It is easy to be sceptical about the value of such efforts, and, indeed, a reliable measuring rod of their effectiveness is hard to find. The FPA counts its discussion groups and the demands for its pamphlets; the CED claims to distribute policy recommendations to 150,000 "opinion makers" and through mass media to reach 50 million Americans, as well as training its members for responsible government posts. Perhaps a more dependable yardstick lies in the growing recognition of the power of organised opinion, and the growing desire to have a part in it. The continuing education of a hybrid democracy like the United States is a complex and infinitely diverse process, of which only a small part can take place in schools. That the techniques of this education are changing with the times is at least a healthy sign.

Prices Lag Upwards

THE consumer price index, rising steadily during the last two years, reached a record high in February and there is little prospect of a downturn during the next few months. This explains at least some of President Eisenhower's wish to delay tax cuts, or any other drastic action to deal with the recession, as long as possible. For many experts believe that, if the boom is revived before retail prices have fallen, then a disastrous inflation will be almost inevitable. Some of those who want to deprive the President of this excuse are arguing that the index is artificially high and does not reflect the real cost of living today. They allege that the calculations do not allow for the discounts, free service and other devices by which goods are sold below list prices in times of slack demand or for the changes in buying habits which are forced on the housewife when her husband's earnings are reduced.

It is difficult to justify the first charge since the data for the index, collected regularly by personal visits, are based on displayed prices, thus covering reductions at sale time, and include discounts and trade-in allowances, for motor cars, for example. There is more substance in the second charge, for the index is designed not to measure day-to-day fluctuations in the cost of living of all Americans but changes in the prices of a fixed list of goods and services chosen to represent the customary spending pattern of the families of wage earners and clerical workers. It does not therefore show that at the moment people are buying more poultry and less meat, or tinned instead of fresh vegetables, in order to save money. If the index were adapted too frequently to what might be only temporary changes in the pattern, then its value as a basis of long-term comparison would be lessened and the compilers might also lay themselves open to charges of having manipulated it unfairly.

The official explanation of why the index is not going down with the other economic indicators is that it is a "lagging" statistic which reacts slowly. It is months before falls in the costs of raw materials affect the prices of goods in the shops which have been made from those materials. But the subsidiary index for durable and non-durable goods other than food is now at last beginning to decline. The total index is held up by service charges, which account for one-third of its components; fees for medical care, hairdressing and so on are adjusted infrequently and therefore tend to stay up even when demand is declining. Furthermore, food costs depend more upon farming conditions than upon the general economic situation; this winter's cold has pushed up the prices of fruit and vegetables, and pork is expensive because few hogs are being sent to market. Nevertheless, it is true that nowadays prices in general are less flexible than they used to be, largely because costs are also less so.

Taking Care of Their Own

PROPOSALS for increases in pay for a variety of government employees, from Admirals to Post Office clerks, have been moving through the legislative labyrinths of Congress in recent weeks. Rejoicing by the groups concerned is, however, still premature for even when both houses have completed action on the measures, their ultimate fate will depend on the President. This week the House passed, by a heavy vote, a Bill which would increase the total cost of servicemen's pay by about $670 million during the coming year. The Bill embodies, in considerably modified form, the recommendations of the Cordiner Committee which the President endorsed in his Budget message in January. However, it goes further; besides providing for an incentive plan with pay depending on skill and merit, it grants a general pay raise, based partly on the increased cost of living, to servicemen of all grades with more than two years service. The general increase is progressive, with top ranks, both officers and enlisted men, receiving the greatest addition (*e.g.*, the basic pay of a full General goes up 47 per cent, from $1,276 a month to $1,875). This reflects the Cordiner Committee's aim of making service careers more attractive and of reducing the present turnover of personnel whose training is costly.

Hopes for the 500,000 employees of the Post Office are less bright. Originally, the House passed a Bill providing for increases in postal rates, including a rise from three to four cents an ounce on letters. The Senate went further, voting to raise this to five cents for a three-year period on out-of-town letters; at the same time an amendment was tacked on giving an average pay increase of 12½ per cent to postal employees. But the House baulked at the five-cent rate, and the Bill is now being considered by a joint conference, which hopes to resolve differences of opinion in time to vote on the measure before the Easter recess begins on April 3rd. The five-cent letter rate is what Mr Eisenhower

the things they say!

I always like to support a family concern.

Why do you say that?

Because I don't think you ever find quite the same friendliness between managers and men in one of the big businesses.

You wouldn't say that if you knew much about I.C.I. Being a working journalist, I've seen inside lots of their plants.

I've seen how they're run, and I can tell you that I.C.I. take great interest in the problems of human relations, and go to immense trouble in trying to solve them. In any case, big concerns are sometimes absolutely vital.

I don't see why.

Well, take that 'Terylene' skirt you're wearing. I.C.I. had to spend £5,000,000 on research and development before they felt that 'Terylene' fibre was a thoroughly practical textile material. Since then they've allocated £49 million to construct plants to make the stuff. No small concern, whatever its merits, could have taken on a job like that.

I see what you mean, but a small business has advantages denied to a big one.

Quite so, and no one would agree with you more than I.C.I. When the I.C.I. Board decided to go ahead with 'Terylene', the first thing they did was to appoint a team of their younger executives to take over the project, and they gave that small team plenty of scope for its own initiative. You see, I.C.I. are fully alive to the necessity for delegating authority and do so right down the line. In this way they contrive to combine the advantages of smallness — and bigness — in their own activities.

ICI

Z

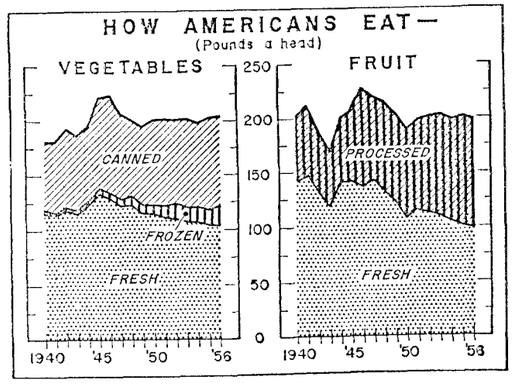
asked for, to combat the growing postal deficit which is currently approaching $1 billion a year. But last year he vetoed a postal pay increase on the grounds that it was inflationary; this year he asked that any increase be limited to 6 per cent, and it is hinted that he would veto any greater increase, even though he would thus also cancel the higher postal revenue.

Simultaneously with the postal Bill, the Senate approved a 7½ per cent rise in pay for a million civil servants. This measure is now being considered by a committee in the House, which has a Bill of its own providing increases of up to 11 per cent for such workers. The committee hopes to dovetail the two Bills, but it is doubtful whether this will be accomplished in time to have it ready for voting before the recess. The President is in favour of a rise for civil servants; but he has asked for no more than 7½ per cent, and again, if Congress requests too much, he may say no.

Sentence for Court Reform

FIVE years of work on the modernisation and streamlining of New York's system of state law courts apparently went down the drain this week when the lower house of the State Legislature turned bi-partisan thumbs down on the Tweed plan. Conceivably a special session later this year could rescue it, but it is far more likely that the urgent reform of the state's antiquated judicial structure will have to wait until the Legislature, prompted perhaps by some sensational scandal affecting the courts, appoints another commission to do the job all over again.

Mr Harrison Tweed, who in 1953 was chosen to head the Temporary Commission on the Courts, modelled his plan on the Vanderbilt scheme which has been such a success in improving the courts of neighbouring New Jersey. But New York's politicians seem to be a tougher breed than their counterparts across the Hudson; they refused to contemplate the wholesale wiping out of minor court jobs which are such useful rewards for their supporters, even though modifications were made in the plan to conciliate the Democratic boss, Mr De Sapio, and the lesser known Republican powers in the rural parts of upstate New York. These modifications, moreover, cost Mr Tweed the support of the purist reform groups, who seem to feel that half a loaf is worse than no bread. Finally, his own commission refused to accept the watering-down of some of the proposals for consolidation of the judicial machinery. The result was to provide the opposition with a veneer of respectability for its selfish objections. Some of these objections, it is shameful to report, are shared by state judges who themselves are elected and who have no desire to see their political influence diminish. The public and the members of the bar would have had to feel much more strongly than they do to overcome such entrenched opposition.



Canners Feel their Age

FROM A CORRESPONDENT IN CALIFORNIA

ALTHOUGH it is not wholly certain when foodstuffs were first put into tins in California, the state's great canning industry has chosen to observe its centenary in 1958. From a marketing point of view last year was the best in the industry's history. The growth of population, increases in individual consumption and the rising prices of other foods combined to bring total sales of tinned fruits and vegetables to new high levels; in particular, the Pacific coast, already the source of half the country's output of these products, increased its share still further. However, these records were attained only through a general lowering of prices and a huge over-supply of tinned goods still remains. As a result, profits of the canning companies have also broken records, but downwards, and they are likely to remain below the level necessary to attract the capital which is needed to combat the industry's present weaknesses.

The profit margins of canneries have been low for more than a decade because, while costs have increased steadily, annual production has regularly exceeded demand and has depressed prices. In 1957 the cost of tinplate went up by 7 per cent, of glass by 6 per cent and of shipping by nearly as much as 12 per cent, from the year before. When production is reduced, unit costs go up, since canners have large fixed investments in plant and equipment which are used only seasonally. Modernisation, labour-saving devices and diversification, which might raise profit margins, all require capital that is difficult to attract before those profit margins have been raised. In 1957 the canners did succeed in lowering somewhat the cost of the produce that goes into cans. But they may have to pay dearly for this in an indirect way.

Prices for most canning crops in the West are set by negotiation between the industry and strong organisations of the farmers who grow the individual products. Recognising that the canners, whose own prices were depressed,

would want to pay less for their new supplies, the growers' organisations managed to curtail the prospective crops, through exhortation or through destruction or diversion of a portion of the output, as permitted by state marketing laws. Having thus made their sacrifice, the growers then demanded the same prices as in 1956 from the canners, who were equally determined to obtain reductions. The long and bitter negotiations ended in a partial victory for the canners, who obtained price cuts but considerably smaller ones than they wanted.

Late in 1957, however, officials of farmers' marketing organisations which deal with nearly all the varieties of fruits and vegetables processed in California announced that they had formed a grower-owned canning company to market tinned goods in competition with the rest of the industry. Although its initial plans are modest, the new

company is patterned after other grower-owned marketing organisations which have achieved almost complete dominance in the markets for such products as lemons, raisins, walnuts, almonds and other Californian specialty crops. If it can pass the various practical and legal tests which it must undergo, the new company will add enormously to the already formidable power of the state's growers of canning crops and can drastically alter the shape of the *entire* industry.

Another threat which is diverting the attention of the canning industry from its celebrations is a new challenge to the favour which canned goods enjoy with consumers. While canned foods suffered less from the rapid rise of frozen foods than did the demand for fresh produce, the latter is now reviving. Progress is being made with the sterilisation of fresh foods by means of atomic radiation, so that they can be sold, free of spoilage, without further processing or packaging. Of more immediate importance, however, is the booming popularity of plastic packaging.

Sealed polythene bags offering protection and convenience in handling, have become commonplace for many small consumer products which used to be sold unpackaged. The same advantages, to which are added opportunities for identifying brands and standardising quantities, have meant that polythene and other plastics have quickly been used for packaging fresh produce and other foodstuffs. Although these packages deprive the customer of her traditional prerogative of pinching, they have proved so popular that, according to estimates, 20 to 30 per cent of all fresh fruits and vegetables are now packaged before sale ; those percentages may double within a few years. For this and other reasons the fresh produce industry, which markets about 62 per cent of the country's fruits and vegetables, seems to be halting the downtrend in consumption. The relative position of fresh, canned and dried produce has become static, while frozen foods have apparently levelled off at about 4.5 per cent of the vegetable market and 15 per cent (including juice) of the fruits.

The frozen food industry, besides suffering from the disorganisations of a new and fast growing business, has encountered two serious obstacles that have minimised its profits. The first is the limited amount of expensive refrigerated space which retail shops can provide and for which competition is heavy between the wildly proliferating number of brands and items—*including pre-cooked bakery goods and complete pre-cooked meals.* The other is a widespread tendency toward competitive price-cutting by the myriad producers who enter the field because of the relatively low investment required. As a result, few firms have been able to make a profit and the canners who several years ago hastily started to produce frozen food because of its potential threat to canned products now find themselves making up the losses characteristic of the chaotic frozen food market from the already-pinched profits of their canning operations.

Colorado—Welfare State

FROM A CORRESPONDENT IN DENVER

COLORADO has long had the most generous old age pensions in the country. Now it is to provide a health service for the aged. In February each pensioner received a card entitling him to free medical and hospital *treatment* at state expense by arrangement with Blue Cross and Blue Shield, both private non-profit-making organisations. The state also will contribute up to $100 a month to pay for care in nursing homes for pensioners who need it. What is remarkable is that this costly step was adopted to reduce the drain of pensions on the state's finances.

In 1936 a powerful "pension block" managed to persuade voters to adopt an amendment to the State Constitution which set aside, for pension purposes only, 85 per cent of the revenue from the state's 2 per cent sales tax, and 85 per cent of the state's income from alcoholic beverages. It also provided that all such revenues in any given month should be divided among pensioners in the succeeding month and that any citizen of 60 or more who was without means need not wait for a pension until he reached the usual age of 65. Finally, the legislature was forbidden to abolish or reduce any source of revenue for pensions without having first provided an equally productive alternative and all future excise taxes were declared to be the property of the pension fund.

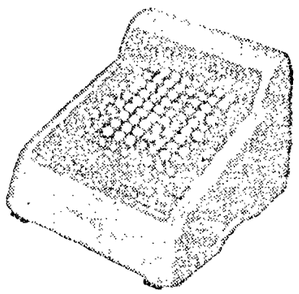
These provisions not only meant that pensions ate up *about a quarter of all the state's revenues ; they also greatly* hampered the state in raising money through taxes for any other purpose. Legislators have had to be very careful in adopting any new tax to meet the general expenses of the state, lest it be ruled to be an excise tax and 85 per cent of its revenue go into the pension fund. But Colorado's 55,000 pensioners have fared well ; they are being paid, in all, some $60 million a year, of which about a third comes from the federal government and two-thirds from the state. Any private income is deducted from the state grant, but even so the payments have averaged nearly $100 a month for several years—and husband and wife are each entitled to a pension.

The introduction of a health service for the old is part of the price Colorado had to pay for another constitutional amendment to release it, after twenty years, from the crippling law on pension funds. It also had to guarantee each pensioner an income of $100 a month and to set aside a $5 million reserve fund to guarantee the payment of pensions in bad times. All this has now been done and the state hopes that by 1960 or 1961 the taxes whose revenue was formerly reserved for pensions will be producing enough to help pay some of the state's other bills.

SHORTER NOTES

Most taxpayers will not be affected by the drive to tighten up on expense accounts which was started last year. Protests have led the Internal Revenue Service to decide that only taxpayers who do not have to account to their employers for their expense money will be required to enter the total of their expenses on their tax returns and itemise them. One effect of the drive against abuses has been to stimulate the use of credit cards, which enable bills for meals, rooms, and transport to be sent direct to the employer.

* * *



Cheques soaked in Pink Satin scent have proved a useful sales device for a manufacturer in Connecticut who estimates that each of the 48,000 cheques he issues each year are handled by 25 people ; many of these are women who write *in to order some on their own account.*

SUPERSPEED
ALL THE WAY TO
THE FINAL
NET TOTAL

Thanks to the "Memory-Dial" Calculator there's only *one* handling of the figures.

Here is a machine that does more than merely add and subtract. It *remembers* your total in the accumulating dials at the rear while the operator's calculations are recorded in the dials at the front. These Duplex features, together with live key action, enable the Burroughs Memory-Dial Calculator to sub-total, grand-total, and net-total at superspeed.

It is designed to give automatic control of accumulating totals by the transfer key. If your business has, for example, invoicing, payroll, statistical or stock record applications, you will find the simplicity, accuracy and speed of Burroughs Calculators quite unequalled. A Burroughs Calculator means speed straight through to the net total. That means a

saving of time and labour —faster calculating at lower cost. See it at your local Burroughs office; or write to Burroughs Adding Machine Limited, 356-366 Oxford St., London, W.1.

THE WORLD OVERSEAS

King Saud Hands Over

FROM OUR CORRESPONDENT LATELY IN RIYADH

THE transfer of full legislative and executive powers from King Saud to the Emir Faisal, promulgated in a royal decree on March 22nd, is the first significant constitutional change in the whole history of Saudi Arabia. Hitherto all power has been vested in the King, ranging from decisions between war and peace to approval of visa applications. By a stroke of the pen absolute power has now passed from the King to his prime minister. The change is perhaps less drastic than it sounds, for the prime minister is also the King's eldest brother and heir to the throne. But it is nevertheless of great importance, since it shows that even in Saudi Arabia public opinion has begun to encroach on the privileges of absolutism.

The principle of absolutism is not infringed by the decree. On paper at least, the Emir Faisal's powers are as absolute as King Saud's ever were ; and he derives them from a royal decision which presumably could be revoked. Nevertheless, the change was certainly brought about by the rising tide of popular discontent which was beginning to find free expression both in the towns and among the nomad tribesmen of the desert. The target of criticism was royal extravagance. There were murmurs from some of the royal princes, from a large section of the educated middle class and from the great majority of the Egyptian, Syrian and Palestinian immigrants who occupy many key positions in the civil service, municipal administrations, public utilities and major engineering and constructional works. "All constructive enterprises in the country were started under the old King," said the intelligent young businessman ; "the Mecca and Medina roads, the Riyadh-Dammam railway, the big electrification schemes and the rest. The present reign has given us nothing but palaces." It is a matter for bitter comment in Riyadh that the new Nasiriyeh palace, completed last year, consumes nearly three times more electricity than the whole of the rest of the city—which now numbers over 300,000 inhabitants.

The accusation, launched against King Saud from Damascus, that he had plotted the sabotage of President Nasser's aircraft, was a spark to the tinder. While loyal supporters of the King denounced the charge as a fabrication, the King himself and his closest advisers maintained a stubborn silence, contenting themselves with a reference to the King's disclaimer of any knowledge of the affair and urging patience pending an investigation by a royal commission. Meanwhile, critics of the regime not only professed to believe the accusation, but said so with astonishing freedom. The case for the opposition seemed to be materially strengthened by reports late last week that three members of the royal commission of investigation had resigned. Further supporting evidence was found in the obvious desire of the King to avoid public appearances ; he even retired to his personal residence for evening breakfast on the first day of Ramadan. Something was clearly untoward in the marble, chandelier-bedecked corridors of Nasiriyeh. There could be no mistaking that charged atmosphere. Yet the climax took away the breath even of those who had so carnestly desired it. Some of these latter suspect a trap ; it seemed almost too easy.

Will the Emir Faisal's assumption of power permit the decent burial of Colonel Sarraj's accusation ? Saudi Arabia can have no interest in prolonging the crisis, and the decision therefore seems to lie with President Nasser—as usual. If he is satisfied with the apparent success of his action against King Saud he will presumably let the matter drop. In any case, he is likely to soft-pedal the issue pending a study of Saudi Arabia's new course in relation to his own aims. Two questions arising out of the crisis merit early consideration. What of the Egyptian military mission, which was expelled from the country without fuss soon after the attack on King Saud ? And what of the Syrian managers of the Al Kharj arms factory, who replaced the French staff as a result of the Suez crisis, and who were themselves expelled at the same time as the Egyptians ? If either of these parties were to return, it would indeed mark a change of attitude.

The conditions that the Emir Faisal is said to have laid down before accepting his new responsibilities accord closely with the hopes of the opposition. Several of the King's brothers have been chafing under the rule of palace favourites. Foreign advisers (inevitably) have been an easy target for popular criticism, though there is room for doubt whether they have been any more responsible for the waste and extravagance than many a native Saudi ; budgetary secrecy has made it impossible to exercise any real check on expenditure.

The reported insistence of the Emir Faisal on alignment with the United Arab Republic should cause no surprise to those who know him. He is one of the most convinced and convincing Arab nationalists in the kingdom and has expressed his views on Zionism and imperialism regularly, freely and with force. He has no quarrel with the Hashemites as such. The stumbling block is the Baghdad Pact, about which most Saudis, including both the adherents and the critics of King Saud, feel as strongly as the Egyptians. "Why," asks the Emir Abdullah Ibn Abdul Rahman, the King's uncle and chief adviser, "did Iraq rush into a pact against the enemies of the West without first insisting that the West should do something about our enemies—the Jews and imperialists ? " Feeling on Buraimi and the disputed southern frontiers of Saudi Arabia still runs deep, and there is no question of any Saudi government approving a pact in which Britain participates. A stay in Riyadh engenders a depressing feeling that the British no longer count in Arab reckonings, except as ageing enemies not far from senility.

"Alignment" does not mean union or even federation. Union would involve the disappearance of the Saudi dynasty, which the Emir Faisal would never contemplate. Federation, unless of a loose, almost meaningless, kind, would also carry dangers for the dynasty. If, for example, the Saudi army were integrated under General Hakim Amr, what guarantee would there be for the survival of the house of Saud ? On what would rest its pretensions to absolute rule and to undivided control of the oil revenue ? These two issues are crucial to the Emir Faisal no less than to King Saud before him. A reduction in Saudi expenditure on public and private account might leave a surplus for investment in the United Arab Republic. But the investor would require an adequate return. The two sides could negotiate about this and they need not necessarily quarrel over it. It is the sort of issue which the Emir may have in mind—along with general support for the United Arab Republic in the international field—when he speaks of "alignment." What he cannot and will not surrender (without a fight) is one tittle of Saudi sovereignty. If President Nasser recognises the strength of Saudi feeling in this respect, he stands an excellent chance of winning consistent Saudi support, with doleful results for the Hashemites.

Dr Adenauer's Nuclear Misfire

FROM OUR BONN CORRESPONDENT

THE tones of "daddy knows best," in which Dr Adenauer is prone to cut short discussion of highly important issues, often grates on the nerves of the German family and from time to time sets off a thundering row. Dr Adenauer has done it again. Instead of the enlightened resignation which he apparently hoped the broadcast Bundestag debate on foreign affairs would generate far and wide through the land, the Chancellor has kindled much anger and confusion. It is now going to take him some time to dispel the widely-held conviction that out of over-eagerness to serve Nato he and his ministers are prematurely pushing western Germany into preparations for nuclear warfare, needlessly prejudicing thereby the chances of a summit conference ; of creating a nuclear-free zone, or zone of disengagement, in central Europe ; and, last but not least, of progress towards reunification.

At Frankfurt last Sunday a committee styling itself "Fight Atomic Death!" launched, chiefly under socialist auspices, a campaign intended to mobilise the dismay which so many west Germans understandably feel at the prospect of their country not only putting on nuclear armour, but also being the first to do so on the European continent. Like demonstrations are to be staged all over west Germany during the coming weeks. The political and moral implications of the government's decision are to be discussed by the executive committee of the trade unions' federation at Hamburg this weekend, and by the all-German synod of the Evangelical Church meeting in east and west Berlin on April 26th. There has been talk of a 24-hour strike by the unions ; and the federation chairman, Herr Richter, has asked to see the Chancellor. Unable to wait for an official lead, some six hundred Henschel workers downed tools at Kassel for a few hours on Tuesday while the Bundestag was still having it out.

The Social Democrats are pressing for a plebiscite, or, failing that, for at least some sort of widely-conducted ballot. The Rev. Martin Niemoller, of anti-Nazi fame (who intends to take part in the British demonstration at Aldermaston on Easter Monday), is threatening to withdraw Evangelical chaplains from the armed forces. Doubtless the storm will presently subside. Already the miners' chairman, Herr Gutermuth, and the Social Democrats' defence expert, Herr Erler, have pronounced that a political strike would be unjustifiable. Dr Adenauer can still count on a clear majority in the Bundestag, and is sure of it for a good three years more. If public opinion really is swinging heavily against him, it is unlikely to do any palpable damage until after this year's Landtag elections, of which the first is due on July 6th in North Rhine-Westphalia.

Dr Adenauer has admitted behind the scenes that he made a tactical blunder in insisting upon a debate at this moment. True, he has achieved much of what he wanted: the resolution finally adopted, while reaffirming the government's intention to press for all-round controlled disarmament, virtually authorises Herr Strauss to purchase Matador missiles from the United States before the closing date of April 3rd and to manifest official Germany's nuclear willingness at the Nato defence ministers' conference beginning in Paris on April 16th. Yet it is an authorisation clumsily and dearly obtained.

A substantial part of the price has been another sharp jolting of the Bundestag's not too securely established prestige. At the close of one of the four days which the coalition and opposition parties required to cover the all-too-familiar stamping ground, the gentle minister of food and agriculture, Herr Lübke, remarked anxiously that it had been a ghost-haunted session, evoking for him the tumults of the twenties. One understood what he meant. Bygones were not allowed to be bygones. Taunted at one stage with simplification, the Chancellor replied that he was proud of it, and yet apologised to his taunter—the sensitive one-time communist, Herr Wehner—for his lack of dialectical training. This was comparatively mild stuff. Shortly afterwards, while Herr Kiesinger was commending the statesmanlike qualities of his venerable chief, the house rang with mocking cries of "Heil! Heil! Heil!" And when the young Hamburg socialist, Herr Helmuth Schmidt, reminded a Christian Democrat that he had voted for the enabling bill with which Hitler finally extinguished parliamentary government twenty-five years ago, Herr Schmidt was interrupted by one deputy calling him "the rudest lout in the house," and by another (a woman) likening him to "a shot of poison." The public, it should be noted, overheard all this, for the proceedings were broadcast in full ; and at the end of the third day the President made it known that he had received many letters and telegrams urging him to make an end of the unedifying dispute.

Apartheid . . . or Apartheid

FROM OUR CORRESPONDENT IN SOUTH AFRICA

ON April 16th South Africa goes to the polls, or rather white South Africa does, for of the country's 13 million inhabitants, only the whites, numbering about 3 million, have the franchise, and of them 1,600,000 are registered

voters. Only a handful of non-whites, mostly Coloureds in the Cape, have communal representation in parliament. The National party, with 96 members in the now dissolved lower house, and ten turbulent years of office behind it, is confident that it will be returned to power, even that its present majority of 33 in a house of 159 will be increased in the new house of 163 members. Few objective observers at the moment would dispute the first part of this claim, although many believe that the Nationalist aggregate of votes may be lower than last time, and that the new administration will again be a minority government.

There are 296 candidates in the field, with 24 unopposed returns, all members of the United party which has a candidate in every constituency. There will be straight fights between the Nationalists (unrepresented in 30 constituencies) and the United party in well over 100 seats ; in three the Liberal party is campaigning, more in a spirit of missionary endeavour than with any real hope of electoral success ; in two, Labour joins the two main parties to fight three-cornered contests, a forlorn struggle by a courageous little parliamentary group to avoid extinction ; and in another dozen seats a motley assortment of independents and nondescripts are standing without any real hope of winning or, with two exceptions, of saving their deposits.

★

In effect, therefore, the election will be a trial of strength between the two main parties. Mr Strydom, the prime minister and Nationalist leader, only doubtfully restored to physical fitness after an absence of three months from public life, has once again taken his stand on apartheid and republicanism under the accommodating phrase, " South Africa First." But there is less fire in the republican call, and apartheid is now officially described as separation of the races " when practicable and desirable "—a far cry indeed from the grandiose and confident conception of ten years ago. But on the personal level the insistence on separation and discrimination has become more intense, and apartheid remains the fiery symbol of white supremacy. It is still a potent political war-whoop in spite of the disillusionment brought about by the difficulties of carrying it into effect. Apartheid remains the Nationalists' notice " to the world " that they will fight " to the death " rather than share political power with the non-whites. Only thus, the party maintains, can the white man maintain himself and avoid extinction.

And this time the blood call to survival is being extended : the Afrikaner people are being assured that they are engaged in nothing less than a fight for survival and for the continued existence of the Afrikaner nation as a separate entity. The " enemies " are all non-Nationalist whites and all non-whites, domestic as well as foreign. The prime minister's newspaper has given notice that as the election approaches the tribal drum (the paper's own phrase) will be beaten with increasing intensity. It should be explained that there are scores of thousands of Afrikaners who are not Nationalists, and they are looked upon as Nationalism's bitterest white foes.

Against this unashamed tribalism and the appeal to race prejudice and fear, the United party is pitting a middle-of-the-road policy. Its main features are co-operation between the two white groups on a basis of equality in order to bring about national unity and a single South African nation ; a " benevolent " apartheid which will apply race discrimination with justice, but concedes the right of the non-whites to some very slight extension of political representation as well as the return of the Coloured voters of the Cape to the common roll (an undertaking which the Nationalists are exploiting vigorously as being the thin end of the wedge); and an end to racial lunacies like the population register and the more glaring excesses of the application of group areas and other delegated legislation. The United party promises to restore sanity and moderation to government (the need for at least a modicum of which can hardly be disputed). It says that it will seek the friendship and active co-operation of other states in Africa and try to restore the outside world's confidence in the Union, thereby helping to attract much-needed capital which has been frightened off by Nationalist extremism ; that it will encourage immigration and tackle the crime wave by more effective police methods, and by eliminating some of the frustrations and tensions caused by the inflexible application of apartheid.

Sir de Villiers Graaff, conducting a vigorous nation-wide campaign, has been attracting large audiences and has given new hope and fresh energy to the United party. He and his party are bitterly accused of speaking with two voices on apartheid in the conservative rural areas and in the more progressive urban seats, and the unequivocal statement of the forthright Archbishop de Blank of Cape Town on multi-racial schools has plainly embarrassed the party. The Archbishop's outspokenness has been interpreted by the Nationalists as a sign of the shape of things to come should the United party win the election.

The Nationalists have so far failed to generate the same emotional intensity among their supporters as in previous elections, and observers believe that there is more apathy, grumbling and discontent in the party than for many years. But it remains to be seen to what extent this fidgetiness will be reflected at the polls : Nationalists are apt to vote with the blood " for the cause," the greater glory of " die volk," rather than for a party political programme. The steadily rising cost of living and the increasing pinch of the economic shoe, combined with some disillusionment over Nationalist administrative failures in the ideological sphere, have combined to make the political situation more flexible than it was five years ago. But any appreciable change in the relative strengths of the two parties after April 16th is unlikely.

★

Meanwhile the non-European peoples, around whom so much of the fight rages, look on in ignorance, apathy, dismay or growing bitterness, depending on their degree of political consciousness. Of the 1,200,000 Coloured people of the Cape, deprived of their century-old common franchise rights by a questionable constitutional manœuvre, fewer than 30,000 are able to take part in the election now in progress to choose four Europeans to represent them in the House of Assembly. The candidates range from unofficial Nationalist and United party supporters on the right to men with advanced views on the left. Many Coloureds are boycotting the elections because they maintain that the communal vote is useless ; others are plainly disinterested ; and many are so far from a polling booth in their vast constituencies that they are hardly aware of the elections.

And while the Africans, harried and harassed and threatened whenever there is the slightest sign of political

The Benson Cat is a moveable cat

THE CAT doesn't think it's moveable! It believes that Bensons after 49 years in Kingsway Hall are bound to stay there for ever. But it's got a rude shock coming, because over the Easter weekend the whole office will move - to new offices at 129, Kingsway, W.C.2 ('phone as before: HOLborn 6922).

The new offices are on the corner of Kingsway and High Holborn where the old Holborn Restaurant used to be. Outlying departments, including the Television Department from Hanover House and Benson's Press Service from Bedford Row, are also moving into the new offices. So all of Bensons - plus cat - will shortly be under the one roof, which will make things very much easier for everyone!

S. H. BENSON LIMITED *Incorporated Practitioners in Advertising*
Shortly to be at 129, Kingsway, W.C.2. Telephone (as before) Holborn 6922.

MAGNIFY THE IMPACT of your advertising message around the world. Present your products in the best possible way to your most important prospects—the readers of LIFE INTERNATIONAL and LIFE EN ESPAÑOL.

The large page size and superb reproduction of LIFE's International Editions focus attention on your selling story. Distinguished in editorial content and appearance, both magazines give your product and your company a "better look" in important markets of the free world.

LIFE INTERNATIONAL, published in English fortnightly, circulates in 120 countries outside the United States and Canada.

LIFE EN ESPAÑOL is published in Spanish every fortnight for Latin America.

Their combined net paid circulation of approximately 670,000 is largely concentrated at upper income levels. With an average of 7 to 8 readers per copy, these magazines reach a combined audience of about 5,000,000 prospective buyers . . . key people in business, government and the professions.

Everywhere important people respond to what they see in LIFE's International Editions—as you'll discover, too, when your advertising messages appear in their pages.

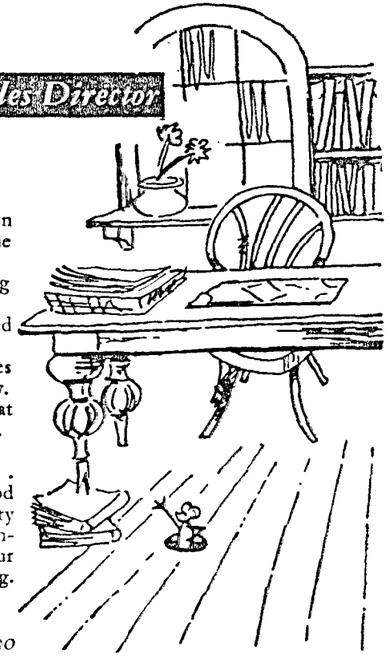
The case of the bearded Sales Director

The funny thing was that he only wore a beard when entering or leaving the factory. At all other times he was clean-shaven.



"I want this mystery solved," said the Managing Director, "and solved quickly."

Well, I checked the cash . . . all O.K. I checked his home life . . . again everything perfect.

Finally in a flash of inspiration I tackled the Sales Director direct. "Why the beard," I said tactfully.

"Oh that," he said. "Well, just take a look at our premises. They're dreadfully dingy. I'd hate anyone to recognise me."

paint works wonders with premises . . . and morale. We have a very good Technical and Colour Advisory Service which is at your command. Take a look round your premises . . . then give us a ring.

Running to save m'lady

RUNNING FOOTMEN were accustomed to running in front of their masters' carriages, clearing the way ahead, but sometimes they had more exciting tasks to perform. During the reign of the first Elizabeth, Lord Berkeley's wife fell ill and Langham, running footman to his Lordship, "carried a letter from Callowden to old Dr. Fryer, a physician dwelling in London, and returned with a glass bottle in his hand, compounded by the doctor, for the recovery of her health, a journey of 148 miles performed by him in less than forty-two hours, notwithstanding his stay of one night at the physician's house, which no one horse could have so well and safely performed, for which the Lady shall after give him a new suit of clothes."

Today, merchandise travels faster than in Langham's time but rarely does one man guard it to journey's end. Manufacturers look after their goods by packing them snugly and safely in cartons made from 'Thames Board', and in 'Fiberite' cases made from solid or corrugated fibreboard.

activity or even consciousness, try to launch a movement to obtain a minimum wage of £1 a day for all workers, Mr Strydom issues dark warnings about a nation-wide stoppage of work on election day to challenge the white man's dominant position. The African National Congress is blamed for this venture, and the government is poised to outlaw the organisation, itself involved in serious domestic turmoil as a result of the challenge to the moderate leadership by extreme black nationalists, in the reserves and other areas. The implementation of the threat will either produce fresh unity in the African National Congress or hand over the leadership to the extremists.

There is no contact between the white politicians in the National and United parties and the leaders of the non-white peoples, African, Asian and Coloured. Thus the great mass of white voters have not the faintest idea, and do not care, what their non-white fellow-South Africans are thinking or hoping. No wonder that next month's election bears an air of unreality or that it has no meaning for the vast majority of the South African people, who are unconsulted pawns in a great game that the white men are playing.

Listening-in to Canberra

FROM OUR CORRESPONDENT IN AUSTRALIA

IT is remarkable that the Australian people should be so devoted to democratic institutions, for one would have thought that they know more than anyone should know about parliamentary debate. A visit to the British House of Commons can sometimes be an experience, but few people are able to make one. The Australians, on the other hand, can switch on their politicians at any time. By the terms of its charter the Australian Broadcasting Commission is bound to use one of its networks to broadcast the proceedings of one or other House, and it uses for this purpose its "serious" programme. This programme at other times is of a quality that would bring tears of jealousy to the eyes of Britain's Sound Broadcasting Society. But there comes a dread moment every morning when the music dies and the air is filled with the strident voices from Canberra. Admittedly it is an effective way of keeping this vast continent in touch with the remote little fastness in the foothills of the Australian Alps—though there are some who would say that it would be better that the politicians should listen to the people, rather than the other way round.

Designs on the Commonwealth Bank

In recent days the keen radio-democrat has had an exciting time following the fortunes of the banking bills, a bunch of fourteen bills whose main effect would be to split the Commonwealth Bank into three separate parts: a central bank, a trading bank, and a development bank. That may not sound very exciting, but the history behind these measures is long and contentious. It goes back to the depression of the thirties when Mr Scullin's Labour government, trying to relieve unemployment, found itself thwarted by the credit policy of the Commonwealth Bank. The bank, although a Federal institution, was in those days able to act independently, and when the government tried to change the bank's board it was outvoted in the Senate. Political control over the bank was finally established during the war, and the Labour party then turned its attention to the private trading banks which, it believed, were also to blame for the difficulties of the depression years. But the attempt to nationalise them fell foul of the constitution and was finally ruled illegal by the Privy Council in 1948.

In spite of this the banks do not feel safe from the Labour party's designs, which have never been abandoned. One focus for their mistrust is the Commonwealth Trading Bank, which, they feel, might be built up to such an extent that it could begin to put them out of business—thus nationalising by the back door. They already think that the Commonwealth Trading Bank has stolen business from them by an unfair use of its privileged position. The banks have long wanted legislation to break up the Commonwealth Bank family and to put the Trading Bank on the same footing as themselves. But they did not then expect to get a Commonwealth Development Bank that would be exempt from normal control. This is to be established to help worthy applicants who have been refused finance by the private banks—although who those applicants are, if not the uncreditworthy, no one knows. The proposal is thrown in to buy the support of the Country party, whose leader, Sir Arthur Fadden, is Treasurer, and who, no less than the Labour party, has resentful memories of the banks' credit policy during the depression. The Opposition has represented the bills as an attack on the "peoples' bank." It knows they are nothing of the kind, but is frantically in search of an election issue. It might have been shrewder to support the bills and thus confuse the ranks of the Liberal and Country parties, whose alliance has been somewhat strained by this measure.

When the bills were first introduced, in the last session, the Opposition would not even allow them a first reading. It mustered every senator, including one who had just had an operation and was brought by ambulance from his hospital bed. This week it adopted the same draconian tactics, to the despair of a gentleman from Tasmania who wanted to go home to secure his re-nomination at a party convention. The combined forces of 27 Labour senators, 2 Democratic Labour party ones and one Independent again drew the voting, 30-30, which counts as a rejection.

Having had a bill rejected twice, Mr Menzies could, if he wished, have asked for a "double dissolution"—a dissolution, that is, of both houses. The idea must have had its charms. A general election is due in any case later this year, but who knows whether the two factions of the Labour party might not unite by then? It is unlikely, but if they did, Mr Menzies could hardly hope to win his fifth election in succession, and he might then regret not having bid for a new three-year term now. Yet, on the other hand, the banking bills were not the sort of issue on which a wise government would wish to go to the country.

Design for Defence

Another political exercise to interest the listening student was the long delayed announcement about the structure of the defence departments. A small committee under the chairmanship of Sir Leslie Morshead was appointed to consider their possible reorganisation last October, and by December it had produced a report advocating such sweeping changes that the government was frozen into three months of silence and indecision. The report was never published, or tabled in the house, despite repeated challenges from the Opposition. But it is known that the committee wanted to abolish the service departments as such and to transform them into mere divisions of an all-powerful,

all-co-ordinating ministry of defence; and that these divisions were to be organised, not on the basis of the separate armed services, but on the basis of functions common to them all, such as personnel and logistics.

The prospect of such an upheaval was formidable. Even more daunting perhaps were the personal difficulties involved. It would have meant demoting the ministers for navy, army and air to the rank of associate ministers—and even if they were given other portfolios as well in order to keep them in the cabinet, that still would not leave enough portfolios to keep everyone happy. It would have meant elevating the minister of defence to a position of great power and importance. It would also have liquidated three permanent secretaries, and had already produced some very long faces in the departments marked down for disruption and down-grading. But it is believed to have been supported by all three chiefs of staff.

The report's logic must have been good, for in rejecting it Mr Menzies prayed in aid the creaking old constitution, which at times can have its uses. Defence, he said, was too big a province for one minister, and to appoint associate ministers would probably be illegal. No minister may hold an office of profit other than that of minister in charge of a department, so also none could be an assistant minister. However, he assured the House that the government would secure better co-ordination in other ways, and one of these would be the appointment of a chairman of the chiefs of staff. Thus Australia will follow Britain's example, though more from expediency than from admiration.

The leader of the Opposition, Dr Evatt, spoke of Mr Menzies's "excuses" for rejecting the report—but not, probably, because he particularly believes in it. The Labour party's main contribution to defence thinking seems to be its determination to prevent Australians from serving overseas. It was the architect of the Defence Act of 1904—still on the statute book—which enacted that only volunteers should be sent overseas, but imposed on every citizen the obligation to serve in his country's defence. But now, at least as far as Malaya is concerned, Labour objects even to the volunteers. It is afraid that because of them Australia may be thought to have colonial ambitions—even though Tengku Abdul Rahman is glad to have them. If Dr Evatt ever makes up his quarrel with the rival Labour faction, Australia's small contribution of a battalion group (1,300 men) to the strategic reserve in Malaya may well be withdrawn.

Through Tunisian Eyes

FROM A CORRESPONDENT IN TUNIS

BEFORE the bombing of Sakiet, the Tunisian leaders saw the future exclusively in terms of close co-operation with France. Paris was the magnetic pole, even when President Bourguiba glanced towards Washington. The Tunisian economy remained closely linked to that of France; Tunisia depended on France for its external trade and for investment in a proportion that wavered between sixty and seventy per cent. The country's leaders wished to reduce this dependence and the disadvantages it brought. But none of them dreamed of questioning the basic orientation, and the Tunisian government had laid no plans for withdrawal from the customs union with France or from the franc zone. On the contrary, the dominant thought was that, once the Algerian war was over, its present links might be increased and political ones forged between North Africa and France.

After Sakiet, however, there was no longer a single Tunisian leader who believed that co-operation with France would be possible within the next five or even ten years. It was now obvious, people said, that there had been no change of heart in France, and that the persistence of a "colonial mentality" precluded any healthy and lasting co-operation. These fears would be greatly strengthened if the extreme Right in France were to prevent M. Gaillard from coming to an agreement with Mr Bourguiba.

Although the bombing of Sakiet has deprived Tunisia—and doubtless also the Algerians and Moroccans—of the magnetic pole that was Paris, it has not given them any alternative focus. The neutralism to which it gave birth is, for the moment, imprecise and negative. The quarrel with Egypt, which Mr Bourguiba made public in his speech of March 6th, has left Tunisia sandwiched, but in isolation, between Paris and Cairo. In such circumstances, it is only natural that Tunis should seek to improve its relations with its immediate North African neighbours. Mr Bourguiba has tried to do so by sending personal messengers to the kings of Morocco and Libya. But the first is too concerned for the future of his throne to diverge, even slightly, from a policy of prudence, while the regime of the second is neither solid enough nor of sufficient prestige for him to be able to offer Mr Bourguiba any real support. (It is said that the messenger who recently introduced into Tunisia the letters of Salay Salah Ben Youssef calling for the assassination of Mr Bourguiba had obtained his visa gratis in Tripoli.)

In fact, Mr Bourguiba's principal trump continues to be his influence on the Algerian rebels. The rise to power of Krim Belkacem—the most "Bourguibist" of the FLN leaders, now considered to have eclipsed the hitherto dominant Abbane Ramdane himself—is bound further to strengthen Mr Bourguiba's influence on the Algerian maquis. On the other hand, the Algerians, who have received considerable aid and support in Cairo, have expressed reservations about Mr Bourguiba's recent diatribe against President Nasser's regime.

A further consequence of Sakiet is that Mr Bourguiba must now take into account the reactions of his own public opinion. Before the bombing, he enjoyed, both internally and outside, complete freedom of action. Having eliminated, exiled or subjugated all those of independent political opinion, and tamed the party, the trade unions and the constituent assembly, he alone conceived and directed policy. The difficulties caused by the Sakiet bombing have aroused Tunisian public opinion and prompted it to express itself. The President neither can nor wishes to prevent it from doing so. He has been still further handicapped by the French government's note delivered in Tunis on March 11th, contesting the Tunisian government's right to freedom of action in diplomacy and defence. (This claim is based on the conventions of June 3, 1955, "which have neither been abrogated nor modified.") How could he keep his hold on the Tunisian public were he to listen to France contesting Tunisia's right to an airspace of its own, and therefore rejecting all Tunisian protests against the violation of this airspace by French aircraft?

It is understandable that in this climate Mr Bourguiba needs to show tangible results; the present situation in Algeria and Tunisia makes the need for such results an urgent one. If he cannot fulfil it, he, his regime and western influence may all be swept from the Maghreb.

FLY THE FINEST

Fly TWA

JETSTREAM

Equipped with Radar and Synchrophased (Anti-vibration) Propellers

non-stop to USA

For these reasons: Because the TWA Jetstream is the quietest, most comfortable, longest-range airliner in service today. Because you can choose the palmy luxury of TWA Ambassador service or the sheer saving of TWA Economy flights. Because you can fly TWA Jetstream non-stop to New York or direct to the West Coast of America by the short Polar route. Because you can fly TWA Jetstream to the principal cities within the USA. These are all fine reasons for flying the finest—for flying TWA! Call your Travel Agent or TWA for full details of TWA services, routes and timetables.

New Economy Fares from April 1st

On April 1st† TWA introduces its new Economy Fares. Cash price for the round trip London/New York will be £162—a saving of £40.10s. over Tourist fare. What's more, under TWA's Time-Pay Plan you need only pay £16.4s. down and 21 monthly payments of £8.5s.7d. (subject to satisfactory references). Here are a few typical new Economy Fares:

Round Trip from London to:	
New York	£162
Boston	£158.16
Chicago	£187.5
Las Vegas	£225.11
Los Angeles	£236.6
San Francisco	£236.6

* Jetstream is a service mark owned exclusively by TWA. † Subject to Government approval.

THE BUSINESS WORLD

Oil in the Middle East

LIFE is a burden to long-term planners. Where now are the gloomy predictions of painful shortages of fuel by the middle sixties? Coal is suddenly plentiful. Atomic energy programmes are being cut. And the present abundance of oil is no temporary affair that will pass with the end of the American recession. Suppose that the free world's demand for oil rises during the next five years at an average rate of 6 per cent a year—no pessimistic assumption for a period beginning with a recession. Such an increase could be met by an increase in oil production outside the Russian block from 768 million tons in 1957 to 1,030 million tons in 1962, or an annual increase in output over the five years of just over 50 million tons. American producers of oil, now effectively protected against cheaper imports, should be able to meet a larger part of America's own rising requirements than at one time seemed possible. So, even on distinctly optimistic assumptions about demand, perhaps 35 million tons of new output a year will suffice for rising demand outside the United States.

Additions already planned for crude oil collection and tanker loading in the Middle East and in Venezuela could comfortably cover this; it is more likely that the rising demand for Middle East and Venezuelan oil will not match the potential output. If it is true that the demand for oil products, with the possible exception of fuel oil, is not much stimulated by reductions in price, the oil industry is in for a thinner time than it has known for a generation. And not only the companies. If oil prices are badly hit, the revenues of host governments in the Middle East will be jeopardised.

Twenty-five years ago it was possible for the oil industry to meet the same kind of problem by a comprehensive system of production controls and market sharing arrangements. Such solutions are not feasible today. Oil production outside the United States was then largely concentrated in the hands of a small number of large oil companies. They had a clear community of interest in limiting output and sharing it between themselves, and they were not at that time inhibited by the active enforcement of the American anti-trust laws. Nor were they then under pressure from host governments for increased production and revenues.

The climate in which the major oil companies now operate is utterly different. First, they no longer have the field to themselves. Independent oil companies become increasingly important; in the Middle East their impact is already significant and in Venezuela new oil strikes by successful independents are being reported almost every week. Independents usually have neither the resources nor the inclination to hold back production from their newly won reserves. Secondly, if the oil companies could now make common cause about output and marketing policy, they would immediately fall foul of the anti-trust acts. Even the agreements they made in the thirties are being called into question in a huge cartel suit against them in the United States; the mere suggestion of any new agreements would stoke the uncomfortable fire that the Department of Justice has already lit under them.

MOST important of all, Middle East governments are no longer sleeping partners as they were twenty-five years ago. They all take an acute interest in the operations of the oil companies to whom they have given concessions; they all want higher output and higher revenues. And they have encouraged the entry of independent producers who have no interests in production elsewhere, in the hope of stimulating the discovery and development of their own reserves. To such governments the mere notion of controlled production is anathema. None of the oil companies operating in the Middle East, with the possible exception of Aramco in Saudi Arabia, has yet succeeded in convincing its host government of the need for cutting back.

No doubt there are some host countries who see that their revenues cannot be maintained if the price of crude oil collapses, and that the surest way to such a collapse is to press their demands for expansion in disregard of more slowly rising demand. What is the alternative? Some say to control output on a principle of "historical shares." But what is each Middle East country's historical share? Persia's share of total Middle East output was 37 per cent in 1950. It dropped almost to nothing, and although Persia's output has now recovered in absolute terms, its share is still only 20 per cent. Iraq, too, contributed 20 per cent of Middle East output before the Syrians sabotaged the pipelines to the Mediterranean. The Iraq Petroleum Company is committed to securing a market for enough Iraq crude oil to enable the pipelines to operate at full capacity again next month, but even then Iraq could not regain its 1955 share of total Middle East output unless the others cut back. Kuwait and Saudi Arabia, to a lesser extent, have benefited from the misfortunes of Iran and Iraq, but they would be quite unwilling to revert to the smaller shares they once had.

Could each Middle Eastern country agree to limit output to a given percentage of its proved reserves? The difficulty here is that the rate of proving reserves has not been uniform throughout the Middle East—or as between the Middle East countries and Venezuela. Some countries would justifiably feel that a more intensive exploration effort within their territory in the past would have given them a more favourable basis for joining such a control scheme now. Or, according to good economic principles, should not the highest cost output be cut back first, and the lowest cost last? That policy would fall most heavily on Venezuela and in the Middle East on Iraq, followed, in order of decreasing costs, by Saudi Arabia, Iran and Kuwait (which on this basis might not have to cut back at all). Unfortunately, although costs may be highly relevant to the oil companies—and to consumers of oil—they are not very relevant to local political realities.

In sum, there seems little chance of the host governments agreeing between themselves on a basis for controlled output. Divergences of interest are so wide that only complete economic union between the producing countries could bring them together—and that is a remote hope. The major oil companies, then, will still be left with the baby, with the US Department of Justice as the baby-sitter. They will have to act individually within the limits of the anti-trust laws; they will have to convince their host governments, individually, that production control is in the country's interest and that rival countries are suffering in the same way; and they will have to "cut in" at least some of the independent production to their own markets to prevent any undermining of the price structure.

Efforts towards a workable compromise on production control may well be a deciding factor in another problem that is always present in the Middle East: the closer identification of host governments with the activities, management and even ownership of the oil companies. There is still the clearest distinction between "the company" and "the government," which the fifty-fifty principle has not broken down. That is, indeed, an equitable and dependable principle and the host governments can be relied upon to interpret it to their own advantage, with the consent of the companies. But it does not follow that fifty-fifty will always appeal to them as a natural law. The share of profits retained by the oil companies after paying taxes and royalties to their host government is much smaller than it used to be, but it is not small in absolute terms, and production is still far more profitable in the Middle East than elsewhere.

MIDDLE EAST governments know this. They are impressed with the triumphs of capitalist technique that have produced riches out of deserts; but some of them have a shrewd idea of the rate of write-off of oil installations. They are as capable as anyone else of reading US Senate reports which show that Aramco earned 60 per cent on its net assets in 1956. The operations of the consortium of oil companies in Iran, and also, of the Kuwait Oil Company, must equally allow a quick return. The risks are great, and the return may not be disproportionate; but one way of reducing the risks is to be ready with timely concessions about the returns.

This does not mean, as Mr Joseph Alsop suggested, in a letter to *The Economist* two weeks ago, that there is nothing between the present system and the outright nationalisation of oil production facilities throughout the Middle East. There is a wide spectrum of possible arrangements between absolute oil company ownership and a fifty-fifty sharing of profits, on the one hand, and the complete taking over of facilities and retention of all profits on production by the national government, on the other. Given an imaginative approach by the oil companies, it is possible that even the more extreme nationalist governments that may come to power in the Middle East could be persuaded of the advantages of extended co-partnership with the oil companies. The companies have the markets; that is a fact of world economic life that Saudi Arabia and other Middle Eastern governments cannot hope to change.

There is much that the oil companies can do—and in several cases are doing—to make their profit sharing arrangements more attractive to their host governments. They may begin with 50 per cent of x, but presently it becomes 50 per cent of x plus y. But the most important factor is their willingness to cultivate a positive partnership in a joint enterprise with the host governments. It may be said to exist already in form and to a considerable extent in practice. But it involves something more than enlightened policy, such as employing local contractors and training local labour. It goes far beyond acts of expedient generosity, such as the provision of a water scheme for a thirsty town. It means employing more and more local nationals in management, as well as in subordinate posts. It means taking the host governments further into the policy decisions which concern the off-takers or parent companies, the absentee landlords of the producing company who are remote from the national governments. It means a courageous decision in favour of involvement and identification with local interests so that even to nationalist opinion "the company" becomes "us."

The amicable operation now achieved by the Iranian oil consortium suggests one way in which the other oil companies might move. Aspirations for national ownership may mount irresistibly if they are simply brushed aside. But it may be possible to turn them to advantage by inviting national participation in both ownership and direction, and so convert mere slogans into meaningful co-operation. The oil companies' key objective must be to maintain reasonably profitable (which means economic) conditions of operation in the Middle East, and timely moves to gain the co-partnership of national governments in this aim will be infinitely preferable to bowing to nationalist demands when they are put on the table. There are those who say that the way to deal with an Arab is never to give an inch until you are forced to. But that seems more likely to be the best way of making nationalisation inevitable.

DECENTRALISED POWER—II

Fitting in the Atom

THE original nuclear electricity programme of 1955, which reckoned on building only 1,500-2,000 megawatts of nuclear capacity by 1965, was essentially a bid to gain British business a lead in this new technology. Specifically, the intention was to get each of four private manufacturing consortiums trained by the Atomic Energy Authority experience quickly in building at least one nuclear power station. The programme was limited by the expectation, at that time, that only very limited supplies of natural uranium would be available: graphite of the quality required in the reactors, too, seemed likely to be short. So nuclear construction was planned to begin at a slow pace and build up towards the end of the decade—if only because fissile material produced as a by-product in the first reactors would be required as fuel for the reactors of the second stage. From the point of view of electricity supply, the programme represented a smooth introduction of nuclear generation into the already rapidly expanding power programme: the Central Electricity Authority would be able to learn in its stride.

But in the next eighteen months, circumstances changed. The discovery of new deposits in Canada eased supply prospects for natural uranium, removing the need to wait for the first reactors to make fuel for the next. It was decided to bring new facilities into being to produce the graphite required. It became clear that the power rating of the first reactors to be built could be increased substantially. Outside these nuclear considerations, coal was short, with Britain driven into importing nearly as much as it exported; and the prospects of a gap between Britain's energy demand in the sixties and its coal supplies then widened alarmingly. The technical possibilities of advancing much faster with nuclear electricity, as it happened, came to be considered in Whitehall during the wave of public enthusiasm that followed the rapid and successful commissioning of Calder Hall—and also during the closure of the Suez Canal. The trebled programme that emerged last spring—providing for the building of 5,000-6,000 mW of nuclear capacity by 1965—was an entirely practical one: but it could perhaps hardly have been adopted in any other concatenation of circumstances. It placed much heavier responsibilities than before upon the electricity supply industry—the whole structure of which was reorganised last year partly with this vast new job of fitting in nuclear power faster in mind.

The newly decentralised structure of this nationalised industry, which was outlined in an article last week, was designed to leave the new Central Electricity Generating Board free primarily for this new responsibility. Before the board took over generation and bulk transmission from the departing Central Electricity Authority in January, the nuclear programme had in fact been slightly cut back. This modification arose simply from the Treasury decision last September to restrain public investment: it involved spreading out the nuclear construction over a year or so longer, to 1966-67 instead of 1965. But even this slightly stretched programme presents formidable problems.

IN the first place, it increased capital commitments for generation—and the cost of the power generated. Over the nine-year period originally reckoned, now ten years, the introduction of 5,000-6,000 mW of nuclear power will cost some £775 million more than a wholly conventional programme of the same capacity. Moreover, between the two nuclear White Papers, the estimated cost of nuclear power had gone up 10 per cent,

universal production process, not the old technique. The Steel Company of Wales, incidentally, mentioned that this new price structure would apply to all orders executed during the rest of this year.

The main change of the new price structure is that the biggest reductions have been made, even in basic prices, on the thinner-gauge tinplate; and that the "extras" in the price structure further reflect the same emphasis. Some reduction is offered the customer on almost all types of tinplate; but the more that he adapts his own use of tinplate to the lighter plate that it is more advantageous for Trostre and Velindre and Ebbw Vale to roll, the more good it will do him. For a large number of British customers, this means revising completely their own ideas of how a good tin should be made: a large number of world-famous British products, for example, are marketed in tins that are far too robust for any practical rough handling that they ever encounter. Metal Box, the main producer of the open-top can, has welcomed the new price structure: some of the other people who make their own cans as a matter of packaging their major product and have never given changes in can-making technique much attention, have been rather shocked by the idea of making tins out of the plate to which the makers would like them to switch. To get the full benefit of it will mean sharply revising their idea of what a can ought to be and do: but it should also save them thousands a year, and make steadily more economical use of steel in tinplate, to match the economies in tin coating that have been achieved over the years.

IMPERIAL CHEMICAL INDUSTRIES

Better than Expected

AFTER three years of an ordinary dividend of 10 per cent from Imperial Chemical Industries, the time had come, investors hoped, for a more liberal payment. They set their modest sights at a dividend of 11 per cent for 1957. They were too restrained; the payment is raised by 2 per cent to 12 per cent. The directors also proposed a 50 per cent scrip issue, requiring the capitalisation of £72,177,205 from reserves totalling £171,050,672. The possibility of such a capitalisation was allowed for in the conversion rights on the 5½ per cent unsecured loan stock issued late in 1956. Clearly the liberal dividend policy will encourage holders of the stock to convert into the equity.

SALES AND PROFITS
(£'000s)

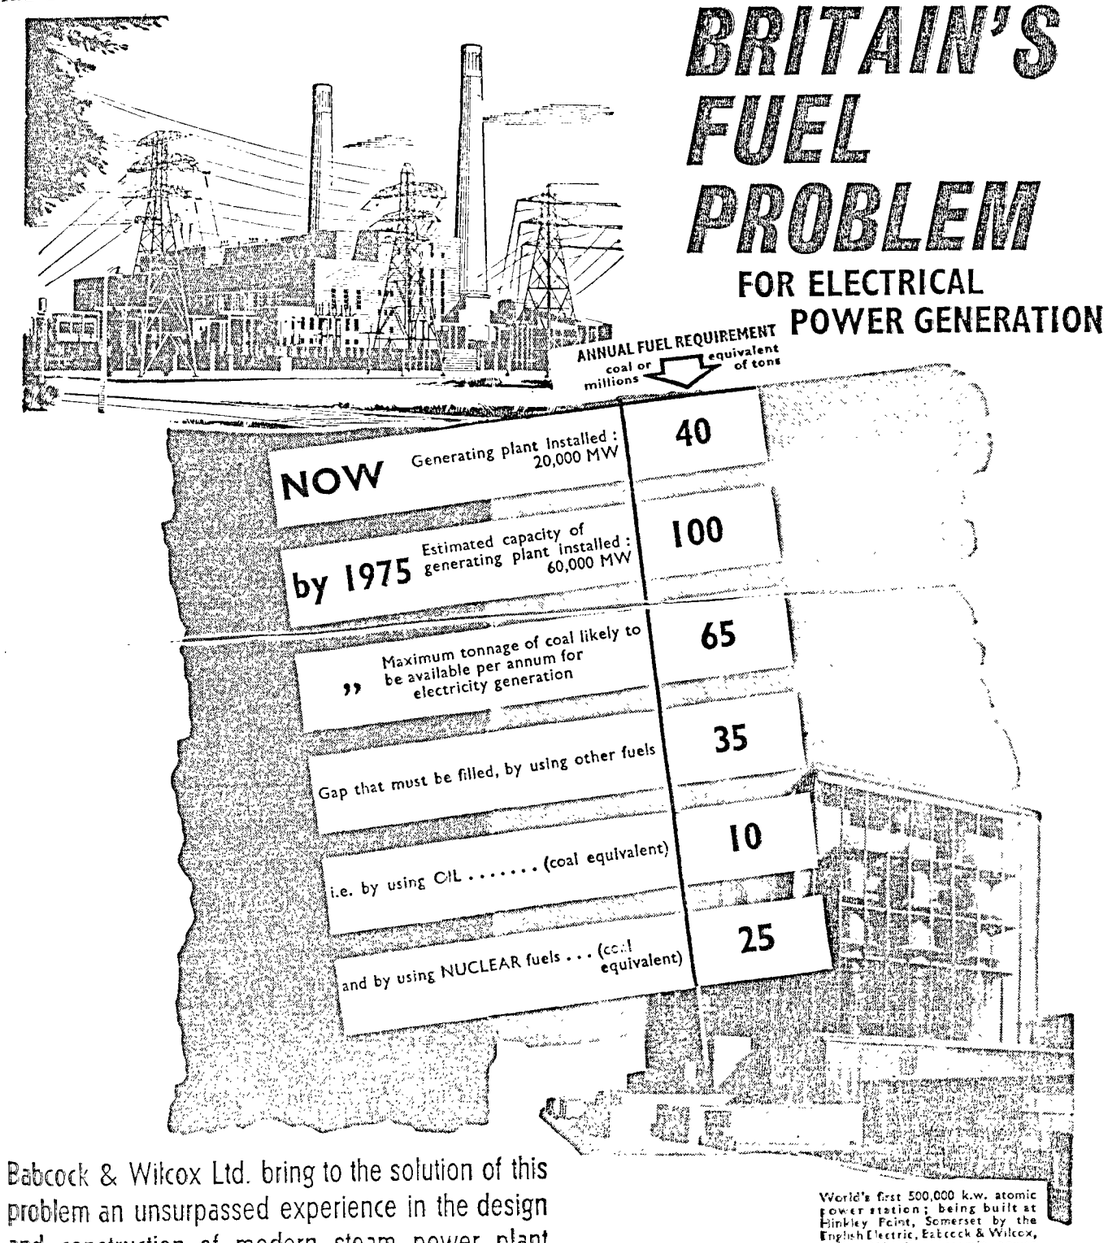
Six months ended:	June 30, 1956	Dec. 31, 1956	June 30, 1957	Dec. 31, 1957
Sales	221,000	214,000	235,000	228,000
Gross income	27,255	22,856	30,933	24,197
Taxation	12,833	10,931	14,153	12,173
Net income	13,294	10,878	15,683	11,151
Gross income/sales	12·3%	10·7%	13·2%	10·6%
Net income/sales	6·0%	5·1%	6·7%	4·9%

The new dividend absorbs £9,952,082 net from a net income of £26,834,346, which is £2,662,609 higher than the 1956 net income of £24,171,737. Over the year sales have risen from £435 million to £463 million, the increase being spread evenly over the two half-yearly periods. The group's total income, before tax, has risen from £50,121,439 to £55,135,296 but much the bigger increase in profits occurred in the first half of the year. As the accompanying table shows, profit margins in the second half of last year were smaller than those earned in the first six months, just as they were in 1956.

MR COBBOLD EXPLAINS

Inflation Still Lurking Around

THE Governor of the Bank of England has taken another step in the policy he described a few weeks ago as "moving gradually in the direction of saying more about what we are doing." He seized the occasion of the annual dinner of the Machine Tool Trades' Association to explain the background of last week's reduction of Bank rate. On purely technical grounds, he said, given the downward pressure that was being experienced in the short-term market, and given the "relative development" of short-term rates here and overseas, a reduction in Bank rate to 6 per cent would have been justified at any time since January. The cost of a high rate to the budget and to the balance of payments "is always an argument against staying too high too long"—and so is the evident fact that "freedom of manœuvre is restricted whenever we are at levels which seem pretty extreme." But these technical considerations could not be decisive: wider considerations dictated caution. "These are strong arguments for not coming down too soon before an exchange recovery has been consolidated and before very high short-term rates have played their part in curbing inflation."



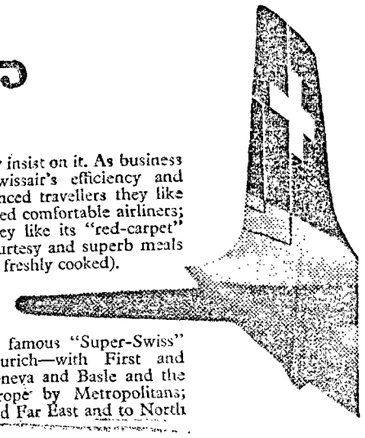
In mid-February, Mr Cobbold described the battle against inflation as "only half won." Now he says that "inflationary pressures, though damped down rather more clearly than was evident six weeks ago, are still lurking around." In view of the patches of recession round the world, the "worst service" we could do to prospects of high employment would be to allow inflation to price Britain out of world markets.

IN THE MARKETS

Funding at Six Per Cent

NOTHING more than a tactical surprise on timing was involved for the markets in last week's Bank rate reduction. Few changes have been more fully discounted in advance by market prices. Therefore it was to be expected that after the tactical surprise had worn off, markets might revert to their previous pattern. The investor who ten days ago felt modestly confident about gilt edged, but who feared that a revival in industrial stocks was not yet due, can logically hold the same view today. Very broadly the behaviour of the market suggests that he does. Gilt edged have held steady. The *Financial Times* Government security index at 81.15 on Wednesday held part of the gain it made on Thursday and Friday of last week (when it rose from 80.87 to 81.40). *The Economist* indicator of ordinary shares at 176.0 shows a rise of 2.2 on the week, but that was less than the gain shown on Bank rate day. The market has since been sagging, and the start of a new account on Wednesday did little to help.

But even after a Bank rate move that has been widely foreseen there must be some repercussions. The least satisfactory of these is that on funding through the market; the selling of stock by the Government broker, which was heavy just before the Bank rate change, has now practically stopped. Does this mean that the donkey has been allowed to eat all his carrot, as he was with unhappy consequences in February last year? It is reasonable to hope that it



Babcock & Wilcox Ltd. bring to the solution of this problem an unsurpassed experience in the design and construction of modern steam power plant to operate with high efficiency on every kind and grade of fuel—solid, liquid or nuclear.

does not. Fairly substantial semi-speculative purchases of gilt edged were made in the weeks during which a Bank rate move was expected. When profits on these purchases have been taken, funding should be able to start up again. In terms of pure market technique, the approaching repayment of the £676 million of 4 per cent Conversion stock 1957-58 may tempt some holders next month to sell to the Government broker before the stock goes ex interest for the last time, and some buying by the banks and others of the 5½ per cent Exchequer Stock, 1966, may follow and set the ball rolling again. The terms of the next corporation issue, expected quite soon, may also affect the market. If the 6 per cent series of issues is ended, and a new series of 5¾ per cent or 5½ per cent stocks at a discount is started, buyers will come in, hoping that subsequent issues will be made at diminishing discounts. The expected diappearance of 6 per cent coupons obviously had much to do with the success of the £3½ million debenture issue by Land Securities Investment Trust.

Outside Rates Adjusted

OUTSIDE the strict run of stock exchange securities the alterations in rates needed by the Bank rate change were substantial. These changes do not include building societies, now congratulating themselves in having mostly stood firm against raising either the 6 per cent rate on mortgage advances or the 3½ per cent net paid on shares. Their hope now is that the 3½ per cent rate, equivalent to just over 6 per cent gross, will look much more attractive so that they will be able to lend more on mortgages. But a marked adjustment is now needed in the rates for mortgage and temporary money that the local authorities are still paying. The table shows how they had moved by the middle of this week. But brokers and local treasurers still have divergent ideas and it would not be right to look

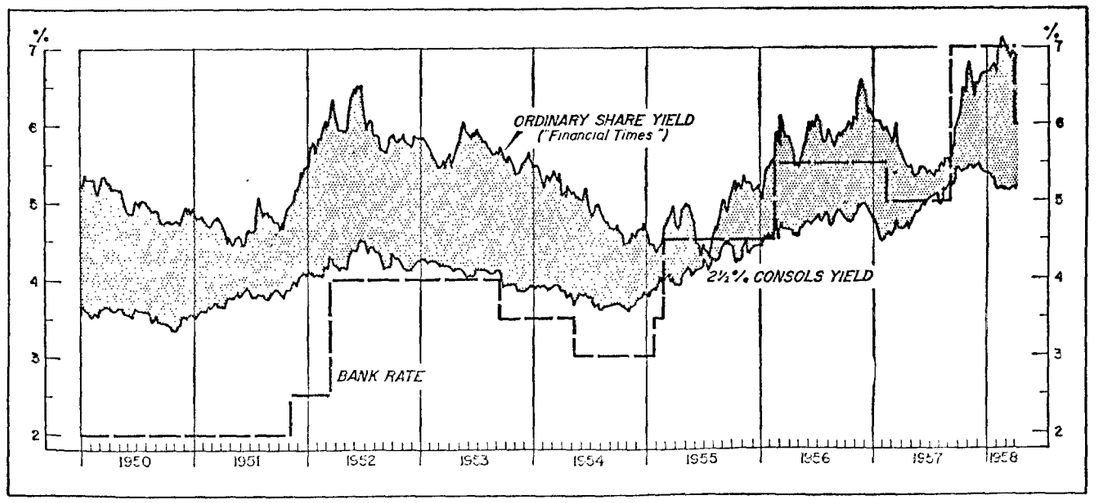
MORTGAGE MARKET RATES

	End September, 1957 %	March 18, 1958 %	Now %
Temporary Money:			
7 days.....	7	7	6¼—6½
Mortgages:			
2–5 years.....	7½—8	7 —7¼	6½—6¾
7–10 years.....	7½	6¾—7	6⅝—6¾
15 years.....	7¼	6¾	6¾
20 years.....	7	6¾	6

upon the adjustment as complete. At this time of year many local authorities are short of money and some "hot" 48 hour notice money has again been taken this week at about 6⅛ per cent, against 6¾ to 6⅞ per cent before the Bank rate change.

In the field of hire purchase finance there have also been marked changes in the rates that hire purchase companies pay on deposit money—though not so far on their agreed

FINANCE HOUSE DEPOSIT RATES



(First Class Houses)

	Before Bank Rate Change %	Now %
6 months.....	Up to 8½	6½—7¼
3 months.....	Up to 8	5½—7

scale of charges for hire purchase accommodation on cars. It is argued that the true interest element in that "service charge" is too small to warrant any change yet. Those finance houses that link their deposit rates to Bank rate have dropped them by one per cent but at least one other is paying 1½ per cent less.

The Spread of Yields

LAST September industrial equities were being bought as a hedge against inflation and even devaluation while gilt edged were being sold for the same reasons. The yield on the shares that compose the *Financial Times* index became almost identical with the yield on Consols. The events of September 19th threatened recession for many industrial companies and put new strength into gilt edged. The yields diverged until recently there has been nearly two per cent between them. The gap has been as wide twice before in the past decade, but it has been no wider.

Money Market Reactions

THE first adjustments in the money market to the 6 per cent Bank rate reflected the assumption that the rate would be kept effective; and the authorities have lost no time in making it so. Hence the flexible rates have come down by notably less than 1 per cent. The Treasury bill rate at the tender last Friday fell by no more than ⅞ per cent, to 5⅞ per cent; the margin below Bank rate was only a trifle wider than that after the increase to 7 per cent, when the bill rate went considerably higher than had been expected. Credit in the market has been kept tight, and help on Bank rate terms has been needed on two occasions; even so, with average money costs down by nearly 1 per cent to just under 4¼ per cent, the margin on bills at the new rate has widened considerably.

The bill rate may therefore be expected to come under pressure in coming weeks. World influences are still pointing strongly downward. The American Treasury bill rate fell again this week to a new three year low point of 1.19 per cent, and the official discount rate has been reduced in both Holland (from 4½ to 4 per cent) and Belgium (from 4½ to 4¼ per cent). On balance, the interest differential between Treasury bills in London and New York has narrowed, but it is still fully 4¾ per cent; moreover, the narrowing was offset by a corresponding movement in the margins on forward exchange, so that the net margin on this type of covered arbitrage remained broadly the same, at ⅜-½ per cent. On Wednesday, however, the forward premium on the dollar widened under the pressure of arbitrage money, and the net margin fell to about ½ per cent.

An intriguing feature of the market's recourse to penal assistance on both Friday and Monday was that for the first time since 1931 some of the help was taken by discounting bills, rather than by taking loans on the security of bills. Although both discounts of first class paper and loans on the security of good paper are now charged at Bank rate, discounting is normally notably more expensive—as indeed it often was before the war when loans were made at ½ per cent above Bank rate; for the average life of bills in the parcel discounted has to be a minimum of 21 days, whereas the loans can be taken for a minimum of seven days.

Several factors could have influenced this unusual choice. As the trend of rates is downward, the banks naturally favour the longer bills, and some small houses may be finding themselves with an undesirable hump of April maturities. Moreover, since these bills were acquired at 6¼ per cent, discounting at the new penal rate does not involve actual loss. There may also have been tax considerations for houses whose accounting years end on March 31st.

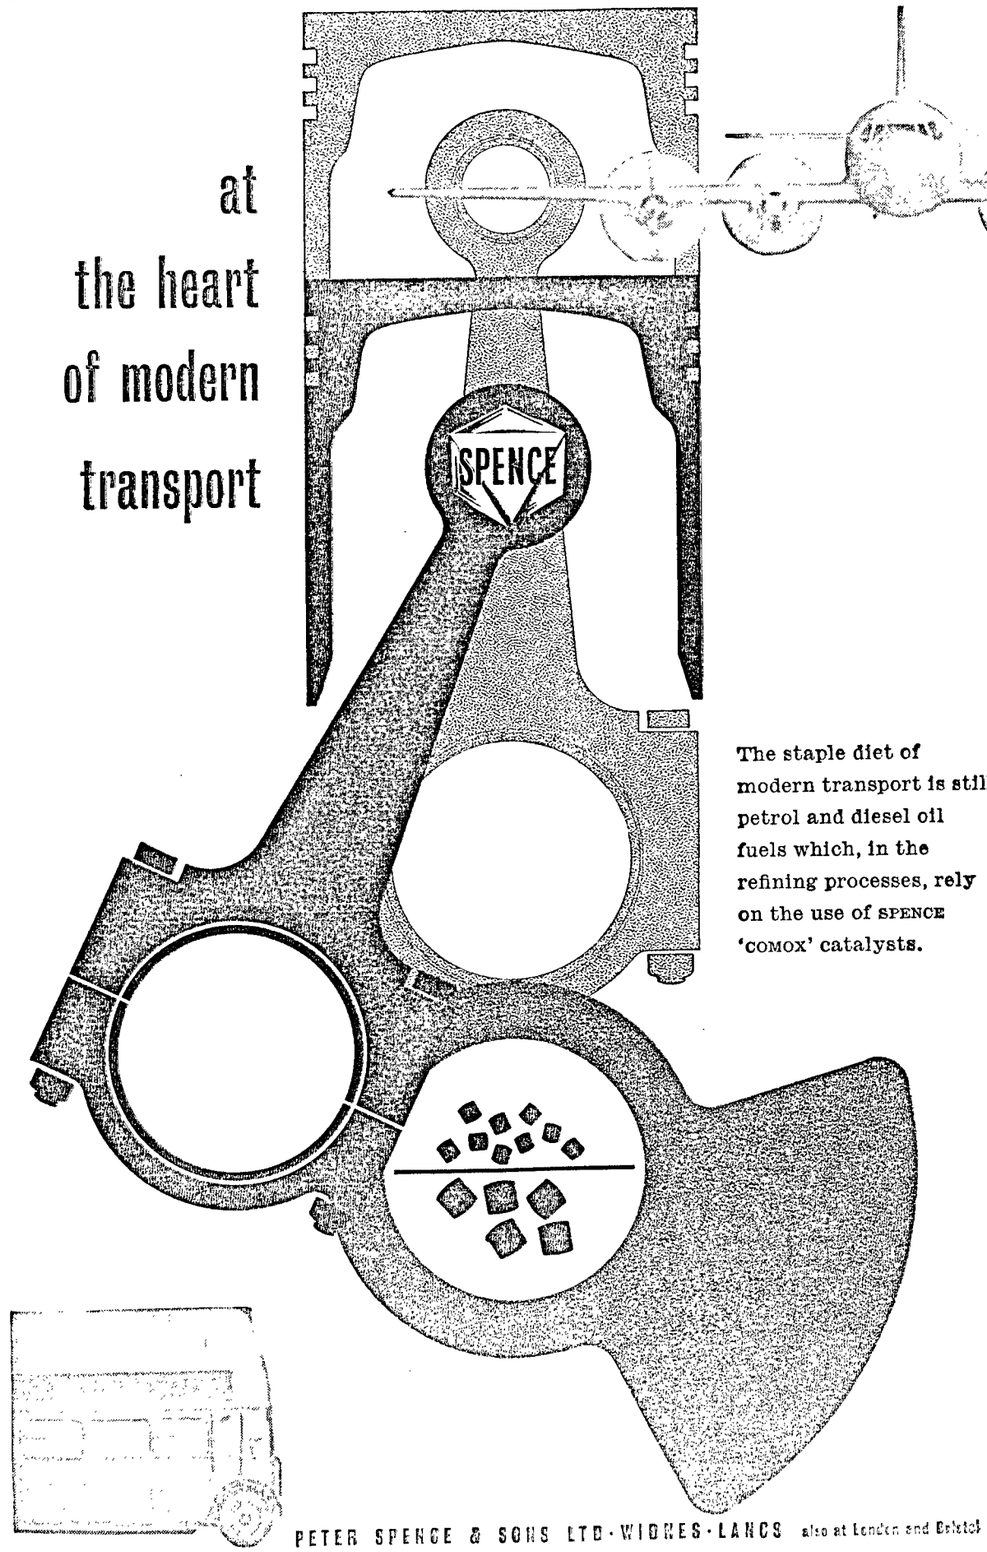
FOREIGN EXCHANGE

Sterling after Bank Rate

STERLING has stood up impressively to the reduction in Bank rate. It has continued in good commercial demand from New York and the rate in the official market, which was $2.81\frac{7}{16}$ before Bank rate was reduced, has since strengthened to $2.81\frac{9}{16}$. For some weeks before the reduction, anticipatory selling of sterling from the Continent had occurred regularly each Wednesday only to be followed by covering purchases on Thursday and Friday after the "no change" announcement. But when the event did occur, the speculators were proved wrong. Sterling did not fall and the small but regular losses they had made by short selling in previous weeks could not be recouped. The undertone of sterling continues extremely firm both on commercial and capital account.

Sterling has been less firm against Continental currencies. The Deutsche mark has again been outstandingly strong; Dutch guilders, however, have weakened slightly following the reduction in the Netherlands Bank rate and Belgian francs were also sold this week in anticipation of a comparable move by the National Bank of Belgium. The evidence of the foreign exchange market suggests that the Exchange Equalisation Account must again have bought dollars and certain Continental currencies on a fair scale during the past week. If that is so it should imply that the end March gold and dollar reserve figures, due to be published next Wednesday, should show a reinforcement well in excess of the $94 million received from EPU in respect of Britain's February surplus.

BANK FIGURES



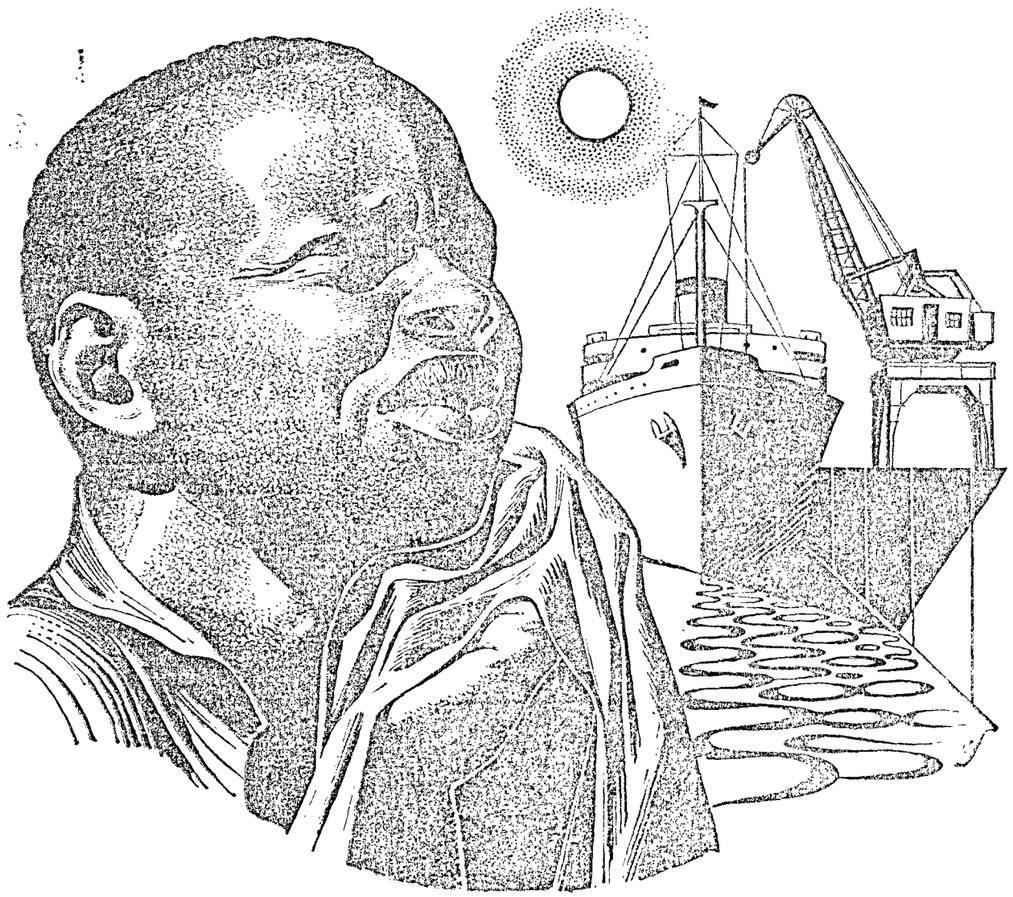
The Credit Trend

THE first bank statements for mid-March show that the seasonal decline in deposits continued in the four weeks from mid-February, perhaps a little more strongly than in recent years. The figures of ten clearing banks (all except the National) show a fall in gross deposits of £37.8 million, and a rise in balances in course of collection of £8.1 million; hence net deposits of the ten banks are down £45.9 million, compared with a fall twelve months ago for the eleven banks of £32.8 million. Liquid assets are now down by nearly £95 million, reflecting the Exchequer's repayments of bills from the proceeds of the tax influx. Advances at the ten banks are up £37 million; and £21 million of this is attributable to the National Provincial, whose figures are affected by a certain number of especially large accounts. But this month's increase in advances as a whole is not unduly large for the season, and it does not imply that the recent downward tendencies have been reversed. In March, 1957, clearing bank advances rose by £53 million, despite repayments by public boards of £17.7 million. The banks still show no concerted move into gilt edged; investments are up by £9.7 million, but the increase is attributable wholly to Lloyds Bank, which also purchased £13 million of gilt edged in January.

PUBLIC INDUSTRIES

Finance for Expansion

THE present system of advancing capital to the nationalised industries from the Treasury, instead of the issue of Treasury-guaranteed stock, about which the Chancellor of the Exchequer has given notice that he will announce his future intentions in his budget speech, was announced in Mr Macmillan's budget of 1956: but the first advances were not made until August 17th of that year. Accounts of these transactions during the financial year to March 31, 1957, with some comments by Sir Frank Tribe, the Comptroller and Auditor-General, were published this week: they were prepared by the Minister of Power and the Secretary for Scotland, who hand the money over to the Gas Council and Electricity and the two Scottish electricity boards respectively. During the eight months in question,



The staple diet of modern transport is still petrol and diesel oil fuels which, in the refining processes, rely on the use of SPENCE 'COMOX' catalysts.

PETER SPENCE & SONS LTD · WIDNES · LANCS also at London and Bristol

Cargoes sweat too

And when they do, rust, staining and other damage may be the result. "Cargo sweat" occurs when ships pass from cold to warm climates. A change from warm to cold can cause condensation on the ship's structure, known as "ship sweat". Shipowners have found the answer to both problems is Thermotank Drihold equipment. This maintains close control of ventilation and drying to ensure that condensation cannot occur. Control of the atmosphere for comfort or industrial processes is the business of Thermotank—on land, sea and in the air. The Company pioneered the first air conditioning of ships more than fifty years ago. Today Thermotank maintain an unequalled service covering every major shipping route throughout the world.

Thermotank
CLIMATE MADE TO MEASURE

£199,150,000 was advanced to these four public corporations for their long-term capital requirements and to repay their bank overdrafts: another £184,400,000 had been advanced during the current financial year and the corporations had repaid about £8 million.

The industries draw their advances monthly in accordance with requirements: they pay rates of interest reckoned to be suitable for long-term Government-guaranteed stock at the date that they are made, and are being repaid on the annuity basis of equal instalments, over 25 years for the Electricity Council, Gas Council and South of Scotland Electricity Board, and over 30 years for the Scotland Hydro-Electric Board. Sir Frank Tribe commented, in his report on these accounts, that the change in method of financing appears to have saved these public corporations considerable expenses in connection with the issue and management of stock.

Finance for Deficits?

PART of the ugly financial prospect faced by the National Coal Board this year, Sir James Bowman explained to the National Union of Mineworkers this week, could be the need to borrow from the Treasury to meet its interest charges as well as its capital requirements: the board is anxious not to have to share the ignominy of the British Transport Commission. The sort of deficit that would force it into that expedient—the figure of £40 million for this year has been mentioned—is what could happen if demand for coal continues to drop at the rate so far this year (800,000 tons down inside Britain in the first ten weeks, in spite of colder weather, with exports down another 750,000 tons) and the board were to take no emergency measures. It is doing so: suspending Saturday mining this summer and recruitment indefinitely, and reviewing its programme for closing uneconomic pits.

It analyses the fall in demand as due first to consumer resistance, owing to the continued increase of coal prices. In the fields where oil competes directly with coal, its consumption went on rising last year (the Coal Board reckons it was equivalent to 19½ million tons of coal last year against 12 million the year before, in spite of Suez): and oil price cuts recently amounted to 5s.-10s. a ton (say 8s. 6d.-17s. per ton of "coal equivalent"). The cut in output in some of the main coal-using industries contributed, so did growing efficiency in the use of coal. Abroad, with Transatlantic freights down to 22s. a ton, the Americans are undercutting British export prices by £1 a ton and the Poles, who will vary their prices to fit any market, by £2 a ton (the Poles are offering large coal f.o.b. at 75s. a ton). British coal is thus increasingly uncompetitive on the Continent—which in any case has as sharp a recession in demand as Britain, with the High Authority of ECSC considering financial assistance to its mining members to help bear the cost of stocks. Stocks are costing the NCB dear, too: and productivity in the industry has dropped so much since the peak of last year that current costs are dangerously high.

Suspension of recruitment apart from juveniles (for most pits), which at its present rate might allow manpower to run down by 15,000 or more in a full year, can clearly save money. Saturday working can be highly profitable in some areas: but not if the coal is not sold. There were 167 pits in 1957 that lost £1 a ton on all the coal they produced: only a limited number will be closed, unless matters get worse. Pit managers have been told to act, with or without union co-operation, against persistent absentees. The board will not consider cutting opencast (which being "let" on long term contracts, could not be cut quickly anyway): it needs the 13s. 5d. a ton it made on the 13½ million tons of opencast coal produced last year.

BUILDING SOCIETIES

Scottish Amicable's Future

SELDOM has a large building society been so unhappily placed as the Scottish Amicable Building Society. This is the largest society in Scotland, with total assets of £24.8 million. The sudden death a fortnight ago of Mr W. S. Allison, the chairman and managing director, soon after the death of his son, Mr W. D. M. Allison, the deputy managing director, has left the remaining directors the legacy of serious depreciation on the investment portfolio. On January 15th, the society's gilt-edged securities showed a depreciation of £1,428,012 on their book value of £5,552,200; this depreciation exceeded by £430,219 the reserves of £997,793. In consequence, the shareholder's invested £1 was not quite covered by 20s. of assets. The investments have been partly carried by a bank loan of £180,000 which remains outstanding.

How did Scottish Amicable get itself into this difficulty? The history is not easy to unravel, for investment policy seems to have been kept in the managing director's own hands. The movement of the book value of the portfolio, which jumped from £4 million to £5½ million in the year 1954-55, and the fall in cash resources in that year suggests that a big buying movement occurred then. A really big depreciation on investments became apparent in the 1955-56 accounts, and from then on the society seems to have gone

* At book values.

slow on mortgage advances. From the evidence of the speech that Mr Thomas Johnston, the respected president, made at the meeting last week it seems that the buying must have included undated stocks: "These securities have been staggered so far as maturity dates are concerned. Government stocks which are undated are, of course, a separate problem." Members are entitled to feel regret that Mr Johnston did not tell them ever what period the dates are staggered, nor the date of the last of them, and that he did not disclose how far the "separate problem" had been dealt with.

As to the future the new board has given no clue. Even a depreciation of £1.4 million should be wiped out by time and a conservative policy. Meanwhile, other building societies are showing interest. To take over the Scottish Amicable at a moderate immediate loss might be justified, the argument runs, by the advantage of a foothold in Scotland. The Alliance is certainly interested and another larger southern society is believed to be, but the general expectation is that the board will carry on independently for the

present at least. Whatever the outcome, the moral for the building society movement must not be lost: liquid assets must be truly liquid. They are there not to earn a high rate of interest. They are there to support the society's obligation to repay its depositors and its shareholders.

CHURCH OF ENGLAND FINANCES

Pooling the Trust Funds

SEPARATE from the general fund of the Church Commissioners, there are scattered up and down the country trust funds designed to further the objects of the Church of England. These include the capital fund of the Central Board of Finance, the trust funds of the dioceses, educational trusts and trusts administered by parochial church councils. Often they are managed by trustees with little investment experience; often they are too strictly confined to gilt-edged stocks by the Trustee Act; and often they are too small to allow the advantages of effective investment spread. A measure has just received the Royal Assent to permit these trusts (which themselves will remain separate entities) to pool their invested funds under a single managing body with powers of investment wider than those laid down in the Trustee Act. The Central Board of Finance is now inviting these trusts voluntarily to come into the scheme. To cater for the requirements of individual trusts, it offers three options:

1. *Investment Fund.*—Moneys contributed to this fund can be invested in the full range of stock exchange securities (including equities) and in property. The trusts participating will in effect become holders of non-transferable shares in the pool. Every six months the fund will declare its dividend and be valued, and money can be put in or taken out only on these valuation dates. The fund, like a unit trust, accepts the risks of capital appreciation or depreciation, and the sum withdrawn will reflect that change in capital value. But the managers of the fund can hold back part of the income and use it to build up the capital fund or to even out the dividend payments. If eventually there is any need to pursue differing dividend policies, the measure allows for more than one investment fund to be set up.

2. *Term Deposits.*—Deposits can be made into this fund at fixed periods of the depositors' choice at a fixed rate of interest agreed at the time of the deposit. The depositor (unlike the member of the investment fund) will draw out exactly what he put in, so that the central board of management is at the ultimate risk if the deposit fund shows a capital loss. Presumably these deposits will largely be invested in local government mortgages, though the fund also has power to invest in trustee securities, building societies and also in the investment fund.

3. *Short Term Deposits.*—The same sum of money as was deposited can be withdrawn under this arrangement at short notice. The deposits can be invested in the same range of investments as the "term deposits." Presumably some of the money will find its way into Treasury bills as well as short term local authority loans. Interest paid on these deposits will be determined at least once a quarter and applied retrospectively.

The volume of funds eligible for these schemes and the proportion of them which will in fact be contributed is unknown, but the size of the fund will be small as compared with the portfolio of the Church Commissioners. But both size and success will depend on the quality of management.

SCIENTIFIC MANPOWER

A Straw in the Wind

BRITAIN'S process industries are not short of pure scientists so much as practical scientists, men who can translate theory into a workable assembly of concrete, tubes, electronics and bent metal. One of the most notorious shortages has been that of chemical engineers, a discipline slow to win professional recognition in this country—although the industries that need them have been among the fastest growing in the economy. This gives special interest to a survey conducted by the Institution of Chemical Engineers which suggests that the worst of the shortage may soon be passing. Taking universities and technical colleges together, the survey indicates that where 277 chemical engineers qualified in 1956 (most of them at universities), by next year the numbers will have more than doubled, to 727, and should be running by 1966 at nearly 1,000 a year. If these estimates are reliable guides, the 47 per cent increase in the total number of chemical engineers between 1956 and 1959, which the 1956 government survey of manpower needs regarded as necessary to meet an estimated demand for 2,200 chemical engineers, should comfortably be reached.

The Institution itself feels that these figures should be interpreted with caution. It does not doubt either that enough boys will want to be trained (five apply now for one place), or that there will be enough places for them; but does suspect that estimates of teachers likely to be forthcoming err on the side of over-optimism. A chemical engineer can earn more in industry and has better prospects than he has in teaching; many advertisements for teachers receive no answers at all, and a good proportion of those who do apply are unsuitable. But the precise figures are probably less important than the indication they give that the watershed has been passed and that in place of the alarming shortages of trained men so repeatedly and regularly forecast, there may in fact be a situtation moving towards equilibrium.

DEFENCE RESEARCH

Uncertain Future

THE future of the Ministry of Supply's huge research establishments balances on a knife edge and depends very largely on how the agreements to co-ordinate defence research with Western Europe work out in practice. Several such agreements have been made in the past without any detectable material results. This time Mr Sandys's European tour seems to have been directed towards two objects: to break down the belief current ever since last year's Bermuda talks between the Prime Minister and President Eisenhower that Britain was interested only in a trans-Atlantic exchange of ideas and saw no future in cross-channel traffic; and to suggest that Western Europe might be interested in making use of the research facilities available in Britain for their own projects. Some of these facilities, such as wind tunnels, computers, high altitude test plant and the like are both expensive and slow to build. It might help the defence industries in Western Europe, particularly the reviving German aircraft industry, to have access to those already in existence.

We are the cablemakers

but not that alone.

We act as a kind of super electrician
for the British Transport Commission,
putting all we know into their scheme
to change the railways to electricity—from steam.
Our contribution is the design and building of the overhead line.
(When completed, the British system
will be the most advanced in the World.)

Oh, Mr. Porter, what will comedians do
when we have brought electric trains from Liverpool to Crewe?
(70 track miles will be electrified at Crewe Junction
without interference with their present (steam-lined) function.)

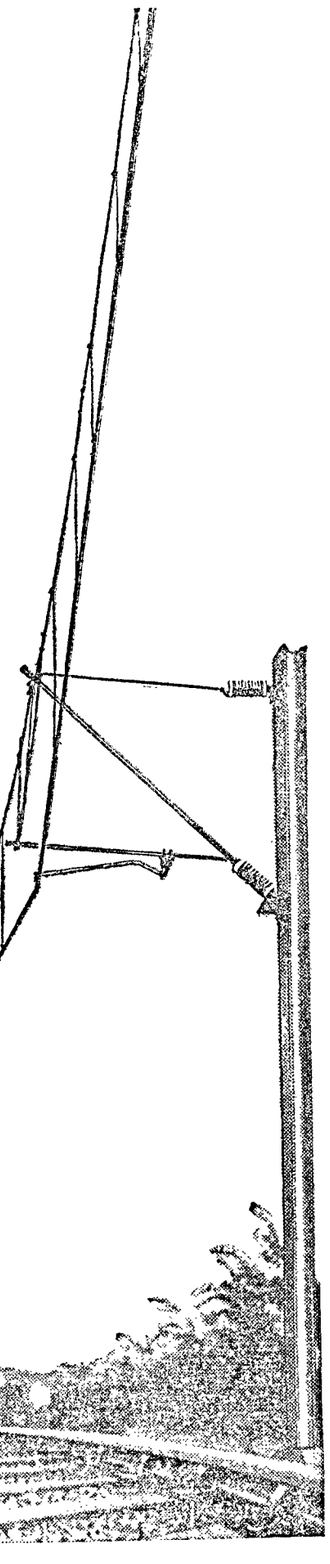
Where else shall we electrify?

A busy line from Liverpool Street
for Enfield, Chingford and Bishop's Stortfordians,
another from Fenchurch Street
for Tilbury (on docks) and Southend-on-Sea.

We are also to act on the section from Colchester to Clacton,
concluding this particular phase at Walton-on-the-Naze.

Why choose us for this important job?

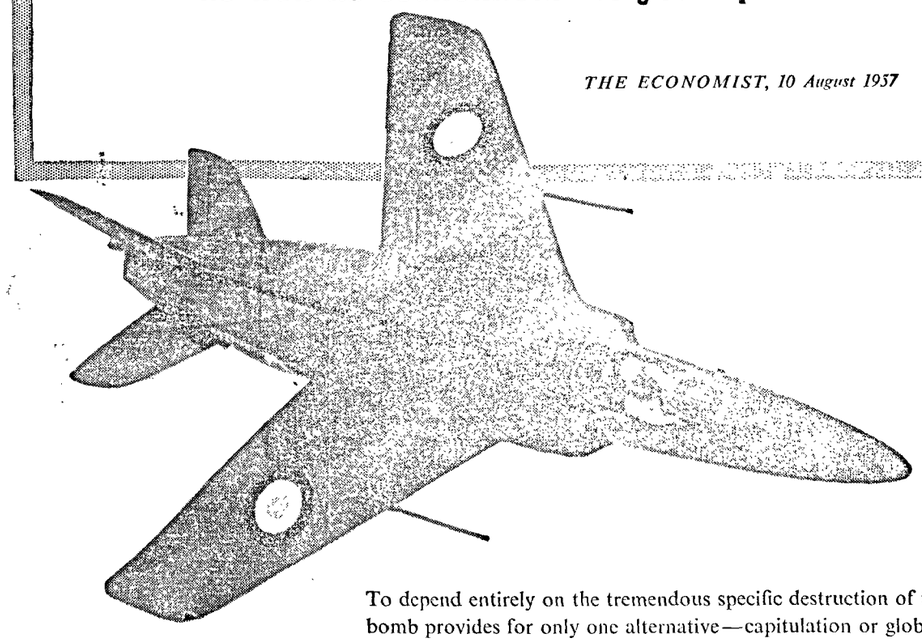
We have the experience.
We have the equipment.
We have the men.



we think for the World
on many lines

BICC

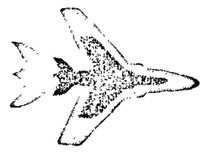
BRITISH INSULATED CALLENDER'S CABLES LIMITED



Parent company of the BICC Group—the World's largest organization (comprising 40 companies) with complete facilities for research, manufacture and contracting in the transmission and distribution of electrical energy for power and communication.

Head Office: Norfolk House, Norfolk Street, London WC2. International Sales Office: 21 Bloomsbury Street, London WC1 Museum 1600

"There is certainly no ground at all
for supposing that defence—
WELL BALANCED AND EFFECTIVE—
as well as economical—is yet expendable"



THE ECONOMIST, 10 August 1957

To depend entirely on the tremendous specific destruction of the nuclear bomb provides for only one alternative—capitulation or global war. It does not take into account British commitments in Nato and elsewhere; or the sporadic raids across ill-defined international frontiers which could become the flashpoints of a third world war. Mobility of conventional forces remains the only effective deterrent to local conflicts.

The GNAT light jet fighter heralds a new trend in fighter design. By brilliant and unusual concepts in design and manufacture the GNAT equals and in many respects surpasses the performance of the conventional fighter—yet it can be built and maintained at only a fraction of the cost of the standard fighter, avoiding the penalties of weight and complexity and the necessity for specially prepared runways. As a modern tactical fighter the GNAT is the right aircraft, for the right job at the right time.

FOLLAND
GNAT
LIGHT JET FIGHTER

FOLLAND AIRCRAFT LIMITED, HAMBLE, SOUTHAMPTON, ENGLAND

What is more important to Britain, such an arrangement would prevent these costly facilities from being underemployed, as they most certainly will be under the reduced defence research programme. The Ministry of Supply's research expenditure for the coming financial year has been cut by an estimated £6 million to £217.4 million, and a further £3.3 million lopped off the cost of works at its research establishments. Since this vote provides a convenient heading under which to tuck away awkward items like nuclear weapons on which the government does not want to reveal its precise expenditure, the fact that the total vote should fall at all at a time when the effort put into such weapons and into exotic carriers like ballistic missiles is rising shows how big the cut must be in other—genuine—fields of research. No more projects are likely to be cancelled; what is happening is that few new ones are being fed in at the other end of the pipeline. By 1961 or 1962, the British forces may be only too grateful to accept weapons designed and made in other countries for they may be bringing forward very few designs of their own.

SOUTH AFRICA'S RESERVES

Dollars Drawn from IMF

SOUTH AFRICA has this week bought $25 million from the International Monetary Fund and has in addition arranged a standby credit for a like amount to be available over the next twelve months. These dollars are equivalent to the gold tranche of South Africa's subscription to the Fund and have, therefore, been obtained cheaply and without need for prior authorisation. South Africa's gold and exchange reserves have been falling steadily during the past year. At the end of March, 1957, they stood at £136,500,000, of which £53,300,000 was in exchange, mostly sterling, and £83,200,000 in gold. By the end of 1957 the total had fallen to £103,200,000 and the latest figure—for March 21—was £89,060,000, of which £18,800,000 was in exchange and the balance in gold. The sharp diminution in exchange holdings may partly reflect capital movements springing from the disparity between interest rates in South Africa and London. But South Africa has also recently introduced a considerable liberalisation of imports.

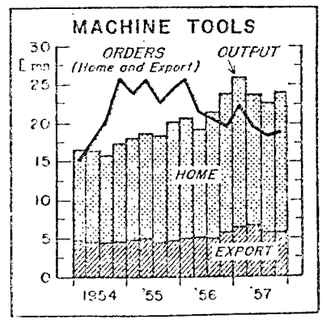
LIFE ASSURANCE

Bumper Bonuses

THIS year's bonus declarations by the life offices show how profitable participating contracts can be at a time of dear money and increasing longevity. With one exception, all the offices that have declared a bonus or changed their interim bonuses on policies becoming claims between valuation dates are paying more. The cost of getting a record amount of new business and all-round increases in other expenses have been offset by profits from longevity and by buoyant interest income; high yields on fixed interest stocks and rising equity dividends are the key to big bonuses. Not all the dividends however, have risen in step with the bonuses; like the Prudential, Pearl Assurance has increased its bonuses but, unlike the Prudential, it has left its tax free dividend unchanged—at 70 per cent. Good news is not confined to holders of with-profits life policies. Pension deferred annuities with profits, both for employees and for the self-employed, are receiving higher bonuses, as are industrial policies.

The further depreciation of their stock exchange securities that all the offices suffered in 1957 will not affect bonuses. Most offices had more than sufficient hidden reserves still in hand to absorb the whole of last year's investment losses—and these losses will eventually be recovered in so far as insurance company portfolios consist of dated stocks. Other offices can, with perfect propriety, adjust the basis of their actuarial valuation to take account of the higher prospective rate of interest and use the reserves thereby released to write down their assets.

ORDINARY LIFE BONUSES



Office	Reversionary Bonus (per cent.) Old rate	New rate	Office	Reversionary Bonus (per cent.) Old rate	New rate
Britannic	40/– S	42/– S	Prudential (c)	42/– S(b)	44/– S(b)
Commercial Union	42/6 C	50/– C	Royal Exchange	42/– S	50/– S
Co-operative	40/– S	40/– S	Scottish Equitable	45/– C	46/– C
Life Assoc. of Scotland	36/– S	45/– S	Scottish Mutual	40/– S(d)	44/– S(d)
London & Manchester	40/– S	42/– S	Scottish Provident	42/– C(d)	45/– C(d)
National Farmers (c)	30/– S	40/– S	Scottish Widows'	44/– C	46/– C

Pearl (a)	40/– S	42/– S	Yorkshire	45/– S	50/– S

S Simple bonus: C — Compound bonus. (a) U.K. business: (b) Policies issued before 1955 receive additional bonuses on death or maturity. (c) Minimum: (d) On endowment assurances: whole life bonuses are different.

MACHINE TOOLS

Steady but still Busy

THE rate of new orders for machine tools from home industry and from overseas would appear to have levelled off since last summer to roughly £6 million or so a month. But as the monthly rate of output has meanwhile been running at almost £2 million more than that, the industry's total order book has been steadily falling. Last December it contained £79 million worth of business, £26 million less than at the peak of the boom in orders for home investment in the spring of 1956, and equivalent now to only nine months' future work. Generally it is the more standard type tools that can be delivered most readily, by some firms straight from stock, while the specialist tool makers are on the whole still well booked up. But the position does vary from firm to firm: one manufacturer of turret lathes can still only offer two years' delivery whereas a competitor with an almost similar type of tool is able to deliver in a couple of months. This shortage of business for a few firms in the industry has already begun to affect their rate of output. Total production expanded much more slowly during 1957 and November and December output was actually a little smaller than at the end of 1956—too short a period, however, to be taken for certain as a definite new trend in the industry's activity.

Nevertheless the £87 million worth of tools manufactured last year represents an increase of almost half on the value of the industry's output in 1954 before the investment boom. Allowing roughly for price increases, this probably means an increase in volume of between 10 and 15 per cent in the three years. Only in 1956 did the industry become a net importer of machine tools—when exports reached £21 million and net imports £25 million—so unlike the rearmament period during and after the Korean war the industry managed broadly to meet the demands of British industry (and retain its sizeable export trade). Delivery delays increased on average to about 15 or 16 months at the peak, which suggests that the industry, while avoiding overexpansion, managed to step up its capacity only to what it deemed prudent. The present drop in American machine tool production and the extent to which labour has had to be laid off there is the latest example of a lesson the British industry can now claim it was wise not to forget.

MONOPOLY CONTROL

Agreement over Oxygen

An agreement has now been reached between the British Oxygen Company concerning practices of the company that were criticised by the Monopolies Commission in February, 1957, when it held that "conditions laid down in the Act" did exist in the supply of oxygen and dissolved acetylene, and operated against the public interest. The company's undertakings cover a fair variety of subjects. It has told the Board of Trade that:—

- a substantial research effort is being made and will continue;
- it will not take over other producers of these gases with the object of adding to its monopoly position;
- it will not use subsidiaries as "fighting companies" to eliminate competitors;
- it will sell gas in the quantities customers require without stipulating that they buy all their requirements from it alone;
- it will similarly sell gas-using equipment without any "exclusivity" require-conditions about taking gas;
- it is already publishing price scales for oxygen and acetylene for all customers except those taking oxygen in "tonnage" quantities, where prices will be negotiated according to geographical situation and regularity of demand;
- these published scales will apply to all customers save those who get their gas free of increase in price over 12-month periods as a reward for agreeing to buy some minimum quantity during that period; and that
- the company's quotations for plant shall be based exclusively on the need to sell plant, independently of its interest as a supplier of gas.

These undertakings cover most of the specific points criticised by the Commission last year. The Board of Trade, which took no action on the Commission's recommendation of price control for BOC, remarks after detailing these undertakings that it had "thought it desirable to draw the company's attention to the powers conferred by Section 12 of the Monopolies and Restrictive Practices (Inquiry and Control) Act, 1948"—which refers to its powers to ask the Monopolies Commission to report whether undertakings of this nature are being complied with in practice.

COTTON WEAVERS

New Redundancy Scheme

Shades of the great redundancies of the 1930s, when the Surplus Spindles Board, buttressed by a statutory levy, set about reducing the number of cotton spinning spindles in Lancashire in the hope that scrapping surplus spindles would leave a livelihood for the remainder, are conjured up by the new redundancy move in cotton and rayon weaving. But Weaving Reorganisation Limited, just registered with a nominal capital of 100 shares of £1 each, will not work in quite the same way as the prewar spinning section scheme. It represents a private effort of the two weaving trade associations—the Cotton Spinners' and Manufacturers' Association and the Rayon Weaving Association—and it will rely on private finance to buy up and scrap surplus looms.

The chairman is Mr J. H. King, formerly general manager and now a director of Williams Deacon's Bank. The other directors, Sir Cuthbert Clegg, Mr E. W. Cockcroft, Mr J. D. Greenwood, Mr S. L. Mason, Mr R. W. Pennington and Mr W. T. Shackleton, appear to represent the weaving associations notwithstanding that Sir Cuthbert Clegg is also a local director of Martins Bank. It is proposed to raise most of the finance from outside the industry and, part of it in the form of interest-bearing loans, and an application is to be made to the Capital Issues Committee. Obviously, the sponsors must be thinking in terms of bank money, but it is not clear that the connection with Williams Deacon's is closer than the chairman's personal one. The appeal to sell to the new company and be closed down is intended mainly for those cotton manufacturers who have not re-equipped, but the terms that will be offered to such mills have not been disclosed. One important provision in the particulars registered requires not only every director but every servant of the new company to pledge himself in advance to strict secrecy in order to protect those who may wish to negotiate the sale of their looms.

That cotton weaving, with 78 per cent of Lancashire's 209,000 installed looms working, has a redundancy problem is not doubted. Weaving at the moment is certainly the least prosperous section of the industry. The doubt must obviously be whether, while imports remain unrestricted, the mere removal of the surplus (and presumably weakest) part of the weaving industry will automatically bring more business to other Lancashire looms rather than to Hongkong, India and Pakistan. The weavers think it worth trying. They will think their chances much better if the Board of Trade delegation now in Hongkong, headed by Sir Frank Lee, does succeed in getting the Asiatic members of the Commonwealth to accept a quota limitation on shipments to this country.

RECEIPTS

Lord Hailsham Dissents

Lord Hailsham's exhortation to the business community "to go back to the sensible practice" of giving stamped receipts is not likely to check the economical practice of abandoning them. The way in which last year's Cheques Act provoked the quite unexpected revolt against receipts is a minor oddity of business history, but several

big businesses had given up calling for receipts a long time before the Cheques Act was conceived, and some had successfully asked their suppliers to do without them too. Many more firms and some state boards have now followed the pioneers' lead—and a few have pushed the change beyond propriety, by ignoring legitimate requests for receipts from the few payers who want them.

It is possible, though laborious, to discipline such offenders, and a few examples might be a useful reminder that doing without receipts must be by consent of both parties; but it offers considerably more saving than the receipt stamp alone, and despite a small and vocal opposition, the abandoning of receipts has clearly come to stay. Perhaps the only danger, as opposed to inconvenience, in the new practice is that when no receipt is expected it will take longer to discover that a cheque has gone astray, and the resulting delay in "stopping" the cheque may make it easier for the money to get into wrong hands; but if the cheque was properly drawn in the first place the risk of misappropriation is slight. The Chancellor of the Exchequer said some time ago that paid cheques will be accepted as evidence of payment in support of maintenance claims under Schedule A. After something so near to governmental approval of the change it is too late to try to reverse it.

SOFTWOOD

Stockpile Sold Out

The remaining 55,000 standards of the British Government's strategic reserve of softwood have now been sold to the trade. Thus the stock built up largely during the war to a maximum of 233,000 standards has been entirely disposed of since May, 1956. The wisdom of selling on a weakening market may be open to question. Commercial stocks of softwood in this country amounted to the substantial figure of 543,000 standards at the end of January and will, some importers argue, need to be reduced by about 10 per cent by the end of the year. So British imports in 1958 seem unlikely to exceed 1.3 million standards, against well over 1.4 million last year. The Russians meanwhile remain substantial sellers. Since December they have sold 120,000 standards on the British market and they have recently offered a further 70,000 standards at reduced prices. Redwood fourths as an example are offered £3 a standard lower than at the beginning of this season. Lower freight rates have also brought Pacific Coast Canadian timber into the picture and some has been sold as low as £67 a standard cif. Only the Scandinavians are now taking the opposite view and holding firm in the hope of an eventual revival in British buying.

SHORTER NOTES

The figures given in the Business Leader "New Pattern for Electricity" last week for the capital employed in the Central Electricity Generating Board and the Area Electricity Boards were wrongly described as "written-down values." They were in fact original book values at historical cost, before taking account of amounts so far provided for depreciation.

* * *

Mr C. W. Hutley and Mr G. F. Farrow, joint managing directors of the property company, A. Peachey, have acquired a controlling interest in Bell London and Provincial Properties, which owns a number of shops and about 1,400 flats (including a big block of flats at Marble Arch). The new policy "will be to negotiate fresh leases with existing tenants."

COMPANY AFFAIRS

LEWIS'S AND HARRODS

The department store, says Mr S. H. Leake, the chairman of Lewis's Investment Trust, is "by tradition an opportunist organisation." At current prices, are the equities of these opportunist organisations opportunity stocks for investors? An immediate answer is suggested by the statement of Sir Richard Burbidge, the chairman of Harrods, that "the outlook for 1958 cannot be reviewed with a great deal of optimism." In 1957-58, the net profits of Harrods edged up from £1,049,361 to £1,073,565 and on the maintained dividend of 17½ per cent its £1 ordinary units at 55s. 9d.xd yield 6¼ per cent. In the same period the net profits of Lewis's Investment Trust fell slightly from £2,271,437 to £2,238,046, largely because of an initial loss on the trade of the newly opened Bristol store which, however, is "approaching a profit earning basis" sooner than the directors had anticipated. The trust's 4s. ordinary units on the maintained dividend of 17 per cent yield 5⅛ per cent at 13s. 3d.xd each. Does the gap in these yields indicate a different view of the prospects for a department store group such as Lewis's concentrating on the medium range of goods than for a group such as Harrods more heavily committed, especially in its London store, to the top range?

Whatever the reason it is clear that both groups have found—and will find—the competitive going hard. Costs are rising, prices may have to be trimmed and it is not easy to secure a big increase in turnover. Investors must therefore look beyond this year. They have done so, noticing that both groups have built or intend to build new stores—Lewis's at Bristol and Harrods in Birmingham—and have spent and are spending big sums on improving existing stores. Hoping for the fillip these developments may eventually give to earnings investors have to accept conservative dividends now, for the directors of both groups are intent on meeting the capital cost from retained profits. Another point that investors in department stores always have in mind is that underlying asset values far exceed current stock market prices. How much so was revealed by Sir Richard Burbidge when, in vigorously denying rumours about a take-over bid, he stated that the market value of building, plant and land owned by the Harrods group was double the book value of £10 million, giving an asset value of at least £5 per £1 ordinary stock. But to buy ordinary shares of department stores now is to accept bread today in the hope of jam tomorrow.

ANGLO AMERICAN

Last year's 10 per cent free scrip issue by Anglo American Corporation of South Africa pointed the way towards the liberalisation of its dividend policy. Rising profits and dividends from the new gold producers in the Orange Free State signposted the road still more clearly. Now the first big step along the road has been taken. The final dividend is set at 6s. per 10s. share (against 5s.), making a total payment for 1957 of 8s. per share (against 7s.); the final dividend is payable on the capital as increased by the offer by Anglo American to acquire a further holding in African and Euro-

pean Investment Company. That company is now controlled by Anglo American, which owns about 86 per cent of its equity, and it too has raised its dividend. In all, the total dividend of African and European, which has interests in coal as well as gold, has been increased from 3s. 3d. to 4s. per 10s. share.

The net income of Anglo American rose last year from £4,418,395 to £4,987,000 but that increase does not fully reflect the bigger dividends recently declared by some of its gold mining investments for their final dividends were declared and paid after the Anglo American accounts were closed. Thus another increase in its income is likely this year and it is upon this prospect as much as upon the latest dividend that the 10s. shares now stand at 125s. and offer a yield, low even for the leading mining finance house, of £6 8s. per cent.

ALBRIGHT AND WILSON

THE major chemical companies are now reporting good figures. Preliminary returns from Albright and Wilson for the year to December 31st make pleasant reading for stockholders. The ordinary dividend has been raised from 18 per cent to 20 per cent. On the news the 5s. stock units rose from 17s. 9d. to 19s. 3d. and on the new dividend they yield 5.2 per cent. Last year the consolidated trading profit, before depreciation and tax, advanced from £4,416,000 to £4,754,000 and the net profit after tax from £1,203,000 to £1,553,000.

But the most significant fact is that the advance in profits occurred in the second half of the year. Gross profits in the first half of the year were slightly down—from £2,292,000 to £2,234,000—because in 1956 the controlling interest in an American subsidiary, Oldbury Electro-Chemical, was transferred to Hooker Electrochemical, another American company which is not a subsidiary of Albright and Wilson, and the earnings of Oldbury were excluded from the 1957 reckoning. Dividends received from Hooker Electrochemical have, of course, been included. Thus the directors' prediction of "satisfactory" results in the second half of 1957 has been fully justified, with the gross profits of the Albright and Wilson group advancing in that period from £2,124,000 to £2,540,000.

MONSANTO CHEMICALS

ON the 13½ per cent dividend paid for 1957, the 5s. ordinary stock units of Monsanto Chemicals yield just over 5 per cent at a market price of 13s. 4½d. The yield looks ahead. The group is still growing fast, and last year its turnover rose by 11¾ per cent, its profits before tax rose from £1,722,887 to £2,098,104 and its net profits after tax rose from £884,485 to £1,029,832. But investors are looking well beyond these figures towards the completion of the Fawley developments.

So they will be encouraged by the remarks of the chairman, Sir Miles Thomas. After announcing that, with the technical assistance of the American parent company, Monsanto is preparing to enter the market "with a range of fully competitive polyethylenes," Sir Miles says: "During the current year we made an excellent start on the construction of the polyethylene plant at Fawley, and . . . the bulk of the building work and a large part of the plant installation is expected to be completed during 1958." This and other developments at Newport and Ruabon should, Sir Miles concludes, "not only consolidate but increase our home and export business" enabling the group to "take full advantage of any liberalisation of European trade." And Monsanto, he claims, already maintains "a higher proportion of direct exports than is general either in the British chemical industry or in British industry as a whole."

FORD MOTOR

THE full accounts of Ford Motor and the statement by the chairman, Sir Patrick Hennessy, which accompanies them, add little to the information investors have already gleaned from the company's half-yearly and full year's preliminary reports. The difference between the trading and profit experience of the first and second halves of the year was discussed in these columns on March 15th. Sir Patrick Hennessy draws attention to the contrast but, beyond a passing reference to the "important cost factor" of "high volume production," he does not explain why the change in demand had such a telling effect on profits. How telling is revealed in the following figures:

	1956	1957
Number of units sold at home	165,803	153,752
Number of units sold abroad	153,939	184,669
Total number of units sold	320,742	338,421
Total turnover	£145,673,493	£165,915,939
Gross profit	£3,735,945	£18,042,573
Net income	£5,514,356	£10,830,809
Ordinary dividend	7½%	9%

Sir Patrick, however, does point to the record level of exports and in particular to a "dramatic" increase in exports to the United States. But shareholders will regret that having fixed their gaze on the export market Sir Patrick does not add any comment about current prospects either in that market or at home. Clearly, however, Ford Motor is still planning for an eventual enlargement of its markets, for having spent £19½ million on fixed assets last year it still has outstanding contracts for £13¼ million. It has been able to finance these additions and an increase in stocks from £26.7 million to £29.9 million without appealing to the capital market. Indeed, over the year it built up its liquid balances still further—from £31.8 million to £37.4 million. But that reinforcement must surely be regarded as temporary, for "trade accounts, deposits and sundry creditors" have jumped from £25.9 million to the surprisingly large figure of £38.4 million.

BRITISH ALUMINIUM

ALUMINIUM production is not at the moment the happiest of industries, and British Aluminium is perhaps not the happiest of companies in that industry. This, the biggest British concern, has long been a producer of ingot aluminium on a relatively small scale and a fabricator of its own and other producers' metal on a large one. Much of the company's present growing pains, including the none too felicitous rights issue of 2,000,000 ordinary shares at 58s. last July, have been the outcome of the decision to assure supplies of aluminium by increasing on the production side. That decision has been overtaken by a buyers' market for the metal, the cut-back in the aircraft industry having led to a cut in the production of aluminium in North America. The ordinary shares stand at 44s. 9d. (to yield 5⅛ per cent) after a profit and dividend statement that can have lifted few hearts.

The final ordinary dividend, payable on the increased capital, is 8 per cent, in line with the prospectus forecast that the 12 per cent rate would be maintained on that increased capital. Trading profits for 1957 were, however, £273,733 down at £3,020,706. Those figures were struck after deducting a smaller depreciation provision of £810,165 (against £858,302) and a smaller allocation to plant replacement reserve (£200,000, against £250,000). The consolidated net profit after tax, thanks to a lower tax charge and a bigger investment income, was £1,247,389 (against £1,330,989) a sum which covers the 12 per cent dividend on the increased capital about twice. But the full impact of the recession was presumably not exhausted in 1957.

BEECHAM GROUP

THROGMORTON STREET has long had a bullish eye on the 5s. ordinary shares of the Beecham Group. Profits were shown in an interim report last November to be climbing rapidly and the second interim dividend was increased from 10 to 12 per cent after the first interim payment had been left unchanged at 10 per cent. Investors then began to think in terms of a total dividend for the year to March 31st, 1958, of 37½ per cent, as compared with 32½ per cent in 1956-57. They were too cautious; the directors have now announced a 100 per cent scrip issue and a final dividend of 9 per cent on the increased capital. Thus on the old capital the total payment has been effectively raised from 32½ to 40 per cent, or from 16¼ to 20 per cent on the new capital.

The increase, the directors say, is made "in the light of the information which they have at the present time" about the 1957-58 trading results. These will certainly be good and on the basis of the gross profit of £3.2 million earned in the six months to September 30th a full year's gross profit of £6 million or over (against £4.5 million in 1956-57) does not seem to be an impossible guess. But whatever the profits are, the dividend itself more than satisfied the market where the 5s. shares were marked up from 29s. 9d. to 32s. 4½d., to yield just 6.2 per cent on the new dividend.

BRADFORD DYERS

SINCE the sale of its controlling interest in Beida Dyers, Bradford Dyers has earned most of its profits in this country. As was noted in these columns profits of these home subsidiaries fell by 8.7 per cent to £722,708 last year. The chairman, Mr James Ewing, attributes this decline to:

1. A fall in the volume of goods available for dyeing and finishing, particularly in the second half of the year.
2. Smaller margins in more competitive markets for cottons and rayons.
3. "Heavy revenue expenditure" in connection with the closing down of two branches and the transfer of another to a different locality.

The profits of overseas subsidiaries, of which the most important are in North America, fell by 41 per cent, from £259,645 to £152,979. In North America, though turnover was maintained, margins were sharply cut, being more than halved in the United States where "intense price competition" forced the company to absorb increases in wages and the costs of supplies.

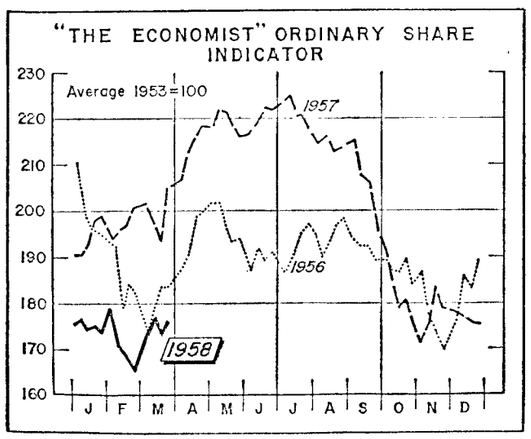
Investors are fully used to bad news from the textile industry and they have become familiar with the steps the textile manufacturers are taking to try to improve matters. Bradford Dyers is fortunate in that it can spend heavily on capital account to instal new machinery. It is also trying to achieve economies by concentrating production in a smaller number of processing units, and is adding to its interests outside the field of dyeing and finishing. Investments in these "diversified interests" now amount to £780,000 (against £500,000 a year ago) and they spread to steel merchanting and engineering. Bradford Dyers like other textile manufacturers has become interested in tufted carpets and Mr Ewing now says that the company is "able to produce printed carpets in attractive designs at reasonable cost." But it is not to these interests, promising though some of them may be, that investors will look for a recovery in the group's fortunes. The dividend which has been cut from 10 to 6 per cent is still largely bound to textiles. On the reduced dividend the £1 ordinary shares at 13s. 4½d. yield almost 9 per cent.

TIMOTHY WHITES AND TAYLORS

GOING for the first time into some of the shops of Timothy White and Taylors the customer is not quite sure whether he has entered a hardware store or a chemist. The Timothy White shops, scattered up and down the country, are in fact both and the group is a wholesale chemist as well. Like other multiple retailing groups, the company has been closing down uneconomic branches, opening new ones and improving existing ones. The policy has paid off and for the year to December 29th the directors have reported another increase in trading profits, from £1,670,681 to £1,745,362, and in net profits from £491,882 to £544,858. This is a smaller rate of advance than was achieved in 1956 when presumably the pressure of costs on margins was less strong; and the slowing down in the rate of expansion may have some bearing on the directors' decision to leave the ordinary dividend, allowing for the 100 per cent free scrip issue, effectively unchanged at 16¼ per cent. This dividend absorbs £211,826 net and on it the 5s. ordinary shares at 13s. 10½d. yield just under 5⅞ per cent.

THE DOWTY GROUP

IN these columns on March 8th, the figure of £475,000 was wrongly described as being the gross profit of the Dowty Group in the six months to September 30th. It is in fact a net figure struck after tax.



London Stock Exchange

FIRST DEALINGS:	Mar. 12	Mar. 26	April 16
LAST DEALINGS:	Mar. 25	April 15	April 29
ACCOUNT DAY:	April 1	April 22	May 6

FOLLOWING the reduction in Bank rate, gilt-edged made limited gains, the improvement over the week ranging between ¼ and ½ in medium and long dated stocks. Short-dated stocks weakened on the small fall in the Treasury bill rate, but on balance 2 per cent Exchequer 1960 gained ⅛ to 95⅝ and 4½ per cent Conversion 1962 ⅜ to 98½. High-coupon corporation and Dominion loans were supported, but the rise was limited by the possibility of further issues; 5½ per cent LCC (1977-81) rose 1½ to 98½ and 6 per cent Federation of Rhodesia and Nyasaland (1976-79) improved 2 to 1¼ discount.

Although the *Financial Times* index of industrial stocks rose 4.3 last Thursday the prevailing uncertainties reduced the overall rise to 1.5 on the week. Ushers Wiltshire Brewery jumped 6s. 10½d. to 56s. 10½d. over the week. Richard Costain made a large advance before the announcement of the dividend increase. Electrical shares turned dull on rumours of a possible issue; AEI declined slightly to 49s. 3d. over the week. Finance shares were strong, United Dominions Trust rising 4s. to 84s. Land Securities new debenture started at a premium of 1¼ on Wednesday, but South Durham's convertible debenture fell from an opening discount of 1¼ to 3¾ discount.

Shell Transport and Shell Trinidad made gains despite a reaction on Wednesday, but BP and Burmah lost ground under the influence of political changes in the Middle East. Kaffirs were dull and movements in diamond producers were irregular. Copper mines were outstanding among base metal producers; Bancroft rose a further 1s. 4½d. to 17s. 6d., Nchanga 18s. 9d. to 200s. and Rhokana 2⅜ to 24¾. Tea shares were firm and rubbers steady.

(1) This covers mining, manufacturing, electricity and manufactured gas with the following exceptions: Denmark excludes mining; Greece, mining and manufactured gas; Ireland and Sweden, electricity and manufactured gas; and Austria, manufactured gas. Germany excludes West Berlin, Luxemburg. Italy includes Trieste. (2) Special trade (excluding re-exports) with the exception of Ireland which covers general trade with exports seasonally adjusted. Belgium includes Luxemburg. (3) New drachma introduced May 1, 1954 (1 new drachma = 1,000 old drachmas). (4) Thousand million drachmas. (5) Bizonal area. (6) Average for third quarter.

Financial Statistics

EXCHEQUER RETURNS

For the week ended March 22, 1958, there was an "above-line" deficit (after allowing for Sinking Funds) of £1,705,000 compared with a surplus of £16,842,000 in the previous week and a surplus of £25,112,000 in the corresponding period of last year. There was a net expenditure "below-line" of £35,084,000, leaving a total deficit from April 1st of £89,041,000 (£315,038,000 in 1956-57).

THE MONEY MARKET

At the tender on day after last week's Bank rate reduction, the Treasury bill rate dropped by ⅛ per cent to 5⅛ per cent. The discount houses raised their bid by 2s. 3d. to £98 12s. 2d. per cent; and the market again secured a good proportionate allotment of 52 per cent. Total applications were up by £29 million to £309 million, for an allotment up by £10 million to £260 million.

Money has been generally short since the Bank rate cut, and on both Friday of last week and again on Monday small amounts were taken at the new penal rate. The Bank also gave fairly large help through special purchases of bills, some of them from the banks, and this money was passed on to the market at rates up to 5⅝ per cent. The general rate for "floating" money has been 5-5⅛ per cent; the clearing banks' new minimum on "good" money is 4½ per cent. Dealings in June maturities began after the tender at 5⅛ per cent, but this week rates hardened to 5⅛ and even 5¼ per cent.

Rates on commercial bills have generally fallen by around ½ per cent. Thus two and three months' fine bank bills are down from 6¼-6⅜ to 5⅝-5¾ per cent, and three months' trade bills from 6¼-7¼ to 6¼-7 per cent.

The Bank return shows a pre-Easter outflow of notes of £10.2 million. The fiduciary issue has been raised by £50 million to £2,050 million.

BEFORE — AFTER — *and the difference?*

What Vulcan insures, Vulcan inspects—thoroughly and *regularly*. As a result our clients have made us one of the largest engineering insurance companies in Europe.

Maybe £5,000

How?
Faulty water gauges were spotted, and an accident costing £5,000 or more has been prevented.

Spotted by whom?
By a Vulcan Engineer-Surveyor during his regular inspection of the boiler. Experience gives him almost second sight into the accidents that are waiting to happen.

Are his services expensive?
Not at all. Your broker will tell you that, though the Vulcan man is a specialist, his services cost no more than insurance and inspection by general practitioners.

COMPANY MEETINGS

LEWIS'S INVESTMENT TRUST

POSITION OF GREAT FINANCIAL STRENGTH

MR S. H. LEAKE ON DOUBTFUL MERIT OF A SALES TAX

The twenty-ninth annual general meeting of Lewis's Investment Trust Limited, will be held on April 15th in Liverpool.

The following are extracts from the circulated Statement of the Chairman, Mr S. H. Leake, OBE, to be delivered at the Annual General Meeting:

After a succession of record trading profits the Group consolidated net profit at £2,238,046 shows a reduction of £33,391 on the previous year. Our new Bristol Store, which was opened on September 26th, inevitably incurred a loss on trading in its early months. Building operations both in Liverpool and at Selfridges affected our trading in those Stores. We have also had to meet a further rise in working expenses, including wages.

The principal movement in the Accounts reflects the completion of our Bristol Store. Building construction, fixtures and stock represented a total investment of some £3 million, of which approximately £1,800,000 was paid out during the year. This was financed wholly out of our own resources, and the Consolidated Balance Sheet of the Trust shows that there is a reduction in the holding of Treasury Bills from £2,574,350 to £895,149. Nevertheless we end the year with more cash in the bank and a larger holding of Tax Reserve Certificates than last year.

While the net current assets of the Group of £6,806,448 show a reduction of £1,406,634 for the reasons already explained, our Fixed Assets, after Depreciation and Amortisation, at £19.175,144 show an increase of £2,306,786.

DIVIDEND POLICY

In the light of our capital commitments of £2,127,000 we decided to recommend that the final dividend should be kept to the same level as last year, leaving a balance to be carried forward of £335,798, against £309,970 brought in and adding a total of £1,336,891 to the Reserves, representing 59.73 per cent profits, as compared with 60.30 per cent in the previous year. You will observe that the Reserves, less Intangible Assets, are shown in the Consolidated Balance Sheet at £6,836,093, which compares with the Trust's Ordinary Capital of £5,715,978. This is a position of great financial strength, but after the heavy outflow which has occurred during the past year, it would clearly be wise to rebuild our cash resources to meet the capital commitments still outstanding.

We have completed an important stage in our development programme. We have planned and erected our Store in Bristol at a cost of some £3 million, which we have paid for without recourse to borrowing. The necessary funds were available within the Group because we have followed a policy of good husbandry in retaining considerable profits for use within the business. Prosperity is seldom static; it usually progresses or it falls away. It is our constant aim to keep your business on the up-grade and this demands expansion of our activities. To expand requires money and to raise money there are two obvious courses open to us—either to accumulate profit retentions or to approach Members or the Capital Market for fresh funds. Had we distributed a high percentage of the profits of the past and had to raise additional Capital, the £3 million necessary for our Bristol Store at the present time would have been costly, for the distribution of this sum would have attracted in Profits Tax no less than 7 per cent of the gross amount, or about £1,400,000. We have confidence that the project in Bristol will yield profit and advantage to Shareholders in the near future. We are now engaged in building up our reserves again not only to finance the completion of our present programme of over £2 million but to lay the foundation for further expansion as and when opportunity offers.

PRICES

There would now appear to be a genuine prospect of a reduction in the price level. In our own case from September, 1956, to December, 1957, we estimate that our non-food price index rose by 2 per cent, but our retail food index fell by 2 per cent. During the past few months we have been able to peg nearly all our non-food prices and to reduce further some of our food prices. We welcome this tendency. The department store is by tradition an opportunist organisation. It tends to buy little and often and to avoid long-term contracts on standardised lines. Its merchandise appeal is based on a wide choice of stock, reflecting constant changes in consumer goods which result from improved production techniques, new materials and manufacturing skill in adapting them to new uses and new demands from the public.

TAXATION

The total amount we pay in the form of Income Tax, Profits Tax, Employers National Health Insurance Contribution, Purchase Tax and Rates to Local Authorities has now reached over £5,826,000 per annum. Both the State and Local Authorities find it easier to pass on their financial burdens, from which stem some of our national inflationary problems, than to prune or even to halt ever increasing national and local expenditure. The habit of demanding constant increases in one form of tax or another grows by what it feeds on.

PURCHASE TAX

Purchase Tax continues to inflate retail prices, but the problem cannot be solved by replacing one form of tax by another, such for example as substituting a Sales Tax for Purchase Tax. If the intention is to collect the same revenue of £450 million as is now produced by Purchase Tax, then a Sales Tax not of 5 per cent as has been suggested, but of 14 per cent would be called for, unless the tax were extended to food, services and capital goods. Purchase Tax may sometimes be "crazy" in its application to individual articles, but it would be crazier still to replace it by a tax of doubtful merit, giving a highly speculative yield and having to be collected not from 62,000 sources at little expense to the Exchequer, but at very considerable expense from 500,000 or even more different retail units. Many of these would be one-man businesses or street traders keeping the most rudimentary accounts, and in common fairness should not be excluded. Furthermore, a percentage Sales Tax might be difficult to assess in our currency. We are also by no means clear as to how a change over in such a system of taxation could be effected without serious loss to Retailers, since they have already paid Purchase Tax on merchandise in their possession. In my view such a change would probably lead to our being saddled with both forms of tax and postpone still further the need to effect economies in public expenditure.

ANALYSIS OF TOTAL INCOME

We have noted the wish expressed by the Cohen Committee for more information on the relationship of profits to taxation and to wage and other costs. We accordingly give the following analysis of out total income:

	s.	d.
Cost of Goods, excluding Purchase Tax	12	8¼
Purchase Tax	1	1
Wages, Salaries and Pensions	3	3
Expenses, excluding Rates		7½
Depreciation, Amortisation and Debenture Interest		3
Taxation—Income Tax, Profits Tax and Rates	1	2½
Dividends		4½
Reserves		6½
	20	0

BRISTOL

The opening of our new Bristol Store at the end of September was a memorable occasion after more than three years of planning. The response of the public of Bristol has been encouraging. The building itself and its equipment have been the subject of much admiration and congratulatory comment, and we claim that this store is the most modern in Europe.

OTHER STORES

In Liverpool the last section of the store to be reconstructed after war damage reopened for trading at the end of October, and although much still remains to be done behind the scenes, the total selling area is now virtually complete. We look for a steady and progressive up-swing in both trade and profit-earning capacity. In the case of our other stores, notably Manchester, we are fully conscious of the importance of store modernisation, and we shall embark on a programme to bring them gradually into line with modern practice.

SELFRIDGES

Selfridges have had a difficult year and the Selfridge Group suffered a slight setback of £11,654 in their Consolidated Net Profit, after tax, of £573,502. The rebuilding operations in progress at the rear of the store; the extension of the forced ventilation system within the store and the repair of war damage on the roof have disturbed customary facilities, and have had some effect on the trading operations. We have formed a Garage Operating Company in association with Lex Garages Ltd. to deal with the operation of the Ramp Garage when it becomes available. Before the end of the year we hope to open a considerable extension of ground floor selling space in the main store. Capital commitments of some £1¼ million are outstanding and it is hoped that they will be financed out of the resources of the Selfridge Group itself.

I am pleased to say that our relations with staff continue to be cordial and I am sure that I have your authority to convey to them the thanks of stockholders for the efforts they have made to produce this year's results, and at all times to implement our guarantee of complete satisfaction to our customers.

BIRD AND COMPANY (AFRICA)

SIR ELDRED HITCHCOCK ON EXPANDING TEA DEVELOPMENTS

The Fortieth Annual General Meeting of Bird and Company (Africa) Limited was held on March 15th at Tanga, Tanganyika. The following are extracts from the circulated statement of the Chairman and Managing Director, Sir Eldred Hitchcock:

During the year the company reached the highest sisal output in its history. The net profit before tax was £279,000 and after tax £238,000. Taxation is lower because of allowances for tea development. This is an encouraging result having regard to the weakness in the sisal price and to some inevitable increases in costs. For the current year we anticipate, other things being equal, a production of sisal fully up to that of the previous year. Income from tea will not accrue until the year 1958-59. We have again paid a dividend of 17½ per cent on the issued share capital, but as increased to £900,000.

THE SISAL OUTLOOK

During the year under review, and since, the sisal price weakened, and some growers even sustained losses. This occurred before the recent general fall in primary commodities, which, however, did not cause a further deterioration in the sisal price. The weakness in the price was due, partly to some disbalance of world supply and demand which may well be temporary, but also and mainly to circumstances concerning Brazil and Mexico of a special nature. There is good reason to assume, however, that long-term prospects are more encouraging.

Sisal is still the cheapest by far of all fibres and it has no effective synthetic or natural competitor. On the present level of price, however, it is very difficult to improve the prosperity of those engaged in the industry.

An economic survey of the sisal industry has just been concluded by Mr C. W. Guillebaud, Reader Emeritus in Economics in the University of Cambridge. He takes a not unfavourable view of the future.

TEA DEVELOPMENT

Your Company produces more sisal than all the Sisal Companies combined quoted on the London Stock Exchange, and is adding tea development on an expanding scale to its sisal activities. This development is under the technical guidance of Mr Sydney Bolster, of London, who has a lifetime of practical experience of tea production in Africa, India, Ceylon, and elsewhere. In establishing our areas we are engaged in a pioneering effort in some of the most difficult country in Africa. I doubt, however, whether there is any better area in Africa for quality tea—and I would stress the word quality.

Last year, when I reported, I said that we then proposed to add 200 acres a year to our planted areas, in addition to the 300 acres already planted at Ngua.

Mr S. Bolster recently inspected our areas, and concluded his report as follows:

"The cleared areas are a fine sight, with well rounded hilltops and clean slopes. The forest soil which is rich in humus has remained fixed in spite of unusually heavy and continuous rain which has fallen. The motor roads have been carefully planned and are well laid out.

"Kwamkoro and Ngua have the makings of a first class tea group—they are situated in an area which I believe will prove to be the 'better part of Ceylon' in Africa, where Kenya and Uganda are 'Assam in Africa.' The close stand of heavy compact bushes should provide a large crop of fine quality tea for manufacture.

"This is a sizeable asset for any investor, and I feel that the Company would be well advised to purchase the neighbouring Ndola Estate, the valuation for which is very reasonable."

We have since acquired the adjoining Ndola Estate. Our areas now comprise 3,165 acres of which 750 acres are planted and I hope that by June, 1958, this will be increased to 1,000 acres. We contemplate a programme to complete over the next seven years a total of 2,700 acres, at a cost of approximately £300 an acre, all in, including roads, buildings, factory etc., although costs in the earlier years are higher than this average owing to heavy initial clearing, building and equipment expenditure.

We have been fortunate in securing the Kwamkoro-Ngua-Ndola areas which we are treating as one integrated group. It has taken us some years to acquire these areas. To safeguard ourselves we were at the same time acquiring a further 4,500 acres of which 4,000 acres are freehold, in the vicinity of which a small nucleus of 110 acres is planted with tea and is being extended.

The area is near the tea estates of the Assam Company and the Bombay-Burmah group. This is some of the last freehold land suitable for tea available in this area. We have not yet decided whether to develop the area ourselves in addition to our other large areas or to dispose of the whole or part.

The labour position on our tea areas is very satisfactory, and we employ almost entirely local labour. Our staff policy is to employ staff who understand local conditions and the African, speak fluent Swahili, and who know the climatic, soil, and cultivation conditions of this particular part of Africa. Without these qualifications, knowledge of tea in Ceylon, India, or elsewhere is not a sufficient qualification. We are fortunate in having our sisal organisation to support our tea development.

FUTURE FINANCE

Our tea development is expensive but, when once mature, tea continues to yield return for up to a century; in fact the full period is not yet known. Our tea development should strengthen and broaden the basis and future earning capacity of our business, but part of the cost of tea development must finally come from outside our own resources in some form of more permanent finance.

The Chairman added: "The Board hope shortly to be in a position to circulate proposals to shareholders."

TAIPING RUBBER PLANTATIONS

WELCOME IMPROVEMENT IN CROP

The forty-seventh annual general meeting of Taiping Rubber Planations Limited was held on March 26th in London, Mr G. R. Roper-Caldbeck (the chairman) presiding.

The following is an extract from his circulated statement:

The crop harvested for the year at 1,344,000 lb showed a welcome improvement of 128,000 lb on the previous year's output. For the current year the estimate is 1,350,000 lb and, providing the weather is kind and there are no untoward incidents, this should be achieved, as the crop harvested so far this year is well ahead of the output for the corresponding period in 1956-57. This year's bigger crop is partly due to a further area of postwar rubber coming into bearing and partly due to close attention being paid to tapping tasks and the greater use of stimulants on old rubber scheduled for felling.

The profit earned is some £3,000 less than last year for, although the crop was up, the average price of rubber was about 2¼d. per lb lower than last year. Estate Expenditure at £97,343 was some £9,000 higher but despite this the actual cost of production was fractionally lower than in the previous year.

The net result of trading is a profit of £17,174, to which should be added the refund of Replanting Cesses amounting to £1,969, making a total of £19,143. After providing £2,935 for taxation and transferring £5,000 to General Reserve, your Directors recommend payment of a dividend of 6 per cent, the same as last year, leaving the carry-forward about £500 more than brought in.

REPLANTING

After all, no further new planting was undertaken during the year. I said last year that we had learnt enough from our experiment in new planting to warrant a continuation and that we planned to fell and plant a further 80 to 90 acres during 1957. Unfortunately, however, we have had to re-consider this decision as the young trees in the 1956 area have suffered severe damage from monkeys from the adjoining jungle. This problem, quite unforeseen, will have to be tackled and a solution to it found before any further new planting is undertaken. Meanwhile, we have decided to concentrate on the policy of replanting, and the programme we now have in mind is to replant, finances permitting, some 480 acres over the years 1958 to 1961, thus taking full advantage of the Government's replanting scheme under which we receive assistance to the extent of $400 per acre. As I have indicated, the fulfilment of this objective is dependent upon the necessary funds being available, and these must come in great part, out of profits.

In December 1957, members were advised that the Board had accepted proposals from the Mining Company for a postponement of operations on our property until the dredge had worked out an area close to where it was presently operating. In view of the delay in commencing work on our property, which we understand may be from three to five years, the Mining Company has agreed to pay us a tribute on all tin ore won both from the area it is now about to work, and our property. The rate of tribute overall has been slightly reduced, but under the new arrangements we should receive some income much earlier than was originally envisaged, and the total sum received should be greater.

The report was adopted.

STATE BANK OF INDIA

YEAR OF ALL-ROUND PROGRESS

PROFIT INCREASED: DIVIDEND MAINTAINED

SHRI P. C. BHATTACHARYYA'S SPEECH

The third annual general meeting of the State Bank of India was held on March 14th at Bombay, Shri P. C. Bhattacharyya, the chairman, presiding.

The Bank has reported all-round progress for the year 1957 both in its traditional business as well as its developmental activities. The following are the salient features of the Bank's Annual Report for 1957 and the Chairman's Speech delivered at the Meeting:

INCREASE IN DEPOSITS AND ADVANCES

The Bank's deposits in India increased from Rs.221.5 crores at the end of December, 1956, to Rs.344.3 crores at the end of December, 1957, raising the Bank's share of the deposits of all scheduled banks from 20.1 per cent to 25.1 per cent. This increase of Rs.122.8 crores in the deposits helped the Bank to add to its investments by Rs.77.8 crores, to strengthen its cash reserves by Rs.10.9 crores and to dispense with borrowings from the Reserve Bank after the first week of April, 1957. The Bank's advances in India also increased from Rs.135.0 crores to Rs.164.6 crores, raising the Bank's share of the total advances of all scheduled banks from 17.1 per cent to 19.2 per cent. The advances reached a peak of Rs.185.4 crores in May, 1957. Industry continued to receive the bulk of the Bank's advances (61.5 per cent on June 30, 1957) while commerce obtained 21.8 per cent.

FOREIGN EXCHANGE BUSINESS

During 1957, the Bank recorded further all-round progress in its foreign exchange business. The increased number of accounts opened under bilateral arrangements and the emphasis laid on the building of cordial relations with correspondent banks, especially for financing the import of capital goods on deferred payment terms, yielded improved results. The Bank's activities were extended to direct dealings in 17 foreign currencies. The scheme to issue Rupee Travellers Cheques was finalised and the Cheques have been on sale all over India and abroad since January 2, 1958.

BRANCH EXPANSION

The Branch Expansion Programme gathered momentum during 1957, the number of new branches opened during the year being 91, as against 46 in 1956. The total number of new branches opened since the Bank's establishment till the end of February, 1958, was 176—out of which 160 branches were opened at places with a population below 50,000 (rural and semi-urban areas). At the current rate of progress, the Bank confidently expects to discharge its statutory obligation to open 400 new branches by June 30, 1960. At the close of 1957 the Bank had a total of 632 offices—3 Local Head Offices, the office in London, 393 branches and 235 sub-offices.

FINANCE TO CO-OPERATIVES

The Bank continued its policy of being responsive to the needs of co-operative institutions. The scope of the Bank's remittance facilities to co-operative banks was further extended during 1957. The Bank's limits of advances to co-operative banks against government securities amounted to Rs.8.5 crores and those against debentures of land mortgage banks to Rs.19 lakhs. The Bank's investments in the debentures of land mortgage banks amounted to Rs.41 lakhs on December 31, 1957. The Bank has also decided to finance co-operative marketing and processing societies. The Bank sanctioned in 1957 pledge advances to three sugar factories and a cash credit limit of Rs.2 crores to a State Co-operative Bank to enable it to finance sugar co-operatives.

FINANCE FOR SMALL-SCALE INDUSTRIES

The State Bank's Pilot Scheme for financing small-scale industries, initiated in 1956, is now extended to 36 centres and credit limits of over Rs.80 lakhs have so far been granted to 189 small industrialists. The Scheme was further liberalised in 1957 so as to enable the Bank to provide working capital to small concerns against almost any commodity, if the product turned out has an assured market. Clean advances are also granted to a limited extent provided fixed assets are offered as collateral security and in special cases, against the capacity of the unit to produce goods for specific orders. The Bank has decided to advance to the units securing orders through the National Small Industries Corporation, the full value of raw materials pledged with the Bank at *any* of its branches.

ADMINISTRATIVE REORGANISATION

The Bank has started a fourth Circle at New Delhi from January 1, 1958, and it is expected that this reorganisation will enable the Bank to maintain closer contacts with customers and exercise more effective supervision over its branches. A Rural Credit Section has been established at the Central Office for guiding and co-ordinating the Bank's efforts in the field of co-operative finance and each Local Head Office has established a Development Section for devoting special attention to all the developmental activities of the Bank.

PROFITS AND THEIR APPROPRIATION

The Bank earned a net profit of Rs.1.37 crores in 1957 as against Rs.1.56 crores in 1956. Earnings from interest and discount have gone up from Rs.6.19 crores in 1956 to Rs.8.25 crores in 1957 and those from commission, exchange and brokerage from Rs.2.44 crores to Rs.3.54 crores. Interest paid on deposits, borrowings, etc., also increased from Rs.1.59 crores to Rs.3.40 crores. The dividend to the shareholders is maintained at the rate of Rs.16 per share. Rs.25 lakhs have been transferred to the Reserve Fund and Rs.32 lakhs are absorbed as bonus to staff. The Staff Welfare Fund and the Staff Co-operative Housing Fund (a new item in the Balance Sheet) have been credited with Rs.10 lakhs each. The last two items are indicative of the bank's solicitude for the welfare of the staff and its readiness to assist constructive activities of a co-operative character.

PLACE IN THE ECONOMY

Both deposits as well as advances (in and outside India) have continued to rise, and at Rs.407.9 crores and Rs.205.2 crores respectively, they have exceeded all previous records. The State Bank thus continues to maintain its position of great and pivotal importance in the Indian economy.

STATE BANK OF INDIA

(Condensed) BALANCE SHEET AS ON 31st DECEMBER, 1957

CAPITAL AND LIABILITIES	Rs.	PROPERTY AND ASSETS	Rs.
1. Capital—Issued, Subscribed and Paid-up	5,62,50,000	1. Cash in Hand and due from other Banks	39,51,93,015
2. Reserve Fund and Other Reserves	7,36,75,000	2. Money at Call	2,00,00,000
3. Deposits	366,51,89,439	3. Investments	183,43,33,955

THE BRITISH OXYGEN COMPANY LIMITED

HIGHER SALES AND PROFITS

CONTINUALLY GROWING DEMAND FOR PRODUCTS

MR J. S. HUTCHISON'S REVIEW OF WIDESPREAD OPERATIONS

The Seventy-second Annual General Meeting of The British Oxygen Company Limited was held on March 25th at Grosvenor House, Park Lane, London, W.1.

Mr J. S. Hutchison (the Chairman) presided. The following is an extract from his circulated statement:

The consolidated profit of £5,964,085, after depreciation of £3,217,463, compares with £5,198,464 in the preceding year. The profit increase relates to a sales advance of 14.7 per cent and to the employment of considerable additional capital during the year.

Taxation takes £3,215,099 against £2,699,611, and the net profit available to us is £2,440,245. Subsidiary companies retain £497,238; general reserve receives £750,000 (against £500,000); ordinary stock dividend requires £980,212, and £142,358 is carried forward to make the total of unappropriated profit £1,060,737.

CONSOLIDATED BALANCE SHEET

Additional investment in fixed assets was £8.7 million and stock and work-in-progress increased by £1.2 million, debtors by £1.4 million, and treasury bills and deposits by £2.1 million.

This addition of £13.4 million to assets and a reduction of £2 million in current liabilities and provisions, a total of £15.4 million, was provided by the issue of 5½ per cent debenture stock 1981/86, £10 million; by the issue of £0.8 million unsecured notes by Commonwealth Industrial Gases Limited, in Australia; by other loans £0.2 million; and by depreciation and profit retentions of £4.4 million.

We have re-examined thoroughly our programmes of capital expenditure for the next year or two in the context of the present national policy of restraint and have confined these strictly to essentials to enable us to meet the continually growing demand for our products. The total as it now stands is expected to be financed from existing resources and from depreciation and profit retentions which are in excess of £4 million per annum.

The allocation to general reserve this year has been increased from £500,000 to £750,000 in support of the continuing high rate of capital investment necessary to meet and anticipate the demand for our products. A sum of £142,358 also is added to the unappropriated profit carried forward. These amounts make an important contribution to our capital requirements.

The directors have considered most carefully whether the increase in available profit would enable them to recommend some increase in ordinary dividend. They have decided, however, that conservation of resources must have priority at a time when large capital expenditures have to be undertaken against a background of financial restraint.

UNITED KINGDOM GAS DIVISION

Expansion of industrial gas sales has continued mainly under the influence of the bigger steel outputs and we have before us a programme of extension of production capacity to enable us to meet fresh requirements as they arise.

Acetylene, propane, argon, nitrogen and other gases and gas mixtures maintained their sales advance whilst medical oxygen, nitrous oxide and other anaesthetic gases continued on a very steady basis.

Wages, salaries, materials and services all contributed to a significant rise in costs, so that despite greater output, increase in selling prices was unavoidable.

ENGINEERING DIVISION

British Oxygen Linde Limited, in addition to the contract mentioned last year for oxygen plants for the new steelworks at Durgapur in India has been selected as contractor for the oxygen plants valued at approximately £1 million required for the Rourkela Steelworks, and a contract for over £800,000 for plants required by African Explosives Limited.

The formation, in conjunction with Davy and United Engineering Company Limited, of a new company, "Davy British Oxygen Limited," was announced during the year. This company will make available to the steel industry "oxy-steel" processes utilising the steel plant manufacturing facilities of Davy and United Engineering Company Limited, Sheffield, and the metallurgical techniques and tonnage oxygen plant manufacturing facilities of British Oxygen.

British Oxygen Wimpey Limited has been actively engaged throughout the year on government contract work.

British Oxygen Aro Equipment Limited has continued to be occupied mainly on development work. The immediate outlook in this sphere is affected by recent changes in military requirements.

Sparklets Limited has been affected by under-activity in the die-casting industry. This has been compensated, however, by a substantial improvement in the syphon and bulb business following last year's successful introduction of the new popular-priced Hostmaster syphon and earnings have fully recovered from the low point of a year ago.

Woodside Die Sinking Company Limited, now successfully installed in new and improved premises, has made available its precision engineering service to a wider range of industry.

ELECTRIC WELDING DIVISION

Quasi-Arc Limited, with improved earnings, has maintained its position in the highly competitive fields of electrodes and electric welding equipment. The outlook remains favourable.

CHEMICALS DIVISION

Turnover of British Oxygen Chemicals Limited was up 40 per cent last year as a result of bigger sales of melamine and polyvinyl acetate and, in spite of increased costs and keen competition, contributed a larger profit. Sales growth continues in the current year in a favourable way.

Our project in Northern Ireland under Carbide Industries Limited, for manufacture of carbide and acetylene, associated with du Pont's undertaking there, is going according to plan with site work now well under way.

OVERSEAS INTERESTS

Last year sales expanded in all overseas countries, in some by as much as 25 per cent, and the enhanced outputs aided a general and sometimes considerable improvement in earnings.

RESEARCH AND DEVELOPMENT

Research and development activity continues to play a full part in our affairs. The range of investigation is wide and the results reach all sections of our business. Service is frequently given to other organisations whose problems impinge on our particular field of knowledge, for example, the importation of liquid methane and the use of oxygen in the increasingly important field of gasification. In contrast to this more direct application we engage in fundamental and pioneer investigations, as for example, in deep low temperature regions which may be the root of development in the future.

MONOPOLIES COMMISSION

Addressing the meeting, the Chairman said:

You may have seen references in the press in the last few days to the conclusion of our talks with the Board of Trade on the Monopolies Commission Report on certain gases.

In my statement last year I gave my views fully and indicated our agreement with many of the recommendations on matters towards which our policy had been directed and on which we have already acted. The undertakings we have given are in respect of these matters.

The Commission expressed divided views on profit margins. We note the Government statement that they do not propose to take any action to regulate the level of our prices and profits on oxygen and dissolved acetylene.

MANAGEMENT AND STAFF

The Chairman's circulated statement continued:

We are again indebted to our executive directors who carry the daily decision and guidance over the whole range of our activities. They are supported most ably by a loyal and experienced team of senior officers, staff and workers of all grades. Our full acknowledgment and thanks are due to them all.

PROSPECTS

Here is my view on the outlook. Industry in many overseas countries will continue to press forward. In the United Kingdom we respond to the activity of heavy industry and general engineering—a field which today shows many fluctuations. Prudence dictates caution and consolidation.

The width of our activity and the influence of new methods and new construction, particularly in the steel industry, encourage the view that we shall be able to give a good account to you at our next meeting, although the months ahead may prove to lack the buoyancy of some recent years.

The report and accounts were adopted.

THE MESSINA (TRANSVAAL) DEVELOPMENT COMPANY, LIMITED

(Incorporated in the Union of South Africa)

EFFECT OF FALL IN COPPER PRICES

CONFIDENCE IN LONG-TERM PROSPECTS UNCHANGED

COMMANDER H. F. P. GRENFELL'S REVIEW OF ACTIVITIES

The eighth Annual General Meeting of Stockholders of The Messina (Transvaal) Development Company, Limited, was held on March 19th in Johannesburg, Commander H. F. P. Grenfell, DSC, RN (Retired) presiding.

In the course of his address to the meeting the Chairman said: Ladies and gentlemen,

In the course of the year the price of copper fell from £295 to £195 per ton and since then there has been a further substantial drop. On February 13th it was quoted at £160 10s., which is the lowest level since 1950.

Had these prices persisted for any length of time few companies would have been able to make much more than a nominal profit in relation to the capital employed, while high cost producers might have suffered substantial losses.

I am glad to be able to reassure you today by telling you that our costs are such that we have been able to continue operating at a profit—moderate though this may be.

This can be largely attributed to the various measures designed to improve operating efficiency which we have introduced during the past ten years. They have involved considerable capital expenditure but our position today proves beyond doubt the correctness of our policy.

It is an interesting fact that the present recession in copper prices has occurred at a time when world consumption of copper outside the United States of America has reached an all time record figure. It is true that world production has also risen but on analysis it seems likely that if consumption had not fallen off in the United States the overall figures of consumption and production throughout the world would probably have been roughly in balance.

Copper still remains one of the essential metals and it would surely be unrealistic to assume that the present situation in the United States will be a permanent feature of the world's economy.

All this leads me to the view that the long-term prospects for copper and therefore of your Company are unchanged and in spite of our present difficulties I look forward to the future with confidence.

OPERATION AT MESSINA AND UMKONDO

During the year operations at Messina proceeded normally, the average tonnage of ore produced monthly being 76,300 as compared with an average of just over 70,000 tons for the previous twelve months while operating costs fell by 6d. to 36s. 6d. per ton of ore produced. You will see from the details in the summary of the General Manager's Report that a lower grade of ore was treated which had the effect of increasing the cost of refined copper to £130 per long ton.

At the end of the year the ore reserves showed little change in spite of the fact that the tonnage hoisted again showed an increase over the previous year.

At Umkondo on the other hand we have thought it wise, in view of the fall in copper prices, temporarily to re-classify the ore reserves into two categories, "Proved and Probable" and "Possible." All ore which cannot at present be mined profitably but which under more normal conditions would be payable, has been classed as "Possible" and excluded from this year's total which, as a result, shows a fall as compared with last year.

At Messina both the concentrator and smelting plants operated very satisfactorily over the year. A considerable improvement in results was obtained in the mill by the introduction of electronic control equipment while, as forecast last year, the smelter had a record year and produced 14,723 tons of copper which is the highest figure we have ever achieved.

INTERESTS IN SOUTHERN RHODESIA

Turning now to our interests in Southern Rhodesia, I must first bring to your notice the substantial decrease in operating costs of just over 10s. per ton of ore produced at Umkondo.

At Alaska we continued exploration on the surface by geophysical, geochemical and other methods and, so far, results obtained confirm the opinion I expressed last year that this property will prove to be a profitable asset.

At Sanyati further diamond drilling has indicated that our estimation of ore reserves can be increased to a total of just over 15 million tons containing 1.4 per cent copper, 1.35 per cent lead and 2.85 per cent zinc.

EXCELLENT PROGRESS AT MANGULA

I move now to Mangula where I am glad to report that excellent progress was made during the year on the surface construction and underground production programme. So much so that we began railing concentrates for shipment and subsequent treatment at refineries in Europe at the beginning of October last year. Since then—apart from teething troubles which are always to be expected with new equipment—the Mine has settled down well on a production basis.

The principal points of interest are as follows:

First, the increased ore reserves in the Molly section which in round figures now total over 25 million short tons estimated to contain nearly 350,000 tons of copper; second, as I have already mentioned, the fact that we are already receiving revenue from the sale of our concentrates; and third, that we expect to complete the installation of additional units in the mill and flotation plants by the first quarter of 1959 when output will be roughly doubled and operating costs substantially reduced.

I am sure you will be glad to hear that even at our present rate of production and at the current level of prices, revenue receivable from the sale of concentrates is sufficient to meet operating expenses.

I have made a number of visits to Mangula during the past twelve months, and on each occasion I was greatly impressed by the keenness evident in all sections. The community is a particularly happy one, the organisation is efficient and I am confident that under the able and energetic leadership of Mr Wilson, the Resident Manager, and his senior Staff, Mangula will develop into a most successful Mine.

The issued capital of the Company is now £4,500,000, and the 5s. stock units are quoted on the Rhodesian, London and Johannesburg Stock Exchanges. Following the Offer for Sale, your Company's holding is now approximately 80 per cent of the issued capital, and I have no doubt that once the price of copper recovers, the stock units will prove to be a profitable investment.

The Directors' Report and Balance Sheet and Accounts for the year ended September 30, 1957, were adopted.

The retiring Director, Mr P. U. Rissik, was re-elected, and the remuneration of the Auditors for the past year's audit was fixed.

There being no further business, the Chairman declared the meeting at an end.

BANQUE FRANÇAISE DU COMMERCE EXTÉRIEUR

The annual general meeting of the Banque Française du Commerce Extérieur was held in Paris on March 12th.

Monsieur Belin, Chairman of the Board of Directors, presided, and was assisted by Monsieur Assémat, Vice-Chairman of the Board and General Manager. The Government representatives were also present.

During the year 1957, the activity of the Bank developed satisfactorily and its endeavours were especially directed towards the granting of export credit, the total amount of which has grown sizeably larger.

Allowing for all charges and provisions, as well as for depreciation, net profits amounted to Frs 481,360,349, as against Frs 430,065,019, for the preceding year.

After making provision for statutory payments to shareholders, staff and social security funds, the Board have earmarked Frs 170 million for the general reserve, and have placed a balance of Frs 140,572,820 at the disposal of shareholders.

After the Accountants' report and the observations of the Management Committee had been duly read, the accounts were adopted unanimously. Further motions, to distribute a bonus dividend of 4 per cent and to strengthen the general reserve by a supplementary appropriation of Frs 50 million, were duly carried.

Apart from provisions and redemption payments, the total Bank's resources thus reached Frs 3,159 million.

SCOTTISH AMICABLE BUILDING SOCIETY

ANNUAL GENERAL MEETING

At the sixty-sixth Annual General Meeting held on March 17th, in Edinburgh, the President, the Right Honourable Thomas Johnston, CH, PC, LLD, said:

On behalf of the Vice-President, Trustees and Directors, and on my own behalf, I would extend to you all a very cordial welcome to this the 66th Annual General Meeting of the Society.

And I would like to say how greatly I appreciate the honour of having been invited by your Board to become President on the sudden and greatly lamented passing of my predecessor, the Right Honourable Lord Inverclyde.

Lord Inverclyde first became associated with the Society as a Trustee in 1941 and he was elected President in 1949. He therefore filled this office for nine years and presided at the Annual Meetings with general acceptance. His services to the Society and to other great public welfare organisations will always be remembered with gratitude.

I am happy also to announce that the Right Honourable the Earl of Eglinton and Winton, TD, DL, has accepted invitation from your Board to become Vice-President of the Society.

During the year we regret the passing of Mr W. D. M. Allison. He had become a Director in 1944 and Deputy Managing Director in 1945. The Directors wish to record their appreciation of his services to the Society.

And there is one lovable and conspicuous figure which, alas, will never again be among us at the Annual Meetings of the Society. As no doubt most of you know, Mr W. S. Allison passed away last week. He had never quite recovered from the sudden shock of the death of Mrs. Allison, and for the last five months he had himself been suffering from a coronary attack. He had hopes of recovery and two days before his end he informed me of his intention to be present at this Annual Meeting. He had, he said, not missed a meeting for 35 years. But, alas, it was not to be.

William Allison was a great Managing Director, architect, pioneer and guiding spirit of this Society. He took over 35 years ago in difficult times and guided the helm through many financial and building hazards until now it exists as a living monument to his efforts.

It had always been hoped that Mr Allison would recover and come back, and he himself had been confident of this and was loth to give up the reins. Even on the last day of his life he was signing letters dealing with the Meeting.

In these circumstances no permanent change could be made and matters involving a new policy have been justifiably held in abeyance.

The Board of Directors have given deep consideration to the position and have, and are, consulting experts to enable every aspect of the Society's activities to be closely examined.

I have now to present to you the Annual Report and Accounts for the Financial Year ended January 15, 1958. They have been in your hands for the requisite period of seven days and I propose with your permission to take them as read. I should, however, like to deal with a few figures.

The new savings in the Shares and Deposit Department amount to £4,538,526 and the total at the credit of shareholders and depositors is now £22,900,351. The average amount held by Shareholders at January 15, 1958, is £462 and by Depositors £802.

You may recall that on a past occasion the late Lord Inverclyde referred to the proposed introduction of a new Share Investment Department, and I am asked by the Board to report that this has proved to be successful.

Continuing their policy of careful and prudent lending the Directors have granted mortgages during the year on selected securities only, mainly consisting of dwelling houses for owner-occupation. The mortgages cover an ever increasing number of new houses. The sum advanced during the year on selected securities was £2,072,910. The mortgage assets now total £17,458,400.

During the year an increase of £36,908 is shown in our Trustee Investments, Bank Balance and Cash in Hand, which now total £6,546,218 and which represents 26.43 per cent of the total assets.

The reserve Funds now stand at £983,341 together with a carry forward of £14,451.

The Directors' policy has hitherto been to hold a substantial fund of Trustee and Government Securities, and these Trustee Securities at January 15, 1958, including Interest, amount to £5,597,642 which, as already pointed out, with cash in the bank and in hand provides a total of £6,546,218. These securities have been staggered so far as maturity dates are concerned. Government Stocks which are undated are, of course, a separate problem and affect all organisations which have lent money to the Government upon them.

Owing to the fall in Government and other securities the Society, in common with other financial institutions holding these securities, has experienced depreciation between the book value and the market value.

The book value of the Society's own properties stands in the Balance Sheet at the figure of £587,684, these properties having been valued by a qualified valuator in January, 1957, at £858,000. After charging all expenses, interest on Deposits, Income Tax and Profits Tax, the Directors have provided for the interest to Unadvanced Shareholders of £658,543 5s. 10d., calculated at the rate of 3½ per cent (Income Tax paid by the Society), from January 16, 1957, to January 15, 1958, and on Regular Savings Shares at the rate of 3¼ per cent (Income Tax paid by the Society) from January 16, 1957, to January 15, 1958. From the amount of £64,074 18s. 11d. available for appropriation, £49,623 8s. has been allocated to Reserves and the balance of £14,451 10s. 11d. has been carried forward.

The past year has been a difficult one for Building Societies and the Board, I am informed, have had the whole question of interest rates under constant review.

There is one disability under which Building Societies operate. It is the wrongful application to our affairs of the profits Tax. We have been compelled to allow this last year a sum of £22,836. Now we and every other building society are mutual organisations; we do not make profits in the customary sense of the word, and it is hoped that the promise given by last year's Chancellor of the Exchequer to review the position in this year's budget will mean substantial relief to the Scottish Amicable Society. In ten years the rate of Profits Tax that we are now paying would amount to quarter of a million sterling. It is an unjust imposition.

And further it is noteworthy, as you can see from our accounts that between Income Tax and Profits Tax it costs us about 2½ times the sum that it takes to run the Society.

The following Directors retire and in accordance with Rule 34 (Sub-section 5) I declare them re-elected.

Major Robert Bruce, MC, FRIC.
Mr H. S. Swan, JP.

I should like on behalf of the Directors to express their appreciation of the continued efficient service rendered by all the Society's officials, branch managers, agents and staff. I may say in connection with their work that the expense ratio of the Society stands at the very satisfactory figure of 11s. 6d. per cent against total assets compared with 11s. 9d. for the previous year.

The Auditors' Certificate having been read, I have much pleasure in moving that the Annual Report and Accounts be adopted.

The motion was seconded by Sir E. D. Stevenson, KCVO, MC, and the report was unanimously adopted.

THE BEAUMONT PROPERTY TRUST LIMITED

INCREASED PROFITS

The twenty-fourth annual general meeting of this Company was held on March 20th in London, Mr C. W. Black, DL, JP, MP, FRICS, FAI, chairman, presiding.

The following is an extract from his circulated statement for the year ended September 30, 1957:

The Accounts for the Group for the year will, I think, be regarded by our members as satisfactory. The Profit for the year, before taxation, amounted to £221,337, compared with £178,997 in the previous year.

The increased profits have made it possible for the Directors to recommend total dividends of 11 per cent, which compares with 10 per cent in the previous year.

THE RENT ACT

During the year under review the Rent Act 1957 passed into law, and this should enable us to secure a fair return on our residential properties in the future. There has been an enormous increase in costs but, until recently, we have not been able to increase rents. That position has now been rectified. I am glad to say that in 80 per cent of cases we have already concluded new arrangements with our Tenants which are mutually satisfactory.

The Companies own a very sound portfolio of freehold and leasehold properties. The demand both for business and residential properties appears likely to continue on a satisfactory scale, and your Directors therefore envisage a progressive and satisfactory future for your Companies.

The report and accounts were adopted.

ALUMINIUM LIMITED

A TRANSITIONAL PERIOD

ADJUSTMENTS TO COMPANY'S EXPANSION PROGRAMME

The thirtieth annual meeting of Aluminium Limited will be held on April 24th in Montreal.

In the course of his general review of the Company's affairs in 1957, Mr Nathaniel V. Davis, the President, stated:

The year 1957 was a year of transition for the Company and for the industry. The preceding 10 years were, with few exceptions, years of strong demand, full production, and rapid expansion. In 1957, however, supply exceeded demand. Free-world production did not increase. While consumption in Europe and many other areas continued to grow overall consumption dropped by about 3 per cent. At the same time customers reduced their inventories. The resulting decline in demand for primary metal led some companies, including Aluminium Limited, to retard their expansion programmes.

Under these changing conditions, Aluminium Limited's results for the year were adversely affected not only by a consequent reduction in sales, but also by the impact of a protracted strike at the Aluminum Company of Canada Limited's main smelter located at Arvida, Quebec. Aluminium Limited's net income, after all charges, including dividends on preferred shares of subsidiary companies, was $41,422,456 or $1.37 per share on the 30,168,212 shares outstanding at the year end. For the preceding year, 1956, the comparable figures were $55,657,372 or the equivalent of $1.85 per share, after giving effect to the three-for-one share split which occurred in 1957.

Cash generation in 1957, comprising net income, depreciation and reserves for future income taxes, was $93,339,106 or $3.09 per share, as compared with $105,711,431, or $3.55 per share in 1956.

The reduction in net income reflects the decline in sales and operating revenues from $483 million in 1956 to $453 million in 1957 and the impact of the strike at Arvida. It also reflects increased operating costs resulting from retroactive wage increases granted in Canada during the year.

Capital expenditures in 1957 under the Company's long-range expansion programme amounted in total to $180 million, principally to provide new basic facilities for production of hydroelectric power and raw materials on which future smelting expansion may be based. No new addition to the Company's Canadian smelting capacity was completed in 1957, although construction of potlines with an annual capacity of 80,000 short tons was continued at Kitimat, British Columbia, until October, when a decision was taken to defer their completion until justified by an upturn in demand.

Although the expansion programmes of some other primary aluminium producers have also been curtailed, there are large increases in aluminium capacity scheduled to enter production in the next year or two in several countries. The Company must, therefore, look forward to a continuation of overcapacity in the industry as a whole until world markets can be expanded to absorb the increases in production. The abundance of primary aluminium supply does, however, provide the opportunity to develop new uses and markets with every assurance that users' requirements can be met. During the past several years the shortage of supply has unquestionably impaired the growth of uses for aluminium.

Currently the Company's Canadian smelters are operating at about 80 per cent of rated capacity, producing substantially as much metal as in the year of peak production. Shipments so far this year are below this level. This reflects reduced sales to other producers who are bringing in new capacity as well as a lower demand in the trade generally. The general trade demand has shown some signs of stabilising in recent months.

Increased emphasis is being put upon an improvement in operating efficiencies, a strengthening of sales, market development and research activities, and expansion of fabricating outlets. While the Company remains confident that the growth in aluminium consumption will continue and will provide the basis for utilising the expanded facilities which are under construction, the continuation of this programme and the prospects of increasingly strong competition which may result in reduced profit margins will require the most careful utilisation of the personnel, plant, and capital resources of the Company.

With metal in over-supply, keen competition was experienced in all markets. During the latter part of the year, prices weakened in most markets outside of North America. In Britain, and to a lesser degree in Western Europe, primary aluminium of Russian origin emerged as competition of consequence at low prices.

The use of primary metal in the United Kingdom declined and our shipments followed this trend. Fabricators reduced their stocks to lower levels than those which had prevailed in the previous year and were encouraged in this by the Government's tight money policy. Shipments by United Kingdom fabricators commenced to improve in the latter part of 1957.

EXPANSION PROGRAMME

Commenting on the Company's expansion programme, the President said that during the course of 1957 adjustments were made in some segments. The overall effect of the adjustments made during the year was to defer completion in Canada of some 240,000 tons of primary smelting capacity and to reduce the previous capital outlay provision by about $200 million in the years 1957 to 1959 inclusive.

Under the revised programme, the Company was continuing the development of hydroelectric facilities and alumina plants, which required lengthy construction periods. Those facilities when completed would provide additional power for the Company's own needs and additional alumina for which there was an increasing outside demand. That programme would at the same time provide the foundation on which the Company's Canadian smelter capacity could be quickly increased to 1 million tons of aluminium per annum as market conditions warranted.

Turning to the scene outside Canada, Aluminium Limited's subsidiaries and affiliates were proceeding with various expansions of smelting capacity which although smaller in scope were, nevertheless, appropriate to their individual requirements.

The Company's long-term programme for the modernisation and expansion of fabricating facilities was continuing.

BLUNDELL, SPENCE AND COMPANY

ANOTHER SUCCESSFUL YEAR

The sixty-ninth annual general meeting of Blundell, Spence and Company Limited was held on March 26th in London, Mr E. B. Calvert, chairman and managing director, presiding. The following are extracts from his circulated statement:

Once again record sales figures were established both in respect of home and export markets with the result that despite a continued rise in operating costs the Company experienced another very successful year's trading. In the home market the period was one of consolidation and considerable further achievement. In addition to a substantial and encouraging expansion of business through existing main distributors, it was possible to improve still further the general pattern of distribution by the appointment of new stockists in certain areas of the country where sales progress was difficult without adequate merchant support.

In my last Statement I referred to the outstanding success of Pammastic—"The World's Best Emulsion Paint"—and predicted a still greater future for this first-class product. Backed by adequate and competent advertising sales of Pammastic continued to progress in a most heartening manner. Your Directors are particularly pleased with the strong and sustained demand there is for Pammastic for use on exterior surfaces for which it is so eminently suitable both from a decorative and protective point of view.

Sales of Pammel, your Company's first quality alkyd gloss finish incorporating Epikote, continued to develop and during the year steps were taken to revise and enlarge the colour range in which this product is offered. I am hopeful that in my next Statement I shall be able to report a further considerable expansion of sales.

The volume of business done with overseas markets is substantial and contributes very considerably to the well-being of the Company as a whole. Sales to export markets attained record proportions and Pammastic, of course, made a very large contribution to this success. Nevertheless, export business is very competitive and I consider it most regrettable that the competition between British manufacturers in certain markets is so cut-throat in nature that business becomes utterly unremunerative and reacts, therefore, most unfavourably on the Industry and the Nation as a whole.

The high reputation of your Company's products throughout the world is only made possible with well-equipped laboratories, a progressive technical staff and modern production methods.

After reviewing the affairs of the Subsidiary companies, the Statement continued:

The trading of the Group during the period under review has resulted in a profit of £377,059, and after various allocations and adjustments, including provision for taxation, there remains £103,825, an increase of £34,525, compared with the previous year. Your Directors propose a dividend of 15 per cent, of which 5 per cent was paid as an interim dividend on September 27, 1957, and have placed the sum of £40,000 to General Reserve.

Every year I find it most difficult to provide information regarding the probable result of the current year's trading. Nevertheless, information and figures so far available to me suggest that your Company can look forward to another satisfactory year. The report and accounts were adopted.

REVERTEX, LIMITED

(Manufacturers and Sellers of Concentrated Rubber Latex and Synthetic-Resin Emulsion)

ANOTHER SATISFACTORY YEAR

CURRENT YEAR'S PROSPECTS

The thirty-fourth annual general meeting of the shareholders of Revertex, Limited, was held on March 26th at 51/55 Strand, London, W.C., Mr A. F. Baillie (Managing Director) presiding.

The Secretary (Mr H. K. Marsh) read the notice convening the meeting and the report of the auditors.

The following is the Chairman's Statement which had been circulated with the report and accounts for the year to September 30, 1957:

You will probably already know that Mr D. H. Scott, CBE, died suddenly on February 10th, and in these unhappy circumstances, as Managing Director, it falls to me to preside over this meeting. I also regret to have to report the loss of Mr A. Palache, who died after a long illness on February 22nd.

Their passing is a sad blow to us all and before proceeding to formal business I wish to pay tribute to them. Denis Scott and Albert Palache were our friends and colleagues for very many years and we owe much to their wise counsel. We shall miss them both greatly.

GROUND HELD IN DIFFICULT PERIOD

I feel I cannot do better than present to you the statement which Mr Scott himself prepared prior to his death.

"You will see from the Accounts now before you that our Company has had another satisfactory year and that we have rather more than held our ground in a difficult period. I would like to express our appreciation of the good work done in their respective spheres by all our staff and employees both at home and abroad to whose efforts these results are so largely due.

DIRECTORATE

The Board appointed Mr C. J. Fitzgerald a Director as from January 1st this year and you will be asked to confirm this appointment later on in this meeting. Mr Fitzgerald joined the Company in 1935 and since 1951 has been General Sales Manager. Mr D. W. Stutchbury, who joined us in 1946, has been appointed General Sales Manager in his place.

REVERTEX (CONCENTRATED RUBBER LATEX)

During the year our deliveries of Revertex showed a further increase. As I informed you in my speech last year, although we hope to be able to count on our establishment at Kluang, Malaya, as our main base of operation on the latex side for many years to come, we thought it prudent to consider the question of installing a plant in Africa, and to that end the main rubber growing areas in Africa were visited. We are now carrying out tests on a pilot plant scale on the latex in the locality which we consider the most suitable. Should these tests prove satisfactory, as we hope, we shall then proceed to erect a full scale production unit.

Our policy in regard to our factory at Kluang is to do everything that is necessary to maintain it in a high state of efficiency and to provide new plant as required. At the same time we charge depreciation at the rate of at least twenty per cent per annum on the original cost, with the result that assets in Malaya costing £326,977 now stand in the Balance Sheet at £71,533.

EMULTEX (POLYVINYL ACETATE EMULSION)

Deliveries of Emultex were slightly greater than for the previous year. We believe that with the high standard of quality we maintain and the variety of grades we offer we are well placed to profit from any overall increase in the use of polyvinyl acetate emulsion.

During the past few years we have built up quite a considerable export business to the Union of South Africa, and we feel that the time has come when we should manufacture out there. We accordingly bought a suitable site on the Amanzimnyama Industrial Estate near Durban and a small factory is in course of erection. We have also formed a wholly owned subsidiary company, Revertex (South Africa) (Proprietary) Limited, to conduct our operations in the Union of South Africa, and according to our advisers it should rank as an Overseas Trade Corporation for tax purposes. These steps have been taken since October 1, 1957, and will thus only be reflected in the Accounts for the current year.

ALCOTEX (POLYVINYL ALCOHOL)

This product has made a small but welcome contribution to our profit during the past year and the new plant is now operational. We look for an increasing profit from this source during the current year.

ACCOUNTS

For the year under review the profit, before tax, amounted to £406,975, as compared with £392,198 for the previous year. The net profit, after making full provision for taxation, was £190,975, as compared with £193,198. The small decrease in the net profit, after tax, as compared with the increase in the profit before tax is due to three factors. In the previous year we were able to transfer £10,000 from provision for income tax no longer required; the proposed increased distribution this year will attract an additional £6,000 in profits tax; and the increased rate of profits tax was in force for the full year.

I am glad to say that the rubber market became more normal during the year, with the result that our hedging is now much less costly.

DIVIDEND AND PROSPECTS

The Directors recommend the payment of a final dividend of 20 per cent, less tax, making with the interim dividend of 10 per cent, less tax, paid last November, a total of 30 per cent, less tax, for the year. The total dividend of 30 per cent, less tax, will absorb the sum of £78,272 net and the unappropriated profits will be increased by £112,703 to £589,311.

It is again extremely difficult to forecast the results for the current year in the prevailing uncertainty about the near term prospects of world trade as a whole. The estimated profit for the first quarter approximates closely to that for the first quarter of the previous year and the outlook is so far not unpromising. Subject to unforeseen circumstances, I think we should have another fairly good year."

The report and accounts were unanimously adopted and the dividend, as recommended, was approved.

The retiring directors, Mr S. Whyte and Mr C. J. Fitzgerald, were re-elected, and it was resolved that the remuneration of the auditors, Messrs Deloitte, Plender, Griffiths and Co., be fixed by the Directors. The proceedings then terminated.

DUNFERMLINE BUILDING SOCIETY

FUNDS INCREASED BY ALMOST £740,000

The Society's eighty-ninth Annual General Meeting was held in Dunfermline on March 18, 1958, Mr Andrew Crocket, Chairman of the Society, presiding.

In proposing the adoption of the Report and Accounts the Chairman said that total funds had increased during the year by almost three quarters of a million pounds to a record figure of £11,918,889. Some 1,750 advances had been made during the year to assist house-purchase, totalling £2,095,594. With only one exception this was the largest amount advanced in any one year in the Society's history. These figures, he felt, gave evidence that the Society had continued to enjoy the confidence of the investing public, and this was the more gratifying in that conditions during the past year had been rather difficult in the Building Society movement as a whole.

SHARE CAPITAL UP BY £753,764

During the year under review the Society's share capital had been increased by £753,764 to a total of £10,835,823 at the end of the year. In accordance with the trend of preceding years, deposits showed a slight decrease and stood at the figure of £677,925.

The Society's advance department had been particularly active during the past year. The net increase in mortgage assets had risen by over £900,000. The rate of mortgage interest to old and new borrowers alike had been maintained at 6 per cent per annum.

Investments and cash together amounted to £2,257,372, and although this showed a reduction of some £180,000 over the year, the Society's actual cash balance at just over £633,000 is a considerable increase.

Reserves, etc., had now passed the quarter of a million mark to reach the figure of £253,273. With the heavy drain of taxation progress in building up the reserves is necessarily slow, but it is hoped that some form of relief from the present burden of taxation will be allowed by the Chancellor of the Exchequer.

In his concluding remarks the Chairman expressed confidence that the Society would continue to enjoy active business conditions at Head Office and throughout all its Branches. Attractive premises had been acquired in Ayr, where it was expected that an already rapidly developing business would still further expand.

The report and accounts were adopted.

BANK OF SCOTLAND

NEED FOR CONFIDENCE IN STABILITY OF STERLING

LORD BILSLAND'S VIEWS

The Annual General Meeting of the Proprietors of the Bank of Scotland will be held on April 1st within the Head Office, Edinburgh.

The following is an extract from the statement by the Governor of the Bank, The Right Honourable Lord Bilsland, KT, MC, DL, LLD, which has been circulated with the Report and Accounts.

It will be recalled that at this time a year ago the country's economy was in process of recovery from the effects of the Suez Canal incident. It became apparent, however, towards the late summer that all was not well. Distrust of the stability of Sterling abroad was apparently generated by the strength of the German Mark and the devaluation of the French Franc which coinciding with the seasonal pressure on Sterling resulted in speculation abroad on a devaluation of Sterling. The consequent drain on the country's Gold and Dollar Reserves was serious and firm action was necessary to protect the stability of Sterling. This action was taken in September when Bank Rate was raised to 7 per cent, capital expenditure in the public sector of the economy limited to the previous year's level, and the Banks were directed to ensure that the average level of advances over the ensuing year should not exceed the average level of the past year.

CRISIS SURMOUNTED

In retrospect, it may be said that if action had been taken sooner the necessary measures might have been less drastic. However that may be, the remedies appear to have been effective so far and, after making full allowance for the credits arranged with the International Monetary Fund and the Export-Import Bank, a substantial improvement in the Sterling Gold and Dollar Reserves has been achieved. Thus again a crisis has been surmounted but, so long as the reserves behind Sterling are insufficient to remove doubt on their complete adequacy in all circumstances, it is not possible to have confidence that a similar crisis may not arise again.

With Sterling pegged to the Dollar at an exchange rate varying within small limits, the speculators in Sterling have virtually nothing to lose and, as was shown last Autumn, they can create a situation in which, for reasons unrelated to the state of this country's export trade balance, they may gain substantially if our national efforts to recreate confidence in the stability of Sterling should for any reason fail.

While the importance of building up the Gold and Foreign Exchange Reserves of the country is thus clearly manifest, the situation cannot be said to have been conclusively dealt with until there has been a definite halt in the upward trend of industry's wage costs. The negotiations pending on wages levels are therefore of particular significance at this time. Foreign confidence in Sterling will not be permanently restored until convincing evidence of the country's determination and ability to resist continued inflation has been demonstrated. Towards this end the present downward trend in commodity prices is helpful as are recent announcements of price reductions in certain manufactured products attributable partly to lower raw material costs.

The current recession in trade activity and industrial production in the United States of America is of particular importance in its potential effect on world commerce and on this country's export trade. Opinion at the present time in the main supports the view that no major set-back will occur and that, after the necessary period of readjustment, the length and severity of which cannot be assessed, activity will be restored.

After reviewing conditions in Scotland the statement continued:

THE ACCOUNTS

The profits for the past year at £636,961 are less than the previous year by some £2,000. As I stated last year, the present high interest rates do not operate to our advantage. Allocations of £200,000 to Reserve for Contingencies and £80,000 to Pension Fund are again proposed, and after providing for the maintenance of the dividend at 14 per cent for the year requiring £362,250 net, the balance carried forward is £248,256, representing a reduction of £5,289.

In the Balance Sheet, Deposits are over £5 million less than last year at £168,077,105. During the greater part of the year deposits were higher than the previous year, and the reduction now shown has only emerged in the last two months of our year. Note Circulation has again expanded, this year by an additional £1,500,000, and Acceptances, Guarantees, etc., on behalf of customers are nearly £2 million greater at £22,376,062. Advances at £40,492,293 are approximately £1,500,000 lower than last year and over £4 million less than two years ago. The strong liquid position of the Bank is fully maintained with Cash, Balances, Documents in Transit, Money at Call and Bills Discounted totalling £80,781,826.

MIDLAND COUNTIES MOTOR FINANCE COMPANY LIMITED

BRIGHT PROSPECTS

MR HAROLD SHENTALL'S STATEMENT

The Twenty-ninth Annual General Meeting of the Midland Counties Motor Finance Company Limited, was held on Monday, March 24, 1958, at the Royal Victoria Station Hotel, Sheffield. The following is the statement by the Chairman which had been circulated with the report and accounts for the year ended December 31, 1957:

Although the year which I have to review shows an increase in the Group Trading Profit from £373,037 to £402,654, the net profit after taxation, depreciation and other charges shows a slight decline from £139,770 to £127,452.

Despite this reduction in the net profit there is no doubt that 1957 has been a very satisfactory trading year.

In my statement last year and on previous occasions, reference has been made to the fact that the results of this Company are to a substantial degree dependent on the previous year's trading.

Thus, 1956—a year of great crisis in the motor industry, to which the fortunes of Midland Counties are allied—benefited from the very favourable conditions experienced in 1955.

In 1957 our net profit is down due to the difficult trading in 1956. You will notice, however, that hirers' balances which had decreased by £593,545 at the end of 1956 show an increase of £445,893 at December 31, 1957.

A substantially higher proportion of the interest chargeable is carried forward into 1958 than was brought in at the beginning of 1957, and this will be of considerable benefit in the current year.

On the whole, despite the difficulties of the intensification of the credit squeeze, and the severe increase in the bank rate, 1957 was a very favourable year for your Company, showing a marked increase in the business transacted.

During the peak months of the year the amount of business done was limited by the funds available, but strenuous efforts have been, and are being, made to supplement these by the only method at present open to us—increasing our deposits. Progress is being made in this respect, and I would again draw the shareholders' attention to our scheme for the acceptance of deposits. We offer attractive rates of interest, security for your money, with a minimum of formalities.

Your Directors again recommend the payment of a final dividend of 20 per cent., making a total of 30 per cent. on the ordinary shares for the year. They also propose to place £50,000 to reserve, leaving an increase of £14,305 in the balance carried forward.

The current year has got off to a good start, and we have the advantages, to which I have already referred. At present there is no sign of any falling off in the favourable conditions enjoyed by the Motor Industry as a whole. The prospects, therefore, look bright, but the general conditions in the country do make it difficult to prophesy with any degree of confidence. Reduction in overtime working may affect the demand for the cheaper second-hand vehicles and this could have repercussions on the market as a whole. There is, too, always the possibility that fresh restrictions might be imposed on the Hire Purchase Companies. Such considerations must temper the optimism we feel at the present time.

Once more, I must express our sincere thanks to our management and staff for all the hard and intelligent work they have put in during the past year. The results achieved are due in no small measure to their efforts, and this mark of our appreciation is no empty formality.

The report was adopted.

THE SCOTTISH LIFE ASSURANCE COMPANY, LIMITED

A YEAR OF MANY RECORDS

Mr C. R. Munro, CA, Chairman of the Board of Directors, presided at the Annual General Meeting of The Scottish Life Assurance Company, Limited, held at Edinburgh, on March 26th.

In moving the adoption of the Report and Accounts for 1957 the Chairman said:

1957 has been for us a year of many records. Not only has it been the eighth year in succession in which we have produced record net new sums assured but these have for the first time exceeded £10 million. Our Life and Annuity Fund has, for the first time, exceeded £20 million, and our premium income now exceeds £2½ million, and the gross yearly income from investments £1 million. The net new business was 17 per cent and the group life business 41 per cent above the corresponding figures in the previous year.

In 1957 our premium income increased by £364,000, being 16 per cent over that for 1956 and 33 per cent above that for 1955. The gross rate of interest earned has risen to £5 18s. 2d. per cent compared with £5 13s. 11d. per cent in 1956. The corresponding net rates after deduction of income tax are £5 1s. 3d. per cent and £4 19s. 11d. per cent respectively. Both these rates of interest are the highest achieved in the Company's history.

One consequence of the increase in Bank Rate to 7 per cent in September, 1957, was a reduction in market value of our British Government securities and other fixed interest stocks. Furthermore, the decline in prices in this country, in USA and Canada, has affected the value of our ordinary stocks. Notwithstanding these falls in value, our investments are worth considerably more than the figure at which they stand in the balance sheet. During the year we made a substantial addition to our portfolio of debentures, in which section is included a number of the presently popular convertible debenture stocks. To a restricted extent we have remained active in the mortgage field, where we lend money on security of house property for owner-occupation in this country, and we also increased our portfolio of ordinary shares, including both American and Canadian stocks.

During 1957 we revised our basis of premium rates to take account of the latest mortality experience of assured lives. The result has been to produce considerably cheaper rates at certain ages, particularly for older lives, and for higher sums assured. It is our constant endeavour to provide life assurance against premature death, from whatever cause, to as large a section of the population as possible, and it is satisfactory to report that last year we were able to offer terms to 96½ per cent of our proposers, of whom over 90 per cent were granted terms at the normal rate of premium. Of the 3½ per cent to whom we could give no terms we have, in a number of cases, offered to reconsider them at a future date, in the hope that we shall then be able to offer them some terms of acceptance for life assurance purposes.

The Directors recommend that the Final Dividend for 1957 should be raised by 2s. per share to 8s. per share, making the total for 1957 12s. per share as against 10s. for 1956.

The Report and Accounts were adopted.

FORD MOTOR COMPANY LIMITED

RAPID RECOVERY AFTER EARLY DIFFICULTIES

SALES TO DOLLAR AREA EXCEED $50 MILLION

SIR PATRICK HENNESSY ON RESTRICTIVE HOME TAXATION

The twenty-ninth Annual General Meeting of Ford Motor Company Limited, will be held on April 18th in London.

The following is an extract from the statement circulated by the Chairman, Sir Patrick Hennessy, covering the year ended December 31, 1957.

The results for the year, showing a recovery in earnings to the level of three years ago, might well suggest steady and uneventful progress, but such was far from being the case.

There were two distinct phases within the year. During the first, which lasted until March, car business remained at a seriously low level, and during the second we experienced a period of rapid recovery to an unexpectedly high level of demand.

Commercial vehicles and tractors were less directly affected by fuel shortage. Demand was relatively well maintained, and stimulated by the introduction in the course of the year of two important commercial vehicle lines.

In May came the entirely new Thames Trader diesel and petrol commercial vehicles, ranging up to five tons in capacity, and in November they were further extended to include seven-ton vehicles. Many operators at home and abroad, following intensive demonstration of the Traders' robust and economical qualities are already placing substantial orders with us.

In November we announced our new forward control vans of 10-15 cwt. capacity to replace the model which has given such excellent service to many thousands of customers over the years. These new vehicles are supplied in a variety of goods and passenger carrying types.

Finally, this year of intensive development was capped by the introduction in November of a new diesel tractor, which we named the Fordson Dexta, and which, with the larger Fordson Major, provides power for the varying farming needs. With its comprehensive range of Ford-Ransome implements, the Dexta is well equipped to meet stern competition in its class in markets throughout the world.

HOME AND EXPORT SALES

During the year sales in the home market totalled 153,752 units, including 106,367 cars, 34,322 commercial vehicles and 13,063 tractors.

Exports were 134,206 cars, 18,399 commercial vehicles and 32,064 tractors, a total of 184,669 units, or 54.6 per cent of our overall sales. Foreign currency earned by those exports included more than $50 million.

Undoubtedly the most dramatic export market last year was the USA, where interest has increased so greatly that the imported car market, although still only a small fraction of the total, has quadrupled in the last two years. In the same period our sales of cars to the USA increased more than six times to over 22,000. The growth in this market fully accounts for the past year's export records; indeed, our total exports elsewhere did not exceed 1955 levels.

BURDEN OF TAXATION

During the past two years the German motor industry has increased car production by 36 per cent, whilst the British industry has declined by 4 per cent. In Germany, where there is no purchase tax and a sales tax of only 6 per cent, the home market increased by 33 per cent; ours, restricted by 60 per cent purchase tax, declined by 14 per cent. This gives weight to my recommendations last year when I contrasted their home market with our own, and urged the need for purchase tax relief. It would be wrong to assume that, with this disability, we can compete successfully in a European Free Trade Area.

An important cost factor in the motor business is high volume production, to justify the installation of modern equipment and enable us to compete in the market places of the world. This high volume can only be achieved and maintained with maximum sales at home.

No major industry in this country, bearing such heavy responsibility for export, is so restricted by taxation at home. Few industries are so modest in their claims upon imported materials: only raw materials normally are imported by the motor industry and, in the course of manufacture, they gain more than ten times their value for export.

Substantial reduction of purchase tax on passenger cars would give us no more than equal opportunity with our Continental competitors.

Further, purchase tax on commercial vehicles, now 30 per cent on chassis, is quite indefensible and ought to be abolished.

I welcome the fact that a start has been made on trunk-road construction in this country. It is as yet only a beginning and far short of what is necessary to correct our present deficiencies. However, it can be said that this Government has done more to implement road construction than any other in the post-war years. There is some basis of hope for the future inasmuch as road construction now appears to rank higher in official priorities.

In recent months the construction of the new Thames Foundry has been completed, and it is now running in. Later in 1958 our pressed steel shop will also be in production, and in the early months of 1959 the new assembly building, which is now at the steel girder stage, will be in use. These three projects are the cornerstones of our present programme, and will enable us substantially to increase productive capacity, improve our techniques and efficiency, and provide employee amenities of a high standard.

EMPLOYEE RELATIONS

A year ago I expressed our earnest desire that good employee relations might be established at Briggs Motor Bodies Limited. While there has been movement in this direction, I regret that it has not yet been possible to reach agreement on standardisation of working conditions for Briggs hourly-paid employees with those at Fords. It is my sincere hope that during this year we shall reach an understanding which will allow Briggs hourly-paid employees to enjoy the same benefits and working conditions as their Ford colleagues.

LEYLAND MOTORS LIMITED

OVERSEAS SALES EXCEED £20 MILLION

The thirty-ninth annual general meeting of Leyland Motors Limited was held on March 26th at Leyland, Lancashire.

The following is an extract from the circulated statement of Sir Henry Spurrier (chairman and managing director):

Taking it by and large the year under review has almost certainly been the most difficult one which the Company has had to face since the end of the War. Fuel shortages following the Suez Crisis, and financial difficulties consequent on the economic situation in various parts of the world brought many difficult sales problems. Within the commercial vehicle industry there has been little or no recovery of the situation, unlike the experience amongst car manufacturers. On account of all this, we must consider ourselves fortunate to have started the year under review with a very large backlog of orders on our books. Despite these difficult circumstances I am satisfied that we have more than maintained our share of any business which has been offered.

HOME AND OVERSEAS MARKETS

The home market now appears to have reached saturation point so far as the supply of new fleets of vehicles is concerned, and we must look to the smaller operator and the ancillary user for any increase in volume of business that we may win in the future. Bus services all over the country are experiencing more and more competition from other forms of transport, most of all from the private car. The expansion of transport of goods by road is not only restricted by statute, but also to no small degree by the limitation and lack of main trunk roads. The Government's road programme is far short of the essential requirements needed to put the country's transport system on a sound and economic basis.

The overseas market is a different story. After Suez nearly all markets were seriously unsettled, but most of these made some recovery, and generally speaking I believe that the end of the year found us holding the position we occupied at the beginning. During the past year the direct overseas sales value of vehicles, units and spare parts alone exceeded twenty million pounds.

In my statement last year, I referred to the Company's decision to purchase the Government owned Tank Factory built on Leyland property. We were faced with making a rapid change-over of its million square feet of shop floor from the production of tanks to that of our own domestic units—in particular the complete manufacture and testing of all Leyland diesel engines. By unrelenting efforts on everyone's part the work was accomplished in record time, enabling us to avoid redundancy which previously had appeared likely. The change-over will, I feel confident, provide a diesel engine factory with the most up-to-date equipment, second to none in its capacity for quality and quantity of output.

THE PRESENT YEAR AND THE FUTURE

Trading conditions, both at home and abroad, are now more difficult, and we are finding it increasingly necessary to offer more attractive purchasing terms and to give more and longer credits.

The world's markets today have, amongst other things, become noticeably price conscious. Because of the ever rising cost of production, through wage awards and increases in the prices of material, British goods are slowly but surely becoming less competitive against those of the foreign manufacturer.

From the point of view of the commercial vehicle industry I am convinced it is essential that we should find means to arrest the spiral of increasing costs, and we have not a great deal of time in which to do so if we are to continue on our present level of sales output. Any effort in this direction is more often than not offset by the negotiated wage increases which, when regard is paid to the future of the industry, we are having to face far too frequently.

ACCOUNTS

The profit and loss account shows a trading profit of £6,065,279, and taken by itself represents a record profit of the Company. It will, however, be understood that it has been earned with the great increased capital, and must therefore be compared against the profit and capital of last year.

We are faced with a payment of £2,632,340 for taxation. Anyone comparing this figure with the sum of £756,332 paid to shareholders must ask themselves if the country could obtain any benefit by a complete takeover, or whether financially we are not already nationalised.

The Directors recommend a dividend of 2s. 6d. per Stock unit, less tax.

The report and accounts were adopted.

THE FEDERATION OF MASTER COTTON SPINNERS' ASSOCIATIONS LIMITED

MR ERNEST HIRST PUTS THE CASE FOR A CEILING ON IMPORTS

The Annual General Meeting of the Federation was held on March 25th in Manchester, Mr Ernest Hirst presiding.

Mr Hirst said that the cotton industry faced the most critical moment in its history. The cotton industries and governments of all the OEEC countries were now experiencing the same problems as Lancashire owing to the threat of textile imports from Eastern countries with low standards of living and sometimes the added advantage of subsidies.

The world slump of the 1930s had been followed by the war, when half the mills were closed and no re-equipment had been permitted. Since the war the industry had made tremendous and successful efforts to put itself on a sound basis. A vigorous recruitment policy had been accompanied by the installation of improved amenities and welfare equipment which had begun to attract a fair share of young people. Juvenile rates of pay and promotion were good and technical education was encouraged.

£100 MILLION SPENT ON NEW EQUIPMENT

By 1954 Lancashire was installing new machinery at a faster rate than any other established cotton industry; between 1948 and 1957 more than £100 million had been spent on new equipment. The industry was being gradually streamlined and production was being concentrated in the more effective units.

Modernisation had now been slowed down by the threat of increasing and unlimited duty-free imports from India, Pakistan and Hongkong on a scale which no other country permits or would permit.

Shift working in Lancashire would gradually increase, largely in order to conserve capital, but it was a common fallacy to think that the cost of production would be greatly lowered thereby. The premium paid for the shorter hours worked on shifts largely negatived the advantage of more intensive use of machinery.

The Yarn Spinners' Agreement, although not operated by the Federation, was, in Mr Hirst's opinion, essential in order to provide a minimum margin for efficient firms so that they could continue with their re-equipment and modernisation plans. The fact that it did not provide a feather bed was shown by the large number of mills which had recently closed.

The greater part of the fall in exports had been caused either by low price Japanese competition or by the imposition of tariff or quota restrictions in markets which still wished to buy our quality goods. The present crisis was mainly caused by unlimited duty-free quantities of cheap goods from within the Commonwealth and Empire which were imported and not re-exported after processing.

UNFAIR COMPETITION

The Federation had circulated widely a short document which set out seventeen points demonstrating clearly the unfair nature of this competition and the facts given had not been disputed. Complete exclusion of these goods was not asked for, only a reasonable ceiling. Mr Hirst said that the Federation was non-political, but a Government which was so short-sighted as to ignore the danger of unemployment and dissipation of invested capital on such a scale must expect to lose the votes not only of those directly affected, but also of those who realised the soundness of Lancashire's case. It was quite untrue that a reasonable revision of existing policies, in order to give some safeguards to Lancashire, would undermine the whole system of Imperial Preference or affect other industries adversely.

The industry would continue to press on with the preparation of its own plan aimed at limiting imports. The announcement that high-ranking Government officials were proceeding to Hongkong to discuss the problem was naturally welcomed, but speedy action was required.

The industry had behaved with remarkable steadiness and had followed constitutional principles as it was felt that the soundness of its case must yield results, but the impatience of many Federation members, who had not had the opportunity to follow all the efforts made to press their case, could be appreciated. The present deadlock must be ended, as the cotton and allied fibres industry must remain a great basic industry which would continue to provide steady large-scale employment at home and be a spring-board for exports.

THE SCOTTISH MUTUAL ASSURANCE SOCIETY

EXCELLENT RESULTS

The seventy-fifth annual general meeting of The Scottish Mutual Assurance Society was held on March 19th in Glasgow.

Mr T. R. Patterson, CBE, DL, JP (the chairman), presided and, in the course of his speech, said:

This is our seventy-fifth year and we have invited all our Branch Managers and Resident Secretaries to attend. We are delighted to have them with us and to congratulate them on the excellent results of the past year. The number of new policies written has increased by over 10 per cent, while the sums assured have increased by over 20 per cent to the record figure of £6¼ million.

In the autumn it became necessary among other things to increase Bank Rate to the "crisis" rate of 7 per cent. As a result we have been able to invest new money on favourable terms and, with further increases in the dividends on our holdings of ordinary shares, the gross rate earned on our funds in fact increased by 4s. 5d. per cent to the new record figure of £6 3s. 4d. per cent. The net rate increased by 7s. to £5 6s. 4d. per cent—also a new record—partly due to an adjustment in our provision for income tax for previous years.

After a full review of the affairs of the Society as regards both Assets and Liabilities the directors decided to increase the rate of Intermediate Bonus to 44s. per cent per annum, the full rate declared two years ago at the triennial distribution of profits.

The report and accounts were adopted.

EASTBOURNE MUTUAL BUILDING SOCIETY

ASSETS EXCEED £7 MILLION

The eighty-first annual general meeting of the Eastbourne Mutual Building Society was held on March 19th at Eastbourne.

Mr Laurence A. Caffyn, chairman, in the course of his speech, said: It has been a year of steady progress. The total assets increased during the year by £80,000, and by the end of the year had reached the satisfactory figure of £7,221,000. Of these assets, £734,000 or 10.2 per cent of the whole comes under the heading of liquid assets.

The year 1957 was one in which most other financial institutions had to curtail activities. The result was that building societies were confronted with an unprecedented demand for loans. The primary object, of course, of building societies is to grant loans for home-ownership and, therefore, your Board had to concentrate on the task of helping people who wished to achieve this most desirable object. There have been rumours that building societies were not making the advances they ought to make, but during the year your society advanced £400,000 more than it advanced in 1956. The total of £822,000 was a highly creditable performance.

The society's liability to income tax and profits tax continues to increase. Building societies have always maintained that they should not be assessed for Profits Tax, for the simple reason that they are non-profit-making concerns. We still hope that Profits Tax for building societies will be completely abolished.

The report and accounts were adopted.

NATIONAL MUTUAL LIFE ASSURANCE SOCIETY

A MOST ACTIVE YEAR

MR KENNETH MOORE'S STATEMENT

The Annual General Meeting of the National Mutual Life Assurance Society was held on March 25th at the head office of the Society, 39 King Street, London, E.C., Mr Kenneth A. E. Moore, FCA, the chairman, presiding.

In a statement which had already been circulated to the members of the Society together with the annual report and accounts for 1957, the chairman said that the Society had once again had a most active year, with new sums assured totalling over three million for the first time.

He then went on to review the problems of investment in 1957—a year during which there were substantial falls in market values, not only of gilt-edged and other fixed-interest stocks, but also of equities both sterling and dollar. It had been the constant endeavour of the Directors so to adjust the investment portfolio as to minimise the impact both of falling investment values and of currency depreciation.

The Society was almost unique in showing its quoted investments in the balance sheet at their approximate middle market prices at the end of each year. The Reserve Fund, which was started 25 years ago and which had been a buffer against adverse fluctuations in market prices ever since, had sufficed to carry the whole of the investment depreciation of 1957 with a margin of nearly £250,000. This Reserve Fund was, of course, entirely distinct from the Actuarial Reserves which were carried under the Assurance Funds.

INTEREST RATES

The general fall in investment values in 1957 was, to a large extent, a reflex of the considerable rise in interest rates which occurred during the year, particularly following the rise in the Bank Rate. In the case of a life office there were countervailing advantages in that so long as these higher interest rates persisted it was possible to invest new moneys at higher yields than were normally assumed in actuarial calculations.

The statement then set out in a short table the effect of the moves that it had been deemed prudent to make during 1957 in fixed-interest and ordinary stocks, both sterling and dollar. Broadly speaking, the movement was away from ordinary shares into fixed-interest stocks to the extent of about 10 per cent of the Society's total assets, ordinary shares having been reduced to 17 per cent.

TRIBUTE TO STAFF

Mr Moore concluded his statement by placing on record the thanks of the Directors to the officials and staff for the competent and satisfactory way in which they had dealt with the day-to-day work of the Society, and to Mr Oram, who was appointed Actuary and Manager in 1956, their special thanks for the contribution which he had made to the tasks of management. Mr Oram had recently been appointed to the Board of Directors.

The report and accounts were unanimously adopted.

INTERNATIONAL COMBUSTION (HOLDINGS) LIMITED

Annual Report and Accounts of the I.C.L. Group for 1956-1957

INTERNATIONAL COMBUSTION LIMITED
Complete Steam Generating Plant for Power Stations, for Industry and for Nuclear Power Application in Great Britain.

400,203	Investments (less Provision)	464,354
5,763,034	Total Capital Employed	6,798,112

EXTRACT FROM THE REVIEW OF THE CHAIRMAN, SIR JAMES REID YOUNG

The Group profit of £2,601,201 is once more at a record level, due mainly to closure of several long-term Contracts.

Export deliveries and those for general industrial field were substantially increased. Output of Derby Works showed an increase.

Orders on hand showed an increase of £1 mn. over previous year. Since end of financial year order placed by Central Electricity Generating Board for 550 MW Unit Boiler for Thorpe Marsh, nr. Doncaster, having nearly three times the steam capacity of any previous individual unit placed by the Board. Also Contract received jointly with the B.T.H. Export Co. Ltd. for complete Power Station for City of Buenos Aires.

Subsidiary and Associated Companies, both home and overseas, have in general shown satisfactory working results.

Output is continuing on a satisfactory scale and current year's results may compare not unfavourably with those of 1956/57.

In respect of business now offering, overall profit margins tend to be less satisfactory than obtained in the past. Group's production resources are being substantially increased and modernised.

JAMES PASCALL, LIMITED

FURTHER INCREASE IN DOLLAR SALES

The sixty-first annual general meeting of James Pascall, Limited, was held on March 26th, in London.

Mr R. Ellman Brown, FCA (the Chairman), in the course of his speech, said :

The results for the year ended December 31st show a reduction in profits on the previous year. The net profit, subject to taxation, is £302,096, which represents a decrease compared with 1956 of £182,343. These two years cannot, however, be compared on precisely the same terms.

In retrospect, it is now clear that, through the Suez crisis, sales in the latter part of 1956 were inflated through stock building by the Wholesale and Retail Confectionery Trade as an insurance against the effects of petrol rationing. So, in fact, the record profit figure of 1956 in part contained profits from sales which would, without the Suez incident, have been made in 1957 and, in effect, coloured our estimates of the level of the 1957 sales. Competition during the year also became even more fierce under the impress of a continuing general decline in confectionery sales.

There is, however, one very encouraging feature brought about by the rationalisation of the Company's manufacturing processes. Despite the fact that sales for 1957 show a diminution against those for 1956, there was a reduction in production costs per ton produced in 1957, compared with 1956.

Our export trade continued on a most satisfactory level during 1957, and we are able to report a further increase in our dollar sales to Canada and to the West Coast of the USA. During the year our Irish sales have continued to increase, as has our manufacture under royalty in Italy. During this year we have also negotiated a satisfactory agreement for direct manufacture under royalty in South Africa.

The profit on trading amounted to £429,676, compared with £636,688 for the year 1956. Your Directors propose that the dividend on the Ordinary Shares shall be maintained at 55 per cent.

FUTURE OUTLOOK

We cannot gauge the ultimate effects of the credit squeeze upon consumer uptake, nor can we make allowance for any large-scale industrial unrest, such as occurred in the early months of 1957, and which undoubtedly contributed to the lessening of demand. We know already that the payment of increased margins to the Distributors will involve considerable additional cost in 1958. Sales to date this year are running at a higher level than at this time last year.

There has been a drop in sugar prices in recent months, but it is certain that the Sugar Board has for some time been selling at a loss, and it has just been announced that the distribution allowance is withdrawn and a surcharge will be added to the price.

There has been a steep rise in cocoa prices which, in the later part of the year, will affect our profit margins. On the other hand, rationalisation and mechanisation of the Company's manufacturing processes continue and we hope for further savings in the cost of production. I have faith in our ability to meet the present intensive competition in our industry, while fully maintaining the reputation for high quality manufacture upon which the success of this Company is founded.

The report and accounts were adopted.

METROPOLITAN COLLEGE, ST. ALBANS
or call at 30, Queen Victoria Street, London, E.C.4.

APPOINTMENTS

SCOTTISH INDUSTRIAL ESTATES, LTD.

The Directors of SCOTTISH INDUSTRIAL ESTATES, LTD., invite applications from suitably qualified persons for the position of Assistant to the General Manager of the Company.

Applicants, preferably not more than 45 years of age, should have had wide administrative, commercial and/or industrial experience, qualifying them to give effective assistance to the General Manager in the discharge of the managerial responsibilities inherent in a large-scale organisation responsible to a Government department for the erection, maintenance and general administration of industrial property which, at present, includes nearly 400 modern factories in Scotland.

The salary scale appropriate to the appointment is £1,600 to £2,000 per annum. The commencing salary will be determined by the Board. The Company operates a Contributory Superannuation Scheme which the successful applicant will be required to join.

Canvassing of the appointment, either directly or indirectly, will result in disqualification.

Applications, in duplicate, together with five copies of three recent testimonials, should be lodged with the DIRECTOR AND GENERAL MANAGER, 3, WOODSIDE PLACE, GLASGOW, C.3, not later than April 10, 1958.

MONSANTO CHEMICALS LIMITED

require a man preferably a graduate, to study and develop clerical methods and procedures in their London Administration Department. The job requires keen analytical power and ability to work with others. It offers an ideal opportunity for a man aged about 25-30 years to progress in this field in an expanding company.

Experience or training in commerce, economics or accounting would be an advantage, although full training will be given. Good prospects and salary. Non-contributory pension scheme.

Send full particulars to D.L.1, Personnel Department, Monsanto Chemicals Limited, Monsanto House, 10-18, Victoria Street, S.W.1.

DEVELOPMENT OFFICER required to undertake a special study of data processing, to review the scope for the use of electronic and other modern techniques within British Road Services and to implement data processing programmes. The work will require clear thinking, imagination and enthusiasm for new methods and the ability to organise and carry out prolonged detailed investigations. Applicants must have analytical ability and knowledge of administration, organisation and accounting systems and office methods and procedures. Knowledge of advanced mathematics and electronics is not required. The selected candidate will be required to attend training courses in the characteristics, programming and use of electronic data processing machines. Salary range £1,250-£1,600 p.a. Contributory superannuation scheme.—Applications, giving age, qualifications and experience, to Personnel Officer, British Road Services Ltd., 222 Marylebone Road, London, N.W.1.

A PROMINENT and expanding Group of Chemical Companies in Co. Durham seeks a fully experienced Secretary able to supervise preparation of financial accounts and thoroughly versed in Standard Costs, Budgetary Control and Modern Management Methods. This is a first-class job open only to a first-class man. Four-figure salary with bonus and non-contributory pension scheme.—Applications, which will be treated in strictest confidence, must give fullest possible account of experience as well as personal particulars, to Box 902.

UNIVERSITY OF LONDON.—The Senate invite applications for the Readership in the History of Philosophy tenable at the London School of Economics and Political Science (salary scale £1,475-£1,775-£2,150 a year plus £80 London Allowance).—Applications (10 copies) must be received not later than May 2, 1958, by the Academic Registrar, University of London, Senate House, W.C.1, from whom further particulars may be obtained.

UNIVERSITY OF LONDON

Applications are invited from experienced accountants for the P.D. Leake Research Fellowship. The emolument will be £2,000 tenable for one academic year. The successful candidate will be expected to carry out research in subjects with which the accountancy profession is directly concerned. Only members of the United Kingdom accountancy bodies, recognised for the purpose of United Kingdom law, are eligible.

Applications should be received not later than April 30, 1958, by the Director, the London School of Economics and Political Science, Houghton Street, London, W.C.2, from whom further particulars may be obtained.

THE UNIVERSITY OF BIRMINGHAM

FACULTY OF COMMERCE AND SOCIAL SCIENCE

EDWARD WILSHAW POSTGRADUATE EXHIBITION

One Exhibition, of the order of £200, but the amount to be determined in each case by the applicant's merits and circumstances, will be offered each year from a fund founded by Sir Edward Wilshaw, K.C.M.G., D.L., LL.D., F.C.I.S., J.P. The Exhibition is open to graduates of this and other Universities who wish to prepare themselves for careers in business administration and management and who propose to read for the Graduate's Commerce Diploma in business administration.—Applications (two copies) including the names of two referees, should be sent by [illegible] strar, The University, [illegible]

ECONOMICS/ARTS GRADUATES

We are a well-known organisation, operating internationally from offices in Central London. We are looking for a man aged 25-27, with an Honours degree (Economics or Arts) to train initially in the absorbing and responsible job of large-scale buying. Subsequent progress may lie in the Buying Department or in another Division of the Company, depending on the aptitude of the selected candidate.

For a man of character and business acumen, this is a first-class career opportunity, in a hard-working but congenial atmosphere. Similar trainees in the past have made excellent progress.

Starting salary will be related to present earnings, with very good prospects. Other conditions of service include a pension and life assurance scheme.

If you are of the right age and background and would like to be considered, please write, indicating age, career so far, and present salary, to Box 897.

CHIEF ACCOUNTANT. A well-known Company in the Watford (Herts) area manufacturing specialised electrical plant is intending to appoint a Chief Accountant (a) to install an efficient costing system (b) to control and develop a partially mechanised accounting system (c) to submit periodical statements to management. Applications are invited from Chartered Accountants or Costs and Works Accountants in age groups 28-36 with at least three years' industrial experience preferably in engineering industry. Commencing salary not less than £1,500 ; contributory pension scheme, 5-day week.—Replies, in strict confidence, to Chairman, Box 896.

CONSTRUCTORS JOHN BROWN LIMITED invite applications for a post of an Executive Director. Preference will be given to a man with experience in Chemical and Petroleum Chemical Engineering and Construction who also possesses proven administrative ability. —Applications should be addressed to the Chairman of the Company at 8, The Sanctuary, London, S.W.1, who will deal with them personally and confidentially.

IMPORTANT London association of merchanting houses requires during April-June full-time or part-time assistance in statistical analyses of various classes of primary data. Essential qualifications include not only arithmetical accuracy (or ability to use mechanical calculators) but also sound economic judgment in selecting and applying suitable methods of tabulating, summarising and analysing quantitative material as well as skill in graphic or other evocative presentation of results. Work could be done mostly at home and might suit young graduates in statistics or retired professional statisticians. Fees by arrangement.—Apply Box 894.

ACTUARIAL STUDENTS

If you

(1) have completed or are completing part II of the examinations,

(2) are confident of qualifying in a reasonable time but cannot quite see where qualifications will get you and

(3) would like to live in South Africa (a country which, while it has disadvantages also has many big advantages),

you may be just the man we are looking for as Assistant to our Actuary in Johannesburg. The position carries a generous salary and the prospects for a hard worker with a sound practical approach are excellent.

If you are interested, please write to "The Actuary," P.O. Box 8791, Johannesburg.

WILMOT BREEDEN FELLOWSHIP

Applications are invited for a Fellowship to be held in association with the College of Technology, Birmingham. The value of the Fellowship, which is for a two-year term, is £1,000 per annum.

A candidate for the Fellowship should normally have had two or three years' research or industrial experience. He must be acceptable to the College of Technology, Birmingham, as a post-graduate student, and should have an Honours Degree at a University in the British Commonwealth or an equivalent qualification.

The Wilmot Breeden Fellow will engage in an enterprise of such character as to require the facilities both of the College and of the Company, and his time will be divided between the two. The activities with which the Company is especially concerned include Mechanisms, Electro-Chemistry, Metal Finishing, Metallurgy, Metal Formation, Hydraulics, Electronics.

Full details may be obtained on application to the Secretary, Wilmot Breeden Limited, Amington Road, Birmingham, 25.

Final applications must be received by the Secretary before May 1, 1958.

UNIVERSITY OF HONG KONG

Applications are invited for the post of LECTURER IN THE DEPARTMENT OF ECONOMICS AND POLITICAL SCIENCE for the teaching of Accountancy and Business Administration in the Final B.A.(Hons.) course in Economics. Applicants should have a professional qualification in the above fields, besides a degree in Economics from a British University.

Annual salary (superannuable) is $ 11,575 x £50—12,175 (man) or £1,200 x £40—£1,680 (woman), together with an expatriation allowance of £225 a year if applicable. The equivalent of income tax in the Colony is comparatively low.

First-class sea passages are provided for expatriate staff and their families on first appointment and leaves.

Further particulars and information as to the method of application may be obtained from the Secretary, Association of Universities of the British Commonwealth, 36, Gordon Square, London, W.C.1.

The closing date for the receipt of applications, in Hong Kong and London, is 3rd May, 1958.

MIDDLESEX COUNTY COUNCIL

PRINCIPAL PLANNING ASSISTANT, APT IV. Salary £1,025 per annum-£1,175 per annum plus London Weighting. In charge of survey and analysis section. Good experience and appropriate qualifications required. SENIOR PLANNING ASSISTANT. Special Scale. Salary £750 per annum-£1,050 per annum, plus London Weighting. Appointment may be made above minimum. Qualifications in town planning, geography, economics or other appropriate subjects. 5-day week. Prescribed conditions.—Application forms from County Planning Officer, 10, Great George Street, S.W.1, returnable by April 8th. (Quote X140 TP). Canvassing disqualifies.

J. & J. COLMAN LTD. invite applications for post of STATISTICIAN at Norwich. This is a new appointment and will provide the selected candidate with opportunities for demonstrating the value of statistical techniques in routine testing, laboratory experimentation, product development and in such other fields as he or she can show to be worthwhile.

Candidates should be either be graduates with suitable qualifications (Maths. or Economics), or should be trained in some other relevant subject (e.g. Chemistry), with later experience in the use of statistical techniques at the level of the N.S.S. Certificate examination.

A sound knowledge of experimental design problems, statistical quality control and sampling.

Previous industrial experience desirable and an ability to work in collaboration with other technical staff of all grades is essential. Age not less than 25. Salary according to age and experience.

Please write, giving details of age, qualifications, experience and salary required, to the Secretary, J. & J. Colman Ltd., Carrow Works, Norwich.

KUMASI COLLEGE OF TECHNOLOGY

Applications are invited for the post of LECTURER in ECONOMICS in the Department of Commerce.

The College prepares students for the London University B.Sc. degree in Estate Management and for examinations of the A.C.C.A., C.I.S., and C.C.S.

Applicants should have a good honours degree in Economics ; a professional qualification, e.g. C.I.S. an advantage.

Appointment may be accepted on contract for 5 years or on pension or arrangements to continue policies initiated under the F.S.S.U. Scheme might be made by the College.

Contract Salary Scale : £1,017 10s. x £55—£1,787 10s. per annum plus gratuity of £12 10s. for each month of satisfactory service payable at end of contract. Pensionable and F.S.S.U. Salary Scale : £925 x £50—£1,625. Point of entry according to experience.

Children's allowances up to a maximum of 3 at the rate of £50 per annum per child up to 10 years, and £100 per annum per child over 10 years in full-time education up to 21 years.

Conditions of Service include annual leave with free return 1st class passages for the member of staff and, conditional on minimum stay in West Africa, for his wife and up to 3 children under 17 years. Bungalows, with basic furniture at low rental provided. Income tax low.

Applications (6 copies) giving age, qualifications, experience and the names of 3 referees, should be sent to The Council for Overseas Colleges, 12, Lincoln's Inn Fields, London, W.C.2. Closing date April 20, 1958.

SALES and Marketing Analyst, man preferably in mid-twenties with Economics degree, some statistical knowledge and ability to interpret Research findings, required by Nabisco Foods, Ltd. (formerly Shredded Wheat Co., Ltd.), Welwyn Garden City. Familiarity with technique of Consumer and Retail panels, and experience of Grocery products field an advantage. Good salary grade, prospects and amenities.—Applicants invited to write to Executive Administrator Personnel, stating age, educational background, experience and present salary.

UNIVERSITY OF LONDON
INSTITUTE OF EDUCATION

Applications are invited for the post of Lecturer in the Methods of Teaching History which will become vacant on September 1, 1958. Salary scale, £900-£50-£1,350 and thereafter, subject to review, by annual increments of £75 to £1,650 a year, plus £60 London Allowance; family allowances and membership of the Federated Superannuation System for Universities. Good academic qualifications and teaching experience are essential. An interest or qualification in philosophy would be an additional recommendation. Forms and further particulars may be obtained on application.—Six copies of the application and testimonials should be returned to the Secretary, University of London Institute of Education, Malet Street, W.C.1, not later than April 19th.

THE UNIVERSITY OF MANCHESTER

Applications are invited for the post of LECTURER IN SOCIAL ANTHROPOLOGY. Salary on a scale £900 to £1,650 per annum with membership of F.S.S.U. and Children's Allowance Scheme. Initial salary according to qualifications and experience.—Applications should be sent, not later than April 12, 1958, to the Registrar, the University, Manchester 13, from whom further particulars and forms of application may be obtained.

UNIVERSITY OF MANCHESTER

RESEARCH STUDENTSHIPS AND RESEARCH GRANTS IN ECONOMIC AND SOCIAL STUDIES

Applications are invited for the above studentships and grants, tenable for one year in the first instance and renewable for a further period not exceeding two years. The studentships are normally of the value of £350 or £400 per annum. They are offered to candidates who have obtained the degree of Bachelor or Master in this or any other approved University, and applications are acceptable from students who expect to graduate this summer. —Applications should be sent not later than July 1, 1958, to the Registrar, The University, Manchester, 13, from whom further particulars and forms of application may be obtained.

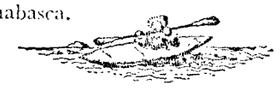
RITCHIE CALDER'S *Signposts to the Atomic Age*

ATOMIC HEAT to freeze the Arctic...

"IN THE FROZEN WASTELANDS OF THE Canadian North, Eskimos and Indians, going off to hunt the caribou or trap for furs, are taught how to prospect for the fuels and metals of The Atomic Age. They are part of that Age and very much aware of it. *Innuit*, the Eskimo of the Barrens, no longer laughs at the eccentric interest which *Kabloona*, the White Man, shows in yellow-stained rocks; he knows what makes a Geiger-counter tick and recognises uranium when he sees it. His Tree-line neighbour, the Cree Indian 'brave' has already grasped the meaning of atomic energy—he calls it *Eskoitik-otchi-Kaochipyik* which is 'Lightning-which-comes-out-of-Rock'.



Those vast empty spaces, half the size of the United States, are already being systematically surveyed. Geologists, on the ground and from the air, are charting its fabulous mineral wealth. Helicopters, fitted with gravimeters, magnetometers, and scintillometers, can detect the ore-bearing deposits beneath the snow and ice, the pathless forests and the countless lakes. Their charts already speak eloquently of the abundance of the

atomic fuels and "new" metals for which the metallurgists and nuclear engineers are praying: but most of that wealth is locked up in remote parts of the Pre-Cambrian, or Laurentian Shield, so inaccessible to conventional haulage, by road or rail, as to seem unworkable.

Yet the answer could lie in atomic energy itself. Imagine 'industrial oases', powered and l— "packaged reactors" and reached only by a— reactors themselves could be assembled b— (which has already served in the const— massive defence installations in the Ca— Once the reactors are established and 'critical', fuel-replenishment would be no problem.

Completely civilised townships could be created with adequate heat to counteract the climate, and modern amenities to enliven the Long Night. Again the prototype exists in the Canadian base at Churchill on Hudson Bay and the U.S. base at Thule, in Greenland. With self-sufficient power, independent of coal-trucks, oil-tankers, or pipe-lines, the ores could be mined, milled and processed into small bulk and flown out by air, like the casks of sodium uraninate from the Eldorado mine on Lake Athabasca.

That raises another problem for which atomic energy could have a quaint answer. How to ensure all-the-year-round air-communications? The winter, contrary to popular belief, is the best time; the sea and lake ice can take the heaviest aircraft. The trouble starts with the coming of the sun. Ice thaws. Airstrips heave and toss and melt into mud, while the permafrost, the continuously frozen sub-soil and rocks, remains solid underneath. With sufficient power available, the airstrips and roads could be refrigerated and kept solid, like an ice-skating rink.

Atomic heat to freeze the Arctic! It is like selling refrigerators to the Eskimos." [R.C.]

"'Dead Heat' he called it"

"This Newalls chap spent a couple of days at our factory looking at everything... boilers, pipework, furnaces—he even went up on the roof. Then he said he could cut our fuel bills by 15%. You see, we weren't getting maximum results from the fuel we were using. Insufficient insulation was allowing a lot of the heat generated to escape into thin air without doing any work—'dead heat', he called it. At our next Board meeting, it was decided to call in Newalls to attend to our insulation requirements throughout the factory. Now we're beginning to reap the profits."

NEWALLS ADVISORY SERVICE is available to anyone interested in increasing productivity and working efficiency by better thermal insulation.

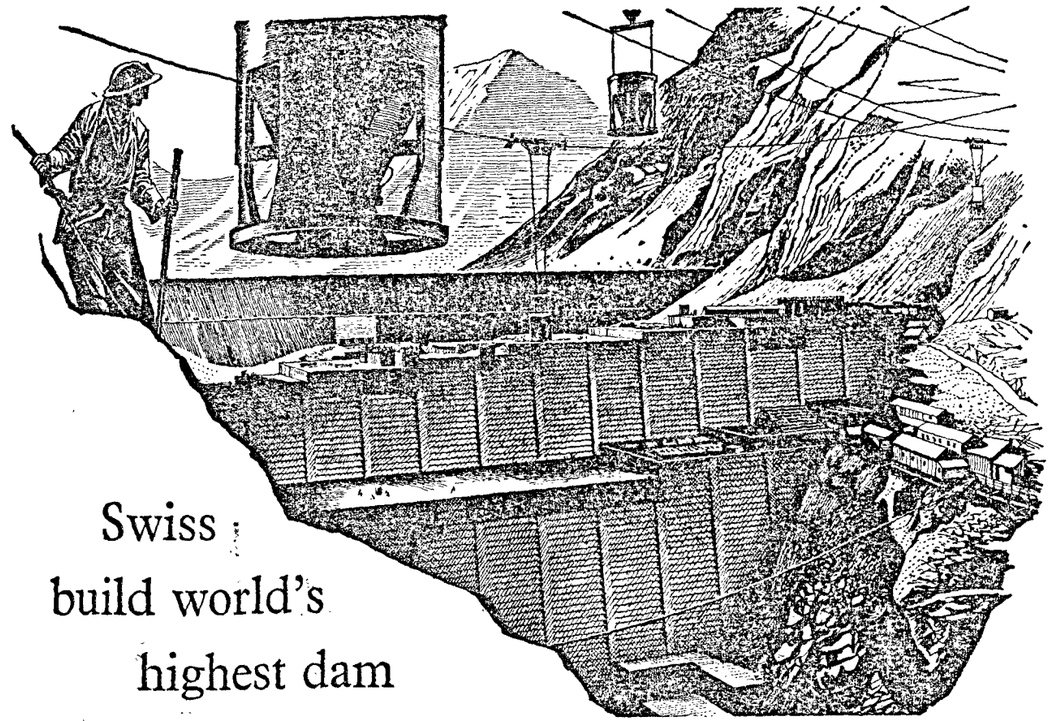
Holidays? I'm going back to

Denmark



To me, Denmark with wonderful Copenhagen, its colourful past and fun-filled present, is irresistible. And it's such pleasure getting there! You step aboard a D.F.D.S. ship at Harwich or Newcastle and at once you revel in your first taste of real Danish hospitality. Go this year – you can take your car for as little as £5. 3s. 0d.—and there's an almost unlimited currency allowance for Scandinavia. Yes! it's Denmark again for me.

Swiss build world's highest dam

On the snow-covered slopes of the Alps, in the Canton of Wallis in Switzerland, one of the most amazing feats of modern engineering is being carried through to a triumphal conclusion. Simultaneously, two mighty hydro-electric projects, Mauvoisin and Grand Dixence, are under way. The dam at Grand Dixence will be the world's highest—931 feet, with the huge volume of 7.6 million cu. yds. of concrete. The Mauvoisin dam will be 777 ft. high and the four underground power houses will supply 1,200,000 kilowatts—one third of Switzerland's present capacity! More than 50 miles of tunnels have already been drilled with Atlas Copco drills and Sandvik Coromant drill steels—chosen for 75% of all the drilling operations. Atlas Copco equipment has also been used to excavate two of the power houses, as well as the dam sites, and to supply rock for the concrete.

Track smoothing speeds racing cars

Compressed air is versatile. Atlas Copco provide the means for all its many applications. At Monza, Italy, Atlas Copco chipping hammers were selected to smooth out irregularities in the concrete surface of the Grand Prix motor-racing track. This operation, which was completed while cars were already practising on the circuit, allows top speeds of 160 m.p.h. to be achieved.

The Atlas Copco Group of Companies is responsible for the manufacture of compressed air equipment and its distribution and servicing in 90 countries throughout the world. Group Headquarters: Atlas Copco AB, Stockholm 1, Sweden.

Reliefs with Thanks?

THE implication which most people will draw from this year's Economic Survey is that the Chancellor may be going to grant some tax reliefs in his budget, but that he is likely to determine the extent of them by a pin or a hunch rather than by economic planning. This is not necessarily a criticism of Mr Amory. It may be more a criticism of the present state of economic planning, or even of the present prospect for the economy. The proper attitude in which any economist should review this year's survey, the details of which are more substantially discussed on page 43, is one of humility towards the failures of his own science.

The authors of the survey do not, at the outset, appear to share this humility. In its form, this year's survey is rather more of an "economists' document" than were either of its immediate predecessors. It begins, more determinedly than did the surveys for 1956 or 1957, with the sort of arithmetical analysis of real demand and production on which modern economics has taught that budgets ought to be founded. It shows more impatience than the survey did last year with the fact that "industrial production in 1957 was only slightly higher than in 1955," although "the high investment which has been going on for several years in most industries should provide a store of capacity for further expansion." The Treasury reports that the relatively small £435 million increase in real demand in 1957 does "not appear to have strained the economy"; and, on present trends, it apprehends that the "decrease in demand relative to industrial capacity which took place in 1957 will continue into 1958." But, at this stage, the return to the old planning phraseology stops short. After this sort of opening, the "planners" of economic surveys in the years until 1955 would have proceeded to work out the probable shortfall between effective demand and effective productive capacity; and to suggest that this shortfall represented the amount of tax reliefs that could legitimately be given away. On this old (though hardly yet conventional) basis of reckoning, there is no doubt that the scope for tax reliefs this year would have been very considerable.

But the survey for 1958, like those for 1956 and 1957, does not carry economic planning that far—and for a very good reason. Its optimistic arithmetic is held back by the three "disappointments" that have dogged these last two years of less buoyant demand. These are that prices have gone on rising, even though demand has fallen below effective industrial capacity; that exports have not sufficiently increased, even though (and while) pressure on the home market has been easing; and that Britain, although running a balance of payments surplus of £237 million in 1957, managed to incur a foreign exchange crisis as well. The "expansionist school" of economists has cited these disappointments as a sign that the price inflation of the last two and half years has been of the "wage push," not "demand pull" type; and as showing that the strain on sterling cannot sensibly be eased by measures that would depress internal

production, but only by measures to restrict the capital outflow from London. The authors of the survey certainly do not go as far as this. But they do back up —or seem to back up—their vague apparent inclination for a not-too-tough budget with an argument that emanates more familiarly from Whitehall.

This argument, not to put too fine a point on the matter, is based on the old policy of hoping for the best. The authors of the survey believe, or profess to believe, that the three major disappointments of the recent period of slackening demand may be avoided this year. After a brief look at the current trend of costs, they opine that there should be "a good opportunity in 1958 to stop the rise in prices which has troubled the country for twenty years." And, "externally, it may well prove that the United Kingdom will achieve a substantial current surplus on its balance of payments in 1958." Admittedly, and unfortunately, as a result of the fall in commodity prices, the countries of the overseas sterling area are already in large deficit with the non-sterling world; but the survey hopes that Britain's own surplus may be large enough to offset the resultant drafts on the overseas sterling area's balances, without "too great a strain" being imposed upon the reserves.

THESE adumbrations may be right. But they look and sound very unlike adumbrations based on confident forecasting, and much more like convenient hopes that there is no need yet to anticipate that anything will necessarily go wrong. Leaving aside the possibility of a world slump (which would require a change in policies then, not in programme promotion now), one internal thing which obviously could go wrong is a revival of wage inflation. The present indications here are still rather disturbing. There are newspaper reports that Sir John Forster and the railway wage tribunal are going to spend this weekend deciding whether they will recommend an increase to workers in yet another nationalised industry in deficit.

Another main thing which might go wrong is a renewed strain on sterling in the autumn. The trouble here is not simply that such buoyancy as there is in Britain's exports may have some adventitious elements in it; some of Britain's overseas customers, for example, have probably been bringing their purchases forward for fear that their own governments may soon impose import restrictions. The bigger apprehension for Britain is that if the American recession throws an increasing strain on the outside world's dollar reserves, then the scramble for these scarce reserves may react once again on sterling. This scramble may not occur; it is the sort of movement that it is always very difficult to foretell. But, in cold fact, one would have thought that there was more reason to apprehend such a misfortune this autumn, looking forward from the April of 1958, than there was last year, looking forward from the April of 1957.

If one enters these caveats to the survey's analysis, what view should one hold about the budgetary policy which seems to emerge as most likely from its general tone, the probability—it is, of course, by no means yet a certainty—that Mr Amory may feel that he is going to be able to give a few tax reliefs away? This is a matter of weighing uncertainty against uncertainty, and on which it is now necessary to express an opinion.

OUR own opinion is that, on balance, Mr Amory would be right to give some tax reliefs this year; and would remain right even if there were (as there may be) rather more danger than the survey admits to that the wages front may turn sour after April 15th and that speculation may turn sour in the autumn. It is unlikely, in the first place, that the scale of reliefs he may have in mind would react on the economy quickly enough to make defeat in the wages battle more likely; this battle, for 1958 at any rate, now depends mainly on the level of economic realism in the arbitration courtrooms and of commercial courage in the boardrooms of the nationalised industries.

Again, if there is a run on sterling later in the year, it will be mainly because of the world shortage of dollars and of the open-ended system of borrowing in London which many overseas countries enjoy. It is not really likely to be because any marginal tax reliefs accorded now will make it more profitable for many British factories to turn away from exports to take advantage of a noticeably softer home market. This argument about the need to avoid undue pre-emption by the home market was a powerful one when Britain's trouble was that the British people held too much sterling; the trouble now is that some foreign countries are earning too little of it and may soon keep our exports down by the imposition of more import restrictions. Most of the British production stimulated by moderate tax reliefs now would probably be production which otherwise would not be undertaken, not production which otherwise would go to export.

The forms of protection needed against the economic dangers of 1958 are more direct. Against the threat of wage inflation, the correct posture is obvious, and will be tested again this weekend. Neither the policy apparently indicated in this survey, nor any other policy with any imaginable relevance to 1958, will make any sense unless the country recognises that it will be far better to stand up to a transport strike this year than to absorb any further wage increase. Against the threat of an autumn capital drain on sterling, the proper remedies are to try to secure some strengthening of general international exchange reserve (through negotiations for a remodelling of the IMF, EPU or the International Bank?) and meanwhile to do all that is possible to discourage borrowing from (and encourage lending to) London. The obvious way to do this is through the maintenance of high interest rates. There is greater reason for doubts about the authorities' recent action in reducing Bank rate than about their apparent hints in this survey of a possibly not-too-unpopular budget.

In Both Stalin's Shoes

The Russian challenge on the suspension of nuclear tests is linked with Khrushchev's decision to make himself Soviet prime minister.

TO get Mr Eisenhower and Mr Macmillan up a gum tree, while at the same time tipping Marshal Bulganin into the dustbin of history and stepping into Stalin's second shoe, was no mean week's work even for the indefatigable Nikita Khrushchev. Two of his actions had been generally expected. Monday's announcement of a unilateral Soviet suspension of nuclear tests was preceded by much dropping of hints, which had already evoked gloomy commentaries on the painful dilemma it would imply for the western governments. The downgrading of the Soviet premier, who now returns to the post as head of the state bank which he occupied twenty years ago, had been forecast ever since it became known that his loyalty to Mr Khrushchev wavered during last summer's crisis. But none of the prophets foresaw the party secretary's spectacular action in making himself titular head, as well as actual master, of the Soviet government.

To what extent were these outwardly separate moves interlinked? In fact, the connection may well have been a close one. The halting of Soviet nuclear tests, which is further discussed on page 10, may indeed present the western governments with an unhappy predicament. But it should not be forgotten that Mr Khrushchev himself had previously rejected suggestions that Russia should give a lead in this respect—his argument being that to do so would jeopardise his own country's military security. That argument was doubtless fully endorsed then by his military commanders. They, and those of the Soviet civilian hierarchs who tend to caution, are very likely not entirely happy about the new gesture. Mr Khrushchev may intend both to show who is master and to make it clear that he takes upon himself full responsibility for the suspension of the tests. This alone could provide one reason for his decision to assume the premiership.

Obviously there are other aspects to the matter. The code of the "summit" prescribes that, whatever the realities of personal power relationships, the man who ranks as head of his country's government is regarded as the principal negotiator on its behalf. Understandably, Mr Khrushchev may have no wish to elevate a new man of straw to the post of premier, at least until after the conference for which he has been pressing. To appear at Geneva as a ventriloquist with a palpable dummy could be both inhibiting and humiliating for him. And, quite apart from this problem, which is part protocol, part hard political fact, it might have been difficult to find a reliably docile premier who would not at the same time make the office a shameful mockery in the eyes not only of foreigners but of Russians, too.

Many Russians (as well as foreigners) may now be inclined to draw perturbing conclusions from the sight of their party boss openly concentrating power and office in his own hands in a way that even Stalin did not employ until the war years. Mr Khrushchev must be aware that his new action was bound to excite suspicions at home as well as abroad. Like Stalin, he has used the party secretariat as the ladder up which to climb to supremacy. Since 1953 he has eliminated more rivals and opponents than Stalin ousted in the five years after Lenin's death. He is now quoted and praised throughout the Russian press, and by those of his colleagues who can get a speech in edgeways. At first sight, the cult of personality seems to be again in bloom, while that of collective leadership has abruptly withered away. The ingenious attempts of Mr Khrushchev's apologists to demonstrate the opposite carry as little conviction as their description of him as "a pupil of Lenin" (it may be questioned whether Lenin was ever aware that he existed).

Rightly or wrongly, the new premier has evidently calculated that he can ride over any internal opposition that his latest move may foster. His own pronouncements suggest that he is sublimely confident both of himself and of his people's loyal support. Ambition and natural ebullience may, admittedly, blind him to some of the dangers. But it is worth recalling how skilfully this outwardly impulsive and extrovert figure has, in the past five years, manipulated his way to the Soviet "summit" with a controlled cunning rivalling, if not outranking, Stalin himself.

ONLY a few days after Stalin's death his heir apparent, Mr Malenkov, was forced out of the party secretariat, relinquishing the substance of power for its shadow in the form of the premiership. From that moment onward, Mr Khrushchev was very clearly the senior member of the secretariat, with all that this implied. After the fall of Beria—who, as head of the hated political police, could easily be eliminated amid genuine public applause—he obtained the official title of first secretary. Mr Malenkov was less easily disposed of, for he was not only Stalin's crown prince; he also built himself up swiftly as a man who wanted to give the people a new deal. Not until early 1955 were the first secretary's party nets ready to catch him; his deposition from the premiership was then preceded by charges that

he was violating the sacred principle that heavy industry must be given precedence. The Molotovs and Kaganoviches of the "old guard" were mobilised against him then. But only a year later, in February, 1956, the old guard was itself thrown into confusion by Mr Khrushchev's "secret" denunciation of Stalin.

The first secretary's successful bid for the support of the anti-Stalinist elements did not, however, make his position finally secure; it was shaken, later in the year, by the explosions in eastern Europe that culminated in the Hungarian rising; and on the home front his sweeping reforms, although popular among the masses, antagonised a host of industrial tycoons and officials. Last June, when his various opponents in the party presidium united against him, his fate seemed to hang in the balance. His triumph then over what has since been labelled the "anti-party group" of Messrs Molotov, Kaganovich, Malenkov and Shepilov was formally achieved by switching the struggle into the central committee, which he had been industriously filling with his own nominees. But in reality, he seems to have rested his faith largely on the backing of the army, whose hero, Marshal Zhukov, had risen alongside him in the political hierarchy.

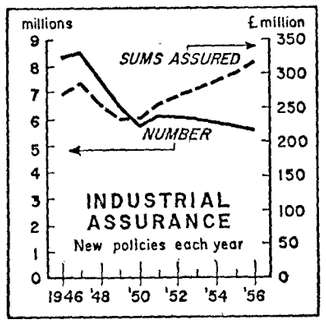
IT remained only to dispose of the marshal. By now Zhukov was the only independent figure in a party presidium packed with supporters of the triumphant secretary, and he was the only man able to deny complicity in Stalin's crimes. No doubt the launching of an inter-continental missile hastened his removal; in the rocket age generals are apt to be more expendable. When, in October, Marshal Zhukov was ousted both from the presidium and from the defence ministry, the last real obstacle to the supremacy of one man was removed. The latest events have simply given visible form to an already accomplished fact.

Thus Mr Khrushchev has good enough reason to feel confident that he can now risk coming out into the open as Russia's real master. His success as the great eliminator has shown that he knows precisely how to divide and disarm opponents and potential rivals. But he has reached his lonely pinnacle later in life than Stalin did. He is nearly 64. One wonders how long he can keep up the unflagging activity which is an essential part of his secret. Unlike Stalin, he seems fated by circumstance always to need something new to show—and something popular.

Stalin was able to embark on his ruthlessly unpopular collectivisation of Russia's peasants even while he was still disposing of his opponents. Mr Khrushchev, in contrast, has to woo the peasants and take over Mr Malenkov's popular appeal to the consumer. The peoples he rules are more educated; they are more articulate and less frightened than their fathers—partly because he himself has dismantled some of the apparatus of terror.

It is one thing to remove recalcitrant individuals by pulling wires behind a screen; it is quite another to keep a stirring nation in bondage. Stalin sat in Byzantine splendour on the throne of Soviet power. Mr Khrushchev, self-proclaimed a post-Byzantine, has to watch how the wind is blowing; he has to appeal, wherever possible and within the limits of a lately-Byzantine community, to popular aspirations. That is why he has come to be there. It can scarcely be a coincidence that he should have timed his assumption of the premiership to come just before this week's Soviet challenge on suspending nuclear tests—a challenge well calculated to appeal to both Russian and world public opinion.

The Business of Burial



Funeral direction in Britain is mostly still a small and cosy family business. But it faces many of small business's typical problems.

FEW people speak of an undertaker in anything much above a whisper. He is naturally a person who is called in at times of sorrow; but almost alone among professional men, the undertaker as a person is closely linked in the public mind with the tools of his trade. It is a trade with a fixed market, which cannot exceed the half-million or more people who die each year—but which, as burial without the use of some undertaker is now rare, probably does not fall far short of that figure. Although precise statistics are naturally not available, it seems probable that the average sum passing through an undertaker's hands at each death is between £30 and £40, which would suggest an annual turnover for the whole trade of somewhere around £15 to £20 million. This turnover is spread thinly among many firms, for the business is essentially one of small scale enterprise.

In the 1951 census of England and Wales, 4,013 men and 249 women listed their occupations as funeral directors or their assistants; this is an increase of 15 per cent over 1931, although the death rate has slightly declined since then. Of these 4,262 people, 617 called themselves employers, 1,974 called themselves managers or workers on their own account, and only 1,671 were listed as operatives; funeral direction is quite

largely a co-operative business carried on by working partners belonging to the same family firm. To these must be added many part-time undertakers and workers—especially, of course, carpenters in the country districts (who will not be listed as funeral directors in the census figures)—and a declining number of funeral departments run by big department stores. But these latter are not proving very profitable, and many have been closing down.

The family firms which are the core of the business often have a long history, which in many cases goes back seven generations or more. A young man will normally enter the profession through his family connections and will then train for one or two years, first in the funeral workshop and garage and then in an office and an embalming centre. This voluntary apprenticeship scheme, and indeed the general co-ordination of funeral standards throughout the country, is organised at the centre by the National Association of Funeral Directors, to which 3,400 partners in undertaking business belong. As trade associations go, it is not a particularly restrictive one. Entry into the trade is quite free; there is no licensing or anything of that sort; and the capital required—including the cost of a workshop, plus say £3,950 for a Daimler hearse, and £1,000 for a following car—is sizeable but not exorbitant. Nevertheless there does not seem to be any great rush of eager young men into the trade, except by those for whom funeral direction is in the family blood; and the association suffers little undercutting of its suggested minimum price for a funeral of £25 (excluding the cost of the grave and extras). Because reputation and connections in funeral direction are so important, the trade believes that complete newcomers, without family ties and personal recommendations, rarely get enough customers to cover their costs for ten years or more. They are like barristers in that respect.

THE fact is that most customers who come to a funeral director are not at that moment in a mood for the careful higgling on which true competition depends. A death, like a birth or a marriage, is one of the most important events in British life, especially among the working classes. It provides an occasion for a family to meet and show its solidarity and, as such, is a time when it is felt that no expense should reasonably be spared. This love of solemn splendour—and conversely, the stigma of a pauper's grave—has been the foundation of the funeral directors' business. It led during the 19th century to the building up of an elaborate system of burial insurance, the weekly instalments on which often started the moment a child was born. These might have been expected to fall away when, under the national health service, a death grant of £20 (recently raised to £25) was made by the state to cover funeral expenses—and when the limit for private burial insurance was fixed at £20 (which can only be taken out on the lives of parents or grandparents). But, in fact, burial insurance continues today at a rate that must make any rationalist blink.

Burial policies are part of the more general industrial (or home service) assurance, which is

> the business of effecting insurance on human life when premiums are payable at intervals of less than two months and are received by collectors who make house to house visits for the purpose.

After 1948, when the death grant started, both the number and amount of industrial assurance policies fell away, as the accompanying table shows: since 1950, however, the number of policies has remained fairly steady and the amounts assured have risen sharply. A lot of these policies, of course, are merely small scale life insurances, including the rather morbid business of betting on grandfather's early death which is in some areas a popular working-class substitute for (or sideline to) the football pools. But, of the 5¾ million of new industrial assurance policies that are taken out every year, roughly 5 per cent, or 280,000, still explicitly cover funeral expenses. Since the average policy runs for twenty years, this means that between 5½ and 6 million people now hold a funeral policy; and the total assured under these funeral policies is of the order of £100 million.

Two facts go a long way to explain the continued popularity of burial insurance. The first is the strong sense of tradition in working class homes; the second is that the state grant of £25 is far from sufficient to cover the cost of most funerals today. Even in the 1930s it was estimated that an average funeral would cost between £20 and £25. Since then the cost of living has trebled, and the cost of dying has kept roughly in step. Today the price of a relatively unostentatious funeral in a town is likely to be at least £60. Of this, £35 would probably go on the coffin, the robe, the hearse, the following car and the services of the undertaker (this is the "money passing through an undertaker's hands" referred to in the first paragraph); £15 on the grave (or double if the burial took place outside the dead person's parish); and a minimum of £10 on extras, such as obituary notices and wreaths. (These last incidentally are the bread and butter of the flower trade, and are usually supplied at 2 guineas upwards). If a headstone and more following cars are required, another £25 or more may easily be added to the bill.

THE funeral directors' own most common complaints today are against bureaucracy and local authorities. The brochure sent out by their association contains a stirring plea that all undertakers "must be united to

combat the restrictions and regulations which threaten the independent businessman." A funeral director who wishes to improve his premises may often "have town planning difficulties"; every year the association is "opposing private bills in Parliament and local authority regulations which, if allowed to go by default, would cripple your businesses"; while purchase tax, speed limits (sic), coroners' removals, the Cremation Act and procedure and burial law "are some of the matters with which National Office deals on behalf of members every week."

One particular cause of complaint is that the cost of graves, which is outside the undertaker's control (although customers do not realise this always), is the item in funeral expenses that has recently been rising most swiftly. As existing cemeteries have been filling up, and local authorities have been forced to open new ones at heavy expense, the borough and county councils have put up prices sharply (though still not by enough to cover their costs). Prices in cemeteries owned by the Church have tended to follow suit at a later date.

This overcrowding of the burial grounds has led to a massive rise in the number of people choosing to be cremated. In 1939, only 3½ per cent of funeral services were in a crematorium; by 1950, the figure was 15½ per cent and last year it reached 28 per cent. To meet this increase in demand, many new crematoria have had to be opened. The total operating at the end of 1957 was 108; of these, 80 were owned by public authorities and the rest by private enterprise. Although the cost of a new crematorium can be formidably high (the one at Daldowie, seven miles from Glasgow, cost £210,000) construction at the average post-war price of £50,000 has been worth a local authority's while. For since municipal cemeteries are run at a loss of over £5 a burial, or as high as £15 in some towns, the 163,000 cremations last year saved £800,000 on the rates as well as 163 acres of land, much of it in valuable urban areas.

The increase in cremation has not affected the undertakers' receipts significantly, since they just arrange for a different service; for this reason, and because the expensive funeral drive to the nearest crematorium tends to be longer than to the nearest cemetery, the price of a cremation is not necessarily any less than that of the traditional burial. But it does indicate that the undertaking industry is going through a period of technological change (which, among other things, is hitting monumental masons hard). Another sign of the times is that less heavy black is being worn, and there is a trend towards the greater informality that characterises the American funeral. The (by British standards) excessive social ostentation of Forest Lawns, the Los Angeles necropolis which formed the background of Evelyn Waugh's "The Loved One," has as yet made no headway here. But forward-looking British undertakers are prepared for anything.

NOTES OF THE WEEK

NUCLEAR ARMS AND TESTS

After Me — No, After Me

A BOXER who has just received a crisp and efficient blow on the jaw recovers no points by claiming that he saw it coming. There is little profit for the West in explaining that the Russians' decision to suspend their nuclear tests was expected, and that anyway it came hard on the heels of a particularly long and loud series of Soviet bangs. If, even a month ago, the West had made its own proposals for a controlled suspension of tests, it might have stopped the Russians from holding their nine latest experiments, and have prevented them from harvesting kudos for an act of self-denial which in reality costs them nothing. It is now several months since it become clear that a suspension of tests might provide one area of possible agreement with Moscow. In the interval, the western governments have failed to make up their minds whether the political advantages of a suspension outweigh the military handicaps. Not surprisingly, the tortoise has been left standing at the post in the contest to impress world opinion.

But, as Mr Dulles correctly pointed out at his press conference this week, it is not only a matter of scoring propaganda points. Even if the present tempo of testing does not harm health, there are two arguments for urging a general halt to these experiments. If the Russians accepted even a simple and rudimentary system of controls in this field, it would become more difficult for them to refuse to extend the principle of inspection to the manufacture of nuclear weapons; Mr Gromyko himself conceded this week that a mere pause in testing would not end the threat of nuclear war. And if the three nuclear powers let a hush descend now, France—or Sweden or Israel—would find it embarrassingly conspicuous to violate the calm later. If western scientists want to go on with their explosions, they will have to produce some very convincing reasons. But—on this Mr Macmillan and Mr Gaitskell seemed in full agreement during their exchanges on Tuesday—if all the different kinds of nuclear weapon that scientists want to try out are multiplied by all the different countries which will sooner or later be able to conduct tests, there will never be a spare half-minute in which someone is not saying, "Just let me have my bang before we all stop." The main criterion is a simple one. If the West forgoes its next batch of tests, will it really be in danger of losing its deterrent power? If so, the tests must go on; but if not—and it is difficult to believe that the deterrent would evaporate if the forthcoming explosions did not take place—the West's next move should be to offer to give up its own tests under a reasonable system of inspection.

German Arms and Britain

THERE could have been no more apt conjuncture of events than Mr Sandys's visit to Bonn just when its parliamentarians were locked in debate about the equipping of the Bundeswehr with atomic arms. The dilemmas which were posed by Germany's original rearmament have now presented themselves anew. Are nuclear weapons in West Germany's hands necessary if it is to play its proper part in a joint defence plan—or would they increase the risk of war and spoil the chances of a solution to the problem of Central Europe? The mere thought of German fingers on missile buttons is enough to appal many people, while others, in this country and elsewhere, will share the view of the opposition in Bonn that to supply the Bundeswehr with Matador missiles now, even without warheads, is a singularly ill-timed move. How adequately have the military considerations that prompt the Nato generals been tested against the political considerations which the allies' civilian planners have to take into account?

Apparently it is intended at present that West Germany should be given only "delivery mechanisms"—missiles—and that the nuclear warheads would remain in American (and British?) hands. But cannot fissile material from atomic power stations be easily adapted for military use? In this respect the newly created six-nation Euratom community, which has powers to control such material in West Germany and the other member countries, has great military significance; and here there seems to be a strong additional argument for Britain joining it. Moreover, if there is any question of West Germany eventually having atomic arms fully under its own control, the already strong economic case for more international division of labour in arms production will be reinforced by an even more compelling reason for Britain to join its continental allies in a closer defence partnership. In continental eyes, Western European Union, which was supposed to lead to such a partnership, now stands mainly for a broken British promise. Mr Sandys, in Bonn, has been seeking to give it new life. More and more insistently, the question arises whether Britain would not get the best dividends out of its dwindling nuclear-arms assets by putting them into a European pool.

PARLIAMENT

Thames Not on Fire

THE parliamentary term between the end of the Christmas and the beginning of the Easter recess has not been a particularly ruffling one in the House of Commons itself; events have rather conspired to make Westminster little more than a backcloth to the excitements of Rochdale, Torrington and the nuclear-dominated international stage. In the opening weeks of the term the Prime Minister's absence abroad (and Mr Butler's adroit deputising) kept the political situation rather off the boil; even after Mr Macmillan's return, apart from an occasional question time rumpus, the Government has more often than not succeeded in its obvious desire to keep exchanges quiet across the floor. The Government's own programme of legislation has been well judged to this end. It has so far produced 39 Bills, of which 17 are on the Statute Book and the Life Peers Bill soon will be. Of the bigger technical measures, the Local Government Bill (the only really major technical bill) is working its way through standing committee; the Tribunals Bill is still in the Lords; the Agriculture Bill has only just been launched; the New Towns Bill is already law; and the Slaughterhouses Bill (a rich field for special pleading) is nearly through the Commons. Once MPs reassemble after Easter on budget day, Parliament will enter the period of the year when financial business dominates the timetable, but the Government seems to be well placed to get its modest legislative programme on to the statute book by the end of July.

Truth to tell, few of these measures are arousing much parliamentary interest. The sound that now echoes across the Thames is not so much of tongues wagging as of them lapping: Tory MPs are licking their wounds, and Labour MPs licking their chops. This is interposed on the Tory side with the usual hunt for scapegoats. This week, for some reason, some Tory MPs have blamed the Torrington defeat on Lord Hailsham, although the poor man never went near the place. By contrast, Mr Butler, who was the Tories' principal domestic Goldstein a short while ago, has regained respect in the party and (possibly) more influence in the Government; the fact that he was put up on television to answer questions about the H-bomb this week has revived speculation about the part he could play in foreign affairs.

On the Labour side, the immediate impression is that Mr Gaitskell has suppressed the Victory for Socialism revolt with considerable aplomb. But the party's propaganda tactics still seem considerably less adroit than its internal bossmanship. In its attempted escape from its H-bomb awkwardnesses, the leadership is pinning its flag to a whole series of aggravating side issues—such as no missile bases before the summit talks—which cannot possibly be of significance when general election time comes; and the things Labour has prophesied about the Rent Act are so dire that, when tens of thousands of people are not in fact turned out of their homes next October, the anti-climax could be a factor in helping the party not to be turned into office. The resurgent Liberals, for the present, have none of their own chicks to get cross with—except, as our letter columns show, *The Economist*.

TORRINGTON BY-ELECTION

The Liberal Triumph

THE Liberal victory at Torrington was compounded of several ingredients. Undoubtedly many of those who supported Mr Bonham Carter were voting from an old and personal Liberal tradition; these were the survivors of the 9,589 people who had voted Liberal here in 1950, and especially of the 4,000-odd who went to the polls last Thursday but who, when no Liberal candidate stood in 1955, had not voted at all. But Mr Bonham Carter would never have reached Westminster on their loyal votes alone. He also seems to have attracted support from more than one in three of those who voted Tory in 1955, and from about one in five of those who voted Labour in 1955. Some of the ex-Labour people no doubt supported him as the man most likely to keep out the Tory. Most of his other recruits voted Liberal as a protest against the two big parties. This last group can be subdivided between those who on principle dislike the monolithic, whip-driven structure of British politics, and those who objected to the big parties for not providing them with a higher standard of living than the nation can afford.

The Economist last week passed some stringent comments on the Liberal party's failure to try to turn this swing to negativism into a positive swing to liberal ideals; and deplored the impression they have given that their main aim now is to gain votes by offending no local interest rather than to advocate reform. The reaction of some leading Liberals to this charge appears in our correspondence columns on page 20; it is fair to leave it to our readers to judge between our last week's article and them.

This having been said, the Liberal revival remains an astonishing piece of spontaneous political combustion. The Torrington Liberals started their campaign with almost no organisation, whereas the Tories had an extremely good one, backing a candidate who had already put in two and a half years' work in the area. Bearing in mind the difference that organisation must have made in this scattered constituency—in collecting the postal vote, for instance, and ferrying voters to the polling booths—Mr Bonham Carter's majority of 219 was probably worth something more comfortable in terms of voters' real preference.

This disparity between the organisations, incidentally, presumably provides one explanation of why the public opinion polls went wrong in forecasting an easier Liberal victory. They registered the number of *potential* voters for each candidate; they could not allow for one party being more efficient than the others in getting those potential voters to the booths. What is less easy to explain is how, on the eve of the poll, the local Tories seemed genuinely convinced that their canvassing returns promised them with fully enough votes to win. There is evidence that current dissatisfaction with the Government is of the sort that one voices loudly to one's own friends, votes quietly about in the polling booth, but is not so deep-rooted that one feels obliged to be rude to any Tory canvasser who comes round to one's house. The future will show whether this element of mildness within the anti-Government protest is of any political significance.

How Many Others?

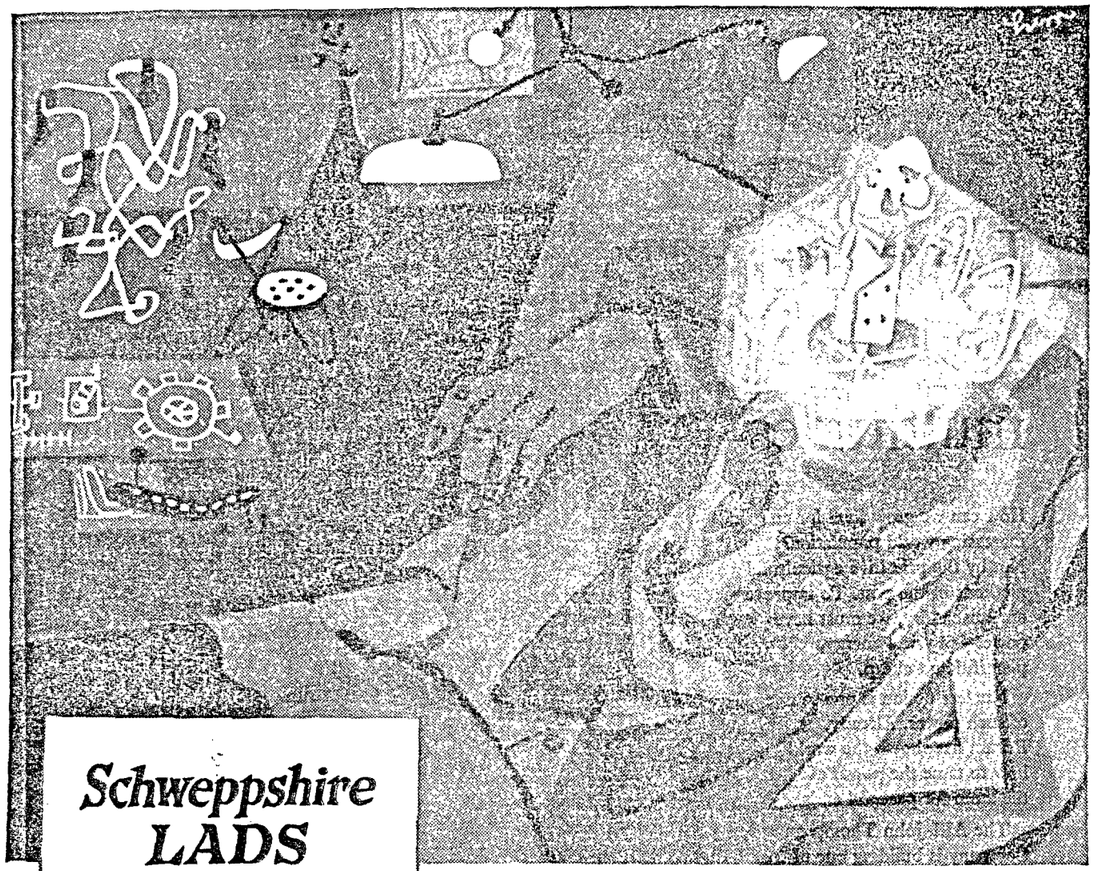
TORRINGTON has brought a whole new series of figures within the interested purview of the electoral statistician. Delighted Liberals are asking how many more potential Torringtons there might be, if only Tory MPs could cause early by-elections by dying or being ennobled in the right constituencies. The "right constituencies," in this context, are those with a reasonably strong Liberal vote in the recent past. Perhaps the best approximation to their number can be attained by looking at the Liberal vote in the general election of 1950, the last time the party tried to blanket the country with candidates.

Excluding the six seats won by Liberals last time, there were 44 constituencies (including Torrington and Rochdale) in which the Liberals got a vote of over 9,000 in that 1950 election. Of these, 12 are now held by Labour; on present trends, and assuming no new Tory-Liberal pacts, it seems unlikely that the Liberals would capture these. Another 13 are of what might be called the "Rochdale sort": that is to say, seats won by the Tories in 1955 but in which intervention by a Liberal would be more likely to secure the seat for Labour than for himself—although a really big direct swing of votes from the Conservatives could put the Liberal at the head of the poll. It is difficult to say how many of these the Liberals really could win if an early election befell. For what it is worth, however, on the basis of the 1950 figures, eleven of these 13 seats would seem to be easier for the Liberals to gain than Rochdale; they failed to gain Rochdale by 4,530 votes.

There remain the more precise equivalents of Torrington, which naturally arouse most interest. The 19 remaining (and hitherto firmly Tory held) seats from our 44 above can be set down as follows below, in order of apparent scope for a Liberal victory. The convention used for measuring "scope for a Liberal victory," in this very rough approximation, is the size of direct swing required from Tory to Liberal, compared with 1950 (assuming the Labour vote unchanged). Boundary changes have been ignored. The first two seats on the list were held by the Liberals in 1950, but have been lost to the Tories since:

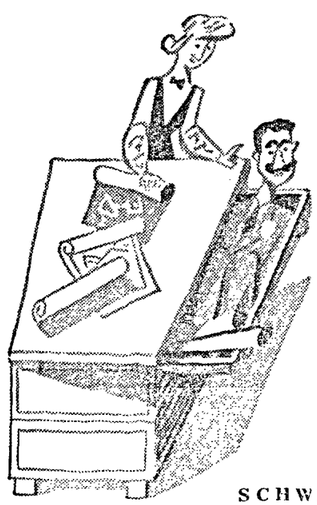
Tory seats vulnerable to Liberals on basis of 1950 results.
Under 10 per cent swing of Tory votes to Liberal required: Roxburgh, Eye, North Dorset, Denbigh, North Cornwall.
10 to 25 per cent swing required: Berwick, North Devon, Bridlington, Bodmin, Penrith, Torrington.
25 to 40 per cent swing required: Totnes, Westmorland, Torquay, East Grinstead, West Bournemouth, West Southend, Hastings, Finchley.

It will be seen that Torrington comes twelfth on this list. As last week's Liberal majority there was nearly as small as a majority can be, it may perhaps be regarded as the present dividing line between Liberal prospects and Liberal possibilities. Add to the eleven other "equivalent Torringtons" the Liberal members already in the House, plus perhaps six or seven "Rochdale-type" seats the Liberals might win in Labour's teeth, plus three or four Tory seats where Liberal strength has considerably increased since 1950 (Inverness is the outstanding example), and the calculation seems to be: if the mood of the country at the time of the next general election were exactly the same as the apparent mood now, then the Liberals might be expected to get perhaps between 25 and 30 seats in the House. This is a long way short of the figure which some Liberals are hoping for, but it still represents an extraordinary improvement in their prospects in a very short time.



MR THORNEYCROFT

The Cause of Fission



AFTER Mr Thorneycroft's speech to his constituents at Monmouth last weekend, it is nonsense to regard the ex-Chancellor as a potential leader of the dissident right wing of the Conservative party. He emerges, in foreign affairs, as an almost extreme supporter of its internationalist left. For Mr Thorneycroft made it clear that he considers it to be very "questionable" whether Britain should continue to manufacture its own H-bomb. He had no doubt, of course, that the west as a whole needs its bomb, but "we should ponder well the merits or demerits of duplicating the American effort." "Solvency and conventional arms are likely to be of greater benefit to us." In a palpable hit at Mr. Sandys's defence views, Mr Thorneycroft insists that "it is an illusion to talk as though we were engaged upon a serious discussion as to how we would take the Russians by ourselves"; such "language appertains to another age."

He would like to see "a meeting at the Western summit" to thrash out a sensible defence policy based on proper comparative costs; wider economic issues would be on the

COURT NILES

I always thought that Court Niles was unduly influenced by his peculiar name. Had he been called something more deep rooted like Barstone he might have gone on for ever taking ten deep breaths first thing, standing on the escalator of Green Park Underground Station, turning sharp right outside, and giving up smoking till noon in the office where he was Complaints Manager (Real Honey Export Co.).

But his name gave him a sense that he was born for something or other; which had the effect of making him feel that he simply could not leave anything alone.

The first thing he couldn't leave alone was sock drying. Instead of putting his socks on top of the electric heater in the ordinary way, he had a wire frame made which was not only sensible but also looked quite nice aesthetically. That was the awful thing about all his things, they looked quite nice aesthetically. From sock dryers it was an easy transition through buttonless cuffs to a television set which by interrupted invisible eye, housed in unpolished zinc, turned itself on automatically whenever you went into the room. Soon Real Honey itself was being transformed: not only of course by the creation of the Contemporary Hive Construction Co., (which was really only an old office desk under Court's office window covered with cigarette butts) but by the general infiltration of Design in e.g. the very small circular conference table in front of this old desk which Niles placed on some sort of central peg so that it could revolve for some purpose or other (Design in Movement).

Soon of course Niles was experimenting on the building itself with a simple design for avoiding direct sunlight, which was certainly effective on those three days of the year when direct sunlight was proved to have existed. Soon he had re-designed practically everything except the balance sheet, so that after the inevitable bankruptcy of his firm, and of each successive firm he worked for, he actually became Adviser on Town Planning for the Sunpine New Suburb Development Co., whereupon his work was placed so indefinitely far in the future that he was regarded as relatively safe, though he continued to make people personally uncomfortable about the absence of design in what he called "everyday living". Personally I was rather sorry for the old days when Court was bottled up in Real Honey Export.

Written by Stephen Potter, delineated by George Him

SCHWEPPERVESCENCE LASTS THE WHOLE DRINK THROUGH

agenda, too, for Mr Thorneycroft is appalled at "the spectacle of America fighting a recession on one side of the Atlantic, and Europe struggling with inadequate reserves upon the other, with little or far too little recognition of the interdependence or even of the connection between the two." And

> when, in addition, each separate part of the west becomes engaged or is about to become engaged separately and in isolation and at vast cost in devising its own missiles, anti-missiles and other nuclear devices, one questions the reality of any defence policy, or indeed, of any other common policy at all.

Mr Thorneycroft's well-known economic views fit into this framework: "the truth is that we can't have more bombs, more welfare, more schools and hospitals, only one per cent of the population changing jobs, stable prices and a rising standard of life all at the same time." We "had better choose what we want and choose what we think right." There is, of course, a difference between Mr Thorneycroft and his colleagues here. He would clearly put stable prices first; others might prefer a rising standard of life. But those whom Mr Thorneycroft clearly feels he had to fight hardest against were those who would prefer more welfare, higher government expenditure, and—once again—that private British bomb. The split which appeared in the Government last January now appears less than ever a matter of that "mere £50 million," and more of a nuclear fission.

RUSSIA

Khrushchev's Malenkov?

The list of ministerial appointments announced by Mr Khrushchev this week in his new capacity as Soviet premier shows how completely he has now restocked the key positions in the state, either with his own men, or with prudent men from whom he presumably expects no trouble. A year ago the government presidium or "inner cabinet" comprised Messrs Molotov, Kaganovich, Malenkov, Mikoyan, Bulganin, Pervukhin and Saburov—a tough team for even Mr Khrushchev to handle, and all the more redoubtable because these deputy premiers were members of the party presidium, too. Now only Mr Mikoyan remains; he may not look very happy, but his familiar suavity will be of great value to the new premier at summit talks or other international confrontations. Firmly applying the "divide and rule" principle, Mr Khrushchev has arranged that only three men will now belong to both presidiums at once: himself, Mr Mikoyan, and a fast rising newcomer, Mr Frol Kozlov.

It is natural to suppose that this Mr Kozlov is already being groomed for the role of crown prince in somewhat the same manner as Stalin groomed Mr Malenkov. He is about fifteen years younger than Mr Khrushchev, and has visibly been his protegé for some time, coming into view for the first time at the end of 1953, when Mr Khrushchev put him in to run the Leningrad party machine. In the year of the sputnik he shot up in a three-stage trajectory, successively becoming a junior member of the party presidium, then a full member, and finally, as recently as last December, premier of the Russian member republic of the Soviet Union (a post which has lately served as a way stage for a swift succession of party hierarchs aiming at higher things). Now he comes abreast of Mr Mikoyan, the only other "first deputy prime minister," and stands immediately at his master's elbow. One wonders whether he has yet had time to reflect on the sad fate of Russia's last crown prince, who is now detained in central Asia at Mr Khrushchev's pleasure.

HUNGARY

Propping Up Mr Kadar

It looks as if Mr Kadar is not on the skids after all. Rumours that he was have been circulating in Budapest for some weeks, stimulated by his non-appearance on various public occasions, by his failure to lead a delegation to east Germany, and by an unusual silence about him in the Hungarian press. Now, however, his photograph has reappeared on the front page of *Nepszabadsag*, and he is being taken up by the great ones of the communist world. Last week he was received by Marshal Tito in his hunting lodge—a visit for which he is believed to have been angling for some time. This week Mr Khrushchev in person has been leading the Soviet delegation to Hungary's independence day celebrations.

Mr Kadar may well be in need of some powerful helping hands. His perpetual struggle against the extreme Stalinists inside his party appears to have grown more acute since, at the end of January, he resigned the premiership in order to concentrate on party work. Many of the smaller fry among the Stalinists have been able to hang on to their jobs ever since the October rising simply because there has been no one to replace them. And in the middle of February the central committee decided to readmit a number of the leading Stalinists who had been expelled in November, 1956. They included Mr Laszlo Piros, a former commander of the political police whose conduct helped to provoke the rising; General Bata, who was minister of defence in October, 1956; and Mr Istvan Kovacs, one of Mr Rakosi's principal lieutenants from 1949 onwards.

Although this decision is believed to have been opposed by many of the rank and file, the Stalinists must have been encouraged and strengthened; and the repression and reprisals in which the regime continues to indulge may be forced on Mr Kadar in an effort to keep the Stalinist wolves at bay. It is unlikely that there has been any active collusion between Marshal Tito and Mr Khrushchev over propping up Mr Kadar. But both must clearly have their reasons for wanting him to stay put. Many of the more realistic Hungarians, too, are believed to feel that he is the best boss they have.

HOLLAND

Swing Against Labour

The Dutch government received a warning signal from the electorate in the provincial elections that coincided with the Queen's visit last week. Since there were no specifically provincial issues at stake, the results can be taken as an interim verdict on the socialist-led coalition. The Labour party, led by the prime minister, Dr Drees, received 28.65 per cent of the votes as against 32.7 at the general elections, while the opposition Liberal party won 11.4 as against 8.77 per cent in 1956. These modest changes are significant in Holland, where the party balance is usually slow to change.

One of the main reasons for the swing against the government is its deflationary policy. This has, on the whole, been successful; foreign currency reserves have risen, the balance of trade has improved, and the volume of exports continues

to increase. But some of the repercussions have been unpleasant; in particular, there has been a considerable increase in unemployment (about 100,000 in the last three months), and this does not look well for a government dominated by the Labour party. Its popularity has also been weakened by the troubles with Indonesia. Business circles have now completely written off their investments in the former Dutch East Indies. Trade with Indonesia is almost at a standstill, which means the loss of about 3 per cent of the national income. About 40,000 Dutch citizens have been repatriated from Indonesia. Most of these are at present dependent on state aid; they may well add to the unemployment problem and are certainly adding to the huge housing shortage. There are also other sources of discontent. The recent introduction of a bill providing for large increases in children's allowances made many Dutchmen feel that the government was overdoing its social security policy and pandering inexcusably to the Roman Catholics. And the government's favourable attitude towards nuclear weapons and missile bases has met with some criticism.

Last week's election results are not likely to have immediate effects on the government's policies. But they will certainly make the already uncomfortable co-operation between the socialists and their Catholic coalition partners even more difficult.

DIRTY BOOKS

A Step Towards Reform

THE select committee set up originally to revise a private member's bill on obscene literature, and subsequently revived to consider the law in general, issued its report last week (HMSO 1s.). Its recommendations, if enacted, would go a long way towards meeting the views of the Society of Authors and others who have been campaigning for reform of the law, though the committee has not attempted to frame an entirely new definition of obscenity.

Instead it has preferred to modify the test of obscenity, laid down by Chief Justice Cockburn in 1868, on the lines of the liberal interpretation placed upon it in the case of R *v* Secker in 1954, as a result of which the defendant was acquitted. The select committee accordingly proposes:

(1) that a jury should have regard to the effect of a work as a whole and not deem it obscene because of isolated passages;

(2) that a work shall be deemed obscene if its effect as a whole tends to deprave or corrupt those among whom it was *likely* to be distributed or offered for sale (this would embody Mr Justice Stable's dictum that literature is not to be condemned as obscene because it is unsuitable for a schoolgirl or child in a nursery);

(3) it should be a defence to show that the work is of such literary or artistic merit that its publication should continue, and, to establish this, expert evidence should be allowed;

(4) the author should have a right to be heard in any proceedings where he is not himself a party, and should have a right of appeal if a destruction order has been made in respect of books he has written;

(5) booksellers and librarians should have a defence similar to that allowed in the anti horror-comics legislation—the Children and Young Persons (Harmful Publications) Act of 1955—that they have no reasonable cause to suspect a work is obscene;

(6) the Director of Prosecutions (not the Attorney General, as had been suggested) should have to give his consent to the initiation of any proceedings, in order to achieve greater uniformity in the administration of the law.

Unfortunately, the select committee was not itself of one mind in framing its proposals. In particular, the suggested defence of "literary or artistic merit" was only carried by the chairman's casting vote. The Government admittedly cannot be expected to find time for an official bill this session. But it would be a great pity if the Home Office were to use disagreement in the committee as an excuse for delaying legislation indefinitely, for the committee's proposals as a whole would not only protect reputable authors, publishers and booksellers but would also make it easier for the police to deal with the trade in real pornography.

BUTTER

Dumping and Crypto-Dumping

THE British Government will next week hold special talks with the Deputy Prime Minister of New Zealand on the marketing of New Zealand butter in the United Kingdom—or, more exactly, on the threat to that butter of competing imports from other countries. The dimensions of that threat, which between 1956 and 1957 was measured by a loss to the New Zealand export trade of 10,000 tons, need putting in perspective. Butter consumption in the United Kingdom has risen steeply over the last three years, from 412,000 tons in 1955 to 547,000 tons in 1956 and 640,000 tons in 1957. Of this total increase of 228,000 tons, home production, rising from 156,000 to 336,000 tons, accounts for over two-thirds. The controversial imports from Sweden and Ireland—which have been made to look large by the announcement that they increased respectively tenfold and fiftyfold from 1956 to 1957—now turn out to amount between them, in absolute terms, to only 28,600 tons. This is a quantity which, whether regarded as displacing New Zealand produce or as an influence on the market price, is obviously neither here nor there.

Of course, New Zealand has a legitimate grievance against subsidised competitors. So, for that matter, has Denmark. But the subsidised competitor who really counts, in this instance, is not the Swedish or the Irish but the United Kingdom producer. The increase in United Kingdom butter consumption has been made possible by a flood of what can justifiably be described as internally dumped milk; the quantity sold to manufacturers, at far below the farmers' guaranteed price, rose from 437.2 million gallons in 1955 to 696 million in 1957. An abatement of this flood, following on the newly imposed cut in the guaranteed price, would make incomparably more difference to the New Zealand exporter's prospects than would even a complete ban on Irish and Swedish and Finnish butter.

There is a good case for saying that anti-dumping legislation is altogether unsuitable to farm produce. Hardly a country in the world does not in one way or another subsidise its agriculture, and so lay its exporters open to the charge of dumping. A general banning of all foodstuffs to which the label of "dumped" could theoretically be attached would amount to a blockade. A selective banning could only be political, and correspondingly prolific of odium. New Zealand's request, coming as it does from a new administration with its reputation to make, is understandable enough; but the lever on which the New Zealand government is pressing could easily break in its hand. Wiser counsel would suggest patience—and a hopeful watch on the United Kingdom milk-production figures, following the recent price cut.

EUROPE

Made in Italy

THE Italian plan for the outer tariff wall of the free trade area is becoming a central issue in the negotiations. Under it the outer tariff would be as uniform as possible; a country could retain lower duties on certain imports from the outside world, but in that case high-tariff fellow-members could impose a compensatory tax on its exports to them. This idea may become one of the proposals that the six common market countries now hope to submit to the Maudling committee in May.

For some low-tariff countries the scheme would not be unattractive, provided their low tariffs are taken properly into consideration in the calculation of any uniform tariffs for the whole area. Sweden, say, could keep its low tariff on products of which it is mainly an importer. On products which it exports on a large scale it could raise the rate, and thus buy freedom from the compensatory taxes in the markets of Europe.

But for Britain the Italian proposal poses a more difficult problem. Britain gives free entry to Commonwealth goods not just because it wants cheap materials but as a *quid pro quo* for the concessions its exports get in Commonwealth markets. It cannot raise its tariffs against the Commonwealth without destroying the whole open Commonwealth trading system. The Italian suggestion appears to pose in some measure just that choice between the Commonwealth and Europe which the original idea of retaining separate national tariffs around the larger European grouping was designed to avoid. It would be absurd to turn down a constructive attempt to bridge the gap between Britain and its neighbours merely because it does not bear the label "made in Whitehall." Close inquiry to find out on which products Britain's tariff concessions really matter to the Commonwealth might reveal that even here the practical conflict is not great. But can the principle of free entry for Commonwealth goods be given up?

Some people are asking whether the possibility of solving the Commonwealth's problem by a broader approach—by forging new links between it and Europe—may not have to be raised in the current negotiations. But the continentals, though interested in sharing in Britain's preferences in Commonwealth markets, have shown little desire to offer *quid pro quo* opportunities for Commonwealth exports in their own markets.

*

Hardly anyone in Brussels believes that fundamental agreement can be achieved in the next three months, despite the salutary efforts at compromise set in motion by the French memorandum and Mr Maudling's "ultimatum." If the pessimists are right, there is great significance in the proposal, attributed to Professor Hallstein, that, as a stop-gap while they go on talking, the OEEC countries should all reduce their tariffs by ten per cent at the end of this year in step with the Six. At least this would avoid the catastrophic outbreak of tariff discrimination which otherwise threatens next January.

The Six have not always appeared to appreciate the destructive significance this break would have for their own ideal. They are at last forcing all western Europe to follow them along the path towards economic integration. Outer Europe, especially Britain, is really trying quite hard now to keep up with the sprinting leaders. But a setback now could let loose ugly reactions, playing into the hands of those who think in terms of a little socialist Scandinavia, a little pink Commonwealth. The shock troops of Europe will not be doing their job if they cut communications with the slower-marching army behind.

LIBYA

Roubles worth Biting

THE attention of Libya, which already has one ear cocked to Cairo and the other to the West, is being diverted by an offer of £10 million in "unconditional" aid from the Soviet Union. Exactly two years after the Libyan parliament rejected a previous Soviet offer of aid, Russia is again trying to embarrass Libya's western friends. The past two years having been such successful ones for Russia in the Arab world, it doubtless feels that it is time to have another try. The statement is neatly timed to upset the Anglo-Libyan negotiations now in progress to determine the amount of the British subsidies, for budget and development, to be provided over the next five years. It also comes at a time when economy-minded American congressmen are again discussing reductions in foreign aid. Both the United States and Britain have been generous to Libya. Half its national income since it became independent in 1951 has been in aid from foreign countries. Its present relations with its supporters have a businesslike give-and-take character, the give being economic and technical aid and the take being the use of bases on its soil. The Russians claim they ask for nothing.

There are two reasons which might, one day, induce the Libyans to accept a Russian offer if, indeed, these offers are genuine. One would be if aid from the West were to be stopped, and that is most unlikely. The other would be if events in North Africa should force Tunisia, Morocco and Algeria into the communist sphere; in that case, Libya could not stand alone against them. At present the Libyans are more anxious to keep their steady income from Britain and the United States than to accept handsome presents that would jeopardise that income.

Perhaps the Libyans can even put an end to these casual and disruptive Soviet offers of aid. If they are bold enough to accept the offer under the "disinterested" conditions so widely advertised by Moscow, they might ask the Russians to be kind enough simply to deposit the £10 million, in the name of the United Kingdom of Libya, in a reputable bank, and then wait to see from the reply just how "unconditional" the offer really is.

WEST INDIAN ELECTIONS

Too Even for Comfort

THE Governor-General of the Federation of the West Indies, Lord Hailes, faces some trouble in keeping a stable federal government going; his experi-

ences as a whip, so much held against him at the time of his appointment, may come in quite handy after all. The federal general elections have produced an inconveniently evenly divided house. Of the two parties which contested the elections throughout the island, the Federal Labour party, which is generally associated with the name and policies of Mr Manley, premier of Jamaica (who did not stand for a federal constituency), won 24 seats; and the Democratic Labour party, which takes its inspiration from Sir Alexander Bustamante (who also opted for the island, not the federal, legislature), won 21. But party allegiances are not clear cut in the minor islands, and it appears that at least two of the Federal Labour members might cross

THE NEW LEGISLATURE

	Jamaica	Trinidad	Barbados	Leeward Is.	Windward Is.
Federal Labour Party and allies (Manley/Williams/ Grantley Adams)	6	4	5	5	7*
Democratic Labour Party (Bustamante/ Gomes)	11	6	0	0	1

* 2 or more members of this group might join DLP.

the floor. The federal leader of the Manley Labour party is Sir Grantley Adams, long the chief minister of Barbados, who did forsake local politics; but experienced as he is, with a good lieutenant in Mr Bradshaw from St Kitts, he would clearly find it hard to keep going with a majority of two in an untried and inexperienced legislature. He will face a formidable opposition team led by Mr Albert Gomes (Chief Minister of Trinidad until he was displaced by Dr Eric Williams in 1956), with two other Trinidadian ex-ministers in support.

The results of the election, in fact, show that if Sir Grantley rules, it will be mainly by virtue of a small islands coalition; while Mr Gomes's problem is to attract enough small island members across the floor to enable the solid opposition block from Trinidad and Jamaica to take charge. It is unfortunate that the division between large and small islands should emerge so clearly so soon in the Federation's political development; but it is a not inconsiderable achievement that the islands have succeeded in putting an island-wide two party system into operation so swiftly even though the difference in their policies is small (the Bustamante-Gomes party is probably slightly more Conservative; the Federal Labour party more socialistic). Meanwhile, Mr Manley and Dr Williams in Jamaica and Trinidad respectively will have to look to themselves—for their party's failure to win a majority of federal seats in their own islands suggests that their local political fortunes are drooping.

NORTHERN RHODESIA

Variations on a Fancy Franchise

THE new constitution which is now put forward for Northern Rhodesia, in a white paper published in Lusaka last week, is not quite a carbon copy of the constitution and franchise which Sir Roy Welensky has successfully got through his own and the British parliament for the Federation as a whole; but it comes very near it, and indeed too near. (It is, alas, just as complicated.) It was high time that the Colonial Office liberalised the legislature of this territory, for which it is mainly responsible, but it ought to have given an even stronger lead to Sir Roy in widening the African franchise.

It should, however, be said at the outset that the new constitution is a big advance for Africans, who have hitherto elected only four members, by indirect election, to the Northern Rhodesian house. The new constitution enfranchises Africans with "protected person" status, in line with Sir Roy's federal constitution; and, as a matter of convenience, it sets up two identical electoral property franchises, one upper (and mainly white) and one lower (and mainly black). The upper will mainly elect 12 members, the lower will mainly elect six. It is certainly a great improvement in the Northern Rhodesian constitution that just as the number of "special" (i.e., mainly African) votes will be restricted to one-third of the voting for "ordinary" members, so the number of "ordinary" (i.e., mainly white) votes is to be restricted to one-third the votes for "special" members. This is much fairer than the much-criticised federal or Southern Rhodesian schemes, where the "rich" elect the whites, and then again are the preponderant vote in the election of the blacks.

But it is certainly entirely retrograde and wrong for the Colonial Office to propose that over a period of ten years the qualifications for the "special" (or African) roll shall be progressively raised until to get a vote everyone, black or white, must in ten years have the qualifications of a white voter. On the contrary, the movement should be the other way—the property and educational qualification should be progressively lowered so that in a period of ten or more years the country would move towards a genuine adult franchise, under which the Africans would become (as in the end they must) the voting majority. Africans will certainly, and rightly, object to this clause which would only be tolerable in conditions of rapid inflation of African incomes and property-values. Admittedly, the Colonial Office has a tough job in getting the settlers to agree to any liberalisation; but this clause sets the wrong, not the right, example to Sir Roy. It is therefore too dangerous to sustain.

CUSTOMS AND EXCISE

Out of Focus

SCHOOLBOYS' grouses do not often stir Parliament to debate. But last week it happened, and rightly. The boy concerned, an American arriving in England for a stay of a year or—an important possibility—a little more, had his new camera confiscated by the Customs because he could neither put down a large sum as security nor, being inconveniently honest, would promise to be gone, camera and all, within a twelvemonth. Mr Peter Smithers, MP for Winchester, took up the case in an adjournment debate and got a dusty answer. Were schoolboys exempted from the rule which limits duty-free privilege to visitors staying less than a year, why not university students too? And there is a "grave risk" that students, notoriously prone to "fall into impecuniosity," might be tempted to turn their privileged possessions into cash. Were the privileged period itself extended, visitors briefly outstaying it would still be aggrieved. The discretion of Customs officers must be exercised within the rules. "It is only fair to ordinary residents and traders who are dealing in similar goods" that they should be protected against the possibility of uncustomed articles coming on the market. In short, failing surety, the camera stays impounded. So runs, in drearily familiar phraseology, the official case, of which Mr Simon, the Financial Secretary to the Treasury, was the mouthpiece.

The kindest possible comment is that it is out of focus. Less kindly, it can be accurately described as hypocritical balderdash. It is out of focus because the amount of damage that could conceivably be done to the national revenue, to the home producer or trader, is minimal compared with the loss of goodwill and enduring exasperation generated by even one such case as that of the schoolboy's camera. To all the arguments about "grave risk," in fact, the proper retort is briefly and simply "so what?" It is hypocritical balderdash because, as every traveller knows, the "discretion" of the Customs rests overwhelmingly on the sheer impossibility of assessing the age, value and *bona fides* of each new arrival's every possession. The Customs' business should be to identify the sort of person who makes a business of smuggling, and give him the full treatment; not to harry, necessarily at random, the ordinary traveller who just conceivably might regard his camera (or other, less dutiable, possessions) as hockable in moments of shortage of cash. A change of policy would benefit not only the tourist trade, but respect for the law—and for the ministers who talk to its brief.

INCOME TAX WEDDINGS

Marriage on the Assembly Line

THE coincidence this year of Easter Saturday on April 5th and the end of the financial year has, over the last few days, created boom conditions in the marriage market. Easter week, and particularly Easter Saturday, has traditionally been a peak time for weddings; but, since the war, marriages at Easter have been overshadowed by those timed to reap the tax benefits available to couples who marry before the end of the financial year. This benefit is the increase, on marriage, of £100 in tax free allowances for the whole year in which the marriage takes place; it means, in effect, that for anybody who will be paying the full standard rate of tax on marginal income after marriage—that is, anybody earning over about £800 a year—a wedding before April 5th brings a bonus of £42 10s. For once the natural desire for this bonus does not conflict with that for an Easter wedding.

The registry offices, where a third of all British marriages now take place, report exceptionally brisk business. At Caxton Hall, weddings have been starting at 8 a.m.; on one morning last week twenty-five couples were married there in ten minutes each, while this week's time was fully booked. The same is true of Chelsea, except that a wedding there takes up to twenty minutes; for this registry office to marry twenty-four people a day, as it has been doing recently, therefore, means working from 9 till 5. The Tottenham registrars, who, using four marriage rooms, are believed to hold the London record of sixty-four weddings in a day, married forty couples last Saturday, compared with under fifteen for an average day. Wandsworth, another large registry centre in London, reports a similar rush of clients.

The churches, from all accounts, will also be working to capacity on Easter Saturday. But the clergy are bound to view with disquiet the present marriage peak in late March and early April. For one thing, the financial year usually ends in Lent when the Church is loth to hold more weddings than it can help. Secondly, since the religious service is longer and less flexible than the civil one, clergymen cannot easily accommodate the extra people who want to be married in Church at Easter; and the dominant partners in the more mercenary of these couples tend to hustle their spouses in under the Inland Revenue's wire by a registry office ceremony instead. And, whatever one's religious belief, it is

Gain from marrying on or before April 5th instead of after it

Income £	Income Tax £ s. d.	Surtax £ s. d.
150	—	—
300	14 13 4	—
500	27 12 10	—
800	42 10 0	—
2,500*	42 10 0	10 0 0
5,000*	42 10 0	22 10 0

* Maximum rebate from income tax £42.10.0. Reduction in surtax not obtained as cash rebate but as automatic reduction in assessment in the following year.

hard to feel that there is the same bond forged by a ten minute civil service at a time dictated by the tax collector as there is in a more seriously approached ceremony at a time to suit the couple getting married. If marriage allowances were deducted from quarterly instead of from annual income, would the gain to the Exchequer from clawing back a full bonus from these people offset the increase in administrative costs involved? If it would, many people will feel that there is a case here for Mr Amory to ponder in his budget; the present largely accidental system arouses a depressing vision of a land where marriage takes place and children are produced only after exhaustive financial calculation and where the whim of the Inland Revenue reigns supreme.

The Economist

APRIL 3, 1858

THE BANK'S DIRECTORS

SIR—. . . There is one topic which I would not touch on offensively, but which it would be childish to refrain from mentioning. The Bank of England is not a drag machine. It is governed by a body of Directors, all of whom are large merchants, and, in consequence, under very great liabilities. No doubt they are men of means and stability; they would not otherwise occupy so high a position. But those means consist, not of land or coin, but of bills of exchange, book debts in ledgers, produce in warehouses, ventures at sea. Once create a panic and those bills may be rendered worthless, those book debts may pay 3s. in the pound, the produce become quite unsaleable, the ventures will result in a loss. You cannot suppose that merchants in such a position will view a panic so calmly as a speculator on political economy. I do not mean for a moment to charge your Directors with a disposition to pursue their own interests at the expense of the interests of the public. I am sure that if a distinct opposition between the two were clearly made out, the Directors would pursue the public interest. But the operation of a personal bias is to prevent questions coming to a distinct issue. A man does not, in consequence of it, violate what he knows to be his duty. He only mistakes what is his duty. The Bank Directors will think it their duty to prevent a panic, and any formal regulation to the contrary will, when the occasion arrives, be thought "theoretical and pedantic." Experience shows that this reasoning is correct. In all crises, from 1797 to the present time, if the Bank Directors have erred, it has been on the side of liberality. We cannot rationally expect it to be otherwise. . . . I am, yours faithfully, A BANKER.*

[* Walter Bagehot.]

LETTERS

The Liberals Reply

SIR—You end your article "L or 1?" by saying that there is only one thing more painful than kicking an old friend when he is down and that is to kick him when he is getting up. You should have added that as far as "the old friend" is concerned, it is always more painful to be kicked below the belt.

Your article is so full of generalisations and deleterious implications which can only be regarded as directed at Mr Ludovic Kennedy and myself that it would require another article of the same length to correct them. Perhaps you will allow me space to correct one or two of the more inaccurate and misleading.

You write that "the two main policies propounded by recent Liberal candidates seem to have been support for protectionism and for sentimental pacifism." They may seem to have been, but they happen not to have been as any competent reporter would have learned had he bothered to attend one of my meetings.

At almost every meeting which I addressed I was asked by Tories (reading from the little handbooks with which they were supplied by the Central Office) whether or not I agreed with Mr Arthur Holt's suggestion that all tariffs should be cut by 50 per cent, and whether or not this would not *ruin* British agriculture. You, of course, will recognise these questioners as Tories who "have been broadly and liberally right." To this question I replied:

(a) that the farming industry was very lightly protected by tariffs compared with other industries; that only 15 per cent of our imports of food were protected by any tariffs; and that the highest tariff was 10 per cent.

(b) that as a consequence farmers would be likely to gain more than they lost from a reduction in such tariffs.

(c) that price supports rather than tariffs guaranteed the farmer his income.

(d) that Liberals preferred price supports to tariffs because the former were a subsidy to the community as a whole for which the community were well aware they paid, whereas the latter represented a concealed tax which raised the cost of living.

I was also asked by the Bideford glove-makers whether I would support a tariff on imported gloves, the importation of which has caused local unemployment.

I refused.

As to "sentimental pacifism," I imagine you refer to the Liberal policy on the H-bomb. I stated on the wireless, in a broadsheet, and at every meeting that the West must keep the deterrent, that it should be under international control, i.e., Nato, *but* that this country should not make it. I am glad to see that Mr Thorneycroft made a speech last weekend much on these lines. Has he now become a sentimental pacifist?

You say that dependence on Liberal votes would now bring more caution into Tory policy . . . if you refer to Suez, you are right. We would oppose with equal vehemence any attempt on the part of the Labour Party to renationalise steel.

Finally you suggest that Liberals oppose the Rent Act. As we suggested eight years ago that such an Act was necessary, this seems rather hard. As we voted for it in the House of Commons, it would seem inaccurate. The only alteration to it which we have suggested is that tenants should not be evicted in October 1958 if alternative accommodation is not available.

Your article also contains the following gem: "good ideas that would be initally popular have mostly been put into effect long ago." Who ever thought that the paper edited by Walter Bagehot, Walter Layton and Geoffrey Crowther would speak with the voice of the great Lord Eldon?—Yours faithfully,

MARK BONHAM CARTER

House of Commons

★

SIR—You say in your issue of March 29th "the two main policies propounded by recent Liberal candidates seem to have been support for protectionism and for sentimental pacifism."

This extraordinary statement suggests that you have neither read Liberal policy nor even taken the trouble to look at the election addresses or speeches at recent by-elections. You are simply repeating current catchphrases. The party's views on free trade and protection have been stated again and again. Mr Holt, a Lancashire member, who took a prominent part in the recent by-election campaigns, has made it clear that we do not support protection for cotton, and Mr Kennedy in his election address said he would reduce tariffs reciprocally and gradually. In spite of this you accuse us of vote-catching by demanding protection for the industry. Incidentally, as you ought to know, protection for cotton was not a dominant issue at Torrington. The loss of confidence in the Government goes far deeper than these events.

As for "sentimental pacifism," for over a year we have said that, while Britain should make her contribution to Western conventional defence and a contribution to a joint Western nuclear programme if needed, she should not continue to make nuclear bombs herself. We see no point in duplicating the American deterrent. This policy now apparently has the support of Mr Thorneycroft. How it can be called "sentimental pacifism" I do not understand.

It would be interesting to know how many meetings at these by-elections were attended by your correspondent. In fact we have fought all these by-elections on our main official policies.

Apparently, you want all Liberals to join the Conservative Party, perhaps under the smoke-screen of National Liberalism. I think this would be dishonest. The Liberal Party continues to believe that a body of forty or fifty Liberal MPs would enormously strengthen Liberalism in Parliament and, for instance, might have provided impetus for the various moves towards greater unity in Europe.

It is strange that you should publish this article so soon after your article of March 8th advocating the alternative vote.

Believing, as you appear to, that all Liberals are rogues, it seems odd that you should want some of them in Parliament.—Yours faithfully,

House of Commons DONALD WADE

★

SIR—I am very grateful for your article on the Liberal Party. You have said things which badly needed saying.

It would doubtless be charitable to claim that the Liberal Party has done no more than adopt the methods of its opponents in order to beat an unfair electoral system; and that having re-established itself it will speedily recover its soul. Unfortunately the type of recruit these methods have attracted makes such a happy conclusion more unlikely than ever.

A great opportunity has been missed. But perhaps it is not too late. Criticism from one's friends should be more tolerable than criticism from one's enemies and I should like to invite the "Liberal News" through your columns to throw the issues open to debate by re-publishing your article in full.—Yours faithfully,

S. E. GRAHAM
Liberal Candidate, 1955 General Election, Roxburgh, Selkirk and Peebles

Leeds

★

SIR—You say that "the main purpose of the Liberal Party should not be to get more Liberal MPs into Parliament by hook or crook but to inculcate more liberalism into the country." But this is to ask the Liberals to be above, not in, politics. Politicians must have seats and seats are not won by inculcating anything into anyone.

As a Conservative I would like to see twenty or thirty Liberals in the next Parliament determined, in your words "to probe down to the roots of every stalk in the national life." There is an obvious need for a third group of independent thinkers inside the House. If they will be of use inside by preferring truth to popularity, we should not cavil too much at the means they employ to get there.—Yours faithfully,

London, S.W.3 CHARLES JANSON

Oil in the Middle East

SIR—There are two comments I have to make on your article last week. First, it is not correct to say that 25 years ago "the large oil companies had the field to themselves." On the contrary the share of independent importers and marketers was, in several countries such as the UK, much greater than it is now; these marketers were supplied from Russia, Rumania and by American independents who were then still in the export business. The other point turns on your fatalistic assumption that the American conception of enforced competition will make it impossible for anyone to find ways of adjusting by mutual consent supply to stagnating—or even shrinking—demand. Originally co-operation of this nature among competitors was proscribed only within the USA, but in the last two decades the scope of that doctrine has been extended to cover foreign operations of American enterprises; now the wheel has turned full circle and the exclusion of restrictive practices only applies abroad. As far as the USA proper is concerned, crude production is rigidly controlled by the relevant states and lately import quotas have been imposed upon each one of the importers, in a system which in a positively Orwellian fashion has been called "voluntary."

The economics (and therefore the strategy and tactics) of stable or shrinking markets differs from that of rapidly expanding ones to which we had become accustomed. It might be that for a while some of the recipes of the 'thirties will be worth looking at and one should not perhaps assume that one has to take for granted a flat refusal of the Americans to co-operate. A way of thinking which makes it possible only for governments to regulate trade in minute detail is a tempting invitation for all of them to do so. Such trend would prejudice in the first place the far-flung American interests.—Yours faithfully,

London, W.1 P. H. FRANKEL

The Stock Exchange

SIR—May I question the thesis in your March 15th issue's leading article intriguingly captioned "The Confident Recession," that the strength currently exhibited on the New York Stock Exchange warrants optimistic conclusions about the extent and duration of our recession-depression. Exception is in order on the grounds of actual performance as well as logic.

Conceiving of the recurrent fluctuations of share prices as an indicator, either barometric or thermometric, of the nation's economy, manifests complete misunderstanding of the proper behaviour of the stock-holding investor and of the market's functioning. The *raison d'être* of the stock exchange is to provide liquidity, not a forum for placing bets on the future of business or politics.

The market's actual performance has conformed to this interpretation, via the recurrent major divergences of its fluctuations from the accompanying economic events. The tremendous stock market boom of the late nineteen twenties had no foundation in either the state of business or the commodity markets. Again, the great bull market of 1935-1936, marking a 50 per cent rise in the valuation of equities, was completely unrelated to industrial activity or corporate earnings. Conversely, the rise in production and national income from 1939 to 1942 was accompanied by a major decline in the stock market. And after the second world war, the market averages declined by 22 per cent in 1946 and remained in the depths until 1949, an interval marked by booming business with a 40 per cent rise in commodity prices.

Incidentally, your impression of optimism on the part of the Wall Street community calls for considerable qualification. Its inapplicability to the "smart" professional element is evidenced by the current official data showing at the highest figure since 1931 the total of short-sellers (those who borrow shares and sell them in the expectation that their price will decline and enable repurchase at a lower price to yield a profit). And with reference to the institutional and other long-term investors, to whose support you credit the strength of the Dow Jones Average: their forbearance from liquidation may well rest on assumed continuation of our current price inflation despite recession; coupled with their being "frozen" in the market because of the capital gains tax still accruable on their holdings at these historically high levels.

Our recession truly may be nearing its end. But surely stock market behaviour does not provide an easy answer to the highly complex question!—Yours faithfully, A. WILFRED MAY

New York City

The Universities

SIR—It has always been my impression (modesty prevents me from claiming more) that we who teach in Redbrick have always recognised it to be an essential part of our duty "to make the mass of the people . . . more educated than they are." Your scheme, to provide the two ancient universities each with one big new college apiece, may break open the eye of their needle but it will not avoid the depreciation of Redbrick degrees, particularly in the arts and social sciences. That failing of the British system of higher education comes from those who will always prefer a poor Oxbridge degree to a good provincial one, often for no better reason than that the man from Redbrick (and his sister) has not dwelt under gothic towers, looking over a thousand years of history—and also possibly from the school masters and school mistresses who lead their charges to believe that the chance of breaking into the circle of top dons and administrative civil servants is worth more than the adventure of becoming a part of that new generation of educated men and women in business without whom we British are going to remain among the backward, if technically developed peoples of the world.—Yours faithfully,

GILBERT WALKER

University of Birmingham

The Free Trade Area

SIR—Mr John Hay in his letter published in your issue of March 8th suffers from a disease common to politicians; if you believe a thing to be good you have only got to persuade other people hard enough and they will believe it good also. If you fail it is not the idea but your propaganda that is at fault. The proposition that effective propaganda in France for the Free Trade Area would make it more popular is very doubtful; more probably it will kill it altogether. To most Frenchmen the idea is merely a clever scheme by which Britain obtains the benefit of the Common Market without any of the sacrifices. To the French the benefits are political, the sacrifices economic. A purely "economic" scheme like the Free Trade Area is meaningless and unwelcome.

Why will our politicians not consider the political aspects seriously? They are surely impressive. The old rivalry of France and Germany is likely to be buried for good. A nucleus for wider European integration is created; there is a chance of regional atomic planning with all its possibilities, economic and technological. Finally, why not a Common Market foreign policy, at least in so far as it helps to iron out the problems created by members' "special interests"? Instead of being created with the pompous hesitancy of Strasbourg, it may well grow naturally all by itself, and for that reason be effective.

What politicians ought to be thinking about is not better salesmanship for the Free Trade Area but an alternative should its present form prove unacceptable to all or some of the Common Market countries. This alternative is likely to boil down to staying outside the Common Market altogether or joining it, possibly with as many special dispensations as skilful negotiation may get us. In fact, precisely the choice that was there before a Free Trade Area was thought of. Neither the Imperial Preference problem (the Commonwealth have not spoken officially on this subject; can we assume that they will refuse to budge from the present system under any circumstances?) nor the agricultural problem need really be insoluble.

A lot of people in industry are under the misapprehension that the Free Trade Area depends on their approval or disapproval, and will get a nasty shock when they realise that Britain's final decision to join it might well coincide with the final departure of the idea into limbo. That leaves us with the original alternative. In making our choice it might as well be remembered that the Common Market already exists without the Free Trade Area and that our possibilities of moral and economic leverage on Western Europe are declining every year that it continues so to exist.—Yours faithfully,

Bramhope J. P. NETTL

BOOKS

The Triumph of Capitalism

Les Bourgeois Conquérants

By Charles Morazé.
Armand Colin, Paris. 491 pages.

EVER since the appearance in 1949 of Professor Fernand Braudel's great work on the Mediterranean world of the second half of the sixteenth century, it has been obvious that the new school of French historians, whose inspiration derives from Marc Bloch, would be the major source of new historical ideas in the postwar era. Whether this would also be true of historical works, or whether Professor Braudel's achievement would be flanked only by monographs and sketches, has been less certain. But now we get the full challenge of the new school in a planned series of large volumes ambitiously entitled "Destins du Monde." Professor Morazé's, the first to appear, has a preface by Professor Braudel, who with the late Lucien Febvre planned the series.

Both in conception and in execution the volume is as far as could be from the manner and the matter of most contemporary British historiography. Instead of the juxtaposition of specialist to specialist, each bringing his own little brick to the building, in the manner of the new as of the old Cambridge histories, we have a highly personal survey of a great theme—the triumph and worldwide expansion of the European capitalism of the nineteenth century. Instead of the Oxford concentration upon whatever history can be extracted from monkish chronicles, we have history that ranges the globe geographically and all man's activities thereon. Most modern British history is of little relevance to the problems of the contemporary world; M. Morazé gives a foundation for analysis and comprehension.

The book is constructed on unusual lines, since the bulk of it consists not of narrative but of three cross-section surveys of the world in the 1780s, the 1830s and the 1890s. Such narrative as there is—developments in the sciences, in the economy or in exploration—is designed to link the surveys together and for the ordinary "1066" kind of events the reader has to look to the very elaborate "chronology" at the end of the book. As students of M. Morazé's earlier writings will guess, what gives the book its undoubted unity—so rare in "social" histories—is the personal conviction of the author about the order of priorities. It was not the bourgeois who conquered by their own merits, but rather the new advances in the sciences through the bourgeois; on the other hand, economic advance is not to be explained in terms of "inventions" only but in terms of demography, of social institutions, and in particular of the institutions of credit, as well. We begin with London and Berlin as the typical cities of contrasted maritime and continental worlds, with Paris partaking of both elements; we end with Europe as a whole challenged by the rising continental powers—the United States and Russia. We pass from the world of Newton to the world of Einstein.

The cautious, while accepting M. Morazé's broad patterns, may question one or two of his immediate equations between historical "events" (wars and revolutions) and fluctuations in the trade cycle. Any synthesis of this kind must to some extent be based upon the general state of historical knowledge in the country that produces them. And given the low ebb of Anglo-Saxon studies in France, it is not surprising that the American sections contain some odd errors, and that even some references to Britain are not quite correct. But these are minor blemishes on a work that should excite the imagination of the ordinary reader and teach the more humdrum historian of the nineteenth century how much he needs to know.

Although the bibliographical apparatus is weak, the use of maps and diagrams is as imaginative as one expects of the French. M. Morazé, without pretending to give an account of the history of culture, is well aware of the historical relevance of works of art, and the illustrations are well chosen and well produced. But as in almost all modern French books, the mis-spelling of English names and words reaches a degree of regularity that almost makes one feel they do it on purpose.

Seeing for Oneself

I Saw for Myself

By Anthony Nutting.
Hollis and Carter. 103 pages. 10s. 6d.

Journey into Chaos

By Paul Johnson.
MacGibbon and Kee. 178 pages. 15s.

Red Mirage

By John O'Kearney.
MacGibbon and Kee. 227 pages. 15s.

LAST year, three angry young men set out for the Middle East. One was dressed by Savile Row (he is on the dust cover); the second had borrowed a spiritual duffle coat from Mr Kingsley Martin; the third was an American reformer in a pink sweat shirt.

Mr Nutting would have written the best book had he resisted the convention, and the convenience, of staying with British ambassadors, using their addresses and their CD motorcars, and seeing only the best people. He starts from an excellent basis of knowledge founded on years of reading Foreign Office telegrams, but this range of interviews while seeing for himself is too narrow to allow of sure judgment. Although moving almost exclusively in high life, he acquires, every here and there, a sense of the social crisis that pervades his target area. His best chapters are on North Africa, on the Persian Gulf and on the pent up social discontent in Iran that colours the attitude of almost every Persian who can read towards the Shah and towards the vagaries that are forever holding up development.

On the middle section of his beat he is much less perceptive because he persists in regarding the Egyptian revolution as "Nasser" and not as a social phenomenon now stirring the whole of the Arab world, much as 1789 stirred the liberals of early nineteenth century Europe. He therefore gravely underrates Egyptian influence, particularly in his chapters on Saudi Arabia and on Iraq. This last, which is smug and over-optimistic, wholly fails to point out that "in order to put through a nation-wide programme of capital development, you must have a *social* policy," which the Iraqi ruling class has not.

The quotation, italics and all, is from Mr Paul Johnson, and is typical of his pithy style and pin-point perspicacity. But he reaches his conclusion via a factual exposé so carelessly put together that one could weep for talent gone to waste. Wrong dates, wrong facts, sweeping statements based on a single glance at some problem, misinformation on Saudi Arabia based on the kind of gossip heard in Beirut bars cannot be offset by periodic injections of shrewd judgment.

Mr O'Kearney's material is even less well processed. Still at the stage of exclaiming when invited to an Arab meal, he writes down only the bits of the conversation he wanted to hear (and as likely as not was told because his hosts thought it would please). He turns virtually red in his effort to prove that Mr Dulles, Mr James Richards and Mr Loy Henderson are seeing mirages when they discern a Red Peril. This is a pity because, on the subject he has chosen, there is a useful book to be written by some more balanced writer.

The most interesting point about the two English books—one by a Conservative, the other by a Labour author—is where they coincide and where they diverge on recommendations about policy. Both think the British position in the Persian Gulf has outlived its usefulness and could be brought to an end. Both are sure that western governments must help to induce first the oil companies (as an example?) and then the local governments to pool resources so as to lead to an evener spread of oil income throughout the area. Neither has worked out his plan, but both stir up thought on two imminent problems.

Paradise Regained

Big Sur and the Oranges of Hieronymus Bosch

By Henry Miller.
Heinemann. 355 pages. 30s.

AMERICAN literature has time and again produced classics of solitude, records of the estranged soul seeking out its millennial and private kingdom. Because the commanding national tradition has been one of collective endeavour, of aggregate responsibility and civic achievement, the protest of the eccentric has been the more vehement. Paradoxically, this continent of immense spaces has a literature of claustrophobia. With the advance of a space-devouring culture across the breadth of the land, it has become correspondingly more difficult to escape, to "get away from it all." Thoreau could leave Concord on foot and vanish, before he had gone very far, into virgin country of wondrous beauty. Mr Henry Miller, an author not always associated with pastoral repose, had to go much farther—to the wild, mist-shrouded Pacific coast south of Carmel.

There is no place on earth quite like Big Sur. The high, bleak cliffs descend into the icy Pacific. Patches of giant redwood tower over the dark glens and canyons, which cut inward from the coast. The grating of the sea and the murmur of the branches are borne on a constant wind. Hawks sail low over the cliff crests, and at night one can hear the bark of the sea lions gathered in tawny legions on fantastically shaped headlands. The road to southern California and Mexico is hewn into the living rock. There is a seventy-mile stretch without a petrol station. Cars hasten by like embarrassed beetles. They do not belong to this archaic and inviolate world. No doubt they will master it one day to their own sorry purpose. But not yet.

Scattered along the ridges in weird houses, which are thrust out above the sea like ships' prows, dwells a colony of writers, artists, hermits, astrologers, vegetarians and necromancers. Driven from France by war and weariness of spirit, Mr Miller came to Big Sur in 1944. This book is an account of his new home and of the fabled creatures that surround it. It is, literally, a book of hours, of *très riches heures*. There is little method to it: remembrance alternates with portrayal, portrayal with meditation. It is pervaded by the chaotic play of wind and water, of recollection and myth. Often the style falters or grows querulous as in conversation. It has nothing whatever to do with Hieronymus Bosch. Yet, Bosch would have understood its essential design, the caprice of order. As in his paintings, so we find in Big Sur an image of Paradise Regained. Mr Miller's Eden is destined for "the sort of American that never starts a war, never raises a feud, never draws the colour line, never tries to lord it over his fellow-man, never yearns for a higher education, never holds a grudge against his neighbour, never treats an artist shabbily and never turns a beggar away." As in all utopias, the strain of social criticism and irony runs strong. This paradise also is threatened with destruction. Beyond Big Sur, where the forests thin out, lies what Mr Miller has called the "air-conditioned nightmare."

His English publishers are men of gravity. They list "books by Henry Miller" without including any of his more celebrated works. And yet, there is a link between "Tropic of Cancer" and "Big Sur." In his purgatorial wanderings, Mr Miller was no less himself than in his *paradiso*. Eschatology and scatology are related concepts. This is, indeed, a strange man and a strange book—but so Emersonian, so wholly American.

Battle of Crete

Daedalus Returned

By Baron von der Heydte.
Hutchinson. 186 pages. 16s.

THE battle of Crete will have a special place in military history. It was an individual action, clearly and easily distinguished from the main stream of the war though not without influence upon its course. It was also the first—and possibly the last—example of an attack upon an island from the air without sea power. Like Waterloo it was a close run thing. How close is now being seen from personal accounts such as this. Baron von der Heydte was in command of a German parachute battalion which dropped at zero hour near Canea. He was thus on the flank of the main struggles for the aerodrome on Maleme and before the village of Galatas, and he cannot therefore give firsthand experience of the real turning points of the battle. But his account is valuable for the vividness with which it demonstrates the emotions and difficulties of the German parachutists: the immediate access of abounding confidence in the parachutist once his drop was over; the sense of utter bewilderment, as they crawled into position; the complete confusion of close range fighting in the oliveyards; and the tension caused by long, unexpected silences when the ammunition in some companies—not to mention the rations throughout the battalion—had run out.

The author has filled out the relevant shortness of his part in the battle itself with comparisons from his own long experience of fighting in North Africa, Italy, France and Russia, and with some less apposite and, for the British reader, somewhat sentimental personal recollections; but he emerges as a serious and chivalrous commander, with the sensitivity to feel keenly both the romance of the setting and the beastliness of blood and battle and to bring home to others something of a week that seemed larger than life. Thus, the final picture does not seem far-fetched: of a Cretan eagle poised and about to swoop upon the island from close by the author's aircraft as he flew from the sunlight of Maleme back to Athens after the capture of the island—on his way eventually to Russia.

Literary Dabbler

Marcus Clarke

By Brian Elliott.
Oxford University Press. 281 pages. 35s.

A SLEDGEHAMMER of scholarly research has been used to crack this man, who wrote one classic of nineteenth century fiction and sparred with life and letters as a journalist in Melbourne between 1867 and 1881.

Through no fault of the author, the kernel is scarcely revealed. Clarke is too elusive to be caught in this way, except in an excellent preface where a comprehensive view catches some measure of the man for the last time. Then Clarke peers out from slitholes through an armour of irony and cruel wit in Australian newspaper columns written in Sala's style. Theatrical and literary criticisms, hoaxes, pre-Potter gamesmanship and a capacity for allowing himself to be surrounded by unpleasant legend or persistent financial troubles—all appear like parts in the repertoire of a literary actor whose only truly successful role came with the writing of "For the Term of his Natural Life."

Clearly Mr Elliott knew that Clarke would repeatedly disappear off the dissecting table; he ends his preface by declaring that the book was intended to be a personal study, but that he will not quarrel with the impression if in effect it should seem more like the portrait of an age. He writes freely and well about the small literary circle in Melbourne in the late nineteenth century, but he is seldom at home with Clarke.

The wider story will interest some students of a colonial age and enrich one part of the history of Australian journalism. General interest, however, must be focused on Clarke as author of "For the Term of his Natural Life." At Highgate School we find the beginning of the brew that makes an author. There, his best schoolfriends were the brothers Cyril and Gerard Manley Hopkins. Intended for a diplomatic career, he suddenly found himself left with less than £1,000 instead of an expected fortune and decided to emigrate to Australia where other members of his family had held distinguished posts.

This seems to have been a turning point in every sense. His failures in Australia as a bank clerk, farmer and librarian stem in part from his feeling that such work was for lesser minds. He was undoubtedly a gifted and facile writer and in journalism he found some outlet. Much of his behaviour in print or in life shows a continuing resentment at being cut off from his dreams of "elegant sophistication." He is more natural and more honest in the correspondence maintained for years with Cyril Hopkins. But even there he puts a gloss on facts to favour the view that a man of taste and superior intellect was wasting his talent among raw and rough colonials. He could have returned to London to make a good living as a journalist, but he could not come to grips with a decision of that kind. A bottle of bubbly, a good pipe and a carefully-selected cognac in a Melbourne literary club gave him the advantages of feeling superior in a colony without the disciplines and obligations of the elite society he imagined was his own.

Drift and dabbling brought him almost by accident to his great novel. Those who imagined that he wrote it in passionate protest against the cruelties of the penal system will find that it was offered as a serial in twelve instalments before he had put pen to paper or thought deeply on his theme. Once engaged upon it, the tragedies enclosed in the historical records broke out into his novelist's mind. Instalment by instalment, he grappled with the technical problem of making the life of the tragedies stay within the body of his serial. On one occasion the publisher is said to have locked him in his room to finish an instalment. He was not bedevilled by alcohol as many have supposed, but by a lack of self-discipline and direction—qualities forced into him by this work in which, as Mr Elliott admits, he transcended rather than mastered his limitations.

Between 1874 and 1877 the novel went into book form with editions in Australia, England, America and Germany. In the last two or three years it has been reprinted in the popular classics series by Oxford and by Collins. It will remain a landmark of nineteenth century fiction, but Clarke himself, as the book faithfully shows, could never strike a balance between his dreams and his world. It is typical and tragic that, having used his pen and his wit savagely against poverty and the suburbs, he died at the age of 35 in both.

Italian Partisans

The Story of the Italian Resistance

By Roberto Battaglia. Translated by P. D. Cummins.
Odhams. 287 pages. 21s.

No doubt one ought not to complain, when offered an apple, that what one really wanted was an orange. Roberto Battaglia's "Storia Della Resistanza Italiana" was rightly acclaimed as a sincere and careful effort to straighten for posterity a record of heroism and human decency (with lapses therefrom) that political strains and stresses in contemporary Italy had twisted into a disagreeable tangle. When part of public opinion was determined to have it that Italian partisans were rogues and vagabonds to the last man, and another part no less bitterly replied that they were heroes every one, it was hard to find out—or remember—just where the lines of truth had approximately run. Sr Battaglia's book was a great help.

Frankly partisan himself, he nevertheless succeeded with a fair measure of impartiality in showing how reluctance turned gradually into resistance, indifference into action, despair into hope. He recalled the fact—and it was a fact, though much questioned in 1945 and after by Italians who had done nothing in the battle (or nothing, at any rate, on the Allied side)—that the partisan brigades of northern Italy indubitably felt themselves in the true line of succession to those Garibaldini who had made Italy a century before. He re-established the truth—and it was a truth, though no less questioned—that patriotism lay on their side and treason on the other. He provided a reliable account of the growth of armed resistance from its somewhat futile beginnings in the south to its splendid triumphs in the north.

Is not this, then, the meditated fruit of all those struggles that one would like to taste? In this "edited version," at any rate, the whole thing has a dull and woolly taste. That is partly the fault of the original: trying for comprehensiveness, Sr Battaglia gave the first half of his book, or rather more, to the background and origins of Italian resistance. His account of the fighting in the north is accordingly much briefer than its fury and success would seem to warrant: the battle for Genoa—captured from a large German garrison two days in advance of Allied arrival and in face of great tactical difficulty—gets less than four pages. Inevitably there is no room for the smell and flavour of the real thing. Nobody reading these four pages—or the few allotted to the taking of Milan and Turin—could possibly know what cunning and what courage were involved.

But the failure of this book is also that of its editors in London. There is, for instance, an introduction in the style of "some of my best friends were partisans" whose only real object seems to be to shield the publishers from any suggestion that they may be supporting, at however far remove, some kind of propaganda for communism. But the fact—lamentable though it may be—is that the partisan resistance in Italy would have been, without the communists, little better than a sad fiasco. "In the partisan war," this introduction explains, "men were fighting as individualists in small units for their homes and their own cities." Were they? Many will reply that the whole point of the partisan war—what gave it its profound appeal to men and women of all classes and why it could become a national movement—is precisely that men and women felt themselves to be fighting for the self-respect of the whole of Italy: as Sr Battaglia says, to redeem the honour of Italy "which had been so vilely besmirched by the Fascists."

Editing of this book for an English public was probably necessary. But the editors have done themselves, and the book, no service. They might have usefully offered, by way of introduction, an adult summary of recent Italian history, a sensible analysis of partisan opinions, and—painful if necessary—a salutary account of the trouble that the Allies afterwards took in ensuring that partisans of whatever colour should have as little as possible to do with the government of post-fascist Italy. As it is, the editors have merely got themselves awkwardly between the reader and the real drama.

Gaul is Divided

La France Déchirée

By Jacques Fauvet.
Arthème Fayard. 152 pages. 500 francs.

THIS is not a book on the Algerian war. M. Fauvet, whose daily column in *Le Monde* is the best guide to current French politics, has decided to look at his subject-matter from a distance, to separate the permanent from the ephemeral. The result is a brilliant, epigrammatic essay. This elegant introduction to French politics contains at the same time a warning against facile generalisations.

In the first part of his book, M. Fauvet shows how in politics France has to pay a price for the seamy side of its virtues. Individualism, pushed to extremes, makes the exercise of governmental power extremely difficult. The intellectual bent leads to the survival of anachronistic quarrels, lends power to abstract slogans and feeds the illusion that to have set a problem means to have solved it. (This is illustrated by an example worthy of "This France": a deputy having proclaimed that "this cannot last, that we must strike a blow," concludes that he will write a letter to the *Revue des Deux Mondes.*) Finally, respect for tradition degenerates into resistance to change. Changes too long postponed bring about revolutions. Conservatism and revolution are thus linked in the French heritage.

M. Fauvet sets these features against the background of French divisions. France is divided on religious grounds between Roman Catholics and non-believers; on economic grounds between North-West and South-East; on political grounds between Left and Right. And these divisions do not always coincide. Furthermore, beneath the apparent changes in names and labels the deep divisions persist.

There cannot, therefore, be any easy remedy. Governmental instability is the result not the cause of divisions. To put the blame on the party-system is also superficial, since the structure of French parties varies from the communist monolith to the Radical club. The real solution according to M. Fauvet depends on the ordinary citizen. The Frenchman "takes an interest in elections, less in parties, very little in government." Until he changes his attitude, he cannot expect democracy to work efficiently.

At the end of his survey, M. Fauvet identifies three reasons for hope. By 1970 France will be driven to action by the demographic revolution, the continuing technological change and the challenge of its European partners. But if it does not prepare for this transformation, 1970 may prove a broken date.

One leaves this excellent guide to the apparent chaos of French politics with regret. Throughout we have the conviction that each comment, each epigram springs from a great deal of knowledge, of erudition. It is to be hoped that this masterly essay will be followed by other volumes in which M. Fauvet will be allowed to draw on a larger canvas for his readers' further enlightenment.

Thought Controllers

Mental Seduction and Menticide: *The Psychology of Thought Control and Brainwashing*

By Joost A. M. Meerloo.
Cape. 324 pages. 21s.

IN its modern sense brainwashing has for a long time been a preoccupation of the military authorities, particularly in the United States, and of specialist psychiatric journals. It has lately become a subject for the general reader, and this book inevitably invites comparison with Dr Sargant's recent "Battle for the Mind." Both deal with the psychology and technique of brainwashing, and both seek to put their subject in a wider setting. But here the resemblance ends, for whereas Dr Sargant founded his exposition on Pavlovian experiment and theory and dwelt much on the earlier and similar techniques of religious conversion, Dr Meerloo tries to drive Pavlov and Freud in double harness. He is more successful in this feat than might sound possible, particularly in his use of psychoanalytical concepts to explain how a person's inner weaknesses can contribute to his involuntary conversion.

Once a prisoner—military or political—has his stamina undermined by hunger, cold, lack of sleep, exhaustion, and, if necessary, by torture, the interrogator deliberately plays upon his deeper conflicts and needs—upon his despair, his wish to regress into dependence, the anxiety produced by his unconscious feelings of guilt, and on his urgent need to belong to a group.

The Chinese communists have, it seems, refined the technique learnt from the Russians; they rely less on extremes of physical torture and more on group pressure in cells of six or eight prisoners.

Dr Meerloo is at his best in describing events within his personal experience as a prisoner in Europe, or in helping those who had been exposed to interrogation to settle down after release. His efforts to account for the extraordinary success of brainwashing are, like so much psychoanalytical literature, persuasive but not completely convincing. Although he uses an occasional word—hypnosis, for example—in a peculiar sense, his writing is intelligible and unsensational—unlike the book's title, dustjacket and many of its sectional headings. In other parts of the book, he examines methods of propaganda in totalitarian countries and hidden persuasion nearer home—not only in advertising; but he is less successful the farther he strays from his main subject.

Like others the author has considered what steps can be taken to fortify people against brainwashing, and the answers are again vague and disappointing. They amount to little more than measures to boost individual and group morale. He believes that almost everyone can be forced to succumb to a determined assault and that it is consequently unjust to punish prisoners after they have been released and have recovered. This particular question was fully dealt with in an article in the *New Yorker* of October

Duckworth Books

Industrial Innovation Series

This series incorporates the results of research undertaken by members of the Department of Political Economy of University College, London under the direction of Prof. G. C. Allen.

What are the circumstances which predispose an industry either to welcome innovations or obstruct them? The authors describe and analyse what has actually happened in seven different industries in the United Kingdom, where either the products are recent inventions or the methods of manufacture have been profoundly affected by recent changes in technique. They pay particular attention to the effect on innovation of the structure of the industry, in other words, whether its organization is predominantly competitive or monopolistic.

26, 1957; the low death-rate of Turkish prisoners in Korea and the failure to indoctrinate them were there contrasted favourably with the experience of American prisoners. The difference was attributed to the Turks' high morale and discipline. This explanation may be correct, but there are other possibilities: a lack of Turkish-speaking interrogators perhaps; or may not the Chinese have been interested, for political reasons, in converting only their English-speaking prisoners? It is probably still an open question whether high morale can make brainwashing impossible, or at least an uneconomic proposition when applied to large groups of men; but the single individual seems to have little chance of resisting it for long.

Greek Odyssey

An Affair of the Heart

By Dilys Powell.
Hodder and Stoughton. 280 pages. 21s.

THIS book is certain to put all Hellenophiles into a state of euphoria, even though they may have some reservations about the technique used by Miss Powell in trying to convey the authentic flavour of her conversations with Greeks. But it is not just another book about Greece and its appeal should not be only to those whom it will inspire to retrace nostalgically their own wanderings through Athenian streets and expeditions into the Greek countryside. It is a description of one English person's relationship towards Greece and the Greeks—a relationship that developed through the years while remaining fundamentally unchanged and which largely revolved round the small village of Perachora on the remote peninsula dividing the Corinthian and the Halcyonic Gulfs.

It was near Perachora village that in 1930 Humfry Payne, Miss Powell's first husband (who died in 1936), discovered an astonishingly rich ancient site. For three seasons, Miss Powell accompanied her husband to the Heraion; she watched the progress of the dig and the effect of this gradual uncovering of archaeological wealth on the Perachorans. This book, however, is not concerned with those idyllic days in the distant thirties, but with the three visits that Miss Powell has paid to Greece since the war—in 1945, 1953 and 1954. On the 1953 trip she travelled extensively in northern Greece, mostly by bus, sometimes by taxi and sometimes—to the amazement of the Greeks—on foot. On her last trip she accompanied an archaeological and diving expedition to the island of Chios, and in this book she gives a fascinating and amusing account of the part that diving can play in archaeological investigations. On each occasion she managed to revisit both Perachora village and Mycenae, where Humfry Payne was buried and where she had good friends at the local inn.

This book might have been unbearably sentimental—but it is not. Miss Powell is extremely reticent about her personal tragedy. Where she is moving is in her description of the plight of the Greek country people, who have had to endure war, foreign occupation and civil war, in addition to the painful poverty that is the lot of most of them even at the best of times. But she never lapses into the false sentiment that would be so inappropriate for these stoic characters. They are realists but they also dream dreams. The Perachorans hoped that if only they could build themselves a museum, their archaeological treasures would be returned to them and their village would become rich and famous. And when Miss Powell paid them her last visit in 1954 they had in fact at least set up a museum, "with the long faith in Tomorrow and Next Year which incessantly wars against the austerity of their lives and the majestic indifference of their landscape. . . ." But she found the museum still empty. One would very much like to know whether some of the Heraion's treasures have by now been returned to Perachora village.

North African Ramble

Corsair Country: *The Diary of a Journey Along the Barbary Coast*

By Xan Fielding.
Secker and Warburg. 232 pages. 25s.

THE pretty dust cover of Mr Xan Fielding's book shows a little harbour, with a blue sea and a blue sky, seen through an arch, with an Arab in the foreground and a quay with a few palm trees behind. It is clear therefore that the Corsairs whose country we are to visit were those of North Africa. The author began his journey at Tangier and finished it at Tripoli, having followed the coast line, as far as that is possible in a car, through Algeria and Tunisia. Internal evidence suggests that the journey took place about 1954. Since then great changes have taken place on the Barbary Coast. These, the author tells us in his introduction, have "no real bearing" on his subject, which is "the unchanging and perhaps unchangeable qualities of North Africa and the North African people" as they happened to strike him—"just a personal picture, take it or leave it."

The reader soon finds that the portrait which he encounters is that of the author rather than that of the people of North Africa. Of the latter Mr Fielding seems to have met few except the touts who abound in all tourist infested areas—and, of course, the proprietors and hangers-on of the hotels where he stayed. Indeed the snapshots of these casual acquaintances, sometimes odd, sometimes pathetic, sometimes disreputable, are the most vivid and in some ways the most satisfactory feature of the book. Of any deeper comprehension of the country or its people, whether Europeans or Muslims, there is very little sign. Too often we arrive at a city only to leave it again immediately, because to the author it seems at first sight exactly like somewhere else. Such snap judgments can be irritating, especially in a writer who seems to have been able to devote a whole year to this ramble. In other respects the books is readable enough.

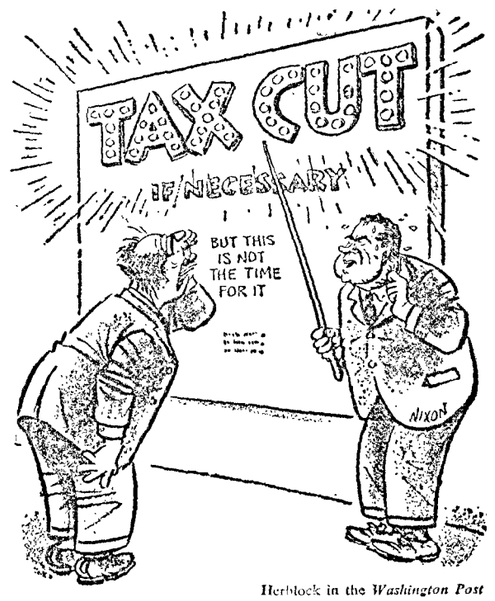
AMERICAN SURVEY



AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

Democrats Count on Victory

WASHINGTON, DC

AS the members of Congress prepare to depart for their ten-day Easter recess, the Democrats are in a mood of optimism approaching euphoria and the Republicans transfixed by defeatism. With the congressional elections still seven months away, impartial observers and politicians from both parties unanimously forecast that there will be large Democratic gains in both the House and the Senate. For the first time since President Eisenhower took office, the opposition has a political issue with a strong national impact. The economic decline is increasingly severe and it is widespread: 70 of the country's 149 major economic centres are now classified as having "substantial" unemployment and the final figures for March, when they are available, are not expected to show any improvement. The Democrats visiting their constituencies during the Easter holiday are expected to return with fresh reasons for alarm and to call for more vigorous measures against the recession. But neither pump-priming nor a tax reduction is likely to alter the political picture very soon. The economy may have begun to "turn around" by November but the Democrats believe the voters will still be feeling the harsh effects of the recession. The 1954 elections, which came near the tail-end of a milder recession, cost the Republicans 27 seats in the House of Representatives.

"If You Get It, Remember I Mentioned It"

Herblock in the *Washington Post*

The present downturn in the economy is only the latest in a succession of unfortunate developments for President Eisenhower and his party. The Russian scientific successes, the bitter clash over racial segregation in Little Rock and the prolonged depression on the farms have all undermined his popularity and impaired his prestige. His minor stroke last autumn contributed to an impression of waning personal vigour and the conviction grows that this Administration has lost its touch. A year ago, during the now forgotten battle over the budget, Mr Eisenhower still had powerful reserves of popular confidence in the country upon which he might draw to overawe his critics in Washington; these are considerably less now.

The President's political popularity as measured by the Gallup Poll has ebbed to 52 per cent, the lowest figure since he came to office more than five years ago. The conservative press has become more critical of his Administration on important issues; *Time* magazine, the bell-wether of the Luce publications, which is influential in forming middle-class opinion, has attacked Mr Eisenhower sharply for the first time. At a party meeting Republicans in the Senate voted, 17 to 14, to ask the President to sign the Democratic farm Bill, an open revolt against the Administration's farm policies. Mr Eisenhower, nevertheless, insisted on vetoing the Bill, on the grounds that, by freezing agricultural price supports at present levels, it would only make the farm problem more difficult to solve. His obstinacy in this matter is likely to lead to other revolts by his nominal supporters on more vital questions, such as tariffs and foreign aid.

As a sign of President Eisenhower's steadily weakening position, Vice President Nixon's personal programme of disengagement from the Administration's decisions is more spectacular than poll ratings, press criticism, or party grumbling. Mr Nixon is generally considered to have by far the most sensitive antennæ in his party for detecting changes in the public mood. After more than four years as the President's devoted adjutant and political agent, Mr Nixon has in recent months begun to stand apart from his chief. When last autumn the President attempted to calm the post-sputnik excitement about missiles and satellites, Mr Nixon in his speeches gave much comfort to those who were demanding a keener sense of urgency. He has made no secret of the fact that he does not share the President's determination to stand by the unpopular Secretary of Agriculture. Finally, Mr Nixon has said publicly (although he was later obliged to modify this independent stand) that, if the economic decline continues, he would favour a large

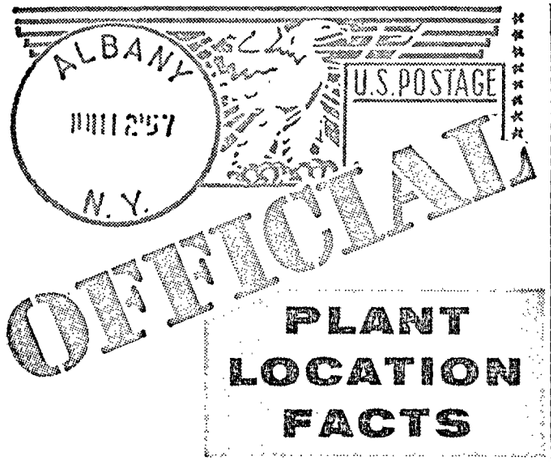
tax cut; he emphasised that this was his opinion but not necessarily that of the Administration. He is almost certain to become his party's presidential candidate in 1960 but, if the present Administration drags to its end as a failure, the Republican nomination may not be worth very much. The Gallup Poll recently showed that the Democrats would run ahead with 56 per cent of the votes to 44 per cent, if next November's congressional election were being held now. This is the worst Republican showing in twenty-two years. If the Democrats were to increase this prospective margin by as little as one or two points in the real election, they would duplicate the enormous majorities of the early New Deal years. Between 1932 and 1938, their strength in the House of Representatives ranged from 313 to 346 seats out of 435. Such majorities are not, however, quite as overwhelming as they appear because sizeable defections by conservative southern Democrats on most domestic issues mean that the party must have about 275 seats to put through the progressive sections of its programme; the present division—235 Democrats to 200 Republicans—provides little more than nominal control.

A gain of 40 seats is the minimum goal of the Democrats. Since the Republicans won almost exactly that number of seats in the last election by majorities of 5 per cent or under of the votes, this goal now appears to be easily attainable, although it is about the most that the more realistic party leaders expect to achieve. A gain of this kind would probably be accompanied by an increase of at least four to six seats in the Democratic strength in the Senate, where the party now holds 49 seats to the Republicans 47. Any strikingly larger gains by the Democrats would indicate a fundamental shift in public attitudes and bring decisively to an end the stalemated politics of the past eight years.

When asked how he expected to counter the Democratic campaign, the chairman of the Republican National Committee answered with a single word: "peace." A well-managed summit conference in September might refurbish Mr Eisenhower's prestige as a peacemaker and restore the image of the Republican party as the peace party. Unless international events become critical, however, it may be doubted whether this theme will help Republican congressional candidates much. It was crucial in both of President Eisenhower's own contests, but the voters did not reward him for the Korean Truce by re-electing a Republican Congress in 1954 nor did they consider it of great importance that he should have a sympathetic Congress to help him to restore peace in the Middle East in 1956. Peace appears to be more of an issue in presidential than in congressional campaigns. Certainly it is not one which greatly worries the Democrats at present. They are confident that in November voters will be more concerned about the scarcity of jobs or the difficulties of farmers than about the reunification of Germany or the war in Algeria.

Labour Laws Go Astray

It is a great pity that Senator McClellan proved unable to control the longing of the Republican members of his special investigating committee to stir up the embers of the four-year-old Kohler dispute. Their hope was to scorch Mr Reuther, the president of the automobile workers' union and a power both in the labour movement and in Democratic politics. Instead, it is the committee's reputation for impartiality which has been consumed; it split at once along party lines. Mr Reuther, on the other hand, sustained his reputation for incorruptibility—which was never in doubt—and, as the last witness, held the committee spellbound by appealing for an end to personal vilification and by admitting frankly that members of his union had been guilty of reprehensible violence and illegal mass picketing, but only because they had been provoked by a "feudal management." Unlike Mr Kohler, who offered no concessions, Mr Reuther asked for arbitration.



By allowing itself to become involved in the thankless and obstinate Kohler dispute, the McClellan committee has let slip the opportunity to secure legislation to correct the abuses it uncovered last year when it lifted the lid from the teamsters' union. Moreover, exhibitions of spite toward Mr Reuther on the part of Republican members—Senator Goldwater persists in calling him "a greater menace than the Russian sputniks"—have made it impossible for organised labour to support the committee any longer. When its report came out last week, Mr Meany, the president of the merged trade union federation, denounced it as a "smear"; Mr McNamara, a Democratic member of the committee and a former trade union official, had refused to sign it on the grounds that it was framed as a "blanket indictment of the labour movement" and he has now resigned from the committee.

A more valid criticism of the committee's report is that it lets management off lightly, although it was created to look for "improper activities" of employers as well as those of trade unionists. Its five recommendations are mild enough: regulation of pension and welfare funds; regulation and control of union funds; legislation to insure union democracy; the curbing of labour "middlemen" who fleece the workers; the abolition of the "no-man's land" in labour relations between the federal and the state governments. On some of these points—such as whether democracy can be secured inside trade unions by passing a law—there are well-founded doubts. It is also true, as Mr Meany argued last week, that the federation has made great efforts to clean its own house. But if this session of Congress fails—as seems likely—to strengthen the federation's hand, urgent reforms may be long postponed; if the next Congress is dominated by liberal Democrats, it will have more exciting and less embarrassing things to do.

New Twists to Aid and Trade

The recession has added a new twist to the plots of Washington's perennial serial stories—the congressional battles over funds for foreign aid and over renewal of the Reciprocal Trade Agreements Act under which tariff reductions are negotiated. Hearings on both of these Bills have been going on for several weeks and it is obvious that even some of the most internationally minded Congressmen are finding it difficult to overlook the fact that next autumn they will have to explain to the electorate why they voted to give money to foreign countries for public works when some of their own constituents were on public relief, or why they facilitated a lowering of tariffs to bring more foreign goods to America to replace those which their constituents might have manufactured.

An amelioration for the second complaint has been proposed by liberal Congressmen and trade unionists who advocate "special adjustment programmes" to help districts where industry has been disrupted by competition from

New York State **labor**
leads the nation in:

Stability: Year after year, on the average, it loses the fewest man-hours (per hours worked) due to work stoppages.

Adaptability: It staffs the widest variety of shops, plants and factories in the nation.

Productivity: Being well educated and mature, it turns out at high, steady rates finished products worth more than those produced in any other state.

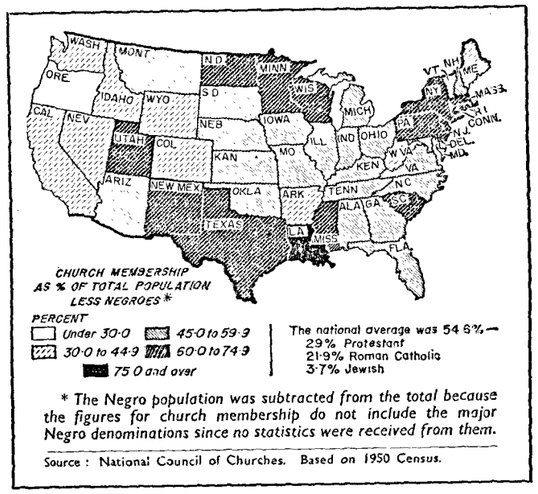
imports. Such programmes are not apparently considered either necessary or desirable by the Administration; but the President has as usual been doing his best to placate some of the interests which feel most injured by foreign rivals. He has refused to make more than an infinitesimal improvement in the onerous quota restrictions on imports of wool and worsted; he has just put teeth into the "voluntary" curtailment of oil imports; and he is expected soon to provide more protection for domestic lead and zinc miners.

One of the Administration's great arguments for tariff reduction—and for foreign aid as well—is the encouragement which a more plentiful supply of dollars abroad gives to exports of American agricultural products and the help which this brings to the troubled American farmer. This year, in recognition of the growing unemployment in domestic industry, a great deal is also being heard of the number of Americans—4,500,000 is one figure—who owe their jobs to foreign trade; another 600,000 are said to be dependent on foreign aid. But there is also a new insistence that more foreign aid funds should be spent in the United States in order to make work there; the Administration strongly opposes this suggestion.

It is almost certain that the Trade Agreements Act will be renewed only for three years at the most, not for the five to which the Administration attaches great importance because of its desire to have negotiating powers in hand when bargaining on tariffs begins, probably not until 1962, with the European common market. The common market is another new twist to this year's trade agreement story, while in foreign aid the novelty is Russia's growing economic penetration of the uncommitted countries. The purpose of the two high-powered bipartisan conferences held recently in Washington was to rally behind these specific arguments of self-interest, and behind the more general case for both foreign aid and foreign trade, the pressure of public opinion to counteract that of the paid lobbyists who influence Congress out of all proportion to the importance—or the difficulties—of the groups they represent.

Churches on New Foundations



FROM A SPECIAL CORRESPONDENT

LAST year the construction of church buildings became a billion dollar business. A more than tenfold growth in annual spending for religious construction has raised the total from $76 million in 1946, when postwar shortages were still acute and controls were still in force, to an annual rate of more than $900 million towards the end of 1957. Another $3 billion, or three times as much, is spent every year on operating expenses by the churches; this is about one per cent of the country's disposable personal income.

The new buildings are going up almost exclusively in the suburbs. In the big cities a certain number of major churches, such as St Patrick's and St Thomas's on New York's Fifth Avenue, are maintained for reasons of prestige, chiefly to serve visitors from out of town. Along the eastern seaboard, from the Old South Meeting House in Boston to Trinity Church in the shadows of Lower Manhattan's skyscrapers to St Michael's in Charleston, the historic churches are carefully preserved, as are the seventeenth century missions on the Pacific coast. Occasionally, a city church—Riverside in New York is an example—retains its character as the centre of a community in which members know one another. But the lot of many urban churches, as their former parishioners move away to the suburbs, is to be deconsecrated and sold for secular uses or pulled down to make way for an office building.

The rate of attrition has been even more conspicuous in the rural areas where there has been a rapid decline of population. In the less productive farm areas two, three or even four churches are having to share a clergyman, with services monthly, bi-monthly, or at staggered hours. The rural churches have not been able to take advantage of the opportunities for consolidation provided by the automobile as the rural schools have; loyalty to a particular building—heartstrings are often drawn by its adjacent cemetery—makes congregations reluctant to change.

But anywhere near a city, today's farm is often tomorrow's new suburb. Many areas that were classified as rural only yesterday are the very places where the boom in church building is now the greatest. In these former farm areas, the scale of building shows that the old expression, God's acre, is obsolete: four to five acres are regarded as about the least that are needed for a modern layout. The task before church architects today—and the amount of work available in this field has produced many specialists—is not to design a sanctuary alone. In complexity, it resembles the task of

* The Negro population was subtracted from the total because the figures for church membership do not include the major Negro denominations since no statistics were received from them.

Source: National Council of Churches. Based on 1950 Census.

the builders of the abbeys of the middle ages much more closely than that of church architects since the Reformation, for the plan includes most of the facilities required for medieval corporate living, from refectory to necessarium. True, instead of the ambulatory, there will be a car park, and the dormitory will provide only for sleeping infants deposited with the nursery service by parents attending church. But there will be administrative offices, kitchens, a library, the choir room and the vestry, and, above all, an expanse of Sunday school rooms beyond the dreams of a teaching order.

The church will be designed to serve some 800 members and their children, which is about the number that can be accommodated conveniently in one edifice or served by the combination of clergyman, director of Christian education, and office secretariat that makes up the normal professional staff in Protestant churches. (In Roman Catholic parishes, both the numbers of communicants and the numbers of

priests are greater.) Even so, two services, at 9.30 and 11.0, are likely to be required on an average Sunday morning ; on special occasions, such as Christmas and Easter, a public address system, indoors and out, is necessary to pipe the celebration to worshippers for whom there is no room.

The cost of such a project can come very easily to $300 or $500 million, not including such increasingly common extras as air-conditioning or a carillon, and even perhaps not including a steeple ; modern congregations divide sharply on the subject of steeples. The collecting of funds of this order usually presents no great difficulty. Specialists in money-raising, who have appeared as personal incomes and the demands of good causes upon them have mounted, are employed with increasing frequency. For a fixed retainer or a percentage of the total subscribed, they come to a community to direct the drive. In the solicitation of gifts, emphasis is put on the tax-exempt status of money given to religious institutions, and use is made of the habit of instalment buying to which about one American family in two is already conditioned. Payments spread over three years make substantial pledges look much smaller to the giver, and the full employment to which all Americans under middle age have been accustomed so far makes this type of commitment seem reasonable to the signer of the pledge, and acceptable both to the finance committee that receives it, and to the banker who in return for a mortgage advances funds to pay the contractor.

Religious bodies are increasingly engaged in raising money for new plant before they actually need it. The present recession has postponed some schemes but most American enterprises of all kinds make their forward plans to fit a growing economy, and churches in the suburbs, where the birthrate is increasing so conspicuously, have special reasons for doing so. At the moment, every member of the Presbyterian Church is being asked to give one day's wages for building churches, over and above his current pledge.

Americans today are apparently much more willing to contribute to the building and maintenance of churches than they are to support other community activities. The Community Chest and United Givers Funds, through which most areas now raise their money for charities, have been experiencing increasing difficulty in reaching their goals in recent years. One possible explanation may lie in the vigorous efforts of the suburban churches to provide a sense of community for their members. In a new suburb, every one is a stranger, and the mobility characteristic of American life causes constant turnover even among the new arrivals. To relieve this sense of loneliness, many suburban churches appoint members to call on any newly arrived family of their denomination, and introduce it to its neighbours. At the church itself, organisations for people of all ages, children, young people, young adults and senior members exert themselves to make participants in the service feel at home. (This can be overdone—one newcomer remarked of a reception committee : " I had not expected to need a hostess in the house of my Father.")

To some extent, what the surburban church is supplying is more a sense of human community than a sense of religious community. Theology hardly figures in church life ; few members could give much account of any doctrinal difference between their church and the others. With the raising of incomes during the last twenty years, even the social differences which used to draw lines of distinction between Protestant denominations have been blurred—it used to be said that a Methodist is a Baptist who can read, a Presbyterian, a Methodist who has made some money, and an Episcopalian, a Presbyterian who has been accepted socially.

What is communicated is a kind of standardised goodness, but little of the tragic sense of life, little of awe or majesty. Yet the mounting figures of membership, the generous financial support, the full sanctuaries and the bursting Sunday schools show that the church is an institution which is winning increasing approval.

Buy American Oil

Oil producers in Texas, restricted to only eight days' output in April, appear unimpressed by the Administration's latest move to tighten the " voluntary " restrictions on petroleum imports. The lowering of the ceiling on imports of crude oil into the East Coast by 58,000 barrels a day is designed to bring them down to 713,000 barrels a day by September 1st ; this is equivalent to 12 per cent of domestic production east of the Rockies during the past three months. But this latest reduction would permit an increase of less than 1 per cent in the present restricted level of domestic output, which is still running 1,500,000 barrels a day below the peak achieved during the Suez shortage. Unless there is an unexpectedly sharp recovery in oil demand in the United States, therefore, the pressure in Congress for " mandatory " controls will be resumed with renewed vigour ; its real object will be to ensure more severe cuts in imports, not merely compliance with the present " voluntary " quotas which the domestic producers consider too liberal. Figures showing that, for the first time since 1943, the total proved reserves of oil in the United States declined fractionally in 1957 strengthen the argument of domestic producers that even the present level of imports discourages exploration for new sources of petroleum within the United States.

Despite the publicity given to the three importers who have so far failed to comply with their " voluntary " quotas, imports of crude oil, into both east and west coasts, are running below the limits set. Doubts about compliance are less likely to arise in future because the Administration is to deny contracts to supply government agencies to any importer who fails to observe his quota—though, as the critics have been quick to point out, this would still not affect any renegade importer who chose to do without government contracts. No quotas have been placed on imports of refined products. But these will be affected by the President's revocation of the exemption from the Buy American Act which has previously been allowed for oil imports.

This Act prohibits government agencies from buying foreign goods, unless similar goods are not available in the United States at " reasonable prices." Interpretations have varied, but normally domestic goods are considered " reasonably " priced if they are not more than 6 to 10 per cent dearer than the imported product. If these were the price differentials applied to oil, the Act might provide little assistance to domestic producers, as most foreign suppliers could undercut American prices by more than this. But if, as some reports suggest, government agencies are told to allow a wider price differential, or even not to take prices into account at all, they might have to stop buying imported oil entirely.

Ambassador of Sales Extraordinary...

TIME

Sir William Rootes, Chairman of both the Rootes Group and the Dollar Export Council, is a salesman extraordinary. To support Rootes own world-wide selling organisation, Sir William uses the persuasive power of international advertising to help pre-sell automotive markets. It's hardly surprising that the Rootes Group are among Britain's leading exporters.

Steel at the Bottom?

THE production of steel fell again at the end of March, bringing to a funereal close one of the most depressing three-month periods in the industry's history. Last week's output was estimated at 1,363,000 tons, equal to 50.5 per cent of capacity, and was the lowest for nearly six years, apart from the strike in July, 1956. Moreover, much of the restricted production of recent weeks has gone unsold, piling up at warehouses and mills; furnaces are being banked all over the country, and nearly half the industry's workers are either unemployed or on short hours. The steel companies believe they are at the bottom of the valley; but many feel that the peaks on the other side are a long way off. Steel production and shipments are sensitive indicators of the health of the economy; they often lead the way downward in a slump, since manufacturers planning cutbacks in production cancel their purchases of steel and use up existing stocks. Some steelmakers fell that this liquidation of stocks has nearly run its course, and that new orders will begin to appear soon. But the majority are more pessimistic; they see little hope of any real recovery before the third quarter of the year.

In support of this they point gloomily to automobile production, which is still far below that of last year—although it has increased slightly in recent weeks. Automobiles use about one-fifth of the steel produced, and the consequent relationship between the outputs of the two industries may be seen from the accompanying chart. At present motor manufacturers have large supplies of steel in relation to their production and none of the companies seems likely to step up buying in the near future. Indeed, help from this quarter is not generally expected until late summer, when the 1959 models go into production; the only optimistic note is that representatives of the United Automobile Workers' union, which opened negotiations for a new contract with the General Motors Corporation last week, have promised to do their best to avoid a strike which would further retard production in this already depressed industry.

The prospects of other big customers of the steel industry are also disappointing; the expected seasonal improvement in construction has not yet materialised, and makers of farm machinery, household appliances, heavy industrial equipment, and railway rolling stock are not buying in their usual amounts. The sole glimmer of hope in recent weeks has come from the machine tool industry, which reported increased orders for both February and March. But the rise which this forecasts may not benefit steel for some time since orders for new machine tools customarily come well in advance of any intended increase in manufacturing activity.

Mrs Mop Incorporated

FROM A CORRESPONDENT IN NEW YORK

AT five o'clock each evening New York's working population wearily boards the undergrounds, buses and suburban trains, leaving behind in the business districts of the city the inevitable by-product of their labours—a vast accumulation of dirt and rubbish. At the end of any day the office buildings, streets and other public places in the city are inundated with discarded newspapers and bits and pieces of scrap, cigarette ends, chewing gum and a thousand-and-one other forms of dirt. By the next morning the city is sparkling and fairly clean, waiting for the process to begin again. For each evening an army of men and women, using as their weapons brooms, mops, vacuum cleaners and scrubbing brushes, begin a relentless and never-ending, but virtually unseen, war on New York's dirt.

These daily spring cleaners are the employees of the dozen or so giant maintenance corporations in the city which are ready and able to perform any and every service for their clients, including electrical work and carpentry, general repairing, heating and air-conditioning service and maintenance, plumbing, painting and sandblasting. In fact, they take care of every aspect of a company's business except the actual business itself and are satisfied if they can just "stay even" in what they admit is never a winning battle against dirt.

By far the largest and most diversified of these concerns is the Allied Maintenance Corporation. Based on the Empire State Building—one of its clients—it sends out a daily force of more than 5,000 men and women to take care of the Statue of Liberty, the New York Daily Mirror Building, Saks Fifth Avenue, Abercrombie & Fitch and many other department stores, the Pennsylvania Railroad Station, the three mid-town airline terminals as well as Idlewild and LaGuardia Airports, the Yankee Stadium and hundreds of other structures. In return, its clients as a whole pay Allied Maintenance more than $25 million for its services every year. While most other maintenance firms have limited themselves mainly to providing cleaning services in specific metropolitan areas, Allied has been expanding and diversifying its activities through the years. The company was founded in 1888 to deal with the lamps on the Pennsylvania Railroad's trains, but soon moved into cleaning stores, buildings and even the more luxurious mansions along Fifth Avenue (this has since been abandoned and Allied no longer cleans private houses) and, much more recently, airports, fifteen of them, from Gander, Newfoundland, to Fort Worth, Texas.

IN the process of minding other people's business, Allied now tackles any and all types of jobs. At airports it not only cleans the terminals and hangars, but also scours the aircraft themselves, repairs engines, takes care of luggage, mans and even develops various fuelling systems, washes dishes and runs sightseeing tours. For many of its clients it supplies doormen and guards, works lifts and provides information. For its customers at sports stadiums, Allied collects tickets, runs the scoreboards, paints and cleans, mows the grass, and has developed new and tough varieties of grass which will withstand the continual pounding of athletes day after day.

The biggest portion of its business is still cleaning and its experiences in this field pretty much parallel, on a larger scale, those of the other maintenance concerns across the country. Each evening its staff in New York alone mops, sweeps, scours, scrubs, dusts and polishes more than 52 million square feet of building space. Every year it wears out more than 16,000 brooms and brushes; uses up more than 19,000 pounds of mopheads, 20,000 pounds of cleaning cloths, and 160,000 pounds of powdered detergents. In cleaning up after the millions who daily dirty a city the size of New York, the maintenance corporations constantly run into situations with which the available types of cleaning equipment cannot deal. In the past few years alone, Allied has been forced, in order to accomplish its jobs as cheaply and quickly and efficiently as possible, to develop new weapons and variations on old ones. It has produced an enormous vacuum cleaner to take care of miles of carpeting in department stores—it calls this instrument a "doodlebug"; in order to clean the steps of escalators quickly it worked out a new type of brush. Through time and motion studies, the company has discovered the ideal length of a broom handle, what is the most satisfactory material for a mophead and the best way of cleaning venetian blinds: they should be taken down and dumped into a bath of cleaning solvents.

Too Good to Govern

FROM A SPECIAL CORRESPONDENT

AMERICAN social-psychologists, having documented the personality of the business executive in great detail, are now turning their attention to a different type of executive, the federal civil servant. Their preliminary observations—the first fruits of a projected full-scale study—were presented recently by Professor Norman Martin, a sociologist at the University of Chicago, to the university's annual symposium on human development. A projective personality test was given to a hundred civil servants in, roughly, the "middle management" range; men earning between $7,000 and $12,000 a year and mostly between 35 and 50 years old. These federal government officials, Professor Martin said, were not the heartless, dictatorial bureaucrats of the popular image. They are "nice guys—perhaps too nice to fit the executive mould."

Their ability to organise is high, but their capacity for decision is somewhat handicapped by their strong desire for security and their intellectual approach; they tend to see all sides of a question and to be analytical. While the business executive is said to know what he is and what he wants, and to have well-developed techniques for getting it, the civil servant, especially in the middle ranks, lacks this sense of identity and purpose. "Instead of conviction, there is doubt." He is only moderately ambitious and does not have the businessman's urge to be mobile; he may want to change, but he does not do it. While a businessman fears that he may not succeed, the civil servant seems to fear that he has already failed.

Again, while the business executive's attitude to authority is positive and constructive, the civil servant's is negative. He tends to manipulate a situation to thwart the dictates of authority but he does not arrogate authority to himself. While the businessman models himself mainly on his superiors, the civil servant is guided by his colleagues of similar rank and his subordinates; these he sees in a warm glow, and this may circumscribe his loyalty to the larger organisation, the agency and the department. "It may lead to choices of action which benefit his immediate work group, but which are not necessarily in the best interest of the organisation and the public." Because he is highly frustrated and unsure of his aims, he tends to strike out; "activity and aggression, however, do not pay off. In the end, the only answer is conformity."

It may well be, said Professor Martin, that a number of different types would emerge from a full-scale study; the pilot study itself indicated that the higher the rank of the civil servant, the closer he resembles the business executive. Further study of the man, and also of his job, might not only qualify prevailing notions of the kind of people the federal service requires but might also suggest ways in which the government, the largest American business, could get the best out of the executives it has.

States Without Interest

FROM A CORRESPONDENT IN COLORADO

AMERICAN states are usually as hard pressed for funds as anyone else, but many of them are forced to keep an untapped source of money in their own back gardens. For many of them have what amounts in the aggregate to billions of dollars of inactive funds lying idle in local banks earning little or no interest, even though the states in question may be borrowing money for their other needs at current rates—to the benefit of no one but the banks. In 1956 some 18 states, bound by custom or law or, in some cases, by constitutional prohibition, were still receiving no interest at all on state funds deposited in banks for no matter how long a term. Six of them were also precluded from investing these funds even in federal government securities. The situation of course varies widely from state to state and some administer their long-term funds as shrewdly as any private investor.

In Kansas, as in some other states, the custom of charging no interest on inactive state accounts was inaugurated in 1937 to "help the banks" during the depression. In 1956 attempts to remedy this were only partly successful in overcoming the powerful influence of the bankers on the State Legislature, but a new law at least provided that, while one-fifth of any state-owned deposit must be held in a checking account paying no interest, the other four-fifths might draw up to 1 per cent. The result is that Kansas taxpayers earned some $560,000 last year on the $70 million deposited in the state's name—but they could have earned another $1,500,000 if the banks had paid the state the commercial interest rate on savings. In 1956 Missouri voters managed to change the constitutional provision which prevented the state from earning any interest on its deposits. But the state law which followed limited the interest payable to 1 per cent by providing that no state funds in Missouri might be deposited for more than thirty days—and federally insured banks may only pay 1 per cent on thirty-day deposits.

In Colorado there has recently been a more successful revolt. The state was found to have $27 million on loan to 142 banks at 1 per cent a year on contracts which compelled the money to stay there for a minimum of a year. State officials told the banks that, unless they would pay at least 3 per cent, the money would be put into short-term securities of the federal government, which at that time were paying more than 3 per cent. The difference in interest was enough to earn the state another $500,000 a year.

THE WORLD OVERSEAS

Flood-Tide for Canada's Tories

FROM OUR OTTAWA CORRESPONDENT

IT had been foreseen that the Conservative gains in Monday's elections would deserve the name of a sweep, but very few had expected such an overwhelming triumph. Four provinces returned nothing but Conservative members. Quebec elected twice as many Conservatives as Liberals—something which has not happened since the days of Sir John Macdonald between 1867 and 1882. The Social Credit party lost all its seats in the federal parliament, where since 1935 it has held a minimum of ten, and recently nearer twenty. The CCF (socialist) party, which had cherished some hope of replacing the Liberals as the official opposition, was cut down from 25 to eight seats, and all its principal stalwarts, including Mr Coldwell, have been defeated. Mr Coldwell will be greatly missed, for he has deservedly enjoyed great respect among all parties. The entire opposition will occupy little more than one-third of the seating on the opposition side of the House of Commons; subject to the final official figures, it looks like having only 55 members—47 Liberals and eight CCF.

No Canadian parliament in history has ever been so one-sided. The only one that came near this top-heavy government majority was that elected in 1949 when Mr St Laurent first led the Liberals to the polls. Organisation will now be the Conservatives' compelling need, and it will require talents different from the inspiring oratory which won votes and even from the "dedication" which Mr Diefenbaker again pledged in his television talk on election night. More than 200 Conservative MPs, representing either all or most of the constituencies in every province except Newfoundland, will have very diverse interests to foster. One danger is that the cabinet will feel so secure that it will give only scanty consideration to backbenchers; this almost inevitably ends by producing bored and listless men who may constitute a concealed time-bomb under the party's future. The opposite danger is that such a large party caucus might come to dominate the cabinet's policy planning, with the leaders always striving to reconcile the irreconcilable views of different sections.

This must end in the sort of government by pressure which Washington well knows under the name of log-rolling. But the main object of this election was to free the government from bondage to pressure groups. Mr Diefenbaker and his House leader, Mr Howard Green, may try to solve this problem by organising the backbenchers into a series of powerful committees, each studying some particular realm of policy. If they can achieve this successfully, they may give the backbenchers a sense of purpose and usefulness, and at the same time use their large majority to reconcile regional diversities of interest rather than exploit them.

Some of the reasons for the Tory sweep obviously go back to the state of the public mind before June 1957. Far more people voted against the Liberals this time, but not because they liked Mr Lester Pearson less than Mr St Laurent and Mr C. D. Howe. Many of them believed last year that the Liberals had been in too long, but they either saw no chance of their being beaten or else they simply could not see the Conservatives as an alternative government. Now they have concluded that the Tories are no less efficient than the Liberals, and in some respects perhaps more so. No reason for going back to the Liberal regime was apparent, and every instinct of commonsense and fair play led the voters to say, "Give the Tories a proper chance."

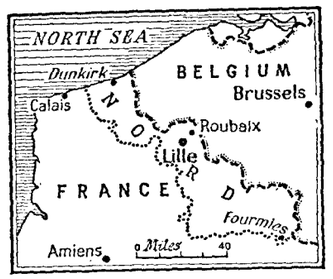
How much weight did the voters give to the new attitudes expressed by the Conservatives towards the Commonwealth and towards the United States? If we knew that, we should know whether Canada is in fact undergoing a definite change of orientation. It is almost impossible to judge the influence of this factor. But at least it is self-evident that very few Canadians were scared by Mr Pearson's warning that "rough talk" might provoke unfavourable American reactions. Moreover, the prevailing mood does not favour the Liberals' habitual attempt to be "buddies" with Washington; and it does favour Mr Diefenbaker's insistence on "developing Canadian resources for Canadians."

By all odds the most surprising feature of the election returns is the Conservative capture of fifty seats in Quebec, where since 1935 they have never had more than a handful: the eight seats won in 1957 represented the peak. Here again, the reasons are too complex to be distinguishable in this short perspective. Among the influences at work must be included the same weariness with the Liberals' long rule that swung the rest of Canada last year, but may then have been suppressed in Quebec out of loyalty to Mr St Laurent; an undoubted desire to be on the winning side, which Quebec has repeatedly expressed, as though instinctively realising the danger of having a solid French-Canadian block out of step with the rest of Canada; and the strong support for many Conservative candidates given by provincial organisers of Mr Duplessis's National Union party. The importance of this help varied from constituency to constituency. It was always based on local (or at most district) organisation. There was no alliance between Mr Duplessis and Mr Diefenbaker, and Mr Duplessis was never publicly committed to the support of the Conservatives. Nevertheless, he has his provincial machine under very direct and personal control. He certainly cannot have disapproved of what it did, though his own provincial interests would presumably have been better served by having the central government in Ottawa a good deal less secure than this one will be.

In the long term, the most intriguing speculation is whether this vote means anything like the final demise of the "conscription bogey" which has given the federal Liberal party a virtual monopoly of Quebec votes since 1917, has almost completely suppressed the old "bleu" tradition of French-Canadian Conservatism and seriously distorted the logic of federal politics. The inclusion of a large block of Quebec members in the bosom of the Liberal party was always basically contradictory, for they were always far to the right of members from other parts of Canada who took the party's title seriously and wanted to make it liberal with a small "l" as well as a large one. The reduction of the Liberals' Quebec contingent to 25 will help Mr Pearson to restore the small "l" liberal principles, as is his declared purpose—though Quebec still supplies more than half the Liberal MPs.

Another subject for speculation is raised by the new kind of approach to Quebec made by Mr Diefenbaker. He went much further than any previous political leader has done towards putting the French-Canadians on the same footing as any other ethnic minority. He repeatedly said he wants no "hyphenated Canadians." In his campaign speeches in the French language and in the French part of the post-victory telecast, he took care to praise the contribution made to Canada by other racial groups of neither British nor French stock. Obviously there is no implication that, say, Ukrainian should become the third official language, or that French should lose its position as an official language in the province of Quebec and in the federal parliament and courts. But the real nationalists of Quebec have always resented the suggestion that French-speaking Canadians were merely the largest of the minority groups. They see other groups being absorbed in the English-speaking majority: their object is to preserve their own identity. Yet Quebec has now given Mr Diefenbaker two-thirds of its federal representatives, not apparently resenting his talk about other ethnic groups nor the tone of his approach, which was far more aloof than the province has been accustomed to. Is it a temporary swing to ensure getting on the bandwagon, or does it indicate some fundamental underlying changes in Quebec thought?

FRANCE AT THE CROSSROADS



I—The Nord and the Common Market

FROM OUR SPECIAL CORRESPONDENT

GIVEN the impotence of government in Paris and Algiers, the mood of French public opinion at home will be one of the cardinal political points in the coming months. It is not entirely made up of Algerian complexes. Indeed, the paradox in France today is the contrast between the senility of politics and the rejuvenation of economic life and outlook. The effects of recent expansion are profound, and must finally have political consequences. To try to assess some of these effects and consequences, your correspondent has been in Lille, on the first leg of a modest Tour de France.

How real is the economic renaissance as seen from this French Manchester? Lille's patent prosperity, witnessed to in daytime by crammed streets, pavements and shops, at night by its massed neon lights, proclaims it as one of the marches of the middle kingdom whose spiritual capitals are Brussels and Düsseldorf. The natural test of French renewal is whether such a region is ready to meet the common market with confidence. A minatory wail went up when M. Gaillard visited the area some weeks ago: there would be disaster, the Nord would lose its vitality, or be drawn by the magnet of Antwerp into the Belgian fold unless the Lille-Dunkirk canal were immediately widened. . . . But in fact, the industrialists do not seem really alarmed.

The most go-ahead among them privately welcome the goad of the common market. They seem quite prepared to draw the bonds closer with Belgium—after all, the Nord is geologically the French end of the south Belgian coalfield. The textile employers, when asked what agreements they expect in the common market, admit only to "preliminary contacts" with Belgian rivals; but people who should know say they are looking for chances to buy themselves into Belgian firms. At semi-official levels, the first contacts have been taken with the Governor of the Belgian Hainault. As for the Germans, the area has for long had close contact with them, and considering how unpleasant some of them were, there is an astonishing lack of bitterness. Here, too, agreements seem to be in the offing.

Agreements or not, in the early sixties, the common market will force the area to face the problems which would in any case be forced on it through the arrival at the labour exchange of France's abounding postwar babies. Regional studies show that while the Nord's birthrate is twice the high French average, the rate of growth of its present industries—mainly textiles, coal and traditional engineering—will only be half the national norm. This underlines the Nord's problems: rich though it is, its industries are the kings of yesterday's economy rather than of tomorrow's. It produces half France's wool and coal, a third of its cotton; and though it also produces 40 per cent of its tractors, 25 per cent of its steel and much of its chemicals, its engineering is more developed in old lines, like railway rolling stock, than in new ones like machine tools, electronics or aircraft. To face the common market, it must modernise its existing industries. But this, by somewhat reducing employment, will increase the need to implant new ones to employ the young.

The problem is not insoluble: it is a matter of creating 20,000 new jobs a year after 1961, in an area which already employs over a million people. But it will require vigour and foresight, all the more since present labour shortages conceal the coming problem, and discourage new industries from coming in from the overloaded Paris area. A start has been made. The depressed cotton town of Fourmies, for instance, has been almost entirely reconverted by the arrival of an electronics firm, of Bendix washing machines, and other light engineering plant—mostly from the Paris

area. In Roubaix, some empty textile mills are being turned over to plastics or chemicals. But progress is still slow.

As for the common market, it will hit industries differently. Coal and steel, already in the coal and steel community, have nothing to fear. In fact, impending shortages of coal (in a coal-producing area) are driving the expanding steel industry to set up a major plant shortly at Dunkirk. French steel, in search of cheaper raw material imports, is for the first time migrating to the coast in the wake of its American, British and German rivals. But textiles and even some big engineering firms which have not been so well managed as they might have been—and together they employ 40 per cent of the region's labour—will have to make bigger reforms.

The textile industries have, admittedly, made a considerable effort to modernise already—as in the recession of 1952-54, for instance, when 45 out of 256 cotton spinning mills closed down. One informed guess is that a third of the firms, especially in wool, are now able to meet any competition. Most firms, indeed, seem to think that having weathered so many world crises, they will safely ride out the common market as well. For many of them, this may be over-optimistic; especially for the smaller ones. These suffer more than bigger companies from the old-fashioned distributive system, dominated by the Paris traders, who break up rather than group orders and hamper mass production and specialisation. The traders are strongly entrenched, as four wool firms which recently tried to by-pass them discovered. There will also have to be some mergers, if only because the capital market is such that only the biggest firms can launch loans. The obstacle here is the number of family-owned firms; families are always reluctant to yield up personal control. But wool at least does not seem to fear the common market (appreciably less than it fears Japanese or Uruguayan imports), and even cotton is less apprehensive for the future than Lancashire.

★

This relative confidence assumes that the common market will "harmonise conditions of competition"—though the more intelligent industrialists seem less concerned today with old war-cries like "equal social charges" than with fiscal and financial policies that favour investment. One even said that "the problems of the common market are not those of France and Germany and Italy, but of the common market and the outside world." Yet he, like all his peers, was adamant against the free trade area. This was not because the French were only looking for safeguards, he said, "though we are not angels and are certainly influenced by protectionism. But it is also a question of the conditions in which markets are opened. Britain asks for our markets, but keeps those of the Commonwealth shut, excludes agriculture, and maintains separate tariffs. People here are even saying that only the British could have thought up such a one-sided arrangement." One informant thought some of the employers' objections might be filed down in the course of negotiations, but such phrases from a particularly scrupulous man show that opposition to the free trade area is far from merely tactical.

One's final impression of the Nord is that it carries too big a past to be quite free in its future movements; but that it has a broad enough back and sufficient mental resources not to be unduly weighed down by this. The most striking sign of vitality is the new awareness of long-term problems. One employers' representative pointed out that four years ago he would not have had a single one of the figures or studies of regional problems that he was quoting now. Some woollen factories began in 1950 a series of comparisons of productivity which has spread to Belgium and even Britain and today involves 80 firms: to the secretive French industrialists of yesteryear (too many of whom still survive) this would have been unthinkable. The new spirit must not be exaggerated; as one observer said, "most people agree in principle, but their principles don't always command their practice." A recession due to political upheavals, or a sudden end to the Fourth Republic's financial rake's progress, might well break the impetus of change. But the last four years have undoubtedly brought to the Nord an awareness of the advantages of an expanding economy, and some younger men who are unlikely to forget them. This is something France has not really had for fifty years, and which rising population and the common market should confirm.

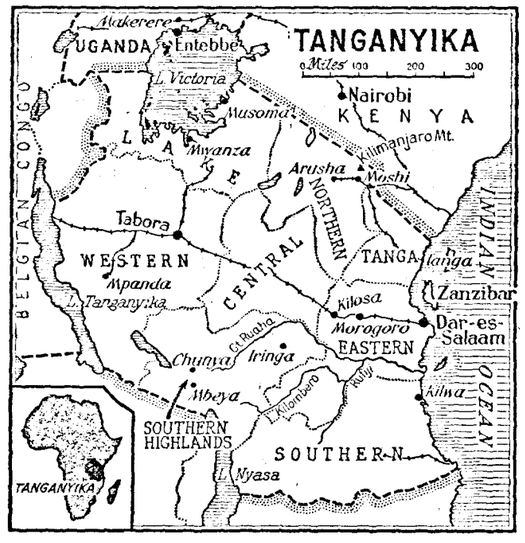
Tanganyika Moves Forward—I

FROM OUR SPECIAL CORRESPONDENT



THERE is a European in Nairobi who is a polyglot mimic of genius. He can fill a cinema with the three races and make them roll about with laughter. One of his best turns is the recently immigrant housewife trying to order the food in Swaheli. His social value is more and more appreciated by the palefaces on whom the awareness is dawning that they bore the Africans to death. Half the political trouble lies there. The old European pioneers were different. "Honoured strangers" such as Livingstone and Schweitzer; all the great missionaries and explorer-scientists; the semi-pirates like Rhodes or Harry Johnston: all of them were numinous figures who did what they chose and held the Africans spellbound. The present discontent in East Africa and elsewhere in the continent is quite unmysterious. Without resorting to Jung, still less to Lenin, we can say that Africans feel depressed: the old life has gone and nothing genuinely human has replaced it.

Tanganyika, however, is so different from the run-of-the-mill colonies that one can already speak of it as a growing African country. The Germans opened it up in truly surgical fashion in the 'nineties, and the British then let it stagnate in tropical silence between the wars. Almost nothing happened until Mr John Strachey and Mr Leslie Plummer (as he then was) planted groundnuts. When their armies were evacuated, the African population could look at the primeval scene with equanimity. Sir Edward Twining was in his castle; the chiefs were in their houses; the district officers were in their offices; and nobody had interfered very much. Dar-es-Salaam had been put on the map and a few new roads (but no new railways) built. Above all, there were only some 20,000 Europeans in the whole vast country.

In the last eight years Tanganyika's economy has made great advances, which will be analysed in a second article. Two features seem politically important: the great increase in the earnings of rural Africans and the tribal and co-

operative character of African agricultural enterprise. Since 1948 the revenue of native treasuries has increased nearly six-fold. The brightest stars are the Kilimanjaro Native Co-operative Union (Chagga Tribe), which last year sold its coffee crop for £3 million, and the Sukuma, near Mwanza, who are making casual fortunes out of cotton. The Mwanza cotton-growers have lately formed a co-operative society to bargain with the Indians who own all the ginneries. Under European guidance, the arrangements are working well, and if now and again a secretary decamps with the funds, this is considered a price well worth the paying. Where, as on Kilimanjaro, prosperous Africans are loyal to the tribal council and to a highly educated and hard-working chief, there is African local self-government with a minimum of British rule from the centre.

Only a few rural areas enjoy these conditions; for instance, the Morogoro-Kilosa, Iringa and Chunya-Mbeya regions have such agricultural wealth, although on a smaller scale. Vast tracts of the country, especially in western and

central province, have nothing but native subsistence agriculture, and barely that. There, naturally, the chiefs are stagnant and the district officer the real leader of the community. Only irrigation could change the complexion of these regions, and even then it will not be easy to accustom the Africans in them to change their type of culture.

A third type of agricultural organisation is the sisal plantation, which is at present entirely European-owned and managed. The industry, which is concentrated on alienated land in Tanga province, is, with the railways and docks, the most explosive element in Tanganyika. This, however, is not saying very much. The labour force is casual labour from the poorer parts of Tanganyika and other African territories. It is discontented with its wages and with the refusal of some of the growers to recognise unionisation. But the Tanganyikan Federation of Labour, which was founded in 1955, has formed a plantation workers' union, and it is a matter of time, so it considers, before its officials will be permitted to organise in the camps themselves. Sisal is vital to Tanganyika, and its culture needs a lot of capital and skill. The political question is to what extent Africans will soon be able to take their place in the direction and ownership of the industry.

Unlike the Belgians, the Boers and the Portuguese, the British are introducing democracy into all their African territories. In Tanganyika the policy has run into difficulties. Any nascent parties have to deal with Africans with the diverse backgrounds already described, with a thousand or two scattered farmers of different European races (referred to by the Governor as "the peasants"), with the Indian shop-keepers in the few smallish towns and with the merchants of Dar-es-Salaam, including a few Ismaili grandees.

These people are separated by huge distances, with communications so sparse that it is hard to speak of Tanganyika as a political unit at all. Despite these obstacles, Sir Edward Twining, who has governed Tanganyika since 1949, has persisted in his plan of establishing multi-racial democracy. This should exist at several levels of government and in industry itself. The Governor's position has been adopted in spirit by the vast majority with the result that racial tension is as absent from his territory as it is from Ethiopia. But that does not mean that he or anyone else has succeeded in creating a tri-racial party or, indeed, any vigorous political group.

Such, indeed, was the purpose of the United Tanganyika party, invented in the Governor's study a few years back. Today the party's president, Mr Ivor Bayldon, and chairman, Sheikh Hussein, admit a relative failure. There are only about 1,000 subscribing members; Europeans are disinclined to put up candidates; the Indians are sitting on the fence; and the Africans, if they go to anything, are apt to go to TANU, the Tanganyika African National Union, led by Mr Julius Nyerere.

If Mr Nyerere (educated by the American Fathers of the Holy Ghost and at Edinburgh University) were a less charming personality; if TANU were racialist and aggressive; if it had a million instead of 150,000 to 200,000 members; then the UTP would have a rallying point, as had General de Gaulle's *Rassemblement*. As things are, it has nothing much to bite on. The UTP leaders claim that their cause, which is the government's, is frustrated by the district officers, who, when asked by Africans whether they should join, reply that "they have nothing to do with politics." They also complain that the government itself preserves its civil service manners in the Legislative Council, thereby devitalising the political atmosphere.

The Tanganyika African National Union has asked that there should be an unofficial majority on the Council, with the Governor retaining reserved powers. Elections should be under universal suffrage. Government policy, on the other hand, is for the election of ten constituency-members on a qualitative franchise under a system of cross-voting (in each constituency each voter votes for three persons of different race from among a number of candidates). These elections will be completed in the autumn of 1959, when there will be a constitutional committee to decide the future composition of the Legislative Council—that is, whether the elective system might be further extended; whether, perhaps, an unofficial majority might be introduced. It is generally held that responsible government (with a genuine ministerial system) will be an intermediate target between the present civil service government and full democratic independence. It is easy to make fun of Tanganyikan semi-politics which are, indeed, mock-politics in preparation for the future. But the observer cannot but be impressed by the embryonic administration which includes a small élite

of African assistant ministers, two African district officers and thirty African assistant district officers. There are several African trade unionists of quality. Finally, the traditional rulers of the country, the chiefs, who are vastly more prominent than in Kenya, fully intend to continue their functions. In the last year the representative chiefs have held two conventions in the manner of an upper house. Chief Marealle of the Chagga is, with Mr Julius Nyerere, the most forceful Tanganyikan politician. Both ably addressed the Trusteeship Council in New York last year.

Unless some unforeseen malady attacks Tanganyika, it should become a model state in a most unhappy continent. But in order that this should happen, a certain type of economic development is most desirable, even if it is not absolutely indispensable.

(To be concluded)

Denmark on the Brink

FROM OUR SCANDINAVIAN CORRESPONDENT

In its approach to the three European market plans, Denmark resembles an apprehensive bather, stripped but still shivering on the brink. At the deep end, marked "Free Trade Area," stands Mr Maudling making encouraging noises and proffering a lifebelt labelled "agricultural concessions." Beneath the sign "Nordic Customs Union," at the shallow end, the rest of the Scandinavian family clusters expectantly. A roped-off area between bears the inscription: "Common Market—Members Only." Here the Six are splashing about happily, assuring each other, "It's lovely once you're in"; but despite vicious shoves from the farmers, Denmark hesitates to join them.

The refusal of Denmark's Socialist-led coalition to be stampeded into a decision as momentous as that on Nato finds general endorsement, except by the farmers. But the recent *Folketing* debate, that was intended to stimulate popular interest, failed lamentably. It was useful, however, in showing that Danish opinion, hitherto nebulous or non-existent, has crystallised in broad support for the free trade area. It was also happily timed. Since last May's elections, when market plans were scarcely an issue, the press has given the topic immense coverage. Denmark's Agricultural Council (representing larger farming interests) has emphatically advocated adherence to the Six, despite the increasing misgivings of small holders; but the influential four-country Nordic Industrialists' Association, and Danish organised labour, have pronounced solidly for the free trade area, although the textile industry has cold feet. Only three deputies advocated immediate accession to the common market; several Liberals (representing agricultural constituencies) and Conservatives, formerly vocal partisans of the Six, recanted.

Hr. Krag, the minister of overseas trade, reiterated the advantages of "the big umbrella" beneath which Denmark's chief trading partners, Britain and the Six, as well as a Nordic customs union, could shelter. The Danes, he said, supported a multilateral, low-tariff system, particularly as the value of exports to non-OEEC countries had increased since before the war from 10 to 26 per cent of the total. Denmark could not, however, open the floodgates of industrial competition without compensatory agricultural concessions. Hr. Krag called Britain's readiness to modify its concept of an industrial free trade area "a considerable advance," but criticised the imprecision of its agricultural proposals. While admitting Denmark's dislike of imperial preference, Hr. Krag said the Danes would endorse a convention that recognised Britain's special Commonwealth commitments.

Hr. Dahlgaard, the minister of economic affairs, pointed out that the plans for a Nordic customs union would cover 80 per cent of Scandinavian trade, excluding agriculture. Simultaneous membership of this "liberal low-tariff club," and a high-tariff common market was impracticable, but a Nordic union within the free trade area looked advantageous. Alone it could not solve Denmark's problems, for Danish agricultural exports to Scandinavia are negligible. But Hr. Dahlgaard said that the block's position as the largest European customer of both Britain and the Six would strengthen Scandinavia's voice; consequently, the four were urgently studying full internal trade liberalisation and Scandinavia's role within a future free trade area.

The 64,000 dollar question being the future of agriculture, the gravamen of Danish opposition charges is the government's alleged tepidness towards the common market. Their fears of Danish isolation, if the free trade area negotiations collapse, seem ill-founded, since the common market expressly provides for new members, and Hr. Krag has tirelessly maintained personal contact. Arguments for the Six are superficially persuasive. For Denmark, Britain is a dwindling market, whereas the Six, with 165 million inhabitants, is an expanding one. In 1938, Britain absorbed 70 per cent. of Danish agricultural exports, and the Six a quarter, against 46 and 35 per cent today. Yet, although the British market for Danish eggs has disappeared, Britain is still the Danes' biggest customer for butter, and virtually the only one for bacon. The abrupt stop on Danish butter imports into Germany provided a salutary shock.

★

The benefits for Danish farmers in a "managed" market with minimum prices might prove illusory. A system that excludes the Danes' best customer, Britain (thus inviting reprisals), and includes its worst agricultural and industrial competitors, Holland and Germany, is scarcely ideal. Danish labour distrusts supranational institutions, stresses the paradox of joining a primarily political grouping on economic grounds, and foresees an influx of low-paid foreign workers. Moreover, Russia's antipathy to the Six carries weight with neutralists. Fears of becoming a "German province," and the difficulty of putting Scandinavian integration into reverse, make Danish accession to the Six, except from despair, improbable.

Denmark alone among the members of OEEC pays no farm subsidies, condemns protection, and desires genuinely free trade in foodstuffs. Although industry's share of export earnings grows by 2-3 per cent annually—from 20 per cent before the war to 45 today—agriculture remains the economy's mainstay. Danish anxieties, allayed by Britain's conciliatoriness, have been reawakened by France's new proposals; but Italy's compromise plan indicates that France's common market partners may extract the sharpest teeth of its proposals. Nevertheless, the Danes foresee a show-down, although they still hope for an Anglo-French compromise. Mr Maudling has said: "It will be a dark day for Europe if negotiations break down"; for Denmark it may be disastrous.

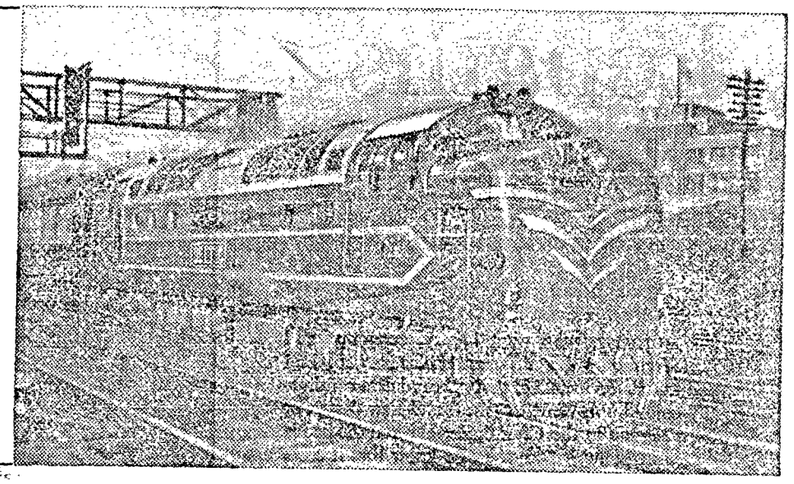
Lengths ahead!

FOR MOTORISTS who want luxury, economy, and value for money the automatic choice is FORD. Did you know, for instance, that *all* Ford cars continually enjoy improvements (the brand-new design of Ford seating in the Consul, Zephyr and Zodiac is a case in point)? Did you also know that it costs far less to run a Ford than any other car? Take Price . . . a Ford costs less, yet offers more. Insurance . . . there are specially low rates for Ford owners. Running costs . . . lower again, with low, uniform prices for Ford Service and spares. Resale value . . . a Ford fetches a higher price on resale or trade-in. In every respect it will pay you to see a Ford Dealer *first* when you're out to buy your new car.

CONSUL DE LUXE

de Luxe, two-tone family car — 6-seater with a host of luxury fittings.

OVERDRIVE — available on Zephyr and Zodiac saloons, convertibles and estate cars.



FULLY AUTOMATIC TRANSMISSION — available on Zephyr and Zodiac saloons and estate cars.

'ENGLISH ELECTRIC'

A large order for ENGLISH ELECTRIC "Deltic" diesel-electric locomotives is being placed by British Railways. Powered by two 1,650-h.p. NAPIER "Deltic" diesel engines, these are the most powerful single-unit diesel-electric locomotives in the world.

3,300-h.p. "Deltics"

The first locomotive of this type has already been in regular service with British Railways for two years, and for some months, on the London-Liverpool and London-Crewe runs, has been achieving some 4,000 miles per week.

THE BUSINESS WORLD

Safe for Expansion?

For two years, in Britain, the pressure of demand upon productive resources has been easing—partly as a result of disinflationary policies, partly as a result of maturing investment. This year, again, productive capacity is likely to grow more than demand at home and abroad for the goods and services Britain could supply; and there is a good chance that prices may stop rising. But the country has managed to achieve a less inflationary climate than for several years only at a time when there are signs of deflation abroad. And Britain's own growing balance of payments surplus mirrors growing difficulties for our partners in the sterling area. In 1958, however, the Treasury thinks these Commonwealth countries can draw down their sterling balances without imposing too great a strain.

THROUGHOUT 1956-57, the investment boom that had overloaded the British economy in 1954-55 was steadily paying off. During the last five years, gross fixed investment rose from 14 per cent of the country's total output to 17 per cent, and net investment is now at the high rate of 9 per cent of the national income. "Over the economy as a whole," observes the Economic Survey this week, "there has been a substantial increase in productive capacity . . . even investment which has taken the form of replacing existing plant and buildings must have improved the quality and thus the productive capacity of the United Kingdom stock of capital." This steady growth of Britain's power to produce has been the one positive internal fact among the many economic frustrations of the past two-and-a-half years; as much as any policy, this has strengthened the country's "ability to exert its influence on world economic affairs in a positive direction." It may be significant that this year's survey reverses the editorial pattern of the last six years and puts its record of the British internal economy, emerging from inflation, first—before turning to the world economy with which this country's fortunes are inevitably bound up.

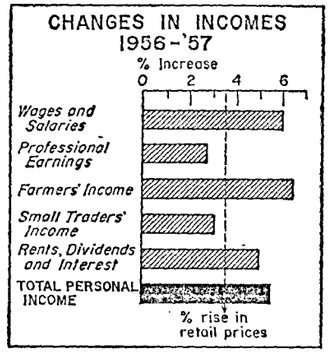
Investment continued to expand at a high rate in 1957, but its pattern was changing and it will rise less this year. The great surge of manufacturing investment came to an end; over the whole year it rose by only 3 per cent against 12 per cent in 1956, and by the end of the year, in real terms, was no higher than a year before. The big growth last year came in public investment, though housing, an important element here, continued to decline. Investment in transport and communications rose by nearly a quarter, and in the nationalised fuel industries it went on rising. Since 1951 private fixed investment, other than in houses, has grown by nearly a half, and public investment by about a third. The financing of investment, inside and outside the economy, reflected the diversion of extra resources towards the public sector. Private persons, and even companies, were still saving more money than they invested; so was the Government itself. But public corporations and local authorities were investing four times as much as they saved; they remained heavy net borrowers from the rest of the economy.

In 1957 as in 1956, the survey reckons, personal saving in all forms was of the order of 10-11 per cent of people's income after tax. Personal incomes of all kinds rose by 5½ per cent; wages and salaries, which are about two-thirds of the whole, by 6 per cent; but people spent only 4½ per cent more than the year before.

The £1,639 million of personal saving which comes as a residual in the estimates, played a substantial part in the financing of investment: the moderation of extra demand for personal consumption, which in real terms is calculated to have risen by 2 per cent, helped to ease demand upon the country's capacity. More than half the extra money people did spend still went to meet rising prices: but they did buy a good deal more cars, and durable household goods.

Government expenditure on current account, also, went down, for the fourth year in succession; last year, by as much as 3½ per cent in real terms. This resulted wholly from cuts in defence spending (other items were rising) and was concentrated in its effect; the number of people employed on defence work in manufacturing industry fell by nearly 150,000 (or about a fifth) and in the aircraft industry, for example, the cuts may already have reversed the upward trend of output.

In terms of real resources, these various factors added £150 million to fixed investment, £225 million to consumption, and only £10 million to the volume of exports, and reduced by £115 million the Government's current expenditure. In fact, the gross domestic product is reckoned to have risen by £300 million at 1956 factor cost, an increase of 1½ per cent. The total supply of goods and services rose slightly more, by two per cent, for imports, in real terms, rose by £135 million as well. In all, £435 million of extra resources were available in the economy last year, against the £270 million of extra demand itemised above.



The other £165 million of extra resources went into a higher rate of stockbuilding throughout the economy. It would be unreal to list this formally as an element of extra demand, since some of the rise appears to have been involuntary—in other products as well as the obvious cases such as coal. The actual value of last year's physical increase in stocks, in the national income figures, is put at £425 million, much more than for several years past. Manufacturers' stocks, about half the total value of stocks in the country, rose by 8 per cent in value and 6 per cent in volume, about half of the extra volume being more work in progress. Interpretation of these figures is difficult; but over the past ten years stocks in manufacturing industry have grown at least as fast as output, with a relative increase in holdings of finished products and work in progress.

"Moderate Expansion," Moderate Inflation

Recovery in motors and consumer durables pushed production up a little. Costs and prices were still rising: but less than in most postwar years.

THOUGH output in the economy, within industry and outside it, rose by only 1½ per cent, national expenditure rose by nearly 6 per cent, to just under £19,000 million. Home costs rose by 4 per cent; the price of internal output plus imports, "final output," by 3 per cent. "The average increase in prices," comments the survey, "was indeed smaller than in most postwar years, but as it came after a long upward movement it was more than enough to cause serious concern both at home and abroad." Retail prices were 3½ per cent higher in 1957 than in 1956 (though the official statisticians appear to be assuming that the prices of all goods and services that consumers bought went up on the average by only 2½ per cent). Nine-tenths of the increase in costs of final output came from higher home costs; the rest from higher net taxes and slightly higher import costs.

Within industry, where output showed a small increase in the second quarter of 1957 and remained just above the 1956 level for the rest of the year, there were conflicting influences on costs. The survey hazards indices of "output per man-year" in industry as a whole and in manufacturing, which seem, against the changes that the Ministry of Labour has recently made in the manpower statistics, a brave exercise: but the trend of labour costs appears fairly clearly. In manufacturing, output went up about 1.8 per cent and the wage and salary bill by some 6 per cent; so labour costs per unit of output (which average about 20 per cent of turnover in the manufacturing industries) rose by about 4 per cent. The costs of materials (which along with semi-manufactures average some 65 per cent of manufacturing turnover) were substantially unchanged.

The survey, at one point, infers from these price indices that "labour and materials cost per unit of output (in manufacturing industries) probably rose no more than the prices of final output, so that there was probably little change in profit margins." For the economy as a whole, however, it records that gross trading profits and other trading incomes rose by 5 per cent against an increase of 1½ per cent in output, so that per unit of output they rose 3½ per cent. These two concepts of profits are not quite the same. Nevertheless, manufacturing contributes about two-fifths of the whole domestic product: Did its trading experience differ so much from all other business?

By December, 1957, prices of industrial materials used in manufacturing (mainly imported) were 7 per cent below the average for the year, and "it seems unlikely that there will be an upturn in the immediate future." It takes time for changes in material costs to work through, but wholesale prices of manufactures other than food had stopped rising by the last quarter of 1957. This year there should be growing scope for the reductions in prices that have already begun, unless wages rise enough to offset the lower cost of materials. Overhead costs per unit of capacity, since capacity has been rising faster than output, must also have gone up; but they would come down if expansion were resumed.

This was already the experience of the motor industry—for most companies—in 1957; its sharp recovery, the main element in the slight increase in engineering output from 1956 to 1957, brought down unit overheads sharply. Total engineering production did not regain the high level of 1955, though output of plant and machinery for investment and exports went on rising during the two years, more slowly in 1957. The total dipped and rose again mainly in accordance with the collapse and recovery in production of cars and consumer durables. What was good for motors (though not General Motors) was indeed good for British industry as a whole last year; the recovery of this industry, and its demands upon intermediate engineering, constituted probably the largest single influence in the slight improvement of total industrial output during 1957.

Living with the World

As traders and investors we had a moderately satisfactory year, but in our third role as international bankers we were obliged to borrow to meet unusually large calls upon us by our clients.

STERLING'S third-quarter crisis slips into the background of the Economic Survey as a major nuisance that the British economy has already managed, with outside help, to live down. There are some elisions both of argument and statistical presentation in the survey's chapter on overseas trade and payments that receive a closer look in Business Notes on a later page. But the end result, for a year that opened with the threat of grave economic damage from Suez and closed after the autumn run on sterling with the breath-regaining exercise of deferring the instalments on the North American loans, was satisfactory beyond all but the most optimistic hopes. The surplus on current account turns out at this stage (for it is certain to be materially revised later) at £237 million, against £266 million (itself revised upwards by more than £30 million) in 1956. This is a result that has been greeted with a certain degree of disappointment, but it deserves to be treated with reserve not because of its absolute size so much as the special ingredients that have gone to its making. The odd £37 million represents interest unpaid for the second year running on the dollar loans and postponed into next century. Once again the terms of trade came to the rescue without, as yet, imposing any significant burden on British exports, which continued to rise, though only slightly, in volume and were only checked in prices from September, whereas an increase of 3½ per cent in the volume of imports was accompanied, from May onwards, by a sharp fall in import prices. A payments deficit on visible trade of £97 million, though £36 million higher than in 1956, still represents a fortunate outcome for a year beset with currency alarms, slacker trade and falling prices. Britain can be thankful that world trade in 1957 rose more rapidly than world production; it is time for a certain apprehension whether Britain can make a more determined effort in exports during 1958.

In no year since the war was there a greater contrast between this achievement on Britain's own current account and the drain on the central reserves that are held on behalf of the countries of the sterling area. These countries took the first impact—and it was a heavy one—of lower prices for their own exports but they continued, with few exceptions, to import on a liberal scale. So Britain was, in effect, forced to trade a big slice of the dollar reserves against a further sharp reduction of the sterling balances on which these countries were freely drawing. That is the essence of being in the international banking business—to redeem deposits when the customers are short of cash and to pay them out in dollars if need be. The other side of that medal is that Britain last year got its imports more cheaply and earned rather more from its exports.

The survey refers with a certain delicacy to the other factor in the loss of the reserves. There are few blunt references to the sterling crisis of last August and September; but there are some opaque neologisms such as "a sharp decrease in the external monetary reserves of most countries, apart from the United States and Germany" and "large-scale capital movements in favour of the mark." The survey spends some paragraphs explaining how "a current surplus . . . does not in itself prevent a severe exchange crisis." It notes "the marked rise" in the flow of capital into non-sterling securities "through free markets in the sterling area." It claims that in a year of tighter monetary conditions in the United Kingdom, the traditional flow of private capital to the colonies was maintained at a level comparable with that in the past. But a major slice of the long-term investment outflow of £168 million in the first half of the year must have found its way via the "Kuwait gap" into dollar securities, and the shrinking modesty of a mere £21 million for net investment abroad in the second half of the year marks both the closing of that gap and the resort to new borrowings from and deferred repayments to the United States and Canada.

It may be reasonable to describe the resultant of these complex operations as "a significant strengthening" of the overseas monetary position. A kind of funding has occurred by which sterling liabilities have been reduced and the dollar reserves have been increased by incurring new medium and long-term dollar liabilities. It may have been a good bargain to buy time in this way, but the improvement in the reserves has involved important changes in the character of the liabilities which they carry.

The Prospect Now

After last year's fortuitous benefits, how far can Britain defend itself and the world against a deflationary spiral?

THE survey can fairly claim that the economic climate is less inflationary than for several years and that this change has been reflected in increased confidence in sterling. In retrospect, it is clear that while Britain did much last autumn to help itself, it was also aided by a

certain amount of good luck that fell as a misfortune on other countries. When will the advantage of improving terms of trade turn into a positive disadvantage by reducing the demand for British exports? There are three question marks about 1958. One is the course of economic activity in the United States; on this the survey notes that the United States government have expressed confidence that the American recession need not be prolonged, though it wisely adds the footnote that most countries of the world have been losing dollar reserves and are less able to ride out a period of difficulty. A second is the effect of falling commodity prices on the payments accounts of primary producing countries. And a third is the prospect that the recession in the United States is not likely to be offset by expansion in Europe, as it was in 1953-54.

This is a sombre background, though not without some brighter features. This year presents "a good opportunity . . . to stop the rise in prices that has troubled the country for years." Difficult conditions in overseas markets will impose the need on British manufacturers to keep their prices down; even so, the survey suggests that there may be "a substantial current surplus" on the balance of payments this year. But the other side of that medal is that lower commodity prices will eat further into the "non-sterling earnings" (*sc.* dollars) that the primary producing countries fed into the central reserves during the years of boom. They will be living to a greater extent on their accumulated sterling reserves; and the counterpart to that fact will be a reduction or even a reversal of the flow of dollars to the central reserves.

The final question, then, is whether Britain can afford to carry the rest of the sterling area through a rough time. The survey concludes that it should be strong enough to enable other countries in the sterling area to draw on their sterling balances without imposing too great a strain on the central dollar reserves. Certainly, there should be adequate room within the British economy to meet all the demands that are likely to be made on it—certainly for exports, which disappointingly made no increased demand on the country's resources last year. It is, then, not unduly optimistic to be hopeful about the prospects for Britain this year; but it would also be wise to consider in good time the dispositions that would be needed if things go wrong. On these matters the survey maintains a silence that is understandable, and so does not entirely escape the charge of undue dependence on hope—about the recovery of the American economy; about the ability of British exports to sell in difficult markets all over the world; and about the ability of the central reserves to carry increased burdens this year without attracting the attention of the speculators in sterling this summer. Britain's economic destiny is not within its own hands. But the concluding sentence of the survey rightly observes that its ability to exert its influence on world economic affairs in a positive direction depends upon its own economic strength. Past mistakes have weakened that strength; but recent achievements have made a good beginning towards increasing it. There may presently be room for modest initiative at home, if the need arises, without running too desperate risks externally.

BUSINESS NOTES

BALANCE OF PAYMENTS

The Current Surplus

THE official estimate of the current external surplus in 1957 is perhaps not quite so good as had recently been hoped; but it is possible that the official statisticians have merely been cautious. Thus while the surplus in 1956 is written up from £245 million to £266 million, that for the first half of 1957 is written down, from last October's estimate of £125 million to £115 million; the surplus for the second half of 1957 is put at £122 million, making £237 million for 1957 as a whole. But in the capital account, the item "miscellaneous capital and errors and omissions" is extraordinarily large, at £50 million in the first half-year and £104 million in July-December. It is difficult to believe that hidden movements of short-term capital resulted in an inflow of this magnitude—did the favourable turn in the commercial leads and lags in the last quarter as much as make good the adverse swing in the third quarter?—and the unexplained inflow may in fact have been in current items.

The current surplus in 1957, as in 1956, was swollen by the postponement of the £37 million of interest due on the postwar North American loans. On the other hand, invisible earnings were adversely affected by the Suez disruptions; and while export prices rose, import prices in the year as a whole were not lower than in 1956, whereas in the first months of 1958 they have been down on the year by 10 per cent. The improvement in the terms of trade in 1957 amounted to 3 per cent, so that an increase of 3½ per cent in the volume of imports along with an unchanged volume of exports widened the visible deficit, on a true payments basis, by only £36 million, to £97 million—still the narrowest gap for any postwar year other than 1956. It may be noted that this deficit corresponds to that of £617 million given in the monthly figures of trade shipments, which show exports fob but imports cif.

The small increase in the visible deficit was entirely attributable to a decline in the surplus with the overseas sterling

area; the visible deficit with non-sterling countries was virtually unchanged, at £143 million. The fall in invisible receipts, on the other hand, was concentrated in payments

with non-sterling countries; the surplus on private invisible transactions with sterling countries rose from £396 million to £451 million.

The Most Sophisticated Crisis

THE patient layman who has accepted the ever more exacting and more complex prerequisites of external stability that have been laid down by the official and the unofficial experts through the years is now entitled to a gasp of despair at the exercise presented to him for 1957. For the second year running, a major crisis for sterling and the reserves was accompanied by large surpluses in the balance of payments. The paradox for the half-year of Suez was explained in a new classification of the accounts: the current surplus has to be large enough to finance commercial long-term investment, and since it was not, the overseas monetary or banking position necessarily deteriorated; and the reserves themselves fell by more than this deterioration, owing to the run down of sterling liabilities.

Now for 1957 the Treasury presents an even more startling conjuncture; the worst sterling crisis since 1949 was accompanied not only by a large current surplus but by a surplus in the new "net commercial balance," capital items included. Hence the overseas monetary position is shown to have improved in July-December by £101 million. What then rocked the boat? The run on the sterling bank is the explanation that has been accepted from common observation, but the official attempt to spell this out statistically has not been entirely happy.

Part of the mystery arises from the wide time span; figures for end-September would have shown a much larger fall in sterling balances, and presumably would have reflected the outflow of short-term capital. But a big element of the confusion lies in the coverage of "long-term investment (net)." The incongruous surplus here reflects entirely the drawing equivalent to £89 million from the Export-Import Bank and the saving of £26 million from the postponement of last year's capital repayment of the American loans. Admittedly, these transactions achieved an improvement of quick assets by incurring a longer-term liability; but the border line is thin between the Ex-Im loan, repayable over seven and a half years, and the 1956 IMF loan, repayable in three to five years and classified as a short-term liability.

The third major special support that shielded the impact on the official reserves was Germany's deposit of advance instalments on its postwar governmental debt to Britain. In July-December this deposit reached £67½ million; without it, the sterling balances of non-sterling countries would have fallen by some £68 million in the half-year, whereas in fact they fell on balance by only £1 million. The German payment, the Ex-Im drawing, and the loan postponement (of interest and capital) together gave relief amounting to nearly £220 million. That is why the reserves in the half-year fell by no more than £38 million.

IN THE MARKETS

The Corporation Twins

A STRONG market in gilt-edged stocks—so strong in the irredeemable stocks that the jobbers were clearly being squeezed—developed as the Easter holiday approached. Short-term punters were not active, because the long week-end was at hand. In the short and medium dated stocks there was steady institutional buying. So the first of a new series of corporation issues—the 5¾ per cent series—got off successfully even though the terms had been drawn finely. Lists were quickly over-subscribed on Wednesday for twin issues for the corporations of Swansea and Hull, each borough offering £3 million 5¾ per cent stock 1976-78 at £98.

It is not unknown for a single prospectus to cover more than one issue. East Africa has made a double issue for two of its public utilities on a single prospectus recently, but it is necessary to go back to the housing bonds of the nineteen twenties to find separate English local authorities sharing a single prospectus. The technique of choosing partners for such an offer presents obvious difficulties; the two must be of approximately the same status and the prospectus, which reveals the yield of a penny rate to be £8,028 in Swansea and £12,250 in Hull and the actual rates to be 20s. 8d. in the £ in Swansea and 22s. 6d. in Hull, shows that this can only approximately be arranged. On the single application form investors may apply for the stock of either corporation or of both, but not for one or the other without saying which. The advantage of amalgamating two small issues and thus reducing the long waiting list is obvious.

For investors the more immediate question is whether the terms—an interest yield of £5 17s. 3d. per cent and a gross redemption yield of £5 18s. 6d. per cent—are right. Those yields in fact are so close to the yields on the generally more popular London County Council 6 per cent stock now standing at £102⅛ that the issue would have been in some doubt if the whole gilt edged market had not been moving upwards.

GOVERNMENT SPENDING

Treasury Taken for a Ride

POSTWAR experience has led many people to suspect that the problem of reducing the load of Government expenditure, or even of preventing its steady increase, never will be solved without an entirely new approach in official techniques of planning and control and in definition of objectives. Weighty support for this view now comes from Mr Enoch Powell, who served as Financial Secretary to the Treasury last year during Mr Thorneycroft's chancellorship, and who resigned with him and Mr Nigel Birch in January. In an article in the current issue of *The Banker* Mr Powell considers "Treasury Control in the Age of Inflation": his carefully reasoned survey of the weaknesses of traditional techniques makes disturbing reading. The classical instruments, which once were formidable, are now, he says, actually dangerous, because they present all the appearance of full control without the reality.

The most evident cause of this undermining of the traditional defences is the course of inflation itself, which makes supplementary estimates virtually a matter of course and compels officials to shrug off unbudgeted increases as "water over the dam." Moreover, Mr Powell shows, inflation is "not the only escalator which takes traditional Treasury control 'for a ride'." There are nowadays at least three other types of "built-in escalators" represented by automatically expanding services, Government "commitments," notably in the sphere of defence, and Exchequer undertakings to meet given proportions of expenditure the total of which is determined by other bodies, such as local authorities. The reforms needed to give effective control—which has to be both more intensive in each financial year, and also more extensive over longer periods of estimate and planning—would, Mr Powell believes, have far-reaching implications for the habits of Government itself.

ATOMIC ENERGY

Dounreay Delayed

A YEAR ago it was forecast with some confidence that the Atomic Energy Authority's breeder reactor at Dounreay would come into operation last Tuesday. Many changes have since been made to details in its design and to staff arrangements. There are also some second thoughts on the long-term prospects of this type of power-producing reactor. The date on which Dounreay goes "critical" has been moved back to some time during the summer. Since May last year, when the main construction of the reactor with its roc's egg shell was completed, AEA engineers have been changing their ideas on some aspects of Dounreay's design, particularly since they had a chance to look at similar American work. The biggest of these changes concern safety devices to stop the highly concentrated fuel from flowing—if by mischance it over-heated and melted—into a dangerous puddle of fissile material at the bottom of the reactor. The Fleck report has also had its effect on the organisation of the Dounreay site, which is developing into one of the AEA's major research and production establishments.

A breeder reactor uses some of the atomic particles released during fission to create new fuel. The system is the same as that used to manufacture plutonium in a Calder Hall type reactor, but the reaction takes place at a faster rate, to yield rather more fresh fuel than the reactor is actually consuming in its core. Dounreay is a pilot model of a power station based on this system, with a token net electrical output of 15 megawatts. In recent weeks both Sir John Cockcroft and Sir Christopher Hinton have hinted that were they designing Dounreay now, instead of three or four years ago, it would be a very different plant. "In the course of its design," Sir John has said, "we have come to appreciate more fully the difficult technological and safety problems of this reactor, so we will proceed cautiously with its operation and development and will not expect it to play a major part in our programme before the 1970s."

By that time, engineers may see their way more clearly towards a power system based on fusion; in fusion vast quantities of atomic particles are available for breeding quantities of nuclear fuel of quite a different order to the limited amounts likely to be produced from a Dounreay-type reactor operating under optimum conditions. Whether Dounreay will become something more than an interesting experiment depends largely on what progress is made with fusion, on the one hand, and with high temperature offspring of the basic Calder Hall system, on the other. By 1962, decisions will have to be taken about the next generation of nuclear power stations.

AIR TRANSPORT

Is Your Airline Really Necessary?

IT may not have been too tactful of Mr B. S. Shenstone, chief engineer of British European Airways, to express himself forcibly on the multiplication of airlines ("no nation feels it is properly a nation unless it has a national airline") so soon before the Easter week-end when latecomers will be lucky to get seats on any airline, whatever its size. But his argument that the small national airline is a dubious asset to international air traffic and a millstone around the neck of its own economy needed to be put.

The international rules of air traffic are a constant temptation to small countries to set up their own airlines. Services from one country to another are agreed by governments on a reciprocal basis; hence the country with a small airline can make certain that its own services get a big enough share of traffic into local airports to keep it happily employed. The bigger airline, with so much more at stake, can only bow to this pressure, even when this means pooling the profits. It is too easy to get a foot into the international air business, and most small countries cling to the strange idea that their prestige will be enhanced if they can show the flag at those most blasé of international establishments, the world's major airports.

So one-third of the 82 international airlines belonging to, or associated with, the International Air Transport Association have fleets of 20 aircraft or less, a high proportion of which are local runabouts. Between them these small operators own less than 13 per cent of the 2,900 aircraft belonging to IATA members; more than a third of their fleets are DC3's of anything up to 22 years old, with a substantial sprinkling of other elderly types like Vikings, Catalinas, Rapides and early marks of Convairs. The cream of these fleets, reserved for prestige international services, consist for the most part of Viscounts—a big slice of Vickers-Armstrong's order book is for batches of as few as three Viscounts—or from two to five long-range aircraft of the Douglas-Boeing-Lockheed class. A small country can have a big airline—witness the Dutch KLM with a fleet of 96 modern machines—and an airline can also grow from small beginnings—as the German Lufthansa is doing. It may have special reasons for a token international fleet; El AC's

three Britannias and five Constellations are a lifeline with the West in case land and sea communications are cut by hostile neighbours. But international airline operation by small countries usually achieves nothing more than the tying up of capital that might be better used for their own economic development. A long-range airliner costs over £1 million; against this, the average profit of the world's operators, heavily weighted by the results of the streamlined giants, is no more than 1 per cent. The difficulty that small airlines find in raising capital to keep their token fleets up to date explains why aircraft manufacturers are badgered on all sides to give credit terms that no other industry would tolerate. And yet they multiply. Ghana is discussing the possibility of an airline under its own flag, while Aer Lingus, one of the more level-headed of small operators, has finally succumbed to temptation and started transatlantic services this week—although admittedly using chartered aircraft and crew. Competition in the passengers' interest is most desirable, but it is now generated in an odd way through government protection for the smaller operator coupled with government curbs on the bigger foreign airline—not competition so much as airlinesmanship.

MOTOR INDUSTRY

Vauxhall's Growing Pains

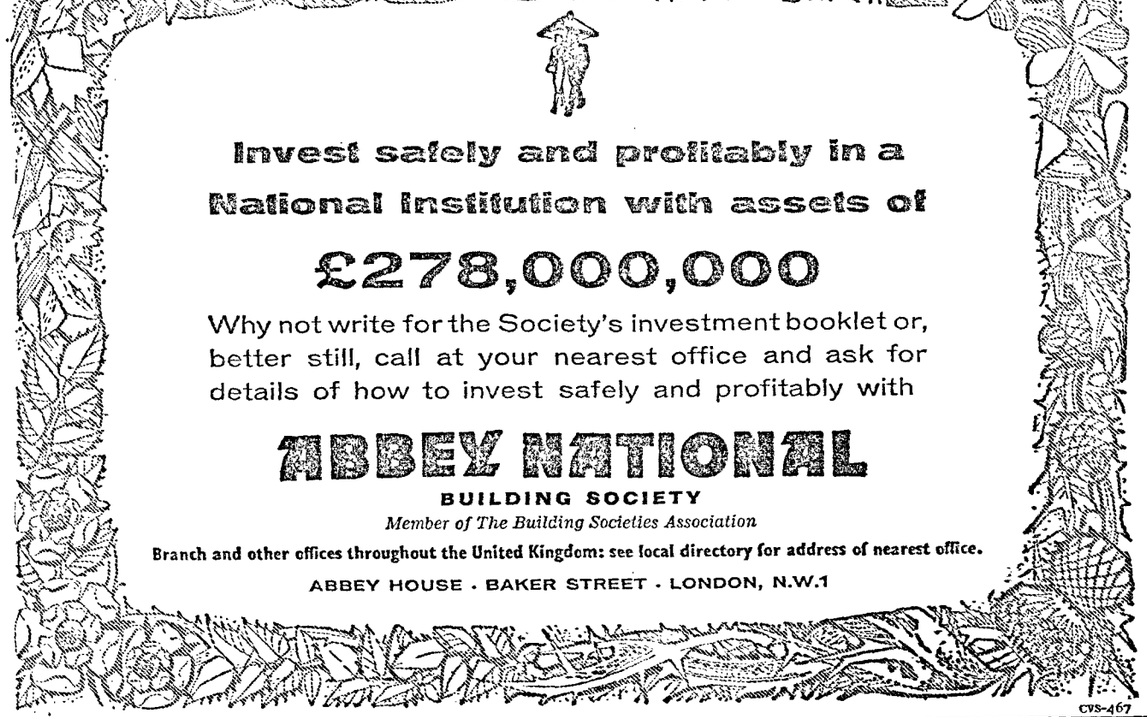
In the three years 1955-6-7, Vauxhall Motors expanded its total net investment in manufacturing operations more than fourfold, from a total of £15½ million, divided more or less equally between net fixed plant and net working capital employed (that is, stock and work in progress plus debtors less creditors) to £64 million, of which £15 million represents net working capital employed, and £49 million represents net fixed assets (including £9 million of special tools, jigs and dies). This expansion has nearly completed the programme announced towards the end of 1954 to double the company's production capacity from 130,000 vehicles a year (the number actually produced in 1954), to 260,000 units a year, of which the plant should shortly be capable. But the simultaneous processes of bringing the new plant in, training a big intake of green labour, and introducing more model changes in a year than ever before played havoc with Vauxhall's costs last year. In 1957 the number of vehicles produced rose 18 per cent: turnover rose by 6½ per cent to £76 million; but the company showed a net operating loss of £2,366,831, after providing for interest, depreciation and tool amortisation. Tax adjustments reduced the net loss to £1,134,744, against a net profit of £3,934,443 in 1956. All the ordinary capital of Vauxhall is held by General Motors.

"Production development costs" for a completely new range of passenger cars, together with two new diesel engines for the Bedford trucks, were expensive: so were extemporised methods of manufacturing in the place of parts of the plant whose delivery and installation could not be accelerated to earlier dates than those originally planned. Moreover it was not possible to utilise to the full the major manufacturing facilities that were little disturbed, since the demand for trucks both at home and abroad was less than in 1956; but depreciation, special tooling and loan interest on the new facilities, which were £3½ million higher than in 1956, had to be borne. The company's difficulties arose essentially from the decision to accelerate a five-year development plan, originally not intended to reach full capacity before 1960, into 2½-3 years. Physically, it succeeded: and with doubled capacity, for this year's continuing high demand, the earning power of the new plant should in due course make profitable use of the time that has been gained. But the price, in the short run, has been a brutally heavy one: and comparisons with Ford, which has still to complete its development programme but weathered the car recession well and has made hay out of the recovery so far, are inevitable.

THE BUDGET OUTTURN

Surplus Below Estimate

In spite of the large supplementary votes required of Parliament a few weeks ago, the net outturn of the financial year ended last Monday came within striking distance of the budget estimate. In the above-line account there was a surplus of £423 million, which surpassed the 1956-57 surplus by £133 million but fell short of estimate by £39 million. This is a distinctly better result than many people were expecting at the time of Mr Thorneycroft's resignation. The improvement upon those expectations reflects three main factors—the buoyancy of the revenue, the fact that the supplementary votes were offset to a considerable extent by under-spendings on other votes, and a special non-recurring saving affecting the debt service.



Ordinary revenue, as the accompanying table shows, surpassed estimate by £54 million, in spite of a substantial shortfall in non-tax revenue. Miscellaneous receipts, although including a book credit of £37 million from the suspense account to which the 1956 annuity, later postponed, on the North American debt had been placed, were £30 million less than in 1956-57 and £19 million below estimate; and the net receipt from the Post Office was only £7.8 million, compared with the estimated £20 million. Income tax alone almost sufficed to offset these shortfalls:

THE YEAR'S OUTTURN AND ESTIMATES
(£ million)

	Out-turn	Change in 1956-57

One of the most advanced cars you can buy to-day!

THE NEW Riley Two-Point-Six

If motoring for you is more than just getting there, you owe yourself a run in the new Riley Two-Point-Six. Here's thrilling power, married to a new suspension which gives almost unbelievable surefootedness. And a better than ever version of the famous Riley steering. Seating is for six in sheer luxury, polished walnut facia and door cappings, rich leather upholstery. The engine is the new 6-cylinder twin-carburetter unit, big hearted and smooth as silk all the way. The brakes are power assisted. Altogether the new Riley Two-Point-Six is a car you'll be proud to own. Ask your dealer for a demonstration.

Three transmissions to choose from. A synchromesh gearbox with short sports type manual gear shift is standard. Optional equipment, at extra cost, includes overdrive or a completely automatic transmission.

Price **£940** *plus £171.7s. P.T.*

There is also the Riley One-Point-Five—
a compact four-seater with brilliant performance and low running costs.

Every RILEY carries a 12 MONTHS' WARRANTY and is backed by Europe's most comprehensive service—B.M.C.

B.M.C. Service in Europe
Riley Owners planning a Continental Tour are invited to see their Riley Dealer for details of a free service to save foreign currency.

striking was the performance of Excise, which topped its estimate by nearly £30 million. Motor duties, surtax, stamps, customs and death duties also exceeded estimate, the last two only slightly.

Expenditure also Buoyant

TOTAL ordinary expenditure, at £4,920 million, was £52 million more than the actual expenditure of 1956-57 and £93 million more than the budget estimate for 1957-58. Of this latter increase, £68 million was attributable to supply services, which totalled £4,138 million, compared with £4,044 million in 1956-57. The estimates for supply services for the coming year stand at £4,259 million (assuming the local costs of the BAOR to be met by a German contribution), so that the minimum prospective increase over actual expenditure in 1957-58 proves to be two and a half times the £50 million that was widely supposed to be the only difference between Mr Thorneycroft and his Cabinet colleagues last January. Other ordinary expenditure last year also exceeded estimate. Interest and management of the national debt had been estimated through the spectacles of April, 1957, to decline sharply, by £71 million. Then Bank rate had recently been reduced and a slackening of the abnormal rate of encashments of savings certificates experienced in 1956 was also expected. In the event, the debt charge shrank by £48 million, and thus exceeded estimate by £23 million, in spite of the fact that it was relieved of £37 million of interest through last December's deferment of the 1957 payments on the North American loans.

Net expenditure below-the-line, which in 1956-57 had fallen well short of estimate, has this year moderately exceeded it. It rose by £14 million, to £635 million, compared with the estimate of £587 million. Most of this excess is due to a steep rise in advances to the Coal Board for capital expenditure ; in the previous year the board had drawn much less than the estimate, but last year it surpassed an increased estimate by £37 million, drawing £82 million net, compared with only £26 million in 1956-57. PWLB loans to local authorities showed a further slight decline, and were £8 million below estimate, at £92 million, so that the net drain on the Exchequer was no more than £45 million ; at their peak, in 1952-53, these loans absorbed £412 million gross and nearly £400 million net. Loans to nationalised industries under the two-year arrangement made in 1956 (the future of this temporarily prolonged arrangement is to be disclosed in the budget) rose by £11 million gross, to £295 million, slightly more than estimate. Advances for the finance of the railway deficit, under last year's Act, rose by £14 million to £66 million, compared with an estimate of £50 million. The net deficit on the Exchequer accounts as a whole, as the table shows, was £212 million—more than a hundred million less than in 1956-57, but almost a hundred million more than Mr Thorneycroft had estimated.

ALUMINIUM

Canadian versus Russian

A REDUCTION this week of nearly 9 per cent in the price of Canadian aluminium, which lowered the UK delivered price from £197 to £180 a ton, might help to develop the new uses on which the producers of aluminium are now relying to justify their plans for expansion. Falling industrial activity, aggravated by defence cut-backs in the aircraft industry, led to a fall of 3 per cent in the free world's consumption of aluminium last year, and a sharper reduction in demand as consumers began to run down inventories. The Aluminium Company of Canada has already cut back production to about 80 per cent of capacity, and deferred the completion of some 240,000 tons of additional smelting capacity. Although this is the first price reduction for nearly ten years, the price of aluminium stopped rising eighteen months ago, and has since been stable. By contrast prices of British steel rose in Britain by an average of 7½ per cent last July, and have now been cut, at the same time as aluminium, but by only about 1½ per cent. On the other hand the London price of copper, which two years ago was well over twice as high as aluminium, is today fluctuating very near the new price for aluminium.

Slackening demand and competition from other metals are not the only worries for the Canadian producers. Although UK imports of aluminium have fallen steadily from 258,000 tons in 1955 to 191,000 tons last year, imports of the Canadian metal have fallen rather faster, from 239,000 tons in 1955 to 153,000 tons last year. At the same time British imports of Russian aluminium, which were only 2,500 tons in 1955 and fell to 200 tons in 1956, reached an annual rate of 24-25,000 tons during the latter half of 1957 and the first two months of this year. The Russians, who in times of scarcity were asking premiums of as much as £70 a ton above the Canadian price, are now offering the metal at discounts of up to £18 a ton off it. The Canadians have countered this—but only partly—by the offer of a loyalty rebate of 2 per cent (under £4 a ton), to be paid at the year end to loyal buyers of the Canadian metal. But it seems unlikely that the Russian inroads will be reduced either by that or by this week's reduction in the Canadian price, for the Russian contracts often guarantee to maintain the same price discount even if the Canadian price falls.

Faced with this form of competition—which, though no doubt unpleasant for the Canadians, does not by itself constitute dumping—the Canadian producers asked the Board of Trade last January to impose an anti-dumping duty on imports of the Russian metal. Their case, which is still under consideration, rests on a necessarily arbitrary calculation of the fair market price, or of costs of production, in Russia. It is true that unless an arbitrary judgment were made, the anti-dumping duty could never be applied, under the terms of the present Act, to goods originating in a Communist country: but to stifle such limited price competition as has appeared in aluminium might be a dubious use of the duty.

BANK FIGURES

Falling Deposits

THE full statements for mid-March of the eleven London clearing banks, aggregated below, confirm that the decline in deposits has been more than seasonal : the adjusted index compiled by Lloyds Bank dropped by 0.5, to 109.3. In the first two and a half months of 1958, net deposits have fallen by £429 million, compared with the fall of £408 million in 1957, which itself was big. Advances

have risen notably less steeply than a year ago—the March increase to borrowers, other than state boards, was £42 million, compared with £71 million in March, 1957. The fall in liquid assets, by £493 million since end-December, has actually been a little larger than last year. This is no

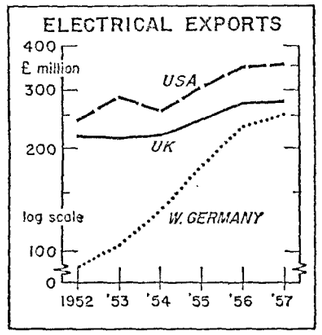
mean achievement, since the Government must have needed part of its revenue surplus to finance the exceptionally large surplus in external payments. But the surplus on the Exchequer's domestic finances has been notably larger than in early 1957; and net sales of long-term securities in the market have probably at least matched those in the short-lived spurt preceding the cut in Bank rate in February last year.

NEW ISSUES

Dodging the CIC

THE Chancellor is looking into the ways of raising new money, especially for hire purchase, which by-pass the Capital Issues Committee. The fear that he may soon try some new way of blocking the loopholes undoubtedly has some connection with the spate of these plans in the weeks before the budget. Two companies in the motor car trade are the two most recent sponsors of what is in effect a rights issue of ordinary shares "ex CIC." Both have taken over, in exchange for their own shares, companies whose only asset is cash, and the shares so issued have then been offered, through an issuing house, to shareholders of the companies buying the cash.



Midland Counties Motor Finance Company, an hire purchase finance house for the motor trade, has bought all the share capital of Townhead (Glasgow), whose only asset is £400,000 of cash, for 105,290 of its ordinary shares of £1 each. The Townhead vendors have re-sold these shares to Erlangers, who, in turn, are offering them in the ratio of three new for every eight held to existing ordinary shareholders in Midland Counties at 77s. 6d. per share. Henlys, the motor trading company, has bought all the issued capital of H.P. (Yorkshire), whose only asset is £302,370 of cash, for 448,288 of its ordinary shares of 4s. each. The new shares have been sold to Robert Benson, Lonsdale by the H.P. (Yorkshire) vendors at 13s. 10½d. each and Robert Benson, Lonsdale is offering them to ordinary shareholders in Henlys in the ratio of one new for every three held at 14s. 3d. per share, free of all expenses. So everyone, except the Chancellor, is satisfied: the companies have new capital; the vendors have cash; and shareholders are given a small turn in the rights issue.

EXPORTS

Electric Currents

IN 1953, before the investment boom, Britain's electrical manufacturing industries were exporting about 28 per cent of their output; by last year, the proportion was down to 22 per cent (though a good deal of electrical equipment is exported indirectly, for example in cars). As the British Electrical and Allied Manufacturers' Association says in its annual report, published last week, this does not mean a fall in exports, which rose during the period both in value and in volume: it shows that home demand for these industries' products rose much more. Coincidentally, Britain's share of world export trade in electrical goods also dropped from 28 per cent in 1953 to 23 per cent in 1957. The United States is still the world's main electrical exporter, though its share was down to just under 30 per cent last year. The major exporter showing the biggest rate of increase, as one has come to expect, was Germany, which last year was only barely behind Britain in its share of world business.

Rather more than half Britain's electrical exports still go to Commonwealth markets, but more than 18 per cent, last year, went to Western Europe. The electrical manufacturers are well aware of the prowess of some of their European competitors, but the Free Trade Area is a far less worrying prospect for them than being shut out of the Common Market, which alone, in 1957, took nearly 10 per cent of all British electrical exports. At present, British heavy electrical engineering companies are tendering for "everything and every job": this means tens of thousands of tenders a year, to some 120 countries, and for about four times as many jobs as they get contracts. Their competitors—among which BEAMA notes East Germany, Czechoslovakia and Hungary, though Russia's own exports were mainly inside the Curtain—tender much more selectively on an "in and out" basis, and are hence less worried about spoiling the general market in a country by cutting prices on one job there. This is inevitable for Germany, coming late into a market where the United States and Britain both enjoy special advantages in their own spheres. But it places a very heavy burden on the fairly few British heavy electrical companies that do export, and as BEAMA comments, "it is regrettable to record that there is still an unduly large proportion of British electrical manufacturers who do not export at all."

INDUSTRIAL DEMOCRACY

Employees' Share Schemes

SEVERAL big industrial companies have introduced plans to encourage their workers to become shareholders. The most open-handed of such schemes invests a sum of money (usually linked to the dividend) in shares that are

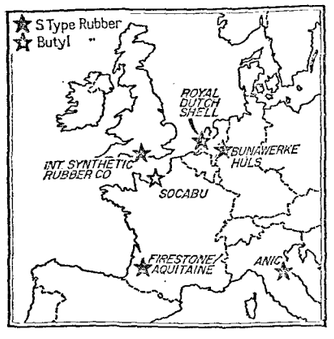
handed out free to the workers; this type of scheme is run by ICI and Courtaulds. Other schemes supplement the worker's own investment by a contribution from the company: Rhodesian Selection Trust and a number of American companies are examples. Yet other schemes give long-service employees shares of a special class (usually preferential and usually unmarketable) and there are various trust and savings bank schemes in which the worker is not a direct shareholder but receives the benefit without being a personal holder of a special class of high dividend share deposited by the company: Joseph Lucas is one example. In "The Challenge of Employee Shareholding,"* Dr George Copeman analyses the schemes existing in this country and in the USA into ten categories and offers carefully checked summaries of the principal schemes.

Dr Copeman obviously prefers the schemes in which the workers become fully enfranchised holders of ordinary shares that they can keep or sell at will. That is the ICI method; and ICI is apparently not seriously disturbed by the fact that 23 per cent of the £1.7 million ordinary stock that was handed last year to 50,500 employees was sold, depressing the price at the time by 1s. 10½d. to 40s. 6d. It also emerges that the ICI scheme is in practice more generous than the Courtaulds scheme, the average bonus per participating head being £33 in ICI and £20 in Courtaulds. But there are many diverse factors, including the relation between capital structure and industrial process, and it is inevitable that each scheme should be *sui generis*.

*The Challenge of Employee Shareholding, by George Copeman. Business Publications in association with Batsford. 200 pages. 18s.

TAX RESERVE CERTIFICATES

Interest Cut



REDUCTION of Bank rate on March 20th made Tax Reserve Certificates carrying interest at 3½ per cent tax free an exceptionally attractive investment for their purpose. Interest is payable only for two years, and the holding can be employed only in payment of income tax, surtax, profits tax, and land tax. But TRCs are held mostly by people and institutions which suffer a high rate of tax, and even at no more than the standard rate of 8s. 6d. the tax-free interest was worth £6 1s. 9d. per cent. For holders in the surtax class it was worth more. Money poured into tax certificates. The average rate of investment is just over £7 million a week, but in the last two weeks and one day of the financial year £40.6 million of certificates were bought, against £18.7 million in the last two weeks of the previous financial year. Naturally the Treasury has now found it necessary to bring the rate of interest into line. New certificates bought after March 29th carry interest at 3¼ per cent tax free (equal to £5 13s. per cent gross to a taxpayer on the standard rate)—still an attractive rate.

SYNTHETIC RUBBER

Europe Makes Its Own

NEW styrene-butadiene and special-purpose rubber plants nearing completion in Britain, Germany, Italy and France, together with projects recently announced in the Netherlands, should make Western Europe virtually self-sufficient for most types of synthetic rubber by 1960. Western Europe consumed over 200,000 tons of synthetic rubber last year, mostly of the standard general purpose type, against about 600,000 tons of natural rubber. But it produced only about a tenth of its requirements of synthetic—special-purpose rubbers made in Britain, and Buna rubber made in Germany—so that the balance had to be imported, and paid for in dollars. During the next two years this supply position will be radically changed.

In Britain, the International Synthetic Rubber Company's plant near Fawley, owned by the UK tyre makers, will come into production during 1958; full production of S-type rubber, at an annual rate of 50,000 tons, is scheduled for the last quarter of the year. At Ravenna, in Italy, a plant to produce S-type synthetic rubber and fertilisers from natural gas has been built by the Anic Company, a subsidiary of the state-owned ENI group. Running on imported butadiene, this plant should be producing at an annual rate of 30,000 tons of rubber by the end of this year, and if the company carries out its plans to make butadiene locally it hopes to reach an annual output of 50,000 tons or more by 1960. Germany, too, is about to re-emerge as a large-scale producer of synthetic rubber with a new plant built in the Ruhr by Bunawerke Hüls AG, in which Chemische Werke Hüls, AG has a half interest, with the other half divided equally between the "big three" chemical concerns, Bayer, Hoechst and BASF. Designed for an annual output of at least 45,000 tons of cold rubber, this plant should also be in full production by the end of this year. Any losses, up to £850,000 a year for five years, will be underwritten by the German tyre manufacturers. In France, the Firestone Tire and Rubber Company's plans (jointly with Société Nationale des Pétroles d'Aquitaine) for a 40,000-ton S-type rubber plant have not yet reached the construction stage, but a plant to make 20,000 tons a year of butyl rubber, sponsored by a consortium led by Esso Standard, is due to come into production next October. The first of its kind in Europe, this will provide for all of Europe's current demand for butyl. At Pernis, near Rotterdam, the Royal Dutch-Shell group plans to produce at least 50,000 tons a year of S-type rubber, though in view of its later start this plant is unlikely to be producing much before 1960.

If all of these plans are fulfilled, Europe's capacity for the production of S-type rubber could reach nearly 250,000 tons of cold rubber by the end of 1960; the actual output of oil-extended rubber would be 10 or 15 per cent higher; and the addition of some 10,000 tons of hot Buna rubber, 20,000 tons of butyl, and some 30,000 tons of other special-purpose rubbers made by Du Pont, ICI, Bayer, and others, brings the total to over 300,000 tons a year. Synthetic rubbers account for only 25 per cent of Europe's total rubber consumption, compared with over 60 per cent of total consumption in the United States, so even if natural rubber prices do not rise, some switch from natural to synthetic in Europe may be expected to augment the normal growth in demand. Although some American synthetic rubber may continue to be imported, there should still be room for most of Europe's planned output within its own borders.

WOOL

Stockpile Stops Selling

THE British stockpile has decided to offer no wool at the London May sales. An announcement about further sales is to be made later. That it is right for the British stockpile to stop selling on a sagging market is not open to doubt. Clearly the decision is intended to comply with the Defence White Paper's policy of selling so as not to disrupt markets. Equally certainly the governments of the wool producing dominions have been consulted. What is extraordinary about the decision is the haste with which it appears to have been taken. Last week the Committee of London Wool Brokers was fixing up the programme for the stockpile's May offering and some of the wool not now to be sold was on its way to London from the North.

The inference must be that the Board of Trade has discovered a desire to appease the New Zealand trade mission shortly expected in this country. It has not necessarily been much influenced by the fact that sales at current prices almost certainly involve a small loss. The British stockpile originally of about 500,000 bales has been sold at the rate of about 100,000 bales a year down to an estimated figure of about 350,000 bales. The influence on world prices of releases of that order must be marginal.

BUILDING CONTRACTS

Tendering at Firm Prices

THE Ministry of Works could hardly have chosen a more opportune time than the end of April last year to try to get the building industry back on to its prewar practice of firm price tendering. Soon afterwards, the rate of constructional activity began to slow down, and pressure on the industry's costs also lessened. And this change in the climate of trade both in the building industry itself and in the supply of building materials has certainly made it easier and more advantageous for builders to submit firm prices for contracts.

For a year from May, 1956, the Ministry tried out the idea as an experiment with selected contracts costing less than £100,000 and with one—for a large office block in Manchester—that cost more. But since May last year government building contracts of all values "thoroughly planned in advance" and due for completion within two years—the two conditions the Ministry conceded to the industry—have been let at prices that only variations in the design or extra work could cause to be changed. Local authorities and the nationalised industries were encouraged to follow suit. By last January as many as 37 per cent of the new houses and flats in contracts approved by the Ministry of Housing for England and Wales were let on firm price contracts. This is progress indeed: as recently as June last year the proportion was only 3 per cent, and the current figure probably covers about £100 million of new work a year. In road construction, where more machinery and fewer materials are used, the contractor has even greater chance of making money by putting in a good performance on a firm price contract; the £15 million contract for the Birmingham motorway is one recently let on the new basis. Educational building work—the other main form of governmental construction—has been a little slow to switch over since many contracts were already in the pipeline. The power station programme and railway modernisation, among nationalised industry contracting, are somewhat special in the nature of the work involved, and may also consist largely of contracts extending beyond the present concessionary limit of two years. But if all public sector building work that qualifies were let on the new basis then perhaps a third of all new construction would be on firm prices, say £500 million or more a year.

How far the practice has begun to spread among work done for private clients is somewhat obscure. But the advantages should be apparent to the industry and to the owner. The latter may get his building more cheaply and more quickly; and the contractor should be able to get the client—and his architect—more readily to make up his mind on the detailed design at the outset and keep to it, which in turn should allow him to plan his own operations and the contributions of the sub-contractors more effectively. That objective, allowing keener attention to costs, particularly in any future period of over-load on the industry, is in everyone's interest. Encouraged by present progress, the Ministry of Works may well decide to start pressing its recommendations home more insistently.

BANK NOTES

The Tourist Market

FOREIGN exchange rates quoted in *The Economist* and in other papers are telegraphic transfer rates. They are, broadly, the rates at which commercial transactions are settled by the change of ownership of bank balances. Frequently inquiries from readers suggest surprise because the rates at which the travelling public can buy and sell foreign bank notes differ from the telegraphic transfer rates. Such differences were narrowed recently when the British Government withdrew the prohibition on the importation of sterling bank notes into this country. But some other countries still maintain rules about the amount of their own bank notes that the travellers can take in or out and the price of their bank notes in international markets reflects these rules.

	Telegraphic Transfer Rate		Wholesale Bank Note Rate	
	Buyers	Sellers	Buyers	Sellers
Austria	72·71	72·75	72·40	72·80
Belgium	139·65	139·70	139⅛	139⅝
France	1,182	1,182½	1,251	1,254
Germany	11·74⅛	11·75	11·72	11·77
Italy	1,745½	1,746	1,735	1,743
Norway	20·01	20·01½	19·94	20·05
Spain	117·4*		147½	148
Switzerland	12·25⅜	12·25⅞	12·18	12·22

* Fixed rate.

The accompanying table sets out the rates for bank notes quoted by a London merchant bank specialising in this business, and compares them with the telegraphic transfer rates. The individual traveller naturally will make his arrangements not with a wholesaler but with his own clearing bank and the rates he will pay will have to cover the

bank's risk in holding a stock of notes and its commission. As an example, the joint stock banks have recently been quoting French franc notes in small quantities at around 1,245-1,270 to the £.

SHORTER NOTES

The Shell Company of Palestine, which distributes about 40 per cent of the 1,300,000 tons of petroleum products consumed annually in Israel, has been sold by its joint owners, Royal Dutch-Shell and BP, to a group of investors headed by Mr Isaac Wolfson. The company's assets in Israel, which include a storage installation at Haifa, bulk oil depots at Tel Aviv, Jerusalem and Beersheba and about fifty service and filling stations, together with road tank wagons, have a book value of about £4,250,000, but may have been sold for less. Haifa refinery, which is also owned jointly by Royal Dutch-Shell and BP, is not included in the deal, but Mr Wolfson has no doubt received assurances about his future oil supplies.

* * *

Investment in new road construction and major improvements, as provided in the Civil Estimates, is expected to rise by £15 million to £42 million in the new financial year. With local authority contributions this will probably bring total road investment up from not quite £40 million this year to nearly £55 million. £10 million of this increase will go on the Birmingham motorway and the new Thames tunnel. Authorisations next year will be £37 million higher at £106 million, which will leave the government committed to spending a further £178 million by this time 1959.

* * *

Mr Arthur John Whitehead, head of the Whitehead Industrial Trust and four others have been charged on a warrant which refers to Boundia Securities Limited, as well as to the Whitehead Industrial Trust, alleging a conspiracy to defraud such persons as might be induced to purchase the shares of Tati Goldfields and Sage Oil Company.

* * *

Returns collated by the UK Chamber of Shipping show that 182 ships totalling nearly 1 million gross tons were laid up in UK ports on March 1st. A further half million tons were awaiting or undergoing repair. British ships laid up totalled 611,000 tons (120,000 tons more than on February 1st) and included 254,000 tons of tankers; foreign ships laid up rose by 70,000 tons to 357,000 tons, of which only 21,000 tons were tankers. British ports probably contain only about a fifth of the total tonnage now laid up throughout the world.

* * *

Monthly instalment contributions in the savings plan of the unit trust, Domestic Investment Trust Second Series, can now be made over the counters of the branches of the Midland Bank in England and Wales.

COMPANY AFFAIRS

UNION ACCEPTANCES

THE late Sir Ernest Oppenheimer saw that South Africa needed to develop a money market of its own—a necessary corollary of the need to generate locally a larger part of the capital that its mines and industries (including the Anglo American group) use. Union Acceptances was his instrument, initially a combined issuing house, acceptance house and discount company. It was followed by Union Acceptances (Zurich) to tap Swiss capital; then by Rhodesian Acceptances to help along with others in the development of a money market in the Rhodesias; and more recently by the Discount House of South Africa, which separated the bill-carrying from the acceptance functions.

The second balance sheet of Union Acceptances and the speech of Mr Harry Oppenheimer show how much of his father's dream has been accomplished, and what still remains to be done. The business has expanded; net profits have risen from £50,607 in 1956 to £116,744 in 1957, the issued capital from £500,000 to £1 million and the balance sheet total from £6.6 million to £11.2 million. Nothing has yet been taken out in dividend. The big balance sheet change, compared with 1956, is that on the formation of the discount house, Union Acceptances has ceased to hold its own accepted paper. So while acceptances are up from £3.3 million to £7.5 million, holdings of bills are down from £1.9 million to a mere £94,000 of commercial bills and £100,000 of Treasury bills. Cash is up from £343,000 to nearly £2 million.

To make a discount market work Mr Oppenheimer wants the South African Government to issue tender Treasury bills, the price of which would fluctuate with market conditions. He can now argue that the new Rhodesian Central Bank, which operates in a much less fully developed financial environment, has agreed to do so. Union Acceptances perforce had to build up an information and investment management service to support its own duties and this, it finds, can be turned to other uses. For some time it has been offering a financial advisory service, and now it is ready to manage an investment trust. Mr Oppenheimer discloses that he has been attracted by the idea of an open-ended trust, but finds legal and other difficulties still to be overcome. Meanwhile an orthodox investment trust—First Union General Investment Trust—has been established with a wide industrial spread. Its shares are held by large institutions in South Africa and overseas and it is intended later to give them a wider distribution.

REYROLLE

THE preliminary statement of Reyrolle, the electrical manufacturers specialising in switchgear, is skimpy in detail but reasonably satisfactory in content. The group's profits, which had fallen sharply in 1956, made a slight recovery last year though not sufficient to bring them back to their 1955 level. Profits before tax rose last year from £2,563,273 to £2,762,274, and profits after tax from £1,253,920 to £1,353,036. On the ordinary capital as increased to £4,579,411 by the rights issue in December, 1956, the dividend is maintained at 17½ per cent.

Cold Wind for Unilever

THE investor in Unilever is tied to the housewife's apron strings. Whether she is black, brown or white it is the way she spends her francs, rupees or shillings that govern the size of the earnings and dividends of the Unilever diarchy. In holding Unilever ordinary stock the investor has to strike a balance between the prospective advantages that will accrue from the secular growth of trade as living standards improve and the immediate threat that a trade recession will temporarily interrupt that growth. The investors' choice still seems to be tilted towards long term growth, for on the maintained ordinary dividend of 17½ per cent the shares of Limited yield nearly 4¾ per cent.

This comfortable view of the long term future is supported by the fact that the dividends are covered about four times by earnings. The directors of Unilever are prepared to take long views too: they spent £42 million on fixed assets last year and another £38 million is listed against capital projects. With equanimity they contemplate a fall in liquid resources from the "unusually high" figure of £47.7 million to £22 million with the remark that resources are expected "to be sufficient to meet requirements in 1958."

But it is clear that the rate of growth of earnings has been checked. That is apparent from the fall in net profit margins on turnover from 2.9 per cent to 2.4 per cent and on capital employed from 10.2 to 8.2 per cent last year. The economists of Unilever estimate that world industrial production increased last year by less than 2 per cent, that this small increase occurred almost entirely in the first half of the year and that "the expansion of international trade had clearly been checked." In such circumstances, an increase of 3 per cent in the money value of turnover from £1,671 million to £1,720 million may be considered more as a cause for congratulation than despondency. In the United Africa Group, where the fall in commodity prices had an immediate effect on money incomes, sales increased by only 1½ per cent to £295 million.

Bigger sales of the group as a whole, however, earned smaller profits. Trading profits fell from £99 million to £85¼ million. In keeping with the detailed frankness of the Unilever reports, the directors list the causes of this decline in profits. At the beginning of the year it was "more than usually difficult"—which may be a roundabout way of describing consumers' resistance—to adjust the price of margarine and edible fats to match the steep rise in raw material prices at the end of 1956. Abundant supplies of cheap butter checked the expansion of sales of margarine and actually led to a fall in the Netherlands and Germany—a fact which helps to explain why NV's profits fell more steeply than Limited's. In the face of this competition, selling prices had to be reduced later in the year. In animal feeding stuffs, selling prices had to follow the fall in commodity prices and margins were reduced by the "combination of this price movement and the higher cost of raw materials acquired earlier." Moreover, in Europe the demand for animal feeding stuffs was reduced by the unusually mild winter.

The devaluation of the French franc and the exclusion of earnings in Indonesia from the 1957 reckoning make their own contribution to the decline in profits (notably in the NV accounts). But the directors set down the principal reason thus: "Although turnover increased in most of the main commodity groups intensified competition meant that this could only be achieved by an increase of advertising and other expenses." Of soaps and detergents the directors report "total sales continued to rise, though profits were lower"; soapless detergents made "further substantial progress in almost every country," but sales of soap products fell slightly. Unilever's total sales of soaps and detergents were lower in the British market; and in this country Unilever products more than held their own in a shrinking market for synthetic powders, but "Persil" failed "to continue its record breaking progress" in an appreciably bigger market for soap powders.

All this is a reckoning of the past. But it is also a pointer to the immediate future. Trade has shrunk; competition may be even sharper than it was last year; and margins may suffer. And it is notable that the emphasis in capital projects has been tilted towards food (other than margarine and fats) where sales have been expanding and where profits have been holding up. The outlook, on which the directors make no comment, would thus seem to be that the diarchy will find it difficult to secure bigger sales and even more difficult to do more than to earn recent margins of profits upon them. This is a cold wind, but it would take a hurricane in world trade winds to topple this giant from its secure pedestal.

SWAN, HUNTER

INVESTORS were given an inkling that the Tyneside shipbuilders, Swan, Hunter, and Wigham Richardson, might be adopting a more generous dividend policy last July when the directors raised the interim payment from 3 per cent to 5 per cent. So in front of the final dividend announcement the price of the £1 ordinary stock was moving up. The guess was right; the final payment is up from 11 to 13 per cent, making a total dividend of 18 per cent, against 14 per cent. On the new dividend the £1 stock at 57s. 3d. yields 6.3 per cent.

Such a decision could hardly have been taken unless the directors were happy about the order book and the current trend of profits, especially as the dividend relates to a year when gross profits actually fell from £3,398,860 to £3,054,757, but these figures are struck after an unspecified (and presumably higher) charge for depreciation. Moreover, variations in shipbuilding profits are often connected with the uneven completion of contracts. After tax, net profits have risen slightly—from £1,482,952 to £1,493,663—and the new dividend is covered more than three and a half times by earnings.

GLAXO LABORATORIES

BIG profit retentions are needed by pharmaceutical manufacturers to cover the costs of continuing research and development. The big earnings cover of Glaxo Laboratories seems to have hypnotised investors, and the dividend yield on the stock has remained low, but dividends on the 10s. units have gradually been raised. This year's payment may be raised again, for the interim has been increased from 5 to 6¼ per cent, which undoubtedly has raised hopes that the total payment for the year to June 30th next will be more than 12½ per cent paid for 1956-57.

Certainly the market was pleased with the interim and with the half-yearly results supporting it. The 10s. units were marked up from 35s. to 36s. 9d. Turnover has risen and profit margins have widened. In the six months to December 31st turnover was 24 per cent higher than in the same period of 1956 and 5 per cent higher than in the first six months of last year. Trading profits at £2,509,000 were nearly 57 per cent higher than in the last six months of 1956 (when they were £1,601,000) and about 9½ per cent higher than the £2,289,000 earned in the first six months of 1957. These figures suggest that the rate of growth has slowed down and the directors warn shareholders that "whilst profitability before taxation has been more than maintained . . . it is not to be inferred that a further improvement will be possible during the current half year. Conditions in a number of overseas markets are difficult, and restrictions on importations have been imposed in certain instances."

PRESSED STEEL

THROGMORTON STREET had naturally expected some recovery in the profits and dividend of Pressed Steel, whose fortunes are tied closely to the motor industry, though it makes refrigerators and railway wagons as well as motor bodies. Satisfaction with the results actually achieved last year was reflected in the rise of 7½d. to 15s. 4½d. in the price of 5s. ordinary stock and of 3 points to 107½ in the 5½ per cent convertible debenture, which provides the option to convert into ordinary stock from June 1st this year. On the issue price of £100 the conversion option is equivalent to 14s. 3d. for the ordinary stock when it starts on June 1st this year and to 15s. 7½d. on its final date of June 1, 1961.

Pressed Steel's net profits after tax rose from £951,682 to £1,527,121 in 1957 and its gross profits before tax from £2,190,160 to £3,508,051. The total ordinary dividend has been raised from 15 per cent, to which it was cut in 1956, to 20 per cent, but the rate is still lower than in 1954 and 1955 when 22½ per cent was paid. Earnings appeared to justify the complete restoration of the dividend but the directors have not thought it wise to go the whole way.

London Stock Exchange

FIRST DEALINGS:	Mar. 12	Mar. 26	April 16
LAST DEALINGS:	Mar. 25	April 15	April 29
ACCOUNT DAY:	April 1	April 22	May 6

THE fall in the Treasury bill rate, expected though it was, helped to keep gilt-edged prices moving upwards, just as the announcement of Corporation issues at 5¼ per cent (expected though this break with 6 per cent was) did. Throughout the list of Government stocks prices moved up, especially on Tuesday in anticipation of the gold and dollar figures when a strong demand, which embraced those dates which fit the requirements of the banks, developed. In the four days to Tuesday's close War Loan rose from 64⅞ to 65⅞, 3 per cent Transport (1978-88) from 63⅛ to 64⅛, and 3 per cent Saving (1955-65) from 86⅛ to 86¼. And the new Belfast stock established a premium of ⅛.

The gains in gilt-edged prices were not made at the expense of industrial equities. Their prices in a narrow market made modest gains, with *The Economist* indicator rising from 176.0 to 179.4 in the four days to Tuesday's close. Industrial prices were particularly stimulated by good company results; after the dividend announcement, for instance, ICI gained 3s. to 43s. 9d. and then held this gain in active dealings. Selective buying included building and constructional shares, under the lead of Richard Costain after that company announced a bigger dividend. One of the biggest rises was that recorded in the stores group by William Whiteley, which in four days rose from 20s. 10½d. to 27s. 6d.

The market in oil shares remained quiet, with prices moving erratically within narrow limits, but Ultramar went ahead. Kaffir shares after the week-end were firm, notably the Free State issues. Rubber and tea shares held earlier gains in a quiet market. Among the metal issues, copper shares moved up on the improvement in the price of copper.

(4) Annual figures are total for the fiscal year ended June 30th. (5) Figure for third quarter. (6) Bonds due or callable from 10 to 20 years.

Financial Statistics

EXCHEQUER RETURNS

For the nine days ended March 31, 1958, there was an "above-line" deficit (after allowing for Sinking Funds) of £29,440,000 compared with a deficit of £1,705,000 in the previous week and a deficit of £54,204,000 in the corresponding period of last year. There was a net receipt "below-line" of £5,843,000, bringing the total deficit for the financial year to £211,563,000 (£331,354,000 in 1956-57).

THE MONEY MARKET

THE Treasury bill rate fell modestly at the tender on Friday of last week, following its decline of 7/8 per cent on the morrow of the 1 per cent reduction in Bank rate. The discount houses raised their common bid by 3d. to £98 12s. 5d. per cent, marking a reduction in their discount rate of 1s. per cent. Bids by outside applicants appear to have been rather more conservative, as the average rate of discount on the whole allotment fell by only 8d. to £5 10s. 5.54d. per cent. Accordingly, despite the increase in total applications by £23.6 million to £422.8 million, for an unchanged allotment of £260 million, the proportionate allotment at the minimum bid fell only slightly, from 55 to 52 per cent. At Thursday's tender, the allotment was again unchanged.

Credit has continued to be in short supply in Lombard Street. On Thursday before the week-end, conditions were very stringent and despite very large special help one or two houses found themselves "in" the Bank at 6 per cent, for a small amount. Moderate special help was given on Friday and small help on the following day; on Monday, when there was calling associated with the end of the fiscal year, one or two houses had to make penal borrowing despite very large official purchases, as they did also on Tuesday, despite moderate special help.

Hence rates on floating money have been kept up, reaching 5¼ and 5⅝ per cent, and dealings in June maturities have taken place at 5 7/16 and 5 1/2 per cent.

COMPANY MEETINGS

THE BRITISH OIL AND CAKE MILLS LIMITED

HIGHLY COMPETITIVE EXPORT TRADE IN OILS

INTRODUCTION OF NEW COMPOUND PRODUCTS

EXPANSION AND MODERNISATION OF ANIMAL FEEDING STUFFS PLANTS

MR GUY CHIPPERFIELD'S REVIEW

The Annual General Meeting of The British Oil and Cake Mills Limited will be held on April 23rd at Unilever House, Blackfriars, London, E.C.4.

The following is the review by the Chairman, Mr G. Chipperfield, CBE, which has been circulated with the Report and Accounts for the year ended December 31, 1957.

SEED CRUSHING AND EDIBLE AND TECHNICAL OILS

During 1957 the throughput of our seed crushing mills was at a somewhat lower level than during the previous year and there was some change in the nature of the seeds processed. The demand for liquid oils was lower in the face of reduced requirements on the part of some of the edible trades which we supply, and another important factor was the persistently depressed condition of the cake and meal market throughout the year. Obviously, the prosperity of the seed crushing business is closely linked with the feeding stuffs market and, if cake prices fall, then to remain profitable, crushers must either look for lower seed prices or higher prices for the oil produced. The year 1957 was almost winterless so far as animal feeding conditions were concerned, both in this country and in Western Europe, and, bearing in mind the relative production of cake and oil, there was a tendency for crushers to favour the processing of a greater proportion of high-oil-yielding seeds than might otherwise have been the case.

Except for the continuance of disturbed conditions in the Middle East and North Africa throughout the year and the troubles in Indonesia towards its close, 1957 saw no political or military crisis of great significance. Certainly markets were not affected to such a violent extent as was the case with the crises of Korea in 1950/53 and Suez in 1956. Particularly in the case of groundnuts, which at one time were hard to obtain, the latter event precipitated a high level of prices at the commencement of 1957 and, to illustrate the hazards which the seed crusher has to face, it may be of interest to record briefly some of the movements in prices which took place during the course of the year:

PRICES OF CRUDE/RAW OILS
(Per ton, naked ex mills)

	Dec. 31, 1956 £	Mar. 31, 1957 £	June 30, 1957 £	Sept. 30, 1957 £	Dec. 31, 1957 £
Liquid Oils					
Groundnut oil.....	170	140	123	128	126
Cotton oil (washed).	166	140	124	126	126
Soya bean oil.....	144	126	115	117	115
Consistent Oils					
Palm kernel oil.....	97	90	95	95	104
Coconut oil.....	101	96	97	95	107
Drying Oils					
Linseed oil.....	150	121	103	105	116

A noteworthy feature is that, whereas consistent oils showed relatively little difference in price at the end of the year compared with those ruling at the beginning, liquid oil prices showed an appreciable reduction, which in the case of groundnut amounted to more than 25 per cent. One reason for this tendency is, of course, that world production of palm kernels and copra has not progressed to the same extent as that of the other seeds referred to, because planting cannot be quickly developed as is possible in the case of annual crops such as groundnuts and soya beans. Moreover, the production of olive oil was at a higher level in 1957, and this led to reduced demand by Mediterranean countries for other liquid oils. The principal drying oil (linseed) also finished the year more than 20 per cent lower in price than at the commencement, after touching an even lower figure about the middle of the year, there being a considerable increase in supplies of seed from Canada and the United States.

The supply of oilseeds is subject to many varied factors which may operate against normal economic trends. For instance, the export policy of certain countries (e.g., India and the Argentine) can unsettle world markets through supplies in large volume suddenly becoming available or appearing likely to become available as a result of political planning or the incidence of export quotas. Likewise the application of artificial price levels, such as occurs in France and Italy, or the operation of a Farm Support price policy as in the USA, can play their part in disrupting the normal interplay of market influences.

The tonnages of vegetable oils produced in our mills—much of which we refine or harden—are sold both to the edible trades and to the technical industries in their many categories, and, generally speaking, our 1957 deliveries in total were well maintained in comparison with previous years, although, in the case of the Margarine and Compound Cooking Fat industries, where demand was affected by competition from subsidised imports of butter and lard at low prices, there was a slight reduction. As regards profit margins, it will be readily understood from the statistics quoted that conditions made it difficult to maintain them on a basis which we regard as reasonable in relation to the capital employed.

The export trade in oils continues to be highly competitive. We sell our products in some sixty overseas markets and we aim to increase this trade by supplying oils of a consistently high standard of quality, as well as giving attention to quicker delivery and efficient service. A point we have to bear in mind is the tendency for the export trade to change in the light of the fact that other countries are processing seeds locally to an increasing extent and thereby providing additional sources of competition to us. We must seek to keep our costs down to a minimum.

MORE DIFFICULT CONDITIONS IN THE COMPOUND FEEDING STUFFS TRADE

In the face of difficult market conditions, profit margins in our animal feeding stuffs business were lower than in the previous year, in fact we barely obtained an adequate return on the capital employed. The tonnage was rather lower than that of 1956, the latter part of which was weighted by the exceptional demand caused by the Suez crisis, but it was appreciably higher than that of 1955.

The effect of Suez was to raise freights and ingredient prices to the highest level since decontrol, but they began to ease in the spring and thereafter the downward trend continued practically unbroken through the year.

Whilst on the subject of prices, it is interesting to note that, compared with those ruling for compounds in August, 1953, when feeding stuffs were decontrolled, our prices have fallen by more than £4 a ton in the case of dairy feeds and between £6 and £7 in the case of pig and poultry feeds, even though wages and salaries rose by 30 per cent during the intervening period and the cost of fuel and transport and other services increased correspondingly.

Falling ingredient prices favoured the small manufacturer able to manage with local supplies as compared with the larger processors like ourselves who shoulder the financial responsibilities of the considerable cover in imported ingredients which is essential to fill the deficiency in feed requirements for livestock which are not obtainable in this country. Naturally the first priority in our buying policy is to make the maximum use of available home-grown supplies; in fact during the present crop year we have already bought more home-grown cereals than last year, when we used 280,000 tons.

Questions have been asked in Parliament and elsewhere about the relative percentages of home-grown and imported materials used in compounded feeding stuffs. Assuming, as I suppose we can, that all home-grown cereals, etc., are used and that relatively none is wasted, obviously the percentage of imported materials used simply reflects the deficiency not obtainable at home. In this country's economy, the compounding of livestock feeds is especially in the national interest because we cannot produce high energy ingredients here in anything like the required volume, and there is an over-riding need to keep the cost of food produced on the farm to a minimum. The appreciable increase in the production of food on our farms which has been welcomed both by the Minister of Agriculture and by the President of the National Farmers' Union, has been

made possible by improved breeding and management and by sound scientific methods of feeding, and in this the proper blending of imported and home-produced ingredients has played a vital part. It has also made possible a 30 per cent reduction in imported feeding stuffs compared with prewar.

The campaign for "self-sufficiency" and a reduction in imports of feeding stuffs has continued. However, it is often dangerous to generalise on the subject of animal nutrition in a country where conditions of soil may vary almost from farm to farm and where climatic conditions are unpredictable: but one can certainly state, as a maxim, that all producers, whether of industrial or agricultural products, should aim to make the maximum economic use of raw materials or ingredients obtainable from home sources. The keyword is, however, "economic" and the guiding principle increasing productivity. In the case of imported feeding stuffs, I think it unsound to regard them in isolation without considering at the same time imports of meat and other food products which could be replaced by those produced at home, and to consider as well exports to those countries which sell feeding stuffs or farm products to us. In any case, it must be clear that any short-sighted attempt to economise by improvising feeds or cutting down on essential ingredients will fail to show any true economy, and that the true test must be the cost per gallon of milk of requisite quality or per pound of meat or per egg and not the initial cost per ton of the feed. It is often overlooked that, in a scramble to cut expenses, apparent economies made in the feeding stuffs bill are useless if they result in a fall in productivity... The same applies to money put into feed processing equipment on which apparent savings are submerged by a variety of costs of installation, operation and maintenance, as well as by loss of revenue as a result of lower yields of end products. There is such a thing as being a penny wise and a pound foolish. The real interest of the farmer lies surely in the direction of greater productivity per acre and per head of livestock and not in dissipating his capital, his time and his energy in undertaking a variety of specialist tasks which are best left to ancillary industries equipped for the purpose.

THE INTRODUCTION OF NEW PRODUCTS

Almost every year since feeding stuffs were decontrolled, our Company has launched one or more new compound products that have exerted a considerable and beneficial influence on farming economy. Thus, "Sowlac," the first sow milk substitute to be produced, has been instrumental in appreciably raising the productivity of the pig industry by the early weaning technique of which our Company were the pioneers. In a similar context the early weaning of calves was first introduced on a practical scale by the launching of "Calfwena" in 1956. This food, now one of the most popular of the Company's specialist products, has afforded considerable economic benefits in the saving of labour and time in the rearing of calves for both milk and beef, apart from its many nutritional advantages. To meet the needs of pig farmers in areas where large quantities of cereals are available, the Company introduced "Cerecon," and towards the end of last year "Dairicon" was launched as a balancer concentrate for use with cereals for the dairy and beef farmer. We also introduced "Broiler Feed 3-8-8," the highest energy ration yet produced for the broiler industry, designed, as its numerical suffix indicates, to produce a 3 lb. bird in 8 weeks on 8 lbs. of feed.

INCREASED IMPORTS OF FEEDING STUFFS FOR BROILERS MAY BE NEEDED

Although the production of broilers in this country—20 million in 1957—is at present relatively insignificant compared with that of the USA, where it is over 1,300 million a year, there is undoubtedly room for considerable expansion, particularly as more and more centres become better equipped for the marketing of frozen poultry in an attractive form at reasonable consumer prices. The British Broiler Industry is faced with considerable problems, not only by way of production and housing difficulties, but also in training the skilled staffs required to rear large quantities of birds satisfactorily to killing weight. We wish them all success and are ready to play our part in the economical provision of feeding stuffs which will help development of the broiler trade at popular prices.

The distributive trades, whether butchers, provision merchants, chain or self-service stores, seem confident that there is considerable scope for expansion in the broiler trade, which should make rapid strides as processing and distribution facilities enable wider sections of the community to enjoy chicken meat at popular prices. This healthy tendency, which can provide an important new outlet for greater productivity on our farms, will in due course mean an increasing need for imported feeding stuffs, and, undoubtedly, there is an advantage to this country in that purchases of requirements of grain in excess of home supplies from our Commonwealth friends enable them to increase their purchases of our manufactured goods. Moreover, in encouraging the overall productivity of our farms in this way, we retain overheads and profits here instead of paying them to foreign producers.

Contrasted with 1952, when 25 per cent of eggs for home consumption were imported, the figure for 1956 was already 6.72 per cent and in 1957 the country was virtually self-sufficient, home production accounting for about 98.8 per cent of all commercial supplies. This automatically means that any further increase can result in an egg surplus unless housewives can be influenced to purchase them more freely and no doubt one of the tasks of the newly formed British Egg Marketing Board will be to undertake virile marketing propaganda to this end.

FIELD WORK

The annual BOCM Milk Yield Competition, the 19th of which was held last year, continues to emphasise the more important economic aspects of dairy farming. In figuring costs of milk production, it is easy to overlook the fact that, regardless of yield, every cow costs at least £50 a year to maintain before she delivers a gallon of milk, and these inescapable overheads have to be charged to each gallon of milk she eventually yields. Thus, at the average yield of 720 gallons per animal for all recorded herds in England and Wales, a minimum of 1s. 4½d. has to be borne on every gallon produced to meet the initial overhead of £50. In comparison, the animals entered in the BOCM Milk Yield Competition averaged 1,087 gallons per cow and the commensurate overhead charge was therefore reduced to 11d. a gallon, or a saving of nearly 6d. a gallon through the proper use of concentrates.

It is gratifying to note that the Company's pioneer work on Pig Progeny Testing has paved the way to a wide extension officially of this important contribution to improved bacon production. By the end of this year five Government controlled Progeny Testing Stations will be in operation and, in view of this, we are discontinuing our own Tests. We shall now concentrate on other practical aspects of bacon and pork production.

Our Bull Progeny Tests, which have provided much useful data to milk producers, continue to operate at Barlby in Yorkshire and South Cathkin near Glasgow; Dairy Shorthorns are at present under test at Barlby and they will be followed by Guernseys and some 60 Friesian calves, purchased at week old, which are now being reared at Barlby to form the nucleus of our 1959/1960 Test. This will be another pioneer effort, in that the animals taking part will all have been reared under standardised conditions almost from birth, and it could produce results of considerable interest. The Ayrshire breed continue to be tested at our Scottish Station.

In conjunction with the Breed Societies concerned and the Fatstock Marketing Corporation we are now undertaking further pioneer work in connection with Sire Performance Testing of bulls for beef. Together with a representative of the Fatstock Marketing Corporation, Mr J. C. Leslie, the Company's Chief Agricultural Adviser, paid a visit recently to the United States and Canada with the object of studying the latest methods practised in those countries. Special housing and equipment have been installed at our Barlby Station for the purpose and arrangements are being made to test the Aberdeen Angus and the Beef Shorthorn breeds with the co-operation of the Breed Societies concerned. The aims are to provide records which may help towards improving genetically the weight for age of commercial fatstock, to improve genetically their carcase quality and to help provide sires proven by test and whose progeny have the highest daily live weight gain and, when slaughtered, the best carcase quality.

Three new productions were added in 1957 to our catalogue of Advisory Films. The first, "Artificial Insemination in Chickens and Turkeys," was made in collaboration with the Poultry Research Station, Houghton, and was among the films selected to represent British scientific film achievement at the International Congress of Scientific Films in Amsterdam last September. The second, "Quality Milk." deals with problems of the fatty and non-fatty solid content of milk and has a timely importance in the light of the stress which is now being placed on these factors in the economy of milk production. Released in November, 1957, it has already proved to be one of the most popular ever made by the Company. The third in our current series is titled "Modern Turkey Production" and presents the year-round activities of Hoppers Farm, High Wycombe, one of the largest turkey farms of its kind, with an annual output of 60,000 birds, all of which are fed on the Company's products.

ACCOUNTS

As already indicated, the profits from our animal feeding stuffs trade were lower in 1957. On the one hand, production and selling costs continued to rise, on the other, there was some diminution in deliveries, due to the abnormal off-take towards the end of 1956 and the exceptionally mild season in 1957. Besides this, we had to meet the impact of falling raw material markets. Although our sales of edible oils were maintained, profits were disappointing, largely because of the sharp fall in the price of groundnut oil, to which I have already drawn attention. Our business in technical oils continued to show satisfactory profits.

Reference is made in the Directors' Report to the agreement which we entered into in 1945 for the pooling of profits with our Holding Company and other of its subsidiaries having interests in the seed crushing and ancillary industries. As we mention in the Report, this agreement was of considerable value to your Company in facilitating the reorganisation and development of its business in the years following the last war, but we felt that it had now served its purpose and that it could be terminated without any loss of the advantages which result from the Company's relationship with its Holding Company and its fellow subsidiaries.

Therefore, as mentioned in the Report, the agreement was terminated with effect from January 1, 1957. I would like to make it clear that the interests of the preference and preferred ordinary shareholders have not in any way been prejudiced nor their rights and privileges in any way lessened by this rearrangement.

The profit for the year, before taxation, was £2,880,462. After providing for taxation of £1,417,000 on these profits and including released provisions of £13,321 for taxation of previous years, there remained a surplus of £1,476,783 of which dividends will take £682,591, leaving £794,192 retained in the business.

Turning to the Balance Sheet, capital expenditure at £1,760,000 was again heavy in 1957 and was mainly devoted to our programme of extension and modernisation of our compound plants, now nearing completion.

Due to lower raw material and selling prices, the amount tied up in stock and debtors fell from £17,942,000 at December 31, 1956, to £16,468,000 at December 31, 1957.

We have arranged to co-operate with three other animal feeding stuffs manufacturers, who are at present shipping their products from England or Scotland to Northern Ireland, in building a mill at Belfast. The trade investment of £46,500 represents our subscription for shares in Associated Feed Manufacturers Limited, which has been incorporated in Northern Ireland to own and run this mill. A site has been acquired on which work has begun, and we have been deputed by the other participants to undertake the erection of the plant. As the name implies, Associated Feed Manufacturers Limited will undertake only the manufacturing operations for the participants, whose independent marketing arrangements will not be affected.

TECHNICAL DEVELOPMENTS

The expansion and modernisation of our animal feeding stuffs plants is nearing completion. However, as in any other live and progressive industry, technical improvements which cheapen our products or enhance their quality continue to be made and are being incorporated in our manufacturing processes. For instance, attention has been increasingly directed towards the growing importance of the accurate inclusion of small quantities of vital ingredients which are associated with modern high performance feeding stuffs. This, coupled with the mounting complexity of our manufactures to satisfy the demands of our customers, has led us to plan the installation at our Avonmouth Mill of a completely automatic punched card operated plant for the proportioning and correct addition of some 30 separate trace ingredients. This plant would be among the most advanced of its kind in the world.

In the field of technical and drying oils, we have completed the installation of an Alfa-Laval hermetic pressure degumming plant in our Greenock Refinery for the production of crude linseed oil of the highest quality.

Our oil refinery at Hull, which was in the process of modernisation, was badly damaged by fire early in the year but, as a result of commendable effort on the part of our local management and staff, the ravages of the fire were made good and renovations completed by the end of the year.

We have continued to develop the scope of our research activities in all the fields in which we operate for the improvement of our existing products and the search for new ones. Apart from the new feeding stuffs products to which I have already referred, our Development Laboratory and factory scale pilot plant at Erith, which came into operation during 1956, have provided us with the first batches of our new "Trokene" products —a new class of film-forming materials which has recently been developed by us and which we believe may in due course prove to be of great interest to many customers by opening up a number of possible applications.

TRIBUTE TO STAFF

In conclusion, I want to pay a high tribute to the loyalty and efficiency of the Company's employees at every level and in every category, which have stood us in good stead throughout a somewhat difficult year. This was notably so during the periods when the 'flu epidemic hit various parts of the country and all concerned put in hours of extra work to keep the wheels turning normally.

THE WINTERBOTTOM BOOK CLOTH COMPANY, LIMITED

STATEMENT BY MR MARK BRICKHILL

The sixty-sixth annual general meeting of The Winterbottom Book Cloth Company, Limited, will be held at the Manchester Chamber of Commerce, Ship Canal House, King Street, Manchester, on April 22nd.

The following is the statement by the chairman, Mr Mark Brickhill, which has been circulated with the report and accounts for the year ended December 31, 1957:

Before proceeding to deal with the affairs of the company, I regret to report the death, on July 6, 1957, of Mr Elkanah Stott, a Director of the Parent Company and a Managing Director of Dawson, Payne & Elliott, Limited. Mr Stott had been a member of the Board for 11 years, and his death caused profound sorrow to his colleagues and to all who knew him.

FIXED ASSETS

The policy of expansion and modernisation which I have mentioned to you in previous years has continued during 1957, and the fixed assets of the Group before depreciation have increased by £454,998. This expansion programme has been financed without recourse to the Company's portfolio of quoted investments. It is the intention to continue this policy, and an amount of £184,000 is shown in the Notes on the Accounts as the capital commitments of the Group at December 31, 1957.

QUOTED INVESTMENTS

The book value of the Parent Company's quoted investments at December 31, 1957, stood at £2,074,311, from which should be deducted the Investment Reserve of £267,109 giving a net value of £1,807,202. Against this, the market value was £1,853,607 showing a surplus of £46,405.

Based on the market value at December 31, 1957, the approximate distribution of the investment portfolio was:

Fixed Interest Investments ...	35 per cent.
Equity Investments—United Kingdom	45 per cent.
Equity Investments—USA and Canada	20 per cent.
	100 per cent.

PROFITS AND DIVIDENDS

Although some of the Companies of the Group have reported increased profits for the year, others have been adversely affected by increased costs of materials and labour and more difficult trading conditions in foreign markets. As a result, profit margins have been reduced, particularly in our textile trades.

The Group Profit before Taxation has decreased from the 1956 figure of £1,166,850 to £918,237. The Group Profit after Taxation amounts to £360,515, and after allowing for Minority Interests and Subsidiary Company adjustments, the profit of the Parent Company is shown as £365,087.

Your Board has decided, in view of the results of the year, to recommend a final dividend on the Ordinary Stock of 11 per cent which, with an interim dividend of 4 per cent, makes a total of 15 per cent for the year.

RESERVES

The opportunity has been taken this year to consolidate some of the Parent Company's Reserves. The Special Reserve of £100,000 has been transferred to Group Plant Replacement and Development Reserve, which has also received an amount of £76,000 from Profit and Loss Account. After applying £16,000 in reducing the Investment in a Subsidiary Company, this Reserve stands at £900,000 in the books of the Parent Company.

The Stock, Debtors, Exchange and Contingencies Reserve of £93,069 has been transferred to Investment Reserve to which has also been added the net profit arising on realisation of investments, etc., of £1,438, making a total of £267,109.

In addition £50,000 has been appropriated from profits to General Reserve, bringing the total to £875,000 in the Parent Company.

GROUP ACTIVITIES

It is the intention of your Board to continue a policy of diversification in order that the success of the Company should not be dependent upon the trading conditions in any one industry. At the same time, I am sure that you will agree that our programme of modernisation of existing plants must continue so as to be in the position to take advantage of any improvement in trading conditions.

This year it has been possible to include the German Subsidiary Company, Bamberger Kalikofabrik AG, in the Group Accounts for the first time and the corresponding figures for 1956 have been adjusted accordingly.

Finally, may I express on behalf of your Board thanks and appreciation to the staff and workpeople of all our Group Companies both at home and abroad for their co-operation. I am pleased to report that the happiest relations continue to exist.

ASQUITH MACHINE TOOL CORPORATION

TAXATION NULLIFIES EXPANSION OF TURNOVER

GROUP'S SALES LARGER

INCREASE OF CAPITAL APPROVED

MR ROBERT W. ASQUITH'S REVIEW

The thirty-seventh annual general meeting of the Asquith Machine Tool Corporation, Limited, was held on March 31st at the registered office, Highroad Well, Halifax, Mr Robert W. Asquith, MIPE, chairman, presiding.

The following are extracts from the chairman's review circulated with the report and accounts for the year to September 30, 1957:

I am pleased to report the trading profit for the Group before taxation has increased from £666,375 to £699,569. However, as taxation demands have also increased from £332,700 to £373,720, the net profit attributable to the shareholders of the Corporation is reduced from £328,809 to £321,460. The payment of the dividend totalling 25 per cent and the bonus of 5 per cent on the ordinary shares of the company, if approved, will absorb £115,575, leaving a profit of £195,535 to add to the revenue reserves of the Holding Company and its Subsidiaries, which now total £1,054,190.

There is no point in my making any comment on the crippling load of taxation. This has been brought to the attention of the Chancellor by many different people from many different sources.

The depreciation charge has increased from £113,378 to £147,388, which in view of the expansion programme of the Group, is, of course, to be expected.

I consider the results satisfactory in view of the conditions obtaining during the year under review: however, I should point out that the Group's sales increased by 20 per cent, and the results, therefore, will indicate to you that profit margins were reduced during the year.

I am pleased to report that all your subsidiary companies operated at a profit during the year, and I comment on them individually as follows:

WILLIAM ASQUITH LIMITED

This Company again maintained a high volume of business, and the new Shrewsbury plant, for the first time, really contributed to this company's production.

The Company installed a number of major Transfer Lines in Automobile Plants, which did not show the ratio of profit one would normally expect, and in addition to the narrowing profit margins mentioned above, this has played some part in reducing the profitability of the overall turnover. However, the company has acquired valuable experience, and we are certainly now in a position to cater for the demands of those industries which look to automation to improve their productivity. I would also like to report that the Company's additional Design and Engineering Division, recently installed in the Birmingham Office of the Sales Company, has been, and will be, invaluable as far as these activities are concerned.

DRUMMOND BROTHERS LIMITED

This Company again had a satisfactory year. Although their backlog of orders at the end of the financial year was not as high as in previous years, this was due in no small degree to the upsets in the automobile industry, one of the Company's most important customers, arising out of the Suez crisis. However, I am pleased to report that prospects are more hopeful.

GEORGE SWIFT & SONS LIMITED AND SWIFT-SUMMERSKILL LIMITED

These Companies have made a substantial contribution to the Group's results, and their backlog at the end of the year was substantially longer than I like to contemplate. Plans are being developed for the provision of additional facilities, so that both George Swift & Sons Limited and Swift-Summerskill Limited will be in a position to give improved service to the engineering industry.

MODERN FOUNDRIES LIMITED

This Company has had a very satisfactory year, and it is the intention of the Board during the coming year to spend additional money with a view to improving its efficiency. I particularly refer to the intention to install a Hydro-Blast Plant, which will not only make more floor space available in the main Foundry, but will also improve considerably the working conditions.

ROTADOP LIMITED

As reported last year, this company has specialised more on engineering activities for the Group, and I am pleased to report that these have produced a very real benefit. Whilst the diamond polishing section of the company continues to be profitable, I think it would be correct to say that without the engineering activity, diamond polishing as such, in present conditions of the trade, would not be justified.

DRUMMOND-ASQUITH (SALES) LIMITED

The real benefit of this Company has now begun to be felt, in as much as selling is becoming every day a more important function of the engineering industry. I firmly believe that an efficient and live selling organisation is an essential prerequisite to manufacturing. In other words, the first operation in manufacturing organisations, however efficient they may be, is the "selling operation." I am convinced that the enthusiasm of your selling company is such that we should obtain our fair share of any business which is obtainable.

Your directors have constantly under review how the selling organisation can be used to the greater benefit of the Group as a whole.

ASSOCIATED MACHINE TOOL CORPORATION (USA)

This Company had a reasonably satisfactory year. It has been decided to move its headquarters from Pittsburg to Erie, Pennsylvania, as it was felt that certain economies could be obtained by shipping direct to this Great Lake Port.

During the course of the year, Davy and United Engineering Company Limited, a member of Indian Steelwork Construction Company Limited, who obtained the contract for the supply of one of the Steel plants at present being installed in India, entrusted to your Company the contracts for the supply and installation of all the machine tools for the Central Engineering Maintenance Department for this particular project at Durgapur.

INCREASE OF CAPITAL

During the last few years your Group has followed a policy of expansion, partly to broaden the range of its products and partly to increase its productive capacity in its traditional lines of manufacture.

The first stage of this development was at Shrewsbury to take advantage of the favourable labour situation in that area. I am glad to say that labour is now more readily available in Halifax and we now propose a major expansion of the Halifax plants of William Asquith Limited, Modern Foundries Limited and George Swift & Sons Limited.

In this connection, shareholders will receive a notice convening an Extraordinary General Meeting to be held immediately after the Annual General Meeting on March 31, 1958, to increase the Company's Ordinary Share Capital to £1,050,000. Subsequently your directors intend to raise further capital by offering 1,340,000 ordinary shares of 5s. each, to ordinary shareholders, in the proportion of one share for every two held, at a price to be announced later. Subject to no unforeseen changes in business conditions as they affect your Company, the directors are of the opinion that it will be possible to pay a total dividend of 25 per cent on the increased capital for the year ending September 30, 1958.

THE OUTLOOK

The expansion scheme is an important one and I am sure that you will want me to say something about our prospects for the future. As far as we can see 1958 should be another successful year but orders in hand in the industry generally are becoming less and competition is growing keener all the time. In the view of your Board, the best way that we can face this competition is to be constantly improving the designs we can make available to our customers and, at the same time, to broaden the range of equipment that we can offer them. I have already expressed my belief in your sales company and we are constantly adding to and improving our manufacturing facilities. We view the future therefore with the confidence that we shall obtain our full share of any business which is available.

It is in the light of this confidence, and having in mind the increasing benefits now arising from recent expansion, that your directors have felt justified in recommending a bonus for the past year.

The report and accounts were adopted.

At a subsequent extraordinary general meeting the proposed increase of capital was approved.

Another Record Year at

AMF

It is a pleasure to tell you that in 1957 American Machine & Foundry Company again established new records.

- **Sales and Rentals: $261,754,000, an increase of $63,696,000—32% over 1956.**
- **Net Income (after taxes and preferred dividends): $11,436,000, an increase of $2,815,000—33% over 1956**

AMF has paid dividends for thirty-one consecutive years. Dividends of 30¢ per share were paid on the common stock in each of the first three quarters of 1957. In the fourth quarter, the regular dividend was increased to 40¢ per share. At the year end, AMF stockholders numbered 21,213, an increase of 92% in five years.

Carter L. Burgess was elected President of AMF at the Board of Directors' meeting held February 4, 1958. His wide and varied experience in business and in the service of the Government will be of great value in matters of policy and administration.

I am entirely confident that AMF will continue to expand, to the benefit of its employees, customers and stockholders.

Morehead Patterson

CHAIRMAN OF THE BOARD AND CHIEF EXECUTIVE OFFICER

We will be pleased to send you a copy of the 1957 Annual Report

In its 58-year history, AMF has progressed into a broad-based company operating in four important areas:

- consumer products for recreational and leisure time activities
- automatic machinery and equipment for industry
- handling and launching systems for guided missiles
- atomic reactors and related nuclear equipment

PLEASE USE COUPON

Mr. C. J. Johnson, Secretary, Room 211
American Machine & Foundry Company
AMF Bldg., 261 Madison Ave., New York 16, N. Y.

Please send me a copy of your 1957 Annual Report.

HARRODS LIMITED

QUALITY GOODS AT LOWEST POSSIBLE PRICE

COMPANY'S RECORD OF PROGRESS AND EXPANSION

SIR RICHARD BURBIDGE ON RUMOURS OF "TAKE-OVER BIDS"

The sixty-eighth annual general meeting of Harrods Limited will be held on April 14th at the Company's Premises, Brompton Road, London, S.W.1.

The following is an extract from the circulated statement of the chairman and managing director, Sir Richard Burbidge, Bart, CBE:

Trading conditions during the year under review were never easy, the second half in particular being adversely affected by the mild Autumn which handicapped the fashion trade and by the epidemic of influenza which not only caused serious shortages of staff, but which also kept many potential customers from the Stores. The raising of the Bank Rate and the restriction of credit facilities undoubtedly achieved its object in reducing spending, and it was only as a result of the exceptionally good Christmas Trade and later the January Sales that we were able to show a moderate increase on Sales for the Year.

This increase in turnover is reflected in the Gross Profit of the Group, which at £9,282,181 shows an increase of £246,560 over last year. The Profit after Taxation is £1,073,565 and is £24,204 more than last year. The Net Profit Available to be dealt with by Harrods Limited at £991,244 is £76,719 more. It is proposed to pay the same dividend as last year, but to increase the appropriation for Reserves by £83,613 to £400,000.

CONSOLIDATED BALANCE SHEET

In the Consolidated Balance Sheet you will notice that the total Reserves including Future Income Tax amount to £7,314,964, an increase of over half a million pounds on last year and £1,130,558 more than two years ago. Fixed Assets show a slight increase and the Current Assets at £10,334,289 are £4,173,424 in excess of Current Liabilities, £261,929 more than the excess last year.

The general picture in all the stores was much the same—a small increase in turnover with a hard struggle to curb expenses and hold the net profit. Harrods in Brompton Road, which store, as you know, brings in half the net profit of the Group, succeeded in achieving slight increases in sales and net profit. The main exceptions to the general trend were John Walsh Limited in Sheffield, who did exceptionally well both as regards trade and net profit, and Hendersons of Liverpool, who were handicapped very considerably by rebuilding operations and lack of space and whose trade and net profit suffered accordingly.

"THERE IS ONLY ONE HARRODS"

I should like to refer now to a matter that received considerable publicity during the latter part of the year, namely, the rumours of "take-over bids" being made for your Companies. I immediately denied the rumours and I have been unable to trace any buying of Harrods Stock that might indicate any such move.

It has always been the object of your Directors to build for the future as well as live for the present, and as a result of this policy Harrods has become a name which is known and honoured all over the World, earning a goodwill which is unique and priceless, and which should be preserved at all costs.

The Company was founded in 1890 and not once since then has it failed to pay a dividend on the Ordinary Stock. During the last 30 years the businesses of D. H. Evans, Walsh's, Hendersons, Rockheys and Rackhams have been purchased and the first three businesses as well as Kendal Milne and Dickins & Jones have been rebuilt or expanded, all largely from internal resources ploughed back.

A take-over bid can be made so attractive on paper that many stockholders might be tempted to exchange the substance for the shadow and it is for this reason that I am giving the facts. The present book-value of the assets attributable to the Ordinary Stockholders is £10,159,962, but the real value is of course much more. It is safe to say that the present value of the Ordinary Stockholders' assets is at least £20 million, or £5 per £1 unit of Ordinary Stock, without taking into consideration the valuable goodwill of Harrods and its subsidiary companies.

BIRMINGHAM

The final plans have now been approved and a concurrent lease with the Birmingham Corporation has now been signed, which together with our freeholds will form the whole of two city blocks, bounded by Temple Row, Cherry Street, Corporation Street and Bull Street including the North Western Arcade.

A contract amounting approximately to £3,500,000 has been placed with Taylor Woodrow Construction Limited for the erection of a new building—which will comprise our new store and shops and offices. You will see from the sketch plans on the inside back cover of the report and accounts what the new buildings will look like when completed, which should be by 1962. Vacant possession will be obtained in stages over the next 18 months, and building has already commenced on Temple Row for the rehousing of Rackhams.

The main part of this development will be spread over three to four years and the Directors consider that the Company will be able to cover the costs incurred during the first two years of construction from its own internal sources. It will be necessary to make arrangements to cover the balance of the cost and careful consideration will be given to the matter in due course.

PROSPECTS

The outlook for 1958 cannot be reviewed with a great deal of optimism, and with certain increases in expenditure in some directions profit can only be maintained by increased trade. Your group of stores serves a wide range of the public from the top to the lower medium class of trade, and I feel sure that by skilful buying and selling in each of our stores we shall be able to hold our own with the increasing competition despite the continuing adverse conditions of high bank rate and Government efforts to restrict home consumption. I am hopeful, therefore, that with our Managements well alive to circumstances we shall be able to show a satisfactory result in the current year.

GHANA MAIN REEF LTD.

The twenty-fourth annual general meeting of Ghana Main Reef Limited, was held on March 31st in London.

Major-General W. W. Richards, CB, CBE, MC, Chairman, presided. The following is an extract from his circulated statement:

The year ended June 30, 1957, witnessed a most satisfactory recovery in our financial position—the debit balance of £15,584, with which we started the year, was converted into a credit balance of £61,362 by the end of the year. It is your Board's intention to rebuild and maintain the sound financial structure enjoyed by the Company prior to the 1955-56 wages dispute. For this reason, no Dividend has been recommended for the year under review.

For the current year, ending June 30, 1958, we have declared an Interim Dividend of 5 per cent, less Income Tax.

The available Ore Reserves at June 30, 1957, including ore in pillars, amounted to 371,201 tons, averaging 8.49 dwts per ton over a width of 77.0 inches.

Bondaye: Development of the 20th level orebodies has met with but modest success. However, the results point to the desirability of deeper exploration; and sinking is being resumed to the 22nd level horizon.

Tuappim: Development on the 16th level Southern Ore Shoot, proved a continuous payable length of reef for 430 feet, averaging 11.66 dwts per ton, over a width of 121 inches. The Northern Ore Shoot gave 17 feet, averaging 7.84 dwts per ton, over a width of 107.3 inches.

Working Costs, comprising mining, treatment, etc., showed a gratifying improvement.

The report and accounts were adopted.

JOHN EMSLEY LIMITED

WELL FILLED ORDER BOOKS

The Eleventh Annual General Meeting of John Emsley Limited was held on April 2nd at Bradford, Mr Harold Jaques, ASAA, chairman and joint managing director, presiding. The following are extracts from his circulated review:

The trading profit and sundry income of the operating subsidiaries for the year ended November 30, 1957, subject to taxation, amounted to £122,366, as compared with £287,515 for the previous year. The net profit and income after taxation amounted to £25,884, as against £132,345 for the year to November 30, 1956. During the year under review there has been a serious fall in wool prices, which is the main cause of the reduction in the profits, by reason of the valuation of the stocks at the market price of replacement.

The distribution of our goods in the United States of America by means of our five companies operating there has been maintained, with beneficial results to the Group. These American companies have established a good reputation for our goods from "coast to coast," whilst our business in Canada has also shown considerable improvement.

During the year negotiations have been concluded for a further addition to the Group by the purchase of the shares of the well known spinning firm of Abram Ambler & Sons Ltd.

Despite keen competition we have obtained a good share of the business available, and our Group turnover shows a substantial increase and our order books are well filled.

The report was adopted.

THE BRITISH SOUTH AFRICA COMPANY

CLAIM AS "OVERSEAS TRADE CORPORATION" ADMITTED

ANTICIPATED BENEFITS FROM REORGANISATION

The sixtieth annual meeting of The British South Africa Company was held on March 27th in London.

Colonel Sir T. Ellis Robins, KBE, DSO (the President), presided, and, in the course of his speech, said: It will come as no surprise to you to learn that our revenue from Mineral Royalties, after providing for the Northern Rhodesian Government's twenty per cent interest in that revenue, has dropped by some £3,500,000 as compared with the figure for the previous year. In 1956 copper averaged £316 per ton for royalty purposes. Last year the average was £220. For the first five months of the current year the average was between £161 and £162 per ton.

It must be apparent that Rhodesian copper producers have for some time past been going through a period of over-production, which has indeed been world-wide, and that shareholders in copper companies and the Charter itself must be prepared for lean fare, which even the voluntary percentage cuts in production already announced cannot improve materially.

Although the present price is a little too near the margin of profitability, the industry can survive on it, and it will almost certainly have beneficial effects in bringing about more economical working and a determined effort to increase the uses of the metal.

It follows that, in addition to causing a decrease in its direct mineral revenue, the depressed state of the copper market must necessarily mean smaller dividends from the producing copper mining companies in which the Company is a substantial shareholder.

Members have received a favourable dividend this year as copper stood at a reasonably high level during the early part of 1957, thus giving a fairly good average price for the year. I feel, however, that I must repeat the words of warning uttered by my predecessor last year that, if the price of copper remains at today's level or goes lower, the Company's revenues must be adversely affected and possibly its dividend rate may have to be reviewed.

OTHER SOURCES OF INCOME

Against last year's drop in royalty revenue the income from the Company's estates, investments, interest and underwriting commissions rose by about £300,000, largely due to increased dividends from investments in gold-mining companies, interest on gilt-edged securities and on loans to Bancroft and to the Kariba Hydro-Electric Scheme.

The total Group income for the year was £12,260,000 odd, against which must be set expenses totalling some £1,322,000. After deduction of expenses, the consolidated profit for the year, before taxation, comes to approximately £10,938,000. The taxation charged on those results is £6,088,000 odd, leaving a figure of £4,830,000 available for appropriation—some £2,180,000 less than the previous year. The Directors recommend the total distribution of 4s. 6d. less income tax, per stock unit or bearer share, compared with the distribution of 5s. 3d., less income tax made last year.

STATUS AS AN OTC

Some of you may have seen an announcement in the press by the Company that it had been advised that, subject to the Directors taking certain steps, the Company's revenues from its mining and estate operations in Rhodesia should qualify for the benefits accorded to overseas trade corporations by the Finance Act, 1957. Your Directors in consultation with their accountants and lawyers, devised certain measures which have now been carried out and which have had the effect of qualifying the Company provisionally as an "overseas trade corporation" for the purposes of the 1957 Act with effect from March 21, 1958.

One of the main steps which has been taken is the formation of a new subsidiary company "The British South Africa Company Investments Limited," for the purpose of acquiring from The British South Africa Company its securities other than those which have been acquired for permanent investment. This new subsidiary will operate in the United Kingdom as an investment dealing company.

It has also been thought convenient and desirable to form a second subsidiary, "Cecil Holdings Limited," for the purpose of acquiring certain fixed investments held by the new investment dealing company. This Company will operate in the United Kingdom as an investment trust company. Other subsidiaries have been formed for the purpose of performing certain ancillary services for the functions of the group. The shares of these companies will also be held by Cecil Holdings Limited.

ANTICIPATED BENEFITS

The result of the reorganisation should be that the Company's trading income derived from its activities in Africa (the bulk of which will consist of its mineral revenues) will be exempt from United Kingdom Income Tax and Profits Tax (subject to the proviso that the payment of dividends out of such trading income will give rise to a charge of United Kingdom Income Tax upon the gross amount of such dividends). The group's investment income will continue to be subject to United Kingdom Income Tax and Profits Tax as heretofore. It may, nevertheless, be reasonably assumed that the various measures we have taken will result in an appreciable saving of tax, which will assist the Company in expanding and developing its overseas activities.

On the assumption that our mineral revenue will amount to £5,400,000 in a full year, and that we continue to pay a dividend of 4s. 6d. and on the basis of current rates of taxes in the United Kingdom and overseas, then our tax saving as an overseas trade corporation will be of the order of £1 million per annum.

To that extent, therefore, the somewhat sombre picture presented by the copper market and its effect on the Company's revenue can be brightened, and it must be regarded as very satisfactory that the Company's claim to qualify as an overseas trade corporation has been admitted.

The report was adopted and the total distribution of 4s. 6d. less income tax, per stock unit or bearer share was approved.

ALLIANCE BUILDING SOCIETY

ANOTHER GRATIFYING REPORT

The ninety-fifth annual meeting of The Alliance Building Society was held on March 28th at Brighton, Mr F. J. Wellman, JP, chairman, in the course of his speech, said: It is once again my very great pleasure to present to you yet another gratifying Annual Report and Statement of Accounts. I use the expression, "gratifying" without any false sense of modesty because by any reasonable test which you may apply to the Report and Accounts, we have done well during 1957 both by comparison with other Building Societies and in comparison with our own previous Reports.

After crediting interest amounting to £1,915,489 (free of all income tax) and paying withdrawals of £9,282,012, the total invested in shares in the Society was up by nearly £6 million to the new record total of £58,535,173.

INTEREST RATES

Touching upon the question of interest rates and the recent movements in Bank Rate, he said: While Bank Rate was at 7 per cent, the policy of the large Building Societies in maintaining their steady rate of 3½ per cent per annum, free of income tax, tended to come in for criticism. Your directors and the Council of the Building Societies Association took the view that a 7 per cent Bank Rate was a crisis rate. While, therefore, your directors were at all times wishful to pay a fair and even generous rate of interest to investors, they continued to feel that a gross equivalent yield of £6 1s. 9d. per cent per annum without risk of depreciation and with the splendid facilities for withdrawals we offer, represented a fair and attractive yield.

At all events those who have savings invested in a Building Society can look with more confidence to the future than the holders of securities which are at the mercy of fluctuating market prices.

I should like once more to pay my annual tribute to all the executives and staff.

IMPORTANCE OF STABILITY

Mr Lewis C. Cohen, deputy-chairman, in the course of his speech, said: The whole basis of Building Society work and their attraction to the public can be summed up in one word—stability. We say to investors—security is far more valuable than an infinitesimal advantage in interest on investments. Rock-like we have continued to offer to our investors 3½ per cent free of tax equivalent to £6 1s. 9d. per cent and continued to lend all the time at 6 per cent, which for some months has been a rate below the Bank Rate.

We are an organisation which for 95 years has been able to say—no shareholder has ever lost a penny, that we have paid a fair and proper rate of interest, and that £1 invested in the Society has always been worth £1. That record means far more than a fluctuating rate which sometimes may spell a loss to the investor. I look forward to the time when it may be possible to extend the activities of British Building Societies into our Commonwealth, in Canada, Australia and New Zealand, which may have branches of British Building Societies, and in the first case possibly money invested in England might be used to assist in housing in our Commonwealth, but later as the Commonwealth develops the money and the wealth of the Commonwealth may be utilised here in the old country for assisting us with our problems.

The report and accounts were adopted.

HALIFAX BUILDING SOCIETY

ONE HUNDRED AND FIFTH ANNUAL MEETING

MR ALGERNON DENHAM'S SPEECH

The one *hundred* and *fifth* Annual Meeting of the members of the Halifax Building Society was held in Halifax on March 31, 1958, the President, Mr Algernon Denham, JP, presiding. In his review of the year the President stated :

The year has presented a number of problems including an abnormal demand for mortgages, a wide fluctuation in the value of our liquid funds and a comprehensive revision of our Rules.

Gross receipts from investors in the year at £85.3 million are a record for the Society and although withdrawals increased from £46.9 million to £50.2 million this figure is a smaller percentage of our investment balances than we have experienced for many years.

We lent during the year £66,674,883, an increase of £20,546,318 over the previous year. This we regard as no mean performance, and since the year-end our lending has continued at a similar high level.

During the year the assets increased from £297 million to £344 million. While growth is not the only yardstick by which success should be measured nevertheless we regard this accretion of assets as an impressive mark of public confidence.

The maintenance of our liquidity ratio at last year's figure of 17.9 per cent has involved a considerable addition to our investment holdings which have risen by £8.3 million to a total of £61.5 million.

Our reserves are the measure of our financial strength. Traditionally the purpose of reserves is primarily to give confidence to the investor and, secondly to provide a fund to meet any losses we might sustain on our mortgage securities. Today it would appear that the main object of reserves is to act as a hedge against the depreciation in our holdings in British Government Securities.

A year ago I indicated that your Board contemplated the recommendation of changes in the Rules of the Society. They had not been revised since 1940 when the total assets were £129 million. The most important change provides that a postal ballot of all members may be taken in the event of a contested election of Directors and on other matters of importance.

The new Rent Act came into force in July last and has since become a cockpit of political manœuvre. Rent restriction over the years whilst rightly giving protection to tenants during a period of acute housing shortage, created substantial hardships for property owners whose rents were pegged on a basis which paid no regard to the increasing cost of repairs.

By permitting increases in rents, the new Act has remedied this defect and it is much to be desired that landlords, with their justifiably increased income, will shoulder their responsibilities for upkeep and repairs.

We are told that on a change of Government priority will be given to a measure involving the nationalisation of tenanted houses. The majority of these houses will fall into the category of pre-1914 properties and it would be a great disservice to the State if the Government were to perpetuate their occupation on a rental basis rather than encourage their purchase for owner occupation with resultant benefits not only to the properties but to the community as a whole.

HICKSON & WELCH (HOLDINGS)

ANOTHER SUCCESSFUL YEAR

The sixth annual general meeting of Hickson & Welch (Holdings) Limited was held on March 27th in London, Mr Bernard Hickson, MSc, FRIC (Chairman and Managing Director), presiding.

The following is an extract from his circulated statement:

There has been an appreciable increase in the trading profit and the net profit after taxation of £254,211 amounted to £251,397 (£202,612 last year). Last year I sounded a note of warning in case there had been stockpiling because of the Suez crisis. This caution proved unnecessary, and we continued to trade at a satisfactory level throughout the whole year. In fact, the total sales to customers of the products and services of the Group have increased by 21 per cent over the corresponding total for last year.

The increased profits are the result of greater output, higher yield efficiency and the earning power of new capital assets provided out of the high proportion of profits which it has been our policy to retain in the Group each year. The sale prices of our major products at the end of our financial year were no higher, and in some cases were less than those of twelve months ago, even though costs of raw materials, labour and services had risen.

Hickson & Welch Ltd. have had a very successful year, and the output, sales turnover and profit are again records. There has been a major reorganisation of the companies at Huddersfield, John W. Leitch & Co. Ltd., and the Gardinol Chemical Co. Ltd. In the middle of the year it was decided to combine the management with that of Hickson & Welch Ltd., and the Huddersfield works are now under the direct supervision of Castleford staff. Chemicals made at Huddersfield are now sold by Hickson & Welch Ltd. as part of their general range of products. The name of the Gardinol Chemical Co. Ltd. has been changed to Ronsheim & Moore Ltd., and it continues to supply specialised products to the pharmaceutical and cosmetic trades. Your associated company in India, Hickson & Dadajee Private Limited has had a most satisfactory year.

Hickson's Timber Impregnation Co. (GB) Ltd. has again increased its sales of timber preservatives throughout the world. The success of our service can be measured by the fact that further vacuum and pressure impregnation plants have been erected in this country and abroad during the last year.

The Statement then reviewed the satisfactory progress of the Timber Impregnation Companies in New Zealand, Malaya and Singapore, Australia and South Africa and continued:

I have before me details of the results of all the companies in the Group for the first four months of the current financial period, and an excellent start has been made. Our order position is in a healthy state and unless there are any major upheavals in national or international economies, we can look forward to results comparable with the year under review and the maintenance of dividends at the present rates.

The report was adopted and the final dividend of 13½ per cent, making 17½ per cent for the year, was approved.

THE STEETLEY COMPANY LIMITED

(DOLOMITE AND REFRACTORIES)

The Annual General Meeting was held in Sheffield, on 31st March, 1958. The accounts for the years ended 31st December, showed:

	1956	1957
	£	£
Trading Surplus	1,561,155	1,943,506
Taxation	801,874	1,017,543
Profit	759,281	925,963
Issued Share Capital	3,164,874	3,221,874
Dividends	217,636	269,150
Undistributed Profits	541,645	656,813

The following is an extract from the statement to shareholders made by Mr N. M. Peech, Chairman:

The growth of the Company continued with production and sales at home and in Canada advancing to new peaks. By the end of the year a substantial extension to the sea-water magnesia works and a new refractory brick plant were completed. The capital expenditure during the year, incurred mainly on these projects, amounted to £2,379,558. The dividend on the ordinary shares of 16% compares with 13% for the three preceding years. Current demand for the Company's products is satisfactory.

GRAYS BUILDING SOCIETY

(Established 1880)

SATISFACTORY POSITION MAINTAINED

The Annual General Meeting of the Grays Building Society was held on Monday, March 24th, at Grays, Essex. Mr A. E. Frost, the Chairman, stated that during the year the assets had increased over the previous year by £127,024 to £2,580,119. The total standing to the credit of Shareholders and Depositors was £2,462,436, showing an increase on the year of £121,869. Reserves now stand at £92,803. The Liquid Assets £279,805 being nearly 11 per cent of the total assets. The sum advanced on mortgage during the year was £168,750.

The Society—like most other Societies—had found the year difficult, and of a large number of applications for mortgages only a few could be satisfied.

Mr Frost went on to state that during the year the rate to Shareholders had been increased to 3¾ per cent or 4 per cent Fixed Term, and Depositors to 3¾ or 3½ per cent Fixed Term. Since January, 1958, the rates of interest had again been increased—Shares to 4 per cent or 4¼ per cent Fixed Term, and Deposits to 3½ per cent or 3¾ per cent Fixed Term. The Fixed Term being for a period of two years on all Investments or Deposits of £100 and upwards. The Chairman said that this form of investment was proving most attractive.

The report and accounts were adopted.

ERICSSON TELEPHONES

The annual general meeting of Ericsson Telephones Limited was held on March 28th in London.

Sir Harold A. Wernher, GCVO (the chairman), in the course of his speech, said: It is with pleasure that your directors meet you with another satisfactory report. The year commenced with a good order book and business subsequently received enabled us to maintain a high level of production throughout the year. Turnover from the factories was up by 12 per cent, but operating costs were higher, due primarily to a substantial increase in our weekly wage bill.

Last year I told you of the considerable improvements and extensions we were carrying out at our main factory at Beeston. Some of these were completed and brought into service during the year and contributed to the greater volume of production.

The UK must maintain a steadily expanding export of manufactured goods and we at Ericsson's get considerable satisfaction from our own contribution to these export efforts. As for some years past, nearly half of our total production was sold overseas.

Referring to the accounts, we have a trading profit of £1,251,112 against £1,414,061 in 1956, which was a record year. Taxation continues to be a heavy burden on industry; in our case it takes over 53 per cent of our trading profit. There is no question that this restricts the full development and expansion of progressive businesses. We have started the present year with a good order book. This is fortunate because there are indications of recession in world trade.

The report was adopted and a final dividend of 10 per cent, free of tax, on the enlarged Ordinary Stock, amounting to £200,012, was approved.

SUN LIFE ASSURANCE SOCIETY

MR C. G. RANDOLPH'S STATEMENT

The annual general meeting of the Sun Life Assurance Society will be held at 63 Threadneedle Street, London, E.C.2, on Tuesday, April 22, 1958. Mr C. G. Randolph, Chairman of the Society, has issued a statement to shareholders, which in outline is as follows:

DIRECTORS

During the year Mr G. J. A. Jamieson was appointed a director, and his re-election will be proposed at the forthcoming General Meeting.

FUNDS, INCOME AND OUTGO

The funds increased during the year by £6,100,000 (after allowing for the reduction in the balance sheet value of the assets, to which I refer later) and now stand at over £126 million. The life premium income and the consideration for annuities granted reached the totals of £15,658,000 and £3,091,000 respectively.

The gross interest income of the Life Assurance, Annuity and Sinking Fund Accounts amounted in all to £5,991,000, representing a rate of £5 2s. 3d. per cent, an increase of 3s. 10d. over the rate for 1956.

The number of claims by death was substantially less than the number expected according to the mortality table employed in the calculation of our current rates of premium; the total amount of such claims at £2,698,000 was, in fact, less than the corresponding figure for 1956 notwithstanding the growth in the business in force.

NEW BUSINESS

I am glad to be able to report that last year the new life sums assured reached the record total of £60,806,000, an increase of £4,670,000 over that for 1956, and annuities (including deferred annuities and group pensions) for £1,565,000 per annum were granted.

PENSION SCHEMES

A considerable number of new schemes of various descriptions were inaugurated during the year. Many of the new group pension schemes have been arranged on a "with profits" basis, and I feel sure that the rates of bonus now declared for the past triennium in respect of such schemes will give cause for satisfaction.

Much has been heard during the last year regarding state pensions. It is our opinion that the state pension scheme should be limited to the provision of pensions to cover basic needs and that any additional pension provision should continue to be made by occupational pension schemes operated on sound lines, or by individual retirement annuities, neither of which involves the Exchequer in any cost other than the taxation concessions allowed in respect of such schemes and annuities.

HOUSE PURCHASE

I have again to report that the applications for advances under our house purchase scheme continue to exceed the number which we consider it advisable to entertain and we are therefore maintaining the quota system which was introduced in 1955.

NEW DEVELOPMENTS

Recently we have given much thought as to how we could best meet the needs of the man who cannot at present afford all the life assurance cover that he will eventually require. The need for cover will increase with his responsibilities, and he will no doubt hope that his financial position will improve correspondingly, thus enabling him to pay more in premiums. His problem is that should his health deteriorate he may find himself unassurable or acceptable only at a specially increased premium. To meet this situation we have devised a policy called the "Increasable Assurance," which includes the option at regular intervals of effecting additional assurance up to stipulated amounts without further evidence of health. We shall be pleased to supply full details on request.

INVESTMENTS

In view of the prevailing financial and economic uncertainties, the directors have decided to apply £4 million of the Investment Reserve Fund to reduce the balance sheet values of the assets, thus bringing such values more closely into line with current market values, and to transfer sums amounting to £4,500,000 to the Investment Reserve Fund, which now stands at £5 million.

TRIENNIAL VALUATION

The substantial increase in the interest yield on our Funds in recent years and the large transfers which have been made to the Investment Reserve Fund amply justify some relaxation in the stringency of our actuarial valuation, which, in the life account, has on this occasion been made at 2¾ per cent per annum instead of partly at 2½ per cent and partly at 2 per cent. This change in the interest rate has resulted in a reduction of approximately £3,400,000 in the actuarial liability, which may be compared with the much greater sum of £5,560,000 transferred during the triennium from the Life Assurance Fund to the Investment Reserve Fund. The valuation shows an aggregate surplus of £5,353,086 of which £4,780,875 is being divided.

The very satisfactory result of the valuation has enabled us to increase once again the bonus on life assurance policies, the new rate being 46s. per annum per £100 sum assured compared with 40s. three years ago.

Since the last valuation was made we have opened two new classes of profit-sharing policies, viz., group pension policies with profits and retirement annuities with profits. Under both these classes the rates of bonus now declared are markedly higher than the rates which we have put forward by way of illustration of the bonuses likely to be declared if the rate of profit remained the same as when the policies were first introduced.

The amounts of the bonuses allotted to the individual policies are being calculated and will be notified to the policyholders as soon as possible.

DIVIDEND

The proprietors' share of the divisible surplus is £478,087. The directors have declared a half-yearly dividend of 3s. 6d. per share, free of income tax, payable on *June 30th* next, and, in the absence of unforeseen circumstances, it is expected that this rate will be maintained until the date of the next triennial valuation.

NATIONAL SAVINGS

In times such as the present when inflation imposes such a strain upon the economy of our country, it is particularly desirable that each one of us should make the maximum effort to increase the amount of his personal savings. A substantial increase in personal savings would considerably reduce inflationary pressures and would be most beneficial to the economy. In my statement last year I drew attention to the attractions, as a form of saving, of a "with profits" endowment assurance policy effected with an old-established office such as ours, and I am sure that you will agree that the rate of bonus which we have declared in respect of the past triennium amply justifies my recommendation.

STAFF

A chairman who repeats himself may be accused of showing signs of age, but I must risk that because I wish to emphasise again the praise that is due, and how sincere our thanks should be, to the executive and to the staff for enabling me to put before you these Accounts.

MONSANTO CHEMICALS LIMITED

The following are salient features of the circulated Report of the Directors, 1957, and of the statement by the Chairman, Sir Miles Thomas, D.F.C., which will be presented at the Annual General Meeting on April 23rd, 1958.

SALES New records were achieved in both total sales and exports.
Sales at £15,683,000 were 11¾ per cent. higher than in 1956.
Export sales at £6,416,204 were 10¼ per cent. higher.
Exports represented 41 per cent. of total sales and were distributed through over 100 countries.
Home selling prices were in general held to existing levels whilst export prices were dictated by continued and intensifying international competition. It was consequently necessary to absorb most of the continuing increases in the cost of raw materials, services and labour.

PRODUCTION The year was notable for very substantial progress in the production field; the gross volume of output was increased by 11½ per cent. over that of the preceding year. At Ruabon a new plant for the manufacture of Santosite was commissioned and extensions to the phenol and acetyl salicylic acid (aspirin) plants were completed. At Newport new plants were brought into commission for the manufacture of cyclohexylamine, Santocure AW, maleic anhydride, "Tred" and continuous production of oil additives.
Several existing plants were extended.
Improvements resulting from process research and plant investigation work yielded substantial increases in output.

FUTURE DEVELOPMENTS During the year an excellent start was made on the construction of the polyethylene plant at Fawley where civil engineering design work was substantially completed.
Further extension at Fawley is under long term study and we have space for development at Ruabon and Newport. Programmes of expansion are being considered, particularly with intent to strengthen further our sound positions in rubber chemicals, oil additives, fine and heavy chemicals and styrene-based plastics.

THE YEAR AT A GLANCE

	1957 £	1957 Percentage of Total Income	1956 £	1956 Percentage of Total Income
WE RECEIVED: From the sales of our products and from dividends, interest, etc.	£15,897,945	100·0	£14,166,890	100·0
WE PAID OUT OR PROVIDED FOR:

GENERAL INVESTORS AND TRUSTEES

The fifty-first annual general meeting of General Investors and Trustees Limited was held on March 27th in London, Mr R. G. Mills (the chairman) presiding.

The following is an extract from his circulated statement:

The valuation of the investments at the date of the Balance Sheet shows a drop from £4,921,380 to £4,594,922. A diminution in value for the past year unfortunately is a common feature of nearly all investment portfolios. In spite of this depreciation, at the Balance Sheet date each 5s. Ordinary Share was backed by net assets of 12s. 8½d. against the market price of 11s. 9d. The gross revenue, on the other hand, has stood up well. This shows an improvement of approximately £29,000 over that of the previous year, but the increase in the net revenue is sharply reduced to £9,637, partly owing to provision for Profits Tax having been increased by £6,300 to £13,000.

It may be of interest for you to learn that a purchase of £100 of the Company's Ordinary Stock in February, 1948, would, if retained up to January 31st last and supplemented by the exercise of three rights issues and two free issues, have resulted in a nominal holding of £296 costing in all £317 and worth in market value today more than double that figure or in fact £695. Over the same period gross dividends received by the Shareholder would have amounted to £215.

The report was adopted and a total distribution of 15 per cent was approved.

LUTON WATER COMPANY

The ordinary general meeting of the Luton Water Company was held on March 27th at Luton, Mr Edmund Walker, MC, chairman, presiding.

The following is an extract from his circulated statement for the year 1957:

Revenue from all sources showed an increase of £8,564. Expenses, however, including taxation, are up by £9,742 and the net revenue is £26,018 compared with £27,196. There will be a balance of £24,856 to be carried forward as compared with £23,654.

The Government White Paper published in 1945 drew attention to the multiplicity of water undertakings, and since then the policy of the Ministry has been to press for regrouping within the industry. In a circular issued nearly two years ago the Ministry called on the industry to proceed much faster and more radically. Your directors have been concerned with the position of the company in relation to the Dunstable Water Undertaking of the Eastern Gas Board and came to the conclusion that it would be logical and in the best interests of all concerned for the two undertakings to be amalgamated. Mutually satisfactory terms for the acquisition of the Dunstable undertaking by your company have been agreed. Those terms will be embodied in an agreement scheduled to a Draft Order and will then be submitted first to the stockholders and then to the Minister for approval. One result will be that the company will assume responsibility for the whole of the Bow Bridge scheme instead of two-thirds as now envisaged.

The report and accounts were adopted.

UNIVERSAL ASBESTOS MANUFACTURING

HIGHER TURNOVER

The twenty-first annual general meeting of The Universal Asbestos Manufacturing Company, Limited, will be held on April 25th in London.

The following are extracts from the circulated statement by the chairman, Mr F. W. R. Douglas for the period from October 1, 1956, to September 29, 1957:

The financial results for the year show a substantial fall in profits, especially when compared with the record results of the two previous years. Our total turnover during the year under review was marginally higher than in the previous year, which fact is in itself satisfactory, showing that, in spite of the general decline in building activity at home, we are able to maintain our position and to sell the full output of our factories. The decline in profit was due to increased costs of raw materials, labour and overheads; to increased worldwide competition in export markets; and to a loss sustained in the first year's trading of one of our new operating subsidiaries, Union Fibre Pipes (Great Britain) Limited.

As I told you last year, we felt it highly desirable to stabilise our prices for as long a period as possible and it was, of course, inevitable that with rising costs the effect would be to reduce the margin of profit. Towards the end of the financial year we felt it necessary to make a small increase in our prices—too late, however, to have any material effect on the results for the year.

In the Export field our turnover showed an increase of some 25 per cent, compared with the previous year, but the prices which were obtainable under intense competition in world markets were very low indeed and scarcely did more than absorb their proportion of the standing overheads of the business.

The Trading Profit of the Group amounts to £201,358 compared with £340,135 for the previous year, and the Group Net Profit, after making full provision for taxation, is £84,309. The Board have decided to pay a second interim dividend of 6d. per share, less tax, on the Capital as increased—the amount so distributed being the same as the Final Dividend last year.

THE CURRENT YEAR

It is, in my view, inevitable that, with the continued official discouragement of spending, the building industry will be among those to suffer, and I think one can only reasonably forecast reduced operations and sales over the next few months. Although this news may appear somewhat depressing, I can perhaps relieve the situation by saying there are certain heartening features in our present trading in that, in spite of difficult conditions, the profits so far this year show a marked improvement over the comparable period of last year, although the volume of demand has somewhat declined. If the present improved profit figures are maintained throughout the year, we shall be able to present to you results of a more favourable nature than those now before you.

To meet the cost of future developments and to provide the Company with additional working capital it is intended to issue £260,000 Convertible Unsecured Loan Stock which will shortly be offered to Shareholders.

COW & GATE LIMITED

WIDE RAMIFICATIONS OF COMPANY'S BUSINESS

The forty-ninth annual general meeting of Cow & Gate Limited was held on March 31st at Guildford, Mr Ernest E. Taylor, CBE (Chairman and Joint Managing Director), presiding.

The Secretary (Mr J. W. Barter, FCIS, ACWA) read the notice convening the Meeting and the Auditors' Report.

The Chairman, in the course of his speech, said:

Your Company has had another successful year's trading.

There must, I think, be many of our shareholders and also members of the general public who still think of your Company as mainly the manufacturers of infant and invalid foods. This may have been so thirty years ago. Today, however, its business has wide ramifications. Not only have we a very large and, I am glad to say, an expanding business in infant and invalid foods, but our factories throughout England and Wales are large makers of cheese, butter and cream and evaporated and condensed milks. I understand that we are now the second largest buyers of milk by wholesale contract in the country and the second largest manufacturers of milk products. In addition to this there are our very considerable retail interests, mainly in London and the south and west of England.

ACCOUNTS

You will remember that in September last there was an issue of 13,849,078 Ordinary shares at the price of 2s. per share and it gives me much pleasure to be able to tell you that not only did shareholders take up a very high percentage of their "Rights" but they also subscribed for the "Excess" shares several times over.

Turning to the Profit and Loss Account, it will be seen that the net profit of the Group before taxation is £1,567,525 compared with £1,396,006 for the previous year, and this increase has been achieved solely as a result of an increase in Sales. Current Taxation requires the very large provision of £894,051, but this year there is a special non-recurring credit of £312,533. In view of this and the increase in the net profit your Directors considered it proper that shareholders should benefit by a modest increase of 2½ per cent in the rate of Ordinary Dividend while at the same time transferring to General Reserve a sum of £458,781 to bring this Reserve up to £1,200,000.

The position with regard to our well-known range of infant foods continues to be most encouraging. Sales of our baby food are steadily increasing and the broadening of the distribution of our carton pack is resulting in an increased volume of sales. The new Cow & Gate Cereal Food introduced just over a year ago is now firmly established and is proving a very popular addition to our range.

Sales of our territorial cheeses continue to expand and again we have won numerous prizes for factory-made cheeses at Shows throughout Britain.

FARMERS WIFE Double Devon Cream and Creamed Rice which have been consistently advertised on television are proving exceptionally popular throughout the country.

The turnover of our Retail Subsidiaries has been further expanded during the year.

Although exports of our products have in the past been comparatively small, we have been making a determined effort to increase them. We find competition from other countries severe but we have every reason to hope that we shall be able to increase our export sales in the next few years.

The report and accounts were adopted.

WILLIAM HOLLINS

(Manufacturers of "Viyella" and "Clydella")

RECORD VOLUME OF BUSINESS

The fiftieth Annual General Meeting of William Hollins and Company, Limited, was held on April 1st at Nottingham, Mr Joseph Wild (the Chairman) presiding.

The following is an extract from his circulated statement:

Our total turnover in Home and Export Markets for the year 1957 showed a further substantial increase over the preceding year. In fact, the Report and Accounts now submitted reflect the highest volume of business ever transacted in any year in the history of the Company.

INTRODUCTION OF NEW PRODUCTS

In the Home Market the demand for our products continued at a high level and sales showed a further substantial advance, but the continuing increase in the cost of production has brought the retail prices of many of our lines of merchandise to levels at which further large expansion of sales is becoming ever more difficult. We have, therefore, during the past year, introduced several new products to meet the large demand for good quality merchandise in the lower price brackets.

WOOL VALUES

During December last the price of wool reached its lowest point for the year, with the result that we had to face a write-down of approximately £200,000 to bring the value of our stocks of raw materials and processed and finished merchandise into line with current raw material prices.

The whole of this sum has been provided out of the year's profits and without recourse to Reserves which now exceed £2 million.

OUTLOOK

Looking at the future, much depends on the United States of America—a very important market to your Company. The recession in trade there could have far reaching effects on world trade. In Europe the implications of the Free Trade Area will not be fully apparent for some years, but these developments will continue to receive our closest attention.

Your Board will not fail to seize every opportunity of expanding our sales both at home and abroad and to effect every possible economy without impairing efficiency or service.

The Chairman concluded by paying tribute to the work of the many thousands of employees of the Company and of its Subsidiaries at home and abroad.

The report was adopted and the Dividend on the Ordinary Stock of 10 per cent for the year 1957 was approved and the retiring Directors re-elected. An increase in the authorised capital of the Company by the creation of 1,130,000 Ordinary Shares of £1 each was approved.

ARISTON GOLD MINES

EXCELLENT RELATIONS WITH GOVERNMENT

The twenty-eighth annual general meeting of Ariston Gold Mines (1929) Limited was held on April 1st in London.

Major-General W. W. Richards, CB, CBE, MC, presided.

The Chairman said: Considerable comment has been made in the press and elsewhere recently concerning mining companies operating in Ghana who may qualify for taxation purposes as an Overseas Trading Corporation. On a Revenue view your Company was not automatically eligible for OTC status as at April 6, 1957. We have consequently modified existing selling arrangements so as to qualify without any doubt as from April 6, 1958. Had we not elected to be so considered the taxation charge in respect of the year under review would probably have been some £50,000-£60,000 greater.

It will be appreciated that profits for the year ended September 30, 1956, were adversely affected by the strike which precluded any material benefit being derived from the new legislation during 1957-58. It is anticipated that savings in profits tax per annum on an assumed dividend of 30 per cent would be in the region of £100,000. Current dividend distributions have been based exclusively on the adoption of the above policy on the best advice available and in the best interests of all concerned.

The net profit for the year ended September 30, 1957, after taxation, was £244,167. The directors recommend a final dividend of 5 per cent, making 10 per cent, less tax, for the year. They have also declared an interim dividend of 15 per cent, less tax, and a bonus of 10 per cent, less tax, in respect of the year ending September 30, 1958.

The total Ore Reserves at September 30, 1957, were 2,662,338 tons averaging 6.84 dwt over a width of 122 inches.

MR C. J. BURNS ON HIS VISIT

Mr Burns, a director of the company, in the course of addressing the meeting said: I would like to present to you a picture of your company, its difficulties and its achievements, and the high standard of technical efficiency of the mines' staff, also to give you an up-to-date picture of the relationship between the Ghana Government and the mining industry to correct certain misapprehensions relating to the future of British capital in Ghana and the prospects there for our mining industry generally.

From the mining angle it must be remembered that apart from strikes and essential maintenance the mine does not close down. A seven-day week is the normal, not the unusual, and consequently an adequate supply of stores must be maintained to avoid the necessity of a shutdown.

Dealing with the mining techniques evolved after careful study by your management in conjunction with their technical consultants, West African Gold Corporation, Limited, and West & South African Gold Mines, Limited, it is perfectly true to say that their standards are as high as, if not higher than, the standards in other parts of Africa.

GOVERNMENT'S ATTITUDE

I would now like to touch briefly on the relationship between the mining industry in Ghana and the Ghana Government. Since Ghana achieved independence on March 6, 1957, numerous articles have been written in some sections of the British press which have given rise to a belief that politically and economically Ghana was not a stable country. As part of the gold mining industry it will be quite wrong for me to discuss the political scene in Ghana, that is purely a matter for the citizens of Ghana. I do wish to emphasise most strongly, however, that within the framework of the present administration in Ghana the gold mining industry not only has full scope to develop unharmed by Government restriction, but in addition has received the fullest co-operation from Government towards the peaceful settlement of wage disputes, and the Government itself has shown that it is fully aware of the difficulties experienced by low grade mines in terms of fixed price for gold and has done all in its power to alleviate those difficulties.

It has been my privilege to negotiate with Government the terms of assistance to be given to the marginal mines. In July, 1956, Government made a grant of £200,000 to the marginal mines to cover the period from June, 1956, to July, 1958. They have now undertaken to bring out to Ghana an independent mining expert who will report to Government on the state of the gold mining industry with a view to the passing of new legislation granting a subsidy to marginal or low grade mines on the lines of similar legislation enacted both in Canada and Australia. This alone shows quite clearly the importance which the Ghana Government attaches to the preservation of a strong and profitable gold mining industry. I can also say from personal experience that Government does realise the very great assistance given by the industry to the development of those areas of Ghana where the mines are situated.

Of recent time the Mines Employees Union have shown increasing awareness of their responsibilities, and relations between the mining industry and the Union have been both cordial and co-operative. Given the industrial peace which both Government and the industry have striven so hard to establish and which now seems assured, and a realistic price for gold, the West African gold mining industry can in my view look forward to many prosperous years.

ASSISTANT STATISTICIANS

SOUTHERN GAS BOARD

Vacancies exist for two Assistant Statisticians at the Board's Headquarters in Southampton. Both positions call for a high degree of intelligence and personality.

Preference will be given to candidates of less than thirty years of age with a degree in Mathematics or in the final year of a University course in Mathematics.

Starting salaries will be between £600 and £1,000 per annum according to qualifications and experience. The latter figure may be exceeded in the case of a really exceptional candidate.

The successful candidates will be required to pass a medical examination and, unless already subject to a Pension Scheme by virtue of the Gas (Pension Rights) Regulations, 1950, will be required to join the Board's Staff Pension Scheme.

Applications, marked "Assistant Statisticians," should be accompanied by a separate sheet showing name, age, education, experience, present appointment and salary. They should any supplementary information, in that order, addressed to the Personnel Manager, Southern Gas Board, ... Above Bar, Southampton, to reach him not later than ... 1958.

SURVEYS CLERK

A vacancy exists in our Market Research department for a woman of good education aged between 21 and 32 years.

The duties involve coding and tabulating market research surveys and tests and the translation of research plans into fieldwork action. In addition the successful applicant will participate, under the direction of the Consumer Analyst, in the construction of questionnaires, the analysis of consumer research operations and in the application of appropriate statistical techniques.

This position will provide a valuable training for an executive career in market research.

The gross remuneration offered will be in the range of £550 to £700 p.a.

The Company operates a Social Security Scheme which covers non-contributory pension, sickness benefit and life assurance.

Write, giving details of age, education and experience to the Personnel Officer, Petfoods Limited, Melton Mowbray, Leicestershire.

RENOLD CHAINS LIMITED require a woman assistant in their Central Statistics Department to be responsible for the day-to-day operation of the Central Library and to take an active part in the Information and Statistical Services provided by the department.

Candidates should have experience of industrial library work and a qualification in economics and/or statistics would be a strong recommendation. Starting salary in the region of £510 per annum. The post carries membership of pension and profit-sharing schemes.

Application should be made, in writing, giving full particulars, to:

Employment Department,
Renold Chains Limited,
Renold House,
Wythenshawe,
Manchester.

MARKET RESEARCH. A London Advertising agency requires an Assistant in the Research Department. Candidates should preferably be between 25 and 30 and should have either a university degree in Economics and Statistics or practical experience in market research and/or marketing. Some knowledge of advertising practice and particularly media selection would also be an advantage.—Please write to the Secretary, C. R. Casson, Ltd., 6 Aldford Street, W.1.

ACTUARIAL STUDENTS

If you

(1) have completed or are completing ... II of the examinations,

(2) are confident of qualifying in ... reasonable time but cannot quite see where qualificatior ... will get you and

(3) would like to live in Sou... Africa (a country which, while it has disadvantages ... has many big advantages),

you may be just the ... an we are looking for as Assistant ... Actuary in the ... Johannesburg. The position carries a ... good salary for a hard worker with ... generous ... approach and excellents ... a sound practi...

If you are interested, please write to "The Actuary," P.O. B... 8791, Johannesburg.

GAINING IN MARKET RESEARCH

A leading London market research agency has a vacancy for a well-educated man with experience in Accountancy, Insurance, Banking or in a similar business. Age 25 to 35 years. A University degree will be an advantage but it is not essential. Desirable attributes are an aptitude for figures, a logical mind, initiative, and an understanding of and interest in business problems. There are excellent opportunities for advancement. The starting salary will be based on age and experience. A superannuation scheme is in operation.—Apply, Box 903.

UNIVERSITY OF LONDON.—*The Senate invite applications* for the Readership in Statistics tenable at the London School of Economics and Political Science (salary scale £1,475-£1,775-£2,150 a year plus £100 London Allowance).—Applications (10 copies) must be received not later than May 9, 1958, by the Academic Registrar, University of London, Senate House, W.C.1, from whom further particulars may be obtained.

THE UNIVERSITY OF MANCHESTER

Applications are invited for the post of LECTURER IN SOCIAL ANTHROPOLOGY. Salary on a scale £900 to £1,650 per annum with membership of F.S.S.U. and Children's Allowance Scheme. Initial salary according to qualifications and experience.—Applications should be sent, not later than April 12, 1958, to the Registrar, the University, Manchester 13, from whom urther particulars and forms of application may be obtained.

LEADING FRENCH ADVERTISING AGENCY seeks bilingual French/English manager for its Research Department. Candidates for this exceptional situation should have several years' experience of the management of a Marketing and Advertising Research Department with manufacturer or agency, and be prepared to live in Paris. Interviews in London.—Write, with fully detailed curriculum vitae and stating salary required, to Ehinger, 7 Avenue de la Grande Armée, Paris VIIIème.

GERMAN BORN LINGUIST (preferably with commercial experience) wanted as full-time language tutor in ... leading language ... secretarial college, London. Immediate vacancy.—Box ...

HOTPOINT

ACCOUNTANT

An attractive opportunity is available in this well-known and expanding domestic electric appliance manufacturing company to qualified Accountants within the age limit of 27 to 35. The vacancy is concerned with the development of management accounting and budgetary control techniques, and applicants should have industrial or commercial experience and be an Associate of an Institute of Chartered Accountants. The commercial qualifications and ability will depend on experience to the Personnel Superintendent, Hotpoint Electric Appliance Company Limited, Craven House, Aldwych, London, W.C.2.

An A.E.I. Company.

UNIVERSITY OF NATAL

NATAL RAILWAY RATING

FELLOWSHIP

SPONSORED BY THE TOWN AND REGIONAL PLANNING COMMISSION, NATAL.

Applications are invited from graduates in Economics or Commerce for a full-time Research Fellowship, tenable at the University of Natal, Durban.

The holder of the Railway Rating Fellowship will be required to undertake research into the effect of railway rating on the location of industry in inland Natal, with particular reference to the Tugela Basin.

The Fellowship is tenable for two years in the first instance, but may be continued for a further period.

The salary, inclusive of cost-of-living allowance, is £800 per annum for the first year and £850 per annum for the second year.

The Fellow will work under the supervision of the University.

Travelling and other expenses incurred in carrying out the research will be met from funds placed at the disposal of the University.

The Fellow will be permitted to utilise information obtained as a result of his enquiries for purposes of a thesis for a postgraduate degree.

Duties should be assumed as early as possible.

A prescribed form of application and further particulars may be obtained from the Secretary, Association of Universities of the British Commonwealth, 36 Gordon Square, London, W.C.1.

The closing date for applications is May 15, 1958.

AUSTRALIA

CANBERRA UNIVERSITY COLLEGE

Applications are invited for appointment to the posts of:

LECTURER IN GERMAN
LECTURER IN POLITICAL SCIENCE
LECTURER IN PSYCHOLOGY

Salary range: £A1,450-£A2,050 per annum. Annual increments are £A70. Commencing point within this range will be determined in accordance with the qualifications and experience of the applicant.

Further particulars, conditions of appointment and the summary forms which must accompany applications may be obtained from the Secretary, Association of Universities of the British Commonwealth, 36 Gordon Square, London, W.C.1, with whom two copies of each application must be lodged.

Applications close, in Australia and London, on May 31, 1958.

APPOINTMENT REQUIRED

"ALL THESE FIRES must be costing the country a terrible lot, in capital, lost production and so on. Can't anybody do anything about it?"

"Well, we reckon our new factory's about as safe as possible, you know."

"Special design and materials, I suppose? Our place was built too long ago!"

"Not only that. We've also installed one of those A.F.A. automatic fire alarm systems, whereby any fire sets off a little detector and calls the brigade automatically. You can do the same, however old the building."

"You're satisfied it really works?"

"Oh definitely. What's more, before we bought it we consulted our architect and the local fire brigade chief and they were all for it. All the best people have it, you know—like I.C.I., Metal Box, Cadbury's—and the Insurance Companies like it, too. We get a rebate."

"Do you now? Then I *must* look into it."

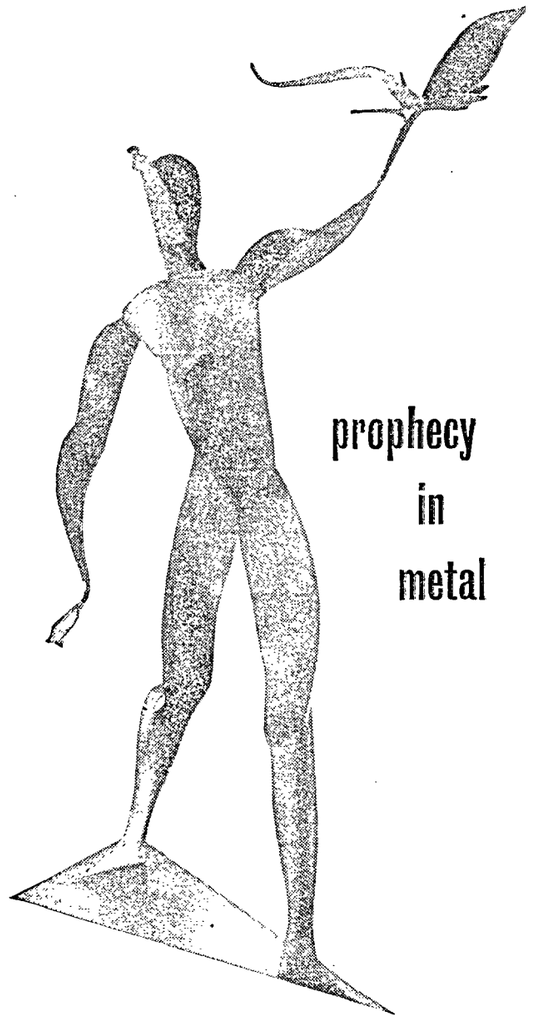
Imagine you have come to see you



Look around your office.
Is it "you"? Does it still win
friends and influence people?
Or is that creaky old desk—possibly
the whole dreary room—past its best?
Whatever improvements you need,
you'd do well to get Catesbys
Contracts to put things right.
Ring them at Museum 7777 (or
send a letter if you're abroad).
They are good at doing it all—
replanning and building,
laying new carpet, or giving
you the right desk and
chairs—all in the way you
like, for a price that will
please you. In no time at
all, you'll have a good new
office buzzing with new business.

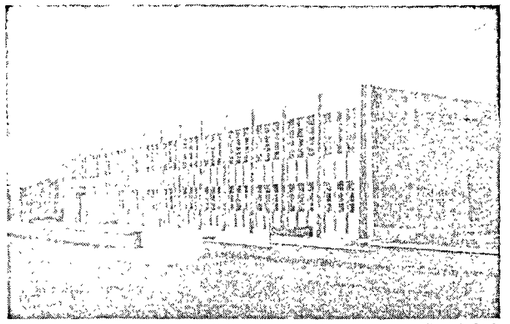
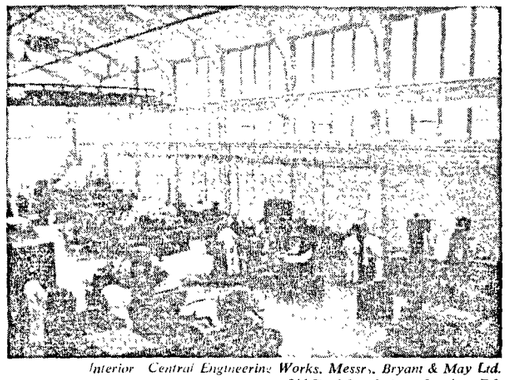
Money is dear but . . . today BEECHAM BUILDINGS cost less



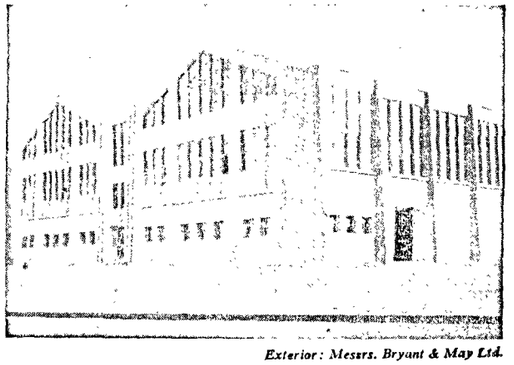
Beecham Buildings construct high-quality commercial and industrial buildings—from office blocks and small factories to large industrial layouts covering many acres at prices which, over the past twelve months, have actually fallen. We accomplish it in these days of 6% by working quickly and eliminating waste.

WE STREAMLINE PRELIMINARIES



We in Beechams have the *complete* building organisation, including departments for every phase of building from first design to final finishing. Consequently we can quote firm prices as soon as sketch designs are agreed, saving much valuable time over the usual procedure when outside contractors must be consulted for quotations, and enabling us to move on to a site months earlier.

WE BUILD BY MODERN METHODS



Because we employ advanced techniques, we are able, without sacrificing quality,* to put up your factory faster, perhaps in only half the time you could have it built by older methods. You will get into production months earlier with a quick return on invested capital. With capital tied up at 6% this saving in time is a heavy saving in money. Every contract is kept under one control. Every operation is timed and its completion dovetailed into the schedule, ensuring maximum efficiency and minimum site delay. The use of planned factory production of precision cast concrete units, served by our own fleet of specialised transport—ensures control of quality, free from the hazards of the weather. Beecham methods mean rationalisation; and rationalisation means economy.

Office block for Messrs. Nortons-Tividale Ltd. Tipton, Staffs.

Take a letter to our printers Miss Bidmead . . . and say

Dear Sirs,

We are urgently concerned to find a way of reducing the cost of the large quantities of notepaper, envelopes and printed and unprinted papers of all kinds for use in our offices and factory. Are there not any papers which will achieve this saving without loss of the quality look that we have so carefully built up over the years ?

Now reply to this letter Miss Fowler . . . and say

Dear Sirs,

Good supplies are now available of PLUS FABRIC - one of the famous Spicers papers - in a full range of weights and tints. These papers have excellent colour and opacity, handle extremely well, and yield a finely printed result diestamped, letterpress or litho.

The use of PLUS FABRIC would certainly show a worthwhile saving in overall cost of papers and envelopes without loss of appearance and quality.

SPICERS PLUS FABRIC cuts the cost of business stationery and gives a plus in quality

PAPERS
Bond and Bank in white and a range of attractive tints. Excellent for printing, typing and writing. Also white and tinted Duplicator.

COMMERCIAL ENVELOPES
Plus Fabric is available in a wide range of envelopes in azure, buff, grey and white.

CARTONNED CUT REAMS
Plus Fabric papers are also packed in cartons which are readily opened and closed again for ease of office use.

Ask your printer or stationer to show you samples

PERSONAL STATIONERY
Spicers delightful personal writing paper in four attractive colours is available in pads or boxes. Colours: azure, buff, grey and white, with matching envelopes.

Obtainable from all good stationers

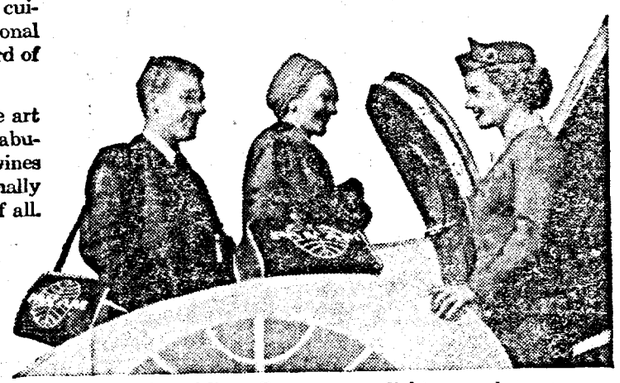
NOW PAN AMERICAN OFFERS YOU FOUR FINE TRANSATLANTIC SERVICES



On more flights weekly to the U.S.A. than any other airline

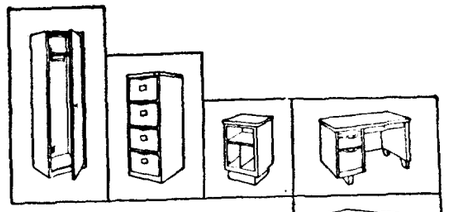
Economy-class Thrift Fares: This brand-new service for the lowest normal year-'round fare starts April 1st.† Paris to New York, for example, is only $489.60 round trip. Yet Pan American offers you the finest, most modern equipment—like the famous "Super-7" Clippers*, holders of over 20 transatlantic speed records, and the same highly trained, pleasantly courteous crews. Pan American will offer as many as 47 economy-class flights a week to choose from. Full 44-pound luggage allowance—complimentary sandwiches and light beverages served at your seat.

Tourist Service: *The Rainbow*, world's most popular tourist service. Everything you could wish in the way of courteous service, marked by the little extra touches that make Pan American the choice of experienced travelers, *Rainbow* service couples an outstanding cuisine, plus a choice of wine at modest cost, with personal attention that is as unique as Pan American's record of over 65,000 transatlantic flights.

First-class President Service: This is where the fine art of pleasing the passenger reaches a gracious high. Fabulous meals by *Maxim's of Paris* with vintage wines and champagne set the standards for this traditionally fine service—the most popular first-class service of all. Extra-wide, extra-long, foam-soft seats for everyone. Spacious berths, private *President Staterooms* are available at a surcharge.

Deluxe President Service: Pan American has reserved its *all-first-class* double-decked Stratocruisers for this outstanding air service to the U. S. A. Two separate decks—one for the main deck, one for an exclusive cocktail lounge—give you plenty of room to roam around high over the Atlantic. You'll enjoy the comfort of Pan American's original Sleeperette* service or a cloud-soft berth. And for the ultimate in air-borne luxury, ask for *The President Special*—the world's most luxurious air service by far. Sumptuous 7-course meals by *Maxim's* . . . extra cabin attendants . . . limited passenger list.

No other airline offers so many flights a week to so many convenient U. S. gateway cities.



The priceless advantage of Pan American's unequalled experience is yours on every flight no matter what your choice of service. No other way can offer you the relaxation that comes with knowing you are aboard the only airline with over 65,000 transatlantic crossings. Don't settle for less, call your Travel Agent or Pan American—800 offices around the world.

*Trade-Marks, Reg. U. S. Pat. Off. †Subject to Government approvals

HARVEY

The case of the bearded Sales Director

The funny thing was that he only wore a beard when entering or leaving the factory. At all other times he was clean-shaven.
"I want this mystery solved," said the Managing Director, "and solved quickly."
Well, I checked the cash . . . all O.K. I checked his home life . . . again everything perfect.
Finally, in a flash of inspiration, I tackled the Sales Director direct. "Why the beard?" I said tactfully.
"Oh that," he said. "Well, just take a look at our premises. They're dreadfully dingy. I'd hate anyone to recognise me."
Paint works wonders with premises . . . and morale. We have a very good Technical and Colour Advisory Service which is at your command. Take a look round your premises . . . then give us a ring.

Eastman CHEMICALS are serving European industry

Textiles

DYES FOR SYNTHETIC FIBRES

Eastman Polyester Dyes provide a broad range of colours on polyester fibres (e.g. Terylene) with the best overall fastness properties obtainable. *Eastman Acetate Dyes* include the GLF series, the only complete line of acetate dyes available with outstanding resistance to gas- and light-fading, and more than 35 "commercial type" acetate dyes exhibiting excellent tinctorial value and economy.

RAW MATERIALS FOR FIBRE MANUFACTURE

Cellulose Acetate is available as flake for producing spinning solutions used to make acetate fibres.

RESIN FOR FINISHING AGENTS

Epolene, Eastman's polyethylene resin, is the basis for preparation of textile finishing agents.

Protective Coating

FILM FORMERS

Eastman Cellulose Esters include *Cellulose Acetate* for tough, abrasion-resistant wire coatings; and *Cellulose Acetate Butyrate* for lacquers, adhesives, airplane dopes and melt and peelable coatings. Films of cellulose acetate butyrate are noted for their high strength, flexibility and excellent weathering properties.

SOLVENTS AND PLASTICISERS

Eastman supplies a broad range of *Solvents* and *Plasticisers*, including economical isobutyl acetate.

Petroleum

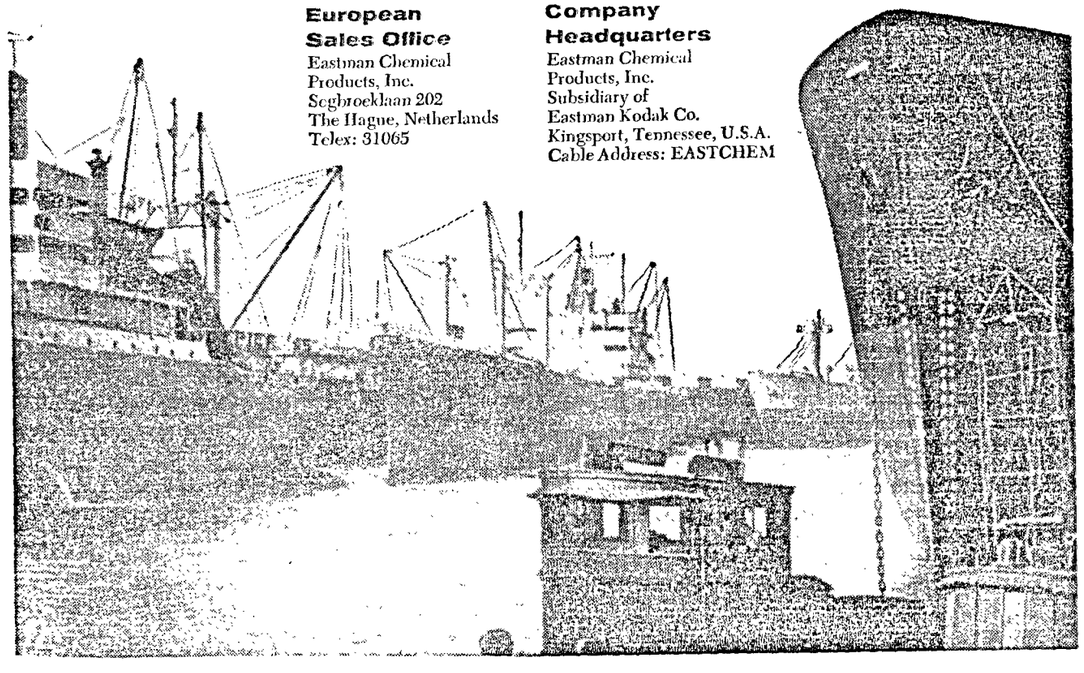
Tenamene® 1, 2, 3, 60 and *MD 50* are gum inhibitors and metal deactivators used in motor and aviation fuels to maintain quality during storage and use.

Rubber

Eastozone® 30 and *31*, Eastman antiozonants, safeguard rubber products against the deteriorating effects of atmospheric ozone.

Food and Agriculture

Tenox® antioxidants protect food and animal feed against oxidative deterioration. They are available in a wide range of formulations to meet specific processing conditions. A line of commercial-grade antioxidants are also available to protect a variety of industrial products.



Waxes and Polishes

Epolene, a low-molecular-weight polyethylene wax, is available in regular and emulsifiable grades for use in paper coatings, polishes and as an upgrading agent for paraffin and other waxes.

Stocks of many of these products are maintained in Europe, assuring quick delivery. If you would like to investigate any of these quality products, call or write Eastman's European Sales Office in The Hague. They will put you in touch with our local representative. He and a member of the Eastman staff will gladly work with you toward obtaining the most effective use of Eastman chemical products in your operation.

A Budget for Uncertain Weather

MR HEATHCOAT AMORY'S greatest political virtue has always been his level-headed intellectual modesty, and when he opens his first Budget next Tuesday he may have need of it. He is being assailed with advice to decide here and now whether he is more likely to have to fight against inflation during the coming year or against a slump. In fact it will be much wiser of him to recognise that neither he nor anybody else can really tell which will be the main danger throughout 1958-59. Quite possibly Britain will face both dangers, but at different times of the year. The Chancellor's real problem is to fit his budget into a setting of prudent uncertainty.

There seem to be two alternative ways of doing this. One would be to introduce only an interim "standstill budget" at this time, and to say that he may introduce another budget later on, when it has become clearer whether the weather outside will demand a sunshade or an umbrella. If he did this he could (and should) still carry through some technical adjustments—they are especially badly needed in the field of company finance—but he would give no net reliefs away. His alternative course would be to introduce a budget designed to meet the economic situation as it at present is, instead of trying to forestall the situation as it may become; he could still, of course (and probably will) foreshadow the possibility of a second budget later in the year if the outlook changes. On balance, this second course would seem the better one. It would certainly be politically the more attractive.

For most people are agreed that in a budget designed to meet the "situation as is" it should be possible to grant a few tax reliefs. Three different methods are in vogue for guessing at the amount of the possible reliefs, and all seem to point to roughly the same range of figures. On commonsense grounds, it would hardly seem worth giving away less than £50 million a year and hardly seem prudent to give away more than £150 million. On grounds of budget arithmetic, if Mr Amory hives the borrowing of some nationalised industries out of the below-line Exchequer accounts on to the market, he may conceivably be able to show (albeit misleadingly) an overall budget surplus somewhere within this same range. And, as it happens, Mr Amory might reasonably reach much the same conclusions after nice calculations of the most probable balance in 1958 between real demand and supply. The Economic Survey opined that last year's increase of £435 million in real demand did "not appear to have strained the economy," and most estimates suggest that the real increase in demand this year may be at least £150 million smaller. To give anything up to £150 million of tax reliefs away would not in these circumstances seem to be an improperly reflationary thing to do.

Reliefs to whom? In the field of personal taxation, which is what most people are most immediately interested in, the proper recipe for any modern British Chancellor is to increase the incentive to earn rather than the incentive to spend. Economically, therefore, there is a better case

for reducing direct than indirect taxation ; this would be a good year to make another rearrangement of income tax allowances—perhaps one designed to free from tax some of the several million people whose incomes have lately risen above the exemption limit, not because they have reached the level of real affluence where people traditionally do pay income tax, but simply because that exemption limit has not been raised in step with the decreasing value of money. Politically, however, the more immediate pressures on the Chancellor of the Exchequer in these weeks before the budget have centred, not on earned income tax, but on four other unpopular taxes.

APART from the perennial pressure to reduce the motor fuel tax—which some Chancellor should bow to one day, but not yet—the main recent political campaigns have been against the purchase tax, the entertainments tax, and the Schedule A tax on house owners. The assault on purchase tax has a great deal of good sense in it, provided Mr Amory realises what the real point of it is. The case now is not for reducing the burden on popular household goods which are taxed at the lowest rate ; it is for reducing the anomalies that are inseparable from the attempt to tax luxuries at a higher rate, so that getting goods shifted into a lower tax range by turning door-knocking nutcrackers into nutcracking door-knockers has become a publicised side-play in a now common industrial sport. The clearest and boldest way of removing these anomalies would be to replace all rates of purchase tax by a flat rate sales tax ; this would mean, in effect, reducing the tax on all "inessential" manufactured goods but imposing a new tax on "essential" manufactures, on services (hairdressing, laundry work, and so on)—and, if the Chancellor wanted to keep the flat rate as low as possible, also imposing the tax on some foods such as confectionery. Assuming that Mr Amory does not feel able to go as far as this (and he almost certainly does not), then to reduce all purchase tax rates at present above 30 per cent to 30 per cent would cost about £120 million a year. To take a substantial step in this direction would be a good second-best course to rearranging income tax allowances.

To remove the entertainments tax on cinemas would cost £30 million a year. If the sole effect of this was that admission charges went down, and the public then spent that £30 million in going to the cinema more frequently, it would not lead to an equivalent pre-emption of scarce real resources, but only of empty cinema seats. Unfortunately, however, the public would be more likely to spend most of its £30 million on other things. Some relief may be in order ; but total remission, besides being inflationary, would not help the cinemas as much as that secularly declining industry at present likes to think. Much the same may be true of the present Conservative backbench urge to pave the way for what they call an "advance towards a house-owning democracy": by reducing or abolishing or regrading both the stamp duty on transfers of property and the Schedule A tax. The sad truth is, that if political gimmicks such as this do not involve giving a lot of money away to much of the mass electorate then they are unlikely to work as political gimmicks, and if they do involve giving a lot away then they cannot be afforded. This is not to say that the urge to encourage private house-ownership should be opposed ; but it is to say that there are a lot of other things that should be accorded a higher priority.

AMONG these other things are a wide range of changes in business taxation, which would have the advantage of removing distortions at some points of real strain while not costing the Chancellor very much money. In business taxation, desirable technical reforms jostle each other in a long queue ; they include the need for a new look at some non-taxable emoluments and for a fairer formula for dealing with irregularly fluctuating incomes. But two big questions tower above this weedy plain. The first is whether Mr Amory is going to be brave enough to amalgamate the 3 per cent undistributed profits tax and the 30 per cent tax on distributed profits ; if he imposed a combined tax of about 10 per cent, he would not necessarily give any net revenue away. The economic case for combining these taxes has been recognised by practically everybody, including both the majority and the Labour-inclined minority of the royal commission on taxation. The thing that has stood in the way so far has been the political convenience of treating dividends as a dirty word, and therefore as a discriminatorily taxed reward. But there could not be a better year for making the change than 1958, when dividends are going to be held down by other factors in any event. There would admittedly be a vast undergrowth of administrative difficulties—of apparent "unfairnesses" between company and company—involved in any such sudden change ; but the need to bring competition back to the capital market is urgent, and the best principle here may be "never mind the undergrowth, merely swing the axe."

The second big question about business taxation is whether Mr Amory is going to restore the investment allowances ; this would not affect his revenue for 1958-59, but only for later years. Perhaps the problem as it presents itself to the Chancellor next week will be whether to restore the allowances now, or to hold them over as a near-first priority for any anti-recession budget that he may have to be ready to introduce later ; there is a reasonably strong case for action now, because decisions to invest have already begun to decline. But Mr Amory should be urged not to try to reach for a halfway house : by restoring the allowances selectively —for, say, export industries only. The main effect of introducing such distinctions between essential and presumed unessential industries would be to intensify in the taxation of investment just those distortions and anomalies which opponents of the purchase tax are urging the Chancellor to remove from the taxation of consumption. Together with any other measures of disguised export subsidy, this step should be avoided in next week's budget like the plague.

THERE, as regards taxation, advice to Mr Amory may rest. There are two other things that he will be widely expected to talk about next Tuesday. First, the time may be approaching when the Conservatives will have to do something about the nationalised industries ; the essentials of this problem are discussed in a separate note on page 101. Secondly, it is generally presumed that in his budget speech Mr Amory may disclose the plans which the Treasury has prepared for countering any real slump, if one should befall. Internally, these plans could sensibly include preparations for the release of postwar credits, for road programmes and other public works ; externally they should certainly centre on negotiations with America for increasing international exchange reserves—or, if America will not assent to these, for negotiations with Europe and the Commonwealth about widening non-dollar credit lines within the European Payments Union.

But these are arrows for the quiver. Next week the nation's main concern will be with Mr Amory's actions in the present breach. His best course there would be to give some moderate tax reliefs. The present state of the nation's finances seems to allow them ; and, in this appallingly over-taxed economy of Britain's, any British Chancellor, whenever circumstances do not positively forbid, should admit to an unashamed bias towards relief.

Bonn's Atomic Rearmament

To arm the Bundeswehr with nuclear weapons will probably be an irreversible step. The western powers should pause to consider what the consequences are likely to be

ABSORBED in the conflict of conscience about its own nuclear weapons, the British nation has paid little attention to the convulsion of German opinion over an issue that is in many ways more portentous, the nuclear rearmament of west Germany. It is true that the debate which lasted from March 19th to March 25th in the Bundestag at Bonn was too vast a war of words for any newspaper fully to report. Yet the general course was clear enough. What began as a debate on foreign policy, with particular reference to summit conferences, turned into a debate on atomic rearmament, and ended with a government majority for the proposition that the armed forces of the German Federal Republic "must be equipped with the most modern weapons."

History has many strange things to tell of the relations between former enemies after wars that had seemed vital at the time they were fought. Perhaps there has been none as strange as the passivity with which this decision by Bonn has been accepted by Germany's ex-enemies in the West. Dr Adenauer is coming to London next week for talks with Mr Macmillan ; there is no reason to suppose that this subject is even on the agenda.

Evidently it will, however, be on the agenda of the Nato defence ministers when they meet in Paris on Wednesday ; for it was this approaching meeting which, Dr Adenauer told the Bundestag, had forced his hand and obliged him to insist on an immediate vote. As he explained, Nato was planning a military reorganisation which would require the member states to accept rockets and nuclear weapons. Since the Soviet Union possessed rockets and nuclear weapons, Nato would become "meaningless and pointless" if one of its important members were without weapons "of the same strength as those of the potential opponent." Indeed, he went on, Bonn practically had to decide whether to stay in Nato or not ; for if it rejected the requirements of Nato's strategic planning, it would have to leave the alliance.

If this were true, it would be a fearful condemnation of an alliance that it should impose such a choice on a member state placed as Germany is. But in fact, not only could the Nato ministers not take up any such attitude without the affirmative vote of their German colleague ; it is obvious that they would not take it, whatever their German colleague thought. Dr Adenauer when he spoke in that way was bringing a familiar form of persuasion to bear on his parliament ; he was also preserving the formal position that nuclear rearmament has not been an aim of policy of the west German government, but is a burden thrust upon it by its friends and accepted from loyalty.

The "strategic planners" of Nato are no more able to dictate requirements to Bonn than the ministers are. They can, and should, state their views about what is militarily desirable. They can urge that the Supreme Commander ought to have more atomic cannon and more rockets than he has now. They may even have advised him that it would be more convenient if the rockets and cannon were in the hands of the various national components of the Nato forces, instead of (as at present) only in American units that are kept on call. But the military planners cannot set aside the

political objections; only the political leaders can do that. If they have—and it is unlikely that Dr Adenauer would have committed himself without making reasonably sure of the acquiescence of Washington, London and Paris, at least—then the responsibility does not fall on the soldiers. It falls on the western governments, in whom the habit has grown of accepting—so long as no expense to themselves is involved—an automatic priority for military considerations over political ideas. Their indispensable concern for security need not cause them to distribute nuclear weapons indiscriminately.

IN the particular case of Germany the military advantage of putting the new weapons in German hands looks minor, while the political arguments against it appear decisive. What appears to be proposed at this stage is that the "means of delivery" of nuclear warheads should be supplied to the west German armed forces, while the warheads themselves are kept under the Supreme Commander's control under the arrangements hinted at in the communiqué that followed the meeting of Nato heads of government in December. Is this imperative to western security? There are already two atomic powers (the United States and Britain) among the states that keep armies in west Germany. Obviously Nato's nuclear fire-power there could be reinforced with additional American (and even, if necessary, British) nuclear units. It might not be convenient, but it would be perfectly possible, and it would have the advantage that one day, when they were no longer needed, they could be taken away again. Thus the western powers would remain able to negotiate for a pacific solution of the German question if and when the opportunity offered. If the present intention is carried out they may quickly lose any such power.

Against this it is being seriously argued in the western governments that they could not "discriminate" against the Germans by keeping nuclear weapons out of their hands. Why not? When it was agreed in 1954 that west Germany should join Nato and raise an army, the west German government itself accepted a special position, for excellent reasons, promising formally not to produce certain kinds of weapon, including atomic weapons, rockets and guided missiles. Nobody called that promise unfair to the Germans. Since nobody supposed then that the Americans (let alone the British) would think of supplying the Germans with nuclear weapons, the promise was treated as an effective guarantee that Germany would stay out of the atomic weapons club, and opinion in the west was persuaded to accept a German army on that understanding. Dr Adenauer himself told the Bundestag in October, 1954, that his government had renounced *the use* of weapons of mass destruction, thus giving exemplary proof of its peaceful intentions. His attitude then was regarded as praiseworthy; it was not until last month that he questioned whether he had been rightly reported.

The west German army created under the treaties of 1954 is a very different thing from the German contingents in the European army that would have been if the European Defence Community treaty of 1952 had gone through. The west Germans now have a national army, air force, and navy in their own control; and this was accepted as following logically upon the decision to have German soldiers at all. It is now in course of being accepted, as following logically again, that the German army shall have the means of delivering nuclear warheads over limited ranges. (Apparently Warsaw, Prague, Budapest and Belgrade would be within range of the Matador, which Herr Franz Josef Strauss has ordered. As might be expected, the prospect has set off a new round of consultations in Prague and elsewhere between the communist governments.) What, then, about the warheads themselves? Do they not follow logically? And if the possession, why not the production? Is it seriously supposed that the west German government will be content to bear heavy expense in procuring and maintaining the vehicles, and not to concern itself with the supply of explosives?

THE danger in this prospect is heightened by the fact that there are not one, but two, German states each of which is technically fully capable of producing a range of nuclear weapons for itself. The two states live in a condition that amounts to suspended civil war, each denouncing the aggressive designs of the other, and each increasingly the victim of its own hostile propaganda. As an article on page 125 indicates, the tension in east Germany has risen sharply with the Bonn decision in favour of atomic weapons. It is fair to say that neither of the two German governments is actually plotting war, though each would refuse to believe this of the other. What is tragic is that they are pursuing aims unattainable by any but violent means. Where it would be reasonable to seek a *modus vivendi*, they stake their claims constantly higher. Reacting against each other, they veer ever further away from any middle course in all-German policy.

The two hostile German states stand today under the protection of the two hostile world powers. So the peace is precariously kept, but the two sides in Germany grow ever more bitter against each other, outdoing their protectors; and the arrangement has the further drawback that any armed conflict between Germans would be likely to lead to world war. Suppose that Moscow and Washington one day grow tired of their permanent wrestlers' lock in Germany and wish to detach themselves? Once the two German states, or one of them, has nuclear armaments the world powers will not be able to leave; nor will they be able with safety to stay.

This nightmare is vivid in the minds of many people in Central Europe. It is made worse by the absence of a recognised German eastern frontier. Evidently it moved the Polish government to produce, and to persuade the Russians to approve, Mr Rapacki's plan for a zone free of nuclear weapons. The plan is not, by itself, acceptable to the West. But it faces western policy with its real problem, which at this stage is not to choose this or that plan as practicable, but to decide in which direction it would wish to go.

Is it the western purpose to make disengagement impossible? Many people do think it an excessive risk, in any circumstances, holding the German nation to be so deeply untrustworthy that a unified and evacuated Germany would be unsafe; on that argument, the sole object of policy towards Germany must be to tie Bonn ever more closely to Nato. But the bizarre thing is that this train of thought should have led them to think it mere common prudence to arm the Germans, whom they distrust, with the weapons of mass destruction.

Scorecard for the County Elections

The county council elections started on Thursday, and will continue in different counties on different days of the coming week up to April 16th. As the last of these three-yearly elections took place on the eve of the 1955 general election, these contests will provide one of the widest and tidiest measures yet of by how much Conservative popularity has fallen since then.

IN this week's triennial renewal of the 62 county councils in England and Wales, there are just over 4,000 seats to be filled. Some 2,400 of them are being filled by unopposed returns, but these lucky councillors (623 of them Labour, the rest anti-Labour) would have got in in their areas in any event. In most of the other 1,600 constituencies, a Labour candidate is standing and is being opposed by somebody with official Conservative support.

Last time these elections were held—in April, 1955, a month before the Conservatives' victory in the parliamentary general election—Labour elected 1,040 county councillors. This was slightly below the 1946 Labour figure, 200 better for them than in 1949, but nearly 200 fewer than in Labour's peak year of 1952 (when Labour enjoyed a comfortable 6 per cent lead on the Gallup poll). It is hazardous to argue from local elections with a 30 per cent turnout to general elections with an 80 per cent one, but the coincidence of timing between the last county elections and the last general election makes the temptation irresistible. As a very rough rule of thumb, then: Labour men who are already counting their parliamentary chickens should probably feel jolted if their party secures fewer than 150 net gains of seats. It will be more in accord with recent trends in parliamentary by-elections if they secure between 200 and 250 net gains.

Outside London

OUTSIDE London, Labour at present controls six county councils: Derby, Durham, Glamorgan, Monmouth, Nottingham and Northumberland. Only the last of these has, since the war, ever slipped from the party's grasp. What Labour has now in the counties, it will therefore obviously be expected to hold, plus between two and six other counties. The two most likely new Labour captures are **Carmarthen** (which was narrowly lost to the anti-Socialists in 1955 and where Labour has since won a by-election) and the **West Riding of Yorkshire** (which has changed hands at every postwar election, but where the Conservatives did exceptionally well in 1955, reducing Labour representation to its lowest point since the war). The other counties won by Labour in 1952, but then lost in 1955, were **Essex, Staffordshire** and **Lancashire**; if Labour gets all these back, as it well may, it will feel fully satisfied. The most exciting contest of all, however, may be in **Middlesex**. If Labour recaptures this, after nine years of Conservative rule, this will confirm the gloomiest Tory fears. But the Tories seem likely to be less worried by the Liberals in these county elections than they may be in a general election. Liberal candidacies in this coming week (just over a hundred of them in contested seats) look like being just sufficiently strong to be interesting, but also sufficiently scattered to keep the main two-party battle in its familiar place in the foreground.

The London Marginals

THE London County Council elections, which take place on April 16th, will in many ways provide the neatest yardstick of all; it is to them, therefore, that we devote the fullest analysis. Each of London's 42 parliamentary constituencies returns three county councillors. Labour has a majority of 22 in a council of 126 now. After next Wednesday, it will be expected to have a majority of at least 54; indeed, as will be seen from the table on the next page, unless it reaches this figure it will not be doing well enough to make it a favourite to win any early general election in the country as a whole. The most probable Labour majority for the LCC after next Wednesday would, on present form, be about 72 (i.e., 99 councillors to 27). The sensible peak of Labour ambitions may be a majority of 90. For those who expect Labour gains, the interest must centre solely on Tory held (or partly Tory held) constituencies. Among these, the following are regarded as the crucial fights, in the possible order of Labour hopefulness:

(1) **Barons Court**: Labour got two of the three LCC seats in 1955, then won the constituency parliamentarily by a tiny majority of 125. A third Labour seat seems in the bag this time, especially as there is Liberal intervention.

(2) **Clapham**: Labour lost the LCC election in 1955, but scraped home parliamentarily (majority 225). Three Labour gains of seats confidently expected.

(3) **Wandsworth Central**: A Labour constituency both on LCC and parliamentarily until 1955, then Tories gained it in both. Labour should get these three seats back.

(4) **Battersea South**: Labour expects to gain these three seats narrowly, especially as there is Liberal intervention.

(5) **Holborn and St. Pancras**: The Labour party holds this constituency in Parliament. But the Conservatives hold it in the LCC because there is a "local government only" franchise there. The Labour effort in 1955 was

very bad, but will be very strong, and very left wing, this time. Labour should win, it thinks; the Tories hope that the unpopularity of Labour's extreme left councillors here will save them. There is Liberal intervention.

(6) **Dulwich**: The party machines are well matched, and there is no Liberal intervention (as there was in the 1955 general election). But Labour thinks it should just win.

(7) **Woolwich West**: This was won by Labour in 1952, and Labour thinks it should win again. Both parties are very well organised here.

(8) **Lewisham North**: This is regarded by Labour as a key fight. Labour gained it parliamentarily in a by-election last year, when an Independent Loyalist split the Tory vote. Now a Liberal splits it.

(9) **Lewisham West**: Not quite as marginal as Lewisham North (see table) and no Liberal intervention. Tories expect to hold; Labour thinks it has a chance.

(10) **Lambeth Norwood**: Labour made a mess of the previous election: the party was in a state of disintegration with personal and policy splits. It was then regarded as marginal; now that Labour is well organised it may be considered marginal again. If Labour wins, this will be regarded as a sign of considerable electoral strength.

(11) **Putney**: This does not look very hopeful for Labour but the area is becoming less middle class as the LCC have built a lot of council flats. The Labour campaign here, run by an advertising expert, is unabashedly anti-rent act. Putney will vote on that—and rates.

(12) **Paddington South**: In 1955 the Conservatives had a good majority but on a very low poll. Labour thinks that in event of a revival by the intervening Liberals, and a higher poll, the Tories could lose the seats.

If Labour won all these seats, then it would win a majority of 90 (108 councillors against 18) in the LCC, thus wiping the Tories out of all but six constituencies. Those remaining six Tory constituencies, however, look pretty safe—unless indeed the Liberals have some sensational success in the Tory strongholds of Chelsea, Hampstead or St. Marylebone (in all of which, as in seven other constituencies, they are intervening).

The following table, although it ignores the effect of Liberal interventions, is in other ways self-explanatory; it may serve as a useful scorecard for analysing what the LCC results will imply for a general election. The figures in the last column are necessarily very rough:

Constituency	Presumptive Labour majority on LCC if constituency secured (seats)	Swing to Labour required to win Parliamentary seat (% of votes)	Presumptive Labour majority in Parliament if it only just won this seat* (seats)
Barons Court	24	*Labour seat*	— 70
Clapham	30	*Labour seat*	— 70
Wandsworth Central	36	1·1	— 35
Battersea South	42	1·1	— 35
Holborn & St.Pancras	48	*Labour seat*	*See text*
Dulwich	54	1·8	— 10
Woolwich West....	60	2·2	+ 10
Lewisham North ...	66	4·0	+ 60
Lewisham West.....	72	5·0	+ 90
Lambeth Norwood .	78	5·7	+110
Putney	84	7·1	+150
Paddington South...	90	11·8	+275

**Explanation of this column*:—The Tories had a majority of 67 seats over Labour in the last general election. Wandsworth Central, to cite one example, appeared to be approximately the fifteenth of the most precarious seats among all those that the Tories held. So if Labour *just* won this LCC seat next week, the indication would be that the Tory majority in Parliament might come down in a new general election by 30, to 37. This latter figure is called 35 in the table, so as not to be finicky.

Report from the Field

OUR correspondent roving around London's hustings reports: A week before the LCC election it was not always easy to find it—and this is the electorate's trouble, too. All the parties have published manifestos to say what they intend to do with London if they stay or get in for the next three years, but none of the papers has given them much publicity. "The trouble is, London hasn't got a provincial paper of its own," grumbled one party organiser, "What do the big nationals care about the LCC?" Meetings are even less important than in parliamentary elections: "Only a few cranks and pressmen go usually; but even that's part of the—er—proper ritual, you know."

So local government electioneering is strictly an infantry guerrilla warfare, in which unpaid devoted souls load themselves up with voting-cards and go from door to door breaking up happy television parties. "The problem," said one conservative candidate, "is to get them to realise what the LCC *is* and what it *does*. They've heard about Parliament, of course, and some of them know about the local borough council, but the LCC—well, that's a bit beyond them."

Hence the following colloquy which your correspondent overheard on the landing of an LCC block of flats: "Good evening. May I introduce myself? I'm your Conservative LCC candidate for the elections next Wednesday." "Oh, are you? Well, I'm afraid you're not very welcome this year." "Oh, dear, I'm sorry to hear that! What have I done?" "Well, just look at the Government! Just look at what they—" "Excuse me a moment, this is an election for the LCC. The *socialists* are the government there—been in since before the war. They've done it—not us." "Oh, er, yes; that's so, of course. The *LCC*, you said?" "Yes, and we think you should throw them out, they've been wasting money long enough, don't you think?" "Well, sir, you may be right, at that. Maybe—" "Here's our voting card, Mrs. So-and-so, then; three votes, three candidates, day after budget day. . . ."

And so to the next, who says, "Well, now, dear, I did vote for the Conservatives last time, but now I think it's the Liberals' turn. . . . Yes, I know, dear, but let's hope they can get enough votes to form a government . . . and then we can stop this dreadful bomb. . . ."

This can work the other way. In a solidly Labour borough your correspondent detected Labour embarrassment over the communist appropriation of the slogan "Homes not H-bombs"; fresh from the Aldermaston march the Communist canvassers here were visiting nearly all of the borough's 60,000 voters, in support of one of the four Communist candidates for the LCC. "We shall be bottom of the poll," a young Communist said, "But things are looking up." Labour, by contrast has abandoned meetings in this constituency, and was depressed about the smash-up of its loud-speaker van. In the marginal constituency of Holborn and St Pancras, intense irritation has been provided by the local—and strong left wing—Labour council, which is flying the red flag instead of the Union Jack, and is giving its employees a holiday on May Day.

Theoretically, the Conservatives are the attacking force, basing their campaign upon detailed charges of maladministration, extravagance and a growing dictatorial complex in County Hall. They play with such facts as that LCC expenditure has risen from £55.9 million in 1950-1 to £109.6 million in 1958-9, while it costs the LCC 19s. 11d. to keep a child in a day nursery and over £10 a week in a residential nursery. But when it comes down to the electorate, the issues are apt to be national, not local, desperately though the Tories plug the issue about the rates.

Labour, theoretically on the defensive, is in fact the attacking party. It defends its stewardship with a wave of the hand towards the new blocks of flats, and says piously, "London can't be run on the cheap." Then it turns to the Rent Act, the block grant, the "iniquitous eleven-plus," unemployment (coming, not present), and even the H-bomb. "Oh, yes, this is a local government election and the issues are local," its party organisers say; "but you can't ignore the fact that the Aldermaston march began in Trafalgar square." Tactically, Labour has not raised LCC rates this year, as in previous election years; familiarly enough, in the marginal counties of Lancashire and West Riding the Tories are taking credit for not raising rates, too.

In the main, such voters as vote will vote the national party label, not the record of an upper tier local authority which taxes them more by stealth than anything. But there is plenty of public spirit in organising the election and in the efforts of the candidates. The latter come from all walks of London life, which will be represented whoever wins; one in four on both sides is a woman. Labour has put up two peers to the Tories' one peer and Lady Lewisham. The Tories come up strongly with business men and lead Labour on professional people, ranging from QCs and an ex-Lord Provost of Edinburgh through an average adjuster to Mr Christopher Chataway. Both parties draw heavily on London office workers for would-be county councillors, but even Labour has put up only eleven factory workers. Retailers and shopkeepers, who seem so vitally interested, are really too tied to their shops to stand (five for the Tories, three for the Liberals, none for Labour). Sadly, there are only seven independents; perhaps significantly five of them are old-age pensioners and another a "philosopher and entertainer". Five of the independents are standing in Labour's stronghold of Woolwich East. The successful candidates next Wednesday will get in as politicians, but stay in as administrators and loyal party men; and after their brief appearance on the doorsteps London will no doubt forget about most of them as individuals altogether.

NOTES OF THE WEEK

RAILWAY WAGES

The Showdown?

THE wages test has arrived. On Thursday the majority of the railway wages tribunal rightly decided that it could recommend no increase for railway workers this year. Taken in conjunction with Mr Cousins's ultimatum on behalf of the London bus workers, the presumption, as we write, is therefore that the country may have to prepare to stand up to a national transport strike. The long-delayed conflict, if it comes, will be between two attitudes. One is the attitude that bases itself on "fair shares": on the instinctive belief of so many British people—by no means only trade unionists—that a man's wages in any occupation should, as of right and if need be by public subsidy, be made roughly equivalent to what they are in any other occupation that is comparable in arduousness. The other attitude is that based on solvency: on the recognition that a man's wages in any occupation can depend only on what he earns from his industry's customers. If people are to move into the right jobs, this latter view has got to prevail; it is the prerequisite of keeping up the whole country's standard of life, trade unionists' as well as everybody else's.

It will, of course, be appalling if Britain has got to face a period of major industrial strikes in order to drive this point home. So many times since the war governments, arbitration courts, trade unions and employers (especially nationalised employers) have had the opportunity to reach a solution in some other way. If only this country could get back to a rate of faster industrial expansion the problem could be solved, in this age of industrial revolution, by differential rates of enrichment for everybody, rather than by intervals of standstill for some. But the trade unions themselves have not been the least among those who have stood in the way of this expansion. Whether a spring and summer of strikes would induce them to get out of the way of it is a point which only the future can show; the national tendency in recent years may well have been to overestimate the bad effects of a short period of bitterness, and to underestimate the bad effects of a long period of easy meat. Let nobody doubt that a transport strike, if it comes, will be a major political and social upheaval—much more in fact, than it will be an economic one. But the annual hand-out of wage increases far in excess of productivity, to workers even in industries that are over-expanded and in deficit, has been a recipe for general inflation and overall stagnation at the same time. There is no doubt that it will be worth while to stand up to the threat of a transport strike on this issue; just conceivably, this could be the turning point away from Britain's main economic misfortune since the war.

TOP-LEVEL MISSIVES

Logical Negativism

"ZERO plus zero plus zero plus zero," in Mr Suhrawardy's lapidary words, "still equals zero." Some such thought comes all too naturally to the observer of the latest top-level exchanges on disarmament and related matters. The spring spate of official communications between the Soviet and the western governments has been accompanied by a freshet of Khrushchev speeches, press conference remarks by Mr Eisenhower and Mr Dulles, and miscellaneous utterances by Mr Macmillan and others. The Aldermaston marchers, of whom over ten per cent actually

managed to walk fifty miles in four days, have been rewarded with the Soviet ambassador's assurances that "I solemnly declare that your demands and our position coincide." Unfortunately even this terminologically inexact statement can give little cheer to any sincere champion of disarmament; and where else is there a ray of light in the gloom?

In America, the Administration is now meeting both sharp and widespread criticism of its failure to recapture from Russia the initiative in either diplomacy or propaganda. As a note on page 118 indicates, this week's press reports have tended to exaggerate the differential in language and tone between the latest utterances of Mr Eisenhower and Mr Dulles (a natural error, in view of the past record, but an unfortunate one, since it further confuses an already cloudy picture). In fact, both President and Secretary of State seem to concur in regarding Mr Khrushchev's suspension of nuclear tests as essentially a propaganda move; yet both have hinted at the possibility of an early suspension of American tests too, and Mr Eisenhower's harking back to his "atoms for peace" plan of 1953 was undoubtedly endorsed, and probably inspired, by Mr Dulles. But their joint posture has neither squared up to the fact that in present conditions policy and propaganda are hopelessly inseparable, nor appeased the critics in the United States or the wider world.

True, the critics themselves offer few constructive suggestions. At the moment, even a twelve-year-old could easily catalogue and castigate the shortcomings of western diplomacy, and some of the silly alternatives now being propounded look like the work of a still younger child. Certain things that the West should *not* do are clear enough—one of them being the subject of a leading article in this issue—but so far no positive alternative to the existing and dispiriting programme has been framed. A kind of logical negativism reigns. The western governments look as if they are going to find themselves embarking on the climb to the summit without faith in their old policies and without any grip on new ones. That is why the great public debate on these matters, unsettling and disruptive though it may be, must go on. Indeed, it must be intensified; and the accent must be switched from the sterile interplay of rigidity and destructive criticism to a search for positive policies which, unlike those hitherto canvassed, will hold water.

SOVIET UNION

On the Wings of a Dove

MR KHRUSHCHEV is making great efforts to appear as the untiring apostle of peace to his own people as well as to the foreign public. The first act of the new Soviet premier, after he had taken over from Marshal Bulganin, was the announcement of a suspension of nuclear tests. The clumsiness of the initial western reactions to that Russian gesture gave the new premier an excellent opportunity to score fresh debating points. He did not fail to ask President Eisenhower and Mr Macmillan why, if Moscow's unilateral action was nothing more than propaganda, the western governments still refused to follow suit. In a less polemical mood, Mr Khrushchev added that the Soviet government would be glad to collaborate in a system of inspection which, he believed, would not be difficult to set up.

These and similar statements were made by Mr Khrushchev in his travels through Hungary. For his first foreign tour after the reduction of the B and K duet to a solo act, Hungary looked like a tough assignment. But Mr Khrushchev knows no stage fright. To relieve the resentment against the presence of Soviet troops, he repeated Moscow's offer to remove all its armed forces from eastern Europe, and to demobilise them as well, if the western powers would do the same about their troops on the continent. On the insurrection itself he was on one occasion less dishonest than in the past: he admitted that Soviet tanks had to fire on Hungarian workers. He added that this decision was reached after sleepless nights in the Kremlin, and warned the Hungarians not to rely again on Soviet "help" in similar circumstances.

In eastern Europe this cryptic statement could have been taken to mean that the Soviet army will no longer come to the rescue of a collapsing communist regime. Mr Khrushchev subsequently realised that he had been dangerously carried away, and put the blame on misinterpretation by "bourgeois" journalists. A rising "in any socialist country," he now proclaimed, would be crushed by the combined forces of Russia and other communist states. Yet, despite this correction, Mr Khrushchev's emphasis on nuclear disarmament and disengagement must be distasteful to some of his more conservative colleagues. Mr Khrushchev is aware that nothing could consolidate his position at home better than a spectacular international agreement combined with a shift of resources from defence to consumer goods. What is not so clear is whether his current peace drive has a deadline beyond which he will call a retreat. Once the Americans have carried out their forthcoming nuclear tests, rocket bases have been deployed on the Continent, and the German army has been equipped with atomic weapons, will Mr Khrushchev still preserve his enthusiasm for summit-climbing?

RENT ACT AMENDED

Hard Cases Make What Law?

IN the spirit of Easter charity, Mr Henry Brooke's sudden decision to rig a safety net under the Rent Act may be put down mainly to humanitarian, and only secondarily to political, motives: at any rate, he is not likely to get much out of it politically, as he must well know. Nor is the amending bill, as he described its intention last week, seriously running away from the principle of rent decontrol. It was, perhaps, a pity that Mr Brooke spent the first half of his statement explaining that the Rent Act was working well and intimating that no amendment need be made, and the second saying that the Government had nevertheless decided to introduce just such an amendment. It is a still greater pity that the House should have spent all its time discussing relative fairness between the much-favoured sitting tenants and the much-maligned landlords, without saying anything about unfairness to other—and long unsubsidised—tenants who want to move into the accommodation that the Rent Act will set free. But a sense of proportion needs to be kept.

Under the present law, a landlord seeking to regain possession of his property for a new tenancy will normally not have to wait more than four weeks for a court order to become operative. Under Mr Brooke's new bill, which will stay in force for a limited period after the Rent Act comes into full operation after October 6th, the courts will in certain

circumstances be able to grant a stay of execution for a longer period than four weeks: for just how much longer has not yet been revealed. The main circumstances which will be held to justify a temporary extension of tenure will be if the tenant cannot find alternative accommodation, and if he can show that eviction would cause greater hardship to him than extension of his tenure would cause to the landlord. The Government believes that most of those who will qualify under this clause will be elderly people, especially in large towns; this, of course, prompts the immediate objection that it is precisely the squatters' rights exercised by so many retired folk, on over-roomy accommodation in the large towns, that is the principal cause of the acute housing shortage for young people around the main centres of work.

But, even for those who secure a temporary extension of tenure, the increased rent will become payable after October 6th; and it is this push of higher rents that has always promised to be the main factor in producing a more equitable spread of tenants over tenantable space. If the Rent Act does what is hoped of it, relatively few people will be able to show for long that they cannot get alternative accommodation. It is only if the provisions of the new bill significantly delay that freeing of alternative accommodation that Mr Brooke will have rueful cause to agree with Publilius Syrus, that hard cases do indeed make bad law.

BEFORE THE BUDGET

The Nationalised Nettle

MANY people are expecting that Mr Amory may decide to say, and possibly do, something new about the nationalised industries in his budget statement next week. A significant table was inserted into the Economic Survey which showed that the only two sectors which invested more than they saved last year were the nationalised industries and the local authorities, with excesses of £556 million and £430 million respectively; everybody else—persons, companies and the Government—showed a surplus of savings over investment. Some Tories are interpreting this to mean that the whole blame for recent inflation can be laid at the door of the public corporations and the local councils. The point for the Conservatives to grasp, however, is that the main trouble about the nationalised industries is not that their investment programmes are too large (although some of them may be); it is that their savings—which means their current profits—are too small, indeed in most cases non-existent.

In the days of more buoyant demand their profits were too small because they did not increase their prices by as much as they could have done; now they are too small because they are being much too slow in laying out of employment their most unprofitable services—together with the men who operate them. The wage inflation which the nationalised industries have hitherto annually led has had its roots in the same attitude: in the belief that they must pay high enough wages to attract sufficient workers to operate all their money-losing services as well as their money-making ones. If Mr Amory next week takes the borrowing of the nationalised industries out of the Exchequer accounts on to the gilt-edged market, but pays no new attention to this much more essential failing, he will have touched only an unimportant fringe of the problem; the need now is not to foreshorten the public corporations' investment projects so much as to find some further and tougher way of foreclosing on their current deficits.

CANADA

Star Without a Script

FAIRLY enough, many commentators on last week's Canadian elections—including our correspondent in Ottawa—dwelt on the dangers implicit in too large a parliamentary majority. Even some of the Conservatives themselves, having evicted a Liberal ministry whose insolence of office arose from its exaggerated sense of security, now fear that they may have got out of the frying pan into the fire, for Mr Diefenbaker's government is more firmly entrenched in terms of parliamentary seats than any Canada has known. The new premier will have to work hard to prove these fears false. But there is a bright side to the same coin. While the Liberals' imagined security in office admittedly led them to a prideful fall on the home front, it also emboldened them to launch out on imaginative courses in foreign policy. Mr St Laurent and Mr Pearson—whom it is now sad to see relegated to the leadership of a virtually helpless domestic opposition—had made their country count for a great deal in the world. Only a strong, secure government can perform such feats—and now, after nine months, there is again a secure government in Ottawa.

For the outside observer, indeed, the disturbing feature of last June's electoral outcome was that it brought to power a minority government which could scarcely be expected to play a full part on the international stage. Yet it proved possible to go on playing *Hamlet* without the Prince at least for a while. At the last United Nations Assembly, for example, the Canadian element in the diplomatic fire brigade worked on tirelessly, and continued to enjoy its special status. The gap thus tided over, and a government again installed which is secure enough at home to speak with authority abroad, what will it say? One may discount, as natural election material, some of Mr Diefenbaker's more thumping statements about Canada's future posture in the world. But a solid substratum remains, as authentically Canadian as the Laurentian Shield. The newly published report of the Gordon commission (ironically, a Liberal-appointed and Liberal-led body) seems, as our Ottawa correspondent shows on page 126, to point the way for a new effort to build a greater and more independent Canada. This is a goal after Mr Diefenbaker's heart, and a wholly legitimate one. But if the triumphant Conservatives become so absorbed in cultivating their huge garden that they turn their backs on the world, the world will feel the loss; for it still needs a loud and clear Canadian voice in its councils.

TERRITORIAL WATERS

Taking the Plunge

WITH a muffled plop, Britain dropped overboard last week an old and favourite concept of international law. The belief that a country's sovereignty cannot legally extend more than three miles out from its coastline is an ancient one, so ancient that in British eyes it has acquired the look

of revealed truth. Now, as one country after another (including some of Britain's friends) declines to conform to old-fashioned ideas of what is right and proper, we have been compelled to change our attitude. Last week, at the United Nations conference on the law of the sea in Geneva, the British delegate proposed that the limit of territorial waters "should not extend beyond six miles." He claimed that this should not be taken to mean that Britain had abandoned the idea that three miles was the real legal maximum. But this attempt to distinguish between what is "accepted" and what is "permitted" is bogus. The effect is plain: if the proposal were accepted, six miles would soon be the generally acknowledged boundary of sovereignty—even if, as the British proposal suggests, the rights of passage for ships and aircraft between three and six miles were to stay unaltered.

But will the proposal be accepted? In 1956 the International Law Commission, which was instructed to draw up a draft code of sea law, had to confess itself baffled on this point. Apart from declaring that there was no basis in law for claiming more than 12 miles of territorial waters, it simply referred the matter to an international conference. There are a number of purposes for which countries want to exercise power beyond the three-mile limit, but for the majority of them the most important is fishing. Iceland's reported determination to push its fishery limits still further out to sea is only the latest example of the desire of many countries to keep the fish that breed near their coasts under their own control. For powerful maritime nations like Britain, which want the fish that lie close under foreign shores and have the vessels to go and get them, the freedom of the seas has been a beneficial concept. It is now necessary to realise that many countries do not look on it with so kindly an eye. The British proposal is a step in the direction of meeting their demands, but it is not at all sure that it goes far enough to rally the necessary two-thirds of the conference. If it fails, the essential thing will be to try to stop the claims of unrestricted sovereignty spreading wider yet and wider. Is there not a case for making a distinction between territorial waters, in which a country enjoys sovereignty, and a slightly broader zone round it in which it merely enjoys a special privilege in the allocation of fishing rights? This is the core of the proposal made by the Canadians at Geneva. If Britain's suggestion makes no headway, it may be necessary to take a closer look at this idea.

LABOUR AND DEFENCE

Demonstration for the Bomb

THE appearance of Mr Gaitskell, Mr Bevan and Mr George Brown arm in arm at Shape headquarters in Paris this week was not only a remarkable exercise in peaceful co-existence. It was also a gesture that should do Britain, as well as the Labour party's reputation, a lot of good. It has always seemed unimportant whether Labour should hold consultations on defence policy with Mr Macmillan, but very important that it should hold them with General Norstad: if only to show that the accession of Britain's alternative government would not in any way impair this country's solidarity with the western defence alliance. This week's visit was calculated to demonstrate precisely that. It was testimony to the effectiveness of Mr Gaitskell's leadership in the party, and he ought to have credit for it: for in this matter nobody can doubt what an awkward corner he had to turn.

The visit coincided with the publication by Mr Strachey, under the seal of Mr Gaitskell's approval, of a pamphlet bearing the ingeniously misleading title of "Scrap *All* the H-bombs": the pamphlet's central theme is that Britain should not unilaterally scrap its own. Mr Strachey bases his argument against unilateral British renunciation of the bomb on the grounds that (a) renunciation would leave Russia and America as they were with the means to destroy the world and without the slightest expectation that they would follow suit; (b) that British renunciation of the bomb would still leave the country committed to alliances backed by the American deterrent and thus to moral complicity which would make nonsense of the "gesture"; and (c) that if the "gesture" were backed by British withdrawal from the alliances the resulting disturbance to the balance of power would increase, not diminish, the risk of nuclear war.

This is the case put forward for the Labour pacifists to answer, albeit worded with every concession to their susceptibilities. If Mr Strachey plumps rather hastily for following Russia in the suspension of tests, if he commits the party to delay in establishing missile bases and to grounding the H-bombers without serious study of the technical issues, and tries to take some political mickey out of the Tories over the summit talks—still, much can be forgiven the official Labour thinkers on defence for the intellectual toughness with which they are now facing the central issue of commitment to the alliance. Mr Strachey's policy, as it emerges in this pamphlet, wears a touch of Sandysianism in his belief that Britain should keep the bomb so long as anybody else has it, and of propaganda wheedling over the side-issues. He can be criticised under both heads. But the criticism he invites is mercifully smaller than one might have expected a Labour pamphlet to invite, at this time of marches to Aldermaston.

MALTA

New Round?

MR MINTOFF'S retort to the debate on Malta at Westminster last week has been the firm reiteration of his demand for integration on his own terms, coupled with the threat of a campaign in favour of independence unless the Colonial Office—and indeed Parliament—cave in. His references to the idyllic state of Libya, subsidised on all sides, provides a preview of the form that campaign would take: independence, if Mr Mintoff fights an election on it, will be dressed up as equivalence even more alluringly equal than was integration. (But not, one fancies, equivalence with Libya.) Mr Mintoff's ability to project his own fantasies should not be underrated; his almost dictatorial grip on the media of persuasion in the island, from the rediffusion system to government control of people's livelihoods, has recently been emphasised and re-emphasised by Miss Mabel Strickland. Her complaints are somewhat exaggerated, but not much.

Does Mr Mintoff really wish finally to cut the painter? The sad truth seems to be that he is now a split personality. In his more coolly calculating moments, there are signs that he regards his rejection of the British offer, his dismissal of Mr Lennox-Boyd's explanations of it as a "pack of lies," his present round of quasi-election rallies, and his presenta-

WHEREVER YOUR DESTINATION, fly by B.O.A.C. . . . the airline whose convenient, comprehensive route network covers the globe! B.O.A.C. offers you the finest value in air travel the whole wide world over—*to 51 countries on all 6 continents.*

On all these world-wide routes, B.O.A.C. takes great pride in its reputation for *passenger service.* You fly by the finest, fastest airliners in service today . . . enjoy that particular blend of comfort, good food and personal attention which makes experienced air travellers unhesitatingly choose B.O.A.C. BRITISH OVERSEAS AIRWAYS CORPORATION WITH S.A.A., C.A.A., QANTAS AND TEAL

tion of Malta's budget with a £7 million deficit without funds to meet expenditure much after the end of this month, as simply a further raising of the ante. He has no doubt noted how many British MPs last week hoped that negotiations would be resumed, *and that a minority* of them even thought that he should be given another million pounds towards his budget and something more towards equivalence. He still thinks he can extract more from Britain.

Even if he could, however, the angry sprite within him might still prevent him from coming to terms. His terms in this angrier mood are a blank cheque, an open credit, a promise to repair warships at Malta even should there be no warships left to repair; and, when Hyde really takes over from *Jekyll*, it is questionable if he could bear to agree even on that basis. It is very doubtful, therefore, if much is to be salvaged by luring him back to London. It will be best to leave the British offers open, but to make a far bigger effort than through official speeches to tell the Maltese what those offers are—and to let Mr Mintoff get on with his election. His present intention seems to be to hold it in the chaotic conditions produced by a government which has run out of money to pay *its bills and pay-cheques*; such conditions ought to tell against himself with sensible people. If not—if all Maltese are Mintoffs—then proceedings for divorce instead of marriage may be put in hand. But it is for the people of Malta to choose if they are to be, not for Mr Mintoff or the British Government to prejudge their choice. To that act of choice we now come very near.

BAHAMAS

The Colour of their Money

AFTER his wrestlings with Malta, nobody will grudge *Mr Lennox-Boyd his* Easter in the Bahamas. His business there should not be unduly arduous. It is to draw up a new constitution, which is the sort of thing any colonial secretary of Mr Lennox-Boyd's seniority is by now doing in his sleep. But the situation in the Bahamas should be stimulating, since the present constitution has been described as comparable with those of the American colonies before independence. This means that the individual rich and the corporate rich have votes by virtue of their wealth, and often a great many more votes than one; while the poor and coloured have relatively few votes, and, it would seem, no position in the Bahamian government comparable with that of, say, Barbadians in Barbados. Feeling that this situation was overdue for change, *last January* the coloured population, led by the taxi drivers, indulged in a good deal of striking and rioting—bad though this was for the tourist trade—in support of the principle that man does not live by tips alone.

The Bahamas *attract tourists* and wealth *just because a* system of rotten boroughs suggests to outsiders a stable oligarchic administration and promises them smoothly run hotel amenities. The Bay Street merchants, as the white people in power are called, will probably tell Mr Lennox-Boyd, adapting Wellington's words before the Reform Bill of 1832, that they are "fully convinced that the colony possesses at the present moment a legislature which answers all the good purposes of legislation, and this to a greater degree than any legislature ever has answered in any colony whatsoever. . . ." To that many Europeans in many colonies would enviously subscribe. But Mr Lennox-Boyd cannot agree; and he should be able to sketch something along the lines of, say, Trinidad's territorial constitution, on the back of an envelope—with, perhaps, a reference to West Indian federation? The Bahamians have asked for a royal commission to make recommendations; a constitutional commission, at any rate, should be easy to arrange and should be promptly conceded. Mr Lennox-Boyd should then coin the terrible word "Bahamianisation," present it to the Governor, and return refreshed to a good many more serious colonial problems.

FRANCE AND TUNISIA

Trail's End

THE "good offices" mission set up after the bombing of Sakiet appears to be on the point of dispersal. Paris newspapers regard it as a failure and look hopefully to Mr Hammarskjöld for a formula to control the frontier between Tunisia and Algeria. The present deadlock between France and Tunisia can surprise no one. From the beginning it has been obvious that whatever difficulties there are between France and Tunisia, they will not be finally settled as long as the war in Algeria continues.

Many Frenchmen may be pleased that the "good offices" mission has made little progress toward a final solution. They may even think that a purely domestic affair is no longer exposed to foreign intervention. But the free world is again at the mercy of the contending parties. Both France and Tunisia threaten dire consequences if each does not have its way. France means to keep Algeria in the French Union. Tunisia means to see Algeria independent. If the continuing efforts of "good officers" cannot succeed, then a solution imposed from some quarter (which might not be hostile to France) becomes in the long run more likely.

M. Bourguiba threatens that the Algerian rebels may form a government in Cairo, where they would presumably enjoy the blessing and support of the Afro-Asian and communist blocks. The implication is that Algeria must be independent if the whole of North Africa, from Libya to Morocco, is to be saved first from President Nasser and then from the communists. From the other side of Algeria, the King of Morocco has said that any defence pact Morocco signs must be based on the withdrawal of foreign troops.

If Anglo-American "good officers" cannot succeed, or if their presence is regarded as interference, why should not the French government set up its own good offices, bringing in Tunisia and Morocco as equal partners to settle their differences in North Africa? The obstacle is in French internal politics. It may have become impossible to prevent Algerian independence; but France could still influence the manner in which independence came about. Probably it will not be able to do so for much longer.

FRANCE

The Lull is Over

PARISIANS who woke up last week to find that the water was lukewarm and the gas feeble, and that they were faced with the prospect of walking to the office, could not laugh it all off by looking at the calendar. April Fools' Day had been chosen as the date for a token strike by the employees of such public utilities as transport, gas and electricity. That workers in the public sector should have been the first to issue a warning was no surprise. While real hourly earnings have gone down in the last two years, the decline has not been uniform. Many private employers, riding on the boom, have been willing to share some of the rising nominal profits with their workers. The lag of wages behind prices is more striking in nationalised industries and public utilities because the government, aware that each increase in wages would spread almost automatically throughout the public sector, has been trying to apply the brake.

Differences in the position of the various groups of workers may explain why, despite the decline in real wage rates, there has been comparatively little social strife. Wage differentiation during the previous three years of prosperity has helped to soften the fighting spirit of the French workers and to delay their customary protests. Last week's strike, however, was a warning that peace on the labour front may not last long. M. Gaillard reacted to it immediately with an appeal to the nation about the gravity of the economic situation. France, he exclaimed, was on the razor's edge; if the inflationary forces were not contained, the country would be precipitated into a new foreign payments crisis, which would be disastrous.

M. Gaillard, who as an economist should know better, kept the cost of the Algerian conflict out of his public accounts. Nevertheless, his message was a timely reminder. It was given a sense of urgency by the simultaneous announcement that the French balance of payments, after two unexpectedly good months, showed a current deficit of $62 million in March. Seven months after the last virtual devaluation, the French government is once again faced with a difficult struggle to hold the value of the franc. The deceptive lull, induced by the dollars M. Monnet brought back from Washington, is over. M. Gaillard now has to show whether he can stick to his pledges of austerity and credit restriction. If he fails, France will pay the penalty later in the year.

CO-OPERATIVE PARTY

A Party of Shopkeepers

THE Co-operative party seems to be getting rather the better of its argument with Transport House about its future relations with the Labour party. Some Labour leaders have been worried by the prospect of the group of (at present twenty) Co-operative MPs holding the balance in Parliament after the next election, and so being able virtually to dictate a Labour government's policy. These anxieties have been heightened by the sight of Co-operative candidates being selected by local Labour parties in constituencies that were formerly regarded as trade union pocket boroughs. In negotiating a new agreement with the Co-operators, therefore, the Labour leaders have been trying to make Co-operative MPs more firmly answerable to the Labour whip, and to limit the number of Co-operative candidates. At one point, Transport House proposed to ration the Co-operators to six MPs, although with the bait that the people concerned should be senior figures. But judging by the reports, both open and implicit, to the annual Co-operative party conference over Easter, the more extreme Labour proposals have been defeated.

Some limitation is fairly certain, but the Co-operators appear likely to be able to put into the field at the next election their existing twenty MPs, plus another ten candidates. In addition, the conference was assured that the Co-operative negotiators had not budged from the position that their party must remain responsible to the Co-operative movement. It was said that the new agreement with Transport House would ease any difficulties the Co-operative MPs might have in meeting the Labour whip on matters of special Co-operative interest. There have been hints that Co-operative activities at constituency level may be curtailed—in response to recent union mutterings that the Co-operators work unfairly hard and beguilingly to get their candidates adopted by selection conferences. But at least the Co-operative movement's political wing faces a more flourishing future than seemed likely a few months ago.

It is tempting to paint this controversy in David and Goliath terms, and to picture the gallant little Co-operative group striking a blow for Parliamentary independence. One such sign of independence, it might be said, was the attack that the Co-operative party conference launched this week on the new Labour policy of state shareholding in private firms—an attack, incidentally, which cannot make the Labour leaders look any more favourably on their allies. But the motives behind that motion were significant: the Co-operators' expressed objection to the share-purchasing scheme was that the state would be backing the Co-operative shops' private competitors.

It is in matters of their own trading concern that the Co-operators' influence on a Labour government could be pernicious: not in the big issues, but in little clauses poked into little bills to help their enterprises along (as a matter of history, one such clause was inserted into Labour's nationalisation of transport act ten years ago). Sometimes, the Co-operators' influence could work the liberal way: in their opposition to agricultural marketing boards, for example. But more often, especially nowadays, their interest in trading matters would be very similar to that of any other similar vested interest. To say that Labour is made more independent by its alliance with the trade unions and the Co-operatives is rather like saying that the Tories could be made more independent if a hundred of their MPs were sponsored by the FBI and another twenty specifically by the National Association of Small Shopkeepers. Does anybody imagine that they would be?

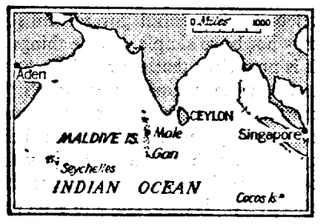
INDONESIA

Too Soon for Shouting

FROM the casually confident statements in Jakarta, Indonesia's almost bloodless civil war is all over, bar whatever shouting President Sukarno may allow himself to celebrate the central government's victory. But the truth may not be so simple. Some things are plain enough; thus, it is now clear that the rebels in Sumatra and Celebes were hasty in challenging Dr Sukarno's "guided democracy" to mortal combat; that in their preoccupation with autonomous economic progress in the year before they formed their government they neglected to lay the political groundwork for a rebellion or to accumulate the arms to defy Jakarta effectively. Having failed to achieve unchallenged authority even over Sumatra, Dr Sjafruddin, the rebel premier, failed to allow for the fact that a clarion call, in politics as in acoustics, fades over receding distances; by the time it

reached even parts of Java it was too faint to arouse support.

Scarcely impeded by rebel resistance, the central government forces have gained a sure hold on the Caltex oil centre at Pakanbaru, in central Sumatra, and on Medan in the north. They have landed in eastern Sumatra and threaten the rebel strongholds of Padang and Bukittinggi ; they claim successes in central Celebes. At this point, however, the picture becomes blurred, for Jakarta admits reverses as well as successes in Celebes. More significant, perhaps, than tactical gains or losses, is the fact that Dr Assaat, a Simonpure patriot who deputised for President Sukarno in the early days of the fight for independence, has chosen this dark moment to join the revolutionary government. His action argues a confidence that the rebels are in a position to defy Jakarta indefinitely in guerrilla war.



Another element in Dr Assaat's confidence could be the expectation that the American government will not allow the revolutionary government to be overcome. The rebels may have drawn comfort from this week's comment by the State Department, expressing regret that Indonesia had turned to the communist block to buy arms "for possible use in killing Indonesians who openly oppose the growing influence of communism." But there are still no grounds for supposing that Washington would actively intervene on behalf of the rebels except in circumstances which all Indonesians would deplore.

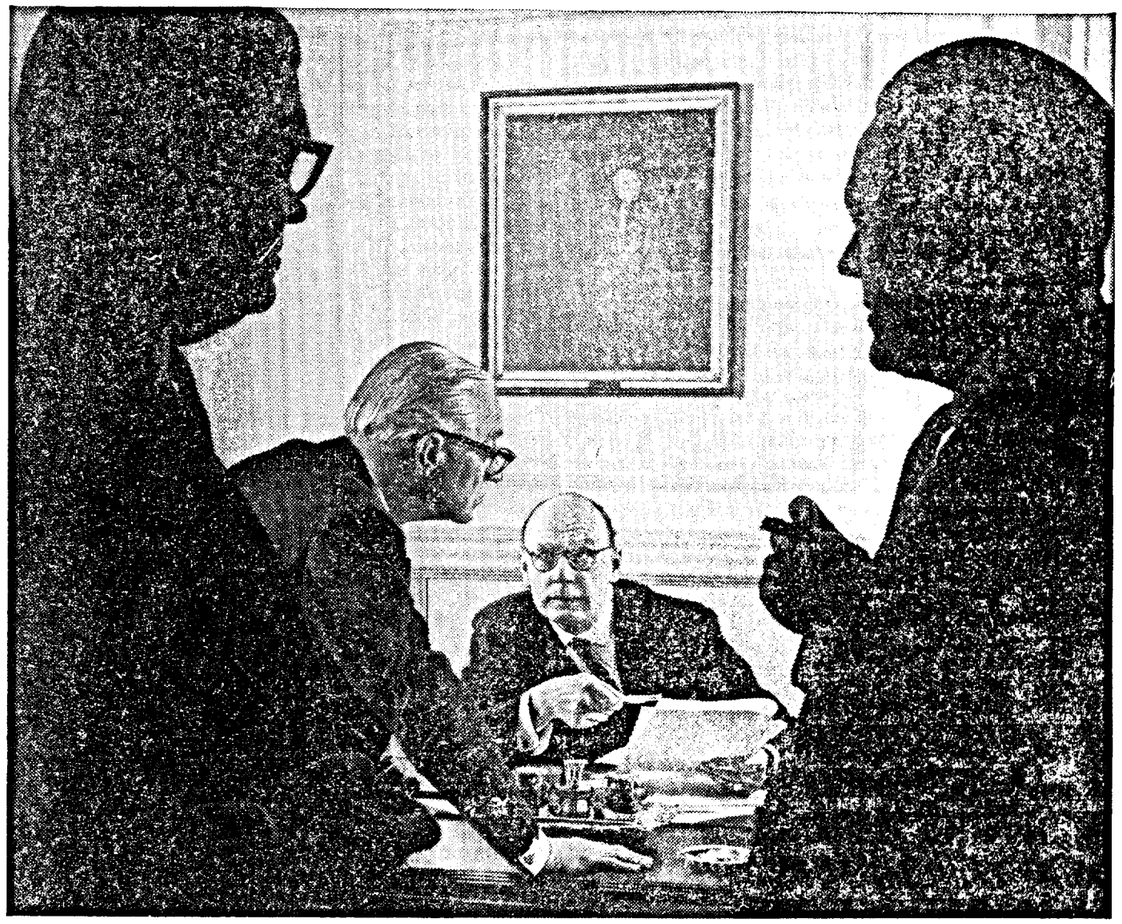
If, as everyone must hope, the Indonesian fighting remains an internal matter, then the rebels may derive comfort from the fact that the revulsion of which their government is the expression goes too deep to be blotted out by a military victory. In that sense, the civil war may be only beginning.

THE MALDIVES

"Sad Cry" from Gan

It was evidently too readily assumed last year that the agreement made with the government of the Maldives to reactivate the Royal Air Force air staging point at the southern extremity of the islands successfully got round the loss of the air and naval bases in Ceylon. The spreading dislike of foreign bases seems to have reached the Maldives as well, though whether by way of Ceylon or by some other route is uncertain. Soon after the agreement was signed with the Maldivian prime minister, Ibrahim Ali Didi, a new government came into power under a new prime minister whose name, Ibrahim Nassir, may carry suggestive but misleading overtones to the English ear. The new government has apparently become increasingly restive as the base has neared completion. Under the original agreement, it was specified that the Maldivian government should resettle the few hundred inhabitants of Gan—the island selected for the airstrip—elsewhere at British expense, and subsidiary arrangements would be drawn up by the two governments to implement this.

The Maldivian government has chosen to make difficulties at this juncture. It sent a mission to Gan which heard the "sad cry" of the Ganians, and discovered that Ali Didi made the agreement with Britain without fully discussing it in, and gaining the concurrence of, the majlis (the Maldive parliament). Thereupon the British High Commissioner in Ceylon, through whom British protection over the islands is exercised, went twice for consultations to the capital, Male—and, purely for convenience's sake, each time in a warship. The Maldivian representative in Colombo has now delivered himself of a communiqué to the Ceylon press of oriental eloquence, hinting that agreements are being forced through at naval gun point, and expressing alarm at the way a small country is being forced to do the will of a big democracy. The British High Commissioner has replied with full explanations about international agreements, British rights, and the use of warships to take High Commissioners to places where no steamers regularly ply. This, it is to be feared, will do Britain no good in Ceylon ; but the more pressing problem is to keep the goodwill of the Maldivians as well as the important staging-post. If it is so important, surely the stationing of a British minister in Male is overdue ? And if, as is said, the Maldivians are unsettled because they are beginning to hear about world affairs, would it not be well to have a Foreign Office information officer at Male, equipped with a wireless set, to put them in the picture ? It looks as if too much was being taken for granted by those in authority simply because the Maldives are a small, remote place, where a mission would certainly live a dullish life.



CAMBODIA

Sihanouk Still on Top

Prince Sihanouk of Cambodia makes a habit of winning his elections with a finality that would attract less attention in a communist than in a democratic country. In 1955, in the first elections after Cambodia recovered its independence at the Geneva conference a year earlier, the prince's Sangkum party swept the board by winning all the 91 seats in the National Assembly. Prince Sihanouk felt obliged to apologise for his "too complete success." Will he apologise again now that the Sangkum has won all the 62 seats contested at the new elections late last month ?

To be fair, this unanimity is not quite so suspicious in Cambodia as it would be elsewhere. When the prince, shortly after he had abdicated the throne in March, 1955, founded his Sangkum (Popular Socialist Community), he declared it to be, not a party, but a mass movement. And this it has proved to be. A deep-seated respect for the throne—and the prince, though an ex-king, is still heir to the throne now occupied by his father—together with popular enthusiasm for the man who won back independence from the French, have combined to give the Sangkum an unassailable position. In miniature, it is Pandit Nehru and Congress all over again, but more so.

The only opposition of importance is the People's Party, which is generally regarded as the organ of Viet Minh (Vietnamese communist) subversion in Cambodia. But in

"We want finance, labour, space ...I've found the lot in NORTHERN IRELAND"

Everywhere else in the United Kingdom one or more of the three great shortages gets in the way of expansion plans – not enough money; not enough men; not enough space. Only Northern Ireland can offer you all three, in plenty. Go and take a close look at it: what you learn will be valuable to you now or later.

MONEY – *to cut the need for investment funds*

Outright grants of 25% and/or loans for plant, machinery and buildings are available, also removal and training grants.

MANPOWER – *first-class and plenty of it*

Over 9% of the labour force – over 30,000 of them men – are looking for jobs. They are hard-working and loyal; absenteeism and labour turnover are low: output is high and shift-working is practicable.

PRODUCTION SPACE *in modern factories ready now*

If you employ mostly men you can rent a standard Government factory for about 9d per sq. ft. p.a. – room for at least 100% expansion. Or the Government might build you a special-purpose factory on amortization terms. Sites of all sizes are available.

EXCELLENT SERVICES

Modern transport services make delivery quicker and easier than ever before. Ample water, gas, electricity and housing.

SUCCESS STORY

Since 1945 over 130 new factories have opened in Northern Ireland, and many have expanded. Courtaulds, British Tabulating Machines, Metal Box, Du Pont, Chemstrand, Hughes Tool and many others will tell you of their experiences.

YOU CAN BE THERE IN A COUPLE OF HOURS!

Get in touch with THE NORTHERN IRELAND DEVELOPMENT COUNCIL (*Chairman : Lord Chandos*)

Marching in step to prosperity

✻People whistling at their work on the factory floor: office staff obviously enjoying life: management with a smile for everybody . . . no need to wonder what the future holds for this firm.

The secret? A Top Management aware that, if Britain is to hold her industrial place in the world, it is as essential to modernise administrative operations as it is production lines.

Every business wanting to be sure it is marching in step to prosperity should ask Remington Rand to survey its entire administration and report on it. This will make available unique knowledge and experience that may prove invaluable. It will be based on 80 years of technical research and practical work on office efficiency problems in 41 countries.

The world's most comprehensive range of Office Equipment includes: ACCOUNTING, ADDING, CALCULATING, DICTATING, DUPLICATING AND PHOTO-COPYING MACHINES • UNIVAC ELECTRONIC COMPUTING SYSTEMS • FILING, VISIBLE RECORD AND CHARTING SYSTEMS • FIRE RESISTANT EQUIPMENT • TYPEWRITERS (ELECTRIC, NOISELESS, STANDARD) • OFFICE FURNITURE AND SUPPLIES

electoral terms this carries next to no weight. The People's Party alone put up candidates against the Sangkum; there were five of them, of whom four received no votes at all and the fifth fewer than 400. Prince Sihanouk, though intent on remaining neutral between the great power blocks, has scathingly denounced communism in recent speeches.

On paper, the prince has demonstrated—as President Nasser is demonstrating in the United Arab Republic—that nationalism can be more potent against Communist parties than military pacts. The dangers in Cambodia now seem to lie entirely in the future; they are inherent in the facts that the Sangkum is the party of one man, that its membership and candidates tend to be middle-aged, and that many of the country's young intellectuals put their faith in the People's Party or other left-wing groupings even if they do not express it now by voting for them.

EDUCATION

What the Teachers Want

THE weather no doubt contributed something to the monumental gloom of the teachers at the annual conference of the National Union of Teachers at Scarborough over the Easter weekend. They were clearly determined to put the worst possible face on everything: even though the £613 million estimated for education in the new financial year is the highest ever provided, it is a long way short of the £1,000 million which the teachers feel is "needed to carry out the first requirements of the Education Act." The size of classes and the shortage of staff provided at once a theme for crying woe, and a setting for the teachers' wage claims. The union executive committee has recommended that the union should press for an increase of the basic salary scale, which is at present £475-£900, to £600-£1,200.

Such an increase would bear little or no relation to the real nature of the teacher shortage. The case for a flat increase in the basic salary scale at present is frankly not a good one. The women teachers, who form the majority of the union's membership, are already doing relatively well. A woman teacher of an ordinary class, with no special responsibilities and on the maximum scale of nearly £900 a year, is getting as much as (perks apart) a matron in a 700-bed non-teaching hospital. As equality of pay is reached (in 1960) her position will further improve. This, of course, is not to say that existing salaries are adequate to attract the (mostly male) teachers of mathematics and science who are urgently needed both in grammar and secondary modern schools; all male teachers *sotto voce*, and the schoolmasters' association vocally, complain that they are also unfair to the married teacher with a family. It has long been accepted, however, that, in view of the determination of the women teachers to get equality of pay, this problem can only be met by graduate and responsibility allowances. The practical problem is to wield these effectively.

As it happens, a survey of these special allowances has just been published by Dr W. P. Alexander, secretary of the local authorities' panel of the Burnham committee.* Dr Alexander clearly shows that local education authorities have consistently tried to use allowances to provide such pay differentials—and a third of primary school teachers, 42-45 per cent of secondary modern teachers, and 77 per cent of grammar school teachers already get them. The use of special pay for "heads of departments" could, however, be further extended to attract teachers of the most urgently needed types, particularly in secondary modern schools. More special pay, and more grades for which it can be given, is the right answer; but Dr Alexander's figures certainly show that most teachers of any calibre are already getting substantial extras over and above the Burnham scale.

HEALTH SERVICE ESTIMATES

This Year's Bill

THE total of the health service estimates for 1958-59 were given by the Chancellor of the Exchequer a few weeks ago, when the rise in the gross total to nearly £740 million caused the Government to increase the health service portion of the weekly national insurance stamp. The table overleaf, based on the detailed estimates recently published, shows how the total is made up and the respective shares of the taxpayer, the ratepayer, the insured worker and the patient in meeting the bill.

The higher expenditure budgeted for represents a combination of greater demands on the service and the payment

The Economist

APRIL 10, 1858

VIRTUES OF THE ALLIANCE

"Scarcely any estimate of the value of a real alliance between France and England can be too high; scarcely any price can be too great to pay for its attainment and consolidation. By a real alliance, we mean a genuine, unforced, spontaneous union;—a connection not only dictated by community of temporary interests, but cemented by cordiality of feeling, by a conscious sympathy in the same noble and unselfish aims, and by an essential agreement in the great principles of policy; . . . We can scarcely trust our imagination to dwell on the influence which an alliance of this nature between the two great Peoples which stand at the head of modern civilisation would exercise on the destinies of Europe and the fortune and felicity of all other lands. . . . Two nations, unrivalled in wealth, and unequalled in the wide extent of their dominions; both consummate in intelligence, but harmoniously diverse in the characteristics of their respective genius; both endowed with wonderful energies, but varying in the objects to which those energies are habitually applied; the one essentially naval, the other essentially military, but both at least the equals of any other State on either element; each so full of glory in its past history that to seek for added glory now would be mere greedy and silly surplusage; both having passed through so many phases of deep and sad political experience that they cannot but have learned at last wherein consist the true well-spring of a nation's happiness and grandeur; . . .—of two nations, thus constituted and thus allied, what could resist the silent, easy, inevitable influence for good? . . . What despotism could live in juxtaposition with such a mighty and diffusive atmosphere of freedom? What intellectual darkness must not be penetrated by the neighbourhood of such lambent and irradiating light! What barbarities could continue to be perpetrated in the face of two such frowning and grieving guardians of justice and advanced humanity! . . . No war could take place without our sanction. Oppressors would not dare to call down our displeasure.

of higher wages and salaries to those working in it, including the 5 per cent interim increase to doctors announced last spring. But the main interest in the estimates now lies in the methods chosen to meet the bill. In recent years, the Government has tried to prevent the full increase of the cost from falling on the taxpayer, first, by making the shilling on prescriptions a charge on each item instead of on each form and, secondly, by increasing the national health contribution. It is doubtful, however, whether this last device can be repeated indefinitely so long as it remains a flat sum. If the Government is determined to keep the cost to the taxpayer down, and unless all insurance contributions are to be graded as a proportion of income, the patient may next year be called upon to pay more.

	Actual expenditure 1956–57	Final estimate 1957–58	Estimate 1958–59
		£ mn.	
Gross Expenditure	653·4	705·9	736·7

Rates' contribution	25·9	29·0	30·8
Net cost to central government	**526·0**	**545·3**	**530·7**

Correction—Butter Statistics: *Peccavimus* last week, badly. Our note on "Dumping and Crypto-Dumping" contained some figures that were completely wrong. British domestic production of butter (excluding farm production) amounted to 15,000 tons in 1955, 25,000 tons in 1956 and 33,800 tons in 1957. Butter disposals, allowing for stock changes, rose from 330,000 tons in 1955 to 353,000 tons in 1956 and to 398,000 tons in 1957. No account is taken in any of these figures of private production of butter on British farms, but this amounts to only about 9,000 tons a year.

Imports from New Zealand fell in 1957 by 9,600 tons to 146,000 tons; those from Sweden and Ireland, although increased respectively tenfold and fiftyfold, amounted together to only 28,600 tons. Thus Britain's domestic production of butter is certainly not the preponderant factor in the subsidised competition faced by New Zealand exporters, as our note last week represented. The most that can be said is that the recent increase in British production is a significant factor; the increase between 1956 and 1957 was nearly equal to the falling-off in New Zealand imports. A reduction in the extent of subsidies (via cheap milk) to the United Kingdom butter producer would therefore be a legitimate objective for New Zealand exporters—as legitimate, though perhaps not so polite, as the reduction which they are pressing for in imports from Sweden and Ireland, to a level warranted by Swedish and Irish costs.

LETTERS

The Liberals

SIR—*The Economist* is not commonly inconsistent, but there seems a glaring contrast between your admirable article on March 8th advocating the Alternative Vote and your more recent article "L or I" suggesting that the Liberal party should concentrate on inculcating "more liberalism into the country." I deplore seeming inconsistencies in Liberal policy as much as you do, but a party without MPs is no party at all, nor is the radicalism you want the whole of Liberalism. Respect for the rights and feelings of others is needed to prevent it drifting into an oppressive socialism and a blatant bid for power by an appeal to majority self interest—which is, curiously enough, just what you accuse the Liberals of doing at present.—Yours faithfully,

W. N. LEAK

Winsford

★

SIR—Mr Mark Bonham Carter in his letter to you of April 5th says that Liberals preferred price supports to tariffs. We feel it right to point out that those who favour liberalism will recognise that price supports in the form of guarantees or other devices are in the same category as tariffs and can be no part of liberalism.

The Liberal party itself gave full support to that view when it passed a resolution in that respect at its assembly at Ilfracombe in 1953. That resolution called "for a drastic revision of agricultural policy," "the relaxation and gradual abandonment both of the control of prices and markets" and that guaranteed prices and assured markets should be abandoned "always provided that in changing the present system, the arbitrary powers centralised in the hands of the Minister be terminated in all cases before the abandonment."

It is clear that the Government is in process of abandoning its arbitrary powers of dispossession and that Liberals should now firmly advocate the abandonment of guaranteed prices.—Yours faithfully,

S. W. ALEXANDER

Generating Electricity

SIR—Your article on fitting more and more nuclear power stations into the electricity grid draws attention to the fact that by 1966 the nuclear plant we shall be starting to construct will have to market energy in a system whose base load is already completely covered by earlier nuclear stations, and that therefore these new stations must be competitive with new conventional plant at lower load factors. When that point is reached the use of hydro-electric pumped storage becomes most attractive.

A fluctuating load on an atomic power station involves the using up of expensive control rods, and so the annual operating cost will be increased compared with steady load operation. This means that the cost of energy from a nuclear station rises rather more steeply than in inverse proportion as the load factor is reduced.

Hydro-electric pumped storage plants consist of two lakes, natural or artificial, at different levels, water being passed down to the lower lake through a turbine to provide peak generation for about four hours every day and being pumped back up again at night in about seven hours using off-peak energy. After 1971, when the 1966 nuclear stations start to operate, off peak energy (for which there is otherwise no demand) will be free or even have a negative value. Since the operating costs of hydro-electric stations are extremely low, the cost of peak power produced will be little more than the capital cost including transmission to the load centres of £50 to £60 per kilowatt, about the same range as that of conventional plant, and about two-thirds of the predicted future cost of nuclear plant for the same period. Since a hydro-electric station has a much longer life than other generating plant, the annual charges per pound of capital cost are less.

Pumped storage compares favourably in cost with conventional plant as well as with nuclear plant at lower load factors, and combines the two advantages of minimum capital cost and no dependence on imported or scarce fuels.—Yours faithfully,

IAN MACKINTOSH

Bath

The Bank Rate

SIR—I am sorry to learn of the drop in the Bank rate. I had considered the 7 per cent rate an utterly brilliant move, and the one sure thing that would protect Britain from the impact of the American recession.

Assuming that the 7 per cent rate were maintained throughout the period of the American recession, I had hoped it would have had these effects. First, that if exports suffered, the use of the "hot money" would enable necessary import levels to be maintained without an apparent drain of the reserves. And second, when exports were fully recovered and strong, then the Bank rate could safely be lowered and "hot money" discouraged, again without straining the reserves.

As a buffer against our recession your high bank rate has so far been successful. Even 6 per cent is high enough since the Federal rediscount rate has dropped. The timing of the drop, however, makes me wonder whether a marked disparity in rates was ever intended as a buffer to recession, or whether it was merely a matter of accidental brilliance.

I also fully agree with *The Economist* that the "hot money" does not necessarily have to turn "cold," and that it could become a permanent beneficial factor for the British economy. The British penchant for a remarkably low level of unemployment could well be offset by a remarkably high Bank rate which might give the economy a measure of stability that recurring crises in sterling suggest that it needs.—Yours faithfully,

JOSEPHINE OLIVER

Harrisburg, Pa.

Canadian Trade

SIR—The recent trade mission to the United Kingdom by Canadian businessmen, the establishment of an official office in Canada by the Canadian government to promote the import of United Kingdom goods, and other actions, raise the question among Canadians, "What is the United Kingdom government prepared to do, in addition to what it is already doing, to expand exports to Canada?" May I put forward a proposal which your readers and the United Kingdom government may wish to consider?

A major reason for the lack of growth in United Kingdom exports to Canada is the generally poor performance in the after sale service of certain goods, the lack of an adequate line of types and sizes which can be obtained promptly, and the difficulty of displaying the wide variety of goods which could be used here. Those firms which have stocked adequate parts and a range of products, which have given fast and competent after sale service, and which have properly displayed their wares have, as a rule, found it easy to sell in this market. I suggest that overcoming this problem of availability and service (as well as the allied problem of proper marketing) is crucial and can be solved along the following lines:

1. The United Kingdom government can arrange on a sale-leaseback arrangement for the construction of a number of large, well-located, *bonded* warehouses and product display centres in major selling areas of Canada. These warehouses could be operated by a Crown corporation or on contract to a private Canadian firm.
2. United Kingdom manufacturers could rent space in the warehouses sufficient to create adequate stocks of goods from which local deliveries could be made in a variety of ways. Proper facilities would exist at the warehouse for the clearing and assembling of crated goods. Showrooms and office cubicles would be available so that a manufacturer's display could be assembled for inspection. Sales from bond would be notified to customs and warehouse management would collect duties, sales taxes and other charges.
3. An incentive to stock goods in bond would have to be given by the United Kingdom government. This might take the form of allowing special low or nominal interest loans to United Kingdom manufacturers who ship to Canadian bonded warehouses either a basic stock of goods or an inventory related to sales or planned sales. Similar loans might be considered against promotional expense on a formula basis.

The scheme above would likely be self supporting—rent of warehouse space paying for the lease—except to the extent of the subsidy involved in differential rates of interest on the proposed loans. But this subsidy would pay for itself so long as the rate of corporation tax taken against the rate of profit on sales is equal to the subsidy expressed as the difference between the market and the subsidised rate of interest. Inasmuch as rental for inventory space must be paid in any case, the added charges involved for storage represent the differential in storage costs in the two countries. I envisage that the shipping charges would be part of the loan suggested.

There is a limit to the role of government if the price system is to function smoothly in the business world. One of the proper roles of government is to create the environment within which businessmen can operate. The first thing which is required of the United Kingdom government is that it obtain sound and extensive advice about the problems of the Canadian market and of those who deal with United Kingdom businessmen. Having this, the next step is to act. We in Canada feel that we have done about enough.—Yours faithfully,

BOOKS

The Other Place

The House of Lords and Contemporary Politics, 1911-1957

By P. A. Bromhead.
Routledge and Kegan Paul. 283 pages. 30s.

THE House of Lords has long been among the more improbable of constitutional anachronisms. It is an anomaly that would be intolerable if it did not happen to work quite well. Its reform has been imminent for half a century and more, and in the endless discussions about its fate it has figured alternately as a romanticised symbol of national continuity and as a monstrous survival of aristocratic privilege, as a bulwark against ill-considered legislation and as a barrier to democratic progress. Such emotional theorising has tended to divert attention from the actual facts about who runs the House of Lords and about what functions it performs in practice.

Mr Bromhead's book provides a long overdue corrective. He has assembled the data that are available about the working of the upper house since its wings were clipped in 1911. He punctures many of the excessive claims made both for and against the Lords. Some of his conclusions confirm the findings of recent Fabian pamphlets and of articles in *Parliamentary Affairs* and this journal; some are new and surprising. The peers who *really* keep the House going today are about sixty in number, forty or so being Conservatives and twenty Labour (mostly ex-MPs). Backwoodsmen intervene less often and less decisively than is often supposed. First creations supply almost all the active Labour peers and about half the active Conservatives. (But dukes, marquesses, and earls are still disproportionately prominent among leading Conservatives.) Cross-voting by avowed party supporters is as rare in the Lords today as it was in the Commons fifty years ago. Bishops have become increasingly inactive as legislators and, for the most part, peers who have achieved fame in other fields than politics have made surprisingly little contribution to debates. Twentieth century reform has done little to regularise the smooth-running anarchy that has so long characterised the Lords' proceedings.

Mr Bromhead is, however, able to document the silent revolution which has overtaken the upper house in the last fifty years, as it has accepted more and more fully that power has passed from it. The co-operative approach demonstrated between 1945 and 1950 is in sharp contrast to the blunt obstructiveness of 1911-14 and, to a lesser extent, of 1929-31. Even more striking is the change in the Lords' attitude to the measures of Conservative governments which, in the 1920s and 1930s, were treated rather more roughly than socialist legislation after the war. Since 1951, however, the Lords have been but a tame shadow of their former selves; only on capital punishment did the old *Adam briefly reassert itself.*

The debate on the future of the House of Lords has too long centred on its right to block legislation. But it can only have a future at all if both the government and the alternative government agree that it serves a useful purpose. The left will never accept the principle that a non-elected house should be able to prevent legislation; therefore the most the upper house can hope for is to have influence rather than power, to possess the right to delay bills for long enough to guarantee that the lower house will give serious consideration to its amendments. For, as Mr Bromhead's book makes plain, much the most useful function performed by the Lords has been the improvement of the details of legislation. In the other roles assigned to it by the Bryce committee in 1917—the imposing of delay, the initiation of Bills, and the ventilation of public issues—its record has been less notable.

As a sound, clearly documented, up-to-date work of reference, this book is of high quality. But it remains an outsider's view, based on Hansard rather than upon what peers actually think and say about their House. The author meekly accepts, for instance, that the Independent Unionist Peers (the coroneted version of the 1922 Committee) is a private organisation about which he can write nothing; and, despite his vast reading in the field, he is reluctant to make judgments about the abilities or attitudes of peers or the impact of their interventions upon the determination of public policy. Mr Bromhead has provided an invaluable mass of evidence for use in the continuing debate on the reform of the Lords—but he has rather left on one side the human elements that have to be considered when attempts are made to devise a better revising chamber than now exists.

Climbing to Power

The Rise of Khrushchev

By Myron Rush.
Public Affairs Press, Washington, D.C. 116 pages. $3.25.

DR RUSH, a member of the Social Science Division of the Rand Corporation, is one of those specialists in Soviet affairs who interpret events by studying nuances of official publicity that normally are—and are meant to be—devoid of meaning outside the inner circles of Communist parties. He argues that the political processes leading to party decisions in Moscow are wrapped in secrecy, but that whenever there is controversy among the leaders the protagonists endeavour to gain support among the middle grades of party members, and these middle grades for their part are vitally interested in knowing what is going on at the top; hence the slightest variations in the stereotyped party language have great significance for the initiated, and major controversies can be carried on by hints and insinuations without any acknowledgment of dissension within the party either to the masses of the Soviet people or to the outside world.

Applying these principles of interpretation to the career of Mr Khrushchev since the death of Stalin, Dr Rush traces through a series of obscure battles of words Mr Khrushchev's quest for supreme power and the efforts of his rivals to prevent him from getting it. The key to the situation just after Stalin's death was a general unwillingness in high party circles to see anyone invested with the unlimited authority which he had wielded. Hence Mr Malenkov was not allowed to combine the positions of head of the government and first secretary of the party and had to hand over the latter office to Mr Khrushchev. The formula of "collective leadership" was appropriate to a balance of factions in which no individual had dictatorial power. But Mr Khrushchev used his control of the party machine, as Stalin had done before him, to manipulate local politics and pack the central committee with his nominees. He sought to strengthen his authority by enhancing the importance of his office. He ran, however, into considerable opposition.

Dr Rush demonstrates in detail how the movement for reducing Stalin's stature in retrospect was indirectly aimed at Mr Khrushchev. The attack on "the cult of personality" was designed to thwart the emergence of a new autocracy in the party, and Mr Khrushchev was the only candidate. When the Twentieth Congress opened, the question what to do about Stalin was still undecided, and Mao Tse-tung's message to the Congress, read out on February 15, 1956, eulogised both Stalin and Khrushchev in association. But next day Mr Mikoyan made the first direct public attack on Stalin, and of the two victims of Stalin's terror whom he mentioned by name one was Kossior, to whose office, after his execution, Mr Khrushchev had been promoted by Stalin. This was a very damaging blow at Mr Khrushchev. But nine days later, at the notorious secret session of the Congress, he averted the attack from himself by taking the lead in the demolition of the Stalin myth. He hurriedly substituted a new cult of Lenin as the basis for his own ambitions.

Dr Rush has provided the most adequate explanation so far of Mr Khrushchev's tactical vagaries in his climb to power. It may be objected that, if Mr Mikoyan so nearly upset Mr Khrushchev's apple-cart, it is strange that he should have survived politically when Messrs Malenkov, Molotov and Kaganovitch have been swept away. But Dr Rush argues that although Mr Mikoyan was a champion of "collective leadership" against the new autocracy, he was also a supporter of Mr Khrushchev in the latter's foreign policy innovations, particularly with regard to Marshal Tito, and that Mr Khrushchev has not been able to dispense with this support. If this is so, Mr Mikoyan is likely to disappear suddenly from Soviet politics just as soon as Mr Khrushchev feels he can do without him. Or it may be, in view of the remarkable capacity for survival that Mr Mikoyan has shown over the last forty years, that he will last the longer of the two.

Furnace, Forge and Foundry

History of the British Iron and Steel Industry

By H. R. Schubert.
Routledge and Kegan Paul. 445 pages. 60s.

THE proprietor of the Heathfield blast furnace in Sussex wrote, in 1754, to the Prince of San Sorrino: "A furnace is a fickle mistress and must be humoured and her favours not to be depended upon. I have known her produce 12 tons per week, and sometimes but 9 tons, nay, sometimes but 8, the excellency of a Founder is to humour her dispositions, but never force her inclinations."

Dr Schubert's scholarly and devoted account of iron and steel making in Britain from prehistoric times to the Industrial Revolution will make its greatest appeal to those who have some familiarity with this mistress, and affection for her. The book is primarily a description of technical processes and of the topography of the industry; and the author's technical knowledge and historical craftsmanship are both equal to the task he set himself. The result is a work that will certainly remain standard in its field for a very long time.

Except for matters of detail, there will probably not be much that is new to students of any single segment of the long period covered by the study. The first half of the book is devoted to iron and steel manufacture in prehistoric, Roman, Anglo-Saxon, Norman and medieval Britain. During these long centuries the process of iron making remained fundamentally the same, the ore being converted directly into iron blooms in a charcoal furnace. This process required very little fixed capital and produced a good quality wrought iron. On the other hand, it was wasteful of both fuel and ore. In response to government demand for cast iron for bullets and cannons, it gave way, hesitantly after 1496 but more rapidly after 1543, to the indirect process of iron making in the charcoal-fired blast furnace. The introduction, expansion and decline of the industry under this new process, which had as by-products the establishment of the foundry industry and the separation of furnace and forge, is the subject of the second half of Dr Schubert's book. The application of water power to various processes in the making of iron forms an important secondary theme throughout the study.

While this is not an economic history, the author has included, where possible, material on the supply of fuel and ore, the nature of demand, foreign and domestic trade, prices and production costs. Of particular interest are the examples of the introduction of skilled workers from the Continent to initiate new processes. French workmen were brought to England to help to get the new blast furnaces and casting process working in the early sixteenth century; and German workmen were called in to instal new machinery for wire-drawing, to meet the demand for fine wire for wool carding, in the third quarter of that century. Dr Schubert found merchant capital important in financing the new blast furnaces; this found a parallel in the merchant capital that helped to finance the Bessemer and open-hearth processes in the nineteenth century.

Between Worlds

Face to Face

By Ved Mehta.
Collins. 320 pages. 16s.

AT the age of twenty-three Mr Ved Mehta writes with a simplicity and directness of style and thought that generally escape writers of supposedly greater maturity. But then he has been exposed to tests of spiritual endurance most people evade all their lives. There is no part of his life that has come to him straightforwardly and without challenge. The happiness of childhood in a devoted Indian home was darkened—literally—by blindness and by the division of mind between two great-souled parents on the methods—traditional and modern—by which it might be treated. Early adolescence brought the division of India and the breaking up of the material framework of family life and prosperity. And, as if that burden were not heavy enough, it coincided with the discovery that, being blind, the growing boy could find no Indian institution adequate to carry his education further.

Then followed the long, painful efforts to find a place in America, the late, last, unexpected success with the Arkansas School for the Blind and thereafter the fantastic gulf to be bridged between a sophisticated cultured Indian Hindu environment and the rough surroundings and attitudes and companionships of handicapped adolescents in the American South.

Through all this turmoil, Mr Mehta takes us with an objective, sensitive touch. We learn almost to feel the physical condition of sightlessness and to sense the spiritual condition of living between two civilisations, fully member of neither, torn between memory and fact. It is a record which, without pretensions of any kind, is a record of heroic endurance. Indeed, in the short tragic story of K, the Nisei student, Mr Mehta, allows us to see the fate of a man similarly caught for whom the strain was too great. But there are no heroics, no underlying self-congratulation. Simplicity, freshness and objectivity are more than the style of Mr Mehta's book. They are the roots from which this record of fortitude draws its power.

1588 and All That

The Enterprise of England

By Thomas Woodrooffe.
Faber. 301 pages. 25s.

COMMANDER WOODROOFFE has adapted Philip's name for what we call the Armada to describe the emergence of England as an oceanic power. That is, perhaps, the most original thing about a book that tells once more the oft-told story of the voyages of Hawkins, Drake, Frobisher, Gilbert, *et al.* It concludes quite arbitrarily with the defeat of the Armada, thus giving the erroneous impression that the war was over and the process of Elizabethan expansion complete. But, of course, it had hardly begun. Even in the narrow terms of naval history one cannot describe the force employed in 1588 as "an oceanic navy." Spanish power was not so feeble as the epic story of Drake's early years suggests: for him the worst was still to come. What happened during the last ten years of the reign puts the achievement of the age into a better perspective.

Within its limits the story is told in fluent and readable fashion. It is refreshing to see the Armada largely from the Spanish point of view, but the book makes no attempt to solve any of the problems with which the voyages abound; nor does the meagre evidence justify the author's confidence in the tactics employed. In more than one book Dr Williamson has surveyed the period with far more authority. The present volume can be recommended for the school library, though even there a good edition of the contemporary narratives would be preferable. What we still require is a study of the whole business of Elizabethan privateering: the organisation of the syndicates that launched these voyages, with a profit and loss account of their activities. Such work has begun. Only when it is completed shall we be able to understand the golden age of private enterprise, which, at sea, was by no means the same thing as the enterprise of England.

Guerillas in Malaya

Red Jungle

By John Cross.
Hale. 244 pages. 16s.

THE author was a member of a signals unit that was left behind in South Johore shortly before the fall of Singapore. The party and their Communist guards tended their heavy equipment with great devotion, lugging it from one camp to another to evade the Japanese. Failing to make contact as arranged beforehand, they asked the Communists to send couriers out of Malaya, but in more than three years' listening they

never heard a thing except the news and they ended up as "Comrades of the News Press."

Mr Cross reproduces from their jungle newspaper Communist claims of successes against the Japanese in the two and a half years up to August 1944. His only comment is "interesting," which is inadequate. The figure of 5,085 seems very high for enemy killed and seriously wounded, and 22 casualties per clash is at least ten times the rate recorded during the height of the emergency. If 5,000 casualties were inflicted, why were only 344 weapons captured?

There is no doubt that the Japanese found it necessary from time to time to send large forces against the guerillas; but one of the lessons of these operations was the difficulty of inflicting casualties in the Malayan jungle whether one was attacking or being attacked and, when Mr Cross reports 70 of the enemy killed in two engagements, some commentary is called for. It was Mr Cross's duty to keep away from engagements; otherwise he would probably have noted discrepancies between Communist claims and his own observations.

From early 1945, when numbers of British officers began to arrive in Malaya, the Communists were anxious to conceal the political aspect of their guerilla movement and they certainly succeeded with some officers. This prompted Mr Cross to ask one of the leaders what the Communists would do after the war with the arms supplied to them. The leader of his party, Major Barry, seems to have been asking himself, before he died in July 1944, the even more penetrating question: what would the Communists do during the battle for the liberation of Malaya?

We now have two books about Malaya under the Japanese, both written from the guerilla point of view. Spencer Chapman did not visit South Johore, an area always very important to the Communists, so "Red Jungle" fills a gap. But it is time someone attempted a comprehensive account of the Japanese occupation, including a picture of the guerillas as seen from the towns and villages.

Justice

Aspects of Justice

By Carleton Kemp Allen.
Stevens. 310 pages. 25s.

BETWEEN the preface and the introduction to this book the author inserts a lovely sentence from Plato warning his readers that they may find the work stiff reading; but he hopes they will persevere. Both warning and encouragement are justified. Only a mind trained to philosophy will find the book easy, but non-philosophers who persevere will be rewarded for their persistence. It is a stimulating and invigorating piece of writing.

Drawing largely on Plato and Aristotle, Sir Carleton distinguishes four accepted characteristics of justice. It lies in the domain of morals. It is a social virtue. It maintains an equilibrium in human affairs. It does not demand equal status for all, but it does postulate equality of consideration for all. But, even when these dogmas are honestly accepted, their application varies so much from age to age and from land to land that it is dangerous to regard any manifestation of justice as revealed truth—universal and inevitable. In England it is never doubted that newspaper comment before the trial poisons justice at the springs. It is a doctrine that ranks with the decalogue. In the United States (whose legal system is blood brother to ours) the press has free play from the word "go," and nobody thinks that justice is outraged thereby. That is a most curious and perplexing difference of outlook between two closely related systems of justice.

To the philosophic mind the core of the problem of justice lies in the question: is justice an absolute? Sir Carleton does not think it is, and most people of an earthier quality than his will doubtless agree with him. A practising lawyer, asked for an opinion on whether a huntsman should pay income tax on his Christmas tips, may retort impatiently, "What the hell has the absolute got to do with a huntsman's tips?" And indeed the connection is not obvious. But Sir Carleton, though maintaining his belief that justice is relative, nevertheless finds, in the views of a jurist who does revere justice as an absolute, something of great worth in the daily administration of the law. They help the practising lawyer to keep his eye on the ever-fixed mark that looks on tempests and is never shaken.

In the second half of the book Sir Carleton discards the board and gown of the professor to narrate one of the most remarkable true-life crime stories ever told. It is a tale of a murder trial in the New South Wales courts of sixty-three years ago. It has everything that a story of this kind needs—passion, crime, mystery, surprise, and just the right amount of complication. The murderer is first convicted, then pardoned, then retried for perjury and sentenced to fourteen years' imprisonment. The secondary villain ended as speaker of the New South Wales assembly and President of the Labour party. Beyond that no further details will be disclosed in this review.

OTHER BOOKS

DOMINION OF THE NORTH
By Donald Creighton. *Macmillan.* 619 pages. 25s.

There are a number of good general histories of Canada. Among them "Dominion of the North" is outstanding for its insight into the significant relationships among the complex forces that have shaped Canadian development. The fruit of mellow and meticulous scholarship, it achieves compactness and clarity, not by over simplification or by leaving gaps, but by masterly perspective.

The original edition ended with Canada's declaration of war on September 10, 1939. This very welcome revised edition carries the story on through the second world war and postwar years. A new concluding chapter, "Modern Canada in a Great-Power World," analyses a proud war record and the problems and achievements of a maturing "middle power" in the subsequent years of uneasy peace. For many readers it will throw a new light on the nature of the Canadian nation and its international relationships. It is especially illuminating in its examination of Canada's attitude *vis-à-vis* the United States and the changing Commonwealth, and in its thought-provoking interpretation of the lusty flowering at mid-century of a characteristic Canadian culture to the growth of which Professor Creighton has himself contributed so much.

ECONOMICS OF THE FUR INDUSTRY.
By Victor R. Fuchs. *Columbia University Press.* London: *Oxford University Press.* 168 pages. 40s.

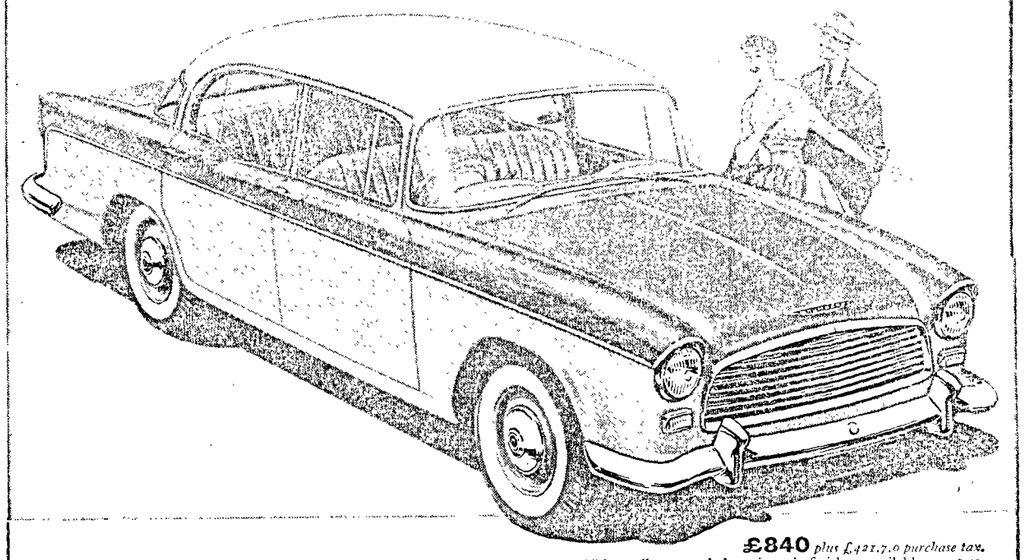
Most books that have been published about the fur trade concentrate on the historical and romantic side of the industry; this is certainly not the case with Mr Fuchs's book. It may be heavy going for those who have no intimate knowledge of the trade; on the other hand it will be both interesting and invaluable to all those engaged in the industry as well as those indirectly affected by its activities.

The book refers primarily to the economics of the American part of the industry, but its diagnosis would apply in most instances to the trade in other parts of the world. Mr Fuchs had to undertake much arduous research because of the variety of the raw material, the varying sizes of manufacturers, the number of sections included in the trade and the extremely competitive and individualistic nature of the industry.

Mr Fuchs has gone to great lengths to account for the decline in the consumption of fur and at the same time the absence of any long-term planning to ensure sufficient supplies of raw material. His criticisms on the cut-throat competition in certain sections of the industry may appear somewhat severe but there is no doubt that the exceptional individualism precludes even limited unity among the manufacturers. He deplores the lack of any effort in the trade to attract the new middle income group into buying furs, and in his criticism of the absence of any long-term planning he points out that there is no organised second-hand market such as exists for instance in the motor trade.

Not everyone will agree with Mr Fuchs's emphasis on the dangers of excessive individualism and cut-throat competition. But he has gone to great trouble to gather facts about a relatively unknown industry and those engaged in the trade will find his work invaluable.

THE SCHOLASTIC ANALYSIS OF USURY.
By J. T. Noonan, Jnr. *Harvard University Press.* London: *Oxford University Press.* 432 pages. 72s.



This book traces the history of Catholic thought on credit from the first crude prohibitions of the Dark Ages, through the increasingly refined and realistic distinctions of the scholastics proper, down to contemporary doctrine, and links it to the parallel development of lay economic theory. It is likely to rank as the definitive study of its subject.

General :—

CAREERS ENCYCLOPEDIA. *2nd edition.* Edited by G. H. Chaffe and P. J. Edmonds. *Cleaver-Hume.* 672 pages. 15s.

This second edition gives facts about some 200 careers in callings as far removed as riding and the lighthouse service. For those who refuse to be satisfied, there is also a section on emigration. The information given is concise and clear, and—rare these days—the price of this second edition is little more than half that of the first.

The incomparable

£840 *plus £421.7.0 purchase tax.*
White-wall tyres and chromium rimfinishers available as extras.

HUMBER HAWK

A car of distinguished appearance combining luxurious comfort and a smooth yet powerful performance with the highest standards of road holding and reliability.

Comfort
Exceptionally wide doors plus a 'step-down' floor give remarkably easy access to the luxury of a 6-seater interior that is inches more roomy in every direction.

Performance
The powerful Humber engine, reliable and economical, gives an excellent all-round performance—smooth power at your command.

Safety
Tough unitary construction ★panoramic visibility ★ balanced weight distribution ★ precision steering ★ instant response...vivid acceleration and powerful brakes

WITH FULLY AUTOMATIC TRANSMISSION OR OVERDRIVE AVAILABLE AS AN EXTRA
(Available also as a touring limousine)

AMERICAN SURVEY

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

America's Space Suit

WASHINGTON, D.C.

THE President has been widely hailed for his tact in proposing that the permanent agency for exploring outer space should be built around the existing National Advisory Committee for Aeronautics. With any luck this should avoid a repetition of the fight between the civilians and the military that preceded the birth of the Atomic Energy Commission. Although it is headed by the General Doolittle who commanded the first American raid on Tokyo, NACA's complexion is indisputably civilian. Yet over the forty-three years in which it has been carrying out its statutory duty "to supervise and direct the scientific study of the problems of flight with a view to their practical solution," it has earned the confidence of the armed services, the aircraft industry and the world of science for its skill in marrying their energies and enthusiasms without red tape.

The committee, whose seventeen members include civilians from outside the government as well as representatives of several civil and military departments, has its own technical staff and laboratories; these are used for fundamental research, for the benefit of both civil aviation and the armed services, and for trying out inventors' ideas. Under the proposed new arrangement all these facilities and functions —and it is hoped the forty-three years of goodwill into the bargain—will be inherited by a National Aeronautics and Space Agency, headed by a director appointed by the President, and the old advisory committee will be refurbished as an Aeronautics and Space Board. The agency will be responsible for all activities connected with "aeronautical and space science" except for those associated with primarily military projects. These will remain in the hands of the Department of Defence.

Since Congress obviously had no intention of turning the whole cosmos over to the military anyway, the services seem prepared to accept in general these proposals for a civilian entry into space. But there is some dismay in their research departments at the extent to which the President is evidently leaning on his own special Science Advisory Committee which has recently poured a shower of meteorites on to the more high-flying military fantasies about the potential applications of space technology, such as the establishment of military bases on the moon. At a hearing before the House Armed Services Committee last February, General Putt of the Air Force explained that it was easier to shoot a missile from the moon to the earth than in the reverse direction. Less energy would be required since there is no atmosphere, the warhead could be catapulted from shafts sunk deep into the moon's surface and the missile could be observed and guided from start to finish. Lunar outposts and even launching sites could be put on the dark side of the moon and a missile attack from the earth could be detected by telescopes in time to give several hours' warning. Since there is no atmosphere on the moon, there would be no blast when the enemy's bomb arrived.

If the United States had lunar bases, said General Putt, the Russians would not start anything until they had first neutralised these sources of retaliation; since they would need to fire their missile at the moon a day or two in advance of any attack on earth, this would give the game away. However, the General cautioned the committee:

> We should not regard control of the moon as the ultimate means of ensuring peace among the earth nations. It is only the first step toward stations on planets far more distant—from which control over the moon might then be exercised.

One admitted snag is that wherever Americans go the Russians will probably turn up too and may well be there first. But at least one official scientist, Mr James Edson, Assistant to the Army's Director of Research and Development, sees in this a pale silver lining. The moon, he suggests, might become

> the agreed arena of conflict for the settlement of terrestrial power disputes, terrestrial damage thus being avoided by both sides and the winner emerging in a position to impose his will upon the earth.

Mr Edson has worked out a timetable under which the first permanent lunar bases for military and commercial purposes would be established some time between 1968 and 1973. According to him the garrison may not have to breathe, eat or drink because "space medicine" will have supplied a "synthetic nutrient." A little breathing, however, will still be a good thing, so that the troops do not get out of the habit and are able to speak.

Dr Wernher von Braun, the head of the Army's German scientists at the Redstone Arsenal, is not so much interested in either the earth or the heavens as in the gadgets for reconnaissance and weather prediction which he can let loose in between. He claims, and his views are no longer seriously challenged, that once a satellite with television equipment is aloft "there will never be a period of more than a week to two weeks when you don't have a clear record of what goes on at every spot on earth"; that for the first time it will be possible to tell immediately what the total cloud coverage of the earth is at each instant; and that with six satellites using multi-channel tape recorders all the world's post could be rapidly delivered.

But the direct military value of satellites or moon is much less fully accepted. Dr von Braun naturally enthuses: according to him, a bomb is not dropped from a satellite but pushed gently into space, with a decelerating rocket that causes it to glide into the atmosphere at a shallow angle. Both satellite and bomb whizz around the earth until ultimately the target appears in their direct line of sight, whereupon the bomb is guided home in much the same way as anti-aircraft missiles are controlled now. To Dr von Braun

such a bomb has the supreme advantage of being much more effective against a moving target—a fleet taking evasive action, for example—than is an intercontinental ballistic missile, whose course is fixed once it is launched. But to the President's special committee, which contains some of the biggest names among American scientists, a satellite, like the moon, seems a clumsy type of bomb carrier. Such a procedure, the advisers say, amounts to launching a missile

> from a moving platform halfway around the world with every disadvantage compared to a missile base on the ground. In short, the earth would appear to be, after all, the best weapons carrier.

But on such matters the civilian space agency will not necessarily have the last word.

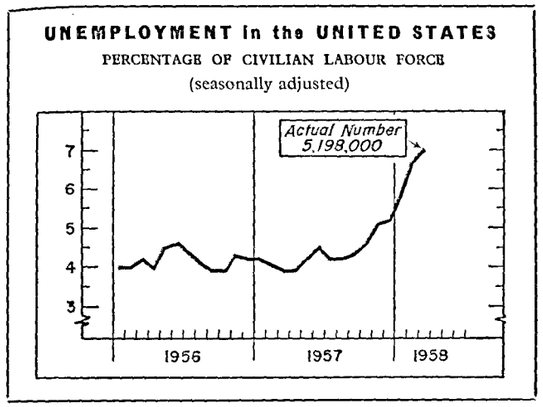
Nowadays the strategic weapon of the future is thought of not as a bomber or as a missile but as a missile fired by a bomber. Attempts are to be made to equip both the B52 and the B58, the new supersonic medium bomber, with ballistic missiles such as the Hound Dog, which is now being perfected. The true bomber-missile will be the chemically-fuelled B70, which will also be the country's first truly intercontinental bomber, in that it will be independent of overseas bases even for refuelling ; it is hoped that this will be airborne by 1963. But the real stepping stone to the military use of space is supposed to come next year with the X15, a research vehicle launched by a mother plane in which a test pilot will fly at a mile a second a hundred miles up. This is meant to prepare the way for the Dynasoar (for dynamic soaring), a bomber using the boost-glide principle. Strictly speaking it will be a satelloid rather than a satellite: although the pilot will revolve round the earth one or more times before swooping down to strike his target, his plane will remain under the influence of gravity, moving by momentum but not being in orbit.

With all these wonders in prospect it is not so astonishing to hear Mr Dulles, who has taken to brooding of late about his worldwide reputation for negative thinking, speaking with unusual passion about the need to arrange the disarmament of space before irrevocable steps are taken.

Propaganda Tests

LAST week President Eisenhower admitted that, although in his view the Russian abandonment of nuclear tests was just a "gimmick," not to be taken seriously, yet he might have been mistaken when he refused to try and counteract its undoubted propaganda value by explaining in advance why the United States intended to continue its own tests. This week he took a positive step forward by saying that the United States itself might suspend nuclear testing unilaterally and unconditionally after the series which is to begin later this month. Whether or not American testing will actually be abandoned depends officially on whether or not the coming series gives the scientists all the information they want. But it looks as if, when the matter next comes before the National Security Council, the President will move over to the side of those who put political and psychological considerations ahead of military ones in this matter ; according to reports this group is headed by Mr Dulles, while the Secretary of Defence and the head of the Atomic Energy Commission lead those who insist that military needs must come first. This disagreement, it is said, explains the lack of initiative and imagination in the Administration's approach to the suspension of nuclear tests, a question which has been under discussion for two years. But even now the President is trying to avoid taking the final decision: he has ordered his advisers to present him with an agreed view on this and other aspects of disarmament policy by the end of the month.

There is a good military case for the coming series of tests—and a good psychological one, too, if only it had been presented before the Russians seized the limelight. Warheads for the long-range missiles on which American defence depends increasingly are to be tested and so are small atomic weapons for tactical use. The emphasis will be on "clean" explosions, which do not spread radioactivity. Only those who oppose all nuclear tests on principle, such as the international group of distinguished scientists and citizens who have filed suit in a Washington court against the Secretary of Defence and the AEC, argue that the coming series should be abandoned. To do that, even critics of the Administration realise, would be to give the Russians, who have just finished their own annual series of tests, a real as well as a propaganda victory. Many of these critics are, however, urging that, as a counter-propaganda move, the United States should publicise the "dirtiness" of the Russian tests which are alleged to have brought a record amount of radio-active fall-out around the world. But the AEC opposes such a campaign, partly because it claims that the facts could not be given without exposing its secret system of collecting information and partly because that information will not have been fully assessed for months —and when it is the notorious American tests of 1954 may turn out to have been more noxious.



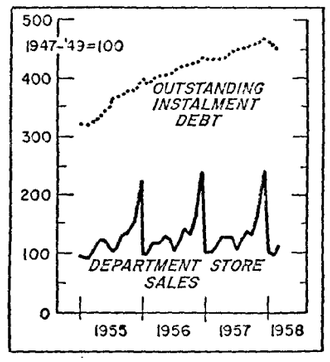
Recovery Marks Time

HARD-WORKING members of Congress, who have accomplished far more than is usual by this time of year, have been spending their ten-day Easter recess at home picking up their cues for the second half of the session. For the President, who has been urging Congress to restrain its spending for recovery, this breathing-space may well be the lull before the storm. Mr Eisenhower has taken a hopeful view of the March unemployment figures which appeared this week and, standing almost unchanged at 5.2 million, did not show the 200,000 increase that had been widely feared. But neither did they show much sign of the revival of activity that is usual in March, although the bad weather early in the month, when the sample was taken, must be partly to blame.

So far, although members of both parties are trying to take the credit for long lists of anti-recession measures, they have hesitated to plunge into massive spending ; in the rush to get away, Republicans, for example, were able to postpone action on the Democratic Bill to provide $1 billion in loans to communities for local public works. But if the voters are in a mood for more drastic remedies, Congress may not be deterred even by the warning of the Director of the Budget that this fiscal year, which ends on June 30th, will show a deficit of about $1.5 billion because of higher spending and lower revenues than were expected last January.

Before it left Washington, Congress had ensured its welcome home by voting, with unexpected speed, to provide

a new $1.5 billion transfusion of cash for highways—both for the interstate system, which no longer will have to cut its construction to receipts from specified taxes, and for the ordinary road system ; here the federal government normally expects the states to match its grants 50-50. Now, the federal proportion will be two-thirds and hard-pressed states, which cannot even find their 33 per cent, will be given temporary loans. Another $1.6 billion will be made available to the states in July, instead of in December. All this



is more for highways than the Administration requested, but the big bi-partisan majorities for the Bill, which unexpectedly swept a mild control of advertisement hoardings on the inter-state system along with it, are convincing arguments for the President's approval ; he has already signed, though with considerable reluctance, the housing Bill, which was the first big anti-recession measure of this Congress. Down payments for house purchases have now been reduced, and abolished for ex-servicemen, and the President has released $300 million of the $1 billion provided for the purchase of government-insured mortgages, despite his objection that such a direct drain on the Treasury discourages private enterprise from doing its share.

Whether Mr Eisenhower will also swallow the $1.5 billion "pork barrel" Bill authorising river and harbour improvements, which he vetoed in 1956, is more doubtful ; the Administration is fearful of starting new public works which may not get under way until the recession is past and inflation is once more the real enemy. Apart from the increased spending on defence, which, although it is not technically a recession measure, is due to give the economy its greatest stimulus, the Administration has tried to confine itself to bringing forward spending which would have taken place in any case—such as the purchase of lorries and trailers for the armed forces—and to encouraging spending on the part of private individuals (for housing, for example) and of communities for hospitals, roads, airports, and so on. Mr Eisenhower is convinced that it is private, not public, spending which will exorcise the recession ; he also does not want to enlarge the already formidable deficit looming up for the financial year which begins in July. But to accelerate bureaucratic spending takes time, while the response of local governments and private individuals is hard to gauge. Consequently economists are not finding it easy to estimate the impact of what has been done and to decide whether it is likely to be enough, without a tax cut, to refloat the economy. But by next week the politicians may have taken the decision out of their hands.

Plight of the Salesmen

RETAIL trade, plagued by snowstorms as well as by an inclement economic climate, had little to warm its heart during March. Preliminary estimates showed that department store sales were higher than in February, despite the bad weather in many parts of the country, but below expectations, considering that they reflected buying for this year's early Easter. Robbed of this holiday stimulus, sales for April will probably be down and so, on balance, the year thus far remains a disappointing one. It is true that some items have not been badly affected ; the demand for clothing and other non-durable goods has not suffered much. But sales of cars, household appliances, television sets, and furniture, in particular, have been below what the American retailer has come to regard as "normal," and at present these show no signs of turning up. Even the worker who still has his job has become cautious and has postponed or even cancelled his plans for buying more expensive articles ; this caution has been reflected in, among other things, an increase in mail-order buying, as prices in the catalogues are often as much as five per cent lower than in retail stores. A survey recently conducted by a university research group on behalf of the Federal Reserve Board showed consumers generally more pessimistic than a year ago about their incomes and financial situations, and about business in general.

Shopkeepers have responded to this air of caution with increasingly vigorous salesmanship, meanwhile keeping a Spartan eye on ever-increasing costs ; few are optimistic about the near future. Reluctant to lower their profit margins, they have hesitated to cut prices, with the exception of those of household appliances, reduced since the abandonment by the General Electric Company of its retail price maintenance policy. Later this month, the automobile manufacturers will stage a "buy now" campaign in 23 cities across the country, highlighted—perhaps quixotically—by the slogan, "You Auto Buy a Car." A similar drive recently held in Cleveland resulted in a sharp rise in new car sales, in spite of the slogan.

Whether the consumers will respond to these appeals remains uncertain. This week the President asked them to buy ; but they may pay more attention to the Secretary of the Treasury, who urged them, two days before, to invest in government savings bonds. Personal savings in Federal Reserve member banks have risen by nearly sixteen per cent since the beginning of the year, and consumer instalment debt, which is largely governed by sales of cars and appliances, fell during February, on a seasonal basis, for the first time in over three years. These figures have led some economists to doubt whether tax reductions can be counted on to check the slump ; unless consumers can be persuaded that "things are looking up," the extra money they receive may wind up in savings accounts, rather than in the retailers' tills.

Unified Command for Defence

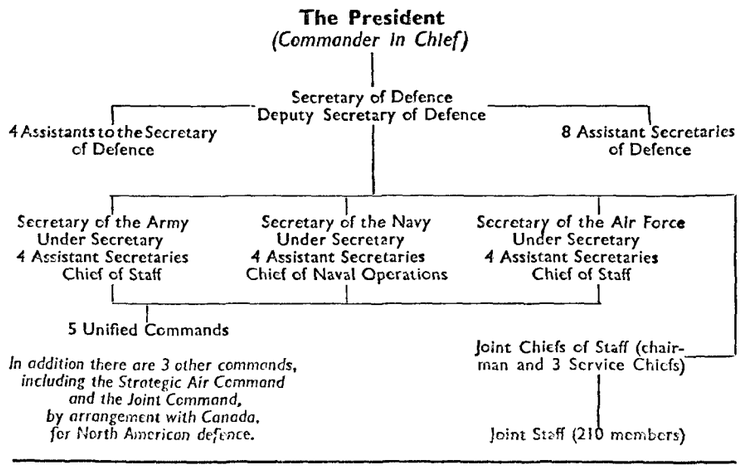
FROM A SPECIAL CORRESTONDENT

PRESIDENT EISENHOWER'S bold proposals for streamlining the military establishment make plain how far it still falls short of the unification of the three services decreed by Congress in 1947. Despite further changes in 1949, when the Joint Chiefs of Staff acquired a chairman for the first time, and in 1953, a long and tangled chain stretches from the Secretary of Defence through the individual services to the commands in the field; these commands themselves are loosely organised and suffer from conflicts between their responsibility to the services and to the supposedly overriding central authority. If a major war were to break out, such a clumsy arrangement would be intolerable; at almost the first shot the history of 1917 and 1941 would be repeated and there would be a major reorganisation into a command system capable of swift decision and firm action. The President, arguing that the revolution in weapons makes it impossible to wait until another emergency arises, is putting all his personal authority behind his reforms.

In the plan it is easy to see the hands of General Gruenther and General Bradley, who know from personal experience how unworkable the present system is; they were members of the small group consulted by Mr McElroy, the Secretary of Defence, when he was preparing his recommendations for the President. The plan underlines heavily the civilian control of the military by the Secretary of Defence. His powers would be greatly increased and at last the professional military establishment would be designed to respond to such control. Hitherto, although lip service has been paid to unity, each Joint Chief has still been unmistakably the head of his own particular armed service. The "unified commands" overseas have been under a single commander in each case, a naval one in the Pacific and an air force one in Alaska, for example, but in each theatre the commander might find that a part of his force was being reassigned by the Secretary of one of the services back in Washington. Under the new scheme, this could not happen; the Secretaries of the Army, Navy and Air Force would simply be assistants to the Secretary of Defence, concerned with administration, supply and training for their respective services, but having no control whatever over overseas or other field commands. The Chiefs of Staff, on the other hand, would be empowered to delegate most of their service responsibilities, leaving themselves free for their joint duties.

The unified commands would be responsible, not to any single service, but to the Joint Chiefs as a whole, who would act in the name of the Secretary of Defence. Indeed these commands would be created, and their commanders chosen, not by the services but by the Joint Chiefs. To discourage partisan attachment to a single service, the President has decided that promotion to the top ranks, from which the high commanders are chosen, should be at the discretion of the Joint Chiefs, rather than being left, as at present, to promotion within the individual services.

The strongest objections are being taken to the President's proposal that, in the next Budget, the Secretary of Defence should be given complete power over research and the authority, which he lacks today, to redistribute appropriations among the services to meet new situations. Congress is traditionally unwilling to relinquish its power of the purse, and Mr McElroy has suggested tactfully that Congress might set a limit on the amount that he may reallocate should emergency require.



ONLY a few lines in the President's Message are devoted to a problem which the professional soldier recognises as the very key to effective planning and command. The Joint Staff was created in 1947 on a pattern that was frankly a compromise in order to win the acceptance of the Navy. Suspicious of the ambitions of the Army and the Air Force, the Navy insisted that the Joint Staff be limited to 210 officers, with an equal representation from each service, and that it should function solely by similarly balanced committees. The purpose was to give each service a voice, and tradition is such that a young Joint Staff officer who votes in committee "against his own service" does not fare well in promotion. The result is that, where

service rivalries exist, decisions are hard to reach and end as weak compromises, or else no decision can be taken; this means that the time of the Joint Chiefs is squandered in settling trivialities. Moreover, under the unification law of 1947, the director of the Joint Staff has always been named by the Joint Chiefs—which means by rotation among the services.

Under the new organisation of defence the Staff director would be named by the Secretary of Defence, presumably because he is able rather than because he is acceptable to the other services. The present committee system has already been ended, by presidential order; in future, membership will be determined by functional purposes, not by service representation. Moreover, Congress is being asked to raise or remove the 210-man limit on the size of the Joint Staff.

The President's programme faces very great difficulties. Parts of it can be, and are already being, put into effect by administrative order. But the approval of Congress must be won for other essential steps: the removal of the limit on the number of staff officers, the diminishing in importance of the three service secretaries, and the empowering of the Secretary of Defence to reallocate appropriations. The reaction of Congress, as soon as the message was published last week, was to concentrate on the objections and to ignore the President's courageous demand for major reforms. Some Congressmen are outraged by the President's inclination to retain all the Assistant Secretaries of Defence, whose profusion and whose short stays in office have caused much indignation. The President will certainly have to consider jettisoning some of the less important aspects of his plan to save what is vital, particularly the reform of the Joint Staff which in some respects is the most important of all.

PRESENT CHAIN OF COMMAND

Cold Comfort on the Farm

ALTHOUGH it is unlikely that the two-thirds majority needed to over-ride the President's veto of the Farm Bill will be found in the House of Representatives, a determined effort to register a protest in this way is promised in the Senate after the recess. But some members on their visits home may have found ordinary farmers as sympathetic as is the official American Farm Bureau Federation to the President's view that to freeze price supports and acreage allotments at their current levels for a year, as the Bill would have done, would only aggravate the farm problem and check the little progress that has recently been made toward a solution. This progress was conveniently underlined, as the veto message was being prepared, by a sharp monthly rise in farm prices for the third time this year. The index has now gone up by 9 per cent since the present flexible system of supporting prices came in in 1955 and the farmer's purchasing power has also gone up recently—in contrast to that of the rest of the community. The gains have been due mainly to higher prices for cattle, poultry, fruit and vegetables, none of which are supported, and this reinforces the President's argument that what farmers need is less government intervention, not more, a thaw rather than a freeze.

The Administration did, however, try to warm up the veto a little. As a result of it the levels at which the prices of several commodities are to be supported this year were reduced, but they have all been cut by rather less than had been expected. And the President promised to step up the disposal of agricultural surpluses abroad, as soon as Congress extended his authority to do so. Meanwhile he is at once applying the present export scheme for wheat to cotton, maize and other feed grains, of all of which the government holds substantial stocks. Under the wheat programme, very successful from the American point of view and designed to take the government out of the export trade, commercial exporters are reimbursed for the difference between the high American prices they pay and the low foreign prices they receive, not in cash but in kind with grain taken out of the government stocks. But these measures, by reducing the surpluses held by the government, must inevitably push support prices up again and encourage the accumulation of more surpluses, under the present law. The President appealed again, as he did in January, for a change in the law to prevent this, but his veto has made it even more certain than it was before that Congress will do nothing to help him.

Stakes in California

FROM A CORRESPONDENT IN SAN FRANCISCO

FOR the first time in many years, California is approaching an election divided by genuine issues and with both parties led by well-known and hard-hitting candidates. Senator Knowland, the Republican choice for Governor, is the Senate minority leader and, until Congress adjourns, can campaign in person only when Congress is in recess, as it was over Easter. An orthodox conservative on economic matters, he has stirred up the campaign by sponsoring, as part of his programme of labour reform, a state right-to-work law; this would make membership in a trade union entirely voluntary by outlawing the union shop which requires employees to join after they have been hired.

So far Mr Knowland is the only outstanding leader of either party to sponsor this measure; it is too much for a number of Republican members of the State Legislature, it is opposed by two important Republicans, Senator Kuchel and Governor Knight, who is standing for the Senate in Mr Knowland's place, and the Vice President, Mr Nixon, also a Californian, has sidestepped the issue. Senator Knowland is also the state's only political leader to support the Eisenhower Administration's highly controversial programme of partnership with private enterprise in developing water power.

On the Democratic side, Mr Pat Brown, the Attorney General, who is running for Governor, and Representative Engle, the senatorial candidate, are well-known, middle-of-the-road leaders for whom even conservatives can vote; this is something new for California's Democrats. A series of public opinion polls shows that Mr Brown is ahead of Senator Knowland, and Mr Engle ahead of Mr Knight, even though he is far less well known than the Governor. The Democrats also have the advantage of a united front against both the right-to-work Bill and the partnership programme.

ASIDE from these immediate issues, the political control of the state for many years to come is at stake. In 1961, after the next federal census, the state will be redistricted to take account of its growing population. The party in power will be in a position to draw the boundaries of electoral districts so as to favour its chances for the next ten years. Furthermore, the political fate of two potential Republican presidential candidates, Vice President Nixon and Senator Knowland, may well depend on whether Mr Knowland becomes Governor and head of California's big delegation to the Republican convention in 1960. To seize control of the state Republican machinery and of the delegation, Mr Knowland must either be elected Governor or, failing that, win a substantially bigger vote than his Republican rival, Governor Knight, receives in his Senate race. In view of Senator Knowland's apparent agreement to leave Mr Nixon a clear track in 1960 in return for support in a later contest, it is vital for both that Mr Knowland should become the undisputed head of the party in California.

The hardening of party lines in the state since the end of the Warren Administration in 1954 gives an advantage to the Democrats since they have about 800,000 more registered voters than the Republicans. They also welcome Senator Knowland's insistence on making California a testing-ground for the right-to-work principle, since this will discourage further the tendency of Democrats in this state to vote for Republicans. Senator Knowland, on his flying visits, seems confident that an active campaign in the late summer will restore his fortunes. He scoffs at the public opinion polls, recalling that in 1952 when he was an active supporter of the Taft-Hartley Labour Relations Act, he won in 57 of California's 58 counties. And the latest poll in the state, on the right-to-work Bill itself, shows 51 per cent for the Bill, 44 per cent opposed, and only 5 per cent undecided. Many observers point out, however, that this year Senator Knowland is running for the first time against a popular, proven vote-getter, and at a moment when half a million unemployed cast a shadow over sunny California.

EXPLODING CITIES—V

Suburbia Goes to Market

FROM A SPECIAL CORRESPONDENT

IN the suburbs, curiously enough, debt is credit ; the more a suburbanite owes the more he owns ; and it is through buying a house that he achieves a transient existence. The suburbanites, in fact, are nomad-capitalists, drawing their mobility and wealth not from owning tents and goats or even stocks and shares, but through two financial devices known as the government-insured mortgage and the instalment plan. The man who moves his family to the suburbs to start a fresh way of life is entering a new middle-class group and must undergo the painful educational process of "upgrading" his tastes, habits and possessions. It is the economic impact of the collective suburbanite on his way up that has created today's "luxury economy."

His income is on the average 15 per cent higher than that of the urban dweller and this enables him to build up equity in a house and possessions, and thus to become a capitalist, by a process of monthly budgeting. With the help of the post-war system by which the government insures mortgages, he can buy a house by monthly instalments like rent and can sell it when his increasing investment and income permit him to buy a more expensive one; he thus expects to move about once in six years and to come out richer each time. The process of acquiring furnishings and household appliances and even minor items is speeded by such devices as revolving credit at department stores, an instalment plan which enables and encourages the buyer to keep his monthly spending on credit up to a certain level ; he seldom thinks of this as debt or as expensive in terms of interest payments.

While the suburbanite has often been accused of an irresponsible "live now, pay later" attitude, he is thought by some economists to be not only a good credit risk now but also a man of substance for the future and the firm foundation of national prosperity. He is perforce a man of property and in 1956 58 per cent of those owner-occupied homes which had been occupied for two and one-half years or more were debt free. A survey in the same year indicated that about 95 per cent of home-owning families had motor cars, television sets and automatic washers and that a high proportion of them had insurance and savings as well. Another survey early in 1957, however, made it apparent that, even before there was talk of recession, a growing number of suburbanites were curbing their buying plans and felt that they had all the major equipment and all the debts that they wanted. There seems after all to be a limit to the number of refrigerators, lawn mowers and automobiles, even of different colours and shapes, which the best intentioned supporters of the economy can use around the house.

As a refreshing change from statistics and generalities, last February's issue of the *Ladies' Home Journal* contained two interviews entitled "We Can't Live on $25,000 a Year" and "We're Doing Fine on $8,400 a Year." The $25,000 man, a New York advertising executive whose job requires him to have an "exurban" estate, spends one out of every three dollars of his take-home pay on shelter. Aside from this, he apparently does not feel obliged to keep up with the wealthier local Joneses, for he has no servants and does not belong to the country club. Nevertheless, he overspends his income by $2,000 a year and his wife does not expect to pay the milk bill regularly until he is making $60,000 a year. On the plus side he is accumulating capital in the form of equity in a valuable property and through his company's compulsory investment plan. The $8,400 man, a mining engineer, has a 1949 car and owns a three-bedroom, two-bath, $17,800 house outside a midwestern town ; he spends $200 a month on shelter and on instalments on two household appliances ; he carries seven kinds of insurance, puts $68.50 into various kinds of savings and still has a surplus of almost $60 a month.

WITH the outward movement of industry and commerce from the cities, many suburbs are no longer merely bedroom communities whose inhabitants return daily to the centre of the town to do their work and their shopping ; they are becoming self-contained entities offering both employment and shops, services and entertainment. The advent of the giant shopping centres in the suburbs has cut into retail sales in the cities ; in some cases these have declined drastically while in the suburbs sales have boomed. Last year there were reported to be 1,200 shopping centres doing more than $20 million worth of business a year each. These large centres may cover up to 1 million square feet of land and contain branches of one or two department stores, various speciality shops, supermarkets for food, drug stores and shops selling household equipment. Success in creating the "perfect shopping centre," however, sounds as complicated as hitting the moon, since it is related to an Einsteinian theory called "Reilly's Law of Retail Gravitation," which can be adapted to calculate the pull of a shopping area, whether local or down town, on potential customers. It now appears that the shopping behaviour of the suburban housewife is as predictable as night and day.*

But what the suburbanites will actually buy still keeps manufacturers and advertising men guessing. This involves the intangibles of the search for the good life and the laws of the economics of happiness have proved exceedingly capricious, since suburban consumption seems to be governed as much by social as by material motivations. While individual items may become fads or failures, the special conditions of life in Suburbia have created enormous new markets related to outdoor living, leisure activities, the do-it-yourself movement and so on. There are for example an estimated 18 million home gardeners demanding tools, shrubs and even, it is said, plastic rocks ; 90 per cent of sales of house paint used to be to paid artisans, now 70 per cent are to amateurs. One of the most phenomenal booms is in garden swimming pools, with an estimated 45,000 built last year, 36 per cent more than the year before.

The suburbanite who can be seen at the shopping centre with his entire family on Saturday has not in the past been noted for his shrewdness. He and his wife have made a large part of their purchases on impulse. But now that the buying spree is falling off, it is reported from many sides that the consumer is becoming more sophisticated and has obviously learned a lot about prices, values and credit. This situation has apparently driven the advertising agents to psychoanalyse themselves in order to find out why buyers are resisting their blandishments.

* For more scientific discussion of Reilly's Law, see *Technical Bulletin No. 24, Shopping Habits and Travel Patterns*, March, 1955, published by the Urban Land Institute, Washington, D.C.

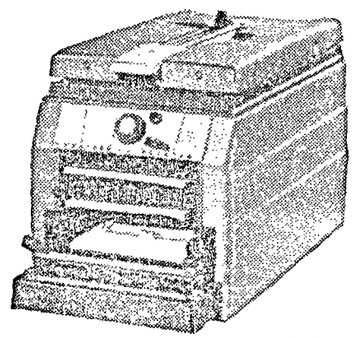
As good as seven typists at your beck and call



WHY waste time and money making copies by typewriter of letters, reports, invoices and so on? The Kodak 'Verifax' copier will do the job more quickly than ever you thought possible. It produces up to 6 copies each of 40-50 documents in one day—that's faster than 7 copy typists. The copies are made on inexpensive paper. In normal use the 'Verifax' can save its cost in two months or less. And you know that every copy is a true facsimile, completely accurate in every detail. Checking is not necessary.

Anyone can learn to use the Kodak 'Verifax' copier in five minutes or less. It is clean, self-contained and takes up little more desk room than a typewriter.

Whatever your business—no matter how big or small, there's room in it for a 'Verifax' copier. Send for details today.

THE WORLD OVERSEAS

EAST GERMANY—I

A Look of Permanence

FROM OUR SPECIAL CORRESPONDENT

WESTERN policy towards east Germany is based on the exclusive recognition of Bonn as the only government entitled to speak for Germany—a principle interpreted with singular whole-heartedness: not only *de jure* recognition, but even *de facto* dealings, are studiously avoided. An east German resident cannot travel to Britain on his passport, but must procure a temporary travel document in west Berlin. Agreements for trade are negotiated (when at all) by the Federation of British Industries instead of by the British Government. At a ceremonial farewell to the Russian troops departing for home last month, the western military representatives, attending as guests of the Russians, chatted informally among themselves when the east German national anthem was played.

What purpose can this theory of non-existence serve? Obviously it can annoy and inconvenience the government and ruling party; but it cannot do much more, unless the German Democratic Republic is so shaky politically and such a failure economically that, left alone, it is bound to collapse. But to judge this prospect requires an assessment, continually brought up to date, of the regime's actual state of health.

An extensive tour of east Germany this spring can lead to no other conclusion than that the east German state is not going to collapse. Time is not on the western side; indeed, the visitor is forced to doubt whether time is on the side of peace in central Europe if the present eastern and western policies are continued. Neither the western taboo, nor the economic and psychological warfare conducted from Bonn, nor its own inherent weaknesses—not even the scepticism and hostility of a large part of its own population—are preventing the German Democratic Republic from getting on its feet. It would be misleading to depict its people as contented with their lot; they are not. But the economic improvement compared with three or four years ago is apparent at a glance in the street scene of a dozen towns, the look of the children on their way to school, the traffic on the roads, the crowds in the cafés and theatres.

Only the agricultural scene is superficially unchanged. In east as in west Germany, industry is the dominant interest, and the first beneficiary of a change for the better is the industrial population. The workers' and peasants' state seems to manage its peasants no better than the so-called capitalists' and landlords' state did. The grievances of the country people are still serious. The grievances that are aired in the towns—and they are still aired very readily—are of a relative kind; in effect, everything western is considered to be superior to the products offered on the socialist market.

For very many products, this belief is still well founded. Socialist television sets have small screens; socialist gearboxes wear out too quickly, for lack of hard steels; socialist coffee is old and tired and very expensive; socialist films are dreary and socialist newspapers unreadable. These grumbles do not compare with the bitter complaints of five years ago. Bottlenecks have been overcome; industry is productive; there is plenty to eat and drink and plenty to buy with the high wages that the industrial worker can earn, or with the good salaries that are open to the technicians, managers and intellectuals so long as they are on good terms with the state. What used to be the special standard of consumption provided in Leipzig for the Fair is now expected generally and, but for the occasional slip, generally provided.

The source of this relative well-being is precisely the same in east as in west Germany. For all its misfortunes, east Germany was left with a pool of technical skill and of basic industrial equipment sufficient to secure it a place in the communist economic world not dissimilar to that of west Germany in the western world. With a substantial part of the mechanical engineering industry (as well as of the chemical, electrical, and optical industries) of the former German Reich, the German Democratic Republic is prospering as a supplier primarily of investment and production goods, primarily to the communist block with its insistent demand for machinery, machine tools, and industrial installations. The basic resource, as it has turned out, was the human skill. It is not only in the west that the Germans have contrived, after a period of stagnation and gloom, to re-equip their dismantled factories better than new and re-establish an urban standard of living. Labour is short; but productivity—though still well below that of west Germany—has risen as the new machines have come in. Flight to the west has probably become less attractive and has certainly been made more difficult; its volume is diminishing.

Unfortunately, no improvement in the temper of east German politics has accompanied the economic recovery. An effort in that direction was made last year by the group headed by Herr Schirdewan, Herr Oelssner, and Herr Wollweber. Herr Schirdewan appears, from the general answers that are given in Berlin to a tactless foreign questioner, to have pressed for a general policy less calculated to widen the breach between the east and west German states than is the present policy of Herr Ulbricht. Herr Oelssner is said to have desired an economic policy less ruthlessly set on squeezing out the small surviving private interests. Herr Wollweber found himself in

the curious position of a chief of the security services seeking to abate the severity of the police system. It is in the logic of things that an eventual alternative east German government might have some such programme as this, and there were indications that the Russians for a time last year were inclined to give Herr Schirdewan some support ; but if they were, in January they withdrew it and the dissidents were expelled from their offices in the party and the state. Some of the economic reforms that they desired seem, nevertheless, to be going through ; but in politics, and in particular in all-German questions, the Ulbricht line is more severely in force than ever.

The days are gone when east German communists would impress on the foreigner their earnest desire for the reunification of their country. Germany, they now say, is not going to be united at the expense of the German Democratic Republic ; an attempt by Bonn to extend its system to east Germany would mean world war ; the most that can be done is the so-called " confederative " solution, which, when explained, boils down to no more than an all-German advisory council, each of the two German governments retaining all its powers, including its separate foreign relations and its separate armed forces. This bland requirement of an indefinite shelving of the problem of German unity might be taken as the expression of a reviving self-confidence, which the present rate of east German economic progress could very well be held to justify—if it were not accompanied by a crescendo of hostile propaganda against the West generally and west Germany in particular. The tone of the east German press and radio, and indeed of party spokesmen individually (civil and helpful as they are to a seriously interested visitor) is truly terrifying. Bonn, in particular, is spoken of constantly as a hostile power resolved to seize power in the east by armed attack.

This atmosphere has been made worse than ever by the west German government's disclosure last month of its intention to accept atomic weapons. It is the custom of the east German press, radio, and politicians to portray Dr Adenauer and his ministers as the successors of Hitler, Goering and Goebbels. When the Bundestag foreign affairs debate from March 21st to 25th turned into a debate on atomic rearmament, the east German population was drenched daily and hourly with commentaries and denunciations on the bloodthirsty schemes of Bonn. People receive this, in general, sceptically enough, with an imperviousness induced by years of tedious exhortation. The regime has not learnt how to make itself believed, much less loved ; still, it is making itself accepted as permanent.

(To be concluded)

Steering Canada's Future

FROM OUR OTTAWA CORRESPONDENT

FRESH from the awe-inspiring and rather worrying capture of 209 parliamentary seats out of 265, Mr John Diefenbaker met his cabinet on Maundy Thursday when, as one minister said, they were mostly too bemused and exhausted to do much serious business. But each minister was presented with a volume of 509 pages to add to his pile of homework. It is the final report of the royal commission on Canada's economic prospects which was appointed by Mr St Laurent's government in June, 1955, with the staunch Liberal Mr Walter Gordon as chairman. At first sight it throws political divisions into hopeless confusion. It reads more like a Conservative than a Liberal document ; yet Mr Gordon was actively helping and advising Mr Pearson during the election campaign.

This very fact, however, is the clearest evidence yet provided about the nature of the great swing of Canadian opinion demonstrated last June 10th and on March 31st. The task of Mr Gordon's commission, with four very able commissioners and a secretary of genius (Mr Douglas LePan) was to enquire into the long-term prospects of the Canadian economy, its probable development and future problems. Mr Gordon prepared and published a preliminary report at the beginning of 1957 when the Liberal government was still in power. It trampled like a bull elephant through the pleasant pastures where the government kept its favourite pets with Mr Howe as their head keeper. Mr Howe was contemptuous of the hulking brute's incursion. Mr St Laurent was irritably impatient. But he had invited the brute and he could only try to freeze it out by ignoring it.

Since then Conservative triumphs have provided an entirely different background for the final report, which is a much better document. The recommendations of the preliminary report, which Mr Gordon was evidently anxious to place before the Liberal government, stuck out like awkward bones from a half-starved body. In the final report they are well covered with flesh, nourished on a score of special studies which have been published. This well-fed creature reveals far more clearly than the half-starved youngster where its affections are set—and it is not on Liberal policy as practised in the last dozen years. This is a definitive sign of the kind of revulsion against the Liberal government's policies which produced the present political upset. It shows a revolt against *laisser-faire* economics and American continentalism. It reflects, though more mildly than public feeling seems to wish, fear of American domination and reassertion of the Canadian will to independence, whatever economic laws may say.

The key passages come in the first and last chapters. Here is the keynote from the opening chapter:

> It is doubtful whether Canada would be a separate nation today if economic forces had been allowed to determine our destiny. . . . Those who built this country showed in what they did that they believed its economic future was not entirely beyond their power to control. . . . We commend their spirit to our fellow countrymen as a proper guide for the future.

This bears no echo of Mr St Laurent or Mr Howe. It is a polite and literate expression of the " vision " which Mr Diefenbaker proclaimed with such success from the hustings last month.

When Mr Howe was their prophet, the Liberals believed in letting things run themselves with a minimum of government intervention. If the mantle falls on Mr Gordon, the order of the day will be purposive governmental direction. In the concluding page of the report it is stated that Canada's prospects will be dimmer if the government makes wrong decisions or—and here is the emphasis—takes no action on certain problems.

Another characteristic Conservative goal on which the commission has clearly set its heart is the growth and diversification of Canadian secondary industry. It says:

> There is no satisfactory way of measuring or evaluating the advantages that the nation gains from having domestic manufacturing industries which provide it with assured sources of supply for many commodities and which give the economy a measure of diversification and thus a greater degree of stability than it might otherwise enjoy.

But it clearly rates these advantages highly. This willing of Conservative ends, however, does not mean accepting Conservative means. The commission pours cold water on the Conservatives' ambition to get more of Canada's raw materials processed here before export, though it suggests how pressure might be applied in suitable cases. It dismisses without argument the possibility of increasing manufactured exports. It does not mention an Anglo-Canadian free trade area and barely mentions European free trade plans. Yet it realistically examines the competitive position of Canadian secondary manufacturing. It says that Canadian productivity in this sector is 35 per cent lower than American. " Capital intensive " industry cannot compete against American production because of its small domestic market. " Labour intensive " industry cannot hold its own against the low wages of overseas countries, including Britain. But the report rejects the theme song of tariff-seeking Canadian manufacturers by saying that, except in a few industries which employ a lot of labour, Canadian labour costs per unit of output are far lower than in any country in the world except the United States. Industries which do depend heavily on labour, it says, are victims not of lower overseas wages but of high wages paid by more productive Canadian industries. Canadian secondary manufacturing is left, therefore, to expand in a growing but still small domestic market. Apart from any economies made possible by concentration on fewer lines of goods, it is condemned to permanently higher costs than American factories. But its tariff protection should remain, says the commission, at the same general level as now. The question is whether this provides any tenable basis for long-term expansion.

★

Besides dismissing the hope of any significant increase in manufactured exports, the commission predicts that Canada will gradually come to do more, not less, of its trade with the United States. Its economic orientation is thoroughly North-American in line with the Liberal tradition. But it is far more Conservative than Liberal (on any past performance) in pressing proposals for limiting the pervasive influence of American control over Canada's most productive resources. It urges tax incentives to induce foreign companies to sell stock in their Canadian subsidiaries to Canadians and to put Canadians on the boards of directors. It wants stricter control and less haphazard policies to safeguard Canadian interests in all forms of energy, specially oil and gas.

In general outlook, then, the Gordon commission adopts, in somewhat more apologetic form, the Conservatives' insistence on maintaining Canadian independence before the threat of economic domination by the United States. It seeks to combine this with the Liberals' traditional continental orientation while rejecting Liberal economic theories which frustrate its first nationalistic aim. But while the Conservatives reinforce their reassertion of Canadian independence with the help of the long neglected forces of history, and can appeal to the enduring ties with the Commonwealth and Europe, the Gordon commission's new style Liberalism seems unwilling to call on any outside supporters. Its orientation is to be towards its own navel.

Jordan Mends its Fences

FROM OUR SPECIAL CORRESPONDENT IN AMMAN

THE Jordanian and Saudi governments are beginning talks in the near future, though the date and place of the meeting have not yet been decided. It is expected that these discussions will put an end to the rumours that are circulating about the future of the Saudi subsidy to Jordan (£5 million annually) and of the Saudi troops sent into this country to help King Hussein during the crisis last April. The fate of the subsidy is already certain. In a statement last Sunday, Samir al-Rifai, the Jordanian deputy premier and foreign minister, clearly foreshadowed its termination. Rather than question its imminent demise, the Jordanian leader seemed concerned primarily to assert that, in contradiction to authoritative reports emanating recently from Saudi Arabia, the initiative in this matter came from Amman and not from Riyadh. Clearly any suggestion to the contrary might be interpreted by Jordan's enemies as a defeat for the Jordanian government and a weakening of its position. " It is not in conformity with the nature of the new regime (the Arab Federal State)," Samir al-Rifai said, " that Saudi Arabia should continue to fulfil its commitments when Egypt and Syria have failed to do so." Thus the ending of the subsidy would be due to a reconsideration by the Amman government rather than to any change in the attitude of the new Saudi government towards Jordan.

The Jordanian government is at pains to minimise the effect of the recent change in Saudi Arabia. Official statements continue to speak of decisions made and policies formulated by King Saud or " by King Saud and his government." References to Prince Feisal are few and far between. It is clear that the Jordanians, having hitched their wagon so securely to King Saud's star, are reluctant to believe the star may no longer be in the ascendant. In keeping with this belief, a government broadcasting station continues to conduct a vigorous polemic in defence of the Hashemite Federation against the union of Egypt and Syria. But the press takes a more cautious line ; references can be found to " two sectors of the Arab Union " and to the contribution which both can make to further the general interests of the Arabs.

★

The future of Saudi troops in Jordan is obscured by official utterances of unusually delphic quality. The Jordanian line is that King Saud is anxious that his forces should remain in " the front line of Arabs " which presumably means in Jordanian territory facing Israel. At the same time it is emphasised that the number of Saudi troops in the country is fixed " by the Jordanian government in agreement with the Saudi government in the light of the common interests of the Arabs." Such statements leave it far from clear what would happen if the Saudis and Jordanians disagreed in their interpretation of common Arab interests. Despite strong rumours from Riyadh of an early withdrawal, there is as yet no sign of any Saudi movement southeastwards. Even if it should occur, its political significance would be hard to assess, though Amman evidently fears that it might be interpreted as a withdrawal of Saudi moral as well as military support.

Meanwhile, General Rafiq Aref, chief of the Iraqi general

staff, is now in Amman discussing with the military authorities ways and means of setting up a unified command of Jordanian and Iraqi forces. It would be difficult to conduct a war against Israel from remote Baghdad; and despite hard words exchanged between Cairo, Damascus, Amman and Baghdad, a war with Israel is the only war that any Arab army is likely to fight in the foreseeable future.

Whether unification will extend in practice below the level of supreme command is doubtful. It would require the solution of many complex problems, not the least of which is a sizeable differential in pay. In the past, the Iraqis have shown little disposition to send troops beyond their frontiers; and there is no earthly reason why Jordanian units should serve in Iraq. It is therefore probable that, substantially, both armies will retain their separate identities though bearing the same name and operating under the co-ordinating direction of a supreme command. The armed forces, incidentally, will absorb a very high proportion of the federal budget of which Iraq has undertaken in the first year to carry eighty per cent. It must be remembered, however, that Jordan has never paid for its army. It was at first financed directly by Britain; then during the past year by aid received in various guises from the United States. Therefore detailed figures of the federal and state budgets must be awaited before it can be determined whether the Iraqi gesture is as generous as it looks.

The prevailing calm in Jordan has led to a cautious relaxation of the repressive measures introduced nearly a year ago at the time of the April crisis. Two hundred members of the opposition (mostly small fry) were released from prison last week and a further list of candidates for release, largely in prisons in Jerusalem and Nablus, is now under consideration by the authorities. Some official statements have led to the expectation that the severity of martial law may be lightened in the near future. One influential newspaper, while expressing appreciation of past efforts, assures the government that steps to modify martial law would be favourably received by the people.

A FRENCH JOURNEY—II

Agriculture's Industrial Revolution

FROM OUR SPECIAL CORRESPONDENT

"IT is a pity our politics give us such a reputation for inconsequence," said the Lyons banker. "Nobody thinks we can do anything else. My English friends have no idea of our economic revolution since the war. They know nothing of our new industries here on the Rhône. Chemicals, plastics, electrical engineering . . . of course, it's our agriculture that is backward."

This certainly *was* true. But is it still? The impression after a trip to the Auvergne, one of France's traditional poor regions, is that rural rejuvenation is almost more astonishing, because less expected, than industrial renewal. Nobody would yet propose the rural equivalent of visits to the Renault automatic plant or the Donzère dam, the "industrial tourism" now being conceived for transatlantic busmen on holiday. There is no plumbing lost in the Auvergne, and stables run ankle-deep in classical manure. But in the barn, the farmer points proudly to his tractor, and even overlooks the station wagon or second hand car beside it. In fact, I was once told that "in this village, we have three times more combines than we really need." These local impressions confirm the evidence of official yardsticks. In 1955, 10 per cent fewer people than in 1938 raised 25 per cent more from the land. As for tractors, last year there were 530,000, against 70,000 in 1948—relatively much fewer than in Britain, but the gap is rapidly closing. *Le Monde* recently estimated that postwar productivity has risen still faster in agriculture than in industry.

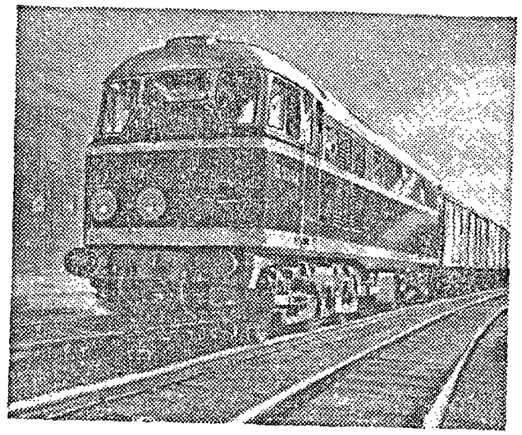
A good example of this advance is Saulzet, a village in the plain between the Auvergne mountains north of Clermont-Ferrand. Like most of France south of the Loire, this is a village of smallholders; the average farm is only 25 to 30 acres. The root cause of mechanisation, apart from the lure of the machine, is scarcity of labour. There were seven million people on the land in France in 1920, there are five million now; and nearly 100,000 people leave yearly for the towns. In Saulzet, this movement began around 1900, and induced some mechanisation as early as 1920. But it was on nothing like its present scale, where the more successful farmers now talk of investment and machines in almost the same terms as the Paris experts. What seems to have finally released the floodtide of machinery in Saulzet was the "remembrement," the voluntary redistribution of the peasants' holdings, carried out immediately after the Liberation.

Previously, here as in most French villages, land was held in strips, almost mediaevally. Peasants spent more time walking between than working on their innumerable, tiny, scattered plots that were often miles apart. Whereas enclosures were completed in Britain in the 19th century, the Revolution's land and inheritance laws perpetuated France's archaic system into the mid-twentieth. Since peasants today, as in Plautus or Molière, still suspect that exchange is fair robbery, the process of voluntary land-concentration in a single village usually demands three years of a tactful—and government paid—land surveyor's efforts. But, once achieved, its results are spectacular. In Saulzet, 2,300 strips were reduced to under 1,000—less than the average, for in one typical commune near Paris 5,000 were

A NEW SERVICE
OF ECONOMIC AND MARKETING RESEARCH

DURABLE CONSUMER GOODS

A series of continuous comprehensive surveys are now being prepared to assist manufacturers and others to estimate the future market for the following durable consumer goods:

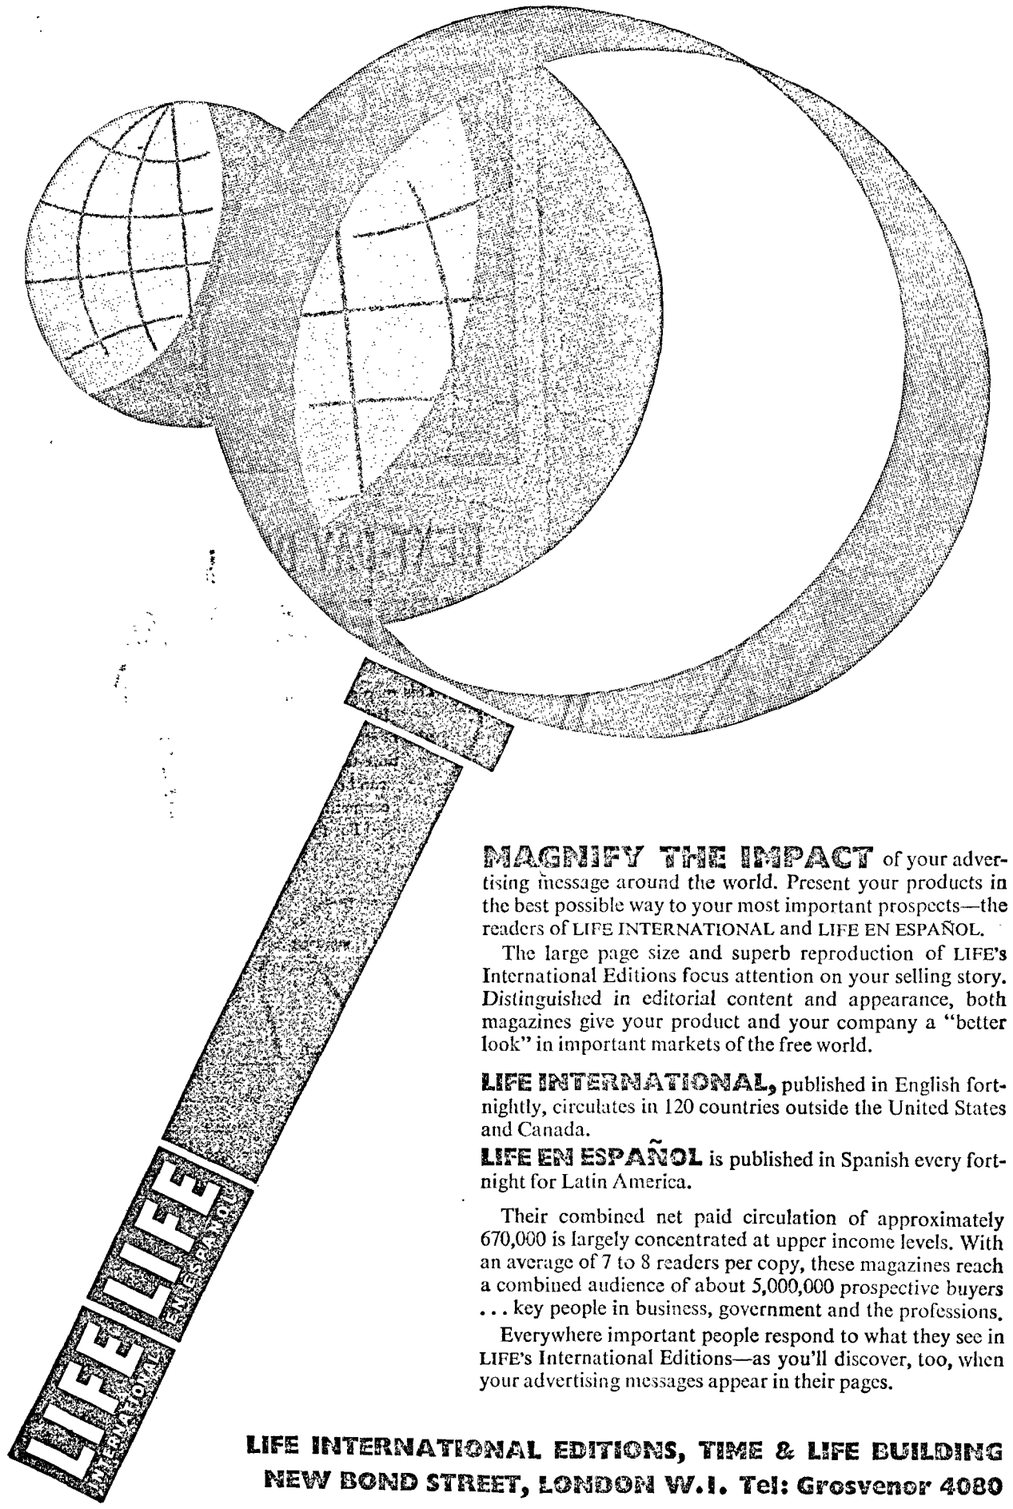


Electric washing machines	Tyres
Refrigerators	Car heaters
Vacuum cleaners	Cycles
Electric fires and convector heaters	Car radios
Gas and electric cookers	Radios and radiograms
Sewing machines	Record players gramophones
Passenger cars	Television sets

These surveys are being prepared jointly by

THE ECONOMIST INTELLIGENCE UNIT LIMITED
and
THE BRITISH MARKET RESEARCH BUREAU LIMITED

Further information from:



THE ECONOMIST INTELLIGENCE UNIT LTD.,

NEXT-DAY DELIVERY BY EXPRESS FREIGHT

This map shows some of the many towns to which British Railways Express Freight Services can give next-day delivery for wagon-load traffic. It is a time-table service—and door-to-door transport can be provided. Express Freight charges are competitive with any other form of transport. For further information get in touch with your local Stationmaster or Goods Agent. He'll supply you with all the details you need.

BRITISH RAILWAYS EXPRESS FREIGHT

MAGNIFY THE IMPACT of your advertising message around the world. Present your products in the best possible way to your most important prospects—the readers of LIFE INTERNATIONAL and LIFE EN ESPAÑOL.

The large page size and superb reproduction of LIFE's International Editions focus attention on your selling story. Distinguished in editorial content and appearance, both magazines give your product and your company a "better look" in important markets of the free world.

LIFE INTERNATIONAL, published in English fortnightly, circulates in 120 countries outside the United States and Canada.

LIFE EN ESPAÑOL is published in Spanish every fortnight for Latin America.

Their combined net paid circulation of approximately 670,000 is largely concentrated at upper income levels. With an average of 7 to 8 readers per copy, these magazines reach a combined audience of about 5,000,000 prospective buyers . . . key people in business, government and the professions.

Everywhere important people respond to what they see in LIFE's International Editions—as you'll discover, too, when your advertising messages appear in their pages.

LIFE INTERNATIONAL EDITIONS, TIME & LIFE BUILDING
NEW BOND STREET, LONDON W.1. Tel: Grosvenor 4080

reduced to 750. This is partly due to the canniness of the Auvergnat peasant ; now most of the farmers would like a new redistribution to redress their former caution. Many still have 12 to 16 plots, and realise that they would have done better to have even fewer. (In some other places 50-acre farms with over 100 strips now fit happily into four or five fields.) After concentration productivity immediately goes up by at least 25 per cent. But its main advantage is that it permits long-term mechanisation, hitherto impossible. For instance, the farmers of Saulzet, the first village in its locality to concentrate (many have now followed it), have encroached on their neighbours by renting a third as much land again as they worked before.

"*Remembrement*" is a cumulative process: the success of the pioneers is infectious. Since the war, about one-sixth of the 30 million acres that need it have been enclosed ; and the waiting-list is now as big as all that has already been done. This acceleration is equally characteristic of the Study Centres in Agricultural Techniques (CETAs), which may prove still more important for French farming. These are groups of about fifteen farmers each, who experiment and assess new farming methods communally. They meet monthly, compare results in the field, discuss them with a hired agronomist, and draw up a programme ; the factual findings are circulated afterwards to them all. This remarkable network of informal research cells is almost unique in France in that it owes nothing to government initiative, though the cells are now subsidised. The first was started just after the war by a big farmer and his friends in, significantly, the capitalist farming country round Paris. In 1948, there were but four offshoots, in 1952 still only 60 ; today there are over 500, and they are multiplying too fast for the number of agricultural engineers available to advise them. There is still far to go—perhaps several thousand are needed—but they already exert tremendous influence in popularising techniques. They are equally useful to the experts, who often ignored the practical difficulties of new methods. The tremendous growth of the CETAs in the last three years is probably the most hopeful sign in French farming.

★

Rapid change has its dangers, in particular those of over-investment. The smallholder buys a combine to ape his neighbour, and then either finds he must buy more land to use it economically—and gradually expands—or discovers he cannot pay his way and eventually sells out. "There were 40 farmers in Saulzet ten years ago, now there are 30, and in ten years I dare say there will only be twenty." Some of the ousted peasants become landless labourers, and the experts object to this on social grounds. Others drift to the towns ; thus labour is lost which is needed for meat and dairy farming, which farming requires a lot of labour. Why not have freeholding peasants rather than hired labourers ? The experts fear that once highly-populated areas like the Auvergne mountains, which could usefully raise meat, will soon be abandoned. They try to persuade farmers to avoid over-investment by owning machines co-operatively. The farmers' usual objection is that "we all want the same machines at once." As one mountain farmer, who appreciates the problem, added, "You see, we have to 'over-invest.' The labour would not work without machines."

These are, however, the risks of a renaissance. French agriculture is being qualitatively transformed: go-ahead producers of the south are turning from peasants into capitalist farmers, as they have long since in the industrial north. France's rural backwardness has often been attributed to its industrial weakness. Conversely, though, while a third of the French population lived outside the commercial circuits, in narrow self-sufficiency, industry lacked a market. Now that the vicious circle is broken, the change is more than economic. Perhaps the main reason for France's industrial tardiness was the immense wealth, relatively, of its early 19th century rural society. Fidelity to this world and its values was a primary obstacle to rapid industrialisation. Now agriculture itself is "industrialising," and changing as fast as the never-quite-French France of the factories ; these signs of a revolution in French attitudes are more important than any production graph.

(To be continued)

Can Black South Africa Take a Hand?

FROM A SPECIAL CORRESPONDENT

TRADITIONALLY, South African politics centre round the "native question." But in the past the African himself has been aloof: effectively voteless, he has kept detached from the passionate white struggles over his own destiny, and the contending parties have barely needed to consider him even as a passive observer. The election next Wednesday will be different. The politically organised Africans have reversed their longstanding policy of boycott and indifference towards white elections. On March 16th two thousand delegates to a "National Workers' Conference" issued a call for a mass protest to begin two days before election day. The president-general of the African National Congress, Mr Albert Luthuli, has described the protest as a direct appeal to the white electorate: "it is time the voters took into account the real majority in South Africa."

The appeal will stress in particular the African misery that results from the government's policies, from the pass laws and from the low standard of living. "£1 a day" has been proclaimed as the objective—a rate which has been described as hopelessly unrealistic, though it would still leave a vast gap between the incomes of the average European and the average African wage-earner. Other grievances to be stressed include the reservation of skilled jobs for whites, the Group Areas Act extending racial control of land tenure, and, of course, the exclusion of Africans from the elections.

On the Rand and in Port Elizabeth, the protest is likely to take the form of at least a partial general strike: in Johannesburg the cry is "Stay at home on April 14th, 15th and 16th," while in Port Elizabeth a whole week's strike has been suggested. In less tightly organised centres, action may be confined to an economic boycott: in Natal, the *ad hoc* Protest Week Committee has called for abstention from shops and entertainments, and a special ban on the products of firms regarded as Nationalist. The white reaction has been sharp: the government has given a warning that demonstrators will be handled "with the gloves off," and police leave has been precipitately cancelled throughout the Union. The United party, condemning the protest, has hinted at a dark plot by African Nationalists to ensure re-election of the government. But within the African

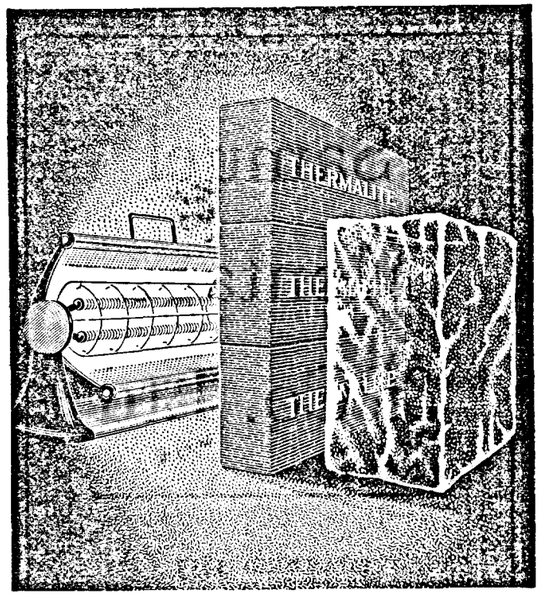
National Congress, the only dissentients from the strike are the numerically insignificant "Africanists," who reject the multi-racial, moderate, policy of the leadership.

Mr Albert Luthuli was deposed as Chief by the government for insubordination, but he remains the incarnation of natural chieftainship: magisterial, intellectually dominating, yet not without humour. In conversation he has expressed his conviction that the United party had missed their chance to turn the strike against the government. "Hertzog in 1924 knew well how to turn unrest in the country against the party in power, and Smuts suffered by it. Our immediate problem is to get rid of the Nationalists: if the United party won, we should still fight them, just as we should fight the Liberals. But when it is suggested that we are trying to put the Nationalists in, it hurts me."

Congress supporters maintain that if they accept the argument that "the white voter will be stampeded" by action at this time, then all action by Congress would be stultified and it would be enmeshed in the same toils of expediency which strangle the United party. "We must assume that the white electorate is a thinking group," said Luthuli; "they should be capable of realising that, with the African people taking a more and more active role, ten years more of Nationalist rule would bring disaster." Congress argues that both the Nationalists and the United party, as well as the outside world, will pay more attention to mass action now than at a less crucial time.

Tanganyika Moves Forward—II

FROM OUR SPECIAL CORRESPONDENT



TANGANYIKA is waiting for another Dr Williamson. Hitherto no new mining genius has come to swell its revenue. But several powerful concerns are prospecting hard. In the south-west the Western Rift exploration company is looking for radio-active minerals; the United Kingdom Atomic Energy Authority is drilling for helium at Musoma near Lake Victoria; and, most important, BP Shell, having failed on Zanzibar and Mafia islands, has sunk a test well at Kilwa. The results of all these surveys will not be known for from five to seven years. But the hoped for consequences are clear enough: more minerals will mean more revenue and so more education, irrigation, communications. Perhaps Tanganyika's lack of mineral wealth and communications have until now been a blessing in disguise. Its sole connections with the outside world are with Uganda, which influences the cotton-growing province around Mwanza on Lake Victoria, and with Kenya. But the last link is only with Mombasa. There is neither a railway nor an all-weather road between the African political centre of Nairobi and anywhere in Tanganyika. The territory is thus spared both the troubles of an industrial belt and contagious diseases from abroad. All Tanganyikans, including the African Nationalists, want minerals now because they know they would be exploited, not by autonomous southern African big business, but according to strict rules laid down by the government of Tanganyika. Africans would play a part at all levels.

Like most British dependent territories, Tanganyika receives small colonial development and welfare grants. It can raise loans on the London market. It gets a trickle of aid from such bodies as the Food and Agriculture Organisation and the International Co-operation Administration, but on the whole the territory must finance itself. This within very frugal limits, it has managed to do. Total revenue stood at £20 million in 1956-57 (more than twice that of 1949). Domestic exports reached nearly £45 million in 1956. Sisal provided less than half of the 1951 value when the United States was stockpiling; but in the same period the value of coffee exports doubled and cotton trebled. Other cash-crops of growing value are castor seed, sunflower seed, cashew nuts and ground-nuts. There are two disturbing signs: competition from Brazilian sisal-growers who are juggling exchange rates Miranda-wise; and a decisive slump in coffee this year. Added to the Brazilian threat is that of a serious American recession; this would make itself felt in the motor car trade, which largely uses sisal for upholstery. Tanganyika can do nothing much about these dangers to its cash crops except improve productivity and quality. A big slump in coffee would ruin the 300,000 Chaggas whose coffee sales have quadrupled in the last ten years.

At present 60 per cent of the revenue comes from non-African sources. This reflects the low degree of urbanisation and the prevalence of subsistence agriculture in many areas. Irrigation is essential to improvements in this sector but irrigation in Africa south of the Sahara is a very ticklish business. Tanganyika is very short of rivers. One of them, the Rufiji, is under a five years' survey and a 5,000 acres pilot project has been already selected. In general the problems of soil-types, salinity and water storage are extremely difficult. Further, in order to persuade the "subsistence-peasant" to grow cotton or rice, convincing demonstrations are indispensable—and after groundnuts a certain caution is advisable. One hopeful development is the recent decision by the Tanganyika Sugar Company, partly financed by Dutch capital, to grow sugar in the Kilombero valley in Eastern Province. With a capital of £2,500,000, this factory will swell the present production of 18 million tons a year, which is all produced at Arusha-Chini in Northern Province.

Throughout Africa there is a passionate demand for education even if the economic opportunities that follow it are still very few. Mr Julius Nyerere has recently complained that the government education system has produced only one district officer in forty years. This is not quite fair. But in spite of the greatest efforts by the government in the last ten years only about 10 per cent of the children go to school at all. The cream of Tanganyika's brains is represented by 183 students at Makerere, Uganda. In a population of 8½ or 9 million, 2,500 children at secondary schools is obviously a pathetic figure. But what can be done about it? The only solution would seem to be a massive outside aid covering both the capital costs of building schools and some of the recurrent expenditure. Indeed, failing the discovery of vast mineral wealth in Tanganyika, only an injection of foreign funds could accelerate the educational drive. The territory would seem to be a perfect field for United Nations aid and for the larger and wiser American private foundations. There is also a serious need for the introduction of American technical personnel into the territory for irrigation schemes. Whatever Tanganyika is, it is not a "colony" in the American sense of the term. It is an African country whose political development, guided by the British, its outrunning its economic resources. No place, it seems, would benefit more from well-directed American enthusiasm.

(Concluded)

This is why

so many factories

are built with

THERMALITE-YTONG

Load bearing insulating building blocks

Thermalite-Ytong provides exceptional thermal insulation as an *integral part* of the structure. It is a load bearing material and it can also be used as an infilling to steel or concrete frame constructions in industrial buildings and *needs no further treatment to ensure maximum fuel saving.*

Thermalite-Ytong is simple to erect, presents no fire hazards and is competitive in cost.

Nine More Rivers to Cross

IN a speech last month the Home Secretary foreshadowed legislation the technicality of which should mask neither its importance nor its controversial character. How constitutionally important can be gauged by the fact that, after twenty long years, it should end government by war-time decree; how politically controversial by Mr Butler's frank avowal that its purpose is to abolish powers "that would enable a Socialist State to be brought in, as it were, by the flick of a switch."

Its object is the elimination or replacement of all the remaining emergency controls, which are contained for the most part in the Defence Regulations. There are to-day 42 of these still in force, compared with 342 on VE-Day. The Regulations were originally made under the Emergency Powers Acts, 1939 and 1940, for purposes connected with the war. These Acts expired in February, 1946, but many of the Regulations made under them were given a new lease of life. Some were prolonged by the Emergency Laws Acts, 1946 and 1947, but most were kept alive by the Supplies and Services Act, 1945, for the purposes laid down in that Act, i.e. generally for assisting the transition from war to peace. In 1947, when the economy was under great strain, additional economic purposes were brought within the power of regulation and in 1951, because of Korea and rearmament, certain defence purposes.

During the war, emergency powers had to be renewed annually by Parliament. In 1945, the Labour government took them for a span of five years. Since 1950, they have again had to be renewed each year, and each year they have become fewer and fewer. Sometimes they have been revoked as a result of the deliberate abolition of a particular control, such as identity cards or building licences. Sometimes they have automatically become obsolete, for example upon the dissolution of the Miners' Welfare Commission or the renaming and reorganisation of the old ATS. Sometimes the promotion of new general legislation has made it possible incidentally to dispose of regulations on the same subject: the food and drugs legislation of 1954 was such a case. And sometimes legislation has been promoted for the specific purpose of replacing emergency enactments: the Land Powers (Defence) Bill, now passing through Parliament, is an admirable example.

The Land Powers Bill itself, the Opencast Coal Bill and the Water Bill will together dispose during this session of seven of the remaining Defence Regulations. Twenty-six others may be described as formal or ancillary and their revocation must wait until the substantive provisions are got rid of. The remainder number (like the rivers of hell) precisely nine.

NINE more rivers to cross, then—but not all of them by any means difficult to negotiate. Defence Regulation 59, for example, which permits exemptions from some insufficiently flexible provisions of the 1937 Factories Act, could well be swept into modern and tidy legislation on factory conditions, which indeed is badly needed. Defence Regulation 62, which gives the Minister of Agriculture power to control the cultivation of requisitioned land, is being retained only to wind up these operations and may well be revoked this year. Regulation 6 of the Defence (Armed Forces) Regulations, under which servicemen can be used temporarily for urgent work of national importance, particularly on the land, has not been pronounced upon, but its future is unlikely to keep active politicians awake at night.

At this point one minor and, quite possibly, one major embarrassment present themselves. The minor embarrassment concerns what is left of the emergency enactments relating to patents and trade marks. The Government had one shot, in 1953, at providing permanent powers for departments to authorise the "use" and "disclosure" of technical information for "the services of the Crown" in disregard of any licence or agreement restricting the use of such information. It is still nurs-

ing its bruises. The Bill encountered such fierce and unanimous opposition in the House of Lords that Lord Woolton himself had to step in as peacemaker and withdraw it. Protracted discussions with industry followed, and in the summer of 1956 the report of a departmental committee under the chairmanship of Sir Harold Howitt. If the Howitt proposals were adopted, the eventual legislation would differ from the present emergency powers in that it would be strictly limited to production for defence and would provide for a period for the renegotiation of agreements, for compensation, and for appeal to the High Court. It would give the Crown permanent powers to authorise the use of technical information for government defence contracts, but would expressly exclude powers to authorise disclosure of information to the Crown or to any other person. Thus refitted the bill might not have a smooth passage but it would hardly be shipwrecked.

The other embarrassment concerns Defence Regulation 58AA, under which the Industrial Disputes Tribunal is kept in being. Our permanent law provides for industrial arbitration only where it is voluntary and by the consent of both sides. During the war the imperative need to avoid stoppages of work led to emergency arrangements under which, *inter alia,* trade disputes that could not be settled by means of existing negotiating machinery could be referred to "compulsory" arbitration, invoked by only one party to the dispute, for a decision which would be binding upon both. These arrangements continued into the postwar period, though they were considerably modified in 1951. Is the present Industrial Disputes Tribunal to be permanent? Is it to be retained for some industries only where it may be thought to serve a particularly useful purpose? Or is it to be abolished altogether? The choice probably lies between the second and third course, with a bias in favour of the third, though no course is likely to prove plain sailing.

Finally, we come to the heart of the problem: exchange controls, controls over the import and export trade, general economic controls which include rationing, and price controls. The first two of these are not primarily dependent upon Defence Regulations at all. Exchange control has been part of the permanent law since the passage of the Exchange Control Act of 1947. It is, however, the case that Regulation 2A of the Defence (Finance) Regulations is used to supplement existing controls over financial relations with other sterling countries and the need to determine the future of this relatively minor power might possibly lead to reconsideration of the exchange control powers as a whole. Again, the general power of control over imports and exports derives not from a Regulation but from the Import, Export and Customs Powers (Defence) Act, 1939. There is, however, a weakness in this Act. It can be used, for example, to regulate the supply of strategic goods to foreign countries from the United Kingdom, but it cannot be used to regulate the supply of strategic goods situated outside the United Kingdom. For this purpose the wider powers to control transport rest on Defence Regulation 55, reinforced by Defence Regulation 46, which controls voyages that British ships may make. It will hardly be possible, therefore, to touch 46 and 55 without raising the whole question of the future of import and export controls. This is especially so since the Act of 1939, though it is not limited in time and is not subject to annual renewal, specifically provides for its own termination by Order in Council at the end of "the emergency."

No one who has studied the extraordinary wording of Defence Regulation 55 can feel any surprise at its use for stretching the powers given by an already widely drawn Act of Parliament. It would be difficult to think of any economic liberty through which it would not be possible to drive a cart and horse, given the power to provide by order "for regulating or prohibiting the production, treatment, keeping, storage, movement, transport, distribution, disposal, acquisition, use or consumption of articles of any description" and "for any incidental and supplementary matters for which the competent authority thinks it expedient for the purposes of the order to provide." At present the scope of this power has been narrowed by statutory instrument, and it can be used, apart from strategic regulation, only for dealing with various fuels like coal and petroleum, iron and steel scrap, certain agricultural products, bread, flour and welfare foods and the control of hire purchase and credit sale agreements. But its scope can be extended once more by statutory instrument at any time and in any direction. This is *par excellence* "the flick of a switch" regulation. It was by such a flick of the switch that the present Government, having much reduced the scope of the regulation in 1954, was able to extend it to include hire purchase in February, 1956, and petroleum in the Suez crisis.

The other "flick of a switch" regulation is 55AB. At present it authorises price control of about a half a dozen groups of goods only, including coal and petroleum, iron and steel scrap, welfare foods and medical supplies; but it can at any time be extended to enable a competent authority to provide by order "for controlling the prices to be charged for goods of any description or the charges to be made for services of any description."

In dealing with these central economic controls the Government will have to ask itself three questions. The first is to what extent they can be dispensed with altogether. The litmus test here will surely be provided by general price controls. If the Conservatives have not the courage of their economic convictions on this issue they are not likely to have it on any other. The second question is how far economic powers on the statute book can be limited in time. Ministers might refresh their memories of the debates of 1946, when they waxed eloquent, in Opposition, about the iniquity of adopting permanent legislation on exchange control. Are we really to accept that exchange control

(or import control) is here for all time? Should not their use and continuance be subject to annual challenge under the Expiring Laws Continuance procedure or in some other way? The third question is whether the scope of remaining powers can be narrowed before they are put on the statute book. Here a real constitutional point arises. It is intolerable that a major economic decision, such as the decision to re-impose rationing, does not in fact require an Act of Parliament, but could be implemented by a "flick of the switch." If Mr Butler really intends to make a dead set against these blanket powers, his arm must be strengthened.

It will not be easy for Ministers to do the right thing. Every kind of pressure will be upon them in the opposite direction—the caution of the bureaucracy, reluctant to give up any power that might some day come in useful; the wrath of the Opposition, both simulated and sincere; the prudence of parliamentarians aware that there is a limit to the number of blazing rows that can be sustained in the closing stages of a Parliament. But there is room for hope. Even if the Government should be unmoved by economic argument or constitutional propriety, its political instinct ought to push it in the right direction. It did, after all, gain power on the promise to "Set the People Free" and retain it on the slogan that "Conservative Freedom Works." The powers of permanent economic control it could now put on the statute book without making itself look thoroughly ridiculous are therefore mercifully limited.

Lessons from Vauxhall

"Too little and too late" has been the epitaph of many unsuccessful enterprises. Vauxhall Motors has recently shown the price that part of the world's largest industrial undertaking was ready to pay to be on time.

In September, 1954, Mr Curtice, president of General Motors, announced that its British subsidiary, Vauxhall Motors, was to embark on a major expansion scheme that would increase its annual rate capacity from 70,000 passenger cars and 50,000 commercial vehicles a year to 155,000 passenger cars and 95,000 commercial vehicles. The expansion called for an additional investment in plant and tooling of £36 million, and was to be completed in five years, towards the end of 1959. That was the original intention. In fact, the whole programme was virtually completed last year; limited production began in part of the new plant more than twelve months ago. This acceleration has been highly impressive—and highly expensive.

In 1954, working slightly over rated capacity, Vauxhall made some 70,000 passenger cars (just over 9 per cent of the country's total), and 60,000 vans and trucks (just over 22 per cent of the total). But in the next year the British motor industry achieved an output record that still stands, and although Vauxhall squeezed about 9 per cent more units out of its old plant, its share of the market was shrinking. Both Ford and the British Motor Corporation group as a whole increased their output more than Vauxhall could, and gained bigger shares of the business. The prospect of further increases in the total output of cars in this country looked very rosy in mid-1955. This gave Vauxhall a powerful reason for accelerating its expansion—the danger of losing ground for four more years because it was unable to match the expansion of the rest of the industry.

A second powerful reason was that the Velox and Wyvern models introduced in 1951 were then entering the fourth year of their market life—a stage at which any British manufacturer would be reluctant, and any American more than reluctant, to invest any substantial sum in new plant to increase their output, or to contemplate a further five years of market life for them. Indeed, taking advantage of the hindsight of 1958, it is remarkable that five years should ever have been accepted originally for bringing in the new production facilities on which basic model changes largely depended.

In the event, it was decided to reduce the five-year period to about 3½ years. The necessary re-arrangements of dates with innumerable outside suppliers were carried through, even though many of the contractors, especially those supplying production machinery, were thus giving up margins of time that they could not in every case spare; so some contractors did not manage to meet the advanced dates. The laggards were more often British than Continental or American manufacturers, though this may have been an inevitable consequence of the general overload upon the British economy—in which machinery manufacturers had to cope, among other things, with a surge of orders from all British motor manufacturers.

Despite these delays, Vauxhall did bring its new plant into production in about two-thirds of the time it had originally planned. Part of the price it paid for doing so was bluntly set out in the financial results of 1957, published last week—a net loss of more than a million pounds, against a net profit of nearly £4 million in 1956, in spite of higher turnover and much higher unit sales than the year before. Vauxhall bought its extra time dearly.

A considerable part of the extra cost of saving time is to be found in the expenditure on special tools, jigs and dies involved in its 1957 model changes—over to

the Victor and the new Velox and Cresta in cars, and to two new diesel engines for the Bedford commercial vehicles (a field in which Ford had recently been reducing Vauxhall's lead). Such expenditure for the three years to the end of 1951 was under £2½ million; the total in the three years to the end of 1957 was almost £12 million. One might reasonably guess—allowing for price increases and for the fact that two sets of body dies were required for the two separate car models, instead of just over one for the old Wyvern/Velox/Cresta range—that a comparable tooling cost for the 1957 range could be put at £9 million: this allows, moreover, for more labour-saving arrangements and a greater investment in equipment. But that would be nearly £3 million less than was actually spent, and of this at least £2 million remains to be amortised.

The smallest part of these extra tooling costs would be overtime in Vauxhall's own toolmaking shops, which would ordinarily have done much more of this work than proved possible under the accelerated programme. It cost more to have the work done outside by British suppliers—and competitors, as is the sensible custom of the trade—which naturally cover more of their own overheads and profit on such jobs; yet more to get some of it done by Continental suppliers (among which Renault are to be counted); most of all to have some done in the United States.

VAUXHALL'S sales in 1957, in money terms, were almost 7 per cent above those for 1956, and this probably gives a fair measure of the physical increase in output. At 1956 rates, this would have meant an increase of £800,000 in wages and salaries; in fact, the bill went up by almost £4 million. The number employed at the end of last year was up by about 6,000, no less than 37 per cent; moreover, there was an increase of 14 per cent in average earnings through the year. With such an intake of new labour, presumably at lower than average rates, established Vauxhall employees must have had an even bigger increase in annual earnings—due more to extra night-shift and overtime earnings than to higher basic rates. At Luton shift and overtime premiums are paid as percentages of the whole consolidated wage rate, and not merely on the basic rate—which makes the cost of emergency working higher.

Two other items of pre-production expenditure must have been heavily inflated by the decision to telescope a five-year plan into 3½ years—engineering and development costs of the new models and the costs of relocating production equipment. In both, the extra load involved paying other principals to do work that could normally be done by the company's own staff. No company can economically maintain an engineering organisation capable of taking much more than the average load to be expected over the years; the overload of the accelerated programme meant much more reliance on outside contractors. Similarly, engineering and development work, both on the products to be made and the techniques to be employed in making them, costs much less when done at a measured pace by the company's own organisation, and it is generally acknowledged that in the field of production engineering Vauxhall has an outstanding team. Vauxhall's American parentage made it possible to "sublet" this work to a degree not open to a British-controlled company; but it was at a substantially higher cost.

Actual production costs, even on existing models, must have been increased by the difficulties created in this vast reorganisation. Some of the planned equipment was not ready until after production had started, and improvisations of all sorts had to be brought into play. The result, inevitably, was extra costs: extra direct costs in cutting and shaping metal; extra costs in handling and re-handling workpieces from one place to another for successive operations; and extra costs in scrapping or re-working components that therefore failed to pass inspection. In modern practice, every part of a motor vehicle is designed with the closest attention to the equipment that will eventually make it; improvised methods, even if they yield an identical component, may cost several times as much. One particular feature of the new Vauxhalls that must have been a production nightmare in the circumstances is the cranked member which forms the rear edge of the wrap-around windscreen, carries the front doors, and has important loads to carry as part of the structure.

VAUXHALL does not find it hard to foresee a period in which its growing earnings should rapidly put paid to this account of costly development. For the years 1953-55, the heyday of the range introduced in 1951 and the period of fruition of the company's first postwar expansion plan, it was earning £10 million or more a year before tax. Its capacity is now more than double what it was then—both for cars, now in record demand, and for trucks, where full employment of its facilities must wait upon stronger revival of the at present comparatively depressed truck market. When its capacity is fully employed, the peak earnings of a few years ago should be handsomely exceeded (though on a much higher capital employed).

For the outside observer, there are perhaps two lessons to be drawn from this accelerated, expensive feat of expansion. The first is that when any organisation of human beings undertakes a task of magnitude far exceeding what it is designed for, and money has to be spent at a far higher rate, a rigid control of costs is one of the first inevitable casualties. Signs of this peep from the company's annual accounts—and physically they can be seen in the magnificent new facilities at Luton. The second lesson might be an enhanced appreciation of the economic value of the normal disciplines of the market place. If Vauxhall had been an independent company, financing itself from year to year, it would have found it very difficult to mobilise either the human or the financial resources for this operation—the latter including last year a call of over £16 million of new cash, in addition to a rundown of £10 million in liquid assets. An independent company, with no massive parent to support it, might have had to make its crucial decision two years earlier—or face a most unholy mess.

BUSINESS NOTES

IN THE MARKET

Gilt-Edged All the Way

INVESTORS left for the Easter holiday with a strong predilection for gilt-edged stocks. They came back with their buying boots still on. Industrials have moved up in sympathy, *The Economist* indicator rising from 179.4 to 182.8 in the eight days ended on Wednesday. But the heavy and sustained demand for gilt-edged stretching right along the line from the short and medium dates that the banks normally prefer to the irredeemables, has been the main feature. Between the end of last month and Wednesday of this week the *Financial Times* index of Government securities has risen from 81.53 to 83.31 without a pause, though on Thursday reports of the rejection of the railway wages claim caused markets to hesitate. Investors may talk of Bank rate; they may indulge in guesswork about the budget; those notions merely seek to rationalise a decision to buy gilt-edged stocks that had been taken independently. The banks have bought some stocks of rather longer dates than they have latterly fancied; the 5½ per cent Exchequer stock of 1966 is no longer too long for them. In consequence funding operations by the Government broker have been heavy. Insurance companies and other institutions have bought at the long end of the market and quite a number of industrial companies have been investing surpluses.

GILT-EDGED NET PRICES

	Sept. 18, 1957	Sept. 20, 1957	Mar. 19, 1958	Mar. 24, 1958	April 9, 1958

Savings Bonds 3% 1955/65	87 1/2	84 13/32	85 31/32	86 1/16	86 11/16
Savings Bonds 3% 1965/75	70 5/16	67 5/32	70 9/32	70 7/16	71 13/16
Brit. Transport 4% 1972/77	79 1/8	76 1/2	80 1/4	80 1/16	81 3/32
Treasury 3½% 1977/80	71 11/16	68 1/32	72 11/16	72 23/32	74 3/8
Brit. Transport 3% 1978/88	61 1/32	58 1/16	62 5/32	63 1/16	64 1/16
Brit. Gas 3% 1990/95	61 13/32	57 13/32	62 7/32	62 21/32	64 13/32
Funding 3½% 1999/2004	67 3/32	62 1/2	68	68 1/4	69 13/32
War Loan 3½%	64 11/16	60 13/32	63 11/16	64 13/32	66 1/16
Consols 2½%	48 1/4	44 3/16	48 13/32	48 1/16	51 3/8

Two dangers now seem to confront the market, either of which could produce a temporary dip. There are now quite a number of speculative and semi-speculative holders of gilt-edged—speculative inside the House and semi-speculative outside, where companies and institutions have bought ahead of their investment needs and have gone for stocks which are longer dated than they normally would buy. Moreover, the pressure of new issues on the market promises to be heavy both in gilt-edged and industrial offerings. On the industrial side there is news that Pye, the radio and television company, is to raise £2½ million of debentures, and Lord Chandos has disclosed that Associated Electrical Industries has received Treasury consent for a new debenture issue during the summer. On the gilt-edged side the twin 5¾ per cent issues for Swansea and Hull were well received and both have now established a small premium. The queue of borrowers remains long, and it is likely that very soon after the budget the turnstiles will admit a large one. These influences need not destroy the bull market in gilt-edged, but they may suggest the wisdom of temporary caution.

PRODUCTION

Varying Fortunes

THOUGH the broad statistical indicators continue to show "total" industrial output in Britain as just about level—the official index for "all industries" in February, allowing for seasonal changes, is expected to be 136-137, against 137 a year before—this stability continues to mask sharply divergent trends for the country's different industries. There are the industrial sectors where expansion has hardly faltered, through boom and disinflation, such as the public utilities—essentially electricity—and the chemical trades; industries that were hit in 1956 and recovered sharply last year, of which motors is the outstanding example; and others where output has shown practically no growth at all for several years, such as the textiles and clothing group, where output in 1957 was a shade lower than in 1950. Mining and quarrying output, too, was no better in 1957 than it was six years before; so far this year it has been substantially lower. Paper and printing was one of the

most rapidly expanding industries up to 1956, when it suffered its second setback since the war; last year its output began to rise again. Building output, which rose sharply as investment grew in 1956, remained broadly level

CHANGES IN INDUSTRIAL PRODUCTION, 1955–57
(Percentages)

last year; today there are signs that its activity is on the decline. Its suppliers, such as bricks, cement, and glass manufacturers, have levelled off along with it, and are now producing somewhat below capacity: so is the steel industry.

Engineering Demand Shifts

IN 1957, the emphasis of the investment boom shifted on to engineering: it was time for the plant and equipment to be put into the new factories. In its customary estimate of where engineering products were used in the British economy, the Economic Survey showed last week that while the total value of the supplies available rose by only £100 million between 1956 and 1957 (at 1956 prices), investment, excluding cars, took £130 million more engineering resources than in 1956. Defence demand upon these

DISTRIBUTION OF SUPPLIES OF ENGINEERING AND ALLIED PRODUCTS
(£ million 1956 factory prices)

	1955	1956	1957
Supplies :—			
Production	5,055	4,890	4,980
Imports	115	125	135

Passenger cars for the home market	225	175	190
Consumer goods for the home market	430	360	415
Other industrial goods, repair work and stock change	990	825	745
Exports	1,385	1,490	1,510
Total	5,170	5,015	5,115

industries continued to decline. These estimates show the miscellaneous item in the Treasury table "other industrial goods, repair work and stock exchange" as declining quite considerably, though this item ordinarily moves more in line with consumption and stocks, which were presumably both rising. Exports of engineering products rose a little.

As a whole, engineering output was just under 1¼ per cent up on 1956; not quite back to the level of 1955, though its exports were nearly 10 per cent higher than in that peak year of internal demand. Plant and machinery deliveries were up by 3 per cent; the value of machine tool output rose by 11 per cent, and the volume probably by 6 per cent. Though most producers of capital goods are still busy, their orderload is tending to drop. But for the moment, the continued strength of the motor industry—and of its widely ramified demand upon intermediate engineering industries—is probably sustaining total output in engineering 3 per cent or more above a year ago.

STEEL

Home Demand Still Strong

THERE is still no sign that consumers of steel in Britain are beginning to run down their stocks to any considerable extent, which is an indication of the underlying strength of demand for steel. The current rate of ordering, for most steel products, is continuing to decline somewhat, bringing down the length of order books; but this is mainly because customers, knowing they can get deliveries more quickly from the steel industry's expanded and no longer quite so busy capacity, are not placing orders so far ahead. Even the motor industry, still the main ebullient exception to rather slacker activity in engineering, is ordering more cautiously: its demands are continuing to grow in quantity, but it is not committing itself so far ahead. This reasonable attitude is spreading to some of the customers for heavy steel—who take large tonnages and ordinarily order much farther ahead, and therefore can affect the industry's total tonnage on order quite significantly.

But demand in the first quarter of 1958 has certainly been no worse than the industry expected. In the second quarter it may dip rather more: demand for building steel, which after the September tightening of credit was held up for a time by the fact that companies with factories half-finished wanted to get them operating and earning money quickly, is now beginning to feel the backwash. Steel consumption, which rose somewhat in the last half of 1957, is still probably remaining fairly high. Steel output in the first quarter was 5,475,000 ingot tons, about 1 per cent lower than in the first three months of 1957: production in March, at the rate of 432,300 ingot tons a week, was indeed fractionally better than in March, 1957. The expected fall in building output has reduced demand for tubes, affecting steel production in the Midlands, and demand for oil country tubes seems also to be softening somewhat. Output in Scotland has been affected by weakness in demand for light bars and in South Wales by the closing of older steelworks and some production difficulties at the modern mills.

Export Prices Dropping

ON the world market, steel prices are still coming down. Last week's reductions in the prices quoted by the Brussels steel cartel—cuts of 13 per cent for certain products—for the most part did no more than regularise the price levels at which business was actually being done by Continental steel exporters (though it may be noted that for

a few items the export cartel prices now appear to have been brought below the home trade prices ruling in the German market). It seems likely that even the new list of reduced prices will still be shaded by the Belgian and Luxembourg producers, who are exceptionally dependent upon the world market, where demand for most products is still very soft. British export prices are co-ordinated only for a few products: all are tending to slip.

Belgian steel producers, indeed, are said to be shading their "official" home trade prices under the ECSC lists, in order to meet competition from cheaper French and German steel. The rules of the community do not allow French or German producers to sell above their home prices in Belgium, so that when premiums can readily be obtained by exporting steel Belgian producers are in no danger of being undercut; but when demand drops off in the world market the situation changes. There are reports that various "packets" of steel are being offered to British consumers from abroad at attractive prices, but few reports of business being done. At present duties on most kinds of steel imports are suspended until September, when they will come back into force at the recently reduced rates; duty on steel sheet and plate is suspended for a further six months beyond September.

GOLD RESERVES

Another Big Inflow

THE near-record rise of $231 million in the gold and dollar reserves in March is encouraging, even after making allowance for the exceptionally large receipt of $94 million in settlement of the surplus with the European Payments Union for the previous month. That surplus was swollen by the deposit in London by the Royal Dutch Company of proceeds of its New York/Amsterdam issue; making allowance for this, the March figures seem to indicate no abatement of the mid-winter flush in the reserves. This reflects Britain's large current surplus, as well as bear covering and some arbitrage money. The surplus with EPU last month reached £5 million, and will bring in $10 million in gold in the middle of this month. Thus the

RESERVES SINCE THE CRISIS

	True dollar balance in period*	Actual change in reserves	Reserves at end of period
1957 :—			
July	− 32	− 14	2,367
August	−300	−225	2,142
September	−256	−292	1,850
October	+141	+243	2,093
November	+ 71	+ 92	2,185
December	+ 86	+ 88	2,273
1958 :—			
January	+166	+131	2,404
February	+260	+135	2,539
March	+147	+231	2,770

* Adjusting for one month lag in EPU settlements, for $250 million drawn from Export-Import Bank in October, and for small receipts of US aid

"true" current gain for March, adding in this EPU receipt and deducting the February receipt, was $147 million; and without the quarterly instalment on the 1942 Canadian loan it would have reached $154 million. This compares with February's exceptional figure of $206 million, and with $166 million in January.

The gold gain carries the reserves to $2,770 million. This is the best total since November, 1954—when Bank rate stood at 3 per cent. Even without the $250 million borrowed from the Export-Import Bank last autumn, the total is the best since mid-1955; but this reflects the $561 million borrowed during the Suez crisis from the International Monetary Fund. This has to be repaid by 1961, and the Ex-Im loan from 1960 to 1965; there is still a long way to go before the reserves are at safety level.

BALANCE OF PAYMENTS

How Sterling Took the Strain

BURIED in the technicalities of the latest white paper on the balance of payments lies a convincing answer to the sceptics, domestic and overseas, of the worth of sterling's international role. In 1957 as a whole, the overseas sterling countries ran down their London balances by £157 million—contributing, admittedly, to sterling's autumn crisis, but contributing, too, to the maintenance of exports and employment in Britain, and still more of the exports and employment of its competitors. Because of a more than seasonal sag in exports in the second half of the year, but even more because of a persistent rise in imports, the overseas sterling area ran into heavy deficit in 1957. The current deficit with Britain widened from £307 million to £343 million (entirely as a result of Britain's increased surplus on invisibles); net earnings of non-sterling currencies plus gold sales finding their way into the United Kingdom reserve—which are the best available measure of the overseas sterling area's non-sterling balance—dropped from £161 million to £72 million. The overseas sterling area's increased deficit was financed first by the receipt of investment funds from Britain, and secondly by the drawings on the sterling balances. Without these, these countries could not have financed their increasing imports, which in 1957 came mainly from sources other than Britain.

Drawings on sterling balances (−)	**− 45**	**− 23**	**−157**	**+ 69**	**−226**

The sources of the worsening in these sterling countries' payments are summarised in the table, which shows that no deterioration occurred with the dollar area: indeed, transfers of gold and dollars alone to the central reserve actually increased, from £231 million to £270 million. But the balance with OEEC countries, which in 1956 had been transformed from a surplus of £39 million to a deficit of £10 million, underwent a still sharper deterioration, to a deficit of £89 million, comprising a substantial element in Britain's deficit in the European Payments Union. An equally serious deterioration was suffered in payments with

other non-sterling countries; here the traditional deficit widened from £68 million to £138 million.

Of the individual sterling countries, India's drawings more than accounted for the decline in the balances of the overseas sterling area as a whole in 1957, with a big counterweight supplied by Australia whose balances rose by around £120 million. By the second half of the year however the pressure had spread to nearly all the other overseas countries, and notably to New Zealand. The fall in export prices was having some effect; but the bigger influence was the continued buoyancy of imports, particularly in India and New Zealand. This suggests that the main effect of the reduction in the purchasing power of the primary producing countries has still to be felt by Britain and by other industrial countries, whose exports in 1957 were being sustained by the use of the international sterling reserve.

More Information, Please

WHEN an official estimate of the overseas earnings of all forms of banking, insurance, merchanting and brokerage in the UK was made for the first time last December in reply to a parliamentary question—it came to £125 million for 1956—the then Economic Secretary to the Treasury undertook to consider a suggestion that these details should be published in future in the annual Balance of Payments white papers. This raised hopes that, at long last, the Treasury had decided to change its policy of hiding the details of the "invisible" transactions that play such a fundamental part in Britain's balance of payments. They were false hopes. The latest white paper gives no more information, in this respect, than its predecessors.

The overseas earnings of the City of London are again completely hidden—as they were in 1956 until the Economic Secretary unearthed them—in that meaningless catch-all, the "other (net)." This cloak also covers the overseas earnings of the British oil companies, including those of their oil tankers. In a letter to *The Economist* of March 15th, Mr Joseph Alsop, the American columnist, said that he had been "authoritatively informed in London that what may be called the British oil account currently shows a net surplus of £50 million a year, after payment for all oil consumed." No one else has. No hint of this figure graces the white paper.

This is surely carrying a regard for commercial secrecy too far. The validity of important arguments in the continuing debate on the future of the sterling area rests on an accurate appraisal of the City's overseas earnings. Not only energy policy in Britain, but British policy in the Middle East, must be directly influenced by the net foreign exchange gain or loss made by the oil companies. But without the relevant figures how can these matters of vital public interest be objectively discussed in Parliament, in the press, or anywhere else outside the Government? The speed with which an official estimate of the City's overseas earnings appeared when some unofficial ones began to be bandied about last year showed that there is no compelling reason why a detailed breakdown of the figures should not be published.

OIL

50:50 for the Sahara?

UNDER the present French mining law covering Algeria and the Sahara desert, foreign oil companies pay taxes to the Algerian government on a basis that appears, in most respects, to be more favourable to the company than the equal profit sharing arrangements now in force in Venezuela and the Middle East. But it had always appeared unlikely that, once substantial quantities of oil began to be produced in the Sahara by foreign oil companies, any Algerian government—whatever its relationship with France might be by that time—would be satisfied with an arrangement which gave it a lower share of the profits than the governments of other producing countries receive. That the new law which is now being drafted for the approval of the French Minister for the Sahara and the French Government should include a 50:50 profit-sharing provision therefore comes as no surprise. Indeed the major foreign oil companies, who set great store by the equal profit sharing principle between oil companies and host governments throughout the world, would probably welcome the extension of this principle to the Sahara—especially if the provisions for depletion allowances and the amortisation of exploration costs prove as generous as first reports suggest.

Arrangements for the equitable division of profits between the operating company and the host government do not, however, solve the more immediate issue: the division of ownership and control of the operating company between foreign oil companies and French interests, both government and private. No non-French oil company has undivided control over any operating company with a concession in the Sahara. The Royal Dutch-Shell group has a 65 per cent interest in an exploration company which was granted a concession before any oil was found in the Sahara—but which has not been fortunate enough to find any oil itself. In every other case effective control rests with the French partner and in many cases with the French Government. A few American independent companies have accepted these terms as an "entry fee" to oil production in the Eastern Hemisphere. But the major companies, such as Standard Oil (New Jersey) are still unwilling to bid for concessions at the cost of yielding control over the development of the oilfield and the disposal of the output. They regard as reasonable the French Government's insistence that France

The Paper Bulletin

The latest issue of this quarterly bulletin contains two Special Reports:—

WORLD WOOD PULP—A CHANGING MARKET—an exhaustive analysis of world supply and demand.

THE TREND OF BRITISH PAPER OUTPUT—latest trends and future outlook.

In addition there are the usual features which provide a

COMPREHENSIVE AND CONTINUOUS SERVICE

for those whose business is paper:

Guide for Paper Users—all uses of paper are surveyed

Raw Material Notes—market intelligence

Reports on Paper Using Industries—useful guide in reaching *current decisions.*

25-page Statistical Appendix—production, exports, imports, prices, stocks, consumption in United Kingdom, North America and Scandinavia.

should be assured the full foreign exchange benefit of any oil produced in the Sahara ; but unless they are allowed at least a 51 per cent interest in the producing company, the negotiations they have begun seem likely to end without agreement.

FOREIGN EXCHANGE

Premium on Gold

THE London price of gold if converted into dollars strengthened this week to $35.13 per fine ounce. This premium reflects a demand for gold going rather beyond routine Middle East and Far East buying. There has even been evidence of purchases, as yet modest, on behalf of Continental operators who are switching from US dollars into gold on the reasoning that every downward notch in the American recession must reduce the long odds against an ultimate adjustment of the dollar price of gold. Demand of that sort is, however, marginal, and a little central bank offering in London on Wednesday was sufficient to move the price down sharply to $35.10. Another reason for the rise in the dollar price of gold has been the recent paucity of supplies. The Bank of England has been a very meagre seller. This in turn reflects the current demand for sterling. The Bank of England, acting for the Exchange Equalisation Account, is still receiving a fair supply of dollars and is, therefore, under no necessity to replenish its dollar balances by sales of gold in the London market.

Sterling Firm

IN the official market for sterling the rate has risen this week to $2.81⅞ but tailed off slightly on Wednesday to around $2.81⅝. The commercial demand for sterling persists. There is also continued evidence of capital movements to London. In this latter type of operation it is difficult to distinguish between the normal rebuilding of the working balances that were depleted last year and the attraction of short-term money by London's higher interest rates. The New York Treasury bill rate fell again this week to under 1 per cent and the London rate dropped by ⅛ per cent to just under 5 7/18 per cent. After those changes and with the prevailing forward foreign exchange rates the margin on arbitrage with the exchange concerned is no more than moving money to London. A certain amount of new interest arbitrage business is still being done.

A feature of the foreign exchange market during the past week has been the strength of Canadian dollars, both in terms of sterling and of US currency. The premium over the US dollar has risen to 3⅛ per cent. The demand for Canadian dollars is wholly due to capital movements and notably to remittances to Canada of the proceeds of some substantial bond issues recently made in the New York market. US investment in Canadian equities has fallen away but the prevailing low level of interest rates in New York is encouraging a fair volume of bond offerings on Canadian account.

RUBBER

Russian Buying

RUSSIAN buying of rubber in London which reached high figures between September of last year and this January has died down, but not because the Russians have lost interest. They have transferred much of their buying to the East, where it is being done through London houses. A purchase of 11,000 tons for shipment from the East to Odessa was recently announced and it appears that in total the Russians are still taking about 15,000 tons of rubber a month, with the difference that because of the availability of shipping or for some other reason the rubber will not now come to London and be trans-shipped.

It is that steady Russian buying which holds the price of rubber steady at around 23d per lb in the face of industrial recession in America. At present prices natural rubber is fully competitive with synthetic, the American price of synthetic being equal to about 24¼d per lb cif, including the 10 per cent import duty in this country ; the Canadian price of synthetic, which is duty free, is 10 per cent higher. No 3 sheet natural rubber, normally regarded as the competitor with synthetic, is about 20½d a lb. This will not quickly tempt American consumers already using mixtures of natural and synthetic rubber to vary their proportions. They do not move for the sake of small differences and when monthly figures of consumption from America show changes in the proportion of natural to synthetic rubber used they more often than not reflect changes not in the mix, but in output as between truck tyres which contain a high percentage of natural rubber and passenger car tyres containing a high proportion of synthetic.

TRAMP SHIPPING

A Greco-British Accord?

WHEN the members of the Greek Shipping Co-operation Committee meet round the table with a sub-committee of the tramp section of the UK Chamber of Shipping on April 11th, they will discuss two plans—one Greek and one British—to help bring about a revival of tramp freight rates. Both plans are concerned solely with dry-cargo shipping ; it is generally agreed that the oil companies would not at present support joint action in the tanker market.

About 800 Greek-owned ships flying either flags of convenience or the Greek flag (in the ratio 5:3) account for some 40-45 per cent of the world dry-cargo tramp tonnage ; British flag and other flag ships make up the remaining 55-60 per cent, in roughly equal proportion, but include a substantial number of Greek-owned ships operated by British and other non-Greek subsidiaries under British and Canadian flags. About 360 Greek ships, or not far short of half the Greek tramp fleet, are now laid up—a total of some 3,600,000 deadweight tons, against some 1,600,000 tons of British cargo ships laid up.

British owners, having lost ground since the war to Greek-owned ships operated under flags of convenience, may be inclined to rejoice in the fact that their rivals' present predicament is worse than theirs. But at the current level of freight rates British owners as well as Greek are losing money, and although some of the smaller and more speculative Greek owners may be forced to the wall, British owners cannot hope to eliminate the more powerful of their Greek rivals without crippling themselves in the process. If they accept this, then there is no half-way house, for no plan to raise freight rates could succeed unless it had the support of both Greek and British owners. This may be a bitter pill for the British owners to swallow, but may be sweetened by the fact that Messrs Niarchos and Onassis, who flourished on flags of convenience in the past, are almost

solely tanker owners and will play no important part in any dry-cargo lay-up scheme, while Mr Kulukundis, the chief Greek spokesman, runs many of his ships under British and Canadian flags.

The Greek proposals, which are only tentative, are also rather mild. The laying up of shipping would be accelerated only to the extent that all signatories to the agreement would bind themselves not to operate at a loss. But once a ship was laid up, it would stay laid up for at least six months, and would then come back into service only at an agreed minimum rate set high enough to cover out of pocket expenses, though not full depreciation. Unlike the original plan of Britain's Chamber of Shipping, the Greek proposals contain no provision for the payment of compensation to owners of laid up ships out of a levy on those operating, but the Greeks are not adamant about this. If the British owners are willing to bury the hatchet it may not be difficult to reach a compromise on a plan to be adopted. Whether all of the small tramp owners could be induced to adhere to such a plan, or how soon it would help to raise freight rates, is another matter.

COTTON IMPORTS

A Response from Hongkong?

SIR FRANK LEE'S Board of Trade mission to Hongkong evidently found the colony's textile industries no more ready to consider putting a voluntary limit on its exports of cotton cloth to Britain than when Lancashire sent the Clegg mission early last year, though negotiations had been taking place sporadically since then. It was Hongkong's blunt refusal to fall in with India and Pakistan in any voluntary scheme of limitation that finally wrecked that previous attempt to satisfy Lancashire's desire for some form of protection from Commonwealth competition. But the statement the colony's special negotiating committee put out after twelve days of discussions could be read as suggesting that the Permanent Secretary's visit may have been of some value for Lancashire. In it Hongkong stated its willingness to talk directly with Lancashire about a scheme of limitation provided the industry here reaches a prior agreement with

Enlarging London Airport

EVENTS have caught up with the Minister of Transport and with the committee that reported to him last summer on the future of London Airport. When Mr Watkinson announced before Easter that he had accepted the framework of the committee's report and was inviting tenders for the next stage of the airport's extension, it was already too late to save one of the world's major international airports from near-chaos in roughly a year's time.

The basic services at London Airport can deal with any aircraft likely to use them in the foreseeable future, with the possible exception of the 180-ton Russian Rossiya, which lands at very high speed. It is one of the few airports in the world whose runways are already long and strong enough to handle the big American jets expected to come into service next summer; but having landed them, it has nowhere to park them. This fact explains the urgency of a new bout of building at an airport on which £26 million has already been invested. London Airport's six runways form two interwoven triangles enclosing a central area that was originally intended for the handling of all passengers. Short haul services have been flown from this central area for more than two years but long range services are still operated from the Indian village that sprawls inelegantly along the north side of the airport a good mile away. One of the main recommendations of the Millbourn committee was concerned with finding room for these long range services within the constricted central area by spilling over into the least used of the six available runways.

It is a good scheme, but unfortunately the jets will not wait for it to be completed at leisure. And whatever is done about the long-distance passengers in the all too endurable "temporary" huts, neither the Douglas nor Boeing jet airliners can be parked on the aircraft stands from which trans-Atlantic passengers normally board their aircraft on the northern side of the airport. The concrete will not hold them, and the area is already too crowded with other long-range aircraft to leave room to manœuvre the big jets in and out of the stands.

Cynics hope that the jets will not be ready for service next summer, but urgent steps must be taken to prepare aircraft stands for them in the central area. Tenders are being invited now; since some concrete is already there, it is hoped to have the stands ready by next summer. Work is also being rushed forward on a new building for long-range passengers to match the new stands. But since permission was held back so long, the Ministry of Transport is putting it up in two halves in a desperate race to have some accommodation ready as early as possible—not so much to ease the journey of passengers as to move traffic from the long-distance huts before the expanding crowds actually burst their walls. It is therefore intended to shift BOAC and some of the Commonwealth airlines into the first half of the new building as soon as it is finished—with luck, by mid-1960, a full year after the new aircraft stands come into use. Foreign airlines will not be able to move into the central area until the second half of the building is finished a year or so later. Operators like Pan-American, which will be the first to have the new jet airliners in service, will for several years have to shuttle passengers between the aircraft stands in the middle of the airport and the northern terminal buildings.

An opportunity will be taken to experiment with the "finger-and-gate" system on the new stands, by which passengers walk down covered piers that project from the airport buildings and through exit gates into the aircraft drawn up alongside. This is one of the devices suggested for increasing available parking space. Parks in the central area for short-haul aircraft are already so crowded that new stands are being constructed for these at the same time as work begins on those for the long-range jets. The cost of the new stands is put at £1.3 million; the passenger building might not cost more than £2 million; and a further £1 million will certainly have to be spent on another pier and aircraft stands when the second half of the building is finished. This represents construction that cannot be held up any longer without disrupting the whole work of the airport. All told, the improvements and extensions that the Millbourn committee considered necessary were put at £17 million, bringing projected expenditure on the airport up to £47 million. Those sections of it that deal with new restaurants and other non-technical frills should, in the circumstances, be very closely scrutinised.

However tricky your transport problem, B.R.S. can handle it

Circumstances may be against you. But British Road Services is on your side — always. A telephone call to your local B.R.S. depot quickly brings you a helping hand from a nationwide organisation with a willing and experienced staff and a vast fleet of vehicles of all kinds, regularly maintained, and ready to tackle any job, at any time. Modern methods and equipment ensure careful attention to every load, and the B.R.S. teleprinter network provides the means for rapid transmission of your special instructions.

A B.R.S. vehicle with an insulated container for the carriage of fresh, chilled, and frozen meat, frozen foods and other commodities which have to be kept at an even temperature. This container has a capacity of 735 cubic feet and 6 tons — just one of the many and varied services B.R.S. render to Trade and Industry.

If you find transport something of a problem...

India and Pakistan; that by entering into talks exporters would not be committed to any figure for exports; and, that the discussions would be confined to shipments of grey cloth retained in this country.

By stipulating a prior agreement with India and Pakistan, Hongkong could well be offering no more than an oriental passing of the buck. But that Sir Frank Lee went on to spend two days in New Delhi and a day in Karachi may mean that he has found some basis for further inter-industry meetings, and both India and Pakistan had already agreed to send delegations to Lancashire next month. It seems fairly clear at least that Sir Frank Lee has not been able to wring the agreement he would have liked from the colony, but Hongkong's apparent acceptance in principle of the idea of a voluntary limitation, with conditions, may save the Government from again having to decide between putting a quota on Commonwealth imports for the first time and letting an industry based largely on Chinese refugee capital and management continue to use colony status to compete without hindrance with a domestic industry in its own market.

AIRCRAFT INDUSTRY

Flying High

When aircraft designers talk of "high" altitudes they think of the region between 8 and 20 miles above the earth, which is being used increasingly by bombers, fighters and certain types of guided missiles. It is bounded by the hazy upper limit at which the rarefied air still provides enough oxygen to sustain combustion. The task of developing jet and ram-jet engines to operate efficiently in the conditions found at such altitudes is complicated. Last week, the Bristol Aeroplane Company officially opened its first high altitude test plant, a relatively small installation costing £1 million and financed largely by the Ministry of Supply to speed the development of the ram-jet engines used in Bristol's guided missiles. The biggest of these measures only 16 inches diameter. A much bigger plant to test full-size jet engines will be opened by Rolls-Royce during the summer. This has cost nearly £6 million; it is more complicated than the Bristol installation since it is designed to run continuously and not in short bursts. These plants artificially reproduce the conditions found at a range of speeds and altitudes. Bristol's range is 100,000 feet and speeds 3.5 times that of sound; Rolls-Royce go to 70,000 feet and speeds 2.5 times that of sound. The installation of a high altitude test plant at Bristol indicates a fairly plain intention on the part of the Ministry of Supply to provide in a reduced aircraft industry for at least two aero-engine manufacturers and discussions are still going on about a possible merger of Bristol's engine division with the smaller Armstrong-Siddeley section of the Hawker Siddeley Group.

RETAIL STANDARDS

Pillow Case

On Tuesday, the Marlborough Street magistrate ordered the Downland Bedding Company to pay 500 guineas costs to the Retail Trading Standards Association whose business is accurate trade descriptions and which had prosecuted the company for selling pillows with fillings containing more than a prescribed two per cent of impurities (mainly ground feather and quill dust which tends, among other things, to plump up the weight of the filling). The intriguing aspect of the case was the fact that the offending pillows bore two marks authorised by the British Standards Institution, one showing that the filling was of such a prescribed purity, the other that it was of all-round reasonably good quality. The BSI, however, took no active part in the proceedings and can only blame itself if confusion arises in the public mind about the value of its licensed marks to protect customers.

Yet witnesses from the BSI said that in 1953 they had issued strong warnings about the level of purity in the fillings used by this firm; since then its inspectors, including those who make sporadic purchases, had kept watch on its products. If their analysis had ever given the same results as the three pillows bought by the RTSA—that is, between 3 and 4 per cent of impurities instead of the prescribed maximum of 2 per cent—the company's licence from the BSI would have been in peril. But apparently that never happened, and the BSI had no hint of the impending prosecution until the writ was issued. But the wording of the standard itself was ambiguous; even though the BSI's own officers had no doubt themselves about what it meant, the court certainly had, and this may be the reason why the magistrate, although he recorded an offence, imposed no penalty other than costs. So the BSI is in the undignified position of having had its barking done for it by another watchdog and has now to decide what action to take about a company that still holds a valid licence to apply both BSI marks to its pillows.

Tweedledum and Tweedledee

An old feud looks like coming to the boil between the Harris Tweed Association in the Hebrides and the Retail Trading Standards Association. Since 1934, the Harris Tweed Association has owned a trade mark that defines Harris tweed as cloth hand woven from Scottish yarn spun—but not necessarily hand spun—in the islands of the Outer Hebrides. Between six and seven local mills supply yarn to hand weavers, who return cloth to them for finishing. For a levy of 2d. a yard, inspectors of the Association will stamp this cloth with the trade mark. The proceeds, running at about £60,000 a year on an output of 7 million yards, go on publicity, of which the *leit-motif* is that stamped cloth is the only genuine Harris tweed on the market.

This, in the view of the Retail Trading Standards Association, is going altogether too far. It argues that if a proportion of hand weavers on the islands prefer to buy their yarn on the mainland rather than from island mills, for reasons that are partly technical and partly connected with cost, they are entitled to call their product Harris tweed even though the Harris Tweed Association will not recognise it as such.

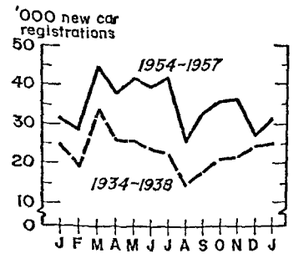
This storm in a porringer has two consequences for the islanders, whose main livelihood is this one, specialised product. There have been complaints—which certainly need examination—that those of them who hand-weave mainland yarn find it difficult, if not impossible, to buy any yarn at all from the local mills that support the Association. The two main export markets, Canada and the United States, are also closed to them because customs authorities in both countries accept the term "Harris tweed" as part of a protected trade mark and so will not allow it to be attached

to cloth that has not been stamped by the Association and paid its levy. Opportunity played into the hands of the RTSA last November when an over-enthusiastic American copy-writer described the Harris Tweed Association in a full-page advertisement as created by Board of Trade charter. This was denied in Parliament by Sir David Eccles, who not only disowned the Harris Tweed Association's cherished definition but went further than anyone expected in saying that " the description Harris tweed is very like that of Bath buns." The RTSA is now trying to get this view accepted by the American and Canadian customs. The Harris Tweed Association, which described the Board of Trade's action as " unhelpful," hinted darkly in a recent statement that the correct description of " this famous cloth . . . is a matter for the Courts, and not for the Board of Trade to decide."

NATIONAL SAVINGS

Last Year's Poor Showing

THERE is an " odd year crisis " complex about the returns of the National Savings Movement. The table shows that the financial year 1957-58 was one of those odd years with a deficit (an excess of withdrawals over new savings disregarding the accumulations of interest on the outstanding savings certificates) of £15.6 million, against a surplus in the previous year of £119½ million. The result



NET INVESTMENT IN NATIONAL SAVINGS

* Approximate. † Including for the latest year one department of the Birmingham Municipal Bank.

has caused the chairman of the National Savings Committee, Lord Mackintosh of Halifax, disappointment but the reasons for it are not hard to find.

In the previous financial year 1956-57, savings were being swelled by heavy purchases of the attractive new savings media, the new certificates, and the premium bonds, while the trustee banks had been enabled to offer freedom from income tax on deposits in their ordinary departments not exceeding £600. Those attractions still looked good in the first half of 1957-58. But against a 7 per cent Bank rate not matched by any adjustment in the terms offered on " national savings " they lost their attraction. Lord Mackintosh draws the conclusion that the rates of interest paid were out of line. He naturally expects better results in the atmosphere of a 6 per cent Bank rate.

THE SEASONS AND CAR SALES

Since before the war, the seasonal pattern of new car registrations has altered. Holiday motoring now boosts sales more in July: but buying dips more in December than it did.

DIAMONDS

Glitter Dimmed

SALES of gem and industrial diamonds by the Central Selling Organisation, which markets just over four-fifths of the free world's diamonds, were the lowest in the first quarter of this year since the third quarter of 1954. The decline, so long expected, began in the last quarter of 1957 and it now looks as if the postwar boom in diamonds has at last been checked. Only the cheapest industrial quality, crushing boart, remains in short supply. The United States' stockpile has virtually stopped buying industrials but sales did not really falter until the recession

in the American economy appeared. Then the demand for gem stones also slackened for, faced with an uncertain outlook, cutters have not been anxious to add to their stocks. A gem stone, after all, is a luxury and a hedge against inflation, not against deflation. The fall in sales so far is no disaster for the producers; total sales are running at the levels reached five or six years ago, and then regarded as high prosperity. Moreover, the Central Selling Organisation has ample cash and next to no stock of diamonds.

WOOL TOP FUTURES

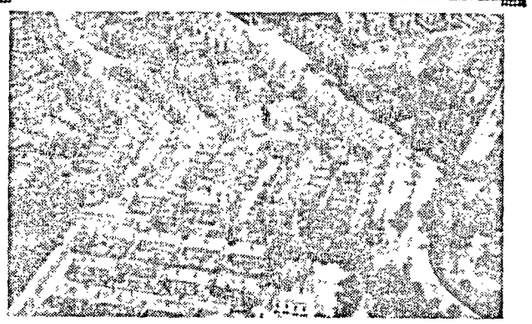
London's Success

ONLY one new commodity futures market has been added in the postwar era to the array of terminal markets that Britain offers—the London wool top futures market. It started not by accident but thanks to a stroke of luck. The London Produce Clearing House (a United Dominions Trust subsidiary) worked hard to open the market. But the Bradford trade as a whole did not want it, and the Wool Textile Delegation was more than cool. In the Korean boom and the slump that followed, however, some wool traders applied for and were granted foreign exchange to hedge in the international markets—New York, Antwerp and Rubaix. It seems likely that that small demand for scarce foreign exchange just swung the balance in favour of having hedging facilities here.

The London Wool Top Futures market now at the end of its first five years finds itself the largest in terms of turnover in the world. Messrs Buxton Ronald Du Croz and Company, one of the three member firms of the London

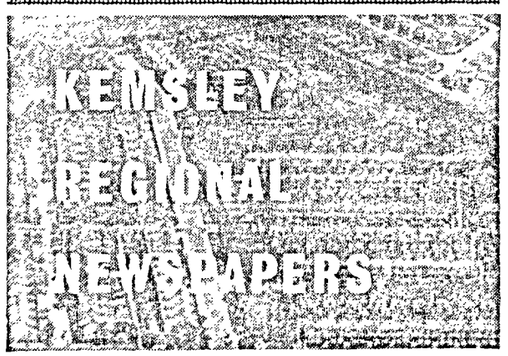
The end to a perfect dinner— as decreed by French Law

French Law controls the *naming* of the finest brandy with extreme severity. It decrees that only brandy originating from the Grande and Petite Champagne districts of Cognac may bear the proud title of *Fine Champagne*. Remy Martin produce Fine Champagne V.S.O.P. Cognac justly called the "Pride of Cognac". And it is important to you that Remy Martin make *nothing* less good. *This means* that when you insist on Remy Martin, you are sure to get a really fine brandy . . . genuine Fine Champagne Cognac.



PRIDE OF COGNAC

REMY MARTIN



Shall we wrap it?

FIBRECLASS Cosywrap used Kemsley Regionals for their recent campaign. These advertisements, well wrapped around by supporting space taken by local stockists, told our readers in Britain's major marketing areas precisely where they could buy the product. Cosywrap gives coverage of the home: the advertiser who uses Kemsley Regionals can be sure of saturation coverage of Britain's major markets.

Wool Exchange (London's wool auction market) that supported the new futures market from the start, reports its last year's trading in the merino contract to have been 37,000 contracts (of 5,000 lb of Bradford 64s "B" tops each). The new crossbred contracts has so far hardly caught on. That makes London comfortably the largest of the four wool futures markets; one calculation represents the London turnover at just over half the total turnover of all four, but that reckoning seems to ignore the fact that New York also has a greasy raw wool contract with an active trade. The volume of business in the merino contract is just about the same as Bradford's total output of merino tops. But that naturally does not mean that all topmakers are using the futures market. The wool trade, topmakers and spinners, are using the market to a growing extent as are the international wool merchants. Some of the business is arbitrage with New York and some is speculative.

It is nevertheless true that the Bradford system of dealing without hedging has not died. The topmaker counts himself protected when he has sold his tops for future delivery and bought only sufficient wool to make them. This method can fail when cover is most needed, that is when prices are fluctuating violently, as in the 1951-52 season and on many occasions during the recent decline in prices. It is then that topmakers are at grave risk of spinners wishing to postpone taking up the tops ordered and at risk of being caught either long or short of wool during the long gap between the end of one wool selling season at midsummer and the opening of the next in the autumn.

SHORTER NOTES

Last year British Paints (Holdings) achieved record sales and profits. Before tax the consolidated profit advanced from £951,023 to £1,329,068 and after tax from £398,207 to £623,803. The ordinary dividend is raised from 25 to 30 per cent.

* * *

The two per cent increase in retail sales during February, about a half of which is estimated by the Board of Trade to have been the result of higher prices, suggests that personal spending is continuing to remain fairly steady, showing neither much growth nor any inclination to fall. Household goods shops, however, suffered "a sharper seasonal decline than in recent years."

* * *

United Glass Bottle has left its ordinary dividend unchanged at 11¼ per cent for the year to January 4th, in which trading profits fell from £1,257,725 to £1,044,271. Sales were "exceptionally high" in the closing weeks of the year but this increase came too late fully to offset the "very much reduced" profits of the first half of the trading year. Current sales and orders are described as "encouraging."

* * *

The area of new factory floor space in plans receiving Board of Trade approval between January and March was the lowest for any quarter since the end of 1953. The total floor area in the 583 schemes approved, 11.8 million square feet, was 2 million square feet lower than a year ago.

COMPANY AFFAIRS

ROYAL DUTCH/SHELL

As forecast in the recent prospectus, the directors of "Shell" transport have maintained the tax free ordinary dividend of 18¾ per cent on the increased capital. The preliminary statement sets out the experience of the Royal Dutch/Shell group for the whole of last year. Production of crude oil was higher, as was refinery throughput. Sales proceeds and other income rose by nearly 13½ per cent, by £313 million to £2,634 million. Although operating expenses rose by £183 million to £1,497 million, sales taxes by £58 million to £543 million, and depreciation and depletion by £20 million to £197 million, the net income of the group after tax rose by 18½ per cent—from £179½ million to nearly £212¾ million.

From this income of £212¾ million, £44.3 million was distributed to the two parents, "Shell" Transport and Royal Dutch, and the remainder retained in the business. Including depreciation and depletion provisions the group ploughed back in all nearly £386 million, exactly matching the sum it spent on capital development and exploration, and over the year the total of cash and securities rose from £320 million to £349 million. These figures underline the fact that the gigantic issue of the Royal Dutch/Shell group, which raised in all about £115 million, looked forward. The issue, in fact, foreshadowed a period of heavy capital expenditure, most of which will continue to be met by retained earnings.

The oil companies have now to accept the prospect of smaller profit margins. Product prices have come down and the narrowing of margins, as costs continue to rise, is reflected in the quarterly estimates of the group's trading experience set out in the table. The rate of growth in sales was sharply reduced and the pressure on margins intensified in the latter months of last year so that the big expansion in profits reflected in

the annual figures really occurred in the first months of the year, when Venezuelan production made a notable contribution. The comment of the directors is: "Gains were recorded in sales of aviation fuels, kerosene and chemical products, but some slackness in demand for gas oil and fuel oil was experienced as a result of unusually mild weather, and sales of these products in Europe were also adversely affected by interference with supplies from the Middle East in the year, so that in total they were slightly lower in 1957 than in the previous year."

DE HAVILLAND

One of de Havilland's biggest problems must be finance. Work in progress on the Comet IV's, which have yet to make their contribution to earnings, must have been built up and the company's success in securing the BEA order for a medium range jet airliner must ultimately add to working capital commitments. Conservation of resources is thus inevitable and no one need be surprised at the decision to leave the ordinary dividend unchanged at 7½ per cent. Nor can there be much surprise at the drop in profits in the year to September 30th, though it is sharp. Before tax, the group's earnings fell from £3,846,338 to £1,544,415. Those figures are struck after charging £1,878,444 (against £930,481) for jig and tool expenditure and after carrying forward against contracts for the sale of aircraft another £1,276,783 for further expenditure on jigs and tools. The directors explain this decision to spread out such expenditure over more than one accounting period in terms of "the protracted production cycle of new large civil aircraft."

After tax, the group's net earnings have fallen from £1,659,238 to £619,611. The fall in profits seems to reflect several factors. First, the accounts have had to bear some of the cost of bringing new aircraft into production before the sale of these aircraft yields a final profit. The first production Comet IV, which the British Overseas Airways Corporation will bring into service later this year—neck and neck with Air France's medium-range jet Caravelle—was rolled out to prepare for its first test flight only last Wednesday. With the imminent signing of a contract with Argentine Airlines, total orders for this aircraft now stand at 31, to be delivered over the next three years. Secondly, profits from the Canadian subsidiary have fallen from the exceptional levels reached in 1955-56 when the company was completing defence orders for the US services. Thirdly, there has been some run down in military orders; the cancellation of the Saunders Roe fighter hit the de Havilland engine division particularly hard. It will, however, provide engines for the Blackburn navy bomber that the Minister of Defence is trying to get adopted by the RAF as a Canberra replacement. Deliveries have also begun, since the period covered by the accounts, of airborne guided missiles, and the company is one of three main contractors for the 2,000 mile range ballistic missile under development.

RIO TINTO

Equity stocks with the label "growth" pinned on them in a boom often suffer the worst beatings in the slump that follows. A year ago the 10s. ordinary stock of Rio Tinto wore this tag and stood at 95s. to yield only 2¼ per cent. By October the price was down to 63s. 9d. and the company then made a one-for-six rights issue at 50s. a share. The stock is now quoted at 54s. 4½d. and on a 26 per cent dividend on the enlarged capital yields about 4¾ per cent. That dividend was forecast in October and is approximately equal to the tax-free payment of 15 per cent paid for 1956 on the smaller capital.

In the past twelve months the fall in metal prices and the slowing down of industrial activity has caused investors to think more cautiously. And the company's preliminary statement does nothing to disturb the assessment that the risks in Rio Tinto are still big. Excluding the earnings of Rio Tinto of Canada, the income of the group rose last year from £3,485,000 to £3,900,000, which seems a fair result. But currently the biggest single source of Rio Tinto's income is the dividends on its Rhodesian copper investments. These have been reduced, cutting Rio Tinto's investment income from £3,517,000 to £2,643,000, and they will probably be cut further this year. So the increase in Rio Tinto's total income must owe a good deal to the consolidation into the 1957 accounts of the earnings of Kern Oil, which the group acquired early last year.

It can be argued that neither current income nor the fact that the net dividend absorbs as much as £1,091,000 from a net income of £1,491,000 is of paramount importance. What is important, this argument runs, is the profit likely to accrue from uranium production and the hope that Rio Tinto's extensive mineral exploration programme will produce a winner. The Mary Kathleen mine in Australia is not due to produce uranium until later this year. But uranium production is already under way in Canada and the proportion of the profit of Rio Tinto of Canada attributable to the parent company went up last year from £41,000 to £380,000. That income is not consolidated into the group accounts. Earnings from uranium are not in effect distributable to the Rio Tinto equity until the big loans which made production possible both in Canada and Australia are largely paid off. The uranium is sold under fixed price contracts over a limited period of years. At the end of the period the capital cost of the mines will be amortised, but then Rio Tinto may be selling uranium at a free market price. The risks of undue dependence on uranium are obvious and Rio Tinto has pushed ahead with an ambitious and costly programme of exploration for other minerals. That programme now has to be re-assessed against a background of much lower metal prices than ruled when it was started.

ALLEN AND HANBURYS

The stock market's reaction to the intended offer by Glaxo Laboratories to acquire all the ordinary share capital of Allen and Hanburys was that shareholders cannot afford not to accept. It is to be an agreed merger supported by the directors of both these companies and the terms are three 10s. ordinary shares of Glaxo for every £1 ordinary share in Allen and Hanburys. On the eve of the announcement, the Glaxo units stood at 37s. 3d. Thus the bid put a price of 111s. 9d. on the Allen and Hanburys units, which were then standing at 65s. After the announcement, these units were marked up by 41s. 3d. to 106s. 3d. The Allen and Hanburys shareholders in accepting the bid will gain in dividend cover and in income, though quite how much is not yet clear, as Glaxo recently announced a higher interim dividend out of bigger earnings without forecasting what the final dividend will be. There is a bigger asset backing to the Allen and Hanburys equity than to the Glaxo equity, but the big point in the bid's favour, which should override all others, is the immediate gain in capital value.

Glaxo is much the bigger concern, its gross profits in the year to June 30th being about seven times as big as Allen and Hanburys' and its net assets nearly four times as big. Each company will retain its "own name, individuality and pattern of business" but the directors are certain that the merger should "establish a concern of great strength and comprehensiveness in the pharmaceutical field," remarking that the two businesses are "complementary rather than competitive." The two groups have in the past concentrated upon rather different ranges of pharmaceuticals and drugs. In particular, Glaxo, through this merger, will enter the important markets for insulin and anti-allergy drugs.

THOMAS TILLING

The pattern of investment in an active industrial holding company such as Thomas Tilling is always changing. Big changes, including the sale of its holding in the Brush Group, occurred in the investments of Thomas Tilling last year. The results, however, suggest that the investment policy has paid. Last year the gross profits of the group rose from £2,487,065 to £2,894,388 and net profits from £1,206,691 to £1,324,585. The ordinary dividend has been raised from 11¼ to 13¼ per cent.

C. A. PARSONS

On the 7½ per cent dividend for 1957 the £1 units of C. A. Parsons at 50s. 9d. yield just under 3 per cent. That low figure still reflects the "nuclear power boom" of 1956-57. But the steam is now out of the boom. Twelve months ago Sir Claude Gibb, the chairman of C A. Parsons, said that unless the group secured a "very big increase in output" profits were likely to fall in 1957. They have fallen, declining after tax from £2,293,264 to £1,996,714.

RHODESIAN ANGLO AMERICAN

BECAUSE of the decision of the Capital Issues Committee, Rhodesian Anglo American was able to offer to its British resident shareholders only £500,000 of the £4,000,000 issue of a 6 per cent loan stock at 95, carrying the option to convert the stock in the next five years into Rhoanglo ordinary shares at 80s. a share. The result was Gilbertian: British shareholders oversubscribed their quota applying for about £580,000 of the stock and applicants for over £30,000 of stock had to be scaled down to about 65 per cent of their application.

But the issue as a whole was undersubscribed and Anglo American Corporation of South Africa which had underwritten the whole at a commission of 2½ per cent had to take up 36.5 per cent. Anglo American, itself a big shareholder in Rhoanglo, could equally have mopped up the surplus with an application for excess shares. The effect of Anglo American taking them as an underwriter is that the mining finance houses and South African institutions which have sub-underwritten the issue get their proportion on sub-underwriting terms. They presumably are not displeased and are likely to be firm holders. Dealings began in the new stock at par.

HUDSON'S BAY

WHY, with the cooling winds of recession blowing across the North American continent, was the trading dividend of Hudson's Bay raised from 15 to 20 per cent? The group's sales and profits as a whole in the year to January 31st last were better. But the Hudson's Bay retail stores earned slightly smaller profits from a bigger turnover and profit margins in the wholesale department were slightly lower; moreover, the rate of increase in sales achieved by the retail stores in the spring and summer was not maintained later in the year. Thus the increase in income came from royalties and from the fur trade, where the company's three auction houses enjoyed "a very good year." About £120,000 of the increase in the profit of the fur trade department represented a non-recurring credit on the sale of fixed assets. Furs, retailing and wholesaling would all seem likely to be affected by the recession this year and yet the directors must have felt confident about the future when they raised the dividend.

It cannot have been merely because Hudson's Bay has now qualified as an overseas trade corporation. At current rates of profits and dividends this will save the group about £250,000 in tax a year. Was it because Hudson's Bay Oil and Gas, now a public company, is out of the red? Last year that company stepped up its oil production and earned a profit of $3 million which, with the help of non-recurring gains of nearly $4½ million, converted the deficit account brought forward from previous years into a surplus of $629,000.

Years to January 31,	1957 £	1958 £
Total sales	69,360,000	72,397,000
Total gross profit	4,024,000	4,329,000
Total net profit	1,909,000	2,312,000
Retail sales	44,092,000	46,834,000
Retail profit	2,408,000	2,405,000
Fur sales	9,409,000	9,215,000
Fur profit	825,000	1,099,000
Wholesale sales	15,859,000	16,348,000
Wholesale profit	197,000	199,000
Royalties	509,000	542,000

In addition to the trading dividend, shareholders received a maintained tax free payment of 2½ per cent from the land account. Under a supplemental charter recently granted to Hudson's Bay the length of life of this land account has in effect been extended, for the company has been able to transfer £672,000 from capital reserves to the land account, bringing its undistributed surplus up from £1,135,000 to £1,771,000. The total distribution, taking the trading dividend and land account dividend together, has been raised from 19.34 to 24.34 per cent gross, on which the £1 ordinary shares at 157s. 6d. xd yield only 3.1 per cent—a return that continues to discount the development of the company's oil interests as well as the growth of the Canadian economy as a whole some way ahead.

London Stock Exchange

FIRST DEALINGS:	Mar. 26	April 16	April 30
LAST DEALINGS:	April 15	April 29	May 13
ACCOUNT DAY:	April 22	May 6	May 20

AFTER making substantial gains on each day of dealings last week, gilt-edged resumed their rise after the holiday. Turnover was heavy and there was outright buying by institutions; the *Financial Times* index of Government securities rose from 82.45 at last Thursday's close to its highest point this year of 83.31 on Wednesday. Considerable interest was shown in corporation and Dominion loans, 5 per cent Agricultural Mortgage (1959-89) gaining 1¼ to 88¼ since last Tuesday, while 5¾ per cent East Africa 1977-83 rose the same amount to 92¼. The new Australian 6 per cent loan rose from a discount of ⅛ to a premium of ⅝ and the new LCC 6 per cent stock advanced to 3/16 premium.

There was a less pronounced rise in industrial stocks, the fear of industrial disputes partly offsetting hopes of a favourable Budget, but nevertheless prices had recovered the ground lost since the beginning of the year before the holiday began, and improved further from Tuesday. Banks advanced, Midland rising 3s. 3d. to 63s., National Provincial 3s. to 63s. and Lloyds 2s. 9d. to 47s. 9d., while discount houses became a little firmer. Insurance shares weakened, Alliance losing 2s. to 71s. 6d. Building shares were strong and paint producers jumped on the increased dividend by British Paints whose stock gained 1s. 6d. to 16s. 3d.; Pinchin Johnson rose 9d. to 17s. Orders at the International Motor Show helped motor shares, but Raleigh fell 1s. 6d. to 30s. 4½d. on the decision to work a four-day week for an indefinite period.

Oil shares were dull and little interest was taken in Kaffirs, although Harmony was an exception, rising 1s. 3d. to 34s. 9d. A sharp decline in copper mines was halted on Wednesday. Rubber plantations have been consistently firm.

[1] Electricity production in New Zealand represents deliveries only and in Canada, prior to 1957, excludes industrial generation for own use. [2] Copper and tin refer to metal production. [3] General trade (including re-exports) except for Canada, which is *special trade only.* Imports are cif except for Australia, Canada and S. Africa which are fob ; exports are fob. Trade for India includes that going by land ; annual figures for India are for 12 months beginning April 1st of year stated and for Australia 12 months ended June 30th. [4] Gold and foreign exchange holdings are those of the government and central bank ; only figures for Australia include holdings of commercial banks. Cost of living for S. Africa and S. Rhodesia relates to Europeans only and for S. Africa includes direct taxes. [5] Including foreign investments. [6] Including semi-processed gold. Beginning January, 1955, including South-West Africa. [7] In July, 1948, part of holdings was transferred to the State Bank of Pakistan. [8] April, 1948—March, 1949. [9] Including some long-term securities. [10] Average for third quarter.

Financial Statistics

EXCHEQUER RETURNS

For the five days ended April 5, 1958, there was an "above-line" surplus (after allowing for Sinking Funds) of £25,846,000 compared with a deficit of £29,440,000 in the previous nine days and a surplus of £17,999,000 in the corresponding period of last year. There was a net expenditure "below-line" of £25,560,000, leaving a total surplus of £286,000 compared with £9,506,000 in 1957–58.

THE MONEY MARKET

THE Treasury bill rate at the tender on the eve of the holiday fell by 2s. per cent to £5 8s. 6.30d. per cent, ⅛ per cent below its level on the morrow of the Bank rate reduction. But the current rate is by no means abnormally low in relation to a 6 per cent Bank rate; rather, the fall of 7/16 per cent in bill rate was abnormally small in conjunction with the Bank rate reduction of 1 per cent.

At last week's tender, total applications for the unchanged allotment of £260 million fell by nearly £21 million, to £402 million; and the increase of 6d., to £98 12s. 11d., in the discount market's common bid resulted in an increase in the proportionate allotment from 55 to 61 per cent. At yesterday's tender, the offer was again unchanged at £260 million.

Credit conditions have continued stringent in Lombard Street, and on both Thursday before the holiday and on Tuesday a few houses were forced to take very small loans at Bank rate, despite small special official help through purchases of bills from the market. Dealings in June maturities have generally been at 5 11/16 per cent, and rates on floating money have ranged up to 5¾ and even 5⅞ per cent.

Wednesday's Bank return shows a further rise in the active note circulation of £7.1 million, to £2,025.1 million, in the week straddling Easter. This brings the rise in the last three weeks together to £42.5 million, against £37.0 million in the three pre-Easter weeks last year.

ABRIDGED REPORT

CANADIAN PACIFIC RAILWAY COMPANY

(Incorporated in Canada with limited liability)

SEVENTY-SEVENTH ANNUAL REPORT OF THE DIRECTORS FOR THE YEAR ENDED DECEMBER 31, 1957

TO THE SHAREHOLDERS:

Railway revenue was the second highest in the history of your Company having been exceeded only by that of 1956. Freight traffic volume as compared with 1956 was down 10%, with over half of the decrease having occurred in grain and grain products moving under low statutory rates. A factor contributing to the decrease in volume was the strike by locomotive firemen in January. Rate increases added 5% to freight revenue.

Other Income was $6.6 million lower than in the previous year. Decreases were widespread but were particularly marked in dividends declared by The Consolidated Mining and Smelting Company of Canada Limited and in net earnings from your steamships.

Net Income amounted to $46.8 million, which, after providing for dividends of 4% on Preference Stock and dividends amounting to $1.50 per share on Ordinary Stock, left a balance of $22.7 million available for modernization and other corporate purposes.

The Income and Retained Income Accounts of your Company show the following for the year ended December 31, 1957:

INCOME ACCOUNT

Railway Revenue		$487,565,479
Railway Expenses		449,319,097
Net Earnings		$38,246,382
Other Income		23,441,276

COMPANY MEETINGS

BANCO DE MEXICO, SA

(MEXICO DF)

The thirty-sixth Regular General Stockholders Assembly of the Banco de Mexico, SA, was held recently, and the following are details from the Report presented by the Board of Directors:

ECONOMIC ACTIVITY

During 1957 the increase in the real product, that is, after deducting price rises, was 4 per cent, a rate which exceeds the population growth. The drop in the external prices of some of Mexico's leading mineral and agricultural exports and the adverse climatic conditions which caused an unusual reduction in the Central Plateau harvests, especially corn, limited the increase in the national product.

There was an increase of real income per capita and private consumption was somewhat higher than in 1956. The reduction in farming slowed the increase in incomes demand for consumers' goods and limited the expansion in commercial activities to only 3 per cent with respect to the volume registered in 1956.

Investment, both public and private, constituted the leading sustaining factor in the growth of production. Total real investment increased 7 per cent over that of 1956. Real investment of the public sector increased 8 per cent and private investment rose 6 per cent in real terms.

Total wages represented a similar share in the real product as in 1956. Profits of non-agricultural enterprises increased somewhat their share in the total product and farmers experienced a slight reduction in their share.

Agriculture. — Agricultural production dropped slightly in 1957. Increases in production of cotton, sugar cane and coffee did not fully offset the reduction in non-irrigated crops, particularly corn and beans.

Livestock.—The severe dry spell in the northern part of the country originated a reduction in livestock production and forced the export of about 300,000 head of cattle, because of the shortage of pastures, as compared with the 110,738 head exported in 1956.

Forestry.—Forest production continued without increasing. Domestic demand for forest products has been met, and there was a reduction in wood exports.

Fishing.—Poor weather conditions adversely affected fishing activity, which experienced a reduction in 1957 with respect to 1956.

Mining.—Mining production registered an increase of 7 per cent in 1957. Sulphur extraction rose 35 per cent; metals output increased 5 per cent, despite the sharp drop in international prices. Copper production increased 11 per cent; lead, 8 per cent; iron, 16 per cent; manganese, 29 per cent. Zinc output went down 2 per cent; bismuth, 44 per cent, and gold, 1 per cent. Certain exemptions on mining taxes, conditioned to additional investments, provided a stimulus to this activity in spite of unfavourable conditions in foreign markets.

Petroleum.—Activity in the petroleum industry was 10 per cent higher than in 1956. Crude petroleum extraction dropped 2 per cent, while refining increased 14 per cent. The petroleum industry pursues its programme designed to produce increasing quantities of petroleum products in order to meet the constant increase in domestic consumption and reduce imports. As a result of continued explorations proven reserves of crude petroleum continue to increase.

Manufacturing. — Manufacturing output experienced further growth and in 1957 was 6 per cent higher than in 1956. The slowing of the growth of internal demand due principally to the reduction in farm income, led to limited increases in the production of consumers' goods. The demand for investment goods, which has remained high, was the main factor in the increase in total manufacturing output. The steel industry registered an increase of 14 per cent in output; the fertiliser industry lifted output by 22 per cent; the sugar industry, 37 per cent; the cigarette industry 3 per cent. In the textile industry, production of wool and cotton fabrics rose while output of synthetic fibres and woven fabrics was reduced. Production decreased in the glass and rubber industries.

Electric power.—Electric power generated rose 8 per cent in 1957, reaching an estimated total of 8,453 million kilowatt hours. Constant investment has permitted an increase of 7 per cent in generating capacity. The Federal Electricity Commission as well as the private enterprises have participated in this achievement.

Construction.—Public sector construction increased 7 per cent; private construction rose 15 per cent. Total increase in this field was 12 per cent.

Transportation and communications.—Railway freight traffic was 9 per cent higher in 1957 than the year before. Rail passenger transportation did not rise in 1957, reflecting a continuous shifting to the use of highway and air transport. Air passenger transportation rose 9 per cent while air freight dropped 1 per cent. The increase of 7 per cent in gasoline consumption indicated an increase in services provided by motor vehicle transportation.

Prices.—From January to August, 1957, wholesale prices registered increases; in September they went down slightly and remained stable for the rest of the year. In spite of decreases in the prices of some articles, the monthly average of the 210-article wholesale price index was 4.3 per cent higher for 1957 than for 1956. Wholesale prices were 6.2 per cent higher in December of 1957 than in December of 1956. The price rises were due chiefly to a reduction in the supply of agricultural products, in addition to an increase in over-all demand, although total demand grew at a slower pace than in 1956. Price rises abroad and some increase in internal costs also affected the index rise.

BALANCE OF PAYMENTS

In spite of several unfavourable factors, the loss of foreign exchange in the reserve of the Bank of Mexico was less than the amount paid in cash for the unusual corn imports. The reserve stood at 441.2 million dollars as at December 31, 1957, showing a loss of less than 6 per cent from the level of the same date in 1956.

International prices of export products went down in general, while prices rose on products imported, so that the terms of trade were unfavourable to Mexico in 1957, as in 1956.

Exports.—Total income from exports of goods and services—including tourism, immigrant workers abroad and other services—amounted to 1,399.7 million dollars in 1957, representing a drop of 1.6 per cent with respect to 1956. Receipts from cotton exports decreased in comparison with the unusual sales which had been made in 1956. In addition, world prices of copper went down 30 per cent; lead, 7 per cent; and zinc, 14 per cent.

Imports.—Imports of merchandise and services amounted to 1,560.0 million dollars, which represents an increase of 104.0 million over 1956. Purchases of corn and petroleum were responsible for increases in the merchandise item. It is to be noted that a purchase of 500,000 tons of corn was contracted in the latter part of 1957 and that Petroleos Mexicanos considers that oil imports will be reduced considerably this year.

The value of total imports, an important part of which is composed of production goods reached a record level in 1957. These imports together with increasing domestic production of investment goods should be reflected in higher levels of output in coming years.

Tourism.—Total income from tourists and from border transactions amounted to 590.5 million dollars in 1957, as compared with 508.2 million in 1956, that is, an increase of 16 per cent.

Direct Foreign Investment.—Because of favourable economic and political conditions in the country, foreign exchange income from direct foreign investment—new investment and reinvestment—rose to 140 million dollars, that is an increase of 10 million with respect to 1956. The main fields of activity in which the 140 million was invested were manufacturing, trade, mining, and to a lesser extent, public utilities. As for origin of the funds, 78 per cent corresponded to the United States.

During 1957 gross direct foreign investment represented 11.3 per cent of total investment in the country; in 1956 it accounted for 11.8 per cent.

External Medium and Long-term Credits.—In 1957 the country received net income of 77.2 million dollars on account of medium and long-term credits—that is, with maturity of over one year—for financing economic development projects and obtained abroad by Nacional Financiera and other institutions. This amount represented an increase of 33.8 million dollars with respect to 1956.

MONEY, BANKING AND SECURITIES

During 1957 the authorities continued the policy of monetary stabilisation and of channelling credit to productive activities, without neglecting the credit needs of trade. Continued firm support was provided to the banking system and to the sound development of the securities market.

Money supply.—The monetary measures adopted in previous years and in 1957 permitted an expansion of 6.7 per cent during last year in total means of payments, an expansion consistent with the needs of financing the real output of goods and services. Of the total increase of 781.4 million pesos in the money supply, 360.5 million corresponds to bills and coins and 420.9 million pesos to checking accounts in domestic currency.

Financing provided by credit institutions.—Total financing granted by the banking system, including credits and investments and excluding inter-bank operations, reached a new high of 22,408.8 million pesos as of December 31, 1957, which represents an increase of 14.0 per cent in comparison with the level attained one year earlier.

The policy of channelling the resources of the banking system to productive activities was continued in 1957 with satisfactory results. Credit granted by private banks to industrial enterprises rose 20.5 per cent, and that granted by official institutions, excluding the Bank of Mexico, rose 13.9 per cent. In addition, industry was financed through purchases of securities. Agricultural credit increased 12.5 per cent.

Securities market. — The outstanding volume of interest bearing and other type of securities rose again during 1957. Interest bearing securities outstanding rose to a new record level of 10,833.5 million pesos as of December 31, 1957, showing an increase of 14.3 per cent compared with the previous year. As for other securities, in the Federal District increases were registered in authorised capital of corporations of 3,522.1 million pesos during 1957, an amount 562.6 million higher than in 1956.

FEDERAL INCOME AND EXPENDITURE

Notwithstanding the considerable increase registered in the investment expenditures of the Federal Government in 1957 with respect to 1956, directed to accelerate and in some cases terminate public works and installations urgently required by the country's development, preliminary figures indicate that during the fiscal year of 1957 a total deficit of only 75.0 million pesos was incurred, less than 1 per cent of federal income.

Current cash revenue amounted to a record 8,320.7 million pesos, that is, 426.8 million more than the year before. The income tax provided the biggest increase in receipts—222.7 million pesos—and income tax receipts accounted for a third of total current revenue of the Federal Government.

Cash budgeted expenditures amounted to 8,131.1 million pesos in 1957 according to preliminary figures, 682.4 million higher than in 1956.

PUBLIC SECTOR INVESTMENT

Total investment of the public sector—Federal Government, States, Federal District, Territories and Municipalities, decentralised institutions and state enterprises—amounted to 5,357.3 million pesos in 1957. The increase —14.2 per cent—reflected the intention of the Federal Government to help maintain the economic development of the country at a satisfactory pace.

Direct investment of the Federal Government accounted for the major part of the increase in public investment, expanding by 494.4 million pesos, or 31 per cent. Investment of decentralised institutions rose 29.8 per cent (by 68.3 million pesos); that of state and mixed enterprises rose 1.5 per cent (by 30.6 million pesos); that of the Federal District increased 16.2 per cent (by 59.8 million); and investment of the States, Territories and Municipalities increased 19.9 per cent (by 63.9 million pesos).

SCOTTISH AMICABLE LIFE ASSURANCE SOCIETY

A YEAR OF NEW RECORDS

CONTRIBUTION TO COUNTRY'S ECONOMY

The one hundred and thirty-second Annual General Meeting of the Scottish Amicable Life Assurance Society was held in Glasgow on April 9th, Sir Lynden Macassey, KBE, QC (President of the Society) presiding.

In moving the Adoption of the Report and Accounts, Mr Howard Cunningham, CBE, MC (Chairman of the Ordinary Directors) said that the Life Assurance industry had made a tremendous contribution to the welfare of the economy in all the difficulties of the postwar era. This was confirmed by the Treasury in the February, 1958, number of their Monthly Review of the Economic situation, which demonstrates that a very substantial part of the total increase in personal saving between 1952 and 1956 was through Life Assurance and Superannuation Funds and adds that the payment of premiums and contributions at regular intervals imparts a capacity for steady growth that is lacking in most other forms of personal saving.

The Treasury Review points out that this rapid rise in saving through assurance and pension funds has helped to make possible the acceleration in investment during the period under review and concludes that, to secure higher living standards without heavier Government saving through higher taxation, further increases in personal saving are necessary. This objective tribute to the contribution made by the Life Assurance Offices and by the Pension Funds to the economic needs of our country may well raise doubts as to the wisdom of proposals for extending the State pension arrangements beyond the subsistence level—an extension which would inevitably reduce the scope for the "rapid rise in saving through assurance and pension funds" which the Treasury regard as necessary for the provision of higher living standards in the future. The outstanding success of the Life Offices and Pension Funds in attracting savings is too precious an asset to the economy of our country for it to be prejudiced by political action or by state interference of any kind.

RECORD OF CONTINUOUS PROGRESS

The Society's contribution to the growth of personal savings was amply illustrated by the figures in the Annual Report. This was the first occasion on which the Society's premium revenue, which now amounted to almost £8,250,000, had risen by more than £1 million in a single year. Net new sums assured under individual assurances had reached new records in every successive year since 1945. In all respects, in relation to mortality experience, interest earnings and expenses, the past year had been very favourable—so much so that, as at July 1st last, the rate of interim bonus was increased to 45s. per cent per annum compound—the highest rate ever payable during the Society's history of 132 years. This same rate of bonus applies to participating annuity contracts—both for group pension schemes and for the new "self-employed" retirement annuities.

The Society's investment policy throughout the past year was designed to take full advantage of the exceptional opportunities to acquire first-class securities providing high interest yields for many years to come. It was indeed fortunate that almost one-third of the Society's total funds of £57 million had accrued during the past three years and had been invested under these extremely favourable conditions. The Board had welcomed the opportunity of being associated in the formation of Thistle Industrial Holdings Limited whose main object is to assist in the development of selected industrial companies by the provision of capital for this purpose.

The past year had been one of intense activity at Head Office and at all the Society's Branch Offices—which now consisted of 20 main Branches and a further 21 Sub-Branch Offices spread geographically from Elgin in the north to Bournemouth in the south. The Chairman added that, during his year of office, it had given him great pleasure to visit many of these offices and that he had been very impressed by the enthusiasm and efficiency of the staff throughout the whole of the Society's widespread organisation. In reply to a question, the Chairman said that he welcomed the opportunity of stating most emphatically that there was no connection or relationship whatsoever between the Society and the Scottish Amicable Building Society.

The Report and Accounts were adopted.

TWINING CROSFIELD & COMPANY

A DIFFICULT YEAR

The Forty-first Annual General Meeting of Twining Crosfield & Company, Limited, was held on April 2nd, Mr H. W. Backhouse, the chairman, presiding.

The following is an extract from his circulated statement:

The fall in Trading Profit in the year 1957 is mainly due to difficulties incurred during the first three months of the year following the Suez crisis. One result of excited buying at all levels during November and December, 1956, was a relatively small turnover during January, February and March. Another factor was a considerable fall in the market price of tea, from 5s. 6½d. per lb for plain tea in December, 1956, to 3s. 3d. at the end of March, 1957, which meant that our stocks bought at the higher levels could not be sold profitably. For the remainder of the year we were able to trade at a reasonable profit and the results should not be regarded as disappointing in the circumstances.

After the end of March the market price of tea remained reasonably stable for the remainder of the year. The outlook appeared "bearish" owing to evidence that world production of tea was exceeding consumption as it had in 1956 and there appears to be no immediate prospect of a revival of an International Tea Agreement to regulate production to the World's requirements. During the year under review plain tea was often selling at prices which were below the cost of production and the consumer in the United Kingdom was offered a wide range of retail prices and very good value for money especially in the higher priced lines.

The Board recommends the payment of a final dividend on the Ordinary Shares of 12 per cent, making 18 per cent for the year, which is at the same rate as last year's distribution. The carry forward is increased by about £22,000 to £149,318.

While we can report increased turnover in our proprietary teas and coffees there is intense competition, which we face with confidence, and we shall continue to push our sales with energy. We have started 1958 with two good months trading.

The report and accounts were adopted.

Peninsular and Oriental **P&O** *Steam Navigation Company*

THE SPREAD OF GROUP INTERESTS

THE earned surplus for the year before charging taxation rose from £12·5 million to over £17·5 million, a record in the annals of our Group. The explanation of this rise is not difficult to find. Although in the popular mind P & O is regarded as a passenger liner company, over 40 per cent of its tonnage consists of cargo liners. Moreover, it is the parent company of a large Group of shipowning companies, two of which are concerned wholly in the trading of tramp ships. Those ships are traded on the open market and depend entirely on the law of supply and demand for the rates of freight they can obtain. At the present time it is impossible to fix one at a rate which will show a profit. Yet eighteen months ago the demand for tramp ships was at its height and freight rates reached almost unheard of levels after a year or more when rates had been steadily rising. Herein lies the difference between 1957 and 1952. The year 1952 had the benefit of a peak in tramp rates as high as has been lately experienced yet the 1952 profits were only two-thirds of the 1957 profits. But the rise in tramp rates which resulted from the Korean War arrived suddenly and receded equally suddenly. The number of voyages that could be fixed at the high rates then ruling was strictly limited. On the other hand, all voyages finishing in 1957 had the benefit of the very firm rates which ruled throughout 1955 and 1956 culminating, of course, with the peak rates secured by the relatively few voyages fixed at the end of 1956. Furthermore, most cargo liners carry some cargo at rates related to those ruling in the open market and when those rates are very high the benefit is reflected in the voyage results. As I have explained on previous occasions, liner rates of freight do not fluctuate so spectacularly as do tramp rates of freight and it is important to remember that the results of the past year have been derived very largely from the profitable state of the tramp market.

The operations of the Group are world wide. A drought in India necessitating the import of extra quantities of rice; a bumper wool cheque in Australia; Government restrictions on imports into any of the countries which we serve; a major disturbance somewhere in the world resulting in a temporary shortage of shipping space; all these occurrences can have an important influence for good or ill on our trade.

The closing of the Suez Canal caused disturbances to the pattern of world trade beyond that actually passing through the Canal. To give just one instance, the difficulty of obtaining goods from Europe caused India and other countries in the East to turn to alternative sources of supply. And so it happened that at a time when the earnings of the Group's cargo ships were swollen by the high rates of freight obtainable in the open market, certain of the liner trades experienced exceptionally good trading conditions.

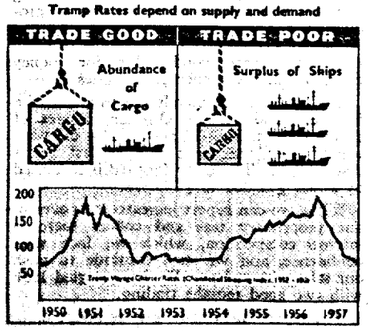
DIVIDEND POLICY

The profit for the year after taxation is £4 million more than in 1956 and the Board were faced with the question of what dividend to pay. As we may well be on the threshold of a major depression in the industry, it might have been argued that the Board should not have raised the dividend above what was paid in 1956.



I fully realise, however, that the dividend that we have been able to pay for a number of years past has represented an extremely small percentage of the capital employed by the Group. Taking this and all other factors into consideration, the Board have decided to recommend an increase in the final dividend, making 11 per cent for the year. Even so, after increasing the dividend, the amount paid out by the Group is no more than 1¼ per cent on the book value of the net assets, which is very low in comparison with the rate of return that is paid by most other industries.

Whether we shall be able to maintain the dividend at 11 per cent next year is obviously a matter of conjecture and I am anxious that nothing I say on this subject should be misunderstood. I would emphasise that shipping is a speculative industry whose fortunes fluctuate more sharply perhaps than those of most land based industries. As to the future I would remind you of the warning given in the Directors' Report.

OUTLOOK FOR THE FUTURE

In face of the complex influences I have described, this is a most difficult moment to forecast the results of a large shipping organisation. Although some of our passenger trades, which were particularly badly hit by the closing of the Suez Canal, have been showing improved results during the past few months, the general position of cargo trades has deteriorated, particularly since the end of 1957. Nevertheless, as a result of the normal time lag before such influences make themselves felt on our voyages, the current results do not yet reflect the full effect of the collapse in tramp rates and the shortage of cargo which lies behind it. At present there is little prospect of any improvement and if these conditions persist for very long it will be necessary to lay up ships. Fortunately the spread of the Group's interests affords some insurance against the worst effects of the slump, but until there is a general improvement in world trade the trend will be downward.

Tramp Rates depend on supply and demand

TAXATION

Despite an increase in the Group surplus of £5 million, the charge for taxation has risen by not quite £1 million. The explanation of this very modest rise in the Group tax charge is to be found in the relief that the Group has received by reason of the operation of the investment allowance, amounting in 1957 to over £1,800,000 as compared with £900,000 in 1956. We are likely to feel the benefit of the investment allowance for some considerable time ahead in view of our large building programme.

Report on Company Meeting of Associated Electrical Industries Limited

Lord Chandos, Chairman of Associated Electrical Industries, tells stockholders—

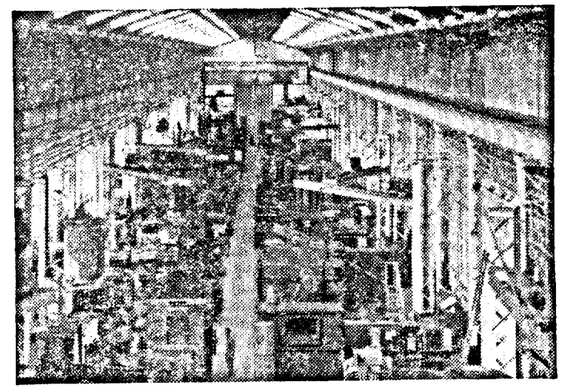
NEW FACTORIES SWELL THE OUTPUT OF A.E.I.

Orders booked total £177,000,000 — Product Divisions to be formed.

Presiding at the Annual General Meeting of Associated Electrical Industries held on April 9th, Lord Chandos (the Chairman) said that in 1957 the total value of electrical apparatus shipped and invoiced to their customers surpassed that in the record year of 1956 by over £16,500,000. Notwithstanding that increase, the profits remained at about the same level as those for 1956. It was estimated that two factors alone, the strike in the engineering industry and the influenza epidemic, caused a loss of trading profit before tax of a little over £1 million. Apart from those unusual influences the profits last year were still affected by the heavy initial expenses involved in starting new plants.

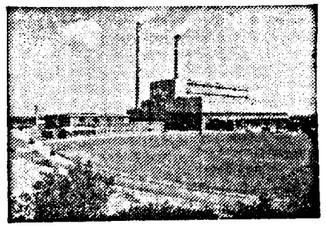
Touching on the more encouraging counterparts to the adverse features of 1957, Lord Chandos said the first was the order book. The orders booked by the Company during the year totalled £177 million, exceeding by £40 million the highest previous figure reached in 1956. In spite of their efforts and additional capacity, orders in hand rose to £180 million. Of the 1957 total £7,300.000 related to equipment for nuclear power plant. The total of orders received was largely due to a striking increase in export business, and was all the more encouraging because world markets had been buyers' markets and competition had been keen.

FORMATION OF PRODUCT DIVISIONS



Dealing with the formation of Product Divisions, Lord Chandos said: We have decided that over the next few years we should change to a divisional organisation based on products. The three principal operating companies—B.T.H., M.-V. and S.E.S—will manage various A.E.I. divisions under a policy laid down by the board of the A.E.I.; these companies will remain the instruments through which general A.E.I. policy is carried out, and they will devolve some of the day to day executive work upon the divisions.

Initially two A.E.I. divisions are being formed. The A.E.I. Turbine-Generator Division will be managed by M.-V. and the A.E.I. Heavy Plant Division by B.T.H.; these divisions will control the design, manufacture and sales of all products falling within these categories.



By forming these divisions, we shall eliminate duplication of effort and make the best use of all personnel currently employed by B.T.H. and M.-V. and of all manufacturing facilities available. We shall achieve this without disturbance to existing contracts with our customers. Our employees may be assured that increased opportunities are now open to them, and that it will rarely be necessary for them to change the present location of their work.

Many established M.-V. and B.T.H. designs will continue to be available for some years, but with continuing engineering development they will be superseded by a comprehensive range of A.E.I. designs.

In conclusion Lord Chandos said: By the end of the year the numbers of those working for A.E.I. had risen to just over 90.000, and I wish once again to emphasise that, despite the strike in the engineering industry last year, our relations with the men and women in our factories continue good and are marked by a confidence on both sides. I wish to thank them all for their efforts which have maintained our pre-eminent position in the industry.

"The Wythenshawe Transformer Plant near Manchester is the first of our great projects to be in full effective production in 1958. The load on the plant has built up satisfactorily and will be a substantial profit earner from now onwards." *This photograph of one bay of the new factory shows the tanks which are filled with oil to cool the transformer core and windings.*

"Forty-three per cent of the major generating plant commissioned by the Central Electricity Authority during 1957 was of our manufacture. Of the Authority's four steam power stations having the highest thermal efficiencies during the year ended March 31, 1957, three had our generating plant." *This, the Castle Donington Station, where we installed three 100,000 kW turbine-generator sets, headed the list.*

THERMONUCLEAR FUSION. "Once again it has been demonstrated that the British have an inventive skill second to none. Our congratulations are due to the brilliant young scientists at the A.E.I. Research Establishment, Aldermaston, who designed and built Sceptre and to those of the Metropolitan-Vickers Company who built and partly designed Zeta for the Authority. The results achieved with Zeta and Sceptre lead us to believe that mankind has now within reach a source of power which will last for all time." *Dr Allibone, Dr Ware and Mr Chuck with Sceptre III at Aldermaston Court.*

A·E·I ASSOCIATED ELECTRICAL INDUSTRIES LIMITED

Crown House, Aldwych, London, W.C.2

TELEPHONE AND GENERAL TRUST

ANOTHER SUCCESSFUL YEAR

SIR ALEXANDER ROGER ON STRENGTH OF INVESTMENT PORTFOLIO

The thirty-second annual general meeting of the Telephone and General Trust Limited will be held on April 29th in London.

The following is an extract from the statement by the Chairman, Sir Alexander Roger, KCIE, which has been circulated with the report and accounts:

Again I am happy to put before you satisfactory results for the year.

The Gross Profit of the Trust—the Holding Company—before taxation was £387,800 compared with £369,594 in the previous year. Taxation at £201,950 (£189,200 last year) took over half the Gross Profit, leaving a Net Profit of £185,850—an increase of £5,456.

At the last Annual General Meeting you approved an increase of £400,000 in the Authorised Ordinary Capital, and the capital duty of £2,000 thereon has been written off.

We have transferred £50,000 to General Reserve (£25,000 last year), bringing the balance thereon to £250,000.

An Interim Dividend of 5 per cent on the £1,355,000 of Ordinary Stock was paid in October last as compared with an Interim of 3 per cent on £1,110,000 Stock in the previous year. This was to bring the Interim and Final Dividends into closer relationship and, as was then announced, did not imply an increase in the total rate of dividend for the year.

We are proposing a Final Ordinary Dividend of 8 per cent, again making 13 per cent for the year, in addition to which this rate is also being repeated on the "A" Ordinary Stock.

After providing for the foregoing and the 7 per cent Preference Dividend, Profit and Loss Carry Forward is increased by £2,952 to £188,582.

BALANCE SHEET

Capital Reserve is increased by £49,500 to £675,000 as referred to in the Directors' Report, and Revenue Reserves now total £538,582.

The valuation of £3,239,072 for quoted investments represents an appreciation of £1,509,215 on the net book cost of £1,729,857. This emphasises the strength of our investment portfolio in spite of the general decline in market values during 1957.

Interests in Subsidiary Companies totalling £3,076,638 have increased only slightly over the previous year's total of £3,055,719. The increase of £898,907 in Shares is the result of funding of part of the Trust's loans to the Jamaica and Trinidad Telephone Companies, which accounts for the reduction in these loans as at December 31st last.

Of the Trust's total investments including loans to Subsidiary Companies, on the basis of book cost, 22.17 per cent is in Loans, Debentures and British Government Stocks, 7.57 per cent in Preference Stocks and 70.26 per cent in Ordinary Stocks.

Geographically, 95.87 per cent is in the British Commonwealth and 4.13 per cent in foreign countries.

Deposits at Call and Bank Balances amount to £754,731, but again most of this will be required at least temporarily towards the capital expenditure programmes of our overseas subsidiary and associated operating companies.

The Group Reserves total £1,983,211—an increase of £172,319.

The Net Assets of telephone operating and servicing subsidiary companies have increased by £452,429 to £5,583,412.

TELEPHONE OPERATING COMPANIES

PORTUGAL

During the period of some thirty years of close association with the Anglo-Portuguese Telephone Company the Trust has provided short-term financial assistance on a mutually convenient basis, and over the whole period has advanced several million of pounds sterling by way of temporary loans to enable the Anglo-Portuguese Telephone Company to expand and develop. These loans have been repaid from time to time from the proceeds of issues of capital made by that Company.

The number of stations in the Anglo-Portuguese Company's Concessionary Areas, namely the cities and suburbs of Lisbon and Oporto, has increased in the last thirty years from just over 21,000 to 209,493 at December 31, 1957, of which 19,778 were added during 1957.

Applications for service show no abatement and a heavy task is placed upon the Anglo-Portuguese Telephone Company to keep pace with the demand, in which the Trust and its associates continue to give every support and assistance both financial and technical.

WEST INDIES

The telephone operating Companies in which we are interested in Jamaica, Trinidad and Tobago, and Barbados expended collectively during 1957 some £835,000 on the expansion and improvement of their plants, the aggregate gross book value of which amounted to £7,057,000 at December 31, 1957.

Stations in service increased during the year by 5,402 to a total of 62,550.

The provision of the considerable amount of new money required to enable these Companies to cope with the rapidly expanding demand for exchange and trunk service is an ever-present problem. We do all we can to provide temporary loan facilities to permit the Companies to go ahead with essential projects, and during 1957, as mentioned earlier in this review, we increased our shareholdings in Jamaica and Trinidad by nearly £900,000 in reduction of these loans.

In addition, during the year these two Companies between them raised from outside sources a total of £410,000 in Preference and Ordinary Share Capital.

It is apparent that increasing supplies of new capital will be required and this matter is kept under constant review by us in London and our associates in the West Indies. It is encouraging to be able to say that there is a widening investment interest being taken in the West Indies.

GENERAL

We remain satisfied as to the future of our telephone interests, and I feel that this together with our well-spread general investment portfolio allows us to look ahead with confidence.

BRITISH-AMERICAN TOBACCO COMPANY LIMITED

GRATIFYING TRADING RESULTS

The fifty-fifth Annual General Meeting was held on April 2nd in London. Mr D. M. Oppenheim, the Chairman, in the course of his speech said: The increase in the Consolidated Trading Profit is approximately £4,750,000, which I am sure you will find very gratifying. Last year I mentioned that the dividends received by the Holding Company from its subsidiaries had increased. I am sure you will be glad to know that this trend continues, as reflected in the increased amount of Group Net Profit dealt with in the accounts of the Holding Company. The fact that the increase in the Holding Company's share in this profit is proportionately less than the increase in the total is primarily due to the subsidiaries' need to retain profits in order to finance the very considerable increase in the investment in fixed assets and stocks. One of the factors which accentuated the increase in stocks is the high price at which leaf tobacco had to be purchased during the year.

You will have noticed from the accounts that the Group transfer to Fixed Asset and Stock Replacement Reserves has increased by £2,600,000 as compared with last year and £950,000 of this increase applies to the Holding Company.

In a time of rising prices, profits calculated on the basis of historic cost are unrealistic in that some proportion of them is not represented by additional real assets of the business but only by the higher money value of the assets required to maintain and not expand the productive capacity of the business. It cannot be said, therefore, that a profit in the real sense has been realised until provision has been made for the difference between the cost of materials and manufacturing assets consumed in production and the cost of their replacement. The transfer to Fixed Asset and Stock Replacement Reserves shown in the accounts is a reasonable approximation calculated from year to year on consistent principles of this difference in value which it is considered should be taken into account in arriving at the Net Profit for the year available for dividends and normal reserve appropriations.

The greater part of this transfer relates to tobacco leaf stocks and is an approximate calculation on LIFO principles of the amount by which profits would have been reduced if the current replacement value and not the book value (which is average cost) of leaf used in production had been charged against trading profits. The fact that this year's transfer is so large is due to a general increase in the cost of leaf tobacco throughout the many countries in which the Group operates. I am sorry to say that we have no reason to expect any decrease in prices in the current year.

The sales of the majority of the subsidiaries increased during the year to

September last, although there were a few exceptions. In the first five months of the current year, total Group sales again show an increase over the corresponding period of last year, but I think I should say that the increase is considerably less generally spread.

The cost of materials and tobacco taxation in various countries overseas are still showing a tendency to rise and competition is intensifying with the extensive introduction of new types of cigarettes and packages. These factors, combined with price controls in some countries, may make it impossible for adequate price adjustments to be made so as to maintain profit margins. Whilst trading conditions will probably be more difficult, I am hopeful that the adverse factors will be largely, if not entirely, offset by some increase in sales and increased manufacturing efficiency, and I am reasonably hopeful that the Holding Company's share of the Group Net Profit will be at least maintained for the year 1957-58.

The report was adopted.

ASHANTI GOLDFIELDS CORPORATION

RECORD OUTPUT AND TONNAGE IN JUBILEE YEAR

The sixty-first annual general meeting of Ashanti Goldfields Corporation Limited was held on April 2nd in London.

Major-General Sir Edward L. Spears, Bart, KBE, CB, MC, FInstD (Chairman and Managing Director), presided and, in the course of his speech, said:

The Corporation has celebrated its Jubilee by achieving the largest tonnage, and the highest gold output, in the sixty years of its history.

This result is due to the programme of development, shaft sinking and modernisation planned and carried out since the war ended. It has been achieved, at a cost of £3,329,096, entirely from the Corporation's own resources.

Development and exploitation of the mine will require further large capital sums; but these also we expect to provide out of earnings. We have no reason to doubt that we shall be able to keep up the present high level of output. Recent development results, especially in the deeper levels, are very encouraging.

The Profit before tax was £1,349,657, an increase of £707,305 over the previous year. Income Tax on these profits, mainly Ghana Tax, was £576,126, leaving a profit after tax of £773,531. This is the highest profit since 1940. Because of the Corporation's status as an overseas trading corporation, £200,000 has been placed to general reserve.

Production in the year under review was 338,727 tons milled, yielding 275,217 ounces of gold. Both these figures are the highest in the history of the mine. It is our policy to maintain the high level of output achieved last year. In the current year, the production programme is 22,500 ounces monthly from 29,000 tons milled.

The report was adopted.

WESLEYAN AND GENERAL ASSURANCE SOCIETY

SIMPLIFIED PENSION SCHEMES

The Annual General Meeting was held on April 1, 1958, Mr A. H. Sayer, MC, JP, the Society's Chairman, in moving the adoption of the Reports, said :

The past year's operations, now under review, show good progress in all Departments of the Society's activities, and are a justification for the claim that the Society shapes its service to current social and economic needs. To illustrate this, may I mention that when, in October last, the Prime Minister appealed for more savings to check inflation, the Society responded by introducing a special incentive, unique in the life assurance business, in the form of initial premium reductions, to purchase ordinary life assurance during the period of the 7 per cent Bank Rate. This action received encouraging support from all quarters.

The formal Annual Report over my signature, now in your hands, shows that the Total Premium Income for the year amounted to £4,542,000, being an increase of £117,000 over that of the previous year. The Total Assets now amount to over £35 million. The Total Sums assured under standing policies in the Ordinary and Industrial Departments together now exceed £100 million.

The Actuary's report shows that there is a surplus in each Department. From these surpluses, totalling £973,000, the Directors have declared Divisible Profits, namely £350,640 in the Ordinary Life Department and £192,500 in the Industrial (Home Service) Life Department. The Reversionary Bonus declared in the Ordinary Department is 36s. per £100 sum assured, compared with 32s. at the last declaration. In the Industrial Department the Bonus to be paid on claims arising in the period to the next Annual Meeting has been materially increased for endowment assurances maturing.

While it is gratifying to report the improved profits that are a clear indication of a successful year's operation, profits in this day and age are not the only criterion of service to the community. We are equally proud to record the fact that a large majority, among those families who are purchasing their homes through the assistance of the Society, are paying interest even today at only 4 per cent or 4½ per cent.

While the Bank Rate remains at a high level, investments can be made profitably to give a high interest yield. A progressive insurance organisation such as the Wesleyan and General, has a continuous supply of money to be invested consequent upon the normal growth of its accumulation of policyholders' savings and the necessity for reinvesting the proceeds of securities which have been redeemed on reaching maturity date. The present period is, therefore, favourable.

Inevitably high interest rates are associated with low market values, but these are only of technical importance as far as British Government and other fixed interest securities are concerned, because the Society does not need to sell. When sales are made, it is to take advantage of market anomalies in prices, or, for example, to invest long instead of short, and such sales are always followed by immediate reinvestment.

The Society is introducing a simplified Pension Scheme which avoids the complicated rules and the special approval by the Inland Revenue usually associated with pension schemes. Being simple in form, it can be easily understood, and appreciated by Employer and Employee alike. It will be welcomed by firms which at present have no Pension Scheme in operation. A descriptive booklet will be sent to anyone making application.

The report and accounts were adopted.

FALCON MINES

The forty-eighth Annual General Meeting of Falcon Mines, Limited, was held on March 31st at Bulawayo.

Mr F. L. Wigley, Chairman, presiding, said: The Directors' Report and Accounts together with my Review of the Company's activities, which have been in your hands for some time, give full details of the operations of your Company for the year ended September 30, 1957, and I now propose to give you a brief account of the work done and the results obtained since the close of the financial year.

The tonnage milled at the Dalny Mine for the five months ended February 28, 1958, was 85,300 tons, which yielded 15,506 ounces fine of gold, equal to a recovery of 3.63 dwts per ton milled. The working profit at the mine for that period, based on a selling price of gold of 245s. 6d. per ounce, was £41,990. In addition £1,265 accrued from sales of gold at prices above 245s. 6d. per ounce in respect of gold produced during three months ended December 31, 1957.

Regarding development, the total footage advanced was 3,206, of which 1,255 feet were sampled and 545 feet, equal to 43 per cent, were payable, averaging 6.2 dwts per ton over a width of 68 inches.

At the Sunace and Bay Horse Mines the estimated working profits for the five months were £4,861 and £991 respectively.

The working profit for the three mines for the period was thus £49,107, excluding additional revenue which will accrue from the sales of gold at prices in excess of 245s. 6d. per ounce for the months of January and February, 1958.

On March 10th, Dividend No. 9 of 4¼d. per share, equivalent to 7½ per cent, was declared payable to Shareholders registered on March 31, 1958. This is the same as declared in March, 1957. Dividend warrants will be posted on or about May 9th.

The Report and Accounts were adopted.

ARMY & NAVY STORES LIMITED

The eighty-sixth Annual General Meeting of Army & Navy Stores Limited will be held on May 2, 1958, at 105 Victoria Street, S.W.1.

The following is an extract from the statement by the Chairman, Commander S. C. Lyttelton, OBE, DSC, RN, which has been circulated with the report and accounts for the year ended January 31, 1958:

Up to the end of July sales were good and it looked as though the results would be most satisfactory. From July, however, sales slowed down considerably, which had a detrimental effect on the final results. In view of these difficulties it is pleasant to report that group trading profits are up by some £24,000.

TRADING RESULTS

Trading profits for the Group, omitting all transfers from reserve : 1956-57, £292,613 ; 1957-58, £316,449. Taxation is up by about £15,000, leaving the group profit after taxation at £116,003 against £111,477 for last year.

Last year there was a figure for Exceptional Income of £36,657. This year Exceptional Income is about £31,000 less, leaving a group profit available of £121,760, against £148,134 last year. With £153,277 brought forward and a transfer from Repairs and Maintenance Equalisation Reserve of £2,027, the amount available for appropriation is £277,064. Of this figure £123,734 is retained in the accounts of the subsidiaries, leaving a sum of £153,330 available for appropriation in the Parent Company.

APPROPRIATIONS

A provision of £10,000 has been made for maintenance and departmental re-grouping and a sum of £7,458 has been transferred to the General Reserve. It is recommended that a dividend of 10½d. per Stock Unit, less tax, be paid, against 9d. per Stock Unit, less tax, last year. Now that we have reached the position where improved earnings enable us to recommend an increased dividend, it is in accordance with the policy of the Board that the capital distribution should be reduced. Various factors must be taken into account and after very careful consideration your directors have come to the conclusion that, at a time of great financial stringency in this country and of extreme uncertainty in the economic outlook both here and abroad, a prudent course must be the right policy. We have therefore decided to recommend that the distribution from capital profits this year should be 1½d. per stock unit against 4½d. last year.

CONCLUSION

The uncertainty in economic outlook makes it impossible to foresee what the future may bring, but your Directors are confident that now that so much modernisation and improvement has been carried out, your group is in an excellent position to trade with satisfactory results.

TAYLOR, WALKER & COMPANY

YEAR OF RE-ORGANISATION AND EXPANSION

DEVELOPMENTS FINANCED FROM OWN RESOURCES

LIEUTENANT COLONEL W. H. KINGSMILL'S STATEMENT

The fifty-first annual general meeting of Taylor, Walker & Company Limited will be held on May 1st in London.

The following is the statement by the Chairman and Managing Director, Lieutenant Colonel W. H. Kingsmill, DSO, MC, which has been circulated with the report and accounts for the year ended December 31, 1957:

Ladies and Gentlemen,

Although last year started well, due to the very mild weather in January and February, the last half of the year did not fulfil the early expectations. This was due to two reasons. Firstly, there was little or no summer from the end of June onwards, and secondly, the increase in the Bank Rate meant that money became scarcer for the purchase of luxuries. Beer, in spite of the fact that it is a traditional national drink, does count amongst the luxuries to the public, whereas, for example, tobacco is looked upon as a necessity. To put it very plainly, it is easier to give up a glass of beer, or wine, or spirits, than it is for the average person to give up a packet of cigarettes.

During the year under review there have again been several wage awards granted due to the increased cost of living, which have obviously affected the cost of production. In addition, your Board considered that the office staff, to whom so much is due, should have an increase based on the reduced purchasing power of the £. This increase in staff salaries was the first for some three years, and in the opinion of your directors it was more than justified. I would remind stockholders that office staffs have no union to fight their case and rely entirely on the goodwill of the directors as trustees for the stockholders to see that they are suitably rewarded, in order to enable them to maintain a comparable standard of living.

THE YEAR'S RESULTS

Turning to the accounts, you will notice that the gross Group profit after taking income from investments, but before depreciation and tax, etc., has risen by £44,642. The item shown as " Loss on redemption of debentures " of £15,347 refers to the redemption of the Chesham & Brackley Debentures, which in the opinion of your Board was a wise thing to do. There are now only £4,135 of the three debentures outstanding and we have given the holders of these debentures six months' notice to redeem in accordance with the debenture trust deeds. The additional items of depreciation and goodwill written off totalling some £61,000 are of a non-recurring nature and result from the projected merger of UK Marketing Trade of Curtis Distillery Company Limited and J. W. Nicholson & Company (Holdings) Limited whereby Nicholsons will acquire a half interest in the existing Curtis Distillery Company which will change its name to Curtis Nicholson Limited. Another Company in the Taylor Walker Group will change its name to the Curtis Distillery Company Limited and trade in a modified manner alongside Curtis Nicholson Limited and the new distilling company called English Gin Distillers Limited

CANNON BREWERY

The conversion of the Cannon Brewery property is now well under way and it is hoped that the new distillery portion for the manufacture of gin will be in operation by the end of April. The main bonded warehouse and bonded bottling stores and the duty paid bottling stores should be finished and in operation by the end of July. Work, unfortunately, on these two parts of the project has been held up by additional LCC requirements due to a certain amount of corrosion being found on some of the steel girders when they were exposed during the alterations.

During 1957 we and the Cannon Brewery Company Limited, opened five new houses and it is confidently anticipated that these will show a more than economic return on their outlay. In addition, one house, the "Lion and Lamb" at Chelmsford, was rebuilt and major alterations were carried out on several other licensed properties. Further, considerably more money was spent on the maintenance of our houses during the past year, as your directors feel that with every sign of continuing inflation it would be wise to put your company into a position whereby they can cut down over the next year or two on repairs and maintenance should this trend continue. I would also like to point out that the above-mentioned alterations to the Cannon Brewery premises and additions to the Brewery at Limehouse have to date been financed from our current cash resources as your directors are of the opinion that this is not the time to make a long term borrowing policy economic or advisable.

NEW ACQUISITION

During the course of the past twelve months we have bought the old-established family brewery of Ward and Son, Limited, which owns 29 licensed premises around the Essex/Suffolk border. This also has been financed from our current cash resources and is in pursuance of our aim of expanding whenever and wherever possible to the stockholders' ultimate advantage. This will extend our influence further eastwards and we already have evidence that Taylor Walkers Beers are being received with satisfaction in Ward's houses.

You will have noted a trend in this Country towards the supply of beer in cans. Your company decided to put down a plant at Limehouse to satisfy this demand and by the end of April it is hoped that Reserve and Cannon Stout will be available at all our off licences and all Victoria Wine Company's shops, as well as being exported to the West Indies and other markets.

From the foregoing, stockholders will appreciate that considerable re-organisation and expansion has taken place within the Group during the year under review, but these developments will take time to show results before they can be reflected in profit earning capacity.

Your directors once again have much

pleasure in recommending to stockholders that a final dividend of 7 per cent gross, making with the interim dividend a total of 10 per cent gross for the year 1957, be paid.

The future of the brewing trade under today's conditions is difficult to forecast, but your directors feel that given reasonable summer weather there is no reason why 1958 should not equal or exceed the trade of 1957.

Lastly, I would like, once more, to thank all the staffs and employees in the Taylor Walker Group for their loyal services to their respective companies, and to say that your Board consider that the Management/Employee relationship is second to none in the Industry.

THE CHARTERED BANK

104TH ANNUAL GENERAL MEETING

The One Hundred and Fourth Annual General Meeting of The Chartered Bank was held on April 2nd at the Bank's Head Office, 38 Bishopsgate, London, E.C.2.

The Chairman of the Bank, Mr V. A. Grantham, presided.

Mr H. F. Morford, Chief General Manager, read the notice convening the meeting and the report of the Auditors. With the consent of the stockholders present, the Report and Accounts, which had been circulated previously, were taken as read.

The Chairman then moved that the Report and Accounts for the year 1957 be approved and that a final dividend of 7½ per cent, less Income Tax, be declared; this, together with the interim dividend of 7½ per cent already paid, made a total distribution for 1957 of 15 per cent.

The resolution was seconded by Sir John Tait and carried unanimously.

The retiring Directors, Sir Arthur Atkinson Bruce, KBE, MC, The Right Honourable The Earl of Inchcape, Sir Harry Greenfield, CSI, CIE, and Sir Charles Watt Miles, OBE, were re-elected, and Mr Clifford Waite, Mr Ian Lilburn MacEwen, Sir Evan Meredith Jenkins, GCIE, KCSI, Mr William Ewing Eadie, CA, Sir Stephen Gibson, CBE, and Mr Ernest John Pakes, CBE, were elected Directors of the Bank.

It was resolved that under the provisions of Bye-Law 81 in respect of the year ended December 31, 1958, and until otherwise determined by the Company in General Meeting, the remuneration of the Directors should be such sum as might from time to time be determined by the Court of Directors not exceeding £50,000 per annum.

Messrs Deloitte, Plender, Griffiths & Company and Messrs W. A. Browne & Company were reappointed Auditors, and their remuneration was fixed.

A vote of thanks to the Directors, General Managers, Branch Managers and the Staff at home and abroad for their successful conduct of the affairs of the Bank was proposed by Sir Esler Dening, GCMG, OBE, and seconded by Mr Joseph Nissim.

Closing date for the receipt of initial applications May 9, 1958.

THE UNIVERSITY OF MANCHESTER

Applications are invited for the full-time posts of ASSISTANT in the Research Section of the Faculty of Economic and Social Studies. The successful candidates will be expected to pursue research in ECONOMICS, ECONOMIC STATISTICS, GOVERNMENT, SOCIAL ADMINISTRATION, SOCIAL ANTHROPOLOGY or SOCIOLOGY and should be graduates in any of these subjects or in Modern History or Economic History. There are vacancies in both Grade II (which carries the status of Assistant Lecturer) and Grade III. The salary scales are as follows: Grade II—£700 to £850 per annum; Grade III—£600 to £650 per annum.—Applications should be sent, not later than April 28, 1958, to the Registrar, the University, Manchester 13, from whom further particulars and forms of application may be obtained.

ORDERS for advertisements in The Economist *are accepted on condition that they are liable to rejection at the discretion of the Editor; that while every effort will be made to publish an advertisement on a specified date, no guarantee is given; and that white on black, reverse blocks or large sizes of black-faced type may be stippled or lined at the Editor's discretion.*

APPOINTMENTS

TELEVISION ADVERTISING

The Advertising Department of a nationally known manufacturing company requires a suitably *qualified man to join the group which handles the* company's television advertising.

Applicants should be 23 to 27 years of age, of first-class education, preferably graduates with a good honours degree, probably Arts. Previous experience, whether in television, films, theatre, or advertising agencies will obviously be useful but not essential.

The man will contribute to the development of effective television commercials on a wide variety of brands. This work demands imaginative thinking as well as the quality of mind and temperament which enables a man to plan and organise. Confidence and effectiveness in dealing with people are also important since the work involves considerable negotiation.

The commencing salary will be a good one and our salary policy ensures opportunity for high earnings in the future. There is a good pension scheme as well as other benefits. Applicants should write, giving details of background, education and career to date, to Box 908.

PUBLIC RELATIONS

Major Oil Company offers newly created post to experienced male journalist able to prepare, write and present material for all media, including spoken word. Understanding of Public Relations work and knowledge of *oil industry preferred*; versatility and adaptability important. This appointment offers scope to a man (25/35) with real ability; he will be paid accordingly.—Applications, *giving details of experience*, to Box 912, quoting ref. PR/96.

SALES and Marketing Analyst, man preferably in mid-twenties with Economics degree, some *statistical* knowledge and ability to interpret Research findings, required by Nabisco Foods, Ltd. (formerly Shredded Wheat Co., Ltd.), Welwyn Garden City. Familarity with technique of Consumer and Retail panels, and experience of Grocery *product field an advantage.* Good salary grade, prospects and amenities.—Applicants invited to write to Executive Administrator Personnel, stating age, educational background, *experience and present salary.*

ACTUARIAL STUDENTS

If you

(1) have completed or are completing part II of the examinations,

(2) are confident of qualifying in a reasonable time but cannot quite see where qualifications will get you and

(3) would like to live in South Africa (a country which, while it has disadvantages also has many big advantages),

you may be just the man we are looking for as Assistant to our Actuary in Johannesburg. The position carries a generous salary and the prospects for a *hard worker with* a sound practical approach are excellent.

If you are interested, please write to "The Actuary," P.O. Box 8791, Johannesburg.

FEDERATION OF BRITISH INDUSTRIES.—Applications are invited for an Assistant's post in the North American Department. Applicants (male, ages 25 to 30) should be University graduates *preferably—some knowledge* of U.S.A. and/or Canada would be an advantage. Starting salary £800 or £1,000 p.a. according to qualifications and experience. Post pensionable subject to *satisfactory probationary* period.—Applications should be addressed to North American Department, Federation of British Industries, 21 Tothill Street, London, S.W.1, marked "Assistant."

MARKET RESEARCH.—A leading London Advertising Agency seeks a graduate, age 23/30, as Assistant Executive in the Market Research Department. A sound knowledge of statistics is required and some practical Market Research experience is desirable. The post offers interesting and responsible work on important national advertising accounts.—Write, *in confidence*, to the Manager, Market Research Department, F. C. Pritchard, Wood & Partners Ltd., 25 Savile Row, London, W.1.

UNIVERSITY OF BELFAST

Applications are invited for an assistant lectureship in Economics from October 1, 1958. Salary will be on the scale £700 x £50 to £850. Special consideration will be *given to applications with qualifications* in mathematical economics or statistics but other applications will also be considered.—Applications should be received by May 1, 1958. Further particulars may be *obtained from G. R.* Cowie, M.A., LL.B., J.P., Secretary to the University.

UNIVERSITY OF GLASGOW
LECTURESHIP IN ECONOMIC HISTORY

Applications are invited for a Lectureship in Economic History. Salary scale: £900 to £1,650. Initial salary according to experience and qualifications. *F.S.S.U.* and family allowance benefits.

Applications (8 copies) should be lodged, not later than April 26, 1958, with the undersigned, from whom further particulars may be obtained.

ROBT. T. HUTCHESON,
Secretary of University Court.

April, 1958.

MIDDLESBROUGH EDUCATION COMMITTEE
CONSTANTINE TECHNICAL COLLEGE
Principal: G. S. Atkinson, B.Sc., Ph.D.

(AMENDED ADVERTISEMENT)

HEAD OF THE DEPARTMENT OF COMMERCE.—Applications are invited for the post of Head of the *Department of Commerce.* Applicants must be *graduates* of a British University and/or have equivalent professional qualifications with appropriate teaching and commercial experience. *Applications in response to the previous advertisement remain under consideration.*

The Department is responsible for courses leading to the Higher National Certificate in *Commerce*, the final examinations of the professional bodies, and university degrees as well as for Management Studies, general education and liberal studies.

The Department is Grade III for which the salary scale *is £1,600 x £50 to £1,750.*

Application form and further particulars may be obtained from the Director of Education, Woodlands Road, Middles*brough, to whom the completed form should be returned* by April 28, 1958.

SENIOR BRANCH OF THE FOREIGN SERVICE.—About five posts in Grades 7 or 8. Age 27 and under 33 on 1.8.58, but possible age extension to 40 for members of H.M. Overseas Civil Service with experience directly relevant to Foreign Service needs. Selection by interviews in June/July. University honours graduates and others *with suitable qualifications and experience considered.* Sound knowledge of international problems and *experience* of administrative or other responsible work essential. *Competent knowledge of at least one foreign language;* Middle Eastern and Oriental languages particularly useful. Salary scales (men) Grade 8—£1,190-£1,410; Grade 7—*£1,450-£2,050.*—Write to Civil Service Commission, Burlington Gardens, London, W.1, for application form quoting No. 292/58. Closing date May 22, 1958.

Important Textile Company has a vacancy for a young

STATISTICIAN

at its Head Office in Manchester. Successful applicant will eventually be required to assume charge of Statistics Section of Economics Department and be *responsible for the collection and interpretation* of both internal and external data affecting the Company's activities.

Applicants should be 25/30 years of age and hold a *good Honours Degree in Economics.* Some experience of similar work an advantage.

Applications, giving full details of age, education and experience, to Box 909.

"THE BIRMINGHAM POST" will shortly have a vacancy for an assistant (male) to the City Editor in its office at 88 Fleet Street, E.C.4. Experience of financial journalism or in the City essential. Preference will be given to applicants with economic training and proved ability to write well. Successful applicant would take entire charge of City page in City Editor's absence. Staff Pension Scheme.—Applications, in writing, giving a full statement of qualifications, experience and age, to be addressed to the Editor, The Birmingham Post, 38 New Street, Birmingham.

THE STATISTICAL DEPARTMENT of British-American Tobacco Company Limited, Head Office, *Westminster, has a vacancy for a young man of about* 24 years of age who is either a university graduate in Economics or Statistics or holds a Diploma in Statistics issued by *one of the recognised Societies.* Applicants must have had some experience in sales statistics. Interest or experience in consumer research is also desirable. The Company works a 5-day week, has a contributory pensions Fund and provides free lunches in their restaurant on the premises.—Applications, mentioning statistical qualifications, should be addressed to Personnel Department, 7 Millbank, London, S.W.1.

ORGANISATION AND METHODS OFFICER, based in S. Yorkshire required by National *Coal Board.* Work entails efficiency studies in a large scale organisation *and offers considerable scope for men with drive, progressive* ideas and initiative. Previous experience of O. & M. or in such fields as work study, operational research, financial/cost accounting or office management desirable. Degree and/or professional qualification an advantage. Salary £1,175 to £1,650.—Apply Staff Director, N.E. Division, Holmwood House, Ecclesall Road South, Sheffield, 11, within the next 7 days, and quote AA/350.

UNIVERSITY OF ST ANDREWS
QUEEN'S COLLEGE, DUNDEE
LECTURESHIP IN ECONOMICS

Applications are invited for a Lectureship in Economics in Queen's College, Dundee, commencing October 1, 1958. *Candidates* should have special interest in labour economics and/or social economics. Salary, £900 x £50 to £1,350 x £75 to £1,650 (efficiency bar £1,350). F.S.S.U.; Family *Allowance; Removal Expenses Grant.* Applications (eight copies), together with names of three referees, to the undernoted not later than April 30, 1958.

PATRICK CUMMING,
Joint Clerk to the University Court.

April, 1958.

BUSINESS AND PERSONAL

A NEW SERVICE FOR INDUSTRY

To meet the changing requirements of industry in the European Common Market, and free trade zone, a large and well-established engineering group in the London area offers a complete consultancy service to firms who may be faced with increasing development and marketing difficulties. Having ourselves been faced with the necessity of providing facilities for market research, design, development, model shop, tool making, type testing, etc., we are able to offer a complete consultancy service backed by all necessary engineering and marketing facilities to assist firms requiring it, and we work closely with American Associates specialising in placing U.S. patents in this country and can, therefore, help in finding new production items. This offer is primarily directed towards firms requiring it for a limited period in order to find new lines and develop them to pilot production stage. The total available capacity of this service is estimated at £250,000 per annum, of which approximately £100,000 will become available to firms outside the organisation, in whatever amounts are required. Principals please write to Box No. 891. All correspondence will be treated as strictly confidential.

JUST LIKE THE CONFIDENCE YOU INSPIRE THROUGH ATV

The retailer... have you got him on your side?

He's pretty shrewd, generally speaking, your average retailer. He knows quite a bit about advertising—and he can usually tell a campaign that's going to sell from one that only *sounds* good.

No wonder he perks up when he sees your product is on ATV. He spends his working day serving customers and it hasn't escaped his notice how they ask for ATV-advertised goods —*and* he knows which they are.

Yes, the retailer watches the commercials pretty closely. When he sees yours, he makes an appreciative mental note. When your salesman describes your hard-selling ATV campaign, he doesn't get shown the door. Your display material by-passes the wastepaper-basket and goes in the window. You open scores of new accounts.

An ATV advertising campaign is the surest, quickest way to get the retailer on your side. And it needn't be an expensive business either. ATV's rate structure (stabilized for a year, despite rising audiences, and closely segmented, so that you can pin-point your audience) takes care of that.

For further information and the answer to any questions, please telephone CHAncery 4488 or Birmingham Central 5191.

I've just been trying to locate you Mr. Hawkins . . .

the M.D. left a message for you; he agrees there is room for economy in the firm's stationery and if this can be done as you say without loss of the good-quality look, he would certainly be most interested to see the printer's recommendations.

Now have a word with our printers, Miss Daley . . .

and say we should be glad if they would send their representative along again to go further into the proposal to produce all our printed and unprinted office stationery and envelopes on Spicers Plus Fabric papers. We shall need to see samples of the range, including all the whites, tints, and duplicator papers.

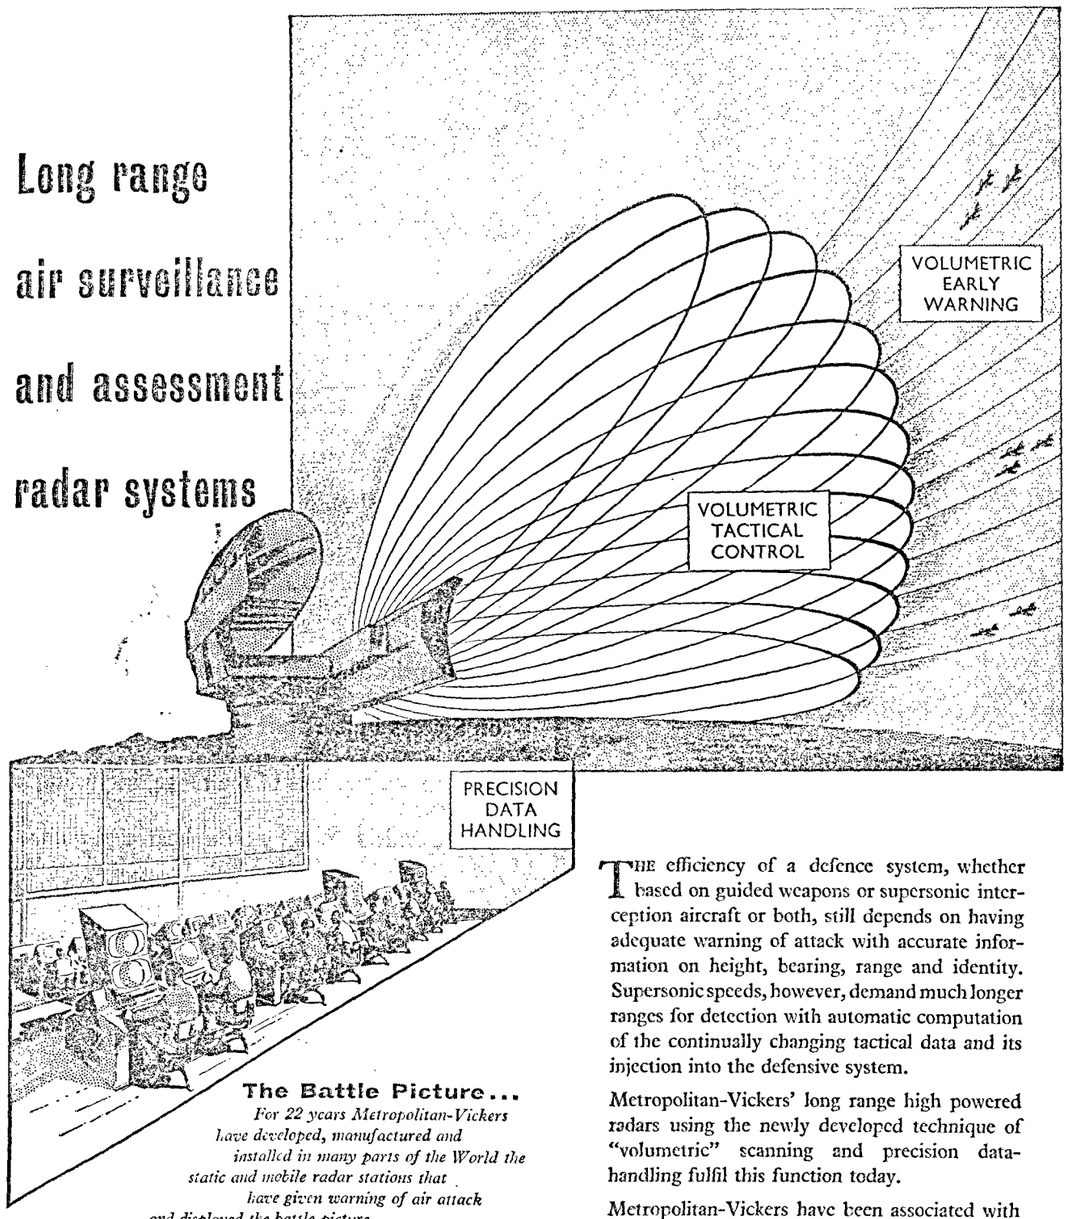
SPICERS PLUS FABRIC cuts the cost of business stationery and gives a plus in quality

PAPERS
Bond and Bank in white and a range of attractive tints. Excellent for printing, typing and writing. Also white and tinted Duplicator.

COMMERCIAL ENVELOPES
Plus Fabric is available in a wide range of envelopes in azure, buff, grey and white.

CARTONNED CUT REAMS
Plus Fabric papers are also packed in cartons which are readily opened and closed again for ease of office use.

ASK YOUR PRINTER OR STATIONER TO SHOW YOU SAMPLES



PERSONAL STATIONERY
Spicers delightful personal writing paper in four attractive colours is available in pads or boxes. Colours: azure, buff, grey and white, with matching envelopes.

OBTAINABLE FROM ALL GOOD STATIONERS

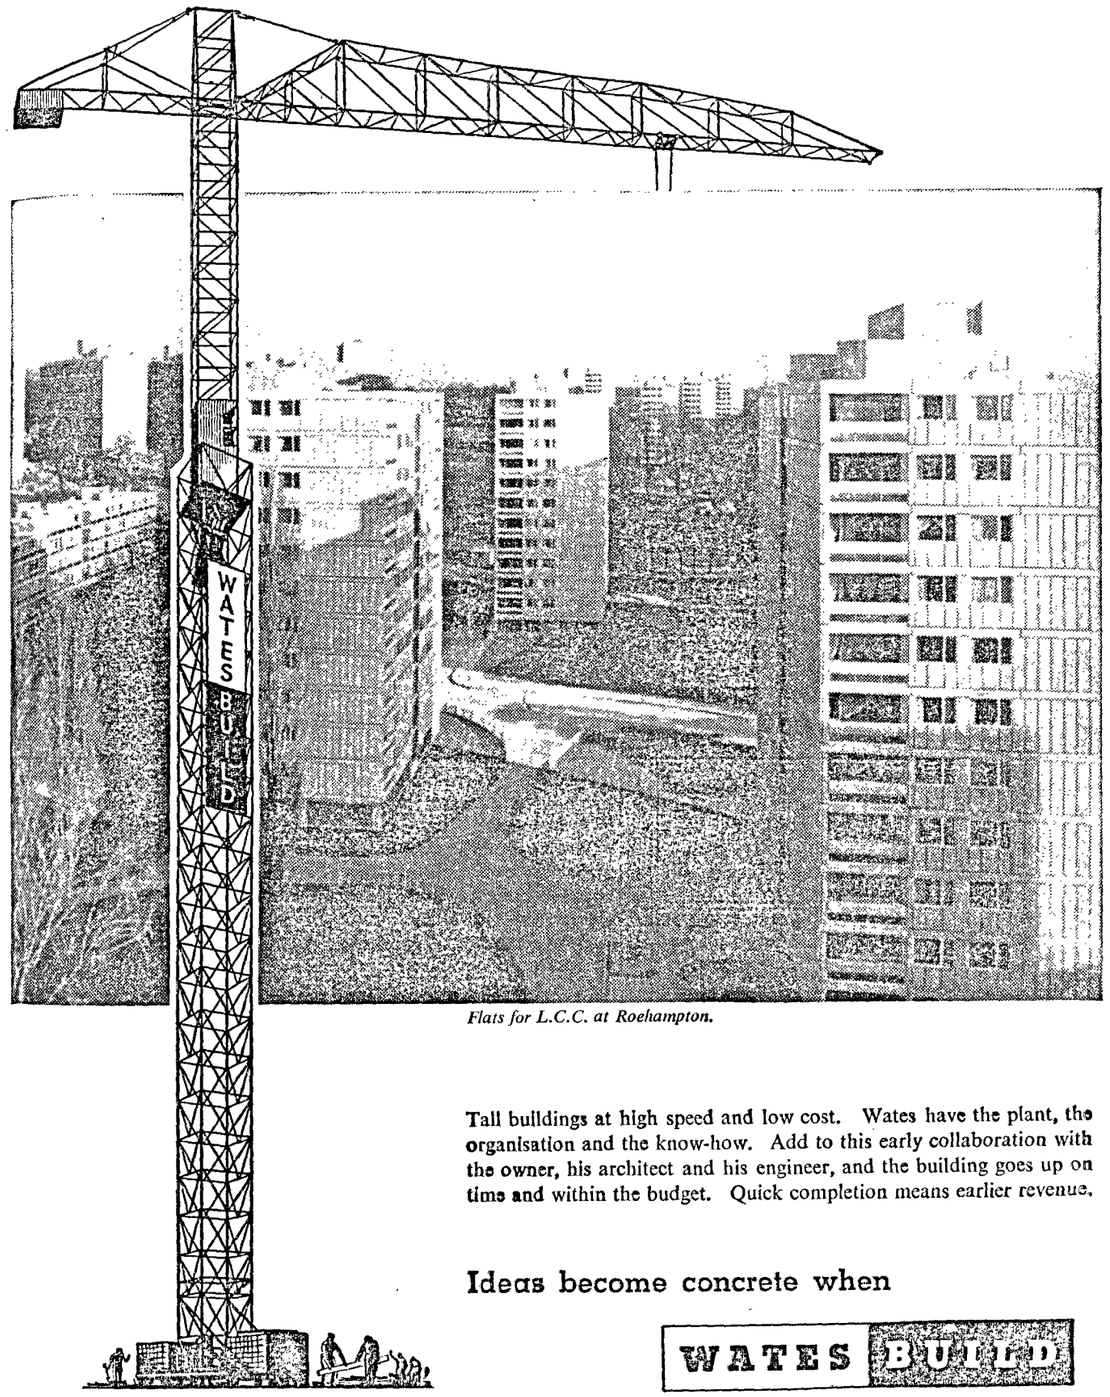
Long range air surveillance and assessment radar systems

The Battle Picture...

For 22 years Metropolitan-Vickers have developed, manufactured and installed in many parts of the World the static and mobile radar stations that have given warning of air attack and displayed the battle picture.

METROPOLITAN-VICKERS

An A.E.I. Company



THE efficiency of a defence system, whether based on guided weapons or supersonic interception aircraft or both, still depends on having adequate warning of attack with accurate information on height, bearing, range and identity. Supersonic speeds, however, demand much longer ranges for detection with automatic computation of the continually changing tactical data and its injection into the defensive system.

Metropolitan-Vickers' long range high powered radars using the newly developed technique of "volumetric" scanning and precision data-handling fulfil this function today.

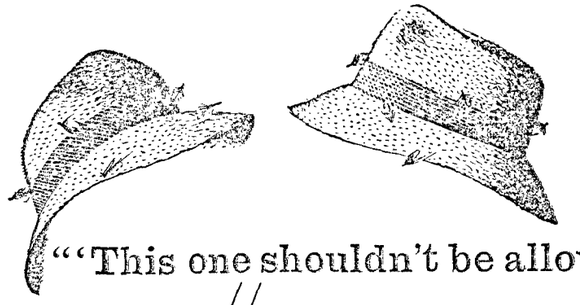
Metropolitan-Vickers have been associated with the Royal Radar Establishment in the development, manufacture and installation of Radar Stations which are an essential part of the British system for defence against air attack.

Britain's first R.A.F. Guided Weapon Station at North Coates includes Metropolitan-Vickers' radar equipment.

LEADING ELECTRICAL PROGRESS

Flats for L.C.C. at Roehampton.

Tall buildings at high speed and low cost. Wates have the plant, the organisation and the know-how. Add to this early collaboration with the owner, his architect and his engineer, and the building goes up on time and within the budget. Quick completion means earlier revenue.



Ideas become concrete when

AN EXPORT OPPORTUNITY

In CANADA

average earnings £24 a week

BIG POTENTIAL FOR BRITISH GOODS

In 1956, capital investment in Canada reached $6,617 million. An average industrial worker's earnings are $64.69 a week; it is reckoned that Canadians' discretionary spending power is now *seven times* pre-war. And consumption may nearly double in the next ten years.

What of British goods? Between 1949 and 1956, imports from Britain rose 30% from about $307 to $400 million. But total imports rose faster—they increased by 45%. This means a *big potential sale for British goods of all kinds.*

Speaking their language

It's easy for the British manufacturer to advertise in this great market, by using the magazine that Canadians like best.

In Canada, The Reader's Digest has almost twice as many readers as any other magazine. It is the *only* publication that covers both great language groups, with separate English and French editions. And its readers are the people who matter most to you *as customers.* Your advertising in the Digest reaches more of Canada's higher-income families than in the next two magazines combined.

All over the free world, through its overseas editions, *the Digest speaks to your customers in their own languages.* It has international stature—yet keeps the local touch. In most countries it reaches the most people *and* the best prospects, at far lower cost than other magazines.

We can help you plan—here in London

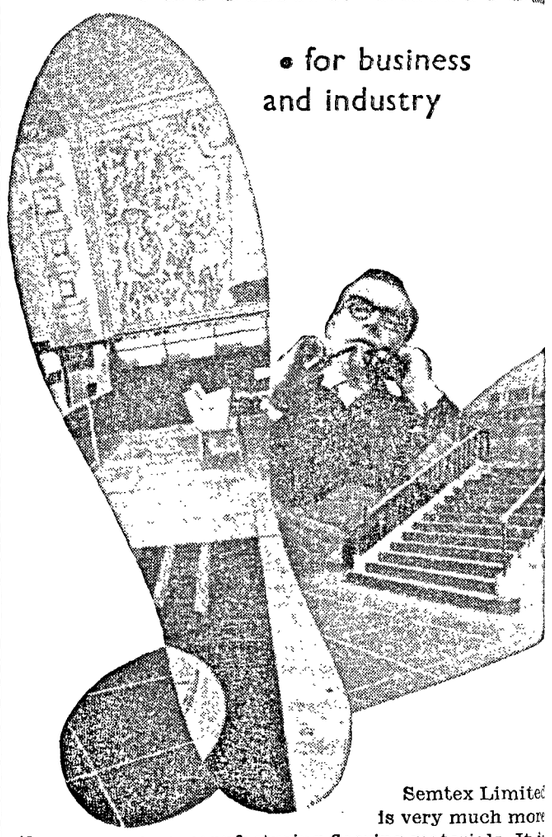
If you consider advertising in Canada—or elsewhere overseas—we shall be glad to help with facts, figures and information.

Here in London you can book space in one or any combination of our 29 editions, to cover your best markets without waste circulation. You can avoid the uncertainties of remote control, and be sure of full advertising value for what you spend. A further convenience: in most cases you can pay in sterling.

If you'd like an analysis of how The Reader's Digest covers *your* areas of interest, just write or telephone: The Advertisement Director, Reader's Digest, 25 Berkeley Square, W.1 (MAYfair 8144).

29 Editions . . . 13 Languages . . .

20 million copies sold every month



The Reader's Digest has separate editions covering the following markets in their own languages. (Monthly circulation in brackets.) **U.S.A.** (*11,500,000*). **Commonwealth:** U.K. (*1,100,000*); Canada (*English and French editions—925,000*); Australia (*450,000*); New Zealand (*75,000*); South Africa (*140,000*); India (*in English—60,000*). **Latin America:** Brazil (*460,000*); Spanish-speaking countries (*4 separate editions—1,175,000*). **Western Europe:** France (*1,050,000*); Belgium (*100,000*); Switzerland (*German and French editions—105,000*); Holland (*100,000*); Germany (*700,000*); Austria (*100,000*); Italy (*500,000*); Spain (*150,000*); Sweden (*300,000*); Denmark (*235,000*); Norway (*185,000*); Finland (*135,000*). **Middle East** (*in Arabic—50,000*). **Japan** (*450,000*).

All over the world people have faith in

The Reader's Digest

a unique FLOORING SERVICE

• for business and industry

Semtex Limited is very much more than a company manufacturing flooring materials. It is an organisation devoted to the creation of the best type of floor to meet every purpose. You see illustrated the entrance hall of the "Daily Express" offices and the headquarters of Chester County Council, both laid in super-luxurious, super-strong Dunlop Rubber Flooring. But this is just one Semtex product. Others include lovely long-wearing Vinylex Tiles; Semflex, ideal for domestic use; Semastic Decorative Tiles, ideal for a handsome hard-wearing floor at low cost; jointless Fleximer flooring; decorative linoleum and cork. Each is backed by the comprehensive design, contractual and service facilities operated throughout the United Kingdom through over 20 branches by Semtex. There are also approved laying units in many areas.

For full information write or telephone to the address below:

The American trip that paid for itself —even before he arrived!

How COULD he, a British businessman with few contacts, hope to meet and sell to the most sought-after men in America? He decided to go to America, and, on the recommendation of his travel agent, by United States Lines.

As soon as he stepped aboard his problem was half-solved: he found himself among the very businessmen he had sought so long to meet! He made so many valuable contacts that he might have been *in* America already—and his trip had paid for itself, even before he arrived! Ship-to-shore telephone, Dictaphone, stenographic and typewriting services are all available to the businessman wanting to work on board; yet there's no better way to relax than aboard the "United States," or her running-mate the "America," with their unexcelled food and wine, top-grade orchestras, well-stocked libraries and "keep-fit" facilities—whether he travels FIRST, CABIN or TOURIST CLASS. In addition there's 25 cubic feet or 275 lb. FREE baggage allowance.

A "FIRST CLASS" HOLIDAY

whichever class you choose

Now that the travel allowance has been extended to cover the U.S.A. and Canada, holidaymakers and businessmen's wives and families can go to these countries. Remember—*your £100 is spendable entirely in America.* If you travel by United States Lines *your holiday starts as soon as you arrive on board ship:* by the time you land in America you're thoroughly rested and relaxed, ready for *another* exciting holiday.

If you're travelling on a budget but still want the best that money can buy, CABIN and TOURIST CLASS, with their gay informality, offer a perfect solution.

Fares to destination and on-board expenses payable in sterling.

Sales of Leyland's 'Titan' outstrip by far those of any other double-decker in the world. Here is one of a big Madrid fleet.

Working in temperatures varying from 100° to below zero, this Leyland 'Hippo' is seen in action in the Southern Alps of Australia.

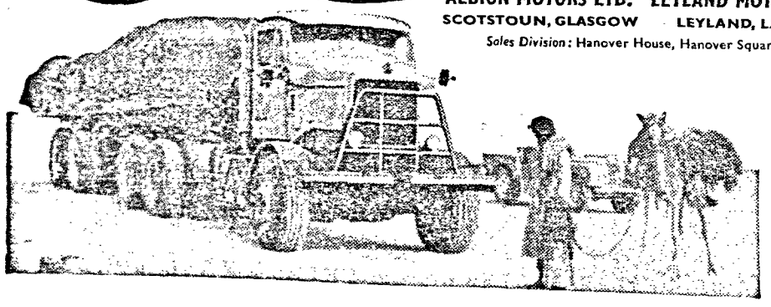
An Albion 'Chieftain' operating in Southern Rhodesia for Caltex (Africa) Ltd. A Leyland 'Beaver' tractor unit is in the background.

The moment you buy from

Albion Leyland Scammell

...you inherit a service unique in this world

If you use road transport, Leyland and its associated companies, Albion and Scammell, can offer you everything from 3-ton short-haul trucks to giant 150 tonners . . . and well over 100 models in between. They also make buses and coaches seating from 25 to 78 passengers, which are to be found operating in all five continents. People who really know the transport business pay tribute to the superlative efficiency, economy and reliability of any vehicle made by the Group. That's why they lead in world sales!



But when you buy from Leyland-Albion-Scammell, their experts follow you around, wherever you operate, to see you get the last penny-worth of performance from your purchase. They've got branches and depots in 60 countries stocked with spares and replacement units. Resident and mobile engineers in these countries are on call to help and advise. To cap it all, a team of specialists will fly from Britain to your assistance when necessary.

And where in the world can you equal service like this!

The case of the Vanishing Secretary

The Managing Director was distracted. "The best Secretary I've ever had . . . and she just walked out and disappeared after a fortnight here. She was wonderful. Why should she do it?"

Well, I soon tracked her down. Secretaries don't just vanish. After careful investigation I found her address from the Company Secretary's office. Two days later (we work fast in the sleuth business) I was interviewing her.

"Oh, he was a charming man", she said, "and a most considerate boss. But I just couldn't stand those dirty offices. They hadn't been painted for years".

The moral is "keep your staff happy and busy in congenial surroundings" —and, as a brilliant first step, ring Bishopsgate 3717 and put your problem to us. Our Technical and Colour Advisory Service can help you in many ways to make your business outlook brighter.

"Communications" by Roy Nicholds

Taxi! Taxi!

The newer applications of electronics in industry, medicine and commerce have tended to overshadow the tremendous advances made in radio communications. Yet in half-a-century, age-old barriers of time and distance have been eliminated, and men can, if they wish, communicate instantly with each other by word or picture over vast distances, and sometimes in circumstances which challenge the imagination.

But it is in the daily scene that one can best recognise the contribution of radio communications to our welfare and safety—the radio-equipped taxi, the walkie-talkies of the fire brigade and railway marshalling yard, the air traffic control system, the ship-to-shore telephone, the newspaper photograph radio'd from New York.

Mullard's part in the development of radio communications can be judged by the number of manufacturers who consistently use Mullard valves, tubes, transistors and magnetic components. Here, then, is yet another example of how Mullard experience and know-how, on which you too may draw, is serving Britain's designers of electronic equipment.

Mullard

Foresight for Tories

COMING on top of the recent by-elections, the results of the county council elections have caused a good deal of baring and beating of Tory breasts. The chief mourner and chairman of the party, Lord Hailsham, has gone so far as to say that "Britain is in danger of becoming a socialist state." Very likely he means no more than that the Labour party looks like winning the next general election, which is still by no means the same thing, however depressing the prospect may seem. But the real danger is that the Tories may still not understand what the next election will be about.

Pace Lord Hailsham, who speaks of "deep-seated and massive causes," there is nothing apocalyptic, or even unexpected, about the recent political trend. The swing against the Government is, at this stage of its life, usual. It may well be, indeed, that nowadays no government can normally expect more than its four or five years in office, with the rival parties ranking rather as Ins and Outs than as deadly ideological opposites. What is more, apart from the county elections in and around London, where low polls and the loyalty of the Labour faithful added emphasis to the results, the pendulum has not yet swung across decisively to the Opposition. Just as the 1945 Labour Government gained a few extra uneasy months of office, if not of power, five years later, because the prewar image of "Toryism" still rankled, so now the image of postwar socialist "austerity" still stops dissidents from crossing over to Labour. This, presumably, is the pragmatic justification for Lord Hailsham's cry of "wolf." The socialist bogey is still, politically, worth parading—while the Tories work out another more positive appeal.

For the next election will not be about socialism but about capitalism—or, more precisely, about the present state and future expectations of its British version. This will remain the crux even if Labour, with its split mind, does win next time. The only way to enlarge this nation's wealth and the freedom of choice of its people, the only way to underpin its security and a rising standard of life, is continuously to enlarge its capital. The focus, now more than ever, has to be on investment. The key question now in politics is: How?

To say this is emphatically not to endorse the caricature of Britain today as one vast depressed area. By all the ordinary tests—the state of trade and employment, the balance of payments, and the cost and the level of living—the country is in encouragingly good shape. But economically, it is not, and has not been, growing. That is the danger signal, whether one looks at the flattening-out of both investment and output or at the steady decline over the years in the British share of world trade.

Again, to say this is emphatically not to deny the necessity, as things were, for the policy of Tory austerity applied last year by Mr Thorneycroft and now continued by his successor, or to detract in the least from their political courage (and their success so far) in defending the pound. The preservation of the value of the currency both abroad and

at home is rightly, and inevitably, a first charge ; justice and expediency alike demand it. And it is no retort to say that, in other circumstances, the pressure upon the pound last summer need not have arisen ; it did arise. What is really, and urgently, wanted is the frank recognition that this kind of austerity—the cutting back of investment in 1955 ; the brake which has been put upon production for three years ; the holding-back of investment now, coupled as it is with the paring-down of private industrialists' programmes as well—is particularly bad for Britain. To say that expansion should be resumed, even if it means "letting the pound go," is foolish and irresponsible ; but the frame of mind which accepts as axiomatic that expansion cannot be resumed without the pound being devalued is impossibly defeatist, and just as silly.

The problem can be stated very simply. One thing can be taken for granted : if there is not enough room, without overloading the economy or imperilling the pound, for the productive investment (in machines, in buildings, in power and in communications) upon which our future depends, then the other calls upon the economy, whether for consumption or for the activities of government, whether at home or abroad, are too large. The sum, until now, has too often been done precisely the wrong way round: investment and production have become the residual, and unsatisfied, legatees. The process of limiting the country's liabilities, hearteningly seen to be needed after the Suez experience, has still not gone far enough. Only when this process has gone far enough—and no liability, social, military or financial, including all commitments overseas, can be exempt from the continuing reappraisal—will it be possible to reconcile the long-term necessity for national growth with the short-term necessity to escape from exchange or inflationary crises.

This is the challenge—to both parties. The proper reason for alarm at the prospect of a victory for Mr Gaitskell and Mr Bevan (to say nothing of Mr Wilson) at the general election is not that a Labour government will bring in the socialist state ; the programme for 1959-60, for all the tampering and tinkering which it proposes, is less socialist than the programme for 1945. It is rather that the Labour party (including its component of the great trade unions) seems no better equipped now than it was ten years ago with a policy, or even with an attitude, calculated to bring into being an enterprising, enrichening and innovating Britain. Its spokesmen have proclaimed the need this week for more production ; but too many of them, by their bearing towards capital and business, make it likely that the mere advent of a Labour government will be regarded as a threat to the pound. And its leaders, if they win, will have neither the national (post-coalition) standing of their 1945 predecessors nor the postwar array of controls and controllers—upon which, it seems, they still intend lugubriously to rely.

All this is true. The question is whether the Tories will have, and will be seen to have, a long-term policy themselves—for 1959, or even for 1964. The Prime Minister, it should be noted, is unworried. Everything, he hopes, will be all right on the night: when the next election comes, disinflation will have put a new solid foundation into the economy, and the advance can be resumed ; Mr Amory's modest budget is, in this cool calculation, a brave stroke. Much can happen—including, possibly, the unsought import of a depression—before then. But this can be said already. Unless the Conservatives do show proofs of being able to follow up their stout, if belated, stand for a thrifty economy with their own design for a thriving one, then the Labour model will certainly win another trial.

Nasser's Russian Friendship

It suits the Egyptians' book to argue that they need western help if they are to stave off Russian influence; all the same, it may be true.

PRESIDENT NASSER is about to visit Moscow. Although it would be more neutral to stay at home, and presumably more positively neutral to balance the journey with a call at a western capital, he could not indefinitely postpone paying his respects to the Kremlin while the West makes up its mind whether or not to receive him. As with every other country that is hard up, Egypt would like to be in the happy position of playing the affections of one rich suitor against another : an adroit mixture of juggling and gentle blackmail should theoretically produce twice as much money without jeopardising independence. But in Egypt's case there are two obstacles : President Nasser is not subtle enough for a delicate double flirtation and, until now, the American swain has shown too jealous a temperament to play its allotted part in a triangle. Egypt now depends on the Soviet Union alone for economic and military aid.

Few Egyptians are happy about this state of affairs. The complaint, often heard in Cairo, that President Nasser for all his good intentions will not be able to remain neutral if pushed by the West as well as pulled by the East, is not the less true because it is also a way of angling for western help. American policy is interpreted in Cairo as a bungled attempt to freeze the President out ; it is marvelled that Washington should

fail to realise that the consequences of its manœuvre are bound to be very different from what was intended. In fact this bell may have rung at last ; Mr Dulles has evidently been contemplating a change in American tactics towards Egypt. Agreement over compensation for the Suez Canal Company's shareholders may be the overture for the United States to release the blocked Egyptian dollars and resume more normal trading relations. Mr Dulles may have recognised that, however unwelcome it is to have President Nasser on a neutral tightrope, it would be very much harder to have to try to fish him up if he and Egypt fell into Soviet waters.

EGYPT is not yet dangerously deep in Russia's debt. Soviet tanks and aircraft are being paid for slowly at a rate of about £5 million a year—or no more than a modest rate of interest on what was advanced. The replacements for the arms destroyed by the British, French and Israelis were, according to Cairo, given to Egypt free. Even if this is not strictly true, the description of the relationship between the two countries as an economic stranglehold is not yet justified. On the civil side, the credit of £62 million that the Soviet Union has promised for industrial development does not have to start being paid back until a year after the delivery of all Soviet equipment is completed, and is then spread over twelve years.

Dr Aziz Sidky, the minister of industry, came back very cock-a-hoop from his trip to Moscow to fix the credit agreement. His confidence was understandable ; the Russians had not only been amenable, they had obviously been out to please. On Dr Sidky's request, the terms of credit were extended ; and Russian experts were only to be allowed into Egypt or Syria by mutual agreement. But who is really getting the better of whom ? The numbers of Soviet experts may be controlled, but if no technicians are available from anywhere else, Russia will have the monopoly. After a time, Russian spare parts will have the run of the market. Who but communists will buy this year's crop of Egyptian cotton ? Egyptian schools even have to get their English text books from Russia.

The Egyptians' position is sufficiently clear: they would rather get help from both sides, but if the West will not co-operate, they must rely on the other side alone. But what is it all worth to Russia ? There is no obvious material advantage : unlike the Americans, the Russians do not need oil for their allies or military bases for themselves. Their friendships with the Arab states are of little intrinsic value. They are, however, valuable counters in the suppressed world war against the United States. The Americans got into the Middle East first. The Russian game is to divide allegiances and secure some for themselves. A second question is why they chose Egypt and 1955 as the place and time to develop a policy that has been essentially a counter-attack against American containment. The choice may have been settled by shrewdness, or by chance. Egypt after the fall of King Farouk had the dynamic of revolution. Its strategic position is unique: it is in Africa as well as in the Arab world and it sits astride one of the principal channels for the flow of oil to Europe. And the door was invitingly open when the West refused to give Egypt's new soldier rulers all the arms they wanted.

Having chosen Egypt, the Russians have shown faultless giftmanship. Their touch is unoppressive and they show remarkable aptitude for swallowing disagreeable facts. They have not tried to interfere with President Nasser's policy of locking up Egyptian communists in prison. They were first on the steps to welcome the United Arab Republic, although the union cut their direct line to Damascus through the Syrian communists and near-communists. The Soviet Union has performed the acrobatic feat of placing Egypt in its debt and at the same time boosting the Egyptian leaders' self-respect. Even those sceptical Egyptians who believe Russian flattery to be mostly false like to hear the soothing phrases just the same.

President Nasser, for instance, does not seriously believe that the Russians want him at a summit conference, but when they made the suggestion in January his vanity was tickled. The Russians, in their dealings with Egypt, choose their words more tactfully than the Americans do. The terms of the Eisenhower doctrine sounded humiliating in Egyptian ears: it offered the Arabs "mutual defence," a phrase and a concept used by the British and resented by the Egyptians for twenty years. American talk of "interdependence" is not calculated to appeal to a newly independent, nationalist state. Although the Egyptians knew that the sweeping promise of the Russian delegate, Mr Arzumanian, at the Afro-Asian conference in Cairo—to give Soviet aid to any country that asked—could not be carried out to the letter, the spirit of it delighted them.

IN the face of the Russian success in Egypt, the West can either continue to hold off—or it can enter the lists. Holding off means giving the Russians time, and it would be strange if they did not use this time to make the western position worse. Entering the lists need not mean a competition with the communists on the lines that everything they can give, the West can give better ; nor does it mean giving President Nasser whatever he may ask on his own terms. But it does mean that the policy of treating Egypt on the assumption that Arab nationalism is merely an unpleasant, temporary phenomenon is unprofitable and ought to be dropped.

However great President Nasser's demerits, western ostracism is no more going to unseat him than it unseated General Franco. If a new kind of Egypt has come to stay, the West cannot afford not to get on normal working terms with it. For the present this means trade, financial clearing, and diplomatic relations. Later it may even mean aid as well. The Egyptian plea that western help is needed to counter Russian influence is the sort of propaganda that raises hackles ; yet it is valid, as the United States government is beginning to recognise.

Africa Awakened

The pace of African emergence from tutelage to independent status is visibly quickening. Events in four capitals—Accra, Nairobi, Salisbury, and Pretoria—this month have dramatised the problems of the continent. The article below looks at the strengths and weaknesses of the independent African block which met at Accra. The succeeding article examines the particular test British policy is undergoing in Kenya. Reports on the political crisis in Southern Rhodesia and on the Union of South Africa after the Nationalist party's electoral triumph appear on pages 321 and 322.

A Beginning at Accra

INDEPENDENT Africa's first conference, to which Dr Nkrumah has been playing host at Accra, just failed to be a big stir. But its ripples are meant to spread, and may spread awkwardly for the colonial powers. Time must tell. Accra, simply, is a beginning. It is the start for the young African states as Bandung, more pretentiously, was a start for the Asians: the announcement of a new block, perhaps of a new force, but above all of their own, surprising existence in diplomacy. It need not take too long before African meetings make a pretty big splash—in the headlines at least.

But this time, while the men of Accra talked to themselves behind closed doors in one corner of the continent, the important news for Africa seemed to be coming from everywhere else. Dr Nkrumah's conference, planned for a dozen years to propagate his pan-African ideal, met in a week in which urgent, and often highly unplanned, things were happening to other people. The record was eloquent enough. The French Assembly overthrew the Gaillard government for thinking of talking to the Tunisians, and by that act opened a public split between French and American policy on Algeria. In South Africa the party of apartheid further increased its dominance, unseating the United party leader in the process. The Kenya government swooped on seven African leaders and charged them with preventing other Africans from standing in the special elections under the Lennox-Boyd constitution. The new Southern Rhodesian prime minister, trying to win his way into parliament, was turned back by anti-liberal voters at Bulawayo; he has called a general election. The ruling United Federal party has now been split. Morocco had a sudden political seizure (serious enough to recall its chief delegate from Accra) when its prime minister joined forces with the opposition against the Istiqlal. And in Algeria itself the long war went on.

YET it was at Accra that history was made. It is true that the African states were invited in 1955 to Bandung—where the Egyptians, at least, were in their element—but they could then still be counted on the fingers of one hand. Now they are eight: Ethiopia, Ghana, Liberia, Libya, Morocco, Sudan, Tunisia, and President Nasser's United Arab Republic, the one African state with a foot in two continents. (The South Africans, though not on bad terms with Dr Nkrumah personally, refused to join his new club.) What matters is that since the early Afro-Asian days the eight Accra powers have been learning to make their own way in the world and within the United Nations. Their fraternal declaration was fully due.

But whose fraternity is it? Probably not even Dr Nkrumah himself can yet recognise at sight that "African personality in international affairs" which he charged his colleagues to exhibit abroad. The personality may still be built by the independent Africans as relationships among themselves, previously too distant and difficult, are developed. But at Accra it was a figment, no more. It has taken the first conference of emergent Africa to demonstrate round one table how variously the independents are already divided.

Of the three monarchies, one (Ethiopia) is the antique inheritance of the Lion of Judah, the second has just been elevated from the old but precarious Sultanate of Morocco, the third was created from the desert sands after Italy's expulsion from Libya in the second world war. Ghana, a parliamentary democracy, retains its place in the Commonwealth and, a trifle uncertainly, acknowledges Queen Elizabeth as titular head. The Sudan keeps cautiously uncommitted—particularly to its authoritarian Egyptian neighbour. The last three independents, the republics of President William V. S. Tubman in Liberia, Habib Bourguiba in Tunisia, and Gamal Abdel Nasser in Egypt have almost nothing in common except that they are republics. Two of them are now open rivals.

THESE differences count already, and will count more as the Africans get to know each other in the future. But what matters immediately is the one experience they have almost all shared: European colonialism. (The Liberians, Afro-American colonisers in an aboriginal Africa, have an experience, and possibly a psychology, peculiar to themselves.) In such a convocation, met with one purpose—to agree—and using one argument—anti-colonial morality—it was all too easy to concentrate on the cockshy issue that divided everyone least. The FLN in Algeria was only one, the most obvious, nationalist organisation looking to the Accra powers for direct political support. Had Presidents Nasser and Bourguiba descended in person, each bidding up the price in hopes of keeping the FLN in his own pocket, the less-committed Accra negotiators might have been confronted with an unduly stiff anti-colonial manifesto to sign at the final meeting. The Liberians and Ethiopians, who have always made it clear they have no wish to stir up trouble for the West—and for themselves—among their neighbours, might well be relieved that the big names chose to stay away this time.

As it was, President Tubman arrived with a French decoration on his lapel and did not mention Algeria in his opening speech. Dr Nkrumah himself, although more pointed, seemed intent on impressing his colleagues with necessary moderation, and although the FLN delegates were eventually heard it was only after reports of a stand by the Sudanese and the three negro powers to restrict their position. Even then, the FLN, under what was thought to be Moroccan influence, did not press things as far as it might have done.

IF this mildness was meant to reassure the outside world, and particularly the United States, Accra's message was still easy to read. It tells the colonial powers that someone else is writing a time-table for African independence. But, perversely enough, it is the faster colonial time-tables that have attracted independent Africa's harder looks. It has not been the Belgians and the Portuguese (who simply say that no time-table is needed) or the distant Afrikaners (who have handled Dr Nkrumah with some skill) that the Accra eight have really been talking about. What concerns them, besides Algeria, is the pace of change in Cameroon (where a nationalist *maquis* claims to exist), throughout the potential federation of French West Africa, and in Nigeria and Kenya. For it is the absentees, the Africans whom Dr Nkrumah did not invite, who have most to gain from the conference and who, once they take their place in a new African state system, can dominate the affairs of the continent and overshadow the little Ghana which has paved the way.

Nigeria, if it proves viable, with its population of more than 30 million, is the black African giant of the future; together with a West African federation or federations it could bring the seat of African power south of the Sahara and away from the Moslems of the Mediterranean coast. The clash of interest is beginning. The West Africans fear Morocco's claims to Mauretania, while the recent flight of four Mauretanian leaders to Rabat exemplifies Moslem anxiety to escape isolation within a black African community. On the other side of the continent the Ethiopians are worried about Egyptian motives in Somalia. Even Dr Nkrumah, who wants to have his Volta dam financed whatever happens at Aswan, has just accepted Israeli assistance in running a shipping line—a declaration that black Africa is not there to back Arab interests in the Middle East. Were the Maghreb once united from Morocco to Libya (a process about which the Tangiers conference should have something to say) and West Africa on its feet, the danger of Egyptian influence must sensibly decline.

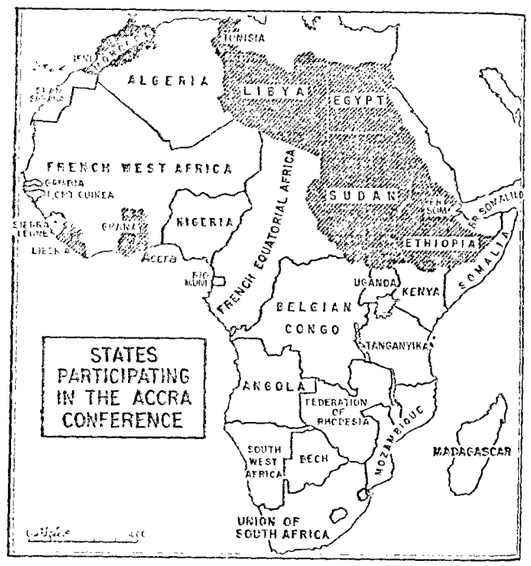
NEVERTHELESS, the moderation which the Accra powers have shown this week, and may show in the future, depends in the last resort not so much on expectations of sterling or dollar aid or on distrust of Egypt's flirtation with Moscow, but on the skill and imagination the West displays in putting its African house in order. Even if American pressure eases France out of Algeria one day, will France take the right steps to stop Cameroon exploding? The Moroccans are pushing the Spaniards out of their enclaves; will the Portuguese take the hint, or do they hope to hold another, more grandiose Goa? The South Africans now seem to have turned the decisive corner away from racial integration; for the moment they are probably too distant for the Accra powers to spend too much time on them, but their turn will come. And as for Britain, it should not need Sir Roy Welensky's warning that Russia "is looking to African nationalism as a prerequisite for revolution" to grasp how much is at stake. The Rhodesian tussle has been made dramatic by Sir Edgar Whitehead's by-electoral defeat and Mr Todd's secession; the Central African experiment has reached its test. Finally, Kenya offers the Colonial Office a nettle to be grasped. The following article suggests a British policy for this awkward trial in gradual emancipation.

Kenya in Context

KENYA is embarking on a new political course under Mr Lennox-Boyd's constitution. This week the legislative council, sitting as an electoral college, appointed ten of the twelve special (or cross-bench) members which the constitution has added to the council's numbers. But it was ominous that all the African elected members boycotted the meeting, and that in the previous week Mr Tom Mboya and six of his colleagues among the African elected members were charged with conspiracy to prevent other Africans standing in these special elections at all. Mr Mboya wants an African majority now, and while Kenya's liberals are eventually prepared to accede they have not been encouraged by Mr Mboya's intransigence at this early stage.

"For anyone who believes in democratic principles an African majority in the legislature is inevitable," Mr Vasey, the colony's Minister of Finance, declared recently. He stated what is obvious in the long run: there are 6 million Africans in Kenya to 200,000 Asians and 60,000 whites. No dam woven of fancy franchises can hold back the pressure of that majority indefinitely in the world of today, nor can the complexities of an ingeniously balanced colonial legislature, special members and all, for long divert it. But with the African

elected members in the deck for intimidation and attempting by extra-parliamentary means to keep out of the legislature any black man with views different from their own, the question must be asked: what sort of democratic principles are to govern progress in Kenya?



Recent events—the special elections (in which Mr Vasey, a liberal, was beaten by the luck of the draw), Mr Mboya planning a new kind of Kenyatta *cause célèbre*, and arrests for new Mau Mau oath-taking in the reserves—have put British policy in Kenya in a dilemma. Clearly the only questions now are when the majority in Kenya will find expression in the government, and how; and who the African leaders will then be. A lot of progress has to be packed into a tight timetable, yet the train is not even ready to start. On the contrary, the "emergency" is technically still on; the African leaders are deadlocking normal political advance, while the government's refusal to swallow the purge prescribed by the East African Royal Commission four years ago lost a golden chance to unclog the country economically.

To get Kenya from its present constipated condition to some sort of responsible multi-racial government would take all of five years, even with skilled handling; even then it may be a long way from full self-government. But within five years Kenya will certainly have another independent African state on its northern border, while the whole of west and Saharan Africa (conceivably including Uganda) will be composed of independent or nearly independent African states. Whatever the hard realities of East African backwardness may be, it would be folly to think that this will not greatly change the climate in which nationalist claims will be pressed; the only event that might work the other way would be the spectacular collapse of some new African state.

THE danger is that because the new Lennox-Boyd constitution has now got under way, and because theoretically it runs for ten years, it will be thought that something has been settled, at least for a time, in Kenya. It cannot be too strongly stated that the new constitution settles nothing. It puts a stronger African nationalist block into opposition; and it balances this by bringing into the house enough official members and cross-bench members to enable government to vote that opposition down. The Africans led by Mr Mboya are determined to show that they can build a glacial nationalist movement, an unbroken irresistible black front; and, restricted in their freedom to organise political parties, they resort to intimidation to do so. The government inevitably reacts by putting down intimidation and by restricting African political organisation, which deepens African hostility. Each side seeks to wear out the other. This is a poor basis for political progress towards self-government.

To the Europeans, Mr Mboya's present non-co-operation is sheer perversity. He has been made a fair offer. The European attitude has, they feel, become liberal. If the elected Africans would co-operate, obviously they would in the fullness of time come to power in an orderly and British manner; and then Kenya would remain a country in which Europeans and Asians could still live, serve, make money and enjoy their distinctive ways of life.

To the African leaders, however, such an offer smells like a trap. Though they are buoyed up by the feeling that black nationalism is the winning cause almost everywhere north of the Limpopo, they are fearful of being baulked of their reward. The 5,000 white farmers in the Highlands at one moment look as formidable to them as the embattled French in Algeria or Afrikaners in the Union; at another, they seem so weak as not to be worth conciliating with any promises about minority safeguards. In a country where black outnumbers white by 100 to 1, the Africans yet fear a common roll (as a means of breaking the communal deadlock) lest by

some Welenskian legerdemain they find themselves signing for a scheme in which each white vote is worth more than 100 black.

Not only do they fear that if they worked for political advancement within a multi-racial government they would become prisoners of white chicanery; they also fear to expose their own incompetence. It is one thing for West Africans to run governments with the support of obedient colonial servants; quite another to work with tough European farmers and business men with no tenderness for African susceptibilities. So they react with the cliché that efficient government is no substitute for self-government. They shout that a poor African-ruled Kenya is better than a rich white-ruled one. Privately, they do not believe that, if they got power, the country would go smash even if they were inexperienced: they seek the European lands and fixed assets as a comfortable nest egg to tide them over.

To state the Africans' attitude in these stark terms is not to be unsympathetic. Their uncertainty is real, their suspicion ingrained. Nor does the present more flexible mood of the Europeans purge their past mistakes. If their wealth now excites African covetousness, it is because Europeans have clung to privilege and to the notice "trespassers will be prosecuted" when, by implementing the Royal Commission's ideas, they might have relied on their own productivity and skill to make them necessary to any future African government. They must blame themselves for much of the mess they are in.

THE fact must be faced, therefore, that the Lennox-Boyd settlement can only be a starting point for new measures. What should these be?

The advantage of the Lennox-Boyd constitution is that it enables Kenya to be governed by a ministry of all races without Mr Mboya; and clearly there can be no surrender to Mr Mboya in his present mood. But that alone is not enough: what is needed is to set up the goal of self-government, but to give Africans an alternative route to get there. What Mr Mboya needs, in fact, is competition—competition with his policies and with his leadership. The government should seek to increase the number of African politicians in Kenya: there are too few, not too many. Let the four Africans who have come into the legislature this week for the special seats be offered ministerial office; they should also be given the authority and standing (and the protection, moral and material) to enable them to command respect.

Beyond this, steps should be actively taken to bring more Africans into the chamber as representatives of multi-racial constituencies, perhaps on the Tanganyika model in which the franchise is equal. Only in this direction can the country move from a colonial constitution towards responsible cabinet government. African nationalists might win such seats. The ideal is to create seats which nationalists can win, but not by intimidation or by racialism. The soundest policy now is not just to rule Kenya firmly; but to rule it so firmly that politics are possible. It should be made plain to Africans that they will be able to come at a fair pace to a decisive voice in Kenyan affairs—but only by orderly methods, not by politics with a Mau Mau spirit behind a western façade.

Such a prescription for getting Kenya on to a forced march to multi-racial self-government may seem difficult. It may be conceded that it would need an energy and decisiveness about objectives and methods only seen in Kenya at the height of Mau Mau. But what is the alternative? If the Europeans and Asians do not wish in the end to be ruled by governments dominated by men of Mr Mboya's outlook, they must find Africans with a different outlook to whom to confide their future. As it is, it looks only too likely that, on the African tide, the last word will be Mr Mboya's.

NOTES OF THE WEEK

WAGE DISPUTES

Mr Cousins Missing the Trains?

THE attempt to drive towards a railway settlement seems to be proceeding on nearly, if not quite, the right lines. Sir Brian Robertson has said that, once he has formed a clear estimate of the economies in railway working he can expect this year, he hopes to be able to give the unions a date by which wages can again be reviewed; it would be wiser to promise that this review will take place once certain target economies have been achieved, rather than to talk about dates yet awhile. But the sort of post-dated wage bargain now being discussed promises, at any rate, to be many times better for the economy (and for the railways) than the sort of wage surrender in which the commission has indulged in every other recent year. The detailed problem of the railways' finances is discussed on page 331.

The leaders of the three railway unions have shown themselves to be praiseworthily canny men in these last two weeks. Next week will show whether they will continue to display this caution in the case of the London Underground train drivers; workers on the Underground were refused a wage increase this week, but their claim still has another stage of the arbitration machinery to go through. It is now increasingly possible to hope that the strike of London busmen, which is due to start on Monday week, will, if it does go forward, be a busmen's strike alone.

Mr Cousins came back from Jugoslavia this week to make preparations for this bus strike. Financially, his union could sustain a strike for a long time. As the London busmen form only a small part of the Transport and General Workers' Union's membership, it is being said that even an eight-week strike by them would cost only £1¼ million out of the union's total available funds of over £11 million. But this calculation is on the assumption that strike pay for each striker will be only £2 a week, plus 10s. a week for his wife and 6s. for each child. The average central London busman is thus being asked to give up many pounds a week in earnings—in a fight in which his declared aim is to get only an extra 2s. a week above the 8s. 6d. recently offered to him. The men do not seem likely to enthuse over this prospect, and there must be some danger to Mr Cousins that after a time the strike might simply peter out. Without support from the railways or the Underground men, a bus stoppage may cause less massive inconvenience to

most of London's commuters than is generally supposed, and the public demand for a settlement may not be insistent. Mr Cousins therefore faces an awkward personal decision: having probably missed the trains, he must suspect that the course of discretion would now be not to stop the buses. It seems a poor sort of gamble to bring most of his men out on odds of a hiding to two bob.

THE SUMMIT

Too Many Angels

It is, of course, perfectly legitimate for America, Britain and France to make propaganda out of Mr Gromyko's insistence on seeing their ambassadors separately rather than together—just as it is legitimate for the Russians to make propaganda out of American bomber alerts. All's fair in love, war and summitry. Both Russians and westerners are out to score all the points they can along the road to the summit. Both have in mind the need to be able to blame the other fellow when disenchantment ensues. The in-fighting will get tougher yet.

So far, the Russians have scored most of the points. This has hardly been difficult so long as they could represent themselves as eager, and the West as reluctant, to initiate talks. It is tactically shrewd, therefore, for the western governments to play up the Soviet rejection of their proposal that a diplomatic working group should get down to things in Moscow. But it is all quite irrelevant to reality. The Russians have long made it clear that they are not interested in a summit meeting on the 1955 model—*that is*, a meeting with the Americans, British and French. Last week Mr Gromyko fulfilled (indeed, over-fulfilled) his promise to "start an exchange of views" by summoning not merely the three western envoys, but also those of twelve communist governments and of India and Sweden. Mr Dulles may object to the participation of "neutrals," the Foreign Office and the Quai d'Orsay to being equated with satellites; but since the core of a top-level meeting must in any case be a Russo-American confrontation, it scarcely matters how many other angels are theoretically dancing on the summit. Indeed, the two super-powers could slip off together into a corner more tactfully at a conference of eight, twelve or fifteen governments than if there were only four.

Mr Eisenhower's public rejection on Wednesday of the idea of a "summit for two" was only to be expected. Less explicable were the suggestions this week that the latest Soviet tactics have led him to have second thoughts about the wisdom of having a summit meeting at all. If this is so, the President must have clung longer than most to the belief that the Russians actually intend to come to terms. On the more likely assumption that their chief aim is to exploit western reluctance to meet them, it is surely playing into their hands to start back-tracking at this stage.

When "Fail Safe" Fails

Mercifully, time has not yet been altogether annihilated by the rocketeers. It is estimated that Soviet nuclear missiles would need half an hour to reach the United States across the North Pole. This slender margin, plus an Arctic radar warning system, enables the thirty-minute men of the Strategic Air Command to get airborne and on course for retaliatory strikes at Soviet targets. As their lumbering old subsonic B-52s take several hours to travel the necessary 5,000 miles, it is easy to calculate that they can never get far before it becomes clear whether the objects seen on the radar screens were or were not rockets. The "fail safe" procedure, under which they turn back in any case if they do not receive positive orders to proceed before reaching a certain point, is an assurance against the risk of communications breaking down. There is no pressing on regardless.

Hence the calm with which the world at large, and the Security Council in particular, received last week's Russian complaint about these "provocative" American arrangements. Even the Soviet rulers do not seem to take their own case very seriously. In New York on Monday, they were quick to withdraw their resolution as soon as they had achieved their objective of using the council as a sounding board; and in Moscow the same evening, Mr Khrushchev put on his familiar show of convivial bragging without a trace of anxiety about being near the "brink."

Nor can the Russians have really hoped to get the Americans to promise to be good little sitting ducks. Suppose the roles were reversed, and Washington, not Moscow, could claim the ability to hurl ICBMs over the Pole. The Soviet air headquarters at Omahasky, Nebraskov, would surely be all set to get its nuclear bomber fleet off the ground at the first flicker of a radar screen in Novaya Zemlya. And no doubt the Russians, too, would operate a "fail safe" procedure. Perhaps they already do; who can tell? But the really disturbing thought provoked by the disputation is this. Even the fastest bombers can be, and evidently are, turned back to base in good time when the alarm proves to be a false one. Missiles, one suspects, cannot. When both sides come to depend on ICBMs, what new safety measure can replace "fail safe"?

BUDGET DEBATE

Swopping Their Battlefronts

"The right honourable gentleman and his honourable friends recommend maximum production as top priority. Our top priority in present circumstances is the maintenance of the strength of sterling and a stable price level." Thus the Chancellor in summing up one of the most interesting post-budget debates of recent years. It is, after all, a considerable change from 1955 to find that the principal tenor of the exchanges lay in this: that Labour was putting its main emphasis on the need to increase total income, and the Government was putting more emphasis on the need to avoid unfairness in the distribution of income—as exemplified by the effect of inflation on (to quote the Financial Secretary to the Treasury) "the pensioners, the sick, the disabled, the widows, and those living on small fixed investment incomes." As all these latter are minority groups, it is a fair guess that in this exchange of arguments Labour has succeeded in picking up the politically more popular clothes in the country.

In the Commons, however, the honours went to the Government, and Mr Amory continued to enhance his reputation as a parliamentarian. He intimated again, in his winding-up speech, that his first priority "in the event of an incipient recession" may be bigger foreign lending "to assist exports." One might have expected an Opposition charge that it would be better in these circumstances to increase investment at home than to bolster up the demand

of those of Britain's customers who have run into debt; but the charge did not come. Among measures that could be used to stimulate home demand, the Chancellor emphasised that "arrangements for holding bank credit, hire purchase and the raising of capital can be modified or removed at any time." "The same applies," he said, "to interest rates"; in his speech he put his reference to a possible lowering in interest rates after his reference to a lowering of other controls, and it would be nice to think that he might observe the same order of priority in his programme.

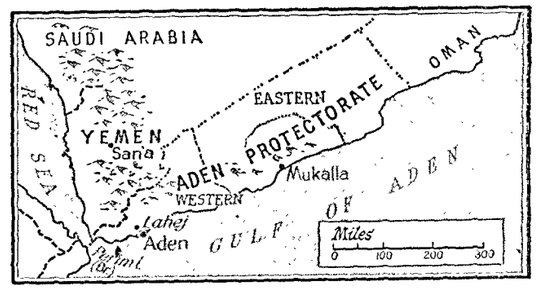
In his study of investment programmes in the public sector, the Chancellor has thankfully found that there is a "substantial volume" of appropriate anti-recession projects—"short-term schemes which can be started quickly and completed within a year or eighteen months." On the consumer front, there are also many things that could be done quickly "if it comes to the direct stimulation of consumer expenditure," but Mr Amory restrained himself from going into details because "most of what could be said would sound more like a cookery book . . . than the actual menu to be served on a given occasion." He made no reference to the possibility of introducing a second budget in the event of incipient recession; probably he should have done. There was, however, an undoubted air of quiet confidence in all these references to the ways in which home demand could be quickly restimulated, if he felt that he should give the word.

To Live with the Dollar

Where Mr Amory cannot be so confident is whether the world will be able to ride off a dollar liquidity crisis this autumn, whatever happens to British demand; there was, indeed, something of a conspiracy of silence about this danger all through the debate. But the delicate international negotiations that are an obvious need for this nervous spring are, as one had suspected, afoot. "The Government," said Mr Amory in one of his most interesting revelations, "have had some discussion with the American government at official level" about "long-term financial liquidity and other problems."

This seems to confirm the guess made by *The Economist* on March 1st about the significance of the unpublicised British "knights' moves" then in progress at Washington. Mr Amory continued, in this dissertation on the need to inject more hard currency credit into world trade:

> In a few weeks' time, there will be a meeting of Commonwealth officials at which it is hoped that the matter will be discussed further. There are a number of solutions, but all involve some expansion of the scale of existing international co-operation.



Once again, the Chancellor did not go into details, although he did say, perhaps not very hopefully, that it would be in Britain's interest that "the price of gold should go up." But he is "strongly of opinion that the time is now approaching, if it has not already arrived, for another forward move in international economic co-operation." A much more effective International Monetary Fund? Stand-by credits by different national central banks? Some sort of Atlantic Clearing Union? Five years ago discussion was rife about these and other possible ways of making it easier for expanding world trade to "live with the dollar"; a main feature of this summer might be—it certainly ought to be—that all this discussion should again be unblushingly and determinedly taken up.

ADEN

Up a Blind Alley

If it is true that misery loves company, then only the French, with their trouble in North Africa, can derive any comfort from the sending of British warships and troops to Aden.

It has long been said that the British Government is fighting a rearguard action at Aden. The strategic position of Aden has been rendered more important by the spread of Egyptian influence in Arabia and the Persian Gulf. Has the position of the British proprietors of Aden been that they one day expected to sail away and leave it to the Imam of Yemen or to some other petty local ruler? There have been few signs of that. The location of the great refinery at Aden appeared a masterly plan. After the loss of Abadan it seemed wise, no matter where the crude oil came from, to have the refinery on one's own property. A new era in the colony and the protectorates could have begun then, for it was clear that the British Government meant to stay. It was a time to insure the British position by making Aden such an attractive proposition that the Yemenis could look on with all the greed and envy they liked, but could make no headway with the people either of Aden or

of the protectorates. Instead, the coming of the refinery has brought industrial strife, which has made more friends for Nasser. The general policy of keeping the place a backwater was persevered with for too long.

Efforts to set up a federation of the twenty-three petty protected states came too late. When the plan was first proposed Nasser was still a soldier of King Farouk, and Imam Ahmad of Yemen had no foreign friends at all. By the time the Government tried to put it into effect the missionary work of Cairo had begun, and the Imam had begun to have some success in recruiting dissidents in the protected areas.

Politics in south Arabia have now reached the stage when the inhabitants, or many of them, are clamouring to trade indifferent British protection for the promises of Cairo and the claims of the Imam. They see no danger in trading an old-fashioned imperialism for the new one that is now all the rage in the Arab world. To them, Russian activity in the mountains and harbours of Yemen only emphasises British inactivity for the past hundred years.

The British Government cannot now give in without providing Nasser with another triumph. Perhaps it is necessary to send in the troops. Perhaps it is necessary to hold on. But it is sad that Aden, after London and Liverpool the busiest port in the Commonwealth, should have been left far behind in every way for so long.

MALTA

A Prime Minister on Strike

MR MINTOFF'S "resignation" as Prime Minister of Malta should be stigmatised for what it is: a prime minister, who has run out of money for the management of essential services, and who is unable to raise more of it from Britain and unwilling to raise more of it at home, has thought it consistent with the dignity of his office to go on strike. A dissolution of the Maltese parliament and an early election will not necessarily restore matters to order, for Mr Mintoff might well be returned in emotional triumph. It would be best to recognise frankly that for some time to come the political side of the government of Malta is likely to be a matter, not of professional administration, but of amateur dramatics.

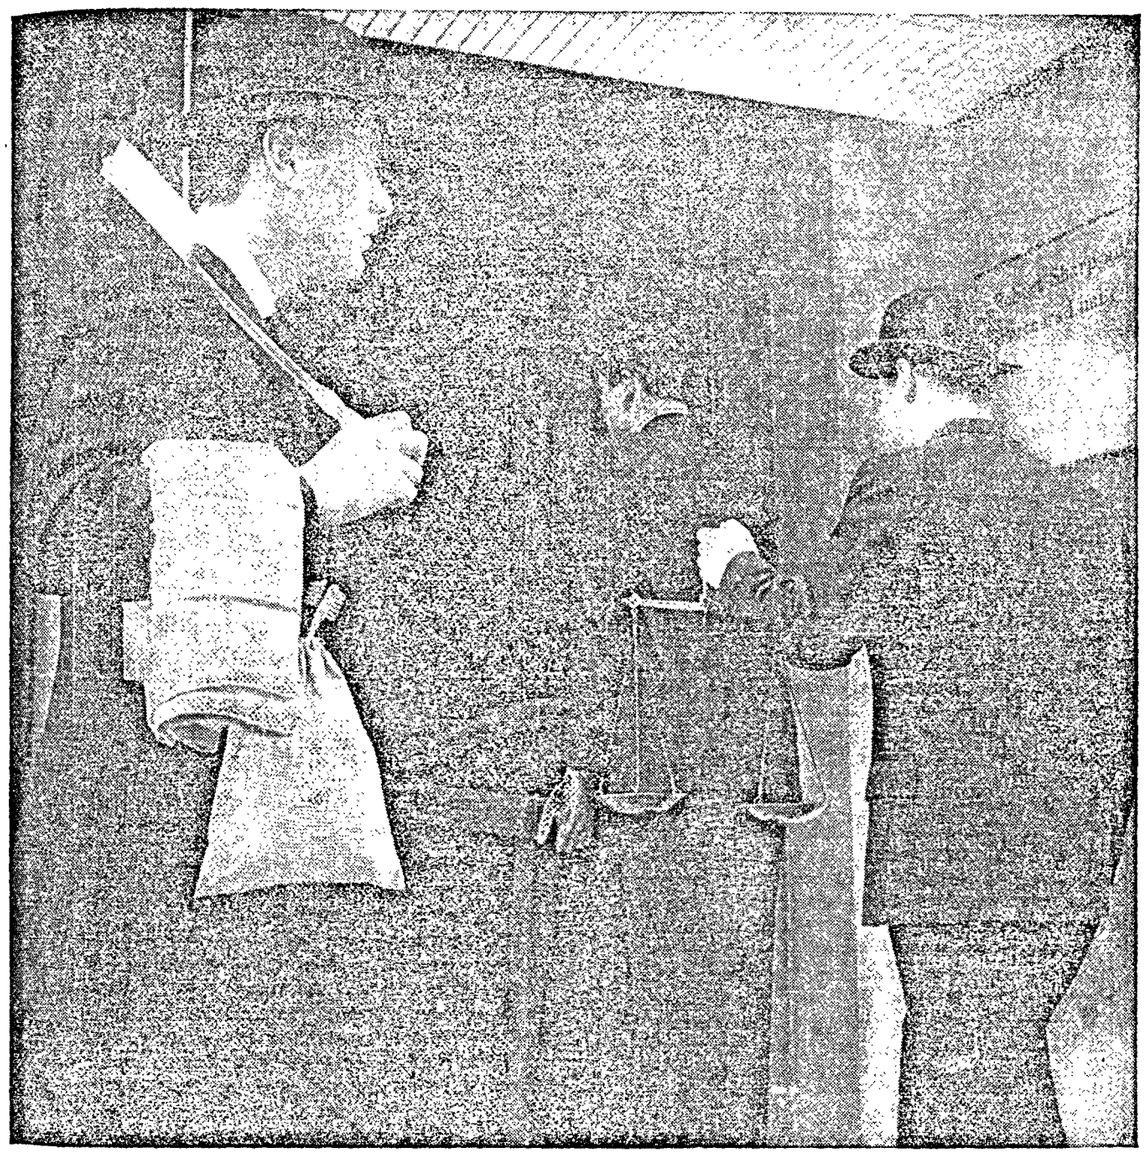
Britain's interests in this matter are plain. They are, first, and most important, that the island should not become another Cyprus; and, secondly, that the British Exchequer need not become Malta's milch cow. The strictly military importance of the base, as Commonwealth terrain, is rapidly declining; the shadowy fear that Malta might become a communist enclave haunts British policy in the background, but only monumental mismanagement by both Britain and the Maltese could bring that about. The best course for Britain might well be if the Maltese people were now to hold, not an election, but a referendum: to find out whether their choice would really be for independence (which they would be unlikely to opt for in any calm vote, because independence would mean poverty), or for integration on Britain's original generous terms, or for Mr Lennox-Boyd's more recent compromise suggestions. Unfortunately, it will now be very difficult to work towards any such solution, especially if no Maltese can be found to run the country as something more than a disorganised anthill in the interim. Nevertheless, the proper course for Britain is to do all it can to expedite the opportunity for the Maltese people to make their own choice; and despite all that has happened, the best Maltese for holding office in the meanwhile would still be Mr Mintoff. For Mr Mintoff remains, on one side of his split personality, an exceedingly able man: his besetting tragedy is merely that he is apt to put love of his own vast pride in front even of his considerable love for his own country.

LABOUR POLICY

Lorries,

As usual at this season, press reports have begun to appear about Labour's projected policy statements for this year. As usual, party spokesmen have described some of these press reports as "ill-informed," but they generally provide a reasonable picture of the party's current trend of thought. All this year's leaks so far have suggested that Labour may want to look more moderate, but not necessarily to be so.

In road transport the reports have suggested that, under a Labour Government, the still-nationalised British Road Services may not necessarily re-acquire compulsorily all the country's long-distance lorries for hire, but that there may be greater restrictions on the grant of C licences under which traders are allowed to carry their own goods. This is without doubt the solution that the nationalised industry would like: BRS's long-distance lorry fleet is just about the right size now to secure economies of scale, and it does not much want to add a lot of other people's old lorries to it. Some of these private lorries, Labour might think, are not worth the compensation money, and marginal competition from them does little harm to big brother's profits. The much more effective competition, which the nationalised concern would like selectively to restrict, is that from traders who find it more economic to carry their own goods according to their own chosen timing schedules, instead of getting them carried according to BRS's schedules. There may be a case for one element of tighter restriction on C licence vehicles: greater restriction on the use of firms' delivery vans in big cities at certain times of the day. But any other new restriction would be a deliberate attempt to make Britain's transport system less efficient, in order to make the nationalised part of it—and, incidentally, the remaining private road hauliers—look more efficient by giving them a bigger monopoly profit.



Steel,

IN steel, by contrast, Labour does seem to be edging its renationalisation policy—if it has got to have one—the right way. To moderate Labour men, the only thing a renationalisation of steel act really needs to do is to renationalise the Iron and Steel Board. This board already has considerable influence over the industry's prices, production, investment research and exports. In fact, in dealing with the private enterprise steelmakers, that influence is now more effective than any the former nationalised corporation ever had. It is also probably presently tending to increase; under nationalisation it would no doubt increase further. The new Labour plan for steel is said to concentrate mainly on increasing the Board's powers, and to propose that the steel companies themselves, although their shares should be taken over, should be left with their separate names and individualities. Some Labour extremists had wanted to destroy these separate companies next time, merely in order to make any subsequent denationalisation more difficult. The reported new plan, if carried out, would therefore represent something of a victory against those who believe that the main purpose of making an omelette is to enjoy the sadistic pleasure of breaking up eggs.

, and Which Schools?

IN education, it is reported that the Labour planners do not propose to make the great public schools of Britain illegal institutions (which is no doubt very nice of them); that there is strong opposition within the party to "bolstering up" these "forcing grounds for a class-conscious elite" by granting a pursefull of state scholarships to poorer students wanting to enter them; but that a majority want the schools to "wither away," perhaps with the aid of some nasty-minded fiscal "reforms" to check family covenant arrangements that are designed to help the payment of school fees.

The big problem hanging over the party's education policy, however, concerns the state system of education, not the small private sector of it. The party's propagandists are anxious to be able to say that they are going to "abolish the eleven-plus examination." They think that this would be a vote-catching slogan with that great majority of parents whose children do not p[illegible] it. To some Labour extremists,

What do Robert Sharp's do?

Or better, what would Robert Sharp's do for you? What extraordinary talents have they which might interest you? How thorough are their marketing investigations? How reliable is their advice on pricing, packaging, distribution? How brilliant are their ideas when it comes to advertising? Why has their own business multiplied by five in five years? What size appropriation could you trust them with? How would they set about spending it? Would you be better off at the end?

"abolishing the eleven-plus" means in effect abolishing the grammar schools and the whole principle of selectivity in education; this could not be done at a stroke of the pen, but great damage might be effected by vicious attempt. Fortunately, there is some sign that moderate counsels may be prevailing here also: that Labour's platform of abolishing the eleven-plus will really mean merely mitigating the ordeal of relying mainly on a single examination on a single day, and setting greater store by teachers' reports. This would no doubt be accompanied by efforts to merge more grammar schools into comprehensive schools, but mainly for the purposes of experiment. There is no doubt, however, that the party's statement on education deserves to be the most uneasily-awaited of its policy documents this year.

JUGOSLAVIA

Belgrade's New Challenge

SOVIET-JUGOSLAV relations, always uneven, have taken a sudden turn for the worse. The trouble arose out of the massive draft programme, originally published early in March, for the seventh Jugoslav communist party congress. The Russians took strong exception to parts of it, and apparently said so in decided terms behind the scenes in Belgrade. Early this month they privately told the Jugoslavs that they would not after all attend the Jugoslav party congress; and last week they openly attacked the programme's "erroneous propositions." Last-minute amendments did not serve to blunt Moscow's displeasure, and so the Jugoslav Communists have been holding their congress in Ljubljana this week with practically no "fraternal" support from abroad.

The offending party programme contains nothing that the Jugoslavs have not said often since 1948. But for the first time it enshrines in an authoritative and comprehensive form their ideas not only on Jugoslav problems but also—most maddening for the Russians—on communism in general. The theory that different countries must pursue separate (in effect national) roads to socialism is deliberately spelt out. The primacy of the Soviet Union in the international communist movement is implicitly denied; so is the concept that "communist parties have a monopoly of every form of movement towards socialism." (This last point has a rather hollow ring in the light of Marshal Tito's diatribes against Mr Djilas on Tuesday.) No one should be surprised that the solemn presentation of these and other ideas should have stuck in Mr Khrushchev's throat, even though in the past he may have paid lip-service to some of them.

This new estrangement from Moscow is clearly a serious blow to the Jugoslavs, especially as in matters of foreign policy they have recently been lining themselves up more closely with the Russians. Yet there is little doubt that they will stick to their guns. On Wednesday, Mr Rankovic's uncompromising attack on the Russian attitude to Jugoslavia roused the congress delegates to what was in effect an anti-Russian demonstration. The observers from the Soviet block (with the notable exception of the Polish representative) absented themselves from the conference hall during this part of Mr Rankovic's speech. How much further Soviet resentment will be pushed remains to be seen. Will the Russians be so foolish as to send Marshal Tito to Coventry again?

FRANCE

M. Bidault Proves the Point

ADVOCATES of a reckless policy of reconquest in North Africa cannot muster a majority in the French national assembly. This has been shown by M. Bidault's failure to form a government after a week of crisis in Paris. As was logical, President Coty decided to call first on one of the opponents of compromise who had voted against M. Gaillard. M. Bidault, in spite of his past career as progressive Catholic and a distinguished resistance record, fitted the bill perfectly. Though a member of the Christian MRP, he has become in recent years one of the most vehement spokesmen of the colonialist Right. If his name and record could lead to some confusion, the list of M. Bidault's prospective cabinet ruled out any misunderstanding. He offered the post of minister-resident in Algeria to the ex-Gaullist M. Soustelle and the ministry of defence to the dissident Radical, M. Morice.

Evidently it was going to be a government of the *ultras*, and this was too much for the Socialists to swallow. M. Mollet announced that they would vote against. M. Bidault went on with his cabinet-making undaunted, but he was finally compelled to throw in his hand on Tuesday, when his own party—the MRP—decided to refuse its support. One week was enough to show that the Assembly's extreme intransigents on North African policy are more vociferous than they are numerous.

The course of the present crisis is complicated by the fact that cantonal elections are being held at the same time. These are roughly equivalent to county council elections, with the difference that more French deputies are directly involved. The first ballot showed no important shifts and confirmed the basic stability of the French electorate. The second ballot, to be held on Sunday, may give some indication of the likely party alliances in parliament. In the meantime, President Coty has drawn the lesson from the defeat of the candidate of the Right and has turned to M. Pleven, a man of the centre. It has been proved that the Right is not strong enough to govern; but can it rule negatively, by vetoing any compromise proposal for Algeria? M. Mollet and the Socialists probably hold the answer.

FREE TRADE AREA

The Key Drops Out

THREE contributions have been made in ten days towards better British relations with Europe and a more hopeful footing for the free trade area talks. The German leaders who visited London last week seemed aware that only they and the British Government are at present in a position to provide the western world with the lead that it needs. Dr Adenauer went home more convinced, as it appeared, of the political importance of the free trade area project, and prepared to throw his weight into the scales for a compromise.

A second contribution to better British relations with "little Europe" was made by Mr Sandys in Paris with his new proposals for co-operation on arms development and production. A start seems to have been made on breaking down the wall of mistrust in western Europe.

A third impetus for the free trade area has been provided by the joint statement by the industrial federations of six countries outside the common market—the Scandinavians, Austria, Switzerland and Britain. Few of their ideas are new; but this evidence of solidarity among industrialists strengthens the hand of their six governments in seeking early decisions on the free trade area project. The Austrians and Swiss have given the lie to fears that their countries might seek agreement with the common market on a bilateral basis. The next step for the industrial outsiders is to come to terms with their counterparts within the common market itself.

Outside France, many forces are thus pressing the negotiations forward. Even in France, thought is being given to possibilities of compromise. But at the critical moment the key to the negotiations has dropped out—the French government. The ministers of the six common market countries hoped to thrash out a compromise solution at their meeting this week. With France out of the game, they could not do so. As a result the next meeting of Mr Maudling's OEEC committee on May 2 looks like being fruitless. The next French government will not necessarily be any easier to negotiate with than M. Gaillard's was. But it will be better than none at all.

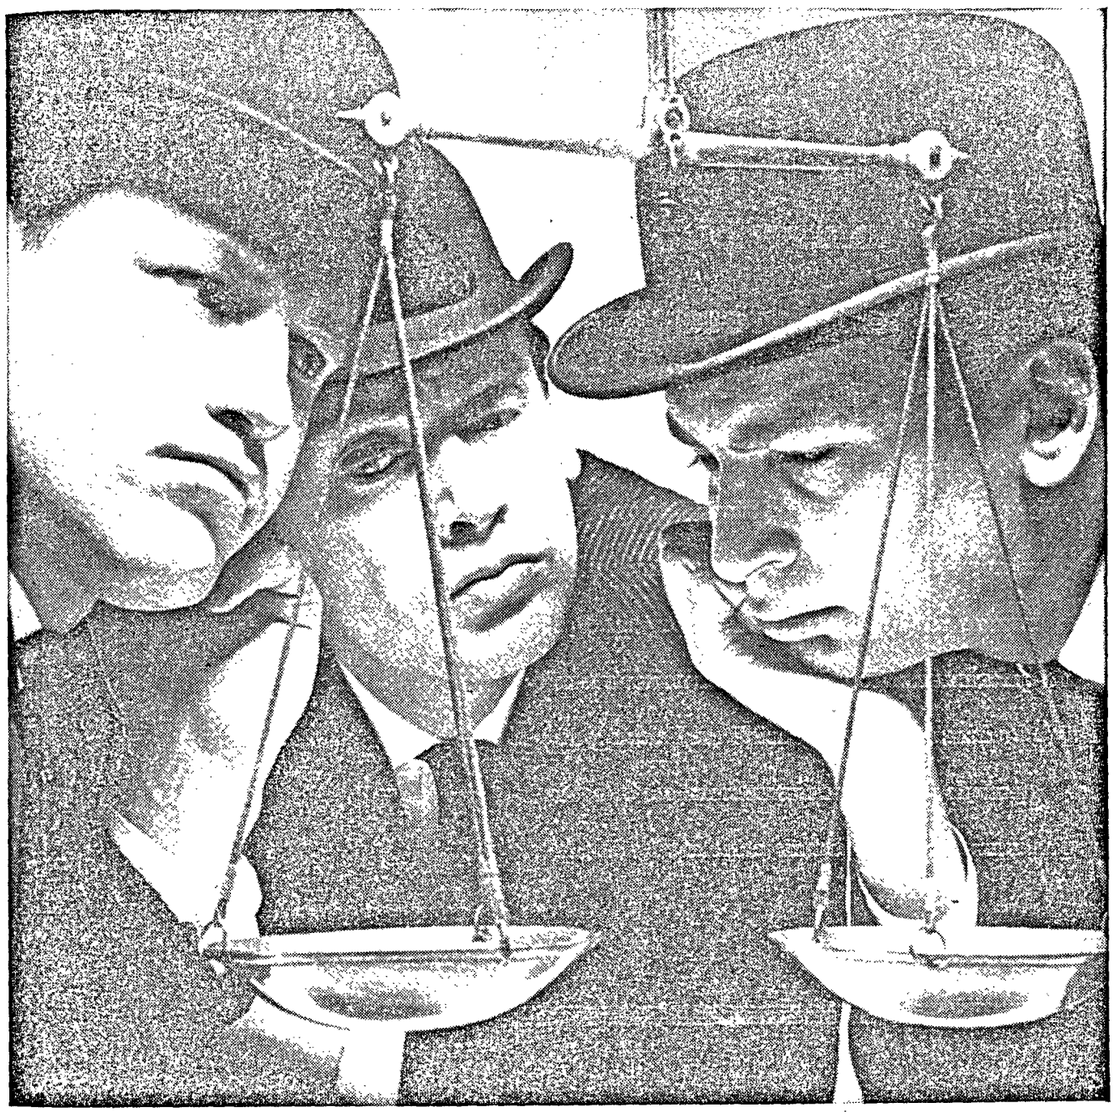
RENT ACT AMENDMENT

Much Worse than Expected

MR HENRY BROOKE'S Landlord and Tenants (Temporary Provisions) Bill is a much worse measure than one had been led to expect by his announcement on April 2nd, and for five reasons. First, the bill will last for three years, which is a far longer period than is needed to allow people of small means to find time to arrange for alternative accommodation. Secondly, the periods for which the county courts can suspend orders for possession are to be a minimum of three and a maximum of nine months, with a possibility of extending suspension of an order for a further six months on each renewed application; these periods, again, are longer than expected. Thirdly, a great administrative muddle is likely to arise from the clause which lays down that the rent to be paid pending a court hearing—and the *minimum* rent which the court can order successful tenants to pay after this hearing—will be "twice the gross value of the property occupied, together with rates and a reasonable charge for services where appropriate." Fourthly, the provisions about the *maximum* rent which the court can order a successful tenant to pay will introduce an eyebrow-raising new principle to the statute book of England. Fifthly, the scope of the bill is almost entirely arbitrary.

Consider this arbitrariness first. About 80 per cent of tenants, according to a reliable sample, had already agreed to new terms with their landlords before April 2nd; the lucky people under the bill will be a proportion of the remaining 20 per cent who had not made agreements by then, and who also were in accommodation for which the landlord had not signed an agreement with a *new* tenant for after October 6th. (These agreements with new tenants will still hold good.) The people lucky enough to qualify for the safety net seem likely to hold the landlord by the short horns in the first stage of their negotiations with him. Until he has agreed with them what is the proper controlled "interim" rent—which really means agreeing what is a "reasonable charge for services"—the landlord will usually not dare to go to court for an eviction order; for if this is not granted, the rent being paid at the time of the hearing will form the minimum that the landlord can be forced by the court to accept. The jamming of the courts, first with cases to decide on reasonable charges for services and then to decide if a tenant's means and circumstances are such as to protect him from eviction, seem likely to delay the making of any orders for six months—if not for more.

When the cases do begin to come before the courts, it is possible that more eviction orders will be granted than optimistic tenants may at present expect; the provisions that eviction can be suspended only if the order would cause greater hardship to the tenant than refusal would cause to the landlord are those that Mr Brooke promised on April 2nd. For those tenants who are allowed to stay on, however, the bill lays down that the rent payable, although it cannot go below what he is paying when the hearing opens, "will be the rent asked by the landlord, unless the court is satisfied that this is beyond the means of the occupier." This last sentence formally embodies in a statute the extraordinary principle that one private person can be compelled to subsidise another, depending on that other person's means. Nobody has ever suggested that the proper way of implementing price control for, say, bread would be to vary the permissible price from customer to customer—so that bakers in the poorer areas would all go bankrupt. It will be interesting to see whether Parliament lets this astonishing clause pass wholly without comment.



SMITHFIELD STRIKE

Paddling Their Own Canoe

SINCE last Saturday, 1,700 meat haulage drivers at Smithfield market, the centre of meat distribution for London and the home counties, have stopped work in support of a claim for a 15 per cent rise in wages. The men claim the increase on the grounds that their productivity has risen since their last pay award a year ago, because since then the speed limit for heavy vehicles has been raised from twenty to thirty miles an hour. The employers have replied that no driver has yet been asked to go any faster, that because the new speed limit on heavy vehicles has no relation to the job of driving meat round London less than one in ten of the strikers ever could be so asked, and that in any case the men's pay is on average 11 per cent above the basic rate. Since ten months of negotiation had produced no compromise acceptable to both sides, the men finally decided to come out on strike.

This has not so far caused any of the dislocation or shortages in the butchers' shops that had been feared. Because the hauliers drive meat from the docks to the wholesalers in the market, imported supplies have been below normal. But home abattoirs have made extra meat available to meet the gap, and the retailers who usually have deliveries made to them have driven up to Smithfield in vans and private cars to collect their meat themselves. Apart from the inconvenience caused to motorists by traffic congestion round the market, and that caused by loss of earnings to the striking van drivers themselves, the only real sufferers look like being the checkers for the haulage companies, most of whom now have no work and have been given a week's notice.

One disconcerting fact does, however, emerge from a tour of the market, and from a look at the list of charges for portering (1s. 3d. for hindquarters, 2s. 6d. for a sow) that seem

Robert Sharp's weigh up

The facts unearthed by research have been known to confuse minds less brilliantly lucid than those at Robert Sharp's & Partners.
Fortunately, all the directors and executives at 45 Albemarle Street have been trained in the very best schools. They follow the argument where it leads. Discussions tend to be unbedevilled by personal foibles. Analyses tend to be correct. Recommendations to be profitable. Robert Sharp's act for twenty-five national advertisers. All prosper. If you like working with good minds and have an appropriation of between £20,000 and £200,000 you should certainly consider Robert Sharp's seriously.

exorbitantly high : the monopoly of the Smithfield bummarees in carrying the meat the few yards from the wholesale stalls to the vehicles is still as tight as ever. This monopoly, it will be recalled, was challenged by a butcher in court in 1955, who said that butchers should be allowed to carry their own meat back to their vans if they want to, rather than waste time by waiting in a long queue for the favour of attention by the bummarees. The butcher won his case, but the Transport and General Workers' Union, to which the porters belong, intimated very plainly that the market had better not put the court's ruling into effect. As one union spokesman was reported as saying at the time : "the judge says butchers can carry their meat, we say they can't, and they won't." And, over two years later, they still don't.

KOREA

Frost in May?

SPRING, which softens the earth everywhere in the northern hemisphere, leaves the politics of South Korea as ironbound as ever. The Koreans go to the polls on Friday next week to elect a new parliament, the second since the fighting ended nearly five years ago. They seem unlikely to repeat their achievement in the presidential poll of 1956 when they surprised foreign observers and President Rhee alike by voting against his regime in large numbers. The opposition Democrats, who then won the vice-presidency and might conceivably have taken the presidency as well had their candidate not died a natural but untimely death just before polling day, have been quarrelling among themselves.

Some of their members have broken away to form the rival Unification Party, though their ideas about achieving national unity appear to be no more subtle than the orthodox blood-and-conquest proposals of most Korean politicians. At present the Democrats hold 43 of the 203 seats in the legislature. They are likely to do fairly well in the towns where the voting is genuinely unconstrained ; but the issue will be settled in the country villages, and here Dr Rhee's policemen are expected to keep their usual avuncular eye on his party's interests.

The one small political group which has advocated peaceful reunification, the Progressives, has now been banned. Its leader, Mr Chough Bong Am, sits in prison, having allegedly confessed to receiving funds from North Korea in the 1956 election. South Korean policy thus seems to be frozen even more rigidly in its formal threat to march back into the north. The chief hope of future improvement lies in the messages being exchanged between the Chinese government and the governments of the 16 countries that fought against its armies in Korea. The Chinese, having announced the withdrawal of their troops from the peninsula and suggested a form of vaguely "supervised" elections, have now been asked exactly what they mean by this. Might "neutral" supervision mean inspection by a United Nations team ? Would inspectors be allowed to enter polling stations in North Korea, or would they be confined to sitting frustrated in a few centres, as the truce commission was ? Would the elections be on a proportional basis, or would the North Koreans expect their quarter of the electorate to get half the seats ? Extracting an answer to these questions is liable to be a lengthy and laborious business. But they lead to the heart of the matter ; and sooner or later, whatever Dr Rhee says, the South Koreans will have to acknowledge that reunion will not be achieved by bayonets.

TERRITORIAL WATERS

The Narrowing Seas

THE combined forces of idealism, nationalism and realism have not brought success to the United Nations conference on the law of the sea at Geneva during the past nine weeks. The stickiest point for the representatives of eighty-six countries has been that of the extent of the territorial sea. Claims and proposals have ranged from the traditional British and American three miles to Peru's claim to two hundred miles for exclusive fishing rights. The Russians, for once, cannot be said to have scuttled a conference. Having had a twelve-mile limit for years, they suggested that a country should be free to choose any number of miles from three to twelve. But with twelve miles becoming more popular (Saudi Arabia and Egypt have adopted it since the conference began), who is to stop at three, six or nine ? The United States and Britain, having abandoned the three-mile limit, propose a six-mile territorial sea plus an additional six-mile fishing zone with the rights of those already fishing therein to be preserved.

These proposals and the compromises on them are based on the natural desire of each country to preserve existing practices, the disarrangement of which would affect industry or national pride. In the fishing ports of Britain, genuinely disturbed trawler men have uttered warnings of dear fish and chips if Iceland begins to enforce a twelve-mile limit.

If, as now appears, none of the proposals can muster the necessary two-thirds majority by the end of the conference

The Economist

APRIL 24, 1858

A DEMOCRATIC FOREIGN POLICY?

The democratic spirit, in this narrower sense in which we are using the term, is egotistic in its international relations, mainly, we believe, because all complex foreign relations and alliances tend to limit the direct influence of the masses on public affairs. An anxious and thoughtful foreign policy is scarcely possible without reposing ample trust and devolving great responsibility on the Executive Government. The people as such cannot have a *policy*. They may feel large sympathies, and strong antipathies, and have accesses of vehement impulse; but a foreign policy is essentially a thoughtful and reflective *scheme* of foreign relations, and this cannot be carried *out at all without taking for long periods of time a carte blanche* from the elective classes as to the line of conduct to be pursued. Hence the American Government has always been forced to keep as clear as possible of *hampering* alliances. The American Executive has no sufficiently durable power for such relations. What the President might do one day, a popular vote might deprive him of the power of adequately executing the next. Again, the change of Presidents often involves a complete change of political *bias* every four years. With such conditions of government to comply with, it is obvious that no scheme of foreign policy, such as Pitt's or Chatham's, could be sanely attempted by the Foreign Minister of the Republic. Indeed, democratic Governments can never long exercise the check on the capricious will of the masses, which the ascendancy of one mind and one deeply-considered and consistent purpose requires. The people are impatient of a scheme. They break in upon it from time to time with hasty vetoes.

on April 25th, the United Nations General Assembly will be expected to arrange another conference. Perhaps it will have more chance of success if the purely local problems that have blocked this one are settled before it convenes. If the legal experts of eighty-six nations can agree at all, it will be easier if they can do so away from the glare of publicity. The conference at Geneva has accomplished much of its purpose by clearing away not only many misunderstandings, but many points on which there is little or no disagreement, such as pollution, piracy and slavery.

If this conference breaks down there will probably be a general rush to declare the twelve-mile limit. Perhaps that will provide a working arrangement until some country, as yet unborn or uninformed, claims for itself a territorial sea of fifteen miles. Then it may all begin again.

HOSPITALS

Minister on the Defensive

THERE is a faintly peevish tone about the white paper which Mr Walker Smith has just published in response to the strictures on the running costs of hospitals that were made by the Select Committee on Estimates, 1956-57. That committee, after paying tribute to "the devotion and enthusiasm that prevails throughout the hospital service" both among voluntary workers and paid staffs, alleged that there was an "apparent lack of vigour" in the way that the Ministry of Health faced "some fundamental problems." The minister dissents, claiming for his department "vigour and determination, perseverance and constructive energy," and offering as evidence of these qualities the fact that a number of the select committee's criticisms and suggestions have "already been the subject of action." Listed under thirteen heads, the action amounts in most instances either to reminding hospital authorities of one or another desirable line of conduct (such as choosing members of Hospital Management Committees for their experience and ability rather than as representatives of local or other interests) or to "considering" the committee's recommendations (such as "that the Ministry of Health's Organisation and Methods Service should be established on a permanent basis and expanded so as to enable it to cover the hospital service as a whole"). An exception is the encouragement of joint contracting and service arrangements by hospital authorities, in which "considerable progress" is reported.

These things take time, and there is not much to be gained by nagging the Ministry on points of detail and tempo. The white paper, however, gives little encouragement to those who look to the ministry for a vitalising and dynamic drive which should bring the full benefits of unification to the hospital system. Admittedly there is a nice balance to be struck between an over-use of central power and initiative (which could devitalise the regional boards, clutter hospital administrators' desks with superfluous paper, and even bring about the withering away of the voluntary system) and an under-use (which misses the opportunities of leadership and even of mere co-ordination). But it is certainly not the first of these dangers which threatens the hospital service today. The Ministry of Health does not wield a deadening tyranny; it does not as a rule unduly badger the bodies over which it is set in authority; and no one seriously complains of its efficiency in the narrower sense. But neither does it inspire, cross-fertilise, or even, less ambitiously, provide a clearing-house of experience which would allow each hospital authority to learn from the mistakes—and the successes—of others. This is not the sort of deficiency that can be pinned down under specific headings in an official document. It is eminently a matter of personalities, general attitudes, and nascent tradition. One cannot conjure a Morant out of thin air; the fact remains that a Morant—preferably with more tact than the original—is what the hospital service needs.

POLAND

Warning Bells

MR GOMULKA is no longer carried forward by a wave of revolutionary and patriotic fervour. His is now the more prosaic job of prodding production in a country where hopes pitched too high have bred disappointment. The change in mood and method is illustrated by the move, sponsored last week by Mr Gomulka at the congress of trade unions, to curtail the powers of workers' councils. In October, 1956, these very councils, springing up spontaneously in factories throughout the country, played a crucial part in the movement that brought Mr Gomulka back to power. Their part then could almost be compared to that of the Russian soviets in October, 1917. Now the Polish leader feels compelled to curb the powers of an institution to which he partly owes his present position.

The workers' councils in Poland were not modelled on the early Russian or on the Jugoslav pattern. Indeed, since they sprang up from below, they varied greatly from factory to factory. In some, they tried to take over most functions of management; in others they merely sought better pay. But from the very first it was clear that, once conditions had returned to normal, a clash was likely between the councils, representing local workers' interests, and the central planning authority. To avoid such a conflict it is now proposed not to abolish the councils, but to make them subordinate to a new factory institution—the workers' conference. Such conferences, which are to meet at least once every quarter, will include delegates from trade unions and from the communist party as well as representatives of the workers' councils. The exact composition and functions of these bodies are not yet known, but party control will undoubtedly be strengthened. Mr Gomulka has also emphasised that workers' assemblies can supervise the factory manager; they cannot dictate his policy.

Poland is also faced with other labour problems, including acute over-employment. Attempts to sack and shift the redundant are meeting with strong resistance. The planners, on the other hand, plead that without such steps to raise productivity it will be impossible to increase the national income. Workers are pressing for higher wages and this has led to some strikes, which Mr Gomulka has now condemned. Mr Loga-Sowinski, the trade union chairman, was less categorical. When legitimate demands are repeatedly dismissed, he declared, workers should be allowed to stage warning strikes . . . "for the fraction of an hour." Ideally, the assumption should be that such a warning will suffice. Yet, on this, as in other aspects of labour relations, practice alone will show how much democracy is preserved in the Polish experiment as Mr Gomulka is forced to retreat from the hopeful positions of eighteen months ago.

WEST INDIES

The Last Lap

THE opening by Princess Margaret of its first parliament on Tuesday marked the penultimate stage in the West Indies Federation's peaceful journey towards independence. For the time being, the Colonial Office, through the Governor-General, Lord Hailes, reserves the right to go against the federation's executive body on questions of defence, foreign affairs and finance. But the constitution is to be reviewed in five years, and then, if things go smoothly, the final step to full dominion status may be taken.

The last lap has started well with the election of Sir Grantley Adams as the federation's first prime minister, who can give the young state the experienced navigation that it needs. He and his government have the formidable problem of knitting the islands together by common trade policy and free inter-island travel. But although it has many problems, the federation has one outstanding advantage over other multi-racial states. Colour is not the principal political issue. Although colour prejudice still exists in the West Indies, black and white are moving towards independence together and not fighting, as they are in many parts of Africa, for the power that independence will bring. This means that the journey to independence has not been bedevilled by constitutional deadlocks and wrangles about franchise. Although the islands are separated by awkwardly long distances, they are not divided by the racial emotions that pull at other emergent colonial territories.

The County Elections

LABOUR did very well in the county council elections, taking 222 seats from its rivals and 21 new seats, and returning the largest number of county councillors it has ever had—1305 out of a total of about 4000. This compares with 1096 in 1946, 831 in 1949, 1229 in 1952 and 1,040 in 1955.

Labour's most spectacular success was in London, where the direct swing from Tory to Labour was 9 per cent, which would be enough to give Mr Gaitskell a majority of well over 200 in the Commons if it were repeated all over the country in a general election. In no London division was this swing reversed. It was least—of the order of 3 to 4 per cent—in Shoreditch and Finsbury, South Kensington and North Lewisham; two out of the three council seats in this latter constituency were saved for the Tories, helped by the fact that one of their candidates was Mr Christopher Chataway, and there was a similar saving in neighbouring West Lewisham (5½ per cent swing) where the Tories put up another television personality in Lady Lewisham. Labour's greatest triumph was in another marginal constituency, in Dulwich, where the swing of 14 per cent gave them three new seats on the LCC; presumably because the Rent Act is important in this area, the swing was nearly as great next door in the Labour stronghold of Peckham. In addition to Dulwich, Labour gained all three seats from Conservatives in six other marginal London constituencies, and did rather better than average in five of them (the exception was West Woolwich, gained with a swing of 6 per cent). The Liberals put up candidates in eleven London divisions; their share of the polls in these averaged 9.7 per cent against just over 4 per cent in the thirteen divisions they fought last time. Their vote ranged from 3.5 per cent in Hollern and St. Pancras to 16.9 per cent in Hampstead, which was much better than in 1955 but still not very good.

In the other home counties around London, Labour marked up successes very much on its LCC scale. In Middlesex, Essex, Kent and Surrey, Labour representation is now higher than ever before. The Rent Act doubtless helps to explain this success in and around London, but it cannot wholly account for it, for there are eighteen other counties (including Lancashire and Cheshire) in which Labour strength is at a new peak, and only in one region (the north, including Yorkshire) is it below the 1952 figure. The failure to capture outright control of the West Riding of Yorkshire was Labour's one major disappointment.

The turn-out was generally low, lower even than in 1955 (when optimists had blamed the newspaper strike for the poor voting figures). In one Leicestershire division only 7 per cent went to the polls, but really freakishly small turn-outs of this sort occurred only where independents were standing against each other. The major parties may be boring the electorate, but not quite to this extent. Normally the turn-out in party-contested seats ran between 30 and 40 per cent. In London the vote was 30.3 per cent compared with 32.4 per cent three years ago; in Middlesex it was 33 per cent compared with 35 per cent; in the West Riding, perhaps significantly, it varied from 43 to 52 per cent. Across most of the country the Conservative vote was well below that of 1955. Even in South-West Hertfordshire, where the population is rising rapidly, the Tories dropped (in fourteen divisions) from nearly 23,000 to 18,000, while Labour's vote rose from 14,000 to 21,000.

But as a rule the Labour vote rose much less than this, or indeed dropped. It was the Conservative decline which mainly accounted for Labour's victories. For instance, in two-thirds of the comparable Middlesex seats, Labour polled worse in this victory year than it did in 1949, a year of local and national defeat. The three "barometer" Middlesex constituencies which have changed hands at every county election since the war—Hounslow Central, Wembley North-East and Willesden Kensal Green—were won by Labour in 1958 with 800 fewer Labour votes than nine years earlier, when they were lost. Similarly in Bucks, two Wycombe seats lost in 1949 were won in 1958—with similar Labour votes. In Northants, three of the four Labour gains were made on below-average polls (two of them on turn-outs which were among the lowest in the country).

It is probably reasonable to infer from these results that Labour will do very well in the May borough elections. To beat its 1952 record, Labour must elect 1,650 borough councillors (or, allowing for boroughs created in the last six years, 1,700) out of a total of some 3,300. This would make Labour gains of 400 to 450 seats quite probable, without counting the presumed extra effect of the Rent Act in the towns. And gloomy Tory MPs will have taken note that across the country, not merely in London, many Labour county victories were in marginal Tory parliamentary seats—for instance in Brentford, Watford, Devizes, Westbury, and Stroud (all with Conservative majorities of less than 4,000) and in Spelthorne, Heston, Wycombe, Banbury and Salisbury (with 4-8,000). Once again, the West Riding showed a different picture; there, indeed, the anti-Socialists even made gains in two Labour parliamentary constituencies with small majorities, Sowerby and Brighouse-Stanbarough. But that was a very meagre Conservative crumb of comfort amid such a fancy meal.

LETTERS

The Liberals

SIR—It is very difficult for the uncommitted voter, or any sort of voter, to know precisely what the Liberal party stands for on many important issues. For example Mr Mark Bonham Carter, MP, said in his letter to you of April 5th that Liberals preferred price supports to tariffs. No doubt this allayed quite a lot of anxiety in Torrington and swayed quite a lot of voters. On the other hand, Mr S. W. Alexander, whose services and fidelity to Liberalism cannot be impugned, points out in your issue of April 12th that price-supports "are in the same category as tariffs and can be no part of Liberalism," a conclusion which the Liberal party officially endorsed in 1953.

This discloses, on a fundamental question, a contradiction which may not matter when only by-elections are involved, but which must, surely, be settled one way or the other before the next general election takes place.—Yours faithfully, BERNARD BRAINE

House of Commons

Kenya

SIR—Lord Altrincham writes in your issue of March 29th of what he is pleased to describe as our absurdly low rates of taxation in Kenya. Unless Lord Altrincham thinks that rates of taxation in the United Kingdom and in a number of other countries are also absurdly low, what he says in this connection must also be regarded as absurd.

It is a fact that individuals in Kenya in the lower middle income brackets, with families to support, pay more in direct taxation than their counterparts in England, if one takes into account the family subsidies which are paid here in England and which are not paid in Kenya, and treats these as remission of taxation. This fact is not sufficiently well appreciated, and Lord Altrincham may be forgiven, perhaps, for not being aware of it, but before he chooses to speak in such emphatic terms on Kenya's rates of taxation he should surely first of all acquaint himself with authoritative and objective opinion on the matter, such, for instance, as that expressed by the East African commission of inquiry on income tax which published its report last year and which, incidentally, consisted entirely of people from the United Kingdom. This commission has recommended that rates of income tax on the individual in East Africa should be reduced.

Lord Altrincham, for some reason which is not quite clear, seems to think that in deciding whether our rates of tax are high or low, the return we get in the way of Government services is quite irrelevant, or if it is not, his argument appears to be that we should not forget that the supply of labour in Kenya is both plentiful and cheap. The supply and cost of labour to those in the lower middle income brackets is of no practical personal interest, as they cannot afford servants; as for the rest, there can be few people with any real experience of labour in East Africa who would maintain that labour is cheap—that is if its value is measured in terms of its product.

As one who has some recollection of Lord Altrincham's father when he was Governor of Kenya and who is a native of Kenya, albeit a European one, I feel sure I am not alone in deploring the sort of ill-considered remarks made by Lord Altrincham to which this letter refers.—Yours faithfully, P. J. GILL

Nairobi

Dividend Stripping

SIR—Your comment that the Chancellor's proposals on dividend stripping "hardly warrant too much excitement. This is professional stuff . . ." seems rather superficial.

Of course it is professional stuff. It is also an "obvious avoidance trick" which I, for one, would certainly not attempt to justify. But in taking your present line you seem to me to be taking a narrow view by concentrating on the immediate issue (which is not important) and ignoring the underlying principle, which is vital.

To me, back-dated legislation—by whatever name it is called—is an authoritarian device and as such it stinks, irrespective of party or pretext. It is a device which is capable of very great abuse. I feel that the provisions as to retrospective effect of the Chancellor's proposals would be very well lost on the committee stage of the Finance Bill.

The only democratic method of changing the law and thereby controlling the actions of individuals is by legislation, not by threat. I think that the Government should have acted sooner, but to attempt to rectify this delay retrospectively seems to me to be quite wrong. If retrospective legislation is accepted as legitimate, the way is opened to serious inroads on the liberty of the subject. I can see no difference in principle between retrospective fiscal legislation and retrospective legislation for other purposes. Nor do I consider the question of "warnings" to be relevant to the question of principle involved. This business of "warnings," if carried to its logical conclusion, would cause chaos by destroying confidence.—Yours faithfully, G. R. DUCK

Manchester 3

Domestic Servants

SIR—In *The Economist* of March 29th, an article entitled "The Servant Problem—II", makes what would appear to be misleading statements regarding the National Institute of Houseworkers. You are evidently not aware that members of the daily houseworkers' service (except in about half a dozen cases) are not institute-trained workers; they are people who have gained their knowledge and skill by experience, and, in order to ensure that this is adequate, have been successful in the institute's diploma examination, which sets the national standard for skill in private domestic work. The administrative overheads of the daily houseworkers' service are not high and have not generally been the cause of restricting its services. No grant is given towards it, and its development has been by means of a loan from the Ministry of Labour, which has yet to be repaid. The amount of the current service charge is 3s. 1d. an hour, not 3s. as stated.

As one aspect of the work of the institute has been mentioned, it should also be said that it has undertaken even greater responsibilities than the daily houseworkers' service. In colleges situated at Harrow and Swansea it trains young people for domestic work, and it has also made an important contribution to the training of workers in hospitals. Trainees are carefully selected and are helped to find employment after they have qualified. Anyone who has been closely integrated with the work of the institute will have been impressed with the fact that one of its primary objects is to raise the status of the domestic worker and to set a national standard of skill, wages and conditions of employment for those whose work is so urgently needed in the general pattern of home economics at the present time.—Yours faithfully,

FLORENCE HANCOCK
LILY NEWTON

London, W1

Japan

SIR—In your appraisal of the Japanese economy in the issue of March 8th, three points relating to foreign trade need correcting.

Japan's prewar foreign trade statistics did not include Japan's trade with the empire areas of Korea, Taiwan, and Karafuto, since the empire was regarded as one domestic trade area. For this reason the importance of Japan's prewar trade with Asia is usually understated. In 1936, Japan imported not 39 per cent of her imports from the rest of Asia, but 55 per cent, if imports from Korea, Taiwan, and Karafuto are taken into account; similarly, her exports to Asia accounted for 64 per cent of all exports, not 50 per cent, as your correspondent suggests. Thus, the shift in the postwar trade away from Asia, which your correspondent points out, has been very much greater than the data he presents suggest.

For the same reason, he tends to exaggerate the increasing dependence of Japan on imported foodstuffs. The eight per cent of foodstuffs imported in 1934-6 did not include imports from Korea, Taiwan, and Karafuto, the first two supplying Japan at that time with virtually all her paddy imports. If imports from these areas are taken into account, Japan's prewar food imports would much more nearly approximate to the 20 per cent of 1956. It is most remarkable that in view of a rapidly increasing population, Japanese agriculture has been able to so effectively hold down the need for additional imports.

Finally, there is a reference to Japan's imports of iron ore, presumably in quantity, from northern China and Manchuria. In fact, very little iron ore moved to Japan from Manchuria and north China. For the most part the low-grade and difficult Manchurian ores were refined in Manchuria. However, pig-iron was a major export from Manchuria to Japan, and for a time from north Korea as well.—Yours faithfully,

NORTON GINSBURG

University of Chicago

[But should the resources which are extracted from colonial possessions be counted as "foreign trade"? The food which Japan imported from its overseas territories before the war came virtually as a prize of empire. Koreans and Formosans still ruefully recall Japan's demands on them. Now that Korea and Formosa are independent, Japan can no longer depend on their supplies with the same confidence. The present dispute with the Formosan authorities illustrates this point well. Similarly, the Manchurian ore was under Japan's control even though most of it was refined on the spot. Where the geographical distribution of Japan's resources is the important point, Professor Ginsburg's correction is just. Where Japan's dependence on "outside" sources is the point at issue, it seems best to exclude statistics from the prewar colonies.—ED.]

What next in Current Affairs?

Your judgment can be as sound as any expert's, provided you use KEESING'S, the essential pre-requisite to an accurate survey of the *present* situation in Politics, Economics, Social Questions at home and overseas.

KEESING'S enables you to form your own opinion—not vaguely relying on hearsay, guess-work or wishful commentary but—realistically founded on solid FACTS.

For KEESING'S supplies its subscribers every week with a concise bulletin recording in scholarly manner all important developments in current national and international affairs, free from bias or prejudice, neatly tabulated for filing in the book-like Binder.

Its unique 'living' Index provides instant reference to past data (extending over more than two decades) and, by being renewed every fortnight, it keeps constant pace with history-in-the-making, *and so will you.*

BOOKS

Gunther in the Red

Inside Russia Today
By John Gunther.
Hamish Hamilton. 591 pages. 25s.

"No Soviet mother has ever seen a napkin." Let's face it, this is the kind of thing that makes Mr Gunther's books irresistible. Mrs Furtseva's little sports car gets its mention along with Mr Khrushchev's secret denunciation of Stalin. Tiflis streets are "filthier than any I've ever seen, except in certain areas of New York." Mrs Molotov has two brothers, one in Israel, one in Bridgeport, Connecticut. Russian babies are liable to be christened—oops, sorry, named—"Unit of Society" or "I Didn't Expect." The Soviet Union possesses a fifth of all known reserves of coal and iron ore, the world's largest black-earth area (247 million acres), jet airliners that make it possible to get from Paris to Peking in 19 hours 45 minutes, a fast increasing number of schizophrenics, and an acute shortage of bath-plugs. All self-respecting Soviet towns have theatre companies and many have ballet too; meanwhile the public is eagerly paying £35 apiece for black market records of American singers, taken on tape from foreign broadcasts and then reproduced on discs made from old X-ray plates scrounged from hospitals; Messrs Presley and Sinatra and Miss Clooney top the list. Sputniks in the sky, testifying to the triumphs of Soviet science, contrast with the Russians' drab clothes ("still revolting") and their fixation about shoes ("Moscow is the city where, if Marilyn Monroe should walk down the street with nothing on but shoes, people would stare at her feet first").

Mr Gunther has visited Russia four times, in 1928, 1935, 1939 and 1956. This, the sixth of his "Inside" books, belies its title more than its predecessors, which is hardly surprising. No foreign visitor is permitted to get really "inside" Russia in the sense of living a normal life there; no Russian is permitted to publish a true "insider's" account of his country's affairs. But the Gunther technique, which is to collect vivid impressions during a brisk tour and then retire for a year's intensive combing of source material, fills the bill remarkably well. Mr Gunther cites authorities rather than posing as one. Nothing daunts him, and very little escapes him. Between his two covers he squeezes in a long and appreciative account of Soviet technical and educational achievements, a terse summary of the post-Stalin conflicts among the party leaders and in such fields as art and literature, and much shrewd comment on Soviet policy towards America, Europe and Asia. He throws in a Who's Who—updated to 1st October, when Marshal Zhukov was laid low—and some travel notes, which include many very useful tips for other intending visitors. He can be formidably fair, not only giving credit where it is due but also offsetting some of his sharpest criticisms with reminders of corresponding defects in democratic countries.

But it is, of course, the icing on the cake that makes his books so hugely alive and readable. Everything fascinates him. The Muscovites who read books (not newspapers, books) on escalators. The over-hasty Tajiks who renamed Molotovabad and Kaganovichabad the day before the two heroes' disgrace was made public. The Gorky Street prostitutes who, for lack of premises in an over-crowded city, use slowly cruising taxis. The one and only visa issued by the Ukraine "foreign office," solemnly numbered 100,001. Obraztsov's wonderful puppets, Gerasimov's dreary court portraits, Dostoevsky's still unobtainable masterpieces. Fadeyev, the alcoholic who ruled the Writers' Union for a decade and killed himself when the victims of his purges began to trickle back from Siberia. The interpreters and guides whose unflagging helpfulness made up for the boorish obstructiveness of officialdom. The real-life re-enactment of Gogol's "Inspector-General" last year at Novosibirsk, by an ex-convict posing as a deputy minister.

An advertisement in a Soviet newspaper offering 2,400 houses for sale catches Mr Gunther's eye and leads him on to tell us that in Russia today you can not only buy houses but inherit them, and obtain rent from tenants; and that a third of all house building is now being done by private enterprise. Doctors, too, take fee-paying private patients, and some Russians abhor the free health services. Private cars are beginning to multiply, which is hardly surprising if, as Mr Gunther reports, a small car costs no more than a dozen pairs of shoes. But pressure for mental conformity is still intense; in the author's words:

> What really makes scandal in the Soviet Union is a report that (to cite a recent example) only 211 out of 3,300 students showed up at an indoctrination course in a provincial town. The nation reels. It is as if, in Hollywood, some celebrated movie star were to be found in bed with a horse.

Information at a Glance

Everyman's Encyclopædia: *Fourth Edition, Vols I and II.*
21s. each, 24s. after publication of the twelfth and final volume. 756 pages and 792 pages.

THE making of an encyclopædia is an exercise in compromises: between comprehensiveness and avoidance; between generality and detail; between history and current events; and increas-

we shall never have Christian unity until we are all agreed upon Christian truth. Meanwhile the papists are wrong because the doctrine of papal infallibility is self-contradictory and unhistorical. The Lutherans are wrong because they have no bishops. Dr Norman Sykes is wrong because he likes bishops but thinks the Lutheran Church is a Christian Church. The Presbyterians are wrong because—for reasons too numerous to catalogue here. Everyone seems to have strayed off the beaten track, probably during the later Middle Ages.

The book is not so negative as this sounds. We have to travel round the fairer meadows of Christendom culling blossom. We must look towards Rome or towards the Eastern Orthodox for assistance in understanding the pattern of Christian truth. We must use, he says, "at every stage whatever powers of discrimination we possess" as we ransack the history of the Church and thereby seek to disentangle the "authentic norm" of faith and practice. But the principles upon which we are to pursue this process of discrimination are elusive. What is the yardstick which enables Dr Mascall to pass such serene condemnations on everyone else?

He seems, on some pages of his book, to reply thus: the test of the authentic norm is the faith of the "Scripture and the Fathers and the undivided Church." This ought to give us a clear light whereby we may discriminate. But elsewhere he tells us that we are not to be antiquarians and archaeologists, that we are not to suppose the primitive and undivided church to have been free from serious blemish. Nor are we to think that even in the chief heads of doctrine we should follow the ancient Church. For the ancient Church believed the early chapters of the book of Genesis to be a record of historical events: and Dr Mascall regards it as a ground for one of his calm verdicts of guilty when he finds a modern church hampering the scholarship that proves the early chapters of Genesis to be unhistorical. Sane reasoning evidently enters into his yardstick. And if he avows that the authority of the primitive Church is not absolute in one particular, how comes his confidence in several other particulars to be so much more than modest?

But perhaps a suspicion may grow which, if confirmed, would solve the whole difficulty. Is it Dr Mascall's view that the only way to recover unity will be that everyone should assent to the opinions of Dr Mascall?

Coats, Skirts and Brands

The Women's Outerwear Industry

By Margaret Wray.
Duckworth. 318 pages. 30s.

THIS is a study of the extent to which new methods of production and marketing have permeated the manufacture of women's clothing since the war. Dr Wray has produced a painstaking and factual but prosaic book, repetitive, weighed down with detail and drenched with footnotes. She has collected a vast amount of information, has visited many factories, but shows little skill in presenting her research; this is a pity, for a sound, well-written book on the strategy of women's clothing manufacture would have been valuable.

Dr Wray concludes broadly that clothing manufacturers have introduced considerable innovations in marketing since the war, but that in production technique the industry is on the whole going ahead slowly and unevenly. The chapter on marketing, which shows how extensively the industry relies (especially in coats and suits) on branded lines and national advertising, is important. There has been a revolution in the sale of women's outerwear (in selling, that is, by manufacturers) in the past two decades, and Dr Wray does well to underline its significance. Today a substantial part of the trade in tailored wear is in the hands of a small number of big firms, who sell brands rather than coats.

So far as the spread of engineering techniques, sectional manufacture, modern machinery and other innovations in the manufacture of women's clothing are concerned, the picture is not clear-cut. It is not a "tidy" industry. It makes dresses, blouses, tailored outerwear, and it makes them in London factories, factories in old-established provincial clothing centres and factories in development areas—with a different and far from uniform set-up in each. The conclusions reached are that in London factories, which are the most progressive (in types of clothing), methods have changed least, while in factories in the development areas modern engineering techniques have achieved their biggest hold. This is partly due to labour factors: London has the most experienced workers, and older skilled labour hates change. The factories in the newer clothing centres rely on green labour, which is best run on planned sectional production. But modern high speed machinery has made itself felt in London workshops, except where the premises are too small or too inconvenient. They often are; but garment makers prefer to stay in London in cramped quarters at high rents because the "climate is right" for the industry.

A weakness of the book is some lack of feeling for this nonconformist industry, so individual in outlook that even its big boys fight against regimentation. Every now and then we catch a glimpse of impatience with the spirit of fashion, which disorganises the flow of production. Thus Dr Wray, referring to "Market Therapeutics" (taking the variation out of fashion), says rather loftily that "reorganisation of the industry based solely on technological planning for lowest cost production that resulted in the production of clothing in uniform styles would lead to an unwarrantable reduction in consumer satisfaction." The point, surely, is that it would lead to a mighty reduction in consumers.

It is an industry where customs as well as habits are at times quaint. Thus Dr Wray discovered two factories operated by a firm on different floors of the same London factory block. Each is a separate unit, one staffed wholly by Jews, the other wholly by Gentiles; but there is no Orange flavour in the split, which is due to differences, not of religion, but of styling: the Jewish factory makes garments of high fashion appeal and poor finish; the Gentile unit supplies good finish but less style.

There is a slip on page 47, where Mr Harry Wadsworth, most modest of men, is elevated to Sir Raymond Streat's post (now ex-post) as head of the Cotton Board.

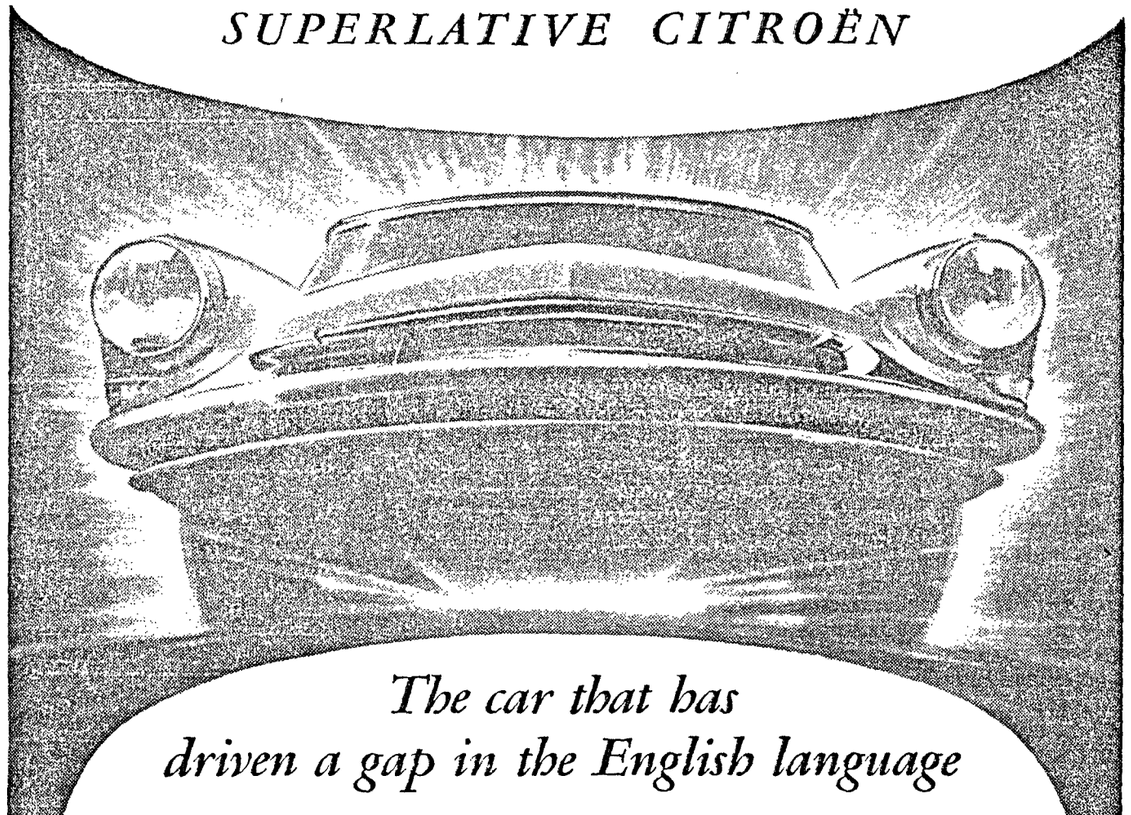
OTHER BOOKS

RELATIONS BETWEEN THE CENTRAL BANKS AND COMMERCIAL BANKS. *Fritz Knapp* (Frankfurt on Main). 212 pages. 24 DM.

This volume reproduces the lectures given to the tenth international banking summer school held last year in Germany. The speed with which the book was published (less than three months) is commendable, although the translation of some of the lectures is at times very laboured.

The annual banking schools provide an opportunity for the exchange of ideas and experiences; their value is far beyond the measure that can be gauged from reading the prepared papers that are used to initiate discussion. It is wise to remember the context when studying this record. At the same time any book should be capable of standing on its own merit. This book does that. Inevitably the standard of the contributions varies, despite the fact that speakers were seemingly given the broad headings around which to compile their notes. Nevertheless the book will be a handy and up-to-date work of reference for students of banking and monetary control.

Most chapters are devoted to a country by country examination of the theme indicated by the title of the book. Eleven countries are considered, including the United Kingdom, United States and Russia. The last is a particularly welcome contribution by V. Gerashchenko, First Deputy Chairman of the State Bank of the USSR, who first broke silence on Russian banking in an unscheduled address at the summer school in Oxford two years earlier. A final chapter reproduces an address by Herman Abs on aspects of the relationship between the German banking system and the Government. Those who recall the sharp criticism by Dr Adenauer of the increase in the central bank's rediscount rate in the spring of 1956 will be stimulated by the opinions of the author on the distribution of responsibility between the Government and the central bank. They are not without relevance to affairs in the United Kingdom.



THE ONCE AND THE FUTURE KING. By T. H. White. *Collins.* 677 pages. 25s.

Admirers of the author's Arthurian epic can now have all the stories in one volume. It includes "The Sword in the Stone," the first—and perhaps best known—which has two new chapters: "The Witch in the Wood," which has been rewritten and renamed "The Queen of Air and Darkness"; "The Ill-Made Knight"; and "The Candle in the Wind," which has not been published before.

MR PEPYS OF SEETHING LANE. By Cecil Abernethy. *W. H. Allen.* 384 pages. 25s.

The author admits that he has "occasionally taken a novelist's liberties"; "adopted a third-person point of view for the narration"; and "added some dialogue." The result is a story entertaining enough to encourage readers to turn to Sir Arthur Bryant or, better still, Pepys's Diary.

SUPERLATIVE CITROËN

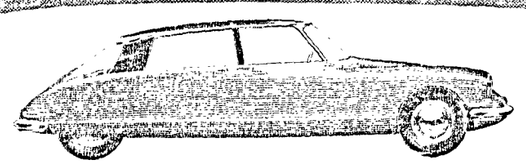
The car that has driven a gap in the English language

How can a lover describe his beloved? How may a mystic communicate his vision? How does a mother describe her child? We are faced with the same inadequacy of language when we try to tell you of the superlative qualities of the Citroën D.S.19. There just isn't a language of the future—so how is one to write about a car that is at least ten years in advance of our times? *You* try it. Go on. Take a look, take a ride in this beautiful, graceful thing. But be careful. You'll know no rest, no content, until this proud, gleaming heaven-on-wheels is your own . . . and even then you'll have no words to express your bubbling delight. It's beyond praise because praise, spoken, sung, or exquisitely rhymed can only present a pale shadow of the magic of a car that takes you, as you glide under the steering wheel, ten years into the future.

ONLY in a Citroën D.S.19 can you enjoy all these advantages . . . no other car has more than two of them!

- **Hydro-pneumatic suspension on all wheels keeps car at same height and on even keel, whatever the load or camber . . . smooth riding over roughest surfaces.** *Exclusive to Citroën.*
- **Power-operated front-wheel disc brakes (standard brakes for rear wheels) with twin pedals—hydraulic and mechanical—for instant halting always.** *Exclusive to Citroën.*
- **Hydraulically-assisted rack and pinion steering makes for feather-touch, finger-tip control.** *Exclusive to Citroën.*
- **Hydraulically-operated gearbox. Clutch automatically disengages below minimum r.p.m.—engine cannot stall.**
- **Single spoke steering wheel and new-angle steering column minimise danger to wrists and chest—make Citroën safest to drive.** *Exclusive to Citroën.*
- **Front wheel drive plus low centre of gravity give maximum road-holding . . . facilitate high-speed cornering.**

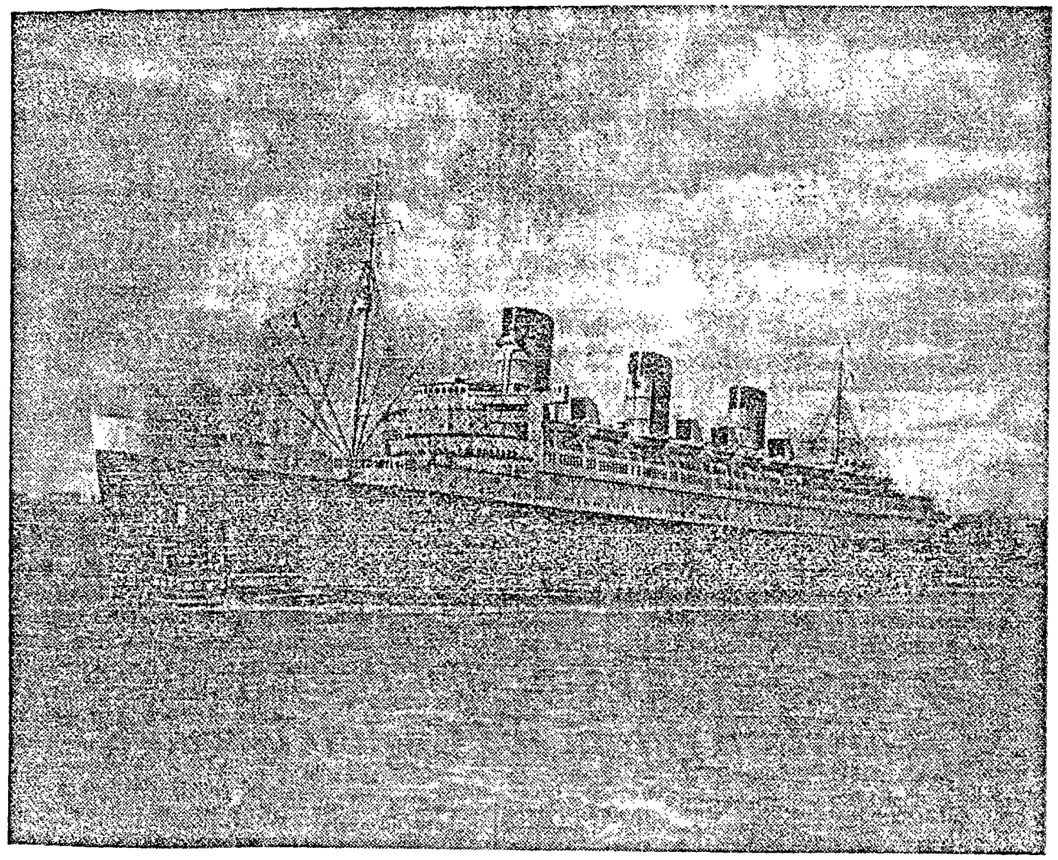
PLUS (AMONGST OTHER THINGS)



- **Seating for six adults—in comfort. Oversize boot—17 cu. ft.**
- **The best all-round visibility of any production saloon.**
- **Genuine top-speed of 87-90 m.p.h., 28-30 m.p.g. at 45 m.p.h.**

D.S.19 performance is *proved*—not only by first-time success in the Monte Carlo Rally but by thousands of owners all over the world. Get one of the 100 Citroën dealers in this country to give you a demonstration. For name of nearest agent and full details of the D.S.19 and other Citroën models write to the address below.

Price—£1,150 plus £576.7.0 p.t.



Don't just keep up—*get ten years ahead with a*

CITROËN

Also available: the I.D.19 £998 plus £500.7.0 p.t. and the versatile 2 C.V.—£398 plus £200.7.0 p.t.

Alaska's Flickering Star

WASHINGTON, DC

THE false alarms over the Arctic have called attention to America's northern border line with the Soviet Union. This is the territory of Alaska which was "liberated" from Russian rule as long ago as 1862, when it was bought for $7,200,000, and which started this year with high hopes of throwing off "colonial rule" and achieving "self-determination" as the forty-ninth state of the Union. Whether the hopes will prove as false as the alarms may be decided as this issue of *The Economist* goes to press, since that strange mandarinate, the Rules Committee of the House of Representatives, was to consider on Thursday whether or not the Alaskan Statehood Bill should be brought to a vote on the floor of the House.

Statehood for icy Alaska and for its fellow suppliant, the tropical islands of Hawaii, has been promised by both political parties in every presidential election since 1948. President Eisenhower has proposed that Hawaii be admitted to the Union every year since he took office and this year he also threw his support behind Alaska. According to a Gallup Poll, 73 per cent of those asked were in favour of admitting Alaska and 6 per cent against, while 65 per cent supported the admission of Hawaii and 12 per cent were opposed. On Alaska alone there have been eighteen congressional hearings, accumulating over five thousand pages of testimony. Since 1948 both Houses of Congress have passed Bills for admitting both territories, but never, unfortunately, in the same Congress. When everyone seems to favour creating two new states, why does the congressional cow go on chewing the end of these proposals?

The explanation is that, while there is a group in Congress which is strongly against statehood, those who are for it are not for the most part very strongly in favour of it. In a Legislature which lacks party discipline the issue of statehood is part of the small change of political bargains; no one is going to be elected or defeated in his constituency because of the way he votes on it. The Southerners, who occupy most of the influential places in both Houses, oppose statehood because, whatever position in the political spectrum the Senators sent by Alaska and Hawaii might adopt on other issues, the one certainty is that, representing such mixed populations, they would supply four extra votes on behalf of civil rights for Negroes and against southern obstruction on such questions. To do nothing about statehood is therefore a cheap way for a member of Congress, who is hoping to advance something of greater interest to his constituents, to oblige the southern leaders. When the signs of the political zodiac are in exactly the right combination, a vote for statehood will be an equally inexpensive way for a politician with too conservative a reputation to chalk up a liberal credit. Then Alaska and Hawaii will become states.

The active opposition is not entirely confined to the South. The single most vocal opponent in the House of Representatives, Mr John Pillion of New York, objects to adding to the number of sparsely populated states, such as Nevada, whose two Senators, representing 200,000 people, can cancel out the votes of New York's two, representing 16,000,000. In the Senate, however, the leading opponent is from Nevada, Senator Malone, who thinks that the admission of "non-contiguous areas" to the Union would be a precedent used by the eastern internationalists for admitting all manner of states such as Formosa, the Philippines and the countries of western Europe as part of a conspiracy to establish a "United States of the World." Less extravagantly, many eastern and mid-western conservatives are apprehensive that Alaska's two votes in the Senate would be added to those of the westerners who favour big federal spending on the reclamation of America's own under-developed areas.

Nevertheless, at the beginning of this session of Congress, the signs seemed set fair for Alaska. Mr Fred Seaton, who had been an enthusiast for Alaskan statehood when he was Senator from Nebraska, had become Secretary of the Interior, the department which administers the territories. The President, who as an old army man had shared the services' reluctance to relinquish federal control over an area so largely devoted to military purposes, was satisfied with a new provision giving him the authority to withdraw any part of the remote and barren areas of north and western Alaska from state rule. The Alaskan people had two years ago approved a state constitution, which is held by many political scientists to be a model of its kind, and had sent two Senators-elect and one Representative-elect to Washington to knock hopefully at the legislative doors. But from the viewpoint of practical politics two other developments were perhaps even more to the point: real political competition between the two parties had sprung up within both territories, and Hawaii had asked to wait until Alaska had been admitted.

Thanks to Mr Seaton's unusually popular administration

of the territory and his intelligent use of patronage, an effective Republican party has emerged in what was formerly one-party—Democratic—Alaska, and is now clearly in a position to challenge the past assumption that the two Senators whom Alaska would send to Washington on becoming a state would automatically be Democrats. It was for that reason that the Republicans always insisted that Hawaii, which is traditionally in their camp, be brought in at the same time. In past Congresses, the two Bills have been tied together by a coalition of those who wanted to pass both and those who wanted both to fail and it was the latter group whose purpose was served.

This is because Hawaii has been the more vulnerable of the two candidates, actually because some respected figures in the senatorial club are reluctant to admit an oriental face (37 per cent of the people of Hawaii are of Japanese origin and there are other exotic strains) but ostensibly because the Kremlin might be able to "reach out and control a member of the Senate Foreign Relations Committee." This alarming contingency is alleged to be quite on the cards if Hawaii is admitted, as a result of the political and economic power on the island of the International Longshoremen's and Warehousemen's Union, which with a single strike could paralyse the islands' three industries—sugar, pineapples and tourism—and which has frequently been accused of having Communist leaders. But this year Hawaii has a new strategy, of letting Alaska be admitted first to set a precedent, and the Islands' non-voting delegate in the House of Representatives, being a Democrat, is living proof that Hawaii is not necessarily Republican.

Why then is statehood for Alaska still held up? Because Mr Howard Smith, an elderly and extremely conservative Virginian who heads the House Rules Committee, has indicated that the measure will be passed only "over his dead body." It is a peculiarity of the House of Representatives that the role played in Westminster by "the usual channels" in fixing the calendar and deciding the length of debates is carried out by a formal committee, whose members feel free to act according to their own opinions rather than as delegates of their party leaders; moreover, the chairman has wide powers—he alone decides when meetings are to be called and what Bills are to be considered for placing on the calendar. Although there are ways of over-riding him they are technically difficult and the committee has a strong corporate feeling. If Mr Smith can delay the measure for several weeks more before allowing it to be debated in the House, there will probably not be enough time for it to be considered in the Senate before the present Congress adjourns late in July. Senator Lyndon Johnson, the leader of the Democratic majority in the Senate, has said that he will only bring the Bill up there if it has already passed the House. After all, if there is no certainty that statehood for Alaska can be got through the House, there is no purpose in offending its opponents in the Senate by voting on it there.

Atoms for Nato

LAST week Mr Dulles appeared before the Joint Congressional Committee on Atomic Energy on behalf of the Administration's proposals for permitting freer nuclear exchanges, in an attempt to save them from the friends of international co-operation. The Democrats on the committee, led by Representative Holifield and Senator Anderson, contend that the Administration wants to supply allied countries with "do-it-yourself kits" for making atomic weapons; in their view the legislation would thus have the effect of spreading the ownership of nuclear bombs—and the dangers which accompany that ownership—round the world, and would also diminish the chances of achieving an agreement on disarmament. In particular the Democrats, always suspicious of the Atomic Energy Commission, object to the lack of any effective provision for congressional approval of the agreements under which the transfer to other countries would be made.

Mr Dulles declared that, under the proposed amendments to the Atomic Energy Act, information on how to make nuclear weapons and the material with which to make them would be supplied only to countries which were already manufacturing such weapons. This in fact means only to Britain, for the present at least, and President Eisenhower reinforced Mr Dulles's efforts this week by adding that what Britain mainly needed was information on the "clean" atomic weapons of which the United States is so proud. Other allied countries are apparently to get information about the effects of atomic weapons and also to be given the weapons themselves, but without their warheads, which would be delivered by the United States when actually needed. Mr Dulles argues that, unless the other members of the North Atlantic Treaty Organisation are armed in this way, they will cease to have the will to resist and the whole European defence system will collapse. Alternatively, he claims, they will do just what Mr Holifield wants to avoid, and start making their own atomic bombs. Furthermore, in Mr Dulles's opinion, America's allies would refuse to consider any disarmament agreement that would stop nuclear tests, and thus keep them from developing their own atomic defences, unless they were certain of being able to share in the work which the United States has already done in this field.

Tax Cut—a Bargain?

To the relief of the Administration, Congress returned from its Easter visit to the voters quite willing to postpone for a little longer the question of cutting taxes to cure the recession. But powerful voices, including those of ex-President Truman and Mr Eccles, a former chairman of the Federal Reserve Board, continue to urge the need for immediate action. Even bigger guns were brought up this week when a panel of distinguished economists, businessmen and educators who have been assessing the problems of economic growth for the Rockefeller Brothers Fund recommended an immediate tax cut, as well as a programme of short-term public works and tax advantages for businessmen who invest in capital improvements, to enable the United States to resume and increase its rate of economic expansion. The group proposes the tax cut as a first step toward a permanent policy of lowering taxes during recessions and raising them with prosperity "to the necessary levels."

The fear that such levels might be astronomically high and politically unacceptable is, however, one reason why Mr Eisenhower and his Secretary of the Treasury are reluctant to embark on further deficit financing unless it becomes unavoidable. Mr Anderson estimated last week that there will be a deficit of $3 billion in the fiscal year

"We want **FINANCE**
LABOUR
SPACE

... I've found the lot in NORTHERN IRELAND"

Everywhere else in the United Kingdom expansion plans are bedevilled by one or more of these great shortages—not enough money; not enough men; not enough space. Only Northern Ireland can offer you all three.

MONEY—*to cut the need for investment funds*
Outright grants of 25% and/or loans for plant, machinery and buildings are available, also removal and training grants.

MANPOWER—*first-class and plenty of it*
Over 9% of the labour force—over 30,000 of them men—are looking for jobs. They are hard-working and loyal; absenteeism and labour turnover are low: output is high and shift-working is practicable.

PRODUCTION SPACE *in modern factories ready now*
If you employ mostly men you can rent a standard Government factory for about 9d. per sq. ft. p.a.—room for at least 100% expansion. Or the Government might build you a special-purpose factory on amortization terms. Sites of all sizes are available.

EXCELLENT SERVICES
Modern transport services make delivery quicker and easier than ever before. Ample water, gas, electricity and housing.

SUCCESS STORY
Since 1945 over 130 new factories have opened in Northern Ireland, and many have expanded. Courtaulds, British Tabulating Machines, Metal Box, Du Pont, Chemstrand, Hughes Tools and many others will tell you of their experiences.

You can be there in a couple of hours

which ends this June, and that in the following year expenditures, swollen by anti-recession spending already reluctantly approved by the President and by rising defence costs, will rise to $78 billion at least, $4 billion more than was expected last January and more than has ever been spent in peacetime or even at the height of the Korean War. If revenues, as now forecast, fall under the impact of the recession to $70 billion, there will be an $8 billion deficit—and a need for a higher debt ceiling — without any tax cut. Given time, this deficit should provide a powerful stimulus for the economy, while a larger one might simply renew inflationary pressures.

Alive as it is to the risk, the Rockefeller panel takes the view that without positive action now there is a danger that a downward spiral may develop. It also argues that the fall in the gross national product to $424 billion at annual rates in the first quarter of the year already represents a loss of $25 billion a year in output, for the national product, given steady growth, should have risen from an annual rate of $432.6 billion in the last quarter of 1957 to $450 billion. A tax cut which hastened recovery would, the report insists, be a good bargain, and to delay it might mean that more drastic measures would be needed later.

Safe and Solvent

WHATEVER Mr Vinson, the experienced chairman of the House Armed Services Committee may say, the President's proposed reorganisation of the defence establishment could never lead to a military "man on horseback" running the country, since the American Army no longer has horses. Mr Vinson's unfortunate choice of words is an illustration of the outmoded approach to military matters which President Eisenhower condemns among the critics of his plan. They also claim that it will make a "czar" out of the Secretary of Defence and set up a "Prussianised" general staff. But the ideas behind these doubtful historical allegations are not so far-fetched as the language—or as the President asserts. For Mr Vinson and the many members of Congress who share his concern are genuinely anxious lest the armed forces should be over-centralised, lest civilian control should be lost and, above all, lest congressional responsibility should be undermined.

Congress exercises its responsibility through its power of the purse and originally the President seemed to be trying to weaken this drastically. He gave the impression that he wanted all funds to be appropriated directly to the Secretary of Defence instead of for particular purposes and individual services as at present. It now appears that all that he wants is limited authority for the Secretary of Defence to allocate a small proportion of military appropriations as he sees fit, in order that he may be able to find money for new or changed plans. In any case no legislation is needed to allow this flexibility and it can be arranged through alterations in the way in which the next budget is presented to Congress—which will not happen until next January.

What had looked like being the most controversial section of the President's proposals is therefore not included in the Bill on which hearings have just been opened by Representative Vinson's committee. Nevertheless, these will certainly bring abundant and lengthy controversy, encouraged by Mr Vinson himself. Much of it will arise out of the evidence given by the opponents of the President's plan from the armed forces; testimony on oath before a congressional committee does not come under the Secretary of Defence's ban on public criticism of the reorganisation scheme by serving officers. This is one scheme, however, for which President Eisenhower really seems prepared to fight hard—and, more important, to go on fighting—for he ardently believes that it is the only way to keep the country both safe and solvent.

Squeeze on the Press

FROM A SPECIAL CORRESPONDENT

EARLY this year the *Washington Post* raised its weekday price for street sales to ten cents (about 9d.) although when the paper is delivered to people's houses it will still cost only five cents; this is because advertising managers prefer sales which bring the paper to the whole family. The price of the big Sunday edition remains unchanged at twenty cents, either at the corner or at the front door. The *Post* is the latest newspaper to be squeezed between rising costs and advertising revenues which are either stationary or slow to rise. Since it went up to five cents in 1944, the price of newsprint has more than doubled; so have wages, on the average.

Increased costs have caused 450 daily papers, about 1 fourth of the total, to raise their price either to seven or to ten cents on weekdays. Washington is one of the last big cities to be affected. Los Angeles was the first, six years ago, and it was followed by San Francisco. Last spring all the evening papers in New York City went up to ten cents, but the damage done to their circulations and advertising revenues did not encourage the morning papers to follow suit. In Chicago the newspapers acted in concert in order to prevent any change in the competitive situation. The initiative was taken by the powerful *Chicago Tribune* shortly after it bought the failing *Chicago American* from the Hearst chain. The increase to seven cents last summer is reported to have brought the *American* $1 million a year in new revenue and its first profit for years.

Few metropolitan newspapers are in good financial health. Even the prosperous *New York Times*, which has just published, for the first time, a statement of its earnings, draws more than half of them from a newsprint company. During the first six months of 1957 seven of the ten newspapers with the largest volume of advertising lost advertising. Last year newspapers as a whole received $3.3 billion of the $10 billion spent on advertising of all kinds, more than television, radio and magazines put together and nearly 3 per cent more than in 1956. But the papers' share of the advertising revenue received by all four major media has declined steadily since 1949, when television stations began

to open in large numbers. In that year newspapers took about 62 per cent of the total advertising revenues of the four media; in 1957 it is estimated that their share had fallen to about 55 per cent. This percentage loss was due almost entirely to competition from television, since the dollar figures and the percentages for sound broadcasting and magazines have remained almost unchanged for five years.

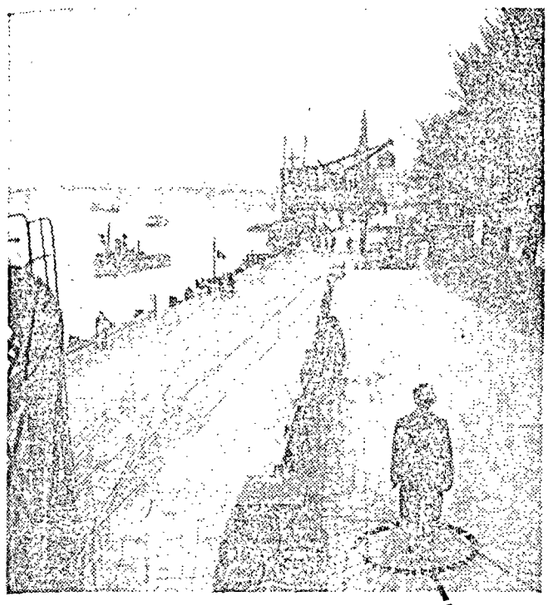
Many owners of newspapers in the big cities also put much of the blame for their troubles on competition from "satellite" dailies which have sprung up like mushrooms in the suburbs and small cities nearby. These "community newspapers," which have roughly 20,000 to 70,000 readers, drain off circulation and advertising revenue by supplying local news and local shopping guides. And the ponderous metropolitan giants have been slow to counter with the logical weapon: special news and advertising sections for different areas slipped into the regular editions.

Metropolitan newspapers have seen their share of newspaper readers fall from 39 to 37 per cent since 1953. Moreover, production costs, distribution costs and journalists' salaries are lower in the suburbs and the surrounding country, with the result that the smaller papers earn from 8 to 12 per cent on their capital compared with 3 to 5 per cent for the big ones. In greater Los Angeles there are thirty flourishing middle-sized papers sharing 700,000 readers. Long Island's *Newsday* has captured 269,000 readers, mostly from the big New York City dailies.

Informed critics, however, such as Mr Mark Ethridge, the publisher of the influential *Louisville Courier-Journal*, feel that the continuing loss of newspaper circulation in relation to the growing population is the fault of the newspapers themselves. They point to the extensive use of syndicated leaders and poorly-written syndicated columns and to the running as news of dull and slanted press releases. They also criticise the failure to cover local news and to lead crusades against such evils as slums, and the lack of responsible interpretation of national and international affairs. Moreover, when profits fall, too many publishers try to economise on their editorial departments. The *New York Herald Tribune* gave an example which the critics would like to see followed when it decided late last year to try to save itself by putting out a better and more serious paper.

THE United States has no national newspapers similar to those in Britain. Two years ago the *New York Times* actively explored the idea of printing in various parts of the country, but it is believed that the costs were too great. Circulations, therefore, are small compared with those in Britain. The largest is that of the *New York Daily News*, a racy tabloid which sells 2,156,000 copies a day during the week and 3,857,000 on Sundays. In second place is the *Chicago Tribune* with a daily circulation of 954,000 and 1,304,000 on Sundays. The *New York Times* is sixth, with 557,000 on weekdays and 1,189,293 for its Sunday edition.

The closest approximations to national newspapers are provided by the chains, of which there are about a hundred. Leading the list is Scripps-Howard, with 22 dailies. Other groups with large numbers of influential newspapers are Hearst, with 15, and Newhouse, Copley and Newhouse with 13. The newspapers of the chains reflect, to a greater or lesser degree, the political and social viewpoints of their owners, with the exception of those run by Mr Samuel Newhouse, who is fiercely insistent on editorial independence. Consequently most of them are conservative and Republican and increase the one-party character of the press. During the last election newspapers with nearly 80 per cent of the readers supported Mr Eisenhower. More than half of the rest supported neither side. The dreary sameness of daily newspapers from New England to California alarms Americans who fear the growth of a dangerous uniformity; this is also fostered by radio and television programmes.



Most of the present generation of newspaper owners have not been newspapermen themselves and as a general rule take much less interest in the newsroom than in the advertising and accounting offices. The result is that editors and reporters are no longer fired by the traditional ambition to get all the news first and best or perish in the attempt. The profession has become stale, stodgy and standardised. Editors have apparently ceased thinking of themselves as the consciences of their communities and pride themselves instead on being businessmen.

Mergers and purchases which guarantee surer and larger profits with less worry have occurred at a rapid rate in recent decades. In 1900, 700 cities had competing dailies with independent editorial managements; now there are only 85, and rising costs are likely to increase the number of one-paper cities. In 1900, 2,700 newspapers appeared each day; the number has fallen to 1,759. More than one out of every four newspapers is run by a chain. Eighteen states have no cities with competing dailies. About a third of all daily newspapers are absentee-owned. Mergers sometimes stop half-way, combining composing, printing and advertising to save money, but leaving the newsrooms separate. But this loudly proclaimed maintenance of editorial independence is usually a fiction.

The high executives of the metropolitan papers have only recently become concerned by the apparent loss of American faith and interest in their newspapers. After many conferences, the publishers' association decided early last year to spend $1 million on a public relations campaign. This kind of thinking has been sharply criticised. Qualified observers feel that the newspapers' troubles are too deep-seated to be cured by self-advertisement. Apart from noting the small salaries paid to reporters and the failure of journalism to attract able college graduates, the critics say that the magazines, sound broadcasting and television have increasingly taken the lead in dealing with controversial issues. Hard-hitting crusades, out-spoken comment and three-dimensional reporting that pulls no punches are seldom found in the newspapers, unless they are dealing with shocking conditions far from home and retaliation. A number of publishers believe that rising costs and falling circulations may force a third of the present daily newspapers out of existence by 1975. If this comes true, few believe that the newspapers of quality will be among the casualties.

Reserves for Loans

THE Federal Reserve Board last week took two further steps to relax an already-easy supply of money. First, it lowered reserve requirements—the percentage of deposits which banks must hold in cash at a Federal Reserve Bank—by one per cent for member banks in New York and Chicago, and by one-half of one per cent for banks in 48

SHERATON

A FAMILY OF 45 FAMOUS HOTELS

THE SHERATON-PLAZA HOTEL WELCOMES YOU TO BOSTON

Beloved in Boston — famed on both sides of the Atlantic — the Sheraton-Plaza Hotel (completely air-conditioned) will make you feel comfortably and luxuriously at home on your next trip to the United States. Here are a few reasons why international travelers prefer Sheraton Hotels in the U. S. A. and in Canada:

• Reservations held if ships or planes are delayed
• Facilities for banquets, business meetings and conventions
• Bilingual departments • Sheraton's Family Plan:
No room charge for children under 14 in room with adults
(except in New York, Syracuse, Atlantic City and French Lick)

For reservations see your travel agent, or write Mr. Albert de Leon, Director, International Department, Sheraton Hotels, Sheraton-McAlpin, Broadway and 34th St., New York 1, N. Y., U.S.A.

the things they say!

First-class honours in Chemistry, eh, Jim? I expect you've been offered plenty of jobs.

Yes, but unfortunately most of them have been in industry.

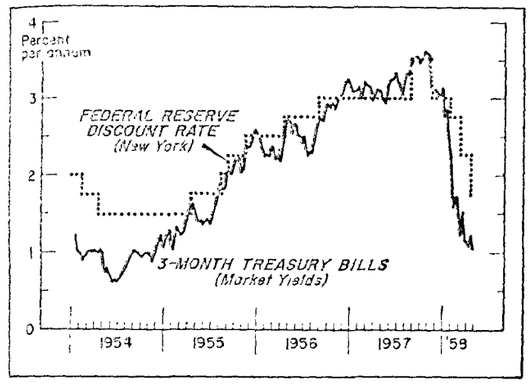
What's so unfortunate about that?

Well, I'd like to go on doing the kind of research we do at the University.

Industrial research holds no attractions for me.

Why not? I used to think like you, but since I joined I.C.I. I've seen that research in industry can be just as satisfying. Think of the value to hospitals of the new anaesthetic 'Fluothane' and the importance to farmers of 'Helmox', a new treatment for lung-worm disease in their cattle. Both are recent I.C.I. discoveries and this is obviously work of national importance.

Perhaps it is, but I'd prefer to continue pursuing knowledge for its own sake.



Maybe, but whether you work in a University or in an industrial laboratory you'll be employing the same scientific method, the same mental approach—and is there anything derogatory in acquiring scientific knowledge to use it for practical ends?

I don't suppose there is, really.

Of course there isn't. And you might find yourself doing pure research in I.C.I. anyway. About 15% of I.C.I.'s big research budget is devoted to fundamental work, and some of the men engaged in it have achieved international recognition in their particular fields.

ICI

other large cities. It then approved a reduction of the discount rate, roughly the equivalent of British Bank rate, by the Federal Reserve Banks. The first of these moves will increase member bank reserves by $450 million, which will enable them to make up to $2,700 million of new loans and investments through the multiplying feature of the reserve system. New York and Chicago banks will now be required to keep 18 per cent of their customers' deposits as reserves and the other city banks 16½ per cent. Though the reductions are intended as a stimulus to business borrowing, they will also offset the loss of reserves caused by foreign purchases of gold. When foreign depositors use the money in their accounts to buy gold (from the Treasury), this money

leaves the banking system entirely, thus diminishing reserves; in the past two months more than $600 million has left the United States in this way—much of it going to Britain.

The discount rate, which is the interest paid by member banks borrowing from Federal Reserve Banks, was reduced from 2¼ per cent to 1¾ per cent, its lowest level since August, 1955. This rate has fallen four times since November, 1957, when it stood at 3½ per cent. The latest reduction should be followed by a further lowering of the interest which banks charge their borrowing customers and should give a psychological stimulus to businessmen to abandon the cautious attitude toward borrowing which they have displayed in recent months. In fact, three of the largest New York banks have already reduced their prime rate to 3½ per cent, and others may be expected to follow their lead soon. This is the rate at which depositors with the best credit ratings borrow, and it has been held at 4 per cent since the beginning of the year, although some other interest rates have fallen sharply, especially that of 91-day US Treasury bills. While lower interest rates may increase borrowing by businessmen, it would probably be more helpful if the banks were to encourage borrowing more actively than they have done recently.

Over-ruling the Court

MANY conservatives in both parties hold that the Supreme Court, in the past four or five years, has been guilty of grossly exceeding its judicial powers. The Southerners feel most strongly about the decision in 1954 declaring unconstitutional the practice of racial segregation in tax-supported schools; other critics, not all of whom are to be dismissed lightly, object most vigorously to the Court's recent decisions upholding the rights of the individual, on the grounds that they make subversion safe. Last week, in the Senate Judiciary Committee, these two groups won over Senator Watkins and Senator Dirksen, Republicans whose conservatism has usually been tempered by loyalty to the President, and rang up a preliminary success for a measure to curb the powers of the Court. This is the first threat to the independence of the judiciary since President Roosevelt, over twenty years ago, tried to "pack" a Court which was throwing out New Deal measures almost as fast as they could be passed.

The original Bill was Senator Jenner's, a bald attempt to deprive the Court of the right to review cases involving subversion and congressional investigations. It would have created legal chaos by paralysing the only court empowered to settle differences between state and federal law and stood no chance of passage even in committee. Senator Butler's less vulnerable substitute, on which the committee is voting, confines itself in the main to reversing the Court's decisions in the cases which have most offended conservatives. The exception would prohibit the Court from reviewing state regulations for admissions to the bar; some lawyers have been refused permission to practise because of alleged Communist associations, and in the South the grounds might be that they had acted for Negro clients. The other decisions involve setting up standards for congressional investigations, the scope of the security programme for government employees, whether it is a crime to advocate, in theory only, the overthrow of the government, and whether federal laws supersede state ones in the same field. On the first two provisions, the committee, by 9 votes to 6, decided to overrule the Court; on the third, to sustain it. It has yet to reach the last two.

Many lawyers reluctantly concede that the Constitution gives Congress the right to alter the appellate jurisdiction of the Court, although it has not done so since the days of reconstruction, nearly a century ago. But most of them strongly oppose the present Bill; so does the Department of Justice. The Senate is not likely to shrug off this weight of responsible opinion. But the President could demonstrate his well-known attachment to the separation of powers by acquainting himself with Senator Butler's Bill and making the case against it overwhelmingly clear, particularly to his own supporters.

Berkeley's BBC

FROM A CORRESPONDENT IN SAN FRANCISCO

THE domination of the American airwaves by advertising has so lowered the quality of most broadcasting that the independent committees, which allot the industry's highest honours, the annual George Foster Peabody Awards, have always had a difficult task. Not only are there seldom enough programmes of real excellence from which to choose, but even these few seem subject to an inexorable Gresham's law of taste that displaces them with programmes which appeal to wider audiences and therefore are preferred by commercial sponsors. The Peabody awards consequently go to an odd assortment of non-obnoxious popular entertainments and less popular programmes of cultural or educational value. The awards presented this month honoured

not only Mr Bob Hope, the comedian, Miss Dinah Shore, the popular singer, and Mr Edward Murrow's documentary series, "See it Now," but reached outside the commercial broadcasting field to reward a unique non-commercial station in Berkeley, California, for its local public service and cultural excellence.

This station, KPFA, has been dubbed the "BBC of Berkeley"—the home of a large section of the State University—not only because it actually offers its Northern Californian audience many transcriptions from the BBC's Third Programme but also because its operations are not supported by advertising. It is financed by the direct contributions of subscribing listeners who pay a minimum of $10 a year to provide its operating costs. But KPFA's uniqueness does not consist entirely of its freedom from commercial slogans and jingles; by addressing its audience directly instead of attempting to sell it, as a market, to advertisers, the station has been able to retain control of its broadcasting standards.

America's ordinary commercial wireless stations, in search of the widest possible audiences, are forced to fit their programmes to a lowest-common-denominator of listener taste and intelligence if only because, as Dr Robert Hutchins, the educator, once explained, the advertising of a soap manufacturer must naturally appeal to the "great unwashed." KPFA intends to attract a variety of small, discriminating, audiences who together will be numerous enough to support the station. It therefore presents almost all the BBC's "World Theatre" and other recordings and live programmes which cover the entire spectrum of literature, including a few in foreign languages. Many of the contemporary works are read by the actual authors, who either live in or visit the San Francisco Bay area, one of the cultural centres of the United States. A similarly broad selection of serious talks and lectures from the station itself, from universities far and near and from the BBC, range widely over the arts and sciences, over politics and local affairs. KPFA's musical programmes concentrate on seldom-heard works of serious composers, ancient and modern, as well as jazz, folk and experimental music. It has presented the first performances of countless contemporary compositions, broadcasts numerous local concerts and offers its facilities to many artists who cannot appear profitably on the commercial concert stage.

Few of KPFA's programmes would survive long or even appear on commercial American wireless. Even the non-commercial stations supported by universities or municipalities are not as formidably highbrow as KPFA. Its independence, for instance, has led it to specialise in broadcasting seldom-heard political opinions, voiced by communists, socialists, anarchists and single-taxers as well as by conservative and liberal Republicans and Democrats. KPFA also differs from the numerous commercial stations which have lately found it profitable to broadcast to the specialised audience that seeks relief in almost continuous "good music" from the crassness of ordinary radio. While KPFA's offerings range from Palestrina to *musique concrète*, their repertory seldom strays farther than Tchaikovsky or Léhar and avoids anything, such as dissonant music, that might offend any portion of the maximum audience which is sought for the advertisers.

For the same reason commercial radio also avoids anything that anyone might find "controversial" and has relegated itself, quite literally, to the background of American life. Sets are commonly turned on and thereafter left untouched and largely ignored—a practice encouraged by the broadcasters, whose greatest fear is that the listener will tune to another station; to attract momentary attention advertising messages are often actually louder in volume than the programme itself.

KPFA, whose programmes are each meant to be listened to by someone, makes no attempt to stay in the background and assumes that the uninterested will turn the station off. This is unfamiliar, even uncomfortable, to American listeners, as is KPFA's habit of not cutting off or interrupting long programmes; it sometimes even observes complete silence—a cardinal sin on commercial wireless. KPFA's success has been hindered by the fact that it broadcasts only on frequency modulation (FM) which is little known to the public since neither commercial broadcasters nor set manufacturers have promoted it vigorously. In its nine years of operations, KPFA has very slowly attracted only 6,000 paying listeners—although, in its broadcast area of 3 million people, many listen to it without paying. This is enough, however, to provide its basic annual budget, with the help of such special efforts as jumble sales. Its tiny group of supporters, including a few sympathisers far out of range of its signal, are fanatically devoted to KPFA. They contribute or raise a total of $105,000 a year for it, actively campaign for new listeners and subscribers, and deluge it with letters of detailed praise and criticism.

With the spread of its reputation and the wireless industry's recent "discovery" of FM, resulting from the inroads of television and a nationwide craze for high-fidelity sound equipment, KPFA's future prospects are felt to be bright. It is planning another outlet in Southern California later this year. But, since the high-quality programmes which have attracted its small group of supporters would not be possible without much volunteered talent and the special arrangements with the tax-collectors that only its non-profit status makes possible, it is unlikely that KPFA will have much effect on American wireless as a whole.

SHORTER NOTES

The output of crude oil in Texas, the biggest producing state, will continue to be held down in May, as it was in April, to the equivalent of eight days' full production. This is the lowest level ever set by the Texas Railroad Commission, the state regulatory agency. Stocks of crude oil and its products, at 642 million barrels, are still higher than usual at this time of year and the independent producers find that they can sell their full quotas only if production is restricted.

* * *

When Ellis Island, through which so many millions have passed on their way to becoming Americans, was no longer needed for the Immigration Service, it was put up for sale. But the largest bid was only $201,000, from a private source; this has been rejected, as the buildings and 21 acres of land are appraised as being worth more than $6 million. So far no worthy or imaginative public use has been found for this historic island in New York's busy harbour.

According to some maps, Canadian markets are a long, long way away. Yet a relaxing overnight journey by TCA, Canada's own international airline, takes you right to the business heart of Canada. Nothing remote about these rich home-from-home markets. Not only are Canadians friendly people but they're very happy to buy British. TCA's convenient daily services to all Canada enable you and your executives to play an active part in developing the Canadian side of the business. And TCA Air Freight, with its daily direct-delivery service, gives you the edge on any distribution problem.

Fly TCA—De Luxe Class

Enjoy complete relaxation aboard a giant TCA Super-G Constellation. Fully reclining seats. Good food and drink. Wonderful service. And don't be surprised if you meet some of the many Canadian business men who always fly TCA.

Afrikaner Triumph

FROM OUR CORRESPONDENT IN SOUTH AFRICA

OUTSIDE a newspaper office in Durban a large crowd was gazing at a huge election scoreboard and watching the Nationalist party's majority creep up relentlessly to give it its third successive victory since 1948. More than nine-tenths of the spectators were non-Europeans—Africans, Indians and a few Coloureds—mute observers of a drama in which they figured prominently but in which they had no voice. Nobody could tell precisely what they thought as they watched. It was obvious that they were filled with bitterness towards the white man whose government a few days before had used an unprecedented display of force, and threats of force, to crush a demonstration organised with the dual purpose of protesting against the white monopoly of government of the country and of demanding a minimum wage of £1 a day. For them the Nationalist victory means more years of repression and resentment.

A post office worker walked into the tense atmosphere of a Johannesburg polling booth. As he went up to the United party table to get his voting number he was recognised by some of the crowd and greeted with howls and jeers. "He reads the Nationalist newspaper, goes to church on Sundays and now he votes for the United party. He's a traitor. I'll see that he's fired," shouted the Nationalist cheer-leader. It takes courage, these days, for people in vulnerable occupations to resist the Nationalist juggernaut openly: the pressures to conform are tremendous.

THESE vignettes of South Africa's polling day indicate the atmosphere surrounding a triumph that has mystified the outside world and depressed the anti-Nationalist forces in the country. Quite simply, the electorate, frightened with tales of racial submersion, let "blood" decide: the Afrikaner racial tom-tom prevailed. It was a vote for the white man to remain boss and no nonsense about sharing or consulting. It was, too, a vote to make the Afrikaner top dog in the white camp, a vote for a separate Afrikaner nation which will call the tune and co-operate with non-Nationalists only on its own terms. Two of those terms are apartheid and republicanism. Mr Strydom convinced the majority of Afrikaners, and a handful of English-speaking South Africans, that their existence as a white nation was in danger unless the Nationalist party remained in power. That is why, on election eve, his injunction was: "Vote for the Nationalists—or death." That this call was heeded is at once a tribute to the power and skill of Nationalist propaganda and organisation, and a reflection on human receptiveness to fear, selfishness and race prejudice when they are skilfully exploited.

The election produced a 5 per cent swing in favour of the Nationalists. The consistent increase in their vote is explained largely by the fact that they have captured most of the young voters who have come on the roll since 1953. This was the handsome dividend produced by twenty-five years of Christian-National education openly aimed at indoctrinating youth with the religion of Nationalism. For the first time South Africa has become aware of the real power of the Afrikanerdom that was launched by the influential Calvinist church and the Nationalist party in the early nineteen-thirties, when Dr Malan and General Hertzog parted company, and when the goal of a "pure" Afrikaner nation took the place of the broader Hertzog concept of a South African nation compounded of the two language groups.

In the Cape, the Nationalist majorities were also boosted by the removal of the Coloured voters from the common electoral roll. These factors, combined with an exceptionally favourable delimitation of constituency boundaries, the loading of the franchise in favour of the rural areas, and a postal vote sadly open to abuse—in brief, an electoral system ruthlessly exploited in every way—produced a result beyond the Nationalists' best expectation. They won 103 seats (96 in the last parliament) compared with the United party's 53 (52 in the last parliament), in a 90 per cent poll. The Nationalists gained six seats from the United party, while the United party gained three from Labour and three from the independents.

For the first time since the Union was formed the Labour party will not be represented in parliament, its two able members in the last parliament having been badly beaten in three-cornered contests on the Witwatersrand. And of the three Liberal party candidates, only one, in Cape Town, managed to save his deposit. Thus, apart from three representatives of the Cape Africans and four of the Coloureds, there will be only two parties in the Lower House. And both groups representing the non-whites will disappear if Dr Verwoerd, Minister of Native Affairs and Mr Strydom's heir-apparent, has his way.

The Nationalist party will now be compelled to enlarge its catalogue of restrictive and repressive measures in order to achieve some of the apartheid which stubbornly eludes it, and to damp down the slightest sign of non-European protest or unrest. There is little doubt that the African National Congress played into the hands of the Nationalists with its abortive election week stay-at-home demonstrations. And the government is certain to make its display of force and threats on this occasion the model for the future.

Some of the Nationalists' more thoughtful commentators have obviously been worried by some of the implications of this electoral victory, and in particular by the fact that Nationalist policy has driven the two language groups into separate compartments. The Nationalists have isolated themselves in their own laager, and they realise, after last week's poll, that they might feel more than a bit lonely

The efforts made to remedy these disproportions are a sharp reminder that German industrial eminence is not confined to the Federal Republic. Brown coal production is being expanded on a huge scale; this is relatively simple, since the deposits are there and are accessible, but it does require very large excavators and elaborate handling installations, which are being produced and put into service. A process for producing metallurgical coke from brown coal has been developed at Lauchhammer, north of Dresden. Three briquetting plants process 6 million tons a year of brown coal under high pressure into 2 million tons of special-quality briquettes; these are delivered by conveyor belts to the Lauchhammer cokery, where they are further processed into 1 million tons of unusual-looking coke (700,000 tons of which is considered of metallurgical quality), together with coal gas and the usual by-products.

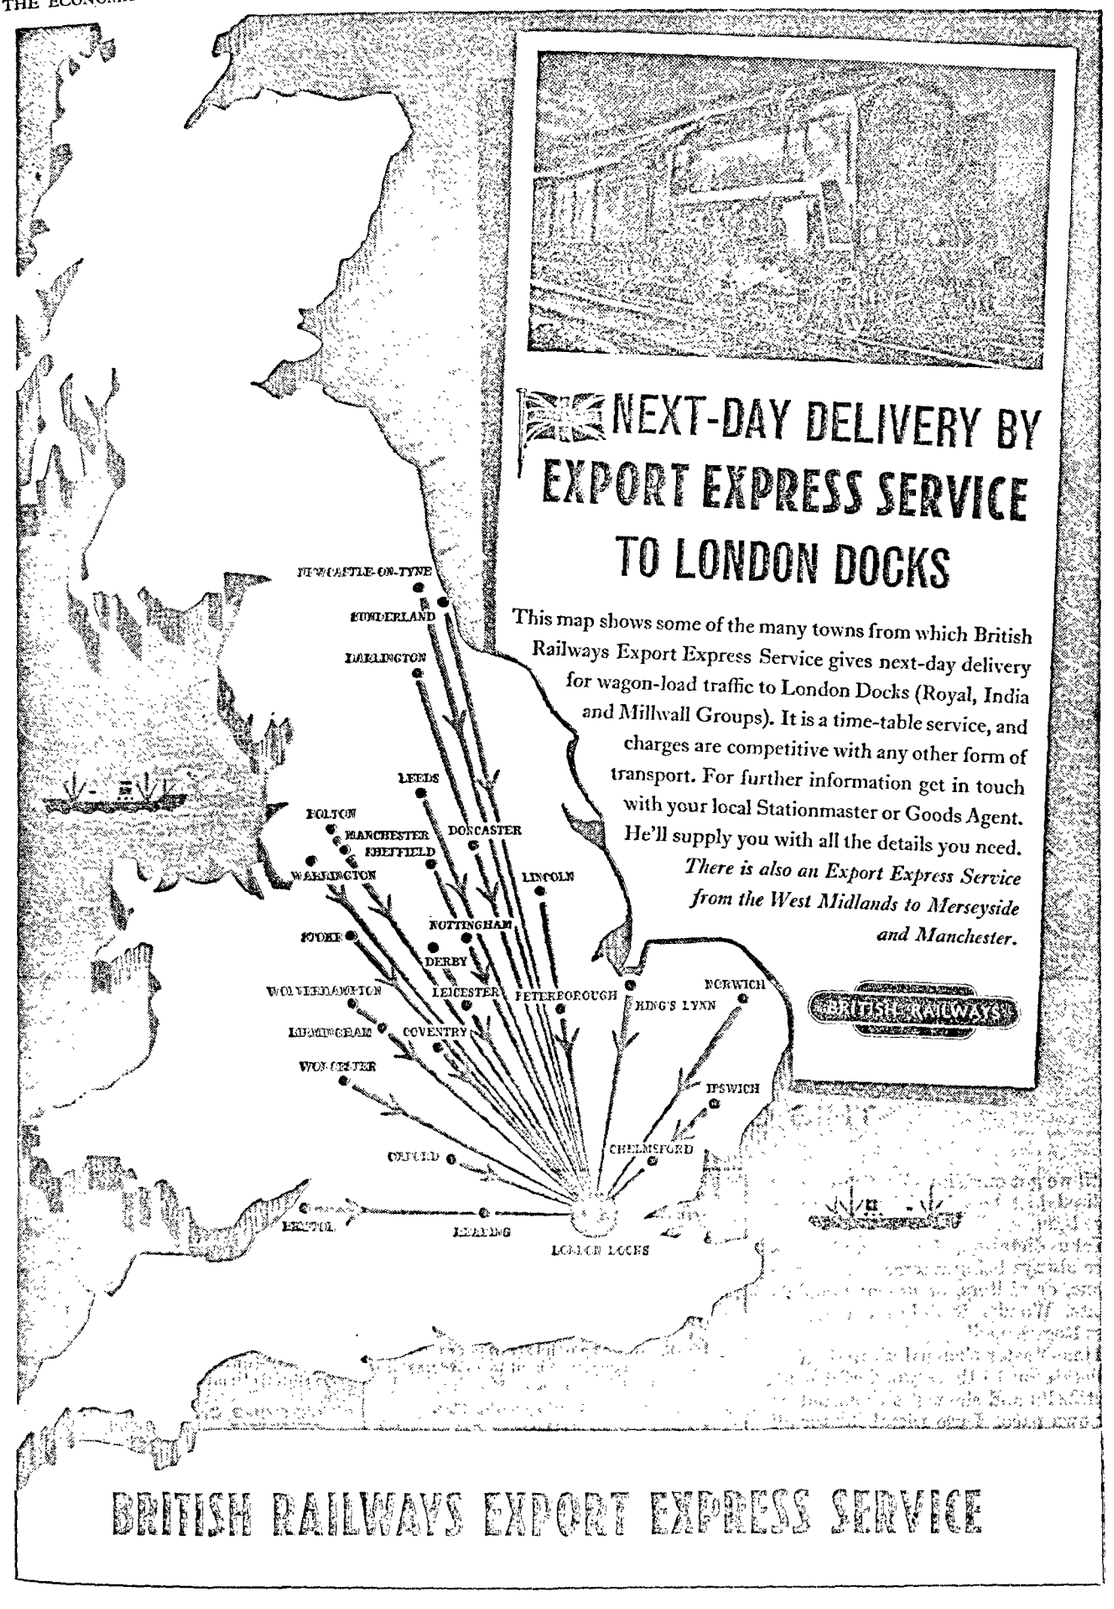
Brown coal coke from Lauchhammer is among the materials fed to another novel plant, at Calbe, near Dessau, designed by east German metallurgists to produce foundry iron on a large scale from very poor materials: Harz and Thuringian ores with brown coal ash (which contains iron), brown coal coke, and an admixture of gasworks coke. The ten blast furnaces, smaller and lower and designed for very different charging, combustion and discharging conditions than the conventional blast furnace, produce about 100 tons a day each; they supply the entire east German requirement of foundry iron, with a surplus for export. (Iron for steelmaking is produced from imported conventional materials by the Stalinstadt iron works near Frankfurt on the Oder.) The original plan for Calbe, which envisaged twenty furnaces, was found to be more than was needed; work on the second group of ten furnaces was stopped, and the installations, though partly built, are being scrapped and their site levelled. Any embarrassment felt about that piece of over-investment seems to be completely outweighed by satisfaction at the good performance of the plant as it now stands, and at the interest it has aroused in west Germany and abroad.

★

Another unexpected industrial sight is the Warnow-Werft shipyard at Warnemünde (Rostock). The Soviet zone of Germany included no important seaport and no important shipbuilding centre; its seaborne trade was formerly carried through Hamburg (now west Germany) and Stettin (now Poland), and the German shipbuilding centres on the Baltic were Stettin and Danzig. Rostock is to be the new centre for shipping and shipbuilding; preparatory and dredging work has just begun on a new port, to take ships up to 10,000 tons, in the salt lake called the Breitling at the mouth of the Warnow. Across the Breitling from the pine wood which now marks the harbour site, a new shipyard has been built where there was formerly a private yard building small boats and repairing fishing craft. The new yard has an orderly layout and ample space for sectional assembly. Its labour force is mostly young, recruited from other occupations and trained on the spot. All the overhead crane operators are women. Most of the technical staff are under thirty and come from the shipbuilding faculty at Rostock; the director is 36.

These three plants are all in one way or another showpieces; but a visit to some of the mechanical engineering centres of Saxony and Thuringia leaves no doubt that the traditional skills of what used to be central Germany are still there, and are hard at work in re-equipped factories. At the former Wanderer works at Chemnitz (now called Karl-Marx-Stadt), from which the Russians removed virtually everything that the bombers had failed to destroy, highly automatic machine tools are being turned out in series with 98 per cent of new machines. The east Germans are well-equipped with the means for their own re-equipment. Defeat, revolution and emigration have left them still an advanced industrial country which can be seen, through the clouds of dogma, once more fully at work.

(The first article appeared on April 12th)



Death Under the Cherry Blossom

FROM OUR CORRESPONDENT IN TOKYO

DESPITE many postwar changes, Japan continues to be the land of geisha, cherry blossom and *hara-kiri*. The geisha and cherry blossom are well-established and well-exploited tourist attractions, putting $50 million a year into the Japanese economy, more than enough to pay for the foreign patents that materially contribute to Japan's swift industrial advance. Meanwhile, the Japanese go on being one of the most suicidal races on earth. The geography itself is suicidal, with its precipitous mountains, abundance of lakes and swift-flowing rivers, and its smoking volcanoes. Taking full, melancholy, advantage of these natural features, the Japanese also throw themselves under electric trains, and the suicide-rate is further maintained by easy purchase of either sleeping pills or poison.

Hara-kiri, in the strict sense of formally ritualistic bowel-slashing, is no longer much indulged in; but *jisatsu*, or common-or-garden suicide, is all too common. The suicides, however, try to make even of *jisatsu*, as the Japanese do of most things, an art. The cherry blossom that tempts the tourists also inspires the suicides. The suicide-rate rises sharply and seasonally with the advent of spring because the Japanese prefer to take their lives in the most pleasant possible surroundings. In the spring the nation's most celebrated beauty spots never lack their quota of suicides mingling with the trippers. On a single day this March, Nikko was the scene of five spectacular double suicides: the highest number in one day at Nikko since 1875.

This year since the buds began to peep (it has unfortunately been an extraordinarily early spring), the number of *families* commiting suicide has risen to an average of three a day, while thwarted young lovers have contributed an average of one suicide pact per day. Even this does not tell the whole story, for it excludes such suicides as that of the 13-year-old schoolboy who hanged himself from a rafter in his father's barn because his favourite professional wrestler failed to win the spring *sumo* championship in Osaka. Though Japan is probably the most prosperous country in Asia (only an estimated ten or twelve per cent of the population being destitute), a number of family suicides occurring this spring have been prompted by economic hardship. But a much larger number, the authorities say, were precipitated by emotional upsets—chiefly

Between the three of us,

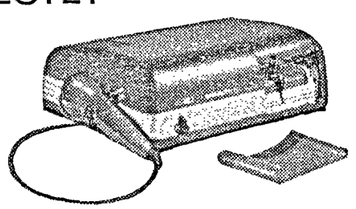
THIS OFFICE WORKS PERFECTLY

Until we got our Time-Master, I never realised just how inefficient we must have been.

Take dictation, for example. We were always being interrupted by the phone, or visitors, or urgent appointments. Wonder it didn't drive poor Miss Rogers mad!

Time-Master changed all that. Now I dictate on to those wonderful little Dictabelts and she types them out at her own pace. I use Dictabelts for all my notes and memos too. I estimate Time-Master saves me an hour's routine work a day.

The words DICTAPHONE, TIME-MASTER, and DICTABELT are registered trade marks



THE DICTAPHONE TIME-MASTER
the world's greatest dictating machine

★ Made to an unequalled standard of precision engineering.
★ Fingertip control.
★ Perfect recording, playback, and correction.
★ Fast, efficient service—everywhere.

DICTABELT—the world's most modern dictation record—exclusive to the Dictaphone Time-Master

★ Light, handy, but virtually indestructible.
★ A permanent, visible recording. Can be posted or filed.
★ Crystal-clear recording at extremely low cost.

You cannot know *all* the advantages of owning a Dictaphone Time-Master until you've lived with it for a week. Try it—free.

The Dictabelt record—main reason why Dictaphone Time-Master far outsells all other dictating machines.

NOTHING CAN COMPARE WITH

DICTAPHONE
TIME-MASTER

Dictaphone Co. Ltd., 17-19 Stratford Place, London W.1. Sales and Service in 68 Countries

DICTAPHONE ALSO MANUFACTURE TELECORD — WORLD'S FINEST NETWORK DICTATION SYSTEM

jealousy by a husband of his wife or vice versa. The suicides of "young couples" are almost all prompted by parents' opposition to their getting married. The Japanese, who falsely pride themselves on their ability to conceal emotion and who are never more pleased than when some superficial observer compares them with another island race, the stolid British, are in fact intensely and even neurotically emotional. Japan's innumerable newspapers do not include a *News of the World*, but one feels that such a newspaper would do well.

An irony of the situation is that, while the suicide-rate continues to rise, the Japanese mortality rate from more natural causes has plunged steeply down. Since 1947 the death-rate has fallen a full fifty per cent to eight per 1,000. The chief factors are a sensational fall in the infant mortality rate (since 1935) from twelve to four per cent, and a fall in the tuberculosis death-rate from two to .49 per 1,000. Correspondingly, the life expectancy of a Japanese male has risen by 16 years since 1935 to 63, and that of a Japanese woman by 17 years to 67. Yet the suicides persist in trying to put a dent in these highly encouraging figures and to shorten lives which medical science seems determined to lengthen.

The most astonishing phenomenon of all is the attitude of many young Japanese "intellectuals" to the suicides. These young men—mostly writers, artists, university lecturers—give the impression of being very much a part of the postwar world. Much less aggressive and aggrieved than their counterparts in, for example, India, they are keenly interested in both the culture and material achievements of the West, without seeming to have acquired any sort of contempt for their own considerable heritage in both spheres. They appear to be reasonable and well-balanced young men. But this impression receives a setback when the subject of suicide is raised. With charm, with eloquence and with a deep-seated melancholy that one had not hitherto suspected, they gravely defend the custom. "Surely," they argue, "it is better to die for love, for passion, than to live without either?" But, the foreigner protests, surely also the ill-starred lovers could have found some less drastic solution or, failing a solution, something else to live for than love? "Ah," the young men gravely reply, melancholy finally getting the decisive upper hand; "but is life, in fact, so worthwhile as you imagine? Doesn't it have more burdens than pleasures? The thought of death can often be very enticing."

There is a point beyond which this argument can obviously not be pursued. An awkward *impasse* between two ways of thought has been reached and seems unbridgable; a yawning gulf has disconcertingly opened; both sides agree to change the conversation.

A possibly significant footnote is that the young women of Japan palpably do not share the male view—though they commit suicide when the male decides they should. In most suicide pacts, the man announces the intention, the girl is reluctant, but lets him have his way with himself and with her. In death, as in life, Japan is still a man's world.

Racial Conflict in Ceylon

FROM OUR CORRESPONDENT IN COLOMBO

CEYLON is again faced with the threat of communal conflict. The Tamil Federal party is making plans for a satyagraha movement in the northern and eastern provinces, where the majority of the indigenous Tamil-speaking people live. The agreement reached between the government and the Federal party last July has been pronounced dead. This agreement brought about a truce in the linguistic conflict, and the Federalists then called off the satyagraha they had planned for last August. Two Bills were promised under the agreement: one to make provision for the reasonable use of Tamil (in local administration, correspondence, recruitment to the public service and education); the other to set up regional councils which would provide greater provincial autonomy.

Mr Bandaranaike now says that the Federal party, by renewing direct action with its campaign against the use of buses with Sinhalese registration plates in the north, has invalidated the agreement. The Federal party has suggested that the government was bullied into abrogating the agreement by Sinhalese-Buddhist extremists. It is probably too facile an explanation to say that the prime minister was intimidated by the Buddhist monks who set up camp on the road leading to his house. Opposition to the agreement had in fact mushroomed. Government MPs were also perhaps concerned that the United National party, which was also against the agreement, was trying to benefit by the situation. It is even said that, within the cabinet, the marxist element was prominent in urging the prime minister to take a tougher line with the Federalists.

Who broke the pact is now largely an academic question. The tragedy is that the agreement, reached after so much patient negotiation, should have been sacrificed on such a petty issue as that of number plates on a few buses. The transport minister had decided, before July, that new motor vehicle registration plates should have a Sinhalese letter in place of the English ones so far used. The Tamils objected, and in the north, Federal party volunteers began to deface private vehicles with the new number plates; but after the July agreement was reached, their campaign was stopped

A few weeks ago, the transport board decided to send new buses (with the Sinhalese registration plates) to the north. It was explained that these areas, poorly served by the former private operators, needed new buses urgently. There was no immediate dissatisfaction among travellers in the north. But some days later the Federal party called on its volunteers to pick up their cans of paint and set to work on these buses.

The police took no action, even when faced with a

retaliatory movement in the Sinhalese areas to obliterate Tamil lettering on office nameboards. The government was, however, forced to take more serious note when violence ensued and a few lives were lost. Mr Bandaranaike announced that the Federal party had rendered the agreement null and void, and had also created a situation in which it was not possible to proceed with the implementation of the agreement. He also asked the police to prosecute anyone who broke the law as a means of registering his protest, pro- or anti-Sinhalese. The tar-and-brush brigades which went round the Sinhalese areas defacing Tamil nameboards immediately gave up their activities, but the Federal party has shown renewed vigour in its own campaign in the north. Its leaders, with their families, have rushed to court arrest. They are no doubt eager to don the haloes of martyrdom, and have said that they will fill the country's jails. Prosecutions have been launched, but the cases have not gone to trial yet. Arrested persons are released immediately after their statements are recorded.

Rubbing out Sinhalese characters on bus number plates is only a beginning. The Federal party intends to break other laws, and plans are being drawn up for a full satyagraha programme. The leaders insist that their campaign will be Gandhian and non-violent, but it seems doubtful whether it can ensure self-discipline among its ebullient followers.

When the talks between Mr Bandaranaike and the Federal party resulted in agreement last year, there was general relief. Both parties made efforts to convince the people that a fair compromise had been struck. Now the delay in implementing the agreement has given extremist elements time to sow their seeds of discord. The delay cannot, however, be fairly laid at the door of the government. Mr Bandaranaike has said, and the Federalists have not denied, that the delay was the result of two requests made by the latter. They had asked that both Bills should be presented to parliament together, and that the second Bill should indicate the powers of the councils in detail.

★

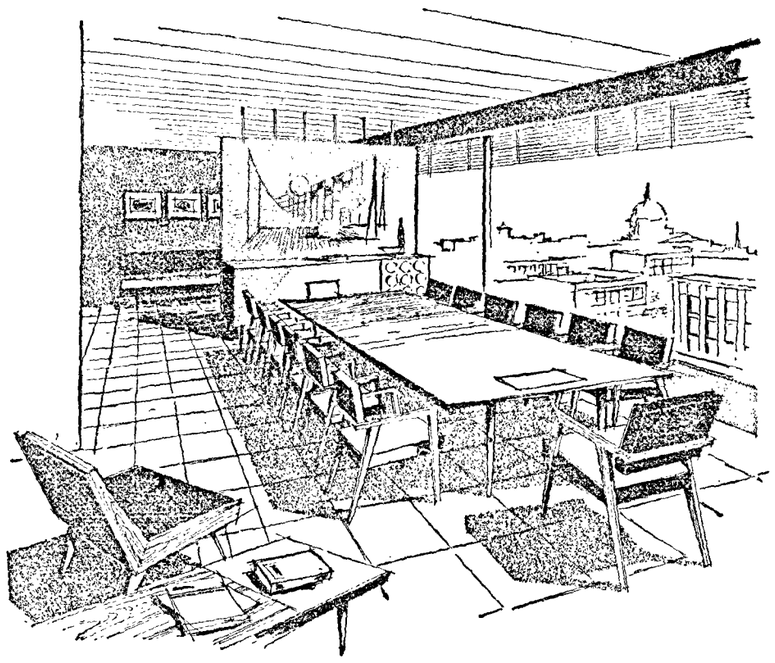
The prime minister has stated that, pact or no pact, the government will carry out what it had intended to do, in justice to the Tamils. It has now been announced that the first Bill will be introduced in parliament immediately after it reassembles in June. The introduction of the two Bills should take the edge off Tamil bitterness. What the reaction will be in Sinhalese areas, however, remains doubtful. It is clear that the mood has changed since the agreement was reached and the Bills promised. The United National party also appears to have found common cause with Sinhalese extremists in opposing these Bills.

Another rather dangerous development is the spread of the Dravida Munetra Kazagam movement to some parts of the country. What began as an anti-Brahmin movement in Madras state has grown into a pan-Tamil agitation, and the idea of a single state embracing south India and parts of Ceylon has been openly suggested. Efforts to find converts to this idea have apparently been made, both among the Indian plantation workers in Ceylon and the indigenous Tamils in the north. Sinhalese extremists may be able to arouse fears among the Sinhalese on this score, alleging that there is a move to annex north Ceylon to south India.

The situation is therefore not without combustible elements, and irresponsible demagogy on either side can provide the sparks. Mr Bandaranaike has appealed for calm and restraint. Unless this plea is heeded, the danger of considerable conflict and tension remains grave.

Cuba's Rightist Rebel

BY A CORRESPONDENT



A YEAR ago, Señor Fidel Castro, the leader of the rebel opposition in Cuba, stood as a champion of freedom in the Caribbean : today he is less respected. By Caribbean revolutionary standards, he has failed rather badly because after a year's fighting he has been unable to overthrow the president, General Fulgencio Batista. More important, he has not yet given any convincing account of what he stands for or what alternative to the existing dictatorship he can offer. In fact, some sarcastic Cubans are saying that Señor Castro is only distinguished from General Batista by his beard.

General Batista has the largest and best equipped army in the Caribbean. But some years ago, realising that military power alone might not be sufficient protection, he decided to follow in the steps of General Perón and establish strong trade unions, which enjoy a certain amount of official favouritism. The condition of the Cuban working class is still appalling, but it is at least better than it was ten years ago. And the president's hold over the masses was demonstrated during the three general strikes that were called by Señor Castro. On all three occasions the largest proportion of stoppages took place among the white collar workers—especially among the bank clerks—while the unskilled workers remained inactive.

Señor Castro has been accused of communist sympathies, but this means very little since all opponents of the regime are automatically called communists. In fact he is further to the right than General Batista. He draws support from the Catholic church, the largest industrial concerns and the landowning aristocracy, and his couriers include adventurous debutantes and young men about town. At the beginning of his campaign against the dictatorship, he published a pamphlet advocating agrarian reform, nationalisation of public services and free trade unions. Now he appears to have changed his mind and is advocating free enterprise, stability, a fair deal for the landowner and free but "responsible" trade unions.

Neither of these two programmes can be taken seriously. Señor Castro originally sought to lead a popular revolution. When this failed, he appealed to those elements in the wealthier classes who were interested in overthrowing the regime. To get their support he had to change his programme, and this he did without much hesitation. He is now riding on the simple and straightforward slogan : "Get rid of Batista."

What will happen if Señor Castro succeeds ? He will not himself be accepted as president by those who support him now. He knows this and has already proposed Dr Manuel Urrutia, an obscure judge, as his presidential nominee. But whoever becomes president after General Batista, it is unlikely that the Cubans will escape the system of official corruption and favouritism that has long dominated their politics.

An important Boardroom announcement

There is rather a different air about the Boardroom to-day, for contemporary design is ideally suited to the modern building. Maples will design, fit and furnish such an individual scheme—and will incorporate any special features that you may require.

'ENGLISH ELECTRIC'

Atomic power is in the news, and people are rightly interested in projects like the new 500,000-kilowatt atomic power station at Hinkley Point, for which, as for so many of Britain's conventional power stations, ENGLISH ELECTRIC is supplying the generating plant and distribution equipment. None the less, 86 per cent of Britain's power still comes from coal, and the efficiency of British mines remains of vital national importance. Here also ENGLISH ELECTRIC contributes significantly, by supplying equipment for the mines themselves—such as the main winder drives at the pit heads.

bringing you

Underground, too, where the coal is won, electricity plays its part in speeding production. Electrically powered cutters work faster than any human, and relieve skilled miners for work at difficult seams. Electrically powered conveyors send the coal to the main haulage ways, where it is loaded into tubs and taken to the pit shaft in special trains—hauled, as in this picture, by ENGLISH ELECTRIC battery-operated locomotives. Thus electricity brings better working conditions to people in the coal industry, and higher living standards to the population who benefit from the coal they produce.

better living

THE BUSINESS WORLD

Finding the Means

THE stroll round the garden path in Downing Street this week had some important results. The Government has made it unmistakably clear to the railway unions and to the Labour party that it has set its face against any subsidy-cum-loan to the Transport Commission beyond the £250 million already committed and now half-spent. The commission and the unions, with the joint incentives for the one of some restoration of the "Thorneycroft cuts" in the accelerated railway investment programme and for the other of a consequential pay rise at some not too distant date, may be induced to make a joint attempt to prune railway costs and increase railway efficiency.

Whether this will go as far as finding the £11 million or so a year needed to finance a three per cent pay rise remains open. The commission has already had to instruct the regions to cut this year's programmes for revenue expenditure to produce savings of £15 million to keep the deficit within the bounds that the Government is pledged to meet. Much more could probably be squeezed out with stronger wrists; they have recently been at work in Marks and Spencer and in the Post Office and might well produce dramatic results inside the Transport Commission. Such economies would be welcome in tailoring manpower, organisation, and services to current needs; most of the £15 million that the regions have already had to cut out of their revenue budgets has come from maintenance and repair expenditure, which it is not prudent to cut.

The reductions in the railway investment programme last September were inevitably in conflict with the specific Government policy of giving all help to the commission short of a permanent subsidy or larger loan. It was never expected that the full 15-year programme would remain unmodified in the light of the changing prospects for the railways. But to hold back the pace of renovation over the much shorter period of seven years is rather different, for in that time the commission has calculated (and apparently still expects) that it will break even and so be able to start paying back the £250 million revenue loan. It now appears that the extent of the cuts in railway investment last autumn came about by accident and the Government remained unwilling to change its decision, despite their serious reaction on some parts of the development programme. In the *Proposals for the Railways** of October, 1956, the commission envisaged the spending of £135 million on capital equipment in 1958 and £140 million in 1959. Pressed for more up-to-date estimates last autumn, the commission put forward £151 million for this year and £148 million for next, which allowed for the subsequent rise in costs and the quicker tempo of the actual work. Only after the Government had cut these figures back to £145 million for both years did the commission receive detailed proposals from its regional boards which added up to a much higher total. The regions had been able to get ahead far more quickly than the commission had realised.

So the regions then had the disheartening job of selecting the contracts they could prolong and the delivery schedules they could postpone without involving even larger consequential delays elsewhere. In general, this meant leaving intact the electrification programme and other works of long-term construction, such as the new marshalling yards, which would not produce returns for some time; and slowing down the main-line diesel and new wagon programmes—items that can bring immediate benefits in lower costs or better performance but were more easily brought under the chopper. Yet the extent of the reductions in railway investment was trifling. What really happened was that the railways lost an opportunity to push ahead faster.

This sorry tale is bound to affect the commission's revenue this year. Modernisation was expected to show its first noticeable returns in 1958. In the 1956 white paper the commission expected to achieve a fairly high level of investment almost immediately but to run into deeper deficits before this capital spend-

* Cmd 9880

ing took effect. Clearly, however, the immediate rate of loss has been larger than was expected. Of the £250 million the commission can borrow to cover its revenue losses up to 1962, £54.4 million was claimed for the net deficit in 1956 and a further £64 million has been drawn for its net deficit in 1957. Another £61 million was provided in the budget estimates for 1958-59—of which £10 million has already been claimed. Thus almost £180 million of the £250 million is likely to be used up in the first three of the seven years—broadly £20 million to £30 million more than was implied in the white paper.

This would not be so very serious if the deficits were to start declining this year. But will the rate of deficit start to fall from now on? Why has the recent and present rate of loss been higher than expected? Three years of stable industrial output and the more recent rundown in most kinds of investment spending provide most of the answer, and the further rise in costs, particularly last year's wage increase, provides the rest. Railway freight services have been particularly sensitive to the economic climate since petrol was derationed in 1951 and the private haulier was freed of the 25 mile restriction at the end of 1954. Since 1951, railway freight movement has fallen by about a tenth.

WHEN the commission first framed its proposals for modernisation at the end of 1954 and then elaborated and slightly modified them in the summer of 1956 it made several important assumptions. It assumed no change in prices and accepted the general expectations then current about the likely future rate of growth in the economy. The commission could hardly have built any precise rate of general inflation into its plans, nor could it have been expected to foresee the levelling off in economic growth since 1955-56. It might perhaps have reckoned with a continued growth in the numbers of "C" licence road vehicles (which has in fact accelerated), and with sharper competition in transport following the partial denationalisation in road haulage. But it probably did not expect competition between road and rail freight rates to become as keen; on some of the busiest and most competitive traffic routes between the main industrial cities the rates are no higher than ten years ago.

Over the full fifteen years the commission reckoned on a slight increase in rail freight traffic and a small drop on the passenger side. In the event, since 1956, passenger mileage on the railways has shown a slight steady growth (partly the result of better services and new equipment such as the multiple unit diesels), while freight ton mileage, which is by far the larger revenue earner, has fallen further, despite the windfall gained a year ago from five months of petrol rationing. The margins between receipts and costs are so razor-edged that even a small drop in freight traffic has a serious impact on net receipts. The commission has been able to make even less use of the 10 per cent general increase in maximum freight charges last August than is expected, and the chances of raising passenger and freight charges generally again are nil at present, since the railways would lose more traffic—and perhaps lose it permanently. The commission is considering how to get higher rates from a few selected traffics that would not result in less net revenue, and it could certainly extract more from certain bulk traffics if the commission—and the Government—were to abandon their conceptions of public policy. But the extra receipts from selective rate increases could not be large.

THE railways may thus not be wholly to blame for so far doing worse than they expected. Their prospects depend, not upon any early general raising of charges, but upon three further factors: an early revival of industrial activity, which is outside their control; genuine revenue economies achieved by administrative action, which the commission and the unions are now supposed to be intensifying; and the due materialisation of the expected benefits from the various modernisation proposals. These were spelled out with a certain apparent precision in 1956:

BENEFITS OF MODERNISATION

	1956 to 1961-62	1961-62 to 1970	1956 to 1970
	£mn.	£mn.	£mn.
Pruning services	+ 3	—	+ 3
Improved productivity	+ 5	+ 5	+ 10
Commercial freedom	+ 20	+ 5	+ 25
Re-equipment	+ 35	+ 50	+ 85
Gross revenue improvement	+ 63	+ 60	+ 123

This figuring at least indicated that the commission did not expect much from cutting out uneconomic services and from improved labour productivity as such (as distinct from the higher productivity that results automatically from re-equipment). By far the greatest returns were expected to come from its new freedom to vary charges, mainly in the first half of the programme, and from re-equipment which would be more productive of results towards the end of the full period.

Up to now the commission's policy has been to abandon only those "uneconomic" services which do not contribute to their direct costs and are unlikely to do so even after money has been spent on them. The commission claims that its nascent costing system can allocate all but about a quarter of total revenue outgoings as direct costs to particular services. Presumably the harder pruning of uneconomic services discussed this week means cutting out the remaining "direct losers" and taking a new view of the "small contributors." The trouble is that procedural delays seem interminable and public attitudes towards the closing of "Bluebell" lines is perverse. Really large benefits from a revision of uneconomic services would come from differential pricing for peak traffics. The London suburban services, which are the biggest headache, probably just about cover their direct costs, but administrative and political difficulties stand in the way of making them contribute more to indirect costs.

The relatively small gains expected from improved labour productivity pure and simple were bound to be more than offset by wage advances. Progress towards better manpower performance has taken a slow, negotiated path, in which the diesel manning agreement and co-operation in work study have been the brightest features. It is always difficult to match manpower to short-term fluctuations in traffic, but the discussions now taking place between the commission and the unions on staffing ratios and co-operation in new methods may for the first time lead to a pay rise after better results, and not before. If this is the case, it could have immense benefits on the way a renovated railway service is worked.

So far the commission has not made any major use of the merchandise charges scheme that came into effect last July, apart from abandoning the historic "any quantity" rates and revising charges for consignments smaller than one ton. Given a general 10 per cent increase in maximum rates a month later, the commission decided not to make wholesale and radical changes straightway. Over-hasty changes might be unwise, indeed, in view of the fact, revealed by the Parliamentary Secretary on Tuesday, that 50 per cent of the railways' freight business comes from 80 firms. The present narrowness of operating margins means that commercial freedom can become effective only as renovation lowers costs and allows the railways to undercut road operating costs on an appreciable scale.

Perhaps it is too early, therefore, to get cold feet about the railways' real chances of ever becoming profitable again. The odds against the railways paying their way by 1961-62, have lengthened and while there are some encouraging signs they are small beer compared with the benefits the commission hope to get in a year or two and thereafter. It will be time to take a cold sceptical look at the commission's prospectus at the beginning of the sixties, when it expects to be out of the red and by then yet another government may have issued its own revision to the prospectus. For the present, everything hangs on the discussions now taking place with the unions, and on the use the commission makes of the benefit of the doubt during the next two to three years.

Building Society Reform

The seven per cent squeeze has produced one major casualty among the building societies. The £24 million Scottish Amicable is to be taken over by the Co-operative Permanent.

LOOKING back to last autumn, the building societies may well feel satisfied. Their final figures will not be available for another month, but pretty close estimates are possible and they show solid achievement. The societies have the last laugh against those (including *The Economist*) who thought that they should adjust their interest rates to fit a 7 per cent Bank rate. Most of them stuck to 3½ per cent net on shares and to 6 per cent on most mortgages. Their rates on investment looked unattractive and produced markedly less money for lending on mortgage than could have been absorbed. All the same, the line was held until Bank rate came down. And now the provisional figures show that only twice before were last year's mortgage advances exceeded; with few exceptions the societies have emerged from last year's test with strength unimpaired, and 3½ per cent net on their shares (equal to £6 1s. 9d. per cent at the standard rate of tax) is again a competitive return in a 6 per cent world.

The building societies insist often enough that their interest rates are not directly connected with Bank rate. Having guessed right about Bank rate, what prospect could be more inviting than to find interest rates now moving their way? If growth in occupier house buying emerges, as a by-product of the Rent Act, more money will be flowing in to finance it. The Chancellor, too, has done his little bit to help. The margin between interest paid on shares and interest charged on mortgages has been much too narrow for comfort—the annual addition to reserves has varied with the expense ratios of individual socities, but even for the whole movement it works out no higher than 5s. per £100 of assets. Now the profits tax concession will relieve the societies of about £1 million out of a profits tax burden that would otherwise have approached £2.3 million this year. That would raise the average margin for reserves towards 6s. per £100 of assets—not affluence, but at any rate frugal comfort. If interest rates in general should fall to the point at which both mortgage interest and share interest could be reduced, the burden of income tax that the socities pay at the composite rate would fall too.

IT sounds a cheerful prospect. But there are some awkward obstacles. One of them is a legacy of the financial stresses of last year—investment depreciation. Building societies are taxable at the standard rate on their retained surpluses. They are not taxable on capital gains and last year they could buy gilt-edged stocks below par with grossed up net yields higher than a 6 per cent return on mortgage money. The societies might have been excused for thinking the "shorts" preferable to mortgage business, and they certainly invested in them freely and sought to run at a higher liquidity ratio. But they were bargaining on stiff rates, not a crisis rate, and 7 per cent Bank rate

inflicted severe depreciation on their investment portfolios. Fortunately this was acute only in one case, the Scottish Amicable, whose whole reserve failed by £400,000 to cover the depreciation. Now shareholders may lose their interest from January 16th until some date of amalgamation in June to cover the investment mistakes of years ago. Share interest from January 16th to the transfer date will depend on the recovery of the gilt edged market, which could mean that the Co-operative takes over at the equivalent of 19s. 5d. in the £. At the other end of the scale, the Halifax and the Leicester Permanent write down their investments at least to market value, and show no depreciation. But, as Mr Denham's recent speech to the members of the Halifax society showed, that society is worse off by over £1 million on its investments over the year.

The best course for investment policy is not easy for a building society to find. The Scottish Amicable figures prove that the gilt-edged holdings must be short-dated, but the Halifax figures prove that shorts and short mediums—the only stocks that that society uses—offer no full protection in periods of great market strain. One side-stepping device used by many societies is to invest in unquoted loans to local authorities (often supported with stress clauses that enable the society to call for its money in circumstances to which most of them would be reluctant to admit), phased so that some portion is constantly being repaid. Indeed the Bradford Equitable makes up its whole portfolio of such stocks and so shows no depreciation. But depreciation is not necessarily escaped because it is not shown. At the best of times local authority mortgages are marketable only with difficulty, and anyone who took a local mortgage at par when Bank rate was 5 per cent could certainly not have sold it near par with Bank rate at 7 per cent. But in reckoning true liquidity it really is the market value of investments that counts.

If there is no short cut to safety in investment, there are several gambits for reducing risk. The first is to keep the dates short and in a phased sequence. The second, for those societies whose liquidity ratios are already high (in the big societies they range from 13½ per cent to 18 per cent), is not to let liquidity run higher. Nearly half the money that building societies handle arises from mortgage repayments. And several societies have recently been trying new ways of raising on longer term the money that is to be lent on long mortgage. Fixed-term deposits at more attractive rates of interest might give the societies more assurance against withdrawals by investors. But though useful, the term deposit has its limitations. Certainly, the fine balance between rates paid and rates charged by the societies would be overturned if anything but a small proportion of their total funds were to take the form of fixed-term deposits. Nor is it evident that the societies could induce investors to prefer building societies' shares to Stock Exchange securities without the offer of repayment at short notice.

Two longer range problems also confront the societies. The composite rate of income tax that they pay on behalf of their members is an average personal rate of tax, based on a sample taken every four years but recalculated after each budget. Over the decade 1948-49 to 1957-58, the composite rate has risen from 4s. 3d. in the £ to 5s. 6d. in the £, though the standard rate of tax has gone down from 9s. to 8s. 6d. and various personal allowances have been extended, and this year again the composite rate may again be a penny or two higher. Pay packets have been better filled and the societies particularly in the south have been attracting a more substantial type of investor with a higher personal rate of tax. The composite rate arrangement seems inexorably bound to lose its value to the societies and, as it does so, their working margins between interest charged and interest paid may be squeezed.

Last, the law under which the societies work dates mainly from 1874 and 1894. It calls urgently for rethinking. Glaring contradictions exist between the conceptions that it still imposes on building societies and those that modern company law imposes on public companies. A subcommittee of the Building Societies Association pegs steadily away at law reform and the recent suggestion that trustee status should be accorded to deposits in certain societies underlines the need for new thought. But agreement still seems far away. The mere fact that most societies are intelligently administered and do good work ought no longer to serve as an excuse for delaying reform. One point would be generally agreed: that the Chief Registrar's powers over the registration and naming of new societies ought to be strengthened. At present any three persons, whatever their resources and whatever their history, can register a society and start collecting money. It can also be argued that directors' outside interests—their personal borrowings from the society, and their other directorships—ought to appear in the accounts. And although majority opinion in the movement is strongly against the idea, the outsider finds it hard to understand why the members of the association do not favour legislation that would enable them to protect their movement by some central guarantee fund. The great controversy in Halifax a year ago showed that democratic rules which are not kept up to date themselves become undemocratic. One point of comparison which is still overlooked is that the opposition in a building society does not enjoy, as it does in a company, the right to address its fellow members. There is simply no access to their names and addresses.

BUSINESS NOTES

FOREIGN EXCHANGE

Sterling Sold

After bumping against its ceiling of $2.82 towards the end of last week (the rate in the official market touched $2.81⅞ which, allowing for brokerage, is as near the limit as it can go), sterling has this week relapsed to $2.81½. This movement is attributable partly to commercial operations, and in particular to a substantial switch from sterling into dollars on the part of one of the big oil companies. This order is said in the market to have been handled with less than the accustomed degree of skill. On the appearance of a substantial commercial demand for dollars the Exchange Equalisation Account wisely withdrew from the market and let the rate slip. There is no suggestion that the past week's activities have cost the Exchange Equalisation Account dollars and the substantial gains made in the earlier part of the month remain largely intact. Transferable sterling weakened slightly, to $2.7920; it has now completed six months above $2.78, the lower limit in the official market.

New York is still short of sterling, but with the first indications of the sterling rate slipping away there has been a tendency to postpone purchases. The underlying mood is still strongly favourable to sterling, though some adverse influence is attributed to the publicity given to disturbances in Malta, Cyprus, and the Middle East. In the first half of the week a further deterrent to the buying of sterling was the reappearance of pre-Bank rate selling, which was so regular a feature of the market in the few weeks that preceded the cut in the Bank rate from 7 to 6 per cent. This selling was normally followed by covering purchases on Thursdays and Fridays and it is significant that when Bank rate did fall from 7 to 6 per cent, sterling after a momentary hesitation regained its former strength. In spite of this, the "hedge" selling of sterling has again been in evidence.

Since the cut in the Treasury bill rate last Friday there have been fewer signs of foreign money coming into London. The forward discount on sterling against dollars now represents an interest equivalent of about 3¾ per cent per annum, a figure which leaves an advantage of under ½ per cent in a switch of money from investment in New York to London Treasury Bills. A margin of this size is inadequate to stimulate any substantial further movement of money covered against the exchange risk.

INTEREST RATES

Out of Line Again?

The Federal Reserve Board last week sanctioned a further cut in the discount rate in New York and other key centres, by ½ per cent to 1½ per cent; and at the same time it made another reduction—this time a selective one, lessening the discrimination against the big centres—in the minimum requirements that member banks have to keep with the central bank in reserve balances. The "Fed" began its moves towards cheaper money cautiously, with its reduction of ½ per cent from 3½ per cent in the discount rate in mid-November; recently its policy has become unequivocally expansionist. Open market purchases have contributed to a steep fall in the Treasury bill rate, far below the discount rate; this week, the New York bill rate has fallen from 1.22 to 1.06 per cent. The margin of New York money rates below London rates is still not quite as big as it was on the eve of the Bank rate reduction in the London Bank rate to 6 per cent; but it is still substantial, and the margin above Continental money rates is also significant.

The differential naturally enhances the expectation of a

further Bank rate reduction here, and the New York move was a contributory influence in the sharp fall in the London bill rate last week, by ⅛ per cent, to 5.2 per cent.

IN THE MARKET

£20 Million for New Zealand

THE New Zealand issue was for no less than £20 million of new money, a large sum for a small country, and carried another 6 per cent coupon. It was made at £99, and its redemption dates of 1976-80 imply a gross redemption yield of £6 1s. 8d. per cent. These terms differ only narrowly from those on the shorter dated £16 million Australian cash and conversion issue made at 99½ when Bank rate was still 7 per cent. The Australian stock now stands at a premium of only ⅛ over the the issue price. But the New Zealand stock did not upset the gilt-edged market, which through the week to last Wednesday continued to climb gently, carrying the *Financial Times* index of Government securities from 83.29 to 83.58. The demand for gilt-edged stocks stimulated by bank buying and by the growing belief in the market that another Bank rate move may not now be far away remains strong.

But the New Zealand issue tested the market even though it did not knock it. The result when lists opened on Thursday was a little less favourable than the market expected, rather more than half the issue being left with the underwriters. It must now take a little time for the new stock to find a permanent home. That is a familiar problem. Even the Australian issue, though it ranked as a success cannot yet be regarded as entirely absorbed. One difficulty that issuing brokers concerned with these Dominion issues experience is the fact that the Government broker still has a big block of Funding 5½ per cent stock 1982-84, which is tax free to residents abroad. Investors who would otherwise have been attracted to Dominion stocks on tax grounds find the differential of ½ per cent in interest coupons compared with a British government issue barely attractive enough.

Not An Empty Shell

A HEAVY period for industrial issues, chiefly of prior charges, is now beginning. Pye Radio's issue of £2½ million 6 per cent debenture stock at 98 has just been underwritten. It is redeemable at par between 1976 and 1981. Gallaher's larger issue of 6 per cent stock is soon expected. Associated Electrical Industries will come to market with a big issue in June, and several others are known to be on the way.

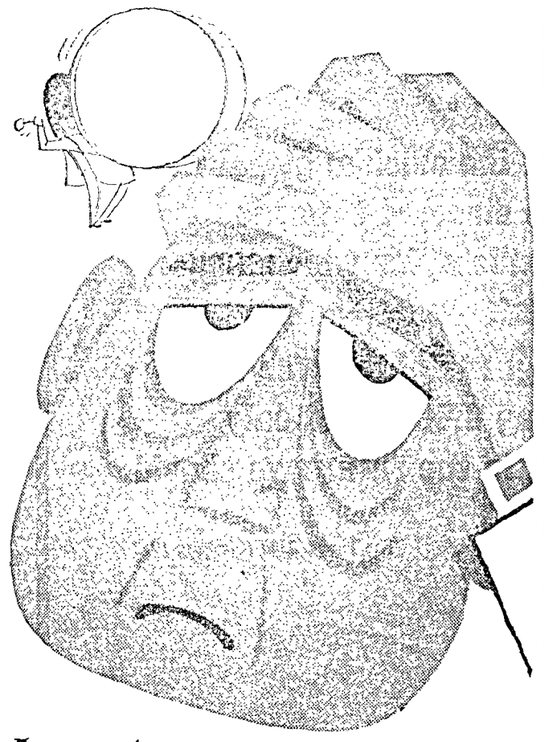
The most intriguing, though by no means the largest of the capital market operations this week has been the arrangement for providing a quotation for 48 per cent only of the ordinary capital of Guthrie and Co. the eastern merchants, best known in the City as a leading rubber agency, with Sir John Hay as its dominating figure (though he is not its owner). The Anderson family, which owns this old-established public company, registered in Singapore but quoted nowhere, also owns 58 per cent of Malayan Rubber, Loan and Agency Corporation, a quoted investment company specialising in rubber shares. That company, after reinforcing its cash by buying a shell—Taipan Trust which has £50,000 cash—is taking over 48 per cent of the Guthrie equity (288,000 shares of 100 Malay dollars). The purchase consideration is £588,000. Of this £159,600 will be paid at once in cash, £104,400 will be covered by the issue to the vendors of Malayan Loan and Agency shares (taken at 3s. 7½d. per share). The balance is an unsecured loan, initially non-interest bearing, of £324,000 and will be paid off gradually out of resources remaining after the Loan and Agency Company has paid a minimum dividend of 10 per cent.

The implications of the scheme are clear. The Loan and Agency Company's 2s. shares recently fluctuated in the range 4s. to 4s. 6d. and may remain in that range when the new shares come on the market. The yield on a 10 per cent dividend will be under 5 per cent, but the build up possibilities as it gradually pays for its portfolio will be interesting to surtax payers seeking low income and chances of capital gains. For the vendors there is also a tax angle. Not only does the partial grant of a quotation do something to simplify the burdens of a family struggling with Malayan as well as British estate duties, but during the next few years while the Loan and Agency Company is paying for its shares the vendors will be receiving substantial sums by way of repayment of a loan—and these do not attract tax.

MOTORS

The Brightest Jewel

THE motor industry is now one of the very few bright spots left in the national economy. The current rate of car, lorry and bus production is a full twelfth more than towards the end of 1955 when the industry went in for its own recession, and export shipments are also higher. Daily output rose still further last month, by nearly 150 units to 5,685 units a day all told. The increase was confined entirely to car output, however, which in the previous four months had been stable at a daily average of about 4,200 units. The March figures were a full 200 units a day higher than in February when 4,173 cars left the factories every working day. Commercial and public service vehicle production slipped a little last month. This side of the industry is still producing 8-9 per cent fewer vehicles than just before it started to go downhill in the early part of 1956; overseas shipments of lorries and buses, which were rising until March, have also still to make good the ground lost in 1956 and 1957.



DEVELOPMENT PLACES

A Blank Bill

THERE is only one clause to the Development of Industry (Industrial Finances) Bill which will give effect to the decision, announced in the budget speech last week, to extend the Treasury's powers to make grants or loans to industrial companies to places outside the development areas. The bill was published this week. It waives the existing conditions upon such financial assistance if the Board of Trade

> is satisfied that the purpose for which the grant or loan is required is a purpose likely to relieve or contribute to the reduction of the rate of unemployment in any locality in which, in the opinion of the Board, a high rate of unemployment exists and is likely to persist.

There are a number of places outside existing development areas, such as Hull, Plymouth and Aberdeen, where unemployment has been high for a considerable time, and where existing undertakings are known to be running down their

THE REAL THREAT...

"... the real threat is not the suicidal global war. Our preparations should be directed towards limited wars and lesser conflicts, for which modern fighter aircraft are essential.

In the past we have designed fighters for the specialised task of defending Britain and only secondarily for other roles. In the future we should reverse the role."

The Times, *22nd February, 1958*

The Folland GNAT was, in fact, specially designed with this reversal of roles in view. It is a fast, light fighter well suited to the needs of limited and local conflicts—conflicts which could easily spread and develop into very dangerous situations. A strong, effective air force is the best means of resolving these conflicts, swiftly and economically, before they can mature.

The Folland GNAT makes such an air force a sound economic proposition—reversing as it does the trend to greater size, complexity and cost in fighter design. Faster than any conventional British fighter in service, it has better manoeuvrability, a higher ceiling and the most advanced armament and equipment; its simplicity makes it extremely easy to maintain.

As a strategical or tactical fighter of the first rank, the GNAT is the most effective counter to 'the real threat'.

labour force. To schedule these as development areas would hardly be appropriate; the situation may be very localised. Moreover, experience has shown that any region once scheduled as a development area is never willing to give up the minor advantages in attracting industry (for example, the power to put up factories for rent to industrialists) that this brings with it, even though those advantages over the years may have brought it relative prosperity. There may be some advantage in not being committed to give this preferential treatment to an area for all time, and in being able to deal with places—and enterprises—on an *ad hoc* basis. Nevertheless, this will certainly swell the incessant chorus of special pleading to which it is broadly the Board of Trade's main function in life to listen. Without due stony-heartedness there and at the Treasury there could be more than formal significance to the concluding sentence of the explanatory and financial memorandum published this week: "It is not possible to form any estimate of the increase in expenditure which is likely to be incurred as the result of the bill."

TERYLENE

British Celanese v. *Calico Printers*

The ordinary stock units of Calico Printers Association dipped 4s. and then recovered 3s. on Tuesday after the news that British Celanese has lodged an objection to the extension of the "Terylene" patent due to expire in the middle of July. The move was unexpected and investors found it hard to assess. Calico Printers, with supporting evidence from its exclusive British licensee, Imperial Chemical Industries, had applied for an extension of the polyester fibre patent on which "Terylene" is based, on the ground of loss of exploitation during the war years. There is power to grant a maximum extension of 10 years; Calico Printers sought a substantial number of years, but less than the maximum. Here are the essential facts:

"Terylene" is a trade name owned by ICI. On the expiry of the patent, others could manufacture and sell polyester type textiles in the British market, but not under the name "Terylene."

The bulk of Calico Printers' royalty income, which amounted last year to £522,000 and thus approximately covers the net cost of a 22½ per cent dividend, comes from "Terylene," and most of it in this country. Refusal to extend the patent would lose Calico Printers the "Terylene" royalty income from this country but the royalty from the Continental and Canadian patents runs to later dates.

British Celanese, now a subsidiary of Courtaulds, opposes the application for extension. It owns three patents (not at present being exploited) covering the manufacture of polyester (the raw material), not the textile adaptation of it). The Courtaulds group thus have a foot in the polyester camp and as the biggest makers of man-made textiles, may not wish to be bound for a fixed period of years not to develop that field. Courtaulds share with ICI the ownership of British Nylon Spinners.

The argument will now extend beyond mid-July and the patent will remain valid while it does so. If the result should be an extension but for a shorter period than Calico Printers sought, ICI with its heavy development behind it and an established trade name would have relatively little to fear. Indeed not to pay royalties to Calico Printers might almost be an advantage. Calico Printers has more at stake, but less than the whole of the group's royalty income.

BRITISH TRADE

Changing Pattern of Imports

Last week's provisional figures showed that imports in the first quarter were 12 per cent lower in value than in the same months of 1957 and exports 1 per cent lower. Since import prices were reduced by 10 per cent, the volume of imports was about 3 per cent less. But allowing for cargoes delayed into 1957 by the closing of the Suez Canal, there was probably little difference in the level of importing. On the other hand, export prices were a shade higher at the beginning of this year than last, and shipments of British goods were slightly down.

The average decline of 10 per cent in prices was not evenly spread over the import bill. Between a third and a quarter of the fall is represented by lower freight charges, and these cut deep into the landed cost of bulky commodities such as oil, grains and iron ore. Among commodities imported in any quantity, those which have fallen most in price include wool, rubber, dairy products, tea, sugar, bacon, mutton and lamb. In actual volume too there have been big changes. Petroleum imports are naturally much higher (coupled with a switch away from dollar oil). The big increase in rubber imports so far as it concerns synthetics has been retained here, but increased imports of natural rubber simply match big re-exports to Russia, and now that Russia has changed tactics and is buying in the

* Retained.

East instead of in London these imports may fall. Imports of most raw materials were lower than a year ago, particularly textile fibres. Tobacco imports were also down, by one-fifth. Among semi-manufactures, as much copper, lead and zinc was being bought, more aluminium and more tin (much of the world's tin production tends to be delivered in London now, as the buffer stock manager knows). The value of imported chemicals continued to rise and nearly all finished manufactures were higher. In consequence, the drop in payments was concentrated entirely on the dollar and sterling areas; payments to OEEC and other non-sterling countries were slightly greater.

On the export side, engineering shipments continued to grow and reached a record quarterly figure of £355 million. Car exports, particularly to dollar markets, were booming and provided three-fifths of the whole rise in engineering exports between the first quarter of last year and this.

Exports of agricultural tractors and aeroplane engines also did well. But, outside the engineering field, exports of all the other main groups, even of chemicals, were lower in value than a year ago. And British sales did particularly badly in the OEEC countries, where they declined by 12 per cent in value in the quarter.

SHIPBUILDING

More Cancelled Than Ordered

THE British shipbuilding industry has begun to live off its fat. It still has plenty of fat—figures published this week by the Shipbuilding Conference show that the British order book at the end of March contained 765 ships, totalling 6,331,000 gross tons. But during the last three months that order book has shrunk by about 500,000 tons, which is nearly 150,000 tons more than the total of ships completed during the quarter. The reason for the decline is that cancellations of 183,000 tons were not offset by new orders, which consisted of only 39 small ships totalling 41,000 tons. If this trend were to continue unchecked the order book would be worked through in considerably less than its "book value" of about four and a half years' current output.

Some comfort can be derived from the fact that foreign yards have been hit harder by cancellations than have the British. There is no sign of an end to the recession in freight rates either in the tanker market or in the dry cargo tramp trades. But of these the hardest hit have been the independent owners of both tanker and dry cargo tonnage who normally operate their fleets under flags of convenience. Most of the new orders placed by these owners were in foreign yards, and consequently the main effect of cancellations has been felt abroad. Even in Britain, the greater part of the cancellations made during the first quarter—109,500 out of 183,000 tons—were of orders placed by foreign owners; for once the fact that only about 20 per cent of the total British order book is for foreign account has its compensations. Admittedly, the greater part of the cancellations during the first quarter—129,000 out of the 183,000 tons—were also tankers, and tankers account for over half of the total British order book (and about three-fifths of the orders for foreign account). But a large proportion of the orders for tankers from British yards has been placed by the major oil companies, which have shown no signs of cancelling them; the independents, who have been forced to cancel, had placed most of their orders abroad. This is almost a traditional pattern of shipbuilding boom and recession: Britain, building a wider range of kinds of ship, but generally more slowly than its foreign competitors, never gains as much in the surge of boom orders, particularly for big simple bulk carriers and never steps up its output as much; but equally never loses quite as much as quickly when cancellations come in their turn. It is no doubt comforting on the Clyde, and will strengthen some traditional attitudes in the industry: elsewhere, feelings may well be mixed.

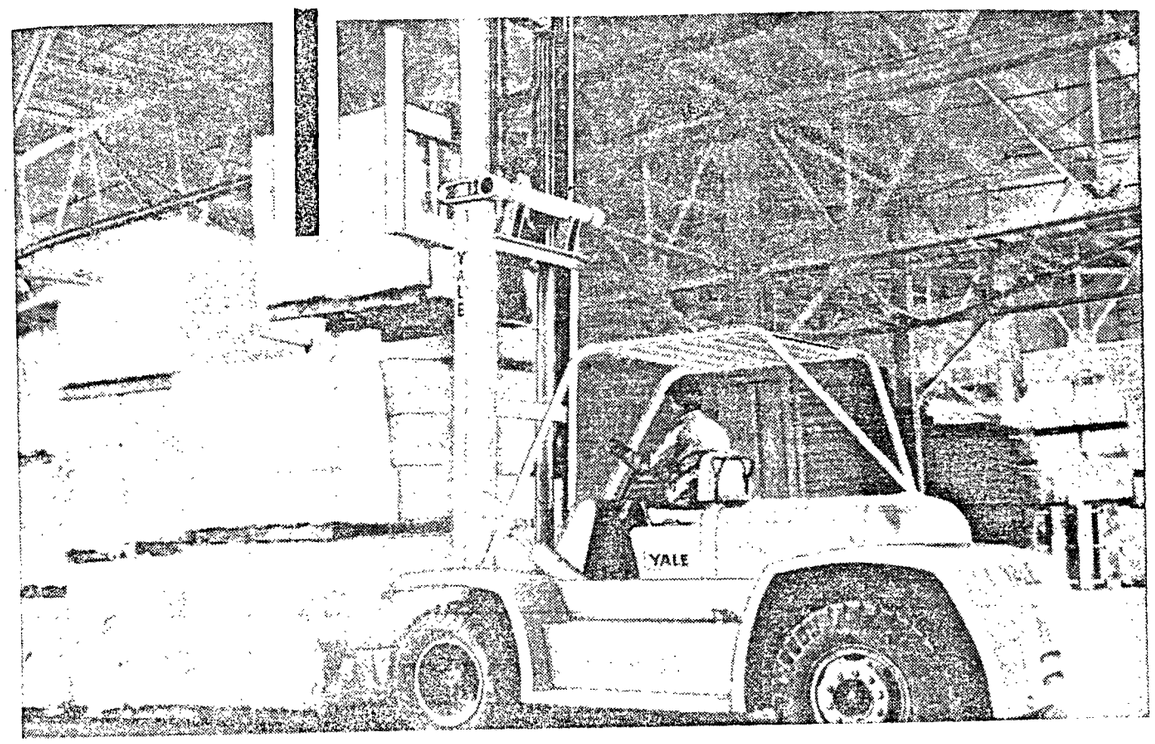
THE BUDGET

Dividend Stripping Again

IT is a measure of the uncontroversial nature of Mr Amory's proposals that the loudest criticism should be vented on his retroactive moves against dividend stripping. There is undoubtedly an important principle here—taxpayers should be able to conduct their affairs knowing that their liabilities will depend firmly on the law (though how much law comes into a prolonged surtax or estate duty negotiation?) and not on warnings. It is true, too, that the form of avoidance that the Chancellor proposed to deal with is rather different from that covered by the 1955 legislation and that two and a half years, with two opportunities to put the matter right, is unduly long. Mr Amory is said to be having second thoughts about retrospective action against this "pure tax dodging," but he has chosen his words carefully: "If I am convinced by argument I do not mind changing my mind."

Not all the arguments are valid. To say that dividend stripping merely remedies the law's failure to allow trading losses to be set off against earlier profits, as well as to be carried forward against future profits, is not good enough; such a proposal has often been put forward but never accepted by the legislators. And granted that retroactive legislation ought always to be regarded with distrust and suspicion (for reasons that Mr Paget's speech made abundantly clear in the House of Commons on Monday), it is the fact that the "stern warnings" of 1955 were pretty strong and clear. Mr Henry Brooke, then Financial Secretary, said:

> The dividend strippers have been given notice to quit. With the authority of my Right Hon friend the Chancellor of the Exchequer my Hon friend the Economic Secretary has also put it on record that if clever people should discover ways and means of getting round this legislation which is squarely directed against dividend stripping the Government will not hesitate to stop any such loophole by further legislation and to make such legislation retrospective.



As Mr Amory has observed, the time for protest was in 1955, when the threat was made, not in 1958 when the Government has kept its word. The alternative, too, must be considered. In tax matters, an increasing area of decision is left to administrative action rather than clear statutory definition. There is give and take between the taxpayer and the Revenue, and in many ways it works to the taxpayer's advantage. If the Revenue is to be put on its mettle to produce watertight legislation for every case of avoidance it would be of a length and complexity which would make the ring fence put round OTCs last year look like a nursery play-pen.

RESTRICTIVE PRACTICES

Is No Defence the Best Defence?

THE first session of the Restrictive Practices Court, which was held this week, proved inconclusive and—from the point of view of the Registrar's office—rather disconcerting. The seven-member court, headed by Mr Justice Devlin, had been convened to deal with two price-fixing agreements registered last year by the trade associations involved. Both agreements had been abandoned by the groups concerned, after having been referred to the Court; and it had been expected that this week's hearing might perfunctorily declare the agreements to have been contrary to the public interest, and enjoin the parties involved against bringing them back into force in future. The court would thus have presumed that the associations abandoned these agreements because they saw no chance of defending them successfully in practice. However, the court was not pre-

PROBLEM: *To meet the demand for more efficient high capacity load handling*

SOLUTION: **Yale High Capacity Petrol Trucks**

Provide more visibility . . . stability . . . and manœuvrability

New Yale High Capacity Petrol Trucks solve the problem of heavy load handling. They solve it safely, too—by offering an exceptionally clear, unobstructed view to the operator. Power steering, power brakes and separate inching control provide fast cycle operation. Low centre of gravity, big pneumatic tyres and broad lifting base assure greater load stability. Yale High Capacity Petrol Trucks are available in capacities of 15,000 to 20,000 lbs. with choice of fully automatic torque transmission, fluid coupling or standard transmission.

All Yale Petrol, Electric, Diesel and Hand Lift Trucks are available in currencies of the Free World. All are built to the same high quality standards, no matter where you buy them. Let your Yale Sales and Service Representative help select the Yale Truck best suited to your requirements.

Men who carry the responsibility for new construction schemes are entitled to an assurance that the scheduled cost and completion date will not be exceeded.

Building to a Budget

THE BUILDING OWNER who makes use of the Laing Target Contract has this assurance. The final cost of the job is based on a target figure agreed between his architects or consultants and the Company at the planning stage. Working together as a team from the start, and calling on the Company's practical experience of construction methods, building costs and new materials, the building owner can have a realistic estimate and a reliable building programme.

Preliminary work can be started and materials ordered while design details are being finalised. Preplanning the entire project ensures smooth continuity of operations and speedy completion.

Building together from the beginning with John Laing and Son Limited means building to a budget.

pared to presume this from the Act's provision that such agreements are against the public interest unless proved justifiable.

The first association, representing six manufacturers of fractional electric horsepower electric motors including General Electric and English Electric, argued that abandoning and failing to defend the present agreement should not stop them from "re-activating" it and subsequently defending it before the court in the future, perhaps after successfully defending other agreements to which they happened to be parties. In effect, the Court conceded this point; after obtaining undertakings that the companies would not re-activate the agreement without the permission of the Court, it adjourned the proceedings. In the second case, the Association of Corrugated Paper Makers had abandoned a price-fixing agreement and were perfectly willing to promise not to bring it back; but they asked the Court not to declare that it had been contrary to the public interest. The companies claimed they had quit the agreement for competitive reasons, and should not be stigmatised simply because they had not defended their case. Despite the dogged reiteration by the Registrar's lawyers that the Act assumes that agreements are contrary to the public interest until proved otherwise, the Court, instead of issuing an order enjoining the companies from operating under the agreement, accepted their undertaking that they would not, and dropped the whole matter. Thus in neither case did the Court do what the Registrar had assumed it would do. But the Court did make it quite clear that these two cases should not be taken as a precedent—indeed its actions are best explained by its reluctance, to set a precedent in cases that had not been argued.

The Court also fixed the dates for hearing two future cases, in both of which agreements will be defended by the associations involved. The first case, involving an agreement between members of the Chemists' Foundation, will be heard on October 6th, and will be followed, not before October 27th, by hearings on the Yarn Spinners' Agreement. The Cotton Yarn Doublers' Association will follow the Yarn Spinners' group, as their cases are similar. The Court rejected the request of the Registrar that it should sit in two divisions to accelerate hearing these cases. Finally, in postponing the setting of a date for hearings involving the Agricultural Twine Manufacturers, the Court touched on the extraordinary complexity which the documentation and cost accounting of these cases may involve. In contrast to the cases heard this week, the agreements defended in the autumn will necessitate a great deal of paperwork and, possibly, the calling of a large number of witnesses.

BANK FIGURES

Funding at Work

THE individual statements of the eleven London clearing banks at their make-up on April 16th show some dramatic changes. As expected, the banks are seen to have added to their gilt-edged portfolios since the mid-March make-up, but the extent of the increase, of £42 million, is unusually large. Hitherto, the banks' ventures into gilt-edged have been hesitant; they took up a net £33½ million in January, the time of the issue of the 5½ per cent Exchequer stock 1966, nothing in February, and £10 million in March, all attributable to Lloyds Bank. Of the latest increase, Barclays accounts for more than half, thus raising its proportionate commitment in gilt-edged still further above the average; the Midland has bought £10 million, the National Provincial £4½ million and Lloyds a further £2¼ million.

At the same time, the banks' advances have risen more than seasonally by £47 millions. In earlier months this year, however, the rise has been rather less than seasonal, and it may be that part of the explanation may lie in delays in tax payments prompted by the very high cost of running an overdraft. The banks' "risk" assets in the latest month have thus risen by £89 million. But their liquid assets have fallen, contra-seasonally, by £24 million.

As a result, liquidity ratios, which at the usual low point of mid-March seemed more than adequate at an average of 33.9 per cent, have suddenly assumed a less comfortable look. The ratio of the National Provincial is down from 34.0 to 31.8 per cent, that of Lloyds from 31.9 per cent to a bare 30.1 per cent, while at Williams Deacon's the ratio has actually slipped below the conventional minimum to 29.5 per cent. The squeeze on liquid assets reflects reduced dependence by the Government on bank borrowing, and that reflects to a significant extent the Government's increased sales of long-term securities, including those to the banks. Funding policy is succeeding.

EXPORT CREDITS

The New Concession

THE extension of the export credits guarantee scheme announced by the President of the Board of Trade last week in amplification of the Chancellor's budget hint, is small. Perhaps it had to be small until the Speed Committee's report has mapped out the future for the Export Credits Guarantee Department. Nevertheless the concession on the guarantees that the department gives direct to bankers is useful. On capital goods guaranteed in that way, the minimum sum qualifying for guarantee has hitherto been £250,000 and the percentage of the relevant importers' bills that the department was prepared to cover has been 85. The minimum sum is now reduced to £100,000 and the maximum percentage cover is raised to 90.

SUEZ CANAL COMPANY

No Corn in Egypt

MONDAY'S meetings of the Suez Canal Company's shareholders in Paris cleared the capital reconstruction schemes not with unanimity, but by big majorities. They failed to provide stockholders with any of the news for which they had hoped. Neither did M. Georges-Picot, the chairman, speak confidently of agreement with Egypt, nor (perhaps because negotiations on compensation had reached a delicate stage) did he give the revised estimate of the break-up value of the assets outside Egypt that stockholders had been led to expect. It was not the chairman's statement but the reports from Cairo which caused the activity in Suez Canal shares this week, and which for a time carried the capital shares to £56½ and the jouissance to £39¾.

The company's main contribution has been emphatically to deny the existence of agreement between itself and the Egyptians. But the reports from Cairo—including a statement from the Governor of the National Bank of Egypt—maintain that agreement has been reached. The difference

presumably can be explained by the fact that a measure of agreement exists between the World Bank and the Egyptians but that the board of the company as such has not yet assented. Individual directors, however, must be aware of what is going on. What will agreement, when it comes, be worth to stockholders? Something, it may be expected, much nearer to Egypt's first offer to pay the equivalent of the Paris Bourse prices on the day before nationalisation than the company's counter claim for £204 million plus the assets outside Egypt. Nevertheless it is believed that it will be a little better than the first Egyptian offer.

ANGLO-CANADIAN TRADE

A Long-Term Exercise

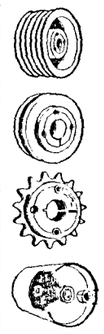
By its own sheer enthusiasm and the welcome it received in British industry, the large and distinguished Canadian trade mission that recently visited Britain could have obscured the simple realities of Anglo-Canadian trade. There is no dispute about the soundness of its objectives. It is clearly in the national interest of Britain to earn more dollars by exporting more goods to Canada; it is as clearly in the national interest of Canada that Britain should earn more dollars with which to buy Canadian exports. Canadian reluctance to depend too completely on the American economy may or may not be economically wise: but that too is understandable. The relevant decisions, however, will be taken not by the two governments but by private firms—which cannot be expected to take patriotism to the extent of acting against their own interests. In general, British manufacturers can be expected to promote the sales of their goods in Canada only if they are convinced that money spent on penetrating the Canadian market will bring a better return than the same amount spent on developing markets at home or in other foreign markets. By the same criteria, Canadian firms can be expected to buy British only if the British product is of better quality, or cheaper, or more attractively designed and packaged than the American or other goods with which it competes. And it would be unrealistic to expect any lasting market to be built up by displacing Canadian-made goods, for the Canadian government cannot be expected to deny protection to its domestic industries.

The report of the Canadian trade mission to Britain, issued this week, does not dispute these conclusions—indeed many of its recommendations reinforce them. It emphasises the commercial advantages already enjoyed by American exporters to Canada: close proximity, in distance, in consumer taste, and in engineering practice; a flood of American newspapers, magazines and television programmes carrying enormous waves of advertising to Canada; and the establishment in Canada of a large number of subsidiaries of American firms, which tend to look first across the border for their supplies. To counter this British firms must advertise, advertise, advertise—and do so not only in print but in the person of the Managing Director. A closer understanding of Canadian requirements, quick delivery from inventories maintained in Canada, and follow-up service to American standards—all can stand frequent reiteration.

The Canadian market may therefore be, as the Canadian trade mission points out, more costly to penetrate than sterling markets, and even so British exporters "should be prepared to allow for a three to five year period" during which "returns may not be particularly encouraging." Only long-term prospects would provide the justification, and these Canada can certainly offer—with a gross national product which has increased over the last decade faster than that of the United States, a fast growing population with the door still open to immigration, and consumption per head already twice as high as Britain's. But as Canadian consumption grows, so will Canadian industry. Many more British manufacturers may well decide, as many have done already, that a secure share of this expanding market is best achieved by setting up manufacturing subsidiaries in Canada (a decision made no harder by the fact that it is a way of getting capital out of this country, and into dollars).

STEEL

Capacity and Demand



Blast furnace capacity in the British iron and steel industry increased to 14.7 million tons in 1957, and crude steel capacity to about 22.3 million ingot tons; thus providing, the British Iron and Steel Federation says delicately in its annual report this week, "some margin over actual production," which amounted to 14.3 million tons of pig iron and 21.7 million ingot tons of steel. The Paymaster-General, in a recent Parliamentary answer about current steel production, also mentioned that the industry's current output represented about 95 per cent of capacity. There is a certain amount of intestinal fortitude in an industry that starts talking about capacity figures, after declining to do so for several years, at a time when it happens to be producing less than it could (the American industry has been busy these four months explaining why capacity figures don't really mean what they suggest). The British notion of capacity is what reasonably could be produced during the whole of a year, counting in new plant as it comes in, which is more sensible than the rigid American concept of what could be produced from plant in commission on the first of the year: but it would be as well to have the British meaning quite specifically defined.

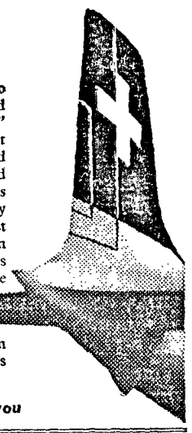
Consumption of steel in Britain began to slacken in late 1956, not in 1957. In the first half of last year, it was markedly below that of the first half of 1956 (reflecting, presumably, mainly recession in the motor industry and among its suppliers). Consumption picked up last autumn along with the recovery in car demand; though other consumers' activity was slackening, and demand prospects are still uncertain. The industry nevertheless managed to increase its output steadily over 1956, though the rate of growth was slackening. This it did by cutting its import tonnage nearly in half, and by contriving to push up its direct exports of steel by nearly a quarter. The effect, quantitatively, was an increase in "net exports" of finished steel from 1½ million ingot tons in 1956 to 3 million tons in 1957. In money, the net gain was about £77 million; in addition, it is reckoned that "indirect exports" in goods made of steel sold abroad rose by £87 million in value of nearly £1,523 million in 1957. But the Federation records that the slackening in growth of demand for steel during the year was quite international: and not simply in the capitalist world. Current production and future plans in the USSR and Eastern Europe, it notes, "were similarly affected."

Save money—
make TAPER-LOCK your standard method of fixing to shafts

Use a TAPER-LOCK Bush and fix your pulley to its shaft in less than a minute. TAPER-LOCK Bushes are interchangeable too; you can fit them to any diameter shaft. They cut out keyways, save space and have no dangerous projections.
TAPER-LOCK Bushes are off-the-shelf stock at 19 Fenner Branches. Many Distributors at Home and overseas also stock them.

J. H. FENNER & CO. LTD. HULL

Branches at: Belfast, Birmingham, Bradford, Bristol, Burnley, Cardiff, Glasgow, Hull, Leeds, Leicester, Liverpool, London, Luton, Manchester, Middlesbrough, Newcastle-on-Tyne, Nottingham, Sheffield, Stoke-on-Trent.

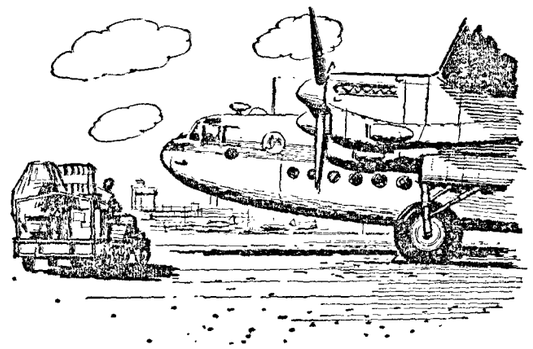


LARGEST MAKERS OF V-BELT DRIVES IN THE COMMONWEALTH

SWISSAIR

For Super Service on the 'Super Swiss'

When only the best is good enough, the only way to fly from London to Zurich is **First Class** aboard the famous, precision-maintained **"Super Swiss" DC-6B**, weather-radar equipped for the smoothest of flights. You will meet unexcelled courtesy and personal attention, and enjoy meals freshly prepared and freshly cooked, to delight the most fastidious palate! The "Super Swiss" leaves London every morning and late afternoon—also offering tourist accommodation, of course. Connections in Switzerland with SWISSAIR flights to destinations in Europe, North and South America and the Middle and Far East.



To Basle & Geneva—several departures daily from London (day & night)—by all-tourist Metropolitans with two seats a side only.

Your Travel Agent will be pleased to book you

Offices in LONDON · MANCHESTER · GLASGOW · BIRMINGHAM · DUBLIN

Distributors gain—
and
you profit

AFRICARGO pays off

Rapid, reliable air delivery means real cash gains to your dealers and distributors in Africa. They can carry very much less stock—so they save capital, save on storage and insurance, don't risk goods deteriorating or becoming out of date. Naturally, they prefer to order from firms who freight by air—and that's where you profit.
You gain even more when you use Africargo. As the only *all-cargo* air service to Africa, we can guarantee absolutely firm bookings, specialist care and handling for your products, expert advice on packaging, routeing and insurance. And our aircraft can carry freight whose bulk or tonnage would otherwise make air shipment impracticable.
Expensive? Not at all. Packaging is usually much cheaper than with sea transport—often a dust cover alone is quite enough. Insurance, too, is cheaper—because there's much less risk of damage or pilfering. So total air freighting costs compare very favourably with those of sea shipment.

A few of the many firms who use Africargo

Citroen Cars Limited · Vauxhall Cars Limited · Coty Limited
Kodak Limited · Rank Precision Industries · Rootes Limited

DIESEL ENGINES

Motoring on Diesel?

THE "Four 99," a small compact four-cylinder high-speed 1.6 litre diesel engine, now in production at the Peterborough factory of F. Perkins, Ltd., brings a British diesel for the first time to the fringes of the passenger car market. It certainly reduces, but could not be said to eliminate, the main disadvantages of a diesel engine compared with a petrol engine used in a light vehicle—the familiar diesel "knock" and its lack of flexibility, especially in acceleration. The question is whether the customers can be persuaded that the disadvantages that remain, including the higher initial cost of the engine, are more than offset by the very striking economies in fuel consumption that the new engine has demonstrated. In RAC trials a Vauxhall Velox car equipped with a Perkins Four 99 diesel engine averaged over 56 miles per gallon at an average speed of 35 miles an hour over a total distance of 218 miles. A Ford Consul Mark II achieved over 50 miles to the gallon under similar conditions. Taxis operating in the London metropolitan area showed a fuel saving of 50 per cent when using this diesel engine instead of petrol, and a loaded Bedford light van, on door to door delivery, showed a fuel saving of nearly two-thirds.

This last test points to the probable first large scale market for the light diesel: when operating at slow speeds, and with frequent stopping and starting, the advantages of the diesel increase. Although assembly line production of the new diesel has begun at Peterborough, and a market has been established for it in combine harvesters, it is available for installation in cars and vans only in "conversion kits" costing a little over £200. Not until a maker of, say, delivery vans, offers a diesel engine as first equipment, can the light diesel penetrate beyond the fringes of the petrol engine's last remaining preserve. Given the advertised reliability and low maintenance costs, which must be confirmed in every day operation, the attraction of the diesel is influenced directly by the height of the fuel tax, and the differential between petrol and diesel fuel prices. At present in Britain there is little to choose between the two fuels in price, but the height of the tax, which both fuels attract, tells strongly in favour of fuel economy. In some continental countries, diesel fuel is also taxed less heavily than petrol, making the diesel engine an even more attractive buy. In countries such as the United States, where taxation on all oil fuels is low, the incentive to widen the use of the diesel is correspondingly less.

COPPER

Chile Seeks Stability

FIRST reactions in London to Chile's new attempt at price stability for copper—its request to the United Nations International Trade Commission for a stabilisation scheme—have been sceptical. How long, the metal trade asks, would it take to set up an international body under Uno and get it into action? Would not the copper slump by then have passed? The path to a fully ratified commodity scheme for copper under the Havana Charter would be long, a matter not of months but of years.

If that were accomplished and if there were still need for the scheme, where would the Americans stand? The same benevolent neutrality that they have shown to the tin scheme could hardly be expected in the case of a commodity of which the United States is a major producer. American copper interests would not find it easy to get Congress to participate in an international organisation in restraint of trade. Nor can the United States really talk turkey with the world on copper while the future of its import duty remains undecided. That duty is now suspended and if, as seems likely, suspension is not renewed, a duty of 1.7 cents per lb will be restored on July 1st; and strong pressure is afoot for a 4 cent duty, equivalent to £32 a ton.

The difficulties of stabilising the price for copper are not easily overcome. Any full international scheme would have to reckon with the fact that about a quarter of the copper the world uses is "secondary," metal from scrap and residues. That fact enables American custom smelters frequently to quote lower prices than the primary producers as they are now doing with a price of 23½ cents per lb, against the producers 24 cents. Moreover, an efficient international control scheme would require a buffer stock of most formidable size and with much greater financial backing than the tin scheme needed.

The next stage for the Chilean plan may occur at a conference convened in London on May 8th by the International Wrought Non-ferrous Metals Council, which represents consumers. But representatives of some of the important producing groups will also be there again, including Señor Lagarrigue, the Chilean copper industry's energetic representative. It will be surprising if he does not press his country's views.

ADVERTISING

Biggest Client of All?

IN 1957 the Unilever group sold some £1,220 million worth of goods to outside customers and spent £83 million on advertising. It should not be concluded that without advertising its customers could have had those goods 7 per cent cheaper; nor indeed, alternatively, in comparing the advertising expenditure with total trading profits of about £85 million and dividends of about £8¼ million net, that without advertising it could have doubled its profit and paid out ten times more to its shareholders. "Advertising has played—and will always play—a vital part in the growth of Unilever," said Lord Heyworth this week, when he disclosed these figures in an annual speech focusing on this specific aspect of the group's activities. This advertising expenditure covers hundreds of brands of different kinds of goods, in nearly 200 companies of the group, in 50 countries where Unilever manufactures and markets and in more than 50 others where its products are sold.

"We spend large sums of money, time and thought on the development and manufacture of the goods we believe the consumer wants," said Lord Heyworth. "It would be foolish indeed to stop short at that point, and not take steps to tell them what we have to sell and try to persuade them to buy." Apart from the effect of advertising in extending the market for particular goods, and therefore allowing economies of scale in mass production, he mentioned similar economies in distribution: "It speeds up the turnover of stock and thus makes lower retail margins possible, without reducing the shopkeeper's income."

More broadly, he proclaimed the value of advertising, even as an irritant, in overcoming inertia and making the consumer receptive to the process of change. In a concern such as Unilever this change is continuous. Nearly a quarter of the group's detergent trade in Britain and a third in Holland come from products introduced in the last six years. Change, too, affects existing products:

> In the past five years in the United Kingdom there have been four changes in Lux Toilet Soap, six in Persil, two in Omo and two in Gibbs S.R. Toothpaste. In Holland in the same period there have been five changes in Blue Band, three in Lux Toilet Soap, six in Omo, five in Sunil, five in Radion and two in Vim.

To see if the public likes these changes, the free coupon offer is frequently used. Lord Heyworth stoutly defended this device (though recording that it now represents a much smaller proportion of the group's advertising than it did in 1954). The coupon amounts to a temporary price cut, and seems to assist sales more than cutting the price permanently by the tiny margin that its cost would permit. "We have tried it," said Lord Heyworth, "and it did not work. The amount of money which is saved by dropping the promotion is too small to make any significant impact if it is applied to reducing the price."

SHORTER NOTES

Montague Burton, the multiple tailors, is to make a £3,400,000 bid for the share capital of Hide and Company, the drapery group of which Mr L. P. Jackson was chairman. The bid is of 11s. in cash for the 10s. preference shares (whose market price was 8s. 9d.) and the equivalent of 5s. 1½d. for the 1s. "A" ordinary and 1s. ordinary units (whose market price was 4s. 6d.). The offer for the ordinary will be partly in cash and partly in unsecured loan stock, but Robert Benson Lonsdale has agreed to buy any loan stock accepting shareholders may wish to sell.

* * *

As forecast in the prospectus of one for four rights issue at par of £1 ordinary shares in Babcock and Wilcox, the company is paying a final dividend of 6¾ per cent on the enlarged capital; the interim payment on the smaller capital was 7 per cent and the total dividend is equivalent to 13 per cent on the new capital, a rate which the directors have already said they hope to pay for 1958. Last year the gross profit of this group of boiler-makers advanced from £3,668,461 to £3,865,812.

* * *

After the meeting of the International Sugar Council in London, the statistical committee announced a revised estimate of world market requirements for sugar this year of 5,610,000 metric tons raw value; this compares with a previous estimate of 5,515,000 metric tons.

COMPANY AFFAIRS

UNITED DRAPERY STORES

THE encouraging fact in United Drapery's announcement is not the maintenance of the ordinary dividend at 32½ per cent on the capital as increased by a 10 per cent scrip issue but the trend in profits. The small effective increase in the dividend had been discounted; the big advance in this multiple empire's profits in the second half of its financial year compared with the first half had not. Over the full year to February 1st the group's profits rose from £6,294,939 to £7,131,877. The successive half-yearly steps in the past two years' profits are thus £3.0 million, £3.3 million, £3.3 million again, and £3.8 million. There is another sign that trade picked up. In 1956-57 more than £350,000 was written back into the profit account from the provision against unearned profit on hire purchase, because hire purchase debt against which these reserves were held had run down. In 1957-58 over £72,000 has been charged against profits to increase this provision; this suggests that hire purchase debts have risen again, particularly in the second half of the year. But investors in the distributive trades who look for signs beyond the beginning of February may notice that a smaller group, New Day Furnishing Stores, reports a falling off in sales since then though before they had been "showing a steady increase." The directors of New Day, considering it "prudent to husband the company's resources," have cut the interim dividend from 5d. to 3d. per 2s. ordinary unit.

United Drapery's net profits have risen from £2,599,877 to £2,710,133 and the bigger dividend, requiring £1,424,891 net, is paid without much inroad on profit retentions, which amount to £1,280,408 against £1,299,697 in 1956-57. United Drapery 5s. units at 24s. 9d. yield £6 11s. per cent on the 32½ per cent dividend.

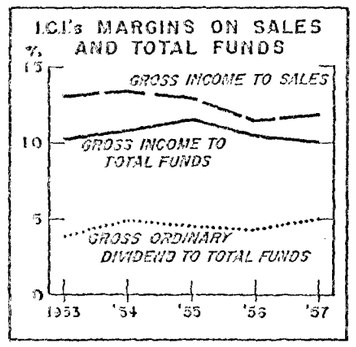
VICKERS

A BIG turnover in the ordinary stock preceded Vickers' final dividend announcement. It seemed that some underwriters of the unhappy Vickers ordinary issue of last September had decided to sell at a small loss. The twin issue of 11,772,756 ordinary shares at 33s. and of £10 million 6 per cent unsecured loan stock at 96 was a casualty of the increase in Bank rate to 7 per cent. Only now does the indigestion of last September show signs of wearing off.

This market situation may be of more immediate importance than the profit and dividend figures, which had largely been foreshadowed in the prospectus. The final dividend is 7½ per cent on the increased capital (making 10 per cent for the year, the same rate that was paid in 1956 on a smaller capital). Trading results, expected to be "just about as good" as those in 1956 turn out now as profits before tax of £13,515,932, against £12,701,167, and after tax of £6,384,464, against £6,180,122. Vickers ordinary shares are now at 32s. 9d. and yield 6.3 per cent; they have growth on their side, but plums are not likely to drop in the laps of stockholders until the £60 million capital programme, largely for expansion but partly for consolidation, is completed.

CAMMELL LAIRD and HARLAND AND WOLFF

THE preliminary reports for 1957 of the Birkenhead shipbuilders, Cammell Laird, and the Belfast and Glasgow shipbuilders, Harland and Wolff, present strong contrasts. Both companies have plenty of work on hand, but while Cammell Laird's gross profits have risen from £1,265,746 to £1,603,201 those earned by Harland and Wolff, much to investors' surprise, have fallen from £1,802,142 to £1,203,538. The net profits of Harland and Wolff have come down from £896,085 to £463,944 and its ordinary dividend is left unchanged at 10 per cent. Cammell Laird's net profits have risen from £859,734 to £1,091,795 and its ordinary dividend has been raised from 14 to 15 per cent. Cammell Laird's 5s. ordinary units have risen by 6d. to 8s. 6d., while Harland and Wolff's £1 units have fallen by 2s. 1½d. to 22s. 7½d. Both equities now yield 8.8 per cent.



ICI Makes Its Way

No business, however big, can insulate itself from market forces. ICI's size and dominant position as a supplier of basic materials to industry, for instance, gives the group no more than a qualified freedom in its commercial policy. But the element of purposefulness in what it does and says is always apparent. For its ordinary stockholders the increase in the dividend from 10 to 12 per cent is justified in terms of "a reasonable return to stockholders on the total funds invested in the business"—a phrase that almost suggests that the directors have in their minds a percentage bracket within which this return can fairly move. Is it simply an arithmetic coincidence that when the reserves last approached £200 million there was a 100 per cent scrip issue and that now this mark has again been reached there is to be one of 50 per cent?

This scrip issue requires a recalculation of the conversion options on the loan stock. Ex-all, the ICI ordinary stock would stand at 29s. 6d. to yield £5 9s. per cent; the current price of 107½ for the convertible loan stock imputes a value of 29s. 10½d. for the ordinary stock on the first option this year, of 31s. 2d. on the second in 1959 and of 32s. 7d. on the third in 1960. The employees' profit sharing scheme, calculated by reference to the ordinary dividend and taking the form of ordinary stock, also has to be adjusted to the scrip issue. This scheme must be considered a success, for about 75 per cent of the stock distributed last year is still held by employees. They have a direct stake in a policy that is aimed at more capital-intensive operations.

How much further along this road ICI travelled last year can be illustrated quantitatively. Sales to external customers, including a rise of £3½ million to £76½ million in direct exports, rose by £27½ million to nearly £463 million. The increase was achieved with a net addition of only 396 to the number of employees but with a capital expenditure of £67.7 million and an addition of £66 million to the group's total net assets. Gross income rose by £5 million to £55 million, but the gross return on funds invested was lower, for the third year running. It is this figure which the directors reproduce in the report and not the ratio of gross profits to sales. Over the full year this margin improved a little, but this movement conceals a decline in profit margins on sales in the second half of the year, when the ratio came down from 13.1 per cent to 10.6 per cent.

Last year ICI's sales and production rode high. Almost every division secured bigger sales—heavy chemicals, organic and inorganic chemicals, fertilisers, dyestuffs, paints, explosives and "Terylene," sales of which doubled despite some falling off towards the end of the year. The big disappointments were "Alkali" (which ICI no longer makes) and titanium (in which the directors express long-term confidence). By "improvisation and modification" ICI was able to maintain supplies to customers after the Suez episode "with little or no disruption" while the increase in Bank rate in the autumn had "little effect on the general level of demand for the company's products." Indeed, sales in the last quarter of the year were higher than in preceding

quarters. But the directors also refer to signs of a reduction in stocks and orders, sufficient to generate "some feeling of uncertainty about trading prospects in 1958." They specifically refer to the slackening of the pressure of demand on the iron and steel industry and on certain sections of the engineering industry, to "reduced activity" in the building trade and allied industries and to "a falling off in demand for textiles." ICI's power of independent manœuvre is thus restricted, but it still has some independence. On prices it moves cautiously; when its self-imposed "price freeze" came to an end last June it was with seeming reluctance that some prices were raised and with pride that some were reduced.

In pricing the group cannot ignore the massive cost of its development programme. That has to be financed largely from ploughed back profits and so to some extent consumers pay a share towards it. As yet it cannot be said—certainly not on the evidence of the fall in the year-end capital commitments from £41½ million to £37½ million—that the capital programme has been trimmed, though clearly such plans as the development of the site on the Severn on the lines of Wilton could be stretched out in time if the need arose. Most of the capital sums are earmarked for extensions of existing plant—the increase in "Terylene" capacity alone will cost £20 million. ICI is not lured into innovation for its own sake. It is indeed an innovator, but its efforts are often directed towards bringing a well-tested scientific discovery out of the laboratory into full scale manufacture and distribution.

ICI is an institution solid and big enough to attract the sheep's eyes of those who press for public ownership. It is about as big as the nationalised gas industry, but it invests faster. Its main divisions by themselves would rank among this country's big companies. Yet it always tends to be looked upon as a single entity. Figures of the performance of the separate divisions would enhance the ample account of their activities which the directors already provide.

SEARS HOLDINGS

Shaw and Kilburn, distributors of Vauxhall vehicles, was the only big concern Mr Charles Clore added to his industrial empire last year. Its accounts are consolidated into those of Scottish Motor Traction which may help to explain why the SMT group earned a profit in 1957 of £607,858, against £536,009 in the previous fifteen months. That increase plus the advance in the profits of the British Shoe Corporation from £2,754,999 to £3,012,325 largely account for the rise in the total profits of Sears Holdings from £6,121,129 to £6,478,285. The inference is that Mr Clore's other interests in Bentley Engineering, Furness Shipbuilding and Parmeko have collectively done little more than to hold their own, though Furness Shipbuilding, with yards fully booked, should have continued to do well. Diversity, so long as the second echelon of management is as sound as the financial control, brings obvious advantages.

At the moment consolidation rather than further expansion may look more tempting in Park Street. The directors have been content to leave the ordinary dividend unchanged at 22½ per cent, though net profits have risen from £1,928,068 to £2,378,096. There was some disappointment with these results and the 5s. "A" ordinary shares came down from 14s. 7½d. to 6½d., to yield £8 11s. per cent.

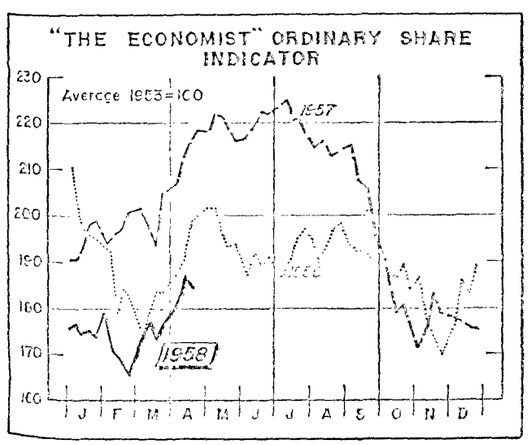
THOMAS TILLING

"We are not interested in the blues." In this remark, Mr Lionel Fraser, the chairman of Thomas Tilling, expresses a distaste not for jazz but for pessimists and their "gloomy predictions." Certainly, in his comments on the subsidiary and associate companies of this industrial holding company, Mr Fraser can usually express satisfaction with the trading results or confidence in the prospect—and with good reason. Thomas Tilling's gross profits advanced last year from £2,487,065 to £2,894,288 and the ordinary dividend was raised from 11½ to 13¾ per cent, maintaining the company's record of expansion.

There are some trump cards in Thomas Tilling's hand—James A. Jebling, the "Pyrex" manufacturer, is one, and Mutual Finance, the hire purchase house, may prove to be another. But the cards were reshuffled last year. The company sold its holding in Hawker Siddeley, which represented Thomas Tilling's original investment in the Brush Group, "at a good profit" and later sold its 100 per cent interest in Daimler Hire and its property in Rutland Gate and a minority interest in E. R. Holloway, makers of plastic goods. In all, these transactions provide well over £2 million in cash of which about half had been absorbed into the balance sheet at the end of last year. Thomas Tilling now has a controlling interest in Hibbert and Buckland, nylon stocking manufacturers, VW Motors, the sole concessionaire for Volkswagen vehicles in this country, and in Holyrood Knitwear and it has raised its investment in Heinemann Holdings, the publishers, to a majority holding. On December 31st Thomas Tilling held £811,814 in cash (against £319,731 in cash and £90,000 in tax reserve certificates) but its total bank overdrafts came to £1,807,695, against £891,964. And Mr Fraser now asks stockholders to support a proposal doubling the company's borrowing powers.

BRITISH MOTOR

A year ago the British Motor Corporation passed its interim ordinary dividend, because of a loss on trading in the previous six months. Sales and profits made a strong recovery in the latter months of the financial year ended on July 31st and the directors in the end paid out a single dividend of 12½ per cent, which was the same in total as in 1955-56 when the payment was made up of an interim of 4 per cent and a final of 8½ per cent. This year (1957-58) interim payments have been resumed with 4 per cent. The directors say nothing about trading results, but it can be assumed that these are good.



London Stock Exchange

LAST DEALINGS:	April 29	May 13	June 3
ACCOUNT DAY:	May 6	May 20	June 10

Before and after the announcement of an unchanged Bank rate Government securities made further steady progress. Short-dated stocks responded to the lowering of the Treasury bill rate, but turned quieter after Monday; 3 per cent War Loan 1955-59 rose ¼ to 98½, but 2 per cent Conversion 1957-58 was only ⅛ higher at 98¼. There were gains of nearly a point in medium and long dated stocks; 3 per cent Exchequer 1962-63 improved ⅞ to 93¾ and 2½ per cent Savings 1964-67 ⅜ to 81 xd, while 4½ per cent Electricity 1974-79 gained ⅞ to 85¼. The New Zealand issue checked the rise in Dominion stocks, but prices were firmer by Thursday. The New Zealand lists closed at 10.30 a.m. partially undersubscribed.

Although discount houses eased later, fairly large gains were made on balance, Alexanders Discount rising 2s. 6d. to 25s. But bank shares slipped back, English, Scottish and Australian falling 2s. 6d. to 26s. 6d. on the dividend prospect. Insurance stocks were also weak, Legal and General losing 3s. 9d. to 122s. 6d. in the week to Wednesday's close. After the initial marking up on the Budget proposals, industrial equity prices drifted lower. Persistent small losses brought *The Economist* indicator down by 2.3 points to 184.5. Among cinemas, Rank Organisation lost 9d. to 6s. 10½d. Hoover "A" improved 1s. 3d. to 38s. Gus "A" rose 3s. 6d. to 44s. 1½d. on the scrip issue. A decline in gramophone record production led to losses in EMI and Decca. Motor shares weakened and Rolls-Royce fell 4s. 3d. to 88s. 6d.

British Petroleum declined 2s. 6d. to 91s. 10½d. following the dividend, but Apex (Trinidad) and Trinidad Central were strong. Kaffirs weakened after the quarterly results, with Virginia falling 6d. to 7s. 9d.

(1) Employment figures relate to June of each year; other figures are monthly averages. (2) Engineering, shipbuilding, electrical goods, vehicles, metal goods, precision instruments and jewellery. (3) Textiles, leather goods, clothing, food, drink and tobacco, manufactures of wood and cork, paper and printing. (4) Number registered as unemployed expressed as a percentage of the estimated number of employees. (5) From June, 1956, onwards, comparison with earlier figures is affected by the revocation of the Notification of Vacancies Order, 1952. (6) United Kingdom. (7) Figures have been revised back to July, 1956, on the basis of mid-1957 count of National Insurance Cards.

(1) Relates to wholesale prices in Athens and Piraeus only for Greece. Figures for Ireland from 1955 onwards are for home-produced goods only. Figures for Germany, F.R. are producers' prices of industrial products. (2) July-December. (3) Relates to prices in capital cities only for Austria, France, Greece and Turkey. Austria and Belgium exclude rent. Denmark includes direct taxes. Figures for Ireland are based on August, 1953=100. (4) Including direct taxes. (5) Including trade with Faroe Islands. (6) Index numbers of unit value which compare the current average value of trade with its value in 1953; they are influenced by changes in the composition of trade as well as price movements. Export prices in Ireland are adjusted for seasonal variations. (7) Deposit money and notes and coins held by business, individuals and foreigners. Except for Greece, holdings of the issuing authority and other banks are excluded. (8) Holdings of the government and central bank at end of period. Foreign exchange figures for Norway exclude government holdings; Netherlands, Norway and Sweden include foreign investments. Ireland includes some long-term securities. (9) Beginning May, 1954, a new drachma equal to 1,000 old drachmas was introduced. (10) Average for third quarter. (11) New series.

Financial Statistics

EXCHEQUER RETURNS

For the week ended April 19, 1958, there was an above-line" deficit (after allowing for Sinking unds) of £59,958,000 compared with a deficit of 5,460,000 in the previous week and a deficit of 41,045,000 in the corresponding period of last year. here was a net expenditure "below-line" of 20,651,000, leaving a total deficit of £87,835,000 ompared with £31,215,000 in 1957-58.

THE MONEY MARKET

THE pace of the decline in the Treasury bill rate accelerated at the tender on Friday of last week. The average rate fell by 2s. 6d. per cent, to £5 4s. 0.93d. per cent, 7s. per cent below the rate on the morrow of the Bank rate reduction. The discount houses raised their common bid by 7d. to £98 14s. per cent, following the adjustments of 6d. at each of the two preceding tenders; but the allotted portion of applications at these bids dropped from 59 to 49 per cent. Applications dropped by £16 million to £406 million, but the allotment fell by £20 million to £240 million. At yesterday's tender the offer was increased by £10 million.

Credit was plentiful in Lombard Street just before the tender, and on the Thursday some funds were unlent. Subsequently, however, conditions have been fairly tight, necessitating help from the Bank. On Monday, despite fairly large special purchases made both directly and through the banks, three or four houses had to take a small amount at Bank rate, and on the two following days the market remained "in" the Bank, although the amounts involved were trifling. Business in bills was substantial on Tuesday, and the keen demand for June and July maturities brought the rate down from 5⅛ to 5⅛ per cent. Flexible rates for overnight money have ranged as high as 5¼ per cent—actually above the Treasury bill tender rate—but at times they have dropped below the clearing banks minimum of 4½ per cent.

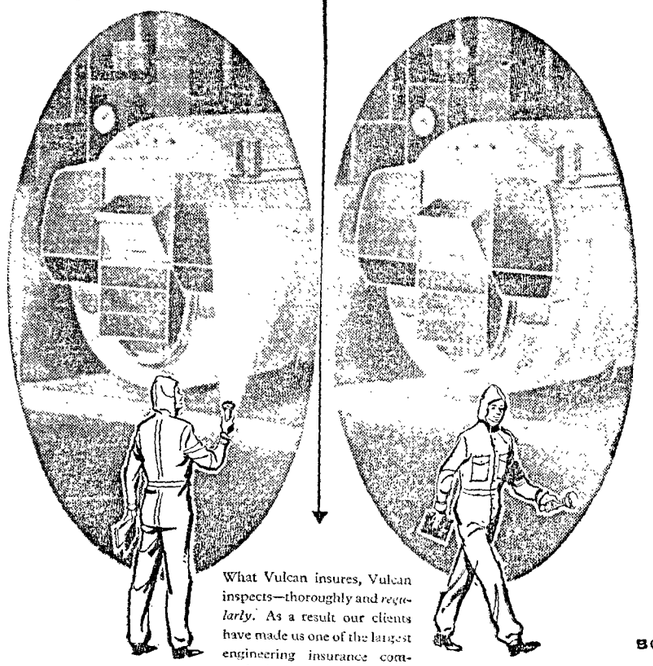
Money to burn?

MILLIONS of pounds worth of property in Great Britain is destroyed or damaged by fire each year. For 1957, the round estimate is £26,000,000. Had it not been for insurance, this would have meant the ruin of many businesses, both large and small, as well as of thousands of private householders.

Although fires are frequent, both businesses and homes often remain insufficiently insured, whilst each year brings its sad stories of people who had no insurance at all.

Fire burns money—*your* money. Insurance for the *full* value of property prevents the financial disaster which can so often follow fire.

For advice on all forms of fire insurance—



Ask the man from the

PRUDENTIAL

The address of the local office is in your telephone directory

BEFORE AFTER —and the difference?

Maybe £5,000

How ?
Faulty water gauges were spotted, and an accident costing £5,000 or more has been prevented.

Spotted by whom ?
By a Vulcan Engineer-Surveyor during his regular inspection of the boiler. Experience gives him almost second sight into the accidents that are waiting to happen.

Are his services expensive ?
Not at all. Your broker will tell you that, though the Vulcan man is a specialist, his services cost no more than insurance and inspection by general practitioners.

FREE

"Vulcan"—a journal of absorbing interest to all users of plant and machinery, with reports of accidents and safety hints. For a year's subscription—free—write now to Dept. 17.

What Vulcan insures, Vulcan inspects—thoroughly and *regularly*. As a result our clients have made us one of the largest engineering insurance companies in Europe.

LORD HEYWORTH ANSWERS SOME CRITICISMS

The Annual General Meeting of the Members of Unilever Limited was held on April 24th at The Hall of the Chartered Insurance Institute, 20 Aldermanbury, London, E.C.2. Lord Heyworth presided.

Addressing the Meeting the Chairman said:

In 1957 Unilever spent on advertising £83 million. True, this expenditure covered hundreds of brands and a wide range of goods such as soaps, toilet preparations, margarines and other foodstuffs; it was spread over nearly two hundred companies; it was spread over more than a hundred countries, fifty of them being countries where we manufacture and market and the rest territories where our products are sold; North America alone accounted for nearly half the total. But with all these qualifications £83 million remains a sum of sufficient magnitude in its own right—almost equal to the trading profit for the same period—to warrant the choice of advertising as the subject for my address today. Moreover, advertising has played—and will always play—a vital part in the growth of Unilever. And if a topical note is required, it is to be found in the Directors' Report, which tells you that in 1957 we were compelled to increase our advertising expenses, with a consequent reduction in net profits despite a greater turnover.

I do not then apologise for my choice of subject. Nor have I any intention of making an apology for advertising, and if I try to deal with some of the criticisms of advertising which have been voiced in recent years, please do not think that I am doing so in the white sheet of penitence.

CHANNEL OF COMMUNICATION

Advertising must expect to be criticised. It is part of our daily life and because it is a very public act, everyone is conscious of it. It is a matter of public interest and as such, open to comment. Everyone has his or her views about it and everyone expresses them. Some dislike it, or some of its manifestations, and readily assume that the rest of the public share that dislike. But the consumer would often be hard put to make her choice without it. And to us, advertising is a necessary part of our business because it is the way we communicate with our customers. 1,800 million consumers—the whole population of the free world—make up the potential market for our goods and there is no other way to communicate with them. We spend large sums of money, time and thought on the development and manufacture of the goods we believe the consumer wants. It would be foolish indeed to stop short at that point, and not take steps to tell them what we have to sell and try to persuade them to buy.

First and foremost, then, the advertiser, whether he be the huckster in the marketplace crying his wares to those within earshot, or the big advertiser communicating with millions through the Press or the television screen, is communicating with his customers. But, more than just business communication, advertising is essential to a free economy. A free economy presupposes freedom of choice for the consumer, just as at the other extreme a totalitarian economy restricts freedom of choice by restricting what can be chosen. Freedom of choice for someone who is not made aware of the alternatives from which choice can be made is an illusion. More than that, freedom of choice includes freedom to try to persuade others to your way of thinking, and, for us, advertising in a free economy is not only our means of informing the consumer how she may exercise her choice but also of asking her to exercise it in our favour. No doubt the fact that advertising is essential to real freedom of choice is one reason for its being disliked by those who believe with Oliver Cromwell that the public should have "Not what they want but what is good for them."

PUBLIC NOT EASILY MISLED

An idea appears to have grown up that people must be protected—though what they are to be protected from is not always clear. From making the wrong choice, I suppose, or what the benevolent and protective planner *thinks* is the wrong choice. I am sometimes tempted to wonder by what criterion those who think on these lines propose to divide the population into the select minority who are to have the right to pick and choose, and the remainder who are not considered fit to do so. Will provision be made for transfer rights from one group to the other—the issue, maybe, under appropriate safeguards, of a provisional Learner's Licence to pick and choose for six months, pending passing the test?

But seriously, I think that most people are a good deal tougher than those who wish to protect them in this way have realised. Naturally they will sometimes make mistakes, but they learn from those mistakes, and build up a resistance which one might compare to that which the human body develops from measles and other childhood ailments. As a result, they are not all that easily misled. And they are essentially human. Their lives revolve round the places where they live, their families and their gardens. They are full of plans for the betterment of their homes, for providing good things for their children, dressing better, striving towards an improved standard of life. They lay great store by what they possess and what they have achieved. In these matters they have a well developed sense of self-protection. They want to lead their own lives in their own way, and above all they want freedom of choice, including the right to make their choice, for whatever reasons seem best to them, whether they be emotional or icily rational.

AID TO MATERIAL PROGRESS

Advertising, I have suggested, is a prerequisite to real freedom of choice. It is also an aid to material progress. No society can remain static; it must either progress or deteriorate. Most are striving to improve their standards of living, to reduce poverty and drudgery. How, then, does advertising help to bring about a rising standard of living? First, I suggest by making people receptive to the idea of change. For, paradoxically, although human beings want to improve, there exists in most of us a certain inertia towards change and one of the justifications of advertising is the part which its persuasive power plays in helping to overcome that inertia and bringing people to see that the old ways are not necessarily the best ways. To take one example from our own past, one might ask what the British soap trade would be like today but for the first Lord Leverhulme's passionate belief in advertising. How much longer would it have taken to get beyond the anonymous bulk of the long unwrapped bars that were the normal form of soap until he burst upon the scene? And if the force of advertising sometimes seems to be not so much to persuade as to act as an irritant, that is not necessarily a bad thing either. Anything that attempts to change us or jerk us out of our existing habits is apt to be regarded as an irritant. Yet although a challenge to go one better than before can be an uncomfortable bed-fellow it is a prime cause of progress in every field of human life, and it is advertising that brings that challenge home to the individual.

CONTRIBUTION TO ECONOMIC STABILITY

While I am dealing with the part played by advertising in general in the economic life of the community, I should make a brief reference to its contribution in bringing about economic stability. For advertising not only promotes the development of new products but helps to establish them on a more predictable basis and thus mitigates violent fluctuations. Indeed, many economists now

think that in a recession advertising expenditure should be increased, not cut down. In a time of depression anything that helps to re-animate economic activity is of enhanced value. Certainly our own experience suggests that in a slump the well established and advertised brand will hold its sales better than its non-advertised counterpart, even when the latter is priced lower.

"WHO IS PAYING?"

Now, who is paying for the advertising? It is often said—sometimes with some asperity—that the consumer always pays. In a sense that is perfectly true, since advertising is part of the cost of the product. But it is a fallacy to go on from there, as many do, to the inference that if the advertising were cut out the goods would be cheaper. This comparison between the cost of advertised goods and what it is said would be the cost of the same goods unadvertised is completely unreal. A world without advertising would be a different world and it is impossible to make any comparison that would have any meaning.

Advertising is certainly one of the costs of a product but it is a cost which brings savings in its wake. On the distribution side it speeds up the turnover of stock and thus makes lower retail margins possible, without reducing the shopkeeper's income. On the manufacturing side it is one of the factors that make large scale production possible and who would deny that large scale production leads to lower costs? This reduction in costs is perhaps most clearly seen in the field of what economists call "consumer durables," such things as motor cars, television sets and refrigerators, all heavily advertised. But the same result is achieved in consumer goods of the kind which we produce. Take, for example, two of our best known products, the soap powder Persil in the United Kingdom and the margarine Blue Band in Holland. Both have been consistently and heavily advertised. The prices of both, though they have not fallen, have kept below the general rise in consumer prices. If we take the price of Persil and Blue Band as 100 in 1938 and the Cost of Living index in both countries, at that time as 100 also, Persil in 1957 had risen to 148 against a rise in the Cost of Living index to 264, while Blue Band had risen to 267, against a rise in the index to 310. The comparison becomes even more striking when one remembers that not only were the prices of oils and fats about six times as high in 1957 as they were in 1938, but that the quality of the products has been noticeably improved.

Large-scale production does not only result in lower costs for the specific goods produced, but is also usually associated with high productivity of labour and the result is higher real wages. In the United States, where there is more advertising than anywhere in the world, the wages of the worker will buy a bigger and more varied basket of products than those of his counterpart in Britain or Holland. This fact does not of itself provide final proof of the value of advertising, for the actual and potential resources of the United States are enormous and that could be the answer. But the fact remains that Americans believe—and we join them in that belief—that among the instruments necessary to turn that enormous potential into usable consumer resources advertising plays the leading part. It would indeed be a sorry thing if in this time of increasing scientific change and development, advertising were to be forbidden to play its part in translating the fertile thoughts of scientists into results that mean something in everyday life.

UNILEVER'S OWN EXPERIENCE

Up to this point I have been outlining in a general way some of the benefits which I believe that advertising brings to the economy of a country. The story has had to be brief and I have not, I know, covered all the aspects. But there I must leave it and for the second half of my speech turn to some of our own experiences as a big advertiser.

First, let us take note of the fact that advertising reflects the quickened tempo of our times. New products and product improvements follow fast upon each other and news of them reaches mass audiences quicker than before. People switch more readily to more convenient or more efficient innovations and the advertiser must spend more money more quickly if he is to bring home to the consumer the advantages which his product offers, and not risk the loss of his market. Competition is an integral part of this quickened tempo and intense competition increases advertising expenditure. But manufacturers compete because there is a prize worth winning and in doing so they tend, in our experience, to develop the potential market more rapidly than could be done by one manufacturer alone. And the consumer, too, gains from the manufacturer's incentive to improve his product and the greater choice that results from new products.

Our own records provide some measure of the increased pace of life since the war. Nearly one quarter of our detergents trade in the United Kingdom and one third in Holland come from products that have been first put on the market in the last six years. Nearly 70 per cent of our margarine sales in Germany and 61 per cent of the total turnover of our Lever Company in the United States comes from products introduced in the same period. This acceleration has changed some of our businesses substantially within the last few years and the need to keep pace with changes like this has caused us to spend considerably more heavily on advertising in a number of countries. In general, the more sophisticated the country the greater the advertising.

But though the weight of our advertising may vary from country to country, certain broad principles seem to be established. First, the need for courage to risk making mistakes. We have to try things. If the attempt fails, the money is wasted. That may be deplored but it is a risk comparable to those we run in research, where a proportion of the projects pursued by our scientists are almost bound to end up in blind alleys. This is all part of the price we pay for finding out what works.

Just as one must have the nerve to risk making mistakes, so must one have courage in deciding how much money needs to be spent on a particular product or promotion. There is no cut-and-dried formula. We have to build on our experience to find out how to spend no more and no less than is needed to achieve the object. Refusal to recognise that the moment has come to cut one's losses is a serious mistake; but so is the failure to appreciate that to keep on that little bit longer may be just what is needed to turn the scales and make a product a success instead of a failure.

WIDE CHOICE OF MEDIA

Today there are available many means of advertising: newspapers, magazines, posters, the cinema, wireless and television. There is shop display, and there are the many forms of schemes such as coupons, bargain packs and other methods of sampling. The advertiser must choose which to use and in what proportions, so as to get the best return for his money and cut wasteful overlapping to the minimum. This is a big potential source of error which can be very costly, since the cost of buying space in the newspaper or time on the air is extremely high, and in fact normally greater than the cost of composing the advertising. In so far as the solution to this problem of the choice of media lies in more accurate information about the extent and nature of their circulation, a responsibility lies on the owners of the media as well as on the advertisers. In the United Kingdom, the Netherlands and two or three other countries excellent information is available, but in most countries Unilever companies are still struggling with problems for whose solution much basic information is lacking. The media owners can play a big part by providing this information, which will make possible more effective and less wasteful advertising.

APPENDIX II

COMPARISON BETWEEN RISE IN PRICE OF TYPICAL UNILEVER BRANDED PRODUCTS AND RISE IN COST OF LIVING, 1938–1957

	1957 (1938 = 100)	
	Cost of Living Index	Unilever Consumer Selling Price Index
United Kingdom	264	—
Persil soap powder	—	148
Lux flakes	—	270
Vim	—	172
Lux toilet soap	—	283*
Stork margarine	—	263
Sausages	—	220
Ice cream	—	150
Holland	310	—
Sunlight soap	—	294
Radion soap powder	—	270
Vim	—	223
Lux toilet soap	—	284
Blue Band margarine	—	267
Belgium	412	—
Sunlight soap	—	355
Soleil soap powder	—	240
Vim	—	250
Lux toilet soap	—	275
Solo margarine	—	259
France	2,432	—
Persil soap powder	—	2,188
Lux toilet soap	—	2,857
Germany	180	—
Sunlight soap	—	210
Vim	—	186
USA	192	—
Lux toilet soap	—	163
Lifebuoy soap	—	205
Rinso soap powder	—	183
Australia	285	—
Sunlight soap	—	310
Velvet soap	—	271
Rinso soap powder	—	231
India	325	—
Sunlight soap	—	334
Lux toilet soap	—	215

Note.—Products with high edible fat content, such as margarine, hard soaps and toilet soaps, etc., are particularly affected by the substantial rise in oils and fats prices—which in 1957 were about six times as high as in 1938.

* 221 excluding Purchase Tax.

TELEVISION

The most recent means of advertising is television, and I will mention briefly our present assessment of this medium. Its growth in the United States and Canada in the past few years has been remarkable and we are now witnessing a comparable development in the United Kingdom where, after the controversy and doubts which preceded its introduction, commercial television is now firmly established. In Holland, where the whole question is at present under discussion, we have no doubt that the use of television for advertising is bound to come before long.

Television costs the advertiser a lot, but it is worth the money, and it gets more economic as it covers more and more of the country. Both in the United States, where it is now generally our first choice, and in Britain, it has provided a means of communicating with our consumers in a way that not only seems very welcome to them but has proved efficient to us. In Britain there are still a number of transitional problems and uncertainties, but by the end of 1957 it was covering one-third of the homes in the country and is clearly taking its place as yet another national medium for advertising. This is not to say that as time goes by it will necessarily grow at the expense of other media. Not all products are ideally suited for advertising on television. Moreover, in a developing economy in which more and more advertisers are seeking ways of advertising a growing diversity of products one can expect a general increase in all the means of advertising. American experience points to this conclusion. In the United States television advertising revenue continued to increase in 1957 but radio had a surprising revival and reversed the downward trend that had started in 1952. Newspapers, too, and magazines increased their advertising revenue, while the outdoor advertising business enjoyed a record year.

NEED FOR FREE AND GENUINE COMPETITION

At present there is a severe practical limit to the amount of advertising that television can take. In the United Kingdom it is already difficult for advertisers to get all the time they want, and this difficulty will get more acute unless and until another service is provided. It seems to me that this will have to come and that, once the plunge has been taken and the decision made to allow commercial television at all, it is no more than logical to allow free and genuine competition in this new field. This would give viewers still greater choice at no extra cost to themselves, and since commercial television can only pay for itself by attracting worthwhile audiences, the emphasis will remain on the quality of programme that will persuade people to watch it.

Doubts are usually expressed about this quality of the programmes when the possible introduction of commercial television in a country is under consideration. The opponents fear that to attract mass audiences the programmes will be designed to appeal to the lowest common denominator of public taste and that Gresham's Law—a very hard-worked, and indeed misapplied, metaphor in this context—will operate to bring all programmes down to the same vulgar level. But it does not seem to have worked out quite like that in the United Kingdom. Sir Robert Fraser, head of the British Independent Television Authority, had some interesting things to say on this theme when he spoke at Bonn early in March. He pointed out, for example, that in 1955, before the coming of commercial television, there were only four programmes of religion in the average ten-week period, one church service and three discussion programmes; now there were thirty-two, twelve services and twenty discussion programmes. Similarly, where previously there had been only two programmes a week which dealt mainly with politics and current affairs, there were now nine. And, as he said, it was difficult not to believe that in this way television was reducing the passion and prejudice of the democratic party conflict and leading us perhaps a little closer to the ideal of a fair-minded and temperate democracy.

PROMOTION SCHEMES

Apart from television, the form of advertising that attracts most attention today—not all of it friendly—is coupons, bargain packs and similar offers.

Some people seem to think that there is something bogus about these promotion schemes and that their cost would be better applied in making a permanent price reduction. They suggest that if a manufacturer can from time to time offer a soap powder, for example, at, say, 4d. below the normal price, he could equally well afford to reduce the price permanently—if not by the full 4d., at least by some smaller sum. This suggestion misses the point that for the scheme to succeed in its first object, which is to induce people to sample the product, it has got to represent an opportunity to get the product at a genuine bargain price, and for that reason the offer cannot be other than temporary.

Now, if it be asked why we should go on making people sample our products when they are still the same, the answer is that they are not the same. I mentioned earlier the changes that had come about in our business in the past few years through the introduction of new products. What is less obvious is that our products, new and old, are continually being changed and improved from year to year. As examples, in the past five years in the United Kingdom there have been four changes in Lux Toilet Soap, six in Persil, two in Omo and two in Gibbs S.R. toothpaste. In Holland in the same period there have been five changes in Blue Band, three in Lux Toilet Soap, six in Omo, five in Sunil, five in Radion and two in Vim. While some of these are old-established products and some are relatively new, all are subject to change as we go on finding ways of making our products more efficient and more acceptable. Big changes are rare but small improvements are constantly being made, which over the years add up to big developments. This continual state of evolution is enough to justify our constantly persuading the public to give them a further trial. We want the public to get quickly acquainted with each change, particularly as we find that the public sometimes disagree with us that a change is an improvement. It is a matter of very practical importance to us to find out quickly whether the change we have made is to the public taste.

The other purpose of a promotional scheme is to make our advertising more effective, for the claim made by an advertisement is much more intelligible to the consumer if he or she is actually using a product at the time we advertise. She can verify for herself what we mean, for example, when we talk about the whiteness of Persil, the brightness of Omo or the perfume of a toilet soap.

COUPONING

A permanent price reduction is not the alternative to promotions. We have tried it, and it did not work. The amount of money which is saved by dropping the promotion is too small to make any significant impact if it is applied to reducing the price. And the fact is that if we were to drop promotions we would have to find other ways of achieving the same objects, not necessarily so efficient and not necessarily less expensive. But we are not rigid in outlook and we continually search for new ideas and forms of promotions, as the attitude of the consumer and her needs keep changing. For example, in 1954, 24 per cent of our advertising expenditure in the United Kingdom and 20 per cent in Holland went on couponing. In 1957 the proportions were 13 per cent for the United Kingdom, 11 per cent for Holland. But though this reflects our assessment of the changing pattern, we still consider couponing one of the most effective methods of introducing a new or an improved line.

MARKET RESEARCH

I have more than once mentioned the pattern of change. The advertiser himself must be flexible and adaptable to change, he must constantly question his own experience and be alert to recognise the change inevitable in all human and social behaviour, and one of the tools of the trade that helps him to do so is the way he gets information about the consumer's real needs.

Methods of statistical market research have been evolving and developing in the last 30 years and their techniques are well known. They still depend on getting answers to questions and the answers will never be better than the questions asked. A wrong question may produce a misleading answer, causing wasted advertising expenditure and perhaps serious business losses. The business man has relied on his experience and commonsense to prevent him asking silly and misleading questions and now psychological study is beginning to add a new tool to market research and perhaps bringing further accuracy to the science of advertising. The first Lord Leverhulme used to say that half his advertising was wasted, but he never knew which half. We hope that we are on the way to bettering that score.

Information through research is the basis on which a business forecasts future patterns. Our aim must be not only to give the consumer what she wants, but to find out what she will want—next year and the year after. We have to discover her latent wants and be ready to meet them when she becomes aware of them.

CONCLUSIONS

Within the limits of this speech I have not been able to deal with more than a few aspects of a very large subject. Some facets of advertising are, I know, easy targets for the criticism of the intellectual, and some of the criticism is legitimate. But just as advertising sometimes overstates the case, so does its critic. He will tell you, for example, that the

money-grubbing advertiser tempts people into spending more than they can afford and thus reduces them to a state of misery through financial worry, at the same time continuing to tantalise them with the prospect of all the other delectable things that they cannot buy. This particular attack, I may say, leaves Unilever's withers reasonably unwrung, for we have yet to hear of a housewife driven to bankruptcy through lavish expenditure on soap, margarine, sausages or toothpaste. But all such criticism leads, in the end, to the dilemma of weighing the need to protect the weak-willed and weak-witted minority against the need to leave the robust and shrewd majority with the right to pick and choose for themselves. Let us by all means continue to improve the ethics of advertising, which indeed in many countries is already subject to codes of conduct far stricter than some critics realise. But if this process of improvement results in the advertiser being deprived of the basic right to try to persuade the consumer to exercise her choice in his favour, the consumer too will find that she has lost something. She will have lost her freedom of choice.

The Chairman concluded by moving the adoption of the Report and Accounts for the year 1957. Mr G. J. Cole, Vice-Chairman, seconded the motion and it was carried unanimously.

The proposed final dividend of 11½ per cent on the Ordinary Stock and a dividend of 6 per cent on the Deferred Stock payable on May 13, 1958, were approved.

The retiring Directors were re-appointed.

The remuneration of the Auditors, Messrs Cooper Brothers & Co. and Messrs Price Waterhouse & Co., who had been re-appointed under the provisions of the Companies Act 1948, was fixed.

The proceedings terminated with a vote of thanks to the Chairman, Directors and all employees.

UNILEVER N.V.

The Annual General Meeting of the Members of Unilever N.V. was held on April 24th at Museumpark, Rotterdam. Mr F. J. Tempel presided and made a speech in similar terms to that delivered by Lord Heyworth at the Annual General Meeting of Unilever Limited, reported above.

The Report and Accounts for the year 1957 were adopted. The proposed final dividend of 10½ per cent (being the equivalent of the final dividend for the same year to be paid by Unilever Limited to its Ordinary Stockholders calculated in accordance with the provisions of the Equalisation Agreement) was approved, the retiring Directors were re-appointed and the Auditors, Messrs Price Waterhouse & Co. and Messrs Cooper Brothers & Co., were re-appointed.

NATION LIFE AND GENERAL ASSURANCE

EXTREMELY SOUND POSITION

The Thirty-third Annual Ordinary General Meeting of Nation Life and General Assurance Company Limited was held yesterday at Teddington, Mr H. Cox, the chairman, presiding. The following are extracts from his statement:

During the year the Company opened the Ordinary Life Branch and issued retirement annuity policies under the Finance Act, 1956. The Company's Policy was approved by the tax authorities, and we were authorised to issue this type of policy. The amount of new business for 1957 was £51,464, and our expectations for the coming year have been doubled. This Branch will continue its development. We propose to extend the range of our policies in our Ordinary Life Branch.

The Company's income during 1957 was £336,235, as compared with £324,359 for 1956, an increase of £11,876. The premium income in our various branches was £282,523, an increase of £6,826. Our interest income was £52,402, an increase of £5,031. Our claim payments—Industrial Life Branch —were £156,354, an increase of £4,301. In the Life Branches the sum assured, with bonuses, of policies in force was £4,365,661.

Our assets shown in the balance-sheet are £1,237,754 with our Life Funds (including the investment reserve fund), £1,080,454 and taking into account the additional reserves which are included in our valuation, shows an extremely sound position.

The directors have recommended that a final dividend of 6d. per 5s. stock unit, free of tax, be paid, making a total dividend of 8d. per 5s. stock unit, free of tax, for the year ended December 31, 1957. The directors further recommend that the payment of an interim dividend of 3d. per 5s. stock unit, free of tax, be made for the year ending December 31, 1958.

The report and accounts were adopted.

BANK LEUMI LE-ISRAEL BM

SATISFACTORY PROGRESS

The seventh Annual General Meeting of the Bank, being the fifty-sixth of the business established in 1902, was held in Tel-Aviv on April 17, 1958.

In his address the Chairman, Dr Y. Foerder, drew attention to the Bank's satisfactory progress during the Year: Deposits of the public had risen by IL.36 million to IL.208 million, and the rate of increase had again been greater than the average increase with all banking institutions in Israel. Special Deposits of the Government and Government Institutions remained practically unchanged at IL.76 million. The Bank's savings scheme, introduced two years ago, was making satisfactory progress.

Advances and loans remained subject to the Government's anti-inflationary policy of credit restrictions. They had risen during the year from IL.86 to IL.95 million, and rediscount facilities were increased from IL.16 to IL.22 million. Documentary Credits and Acceptances had increased from IL.54 to IL.59 million, indicating the expansion in foreign trade.

The Directors had appropriated IL.250,000 to the Reserve Fund, bringing it up to IL.3,250,000 and IL.100,000 to the Contingencies Reserve.

In reviewing the general economic conditions, the Chairman drew attention to the need to balance claims on the Government's budget by fixing priorities. The country tended to want security, large immigration, expansion and development, and at the same time increased standards of living. All these together were incapable of achievement. The country must prepare itself for the day when outside support will diminish considerably.

The meeting approved the accounts and the proposed final dividend of 6½ per cent, which again brings the total for the year to 12½ per cent, subject to tax.

BROWN BROTHERS LIMITED

RECORD GROUP TURNOVER

The sixty-first Annual General Meeting of Brown Brothers Limited was held at the Great Eastern Hotel, Liverpool Street, E.C.2, on Friday, April 18, 1958.

Sir Richard Yeabsley, CBE, FCA, the Chairman, presided. The following is an extract from his circulated statement:

I am pleased to report for the fourth year in succession the sales of the Company and its subsidiaries at a record level.

The trading profits of the Group for the year 1957 amounted to £1,103,359, compared with £976,894 the previous year.

After charging depreciation, mortgage interest, directors' emoluments, auditors' remuneration, and a sum of £36,774 in respect of Employees' Profit Sharing Scheme, the net Group profit, before charging taxation, amounts to £891,820, as against £789,342 a year ago. Provision for taxation amounts to £512,148, compared with £460,419, leaving a net profit of the Group, after charging taxation, of £379,672. Of this figure, £70,298 has been retained in the subsidiary companies, leaving a net profit for the year of £309,374 to be dealt with in the Profit and Loss Appropriation account of the parent company, compared with £256,354 a year ago.

It is recommended that £150,000 should be transferred to General Reserve, against £100,000 for the previous year.

The directors propose a final payment of 10 per cent on the issued Ordinary share capital, making a total of 12½ per cent for the year.

The unappropriated profit carried to the Balance Sheet is increased by £3,704 to £369,593.

TRADING CONDITIONS

I have already referred to the record sales of the year, and I am pleased to report that the motor trade now appears to have fully recovered from the difficulties experienced early in 1957.

The sale of transport service equipment, plant and tools, showed some setback early in the year, but towards the end of the year sales were again increasing. Restricted mileages must obviously reduce tyre demand, but once again we can report that our tyre sales are back to their normal progressive level.

In the Cycle section of our business, sales of complete machines, components and accessories, showed a considerable rise in the early part of the year, undoubtedly due to the restrictions placed on private motoring. Towards the end of the year there was some fall in demand, but business is now more normal.

It is pleasing to report a considerable increase in the sales of our Radio and Electrical Group, where increasing demand for radio and television receivers has produced record figures for this section of our business.

In a business as complex and varied as ours it is always difficult to give any reliable forecast for the coming year. Certainly sales in the first two months of 1958 have been most encouraging. Nevertheless, it would seem that the Government restriction of capital investment and monetary policy must have an effect on some of our departments in the months ahead.

The report was adopted.

PHILIPS' INCANDESCENT LAMP WORKS HOLDING COMPANY EINDHOVEN

The Annual Report and Accounts of the above-named company and of the Operating Company, Philips' Incandescent Lamp Works, are now available in their English translation. The Holding Company owns fl.494,730,000 Ordinary shares of the Company out of a total of fl.495,047,000 and fl.143,593,000 Preference shares out of the fl.144,000,000 in issue. Below are given the Balance Sheet and Profit and Loss Account of the Operating Company as at 31st December, 1957.

BALANCE SHEET AS AT 31st DECEMBER, 1957

ASSETS			LIABILITIES		
Property, plant and equipment:			**Share capital and reserves:**		
Replacement value	662,038,000		Ordinary share capital	495,047,000	
Depreciation	312,179,000	349,859,000	6% cum. part. pref. share capital	144,000,000	
Intangible Assets:		—	Share premium account	63,622,000	
Investments in and amounts due from Associated Companies		1,350,442,000	Retained profit	494,903,000	
Sundry non-current assets		5,895,000		1,197,572,000	
Stocks:			Revaluation	320,544,000	1,518,116,000
Factory stocks	180,198,000		**Sundry provisions:**		
Commercial stocks	75,399,000	255,597,000	Long-term provisions	34,818,000	
Debtors:			Short-term provisions	29,295,000	64,113,000
Trade and other debtors	118,511,000		**Long-term Liabilities:**		
Prepaid expenses	7,016,000	125,527,000	3½% 25-year debentures (unsecured)	60,000,000	
Liquid Assets:			3½% 20-year dollar debentures (unsecured)	18,925,000	
Marketable securities	5,887,000		4% 25-year dollar debentures (unsecured)	75,700,000	
Cash at bank and in hand	170,457,000	176,344,000	5% 15-year Convertible debentures	186,268,000	
			Other long-term liabilities	185,502,000	526,395,000
			Current Liabilities:		
			Creditors, including provision for taxation	53,828,000	
			Accrued expenses	36,085,000	89,913,000
			Profit available for distribution		95,127,000
(All amounts in guilders.)		2,293,664,000			2,293,664,000

PROFIT AND LOSS ACCOUNT FOR THE YEAR 1957

Profit, including profits made by Subsidiaries, after foreign taxation and before deduction of the following items		326,954,000
Depreciation of property, plant and equipment	36,814,000	
Interest paid	21,198,000	
Contributions to Pension Funds	14,438,000	72,450,000
Profit before taxation		254,504,000
Provision for Netherlands tax on profits		80,603,000
Net profit for the year		173,901,000
Profit available for distribution:		
Shareholders' dividends at the rate of 7.6 per cent. per annum on the Cumulative Participating Preference Shares and 14 per cent. on the Ordinary Shares		80,250,580
Board of Directors and Board of Management		7,027,036
Personnel interests		7,849,651
		95,127,267

The development of the Philips Group as a whole over recent years is shown in a table published in the Annual Report, from which the following figures have been extracted.

	1957	1956	1955	1954	1953
	In millions of guilders				
Sales	3,177	2,686	2,280	1,936	1,601
Profit before taxation	394	313	269	231	172
In relation to sales	12.4%	11.6%	11.8%	11.9%	10.7%
Net profit for the year	187	158	148	119	88
In relation to sales	5.9%	5.9%	6.5%	6.2%	5.5%
Profit distributed	95	94	71	48	37
In relation to net profit	51%	60%	48%	40%	42%
Dividend on ordinary shares	14%	14%	14%	14%	14%
Dividend on preference shares	7.6%	7.6%	7.6%	7.6%	7.6%
Additions to property, plant and equipment	275	293	239	154	82
Depreciation of property, plant and equipment	118	100	82	74	64
Current assets	2,442	2,135	1,916	1,481	1,378

55, MOORGATE, LONDON, E.C.2.

SAXONE, LILLEY & SKINNER (HOLDINGS)

A YEAR OF GREAT ACTIVITY

WELL BALANCED DISTRIBUTION OF OUTLETS

MR THOS. LILLEY ON EFFORTS TO OBTAIN FULL ADVANTAGE FROM AMALGAMATION

The annual general meeting of Saxone, Lilley and Skinner (Holdings) Limited will be held on May 14th at Kilmarnock.

The following is the statement by the Chairman, Mr Thos. Lilley, which has been circulated with the report and accounts:

The Saxone and Lilley & Skinner groups of companies were merged on January 8, 1957, and accordingly the accompanying Accounts are the first to be issued covering the combined trading activities of the whole group.

Your Company has now over 470 retail outlets, mainly through the well-known Saxone, Lilley & Skinner, Benefit and Cable chains of shops, but also through over 60 departments in department stores. The establishment of shoe departments in department stores is a growing development in this country and through its Store Group your Company has ensured for itself a fair share of this trade. Together these shops and departments give a well balanced distribution of outlets throughout the British Isles and Eire and they form the main trading activity of the group. The Company also owns five factories in Kilmarnock and Leicester which supply our wholesale customers and retail outlets of the Group and in addition support a growing export trade. The Company's other interests at home and overseas are shown on page 2 of these Accounts.

PROFIT AND LOSS ACCOUNT

Turning to the Accounts themselves, it is not possible to draw from them a true comparison with 1956 because the figures shown for that year are those of the former Saxone Shoe Company only. Had such a comparison been drawn the net profit before tax of £1,128,232 would have shown a decrease of approximately £90,000 on 1956 profits calculated on a similar basis. Turnover was maintained at a higher level than in previous years, but the extra gross profits made were not enough to absorb the increase in overheads incurred during the year.

Some of these overheads are of a non-recurring nature. The initial expenses of the amalgamation and the cost of the capital payment to the Lilley & Skinner shareholders led to heavy borrowings during a year when the bank rate and the interest rates which follow it have been exceptionally high. The opportunity has been taken also during the first year of the amalgamation to bring the accounting years of the various companies into line, and so far as the Lilley & Skinner companies are concerned the Accounts cover a period of 51 weeks only. As the process of integration and rationalisation goes on certain of these overheads will be substantially reduced, and a fall in them is to be expected in 1958.

NEW LEEDS WAREHOUSE

There are, however, certain expenses, such as interest charges, wages and rates, control of which is largely out of our hands. It is in the Company's manufacturing interests in Kilmarnock and Leicester that the burden of these increased overheads, and especially of increased wages, has been most severely felt. In an industry as intensely competitive as ours profit margins are narrow, and wage increases cannot be added to retail prices if sales, and consequently full production in the factories, are to be maintained. Our aim is to peg and if possible reduce our prices and since we are not prepared to lower the quality of the shoes we are taking active steps to increase the output and efficiency of the factories beyond what has already been achieved. Plans are in hand now to distribute the manufacture of shoes between the Company's factories in the United Kingdom in such a way that the best use is made of the knowledge and experience, and of the plant itself, in each factory.

Although credit restrictions have made it necessary to limit or postpone some of the developments envisaged when the amalgamation took place, there is one major project which we intend to carry out right away. This is the building of a new warehouse at Leeds. The increase in the number of shops over the last few years has made the existing warehouse accommodation inadequate, and it is not well situated geographically to give as economical and efficient a service to the branches as we would wish. A modern warehouse has therefore been planned which will occupy a site near Leeds, and will supply the Company's shops in the Midlands and the northern part of the United Kingdom, while the Lilley & Skinner warehouse at King's Cross will supply those in the south. The new warehouse, which should be ready for occupation early in 1959, will incorporate the latest methods of mechanical handling and storage of goods, and, apart from the improved service it will give to branches, should in itself provide a substantial saving in running costs.

Your Company met with disappointing results in both the overseas manufacturing subsidiaries in South Africa and Australia. Difficult trading conditions in both these countries have been experienced during the past year but visits have been paid to both factories by Directors and senior executives of the group to investigate these conditions and steps have been taken now to ensure that the most is made of the capital invested in the two countries.

NEW BRANCHES AND EXTENSIONS

Your Directors believe that the difficulties to which I have referred are temporary only, and are no reason to alter the forecast I made a year ago that in the long run the amalgamation will be beneficial to everybody connected with Saxone, Lilley & Skinner (Holdings) Limited. It has been a year of great activity in the group. New shops have been opened by Saxone in Strand, London, and in Leicester and Bristol, and important and profitable extensions were made to many existing shops. Saxone have also opened since December 31st three very fine branches at Portman House, Oxford Street, London, at Brixton and at Birmingham, and have established three new shoe departments in department stores. Lilley & Skinner opened new shops in Exeter, Chelmsford and Sutton. A new site in a prominent position in the centre of Ealing has been purchased for development and the building which is planned for it will include a new Lilley & Skinner shop. A comprehensive programme of modernisation is well under way and includes extensive alterations and a new shop front to Lilley & Skinner's branch at 358 Oxford Street which is still the largest shoe store in the world.

In addition to these extensions to the Company's trading activities very considerable reorganisation has been going on within the group, and considerable planning for the future has been undertaken which will enable full advantage to be taken of the amalgamation and of the separate knowledge and experience which each company can contribute. The technical exchange of information has proved most valuable, particularly in the fields of manufacture, to which I have already referred, and merchandising. Care has been taken during the past year, and particularly during its second half, to ensure that the Company begins 1958 with clean stocks and is well placed to meet the new fashion trends in women's shoes which are known to exist. Your Directors believe therefore that if general trading conditions in 1958 show no marked fluctuation, the end of last year will mark the beginning of an upward trend in your Company's fortunes.

There are no other items in the consolidated profit and loss account which require special comment, but I should like to draw attention to the very large amount set aside for depreciation, of £238,507, to which should be added a further appropriation of £30,000 which appears later in the profit and loss account. The cost of maintaining a high standard of shop fittings is ever increasing in these days of inflation. We are sure that the expenditure incurred on these assets is well justified by the sales which they encourage, and by the comfort and service to customers which they offer, but we are equally sure that the cost of maintaining them should be found from profits retained in the business and warrants a large appropriation.

DIVIDEND

Your Directors have given careful consideration to the rate of dividend payable on the ordinary shares and in view of all the circumstances of the year have felt justified in maintaining the total distribution at the same rate as last year, of 22½ per cent. Accordingly they have declared a second interim of 15 per cent which will take the place of the final dividend ordinarily paid at this time of the year.

The balance sheet again compares the assets and liabilities of the present group with those of Saxone Shoe Company Limited only for 1956 and a large increase in the various items in the balance sheet is therefore to be expected. It is perhaps worth reminding you that the current value of the freehold and leasehold properties is substantially in excess of £8 million.

I referred last year to the staff and employees and the very great contribution which their goodwill and loyalty make towards the Company's success. That I do so again is not merely a conventional expression of thanks. The friendliness and enthusiasm with which all members of the staffs of the two companies have co-operated during the past year has been a most happy feature of the amalgamation. There is no doubt that with such willing support on all sides the steps which have already been taken and planned for the future well-being of the Company are assured of success.

JAS. WILLIAMSON & SON

GREATER EFFORT FOR LESS REWARD

INTENSIFIED COMPETITION

LORD PEEL'S STATEMENT

The twenty-seventh annual general meeting of Jas. Williamson & Son, Limited, was held on April 16th at Lune Mills, Lancaster, The Right Honourable The Earl Peel (chairman of the company) presiding.

The Secretary (Mr L. Beswick) read the notice convening the meeting and the report of the auditors was read by Mr R. W. Gorman, FCA, of Messrs Viney, Price and Goodyear.

The following is the Statement by the Chairman, which had been circulated with the report and accounts for the year ended December 24, 1957, and was taken as read:

In common with many other enterprises our experience in 1957 was one of greater effort for less reward. This was due to intensified competition between firms and products and to the steady rise in wages with its reflection in overhead expenses and the manufactured materials which we buy.

NET PROFITS AND ALLOCATIONS

Net profits for the year to December 24, 1957, before taxation, were £714,629, which is a decrease of £154,786 when compared with the previous year. Charges for taxation on those profits in the Company's Profit and Loss Account are £431,304 which is 60 per cent (56 per cent last year) of the profit for the year. This higher effective rate of taxation arises in part from the penal rate of Profits Tax on distributed profits. Despite the reduction in profits for the year, the Board have maintained the policy, which they have followed for many years, of making a transfer on a calculated basis from taxed profits of the year to Plant Replacement Reserve in the sum of £65,000. You will recall that in my statement to you in 1955 when profits were higher I said that we felt it right that the stockholders should receive some benefit in those circumstances. On the results for 1957, the Board now recommends the payment of a Final Dividend of 6 per cent on the £1,996,272 of 10s. Ordinary Stock and on the £665,424 of 10s. "A" Ordinary Stock, less Income Tax at 8s. 6d. in the £, making a total of 10 per cent for the year, and after setting aside an amount of £100,000 for transfer to General Reserve, leaving £45,612 to be carried forward to next year.

FLOORCOVERING AND COATED FABRICS

On the floorcovering side, competition in our conventional lines has been intense as much fresh productive capacity from up-to-date machinery has been brought into operation, while prices have been held at a very low level in relation to the capital employed. The result has been concentration on design and quality—fields in which we are capable of holding our own against all comers. The advent of new products, heavily advertised, has intensified the struggle and is being met by wider publicity on our part, with the object of familiarising buyers with the merits of our products and our own ability as manufacturers.

On the coated fabrics side of our business, our wallcovering Dadolin has made considerable progress, while Lionide, the name we adopted twelve years ago for our vinyl-coated material, has come to be recognised as one of the leaders of high-quality leathercloth and has commended itself to a wider circle of users by the attractive range of effects and colours in which it is now available.

RESTRICTIVE POLICIES OF OVERSEAS COUNTRIES

While our efforts have increased our turnover in both the above fields, our overseas task has been rendered more difficult by restrictive policies on the part of several overseas countries, designed either to conserve their resources in foreign exchange, or to support the establishment of floorcovering or leathercloth industries within their own frontiers. The impact of such protective measures is often sudden and, when a large market is concerned, may well involve us in a drop in the value of sales which it is hard to recoup in any other foreign market, owing to our already widespread export endeavours.

It is a matter for some satisfaction that in these circumstances the value of our total turnover increased over the year. This is not only the result of vigorous selling but is also some reward for the expenditure on new plant over the last ten years, and of continuous improvement in manufacture. As a measure of what has been done, the average figure of capital expenditure over the past five years is £316,282 per annum, and you will note, as an indication of our policy to continue the modernisation and replacement of plant and buildings, that as at December 24, 1957, we have commitments to the value of £350,243.

INCREASED LEATHERCLOTH BUSINESS

Last year I made mention of the integration of The Leather Cloth Company business with that of Williamsons. During 1957 sales have been combined in one Leathercloth Division with the result that increased and more widely-spread business has been secured. Further, the Cotton Mills of the two companies have now been concentrated in the Bath and Greenfield Mills in Lancaster and, whilst cloth production from our own mills was lower this year owing to the disruption caused by the changeover of machinery and the transfer of the Leather Cloth Company's automatic looms, considerable savings are expected in future years from the modernisation of this section of our manufacturing plant.

There is a theory, widely held and much canvassed of late, that inflation can be fought by Industry holding the prices of its products and accepting profits continually reduced by increased overheads to which the Nationalised Industries contribute in no small way. This theory rests on the tacit assumption that Industry has been making and retaining too large profits in the past. We, and the Linoleum Industry as a whole, have certainly not done so and, indeed, need to earn larger profits if we are to secure the money we require to reinforce our competitive capacity and continue our progress at home and abroad. We are well equipped to take advantage of all available opportunities, but our success in 1958 and the years that follow must be qualified by the results of the financial and economic measures now being taken by the Government.

RETIREMENTS FROM THE BOARD

You will observe from the Directors' Report that Mr F. E. Winmill has expressed his wish to retire from the Board this year. Mr Winmill joined the Company in 1931 and was appointed to the Board in July, 1938. He retired from the executive position of Commercial Manager in 1946, but has continued to give us the benefit of his experience as a non-executive director since that date. Mr J. A. Black, who joined the Company in 1931, and who was appointed a director in 1946, also leaves the Board on retiring from his position as Chief Buyer on March 31st. I am sure that it will be your desire that I should express here our appreciation of the loyal service rendered to the Company by both these gentlemen for over twenty-five years and wish them a long and happy retirement.

In conclusion I should like to thank, on your behalf, the Management, the Staff and all employees of the Company for their loyal support during the past year.

The report and accounts were unanimously adopted and the dividend, as recommended, was approved.

The retiring director, Mr H. Priestley, was re-elected, and the remuneration of the auditors, Messrs Viney, Price and Goodyear, having been fixed, the proceedings terminated.

SUN INSURANCE OFFICE LIMITED

A YEAR OF SUBSTANTIAL PROGRESS

TOTAL PREMIUM INCOME EXCEEDS £20,000,000

MR C. G. RANDOLPH'S STATEMENT

In his statement to Shareholders Mr C. G. Randolph, the Chairman, drew attention to two changes in the Board. Mr J. R. Abbey had resigned and Mr G. J. A. Jamieson had been appointed in June.

They had heard with profound regret of the death of Mr H. B. Watts in a motor accident while on an official visit to Tasmania little more than a year after his appointment as Manager for Australia. Mr H. G. Foord, Agency Manager at Head Office, had been appointed in his place.

FACTORS AFFECTING THE BUSINESS

He believed that the capacity of the world insurance market was greater than was required to handle the volume of business available; the excessive competition so produced meant that there was a continual process of rate reduction and widening of the scope of the cover granted.

The problem of rising costs had been a source of anxiety since the war and he felt that their success in reducing the expense ratio in recent years was noteworthy.

The regulation of rates by state control, a feature of insurance business in certain overseas territories, greatly affected the results, particularly during periods of inflation. At present the business seemed to be in one of the cycles when losses were abnormally heavy and he thought that underwriting profits would probably remain meagre.

During 1957 a substantial increase in Fire and Accident income was obtained from all the principal areas of operation. The total premium income in all Departments increased from £18,171,206 in 1956 to £20,669,283 in 1957. This exceptional increase was due to a combination of circumstances and was not likely to recur.

FIRE ACCOUNT

The increase in income of £791,869 compared with one of £447,498 in 1956. The comparative figures were:—

	1956	1957
	£	£
Premiums	8,441,339	9,233,208
Claims	4,202,284	4,349,160
Profit	579,309	777,758
Ratio of profit	6.86%	8.42%

At home the experience had improved, though there had been several very large fires. In the United States an improvement had also been shown, but underwriting conditions continued to be extremely difficult. In Canada there had been a further deterioration and in New Zealand losses had been heavy. Elsewhere, their overseas results generally had been satisfactory.

ACCIDENT ACCOUNT

An increase of £1,619,306 had been secured and the comparative figures were:—

	1956	1957
	£	£
Premiums	8,476,333	10,095,639
Claims	4,782,502	5,552,805
Profit	400,642	310,148
Ratio of profit	4.73%	3.07%

The additional income was well spread although the Motor account showed the greatest expansion. This class continued to cause concern. In this country rationing of petrol had brought about a temporary improvement but the toll of accidents had now again risen. Through a subsidiary a varied portfolio of transit risks, including goods by road, was transacted; this was a difficult class and results had been adverse in 1957.

MARINE ACCOUNT

Premiums had increased by £86,902 and the comparative figures were:—

	1956	1957
	£	£
Premiums	1,253,534	1,340,436
Fund at the end of the year	2,216,854	2,330,396

In the hull account there had been a number of heavy casualties and the underwriting outlook was not encouraging. Competition on the cargo side had become more intense. After transferring the sum of £50,000 to Profit and Loss Account the amount remaining in the Fund was equivalent to 173.85 per cent of the premiums.

PROFIT AND LOSS ACCOUNT

The transfers from Revenue accounts totalled £1,137,906.

It had been decided, now that pension plans for overseas staff were fully operative, to adopt uniformity by showing the total cost of pension arrangements in the Profit and Loss Account; the figure amounted to £400,000. It had also been thought desirable to strengthen the Foreign Exchange Account by a transfer of £150,000.

The income from Interest, Dividends and Rents had expanded satisfactorily and the total, before deduction of Income Tax, amounted to £1,222,335 against £1,106,761 in 1956. The book value of investments stood at £24,264,299.

The Directors recommended a final dividend of 4s. 3d. per share, less tax, making a total of 6s. 9d. per share for the year against 6s. 6d. for 1956.

The Chairman concluded by thanking the staff, Advisory Committees, Local Directors and representatives of the Office at home and overseas for their ready co-operation and hard work.

THOMAS TILLING LIMITED

(INDUSTRIAL HOLDING COMPANY)
Comprising 22 Principal Companies

Insurance, Textiles, Engineering, Building Materials, 'Pyrex' Glass, Car Distribution, Electrical Equipment, Hire Purchase Finance, Publishing and many other interests

"WE CONSTANTLY SEEK WAYS OF GOING AHEAD"

"WE ARE NOT INTERESTED IN THE BLUES"

MR W. LIONEL FRASER
CHAIRMAN

The Sixty-first Annual General Meeting of Thomas Tilling, Limited, will be held on May 15th at Crewe House, Curzon Street, London, W.1.

The following is an abridgement of the review by the Chairman, Mr W. Lionel Fraser, C.M.G., which has been circulated with the Report and Accounts for 1957:

NEW DIRECTOR

Mr Graham G. Thompson, who joined us at Crewe House in 1956, with a wealth of financial and industrial experience, has been appointed to the Board as an Executive Director. He is doing valuable work, the results of which cannot fail to be beneficial.

EXPRESSION OF THANKS

I am continually inspired by the dedicated service rendered by all at Crewe House, from the Managing Director, Mr Peter Ryder, and his colleagues in the Higher Management, to those who work in the various departments, Accounts, Estate, Legal, Pension, Registration and Secretarial. I am equally impressed by the support we receive from our Subsidiary and Associated Companies. I salute them all, as well as my fellow Directors on the Board of the Parent Company, and once again express to them my unreserved appreciation.

FINANCIAL COMMENTS AND RECOMMENDATIONS

The proportion of the 1957 profit before tax of £2,894,388 attributable to Thomas Tilling, Limited, was £1,984,311. This compared with £1,675,455 for 1956.

The consolidated profit for the year 1957 attributable to Thomas Tilling, Limited, as shown by the Consolidated Profit and Loss Account (after allowing for tax and the interests of minority shareholders) is £899,842, which is an increase of £85,157 over 1956.

Preference Dividends of £79,062 have been paid and an Interim Dividend of 6¼ per cent on the Ordinary Stock was paid on November 23, 1957. Your Board recommend the payment of a Final Dividend of 7 per cent, making a total of 13¼ per cent for 1957 (1956, 11¼ per cent).

The Chairman having given reports on the various Companies then continued:

GENERAL REVIEW AND PROSPECTS

Since my last report there have been some major changes in our investments upon which it would be well to enlarge. We sold at a good profit our holding in Hawker Siddeley resulting from our investment in the Brush Group, Limited, and we also disposed of our minority participation in E. R. Holloway, Limited, mostly to the family. With sadness, we parted with our interest in Daimler Hire early in 1958, and, in addition, we turned into cash on satisfactory terms our flats and garages in Rutland Gate. These transactions will ultimately yield a sum well in excess of £2 million, though, in fact, the Accounts now published only fully reflect the Hawker Siddeley and the property operations, representing about one half of that amount.

The significance, of course, is that these funds can be put to work, either in new investment, such as in the three new Companies welcomed earlier in this Review, Hibbert & Buckland Ltd., VW Motors Ltd., and Holyrood Knitwear Ltd. or they can be used to meet the calls on us from our existing interests for additional funds, in either case with likelihood of much more remunerative returns than those obtainable if we had not taken these steps. Let me make it clear that ordinarily we invest to keep—indeed that is one of our basic tenets. Needless to say, we took great trouble in these changes to carry all parties with us and enjoyed their full co-operation and agreement.

Once again it is gratifying to be able to present a favourable report, and as I am happy that our basis is firm, our friends true, our businesses robust, it is reasonable for me to express confidence and indeed to repeat my statement of last year that Stockholders should have no cause for disappointment in our future. Aware as I am of the ups-and-downs in business activity and the changes in world atmosphere that take place, I do not hesitate to say that our Family of Firms, founded as it is on friendship and efficiency, is fulfilling, and will continue to fulfil, the hopes we place in it. I say this in all modesty and in gratitude for the support your Directors receive alike from Stockholders, and other friends who have watched the birth and development of a new idea now thoroughly established. Like others we could not avoid the effects of a downward turn in economic conditions but the diversification of our interests provides us with a good measure of insurance.

Lately, we in this country have had to submit to a surfeit of negative forecasts about coming events from all sides, but has there not been too much singing of the blues? Have some people, I wonder, been spending too much time in gloomy predictions instead of vigorous counter-measures? In Tillings we constantly seek to find ways and means of going ahead, and of strengthening our businesses for the building of progress with prosperity. We are not interested in the blues. In our endeavours we count on the full support of our colleagues who manage our underlying Companies, and we on our part ever remember our responsibilities towards them. Tillings is growing and this is demonstrated by the Record of Growth for the last nine years. Many knock at our door for entry but we are very selective.

We believe, and we derive encouragement from our belief, that our Group of Companies performs a rare and beneficial service to the community.

If you are interested in obtaining a copy of the Report and Accounts please write to The Secretary, Thomas Tilling Limited, Crewe House, Curzon Street, London, W.1

TELEGRAPH CONSTRUCTION & MAINTENANCE COMPANY

The ninety-fourth annual general meeting of The Telegraph Construction and Maintenance Company Limited will be held on May 15th in London.

The following is an extract from the circulated statement of the Chairman and Chief Executive, Sir John Dean, BSc, ARIC, FIRI:

The Group Profit for the year before taxation, £626,274, is 26 per cent above that for the previous year. Turnover showed a very slight increase over that for 1956 but, in making this comparison, it must be borne in mind that the price of copper fell from £260 per ton in January to £180 per ton in December. This means an increase in volume of turnover of nearly 10 per cent. Exports, too, have been well maintained and similar remarks apply.

Your Directors have decided to recommend a final dividend of 3¼ per cent as for 1956, but to increase the cash bonus from 1 per cent to 2½ per cent.

Despite extremely difficult trading conditions the Cables Group has succeeded in attaining a moderate profit.

The Metals Group has again made a most valuable contribution to the profits of the year and the Plastics Division has had a very successful year.

Toolpro Limited. Output was substantially increased and profitability maintained.

Speaking generally, the Company may be considered to have concluded a most satisfactory year in the light of current conditions.

HENEKEYS LIMITED

ANOTHER SATISFACTORY YEAR

The thirty-eighth annual general meeting of Henekeys Limited was held on April 23rd in London, Sir Bernard D. F. Docker, KBE, JP (the Chairman), presiding.

The following is an extract from his circulated statement:

As I forecast last year we have had what I think is another satisfactory year—the profits before taxation being up by £12,387, and we have recommended an additional 1 per cent to the dividend.

The Lease of our Hammersmith Branch expired two months ago. I am fairly sure we shall soon be offered another House by the Brewers concerned. We have acquired the tenancy of a branch at Ilford, which, subject to street widening schemes allowing, should be re-built.

During the year we have continued our policy of improving our Houses, and Camberwell, Richmond, Regent Street, Hounslow and Ramsgate have benefited in this way.

Turnover to date is slightly down in most branches, although our Head Office home delivery trade is up.

During the past year you may have seen statements in the press which may have led Stockholders to assume that offers to acquire the Company have been made. Although it is true that enquiries have been received there has been nothing in the nature of an offer, and there are no negotiations in progress.

A professional valuation of the Company's property placed a much higher value on our properties than the figures shown in the balance sheet.

The report was adopted.

SUEZ CANAL COMPANY

M. J. GEORGES-PICOT'S SPEECH

The Annual General Meeting of the Suez Canal Company was held on April 21st in Paris. M. J. Georges-Picot, the Chairman, speaking in French, said:

I cannot overlook the fact that the Report you have just heard falls far short of giving you all the explanations you would wish to [illegible] particular the all-important matter of compensation due to you.

It is unfortunately impossible for me, even in an address which is more personal than your Directors' Report, to tell you today anything more precise. I am sure you will understand and that you will be content for the time being with the following information: Your representatives met those of the Egyptian Government in Rome for the first time from February 19th to 22nd and a second time between March 31st and April 4th. Both delegations showed the greatest desire to arrive, if possible, and as quickly as possible, at an agreement acceptable to both parties. Delegates from the International Bank for Reconstruction and Development which, under the auspices of its President, is lending its good offices in these negotiations, made every effort at these Meetings to bring the opposing points of view together. I wish, in your presence, to pay tribute to the selfless work done by the representatives of this great international organisation.

These discussions, needless to say, clearly brought to light the wide gap between the respective points of view, not only as to figures but even more so in regard to the legal aspect or, perhaps more accurately, the very spirit in which the whole question should be approached. I do not think this will surprise you, and at the same time I hope it will not dishearten you.

SETTLEMENT OF A PROBLEM—THE CHOICE

It is my belief—and I want to convey it to you today—that in every sphere of the troubled world in which we live, but even more so when faced with a problem such as ours, dominated as it is by so many far-reaching political questions, it is necessary to know at every step how to choose between upholding certain principles steadfastly at the risk of postponing a settlement indefinitely and, without losing sight of these principles, making mutual concessions to reach agreement in the only way which is in fact possible. This is the choice you will no doubt have to make yourselves some day since your Directors have undertaken to report to you any proposed agreement or basis of arbitration before those negotiating on your behalf signify their final agreement.

We have given another undertaking in today's Report, that of calling you together to propose a distribution as soon as you are again free to dispose of your blocked assets.

Correspondence reaching me daily brings home to me how hard, and at times how distressing, it is for some shareholders to have had no dividend for nearly two years. I want to tell you that along with every member of the Board, I feel very strongly the necessity of putting an end to this state of affairs as soon as circumstances allow.

Will you also permit me to say once more how much I appreciate the solid support you have given your Board these last two years and the way you have shown your trust in your representatives during the period of trial which, I pray as eagerly as you do, may soon come to an end.

A translation of the Directors' Report and Accounts is obtainable from the London Office of the Company, 6 Bishopsgate, London, E.C.2.

The Times FURNISHING (HOLDINGS)

RECORD TURNOVER

The tenth Ordinary General Meeting of The Times Furnishing (Holdings) Limited, was held on April 24th in London, Mr Henry Jacobs (the Chairman) presiding.

The following are extracts from his circulated Statement:

Record turnover for the year to December 31, 1957, was achieved by both the Times Furnishing and Willerby Tailoring Groups. Profits are in excess of the previous year (£908,559 against £872,430).

Times Furnishing.—Turnover of this Group of 45 Stores rose by 14% and that of the *Willerby* Group of 65 Shops by 5%.

The increase in Fixed Assets is mainly represented by expenditure on new buildings and shop premises to provide Head Offices for *Times Furnishing* in St Marylebone, a Furnishing Store in Watford, an additional Tailoring Production Unit in Basildon and *Willerby* shops in Oxford Street, Sutton, Kingston, Cheapside, Hounslow, Finchley, Holborn, Putney and Walthamstow.

Capital commitments are for the rebuilding of the Furnishing Store in Market Street, Manchester, and a large new Store in Stratford, E.15.

The successful trading results are the outcome of the policy of supplying goods of high quality at competitive prices on reasonable credit terms. In spite of the increase in the Bank Rate, the charge for credit-service has remained at 5 per cent per annum.

The current year shows that trading figures are being well maintained.

The report was adopted.

FINANCIAL NOTICES

OTTOMAN BANK

(Incorporated in Turkey with Limited Liability).

NOTICE is hereby given that in accordance with Article 29 of the Statutes, the ANNUAL GENERAL MEETING of Shareholders will be held on Wednesday, May 14, 1958, at Winchester House, Old Broad Street, London, E.C.2, at 12.30 p.m., to receive a Report from the Committee with the Accounts for the year ending December 31, 1957; to propose a Dividend, and to elect Members of the General Committee.

By the 27th Article of the Statutes the General Meeting is composed of Shareholders possessing at least 30 shares, who to be entitled to form part of the Meeting, must deposit their shares at the chief office of the Company, Istanbul, or at any of the several branches or agencies abroad (in London at 18-22 Abchurch Lane, E.C.4, and in Paris at 7 rue Meyerbeer, 9ème) 10 days at least before the day fixed for the Meeting.

J. VASSALL ADAMS,
Secretary to the Committee.

23rd April, 1958.

INDUSTRY AND OPERATIONAL RESEARCH

Conference at Harrogate

The Operational Research Society is to hold an open Conference at the Old Swan Hotel, Harrogate, on May 21 and 22, 1958. The theme of the Conference is "Aids to Decision Making."

This conference is particularly intended for industrialists who may wish to learn how operational research can assist in tackling management problems and providing aids to decision taking in the fields of industry and commerce.

The fee for the Conference will be £7 10s., to cover accommodation, on the night of May 21st-22nd, a reception and dinner on the evening of May 21st, meals on May 22nd, and conference papers.

Further details, and application forms, may be obtained from the Honorary Secretary of the Operational Research Society, 3rd Floor, 20, Albert Embankment, London, S.E.11.

APPOINTMENTS

SALES MANAGER (Textiles)

In the near future a leading Scottish Knitwear Firm of international repute will appoint a Home Sales Manager.

The position will carry attractive basic remuneration and offers excellent prospects. The man we want will be capable of selecting, training and directing a staff of [illegible]

[illegible] an up-to-date, well-planned, high quality, high price Sales Lay-out to Retail Outlets in the United Kingdom.

Detailed knowledge of the Women's and Men's Knitwear trade is desirable but not essential.

What is essential is proved success as a Sales Manager, complete integrity, appreciation of method, and the ability to work to a forward plan and enthuse his Sales Staff to do so.

A strong expansion Programme is about to start, and this is an exceptional opportunity for a qualified man—preferably 35/40—with drive and energy to build up a progressive and attractive career.

Please write to me personally, in strict confidence, giving fullest particulars of education, training, career to date, and your views for the future including your immediate and long-term financial requirements.

I hope to arrange preliminary interviews in London or in Scotland.

J. W. GALLOWAY, MANAGING DIRECTOR, BRAEMAR KNITWEAR LIMITED, HAWICK.

BRITISH PAPER and BOARD INDUSTRY RESEARCH ASSOCIATION of Kenley, Surrey, require a MATHEMATICAL STATISTICIAN for design and analysis of experiments and advice to the Industry. Age about 30 with general industrial experience. Full responsibility. Pleasant surroundings.—Write to the Director for details.

CHAIRMAN of large company 20 miles S.W. of London requires secretary-assistant with highest qualifications. Salary £18 per week; pension scheme; work varied and responsible; five-day week of which one in central London office. Fuller description of duties sent to qualified applicants before interview; preference to applicants not over 35; Chronological Statement of Education and experience essential.—Box 926.

COMPUTER PLANNING AND PROGRAMMING

BRITISH INSULATED CALLENDER'S CABLES, LIMITED

Invite applications for appointments in their Computer Department. Candidates will be required to assist Company staff in the investigation of Computer applications, and will be trained to carry out the necessary Computer programming. Applicants should have either experience in O. & M. investigation work or hold a degree in Mathematics.

Please submit applications in writing to:

THE WORKS PERSONNEL OFFICER,
Ref. 26/58/14,
B.I.C.C. LTD., PRESCOT, LANCS.
(Tel. No.: Prescot 6571.)

SHIPPING—A United Kingdom Company with extensive overseas interests is seeking to fill a *chief* executive's post in the Caribbean area. The candidate must have had top management experience in shipping, particularly shipping agency work, chartering, insurance and operation of coasters. He should be not less than 40 years old, and should preferably have had some previous experience working abroad. Salary will be commensurate with the high responsibilities of the post; and it can be confidently stated that terms and conditions of service stand comparison with the best offered by other Commonwealth employers.—Box 924.

FORD MOTOR COMPANY LTD. invite applications for a post in Market Analysis and Product Research. Applicants should preferably be Economics graduates and have some knowledge of statistical techniques or market research. Above all they should be enthusiasts about cars or automotive matters. Some technical knowledge would be advantageous. Salary will depend upon ability and there will be plenty of scope for initiative.—Please write to Training and Recruitment Department (012A), Ford Motor Company Ltd., Dagenham, Essex, giving full details and quoting reference AMR.

UNIVERSITY OF BIRMINGHAM

FACULTY OF COMMERCE AND SOCIAL SCIENCE

Applications are invited for the post of ASSISTANT LECTURER or LECTURER in SOCIOLOGY, to begin duties on October 1, 1958, or as soon after that date as possible.

Salary scales: Assistant Lecturer £700-£850, Lecturer £900-£1,650, with F.S.S.U. and family allowances. The appointment will be made initially at a point on the scale according to qualifications and experience.

Applications (three copies), with the names of three referees, should be sent by May 22, 1958, to the Registrar, The University, Birmingham, 15, from whom further particulars can be obtained.

APPOINTMENTS

IBM UNITED KINGDOM LIMITED, manufacturers and distributors of Punched Card Accounting Equipment and Electronic Data Processing Machines, require men of outstanding ability, capable of meeting and working with senior executives. They is intensely interesting work concerning the investigation of accounting, computing, book-keeping methods and systems, the preparation of reports and proposals and the supervising of installation or recommended machine accounting systems. In other words, this is a specialist consultant's job.

Vacancies should be under 35, preferably with a degree or professional qualification or with a wide experience of commercial and/or industrial systems and methods. No experience in a large Punched Card installation. Recent graduates without experience will, however, be considered.

Up to two years training is given and good salaries based on proved earnings and needs are paid during this period. [illegible]

[illegible] successful candidates will be in the high income group. Vacancies exist in the London, Birmingham, Manchester, Newcastle and Scottish areas, and applicants for the next course beginning mid-1958 should write, giving full particulars of education, qualifications and experience (with recent photograph, returnable), to the Personnel Manager, 101 Wigmore Street, London, W.1, quoting reference DPT/AM 5871.

MANCHESTER CORPORATION TRANSPORT DEPARTMENT require CHIEF ACCOUNTANCY (Qualified), preferably with considerable experience of transport accountancy. Salary £1,025/£1,300 per annum.—Forms of application returnable by Friday, May 23, 1958, and further particulars available from Town Clerk, Town Hall, Manchester, 2.

THE UGANDA COMPANY LIMITED

is appointing a

DEPUTY GENERAL MANAGER

to its organisation in Kampala.

Applicants for this important executive post should be between 30-35 with proved commercial and managerial experience. Excellent opportunity for man with sound trading knowledge and ability to interpret and act upon financial and accounting information. An attractive character is essential to play a leading part in the further development of this composite group whose assets exceed £4 million.

Remuneration around £3,000 per annum, plus free housing, medical facilities, car and entertainment allowances, etc. Married or single. Three months paid overseas leave with passages in alternate years. Contributory pension scheme.

Full details of experience, which will be treated as strictly confidential, to:—

THE UGANDA COMPANY, LIMITED,
16 BYWARD STREET,
LONDON, E.C.3.

MARS LIMITED, the well-known confectionery manufacturers, invite applications for the post of Market Research Officer (Trade Research). The successful candidate will be responsible for the detailed planning of all research concerned with the distribution and sales of company products and services. He will also be required to work with the Statistical Department on the preparation of reports on distributive research.

Candidates should be between 23 and 30 years of age, be graduates in economics (preferably with statistics as a subsidiary subject) and be car owners. Previous experience in an economics/forecasting department, a real understanding of sampling theory, and an interest in helping to produce and interpret statistics are also desirable qualifications.

The post carries an initial salary in the range of £850 to £1,250 per annum, plus a generous non-contributory pension, life assurance and sickness scheme.

Applications, stating age, education and experience, should be addressed to the Personnel Officer, Mars Limited, Dundee Road, Slough, Bucks.

YOUNG GRADUATES

with some experience of

MARKETING OR MARKET RESEARCH

should apply for a progressive post in a newly created department in a Group of Companies manufacturing a wide range of industrial rubber and plastic products, with an increasing interest in consumer markets. Tabulated details of education, experience, etc., will be treated in strict confidence by:—

Group Personnel Officer (Ref. MR), B. T. R. INDUSTRIES Ltd., Herga House, Vincent Square, London, S.W.1.

MARKET RESEARCH—An experienced Market Research Executive is wanted for a senior post in a major London Advertising Agency. A sound knowledge of statistical methods in Market Research and experience in devising, organising and interpreting consumer surveys are essential. The man or woman chosen will be expected to work very much on his her own, assuming complete responsibility for Research work on a group of important National advertising accounts.—Applicants should write in confidence stating age, experience and salary required, to S. G. Abbott, Research Department, F. C. Pritchard, Wood and Partners Ltd., 25 Savile Row, London, W.1.

GRADUATES are invited to apply for interesting good progressive post as Personnel Assistant to Managing Director of Pharmaceutical Manufacturing Company. Young man under 30 with good degree, preferably Arts, should possess initiative, organising and administrative ability; should write fully and in confidence, quoting Ref. AV, to Box 923.

University of Bristol

Applications are invited for the post of Research Assistant in Accounting within the Department of Economics. Candidates should be graduates with some accounting experience but applications from persons about to graduate will be considered. Salary within the range £600 to £700 per annum, according to qualifications. —Further particulars may be obtained from the Registrar, The University, Bristol, 8, to whom applications should be sent by May 12th.

APPOINTMENTS

MSL have been retained to advise on the appointment of a

MANAGING DIRECTOR

for the British subsidiary of an overseas company manufacturing high quality specialty steels. Present turnover of this comparatively young company exceeds £12 million.

The Managing Director will play an important part in the development of the British subsidiary which is about to embark on a programme of development.

Candidates must have an engineering or science degree, preferably in metallurgy, and have at least 10 years' experience selling stainless, tool and other speciality steels. They should also have general management experience and be familiar with warehouse operations and accountancy. Works experience is also desirable. Age 30 to 50.

Minimum salary £3,500.

No information will be disclosed to our clients until candidates know their identity and have given permission after personal discussion. Please send brief details in confidence, quoting reference S.927, to P. J. H. Fryer.

MANAGEMENT SELECTION LIMITED
17, Stratton Street, London, W.1.

SEALE-HAYNE AGRICULTURAL COLLEGE, Newton Abbot, Devon.

Applications are invited for the post of LECTURER or ASSISTANT LECTURER IN AGRICULTURAL ECONOMICS and FARM MANAGEMENT from persons with a degree in Agriculture and some training or experience in the field of Agricultural Economics, or a degree in Economics with a good background and interest in Agriculture.

The duties will include lecturing in Agricultural Economics and Farm Management to diploma and post-graduate students and the preparation of material for farm classes and seminars.

The salary scales are £850 x £50—£1,200 for Lecturers and £600 x £30 to £850 for Assistant Lecturers. The appointment will be made to a grade and at a starting salary commensurate with qualifications and experience. Superannuation under F.S.S.U. Accommodation in College at a nominal charge will be available for a single person.

Applications to be sent to the Principal, together with the names of two referees not later than May 31, 1958.

BEMBRIDGE OF NEWCASTLE, a branch of the John Lewis Partnership, require an ACCOUNTANT, aged 35-45, experience in handling of staff, preferably with a good knowledge of departmental store accounting and control. Pay according to qualifications and experience but not less than £1,500 a year with prospects up to £2,000 a year. All workers are partners and share all profits, with good holidays, sick pay, shopping discount and non-contributory pension.—Applications, giving full details, to Director of Personnel, John Lewis Partnership, W.1. Letters must be received by May 6th, and those selected for interview will hear before May 24th.

MATHEMATICIAN

LAPORTE INDUSTRIES LIMITED invite applications from Mathematicians with experience of application of mathematical statistics to the solution of industrial and scientific problems.

The post offered is a new one involving investigation of problems of considerable variety and scope. It is expected that this appointment will give rise in due course to the formation of a Department which the successful applicant will be expected to build up and lead.

The appointment will operate from and in London and will command a high salary.

Applications, which will be treated in confidence, should quote Ref. LIL/LC2/11 and be addressed to the Laporte Group Personnel Manager, LAPORTE INDUSTRIES LIMITED, Hanover House, 14 Hanover Square, London, W.1.

UNIVERSITY OF CAMBRIDGE

Applications for the post of ASSISTANT in RESEARCH in the Department of Human Ecology, vacant from October 1, 1958, or as soon as possible thereafter. The person appointed will be expected to engage in research in the field of national and international vital statistics, and to give assistance with the design and analysis of a wide range of medical research projects. Applicants should be graduates in mathematics, mathematical statistics, or statistics; those expecting to graduate in the coming summer will be considered. Salary scale, £650 x £25 to £850, with superannuation benefits and family allowance where applicable.—Further particulars and information may be obtained from Dr. G. A. Gresham, Secretary of the Appointments Committee of the Faculty of Medicine, The Medical School, Tennis Court Road, Cambridge, to whom applications should be sent to reach him not later than July 30, 1958.

COLLEGE OF TECHNOLOGY BIRMINGHAM

(Designated College of Advanced Technology)

DEPARTMENT OF INDUSTRIAL ADMINISTRATION

Applications are invited for the new appointments of:

1. Senior Lecturer in the Administration of Product Design and Development.

2. Senior Lecturer in Production Organisation and Cost Control.

3. Senior Lecturers in Work Study (2 posts).

4. Senior Lecturer in the Economic and Distribution aspects of Industrial Administration.

5. Lecturer in Economics.

6. Lecturer in Personnel Administration and Industrial Relations.

7. Lecturer in Communication—written and spoken.

Applicants must be of graduate or professional status and have industrial experience corresponding to the specialisation of the post concerned. Salaries will be in accordance with the Burnham (Further Education) Scales for Colleges of Advanced Technology, viz., Senior Lecturers:—£1,350 by £50 to £1,550 (men) and £1,080 by £30 to £1,230 plus equal pay increments (women). Lecturers:—£1,200 by £30 to £1,350 (men) and £960 by £24 to £1,080 plus equal pay increments (women). In fixing the commencing salary, account may be taken of industrial, professional or research experience up to the maximum of the scales. Further particulars and forms of application from the Registrar, College of Technology, Suffolk Street, Birmingham, 1, on receipt of a stamped addressed envelope. Applications to be received within 14 days of this advertisement.

K. R. PILLING, Clerk to the Governing Body.

MARKETING MANAGER (Textiles)

A leading Scottish Knitwear Firm of international repute require for early and remunerative appointment a man (or woman)—probably aged 35/40—fully competent in modern techniques of assessing and investigating the nature of Market Demand and its variations capable of constructing sound Marketing Plans and preparing briefs for advertising and promotional activity.

A natural appreciation of "Fashion" and the importance of the design aspect in quality Dress Goods trade would be a great advantage.

The successful applicant might well be in a senior position with the Merchandising Division of a Retail Store or Group; having graduated from Buyer or Designer.

Please write to me personally, in strict confidence, giving fullest particulars of education, training, career to date and your views for the future including your immediate and long-term financial requirements.

I hope to arrange preliminary interviews in London or in Scotland.

J. W. GALLOWAY, MANAGING DIRECTOR, BRAEMAR KNITWEAR LIMITED, HAWICK.

THE POLYTECHNIC, 309, REGENT STREET, W.1

SCHOOL OF COMMERCE

Applications are invited for two full time appointments as Grade B teachers, duties to commence on September 1st next.

RITCHIE CALDER'S *Signposts to the Atomic Age*

Trade routes beneath the Sea . . .

THERE IS A POWERFUL AGENT, *obedient, rapid, easy, which conforms to every use, and reigns supreme on board my vessel. Everything is done by means of it. It lights it, warms it, and is the soul of my mechanical apparatus . . .*

"Thus Captain Nemo, in *Twenty Thousand Leagues Under the Sea*, explained the unlimited range of his submarine *Nautilus*. In January 1955, Jules Verne's vision of 1873 was fulfilled. The United States atomic submarine, appropriately called *Nautilus II*, put to sea, driven by an inexhaustible source of power.

Captain Nemo's *Nautilus* was not a war-vessel, but a submarine yacht. Now submarine oil tankers, bigger than any ship afloat, are contemplated. Similarly we could have submarine freighters. But why not passenger liners as well? Under-water *Queen Elizabeths* could be far larger and could travel far faster and far farther.

We just need to get used to the idea of submerging. Already we climb beyond the clouds and "above the weather" in high-speed air-liners. This, we recognise, is part of our mastery over the elements—the captain chooses his levels and his lanes to avoid the upheavals of the lower atmosphere and secure favourable upper winds.

The same applies to that other element, the ocean. Since the first frail craft put out to sea, men have endured the heaving and tossing of the waves, the battering of the winds and the torments of the storms. Even the greatest liners fare badly when Atlantic rollers are 60 feet high.

Designers of the surface ships have to contend with many factors—the resistance of water, the erratic wave-formations and the drag of the winds on the superstructure. They can streamline submarines to shear the water. They have to allow for depth-pressures on the hul but they can ignore the waves, since with the reserves o power of an atomic-engine, the vessels need never surfac except in sheltered waters. Winds can be discounted.

Already submarines of 100,000 tons are regarded as a practical proposition but the bigger, the more economic in terms of atomic power. Even in such dimensions the could command speeds higher than the fastest fish (th swordfish is reputed to travel at 57 miles an hour) an could circumnavigate the world on a pittance of nuclea fuel. Like the air-pilots, the captains could choose th currents and lanes to best advantage. With atomic powered searchlights, passengers would have revealed t them a world inhabited by strange creatures. Tourist could sail up the oceanic canyons, like pleasure cruise up Norwegian fjords. They would voyage between th peaks of the submarine mountain ranges.

As Jules Verne wrote, over 80 years ago: *It marvellous! You were right, Captain Nemo, to make use of th agent which takes the place of wind, water and steam.*

But he did not know the real nature of that agent-nuclear power." [R.C.]

* * *

MITCHELL ENGINEERING *are designing a constructing Nuclear Power Plant to meet wor needs in the New Atomic Age.*

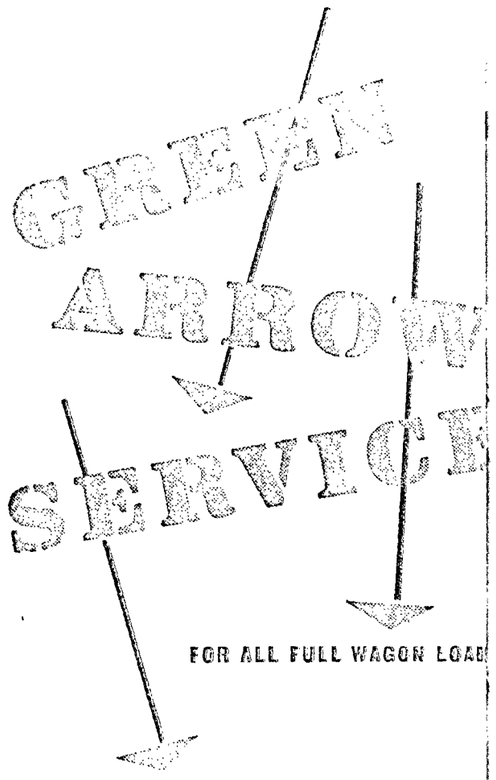
VOLUME CLXXXVII · NUMBER 5934

Do you get a kick out of your desk?



A kick of inspiration—
that comes to those who work in
really well-planned offices?
Or a smart crack across the shins—
because you forgot to sit the
special, twisted way in *that* desk?
If all's not well, ring Catesbys
Contracts at Museum 7777
(a letter, if you're abroad).
They'll put things right—make
the office the right shape, decorate
it, put a new carpet here, more
chairs there, and replace *that*
desk with a new one that's almost
a second secretary. Time and cost?
Quick and low! You'll soon make
both up in that spanking new
office, where work's a pleasure
and profits are, somehow,
easier to coax.

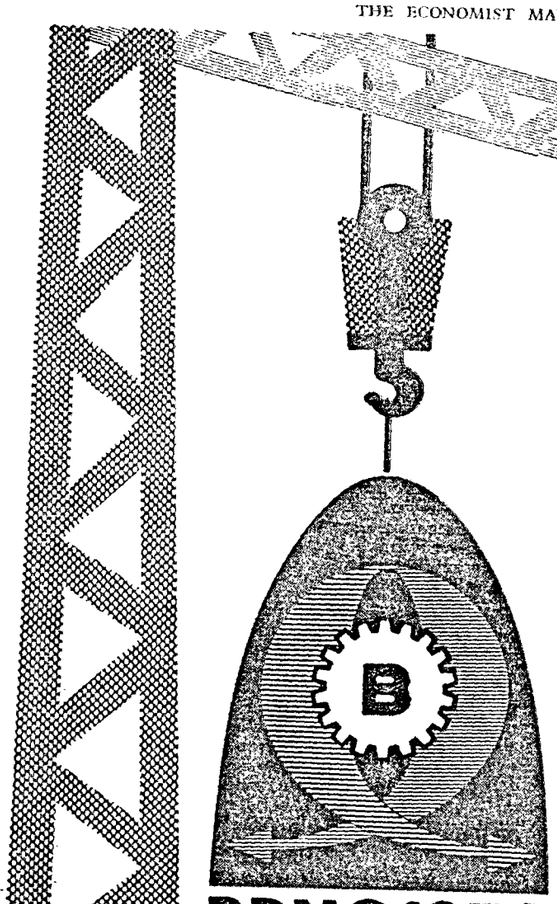
You will establish new business relations at the new International Trade Fair.



INTERNATIONAL ENGINEERING TRADE FAIR

SEPTEMBER 7th—18th
BRNO — CZECHOSLOVAKIA

This year the Trade Fair is specialized in these groups of products :

Machine Tools
Forming Machines
Precision Tools and Gauges
Welding Machines
Electric Spark Machines
Woodworking Machines
Leather, Textile and Rubber Machinery
Graphical Machines
Bearings
Models of Engineering and other Works

Oil Engines and Power Stations
Compressors
Boilers
Pumps
Fittings
Measuring and Regulating Instruments
H.T. Electric Engineering
Measuring Instruments for H.T. and L.T. Electric Engineering
Special and Laboratory Instruments
Machines and Equipment for Chemical Industry
Refrigerating Equipment
Iron and Steel-Works Equipment
Mines Equipment
Building and Roadmaking Machines

mean more sales at less cost..

Sales managers of large and small companies—marketing every kind of product and service—have found that TACK Sales Training contributes positively to solving their major sales problem: How to increase turnover without raising costs...

...regardless of product or service!

From Smiths Clocks & Watches Ltd.—famous manufacturers of horological products, comes this statement by Marketing Manager, L. J. H. Parker:

"Our representatives attended your course just over a year ago. As last year was an excellent one for this Company, there is no doubt that the refreshing and invigorating ideas you gave us played an important part."

Each year over 2,500 salesmen and sales executives attend TACK Courses
Tack Course in Salesmanship and Human Relations—3 days
Tack Course in Sales Management—2 days
May we send you details of how we can help YOUR Company?

Nine questions before the Board—**THE CHOICE OF THERMAL INSULATION**

1 How much will it cost?
2 How much will it save?
3 How long will it take to amortize?
4 How long will it last?
5 Can you install it and forget it?
6 Will it increase or reduce FIRE RISK?
7 Can you change your production processes below it?
8 Will it be harmed by steam, condensation or a corrosive atmosphere?
9 Will it comply with every possible regulation of the Act—FOR EVER?

If you would like nine straight answers to the above questions write to the Sales Director, Cape Building Products Limited. In the meantime, you may like to note that an Asbestolux Thermal Insulation lining specification cannot be improved upon so far as Thermal Insulation, Fire Protection and durability are concerned —whatever the conditions may be.

FIRE will not hurt it **TIME** will not harm it **WATER** will not damage it **VERMIN** will not touch

Eastman CHEMICALS

are serving European industry

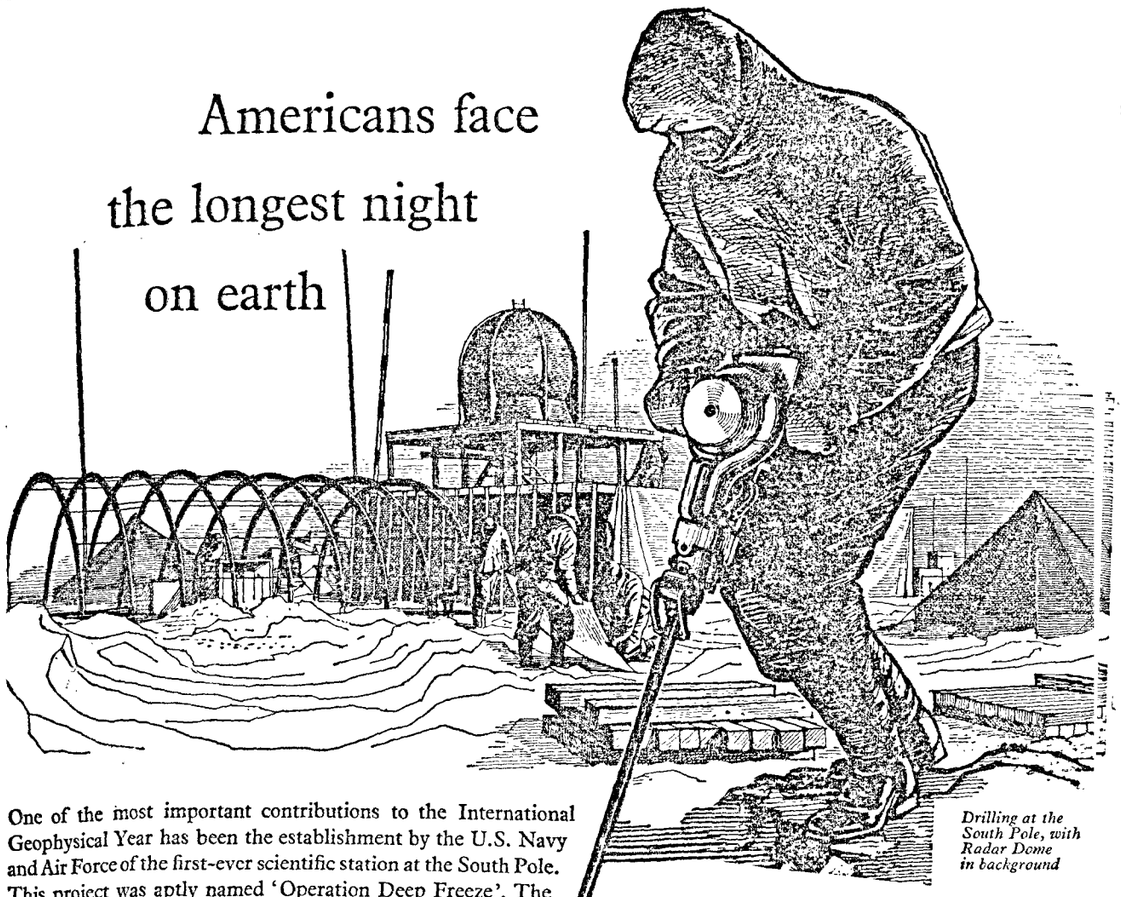
Petroleum
Tenamene® *1*, an efficient, low-cost gum inhibitor, protects motor fuel during storage and use. *Tenamene 2* is a combined gum inhibitor and sweetening agent for motor fuels and aviation gasoline. *Tenamene 3* inhibits gum formation in gasoline and in transformer, turbine and lube oils. *Tenamene 60* and *MD 50*, metal deactivating agents, protect petroleum products from the harmful effects of copper-catalysed oxidation reactions. Tenamene 60 and MD 50 inhibit gum formation in motor gasoline, stop colour degradation in kerosene, reduce fuel oil clogging and improve the high-temperature stability of copper-sensitive jet fuels.

Textiles
Dyes of outstanding fastness for synthetic fibres. *Cellulose Acetate* flake for producing acetate fibre spinning solutions.

Protective Coating
Cellulose Acetate makes tough, water-resistant wire and cable coatings. *Cellulose Acetate Butyrate* produces lacquers, adhesives, airplane dopes and melt and peelable coatings possessing high strength, flexibility and excellent weathering properties. *Solvents* and *Plasticisers* in a broad range, including economical isobutyl acetate, are available.

Rubber
Eastozone® *30* and *31* antiozonants safeguard rubber products against the harmful effects of atmospheric ozone.

Food and Agriculture
Tenox® antioxidants protect food and animal feed against oxygen attack. A wide range of formulations is available to meet specific processing conditions. A line of commercial-grade antioxidants is also supplied for protecting industrial products.



Waxes and Polishes
Epolene®, a low-molecular-weight polyethylene wax, is available in regular and emulsifiable grades and is recommended for use in paper coatings and polishes and as an upgrading agent for paraffin and other waxes.

Stocks of many of these products are maintained in Europe, assuring quick delivery. If you would like to investigate any of these quality products, call or write Eastman's European Sales Office in The Hague. They will put you in touch with our local representative. He and a member of the Eastman organisation will gladly work with you toward obtaining the most effective use of Eastman chemical products in your operation.

Americans face the longest night on earth

Drilling at the South Pole, with Radar Dome in background

One of the most important contributions to the International Geophysical Year has been the establishment by the U.S. Navy and Air Force of the first-ever scientific station at the South Pole. This project was aptly named 'Operation Deep Freeze'. The base, manned and operating since November 1956, stands on a high, featureless snow and ice plateau. Its object: to study some of the worst weather in the world—blizzards, 'white-outs' and temperatures of 102° F. below—all through the long six months of the Antarctic night.

For anchoring wireless masts and other drilling jobs it was essential to use a rock drill that was portable, reliable and easy to maintain—as well as being able to operate in the Antarctic cold at a height of 9,200 ft. The expedition chose the Atlas Copco 'Cobra', using Sandvik Coromant drill steels. The 'Cobra' is the lightest self-contained rock drill in the world. Weighing only 53 lb. with a built-in gasoline engine, it can drill up to 26 ft. per hour through granite.

Blowing out oil fires

Compressed air is versatile. Atlas Copco provides the means for all its many applications. When the vapour on the surface of an oil tank catches fire, Atlas Copco compressors are used to pipe air into the bottom of the tank. This forces the cooler oil to the top, lowering the temperature at the surface and bringing the fire under control.

The Atlas Copco Group of Companies is responsible for the manufacture of compressed air equipment and its distribution and servicing in 90 countries throughout the World. Group H.Q: Atlas Copco AB, Stockholm 1, Sweden.

Atlas Copco puts compressed air to work for the world

Appeal to America

"I AM strongly of the opinion that the time is now approaching, if it has not already arrived, for another forward move in international economic co-operation." Thus the Chancellor of the Exchequer in the budget debate. What Mr Amory meant was that Britain, the Commonwealth and Europe are soon bound to approach America with proposals for increasing (in economists' jargon) "international liquidity." What Mr Amory could not say was that this approach seems all too likely to fall on stony ground, that any deepening of the American recession later this year looks like finding the international monetary system still so starved of short term credit that other countries will have to resort to the sort of deliberate beggar-my-neighbour policies of restriction that characterised 1931-32. But a newspaper can say this, and the time has come when it ought to say it. This article is addressed to friends in America, in terms of genuinely friendly concern; the danger is that, unless the problem is frankly discussed now, an unfavourable march of events may soon cause the debate to be taken up in terms that are much more shrill.

Indeed, some would say, as Mr Amory suggested, that a major problem has "already arrived." To many thinking people on this side of the Atlantic, the most immediate political fact today is not the hydrogen bomb, which nobody looks like using. The most immediate political fact now is that productive power has recently been increasing more swiftly in the communist than in the free world, and this year the balance against the side of the angels is likely to be even worse; in many communist countries production may well increase by anything up to 10 per cent again in 1958, and in many democratic countries it is going, at best, to stand still. Now, Americans can justly argue that it may be worth the United States' while to tolerate a temporary interruption in its own industrial advance, if this serves to stop its price inflation; there may be an even better case, on the same domestic lines, for continuing temporarily to curb industrial expansion in Britain in order to check price inflation here. What is important for the free world's solidarity, however, is that when America or Britain decide to pause in their industrial expansion, other countries should, within reason, have at least as big a cushion as before the war to protect themselves from being forced to check their development also, or still worse to go into a recession at what will look to them like America's behest.

This cushion used to be provided by international gold reserves. At the end of the war everybody was saying that even those prewar reserves were too small; conferences were held at Bretton Woods and other places in order to discuss ways of increasing them. The speeches made at those conferences make strange reading in view of the figures today. For in 1937, total world gold reserves of just over $25 billion had underpinned total world imports of $27 billion, a liquidity ratio of nearly one to one; last year, total world gold reserves of just over $38

billion underpinned total world imports of $107 billion, a liquidity ratio not much greater than one to three. Moreover, outside the United States the decline in liquidity has been even more serious: from a gold liquidity ratio of more than one to two in 1937 to the desperately precarious gold liquidity ratio of not much more than one to six in 1957 (under $16 billion of gold reserves held outside America against some $93 billion of non-American imports). The simple reason for this thoroughly undesirable squeeze on liquidity is that since prewar days the dollar price of many commodities entering into international trade has trebled, while the dollar price of gold has stood still. If anybody had suggested before the war that this effective situation should be reached by a deliberate act of policy—by, say, cutting the real price of gold by two-thirds while leaving commodity prices stable—he would have been regarded as a madman.

The Price of Gold

ECONOMICALLY, therefore, there is now a very strong case for either (a) increasing the supply of the substitutes for gold which the world has necessarily created for itself in the last twenty years; or (b) increasing, perhaps trebling, the price of gold itself. The latter case is now effectively opposed mainly by America. This may seem rather odd, for the gold whose price the outside world would like to increase is, after all, a commodity of which America is by far the largest holder. But the Americans have two objections: one is that it might be difficult for them to sterilise the internal inflationary effects of a rise in the gold price; the other is that the Russians are large producers of gold and would benefit greatly from such a move. As America is the free world's leader, it may be right for other countries to defer to this latter argument, at least, without too much demur. But, in that event, the Americans should have an obligation to help to see that some substitute for gold continues to circulate in the squeezed exchange markets of the world.

In the usual process of free enterprise's adaptability, the world has, of course, created some such partial substitute for (or, rather, addition to) the role of gold during these last twenty years. This has taken the form of larger holdings of foreign exchange. In 1937 the central banks of the world held, in addition to $25 billion of gold, some $2½ billion of each other's currencies, as a sort of small change for international trade; by mid-1957, these "foreign exchange reserves" (virtually all held by countries other than America) had increased nearly tenfold, to over $23 billion. Together with the $16 billion of gold held outside the United States, this therefore lifted the non-American countries' total liquidity ratio (measured against $93 billion of imports in 1957) to not so very much less than the one to two ratio which they held before the war. That is how postwar international trade has been carried on. But a glance at two of the three main components of the $23 billion will show why there is

a fear of renewed liquidity crisis now: very briefly, t system has been underpinned, so far, first by American economic policy which the rest of the f world does not now feel sure will continue, a secondly (this is the most important development) a sterling area confidence system which was grievou hit by the events of last year.

Dollar Loans—What Sort?

CONSIDER first the problem of dollar exchange. (the $23 billion of international exchange reserv already mentioned, just over $8 billion at the middle last year consisted of dollar reserves held outside t United States. Until last year these reserves ha increased steadily—from under $3 billion in 1948 nearly $9½ billion at the end of 1956—because Ameri had more than covered the dollars it sucked in throug its current trade surplus by two compensating mov ments on capital account: by extraordinarily generou aid to, followed by wise investment in, the outsid world. In the first half of last year, however, this flo of dollars out of America was sharply reversed; it i true that the outflow has started again since then, rathe against the trend that might have been expected in time of American recession, but everybody in Europ is afraid that the dollar gap may reappear this autumn Moreover the current gap has been kept down in thes past few months only because most other countrie have slowed their production to keep in time with th slower American tune.

One way in which the United States could help t prevent a world liquidity crisis would be by continuing to close any mounting current dollar gap by increased aid or investment to the outside world. Indeed, i America rejects other suggestions this year, and if it recession continues, it is probable that this is what will be done in the end. The United States will not want to incur the great political odium of having exported any really serious and lasting depression to its allies, o the economic inconvenience of having forced other countries into measures of "reflation on their own" which would eventually involve them in greater dis crimination against dollar imports.

The choice is probably going to be between hastily devised stopgaps, thought up after a crisis, and more deliberate measures to increase the investment outflow of dollars now. There are several deliberate ways in which the direct flow of investment dollars to the outside world could now be increased. One suggestion which has received some publicity this week is that the World Bank might borrow more dollars on the American capital market—where interest rates are at present low—and plough them into other countries' dollar reserves on the nominal collateral of their internal investment projects, like Britain's atomic energy power stations. This sort of dollar investment would be better for everybody than no immediately increased dollar investment at all. But, of course, the nominal association of things like power stations with these loans would be a dubious gimmick, and there are other ways of attacking the world liquidity problem that would be much better.

Restoring Sterling's Function

CONSIDERATION of the "sterling exchange" problem may help to point to one of these better ways. The second component of those $23 billion of international foreign exchange reserves at the middle of last year was over $6 billion of overseas holdings of sterling. These sterling balances first made their appearance as a result of the debts that Britain ran up during the war, and in retrospect it can be seen to have been a fortuitously good thing for the world that they did. It was largely because there was all this sterling lying around that the postwar world has found a convenient medium of exchange in which to conduct more than half of its international trade. As these $6 billion of sterling balances have been backed at times by a sterling area reserve of only about $2 billion of convertible currencies, there has been some element of a confidence trick in the operation. It has been a perfectly respectable confidence trick, precisely of the same sort that is indulged in all the time by the great commercial banks of the world, which generally have a cash reserve equal to less than one tenth of their sight liabilities. But, unfortunately, last autumn there was a run on the sterling bank, and it has now become a declared and necessary objective of the British Government that it cannot afford to have so much sterling lying around the world; this is what is meant by the policy of "keeping sterling strong." It does not matter for this purpose whether the sterling is going to be sucked back from the rest of the world by Britain running a bigger surplus on current account (as the Government says it has got to do), or by attracting capital funds to London by high interest rates (which also restrict industrial activity here), or by restricting Britain's capital outflow to the rest of the world by controls (a policy which the Chancellor calls "breaking up the sterling area," and with the advocates of which, in his budget speech, he waxed surprisingly cross).

One reason why Mr Amory waxed cross may be that he wants, quite justifiably, to lay great emphasis on the "international value of the sterling system" in his approach to America about the problem of world liquidity. A perfectly good case can be made out for saying that the best and cheapest way of preventing a world liquidity crisis would be for America, in effect, to underwrite the sterling area. It would not necessarily cost the Americans a cent to do so, because once the sterling area was underwritten there would be no speculation against the pound and the ordinary bankers' confidence system could continue as before; indeed the operation might even be arranged commercially, for an appropriate underwriters' fee. If the sterling area's gold reserve were put into some new Commonwealth bank, with directors from all the Commonwealth countries, an approach to America on these lines might look rather less insular than it would so long as the reserve remains in Britain's own Exchange Equalisation Account.

The Clearing Union Approach

THE third obvious way of tackling the international liquidity problem would be through the "clearing union approach." The last main component of those $23 billion of international foreign exchange reserves in the middle of last year was over $8 billion of what might be called institutionally created units of account. The most important instrument available here is the International Monetary Fund. When the IMF was set up by the Bretton Woods conference, with $6½ billion of foreign exchange at its disposal and a smaller holding of gold, it was originally supposed to enable international trade to be carried on on the basis of a world monetary system that would be more liquid than before the war. Of course, these relatively tiny IMF quotas have not sufficed in any way for this objective; if the Bretton Woods conference was being held now, everybody would agree that all members' lending obligations and drawing rights should be substantially increased. But instead of increasing these "quotas" now, and otherwise continuing with the original system, many Europeans believe that it would be better to turn the IMF into a "super central bank." This is what Sir Oliver Franks, the chairman of Lloyds Bank, suggested last January when he urged that

> countries should be prepared to deposit exchange reserves with the Fund and treat the Fund's certificates of indebtedness as exchange reserves, in the same way as some European countries already treat as part of their exchange reserves their stake in the European Payments Union.

Let it be made clear to the Americans what such a "clearing union system" would mean. If America continued to pump out more dollars to the rest of the world than it draws gold from it, as it has done in most recent years, the Franks suggestion would not involve it in lending one cent of new money. If America became a net absorber of funds again, then it would not receive all those net funds in gold, but would agree to take some of them in IMF units of account. These units, however, would be just as good as gold; after all, the object of receiving gold is in order to have the unrestricted power to buy more of other people's resources with it, which IMF units of account would equally give. This might be called lending, but only in the sense that any ordinary person "lends" to a bank when he finds it convenient to receive payment of his salary, not entirely in silver and coppers, but in a cheque paid into his banking account.

The analogy with a banking account is, indeed, exact. The great increase in national production and trade that took place in the twentieth century would never have occurred if the old internal monetary system,

whereby internal purchasing power depended wholly on fluctuations in gold supply, had not been swamped by the happy accident of the spreading cheque system ; in the twentieth century circumstances have combined to produce an urgent need for the adoption of the cheque system in the international sphere. It would be entirely proper that America, Germany, Britain and the other potential export surplus countries should have the principal say in drawing up the rules which would ensure that the international fund that cleared these cheques should be as solvent as any other great bank is.

A TYPICAL American reaction to all these proposals may be to say that they are premature. The increased crisis of world liquidity, which many free countries now fear, may, of course, never happen. The Americans may discount the apprehensions aroused in the outside world by the present American recession (which most Americans, perhaps rightly, say will not seriously deepen), and ignore last year's breakdown in the old sterling system (the implications of whic almost all Americans seem to underestimate). But no new strain on international liquidity does occu then the setting up of the precautionary mechanism suggested here would do no one any harm ; mo of them are trigger devices which only a new strai would bring into operation. How many of the fact presented in this article, at least if they are presente in the guise of possible and contingent dangers, woul economists in the American administration reall deny ? If they would deny few of them, cannot they in advance of the approach from Europe that is bound to come, start working on the minds of the non-economists among their colleagues ? The danger a the moment is not so much that the approach will b met by a reasoned obduracy, as by an invincible bewilderment ; it will be a tragedy if the only American reaction is that this whole argument is very complicated and probably exaggerated, and that the wise thing for a businessman's administration to do is to keep quiet and lock up its spoons.

Bus Stop

The sole purpose of a London bus strike now will be to demonstrate a quite unacceptable principle

IT is now almost certain that by Monday morning London's busmen will be out on strike. All efforts at compromise were exhausted this week. Mr Cousins rejected London Transport's offer to give 8s. 6d. more to the 36,000 central busmen and to review the wages of the 14,000 maintenance and country workers in the autumn ; London Transport refused Mr Cousins's last minute "compromise suggestion" that the 8s. 6d. offer to central men only should be changed to an offer, which would have cost the same £1 million a year in total, of 6s. 6d. all round ; and a conference of garage delegates—roughly, the busmen's equivalent of shop stewards—then rejected Mr Cousins's suggestion themselves. They shuddered at the thought of telling three-quarters of the men that they were coming out on strike in nominal support of a claim for two shillings less than they had been offered already. The delegates said that the strike must be labelled as one for 10s. 6d. more a week all round.

But the particular slogan the union puts upon its banners will not affect the strike's result. This strike is being started without initial support from the railwaymen or from the London underground workers, which makes any "victory" for the union rather unlikely, and hopes of a victory that could compensate the men for their losses during the stoppage completely forlorn. Even the country busmen are going to sacrifice more money in a single week of strike than they could gain from any settlement that brought a review of their wages forward from the autumn to this spring. And, whatever happens in the main fight, Mr Cousins must know that the number of Londoners who travel daily by bus, already down by 16 per cent since 1950, is likely to be again permanently reduced as a result of travelling habits caught during this stoppage ; if so, further cuts in bus schedules will soon have to follow the cuts already made this week. This may be a good thing for London, which has too many buses in its streets for economic comfort ; but it is one of the things that a calculating busmen's leader should most have wanted to avoid.

What comments can be passed on all this ? First, that if this bus strike is all that the country has got to endure, the 1958 struggle over wages, about which so much has been said and so many warnings given, will have turned out to be a molehill instead of a mountain. Secondly, that London Transport, which has made a generous offer that will probably in the end be accepted, should give no further ground. For if, with so many cards stacked in its favour, the executive yields to a threat as hollow as that of the busmen, there can be no hope of price stability this year. Thirdly, that Mr Cousins needs to find a face-saving compromise and grasp it as soon as he can. The most likely face-saver may be that he will claim at the end that the offer to review wages in the autumn, which London Transport has already made, is something he has got redefined, in some not very specified way, *during* the strike.

But the final comment to be passed is the fundamental one. The ordinary London bus driver and conductor did not want this stoppage. They have known no more of the gesture which Mr Cousins has chosen to make with their livelihoods than the things they have read in the newspapers this week. To call the garage delegates at Wednesday's conference "representatives of the men" is absurd ; they are a largely self-perpetuating group, composed of the handful of articulate zealots who enjoy making speeches to each other at off-duty meetings, after their colleagues have gone home.

This strike is purely a gesture on their behalf. It is not being launched after careful estimation that the men's losses from it should be less than their eventual gains. It is being launched because Mr Cousins, and still more those immediately below him, feel that it is the professed obligation of trade union enthusiasts to make a demonstration in favour of the principle that *all* workers ought to get some wage increase, even in advance of their productivity, every year. This is precisely the principle against which it has long been necessary that a stand should be made.

It is a stand not against the interests of the organised workers, but against a machine which has got completely out of ordinary workers' control ; the London busmen in this case are not going to be the demonstrators, but the tools their leaders choose to demonstrate with. It used to be said that Ernest Bevin, Arthur Deakin and the old, carefully calculating leadership of the Transport and General Workers' Union were out of touch with their rank and file, and that the more militant Mr Cousins would bring in a new era of union democracy. Some of the conscripted strikers among the central London busmen may find that this argument now rings rather strangely ; in the next few weeks the extraordinary loyalty of the ordinary British trade unionist on the buses is going to be put under extraordinary strain.

The Ljubljana Quarrel

The latest rift between the Jugoslav and Soviet Communists has weakened Jugoslav hopes of leavening the mass of Communist orthodoxy in eastern Europe

LAST week's fall-out between Moscow and Belgrade was sufficiently spectacular to invite comparison with their first quarrel in 1948. The comparison can, however, easily be pushed too far. Marshal Tito has, it is true, again defied the Russians, openly and unequivocally. But defiance in the atmosphere of 1958 is not nearly as risky as it was in Stalin's time. Although Mr Khrushchev has now stepped into Stalin's two shoes, he is unlikely either to want, or to be able, to follow undeviatingly in Stalin's footsteps. Ten years ago the Jugoslavs were heavily dependent economically on the Communist block ; today, a Communist economic boycott would hold no great terrors for them.

With his position so much more secure, (some of the domestic factors that make it more secure are described by a special correspondent on page 415) Marshal Tito can afford to speak with gentlemanly, though uncompromising, moderation. Mr Khrushchev, too, having huffed and puffed without bringing down the Titoist house, may feel that it will do him no good, either, to push matters to extremes. Yet neither is likely to underestimate the significance of the critical exchanges that were provoked by the draft programme for the seventh Jugoslav party congress in Ljubljana on April 22nd. The Jugoslavs do not claim that their programme represents the last word in Marxist theory ; but it does contain what is to them the accumulated wisdom of ten years of practical experiment and ideological exegesis. And, unfortunately for their harmonious relations with Moscow, they are unable or unwilling to keep the fruits of their experience to themselves. So much should have been clear to the Russians ever since the Jugoslavs refused to sign the declaration of the twelve communist parties in Moscow last November.

Fortunately, it is not necessary to become entangled in the intricacies of Marxist dialectic to understand why the publication of the Jugoslav programme upset the Russians. To begin with, the Russians dislike the Jugoslav attitude to the east-west tension. In practice, Belgrade's foreign policy has for months past been moving steadily closer to that of Moscow, and it would be hard to find any major international issue on which the Jugoslavs do not now appear to be on Moscow's side. But they base their attitudes on empirical, not ideological, arguments. It has been irritating for the Russians to see the Jugoslavs, in their theorising, lump the socialist and imperialist camps together as being equally responsible for the present tensions. This is a point—almost the only important one—on which the Jugoslavs have shifted or, as they would prefer to call it, clarified their position as a result of Russian representations. They now hold that Nato, although admittedly called into existence through fear of Stalin's policies, has world domination for its goal, while the Warsaw Pact is a purely defensive counterpoise.

But if the Russians hoped that to budge the Jugoslavs in their theoretical stand would edge them into the Moscow camp, they are plainly mistaken. At the Ljubljana conference, the leaders made it clear that they would continue to judge each international problem on its merits ; on no account would they commit themselves in advance to indiscriminate support of Soviet policies. This attitude, however, is perhaps not quite so discouraging for the Russians as it seems. For some time, as the Jugoslav communists' self-confidence and feeling of security has grown, they have felt increasingly justified in giving more rein to their natural predisposition towards the communist block without actually becoming part of it. As Mr Kardelj puts it, their foreign policy is based on the fact that Jugoslav socialism and the country's security "depend to a great extent on the development and strengthening of socialism in the world generally" and this fact "imposes on us definite obligations towards international socialism." The snag (from the Russian point of view) is that the Jugoslavs intend to decide for themselves what exactly these obligations are.

One suspects, however, that the Russians are really incensed by two attitudes that emerge with devastating clarity from the turgid pages of the Jugoslavs' programme. One is their refusal to recognise Soviet primacy and their implicit criticism of Russia and of Stalin. The other is their insistence on airing their ideas on the international communist movement in general. In the Jugoslavs' view, Stalinism arose not because of Stalin's defects but because of "deformations" in the Soviet system, which, it is implied, have not yet been completely straightened out. They seem to imply that there is still much too much hankering in Russia after the bad old days ; too many Russian dogmatists attack as revisionism every effort to develop Marxist thought in tune with contemporary conditions. To the Jugoslavs these dogmatists are the real revisionists, not the advocates of "different roads to socialism" against whom Moscow has been campaigning vigorously for months past.

Again and again, in the party programme and in the speeches at Ljubljana, the idea that the forms of socialism developed by any one country can have universal application is heavily and heartily slapped down. So is the view that any one country has the slightest right to dictate the policies of any other country. Jugoslav views on the infinite diversity of socialism range from rather high-falutin' and even mystical concepts of the social progress of mankind to the down-to-earth belief that socialism can even in some cases be reached by peaceful parliamentary methods, and to the startlingly heretical assertion that communist parties do not have "a monopoly of any form of movement towards socialism." The smaller communist countries are explicitly encouraged to resist domination by larger ones who have a tendency to impose an "ideological monopoly" or even "political hegemony" on them. Interference by any communist international organisation (like the Cominform) is equally firmly rejected ; but bilateral contacts, which combine maximum opportunities for influencing other people with minimum danger of being pushed around oneself, are another matter.

This may be old stuff, but it is not what the Russians want to hear. Unpalatable ideas expressed in speeches and newspaper articles can be overlooked ; it is different when they are set out in a party programme. Moreover, the Jugoslavs do not consider that the careful exposition of their views should be regarded as a theoretical exercise without relevance to real life. They clearly believe that Jugoslav-Soviet relations should be, as it were, the test case for Moscow's relations with the rest of the communist world.

But this is precisely what the Russians have always refused to contemplate. The hopes aroused after the twentieth Soviet party congress that the beginnings of liberalisation within the individual communist regimes might be accompanied by a real loosening of the Muscovite straitjacket were killed when the Soviet army crushed the Hungarian rising. Last month in Hungary, Mr Khrushchev served notice on the whole block that Russian force would crush any other "counter-revolutions" in the same way. But he also conveyed the impression that he is aware of the deplorable impression made by this brutal snuffing-out of bids for freedom, and is anxious to avoid doing it again if he can. Perhaps he will not need to do it again. But Mr Khrushchev must know that the upheavals of 1956 have not made life easy for the small governments of eastern Europe. On the one hand, the secret police systems have been partially—but only partially—dismantled and, on the other hand, the ferment of ideas that was started by the criticism of Stalin is still working away, especially among the intellectuals. All the more reason, therefore, to keep at bay the dangerous thoughts emanating from Belgrade.

This is what the Russians must hope to have accomplished by boycotting the Ljubljana congress. No doubt they also hope that the Jugoslavs will have taken the hint to concentrate on cultivating their own garden. Whether this hope turns out to be justified or not, the Jugoslavs will certainly have noted the demonstration of the Soviet party's control over its satellites. The spectacle must have stiffened Marshal Tito's determination to keep clear of Mr Khrushchev's leading strings. (He will never, one imagines, feel quite the same about Mr Khrushchev again.) More regrettably, from the Jugoslavs' point of view, a rebuff has been administered to that co-operation and exchange of views between the Jugoslavs and all the other parties of the Soviet block upon which so much store was set in Belgrade after Marshal Tito's visit to Moscow nearly two years ago. Relations at government level may, probably will, remain correct. But inter-party relations seem bound to dwindle ; so do the Jugoslavs' hopes of propagating their comparatively enlightened ideas throughout eastern Europe.

Lessons of a Union

Customs unions are in fashion. Benelux is one that works, mainly because its members have adapted their economic policies to make co-existence possible

The year of the Brussels Fair is, for Belgium, the occasion of a double celebration. The common market has been born: there is a prospect that Brussels may become the European "capital." Two months ago Holland and the Belgium-Luxemburg economic union took another important step together. For a decade now they have been living together in a customs union. In February the Benelux match was legally solemnised in a treaty that for better or worse binds the two in an economic union for half a century. The contrast is striking with the common market treaty —where, after the lawyers had haggled for a long time over the dowry, the feasting has now begun and the banns are out in Gatt, though the union will not be complete for a dozen years, and nobody knows how intimate the whole thing will become in the end. But the Benelux union works ; unpretentious as it is, it carries timely lessons for the new European schemes.

The initial plunge into Benelux was made relatively easy by the many interests the two main partners share. It was the revival of an old political relationship ; and these two merchant nations, lying astride the rail and water routes of north-west Europe, share a liberal attitude to trade. Both had low tariffs before their union and found it fairly easy to sweep away the barrier between them and erect a low common tariff against the world outside in January, 1948.

Yet Benelux has not been one of those dull predestined matches between people who think alike on everything. Indeed, it is in many ways a union of opposites. After 1945, Belgium stood for *laisser-faire* and orthodox economics, while Holland seemed a model Keynesian economy. Their differences have not been bridged by ambitious institutions. Only recently have a formal council of ministers and a parliamentary assembly been set up. But the civil servants and cabinets have developed a close working partnership ; and they have adapted their policies to overcome the payments difficulties and differences in competitive stature that are the bugbear of customs unions.

In the first postwar years Belgium wore the trousers. When Holland was at last liberated it had lost about a third of its national assets ; dykes were broken, cities razed ; the wealth of the East Indies was gone. By contrast, Belgium seemed a sort of European Lucky Jim. At first the Benelux union was constantly strained by Belgium's payments surplus and Holland's deficit.

After 1952, the roles were reversed. Belgium, like Britain, is an old industrial nation. Its population is almost stationary ; the heart of its economy is still the blackened old industries along the Meuse and Sambre —steel, engineering, coal mining—which were the first children of the industrial revolution on the Continent. Its postwar spree raised its industrial wages to the top of the continental list ; and lately it has invested relatively little, even if it has invested well.

Holland, in contrast, bears all the marks of a young economy. Postwar difficulties compelled the Dutch to pare wages and consumption to the bone and drive resources into investment. This, together with a soaring population, brought swift economic growth. And the weight of the industrial effort is concentrated on clean new processing industries. In 1952 the Dutch balance of payments swung into surplus, and the main problem of the Benelux union took a new form: the adaptation of Belgium's old industrial society to co-exist with its young neighbour.

In this second phase the Dutch government consciously pursued a policy of controlled cost inflation. Wages were allowed to rise 18 per cent in two years, and with them consumption. Soon Holland's payments surplus disappeared. The change in the competitive position of some Belgian industries—like shoes and textiles—was apparent in a few months as trade currents went into reverse.

External events, such as the change in the world economic climate in 1952, the formation of the European Payments Union and of the coal and steel community, have helped to resolve the problems of Benelux. Yet its experience does show that trading economies can live together without industrial quotas and tariffs, though they have not only different industrial patterns but different wage and price levels, different tax and social structures, and even different rates of economic growth, so long as their governments pursue policies which achieve a general external balance, avoiding both excessive surpluses and deficits.

The Low Countries have learnt that if this can be achieved, some other problems that afflict customs unions are reduced to insignificance. In 1952, when Belgium's shoe, textile and paper industries were feeling the pinch of Dutch competition, it seemed that Belgium might have to beat a retreat and bring back some import quotas. In fact the change in relative costs as the Dutch economy expanded has meant that the escape clauses have been rarely used. True, an expedient questionable in the eyes of liberal economists has been adopted to ease the problems of weak industries ; the two governments encouraged them to get together with their competitors across the border and reach gentlemen's agreements on specialisation in different products. But the stimulus of competition has been real, forcing

Belgium in particular to adapt itself. In textiles, for instance, high-wage, skilled Belgium has been forced to concentrate on quality goods. Leading firms in both countries have begun to set up plants across the border. It has all been an invaluable preparation for competition in the European common market.

THE flaws in Benelux are as instructive as its achievements. Belgium has been laughing at the news that the special train carrying Belgian ministers home from The Hague, after the signature of the treaty of economic union, was stopped at the frontier while Belgian customs officials searched for smuggled butter. Benelux has certainly not achieved free trade in food, and the new treaty's aim to achieve it by 1962 will not be easily fulfilled. Here, in miniature, is the farming problem which has to be resolved in the European common market. How can the Belgian peasantry, steeped in high-cost traditional ways, be enabled to co-exist with the low-cost husbandry of Holland ? Some progress has been made in raising Belgian standards. The peasant labour force is dwindling as mechanisation spreads. Land reform is beginning to merge the tiny patchwork holdings of the Flemish plain into larger viable units. But Belgian farm prices are still well above Holland's.

Benelux has opened frontiers to a flow of goods freer than that between any other European nations. Yet it has shown that two stable societies cannot be merged in a decade. Movement of labour and capital, as well as of goods, has been freed in theory. But few workers have been lured away from Holland, where there is full employment, by higher Belgian wages ; there has been no migration to compare with the movement from Italy which may take place in the common market. Nor has there been much flow of capital, apart from direct investments in plant or subsidiaries across the border. In taxation, too, there are still evident differences. Budgets are the key to government, and behind Benelux there are still separate parliaments and electorates. The new economic union envisages a further alignment of taxes. But the Low Countries have learnt that an economic merger requires years of political effort.

Today the political impulse behind Benelux has become secondary. All three member governments are now throwing the weight of their endeavours into a bigger European union. Benelux is too small for them. Antwerp and Rotterdam live and flourish on the shipping service and trade which they provide for the smoking hinterland of the Ruhr upstream ; the tug-masters of Rhine and Scheldt are chronically worried by issues of discriminatory national practices which concern all the riparian nations. Above all, Benelux is not enough politically. Whatever illusions their larger neighbours nurse, the Low Countries know that their future depends on ever-increasing integration with all their neighbours.

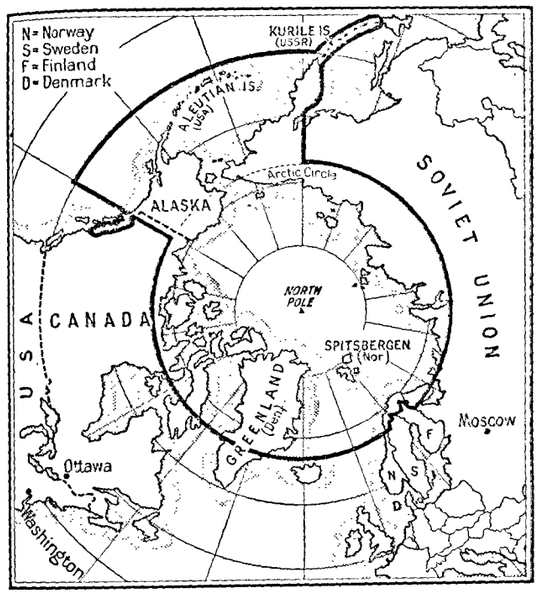
NOTES OF THE WEEK

THE SUMMIT

Ping-Pong Preliminaries

To and fro jumps the bouncing ball. Let's have a four-power pow-wow in Moscow. No, let's have exchanges of views. No, no, we meant a foursome. Sorry, can't manage that, it'll have to be six—three a side, you know, fair play and all that, old man, eh ? Oh well, if you're going to be *huffy*, we'll just have to come and see you one by one. Who's huffy ? Why, *you* are ; we thought you wanted to get started. Of course I do ; you're the ones who are holding things up. But excuse us, dear fellow, it's *you* that's holding things up ; we could get on *much* quicker if you'd only meet us together. But how *can* I—I'd be outnumbered—you must let me bring some friends along to back me up. Ha-ha-ha, as if you needed backing up !

Now, folks, let's see what's happening at the next table. H'm. Looks like more of the same kind of game, if you ask me. Listen to them. Hey, you dangerous fellows, you must stop flying your bombers up towards the Arctic every time you see specks in front of your eyes. Calm down, friend, it's all quite safe ; and just to reassure you, we'll have the Security Council vote on it. Oh no, we won't, I'm withdrawing my resolution. All right, then, *we'll* put up a resolution ; let's have Arctic inspection, like we suggested last year, remember ? No, no, no—bunkum, piffle, eyewash !—what we really need is a resolution calling for summit talks. Summit talks ? Isn't that where we came in ? That is indeed where we came in ; and round about this point the public begins to tiptoe quietly out, having had about enough.



ARCTIC INSPECTION

ICBM Alley

MESSRS Gromyko and Sobolev have summarily rejected the American proposal to open to international inspection all Soviet and allied territories north of the Arctic Circle, and other areas where American and Soviet frontiers approach each other—Alaska and the Aleutians, Kamchatka and the Kuriles. In the Security Council on Tuesday Mr Sobolev called the plan "a diversionary manœuvre" intended to obtain military intelligence about northern Russia. In Moscow on the same day, Mr Gromyko termed it a pure publicity stunt, "detached from any practical steps

towards disarmament." If the proposal is pressed to a vote this week, it will presumably be vetoed by Russia. But even the Russians seem ready to accept Arctic inspection as an item that could be laid before a summit conference ; so the idea cannot yet be written off altogether.

In Tuesday's debate the representatives of Japan and Sweden supported the Arctic proposal, and the Secretary-General himself, in one of his rare interventions, welcomed it as something that might lead to a "major break-through" in the disarmament deadlock. It is, of course, a chip off the old block of the western powers' disarmament programme presented last summer, which was turned down very firmly by a Russia convinced that its development of inter-conti-

nental missiles would enable it to bargain "from strength" for better terms. At that time, official Soviet statements poured scorn lavishly upon the Arctic project. Inspection of these "icy wastes," said Mr Zorin, was "devoid of real meaning," and could yield "no information useful either for disarmament or for the prevention of surprise attack." The criticism seemed wide of the mark even last year, for the western allies were also proposing ground and air inspection of the whole of North America and Russia and of the greater part of Europe ; they offered the Arctic plan as a substitute if the Russians rejected these broader areas. Since then, however, the coming of the ICBM has made the Arctic the obvious "rocket alley" for long-range warfare between the super-powers. Even the Russians no longer seem inclined to mock the idea of policing "icy wastes." They themselves, by their latest complaints against America, have helped to break Mercator's hold on the public mind.

POLITICS AND TRADE UNIONS

Primrose and Pink

THE two most interesting political developments of the past week have both occurred outside Parliament. Last weekend, in a speech to 4,000 members of the Primrose League in the Royal Albert Hall, Mr Macmillan recounted the measures which the Chancellor had already said that the Government would take to meet any change in the economic climate arising from a world depression. But the Prime Minister also included a reference to the measure which the Chancellor left out ; he gave the clearest hint yet that, if recession really should hit Britain by the autumn, then Mr Amory will stand ready to introduce an autumn budget. The healthiest and simplest way to increase both investment and consumption, said the Prime Minister with some emphasis, would be by further reductions in taxation ; and, quite apart from plans to meet a recession, he promised his audience that it is the Government's firm aim to give further substantial reductions in taxation as soon as it is possible and prudent.

These chop-licking references to the possibility of tax reductions, if present economic policies work, have become a suddenly increased feature of Conservative propaganda in the past ten days. They have been accompanied by a reminder, apparently officially inspired, that there is no statutory basis for the common political assumption that the general election must be expected in the autumn of next year ; at a pinch, it will be constitutionally permissible to postpone it until the spring of 1960. Tories are therefore being told that there could still be two—in the event of a recession, even three—more Conservative budgets to come in this Parliament.

This is the stuff to feed the troops. On their opponents' side, by contrast, the main propaganda concern just now is to keep a watch on their industrial field marshals. Labour has something of a split mind about its immediate trade union problem. On the one hand, it believes that the imminence of a railway strike at the time of the general election of 1955 was a factor that lost it a lot of votes then. On the other, it is a historical fact that in the aftermath of the failure of the general strike in 1926 there was a considerable swing of support to Labour, as the trade unions moved over from industrial to political action ; if the bus strike fails in the next few weeks—and most politicians expect that it will fail—then some Labour people think that the post-1926 situation might be repeated.

Mr Gaitskell between Two Spectacles

IT was in these circumstances that Mr Gaitskell took the very bold decision to devote this week's Labour party television programme to an unscripted discussion between himself, Mr Cousins and the shopworkers' leader, Mr Birch. From the point of view of television presentation, he ran a considerable risk in this ; the impression that could easily have come over to the mass audience was of Mr Gaitskell being overshadowed by two very large trade union leaders in very big and impressive horn-rimmed spectacles. Tactically, however, the course of the discussion was interesting.

For it was quite clear that the point that Mr Gaitskell was trying to get across was that, while he is very chummy with the trade union leaders, he is not going to be ruled by them when and if he becomes Prime Minister, and will hope for "what you would call responsibility and I would frankly call restraint" ; while the point the trade union leaders were intent on getting across was that annual wage claims of some sort will go forward under any administration. On the whole, this impression of friendly independence and a certain bluff honesty was probably good television policy. It will certainly have made a better

impression than one other recent development between Labour and the trade unions has done. This other development is the strange affair at St Helens.

The Affair at St Helens

MR TOM DRIBERG is not everyone's political cup of tea, but the way he has been blocked from the Labour candidature at St Helens for once leaves him on the side of the angels (even if not, apparently, sufficiently on that of the saints). When Sir Hartley Shawcross's much forecast resignation at last became fact, some local socialists in St Helens asked Mr Driberg if he would like to stand; and the chairmen's committee of the Labour party's national executive—which has hitherto been responsible for Transport House recommendations—agreed to support him. As both the committee and Mr Driberg well knew, this by no means guaranteed him the seat, even though he is this year's party chairman; more distinguished Labour figures than he have had to be pushed by Transport House on to many selection boards before they at last found a constituency that would take them.

But Mr Driberg was not even destined to reach the St Helens selection board. In part, this is said to have been because of Roman Catholic influence in the local Labour party. But allied with this interest was a more familiarly powerful voice. The leaders of the miners' union in Lancashire intervened and brusquely claimed the seat as a miners' preserve. As Sir Hartley Shawcross was not renowned as a pick and shovel man, one might have expected the National Executive to tell the miners where they got off. But, on the contrary, the Transport House recommendation of Mr Driberg was hurriedly cancelled; and the chairmen's committee was not only rapped over the knuckles for ever having backed him, but was also deprived for the future of its power to make such recommendations. The powerful union block on the executive insisted that in future such matters must be handled by the whole executive.

This particular change may not very much matter. The chairmen's committee comprises the chairmen of the various sub-committees of the executive; these chairmen usually tend to be hard-working old warhorses like Mr Griffiths, and any difference between their views and the whole executive's views on any particular matter is likely to be purely coincidental. But the general principle being invoked by the unions is highly disturbing. The reason for union touchiness is not hard to find. Several seats hitherto held by union men have recently fallen to non-union candidates—to Co-operative nominees, or "intellectuals." That the unions should find the ex-Bevanite Mr Driberg personally suspect is understandable, but it was not their right to block him. Mr Gaitskell should have warned them bluntly that neither they nor any other group can claim to have rotten boroughs in their pocket, any more than they can claim to have Labour Prime Ministers there.

NORTH AFRICA

Off the Fence

THE Algerian rebels have had their way at the Maghreb conference which ended at Tangiers on Wednesday. However much the Tunisian and Moroccan delegates would have preferred a more innocuous form of solidarity, they have had instead to commit themselves to the support of a "free" Algerian government to be formed by the National Liberation Front (FLN). This is forcing the pace. But two points should be emphasised. The formation of the government in exile is still only a threat held in reserve. And the Tunisian and Moroccan delegations represented not their governments (which would have made their relations with France even worse than they are already) but the Neo-Destour and Istiqlal parties; still, these are the ruling parties and their governments would have to go circumspectly in disavowing or watering down their commitments.

It is difficult to see how the Tunisian or the Moroccan government will be able to avoid recognising an FLN government if it is formed. The effect of the conference may be to force the two North African countries off the shaky fence between disloyalty to the nationalist objectives of the FLN and the danger of disrupting their own relations with France.

There were reports at Tangiers of a stream of messages from outside urging the Algerians to hold back. Now that Tunisia and Morocco are being forced into a position of more open support for the FLN, other governments, particularly the British and American, are going to be highly embarrassed to know what attitude to take in the quarrels that will inevitably follow between the Moroccans and Tunisians and the French. The last thing France's Atlantic allies want is to be forced into such a choice. If this is to be avoided, it has become all the more urgent to make a serious attempt at negotiation in Algeria before the FLN takes an irreversible step. For this reason it is a pity that the French caretaker government has decided after all not to raise the Algerian question at the Nato meeting next week in Copenhagen. When Nato does eventually discuss the question, it will be very much better if it is the French themselves who put it on the agenda.

FRANCE

The Turn of M. Pleven

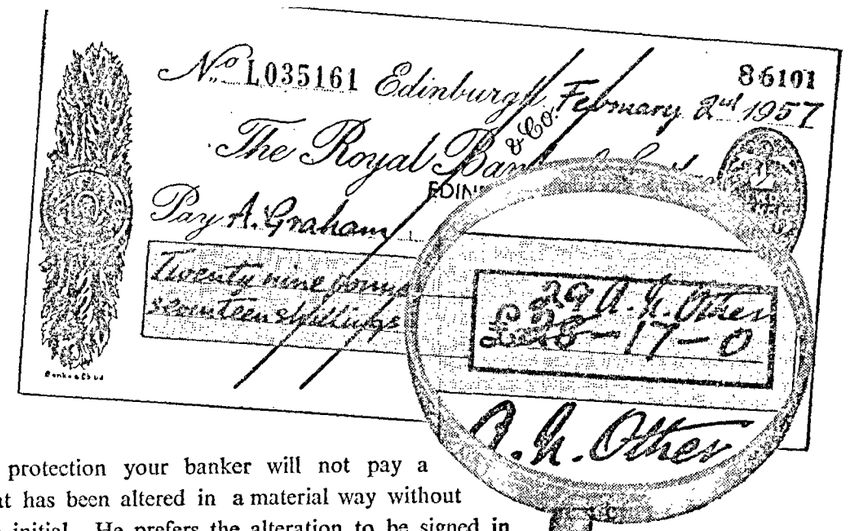
THE French crisis is being played out in slow motion. M. Pleven, who has agreed to try to form a government, is not expected to face the assembly before Tuesday—three weeks exactly after the defeat of M. Gaillard. The delay is partly due to the deputies' interest in local elections, but it also reflects the difficulties involved in cabinet-making. M. Bidault's failure has demonstrated the impossibility of forming a right-wing government. M. Pleven (who belongs to the UDSR, a small centre group) is now trying to revive a national coalition; he wants to include important representatives of all the non-communist parties in his cabinet. As a first step he has drawn up a policy programme for Algeria which has been approved by all the parties except the communists and the poujadists. The plan's contents are not yet known, but this wholesale approval by people of differing opinions suggests that it is innocuous. M. Pleven's supporters, however, claim that it will be sufficiently flexible to allow for some departures from the present Algerian policy which has failed to bring results.

But M. Pleven cannot stick to general principles. Events and bills do not wait until French deputies have made up their minds. Efforts to seal off Algeria's frontiers with Tunisia and Morocco have made it necessary to keep French conscripts 27 months in the forces. Combined with some other additional military credits, this new defence expendi-

"Had a chat with my broker yesterday...

.... and you can take it from me, there are no flies on old Robinson. 'In uncertain times like these' he said, 'you must invest in safety. Look at Abbey National, for instance. They give you a good rate of interest plus all the security you can require; and if you *do* want to withdraw, you can do so at convenient notice with the interest paid right up to date'. Sounds fair enough, doesn't it? 'Well, Robinson', I said, 'it's Abbey National for my money, all right'."

* * *



The yield on Abbey National shares, being 3½ per cent. per annum with income tax paid by the Society, is equivalent to £6.1.9d. per cent. when income tax is paid at the standard rate. With assets of £270,000,000, the Society has all the strength and solidity of a national institution, which indeed it is. Any sum from £1 to £5,000 may be invested. For further particulars, write for the Society's Investment booklet.

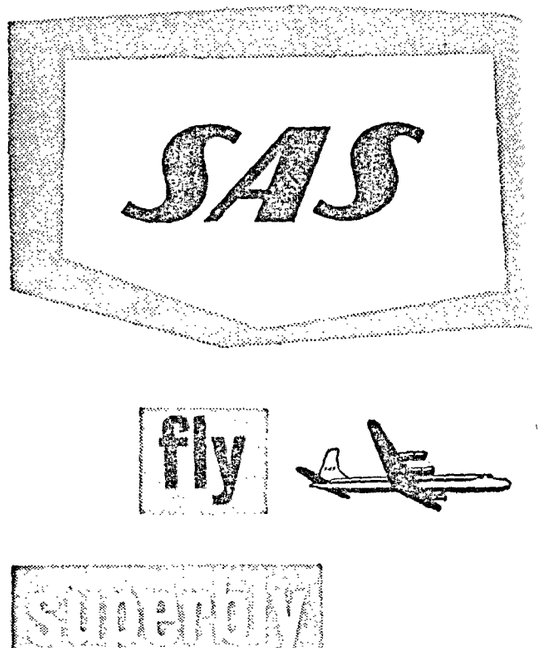
I've always had a soft spot for crackpots. The pottier their ideas the better I like them. Of course, I am not alone in my admiration for crackpottery. Eccentricentialism, to use its proper name, is quite a flourishing philosophy, with some six hundred adherents who frolic regularly at Folly Berserk, the national headquarters.

It was there that I heard an insanely sensible idea regarding advertising. It wasn't reported, being overwhelmed by the less worthy news of an epidemic of apoplexy among advertising agents following a proposal to nationalise their industry. The kernel of the suggestion which escaped notice was that advertising space should be allotted according to the product's value to the community.



Thus, products like *Ugh*, the *Discreet* Cleanser, would be advertised only in appropriate places for private viewing by people one at a time, while the things that contribute to our happiness—books, good wines, handmade shoes, paintings, etc. —would receive their due measure of publicity.

Now that's *true* proportional representation. I'm all in favour of it—and for a start I nominate Mackenzie's Sherry, surely one of life's pleasantest products, for nationalised advertising on a national scale. I don't quite know what one would write about it in order to fill a whole-page newspaper advertisement: I've been a devotee of Mackenzie's Sherry for years but can't say that it has repaired a broken romance, or led me to a better job. Still, the advertising experts should think of something to convince you that it's an exquisite sherry. But why wait?—try a bottle now. You'll agree that Mackenzie's Sherry is worth any taxpayer's money.

ture is estimated at 80 billion francs (about £67 million). The representative bodies in the nationalised industries are only waiting for a government to be formed to press their wage claims. The cost of living is rising. About a fifth of the dollar loan has by now been spent.

Socialists and conservatives are at odds over the means to contain the budgetary deficit. The former want new taxes; the latter, further cuts in expenditure. To reconcile them will not be easy, though M. Pleven is an excellent choice for the job. He served in many postwar governments until his temporary eclipse after the Dien Bien Phu disaster. He has a reputation as an efficient administrator and a born committeeman. If he proves a successful matchmaker, it will still remain to be seen whether he will be better able than M. Gaillard to get action out of a disparate coalition.

EGYPT

Better than Never

AGREEMENT between the Suez Canal Company and the Egyptian government over the amount of compensation to be paid to the shareholders is welcome as the first positive sign of the return to normal relations between Egypt and the West. It has been a long haggle over £29 million. The terms now accepted are probably very little different from what might have been fixed six months or so ago, but at that stage the western powers, habituated to cold-shouldering President Nasser, showed no determination to get the negotiators to come to terms. Now it has come home, to Mr Dulles at least, that this policy was doing no good. Discreet heat was turned on both sides, and a bargain struck.

The next step for the British Government is to reach agreement with the Egyptians over the sequestered and nationalised British property and to release Egypt's frozen sterling balances. The financial talks in Rome have drifted on in as long and as useless a way as the wrangles over compensation. As long ago as January the two sides had substantially agreed on what should be done—but the signatures are still missing. The British side has been anxious to guard against a possible future Egyptian demand for compensation for the damage done on Egyptian soil by the British and French armies. But the Egyptians may prefer to keep this card up their sleeve.

MOVEMENT ALLOWANCES

The Workers to the Work

ANYTHING that makes it easier for workers to change their jobs, when necessary, without incidental loss, is a contribution both to keeping employment high and to ensuring that the unemployed shall be put to the right work. The measures announced by Mr Macleod in the House of Commons last week will have this effect. They raise by 10 per cent the maintenance allowances payable to workers undergoing training at industrial rehabilitation centres. They increase from £2 to £10 the grant available (on top of free removal for household and personal effects) for incidental moving expenses. More important, they break new ground by providing for the payment, up to a maximum of £50, of half the solicitors' and agents' fees involved in house purchase and sale by a worker leaving an area in order to go where employment prospects are better.

This last is a realistic provision which can be expected to become more and more important in a "property-owning democracy." Home ownership, whatever its social attractions, risks being a brake on *mobility*—though the home-owner can hardly be more thoroughly immobilised than the rent-controlled tenant whose privileged position depends on his staying put. It is impossible, as Mr Macleod pointed out in his speech, for the Government to "enter into the whole field of a change in property values," and the likelihood remains that the home-owner who sells a house in a massively declining area, in order to buy in a massively expanding one, will make a net loss on the transaction. Even where actual buying and selling prices are equal, however, outlay on solicitors' and agents' fees can constitute a heavy burden on a migrant. The halving of that burden, together with the reduction in stamp duty in the budget, will make a change of home a significantly less forbidding prospect.

As a means of ensuring that throughout the country available manpower shall be matched to available jobs, getting the workers to the work lacks the fine sweeping emotional appeal of taking the work to the workers—whether by development area policy or by the more elastic and temporary provisions of the new Development of Industry (Industrial Finances) Bill. Nor can it deal with those major tidal shifts of industrial fortune for which development area policy is the appropriate specific. Adequately used, however, it could lessen the pressure for an inappropriate—and far more expensive—use of development area techniques; and although some safeguards may be needed against abuse by ingenious individuals moving for reasons other than an enforced change of job, it offers much less scope for pork-barrel politics. Mr Macleod's initiative is most welcome; this is an example of the sort of peripheral welfare policy at the Ministry of Labour at which he has always been adept.

RENT ACT IN BIRMINGHAM

Take Over Bid

WITHIN very strict limits, the decision of Birmingham Corporation to buy out landlords who have threatened their tenants with eviction is more reasonable than some press reports may have made it appear. The price that the corporation will pay for the houses—it expects to set aside £1 million for the 700 or so affected—will be based on what the property with vacant possession would fetch on the open market. Most landlords may be ready to negotiate on this basis. If they refuse, the corporation will reserve the right to acquire the houses by an order for compulsory purchase, but this is neither so unusual nor so authoritarian as it may sound. The owner will have a right of appeal to the Minister of Housing (who must confirm any such order before it can take effect), and to the Lands Tribunal if he considers that the price offered is not sufficient. These safeguards should ensure that the owners are not victimised; for this reason the proposal, though coming from the Labour majority on the corporation, received Conservative support. As usual, however, the ratepayer who will have to foot the bill has had the smallest say of all.

On a broader view, the Birmingham council's decision is open to criticism for two good economic reasons. The first of these has to do with its timing. Of the 750 Birmingham tenants at present thought to be in danger of eviction, only 382 are said to have exhausted all channels of negotiation with their landlord. Many of the other 368 were still bargaining, but now that the tenant is to be given protection

by the Rent Act amendment introduced in Parliament last week, and the landlord by the city's offer to buy his house if he persists with his eviction notice, both sides may come to feel that they have nothing to gain by reaching a settlement. Because of this, the city will have to acquire more houses and pay more for them.

The second criticism that can be levelled against the corporation's plan is that, in so far as it will stop the movement of a few (and not necessarily the most deserving) tenants to accommodation that they can really afford, it will introduce a new source of unfairness into the city's rent structure. However, because the difference between the free market rent and what the tenant will have to pay will fall on the local rates, some incentive to charge realistically will still remain. This was not true of the London County Council's idea, put forward some months ago, which was that the houses of threatened tenants should be requisitioned and the loss to the landlord made good by the central government. This was a piece of LCC electoral nonsense, and nothing is likely to be heard of it now that the LCC elections are over. The Birmingham device, although wildly extravagant for the ratepayers, at least does not appear to fall into this category.

ADEN

An Interior Problem

ADEN and the neighbouring protected areas present the same kind of problem as do the trucial sheikhdoms along the southern shores of the Persian Gulf. Seaports and strongpoints on the coasts of Arabia were once the only vital spots for the British Government. Whether for coaling, for the protection of distressed seamen, or for control of the arms and slave traffic, a coastal point was important and the interior was of little or no interest.

This easily manageable pattern has been upset by the rise of Arab nationalism and by oil, or the hope of oil. The forbidding deserts and mountains, often unvisited or unknown to the protecting power, now represent prizes to be gained by one side or lost by the other.

In Aden and the protectorates the protecting power is now called upon to revise long-standing procedures for maintaining its influence. The British Government will have to decide exactly what it can do during the next ten or more years and begin doing it with vigour. The immediate problem is to find some substitute for Nasser. There will have to be food on the mat, and money for qat, to take the place of promises from the north. The only substitute that has had any measure of success seems to be popular support of a local indigenous government, as in the Sudan and Tunisia.

In Aden the government can do one of two things. It can withdraw its protection from the areas outside the colony itself and concentrate its efforts in that tiny area. If, on the other hand, the protected areas cannot be left to the questionable care of Imam Ahmad of Yemen, and if they would soon starve in any kind of independent status, then it will be necessary to treat the colony and the protectorates as one enormous problem.

Only when the people of South Arabia can discern clear intentions and can see work in progress will the distant charms of Cairo be overcome. Perhaps Aden can then become the Eden which its name, and local tradition, suggest that it once was.

INDONESIA

The Persistent Rebellion

THE Indonesian rebellion pursues its wayward course apparently it has refused to be extinguished, but merely transferring its centre elsewhere. In Sumatra, at fi the main centre of the rebellion, the central governmen forces have had things all their own way. Padang has falle though its radio transmitter continues to function from point unknown. The official capital, Djakarta, expects t capture of its unofficial rival, Bukittinggi, in "a matter days." In most places, the rebels have shown little heart f fighting; in Pakanbaru, the Caltex oil centre, Djakarta forc left captured rebel troops in charge of the airfield while th drove further into rebel territory.

Yet though the rebellion flags in central Sumatra, it su vives in parts of northern Sumatra, has burst out unex pectedly in the south, and is assuming a new and startlin vitality elsewhere. Widespread targets have been bombed including the oil port of Balikpapan in Indonesia Borneo, where two British tankers were hit—a hazard tha protests to the recognised government cannot remove. Th Shell Petroleum Company has had to halt operations These new and spectacular attacks are being launched from north Celebes, which now looks like becomin

the main centre of the rebellion. It has not escaped the attention of armchair strategists that north Celebes is hundreds of miles closer than central Sumatra to Formosa, a conveniently friendly source of arms. There has been no confirmation of Singapore reports that Dr Sjafruddin, the rebel prime minister, has made his way to north Celebes, but several members of his team are believed to be there.

The rebels' long-term intentions are not clear. They have undergone not merely the shock of an unexpectedly swift military blow from Djakarta, but also a political and military counter-rebellion in Sumatra. Abroad, however, their numbers have been swollen by many defections from the Indonesian diplomatic service, including lately that of the ambassador in Rome. Are they prepared to carry on indefinitely, now that the prospect of gaining control over the whole of Indonesa seems remote? It does seem that some of them, at any rate, will try to do so, arguing that the central government cannot hope to occupy north Celebes without withdrawing troops from Sumatra, thus inviting further outbreaks there.

SWEDEN

Man Bites Dog

SWEDISH politics rarely set headline writers groping for their pencils to record a reversal of the customary order of things. This week, however, Nordic normality has been violated. Last Friday the Social Democrats, who have been

in government with only a single summer's interruption since 1932, were defeated in the lower house of the Riksdag by the combined vote of the opposition parties. On Monday parliament was dissolved for a special election, the first of its kind since 1914 and only the third in the entire history of Sweden's parliamentary democracy. The cause of this upheaval was the government's proposal for a national scheme of "additional pensions" over and above the basic old age pension.

Unlike the basic pension, this would have been graduated according to previous income and would have been, with limited exceptions, universal and compulsory. The debate in the Riksdag was conducted under the beguiling eye of the television cameras; the minister of social affairs infuriated the opposition by hogging a peak viewing-hour, and the Conservatives exploited visual-aid techniques by holding up a large chart while their leader was on the rostrum. In the end the three non-socialist parties, though divided in their own ideas about extra pensions, jumped in unison at their unfamiliar opportunity and pushed the government under by 117 votes to 111.

This does not necessarily mean the end of the Social Democrats' long supremacy. They have hopes that the pensions issue will arrest the slow decline their electoral fortunes have been suffering since the war. In particular, some of the white-collar workers who usually vote Liberal may find the government's proposition too attractive to oppose. If the Social Democrats gain even one or two seats they are expected to continue in office. But this will not be enough to force their pensions bill through. To do that, even with communist support, they will need half a dozen extra seats, which by Scandinavian standards would involve a minor landslide; and customarily the Swedish electorate does not slide, it inches like a glacier.

If, on the other hand, the Social Democrats lose any seats, they are likely to resign and let the opposition parties see if they can resolve their differences enough to form a ministry. Elections are normally held in the autumn, under the inhibiting influence of the approaching northern winter. But this one will take place in the exhilarations of early summer; it may be that the Swedes, stirred by the season into a mood of decision, will settle their political course for some years to come.

POLICE

Constables and the Commons

THE British police are very probably still the best in the world, but outside London they are also the most haphazardly controlled. This is a matter on which it is always very difficult to get any calm discussion started, because there is a lobby of the Establishment which bays indignantly whenever the matter is mooted (in much the same way as, for example, there is a lobby that deprecates any critical discussion of spending in the universities). Hackles are particularly apt to rise at the moment because there is an admitted danger that, with an eye on certain recent events, any inquiry into police organisation might degenerate into a witch hunt. On the other hand, there has over the past few years been a sufficient trickle of "incidents" to raise some anxiety in the mind of the general public; and the implications of ruling by the Speaker this week are worth pondering.

The point emerged when an MP tried to get a debate on a motion about the powers of chief constables. The Speaker ruled that an issue of this sort, except when it concerned the police in London, could only be raised in a bill or on a private member's motion—not, as the MP wanted, on Supply, or on the adjournment. But the real limitation on MPs emerged when the Speaker defined the only three powers which the Home Secretary possesses over local police forces, and therefore the only issues on which he can be tackled at question time. The Home Secretary approves the appointment of Chief Constables (who are picked, however, by local watch committees); he hears appeals in disciplinary cases; and he controls HM Inspectors of Police, who advise him about the efficiency of local forces before he authorises the central government grant. The Speaker specifically stated, however, that the day-to-day administration of the police forces is a matter for the local authorities and not for the Home Secretary.

It is obviously silly that if a metropolitan policeman is rude to an old lady in Piccadilly (London) an MP can ask questions about it in the Commons, but if a provincial policeman does the same thing in Piccadilly (Manchester) Parliament cannot discuss the matter. Perhaps Parliament should not discuss the matter in either case. Perhaps day-to-day activities in all police forces should be kept out of parliamentary questioning, in the same way as activities in the nationalised industries. Perhaps there should be an annual select committee looking into them. Perhaps there should be as complete an isolation of Parliament from the police as there is from the judicature. Perhaps any residual parlia-

The Economist

MAY 1, 1858

LORDS v. COMMONS

"Lord Grey's most wise and dignified warning to the Peers in relation to their conduct on the Jewish Disabilities Bill has been lost upon the Ministry and the House of Lords. . . . There is every reason to apprehend, therefore, a real collision between the Houses. For nearly thirty years the Lower House has consistently and temperately urged, and supported moreover by constantly increasing majorities, a change which primarily affects its own privileges and its own constitution. The House of Lords has obstinately and continuously resisted that change. . . . Now, if the Lords, mistaking their true function, obstinately and fruitlessly assert for themselves a fully co-ordinate and equal power in the State, what will be the inevitable result? Clearly that the one class which opposes itself not to the hasty first thoughts, but to the maturedly ripened convictions of the whole community, will begin to lose its legitimate influence, to be regarded with jealousy even in cases where it exercises its prerogative with wisdom and prudence, and to be exposed to constant and irritating collisions with the body of the people. If the Lords wish to retain their influential place in the English State, they must never forget that they do not represent more than a small section of that State,—a section, no doubt, that has more than ordinary leisure and opportunity for maturing wise counsels and attaining broad views of legislation, but, nevertheless, in no way entitled to impose its prejudices, where they are proved by reiterated trial to be peculiar to itself, on the community at large. The only possible issue of a passionate contest between the people and the Peers will be, that the Peers must eventually be overruled by one of those extreme constitutional measures which the Crown can adopt whenever the least important section of the Legislature proves obstinately obstructive.

mentary questions that can be asked should be asked of the Attorney-General rather than of the Home Secretary. Perhaps the local authority watch committees are the right bodies to exercise their present powers, and perhaps the present diversity of size among local authorities which run police forces—and equally great diversity of modes of operation among watch committees—are exactly right for the different needs of different areas of the country. But it would be astonishing if the present British system of dealing with all these problems, a system which has grown up through an odd series of historical accidents, did indeed prove to be the ideal one in every particular. The present time, when the system of local government as a whole is being reorganised, would be a good one for a separate committee of inquiry.

HOUSING

The Subsidised Scots

A GOVERNMENT inquiry is going to examine whether the socialist council of Glasgow has lived up to its statutory obligations in charging sufficient rent for its council houses. Scottish habits in subsidising tenants are pretty startling. A recent white paper (Cmnd 393) showed that the average rent in all Scottish cities last year was only 5s. 4d. a week for a prewar house (or flat) and 7s. 3d. for a postwar one. The rents charged in the Scottish burghs are somewhat higher, and have risen sharply since 1956 ; but in the counties they are even lower—their "average" prewar house (no doubt an average of a croft and a typical 1930s council house) is rented at 4s. 9d., and their average postwar one at 6s. 3d.

Official figures are not produced in the same way for England and Wales, but most council rents south of the border are of course much higher than this. According to the Institute of Municipal Treasurers and Accountants, the average weekly rents charged by authorities outside London for a standard three-bedroomed council house built before 1945 ranged last year from 8s. in the urban district of Swadlincote to 28s. 11d. in Merton and Morden ; for postwar houses of a similar size, they ranged from 13s. 6d. in Wallsend to 46s. 3d. in Finchley. In London the corresponding rents were 19s. 11d. (for an average prewar house) and 23s. 9d. (for an average postwar one). The divergence is obviously very wide and there are some authorities of each type—borough, urban and rural—where average rents are near the lower end of the scale and some where they approach the upper, although only four charge on the average over 35s. a week for the standard postwar house. But rents in England seem to be two to five times higher in actual cash than those in Scotland.

AVERAGE WEEKLY RENT PER ROOM

	Scotland	
	Prewar house	Postwar house
Cities	1s. 8d.	2s. 0d.
Large Burghs	2s. 2d.	2s. 4d.
Small Burghs	2s. 5d.	3s. 0d.
Counties	1s. 5d.	1s. 8d.

	England and Wales	
	Built before 1945	Built after 1945
LCC	3s. 4d.	4s. 0d.
County Boroughs	1s. 5d. to 4s. 3d.	2s. 4d. to 5s. 2d.
Non-County Boroughs	1s. 6d. „ 4s. 9d.	2s. 3d. „ 7s. 9d.
Urban Districts	1s. 4d. „ 4s. 10d.	2s. 7d. „ 5s. 11d.
Rural Districts	1s. 7d. „ 4s. 3d.	2s. 4d. „ 5s. 2d.

But what do the tenants get for this cash ? Relatively few in Scotland can boast of accommodation of six rooms ; the average council property in Scotland has only 3¾ rooms including the kitchen. An attempt at a more realistic comparison of rents is made in the table where charges for the 3-bedroom English council house and the average Scottish property are standardised on a "per room" basis.

The differences, it will be seen, are still there. The Scottish tenants are still more highly subsidised by their ratepayers. But the differences, when looked at in this table, do assume slightly more reasonable proportions.

INDIA

Breather for Mr Nehru

FOR the third time Mr Nehru has announced his intention to step out of politics for a while in order to think. This time he means it, and the Congress party has decided not to stand in his way.

The prime minister's prestige among the masses is as high as ever, but both his party and the educated classes as a whole feel that he would benefit from a rest. Articulate critics have been grumbling for eighteen months that he has grown "stale"; the party is no longer willing to follow his every move. This was to be expected. The broad lines of Indian policy are set. What is wanted at the top now is attention to details of implementation. The educated do not have to be convinced that India needs a development plan. They want to know where the foreign exchange is to come from for larger imports of fertilisers. They do not want lectures about neutrality ; they want to be told just how to get Goa.

The Congress party, meanwhile, has shrunk from being a national movement to representing a series of sub-national interests ; language and caste are now key electoral factors. Moreover, the party leaders at the centre are mainly to the right of Mr Nehru. They remember that their seats are more vulnerable than his, and that their electorates are more likely than his to visit upon their heads any increase in austerity.

Mr Nehru's temporary stepping aside is very much in the Indian tradition, and will enhance his prestige while preparing the public mind for the idea that after him there must one day be somebody else. If, as seems possible, he were to come to Britain for a while, he could "discover" postwar Europe at leisure ; and this, too, would be to India's advantage, for there is no doubt that he intends to return to power. Finally, there is the advantage that the Indian cabinet will now be able to demonstrate that Mr Nehru can take a holiday without his country collapsing.

COMMONWEALTH

What Sort of Bank?

IT would be nice for Mr Macmillan as well as Mr Diefenbaker if next September's Commonwealth conference produced something larger than a mouse. But the free trade fiasco in Canada last year showed how difficult this will be. In the House of Commons on Monday, however, both parties demonstrated their very proper wish to make the conference a success and gave, in particular, plenty of support to Mr Macmillan's idea of some sort of Commonwealth Bank.

make her MORE than worth her weight in gold

You may be blessed with the perfect secretary. But treating her as a shorthand slave prevents her being what she wants to be—worth even more than her present weight in gold. Give her a Remington Ultravox, the dictating machine that utilizes the unique sound sheet recording system and embodies every significant advance ever made. And, of course, you should complete her 'perfect secretary' equipment with a Remington Electric Typewriter.

FELIX PERIMETER

Of all the examples of *Schweppshire Lads who Made Good*, few teach a simpler or more cogent lesson than the story of Felix Perimeter.

Nobody liked him at school and his teachers in particular loathed him: for Felix was always saying "No." "Keep your hands clean," said his Kindergarten Form Mistress.

"No," said Felix. "The tactile approach is awf'ly 'portant."

Obviously destined for the Army, he did well until Colonel Gravy, of Ballistics, told him that after three years he ought to be able to multiply 2x by 2y. "No," said Felix. "You are asking me to elaborate an abstraction before I have been made to comprehend the concept of fluid measurement on which algebra is founded."

Obviously destined for the pen, Felix yet did badly by always sending in the wrong stuff for the right paper and vice versa. To the Editor of the Dry Fly Fisher's Gazette, for instance, he often sent 5,000 words on the "Lack of Anthropomorphism in D. H. Lawrence's Animal Poetry, Part I". "Unsuitable," said the Editor. "No," wrote Felix, posting Part II. Success came when Coke, of Personnel, made Felix salesman in the china department of Hipmaster's Store, to help clear the 1922 stock of Spanish Galleons painted with a chocolate porcelain finish on a nickel base. "Your 'No' approach has emptied the shelves," said Coke. "No," said Felix and thereafter started to say Yes. This change of personality did him no good. Women customers liked it, but our illustration of this phase of Felix shows that his personality lost much of its independence.

The end is well known. Forcibly promoted through the executive ranks, he finally became F.R. Advisor to Hipmaster Subsidiaries where his salary is now so high, that he has to live in Switzerland in order to earn it, where of course he can't earn it, so that he has no salary.

Poems by Stephen Potter, designed by George Him

SCHWEPPERVESCENCE LASTS THE WHOLE DRINK THROUGH

Just what this would be is not so clear. Some want a Commonwealth version of the secretariat of the Organisation for European Economic Co-operation, others a miniature International Monetary Fund. Some see the Commonwealth Bank as an all-red world bank; yet others as an Export-Import Bank for British exports. If a Commonwealth bank tries to do every financial job under the sun it will probably achieve nothing at all.

There are, however, two needs which seem to require new institutional arrangements. The first and most vital is for a tighter control of the use of sterling balances. This is something that can be achieved only by a body in which the Commonwealth countries have a real political say. Not only the Queen, but sterling, must belong in some measure to Ghana and Malaya as well as to Britain. The second need is for some sort of development bank for the whole Commonwealth—the miniature world bank idea—which would take over the Colonial Development Corporation and do the same job on a much broader scale, drawing capital not only from Britain but from other rich Commonwealth countries like Canada. A third possible gleam in Mr Macmillan's eye when he mentioned the idea of a Commonwealth Bank is discussed in the leading article of this issue: just conceivably, there could be a political advantage, for any delicate financial negotiations ahead, in having the sterling area's gold reserve held in a broadly based Commonwealth institution, rather than leaving it tucked away in the Exchange Equalisation Account in London.

Commonwealth banks, however, are no panacea. They will not of themselves create either the capital for long-term investment or the exchange reserves to keep the sterling area going. For both, the Commonwealth must look to America, or, perhaps increasingly, especially if any direct application to America fails, to Europe and the European Payments Union. EPU's future, linked as it is to that of the European free trade area, is in doubt today. But if the free trade scheme comes off, what is today a clearing union might well grow into something bigger, a centre where exchange reserves are pooled and which would do much to overcome the liquidity problem of the non-dollar world.

TANGANYIKA

Trade Union Dilemma

One of the most difficult problems in the developing African territories is the tendency, which is natural enough, of nationalist-minded, but immature, political organisations to run the equally immature nascent trade unions very largely for political purposes. Neglect of this problem by colonial governments (the East African Royal Commission in a moment of aberration opposed unions entirely) has led to attempts by outside bodies to develop mass unions of a type quite unsuited to the training of African workpeople to organise themselves for their own industrial interests. Little direct help comes from the TUC in Britain, but it often happens that the International Confederation of Free Trade Unions sends representatives to stimulate colonial trade unionism with little knowledge of the territory or its trades and institutions; and this is sometimes paralleled by the appearance of even greener representatives of the CIO-AFL from the United States who combine fierce anti-communist fervour with no less fervent anti-colonial messianism. The total result can be bad for workpeople as well as infuriating for employers.

In Tanganyika, the sisal industry has now sought to forestall these developments by convening a conference of workers' and employers' representatives under the chairmanship of Sir Barclay Nihill. This has worked out a scheme for a central joint council of the industry to deal with all aspects of labour relations and to operate as something between a Whitley council and a wages board. There is to be equal representation on both sides under an independent chairman, and the council's functions are to cover the whole field of labour relations, including wages.

The sisal growers' executive evidently hopes that, around the scaffolding provided by this agreed machinery of negotiation and conciliation, a more practical industrial trade unionism may develop. They have declined to recognise the Tanganyika Federation of Labour, sponsored by the ICFTU, or the Tanganyika Plantation Workers' Union as speaking for sisal workers—who form the bulk of plantation workers, and one third of the employed workers in the country. Whether union leadership of the kind sought by the sisal growers will now develop within the industry, or whether the existing outside bodies will in the end capture the sisal workers among whom they already have some members, has now to be seen. Certainly the workers' industrial interests should be, as they have not been, the first concern; but it may well prove no more possible in Tanganyika than elsewhere to divorce trade unionism from the pressure for larger political rights.

GRADUATES

Which Degrees Pay Off

If economic considerations are important in the choice of degree courses, there should now be a rush to read science rather than arts. The quinquennial survey of graduates' appointments which was made by Manchester University shows what was actually being earned in 1954 by two-thirds of those who graduated at Manchester in all faculties except medicine in 1949. It is probably fairly representative of graduate careers in their early phases everywhere. It shows, as might be expected, that Manchester arts graduates were found, five years on, to be congregated in the teaching profession, law and the public services; those who had done science, or sub-science, were in industry, while in commercial avocations there was an overlap between both types of graduates.

The science graduates were decisively better off in material terms. Though no average can be given, owing to the way the statistics are presented, it is clear that, in general, they were earning from £250 to £750 a year more than their classmates who did arts. Some of the arts men who had got plum industrial jobs were runners-up in terms of wealth to the science graduates; here and there science graduates had lingered on the ill-paid lower rungs of business. But in general £2,000 a year was no unusual salary for a science graduate five years out of the university, while it was a very unusual salary indeed for a Manchester arts graduate. Most of these were doing nicely if they had attained over £1,000 a year. In industry, too—as distinct from in the professions—the class of the degree counted for relatively little in material terms; ordinary degrees in technology were bringing in the shekels, apparently, just as were firsts in science. Nor did honours in law (rather surprisingly) or economics (less surprisingly) confer much advantage in "arts careers."

LETTERS

Liberals

SIR—There are bound to be differences of opinion in every party on specific issues and I believe that even the Conservative party, for all its monolithic qualities, is not altogether exempt from this symptom of vitality. Some Tories abstained on Suez, to their everlasting honour, a cabinet minister resigned on Cyprus, and three members of the Government resigned earlier this year because they differed from their colleagues on Government expenditure. Mr Braine reads the resolutions of the Liberal party assembly, but he has conveniently omitted to read the resolution passed in 1955 which endorsed price supports and makes our position on this subject quite clear. He has failed to notice that the Parliamentary Liberal party voted for price supports in the House of Commons.—Yours faithfully,

MARK BONHAM CARTER

House of Commons

The American Recession

SIR—In your last issue you say in a note on the American economy: "If revenues, as now forecast, fall under the impact of the recession to $70 billion, there will be a $8 billion deficit—and a need for a larger debt ceiling without any tax cut. Given time, this deficit should provide a powerful stimulus for the economy while a larger one might simply renew inflationary pressures."

It is regrettable that *The Economist* should appear to give approval to the elementary fallacy that a budget deficit which is the resultant of a fall in revenue and not a cut in taxes (i.e. of an *increase* in spendable incomes) or of an increase in expenditure can provide any stimulus at all, let alone a powerful one. The most it can do is to mitigate the rapidity of the decline. On this basis we shall indeed be landed into a real crisis.—Yours faithfully,

T. BALOGH

Balliol College, Oxford.

Tanganyika

SIR—At least two errors in your correspondent's despatch, "Tanganyika Moves Forward," should be corrected at once. First, it is not true that the sisal industry is entirely European-owned. The Karimjees, an old established Asian firm, have considerable sisal holdings and there are several other small Asian-owned estates.

Secondly, Arusha Chini sugar works produced 18,000 tons last year, and not 18 million tons as reported by you. Also, the Tanganyika Sugar Company Ltd. is not, as yet, part Dutch-financed.

In the political field, the United Tanganyika Party has failed because it was a party based on expediency, with so many strange and incompatible bedfellows. Its professed multi-racialism was bound to appear an attempt to entrench separate racial streams. And too many educated Africans had already deeply felt the humiliations of European racial arrogance in everyday life. Besides, there never has been any common platform where the masses and the privileged groups could ever stand together. The Tanganyika African National Union of course met the psychological need, and Mr Nyerere, apart from being charming, is a person of impeccable integrity and burning with deeply felt patriotism.

The present uncertainty regarding coffee prices may succeed in driving home the need to diversify the Chagga economy, apart from helping to form a more realistic outlook in the prosperity-minded members of the community.

Your correspondent is right about the undoubted scope that exists for American and United Nations aid. If this were forthcoming in good measure now or soon, Tanganyika's unique status and circumstances will be further underlined to the credit of everyone concerned, including above all the administering authority. But to be of real long-term value, it will be necessary to have the proper apparatus ready for it within the territory, with a national planning committee at the head, consisting of the most suitable persons commanding respect of the majority. Perhaps the most opportune time for the setting up of such a committee will be as soon as the country-wide elections have been completed next year. Such a team of men will be eminently suited for the task of attracting foreign and United Nations aid and provide the stimulus to legitimate national aspirations. There will no doubt be great difficulties, and calibre will not easily be found. But, as your correspondent says, it is easy to make fun of the territory's semi-politics. What matters is direction now.—Yours faithfully,

AMIR JAMAL

Dar Es Salaam

Pakistan

SIR—I am afraid you have been doubly unfair to the Prime Minister of Pakistan in your observations on his recent speech. He was neither intending to alarm Britain and the United States, nor were his "wilder remarks" occasioned by the fact that he was replying to a Parliamentary debate. He was voicing the true feelings of the people and the intelligentsia of the country who feel disillusioned and frustrated by this deliberate attempt on the part of the western powers to bend backwards to win the good will of the so-called uncommitted nations.

By entering into defence pac[t] Pakistan has not only imposed upon [its] economy an intolerable burden but h[as] also exposed itself to the criticisms [of] the Soviet block as well as of prominen[t] neutralists—Nehru, Nasser, and Ti[to]. The man in the street naturally asks h[is] government the meaning of all this, an[d] the Prime Minister of Pakistan, short [of] telling a lie, could not have spoke[n] otherwise than he has done. He mu[st] have known that some of the things h[e] was saying would be thoroughly un[-]palatable to some people. He must hav[e] no doubt hoped that his observation[s] would lead to the process of self-examination similar to the one he ha[s] undergone, and I am sure if *The Economist* and others, who are criticising the Prime Minister, had done what h[e] himself did, they would have come t[o] quite a different conclusion. Pakistan is one of your few friends in the eas[t] and it is, therefore, necessary for thi[s] country to know how unhappy and dis-satisfied it is with some of the policies of its friends. This gives them an opportunity to redress the position in good time before it is too late.

Some of the journals in this country suffer from an exuberance of self-righteousness. If subsequent events could justify that attitude there would perhaps be some justification for it. But they are hopelessly out of touch with current movements in the Muslim world. How many of them knew or imagined that the Middle East would undergo these vast changes so quickly and most of them to the disadvantage of this country? Is it a major sin for a friendly country to point out another blunder which this country is about to commit in respect of Pakistan?—Yours faithfully,

YEHIA SYED

London, E.C.4 *Morning News, Dacca-Karachi*

Cobham Cricket

SIR—As a member (alas no longer active) of the Cobham cricket club, may I ask for an inch or two of space to defend the butterfly against the sledge-hammer?

For good or ill, Cobham was, but is no longer, a village: and the club once was, but has inevitably ceased to be, a village cricket club. The changed name reflects this fact. The village blacksmith (if we had one) would be as welcome as ever, braced or otherwise, on his merits as a cricketer: the only difference is that he might find competition for a place somewhat stiffer.

All would, I think, agree with what you say of the traditional spirit of village cricket: but, having played both village and minor club cricket at various times and places, I cannot on my own experience accept any suggestion that the shooters tend to go up prematurely in the latter.

Forgive me if I conclude by saying that your note reminds me of the story of Catherine the Great and the sentry.—Yours faithfully,

A. V. T. DEAN

Cobham

BOOKS

Programme for Expansion

British Economic Policy Since the War

By Andrew Shonfield.
Penguin Special. 283 pages. 3s. 6d.

BOOKS on current economic policy are surprisingly rare. There are plenty of articles, pamphlets and official reports on particular problems. But few economists have the courage to survey the country's problems at length, to question established policies and prejudices, and to say what they think ought to be done. It is a delight to find an author who is ready to do this and who can produce a lively, polemical book in language comprehensible to the intelligent layman.

Mr Shonfield has a thesis to propound. Looking back over the postwar years, and comparing Britain's performance with that of other countries, he argues that it is the slow rate of growth of production that is at the root of most of our difficulties. If production rose faster it would be easier to maintain a satisfactory balance of payments. It would be easier to meet demands for increases in wages and other incomes, without suffering from rising prices. The improvement in living standards is, after all, the fundamental object of economic policy; Mr Shonfield wants it to be more specifically recognised as such.

The main reason for the slow growth of British production, Mr Shonfield argues, is too little investment. Since the war our policies have repeatedly caused excessive demands to be made on our production capacity. Every time that this has led to inflation or to a balance of payments crisis, governments have checked investment in order to make way for the competing demands. But by checking investment, they have retarded the growth of production, thus obstructing the one sure way out of our difficulties. The competing demands to which the politicians have yielded—notably our large defence expenditure and our high level of investment and military expenditure abroad—result, in Mr Shonfield's view, from *folies de grandeur*. Britain, like a rich but imprudent man who has fallen upon hard times, has been spending too much on the battlements and has been scattering its money abroad too freely: to reverse this policy and devote more to investment requires a change of heart in the country. Having shrewdly criticised the policies of the postwar Labour and Conservative Governments—and the forces that lie behind them—Mr Shonfield calls for a reconsideration of our national aims and for a five-year programme to raise investment and accelerate the expansion of production. In this context, he rightly concentrates on external policy, on the grounds that our weak foreign payments position is the most serious obstacle to expansion. He calls for less investment and military expenditure abroad and for more borrowing from abroad. He proposes that there should be a substantial retreat from convertibility, especially in capital transactions, so as to stop Britain from being so much at the mercy of currency speculation.

Few people would dispute Mr Shonfield's central thesis: international comparisons show clearly that the growth of production in Britain is slow and that abroad higher rates of growth have been achieved through higher rates of investment. Moreover, present policies have brought us to the point where production has been almost static for two years and where investment, after an encouraging increase, has again been checked.

It is the proposals for external policy that are the controversial heart of the book. To restrict foreign investment, to retreat from convertibility and to block part of the sterling balances (while guaranteeing their exchange value) would be to dismantle a substantial part of the present sterling system. Because of the risk of a flight from sterling at the start, and because of the need to replace the sterling system by some new international reserve system, that would be a vastly more difficult operation than the uninitiated reader might gather from this book. But that does not mean to say that it is altogether the wrong direction in which to look. Our balance of payments could be strengthened to the advantage of the sterling system by cuts in military expenditure abroad, by improved exchange control, by mobilising dollar assets, and by selective cuts in overseas capital expenditure, especially investment in non-sterling countries. Steps of this sort alone would give us more room to expand. But to go further—in particular to block part of the sterling balances—would be injurious to other sterling countries and would leave a gap in the world's monetary system. The question how far you go and what co-operation you seek from other countries is vital.

While, therefore, Mr Shonfield's programme cannot be accepted as a satisfactory answer to our external difficulties, his proposals should not be brushed aside. He has argued cogently the case for a change in external policy. It is to be hoped that people will improve on his proposals, not dismiss them. That indeed is the spirit in which he puts them forward.

Lobbying in Whitehall

Anonymous Empire: *A Study of the Lobby in Great Britain*

By S. E. Finer.
Pall Mall Press. 151 pages. 12s. 6d.

LOBBYING has been extraordinarily neglected by students of British government. The workings of Parliament and the Civil Service have been thoroughly examined, but Mr J. D. Stewart's *British Pressure Groups*—reviewed here on February 22nd—was the first book to deal seriously with the activities of those who seek to influence legislation and administration. Now Professor Finer has offered a still broader approach to the subject. Although *Anonymous Empire* is briefer and, in some ways, more elementary than Mr Stewart's book, it is undoubtedly more important. In 30,000 words Professor Finer has provided an extraordinarily readable and lucid summary of a very large subject, identifying the various groups which try to shape the policies of Westminster and Whitehall towards their own ends, describing their tactics, and assessing their effectiveness. He underlines how indispensable these groups have become to the process of government—how much departments rely on their contacts with organised representatives of industry and labour, and how much debates on legislation are based on speeches and amendments drafted by interested bodies.

The work of lobbies and pressure groups used to have a bad name through the publicising of American excesses. Now there has been almost too much of a reaction. Writers stress how fundamental to democracy is the right of petition and how essential it is for groups to organise if their interests are not to be neglected amid the complexities of modern government. In much of his book Professor Finer verges on being a Pangloss; he makes everything about the lobby seem too perfect and orderly and in the public interest. But in his final, and most important, chapter, he admits that all points of view do not secure an equal measure of attention from the powers that be, and that the process of 'squaring' tends to be undesirably secretive. In a plural society where organised groups battle to get as much as they can from the community as a whole, those who are unorganised tend to suffer. To some extent, the organised groups check each others' excesses: trade unionists counterbalance employers, margarine manufacturers object to special favours for butter producers, and fox-hunters marshal their forces against anti-blood sport leagues. The defence of the ordinary consumer, however, is left largely to the political parties, eager to win the votes of the disgruntled. But this does not always prove a very effective defence and the welfare of the community as a whole, represented by no single articulate spokesman, may give way to the demands of the National Farmers Union or the TUC.

Yet on balance the evils of the lobby do not seem very great to Professor

Statistical Summary of the Mineral Industry 1951-1956

One of the most complete reference books of its type, this annual volume of statistical tables contains comprehensive details of the production, exports and imports of all important commercial minerals and metals used throughout the world.

Finer—in so far as reform is needed, he rightly advocates compulsory publicity about their activities and, in particular, about the links between MPs and outside bodies. He has certainly not said the last word on the lobby. His book will whet the appetite of many readers for his own more detailed studies and for the counter-attacks on his viewpoint which will surely come.

Spain Changing

The Yoke and the Arrows: *A Report on Spain*

By Herbert L. Matthews.
Heinemann. 178 pages. 18s.

MR MATTHEWS is a frank and impenitent adherent of the Republican side in the Spanish Civil War. One might have hoped that his open declaration of his bias, prefacing a conscientious attempt to describe fairly the state of Spain today, would have been accepted by the present Spanish regime as an act of honesty towards the reader of his book. Instead, Spanish official spokesmen have filled the air with complaints of his bias. But how strange that the lengthy refutations it has put out should concentrate on the detail of what happened in the Alcazar and the Montana barracks at Toledo on July 22, 1936. Absorbed in the memories that haunt the men of his generation whose emotions were engaged in the Spanish conflict, Mr Matthews found himself angered and disgusted by the rewriting of history to which the victors still devote so much of their time; so he questioned whether Colonel Moscardo ever held that heroic conversation with his son, and whether the son's life ever was used to blackmail the rebel garrison.

The present rulers of Spain are absorbed in their memories, too. For men who do not believe in the freedom of the written word, they meet attacks on their method of government, their taboos, their economics, their administrative morals and their intelligence with an urbanity that it is impossible not to respect; but stick a pin in the Alcazar legend and they spring to their typewriters, afire.

The present Spanish regime has had some notable successes, but it is not a success. Something is wrong with it; can it be this—that the past is more real to it than the present? What is striking is not its badness (though it cannot be called a good government) but that it is completely out of touch—with the people it governs, and with the times in which it lives. The Spaniards themselves, by contrast, are furiously anxious to be in touch with the times and to be in the world, not in an enchanted backwater. They are not so much in opposition to their government as intolerant of what they regard as its nonsense.

Mr Matthews notes a change for the better in the Spanish people's political state of health. He finds that they are becoming more tolerant, more stable and more mature, more middle-class—even "more European." Enigmatic as it looks, this last phrase may contain the key: the Spaniards have become more consciously open to outside influences than they have been for a long time. There may be a change in the national character, as one is tempted to suppose. Or it may merely be that the common notion of Spain as essentially un-European was always more superficial, and more of a rationalisation from transient circumstances, than anyone supposed.

Like other critics of the Spanish regime, Mr Matthews appears a little puzzled by the substantial, though patchy, economic and social progress of the last few years. He attributes more of this progress to American aid than the facts probably justify (against the superficial evidence, he claims that American aid has not been inflationary in its effects). Probably the answer is simple and humdrum: Spain may not be very well governed, but it has had nearly twenty years of continuous government uninterrupted by war or revolution. Naturally, in such a period, capital is formed; the efforts at economic improvement do produce some results; it is not necessary to like a regime to admit that something real can be achieved under it.

Mr Matthews is honest and does not attempt to deny the achievements. His book is not free of the faults of sketchiness and imperfect observation that tend to mark journalists' accounts of affairs in Spain: why is it that the available political and economic facts about Spain are rarely tangible and never coherent?

Communist Commander

The Great Road: *The Life and Times of Chu Teh*

By Agnes Smedley.
Calder. 461 pages. 35s.

AGNES SMEDLEY was born in a village in Missouri in 1893, the daughter, as she tells us in this book, of "a poor farmer who ploughed the fields in his bare feet but wore leather shoes most of the time." While she was still a child, according to the publisher's foreword, her family moved to "a Rockefeller mining camp in Colorado where she acquired a hatred of capitalism with the air she breathed." She became a journalist with a special taste for Asian revolutionary movements, and though she seems always to have been personally too much of an individualist to be a card-carrying Communist, she was to become one of the most effective western propagandists for the Chinese Communist cause. Her career was identified for several years with Indian nationalism, but she transferred her affections to China when she went there as a correspondent in 1928. She died in England in 1950, but left her property in her will to Chu Teh and directed that her ashes be buried in Peking.

"The Great Road" is based on a series of interviews Agnes Smedley had with Chu Teh in Yenan in 1937, when she induced him to tell her the story of his life up to that time. In the book she carries the tale to 1946, but she had no further opportunity after 1937 to obtain his own testimony. The part dealing with the period before 1937 comprises sections in inverted commas that purport to represent Chu Teh's own words, passages that appear to be paraphrases of what he said, and other passages in which Agnes Smedley gives us her own opinions or versions of facts derived from other sources. It is not always certain how much has come through in its original form from the Chinese Communist commander and how much has been interpreted or interpolated by his American admirer, but a strong impression of personality emerges.

The autobiographical picture is of a son of a peasant family in Szechwan, who was with great difficulty given an education in order that he might become a civil official, but disappointed his parents by taking up a military career instead; of his rise to high rank and affluence in the Yunnan provincial army; of his flight after the defeat of his faction in Kunming, his refusal to enter the service of the Szechwan warlord Yang Sen, his departure to Europe for study, and his conversion to Communism while living in Germany between 1922 and 1924. This version differs considerably from that given in "Red Star Over China," by Edgar Snow, who says he got his information from Mao Tse-tung, Peng Teh-huai and other party colleagues. Snow describes Chu Teh as a "scion of a family of landlords." Whether he sprang from the peasantry or from the gentry, he has certainly been an unswerving Communist since 1924 and has been the principal architect of his party's military victory in the civil war. But it is strange that there should be so much doubt about his origin. In any case no western biographer can today go to his birthplace and conduct an investigation on the spot.

Without Taint?

Rider on a Grey Horse: *A Life of Hodson of Hodson's Horse*

By Barry Joynson Cork.
Cassell. 178 pages. 21s.

TO know that Hodson was killed at the age of thirty-six, as a result of his own headstrong action at Lucknow, is partly to understand him. Self-assertive, ill-tempered and disliked by many of his contemporaries, he was one of Henry Lawrence's young men. It was that small band of men which saved India for Britain in the Mutiny. They saw that as their plain duty, excusing the follies of savagery and injustices they committed. They plucked the sword of revenge out of the feeble grasp of the older generation of Indian officers and administrators, who kept their belief in the Sepoys until the moment they were shot down. But did these young men, the real pioneers of imperial rule, understand India as well as the older, weaker generation? Perhaps not, for, left to themselves to rule in an alien land, they were given the power to command—the power to condemn and to punish—too early.

Hodson was one of them and the most controversial figure of them all. Mr Cork, making use of original correspondence, has now produced a slim biography trying to exonerate Hodson. He does not altogether succeed. Hodson's exploits in intelligence and reconnaissance in the Mutiny are not all that startling. Mr Cork's examination of Hodson's conduct at Murree, while in command of the Corps of Guides, which led to Hodson's demotion, may quit him of the charge of deliberate dishonesty, but it does not excuse Hodson's failure to secure the loyalty of his officers.

Hodson, it is clear, was a lonely, sick man, unable to work easily with his fellows: at his death, there were untrue rumours that he was killed looting. Mr Cork's principal concern is to show that Hodson did not, as some thought at the time, coldly murder the sons of the last King of Delhi. The charge is reduced to a rash act of manslaughter. Mr Cork does his best and it is as well to have all the evidence freshly paraded, but nothing perhaps will ever remove the question mark that hangs over Hodson's career. It is appropriate that he gave his name to a band of irregular cavalry.

Russian Space Travel

Sputnik into Space

By M. Vassiliev with Professor V. V. Dobronravov.
Souvenir Press. 147 pages. 15s.

THIS book is a translation from the Italian of a translation from the Russian and could properly be described as a collector's piece. Except for one startling statement that the rocket that launched sputnik 1 stood 120 feet high and measured 30 feet across, or one-third bigger than the biggest American rocket, the intercontinental Atlas, the book has less to say about either sputnik than the Soviet news agencies; and what it does say is so bound up with Professor Dobronravov's theorisings on space travel that it is difficult to tell where fact ends and fancy begins. This theorising has a certain interest; Russian scientists have an irrepressible enthusiasm for space travel, and the sputniks appear to them merely as logical stepping stones on the way to space.

Their ideas are essentially conventional. The authors quote extensively from estimates made by the German-born, American-naturalised rocket designer—von Braun—for whom they obviously have great admiration as builder of the world's first ballistic missile, the V2. In passing, they also clarify the status of some of the more confusing illustrations of huge winged carrier rockets that have appeared in Russia since the sputniks were launched and which the captions in this book mischievously describe as the sputniks' actual launching rockets (as on another page they describe a British Sea-slug guided weapon fired from a destroyer as "another way" of launching a V2). The authors credit these designs to N. Varvarov, who argues that the most economical way to lift a heavy rocket through the lower reaches of the atmosphere is by a jet-powered, winged structure of this kind with its own separate crew to fly it back to earth after it parts company with the main rocket on the fringes of the upper atmosphere. The use of wings, particularly retractable wings to solve the re-entry problem, recurs repeatedly. Written in the "mother's knee" genre, perhaps even because of it, the book turns out to be a more successful layman's primer to the physical and technical difficulties of rocket building and flight outside the atmosphere than some of its more sophisticated counterparts in the English language.

Massive Study

Financial Intermediaries in the American Economy since 1900

By Raymond W. Goldsmith.

Princeton University Press. London: *Oxford University Press.* 415 pages. $8.50. 68s.

PUBLISHED for the National Bureau of Economic Research, this is the third of a series of seven monographs examining long-term trends in capital formation and financing of residential real estate, agriculture, mining and manufacture, public utilities and government. The "intermediaries" are the American commercial banks, savings and loan associations, private insurance companies, government insurance corporations, investment companies, credit unions, personal trust departments, finance companies, investment bankers, land banks and government lending institutions, which receive the savings of individuals, enterprises and government and channel them to the domestic economy. There were about 45,000 of these financial intermediaries in the United States by 1952, twice as many as in 1900. Based on a series of standardised balance sheets for 1900, 1912, 1922, 1929, 1933, 1939, 1945, 1949 and 1952, the findings are supported by 127 tables and 13 charts.

Although admittedly these findings constitute only a beginning in an inadequately studied field, the author selects various factors that may help to determine the role of financial institutions in the economic and financial structure. Among them are the following. In 1860 the proportion of the national assets held by financial intermediaries was some 6 per cent; by 1945 it had risen to 25 per cent, declining slightly to 20 per cent in 1952. Holding the lion's share of more than half of the total funds of financial institutions in 1900, commercial banking today has to be satisfied with one-third. Insurance, mainly because of increased government and private pension funds, has risen from 15 per cent in 1929 to 27 per cent in 1952. Financial intermediaries owned or controlled by government, whose holdings were negligible in the early part of this century and only 4 per cent of the total by 1929, have increased these to 24 per cent. Half the external funds required by

OPERATION SEA LION

GERMAN PLANS FOR THE INVASION OF ENGLAND, 1939-1942

Ronald Wheatley

With an Introduction by Professor Sir James Butler

Based upon original German documentary evidence, here is the authentic account of Hitler's plans for the invasion of Britain, and an assessment of the reasons for their ultimate rejection. The author is engaged on historical research in the Cabinet Office. *Illustrated 30s. net*

Germany and the Revolution in Russia 1915-1918

DOCUMENTS FROM THE ARCHIVES OF THE GERMAN FOREIGN MINISTRY

Edited by Z. A. B. Zeman

While working for the Foreign Office on the German documents captured in 1945, Dr Zeman discovered those concerning German-Bolshevik co-operation in 1915-1918. Topics include the 'sealed train' story, and Count Mirbach's mission to Moscow culminating in his assassination. *25s. net*

Japan's Economic Recovery

G. C. Allen

The author describes and explains the course of Japan's recovery in industrial production, foreign trade, agriculture and finance, and compares and contrasts the present with the pre-war economy in its structure and organization. *25s. net*

(CHATHAM HOUSE)

OXFORD UNIVERSITY PRESS

agriculture, non-farm households, unincorporated businesses, non-financial corporations, and government—local, state and federal—come from these financial intermediaries. By far the biggest user is the federal government: one-quarter of its borrowings in the first world war were supplied by these intermediaries; in the second war they supplied two-thirds.

Though far from being a book for the general reader the monograph contains a fund of information on long-term trends of great use to scholars; it could also be studied with profit in similar institutions outside the United States, for they should find the tables and charts of absorbing interest. Given the greater amount of concentration among British financial institutions, it should not be impossible to provide approximately similar statistics here—at least for a few of the base years, such as 1900, 1912, 1939, and since 1945. This massive study shows how to go about the job in no mean spirit.

Trade Across the Desert

The Golden Trade of the Moors

By E. W. Bovill.
Oxford University Press. 281 pages. 30s.

MR BOVILL'S book is a discursive history of the countries lying immediately south of the Sahara, and it is strung on the theme of the gold that for centuries was traded northwards across the desert from some unknown source farther south. In his earlier book, "Caravans of the Old Sahara" (written in Kano and surveying the scene from the south), the author showed how the Saharan trade routes had woven ties of blood and culture between the peoples north and south of the desert. The present book embodies the work of twenty-five years' further research and is intended to show that "the great markets and modest seats of learning of the south sometimes determined the course of events in the north." This seems to be going too far. Certainly the people of the north profited from trade with the south and the Saadian Sultans of Morocco, who conquered and ruled the Songhai kingdom, gained both wealth and prestige thereby. But this can hardly be called "determining the course of events."

The author seems in general more familiar with the south than with the north. He describes his travels in Barbary as modest, and certainly slips over Aghmat which he describes as "only a few days' journey from Marrakesh" when it is in fact only a little more than twenty miles from that city. It is as an authority on the little known history of the southern Saharan regions and the adjoining lands that the book will be most useful. In one respect, however, it is highly topical with regard to northern affairs. For it contains a fairly detailed account of the capture of Timbuktu by the Moroccan Sultan Ahmed el Mansour in 1560 and the subsequent years of Moroccan rule in the western Sahara. This is the principal basis of the Moroccan claims today to territorial expansion south of Morocco. In an article published on the occasion of the recent visit of King Mohammed V to the south of the country a Moroccan paper came out with the statement that Moroccan territory stretched to the Senegal and that Timbuktu was its final limit.

The book is well documented and full of information which is not easily available elsewhere. No doubt it will continue to be appreciated and found useful as long as was its predecessor, the continued demand for which gave rise to the writing of the present work.

Farming Here and There

Types of Rural Economy: *Studies in World Agriculture*

By René Dumont.
Methuen. 556 pages. 45s.

THIS is not quite so systematic a study of agricultural types as the title suggests. It consists of descriptions of farms and farming practices in about fifteen different countries which the writer has studied, often in some detail. Three chapters are devoted to agriculture under tropical and semi-arid conditions in Belgian and French Africa, and one to an account of the appalling round of peasant life in the Red River Delta of northern Vietnam before the war. The remainder of the book is taken up by a series of European examples, which range from marginal wheat farming in arid Spain through intensive commercial dairying in the Netherlands to the *kohlkoz* and *sovkhoz* of Russia, a culmination which is not fortuitous. There is a chapter on Britain, somewhat curiously confined to the examination of a group of predominantly grass farms in the Welsh Border country, but nothing from the United States or from such distinctive farming regions of the southern hemisphere as New Zealand or Argentina.

Professor Dumont's view that food production must be increased irrespective of market considerations, and his tenderness for the directed economy, will not meet with universal approval. Indeed, a postscript suggests that he has modified some of his opinions on collective agriculture since the Hungarian revolution. Such views in any event detract little from the value of the descriptive chapters, which obviously result from shrewd and skilled observation, and which are illuminated by a passionate concern that the peoples of the world shall have enough to eat.

AMERICAN SURVEY

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

Hemisphere's Poor Relations

WASHINGTON, DC

WHEN Vice President Nixon landed at Montevideo on Monday to spread "good will" in Latin America he was greeted with a mixture of cheers and catcalls from the crowd, with the news that an American-owned meat packing plant had just been seized by his hosts, and with five speeches in a row lamenting Uruguay's economic decline and calling on the United States to do something about it. The meat plant had suspended operations in December, on the ground that political interference was preventing it from making a profit, but it had recently been sold to another American firm which was also soon at odds with the government. The economic decline is attributed firmly by the Uruguayans to the American wool tariff, which is blamed for the catastrophic fall in Uruguay's exports to the United States, from $129 million in 1950 to $12.5 million in 1957. Finally the point was underlined for the Vice President's benefit by suitable references to Uruguay's unfortunate inability to pay in dollars for the oil it normally obtains from American suppliers, and to the pressing necessity which is forcing Uruguay into the barter deal which is currently being negotiated with the Russians—Uruguayan wool and meat for ten tanker-loads of oil and 2,000 tons of cotton.

In short, Mr Nixon encountered at his first stop most of the elements that will confront him during the rest of his journey—genuine tales of economic woe; a tendency to put all the blame on the policies of the United States (which charged exactly the same duty on its wool imports in 1950, when Uruguay's dollar earnings were at their height, as it does now); complaints of political interference by the American investor; and strong hints by the Latins that, unless something is done quickly, the western hemisphere is about to be the scene of the Russians' greatest economic triumph.

The official line in Washington hitherto has been to treat the Latins as improvident children who have the resources to make their countries every bit as prosperous as the United States if they could only develop a protestant ethic, who must once in a while be rescued from the trouble into which they have got themselves, but who should more often be allowed to suffer because it is good for them. American officials point out that Congress has voted Latin America a substantial slice of technical assistance each year—usually more than the Administration has requested; that $7.5 billion, one-third of all private American investment overseas, is now sunk in that area; and that it has received over forty per cent of the dollar value of all loans from the Export-Import Bank during the last decade. This austere attitude, with its emphasis on the need for the Latin governments to provide the right climate for private investment, has of course had the tacit support of the International Bank; although the bank has recently increased its activity in South America somewhat, it is regularly, and often unfairly, denounced for its implacability in demanding that potential borrowers first put their own usually inflationary houses in order.

But there has been growing in Washington a sense of uneasiness at the widening gap between the fulsome cordiality, seasoned by delicate attention to Latin susceptibilities, which characterises the United States' handling of political relations through the Organisation of American States, and the cold sermons with which the United States' delegate regularly reduces the same organisation's discussion of economic problems to impotence. At the very moment when the Canadians, for similar economic reasons, have become impatient at the ritual toasting of the "unguarded frontier," the southern neighbours of the United States are beginning to make felt their irritation at the standard references to the OAS as "the model regional organisation." Indeed, the Assistant Secretary General of the OAS said last month that relations between the United States and the other American republics were in "a period of decline and deterioration" and that one would have to go back to the nineteen-twenties to find a period when they had reached as low an ebb. Then the issue was political, today it is economic.

THERE is some evidence that this sense of alarm is reaching the highest level. In a somewhat oracular pronouncement to a meeting celebrating Pan American Day, Mr Dulles made a passing reference to the desire of the United States to "share fairly" the burden of adjustment to the recession, which can hardly fail to hit the Latin American producers of primary products particularly hard. The speech was overlooked as a disappointingly routine affair until a question at Mr Dulles's press conference elicited the unexpected statement that it was intended to herald "a considerable advance" in the American position. So far there is no direct evidence that this observation, unsupported as it was by any specific promises, means much more than that the United States will modify its stand-offish attitude towards economic conferences when they are proposed by its Latin neighbours. Until now the State Department has taken the view that the United States would rather not go at all than simply act as a wet blanket for eager ideas about the establishment of commodity stabilisation schemes or new development funds and banks. Now the Americans will probably go, but whether or not they will be any less of a wet blanket remains to be seen.

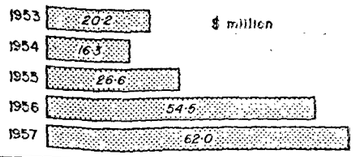
Undoubtedly the Administration remains highly sceptical about the value of commodity agreements and in particular has no intention whatever of undertaking the financial responsibility for supporting the world price of

coffee. The world, indeed, is floating in coffee and, while the Brazilians have lined up six other Latin American countries behind a scheme for controlling exports, there are not only other Latin producers which remain outside but, much more seriously, coffee growing is spreading rapidly in Africa. The Americans point, as a lesson from which Latin coffee growers should learn, to their own sad experience in attempting to maintain high rigid price supports for domestic cotton, which has had the effect of giving a handsome incentive to the growing of cotton abroad. But if the Latin producers were able to come to any sort of arrangement with their African rivals, the United States might look more kindly than hitherto on the impact of such an agreement on the American market. There also may be a more sympathetic reaction if the idea of an inter-American development bank is raised again; the last time, when it was proposed by Venezuela, the idea was allowed to get nowhere at all.

Indirectly the new, more considerate, approach has become apparent in connection with lead and zinc, two commodities of vital importance to the economies of Bolivia, Mexico and Peru as well as of considerable interest to Canada. Only last week came the long expected blow of a unanimous finding by the Tariff Commission that "serious injury" was being done to domestic lead and zinc miners by foreign competition. The three Republican members of the commission recommended the highest permissible increases in the duties, combined with a system of quotas which would cut imports in half. However, the three Democratic members, while recommending a smaller increase in duties, attacked the idea of quotas so caustically that they threw doubt on the utility of any action against imports at all.

It has been no secret that the twelve Senators from the western mining states are quite determined to exact a substantial price for their support of any extension of the Reciprocal Trade Agreements Act; the price seemed certain to include increased tariffs on metals and therefore to damage America's neighbours to the north and south. But on Monday the Secretary of the Interior came up with an alternative and entirely new scheme for subsidising American metal producers by paying them the difference between market prices and higher "stabilisation" prices. He specifically pressed the scheme on Congress as a way of making a practical contribution to good neighbourly relations with foreign suppliers. If Congress buys the idea it will also have made a practical contribution to Mr Nixon's "good will" and Mr Dulles's "considerable advance."

Cut-price Bargaining



THE three large automobile companies have brusquely rejected the offer of Mr Reuther, the automobile workers' president, to extend the union's expiring contract for three months if the industry authorises a "gigantic clearance sale" of its new cars. This has cast cold water on hopes that sales might be stimulated and the recession abated by a joint effort on the part of industry, labour and the government to bring prices down in a vital sector of the economy. Senator Douglas is proposing a relaxation in the 10 per cent excise tax on automobiles if the companies will cut prices by about $100 and if the union offers to help; after all, profits have fallen sharply this year. Mr Reuther is ready to forgo the automatic wage increase of 6 cents due under the present contract on May 29th—the day his agreement with General Motors expires—if a similar provision is embodied in the new contract.

But the producers, who have always stood firm against giving the union a voice in pricing policy, argue that this 6 cents is not Mr Reuther's to give away until a new contract is signed; moreover, while a strike now—when dealers have a two-month supply of cars on hand—can be faced with equanimity, a strike in September, when the companies hope to be working full tilt on their new models, would be damaging. Mr Reuther, whose bargaining position is the weakest it has been since the war, is playing with his usual skill upon the public anxiety over constantly rising prices to avoid signing a long-term contract until he can exact better terms. But the companies, who are working more closely together than ever before, feel that this is a golden opportunity to demand a two-year non-inflationary contract in an industry which sets the wage pattern for many others; General Motors has shown that it is in earnest by "terminating" its contract on the set date.

In another basic industry, steel, which is even more depressed, it is some of the companies which are seeking a price bargain with labour. They see real advantages in the suggestion made by a consumer of steel that the union should forgo the automatic wage increase due to it this summer if the companies promise to freeze prices. The industry is now operating at less than 50 per cent of capacity and cannot hope to raise its prices enough to cover the cost of the rise in wages. So far the steelworkers, while urging a cut in prices, have rejected the idea of a wage standstill. And so far, the President, although he beams upon the idea of "industrial statesmanship" in the abstract, has taken no practical steps to promote it in either Pittsburgh or Detroit.

Two Views on Tests

WHILE Washington—and the world—have been waiting for President Eisenhower to reach a decision about a new American policy on disarmament in general and on nuclear tests in particular, the opposing pressures which are being put upon him by two sharply-divided groups of advisers have become clearer. Moreover, it is now apparent that the division is not simply between Mr Dulles and the State Department, conscious of the propaganda value of suspending nuclear tests and anxious to have some basis for negotiation if the summit is ever reached, on the one hand, and, on the other, the Department of Defence and the Atomic Energy Commission, maintaining that with continued testing of atomic weapons the United States will become strong enough to establish peace by the force of its own nuclear power and that this is the only way to prevent an annihilating war.

For this reason Mr Strauss, the head of the AEC, and his *fidus Achates*, Dr Teller, the inventor of the hydrogen bomb, insist that the United States ought only to weaken itself by suspending tests if this were part of a much more far-reaching disarmament agreement. But theirs is no longer the only scientific view reaching the President, for Mr Strauss is no longer his closest link with the scientific world. Mr Eisenhower now has his personal scientific advisers, Dr Killian, from the Massachusetts Institute of Technology, appointed as part of the attempt to find an answer to the sputnik, and Dr Bethe, a physicist less well-known but just as well thought of as Dr Teller, who is studying inspection and controls in connection with disarmament. And both Dr Killian and Dr Bethe are understood to favour the suspension of tests without waiting for a simultaneous agreement to suspend the production of nuclear weapons.

Dr Bethe gave his reasons for this view in secret to the Senate sub-committee on disarmament and they are therefore not yet available in detail. But he does not base his case, as do so many scientists, on the danger to human health of radioactive fall-out and he does believe that it would be comparatively easy to set up a workable international system for ensuring that a ban on tests would be kept. The contention of Mr Strauss and Dr Teller that this could not be achieved seems now to be almost entirely discredited—among the general public, at least. These two men are now emphasising the other side of their case—the importance of continued testing to the development of nuclear weapons, which can be used in limited wars and to defend the United States against a surprise attack, and to the development of still "cleaner" bombs. Whether or not these arguments are outweighed not only by those of Dr Bethe, but also by the less tangible political arguments for the suspension of tests seems a matter for the statesman rather than for the scientists.

Receding Profits

THE decline—not to say fall—of American business has been chronicled in recent months as thoroughly as that of Rome; and the reports of corporations on their profits, somewhat more succinct than Gibbon and about as readable, continue to grow more gloomy. Actually, according to the calculations of the National City Bank of New York, out of the 65 major industrial groups comprising 3,521 large companies, 34 reported that profits had increased in 1957 over the previous year; and the 3,521 firms as a whole earned one per cent more than in 1956. But the slow pace of the fourth quarter was apparent; most companies had higher earnings in the first nine months of the year but these were largely swallowed up in the last three. The biggest drop in 1957 was experienced by the airlines, caught between rising costs and fixed fares; their profits declined by 92 per cent in the fourth quarter and were 55 per cent lower for the year. Other industries with lower earnings were building materials, farm equipment, textiles, railways, pulp and paper, and metals and mining.

The reports for the first three months of 1958, now being published, continue to tell a solemn tale, and estimates are even more pessimistic. Automobile and steel manufacturers' returns were 5.1 and 13.5 per cent higher, respectively, in 1957; but this year they have suffered the most spectacularly. The Ford Motor Company's profits were 77 per cent lower than in the first three months of last year; and the Chrysler Corporation lost $15 million and reduced its quarterly dividend by two-thirds. The General Motors Corporation, while faring better than its two principal competitors, earned less than it did in the same period last year. The best showing in the industry has been made by American Motors, whose profits were greatly increased, owing largely to demand for its small Rambler cars. Those first quarter earnings of steel companies which have been published so far have all fallen drastically, reflecting both lower output and higher costs. Few of the mighty have been spared; the General Electric Company's earnings were down appreciably, as were those of E. I. DuPont & Company.

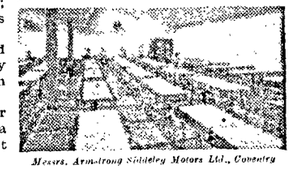
The layout of your canteen will be planned behind this door

The best decision you'll ever make is when you call in Shepherd's.



They're experts in planning canteens from start to finish, and they do it entirely free—without obligation.

Starting with a blueprint, everything is taken into consideration—nothing is overlooked—every single piece of furniture is carefully selected for a reason: that reason is the ultimate efficiency, convenience and working ability of your canteen.

Shepherd's manufacture tubular furniture that's really made to last; delivering direct to customer's addresses.

Take a close look at this illustrated example. It explains more clearly than words how Shepherd's can plan for *your* canteen too.

An enquiry costs nothing. Our technical representative in your area will be pleased to give you the benefit of his experience.

Fractional Horsepower MOTORS

BTH fractional horsepower motors are second to none in quality and proved performance. All types are available in sizes to meet every domestic, commercial, and industrial need. Precision-built of highest grade components, and fully tested, they will give long and trouble-free service.

No manufacturer can offer a wider choice in fractional horsepower motors. Whatever the conditions of service or type of drive, there is a BTH motor well suited to the job.

The BRITISH THOMSON-HOUSTON Company Limited

Member of the AEI group of companies RUGBY · ENGLAND

Not all of the news has been bad. Tobacco companies had higher profits in the last quarter of 1957 and for the year as a whole, and have continued at high levels so far this year. Food companies and grocery chain stores have been relatively unaffected, as have manufacturers of drugs and pharmaceuticals. Finally, shareholders have suffered little so far; few companies have cancelled or reduced their first-quarter dividends, though in many cases earnings have not covered them. This may account in part for the absence of any marked reaction from the stock market; prices have not fallen much in recent weeks, and in some cases have actually risen contrary to earnings. But some observers hold that the market had already discounted the recession, and that lower earnings did not surprise shareholders.

Trade Union Nettle

WASHINGTON, DC

By sheer personal will-power Senator Knowland, the leader of the Republican minority, forced the Senate at the end of last week and the beginning of this to face the issues of personal liberty in the trade unions. Ignoring all advice that his harping on "union democracy" was endangering his campaign for the Governorship of California, Mr Knowland crashed into what had been planned by the leader of the Democratic majority, Senator Lyndon Johnson, as a short, uncontroversial debate on a modest Bill to require public disclosure and auditing of pension and welfare funds. He offered thirty-six riders to the Bill which amounted to a fundamental revision of the general law on trade unions.

Senator Johnson, whose unconcealed irritation at this interference with his plans was in marked contrast to his usual smooth working relations with his Republican opposite number, moved swiftly to box Senator Knowland off. As usual he proved the more skilful party manager; moreover, many Senators hesitated to write such controversial legislation without the benefit of committee hearings—though these have often been the graveyard of similar Bills—and so jeopardise the welfare fund provisions. Calling abnormally long sessions late in the evenings and on Saturday morning Senator Johnson had the amendments voted down one by one. Although most of the southern Democrats sympathise with the substance of Mr Knowland's plan, Senator Johnson lost only one Democratic vote to the other side; Senator Knowland lost ten "liberal" Republicans. But the price which the Democratic leader had to pay was an absolute promise to his southern colleagues that the Senate Labour subcommittee would push ahead right away with a Bill involving such major proposals for labour reform as those offered by the Administration, by Senator Knowland, and by Senator McClellan, the chairman of the committee investigating abuses in the field of industrial relations; these are discussed on the opposite page. Mr McClellan declared in a recent impassioned speech that now if ever was the time to curb the bullying and defrauding of trade union members by their leaders and that he was determined to see that the chance was not lost.

This places the ball firmly in the court of the chairman of the Labour subcommittee, Senator John Kennedy of Massachusetts, who as a presidential aspirant can afford to alienate permanently neither the unions nor the South. He has already disturbed his labour supporters by vague references to the need to ensure "union democracy." But whatever happens in the Senate this year the chances are that any major innovations in the legal framework within which unions operate will be blocked in the House of Representatives by northern Democrats who are dependent on trade union contributions to finance their campaigns in the approaching congressional elections.

Back on the Dole?

Unemployment, which normally falls about 10 per cent between mid-March and mid-April, this year receded only from 5,198,000 to 5,120,000. Many of these workers have exhausted their claims to unemployment benefit under state laws and further help is urgently needed, both to avert hardship and to maintain consumers' purchasing power. Unfortunately there is a wide gulf between the President's proposals and the Bill now being debated in the House. The Administration's Bill was drawn with great care to preserve the present state system of unemployment insurance; to overcome the objections of upholders of states' rights; and to cost as little as possible. The Democratic measure would cost at least $1.5 billion (about three times as much) and would, at least according to the Republicans, "put America back on the dole."

This is because the House Bill would make benefits available to the 2 million unemployed who have never been insured under the state systems as well as to the 3.3 million who are; one of the great defects of the present system is that only two-thirds of the workers are covered. Benefits, under this scheme, would be paid for sixteen weeks no matter how long the state normally pays them, while the Administration Bill would only have extended the usual period in each state by a half; on the average, according to the Secretary of Labour, this would have meant benefit for another 7 or 8 weeks. The House Bill makes a clear grant of the money to the states; the Administration proposed to recover it all in time.

According to Senator Knowland, Mr Eisenhower disapproves so strongly of the Bill and its threat to the present pattern of federal-state relationships that he will veto it if Congress passes it. The Democrats may relish the prospect of a Republican President vetoing a Bill, in an election year, because it is too generous to the unemployed; they can also argue, with much justice, that they are trying, in an emergency, to make good faults in the insurance scheme which should have been put right during prosperity. But it is the unemployed who will be the chief sufferers if there is a long battle between Congress and the White House, and the President apparently would not oppose a separate Bill extending aid, outside the insurance scheme, to those who at present have no claim to benefits.

EXPLODING CITIES—VI

Governing Metropolis

FROM A SPECIAL CORRESPONDENT

In 1950, when the last census was taken, the city of Boston had a population of 801,000, but its metropolitan area contained 2,370,000 people; only one-third of all Bostonians lived in the city of Boston. For Pittsburgh, the

Continued on page 410

Labour Under the Law

WASHINGTON, DC

The legal framework within which trade unions operate in the United States is much more elaborate than it is in Britain. Fixed rules for industrial disputes are set out in codes of "unfair labour practices" which are forbidden to trade unions and to management; last year 5,500 complaints were filed, 3,655 of them against employers. The codes are ultimately enforceable in the courts. The basic assumption of the law is that there are four parties with legitimate interests to be considered: the employer, the trade union, the individual worker and the general public, including employers and workers not directly involved in the immediate dispute. Most of the reforms now being discussed stem from the revelations of Senator McClellan's investigating committee; consequently Senator Knowland's radical proposals, as well as the more moderate Bill offered by the President and another sponsored by Senator McClellan himself, deal principally with the rights of the individual worker and the public.

Balance of Rights

An example of the delicate balance between competing rights sought by the present law, the Taft-Hartley Act, is the provision for compulsory union membership. The closed shop, which prevents non-union members from being hired, is banned. The union shop, under which new workers have to join within thirty days, is permitted except where it is illegal under state "right-to-work" laws. But when the union wins this concession, it automatically forfeits its right to expel any member in that plant except for failing to pay reasonable dues. Senator Knowland proposes that a union should also be compelled to accept into full membership any worker—Negroes for example—whom it has won the right to represent.

The protection which the law gives to the general public, including "neutral" employers, against sympathetic strikes is a very sore point with the unions. So-called "secondary boycotts"—in which the union tries to get at one employer by picketing another with whom it has no dispute—are forbidden, and the National Labour Relations Board, the quasi-judicial body that passes on all cases of "unfair labour practice," is required to give priority to this type of complaint. But the President wants to make it clear that the unions are entitled to act against a firm undertaking work for a struck employer, although they may not apply coercion against the handling of "black" goods nor may they call a strike over which union is to handle a job.

The employer's principal obligation is to bargain in good faith with the representative of a majority of his workers in a given "bargaining unit." This raises three central questions: what is a unit, what is good faith, and how is the will of the majority to be determined? When there is a dispute about the unit the board makes the decision, taking into account the history of collective bargaining at the particular plant. As for good faith, the board has said that it will judge an employer's attitude by his "entire conduct" rather than by each individual incident. For example, although bargaining in good faith is not consistent with a predetermined resolve not to budge from an initial position, "it is not necessarily incompatible with stubbornness or even with what to an outsider may seem unreasonableness." And the board has made it clear that it will not "police the language, sometimes overheated, that may be used in collective bargaining conferences." But the employer may not withhold information which a union needs to present its case, such as the results of time and motion studies or ledgers that will throw light on a claim that the business cannot stand any increases in wages. And unilateral concessions which have not been discussed with the union are held to be a sure sign of bad faith.

To establish a bargaining representative, the employer or a union presenting the signed cards of 30 per cent of the workers, or 30 per cent of the workers acting on their own initiative, may petition the board to hold an election in a plant. A number of unions may compete and there must be a line on the ballot paper marked "No Union." If a union wins it is certified as the exclusive representative with whom the employer must bargain. At least a year must elapse before the employer or another union can reopen the issue.

Strikers' Votes

A trade union has the right to strike, but it may not do so while a contract is in effect, and it should give sixty days' notice. Senators Knowland and McClellan, but not the President, want to add a provision that, at the request of a substantial number of the workers (Senator Knowland says 15 per cent), the board should conduct a secret ballot on a proposed strike; it would be legal only if there were a majority in favour. The present law provides for what is virtually a strike ballot in cases in which the President finds that a strike would "imperil the national health or safety."

An acute issue, on which the President has come down on labour's side, concerns the voting rights of strikers. If a union goes on strike and the employer hires strike breakers, all he has to do to smash the union is to prolong the dispute until a year has elapsed since the last election. If he is skilful and avoids a charge of unfair labour practice, he can ask for a "decertification" election and, since the strikers do not have a vote, the strike breakers will presumably vote the union out. In such a case, the Administration would give the strikers a voice, but a union would not be permitted to picket a plant for twelve months after it had been defeated in an election.

More Democracy in Unions?

The present law hardly touches on the topic which dominated last week's debate in the Senate—whether or not there should be any public guarantees of "union democracy." It provides that a union may enjoy the legal advantages that go with access to the processes of the National Labour Relations Board only if it has filed with the Secretary of Labour a list of its officers with their salaries and allowances and a detailed statement of its constitution, including the procedure for the election of its officers. Unfortunately the law does not provide that these reports have to be accurate or that they can be made public.

The President now proposes that a Commissioner for Labour Reports be set up in the Department of Labour, who will receive, check and make public somewhat expanded versions of these reports, which would have to include evidence that officers are elected by secret ballot at least once every four years. A union which filed false reports would stand to lose its exemption from taxation. Senator Knowland's proposals go much further. On a petition by 15 per cent of the members of a trade union the board would conduct a referendum on such issues as the salaries of union officials and the spending of union dues for political purposes. "Recall elections" for the removal of officers would be authorised. Trusteeships, the practice whereby national unions remove the elected officials of a local branch and place it under central administration, would not be allowed to continue for more than a year. The Senator would have an errant union deprived of its immunity from prosecution under the anti-trust laws.

While it seems very unlikely that anything as radical as this will be enacted by this Congress, Mr Knowland's determination is evidently to make the place of trade unions in American society one of the major issues of the coming campaign—at least in California, where he is running for Governor, and probably in several other states.

Continued from page 408

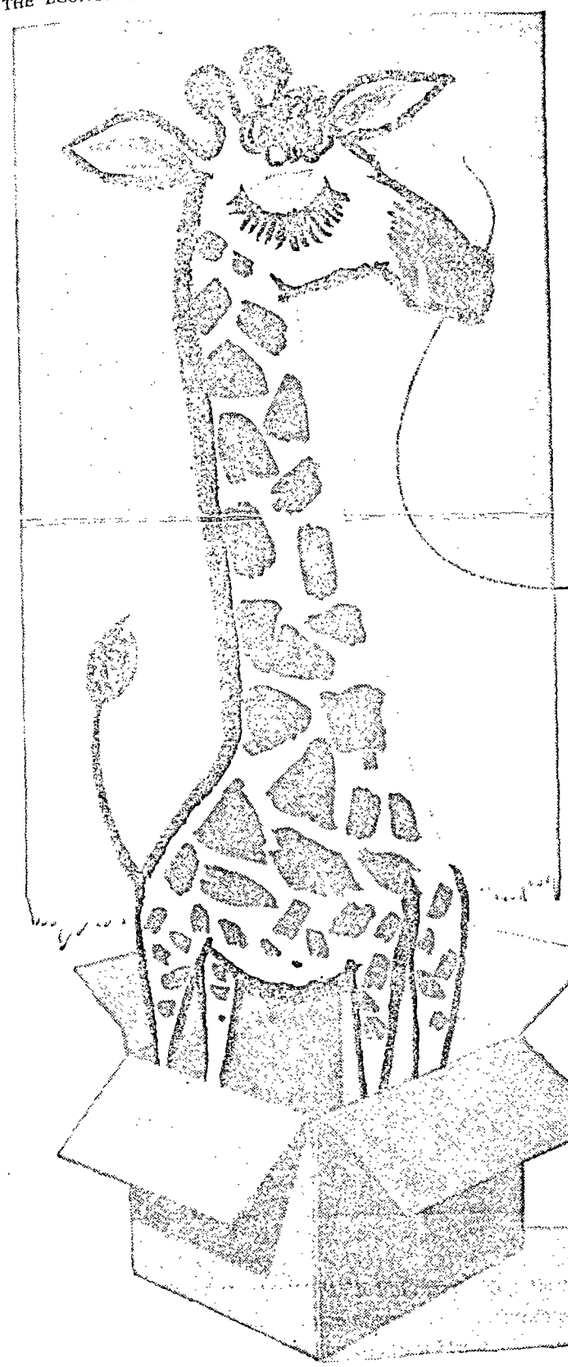
proportion living in the actual city was even less, 30.6 per cent, and in none of the fifteen biggest metropolitan areas did as many as 75 per cent of the people live in the "central city." Between 1950 and 1955 the suburbs grew seven times as fast as did the cities they surround; thus the political boundaries of these cities correspond less and less closely to their boundaries as economic and social units. Therefore it is becoming more and more difficult for a city government, however efficient and enlightened it may be, to deal effectively with the many pressing problems that concern the whole metropolitan area.

Faced with a need to co-ordinate services, to plan new roads, or to seek new industries for which there is no space left in the centre the city fathers find themselves confronted, more often than not, with a host of incorporated suburbs, each boasting a full-fledged municipal government, and each jealous of its autonomy and reluctant to co-operate with its neighbours in solving common problems. These suburban municipalities are united only in opposing any suggestion that, since their social and economic destinies are linked with the central city, their political fortunes ought also to be joined to it.

Such suggestions are nevertheless being made, with ever-increasing urgency, as the difficulties of metropolitan agglomeration pile up and threaten to choke the growth, not only of individual places, but of the entire country. Gradually the suburbs themselves are realising that autonomy can be a costly luxury. Many struggle along without important public services, such as rubbish removal, because their tax revenues, being based almost entirely on residential property, cannot be raised enough to pay for these services. Careful traffic regulation in one municipality may be stultified by a lack of it in the next. If each little city tries to support its own separate and complete police department, many will lack essential facilities that could easily be provided by a single force for the whole area.

In such conditions as these, moreover, many metropolitan problems will not even be considered, much less solved. And while the suburbs are guarding their autonomy, the city at the centre, upon whose prosperity all depend, is often engaged in a desperate struggle against urban blight—a struggle that can only be won if the whole metropolitan area recognises its common interest and offers its help. Furthermore, without such co-operation, the blight may in time spread to the suburbs themselves, as a result of years of unplanned growth.

But to achieve any sort of metropolitan government is likely to require new state laws, frequently hard to obtain from rurally-minded Legislatures, and often amendment of the state constitution as well. Even when the path has been opened by permissive legislation, a favourable majority has to be mustered for it—usually several of them. When Allegheny County (the Pittsburgh area) voted on a new charter in 1929, the proposal needed a clear majority in the county, plus a majority of two-thirds in each of two-thirds of the affected municipalities; it won in the county by 48,000 votes, but only got the required local majorities in forty-nine municipalities instead of the minimum sixty-two, and so failed to be adopted.



To the layman, the simplest solution might seem to be for the central city to annex surrounding territories. Yet this is usually ruled out by the fact that annexation can be applied, in effect, only to unincorporated areas, while the real difficulty in most cases is the incorporated, indigestible suburban municipalities. To consolidate the city with its surrounding county also seems alluringly simple on the surface, but has usually failed to win acceptance, even where, as in St Louis, it could be done legally with only two majorities—one in the city, another in the outlying county as a whole. Suburbia tends to fear it as annexation in disguise, a subtle way for the downtown wolf to swallow the peripheral Red Ridinghood.

A variant of consolidation is to transfer a number of functions simultaneously from both city and surrounding municipalities to their common county government. This has been done, after many complications, in Dade County (the Miami area). A reform of the county government is usually a prerequisite, since the average American county is a superbly anachronistic political museum piece, lacking in centralised responsibility and burdened with a plethora of elected officials. It is significant that "urban counties" are a popular solution in California, where efficient county governments are not so rare as they are elsewhere.

A plan very similar to the urban county is the federal solution, best exemplified by the reforms made in Toronto, Canada, in 1954. By this method, powers to be given the metropolitan government can be enumerated and local self-government safeguarded in those matters for which it is suited. Yet even in Toronto most of the suburbs resisted the proposal, although their difficulties, from sewage to education, cried out for a co-ordinated metropolitan solution. Success was possible only because the plan could be sent to the Provincial Legislature for approval. In the United States, only Virginia has any regular machinery for dealing with metropolitan problems over the heads of the recalcitrant local residents and their entrenched governments.

Faced with seemingly impenetrable barriers of legal restrictions, official rivalries and public prejudice and apathy, many metropolitan reformers have resorted to the setting up of Metropolitan Special Districts to handle specific functions where the need for co-ordination has become particularly pressing. These are separate entities, not under the direct control of city or county governments; often they are so far from direct accountability to the citizens as to seem unreachable. A Special District is often relatively easy to establish without either amending state constitutions or obtaining multiple majorities in the affected municipalities, and it can be made to reach across the boundaries, not merely of cities, but of counties and even states; the Port of New York Authority, for instance, serves both New York and New Jersey, and is named by the two State Governors.

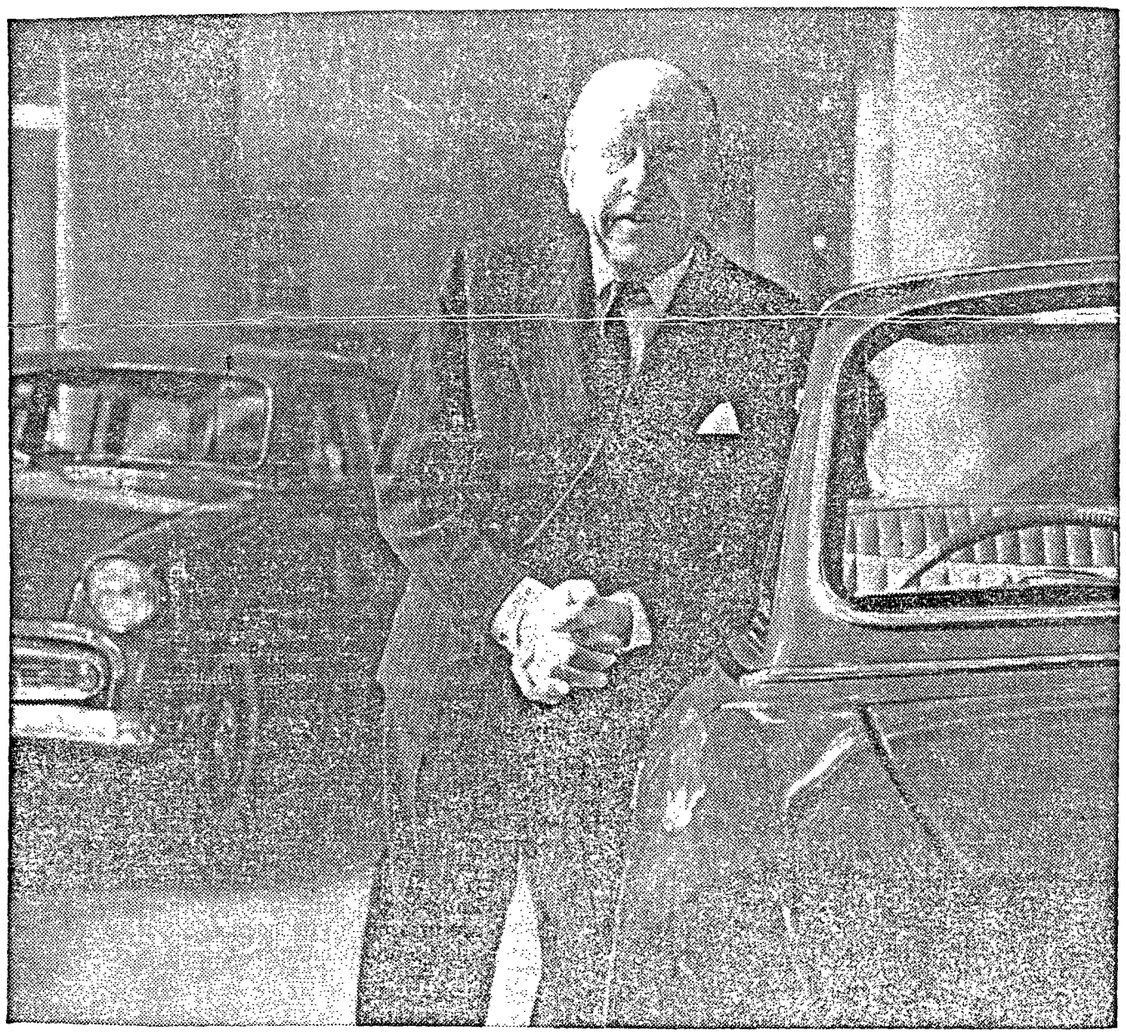
This is an important consideration, for thirty metropolitan areas involve more than one county, and twenty-four more than one state. But when special districts are restricted to one or two functions—the Alameda County (California) Mosquito Abatement District, for example—they do not go far towards solving the general metropolitan problem. In fact they may aggravate it by still further proliferating governmental units without providing any effective control of their activities. The government of a metropolitan area in such circumstances is likely to become a fantastic game of intra-urban diplomacy among semi-sovereign Districts and Authorities, few of them in close touch with, or even understood by, the public they supposedly serve.

HE'LL ARRIVE ALL RIGHT IN A 'FIBERITE'

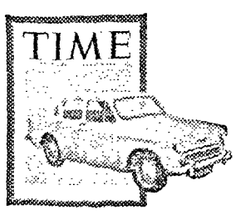
'FIBERITE' quality sets the standard in modern case manufacture. Each case is a masterpiece of design, for every factor has been taken into consideration—the shape, size and nature of the product, and the length and nature of the journey it has to undertake.

And every 'FIBERITE' packing case represents the immense experience of Thames Board Mills, the largest manufacturers of solid and corrugated cases in the country. Their unique know-how ensures that your needs are interpreted in the most effective and economic manner.

'FIBERITE' PACKING CASES



are made only by



THAMES BOARD MILLS LTD., Purfleet, Essex & Warrington, Lancs

The words 'Fiberite' & 'Thames Board' are registered trade marks

Ambassador of Sales Extraordinary...

Sir William Rootes, Chairman of both the Rootes Group and the Dollar Export Council, is a salesman extraordinary.

To support Rootes own world-wide selling organisation, Sir William uses the persuasive power of international advertising to help pre-sell automotive markets. It's hardly surprising that the Rootes Group are among Britain's leading exporters.

THE WORLD OVERSEAS

Indonesia without Solution

FROM OUR CORRESPONDENT LATELY IN DJAKARTA

NOTHING happens quickly in Indonesia—except the daily dramatic Djakarta thunderstorm. No quick or decisive sequel to the abortive "civil war" in Sumatra can be expected. The rebels may stay in the trees, or they may surrender. The government may continue its leisurely and expensive campaign of suppression, or it may quarantine the rebels' stronghold and try to forget them. But the fundamental tensions and conflicts that precipitated the ill-starred revolt continue to rub, fret and inflame, and it is difficult to see how, or when, they can be smoothed or soothed away.

Even if the historic *Dwi Tunggal* (Sukarno-Hatta accord) were restored, the principle of "guided democracy" discarded and Communist activities magically dissolved or ruthlessly suppressed, the basic problem would remain unsolved. So long as 52 million of Indonesia's 85 million people live in crowded Java and monopolise the wealth of Indonesia, produced overwhelmingly in Sumatra and the other outer islands, there must be economic unrest, if not crisis, in the infant republic.

A solution, most experienced western observers in Djakarta believe, can come only from a more flexible federalist constitution, affording greater local autonomy and more equitable distribution of the national wealth to the outlying areas. But a unitarian republic was the dream and the decision of the revolutionaries, and any federalist variation is damned by Dutch parentage and recommendation.

General Nasution, President Sukarno's able chief of staff, who is a proud Sumatran and anti-Communist, has won a pyrrhic victory in Sumatra. He dreads any strengthening of the influence of the Communist elements that have infiltrated the palace and Javanese sections of the army. But the precarious balance which he had succeeded in establishing between Communist and anti-Communist groups has now been dashed and he must move warily in desperate correction.

Mr Sukarno himself is no Communist, despite his weakness for the comrades and his naive but dogged attempts to make himself their captive. According to report, he cannot be persuaded to treat the basic economic emergency seriously. He thinks in terms of popular votes, not of unpopular economics. He believes that when he has talked about a problem, especially to a large and reverent congregation, he has solved it. He is, it seems, now even more radiantly unrealistic in the wake of his chief of staff's reluctant success in Sumatra. "Bung Karno" is still the shining symbol of successful revolution—in Java, at least. Many of the "advisers" who surround him would, of course, lose position and influence if democratic and autonomous reforms were granted.

No one is quite sure even yet what folly of miscalculation betrayed the rebels into their inept and ill-timed challenge. Apparently they believed until the last minute that Colonel Barlian in South Sumatra would join them. If they were so ill-informed or misinformed in their own island, it is easy to speculate on their liaison difficulties elsewhere.

It is openly asserted in Djakarta that two United States agents in Sumatra conveyed the impression—inadvertently, carelessly or accidentally—to rebel colonels that decisive American aid and even intervention would follow an uprising. Certainly two "foreigners" in the Padang area gave instruction in the use of some of the modern small arms delivered in early air drops. In the opinion of Djakarta army officials, the planes which dropped arms—for both Sumatra and north Celebes—came from Formosa and the Philippines.

At no time was there any sign of tension or war excitement in Djakarta. Sentries lounged outside government offices. Barbed-wire barricades had been dragged outside the entrance to air force headquarters. A press censorship of sorts existed, but it was used only to delay reports of military movements that eager correspondents had picked up or winkled out ahead of the leisurely HQ communiqués. The one angry complaint by government officials about inaccurate foreign reporting was that some correspondents had conveyed a "wrong" impression of personal hostility towards, and even persecution of, Dutch residents; no one was concerned over appropriation of Dutch assets and property, but there was general and sensitive indignation at suggestions of discourtesy. The Indonesian does not mind being called a Communist, but he resents being branded as a hoodlum. An armed soldier spoke to me in stern reproof as I sat meekly in my pedicab at a street intersection, but it transpired that he was merely warning me that it was dangerous to drive around in the hot sun without a hat.

Presumably there will now be some gestures of appeasement in Djakarta to the restive outlying areas. The government's threats of strong punitive action and public trials of the rebel leaders are treated with reserve. It is considered that Sjafruddin Prawiranegara and his top military advisers should now have the good taste to withdraw gracefully to, say, Switzerland for a few months to clear the way for an amnesty.

The implacable withdrawal of former vice-president Hatta from the scene has not improved his prestige among intelligent Indonesians. They feel that, instead of displaying personal strength by his continued refusal to co-operate with the president in his acceptance of Communists, he has shown weakness by his continued refusal to recognise a leader's and a patriot's responsibilities in his country's crisis. As a good Indonesian, he should know that the only real success lies in compromise, his critics say. Maybe, western diplomats interpolate hopefully, he knows what he is doing.

Similarly, the local Communists, who have built up a following of six million voters in Java, indicate no desire to take a more active party line; they are quite content for the time being to merge with the "guided-democracy" movement and serve dutifully under "Bung Karno" as their non-party commissar. This is doubtless good sense. The Communists are in no hurry; they do not need to be; they are doing very well now, while escaping any adverse reaction for responsibility for failure, incitement, disloyalty or disunity.

Indonesian discontent will not be settled by military suppression in Sumatra or the Celebes, but by long-range policy-making in Java. It certainly will not be settled in a hurry; nothing ever is in Indonesia.

Peking Breaks it Off

FROM OUR CORRESPONDENT IN TOKYO

LIKE an untidy housewife, the Japanese government has swept the problem of trade with Communist China under the carpet until after next month's general election. The prime minister, Mr Kishi, has made his peace with Formosa and at his cherry blossom viewing party in Tokyo —marred as usual by rain—shared an umbrella with the Nationalist Chinese ambassador. Peking, for its part, has lost no time in resuming its lambasting of Mr Kishi with even more than its former vigour, denouncing him at great length as a former fascist, former imperialist and former war criminal. Many Japanese trade representatives in China have been refused extensions of stay. In Tokyo, the Chinese Communist technicians who were discussing the details of the recently concluded steel agreement abruptly produced some new demands. They now want Japan to deliver 180,000 instead of 150,000 tons of steel this year, and want 150,000 tons delivered before the end of June. Moreover, they propose that China make part payment not in soya beans, which nobody much wanted, but with rice, which Japan does not want at all. When the Japanese side demurred, the Chinese broke off the talks without giving any indication when they would be prepared to resume them. Prospects for increased Japan-Communist China trade now look dimmer than they did before the talks on a fourth trade agreement ever began.

Domestic pressure on the Kishi government for a successful conclusion to those talks was so strong that one would logically have expected a considerable outcry against their failure. Peking (though its anger with Mr Kishi is no doubt perfectly genuine) probably counted on provoking such an outcry. In fact, the breakdown has been received in Japan with tolerable calm. The reason is both interesting and revealing. Despite all the commotion over the Chinese Communists' insistence that they should be allowed to fly their flag in Tokyo and that the Japanese government should accord it the full legal protection afforded to other nations' flags, and despite Peking's rage that Mr Kishi should have equivocated over the first instalment of the demand and firmly rejected the second, the Japanese refuse to believe that the Chinese will really allow this to stand in the way of increased trade. The official Japanese view is that Peking's rage is simulated and is intended solely to try to gain votes for the Japanese Socialists in the forthcoming elections: once the elections are over—and the Socialists have been defeated—Peking will "calm down" and will be ready to resume serious trade talks, with no further fuss about flags.

Taking their stand on this comforting theory, the Japanese newspapers that support Mr Kishi—or at least do not back the Socialists—have been busy returning soft answers and shaking indulgent heads over Communist China's tantrums. Thus both the *Asahi* and *Mainichi* gently reproached Peking for being in too much of a hurry to gain diplomatic recognition—the *Asahi* particularly urged more patience, on the ground that there is "a steady trend of popular opinion in Japan" towards recognition. The *Yomiuri* mildly expressed the view that, in rejecting the proffered compromise of being allowed to fly its flag so long as it did not insist on its formal protection, Communist China had been far too hasty. The Japanese, in short, still think their compromise solution was an ideal way of appeasing the Nationalist Chinese while moving closer to the Chinese Communists, and they find it difficult to understand why Peking failed to appreciate the Machiavellian mechanics of the manœuvre. Meanwhile, however, they remain convinced that Peking's good sense will triumph over its temporary fit of ideological spleen. The finance ministry indeed is so sure this is a correct reading that in the face of all Peking's thunderclaps, it has gone ahead with its arrangement for the Bank of Tokyo to deal directly with the Bank of China on all future transactions, instead of through London as hitherto.

It is at least doubtful that Peking's mind works the way Japan thinks it does. Mr Fujiyama, the foreign minister, may yet find his description of trade with Communist China, as a "necessary evil" for Japan, being interpreted by Peking in a quite discomfiting way. A careful reading of Peking's detailed critique of Mr Kishi suggests that the Chinese Communists seriously regard him as a man who is doomed to become enmeshed in his own contradictions. "By trying to be all things to all men," remarked the *People's Daily*, "he will discover that he is only walking down a blind alley." Far from having as its goal the gaining of some votes for the Japanese Socialists—with a quick return to a more accommodating attitude after the Japanese elections are over—Peking may well be playing for bigger stakes in a longer and harder game. This would certainly fit in with Russia's attitude towards Japan: Mr Khrushchev has just finished telling the Japanese Socialists that, if Japan wishes an easement of its fishing quandary, it can get it only by "the early conclusion of a peace treaty with the Soviet Union." If, as the Japanese think, Peking is primarily anxious just to do business with Japan, it is hard to conceive why the Chinese Communists made such a point of including a proviso about flag-hoisting in the trade agreement in the first place.

Mr Mikoyan on the Rhine

FROM OUR BONN CORRESPONDENT

NEVER far from the mind of every ambassador in Bonn is his standing instruction to anticipate, observe, and assess any change in the nature of western Germany's relations with the Soviet Union. Well aware of this immense curiosity, and of its implications, the Federal Government did all it decently could to avoid appearing to give too glad an eye to Mr Mikoyan during his visit in the past week. It has been at pains since to inform the western embassies fully about the animated discussions, private and public, between the Soviet deputy prime minister and various German political and industrial personages. Doubtless the gist of most of the long despatches that have been pouring out of Bonn this week to foreign capitals could be adequately summed up in the one five-letter code-word reputedly used by British signallers during the war to report that an ungratifying situation remained much the same as before. And that surely is what Mr Mikoyan has reported reassuringly to Herr Ulbricht, who has most to gain from the preservation of the *status quo*.

Not that, in the circumstances, anything very new was expected. Only two days before Mr Mikoyan's arrival in Bonn the Bundestag was discussing the cost of atomic armament, candidly assuming—as Mr Mikoyan pointed out —that Soviet Russia was the only possible aggressor. At the same time *Isvestia*, fulminating that "the torch of atomic war" had been placed "in the hands of those who twice in this generation have plunged Europe into an abyss of indescribable misery," went on to recall that the Federal Republic was the only European state today demanding a revision of its frontiers, and to deplore the "many signs that Bonn is ready to follow the worst traditions of German militarism." Simultaneously, the Supreme Soviet sent a widely-publicised message to the east German People's Chamber declaring that by its decision to arm the Bundeswehr with nuclear weapons the Federal Government had cast off the mask of an advocate of German reunification.

Mr Mikoyan's generous flow of words at Bonn, Duisburg, and Hanover never went beyond variations on these themes. Yet it was an exaggeration to maintain, as did some of those who were anxious to exorcise the shades of Rapallo and Ribbentrop, that Mr Mikoyan's visit had absolutely no political significance. Its political significance was clear from the outset, and not inconsiderable. It demonstrated once again that the Soviet Union is delighted to do business with the German Federal Republic on terms that emphasise its divorce from the German Democratic Republic. There is good reason for believing that at the drop of a west German hat Mr Khrushchev himself would have come bustling along to rub the point in.

For, however much they regret its sturdily anti-communist society, the Russians are frankly impressed by the material robustness of the west German state—which, after all, is the home of more than two-thirds of the German people, which has diplomatic relations with 71 other states (the struggling Democratic Republic with twelve), and which has become one of the world's leading industrial powers. The trade, consular, and repatriation agreement signed by Mr Mikoyan is a fruit of this realistic attitude. Admittedly, a rather puny fruit. The trade agreement now has a term of only three years, whereas the eager Russians had pressed originally for five. The volume of direct trade is to be expanded (without guarantees, however) to DM 422 million (£35.7 million) each way in 1958; to DM 523 million (£44.4 million) in 1959; and to DM 630 million (£53.5 million) in 1960. Thus, if hopes materialise, the total value of the three years' traffic in both directions should be DM 3,150 million, or roughly £267.7 million.

For both partners this business constitutes an almost negligible fraction of their total foreign trade. For Bonn the volume of trade contemplated with Russia in 1960 represents only 1.6 per cent of west German trade with the rest of the world last year. British trade with the Soviet Union is running today approximately at the level which west German trade is expected to reach in 1960. German importers and exporters interested in doing business with the Russians will be able to obtain advice from the Soviet trade mission which is to open shop more or less immediately at Cologne. They are also expressly permitted to negotiate, if they so prefer, directly with the import and export organisations in Moscow. Soviet hopes of establishing consulates in west German cities such as Hamburg, Munich, and Stuttgart, seem to have been dashed for the time being through German insistence on reciprocity on the one hand, and reluctance on the other to extend consular operations in the Soviet Union.

For Germany the principal gains are firstly an exercise in commercial co-operation with a long-neglected but once important customer who may become important again, and secondly, the repatriation, it is hoped, of 15,000 to 30,000 nationals. The intended repatriates are all those wishing to leave who were of German nationality on June 21, 1941, the day on which the Wehrmacht broke into the Soviet Union. They are mostly residents of the territories formerly marked on the map as East Prussia and (except on Lithuanian maps) Memelland. It will take some time to handle all the expected applications. Not until the end of 1959, it is reckoned, will it be possible to judge how genuinely ready the Russians are to let these people make a choice.

Apart from these modest arrangements, and the prospect of a cultural agreement which the chary Germans say they are resolved to confine to an experimental period of twelve months, Mr Mikoyan's visit does not seem to have brought the two governments any nearer. The huge and hoary obstacles in the way of a real *détente* remain—hardening partition, west German membership of Nato, atomic rearmament, the Oder-Neisse line, an unrepresentative east German government, and, always, the Soviet long-term aims. Most of these obstacles would still be there if a Social Democratic government were in power at Bonn. Their removal requires more than the work and good will of Russians and Germans alone.

Jugoslavs Loosen their Belts

FROM A CORRESPONDENT LATELY IN JUGOSLAVIA

LIFE in Jugoslavia has been becoming more comfortable and uneventful—apart from the broadsides from Moscow—than at any time since the war. In spite of some ferment at the top (in the Communist party), and undercurrents beneath (mostly in the regions), the country is beginning to reap some benefits from past sacrifices, heavy investment and thirteen years of stable government. Everybody, having tightened his belt for so long, has let it out a bit.

A westerner in Belgrade this spring might be pardoned for not always remaining aware that he is in a Communist country. The shops are full of food, the streets are full of traffic and the restaurants are full of ordinary people—not only party officials or members of export firms blueing their bonuses or boosting their expense accounts. Housewives have plenty of domestic equipment and anyone who can afford it (not many can) can buy a refrigerator, house, motor-car, washing machine, typewriter and so on. Plenty of people have bicycles, the sale of radios in one year has

exceeded the total of previous postwar sales and a surprising number of families have long-playing record players. This is a nice change from the days when visitors could live on a few combs, packets of needles and a gold watch sold on the black market.

This prosperity is new and almost everyone benefits to some extent from it; but the improvement is only by comparison with what Jugoslavs used to have and it does not give the whole picture. Wages in general are still very low, housing everywhere is totally inadequate, there are many very poor people in the overcrowded towns; and anyone travelling in the interior can see villages where peasants still live in the poverty that their ancestors have experienced for hundreds of years.

But even in the villages a change has set in. Last year's record harvest and fairly high agricultural prices (not subject to price control) mean profits for farmers in the good agricultural areas, and it is indeed a change to see peasants queueing to buy farm implements and fertilisers. They are still leery of a Communist state that has slapped them down so often, but they seem to have accepted for the time being the assurance that they have security of possession of their land and to believe that the government wishes to help the private peasants. For the first time for years all available land has been sown to crops.

★

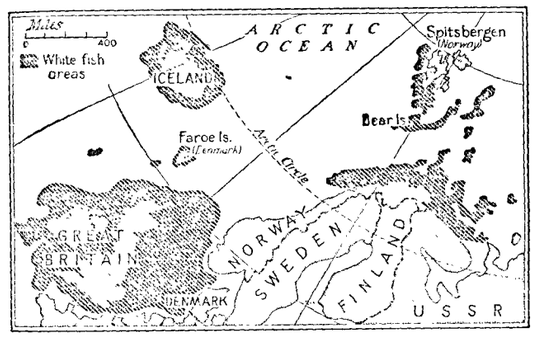
In industry too the emphasis is now on increased production, and a special government department to analyse and help productivity is working overtime. One of the main problems is the wages system which has been attacked both on economic and political grounds. The complicated system now in force gives low basic wages but allows workers in profit-making enterprises to be paid bonuses out of current profits. These have been calculated in terms of extra monthly wages so that in discussing their wages workers will tell you that they have earned fourteen, fifteen or even over thirty months' wages in one year. These high wages have gone to workers in enterprises dealing with food and consumer goods—especially electrical goods which are newly on the market—and in export-import firms. They have not been available for many people who were working just as hard—many said harder—in mines and factories; there has consequently been much discontent.

A new system that is about to be launched is designed to make the wage spread fairer and to prevent too high a proportion of profits from going in bonus payments; these are to be reduced to two to three a year. Extra profits are to be used for workers' houses, piped water, electricity supplies, local roads and other basic services which are desperately needed. A progressive income tax is to be introduced on all earnings including extra earnings in the second jobs that many workers find necessary to make ends meet. How successful this will be, whether it will act as a disincentive, how many officials will be necessary to enforce it against a traditionally tax-hostile population, remains to be seen.

The ferment in the Communist party has been due not to these economic adjustments, important though they are, but to the famous circular letter from the party executive, sent at the end of February, which administered a sharp rap on the knuckles to Communists, high-ups as well as the rank and file, for getting slack. Slightly reminiscent of the tone of the Ten Commandments, it told Jugoslav Communists "Thou shalt not":—neglect party political work; run up expense accounts; order expensive cars for office use and use them for private joy-riding; have luxurious offices and flats and change the latter frequently to get better ones; use the old-boy system (Communist style) for appointments to scholarships, pensions, jobs, special allowances; go for prolonged swanning trips abroad; build expensive local buildings and offices and neglect such things as workers' housing, public services and the needs of the ordinary people, and so on.

Many slightly rueful jokes are being told about the letter, and although cynics wonder how long its effect will last, it is clearly being taken seriously. The privileges of Communist party members whose position as "first-class" citizens allowed them to acquire perks of all kinds had aroused the envy of the under-privileged majority. With the greater freedom now prevailing, people can speak their minds and Marshal Tito, despite his eminence and his travels, has again shown that he has a nose for what is going on beneath him. He may have learnt a lesson from Hungary and Poland; he almost certainly still has a feeling "pro bono publico."

The undercurrents beneath this top-crust ferment are more difficult to detect and assess. The important question in Jugoslavia is always how far real unity has progressed. In recent years the government has allowed considerable decentralisation. It may have been wise to provide a safety valve for regional feelings but at the same time decentralisation has helped to encourage them and some recentralisation is now taking place. Some republics have taken a very independent line in things like finance and education, and Croats and Slovenes, with so much to do in their own republics, still do not like having to fork out heavily in order to help to raise the standard of living in the more backward republics. But on the whole progress towards greater unity has been made and although regional loyalties, the bane of prewar Jugoslavia, are probably still a potential danger to the state, they are not an actual one as long as there is peaceful economic improvement and Marshal Tito remains in power.



Fishermen's Differences

"SAVE our fish and chips" has become the standard expression of the British position in the debate on the law of the sea. Of the fish British trawlermen bring home from deep waters, 40 per cent is caught in waters which would be closed to them if territorial waters were extended from three to twelve miles. What, asked the Attorney-General during the recent conference at Geneva, would happen to John Bull's favourite dish? The same solicitude for the consumer has not, however, determined the British Government's attitude to fish in a European free trade area. Concern for the trawlermen who bring home the livelihood of Hull, Grimbsy and Fleetwood has made the Government want free fishing; but not free trade in fish.

Two of Britain's northern allies, however, Iceland and Norway, take precisely the opposite view. If fishing is a major British industry, it is the lifeblood of their economies. The north-east Atlantic yields a third of the world's fishing catch and some of the richest hauls are made in the coastal waters now in dispute. Each spring the fat cod and herring circle into the warm Gulf Stream waters off the Norwegian

coast in order to spawn. Later in the year the annual cycle of the cod brings them to Iceland. And so, while the British trawlermen who scour distant waters all the year round want open fishing, the Icelanders and Norwegians who have plenty of fish at their door seek to enlarge the limits which make the rich coastal waters a private national preserve. Along the invisible territorial line a cold war is already waged between British trawlermen and the coastal fishermen, and the temperature rises unpleasantly when nets are fouled or when there is poaching in the fog. The political battle which followed Iceland's attempt to enforce a four-mile instead of a three-mile limit is a familiar story. Norway has also contrived to enlarge its territorial waters by "straightening" out the line from island to island. And at the Geneva conference both supported an extension of the limit—Iceland to twelve miles, Norway to six.

Thus, unlike Britain, the two northern allies do not want free fishing; they do, on the other hand, want free trade in fish. While Britain imports fish, Norway and Iceland depend on exports. Fish forms a sixth of Norway's total exports, and almost all Iceland's. Norway has taken the initiative in the last few weeks and suggested that fish be included in a European free trade area on the same basis as industrial products. This straightforward collision with the British view has obvious political significance. For some

time Russia has exerted considerable influence on Icelandic and even Norwegian politics by buying the herrings which cannot be sold in western Europe. Although Nato's vital northern bases will not be lost to communism through a Russian taste for herring, good relations between the North Sea countries do depend on getting over their squabbles about fish.

The fishermen's differences can probably not be resolved at Geneva, where debate becomes complicated and confused by the alignments of world politics and by other extraneous issues. Bilateral arrangements or, still better, a discussion in the broader political context of the "free trade area" may be needed. More than a mere horse-deal seems wanted too. And in Norway a number of constructive ideas for partnership between the North Sea fishermen are in the air. The most interesting is a suggestion that British trawlers might make use of the deep-freeze plants on the coast of northern Norway. These modern plants are at present used only for an uneconomic average of twenty days a year, when the Norwegian coastal fishermen bring in their annual haul. Out in deeper waters around Bear Island and off Spitzbergen, British trawlers are fishing all the year round. They must, however, make a 14-day voyage home after every catch, and the quality of the fish often deteriorates so that it is unsuitable for freezing when it arrives. Instead of making this wasteful voyage, the British trawlers might slip into the fjords, leave their fish to be processed there and go out for more. The Norwegians in return would be given freer access to the British market for their own exports.

The idea would not be popular with the British frozen-food industry. And what, it will be asked, more pertinently, about the market for fish? Even today it hardly seems big enough for everyone. Yet while the fishermen are right to doubt whether the fresh fish market can be expanded, they would be wrong to underestimate the possibilities for frozen fish, particularly in the form of exports to a Europe that is entering the refrigerator age. When the Attorney-General made his plea, he left out an interesting new development—that frozen fish and chips had become in the past year a significant British export, carrying, as Scotch does for Scotland, the tang (or, at any rate, the whiff) of a way of life to Lagos, Accra and New York.

Iraq and the Facts of Life

FROM OUR SPECIAL CORRESPONDENT

THE third annual development week in Iraq which began last weekend sees the beginning or end of schemes costing over £45 million. The largest single project included in the programme is the Derbendi Khan dam on the Diyala river, the foundation stone of which will be laid early in May. Other ventures to be launched include schemes for power, grain storage, water supply and housing at Basra; while factories (textiles, sugar and cement), bridges, roads and more housing schemes will be opened at Baghdad and Mosul. The third ceremonial week has been planned on a more modest scale than the corresponding enterprise last year, the bill for which must have been formidable. Next year, say the enthusiastic officials of the Development Board, the show will be bigger than ever, to mark the inauguration of such large projects as the Dokan dam.

This year's celebrations will be clouded, especially for the British community, by the retirement of the British member of the Development Board, Mr M. G. Ionides, who deserves well of Iraq and of the Arabs as a whole. His withdrawal is not unusual in itself, as he himself conceded in a statement to the Baghdad press. Yet it is an open secret that nationalist pressures were at work. The government would doubtless have been glad to retain Mr Ionides's services. But Nuri es Said would hardly have relished a fight with the extreme nationalists on so tricky an issue as the retention of a foreigner on a policy-making board. Thus the last British official with any responsibility for policy is leaving Iraq. His post will probably be filled—if at all—by an Iraqi; though the suggestion is being canvassed that it might be well to call in a technician from one of the smaller European states.

This year's emphasis on the smaller development schemes is perhaps to be welcomed. It is incontestable that, in terms of economics, Iraq is using its oil revenues wisely, thereby setting an example to spendthrifts elsewhere. Yet ambitious investment programmes looking far into the future have their political dangers in a backward land like Iraq, where the pressure for primary necessities, such as food, clothes and housing, is great. It is the underdeveloped countries

that can least afford development. The opposition to the system of Nuri es Said has made much of this point, and is still making it. The great schemes for flood control and irrigation are described contemptuously as "Nuri's pyramids." Even in the field of housing, the plethora of plans is contrasted with the small number of houses actually built and in occupation; the famous Doxiadis Associates have been criticised for "turning Iraq into a guinea-pig." Much of this criticism is factious in origin. If the government had gone for consumers' goods, the opposition would doubtless have demanded a long-range programme. Yet the doubt is there. Iraq is beset by internal want and external pressures now. In such circumstances, "pie later" is not a stirring battle-cry.

These considerations have little relevance to this month's general elections in Iraq, which are well under control. There is a strong suspicion that the opposition leaders prefer the wilderness to serious struggle on the Chamber floor. In any case, they have declared a boycott of the elections on the grounds of fraudulent procedure, and very few seats will be contested. There was some flurry when it became known that one of "Nuri's young men," Khalid Kenna, former finance minister and now president of the Chamber, was advocating the formation of a moderate opposition group. A year ago, it looked as if Kenna was being measured for Nuri's mantle, though his relatively successful attempts since then to carve out a personal following have done him more harm than good. This last-minute hitch was smoothed out by Nuri with his usual adroitness; and Kenna, having announced his retirement from politics on a Tuesday, put down his electoral deposit on the following Thursday. All should now be plain sailing for the parliament of Nuri's choice and for ratification of the federal constitution.

★

Federation with Jordan—euphoniously called "Arab Union"—has aroused little enthusiasm in Iraq. It is regarded as at best a defensive measure to stave off a dangerous situation in Jordan. As such, it has already served some purpose, and the main preoccupation of Iraq now is to see that the price is not too high. Iraq's contribution to the federal budget, which covers defence, foreign affairs and a few minor items, has been set at 80 per cent for the first year. A figure of £40 million has been mentioned as the ceiling for federal expenditure, but it seems to be on the low side, as the armies of the two states alone cost that. Little economy can be hoped for there, as the training of both armies in the use of modern weapons—or lack of it—leaves much to be desired; and training is an expensive item. Taking the separate state budgets of the two countries as a guide, it would seem that Iraq's share of federal expenditure can scarcely be less than £34 million, of which some £27 million would have been spent anyway on the Iraqi armed forces, foreign service and related matters. Its contribution to the federation is therefore of the order of £7 million—£2 million more than the Saudi subsidy now lost to Jordan. As western aid to Jordan for defence and budgetary support alone, that is, excluding development programmes and UNRWA expenditures, is running at over £16 million per annum, there is no question of Jordan doing without it.

Equally, there is no question of Iraq curtailing its development programme, based on 70 per cent of the oil revenues, to finance investment in Jordan. The best prospect at the moment is the establishment of an Arab Development Bank, now under active consideration in Baghdad. The limitations of such a project are obvious. A bank, even if backed by government funds, must operate on commercial lines, and the openings for sound commercial investment in Jordan are restricted. Even so, the Iraqis make no secret of their hope that a new bank of this nature would receive generous support from the West.

The probable cost of federation is leading many Iraqis to look towards the Persian Gulf. The thought that Saudi Arabia might join—it was never more than a wishful fantasy—is now dead. Today's target is Kuwait. The Ruler's idle surpluses are ampler than anything that Jordan could absorb on an economic basis. But can he really contemplate such a step, any more than King Saud or Prince Faisal? It would be against his own interest (his money is perfectly safe where it is) and against the wishes of his people (who are strongly Nasserist). And if the Iraqis or British, who control the Ruler's foreign policy, pressed him, they might well start something—not for the first time—that they would later regret.

The Mexican Presidency

FROM A CORRESPONDENT

THERE is only one element of doubt about the outcome of the Mexican presidential elections which are to be held in July. The governing party, the Partido Revolucionario Institucional has not yet decided on the number of votes which will be allotted to the opposition parties when the results are published. Among these parties, only one has any real significance, the ecclesiastically tinged Partido Accion Nacional under the leadership of Sr Alvarez. But this party is primarily a north Mexican phenomenon and is a genuine force only in the state of Chihuahua. Even if the counting of votes were scrupulous, moreover, there is little doubt that PRI would obtain anywhere from 90 to 95 per cent of the total suffrage. For the average Mexican at present looks upon it not so much as a political party *inter pares* but as the national party and the necessary medium of progress.

This does not mean that there are no factions or tensions within the PRI. But once the party has decided on a candidate (and presidents are not eligible for re-election), that candidate assumes an immediate aura of national leadership. This fact is brought home even to the most casual visitor. The countenance of Sr Lopez Mateos beams at one from every shop window and bill board, his name is engraved on every wall, and slogans on his behalf vandalise every other turning on the scenic highroads. Mexicans have nothing to learn from any other country about the cult of personality.

Precisely because he is assured of victory by so massive a plurality, Sr Lopez Mateos has been able to afford political independence. Outside his commitment to the maintenance and expansion of the nationalised oil and gas industry, Pemex—a formalised ritual in Mexican politics—he is said to have made few promises and contracted few obligations. Throughout his campaign (for despite the automatic nature of the election, PRI addresses itself vigorously to the voter), the future president has concentrated on regional development and on the high hopes Mexico places in the fertile south, once the great drainage operations have conquered malaria. Sr Lopez Mateos's few pronouncements on foreign affairs and on the need for foreign capital have been vague.

World sees Britain's revolutionary new steel techniques at Brussels exhibition

New steels – new uses – new ways of making it – these are what the world's steel experts will see at the British Steel Industry's stand

AT THE BRUSSELS EXHIBITION Britain's Steel Industry is on show to the world. The Steel stand in the British Industries Pavilion has something to say not only to steel experts, but to everybody.

No one who visits it can be left in any doubt about the vitality and modernity of our Steel Industry, nor of the vision and enterprise of the men, *at all levels*, who keep it running.

Elaborate models

It is a fascinating story that it tells, and it is told in a fascinating way. There are vivid colour photographs of skilled men at work; examples of advanced steel products and alloys; elaborate and ingenious models.

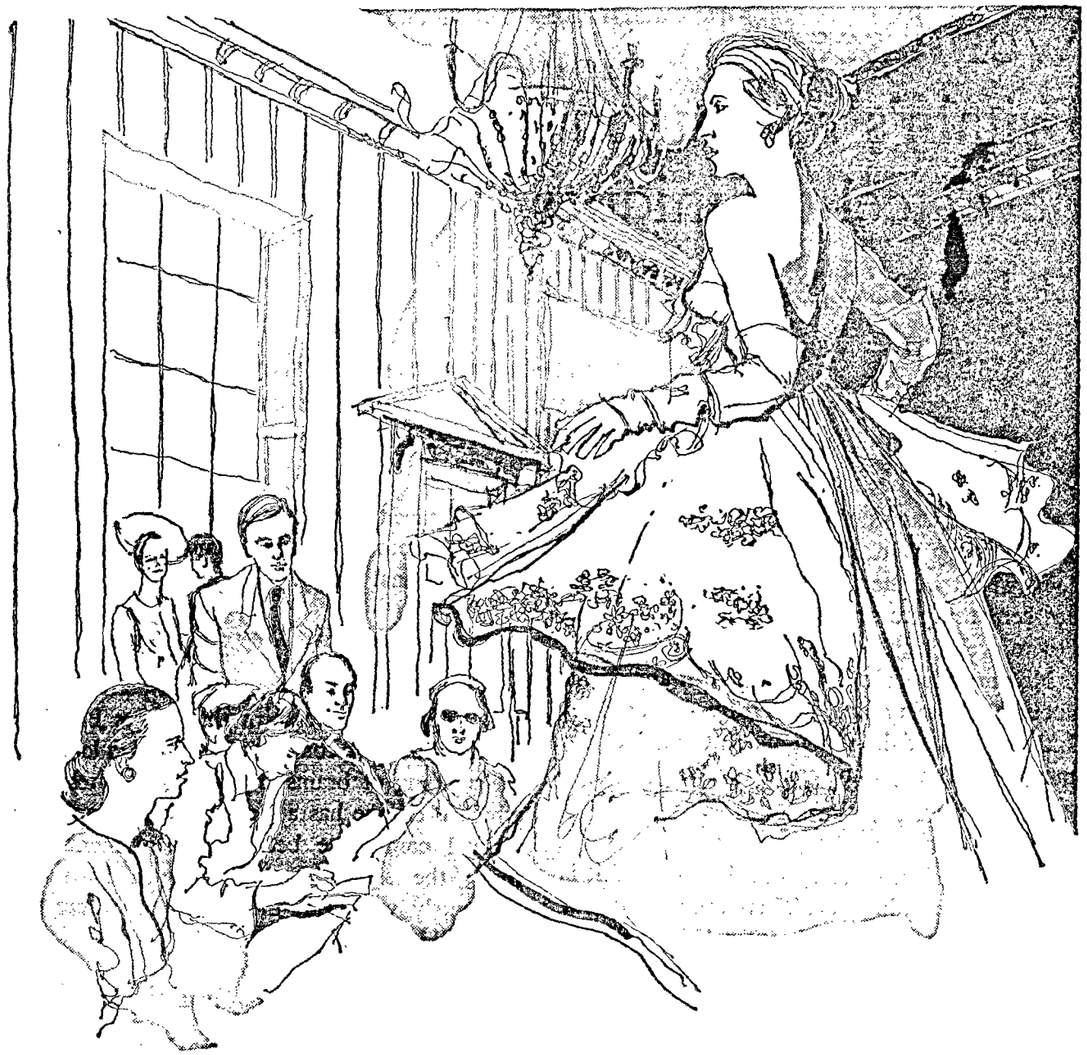
One model shows the great new steelworks being built at Durgapur in India by a group of British firms. Another shows the two stages in making castellated beams, a unique constructional principle which can be seen in use in the stand itself.

More steel—new uses

Britain's steel output has increased by over two-thirds since 1946, while fuel consumption per ton of steel has been reduced 15%. Visitors will be told of plans to increase capacity by a further 7 million tons in the next five years.

They will see some of our new high-performance special alloys; heat resistant and stainless steels for beating the 'heat barrier' in flight and for atomic power stations; vacuum-melted steels of exceptional purity.

Something they won't see



What visitors *can't* see – though perhaps they may infer it – is the spirit that makes Britain's Steel Industry so confident and forward looking: the welding of brains and skill into a team in which everyone has a sense of 'belonging'; the mutual confidence between management and men; the satisfaction of doing a hard job supremely well. But the results are there for the world to see.

How British steel spans the world

There are exhibits showing British steel in use all over the world: models of the projected Forth Road Bridge and of the world's largest radio telescope, jet engines, surgical instruments, a diesel engine bogie cast all in one piece – all of British steel.

There are other countries that make more steel than Britain, but none that makes it better and no major producer that makes it so cheaply – and prices were reduced in March. The story of the great technical advances that make this claim possible is the theme of the British Steel Industry's stand at Brussels.

THE BRITISH IRON AND STEEL FEDERATION

A modish swirl . . . a spellbound hush . . . a burst of applause . . .

The hour of the couturier's personal triumph

is touched also by the hand of science,

anonymous, remote, yet strangely distinctive.

THE BUSINESS WORLD

Less Money from Oil

The combination of a surplus of oil and of tankers has naturally resulted in an intensification of competition in the industry, which is now as severe as it has ever been.
—Lord Godber of "Shell" Transport.

The degree of the current imbalance is such as to indicate the probable continuance of difficult trading conditions.
Sir Neville Gass of British Petroleum.

THE Suez episode and its consequences dominate the accounts that the two oil giants, Royal Dutch/Shell and British Petroleum give of their operations in 1957. Then, the task was to get scarce supplies to a hungry market. Now, the task is to sell expanding quantities of oil to world markets that have lost the edge of their appetite. The theme that dominates the statements of the chairmen of the two companies is how the big oil groups can make out when they are merely prosperous. Looking back, the 1957 accounts tell of a wholly abnormal year. The closing of the Suez Canal more than trebled the tanker voyage from the Persian Gulf oilfields to European markets when the world demand for oil was strongly rising and the world's tanker fleet was already fully employed. Both Royal Dutch/Shell and British Petroleum had to pay more for oil and for freight, though they recouped part of the extra costs by higher selling prices.

By making Middle Eastern oil less accessible, the Suez episode put a premium on Western Hemisphere production and Royal Dutch/Shell, rapidly expanding its output in Venezuela and the United States, was a gainer. British Petroleum, more heavily committed in the Middle East, had no Western Hemisphere oil to sell and was forced by the tanker shortage to reduce its offtake from the Middle East and to buy at high prices in the Caribbean.

The second half of the year spanned a period in which the lingering consequences of Suez were wearing off and the full consequences of the American recession were not yet apparent. Thus Royal Dutch/Shell's margins fell back from abnormally high levels and British Petroleum's recovered from abnormally low levels. Over the full year, the net income of Royal Dutch/Shell rose from £179.5 million to £212.7 million and that of British Petroleum fell from £56.2 million to £54.6 million; both companies left their tax free ordinary dividends unchanged, at 15 per cent for British Petroleum and at 18¾ per cent for "Shell" Transport. British Petroleum units have risen sharply on the statement in the report that a scrip issue is to follow this year; they stand at 100s. 7½d. xd to yield 5.2 per cent. "Shell" Transport units are 145s. and yield 4½ per cent.

A year ago, profits from oil were circumscribed only by the unavoidable rise in costs; today the boot is on the other foot. Who benefits most from falling costs? Supplies in the Middle East are increasing and the routes are wide open. With over four million deadweight tons laid up, tankers are abundant and freight rates have collapsed. Supplies are more than plentiful and demand has slackened. The steady growth of oil consumption in the United States since the war has given way to a slight, if temporary, decline and, though demand continues to rise in the Eastern Hemisphere, it is at a slower rate. There is now acute competition in oil and the craven are recalling—pressing things rather far—the oil war of the early 'thirties.

WHEN competition is fierce the low-cost producer leads from strength. Nowhere is crude oil produced at lower cost than in the Middle East. So long as production and the supply routes through the Middle East are unimpeded, this is a source of strength for British Petroleum. Both Middle Eastern and Venezuelan producers are hurt by restrictions on imports into the United States, but Royal Dutch/Shell is much more directly affected than is British Petroleum by conditions in the United States. When both crude

oil and refined products are on offer at cut prices Royal Dutch/Shell may have some advantage as a net purchaser of oil:

	Royal Dutch/Shell (mn. tons)	British Petroleum (mn. tons)
Crude Oil Production in 1957:		
Middle East (including Kuwait Contract)	28	43·7
Other	72	0·7
Total	100	49·4
Processed in own refineries	110	32·1
Sales of crude oil and products	122	53·0

But another and more important test will determine profits this year: the extent and the security of the companies' markets. With oil in surplus it is the hand at the petrol pump and the negotiator of bulk contracts at shaded prices, rather than the oil driller, who stands sentinel at the oil companies' coffers. British Petroleum is making strenuous efforts, as its recent purchase of a large chain of service stations in Italy shows, to extend its marketing organisation. Extensive though that now is, it is overshadowed by Royal Dutch/Shell's traditional hold over the world's markets, which may give it better protection for its profit margins than British Petroleum's control over the world's lowest cost crude oil.

For both groups 1958 will be a hard year. Because of slacker demand, production will have to be cut back in the Middle East and Venezuela as it already has been, drastically, in the United States. Widespread price cutting is now occurring at all stages from the well-head to the petrol pump. Not all the cuts appear in posted prices, but they are none the less real. Fuel oil from the Caribbean delivered in Europe, in effect, free of freight; three-year freight contracts fixed at impossibly low spot rates; a variety of discounts off posted prices—all amount to the same thing, whatever their form: a lower profit on the final sale. So widespread is the weakness that a fall of between 20 to 30 per cent in the industry's net profits has become the current well-informed guess about the year's outturn. If British Petroleum and Royal Dutch/Shell do better than most of their competitors, as they might, they will certainly not do nearly as well as they did last year. This will be no year for bigger oil dividends, especially as Royal Dutch/Shell now has an enormously increased capital to service, and it would be optimistic to assume that British Petroleum's projected scrip issue will do more than tidy up the balance sheet.

Both groups will still have vast capital expansion programmes to finance. Capital programmes in the oil industry are decided in the light of estimates of demand five or more years ahead, and acquire a momentum that cannot be synchronised to short-term fluctuations in demand. Even in the "crisis" year, 1957, Royal Dutch/Shell's capital expenditure of £386 million was only £2 million less than the group had spent in 1956 and British Petroleum's expenditure of £100½ million was £14½ million more. British Petroleum will again spend over £100 million on capital account this year and Royal Dutch/Shell's expenditure is not likely to fall far. Neither will be pressing forward with new commitments. But next year there will have to be changes. If the oil industry is still in the dumps, there will be a sharp fall in capital spending from the running down of expansion programmes; if it is perking up, expansion will be on again, though it may not be easy to finance. Given maintained capital expenditures this year and smaller profits to contribute towards their finance, the new issues by the two companies—British Petroleum's £41 million in convertible debentures and Royal Dutch/Shell's £126 million in equity stocks—prove to have been made in the nick of time; they would certainly have cost a lot more a few months later.

The new money is now available at the moment when it is most needed. But the policy of capital expansion rests on the assumption that the setback in demand will be short lived. There are signs that drastic reductions in crude oil production and in refinery operations in the United States are putting stocks into better balance, and setting the stage for a smart recovery if demand should begin to pick up later this year. But if the recovery fails to appear, or if demand in Europe falls, the oil companies will not have the resources to carry through all their capital intentions, whatever faith they may profess in the long-term demand for oil. They and their shareholders look like having to wait quite a time for the return of the lush years.

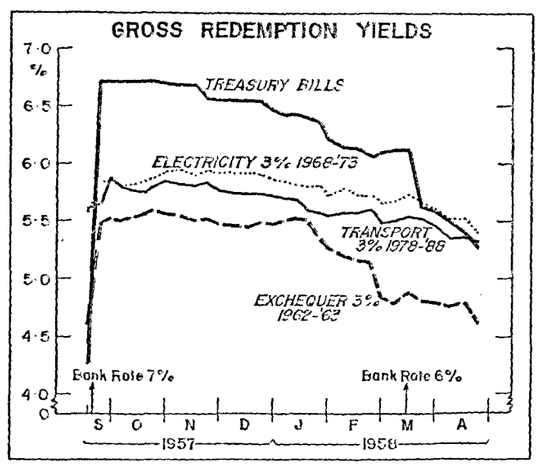
New Phase for Funding



Two new Government issues were announced late last week. They mark no turning point in policy; they denote no relaxation of the credit squeeze; and only indirectly do they carry any suggestion about Bank rate. Yet this seemingly routine replacement of £676 million of 4 per cent Conversion stock 1957-58, is made on terms that call for no fresh money, and are calculated not to force the market upwards but to borrow much more cheaply than has recently been possible. This twin issue marks an important stage in the successful gilt-edged policy. It gives the gilt-edged investor a clear picture of what the Chancellor means by "vigorous funding."

Holders of the maturing 1957-58 stock are offered two options—to convert at par into 4¾ per cent Conversion redeemable on June 15, 1963, or into 5¼ per cent Conversion 1974, effectively at £97 10s. Holders who accept neither option will be paid off on June 15th. The two new stocks are in effect already being dealt in, as 4 per cent Conversion (1963 assented) and 4 per cent Conversion (1974 assented); the former stands at about 99⅞ to yield £4 15s. 2d. per cent and the latter at around 98⅞ (ex the £2 10s. conversion bonus which belongs to the assenting holder) to yield £5 9s. 8d. per cent. An active demand has sprung up for the shorter dated stock, which the official portfolio is meeting.

These new stocks are liked and so is the fact that no cash applications were invited. But there is a surprise about the timing. The maturing stock still has six weeks to run and underwriters are holding undigested New Zealand stock. The time-table, all possibility of strikes apart, did not suggest that Exchequer needs were pressing. The 1957-58 stock is the only compulsory maturity this year and the authorities had already this year created two new issues—£500 million 5½ per cent Exchequer Stock 1966 and £300 million 5½ per cent Funding Stock 1982-84. These are being sold, and the 1966 stock in particular is proving very popular. Issues nowadays are formally timed and tailored to maintain the quantity and the range of the Government Broker's wares, and it is his selling to the market that constitutes the real process of issue. The date of the maturities, which the departments usually buy in substantial volume before they fall due, is rarely the dominant factor; it is not on this occasion. The more important departure is the decision to issue a new "short." At first glance this may seem to run counter to one of the twin objectives of open market policy. Funding policy, as now understood, involves not only selling stock from the official portfolio to the public, but also inducing the public to invest longer. In effect the authorities collect the shorts and sell the longs in exchange for them. The issue of a short to give the money market some pabulum must have been tempting several times this year, but the Bank of England seemed set against it. The object of policy was to fund longer and so the short end of the gilt-edged market remained almost unaffected by the moves to bring the other sections under fuller and more efficient control after 7 per cent Bank rate. The inflow of foreign money, with growing confidence in sterling, makes its direct impact on the short end of the market and there was sometimes a risk that the official hand might be forced into reducing Bank rate earlier than might be warranted on general grounds if the flow of foreign money on covered arbitrage became overwhelming. That did not happen and the flow is now diminished.

But at last the authorities have found it desirable to create a "short"—a good bank stock which ought also to have a money market appeal. "Assented" 1963 stock is in fact six weeks longer than the conventional five year maximum observed by the money market; it is dealt in as a "short" only by dispensation of the Stock Exchange Council. There will be no increase in the number or the amount of the shorts; the 1957-58 stock will not be wholly converted and less than the whole of what is converted will be into 1963 stock, This therefore is still funding.

To the extent that it is not already held in the departments the 1957-58 stock is held largely as a "short" by the money market, by the banks and by some industrial companies; to many such holders only a short is acceptable. The 1974 stock is an attractive medium date, but if no short dated option had been offered, a large payout on June 15th would have been unavoidable and that would have increased the demand for Treasury bills and the remaining shorts. To what extent the Government already

holds the maturing stock is unknown, but it has been tough to get it in. The story is told in the chart, which shows how fast the yields on short-dated stocks and on Treasury bills have fallen as money and confidence returned.

A block of 1963 stock in the Government broker's hands, while it lasts, will thus assist the Bank of England's control over the gilt-edged market. Only one deduction about the future of Bank rate can be made from the operation. The authorities have a little more elbow room in their timing; they have used a little of it in deferring any further change in Bank rate until after the critical date of May 5th. On broad financial grounds the stage has seemed set for a reduction for a fortnight past. It remains so. But on industrial-cum-political grounds, there was a case for walking warily in the week before a major strike. To have this conversion out of the way was also wise.

The conversion operation will diversify the range of stocks that the Government has on "tap." The Government broker can for the moment offer four, all with high coupons, 5½ per cent Funding, 1982-84, 5¼ per cent Conversion 1974, 5½ per cent Exchequer 1966, and 4¾ per cent Conversion 1963. He can suit a wide range of demand at the moment, but the new operation must have been timed with one eye on the approaching end of the supply of the 1966 stock. Even then, however, he will still be able to offer stocks covering the wide range of requirements of the money market, the banks, and such longer term investors as the life insurance and pension funds. That £500 million of 1966 stock created only on January 14th should find a permanent home so quickly is one of the best indications of vigorous funding this year.

The offer to the holders of 4 per cent Conversion 1957-58 expires on Monday. It has risen to £99 17s. 2d., which is just beyond what the Government broker will pay—on terms that yield the vendor the equivalent of the current Treasury bill rate over its last weeks of life, which impute a price of about £99 16s. 11d. If the total assents reach £600 million, leaving only £76 million to be paid off, the operation will have been most successful. Those financial institutions that convert are likely to prefer the 1963 option. The Government will no doubt seek to divide its own conversions between the 1963 and 1974 options to end the day with respectable amounts of each.

This conversion operation is well planned and likely to strengthen the control of the market. For that reason, the gilt-edged market's recent buoyancy may for a time be restrained. Intrinsic public confidence in British Government stocks is standing higher than for several years and given intelligent market management, confidence should continue to grow. But on a close view, some slackening of the recent active demand would not be surprising. A further Bank rate reduction is already largely discounted; when it does come there can now be little surprise in it. The banks have bought heavily of gilt-edged stock (£42.6 million in the last month) but can hardly continue to invest on that scale indefinitely: and the New Zealand 6 per cent stock, well held by the underwriters at only ⅛ discount, has to be absorbed. The outlook in the gilt-edged market does not suggest another upward surge, but investors, if they pause now, are likely to return.

BUSINESS NOTES

FOREIGN EXCHANGE

Switch Sterling in Demand

End of month influences have made the past week an uneven one for sterling, but on balance the pound has lost no ground against the dollar, and the official rate has made a slight net gain to just over $2.81¼. It appeared that the Exchange Equalisation Account had again been taking in dollars and the end-April figures—not available as *The Economist* went to press—were expected to show another substantial reinforcement of the reserve. The capital of the Exchange Equalisation Account was increased this week by £50 million. This gives no indication in itself of the extent to which the account is filling itself up with dollars, but it is an unmistakable indication of the trend. In recent weeks the acquisition of gold, dollars and other currencies has reached a point at which the account had run down its sterling. The general commercial demand for transferable sterling has been particularly good during the past week, with renewed buying from New York and Zurich. The rate has strengthened to $2.7960. Had it not been for some official holding down of the rate, it is almost certain that transferable sterling would have crossed the parity line of $2.80 for the first time.

The other main feature of the exchange market has been the strength of switch sterling which has appreciated this week to around $2.79 on substantial American and Continental buying to meet the imminent calls on Shell and BP shares. In addition the American buying of oil shares which became so pronounced on Wednesday generated a further demand for switch sterling. There has also been some American buying of sterling gilt-edged securities. In the ordinary way switch sterling is bought for delivery to coincide with the end of the Stock Exchange account. For operations in gilt-edged securities, of course, immediate delivery is required, and it has been significant that recently the market in switch sterling has in fact divided into two sections of almost equal importance—one for cash and the other for end-account delivery.

IN THE MARKET

Pressure of Issues

The conclusion that thoughtful investors draw from the balance sheets of the oil giants hardly supports the beemlet in oil shares that greeted the opening of the New Stock Exchange Account on Wednesday. But the less thoughtful took hold of British Petroleum's intention to make a free issue later this year: on the back of their buying the Americans came in. BP rose 5s. 9d. to 100s. 7½d. and Shell (registered) rose 8s. 10½d. to 145s. Whether rational or not, the movement exemplifies an important feature of the Stock Exchange at the moment—that speculative activity will seek the side lanes, such as the oil share-market while the pressure of new issues seeking to come forward combines with industrial news and strike news to damp the industrial share market.

That pressure of new issues promises to be at least as heavy as can conveniently be absorbed. Next week Gallaher, the tobacco company, will publish its prospectus for the issue of £10 million 6 per cent loan stock dated 1983-85 and priced at £96. This week Fisons, the chemical company, has announced the issue of 1,934,954 new ordinary shares at 31s. 3d. The issue will bring in approximately £3 million towards capital projects of £5½ million and is offered to shareholders in the proportion of one for three. With the existing stock standing at about 52s. the rights are worth approximately 5s. 3d. per share. Mutual Finance, the hire purchase subsidiary of Thomas Tilling, is raising £300,000 by the issue of new 5s. shares to existing shareholders at 20s. in the ratio of three 5s. shares for each 2os. of stock held. And looking slightly further ahead Associated Biscuit Manufacturers, which controls Peek Frean and Huntley and Palmer, announces, without detail, its intention to make a debenture issue. This is contingent on a reorganisation of capital being carried through and it is intended to offer holders of the 1½ million unsecured loan stock of the parent company and of the £300,000 4 per cent debenture of Peek Frean conversion into the new stock.

Such plans promise that the flow of industrial issues will be heavy. Already this year it has been abnormally heavy despite dull share markets, thanks to the Shell issue. According to the Midland Bank's figures (which exclude all Government loans), the total for the first four months of this year is £148.0 million against £133.4 million in the same months of 1957.

THE ECONOMY

Output Hardly Slipping

When in his budget speech Mr Heathcoat Amory said "the level of industrial production has tended to decline slightly in the last few months . . ." he was going rather further than outside observers could have done on the evidence then available from the official production index: of late, the impressive thing about output has been its apparent stability. This week, early indications of what production may have been in March have shown the fractional turn downwards that has been expected for some months, but has in fact taken quite a long time to appear. But the January and February indices have both been revised upward. So, oddly enough, have those for January, February and March, 1957. These last occurred because there are a few items of production for which Whitehall either receives only annual figures, or receives much more accurate annual than other figures. Only tiny revisions, of about 0.1 of a point were made; but for early 1957 these happened to change the rounded figures. For March this year the first estimates suggest an index of 137-138, against 138 a year before, when output was slightly affected by strikes in shipbuilding and engineering, but it is still premature to trace any significant downward trend from this.

CHANGES IN FIXED INVESTMENT, 1956 to 1957
(Per cent. change from corresponding period of previous year, at constant prices)

	First qtr.	Second qtr.	Third qtr.	Fourth qtr.
Public sector excluding dwellings ..	+4	+5	+ 8	+15
Private sector excluding dwellings.	+5	+7	+10	+ 3
Of which:				
Manufacturing.....	+9	+5	+ 1	− 5
Dwellings.....	+8	−1	− 8	− 6
Total.....	+5	+5	+ 6	+ 5

Record output in the motor industry, with its widely ramified demands upon intermediate engineering, is still broadly offsetting the declines in other sections of industry. These include building and its materials suppliers, plus certain kinds of machinery manufacture. In both groups, output is being affected by the decline in investment demand for houses, industrial buildings, and now generally in manufacturing. But total investment demand is still high, with the public sector increasing its demands rapidly as private investment levels off. In real terms, fixed capital expenditure in manufacturing industry in the last quarter of 1957 was 5 per cent lower than a year before: but total fixed investment across the whole economy, in contrast, was 5 per cent up.

Building Orders Fall

An indication of the changing demand for new building work is provided by a new set of figures published by the Ministry of Works: this series gives quarterly totals of new contracts received by building and civil engineering contractors since the last three months of 1956 and is a welcome addition to the very limited published information about new industrial orders. The flow of new building contracts fell fairly steadily throughout last year; the decline was most marked for public housing contracts, which totalled £51 million in the last three months against £75 million in the final quarter of 1956, and only slightly less so for private housing development, for which contracts totalled £63 million against £79 million respectively. New industrial building contracts slipped slightly, from £54 million to £51 million between the two final quarters, but the rate of orders for other new work on public or private account fluctuated more uncertainly. The difficulties in compiling these statistics of the final value of new contracts actually placed leads the Ministry to be somewhat cautious about conclusions from them until they have had a longer run: they are based on a quarterly sample and a full census every April.

Are Prices Stabilising?

"Now there are signs," the Treasury observes in its latest *Bulletin for Industry*, "that the falls in prices of some manufactures are becoming sufficiently large and widespread to have a major stabilising effect on the index."

The index of basic materials prices, other than fuel, used in manufacturing industry, in March, was 12 per cent below March 1957—and below the average for the whole of 1957, since most of the fall in prices of these materials came in the last four months of last year. Imported materials have come down much more than that in price—the index includes many items made or largely processed in Britain—but the "import content" of the ex-works cost of manufactures, on average, is only about 20 per cent, and there seems to be an average time-lag of about 6 months before any fall can in practice be passed on. "Prices," says the Treasury, "are mainly dependent on labour costs," which may certainly be the biggest single item in total costs. Moreover, prices of the vast array of semi-manufactures and components which pass from one industry to another and are included in any industry's total outside purchases, will probably have gone down less than those of crude materials, home-produced or imported; and fuel prices have only just turned downward.

HOW PRICES HAVE MOVED

DOWN: Bricks, china, concrete, insecticides, general chemicals, sulphuric acid, drugs, steel sheet and tube, tinplate, brass, perambulators, galvanised cisterns, cotton yarn and cloth, Harris tweed, serge, spun rayon, wool tops, worsted, linen, jute goods, rope, hosiery, lace, canvas goods, leather, hardwood, cardboard, rubber goods.

LEVEL: Electrical porcelain, glass containers, cement, hard coke, dyes, polishes, iron castings, spectacles, gramophone records, felt, rayon filament, linen yarn, wallpaper, paper bags, stationery.

UP: Glass, abrasives, disinfectants, fertilisers, synthetic resins, toilet preparations, paint, soap and detergents, domestic electrical appliances, hand tools, cutlery, domestic hollow-ware, dental goods, spoons and forks, rayon fabrics, carpets, travel goods, clothing, footwear, soft furnishings, furniture, wooden boxes, paper and board, linoleum, brushes and brooms, toys and games, sports goods, pens and pencils, plastic models, photographic paper and film.

The price index for manufactures, which fell slightly in February and March for the first time in three years, covers about 7,000 separate items of manufactures other than food products. For most of last year, all the main groups of these showed increases: but between October and March, for all except clothing and footwear, this trend was reversed. Since that March index was calculated, prices of iron and steel, metal boxes, aluminium, some commercial vehicles, wire netting, television tubes, and certain types of cable have come down. It may take some considerable time, however, for these changes to affect the retail price index; for this includes prices of food (now fairly steady) of housing (still going up) and of fuel and services, where prices remain dependent upon this spring's bargaining about wages.

SUEZ CANAL COMPANY

Nasser's Agreement

PRESIDENT NASSER decreed the nationalisation of the Suez Canal Company on the basis of Paris Bourse prices. That meant a total price of about £71 million or about £15 million more than the value of the company's assets outside Egypt. The company's counter claim suggested that it should keep its assets outside Egypt and be paid in addition £204 million. Pushed hard by the World Bank the parties have now agreed to a compromise which is subject to the approval of shareholders in general meeting. Shareholders may condone but they will not rejoice for the line of compromise has been reached very near to the Egyptian starting point. The company keeps its assets outside Egypt and the Egyptians will pay a total of £E28.3 million (about £29 million sterling). Of that sum rather over £E5.3 million is in Canal dues collected after nationalisation which the company already holds. So the company in effect receives £E23 million. It has had to accept a liability for the pensions of all employees except those who remained in Egypt, which may cost about £13 million. Apart from the initial payment the compensation is spread over five annual instalments of £4 million and one of £3 million spread over the years 1959-1964.

So Tuesday looked like a red letter day for the Egyptian President, who could sit down with the Russians having driven a hard bargain with the West, largely cleared himself with the Americans and begun to clear himself with this country. Nevertheless from the Suez Canal shareholders' point of view the outlook is not wholly bleak. They get a little more than the Egyptians intended, and they get it clear of exchange risk and outside Egypt, which the Egyptians did not originally offer. The whole payment—40 per cent of it in sterling—is calculated in Egyptian pounds at the fixed rate of $2.87 to the £E. In addition to the first instalment of £E5.3 million due at once, two further instalments can also be paid immediately if the British Government releases the appropriate amounts from the blocked Egyptian No. 2 account. Yet another two could be paid at once if the British Government were to release the whole of that account. The British Government, however, seems unlikely to go so far at present. The Canal Company's compensation is not the only or the largest British claim against Egypt. Further negotiations will have to cover the compensation to British citizens and undertakings stripped of their property and expelled.

From the shareholder's point of view there remain many uncertainties, the default risk on the later instalments among them. But a rough guide to the break-up value is now available. The net assets outside Egypt are understood to have been equivalent to 40,000 francs (£34) per jouissance share on December 31st. The net £23 million that the Egyptians will pay is equal to about 26,000 francs (£22) per jouissance share making no allowance for any default risk or for the delay in time. That suggests on the most favourable interpretation an ultimate value of around 66,000 francs (£56) for the jouissance share and seems to leave scope for a little recovery from present market values of about £40 for the jouissance and £56 10s. for the capital shares, even though realisation of ultimate values may still be a long way away.

INDUSTRIAL DEVELOPMENT

"Selective Reflation" by DATAC

SINCE 1945 about £70 million of public money has been spent on building factories for industrial companies coming into Britain's development areas, and nearly £7 million has been lent to certain of these that satisfied an advisory committee to the Treasury that their projects would eventually pay but that they could not finance them from other sources. It is this second Treasury power—to lend or grant money, but not to finance the building of "advance factories"—that is to be extended throughout the country by the new Distribution of Industry (Industrial Finance) bill that had its second reading last week. The condition qualifying any "locality" (i.e. unemployment exchange area) to receive such assistance will be that it has a high rate of unemployment which seems likely to persist.

EXECUTORS & TRUSTEES

holding shares in family businesses and small public companies may well have to meet Estate Duty liabilities by selling these holdings. But it will usually be desired to avoid selling out or loss of control. Estate Duties Investment Trust – known as EDITH – was formed to assist in this problem.

Estate Duties Investment Trust Limited

Our booklet, E6, 'The Death Duty Problem', will be sent on request.

To nuclear power generation Simon-Carves contribute immense experience of major plant construction and civil engineering for the fuel, electricity and heavy chemical industries. This experience has been gained in every continent and includes the building of orthodox steam power stations for more than thirty years.

The association of Simon-Carves and The General Electric Company brings to bear on the whole field of nuclear power a massive combination of resources in research, development, design and construction. These resources, already being applied to the building of Scotland's first nuclear power station, are available for the building of complete nuclear power plants throughout the world.

Work is constantly proceeding on the development of future advanced designs and on the reduction of cost per kilowatt.

SC277(B)/PS

The bill makes two changes of significance in the existing Treasury powers under Section 4 of the Distribution of Industry Act of 1945, in that it allows loans or grants to all forms of trade or business, not industrial projects alone, and that it permits this financial assistance whether or not the project complies with "the proper distribution of industry." As possible non-industrial candidates, the Parliamentary Secretary to the Board of Trade instanced "insurance companies, mail-order businesses, hire-purchase companies, or research establishments": he noted that institutions such as the Crofters' Commission would not qualify unless they decided to "carry on an undertaking by way of business." Other contributors to the debate, as might be expected, had plenty of likely localities to suggest: the Western Isles have 35-38 per cent of unemployment, Anglesey has 11 per cent, Greenock and Dundee have 6-7 per cent, and Hastings (outside the holiday season) has 6 per cent. The Minister of Labour, who introduced the bill, noted that the existing development areas themselves still had an unemployment percentage of 3.1 per cent against 2.1 per cent for the whole country or, to take an example of prosperity, about 1.3 per cent for London and South-East England.

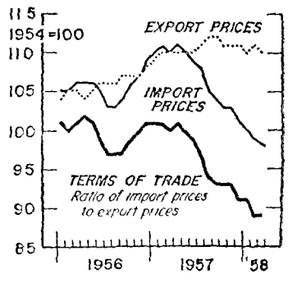
The existing Development Areas Treasury Advisory Committee, DATAC, will continue to scrutinise applications by companies: the Treasury does not have to lend money to every project it approves, but cannot lend money to one the committee has turned down. For this year, the total amount lent will appear in a supplementary estimate: in succeeding years, in the main vote. Mr Macleod defined the whole idea, and others that the government has been putting forward, as "selective reflation": if there were not such a phrase, he said, there ought to be. Lord Hinchingbrooke had some other words for what this might become: "using the taxpayers' money to reduce the unemployment we have otherwise deliberately created."

AIRCRAFT INDUSTRY

Return of the Comet

THE Comet IV airliner that began its test flights last Sunday is, from an engineering point of view, the most highly developed jet airliner now flying or about to fly. It is as different from the Comet I that first flew nearly nine years ago as a racehorse from a coster's pony. The reserve of power in its engines is far greater than that of the French-built Caravelle; it has significantly better fuel consumption and faster rate of climb than the Russian-built Tu 104; and has the two basic requirements of partially silenced engines and reverse thrust for braking on landing that have yet to be fitted on either American jet and without which London, New York and Paris will not allow jet airliners to land, and the airlines will not consider them wholly safe to operate. The strengthened fuselage has been given a minimum fatigue life of 30,000 hours, or ten years' commercial service, based on a 6:1 fatigue ratio (so that the life might in fact prove 180,000 hours); the standard of finish on essential components is well above what is customary in the British or any other aircraft industry.

This skill and care and sheer beauty does not necessarily add up to a sound commercial airliner. Whether the Comet is what BOAC needs or other airlines want has yet to be shown. In its various forms it can carry between 75 and 85 passengers over all routes short of the North Atlantic; orders stand at 31, of which 19 are for BOAC, 6 for British European Airways and 6 for the Argentine airlines. At £1 million, the Comet IV is not expensive by modern standards. By the end of the year at least four should have been delivered to BOAC with full certificates of airworthiness, the first arriving in the autumn; it is then up to the corporation to decide when to put it into service. But this depends on keeping to an exceptionally tight schedule, for the first flight is itself five months late.



With the Comet IV in the air, de Havilland's fortunes seem to be looking up. Within the past few weeks it has won the order for BEA's medium range jet airliner, ironed out the production troubles that had held up its Firestreak guided weapon; it may be on the verge of receiving a German order for it; yesterday the company was allowed to announce that it was the main contractor for the country's only ballistic weapon, the 2,000-mile-range rocket it is building with Rolls-Royce and Sperry—a function taken over from English Electric some time ago. If the Comet is a commercial success, it may be due in large part to the 10,000 hours of flying put in by the RAF and all of which experience was fed back on to the de Havilland drawing board. This is commonplace in America but has not happened before to a British civil airliner. Nothing is so important to the development of an aeroplane as the hours it spends in the air and it is here, not in money, that the Government can make its most important contribution to aircraft development.

BANK FIGURES

Credit Expansion Resumed

NET deposits of the clearing banks rose more sharply last month than in any corresponding period since 1954. The full statement for the mid-April make-up revealed a rise of £65.6 million over a four-week period, compared with increases of £18 million in 1957, £25 million in 1956, £8 million in 1955 (a five-week period), and £79 million in 1954. This more than seasonal movement was reflected in a rise of 0.6 in the seasonally corrected index compiled by Lloyds Bank, carrying it to 109.9 (1948 = 100), or back to the end-1957 peak. The counterpart of this credit expansion, as was explained in a Business Note last week, was a rather sharp increase in both investments and advances. A substantial part of this reflected finance for the public sector. State boards took £15.1 million of the £46.9 million rise in advances; and, given the tactics of the "departments" in selling stock whenever opportunity offers, much of any rise in bank investments can be regarded

IMPORT PRICES FALL AGAIN

Import prices fell further during March—by one point. A corresponding fall in export prices left the terms of trade unaltered at the most favourable level for many years.

Some imported foods rose in price, but butter became still cheaper.

as finance for the central government at one or more removes. Financing of that kind evidently provided one of the main reasons for last month's contra-seasonal decline in liquid assets. As will be seen from the accompanying table, a further important factor was the shrinkage in portfolios of commercial bills.

	April 16, 1958 £mn	%	Change on Month £mn	Change on Year £mn
Deposits	6,450·3		+85·0	+247·4
"Net" Deposits	6,152·2		+65·6	+243·8
Liquid Assets	2,136·2	33·1	−24·1	+110·9
Cash	543·1	8·4	+27·2	+ 52·0
Call Money	421·3	6·5	−17·1	− 15·0
Treasury Bills	1,051·1	16·5	−20·8	+110·0
Other Bills	110·7	1·7	−13·4	− 36·2
Risk Assets	4,100·3	63·6	+89·5	+137·9
Investments	2,136·3	33·1	+42·6	+167·2
Advances	1,964·0	30·4	+46·9	− 29·5
State Boards	65·8		+15·1	+ 13·4
All Other	1,898·2		+31·8	− 42·9

OPTION DEALING

Argument on the Stock Exchange

WHEN Stock Exchange business shrinks the demand for a revival of option dealing often crops up. It has now cropped up again so strongly that a requisition for a special meeting to discuss it has been signed by more than 50 proprietors and will be held after the annual general meeting on May 21st. The argument this time is more evenly balanced than it has been since the war. Possibly not even the council is now unanimously opposed.
