DEFENCE

Mr Sandys's Children

THE three service ministries have now published their belated estimates for 1957-58, together with the usual memoranda explaining them. They have prompted the cynical comment that the Air Ministry does not seem to have read the defence white paper, that the navy has read it but is determined to pay no regard to it, and that the army thinks merely that the white paper's implications are a subject for parliamentary discussion. Like most cynical comments, this is not quite fair. The most accurate judgment is probably that, while the broad decisions enumerated in the white paper have been accepted by all three services, some of the polite phrases in it about the continuing residual importance of forms of armament to be cut are made a little politer in these memoranda; the services are applying balm to their own wounds.

The important thing is that they should not also throw up resistance against the continuing cuts themselves. The RAF's main predicament is that it must carry on with programmes which—like piloted aircraft—have now only a short useful life; the thing Mr Sandys must guard against here is any tendency to try to make those useful lives uselessly longer. The fact that the net air estimates this year are to be £10 million higher than last year is not, however, a sign that the RAF is craftily avoiding the axe; it reflects the parallel deliveries of the old and the new weapons which will continue for the next few years. The navy, whose net estimate is £25 million lower than last year, still avers in its memorandum—which takes advantage of certain inconsistencies in the white paper about the possibility of "broken-backed" conflict—that it must be ready to fight every kind of war. But there would not be much point in having a navy equipped to keep the sea lanes open in thermonuclear war if a thermonuclear war was only going to last ten minutes. The army, which is taking a cut of nearly £100 million in its net estimate, intends to cut out a lot of fat in surplus non-operational units and equipment; it has, perhaps, been less economical than the navy about this hitherto.

DOCTORS' PAY

Operation Postponed

AT two crucial meetings this week, doctors have, very wisely, deferred taking any step in support of "phased withdrawal" from the health service. Since those who attended the special representative meeting of the British Medical Association had arrived armed with all sorts of motions in support of the drastic policy previously adopted by the association's council, the change is the more remarkable—though it is not the first time that bloodletting has given way to tranquillisers at a doctors' meeting.

The reasons for this sudden change of prescription are twofold. First, in the last few weeks, the medical profession has shown itself divided both on withdrawal and on boycotting the royal commission. But this division of views became much more pronounced after the terms of a letter, dated April 26th, from the Minister of Health to the chairman of the association's council had become known. The Minister emphasised that though the commission's terms of reference could not be altered, its declared views on how they would be interpreted could be regarded as valid and that there will be full consultation with the doctors before the commission's findings are implemented. It seems to have been the receipt of this letter which prompted this week's change of front by the General Medical Services Committee (an autonomous committee of the British Medical Association, which looks after the interests of family doctors in the health service). After a close vote it put to Tuesday's conference of the local medical committees a resolution favouring co-operation with the royal commission. The conference preferred to refer the question back to their local bodies, but the proceedings were enough for the council of the British Medical Association to decide to alter its policy overnight.

As a result, decision has been deferred. The scheme for withdrawal remains indefinitely in abeyance. The question of co-operation with the royal commission will come up for decision at the association's ordinary annual meeting in July. From the speeches made on Wednesday it looked as if

Scorecard for the Local Elections

THE 1957 crop of local elections takes place next week. On Tuesday there will be polling for a third of the places on Scottish town councils; on different days throughout the week there will be polling for a varying number of seats on over 400 urban district councils in England and Wales, and similar elections for seats on a smaller number of rural district councils; then, next Thursday, there will be polling for a third of the 10,000 places on the councils of the 402 provincial boroughs in England and Wales. There are no elections this year in London boroughs, nor for county councils.

Because of the pattern of wards, candidacies, and confusing party nomenclatures, results in the Scottish and district council elections usually under-emphasise any swing of opinion in the country; it will not be a cause for surprise (or for premature Tory optimism) if the Scottish election results again present a picture of relatively few gains and losses, and if the early results from the district councils also present a picture of reasonable stability (although, most probably, with some net Labour gains). But it is the results in the provincial English and Welsh boroughs next Thursday that will be the most useful political barometer.

There seems to have been rather a muddle in some press comment about the prospects for these. Because the seats being fought this time are the seats last fought in 1954, when Labour marked up sweeping gains, it is being said that Labour cannot expect many further successes this time. But Labour marked up big gains in 1954 because when these seats had previously been fought in May, 1951—at the nadir of the Attlee Government's unpopularity—Labour had taken an appalling hammering. In 1954, Labour merely took some of those quite exceptional 1951 losses back.

The sensible way to assess the prospect is to remember that although different seats are filled in borough elections each year, the people voting are generally the same; the usual rule is that each ward has three councillors, and one councillor falls due for re-election each year. In 1953 (in seats refought last year) and 1954 (the seats to be refought this year) Labour returned almost precisely the same number of candidates (between 1,360 and 1,365, out of a possible approximate 3,300 seats in the provincial borough elections; and both these elections took place at a time when—according to the usual indicators—political opinion was probably just about equally divided in the country. In the local elections in 1955, which took place a fortnight before the parliamentary general election, Labour returned between 85 and 90 fewer provincial borough candidates than in either 1953 or 1954; immediately afterwards the general election returned a Conservative Government with a majority of 60 in the House of Commons.

It is these figures that can best be utilised to devise some sort of scorecard for next Thursday's provincial borough elections. If the Tories were in exactly as good odour as at the time of the last general election, Labour would probably show between 85 and 90 net losses in the provincial boroughs next Thursday; but it will be very surprising if they do. If the political climate is such as would return an evenly divided House of Commons at a general election, then, by coincidence, this year's provincial borough elections would probably show virtually no net gains or losses; but one suspects that Labour must surely be riding higher than that. It is the next political signpost that may therefore be the most useful to bear in mind:

If political opinion stands now approximately where it stood a year ago, Labour should again (as in 1956) be expected to gain between 180 and 200 seats net in the provincial boroughs next Thursday (and perhaps, very roughly, up to about 100 net in the district councils); most analysts assumed last year that this sort of result would accord with a trend that in a general election would bring Labour a majority of rather under 100 in the House of Commons.

According to most of the political indicators that are available, Labour ought to expect to do even better than this. The next signpost is, therefore, that Labour will need to secure between 250 and 300 net gains in the boroughs next Thursday to get back to their previous highwater mark in local elections—the Tory debacle of May, 1952 (from which, however—as Conservative optimists point out—the Tories recovered to a break-even point in parliamentary by-elections within no more than five months).

If the pre-budget parliamentary by-elections were a true guide to political opinion now, Labour might well expect to get back to or beyond its 1952 highwater mark next Thursday. But has there been a partial swing back to the Tories since the budget? One reason for supposing that there might have been is that in recent local council by-elections Labour has not done nearly as well as in previous parliamentary by-elections (but note that a lot of uninstructed Labour voters never know when a local council by-election is going on anyway).

A last point that should be made, however, is that, even if there are Labour net gains next Thursday near the top of the scale discussed here, there will not necessarily be changes of control in very many borough councils. There are no aldermanic elections in the boroughs this year; next year, when there are, the changes of seats secured this year may cause more changes in council control.

co-operation would have won had a vote been taken then. As it was, the meeting preferred not to vote until constituent members had been consulted, but it is unlikely that they, and consequently the council of the association, will persist in boycotting the commission after what has happened this week. By July the tranquillisers can be relied upon to have produced the desired effect.

EGYPT

The Canal and Sterling

THE American response to President Nasser's terms—which was in effect that he would be judged by his works rather than his words—has saved enough face for most nations to resume using the Suez Canal. However distasteful it may be to Britain and France, traffic through the canal can be expected now to climb back, though perhaps slowly, to its norm of about 40 ships a day. Because the British Conservative party is reluctant to concede the victory to Egypt, the Government is reluctant to admit the fact; but it will do so in due course.

While it still waits it has to decide how the British shipowners will pay their dues. Egypt will not accept sterling because its sterling accounts have been blocked by the controls which Britain imposed after the seizure of the canal in July. Payment in any other currency acceptable to Egypt would require amendment of the exchange control regulations, or a blind eye to their infringement. It has been suggested that, if Egypt agrees, dues could be paid in sterling to a special account which would not be blocked by Britain.

Ultimately the solution must be a substantial easing of the July controls, or their cancellation; this would take Britain a long way back towards normal relations with Egypt. It will have to be faced some time, but the Government, and perhaps the country, is not ready for it yet. Among the difficulties in the way are the questions of compensation for the canal company, of Britain's claim in respect of British property in Egypt and the Egyptian counter-claim for damages, and of the sterling balances agreement by which Britain undertook to release £20 million a year from Egypt's wartime balances in London. There are political difficulties as well: the Government will have to reckon with vociferous opposition to any proposal that unfreezes Egypt's current sterling account when so much else remains unsettled.

MIDDLE EAST

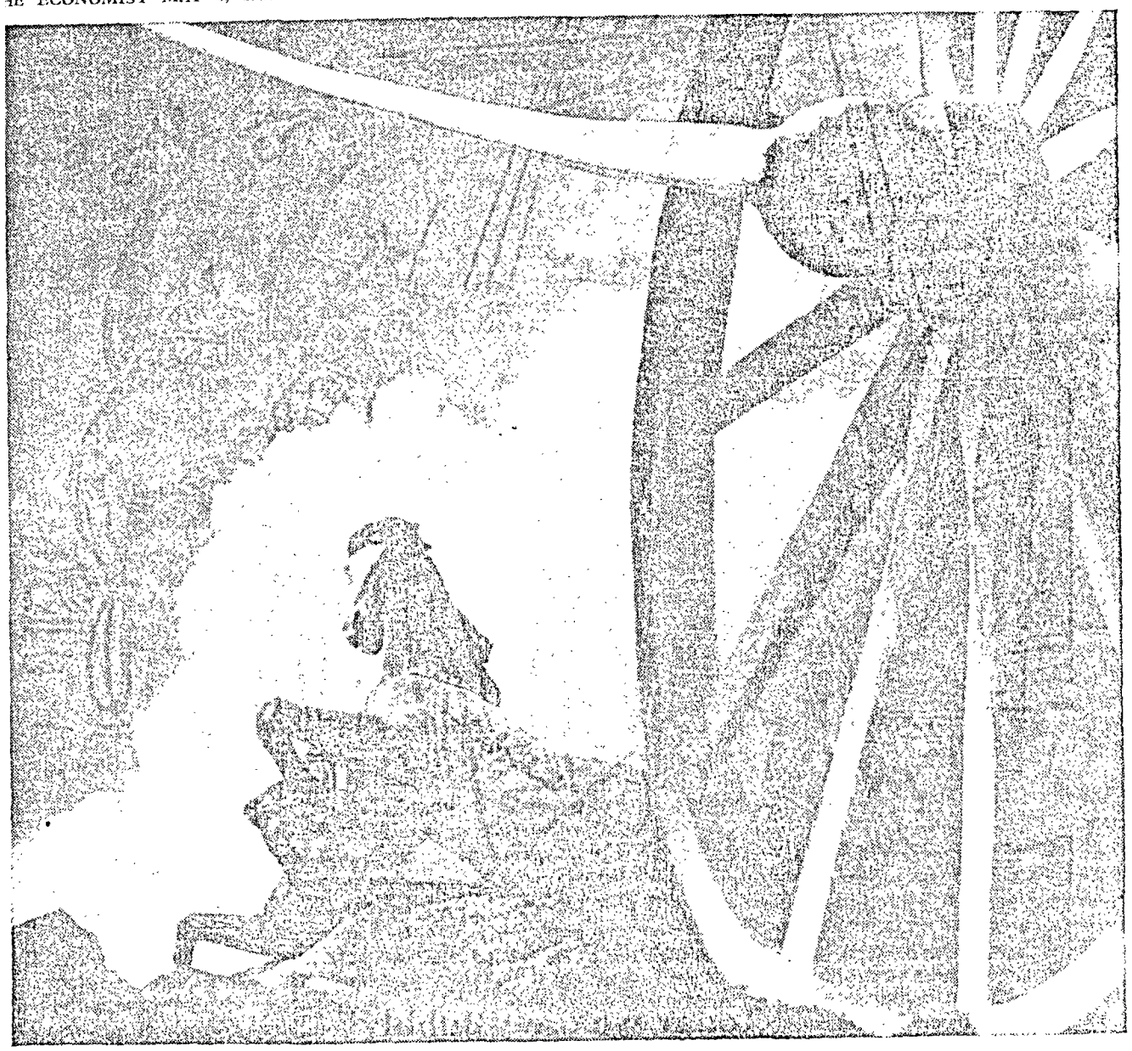
Iran Baulks Israel

IF Israel's prime object in attacking Egypt was to free the gulf of Aqaba for Israeli trade with Asia, or for a share of the transit trade between Asia and Europe, a new blow to its policy has been dealt by Iran. During April, and by working overtime, the Israelis finished the 140 miles of oil pipeline from Eilat to their railhead at Beersheba; but, simultaneously, Arab diplomats were working just as fast to deprive Israel of its only handy source of Asian oil, which is southern Iran.

The American tanker *Kern Hills*, which on April 6th delivered the first cargo of oil for the new pipe, had loaded at Abadan with oil bought from the National Iranian Oil Company. This company, though not yet itself producing enough oil to meet Iranian home requirements, is entitled to take part of its annual "stated payment" from the consortium in oil which it can either use or sell. Home political pressure to sell the oil ties in with a desire to establish a marketing network for future use, although at present Iran would find it more economic to take a direct cash payment from the consortium than to labour to earn the same sum by exporting oil. Nevertheless, it exported 456,000 tons last year, and remains an exporter.

But, as a result of Arab pressure on grounds of Moslem solidarity, the Iranian government has instructed NIOC not to sell to Israel—that is, to cut the painter with its most willing customer. The government has also made a "friendly démarche" to the 17 companies of the consortium, asking them not to sell oil to Israel either. An immediate outcome of its act will be to blight the present effort of Israeli emissaries in France and America to interest investors in a large-diameter pipeline from Eilat to the Mediterranean. If Eilat's oil supply has got to come from, say, Indonesia, a small-diameter pipeline for feeding Israel may pay its way, but a big-inch line for transit traffic will not.

ADEN



Abstinence from Qat

QAT, a mildly narcotic plant that looks like a dejected privet hedge, provided until April 1st the spirit of café society in Aden. The mass of the people chewed it to acquire a gay or sad mood, a glibness of tongue, a powerful thirst, a contempt for sleep and new energy for pleasure—and even for work. The best kind came from Ethiopia and was flown in daily from Dira Dawa. Even more dejected qat came plodding in from Yemen on camels.

Every month the 138,000 people of the colony spent £200,000 on this drug. This is equivalent to £2 10s. for every man and woman—an excessive sum for the poor people who did most of the chewing. Educated people deplored the waste, and the Aden newspapers campaigned against it. In March, the Legislative Council decided that "it was bound to cause hardship to numerous families, was a social menace and entailed other hardships," and banned it from the colony from April 1st.

The immediate effect of this revolutionary act was dulled by the advent of Ramadan, the Moslem month of fasting, during which the indulgence is particularly sinful. The majority accepted the ban as an aid to virtue. A minority quickly organised a "qat bus service," which took them nightly 12 miles to Lahej Sultanate, outside the colony and therefore outside the ban. There they collected oil lamps and sat in twilit circles chewing the cheap Yemeni qat. Traders promptly raised the price and Lahej put a four shillings tax on the lamps. For the moment, this is costly, inconvenient, and not too clean fun. The novelty will probably wear off.

The authorities were pleased to find the ban did not stir up trouble, but the real testing time began with the end of Ramadan on Wednesday. With the spur of virtue withdrawn, the Adeni Arabs will find abstinence a strain. Nevertheless, there are very many who are pleased to be released from a habit which society imposed on them, and the women, who now find there is a little money in the house, are strongly on the government's side. The betting

Quicker by chariot?

Boadicea's chariots were slow and cumbersome—one reason, perhaps, for her ultimate defeat at the hands of the well-equipped Romans.

Her strategy might have succeeded had she been able to equip her charioteers with light, fast-moving vehicles. She would, of course, have specified TITANIUM.

But TITANIUM belongs not to ancient but to modern Britain—and the future.

A high strength-to-weight ratio is only one of the invaluable properties of TITANIUM. It has outstanding resistance to corrosion; it retains useful properties at quite high operating temperatures. It can be welded, forged and machined—in fact, almost any conventional fabricating technique can be applied to TITANIUM and its alloys.

I.C.I. Metals Division is now producing TITANIUM and its alloys in all the usual wrought forms—sheet, strip, rod, tube, wire, plate, billet and forging stock.

I.C.I. Titanium—
TOMORROW'S METAL TODAY

IMPERIAL CHEMICAL INDUSTRIES LIMITED, LONDON, S.W.1
TM3

Today we use "Bubbly"

WHEN THE VIKINGS launched their galleys they sacrificed slaves to placate the sea-gods and protect blond warriors from the hazards of the storm. The Greeks and Romans had better use for their slaves, and were content to splash their ships symbolically with red wine. Today we still observe this age-old rite of protection when we crack a bottle of champagne over the bows.

For the modern manufacturer, launching his product into the seas of competitive selling, protection has a less spectacular, more practical meaning. Millions of tins, jars, bottles, and millions of cartons made from "Thames Board", filled daily on countless production lines, flow to shop shelves protected by stout "Fiberite" cases. Such modern packaging is an insurance for the good name and sound condition of any manufacturer's product.

THAMES BOARD MILLS LIMITED

THE LARGEST MANUFACTURERS OF BOARD AND PACKING CASES IN BRITAIN

Purfleet, Essex (THAMES BOARD) *Warrington, Lancs*

"THAMES BOARD" for cartons, boxes, bookbinding, etc. "FIBERITE" Packing Cases in solid or corrugated fibreboard

in Aden is that the ban has come to stay but that there will be some smuggling.

The courageous decision to ban qat was taken on the initiative of the four elected members of the Legislative Council. Without their unanimous support the government would hardly have dared to challenge an ingrained habit of the people. It is a small but useful demonstration of the value of elected members in colonial legislatures.

EGGS

Rotten for Denmark

IT would be hard to find in the history of commerce a more blatantly irrational trade-flow than that of subsidised British eggs to the continent of Europe. The British hen's response to the precocious spring of 1957, and the British farmer's response to a guaranteed price of 4s. 1¼d. a dozen, have between them produced a flood of eggs which, even at retail prices in the neighbourhood of 2s. a dozen (compare the 8s. a dozen prophesied at derationing) cannot be absorbed by the home market. The surplus, during the three months December to March, was reported in a Parliamentary answer as amounting to some 13,000 boxes (each of 360 eggs) and was exported to 21 countries—by far the most important being Western Germany, with the Netherlands, Switzerland, France, and the Irish Republic also taking substantial quantities. The economics of this trade, even from Britain's point of view, are worth close scrutiny. As (under the inefficient British system of feeding hens) about two-thirds of the cost of producing eggs is normally the cost of (mainly imported) feedingstuffs, and as the eggs are being sold at little more than half-price, the foreign exchange cost of the imported grain that is being fed into many British hens must be more than the foreign exchange value of the eggs that come out of them—and the British taxpayer is paying farmers a subsidy of some 2s. per dozen for supervising this curious exercise of turning an imported commodity into a less valuable exported one. All that can be said for this trade is that it is not quite such a bad bargain for the taxpayer as dumping the surplus eggs in the sea.

Not unnaturally, however, the fact that the eggs are being dumped in Europe instead of in the sea has annoyed the Danes. Danish egg producers have endured with remarkable patience the loss of 85 per cent of their once all-important British market to domestic competitors barely capable—on the evidence of their own spokesmen—of breaking even at an off-the-farm price just double that received by Danish farmers. That loss has up to now been compensated by increased sales to the rest of Europe and especially to the prosperous west German market. Now the European market is itself worse than threatened; during March, sales of British eggs in western Germany virtually equalled those of Danish eggs. A Danish protest that these sales contravene Article XVI of Gatt (which "recognises the harmful effects of subsidies on exported goods") has been met by the highly legalistic rejoinder that exports are not being subsidised as such, and by a reassurance that British hens must surely soon become less prolific. But the proper remedy is to subsidise fewer British farmers to keep fewer British hens; it is not sensible to be actively wishing that the productivity of British hens would please go down.

CHURCHES

Bishops in the Kirk?

THE proposals for closer relations between the Anglican and Presbyterian Churches are an appropriate subject for lay comment; they are certainly getting it in Scotland. The first point to be made is surely that although the churches should be encouraged to move as far forward as they can towards an authorised interchange of communicants, the so-called split between them—the fact that different churches, even outside the Roman Catholic communion, occasionally try to proselytise members from each other—is not necessarily a bad thing. People have different ideas about how they prefer to worship, drawn too much from their inherited family tradition and too little from their own conscious thought; a mild competition between the churches in some areas can keep Christian activity more alive than would a "unifying" attempt to put everybody under one mitre.

Preferably, therefore, the proposals made this week, after inter-church discussions under the chairmanship of the Bishop of Durham, should be judged according to the contributions they could make towards more efficient organisation within the Anglican and Presbyterian churches themselves. The main suggestion for the Anglican church is that lay members might be given more participation in the government of their church at all levels. The ordinary non-conformist is always surprised that they have not got this already, but lay government can go too far. The subjection of a clergyman to his local churchwardens or elders can sometimes have rather the same danger as the subjection of an MP to his local (and extremist) party organisation, or of local trade union policies to shop stewards.

But it is the big change in terminology, and smaller change in organisation, proposed for the Presbyterian church that will arouse more controversy. If the argument were simply that the Presbyterians would be wise to replace moderators who change by rote by more permanent dignitaries, many liberal Presbyterians would be inclined to agree; if the argument were that, to facilitate interchange of communicants with the Anglicans, these dignitaries should amicably agree to a ceremonious laying on of hands by Anglican bishops, to preserve the historical beauties of the Apostolic Succession, it would be churlish to object. But it is surprising how many liberal Presbyterians—even while recognising that they are being irrational—will find that their private sticking point is the proposal to call these Presbyterian senior ministers bishops, or even bishops-in-presbytery. In the real split between low church and Anglican church attitudes—the pomp and circumstance which Anglicans regard as a display of beauty for the greater glory of God, and which older Presbyterians regard as near-idolatry and even younger ones regard as play-acting in serious concerns—the bishop in his robes has long been one of the most potent symbols. The ordinary Scot will find it surprisingly difficult to get himself, let alone his grandfather, to swallow this. The misfortune is that if only the Anglicans would agree to regard the proposed Presbyterian dignitaries as bishops, and if only the Presbyterians could call them almost anything else, there would not be nearly as bitter an opposition in Scotland as is now likely to be aroused.

THE LAND

Wasted Acres

ABOUT a third of the surface of Britain—some nineteen million acres—consists of remote moors and uplands. Until the war these areas were growing steadily less productive and fertile. Since 1945 their decline has been partly checked by the generous subsidies paid for the rehabilitation of hill farms and, in a few lucky areas, by the large planting programme of the Forestry Commission. But most of these hill lands still produce very little, and the local population—not only in Scotland and Wales, but over much of England—is still declining at a rate which makes the provision of modern services exceedingly costly. Antiquated schools and suspended bus lines (not to mention the disappearance of many an Emett-like railway branch line) foreshadow the likelihood of further cumulative decline.

Does this matter, or should something more—or something different—be done to rescue all these wasting acres? A recent report by the National Resources Technical Committee (HMSO, 4s.) believes that something should. The committee emphasises the potential output of these hill areas. For example, it says that the improvement of 3¼ million upland acres should enable 400,000 more store cattle to be kept and beef imports to be cut (if necessary) by a third. It has an even greater enthusiasm for afforestation, which it regards as a very sound "import-saver."

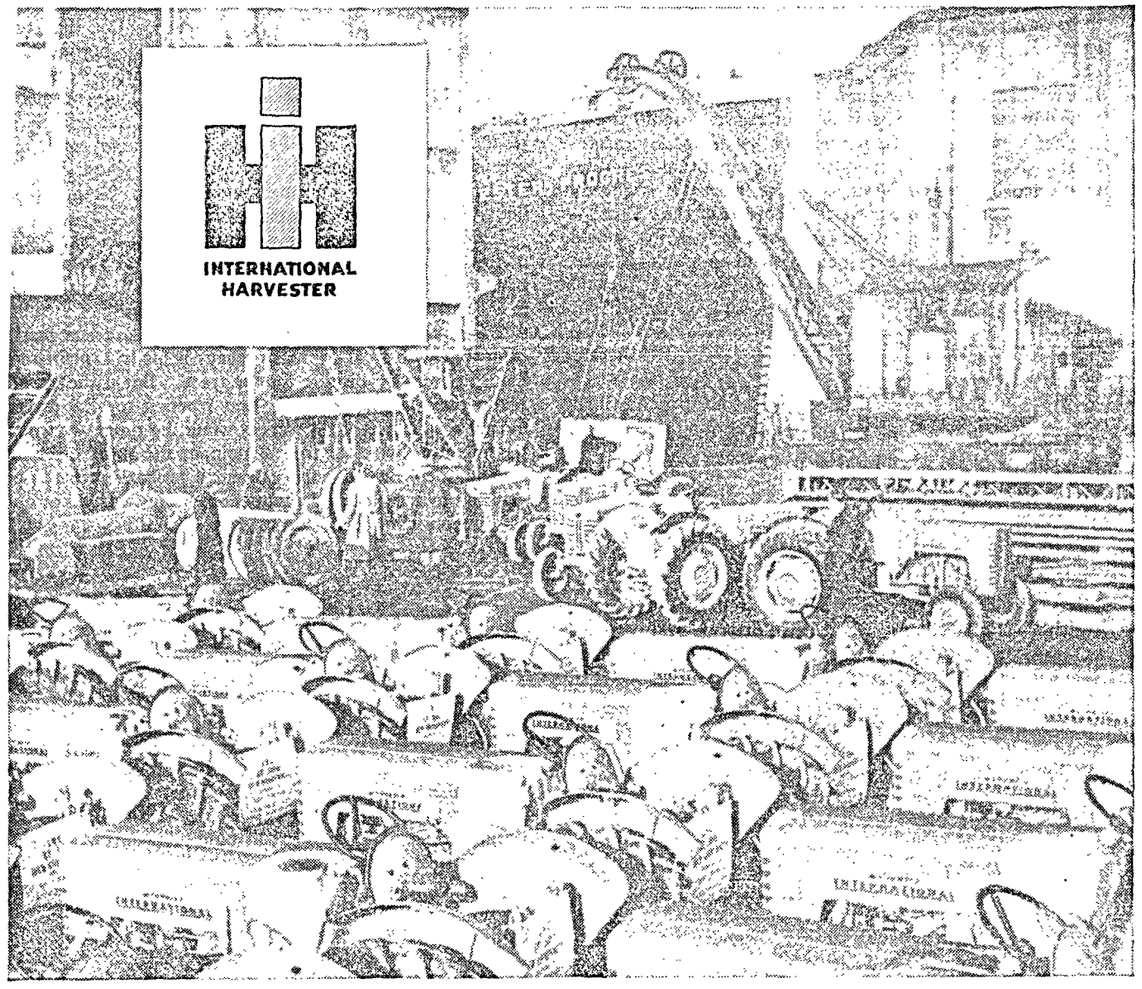
Economically, these arguments are highly ingenuous. The report smacks far too strongly of the idea of "import-saving" at any cost, and the case for sinking money in marginal land for a low return is quite inadequately substantiated. A case may nevertheless exist. It is not simply (as the report does point out) that hill farming and lowland agriculture are essentially complementary, with the hills rearing livestock for fattening on the plains. There is the further point that the present marginal lands of Britain may eventually be relied on, quite reasonably, for an appreciably higher proportion of total agricultural production, as a consequence of urban growth and as a preferable alternative to present costly methods of protecting farmland. The gradual and careful rehabilitation of hill farms, envisaged in the Hill Farming and Livestock Rearing Acts, has much to commend it—on two conditions. One is that Government aid should be coupled (as it is in Sweden and Holland) with an insistence upon the reorganisation of farm boundaries and units. The other is that there should be proper joint planning of farming and forestry in these areas; there should be more careful plans for the integrated use of marginal land, such as that recently produced for mid-Wales—plans with which the Forestry Commission and other bodies should be required to comply.

EUROPE

Cold Welcome for the Grand Design

THE Council of Europe has given a chilly reception to Britain's scheme for a single European assembly. Years of British equivocation in Europe, followed by the Egyptian adventure and then by the arbitrary reduction of British troops on the Rhine, have left a deep distrust on the Continent of British intentions, and this has reinforced the practical objections to the "Grand Design." Could an assembly which, in the British scheme, might contain American and Canadian representatives, effectively supervise the European organisations? Could the neutrals, like Sweden and Austria, come into an arrangement which covers defence? The assembly proposed by Britain would not—at least at the outset—be given definite powers. But the six common market countries have decided upon a supranational assembly. They ask whether the new plan is merely a plot to water this down.

In practice, something on the lines of Mr Selwyn Lloyd's scheme may be inevitable, if the free trade area comes into being beside the common market. The institutions of the two overlapping groups will have to work together closely, indeed virtually as one. And more and more the growing European organisations will require effective parliamentary scrutiny. Yet the practical criticisms of the Grand Design in its present form are cogent. To combine a loose North Atlantic parliamentary link with a much closer European one will be difficult. A special constitutional arrangement would be needed to keep defence separate. The problem of fitting the assembly of the Six into the larger one is so delicate that Britain might best concentrate at present less on the parliamentary aspect of the scheme than on the practical need to bring the many executive European bodies together in one place.



After years of hesitation in Europe, Britain can in any case hardly expect an unqualified European welcome for a new British political design, which in some respects does not go so far as the Six wish to go themselves. The Europeans will want first to see proof of British sincerity in practice. That means pushing ahead with the free trade area, working together more closely on defence, and sharing atomic knowledge. From these activities, the necessity of something like the Grand Design should emerge.

NATO

Blackball from Oslo

THE Spanish government and its press seem to have been expecting an early American move to bring Spain into the Atlantic alliance. Hr Gerhardsen's brusque intimation that Norway for one would not hesitate to blackball a Spanish candidacy appears to have come as a real shock to them. Perhaps the idea that Nato really does operate by unanimous agreement has never got through to Madrid, where the element of consent has never had a prominent place in official thinking.

The case for admitting Spain to the alliance may look a strong one to amateur strategists conning the untidy map of Europe, to some Mediterranean Nato governments which have never been able to understand their allies' distaste for General Franco's regime, and to the Atlantic Council's hosts this week in Bonn. But the case against admission is overwhelming. One need not be too spiritual about it. Spain has long since ceased to be treated as an outcast, and it already has a part in western defence planning by virtue of its agreements with America and Portugal. Yet what would its admission to Nato contribute to that organisation's assets? The Franco government is still, after nearly two decades of power, unable to make itself acceptable enough

DOLLARS FOR BRITAIN!

These tractors, proudly marshalled on the dockside at Manchester, are International Harvester B-250s—a few of the thousand comprising an initial dollar order for Canada—almost as many tractors as the entire total of all types and sizes shipped to Canada from Great Britain in 1956.

In highly competitive markets in all parts of the world, International Harvester equipment is being increasingly acclaimed. Speaking of the B-250 tractor, the President of the International Harvester Company of Canada said:

"This small tractor fills a definite need long expressed by many of our customers. We are happy that British manufacturing and research skill has permitted us to give better service to our customers and, at the same time, to increase trade between our two countries."

International Harvester is proud indeed that the B-250—the most advanced British medium-weight wheel tractor on the market to-day—is increasing productivity both at home and overseas and helping to strengthen our national economy.

INTERNATIONAL HARVESTER COMPANY OF GREAT BRITAIN LIMITED, HARVESTER HOUSE, 259 CITY ROAD, LONDON, E.C.1

to its own people to contemplate the future with any assurance. Its continued existence is grudgingly tolerated, its end eagerly awaited—and nobody can be sure what will follow that end. A regime that has failed to co-exist amicably with the Spaniards themselves would be a decidedly uncomfortable partner for its democratic neighbours. Neither Nato's morale nor its reputation could be unaffected by such an accession to its ranks. It is already a reflection on the more powerful members of the alliance—including Britain—that one of their smaller partners should feel compelled to make a solitary stand in public against the Spanish accession.

KASHMIR

The Jarring Version

CHANCE had it that the president of the Security Council in February, when it debated Kashmir, was a diplomat from alliance-free Sweden with personal experience, not only of service in Delhi and Karachi, but also of the hills and valleys of the disputed state itself. The costliest electronic brain in the world could not have selected a more suitable United Nations envoy to India and Pakistan than Hr Jarring. His report on his mission is a frank confession of failure which does him credit. He records the two governments' antagonistic attitudes and does not try to pretend that there is any point in further efforts by any UN representative until those attitudes change.

Such frankness is all to the good. Admittedly it may lead some people to conclude that the Kashmir problem is insoluble. Indian apologists have hastened to encourage that conclusion by seizing upon every sentence in the Jarring version which could be read as implying approval of their government's rigidity. Pakistan's next move awaits Mr Suhrawardy's return from Japan and possibly his imminent tussle with East Bengali dissidents ; but it is only a question of time before it comes. Another dreary exchange of legal sterilities, selective histories, and arguments of head-splitting ingenuity lies ahead ; and beyond it another, and another. How much longer can two nations whose vital interest is to live together in friendship stand the strain of this quarrel ?

CATTLE EXPORTS

Beastly for Cows ?

AN uncompromising British zeal for the protection of animals is the dominant note struck by the report of a committee which has been inquiring into the export trade in live cattle (Cmnd 154). The origins of this trade do not provide a very good basis for a display of national self-righteousness. It was because British slaughterhouses did not satisfy the standards demanded by an American army contract that live cattle were first shipped to Holland for slaughter. This transaction attracted the attention of continental buyers, and last year quite a brisk trade developed in the export of live cattle to Holland, Germany, and France.

To reduce the suffering which long journeys initially entail for cattle the Government has already stipulated that they must be rested for ten hours, and watered and fed, at the port of embarkation. The committee proposes a number of additional regulations for reducing the animals' discomfort and for ensuring that no unfit beast is made to travel. These are sensible and humane. But the committee's solicitude for the cattle then extends beyond both reason and national frontiers—to the extent of suggesting that no beast ought to be made to endure a long continental train journey on top of its other travels. Accordingly, it wants to ban live cattle exports to any save small and accessible countries, and also to any country whose methods of slaughter are less humane than Britain's. Both stipulations would rule out exports to France.

It would be pompous to say that this sort of discrimination might hurt French susceptibilities as much as the journeys have sometimes hurt the cows. In itself, the live cattle trade is not particularly important. It consists largely of unsubsidised cows, whose poor appearance in the Bordeaux market compared with local animals perhaps helps to explain some British observers' distaste for the trade. But if the French retain their Gallic wit, their best reaction to any governmental acceptance of this report would be promptly to ban the import of live cattle from Britain, on the quite reasonable grounds that British railway wagons probably cause more bruising to cattle than do continental trains. It is not only the French who are beastly to cows.

FRANCE

Visitor-Shy Algeria

GROWING numbers of Frenchmen are perturbed by reports of atrocities committed by French troops and police in Algeria. To stem this tide of moral indignation the government promised to appoint a commission of inquiry designed to check the truth of all such allegations. Before the members of this commission were nominated, however, the Radical friends of M. Mendès-France had decided to send a small group of their own to probe the facts on the spot. Since the Radical envoys were known not to share the gospel of extremist settlers that (to quote Professor Duverger) the guilty men are not those who commit crimes but those who denounce them, a campaign of intimidation was immediately launched in Algeria to prevent their journey. It reached such proportions that the minister resident, M. Lacoste, warned the prospective travellers that their visit would tie up thousands of soldiers to ensure their personal safety. Under this pressure the Radicals put their visit off.

The delay in itself would not be a grave thing, but it is a bad omen for the prospective official commission of inquiry. The settlers learnt in February of last year that riots could force M. Mollet to capitulate. They can use the threat of similar methods—burning down hotels or blocking the streets—to prevent the inclusion in the commission of any member opposed to their views. In the circumstances, too, witnesses will also need extraordinary courage to testify.

FINLAND

A Prime Minister Wanted

FINNISH politics are normally in a state which would be headline news in any other country. But now that the prime minister, Mr Fagerholm, has resigned, even the Finns recognise that the situation is a little out of the ordinary. Mr Fagerholm was defeated in a contest for the Social Democratic party presidency by 95 votes to 94. The faction

that voted for him is no longer represented on the party's executive committee because its leaders refused to accept less than seven seats out of fifteen. It is not surprising that the prime minister feels his position to be impossible.

The new president is Mr Tanner, the founder of the party, a veteran politician who was made a scapegoat for Finland's alliance with Germany in the last war. In 1946, to placate the Russians, he was convicted as a war criminal and imprisoned for five and a half years. The Russian press has been conducting a virulent press campaign against him since it became known that he would run for the party presidency ; and his election, even if he does not become prime minister, will produce some embarrassing moments if Mr Bulganin and Mr Khrushchev carry out their intention of visiting Finland early in June.

Quite what the original split was about nobody seems to know—least of all the Finns. Factions within the Social Democratic party are caused by habit and personal rivalry, and although Mr Tanner claims to differ from Mr Fagerholm in matters of policy, the difference has not yet been defined. Possibly long-suffering Mr Fagerholm will consent to return to his thankless task. The Farmers' League, the second major party in the coalition, has threatened to leave the government if Mr Tanner or Mr Leskinen (the effective leader of Mr Tanner's faction) is offered the premiership ; and the country's economic position is too weak to allow of using economic concessions to induce either the Farmers or the powerful trades union congress (SAK) to support Mr Tanner's faction.

THE VATICAN

Three Pilgrims

NOW is the busy season for protocol at the Vatican. The Pope's reception of Grace, Princess of Monaco, has naturally caught the public's eye, but the Pope has more important, if less photogenic, guests calling on him this month of May: M. Coty, the President of France, and Cardinal Wyszynski, the Polish primate.

M. Coty's reception will be the more formal. The head of the French state is bound to visit the Vatican when on an official trip to the Italian capital ; this is one of the conventions established between Paris and the Papacy since the Concordat between the two was dropped and the Catholic Church separated from the French state more than half a century ago. There are persistent rumours in Paris that M. Coty's visit is destined to prepare the ground, if not actually for the signing of a new Concordat, at least for some concessions to the Church. It has been whispered that M. Mollet, leader of an anti-clerical party, would ask the Pope, in exchange, to restrain Catholic zeal against French conduct in North Africa. Such insinuations are denied by both sides, and it can fairly be assumed that this official visit will not bring any immediate results.

Cardinal Wyszynski's trip, on the other hand, is much more urgent. It is his first contact with the Holy See since his release from forced residence last year after the advent of the new political regime in Poland. Since then the two sides have struck a bargain: the Church was granted important concessions, chiefly the reintroduction of religious instruction in the schools ; for his part, Cardinal Wyszynski has given Mr Gomulka's experiment his blessing. The question now is whether the Pope will give his blessing to a compromise with a relatively tolerant communist regime.

CENTRAL AFRICA

Sir Roy's Bludgeon

THE innocuous vagueness of the statement issued after Sir Roy Welensky's London talks with Lord Home and Mr Lennox-Boyd has been rather marred by Sir Roy's subsequent pugnacity. But his boast at a Salisbury press conference that the London agreement has put paid to the " half-baked ideas " which a future British Labour government might try to impose on the Central African Federation was probably an attempt at diversion: the white electorate have been expressing dismay at how little he has brought back for them. The possibility of a Labour victory at the next elections is the bogey of European settlers in east and central Africa, and there is mounting urgency in their pleas for continuity in colonial policy. British Labour leaders have rejected the idea of a bipartisan approach to colonial affairs, but in this case they may have welcomed Sir Roy's forthrightness. His statement reveals nothing fresh, but it acts as a warning to African nationalists in the federation that the actions of a future Labour government may fall short of the views now expressed by Labour's left-wing.

The question of constitutional advance has been sensibly shelved until 1960, when it was due for reconsideration in any event. The Federal Assembly is to be enlarged, but the future balance of power between the races has not been specified. The one real step which Sir Roy has taken towards the federation's independence is his agreement that a " reasonable number " of British-protected citizens should be allowed to vote in federal elections: these are Africans in Northern Rhodesia and Nyasaland who retain their British status. He has been fiercely attacked by his white opposition for making this concession. But it would have been unthinkable for the federation to have moved towards self-government while 4 million Africans in Northern Rhodesia and Nyasaland did not even have the right to qualify for a federal vote.

TRADE UNIONS

Smoke Among the Firemen

A MAJOR row has flared up among the members and ex-members of the controversial Fire Brigades Union. Both the general secretary, Mr John Horner, and the assistant secretary, Mr J. Grahl, resigned from the Communist party after the revolt in Hungary—a gesture that possibly did something to revive their prestige with their members. But unfortunately they seem to have fallen out with each other. Mr Burns, the president, circulated to executive members a document accusing Mr Grahl of uses of union funds that he considered to be improper ; later Mr Grahl resigned, on grounds of ill health—but for some reason the executive has agreed to pay him (although he is no longer an employee of the union) sick benefit up to a maximum of something over £900. He himself made no counter accusations, but a colleague on the executive, Mr Leo Keely (another ex-communist), circulated to area officers and district secretaries a document in which both Mr Burns and Mr Horner were indicted. Mr Keely has now been " dismissed " by the executive—a curious action since he is an elected member. Now Mr Sidney Withers's nomination for Mr Grahl's old job has been vetoed by the executive

because, as a national officer, he did not inform them of the intention to circulate the accusing documents.

It is impossible for an outsider to pass judgment on the truth or untruth of charge and counter-charge. But one thing is plain: an inquiry into this union ought now to be invited. The question is, who should do the job. At the Easter conference of the Communist party one delegate, himself an ex-officer of the Fire Brigades Union, thought that the party executive should look into the leadership of a union which he did not specify, but which he evidently felt reflected no credit on the party. The Salford branch of the Fire Brigades Union, on the other hand, is putting forward a resolution for the union's annual conference in June that an independent Labour party committee should investigate "the administration and financial position of the Fire Brigades Union over the past five years." But the right body to conduct an inquiry is undoubtedly the Trades Union Congress. If such a demand is made in an emergency resolution, it should be debated, passed and then accepted by the TUC; the demand should not be fobbed off whether or not libel actions are then being thrown between executive and ex-executive members.

The Economist

MAY 2, 1857

RIGHT REPRESENTATION

NOW what we want in a representative assembly is not merely an index to the most powerful forces of the national life, but a full expression of that life itself. We want the Nation to be organically represented by the State. We want to see in it not simply the organs of the greater social interests, but the organs of all interests which are of vital importance to the well-being of the nation. What is most of all to be dreaded in a hasty reform is, that uniformity of representation may take the place of a healthy variety—that the smaller interests may be drowned in the monotonous reduplications of members who represent the numerically larger interests. No doubt it is idle and mischievous to maintain that a system of representation which suits one generation will fairly express the mind of another. But what is to be avoided in preparing the public mind for any great change is the injurious notion that classes stationary in numbers must lose their voice in the national councils, in order to leave room for a fuller chorus from the classes which are increasing in numbers. Let us not be misunderstood. We desire nothing more than to see those larger classes, not yet adequately represented, receive their share of influence. But let it not be laid down that that share of influence ought to be in proportion to their numbers. This is the radical evil of a democratic constituency, and sincerely as we believe that the time is not far distant when some new modifications must be adopted into our representative system, there is no object we have more at heart than this—that before such a change takes place, the country should clearly understand that they ought not to aim at indefinitely extending the parliamentary representation of classes in proportion even to their social weight, but rather at securing a fair influence to those who are in danger of being outnumbered in the constituent bodies. . . . Our safety lies in the various play of mutual influences which our various classes exercise on each other. . . . There is a reserve of power in the English people which they are wise enough never to put wholly forth into their political organisations. . . . A new and vivid political interest calls forth a whole mass of unused force which to the surprise of everybody changes the whole face of the political world.

EUROPEAN TRADE

New Pilot for ECE

THE job of executive secretary of the United Nations Economic Commission for Europe requires special qualities, which Professor Gunnar Myrdal, who is retiring from the post after ten frustrating years, possesses. It is not his fault if the body that alone amongst European organisations seeks not to develop eastern or western Europe, but to join the two, has failed in its broader purpose.

Professor Myrdal has always had a dual sense of mission—a political vision of the need to bring east and west together, and an economist's vision of the greater wealth that Europe could enjoy if greater trade joined the developed west to the young, developing east. And ECE has quietly made a larger practical contribution to east-west trade than is generally realised. For some years, for instance, its committees played a useful part in the allocation of Polish coal and timber. And a committee under its auspices has just produced a standard code for engineering contracts in both east and west; this should overcome a chronic obstruction to trade in capital equipment between the two. Myrdal's ECE has less tangible achievements to its credit too. At the height of cold war, it was one of the few points where economists from east and west could meet and discuss at ease. And it has been a valuable source of economic information about both worlds.

Professor Myrdal's successor, Mr Tuomioja, once Finnish Ambassador in London and a former Prime Minister of Finland, is well fitted to carry on these tasks. He is not only a hardheaded and shrewd economist. Finland is perhaps unique among non-communist countries in its experience of trade with Russia, its drawbacks and advantages. ECE's main positive function has always been connected with trade between the satellites and western Europe; and it may grow in importance in the next few years. ECE has a part to play, for example, in Poland's search for long-term coal contracts in the west in exchange for credits. And it might well be a channel for western aid to Poland, free from political embarrassment to either side.

SHORTER NOTE

In a note last week, it was said that the Ministry of Power, by issuing a statement about petrol rationing, seemed to be "peevishly pretending that it could largely rely on spot checks and petty prosecutions" to stop illegal off-the-ration sales. Although what purported to be an official warning from the Ministry was printed in several daily newspapers, we have since learned that all that really happened was that an agency reporter rang up the Ministry and asked what they were going to do about off-the-ration sales; he was reminded, not unnaturally, that they had the power to prosecute. In common fairness to the Ministry, it should be said that our comment last week would not have been so critical if we had known this background. The point that no rationing scheme could ever be enforced by "sending round an army of coppers' narks" stands; the allegation that the Ministry was ever silly enough to pretend that it could falls, thank goodness, to the ground.

LETTERS

No Reasons Why

SIR—You may call me a "booby" as long as you like, but you should not falsify the facts about shops legislation.

1. You again make vague references to "other countries" which enjoy the "freedom" of a "liberal" regime where shops can stay open all night. I understand your reluctance to name them, because your principal ally in Europe is General Franco if the communist dictatorships are excluded. Outside North America all the progressive countries in the world have shops legislation more advanced than that proposed by the Government, e.g., Norway, Sweden, Finland, Denmark, Holland, Austria, Germany, Australia and New Zealand have general closing hours by law ranging from 5.30 p.m. to 7 p.m.

2. Your second paragraph is a downright falsification of the history of shop closing hours in every country in the world, including America. A kind of "Gresham's Law" *does* operate: the "rogue elephants" *do* compel their competitors to keep open. You say that present practice in Britain proves your point. It does not. From 1939 to November, 1952, 6 p.m. closing was enforced under the Winter Closing Order. Since then the brakes on a return to prewar conditions have been (*a*) local authority orders of 7 p.m. closing, (*b*) trade union vigilance and the resistance of staff and working shopkeepers, and (*c*)—decisively—inflation, which blunts the competitive struggle.

3. Your references to America are most misleading. Please read the Anglo-American Productivity Team Report as a corrective to your doctrinaire myopia. If the correct comparisons are made between the relative positions of shopworkers in the advanced countries of Europe and America, the latter is not the Eldorado of labour conditions you would have us believe. Shop managers in particular work very long hours, usually a six-day week, and often have no half-day. Moreover, you omit the cost of long shopping hours to the consumer. In the food trades all the economies of self-service and supermarkets are swallowed in additional costs, mainly labour costs. In the non-food trades the American system is much more expensive than the British. Precise figures exist for the large department stores, which show that retailing costs are about 4s. in the £ in Britain and over 7s. in the £ in America. Again labour costs are a major factor. A restoration of the prewar shopping hours of Britain would cost 6s. to 7s. a week for the average family. The introduction of the American system would be even more costly.—Yours faithfully,

WALTER PADLEY
President, Union of Shop, Distributive and Allied Workers
House of Commons

An Account of Shop Stewardship

SIR—In your issue of April 20th, in the last paragraph on page 208 you say, "The boot and shoe industry is notable for peace and so, since the war, are the iron and steel workers."

I am a little intrigued at the words "since the war," assuming you mean the 1939-45 war, and am wondering what incidents prior to the last war prompted this qualification in view of the fact that there has been no major disturbance in the steel industry in this country for the past half century.—Yours faithfully,

H. DOUGLASS, General Secretary
Iron and Steel Trades Confederation

Chile's Legal Dictatorship

SIR—In the edition of your paper dated April 27th there appears an article based on information received from your correspondent in Santiago, which constitutes a violent and unwarranted attack on the government of my country.

The article states that, in order to put an end to the disturbances which recently occurred in Chile, the government of President Ibañez exceeded its constitutional powers, victimising by arrest, imprisonment or deportation to concentration camps, numbers of trade union leaders, journalists and others. Furthermore, the situation is described as being one of chaos, corruption and maladministration in general.

It would seem that you have been misled by your correspondent in Santiago in allowing to appear in your columns a picture of violence and mob hysteria quite uncharacteristic of the Chilean people and which does not correspond at all to the actual facts.

In view of this, I would ask you to take note of the following corrections:—

1. The recent disturbances in Chile were not general, and affected three cities only; they were instigated by extreme left-wing elements, especially the Communists.

2. All political parties, including some in opposition, and the country itself were solidly behind President Ibañez, and the National Congress accorded him immediately the extra-constitutional powers for which he asked.

3. These extra-constitutional powers were expressly renounced by the President as soon as it was seen that the disturbances had no popular support and were solely the work of small groups of extremists.

4. The Parliamentary elections in March last were freely carried out within the Constitution and in conformity with the democratic standards which have always characterised the Republic.

5. The anti-inflationary measures of the government have not only put a curb on rising prices and stabilised the currency, but international financial circles, particularly the United States, have shown their confidence in this policy by their reactions towards it. The government of the United States has supported it with stabilisation loans and the International Bank has recently provided the credit necessary for the development of a plan to stimulate industry and transport.

6. The situation is now completely normal and the life of the country proceeds in an atmosphere of mutual understanding between government and people.—Yours faithfully,

ENRIQUE BALMACEDA,
Ambassador
Embassy of Chile, London

New Age Banking

SIR—In view of the comments of a correspondent in your April 13th issue on the undesirability of adapting computers to an involved currency, it might perhaps be pointed out that difficulties of this type could be easily avoided if people responsible for keeping accounts could be persuaded to record them in florins and farthings as a decimal. Interconversion is simple and inaccuracy due to the approximated farthing negligible. It is open to anyone to record his accounts independently on this decimal basis, and such a change could, of course, be introduced in accounts and price lists immediately and unilaterally by anyone with a sales monopoly and presumably also, with advantage, by all exporters.

As a corollary of the simplicity of this change it would appear that English coinage is substantially decimalised already and that the only additional coin necessary in the series £0.1, £0.05, £0.025, £0.01 and £0.005 is a coin with the value 0.1 florins. It is obvious that a reform of the coinage itself could be carried through at once by withdrawing the anomalous half-crown and the ugly threepence and revaluing the penny by law to 5 farthings. Minting of the missing 0.1 florin coin could follow at leisure. The natural anxiety of most people to avoid the loss of the extra farthing would force the change through very rapidly and the face value cost would be spread about as evenly as the present supply of pennies.—Yours faithfully,

B. R. THOMAS
Stockholm

BOOKS

Hungary in the Balance

October Fifteenth: *a History of Modern Hungary 1929-1945, Volumes I and II.*

By C. A. Macartney.
Nelson for Edinburgh University Press. 509 and 519 pages respectively. 84s. for both volumes.

IN these two volumes Professor Macartney has woven, closely and intricately, a gigantic piece of historical tapestry. Its fluency and eloquence are marred here and there by odd, unexpected slang phrases, the more regrettable because in every other way his work will survive the tests of time. The rich texture and the pattern of "October Fifteenth" are enhanced above all by its characters, here depicted with the perception and rhythm perhaps rather of a great fresco painter. These representations include everyone from Horthy to Szálasi, but it is the account of Count Pal Teleki which will remain most insistently in the reader's mind.

> His Transylvanian ancestry and his studies had imbued him with a fixed belief that the only possible policy for Hungary was one of "balance"; a concession to one side must always be balanced by a gesture to the other, or else by a counter-move of reinsurance. He did not always realise how much of substance there was in what he thought a mere gesture of form, nor did he fully appreciate the difficulty of spinning several threads at once; more than once they got tangled in his hands, and at the end, fatally. There were even times when, strangely enough for a man of such lofty moral character, he let subtlety approach perilously near double-dealing. . . . When things got very difficult, he sometimes let himself be stung into sudden action of which he did not always foresee the final consequences; sometimes he would relapse into fits of fatalistic pessimism, in which he merely let things drift and watched them drifting.

There is indeed nothing very simple about the Hungarians or their history during the period with which Professor Macartney deals; as he shows us repeatedly, all the simple interpretations break down when subjected to serious analysis. Those already familiar with an outline of the facts have often, it is certain, asked themselves where people like Gömbös and Szálasi really stood since the facts readily accessible were often contradictory. Such questions are as fully answered as they can be in these pages. When Gömbös visited Berlin in September, 1935, we now learn that he signed a secret personal agreement with Goering: "it seems to have included at least an undertaking to introduce in Hungary . . . a political system closely resembling the German; possibly other engagements were assumed." As for Szálasi, it becomes plain that his "Hungarism" was so extreme that the Germans only fell back upon him as a last resource; it was unjust to regard him as their agent until then.

No one with any knowledge of Hungarian affairs will have failed to understand the tragedy of Hungary's geographical position in the second great war. If its outlook after the Treaty of Trianon was always somewhat distorted by revisionist nostalgia, yet to have to steer between the German Scylla and the Russian Charybdis was a fearful undertaking; it was performed for two years with something like virtuosity by Kállay as Minister President. When Horthy reluctantly gave way to Hitler and agreed to dismiss Kállay in March, 1944, he at least prevented "Operation Margarethe II," according to which the Rumanians, Croats and Slovaks would have marched into Hungary with the German troops and dismembered it completely. Horthy himself told Professor Macartney that when Hitler announced his intention of occupying Hungary, if Horthy had had his revolver with him, "I should have shot the scoundrel dead; and I shall regret all my life not having done so." What a tantalising thought that the Regent of Hungary might have shot the Fuehrer four months before Stauffenberg tried to blow him up.

If this book has a fault, the fault lies in its great length and the assumption of too much knowledge in its readers. If Mr Macartney felt it essential to make a record as complete as human ability could make it, then some kind of digest of his work should be made available, or at least an accompanying chronology. Since he is the unrivalled expert in Hungarian matters and now more than ever disclosed as such, it is difficult for any reviewer to suggest even trifling criticism. But, while admiring his use of difficult and unwieldy material, one wonders why, with his exhaustive thoroughness, he ignored the official Italian Documents; although those published hitherto cover only about half the year 1939, it was a critical year and Italy's role was far from negligible.

The Creed of a Humanist

Religion Without Revelation

By Julian Huxley.
Max Parrish. 262 pages. 21s.

THIS book was first published on the eve of the war; was reprimed, in an abridged edition, in 1941; and now reappears in a revised and enlarged version. It will, say the publishers, "arouse discussion anew throughout the world—discussion which is essential if the mental conflicts of humanity are to be resolved."

Will it? That is just the point. It ought to. It is by far the most satisfying and realistic statement of the anti-supernaturalist world view ever presented; it is firmly based on the central fact, neglected or denied by too many rationalists and believers-in-reverse, that awe, and a sense of the sacred or "numinous," are as normal a human attribute, as much a product of evolution from lower to higher forms of life, as a large brain-case and the capacity for speech. The quarrel of science is with the pre-scientific hypothesis, hardened into dogma, of a personal God; not with the apprehension of sacredness in the external universe, in the human spirit, and in the relation between them. Indeed, a cocksure rationalism which denies this apprehension is itself grossly unscientific.

Dr Huxley works out the implications of this thesis for the interpretation of history, for private and public ethics, for the social sciences, and for the individual searcher after truth, with great argumentative skill, literary power, much erudition, and more charity. But as for arousing world-wide discussion, let alone launching a new and more comprehensive Reformation, one can only conclude that his chances are now what they were when his book was first published—that is, nil. Behind dogma and counter-dogma alike there can be a dæmonic drive, no less potent when the counter-dogma, like that of Marx, wears a "scientific" mask. But science, whose essence it is to eschew dogma entirely, can only note the existence and analyse the effects of dæmonic drives; it cannot, while remaining scientific, itself generate them. "Religion without Revelation" may have a harmonising effect on a few uncomfortable private lives, an immunising or liberating effect on a few intelligent young people; on the mass of unintelligent, superstition-shot apathy, not to speak of the convinced adherents of dogmatic systems, it is unlikely to make more impact in the future than in the past.

Among the Germans

Watcher on the Rhine

By Brian Connell.
Weidenfeld and Nicolson. 281 pages. 21s

MR CONNELL'S report of his eighteen months' watch on the Rhine is timely, instructive, and exuberantly provocative. A fluent speaker of German, and by no means a stranger to the country, Mr Connell put up at a mellowed winehouse just across the river from the provisional federal capital, where he swivelled his inquiring telescope lustily in every promising direction. He does not seem to have liked very much of what he saw.

Readers seeking to be informed will probably feel most gratitude to Mr Connell for his well-ordered accounts of such important features of the German scene as Ruhr industry and the east German Democratic Republic. He has put a lot of sound work into these chapters and made complicated subjects intelligible and interesting. Readers with an ineradicable antipathy to the Germans will love the author for the fierce swipes he takes at pretty well everything the Germans are and do, of which indiscriminate thwacking the following is a sample chosen at random:

> Underneath the heavy, dull prescribed forms of their day-to-day life there is an ungovernable mass of resentments and complexes. Like their food, their music and their humour, their personalities are heavy. It is not the inert heaviness of lead but the menacing quiescence of neat sulphuric acid. Confined in a glass carboy it is harmless, but once released uncontrolled, it burns and ravages everything in its path.

Mr Connell is not happy about the efficacy of the stopper. He comes to the conclusion that in west Germany "government rests on a quicksand" because the Bavarians hate the Prussians, the provinces speak contemptuously of the capital, the socialists insult the capitalists and the industrialists fulminate against the trade unions. Pointing out how certain Junker officers have put themselves with ease at the service of the east German People's Army, Mr Connell fears that the west Germans' "present professed admiration for the western way of life could perform a somersault overnight without a qualm." He shows little compassion in judging the Germans of today; he damns them wholesale for their failings, ignoring the pressures to which they have been subjected and giving little credit for those who genuinely exert themselves to redeem the national character and reputation. He does not seem to have watched at all closely the schools, the universities, and the professional and working classes, whose faces do not have "the liverish pallor of over-eating," who are not to be sighted "floating on a sea of embassy cocktails," and many of whom his uninhibited generalisations do not fit.

Brainwashed

Captured in Tibet

By Robert Ford.
Harrap. 256 pages. 18s.

ROBERT FORD, "the loneliest Briton in the world," was operating a radio station for the Tibetan government when the Chinese Communists invaded Tibet in 1950. He was captured, taken to China, held for nearly five years, much of the time in solitary confinement, and relentlessly brainwashed. His release in 1955, after unremitting British representations, made him headline material in the international press. His account of his experiences is of absorbing interest, not merely because these experiences are unusual and well told, but in two other respects as well. It contains a fairly full description of an under-reported invasion; and it is a welcome addition to the slowly growing documentation on the brainwashing techniques of Chinese Communists.

The Communist invasion of Tibet is a neglected field of study, partly because of the paucity of facts, but also because of a long-standing confusion about boundaries and sovereignty. The absence of Tibetan-drawn maps and the traditional reluctance of an ancient theocratic community to speak up on its own behalf have allowed the Tibetan case to go by default—a circumstance favoured by the fact that the Chinese Nationalists agree with the Communists in regarding Tibet as a province of China. Mr Ford puts Tibet's relations with China in a perspective which widespread ignorance has made unfamiliar.

But many readers will find the second half of Mr Ford's book even more interesting than the first. His long ordeal at the hands of the Communists was made the more difficult because he was never, until after his release, given a clear idea of the "crimes" with which he was charged. He inferred that they included espionage on behalf of the British "imperialists" and the alleged murder of a Tibetan "living god" who had combined, before his death from poisoning, the duties of a lama and of a Communist agent. As the interrogation wore on, the emphasis changed: the attempt to establish guilt gave way to the desire to reform.

The author was never subjected to physical violence, but the mental torture was unrelenting, and in the end he confessed to some of the things his gaolers wanted of him and mastered the technique of self-incrimination in a wider sense. This would be a depressing book, even in the light of Mr Ford's release, were it not for one important fact: re-indoctrination, though intolerably thorough, was little more than skindeep. The man who emerged to freedom in Hongkong was bewildered, but he was not a Communist. Brainwashing can be less than final.

Law and Police

A History of English Criminal Law and its Administration from 1750: *Volume 2, The Enforcement of the Law* and *Volume 3, The Reform of the Police.*

By Leon Radzinowicz.
Stevens and Sons. 766 and 703 pages, respectively. 84s. each.

IN their efforts to give due praise to the author of this astonishing series of volumes, of which the fourth is yet to come, reviewers are liable to find their vocabularies strained if they try to emulate the long series of commendations quoted on both sides of the dust-covers as having greeted the appearance of the first volume in 1948. This difficulty can best be surmounted by repeating a small selection. What Dr Radzinowicz has again given us, with the generous assistance of the Rockefeller Foundation, certainly continues to be "monumental work." No one will question the assertion that it "compels a kind of awed

AN ECONOMIC GEOGRAPHY of the COMMONWEALTH

THE ECONOMIST INTELLIGENCE UNIT

This book provides a straight-forward account of the economic geography, resources and potentialities of the Commonwealth countries. The first part gives a concise account of the growth of the Commonwealth and its peoples, and a survey of its supplies and raw materials, its industries and communications; the second part describes each country separately. Both parts combine to show how the modern unique association of colonies and independent nations is economically advantageous to all its widely scattered members. With sketch maps, glossary, index and photographs.

BLACKIE *18/6 net*

Coming 13th May

Documents on British Foreign Policy, 1919-1939

Second Series Volume VI
1933-34

The primary theme of this volume is the policy of His Majesty's Government between November 1933 and August 1934 in the situation created by the breakdown of the Disarmament Conference and the increasingly rapid progress of illegal German rearmament. The volume also covers exchanges with the French, Italian and Austrian Governments with regard to the preservation of Austrian independence against the menace of interference from Germany. The question of British war debts to the United States is the subject of the final chapter. **100s.** (post 2s.)

HMSO

from the Government Bookshops or through any bookseller

admiration"; that it "staggers the imagination"; that it is "a monument of our legal literature"; and that it will surely "make the author's name a permanently outstanding one in English law."

What is now due for announcement with equal assurance is that certain surprises provided by these two new volumes are of even greater interest than the immensity of the labour which they represent. One surprise is that they are much more obviously "A History of Police in Britain" than "A History of English Criminal Law." This is extremely interesting, because not only police history, but even the existence of the police in their relationship to law and the constant dependence of both on each other have been almost consistently ignored by legal historians. The assumptions that the power of law in Britain lies exclusively in what is called its "rule" and its "supremacy," or, alternatively, in the Englishman's inherent love of it and respect for it have been, and still are, frequent themes of historians. The wind which blows through Dr Radzinowicz's pages can be relied upon to balance the one-sidedness of all such reasoning.

Legal and academic historians are probably equally to blame for the consistent neglect of police history in Britain. Those who know the late Major William Melville Lee's remarkable book, "A History of Police in England," will be interested to note that, in spite of his monumental augmentation of it, Dr Radzinowicz has found himself following in general outline the simple thesis of this solitary saviour of police history. He deserves more recognition of what is due to him than has been given by Dr Radzinowicz.

Volume I of Dr Radzinowicz's work covered consideration of the subject of capital punishment in the eighteenth century and the beginnings of the movement for reform of the criminal law. Volume II, with the sub-title, "The Clash Between Private Initiative and Public Interest in the Enforcement of the Law," opens with a return to the seventeenth century, and continues with an elaboration of the story of the use of informers and rewards, of the evils of gin-drinking, and other matters whose interest lies mainly in the mass of new details that are provided. The sub-title of Volume III is "Cross-currents in the Movement for the Reform of the Police," and it brings the long and thrilling story of crime and riots and antagonisms between various groups of reformers and resisters of reform up to the year 1828. Of greater value in both these volumes than the extent to which their author breaks new ground is his success in handling an immensity of detail without in any way spoiling the simplicity and clarity of his presentation of his story.

Readers may hope that, in his promised fourth volume, Dr Radzinowicz will provide fuller details than has yet become available regarding the influence of Patrick Colquhoun on his fellow-townsman from Glasgow, Sir John Moore. This led to the strange by-passing of police history through military history by Moore's adoption in his army reform scheme, initiated with the support of the Duke of York in 1803, of Colquhoun's preventive police principles, based on a new form of relationship between officers and men. Moore's early death in 1809 frustrated results except in a few units of the Army. But one of these was commanded by Colonel Charles Rowan, who was appointed by Peel as Commissioner of the Metropolitan Police in 1829, and whose plan for the organisation of the new police was a detailed and most ingenious adaptation of all that, as a young man, he had learned from his commanding officer, Sir John Moore. It was Charles Rowan who created the British policeman and his fame throughout the world.

Also to come is some account of how the relationship between the judicial and the executive branches of the law in London changed in the course of the early decades of the new police from bitter animosity to smooth and friendly co-operation. If a warning inspired by some comment in Volume III may be ventured, there is danger in regarding too seriously, at any period of his long life, Edwin Chadwick's muddled conception of the preventive principles of police.

In the Depths

The Galathea Deep Sea Expedition 1950-52. *Described by members of the expedition.*

Allen and Unwin. 296 pages and folding chart. 40s.

THE voyage of the *Galathea* round the world was a major venture in post-war oceanography and worthy of the fine record of Danish achievement in the exploration of the deep sea. This book, which is handsomely illustrated, is a general account of the expedition, whose main object was to find out what life, if any, exists in the greatest depths. Trawling was successful and brought up animals from all depths down to the greatest attempted, at 10,190 metres (more than six miles) in the Philippine Trench, where the catch included sea anemones, sea cucumbers, molluscs, and a bristle worm. Dr Anton Bruun, the leader of the expedition, says "the known limit of life had been pushed some 2.5 kilometres lower down." The greatest known ocean depth is 10,863 metres (recorded by *HMS Challenger* in 1951), so we may reasonably conclude that life exists at all depths. In the exacting conditions of the great deeps, where pressures are of the order of 1,000 atmospheres, animals are small and few in species. Even so, it is surprising to learn that quantitative sampling with the Petersen grab showed that, at least between 5,000 and 8,000 metres, a square metre of the ocean floor supports about 10 animals, weighing together about one gram. The food supply of this "hadal" fauna has been thought to be the rain of dead plankton from upper water levels, but Dr Druun considers other possible sources of food, including vegetable matter sunk from the land and made available by deep sea bacteria.

Besides her main programme of fishing the deep trenches, the *Galathea* fully exploited opportunities for the most varied work, and the subjects of the eighteen contributors range from oceanic productivity to geomagnetism, from the technique of trawling to the ethnology of unfrequented islands. All the chapters are interesting, but not all develop a theme. There are some misleading statements, which seem to be due to inadequacies of translation. An irritating feature of the book is the continuous straining after "records," whether of the deepest, the largest or the first, or simply the most sensational. Contributors are thereby led into some awkward qualifications and even contradictions, while the reader is prepared for the last chapter on the *Galathea's* public relations section, a new departure for a research vessel.

SCH. SCH. "MARY ROSE"

For those whose blood is salt with the tang of the sea and whose pulse quickens at the sniff of pitch or tarpaulin and the savour of good hemp, home is on the water, and if possible actually floating.

Visit with us the boat, or rather craft — a keel-lined gaffy with double-reefed jiffer — of Mr. and Mrs. Oakley Cornsalad, tethered just off Blackspot By-pass in a reedy nook of the Reclamation Overflow, well out of the stream of the factory effluent.

T.V.'d in "Keyhole Camera" as the only all-aquatic couple drawing 2½ ft. of water, Mr. "Jack" Cornsalad proudly showed off his "Yellowcrome" stainless steel ship's bell (rung by clockwork cuckoo emerging from miniature crow's nest), the strong smell of tar (or something very like it), real rope in permanently ship-shape coils (stuck on with Yo-ho), a sail locker with a sort of sail or something in it, and a portrait of Captain Cook in the maid's bedroom.

Pleasing detail (*see inset*). Every morning (two bells) Mr. Cornsalad takes a bearing, plots course, and proves that his position is exactly 16¼ sea miles East North East by East of Lot's Road Power Station.

AMERICAN SURVEY

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

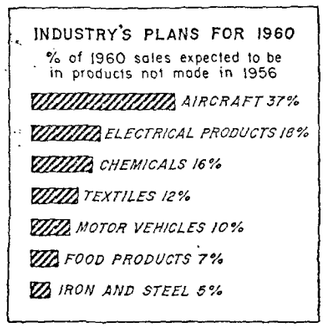
Doctrine for a King

ONCE the Administration decided, apparently with a speed which matched that of developments in Jordan last week, that King Hussein must be wrapped in the mantle of the Eisenhower Doctrine if war was to be prevented in the Middle East, then the doctrine had to be tailored to fit him—or rather remodelled to look less like a western strait-jacket. The process has justified those who contended last January that the President had no constitutional or political need to ask Congress to endorse his middle-eastern policy in advance. It did not require a doctrine to send the Sixth Fleet hurrying to the eastern Mediterranean—officials are now pointing out that this is its normal station. Once it was there, no invocation of the "threat to the independence and integrity of Jordan by international communism" was needed to prove to the Israeli, Syrian and Egyptian governments that the fleet's purpose was to protect Jordan. Admittedly these words set the stage for American forces to come to King Hussein's rescue under the Eisenhower Doctrine, but they did not make it certain that the President had in fact decided to go as far as actual war if necessary. And early congressional reactions show that, even if the Legislature had not been on holiday, it would hardly have questioned emergency action taken without the support of the doctrine, especially when it was to help a brave young King—and especially when it has succeeded without Americans having to fire a shot.

> The **Joint Resolution of the Congress on the Middle East,** popularly known as the **Eisenhower Doctrine,** authorises the President to:
>
> 1. Co-operate with and assist any nation or group of nations in the general area of the Middle East desiring such assistance in the development of economic strength dedicated to the maintenance of national independence.
> 2. Undertake military assistance programmes with any nation or group of nations of that area desiring such assistance.
>
> The **Resolution** then declares that:
>
> The United States *regards as vital* to the national interest and world peace the preservation of the independence and integrity of the nations of the Middle East. To this end, if the President determines the necessity thereof, the United States is prepared to use armed forces to assist any such nation or group of such nations requesting assistance against armed aggression from any country controlled by international communism.

A fleet off the coast of Israel and Lebanon may not have enough direct impact on the people of Jordan to arouse their suspicions of American attempts to dominate them, but economic aid, without which King Hussein could not carry on for long, is a different matter. The Administration has had the tact (or at least what from Washington looks like tact) to offer this aid without forcing the King to beg for it, and through an existing agency, the technical assistance mission already in Jordan, instead of through the machinery of the Eisenhower Doctrine, the Richards mission around which resentment against American interference has crystallised. The $10 million now being added to the $5 million already available for Jordan this year is officially for "economic development and the maintenance of political stability in Jordan," but in practice some of the money may become indirectly a military subsidy.

No one can deny that an American Administration which has often been accused of lacking initiative and imagination in foreign affairs has shown both on this occasion. It is not the independence of Jordan which is vital to the United States but peace in the Middle East and, when this was directly threatened, no attempt was made to seek shelter behind the United Nations. But without joining the cynics who are comparing the position of the United States today with that of Britain over the Suez Canal last autumn, it is still possible to wonder if the American people realise the implications of what the *New York Times* calls a "landmark in American foreign policy," the fact that the United States seems now to be fully committed in the Middle East, apparently ready and willing to use force there if necessary.



Manufacturing a Boom

FROM A SPECIAL CORRESPONDENT

THE boom in capital outlays by business, which has supported the American economy during 1956 and 1957, seems to be turning into a boom of a very different sort. At least that is the clear implication of a survey of businessmen's plans for the years from 1957 to 1960 which has just been released by the Department of Economics of the McGraw-Hill Publishing Company. The survey shows that capital expenditure is due to level out—a point already made by government surveys. But it also shows that a boom in consumer goods is in the making. "Making" is exactly the right word for it. Left to their own devices, consumers have not been spending fast enough to absorb all the output of manufacturing industry. In order to make them spend, manufacturers are planning to introduce more new products between 1958 and 1960 than in any previous period, to back up these products with a greatly increased advertising and selling effort and to increase expenditures on research and development by over 50 per cent—so as to find still more new products. If all this does not make a boom in

consumer goods long before 1960, it will not be for lack of trying.

The boom in spending for new plant and equipment has not really collapsed yet. The surveys indicate that 1957 will run 10 per cent or so above 1956, and plans for 1958 indicate a level within 5 per cent of 1957. But the years ahead are not expected to show anything like the spectacular 1956 rise, of about 23 per cent compared with 1955, in the demand for capital goods. Moreover, the McGraw-Hill report shows clearly that the nature of investment plans is changing. Manufacturing companies intend to put only 47 per cent of their expenditures into plant expansion from 1958 to 1960, compared with 52 per cent in 1957. From now on, the greater share is to be used for modernisation, and a larger share of the total dollars available, for investment of all sorts, is to go into research and the development of new products rather than into new plant.

The reason for going slow on expansion is that capacity has increased so greatly in the past *eighteen months*. In 1956, manufacturing capacity rose by 6 per cent, and before long most of another 6 per cent increase planned for this year will be in place ; total manufacturing capacity will then be nearly 50 per cent greater than in 1950. While this is not alarming, in view of the rise in consumption, it does suggest that most firms have been able to achieve a comfortable reserve. According to the McGraw-Hill survey, the average manufacturing company was only operating at 86 per cent of full capacity and would have preferred to operate at 90 per cent ; the current rate of operations may average as little as 83 per cent. It is therefore not surprising that managements are putting increased emphasis on investment that will raise sales.

To most companies research is evidently the best way to do this (in the typical manufacturing corporation, research has the practical objective of developing a commercial product within five years). The most striking increases in the McGraw-Hill survey are those in research expenditures—up from $6.1 billion in 1956 to a planned $7.3 billion in 1957 and $9.3 billion by 1960. It thus seems likely that more new products will reach the market between 1957 and 1960, and more new processes will enter industrial technology, than in any previous four-year period. There is already a significant increase in the number of companies which are making capital outlays to bring out new products. In manufacturing, McGraw-Hill reports that 32 per cent of all firms expect such expenditures in 1957, compared with 28 per cent in 1956. Some of the individual industries show much sharper increases, particularly in steel, non-ferrous metals, electrical machinery and transport equipment.

In dollar terms, the heaviest investment in facilities for new products will be by the motor and electric appliance industries—and by chemical companies that make plastics, paint, packaging and other materials for a wide variety of consumer goods. Among the products already announced for 1957 are several completely new cars (notably the Ford Motor Company's new "Edsel"), an air conditioner that comes in colours to match the wall and a synthetic wool suit that can be washed in a machine without creasing. By 1958 this stream of new consumer goods is likely to become a torrent, and by 1960—if the researchers keep on—it will be a flood.

Most of the companies reporting to McGraw-Hill expect the new items to pay off heavily in larger sales. For manufacturing companies as a whole, the estimates work out at a total increase of 26 per cent in sales by 1960 ; about half of this is evidently to be accounted for by new products. It is well known that the American population of working (and so of spending) age will not increase as rapidly between 1955 and 1965 as it did in the first postwar decade ; but companies evidently plan to compensate for this by making present consumer goods obsolete and so raising consumption a head. Thus even with only a moderate growth in population and incomes it may be possible to push up total consumption by nearly as much as in the earlier postwar years.

If so, this will be a new kind of boom—for the United States or for any other country—a boom fostered by deliberate creativeness in fields ranging from laboratory research on products to art work on the design of packages, and music and scripts for television advertising. Investment in new and efficient manufacturing facilities is still a vital part of the effort to raise consumption ; but, in the total strategy, facilities for making goods are becoming secondary to the drive to invent new types of goods and new ways of selling them. There is no estimate of the total amount to be spent on advertising and promoting the new articles, but it may well come to several times the original outlay on research if all forms of selling are included. In 1957 $10 billion is expected to be spent on advertising alone, and the trend is sharply upward.

It remains to be seen whether American companies will be as successful in this new effort as they have long been in achieving low-cost production, but the attempt to devise and sell more new products will certainly not fail for lack of money or of interest. Manufacturing companies have already appropriated more for research in the next few years than they were spending on all types of new plant and equipment at the end of the last war.

Dividends from Labour

COMPETITION is now under way between the Administration and the Democrats for the political dividends to be drawn from the congressional investigation into trade union abuses. The Administration was plainly trying to seize the initiative from Congress when, after the Secretary of Labour, Mr Mitchell, had gone to Georgia to see the President, Mr Eisenhower issued a special statement. This asked for the passage of proposals which he has been laying before a Democratic Congress, though not with any great sense of urgency, ever since 1954. The Bill the Administration favours, which is sponsored by Senator Ives, a Republican specialist on labour problems, would require *full information* about pension and welfare funds to be registered and published. At present the only control over such funds, which now total between $25 and $30 billion, is a minor provision of the Taft-Hartley Act requiring that they be kept separate from other trade union reserves. The President also asked Congress to give Mr Mitchell power to make public the general reports on trade union finances which must be filed with him before a union can use the services of government labour machinery.

News of the President's move at once produced more drastic proposals from the Democratic side. Senator Kennedy, whose labour subcommittee is to hold hearings this month on legislation to curb corruption in connection with welfare funds, thinks that federal supervision imposing certain standards of administration and accounting may be needed ; the Administration would be content to leave this to the states, *counting on publicity* to stir up action. Senator McClellan, the head of the Senate Investigating Committee, has added that federal regulation should also apply to welfare funds financed entirely by the employers. The risk that any law might do so is one reason why none has been passed, and the Administration has been tactfully ambiguous on this point.

It is one, however, on which labour may *insist*. Mr Meany, the president of the American Federation of Labour and Congress of Industrial Organisations, has welcomed Mr Eisenhower's proposals ; indeed the federation is ready for even more drastic measures, as long as the Administration continues, as the President and Mr Mitchell have done, to oppose fastening punitive legislation on the vast majority of honest trade unionists. But it would save the federation's face, and seem no more than simple justice, if all welfare funds were treated alike.

Oil on the Carpet

WITH tankers about to move again through the Suez Canal, the tide in oil has turned ; it is excessive imports and not inadequate exports which are once more troubling the Administration. Mr Gordon Gray, the new defence mobiliser, hopes to succeed where his predecessor, Dr Flemming, failed when he asks the international oil companies this week to restrict their imports voluntarily to about 10 per cent of domestic production. He carries a big stick, although an Administration which leans toward liberal trade practices and is wooing the Arab world is reluctant to use it. Oil imports in the second half of this year are scheduled to reach 17.4 per cent of domestic production, and the President, on being told by Mr Gray that this might constitute a threat to the national security, has ordered an inquiry to determine whether government controls are needed, either in the form of a quota or a higher tariff.

This is the first action taken under an amendment to the Reciprocal Trade Agreements Act which was adopted in 1955 with the whole-hearted support of the independent—that is, the domestic—oil companies ; it provides that the President can impose quotas or raise tariffs if imports endanger the national security. In oil national security cuts both ways. The independents argue that cheap imports from Venezuela and the Middle East discourage new drilling and enfeeble an essential defence industry ; they also endanger the nice balance of demand and supply in the United States, which is one of the pleasant results of the European oil lift, and make it harder to maintain the increase in prices which went into effect in January. But imports also save American reserves for any future emergency and help the Middle East to earn its living.

In Congress, however, it is the domestic oil producers who are in the saddle. The international companies recognise Mr Gray's offer as their last chance to avoid federal controls, as well as an opportunity to squeeze out new oil importers if, as he says, "historic patterns" are to be maintained. The big five are also concerned to settle the civil war inside an industry which is beleaguered from outside. The House Commerce Committee, while paying tribute to the "stupendous achievement" of the oil lift, finds the timing of the price increase regrettable because it seemed to take mean advantage of Europe's need ; three other congressional committees, as well as a federal grand jury, are investigating possible violations of the anti-trust laws. To cap it all, Aramco, the Arabian-American Oil Company, which is owned by four of the big five, is on the carpet because it has suceeded in having its payments to Saudi Arabia labelled as a tax, rather than a royalty ; as foreign taxes can be offset against American ones, Aramco is saving—and the American taxpayer is losing—about $80 million a year.

Atomic Stalemate?

WASHINGTON, D.C.

BRITAIN'S programme for atomic energy, *tripling* the original proposals, has provided the domestic critics of the American Atomic Energy Commission with another stick to beat it with. This is an old controversy, but the charges are now more specific : that first Britain, then Euratom, not to mention the more secretive Russians, are gaining the only kind of experience which really counts, that of building large-scale nuclear reactors, while the United States fritters away its initial lead on a variety of experiments and prototypes. Both for reasons of national prestige and for the sake of future export orders, the federal government is being urged to build industrial reactors itself instead of waiting for private enterprise to nibble at the subsidies being dangled before it.

The response of Mr Strauss, the AEC's chairman, and his technical staff is that in the United States, where supplies of conventional fuels are cheaper and more plentiful than in Europe, the new source of power has to undergo a much severer economic test. According to the official argument, this can best be met by combining private enterprise and its cost-cutting incentives with research by the commission on the greatest practicable range of promising types of reactor and an austere refusal to give a permanent subsidy to the production of electric power from atomic energy by linking it, through dual purpose reactors, with the production of plutonium. Further, the majority of the commission holds that, with the exception of the British and their gas-cooled reactor, no one is ahead of the United States.

The AEC's present plans are for three stages in the development of energy from nuclear power. During the first, which extends until the end of 1959, ten experimental plants are expected to produce electricity. But of the total generating capacity of 130,000 kW, no fewer than 100,000 kW are accounted for by one large-scale plant, the pressurised water reactor at Shippingport. A private company is participating rather nervously in this project, but all of the plants, with one exception, will be owned by the federal government ; they are the fruits of the early decision by the AEC to experiment on a variety of types. A boiling water reactor, with a generating capacity of

5,000 kW, has been providing the power for the AEC's Argonne laboratory since February; a "reactor package," which is theoretically though rather clumsily mobile and is meant to produce electricity at isolated military posts, was opened by Mr Strauss this week; and there will also be sodium, homogeneous and two breeder reactors.

The second stage, nicknamed "the first generation," is to last from 1960 to 1964, when the plants at present being planned, and in a few cases already being constructed, on a partnership basis between industry and government, will come "on stream," together with at least two projects to be wholly financed privately, and perhaps two or three to be financed by the federal government. According to the AEC's leading technicians, costs at these plants will be lower than at the experimental models, but will still not be competitive with the most advanced conventionally fuelled power stations. It is thought, however, that the costs will be comparable and possibly a little below those which would be charged by British plants, if costing were done on the same basis.

★

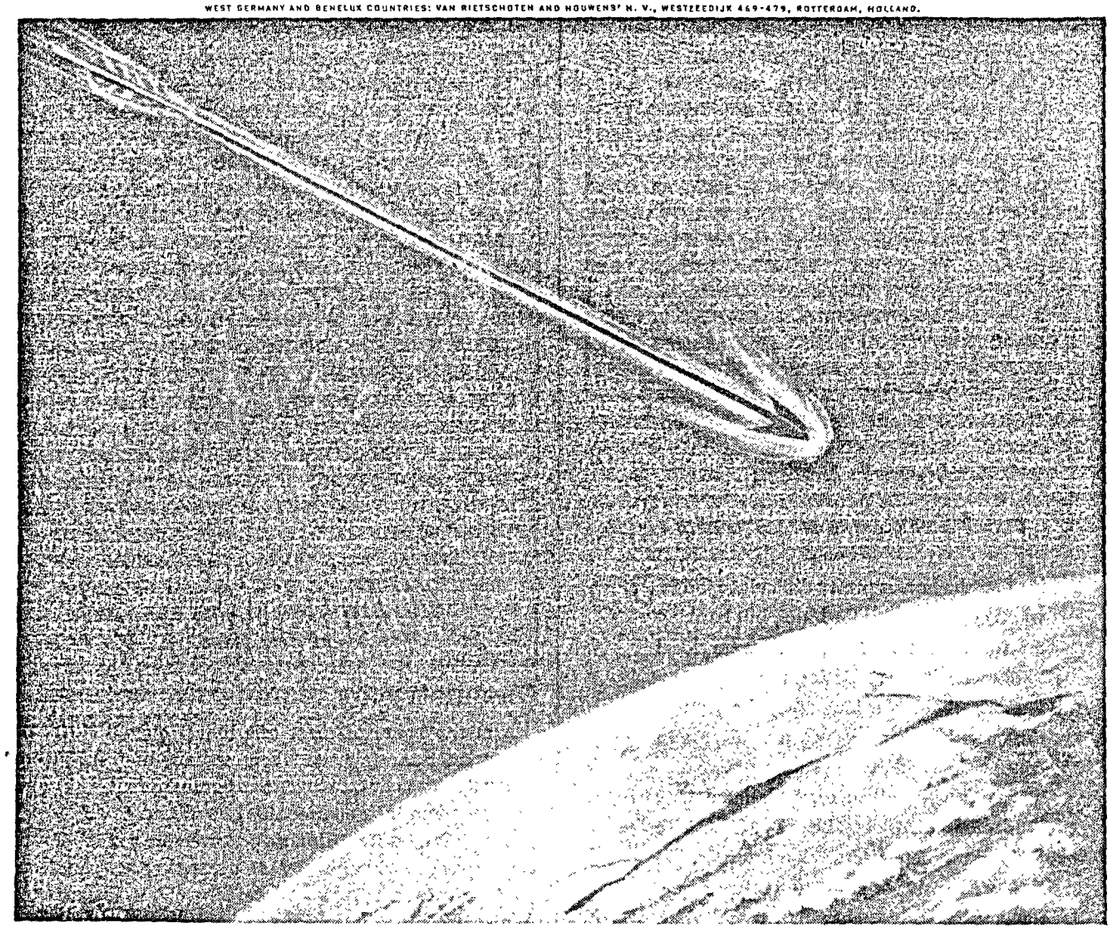
It is this second stage of the AEC's plan which is felt to be lacking in real American drive by the Democrats on the Joint Atomic Energy Committee of Congress; they are backed up by the "odd man out" on the commission itself, Mr Thomas Murray. The main contribution is to come from the power reactor demonstration programme. Under this projects proposed by private enterprise, if acceptable to the AEC, are subsidised to a specific extent, usually in the form of government research and development and the lease of enriched fuel without charge.

To begin with, in 1954, came large-scale projects. Of the three then launched, two, for a pressurised water plant in Massachusetts and for a sodium graphite reactor in Nebraska, have run into serious technical delays and major increases in costs. The third, a fast breeder reactor in Michigan, is going ahead on schedule, but it has not yet been finally cleared for safety.

After that came proposals for smaller reactors, of the kind which might ultimately prove most useful in the export trade and in bringing down to the national average electricity prices in high cost areas in the United States. Three of the seven projects in this group were rejected by the AEC as inadequate, and none of the remaining four has got much beyond the conceptual stage. Finally, early this year, in order to pacify the commission's critics, industry was asked to make clear in the reasonably near future what would be its maximum accomplishments by June 30, 1962. The commission undertook to step in and do the job itself if industry failed to come up with enough suggestions, particularly in relation to two concepts which are not yet being tried out. So far the industrial response to the request has been vague and the political response negative, with no noticeable diminution in the volume and tone of the criticism.

But it is in the stage after this, in the era of "second generation" nuclear plants, from 1965 onwards, that the AEC calculates that atomic energy will become economically competitive. To some extent, the turning point will be psychological—when simultaneously a fairly large number of electricity producers and manufacturers become confident that the plants will be economic when built and can be successfully operated over a long period of time, during which coal and oil prices will be increasing slowly.

In the meantime, there is political *débris* to be cleared. In the present economy-minded mood of Congress, it seems most unlikely that the Democratic critics of the AEC can put through a Bill forcing it to undertake government projects that it does not consider useful. However, Mr Strauss's opponents have certain cards to play, which could induce him to make some concessions to the Democratic point of view. The most important is the urgent need for a Bill providing government indemnities for private industry to cover liabilities in case of catastrophe at an atom plant. The General Electric Company has bluntly threatened to withdraw from all major projects if this measure is not passed at this session of Congress. The Democrats will have to decide whether they really want to deal this much of a setback to such progress as is now being made in order to punish Mr Strauss for not making the greater progress which they are powerless to force on him. The Democrats might be prepared to withdraw their veto on the Indemnity Bill, to ratify the International Atomic Energy Treaty, and to speed the AEC's appropriations in return for a lesser concession, such as the reappointment to the commission of the persistent dissenter, Mr Murray, when his term expires in June. But it would be the very acme of futility if this congressional session ended in the atomic stalemate which overtook the last.



Far Eastern Approaches

UNDER pressure from Britain and Japan, the State Department last week grudgingly announced that it was willing to discuss some relaxation of the increasingly ineffective controls on trade with Communist China, although American businessmen will not share in the somewhat problematical benefits. Under pressure from the whole American press, Mr Dulles two days later reluctantly executed another retreat, this time from his even more untenable embargo on American journalists in China. He was willing, he said, to consider a "one-shot" experiment of allowing a few reporters to go on a pooled basis, if the news-gathering organisations could devise some means of preventing a flood of other journalists and ordinary citizens from pouring through the breach in the Chinese-American wall.

As an argument, this is the feeblest of all the defences Mr Dulles has served up during the nine months since the State Department refused to allow a group of newspapermen to accept a Chinese invitation to step through the bamboo curtain. There are innumerable precedents both at home and abroad for admitting accredited journalists to places from which the public is barred. Moreover, a pool arrangement, with all its overtones of the hand-out and the hand-picked correspondent, has little appeal for American editors. The heavy expense of keeping a permanent correspondent in China would in itself prevent the great influx of which Mr Dulles seems so unnecessarily nervous.

For that matter, there is no certainty that the Chinese government, which in 1949 ejected all correspondents from countries which did not recognise it, would allow American newspapermen to stay more than a month or two. At present American reporters stationed in Hongkong have to depend on the Peking radio and controlled newspapers from the mainland for their information, a situation which has advantages for a totalitarian government. The need to

UNITED KINGDOM AND COMMONWEALTH COUNTRIES (EXCEPT CANADA): BRITISH METAL CORP., LTD., PRINCES HOUSE, 95 BRESHAM ST., LONDON E. C. 2, ENGLAND.

When the tip sublimes!

Away up where it's cold, black and lonely at 500,000 ft., the thermal attack on a missile or "airplane" isn't very meaningful. The air molecules at that height are barely nodding neighbors, rather than crammed together in a fluid mass. But, escape and re-entry into the earth's dense envelope of atmosphere generate thermal attacks of frightening ferocity. Nose and leading-edge temperatures may rise to 3000°F.

Even titanium won't stand such temperatures for more than a few minutes. For all those areas requiring long-time service life up to 1000°F, however, titanium's light weight, great strength and corrosion resistance offer outstanding design advantages.

Production quantities of very high strength heat-treated sheet, to close gage and flatness tolerances, are being engineered into advanced aircraft and missiles. For non-military applications, all types of mill products are obtainable at constantly lower price levels.

T.M.C.A. is again adding to its production facilities to properly service an ever-expanding market. T.M.C.A. engineering service and technical literature are readily available to all those industries challenged by weight, strength and corrosion problems.

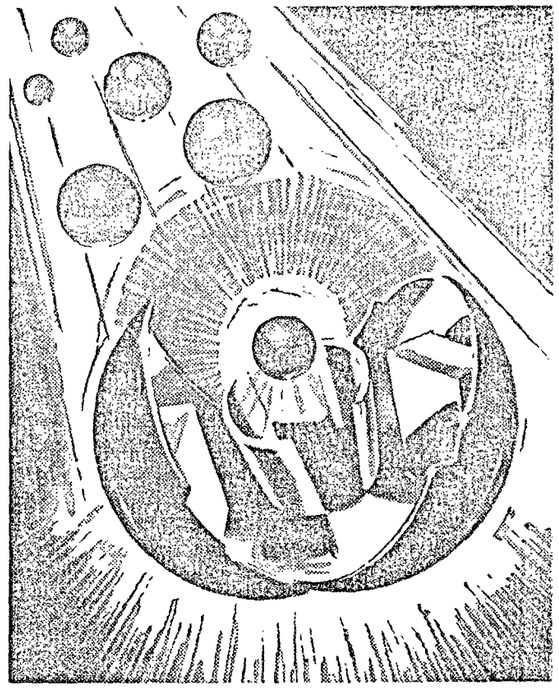
Fresh fields and foreign markets

Beef on the hoof is pretty difficult to judge, whether for meat or for hides, but banking on the spot can bring that extra local "know-how" to the business in hand.

Facts about the language, the people, the customs, all play such a vital part in commercial undertakings overseas.

This is where The First National City Bank of New York can be of special service for businessmen with foreign interests.

The extensive organization is based on a network of 70 branches, offices and affiliates, strategically located in 24 countries outside the United States. In addition, the world's markets are covered by over 3,500 banking correspondents reporting current trading conditions from every important centre of commerce.



Wherever your interests lie, and whatever they may be, this world-wide organization is at your service. Our two London branches are anxious to be of assistance.

The FIRST
NATIONAL CITY BANK
of New York

ESTABLISHED 1812
Incorporated with limited liability under the National Bank Act of the U.S.A.

Head Office: 55 WALL STREET, NEW YORK

LONDON OFFICES:
City: 117 OLD BROAD STREET, E.C.2 TELEPHONE: London Wall 1221
West End: 11 WATERLOO PLACE, S.W.1 TELEPHONE: Whitehall 7651

Chemistry by Bombardment

A silent beam of electrons travelling at 600 million miles an hour is used by scientists at TI's research laboratories near Cambridge to bombard materials and so change them into chemically new forms.

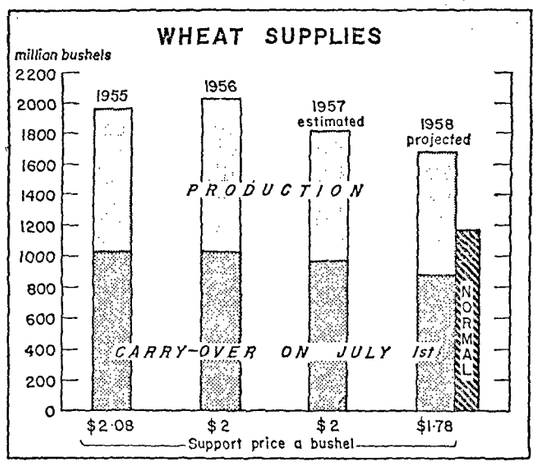
Speeded by a 2-million volt accelerator, the electrons induce these changes by re-arranging the molecular pattern, which makes a material what it is, sometimes achieving in a fraction of a second what cannot be done by other means.

It usually takes a long time for advanced research of this kind to pass from the laboratory to production, but TI has already developed a number of new processes and products by this and other means of high energy radiation —including an irradiated plastic tape at present being tested by manufacturers for a variety of industrial applications. Radiation services are also provided for companies outside TI seeking to benefit by the new chemistry.

Through developments like these, TI and the 45 engineering and allied companies in its seven Divisions contribute to the practical application of research, on which this country's economic progress depends.

The TI Divisions are:

STEEL TUBE DIVISION · ENGINEERING DIVISION
ELECTRICAL DIVISION · ALUMINIUM DIVISION · CYCLE DIVISION
IRON AND STEEL DIVISION · GENERAL DIVISION



TUBE INVESTMENTS LIMITED

The Adelphi, London, W.C.2 · Trafalgar 5633

placate Senator Knowland lest he take out his resentment of concessions to China on the delicate Polish aid negotiations and other foreign policies of the Administration may explain the meagreness of Mr Dulles's offers. Otherwise it is hard to understand why he does not cheerfully transfer the onus of any censorship to Mr Chou En-lai and win back, at home, some of the editorial cordiality of which he stands in need.

Seeds of a Farm Policy

WITH Congress trying to economise at almost any cost and with the cracks in the farm block unusually obvious since the recent deadlock over maize controls, the Administration has decided that a few seeds sown in this favourable soil might eventually grow into a new farm policy, although certainly not this year and probably not next. The break in the drought has improved this year's crop prospects, so price-supporting operations are likely to be more costly than forecast and may absorb the money saved by the reduced need for drought relief and the unexpected reluctance of farmers to join the soil bank scheme.

The present farm laws are even more self-defeating over the long term: when the existing surpluses have been eliminated—and a good deal is being achieved in this direction—then the rates at which prices are supported automatically go up to levels which encourage farmers to grow new surpluses.

The Secretary of Agriculture, Mr Benson, would like genuinely flexible price supports, instead of ones which only move within strictly confined limits. But he is not ready to send proposals to Congress, to be almost certainly thrown on the rubbish heap; instead he seems to be trying to stimulate Congress into working out its own suggestions for reforming a programme which, with all its ramifications, costs the taxpayers, most of them urban dwellers, $5 billion a year, or $1,000 a farm, without satisfying the farmers.

So far prices are still falling under the present system, most recently and most sharply in the case of wheat; its support price is to go down by 22 cents a bushel in 1958, to the lowest level since 1946. It will be lower still if farmers refuse the marketing quotas on which they will vote in June and under which they will be permitted to grow wheat on a total of 55 million acres as they are this year. This acreage allotment is the minimum permitted by the law, in order to avoid the full rigours of the strict legal formula under which plantings in 1958 should be cut to 23 million acres. This formula attempts to prevent unwanted surpluses being grown by basing both acreage allotments and price supports on the relationship between the amount of wheat which, it is calculated, will actually be available and the "normal" supply needed to provide for domestic uses, exports and a reasonable carry-over (195 million bushels in 1958 compared with the 875 million which, it is estimated, there will be in fact). Representatives from wheat-producing states are complaining bitterly about the coming fall in wheat prices, but it is indicative of the changing mood in Congress that no one expects anything to be done about it this year.

Supping with Tammany

FROM A CORRESPONDENT IN NEW YORK

A RELATIVELY minor scandal involving the parole from prison of a fallen gangster named Mr "Socks" Lanza has shaken the Democratic party leadership in New York State and cast light on the inner flaw in the superficially unexceptionable political record of the Governor, Mr Averell Harriman. When Mr Harriman captured the Governorship for the Democrats by a narrow margin in 1954, he ended a dozen years of Republican control exercised by Mr Thomas Dewey. But since winning his first elective public office at sixty-three, Mr Harriman has not added to his distinguished reputation, earned as a member of the Cabinet, ambassador, and international trouble-shooter. His administration, although conscientious and progressive in outlook, has accomplished little, while his settlement of the vexed problem of the allocation of hydro-electric power from the St Lawrence and his timidity on civil liberties have affronted liberal sentiment.

The political style that Mr Harriman has consciously adopted—Mr Truman's earthy "give-'em-hell" approach—is artificial and unbecoming to a man of the Governor's wealth and social background. His bid for the presidential nomination against Mr Stevenson last year ended not simply in defeat, but in a humiliating fiasco. His eagerness to assume the mantle of a great Governor and national party leader in the Smith-Roosevelt-Lehman tradition of which New York Democrats are immensely proud has provoked the cruel gibe that, if there is one thing worse than a young man in a hurry, it is an old man in a hurry.

The Lanza case underscores the view of many observers that Mr Harriman has come to his political apprenticeship too late in life and has misread the lessons of his masters. Mr Lanza, a power in the underworld a quarter of a century ago who was finally sent to prison for extorting money from a trade union, was released in 1950 in accordance with routine parole procedure. He was arrested last February for violation of his parole, but was released after a fortnight. When a committee of the Republican-controlled Legislature began an investigation and the Governor ordered a parallel inquiry of his own, the member of the parole board who had ordered his release hastily resigned.

Mr Lanza, though no longer an important figure in his

own right, has, as an Italian, connections with the Democratic party in Manhattan which make his case political dynamite. As the Irish have moved up in the economic scale, they have also moved out into the suburbs; their places at all levels in the Democratic machine in New York City have been taken by politicians of Italian ancestry. The rise to power of the Italians is symbolised by the success of Mr Carmine DeSapio, the leader of Tammany (the ancient and evil-sounding name of the Manhattan Democratic organisation which its modern leaders are at pains to disavow) who had much to do with the election of both Mr Harriman and of the Mayor of New York City, Mr Robert Wagner.

Mr Harriman has made the capital error of believing that he could best establish himself as a political force by identifying himself with the party organisation. But the sad truth is that, not withstanding Mr DeSapio's strenuous efforts to present Tammany as not only thoroughly reformed but also as a kind of New Deal Memorial Association, the Democratic machine remains dedicated to the acquisition of cash, and the enjoyment of power.

Moreover, at its lower and middle levels, Tammany still has connections with the underworld, as the Lanza case has once again reminded the public. This is partly because during the years of the New Deal, when Tammany was starved for patronage by President Roosevelt, by Governor Herbert Lehman, and by the late Fiorello LaGuardia, the Fusion mayor, its desperate leaders in many districts turned to gangsters and gamblers for the financial support necessary to keep their clubhouses operating. Many, though not all, of these underworld figures, notably the famous Mr Frank Costello, were themselves of Italian ancestry. Their interest in politics derived not so much from corrupt motives as from a craving for respectability and a desire to advance the prestige of other Italians. Mr DeSapio, the first Italian leader of Tammany, is personally of good repute but he is carrying on their efforts on behalf of the Italian interest.

Last autumn, Mr DeSapio chose Justice Samuel DiFalco to run for Surrogate; he was the first Italian to win this judicial prize. The office of Surrogate, which appoints guardians and administrators for widows and orphans and the funds of those who die intestate, is of strategic importance to the party organisation because its holder can reward so many different lawyers with choice plums. In this age of the professional civil service, the elective judiciary is the last and richest stronghold of patronage politics in New York. Out-of-town journalists who noted that the Democrats in New York were devoting more energy to the election of Judge DiFalco than to the victory of Mr Stevenson were not wrong in concluding that Mr DeSapio was more interested in electing a Surrogate than in electing a President. The lure of the long term, good pay, and rich patronage of the judiciary explains the high turnover and mediocre quality of the city's large Democratic delegation in Congress. Able, ambitious politicians are frequently unwilling to serve in Washington and those who do are eager to return home to the main channel of political advancement.

These mundane, parochial affairs are much closer to the heart of Tammany than Mr DeSapio's sermons on the glories of the New Deal. No honest Governor could hope to master these dangerous intricacies and no wise Governor would try. Mr Harriman, indisputably honest, has been somewhat less than wise. He has found, to paraphrase a poem of Miss Marianne Moore, that while to one of his genteel background and rarefied experience the Tammany garden may seem imaginary, its toads are painfully real.

The leaders of the Republican party have watched with rising hope, and the leaders of the Liberal party with deepening apprehension, Governor Harriman's involvement in the affairs of Tammany. The Liberal party, which exists only in New York, is dominated by intellectuals and the Jewish trade unionists of the garment industry, with their eastern European socialist tradition. They have clung to an independent position, despite their ideological affinity with the Democrats, because of a stubborn distrust of Tammany. Since the Liberals have roughly 300,000 adherents, their endorsement is a prize both the Democrats and the Republicans seek. If the Liberals are disappointed in Mr Harriman but are not yet ready to disavow him, the Republicans are eagerly exploiting his errors and are looking forward to launching their customary anti-Tammany crusade in the 1958 election. Many hopeful candidates are already jostling for the honour of leading this crusade. The most notable is Mr Leonard Hall, the recently retired chairman of the Republican National Committee, who has already received President Eisenhower's public laying on of hands, but who is still some way from obtaining the nomination.

It is ironical that Mayor Wagner, who is an organisation man born and bred, has had far greater success than Mr Harriman, the convert, in escaping the stain of Tammany's past history and present connections. Mr Wagner's advantage, like that of the late Alfred E. Smith, may well be that Tammany makes fewer demands on one of its own men than it does on a newcomer to politics. By cautious, intermittent, but convincing displays of independence, the Mayor has neutralised press criticism, disabused the fears of the Liberals who opposed him four years ago, and persuaded most of the public that he is doing a capable and devoted job at City Hall. Local Republicans are nearly in despair in their search for an impressive candidate to oppose him in the election which is coming in the city this autumn.

SHORTER NOTES

New York's first World Trade Fair, which closed last week, will not be its last; the event is to be repeated in 1958. Its surprising success is in large part attributable to the growing attraction of foreign goods for American customers, mainly because of the rising standard of living in the United States. While public attendance was less than had been expected, 700,000 instead of a million, far more buyers came than had been forecast—and came to do business. Exhibitors received firm orders from shops in Canada, Bermuda and Latin America, as well as from American firms, and a number of British manufacturers who were new to the American market found satisfactory agencies to represent them in the Middle and Far West.

* * *

All but six of the twenty people who were hanged as witches in Salem, Massachusetts, in 1692 had been exonerated twenty years later. But only this year has the State Legislature got around to clearing the rest on the condition thta their descendants would not be able to claim damages. The delay is partly due to reluctance to tamper with a tourist attraction, partly to a feeling that the matter was no concern of the state authorities, since in 1692 Salem was a British colony.

THE WORLD OVERSEAS

Britain's Turkish Friends

FROM OUR SPECIAL CORRESPONDENT LATELY IN ANKARA

THE emotional storm that hit Turkey after the release of Archbishop Makarios was as violent as the hot southern wind that buffeted and stifled Ankara and at times shrouded the parched city in thick clouds of dust. People said that the weather was quite exceptional; so was the crisis in Anglo-Turkish relations. At the time it seemed possible that it might leave permanent scars. But determined first-aid efforts, particularly on the British side, have had good results.

Whether the storm has seriously damaged and delayed the chances of a Cyprus settlement is not yet clear. What it has certainly done is to give a clear demonstration of the present strength of Turkish feeling about Cyprus. Many Turks feel that their government, lulled by the conviction that Britain would not leave the island, tended to let the Turkish case on Cyprus go by default and thereby tempted the Greeks to be intransigent. This error, if such it was, is unlikely to be repeated.

When the Greeks think of Cyprus, they think of the people who live on it. When the Turks think of it, they think of the land; to them it is simply an extension of the Anatolian plateau, divided from the mainland by forty miles of sea, but commanding the approaches to the important ports of south-eastern Turkey. For the island to remain in British hands is tolerable; for it to fall under Greek sovereignty is not. All Turks, whatever their views on domestic politics, or on the ultimate solution of the Cyprus problem, agree on this. The fact that Turkey has accepted Greek rule over a string of islands, many much closer than Cyprus to the Anatolian coast, reinforces rather than weakens their conviction; in their view, if Cyprus went the way of Mytilene, Chios and the Dodecanese, the circle of potentially hostile islands round Turkey would be closed and the territorial balance set up under the Treaty of Lausanne in 1923 would be upset.

The Turks fear that Cyprus, under Greek control, might become hostile if Greece's tendency towards political instability caused that country to fall under communist domination; no international guarantees, apparently, can exorcise this fear. It is, moreover, buttressed by other, more emotional, anxieties that now threaten to destroy Atatürk's achievement in healing the long-standing enmity between Greeks and Turks. In any conversation today with a Turk about Greco-Turkish relations, it is not easy to get far without being reminded that little more than thirty years ago the Greeks nearly reached Ankara. One is also assured that Greece's dreams of a Greater Hellas that would include Constantinople are not dead, and that the Greek Orthodox Church plays a large and sinister part in the direction of Greek policy. (The Patriarch of Constantinople is under heavy fire from the Turkish press.) These fears may seem foolish, even fantastic, but they cannot be left out of account. They have been fanned by Greece's refusal to compromise on Cyprus, and by the violent propaganda campaigns waged by the Greek press and radio—which have been well reported in Turkey. They were still further accentuated by the release of Archbishop Makarios and his triumphal return to Athens. To the growing distrust of Greece was then added the shock of feeling—genuinely if misguidedly—that Britain had let Turkey down.

To the Turks Archbishop Makarios is the evil genie of the Cyprus affair; they credit him with Machiavellian cunning and profess to discern this even in his behaviour since his release. When he was deported to the Seychelles they felt that the genie had been safely bottled up: when he was released they felt the bottle had been wantonly unstoppered and they feared the worst. They felt, too, that Britain had changed its policy behind their backs—for had it not released the Archbishop without exacting from him an unconditional denunciation of terrorism, and without first completely destroying Eoka? Would not the next step be negotiation with the Archbishop? Hard things were said about "perfidious Albion"; and the newspapers were full of cartoons satirising the alleged uncertainty of British policy.

The Turkish government has at length been prevailed upon to adopt a more charitable and realistic view of Britain's action. But if the British government's intentions are acknowledged to be honourable, its tactics are still deeply deplored by the Turks; it has set its foot, it is argued, upon a dangerously slippery slope down which it may gradually slither willy-nilly into the pit of *enosis*. In particular, the Turks have shied away from the Radcliffe constitution. They never liked the idea of self-government anyway; but they were brought to accept it last December on the understanding that it would definitely be followed by self-determination for Turks as well as for Greeks—that is, by partition, which most Turks say they are convinced would be a practicable proposition. Now that the Archbishop has been set free to plot and manœuvre, however, and Britain has committed itself to hold, at some stage, talks with the Cypriots (as well as international talks), they feel that the Radcliffe constitution, towards which they had previously

been favourably disposed, will be manipulated in favour of the Greeks.

Since this is an emotional and not a rational feeling, it is hard to dispel by argument. It is reinforced by the conviction that relations between the two races on the island are now so bad that in any case they could no longer settle down together to work the constitution. (This view has been sedulously propagated in Ankara by Dr Kucuk, the leader of the Turkish Cypriots, who has, however, shown himself to be seriously misinformed about various aspects of the Cyprus situation.)

It is not yet clear whether the Turks can again be brought to the point of seriously considering the Radcliffe constitution, or whether they will persist in setting their sights on more or less immediate partition. The cabinet has been discussing the matter interminably, but a pronouncement of policy has been delayed from day to day ; with pressure from the opposition parties growing, it probably cannot be delayed long after the end of the post-Ramadan holiday.

The Turkish prime minister has not, indeed, had an easy row to hoe. He could not ignore the storm of popular anger that greeted the release of the Archbishop ; yet he did not want Anglo-Turkish friendship to be thrown to the winds. He took firm measures to see that the popular disapproval did not get out of hand. Very strict security precautions were taken in Istanbul, where on April 21st the Greeks celebrated their Easter and the Turks celebrated their "Cyprus Day"; the governor of the city banned all public meetings, including football matches ; and throughout the rest of the country attempts to hold meetings and demonstrations on Cyprus have been stopped. These precautions, and Mr Menderes's reference, in his statement condemning Archbishop Makarios's reception in Athens, to Turkey's "very friendly" relations with Britain, show that friendship with Britain remains of major importance in Turkish foreign policy. All through the Suez crisis the Turks stood loyally and helpfully by Britain. In spite of recent events and in spite of appearances, they believe that Britain will continue to be a Middle Eastern power. They hold that the British interest in the Middle East is vital to Britain in a way that the American interest there is not vital to the United States. They do not feel confident that the Americans will be prepared permanently to replace the British. Closer American participation in the Baghdad Pact does not, therefore, alter their view that British membership is still essential.

But the events of the last few weeks have shown again that the weak point of the Anglo-Turkish relationship lies in Cyprus. In moving from their first stand—the *status quo* or Turkish sovereignty—to acceptance of partition, the Turks have in fact shown a greater readiness to be accommodating than have the Greeks. But, whatever the rights and wrongs of the Cyprus issue, if they become convinced that their vital interests are being finally disregarded, then the whole character of their relationship with Britain will inevitably be changed.

French Doubts Over Algeria

FROM OUR PARIS CORRESPONDENT

ALTHOUGH a holiday calm falls on Paris when Parliament is not sitting, there is no real truce in the battle of conscience over Algeria. All the main incidents of the past fortnight are offshoots of the war. M. Lacoste's refusal to co-operate with the Radical commission of inquiry into atrocities is a lamentable sign of the hold the diehard settlers have gained in Algiers. At home, the split in the student movement raises the question how far France itself will be torn by its imperial troubles. On the other hand, the 48-hour rail strike and the 10 per cent increase in miners' wages have shown that the workers are not prepared to see their living standards cut down through inflation in order to pay for the French military effort in Algeria. The government's efforts to close the budget gap by £400 million of spending cuts and new taxes will take the war into the pockets of many voters and deputies to whom it has so far been mainly an idea. The future of the crisis may well depend on a choice—the retention of Algeria, or prosperity. As it approaches, the temperature of the body politic rises.

Many informed Frenchmen who last year mentally gave military pacification a trial have now lost confidence in its future. The vigour with which the rebels have been reacting to the French army's heavy blows, and their increased political intransigence, have brought home to many moderate people that M. Lacoste's policy may be only a prelude to another "Indo-Chinese rot." The controversy over tortures and the remarkable articles of M. Servan-Schreiber, the director of the Mendesist weekly, *L'Express*, describing his experiences as a conscript officer in the field, have shown how the use of force strengthens the rebels' grip on the Moslem population and the settlers' grip on the official world in Algiers.

*

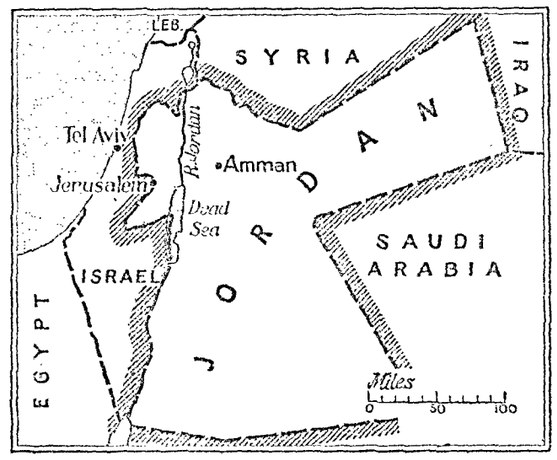
Settlers and government have lived up to the Servan-Schreiber thesis. The Peyrega incident is an unpleasant witness to the atmosphere. M. Peyrega, dean of the law faculty at Algiers university, wrote privately to M. Bourgès-Maunoury, protesting against the killing of an unarmed Moslem which he had seen. His letter leaked to the Paris press. In the storm that followed, Professor Peyrega was supported by many academic men in France, but was attacked by the teachers and students of his own university ; and he got no support from the Minister of Defence, to whom his letter had been addressed. If M. Lacoste, who has implicitly endorsed the virulent campaign of the settlers' organisations against the Radical commission, were merely trying to avoid trouble while he made use of the time to introduce reforms, his attitude might be defended. But since his refusal last year to fight on two fronts (that is, to stand against settlers and Moslems equally) he can refuse the settlers little when they feel really threatened.

Despite the sheaves of protests at home every time some Algerian excess is reported, many of the government's leftward critics fear that France, faced with an insoluble crisis, may lose its soul to reaction. Certainly the fight is growing increasingly uncompromising. M. Soustelle, for instance, has attacked the government's grant of £12 million to Tunisia, arguing that the former protectorates should not get a centime till they stop helping the rebels. Despite its patent sterility, this approach increasingly tempts the militant Right. The Left, with the Socialists committed to M. Lacoste, is in poor shape to take the initiative away from them.

At present the only group, bar the far Left, to admit that it may be France's interest to recognise an Algerian nation is the level-headed conservatives, like M. Raymond Aron and some important business men. They see no benefit in clinging on to an Algeria subject to fantastic population pressures and hostile to French tutelage. The strikers, in their different way, take a similar bread-and-butter line. There were even signs during the last major policy debate that the conservative Independents, who regard themselves as M. Mollet's heirs-apparent, might also finally incline that way. Today, their instinctive sympathy with the settlers who are repressing the rebels is uppermost, but the distaste of their electors for taxes or rising prices may influence them more in the end. An eminent business man recently gave it as his view that it was for M. Mollet to push the European treaties through and for the Right to clear up the Algerian mess afterwards.

It is unlikely, in view of the Socialists' central position in the Assembly and the long road that any of the Right must travel to change their mind, that a solution can come so neatly or so soon. But certainly many Frenchmen now doubt whether M. Mollet can ever end the Algerian war, and the economic situation is the government's Achilles heel. People have once more been talking as if it might fall at the Becher's Brook of the budget and tax debate. That debate does not now seem likely to take place until July, perhaps after the debate on the European treaties. Events, therefore, are unlikely to move rapidly. But the atmosphere is becoming more heavily charged.

Israel Watches Jordan



FROM OUR CORRESPONDENT IN TEL AVIV

FROM the outlying quarters of Jerusalem, which since the partition of the Holy City nine years ago end abruptly in a tangle of ruins and barbed wire, one can look down on the Damascus gate which leads to the old city, the hub of the western sector of Jordan. Anyone who is familiar with the traffic before the gate can easily guess when something is afoot in the neighbouring state. During the last few weeks everyone in Israel has been listening to the rumblings of the upheavals on the other side of the eastern border. What, they have been asking, should be done if the neighbouring kingdom totters and is partitioned between its neighbours, between Saudi Arabia to the south, Iraq to the east and Syria to the north ? Should Israel look on and wait or should it take a hand in the struggle and plant its eastern border at the Jordan river ?

Nobody in Israel doubts that it would be militarily feasible to occupy the "big triangle" and take the area of eastern Palestine which was attached to Jordan nine years ago. There are many who hope for such a move. The activists, both from the ranks of Heruth and from Achduth Avodah, have never given up their dream of an "undivided homeland." And many outside their ranks believe that the guerrilla warfare which has flared up again recently on Israel's eastern and northern borders would be stopped once the Jordan river ran between the states of Jordan and Israel. National emotions and military calculations both point to a move which might be made easy by the tensions on the other side of the Jordan valley.

But there are warning voices and they produce weighty arguments. They admit that Jordan without British support is weak and that the kingdom is a somewhat artificial political creation. They admit also that the frontier with Jordan is dangerous, since at some points the state of Israel is so narrow that one can overlook it from end to end ; and this small wasp-like waist looks like an invitation to a tank column to drive through and cut the state in two. But they also point out that Jordan did not dare to carry out this drive to the sea during the Sinai campaign and that there have been long periods when the eastern border has been completely quiet. What is more, they maintain that the occupation of eastern Palestine would not solve Israel's problems but only produce new ones.

In the first place, the Sinai campaign has shown that in contrast to the war nine years ago, the Arab civilians have lost their one-time instinct for flight before the Israeli army. Therefore occupation of the country up to the Jordan would mean a considerable increase in the Arab population of Israel. To many people in Israel, probably to the big

majority, this appears undesirable. The addition of several hundred thousand Arabs would present difficult problems of internal security and a change in the existing Jewish character of the country. No additional land would be gained for Jewish settlement, since the country west of the Jordan river is not only hilly but rocky and cannot be intensively farmed. Thus there would be no economic advantages in an occupation. And it is no secret that the withdrawal from Gaza was made easier by the knowledge that this step would allow Israel to get rid of the tremendous task of integrating the 300,000 Arabs from the Gaza strip into the political and economic life of the country. If, in order to keep Iraqi and Syrian troops from setting foot on the west bank of the Jordan, Israel should find itself forced to occupy the area, there would be no choice but to form an additional Arab state out of the occupied territory.

All these arguments held good before the Sinai campaign. They have now been reinforced by others. It has been proved that international opinion, as embodied in the United Nations and strongly backed by the United States, is against forcible seizures of territory under any provocation whatsoever ; that it is strong enough to enforce this view against certain states and at certain points on the globe even after a swift victory. Thus Israel might find that intervention in Jordan only demonstrated once again that military solutions are abortive.

Mr Ben-Gurion has given repeated warnings that Israel would move if the *status quo* in the region were violated. This declaration is meant to keep Iraqi and Syrian army units east of Jordan. Israel is closely watching the Jordan struggle to see whether this warning will do the trick.

King Hussein's Balancing Act

FROM OUR MIDDLE EAST CORRESPONDENT

KING HUSSEIN seems to have strengthened his position still further in the past week. If the wisdom of his decision to crush the political parties is assumed, it is difficult to see how he could have played his cards more skilfully or with more success. Yet there is cause for reflection: his position contains a basic contradiction which must be resolved before his victory is secured. The policy of the new government—repeatedly proclaimed—is to pursue the aims laid down by the February meeting of the Arab heads of state in Cairo. That meeting committed Egypt, Syria, Jordan and Saudi Arabia to reject imperialism and foreign pacts and to work for the ideal of Arab unity. Beneath that commitment lay the unspoken assumption that Egypt was the acknowledged leader of the four main Arab states, excluding "unliberated" Iraq. Yet King Hussein has attacked and suppressed the main bases of Egyptian power in Jordan and has castigated Cairo by name for its interference in Jordanian politics. Following up his words with deeds, he expelled Egyptian journalists and closed the Jordanian branches of the Middle East News Agency, which is Egyptian-controlled.

How long can the King keep up his balancing act, accepting Egyptian policies while suppressing the partisans of Egypt in his country? Jordan has never been a viable economic unit and cannot become one in the foreseeable future. The British treaty was terminated only after assurances of financial support had been obtained from Cairo, Damascus and Riyadh. But will Egypt and Syria carry out their promises to support Jordan? If the King is determined to suppress Egypt's power to interfere in Jordanian affairs, he may be forced to look elsewhere for a prop. His only obvious alternative is Iraq, and an approach to that quarter would mean a major realignment of policy, only feasible with Saudi support. And while King Saud has assured him of support in domestic troubles, there is no sign yet that he is prepared for a break with Egypt.

★

Much will depend on developments after the relaxation and eventual lifting of the curfew. It proved a powerful weapon during the closing days of Ramadan; but it cuts both ways. On the one hand, the curfew made it impossible for the opposition to meet and organise their forces. On the other hand, it threatened to bring the economic life of the country to a standstill. Thus it is a weapon that can be brandished only for short periods. What will happen when economic needs dictate freedom of movement and communication is anyone's guess, though majority opinion in Amman inclines to the view that the measures already taken to suppress the opposition—a judicious mixture of imprisonment, exile and fright—have been drastic enough to ensure law and order for the time being.

The communiqué issued after the meeting between King Hussein and King Saud at Riyadh is receiving careful scrutiny. Some appear satisfied with the statement that the Jordan crisis "is an internal matter"—though this hardly squares with King Saud's action assuring King Hussein of the support of the Saudi troops in Jordan. Others, while conceding that the statement is probably intended as a warning to Egypt and Syria, are disappointed that King Saud did not see fit to declare his interest in the independence of Jordan and the preservation of the Hashemite dynasty. There is some tendency to read a sinister significance into this omission—especially as the rest of the communiqué reiterated the adherence of the two kingdoms to aims and policies which are essentially of Egyptian origin.

Meanwhile, the Sixth Fleet has arrived. Small grey ships are moored in Beirut harbour; big ones, including the giant USS *Forrestal*, are lying out beyond the horizon; sailors and marines are attracting the attention of the city's beggars and touts, thus taking the heat off other foreigners. They are the visible signs of the latest twist of American policy, which is now based on the view that the integrity and independence of Jordan "are vital" to the United States. A Beirut cynic remarked that the great powers appear to have so many "vital" interests that it is a wonder they survive at all.

At first there was a tendency in American circles here to describe the visit of the fleet as directed solely to keeping Israel in check. But that deceived nobody. The puzzle is what effect this show of force will have in the Arab states. Perhaps the mere presence of the fleet will achieve its object—which is to stabilise the situation long enough for King Hussein to consolidate his military grip on Jordan. More cautious observers express doubts about the speed with which the United States is assuming the former role of Britain in the Arab world—that of the nation with special influence based on superior power. They saw what happened to Britain.

The signs of the times were clearly visible in Amman during the troubles. Roadblocks were thrown up to guard the approaches to the American Embassy, while the British Embassy made do with a couple extra policemen. King Hussein has taken the obvious course of accepting the aid offered through diplomatic channels, but he had to declare in round terms that a visit by the Richards mission at this juncture would be "inopportune." The intention presumably still stands to invite the mission if Egypt and Syria do so first. But the cruise of the Sixth Fleet is likely to strengthen rather than to diminish Egyptian and Syrian hostility to the missionary of the Eisenhower Doctrine.

Belgium's African Estate

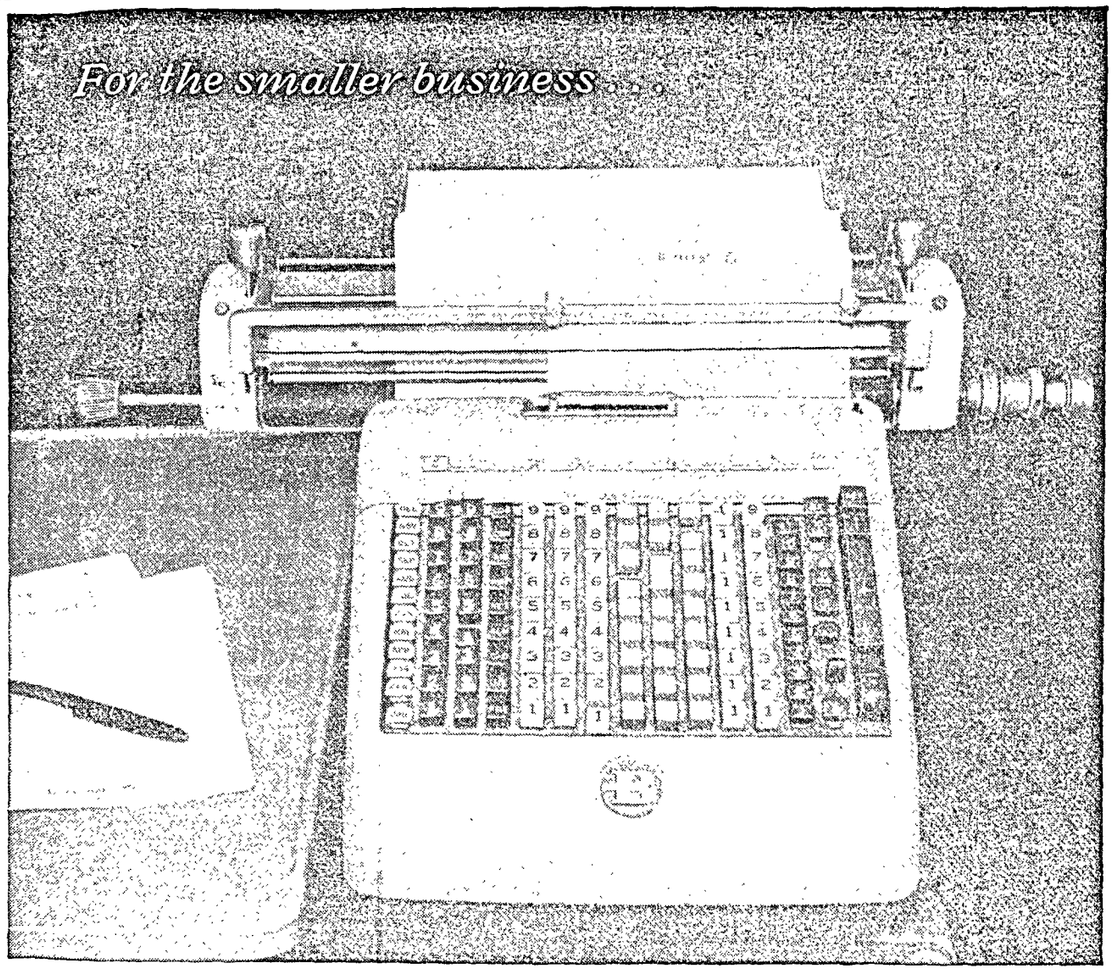
(FROM A SPECIAL CORRESPONDENT LATELY IN THE BELGIAN CONGO)

THE Belgians maintain that their Congo is the most successful dependent territory in the world; a country untroubled by politics and proud of the rapid economic advancement of Africans. The observer who moves north from the British Central African Federation finds it hard to refute this claim. Even American senators when confronted with the Congo's harmoniously exploited wealth have been known to swallow their indignation at a regime that denies political rights to a whole population, black and white alike. The country is rather like a well-run private estate. It lacks both imperial style and anti-imperial heart-searchings. The calmness of the administration is such that critics are almost made to feel guilty of trespass.

There are some 54,000 whites, between 11 and 12 million Africans and practically no Asiatics in the Congo. The Europeans are almost all Belgian; no Rhodesian or South

We are the cablemakers

but not that alone.



We encompass the World with bands of power.
Strangers to few cities.
You will find us in straat and gade,
in weg, rue and praça,
in pasco, alameda, place, rua, djalan and sharia,
and in Bloomsbury.
This mighty cable went to Portugal.
(You can dance in Lisbon under the light it brings).
This mighty cable went to Uganda.
(We used local timber to support the overhead lines).
This mighty cable is 16 miles long.
(No joints—a World record for submarine power cable).
This mighty cable stayed at home
and brings breadwinners from Southend to Liverpool Street.
What's in the morning mail?
A letter from Trivandrum with a query about cores.
Another from Reykjavik—something on the building laws.
A report from Birkirkara. Sheaves of notes from Singapore.
Here's an answer from Mombasa.
(That's one we're waiting for).
And, of course, this:
Dear Sirs, I am interested in your scheme for
graduate apprentices . . . I should like to travel . . .
We who make, lay and sling cables
must speak many tongues.
We who make, lay and sling cables
must know about soils and seas and winds and heat
and dust and mountains and insects and rain and
lightning and rivers and lakes
wherever the trail of power leads.
We who make, lay and sling cables
must think for the World on many lines.

BICC think for the World on many lines

BRITISH INSULATED CALLENDER'S CABLES LIMITED

Parent company of the BICC Group—the World's largest organization (comprising 40 companies) with complete facilities for research, manufacture and contracting in the transmission and distribution of electrical energy for power and communication.

Head Office: Norfolk House, Norfolk Street, London W.C.2
International Sales Office: 21 Bloomsbury Street, London W.C.1 Museum 1600

THIS IS MECHANIZED BOOK-KEEPING
THAT IS NOT EXPENSIVE!

This is the Burroughs Director 600, an extremely versatile accounting machine, especially designed for the small and medium sized business. Sales, purchase, and general ledgers, stock records, cost records, payroll—it will do them all!

The Director automatically adds, subtracts, prints in red, dates, tabulates, returns and spaces correctly; 15" front feed carriage and adjustable form guides allow you to use forms of varying sizes and designs. A full keyboard date makes rapid date changing easy. Listing key, combined with a short-cut keyboard, enables you to convert a Director to a rapid adding machine as well. Hand emergency operation in case of power failure.

Burroughs *The most experienced manufacturers of Adding, Calculating, Accounting, Typewriter-Accounting, Statistical and Microfilm Equipment*

BURROUGHS ADDING MACHINE LIMITED, AVON HOUSE, 356-366 OXFORD STREET, LONDON, W.1

African would normally be given a job in the mines of Katanga. But Belgians themselves are not admitted unless they are considered to be of some use to the colony. Undoubtedly, this strict immigration control is an important political safeguard in race relations; and it is one that is lacking in the Rhodesias, where Asiatics are kept out but almost anyone from the United Kingdom or South Africa is let in.

Belgium's only colony is blessed with vast mineral wealth. It is the world's fifth largest producer of copper and has very rich ore. It mines most of the world's industrial diamonds and cobalt, as well as much manganese, tin, zinc and uranium. All these contribute to the country's trade surplus. The province of Katanga, especially its high southern plateau, is an intensely developed industrial region; almost a Ruhr in the African bush. This is the creation of a giant monopoly, the *Union Minière du Haut Katanga,* which is itself the child of the *Société Générale,* the supreme banking combine of *Belgium.* The Belgian government is a majority stockholder in the UMHK.

The reputation of Belgium as a colonising power in the twentieth century rests very largely on the exercise of these industrial monopoly rights. In the mid-twenties the UMHK decided to employ not migrant, but settled labour, and to turn Africans into skilled operatives as far as possible. Since then, tens of thousands of Africans have been accommodated in Katanga as permanent residents with their families. No expense seems to have been spared in providing them with medical and other services. Meanwhile, the technical training of Africans has continued so that today very few jobs in the mines are restricted to Europeans. "African advancement," which is still an idealistic slogan in other parts of Africa, in Katanga is a reality of many years' standing.

The European economy has, however, touched only some 15 per cent of the Congo's inhabitants. The rest still live their traditional life in the bush, many of them still nomad farmers without any machinery or livestock. As late as 1949, the native tax produced only 4 per cent of the total budgetary receipts. The current ten-year plan, which is due to end in 1960, provides for an investment of $200 million in agriculture. The African farmer must be enabled to produce more for himself and for the industrial worker. At present Africans contribute only 20 per cent of cash or export crops, although they own most of the cultivated land. A big expansion of the Congo's production of palm oil, cotton, and ground nuts is planned. This will entail mechanisation under European auspices and the resettlement of rich but remote land that has been abandoned. Hitherto the administration has been often too inclined for its own convenience to try to concentrate the rural population near the roads. The development of both European and African agriculture is essential to the stability of the Congolese economy, which is at present still too dependent on its mineral exports.

The main features of the Congo's finances are an annual investment rate averaging 30 per cent of the value of the national product; a budgetary reserve equivalent to three-quarters of a year's current expenditure with which to curb inflation; an annual increase in production of 4.6 per cent and a rise in the productivity of labour of 3 per cent a year. All this is very sound. The ploughing back of capital by companies in the Congo has entailed a progressive limitation of dividends. But this is in keeping with the unexpressed mystique of this colonial venture, which is as different from the boom atmosphere of Salisbury, Southern Rhodesia, as it is from the capital-starved atmosphere of East Africa.

Some observers see cracks in Belgian paternalism in the Congo and argue that revolutionary African politics must come soon. One important recent innovation by the government is the authorisation of trade unions, which must be multi-racial and cannot be communist. They will be affiliated to the unions of Belgium and follow the same pattern. In view of the advancement of Africans in industry, this development seems timely and natural, and without obvious political consequences. There are certainly African intellectuals in Leopoldville who are demanding a share in government. These *évolués*—there are only one or two thousand of them in the whole Congo—must be assimilated, if they are not to become rebels. But it seems that room is being found for this small African elite both socially and in the professions. So long as the African industrial workers continue prosperous, it is hard to see what bombshell could destroy the existing regime. Your correspondent was told that Cairo broadcasts to Central Africa had had an unsettling effect for a time, but in the end President Nasser had bored the Congolese.

Third year of Publication

The Paper Bulletin

The 9th quarterly issue contains three special reports:
1. The Fibre Board Packing Case Industry.
2. The Irish Paper Industry.
3. Trends in British Paper Output.

The issue also contains: A Summary of the Contents; Guide for Paper Users; Raw Material Notes; Reports on Paper Using Industries; General Notes; Comprehensive Statistics; Charts.

The March monthly supplement dealt with the implications of the European free trade area for the paper industry.

Hanover as East-West Fair

FROM OUR BONN CORRESPONDENT

It is fitting that the British, who fostered the Hanover Fair in the numb days of 1947, should be providing one of the star turns at the tenth birthday of this now strapping infant. Of the long-term advantages of being bombed and dismantled, especially for those who were not about at the time, much wisdom has already been spoken. It remains true that it was the open spaces of a destroyed factory some miles out of town that gave Hanover its chance.

Bold planning and generous spending have gone into the layout and approaches of what is now claimed to be the largest industrial fairground in Europe. Three fast motor roads connect it with the city and the autobahn. The car park takes 35,000 vehicles. The fairground has its own goods station from which lines run to the halls; lorries can drive right up to most of the stands; every hall can be heated; and the faint showman can be sure of finding almost round every corner a glass of beer and a pork chop.

The prospect of steel masts, derricks, and cranes rising

into the sky from the Hanoverian plain excite in the approaching visitor the vague pleasurable expectations aroused by the distant view of any big port. Nor is he heavily let down on examining the scene at close quarters. From the milestone "Berlin 282 Km.," demonstratively planted outside the office of the Berlin marketing council, to the Cantina Romana and the bookshop catering even for such rare birds as English-speaking business men interested in "The Papal Encyclicals in their Historical Context," there is already much in the permanent scenery that tells of Hanover's far-flung associations.

The foreign visitors' list is impressive, indeed enviable. It has been long and catholic enough this year to warrant the holding of a special East Asian Day, on which German business men discussed trading problems with delegations from Communist China, Japan, India, Burma, Ceylon, Indonesia, Malaya, the Philippines, Thailand, Vietnam, and South Korea. The Soviet delegation has included the ministers for heavy engineering, building machinery, and iron and steel. The Soviet Ambassador has been observed amiably downing Bavarian beer with the federal minister of economics in the Franconian-style inn which a porcelain manufacturer has installed alongside his stand. What the West Germans have been hoping for seems to be coming about: Hanover is taking the place of Leipzig as the principal east-west market in Europe. For the first time, Russia, China, Poland, and Czechoslovakia are using the fair as a base from which to answer prospective traders' inquiries.

★

Of more than 4,000 exhibitors, the majority are here to demonstrate the infinite variety of the applications of mechanical power and its ever-increasing dexterity in replacing the labour of man. For the general run of visitors by far the most interesting exhibits are those of the office equipment industry, and the exhibit of the British consortium which offers to set up a nice atomic power station for all comers who are prepared to pay. With a justifiable sense of their importance to the lives of the "back-room boys," the office equipment manufacturers have done themselves proud in a huge two-storey hall all to themselves, so designed that exhibitors' vans can run right up to stands on the second floor. Here are displayed prodigies of office comfort and efficiency.

The British star turn, showing the new-fangled way of generating power to drive the machines that make the Hanover fair what it is, has been admirably staged by the Board of Trade, the Atomic Energy Authority, and the Nuclear Energy Trade Associations' Conference. There are good models and diagrams, lucid and well-translated hand-outs, and colour films which people are queueing to see. In another hall a Harwell team shows what can be done with isotopes and offers them for sale.

The remainder of the British showing at Hanover is on the whole disappointing. Although west Germany is becoming an increasingly important customer only fifty-odd British firms, few with big names, have thought it worth while to put in an appearance. It is possible that some of them have stayed away for the same reason that the three I. G. Farben successor companies have this year: that there are too many fairs these days, taking up the time of too many experts. But for British exporters, Hanover is potentially a much more rewarding market-place than Leipzig, where in recent years many firms have been more or less fruitlessly trying their luck.

How Indians See Kashmir Today

FROM OUR CORRESPONDENT IN INDIA

A YEAR ago, one met many educated Indians who were not altogether happy about their country's Kashmir policy. Today most of them have joined the clerk and the village shopkeeper who were always sure that Kashmir simply had to be defended against Pakistanis; only a few still argue that India can gain nothing from unwilling citizens and must find out what the Kashmiris want.

The main arguments which convince people are legal. The Maharajah acceded to India in 1947; the UN Commission for India and Pakistan recognised that Pakistani troops had no right in Kashmir and that the Azad Kashmir government could be treated as only a *de facto* authority; the Pakistanis are aggressors, who threaten India with war, have built airstrips in Azad Kashmir, and have increased and re-equipped the Azad forces. The Indians claim that they have complied scrupulously with the only two UN resolutions they accepted, those of August 13, 1948, and of January 5, 1949. They claim that as Chapter VI of the UN Charter is only recommendatory, they were entitled to reject other resolutions.

These arguments have satisfied most Indians. The Security Council's February vote denying India's right to go ahead unilaterally with the absorption of Kashmir has evoked introspection about why India does not have more friends, and indignation at Britain's and America's supposed favour for their Pakistani ally, but few doubts about the justice of India's cause.

★

Nevertheless, the arguments used by the government might seem legalistic and inadequate to many Indians, if it had not managed to put over the idea that it must stand firm to prevent the appeal of religion from being exploited in a plebiscite, and that its efforts to create a secular state would be imperilled if mullas were allowed to suggest that a vote for India was a passport to hell. The government does not want to remind Hindus that the loyalty of Muslims whom they accept as fellow citizens may be doubtful; but the anxiety is still real.

The argument, sometimes used here, that the recent elections in Kashmir were an adequate alternative to a plebiscite, carries little conviction. There were too many unopposed returns—over half the total seats. The elections were not rigged throughout Kashmir. In Jammu, with its safe Hindu majority, pro-Indian opposition parties got nearly half the votes. (Nobody, of course, was allowed to champion secession or accession to Pakistan.) The National Conference party, led by Mr Bakshi since Sheikh Abdullah was jailed, has done much for the Valley. When one talks to villagers without an interpreter, their complaint is about some leaders of the party whom they accuse of being communists; they quote Mr Sadiq's position in the "World Peace Council" and Mr Dhar's use of extension workers to preach Marxism. They say that Sheikh Abdullah eventually alienated them by driving in a big car, wearing a suit and going to the club instead of the villages. They say they would vote for the National Conference; but in 37 out of 45 seats they were given no chance to do so.

A gracious welcome to your guests

Wise move...

Nice flying!

The holiday mood came over them. The holiday move was the next question. 'Let's start to enjoy it', said he. *'Let's enjoy the start'*, said she . . . 'Let's fly KLM!' So that was agreed.

Point of departure . . . and they're feeling better already! KLM travel is the most soothing, most reassuring experience in this small world. The comfort is perfect. The food is perfect. The service is perfect. The schedules fast, frequent, dependable.

And you can move to any European pleasure ground. Holland? Scandinavia? Switzerland? Austria? Germany? Italy? France? There's a gaily coloured KLM Holiday folder waiting for you now at your Travel Agent (or direct from KLM — see below).

You reserve your seats on KLM flights through your Travel Agent or through KLM Royal Dutch Airlines, Time & Life Building, New Bond Street, W.1. Tel: MAY 8803 and at Birmingham, Manchester, Glasgow and Dublin.

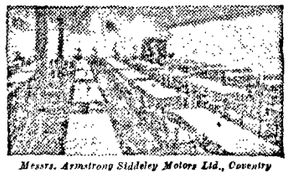
ROYAL DUTCH AIRLINES

The layout of your canteen will be planned behind this door

The best decision you'll ever make is when you call in Shepherd's.



They're experts in planning canteens from start to finish, and they do it entirely free—without obligation.

Starting with a blueprint, everything is taken into consideration—nothing is overlooked—every single piece of furniture is carefully selected for a reason: that reason is the ultimate efficiency, convenience and working ability of your canteen.

Shepherd's manufacture tubular furniture that's really made to last; delivering direct to customer's addresses.

Take a close look at this illustrated example, it explains more clearly than words how Shepherd's can plan for *your* canteen too.

An enquiry costs nothing. Our technical representative in your area will be pleased to give you the benefit of his experience.

DURBAN: The vast lagoon on which Durban is situated was well-known to the seamen of the 16th century. They called it Rio de Natal, and they often anchored at the entrance in search of fresh water and food: occasionally, too, they landed insubordinate shipmates on its deserted shores to repent their ways at leisure. It was, however, not until 1824 that a group of men under the leadership of Lieutenant F. G. Farewell, R.N. sailed from the Cape and founded on the northern shore of the lagoon a settlement which they called Port Natal. Eleven years later the name was changed to D'Urban in honour of Sir Benjamin D'Urban, a veteran of the Peninsular Wars, who was then Governor of the Cape Colony. Throughout the years Durban continued to grow and has now become the finest town and the busiest port on the East coast of Africa. Ideally situated on the shores of the Indian Ocean, Durban is also a popular holiday resort, famed for its wide avenues shaded with gaily flowering trees and shrubs. It is a colourful city in which mingle people of many races, not the least picturesque being the Zulu rickshaw boys in their gay costumes, feathered head-dresses and tinkling beads.

Business men who require information on current commercial conditions in Durban are invited to get into touch with our Intelligence Department, 54 Lombard Street, London, E.C.3. Up-to-date reports from our branches in Durban and elsewhere in the Union of South Africa are readily obtainable on request.

BARCLAYS BANK D.C.O.

Fourteen years before the first Aberdeen-Angus

An Aberdeen-Angus was first shipped to the Argentine in 1876—fourteen years after the Bank of London & South America had opened its doors there. Since then, commerce with Latin America has increased enormously, and with it has grown the influence and interests of the Bank. Today, the Bank holds a unique position as the *only* British bank in Latin America.

It has branches in most of the important trading centres of that vast continent.

Up-to-date reports on local markets, trading regulations and general economic conditions are received regularly from Branches overseas and are summarised in the Bank's *Fortnightly Review*, which is distributed to customers and made available to those who have business in Latin America, Portugal or Spain.

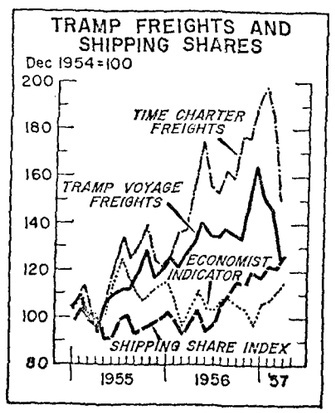
THE BUSINESS WORLD



Shipping's Boom Year

As shipping companies await the signal to start using the Suez Canal again, their financial results, dividends, and chairmen's speeches for last year are pouring in. Bumper profits have been earned and many companies' purse strings have been loosened. Investors cannot hope to appraise the present or guess the future unless they realise that those results contain little—for some companies nothing—of the financial consequences of the closing of the canal in November. They do, however, contain some of the consequences of the upsurge in freight rates that went on through most of 1956 and gained impetus when the canal was seized but not closed at the end of July. The results recently published cover for some companies the year which ended on September 30th, for most the calendar year. The most up to date of them (from Stanhope Steamship Company) runs to February 7th.

Most of the consequences of working without the Suez canal will come in the current year's profit and loss statements and with luck the same financial periods will also cover the reversion to normal routing. The impact will be different in the three main types of shipping, liners, tramps and tankers, and between companies, because of differences in accounting dates.

A feature of the 1956 accounts is that liner companies, tramp companies and tanker companies all shared in the good times. The table shows no single operating surplus, from the selection of companies recently reporting, that was not higher in 1956 than in 1955. But there is a caveat to be entered here. Most liner companies also do some tramping, and P and O which does a great deal of it has explained that its liner experience running to Australia and New Zealand was "very substantially worse than for 1955." The improvement in the consolidated figure sprang partly from better tramp freight rates and partly from *rationalisation of certain far eastern services.* The chairman of Cunard, Colonel D. H. Bates, however, reports more passengers carried across the Atlantic and good cruise results as well as higher freight earnings. It has been the tramp shipping companies that have shown the biggest proportionate rises in profit.

The companies will soon be moving back onto the Suez route. For the general run of tanker and dry cargo ship companies two months might see the bulk of the ships re-positioned and the shortening of the routes will have the same effect on the freight market as a large additional supply of shipping. Anticipation of that is doubtless one of the reasons why freight rates broke sharply in March. But it is not the only reason. A mild winter has reduced Europe's demand for grain and a current high coal output suggests less demand for coal freights across the Atlantic to Britain. Freight rates have not become uneconomic to the owner of good modern ships, and there is no warrant for predicting that they will. For the tramp owner, and perhaps for the tanker owner, too, the experience since the closing of the Suez canal has been on balance a boon. Those shipowners must now look forward to a period of smaller earnings. Companies that close their accounts in June should still be showing good figures; those that account to later dates may account less buoyantly.

For the liner owner normally using the Suez route the balance is more

intricate. While unable to use the canal the owner has faced three disadvantages :

Loss of the earnings from intermediate trade, for example with the Mediterranean ports.

Loss of time and therefore higher voyage costs and less voyages per ship per year.

Higher costs of fuel bunkers.

He has sought to offset those extras by the 15 per cent surcharge on basic freights. That surcharge has now been cut to 5 per cent and the basic freight rates increased which must imply that the liner conferences intend to charge somewhat more in total when they start re-using the canal than their scale before the trouble started. It will take some of them much longer to fall back into normal schedule of sailings, even if they are prepared to trust all their ships to the Egyptian controllers of the canal as soon as they are allowed to do so. When the choice lies between an expensive income-less journey just to get a ship into position for the changed schedule or a longer delay they will probably accept the delay. It is doubtful, for example, whether P and O will have slipped back fully into routine before its financial year ends on September 30.

Sir William Currie, the chairman of P and O, said that the closing of the Suez Canal had had " a most serious effect on operating results . . . of a number of group companies." How far has the 15 per cent surcharge gone towards mitigating that effect ? Sir William has also said : " In spite of everything, our net earnings as a group for the current year before taxation . . . are just about the same as the corresponding figures for last year." That naturally does not mean that the impact on the liner companies has been exactly nothing. Earnings were on the upgrade when the Suez crisis broke.

Shipowners must base their plans for new building—as they have presumably based their better dividends—on the assumption that the bumper results of 1956 will not be so easily attained in 1957, but they must look far beyond this year, too. They must take account of the steady increase in the supplies of modern tonnage that has recently come on to the oceans. So far as tankers go, the vast building and financing plans of the oil groups promise that most active building will continue for many years. The shipowner's traditional miseries—time wasted in port, dock strikes and rising operating costs other than direct wages, are all still with him. But he can plan the replacement of his ageing tonnage in the light of the doubled investment allowance that this budget grants, provided he is willing to assume that that allowance will be maintained as long as his programme lasts. That allowance impinges on the Bermuda ventures. Those who have already arranged to breed in Bermuda—London and Overseas Freighters and their associates, Stanhope Steamship, the Dene-Silver Line group and its associates—will go ahead, though whether the proportion of their ship breeding that will be done there will be as high as originally contemplated is another question. Certainly P and O is thinking again about the proportion of its tankers to be owned and controlled in Bermuda. Those who have hovered on the brink of a Bermudan venture will stop hovering. Court Line, refused permission to start a wholly owned subsidiary in Bermuda, and transfer certain assets to it, is one such. But the 40 per cent investment allowance to shipping should encourage building plans in total.

Investors in shipping seem also willing now to take a long and soberly cheerful view. Shipping shares fell back, as might be expected, when the freight market broke, but the fall was not dramatic and was soon halted. The investment status of shipping shares has improved greatly over the past 18 months. To illustrate this an *ad hoc* index of shipping shares has been plotted against *The Economist* Ordinary Share Indicator and is seen to have broken right through the general level of industrial ordinary shares. The quality of the investment buying is also reported to have improved.

Lancashire's Lot

BY A CORRESPONDENT

A state of transition from a difficult past to an uncertain future has been Lancashire's lot for almost half a century. While some things have changed many old problems remain

It is rare for two books on those old rivals, the cotton textile industries of Britain and Japan, to appear simultaneously. But the two have now been published*; they are written by men with a long experience of their subject and are addressed to a wider circle than their own industries. Mr R. Robson, for many years the Cotton Board's economist, writes on the Lancashire industry and Mr K. Seki, chairman of the Toyo Spinning Company, on the Japanese. Both authors delve deep into history, survey the present and probe forward into the future. Mr Robson's book is notable for its full economic and statistical analysis. The cotton industry has always been forward with information about its affairs ; like the American colonel smothered under his statistical reports in the Pentagon, Lancashire can at least claim " If we should lose this war then by God, sir, we go down with full statistical honours." Mr Seki's book is less objective and less up-to-date, but also well documented.

The observer of Lancashire may look back from last year's output of less than 2,500 million square yards of cotton and rayon fabrics to the 4,500 million yards produced in 1937 with the same nostalgia as the pre-war observer looked back at the 6,000 million yards of 1924 and the 8,000 million yards of 1912. Before the war much thought was being given in Lancashire and Whitehall to a policy for the industry. The need for adjustment is still present, though Lancashire would now claim that Whitehall has left it to find its own salvation.

The mechanical capacity of the industry still greatly exceeds the demand. Although the number both of spindles and looms in place is one third less than in 1937, there are still nearly 50 per cent more spindles and 30 per cent more looms in place than are currently required for full-time working even on a single shift basis. In Japan too, despite a much more drastic reduction in capacity during the war, excess capacity has reappeared. Mr Seki attributes this—and the consequent price competition—to " the excesses of the Anti-Monopoly Law " imposed by the Allies, which hindered the " Big Ten " combines from restoring their comfortable pre-war system of restrictions.

Now, as before, many seek a solution in the protection of Lancashire against low wage competition. The relative cost structures have changed only slightly. The average Japanese margin† in spinning and weaving together is still about half that in Britain. Low wages in India are, in Mr Robson's view, just about offset by lower productivity, but the Indians gain substantially from access to cheap Indian cotton. Competition in the British home market from imported cloth, again, is nothing new, but the level of imports is much higher (equal to nearly 10 per cent of domestic consumption) and the main source has shifted from Japan to India and Hongkong—Commonwealth industries against which protection presents special political difficulties.

Despite the strides made by individual firms in Lancashire, average output per man-hour in spinning rose by only about five per cent between 1948 and 1956, and by slightly more in weaving ; nor was this increase any greater, in Mr Robson's judgment, than could have been expected in view of the reduction in average counts and the growth in consumption of rayon. Somewhat shatteringly, the improvement in output per man-hour since the war has done little more than bring productivity back to the 1937 level. " British performance has fallen increasingly short of American standards, while European producers have tended to narrow the gap which separates, or did separate, them from British standards."

CHANGES IN THE LANCASHIRE SCENE

	1936–38	1953–55

Table prepared from statistics in Mr. Robson's book.
* 32's cop twist.

Part of the explanation of the lag in average productivity in Lancashire, when research, publicity and the example of individual firms have not been lacking, is a reduction in the proportion of workers directly engaged on productive work. " Otherwise," says Mr Robson, " it is difficult to resist the conclusion that the advantages of such improved methods of working as have been introduced have been largely taken out in the form of increased leisure or less effort, for which the gradually ageing working population may account."

Against the similarities in the Lancashire scene now

* The Cotton Industry in Britain, by R. Robson. Macmillan, 368 pages. 45s. The Cotton Industry of Japan, by Keizo Seki. Japan Society for the Promotion of Science, 417 pages, $6.50.

† The difference between the price paid by the spinner or weaver for his material and the price of his product.

and twenty years ago may be set some striking contrasts. These spring less from any action taken by the textile industry itself than from the state of full employment in the British economy. Unemployment has effectively disappeared. In nearly all postwar years the industry has been crying out for more labour—even when it was shrinking too. Shortage of labour has not done much to stimulate productivity, but it has had other results. Wage earnings for men and for women have risen to about the average for all manufacturing industry, and excess machine capacity has ceased to be an effective threat to the profitability of the operating mills. The labour shortage has achieved what none of the prewar schemes for freezing redundant plant managed to do.

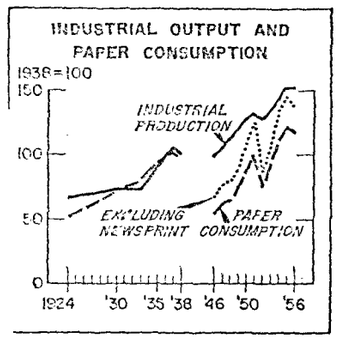
Perhaps the most striking contrast of all is given in Mr Robson's table of spinning margins. In 1929-39, the spinners' margin on 32's cop twist only once reached 6d. a lb. (in 1937), and in most interwar years it was under 4d. Throughout 1952-55 it was 23d. Wages, it is true, accounted for most of the prewar margins, leaving little—sometimes less than nothing—for profit.

After ten years or more of almost continuously profitable operation, how much has been done to renovate the industry? In 1953, the latest year for which comprehensive profit estimates are available in the Inland Revenue reports, the cotton industry's gross trading profits, before depreciation, were £38 million. Gross fixed investment in the same year was £8 million. This ratio of 21 per cent of gross investment to gross profit compares with about 30 per cent for manufacturing industry as a whole. Nearly three million new spindles (nearly all ring spindles) have been installed since the war, but this represents something less than one-fifth of the equivalent spinning capacity now in operation. About 50,000 new looms have been installed (nearly 40,000 automatic); again less than one-fifth of the looms now remaining.

Mr Robson is convinced that some further reduction in output is probable. Somewhat pessimistically he suggests that a more or less stable level of output may not be reached until exports (which now account for about one-quarter of total production) have diminished so far that a further decline would be offset by the gradual normal growth of the home market.

The policies advocated before the war and still strongly entrenched today—price maintenance with sanctions, redundancy schemes, large amalgamations and standardised wage agreements—were founded on the belief that the industry must be regarded as a single whole: the less efficient units must be kept afloat to prevent weak sellers from scuttling the boat. What seems to be needed now are experiments with new methods of trading, integration between the productive and merchanting sections and willingness to break away from the tradition of operating in a vast horizontal framework of specialised units; a number of firms have already moved far in this direction. The framework and traditions were well adapted to an 8,000 million yard industry selling every kind of cloth all over the world. To the outside observer at least, they seem inappropriate today. The aim in the future should have less to do with keeping the industry as a whole afloat and more with clearing a channel for its more enterprising members.

Free Trade in Paper



Paper is one British industry most firmly opposed to British membership of a free trade area. How much substance is there in its fears?

ONE of the eighteen trade associations that last October declared themselves "*unconditionally* opposed" to British membership of a free trade area in Europe—out of the 128 that replied to the enquiry made by the Federation of British Industries—was the British Paper and Board Makers' Association. This was unmitigated opposition from the representative body of a sizeable British industry, with a turnover now of more than £200 million a year. It was a flat refusal to take up the challenge of unrestricted trade in Western Europe, too, from an industry that has recently been achieving a rate of growth exceeded among major industries only by the chemical and vehicle producers. All three of these pace-makers of expansion have benefited to some degree from three decades of protection, but the paper industry is the only one that appears afraid to lose the safeguard.

The paper makers are prepared to set out their arguments for this attitude quite plainly. They depend for much of their supplies of paper-making materials upon countries that would be their principal competitors in the finished product—paper and paperboard. These suppliers, Sweden, Norway, and Finland, have already been slowly moving towards the production and sale of paper rather than of pulp; and the removal of tariffs and physical controls upon the British and continental paper and board trade would seem to be a perfect incentive to accelerate that development, which would certainly be more profitable to the pulp producers. Britain is their major market: hitherto it has imported pulp and other paper-making materials free of duty and levied a protective duty upon imports of paper and board (other than newsprint) in order to help foster the home industry.

Paper-making here at the present scale of output is

virtually entirely dependent upon imports of raw materials. A little woodpulp—mainly mechanical—is made but, so far at least, entirely from imported pulp wood. Production of paperboard is based primarily upon reclaimed waste paper, which amounts to rather less than a third of all the paper that is used. Of the four million or so tons of paper and board now used in Britain each year, very roughly a quarter is imported as such, a half is made here from imported materials and only a quarter is produced from indigenous materials. Moreover, half of otal British paper stems originally from forests that night come into the free trade area, while less than a hird of that (and less than a sixth of total consumption) arrives in its finished state.

Any sizeable shift in the established pattern of importing could lead to serious trouble for a number of British paper-makers. And it would be difficult to build up any compensating programme of exports to the continent. There they would also face competition from the Nordic producers as well as from the various domestic industries, all of which have been enjoying at least an equal degree of protection. At present, paper exports amount to well under a tenth of total British output, and most of that is newsprint and kraft wrapping paper shipped to Australia, New Zealand, and other Commonwealth countries—which incidentally now have plans to produce their own.

Scandinavian membership of the proposed free trade area is not certain yet; nor for that matter is Britain's. Both Sweden and Norway are members of OEEC and received the general invitation a year ago to consider the formation of a free trade area, but their reaction only became active and urgent when it became clear that Britain was seriously contemplating joining. Finland is not a member of OEEC, but it participates in the work of the pulp and paper committee of OEEC and is likely in time to be drawn into any West European free trade scheme in order to "protect" the principal export markets for the forest industries on which its economy so heavily depends.

REMOVAL of the remaining tariffs on paper and board imports would let in the full force of Scandinavian competition which, the outside observer could properly infer from the industry's reply, British manufacturers fear to face. Does it really do itself justice? Is free trade likely to bring disaster to the rapidly expanding home industry? If so, it might be observed that it is about time that the industry was given the stimulus of external competition to weed out the less efficient firms—assuming that some at least ought to be able to stand the pace.

Paper-makers last autumn may have been influenced somewhat by conditions in the paper and board markets at that time. Demand for their products, which nearly always varies closely with the rate of industrial activity, had stopped rising after an exceedingly prosperous three years; import controls had just been completely lifted; and a round of tariff reductions negotiated under Gatt (which still left duties on paper and board other than newsprint at rates varying between 14 per cent and 20 per cent) was just about to come into force. Costs had been rising, and with the temporary flattening of demand in a period when plant capacity was still being increased a number of manufacturers had costly surplus capacity on their hands. But the removal of tariffs in the projected free trade scheme would be a gradual process, spread over a period of 12 to 15 years—and it is the time scale of this regional approach to free trade that should be the starting point of any case study of its detailed implications. Paper consumption in Britain, as in most other highly developed countries, has been growing at a phenomenal rate. In the fifteen years before 1939 it doubled. In the first postwar decade it more than doubled, though this last ten years has not been a "normal" period; in 1946 consumption was only a little more than half as large as in 1938 and demand has been controlled in one way or another until last summer, with restrictions upon newsprint use being particularly severe. If newsprint is excluded, the level of other paper and board consumption by 1955 is found to be nearly half as high again as in 1938 and not very far below the overall growth in industrial output since then. The pace of general industrial expansion for which one can hope here in the next decade or two would perhaps indicate a doubling of the present volume of paper consumption by the mid-seventies. This would still mean an average consumption of only about 350-360 lb a head, well below the present American figure of more than 400 lb a head.

Paper consumption among continental members of the free trade area would be rising at the same time. Last week the pulp and paper committee of OEEC forecast a 20 per cent increase in consumption by member countries in the five years from 1955 to 1960—after having seen its estimate of a 40 per cent increase between 1950 and 1960 achieved by 1955. A doubling of consumption throughout the free trade area in the next 15 to 20 years is indeed not beyond the realm of probability.

The question western European pulp and paper producers should now be asking themselves is how and where this increase is to be produced. In an area of completely free trade—with full mobility of labour and capital too—the theoretical answer would be between the main pulp wood producing areas with large forest reserves and the main areas of consumption. Scandinavia, the main woodpulp producer in western Europe, is hardly likely to be able to cope single-handed

with that order of growth in demand, and encroach heavily into the existing markets of other producers sited closer to areas of heavy demand as well. It will undoubtedly want to process more of its own pulp into paper before shipment but this desire will be handicapped by the severe shortage of capital in these countries, which free trade is unlikely to remedy for some considerable while. Present profit margins are low and all Scandinavian companies suffer from really heavy taxation. Until their governments adopt a more sensible policy towards their major industries, pulp and paper producers there may not present a major threat even to British paper manufacturers' share of the growth of demand in their own market.

Scandinavia will still want to sell its pulp, and Britain is currently its largest single market. Moreover, a detailed comparison of British and Scandinavian costs would probably show up a number of products made in Britain and many mills making them, that compare favourably with their Scandinavian counterparts. High-cost small-scale units here may well have to go out of production, but the remainder, particularly those not heavily committed in products such as kraft paper and certain others which might suffer immediately from untrammelled Scandinavian competition, should have good chances of surviving and prospering further without a protected home market, even though their future rate of growth may be slower.

BUSINESS NOTES

IN THE MARKETS

Talk of Bank Rate

CITY talk, not quite so confident as it was a week ago, is still about the possibility of an almost immediate reduction in Bank rate. It has been sufficient with the opening of a new Stock Exchange account to produce firm market on the industrial side and to keep gilt-edged better than steady in a quiet market. In a leading article of this issue reasons are given why taking another half per cent off Bank rate might not in the best interests of the economy be the first priority. It may occur to investors that there are also strong grounds of market technique for making haste slowly. Those who believe that a change should be made at once base their arguments first on the continuous fall in the Treasury bill rate and the obvious surplus, at the shortest end of the market, of funds available for applying for bills. They go further and say that with sterling and the gold reserves looking a little stronger an ultimate influx of foreign short term money must be expected unless that money is discouraged by a less inviting rate of interest. There is, however, no general pressure of surplus funds operating on other sections of the gilt-edged list.

That is not the whole story. A major aim in British financial policy is to fund by selling stocks through the market. In the early weeks of this year that policy was highly successful. Large sales were made including large sales of short bonds to the discount houses, some of which acquired too high a proportion of bonds (and too low a proportion of bills) in their portfolios. Part of the renewed appetite for bills reflects the ending of that phase of indigestion though much is also due to the reduction in the supply of them. The surplus of bonds seems to have been cleared. The stage is now set for a resumption of selling of gilt-edged stocks by the government broker. He now has a varied offering and his prices are more nearly in line with the market than recently. Funding by sales in the market has indeed been resumed.

It is true that the Government has big maturities to face in mid-June—£300 million of 5 per cent Exchequer stock and £100 million of 2½ per cent Funding stock 1952-57. Some conversion operation must be expected to cover those maturities and it would not be surprising if some conversion option were at the same time offered to holders of the £503 million 2¼ per cent Serial Funding stock in order to reduce the size of the further operation that will be needed by November. But once it is understood that the Government makes most of its issues primarily to itself and that the real process of issue consists in subsequent sales of the stocks by the government broker at varying prices over a period, the relationship between a maturity and a change in Bank rate becomes entirely different. The market generally buys from the government broker in periods when it expects a reduction in Bank rate and takes little from him in periods when it cannot foresee a further move. If Bank rate were reduced now it would have fallen twice in about three months. The City could not possibly start talking it down again at once. The Government, apart from avoiding any charge of rigging the market to its own advantage, might actually sell more stock to the public by delaying any change in Bank rate until decently after its operation in the issue market.

EAST AFRICA'S ISSUE

HOPES of a lower Bank rate, though unfulfilled, accounted for some of the substantial amount of stagging that accompanied the issue of £9½ million 5¾ per cent East Africa Stock 1977-83 at par in the London market. The issue was attractive, however, even on the basis of present interest rates, and was well covered. It was apparently the complicated structure of the issue—the two issues and two application forms that prevented the Crown Agents for the Colonies from getting allotments out on Thursday. In form the issue consisted of two loans. One was of £8½ million for railways and harbours, £1½ million of it being taken up by colonial government funds, leaving £7 million for the public. The other was of £3 million for posts and telecommunications, £500,000 of it having been taken by colonial government funds, leaving £2½ million for the public. Both are guaranteed as to principal and interest by the governments of Kenya, Tanganyika and Uganda.

The high coupon and 5¾ per cent yield (since the issue is made at par) were obviously pitched to ensure success. An obvious comparison is with the 5¾ per cent Tanganyika stock 1978-82 which was quoted in the market at £104½ just before the East Africa loan was announced and at £102½ just afterwards. Even at the lower price the East Africa stock is markedly cheaper both in price and in yield. But just because the issue was heavily stagged the market foresaw that the premium was not likely to be high.

STEEL OF WALES

THE steel group has been well supported on the Stock Exchange for a fortnight. But a small movement within that strong group should not escape attention. Steel of Wales £1 ordinary shares now 5s. per share paid have moved up this week from 4s. 6¾d. to 4s. 10½d.—that is to a mere 1½d. per share discount. That move, natural, and spread gradually over a few days, can have only one meaning—that those underwriters who received much more of the £40 million issue than they wanted have finished selling. There is believed to be almost no surplus of the stock still overhanging the market. It is early days to think of the consequences, but if the small discount on the stock turned into a small premium, the way would be clear for the last of the Iron and Steel Holding and Realisation Agency's big sales of ordinary stocks—the shares of Richard Thomas and Baldwins. The market is beginning to think of some time early in the second half of the year as a possibility for that marketing.

BRITAIN'S FUEL POLICY

Facing the Forecast?

IN a quite masterly survey of the British energy policy with which he has been associated for barely three months, Mr Maudling this week demonstrated that he is well aware of all the underlying questions that it raises—though he did not commit himself to answering all of them. He did not mince words about "the completely new phase" that looks to be approaching in Britain's fuel situation—in which the new source of primary energy, nuclear electricity, should rapidly interpose itself between the slowly rising output that is all the coal industry can plan and the greatly increasing imports for which the oil industry is glad to arrange. That is the course set for the next decade to "ensure that our fuel supplies are adequate" for the demand with which the government is reckoning. But within that decade the possibility must be faced that this course will sooner or later throw up a potential surplus of conventional fuel that cannot neatly be offset by writing up coal exports. And in dealing with that surplus, the Paymaster-General frankly admitted that the government's second major objective in energy policy, ensuring "that the contribution to our balance of payments from indigenous supplies is as large as we can possibly make it" might eventually conflict with price and consumers' choice.

Like most people who have considered this prospective dilemma, Mr Maudling doubted whether it would become significant before the second half of the nineteen-sixties; unlike most of them, he did not retreat from it by assuming that the National Coal Board cannot possibly achieve the coal output it plans in 1965 (and, incidentally, happens to have touched during some admittedly exceptional periods this year) or by pushing up his estimate of total fuel demand in the future. His forecast, by some standards, was indeed on the conservative side, perhaps rightly so (too much refinement of figuring with such an inherent degree of error might be described as silverplating ingots). He put British consumption of fuel in 1965 at the equivalent of about 300 million tons of coal, and assumed net exports of 10 million tons more than in 1955, apart from foreign bunkering, which takes oil and coal to the tune of 10 million tons a year—say, just over 325 million tons a year in all. If the coal industry provides 240 million tons of that, and nuclear electricity the equivalent of 14 million tons (by the end of the year it will be saving coal at the rate of 18 million tons a year), then the "gap" to be filled by oil imports would be the equivalent of about 71 milion tons of coal—say, 41-42 million tons of oil a year, with some 35 million tons sold inland, against just over 20 million tons sold inland in 1955.

HOW MUCH MORE OIL?

THE oil companies have been reckoning on selling a good deal more than 35 million tons of oil inside the British market by 1965—indeed, something closer to 45 million tons. They have balanced their own forward estimates by assuming that coal output will rise less than is planned, that total consumption might be slightly more than the Paymaster-General suggests, and that net coal exports can be pushed up rather more. These assumptions may all be right; but Mr Maudling's statement has bluntly put the other side of the matter. In recent years, Ministers of Fuel and Power had encouraged the oil industry to think of much more than Mr Maudling's (admittedly minimal) figures. In 1955 Mr Geoffrey Lloyd, talking mainly about the black oils, said that as early as 1960 the Government "could see its way" to the use of oil on a scale "equivalent to an extra 25 million tons of coal a year." Early in 1956, Mr Cunliffe of Shell-Mex and BP was able to say that Government policy implied the use of nearly 22 million tons of fuel oil alone by 1960, quite apart from bunkering and rising consumption of other products.

THE FUEL BALANCE, 1955 AND 1965
(million tons coal equivalent)

Supplies	1955	1965	Use	1955	1965
Coal :—			Inland :—

Hydro, etc.	1	2	Total Inland	250	301
			Net coal exports*	4–6	14–16
			Bunkers :—		
			Oil, say	2	(9)
			Coal, say	7	(1)
Total	267	327	Total	267	327

* Allowing for changes in stock.

Of the 20-21 million tons of oil used as fuel in Britain in 1955, about 9½ million tons were gas/diesel and fuel oils used in general industry. Assuming moderate rises in consumption of transport and other oil fuels—something of the order of 3 per cent per year—from the 1955 level, one

might guess that these would account for, say, half of the 35 million tons of "oil requirements" officially assumed, which postulates less than 20 million tons of black oil consumption in general industry by 1965. Last year about 11 million tons were so used, of which about half a million tons was used in generating electricity. The CEA's 10-year contracts with Esso and with Shell-Mex and BP provide for an increase in CEA consumption alone of 5½ million tons by 1965. So the increase allowed for in black oil consumption by other industries is only of the order of, say, 2-3 million tons between 1955 and 1965—which would barely exceed the likely increase in the refineries' own use.

INFLUENCE AND FUEL

At face value, the Paymaster-General's estimates of oil "needs" ten years from now might imply a rapid flattening out of the recent phenomenal growth curve of fuel oil sales in British industry—little extra oil, that is, for anyone except CEA, perhaps steel, and the refineries themselves. Even as a minimum, this looks incredibly low. Mr Maudling made much of what he called "that horrible word flexibility" in forward estimates. The oil industry, naturally, expects (it prefers not to say "hopes") that the flexibility will in fact come on the side of coal, through lower output than planned or higher net exports. But this speech has given it an unpleasant reminder that things might not arrange themselves quite so conveniently for it: oil imports might be made to afford the flexibility. On price and consumers' choice, the surplus would probably be of coal. Nevertheless, this week has made the oilmen a little more uncertain about the attitude of this and later governments, in such awkward circumstances.

In the last few years Government influence has in fact generally been exerted to promote conversion to oil fuels, by exhortation and by counting this conversion as a "fuel-saving" investment qualifying for low-interest loans from the Government and for the 20 per cent allowance no longer allowed to most other industries. Since the Suez affair no more loans have been given for oil conversion, and the question whether such re-equipment should still qualify for investment allowance appears to be under discussion now. A much bigger element of Government influence was originally lent to bless the plan for converting some existing power stations to dual-firing so that they could take oil and equipping some new stations such as Marchwood for oil-firing. Mr Maudling, in the Commons, said "some rephasing" of the oil-fired power programme might take place, though Mr Renton later said that "the contracts must be fulfilled."

Reassurances for every fuel industry abound in Mr Maudling's statement: understandably, the coal industry received rather more than any other. He was hardly in a position to throw any doubt upon the NCB's forward estimate of output, or on CEA's nuclear programme. So it is anybody's guess how significant his setting of those estimates inside conservative estimates for total fuel and thus his derivation of minimum figures for oil "needs" may turn out to have been. If the choice between free marketing of competitive fuels or strategy and the balance of payments should arise, it will obviously be a ticklish one for any government in power. Miners, moreover, unlike oil companies, have votes at elections—and between elections, with their feet. But the slightest sign of a surplus of coal also tends to have a very rapid effect upon the amount they are prepared to get out of the ground.

GOLD FIGURES

Return to Dollar Surplus

THE gold figures for April are probably the best since the Suez crisis. The gold and dollar reserves rose by $111 million. Admittedly, all but $7 million of the increase was attributable to the return of the special holding account into which Britain paid the 1956 interest on the North American loans, pending final ratification of the waiver (now amended to deferment); but the true dollar balance for April is much better than this residual.

The explanation is the regular month's lag in settlements with the European Payments Union. In April, Britain paid EPU $6 million in settlement of the March deficit; but the April EPU balance was a surplus of £16 million,

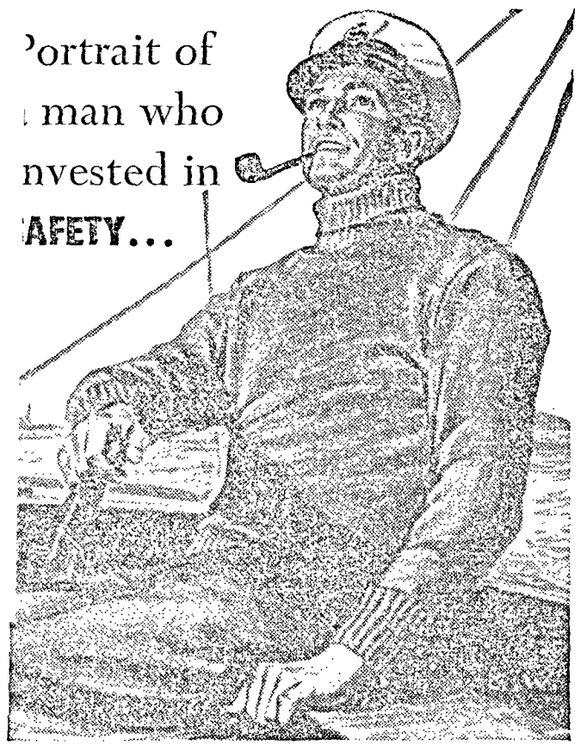
THE GOLD RESERVE

($ million)	EPU settlement*	Direct dollar balance	and special payments or credits	Change in reserves	Reserves at end of period
1956 :—					
August	−51	− 68	− 10	−129	2,276
September	−34	− 94	+180†	+ 52	2,328
October	−28	− 63	+ 7	− 84	2,244
November	−28	−285	+ 34‡	−279	1,965
December	−49	−169	+386§	+168	2,133
1957 :—					
January	−17	− 36	+ 4	− 49	2,084
February	+20	− 20	+ 63	+ 63	2,147
March	+17	− 27	+ 72	+ 62	2,209
April	− 6	+ 11	+106**	+111	2,320
	May	+ 34	...	...	...

* Relates to balance in *previous* month. † Includes $177 mn. from sale of Trinidad Oil. ‡ Includes $30 mn. from official sale of US government bonds. § Balance of drawing of $561 mn. from IMF, defence aid of $6 mn. and end-year instalments of $181 mn. on US and Canadian postwar loans. Includes drawings by India from IMF of $59 mn. in February and $67 mn. in March. ** Including the return of $104 mn. of deferred loan interest.

which will yield a gold payment of $34 million next week. If the EPU settlement were made in the month to which it relates there would have been a commercial surplus last month of $47 million (including $2 million defence aid).

Since dollar payments for oil remained fairly high in April—though they did show some reduction from the peak levels of the first quarter—this represents a handsome surplus in the sterling area's other commercial transactions. The strengthening confirms the indications in the exchange market, in which sterling showed a marked strengthening in the second half of April.



INDUSTRIAL OUTPUT

Looking for the Turn

ALL that can safely be deduced from the official index of production published this week is that British industry has weathered the period while the Suez Canal was closed without the slight dip in output some people expected. If allowance is made for seasonal factors, output seems to have remained steady in the first quarter of this year at the same level, 136-137 per cent of its volume in 1948, that it has been for the previous two years.

It is possible to discern some faint traces that a mild groundswell in total output may have begun by March, though these could be illusory. Motors were already showing some recovery; the indices for January and February

THE FINANCE BILL

The OTC Labyrinth

ONE of the minor but still irritating consequences of the erosion of the tax base is complex law. Thirty of the fifty-eight pages of the 1957 Finance Bill are devoted, in language which may be a lawyer's joy but which is a layman's sorrow, to the relief from British tax on the profits (so long as they are not distributed) of overseas trade corporations (OTC's). This concession, the Chancellor estimated, would cost the revenue £35 million in a full year. Twelve months before Mr Macmillan estimated the cost of an unspecified tax relief on overseas profits at £75 million.

The original estimate seems to have been based on a calculation of all profits earned overseas, either by trading or by export sales. The new bill takes pains to avoid the charge of granting hidden export subsidies by strictly limiting the area of relief. For this concession to be secured sales between a British parent and its overseas subsidiary (or in the reverse direction) will have to be at arm's length prices and the subsidiary will have to take delivery of the goods fob (thus neither performing any service nor incurring any charge in respect of the goods while they are in Britain). This limitation, which already applies to trade between British resident and non-resident companies, is perhaps one reason for the smaller cost of the relief. Another is that, though the relief represents a new departure in the fiscal system, it is not one that automatically benefits all British companies trading overseas. Many of these have already secured the tax advantages now offered to OTC's by transferring the nominal control and management of overseas subsidiaries abroad. The gain is only substantial where local taxes are low (or non-existent) and are likely to remain so. The gain is steadily whittled down as the local rate approaches the British rate (though here local allowances on, say, depletion may be as important as the actual rate of tax) and where the local tax is as high or higher than the British one it can be positively disadvantageous to become an OTC.

EACH company will thus have to consider its own particular circumstances with great care. This is all the more necessary because whether or not a company ranks as an OTC seems to be a matter of fact—not of choice. Some companies will be able to qualify by reorganising themselves; others will have to reorganise themselves to avoid doing so (if, say, they wish to offset overseas losses against British profits). A company, controlled and managed in this country, will qualify as an OTC if it carries on all its trade abroad (except in the Republic of Ireland). Alternatively, a British parent company can form a separate sub-holding company controlling the operations of overseas subsidiaries; and this holding concern, so long as it has no British subsidiaries, will qualify as an OTC—thus permitting a British tax-free flow of funds from one overseas subsidiary to another. The fact that some companies sell their produce here will not be a disqualification so long as the goods are sold in a recognised *market* (as, say, tea or rubber). But banking, insurance, money lending, hire purchase credit and security dealing businesses are excluded—on the grounds,

***"Our laws should recognise as entitled to special tax treatment a class of Overseas Trade Corporations."* — Mr Thorneycroft in the Budget speech. The Finance Bill sets out the conditions of this relief.**

it seems, that their overseas trade depends on the backing of their British head offices and assets. Shipping companies, too, are excluded, because, under reciprocal agreements, their profits are taxed as if they were all earned in this country. Nor can an OTC be formed to exploit the services of individuals ordinarily resident in this country (as, say, those of actors, authors or film stars).

Though relief from British tax will be granted on the profits earned abroad by an OTC, once they are distributed they will attract that tax; and relief will not be granted on an OTC's investment income. On distribution, these profits, having borne local tax, will bear British income tax—and profits tax as well if the shareholder is a company (for example, if the shareholder is a British parent company). Loans and grants from an overseas subsidiary to a British parent will be treated as distributions, thus attracting both income and profits tax. To enjoy the concession, retained profits will have to be used to build up overseas businesses and not those of the British parent. But it is possible, through a sub-holding company, to transfer funds from one overseas subsidiary to another or to bring them back to this country for investment outside the controlling group without attracting tax. Any income arising from such an investment would, however, not rank for relief. As the concession encourages the growth of assets, its investment appeal is to the surtax payer, interested less in dividends than in capital appreciation. Moreover, on liquidation, capital distributions from an OTC (over and above the tax free repayment of capital) will be subject to income tax only. But it should be noted that a private company which becomes an OTC can still be subject to a surtax direction.

THE simplest example of an OTC is a plantation or mining company earning all its profits overseas. Having paid local tax, its retained profits will not be subject to British tax. Its dividends to shareholders (so long as these are not companies) will attract British income tax only. Thus if the local tax is 2s. in the £ the dividend to British resident shareholders will in addition attract 6s. 6d. in the £ (that is the difference between the local rate and the British standard rate), and those not paying the standard rate can claim relief up to the limit of 6s. 6d. in the £. Foreign shareholders will be able to claim back all British tax (which would be 6s. 6d. in the £); the provisions thus encourage foreign investment in British companies trading overseas.

The more complicated case occurs when an OTC subsidiary pays a dividend to its British parent. That dividend attracts local tax (say, 2s. in the £), and then British income tax after double tax relief (in this case, 6s. 6d. in the £). Thus far this dividend, attracting tax at 8s. 6d. in the £, is on a par with that paid by a British subsidiary to its parent. But the OTC dividend is not franked investment income; therefore, duly grossed up, this dividend will attract British undistributed profits tax, payable by the recipient. (And, of course, once the parent pays its own dividend that attracts distributed profits tax). The fact that an OTC's dividend is not franked income has an important consequence. Where local taxes are higher than the British standard income tax rate, there will be no advantage in creating an OTC, since an OTC can obtain double tax credit when paying dividends only to the extent of the standard rate (8s. 6d. in the £) and no relief is available against profits tax. Where this is true, a dividend by an OTC received by another company will be of less value than an equivalent dividend paid under the existing double tax relief rules.

This elaborate piece of machinery deliberately encourages the formation of new capital from ploughed back profits abroad—just as the discriminatory rate of distributed profits tax encourages that formation from retained profits at home.

Continued from page 424

have now come out at the top of the range first forecast for them; and revision of the manufacturing index shows a more than seasonal rise between the two months. The shipbuilding and engineering strikes affected output in late March and the beginning of April. In spite of the major loss in working days they caused, they at present seem unlikely to depress the index by more than a point or two in March. The seasonally-corrected index for March is, in fact, now expected to be down to about 135-136 (1948 = 100); though comparatively few of the engineering industries concerned report actual output quickly enough to have affected this forecast which is made on the basis of early reports from a few major industries such as steel, fuel and power, motors, an allowance has been made for the strikes. Output in the early months of the year, moreover, may have been improved by good weather and unusually good health among workers—a factor elaborately recorded in an industry such as coal, which may well affect attendance in many firms that never measure absenteeism.

BANK CREDIT

Sales of Gilt-Edged

MR THORNEYCROFT in his budget speech enjoined the banks to continue to conform to the terms of the official "request" on restricting advances and instructed the Capital Issues Committee to tighten its hold over advances for capital purposes. His warning, possibly unwise, was certainly unnecessary, for the bankers are being obliged to tighten up because of their own need for liquidity.

The run-down of the banks' liquid assets in the early months of this year has been substantially larger than in previous years—though by no means as large as might be expected from the extraordinary reduction in the outstanding public issue of Treasury bills, from £3,600 million at the end of 1956 to £2,830 million, the lowest for four years. Moreover, between mid-January and mid-March, advances were rising especially fast, even for the tax gathering season, despite substantial repayments by the nationalised industries from their Exchequer borrowings. Consequently, despite sales of investments by Lloyds and the National Provincial, offsetting in part the purchases made by other banks earlier in the year, the average liquidity ratio dropped to 32.6 per cent, and that at Lloyds dipped below the conventional minimum of 30 per cent.

In the latest period, the four weeks to April 17th, the pressure of rising advances slackened considerably. The nationalised industries, having paid off roughly that part of their overdrafts that represented finance for capital outlays, re-appeared as net borrowers to the order of £12.6 million. But, nevertheless, total advances of the clearing banks rose by only £17 million. This marked an increase in advances to borrowers other than the state boards of £4.4 million—compared with £70.7 million in March and £97.1 million in the (five week) February period.

* After deducting items in course of collection. † Ratio of assets to published deposits.

The banks' liquid assets, however, rose less than seasonally, and liquidity ratios continued under pressure. Lloyds restored its ratio to 31.7 per cent by selling investments to a total of nearly £22 million, and the District Bank sold a further £2 million. But liquidity fell below 30 per cent at the National Provincial, which showed only a fractional reduction in its portfolio. The average ratio for the eleven clearing banks rose very slightly to 32.7 per cent. In coming weeks, an obvious source of replenishing liquidity will be redemption of the maturing Funding and Exchequer stocks, of which the banks are believed to be considerable holders.

FOREIGN EXCHANGE

Troubles of the Franc

STERLING has held firm this week. The official spot rate against the dollar, which was $2.79 at the end of last week, has strengthened to $2.79 1/16—compared with $2.79⅞ touched on Wednesday of last week and around $2.79¾ before the March labour disputes. There has been a fair commercial demand from New York which persists in spite

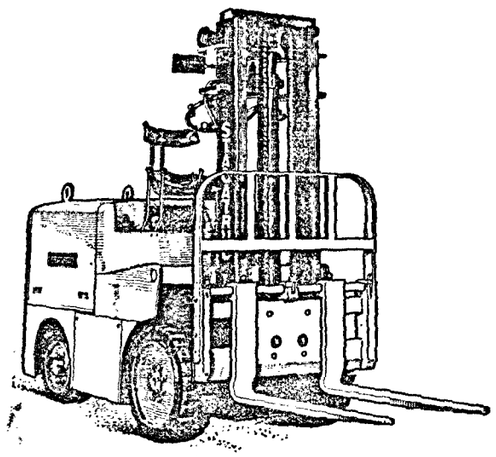
Highest in class



Schools are not what they were. Inside, they are brighter, lighter and more pleasant than ever before. Bowater building boards have aided this transformation by providing a new kind of ceiling for the younger generation to look up to. Budding captains of industry in class will one day learn how many other uses there are for products made by Bowaters. Building boards, packaging products, printing papers . . . by the diversity of their activities, both here and in North America, Bowaters are contributing weightily to the strengthening of Britain's economy. This contribution will become steadily greater as the new mills and factories, planned and being built, come to productive life. Today's children will inherit the benefit.

. . . the willing horse

It is an old axiom that everyone flogs the willing horse—but who wants to use horses in this enlightened age, when mechanical means can do a vastly better job? Nevertheless, it is quite surprising how often materials are humped around by manpower alone at a cost not only measured in fatigue, injury and slowed down production, but in the waste of good hard cash. More and more enlightened industries are taking burdens off men's backs by substituting the horse power of mechanical handling . . . Stacatruc handling . . . for this superlatively well engineered lift truck is the most versatile aid to quicker, cheaper and easier handling available today. Lifting, transporting and stacking all manner of materials with unfailing dependability, the Stacatruc fork lift truck is an integral part of Britain's best mobile materials handling system.

Variations in one key

OLD Jeremiah Fornaby built his plain brick factory in 1840 Sebastian Fornaby, in tune with the times, got a man up from London to design him a cloud-capped castle with machicolations and a working portcullis.

Now Sir Ignatius Fornaby, not without misgivings, has added his contemporary variation.

"Doesn't look safe to me," he said when he saw the plans. "All that glass and stuff. Old Jeremiah wouldn't have liked it."

But he shook off these ancestral forebodings to add, "Better let the Chubb chap have a look. Don't want security trouble."

The Chubb master-key system installed by Jeremiah still worked unobtrusively and efficiently. The Man from Chubb explained how neat, modern locks for the new building could be incorporated into the system.

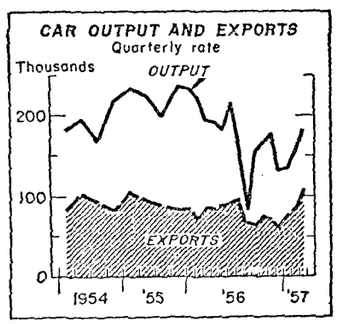
"Deuced clever," said Sir Ignatius, "Old Jeremiah would've liked that."

So, if Fornaby's Limited appears architecturally a little discordant, the security system at least is—literally—all in one key.

For any business, the Man from Chubb will make a free and confidential report. Even if you never take his advice, the opinion of the world's greatest security experts is worth having. Write or telephone Chubb & Son's Lock and Safe Co. Ltd. 175-176 Tottenham Court Road, London, W.1. (MUSeum 5822)

DON'T LEAVE IT TO CHANCE—

LEAVE IT TO CHUBB



of the fact that the seasonal buying of sterling to pay for sterling area commodities should now be past its peak. Seasonal influences have become blurred by other factors in the sterling-dollar balance of payments. Tourist traffic, the expenditure of American troops in Britain, and the satisfactory growth of direct UK exports to the dollar area now make the seasonal dollar earnings from sterling area commodities, though important, a secondary influence. There has also been good demand for transferable sterling—from New York, but not this week—mainly from Zurich. The rate has improved to $2.7730. Security sterling, though slightly better, remains around $2.58.

In sharp contrast the French franc remains under persistent pressure and against sterling has touched its lowest permissible limit of 987½. There was also an ominous widening of the forward discount on French francs early this week, the three months' rate jumping from 10 to 12 francs. The outlook for the franc seems ominous, but there is no general expectation of immediate devaluation. It is unlikely that France would consider such a move at the beginning of the tourist season and on the eve of another renewal of the European Payments Union. Decision on the future parity, if it is not forced earlier, is likely to be postponed at least until the IMF meeting in Washington in September.

CAR SALES

Recovery and Prospects

CAR output is still reviving remarkably strongly. A weekly rate of output of 13,950 in March was fully 17 per cent better than in February and the best rate of production the industry has turned in since June last year. It was still a long way short of the number of cars leaving the factories two years ago just before the market broke, but exports, at just under 36,000 for the month, are already back to those record levels. Home sales are also doing well in the circumstances, shooting up markedly in March, the beginning of the best home selling season in any normal year. It seems that April will show even better figures this year, allowing for the fall of the Easter holiday. With commercial vehicle sales also picking up steadily, short-time working has now disappeared and several thousand workers have been taken back in the last two or three months.

The higher export figures are due almost entirely to the expansion of one market—none other than the United States. Exports to the continent have been gaining some ground slowly, but Commonwealth shipments are even lower than a year ago. But in the first three months of this year the industry shipped just under 20,000 cars to the United States, which is more than in the whole of 1955 and more than half last year's record total. All continental producing countries have been doing as well there ; Britain's gain, also, appears to be well shared by most firms tackling that market.

With the prospect of fewer restrictions for the remainder of this year in its main Commonwealth markets, the industry is hoping to turn in an export performance not very far short of its best year, which was 1955. Hopes for the home market are less sanguine. Sales are going quite well now despite rationing, particularly in second-hand cars, but to catch what the industry feels should be the full summer season it would like to see an early end to the petrol ration. The autumn and winter is again likely to be poor, if the prewar seasonal pattern of sales has really returned to stay, and total production for the year may well therefore reach only about 770,000, the same roughly as in 1954 and less than a tenth more than last year.

GOVERNMENT CONTRACTS

Building at a Fixed Price

THE Minister of Work's decision to return from now on to a system of fixed price tendering for all government building contracts has not been taken particularly well by builders and civil engineers. Though the experimental scheme that the Ministry launched last May for fixed price tendering in the case of all contracts valued at £100,000 or less has worked quite well, and building costs have edged forward only slightly in the last year or so, the industry is not so certain that its costs will remain relatively as stable in the next twelve months. But the Ministry sees its decision as an effective contribution to forcing stability in building prices, whether the industry likes it or not. With local authority and nationalised industry work as well—the Government is inviting them to adopt the same policy—the practice of fixed price tendering would cover a sizeable portion of building and civil engineering output: perhaps about a half of all new work done by the industry. So far the practice has not appeared on any significant scale in the private sector ; but the Minister is hoping that his lead in returning to prewar practice will be followed in time by private clients.

The industry managed to get one concession from the Minister. Fixed price tendering will not apply to contracts lasting for a period of more than two years. It will also not apply to contracts that have not been "thoroughly planned in advance" by the architect or engineer of the public authority concerned. The two-year rule will cut out a fair slice of civil engineering work, such as hydro-electric schemes and power stations, but it has been estimated that about two-thirds of all local authority and government contracts for new work are normally completed within two years.

THE FINANCE BILL

A Very Dead Horse

SEVERAL well-known estate duty loopholes are plugged by the Finance Bill. The "disappearing trick" (which dates from a decision about a dead racehorse and which freed from duty gifts which ceased to exist before the death of the donor), and the watering down of share values by means of free scrip issues (originating in the Oldham decision) are both to go. Under the new proposals, gifts of money will be charged to duty in the event of the donor's death within five years at the amount actually given.

Other outright gifts (as for instance shares) will be chargeable for duty either at their value at the date of the donor's

Overheard in the bar of the Royal Court Theatre Club.

"Now my wife swears by the News Chronicle"

"So do millions of other people. They like it because it's different from any other popular daily."

"In what way?"

"Well, it treats its readers as adults to start with. It assumes that they like to make up their minds without having other people's opinions forced on them. Whatever the event the News Chronicle reports it objectively. Whatever the controversy, the News Chronicle weighs up the pros and cons and encourages its readers to think for themselves. That is why it is the most influential of all popular dailies."

"But what sort of people does it influence?"

"The more intelligent sections of the community, irrespective of class or income group. For the News Chronicle has a readership of over 5 million you know, so its readers must be a pretty good cross-section of all walks of life. They're the sort of people who appreciate worthwhile things—good music, good books, good drama—in fact, I bet there were quite a few News Chronicle readers in the audience tonight. One great advantage of advertising to such people is this. They have the *nous* to recognize good value."

And if you want to know how economically it pays to advertise in the NEWS CHRONICLE just ring William Memory, Advertisement Director, at FLEET STREET 5000

NEWS CHRONICLE
AND DAILY DISPATCH

death, if they still exist unchanged, or at the value—also at the date of death—of the property received in substitution for the original gift. If the original gift is sold or redeemed for cash, no difficulty will arise : the proceeds will be apparent, and it is not proposed that the proceeds of reinvestment should be followed. More trouble will be encountered where the gift bears fruit in the form of rights issues since the value of the additional shares thus acquired, less the issue price paid for them, will be brought into account. Where the gift takes the form of a settlement, the new proposals put the law back to where it was before the Sneddon and Iveagh cases in 1954. The estate duty office will look, not at the individual items put into the trust fund, but at the value of the corpus of the fund at the date of death. Thus, if the trust receives cash and invests it, duty will be assessed on the value of the investments when the donor died.

One small concession is given to the taxpayer in the form of marginal relief where gifts to a single individual slightly exceed the exemption limit of £500. But the bill does not link the justifiable stopping of avoidance with the introduction of tapering provisions on gifts *inter vivos* when the five-year period is nearly, but not quite, up. And the bill is retroactive, since its provisions apply to all gifts made within five years before the date of legislation.

LEAD AND ZINC

New Props for Old?

THE American Administration's decision in 1954 to take the surplus of domestic lead and zinc into its "supplemental stockpile" was simply a palliative for an industry faced with competition from foreign supplies. Subsequently foreign metal was also taken into the stockpile as a means of obtaining additional markets for surplus farm commodities. Like the first, this action tended to aggravate the disease ; by bolstering prices it encouraged production in foreign mines. Late last week producers were reminded that the present system of support cannot go on for ever. The stockpiling of domestic zinc, said the Assistant Secretary of the Interior, is due to end "in a matter of months."

Prices in London fell sharply, prompt zinc closing on Thursday at £93 15s. a ton, a fall of £6 on the week ; the discount on forward metal, however, remained at about £3 10s. a ton, an indication of how short the London market has been kept by shipments of foreign zinc to the stockpile. Lead prices fell too, prompt metal closing about £2 10s. lower at £109 a ton. Reports from Washington suggest that the Administration will soon present to Congress its long-promised "long range" programme for assisting high-cost producers ; and this may be the explanation of the Assistant Secretary's remark. A more selective method than stockpiling is certainly needed.

COMMERCIAL TELEVISION

ATV Takes a Strong Line

THE state of confidence among the programme contractors of the Independent Television Authority can be gauged by the concessions they offer to advertisers. By this standard, the changes that Associated Television has just introduced into its advertising rates are a sign of confidence riding high. To tempt bookings, it has been the practice for some time now for the contractors to cut up their hours of transmission into segments sometimes as short as 30 minutes, each consecutive segment attracting a different advertising rate. ATV has suddenly put this process into reverse. Its present rate card lists as many as 11 different segments for Saturday afternoon and evening, and the same for Sundays (in London). From September, these are being cut on Saturdays to three broad divisions that might roughly be described as off-peak (5 pm to 6 pm) ; peak (6 pm to 7 pm) ; and half-way-up-the-slope (7 pm to 12 pm). For Sundays the reductions are rather less drastic.

This has two results. The most important is that the advertising rate for anything but the peak viewing times has jumped sharply. The second result of the change is that where the advertiser could be fairly certain under the old booking system where his commercial would appear, he will now have to pay a 10 per cent surcharge to get the commercial appearing near the kind of programme that attracts the audience he wants. To sweeten the pill, ATV has taken the rather surprising and unconventional step of guaranteeing that these new rates will run unchanged until September 1958.

This is the first open move made by a programme contractor to recognise the fact that not only is advertising fully booked at peak times, but it is becoming pretty congested at off-peak times as well. ATV's rates for peak times have been increased only slightly ; it is the advertiser who slyly booked 10 or 15 minutes after the peak time and so got his audience at bargain rates and the genuine off-peak advertiser who face the really big rises in their advertising costs. Compared with the size of audience, even the new rates are regarded as competitive. It now remains to be seen how quickly the other programme contractors follow suit and whether they are also going to be bold enough to commit themselves to a given level of rates, as far ahead as ATV has done.

TRADE FAIRS

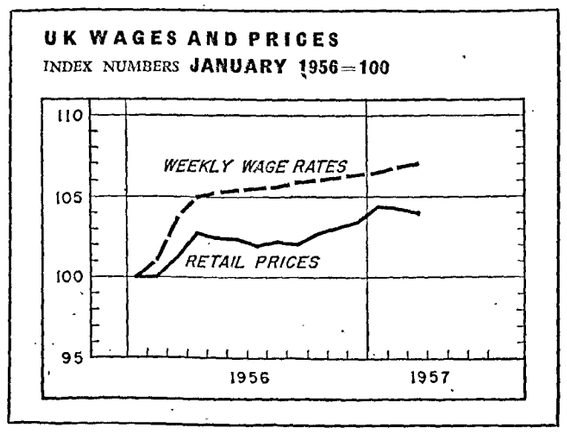
Birmingham's Brave Effort

THE British Industries Fair, which opens at Birmingham next Monday, is a courageous attempt by the local Chamber of Commerce to show that there is no reason why Britain, almost alone among European countries, should fail to organise a successful trade fair. This year the entire fair is being held in Birmingham, none of it in London, and the organisers have had to do without the £90,000 of government funds formerly available each year for advance publicity overseas. Considering this handicap, and the initial setbacks caused by petrol rationing, their achievements in selling exhibition space and in stimulating enquiries from overseas buyers now sound quite promising.

The extra £90,000 that the government is now prepared to spend on overseas trade fairs is certainly badly needed there, and even allowing for it Britain still spends much less on overseas fairs than its main competitors spend. But it is often difficult for the many small firms that make up a large proportion of British industry to display their goods abroad. If this year's BIF is a financial success, or makes only a small loss, in spite of the smaller sums spent on publicity, there may be a case for providing at least some government money for publicity next year. Even a disappointing result should not be taken as proof that it is

finally time to call out the burial party; it would still be possible to change the character of the BIF. Recent discussions in the Birmingham Chamber of Commerce about the possibility of making the BIF an international fair—that is, admitting foreign exhibitors—point in the right direction.

A general fair, providing for simultaneous exhibition of products from all important industries, as the BIF was originally intended to do, could not be opened to foreign exhibitors without becoming of quite unmanageable size. But the BIF has already become, to a large extent, a specialised fair for hardware, building, electrical and heavy engineering, with a small consumer goods section. More buyers would be attracted to a specialised fair covering only one group of industries, if they could be assured that all of the most important suppliers in that special field throughout the world would be represented. Moreover, a series of specialised fairs staggered throughout the year in one exhibition building would bring down the overhead costs that now have to be charged against each fair.



LARGE COMPANIES AND SMALLER

A Professor Looks at Equities

INVESTMENT is a word with two meanings. To economists it usually means the creation of physical assets—the building of factories or piling up of stock. But recently some of them have started to look closely at the other kind of investment—the acquisition of Stock Exchange securities. The latest is Professor Sargant Florence, who produces an essay—part of a larger study—on "The Reward for Risk-bearing by Shareholders in Large Companies" in the current number of the Journal of Industrial Economics. It is a painstaking study seeking to find out how the long term equity investor has fared in each of three sizes of company—"very large" over £3 million issued capital in 1936, "medium large" between £1 million and £3 million, and "smaller large" between £200,000 and £1 million. He is assumed—arbitrarily, but any assumption must be arbitrary—to have bought his shares in 1936 and to have held them 15 years (until 1951). Professor Florence then works out what he has gained over the period, in dividend, in capital value and in total.

The very large companies show a considerably lower average investment gain, but a narrower dispersion in that gain than the medium large companies. The medium large companies in turn have a slightly lower average total gain than the smaller large companies. In a limited examination by industrial groups, textiles—not everybody's first tip for a growing industry—showed better gains at all sizes of company than did the engineering or distribution groups. The general conclusions of the study are sensible—if platitudinous; a wide spread is recommended for the investment portfolio. Industrial ordinary shares, it is admitted, are not a full hedge against inflation; "the incentive to save, not consume . . . looks somewhat slim." But equities are better than fixed interest stocks.

Such discoveries will not come as a surprise to investment experts. The pity is that in reaching them Professor Florence has perpetuated one or two howlers that a less academic mind would have avoided. To add together capital appreciation and gross dividends received and call the result total gain is, as he almost admits, just not permissible. In the hands of the private investor the latter is tax free and the former taxable at his personal effective rate; for other funds—which make up a large part of the investment market—the tax liability varies. "Total gain" is a term without meaning. And is mere size of company—size measured with that most inaccurate of yardsticks, nominal issued capital—the only basis for the analysis? It has some relevance; most investors prefer shares in a company large enough to enjoy a good market. But in times of inflation, capital structures, the shape of a company's capital—its gearing—is likely to be at least as important as size. The shrewd investor chooses companies where the prior charges debentures and preference shares are large, so that any increment in earnings may impinge with magnified effect on a relatively small equity.

HAWKER SIDDELEY

New Atomic Link Up

THE next stage in Hawker Siddeley's bid to enter the atomic power market seems likely to be an association with John Brown, the shipbuilder. When Hawker Siddeley first set up its atomic division, it was announced that research would be concentrated on small power reactors, which are, surprisingly enough, much more difficult to design than big power stations. The link with Brush gives the group the electrical manufacturing experience that it will need, an agreement with John Brown would open the way to develop reactors for shipping. The most serious competition Hawker Siddeley is likely to face in this field will come from its old rival, Rolls-Royce, which has been working now for a matter of years with Foster Wheeler and Vickers-Armstrong's shipbuilding division on the Admiralty's atomic submarine under the direction of scientists at Harwell. There are signs that the American government may soon be providing some technical data on its own atomic submarines to assist this work.

THE NEW SPEED LIMIT

Wages Not at 30 mph

THE speed limit on heavy goods lorries was raised on May 1st, but negotiations on the consequent changes in wage payments to lorry drivers—which have been the main cause of the twenty-year delay to this particular reform—have still not been completed. Another attempt to get

agreement was made after the Minister of Transport announced last year that he would raise the speed limit willy nilly, but the meetings broke down. The trouble is that most lorry operators (British Road Services and firms with "C" licence vehicles) are not governed by the statutory wage machinery for the haulage industry, and that not all independent hauliers will benefit from the new speed limit—for example, short distance and urban delivery operators.

The position now is that long distance operators, who stand to gain most from the change, are waiting to see precisely what benefits they will get with quicker schedules, but the unions in some parts of the country have become restless and have instructed their members to continue working to the old 20 mph rule—which means in effect travelling as now at faster speeds and having longer tea-stops. The result appears to be close to another deadlock, but another meeting of hauliers' and union leaders is due to take place soon, and the new haulage wage award which will probably come into force later this month departed from the trend of previous awards by widening differentials and giving to long distance heavy goods vehicle drivers a rise more than enough to cover the increase in the cost of living.

SHORTER NOTES

The airlines operating on the North Atlantic have been unable to put their 5 per cent increase in fares into operation on May 1st as planned because the American Civil Aeronautics Board is asking for more evidence of the need for an increase before it gives its approval. Without this, no airline of any nationality can operate to the United States at the new fares. Mounting airport charges are one of the most pressing reasons for looking for an increase, and the decision to raise landing fees in this country by 37 per cent from June 1st may ultimately put Britain's airfield operations on a paying basis but to the North Atlantic operators it is going to look like the last straw.

* * *

Mr J. P. Berkin, who has been a member of the Board of the Shell Petroleum Company since 1953, has been appointed, from July 1st, a managing director of the Shell Petroleum Company and a principal director of N.V. De Bataafsche Petroleum Maatschappij, the two parent operating companies of the Royal Dutch/Shell Group. He will replace Mr J. W. Platt who has decided to retire from these offices from the end of June, prior to which date he will have reached the age of 60.

* * *

The Federation of British Industries has published *European Free Trade Area* (price 6s.) to help industrialists to assess the implications of the scheme for themselves. It contains a wealth of useful information and discusses the conditions and safeguards which the FBI considers necessary to British participation.

COMPANY AFFAIRS

SIMON-CARVES

SINCE their introduction to the London Stock Exchange in September, 1955, the ordinary shares of Simon-Carves have grown in popularity with investors. They have a double attraction: the company is the type of family business that investors fancy; and though its main concern is the building of coke ovens it is a member of the General Electric nuclear power consortium. Another factor which encouraged investors was the 50 per cent free scrip issue. An interim dividend of 7½ per cent was declared on the enlarged capital in November and the directors then said that this dividend should not be taken as an indication that the total distribution for 1956 would be greater than for 1955, when the rate was equivalent to 16⅔ per cent on the increased capital.

Throgmorton Street was still prepared, however, to guess at a total payment of 17½ per cent. In fact, the dividend is better than this; the final payment of 12½ per cent makes the total distribution for the year 20 per cent. That is an encouraging omen for the future. But it marks a liberalisation of dividend policy—not an expansion of profits. In November the directors said that the 1956 profits would show little change on the 1955 figures and in the event the latest gross profit of £1,374,024 is a few pounds down on the 1955 profit of £1,385,041. The tax provision has fallen from £755,553 to £708,275 and net profits have risen from £629,488 to £665,749. These profits are yet another warning to investors in nuclear power stocks that they must not count their chickens too soon.

INTERNATIONAL PAINTS

RECENT results from paint manufacturers have been patchy. Where the manufacturer has a big stake in the home market, results have been affected by the credit squeeze as well as by the general rise in working costs. Against this domestic background, the 1956 results of International Paints must be judged good. No doubt, the group's overseas interests and its share in the production of marine protective paints have stood it in good stead.

Last year, the consolidated gross profit rose from £1,404,853 to £1,599,914 and net profits after tax and minority interests from £718,572 to £792,933. And the ordinary dividend has been raised from 20 to 22½ per cent and to this trading dividend has been added a tax-free 2½ per cent jubilee cash bonus payable out of capital reserves. The bigger payment was well received in Throgmorton Street, where the 4s. ordinary stock units were marked up 1s. 1½d. to 14s. 3d. At that price, leaving the jubilee bonus out of account, the yield on a 22½ per cent dividend is 6.3 per cent.

ALBRIGHT AND WILSON

SINCE the war the chemical industry has grown fast and Albright and Wilson has grown with it. One step in its growth was its purchase of Marchon Products in December, 1955. Another is last year's advance of about 33⅓ per cent in trading profits, by £1,216,000 to £4,416,000. A large part of that increase is due to the inclusion of a full year's trading results from Marchon Products, but when the Marchon figures are excluded there is still a growth in profits of around £652,000. So the directors had no difficulty in maintaining the

ordinary dividend at 18 per cent on the capital as increased by the rights issue.

Growth, too, is measured by the spending of about £2½ million on capital account last year: about half that sum was devoted to expansion in Canada. Growth will continue: the group intends to spend about £3 million on its capital programme this year. Much of this expenditure will have to be financed from profits earned and ploughed back this year, for on December 31st the group possessed only £862,000 in net liquid resources. The chairman, Mr Kenneth Wilson, confidently predicts a further expansion in sales and in profits from manufacturing. But the total consolidated profit may show little change over the 1956 figure, as only the distributed income on the group's investment in Hooker Electrochemical, which took over Oldbury Electrochemical, will be included in the gross profit whereas the 1956 consolidated profit included the whole of Oldbury's profits.

UNITED SUA BETONG

SIR JOHN HAY has accepted defeat most gracefully. The scheme of Guthrie and Company to deploy the surplus liquid assets of its rubber companies through a new trust company, and thus putting them out of the reach of shareholders, was strenuously opposed and had to be abandoned. Now Sir John and his fellow directors are distributing some of these surplus liquid assets directly to those to whom they belong, the shareholders. This policy was revealed first in the accounts of Linggi and Labu Cheviot; now it is applied to the pick of the Guthrie bunch, United Sua Betong.

That company is to make a tax-free capital distribution of 25 per cent from the share premium account, paying 5s. on each of the 1,350,000 £1 ordinary shares. This was revealed in the company's preliminary statement for the year to December 31st. In that year gross profits fell from £1,221,198 to £1,037,360 and net profits, following a decline in taxation from £709,389 to £601,069, fell from £511,809 to £436,291. As the company is well off in liquid assets, the dividend policy is liberal, as indeed it has been in the Guthrie group for the last year or two. It is not surprising, therefore, that the ordinary dividend (excluding the special bonus) has had to fall with the profit; it is down from 45 to 42½ per cent. But shareholders should remember that United Sua Betong is one of the more obvious beneficiaries of the tax relief on overseas trade corporations. At 58s. the £1 units of this top company of the rubber market yield over 15½ per cent.

SPILLERS

WHATEVER the commotions in the milling and baking industries, shares in the leading flour milling companies remain among the most staid of equities. There was satisfaction but no excitement when Spillers announced that its trading profits in the year to January 31st had risen by over £665,000 to £5,643,000 and that the ordinary dividend was again to be slightly bigger. The dividend was raised from 12 to 13 per cent and in response the £1 ordinary units gained 1s. 3d. to 46s. 6d. At that price the yield is 5.6 per cent, a yield a few shillings above the average blue chip yield.

The rise in profits is impressive for a year in which for a short time the margin on flour milling came down to a very low level. But the period of squeezed margins lasted only about three months; for the rest of the time margins were more satisfactory—for the millers. And Spillers is not just a flour miller. It has big interests in animal feeding stuffs, and like its competitor, Ranks, it has been adding to its baking interests. These sides of the business must have made their contribution.

Net earnings, advancing from £1,616,549 to £1,721,000, do not fully reflect the increase in gross trading profits, as depreciation absorbed £120,000 more (at £1,450,000) and taxation £357,000 more (at £2,500,000). But the increase was enough to enable the directors to pay the slightly bigger dividend and to plough back slightly more —£995,000, against £940,726.

London Stock Exchang

FIRST DEALINGS:	Apr. 10	May 1	Ma
LAST DEALINGS:	Apr. 30	May 14	Ma
ACCOUNT DAY:	May 7	May 21	Jun

GILT-EDGED prices fluctuated in a w which included a fall in Treasury bill rate and the offer of high coupon East African loan. Wednesday prices were moving upwa once more but the *Financial Times* in of Government securities was bas altered on balance at 87.05.

Industrial shares were generally fir and began the new account on Wedn day with many gains. *The Econom* indicator receded fractionally to 218 but several losses among the leadi stocks following last week's divide announcements were recouped this we Associated Portland Cement drop 2s. 6d. to 45s. 9d., but recovered 49s. 3d., Babcock and Wilcox fell same amount to 78s. 9d. and reced further to 76s. 6d. xd. ICI fell 2s. 43s. 9d., recovering later to 44s. 3d. and Turner and Newall at first lost to 132s. 6d., but rose sharply on Wedn day to 134s. xd. United Drapery firm, but failed to participate this wee in the sharp advance of other stor Cammell Laird eased to 11s. 4½d. and United Molasses to 42s. Rug Portland Cement gained 1s. 7½d. ov the week to 27s. 3d. xd and Tate a Lyle rose 2s. 1½d. to 67s. 10½d.

After fluctuating, oil shares we strong on Wednesday and Thursday a Kaffirs recovered from the low poi reached at the close of last week. Co sideration of the OTC provisions in t Finance Bill led to renewed firmness tin, tea and rubber stocks.

This is the first time since its inception that *The Economist* indicator has moved in an opposite direction to the *Financial Times* ordinary index. The difference is only fractional and is due to the fact that seven of the stocks in the indicator have gone ex-dividend

(1) For a rough conversion to basis of June, 1947, multiply throughout by 1·534. (2) The interim index of retail prices has been linked back to 1938 with the aid of calculations made by Professor R. G. D. Allen for the London and Cambridge Economic Service. (3) For a rough conversion to basis of June, 1947, multiply throughout by 1·561. (4) Surveys made twice a year; annual figures relate to October survey. (5) Revised figure for March 26th: food 97·5 and fibres 91·9.

(1) 1939 figures calculated on the basis of a smaller sample. From January, 1957, as a result of a change in definition some 200,000 to 300,000 persons temporarily laid off or waiting to start new jobs formerly classed as employed are subsequently classed as unemployed. (2) 1939 figures not strictly comparable with rest of series; stocks are at end of period. (3) All commercial banks. (4) Annual figures are totals for the fiscal year ended June 30th. (5) Figure for third quarter.

Financial Statistics

EXCHEQUER RETURNS

For the week ended April 27, 1957, there was an "above-line" deficit (after allowing for Sinking Funds) of £16,568,000 compared with a deficit of £41,045,000 in the previous week and a deficit of £2,873,000 in the corresponding period of last year. There was a net expenditure "below-line" last week of £12,326,000, leaving a total deficit from April 1st of £60,120,000 (£54,740,000 in 1956-57).

THE MONEY MARKET

THE market made a further reduction in its discount rate at the Treasury bill tender on Friday of last week, maintaining its bid at £99 0s. 4d. per cent; but outside applicants carried further the movement of preceding weeks, raising their bids up to £99 0s. 10d. per cent. The upshot was that the average rate of discount fell by 5¾d. to £3 18s. 3.43d. per cent; and although total applications fell by £52.2 million to £359.3 million whilst the allotment fell by £40 million to £200 million, the allotment rate at the market's common bid fell from 55 to 22 per cent.

In Lombard Street credit conditions have alternated between stringency and extreme ease in the past week. On Thursday last funds were short, and despite some special purchases made through the banks—and passed on at rates up to 4 per cent, i.e., above the market's bill rate—one or two houses were obliged to take a small amount at Bank rate. Before the weekend funds became abundant, and some remained unlent; but on Monday stringency returned and in the absence of any official aid one or two houses were again "in" the Bank. On the following day market credit was just about adequate but on Wednesday conditions were again transformed, and the Bank stepped in to mop up part of the surplus through sales of bills.

The Bank return for the week to Wednesday shows a rise in discounts and advances of £13.8 million.

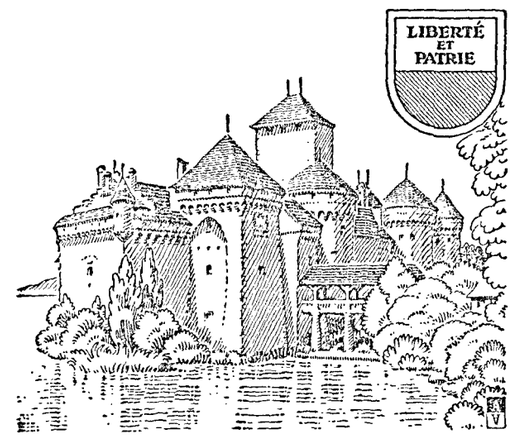
What does
THE LONDON CORRESPONDENT
say today?

Pigeon Pose. Unlike the tourists, here today and gone tomorrow, the pigeons, who obligingly pose for photographs with them, have a permanent home in Trafalgar Square. A very nice home, too, with every mod. con., running water in all the basins, and—in the summer season—dozens of square meals a day.

Even in the early spring, though the square may be almost deserted, the pigeons are still around—the photographers see to that. For to ensure that there are pigeons (*and therefore tourists*, and therefore profits) in the square next summer, the photographers keep the birds well-fed throughout the winter. Sensible fellows. They know which side their breadcrumbs are buttered.

A bird in the hand. It's *the same principle*, really, as a London Assurance Endowment Policy. You pay the premiums now so that you can enjoy the benefits later. It may be a little later, with an Education Policy which will pay off when your children's school bills are heaviest; or a good deal later, with a policy designed to provide for a comfortably-off retirement.

If there is any help we can give you, either with Fire, Accident or Life policies of any kind, please get *in touch with us* by telephone or letter. (Not necessarily, of course, by pigeon post.)



THE LONDON ASSURANCE

Since 1720

Very good people to deal with

1 KING WILLIAM STREET, DEPT. 6, LONDON, E.C.4

Perhaps you didn't know that
MONTREUX

situated on the beautiful Lake of Geneva, had, according to an ancient record, only two hundred "kitchen hearths" in 1416. Since then, Montreux has not only become a world famous health and holiday resort, but has also increased the number of its "kitchen hearths" to such an extent that it can now serve over 3,000 visitors daily.

But everybody knows

that the historical Castle of Chillon, only a few minutes walk from Montreux, was visited by Lord Byron in 1816. This visit inspired his immortal poems "The Prisoner of Chillon" and the "Sonnet of Chillon". The Montreux Branch of the Union Bank of Switzerland will gladly negotiate your Travellers Cheques, effect payments under your Travellers Letters of Credit and be at your service in other financial matters.

COMPANY MEETINGS

UNILEVER LIMITED

MEETING THE CHALLENGE OF THE TIMES

CONTRIBUTION OF RESEARCH TO COMPANY'S CONTINUED PROSPERITY

INTRICACIES OF AN INTERNATIONAL BUSINESS

LORD HEYWORTH ON THE VITAL ROLE OF MODERN SCIENCE

The Annual General Meeting of the Members of Unilever Limited was held on April 25th at The Hall of the Chartered Insurance Institute, 20 Aldermanbury, London, E.C.2, The Lord Heyworth (the Chairman) presiding.

Addressing the meeting the Chairman said:

RESEARCH IN UNILEVER

I have taken as the title of my address to you today "Research in Unilever" and I propose to tell you something of the part research plays in our operations and of its importance to the continued prosperity of your company.

We live in times when all over the world the pattern of life is changing—and changing fast. Populations are growing, standards of living are rising, and scientific activity is intense. Circumstances such as these offer a particular challenge, and a particular opportunity, to a business which, like Unilever, is mainly engaged in the manufacture and sale of consumption goods for the housewife. We have to be alert to what this climate of change means in terms of new markets and of a demand for new and better products which will alleviate drudgery and increase leisure. Without research and development we could not meet these needs.

At the outset I should, I think, define the two terms I have just used—research and development. By *research* we mean a quest for new knowledge which can find immediate commercial application or provide the basic scientific information we hope will ultimately lead to new and improved products and processes. The translation of the results of research to pilot and thence to full-scale plant application is a function of *development*, as also is the improvement of existing products and processes by the application of familiar scientific knowledge. I shall also be using the term *market research*, and by this I mean the investigations we make into the factors that induce the public to buy certain goods in preference to others and the way the consumer's habits and reactions are changing. We are becoming increasingly aware that scientific research alone, though essential, is not enough. It has to be reinforced by studies, long-term and short-term, of the changing habits of people in different countries and of the needs these changes may be expected to create. Thus we can get our scientists early to work and anticipate the need rather than be overtaken by the march of events.

FIRST PRINCIPLES

Starting with first principles, let us consider why a business such as ours engages in research at all and when we have settled that, we can go on to consider where, how, to what extent and with what resources.

I have already indicated that the prime object of our research is to enable us to forecast and meet the new needs arising in a world of change. I do not pretend our motives are entirely altruistic. In a competitive age, failure in our efforts to produce new and better and cheaper products will cause the expansion which is the hall-mark of a dynamic business to fade and die. It is by the discovery of new and better products that we keep our place in the race. It is by improving methods and processes and reducing the costs of manufacture that we bring our products within the reach of new classes of customers and so expand our markets. And here again scientific research must be supported by sound market research, for whatever the intrinsic merits of the product it is futile to produce it if the public will not or cannot buy it. The interplay of scientific research and market research must therefore be close and continuous. It is some evidence of the importance which we attach to market research that we spend on it each year an amount no less than half that of our annual expenditure on scientific research and development throughout the world.

SEARCH FOR NEW RAW MATERIALS

Another object of research which follows as a natural consequence of rising standards of living and growing populations is the search for new raw materials that can be processed to yield ingredients for existing or novel products. Not only can this make more of these products available to satisfy increasing demands and cheapen the cost, but it often releases for other essential purposes the raw materials hitherto used. The development of synthetic detergents is a striking example. If these had not been invented the world demand for vegetable oils and fats for soapmaking would at the present time be nearly one million tons a year greater than it is. Instead this extra fat is now available for food, and is sufficient to provide the portion of the diet that is bought as fat each year for about fifty million people in the Western world, or for two hundred and fifty million people in Eastern countries.

ACHIEVEMENTS

Perhaps I may pause here a moment to give some illustrations of what has been achieved. In industries of the kind with which Unilever is associated the achievements of scientific research are apt to be unspectacular, because their effect is gradual and far-reaching rather than sudden and dramatic. Moreover, they are usually related to homely objects, either of the sort with which everyone is so familiar that they are taken for granted, or new products that swiftly lose their novelty once they become, as they are designed to do, a familiar pa of the household purchases. Yet these pr ducts are some of the small pieces that, wh put together, determine, by the purposes th serve, the basic pattern of a way of life. Ov a short period the change may be hard perceptible; over a long period the improv ment is considerable.

The development of synthetic detergent for example, together with the improvemen in soaps and soap powders, has eased th domestic burden of cleaning in all its aspect Advances in the field of cosmetics and ha preparations have brought glamour to th maiden—and the matron too, for that matte —in every walk of life. The discoveric scientists have made in bettering the flavou and texture of margarine have so improve the product that in this country it sells freel at a price within a few pence per pound o the price of butter—something which a fe years ago we, who think ourselves experts i this trade, would have told you was im possible. Deep-freezing techniques of pre servation have enabled men to disregard th seasons and to put foods that are to a intents fresh upon their tables the year round with the labour of preparation transferre from the kitchen to the factory.

Changes of these kinds have in total a profound effect upon the lives of all of us Such changes must and will go on; but with out scientific research they would never se the light of day. And unless much of thi research is undertaken by industry itself rather than left to government and academic institutions, the results are not so likely to be what the customer himself wants as wha the authorities think that he ought to have —a very different thing.

These are the influences that have urged us to expand our research effort during the past ten years, and I now turn to the question of its location. Whilst we have in general followed a policy of centralisation in expanding our research, this has been allowed to take place mainly in three highly industrialised countries and has been applied to products that are of interest to us on a world-wide basis. This partial concentration enables us to undertake really effective basic research work which would not be possible in small scattered units, to make economic use of expensive research equipment and to benefit from the inspiration that results from the cross-fertilisation of ideas between groups working in different fields and with different scientific disciplines.

MAIN RESEARCH ESTABLISHMENTS

Our three main research establishments are situated in the United Kingdom, the Netherlands and the United States. The two biggest establishments are at Port Sunlight, in this country, and at Vlaardingen in Holland, where the Dutch Prime Minister, Dr Drees, opened the new research laboratory last November. This event marked an important step forward in the development of our scientific facilities in that country. The laboratories at Port Sunlight and Vlaardingen are today concerned mainly with the traditional—and still the largest—interests of Unilever in washing products, edible oils and margarine. At Port Sunlight, the historic home of the soap side of your business, the major effort is directed towards detergents whereas in Holland, the birthplace of the margarine business, the chief concern is with edible oils and fats. Research and development in these two establishments does much to satisfy the basic needs of our world-wide interest in these two fields. In addition, at Bahrenfeldt, near Hamburg, a research laboratory has been set up to meet the special needs of our substantial margarine interests in Germany.

Another major research centre is in the United States where, in 1952, our Lever business in that country concentrated its research activities in a large establishment at Edgewater, New Jersey. Here is carried out research for washing products, toilet preparations, edible oils and other foods. If one is to carry on business in the highly competitive conditions of the United States it is practically essential to conduct one's research on the spot. But we get in addition the special benefit that the results of the research done by our American business are made available to Unilever throughout the world. Much of the basic scientific knowledge in the fields in which we operate originally reached the United States from Europe, but now the flow of ideas and discoveries runs in both directions. And one particular advantage gained from carrying on research in the States is that there we have the liveliest industrial community in the world and the point of origin of many of the changes in the pattern of life that later spread to other countries. Recognising, as we do, the importance of changing social habits to a business which makes and markets products of the kinds in which we deal, it has seemed to us good sense to locate a substantial part of our research effort in the country where change is to be observed in its most animated form.

MAJOR EXPANSION OF INTERESTS IN FOOD

We have also decided in favour of a concentration of research effort when the question is one of making a major incursion into a new kind of activity, for in such a case it is more economic at the outset to do the basic development work in a single centre. The results can then be applied in those countries where the market research has shown them to have possibilities that are commercially attractive. Towards the end of the last war, for example, we decided upon a major expansion of our interests in foods—foods, that is, other than the edible oils and fats, and we were not prepared to embark upon a new enterprise like this without at the same time planning a substantial programme of research. So we concentrated the work of food research at a centre established in 1951 at Colworth, in Bedfordshire. Here, besides laboratories and pilot scale plants, we have twelve hundred acres of pasture and arable land used for the horticultural research associated with the preservation of fruit and vegetables and for animal nutrition work on behalf of our feeding stuffs business in the United Kingdom and on the Continent.

Similar considerations to those which decided us to establish a food research centre at Colworth led us to set up on a smaller scale a research establishment for toilet preparations at Isleworth, on the outskirts of London. Here research is done on preparations for the teeth, skin and hair, and here, too, the results are available for our businesses throughout the world.

So much, then, for the factors that count in favour of centralisation and have led us to establish our major research centres in England, Holland and the United States. Now I turn to the other side of the picture. Centralisation must not be carried to extremes. In the first place, we feel sure that our research effort will continue to expand, but we are certain its effectiveness will suffer if huge research establishments are to emerge from such growth. In such places communications are difficult, the director becomes remote from the staff and the team spirit does not arise so naturally as in a smaller unit.

DEGREE OF DISPERSION

Again, a number of our companies are engaged on special problems peculiar to themselves, peculiar perhaps to the country in which they operate. For the research in such a case to be carried on at a centre remote from the factory or the country concerned would be an unnecessary disadvantage. Therefore a company with special research problems that lie outside the broader interests of Unilever is encouraged to set up its own specialist research group. There are a number of these small units dotted about the Unilever map. In Germany there is one working on drying oils, one dealing with hair dyes, one working on paper and packaging materials. Similarly in the United Kingdom separate small units are responsible for research into glues and silicates. Research on the agronomy of our plantations, where we produce oilseeds, coffee, cocoa, rubber and bananas, and on the manufacture of plywood and veneers is delegated to the units operating in those fields and our American business of Liptons maintains its own laboratory at Hoboken to work on tea and dried soups. Development work, too, is by its nature often best tackled in the factories and therefore development departments will be found in most large Unilever factories.

It might appear at first sight that even the limited degree of dispersion which I have described would make our research effort as a whole less effective. There are certainly problems of co-ordination and communication, but we are accustomed to dealing with these in all parts of our international business. On the other hand, to locate our research units in a number of countries gives us the intrinsic advantages of diversity. Our staffs are able to maintain close touch with University activities, with Government research, with other industrial research workers and with the latest advances in the great industries of those countries. In this way we are able to draw on a pool of accumulated scientific and technological experience. Moreover, the business as a whole benefits from a pooling of the national scientific genius of the countries in which our main laboratories are situated. A better balance between fundamental and applied aspects of industrial research results from the European emphasis on the former and the American on the latter.

CROSS-FERTILISATION OF IDEAS

I have dealt at some length with the way we have approached the question of *where* to locate our research units, and now I want to say something of *how* they operate. The individual contributions are co-ordinated in a comprehensive programme of Unilever research effort which keeps those concerned with the direction of research fully informed of the objectives of all groups. But for the maintenance of a smooth flow of communication we rely on the circulation of reports, interchanges of visits between laboratories, meetings at which particular aspects of our research are discussed, and, above all, on the people concerned getting to know one another.

Research cannot be maintained at the high pitch necessary for success unless there are lively sources of inspiration. We do not underrate the value of ideas which stem from individuals. Many great advances owe their origin to such ideas and our people are encouraged to think on these lines. However, we feel sure that even greater progress comes from discussions between groups of people, particularly when they represent different interests. I have already mentioned the value we place upon the cross-fertilisation of ideas between scientists of different disciplines and similarly we are convinced that in a business such as ours, concerned as it is with goods to be consumed by the general public, it is essential for research and marketing people to be closely associated in the early stages of developing a new product. Such discussions generate the sparks of ideas that would otherwise never appear, and often they make clear needs which were hitherto ill-defined or even unsuspected.

Most research projects owe their inspiration to the recognition of a need—the need to develop an improved process for the production of margarine, the need for a product to be included in washing powders to counteract the discolouration of fabrics with age; the need for a calf food that will be cheaper than milk and yet will eliminate the manual labour associated with gruel feeding. In general the greater the intuitive foresight in perceiving the need, often one of which the consumer is quite unaware, the greater the potential value. These needs form the broad basis of our research programme. It is the responsibility of the research staffs to carry each project through the first all-important stage of conceiving the elements of the solution and to follow through to the pilot scale work in close collaboration with the production staff concerned. An inventive approach is essential for success, but equally so is a spirit of dogged persistence. If the end result of the research project is to be a new or improved product its performance is assessed throughout the progress of the work in experimental laundries, bakeries, farms, kitchens or hairdressing salons, according to its nature. Research into consumer reaction having satisfied us that the project has good prospects of commercial success, the erection of full scale plant is authorised and the development staff advises on its design and commissioning.

Not all projects follow this pattern. Sometimes invention precedes recognition of the need, as when someone with abnormally keen perception sees the implication of some chance observation. Science provides many outstanding examples of great developments —X-rays, penicillin, polyethylene—where the genius of discovery is sometimes described, somewhat ungenerously, as accidental. Not all such discoveries are as epoch-making as these—but lesser ones can nevertheless make valuable contributions to progress. A recent example of such a discovery in our laboratories is the case of one of our German research chemists who, whilst studying the reactions of fatty acids under the influence of certain catalysts, found that one of his experiments had "gone wrong." He might well have consigned the sticky mass to the refuse bin, but realising the importance of the unexpected he probed further and finally developed a product with resin-like, water resistant characteristics, which could have interesting applications in the paint and linoleum industries. Not all explorations of chance observations lead to successful applications, but our staffs are encouraged to

explore such avenues and any other ideas that interest them and may ultimately benefit the business.

SHORT-TERM PROJECTS

Some of the research projects are based on short-term aims. The results of such projects are expected to have immediate application in the business as new or improved products and processes and for which the promise of reward is high in relation to the estimated effort to achieve it. The time taken to achieve success varies. The new liquid detergent for the general wash, launched last year by Lever Brothers, New York, took two years to bring to fruition. Detergent products of this type contain more than a dozen ingredients ; not all are soluble in water and some are incompatible in concentrated solution. The production of a highly concentrated liquid that would remain stable and show no signs of separation, and could be packed in cans without corrosion problems, kept a research team in Edgewater very busy during these two years.

This year one of our companies in the United Kingdom has begun to manufacture a fat that has the unique characteristics of cocoabutter. This is a problem that has been frequently tackled unsuccessfully in the past, but a new approach in our laboratories in the United Kingdom and Holland has culminated in the launching of a satisfactory product in less than three years. In this instance it was necessary, not only to devise means of modifying fatty raw materials, but also to design a completely new process.

By contrast the artificial sow's milk first marketed by one of our companies two years ago can be made on standard compounding machinery. One of the novel features of this project was the designing of a food to be eaten in a dry form by young piglets at a stage in life when normally they would be suckling. The formulation of this product necessitated striking the right balance between the essential nutrient factors and in providing these in easily digestible form. To cater for the needs of life and growth by way of the restricted intake of the young stomach called for concentrated ingredients that had to be chosen from commercially available and reasonably priced raw materials. This development has enabled the pig farmer to rear piglets that, for one reason or another, cannot be fed by the sow, but what is more important is that it enables him also to breed three litters from the same sow during a period when she would normally produce only two.

Short-term projects, a few of which have been quoted to illustrate the kind of work in which we engage, are supported by long-term research directed to no specific product or process, but whose nature is such that it may lead to developments on which our progress a few years hence may well depend. Many of the short-term projects on which we will be working must rely on this storehouse of fundamental knowledge for some of their basic components. Not all the results of this work will find application, but we believe that much of the new thinking and novel developments essential to progress must stem from it. This is exemplified by the studies our scientists have been making of the inter-actions that take place at the surfaces between solids, liquids and gases. Six papers on this subject were read by Unilever scientists at the recent International Congress on Surface Activity. An understanding of the forces that come into play is very important to us since the formation and structure of emulsions is dependent on these forces and we have many product interests in emulsification. Margarine, ice cream and cosmetic creams are emulsions and emulsification is important alike in baking, shampooing and washing greasy dishes. A knowledge of these forces is an essential part of our study of the basic mechanism of detergency in order to answer such questions as what causes particles of dirt to adhere firmly to fibres and what factors contribute to the stability of lather.

BIOLOGICAL WORK

It is equally important for us to make basic studies of biological aspects. Our bacteriologists are examining bacteria in the mouth, since bacterial action is a most important factor contributing to dental decay ; they are studying bacteria on the body, because this can be of value to our work on deodorants and bactericidal soaps ; and their work on bacterial contamination of food is particularly important because there are great dangers to guard against in this field. A fourteen-year programme of study has done much to contribute to the knowledge of the nutritive value of oils and fats, and in another biological field we have examined some of the factors that interfere with the water balance in the layers of the skin and that can result in its drying and cracking.

Much of our biological work is devoted to assuring ourselves that ingredients to be used in our products will not affect adversely the well-being of those who use them or even ill-use them, as for example, when little Johnny consumes a bar of soap. Although such work cannot contribute to the development of new products it is nevertheless an essential part of the responsibilities of our research teams. The effects of washing products on the skins of both animals and humans are examined and exploration of possible toxic effects of food ingredients often necessitates life span studies of rats and tests through three generations that may take up to three years. If, for example, research can show the way to use beams of electrons or gamma rays from radio-active sources to preserve food, it will not be possible to contemplate applying the results until exhaustive feeding trials have demonstrated that the food is a satisfactory article of diet in every respect.

WORLD-WIDE DEVELOPMENTS

Naturally we aim to keep in touch with the latest world wide developments in all branches of science that have a bearing on our research activities. Many of them originate in University laboratories and the great fundamental advances these have initiated in the postwar years command the highest admiration. Contact with Universities and their staffs provides a constant source of inspiration to us. Not the least important of the benefits that have emerged from research in Universities and in government sponsored research establishments are the highly specialised techniques that now have a key role in industrial research. The complex nature of the techniques and of some of the equipment serves to emphasise that the days are gone when a test tube, a piece of string and ingenuity were enough. Some of these recently developed techniques have opened new vistas to us. Analysis of the components present in a naturally occurring fat, which previously occupied a chemist for 5 or 6 weeks and in many instances could only be made in part, can now be completed in a few hours. We are also able to detect and segregate substances present in fats, meat, fish, fruit and vegetables at levels as low as one part in one thousand million, and we have been able to identify nearly fifty of the components which are present in the flavour extract of butter. This technique of vapour-phase chromatography, in which the sample is vapourised and split into its components like the colours in a spectrum, is being used together with the latest spectroscopic techniques to explore flavour, and stability of products during processing and storage, it is even being used to supplement the delicately attuned nose of the perfumer.

We are finding the techniques of radiochemistry to be invaluable in a variety of applications. Radio-active isotopes are being used to trace the absorption of fertilisers in our plantation investigations, to determine the nature of certain flavours and changes in flavour when food is cooked, and in nutritional studies of fats.

THE MAIN CONSIDERATIONS

It is no easy task to determine exactly how much research should be done. It is a healthy sign that we find that more potentially rewarding projects are conceived than can be undertaken. This forces us to be selective and tackle only such a proportion of them as is consistent both with the rate at which our research effort can expand and with our ability to take commercial advantage of the results. The main considerations are, therefore, on the one hand the problem of recruiting research scientists in general, and in particular the difficulty of finding men in whom outstanding scientific ability is coupled with the administrative ability necessary for a research manager ; on the other, the availability of the capital and management resources that will be required if the results of the research are to be applied commercially.

What this comes to is that we must measure the estimated amount of research effort required against the potential reward. The latter is judged by the capital expenditure needed, by the possible earnings in relation to expenditure, that is the yield, by the number of countries and the size of the markets in which commercial development is likely to be possible, and by the length of the period during which it is probable that Unilever will enjoy the benefits of the work. Then, too, we must consider the speed with which a solution to the problem is likely to be found, for while all projects are urgent, some are more urgent than others. Again, we must see how the new product that we hope will result from the research project is going to fit into the structure of our business. Can it, for example, be marketed by an existing sales force or shall we have to create a new one ? And finally we have to see that we still keep allocated to long-term research work, in contrast to short-range product work, a sufficient part of our resources to enable the business to maintain its competitive position five to ten years hence.

VITAL ROLE OF RESEARCH STAFFS

And now, what does all this add up to in terms of the proportion of Unilever's resources applied in this field ? To measure the total effort in terms of monetary cost would be misleading, since research in the United States is more than three times as expensive as in Europe. The number of people engaged on research, including technical assistants, mechanics and administrative staff, is a safer guide. We have eight establishments where the staffs range in size from fifty to five hundred and these employ in all nearly 1,500 people. Factory development units and small specialised research groups account for a further 750 or so, bringing the total in Unilever engaged on research and development to around 2,250. Of these, exactly 666 are qualified scientists and engineers, but there is no mystic significance in this number.

To maintain a staff of this size presents a considerable problem in recruitment. No useful purpose would be served by dilating at

E ECONOMIST MAY 4, 1957 COMPANY MEETING REPORTS

th on the oft-lamented shortage of
tists in industry. Although the shortage
s to be equally serious in both North
rica and Europe it is interesting to con-
the attitude of scientists to industrial
rch in these two areas. On this side of
Atlantic industrial research appears as
unknown territory to the pure scientists
leave our universities ; territory where
imagine that initiative and creative
us will be put in fetters, territory in-
ted by hard-faced business men who
done well out of exploiting scientists
where the whole level of activity will be
llectually lower than in government or
ersity research. Yet many industrial
rch projects differ from academic ones
in their aim, that is, commercial appli-
on on the one hand and knowledge for its
sake on the other. We are by no means
med of our aim for it is an important
or essential to the continued prosperity
the country and on this prosperity must
mately depend the sinews of research—be
ndustrial or academic. There is satisfac-
in being part of such research endeavour,
seeing the results applied, in influencing
ial change and in having the means to
iate such change. Naturally those who
k in industrial laboratories must expect
e degree of direction if the general effort
o be effective, but we recognise the value
the enthusiasm which springs from ample
pe and freedom of choice, and throughout
business we are not so foolish as to ignore
fact that the heights of enterprise are
ched when a man is doing what interests
n most.

The part that our research staffs play in the
siness is vital. Their achievements con-
bute to its material progress and their
pport gives confidence to our production
d selling organisations. But their contribu-
n is even greater than this. For what, in
ence, are the distinguishing characteristics of the research approach to problems ?
ey are the creative and lively imagination
at is alertly ready for new ideas and the
gged perseverance that sees them through.
hey are the ability to use existing knowdge as the base from which to advance to
w concepts. They are the inquisitive spirit of logical enquiry, the readiness to keep an open mind that neither blindly accepts the old nor illogically rejects the new. All these are qualities that must not be confined to research alone but can be applied in every field of endeavour throughout the business. And so it is that for the rest of us in Unilever constant contact with our research colleagues stimulates us in the quest for new ideas, keeps us lively and helps to save us from the deadly sin of complacency. (Applause.)

The Chairman concluded by moving the adoption of the Report and Accounts for the year 1956. Mr G. J. Cole, Vice-Chairman, seconded the motion and it was carried unanimously.

The proposed final dividend of 11½ per cent on the Ordinary Stock and a dividend of 6 per cent on the Deferred Stock payable on May 14, 1957, were approved.

The retiring Directors were reappointed with the exception of Mr A. E. J. Simon Thomas, who, having reached retirement age, did not seek reappointment.

The remuneration of the Auditors, Messrs Cooper Brothers & Company and Messrs Price Waterhouse & Company, who had been reappointed under the provisions of the Companies Act 1948, was fixed.

A Special Resolution was passed amending the Articles of Association to permit the signature of the Secretary to certificates for stockholdings in the Company to be affixed by mechanical means and to include a provision covering the Company's practice of making no charge for the issue of a balance certificate where a member transfers part of his stockholding.

The proceedings terminated with a vote of thanks to the Chairman, Directors and all employees.

UNILEVER N.V.

The Annual General Meeting of the Members of Unilever N.V. was held on April 25th at Museumpark, Rotterdam. Mr F. J. Tempel presided and made a speech in similar terms to that delivered by Lord Heyworth at the Annual General Meeting of Unilever Limited, reported above.

The Report and Accounts for the year 1956 were adopted. The proposed final dividend of 10¼ per cent (being the equivalent of the final dividend for the same year to be paid by Unilever Limited to its Ordinary Stockholders calculated in accordance with the provisions of the Equalisation Agreement) was approved, the retiring Directors, except Mr A. E. J. Simon Thomas, were reappointed and the Auditors, Messrs Price Waterhouse & Company and Messrs Cooper Brothers & Company, were reappointed.

THE LIVERPOOL & LONDON & GLOBE INSURANCE COMPANY LIMITED

Mainly due to the adoption of the current rate of exchange of $2.80 to the £ for North American business, considerably increased Fire, Accident, and Marine premiums exceeding £45 million were announced in a statement by the Chairman, Mr T. H. Naylor, circulated with the Annual Report and Accounts of The Liverpool and London and Globe Insurance Company Limited.

Underwriting profit at £780,000 was the lowest in amount since 1947, and in ratio for twenty-five years. Seldom had underwriting conditions been so unfavourable in so many territories and for so many classes of business in one and the same year.

Premium income in both the Fire and Accident Departments, at some £20 million and £23 million respectively, had shown healthy increases, but profit margins were substantially lower. Marine premiums exceeded £2 million, but it had been decided to put the account on a three-year basis, and accordingly the transfer to Profit and Loss account had been deferred. The Life department had again had a successful year, and it had been possible to make a further increase in the rate of interim bonus from 42s. per cent to 45s. per cent.

An increased final dividend of 30s. is recommended by the Directors, making 57s. for the year 1956, an increase of 6s.

PARKINSON & COWAN, LIMITED

GREATLY IMPROVED RESULTS AND FINANCES

MR H. P. BARKER'S REVIEW

The Fifty-seventh Annual General Meeting of Parkinson & Cowan, Limited, was held on May 1st in London.

Mr H. P. Barker, in the course of his review, said:

A record turnover in 1956 brought a Consolidated Net Profit of £171,536 compared with a loss of £35,456 in 1955. After allowing for Preference dividend, but before providing for Debenture redemption and Distribution Profits Tax, the balance represents an earnings rate of 35 per cent gross (20 per cent net) on our Ordinary Stock. I think you will agree that this is a satisfactory result.

The £390,000 debt to our Bankers at the end of 1955 has been converted to a credit of £68,000.

Depreciation has absorbed £200,448 against £160,552 last year and Stocks have been reduced from £1.58 million to £1.34 million.

DIVIDENDS AND APPROPRIATIONS

In recommending a return to an Ordinary dividend of 9 per cent your directors aim at achieving stability as well as eventual advancement in dividend policy. In addition to £27,600 credited to Debenture Redemption reserve it is proposed to add £50,000 to General Reserve, and £12,613 to Profit and Loss balances.

OPERATIONS IN 1956

In our domestic appliances activities we closed two factories and concentrated production at our main Birmingham Works. In the now combined Parkinson-Monitor Division we have a first-class industrial asset of great potential.

Similarly in Measurement Limited (our Division concerned with the manufacture of liquid meters, pumps and electricity meters) we are concentrating our manufactures at one factory where we have space for eventual expansion.

Our Gas Meter Division continues to operate satisfactorily and the excellence of its products is obtaining growing recognition.

NEW PRODUCTS OF THE GROUP

Our business is so diversified that I can only mention some of the new products which we have introduced in 1956. The Renown Mark Six Gas cooker made by the Parkinson Stove Company is proving an outstanding success. A range of devices has been developed by Measurement Limited which we collectively term "fluid automation" for the metering and control of liquid processes in the food and chemical industries. This business is progressing rapidly. A new gas meter has been designed primarily for overseas markets. A range of high temperature radiant heaters has been introduced and progress is promising.

STAFF

We try to treat all those who work in our Group as separate individuals and to give opportunity, training and security to each as best we may. In these days more than at any other time in industrial history the wealth of a Company is no more and no less than the quality of those who work in it.

The Report and Accounts were adopted.

The retiring directors, Mr C. H. Pearson and Mr R. C. Symondson, were re-elected.

PHILIPS' INCANDESCENT LAMP WORKS HOLDING COMPANY

EINDHOVEN

The Annual Report and Accounts of the above-named Company and of the Operating Company, Philips' Incandescent Lamp Works, are now available in their English translation. The Holding Company owns fl.487,859,000 Ordinary shares of the Company out of a total of fl.488,181,000 and fl.143,571,000 Preference shares out of the fl.144,000,000 in issue. Below are given the Balance Sheet and Profit and Loss Account of the Operating Company as at 31st December, 1956.

BALANCE SHEET AS AT 31st DECEMBER, 1956

ASSETS				LIABILITIES			
Property, plant and equipment :				**Share capital and reserves :**			
At replacement value	fl.	590,314,000		Ordinary share capital	fl.	488,181,000	
Less depreciation	„	288,930,000		6% cum. part. pref. share capital	„	144,000,000	
			fl. 301,384,000	Share premium account	„	54,625,000	
Intangible Assets			—	Retained profit reserve	„	416,129,000	
Investments in and amounts due from Associated Companies			„ 1,191,884,000		„	1,102,935,000	
Sundry non-current assets			„ 4,644,000	Revaluation reserve	„	299,289,000	
							fl.1,402,224,000
Stocks :				**Sundry provisions**			„ 76,832,000
Factory stocks	„	180,013,000		**Long-term Liabilities :—**			
Commercial stocks	„	56,681,000		3½% 25 years' unsecured debentures	„	63,750,000	
			„ 236,694,000	3½% 20 years' unsecured dollar debentures	„	19,125,000	
Debtors :				4% 25 years' unsecured dollar debentures	„	76,500,000	
Trade and other debtors	„	115,692,000		Other long-term liabilities	„	162,983,000	
Prepaid expenses	„	6,481,000					„ 322,358,000
			„ 122,173,000	**Current Liabilities :**

PHILIP HILL, HIGGINSON & CO., LIMITED

34, MOORGATE, LONDON, E.C.2

TRADE INDEMNITY COMPANY LIMITED

CREDIT INSURANCE A VALUABLE INSTRUMENT OF MANAGEMENT

SIR JOHN MAKINS ON THE OUTLOOK

The thirty-ninth ordinary general meeting of Trade Indemnity Company, Limited, was held on April 25th in London, Sir John Makins (the chairman) presiding.

The following is an extract from his circulated statement:

The gross premiums earned in 1956 amounted to £1,654,593, of which we retained £523,038, an increase of about 5 per cent on 1955. In this respect the outcome is very much in line with the expectations indicated to you a year ago. Although additional premiums on 1954 (including previous years) were up a few thousand pounds, those relating to 1955 were heavily down, due to contraction of the business of our Insureds. On the other hand, initial premiums and first year's additional premiums on 1956 Account were substantially up—undoubtedly due to an increasing realisation of the value of Credit Insurance in the prevailing uncertainty.

During 1956 the turnover of transactions underwritten increased by only 1.6 per cent from £862 million in 1955 to £876 million.

In 1955 the claims paid less salvages were low. The same cannot be said for 1956, when we have a gross figure on all Accounts of £756,889 and a retention of £192,115. The deterioration has been most marked in connection with our overseas business, though internal risks have also contributed to it.

We have also developed our selling organisation by the opening of new branches in Newcastle and Gloucester and by expansion in other areas.

PROFIT AND LOSS ACCOUNT

Turning to the Profit and Loss Account, interest on investments and other income (gross) comes to £42,908, which, added to £243,373 transferred from Underwriting, gives us £286,281. Taxation on income within the Account is estimated to absorb £145,559, but we have previously provided £4,198 in respect of the Excess Profits Levy 1952/1953, which is no longer required, so that the net tax figure, at £141,361, is lower than it was in 1955.

Because of the lower tax provision, the actual profit for the year, after providing for tax, is £144,920, to which must be added the carry forward from 1955 of £90,697, giving a total of £235,617. Against this total we have written £50,000 off the book value of the investments and transferred £50,000 to General Reserve. Your Directors then recommend payment of a Dividend of 12½ per cent, less Income Tax, which will absorb £35,937 and leave a carry forward of £99,680.

Balance Sheet. — Current assets at £539,989 (including Treasury Bills at £98,777, since redeemed for £100,000) exceed current liabilities by £260,548. A year ago the corresponding excess was £99,437.

As a result of the £50,000 transferred to General Reserve, this now stands at £200,000.

GENERAL REMARKS

As I have already indicated, interest in Credit Insurance increased during 1956 and this slightly over-compensated for the contraction in business which reduced the turnover under most of our policies. The extent of contraction varied from trade to trade but was particularly noticeable in the timber trade, where it was of the order of 20 per cent. The average reduction per policy was 12 per cent and it is against this background that our overall 1.6 per cent increase in turnover of insured transactions and 5 per cent increase in premium income must be viewed. Also, it is worth noting that we gained ground principally in trades outside those from which our business has come in the past, that is to say mainly in the engineering and metal trades as opposed to timber and textiles. We have, therefore, made some progress in the spread of the sources from which our business is derived and I hope we shall continue to do so.

In the last resort our progress in 1957 will be linked with the solution to the problem which faces this country's economy, namely whether to stimulate demand so as to employ industry more fully or to restrict demand in order to restrain imports and to preserve the trade balance. Unless the right adjustment is found between these two objectives the country will encounter either a situation of continuing inflation or one of deflation. Both these states of economic disequilibrium can make the practice of Credit Insurance difficult and even hazardous, though, so far as we are concerned, inflation in the past has tended to result in a reduction of claims.

It is, however, difficult to escape the fact that one of the problems with which many branches of industry are now contending is that liquid resources are getting scarcer. From an analysis of Balance Sheets recently published, it is clear that cash holdings are decreasing, while debtors are increasing. Many firms are, therefore, in a less favourable position now than they were a year ago to meet rising costs and to pay for investment expenditure. This situation, coupled with the difficulty of obtaining bank loans, may produce a condition of financial stringency for many firms. In these circumstances managerial ability in all spheres of industry is increasingly important and we feel that it is still not widely recognised that Credit Insurance is a very valuable instrument of management.

We have continued to maintain very friendly relations with the Export Credits Guarantee Department and now scarcely regard them as competitors. So far as medium and long term credits for capital goods exports are concerned it is inevitable that the field should be theirs, and when it comes to short-term credits we find there is sufficient scope for both of us. They are mainly concerned with risks where the exchange transfer and political factors are important, and we must recognise that these are contingencies which are beyond our horizon.

The report and accounts were adopted.

WILLIAM BATE (HOLDINGS)

(Electro Platers and Metal Finishers)

YEAR OF DEVELOPMENT

The eighth annual general meeting of William Bate (Holdings) Limited was held on April 30th at Walsall, Mr G. F. Bate (chairman and joint managing director) presiding.

The following is an extract from his circulated statement:

Last year I mentioned the various uncertainties in the outlook which might affect our ability fully to maintain profits at the 1955 level. In all the circumstances we are satisfied to have maintained both our turnover and trading profit at a level substantially higher than in 1954.

After making full provision for Depreciation, Administration Expenses and all Taxation we are left with a disposable surplus of £46,934 on the year's working. Out of this we recommend the maintenance of the Ordinary dividend at 30 per cent for the year, leaving a residue of £26,809 to augment the Reserve Fund and Profit and Loss Account. It is with reluctance that we have decided not to recommend the additional bonus of 5 per cent as paid last year, but prevailing trading conditions which continue to press on profit margins have been taken into account in reaching this decision.

During the past year we have made further substantial additions to our Factory and Plant having in mind that, in the long run, the increasing competition which is abundantly evident in our trade makes it essential to keep ahead in the facilities we are able to offer our customers. In this connection it will be recalled that two years ago I gave brief details of a new service we were inaugurating for the benefit of our larger customers by the installation of special Plant for their exclusive use.

So far as I know, this service is unique in the Electro-Plating Trade. We design, lay out and instal at our Walsall Factory the Premises and Plant necessary to meet customers' individual requirements. Thereafter we are responsible for operating and maintaining it, the customer having access to it at all times as though it were part of his own factory. By its nature this is essentially a long-term project from which I do not doubt we shall derive increasing benefit in the future.

NEW ACQUISITION PURCHASE COMPLETED

Following the increase in our Authorised Capital earlier this year we have completed the purchase of the well-established and well-known undertaking of Willmott-Taylor Limited, of Birmingham. This business is to a large extent complementary to our own and we expect its acquisition will broaden and reinforce the whole basis of our activities.

While we are at last beginning to shake off some of the bad effects of the serious recession in the Motor and allied trades, the high level of activity we enjoyed in the early part of last year has not as yet been fully re-established. Furthermore, economically shattering events seem to occur out of the blue and few branches of industry can view the immediate future with as much confidence as they would like. However, our sound financial condition and general state of operational efficiency enable us to face without misgiving whatever temporary problems may lie ahead.

The report was adopted.

THE CUNARD STEAM-SHIP COMPANY LIMITED

SATISFACTORY OUTCOME OF 1956 DESPITE DIFFICULTIES

Colonel Denis H. Bates, Chairman of the Company, in a statement to stockholders for submission at the 80th Annual Meeting, to be held on May 22nd, says :

A year ago I warned that "the costs of running ships are still rising" and that "it will be very difficult to increase revenue to cover additional expenditure." It appeared questionable if the "Balance Surplus" could be maintained; however, the 1956 surplus is actually £433,002 above 1955, despite the difficulties.

The essence of this satisfactory outcome lies in Management. The whole team of the Cunard Group tackled the situation with skill in the face of frequent industrial trouble. We carried more passengers across the Atlantic, cruise business was good, earnings of the cargo ships increased. I express thanks to the team at home and abroad, ashore and afloat, and to our agents for their unremitting help. During operational difficulties our sole considerations have been the safety of our ships and the comfort of our passengers : to terminate voyages at intermediate ports is not the service Cunard aim at, and I am grateful to the many passengers who have written not only to forgive us, but to add their thanks for our success in meeting these interjections.

When it comes to dividing the year's "Balance Surplus," £500,000 to reserve and £759,561 retained by subsidiary companies are below what is necessary for depreciation to provide for replacement at current building costs, but they represent a reasonable allocation out of the available surplus after taxation. A final dividend of 8 per cent is recommended, a total of 11 per cent for the year.

AIR VIS-A-VIS SEA

From time to time I have been asked what effect the air has had on our passenger business. In my view, sea and air passenger traffic have been complementary rather than competitive; so far Atlantic air travel has largely promoted its own traffic and total numbers by sea and air have continued to increase. If economic law were allowed to prevail, that process would be maintained but the airlines appear to be able to ignore such normal factors of transportation as cost and profit margins.

Air fares are arranged through the International Air Transport Association. Its decisions require Government approval but profit and loss do not seem to have been given much consideration, either by airlines or the Government. It is not surprising to read in the press that the two state corporations or "chosen air instruments" of Britain "have had so far the benefit of capital expenditure of £126 million of public money while their losses to date amount to nearly £40 million." We can fairly ask why people who want the speed of air travel should not pay the economic price for it and why they should expect to be subsidised by their fellow taxpayers. Further, is it wise policy for Britain to authorise its state air corporations to quote uneconomical fares in competition with British ships when in two world wars and more recently over Suez it has been proved how dependent this Island is on its Merchant Service? The United States Government is at least consistent in its policy of subsidising its merchant service to ensure its survival though recently the president of an American airline was reported as saying that the Civil Aeronautics Board should recognise, by authorising increased rates, that a 15-year-old rate structure is not realistic today.

Last year a record number of passengers crossed the Atlantic by sea and we are convinced that for the foreseeable future the demand for Cunard travel will be well sustained.

Year after year it has been emphasised that adequate provision for replacement has been denied us under United Kingdom taxation computation, which only takes into account the original cost of a ship. Since a passenger ship for our Canadian service cost approximately £1 million before 1939 and now requires £5 million, and a dry cargo liner costing £247,000 in 1939 cannot be replaced under £1,200,000, the attrition of our capital assets is obvious. Naturally the replacement problem has caused us to examine carefully the relief from penal taxation obtainable through a "flag of convenience" based on ownership say in Bermuda. The advantage of a Bermudian subsidiary starts at the end of about the seventh year of a ship's life, taking into consideration UK tax allowances granted prior to the 1957 budget, and after the seventh year funds accumulate quickly and would be readily available for building ships; but unless stockholders resided in Bermuda, the advantage could not easily be passed on to them because dividends would be subject to full UK taxation.

In 1956 the Chancellor recognised the struggle British shipping was fighting and retained the investment allowance at 20 per cent. I am thankful that in 1957 he has reinforced the efforts of British shipping to remain domiciled in Britain by increasing it to 40 per cent.

This summer the *Sylvania* joins the *Saxonia, Ivernia, Carinthia,* completing our present Canadian building programme, and it is heartening to report that the three sisters in commission have proved eminently suitable.

NEW SHIPS AND FIXED PRICES

It is still impossible to obtain fixed prices for new tonnage and shipbuilders should remember that just as the country's economy is working on a bare margin so the financial margin of shipowners is inadequate to pay for new ships. New construction today is an act of faith in the future; our faith would be greatly reinforced if we were not faced with ultimate first costs much in excess of those originally contemplated.

This year will bear the impact of longer voyages in our Eastern services via the Cape instead of Suez and whilst the deviation has been met by a freight surcharge the number of voyages annually per ship will be reduced. The early months have already been affected by strikes in America and the United Kingdom. Strikes in this country are particularly devastating: they reduce profits already inadequate for full replacement, they hit the country's exports and imports upon which

strikers as well as the stricken depend for their existence and they discourage passenger traffic which means so much to Britain.

Our economy is balanced on such a narrow margin that the continuance of industrial strife will inevitably bring nearer a repetition of the hardships of the 1930s. We do not seem to learn from bitter experience that we must produce at prices competitive with the rest of the world.

Against the background of difficulties ahead a cheering feature is that the skill of our managements and the loyalty of our staffs surmounted these obstacles in 1956 and all are determined to repeat the effort in 1957, especially if we are allowed a clear run.

W. & A. GILBEY

(Wine Merchants and Distillers)

CENTENARY YEAR

The annual general meeting of W. & A. Gilbey Limited was held on April 30th in London, Mr R. D. Gilbey (the chairman) presiding.

In his statement the chairman, having drawn attention to the fact that it was in February, 1857, that Walter and Alfred Gilbey commenced business, said: Credit restrictions are apparently still necessary for the economic welfare of the country, but one of their curious effects has been that our trade has benefited from the diversion of expenditure from hire purchase of household equipment to better eating and drinking and also to holidays abroad, with the result that the demand for wines, particularly the cheaper beverage wines, has greatly increased.

Last year I remarked upon the larger proportion of our net profit which arose from our overseas business, and this year's results show that this trend continues.

We felt it desirable to make a special announcement in the Press in the New Year that we had concluded negotiations for the sale of our one-third interest in W. & A. Gilbey, Limited (Delaware), to National Distillers Products Corporation, who already owned the other two-thirds. A substantial capital profit has emerged; and, in our Centenary Year, the Board feel it appropriate to release a part of this as a Special Distribution to the shareholders. The balance of the money received will be required for the general purposes of the Company.

At the end of 1956 we established our Canadian Branch as a wholly-owned subsidiary company, W. & A. Gilbey (Canada) Limited, and we were able to conclude satisfactory financial arrangements locally to provide for the considerable expansion which we have made to the plant.

We have also set up a special Canadian subsidiary for the manufacture and sale of vodka.

In order to take advantage of the increasing demand for brandy in Australia we have acquired the Horndale distillery, and there are encouraging reports of our prospects in this market.

The release of the funds invested in the USA has made our cash position more liquid and enabled us to recommend an increase in the Final Dividend, in addition to the Special Distribution mentioned earlier.

The report was adopted.

THE RHODESIA BROKEN HILL DEVELOPMENT COMPANY LIMITED

(Incorporated in Northern Rhodesia)

EXPLORATION WORK LENGTHENS MINE'S LIFE

SIR ERNEST OPPENHEIMER'S REVIEW

The forty-seventh annual general meeting of members of The Rhodesia Broken Hill Development Company Limited will be held in Salisbury, S. Rhodesia, on Tuesday May 21, 1957. The following are extracts from the review by the chairman, Sir Ernest Oppenheimer, which has been circulated with the annual reports and accounts.

The prices of lead and zinc did not fluctuate widely during the year and were higher on average than the prices during 1955. A record tonnage of 28,925 long tons of zinc was produced but the tonnage of lead at 15,200 long tons was slightly lower than the record of 16,050 tons achieved in 1955.

COSTS OF PRODUCTION

The accumulated stocks of zinc concentrates were sold during the year for £360,000, which figure is included in the total revenue. The cost of these concentrates was, however, £320,000, including nearly £200,000 of transport costs leaving a profit of only £40,000 from this source.

Costs of production continued to rise and in consequence the net profit for the year at £1,342,000 was only £188,000 more than in 1955.

In order to maintain lead production at a level where it would meet contractual sales, it has, in recent years, been necessary to produce zinc concentrates in excess of the capacity of the electrolytic zinc metal plant. Lead production under present operating conditions will therefore be slightly reduced to about 14,500 tons per annum, in order to avoid future accumulation of the unremunerative zinc concentrates.

The revenue from the sale of lead and zinc metal was £4,463,000 which is about £435,000 more than last year.

EXPANSION OF POWER

Last year *I stated that future* capital expenditure would be heavy, and £522,000 was spent during the year. Of this, £300,000 was on the expansion of hydro-electric and thermal power generating capacity. During the year the Consulting Engineers recommended that we should proceed with the construction of the Mita Hills Dam, as it is essential to maintain a steady head of water to the existing generator plant throughout the year if the full utilisation of the existing plant is to be obtained. It is hoped that this regular output of power will, together with power from Mulungushi and the thermal plant at the Mine, meet all anticipated requirements of the Mine and the town of Broken Hill until 1959 or 1960.

The project which was being examined to install further generating plant has therefore been deferred and it is now estimated that an amount of about £850,000 will be required to build the dam wall and install the necessary transformers and transmission lines. The date of starting on the dam wall depends on our being able to complete the necessary

formalities to clear the area for flooding, and on negotiations with the Broken Hill Municipality from whom the company hopes to obtain a loan of £400,000, which will materially assist in providing the capital sums required.

The capital expenditure has still to be met and it was, therefore, decided to appropriate £500,000 from profit to meet the capital expenditure of £522,000 during the year, and to carry forward most of the amount of about £200,000 available from last year's appropriation so as to spread the burden of providing the capital required for the Mita Hills Dam and other essential projects. We were able to do this and to recommend a final dividend of 10d. per share which together with the interim dividend of 5d. makes a total of 1s. 3d. for the year, the same dividend as for 1955.

IRON DUKE MINE

Last year I referred to the possibility of disposing of the Company's Iron Duke pyrites mine. This property is a very small mine near Salisbury with a small ore reserve capable of producing some 70,000 tons of pyrites a year. Even if contracts for the supply of pyrites to consumers in Southern Rhodesia were secured, the operations at the mine would result in only a small annual profit for the Company and it is moreover too far from Broken Hill for its operations to be economically conducted. Negotiations for the sale of the property were therefore continued during the year.

It is hoped that a price of £150,000 will be obtained. In this event, this amount will be usefully employed towards meeting the capital expenditure to which I have referred.

The production of cadmium started during the year, and about 52 tons were produced mostly from accumulated stocks. Normal production in future is expected to be about 2 tons per month.

MINE'S LIFE EXTENDED

The known life of the Mine is continually being extended by the exploration work being carried out. I recall that in 1948 the ore reserve was 2,618,000 tons, and in 1949 the Chairman at the time stated that the Mine had at least 15 years' life. Since then the Mine has continued to produce for 8 years and the proved and indicated ore reserves now stand at 3,357,000 short tons of ore. I have no doubt that as our explorations proceed this tonnage will be further increased. The future is therefore assured, and although it is probable that the price of the principal metals produced will be subjected to the normal influences which affect the metal markets, there are indications that prices will remain at a level which will continue to provide a satisfactory profit on our operations.

Copies of the annual report and accounts may be obtained from the London office of the company, 40 *Holborn Viaduct, E.C.*1.

Gestetner

LIMITED

TOTTENHAM, LONDON, N.17

The Company manufactures the world-famous "Gestetner" Duplicating Machine and accessories. It has branches throughout the United Kingdom and subsidiary companies or representatives in all parts of the British Commonwealth, in the Americas, the Far East, and many countries in Europe. Extensive servicing facilities are available throughout the organisation.

ATLAS ASSURANCE COMPANY LIMITED

RECORD NEW LIFE BUSINESS

The Annual General Meeting of the Atlas Assurance Company Limited will be held on May 31st at the Company's Head Office, 92 Cheapside, London, E.C.

The following are extracts from the Statement to Shareholders by the Chairman, Mr. Rudolph E. F. de Trafford, OBE, which has been circulated with the Report, Accounts and Balance Sheets for the year ended December 31, 1956:

Before proceeding to give shareholders an account of our rather mixed fortunes during 1956 there are certain matters to which I should refer.

Shareholders will be interested to know that in the United States we have commenced Accident Department operations—better known there as Casualty business.

The use of atomic energy in the industrial field is a problem to which we as a company, in association with others whose purpose it is to provide insurance protection wherever the need for it may present itself, are continuing to give close attention, both in the United Kingdom and elsewhere. It is an international subject and we shall play our appropriate part in catering for it internationally, naturally with a careful watch on the liabilities which we assume.

FIRE DEPARTMENT

Net Premium Income 1956	£5,265,398
Net Premium Income 1955	£6,237,496
Increase	£27,902

As will be seen, our premium income in 1956 was a little higher than in 1955. Our profit, amounting to £34,129 only (.5 per cent), as compared with £384,686 (6.1 per cent) in 1955, was very meagre. No conflagrations or other spectacular events were responsible for our experience last year and I would be more inclined to attribute this, partly at least, to the general tempo of the age in which we live and to the hazards which in one way and another are to be associated with modern-day industrial development and progress.

Our home business, after a series of satisfactory years, went badly. In the United States, although hurricanes caused us less trouble than in recent years, we again had an unhappy time from an underwriting point of view. On the other hand, our business derived from the Commonwealth and elsewhere overseas fortunately continued to run well and was in fact responsible for our finishing up with an overall profit, small though it was.

ACCIDENT DEPARTMENT

Net Premium Income 1956	£3,311,714
Net Premium Income 1955	£3,015,761
Increase	£295,953

In these days of continually growing road transport of various kinds it was perhaps inevitable that this increased income should have come very largely from motor business. There was, however, a welcome expansion both at home and overseas of other classes of business. Our motor business has continued to run at a growing loss in spite of increases in rates of premium which have been introduced in recent years in various parts of the world. There does not seem to be any doubt at all that rates—as I indicated in my statement relating to our 1955 Accounts—are still too low, both in this country and elsewhere, and that this is a situation which must be remedied.

In closing another difficult year with a profit of £102,565 (3.10 per cent), as compared with £70,343 (2.33 per cent) in 1955, I think we have cause for some satisfaction.

MARINE DEPARTMENT

Net Premium Income 1956	£798,221
Net Premium Income 1955	£776,478
Increase	£21,743

Although the income derived from our cargo account was lower than in the previous year this was more than offset by an increase in hull premiums due to new vessels coming on the market and to increases in the insured values of old tonnage. Claims paid on account of 1956 and previous years exceeded by approximately £87,000 the corresponding payments in 1955.

With regard to marine insurance market conditions generally, although in the hull market there is at least a degree of steadiness, I fear that this cannot be said of the cargo market. Rates are pared as an almost everyday occurrence while at the same time the width of the cover given continues to grow, so much so that one wonders to what extent the hazards that come to be covered can really be counted amongst—to use the language of the marine insurance policy—the adventures and perils which underwriters are contented to bear! In this context the mounting marine casualties in 1956 certainly do not bring any comfort.

The sum of £150,000 has been transferred to Profit and Loss Account, leaving the Marine Fund at the end of the year at £1,300,416, which is a strong position.

LIFE DEPARTMENT

In 1956 the Life Department's new business was a record. Net new sums assured amounted to £11,617,260, £4¼ million more than in 1955, and new deferred annuities were issued for £630,959 per annum, £63,360 per annum more than in 1955.

The expense ratio last year was £12 5s. 3d. per cent, as against £11 10s. 8d. per cent in 1955.

The actuarial valuation as at December 31 last revealed a surplus of £562,638 including £104,901 brought forward from the previous year. £175,000 has been transferred to the Investment Reserve and, after providing for interim bonuses and bonuses on reassurances received from other companies, a balance of £382,093 has been carried forward.

The Fund at the end of the year amounted to £31,169,135, an increase of £2,134,327 in the year. The gross rate of interest earned was £5 7s. 7d. per cent and the net rate £4 8s. 6d. per cent.

APPROPRIATION ACCOUNT

After providing for the dividend at the rate of 3s. 6d. per share, 1s. 6d. per share of which was paid in November last, the carry-forward amounts to £1,435,384.

THE ASSOCIATION OF CERTIFIED AND CORPORATE ACCOUNTANTS

MR A. C. S. MEYNELL'S ADDRESS

The fifty-second Annual General Meeting of the Association of Certified and Corporate Accountants was held in London on April 30, 1957. Mr A. C. S. Meynell, FACCA, was in the Chair.

In the course of his address he said: The membership of the Association continues to show a satisfactory rate of advancement. I had hoped that at this meeting I might have been in a position to report that we had achieved our 10,000th member. But I am afraid that that particular goal still eludes us.

APPRENTICESHIP TRAINING SCHEMES

Apprenticeship training schemes in industry continue to develop along very favourable lines. There are now a number of companies of international repute—as well as others less well known—which are running such schemes in connection with the Association's examinations.

PERSONAL PENSIONS SCHEME

One noteworthy feature of our pension scheme—and one which, so far as I know, does not appear in any other—is the fact that benefits under it are available not only to members of the Association but also to non-members, provided always that these non-members are themselves in the employ of a certified accountant. This we hope will provide some reasonable scope for those practising members who, although their staffs are perhaps not large enough to justify a formal pension scheme, may nevertheless wish their employees to have the advantage of what is becoming a desirable benefit.

THE BUDGET

Professional and business men will welcome the Chancellor's decision to set up a committee to enquire into the workings of our monetary and credit system. That decision is an extremely wise one and at the same time is most necessary. There is, perhaps, no department of our economy which calls for more constructive thinking at the present time, especially as the Government itself, has, by force of circumstances, become one of the largest of industrial investors.

On the other hand we are bound to feel a sense of deep disappointment at the Chancellor's unwillingness to restore investment allowances or to take any steps to level up rates of profits tax. Mr Thorneycroft's view that there are no signs of stagnation in investment is difficult to reconcile with the facts. The rate of investment in plant and machinery flagged noticeably in 1956. It seems likely to continue to do so this year and the recent Board of Trade survey of building plans shows that investment there is also falling. At the same time the level of industrial production has become almost stationary.

The assistance to be given to overseas trade corporations in competing with more lowly taxed competitors will be generally welcome. It will raise overseas earnings, but the concession applies only if those profits are kept overseas and may therefore encourage overseas investment. That can be a very good thing, but not if it provides any serious competition to the demands of home investment.

JOHN BARKER & COMPANY

FACTORS AFFECTING RESULTS

The sixty-fourth ordinary general meeting of John Barker & Company Limited was held in April 26th in London.

Mr Trevor A. Bowen, DL, JP (the Chairman), in the course of his speech said: The result of the year's trading operations of John Barker & Company Limited is a net profit, before taxation, of £707,895. Of this amount, taxation absorbs £396,969 (or 56 per cent) leaving a balance profit of £310,926.

There is a combination of several causes which contribute to the lower profits, the main ones being dislocation of departments due to rebuilding, petrol rationing, and the considerable rise in working expenses, such as salaries and wages, rates and general expenses.

Our Stores are located outside the area in which are found the theatres, restaurants, and other forms of entertainment which act as a magnet to the public. To offset this natural draw to the West End and its shops, we have created a shopping centre in Kensington which we know, from the goodwill built up over many years, has appealed to the general public because here can be obtained all types of merchandise of excellent quality, at the lowest possible price.

Through our concerted efforts, Barkers, Derry & Toms and Pontings are household names, known throughout the country and indeed throughout the world, and we will do our best to maintain the reputation and success so justly gained, of which we are very proud.

The report was adopted.

HUDSON'S BAY COMPANY

A SUCCESSFUL YEAR

The two hundred and eighty-eighth Annual General Court of the Governor and Company of Adventurers of England trading into Hudson's Bay was held on May 2nd, in London, Mr W. J. Keswick, the Governor, presiding.

The following is an extract from his circulated report for the year ended January 31 1957: Canada achieved a record output of goods and services in 1956 and the Company's profits reflected this prosperity as well as the strength of its organisation. Net profit after taxes of £1,854,000 was £2,170,000, or 7s. 9d. per share. Trading dividends paid and proposed amount to 15 per cent being 3s. per share gross or 1s. 8¾d net after United Kingdom Tax. The same distribution as last year is proposed from the Land Account of 2½ per cent (6d per share).

The most important projects were the completion of the Edmonton store extension, the Calgary "Parkade," the Calgary store extension which will be finished in 1957, and four new Bay Stores.

The Department Stores had another good year with an improvement in sales better than the reported average national increase.

The Fur Trade Department, which includes the Fur Sales operations, also had a successful year.

With the Wholesale Department the welcome improvement in profit is an indication of success towards overcoming the problems of this highly competitive business.

The report and accounts were adopted.

JOSIAH PARKES AND SONS, LIMITED

(Manufacturers of Union Locks and Brassfoundry)

The ordinary annual general meeting of Josiah Parkes and Sons Limited was held on April 25th at Willenhall, Staffs, Mr Cyril W. Parkes, JP (chairman and joint managing director), presiding. The following is an extract from his circulated statement:

Your company has again enjoyed a successful year's trading. The sales of UNION Locks and Brassfoundry in 1956 were higher than ever before. The factories were fully employed during the whole of the year; in fact at Willenhall they were overfull for most of the time, and it is clear that further expansion of capacity must be considered in the near future, even to cater efficiently with the existing load. We have continued the development of new and improved products, and purchased last year the patents and manufacturing rights of the BESCOT door closer, which is being marketed under our own UNION Trade Mark. We have also acquired the whole of the undertaking of Edwin Showell and Sons Limited, of Stirchley, Birmingham, who manufacture Brassfoundry.

The net profit before tax at £266,990 is higher by £40,031 than in the previous year, an increase of 17½ per cent. After taxation, the amount left for the company is £130,170 against £117,359 in 1955. The proportion of profit taken in tax is 51 per cent against 48 per cent in the previous year.

The beginning of 1957 has been encouraging, with demand maintained at a high level.

The report was adopted and a total distribution of 15 per cent approved.

UNION CORPORATION LIMITED

(Incorporated in the Union of South Africa.)

ABRIDGED REPORT OF THE DIRECTORS FOR YEAR 1956

After providing £486,100 for United Kingdom taxation the profit for the year is £1,973,473, plus £992,103 brought forward, making a total of £2,965,576. The Directors have placed £1,000,000 to General Reserve Account and £175,000 to the credit of Exploration Reserve Account and have declared a final dividend of 2s. 6d. United Kingdom currency per share, less United Kingdom Income Tax, absorbing £734,750, leaving £883,451 to be carried forward.

With a view to conserving the cash resources of the Corporation the Directors, as indicated above, have transferred £1,000,000 to General Reserve Account bringing the balance on that Account to £2,300,000 at the end of the year.

The final dividend of 2s. 6d. per share less tax was declared on 20th March, 1957, and makes, with the interim dividend of 1s. 6d. per share less tax, a total dividend of 3s. 0d. per share less tax for the year compared with 2s. 9d. per share less tax for the previous year.

Holdings of shares, debentures and other securities have been taken into the Accounts at cost or under but in no case above the market value of December 31st last, or, where no market price exists, above the Directors' valuation. The Directors, as on other occasions, have thought it expedient to write down the book cost of certain holdings below both cost and market price to allow for the wasting nature of a substantial part of the Corporation's portfolio. To this end they have charged the Profit and Loss Account with £150,000

A copy of the Corporation's Annual Trade Cycles Chart, revised to date, is enclosed with the Report.

GOLD MINING INTERESTS

Summary of the operating results for the past year of the Companies operating in the Transvaal and Orange Free State in which the Corporation is largely concerned:—

	East Geduld Mines, Ltd.	Geduld Proprietary Mines, Ltd.	The Grootvlei Proprietary Mines, Ltd.	Marievale Consolidated Mines, Ltd.	St. Helena Gold Mines, Ltd.	Van Dyk Consolidated Mines, Ltd.
Tons milled	1,720,000	1,245,000	2,344,000	855,000	1,812,000	953,000
Yield per ton, dwt.	6.18	8.17	4.31	5.25	5.81	3.24
Working Costs, per ton	32s. 10d.	34s. 3d.	30s. 5d.	41s. 2d.	40s. 11d.	40s. 2d.
Working Costs, per ton	44s. 11d.	5s. 8d.	23s. 9d.	24s. 11d.	32s. 1d.	6s. 6d.
Working Profit, per ton	£3,861,000	£354,000	£2,781,000	£1,065,000	£2,106,000	£30,000
Total Working Profit	£1,918,000	£1,026,000	£1,399,000	£572,000	£2,039,000	£51,000
Net Profit	£1,912,000	£1,041,000	£1,382,000	£506,000	—	—
Dividends: Total	4s. 3d.	14s. 3d.	2s. 5d.	2s. 3d.	—	—
Per Stock Unit or Share						

The net profit figures include revenue from other sources. Thus East Geduld Mines' dividend income in 1956 on its stockholding in The Grootvlei Proprietary Mines was £64,960 and Geduld Proprietary Mines' dividend income in 1956 on its stockholdings in East Geduld Mines and The Grootvlei Proprietary Mines was £746,347.

ST. HELENA GOLD MINES.—*At the end of February*, 1957, the new vertical shaft (No. 2) had reached a depth of 4,175 feet below surface, the Basal Reef having been intersected at 4,097 feet. The shaft is being continued to 5,500 feet. The extension to the Reduction Plant was completed during the year, increasing its nominal capacity to 125,000 tons per month. In March of this year the Company declared a further dividend of 9d. per share.

WINKELHAAK MINES.—During the year the two small vertical shafts were sunk to depths of 1,210 and 1,472 feet respectively and sinking of the ancillary ventilation winzes was completed. Development from these winzes commenced in August and by the year-end a total of 3,765 feet had been driven. Of this footage 1,075 feet were on Kimberley Reef and sampled, disclosing 470 feet or 44% payable averaging 484 inch-dwt. The majority of the necessary buildings, machinery and plant for shaft sinking and development work on this new property have been completed and good progress has been made with the provision of the necessary accommodation for European and Native employees.

THE WITHOK PROPRIETARY COMPANY.—During the year this Company, in which the Corporation continues to hold a substantial interest, sold to the S.A. Land and Exploration Company, Limited, its entire fixed property on the Farm Withok No. 7, district Brakpan, consisting of 2,240 morgen of Freehold Land and 2,628 morgen of Mineral Rights. The consideration payable is £457,500. The purchaser has also refunded to the Company expenditure incurred by it on prospecting operations amounting to £57,500.

Interests in Gold Mining Companies not under the administration of the Corporation.

STILFONTEIN GOLD MINING COMPANY.—There was a further increase in profits from gold and uranium production during the year and two dividends totalling 1s. 6d. per share were declared. The ore reserves at 31st December last were estimated to amount to 4,286,000 tons with a value of 9.54 dwt. per ton over a stoping width of 38.1 inches.

WESTERN HOLDINGS.—During the year ended 30th September, 1956, the rate of milling increased substantially and there was an improvement in the grade of ore milled. The working profit was £2,502,445 and two dividends totalling 2s. 6d. per share were declared. A further dividend of 2s. 0d. per share was declared in March of this year.

OTHER MINING INTERESTS

SAN FRANCISCO MINES OF MEXICO.—The Company earned a Working Profit of £1,497,000 in the year ended 30th September, 1956, and paid a dividend of 4s. 6d. per 10/- Stock unit in respect of that year compared with 4s. 0d. per unit for the previous year. The mill again treated a record tonnage and ore reserves at the end of the year were estimated at 5,073,000 metric tons.

CHROME MINES OF SOUTH AFRICA.—As a result of an improved demand for the Company's higher grade ores and a small increase in tailings and shipments, the net profit for the year ended 30th June, 1956, was £127,721, or more than double that for the previous year. The Company declared a maiden dividend of 6d. per share in September last.

The Corporation is also interested, *inter alia*, in the following Company:—

TSUMEB CORPORATION.—The Corporation's interest in this Company is approximately 9 per cent. The net profit for the year ended 30th June, 1956, was £3,021,946 compared with £4,089,103 for the previous year, and dividends totalling 35s. 0d. per share were declared. Dividends totalling 8s. 0d. per share have been declared during the first nine months of the current financial year.

OTHER INTERESTS

RAY HALL TRUST.—*The net profit for 1956 was* £132,417. A dividend of 16 per cent. less tax was declared compared with 15 per cent less tax for the previous year. The sum of £25,000 was placed to General Reserve and the amount carried forward increased from £119,727 to £130,144. The Trust's investments as at 31st December last showed an appreciation of £389,378 over book cost of £1,021,841. The 3¾ per cent. Series "A" Registered Debentures were redeemed at par at the end of the year.

BRITISH ENKA.—The net profit for 1955 was £258,565 compared with £805,777 in 1954. After adding £41,158 in respect of taxation and other provisions made in previous years and no longer required, transferring £200,000 to General Reserve and paying a dividend of 8 per cent, involving a net outlay of £86,250, £180,907 remained to be carried forward. The results of operations in 1956 have not yet been published.

SOUTH AFRICAN PULP AND PAPER INDUSTRIES.—After providing for taxation and depreciation the net profit for the year ended 31st December, 1956, was £489,078 as compared with £409,572 for the previous year. A dividend of 2s. 0d. per share has been declared. The Company's output of both white and kraft papers increased during the year and efforts are being made further to increase efficiencies and output. As part of the latter programme a medium sized paper machine has been ordered for the Tugela Mill.

EXPLORATION

In the Kinross area further drilling was carried out on that portion of the holdings of Crystal Mining Areas and Acacia Mines which had previously yielded encouraging results. This work has given some further encouragement and is continuing. As indicated last year, however, the amount of drilling involved is considerable and will take some time to complete.

In addition the Corporation is actively engaged in other exploration in the Union of South Africa and elsewhere.

Copies of the full Report and Accounts can be obtained on application at the London Office, Princes House, 95, Gresham Street, E.C.2.

CITY DEEP, LIMITED

MR N. W. S. LEWIN'S STATEMENT

The Fifty-sixth Ordinary General Meeting of shareholders will be held in Johannesburg on May 7, 1957. The following is an extract from the circulated statement by the Chairman, Mr N. W. S. Lewin, dated April 30, 1957:

WORKING RESULTS

The ore milled, at 1,851,000 tons, was 85,000 tons less than in 1955. The yield improved from 3.797 dwt to 3.862 dwt per ton milled. There was a slight increase in the average amount per ounce received for gold. The working revenue, at 48s. 7d. per ton, was 10d. per ton greater than in the previous year. Working costs at 47s. 7d. were only 1d. per ton milled higher than in 1955 and the working profit rose from £23,435 to £90,180.

ACCOUNTS

To the working profit was added a credit adjustment of £6,967 in respect of pneumoconiosis liabilities, interest received amounting to £20,754 and £6,138 being the difference between sundry items detailed in the Income and Expenditure Account, making a total profit for the year, before taxation, of £124,039. This, together with the unappropriated balance of £690,411 brought forward from the previous year, gave a total of £814,450, which was dealt with as follows:

Dividend No. 71 of 6d. per share totalled	£50,671
A transfer to Capital Reserve in respect of expenditure on mining assets, less realisation of trade investments absorbed	64,562
and provision for taxation amounted to	47
making a total of	115,280
and leaving an unappropriated balance to be carried forward to the current year's accounts of	699,170
	£814,450

The unappropriated balance, together with Retiring Gratuities and Abnormal Costs Reserves, was represented by net current assets totalling £930,436 as detailed in the Balance Sheet.

PNEUMOCONIOSIS

The proportion of the outstanding liabilities under the Pneumoconiosis Act, 1956, which the Company would be called upon to pay in order to meet future pneumoconiosis compensation in the event of the mine being closed down, has been finally determined at £545,055, a decrease of £9,008 compared with the previous apportionment as at March 31, 1955.

POSITION AT THE MINE

The intensified development and shaft sinking programme of recent years was eased somewhat during the past year with a consequent reduction in the footages accomplished in each category of work. The total footage developed was 12,173 feet less at 48,398 feet. The payable ore developed, at 871,300 tons, was greater by 29,200 tons than in 1955, but the value at 5.2 dwt was 0.9 dwt per ton lower. At the bottom of the mine development results on the Main Reef Leader horizon showed no marked change from those of the previous year and continue to be satisfactory.

In view of the possibility that payable values may persist beyond the present southern boundary of the Company's mining property, the permission of the Government was sought and has recently been granted to prospect in that area. The work will be undertaken in due course and if results warrant it, an application for a lease over additional claims will be made.

It will be some time before the question of the resumption of the sinking of K1 Sub-Incline Shaft can be considered as this will depend on the results of development from the pilot winze which is being sunk to test the reef on the other side of the Vierfontein dyke. The total footage sunk in Sub-Incline shafts during the year amounted to 1,473 feet or nearly 1,000 feet less than in 1955. The maintenance of a satisfactory ore reserve, however, may call for some increase in this footage.

The reorganisation of the hoisting and pumping arrangements, mentioned in my Statement last year, has made satisfactory progress. During the year two vertical and two incline shafts on the Nourse Section were stopped and since the year-end a further incline has ceased operating. Certain other technical improvements have also been carried out, including the extended employment of scraper winches in stoping, and modified stoping methods leading to a greater concentration of work and output. As a consequence, the profit-earning ability of the mine has shown a welcome improvement and unless there is any marked change in the circumstances governing the mine, there are some grounds for confidence in future operations.

ORE RESERVE

The available ore reserve, recalculated at the year end at 3,750,000 tons, was 83,000 tons higher than at the end of 1955. The average value and stope width, however, decreased by 0.3 dwt to 5.9 dwt per ton and by 0.1 inch to 42.2 inches respectively.

PROPERTY

There is little further I can add to the remarks contained in the Directors' Report concerning the proposed sale of approximately 260 acres of the Company's freehold land to the City Council of Johannesburg. The Company has not been informed what progress the Commission, which has been appointed by the Administrator to examine the merits of the Council's scheme for the new market, is making. As the scheme presents numerous problems, it may be some time before the Commission has completed its investigations and is in a position to submit its recommendations to the Administrator.

RUGBY PORTLAND CEMENT

RECORD RESULTS

MR HALFORD REDDISH'S SPEECH

The Annual General Meeting of The Rugby Portland Cement Company Limited will be held on May 31, 1957. The following are extracts from the speech of the Chairman, Mr Halford Reddish.

The year 1956 was not by any means an easy one, with many problems ranging from the extreme frost of February to the effects of the Suez crisis in the autumn, and with shrinking profit margins in both the home and export trades; a year perhaps of consolidation rather than of any particularly exciting step forward.

At our Southam Works the new kiln and ancillary plant which were being erected during 1956 have just come into production.

The so-called "Profits" Tax with all its iniquitous and inequitable features is still with us. Nevertheless we feel that the time has come when some increase in the dividend on the Ordinary shares should be made. I have pointed out before that profits which are not distributed but "ploughed back" into the business are in effect fresh capital subscribed by the holders of the Ordinary shares and that they are entitled to a proper return on that additional capital. That in itself is justification—if such be needed—for an increase in the rate of dividend; and we are not to be deflected from that view by any outside influences. But to do anything approaching justice is costly so long as the so-called "Profits" Tax takes 27 per cent of the gross amount of the dividend. It is monstrously unfair to that section of the population on which all of us in industry depend for our jobs—the risk-taking investors in ordinary shares, who are thus singled out for penal treatment. And there is still this quite anachronistic distinction for income tax purposes between earned and "unearned" income. If the nation is to survive we need a rapid return to those old virtues of hard work and thrift. We need hard work: we need savings. Yet the man who practises those virtues and then invests his savings is told that his dividends are "unearned." Some more realistic approach is surely necessary in these times.

ORDINARY AND "A" DIVIDENDS

A dividend on the Ordinary shares of 1s. 1½d. per share is in reality one of 6.36 per cent on the book value of the equity capital employed in the business. If the present day value of the assets were substituted the real rate of dividend would be about 3.7 per cent. That portion of the dividend on the Ordinary shares attributable to the home market profit represents a little more than one penny per cwt bag of cement.

An increase in the dividend on the "A" shares is also recommended. £91,170 (gross) is now carried forward to the credit of the "A" shares and is available for future distribution.

Of the Group net profit of £1,093,436, the manufacture and sale of cement in the home market accounted for 39 per cent. The balance was derived from exports, investments, and subsidiaries at home and abroad.

For the first three months of the current year our profit on the manufacture and sale of cement in the home market is slightly down; but the production, deliveries and profits of the Group as a whole are up in comparison with the first three months of 1956.

Our national economy is still balanced on a knife edge and leaves no room for complacency. The action taken by the Government to reduce expenditure, to cease the over-straining of our resources, to begin the lightening of our burden of taxation, must be warmly welcomed by all thinking men.

Copies of the full speech may be obtained on application to the Secretary, Crown House, Rugby.

THE EMPLOYERS' ASSURANCE

PROFIT IN A DIFFICULT YEAR

The seventy-sixth Annual General Meeting of The Employers' Liability Assurance Corporation Limited will be held on May 29th in London.

The following are extracts from the statement by the Chairman, Lord Knollys, which has been circulated with the report and accounts for the year ended December 31, 1956:

The premiums of our Group at £34,595,000 showed an increase of £2,522,000 over those for 1955, and the combined trading profit, after deduction of tax, was £640,508. A final dividend of 4s. per share is recommended by the Directors, making, with the interim dividend of 1s. 6d. per share, 5s. 6d. per share for the year. The total of our Share Capital and published Reserves, including Carry Forward, now stands at £8,787,268.

Fire.—The 1956 results of Fire insurance for all insurers in the United States were probably the worst for at least a quarter of a century. It was not therefore surprising that the loss of £304,000 on our Fire account was primarily attributable to our United States branch.

Its Fire premium income increased, however, by over £700,000, and therefore not only is a part of the book loss accounted for by additions to reserves, but also there is on our ledgers additional business on which we may expect to earn profits in the years to come.

In the United Kingdom for the first time for many years we made no profit, and what turned the scales against us was the cost of claims for frost damage in the early months of the year. Elsewhere generally we made profits, and in all our major branches we increased our premium income.

Accident.—Our experience on this account was satisfactory, and it exhibits the value of possessing a strong and healthy Accident account in a year that is generally unfavourable for Fire business. In the United States, where our Accident business is extensive, whereas Motor business had been profitable and Workmen's Compensation unprofitable in 1955, in 1956 it was the other way round. The remaining Accident lines written by our United States branch turned out well for us, as usual.

In Canada our Accident account was again successful, though we were only able to break even on our Motor business there.

On our United Kingdom Accident account in all we made a fair profit, besides adding satisfactorily to our premium income. It was disappointing only in that our Motor business, in spite of the rate increases to which I referred last year, was again unremunerative.

Life.—Net new business of our associated Life Office, the Clerical, Medical & General Life Assurance Society, was £10,126,498 for the year. The premium income increased to £2,981,760, and the gross rate of interest earned on investments rose to the record figure of £5 17s. 2d. per cent.

Investments.—The Corporation's total investments, including property and associated and subsidiary companies, amounted to £41,722,433, which represents an increase of £2,314,899 over the figure at the end of 1955. Our total investments were still worth a good deal more at market prices at December 31st last than this figure, which represents their book value in our Balance Sheet.

ENGINEERING COMPONENTS LIMITED

The twenty-second annual general meeting was held on April 30th in London, Mr C. C. Griffith, MC (the chairman) presiding.

The following is an extract from his circulated statement:

My half-yearly Report whilst envisaging a drop in our profits, did not anticipate the Suez crisis and the serious effect it could have on your Company's output and earnings.

Sales during the first six months compared very favourably with 1955, bearing in mind the conditions existing, and it was not until September that we saw a serious fall in sales and with this, keener competition than ever, while all the time costs tended to rise. Another factor has been the fall in the price of one of our principal raw materials.

The profit of £418,251 is after allocating £26,000 as Bonus to Employees and £4,000 to the Educational Welfare and Social Fund.

Taxation takes £232,526, and the Subsidiary Companies retain £6,489, leaving your Company a net profit of £179,236.

Sales in the export sphere have proved remarkably good.

Our constant endeavours are to produce better products, which include gaskets, gasket materials and air cleaners.

Your Company is confident that the new products we are producing, and the fields we are exploring outside the Motor Industry, will in the future maintain the position that your Company has enjoyed for so many years.

The report was adopted and the total dividend of 15 per cent approved.

PEARL

ASSURANCE COMPANY LIMITED

Chairman: **GEOFFREY KITCHEN, T.D., M.A.**

Points from the Annual Report and Balance Sheet for the year ending 31st December, 1956

TOTAL ASSETS £243,834,360 **GROSS INCOME £50,992,588**

INVESTMENTS

The Assets show an increase of £13,614,962. The valuation of the investments taking Stock Exchange securities at middle market prices showed a comfortable margin compared with the values shown in the Balance Sheet after taking into account the Investments Reserve Funds.

LIFE BRANCHES

In the two Life Branches the total sums assured on new policies issued amounted to £72,168,907 compared with £60,141,962 for 1955 and the total sums assured and bonuses in force (including the Capital Redemption Fund), amounted to over £582 millions (an increase for the year of over £38 millions). The total new annuities of all kinds amounted to £460,378 per annum.

FIRE AND ACCIDENT

In this Branch the premium income was £8,851,588.

REVERSIONARY BONUSES

ORDINARY BRANCH.—A reversionary bonus of **£2 0s. 0d.** per **£100** sum assured or annuity on United Kingdom policies entitled to participate in full profits.

INDUSTRIAL BRANCH.—A sum of £2,372,041 has been allocated to provide bonuses and other benefits to policyholders in the Industrial Branch making a total allocation up to date of **£28,760,279.**

CHIEF OFFICES: HIGH HOLBORN, LONDON, W.C.1.

INSTITUTE OF CHARTERED ACCOUNTANTS

ANNUAL MEETING

The seventy-sixth annual meeting of the Institute of Chartered Accountants in England and Wales was held on May 1st in London. Mr A. S. H. Dicker, the President, in the course of his address, said:

MEMBERSHIP

On January 1st this year our membership totalled 19,414. Since then we have admitted the successful candidates in the Final examination held last November and we are therefore now approaching 20,000. This is a remarkable achievement, bearing in mind the stringent requirements for admission on which the Institute has insisted throughout its seventy-seven years of existence.

RECRUITMENT

New registrations of articles are being maintained consistently at a satisfactory level, but, as you all know, we are now passing through an era in which there is intense competition from industry for the better educated and abler school-leavers and university graduates. High initial remuneration must obviously be a great attraction for youngsters and it is therefore important that they should be encouraged to take other considerations into account, including the need for a really satisfying career.

We have therefore prepared a small booklet of pocket size called WHY NOT BECOME A CHARTERED ACCOUNTANT? We have issued a large number of copies for sending to all public schools, all grammar schools (whether boys, girls or mixed) and all youth employment officers—a total of over 4,000 recipients. We hope it will be found attractive. It is intended as a first introduction to the profession not only for pupils but also for those responsible for advising them.

The Council would like to see a much higher proportion of university graduates among the Institute's recruits. Personally I have no doubt that national service has played a major part in preventing any expansion of our recruitment from the universities. There must be a severe limit to the number of boys who are either willing or able financially to contemplate waiting until they are over twenty-six years of age before they are in a position to earn their own living as qualified men. I hope, therefore, that when the Government decision to dispense with compulsory national service becomes effective it will have a noticeable effect upon the recruitment of graduates to the profession. We welcome the graduates of all United Kingdom universities, whatever subjects they have taken for their degree courses.

THE BUDGET

A President of the Institute has to avoid party politics and this makes it rather difficult nowadays to comment even on the Budget. I seem to remember a time when sixpence off the income tax was greeted with more or less universal joy and sixpence on the income tax was greeted with almost universal gloom. Nowadays it is well-nigh impossible for any Chancellor to introduce any change without being accused of adding insult to someone's injury or adding cream to someone's jam.

Speaking purely as an accountant, I regard the Chancellor's proposals this year as being steps in the correct direction. Relief for incomes in the early range of surtax was long overdue.

BOWATER-EBURITE

MERGER SUCCESS

The Annual General Meeting of Bowater-Eburite, Limited, was held on April 30th in London.

Sir Eric Vansittart Bowater, chairman, in the course of his speech, said: I am particularly glad that I have sitting next to me my old friend and your former chairman, Mr J. F. Fielding, our president, thus assuring to us the continued benefit of his great knowledge and experience of the industry in which we are engaged.

Mr N. P. Gold and Mr H. Tomlinson, joint managing directors, from which office they recently retired, have agreed to continue to serve as directors of the company, so that we shall also continue to enjoy the benefit of their experience. These three men have constituted a great team. It will be our endeavour to follow the pattern that they have set by the yet further development of our interests.

IMPORTANT NEW PLANT

1956 was a great and memorable year in the history of your company; the highlight was of course the merger of the Bowater interests in the corrugated container field with those of Eburite. This merger will be of the greatest possible benefit to Bowater-Eburite, for amongst other things it has brought into our fold one of the most modern corrugated container factories in this country. Furthermore, the new corrugated container plant under construction by Bowaters Fibre Containers at Ellesmere Port is now nearing completion and should be in operation within the next month or two. In equipment and efficiency it will be the equal of any plant of its kind in the world. This new plant is situated alongside the paper mills of the Mersey Division of Bowaters United Kingdom Pulp and Paper Mills, with which company we have entered into a favourable service agreement for the supply by it of the new plant's requirements of steam, water and electrical energy. This arrangement has resulted in greatly reducing the capital expenditures that would otherwise have been involved had the plant been situated elsewhere.

But for the merger, two such plants would have been built in the north west area, for you will recall that plans had already been drawn up by Eburite to build a similar plant, which would have resulted in costly competition between the two companies in that area.

Our consolidated revenues for the year under review were the highest so far attained, amounting as they did to £1,463,000. The net income of your company for the year amounted to £701,000 by comparison with £592,000 for the previous year.

It is highly gratifying that the board finds itself able to recommend a higher rate of dividend in respect of the first year's operation of the merged company.

I have great confidence in the future of the industry in which we are engaged. It is my belief that the packaging industry is still in its infancy in this country and there is still great scope for its further expansion and development.

The report and accounts were adopted.

HANDLEY PAGE LIMITED

QUANTITY PRODUCTION OF VICTOR BOMBER

The annual general meeting of Handley Page Limited was held on April 29th in London, Sir Frederick Handley Page, CBE (chairman and managing director), presiding.

The following are extracts from his review of the year's operations:

The development and quantity production of crescent-winged Victor strategic bombers for the Royal Air Force has been your Company's major activity during 1956 at its Cricklewood works and Radlett works and aerodrome. These long-range, high-flying, near-sonic aircraft are Britain's premier V-bombers. They fly faster, farther and higher than any other contemporary type. The country's deterrent strategy is largely based upon them.

Flying trials of the Herald branchliner have been going well at our Woodley aerodrome and works. The Herald is now in production to meet the world-wide demand for airliners of this type.

VICTOR

The importance of the Victor in Britain's defence armoury has been clearly stated by the Government. Recently, the Minister of Supply said he believed that the performance of our V-bombers was as good as, if not better than, anything the Americans were producing.

The great development potential of the Victor makes it likely that even more formidable bombers of this type will be produced in the years to come.

BOAC is showing interest in an advanced civil development of the Victor. This will be an excellent aircraft for its routes in the early 1960s.

HERALD

Testing of the Herald is going well. It was awarded a special-category certificate of airworthiness last July. Following its tropical trials, which are due soon, it is expected that it will receive an unrestricted airworthiness certificate, which will enable the Herald to enter airline service. Its performance has been accurately determined and guarantees of its ability have been given to many operators.

RESEARCH

Structural and aerodynamic research during the year has been carried out both on supersonic civil and military aircraft and on the development of highly-efficient long-range transports for flight at subsonic speeds.

In association with several other British aircraft constructors your company is investigating the design of a supersonic civil transport.

FINANCE

The group net profit, after providing £339,370 for taxation thereon, is £273,275.

The net surplus of current assets over current liabilities has increased by £60,932 to £2,712,719.

It was decided to pay an interim dividend of 5 per cent on the ordinary stock of the company and to recommend a final dividend of 10 per cent, making 15 per cent for the year.

The report was adopted.

THE ROYAL LONDON MUTUAL INSURANCE SOCIETY LIMITED

TOTAL ASSETS EXCEED £130 MILLION

INCREASED ORDINARY BRANCH BONUS

The ninety-sixth annual general meeting was held on April 30th at the Chartered Insurance Institute, 20 Aldermanbury, E.C.

Mr E. H. Haynes, FIA, chairman and joint managing director, who presided, said:

Our future is dependent on the Government's ability to stimulate investment and at the same time to keep consumer demand within the limits imposed by our capacity to export. Unless this is done there can be no question of improving our standard of living; indeed, it will prove impossible to maintain the standard of living already enjoyed by the community.

Organisations such as ours which have large funds for investment arising from the regular collection of small amounts at millions of homes all over the country are assuming an increasingly important place as providers of capital. In this way we help to ensure that the savings of the many are used to provide the capital which is essential for the development of the economy.

Our field staff in their daily contact with the public inculcate the habit of thrift which is vital if consumer demand is to be kept within bounds.

As many of you are aware, an extension of our Head Office building in Finsbury Square is in course of erection and will be ready for occupation around the end of the year. When completed this fine new building, which we intend to let, will provide one of the most modern and attractive office blocks in the neighbourhood of the City of London.

PROGRESS OF BRANCHES

The premium income in the Ordinary Branch (including consideration for annuities granted) amounted to £4,080,000, an increase of £118,000 over the previous year. The Fund at the end of the year amounted to £36,254,000, an increase of £1,457,000.

On with-profit policies becoming claims, etc., during the current year the Interim Bonus will be at the rate of Two Pounds per cent in respect of each of the years 1956 and 1957.

In the Industrial Branch the premium income for the year amounted to £9,901,000, an increase of £308,000 over the previous year. Claims and surrenders amounted to £5,218,000. The Fund at the end of the year amounted to £84,877,000, an increase during the year of £5,176,000.

Interim Bonus will be continued during the ensuing year at the same rate as the Reversionary Bonus declared for the period 1951-1955, namely One Pound Three Shillings per cent per annum upon the sum assured.

The premium income in the General Branch for 1956 was £804,000, an increase of £74,000.

The year 1956 has seen yet further expansion in the business we transact. The total income of the Society during the year was £20,104,000 while benefits paid to policyholders amounted to £8,574,000. The total payments to policyholders since the inception of the Society amount to more than £148 million. The report was unanimously adopted.

NORWICH UNION INSURANCE SOCIETIES

ANNUAL MEETINGS

LIFE SOCIETY

Speaking at the one hundred and forty-ninth annual meeting of the Norwich Union Life Insurance Society, held at Norwich on April 30th, the President, Sir Robert Bignold, reported expansion in almost all sections of the society's business. New assurance business at over £70 million showed an increase of nearly £2 million (despite the loss through nationalisation of the Indian portfolio), whilst the capital value of pension business totalled nearly £40 million, an increase of over £10 million.

Total funds at £136 million were nearly £9 million up, while the net rate of interest earned had risen from £4 4s 4d per cent to £4 7s 9d per cent. The expense ratio was 17.9 per cent compared with 18.6 per cent for 1955.

Sir Robert said that at home as a result of the concessions afforded to the self-employed by the 1956 Finance Act, pension business amounting to approximately £7 million had been underwritten. The Society had also been able to reduce the rates of premium in this country for non-participating whole-life and endowment insurances.

FIRE SOCIETY

At the one hundred and fifty-ninth annual meeting of the Norwich Union Fire Insurance Society Limited, the chairman, Sir Robert Bignold, said the accounts for 1956 revealed considerable expansion of premium income. The total at £17,912,775 showed an increase of £1,653,237 over 1955.

Fire premiums totalled £7,318,321, an increase of £650,790, profit in this account being £269,467. Accident premiums advanced by £969,894 to £9,336,077, but the account showed a loss of £510,368. Marine premiums totalled £1,258,377 (£1,225,824 in 1955) and the transfer to profit and loss account was £75,000.

The net transfer from profit and loss was £165,901, whilst interest earnings increased by £12,601 to £379,348 net, covering dividend requirements with a margin of £126,348.

Total assets amounted to £24,034,625, an increase of £1,093,436.

INNS & COMPANY

(Public Works Contractors, Asphalters, Sand and Gravel Pit and Quarry Owners)

HIGH LEVEL OF TURNOVER MAINTAINED

The twenty-second annual general meeting of Inns & Company, Limited, was held on April 30th in London, Mr Walter Wallace (Joint Managing Director) presiding said: The Company has had another successful year's trading. The high level of turnover reached in 1955 was maintained, the trading profit amounting to £684,050 as against £676,787, which is again the highest trading achievement of your Company.

The Profit and Loss Account shows that the balance carried down after depreciation and other items amounts to £552,366 against £549,241 last year. The total amount required for taxation is £301,500. The Capital and Revenue Reserves amount to £779,174.

Current assets at the date of the Balance Sheet amounted to £1,343,525, of which £604,760 was represented by Balance at Bank and Cash in Hand. This latter figure has been reduced by payment of the taxation due January 1, 1957. You will gather that the Company continues to be in a strong financial and industrial condition, ready to satisfactorily compete with whatever trading it may undertake.

You will have received Notice of Extraordinary General Meeting, from which you will observe that the Company has entered into contracts to purchase additional lands for the purpose of the Company's trade. The acquisition of these various lands is very desirable if the Company is to maintain its strong trading position.

The purchase consideration is the sum of £400,000 based on the valuation received by the Company from Messrs Leopold Farmer & Sons and will be satisfied as to £150,000 in cash and the balance by the issue of 200,000 Ordinary shares of 4s. each in the capital of your Company.

At the Extraordinary General Meeting you are asked to increase the capital of the Company and to authorise a Share bonus issue to the owners of Ordinary Shares of one new share for each Ordinary share held.

The report was adopted and at a subsequent extraordinary general meeting the capital proposals were approved.

The Times FURNISHING (HOLDINGS)

INCREASED TURNOVER

The ninth ordinary general meeting of The Times Furnishing (Holdings) Limited was held on April 25th in London, Mr Henry Jacobs (the Chairman) presiding.

The following are extracts from his circulated statement:

Results for the year 1956 are considered to be satisfactory, having regard to the credit squeeze, and the further restrictions upon Hire Purchase trading.

Turnover of the group was in excess of the previous year.

Profits before taxation £872,430, decreased £94,460. Profits after taxation £378,839, decreased £56,850. Excess of Current Assets over Current Liabilities £2,887,217, decreased £77,909. Fixed Assets £1,869,106, increased £270,589. General Reserves and Unappropriated Profits £875,834, increased £200,216.

The decrease in profits is attributable to rising working expenses, a heavy increase in Rates and to costs incurred in the opening of new branches.

The considerable increase in fixed assets includes new buildings for Furniture Stores at St Albans, Slough and Maidstone, expenditure upon the building and equipping of an important new production unit for Willesby Tailoring at Basildon New Town and the acquisition of sites for new Willerby shops. A large new furniture store will open at Watford in coming weeks.

The opening months of 1957 have shown a marked improvement in turnover.

The Directors have received unfailing loyalty and support from all members of the staff, and extend to them their warmest thanks.

The report was adopted.

THE SCOTTISH UNION AND NATIONAL INSURANCE COMPANY

MR CHARLES F. J. YOUNGER'S REVIEW

The one hundred and thirty-second Annual General Meeting of The Scottish Union and National Insurance Company will be held in Edinburgh on May 22, 1957.

The following is an extract from the Statement by the Chairman, Mr Charles F. J. Younger, DSO, TD, circulated with the Report and Accounts for the year 1956:

The new Act of Parliament received the Royal Assent on July 5, 1956, and the Capital Reconstruction Scheme became effective on December 31, 1956. To achieve the objects embodied in the Scheme, a sum of £600,000 has been transferred from General Reserve and capitalised, thereby increasing the Paid-up Capital from £600,000 to £1,200,000.

The new life business completed, after deduction of reassurances, was more than £7,800,000, a new record for the Company. Despite the loss of the Indian business, as a result of the nationalisation of life business in that country, the Life and Annuity Funds have increased over the year by £1,616,501, and now amount to £23,592,741.

The premium income in the Fire Department for the year 1956 amounted to £5,280,901, a decrease of £73,666 compared with 1955. The unfavourable underwriting experience in the USA continued throughout 1956 and was common to most companies doing business in that territory. The results in Canada, where the premium income is growing, were also disappointing, due to very keen competition. After making provision for unexpired risks the underwriting loss of £198,526 was met by a transfer from the Profit and Loss Account.

The net premiums in the Accident and General Insurance Account increased by £211,800 to a total of £2,178,030. The Motor Account was adversely affected by the increase in both number and cost of motor claims, especially in Canada, but the results in the other sections of the Account were satisfactory. Although the year's operations showed a trading profit of £34,107 on the whole Account the sum of £71,983 was transferred from the Profit and Loss Account in order to maintain the unexpired risk provision of 50 per cent of the premium income.

In the Marine Department an increase took place in the premium income, and the sum of £70,000 was transferred to the Profit an Loss Account.

The past year has been marked by a increase in interest rates, and the gross yiel from the Life Fund investments wa £5 10s. 5d. per cent compared wit £5 6s 11d. per cent for 1955. Loans o dwellinghouses and other properties in Gre Britain have been increased and addition investments have been made in industr both fixed-interest securities and ordina shares.

Despite the adverse underwriting experi ence of recent years and keeping in min the continued growth in the investmen income the Directors felt able to recommen that a dividend of 2s. on the "A" shares an 4s. on the Ordinary shares, which is equiva lent to the dividend paid for 1955, before th capital was doubled be confirmed. If under writing results continued to be unfavourable the Directors would require to hav regard to this in relation to future divi dend policy.

The Chairman paid tribute to all the offi cials and members of the staff at home an overseas who have given wholehearted servic to the Company during the past yea and to all members of local boards an agents at home and abroad who hav continued to give the Company thei valuable support.

SUN INSURANCE OFFICE

EXPANSION OF BUSINESS CONTINUES

SATISFACTORY RESULTS IN A DIFFICULT YEAR

MR C. G. RANDOLPH'S STATEMENT

In his statement to Shareholders, Mr C. G. Randolph, the Chairman, mentioned that, owing to advancing years, Mr W. M. Pryor had resigned from the Board. Sir Miles Thomas and Lord Rupert Nevill were appointed in February

Their United States Manager, Mr P. J. Prive, had retired at the end of the year, and the Directors had appointed Mr W. M. Kearns to be General Attorney and Mr G. Leycester Parker, United States Manager. In this country their West End Manager, Mr G. J. Morley Peel, and Mr H. R. Shipley, Branch Manager, Kingston, had retired. They had heard with regret of the death of Mr D. S. N. McCartney, Manager of Wellington Branch, New Zealand.

CONDITIONS AT HOME AND OVERSEAS

The year had been one in which losses had been somewhat higher. Intensely competitive conditions existed in many areas, and reductions in rates and a tendency to widen the scope of the cover were reflected in a narrowing of the slender margin of profit. The problems which accompany inflation, such as inadequate insurance, higher costs for repairs and heavier settlements of liability claims, had continued. Insurances for Nuclear Energy Power Stations were likely to be so large that the resources of the entire international insurance market would be required. Conferences in London to achieve mutual support through Pooling were a fresh example of the international character of insurance.

FIRE ACCOUNT

	1955	1956
	£	£
Premiums	7,993,841	8,441,339
Claims	3,702,801	4,202,284
Ratio of Profit	9.40%	6.16%

The expansion of income of £447,498 had taken place in most fields. The reduction in the rate of profit was accounted for by increased claims for, owing to the larger business, a substantial increase in cost had been carried without a corresponding rise in the ratio of charges. In this country the bitter weather at the beginning of the year emphasised the value of Householders' Comprehensive policies. In the United States and Canada losses occurred on many apparently desirable insurances.

In North America a substantial volume of fire business was transacted by policies issued for longer than a year and the usual 40 per cent reserve was not sufficient. Although the general reserves had always been ample to cover such liability, it had been decided to create an additional reserve in the Fire Account by a transfer from Profit and Loss of £963,940 so that the accounts more truly reflected the underwriting results. The profit for the year was £519,948.

ACCIDENT ACCOUNT

	1955	1956
	£	£
Premiums	7,934,130	8,476,333
Claims	4,229,426	4,782,502
Ratio of Profit	6.25%	4.06%

The premium increase of £542,203 was well spread, but the profit was meagre, and the decrease was due to sharp increases in claims. Motor insurance had continued to present many difficulties. In this country there had been a temporary easing following the restriction in petrol supplies. Rate increases in the United States of America were expected to produce some improvement ther and similar action here was essential.

Workmen's Compensation also cause concern, and in Australia and Cuba the ex perience had been unfavourable. Othe classes had proved generally satisfactory.

The profit for the year was £344,352.

MARINE ACCOUNT

	1955	1956
	£	£
Premiums	1,275,459	1,253,534
Fund at the end of the year	2,225,057	2,216,854

The run-off of years prior to 1955 ha been satisfactory, to a great extent owing t freedom from major casualties. 1955 an 1956 had shown a trend to a more norma total loss experience and there had been great increase in repair costs. Competitio for cargo business had continued to b intense.

After a transfer of £150,000 to Profit an Loss Account, the Fund represente 176.9 per cent of premiums.

PROFIT AND LOSS ACCOUNT

Transfers from Revenue Account amounted to £1,014,300. In order to in dicate more clearly the burden of taxation it had been decided to show overseas taxe on profits in the Profit and Loss Account instead of in the Revenue Accounts. Simi larly, Interest, Dividends and Rents ha been brought into the accounts before de duction of tax, the tax being shown separ ately. Investment income had risen fro £1,009,374 in 1955 to £1,106,761. The boo value of investments was £22,070,934.

The Directors recommended a final div dend of 4s. per share, less tax, making total of 6s. 6d. per share for the year.

In conclusion, the Chairman extended be thanks to the Staff, the Advisory Committe Local Directors, and other representatives the Office throughout the world.

APPOINTMENTS

THE UNIVERSITY OF LEEDS

PARTMENT OF ECONOMICS AND COMMERCE Applications are invited for the post of assistant ecturer or lecturer in Accountancy in the Department Economics and Commerce. Salary scales are at present under review. It is expected that the Lecturer ale will be £900 x £50—£1,350 x £75—£1,650 and Assistant Lecturer scale £700 x £50—£850. The ties consist mainly of teaching in connection with the Scheme operated by the Universities and the countancy profession. Candidates should have a good nours degree preferably in Economics or Commerce practical experience in accountancy and, preferably, fessional qualifications. Applications (three copies), ing date of birth, qualifications and experience, ether with the names of three referees, should reach Registrar, The University, Leeds 2 (from whom ther particulars may be obtained) not later than e 25, 1957.

USTRALIAN NATIONAL UNIVERSITY

CANBERRA

RESEARCH SCHOLARSHIPS

Applications are invited from post-graduate students capacity for research for scholarships in Anthropology Sociology, Demography, Economics (including omic History and Economic Statistics), Geography, stralian History, Far Eastern History (China and —a substantial knowledge of the relevant language a pre-requisite), History, International Relations, Law, Political Science including Public Administration, Philosophy, Political and Social Philosophy, and tistics including Mathematical Statistics.

The scholarships are tenable for an initial period of years and may be extended for a third year. holars will be expected to enrol for a PhD degree, to commence their studies in September, 1957.

The present value of a scholarship is £A771 per num. Married scholars with dependent children may granted additional allowances, and the University ll make a contribution not exceeding £stg.165 towards scholar's fares to Canberra from the United Kingdom, of the same amount towards his return fare.

Application forms and further information may be ained from the undersigned,* or from The Secretary, e Association of Universities of the British Commonalth, 36 Gordon Square, London, W.C.1. Applications should be lodged with the undersigned* by ne 31, 1957.

*R. A. HOHNEN, Registrar, Box 4, GPO, Canberra ACT, Australia.

UNIVERSITY COLLEGE OF SOUTH WALES AND MONMOUTHSHIRE

Applications are invited for the post of Lecturer or Assistant Lecturer in Social Science, from September 1 or October 1 1957. The salary scale for Assistant Lecturers will be £700 x £50 to £850, the salary scale of Lecturers will be £900 x £50 to £1,350 x £75 to £1,650 per annum, and the starting salary will be determined by the candidate's qualifications and experience. Candidates should be Honours graduates with experience in University teaching or research, or in Social work. Training and experience in advanced case work would be an advantage. Six copies of applications together with the names of three referees, should be sent not later than May 27, 1957, to the undersigned, from whom further particulars may be obtained.

E. R. EVANS, Registrar.

UNIVERSITY COLLEGE OF SOUTH WALES AND MONMOUTHSHIRE

Applications are invited for the post of Research Assistant in Economics and Social Science, from graduates in the field of Social Science with specialisation in Sociology and/or Statistics. The present salary of the post is £850 per annum, which will be subject to review by August 1, 1957. Duties will be concerned entirely with market research and intelligence and will extend over a wide range of markets and products. Essential requirements are (1) a first- or second-class honours degree in Economics or Commerce, and (2) a good knowledge of German; some previous knowledge of market research, not necessarily in textiles, would be preferred.—Please send full personal history to The Personnel Manager at Pontypool, Mon.

RESEARCH MANAGER

Young executive wanted to organise and supervise product and market research for American company in Britain. Excellent opportunity for right man. Salary open.

International Latex Corporation Playtex Park, Port Glasgow, Scotland.

ESTABLISHED manufacturers of prefabricated housing and storage buildings with expanding export markets require overseas representatives of high calibre, used to negotiating with top-level executives. Technical knowledge overseas and on the industry experience an advantage. Salary over £2,000 p.a. plus expenses, allowances, bonus, etc.—Box 684.

SENIOR BRANCH OF THE FOREIGN SERVICE. The Civil Service Commissioners invite applications for about five posts in Grades 7 or 8. Age at least 20 and under 32 on August 1, 1957, but the upper age limit may be extended to 40 for members of H.M. Overseas Civil Service whose experience is directly relevant to the needs of Foreign Service. Selection by interview in July. University honours graduates and other candidates with suitable qualifications and experience will be considered. Sound knowledge of international problems and experience of administrative or other responsible work essential. Competent knowledge required of at least one foreign language; Middle Eastern and Oriental languages particularly useful.

Salary scales:

Grade 8—£605—£1,055 (Starting pay according to age).

Grade 7—£1,375—£1,950.

Women's scales somewhat lower but being raised to reach equality with men's by 1961.

Particulars and application forms, from Secretary, Civil Service Commission, Burlington Gardens, London, W.1, quoting No. 292/5717. Completed applications should be received by May 30, 1957.

MANAGEMENT SELECTION LIMITED have been retained to advise on the appointment of a

DIRECTOR OF MERCHANDISING

for a group controlling a chain of service provision shops and supermarkets, based in the London area. This new appointment will include overall responsibility for merchandising food and allied products through all these outlets, the number of which it is planned to increase considerably. Initial salary about £3,000. Life Assurance and non-contributory pension scheme.

Commodity knowledge is not important compared with some years of senior executive experience in merchandising, preferably for multiple shops. The ability to base decisions on calculation rather than uncritically on experience is important in this rapidly changing field. A degree would be an advantage. Probable age 35 to 45.

Please send brief details in confidence, quoting reference S.373, to P. J. H. Fryer, Management Selection Limited, 17 Stratton Street, London, W.1. No information will be disclosed to our clients until candidates know their identity and have given permission after personal discussion.

SECRETARY required by the Women's Liberal Federation. This highly responsible position gives scope for the exercise of initiative and requires organising and administrative abilities.—Applications to 54 Victoria Street, S.W.1.

CAREER openings available in International Investment Department, London Merchant Bankers, for experienced security analyst with knowledge American stocks, and for young man completed National Service interested statistical work and economic problems.—Apply by letter to Box AP/107, c/o 95 Bishopsgate, E.C.2.

OXFORD GRADUATE, 41, wide experience industrial administration in senior management positions, seeks post requiring exceptional ability and drive.—Box 683.

SECRETARIAL TRAINING especially for university graduates and older students, six-month and intensive 14-week courses.—Write, Organising Secretary, DAVIES'S, 2 Addison Road, W.14. PARk 8392.

UNIVERSITY OF LONDON

A lecture entitled "International Technical Assistance as a Factor in Economic Development" will be delivered by Mr. David Owen (Executive Chairman, Technical Assistance Board, United Nations) at 5 p.m. on May 10th at the London School of Economics and Political Science, Houghton Street, Aldwych, W.C.2.

ADMISSION FREE, WITHOUT TICKET.

JAMES HENDERSON, Academic Registrar.

OTTOMAN BANK

(Incorporated in Turkey with Limited Liability)

NOTICE IS HEREBY GIVEN that in accordance with Article 29 of the Statutes, the Annual General MEETING of Shareholders will be HELD on WEDNESDAY, May 22, 1957, at Winchester House, Old Broad Street, LONDON, E.C.2, at 12.30 p.m., to receive a Report from the Committee with the Accounts for the year ending December 31, 1956; to propose a Dividend; and to elect Members of the General Committee.

By the 27th Article of the Statutes the General Meeting is composed of Shareholders possessing at least 30 shares, who, to be entitled to form part of the Meeting, must deposit their shares at the chief office of the Company, Istanbul, or at any of the several branches or agencies abroad (in London at 20/22, Abchurch Lane, E.C.4, and in Paris at 7 rue Meyerbeer, 9me) 10 days at least before the day fixed for the Meeting.

J. VASSALL ADAMS, Secretary to the Committee.

April 29, 1957.

NORANDA MINES LIMITED

DIVIDEND NOTICE

Notice is hereby given that an interim dividend of Fifty Cents (50c) per share, Canadian Funds, has been declared by the Directors of Noranda Mines Limited, payable June 14th to Shareholders of record May 17, 1957.

By Order of the Board.

Toronto, Ontario. C. H. WINDELER, April 26, 1957. Secretary.

THE CUNARD STEAM-SHIP COMPANY LIMITED

NOTICE IS HEREBY GIVEN that the Eightieth Annual General Meeting of The Cunard Steam-Ship Company Limited will be held in Cunard Building (Fifth Floor), Pier Head, Liverpool, on Wednesday, May 22, 1957, at eleven o'clock a.m.

(1) To receive and consider the Statement of Accounts for the year ended December 31, 1956, with the Reports of the Directors and Auditors.

(2) To sanction the declaration of final dividend for the year 1956.

(3) To elect Directors in place of those retiring but who, being eligible, offer themselves for re-election. In accordance with the provisions of the Companies Act 1948, special notice has been received of the intention to move at the above Meeting a resolution for the re-election as a Director of the Company of Col. D. H. Bates, who at the date of the Meeting will be aged 70 years and who retires by rotation and offers himself for re-election.

(4) To confirm re-appointment of Auditors and to fix their remuneration.

By Order of the Board.

J. C. TOMLINSON, Secretary.

Offices:—Cunard Building, Liverpool.

April 27, 1957.

Note to Members.—A Member entitled to attend and vote is entitled to appoint one or more proxies to attend and vote instead of him. A proxy need not also be a Member.

CANADIAN PACIFIC RAILWAY COMPANY (Incorporated in Canada with Limited Liability). CANADIAN PACIFIC RAILWAY PERPETUAL 4 per cent CONSOLIDATED DEBENTURE STOCK, NEW BRUNSWICK RAILWAY 4 per cent DEBENTURE STOCK, CALGARY AND EDMONTON RAILWAY 4 per cent DEBENTURE STOCK. In preparation for the payment of the half-yearly interest due July 1, 1957, on the above Stocks, the Transfer books will be closed on May 17th and will be re-opened on July 2, 1957.—R. F. TREMAYNE, Deputy Secretary, 8 Waterloo Place, Pall Mall, London, S.W.1. April 26, 1957.

DOMINION OF CANADA THREE-AND-A-QUARTER PER CENT REGISTERED STOCK, 1958-63. For the purpose of preparing the Interest Warrants due July 1, 1957, the BALANCES will be STRUCK at the close of business on June 1, 1957, after which date the Stock will be transferred ex-dividend.

For the Bank of Montreal, Financial Agents of the Government of Canada in London.

"Then felt I like some watcher of the skies
When a new planet swims into his ken . . .
JOHN KEA

The sense of wonder and wild surmise felt by the astronomer at his telescope or by stout Cortez and his men when they stared at the Pacific is shared by those who stand to-day on the frontiers of industrial development. Research teams of Consolidated Zinc peer into the future in many fields. They may be geologists, whose laboratory is the surface of the earth itself, working over a prospect as remote from civilisation as a peak in Darien; or scientists, in the central laboratories of the group, charting the course of a new industrial process.

And just as the astronomer may roam the skies for many years before his assiduity is rewarded, or a writer may turn over half a library to write one book, so the industrial explorers of today may travel wide expanses before they can tell of their findings in voices loud and bold.

Even in a large group like Consolidated Zinc, the joy of revelation is still individual. The modern reaction may not be as ecstatic as that of Archimedes, who in his excitement sprang out of a public bath and ran home naked. But the thrill of industrial discovery, whether it relates to a mineral deposit or to a new development in metallurgy, is still as exciting as that of Keats on first looking into Chapman's Homer.

blessing berserk

There is no menace more real than fire. The speed and completeness with which it devours all in its path is awesome. At sea it assumes terrifying proportions as it threatens total obliteration of men and ships alike.

For thousands of years mankind has been striving to hold the tenuous balance between the blessings and the destructiveness of fire. Thanks largely to products of The Cape Asbestos Co. Ltd., he has the whip-hand over this potentially vicious form of energy. So much so, indeed, that the occasional outbursts cannot possibly be compared with the extraordinary amount of help that fire and heat has given in man's constant search for betterment.

Won from their own mines in Africa and elsewhere, processed in their own plants both here and abroad, marketed throughout the world, Cape Asbestos products typify the benefits derived from such globe-spanning activities as well as from the intensive and wisely-directed research and development.

Caposite – in the form of moulded blocks and pipe sections of Amosite asbestos: for thermal insulation.
Marinite – non-combustible sheet, made from Amosite asbestos: for the construction of A & B bulkheads in ships, and industrial ovens, driers, etc.
Asbestolux – non-combustible insulation board, made from Amosite asbestos: for structural insulation combined with maximum fire protection.
Rocksil – rock wool, processed from natural Scottish rock and available in a variety of different forms: for heat and acoustic insulation and refrigeration.
Capasco – non-fade heavy duty moulded brake and clutch linings, for every type of vehicle.

problems in management:

Planning for future production

How a company plans for future production can affect its entire operation. Delivery schedules can be met or delayed, quality and profit can go up or down. Basic to production planning is the purchase of raw materials from dependable sources.

Consider Dow phenol and substituted phenols for instance. These basic chemicals have many and varied applications. Phenol is used for molding powders, laminates, adhesives and protective coatings. Bisphenol A plays an important role in the manufacture of modified phenolic resins for varnishes, as an antioxidant, and in epoxy type coatings and adhesives. An intermediate for varnish and lacquer resins, p-tert-Butylphenol is also used as a soap antioxidant and as an oil additive. Other Dow substituted phenols like p-Phenylphenol, for making phenolic resins, and 4-tert-Butylcatechol, which is a stabilizer for monomeric styrene and butadiene, are ready to help you in your production planning.

Whatever the application, wherever the use—manufacturers who plan ahead rely on Dow for a stable and constant supply of phenol and substituted phenols. Get in touch with your local Dow representative or the nearest Dow branch office.

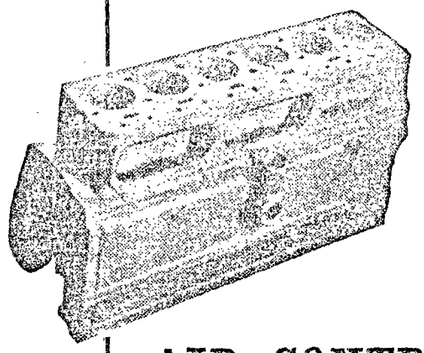
SAVE MONEY by building in REINFORCED CONCRETE



REINFORCED CONCRETE is being used increasingly in Great Britain for offices, factories, warehouses, flats, schools and similar building and industrial projects, as it has proved itself the *cheapest form of construction.*

For the building frame, external cladding, staircases, floors and roof, reinforced concrete offers many advantages—in addition to that of low cost. Modern concrete technology, aided by research—The Blue Circle Group of Companies alone spend over £300,000 each year on research and development—and the availability of the range of Blue Circle Products for structural and decorative concrete, have placed concrete in the forefront of modern constructional materials.

Super Purity 99·99% Aluminium for Church Roofs

Churches are built to endure. Some day, however, a new roof will be needed, and the material chosen must be long-lived and trouble-free. The Parish Church of SS Peter and Paul, Ash-by-Wrotham, Kent, is the tenth to be roofed with BA Super Purity (99·99%) aluminium—a first class material well able to maintain the traditions of Church Building. Moreover, in many cases the cost of a Super Purity roof is more than covered by the scrap value of the original covering.

Calling the Bans

THE British proposals for the registration of nuclear bomb tests and for the examination of their possible limitation, and perhaps cessation, by international agreement do not break new ground. But they come at an apt moment, when there is a mounting outcry for bans upon the hydrogen bomb. And they point an apt moral, which is that there is no short cut to nuclear disarmament.

The outcry, which was amplified last week and at the weekend in May Day celebrations, and is bombinating inside the Labour party, as the question of German rearmament did some years ago, cannot simply be explained as a success for Soviet and communist insinuation. It reflects, among many people with no part in the processions or the public protests, a natural feeling of revulsion and fear in face of a dreadful prospect (an article on page 496 records the rising anxiety in the United States itself about the possible effects of the weapons tests in Nevada on residents in the region). But the outcry also shows what a treacherous counsellor mere emotion, however natural, can be; and it demonstrates the need for some attempt to disentangle the issues and, within the limits of incomplete knowledge, the facts.

The use of hydrogen bombs by both sides in another conflict would certainly be suicidal; but, because of this, the possession of hydrogen bombs by both sides may be a means to prevent another world war. This is the balance of terror to which Sir Winston Churchill has attached his eloquent hope. But the risk remains that hydrogen bombs in being will, in fact, be used. The question is whether and how this risk can be removed or reduced. Different kinds of bans are proposed; and the would-be banners have differing motives. The outright demand is to ban the hydrogen bomb altogether: that is, not only to put an end to its manufacture (and so to its testing) by all countries, but also to get rid of the stocks of hydrogen bombs already in the possession of Russia and the United States. There are formidable obstacles: the first is that the powers would have to agree to it and accept its enforcement; the second is that, without agreement on effective all-round disarmament, it would leave the Russians and their allies with strategic superiority both in conventional weapons and in manpower; and the third is that, from what we are told, there is no known means, even with international inspection and control, of making sure that no stocks of bombs exist.

The next demand is to ban the fresh production of hydrogen bombs. Its fulfilment is no easier. Successful, it would leave the United States with the strategic superiority of its superior stocks of the bombs; it is hard to see how the Russians could honestly consent; the sanction of effective inspection and control would still be indispensable. So it is that most of the recent demands in this country have fixed upon two more limited objectives. One is a ban, by all the powers, upon further tests of hydrogen bombs, if only to prevent the insidious harm which may be done to human life and health by "fall-out"; the other is that,

whatever the international deadlock may be in these decisions, Britain itself should either abjure the hydrogen bomb or refrain from testing it. These were the loudest May Day cries. They echo widespread and understandable anguish that, whether war is prevented or not, these military preparations may cause uncounted casualties from the lingering and far-reaching effects of radiation. They also echo some confusion. Part of this confusion arises inevitably from the divided counsel of the scientists. No layman can yet say whether there is a " safe " limit to the total fall-out injected into the world's atmosphere by bomb tests, or what that limit may be—though every sensible man would like, if it were feasible, to take no risk of the creeping calamity. Nor is any layman in a position to refute the contention that possession of the bomb is useless unless it is tested, perhaps in several different forms. And an international ban on tests, if it could be agreed upon, would presumably require, like other disarmament measures, the means of check and enforcement.

Thus, while the plodding search for disarmament goes on, as all the time it must do, the argument comes back to what, within that framework of painstaking diplomacy, Britain itself should desirably, or could usefully, do. There is confusion here, too. The direct difference made either to the prospect of a hydrogen bomb war or to the risks of fall-out by Britain abandoning the bomb or its testing would be small ; and it is disingenuous to advocate it on moral grounds while at the same time accepting the western policy of deterrence based upon the American bombs. There are, however, two other separate arguments intermingled in the discussion. The first contends that, if Britain insists upon not only having but also testing its hydrogen bomb, it will be correspondingly harder to prevent other countries from having hydrogen bombs of their own, with corresponding perils to the world. In reply it might be argued that the existence of British bombs should make, say, German bombs less not more necessary to the western allies. On the British side itself, it is not altogether unreasonable to ask—and this is the second of these separate arguments—whether the determination to have the bomb is necessarily right, not morally but in terms of policy and economics.

The decision to have first the atomic and then the hydrogen bomb is of long standing and belongs to both political parties. Mr Sandys was faced with the further decision that, for economic reasons, an adequate supply of both the new weapons, with their means of delivery, and the old, with their demands on manpower and resources could no longer be afforded. He made his choice boldly and logically on the side of the deterrent —and the running-down of national service. The fact remains that there was an alternative choice, which by maintaining Britain's conventional forces, would at any rate not have caused the present high indignation (described in the following leading article) in Europe. And the reasons of strategy and prestige which have influenced the British choice, in addition to the evident economic and political motives (which the Opposition shares), are open to argument. But this is on practical not moral or emotional grounds.

The truth is that, though the universal horror of the bomb is a powerful force, the demon cannot be exorcised simply by calling the bans. The way to peace is still by the old long hard road of defence and diplomacy. Many of the implications of what is being done are alarmingly unknown and this time the penalty for failure may well be universal ruin, but there is still no short cut to the safety we all crave.

Albion in the Dock

The hostile reception at Bonn and Strasbourg of British defence policy and of the British "Grand Design" for Europe has revealed a powerful undercurrent of suspicion of British motives. A dose of humility is recommended

THE British Government's effort to make co-operation with Europe a main pillar of its policy has been through a black fortnight. The Council of Europe received the British "Grand Design" for a new western assembly with a barrage of devastating criticism. A burst of inspired rumours from Paris has made it clear that the negotiations on the free trade area have been marking time. In the North Atlantic Council at Bonn, Mr Selwyn Lloyd's exposition of Britain's new defence philosophy of relying on the nuclear deterrent was received with indignant European criticism, and he was forced to mince if not to eat his words. A majority in the parliamentary assembly of Western European Union, the body set up to implement the Paris agreements, which marked the high-water-line of British influence in Europe, has voted for the first censure motion in its history: the WEU ministers had been wrong to accept any reduction whatsoever of British forces on the continent. The two rescue operations—Mr Macmillan's visit to Bonn and M. Maurice Faure's trip to London to see Mr Thorneycroft—were badly needed ; for the chronic European suspicion that Britain's new smiles towards Europe are just another trick in the old national game of a perfidious Albion has come to a head.

Past British conduct in European matters gives cause for distrust. The Prime Minister and some of his colleagues will no doubt recall the excitement in the Council of Europe when Mr Churchill expounded in his rolling, imaginative phrases the idea of a European army. But its execution was left to others, and continued to be left to others even when Mr Churchill was back in power. In Paris Sir Stafford Cripps agreed to join the Coal and Steel Community, only to be repudiated by his government when it heard the news. It will take more than a few months of sincere and constructive efforts in Europe to overcome the deep suspicions such equivocation has inspired. And many British attitudes today—the Prime Minister's own talk of national "greatness," the evident attempt to retain a privileged position in relations with the United States —keep alive European fears that Britain's enthusiasm for Europe may not last. Europeans ask whether it really stems from a humble awareness that the only future for the weak nations of Europe lies together, or merely from a passing wish to bolster a weakened position of national interest.

Their doubts have been violently enflamed by the new British defence policy. Whatever its wisdom, the new policy has been introduced in a way that offends the spirit of the European alliance. The decision to concentrate on nuclear weapons was made without regard to Nato's own struggles to find a common solution to the military, economic and political problems of tactical nuclear warfare. The decision to cut the Rhine Army was, even more, a plain retreat from obligations.

THE defence policy has been insensitive to the problems of Germany in particular. The Germans, especially, feel that Britain's decision to concentrate on atomic rather than conventional weapons sacrifices the interests of European defence to an illusion of national pride. For what purpose, they ask, is it necessary that Britain, as well as the United States, should have the great deterrent ? If all is left to the deterrent, how can a local invasion be stopped ? Would the H-bomb be used if fighting broke out in, say, Berlin ? It was such forceful arguments, from Norwegians and Dutchmen as well as Germans, that obliged Mr Selwyn Lloyd to modify his position in the Nato council at Bonn, and to agree that the nuclear deterrent by itself is not enough. The Bonn government's bitter reaction against the defence White Paper is in part prompted by electoral convenience: Dr Adenauer and the governing party at Bonn would have preferred less to be said about nuclear weapons until after the autumn. But behind this there is a genuine uneasiness and revulsion of very many Germans at the prospect of a concentration of tactical atomic weapons in their country ; for Germany might well be the battlefield on which they were used, as Mr Bulganin has roughly reminded them. Fear has therefore combined with the rumbling resentment left in Germany by Britain's unilateral action in Egypt to produce an explosive charge of anti-British sentiment.

Mr Macmillan, it can be supposed, has done his best to cool the feeling down. But in defence, as in the whole of policy, the sole lasting remedy for European doubts is a more active, practical demonstration of Britain's wish to co-operate, a more real consideration of European views. It is not too late to make a new effort to fit the new model of British defence into common Nato plans balancing the need for conventional and atomic weapons. And Tuesday's resolution of Western European Union in favour of a European arms pool for the production of guided missiles offers Britain a timely opportunity to take the lead in common arms production.

IN the differences over the free trade area the Government has had worse luck than it might have hoped. The scheme is, after all, a revolution in British policy and the greatest single demonstration of the sincerity of Britain's new interest in Europe. Yet even here British attitudes—an air of generosity, a sense that the decision to interest ourselves in Europe is a gift from an insular St. Nicholas to the continental children—arouse resentment. It was hardly surprising that Mr Ormsby-Gore got a poor reception at Strasbourg for the Grand Design, when he went out of his way to explain in his speech that Britain could be asked " to pay too high a price " for collaborating with Europe. " What about the price that Europe is asked to pay ? " mutter the Danes. The exclusion of agriculture from the free trade area scheme, which would so ingeniously give Britain the best of both worlds—Europe and the Commonwealth—raises cruel problems for this nation of farmers. A Danish spokesman sharply rejoined to Mr Ormsby-Gore that for his country the inclusion of agriculture was a *sine qua non* of the free trade area. It is difficult to see how the substance of the British position—to retain preferences for Commonwealth farmers but to do something for European agriculture by a more liberal import policy—can be changed. But the Government can hardly expect the Danes to trust its vague assurances when not only the British but the German market is being ruined by the fatuous dumping of subsidised British eggs. More considerate day-to-day policies are essential.

It is a broader conflict of interests, however, between the common market countries and Britain that has bogged down the free trade area negotiations and brought M. Maurice Faure to London to see Mr Thorneycroft. After their long months of negotiations, the six common market governments, above all that of France, are anxious to get their treaty ratified without further delay. The British Government, on the other hand, sincerely wishing to develop the free trade area around the common market, would like the treaty to be modified in certain ways. This could clearly delay

it, and to a suspicious common marketeer, British requests for alterations look much like "sabotage." They are not; some modifications in the common market treaty will probably have to be made. The problem is to make them quickly enough (so that the two schemes can have a chance of coming into operation together) without holding up the ratification of the Rome treaties which have already been signed.

At this stage it would therefore be helpful if Britain made a point of looking out for those elements in the common market that can be simply taken over by the free trade area. If Britain had taken an active interest from the start, it could have had a large say in moulding the pattern of free trade in Europe. But it cannot expect the Six to alter the substance of their arrangements now. Fortunately, it is clear that in practice the needs of the two schemes are much alike. Both will require rules of competition and bodies to enforce them, for instance an investment bank for southern Europe and central institutions to deal with the policy aspects of balance of payments problems—common economic policies, escape clauses, credits, rates of exchange. Combined arrangements for the two schemes are not merely sensible but essential.

This is the practical reason why a political arrangement, more or less of the nature of the Grand Design, will have to be worked out. Yet the Grand Design could hardly have been presented to Britain's European allies in a more irritating way or at a more tiresome moment—just when the treaties are signed and when the six governments each face the problem of getting parliamentary ratification. The shadowy plan and the ostentatious title are red rags to European suspicions that this is another Foreign Office plot to steal the thunder of the European movement without making any practical contribution to it.

A recovery from the present severe setback to British policy in Europe depends on two conditions: a patient continuous practical effort to work together with Europe; and a greater measure of humility. The national British vice of complacency, indeed, which, when exported, looks so like arrogance, has been nowhere more apparent than in Britain's relations with Europe since the war. Europeans are irritated when British politicians, after dragging their feet for so many years, tell them how to unite. The social and political stability of Britain, its ties across the oceans, its empirical practical approach, are deeply appreciated by other Europeans. But at present, Britain is *in statu pupillari*. It should not behave like a tourist walking into a café in a distinguished wine district and ordering a cup of tea.

Russia's Managerial Revolution

Mr Bulganin has recovered his letter-writing form, and Mr Khrushchev his winsome smile, just when the Soviet government is embarking on a major shake-up in its administrative machine

PROPOSALS for large changes in the pattern of the Soviet system of government have been put before the Supreme Soviet. The project introduced by Mr Khrushchev will sweep away a score of industrial ministries in Moscow, leaving but eight mostly connected with defence. It will give seats in the central government to the fifteen prime ministers of the member republics. At the same time it will overhaul radically the ponderous administrative machine that runs the Soviet economy. It foreshadows a mass dispersal of bureaucrats from Moscow to the provinces, accompanied by the setting up of regional economic councils closer to the points of production.

The reforms will affect the lives of millions of Soviet citizens. It is not surprising that the public discussion started by the publication of Mr Khrushchev's theses on this subject has given the impression of arousing genuine popular interest and even some opposition. The survival of eight ministries may indeed be due to such resistance, which could have forced Mr Khrushchev to scale down his plans.

The Russian rulers are faced with a problem of growth. The present system of planning has been bursting at the seams under the pressure of an expanding economy. Once before, after the October Revolution, the Bolsheviks thought of combining an economic council at the centre with regional boards at the periphery. But when Stalin began to carry out his industrial revolution through five-year plans, the central planning board, or *Gosplan*, relied in its task on ministries in Moscow, rather than on regional agencies. These ministries could work fairly efficiently, and their co-ordination was not too difficult, as long as each of them had only a limited number of undertakings under its control. But as industry grew more complex and more widespread, remote control ceased to function smoothly. The number of economic ministries in Moscow grew to more than 40, and each department tended to become a separate empire, oblivious of what was happening outside its field of competence. The result, for all the efforts of the *Gosplan*, was mounting confusion, red tape, duplication, a disproportionately heavy transport burden, and bad economics.

Even in Stalin's time an abortive attempt was made to cure the ills of departmentalism by appointing deputy premiers as overlords for groups of ministries. Mr Khrushchev's remedy is more drastic. The Soviet Union is to be subdivided into 92 economic areas. Smaller republics, such as Georgia, will form regions by themselves; the large ones will comprise many economic units; thus there will be eleven in the Ukraine and 66 in Russia itself. Each area will have its own economic council to control large-scale production within the region (small enterprises are to be left in the hands of local authorities). The council will organise current production and draw up plans for the future. But it will do so under closer local supervision, both administrative and party.

It is hoped that this decentralisation will get rid of such waste as, for example, the shipment from Kazakhstan to Moscow of a piece of equipment required by a factory (controlled by a different department) next door. The new system, however, could fall into the opposite evils of parochialism and regional self-sufficiency. It is to counter such tendencies that *Gosplan* in Moscow is to acquire a new stature and new powers.

MR I. I. KUZMIN is the unexpected choice for the job of master planner and overlord of the country's economy. How important the post will be may be gathered from the fact that, though hitherto Mr Kuzmin was not even a member of the party's central committee, he has now been appointed a first deputy premier. In Mr Khrushchev's draft not only the chairman of the *Gosplan*, but his chief assistants as well, are to have cabinet rank. After the mass elimination of industrial ministers, there will be many vacant places in the streamlined Soviet government. Fifteen of them are to be filled automatically by the prime ministers of the republics which form the Soviet Union. This is a clever move. It is doubtful whether, at this stage, the premiers of, say, Estonia or Uzbekistan can carry a weight in the Soviet councils comparable to that of their colleagues from the party presidium, but the people of the restless minorities will have the feeling of a double gain: a greater say in running their own economy, and a stronger voice in the government of the Soviet Union.

Mr Khrushchev revealed that 900,000 civil servants have been sacked in the economy drive since Stalin's death. Thousands more are now to be directed to more productive employment. The staffs of the abolished ministries will be the first to feel the axe. Numerous colleges, institutes and other bodies are next on the list for removal from the capital; they are to be spread more evenly over the country. "Far from Moscow" was the title of a popular Soviet novel; the lament of Chekhov's Three Sisters may soon be in the mouths of displaced bureaucrats. One strategic consequence of the dispersal would be that the Soviet Union could no longer be knocked out by a single blow against Moscow. Industrial tycoons in the provinces will fare scarcely better in the change. Hitherto the manager of a provincial plant felt pretty well master in his own house under the not so watchful eye of a distant ministry; he will be less confident under supervision from close at hand.

Altogether the Soviet leaders seem to have drawn important conclusions from recent events. The Jugoslav experience, the Hungarian revolt and Poland's quasi rebellion have taught them how potent the forces of nationalism still are and how tantalising the slogan of "workers' control" remains. This does not for a moment mean that Moscow will now let, say, the Uzbeks shape their own destiny or hand over factories to workers' control, the Soviet state is not going to wither away yet. But it does mean that, to prevent explosions near home, the Soviet rulers now hope by timely concessions to harness these potentially disruptive forces to the drive for production. This is the heart of the matter. It is through fast expanding production, allowing them to relieve the pressures, that Stalin's heirs expect to consolidate their succession and to avoid being overwhelmed.

The reorganisation now envisaged to achieve this end, with its massive cuts or shifts of civil servants and its radical overhaul of the planning system, is a major

The Economist
MAY 9, 1857

A LIBERAL PARLIAMENT

The House of Commons, which has just met, represents, perhaps, more completely than any other we have ever had, the characteristic meaning of the word *Liberal*. In other words it is anti-sectional. It has rejected the parties which were superlatively parties. It has still representatives of almost all sides and phases and classes of public opinion, but it has rejected all those who were purely and conspicuously one-sided. The country seems to be making the demand that each interest, while defending itself, shall not be wholly self-absorbed—that it shall at least be able to appreciate and make some concession to the rival desires and interests with which it has to struggle. . . . Just as liberal culture implies the mingling of many intellectual habits, so liberal politics implies expressly the mingling of many political sympathies. Lord Palmerston, like the late Sir Robert Peel, is in many respects the political type of the House he leads. He has passed through many experiences of party life, and gathered in each something of courteous tolerance for them all. And now the country, weary of the animosity of one-sided sections, has proclaimed its sympathy with him by sending up a House remarkable for what we may call its apparent catholicity. Almost for the first time the county constituencies have returned not a few members in general sympathy with the representatives of the liberal boroughs. . . . This tendency in the politics of the country, only reflects a similar tendency in the social life of England. The different classes begin to regret their own deficiencies. Manchester invites the education of Art in 1857, in return for London's eagerness after industrial inventions in 1851. Even in the home of party strife—the Church itself—the most vehement parties are falling into disrepute. Everywhere the social elements are seeking to mingle; and leaders are disowned for that which would have been their chief merit a short time ago—that they show no candour in estimating the point of view of their opponents. The sin which of all others the country will not forgive is Rancour.

operation involving risks of disruption. It may not be pure coincidence that Marshal Bulganin has recovered his epistolary talent, and Mr Khrushchev his winning smile, just at the moment when the reorganisation is being launched. Russia needs peace in this transition.

Soviet consumers are promised that more efficient methods will result in a larger cake and, therefore, in bigger slices all round. But Mr Khrushchev has said nothing to promise them a larger share of the national income. On the contrary, he has repeated the now ritual condemnation of the pro-consumer policy associated with the name of Mr Malenkov.

The Russians do not live by bread alone, any more than other people. Yet, if the unrest among the minorities and the growing ferment among intellectuals are not to spread rapidly and dangerously among the mass of the population, the Soviet people must be given the feeling of a stake in the regime through rising standards of living. Their expectations have been raised. They want an easier life, more to consume, and a relief from the housing nightmare. The government is taking some steps to meet their demands. But even the present managerial revolution cannot bring about a rapid and radical change in the living conditions of the mass of the Russian people. For this purpose Mr Khrushchev would have to apply the axe to defence and to allied branches of heavy industry—a question of strategy rather than of administrative reform. The ordinary Russian hoping for an improvement of his lot must still look to the international barometer.

New Town

Our Special Correspondent finds prosperity, grumbling and social problems in one of London's eight artificial—but apparently successful—new towns

THE first sound your correspondent heard as the Green Line bus drew up in Harlow in Essex was the yell of a recalcitrant child—raucous, but symbolical, as the town itself is shortly to celebrate its tenth birthday, and one-fifth of its population is under five years old. Together with the seven other new towns around London, it was founded to absorb some of the city's extra population: for various reasons London is still growing, and—a reminder of fears that these new towns could still become merely distant suburbs—ribbon building can be seen in ominous progress along the bus route on the way to Harlow itself. But that is a problem for the future. It was on what still really is a separate community—in which people live, pleasantly and healthily, near their work—that your correspondent had come to report.

Harlow, designed eventually to house and employ 80,000 people, now contains 29,500; unlike other new towns, it started with an almost blank site, and Old Harlow (population 4,500 in 1947) is now a mere appendage to it. On rolling ground, with a few carefully preserved woods, an area some three miles long is laid out in four neighbourhoods, which are to be permanently divided by a cross of green farmland—each neighbourhood (only one is complete) is to have its own shopping centre, while there are to be larger and gayer shops in the town centre itself. On each side of the town are two industrial areas, easily reached by intersecting motor roads and separate cycle and footpaths; the London-Cambridge railway runs by one of the industrial areas; a new main road is to pass the town, and the river Stort is nearby.

The masters of this domain are the Harlow Development Corporation, as established by the 1947 New Towns Act. Their job is to supply buildings, and to balance the different forms of growth: employment, population, housing, and services. Their initial employment battle is won, with fifty prosperous employers in the town; a possible weakness is that most are in various forms of light engineering, toolmaking or research (which are naturally attracted by new and clean factories) and that the only heavy industry is a glass bottle factory. But employers seem very well satisfied: productivity is high, sickness and absenteeism very low, and several firms have expanded their premises (some more than once) since they arrived.

Many of these firms have moved in from London complete with their original labour force; this fact, and the need for certain specialised craftsmen, has relaxed the first intention that all incomers should be on a waiting list for housing in London. But the new houses (together with good working conditions) have been the main bait for Londoners. Different architects have been employed for each area, but the pattern is everywhere of terraces which, in their strivings after urbanity, occasionally achieve mere banality: detached houses are rare, and the few maisonettes unpopular. The terrace houses are dismissed by the conservative inhabitants of Old Harlow, who dislike the "foreigners" anyway, as rabbit-hutches. But they are remarkably well-kept, and the little gardens behind each are the pride of many ex-Cockney hearts. A popular verdict on them was given by the man who said that his wife, although delighted with her house when she first arrived, was now jealous because they kept building nicer ones.

The incomers, Londoners all, traditionally combine a love of the city with a love of grumbling. Discontent decreases with time, but many newcomers say that they would go back to London if they could get a house there. There are some legitimate grumbles. When they move in, the newly built houses are surrounded by all-pervading mud. Shopping has been hard, with some queuing, but it should be abated by the new shops now

opening at the town centre. The only cinema is improvised by the corporation in a factory shell, until a super-cinema is opened next year. There are only six wide-scattered pubs, which annoys habitual pub-crawlers. Bus services are rare and irregular, which comes hard on the multitudes of pregnant women; and people who have been paying five shillings a week in rent find that they must pay thirty-five shillings a week for their new houses. Newcomers arrive with no possessions, and money is tight until the hire-purchase payments on necessities are completed after eighteen months—which, again, makes minor troubles weigh more heavily, and prevents visits to relations, friends and familiar London.

Those attracted by the new housing and the opportunities are, for the most part, youngish married people, whose discontents are balanced by their children's happiness and health. There are fields and woods for them to play in, and the schools have big playing-fields, so that fathers find their interest in football widened from pools coupons to their sons' prowess on a team (though many still hanker after the Spurs). There are fine new school buildings—but also complaints about the impersonal largeness of the two secondary schools, both of which are designed for 950 places, but are already overfull. The problem arising from floods of children of primary school age at different times in different parts of the town is ingeniously faced by a temporary school, which can be moved when needed. Whatever the difficulties about educating them, the children are certainly extraordinarily healthy-looking in Harlow, as well as being extraordinarily numerous.

IN each neighbourhood are "common rooms," which are supposed to encourage the adults' social life; there are also larger "community centres," with a bar for people to meet at, and rooms available for the local clubs. Anything may go on, from caged bird clubs to amateur dramatic societies (of which there are seven in the town), or from rock 'n' roll to trade union or political meetings; there was an awkward moment at one, when an industrialist who subsidised the centre objected to its use by the local Communist Party. The community centre idea, however, has not really worked. Once newcomers have made a few friends, they tend to keep to them, and leave the community clubs alone.

Those who are active in organising local activities remain, in Harlow as elsewhere, the middle-class. The activities committee of a community association, attended by your correspondent, was an unmistakably middle-class group, inspired by an open-shirted idealist in the old garden city tradition, without whose energy things would have been much less lively. Among the aims of the new towns was that, with managerial staff and workpeople living side by side, class distinctions would break down: the original rows of "middle class" housing scattered among the cheaper ones were distinguishable only by their size and the possession of a garage. This is another idea that has not worked. Neither proletariat nor salariat seemed particularly thrilled by it, and the corporation is now selling sites for private building in one part of the town, which is rapidly becoming the "smart" area.

The corporation's main problem for the future may be to provide work in the town for the coming flood of school-leavers. They hope that some offices will move there, which would provide for the scores of potential typists, but the employment of the boys will be harder. At present the town's success is made, not only by its industrial prosperity, but also by the keenness of a few enthusiasts and the lack of alternative living space for those who are there: the second generation, ignorant of the delights and trials of city life, may long to get back to London. The small number of people between the ages of sixteen and twenty-five, as well as making employment temporarily easy to find for the young people, keeps down the delinquency and hooliganism that have accompanied other resettled populations; the bulge in this awkward age group lies ahead. But the achievement is that, in ten years, a town has grown from an architect's idea to a lively community. The corporation is now partnered by an urban district council (on which the only Conservative seems likely to lose his seat); there is a local paper published in the new town itself; the streets and terraces are growing out of the stage of being rather self-consciously Anglo-Saxon names on a map. The squalling child is growing up—and it may have troubles before it. At the moment it looks a nice, hard-working ten-year-old.

NOTES OF THE WEEK

LABOUR PARTY

Mr Bevan's Star

MR BEVAN has lost little time in signalling his return from the East. There has been something for everybody—a swipe at President Nasser to cheer the Tories, a smack at H-bomb tests to rally the May Day demonstrators and a stirring call for steel renationalisation to warm the left. This was a masterly trio of appeals to all that is most Bourbon in British political life. The growing acclaim for Mr Bevan, even in the most unlikely places, contrasts with the growing criticism of Mr Gaitskell, especially in the most likely ones. It is causing speculation whether the future of the Labour leadership is settled after all. The Tories would be less than human if they did not try to fan this doubt for all they are worth.

But it is really a very little doubt. The left, of course, would always prefer Mr Bevan, and some in the centre may have clambered back on the fence. But Mr Gaitskell is still accepted unreservedly by a majority of Labour MPs. Moreover, all the talk about the future of the Labour leadership presupposes that Mr Bevan still wants it. It would be odd if he did not, but that does not mean he will make another direct challenge to Mr Gaitskell. As he cannot hope to unseat Mr Gaitskell on the present balance of power, his obvious (and only hopeful) tactic is to bide his time. One suspects that his wiser self is issuing warnings to Mr Bevan about this all the time; the doubt is whether he is a very good self-listener.

Two possible destinies may now lie before this remarkable man. First, his well-known temperament may get the better of his discretion, and he may still strike out openly against Mr Gaitskell (possibly on some quite irrelevant issue) during this Parliament; if that happens, it is more likely to be Mr Bevan than Mr Gaitskell who is broken in the subsequent fight. Secondly, he may successfully restrain the imp within him until Labour returns to power, gathering good opinions all the while; if he does, he can look forward to becoming a Foreign Secretary in Ernest Bevin's mould—a man who not only dominates Britain's diplomacy but also has a big say in domestic policy. And then, but only then, it is not entirely inconceivable that he might suddenly and surprisingly reveal Mr Bevin's other great characteristic—fanatical loyalty to his party leader and Prime Minister.

FINANCE BILL

Marginal Accommodation?

GOVERNMENT speakers once again steered the debate on the second reading of the Finance Bill away from any detailed discussion of the broad economic prospect ahead; but although Mr Thorneycroft warned the House that he considers himself committed to "keep within the compass of about £100 million" of tax reliefs, he seemed willing to be marginally accommodating. He is going to re-examine whether the bar against the "dead horse" escape route from death duties contains an undesirable "element of retrospection." It does. He said that one other plea from the Opposition—that old age pensioners should be exempt from the excise duty on television licences—"can be discussed in committee, but there are real difficulties." There certainly are. A new debate on old age pensions is about to begin; Labour's "comprehensive" scheme for national superannuation is expected to be published on Sunday week, and it looks as if the Conservatives may introduce a superannuation bill of their own early next session. But the worst possible way of aiding pensioners would be to give better-off groups of them special exemptions from indirect taxes, of the sort that the smokers (or alleged smokers) among them get already. Half the families in the country might suddenly decide that their television sets really belong to grandma. And she already smokes like a chimney.

Apart from this pressure about pensions, the two front-bench contributions from Labour on Tuesday were unusually constructive. Mr Gordon-Walker indicated that Labour is increasingly apprehensive that the overseas trade corporations might lead to "over-stimulation of overseas investment" at the expense of home investment; many other people harbour that fear also. And Mr Houghton urged the Chancellor to introduce a tax management bill, which would incorporate some of the administrative reforms that were suggested by the royal commission on taxation but that are squeezed out of each successive Finance Bill through sheer lack of room. This is a suggestion that deserves wholehearted support; the Chancellor promised to consider it.

DISARMAMENT

Mr Stassen to Move

MR ZORIN'S dismissal of the British proposals on bomb tests seems one of Moscow's less happy moves in the chess game at Lancaster House. Admittedly, Russia had rejected two of the three points in the British memorandum before they were made—advance notification of tests, and total cessation of tests at the point when a general disarmament programme had made it possible to prevent the manufacture of any more nuclear weapons. Mr Zorin showed no enthusiasm on Wednesday for the third point, which was a suggestion for an expert inquiry into means of supervising an agreed limitation of tests.

Presumably the Soviet government will have calculated that its resistance to all these proposals will not prevent it from continuing to pose as the champion of all anxious peoples. It will rely on the simple appeal of its offer to join in a cessation of tests and in a general disarmament programme. If world opinion misses the vital point—that such offers are meaningless without adequate arrangements for supervision, which Russia still rejects—then this Soviet confidence will be justified.

While Christmas Island nears midsummer and black-veiled ladies ambush members of Parliament, the Lancaster House talks look like stretching out for a further period of several weeks. They have already lasted longer than was originally forecast. Mr Stassen, who this week tabled separate proposals for the control of international traffic in arms, will doubtless soon have a new American offer of zones of reciprocal inspection to make, in response to Mr Zorin's move last week—which, if it meant nothing more, certainly amounted to an invitation to further bargaining. The idea that the formal proceedings at these talks should remain confidential has now been tacitly abandoned by all parties. There would seem to be a strong case for devoting less of the delegates' time to preparing, delivering and listening to formal speeches, and more to informal sounding-out conversations outside the conference room, at least until the sounding-out has caught up with the current spate of proposals and counter-proposals.

ITALY

Signor Segni Falls

SIGNOR SEGNI'S government, having survived so many hazards for 22 months, has suddenly fallen. The fatal blow was delivered by Signor Saragat, the vice-premier and leader of the Social Democrats, who decided to take his party out of the coalition and thereby deprived the government of its exiguous majority in the Italian Chamber. This was a complete change of front. Less than three weeks ago, Signor Saragat had opposed a proposal by the Social Democrat secretary-general, Signor Matteotti, who is a strong protagonist of union with the Nenni Socialists, that the party should go into opposition. He was supported by a majority of the party executive, and Signor Matteotti resigned.

Nothing that had happened in the meantime explains Signor Saragat's change of mind. On the contrary, the pronouncements of the two Socialist parties just before Mr Gaitskell's Easter visit, and the discussions during his visit, seemed to confirm Signor Saragat's expressed belief that Socialist unity was impossible until after the next general elections. Nor has Signor Saragat himself provided a convincing explanation. Almost certainly he was propelled into sudden action by pressures within his own party; how and why can only be guessed. He may have come to the conclusion that the coalition government would shortly be finished off by its divisions over the land tenure bill, over Signor Martino's foreign policy and so on. And with the rank and file of the Social Democrats apparently increasingly in favour of socialist unity, he may have suddenly reckoned that his standing at next month's party congress would be improved if he administered the *coup de grâce* himself.

The chances of a stable government in Italy are not bright. The possibilities include another centre coalition of three or four parties, a minority Christian Democrat government, or—worst solution of all—a Christian Democrat alliance with the extreme Right. President Gronchi's search for a new cabinet will not be made any easier by the fact that every Italian politician will now calculate each move in the light of the next general elections; these must be held by June, 1958, and might possibly be brought forward to this autumn.

CREDIT POLICY

Lord Radcliffe's Committee

THE names were announced last weekend of the eight distinguished public figures who are to serve with Lord Radcliffe on the committee to inquire into the monetary and credit system. One's first impression is that they all have the same face. Given the conventions about picking a politically "balanced" committee, Mr Thorneycroft could hardly have chosen eight members with a greater chance of reaching broad agreement and a smaller danger of exploding into too many minority reports.

All eight—two bank directors, two other business men, two "moderate" trade unionists, and two professors—have seen previous public service in some sphere of economic policy; the dominant atmosphere in the committee room seems likely to be that which usually exudes from enlightened ex-civil servants. As in the Macmillan committee, one of the two academics is an expert on banking (Professor Sayers plays the 1931 role of Professor Gregory), while the other is a teacher of general economics (Professor Cairncross is presumably intended to play the heavy role of Lord Keynes). It is tempting to assign to other members 1931 equivalents (Sir Oliver Franks equals Mr McKenna?), but as the Radcliffe committee is to have five fewer members than the Macmillan committee had, the analogy does not quite work. The Labour representation is rather smaller than might be expected (the orthodox labour representation is confined to the two trade unionists, the usual Mr Woodcock and the miners' Mr Jones); but, against this, there are no obviously very Conservative members—the business men's element can reasonably be called extremely middle of the road. One suspects that a majority of this committee may be more inclined than is *The Economist* to assume that, if you impose a physical rather than a monetary control, the physical control is likely to work. All in all, however, the committee will be expertly fitted to assess the evidence put before it, without carrying the burden of too many predetermined and publicly stated individual views. It is broadly the right sort of committee to have.

WAGES

Plucking at the Strings

THE Confederation of Shipbuilding and Engineering Unions decided on Thursday to enter negotiations with the employers "without their hands being tied in any way." This was a direct—and left-wing inspired—slap in the face for the leaders of the Amalgamated Engineering Union, who had wanted the confederation to express its readiness to discuss certain "conditions" in return for a bigger wage increase. What should the employers do now? If the unions are unwilling to discuss any strings, then the employers should certainly refuse to offer more than the minimum 5 per cent recommended by the courts of inquiry; the only extra concessions the employers should consider are if the confederation's "untied" negotiators do in fact find themselves moving along the road to which the AEU wanted them to be committed.

Between an increase of 8s. 6d. without strings and 11s. on certain conditions, the AEU wisely favoured the 11s. But it wanted the strings relaxed. The most important of them

concerns the so-called twelve months' standstill on the presentation of new claims. If there were no standstill at all, the engineers could presumably be expected to get their usual inflationary annual rise some time in the usual first four months of 1958; if the strings were tightly drawn, their next claim could not be presented until May, 1958, and settlement of it presumably would not come before the late autumn of that year. It would not be surprising if there is bargaining aimed at the possibility of a 1958 wage claim being settled somewhere between these two dates. Perhaps the best attitude for the employers to take would be to link bargaining about this with bargaining about another "safeguard" the engineers may well ask for: namely a promise of a special wage review if the cost of living rises sharply in the meanwhile. If a figure—of, say, 5 per cent in the cost of living index—could be agreed upon as a definition of "sharp," the employers might be wise to be more accommodating about this than about other proposals for whittling away the period of standstill. Although estimates are very hazardous, and despite next winter's prospective rise in rents, the year ahead still looks more like being a year of three or four per cent, than of five or six per cent, price inflation.

The other strings that the AEU thinks should be resisted would bind the affiliated executives to nothing more exacting than the mildest of undertakings to do what they could to see that men observed the freely negotiated agreements and did not come to work late or slope off early. The employers, even if they feel a little cynical about the effectiveness of union efforts to keep the rank and file in order, should stand firm by the essentials of these conditions. But some minor changes in drafting might be worthwhile.

MINISTRY OF LABOUR

Temporary Help; Permanent Review

Much is going on at the Ministry of Labour, even though it has not yet been called back into the engineering dispute. This week Mr Macleod told the House of Commons that from June 11th workers who have been unemployed for at least eight weeks, who seem unlikely in the near future to find a job, and who maintain dependants at home, will be able to draw: (*a*) a free fare to a place of work away from their home towns; (*b*) a lodging allowance of 35s. a week for a maximum of twelve months; and (*c*) help in returning home to try again to get a job there. (A resettlement scheme was already in existence for certain areas, but only 34 workers were drawing lodging allowances under it.) The new scheme looks like a sensible aid to mobility; it may remind some workers threatened with redundancy that there is a profitable alternative (from both the individual and the national point of view) to the well-known custom of standing about all day holding meetings to demand a three-day week.

But the main matter now on Mr Macleod's plate is, of course, the proposal of the courts of inquiry that an impartial body should be set up to consider wages in the context of inflation. On Tuesday he answered the question that everyone has been asking: the impartial body, if any, should in his view be permanent, and not merely required to produce a "once-for-all" review. A once-for-all review might be more inclined to probe into awkward questions. Discussions even on the project for a permanent body have, however, reached only the departmental stage; up to Wednesday the leaders of the Trades Union Congress had not been approached. Will they be any more favourable to the idea than they were in 1954, when they turned it down flat? At that time they could not see how an inquiry would differ from the annual economic survey already published; and the argument that there would be no suspicion of Government propaganda in it left them unconvinced. They might not oppose a permanent body, on which they were well represented, which tried to put out agreed statements about the trend of profits; but that does not mean that they think a bunch of university gentlemen can teach them anything about wages. A few union leaders do consider that some sort of order should be brought into wage claims. But they believe that this is a task for the TUC, not for an outside body; and there is no sign that the TUC as a whole is willing to undertake it. At the moment the brain-child of the courts of inquiry has an even chance of being stillborn.

MOROCCO

Swoop on a Great Inheritance

A MYSTERY pervades Marrakech. It began on May 1st, a day on which the whole country was rejoicing, since the feast that marks the end of Ramadan coincided with the May Day celebrations inspired by the new trade unions. Under cover of the clamour, five sons of the late Glaoui, the wealthy pasha of Marrakech, were kidnapped there by men wearing the insignia of the so-called "army of Liberation." Six other well-to-do burgesses who had either money or blood ties with the Glaoui family also disappeared from circulation. Simultaneously, the family palace, which is a walled citadel within the alleys of Marrakech, was occupied by the same force. It was said to be searching for "papers." When the deputy governor of the province (whose superior was at Rabat doing homage to the Sultan) sent regular security officers to the palace, his men were repulsed with gunfire.

More than twenty-four hours later the government issued an unexpected statement which said that the missing men had been taken into custody because they had been "mobilising substantial funds abroad" for operations against the state. Before this news broke, trade union leaders in Rabat had been talking of the need for soaking the unduly rich, and both they and their counterparts in Marrakech seem satisfied with the general trend of the affair. But no one knows where the missing men are.

Conjecture is rife about the motives behind the action. It will be remembered that the Glaoui, once the Sultan's biggest vassal and strongest critic, was one of the instruments of his exile in 1953, but did abject homage at the Restoration. The Glaoui's estate is immense; apart from his feudal holdings as a Berber chieftain, he made a modern fortune by canny investment in French enterprises, many of them in Morocco. The division of his estates between his heirs is in progress. Was the swoop made for loot by rebels who have more local control than the Sultan cares to admit? Or was it a demonstration by the left-wing leader of the Liberation army to win left-wing sympathisers for dissidence in the towns? In either of these cases, the government statement, with its implied admission that its own security forces were not the right tool for the job, would seem bound to weaken the Sultan's hand in the long run. Or did he use the Liberation army in order to reduce the striking power of a clique belonging to a bygone era? If so, why not have used his police or, at a pinch, his own army? To explain these mysteries, a commission of enquiry has been promised.

FRANCE

M. Mendès-France as Hamlet

The Radical ministers are not leaving the cabinet; M. Mollet has avoided yet another crisis. The Radical Party congress ended last Saturday in anti-climax. After the terrible indictment of the government's handling of Algeria by M. Mendès-France, who was enthusiastically applauded, the final resolution contented itself with yet another warning that the Radical ministers will have to withdraw if M. Mollet's government does not mend its ways. At the end of it all, the impression was left that M. Mendès-France, who had made his reputation as a man of action, was reduced to the posture of a Prince of Denmark, unable to choose between reluctance to precipitate a governmental crisis and the desire to change France's policy in Algeria.

Many reasons can be found for M. Mendès-France's acceptance of a compromise resolution: reluctance to break away from the Socialists; a fear of splitting his party still further; perhaps even a fear of defeat within the party if he had tried his strength too far. Whatever the reasons—and even though the latest ultimatum is couched in stronger terms than any before—the man who gave himself only a month to settle the Indo-Chinese question when he was prime minister has now given a warning without a time-limit. The effect on the Radical party—or, at least, on its younger supporters who joined it not because of its gift for always being in the government or its flair for compromise formulæ, but because they associated the name of M. Mendès-France with new, dynamic methods—may be demoralising.

M. Mendès-France, aware of these feelings, will no doubt try to prevent the latest Radical ultimatum from fizzling out as an empty threat. The fall of the government might increase his freedom of action, and it cannot be ruled out. When parliament reassembles next week, M. Ramadier, the minister of finance, will have to ask the deputies not only to endorse budgetary cuts, affecting chiefly investment, but also to approve some of the new taxes to raise £150 million. The conservatives who so firmly insist on great military efforts in Algeria will be less enthusiastic about paying the bill. Despite its reprieve from the Radicals, it is still uncertain that M. Mollet's government will live till the end of June, when the ratification of the European treaties should come before parliament.

ATOMIC ENERGY

A European Target

Euratom has been given an immediate practical meaning by the report of its "three wise men," setting a target for nuclear power development in the six European countries that have signed the Euratom treaty. The argument is in part familiar: the six countries already import 23 per cent of their fuel needs, nearly twice as large a proportion as Britain. Costs of nuclear power already compare with conventional costs and will steadily fall further. The time has therefore come for Europe, too, to plunge into large-scale commercial production of nuclear power. If plans are laid at once, the six countries might set up some 15 million kilowatts of capacity in ten years (two and a half times the British plan) and might stabilise their fuel imports in about 1963.

The target (it is not a plan) will not be easy to achieve. The experts admit that it takes four years to build an atomic power station and that orders cannot be placed until the end of 1958. Investment will cost some $4,000 million more than equivalent investment in conventional plant would cost. A great drive from the Euratom agency will be needed to fulfil it.

Even then the wise men's hopes depend on technical help from Britain and the United States, and in the first years the six countries will have to import reactors, or parts of them, from both. These imports may cost some $11,000 million in the ten years, an inviting prospect for British industry, at present first in the field. But imports will decline as the Europeans gain experience and the strength of the commercial and technical links which then remain will depend a great deal on the efforts which the two tutor countries make in the early years to forge lasting ties with Euratom. Here the report is disquieting. Britain, like the United States, has been open with its secrets and generous with offers of training. But while the United States showed great interest in learning from Euratom's practical experience in return and, it seems, in joint projects to improve and adapt reactors, there is no mention of any parallel British interest. This is a pity. For if the six countries follow the experts' suggestions they will acquire a varied commercial experience—with enriched uranium reactors, for instance—which might be of great value to Britain later on.

GHANA

Christiansborg Castle

Our special correspondent cables from Accra:

A very dangerous chain of events is threatened—and threatened quite absurdly—by Dr Nkrumah's decision that he will move into the governor's palace at Christiansborg Castle as soon as Sir Charles Arden Clarke leaves it, so that the new governor-general (whoever he is to be) will have to make do with some less imposing building in the town. The Colonial Office and the Commonwealth Relations Office must shoulder some of the blame. Had a successor to Sir Charles Arden Clarke been lined up and accepted before independence, Dr Nkrumah would not have been presented with the immediate vacant possession of so desirable a residence. The delay gave time for the Prime Minister or his advisers to conceive the idea that independence should be brought home to the Ghanian people by such a spectacular occupation of the former seat of British colonial power; in the exhilaration of the moment to think was to act.

Now, it is feared, a barrier may have been put in the way of any distinguished British figure accepting an office where his main duty—upholding the dignities of the head of state as Her Majesty's representative—would be made initially rather humiliating; in fact, one possible incumbent is believed to have withdrawn his name on hearing the news, a couple of days after provisionally accepting the commission. It will suit those of Dr

Nkrumah's colleagues who are republican-minded equally well if the governor-generalship remains in abeyance and the powers are exercised by the Chief Justice, or if some sort of puppet governor-general is dredged up from somewhere who will visibly play a poor second fiddle to the African Prime Minister. Their objective is the elimination of all the remaining symbols of former British power.

If this were the universal sentiment in Ghana, there would be every reason to encourage Ghanians to take the final steps to become a republic like India. But it is not the universal sentiment. Dr Nkrumah's political opponents set great store by the preservation of the constitution, which embodies safeguards for minorities and provides important brakes on the growth of a one-party, absolutist type of state; it had been thought that some sort of British father-figure as governor-general in the early years of independence would be a tactful force for constitution-preserving. Under an African governor-general—which now seems the most likely eventuality—there is a fear that some of Mr Nkrumah's colleagues will not be able to restrain the impulse to make a forced march towards what would virtually be party dictatorship. Once again, let it be emphasised, as Ghana is now independent, none of this is Britain's direct concern; but it will be a tragedy for all Africa if history has to record that a deciding factor which sent the Ghanian experiment down that fatal road was an extreme fussiness—in May, 1957—about who should live where.

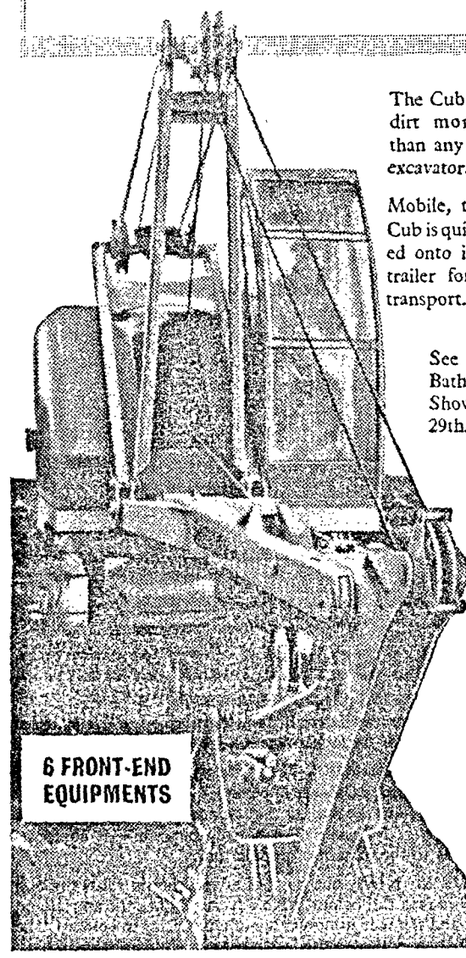
LOCAL GOVERNMENT

Awaiting a Labour Swing

With only a handful of results to come in the Scottish municipal elections, Labour had marked up 22 net gains, which is considerably better than it did in Scotland last year. With results from some 900 seats in English and Welsh district councils to hand, Labour seemed to have marked up 24 net gains, which is probably rather better than it had done by an equivalent stage last year. An interesting feature of the Scottish elections is that Labour is reported to have made most of its gains in the smaller towns, where there have been polls of about 50 per cent; in the big cities, where polls have generally been much lower, Labour has merely maintained its position.

As *The Economist* goes to press, voting is in progress in the main round of local elections this year—in the English and Welsh provincial boroughs. It is perhaps worth repeating the rough standard of measurement suggested here last week. If political opinion stands now approximately where it stood a year ago (which means in a state where most analysts would be forecasting a Labour majority of rather under 100 in the Commons in any immediate general election), Labour could be expected to secure between 180 and 200 net gains of seats in these provincial borough elections; if Labour gains of seats in these provincial borough elections have gone higher, to between 250 and 300, then Labour will have got back to the highwater mark in local election popularity which it achieved in 1952. But the Tories would not need be too disheartened even then; their standing in the country recovered from that 1952 debacle very quickly indeed.

To cite these abstract psephological figures is in no way to state a prophecy. But before these elections some Labour spokesmen have wisely been undercalling the gains they might reasonably expect, while some Tories have unwisely been whistling to keep their courage up. There has also been a muddle in some of the newspapers, arising from the fact that Labour is defending the seats it won in 1954 (when it did not win so many marginal seats as some comment has suggested, but merely took back some "normal" Labour seats which it had lost in the abnormal Tory landslide of 1951). When this year's results are announced—and they will be in the newspaper headlines at just about the time when this issue of *The Economist* is reaching readers' hands—there could therefore be a tendency to regard them as rather worse for the Tories than in fact they are.



Delegating Power

The Government has taken another timid bite at reforming the structure of local councils for which people are now voting. The proposals of its second white paper* (the first dealt with areas and status, and the third—which may appear next month—will deal with finance) concern the delegation of functions by the 61 county councils in England and Wales (excluding London) to the 1,300 county districts. These minor local authorities, who have lost many of the direct powers they once had, have been insisting upon an extension of delegation schemes as the price of their support for other reorganisation measures. Broadly speaking, only 55 of them—non-county boroughs and urban districts of more than 60,000 population—will get much comfort from the white paper. Most of these 55 medium-sized towns are already responsible (as "excepted districts") for education and town planning; they will now operate these services "automatically"—and not just at the counties' discretion—and will be responsible for health and welfare as well. Up to a point, this is a perfectly sensible way of meeting the frustrated ambitions of towns which (under the first white paper's proposals) cannot now expect to become county boroughs. Yet the divided responsibilities it entails (resulting from the fact that finance—and hence ultimate control—will continue to emanate from the county council) make it a very second-best solution.

Although the Minister would have discretion to add to the list of these lucky 55, the other county districts are at present offered only a few crumbs. The white paper suggests that there might be wider delegation of classified roads (subject, however, to stricter county control), of town and country planning (which, given the outlook of most small councils, will be a very mixed blessing) and of certain regulative services; and it thinks that county councils' delegation schemes should be subject to the Minister's arbitration in cases of dispute. But the Government is also proposing one major change in the opposite direction of centralisation: the abolition of the divisional executives in education. This is a sensible change which the Minister should not let himself be talked out of; these experiments in joint county and local administration have, in general, been a failure. Many at present moribund local authorities will be disappointed at these proposals, but Mr Brooke is undoubtedly right to resist the pressure for extensive delegation to small, ill-equipped local authorities. The really disappointing thing about this white paper is that it appears by implication to be rejecting the only sensible alternative: the wholesale amalgamation of smaller units and the integration of urban and rural authorities.

PRIESTMAN BROTHERS LIMITED · HOLDERNESS ENGINEERING WORKS · HULL

Maia, the Roman goddess of growing, gave us our name for the present month. Down-to-earth as ever, the Saxons called it 'Thrimilce', for no better reason than that cows could now be milked three times a day.

Behind many a trim facade, crisis develops. Impassioned voices demand to know the whereabouts of the blanco. The search for linseed oil brings chaos in its wake . . . cricket is here again. Let the darling buds of May scent the air as they will. Let blackbirds sing upon the thorn, let ribbons deck the maypole gay: these things may be Summer's heralds but, by gad, sir—they are not cricket. And so, of small account. The rest of us can take heart, however. The Midland Bank likes small accounts; and, because it gives to them the same courteous attention that it gives to all calls upon its services, the Bank is not unnaturally popular among young people in all walks of life.

MIDLAND BANK LIMITED

Yes, there's a story for you in *woman's own*

It's a SUCCESS story for everyone selling to women

WOMAN'S OWN, one of the most significant factors in the development of the feminine mass market during the post-war period, today influences the incalculable purchasing power of nearly 7,000,000 women readers—more than one woman in every three in Britain. Even this is not the limit. The upward curve of *Woman's Own* audited net sale figures, unaffected by changing economic conditions and social habits, has still to reach its peak. By July/Dec. 1956 it had climbed to an average weekly net sale of 2,530,014 copies—compared with 804,011 copies weekly in 1947. Advertising investment has increased on a similar scale. The 350 advertisement pages of ten years ago had by last year become 1,612—with more than 500 in colour.

The story for you in *Woman's Own* is fact, not fiction. It is the story of one of the most economic—and successful—means of communication with Britain's most profitable consumer market: women who buy for themselves, their homes, their families and their friends.

WELL OVER 5 MILLION HOUSEWIVES. 77% of the women in the *Woman's Own* story are housewives. This means that each issue is read by 5,355,000 of the women who every week budget and buy for the needs of homes all over Britain. *Each issue is a live influence in every household for far longer than a week.*

NEARLY 7 MILLION WOMEN. There's no waste with *Woman's Own*. Advertisers in *Woman's Own* are appealing to a readership of nearly 7,000,000 women—to the market they want and to no other. And the distribution of *Woman's Own* is truly national—it conforms almost exactly to the pattern of population.

MORE COLOUR. Nearly one page of advertising in every three in *Woman's Own* is in full colour. No advertising has the appeal and the impact and the recognition value of advertising in colour. The *Woman's Own* story proves this. Almost everything a woman buys is seen—and sold—to better advantage through the colour pages of *Woman's Own*.

MORE VALUE. To be a part of the *Womans' Own* success story costs advertisers *less*. Through *Woman's Own* advertisement pages—full-colour or monotone—the advertiser reaches his most valuable market for the lowest cost per thousand women readers of all mass-circulation full-colourgravure weeklies.

Woman's Own

Every year more buyers and more sellers are coming into the *Woman's Own* success story!

2,530,014 NET SALE JULY/DEC. 1956

READERSHIP 6,958,000 WOMEN. *N.B. The readership figures quoted on this page are taken from the 1956 National Readership Survey conducted by the Institute of Practitioners in Advertising. Net sale figures, where quoted, are audited figures.*

A copy of the important new brochure concerning the vital women's mass market and how it may be reached through Woman's Own *can be obtained from:*

CHINA

Mao's "Khrushchev Speech"

SELECT groups of Chinese communists have been digesting a speech which Mao Tse-tung made on March 1st, but which has remained unpublished. Less privileged citizens will presumably have to wait to get the full text from foreign broadcasts, as happened in the case of Mr Khrushchev's similar "secret" speech last year. But since the middle of April the Chinese public has been deafened by echoes of what was evidently Mr Mao's main point: that the communist leaders are "in danger politically" if they do not stop "evoking the just dissatisfaction of the masses."

Press and radio have launched a campaign, with Mr Mao's personal *chop* on it, against the "roughshod intervention" of government officials and party bosses, their "arrogance and indulgence in the bad habits of the old society," and the "pushing beyond reason" of their claims to privileges and high pay. They must abandon the attitude of hauteur expressed in the Confucian phrase "Respect and keep your distance from gods and ghosts." They must stop obstructing the policy of more free speech which Peking ordered a full year ago. The delicious slogan for this policy was "*Let all flowers bloom together; let diverse schools of thought contend*" (though it was made clear, for the benefit of the less perceptive, that the contention must always end with a victory for the party line). Not enough flowers have bloomed this spring, according to Peng Chen, who runs the party organisation in Peking city. "At meetings, the masses must be encouraged to express their views. Speakers will not be punished."

The "current contradictions between the people and their rulers" are, to quote the Peking press, "a new and important phenomenon." Their importance is clear enough, for Mr Mao rarely makes a personal intervention nowadays. The word "new" is more intriguing. Ever since the *cheng feng* ("correct the wind") drive of 1942, which the party propagandists are now invoking, the Chinese communists have undergone periodic disciplinary campaigns. This one is enlivened by Mr Mao's ukase that officials must all do a regular stint of "actual work" alongside peasants and mechanics; it is decorated by injunctions that erring comrades should be "rectified" by methods "gentle as a breeze and mild as rain," unless their offences are serious; "comradely heart to heart talks" are recommended instead of the more customary, and much more terrifying, "large struggle meetings." Otherwise the slogans, with their warnings against "commandism" and "bureaucracy," have a familiar sound. What then is "new," and why the mystery?

Austerity and Absenteeism

THE new *cheng feng* campaign needs to be looked at against the background of China's current economic difficulties. The instances cited in the communist press then prove very revealing. One describes a factory where absenteeism recently rose to 70 per cent of the labour force because an allegedly beneficial "wage reform" was mismanaged by the bosses, and the workers were "provoked into making unreasonable demands." Another refers to the habit of accusing any peasant who ventures to speak frankly of "sharing the views of landlords and rich peasants." Mr Peng warns party officials that they must not get frightened and resort to violent repression when deputations approach them to voice complaints, or when "the masses," provoked by "utter lack of democracy . . . get together and create disturbances." They must stop treating ordinary people as the enemy, or the people will turn into the party's enemies. They must, moreover, explain the "contradiction between production and demand," and "urge the people to stick to austerity."

In brief, "the masses feel deceived" because, after being fed on so much propaganda about economic triumphs, they have lately been ordered once more to tighten their belts. This disenchantment, and the "absolutely wrong" methods used to deal with it by too many cadres ("enforcement, imprisonment, extermination") are further imperilling Peking's already rickety economic planning. The Chinese press this week has been full of stories of workers retaliating by absenteeism, go-slow methods, and partial strikes, against managers and party bosses who will not listen to their complaints. Uglier things than that have evidently happened; and Mr Mao's speech, like Mr Khrushchev's, has presumably remained unpublished because it recorded them too starkly.

CZECHOSLOVAKIA

Sitting Tight in Bratislava

SOMETHING of the strains and stresses under the sluggish surface of Czechoslovak life were divulged during last week's congress of the Slovak Communist party in Bratislava. Both Mr Bacilek, the first secretary of the Slovak party, and Mr Novotny, the first secretary of the Czechoslovak party (who headed a strong delegation from Prague), were at pains to demolish the "wrong views" and "even opinions of an anti-party character" that were being put forward both inside and outside the party. Mr Bacilek was particularly concerned to show writers and journalists where their duty lies; he referred to "incorrect articles . . . full of liberalistic tendencies" and even to "furious attacks" made on the Communist party. Mr Novotny inveighed bitterly against those who try to undermine the regime and lead the people astray with "democratic phrases and revisionist demagogic proposals."

The Communist leaders did not, in fact, show the slightest sign of giving any ground to the reformers and the malcontents. Mr Novotny said cryptically that such people could not be left at large. The national conference of the Czechoslovak party nearly a year ago, which showed remarkably little sign of being influenced by the 20th party congress of the Soviet Union, did at least listen to proposals for breathing new life into the moribund Czech parliament. Last week's Slovak congress—held six months after the crises in Poland and Hungary—merely listened to lectures on the wrong-headedness of confusing "socialist" with "bourgeois" democracy. And since the party leaders refuse to admit that any major policy mistakes were made in the past, they naturally refuse to contemplate any important changes in the future. "Doubtful experiments and doubtful examples which are alien to our life" (no doubt like the Jugoslav workers' councils) are eschewed; and the importance of pushing ahead (by "all means which persuasion may require") with collectivising agriculture is reaffirmed. The Czechoslovak party bosses seem content to sit tight and be tough.

TANGANYIKA

Experiment Misfired

THE most important landmark in Tanganyika's slow journey to self-government was a pilot scheme for holding elections in three or four constituencies next March. These elections have now been postponed. In a debate in the Legislative Council last week many of the unofficial members, who are nominated by the Governor from all three races, objected to the scheme's limitations and held out for elections throughout the territory; but the Governor, Sir Edward Twining, is not prepared to agree. The life of the present council expires in March, and unless it is extended, the unofficial members will have to be nominated again.

Sir Edward Twining, whose term of office ends in about a year, had hoped to introduce two constitutional innovations before he left. One of these has already been brought into effect. Official members in charge of departments have been renamed ministers, and six posts of assistant minister have been created in order to give unofficial members training in responsibility. The second step was to have been the introduction of elections on a multi-racial basis. In each constituency chosen for the experiment there would be European, Asian and African candidates, and no ballot would be valid unless it contained a vote for a candidate of each race. The franchise would be qualitative (with criteria of income, property or position) but, even so, in eight out of the nine possible constituences the African electorate would outnumber the European and Asian together.

A too tentative advance has proved to be no advance at all. At one time the United Tanganyika party, to which nearly all the unofficial members belong, was in favour of the plan. In recent weeks, however, members have become increasingly worried by the activity of the Tanganyika African National Union (the African nationalist party) and in order to hold their own in the country, they may have felt it unwise to identify themselves with the slow tempo of the Governor's proposals.

EUROPE

A Gesture to Poland

THE United Nations Economic Commission for Europe began its twelfth session at Geneva with an overt recognition of Poland's new status among the countries of eastern Europe. It had become customary for the ECE to elect a chairman chosen from western Europe or Scandinavia and a vice-chairman from eastern Europe. But this time Professor Oskar Lange, of Poland, was elected chairman on a French proposal. An economist of international repute and a former professor at Chicago and Columbia, Mr Lange renounced his American citizenship and returned to Poland at the end of the war. During the Stalinist period he fell into disfavour and disappeared from the Polish scene; he emerged again after Stalin's death. He is a very different man from the last vice-chairman, Mr Katz-Suchy, who is also a Pole. Mr Katz-Suchy was one of the five Poles with most influence in the conduct of Polish foreign policy in the Stalinist period; at international meetings he made a name for intransigence. For some time his influence had evidently been on the wane.

The gesture of offering this year's chairmanship to Poland was met by the Poles with a gesture of their own; they withdrew Mr Katz-Suchy from their delegation. The ECE has thus for a second time become a platform for Poland's aspiration to independence in economic policy. Some weeks ago the Polish delegation used a meeting of the ECE coal committee to appeal for western investment in the Polish coal industry; Poland offered in return to help with increased coal deliveries to the West. Jugoslavia has expressed the hope that its own successful co-operation with the capitalist countries would encourage similar co-operation with Poland. The Russians have shown less enthusiasm for Poland's new status. Unable to oppose the election of a Polish chairman, they yet accepted it with an ill grace that was generally noted.

CENTRAL AMERICA

Oil and Frontiers

THE Organisation of American States has held on to its reputation for damping down flare-ups in Central America by checking the clash between Nicaragua and Honduras. A commission of five men led by Señor Arias of Panama has been entrusted by the organisation with the task of determining which of the two republics was the aggressor, and of producing a settlement by the end of this week. If the mission succeeds, it should give a time-and-method lesson to the larger international organisation in New York.

The frontier dispute between Nicaragua and Honduras has been simmering ever since the two states became independent more than a hundred years ago. In 1906 the king of Spain was asked to arbitrate, but Nicaragua later rejected the ruling in favour of Honduras. From time to time there were squabbles over timber rights, but neither country put great store by the triangle of swampy, mosquito-ridden jungle, although politicians often used the claim when it was expedient to whip up national feeling.

As with some other Latin American border disputes, the possibility of finding oil reserves in the area has given edge to the quarrel. Both Nicaragua and Honduras are believed to be negotiating with American oil companies over concessions, but Honduras has taken the greater initiative by creating a new state, Gracios a Dios, covering the disputed area. Interest in Central American oil is building up other potentially explosive situations. Further north in the Peten district of Guatemala, a favourable change in the Guatemalan oil law two years ago released a flood of applications for concessions. Several oil companies are surveying in the area, and though oil has not yet (as was wrongly stated in *The Economist* of April 6th, page 54) been found there, the hope of oil has given practical significance to the Guatemalan claim to British Honduras, which would offer a quicker route from Peten to the sea.

SCHOOLS

Money for Labs

IN 1955 a number of companies engaged in chemical, electrical and mechanical engineering got together to raise a fund for helping schools to enlarge their facilities for science teaching. They confined their generosity to independent schools and those receiving a "direct grant" from the Exchequer, which meant that they were promptly accused of favouring only better-off children. But these are the schools, the companies thought, that find it hardest to get the money for capital expenditure; "maintained" schools are provided for by the Government and local councils between them.

The second report on the use of this "Industrial Fund for the Advancement of Scientific Education in Schools" was published this week. Over £3 million was subscribed by 141 firms; grants for building were made to 187 schools and grants for apparatus to 308. The result is that the number of science places in the schools concerned will be increased by half and the number of science specialists raised by perhaps 5,500.

This is particularly satisfactory because in many independent schools—especially those away from industrial areas—the prejudice against a scientific education has been dying more slowly than in the state schools. It remains for science masters to conquer the prejudice that many of them still have against encouraging their pupils to be technologists rather than pure scientists. The achievement of the fund also shows how fruitful industry's interest and co-operation in education can be. There is growing scope for its help in sending young men and women to the universities and technical colleges.

BANK STAFFS

Bank Clerks Militant?

ON Monday, some 2,500 members of the National Union of Bank Employees gathered in the Central Hall, Westminster, before going to the House of Commons to lobby their MPs; on Thursday the executive of the union met members of all parties, led by Mr Robens and Mr Ted Leather. The object of these meetings is to get their union recognised by the employers: it has nearly 50,000 members and has been going for forty years, but is only recognised by two of the clearing banks, by the Co-operative and Trustee Savings Banks, and by some overseas bankers in the City. The other banks prefer to negotiate with their own staff associations, whose officers are appointed and paid by the employers themselves.

The union claims that these associations have no power to look after members. Their great talking point is the history of the Midland Bank staff association, which was voted out of existence by its own members a few years ago after a disappointing end-year bonus, but has been reconstituted, and is again recognised by the bank as representative of the employees, although it has a smaller membership among them than the union, which is ignored. The Minister of Labour could not intervene in this dispute, since it involved an unrecognised body and was therefore not official. The staff associations, however, appear as satisfied with their position as the employers; and this is the weakness of the union's position. As well as the bank men who belong to the staff associations (and there are a majority of these in most of the clearing banks), there are many who belong to neither employees' organisation: the mood of even those more active NUBE members who were in the Central Hall on Monday was illustrated by a jovial voice which called "Give them hell, chaps, but don't forget that you are a responsible bank clerk." Bank men are inhibited by their status and traditions from any very militant action, which is why they hope to gain their ends by Parliamentary means. In those banks where union members are in a majority—or in any where union membership is sharply increasing—the employers might be well advised to come to a compromise before they are compelled to: the compromise suggested by the union (though vehemently opposed by at least two of the staff associations) is a joint employees' negotiating body of staff associations and union together. But it is not very clear what MPs are expected to do about it.

SOVIET UNION

Not By Bread Alone

SOVIET artists are resisting attempts to hobble their creative activity with the fetters of "social realism." When the musicians' and painters' organisations lately held their congresses, both were addressed by Mr Shepilov, who attacked "formalistic" deviations and reiterated the party's right not only to take care of, but also to control, the arts. At a meeting of Moscow writers Mr Dudintsev was officially taken to task for his controversial book *Not By Bread Alone*. But the attacks are milder than the thunder of former days, and men of letters find courage to talk back.

Mr Dudintsev has so far refused to alter his text. In the preface to the English edition, which is to be published by Hutchinson in July, he deplores the use to which his book has been put in the West, but does not deny that his picture is drawn from real life and makes no attempt to change it. At the Moscow meeting he argued that to camouflage the truth will only lead to defeats and bitter disillusion. He also made a plea for greater artistic independence: "I think that, like young swimmers, we should be allowed to swim on our own; maybe we shall not drown. Unfortunately all the time I feel on myself a leading-string, like those by which children are led, and this hinders my swimming." Having experienced the exhilarating feeling of striking out on their own, the Russian intellectuals have begun openly to resent the party leash. The administrative organ of the party, *Partyinaya Zhizn*, reports with disapproval that, when they are told to mend their ways, the culprits retort: "So we are getting back to the old ways, which prevailed until the struggle against the cult of the individual."

The same organ accuses historians of falling under the influence of bourgeois liberalism and of minimising the hostile part played by Trotskyists, nationalists or other deviationists. But such is the effect of destalinisation that heretics no longer go in terror of the stake. It is enough to look at the latest issue of the magazine *Moscow Literature*, with its devastating attack on Soviet playwrights who seek their inspiration in yesterday's decree, official article or even broadcast, to realise that Soviet musicians, painters or writers are no longer prepared meekly to cut their creative work to rigid party measurements. Mr Shepilov has a difficult job on his hands.

LETTERS

No Reasons Why

SIR—It would seem impertinent to correct such an authority on shopping as Mr Walter Padley, but he gives a misleading impression in your issue of May 4th when he seeks to imply that the Scandinavian countries, Holland, Austria and Germany have shorter shopping hours than those proposed by the Government in the Shops Bill. It is the habit of people in most if not all of these countries to get up much earlier in the morning than we do here and certainly as far as Germany is concerned shops open at 7.30 a.m. (7 a.m. in the case of food shops), so that a closing hour of 5.30 to 7 p.m. should be regarded in the terms of life in this country as 6.30 to 8 p.m. at least.

At the end of his letter Mr Padley mentions the cost of long shopping hours to the consumer. Surely what the consumer wants is variety and freedom of choice, so that if Mr Padley is right and short hours really mean low prices, those who want to shop in the cheapest market can do their shopping in one of the many chain stores which already shut long before the legal closing hour, leaving available to the not inconsiderable number of those who work from 9 a.m. until 6 p.m. the more elastic hours of the little man round the corner. If these people have to pay more for what they get, then at least they are getting more, in the form of service, for what they pay.—Yours faithfully, LAURA GRIMOND

Richmond, Surrey

★

SIR—We are puzzled by Mr Walter Padley's strictures on your comments concerning the Shops Bill. We have studied the Anglo-American Productivity Team Report on Retailing. It seems to us to justify your attitude.

First, freedom in the matter of shopping hours has not produced uniformly long hours of opening in America. In food distribution, hours "vary from shop to shop within the larger cities" (page 31); in the non-food trades "the hours of opening differ widely and those of private traders and multiples show almost infinite variation" (pages 44-45). To speak of "Gresham's law" in this context therefore seems doubly improper: it misrepresents the facts as well as prejudging the issue of whether long hours of opening are desirable.

Second, there is evidence in the productivity team report for your view that long opening hours and good labour conditions in retailing are not incompatible. The team noted that "in California, where trade union organisation among food workers is strongest and traditionally more militant, and where wages are highest and working conditions most favourable, the shop trading week is much longer than elsewhere" (page 32).

Third, the report is by no means clear on the question of whether long shopping hours raise costs in the United States. These hours are said on the one hand to be necessitated by "the need for an adequate return on ... large capital expenditure" (page 3) and to be worth the large traders' while in terms of profits (pages 32-33); on the other hand, in the part of the report dealing with the non-food trades, a non-quantitative reference is made to the extra cost of extended hours (page 69). We would be much interested to see Mr Padley's detailed calculations on this point.

Mr Padley suggests that longer shopping hours have led to an inflation of American distribution costs, particularly labour costs. His evidence on this point is both inaccurate and irrelevant. Margins in the food trade are higher in this country than in America and not equal to them. Wage costs in relation to sales are relatively higher still here, although the meaning of this last figure is not clear on account of differences in the proportion of paid employees in the retailing labour force in the two countries. In the non-food trades American margins are higher, but this cannot be used as evidence for saying that "the American system is more expensive than the British." Percentage gross margins are a very bad guide to performance in distribution, because they are heavily influenced, in international or inter-temporal comparisons, by differences or changes in comparative manufacturing productivity. (This is a point on which the productivity team itself slips up rather badly.)

Mr Padley will have to produce much more telling arguments before he convinces us that the various progressive countries outside North America whom we are about to join have shops legislation which it is fair to describe as "advanced."—Yours faithfully,

BARBARA FREEMAN
JOHN KNAPP

Oxford

A Speculator's Best Friend?

SIR—Mr Bevan repeated at Reading on Sunday that a Labour government would renationalise the steel industry. Three effects follow:—

1. On Monday the Stock Exchange put the prices of steel shares down. That means that the dividend yield goes up. So that threats to renationalise (before Mr Bevan has power to carry it out too) simply result in a bigger take-off for Stock Exchange speculators when the market gets back to normal. Yet these are the people whom Mr Bevan wants to punish, not to reward.

2. The country wants more steel. That means the industry must have more capital equipment for expansion. Because of statements made by Mr Bevan and others, steel companies are compelled to offer a high rate of interest in order to attract the money. The Steel Company of Wales, for example, which has just been denationalised, offered the shares at a price which yields 8 per cent (is this the highest yielding "blue chip" on the market?). The price was £40 million, which at 8 per cent means a dividend of £3,200,000 a year. Without the threat of renationalisation, a yield of 7 per cent would have been ample and a yield of 6½ per cent satisfactory. Speeches of the renationalisers have thus given to these investors between £400,000 and £600,000 extra a year.

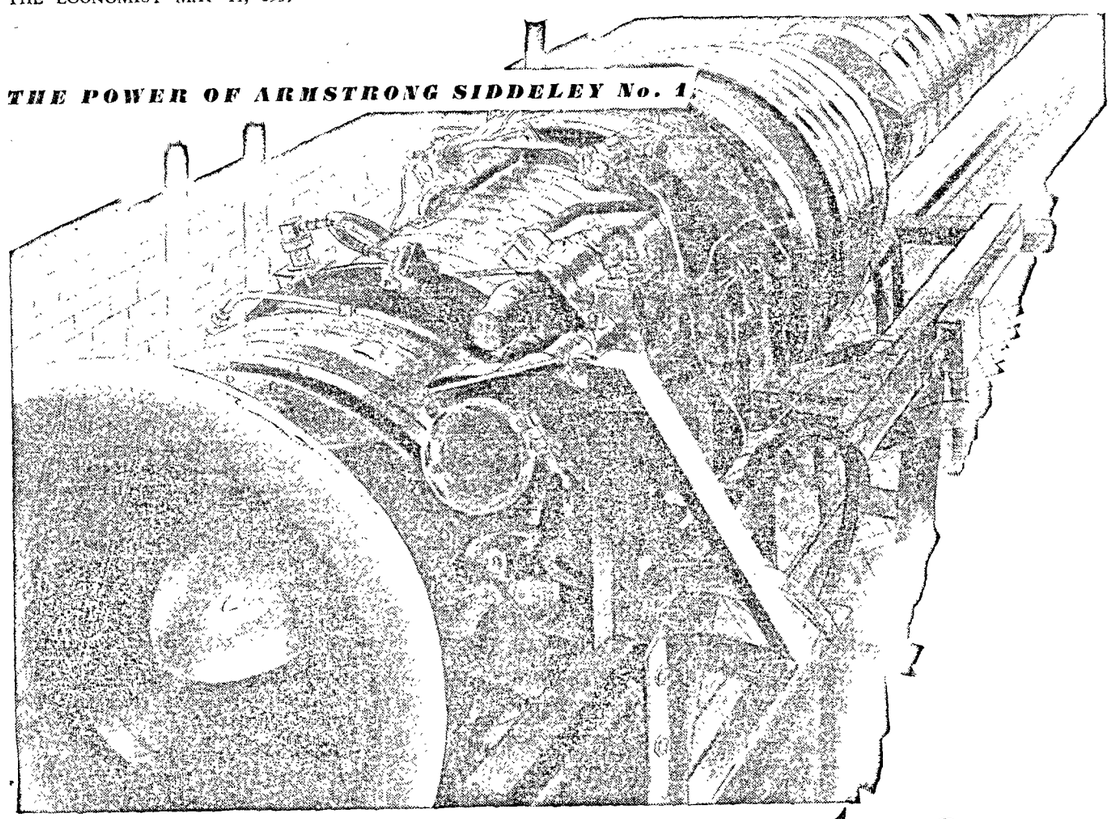
3. Shareholders in steel companies are putting pressure on directors to pay out bigger dividends. If the industry is going to be renationalised, they say, let us take out what we can while we have the chance. The dividends on steel shares are still rising. A one per cent increase on the dividends of renationalised steel companies means about £3 million extra for the shareholders every year on £260 million. An increase of 2½ per cent, which is likely, will be £7½ million for the shareholders.

4. Everybody knows that, even if the industry is renationalised, a "fair" price will have to be paid. A Labour government will not itself be able to decide a price without reference to the international impact of such an action. The "fair" price will be the one determined not by a Labour government, but by independent bodies. The Labour party has a chance of succeeding only so long as it stands by the principle of compensation that impartial persons would consider fair, whatever its own views about compensation.

What is the point, therefore, of continuing to issue threats which only yield bigger benefits to just the sort of people who are threatened? Is Mr Bevan the shareholders' and speculators' best friend? Or is he just a proper Charley?—Yours faithfully,

MEMBER OF THE LABOUR PARTY

Chile's Legal Dictatorship



SIR—In your issue of May 4th you publish a letter from the Ambassador of Chile in which he states "these extra-constitutional powers were expressly renounced by the President as soon as it was seen that the disturbance had no popular support and were solely the work of small groups of extremists."

This would seem to imply that the extra-constitutional powers were in fact taken to suppress what was thought to be a popular movement. Is this how Chile achieves "an atmosphere of mutual understanding between government and people"?—Yours faithfully,

D. E. LUKE

The Queen's College, Oxford

THE POWER OF ARMSTRONG SIDDELEY No. 1

12 years non-stop....

In the twelve years since 1945 when the development testing of the present range of Armstrong Siddeley aircraft engines commenced, the total hours of testing at the bench and in the air are equivalent to running the *whole of that period non-stop.* Over 100,000 hours of relentless enquiry under the most rigorous conditions, has made possible the increased power ratings achieved on production engines—power developed to meet the ever more exacting requirements of modern aircraft.
Research establishments at Coventry and Ansty and the experimental flight unit at Bitteswell enable every aspect of engine development to be subjected to the most painstaking and exhaustive tests.

Many of the world's most powerful fighting aircraft are powered by Armstrong Siddeley aero engines

BOOKS

Paganini among Bankers

Lord Norman
By Henry Clay.
Macmillan. 506 pages. 36s.

CLAY had worked for four years on this life of Montagu Norman before he met his death in a road accident in Holland in the summer of 1954. His draft, as he recognised, was spade-work, needing revision and cutting, and he had not made a start on two last chapters on Norman's work in the war and an appraisal of "The Man." To publish Clay's work substantially as he left it, with two contributed chapters to round it off, took the risk of doing something less than justice both to the author and to his subject. The decision was rightly taken, and the only regret is that by Clay's tragic death the world should have been denied a polished masterpiece based on the raw material that he assembled and sifted with such expert care. The picture of Norman, incomplete though it may be in the later stages of his career, emerges in the round—a virtuoso, an artist, an autocrat, a man who relished his own mystery, the last of the classical central bankers.

How did Norman achieve this eminence? His background was secure; his opportunities at Eton and King's were great; yet he achieved little in his early years. Already he showed something of the rebellious instincts and the intuitive habits of mind that distinguished his work in maturity. His early career with the family merchant banking business was steady rather than impressive, though he enjoyed his apprenticeship in America. In the Boer War, with a well-earned DSO to his credit, he found a curious fulfilment, but he undermined his health; and even ten years later, in 1912, a Swiss physician gave him only three months to live. Sickness of spirit ("a very erratic corner in my brain which makes all the trouble") was cured, not so much by the contemplation of "a complicated series of linear patterns" prescribed by another Swiss doctor as by the relief from the strain of disagreement with his banking partners. The outbreak of war in 1914 postponed his departure from the firm until the end of 1915; within a few days he had been invited to "devil" for the Deputy Governor of the Bank, eight years after his election to the Court of Directors. His real career had started at the age of 45.

It lasted nearly thirty years, twenty-four of them as Governor, and spanning most of two world wars, the struggles of reconstruction in the twenties, the transient restoration of the gold standard, boom and world depression. They were years of great achievement for Norman and of hardly less disappointment. He saw some real chance of restoring his kind of world in the early twenties and he worked with skill and imagination to secure it. But new tides, stronger than his skilful navigation could master, had turned against him. His own technical *tour de force* was *inadequate when governments took an* increasing hand in economic affairs, and when Britain was losing its economic leadership. Norman's agile pragmatism never deserted him. There is nothing in these pages to support the charge that he was a mere deflationist. But his own traits did him mischief in popular estimation. The British people like a "character"; but they were never free of a certain uneasiness about Norman's aloofness; his charm of manner was mixed with an aristocratic disregard; the beard and the hat came close to ostentation in a man who cultivated the prankish mystery of "Professor Skinner."

In all these matters, Norman was not successful in his public relations. He could afford to be contemptuous of anything so vulgar. But his limitations of mind were a different matter. When the world of the twenties deserted his conceptions of Edwardian normality and self-regulation, he had no systematic principles on which he could fall back. He was moved to action by what was happening in the market place, not by response to economic generalisations. Clay says that "his powers of explanation and advocacy fell far short of his powers of insight and decision"; and the contributor of the chapter on "The Man," writing from close experience with Norman, admits its truth. When Norman faced Keynes at the Macmillan Committee, he was quite unable to do himself justice; his was a craft of cases and not of systems, a practice of affairs (not organised save into the broadest principles) that he was too impatient to rationalise. The brilliant executant fell a long way short of creative economic exposition.

"It is not easy," says Clay, "to recall, after the experience of government credits and gifts after the second world war, the responsibility and the influence which bankers carried in the twenties." Norman's striving for order, international co-operation, the essence of free trade and competition, and the fending off of political interference in monetary policy finds an example on every page of Clay's account. He created the art of modern central banking as no one else could have done and he enjoyed, perhaps unduly, its mystique. But he was always seeking the conditions of an honest currency, fair and stable economic relations between Britain, Europe and the United States, and the limiting of economic ambitions to economic means. His intervention to remove some of the structural callouses of British industry in the twenties can easily be misrepresented; he was more attached to expansion and efficiency than those who saw him merely as a banker selling up over-swollen industries would ever allow. The charge that he was addicted to dear money and deflation cannot be squared with economic expansion throughout the twenties (save in 1926) nor with the readiness of London to lend up to the hilt of what the country's surplus could afford for reconstruction in Europe and expansion in the Commonwealth.

These were brave attempts—the work of "a person" rather than "an organisation." Organisation was in the end inescapable; the position of the Bank changed fundamentally after the country abandoned the gold standard, and by 1937 even Norman, though proud to be a central banker talking to central bankers, asked his audience to remember that he was "an instrument of the Treasury." There was still a long way to go before the Bank was nationalised and a Chancellor of the Exchequer could bring himself to describe it in public as "not my agent but my creature." Norman's personality and the strictness of his beliefs still have their lessons for an age devoted to the centralisation of economic power in government. It has not got rid of the economic sloppiness that he, more than anyone else, would have despised.

Guilty or Not?

Not Guilty
By T. E. Utley.
Macgibbon and Kee. 158 pages. 10s. 6d.

A DEFENSIVE task is not a gay one for the controversialist. To attack a wrong policy can be exhilarating; to defend what has been done is dull. Controversialists of the Opposition can enjoy themselves thoroughly attacking the Government, but if the Government's advocates want enjoyment, there is only the Opposition for them to attack; and this, since the Opposition has merely been in the position of saying, not of doing, is a less rewarding pursuit. Mr Utley, setting out to vindicate the home and foreign policies of Sir Anthony Eden's government, is therefore unremittingly exposed to the temptation of turning his attention from the actions of Sir Anthony Eden and his colleagues to the words of Mr Hugh Gaitskell and his; although, as he himself admits, "a government cannot be defended merely by the argument that the opposition to it is foolish and inconsistent."

Mr Utley devotes much of his book to the Conservative record at home, and on this front his exposition has at least the advantage of a consistent philosophy, expounded with cogency though with too many glib sneers at the other side. He says rightly that the government's actions can only in general be justly judged in relation to the acts of policy that went before, and in the framework of the general political and economic behaviour of the British people in our time. The method serves him well until he comes to the election of 1955 and the perplexing strokes of economic policy (Mr Butler's spring and autumn budgets) which preceded and followed it.

His task in defending the record of the Eden government in the Middle East is harder, and perhaps his heart is not so much in it. Certainly, in any fundamental sense, he shirks the task. It is difficult to put up an effective defence of the government's policy if one is not prepared to say honestly what the policy was. Mr Utley maintains somewhat perplexingly that Sir Anthony Eden had foreseen the strong and hostile American reaction to his ultimatum to Israel and Egypt, "for his policy to meet it was prompt." What was this policy? According to Mr Utley, it was the proposal for a United Nations police force, which was to

> remain in the Middle East until a settlement between Israel and Egypt had been achieved and the control of the Suez Canal had been put on a proper footing.

He goes on to say that the force was set up on these lines. As Mr Utley goes on to say, the United Nations force was set up "with the specific objects of securing and preserving the cessation of hostilities." The argument comes adrift over the unfortunate fact that the hostilities which were to be stopped included, and primarily, the hostilities that Sir Anthony Eden had just started. To represent this as the achievement of a statesman who had foreseen what was going to happen is absurd. Mr Utley's final balance sheet is equally incapable of holding water. A war had been stopped, he said; the possibility of a settlement in the Middle East existed; all this was "thanks to the success of British policy in establishing the principle that the Middle East was an international concern." Perhaps it was not possible to do better if the writer was unwilling to consider seriously what the British government was really trying to do and how its intentions were related to the intentions of France and of Israel.

Handing out the Food

The Combined Food Board: *A Study in War Time International Planning*

By Eric Roll.
Stanford University Press. London: *Oxford University Press.* 398 pages. 60s.

FOR four years, from June, 1942, to June, 1946, the Combined Food Board was the focal point for operations affecting the food supplies of half the world. Yet it left no official history of its work, and we owe it to the initiative of the Food Research Institute of California that Mr Eric Roll, who was one of the Board's principal officers, undertook this task. He has done this with great skill and judgment in an interesting and lucid account of the board's failures and successes. He emphasises throughout that the board was merely a piece of machinery for trying, not always with success, to co-ordinate the policies and actions of the governments of the United States, the United Kingdom and Canada, and in no sense a supra-national organisation.

The book opens with the striking contrast between the food position of Britain and America in the first two years of war—in Britain state control and rationing due to lack of ships and dollars, and in the United States free markets and a record level of food consumption. In the first half of 1941, before lend-lease brought vital relief, the food supply of Britain fell to a dangerously low level. (Infant mortality in 1941 was 5 per cent above the prewar average and nearly twice the current level.) Then in June, 1942, when the Combined Food Board was set up, Roosevelt and Churchill announced that "the entire food resources of Great Britain and the United States will be deemed to be in a common pool." This led to the first statistical comparison of food consumption in the three countries, which was the starting point for the national "food balance sheets" now published by the Food and Agriculture Organisation and the Organisation for European Economic Co-operation.

Mr Roll rightly emphasises that "allocation" by the Combined Food Board could never be based on any cut-and-dried formula—an illusion that survived to plague the International Emergency Food Council when world-wide allocation of food supplies became necessary in 1946-47. The board, and later the council, could only recommend, and never dictate, to whom and how much exporting countries should sell; and import requirements were almost impossible to assess with any precision. In April, 1945, the level of stocks in Britain had created such misunderstanding that the question was placed on the agenda of the Yalta Conference, though it was never discussed there. In the period of greatest world food shortage, from 1945 to 1947, countries where the shortage was greatest were generally those where statistics of stocks and consumption were most defective.

More important even than the allocation of scarce foods was the co-ordination of overseas procurement. Thus the Ministry of Food bought meat for the Allies from Argentina and tea from India and Ceylon, while the United States government bought sugar from Cuba and coffee from South America. During the postwar food crisis Unrra countries complained about the unrepresentative character of the Combined Food Board, and this led to its replacement by the International Emergency Food Council, consisting of more than twenty nations.

In the light of his later experience in OEEC and Nato, the author has some interesting comments to make on the effectiveness of international co-operation. He stresses the importance of daily and intimate contacts between permanent delegates. Reciprocal influence on national policies is more readily brought about in this way than by a strong secretariat or through the passing of resolutions by temporary delegates at periodic conferences. The story of the Combined Food Board illustrates once again that defence is more potent than opulence in promoting economic co-operation among nations.

Illjudged Suppression

The Accusing Ghost, or Justice for Casement

By Alfred Noyes.
Gollancz. 191 pages. 15s.

THE title suggests that the author has approached his subject in the wrong frame of mind; and so he has. This is a well-meaning but incoherent and tiresome little book, the work of an old man whose vehemence has outrun his judgment. There is a strong case for pressing the Home Office to authorise an examination of, and a public report on, the notorious "black diaries" and the use that was made of them at the time of Casement's conviction on the charge of high treason. Such a case could be stated in an article or a pamphlet and should be stated in a systematic and judicial manner. Instead, Mr Noyes roams at large over Casement's career and in a chapter on the trial displays so much prejudice that he shakes the confidence of the reader in his capacity to handle the points that really matter. Few reasonable people can doubt that Casement, a British citizen in receipt of a Government pension, actuated by motives with which one may or may not sympathise, committed "treason" and was convicted after a perfectly fair trial. The only remaining point was whether he should be hanged or sentenced to imprisonment for life. But Mr Noyes cannot keep off the red herring of Sir Frederick Smith, the prosecuting Attorney General, and is at pains to establish that "F. E.," by reason of his association with the prewar Ulster "rebellion," was the worse traitor of the two. One need not be an admirer of the man who became Lord Birkenhead to dismiss all this as irrelevance and "hot air."

When we come to the diaries it is a very different matter: Every solution of the problem seems grossly improbable. Was Casement a rabid homosexual? No one had noticed it till the diaries began to circulate: yet if they did not record his secret life, what were they? Is it really conceivable that Casement had made a full translation of the homosexual diary of Armando Normand? And if so why? Mr Noyes seems to think that the diary was fabricated for

use after Casement's arrest, by Sir Basil Thompson. It that conceivable either? The Home Office has once again presented a blank refusal to a request for an official investigation.

So long as that refusal is persisted in, there will continue to be a spate of books about Casement, and that is a dismal prospect.

Unfortunate Princess

The English Empress

By Egon Caesar Conte Corti. Translated by E. M. Hodgson.
Cassell. 419 pages. 42s.

LAST year the tragedy of the Empress Frederick was rather haltingly restated by Dr Richard Barkeley: *now* the posthumous work of Count Corti, who had access to a wealth of royal papers, has been published. But the unfortunate princess is still unfortunate in her biographers as well. Count Corti's book has for its sub-title "A Study in the Relations between Queen Victoria and her Eldest Daughter . . .," but it is not a study of anything so precise. The plethora of quotations from the correspondence between mother and daughter makes the book seem shapeless. Moreover, the author himself seems to have become infected by the royal ladies' taste for adjectives, mostly in the superlative and heaped together, and his narrative is, in consequence, often turgid and cloying.

The most interesting and important chapter in "The English Empress" is chapter XI because it was written by the Empress herself to record the experience of 1888, the year of her husband's accession and of his death: strangely enough Count Corti seems to have felt that this chapter required an apology for some of the "harsh and bitter" words it contained, although these words were no more excessive than the habitual style of the letters quoted throughout the book. Here the widow records that the liberal prince considered "as we did," that the *Kulturkampf* had been carried on with characteristic harshness. "But what seemed to him worst of all was that . . . the Prussian State as such suffered a severe reverse. . . ." She then goes on to say that

> Fritz considered the anti-Semitic movement equally terrible. . . . It was nothing but an element of hatred and dissatisfaction created merely to brutalise the feelings of the nation and to arouse their evil passions of envy, force, intolerance and injustice.

Alas, the Prince Consort had not taught his clever and promising daughter clarity of thought or expression. But the feverish intensity which makes her never dull yet monotonous to read, was part of a genuine interest in the social question. What other crowned head took the trouble in 1879 not only to read "Das Kapital," but also to inquire into the personality of Marx? It is thus to the Empress Frederick that we owe the delightful account from Grant Duff of that momentous figure, an account which has in fact been published before.

The history of the Empress Frederick has been described as a clash of dynastic traditions. One wonders, however, where Queen Victoria really stood. Of course she believed in the unquestionable superiority of her own family, but she certainly did not approve of an interest in Marx and Renan, while she had insistently begged her daughter to do her best to germanise "Bertie."

No Secrets

The Torment of Secrecy

By Edward Shils.
Heinemann. 238 pages. 15s.

THIS is a curious book and an unsatisfactory one. Something went wrong with it in the writing, and the trouble is probably explained in the statement on the jacket that Professor Shils was "associated with the American atomic scientists for many years" and in his own explanation in the foreword that the book was first written "in the heat of the struggle, as a broadside against the depredations of Senators McCarthy and McCarran" and that he then tried to mould it "into something more than a polemic."

The result is a book which has been impoverished by restraint rather than enriched by objective scholarship. Any reader who is used to skipping forewords will be hard put to it to find out what the book is about. It is certainly not about the torment of secrecy.

For a long time the dirty word "McCarthy" is studiously avoided, and the first third of the book is spent in a mild and not very original comparison of the social climates in the United States and Britain—always to the disadvantage of the United States. Professor Shils, for example, records the American belief that aggression overland to adjacent territories is legitimate, but that aggression overseas is imperialism, and the widespread notion that there is only one class on American railways while there are two in Britain. Both these curiosities have been observed and commented on more than once by members of university debating teams writing that inevitable account of a first trip to wonderland.

And when Professor Shils does get to his point his arguments are badly organised and his writing is deplorably slipshod. "A section of the population and a strand of sentiment which are ordinarily kept at bay expands" contains more bad grammar and mixed metaphor than even a sociologist should allow himself.

By "facilitating" the Professor's work the Fund for the Republic (an offshoot of the Ford Foundation) was making a brave try. It would, after all, have been too much to expect any very valuable treatise on lions to have been written by an Early Christian. The first useful book on the McCarthy era is likely to come from an outside observer, someone who is not oppressed by national shame, someone who will be able to understand the full significance of the fact that the Senate did, in the end and contrary to its traditions, effectively stamp on its most noxious member—and without help from the White House.

Port of the North

Liverpool

By George Chandler.
Batsford. 515 pages. 35s.

BOTH Birmingham and Manchester celebrated the anniversary of their incorporation as boroughs by subsidising the publication of valuable, scholarly studies of their historical development. It is a great pity that Liverpool has not followed this example. The city council has sponsored what purports to be a social history of the city, but it is social history of a disappointing kind, consisting largely of a collection of trivial anecdotes. Only one paragraph is given to nineteenth-century emigration and that only to comment on the establishment of the landing stages. The slave trade is shrugged off as benefiting all parties in the long run. Railways get one paragraph, rather less than the Grand National; nineteenth-century shipping is a list of names of lines and a few tales of accidents. That the constable had his truncheon decorated in 1834 seems to have much the same weight as the Poor Law Act of that year.

The book's major weakness is its general plan. By going chapter by chapter through the influences of kings and castles, barons, lords, mayors and burgesses, all sense of continuity is lost, and we are given little idea of how and why the town grew. This is not to say that there is no evidence of useful research in the book. Indeed, a considerable amount of it seems to be new, but its value has been lost by the way in which it is presented. We are told of a series of diaries, throwing valuable new light on Liverpool's social history and here studied for the first time, but all that emerges from them is that the diarist paid his barber 2s. 6d. a quarter for three visits a week and bought a book on the Lisbon earthquake.

Yet there is so much that could have been told. The political struggles over particular changes in social policy, which make up such a fascinating part of the Birmingham history, are not even hinted at. The decision to employ a private company to provide gas lighting is dismissed with the comment, "this must have resulted in improved street lighting," but with no indication that the provision of trading services was such a crucial question in nineteenth-century local government. Was there no one comparable to Joe Chamberlain in Liverpool politics and if not why not? Was it because a single party was in power for so long after 1835?

That the city councillors did not want a scholarly volume for the occasion might be accepted. They have indeed a well-produced book with over 300 illustrations; but if they present it as a serious social history, footnotes and all, then the reader is entitled to expect something more from the text. Parts here and there are not without interest—the chapter on the poor is probably the best—but they are not enough to make up for the rest.

The Dutch Press

Het Dagbladbedrijf in Nederland

By M. Rooij.
Kroese N.V., Leiden, Holland. 622 pages. 57s.

THIS is a dynamic book on a dynamic industry. Dr Rooij's analysis of the economic and social aspects of the newspaper business in the Netherlands is remarkable in many respects, and first of all because it is an editor and not a publisher who has written it. Dr Rooij is the well-known editor of the *Nieuwe Rotterdamse Courant*. Newspaper economics was an almost unexplored jungle in the Netherlands; now Dr Rooij has cleared it in a single bulldozer operation.

Not all Dr Rooij's conclusions are "dynamic." He finds, for instance, that the establishment of new daily newspapers is nearly impossible now: the acquisition of readers and advertisements would take too long and require too big an initial capital, for the circulation of Dutch dailies is almost completely based on subscriptions (a stabilising factor as far as sales are concerned); and existing newspapers already meet the needs of most religious and political groups. Dr Rooij scrutinises the tendency to monopoly (and oligopoly) in the newspaper market.

The book surveys the touchy domain of relationships between publishers and editors. The majority of the 65 newspaper enterprises in Holland do not have, as Dr Rooij thinks they ought to have, articles of association stipulating the competence of the editor. Only two newspaper enterprises explicitly confer upon editors the exclusive power of deciding their newspapers' contents. Dr Rooij also examines the experience of strikes in newspapers—among others the London strike of two years ago—and proposes regulations for Holland, such as exist in Sweden, to prevent newspaper strikes being used for political reasons. His proposal for compulsory arbitration is grounded, not only on economic and social considerations, but also on the wider responsibility of the press and the right of the public to be informed.

The book can be criticised. Dr Rooij's distinction between "opinion" papers and "neutral" papers in the Netherlands has lost a great deal of its significance since the last war; many papers which he apparently still regards as neutral actually contribute much to the expression of political opinions. His view that various agreements among newspapers (especially on minimum prices) are not at variance with Dutch anti-cartel policy is open to argument. His thesis that commercialisation is not a leading characteristic of Dutch newspapers has already caused a debate among Dutch journalists. These few criticisms, however, do not detract from the high merits of a profoundly scholarly work, which is a milestone in the "scientific" study of newspapers, all the more so because it bears witness everywhere of having been written from within.

Canadian Economic Studies

International Cycles and Canada's Balance of Payments 1921 - 33: *Canadian Studies in Economics, No. 1*

By Vernon W. Malach. *University of Toronto Press.* London: *Oxford University Press.* 165 pages. 24s.

Capital Formation in Canada 1896-1930: *Canadian Studies in Economics, No. 2*

By Kenneth Buckley. *University of Toronto Press.* London: *Oxford University Press.* 173 pages. 26s.

THESE "Canadian Studies in Economics" are sponsored by the Canadian Social Science Research Council and edited by Professor V. W. Bladen of the University of Toronto. Volume I is a study of the timing and causal factors at work in Canadian cyclical fluctuations and their relationship to the balance of payments in the eventful twelve year period extending from 1921 to the end of the great depression. Assuming as it does that the reader has a thorough knowledge of monetary theory, trade cycle theory and international trade theory, as well as of statistical method, this book is not for the general reader, but it is a notable, though rather cryptically compressed, experiment in applying theoretical concepts to the analysis of concrete cases and, conversely, using a factual study in a searching test of a battery of theories. There is an admirable critical examination of some widely held general ideas about the comparative timing of cyclical trends in countries heavily dependent on external trade, and in "young" and "old" countries.

There is a mass of useful material and some penetrating analysis in this slim volume. It is greatly to be hoped that Mr Malach will go on to develop this study with a fuller discussion of some of the questions raised in it. It is also to be hoped that he will write such future works in the lively, intelligible style ("Canada abandoned the gold standard rather than abandon prosperity") that occasionally penetrates the technical economist's shorthand into which most of this book's argument is compressed.

The second volume is concerned with establishing "the trend and pattern of real investment in Canada in the years from 1896 to 1930 during which an integrated national economy emerged." To obtain the necessary statistical series Mr Buckley has made a most comprehensive survey of possible sources and earlier estimates relevant to the problem. Although the usefulness of results obtained by such devices as interpolation and extrapolation and "blowing up" figures may be open to occasional doubt, the method of calculation is fully set out and the limitations of each estimate made clear for the reader's guidance. The statistical series are unfortunately reduced to a quinquennial basis (some data not being sufficiently dependable for use on an annual basis), which cannot but obscure certain turning points and so detracts from their usefulness. It would, for example, be most interesting to relate the secular changes traced in this volume to the cyclical changes that are the subject of the first volume, but cyclical upturns and downturns are lost in the five-year intervals.

Even so this is a valuable study. It not merely traces the trend of total investment in the formative period when, with the settlement of the prairies, wheat became the basis of the Canadian economy, but also analyses its components. The analysis brings out many fundamental points, notably the effect of the revolution in agricultural techniques involved in the transition from animal power to mechanical power, and the importance of the role of governments in building up the large-scale durable capital structures required in this type of staple product economy. The author has given his statistical series an admirable historical setting that puts them into clear and illuminating perspective.

Jamestown, Virginia 1607-1957

BRITISH ESSAYS IN AMERICAN HISTORY

Edited by H. C. ALLEN and C. P. HILL

The leading British authorities on American history have combined to produce this volume of 17 collected essays.

AMERICAN SURVEY

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

Single Service On the Way?

WASHINGTON, DC

MR CHARLES WILSON, who is now generally understood to be entering the final few weeks of his unprecedently long term as Secretary of Defence, ended his press conference last week by turning down firmly the idea of a single armed service. Asked whether this was not the only way to end the present bickerings and duplication of work between army, navy and the air force, he simply remarked: "It wouldn't save any money at all. It would just move the argument into another place."

However, within the planning staffs of the army and air force there are many who agree emphatically with the idea that the coming of missiles has rendered archaic any division of forces according to the element in which they are most at home; the only logical distinction, it is dogmatically maintained in many of the staff papers circulated at the "colonel level," divides the forces according to the requirements of different kinds of war. Elsewhere there are compromise suggestions. One is that administratively and for training purposes the three services should retain their present identity, while operationally they would be organised into a strategic force and a tactical force. Another proposal much in the wind is for a fourth, missile, service: this would short circuit the argument as to whether a missile has the primary characteristics of a bomb or an artillery shell and would have the further merit of providing the nucleus for a combined service which would expand automatically as the missile progressively took over the functions of existing weapons.

★

Meanwhile, however, the three services continue to press their competitive claims for separate funds, in the way which has long been normal but which now seems almost out of date, on the Appropriations Committee of the House of Representatives. The navy, most determined opponent of any merger of the services, made a very effective presentation of its case, after having been rather left on one side during last year's animated controversies over which service should have responsibility for long-range missiles. The air force declined to contemplate the total replacement of manned bombers by missiles, nor would it accept as final the decision of the Joint Chiefs of Staff that its strategic bomber force should be limited to eleven wings instead of the seventeen for which it had asked. The army contended that, thanks to its reorganisation into intensely mobile "pentomic" divisions deployed, by low-flying planes with an almost vertical take-off, in "chequerboard fashion" within a battle zone without fixed lines, it would remain a major factor in any kind of war. Moreover, because the nuclear component of a new-style division was concentrated in a small atomic support command, the army claimed that it could convert at instant notice from one style of war to another.

This does not mean that anyone seriously supposes that millions of men could be called up and despatched overseas if a major conflict broke out. The only important forces for fighting purposes would be those in being when the war began. Mr Wilson in his evidence dismissed the present nominal ready reserve of 2,900,000 men as being largely a paper army, but Admiral Radford, who does not cease to be chairman of the Joint Chiefs of Staff until the middle of August, appeared to satisfy the committee that it was still worth while to train proper reserves. He argued, first, that in the event of any threatening communist move their very *mobilisation* would be a serious warning that the United States meant business; and secondly, that the help of reservists would be only too grimly necessary to restore order and essential services if the Russians got through with a surprise atomic attack.

Finally, Mr Wilson and Admiral Radford both advised vehemently against the frequent assumption that, by the magic carpet of an airlift, a substantial task force could be sent with extreme speed to an area of local danger. If the United States had wished to land a division at Suez and had possessed 1,800 of the most up-to-date transport aircraft, it could not have done it in twenty-four hours. Extra fuel and maintenance men would need to be in position all along the way and many airfields would have been required at the other end. In Mr Wilson's words:

> There is no reality to the vision of taking two or three divisions in a couple of days to any place in the world and have them ready to fight. They could not even unload their stuff that fast.

Since the navy's case this year was the most assertive it aroused the most controversy. Its budget provides for the first atomic-powered aircraft carrier, of which six are now definitely planned; these vast mobile air bases will be the nucleus of all task forces. The retiring Secretary of the Navy, Mr Thomas, asserted enthusiastically that an atomic carrier, travelling at forty miles an hour, not requiring to stop for refuelling, carrying aircraft with a range of 1,500 miles, and surrounded by several rings of ultra-modern defences, was a practically impossible target to find and destroy. The navy's claims that its ability to launch crippling retaliation against Russia would be far more likely to survive a surprise assault than that of the Strategic Air Command with its land bases were only moderated by the realisation that, if the navy appears to be able to do too much of the air force's job, it may be conceding the case for a single service. With restraint but clarity Mr Quarles, who has just been transferred from heading the air force to be the new Deputy Secretary of Defence, took some of the shine off the ebullience by remarking in his turn that an air-to-surface missile with target-seeking qualities could be fired at a carrier task force from 100 miles away and, if it was accurate enough to come within a couple of miles of its target, could easily demolish the mobile air base.

At the end of these exhaustive hearings there were clearly two points about which Congressmen were markedly uneasy. The logic of all the presentations, except that of the army, pointed to tactical atomic weapons being used for everything except the most trivial brushfire wars. Admiral Radford and Mr Quarles almost, but not quite, conceded as much under questioning. Representative Sikes got no very clear answer when he asked what would happen if, in a middle eastern crisis, the Russians were to say that this was a local war and that civilised people should not use atomic weapons, but that, if the United States did use such weapons, they would retaliate with guided missiles against European capitals.

Secondly, with Mr Wilson admitting that from now on the curve of defence costs will inevitably be upward, the pressure is rising on the Joint Chiefs of Staff to force them to make a more fundamental review of the weapons they are authorising, even if this stops short of creating a single service. Rather to the surprise of the Congressmen, this idea received an emphatic assent from Mr Quarles: he agreed that the present system "lacks incisive military analysis and cross criticism" and that "some different organisational concept" from that found satisfactory by Mr Wilson might be needed. And, as the new Deputy Secretary of Defence, Mr Quarles must be regarded as Mr Wilson's possible successor.

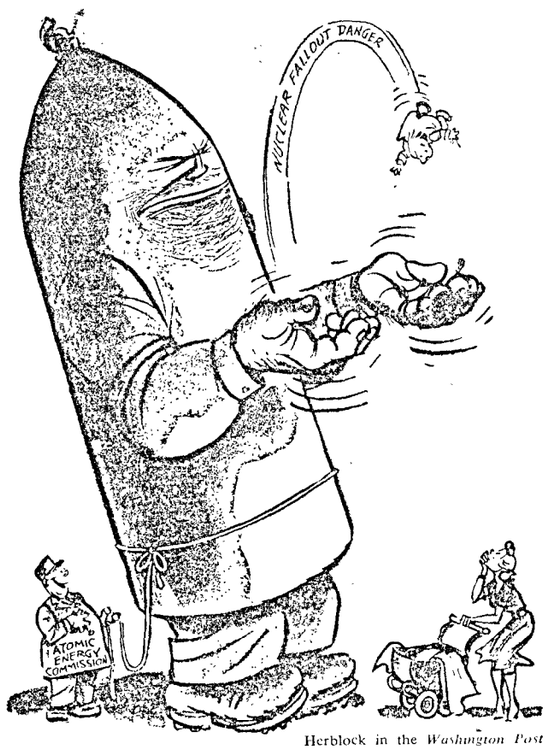
Back to the Budget

CONGRESS has come back to Washington with sharpened enthusiasm for cutting the Budget and with little desire to do anything else at all during the three remaining months of the session. The Administration had hoped that the opposite would be the case, but the voters at home were found to be even more convinced than their representatives in Washington that the government must be made to save the taxpayers' money. The necessity of changing this mood of frustration and revolt if there is to be any hope not only for such programmes as foreign aid but also for those not directly linked with spending, such as civil rights for Negroes, is at last forcing the President to go to the people over the heads of his party and his congressional leaders. It is not difficult to justify what is being condemned as the largest peacetime Budget in history. But unfortunately Mr Eisenhower is not likely to be as appealingly frank as his Secretary of Defence: Mr Wilson is disgusted when his rich friends in the Chamber of Commerce who "have never been more prosperous . . . squawk about the Budget," and points out to these Republican stalwarts that security can never be cheap.

The President can only save his programme from being bled to death by re-establishing his leadership of the country. It is right that this test should come over the Budget, for it was when he allowed his Secretary of the Treasury to criticise it and urged his congressional leaders to cut it that his prestige began to slip. It was then that he ceased to look like the father figure whom the American people had re-elected with such an overwhelming majority only last November. At their Washington meeting last week the Democrats were criticising Mr Eisenhower openly and personally, something which few of them have dared to do before. And this year the Democratic leaders in the Senate are not coming to rescue him from the Republican conservatives as they have in the past; they cannot be expected to take a share of the blame for a programme which apparently is no longer liked even by the voters. It is now that the President who is above party feels the lack of a party; it is now that it becomes obvious that his attempts to build his modern Republicanism into a practical political force have failed so far. For these reasons Mr Eisenhower's coming television broadcasts, in which he will defend himself and his philosophy in almost every American home, are of vital importance for the rest of his presidential career.

Death of a Ghost

WHATEVER happened in fact, in effect Senator McCarthy died not last week but two years and five months earlier, when the Senate, for only the fourth time in its history, censured one of its members—in Mr McCarthy's case for contempt of its dignity. To those, both at home and even more abroad, who felt that this professional anti-communist had affronted the dignity of the whole United States by his demagogic charges, to those Americans whose lives had been ruined by his insinuations, this condemnation seemed not only late but inadequate. Many of these people may also be shocked at the Senate's attempt to make amends with an unusual funeral ceremony in its chamber this week. But coming after the national hero, President Eisenhower, had been attacked by Mr McCarthy, coming after his empty bombast had been displayed on every television screen during the lengthy hearings on his case, the Senate's vote of censure in 1954 had merely confirmed the contempt and boredom which almost the whole country already felt for a man who had once seemed to be a crusader. With Mr McCarthy, McCarthyism—the technique of the "big smear"—became ghostlike as well. It still walks, as the recent suicide of Mr Norman and the coming trial of Mr Arthur Miller demonstrate, but its influence is slight, largely because Americans are no longer lost in the confused fear of communism, the distrust of themselves and of their government, which fostered its original growth.



Senator McCarthy's death is not even of much immediate political interest. In Wisconsin, unlike most states, such a vacancy is filled by election, not by appointment by the Governor; it is expected that the latter will call a special election, rather than wait until the next regular election in 1958, but the final vote can hardly be held before this autumn. There were already several potential candidates in the field from each party, for it was by no means certain either that Mr McCarthy would have won the Republican nomination in 1958 or that he would have been re-elected to the Senate. His death removes one of Mr Eisenhower's embarrassments: the President does not now have to decide whether to endorse the candidacy of a man who was personally repugnant to him and who openly opposed his policies, in order to save the Republican party from losing a much-needed seat in 1958. For the Democrats the prospect of a special election this autumn offers hope of adding to their present narrow majority in the Senate, and also of reminding voters that "the Republicans cannot win" just as the 1958 campaigning season opens.

Radioactive Criticism

FROM A SPECIAL CORRESPONDENT

To a scientist, a " critical mass " is that minimum amount of fissionable material which must be assembled before nuclear energy can be released. And just as the nuclear physicist can detect, in advance, that the critical assembly point is being approached, so political observers are now aware that a nuclear explosion is in the making in their field also. As a result of a congressional investigation of atomic fall-out scheduled to begin on May 27th and the publication, this week, of a lengthy article in *The Reporter* magazine,

"Look, Lady—You Don't See Me Worrying"

Herblock in the *Washington Post*

analysing and criticising the Atomic Energy Commission's programme for testing nuclear weapons in the continental United States, the controversy in America over such tests may soon reach a critical assembly point and set off a chain reaction.

The article in *The Reporter*, taking up virtually the entire issue of the magazine, gives a detailed history of the tests of weapons conducted since 1951 at the Nevada site operated by the AEC and asserts that, as a result of the tests, thousands of people living in Nevada and the neighbouring state of Utah have been exposed, unknowingly, to doses of low-level radiation. Further, it is claimed that the AEC knew very little about the effects of radiation at the time it began the tests and concealed its ignorance behind a wall of secrecy and reassuring public statements. According to the article, information affecting health and safety has sometimes either been kept secret, even though military security was not involved, or released only in a way designed to avoid what one AEC official has called " very bad psychological effect."

The difficulties of the AEC are attributed to its attempts to carry out two seemingly contradictory missions with one organisation—to develop and test nuclear weapons and at the same time to be responsible for protecting the public health from radiation. It is pointed out that there is no official American counterpart to the British Medical Research Council which makes its recommendations to, but is independent of, the United Kingdom Atomic Energy Authority. Then, also, the security regulations of the AEC and the lack of technical or scientific training among members of Congress force the AEC scientists to substitute themselves for legislators and to make policy decisions which should be outside their responsibility. Even the Joint Congressional Committee on Atomic Energy, set up as a " watchdog " over the AEC, is handicapped because it is bound by the same security system as the commission itself.

★

Specifically, *The Reporter* charges that one reason why it was decided to open a test site in Nevada was the fear, during the Korean War, that American atomic scientists and their devices might have been captured or lost if the tests had to be conducted in the Pacific. The magazine also states that, after one test detonation in the 1951 Pacific series, the personnel had to remain under cover for several hours because of the atomic fall-out. Other incidents quoted in the article include a comparatively heavy unexpected fall-out in 1953 on a Nevada motel, where residents were not told that they had been exposed to radioactivity. The charge is also made that, during the same series of tests, about 5,000 people in one town in Utah were kept indoors for two and a half hours after another unanticipated fall-out. This same radioactive cloud made it necessary to wash and decontaminate motor vehicles on the roads in the area ; furthermore, people living in this community were exposed, for 16 days, to atmospheric contamination which during one 24-hour period was 1,260 times the concentration permissible for radiation workers.

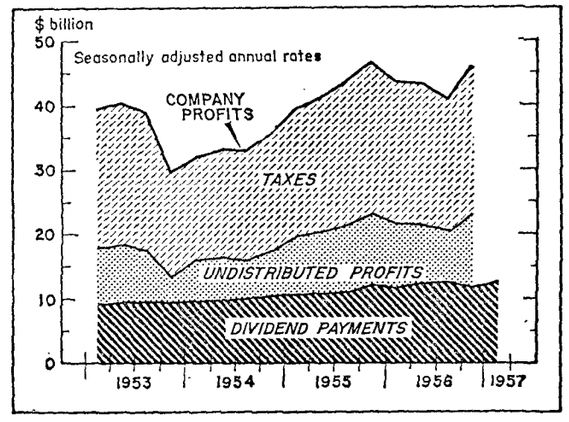
The " limited manpower " which the AEC had available for monitoring fall-out in Nevada and Utah resulted in either inadequate or no warnings being given to the residents of some places affected ; and until just a few weeks ago, according to the article, many of the " official doses " listed by the AEC were only estimates of radioactivity rather than accurate data based on actual monitoring records. It is said that some communities in the area were never monitored until the 1955 tests, when badges of sensitive film were placed on the sites of tests and carried by people outside those sites. One reason for the AEC's failure to use these film badges more before 1955 was apparently that some of its officials feared that they might have bad psychological effects. The article analyses, in great detail, one investigation conducted by the AEC into the deaths of thousands of sheep in Nevada and Utah, allegedly from radioactive fall-out ; it points out that the AEC cleared itself of responsibility for the deaths months before the investigation was completed, and in spite of disagreement among some of the scientists making the investigation. " What is still at issue," says *The Reporter*, " is not the conflicting scientific evidence concerning sheep deaths but the conduct of the AEC."

It is around the AEC's conduct rather than around the possible danger to health that controversy arising out of the article is likely to centre. It certainly provides new ammunition for the already well-armed critics of the commission. But, in its editorial comment on the article, *The Reporter* directs attention to an even graver issue of public policy. It calls for an end to " this mad business " of testing weapons, and asks for " any man who is still free to deny his skill—not to speak of his enthusiasm "—to refuse his co-operation to " this insane, unending race." As a result of this article and of the mounting concern over the uncertain perils of hydrogen bomb explosions, powerful pressure to stop tests of all nuclear weapons may pile up within the very country which first created an atomic bomb.

Woollen Pincers

WASHINGTON, DC

The hearings in which the Office of Defence Mobilisation is giving domestic woollen manufacturers a chance to prove that imports of blankets, felt hats and similar items are damaging the national security, represent one arm of a pincer movement menacing an important British dollar earner. The other and much more threatening arm is the prospect of higher duties on imported woollen fabrics. Under the present tariff concession, the *ad valorem* portion of the tariff can be raised from 25 to 45 per cent when total imports in a given year have exceeded 5 per cent of the average annual volume of domestic production in the preceding three years. President Eisenhower invoked this provision last October for the remaining quarter of 1956.



As a result the quota of low-duty imports was exhausted by the end of November and imports completely dried up during the last month of the year. Many of the fine British worsteds which had been held in bond were rushed out in large quantities in the first three days of January. The pace has been so fast ever since that, should the President decide to enforce the minimum quota this year—it would come to about fourteen million pounds' weight—low-duty imports would cease altogether by the end of August. This would mean a very substantial loss of dollars ; the British stake last year was about $34 million and the earnings so far this year are running well ahead, despite the fall in Britain's share in the trade because of the increase in Japanese competition.

While British interests are more involved in the President's decision, which has been postponed by arguments within the Administration, the ODM's hearings on a whole range of woollen goods will probably develop into an attack on Japan. This accords with the recent trend : of the four new " escape clause " proceedings which have just been started before the Tariff Commission, three of the cases, involving stainless steel flatware, umbrella frames and parts, and cheap, so-called Toyo caps, are based mainly on the boom in Japanese imports.

So far during his second term, the way in which Mr Eisenhower has handled the Tariff Commission's recommendations to raise duties has been encouraging. The ludicrous plea of a single violin manufacturer, whose fiddles were so bad that they even aroused the protests of school teachers, was dismissed after passing the commission's scrutiny. A recommendation that America's straight pins should be defended from foreign assault was summarily rejected, while the President called for further information about the alleged danger that the prosperity of the American economy would be pricked if imports of British safety pins continued at their current rate.

Squeeze on Profits

Analyses of the flood of reports on the earnings of American companies during the first quarter of the year are almost as plentiful and almost as complicated as the reports themselves. There appear to have been an unusual number of changes in the relative positions of individual companies, but the general impression, which is borne out by the recent optimistic activity on the stock exchange, is that business has been better than expected. When the quarter's profits are all added up, the total should be much the same as in the preceding three months, and substantially higher than in the first quarter of last year. The petroleum industry is largely responsible for this—or rather the closing of the Suez Canal which pushed both prices and actual sales of American oil well above the similar

period in 1956, an advantage which is not likely to continue. The sharpest fall in earnings, compared with early 1956, were those of the airlines, which are suffering particularly badly from rising costs ; the profits of building material companies reflected the fall in house construction and those of mining companies the decline in metal prices, while poor results have also been shown by textile manufacturers and in the entertainments industry.

Satisfactory increases in earnings during the first quarter were frequently the result of efforts, which it may not always be possible to maintain throughout the year, to increase sales, improve efficiency and cut costs in order to counteract the effects of the expected falling off in business, and to escape from the profit squeeze which is causing growing concern to businessmen. As competition becomes sharper, it is no longer possible to set off constantly rising costs of labour and materials by constantly raising prices, and an increase in the volume of sales is now less likely to mean an equivalent increase in the volume of profits. Moreover, profit margins—the ratio of earnings to sales—have been going down in general for several years, with the exception of 1955, and total profits have been relatively stable, while the national income as a whole has been going up steadily.

Divided Jewry

FROM A CORRESPONDENT IN NEW YORK

WHEN Mr Dulles called eight leaders of American Jewry to his office, during the Gaza crisis last February, in an effort to persuade them to exercise a restraining influence on the government of Israel, he ventured upon terrain as rough as any he has encountered in diplomatic negotiations abroad. It was an unusual action for a Secretary of State, since this kind of dealing with racial and religious groups is usually left to political emissaries of the White House. Moreover, Mr Dulles's action stirred up controversy within the American Jewish community for, although the meeting was subsequently pictured as a routine briefing of important private individuals, the conference was in fact an overt intervention in the quarrel between Zionist and non-Zionist factions in the United States; in effect, it was an attempt to exploit that quarrel for the Administration's own ends.

Mr Philip Klutznick, president of the B'nai B'rith fraternal organisation, Mr Barney Balaban, president of the Paramount Pictures Corporation, and the six other people who attended the meeting are among the most influential non-Zionist leaders. As such, they are active money-raisers and sympathetic supporters of Israeli causes, but they do not have the vehemence and single-mindedness of the Zionists. Mr Dulles could expect them to advise American Jews privately to adopt a sympathetic attitude towards the Administration's desire that Israel should withdraw from Gaza and to vouch for the sincerity of his expressions of personal goodwill; he also knew that both the advice and the assurances would be made known to Mr Ben Gurion through the Israeli Ambassador in Washington, Mr Eban.

Privately, however, Zionists deplored the conference with considerable bitterness. This was partly because their exclusion seemed an affront to their prestige but, more important, because they believed Mr Dulles was leading Israel down the garden path; and they are increasingly restive at the patience displayed by Mr Eban and by their non-Zionist rivals.

★

There is no doubt that Mr Dulles was trying to influence one of the major sources of Israel's strength. Since Hitler's destruction of the Jews of eastern Europe, the Jewish community in the United States has emerged as the principal cultural, religious, and economic centre of Jewish life outside Israel. New York is now to world Jewry what Warsaw and Vienna were a generation or more ago, and financial remittances and purchases of bonds by American Jews, to the extent of more than $100 million annually, play an indispensable part in Israel's balance of payments. Moreover, while there are less than 2 million Jews in Israel, there are some 5 million in the United States.

Many of the divisions among American Jews have their origin in the historical gap between the early emigration of German Jews to the United States and the later arrivals from eastern Europe. Time and Hitler have blurred these cleavages but their ramifications persist. The two principal non-Zionist organisations are the B'nai B'rith ("Brothers of the Covenant") which, founded in 1843 and now having 425,000 members, is the oldest and largest Jewish organisation in America, and the American Jewish Committee, a rather select philanthropic organisation financed by the Lehmans, Warburgs, and other *grands seigneurs* of the German Jewish community. B'nai B'rith, through its Hillel Foundations in the colleges, its Anti-Defamation League, and its other subsidiaries, carries on a diverse, large-scale programme of cultural activities and vigorous propaganda on behalf of civil liberties and of inter-racial and interdenominational goodwill.

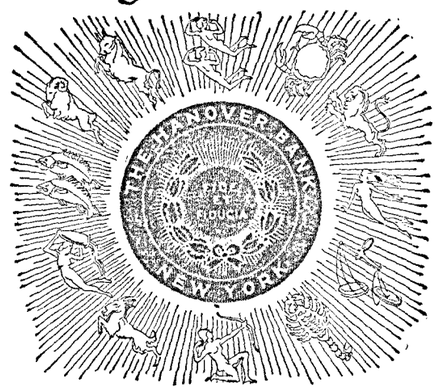
These two organisations broke away four years ago from the National Community Relations Advisory Council, the parent holding company of all other Jewish groups. At present, the principal constituent organisations of the National Council are some seventeen community federations in leading cities (excluding New York and Chicago which are too large for a single city-wide Jewish organisation), the Hadassah, an important women's organisation of over 300,000 members, and the American Jewish Congress founded by the late Rabbi Wise, the famous New York preacher and ardent Zionist. In simplified terms, the American Jewish Committee is distinctly aristocratic, the B'nai B'rith is middle-class in character, and the other organisations are more militant and plebeian. They are also the hard core of the "political activists" and the most tenacious sympathisers with Israel. A Congressman from New York City would probably pay more attention to a resolution passed by a local chapter of Hadassah than to an editorial in the *New York Times*.

★

The coming to office of the Republicans in 1953 shifted the political balance of power within the Jewish community from the Zionist activists to the moderates more nearly represented by B'nai B'rith. That consummate politician, Franklin Roosevelt, had personal working relationships with every Jewish faction and the late David Niles, one of his more astute assistants, devoted much of his time to maintaining and perfecting this liaison. President Truman not only retained Niles but also came to rely heavily, particularly in his hour of need in the 1948 campaign, on Jewish political and financial support. Israel had no stauncher friend anywhere than the "Man from Independence" and Zionist leaders had easy access to the White House.

President Eisenhower, although he has individual Jewish supporters, has nothing remotely resembling this kind of broad backing in the Jewish community or this personal link with the leaders of the principal organisations. Mr Dulles, in pursuing his less than benevolent policy toward Israel, has thus had to shoulder some of the political burden of explaining and defending it, which was carried in previous Administrations by the White House. His strategy has been to woo more conservative Jewish opinion and thus to try to soothe the broader Jewish community which has often felt in the last four years that he was leaving Israel lone and friendless. His efforts have not been without success in tempering the tone of criticism, but it is safe to say he has not substantially mollified the Jewish rank-and-file who remain among his more obdurate domestic critics. He has, however, helped to strengthen the hand of Mr Eban, who is strongly of the opinion that Israel cannot in the end ever divorce itself from American patronage. And the strengthening of a sympathetic Ambassador is an accomplishment of very real importance for any Secretary of State.

Five Steps to Tokyo



and seven opportunities to develop new business on the way. Swissair's first weekly service to TOKYO calls at KARACHI, BOMBAY, BANGKOK and MANILA whilst the second weekly service (from July 5th) flies via KARACHI, CALCUTTA, BANGKOK and HONGKONG. On both flights you have a choice between First Class and Tourist accommodation—and either way you'll find that Swissair's *magnificently* appointed DC-6Bs (radar equipped to avoid bad weather) set a new standard of elegant flying throughout the Orient.

THE WORLD OVERSEAS

IRAN TODAY—1

Iran's Race with Impatience

(BY OUR SPECIAL CORRESPONDENT)

DURING the orgies of self-analysis that are a favourite Iranian pastime, someone is sure to remark to the visiting foreigner that Iran is unique. He will be using the word in its purest sense, and his claim need not be dismissed as mere conceit. For where else has the memory of a great though distant past been kept so green, or been so thoroughly overlaid with habits bred by centuries of insecurity? The combined result of these two characteristics is an unreadiness to take advice (because an Iranian is as talented as anyone) married to a disinclination to take a decision (because times change and a decision taken now may count against one in some unforeseeable future contingency). Generally speaking, Iranian politics and the Iranian economy can be relied on to coast in neutral for longer than Iranian grumbling would lead one to expect.

Here and there, a head rises above the sea of indecision. Dr Mossadegh's was one such; that of the present director of development under the Seven Year Plan Organisation, Mr Ebtehaj, is another; that of the new prime minister, Dr Eghbal, may be another if everyone resists the national inclination to instal so many checks and balances that little gets done. In foreign policy, the Shah seems to be developing into a decisive figure. He seems to have decided that his country's biggest need, at present, is a period of internal stability during which to recover from the gratifying but ruinous years of Dr Mossadegh's adventure, and that this stability is best attained in partnership with the West. This decision has led him to conduct a most consistent foreign policy, including membership of the Baghdad Pact, membership of the Suez Canal Users' Association, efforts to deflect Arab attention from the narrow field of Arab nationalism to the wider one of Moslem solidarity, and a rejoinder—in answer to criticism during a visit to the Soviet Union last year—that Iran had a right to make a pact with anyone it wished.

Dr Mossadegh, between 1951 and his fall in 1953, had fulfilled some nationalist and anti-western dreams, but at the price of doubling the government debt, raiding 31 per cent of the country's gold and foreign exchange reserves, printing notes, promoting inflation, and delaying social and economic development. Since his fall in 1953, stability has been regained, but, as before, at a price—though this time the price is political and not economic. On the economic front recovery has been organised with generous injections of western help, mostly American. Grave unbalance between expenditure and revenue was offset for three years only thanks to American willingness to pick up the chit for three large deficits, but in 1956-57 it has been more nearly righted. (The United States made these payments in addition to gifts and loans covering the largest of its individual foreign aid operations.)

The western oil consortium, with which agreement was reached in 1954, is paying out more than was bargained for and seems likely to furnish about £67 million during 1957; new oil has been struck at Qum on the central plateau (though not yet proven in commercial quantities); Italian, Japanese and German firms as well as more tried American ones are competing for a share in rights to drill and explore the Caspian shore and the Persian Gulf sea-bed; inflation, stayed in 1955, has never since resumed the catastrophic pace of 1953-54; trade is good, and an agreement has been signed with Russia for mutual duty-free transit rights which should improve it further, particularly in the north; an atmosphere of confidence reigns in the bazaar.

But the price paid has been martial law, a stacked parliament, and a general limitation on freedom of expression. When, for instance, a party calling itself the Iran party and consisting of the younger intellectuals of the old Mossadegh group, came out in February with a statement in support of the Eisenhower doctrine, the Majlis (which still looks under the table to see which foreign power is at the back of any Iranian move, however trivial) banned it apparently for the sin of daring to steal the pro-American label. Dr Eghbal has rescinded martial law and the Shah has since announced the intention to found an official opposition party. Time will show what this body is allowed to oppose. Meanwhile, neither move has provided safety valves for the immense feelings of frustration and resentment that pervade the whole of the educated class except those actually in office or enjoying the privilege of a court appointment.

For though there have been a number of material improvements in Iran in the last few years, the social climate has changed little. A building boom in Teheran has caused unskilled employment to keep pace with the lightning growth of the town, and has worked wonders for anyone with capital, since rents are so exorbitant that a speculator in houses reckons to recover his outlay in four years. Some improvements—malaria control or better supplies of drink-

ing water for the towns—have a wider spread. But these benefits do not offset the static feature, which is mistrust of the governed for government and the failure of the government to dispel it. Dr Eghbal, though he has kindled a spark of hope because he springs from the professional class, will have his work cut out to do so.

Where else in the neighbourhood is there so little grasp by a ruling class that the free education it is spreading is fast producing critics of its habits? How soon will it see that a few score families cannot go on appropriating with impunity the first pick of every new development—first water from the newly diverted river, first job for the contractor in whose business someone holds shares, first post, irrespective of qualification for it, in the new technical organisation? The Shah, though so keen to promote innovations that bring good, seems so flag when it comes to the harder job of stopping traditional practices that are unfair and bad. Therefore despair reigns among the men who have the requisite training but no friend-at-court. (This English expression seems more apt than its Persian equivalent, "support for the back.")

The peasants, more than three-quarters of the population, remain inert; though they use a word that means "the cruel ones" when they mention government officials, they are still thinking of little beyond their debts, tomorrow's meal and next year's harvest. They could be roused, but remain a passive force until better communications or some more sudden upheaval stings them to action. Active discontent reigns chiefly among civil servants and professional men, most of whom live in Teheran, partly because of the capital's greater social freedom but chiefly because of the better chance that it offers of attaining everyone's heart's desire, a job at a desk. It teems, therefore, with men boasting unsullied hands but an income which no longer buys them the house or even the meal it used to do. In any case, civil service incomes are pitifully small because of redundancy in a corps to which each successive government has appointed its cronies, and from which no one can be sacked. (Government salaries account for four-fifths of the total budget; the payroll includes many idle hands who attend the office only to draw their monthly money.) Being underpaid, all feel aggrieved; presumably all must continue in this mood until either some cabinet decides to earn new revenue and allocate it to pensioning off the idle hands, or else until the development programme yields alternative employment sufficiently attractive (which means sufficiently *dignified*) to draw off the surplus and release more money to pay the section that carries the load.

★

Iran is running the race that is common to almost all under-developed territories—between the impatience of people who have glimpsed better things and the capacity of the ruling class to keep development abreast of public discontent. Up till now, it has not managed to hold out promise of new openings; the chances that the income from oil may create them, through the seven year plan and the national oil company, will be reviewed in a second article.

Two impressions stick in the mind after a tour of Iran. One is that of the elegance, the good manners, the quick intelligences, and the delight in beauty that extends into the poorest homes in a way that is equalled only in Greece or Italy. The other is of the fatal nationwide capacity for the exercise of negative power: that is, for postponing a decision, or baulking a rival, or withholding responsibility from the man at the far end of the road because (in the case, for instance, of a provincial governor) the central government trusts no one who is beyond its immediate control. Iran's administration is still over-centralised to a degree that is a perpetual handicap in so enormous a country. Because of the consequent frustrations and delays, some watchers predict open revolt by the growing class of educated malcontents. But, all told, the citizen who described his attitude towards the government as one of *"apathie malveillante"* appeared most closely to reflect the mood of the nation. Both his noun and his adjective seemed worth treasuring.

(To be concluded)

Germans Unimpressed

FROM OUR BONN CORRESPONDENT

THE satirical weekly *Simplicissimus,* which never pulls its punches however wayward its choice of targets, depicts the British Prime Minister, hat in hand, standing at the gate of the Federal Chancellery in Bonn. The west German finance minister in servant's livery is proffering Mr Macmillan a bowl of steaming soup, saying: "The master says we don't give cash." The cartoon reflects suspicions widely held in Germany and seemingly underestimated by Dr Adenauer. By no means the whole parish is impressed by the comings and goings of the foreign gentry at the big house. Nor, for that matter, by the master's own travels across the ocean. The churlish question is not infrequently heard: "What are we being let in for now?"

This was not quite the effect intended by the decision to hold the Atlantic Council meeting in Bonn last week. It is an open secret that the foreign ministers' chief object in showing themselves by the Rhine was to stimulate confidence in the Atlantic alliance. In four months' time the west Germans will go to the polls to elect a new Bundestag, and the statesmen of the alliance are naturally anxious that the Germans should vote in a proper state of mind, confident of the ultimate efficacy and fruitfulness of the partnership, undeflected by warnings that they are taking the primrose path to perpetual partition, if not to nuclear annihilation. The foreign ministers' gesture could not but look like heavy backing for Dr Adenauer. It was scarcely surprising to hear the Social Democrats' chief spokesman excitedly protesting that the Council gathering in Bonn was "the greatest interference yet by foreign Powers in the federal election campaign."

Yet it so turned out that in one way and another the Council unwittingly helped to ensure that the issue of arming the Bundeswehr with nuclear weapons will dominate the coming election campaign. For one thing, the final communiqué implied pretty clearly the ministers' agreement, including that of Herr von Brentano, that all members of the alliance should be ready to fight with nuclear weapons. For another, the retiring secretary-general rubbed it in to the press that each member state of Nato was completely at liberty to reject the decisions or recommendations of the majority. This is not where Dr Adenauer and Herr von Brentano had been putting the responsibility a few days before when they seemed to be delicately preparing public opinion to accept the necessity for a nuclear-armed Bundeswehr. The fact that the German government in power in twenty months' time, when nuclear arms will become available, will be free to reject them, has been jumped upon by Herr Ollenhauer. The Social Democratic leader has declared that his party will oppose the nuclear recommendation with all its might. Deeply disturbed by the warnings of Dr Schweitzer and the eighteen German nuclear scientists, millions of Germans will listen sympathetically to this platform.

How far the Prime Minister has succeeded in allaying official and unofficial German suspicions of British policy remains to be seen. Before his visit the impression was deepening that in both the military and economic fields Britain is acting almost solely out of self-interest and expecting Germany to make the sacrifices. The communiqué published on Thursday at the close of his talks with Dr Adenauer indicates one concession, at least, on the British side: it was agreed that the Rome treaties should be ratified first, and that pursuit of the Grand Design—efforts "to simplify and clarify the European institutions"—should be left till later. On defence policy it was known that Mr Macmillan was not prepared to give ground, and presumably these differences were left unresolved; it was announced that Herr Strauss, the federal defence minister, would be coming to London for talks.

When the Christian Democrats hold their pre-election party conference in Hamburg at the beginning of next week it will be interesting to observe with what confidence and with what ammunition their heavy cannon tackle the electorate's misgivings about the alliance.

One omission from Mr Macmillan's programme here must be regretted: was it impossible for Mr Macmillan to meet Herr Ollenhauer? One would have thought it would have served the interest of both countries if Mr Macmillan had been given the opportunity to repeat what he had to say in Bonn to the man who has a chance of becoming Federal Chancellor before the year is out, and in turn to listen to the opposition leader's views. But protocol and party ambition stood in the way.

Complicated Europe

FROM OUR SPECIAL CORRESPONDENT IN STRASBOURG

BRITAIN has had a fairly uncomfortable fortnight at Strasbourg. With the Grand Design last week and the arms cuts this week, the Government was on the defensive and its European stature has not been enhanced by the debates. Yet the atmosphere was quite different from the days when Britain was the "bad European." The Council of Europe delegates gave the Grand Design the benefit of Mr Macmillan's European faith, and treated it as a sincere, if bargaining, proposal. Even the severe comments on defence in the Assembly of the Western European Union were modified by everyone's visible satisfaction at having, at last, a real debate. The session was unwontedly animated.

The Europeans again criticised Britain for encouraging defence cuts on the Continent. While agreeing that Nato's "shield" is not badly hit by Britain's defection alone, they argue that it will be if others follow the British example—which they probably will, as Britain's economic motives for the cuts apply to most of the European partners as well. The British possession of the H-bomb is not accepted gladly as an alternative to conventional obligations—few people believe that it could be used in a continental crisis. The censure motion on the Council of Ministers for accepting the cuts without consulting the Assembly neatly combined criticism of Britain with the Assembly's permanent dogfight with the Ministers over its powers. (The voting went 31 to 27 in favour of the motion of censure—which, however, was technically not carried, since it did not receive an absolute majority of the Assembly's total membership.) The defence committee's vigorous and depressingly circumstantial report on the weakness of the shield suggests that at least the Assembly is getting more information than it was. After this report, the source might well dry up again.

As for the Grand Design, the Continentals took it as evidence of an unsuspected British taste for abstract art. Everyone agrees that the international assemblies should be regrouped. But few Europeans want the mother-parliament to be the Atlantic Assembly dear to the Grand Designers; they fear that it might blur the confines of European unity. Even those parliamentarians who would welcome the Americans are convinced they would not come, except as observers; rumour says they discouraged the notion at Bermuda.

The Grand Design, further, offended the Six by confounding their assembly (they have the Coal and Steel Community, and are preparing for Euratom and the Common Market), which has some powers, and which they see as an embryo parliament, with the consultative assemblies, which have no powers. It proposed an overall assembly working in committees: economic, defence, and so on. The implication was that Icelanders interested in the OEEC could sit in the economic committees making recommendations to the Six. The six governments' reaction was to detect a *revenant* of the old Eden Plan, vividly remembered in Europe, for linking the Council of Europe and supranational coal and steel communities as if they were comparable bodies. Last week, however, Mr. Ormsby-Gore stressed that there would be no constraint on the powers of the assembly of the Six. By that token, there would still, it seems, be two assemblies.

This might please the Germans, who wish to keep the Six pure. But the Italians and the French, with ratification problems, want to strengthen the link with Britain. One even detects a new note of suspicion that some Germans are too keen to lead the happy few. The result is the Martino plan, which proposes that all the assemblies should share one roof (probably near Paris, as the British suggest) and one administrative secretariat, and should sometimes meet jointly; and, above all, have as many as possible of the same members so that incipient antagonisms between the assemblies would be discouraged. The practical difficulty is that, if the Common Market operates, MPs of the Six who belong to the other assemblies as well may easily spend more than a hundred working days a year on them.

Third year of Publication

The Paper Bulletin

The 9th quarterly issue contains three special reports:
1. The Fibre Board Packing Case Industry.
2. The Irish Paper Industry.
3. Trends in British Paper Output.

The issue also contains: A Summary of the Contents; Guide for Paper Users; Raw Material Notes; Reports on Paper Using Industries; General Notes; Comprehensive Statistics; Charts.

The March monthly supplement dealt with the implications of the European free trade area for the paper industry.

Full details from:

THE ECONOMIST INTELLIGENCE UNIT LTD.
22, Ryder Street, London, S.W.1. Whitehall 1511, Extension 144.

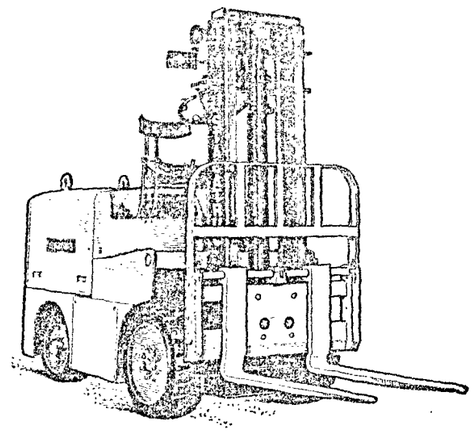
Hence the proposal of M. Dehousse, the president of the assembly of the Council of Europe, that delegates should have deputies. This would raise the number of MPs in national parliaments interested in European affairs and reduce the strain on each of them.

The Martino approach seems to have the best prospect, for it suggests a loose regrouping; a tighter one would violate the functional differences of the assemblies. The Six are now discussing in Brussels an "additional protocol" to the European treaties, leaving the door open to some such proposal. But even if they agree and if the European treaties are ratified (a government crisis in Italy and the chances of one in France are ruffling the recent euphoria), and if the free trade area negotiations go smoothly, the difficulties will remain considerable. For example, the British will stress Nato, but the Swiss, interested in the free trade area, would hesitate to join any assembly linked with defence. Above all, there is no overriding urgency for action. The debate has as its aim to simplify the European parliamentary structure, but it is already a mightily complicated debate, and it has only just begun.

The Brakes Fail in Northern Nigeria

(FROM OUR SPECIAL CORRESPONDENT IN NIGERIA)

"WHY 1959?" said the Emir softly. "Why, because a date had to be set in order to force us to act, to make an effort of will. We of the North have been content merely to talk of getting self-government some day, and meanwhile to leave everything to the British. Of course, we shall keep the British. But the world is changing, and we must start changing with it." To your correspondent, the fiery wind from the Sahara which scoured the little mud-built walled city seemed inimical to any great effort of will; and the troops of caparisoned horsemen converging upon the place to participate in the prayers and ceremonies of Salla, the completion of Ramadan, the month of fasting, testified to the strength of tradition. In they came, to drum-beat and pipes, armed, attended, to acclaim the risen moon, pray and do fealty. In the squat maroon-coloured palace the Emir's council nodded grave, grey Islamic heads; the side-board gleamed with polo cups; outside, the little Union Jack flapped from the residency car. Everything seemed redolent of Lugard and indirect rule and the dual mandate; but—as the Emir said—change was the order of the day.



It came as a considerable shock, however, to senior officials in Northern Nigeria when not only the politicians in Kaduna but the emirs themselves accepted 1959 as the target date for independence. Again and again they had insisted that Northern Nigeria would not be ready for years yet; that the impatience of southern leaders masked a plot finally to deliver the North over to Ibo rule and exploitation; that Zik and Awolowo were welcome to regional self-(or mis-) government—but that the North would stay entrenched behind British sovereignty and the Governor's reserved powers—which meant that the Federation must remain colonial in status, too. Considering that there were exactly 18 Northern university graduates in a population of 18 million, that three cabinet posts in the Northern government could not be filled for lack of possible ministers—let alone the dearth of African civil servants—and measuring the rate at which even under a superheated educational programme these gaps could be filled, the officials felt confident that they could play for time. Even now, they cannot quite believe that the Northern leaders mean it. They note that the premier of the Northern region, the Sardauna of Sokoto, has insisted that there must be "safeguards," without explaining what; they feel that as the brutal facts of the North's unreadiness become clear, and as the southerners show their true colours, the North will somehow back out at the forthcoming conference in London.

But the fact remains that the emirs are backing the Sardauna, and they are the virtual controllers of the Northern People's Congress. There are many motives behind this sudden, apparently emotional reaction to Ghana's independence. The Sardauna has said that he cannot afford to be the stumbling-block to Nigerian independence. Some officials think this exposes the premier's weakness and susceptibility to the flattery which Zik and Awolowo have laid on with a trowel. But the Sardauna's political position is involved. He is threatened on two sides in the North itself. On the one hand, the Northern Elements Progressive Union, led by Amino Kano, makes capital out of his conservatism and emirate inefficiency and misrule; on the other, the growth of the United Middle Belt Union from the ranks of the Northern People's Congress threatens the unity of the Northern region. Both parties are weak; but if the Progressive Union could rid itself of its attendant riffraff it could appeal to the rising middle classes in the Northern towns; the "middle belt"—the southern and more pagan part of the North—is increasingly afraid of Moslem domination through the emirs, the "retired slavers," as British power wanes everywhere.

★

But the only real safeguard which the North has in the Federation is the fact that it is the majority party at the centre by sheer weight of numbers and party loyalty. No government can be formed in Lagos, at present, except under Northern leadership; this is true even under the present limited degree of ministerial responsibility. But if the Northern People's Congress dragged its feet too long, it might lose enough members to the other Northern parties to make possible a coalition at the centre which would outvote it and put it into opposition. In that case independence might come not under its leadership and on its own terms—which are, of course, permanent Northern preponderance at the centre. These were potent arguments for the Sardauna to use with the emirs. On their side, the emirs may have begun to reflect that British rule is not the only possible safeguard of their own prerogatives: a weak "Northernised" Kaduna regional government and the end of British residents might strengthen their hand in local matters. In fact, however, many of them still hardly see beyond their own emirates.

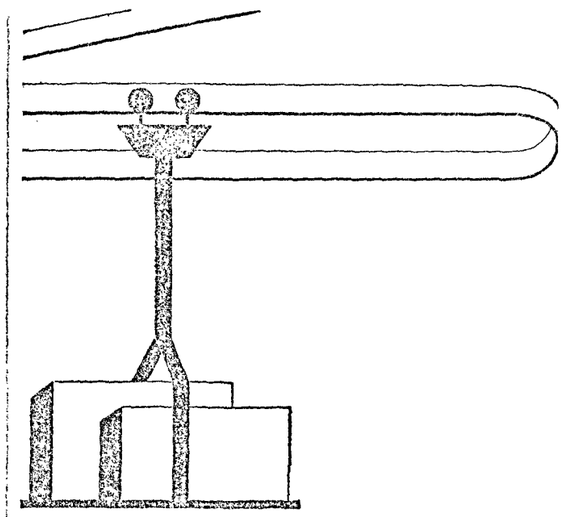
If independence comes quickly, moreover, the North will be able—since there will be no time for anything else—to entrench its regional powers and boundaries. It could bargain with the other regions, and get increased local powers of taxation and (unfortunately) even of borrowing in return for its support. In theory, under full (or even partial) responsible government it would always control the central governments, playing the National Council of Nigeria and the Cameroons against the Action Group, keeping the centre weak, but safeguarding its own access to the

what is the definition of handling?

Our dictionary says it is "to manage or deal with" and that in a phrase expresses the function of a Stacatruc fork lift truck. Men can no longer be relied upon to carry the burden of industry by physically moving materials and products. The Stacatruc is designed to mechanise manhandling processes so that they can keep pace with the growing tempo of production.

The ability of this versatile machine to lift, transport and stack all manner of materials makes it the most widely used mobile materials handling unit in operation today.

Stacatruc fork lift trucks are, in fact, saving time, saving space and conserving effort throughout industry ..... and this means money!



STACATRUC
FORK LIFT TRUCKS

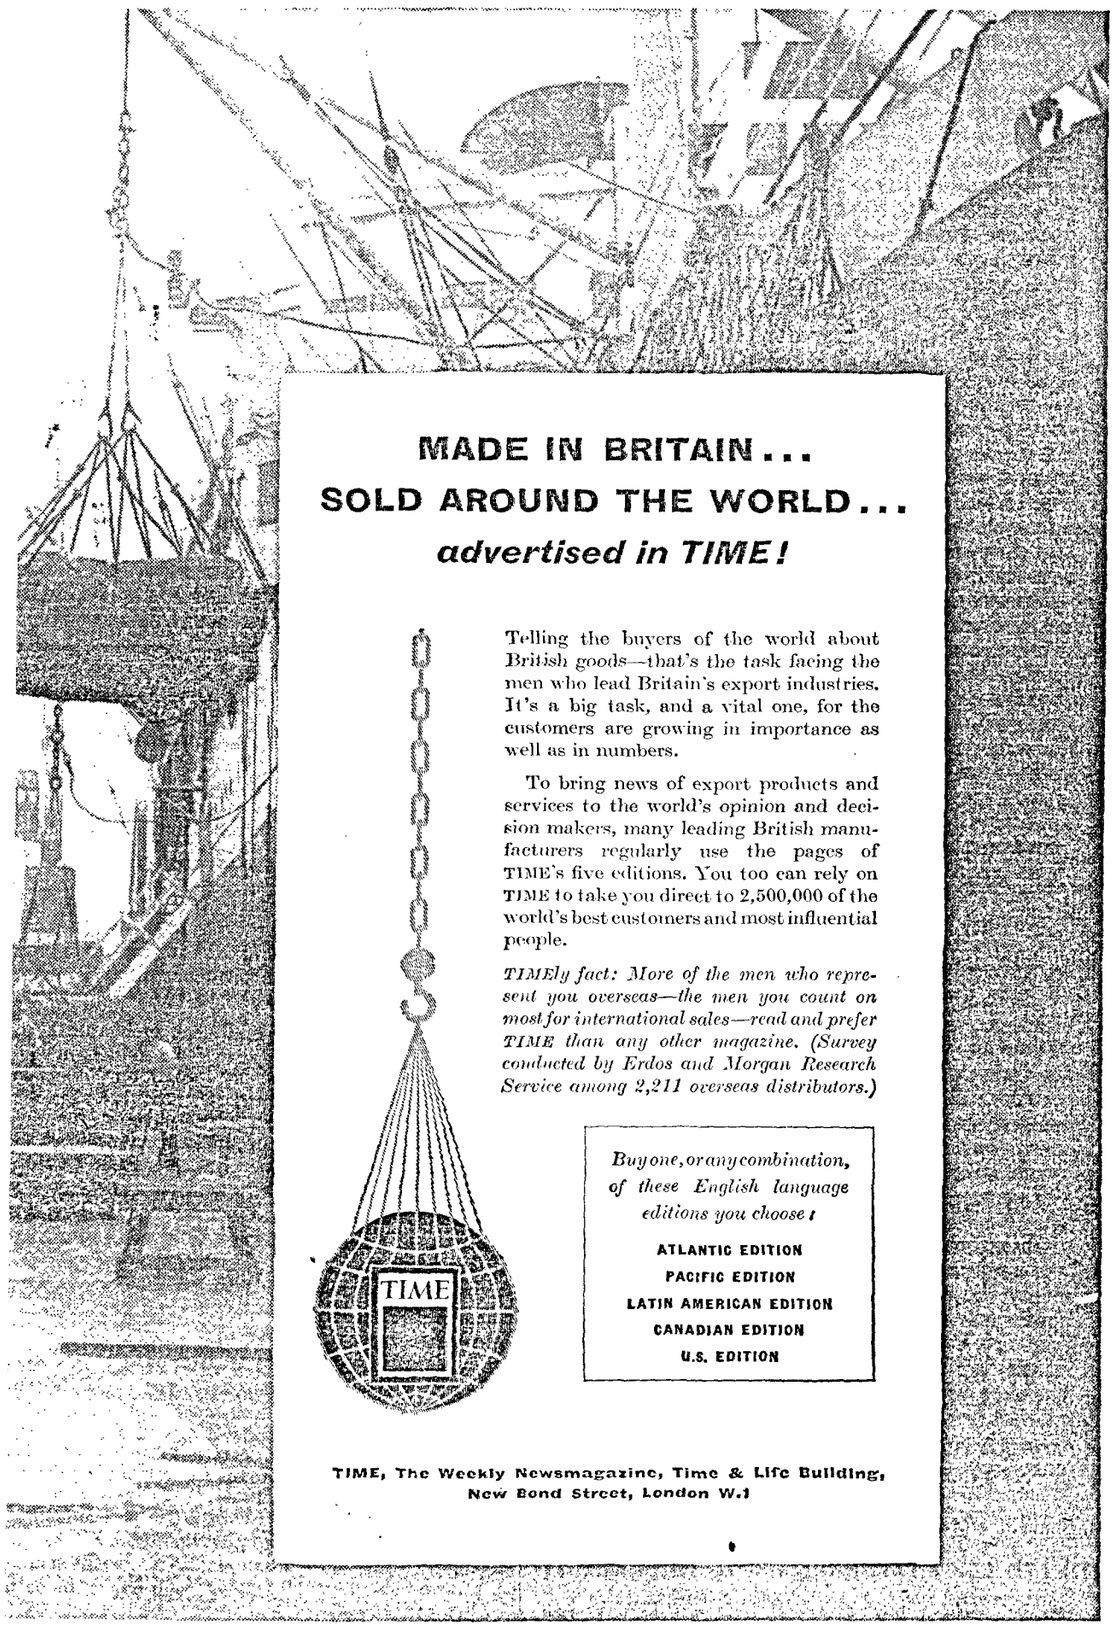
Keep it off the floor!

In the production line of a factory every component has a value which increases as it passes through each process. But while it's lying about idle, waiting to be moved by hand from one place to another, its cost starts to catch up with its value until it ceases to be an asset.



Components must be kept on the move and off the floor, not by costly and inconvenient manual methods, but by one of the many types of mechanical handling equipment that occupy little or no floor space and can move parts horizontally or vertically to any part of the shop.

It's a fact that mechanical handling can do more for production than any other factory technique. This is only one of the many ways in which Electricity is playing a vital part in the drive for greater productivity.

Electricity for Productivity

Ask your ELECTRICITY BOARD for advice and information, or get in touch with E.D.A. They can lend you, without charge, films about the uses of electricity in industry. E.D.A. are also publishing a series of books on Electricity and Productivity. Titles now available are: Electric Resistance Heating, Electric Motors and Controls, Higher Production, Lighting in Industry, Materials Handling, and the latest addition to the series, Induction and Dielectric Heating. Price 8/6, or 9/- post free.

Issued by the
British Electrical Development Association
2 Savoy Hill, London, W.C.2

sea and holding the important cabinet portfolios in Northern (or obedient) hands. Northern politicians bluntly admit that they have the greatest interest of any region in maintaining the unity of Nigeria—provided they rule the union.

The weakness of these ambitious plans, of course, lies in the North's political and administrative inexperience. This year just thirty boys will be eligible to take the two-year course at Zaria for the higher school certificate, which qualifies them for a scholarship to Ibadan University College. The number will increase; but virtually the whole of the higher administrative posts in Kaduna are filled by "expats," while most of the middle range, and even secretaries and typists, have to be imported from England on contract. There are also the new provincial administrations to man, quite apart from the Federal civil service where in theory every other officer should be a Northerner. The position of Northern ministers with almost exclusively Ibo or Yoruba-manned departments would be uncomfortable. Meanwhile, for the first time, the Northern colonial service is energetically discussing whether to take its compensation in 1959, or hang on "for a year or two." Although relations with the Sardauna's ministers are excellent, the British are asking how long the Northern People's Congress will stay cohesive and in control.

What the Congress needs is organisation—and an effort of will, date or no date. At present the emirates run the party on local lines to suit themselves and "run" is an equivocal word. They cannot even, for the most part, run their own Native Administrations very effectively; a good Native Administration treasury producing decent accounts is a treasured rarity. The truth is that without the British the North will fall apart like a rope of sand; and this is precisely the card which the southern parties hope to play. They see in the North's preponderant strength a mere paper facade, and they expect to be able to manage any Northern government supported by British administrators, in their own way.

A minister belonging to the National Council for Nigeria and the Cameroons told your correspondent that under the apparent diversity of parties and personal ambitions, there were only three real parties to the London conference—or the struggle for power in Nigeria: the North, the South, and the British. *De facto* the North and the British have worked together, but now that their tacit agreement to play for time has been broken, the brakes have been taken off—and even if thoughtful Northerners have second thoughts it will probably be impossible to put them on again.

Denmark's Kid-Glove Election

FROM OUR CORRESPONDENT IN COPENHAGEN

AMONG the minor problems posed by next Tuesday's Danish election is the identity of the Ministers who will attend various functions connected with the state visit to Copenhagen of Queen Elizabeth and the Duke of Edinburgh the following week. At least as much excitement has been aroused by the visit as by the election; and the issue of invitations from Amalienborg Palace to present Ministers and their wives has started the rumour that even Court circles expect a victory for the Social Democrat minority government.

The results however are not easily predictable. Proportional Representation rules out clear-cut majorities, and no landslide is likely. Recent Gallup polls show only marginal losses by the Social Democrats, a marked drop in Communist support, and small gains for the right-wing and the neutralist Radicals. Indeed, there might be a danger of Danish politics assuming the rigid Socialist mould of Sweden and Norway, but for the existence of the small Radical party, which perennially holds the balance of power. The present single-chamber *Folketing* is composed of 75 Social Democrats; 14 Radicals, who usually vote with the government on domestic issues; 43 Liberals; 30 Conservatives; and 19 in other parties. A Liberal-Conservative coalition held office from 1950 to 1953 and today it is—with or without Radical participation—the obvious alternative government.

★

The campaign has been conducted with kid gloves, and election fever is absent. Meetings have been thinly attended, and only a few well-bred posters adorn Copenhagen's streets. Only the prime minister, Hr Hansen, who is undoubtedly his party's biggest single asset, has attracted large crowds. The major issues confronting the 2.8 million electorate are too complex to generate much heat. Denmark is in the throes of another economic crisis, with creeping inflation and with foreign reserves gravely depleted. The low prices of agricultural products have brought serious deterioration in the terms of trade. But until he is personally required to tighten his belt the ordinary Danish voter remains unmoved by the news that the National Bank's deficit rose by £5.5 million to £19 million in April. Since most wages are linked with the cost-of-living index, and since the unions have secured big additional increases, traditional socialist supporters have few complaints.

The bourgeois opposition points hopefully to broken socialist promises. The Bank rate, far from being reduced, stands at 5½ per cent; unemployment during 1956 averaged 43,000; and the urban housing shortage remains acute. The opposition parties allege that production and capital investment have stagnated and (supported by the Radicals) they advocate a temporary freeze on wages, prices and profits to stabilise the currency. Over foreign and defence policy, the main parties—except the Radicals—broadly agree.

The Social Democrats claim that, under their rule, production has risen satisfactorily, except during 1955-56. They point to a 70 per cent increase in the value of exports since 1953. Unemployment, they say, has averaged 9.1 per cent, compared with 10 per cent under their predecessors; and they have built 5,000 more dwellings. Moreover, the new people's pensions will be paid from this October. The Social Democrats firmly support Nato, but their defence effort has been marred by ill-advised economics intended to placate the Radicals.

The Radicals enjoy increasing support among young people who are less dogmatically neutralist than the party's Old Guard. It is noteworthy that *Politiken*, an important Radical mouthpiece, supports Nato. The Radicals would, however, prove uneasy bedfellows in either a left-wing or a right-wing coalition; some of them echo Communist demands for a referendum before Denmark accepts defensive rockets or atomic weapons. After the blood-bath in

Budapest, Russian sabre-rattling in the Baltic, and the expulsion of Soviet diplomats for espionage, the Communists are expected to lose three to five of their present eight seats. Close results are expected and, with various combinations possible, there may be hard bargaining over the formation of the next government.

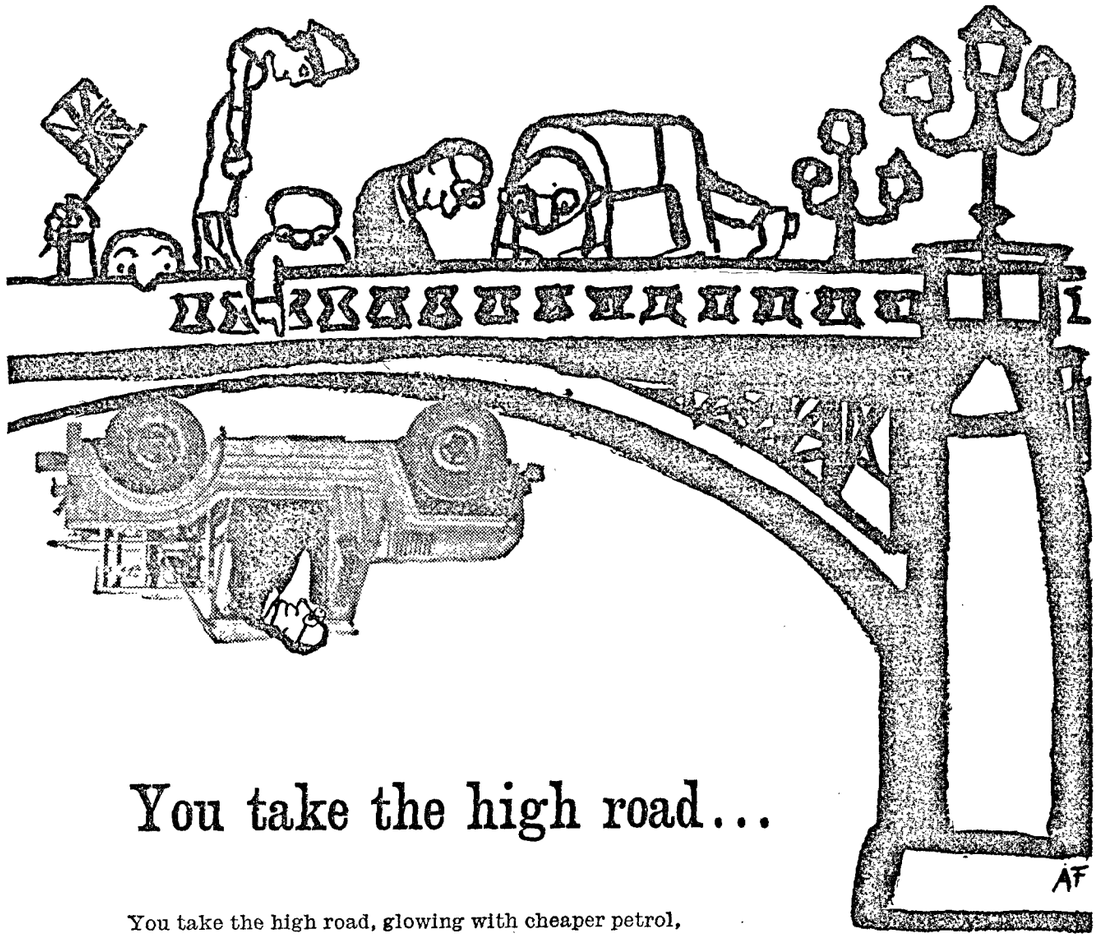
Cambodia: Foreign Aid and Freedom

FROM OUR CORRESPONDENT LATELY IN PNOM PENH

CAMBODIA is a visible disproof of Chou En-lai's dictum that a country's independence is measured by its ability to dispense with foreign aid. This nation of under five million people takes aid from all ideological quarters and uses its neutrality (the word "neutralism" is taboo in neutralist countries) to offset against one another the pressures which come from either side. A year ago observers here were engrossed, and distressed, to watch Cambodia almost publicly insulting the United States from whom it was receiving about $50 million worth of aid a year. And the American giant, under the implied blackmail: "We might go Communist if you stop the aid," continued to pay up and look as dignified as it could.

The four winds of foreign aid—from America, France, China and Russia—are blowing at Cambodia, and the results are sometimes curious. The French are building Cambodia's first deep sea port at Kompong Som ; the Americans contribute an $18 million roadway 140 miles across the jungle to connect the port with the capital of Pnom Penh ; through this port and along this road, when they are finished next year, will presumably come the equipment promised by the Chinese and Russian aid missions which arrived in Pnom Penh seven months ago.

Like four large men in a small room the aid-bringers tread on one another's toes. When the Polish prime minister Mr Cyrankiewicz arrived in March the first item on his programme of visits was the medical school built and equipped by the Americans and French. The story recently published in an American magazine that a 500-bed hospital offered by the Russians is being built on a site prepared by the Americans, though not strictly true, is symbolic. Most curious of all perhaps is the fact that the Russians, when they arrived last autumn to set up an embassy in Pnom Penh, actually called on the American information service and asked their advice as to how they should proceed. There is a temptation, in a country like this, where poverty meets one at every corner, to forget politics and to ask both sides why they do not join forces and work together for the good of the country with no ulterior motive. One feels that in Cambodia this could almost happen.



As it is, western aid administrators are scornful of the lack of tangible results produced by the Russian and Chinese aid missions since their arrival. The Chinese have promised "four factories"—cement, textiles, paper and plywood. Samples of Cambodian limestone, of which there is said to be plenty, have been sent to China for analysis, to see whether cement really can be made here, and the Chinese mission is now back in Peking. Nothing is known of Russian aid, beyond the offered hospital which has not yet materialised, and the arrival of about £70 worth of surgical instruments (said by the Americans to be rusty).

Chinese aid amounts to £8 million, of which it is estimated that £3 million will be required for the four factories. This £3 million of industrial equipment will be a direct government to government grant. The other £5 million will be supplied on a commercial aid—counterpart fund system almost, though not quite, identical with the system used by the Americans in Cambodia, Vietnam and many other countries. Under the American system the goods are imported by private firms who pay the price of them into a counterpart fund in local currency which is then used for internal aid projects. The difference in the Chinese aid to Cambodia will be that the buying agency will be not private firms but the Cambodian government, and the Chinese "counterpart fund" (which will have a different name but the same functions as the American fund) will be generated by resale of the goods by the Cambodian government to private enterprise. What emerges from these technicalities is that in their aid to neutralist countries, the Communists have taken a leaf out of the American book.

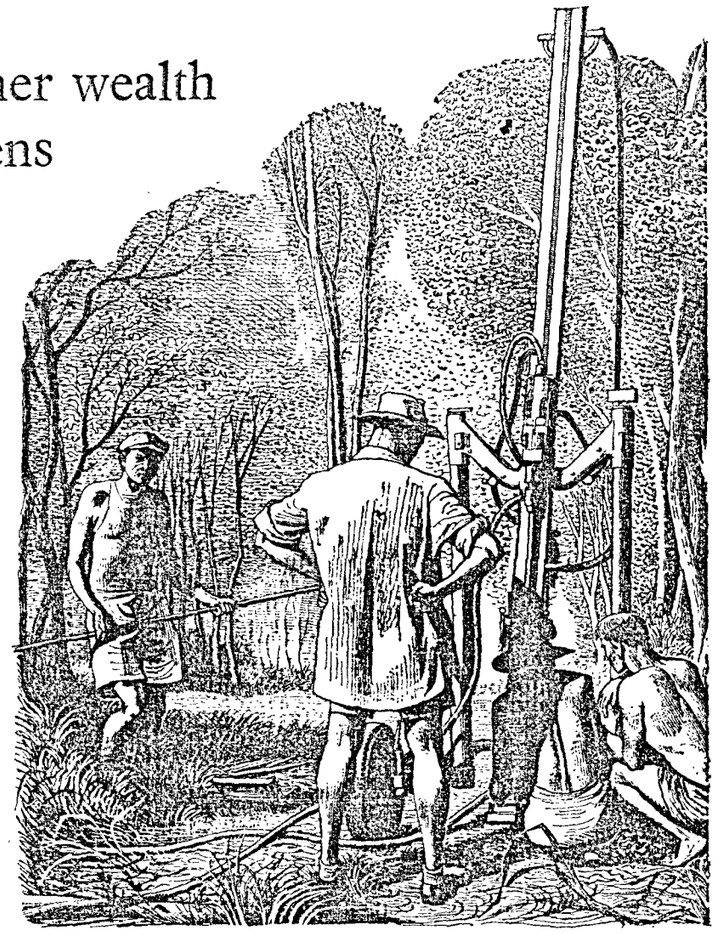
Cambodian policy gives rise to the question: which is the best defence against communism in this corner of South East Asia ? The method of South Vietnam, where Communists are simply illegal and are arrested, where there is only one official line and the press is strictly muzzled ? Or the method of Cambodia—which is less vulnerable than partitioned Vietnam—where both sides are allowed to flourish at will, and, short of slander of the Cambodian royal family, can print what they wish ? In Cambodia there is a real gain in freedom, and, with the reserve that all Asian regimes are more or less autocratic, the government is perhaps as tolerant as any comparable regime in the world. The question is: is it wise ? The large Chinese and Vietnamese minorities (300,000 and 400,000 respectively) tend to sympathise with Peking or with Hanoi and the book shops of Pnom Penh are filled with literature from China.

★

Cambodia's neutralist policy is rendered more dangerous by its recurrent political crises. The government which fell at the end of March was the seventh to resign since September, 1955, when the Sangkum party of Prince Sihanouk won all 91 seats in the National Assembly at the general elections. The trouble is that the Sangkum party is not a political party in the western sense, with loyalty to a programme and a leader. It is a false monolith, which contains all sorts of diverse tendencies, including some which in western parliaments would normally be found in the opposition. The other serious political question is the personal position of Prince Sihanouk, who again—for the fourth time—took over the premiership last month. He is the man who makes all decisions in Cambodia, and it would obviously be best that he should retain the office of prime minister permanently, instead of popping in and out of office like a jack-in-the-box. But according to the Cambodian constitution no criticism is permitted of the royal family, and Prince Sihanouk, as the former King and present King's son, is unquestionably of the royal family. The result is a dilemma. Either Prince Sihanouk is prime minister, and royalty is exposed to criticism ; or he is not prime minister, and nobody else has the authority to remain in office. All of which goes to show how dangerous it is for kings to descend into politics.

You take the high road...

You take the high road, glowing with cheaper petrol,
confident of your judgment, your engine, your suspension,
your brakes, your everything . . .



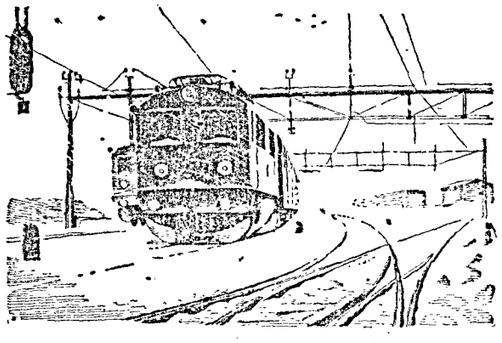
We'll take the low road, doggedly making sure your car's locks never fail you.
You take it easy . . . We'll be out on a corrugated track for six
days at a time, dragging one swooning driver after another from the
wheel of our special, secret, squat, welterweight testing vehicle.

You enjoy yourself . . . We'll be out there pitching and tossing,
over Belgian pavé and herringbone-wrinkle, up and up the Thirty-nine
steps and down the rocky glen, testing new prototype locks
under what we always refer to as "actual road conditions".

The findings, automatically recorded, are important both to us and to you.
They go to explain why Wilmot Breeden components—locks, handles,
bumpers, window-winders, steering-wheels and all—are part of virtually
every British car on the actual roads today.

Wilmot Breeden are at Birmingham: *also at London, Manchester, Bridgwater, Glasgow, Melbourne, Toronto.*

Australia counts her wealth in Roëntgens



Prospecting has come a long way since the primitive methods of Gold Rush days. Uranium is the prize metal now—and Australia uses novel techniques to find it. Wagon Drills driven by compressed air are used to drill holes up to 100 ft. deep. A probe connected to a Geiger Counter is then lowered into the hole and records the degree of radio-activity in milli-Roëntgens — a reading often verified from dust samples collected during drilling. With the direction of the ore body surveyed, exploratory shafts are sunk and lateral drives made into the main body of the ore.

In the Northern Territories alone, these methods have led to the location of *nine major fields*—one of the richest deposits of uranium in the world, and a great increase in Australia's mineral wealth.

Atlas Copco have supplied practically all the equipment and technical staff needed for every stage of the drilling operations —Compressors, Rock and Wagon Drills Sandvik Coromant tungsten carbide tipped drill steels and Long-hole Equipment.

Railway safety at Stockholm

Compressed air is versatile. Atlas Copco provide the means for all its many applications. At Stockholm's main railway station, air supplied from Atlas Copco compressors is blown round the points in winter to keep them free from ice and snow; a successful new method of maintaining safety that has also brought considerable savings in manpower and costs.

The Atlas Copco Group of Companies is responsible for the manufacture of compressed air equipment and its distribution and servicing in 90 countries throughout the world. Group Headquarters: Atlas Copco AB, Stockholm 1.

Atlas Copco puts compressed air to work for the world

THE BUSINESS WORLD

Funding at Work

FEW people foresaw the strength of the hand that the authorities would play in dealing with the June maturities—the £300 million of 5 per cent Exchequer stock of 1957 and £101 million of 2¼ per cent Funding stock, 1952-7. They have decided to replace only £100 million of the maturing £401 million. No offer of conversion is made to the holders of the two maturing stocks : they will be paid off in cash at par on June 15th and about £100 million was raised with the issue on Wednesday of a further tranche of 4½ per cent Conversion stock, 1962, at £99.

These operations might give the appearance of a complete reversal of recent policy. They seem to involve the unfunding into cash of £300 million of government stock, and a reversal of recent efforts towards keeping credit taut and inflation in check by the opposite process of mopping up cash by selling more and longer dated government stocks through the market. To avoid any risk of misinterpretation, and the possible implications for sterling and for foreign confidence in Britain, the Bank of England has taken the unusual course of laying some of its cards face upwards on the table :

> As a result of market operations during recent months, carried out in accordance with the policy stated by the Chancellor of the Exchequer in his Budget speech of continuing to make full use of market opportunities for funding, the two maturing stocks are now mainly held by the departments, having been bought by them against the sale of longer stocks. The new issue of 4½ per cent Conversion Stock, 1962, will amply cover such remainder of the two maturing stocks as will fall due to be repaid to the public on June 15th next.

As the Bank sees the operation it is not a distribution of cash to the public in place of maturing stock. It is a distribution of cash to the departments which already hold more of the maturing stocks than the net £300 million that is being repaid. It enables them to round off an active and successful funding operation on which they embarked at the beginning of the year.

The departments will no doubt take " tap " Treasury bills at first with the proceeds of their repayment and then gradually switch into the next maturity—the £503 million of 2¼ per cent Serial Funding stock, 1957, due for repayment in November. The process of acquiring that stock in exchange for longer dates has probably started. If the aim of funding is to pull the shortest dates into the departments, selling longer dates in exchange, the policy has certainly not been abandoned. On the contrary, the Bank is just taking the first steps to try to repeat on the November maturity its handling of the June maturities. But it is cerainly arguable that its technique has been modified, and to some degree softened, over the past eighteen months. Funding through the market was interpreted at the beginning of 1956 as selling any stock—even including the next maturity—at prices that were tailored down to the market. It is now interpreted as switching by the Government broker so as to place longer-dated stocks with investors. The Government remains a net seller ; it still refuses to contemplate a partial switch which would result in paying out money, and it much prefers to take in money. But to move the public into longer-dated stocks seems to be the first objective.

Lengthening the life of the funded debt, provided it is not accompanied by any strong market boosting, will normally succeed in curtailing the effective liquidity of the economy as a whole. But it will by itself do nothing to curtail the liquid assets of the banks, which exclude all permanent Government stock, however short. To tighten pressure on the liquidity of the banks it is necessary to reduce the supply of tender Treasury bills ; and other things being equal, that demands a net sale of stock by the Government.

The offer of £100 million 4½ per cent Conversion stock, 1962, must be judged in that light. The authorities have chosen a stock which, though technically just within the money market's range, is intended to be ultimately saleable to the banks. But they have also chosen a stock of which they already had a supply, so that demand from the banks, had it existed, could have been met. The presumption must be that the Bank knew when it fixed the issue that a large part of the £100 million must go "inside"—that is, into departmental hands. The issue was priced precisely at the market level with no obvious intention of forcing it up or down—though it happens that on two days this week it would have been possible for an operator inside the "house" to buy the old tranche a shade cheaper than the new issue. In the event the issue did find a demand from the public, though the statement after lists had closed that applicants for up to half a million received full allotment and larger applicants 63 per cent of their applications leaves it to be assumed that the departments must have taken some of it. The new stock started at the issue price on Thursday.

Such a result is in line with the modern conception of issuing Government stock. Issues are made not primarily to be sold to the public on the day when lists open, but to supply the Government broker with wares for gradual sale as opportunities occur. No exact correlation between maturities and new issues is necessary. The essential aim is that the Government broker should be able at all times to offer a reasonable selection of the longer-dated stocks to meet investment demand. And the fair deduction is that his supply of them is at present adequate.

The most important of all the changes in the form of the open market policy, however, is the increasing weight given to the opinion, held by those who are closest to the market, that it is possible to sell more and longer stocks on a reasonably good market than on a bad one, and that to force the market downwards by indiscriminate cutting of the Government broker's prices must defeat its own object. That argument is slippery, because its logical limit is that it is possible by skilfully forcing the market upwards to dispose of very large quantities of funded stocks—for a time. Forcing the market up would now be discountenanced, but funding is more successful if the market is not depressed.

Funding was difficult through much of last year when prices were being cut; it went well in December and the early weeks of this year when the natural recovery from the Suez anti-climax was allowed to run its course; it stopped dead in February when £300 million of 3½ per cent Funding stock, 1999-2004, was issued with the clear intention of curbing the market. It needs no great intuition to see that funding might be more difficult now instead of easier if a reduction in Bank rate had been made before or even just after the Government issue, instead of being still held as a carrot before the donkey. The same consideration may help to explain why the Bank has taken the trouble to explain the significance of the way in which the June maturities have been handled. It is not playing a strong hand because it expects the market to rise; it has to tell the world truthfully that funding through the market will continue. But on the home front it has to reckon with a pronounced preference by some institutions for equities and convertible loan stocks. A visible increase in the supply of long-dated stocks might have been indifferently received. To walk this tightrope requires courage. To lift a corner of the curtain that conceals their motives is a welcome move by the authorities.

Kings in Oil

"During 1956 we obtained from Kuwait, Iraq, Iran and Qatar, our main sources of supply, a total of about 49,500,000 tons [out of 50,000,000 tons] of crude oil."—MR. N. A. GASS, BRITISH PETROLEUM.

"The Group, as you know, operates in virtually every country of the free world. It has two parents of different nationalities, and it is therefore by structure as well as by the character and extent of its business completely international."—LORD GODBER, SHELL.

THESE two quotations come from the reports of British Petroleum and Royal Dutch/Shell for 1956. One is matter of fact and bound by the limited political and economic horizons of the Middle East. The other ranges further and is as conscious of the Caribbean as of the Persian Gulf. Any comparison of these two oil giants must begin with their size. Last year the sales proceeds and other income of Royal Dutch/Shell topped £2,321 million, more than treble the sales proceeds and other income of British Petroleum—£732 million. The net income of Royal Dutch/Shell—£179½ million—is also more than treble British Petroleum's net income of £53 million.

British Petroleum, which towers above Royal Dutch/Shell in the Middle East, is dwarfed by it internationally. That is most clearly revealed in a comparison of crude oil production at the head of the next page.

The comparison does not end with production. Royal Dutch/Shell markets its products virtually throughout the whole of the free world; British Petroleum, strong in Europe, Africa and the Commonwealth, markets practically nothing in the Western Hemisphere. But

Royal Dutch/Shell, operating a tanker fleet of over nine million tons deadweight, and having tankers on order of 1½ million tons, has put proportionately less of its resources into tankers than British Petroleum, which, with its associates, has a fleet of over 7¼ million tons and expects to add another 2 to 2½ million tons.

1956	Royal Dutch/Shell million tons	British Petroleum million tons
Middle East	28	49·5
North America	19	
South America	45	0·5
Far East	11	
Europe and other	1	
Total	104*	50·0

* Including supplies received under long term contract.

It was easier for Royal Dutch/Shell to adapt itself to the re-routing of supplies after the Suez crisis than it was for British Petroleum. The two chairmen put the contrast in bold relief. Lord Godber says:

> The impact of this event—confined as it was to a limited area—was insufficient to reduce in the last quarter the rate of increase in our trade established for the world over the preceding period of the year, throughout which it was gaining impetus.

Mr Gass has a rather different emphasis:

> The increase over the preceding year was 11 per cent, or 5 million tons . . . and thus was less, by 1 million tons, than the 6 million ton increase attained in 1955. This is attributable to the effects of the Suez crisis; prior to this, we were expecting to achieve in 1956 an expansion of 8 million tons, or 17 per cent.

The effects of the crisis are not yet spent. But while Mr Gass speaks of "adverse conditions" affecting results in the first six months of this year, it will not be surprising if the first quarter's results of Royal Dutch/Shell make a strong showing. The most spectacular contribution to European supplies after Suez was made by the increase in production in Venezuela, achieved principally by the Shell group. There the group's production is now running at about 50 million tons of crude oil a year; that output, making up about one-third of total production in Venezuela, is as big as British Petroleum's entire production in the Middle East.

The enforced switch to Western Hemisphere crude oil supplies, obtainable only at higher prices, has swollen the operating expenses of both groups. During 1956, the expenses of Royal Dutch/Shell rose by 15 per cent, and in the last quarter of the year its shipping expenses were no less than 50 per cent higher—an increase that could not all be immediately recovered from consumers. But, unlike British Petroleum, Royal Dutch/Shell, as a Western Hemisphere producer, has been receiving as well as paying these higher prices; for it, a shut down in any area has compensating adjustments elsewhere. Indeed, in 1956, no less than 57 per cent (against 53 per cent in 1955) of the net income of Royal Dutch/Shell came from its operations in the Western Hemisphere.

Last year British Petroleum spent £86 million on capital account, twice as much as in 1955. Royal Dutch/Shell spent £388 million, £55 million more than in 1955. The figures are not directly comparable. The capital expenditure of Royal Dutch/Shell includes that made by associated companies, in which the group has not more than a 50 per cent interest; that of British Petroleum relates to the parent and its subsidiaries alone. The Royal Dutch/Shell figure also includes expenditure on exploration charged to income; the British Petroleum figure does not. British Petroleum, which produces more than it can market through its own outlets, devoted less than one-third of its capital expenditure to production and exploration. Royal Dutch/Shell, more dependent on outside purchases of crude oil, allocated over half its programme to that end.

British Petroleum's contracts for further capital expenditure are put at £120 million: but this estimate looks beyond the current year and includes £88 million for shipping. Neither giant makes a firm estimate of the cost of its 1957 programme, but if the size of the Royal Dutch/Shell programme is the same as last year the cost is likely to be near £400 million. Both groups will have to rely largely upon ploughed-back profits to meet these costs. But recently both

Shell Transport (40%)	443,315	499,493

have turned to the capital market for help, particularly in their arrangements with the banks and insurance companies for financing the building of new tankers. To finance the exploitation of its new Venezuelan concessions, Royal Dutch/Shell has arranged to borrow $150 million at 4¼ per cent for four years from two New York banks.

The reliance of both giants on self-financing is seen in the fact that Royal Dutch/Shell distributed less than a quarter of its net income to the two parents and British Petroleum less than one-third of its net income to shareholders. For last year ordinary shareholders in "Shell" Transport and Trading did receive a higher dividend—the tax-free rate of 3s. 9d. per £1 unit being maintained on a capital increased by the 25 per cent free scrip issue. The directors of British Petroleum were content to leave the tax-free ordinary dividend unchanged at 3s. per £1 unit. With the £1 units of "Shell" standing at 181s. 10½d., and those of British Petroleum at 146s. 9d., the gross dividend yields offered by the two stocks are within a few pence of each other—at just over £3 11s. per cent.

Long-term investors look beyond current dividends and yields, and they see that the future development of both groups will be partly determined by the success of their exploration programmes. Royal Dutch/Shell continued to put the emphasis upon the Western Hemisphere; of the £86 million spent by its subsidiaries, about £37 million represented the cost of new concessions—mainly in Venezuela (the first offered by the Venezuelan Government since 1945) and the group has already submitted bids for further concessions to be granted by that government this year. But both giants are casting their nets wide; and the growing scope of British Petroleum's programme should lead to a less than absolute dependence upon the Middle East.

The world's lowest cost oil, however, is in the Middle East and the greater part of the continued increase in world demand for oil can be met economically only by Middle Eastern supplies. Both groups have equal interests in Iraq Petroleum, but British Petroleum is nearly three times as big as Shell in the Iranian consortium, and produces half of Kuwait's prolific yield. Royal Dutch/Shell's smaller share of Kuwait oil, which amounts to over half of all its Middle Eastern supplies, comes from its long-term contract with Gulf Oil. If Middle Eastern politics allow British Petroleum to exploit its Middle Eastern reserves, it stands to gain more than does Royal Dutch/Shell. If not, then the diversity of Royal Dutch/Shell will tell.

Building Societies' Bare Balance

The building societies go to their conference at Eastbourne feeling that the arguments against immediately following money rates downwards are even stronger than they were against following them upwards

NEXT week, in the bracing air of Eastbourne, leaders of the building society movement will discuss their problems. They will assemble to a Gilbertian state of affairs. Mr Bentley's welcome election to the Halifax society's board means that the Association exchanges an independent chairman for a chairman from a society that has resigned membership; they will elect their friendly competitor enthusiastically. They will face an unusual situation when the voting shows whether Mr Herbert Ashworth, general manager of the Co-operative Permanent, has secured election to the Council. By common consent he is one of the ablest men in the movement, but the Co-operative already has one man on the council, and it would be unusual to elect a second. They will face a pleasing occasion when the "Sir Harold Bellman cup" is presented to the Bristol and West society for the best produced accounts of the year from a member society. Discussions about the possibility of amendments to building society law will continue in the appropriate subcommittee. The Co-operative Permanent and probably some other societies would like to be able to do business in overseas countries including the Isle of Man and the Channel Isles, and that would make it almost essential also to allow the societies to have subsidiaries. But an early outcome to these discussions is scarcely to be expected.

A silent guest will be present at all these proceedings, whose presence will be keenly felt however the discussions go. This important gate-crasher is to be found in the shaded strip on the accompanying chart; he is the man who provides the net inflow of money. Investment in the societies recovered smartly towards the end of last year; at last the facts were faced, the rate for new mortgages was put up to 6 per cent, and the rate for shareholders' money to 3½ per cent net (equal to about £6 1s. 9d. per cent with tax at the standard rate). But that expansion of funds has continued only slowly. The 90 per cent sample of the movement shows that net new investment in the first quarter of 1957 was £30.7 million compared with £28.1 million in the previous quarter and £23.0 million in the first quarter of 1956, but nearly the whole increase compared with a year earlier was in the Halifax Society now quoting competitive rates. So most societies could lend far more on good mortgages at 6 per cent—if they had the money to lend.

"How on earth," they ask themselves, "can we be expected to lower our rates with the next fall in Bank rate when we cannot meet the demand for mortgages at present interest rates?" That is a fair point; so is the next. "How can we reduce the rates on share

investments when the current issue of savings certificates yields about 7¼ per cent if held to maturity and when the premium bonds are skimming about £2½ million a month from just the sort of savings that might otherwise have flowed into building societies?" To most building society men the answer is clear. They know that Bank rate may fall another half per cent any week (making one per cent since building society interest was last raised), and they intend to do nothing immediate about it. There is evidence that outside the association the Halifax is thinking along different lines. It already charges its old borrowers (who are naturally the majority) only 5¼ per cent. If it decided once again to pay lower share interest than the others it would stem its own generous inflow of money to the other societies' benefit.

* Approximate: the Registrar's figures will be published on Monday.

To decide in effect to disregard Bank rate will be bold. Some would argue that it will be foolhardy. The societies were not happy pulling against a rising Bank rate in the previous two years. The table and the charts show the consequences of tardy action. The inflow of new money for investment declined and withdrawals rose. The societies did not jeopardise their financial stability; liquidity was fully protected by restricted lending. But the supply of money was allowed to dry up and the demand for mortgages to pile up. This year, if they have to pull against a falling Bank rate, the societies might have to meet the reverse of the problems of 1955 and 1956—too many investors and too few borrowers. Their liquid funds would pile up at a time when the yield on the government stocks, Treasury bills, and local authority loans in which liquid funds have to be invested is falling. There is no sign of such conditions yet.

The societies have defended and even increased their liquidity through the two years of dearer money. The ratio of investment holdings to total assets, 14.9 per cent at the end of 1954 was allowed to drop to 14.4 per cent in 1955, but was brought back strongly to 15.2 per cent in 1956. The association's sample showing liquidity of 14.6 per cent at the end of March, compared with 14.9 per cent at the end of December, suggests that there has been some decline since. True liquidity naturally is not exactly reflected in these figures. Most societies do not write down their investments to market value, and therefore most of them last year (the Halifax was a notable exception) had some depreciation that was not made good. They had good reason during much of 1956 for keeping liquidity high. Withdrawals by investors were high and the societies had to hold ample liquid funds to meet them. Moreover, through most of the year it was not bad business to be liquid. Before the summer increase share interest stood at 3 per cent, which grossed up at the composite rate of 5s. 4d. in the £, cost the societies £4 1s. 1cd. per cent. Treasury bills and short-dated government bonds then yielded more than the cost of servicing the money. Now with share interest up to 3½ per cent net (costing the societies £4 15s. 5d. per cent, and Treasury bills yielding around 3¾ per cent), the incentive is strongly in the opposite direction. And those who care, as they should, about the current value of the liquid funds that provide the primary security for their shareholders and depositors, are being forced to recognise that fluctuations in gilt-edged holdings can inflict a heavier loss than is ever likely to be suffered on carefully chosen mortgages. The societies are not likely, if they can help it, to allow their liquid funds to pile up beyond what they regard as a reasonable safety margin.

Six per cent is historically a rather high rate for mortgages and most societies—even those who proclaim most strongly that there will be no immediate change, would probably like to see it lower. When it does come down, the intention is that the whole interest structure shall move as far as possible at the same time. On the upward moves in interest rates that carried owner occupier mortgages up from 4½ per cent to 6 per cent and share interest from 2½ per cent net to 3½ per cent net in two years, much had to be given away. The moves were left too late; and share interest had to be moved at once while old borrowers had to be given proper notice. Often they were given long additional grace—indeed, old borrowers from the Abbey National started paying 6 per cent in March this year, and those of the Woolwich Equitable in April. By that time, 5½ per cent Bank rate, the visible cause of the increase, had already disappeared.

The societies have no great margin between income

and outgoings (they hate the word profit because any surplus is carried straight to reserve, and they resent having to pay profits tax on it), and they cannot contemplate a reduction in mortgage charges until they feel strong enough also to reduce share interest. Among the fifteen biggest societies management expenses per £100 of mortgage assets range from 12s. 3d. in the Provincial to 18s. 1d. in the Co-operative Permanent. Expense ratios are not noticeably rising, but the margins between income and expenditure are small—in the region normally of 6s. per cent. And they really ought not to fall below some such figure if reserves are to be built up. The recommendation from the Association in favour of a five per cent reserve ratio has never been revoked, but of the fifteen largest societies only six (none of them in the first four) can now show it. The margin from which reserves can be built up was squeezed further last year, when the composite rate of tax—intended to represent the effective tax rate of the average building society investor—jumped from 4s. 10d. to 5s. 4d. in the £. This year there is the risk of another small rise. Naturally when share interest rates can be reduced the societies will have less tax to pay on behalf of their members. But before that can happen the shaded strip on the chart grows fatter.

BUSINESS NOTES

IN THE MARKETS

Investors Still Buying Equities

INVESTMENT markets have been irregular but the familiar pattern of a rise in industrials and a marking of time in gilt-edged stocks persists through the irregularity. *The Economist* indicator rose from 218.1 to 221.9 in the week ended May 8th, and for the first time since it was started its yield has fallen below 5 per cent, to 4.98 against 5.03 per cent. The *Financial Times* index of Government stocks shows a net fall over the same period from 87.05 to 87.00. The net change conceals the fact that gilt-edged stocks enjoyed a spurt covering the issue of the prospectus for the issue at £99 of £100 million 4½ per cent Conversion stock 1962; the index in fact touched 87.36 on Monday. The market pattern is typical of current thinking by investors. Many of them are inclined to move into industrial ordinary shares and industrial prior charges at the partial sacrifice of their portfolios of gilt-edged as a matter of policy that will not be deterred by evidence of cost increases that seem likely to cut further into profit margins. Those very cost increases are the substance of inflation. But some investors also feel that the attitude of the controllers of monetary policy towards the gilt-edged market is itself changing.

That is the problem that operators in the market are now pondering. While they ponder the market, though not active, is behaving reasonably well. Not only was the response to the Government issue better than had been expected but the two-legged East African 5¾ per cent issue at par that preceded it was a marked success. For the Railways and Harbours issue applicants for up to £500 received full allotment, while applicants for from £600 to £1,000 got £500 stock, and larger applicants received 30 per cent of their applications. For the smaller telecommunications issue applicants up to £300 got £100, from £400 to £600 the allotment was £200, from £700 to £1,000 it was £300, larger applicants again receiving 30 per cent of their applications. An opening premium of around ¾ was established.

Naturally much of the steadiness of the market stems from the speculation that a reduction in Bank rate will have to come in the course of time. In the discount market bill prices continue to be levered up by stagging in anticipation of a reduction. The rate at which the tender Treasury bills were allotted last week fell below 3¾ per cent for the first time in two years and at £3 14s. 9.00d. per cent it showed a drop of 3s. 6.43d. per cent on the week. That leaves Treasury bill rates so far out of line with the 5 per cent Bank rate that it can be claimed that a half per cent reduction is already fully discounted there.

Central African Airways Corporation

An Apology

In a Business Note on page 587 of *The Economist* of February 16th, 1957, the Central African Airways Corporation was referred to as "the Central African Government's insolvent airline." We wish to make clear that this statement was untrue and, in withdrawing the imputation of insolvency, to express our apologies and regret.

EXPANSION, ONCE MORE?

What We Can Afford

DURING the "past year or so," as the Chancellor told industrialists and trade unionists at the National Production Advisory Council on Industry last week, "we have deliberately held economic expansion back": now, remaining cautious, it is prepared to let output rise again.

> Now it may be about to rise and if certain conditions are fulfilled—I say if—then it can rise without risk and with benefit to the nation.

The prolonged pause, he was able to show, had improved the balance of payments by moderating exceptional imports such as coal and steel, while labour was rather easier to get; moreover, there had been a large increase in industrial capacity. But "if we are to look forward without anxiety," both exports and productivity would have to rise.

Mr Thorneycroft emphasised the danger of beginning "another 1955." In the years 1948-56, he said, every 1 per cent increase in industrial production had brought about a 1 per cent increase in imports: so re-expansion would *mean* higher imports, and a substantial proportion of the extra output would have to be exported to pay for them. The proportion of manufacturing output exported last year was back to 30 per cent, a higher proportion than had been attained since 1952. The Chancellor singled out motor vehicles, the rising exports of which this year have especially encouraged him: "I would urge the motor industry—and other industries—not to be deflected from putting exports first by any improvement in the home market." It would also be particularly necessary, this year, to raise productivity:

> In many parts of industry it should be possible to ensure that higher wage rates are offset by higher productivity: in some it may be practicable to do better and bring prices down. This is an important object to aim at, for in other parts of the economy it is not always reasonable, on past experience, to expect productivity to rise as fast as wages.

The Chancellor recognised that the economy is now well off his predecessor's plateau; he hoped merely that the inevitable increases in price from the latest wage concessions could be kept as few as possible and offset elsewhere.

In part his counsels were inevitably those of perfection. The reason that the proportion of manufacturing output exported rose last year, for example, was largely that total production fell while exports did not. There are strong signs, at least, that demand for durable consumer goods is again in the early stages of a boom. To increase car exports as much as home demand for motors seems likely to rise when petrol rationing goes, for example, will be a huge task—and in comparison with home sales not a particularly rewarding one for the makers. But the dose of disinflation administered in 1955-56 has completed its course, to some extent effectively. The government has not chosen re-expansion deliberately this year, as it chose restriction in late 1955: it is accepting the phenomenon, rather gingerly.

FOREIGN EXCHANGE

Agonies of the Franc

STERLING made no response to last week's gold and dollar figures. New York has been less inclined to buy, allowing the commercial demand for dollars in London has depressed the sterling rate. In the official market sterling has fallen from $2.79 7/8 at the end of last week to $2.79¼, while transferable sterling, also sold from New York in the latter part of this week, has fallen from $2.77¾ to around $2.77¼. Overseas merchants requiring sterling seem still to be living from hand to mouth. Peak seasonal commercial demand for sterling should by now be past, and the talk of an early reduction in Bank rate has led to some short sales. In the forward markets, however—particularly forward dollars, Swiss francs and German marks—the anticipation of still lower interest rates in London has been reflected in a slight narrowing of the discount on forward sterling.

The agonies of the French franc, which remains at the bottom of its permissible range of fluctuation against both the German mark and sterling, remain the chief feature of the foreign exchange market. The sterling rate has been at Frs. 987 to Frs. 987.35 throughout the week. It is in the forward market that the main evidence of weakness has been apparent. The three months discount against sterling has widened to Frs. 15. The franc's underlying weakness was reflected in last month's record French EPU deficit of $108.2 million. This was probably a truer figure than the previous month's deficit of $93.7 million, which was kept down by raking into the Bank of France and, therefore, into the EPU settlement the surplus foreign exchange balances of the French commercial banks. That nest-egg has been raided, and few nest-eggs, except the gold reserves of the Bank of France itself, remain.

AUSTRALIA

Reserves Resurgent

AUSTRALIA is now one of the sturdiest members of the sterling area. Thanks mainly to a larger wool clip and an average rise of one third in wool prices compared with last season, Australia's external reserves have recovered impressively. The sterling and foreign exchange balances of the Commonwealth Bank rose by £A48 million to £A441 million in the month ending April 24th. Since the beginning of this year its balances have shot up by £A113 million. If the sterling and foreign exchange balances of the commercial banks are included Australia's total exchange reserves now exceed £A500 million.

The recent acceleration is partly attributable to seasonally heavy shipments of wool, but the import restrictions of last year must be given part of the credit. While the recent relaxation of those restrictions is fully justified, the Australian balance of payments can swing so sharply that it might be rash to count too much on the persistence of the latest improvement.

METALS

Lead and Zinc Fall Further

METAL prices remain weak. The mounting surplus of zinc in the United States, and fears that the government will stop buying it for the stockpile have forced American producers to cut the price by 1½ cents to 12 cents a lb (£96 a ton); prices in London have fallen further, helped by heavy selling by American interests. On Thursday it was learned that the United States price of lead had also been cut, by half a cent to 13 cents a lb (£104 a ton). Prompt zinc closed at £83 10s. a ton in London on Thursday, about £16 lower than a fortnight ago, and lead closed at £96 a ton, about £15 lower than a fortnight ago. Tin prices have dropped by £16 to £763 a ton for cash metal, and copper has been held up by buying which seems designed to keep the price close to £240 a ton, the fixed price charged by the Rhodesian Selection Trust copper companies. Though prompt supplies of zinc still command a premium over forward zinc, the prompt and forward quotations for each of the other three metals are now almost identical. The open market prices of two other metals, nickel and aluminium, have also weakened recently. In the last few months the open market price of nickel has

fallen by nearly £800 to about £1,450 a ton (cif Continent) and it is doubtful if consumers in this country would pay more than £1,300 a ton. Though some Canadian producers are selling part of their output at premium prices the bulk of free world production is sold at the price set by the largest producer, International Nickel Company of Canada. This company raised its price last December by £81 to £600 a ton (delivered UK) and there is no lack of demand for nickel at that price.

The fall in the open market price of nickel reflects a slight increase in supplies for civilian use, thanks to shipments diverted from the United States stockpile, and possibly anticipation of a further improvement in supplies in the future. But a really big increase in supplies is unlikely before 1960-61, when the producers may be hard pressed to find outlets for all they can produce. The chairman of International Nickel has forecast that by 1961 the free world will be able to produce between 650 and 675 million lb a year, about 50 per cent more than in 1956. Assuming that nickel is not taken into government stocks in 1961 and that defence demands are no larger than at present, the 1956 rate of civilian consumption would have to increase by over 75 per cent to absorb that production. The challenge is not, perhaps, as naked as that forecast implies, for producers should be able to deliver to the American government's stockpile a part of any surplus resulting from their expansion programmes. But the need to expand consumption of nickel in the years ahead goes far to explain the company's policy of price stability.

Aluminium in Surplus

PRODUCERS of aluminium are facing a surplus now. In Europe the surplus is small, but the open market price has dropped to about £185 a ton cif Continent; this is about £50 below last year's peak and it is also below the price of £200 a ton cif (£197 delivered UK) charged by the Aluminum Company of Canada. Russia now seems to be the main supplier of the open market. Demand in Britain suffered from the recession in the motor car and other durable goods industries, and the outlook in these industries

HOW METAL PRICES HAVE MOVED

	January 2, 1956 £ per ton	January 2, 1957 £ per ton	May 9, 1957 £ per ton
Tin, cash	834	777	763
Copper, cash	396	268	238
Lead, prompt	121	117	96
Zinc, prompt	102	101	83
Aluminium	179	197	197
Nickel	519	600	600

has now improved. The steep fall in copper prices must also have encouraged a switch back to copper from aluminium for certain uses. As a conductor of electricity, however, aluminium is still claimed to be the cheapest metal. Producers here and in North America are not greatly disturbed by the surplus. They are confident that the assurance of adequate supplies will assist the development of new markets and the expansion of existing ones.

The president of Aluminium Limited, the parent company of Alcan, said recently that since the end of the year stocks had increased by 10,000 tons to 38,000 tons, equivalent to about three weeks' production from its Canadian plants. The company's big expansion programme was flexible, and it was prepared to adjust the rate of expansion in the light of market and other conditions that might develop. The surplus in the United States is substantial, but in this metal, too, producers have a friend in the American government. Under the terms of their agreement for expanding production American producers can deliver surplus metal to the stockpile, and have recently "declared" a surplus of 200,000 short tons for 1956.

STEEL DELIVERIES

Consumption Rises Again

EXPERIENCE last year, when total output in the "metal-using" industries declined slightly in spite of a significant rise in the output of capital goods, showed that capital investment does not take as large a part of the total output of British engineering as might have been supposed. The same looks to hold good for steel consumption, of which investment is often guessed to account for an even larger proportion—roughly half. During last year, after a peak in the spring, the "apparent consumption" of steel—that is, the total deliveries minus the reported changes in consumers' stocks—looks to have declined; by the end of the year it was about 4 per cent lower than a year before. But in the first quarter of this year, with some revival in the output of the domestic equipment and car trades as well as a continued high level of capital goods output, it seems to have turned upwards again. In the first three months, the Iron and Steel Board estimated this week on the basis of preliminary estimates from their quarterly stock census, steel consumption was markedly higher than in the previous quarter and approaching the high level of last spring.

With home demand softening in the last half of 1956 and new capacity still coming in, British steel producers disposed of their extra steel by taking somewhat larger export orders; meanwhile, the reduction and cancellation of import orders earlier in the year was steadily reducing the very high rate of steel imports. By the first quarter of the year the "export surplus" of steel had very considerably increased; with imports down to less than half the rate of a year before and exports nearly 20 per cent up, Britain exported about half a million tons more than it imported. The import rate is now down to roughly 800,000 tons a year; but the board comments that rising demand in Britain "is likely to check for a time the rise in the export surplus and will also call for the maximum increase in steel output in this country."

BANK LENDING POLICY

The Straight and Narrow Path

TWO years ago Sir George Erskine, who is a merchant banker of distinction and a leading force behind the denationalisation of the steel companies, caused a sensation in his presidential address to the Institute of Bankers by suggesting to his colleagues in the big deposit banks that they should revise their classical tenets and meet the needs of the time by providing long-term and even risk capital for industry. This week Sir George's successor at the Institute, Mr T. M. Bland of Barclays, has devoted his presidential address to a riposte in the form of an uncompromising re-statement of the orthodox point of view.

Mr Bland sees no reason why the banks should disregard the classical principles, and no means whereby they could safely do so. "Safety, diversity and liquidity" must remain the precept of lending policy. Bankers should be bankers, providers of trade and other short-term credit, leaving the task of providing medium and long-term capital to the institutions engaged in that job. He recognises that in certain spheres, notably the export of capital goods, the lack of adequate alternative facilities makes it desirable for the banks to take on some commitments running into years; but he has some doubts about the recent essays in tanker finance—"I can never bring myself to regard an advance for eight years or more as good banking." The national interest dictated that the banks break their rules and step in to fill this particular gap in financing facilities—but Mr Bland is anxious that such long-term financing shall be recognised as exceptional.

URANIUM

Cheerful View in South Africa

INVESTORS in the South African uranium industry may find comfort and will certainly find information in the speech of Mr R. B. Hagart, who is joint deputy chairman of Anglo American Corporation and one of two industry representatives on the South African Atomic Energy Board. In a recent address to the Institute of Mining and Metallurgy he expressed his confidence that there will be a strong demand for uranium after the contracts with the British and American government expire in 1964-66 and that South Africa will be a highly competitive supplier. He did not try to guess what the future price of uranium might be, but believes that it will not be unacceptable to South Africa. The current world price of uranium oxide is between 70s. and 80s. a lb, and the American government is offering local producers $8 a lb (about 56s.) for forward contracts. He said:

> Although the average grade of our ore reserves is lower than that of America or Canada, most of our mines have the great advantage that they are producing uranium oxide as a by-product of gold. No mining or crushing costs have to be charged to uranium production and only actual treatment costs in the uranium plants are charged. In America and Canada, however, all mining and crushing costs, as well as treatment costs, have to be charged against revenue from the sale of uranium. For these reasons our average grade of 0.67 lb of uranium oxide per ton is economic and profitable, even against the average grade in the United States of 5 lb per ton and of 2 lb per ton in Canada.
>
> By 1964-66 the entire cost of the present uranium plants will have been paid for out of revenue received under the present contracts. No capital costs, other than for renewals and replacements to plant, will thereafter be necessary. With assured reserves of ore far in excess of our milling capacities, we will be able, if necessary, to offer long-term contracts and assurances of delivery. We should thus be highly competitive.

When the present programme is completed over £66 million will have been spent on uranium and ancillary plants, said Mr Hagart. The contribution of uranium to the South African economy was already substantial. Output of uranium oxide in 1956 was 4,400 tons and exports of oxide were valued at somewhat less than £38 million. Gross profits in 1956 were about £25 million. When all the plants were in full production the annual value of uranium oxide exports would be nearly £50 million and the net value (allowing for payments of principal and interest on the American and British loans) would be over £40 million.

COAL OUTPUT AND COSTS

What Price the Bonus Shift?

IF it were not for having turned the bonus shift into an addition to the miners' daily pay, the National Coal Board by now would probably be thinking of a rise of 4 million tons in this year's output: as it is, nobody knows quite how much to expect. In the first 18 weeks of the year the mines produced 1.8 million tons more coal than in the same period of 1956: even allowing for the loss of slightly less tonnage in holidays, for the better health of miners during this mild winter, and for some slight decline in manpower from its current peak level, some experts think this might imply an increase of 1½-2 per cent in deepmined output. On the other hand, in bargaining about the bonus shift at the beginning of the year the board was alleging that to abandon this would cost 4 million tons of output a year. It now hopes that guess may have been too high: but the abandonment of this financial incentive to attendance might well reduce the industry's net increase in output this year to not much more than 2 million tons. In a year when "effective working time" may be going down, even that would be creditable.

The costs of output rose another notch last week with the increase of 5 per cent in minimum day wages for miners, with slightly more for craftsmen and winding-engine men. At face value, this would cost about £10 million a year: but by the time corresponding increases spread by local negotiation to the industry's more highly paid men on piecework, the cost might reach twice as much. The board seems likely to have earned a substantial surplus after paying interest on its operations in 1956 and high spring output should have improved costs: but these higher wages for nine months of the year, plus the extra costs it is now incurring for mining subsidence, will thin down any margin it is now earning. After this summer's exceptional bargain prices—a pound a ton down—it seems likely that the price of coal may rise again.

MOTOR INSURANCE

Make the Bad Driver Pay

MOTORISTS who are as "accident prone" as the average can hardly cavil at the increases of up to a third in motor car insurance premiums announced by the insurance companies last week. Rates have risen on the average by less than 50 per cent since 1938; during the same period the cost of settling claims has soared, and is now some three times as high as before the war. Company after company has reported a substantial loss on its motor account, and only the imposition of petrol rationing, which diminished both road traffic and accidents, enabled the introduction of this inevitable rate increase to be postponed until next July.

Unitary construction of bodies, extravagant chromium-plated fronts, multi-tone paintwork, and the disappearance

of the protecting running board, all tend to turn what would have been an inconspicuous dent in a prewar car into a major repair job on any recent model. This trend shows in the rates : increases for postwar cars are much stiffer than on old cars. But only a radical change in the policy of the motor manufacturers—and the garage trade—could do much to arrest the rise in the cost of repairs. More adequate roads might help to reduce accidents slightly, although it is significant that in many parts of the United States more fatal accidents (which produce the largest claims) occur through high speeds on good roads than through congestion on bad ones.

Careful drivers who seldom or never have an accident have a more justifiable grouse. The careful driver, generally entitled to a no-claim bonus of 30 per cent, will find that his premium does not rise as much in absolute terms as does that of the man with a bad accident record. But it still seems hard that the percentage rise in the net premium paid should be as high in the one case as in the other. Could this be avoided ? The insurance companies might get the increase in premium income for which they are now budgeting by putting rates up still more, but increasing the maximum no-claim bonus to 35 or 40 per cent (now granted only in very rare cases) at the same time. The higher the reward for a clean record, the more the motorist would be inclined to protect it by more careful driving or by footing the bill for more small claims himself.

The rise in claims might also be checked by requiring the motorist—instead of leaving it as an option, as it now is in most cases—to bear the first £10 or £20 of every claim himself. By moving in the opposite direction in July, and in fact reducing the discount allowed where a policy holder elects to bear the first £10 himself, the insurance companies are going to extract more income only at the probable cost of more claims. It might take a Canute to try and stop the average cost of motor insurance from rising —and British rates are still far below those on the Continent and in the United States. But more of the burden should be put more squarely where it belongs—on the motorist who causes an accident.

STERLING AREA MARKETS

Britain's Shrinking Share

ONE reason for the continued decline in Britain's share of world trade is that it is losing ground to competitors in traditional and partly protected markets in the sterling area. An analysis published in the *Board of Trade Journal* shows that in 1956, total imports into the overseas sterling area from manufacturing countries went up by five per cent ; imports from Britain, however, did not increase, and its share of the market declined. Imports from Germany increased by 21 per cent and imports from other OEEC countries by 10 per cent. The United States, the second largest supplier, and Japan also won larger shares of the market. Though the analysis is directed at trade in manufactures the import figures also include primary products and shipments under special aid programmes. These goods, however, are important only in trade between the United States and India and Pakistan, and changes in the value are unlikely to affect the calculations significantly.

Britain held its share in the contracting markets of Australia and New Zealand (which together took over one quarter of Britain's shipments to the sterling area), and in India and Ceylon. In all other markets Britain's share shrank. Germany and the other OEEC countries together were particularly successful in expanding their sales to South Africa and India, and rapidly enlarged their foothold

IMPORTS INTO OVERSEAS STERLING AREA

From	1956 £mn.	Change on 1955 £mn.	Change on 1955 %	Percentage share 1955	Percentage share 1956
Britain	1,475	+ 2	0	53·6	51·0
Germany	232	+ 40	+21	7·0	8·0
Other OEEC	490	+ 46	+10	16·2	16·9
United States	467	+ 35	+ 8	15·7	16·2
Japan	228	+ 22	+11	7·5	7·9
Total of above	2,893	+146	+ 5	100·0	100·0
Total imports	4,532	+238	+ 6	...	...

in many other markets. The United States held its share in South Africa, and gained ground in Australia, Rhodesia, the West Indies and Malaya ; in India and other markets it slipped back. Japan gained ground spectacularly in the largely entrepôt trade of Hongkong and to a smaller extent in South Africa, India and Ceylon.

RAILWAY TRAFFICS

Advantage Lost

THE railway's gain in traffic from rationed road transport did not last for long. The shift back appears to have started early in March and though the Transport Commission has not yet compiled figures for the volume of its freight and passenger carryings in April, total receipts fell further still last month. Compared with last year the railway hauled only 2 per cent more freight tonnage in the four weeks to March 24th against nearly 8½ per cent more in the previous four weeks, though passenger journeys seem to have held up rather better. This comparison is made a little difficult by the exceptionally fine weather for the end of winter this year, particularly by its effect upon coal movements ; it also ignores what the present level of traffic might have been had the pre-rationing slide continued. To that extent straight comparison with 1956 probably underrates the improvement.

THE CHANGE IN RAILWAY TRAFFICS

(Previous year = 100)	Freight: Total receipts	Freight: Ton mileage: Total	Freight: Ton mileage: March.	Freight: Ton mileage: Minerals	Freight: Ton mileage: Coal	Passengers: Total receipts	Passengers: No. of journeys
1956 :—							
Jan.-Sept.	105·6	101·4	98·7	104·2	101·6	107·8	103·5
Oct.	97·9	95·7	94·7	99·1	94·6	104·2	103·9
Nov.	101·6	97·6	97·2	97·1	98·2	103·6	101·7
Dec.	104·3	100·1	103·7	98·0	99·0	111·2	110·6
1957 :—							
Jan.	110·7	103·1	110·1	101·5	99·9	122·2	115·3
Feb.	115·0	108·4	112·2	106·0	107·3	123·2	115·4
March	106·9	102·2	105·1	102·4	100·4	116·0	...
April	103·5	...	...	...	...	112·2	...

Passenger traffic was showing signs of picking up before the end of last year, both in number and length of journeys, and the Commission believes it stands a good chance of keeping a substantial slice of its recent windfall business, even though petrol rationing has not yet been formally abandoned. About freight traffic, it is less sanguine. But

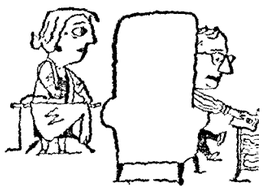
85 marks for Chemistry — the boy's doing well!

Yes, but I wish he wasn't quite so keen on Science.



Why? What have you got against Science?

I don't think it's the best course for someone who really wants to get on.

Nonsense! The scientist is going to be the key man of the future.

They're certainly not at present. The highest posts don't go to the scientists.

You're wrong, you know. This careers book from I.C.I. shows that the technical man has first-class opportunities with them. And not only on the scientific side — on the commercial and administrative sides, too.

Oh, a few good posts go to them, no doubt.

More than a few. 15 out of the 19 full-time Directors of I.C.I. are graduates in Science or Engineering.

Directors? That's a bit ambitious, isn't it?

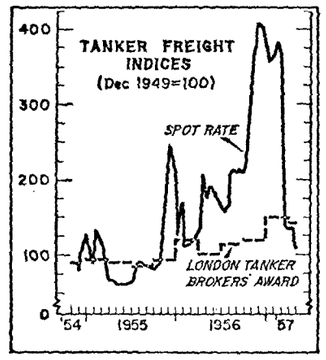
All right. Let me tell you this: of the men holding the 243 most senior posts, over 164 are graduate scientists or engineers.

Have it your own way! You always get the better of me in the end.

F

ICI

the goods vehicle petrol ration is now virtually at an end and the railways are still carrying traffic they would not have been doing before the Suez canal was closed, though by no means as much as the Commission is still trying to attract back.



However, the Commission's revenue has received a useful fillip. Total traffic receipts in the first sixteen weeks of this year are £20 million up on 1956—or roughly by 10 per cent. The railways' contribution to that is just over £14 million, with about £9½ million from freight and nearly £6 million from passenger movements; the switch in road traffic probably accounted for well over half of the £14 million.

TANKER FREIGHTS

Harder Times for Tramps

It now costs about a third less to charter a tramp tanker to bring oil from the Persian Gulf via the long route round the Cape than it did last October using the Suez Canal. Tramp tanker freights have dropped like a plummet since February, when owners were able to get Scale rate plus 340 per cent for their vessels for early loading on the two-way trip round the Cape. This was equivalent to about £18 a ton, and was not far below the peak price for tramp tonnage early last December. The current rate is as low as Scale plus 40 per cent, or roughly £6 13s. a ton, against the price of £8 18s. a ton (including canal dues) for the last tramp tonnage that used the Canal route. The cost of bringing oil from the Caribbean has fallen even more sharply. The current tramp freight rate from Curaçao to this country is equivalent to about £1 14s. a ton, against £7 3s. a ton last December and £5 14s. a ton in October.

But not much tramp tonnage has been booked lately for the Caribbean route. The oil companies are using their own or previously chartered vessels to bring most of the available supplies of oil from there, and they have also not needed to take single voyage vessels for other routes since February. Indeed at times their pooling arrangements have led to some surplus tonnage, which they have relet to other charterers. Their absence from the market has been the prime reason for this sharp depression in tramp freights, but the mild weather and the end of the winter programme of fuel oil imports to the north eastern ports of the United States have also contributed.

The fall in tramp freights has not cut the cost of this country's imports of oil to any marked extent, though it has brought them to a level when it could soon be uneconomic for some of the older tankers to continue working. Normally tramp tankers chartered for single voyages carry about a tenth of the world's oil movements, but the proportion is much lower than that now. The award made every three months by the London Tanker Brokers' Panel—a weighted average of the freights at which all the world's oil is being moved—is a better guide to the freight element in oil import costs. The last award, on April 1st, showed a drop of 7 per cent, but this was still 19 per cent higher than on October 1st last year.

DISCOUNT HOUSES

Sun after Storm

The three big houses in the discount market, the Union Discount, the National Discount and Alexanders, all report for the calendar year, and for 1956 all showed a marked recovery from the buffetings inflicted by the onset of dear money in 1955. The four discount houses with accounting years ending on March 31st or early in April have naturally enjoyed an even sharper recovery. They have benefited from the sharp rise in bond prices in the weeks preceding the February reduction in Bank rate. While the discount houses have suffered some decline in their bill portfolios as a result of the strong outside competition, margins on financing the bills have been better than average (though they have come down somewhat with the fall in the bill rate); and on the increased holdings of bonds the market has enjoyed both running profits (compared with the losses suffered in the early phase of dear money when low coupon bonds had to be financed with money at the new and high rates) and substantial capital appreciation.

This favourable turn has transformed the look of the profit and loss accounts of each of the four houses. In 1955-56, Cater Brightwen, Jessel, Toynbee and Smith St Aubyn could show no true profit but only a "balance" drawn up after transfers from inner reserves. This year, the houses have been able to replenish these reserves—Smith St Aubyn states that inner reserves now stand at a record level—and to show buoyant net profits. Allen Harvey and Ross, which in 1955-56 (but not in the previous year) managed to show a profit after transfers to reserves now reports a substantial increase in profits and "the most successful year" in its history.

This house and Smith St Aubyn are increasing their distributions—Allen Harvey by again paying a 6 per cent final dividend on a capital increased by the two-for-seven free issue of February, so that the total distribution of 10 per cent for the year is equivalent to 11.7 per cent (against 10 per cent) on the old capital—and Smith St Aubyn by a straight increase in dividend from 10 to 12½ per cent. It has also (in company with Jessel, Toynbee) made a substantial addition to its published reserves. King and Shaxson, whose preliminary statement for the year to April 30th is published this week, also reports a big increase in profits, but an unchanged dividend. It is proposed to capitalise £75,000 from undivided profits in a one-for-three issue to shareholders.

ENERGY POLICY

"Stabilising Fuel Imports"?

One sentence in this week's report of Euratom's "Three Wise Men" (discussed in a Note on page 481) appears to summarise Britain's present energy policy with more brutal frankness than any official spokesman here has yet been prepared to use:

Britain's programme of six million nuclear kilowatts by

1965 is expected to stabilise fuel imports from 1960 onwards.

The three experts add that Britain now imports only 12 per cent of its energy requirements (against 22 per cent for the six nations in Euratom): in 10 years' time fuel imports here would have risen to 22 per cent without the nuclear programme. This seems entirely in line with last week's estimates by Mr Maudling of energy requirements in 1965 and how they might be supplied. On such official forecasting, Britain might in fact rely on imports for about 22½ per cent of home consumption of fuel by 1960: but if total energy consumption were to continue to rise while oil imports did not, that percentage would be a peak, and the proportion of imports would come back to about 20½ per cent in nine years' time. And within a "stable" level of oil imports, demand for motor fuel must be assumed to rise—implying that general industrial consumption of the black oils might correspondingly recede.

In a similar way, Euratom's experts suggest that the growth of total oil consumption in the six member nations might similarly be cut off after 1963. They would expect otherwise that these countries' fuel imports—oil and American coal—might double in the next ten years, reaching a third of total energy consumption. "Stabilisation" there might imply total oil and coal imports equivalent to about 164 million tons of coal in 1963, rising no more: increases in total energy consumption from then on would be supplied essentially by extra nuclear power. The experts take the position that Western Europe cannot support the economic growth it hopes for in future, with the expansion of exports that already implies, upon imported fuel. But between its conclusion that the extra energy must therefore come from nuclear electricity and the actual provision of 15,000 megawatts of nuclear capacity by 1967 yawns a considerable gulf of political decision, plus technical and economic achievement.

INDUSTRIAL RESEARCH

What Unilever Does

RATHER curiously, in the course of his recent lengthy discussion of research in industry in general and in Unilever in particular, Lord Heyworth did not disclose what the group actually spent on research. He justified this, not on grounds of discretion, but on grounds of intelligibility. The monetary measurement, he said, would be misleading, since research in the United States is "more than three times as expensive as in Europe"; he preferred to measure the Unilever effort in terms of eight research establishments employing nearly 1,500 people, plus another 750 or so in factories and small specialised groups, with 666 of them, 30 per cent of the total, qualified scientists and engineers. This is, indeed, a useful "real" measure of the group's research. Nevertheless, since the company appears fairly well seized of the "research rates of exchange," it ought to be able to give figures of cost, in Britain, Holland and the United States, and show what they really mean—adding to the usefulness of such an assessment, since cost is the yardstick by which research generally is most often measured. Lord Heyworth added, in monetary terms this time, that Unilever spends half as much on market research as on scientific research and development.

Clearly, the group does not deduce from the comparatively high cost of research in the United States that the effort might more economically be concentrated on this side of the Atlantic. "To carry on business in the highly competitive conditions of the United States," said Lord Heyworth, "it is practically essential to conduct one's research on the spot." Moreover, changes in the pattern of life in the liveliest industrial community on earth often later spread to other countries, and, recognising the importance of such changes to a group selling consumer products of its own kind, it seems sensible to Unilever "to locate a substantial part of our research effort in the country where change is to be observed in its most animated form."

Lord Heyworth touched on the difficulty of recruiting first-class scientists; in Britain, unlike America, he felt:

> industrial research appears as dark, unknown territory to the pure scientists who leave our universities: territory where they imagine that initiative and creative genius will be put in fetters, territory inhabited by hard-faced business men who have done well out of exploiting scientists and where the whole level of activity will be intellectually lower than in government or university research.

His second point, in particular, is a significant one. Whether or not scientists believe they would be exploited in industry by rapacious people, many of them undoubtedly do believe that they would be bored in industry by people who talk a different language: employed either on fiddling jobs or, if on engrossing ones, denied the chance to publish the results of their most interesting speculations. These are genuine, and beyond a certain point perhaps irreducible, disadvantages of industrial research. Against them, it can offer bigger teams, sometimes though not always more lavish research equipment, and higher pay—plus intelligent research management, though this itself involves an even more knotty problem of recruitment.

COFFEE

A Confused Market

THE coffee market is idle and confused. European importers, who bought heavily during the Suez crisis, have shown little interest in recent months and American buying has slackened; dealers there are well stocked and roasters are nearing the summer decline in consumption of coffee. Some Central American producers have introduced minimum export prices, withdrawn them, reinstated or reduced them and it is not clear what the existing minima are, nor how effective they are. Quotations for Brazilian coffee in Europe have become nominal owing to the uncertainty that surrounds the government's new registration rules.

Good quality Brazilian coffee is scarce and prices are steady at 54 to 55 cents a lb fob; robusta coffees have also held steady. But prices of mild coffee have declined, though they rallied this week on the news of the riots in Colombia. The Colombian coffee growers' federation is supporting the market by buying at prices that are above the current export price of about $70.75 per 50 kilos fob. That policy has been successful in past seasons, but this time pressure from other producers may hamper Colombia's subsequent efforts to dispose of its stock. Buyers in Europe are apparently confident that there is enough mild coffee until the new crops become available, and they are aware that supplies in future seasons may exceed consumption. This assumes that the weather will be favourable.

How well organized is YOUR transport?

By using BRITISH ROAD SERVICES' large and well-organized national facilities, you can be certain of the greatest co-operation and reliability.

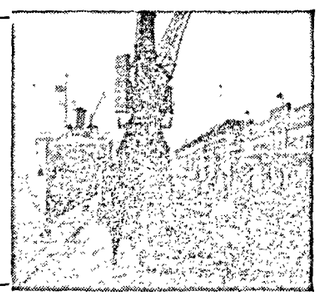
GOOD ORGANIZATION is the backbone of any business. No company can give first-class service unless it is well organized and served by skilful staff. In the road haulage field, British Road Services are outstanding in this respect.

Not only are they a nationwide concern equipped with vast, widespread resources and a massive fleet of vehicles of all kinds; not only are they staffed with experienced, enthusiastic men. *But all these advantages are closely knit to give you a highly-efficient, reliable transport service.*

How does this affect you?

It means that B.R.S. are flexible and adaptable. They can transport any load, of any shape or size, to any destination. They can provide the most suitable vehicle for your load. They can store your goods in B.R.S. warehouses and look after your distribution. And by means of their teleprinter service, they can link their business with *your business* — down to the last careful detail. Result? Speedy, reliable, economic services for you.

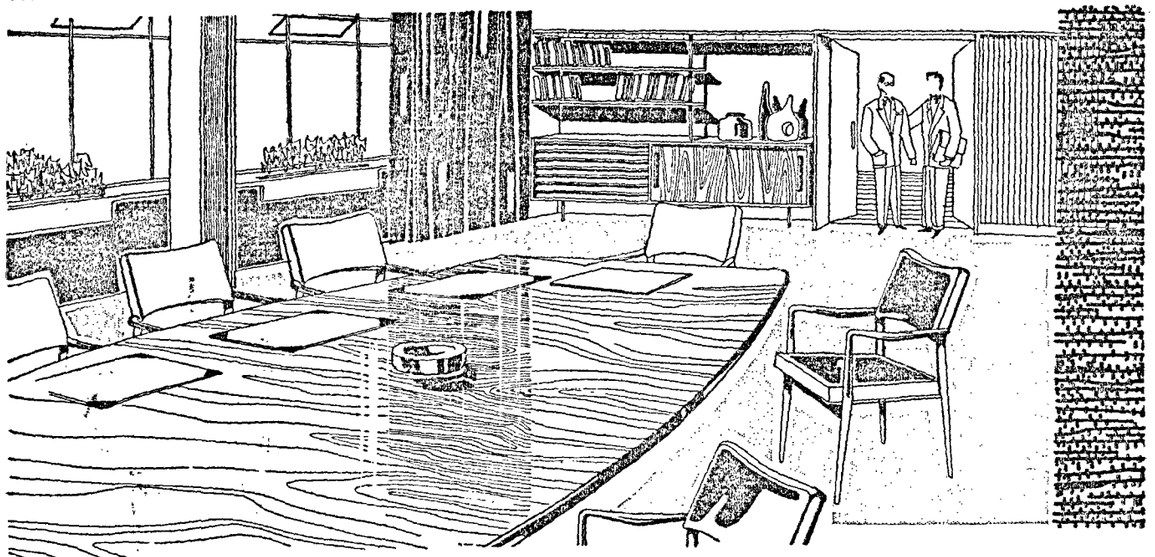
Nationwide responsibility



Being the largest carrier of goods by road in the United Kingdom is no light responsibility. But with their well-knit national organization, British Road Services are well geared to carry this responsibility. And now that fuel rationing has eased they are able, once more, to devote the whole of their resources to the service of trade and industry throughout the British Isles.

Keeping down costs

The wide experience of B.R.S. in the many ramifications of goods transport is available to you. They are eager to discuss with you the most efficient and time-saving methods, improved handling techniques and development of new ideas. By close co-operation B.R.S. can help you to economize. Just telephone your local man. Action will follow immediately.



Knowledge and experience

B.R.S. are thoroughly experienced in dock and airport procedures. With radio control and mobile dock offices they are well organized to carry out your normal and your most extraordinary transport requirements in these fields.

British Road Services Ltd

OIL ENGINES

Diesels by Rolls

ROLLS-ROYCE has been putting its entire range of oil engines on show this week at its works at Sinfin, Derby, for the first time since its oil engine division was set up and production began about six years ago. The company was a relative late comer in this field, but this is not a new experience for Rolls-Royce, and, as before, by drawing upon its work in other directions, it has come up with something worth selling. Apart from the company's traditional emphasis upon quality and reliability—and the overheads of its inspection and testing facilities at Sinfin must be quite high—the main feature of its venture into oil engine manufacture is its concentration upon component standardisation. Hence, though it is now producing four, six and eight cylinder engines, including horizontally slung models, all have the same bore and stroke, and so all parts, other than those that must vary in length with the number of cylinders, are common to each engine. As well as greatly simplifying spares and servicing problems, this also cuts batch production costs quite appreciably.

The Rolls-Royce family of oil engines was based upon the six-cylinder model, which was first installed in a Vickers heavy tractor. Four-cylinder and eight-cylinder models were added about two years ago, and with twin six and twin eight-cylinder power pack sets the range of power now offered runs from 60 to 600 bhp. Earth moving equipment, heavy duty vehicles, industrial power and generating sets are the present main outlets, and nearly three engines out of four are exported. One recent development nearer home is the supply of engines for the Yorkshire Engine 200 and 400 hp diesel electric shunting locomotives and for the new twin eight-cylinder 476 bhp rail cars of British Railways. The company does not say how many engines it is now producing, but output doubled last year and is going up again sharply this year. As a result, it is gradually moving the oil engine division from its present site at Derby to the Sentinel works at Shrewsbury, which it took over last September.

SHORTER NOTES

The Directors of Burmah Oil Company recommend a final dividend of 17½ per cent raising the total payment for the year from 17½ to 22½ per cent. Consolidated net profit was up from £5,990,453 to £7,123,896; after providing for taxation of £9,550,543 (against £7,642,336). On the announcement this share rose to 110s. 7½d., a net rise of 1s. 10½d. on Thursday.

* * *

Canadian Eagle Oil Company has declared a dividend for 1956 of 2s. per share of no par value, against 1s. 9d. Relief from United Kingdom income tax has been authorised on 35/100th of the dividend, the same proportion as last year. Consolidated profit after tax rose from £7,704,149 to £9,341,672. Earnings retained in subsidiaries, the most important of which is Eagle Oil Shipping Company, were £4,016,057 against £726,433. Earnings retained by the parent company were £2,279,350 against £4,306,405.

The number of people in civil employment in Britain fell rather more than seasonally in March: if one allows for seasonal changes, it seems now to have been falling since October. The number in employment at the end of March was in fact 22,900,000: during the six months there looks to have been a decline in employment of about a half of one per cent. But the number of people wholly unemployed has not risen by as many people as employment has declined; and between mid-February and mid-April, after allowing for seasonal variations, it seems to have remained about level.

* * *

In spite of having drastically rationalised their advertising rates into three flat charges for the early, mid- and late evening, Associated TeleVision still intends to continue the practice of dividing its transmission hours into a wide variety of time segments so that advertisers can book reasonably close to particular programmes. The 10 per cent surcharge mentioned in a Business Note last week will apply only when an advertiser wants to pin-point the exact timing of his commercial within the broad segment.

* * *

Esso Petroleum Company, Limited, the equity of which is wholly owned by the Standard Oil Company (New Jersey), is the first oil company to put a precise figure to the cost of the Suez affair in 1956. Helped by a more valuable pattern of production at Fawley refinery, as well as by an increase in the volume of refinery production and sales, Esso's trading profit increased by nearly £3¾ million last year. But this balance was struck before counting the additional costs of £1¼ million incurred by the company in diverting tankers round the Cape and in purchasing extra supplies from the Western Hemisphere that had not been recovered in selling prices by the end of the year. As a result of these and other exceptional costs the net profit, at just over £5½ million, was some £800,000 lower than in 1955.

* * *

The ordinary capital of Turner and Newall of £10,944,718 is to be doubled by a 100 per cent free scrip issue, but the directors tell shareholders that the final dividend will be exactly equivalent to the 22½ per cent paid last year.

* * *

The directors of Boots Pure Drug Company have raised the ordinary dividend from 14 to 16 per cent, following a rise in gross profits from £4,390,637 to £4,754,998 in the year to March 31st and in net income from £2,029,454 to £2,191,828.

* * *

The net profits of Consolidated Zinc fell in 1956 from £2,344,928 to £2,044,383 and the ordinary dividend has been left unchanged at 22½ per cent. The directors say that it is unlikely any "material benefit" will accrue to the company from the relief of tax granted to overseas trade corporations.

COMPANY AFFAIRS

PROFITS FROM PAPER

THROGMORTON STREET has long known that the 1956 accounts of the paper manufacturers would reveal a big decline in earnings. Costs were squeezing margins and there was some competitive price cutting. Moreover, half-yearly reports published in the autumn revealed that earnings were declining.

Bowater Paper Corporation is an exception in that its ordinary dividend has been increased, effectively from 11¼ to 12½ per cent, and its profits are up from £9,868,000 to £12,183,000. But the directors had forecast some increase in the dividend at the time of the convertible loan stock issue and the prospectus and the half-yearly report both indicated an increase in profits. The group's production of paper rose from 994,000 to 1,144,000 tons and of pulp from 328,000 to 351,000 tons. The sales value of paper, pulp and kindred products went up from £72 million to nearly £81 million and of power, merchanted goods and charges for services from £10.7 million to £14.5 million. Perhaps the whole of the increase in the group's profits can be attributed to the inclusion of eight months' earnings of the new North American subsidiary and to the increased production of the Tennessee mills, and perhaps it is only logical that Sir Eric Bowater, the bulk of whose earnings come from overseas, should also be in the minority among paper manufacturers in supporting the common market. Bowater's experience at home—especially if it is remembered that the Corporation has far bigger interests in newsprint than the other companies—cannot have been much different from that of the other manufacturers.

Albert E. Reed is a newsprint manufacturer, but its principal concern is in other forms of paper. Its directors attribute the fall in its profits from £6,671,182 to £5,691,434 to the increased costs of wages, fuel, power and transport. Profits in the year to March 31st last include £316,877 earned by new subsidiaries since their acquisition. Similarly, the sales figure of £58.5 million (against £53.6 million in 1955-56) includes £3.8 million for these new subsidiaries. The group's net profits have fallen from £3,570,723 to £2,979,545. But, as forecast, the ordinary dividend is 16 per cent for the full year on the increased capital of £16 million; in 1955-56, the dividend was 25 per cent on a capital of £6½ million.

Spicers, like Albert E. Reed, made a rights issue of ordinary shares last year. The forecast payment of 10 per cent has been declared on a capital of £3½ million; in 1955, 15 per cent was paid on a capital of £2 million. This company, too, has reported a decline in earnings. Gross trading profits have fallen from £1,035,565 to £751,414 and net profits from £455,509 to £278,046—from which the ordinary dividend absorbs £201,250.

Wiggins Teape also forecast the dividend in their half-yearly report; it is left unchanged at 17½ per cent (including a 2½ per cent bonus) for 1956. That interim report revealed a fall in profits and gross profits over the full year fell from £5,026,127 to £4,363,558. Thanks to a fall in the tax provision, the decline in net profits is by no means as sharp; they have fallen from £2,546,337 to £2,539,023.

SEARS HOLDINGS

MR CHARLES CLORE'S name is automatically associated with the take-over bid. But as the chairman of Sears Holdings he speaks as the head of a "large industrial family," which employs nearly 30,000 people. In that role he speaks of the "benefits of diversification." In his more familiar role as a financier he speaks of an examination of various proposals to extend the vehicle distribution business of the group (now based on Sears' control of Scottish Motor Traction and of Shaw and Kilburn, both distributors for Vauxhall Motors) and of a consideration of "various possibilities" of investment in the United States.

Diversity of interests certainly paid the group handsome dividends last year. Excluding from the calculation the interests which Sears acquired last year, it is apparent that profits from footwear rose by £281,000 (from £1,501,000 to £1,782,000) while other profits fell by £291,000 (from £1,952,000 to £1,842,000 in the Bentley engineering group and from £844,000 to £663,000 in the Furness shipbuilding group). Thus on the basis of its shape in 1955, the profits of Sears fell by a mere £10,000 to £4,287,000; but to this figure must be added a profit of £1,027,000 from the footwear companies Sears acquired in 1956 and another £836,000 from its other acquisitions (including Scottish Motor Traction and Parmeko). The total profit in 1956 was thus £6,150,000 and this was earned in a business which controlled over £23 million in fixed assets, over £15 million in stocks and over £3 million in cash. The directors therefore had little hesitation in recommending an ordinary dividend of 22½ per cent, a dividend covered, they estimate, twice by earnings. Sears as an industrial holding company is still growing and it controls companies in expanding industries. No one can deny its past success: its future success may turn not only on the financial acumen of Mr Clore but also on the managerial skills of the staff he employs in the diverse subsidiaries of the group.

BABCOCK AND WILCOX

SINCE the publication of Babcock and Wilcox's preliminary report, which revealed a fall in gross profits from £4,629,498 to £3,560,808 and an unchanged ordinary dividend of 15 per cent, the £1 ordinary stock, which is one of the nuclear power growth stocks, has fallen from 81s. 3d. to 76s. 3d. xd. There is little in the full report to encourage early recovery. The turnover fell slightly from £33,627,000 to £32,714,000, and increased costs of production eroded profit margins. The group had to continue to invest heavily in capital equipment and to devote a good deal of its attention to research and, as a result, it ended its financial year short of liquid resources.

Two quotations from the statement by the chairman, Mr Lionel Fraser, put the prospects into perspective:

> It is becoming evident that the stage is rapidly approaching when any material reductions in over-all costs will be difficult to achieve and it is the view of your board that any further advances in costs must inflate the price of our products significantly, with unfortunate effect on our competitive power abroad.
>
> Our plans are long term, and faced with ever-growing fierceness of competition and the much finer margins with which we now have to be content, we cannot expect better figures for the time being. Indeed, I ought to stress that development of some of our new projects, especially overseas, is still at an early stage and capital thus invested must of necessity be temporarily unremunerative.

GUEST KEEN AND NETTLEFOLDS

IN anticipation of the ordinary dividend announcement, the £1 stock units of Guest Keen and Nettlefolds had risen to 53s. 3d. The dividend of 13½ per cent, against 12 per cent in 1955, was even better than had been expected and the stock made a further advance, to 56s. 9d., at which the yield is only 4¾ per cent. But, as the dividend is covered about five times by earnings, investors are still looking for a further loosening of the purse strings.

A bigger dividend was justified by the advance in net profits in 1956 from £8,561,190 to £9,185,738. Because of bigger provisions for taxation and statutory depreciation and of a bigger appropriation to replacement reserves, the advance in net profits is but a shadow of the increase in gross trading profits, which jumped from £22,754,701 to £27,052,187. But the latest profit includes a full year's trading of the two steel companies, Brymbo and John Lysaght's, which Guest Keen acquired in December, 1955. The rise in profits cannot therefore be taken as meaning that Guest Keen was isolated from the rise in costs and pressure on margins which troubled the engineering industry last year.

BRISTOL AEROPLANE

A LARGE block of the ordinary shares of Bristol Aeroplane Company has been hanging over the market for some time. The completion of that selling order took place just before the company announced its trading results and ordinary dividend for 1956. The dividend has been left unchanged at 10 per cent, which may have been disappointing to those who have recently bought the stock.

The dividend was unchanged despite a growth in earnings. Before depreciation and taxation, the profits of the group in 1956 were £3,708,234, compared with £3,322,903 in 1955. The tax provision—up from £762,191 to £781,949—has not risen in step with the increase in gross profits, for the group has set £265,000 (against £260,000) of investment allowances relief against its total liabilities. But depreciation is higher at £1,861,257 (against £1,583,349), so there has been only a small advance in net earnings—from £977,363 to £1,065,028. Orders for the Bristol Britannia and the group's interest in guided missiles—now its second largest single activity—have encouraged investors to believe that growth prospects are not exhausted.

MONSANTO CHEMICALS

OVER the postwar years few industries have struggled harder to absorb rising costs and to compete in prices than chemicals. It has been an uphill fight and Monsanto Chemicals (the English subsidiary of the American parent) in its accounts to December 31st shows some scars. In tonnage, the 1956 turnover rose by 11.8 per cent to 97,250 tons, overseas markets accounting for 41 per cent of the total, against 37 per cent. In pounds sterling the turnover of 1956 rose by only 4 per cent to £14,035,000. In group profits 1956 was not a record year. The group trading account plus interest and dividends yielded £2,687,064, against £2,928,057, and in net profits after tax the figure was £919,315, against £1,097,311. The final dividend of 15 5/6 per cent, again making 22½ per cent for the year, is well covered, but it is easy to understand why the company did not increase it.

The group is to forge ahead with its programme of capital expansion. The £8½ million expansion scheme at Fawley and the rights issue of one for two in 5s. shares at 7s. 6d. have already been announced; the chairman, Sir Miles Thomas, now discloses that the American parent subscribed for its full proportion. This is being followed by a one for three free scrip issue and will be followed further by an issue of £3 million of loan capital.

RHODESIAN SELECTION TRUST

THE fall in the price of copper continues to make its impact upon the profits of the Rhodesian copper producers. Average costs fall with the price, because of the mineral royalty and mining bonus elements, but that, of course, is never sufficient to compensate for the loss in revenue. How serious an effect the decline in the copper price has had is shown by Mufulira's estimated profit in the January-March quarter which was £2,286,000, a fall of £229,000 compared with the September-December quarter and Roan Antelope's profit which was £1,482,000—a reduction of £435,000.

Nine months ended	Mufulira Mar. 31, 1956 £000's	Mufulira Mar. 31, 1957 £000's	Roan Antelope Mar. 31, 1956 £000's	Roan Antelope Mar. 31, 1957 £000's
Sales revenue ..	23,802	18,171	21,681	15,448
Costs	11,157	10,724	11,278	10,269
Estimated profit	11,958	7,640	10,656	5,324
Production (long tons)	73,107	75,363	66,858	65,069
Sales (long tons)	69,747	67,566	64,205	59,178

Over the nine months to March 31st, Mufulira's profits have dropped from £11,958,000 to £7,640,000 and Roan Antelope's even more sharply from £10,656,000 to £5,324,000. That contrast owes something to the fact that Roan is a producer of blister copper while Mufulira produces electrolytic as well. But this fall in copper profits and the almost certain prospect of a reduction in dividends is not a new factor for investors in copper shares.

London Stock Exchange

FIRST DEALINGS:	May 1	May 15	May 29
LAST DEALINGS:	May 14	May 28	June 18
ACCOUNT DAY:	May 21	June 4	June 25

THE buying of industrial shares, which followed the recommendation of higher wages in the shipbuilding and engineering industries, lifted *The Economist* indicator from 218.1 to a new peak for the year of 221.9. Prices rose sharply on Friday and again on Monday, when 17,727 bargains were marked, and the gains were mostly held on Tuesday and Wednesday in active trading. Government stocks, especially shorts and medium dates, were firmer at first on the renewed fall in the Treasury bill rate and the small size of this week's funding operation.

Insurance shares improved, Royal Exchange Assurance rising 5s. to 167s. 6d. on the report. King and Shaxon gained 4s. to 58s. 6d. on the scrip issue, and other discount houses advanced, Alexanders rising 2s. 6d. to 30s. and Union Discount 1s. 6d. to 50s. Finance houses were strong, United Dominions Trust jumping 6s. to 100s. Breweries, provisions and stores were exceptionally strong; Bass rose 3s. 6d. and Whitbread "A" 6s. 9d., Ranks gained 1s. 3d. to 18s. 3d. and Tate and Lyle 2s. 1½d. to 70s. Rumours of impending bids raised A. W. Gamage 10s. 9d. to 51s. 3d. and Montague Burton 5s. to 30s. 3d. Steel shares fell sharply on the threat of re-nationalisation. Hudson's Bay rose 9s. 6d. to 23os. 3d. Channel Tunnel was active following the meeting and on the announcement that the Suez Canal Company is interested they rose to 12s. Shipping shares turned weak; Reardon Smith lost 1s. 3d. to 42s. and Stanhope 2s. 6d. to 31s. 6d.

Oils were mainly firmer on balance, but Kaffirs declined. The fall in commodity prices, followed by the disappointing results, resulted in a loss of 7s. 9d. to 74s. in Consolidated Zinc.

(1) Great Britain. (2) Provisional estimate. (3) Excluding all screening losses normally amounting to around 5,000 tons a week. (4) Excluding government stocks. (5) Average for first quarter. (6) Average for fourth quarter. (7) Rayon and nylon production only. (8) Including filter cake from May, 1956. (9) Revised series; stocks at producers' works of ingots, semi-finished steel and alloy, in terms of ingot equivalent. (10) From January, 1957, excluding newsprint for periodicals and certain other purposes for which stocks at end December, 1956, totalled 19,600 tons. (11) *Change in classification* has resulted in transfer of about 1,000 houses from local authorities.

(1) Electricity production for New Zealand represents deliveries only. (2) Copper and tin refer to metal production. (3) General trade (including re-exports) except for Canada, which is special trade only. Imports are *cif* except for *Australia, Canada and S. Africa* which are *fob*; exports are *fob*. Trade for India includes that going by land; annual figures for India are for 12 months beginning April 1st of year stated and for Australia 12 months ended June 30th. (4) Gold and foreign exchange holdings are those of the government and central bank; only figures for Australia include holdings of commercial banks. Cost of living for S. Africa and S. Rhodesia relates to Europeans only and for S. Africa includes direct taxes. (5) Including foreign investments. (6) Including semi-processed gold. Beginning January, 1955, *including South-West Africa*. (7) In July, 1948, part of holdings was transferred to the State Bank of Pakistan. (8) April, 1948—March, 1949. (9) Including some long-term securities. (10) Average for fourth quarter.

Financial Statistics

EXCHEQUER RETURNS

For the week ended May 4, 1957, there was an "above-line" surplus (after allowing for Sinking Funds) of £61,526,000 compared with a deficit of £16,568,000 in the previous week and a surplus of £29,480,000 in the corresponding period of last year. There was a net expenditure "below-line" last week of £15,968,000, leaving a total deficit from April 1st, of £14,562,000 (£27,499,000 in 1956–57).

THE MONEY MARKET

In the discount market a reduction of ¼ per cent in Bank rate has now been discounted virtually in full. At the Treasury bill tender on Friday of last week the market made a determined attempt to get ahead of outside competitors. It raised its bid for the 91-day bills by fully 1s. per cent, to £99 1s. 4d. per cent (equivalent to just under 3¾ per cent); its tactics succeeded, for despite an increase in total applications of £7 million for the unchanged offer of £200 million, the market's allotment rate rose from 22 to about 50 per cent.

This included 92-day maturities offered to circumvent August Bank holiday; for these the market bid at £99 1s. 2d. per cent and received a full allotment. The average rate of discount on allotments to all applicants fell by 3s. 6½d. per cent, to £3 14s. 9d. per cent. This brought the discount rate ½ per cent below its level on the morrow of the February reduction in Bank rate and over 1¼ per cent below Bank rate itself.

Credit remained in abundant supply just before the week-end, but in the first half of this week conditions have tightened. The market was "in" the Bank on both Monday and Tuesday, though only a few houses were involved and the amounts borrowed were small. On Wednesday the issue of the further tranche of £100 million of Conversion stock resulted in a big turnover, and the Bank gave very large special help.

ROYAL INSURANCE COMPANY

KEYSTONE FUND OF CANADA, LTD.

Investment portfolio at 31st March, 1957, comprised Bonds and Preferred Stock $335,089 and 44 soundly established Common Stocks $11,504,751, in the following Industrial Groups :

	%
Oil and Gas	21.6
Metal and Mining	18.1
Utilities	15.6
Banks, Insurance and Finance	9.3
Lumber, Pulp and Paper	7.9
Pipe Lines	7.6
Iron and Steel	6.6
Chemical	2.0
Automotive Equipment	1.7
Building	1.5
Aircraft Manufacturing	1.3
Electrical Equipment	1.1

EXTRACTS FROM THE REPORT TO SHAREHOLDERS FOR THE FISCAL YEAR ENDED MARCH 31, 1957:

* The Fund's large investments in Canada's valuable natural resources, 79% of total assets, including utilities, provide many excellent opportunities to share in the growth of Canada.

* Over-all Canadian corporate earnings in 1956 were 13.7% above the earlier 1955 record, and present trends indicate a probable new high in 1957.

* The Toronto Stock Exchange Industrial Average showed a decline of 5.3% for the twelve months ended March 31, 1957, and the Montreal Stock Exchange Industrial Average, a decline of 13.5%. In the United States the Dow-Jones Industrial Average (30 high-grade New York Stock Exchange Issues) showed a decline of 7.2%. Whereas the net asset value of the Fund, during the same period, increased by 6.2%.

* A further proof of the value of careful selection and supervision of the Fund's portfolio is that 28% of the total assets were invested in the ten portfolio stocks which registered the best gains during the twelve months ended March 31, 1957.

NET ASSETS AT MARCH 31, 1957 — $12,202,695

Keystone Fund Units are obtainable in U.K. through Stock Brokers and Bankers.

The Chairman, Mr. E. Beddington Behrens, at the Annual General Meeting on May 8th, stated: These record profits, subject to taxation, amounted to £284,164 as compared with £31,099 for the year 1943—the year prior to that in which Lord Barnby and I joined the Board. As regards the proposed European Free Trade Area, we are quite satisfied that our costs of production with the new machinery at Peterlee can stand up to any European competition under fair trading conditions. At present we have to face highly subsidised competition from the Continent. Under the rules of the proposed Free Trade Area and Common Market, subsidies of this kind would be abolished.

We have sold practically our whole production to the end of this year, so that satisfactory results for the current year can be expected.

GROUP'S SALES IN 1956 INCREASED BY 11 PER CENT TO NEW RECORD

RETARDING EFFECTS OF SUEZ CRISIS

CONTINUING HIGH LEVEL OF CAPITAL EXPENDITURE

MR N. A. GASS REVIEWS WIDESPREAD DEVELOPMENT

The forty-eighth annual general meeting of The British Petroleum Company Limited will be held on May 30th at Britannic House, Finsbury Circus, London, EC2.

The following is the statement by the Chairman, Mr N. A. Gass, CBE, MC, which has been circulated to Stockholders with the Report and Accounts for the year ended December 31, 1956: In January last, less than a year after his appointment as Chairman, the Board had most regretfully to accept the resignation on medical grounds of Mr B. R. Jackson, whose death was announced two months later. Stockholders will share, I am sure, our deep sympathy with his widow and our sorrow at the premature loss of a distinguished colleague, who in 36 years of devoted service made a great contribution to your Company's progress and earned widespread respect and affection not only within our own organisation but far beyond it, especially in the United States oil industry.

The Board have appointed me to succeed Mr Jackson as Chairman.

On the recent retirement of Sir Gordon Munro, who had been a valued colleague as an ex-officio Director since 1954, HM Treasury appointed to succeed him Lieutenant-General The Lord Weeks, whom we welcome to the Board.

Mr E. H. O. Elkington has also retired after 35 years' service with the Company, during which he was General Manager in Iran and Iraq from 1929 to 1937 and a Managing Director since 1948. The outstanding ability and energy with which he has furthered the Company's interests deserve our warmest thanks. He has been succeeded on the Board by Mr R. Gillespie, previously responsible for the Company's shipping interests as Managing Director of the BP Tanker Company, who first joined the BP group in 1922.

Mr R. B. Dummett has been appointed to the Board to fill the vacancy caused by the resignation of Mr B. R. Jackson, and will shortly take up his duties as a Managing Director on his return from Australia where for the past four years he has been Managing Director of our marketing organisation: Mr Dummett's service with the Company dates from 1936.

EFFECTS OF SUEZ CRISIS

The expansion in the BP group's business in 1956, as described in this statement, would have been at a higher rate but for the retarding effects in the last two months of the year of the closure of the Suez Canal, and the damage in Syria to the Iraq Petroleum Company's pipeline system to the Eastern Mediterranean.

The manner in which the resultant problem of maintaining the essential flow of oil supplies to Europe was dealt with has been explained in a full statement issued for public information, making unnecessary any enlargement on it here. We have played our full part in the collaboration between the petroleum industry and the Organisation for European Economic Co-operation through its Petroleum Industry Emergency Group. Great and much appreciated assistance was rendered by the Middle East Emergency Committee of American oil companies set up under the authority of the United States Government. Whilst the normal rate of imports into Europe could not be achieved, and there had to be some restriction of consumption despite the ameliorating effect of an unusually mild winter, the measures adopted were effective in dealing with the emergency.

The problem was essentially one of transportation, the available tanker tonnage being insufficient to maintain on the long voyage around the Cape the normal rate of supplies from the Middle East. In consequence, liftings from short-haul sources in the West increased and production in the Middle East, where so much of our interests lie, declined to a monthly average of just over 10 million tons for the four months November 1956/Februrary 1957 compared with nearly 15½ million tons monthly for the preceding four months.

The early months of 1957 have, in such circumstances, been a difficult period in which we have experienced a reduction in our trade, and the growth of consumption in the European area, where we have a large marketing interest, has, for the present, slowed down. But the basic facts of the world's growing forward energy requirements, and the increasing contribution to be made by oil, remain unchanged, and we can look forward to an expanding business granted the stable conditions requisite for the progressive development of Middle East oil-production on which the economic future of the producing countries in that area so largely depends.

ACCOUNTS AND FINANCE

The Accounts which are now presented include, as in previous years, the Balance Sheet of The British Petroleum Company Limited with a Consolidated Balance Sheet and Profit and Loss Account of the Company and its Subsidiary Companies.

In the Consolidated Profit and Loss Account the Trading Profit, after providing for depreciation and amounts written off, was £124,171,691 for 1956 compared with £111,683,900 for 1955. The increase of £12,487,791 is due, in the main, to higher sales tonnages.

Depreciation and Amounts written off totalled £25,202,874 compared with £22,143,401 for 1945, the increase being mainly in the amount written off Exploration Interests due to greater expenditure being incurred in 1956 in searching for new sources of oil.

The total taxation charge is £76,324,120 of which £64,036,101 is Overseas Taxation arising mainly in the countries of production: Iran, Iraq, Kuwait and Qatar.

After providing for the items mentioned above and for Debenture Interest the Consolidated Net Profit is £53,014,561 compared with £45,308,243 for 1955.

Your Directors, after placing £1 million to Debenture Stock Reserve, have allocated £32,500,000 to General Reserve and have recommended a final dividend on the Ordinary Stock of 2s. per £1 stock unit free of income tax making a total for the year of 3s. per £1 stock unit free of income tax. Your Directors consider, in view of the present difficult and continuing unsettled conditions and the need to conserve resources to finance capital expenditure, that no larger dividend should be paid at this time. The carry forward on Profit and Loss Account of the Company is increased by £2,359,624.

COMPANY AND CONSOLIDATED BALANCE SHEET

The Issued Capital has been increased by £338,068 as a result of the issue of Ordinary stock in exchange for Ordinary stock, totalling 1,014,205 units of 5s. each, in Trinidad Petroleum Development Company Limited. This exchange was effected on the basis of the market values and the premium at which this Company's stock stood at the time has been transferred to Share Premium Account. The Company acquired for cash a further 2 million Ordinary stock units in Trinidad Petroleum Development Company Limited at a price of 47s. 6d. per unit from the Liquidator of British Controlled Oilfields Limited, bringing our total holding in the Trinidad Company to 77 per cent of the Ordinary stock.

The Capital Reserve which last year stood at £34,766,594 has been increased during 1956 by £3,695,568 being the sums payable to the Company by the other Consortium Companies with whom we are associated in the operations in Iran.

The total capital expenditure of the Group

during 1956, represented in the Consolidated Balance Sheet partly under the heading of direct capital assets and partly under Investments and Exploration was approximately £86 million (as against £43 million in 1955) under the following main headings:

	1956	1955
	£	£
Refineries	22,000,000	8,000,000
Tankers	12,750,000	5,000,000
Marketing Interests	29,500,000	20,000,000
Exploration and Production	21,750,000	10,000,000
	86,000,000	43,000,000

In addition to the Capital Expenditure mentioned above our expanding business required an increasing amount of working capital.

The amounts retained in the business in 1956 as shown in these Consolidated Accounts may be summarised as follows:

	£
Increase in Capital Reserve	3,695,568
Depreciation & Amounts written off	25,202,874
Allocation to General Reserve	32,500,000
Increase in unappropriated balances	3,777,291
	£65,175,733

In addition the non-consolidated Companies retained £15,561,000 consisting of Depreciation £12,085,000 and profits £3,476,000.

In the Consolidated Balance Sheet the heading Investments in Subsidiary Companies Not Consolidated comprises our holdings in subsidiary companies engaged mainly in the distribution of petroleum products. These subsidiary companies are now included in the Group Income Statement referred to below and are listed in the Accounts.

Investments in Allied Companies include mainly our refining interests in Belgium and Italy, our advances to the refining company in Iran and holdings in the Lowland Tanker Company Limited, in British Hydrocarbon Chemicals Limited and in certain distribution companies which are not subsidiaries.

Expenditure on Oil Exploration Interests covers our investments in exploration and producing companies including those in Canada, Iraq and Qatar and our advances to the exploration and producing company in Iran. Our one-half interest in Kuwait is held by the subsidiary company, BP (Kuwait) Limited, which is consolidated in these accounts and whose assets are, therefore, included under the appropriate headings in the Consolidated Balance Sheet.

GROUP INCOME STATEMENT

It is the intention, as stated at the last Annual General Meeting, to publish yearly and half-yearly Group Income Statements: the first of these is issued with the Accounts and shows the summarised trading figures of The British Petroleum Company Limited and its Subsidiary Companies. The Net Income for the year 1956 is £56,194,000, of which £52,718,000 is dealt with in the Consolidated Profit and Loss Account and £3,476,000 relates to Subsidiary Companies which are not included in the Consolidated Accounts.

The initial half-yearly statement, for the first six months of 1957, will show comparative figures for the corresponding period of 1956 and it will be appreciated that the income in the current half-year will be affected by the adverse conditions.

GENERAL

To assist in providing for Capital Expenditure over the next three years, we have made finance arrangements for part of our tanker programme which will enable the Company to obtain £40 million over the years 1957 to 1959. This will be achieved by selling tankers, after delivery, to Tanker Charter Company Limited, which will obtain loans against ship mortgages on the tankers. The BP group will obtain the use of the tankers for the whole of their life paying a hire to Tanker Charter Company Limited sufficient to meet the interest on the loans and to repay the capital over 23 years. At the end of the hire period, BP will acquire at par the £1,000 capital of Tanker Charter Company, which is at present held jointly by Robert Fleming and Company Limited and Ship Mortgage Finance Company Limited.

It will be seen from the Notes on the Accounts that the estimated amount of contracts for Capital Expenditure at the end of last year was £120 million (of which £88 million relates to shipping, including, in part, the expenditure on tankers to be dealt with under the new tanker financing arrangements). It has to be anticipated that actual Capital Expenditure will continue at a high rate, and will necessitate the continued retention in the business of a very substantial proportion of the earnings.

PRODUCTION AND EXPLORATION

During 1956 we obtained from Kuwait, Iraq, Iran and Qatar, our main sources of supply, a total of about 49,500,000 tons of crude oil, or 4 million tons more than in 1955. But for the curtailment of Middle East production necessitated by the Suez crisis in the last two months of the year, this increase would have been substantially greater. Larger production in Iran, as shown in the table at the end of this section, was the principal contributor towards the increase in our crude oil supplies.

In Kuwait, production continued to be drawn from the Burgan group of fields, where development drilling was maintained. Further drilling operations in north Kuwait have proved, as forecast last year, considerable reserves of crude oil, although at a greater depth than at Burgan, and development of this area is proceeding.

In Iran, production of crude oil for members of the Consortium continued to increase, and exceeded the quantity guaranteed to the Government of Iran despite the difficulties arising from the closure of the Suez Canal. Our share of the crude oil amounted to 9,400,000 tons, an increase of nearly 4 million tons over our share in 1955. Development and exploration drilling is being actively carried on and there is a strong indication of further reserves being located in a continuation of the Agha Jari field.

In Iraq, the companies in which we have an interest continued the development of their established fields and exploration for further reserves. On November 2nd the destruction in Syria of the pumping stations on the pipelines from Iraq to the Mediterranean brought the flow of oil from the Iraq Petroleum Company's and Mosul Petroleum Company's fields to a standstill; production from the Basrah Petroleum Company's field, whose export outlet is via the Persian Gulf, was not affected.

In the United Kingdom, the increase of crude oil production to 66,000 tons from 53,500 in 1955 was mainly due to the new Egmanton field, which contributed 9,000 tons to the 1956 total. Our exploration for natural gas on behalf of the Gas Council has not yet found commercial production.

In Scotland, the decrease of 19,000 tons in shale oil production reflected the curtailment of operations which, to our great regret, has been necessitated by this industry's continued trading losses.

In Canada, the Triad Oil Company is expanding its operations, and has raised further finance and increased its technical staff. Our financial interest in this company will reach 50 per cent, in accordance with our agreement of two years ago, during 1958.

In Trinidad, Trinidad Northern Areas Limited continued to increase production both from the deviated wells drilled from shore, and from the off-shore Soldado field discovered last year in the Gulf of Paria. During the year we increased our interests in Trinidad, by the acquisition of stock in Trinidad Petroleum Development Limited described earlier in this statement.

In Egypt, the properties of our associate company, The Anglo-Egyptian Oilfields Limited, were sequestrated by order of the Egyptian authorities on November 2, 1956; all possible action is being taken to protect our interests.

In Papua, a well is being drilled below the accumulation of natural gas at Kuru, but has not yet established the presence of an underlying oilfield. Two other wells were started in Papua under very difficult jungle conditions; one has since proved unproductive and been abandoned, the other is drilling ahead. Geological and geophysical surveys continue.

In Australia, two further wells were drilled, neither of which was successful.

In the North Island of New Zealand, initial geological and geophysical surveys made good progress.

In East Africa, a deep well on Zanzibar Island was carried to 14,281 feet; but did not find either oil or gas. A deep test on the mainland is under consideration.

In Nigeria, where encouraging developments were reported last year, test drilling has located an oilfield at Oloibiri which may reasonably be expected to yield commercial production, and arrangements are in hand for testing its capacity.

In the Mediterranean area our preliminary examination of the island of Malta was concluded. In Sicily, preparations are being made for further test drilling. In Libya, geological and geophysical examination is in progress.

At the southern end of the Red Sea, we have completed a survey of the Kamaran Islands, near Aden, and are examining an area in British Somaliland, where we have been granted exploration rights.

Under arrangements concluded with our French marketing associate and other French interests, we are participating in drilling operations in France. These arrangements having been extended to include exploration in French West Africa; geophysical work is in progress in that area and in the adjoining British Colony of Gambia, where we have also obtained prospecting rights.

The extensive preparations necessary for our first off-shore well in the Persian Gulf Area of Abu Dhabi were continued, and drilling is expected to begin early next year.

CRUDE OIL PRODUCTION INTERESTS

The following table shows the BP group's percentage shareholding in companies producing crude oil in various parts of the world and the total production by each company in 1956 compared with 1955.

	BP Group Shareholding Per cent.	Total Crude 1956 Tons	Oil Production 1955 Tons
Kuwait:			
Kuwait Oil Company, Ltd.	50	54,117,000	53,894,000
Iran:			
Iraanse Aardolie Exploratie en Productie Maatschappij N.V. (through Iranian Oil Participants, Ltd.)	40	25,934,000	15,772,000
Iraq:			
Iraq Petroleum Company, Ltd.	23¾	21,086,000	24,202,000
Basrah Petroleum Company, Ltd.	23¾	8,439,000	7,232,000
Mosul Petroleum Company, Ltd.	23¾	1,078,000	1,282,000
Qatar:			
Qatar Petroleum Company, Ltd.	23¾	5,784,000	5,362,000
Trinidad:			
Trinidad Petroleum Development Company, Ltd. (as from November, 1956)	77	600,000	500,000
Trinidad Northern Areas, Ltd.	33⅓	76,000	58,500
Egypt:			
The Anglo-Egyptian Oilfields, Ltd.	31	1,180,000 (10 months only)	1,472,000
United Kingdom:			
BP Exploration Company, Ltd.	100	66,000	54,000
Scottish Oils, Ltd. (shale oil)	100	77,600	96,600
Canada:			
Triad Oil Company, Ltd.	42	77,000	73,000

REFINING

In 1956 our total refinery throughput was 32,500,000 tons, 3 million tons more than in 1955. But for the dislocation of crude oil supplies caused by the Suez crisis our 1956 throughput would have been about 2 million tons larger.

In addition to the major expansion schemes at Kent and Kuwait refineries described last year, which are making excellent progress, construction has begun of a new distillation unit at Lavera refinery in the south of France to raise its throughput capacity from 2,200,000 to nearly 4 million tons per annum. All these extensions should be completed towards the end of 1957 or early in 1958.

To provide port and terminal facilities for the largest tankers now contemplated, we are developing a new scheme at Angle Bay in Milford Haven and improving the existing installation at Finnart on Loch Long, to service Llandarcy and Grangemouth refineries respectively. Other refinery terminals are also under consideration for improvement.

In the United Kingdom, crude oil processed at our Kent, Llandarcy and Grangemouth refineries increased by 400,000 tons to 8,900,000 tons. At both Kent and Llandarcy, lubricating oil production was substantially increased, totalling just over 200,000 tons, as compared with 166,000 tons in 1955. At Kent, construction work is well advanced on the new distillation unit to raise the refining capacity from 4,600,000 tons to over 7 million tons, and also on the units for the manufacture of aviation gasoline. Other plants under erection include a second catalytic reformer for the production of additional high grade motor spirit and a hydrofiner to produce higher quality gas oil. Work is also in hand on major extensions to jetties and tankage required to deal with the higher rate of crude oil input.

In the Republic of Ireland, we are to participate with other oil companies in the construction of a refinery at Cork.

At the six BP group refineries on the continent of Europe throughput totalled 9,500,000 tons, 500,000 tons more than in 1955. Lubricating oil output in France and Germany was about 140,000 tons, an increase of 20,000 tons. In addition to the new distillation unit under erection at Lavera, modifications are being made to the existing crude oil units at Antwerp and Hamburg to increase their capacities. Catalytic reformers are being installed at Antwerp and Dunkirk, and hydrofiners at Antwerp and Hamburg. Plant to increase the output and improve the quality of bitumen was completed at Dunkirk.

A new refinery, of an initial capacity of 4 million tons per annum, is to be built for our German subsidiary company in the Ruhr by 1960.

At the Aden Refinery, throughput increased to 4,615,000 tons from 4,271,000 tons in 1955. Additions to the refinery completed during the year included facilities for the production of liquid petroleum gas and for loading to sea-going ships of packed oils and bottled gas.

At Kuwait, throughput was maintained at the maximum capacity of 1,500,000 tons. The scheme to expand distillation capacity to 8,500,000 tons per annum is due for completion early in 1958.

In Australia, 1956 was the first full year of refinery operations at Kwinana, throughput being 2,304,000 tons, compared with 1,690,000 tons in 1955. Additions completed during the year included a bottling plant for liquid petroleum gas, an extension to the bitumen plant and additional tankage.

In Iran we had 4 million tons of crude oil processed at Abadan refinery, a substantial increase over the 1955 figure of 2,600,000 tons.

In Canada, as announced in February this year, we are to build a refinery of some 1 million tons per annum initial capacity at Montreal.

In Turkey, as announced in March, we are to participate with other oil companies in the construction of a refinery of about 3 million tons per annum capacity which is scheduled to come into operation in 1960.

PETROLEUM CHEMICALS

The manufacture of chemicals from petroleum feedstocks continues to expand rapidly in the plants of our three associated companies at Grangemouth.

During the year the cracking capacity for olefine production at the plant of British Hydrocarbon Chemicals Limited (in which we have a half interest) has been doubled, ethylene manufacture now being at the rate of 60,000 tons per annum. The greater part of this ethylene is used for the manufacture of industrial alcohol, the plants for which have also been substantially increased. The new butadiene plant has been successfully commissioned and the liquefied product shipped to producers of synthetic rubbers and other polymers. Another plant in this stage of the British Hydrocarbon Chemicals expansion is a large catalytic polymerisation unit, recently commissioned for the manufacture of propylene tetramer, one of the main feedstocks for detergent alkylate manufacture.

Forth Chemicals Limited (in which British Hydrocarbon Chemicals Limited has a two-thirds interest) completed and commissioned its extensions, which have trebled the capacity for styrene monomer manufacture.

Grange Chemicals Limited (in which British Hydrocarbon Chemicals Limited has a two-thirds interest), whose detergent alkylate plant started operation in 1955, has been producing a very high quality product at well above designed output capacity.

The existing plants of these three companies are expected to produce over 150,000 tons of chemical intermediates during 1957, in addition to high grade motor spirit and other hydrocarbon by-products. Plans are in hand for further extensions to produce polyethylene and further intermediates for the organic chemical industry.

Our French company, Société Française des Pétroles BP has increased its holding in Naphtachimie, which is engaged in the manufacture of petroleum chemicals at Lavera. The operations of Naphtachimie have been extended during the year and olefine production capacity is being substantially increased. A polyethylene plant is now in the initial stages of construction.

SEA TRANSPORT

BP Tanker Company's fleet (the name was changed from British Tanker Company in 1956) is now 143 ships totalling 2,016,000 deadweight tons, comparing with 144 ships of 2,018,000 tons at this time last year. The Company also has about 3 million tons of tanker shipping on charter, an increase of some 500,000 tons.

Of the 41 ships referred to last year as under construction or on order one, recently completed, has been purchased by Tanker Charter Company Limited and chartered to us in accordance with the arrangements already described.

The remaining 40 ships of that building programme are all due for completion during the next three years. In addition, BP Tanker Company has placed orders for a further number of new tankers, including several of 65,000 deadweight tons, and particulars of these orders will be published at an early date.

Our French associated company, Société Maritime des Pétroles BP, has now 10 ships totalling 210,000 deadweight tons. They have on order one ship of 33,000 tons for commissioning next year, and two of 47,000 tons each and one of 67,500 tons for delivery between 1960 and 1963.

The Lowland Tanker Company, in which we have a 50 per cent interest, has on order five ships of about 19,000 tons each for completion in 1960/61, when they will join that Company's existing fleet of 10 ships of 16,000 tons each in our service. These five new ships are being financed entirely by loans with mortgage of the vessels to the lender.

Tanker freights reached record high levels during the latter part of 1956 mainly on account of the Suez situation. The cost of engaging tankers for forward delivery on period charter also increased considerably, reflecting higher building and operating costs as well as the world shortage of tanker tonnage before and during the crisis.

The general shortage of officers, particularly of certificated engineers, accentuates the manning problems presented by our expand

ing fleet. Among the steps which the Company is taking to alleviate the situation is the extension of its apprenticeship schemes for the training of deck and engineer officers.

DISTRIBUTION AND SALES

The BP group's sales of crude oil and refined products in 1956 rose to the new record total of 53 million tons. The increase over the preceding year was 11 per cent or 5 million tons—almost equally divided between crude oil and refined products—and thus was less, by 1 million tons, than the 6 million ton increase attained in 1955. This is attributable to the effects of the Suez crisis; prior to this, we were expecting to achieve in 1956 an expansion of 8 million tons, or 17 per cent.

The cessation of shipping movements through the Suez Canal, and of the delivery of oil through the Iraq Petroleum Company's pipeline system to the Eastern Mediterranean, affected operations severely during the last two months of the year. The enforced rerouting of tankers involved a sharp reduction in the rate at which we could ship supplies to Europe, and also in the liftings of crude oil by our buyers. The reduced arrivals of crude oil for our European refineries necessarily involved a cut in their throughput rates, with a consequent contraction in the availability of refined products, and whilst consumption in the markets was affected by various measures of restriction adopted by Governments, there was a considerable drain on stocks.

During the first ten months of the year, we were able to supply from our own resources an increased proportion of our trade, and so to reduce the volume of our oil purchases. But during the last two months of the year, it became imperative to purchase what supplies we could from the West, so as to obtain the benefit of the shorter haul.

There was no general change in the level of crude oil prices during 1956.

Until the closing weeks of the year, the level of refined products prices in the world market reflected, apart from the usual seasonal variations, a marked degree of stability. With the abnormal strains brought about by the sudden and severe dislocation of normal supply channels following the closure of the Suez Canal, there was a sharp upward reaction in the level of prices at which supplies had to be procured. This was accompanied by a general rise in tanker freight rates, as the very limited available reserve tonnage was rapidly absorbed, and we had to face the incidence of much longer hauls in arranging supplies to many of our markets. In such circumstances, an advance in prices was unavoidable as the year ended.

In the United Kingdom consumption of petroleum products increased by 8½ per cent in 1956, as compared with almost 10 per cent in 1955; fuel oil consumption again showed a high rate of increase—approximately 20 per cent. In the summer, a new and advanced motor spirit, BP Super Plus, specially prepared to meet the needs of the highest compression engines, was launched and had a good reception. As announced towards the end of the year, arrangements were made for our associated marketing Company, Shell-Mex and BP Limited, to acquire the motor fuel and motor lubricants distributing trade of the National Benzole Company Limited. We have been concerned for nearly 30 years in the supply of petroleum spirit to the National Benzole Company, and this latest development, which became effective at the beginning of 1957, consolidates the position.

In Europe, mounting industrial production brought about a further substantial increase in the consumption of petroleum in 1956, amounting to some 18 per cent, and we have maintained our position in the market.

We are partners in a project to build a crude oil pipeline from Wilhelmshaven to the Ruhr to supply the refining industry which we and others are developing there to meet the rapidly growing demand in Western Germany. We are also participating with other oil companies in a company formed to investigate the economic advantages and general feasibility of a Trans-European crude oil pipeline system from a west Mediterranean port to refineries in North West Europe.

Early in November of last year, our marketing and other interests in Egypt were sequestrated by the Government, and activities in this market have, for the time being, ceased.

Further progress was made in the North and West African territories.

In markets bordering on the Indian Ocean, results have been satisfactory despite the intensification of competition, particularly in southern Africa, from newcomers to the market.

Our marketing company in Australia, The Commonwealth Oil Refineries, Limited, has recorded its most successful year to date.

In New Zealand, BP (New Zealand) Limited, celebrated its tenth anniversary on December 19, 1956, and continues to make encouraging progress.

In Canada, we have formed a new subsidiary, BP (Canada) Limited, with headquarters at Montreal, to engage in the marketing of products under the BP housemark, commencing in the Province of Quebec in the summer of this year. This marketing effort will, in due course, be supported by the new refinery at Montreal already referred to in the Refining section.

BUNKERING SERVICE

The BP International Oil Bunkering Service continues to enjoy the support of shipowners of all maritime nations. The closure of the Suez Canal, and the consequent diversion of shipping, severely reduced the offtake from Aden which is normally our most important bunkering installation and caused very much heavier demands on bunkering facilities both at South African ports and at ports in the Atlantic Islands. At the same time, efforts were successfully made to divert offtake from United Kingdom and European ports to other ports which were less difficult to supply, and I should like to express particular appreciation of the willing co-operation of all our customers in the efforts made to mitigate the effects of the crisis on the European supply position.

Our sales to civil and military aircraft operators have continued to expand, and the BP Aviation Service has extended its international network in order to cope with the rapid development of the world aircraft operating industry. Particular emphasis continues to be placed on the perfecting of modern fuelling techniques, and on keeping in step with the new trends of aircraft manufacture and usage, from helicopter to the new turbo-jet passenger aircraft.

During the year, sales of our branded lubricants increased most satisfactorily, showing an average improvement of 35 per cent over the previous year. The BP Energol brand name continues to flourish and, despite increased competition, our "Visco-Static" motor oil has maintained its position as the foremost multigrade oil in the United Kingdom, on the Continent, and in Australasia. We have made some further progress in developing our marine lubricants business.

In bitumen we have a profitable, but still somewhat limited, trade and increased supplies from Abadan have enabled us to expand our activities.

We have taken increasing advantage of the opportunities for rigorous product testing provided in the motor racing field, and a number of Grand Prix events in 1956 were won by cars using BP products.

We have arranged the supply of all petroleum products for the British Trans-Antarctic Expedition, and our companies in Australia and New Zealand have supplied the petroleum product requirements of the Australian Antarctic Expedition and the New Zealand contingent of the Trans-Antarctic Expedition.

RESEARCH

Research and development facilities have been further expanded. At Sunbury Research Station the current building programme includes a large analytical and physical research building. In addition, a production and exploration research laboratory, providing comprehensive facilities for geo-physical, petroleum engineering, and geological research, is being built to replace Kirklington Hall and will be ready for occupation by the end of this year.

As in previous years we have continued to study and improve our manufacturing methods particularly with regard to the production of motor gasolines and lubricants.

A new method, originated at Sunbury, of controlling corrosion in oil-fired equipment using high sulphur content fuels aroused considerable interest when demonstrated at the Fuel Efficiency Exhibition in London last October. Numerous enquiries have been received from industrial users of fuel oil wishing to apply this process.

We are participating in investigations at the Atomic Energy Research Centre at Harwell into the use of radio-active substances in various phases of oil industry operations. For the detection of oil-water interfaces, for instance, a prototype neutron gamma-ray borehole instrument is under construction. We are also co-operating through the shipping industry in the study of the application of nuclear power to marine propulsion.

Geophysical research has included study of seismic wave propagation aiming at improved recording and interpretation of seismic field records. New methods and techniques such as magnetic tape recording, are being investigated and adapted to our particular needs. In petroleum engineering and reservoir study, we are keeping abreast of the latest developments including techniques for secondary recovery and repressuring.

An electronic computer is to be installed in our London offices, where this versatile machine will be used for the complex calculations necessary in many phases of our business.

PERSONNEL

In addition to the increased volume of work caused by the continued expansion of operations in 1956, the BP group's staff had to deal with many extra problems caused by the Suez crisis in the latter part of the year. For the good results achieved in such circumstances, special credit is due to personnel at all levels.

Although the general shortage of sufficient technical and scientific recruits to match our growing needs persists, substantial benefit is now being derived from our established training schemes at home and overseas. The inauguration of the new BP University Apprenticeships, under which some 50 young men were enrolled at British Universities in 1956, will further improve our position.

We spare no effort to ensure that employees, wherever they work, not only enjoy good standard of life but also have every incentive and opportunity for training and advancement in technical and administrative responsibility. Marked success is being achieved in under-developed territories in training adults with no previous industrial experience and young commercial and trade apprentices.

Our constant aim is to promote mutual understanding and respect between our managements and the representatives of the trade unions with which we have agreements. It is agreeable to report that our operations have been practically free from industrial unrest.

It is again a very real pleasure to record the Board's appreciation of the excellent and devoted services of the group's personnel at home, afloat and overseas.

EAGLE STAR INSURANCE

TOTAL RESOURCES EXCEED £113 MILLION

The Annual General Meeting will be held in London on May 31, 1957. The following is a summary of the statement by the Chairman, Sir Brian Mountain, Bt:

The total resources of the Company now exceed £113 million.

In the Life Department, expansion has continued with record figures for the eleventh year in succession. The Investment position continues to be satisfactory.

In the Fire Account, in spite of less favourable experience in the United States and Canada, a profit of £352,088 resulted.

The Accident Account proved profitable, but the Home Motor business showed a loss on the year's operations and the general trend of this business indicates that a rise in Motor rates is inevitable. Overseas Motor business produced reasonable results.

In the Marine Account the year 1953 has been closed satisfactorily, but in view of the uncertainties surrounding the Underwriting years 1955 and 1956, no transfer has been made to Profit and Loss Account, but the Fund has been further strengthened.

The year witnessed a further expansion in the Overseas Account. The widespread extent of the Company's interests throughout the world enabled reasonably satisfactory results to be achieved.

Income from Investments at £826,921 showed a satisfactory increase. The amount carried forward is £1,503,372. The consolidated Balance Sheet totalled over £124½ million. Aggregate premium income over £28 million.

ROYAL DUTCH PETROLEUM COMPANY

N.V. KONINKLIJKE NEDERLANDSCHE PETROLEUM MAATSCHAPPIJ

(Founded in 1890)

ROYAL EXCHANGE ASSURANCE

237th ANNUAL REPORT

FURTHER MATERIAL INCREASE IN TOTAL BUSINESS

LORD KINDERSLEY'S STATEMENT

The Annual General Court of the Royal Exchange Assurance will be held at the office of the Corporation at the Royal Exchange, London, EC3, on May 29, 1957.

The following is the statement of the Governor, The Right Honourable Lord Kindersley, CBE, MC, which has been circulated with the Report and Accounts:

There have been no alterations in the Court of Directors since the Annual Court a year ago; nor have there been any changes amongst our higher executive officers.

1956 IN RETROSPECT

While the year was relatively free from natural disasters which have in recent times afflicted so many of our policyholders, the Middle East situation and a wide range of other political, social and economic events exerted their influence on our activities of insurance and investment. In the final outcome 1956 must be accounted a lean year for the British Insurance market.

In all the circumstances, the results of our group of companies as shown by the annual accounts must be considered as not unsatisfactory even though, except as regards expansion, they do not compare favourably with those of the last few years. You will appreciate that insurance experience can run in cycles so that, in order to enable you to judge the results of our underwriting practices over a longer period than the twelve months under review, I have given a brief five-year comparative précis of results when referring to the separate departments.

In pursuance of our policy of expansion we achieved a further material increase in the total of business written, so that the aggregate of premiums in the fire, accident and marine accounts since 1950 reads as follows:

	£
1950	19,131,829
1951	22,019,017
1952	24,917,487
1953	25,613,912
1954	26,016,542
1955	27,176,614
1956	30,664,073

The notable progress in the year under review has, however, had a considerable effect upon the fire and accident revenue accounts where increased premiums of over £3½ million have required additions to departmental reserves of more than £1½ million. We have of course a substantial equity in these increases in reserves and we look upon the planned expansion of our business as of the utmost importance.

Before turning in detail to the subsidiary but vital activity of investment I must mention quite briefly one current major development in the world of insurance—the great potential demand for indemnity in respect of the risks arising from the peaceful application of atomic energy.

During 1956 much time and thought has been devoted by us in common with other British insurers to the problems which will confront us in affording this form of protection. Although the nature and extent of the risks, both at home and overseas, against which indemnity may be required could easily be over-estimated, the conventional methods of insurance and reinsurance cannot easily be applied, and the problems of market capacity, cover and rating for nuclear energy risks have been and still are the subject of continuous study.

INVESTMENTS

In essence the Corporation contracts to pay stated sums of money as indemnity upon the happening of those events which are the subject of its fire, accident and marine insurance policies. Equally so are money payments the subject of our life assurance policies and annuity contracts. For these reasons, and in the discharge of their responsibility for safeguarding the policyholders' money, your Directors have always felt it necessary to carry a substantial proportion of the investment portfolio in high grade fixed interest securities. Moreover, it is necessary in a certain degree to match the investments with the currencies in which liabilities will arise, so that amongst our assets are to be found substantial holdings of the bonds of the Governments of the United Kingdom, Australia, Canada, New Zealand, South Africa, United States and other territories where we operate.

So that you may be able to understand the measure of the depreciation with which we have had to contend in recent years, but especially since the end of 1954, I have set out the market prices at the last three annual valuations of medium dated bonds which are probably typical of those held widely by insurance companies, including members of our group.

31st December	British Govt. 3%	Canadian Govt. 3¼%	USA Govt. 2½%
	1960/70	1975/78	1967/72
	%	%	%
1954	96	107½	98⅜
1955	81½	103⅜	94⅜
1956	78½	95	87 1/16

However, you may remember that in my statement a year ago I revealed that throughout 1955 and in the early months of 1956 we had adopted investment policies designed specifically to afford protection to the capital value of our portfolio of investments, and one immediate outcome of this action was of course an inevitable and quite material restraint upon the volume of our investment income.

Additionally I can assure you that the investments of our life and annuity funds even at the low market quotations at the end of 1956 were in the aggregate substantially more valuable than the figures recorded in the balance sheet. Similar remarks can also be applied, again in the aggregate, to the many separate funds which we combine under the omnibus title of the General Fund.

As 1956 wore on many of the very factors which had exercised such a harmful influence upon our primary business of insurance were able to be turned to our advantage in the investment field because at the appropriate moment we were holding large cash balances and substantial amounts of treasury bills and other short-term securities.

The opportunities we took of acquiring, at home and overseas, during the latter half of 1956 and the first quarter of 1957 both high yielding long term fixed interest bearing securities and relatively cheaply priced industrial equities are likely to have a significant effect upon the future income earning capacity of our funds. The early fruits of this policy can already be observed in the higher interest income earned during the year.

LIFE FUND

	Year	Premiums	Gross Interest income	Gross Yield per cent	Fund at year end
		£	£	£ s. d.	£
Previous Triennium	1952	2,214,801	1,040,249	4 16 1	22,421,999
	1953	2,343,102	1,143,310	5 1 10	23,346,680
	1954	2,483,357	1,224,600	5 4 9	24,232,051
Current Triennium	1955	2,730,200	1,321,753	5 8 5	25,550,794
	1956	2,917,615	1,428,914	5 11 4	26,869,624

In the life account, the volume of premium income and interest income continued to show a steady improvement as compared with earlier years.

The interest income derived from investments is a considerable factor in the profit earning capacity of this fund and the gross rate of £5 11s. 4d. per cent in the year under review is the highest level achieved since 1932. This improving yield coupled with the strong investment reserve position of the fund provides great security for our life policyholders generally and may also be regarded as a happy augury for those with participating contracts when the bonus investigation is made at the end of this year.

The nett new sums assured written during the year totalled £9,536,520 which is within a few thousand pounds of the record achieved in 1955, and the total annual premiums increased by some £187,000.

ANNUITY FUND

	Year	Consideration money	Gross Interest income	Gross Yield per cent	Fund at year end
		£	£	£ s. d.	£
Previous Triennium	1952	185,668	111,238	5 7 5	2,140,341
	1953	260,620	124,312	5 14 0	2,286,716
	1954	227,297	135,978	5 17 1	2,281,193
Current Triennium	1955	264,561	141,047	6 2 0	2,423,011
	1956	291,682	151,227	6 2 5	2,611,599

The foregoing figures suggest that satisfactory progress is also being achieved with this fund but the full measure of our success will not of course be revealed until the results of the triennial valuation are made known at the end of 1957.

The fund has now been divided into two parts, the General Annuity account, containing the major part of the existing business, and the Pension Annuity account which contains certain pension schemes for employees and the new contracts now being written for professional men, controlling directors and others broadly classified as the "self-employed." This latter account enjoys freedom of taxation of investment income under the provisions of last year's Finance Act.

In designing the form of our contract for the "self-employed" we have been guided by three principles. First, we believe that the most satisfactory results for the purchaser will be secured by a participating contract. Then we feel we must keep clearly before us the main object to be achieved, namely the provision of the maximum personal pension obtainable from the limited amount of annual premium permitted by statute, without dissipating any part of it on subsidiary benefits. Lastly we consider it desirable that the amount of premium should be capable of variation from one year to another. Our Participating Pensions Contract is the result.

It is a statutory requirement that this type of contract should be incapable of being surrendered or used as security and for this reason some people prefer an endowment assurance policy with the option of using the proceeds at maturity for the purchase of an annuity. Such an annuity benefits from another provision of the 1956 Finance Act relieving the capital part of each payment from liability to tax.

FIRE UNDERWRITING ACCOUNT

Year	Nett Premiums	Surplus transferred to Profit & Loss Account	Ratio
	£	£	%
1952 .	9,300,241	895,819	9·6
1953 .	9,541,464	1,142,952	12·0
1954 .	9,763,652	700,944	7·2
1955 .	9,597,570	998,408	10·4
1956 .	10,831,189	305,924	2·8

For the first time the group premium income in the fire department has exceeded £10 million and the increase of over £1,233,000, derived largely from abroad, was certainly not achieved through lack of competition, which remained as keen as ever. Substantial rating concessions were made in various directions and the account produced the highest loss ratio and the lowest surplus for many years. Nonetheless, the surplus realised was still quite substantial and in all the circumstances very creditable.

Overseas we escaped any major catastrophe but in some of the territories in which we operate—notably the United States—the fire wastage was much above normal and gives cause for disquiet.

At home, the nation was put to a high and unnecessary expense through the failure of domestic plumbing to withstand the sudden spell of cold weather which occurred early in February, 1956. The total of the claim payments made under Householders' Comprehensive policies as a result of frost during this brief period exceeded the cost of the fire claims under the same policies for the whole year.

On the industrial side there were several very serious fires, and one matter which is causing us great concern is the rapidity with which they have spread. I have previously drawn attention to the increasing tendency for modern methods of mass production and automation to increase the concentration of production and storage in one large block of communicating buildings, and thus expose enormous wealth to destruction by conflagrations involving a fire loading which taxes the resources of the Fire Service.

I sincerely hope that those responsible for industrial planning will give added consideration to the desirability of further sub-dividing premises by adequate fire breaks; and in particular to segregating valuable stores, in which fires are less likely to originate, from manufacturing processes where such outbreaks must be anticipated.

MARINE UNDERWRITING ACCOUNT

Year	Nett Premiums	Surplus transferred to Profit & Loss Account	Fund at 31st December	Ratio to Nett Premiums
	£	£	£	%
1952	2,242,256	202,112	3,828,651	170·7
1953	1,883,979	208,525	3,753,396	199·2
1954	1,766,950	289,548	3,771,715	213·5
1955	1,829,182	275,091	3,775,030	206·4
1956	1,836,829	233,375	3,761,856	204·8

The results of the 1954 Underwriting Account proved satisfactory and permitted a transfer of £233,375. This was largely through freedom from major casualties in that year, but 1955 and 1956 were not so fortunate in this respect.

This last year was of course notable for the sinking of the Italian liner *Andrea Doria*, which imposed very heavy claims upon the London market, where the greater proportion of the value was insured. In recent months, there have been many other casualties which, although individually not comparable with the loss of a liner, have in total reached a formidable figure. With the continued increase in the cost of ship repairs, which has now spread to all ports of the world, I am afraid the outlook for the 1956 account is uncertain, but it is evident that its profit is unlikely to reach the levels we have experienced in recent years.

The cargo market is still very competitive, and we have reached a stage when little more than the war risks premium is left in hand to Underwriters after the close of an underwriting year.

GENERAL ACCIDENT UNDERWRITING ACCOUNT

Year	Nett Premiums	Surplus transferred to Profit & Loss Account	Ratio
	£	£	%
1952 .	13,374,990	558,847	4·2
1953 .	14,188,469	942,925	6·7
1954 .	14,485,940	867,910	6·0
1955 .	15,749,862	611,786	3·9
1956 .	17,996,055	—57,468	—0·3

It will be recalled that last year I drew attention to two particular features of this account:

Increasing appreciation by the public of the extent to which insurance serves their interests in the social, scientific and industrial development of the day, and the wastage of human and material assets arising from motor accidents.

Those same features have been even more prominent in the year under review. Whilst the even greater use made by the public of the services we offer is reflected in the addition of almost 2¼ million pounds to our aggregate income. I am sorry to say that substantial losses have been incurred in the transaction of our world-wide motor account, due to continued worsening experience in many parts of the world but particularly in the United States of America. It is clear that rate revisions are overdue in many territories in which we operate.

The cumulative effect of the transfer to reserve of the customary 40 per cent of the increase in premium income and adverse motor experience is that, after making full provision for outstanding liabilities, £57,468 has had to be transferred from the Profit and Loss Account.

TRUSTEE AND EXECUTOR DEPARTMENT

The highly specialised services which this department provides continue to be in demand both by industry and individual members of the public. At the end of the year the aggregate amount of the trust funds administered by the Corporation, and of debenture and loan stocks for which it acts as trustee, exceeded £255 million.

The Corporation derives many benefits from the activities of this department which cannot be measured solely by the profits transferred to the Profit and Loss Account, which for 1956 amounted to £44,484. This was a record figure but it included some special fees obtained, after many years of negotiation, on reaching settlement terms for certain Foreign Bond Issues.

CONSOLIDATED PROFIT AND LOSS ACCOUNTS

On the revenue side of these accounts the principal items are £1,541,917 income from investments, £526,315 aggregate nett transfers from departmental revenue accounts, and £101,210 being the Proprietors' share of the life department's valuation surplus. There is also a refund of UK taxation in respect of an earlier year amounting to £17,974.

Turning now to the expenditure side you will observe that as usual much the largest figure is the £1,241,271 absorbed by taxation of various kinds. After allowing for the usual charges including the material item of £235,670 transferred to pension funds, a profit of £536,731 emerges. To this is added the carry forward from 1955 giving a total of £4,157,956.

After transferring a further sum of £280,267 to strengthen the pension funds, paying the interim dividend and providing for the final dividend as proposed, £3,270,416 remains to be carried to the balance sheet.

INCREASE OF CAPITAL AND DIVIDEND

The principal bench marks in a year in which much progress and other material successes were achieved, despite the generally unfavourable political and economic climate are quite apparent; substantially increased premium income, the buoyancy of our interest earnings and the high qualities displayed by our invested funds.

The Court of Directors now consider that the capital ought to be increased so as to relate it more nearly to the immense size of our trading to-day and to bring it more into line with the true capital which we are employing in our business. Accordingly, having obtained the consent of HM Treasury but subject of course to the passing of the appropriate special resolutions, it is intended to capitalise £2,850,000 being part of the sum standing to the credit of the share premium account, and thereby allot 2,850,000 shares credited as fully paid to Proprietors in the

proportion of one such share for each £1 stock held.

You will already have learned that it is the recommendation of the Court of Directors that the final dividend shall be 22 per cent, making the total distribution for the year 32 per cent. Although the surplus disclosed in the underwriting accounts was not as high in 1956 as in some recent years, the favourable features I have mentioned above encouraged the Court to recommend the small increase in the distribution.

Looking ahead a little, it is the Directors present thought that they may be able to pay in November an interim dividend of 8 per cent upon the doubled capital; principally so that the interim dividend should be brought more into line with the final. I cannot at this stage make any definite forecast of our total distribution for 1957 as this must depend so much upon factors beyond our control but one yardstick for the dividend about which I am confident is the mounting total of our interest earnings.

HOME AND OVERSEAS ORGANISATION

The successful growth of our business in the postwar years has brought us to the stage where the Royal Exchange can no longer house the whole of our Head Office staff and we have taken accommodation in the fine new building which the Bank of London and South America have erected in Queen Victoria Street. In the course of the next month or two our Life and Trustee Departments will move into modern offices in this building which will relieve the congestion in the Royal Exchange and enable the staff remaining there to work in more comfort and with greater efficiency.

The year 1956 saw the opening of excellent new premises which we designed and built at Welwyn to accommodate our mechanised accounts, renewal and statistical departments. The latest type of equipment is being installed there as the smooth running of our home organisation depends to a considerable extent on the accuracy and promptitude with which this work is performed.

During the past few years we have moved to better offices in a number of provincial centres while elsewhere existing accommodation has been modernised. We have also opened several new offices in districts where the prospects are favourable.

Our field force, on which we largely rely for the expansion of our business—and to whom the brokers, our agents and the public look for advice and service—has been greatly expanded. Today it is larger and better equipped than at any time in our history.

Abroad our operations continue to receive close attention, and a number of visits overseas were undertaken by the General Manager and other officials.

Our business in Egypt was sequestrated towards the end of the year but I am glad to say that our Manager there was quite well treated and returned safely to this country. All possible losses arising out of this action by the Egyptian Government have been provided for in the accounts although we are hopeful that we shall effect some recovery at a later date.

Elsewhere on the African continent our business has gone ahead. In Nigeria we now have three branches instead of only one—with plans for further expansion. We have also sponsored the formation of a local insurance company, the "New Africa." This is a long-term venture but we have good reason to

We were the first insurance company to open a branch in the Gold Coast—which we did thirty years ago—and we were delighted to be officially represented at the recent celebrations on the occasion of the inauguration of Ghana as an independent State within the Commonwealth.

In Southern Rhodesia we have opened an office at Salisbury in addition to our principal branch in Bulawayo and this will put us in a better position to participate in the great developments which are taking place in the Federation.

All our Eastern branches were visited during the year. There are special problems connected with our operations in that part of the world, but we are fortunate in having many good friends there. However, constant review is necessary to keep our organisation abreast of the ever changing political and economic scene. In Ceylon we were very glad to assist a recently formed national company, Colombo Assurance Limited, by agreeing to provide them with a technical adviser for a few years.

Reference has already been made in the departmental review to the exceptional difficulties which we have had to face in the United States. Much time and thought are devoted to the study of our affairs there and in Canada; and everything possible is being done to improve the results.

STAFF

My tribute to the staff is, as in previous years, left to the end of this statement which I hope will have given some idea of the variety of the problems with which they have to deal in the course of their duties. It is upon their calibre and loyalty and on their exertions that the results of this great group depend from year to year and I am sure the Proprietors will wish me to record their sincere appreciation to them all.

To this I would like to add my personal thanks to the branch managers at home and abroad, the departmental managers, our General Manager, Mr H. A. Walters, and his executive assistants, on all of whom special responsibilities devolve. Nor must I forget our Local Directors, our agents and our many friends and supporters all over the world.

Finally, I must thank the members of the Court and especially the Sub-Governor and Deputy-Governor for their help throughout the year.

CROFTS ENGINEERS

Essential machinery for world's vital industries

Crofts power transmission products play their vital part in virtually every field of industrial endeavour —in mines, power stations, factories, chemical plant, steel works, oil refineries and textile mills. Wherever power is used—the list is endless.

Summarised Consolidated Balance Sheet as at 31st December, 1956.

	£		£	£
Issued Capital	2,500,000	Fixed Assets	2,581,905	
Revenue Reserves and Surplus	842,815	*Less*: Accumulated Depreciation	853,970	
Income Tax 1957/58	492,052			1,727,935

		Current Assets		3,068,346
	£4,904,557			£4,904,557

Summarised Profit and Loss Account For the Year ended 31st December, 1956.

	£	£
Profits for the year before Taxation	1,168,302	
Less: Provision for Taxation	597,514	
		570,788
Net Distribution for the year to Shareholders		158,125
Retained in the business		£412,663

EXTRACTS FROM CHAIRMAN'S STATEMENT:

The whole of our Group of Companies have played their part in the good results obtained. The increase in profits is due to the demand for our goods and the increased producing power and efficiency of our whole organisation; as the further extensions in hand and the new machinery get into production, I am expecting our financial results to grow accordingly.

PROSPECTS: In the present upset state of the world it would be foolish to make statements about the future, but I can say that we are ready to deal with a much greater amount of work than ever before.

We start the year 1957 with a good order book, and this, with our improved delivery position, is a guide to the results we can expect if the demand for our Products continues.

The world wide use of our equipment is progressively expanding, our Home and Overseas Sales Departments keep a constant watch for any demand, and see we get our share of any business that is going.

Our Overseas Subsidiaries have shown successful results and will continue to make their contribution to the benefit of the whole Group.

The prosperity of our Company has been shared by our employees generally through the various schemes of payment.

CROFTS ENGINEERS (HOLDINGS) LIMITED

Empire Works, Thornbury, Bradford, 3.

Subsidiaries and Representation throughout the world.

CANADIAN PACIFIC RAILWAY COMPANY

(Incorporated in Canada with Limited Liability)

A YEAR OF PROGRESS AND ACHIEVEMENT

MEETING THE NEEDS OF A RAPIDLY GROWING ECONOMY

POST-WAR EXPENDITURE LARGELY FINANCED FROM RETAINED EARNINGS

REAL AND PRESSING NEED FOR ATTRACTING ADEQUATE CAPITAL

MR N. R. CRUMP ON FOSTERING THE SPIRIT OF ENTERPRISE

The Annual General Meeting of the Canadian Pacific Railway Company was held on May 1st in Montreal, Mr W. A. Mather, the chairman, presiding.

The President, Mr N. R. Crump, addressing the meeting, said:

The Annual Report on the affairs of your Company for 1956 has now been in your hands for several weeks, and you will have found in it a story of progress and achievement, as well as reference to some familiar and some new problems. For the Country as a whole 1956 was a year of notable prosperity. The gross national product reached an unprecedented level, having increased 11 per cent over 1955. Although higher prices accounted for about one-third of this increase, the balance represented actual growth. This growth was reflected in an increase to a new high in the volume of revenue freight carried by your Railway.

Records were also set in operating efficiency. Your freight trains carried, on the average, more tonnage per train hour than in any previous year. The level of net earnings from railway operations was far less satisfactory.

IMPACT OF RISING COSTS

In common with many industries, your Company felt the impact of rising prices during 1956. Compared with most other businesses, however, your Company is less able to absorb higher costs. The margin between its rail earnings and expenses is extremely small, largely because of the maintenance of the statutory low rates on the large segment of traffic represented by grain and flour. The balance of traffic to which higher freight tolls could be applied has become progressively narrower, as a result of increasing competition from highway transport. A further difficulty arises from time lags between the advent of higher costs and the effective dates of rate increases. Thus while wage rates of employees were increased starting from January 1, 1956, on the basis of recommendations of various Boards of Conciliation, it was not until July that an interim increase in freight rates was put into effect and a further interim increase in the same application was not effective until the new year. The balance of the increase sought remains to be obtained and is still pending. Meanwhile further increases in wage costs and material prices have already been incurred. The effect of these conditions was to dissipate in large measure the benefits of the large volume of traffic.

The ratio of net earnings to railway revenue for the year, at 8.2 per cent, must be considered inadequate while it is realised that the capital investment per dollar of revenue is far higher in the railway industry than in most manufacturing, construction and commercial undertakings. Expressed as a percentage of the net investment in railway property, net earnings in 1956 were 3.15 per cent, a return which is less than can be earned currently by investing in risk-free Government Bonds.

Turning now to the current year, I should like to refer briefly to the effect on 1957 earnings of the strike called by the organisation representing the locomotive firemen and hostlers. It is estimated that in the nine days during which railway operations were suspended, the loss in railway revenue amounted to some $14 million. Fortunately, some of this traffic loss can be recovered and the final effect on railway revenues should prove to be materially less than that figure. Numerous instances of customer loyalty came to light in the course of the strike and the spontaneous expressions of public support for the position taken by your Company were highly gratifying. There was a great deal of evidence of general approval for the position of the Company that there is no justification for retaining employees in positions in which no essential work is performed. The issue as to whether firemen are necessary on diesel locomotives in yard and freight service is now before a Royal Commission whose appointment was a condition for ending the strike. An offer to abide by the decision of the Commission was made by your Company in the belief that such disputes should be settled finally by impartial tribunals without the necessity for strike action and the damage to the economy which must inevitably result.

1957 OUTLOOK

There are some indications that the rate of expansion of the economy in 1957 will not be as great as it was last year. In his Budget Speech a few weeks ago, the Minister of Finance said that present investment intentions point to capital spending of $8.5 billion for the Country as a whole during the current year. This amount is 8 per cent above 1956, whereas the increase in 1956 as compared with 1955 was 17 per cent. In absolute terms, however, a capital programme of the magnitude indicated is substantial and adds to the productive capacity of Canada. In the light of this, it could reasonably be expected that there would be some additional volume of railway traffic which together with the rate increases already authorised should produce an increase in revenue.

Expenses will, of course, be affected by the further increases in wage rates which have still to be faced under the terms of agreements made last year with the various organisations representing employees. On the other hand, capital outlays for improvements will produce economies and hence on balance it appears probable at this time that the net earnings for the year will equal, if not exceed slightly, those of 1956.

Patronage of your Hotels is expected to be at a high level this year, but because of increased costs there seems little likelihood of an improvement in net earnings. Work on the 400-room addition to the Royal York Hotel in Toronto is proceeding as scheduled and is expected to be completed about the end of next year.

The demand for communications services of all types—leased wires for radio and television transmission, telegraph, teletype, and facsimile transmission—has been particularly buoyant in recent years. It is expected that this will continue, but an increase in net earnings from your communications is essentially dependent upon an adjustment in tolls to offset increased costs.

Your Ocean Steamship operations should continue to make a favourable showing. The schedule for the summer season calls for 22 more sailings by the *Empresses* than in 1956. This increase is made possible by the entry into service of the *Empress of England*, which left Montreal yesterday to complete her maiden voyage. Steamship freight revenues are expected to be well maintained; demand for cargo space, particularly on Westbound crossings has been good and cargo rates tend to be firm as a result.

The acquisition of the right to extend its Mexico City-Toronto Service to Lisbon, via Montreal, is a further step in the expansion of international routes flown by your Air Lines. The first commercial flight on the new route is to take place on May 30th. This new route, it is hoped will not only appeal to people in Latin America, but will provide new attractions to Canadians for travel through Southern Europe. The regular service between Vancouver and Amsterdam of two flights weekly is being doubled for the Summer season.

DEVELOPMENT OF OIL AND GAS RIGHTS

Your Company owns mineral rights in over 12 million acres of land in the Western Provinces, largely in Alberta and Saskatchewan. This ownership in most cases includes oil and gas and in 1956 provided a net income before income tax of $9.3 million, an increase of $584,000 as compared with the previous year.

In view of the increasing importance of the interests of your Company in the development of oil and gas, a firm of petroleum engineering consultants has been engaged to conduct a complete geological survey of a large and important portion of your acreage. This survey is part of an intensive study to determine the best method of maximising net income from these resources over the long term consistently with sound growth in Canada's petroleum and petro-chemical industries.

ECONOMIC STUDY FORECASTS GROWTH

Last year at the Annual Meeting I referred to the economic study which had been undertaken for your Company. The study was designed to give some indication of the conditions which the transportation industry might face over the next 15 years. The final report has now been completed, and I think you will be interested in some of its findings and conclusions. You will probably be interested first in knowing that there is general agreement between the forecasts made in this report concerning the probable nature and pace of the development of the Canadian economy and the forecasts in the preliminary report of the Royal Commission on Canada's economic prospects, popularly known as the Gordon Commission Report.

Looking ahead for 15 years from 1955, the Havard-McGill group which made the study found that the population of Canada might be expected to increase by 35 per cent to 21 million people: That the gross national product, valued at the price level prevailing in 1955, might climb in the same period to $48 billion, an increase of 80 per cent: and that manufacturing output could increase by 90 per cent, mineral production by 300 per cent and overall transportation requirements by 170 per cent. The Report points out that technological change has radically altered the competitive relationships between the different forms of transportation. Monopoly or partial monopoly conditions have become the exception rather than the rule, but regulatory policy has not kept pace with this development. As a result, a certain amount of economic dislocation is created, not only for the railways but for the other sections of transportation. The continued handling of traffic by other than the most economic medium has prevented the achievement of maximum economy in the total transportation cost of the Nation.

The Report forecasts intensification of competitions, but finds that railways in this Country possess decided cost advantages which continue to assure them a prominent role in providing essential transportation services. Effective use cannot be made of the greater freedom. Regulatory policies will need to be brought up to date so that railways can be at least as flexible in pricing their services as are other forms of transportation. The railway industry also needs greater freedom to adjust services to changing traffic conditions, by increasing, supplementing, or abandoning them as the demand requires.

BURDEN OF GRAIN TRAFFIC

To increase one of the most serious handicaps under which the railways operate is the statutory scale of rates applicable to grain and grain products in Western Canada. It is gratifying to note that the preliminary report of the Gordon Commission acknowledges the need of the railways for relief from the worst effects of that troublesome combination—rising costs and rigid rates—and suggests that the relief might be in the form of a subsidy. Between one-quarter and one-third of the freight traffic volume of your railway moves at statutory and related grain rates, which average about half a cent per ton mile. While these rates have prevailed for the past sixty years, except for an interlude at the end of the first World War, labour and material prices have increased many fold. The conclusion of the Commission that amelioration is called for is thus thoroughly justified by the facts.

In Canada's rapidly developing economy it can be expected that the general price and cost level will be forced upward. Thus, unless corrective action is taken, the burden of losses from grain carried at statutory rates will increase in future years and will result in eventual detriment to most users of railway services.

A RECORD OF PROGRESS

Difficult as our problems have been and are, we continue hopefully to attack the job in hand. The success which your Company can achieve in continuing to meet the needs of a rapidly growing economy can be gauged in some measure by looking at what has already been accomplished and what is being planned. Improvement and modernisation of rail facilities in the past ten years have brought benefits to all three groups affected by the operations of your Company—patrons, employees and shareholders. Patrons have benefited from capital expenditures made with a view to keeping costs as low as possible, as well as from those designed to improve service. Evidence of saving to shippers can be found in comparing the increase since 1946 of 49 per cent in the average unit price paid for all rail freight traffic with the increase of 62 per cent in the general level of wholesale prices in Canada. In terms of service, the use of modern communications has made possible improved utilisation of equipment and expedited car movements.

With further developments in electronic transmission and processing of vast quantities of operating data, more accurate information regarding freight shipments will be available more quickly than ever before. Average freight train speed has been increased from 16 miles per hour in 1946 to 19 miles in 1956, and this trend will continue with greater use of diesels. Sturdier and more specialised freight equipment has reduced damage to goods in shipment. Similarly, improvement of your passenger service has not been neglected. The "Canadian" and the "Dominion" offer transcontinental service on fast schedules in the most modern equipment available. On shorter runs, rail diesel cars have been successfully introduced to effect economies.

The employees of your Company have fared well, too. The average earnings of railway employees in 1946 were $2,300, while in 1956 they amounted to $3,750, an increase of nearly 65 per cent. To this increase have been added improved working conditions, such as the reduced work week of 40 hours, and health and welfare benefits. Out of every dollar of revenue earned in 1956, 53 cents was paid out for wages and pensions as compared with 51 cents in 1946. In this connection I think it is significant that the investment per employee in railway plant and equipment was increased in the same period from $20,000 to $26,000, or 30 per cent.

RETENTION OF EARNINGS

I realise that shareholders have benefited least from the growth of traffic and from the modernisation of the property in the period under review. The declaration of the extra dividend of 25 cents per share last year was the first change in the dividend rate since 1950. Earnings which otherwise would have been available for dividends have been retained for investment in new and improved railway plant and equipment. Indeed, a substantial portion of rail capital expenditures since 1946 has been financed by such retained earnings. An acute problem arises from this fact because the so-called "requirements" authorised by the Board of Transport Commissioners for rate-making purpose have not been modified to provide for a return on investment not directly represented either by debt or by capital stock. The present formula for establishing permissive earnings provides an allowance for fixed charges apportioned to rail operations, an allowance for the actual dividends paid on the Preference Stock, a dividend from rail earnings of 5 per cent on the par value of the Ordinary Stock, and an allowance for retained earnings. In view of the large amounts of shareholders' money reinvested in the property, the "requirements" basis is deficient in not allowing any return on that sum.

Last Autumn I had the opportunity of presenting to the Board of Transport Commissioners the views of your Company on this important question. At that time I pointed out that in the years 1947 to 1955 some $215 million had been so reinvested: another $37 million can be added to that figure to bring it up to the end of 1956. I submitted that shareholders were not being fairly treated unless all the funds, contributing to the increase in rail investment, whether from Capital Stock issues or from retained earnings, received recognition in the permissive level of rail income.

The Board has set out a number of special matters for review during hearings in September on the final determination of the application for the balance of the 15 per cent freight rate increase applied for in 1956 which remains to be dealt with. The permissive level of rail earnings for your Company is among the matters to be reviewed. The need for attracting adequate capital to your rail enterprise over the next 15 years is real and pressing. To secure such capital, Canadian Pacific must offer opportunities comparable with those afforded investors in other enterprises. If it cannot do so, it will fail to get the necessary funds at reasonable cost, and patrons and employees, as well as shareholders, will suffer the consequences accordingly.

AN ATMOSPHERE OF ENTERPRISE

Your Board and the Officers of your Company do not believe that this will be allowed to happen. It is their conviction that the difficulties to which I have referred can be, and will be, resolved. There is no doubt in the minds of any of us that the Canadian public is prepared to give its railways a fair deal. By both its performance in the past and its realistic planning for the future, your Company has demonstrated that it has the flexibility and adaptability that are necessary in these stirring years of change and growth. Great things remain to be done if we are to realise the attractive goals that our forecasters say are within reach. The widespread transportation facilities built up by your Company, the valuable pool of skills and experience possessed by its employees, the energy and initiative of management and the confidence of investors will all be needed in supplying the transportation necessary for development of the tremendous potential of our Canadian economy.

The response of your Company to tasks entrusted to it has always been dynamic. By fostering the spirit of enterprise to which Canadian Pacific is no stranger, we intend to meet the challenges posed by our problems no less than those offered by our opportunities. Motivated by faith in the future and by determination to play our part in it, we are going ahead with plans for adapting the transportation plant to changed and expanding needs. Granted reasonable opportunities to compete, there is every reason to believe that the transportation system which will evolve from our planning and from the careful application of capital will fully measure up to the demands that the future growth of Canada may make upon it.

The report and accounts were adopted.

ROYAL INSURANCE COMPANY LIMITED

A statement by the Chairman, Mr T. H. Naylor, circulated with the Report and Accounts of the Royal Insurance Company Limited announced an underwriting profit of £1,956,000, which was considered satisfactory in the circumstances, as 1956 had been an extremely difficult year for Insurance Companies.

DOLLAR RATE OF EXCHANGE

The accounts this year had been substantially affected by the decision to bring in US and Canadian business at $2.80 to the £ instead of approximately $4.86 as hitherto. In addition to the conversion of current business at the new rate, the corresponding assets and liabilities had been similarly revalued at the beginning of the year.

In comparing the figures with those for 1955, the various increases shown—which arose very largely from a change in the basis of accounting—did not represent any addition to the intrinsic worth of the Company, other than the enhancement that had arisen from the normal development of operations.

In the underwriting accounts the total premium income for Fire, Accident, and Marine business showed an increase of £42 million from £79 million in 1955 to over £121 million in 1956. Eliminating the effect of the dollar revaluation, however, the income in the Fire, Accident, and Marine departments had increased by a little over 7 per cent.

In the Profit and Loss account the interest item at £3,243,174 was higher by over £600.000. The increase here was less marked than might have been anticipated, because dividends and remittances received from North America had always been converted at the current rate of exchange. The revaluation, therefore, affected only that proportion of the interest retained in the US and Canada in conformity with the best standards prevailing in those territories, and did not make the slightest difference to the amount of interest available at home.

In turning to the balance sheet, the Chairman said that the increase of £72 million in the assets had largely arisen from the revaluation of dollar assets, against which there had of course been an increase in the corresponding liabilities. Insofar as the excess of assets over liabilities was retained abroad to cover contingent future liabilities and the continuing development of business, the increase resulting from revaluation had properly been applied to augment various departmental and other reserves. It would be seen from the accounts that the sum of £13 million had been allocated to Additional Reserve in the Fire Account, a small amount of £250,000 to the Additional Reserve in the Accident account, and the General Reserve had been increased by £10 million.

FIRE DEPARTMENT

Year	Net Premiums	Underwriting Profit	Percentage of Premiums
	£	£	
1956 ...	52,599,302	1,217,970	2·3
1955 ...	32,248,998	2,016,085	6·3

At home, Fire premiums had advanced slightly, but loss ratios had been higher than for many years.

In the overseas field, Fire loss experience had been heavier than usual, but the Company had nevertheless been able to show a reasonable profit.

ACCIDENT DEPARTMENT

Year	Net Premiums	Underwriting Profit	Percentage of Premiums
	£	£	
1956 ...	63,045,235	737,917	1·2
1955 ...	42,074,680	1,396,519	3·3

Business in the Accident department had shown satisfactory development, but the profit margin had been reduced, due mainly to a loss on the motor account.

MARINE DEPARTMENT

Year	Net Premiums	Funds as at Dec. 31st	Percentage of Premiums
	£	£	
1956 ...	6,046,875	13,546,933	224·0
1955 ...	4,729,962	10,539,273	222·8

Consequent upon the decision to keep the underwriting account open for a full three years, the transfer to Profit and Loss account in respect of the 1955 underwriting operations had been deferred until the end of 1957.

LIFE DEPARTMENT

Year	New Sums Assured	New Annuities (per annum)	Claims by death	Matured Endowment Assurances
	£	£	£	£
1956..	35,995,786	1,524,999	1,442,072	2,282,056
1955..	33,180,218	1,066,920	1,382,086	2,147,759

New sums assured had shown a considerable advance compared with the previous year, partly owing to the adoption of the new exchange rate for Canadian business. It had been possible to make a further increase, from 42s. per cent to 45s. per cent per annum, in the rate of interim bonus, except in certain overseas territories.

INVESTMENTS

Money had continued dear during the past year in this country, and conditions had been modified only marginally by the reduction in the bank rate in February. Maintenance of dearer money policies had also been observed in many other parts of the world.

Despite higher interest rates, the demand for money had remained strong, and it had been possible to continue to invest substantially both at home and abroad in new issues at attractive rates of interest. At home such investment was also reflected in an increase in the portfolio of mortgages and loans. It was stressed, however, that the Company had acted only in conformity with the Governments policy of restraint, and the greater part of the investment in mortgages and loans had been made in projects of a size sufficient to require the sanction of the Capital Issues Committee.

The inevitable consequence of higher interest rates was a fall in the market value of existing fixed interest securities, but in spite of this the market value of the Company's investments at the end of 1956 still showed a substantial margin over the value at which they appeared in the balance sheet.

In the conduct of investment affairs overseas, great benefit had been derived from the knowledge and experience of the various Local Boards and Committees. The Chairman extended warmest thanks to all these, and in particular said how much the Company valued the care and attention devoted to the specially important investment interests in the United States by the New York Finance Committee under the distinguished Chairmanship of Mr Benjamin Strong.

TAXATION

£500,000 had been set aside in the Profit and Loss account in respect of United Kingdom taxation, this being additional to an amount of £2 million charged to interest, which was shown net of taxation. There were also overseas taxes of some £5 million in respect of underwriting and interest, and after home and overseas income tax on the Life and Capital Redemption accounts had been taken into account, the aggregate taxation on the year's operations had amounted to some £8½ million.

DIVIDEND

An increased final dividend of 1s. 11d. is recommended by the Directors, making 3s. 8d. per 5s. unit of stock for the year.

REICHHOLD CHEMICALS

CONTINUED EXPANSION OF SALES

MR W. H. BREUER ON ADVERSE FACTORS

The fifth annual general meeting of Reichhold Chemicals, Limited, will be held on May 28th, at Winchester House, Old Broad Street, London, E.C.

The following is the statement by the chairman, Mr Walter H. Breuer, circulated with the report and accounts :

The annual accounts are presented in a similar form to last year and adequately reflect the year's operations of our group of companies and their position at the close of the year. During the year the operating companies continued to expand their sales particularly in the fields of Glass-fibre Reinforced Plastics and Vinyl Polymers but like many other companies a very substantial increase in overheads covering wages, salaries, heating, transport, etc., had to be absorbed with a consequent reduction in profit margins, as evidenced in the accounts before you.

In view of these adverse factors coupled with the problems which arose from the credit squeeze and increased competition, your Directors consider the results satisfactory. However, they have been obliged to consider the impact of the reduced profits and the increased rate of Profits Tax and they propose the cash bonus be reduced to 2½ per cent.

DIVIDEND AND BONUS

Accordingly they recommend the payment to the holders of Ordinary shares a final dividend of 10 per cent and a cash bonus of 2½ per cent. With the interim dividend of 7½ per cent already paid, this makes a total dividend of 17½ per cent and a total distribution of 20 per cent compared with 22½ per cent last year. It is essential to maintain the prudent policy of an adequate ploughback, and it is proposed to place a further £75,000 to General Reserve.

Due to continued delays in delivery of component parts of the Phthalic Anhydride Plant, our hopes of deriving benefit from the production of this essential raw material in 1956 were frustrated. It is anticipated that production will shortly commence.

Our associates, Reichhold Chemicals Inc., USA, became a public company in Novem-

ber, 1956. Under a renewed agreement at a reduced rate of commission the Beck Koller Company should effect a satisfactory saving in the full year since the new agreement obtains from July 1, 1956.

We continue to enjoy the benefits from our close association with Reichhold Chemicals Inc., and its associated companies throughout the world, in the frequent exchange of technical information and, further, a reciprocal agreement has been concluded with Reichhold Chemicals Inc., and their associated companies involving commissions to the Beck Koller Company.

BURDEN OF TAXATION

May I emphasise the effect of the intolerable burden of taxation confronting industrial enterprises today. I can only hope that due regard to the necessity of fostering and maintaining increased production as so often expressed by the Chancellor of the Exchequer may soon result in the alleviation of the present penal level of taxation which is detrimental to the progressive expansion of industrial concerns.

In spite of all difficulties such has been the capital expenditure programme of the group that at the end of 1956 the book value of the fixed assets is double the figure at which they stood in 1952.

You will doubtless wish once again to associate yourselves with the tribute I am happy to pay, on behalf of the Board of Directors, to all our factory employees, technical and administrative staffs and directors of the operating companies, for their continued enthusiasm and support in these difficult times.

MONSANTO CHEMICALS LIMITED

The following are salient features of the circulated Report of the Directors, 1956, and of the statement by the Chairman, Sir Miles Thomas, D.F.C., which will be presented at the Annual General Meeting on May 30th, 1957.

SALES New records were achieved in both total sales and exports.
Sales at £14,035,000 were 4 per cent. higher than in 1955.
Exports at £5,821,000 were 15 per cent. higher.
Exports represented 41 per cent. of total sales and were distributed through 124 countries.
Home selling prices were held as near as possible to existing levels while export prices were dictated by the keenest international competition. It was consequently necessary to absorb most of the continuing increases in the cost of raw materials, services and labour.

PRODUCTION New plants completed during the year or shortly after included—maleic anhydride for paint, plastics and resins; cyclohexylamine for our own use in rubber chemicals manufacture and for sale; toughened polystyrene plastics. Several existing plants were expanded.
Increased efficiency achieved the highest volume of manufacture in our history whilst enabling experienced operatives and staff to be released to operate on new plants.

FUTURE DEVELOPMENT New manufacturing facilities will make more phthalic anhydride available to the paint, plastics and synthetic resin industries. Other new plants in 1957 will manufacture by-products of synthetic phenol, and "synthetic rubbers" for shoe soling, and chemicals for the rubber industry.
Construction of the new factory at Fawley will begin shortly. The first plant, to be completed by mid-1959, will initially produce 10,000 tons of polyethylene annually. This will add a new and valuable group to our range of plastics.

THE YEAR AT A GLANCE

	£	Percentage of total Income
WE RECEIVED:		
From the sales of our products and from dividends, interest, etc.	£14,166,890	100.0
WE PAID OUT OR PROVIDED FOR:		
Raw materials, fuel, supplies, etc.	9,237,728	65.2
Wages, salaries, national insurance, pensions, etc.	2,635,093	18.6
Depreciation and obsolescence	574,990	4.1
Interest on loan stock	175,000	1.2
	£12,622,811	89.1
WHICH LEFT	£1,544,079	10.9
THIS HAS BEEN APPLIED AS FOLLOWS:		
For payment of income and profits taxes	708,975	5.0
For payment of dividends to our stockholders	422,625	3.0
For items not applicable to the year	38,501	.3
Retained in the business	373,978	2.6
	£1,544,079	10.9

Copies of the Annual Report are available on application to the Department of Industrial and Public Relations.

THE BRUSH GROUP LIMITED

TWO IMPORTANT PROPOSALS

The sixty-eighth annual general meeting of The Brush Group Limited will be held on May 30th in London.

The following is an extract from the Statement by the Chairman, Mr Geoffrey C. F. Eley, CBE, which has been circulated to Stockholders:

I am sure you will wish to know a little more about the two proposals reported in the Press on April 18th, and how they will affect both you and the Company.

HAWKER SIDDELEY OFFER

The first proposal is the offer made by the Hawker Siddeley Group Limited to acquire the whole of the issued capital of your Company. The Brush Group has been hampered for many years by a lack of permanent capital and whilst we justly appreciate the considerable assistance afforded by the Group's Bankers, the shortage of permanent working capital has had a restraining effect on the development of many projects.

The proposed merger with the Hawker Siddeley Group should enable both Groups to participate fully in the tremendous possibilities of the nuclear era. The advantages to be obtained from the fusion are, however, not restricted to nuclear activities. The addition of the varied range of Brush Group products with their world-wide sales markets would broaden the basic interests of the Hawker Siddeley Group whilst the Brush Group could not fail to benefit from the technical and manufacturing knowledge available in the Hawker Siddeley Group.

Various formalities have to be completed before the formal offer is sent to Brush Group Stockholders, but it will be issued as soon as possible. Your Board regard the terms as fair and favourable to all parties and strongly recommend acceptance.

ASEA ELECTRIC LIMITED

The second proposal is the acquisition, subject to necessary formalities, of the entire share capital of ASEA Electric Limited, the name of which is to be changed to Fuller Electric Company Limited. That company is the English subsidiary of Allmänna Svenska Elektriska Aktiebolaget (ASEA) of Sweden and has a large, modern and well-equipped factory at Walthamstow.

Subject to the necessary consents, the purchase of ASEA Electric will take place irrespective of the proposed merger with the Hawker Siddeley Group.

After commenting on the financial results for the year to December 28, 1956, Mr Geoffrey Eley continued: Notwithstanding the difficult trading conditions of 1956 which affected most of the country's engineering industry, the Group slightly increased its turnover and received more orders than in 1955. In the important dollar market of Eastern Canada we achieved greater success than ever before in the sale of Diesel engines and generating sets.

The Chairman then reviewed the Group's widespread manufacturing activities, and continued:

Our products are of high quality and our trade is sufficiently spread throughout the world to prevent our being too greatly affected by local recessions in any one area.

SAXONE, LILLEY & SKINNER (HOLDINGS)

MERGER BETWEEN SAXONE SHOE COMPANY AND LILLEY & SKINNER (HOLDINGS) SUCCESSFULLY CONCLUDED

RECORD TRADING RESULTS

MR THOS. LILLEY ON BENEFITS FROM EXPANSION PROGRAMME

The annual general meeting of Saxone, Lilley and Skinner (Holdings) Limited will be held on May 30th at 21 Tothill Street, Westminster, London.

The following is the statement by the Chairman, Mr Thos. Lilley, which has been circulated with the report and accounts:

During 1956 the negotiations for the amalgamation of your company with Lilley and Skinner (Holdings) Limited were brought to a successful conclusion and the two companies were finally merged on January 8, 1957. This important development is the one which will naturally be of most interest to shareholders. The accounts which are now submitted to you cover the trading results of the former Saxone Shoe Company Limited for 1956 in the manner in which they have always been presented. For the information of shareholders there is submitted also a consolidated statement of assets and liabilities and a profit and loss account drawn up on the assumption that the amalgamation between Saxone Shoe Company Limited and Lilley and Skinner (Holdings) Limited had been completed by December 31, 1956.

RECORD SALES

In dealing first with the former accounts it is encouraging to report that the combined sales of Saxone Shoe Company Limited and its two subsidiaries, Ritchie's Paper Products and Saxone Shoe Company Australia, established new records in 1956. Much of the profit arising from the increase in sales has been absorbed by heavy increases in overheads, particularly wages. Nevertheless the company has been able to show an improvement of £20,576 in the net trading profits which at £901,879 are themselves the highest ever achieved.

An important contribution to these fine results comes from new shops opened during the year as well as a number of extensions made to existing branches. Entirely new shops were opened in Sheffield, York, Blackpool, Southsea, Lewisham and Strand, London. This last opening caused particular interest because the shop occupies the site of the old Romano's Restaurant and gives a fine example of the style of shop front which has been installed recently by the Company.

REDUCED RATE OF DEPRECIATION

In the past, shopfronts have been written off over 12 years, but in view of their more permanent nature nowadays your directors have decided to adopt a more realistic policy and these assets will now be written off over 20 years. This reduced rate of depreciation, equivalent to 5 per cent per annum, has in fact been applied in the accounts before you and is responsible for the reduction in the charge for depreciation on shopfronts, fixtures and fittings. I would, however, point out that the amount set aside for the renewal of these assets of over £83,500 is still a very substantial sum. Moreover, although the rate of depreciation has been reduced, the ever-increasing cost of replacement must be provided for and, while inflationary conditions prevail, your directors have decided that this is best done by an appropriation from profits. A further addition to the provision for renewals of £25,000 has therefore been made and appears later in the profit and loss account.

The extra profits tax reflects the increased rate imposed last year and now applied for a full year. There is no change in the total distribution by way of dividends, but as already announced the ordinary dividend takes the form of a first and second interim at the same rates respectively as the interim and final dividends of last year. In this connection your Directors have agreed that the total distribution in future will be divided between a higher interim and a correspondingly lower final dividend than has been the practice in the past.

CONSOLIDATED ACCOUNTS

There are no other items in the profit and loss account or balance sheets which require explanation, and I will turn now to the consolidated accounts to which I referred at the beginning of my statement. Two items in the consolidated statement of assets and liabilities require comment. The first is the share premium account of £2,250,000. This represents the excess of the market, over the nominal price, of the company's shares which were issued to the members of Lilley and Skinner (Holdings) Limited in exchange for their shares in that company, at the time of the amalgamation. The second item is the freehold and leasehold properties appearing in the statement under the heading Fixed Assets. The value shown for these properties is the book value, but, as explained when the proposals for the amalgamation were announced, recent assessments have shown that the current values of the properties are substantially greater than those at which they are included in the statement.

The profits shown in the consolidated profit and loss account are those of the two companies together for 1956 and do not, of course, reflect any of the benefits which, we are sure, will follow from the amalgamation, some of which are already being felt. I am glad to be able to report that a most happy and co-operative spirit exists between the different companies in the group, all of which enjoy the continued loyalty and enthusiasm of their staff and employees. Your directors are confident that, in the long run, the amalgamation will be beneficial to everyone connected with Saxone, Lilley and Skinner (Holdings) Limited.

BRITISH ALUMINIUM COMPANY

INCREASED INCOME

The Annual General Meeting of The British Aluminium Company, Limited, was held on May 7th in London.

Marshal of The Royal Air Force, The Right Honourable Viscount Portal of Hungerford, KG, GCB, OM, DSO, MC (the Chairman), in the course of his speech, said: The consolidated income for the year, after tax, amounted to £1,584,269, which compares with £1,426,717 for the previous year.

The demand for our general semi-fabricated products eased slightly during the year under review. We attribute this, at least partially, to two factors: firstly, improvement in the world supply of ingot resulting from new capacity in various countries enabled our customers to reduce their stocks owing to the removal of anxiety about supplies; secondly, the credit squeeze accentuated the tendency towards stock reduction.

Our subsidiary and associated companies operated satisfactorily throughout the year.

PRICES

The price of aluminium ingot, which is influenced in this country by the North American price, increased during last year by a total of £26 per ton, and now stands at £197 per ton. This increase, coupled with increases in wages and other costs, made it necessary to adjust the prices of our semi-fabricated products.

During the latter months of 1956 and the early months of this current year the trading position was adversely affected to some small extent by a number of factors, among them the credit squeeze, hire purchase restrictions, a general recession in the motor industry and industrial unrest.

We have the greatest confidence in the long-term future of our metal, and there is no doubt that the removal of the metal shortage which has been so hampering to development work, will enable us progressively to expand. It is obvious that there must be considerable reluctance on the part of users to make all the adjustments necessary for the use of a new material when there is no guarantee of the availability of supplies. We are therefore looking forward with other members of the industry to expanding demand resulting from an active programme of development work unhampered by anxiety regarding metal supplies.

Last year we were able to expand our export orders in spite of keener and more intensive competition.

CANADIAN SUBSIDIARY

Last year I informed you of the formation of our new subsidiary, Canadian British Aluminium Company Limited, and you will wish to have a report of progress made to date. This has been well up to schedule, and the amount of work achieved has been most impressive, reflecting great credit on all concerned.

When we add to the net income of the Parent Company the amount brought forward from the previous year and deduct certain appropriations and provisions, we are left with the sum of £1,055,172. We recommend a final dividend of eight per cent on the Ordinary Stock which makes twelve per cent, less tax, for the year.

The report and accounts were adopted.

LONDON & MANCHESTER ASSURANCE

LORD GRANTCHESTER'S SPEECH

The eighty-eighth Annual General Meeting of the London & Manchester Assurance Company, Limited, was held on May 8, 1957, at the chief office, Finsbury Square, London, EC2. The chairman, Lord Grantchester, OBE, presiding, said:

DIRECTORS' REPORT AND ACCOUNTS

The Directors' Report and Accounts for the year 1956 have been in your hands for some weeks and I assume you would wish to take them as read.

There is nothing very remarkable on which comment is necessary; you will probably agree that the accounts record moderate progress. The Life Funds stand at over £52 million and show an increase in the year of over £2 million. There is an increase in the premium income in all branches. In the ordinary Branch, where the premium income is approaching £3 million a year, the year's increase is £111,000. In the Industrial Branch, where the premium income is now over £3½ million a year, the year's increase is £159,000. The total sum assured in the two Life Branches is now over £125 million, including bonus additions. In the Fire & General Branch, where the premium income is over £330,000 a year, the year's increase is £35,000.

Our thanks are due to the Directors, Management and Staff of the County Fire Office for their ever-ready assistance with our Fire and General business. In common with the general experience, due to exceptional weather conditions of frost and storm and to the continued bad experience in the Motor Department, the results in the Fire and General Department were disappointing.

There is a further improvement in interest income, which has been one of the objectives of our investment policy over the past few years. The total gross interest has increased during the year by over £200,000 and the gross yield on the funds is £5 11s. 6d. per cent.

The year has not been without anxiety. Costs have risen more sharply than premium income. Local rates figure prominently among the increases as well as an increase in the contributions to the Staffs' Pension Fund and increased remuneration to the Staff, of which we have not felt the full impact in the year under review. It is a disquieting feature that whereas expense ratios were steadily coming down they are now moving upward. It is in the long term interests of the Staff to co-operate with the Management to correct this trend.

INVESTMENTS

The problems of Investment have not been easier. I said last year that the balance sheet values of our Stock Exchange securities as at December 31st, 1955, were in total less than their market value without recourse to the Investments Reserve Fund. This is again the position today although at the date of the Balance Sheet before you it was necessary to take into account the Investments Reserve Fund to a limited extent. There has been no marked change during the year in the spread of our Investments. The growth in assets is reflected in Mortgages which have increased by approximately £1 million and in Debentures and Ordinary Shares which have increased by approximately £½ million each.

BONUSES

I believe, having regard to current premium rates and to the rates of bonus which we are paying, the contracts which we offer in all departments are very good value. The bonus in the ordinary Branch this year is £2 per cent on the Sum Assured and the cost of the bonuses declared this year in the two Life Branches is in excess of £1 million.

INVESTMENT TRUST RETIREMENT ANNUITIES

In addition to the demand for conventional contracts, we sensed a potential demand for a retirement annuity, where the obligation to pay does not arise for a comparatively long period of years, under which both premiums and benefits are related to the level of equity prices instead of being payable in sterling. As a consequence we launched in January this year a new contract under the title "Investment Trust Retirement Annuity," which is based on the price of Investment—Trust—Units.

You will be gratified that our pioneering effort has met with a most satisfactory response. We feel well rewarded for having met a new demand attracting new customers to the Company under this prospectus.

MONETARY POLICY AND INFLATION

I welcome the decision of the Government to set up a Committee to enquire into various aspects of monetary policy and hope the conclusions of the Committee will help toward the re-establishment and maintenance of sound money, for inflation continues to threaten the future value of our currency and our standard of living. It is surely to be expected that the purchasing value of the pound note would fall when the number of pound notes in circulation has been increased four times since 1939 and the quantity of Treasury bills by five times, while production has increased less than 40 per cent over the same period.

SAVINGS

Once again I must stress a subject which is of supreme importance and directly linked with our business. This is the question of saving.

I want to give three reasons for saving—

The first is personal; our sympathy is stirred when we hear or read of the hardship from which some old people still suffer. They need sympathy and help—but, while pity is aroused, we should also fear lest a worse fate befall this generation, as it well may if something is not put aside for the future. There is no better way than through an insurance policy.

The second is both personal and comradely. Savings invested in a policy help to step up the rate of investment in industry and thereby raise the level of productivity. The amount of investment is limited by the supply of savings so every policy-holder helps to keep the wheels of industry going on which he depends for employment.

The third reason is personal and national. A high rate of personal saving restrains the immediate demand for goods, helps the export drive and reduces our balance of payments difficulties. It also helps to keep up the value of our money.

AGRICULTURAL MORTGAGE CORPORATION

INCREASED LOANS

The annual general meeting of The Agricultural Mortgage Corporation Limited will be held on May 29th at Stone House, Bishopsgate, London, E.C.

The following is an extract from the circulated statement of the Chairman, Mr E. J. Bunbury, CBE, MC:

The year 1956 opened with high promise for farming, but after a mild spell, arctic conditions gripped the country and held up work for a month. This was followed by true Spring weather in March. In spite of these vicissitudes, our borrowers have generally maintained their record for the prompt payment of their loan repayment instalments, 95½ per cent of the amounts due having been paid by the end of our financial year.

We have completed loans to the total of £4,116,135 during the year, an increase of £609,919 (17 per cent) over last year, while further loans of £1,169,362 were granted by the Directors and will be completed as soon as the usual legal formalities have been arranged.

The recently published Government long-term assurances to the agricultural industry have been well received, and they are by far the most important steps taken to promote the welfare of the farming community since the passing of the Agriculture Act a decade ago.

Turning to the Balance Sheet, loans on mortgage and improvement loans have increased to £30,528,044. These advances are secured on well selected properties spread over the whole of England and Wales. The liability in respect of our loan capital has increased to £31,577,434, taking into account the further issue of £5 million 5 per cent Debenture Stock and allowing for purchases of earlier issues for cancellation.

GENERAL EXPANSION OF BUSINESS

The items in the Profit and Loss Account reflect the general expansion in our business. Interest on loans to farmers has increased by £161,764 this year to £1,294,541. We have this year received a grant of £47,000 from the Minister of Agriculture, Fisheries and Food under the provisions of the Agriculture (Miscellaneous Provisions) Act 1944 in accordance with the terms of the Agreement with the Minister, which is the lowest amount paid to us since the passing of the Act. Of this sum, £40,200 has been credited to Profit and Loss Account and the balance of £6,800 has been taken to General Reserve, which now stands at £309,900.

After transferring £2,500 to Contingencies Account, making provision for all bad and doubtful debts, and setting aside a sum sufficient to cover all interest payments due from borrowers up to December 31, 1956, and not received by the end of our financial year, the amount available on Profit and Loss Account is £56,580. Of this, £8,400 has been transferred to Special Reserve, £25,105 has been written off the item for expenses of issues of Debenture Stocks, £15,374 has been written off the discount at which various Debenture Stocks were made, and £5,270 has been paid this year for compounding for Stamp Duty on the issue of 5 per cent Debenture Stock 1979/83, leaving a balance of £2,429, which the Directors propose to carry forward.

COMMERCIAL UNION ASSURANCE

NEW RECORDS

The Annual General Meeting of the Commercial Union Assurance Company Limited will be held on May 27th in London.

The following is an extract from the circulated statement by Lieutenant Colonel John Leslie, DSO, MC, DL, the chairman:

In retrospect the year 1956 was perhaps one of the most difficult we have experienced since the war.

It is gratifying to record that our premium income for general business—that is to say, fire, accident and marine together—reached a new record, and the total achieved exceeded £58 million. Our new life business fell just short of last year's record figure but is none the less impressive.

The increase in our premium income for general business has been derived from most of the principal territories in which we operate and it is particularly encouraging as there has been a marked tendency for premium rates to fall for many classes of business. In contrast, our underwriting profit is considerably less than that to which we have been accustomed in recent times.

FIRE DEPARTMENT

At home the premium income has continued to develop, although there is evidence that sums insured have not kept pace with current prices. It is unfortunate that underinsurance does not normally become apparent until claims arise, and it is again emphasised that policyholders should, in their own interests, make certain that sums insured are adequate to meet today's costs.

In the overseas field, which continues to provide us with the greater part of our fire business, we have again achieved a satisfactory expansion in our premium income, to which most of the territories in which we operate have contributed.

I have previously referred to the growing tendency in countries overseas to introduce nationalistic legislation which has had the effect of interfering with the development of insurance business on a truly international basis. Bearing in mind the search which is being made for ways and means of liberalising trade and commerce between the nations, I had hoped this year to report some improvement in the position, but I regret I am unable to do so. I can assure you, however, that every endeavour continues to be made to remove these barriers and we hope that ultimately the efforts will be successful.

ACCIDENT DEPARTMENT

The home revenue again showed satisfactory progress and the rate of expansion in recent years was well maintained.

Unfortunately it is again necessary to draw attention to the high claims cost in the transaction of motor insurance, which, over a large portfolio, has a marked influence on the whole of the home accident account. Last year reference was made to the ever increasing number of accidents on our roads and during the past twelve months the number of our claims again rose substantially. Against this background of rising claims in number and cost, and in spite of the continued use of all underwriting skill, it is evident that a position has been reached where our present rates of premium can no longer be considered adequate.

Employers' liability insurance must continue to be affected by the present inflationary trend in wages and awards but no entirely new difficulties were encountered and some measure of stability can now be said to have been attained.

The revenue from the miscellaneous classes of the accident account again showed expansion, notwithstanding the keen competition encountered in this field.

In the United States, where our casualty business is conducted by our associated companies, The Ocean Accident and Guarantee Corporation Limited and the Columbia Casualty Company, our premium income continued to expand but our operations, in common with those of most casualty insurers, were unprofitable.

MARINE DEPARTMENT

The year 1956 will be remembered for the tragic sinking of the Italian liner, *Andrea Doria*, with more than half of the loss falling on the British market. This loss, together with a general increase in casualties, has raised our first year settlements to the highest in postwar years.

The rating of new tonnage still falls below an economic level and fails to take into account the spiral of inflation in the increased cost of repairs.

LIFE DEPARTMENT

The total life department production shows evidence of continuing progress, despite the fall in the life assurance total.

During the year the life fund increased by £3,789,848 to £57,261,265, and on December 31st, despite the depressed conditions in the investment market, only a relatively small extra provision was required to ensure that, on a strict market price valuation basis, the aggregate market value of the invested assets exceeded the aggregate value at which they are carried in our books. The average earned rate of interest was £3 16s. 4d. per cent net, an improvement of 1s. 1d. per cent on the previous year's figure. The net premium income for life assurance policies was £5,678,113 (1955, £5,399,316) and £1,427,955 (£983,525 for 1955) was received as single and annual premiums for various types of annuity contract, including the substantial volume of the new pension annuity business written during the closing months of the year. Expressed as a percentage of the life assurance premium income only, commission and expenses absorbed 13.2 per cent thereof, compared with 12.8 per cent in 1955, but the rapid growth of our annuity activities has made obsolete this traditional method of quoting a figure for the "expense ratio." As the simplest of the many ways in which this controversial fraction can be calculated I prefer to state that for 1956 the total commission and expenses absorbed 10.5 per cent of the total life assurance and annuity premium income, compared with the 1955 figure of 10.8 per cent similarly calculated.

The directors recommend a final dividend of 2s. 2d. per 5s. unit of stock, making, with the interim dividend of 1s. 6d. paid in November last, a total of 3s. 8d. per 5s. unit.

The further expansion of our business is seen in the continued growth of our assets, which now exceed £165 million.

THE HOFFMANN MANUFACTURING COMPANY

A SUCCESSFUL RESULT

MR J. W. GARTON ON BOARD'S MODERNISATION POLICY

The annual general meeting of The Hoffmann Manufacturing Company Limited was held on May 2nd in London, Mr J. W. Garton, JP (Chairman and Managing Director), presiding.

The following is an extract from his circulated statement:

Last year I mentioned that there was a slowing down in demand from the motor industry. However, we were able to obtain considerable orders for special bearings and in consequence to absorb the surplus manpower very quickly, which has meant that we have been able to achieve a slightly higher level of turnover than in the previous year. We have also had some very good orders from abroad for special bearings and expect to be busy on this class of work for several months ahead. We now have better news to report from the motor industry. The position is improving and we have received increased schedules.

The profit of the Hoffmann Group for 1956 before taxation, but after all other charges, amounts to £1,093,269 and compares with £1,079,802 for the previous year. Income Tax and Profits Tax absorbs £541,608 in 1956 against £543,114 in 1955. The net profit of the Group for the year 1956 after taxation is therefore £551,661 and compares with £536,688 for 1955. This successful result was achieved notwithstanding increased wages and the higher cost of raw materials, which were borne in part by the Company. The Directors recommend a Final Dividend of 6d. per share (free of tax) which together with the 1¼d. per share (free of tax) paid as an Interim is an increase of ¼d. per share (free of tax) on last year.

CAPITAL EXPENDITURE

During 1956 the Group expended £363,000 on Capital Account, and this brings the total expenditure under this head for the three years 1954, 1955 and 1956 to £1,141,000. Orders for capital commitments at December 31, 1956, amounted to £178,611 and, in addition, further expenditure amounting to £165,000 has been sanctioned by the Board for which orders have or will be placed in the near future. In addition, the Board have agreed for a further sum of £300,000 to be spent over the next few years in accordance with their policy of continually keeping production plant up to date by purchase of the most modern machine tools and essential maintenance plant.

As you all know, every year wages have been going up considerably, and it is not possible to recover the whole of the increases in wages and raw materials by increased prices; this can only be done by better plant and machinery, methods, organisation and management, and also good labour relations. We are fortunate in this Company in having a good understanding with people at all levels on the Shop Floor who are told exactly what is happening and, in consequence, we have met no difficulties whatsoever in any of our Schemes of Reorganisation which has helped and will continue to help to maintain the goodwill and prosperity of the Company.

The report and accounts were adopted.

BABCOCK & WILCOX LIMITED

MR W. LIONEL FRASER ON TIMES OF CHANGE AND UNIQUE PROMISE

The fifty-eighth annual general meeting of Babcock and Wilcox Limited will be held on May 30th in London.

The following is an extract from the Review by the Chairman, Mr W. Lionel Fraser, CMG, which has been circulated with the report and accounts for the year ended December 31, 1956:

Loyalty and co-operation on the part of our Staff and Operatives both here and abroad have this year been most marked, and on your behalf it gives me much pleasure to express to all our grateful thanks and appreciation of their splendid work.

The Group profits, after setting aside the sum of £1,942,385 for depreciation, were £3,560,808 which, after providing for United Kingdom taxation and making other necessary adjustments leaves £1,527,844. Your Directors recommend a Final Dividend of 8 per cent on the Ordinary Stock, making a total of 15 per cent, less tax, for the year; and that £500,000 be transferred to General Reserve, raising that Reserve to a new total of £8,445,110; and that £150,000 be transferred to Special Research and Development Reserve.

TURNOVER AND ORDER BOOK

Our actual turnover was substantially the same as the record figure of last year, but increased costs of production due to wage advances and higher prices of raw materials, have further eroded the profit margin. It is becoming evident that the stage is rapidly approaching when any material reductions in over-all costs will be difficult to achieve, and it is the view of your Board that any further advances in costs must inflate the price of our products significantly, with unfortunate effect on our competitive power abroad. It is extraordinary that this is not more generally realised. If Great Britain is to hold her own, it must be emphasised that the only real prospect of stable costs lies in raising output by even more concentrated efforts on the part of all of us who work in Industry and Commerce, whether in offices or factories, and by continual improvement in the machinery and equipment used.

The volume of work on hand is still encouraging. During 1956 almost 40 per cent of the orders received were for the export market, a substantial proportion being in respect of contracts secured in the Commonwealth.

MARINE

The year 1956 was a record for the receipt of new orders. Boilers were built under licence by shipyards in the British Isles, Belgium, Holland, Sweden, Italy and Japan. The majority were for Tankers, but other outstanding orders were for a new passenger ship for The Union-Castle Mail Steamship Company Limited and for a new design Car Ferry.

ATOMIC ENERGY

During the past year we have substantially enlarged our Atomic Energy Department to enable us to handle the wide range of inquiries in this new development. Our main activity, in close association with our partners, The English Electric Company Limited, and Taylor Woodrow Limited, is centred on the national programme for atomic power stations using graphite moderated reactors. A substantial percentage of our research and development work is devoted to studies connected with the problems arising from the raising of steam from an atomic reactor.

In spite of the massive programme of power supply within the United Kingdom, it is to be hoped that adequate facilities will be available, both in money and materials, to maintain this country's overseas business, not only for conventional power stations but also for atomic energy stations. Markets once lost are most difficult to regain and it is clear that British manufacturers need all possible encouragement and support at home in respect of long-term credits and, coupled therewith, credit insurance for this all-important export.

GENERAL REVIEW AND PROSPECTS

We say that "Babcock spans the world," which indicates that ours is a business with international ramifications, and considering the upheavals, economic and political, with which the world has been faced during the past year, it speaks well for the underlying strength of this Company that our results have not been more affected. This is a great Company, and I say it because it should be said. Its standards are high and its sense of service unrivalled, a fine tribute to all who work for the Company but especially to the inspired leadership of Sir Kenneth Hague and his colleagues.

These are times of change and of unique promise, and they call for special zeal and newness of approach to all problems. It may well be that the conduct of industry, and indeed of our entire way of life, will be transformed during the next few years by the development of nuclear energy. Apart from all its other manifold activities associated with steam-raising plant, the Company is determined fully to play its part by the application of its scientific and technical knowledge of nuclear projects, reinforced as this has been by the practical experience in production already gained through the important orders undertaken for the Calder Hall and Chapel Cross Atomic Energy Power Stations.

Our plans are long term, and faced with the ever-growing fierceness of competition and the much finer margins with which we now have to be content, we cannot expect better figures for the time being. Indeed, I ought to stress that development of some of our new projects, especially overseas, is still at an early stage, and capital thus invested must of necessity be temporarily unremunerative. It is also well to remember that whilst we see magic in the future of atomic energy, contracts in this sphere are just as competitive as any others.

Nevertheless, we believe we are building on sound and firm foundations. If I am right in my opinion that we possess the knowledge, the skill and the boldness, to meet and overcome the vast problems which constantly beset a manufacturing concern like ours, then it is certain that the results of our work will prove to be constructive and creative, and should in time be adequately remunerative.

UNITED PREMIER OIL AND CAKE COMPANY

IMPROVED TRADING RESULTS

The thirty-eighth annual general meeting of United Premier Oil and Cake Company Limited was held on May 8th in London, Sir Eric Mieville, GCIE, KCVO, CSI, CMG (the chairman), presiding.

The following is an extract from his circulated statement:

The gross trading profit of the group amounted to £441,000, an increase of £117,000 over the previous year. The great bulk of this increase was achieved by the seed-crushing side of the business, which, you will remember, had been very badly hit it 1955.

The subsidiary companies outside the seed-crushing industry have all had satisfactory results and have maintained their position in spite of intense competition during the latter part of the year. Two of our subsidiaries were affected to some extent by the reduced output of the motor industry.

After all charges, the amount available for the Ordinary Stockholders is £105,296. We now recommend a final dividend of 9d., making a total of 1s. per unit, less tax. This absorbs £46,000, leaving £59,296 to be retained in the business. This, together with certain over-provisions for tax now credited back, has enabled us to place £79,500 to General Reserves and increase the amount carried forward by £14,107.

Early in 1956 we issued £500,000 of 6 per cent Debenture Stock and the result of this issue is reflected in the virtual elimination of the Bank overdraft. We have spent since the war nearly £1¾ million on new plant. It is quite clear, however, that we shall not be able to take advantage of modern developments unless we reinvest at least our annual depreciation allowances in new plant and machinery.

Our proposed dividend of 20 per cent represents no more than 5 per cent on the equity capital employed in the business. In the last ten years we have paid in direct taxation £1,884,000 which compares with £604,480 paid to shareholders as dividends and £1,970,000 retained in the business. This last figure includes depreciation.

PROSPECTS

It is not possible at this early stage to forecast the results for 1957, but I can say that the first three months of the year would appear to be satisfactory. When the low pressure expeller plant now nearing completion at Isis Mill is in operation we shall have there a plant of which we may be justly proud and, apart from some small ancillary machinery and provision of some further warehouse space, the postwar programme of modernisation at that Mill will be virtually complete. At Universal, on the other hand, new techniques are constantly developing.

It is too early to assess the possible effect upon us of a European Common Market. This is a matter of vital importance and it seems to me most undesirable to attempt to prejudge the issue on insufficient evidence. All that I would wish to say at this stage is that it appears probable that some such association of the major Western Powers of Continental Europe will be formed and that we in this Company may have to meet intensified competition with ever increasing efficiency.

The reports and accounts were unanimously adopted.

BLAW KNOX LTD

The annual general meeting of Blaw Knox Ltd. was held on May 8th in London, Mr John M. Wallace (the chairman) presiding.

The following is an extract from his circulated statement:

Our trading profit amounts to £389,097, which compares with £398,089 for the previous year. After making full provision for Depreciation, Income Tax, Profits Tax, Directors' Fees and Directors' Managerial Services the balance available for distribution is £153,800 as compared with £171,122 for the previous year.

Construction Machinery: It has been the consistent policy of the Board to encourage the development of new products and continuously to improve the efficiency of established lines. The good effects of this policy were clearly seen in maintaining the volume of sales in more severely competitive conditions.

Steelworks Equipment: This Department again had a satisfactory year, with new orders and deliveries being higher than for the previous year.

Chemical Process Equipment: During the year there were satisfactory increases in both sales and deliveries. Good progress continues to be made in developing this Division.

Transmission Towers: Orders, particularly for domestic use, continue to rise.

As to the future, your Directors feel that the range and quality of our products ensure our being well equipped to meet competition and to maintain your Company's leading position in the industries which it serves.

The report was adopted and the dividend of 30 per cent approved.

GENERAL ACCIDENT

PROGRESS IN A DIFFICULT YEAR

The seventy-first annual general meeting will be held on May 29th at Perth.

The following is an extract from the circulated address of the Chairman, Sir Stanley Norrie-Miller, Bt, MC, DL, JP:

Experience generally, both at home and overseas, showed marked deterioration, but fortunately there were no disasters of a catastrophic nature and we were able to emerge from a difficult year with our financial position not only unimpaired but in fact strengthened. Income from all sources amounted to £55,484,661, an increase of £4,402,203, which in the circumstances can be regarded as no mean achievement.

The revenue balance, a decrease of £532,944 on the preceding year's figure, was £2,157,757.

A final Dividend of 6s. per £1 unit of Ordinary Stock is recommended, making a total Dividend of 9s. for the year as compared with 8s. 6d. for the previous year.

It might not be inappropriate to remind Stockholders of the solid progress made in the last five years. Our premium income, excluding Life, for 1951 amounted to £32,860,879. For 1956 it was £49,572,664. As between these two years Life premiums show an increase of 136 per cent and Life sums assured at £15,192,652 are almost four times greater. Interest earnings have doubled and our total assets, net of reserves, have increased from £59 million to £91 million.

Premium income in the Accident and General Department advanced by more than three and a quarter million pounds to the record total of £44,469,549.

AUTOMATIC TELEPHONE & ELECTRIC COMPANY LIMITED

Annual Report and Accounts of the Group for the Year ended 31st December, 1956

PRINCIPAL FEATURES

	1956	1955
	£	£
Profit (after Depreciation, etc.)	1,794,031	1,271,629
Taxation	805,935	486,262
Net Profit	988,146	785,367
Dividends	292,127	211,692
Retained in the Business for Research Development, Expansion, etc.	696,019	573,675
Issued Capital	3,994,400	3,294,400
Reserves and Amounts set aside	7,848,905	6,431,097
Fixed Assets	2,147,832	1,735,461
Investments	288,655	296,602
Net Current Assets...	9,406,818	7,693,434

The following is an extract from the Statement to Stockholders made by Sir Thomas Eades, Chairman:—

We entered 1957 with a full order book, and our budgeted manufacturing programme for this year and 1958 evidences new records for the Group.

Prospects for the future are good and with the settled conditions we are all striving for, your Company should be assured of plenty of work to keep all our factories at a high level of production. We remain confirmed optimists for the progress of the Telephone Business and the ability of our people to fully play their part in its development.

UNITED BISCUITS LIMITED

RECORD GROUP SALES

The ninth annual general meeting of United Biscuits Limited will be held on May 30th in Edinburgh.

The following are extracts from the circulated Statement by the Chairman, Mr P. G. Macdonald, WS, JP, for 1956:

Once more I am glad to be able to report group sales for the past year which break all our former records at a figure of over £15,500,000, an increase of £2 million over the previous year. This continued progress is in a large measure I feel sure due to the confidence which the British housewife has in the excellent quality maintained by the biscuits and cakes manufactured by McVitie & Price and Macfarlane Lang.

Your Directors continue to develop their policy of producing biscuits of first-rate quality at the lowest possible price. Full advantage is being taken of the experience we gained from our pioneering in the bulk handling of ingredients and further modernisation is still in progress.

BISCUIT PRICES

The price of our biscuits was reduced by a penny per pound during 1955 and in spite of the further increased costs for wages, certain raw materials, freight, etc., since then the price remains unchanged. This has only been made possible by the continuing expansion in sales with a consequent spreading of overhead charges and the greater use of mechanical and electronic devices both in the handling of raw materials and in the packeting of biscuits. We can, I think, be justifiably proud of our achievement in maintaining stable prices and a satisfactory profit figure.

Our export trade still shows a healthy increase, especially to the dollar countries.

The group profit before providing for taxation amounted to £2,309,841, as compared with £2,163,270 in the previous year. Income tax and profits tax require provisions of £1,187,015 (1955, £1,062,741) and there remains after taxation a balance of £1,122,826 (1955, £1,100,529). Practically the whole of the increase in earnings has been absorbed by additional taxation. The Directors recommend that the final dividend on the ordinary shares be 11 per cent, less tax. The total dividend of 15 per cent for the year is 1 per cent more than last year. The subsidiary companies have carried £750,000 to general reserve and £55,000 to fixed assets replacement reserve, and there remains to be carried forward a balance of £472,089. Since the inception of the Company in 1948, the capital employed has nearly doubled; this has been achieved by retention in the business of profits earned.

THE FUTURE

During the current year to date our progress continues to be maintained satisfactorily. In the knowledge of what the country has come through in the past few months, I would be a bold man who would prophesy as to the future.

There is one matter, however, upon which I have not the slightest doubt and that is that the Government must grant further substantial reductions in taxation.

For far too long have successive Governments taken for granted that it is inevitable that a large section of the community should continue to be taxed at a penal rate.

FRIENDS' PROVIDENT AND CENTURY LIFE OFFICE

STATEMENT BY SIR OLIVER FRANKS

The one hundred and twenty-fourth Annual General Meeting of Members was held on May 8, 1957. The following is an extract from the statement by the Chairman, the Right Honourable Sir Oliver S. Franks, which has been circulated with the Report and Accounts for the year ending December 31, 1956:

This year marks the 125th birthday of your Office, formed as the Friends' Provident Institution, and known since its acquisition of The Century Insurance Company Limited in 1918 as Friends' Provident and Century Life Office.

The New Life Business in 1956 totalling £29¾ million constituted another record. The greater part of this has been written under the ordinary individual contracts with an increasing number of proposers selecting the With-Profit tables. Our Group Life and Pension Schemes are obviously still very attractive and much sought after. As an Office specialising in Pension business we have evolved a variety of schemes for the self-employed.

We report yet another record year in the Continuous Disability Department, which has again been profitable. An increasing part of the new business written relates to Group Schemes for Employers.

A very satisfactory profit comes from the Sinking Fund Account and also from our Subsidiary Hire Purchase Company—Southern Industrial Trust Limited.

The Marine Account has made much the same contribution to profit as in the previous year and the fund is in a strong position.

The Home Fire Account continues to grow steadily, and in spite of storms and serious fires contributes a somewhat larger profit than in 1955.

The improvement reported in the Home Accident results last year has not been maintained except in the Miscellaneous Section, where growth is steady and profit good, but this profit has been more than swallowed up by losses in other Sections, particularly in the Motor Section.

Last year I reported a substantial loss in our Fire trading in the United States and in Canada, a loss in our Accident trading in the United States, and a good profit in Canada. The present results show that the trend has gone further. This is disappointing, and the disappointment is not lessened by reason of the fact that so many of our competitors, both British and foreign, find themselves in a similar position.

These losses in North America have affected the dividend payable by The Century to the Parent Office. This year it amounts to £221,375. This is approximately £30,000 less than in the previous year, though it is still greater than the average amount paid during the last quinquennium.

The funds of the Group increased during the year from just over £60 million to about £67 million. The gross return earned on the whole of the funds of the Friends' Provident of £6 0s. 6d. per cent showed some reduction, however, as a result of the lower dividend received from the investment in The Century Insurance Company, but the net return of £5 6s. 6d. per cent after deduction of Income Tax again exceeded by a large margin the rate of interest on which our actuarial liabilities are calculated.

Mr J. Douglas Pringle resigns under the age limit from the post of General Manager at the end of June. He joined the Century at Edinburgh Head Office in 1942 and succeeded Mr Henry Tapscott as General Manager in 1945.

Your Directors have appointed Mr David Bevill Tregoning, MA, ACII, to succeed him. Mr David Tregoning joined us in 1935 and has had wide experience in the Departments of the Office.

TIMOTHY WHITES & TAYLORS LTD

POLICY OF EXPANSION CONTINUES

The twenty-eighth ordinary general meeting of Timothy Whites & Taylors Limited was held on May 2nd in London, Mr George Ingham Rushton, MPS (Chairman and Managing Director), presiding.

The following is an extract from his circulated statement: The trading profit and sundry income of the Group amounted to £1,670,681 in 1956, compared with £1,520,237 in 1955. The charge for taxation was £790,788, as compared with £681,611.

The Directors recommend a final dividend on the Ordinary Share Capital of 20 per cent, less Tax, making 32½ per cent, less Tax, for the year.

During the year eleven additional branches have been established and again a number of branches have been enlarged and refitted. The results at our new and altered branches have been very encouraging, and your Directors intend to continue this policy of expansion. Coupled with this, your Directors are continuing the policy of closing uneconomic branches, and during the year a further 31 such branches have been closed.

In the early part of 1957 the business of the Group has shown an upward trend as has been the experience of the last few years, but it is not so great as was experienced in the previous year, although expenses, including salaries and wages, continue to rise.

The report and accounts were adopted.

The proposed increase of capital and scrip issue of one new 5s. Ordinary Share for each 5s. Ordinary Share held was approved.

THE MANGANESE BRONZE AND BRASS COMPANY

VOLUME OF BUSINESS FURTHER IMPROVED

The fifty-eighth ordinary annual general meeting of The Manganese Bronze and Brass Company Limited was held on May 3rd in London, Mr J. C. Colquhoun, MBE, chairman and managing director presiding.

The following is an extract from his circulated statement:

The consolidated profit for the year ended December 31, 1956, after charging £83,630 for depreciation but before providing for taxation and dividends, amounts to £536,426. The corresponding figure for the parent company only for 1955 was £485,254. Provision for taxation requires £289,570, so that the net amount available is £246,856.

Your directors recommend that a final dividend of 17½ per cent be paid on the increased Ordinary share capital making 25 per cent for the year (same) plus a bonus of 2½ per cent making a total distribution for the year on all shares held prior to the increase of 27½ per cent. If approved, the surplus remaining out of the year's profit (part year's profit from subsidiaries) after payment of all dividends will amount to £161,362.

It was towards the end of the year that your company acquired, by exchange of shares, the entire share capital and Convertible Debenture stock of Lightalloys Limited, which now becomes a wholly owned subsidiary with profits accruing to your company as from July 1, 1956. Simultaneously your company acquired for cash the entire share capital of Steven and Struthers Limited of Glasgow, which likewise becomes a wholly owned subsidiary. These two companies will, in the opinion of your directors, fit in well with and broaden the scope of the business of your company.

In regard to Paxol Limited of Canada, your directors decided during the year to accept a cash offer and royalty for a period for your two-thirds interest in that business, and a small profit of £7,413 on the realisation of this interest is shown in the accounts.

BALANCE SHEET SUMMARY

Fixed Assets.—The increase of just over £1 million in the written down value of the fixed assets of your company results from a revaluation by professional valuers. This was based on replacement values at 31st December, 1955, less appropriate depreciation for each item, and the total write up is balanced, in the balance sheet, by a "Capital Reserve." The total net fixed assets shown for the group will be increased when an up-to-date revaluation is made of the subsidiary companies.

Net Current Assets.—The excess of current assets over current liabilities of your company showed an increase of £67,559 on the year at £1,080,408.

Total Net Assets.—For the group this value amounted to £2,936,834 at the close of 1956 as against £1,413,389 for your company at the end of 1955. Here again, the figure would be further increased by a revaluation of fixed assets of subsidiary companies.

Birkenhead Works.—The output of ships' propellers in actual tonnage was the best for some years with the highest yet proportion (83 per cent) to our own Scimitar design and an ever increasing proportion in our high strength alloy Nikalium. Scimitar-Nikalium propellers have indeed established a high reputation in the marine world.

Handford Works, Ipswich.—The excellent results which I reported for this factory for 1955, mainly in extruded and rolled products, were well maintained in 1956 despite appreciable fluctuations in the demand for such products or semi-finished products. Again there were indications of a recession towards the end of the year, but 1957 was started with a satisfactory order book.

Elton Park Works, Ipswich.—Some falling off in demand for "Oilite" products became evident as the year progressed, particularly from the motor and domestic appliance industries. The reduction would have been more serious had it not been for the continued development by our technical staff of new applications. In the event there was a 15 per cent decline in sales for the year.

Future Prospects.—Increasing competition from abroad, the passing of the Restrictive Trade Practices Act and Britain's participation in the European Free Trade Area will all affect British industry generally and require readjustments to the general pattern. I believe, however, that your business is now well equipped and sufficiently diversified to adjust itself to whatever the new pattern may become.

The report and accounts were adopted.

APPOINTMENTS

UNIVERSITY OF CAMBRIDGE

Applications are invited for the posts of Senior Research Officer, Research Officer and Junior Research Officer in the Farm Economics Branch of the School of Agriculture.

Qualifications should include an honours degree (or equivalent) in economics, statistics or agricultural economics. For the senior posts, research experience is essential. Some teaching may also be expected.

Salary scales (now under review) are at present: S.R.O., £1,000 to £1,300; R.O. £750 to £1,050; J.R.O., £500 to £700. These scales attract family allowances at the rate of £50 for each child up to the age of 16, or in receipt of full time education. The posts are pensionable under the F.S.S.U.—Further details are obtainable from the Secretary, School of Agriculture, Downing Street, Cambridge, and the closing date for applications, containing the names of not more than three referees, is June 1, 1957. For the junior posts applications will be considered from those graduating in the next six months.

AN INFORMATION OFFICER FOR MANAGEMENT CONSULTANCY

A British firm of management consultants with subsidiaries in Australia and America requires an Information Officer for its head office in London. The work will be concerned with the development and furtherance of good management in both private and nationalised industry and in commerce, and will entail a high degree of responsibility in the collection and dissemination of specialised management information. Applicants should be approximately 35 years of age, with several years' experience of information work and a background which includes some time in industry. They should have the facility quickly to appreciate a technical problem and should be enthusiastic about the development of management skills. Starting salary will be up to £1,500 p.a. and will rise in a period of years to £2,500 p.a. Pension and life assurance. The company is anxious to provide a career opportunity.—Please write, with tabulated details of age, education and experience, to Box 686.

THE UNITED LIVERPOOL HOSPITALS

Applications are invited for the post of ASSISTANT SECRETARY to the Board of Governors. The duties of the post are to assist the Secretary in the administration of the Board's group of hospitals dealing in particular the patients' records and statistics services. Candidates should have a knowledge of statistics and of office organisation and methods. The salary (£802-£983 per annum) and conditions of service will be those laid down by the appropriate Health Service Whitley Council, and the appointment is subject to the National Health Service (Superannuation) Regulations. Applications together with the names of three persons to whom reference may be made should reach the undersigned not later than Saturday, May 25, 1957.

A. J. HINDS, Secretary.
The United Liverpool Hospitals,
80 Rodney Street, Liverpool, 1.

AN EDITOR

is required for a monthly magazine serving the top level of industry and commerce in Britain.

The position is one of considerable responsibility and will only go to the man who can execute a vigorous and imaginative editorial policy exploiting a hitherto undeveloped field of circulation.

His task will be to increase the readership of the magazine by means of lively and authoritative editorial content. To do this he must have extensive contacts in industrial journalism and must be able to obtain first-class material for features of topical interest to industry.

Minimum age: 30. Write, giving fullest details of education and experience, to Managing Director, Box 687.

HOME OFFICE: CHILDREN'S DEPARTMENT. The Civil Service Commissioners invite applications for at least three pensionable posts as Inspectors (Grade II). The inspectorate is organised in Regions.

Duties include inspection of arrangements for boarding out children with foster parents, children's homes and nurseries, approved schools and remand homes. Inspectors also assist in training child care workers.

Age at least 28 on April 1, 1957. Candidates must have wide experience of social conditions and an understanding of behaviour problems of children and young persons. Experience of residential establishments for children will be an advantage. Preference given to holders of a University degree, or an appropriate diploma or certificate, and to those who have had other recognised training in social or educational work.

Salary scales (London)—Men £1,085 to £1,390; Women £989 to £1,296. Women's scale being improved each year until equality with men's scale is reached by 1961.

Particulars and application forms from Secretary, Civil Service Commission, 6 Burlington Gardens, London, W.1, quoting 47055/14. Application forms should be returned by May 28, 1957.

STATISTICIANS in the HOME CIVIL SERVICE. The Civil Service Commissioners invite applications for about three posts of Assistant Statistician. Selection by interview. Age at least 20½ and under 24 on August 1, 1957, with extension for service in H.M. Forces and approved postgraduate statistical experience. Candidates may be mathematical or economic statisticians; they must have a higher degree in statistics or a postgraduate University diploma in statistics or a First or Second Class Honours Degree (II (i) where the Second Class is divided) of which statistics formed the main part, or in which at least two statistics papers were taken in the final examination. Those so qualifying this summer will be eligible. Starting pay for men in London from £605 to £755 according to periods of National Service and postgraduate experience. Maximum £1,055. Promotion prospects to £1,950 and higher. Women's scales at present lower, but are being raised to reach equality with men's by 1961.—Particulars and application forms from Secretary, Civil Service Commission, Burlington Gardens, London, W.1, quoting No. 96/57/7. Completed application forms should reach him by June 20, 1957.

THE UNIVERSITY OF MANCHESTER

Applications are invited for the temporary post of ASSISTANT LECTURER IN ECONOMIC STATISTICS. The appointment will extend for a period of two years from October 1, 1957. The salary scale is at present under review, and is expected to be within the range £700 to £850 per annum with membership of the Children's Allowance Scheme.—Applications should be sent not later than May 25, 1957, to the Registrar, The University, Manchester, 13, from whom further particulars and forms of application may be obtained.

RESEARCH MANAGER

Young executive wanted to organise and supervise product and market research for *American company in Britain. Excellent opportunity* for right man. Salary open.
International Latex Corporation, Playtex Park, Port Glasgow, *Scotland.*

LIFE ASSURANCE—HONG KONG

British Company invites applications for Managerial position at Head Office. All-round Life Department experience (Non-Life experience would be a further asset). Age preferably 25/35. Attractive salary and Contract terms, i.e., leave, accommodation, superannuation, etc. Interviews to be arranged at Company's London Office. —Written applications, in confidence to Box E.797, c/o 191 Gresham House, E.C.2.

AN Accountant is required to take charge of all accounting and costing functions of an expanding engineering organisation. This is a position for a man of sound judgment and initiative and one who can appreciate and interpret the economic aspects of business. Candidates should have previous industrial experience with knowledge of all up-to-date accounting methods. Familiarity with budgeting and standard costing essential. Salary £950 p.a. to £1,250 p.a., dependent on age, experience and qualifications. There is a pension scheme and assisted house purchase. Pleasant working conditions.—Write, stating age, salary, experience, to Box 688.

MANAGEMENT LABOUR RELATIONS

Applications are invited for post as DIRECTOR of the JAMAICA EMPLOYERS' FEDERATION. Industrial relations experience essential.—Applicants should write by air mail stating age and giving full particulars of qualifications and experience, to the Secretary, Jamaica Employers' Federation, 11 Duke Street, Kingston, Jamaica, B.W.I.

UNIVERSITY OF LONDON

A lecture entitled "A Geographical Interpretation of Perón" will be delivered by Professor Preston E. James (*University* of Syracuse) at 6 p.m. on May 16 at the London School of Economics and Political Science, Houghton Street, Aldwych, W.C.2.
Admission free, without ticket.
JAMES HENDERSON,
Academic Registrar.

THE POLYTECHNIC

309 REGENT STREET, W.1.
SESSION 1957-58.

Enrolment can now be made for the following full-time courses:—
(1) General Certificate of Education Advanced Level; Final B.Sc. (Econ.) and B.Sc. (Sociology), and Diploma in Social Studies of London University.
(2) Commercial Administration.
(3) General Secretarial Studies.
(4) Professional Course for Accountants.
(5) Professional Course for Statisticians.
Enquiries and application to the Head of the School of Commerce, from whom a prospectus can be obtained.

B.Sc.(ECON.) LONDON UNIVERSITY

UNIVERSITY CORRESPONDENCE COLLEGE provides postal tuition for the above degree (obtainable without residence), which is a valuable qualification for those seeking executive appointments in commerce or industry, government or municipal posts. The College, established 1887, is an Educational Trust. Highly qualified Tutors. Low fees. Prospectus of U.C.C. Courses for London Degrees and Diplomas, G.C.E. free from the Registrar, 60 Burlington House, Cambridge.

DUNDEE TECHNICAL COLLEGE

Principal: John R. Whittaker, M.Sc., Ph.D., M.I.Mech.E., M.I.C.E., F.R.S.A. offers two residential summer courses on the application of electronic computers to business problems.

A vacancy exists for a young Statistician

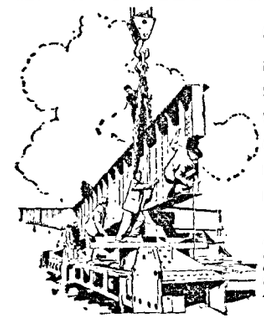
preferably with a degree in either Economics or Statistics for work on economic intelligence connected with sales activities. The sort of man we are looking for should have had some experience in commerce or industry, or possibly financial journalism and be able to assess market trends and prepare statistical reports. If you are interested in a well paid and satisfying career in this kind of work, please reply to Dept. C.P.S. 336/7 Strand, W.C.2, quoting Ref. E2960A.

what happens when

you give her a Vari-Typer?

complete type change with a turn of the wrist

* She becomes your office compositor—quick on-the-spot producer of master copy for all purposes and processes;
* She can 'set up' all your brochures, catalogues, circulars, etc., as well as all your internal forms and other printed matter;
* She has at her disposal hundreds of *instantly changeable* type faces in various styles and sizes;
* Her Vari-Typer, so easily operated, gives her changeable vertical and horizontal spacing and automatic margin 'justification';
* Foreign language copy and scientific and technical symbols present no problems to her;
* She can 'letter up' large drawings for you—even up to 6 ft. in length;
* Her finished copy is reproduction copy, with perfect uniformity of impression, ready for printing by direct plate, photo-offset or stencil methods.



When you give her a Vari-Typer you save time, trouble and money

WEIR

BOILER FEED PUMPS

Electrically Driven

meet every requirement of modern power station practice. They are inherently stable, unaffected by large temperature changes, in perfect hydraulic balance, and have effectively cooled glands. In design and construction, Weir Electrofeeders are based on unrivalled technical and practical experience. We specialise in boiler feeding and can advise on all power plant auxiliaries and type of pump most suitable.

Turbine Driven

are designed on thoroughly scientific principles; noiseless in operation, and free from vibration. Exhaust steam contains no oil and is available for process work or for direct contact feed-heating.

PHOTOGRAPH OF KASTELL OUR-WASSENAAR IN THE NETHERLANDS FROM THE PEPSI-COLA INTERNATIONAL PANORAMA MAGAZINE

Pepsi-Cola is there—*in the castles, the cottages and the cafés of seventy-five countries today. Already, "Pepsi" is familiar to four hundred million people. And wherever it goes, the Pepsi-Cola franchise brings not only refreshment but an equally welcome lift to the economy and to the living standard. Pepsi-Cola International, 3 West 57th Street, New York 19, N. Y.*

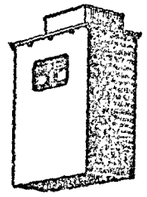
But how *can* we cut electricity costs?

"Do as we did. Put in Johnson & Phillips capacitors. There's one up on that girder."

"What do these capacitors do?"

"In technical jargon, they improve our power factor. More to the point, they reduced our electricity charges by 20% and paid off their initial cost in under two years."

"I'd like to know more."



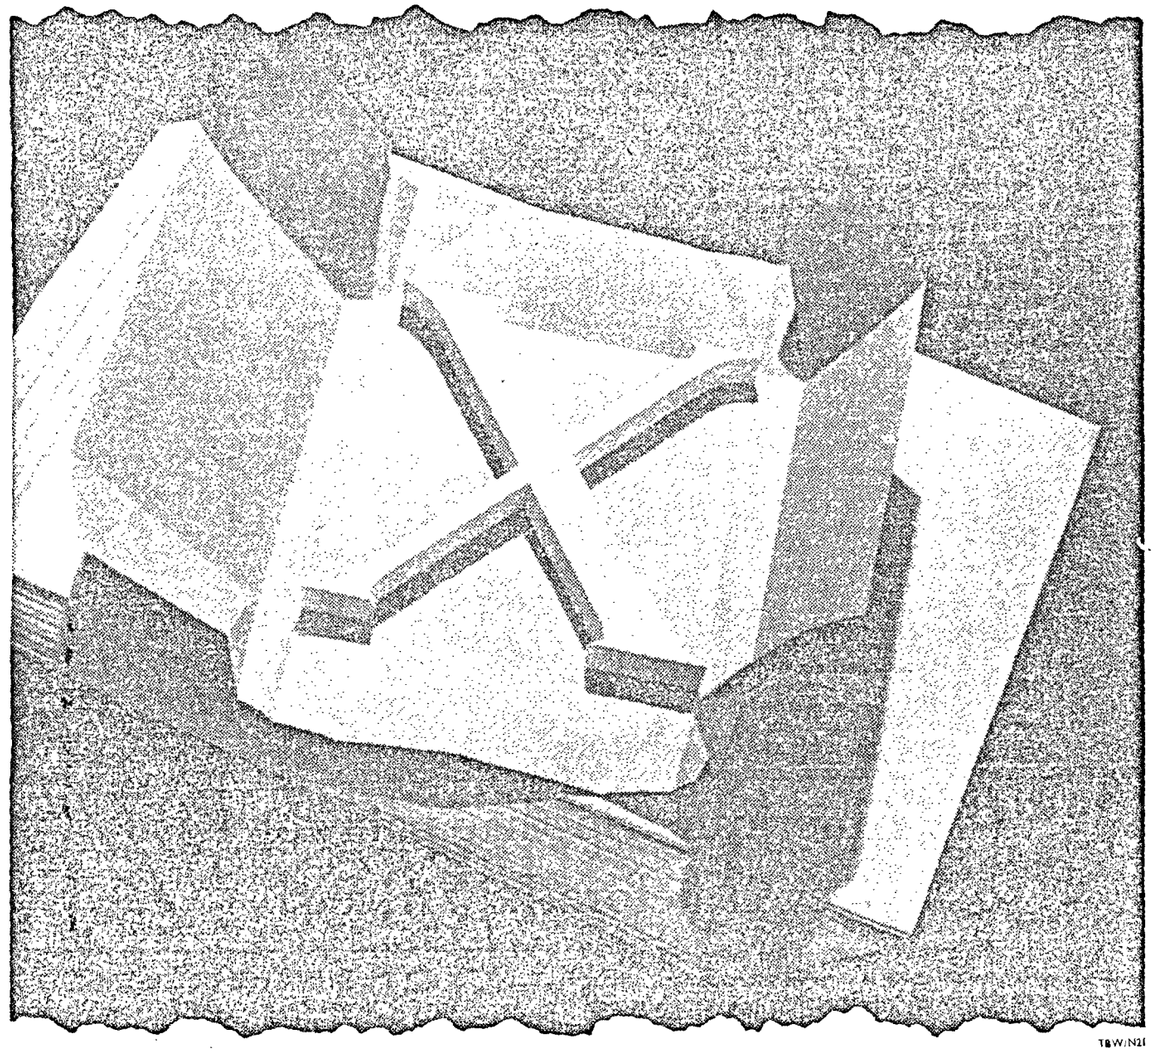
"Then why not get your technical people to contact the Sales Director of J. & P ? He'll send a specialist engineer down."

JOHNSON & PHILLIPS

(P) **A Power in the Electrical World**

JOHNSON & PHILLIPS LTD., CHARLTON, LONDON, S.E.7

J. & P. POWER POINTS



A Practical Example

Consumer's maximum demand loading	500 kW
Average power factor before correction	0.63
Power factor after installation of capacitors	0.95
Cost of capacitor installation	£2,040

ANNUAL COST OF ELECTRICITY

Before correction	£6,900
After correction	£5,415
Annual saving	£1,485

May we examine your plant, without obligation, to see whether capacitors will save you money? Our report will contain hard facts —not optimistic guesses—and you will know whether it is a useful proposition or not.

T&W/N21

Wrapping it up. Whether dealing with some ordinary, everyday, problem of wrapping and packaging, or in opening the way to some entirely new development in paper usage, Spicers are able to advise freely and helpfully. From world-wide resources and very long experience in matters of paper of all kinds for all purposes, Spicers make available to you the most suitable material —in the shortest possible time.

*All the best**

PAPERS

meet at

SPICERS

* *'Best', to Spicers, means the exact choice of the most functionally appropriate paper, board, or plastic material for every packaging, wrapping or printing purpose, at a price which cannot be bettered. Any one of Spicers branches can rapidly provide this service.*

SPICERS LIMITED · 19 NEW BRIDGE STREET · LONDON EC4 · BRANCHES THROUGHOUT BRITAIN · ASSOCIATED & SUBSIDIARY COMPANIES ALL OVER THE WORLD

The American trip that paid for itself —even before he arrived!

How could he, with business to do but few American contacts, hope to meet and sell to the most sought-after men in America? He decided to go to America personally; and, on the recommendation of an experienced friend, by United States Lines.

As soon as he stepped aboard, his problem was half solved: he found himself among the very businessmen he had sought so long to meet! In a relaxed, friendly shipboard atmosphere he struck up many acquaintances, each of whom became a valuable contact. His trip had paid for itself—before he even arrived!

A coincidence? You'll find that most of your fellow passengers aboard the "United States" or her running-mate the "America" are the very men you want to meet—American businessmen. Here, in an unhurried, unworried atmosphere—you'll find people who may make all the difference to your trip.

A "FIRST-CLASS" HOLIDAY
whichever class you choose

The "United States" holds the Blue Riband; her record for punctuality, like her standard of service, is unsurpassed.

Unexcelled food and wine, cinemas, top-grade orchestras, every "keep-fit" facility, well-stocked libraries, 25 cubic feet or 275 lb. of personal luggage FREE, whether you go FIRST, CABIN or TOURIST CLASS. Fares and dollar credits for on-board expenses payable in sterling.

If you are travelling on a budget but still want the best that money can buy, CABIN and TOURIST CLASS, with their gay informality, offer a perfect solution.

FARES June 1st to Oct. 31st from

	1st Class	Cabin Class	Tourist Class
s.s. UNITED STATES	£135.10.0	£85.10.0	£70.10.0
s.s. AMERICA	£119.10.0	£82. 0.0	£68. 0.0

Fares and dollar credits for on-board expenses payable in sterling

"BROOMWADE" serves the world

The old gives place to new. The urge to conquer and construct,
to meet the ever-growing demands of a new age has caused man to span rivers
and chasms with mighty bridges and build railroads across vast wastes.
The civil engineer is meeting modern needs. "BROOMWADE" Air Compressors
and Pneumatic tools are helping to vitalise his plans.
Out of dreams is born reality.
"BROOMWADE" pneumatic equipment serves
the world and is a necessary adjunct
to progressive construction.

Nasser Gets His Dues

MR MACMILLAN, announcing arrangements on Monday for the use of the Suez Canal by British ships, was the first to insist that these terms represent neither an agreement nor a settlement; this was not the end but a stage in the story. It is a stage that brings home to the remaining partisans of last autumn's military adventure the facts which a baffling quality of innocence had enabled them, these six months, to contrive not to see. It is a painful stage, in which some honest men are exposed to severe heart-searching—believing, as many Tories do, that to "give in" to President Nasser (or to "retreat" from Egypt, as a Labour member put it) is not only undignified but wrong, and finding it a wrench to their consciences to support the Government in its decision to take the practical man's way.

These feelings, though they are honest, are out of touch with the world; it is Mr Macmillan who is doing the right thing, and he is entitled to support for it. It is not in the power of this country—except at political and military risks quite disproportionate to the scale and nature of the Suez Canal dispute—to restore in Egypt an imperial position in which Britain could act as arbiter and guarantor of the world's interests. Egypt's territorial control of the Suez Canal does not date from President Nasser's nationalisation decree in July. It followed from the Anglo-Egyptian agreement of 1954, and became fully effective when the bulk of the British garrison left in February, 1956.

The point at issue since then has been not President Nasser's territorial control of the canal (much less his government's sovereignty), but his seizure of a company that, if legally Egyptian, had an international character and held a concession that still had a decade to run. The issue for the maritime nations was the threat to their interest in sound administration, reasonable dues, the safety of navigation, and freedom from political blackmail. None of these threats was confirmed in fact up to the point of the intervention—immediately followed by the blocking of the canal—in the autumn. They were legitimate matters of dispute but they did not entitle, or enable, the British Government to reassert the position of special power in Egypt that it had previously given up. Talk of a "retreat" from Egypt today is, therefore, nonsense founded on fiction. The alternative to what is called retreat would be to ask British shipowners to stand and sulk while competitors use the canal and corner their trade; this would be mere foolishness.

In October, after working the canal for a time without mishap despite the withdrawal of British and French pilots, President Nasser was ready to reaffirm the 1888 Convention with its guarantee of freedom of transit, and to consult the users regarding dues and development. At that time he accepted the "six principles" unanimously adopted by the Security Council, which, *inter alia*, laid down that the canal would be insulated from the politics of any country (whatever that means) and that the dues would be fixed by agreement between Egypt and the users.

He considered that the Anglo-French invasion absolved him from these promises. The terms which he offers now, while they do not in themselves run counter to the main requirements of the canal users, are insufficiently binding ; since they rest solely on an Egyptian pledge. Egypt can withdraw them or change them when it chooses. To that extent Mr Gaitskell was entitled to contend that better terms were on offer in October. In reserving their rights, the users are doing what they might have done in July: contesting the legality of the act of nationalisation and waiting to see if any of the feared evils happen. There is nothing else that Britain and France can do, whether as individuals or in combination.

British and French policy after the seizure of the canal suffered from the fundamental defect that its underlying intention was not to negotiate a canal settlement but to bring about the downfall of President Nasser. He had, from the signing of the Baghdad Pact in February, 1955, conducted a policy that was inimical to British interests in the Middle East and East Africa. The British Government considered the act of nationalisation as a major offence justifying the effort to unseat him ; no other explanation makes sense of the sequence of events. The effort failed ; and Britain, back where it started, has to decide again what its attitude to President Nasser and Egypt will be in the future.

THE position now is encumbered with a lot of political and economic debris from last year. There is the question of compensation for the Suez Canal Company, in which the British Government is the largest single shareholder ; this is complicated by about £50 million of assets of the company which are held mainly in Britain and France. Egypt has "egyptianised" British banks and insurance companies, requisitioned and sequestered other British firms, seized the real property —and in some cases the entire wealth—of British citizens, and confiscated the Suez Canal base with its contents. What this amounts to in money is uncertain, but the base and the Shell Company's assets alone were together valued at more than a hundred million pounds. Egypt, on the other hand, claims—according to newspaper reports—about £500 million reparations for damage done by the British and French attack. There is a substantial fund of ill-will in both Britain and Egypt and, not by any means to be forgotten, four British subjects are standing trial in Egypt ; whatever their alleged offences, they are entitled to succour from their government.

Delegations from Britain and Egypt will start discussing these problems in Rome later this month. Mr Macmillan told the Commons that the unfreezing of Egyptian sterling must depend on their settlement. If this is the case, relations with Egypt are not likely to be normal for a long time to come. There can be little trade, for example, as long as Egypt cannot use sterling except as limited by the new special account for canal dues. Common sense suggests that the wiser procedure would be for Britain and Egypt to resume diplomatic relations ; this can be done without prejudice to any Anglo-Egyptian disputes. Relations were preserved in the autumn of 1951, when the state of dispute was almost total and when British and Egyptians were killing each other in the Canal Zone.

Information from Egypt indicates that President Nasser wants to resume relations. There is no reason why he should not, since he has won his point ; but apart from this he is reported to be anxious about Egypt's increasing isolation, of which the latest indication is the meeting of the two Arab kings in Baghdad. His economic position is weak and too dependent on the Soviet block ; domestically, the communist movement, officially banned, is now exerting a threatening pressure upon him and he has difficulty in dealing with it as long as he depends on Russia and its satellites as much as he does.

SOME members of the Conservative and Labour parties would prefer to leave President Nasser to stew in his own juice. Even the Government, in facing the hard facts of the situation, limps painfully towards normality. The "Suez policy" dies hard. Yet it is usual for British governments to conduct their international relations on the basis that facts must be faced. In Egypt, the fact is that President Nasser's government is the government.

There are cogent reasons for ceasing to hanker after the end of the Nasser regime as if this would solve a problem of British policy. People who know Egypt see no logical succession to it except chaos ; and the most likely result would be the triumph of the xenophobic left wing of the army, or of an equally anti-western Moslem Brotherhood, or of both in alliance. None of these possibilities would do Britain any good. Certainly the British Government need not go cap in hand to Egypt: President Nasser has learnt some hard lessons in the last few months. He needs the west, for economic reasons if no other. He is busily learning that he cannot lead his Arab brethren by the nose into increasing conflict and disorder without paying some of the price himself. This is a time when Britain could demand a halt to the anti-British campaign in the Middle East as the price for ending the most disfavoured nation treatment that has been accorded to Egypt since July.

Finally, a working relationship with Middle Eastern nationalism is at present impossible to the west unless it is on terms with Egypt. The momentary western successes in the Middle East are being built on a few ruling cliques whose authority is not necessarily stable ; convenient as these successes are, their political value may be fleeting. In the end, it will be through Egypt that the west re-establishes contact with the main body of Arab nationalism, which, whether the rest of the world likes it or not, is an established fact of political life in the Middle East. This cannot be done by incubating a sense of grievance.

Something for How Much?

Whether national superannuation is what the nation wants, or ought to have, both parties are determined to offer it to the voters. Here is a first look at Labour's plan

BEFORE the air is filled with the noise of the political barkers, shouting the merits of their rival pension schemes and translating ninepence for fourpence into modern vote-catching terms, there may be time for a blunt question or two. Is retirement on half-pay, or any other fraction, the natural or inevitable end of state welfare ? The Labour party this week has asserted that it is, and that it can justifiably be made compulsory on all who earn. The Conservatives are still doing their homework, and one of the tests of their scheme, when it comes, will be whether they adhere to their proclaimed principle of letting people choose for themselves rather than exploit the obvious convenience, in this sort of exercise, of forcing everybody in.

It is as well to understand from the outset what compulsory contributions to a national superannuation scheme would mean. They would in part be a tax on wages, however elegantly they may be set out as subscriptions from wages. They would represent, in another part, an increase in employers' costs, and, therefore, an increase in prices (with smaller opportunity for personal savings) or a reduction in profits (with smaller opportunity for company savings). A compulsory scheme can be made to look plausible, and even, when the politicians are not looking, to be respectable. But to claim merit for compulsory pensions with no discounting of their effects on the continued willingness of people to make provision for themselves is unrealistic. Private savings and personal economic decisions have taken so many blows from the modern state that they will have little fight left against the compulsory pension.

In this age, it will be thought old-fashioned to argue, in the little time that is left, that the state should content itself with securing the basic freedoms from want and of opportunity. Compulsory state superannuation meets neither case. It proposes not a decent minimum standard in old age (which the public conscience demands, rightly and with increasing success) but a scheme that purports to have the merit of matching benefits to contributions. The sad fact that many modern states cannot be trusted to run their monetary systems honestly is not much of an argument for supposing that they could run an insurance system of this kind with much greater virtue. And the spectacle of the two parties engaging in a kind of progressive Eatanswill, doubling and redoubling their bids for the votes of the prospective pensioners of the next century, promises to be one of the less agreeable political adventures of the next year or so. In this game, no jokers will be left unturned. But the Labour party's first hand is at least dealt in a respectable way by the inclusion of a technical report by Professor Richard Titmuss and two of his professional colleagues. The introductory statement by the Labour Party Executive is in part proudly proprietorial, in part cautionary, and in some part purely escapist. Whenever Mr Titmuss seeks to balance his scheme by provisions that might not be too smoothly popular, Labour mutters hastily that it will have to consult the TUC about them.

THE primary question for either party ought to be whether a national superannuation scheme can be made economically sound. Mr Titmuss's scheme leads what seems to be a strong card. He calculates that it will be possible to raise the old age pension by £1 a week in 1960, and pay a pension to old people even if they stay at work—*and* have a surplus of contributions to invest in the state superannuation fund for many years ahead. Employers would contribute 5 per cent of each employee's earnings, employees would contribute 3 per cent of their own earnings and the self-employed 8 per cent of theirs and the state (that is, the taxpayer) another 2 per cent. The suggestion that the scheme would not only meet an immediate increase in old age pensions but would yield an increase of real savings too (£335 million is the estimate for the first year) looks attractive. What is impossible to estimate is the potential effect it would have in drawing off personal savings that would otherwise be made. The scheme presupposes a satisfactory increase in the real national income and hence in contributions. That is not an unreasonable assumption ; but it is an essential condition of its soundness.

There are, however, at least three objections to Labour's arithmetic. First, nearly £400 million a year —£60 million more than the whole of the net addition to savings expected in the first flush year—would come from the increased contributions to be paid by employers (these contributions, Labour itself concedes, would lead to a rise in costs and prices, and thus provoke a further raising of pensions) and from the high rate to be levied on the self-employed (many of whom, Labour seems to admit, may understandably agitate to be excluded from the scheme altogether). A second objection is that Mr Titmuss seems to have made no allowance for the cost of sickness and other social benefits which Labour admits it would feel bound to

raise at the same time as pensions. And the third—and perhaps most serious—objection concerns the effect on existing private superannuation schemes. Mr Titmuss assumes that three-quarters of the population will want to come into his national scheme, which implies some desertion now and serious desertion in future from private schemes to the state scheme. But if there were no national scheme, private superannuation schemes would certainly grow swiftly in the next ten years ; and, as private schemes would be actuarially sounder than the state scheme, the net savings in their funds would accrue at a higher rate than in the state scheme. The apparent result of Labour's national scheme might be to raise savings in 1960 above their present volume, but it does not follow that they would be higher than they would otherwise be in the 1960s ; if they were not, taxation would have to be higher than it would otherwise be.

This may sound horribly complex. But the broad conclusion is very much what one might have expected from a report written by a responsible economist, but conceived in a Labour-political atmosphere. Mr Titmuss has prevented this Labour scheme from being merely a blithe tossing of bonnets (complete with bees) over the windmill. But the scale of benefits now dangled before the public would not be completely paid for by the proposed increases in contributions. Some increase in taxation would also follow, rather bigger than the tone of the report suggests, and probably bigger still as time wore on. To engage in an exercise that prays in aid only a partial adherence to actuarial principles is really disingenuous. One cannot offer ninepence for fourpence without finding fivepence from somewhere. If the superannuation funds do not provide it, the taxpayer must. To start a scheme on such a questionable foundation would give alarming hostages to fortune.

Objective advice may not get much of a hearing from two parties in hot competition for votes. But it must be urged that any sound scheme would differentiate sharply between help for existing pensioners and a superannuation scheme for future pensioners. Labour has mixed the two up for political reasons. The ordinary non-political man who looks at Labour's proposals for existing pensioners (to raise their basic rate by £1 a week) will think that many pensioners, married ones in particular, will still be pretty badly off. If the money could be reserved for means-tested national assistance payments, the incomes of those most in need might be raised by more than twice as much as under the scheme.

IT is, however, the proposals for superannuation schemes for those now in work that are likely to absorb more immediate attention. Although there are features of the Labour scheme that would not be adopted by the prudent, there may be a case for state encouragement of a model "national superannuation scheme." For such a scheme, the principle of relating contributions to earnings—so that they will rise each year that incomes and prices rise—is certainly the right one. But a Conservative scheme might incorporate several amendments to Labour's proposals :

(1) Should the scheme be managed by the insurance companies instead of by the state? The Tories would be as unwise to assume that they must necessarily protect the insurance companies as Labour is to assume that it is a good thing to hit them. But Labour's conception of a single board of trustees managing the vast funds of a national superannuation scheme is frightening in its obvious implications. It would be much better to spread investment decisions and not to concentrate the opportunity to make mistakes (and to succour any renewed Daltonism?) in a single national board. There would be certain advantages if the insurance companies could run a basic and self-supporting "approved scheme," but with each company offering variations of its own if its customers wished.

(2) Should the scheme be compulsory? The Labour policy document says that "unless provision for superannuation is compulsory in one form or another many employers would continue to deny their workers superannuation rights." Has Labour heard of the existence of trade unions? The best tactic for the Conservatives might well be to set up a framework for an approved voluntary scheme, and then urge the unions to press employers to implement it in 1958 or 1959, as fringe benefits in place of an annual wage increase. Labour would then have an effective option to join a model non-compulsory state scheme.

(3) Pension rights in existing schemes should be made transferable ; this is not an amendment to the Labour plan but a necessary reform even if there were no plans.

(4) It is claimed for the Titmuss scheme that it would be in actuarial balance but for (a) the discriminatorily favourable treatment proposed for existing pensions and (b) the discriminatorily favourable treatment proposed for pensions for lower paid workers. This leaves in question (c) the proposed revalorisation of pensions (i) to relate pensions at the moment of retirement to the rise in average earnings since the contributors concerned started work and (ii) to raise all pensions of those who had already retired to make up for any increases in the cost of living. Part (i) of this concept of revalorisation can be made to sound more respectable when contributions are related to variable earnings than under a flat rate national insurance scheme. Part (ii) is an obvious vote catcher. But the fact remains that revalorisation of this sort would confer benefits on people who had not paid for them in the past ; and these benefits could only be at the expense of current contributors to the scheme, either through dilution of their future benefits or through an increase in their current taxes. This proposal requires the most critical scrutiny ; it would, in effect, be a built-in inflator.

These are preliminary comments thrown out after a first reading of the Labour policy document. Both the big political parties—and outside analysts—will have to do much thinking on these matters in the months ahead, and the first burdens of decision will fall on the Conservatives. Meanwhile, Labour's first essay at such thinking should be greeted with some reserve and some cynicism.

Bonn and the Alliance

Mr Macmillan's relative success in dispelling German resentment does not remove the sources of future difference between Bonn and the western powers

GERMANY'S allies, whom the fear now and then disturbs that a German government might one day come to terms with the Russians behind their backs, tend to forget that German minds can be equally troubled by the converse fear—that the western powers, together or singly, might be tempted into an agreement with the Russians over Germany's head, leaving the German question unsolved or else solving it by the course, unpalatable to them, of neutralisation. To avoid this is the main and most persistent aim of west German foreign policy. For that reason almost any serious exchanges between the western powers and Moscow—the present meetings on disarmament in London, like the summit talks of 1955—are watched from Bonn with mistrust and disquiet. This is by no means the only ground of German suspicion in what has lately become a remarkably touchy set of relationships, but it is always there, just beneath the surface. Mr Bulganin has been able with the greatest ease to render it active again, simply by giving an approving mention to one of the Eden proposals of 1955.

Mr Macmillan's talks with Dr Adenauer in Bonn ten days ago were concerned in the main with more specific and less fundamental grounds for uneasiness ; and within its limited sphere of reference the Prime Minister's visit was a fair success. He was able to dispel a good part of the cloud of suspicions and resentments that had been piling up against Britain in the Chancellor's immediate circle. Put roundly, the German reproach against British policy was that this country seemed to be aiming at a position of special influence in Europe without being prepared to accept any binding European ties or obligations. This intention (the case runs) made the British Government insist on being a nuclear power on its own, made it uninterested in keeping troops on the Continent, and caused it to throw spanners (the free trade area, the "Grand Design") into the works of the European community.

As it appears, the Prime Minister has been able to disarm the last charge by giving the Rome treaties his public blessing and by agreeing that action towards the free trade area (as distinct from the drafting work of the OEEC sub-committee), and any further promotion of the "Grand Design," shall wait a few months until the parliaments of the six countries have had time to ratify the Rome treaties. He did not make any such concession on defence ; frank explanation, and the arrangement that Herr Strauss should come to London next month, were all that could be done. As a reading of the German press suggests, the Bonn government evidently believes that the British ministers gave an assurance on another matter : the Eden Plan of 1955, at any rate in the version that envisaged a zone of inspection of armaments on either side of the German interzonal border, would not be brought up again, at least without Bonn's assent.

JUST as Dr Adenauer was thus obtaining reassurance against any British interest in plans that would neutralise Germany, a journalist's question to Mr Eisenhower threw the whole question up again, this time between Bonn and Washington. Asked on May 8th about the Soviet revival of the Eden plan for a demilitarised zone in east and west Germany, the President said that the United States would study proposals for disarmament test areas "very sympathetically." Steps were quickly taken to water his words down, but they were given great prominence by *Die Welt* and other German papers ; Bonn sought explanations ; on May 14th Mr Dulles took pains to put things right, stating that "we do not accept any arrangement which is based on the present partition of Germany" and that

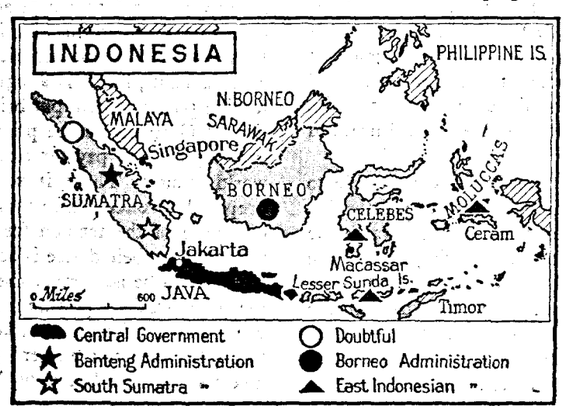
> in anything which touched directly or indirectly upon Germany and its prospects for reunification, we would act only in the closest concert with Chancellor Adenauer.

Handsome as it was, this disclaimer by Mr Dulles does not appear to go quite as far as Bonn would have liked, as the Bonn government's guidance to its own press at the weekend shows. This, quoting American authority, dismissed as "pure speculation" any reports that the United States wished to propose anything at the London conference that would "dissolve the link between reunification and disarmament."

This idea of a link implies a determination, which the German Chancellor on Wednesday affirmed in so many words, not to accept any disarmament proposals unless the German question is solved at the same time. It is not the British, American, or French attitude to disarmament ; but it is a logical part of Dr Adenauer's foreign policy, which, put briefly, regards the reunification of Germany as the price which the Russians will one day have to pay for a reduction of the tension in world affairs. There is no other deal that Bonn is prepared to offer. The western powers would like a reduction of the tension for its own sake, though for the moment their desire is academic. But if and when it ceases to be academic, the interests of Bonn and of the other western powers may suddenly diverge ; and even before then, any flicker of interest in possible terms between the western powers and Moscow may give rise to these bursts of ill-feeling in Bonn.

Indonesia's Troubles

Indonesian affection for President Sukarno has not been extended to his new "concept" of government, which the communists may be able to dominate. Threats of secession may force him to modify his policy



THE proclamation of martial law and the appointment of a new "cabinet of experts" have not yet been effective in restoring order to Indonesian affairs. The government has not succeeded in regaining the authority that its predecessor lost; its control extends only to Java and, in a qualified degree, to northern Sumatra. A budget deficit of $526 million is expected, and the gold reserves have fallen so low that it has been found necessary to suspend all ordinary commercial imports—a measure unlikely to have much effect, since the bulk of Indonesia's external trade now seems to consist of smuggling, especially between Sumatra and Singapore and between the Celebes and the Philippines.

Even in Java it is by no means certain who is actually in control. Under martial law President Sukarno, as commander-in-chief, theoretically exercises supreme power. But he can only work through the army, and even those army leaders who acknowledge his authority have their own ambitions and their own factions. The cabinet is responsible to the President and not to parliament (which is at present in recess), but it seems to exercise little executive power. Its main task is to draw up a workable blue print for constitutional and economic reform which will enable President Sukarno to "guide" Indonesian democracy in what he considers to be the right direction.

President Sukarno, who fought for his country's independence and who has dominated it since its birth, must bear a heavy share of responsibility for the present chaos. He attributes Indonesia's troubles to the machinations of the Dutch and the inefficiency of "western type democracy," as compared to the communist variety. When the army revolts in Sumatra last December produced a cabinet crisis which left Indonesia virtually without a government, President Sukarno elaborated his idea of a *gotong - rojong* (mutual-assistance) cabinet in which all major parties, including the communists, would be represented, thus eliminating an opposition; the cabinet was to be advised by a National Council representing group interests.

The bitter resistance of the Moslem parties to sharing office with the communists convinced the president that *gotong-rojong* could not be established by his fiat. But in the present cabinet of experts he has gone as near to an all-party cabinet as he dare, or can, go: three members are said to be communist sympathisers. He has induced the new cabinet to set up the National Council by passing an emergency law which has no parliamentary sanction. President Sukarno intends to preside over the council and select its members, but he has little chance of winning acceptance for it unless he placates the rebel local governments by turning it into a council of regional representatives; this he is evidently reluctant to do. The major Moslem party, Masjumi, has already denounced the council as a threat to democracy.

THE great danger is that, having originally intended to use the communists without accepting their ideas, the president will find that he has isolated himself from the Moslem parties and become dependent on communist support. The power of the communists derives not so much from their number, although six million electors voted for them in the parliamentary elections, as from their control of the principal Javanese trade union group, SOBSI, and the efficiency of their organisation in comparison with that of the other political parties. This efficiency was well demonstrated when President Sukarno announced the details of his "concept"; in one night they plastered the whole of Jakarta with communist slogans supporting it. But even the communists are not free from the internal splits and jealousies that plague Indonesian parties, and their membership has lost in quality a good deal of what it has gained in quantity since their leaders decided, in 1952, to aim for power through parliament and to throw membership open to virtually all applicants. The main communist strength is on Java, where 54 million of Indonesia's population of 81 million are concentrated. Neither the army nor the people in the remaining three

thousand islands of the archipelago would accept without a struggle a government which the communists were in a position to dominate.

Mistaken as his policy seems, President Sukarno is right in thinking that Indonesia needs competent, unified command, and if his plan looked like producing this, much might be forgiven it. Indonesia is naturally rich and with a little financial and political commonsense it could make quick progress. An overvalued currency (officially pegged at a level now three times the black market rate), constant bureaucratic interference, and a weakness for showing westerners, in trivial matters, that the mighty are fallen, make foreign firms reluctant to increase their capital investment, and discourage what could be a flourishing tourist trade. (The tourist's ardour is often cooled when he has waited several hours at the customs and paid a small fortune for an indifferent bed in an hotel room that is already occupied.) Technical aid, training and investment from the Americans, the United Nations and the Colombo plan countries could be of great value if the reports produced by foreign experts were not often promptly pigeon-holed, while the money intended to implement them was allowed to vanish. The Dutch residents might be a fruitful source of capital and advice, if they were not officially snubbed at every turn.

Instead of forgetting past grievances and making use of their former masters, the Indonesians have lost no opportunity of rubbing salt into old sores. The major irritant of Indonesian-Dutch relations is West New Guinea, which the Indonesians claim as part of the Dutch Indies, and which the Dutch refuse to give up, partly because of its strategic importance and partly because of a genuine concern for the Papuan tribes that inhabit it. New Guinea is some 2,000 miles from Jakarta, and few Indonesians had heard of it ten years ago, but emotional fervour has been so whipped up by now that any reference to New Guinea is an infallible distraction from discontents nearer home. Dutch-Indonesian relations have also been exacerbated by the arrest of a number of Dutchmen on suspicion of assisting the fanatical Moslem bandits of the *Darul Islam* movement; many have not yet been charged, and the procedure in the trials that have taken place seems far from impartial. If these men were pardoned and sent back to Holland, a new period in Dutch-Indonesian co-operation might begin which would be perhaps even more valuable to Indonesia than to Holland.

IT is doubtful whether any Indonesian politician could, or would, pursue this policy of friendliness to the west wholeheartedly; and still more doubtful whether Indonesia will, in the near future, have a leader with authority to pursue any policy on behalf of the whole archipelago. President Sukarno has lost much of his influence by his attempt to impose his own constitutional ideas on an unwilling country. He is still able to block attempts either to bring Dr Hatta (the former vice-president, an upright man and a firm anti-communist) back into power, but he cannot dictate future policy to the whole of Indonesia. The army leaders really hold the reins, both in the dissident islands and in Java, but the army is split into factions which have come near to open fighting. A score of army officers were arrested in Jakarta on May 10th and are accused of plotting to overthrow the government by force.

But in spite of the failures of the past few months and the prospect of deepening chaos in the future the moderation that has been shown in a time of severe stress offers ground for hope for Indonesia's political future. The revolutions in the islands have been bloodless, gentlemanly affairs remarkably free from mob emotion; the Moslem political parties have been quiet but firm in their stand against communist threats and presidential appeals. Indonesian behaviour in an upset does not suggest a society that is easily led into violent courses.

EDUCATION AND EXAMINATION

¶ In fact it is an error to which the English world is just now exceedingly prone, to identify education with ready knowledge. . . . Which really tells us the most about a man's mind—to know that he has spent three years at college after leaving school—or that he got "full marks" for . . . writing out Euclid? No man can make up in after years for losing the freedom of study and the reciprocal influences of mind on mind at a time when the powers of the mind are first developing. Why, for instance, have none of the conspicuously able men who have gradually won a great position as the representatives of the middle classes of England in the House of Commons, seldom or never been able to take their place as ministers with men who have little more knowledge and less than half their capacity? Why have men so eminent as Mr Cobden and Mr Bright been obliged to forgo the satisfaction of carrying out the reforms they had rendered necessary, and to deliver them over at the last moment into the hands of Sir Robert Peel? Not surely from any English worship of birth, for the Statesman was but one step removed from the cotton-spinner—not from any want of capacity, administrative or oratorical . . . but simply because in the advantage of liberal education the Minister's mind had received that width and polish—that insight into various aspects of a question—that tact in adapting the means to the end—that power of generalising particular truths . . . to which men are willing to concede quietly what they will never yield to dead weight of argument, or the menace of superior strength. It is vain to talk of knowledge as the equivalent of liberal education. Could not a man of Mr Cobden's acute and vigorous intellect master with unexampled rapidity the qualifications for a "degree-examination." . . . Yet would this rub down the sharp corners of his temperament—would it eradicate the grooves of practical prejudice—would it give him the smooth and flexible intellect of Peel or Gladstone? It is a blunder of the most fatal kind that a University can commit to merge the collegiate training in the examination-test; for while the former gives a fine and permanent temper to the character, the latter is a mere *tour de force* which is scarcely possible to confide in too little, or to despise as too transient.

NOTES OF THE WEEK

TORY UNREST

Rebels with a Cause?

UNTIL Tuesday there seemed to be two differences between the Tory revolt at Westminster and the explosion of Britain's nuclear device over the Pacific: it had taken place at a low not a high altitude, and the party leaders seemed confident that it would be a single outburst rather than the first of a series liable to cause increasing concern as it rumbles along. This was a cosy sort of revolt in which those who had renounced the whip seemed to have indicated that they would support the Government on every issue except the one that had now been settled. But two things could now make the split a more serious proposition. They are, first, the rebels' intimation that they will set themselves up as a pressure group for a "tough line" about Cyprus; and, secondly—much more important—Lord Salisbury's re-emergence as an active campaigner against Mr Macmillan's general foreign policy.

All previous right wing revolts since the war have suffered from lack of leadership. Now, for the first time, the Suez Group has a leader of real stature. The Government has tried hard to de-Cecil the Tory party since Lord Salisbury resigned, and in the Commons it has largely succeeded, with envy and sour grapes as its chief allies. But there is no evidence that it has exorcised the Salisbury myth from the two points where it has always been strongest—in the House of Lords and, much more important, among the hard core of local party officials. However much rank and file Tories may press for the democratisation of the party for vote-catching purposes, when it comes to the business of government there is still a deeply ingrained respect for the aristocratic tradition. It is this that Lord Salisbury embodies. How real a threat he becomes will depend on how wide is his disagreement with Government policy, and how strongly he chooses to press it. If he contents himself with rare forays into the House of Lords and the correspondence columns of *The Times*, he need prove no more than a nagging nuisance. But if he should start making contact with the party in the country, he could prove formidable. As a student of history, Mr Macmillan will know better than to underestimate a kingmaker scorned.

Voting by Convention

FOR the time being, however, even the leadership of Lord Salisbury is not likely to win many new recruits to the rebel band in the Commons. The eight members who have resigned the whip are a mixed bag. Mr Maude is one of the party's brains, Lord Hinchingbrooke one of its most attractive characters, and Mr Maitland a skilful propagandist. In considering the other five, one rather runs out of nice things to say. Unless Lord Salisbury becomes an active leader in the wilderness, most observers at Westminster assume that many of the new Independents will ask for the whip back after a time. Potentially the most important of the rebels could be Lord Lambton, who has resigned from the post of PPS to Mr Selwyn Lloyd, although he has not renounced the whip. Such a step by a rising young man so close to the seat of power cannot be without some significance.

The proceedings in the House this week, however, have had a certain air of unreality. Mr Gaitskell's motion, which the House was debating, declared

> That this House expresses its concern at the outcome of the Government's Suez Canal policy, and deplores the damage to British prestige and economic interests resulting therefrom.

How anybody who reads that motion carefully could vote against it defies imagination. The fact remains, however, that—although a number of right wingers were expected to join the new Independents in abstaining from voting in Thursday's division—there was never any doubt that the Government would get the sort of majority that it needed. In the first day of the debate Mr Macmillan made great play with the argument that Mr Gaitskell is no fit person to be talking about British prestige; the Tories' personal assault on Mr Gaitskell is continuing as a principal propaganda tactic, although the exchange of unpleasantries is gradually getting a little more good-humoured. The only other significant point in Mr Macmillan's speech on Wednesday was his announcement that Sir Matthew Slattery has been appointed as the Government's "special adviser on the transport of Middle East oil." This introduction of another business man to sit on part of Lord Mills's shoulder seems a peculiarly cluttering device.

ATOMIC TESTS

The Pacific and the Rhine

NOW that the long heralded tests of British nuclear weapons in the Pacific have begun, will anxiety and agitation about them increase or diminish? The next few weeks ought to provide a revealing study in public psychology. Before Wednesday's big bang there had been far more excitement, both here and abroad, about the British tests which had not yet been held than about the Soviet ones which made thunderous background music during the Japanese mission to London in April. Controversy about Christmas Island had already become so heated that it is anybody's guess whether the actual start of the tests will heighten the fever or bring it down.

Foreign reactions to the news of the first test will soon be known. Meanwhile it is relevant to note last week's resolution in the German Bundestag calling for a temporary ban on tests. By agreeing to this resolution, the government parties deferred to public revulsion against the dangers of atomic warfare and radiation. Its wording was not very helpful to West Germany's allies at a time when British and American tests were imminent and Soviet tests just completed. But such strains on the alliance are to be expected as the west German elections approach.

With the aid of this concession, the Bonn government emerged from a long and tense debate on atomic weapons without retreating from any of the fundamentals of its policy. The Social Democrats demanded that the federal German government should refuse to allow any atomic weapons on its territory and should permanently renounce them for its armed forces. Both suggestions were flatly rejected. A one-sided German renunciation would gratuitously strengthen Russia's hand in the disarmament talks, Dr Adenauer explained. The resolution which was eventually passed declared that a decision on arming German forces with atomic weapons was closely bound up with the success of the disarmament talks in London; and that a lasting peace was insecure without German reunification. The only action specifically required from the government is to publicise what measures it will take against atomic radiation and to set up a committee of scientists, politicians and soldiers on atomic weapons.

FRANCE

Fifteenth-Month Itch

M. MOLLET may need all his skill and confidence to stay in power beyond next week. France's hopelessly isolated stand on the Suez Canal issue has shaken his already precarious position. To restore it, he has handed in his resignation—which was naturally refused—and asserted that France will not leave it at that, but will take the matter to the Security Council. His government, however, is also threatened with the resignation of the Radical ministers over the official policy in Algeria. More dangerous still is a possible conservative attack on the government's conduct of economic affairs. Not all the austerity measures which the government proposes need parliamentary approval. Out of new taxes expected to bring in £150 million, some £42 million can be raised by decree. Only the remainder require parliamentary legislation, and it will be M. Mollet's purpose to limit the debate next week to the specific measures involved. The conservatives may not accept this.

M. Mollet cannot offer any strong prospect that the present programme will be enough to avert an economic crisis. Budgetary cuts and new taxes together will at best yield some £400 million—less than the cost of the Algerian war—and the French government has just reasserted that it will keep 400,000 troops in Algeria until a very problematical cease-fire. It has also claimed, rather romantically, that it will still refuse to pay Suez Canal dues to Egypt. It is to be wondered for how long a country in such financial difficulties can afford such a costly gesture. The French franc is faced with immediate dangers. Admittedly France has just received credit facilities worth about $50 million from the European Payments Union. The government can also draw on some $100 million remaining from the credit granted by the International Monetary Fund, and something is also left from the oil loan. But unless the trade gap is rapidly narrowed, within the next two months the French government will have to dip into its last-ditch reserves—the £301 million worth of gold in the vaults of the Bank of France. This would have a dangerous psychological effect.

The government's survival of next week's vote of confidence will depend on M. Mollet's ability to split his opponents' ranks. The conservatives, in particular, may at the last moment hesitate to precipitate a crisis that would threaten the present Algerian policy and play into the hands of his arch-enemy, M. Mendès-France. "Europeans" are now lobbying for the government, and all deputies are aware that Socialist votes will be needed for any future coalition. Yet all these assets may prove not enough to enable M. Mollet to extend his record-breaking run into its sixteenth month.

LOCAL ELECTIONS

Swing Low

LABOUR'S net gain of just over 200 seats in the provincial borough elections, and of something under 100 in the scattered district council elections, accorded fairly well with the standard of measurement that had been suggested in these columns. Labour has done slightly better than a year ago; any Tory parliamentary seat with a majority of less than 5,000 would be quite likely to fall to Labour in any immediate by-election; in any immediate general election Labour would be widely expected to win a majority of perhaps about 100 in the House. Nevertheless, the swing to the left has still not gone as far as it did in Labour's peak local election year of 1952, and from that debacle the Tories recovered very quickly indeed.

The geographical pattern of results this year could perhaps best be described as suggesting a process of regional evening out. A year ago Labour gains seemed to be especially influenced by the rash of discontent with the Tories across the industrial midlands. There has been no obvious repetition of that this time. Indeed—following a trend that had also been evident in Scotland—the bigger cities and towns, including the bigger cities and towns in the Black Country, seemed a little less angry with the Conservatives than a year ago; the elections for Birmingham city council, quite exceptionally, showed two net Conservative gains. The determined searcher after geographical trends can find some evidence that Labour gains were the general rule in some parts of Lancashire (*vide* Blackpool, Burnley), East Anglia (Norwich, Lowestoft), some holiday resorts (Brighton, Bath), and in those old friends of the electoral analyst—the half industrial, half residential boroughs which appeared on so many lists as marginal Tory or Labour seats at the time of the 1955 elections (*vide* Rochester, Chatham, Watford). But this was mainly because marginal boroughs naturally tend to have rather more marginal wards, and was therefore largely merely another sign of the slow percolation of the steady Labour gain throughout the country.

It is no longer possible to explain these widely distributed swings by talking of dissatisfied retired majors who no longer bother to turn out to vote Tory; nor, on what were reasonably average polls, can one now sensibly talk of any other pattern of differential abstentions. The most common type of Tory voter who has got away is probably that most common type of floating voter: the upper working-class and lower middle-class employee, sitting before his television set in a semi-detached villa, has become something more than semi-detached in his politics again. He voted Tory in 1955 when he felt that he and everybody else were getting significantly better off all the time; now that real

incomes seem more stagnant and that he has learned to associate the term "crisis" with Tories as well as Labour, he has swung left. But, to achieve political parity in a re-expanding economy, the Tories would still need to win only about three of every hundred of him back.

PARLIAMENTARY PAY

Still Standing Committees

LABOUR MPs have been wise to kill any suggestion that they may "strike" if they do not get more pay. To trade union MPs, in particular, the idea of direct action may seem superficially attractive, but it would lose them all public sympathy for what is really a very good case. What apparently happened last week was that about seventy Labour MPs drew up a joint declaration, which they planned to present to their Chief Whip. In this they complained about the interminable delay in granting their claim to a salary of at least £1500 a year, and implied that if MPs' pay was not soon raised, they might have to start looking for part-time jobs, which would prevent them from serving on standing committees that meet in the mornings. This, it seems, was the nearest they got to a "strike threat." In the end they were dissuaded from handing in their declaration, but their party leaders have been left in no doubt that they want some action.

It is now three years since an all-party select committee of MPs recommended a pay rise to £1500, and members are still having to make do with a maximum of about £1280. Out of this, those who have no other income must meet all the expenses of being an MP (including, in many cases, keeping a second home in their provincial constituencies) and at the same time meet all their normal family costs. The case for an increase to at least £1,500, and probably more for out-of-town members, remains overwhelming. The sort of MP most electors should want is a politician who can afford to invite, say, controversial colonial politicians to lunch if they happen to come to London; at the moment many MPs simply could not afford to do so.

But two qualifications must be made in discussing MP's pay. The first is that the claims of junior ministers are even more urgent, and should be met without any further delay. The second is that, up to now, part of the Government's economic policy has been based on the supposition that appropriate "moral suasion" might help to damp down wage claims. There always comes a period, between about May and September, when it is realised that the current year's bout of moral suasion has failed, but the new year's bout has not begun. MPs have learned that it is in this period that charges of "invidiousness" can least easily be levied against their own claims.

SOVIET UNION

The Heart of the Cabbage

"THE case of international tension is like a cabbage. If you tear off the leaves one by one you come to the heart. And the heart of this matter is relations between the Soviet Union and the United States." Through this vivid metaphor Mr Khrushchev tried to convey his view of the real balance of world power to the managing editor of the *New York Times* in an interview last week. He added: "If it were possible to come to an agreement with the United States, we could possibly come to an agreement with Britain and other powers."

The notion of the two colossi coming to terms and thus bringing peace to the world is not new in Moscow, but it has not been so bluntly expressed for a long time. Mr Khrushchev's cabbage was nothing if not crisp. He seemed indifferent as regards the size of the conference he envisaged, implying that, whether it was a two-power or a four-power meeting, the Russians would address themselves to the Americans in any case (as they tend to do at, for example, the London disarmament talks). He was firm about the need for a meeting of "leaders of governments"—a term which presumably would embrace himself as well as Marshal Bulganin—and he dismissed the foreign ministers summarily: "If it were a meeting between Gromyko and Dulles it might take a hundred years. Only our grandchildren would see the results." He was even more firm about the agenda. Neither eastern Europe nor Germany could be discussed. It is not clear how this condition could be reconciled with his insistence that "Europe is the area in which relations are most tense," and that the question of European security must be prominent on the agenda.

More encouraging was the fact that he did not seem to share Mr Molotov's familiar liking for conferences for their own sake. On the contrary, he argued that without adequate preparation beforehand a great-power meeting would lead to "disappointments for the participants and for the people they represent." This kind of warning has often been uttered in the West, and it is heartening to hear it echoed in Moscow—perhaps in recognition of a more critical attitude towards its own government on the part of the Russian people.

After the Supreme Soviet

GLOOM must now prevail in the quarters of civil servants in Moscow. Twenty-four central ministries alone are to vanish by the end of next month. Thousands of officials will have to accept jobs in the provinces, some in production, others in the new regional economic councils. Mr Khrushchev has carried his gigantic scheme of economic reorganisation through the Supreme Soviet. True, in his original "theses" on the subject he had envisaged the abolition of all industrial ministries. He has had to accept the survival of eight: aircraft production, defence, radio-technical industry, medium machine-building, shipbuilding, transport construction, chemical industry, and power stations, probably under pressure from the generals and some colleagues in the party presidium. But the enterprises of the surviving ministries will be under the supervision of the economic councils. This high-level agreement had been reached before last week's parliamentary session began. There only remained the question of how many ministries should be kept in the various republics. Many deputies, particularly from the Ukraine, Mr Khrushchev's former stronghold, spoke in favour of complete abolition, and since this was in keeping with his original proposals, he could not deal too harshly with amendments. In fact they probably suited him. A compromise was finally reached: each republic will decide for itself.

The project has become law. Mr Khrushchev, who cannot be accused of timidity, has now a tremendous job on his hands. The whole planning machine is to be overhauled. Within a few weeks innumerable ministries have to balance their books and get ready to hand over, and the new regional councils have to be set up, ready to take over and supervise production. It is doubtful whether the transition can be as smooth and as rapid as Mr Khrushchev imagines. The benefits expected from this reorganisation, in the form of higher production, will take time to materialise. But will the Russian consumer wait patiently?

Bombs or Butter

EVIDENTLY anticipating some grumbling among their people as the Khrushchev upheaval proceeds, and, in particular, some impatient questions about long-promised economic benefits, the Soviet leaders took care to give their answer in advance. It was a simple one: Russia is unwillingly involved in a costly arms race, and guns—or rather bombs—must come before butter. "The Soviet Union is compelled to produce both atomic and hydrogen weapons," said Mr Gromyko last week in a speech in which the word "compelled" recurred like a refrain. The Supreme Soviet's appeal to the British and American parliaments spelt it out: "Production of expensive nuclear weapons is a heavy burden on taxpayers, compelled to spend an ever-growing part of their income on arms."

Revealingly, the Kremlin seems concerned to persuade not only the outside world, but also its own subjects that the West is to blame for the arms race. Hence, presumably, Mr Khrushchev's blunt statement to the *New York Times* that the United States "indisputably" wants war. His sole argument was that "a country which does not want war would not continue to develop its armed forces and to stockpile weapons, and would seek agreement with the other side." The description fits Russia like a glove, but few would claim that it proves that Russia wants war.

Mr Khrushchev has chosen to announce his doctrine at a time when the Americans are conspicuously anxious for some agreement on disarmament, even if it has to be only a partial one. The road to comprehensive disarmament still seems blocked by Soviet rejection of effective means of international control; and American efforts have therefore been increasingly directed toward particular sectors of the problem. Moscow has shown no liking for Mr Stassen's suggestion that all further production of nuclear arms be halted under supervision. But it has at last joined in the discussion on "open skies," although its first move was, characteristically, a maximum bid which it doubtless knew would be unacceptable. Meanwhile the Americans' eagerness to get the disarmament log-jam moving somehow has embroiled them with the problem of German susceptibilities—a problem which is discussed in a leading article. This eagerness may at times disturb America's friends and allies; but it is hard to fit it into Mr Khrushchev's simple scheme of things.

DEFENCE

The New Army

IN the memorandum attached to the Army Estimates the Secretary of State for War promised a full parliamentary discussion of the army's future. This was much needed, for the memorandum was an empty, backward-looking document: Mr Hare has now come up to scratch with a clear speech about the army's prospects. The need is for an army which, behind a major nuclear deterrent, can be a mobile, flexible and compact fighting force. The basic combat unit is to be the infantry or armoured brigade group: some of the small units scattered around the world are to be abolished, and their place to be taken by a central reserve in Great Britain which can be transported by air to wherever it is needed. All new equipment is to be portable by air. New conventional weapons of all kinds are to be developed, including an anti-tank guided weapon which should make heavy tanks obsolete and a mobile ground-to-air guided weapon. Heavy artillery is to be replaced by nuclear guided weapons. Heavier weapons are to be kept at strategic points around the world, to be manned by the central reserve forces if necessary. Plans for the Territorial Army are less satisfactory: it is to be an all volunteer force for the defence of the United Kingdom itself, working, to put it bluntly, as an adjunct of civil defence, instead of, as now, a second echelon for the regular army. In a nuclear war this means that the Territorial Army would provide a disciplined element in a chaotic situation disposing of the dead and organising the living.

The great question mark which hangs over the whole plan is the prospect of maintaining an army of some 150,000 volunteers. To maintain morale and attract volunteers, living conditions are to be improved, and the system of regimental recruiting, with its traditional pull, is to be maintained for fighting regiments. The minimum period of service with the colours is to be lengthened from three to six years. Mr Strachey is not alone in questioning whether the necessary 11 per cent of the available manpower reaching recruitable age in the 1960s will in fact volunteer for the services. Morale among field officers and NCOs is bound to be impaired by the fact that some 3,500 field officers and some NCOs are to be compulsorily retired within five years. There is going to be a restless period in the army until the names of those who must go are known. Having got rid of its surplus officers the army must then set about attracting the necessary troops. If it fails in this, the new pattern for defence (and the abolition of conscription?) will presumably have to be reconsidered.

NIGERIA

Independence and Federation

THE leading politicians in the three regions of Nigeria are now assembling in London for the Nigerian constitutional conference. A hard task and possibly a long conference await them. It is known that one region expects to spend £24,000 on the expenses of its delegates; even if they stay at the best hotels in London, they must therefore presumably be expecting that they will still be here towards the end of June. The premiers of the Eastern and Western regions have persuaded the North on the wave of emotion engendered by Ghana's independence to accept the goal of Nigerian independence in 1959, although the country as a whole is hardly ready for it and the North in 1954 declared that it needed thirty years to catch up the South. But unless the North backs out during the negotiations, the problem is now, for good or ill, to give Nigeria a constitution which will take the strain of political inexperience in all regions, a grave shortage (in the North a catastrophic shortage) of indigenous trained civil servants, and strong tribal and cultural rivalries.

As the target date of 1959 gives the country so little

time to take the fateful last steps, the conference will have to stick to what is strictly practicable if it is to get anywhere. The attitudes likely to be struck by the various Nigerian negotiators are described below. Demands by Dr Azikiwe and the leaders of minor parties for the break up of the federation into smaller units than the three present regions and the Cameroons will have to be resisted. There is no immediate alternative to the present regional structure, on which immense sums have been spent since 1954; the problem is the relation of these regions to the centre in such a way that Nigerian unity can be preserved, tribal rivalries mitigated, and the central government given adequate powers.

The kernels of these powers are finance, the administrative service, and security. While the taxing powers of the regions could reasonably be increased, the centre must have control over currency, credit and the raising of external and internal loans. This control is now too weak. What is wanted is a central economic body composed of the finance ministers of all the regions and the centre meeting regularly and co-ordinating policy; this could be vital at a time of deficit financing and running down London balances such as may lie ahead. The British negotiators must persist in their opposition to any breaking up of the Nigerian police—which is, in Nigerian conditions, a vital instrument of central power. Finally, all will be in vain if something is not done to meet the danger that this year the British civil servants will start taking their compensation and melting

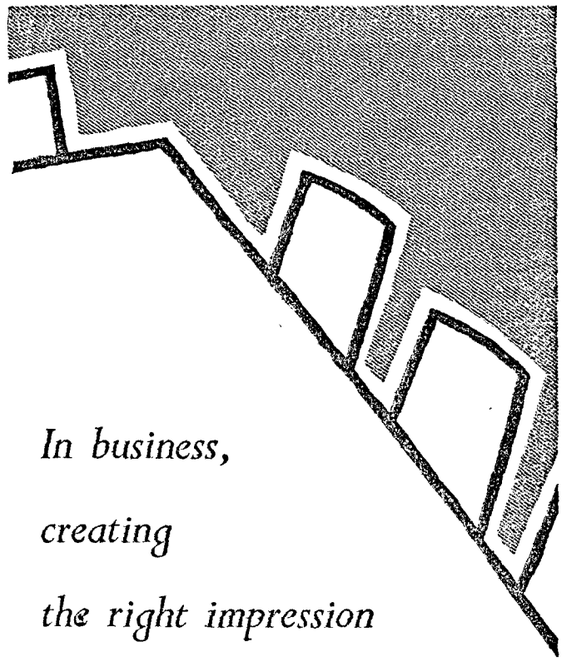
Parties to the Nigerian Palaver

A NOTE above considers the objectives of the Nigerian constitutional conference which is now assembling in London. The Nigerian delegation is intended to be representative of all the major parties and groups in that country: as these are not united on every issue, the conference will proceed by a series of inter-party bargains in which the British Government will be at times the intermediary and at times an interested party. The Nigerian delegation is composed as follows (figures in brackets are alternates or advisers):

	North	West	East
Northern People's Congress (NPC)	5 (3)	...	...
National Council of Nigeria and Cameroons (NCNC).....	...	3 (2)	5 (3)
Action Group.....	...	5 (3)	2 (1)
Chiefs, etc.	2 (1)	2	2
United Middle Belt Congress	1 (1)	...	...
Northern Elements Progressive Union	2	...	...
United National Independence Party.....	...	...	1 (1)

There will also be a delegation from the Cameroons. The condition and attitudes of the parties, our correspondent in Nigeria writes, are roughly as follows:

NCNC: This is the senior nationalist party, which once spoke, and still purports to speak, for advanced opinion in all regions. It was founded by Dr Azikiwe soon after the war, and he is still its president as well as premier of the Eastern region. It forms the opposition in the Western region, with 32 out of 80 seats; but it has the majority of *federal* seats of both East and West, and therefore represents both regions in the federal council of ministers. Its present policy is not to press for regional self-government now but for provisions in the new constitution permitting the creation of new states based on "ethnic" boundaries; these states would, in effect, be mere provinces, so that more powers would then be given to the centre. Dr Azikiwe's ascendancy was shaken by the Foster-Sutton report into the Anglo-Continental bank, which showed his henchmen, and especially the federal NCNC ministers, the extent to which he made decisions without consulting the party. Although the electorate has confirmed him in office, these colleagues of his have rebelled, and personal feuds have torn the party. Meanwhile a new wing of the party, the "Zikist Vanguard," is gathering strength and demanding a return to the pure Zikist doctrine of a unitary, free Nigerian state, with adult suffrage throughout and unrelenting pressure on the British officials and the "feudal elements" (i.e. the Chiefs, Emirs and Action Group bosses).



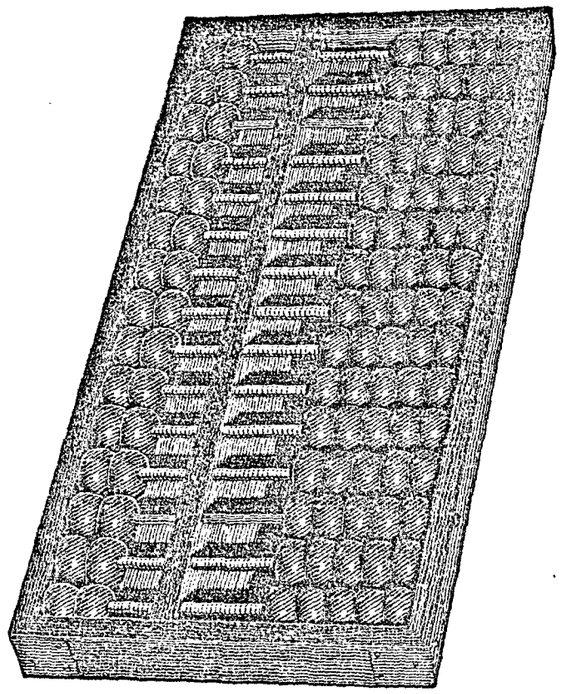
The Action Group: grew from a dissident, anti-Ibo, Yoruba group among the nationalists; its leader is Chief Awolowo. It based itself on Yorubaland in the West, and now challenges the NCNC in the East and to a lesser extent the NPC in the North. It is at present too weak to win in the East, and, elated by its administrative success as the government in the West, is determined to maintain and extend regional powers; it will probably demand regional self-government this year—that is, an end to the governor's reserve powers. It has territorial designs on its neighbours, and wants to take charge at Lagos, merely leasing territory to the federal government. Chief Awolowo is backed by able and determined men who wash no dirty linen in public, value and sometimes even cherish their British civil servants, and mean to win back a full share of control in the centre at the next federal election. They say that it is quite essential that there should be such an election before independence.

The Northern People's Congress has little real party organisation, but is loosely run by the Emirs and leading Northern families; it maintains power by a simple but effective, appeal to loyalty, to the Islamic religion, and to hatred of Dr Azikiwe's Ibos who have migrated to the North as civil servants, traders, teachers and police. It controls the Northern regional house and by weight of numbers predominates at the centre. It is led by the aristocratic Sardauna of Sokoto, who may be Sultan of Sokoto one day—and if not will probably be free Nigeria's first prime minister This party will also provide the first interim chief minister this year. But its policy is strictly regional, it lacks educated and experienced leaders, has a limited outlook, and is weakened by arbitrary decisions of the Emirs in their own kingdoms.

The Northern Elements Progressive Union embodies the reaction to the NPC and is in alliance with NCNC. It appeals to the restive minority in the northern towns, where it is fast gathering strength, but until it becomes more respectable, and gathers in the growing educated classes, it cannot challenge NPC seriously. It favours a strong centre and creation of more states, as well as direct elections in the North; these might weaken the Emirs' grip on the regional house and the NPC's preponderance at the centre.

The United Middle Belt Congress is a new party demanding a separate state covering approximately Ilorin, Kabba, Benue, southern Zaria, and the Plateau provinces. It is now anti-NPC in sentiment and represents pagan fears of Muslim domination.

The United National Independence Party is an anti-Zik remnant left in the East after a previous party row. It has a limited future allied to the Action Group.



In business, creating the right impression begins with having the right furniture

Taking the East into account

Twenty-five years ago you would have found this 'adding machine' of antiquity in every eastern branch of The Chartered Bank. It was of particular use in calculating the intricacies of exchange rates which often fluctuated with great rapidity. Today, the abacus is being replaced by the slide rule and the electric computer. The East is changing but The Chartered Bank remains in step, so that its knowledge of eastern trade, travel and investment is always up-to-date. This knowledge and a century of experience sustain a complete banking service available throughout a branch system, which extends to most centres of commercial importance in Southern and South-East Asia and the Far East.

away from the Eastern and Western regions, to be followed by their colleagues from the North and Centre in 1959. To achieve even these bare minima of a viable Nigerian federation will be a massive task.

THE ADAMS CASE

Responsibility for Contempt

THE trial of Dr Adams for murder two months ago is still having repercussions. Last week, the High Court gave judgment in the case brought against the European correspondent of the American magazine *Newsweek,* and its distributors, for contempt of court because one of its issues contained matter prejudicial to Dr Adams that was not produced in evidence at his trial. The court held that the paragraphs complained of constituted a serious contempt, and it imposed a fine of £50 on each of the distributors—the Rolls House Publishing Company and W. H. Smith and Son.

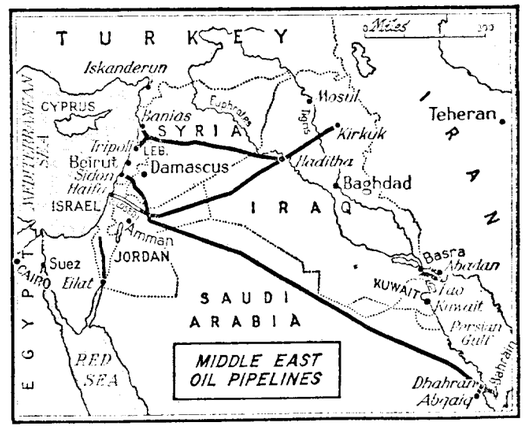
The importance of the case lies in the monitory words of the Lord Chief Justice in giving the court's judgment. For the court, having excluded the European correspondent from editorial responsibility for *Newsweek's* contents (and all foreign correspondents of overseas newspapers will render thanks for this), could not punish the American editors who were responsible because they were outside the court's jurisdiction. It therefore imposed nominal fines on the distributors in order—in Lord Goddard's words—"to emphasise the risk which [they] run by dealing in foreign publications imported here but which have no responsible editor or manager in this country." Lord Goddard went on to warn distributors that in those circumstances they were the only people whom the courts could reach and that, now that the risk and responsibility had been exposed by this case, future offences might not be dealt with so leniently.

This hint of prison or swingeing fines in store for luckless distributors of contempt could have unfortunate consequences for the British public. It is threatening to curtail the distribution of foreign publications and—almost as bad—to lead to the imposition of an amateur and probably heavy-handed censorship by the distributors. But is it as difficult as Lord Goddard made out to bring the real offenders to book—at any rate in those cases where the judge is not determined to send somebody to prison? Could not the fines be imposed on the foreign editors and be collected by writs of attachment on subsequent sales of their publications in this country? The proprietors would then have to choose between paying the fine or losing their British market. If this is not possible, then the best way of preventing the British public from being deprived of papers it wants to read is to amend the law in order to exclude distributors from liability for contempt and possibly libel as well. This seems a meet subject for a private members' Bill.

MIDDLE EAST

Three Kings of Orient

IT is not surprising that King Hussein of Jordan felt obliged to refuse the invitation to join the Kings of Iraq and Saudi Arabia in Baghdad. He is sitting on a smouldering volcano at home, where the two-thirds of his subjects who are ex-Palestinians would sooner see him linked to Syria, Egypt and Russia than to Iraq, Saudi Arabia and the dollar. He excused himself frankly enough, on the ground that conditions in Jordan are not back to normal yet.



His second reason for staying away is implicit in a statement made this week by his foreign minister, Samir Rifai. This announced budget revisions, to include "large amounts" for development aimed at economic independence. Since Jordan has no money, the "large amounts" must come from abroad—and the more sources they come from, the greater the chances of behaving independently while accepting them. Just as last year, when Egypt and Syria first suggested replacing Jordan's British subsidy, he hedged with the proviso that Iraq, too, must help, so this year he does not want entirely to drop support from Egypt and Syria in favour of support from Iraq and Saudi Arabia. One result of King Saud's rapprochement with Iraq, therefore, is that it improves Jordan's meagre bargaining power. But its chief significance is that it mitigates Iraq's isolation from its fellow Arab states.

OIL

The Big Pipe Dream

THE representatives of the 17 oil companies concluded their conference at Shell-Mex House on Thursday and now have a clear idea of what they want to do. They desire to provide two additional pipelines each of 38-40 inches to move an additional 70 million tons of oil a year from the Persian Gulf area sometime after 1960. They estimate that a million tons of steel and ancillary equipment, including ten or twelve pumping stations, will be needed, and the cost will be in the region of £300 million.

The method is less clear than the requirement. The general idea is that a north-south line through Iraq would link the Persian Gulf with the Kirkuk field, and this would

"drain" additional oil production into an associated, new pipeline system which would carry it to the Mediterranean. The production of the Basra field could then be moved north-east to feed the expanding markets of Europe; but it might also provide a quicker, cheaper route for Kuwait oil, together with additional transport facilities for Saudi Arabian oil and for the Iranian oil of the Consortium.

The companies are said to favour a route from northern

Iraq to the Mediterranean through Turkey, across southern Anatolia to the Mediterranean coast ; it is now thought that they will if possible avoid Iskanderun, because that port is the subject of dispute between Turkey and Syria. But the companies are adamant that they have made no decision on the route. Iraq, which is the key to the plan, may not favour taking the proposed pipelines round Syria, despite the bad relations with Syria at the moment, because the Arabs of the Middle East would consider it disloyalty. It is possible that Iraq and Saudi Arabia have formulated some views of their own about future pipeline policy during the visit of King Saud to Baghdad.

A pipeline through Turkey would, of course, reduce the dependence of Iraq and of the companies on Syria, but there is no suggestion that it would divert the oil flow away from the Iraq Petroleum Company's existing pipeline system across Syria. The IPC will in due course restore the flow through that system to the pre-Suez 25 million tons a year, and it may prove necessary to increase capacity further. The truth is that by the middle nineteen-sixties oil production will be big enough to need giant tankers and the Suez Canal route as well as the new pipelines which the companies have been discussing this week.

DENMARK

A Vote for Uncertainty

DANISH electors do not lightly change their voting habits, in spite of economic crises, as last Tuesday's general elections showed. But there was, as had been predicted, a slight swing to the right. The Social Democrats (70 seats) who, with Radical backing, formed the last government, lost four seats and the Communists (6 seats), who were expected to go down heavily, lost 2. The Liberals (45 seats) gained 3, and so, rather surprisingly, did the eccentric Single Tax party (9 seats), whose members cling to the principles of Henry George. The Radicals (14 seats) and the Conservatives (30) did not change their strength.

Hr Hansen has resigned, but unless the new government is formed more quickly than most people expect, he will still be in charge when the Queen and the Duke of Edinburgh arrive on Tuesday on a state visit. The Radicals still hold the balance of power between the Social Democrats on the one hand and the Conservatives and Liberals on the other, and the election results have made them more powerful than before. Any new government will presumably have to depend on them to some extent, but since they are neutralist in their foreign policy, it will not be an easy partnership to work out. The Single Tax party is an unknown factor and if, as seems probable, it chooses to support the Conservatives, it will make an important difference to the bargaining power of the Danish right wing.

SOCIAL SERVICE

Help for the Old

MR MCLEAVY'S National Assistance Act (1948) Amendment Bill, which got its second reading with all-party support last week, is an excellent legislative example of what in the realm of town-planning is known as "in-filling." The original act provided that the larger local authorities should have power to make grants to voluntary organisations (such as the WVS and the Councils of Social Service) supplying hot meals and other domiciliary services or organising recreation for the old. The amending bill extends this power to smaller authorities and empowers them to run such services, when necessary, otherwise than through the voluntary organisations. The principle of co-operation between voluntary and public services is a valuable one, and there is no reason why it should suffer. But there seems no reason, either, why the wellbeing of old people, once recognised as a matter of common concern, should depend on the hazard of the adequacy of voluntary services in their neighbourhood. The amending bill plugs a gap ; and while some improvements in drafting will, by common consent, be needed to fit its provisions into the current reshaping of local government functions and finance, it deserves the welcome it has received.

It is not, indeed, only geographically that a gap exists in the services available to the old. Roughly and perhaps unscientifically—and certainly with little reference to chronological age—the retired population may be divided into three groups: the elderly, the old and the senile. All these need, of course, an income ; the senile need continuous care such as can hardly be rendered outside special institutions. So much is recognised. But between the hale and active elderly pensioners and the "medicated survivors" there is a large and growing class of old people whom it is a waste, an insult and a cruelty to assimilate to the latter group but who are no longer capable of fending entirely for themselves. "Meals on wheels," home help, shopping services, chiropody and the provision of clubs were among the activities mentioned in the Commons debate: a range of good-neighbourly services which for many old people make all the difference between continued independence and an unwilling—and from the public point of view vastly more expensive—resort to the Old People's Home or the hospital. They should be recognised as a necessity rather than provided, optionally and unevenly, as a kind of frill on the structure of the welfare state. Whether in the exact form provided for in Mr McLeavy's bill or otherwise, their expansion and consolidation would be both humanely and economically a very good thing.

GERMANY

Volkswagen Shares for All

THE success of the Volkswagen firm is a continual mockery of arguments about the value of public or private ownership ; since the war nobody has really owned it at all. The claim to ownership made by the subscribers of its original capital through Hitler's Labour Front has not been accepted. The German Labour Front has no legal successor. Since nobody owns the Volkswagen undertaking it has been difficult to sell it to anyone—whether new private owners, as many industrialists have asked, or the state, as the Socialists wish. The firm has been in the joint trusteeship of the federal government and the *Land* government of Lower Saxony, but in practice its management has enjoyed virtual independence.

Professor Erhard now promises to bring Volkswagen out of limbo. He has told the Christian Democratic party congress that the party will soon table a bill to declare the firm a state-owned undertaking and then to sell its shares to the public ; the issue would be a pioneer endeavour in a broader drive to sell off the shares of many of the other

314 firms in which the German treasury has inherited (mainly from the Third Reich) a holding of more than 25 per cent, and at the same time to spread the habit of owning shares to the "little man." To ensure that control as well as ownership is broadly spread, no single initial holding may be more than DM 25,000 (£2,100) ; there will be rebates for small incomes ; proxy voting will be limited. The scheme is in part intended to strengthen Germany's frail capital market, bringing into industrial investment small savings and some of the horde of "stocking-money" which is still estimated at 5 or 6 billion marks. But the belief that economic democracy depends on a broad spread of private industrial ownership throughout the community is also an article of Professor Erhard's political and social faith. The Christian Democrats hope that "Volksaktien" (people's shares) will be a successful electoral answer to Socialist demands for nationalisation.

Volkswagen's competitors will no doubt seize avidly on the hope that their rival will become less competitive once it, too, has to pay dividends. They should not indulge too fond hopes. It may be some time before the bulk of the shares is sold. And Volkswagen, though it has ploughed back profits vigorously, has also been amassing reserves against the day when an owner might be found, as well as paying 50 per cent of its profits to its own workers. The firm will continue, moreover, to enjoy the benefits, not only of its excellent management, but also of the brilliantly simple basic design of its product.

COLOMBIA

A Regime Changes

GENERAL Rojas had become in the last year or so little more than a puppet dictator controlled by the Colombian armed services. Now, after some last wild jerks on his string, he has been thrown out. Without popular or church support he had become a liability to his military protectors, and on May 10th, two days after his farcical re-election by a handpicked constituent assembly, he was packed off to Spain. His final efforts to save himself by holding bogus presidential elections while his term still had more than a year to run—and by imprisoning the opposition candidate, Dr Valencia—precipitated his fall.

Colombians had long been disgusted by the corruption and illiberality of the regime, and last week saw continuous riots and strikes, organised by students but quickly catching on elsewhere: about a hundred people were reported to have been killed. Then the church intervened, accusing the government of murder and sacrilege. General Rojas had already angered the church, which is extremely powerful in Colombia, by his abortive attempt to launch a nationalist movement on the Peronist model, and Cardinal Luque's denunciation killed any hope he had left of staying in power.

★

Four generals and an admiral are now ruling by junta. The new regime began badly when thirty people were crushed to death in a panic stampede, for which the troops seem to have had some blame, during celebrations in Bogotá. But the generals are doing their best to convince the country that they hold with democracy. They have promised free presidential elections in 1958 ; they have established relations with Dr Valencia, leader of the conservatives, and with Dr Lleras, the liberal leader and a former president. As one sign of resurgent political life these two rival parties, who joined to oust the dictator, have split again. The constituent assembly has been suspended, and a new cabinet appointed. The press censorship is to be brought to an end. Colombia has a tradition of honest and independent newspaper reporting, and if the end of censorship proves to be more than a temporary measure, then the order of things may really have changed for the better.

HUNGARY

Mr Kadar Digs In

KOSSUTH'S emblem—for Hungarians the precious symbol of their fight against foreign oppression—has been removed from the Hungarian national flag, and from the uniforms of policemen, postmen and other officials. The secret police (AVH), the most violently hated representatives of the communist régime, are not only more active than ever ; scarcely a day passes without the press eulogising the "heroic" exploits of one of them during the October rising. These flights in the face of popular feeling are made possible by the Kadar régime's increasingly severe reign of terror. Cafés and restaurants in Budapest are raided frequently, and the persons arrested are given such farcical trials that even judges familiar with the judicial mockeries of the Rakosi régime are said to be horrified ; those who betray their feelings are sacked. Sentences of death are carried out summarily, often within a couple of hours.

★

Mr Kadar is entrenching himself in other ways, too. The workers' councils, which played such a key part in the October revolt, are constantly attacked in the press even though they have been thoroughly purged. Some important officials, including the Budapest chief of police, have been dismissed for suspected "counter-revolutionary tendencies." The National Assembly, meeting for the first time since last October, has been told to extend its own mandate—which should have expired last week—because, according to Mr Kadar, the Hungarian people are preoccupied with healing the wounds inflicted by the revolt and "it would not be correct if we spent our time and strength on parliamentary elections." The cabinet has at last been brought up to strength, but the new members, with one possible exception, are all either men who supported Mr Kadar in November or technicians who served under Mr Rakosi. There is no longer any question of broadening the régime by bringing in members of other parties. Indeed Mr Kadar bluntly told the National Assembly that the multi-party system could not and would not be introduced.

The new communist party, however, is clearly causing anxiety. Its membership has crept up to 300,000. But some 400,000 members of the old pre-October party are still holding back ; according to the official paper *Nepszabadsag* "we regard them with some anger and sometimes with hostility." Mr Karoly Kiss, a member of the party executive, nevertheless claims that the party's strength and influence "are much greater than indicated by the membership figures." In bourgeois circles this would be known as making the best of a bad job.

LETTERS

Albion in the Dock

SIR—As one who attended the recent meetings of the Council of Europe and WEU, I believe that your article of May 11th, like most other British press reports of these meetings, misrepresents continental opinion at Strasbourg. Will you allow me to comment on the two main topics of debate: the "Grand Design" and the defence white paper?

On the first you say that "it was hardly surprising that Mr Ormsby-Gore got a poor reception for the Grand Design." But in fact both what he said and the way he said it were most favourably received. I have not heard a single continental politician allege that our proposals for rationalising the increasing number of international bodies spring from a wish to torpedo the further integration of the Six. This wholly incorrect appreciation of motive has been planted by the press. There was nothing "complacent," still less "arrogant," about Mr Ormsby-Gore's insistence that these were only tentative suggestions for bringing order out of increasing chaos. The main criticism which was in fact voiced, and which you do not mention, was that no provision is suggested for contact with the Executive through a Council of Ministers.

Our delegation did its best, not I think unsuccessfully, to explain the following objectives of British policy. Common sense alone demands that the proliferation of bodies which have as their object the integration of Europe within the Atlantic Alliance should be streamlined so as to reduce their demands on manpower, time and money. That means not only that those bodies which now have, or will have, a supra-national character shall continue to enjoy their powers quite undisturbed by those countries which have not yet joined them; but also that, when other than purely European matters are under discussion, such as a common foreign policy for Nato, the Canadians and Americans should be invited to join in.

As to our defence proposals, I am sorry to have to contradict some of the statements in your article. The motion of censure on the Council of Ministers of WEU was not passed because they "had been wrong to accept any reduction whatsoever of British forces on the Continent," but because the Ministers had not explained in detail the reasons for this acceptance. All were agreed that we had scrupulously observed the conditions of Article 6 of Protocol II to the Brussels Treaty; and no one suggested that our decision was "a plain retreat from obligations." Finally you allege that the Germans are asking: "if all is left to the deterrent, how can a local invasion be stopped?" But the Germans have very carefully read the white paper, clause 20 of which clearly states: "The possession of nuclear air power is not by itself a complete deterrent. The frontiers of the free world, particularly in Europe, must be firmly defended on the ground."

Here again Mr Ormsby-Gore and the delegation did their best to explain the following reasons underlying the "new look" in British defence policy. The UK has in no way abandoned its firm intention to bear its fair share in the collective defence of Europe. "The defence of Britain is possible only as part of the collective defence of the free world" (para 10 of the white paper). But we cannot continue to make a disproportionately large contribution (more than twice the cost per head of the population compared with any other country except France). Having some ten years ago decided to manufacture the atomic deterrent, part of our contribution is made to the "sword" and therefore we can contribute rather less to the "shield" of ground forces. (Parenthetically—and with reference to your other article last week, "Calling the Bans"—it was interesting that a resolution urging suspension of tests pending further talks was overwhelmingly defeated by the Assembly.)

In conclusion, may I say that I fully agree with you that "it is not too late to make a new effort to fit the new model of British defence into common Nato plans balancing the need for conventional and atomic weapons." But I confidently assume that such an effort is now being made.—Yours faithfully,

GILBERT LONGDEN

House of Commons

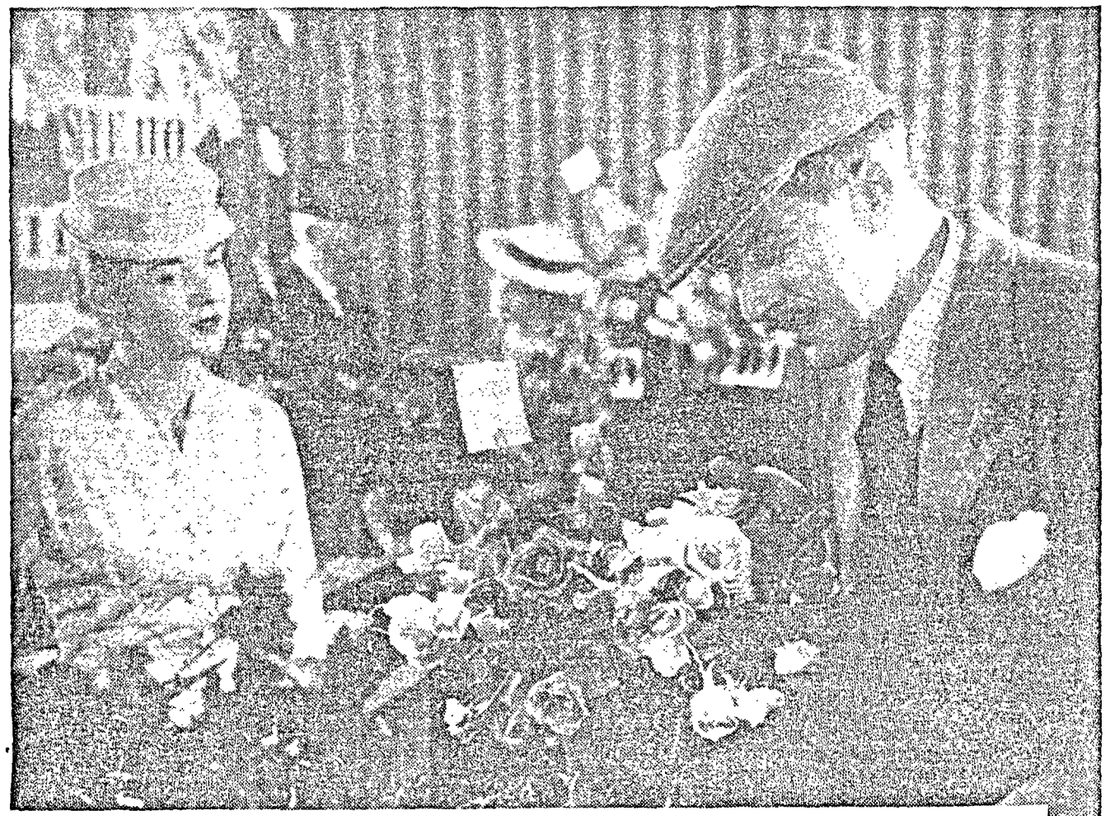
The Canal and Sterling

SIR—I have been surprised at the line *The Economist* has taken about the dispute with Colonel Nasser, but I was frankly amazed to read the article in your edition of May 4th. This article stated that the American response to Nasser's terms had "saved face" and went on to suggest that canal dues should be paid in sterling and that, in order to persuade Colonel Nasser to accept this currency, Egyptian assets in this country should be released.

In other words, we should not only concede a complete victory to Colonel Nasser, but should prostrate ourselves before the Egyptian Pharaoh in order that he might graciously allow British ships to use the canal. It is perhaps beside the point to add that in so doing we would be betraying the interests of all those private individuals and companies whose property in Egypt has been sequestrated.

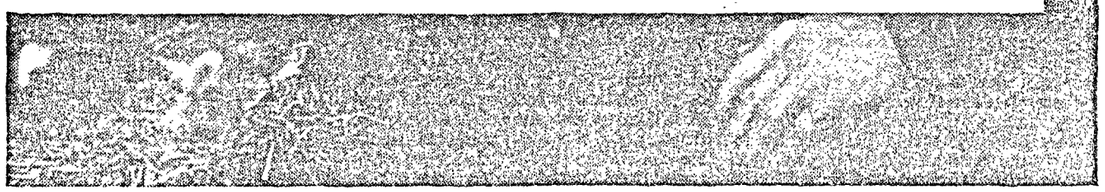
One is becoming used to reading counsels of complete defeatism in certain sections of the British press, but I refuse to believe that this represents the true spirit of the nation. Owing to the defection of our allies last autumn, Colonel Nasser has won a temporary victory, but the battle is not yet over and we should not overlook the historic fact that Britain invariably loses the first round.

The picture is not nearly as gloomy as it is painted. The American public have already come round to the view that Sir Anthony Eden was right in taking action last year and the Administration, slowly and reluctantly, appears to be following suit. Mr Dulles has been forced by the pressure of events to imitate many of the actions he condemned last autumn—the Eisenhower doctrine; the adherence to the military sections of the Baghdad Pact and the recent movements of the 6th Fleet point the way, and it is hoped that a joint Anglo-American policy on the Middle East will eventually emerge.



The Commonwealth, apparently divided by the rapid move of events last year, is now reunited. Australia and New Zealand, to which the canal is vital, are solidly behind us, Pakistan is our ally in the Baghdad Pact, India and Ceylon are doing their best to bring Colonel Nasser to a more conciliatory frame of mind, Canada is the leading power in advocating the constructive use of the United Nations Emergency Force as opposed to its present employment, which appears to many to be merely putting everybody back to the start lines so that the whole business can start all over again.

Colonel Nasser's position is insecure. Though he has won a propaganda victory, it is known throughout the Arab world that his armies have been defeated and he can no longer be regarded as the leader of the Arab League. In Saudi Arabia, in Jordan and in the Lebanon there is a clear weakening of ties with Egypt. Even Mr Dulles seems to think that it is no longer worth while to try and conciliate Nasser.

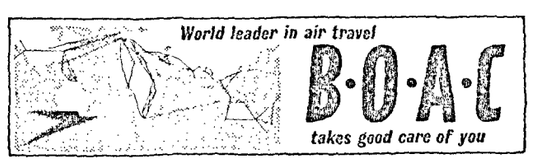


In the long run the value of the Suez Canal to Egypt has been greatly diminished, for never again will the maritime nations of the world allow themselves to be placed in a position where their trade is subject to the whims of one man. All these powers are now thinking of ways they can avoid being dependent on the canal, by the construction of super tankers, by alternative pipelines, by planning for an alternative canal, etc.

In the short term Colonel Nasser's control over his own country has been seriously weakened by the strain on Egypt's economy, which if it continues could well cause his overthrow. Though it must be admitted that the alternative to Colonel Nasser may well be fascism and the Moslem Brotherhood, resulting in bloodshed and anarchy.

Britain and France were the first world powers to take action against

For very particular people... B.O.A.C. of course



World's finest passenger service—World's finest airliners

Whether they fly de Luxe, First Class or Tourist, people with a particular eye for perfection will tell you "*B.O.A.C. is the one and only airline for me!*" And no wonder! . . . B.O.A.C. offers the world's finest passenger service plus the finest, fastest most spacious airliners in operation today. Magnificent B.O.A.C. "Whispering Giant" jet-prop *Britannias* operate frequent flights between Britain and South Africa, the East and Australia. On the Atlantic route to the U.S.A. and Canada there are B.O.A.C.'s super-luxury double-deck *Stratocruisers and fast new* DC-7C airliners.

Whichever of these superb airliners *you* travel by, you will appreciate the *incomparable food and comfort and the* courteous, *personal* attention for which B.O.A.C. is world-famous. On all these routes you can enjoy fully-reclining "Slumberettes". Always fly B.O.A.C.—world leader in air travel!

Consult your local B.O.A.C. Appointed Travel Agent or any B.O.A.C. office.

Remember—it costs no more to fly by B.O.A.C.

BRITISH OVERSEAS AIRWAYS CORPORATION WITH S.A.A., C.A.A., QANTAS AND TEAL

Colonel Nasser. It is now clear that events are moving in their favour and that, though it may be necessary for British shipping companies to use the Suez Canal, it is surely the worst possible time for the British Government to seek any agreement with Colonel Nasser which does not include the six principles accepted by the Security Council. Any such action would place the future of the canal completely in the hands of Colonel Nasser, who would be in the unique position of being subservient to no legal or international control and would thus be able to discriminate as he wished against the shipping of nations to whom he personally was opposed. Surely the world could not tolerate this?—Yours faithfully,

PATRICK WALL

House of Commons

Disarming Candour

SIR—There is, as you say in your article of April 27th, no reason to think that the Soviet Government's nuclear test policy envisages maiming its own productive workers. All that is necessary is that the policy should be formed by ignorant and self-confident persons, devoted to toughness and able to pick those scientific advisers who are likely to agree with them. Given these prerequisites, and since a mere increase of 1,000 bone cancer cases per megaton is a negligible risk by the standards of political morality, Soviet policy can be as bland about the release of more radioactivity as is Mr Macmillan.

The Kremlin has the further advantages, from its own point of view, of having to pay much less attention than Mr Macmillan to public opinion, and of being able to call on eminent anti-Mendelians to talk down its scientific opponents. Since the essential problems before us—or those of us who are more concerned with public health than with demonstrations of prestige—is to reduce the number of explosions regardless of their origin, it would be necessary to apply the pressure of public opinion to those quarters first where it is most likely to work—even if it were not likely that the successful prevention of the British tests would prevent others.

The division of opinion, one might add, is not between the frightened and the steadfast, but between those scientific authorities who are willing to say loudly that all increases in radioactive background are dangerous, and those who, for various reasons, are only willing to say it quietly. The estimate of danger depends in part on the importance one attaches to a few thousand extra deaths, and in part on the direction of the speaker's interests—biologists seem uniformly more disturbed than physicists; medical biologists are most disturbed of all, so far as I can judge by conversation with them. But they, of course, are biased by a professional unwillingness to laugh off that few thousand extra deaths in a realistic manner.—Yours faithfully,

Loughton, Essex ALEX COMFORT

BOOKS

Psephologie Française

Les Elections du 2 Janvier 1956

Edited by Maurice Duverger, François Goguel and Jean Touchard. Cahiers de la Fondation Nationale des Sciences Politiques. No. 82.
Paris: *Armand Colin.* 505 pages. 1,700 frs.

THE French general election of January 1956 presents a number of unique features. It was the first to be held since 1877 as a result of a deliberate dissolution of the Parliament; and it produced the highest turnout of voters ever recorded, the largest number of candidates—almost ten for every seat—and, ultimately, the election of an Assembly which led to a minority government destined to beat the Fourth Republic's record for longevity.

Other distinctions emerge from a closer study. The calculation upon which the dissolution was based proved wrong; not because of any public resentment against M. Faure, its author, but because the electoral alliances (*apparentements*) upon which he relied to strengthen the right-centre coalition were ineffective. This in its turn was largely due to the quite unexpected strength of poujadism, which drew away votes that might otherwise have benefited the right-centre. Although inability to agree on a change in the electoral law was one of the factors contributing to the dissolution, with the result that the election was fought on the 1951 system of proportional representation, the way in which the lists were drawn up, particularly on the less-disciplined right, and the French predilection for personal rather than party politics, made the actual working of the system quite other than the theorists believed. More than half of the deputies elected were the only ones on their list to get in. What mattered more often than not was to be head of a list—any list—and the rest was electioneering. Again, the huge number of lists and candidates did not correspond to political realities. About 300 of the deputies up for re-election were certain to get in; the real struggle was over 250 seats for which there were some 700 serious candidates.

This would at first sight suggest that the differences between British and French electoral habits might have been overrated and that what ought to have happened this time would be a national campaign fought over a limited number of marginal seats. Despite some effort by M. Mendès-France to act like a British party leader, nothing of the kind did, in fact, happen; and the story of the election, like that of other French elections, rapidly reduces itself to the story of a number of individual contests, the links between which are to be found in general tendencies, economic, sociological or even religious.

Such differences in the nature of elections explain the differences, or many of them, between the British type of election study and that developed in France. We can now compare to some extent work in the two countries on the same election, since we have the four articles on the French election of 1956 (reprinted from *Political Studies*), a part of the Nuffield College series of election surveys, to put alongside the much larger volume of Professor Duverger and his colleagues. The British contribution includes two constituency studies, one being on M. Mollet's campaign; the French includes several, one being on M. Mendès-France's constituency. One thing that emerges is the much greater French interest in the sociological aspect of election studies, and in using these as a guide to the political thinking and behaviour of social and regional groupings. This is due not only to the different pattern of French elections, but also to the more abundant and manageable data available. France, for instance, has the constant unit of the department, whereas Britain has constituencies with shifting boundaries, which makes historical comparisons of one British election with another very much harder. British counts are on a basis that is constituency wide; those in France are taken by each commune or polling station. In a few cases, women's votes are taken separately and in one case, on this occasion, newcomers to the register voted separately. It is the ability to map voting behaviour against other sociological and religious data that gives French psephology its particular interest and flavour.

The work as a whole, made up as it is of over twenty separate papers differing greatly in the extent of their generalisation, tends to be almost as elusive in its general picture as the phenomenon it attempts to analyse. And although the editors are to be congratulated on getting out a work of this size and complexity so rapidly and with so few obvious slips, the usual French habit of omitting an index does not make it easy to handle. Some of the matter—the analysis of the content of election addresses and speeches—is useful for the record rather than immediately exciting, but much of the remainder is highly suggestive, especially where contributors are found to disagree rather sharply—for instance, on the effectiveness of meetings as a method of electoral propaganda. Some chapters, particularly M. Jacques Kayser's very thorough survey of the Paris and provincial press, provide important reference material; indeed the whole volume will provide an inexhaustible quarry for commentators on French politics for quite a time to come.

Broadsides on Freedom

Freedom in Contemporary Society

By Samuel Eliot Morison.
Oxford University Press. 162 pages. 22s. 6d.

IN a month in which the American body politic has thought itself compelled to lament, in public, the passing on to his reward of Senator McCarthy, there is something refreshing, something pleasant and reviving in reading the broadsides of Admiral Morison. We have had the spectacle of Congress going through a parade of mourning that would have strained the self-control of a Roman augur, and the more intolerable spectacle of funereal laments for the late statesman in terms that could have been justified for a combination of St. Louis and William Lloyd Garrison but, unfortunately, recalled only an eighteenth-century divine on the make for preferment.

We may be sure that Admiral Morison would not have fallen for the *de mortuis nil nisi bunkum* line. But we may also be sure (this admirable little book is proof of it) that he would not have fallen for some of the more naïve "liberal" protests against McCarthyism. For Admiral-Professor Morison is that very rare bird, a real "come-outer," an independent, a real liberal. He is rightly concerned (he is a most distinguished academic) with academic freedom, but he knows that this is part of a wider freedom, political freedom. He puts first things first. *Politique d'abord* is his motto, but in a very un-Maurrasian sense. Freedom, the old-fashioned article marketed by the founding fathers, is primary and fundamental. If you ignore this truth, you get into the mess in which our muddled and lachrymose party members and fellow-travellers now find themselves. Professor Morison holds the view that a Communist must be either a fool or a knave, and there is certainly a great deal of weighty evidence for this proposition. People who had to wait till the Twentieth Congress or the Hungarian atrocities before they saw the light were blind, deaf, but not, alas, dumb. So Admiral Morison, on general principles, does not think that Communists ought to be tolerated as university teachers or that the problem of security is a bogus one. If American universities are under fire it is partly their own fault for accepting outside control and bogus arts and sciences peddled by Departments of Education. (Here his vigorous remarks, even more vigorous than those of Professor Bestor, have acquired topicality in the English context).

But Professor Morison does not confine his view of freedom to politics and learning. He deals with economic freedom with the same independence of views, attacks "fair price" laws with wit and wisdom and draws on a very wide range of economic history to make his points. (He does not tell us that he is himself a member of the dynasty that had made the Plymouth Cordage Company a model of free enterprise or that he is its historian.) He has no use for the preachers of a blind *laisser faire* that Adam Smith neither knew nor wanted. He still thinks the New Deal a good thing and the yelps of anguished businessmen at best funny. He fires a broadside at some academic denigrators of state interference, notably "the three weird sisters, Hayek, Jewkes and Schumpeter." Is it too bold to suggest substituting von Mises for the undogmatic Schumpeter? For Professor Morison, Schlichter is the boy.

This book will infuriate many people, but all of them ought to be infuriated or at least stung into thought. It is pedantry, no doubt, to point out that *la trahison des clercs* is a phrase we owe to Julien Benda, not to Jacques Maritain; it is Christian charity to suggest that we do not *know* that Harry Dexter White was a secret Communist; and it is pleasant to congratulate Professor Morison on converting the Supreme Court of Canada (where these lectures were given) to his view of the Quebec padlock law.

The Melting Pot

Waterloo to Peterloo

By R. J. White.
Heinemann. 211 pages. 18s.

"RULERS who neither see, nor feel, nor know, but leech-like to their fainting country cling." Shelley's opinion of the English Government in 1819 was echoed in 1919 by the Hammonds' comparison of Lord Castlereagh's England with "an Asiatic police-state." But though the historiographical pendulum has swung since then, Mr White does not hang uncritically on to it. And this book is not intended to be a history of Regency England but a reinterpretation of the transition period, which he calls "the melting-pot."

"The Hunting of the Snark" was still to be written; but to Lord Liverpool the wordy arguments of the hunters would have seemed familiar. Voices clamoured for electoral reforms much wider than those proposed before the war; some, reminiscent of 1789 rather than of 1689, raucously demanded universal suffrage. Those who agreed about nothing else insisted that the social ills of the day could only be remedied at Westminster. The Government found itself attacked for following Burke's gospel in constitutional, and Adam Smith's in economic, theory.

The motives of such diverse leaders of "the people" as Sir Francis Burdett, Bamford, Cobbett, and Hunt are impartially examined. So are the backgrounds of governors and governed. The Liverpool administration had to rule England with Elizabethan machinery: yet it has been blamed by historians, as well as by contemporary critics, for not conjuring up those civilian police-forces which no Englishman of the day would have tolerated. The author quotes J. W. Ward as saying in 1811, "I had rather half-a-dozen people's throats should be cut in Ratcliffe Highway . . . than be subject to domiciliary visits, spies, and all the rest of Fouché's contrivances." The inhabitants of Birmingham and Manchester would have said the same thing more bluntly. The yeomanry's inefficient attempts to shepherd the crowd while Orator Hunt was arrested resulted in the so-called massacre of Peterloo; but if the Manchester city constabulary of today could miraculously have appeared, their reception would have been the same.

Lacking Fouché's spies, the Government relied on local magistrates for supplying information as well as for maintaining order; though the Home Office employed a few paid agents, some of whom were undoubtedly "provocateurs"—hence the ubiquitous notoriety of "Oliver the Spy." Such forms of "security" were crude, but necessary: Hunt's intentions might be constitutional; but his followers drilled like the Sections of revolutionary Paris. The watchword of Cartwright, "the Father of Reform," was "hold fast by the laws"; but the network of his Hampden

The Economists' Bookshop
11-12 Clement's Inn Passage, Aldwych, London, W.C.2.

Clubs seemed disquietingly like that of the Jacobin Clubs in France; and the teeming populations of the new manufacturing areas, which had far outgrown their original parochial boundaries and lacked the supervision of parson or squire, were dangerously vulnerable to the incitements of mob-oratory. The Spa Fields riot and the Pentrich "revolution" before Peterloo, and the Cato Street conspiracy after, seemed to justify Sidmouth's precautions.

Mr White does not debate the evils or the blessings of the Industrial Revolution; he analyses the ingredients of the "melting-pot," illuminating them with a clear uncoloured light. His approach, method, and style should appeal to the general reader. Beginning with a painting of the Life Guards at Waterloo, and ending with a cartoon of the yeomanry at Peterloo, the illustrations are aptly chosen and explained; and there is the kind of comprehensive bibliography that encourages further reading.

Keats Reassessed

On the Poetry of Keats

By E. C. Pettet.
Cambridge University Press. 403 pages. 35s.

BECAUSE of the marvellously swift development of Keats's poetic powers, because he died tragically young, because there are so many shafts of penetrating wisdom in his letters, it has been—and perhaps always will be—easy for his admirers to blur the distinction between promise and performance, and to ignore his limitations, though he himself was almost agonisingly aware of them.

In the Induction to *The Fall of Hyperion* the dreamer-poet, hitherto concerned with "a feast of summer fruits," "a cloudy swoon," is confronted with the need to renounce such luxuries in order to attain a new degree of poetic insight. It is apparent enough from this poem and from passages in the letters that Keats was severely critical of all that he had achieved in his brief writing life—impatient with his "poesy," the outcome of daydreaming and feverish unrest. He was dissatisfied just because he understood that he had not yet reached that maturity which engenders supreme poetry.

His apologists have therefore done him a disservice—as Dr Leavis pointed out some twenty years ago—by claiming for him a Shakespearean degree of greatness, and by reading into his poetry metaphysical meanings which the language of the poems does not support. Mr Pettet corrects all this. He has a just and lively appreciation of the peculiar genius of Keats, but by careful examination of what he actually wrote he demonstrates the untranscendental nature of his imagination and stresses the youthful qualities of even the finest poems.

Exuberance of fancy, hypersensitive reactions to stimuli, the quick shifting of mood, the blend of erotic dream and death-wish, these are all characteristically youthful and highly characteristic of Keats's poetry. Mr Pettet suggests that *Endymion* is more plausible, and therefore more enjoyable, if it is read as a young man's fantasy about an imagined beloved, far beyond his actual reach and experience than if we approach it (forewarned by the critics) as a neoplatonic allegory. Similarly, he refuses to read esoteric meanings into the Odes.

A reader unacquainted with twentieth-century criticism of Keats, might accuse Mr Pettet of labouring the obvious. Actually his book is a very useful corrective to much extravagant and irrelevant theorising. He is patient and percipient in his reading of the poems, and clear in his exposition of them.

What Liberals Believe

The Liberal Tradition

Edited by Alan Bullock and Maurice Shock.
Black. 344 pages. 25s.

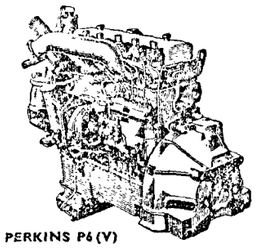
THIS latest addition to Messrs Black's series of books on the British political tradition contains 134 extracts from the works of great liberal thinkers and orators, from Adam Smith and Charles James Fox to J. A. Hobson and John Maynard Keynes. Controversies now entirely dead are left alone; there is little to be seen here even of the Irish rock on which the Liberal party of the eighties splintered. Plenty is left for exposition by the numerous authors cited: free trade, free thought, free action in politics are all discussed and analysed; imperialism and armaments are condemned; plain morality is put forward as the guiding clue through the mazes of international entanglements; and some attempt is made to answer the questions of social reform that became unexpectedly graver as questions of political reform were solved.

In a telling introduction, Mr Bullock and Mr Shock are sceptical of any suggestion that the Liberal party could ever have developed in a radical direction, and turned itself into a successful competitor with the Labour party for the allegiance of urban working men and women. They make no attempt to conceal the self-contradictions of liberalism; they suggest indeed that "one of the most spectacular triumphs of the Liberal tradition" is to be found in the modern British Commonwealth, with all its inconsistencies.

The most striking feature of this historical collection is its relevance to contemporary events. Fox in 1793 "maintained as a principle inviolable that the government of every independent state was to be settled by those who were to live under it, and not by foreign force." Morley wrote in 1874 that "You have not converted a man, because you have silenced him"; Acton, in 1877, that "Liberty is not a means to a higher political end. It is itself the highest political end." Mr Gladstone appealed in the same year to "a tradition not which disregards British interests, but which teaches you to seek the promotion of those interests in obeying the dictates of honour and of justice," and said in 1880 that "the true barrier against despotism is in the human heart and in the human mind." Grey wrote in 1918 that "Peace can never be secured by the domination of one country securing its power and prosperity by the submission and disadvantage of others." Such examples may help to show that this is a book that everyone interested in politics ought to read.

Levantine Facts and Figures

Syria and Lebanon



By N. A. Ziadeh.
Benn. 312 pages. 30s.

THERE has been room for a good book in English about the Levant states, and Professor Ziadeh's "Syria and Lebanon" to some extent fills the gap. Most of the vital facts and figures are here, and so is the complicated day-to-day political story from the last years of the war onwards. The chapter on political parties is particularly useful. That on economic life is at least adequate, though the account of negotiations with the oil companies is so skimped that it could leave a wrong impression.

Professor Ziadeh is less successful in putting flesh on the bones. The essence of young countries like Syria and Lebanon—inevitably in this series they are lumped together, though differing so much from each other in every way that the reader's attention has to jerk constantly to and fro as in a tennis match—is too elusive for the factual approach. Statistics, indeed, can be positively misleading when springing from an unstatistically-minded world. Ideally an analysis such as this would have a strong strain of travel book in it. There are the sort of questions which it would be helpful to find asked and answered. How does a man from Aleppo differ from a man from Homs? To what is due the sort of collective boorishness which makes the Syrians quarrel with all their neighbours almost all the time? How deeply engrained are the Lebanese conventions allotting office along sectarian lines?

Admittedly Professor Ziadeh discusses the confessional problem with considerable candour. If here and elsewhere one misses a rather more *nuancé* approach, this may be due to handicaps of language. The author's use of English sometimes slips off the rails, plunging either into involved obscurities or into equally surprising simplicities (when, for example, writing of the Presidency of the Syrian Republic, he says: "The post is attractive, and more than one person aspires to [it]"). But although this is not an easy book to read, it is one that students of the Middle East will make good use of.

Perkins DIESELS

The Diesel Engine with the Clean Exhaust

What PERKINS DIESELS mean to the TRANSPORT FLEET OWNER

Fleet owners the world over use Perkins Diesel engines—and with good reason too. These rugged engines offer outstanding fuel economy—in many cases showing savings of up to 50 per cent.

Outstanding mechanical reliability and ease of maintenance, backed by widespread service facilities, make Perkins Diesel engines first choice everywhere. If you are in the transport business it pays to fit Perkins Diesel engines—they give you far more for far less.

AMERICAN SURVEY

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

Teamster Overboard

WASHINGTON, DC

THE Senate's select committee on improper activities in the labour or management field is within reach of its first important scalp. After the fortnight the committee has just spent further unravelling the intricate financial operations of Mr Dave Beck, the president of the teamsters' trade union, it is reliably reported that the feudal barons who divide up the power in the union are ready to drop their chief. A more important development is the broad support which is emerging for a complete reassessment of the status and responsibility of trade unions in American life. They are, after all, tax-exempt organisations. Since strikes are rare and dues continue to roll in, they have large idle resources, the disposal of which is a matter of legitimate public concern. It is being recognised in many quarters that the attitude toward trade unions has not kept pace with reality. They continue to be treated with unthinking indulgence as though they were still struggling underdogs. The hard fact is that this indulgent attitude, combined with the political influence the unions exercise in many northern cities, has given them in practice a virtual legal immunity.

Apart from the daily sensations concerning the alleged misdeeds of Mr Beck, a general pattern is emerging. Businessmen who are eager to avoid costly disputes or to tie up their competitors with them, who are anxious to raise extra funds quickly in the middle of a fight for control, or even to arrange the policing of their own restrictive practices, have accepted into partnership trade union officials eager for the outward symbols of respectability and recognition. The brokers in these relationships have been a proliferating race of smooth-talking middlemen. The prime example so far has been Mr Nathaniel Shefferman, a high priced labour consultant to big department stores, whose personal relations with trade union leaders have been conducted under the cover of streams of rhetoric about the need for a grand reconciliation between capital and labour.

The McClellan committee in general retains popular respect although a few conscientious observers are deeply concerned at the spectacle of a man who is already under indictment for not paying enough income tax being made to appear repeatedly before the television cameras, while the evidence against him is laid out for all to see without the usual safeguards of a court trial. After this it is difficult to visualise any jury in the country coming unprejudiced to the task of trying Mr Beck.

On the other hand, the danger of the teamsters—as lorry-drivers are still called—arrogantly shrugging off the charges against them and subjecting the labour movement to bitter and perhaps violent internecine warfare appears to have been reduced by the efficient presentation of the committee's case. Accusations of the sort now being aired against the teamsters' union have been in circulation for a long time, but Mr Beck had history on his side when he questioned whether either Congress or the American Federation of Labour and Congress of Industrial Organisations would dare to offer a serious challenge to "His Majesty the Wheel," as his business associates were in the habit of calling him.

What Mr Beck did not allow for was the exemplary thoroughness with which the committee's large staff of investigators and accountants, headed by its young counsel, Mr Robert Kennedy, prepared its material, and the unqualified support given to the committee by the AFL-CIO. Last week the teamsters' union was handed a twenty-two page bill of particulars of charges drawn up by the federation's ethical practices committee and was given until May 24th to prepare its answer. Next Monday Mr Beck himself, who has already been suspended as a vice president of the federation, will be called on by its executive council to show why the suspension should not be made permanent. But the real test of all this pressure is whether it shakes the confidence of the teamsters themselves in their officers. If they were to stick with their present leaders, depart from the federation and link up, as it has been rumoured they might, with the International Longshoremen's Association, which has already been expelled, and with Mr John L. Lewis's United Mineworkers' Union, they would confront would-be reformers with a formidable array. From every point of view it would be preferable for there to be a radical house-cleaning within the teamsters' own ranks. The risk is that Mr Beck and a few of his more vulnerable associates will be sacrificed, without anything essential being changed.

THIS minimum achievement may not be far off. The new revelations show that Mr Beck's instinct for personal profit extended to the investment of a fund raised for the widow of his oldest friend ; this may be more damaging than the discovery that, like the bosses, he runs up a fancy expense account. Moreover, local branches now understand why they were put under intense pressure to sell toy lorries to their members ; this was a private enterprise of their president. There are also the labour disputes which Mr Beck tried to settle in favour of the liquor business in which he was desperately attempting to launch his son. It has become clear that, whatever formal votes it may have taken, the teamsters' executive board is not really behind Mr Beck. To crown it all, the public relations firm which he hired, with such a flourish and at such expense, to defend his union's reputation, has made as its first recommendation the proposal that he be removed from office forthwith.

The leaders of the American labour movement are sadly aware, however, that the downfall of Mr Beck will not bring the unfavourable publicity to an end. The McClellan committee has yet to reach New York, where the material

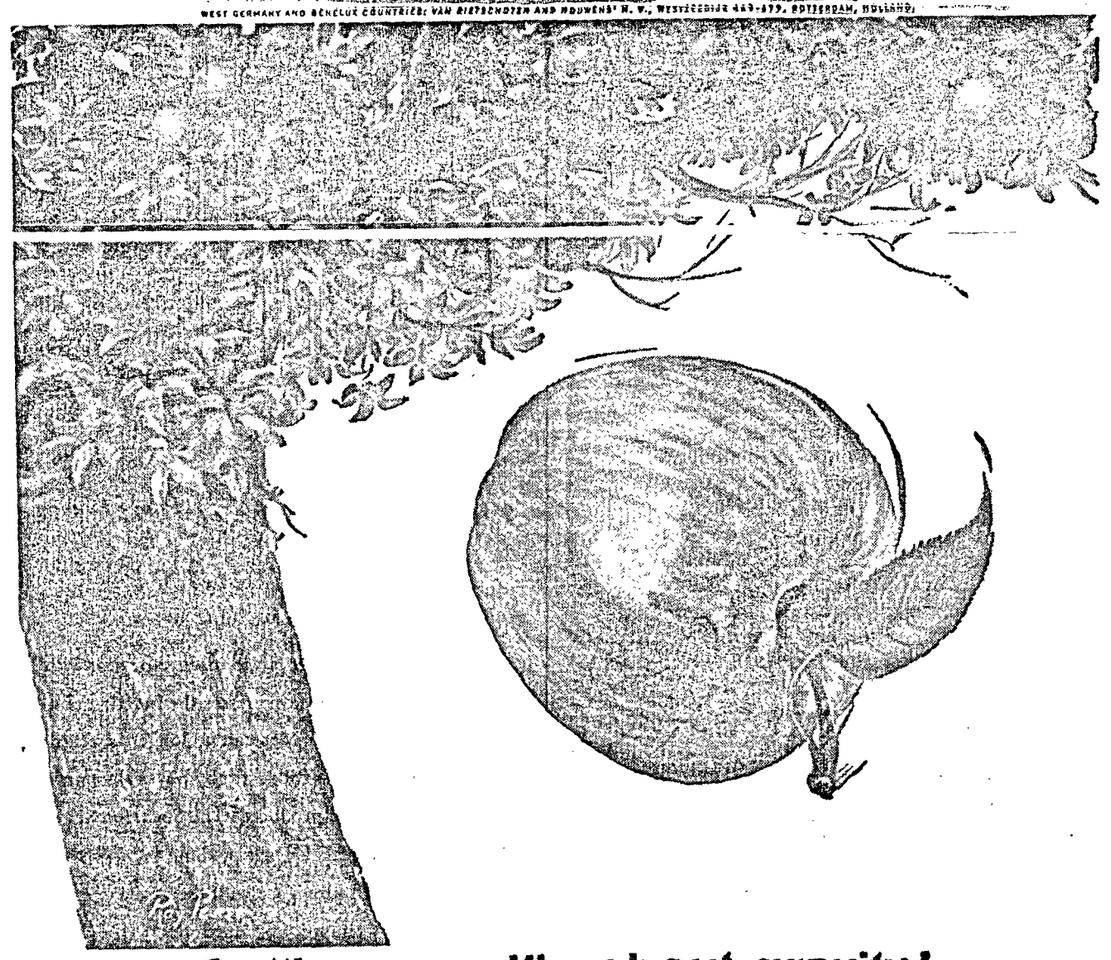
awaiting it on the teamsters looks limitless, and it has yet to round up the other black sheep known to be in the pasture. The AFL-CIO claims that so far it is managing to hold the line against any mass defections from its ranks, but it is obvious that recent events, combined with the unpopularity of the unions' opposition to racial segregation in the South, have blighted for years to come the high hopes of organising the 23 million unorganised workers with which the two rival groups came together.

One important consequence is that, in the course of deciding their attitude to the present investigation, the union leaders have fundamentally revised their traditional attitude to governmental interference in labour relations. The Taft-Hartley Act, the principal statute regulating collective bargaining, is no longer denounced as a "slave labour law." Instead the AFL-CIO is calling for legislation tightening up the supervision of trade union practices and publicising union finances. Since many union officials no longer think of themselves as engaged in a crusade, they must be compelled to behave as though they were administering a trust.

A Senate subcommittee headed by Senator John Kennedy, the elder brother of the McClellan committee's counsel, is now considering what kind of legislation would be useful. Senator Kennedy is particularly worried by the discovery that in many local branches of the teamsters' union there have not been elections for years ; the local officials had been removed and trustees appointed from headquarters. The most obvious need is for regulation of the enormous welfare and pension funds, many of which are so loosely controlled that they are a standing temptation to dishonest officials. The committee will find it less easy to define what conflicts of interest are not permissible for a labour leader and to decide how much democracy in trade union affairs should be required by law. The AFL-CIO is prepared to go a remarkably long way to co-operate in such legislative pioneering. By doing so it hopes to side-track the legislation it really fears and which its enemies hope to slip through on the tide of the public's present disgust. This is "right to work" legislation which would make compulsory union membership illegal throughout the whole country, as it is already in about a third of the states, mostly non-industrial ones, and legislation which would debar unions from taking an effective part in politics. Naturally enough, since most union money goes to support Democrats, Republicans are taking the lead in attempting to shut off this supply. It is ironically fitting that Mr Beck, the man who has given them their big chance, has been the one major trade-unionist who has consistently backed Republicans.

Defending the Budget Abroad—

To the regret of many of his supporters, President Eisenhower's nationwide television talk on Tuesday did not directly counter-attack those in Congress and the business world who have been assailing his Budget as unnecessarily costly. Indeed, the President has since made it clear that even now he does not propose to use the influence of his office, as his less high minded but more politically experienced predecessors did so effectively, to punish members of Congress who do not support his requests. The broadcast was simply an attempt to strengthen the defences of his Budget by enlisting the public on his side. His straightforward explanation of "what happens to the tax dollars that you send to Washington" and why government spending cannot with safety be reduced further was designed to remind Americans that this was the implementation of the programme which they endorsed when they re-elected him last November.



The President's main theme was that "the price of peace is high," that "there is no cut-rate price for security." Spending for defence and for the aggressive waging of peace, through diplomatic efforts, aid to other countries and fostering understanding of America abroad, is responsible for $45 billion of the $71 billion in the Budget ; the rising costs of armaments account for 80 per cent of this year's increase over last year. Nevertheless, the President does not seem to have checked the House's belief that military spending can be reduced or the enthusiasm in the Senate, usually more generous than the House, for cutting American information activities abroad. The congressional difficulties of the foreign aid programme have just been increased by the resumption of arms deliveries to Jugoslavia, which had been held up since last October to please Congress, and by a reduction of $520 million in the original estimate for military aid in the coming year ; only $2.8 billion is now being requested for this and $1 billion for the economic side of the mutual security programme.

These discrediting admissions by the Administration that savings can now be made where a few weeks ago the maximum economy had already supposedly been achieved are more likely to encourage Congress to cut again than to convince it that every penny is essential to the safety of the United States. Neither the visit of President Diem of Vietnam as a living testimony to the success of American help in countering communism, nor the return of Mr Richards to bear witness to the effectiveness of the Eisenhower doctrine, will be enough to shake Congress's determination to take at least another $500 million from foreign aid. It is doubtful if even President Eisenhower's second lecture next week, to be devoted entirely to economic assistance abroad, can mobilise enough public pressure to prevent this particular reduction.

—And at Home

So far the President's first appeal does not seem to have had much effect on Congress, particularly not on Mr Knowland, the leader of the Republican party, supposedly the President's own, in the Senate. Mr Knowland still believes that $3 billion can be cut from the Budget "without damaging the essential needs" of the country. He is particularly opposed, for reasons of principle as well as of cost, to the school Bill which the President considers one of the most essential items in the smaller, $26 billion part of the Budget which covers domestic concerns—charges fixed by law, such as military pensions and interest payments, and the costs of government and of services to citizens. This Bill, the only important new spending proposal this year, would provide an emergency programme of school building, to remedy the national shortage of class rooms. The President firmly denies either that this would involve federal interference with local responsibility for education or that aid would

Getting specific about gravity!

Falling apples fascinated Sir Isaac Newton. No doubt he enjoyed a few of them while devising his famous gravitational formulas. Newton's concern was with what came down, whereas aviation engineers today are primarily concerned with what goes up. Even so, the gravitational challenge is the same.

A jet plane, intercontinental missile—or anything that moves — usually leaves the design stage too heavy for optimum performance. To be specific — the specific gravity of the material of construction is too high.

Now, with Titanium, the design engineer can capture the strength of alloy steel at barely more than half the weight. What's more, Titanium is unaffected by most corrosives . . . and is impervious to the deadly attack of sea water and marine atmospheres. Its coefficient of expansion is low . . . and it can withstand long-time operating temperatures as high as 1000°F.

All types of Titanium mill products, from foil to seamless tubing, are made by TMCA. With production going up and prices going down, now is a good time to design with Titanium. Technical literature on Titanium is available just by asking.

what is the definition of handling?

Our dictionary says it is "to manage or deal with" and that in a phrase expresses the function of a Stacatruc fork lift truck. Men can no longer be relied upon to carry the burden of industry by physically moving materials and products. The Stacatruc is designed to mechanise manhandling processes so that they can keep pace with the growing tempo of production.

The ability of this versatile machine to lift, transport and stack all manner of materials makes it the most widely used mobile materials handling unit in operation today.

Stacatruc fork lift trucks are, in fact, saving time, saving space and conserving effort throughout industry . . . . . and this means money!

become permanent. These two arguments, and the expense of the scheme, are the objections to the programme put forward by Senator Knowland and by the United States Chamber of Commerce, and the opposition to this project epitomises the President's difficulties with Congress. While he and his modern Republicanism have a few faithful friends there, they are not numerous or influential enough to provide the solid block of support which is needed to push his programme through the blockade set up by the Republican conservatives and the Democratic opposition, particularly since that blockade has been reinforced by the general distrust of government spending.

For these reasons and because in the House the school Bill is again being linked with racial segregation, Congress now seems likely to adjourn without approving what in January seemed to be one of the President's most promising proposals. Another once promising Bill, being publicised by its supporters as the "*right to vote*" Bill, which would protect the civil liberties of Negroes, is also now suffering from the lack of any pressure to drive it through Congress. But here the blame lies mainly on the delaying tactics of its southern opponents, which have so far prevented the Bill from being debated in either House, and here at least Senator Knowland may come to the rescue.

Hot Potato from Idaho

MR GORDON GRAY, the new defence mobiliser, has accomplished the seemingly impossible with his announcement that the Idaho Power Company will be allowed, for tax purposes, to write off in five years—a quarter of the usual time—*over $60 million* of the $103 million cost of two of its three dams on the Snake River. He has temporarily united Senator Byrd and Senator Morse, respectively the far right and the far left of the Democratic party. Both find the award indefensible, Senator Byrd because it seems to fly in the face of his Bill to bring the whole rapid depreciation programme to a virtual end, and Senator Morse because he is one of the bitterest critics of the Administration's policy of allowing a private firm to develop the electric power at the Hell's Canyon site on the Snake. Mr Gray's decision is equivalent to a $30 million loan to the company. On this flood of indignation the Democrats on the Senate Interior Committee have promptly relaunched the Bill to authorise a federal dam which was narrowly defeated last year. Mr Gray, who must take responsibility for his predecessors' decisions, explains that the company applied for fast amortisation in 1953, when many other electricity companies were receiving similar benefits, but that the decision had to be held up until the Supreme Court, on April 1st, decided not to interfere with private exploitation of the site. What advocates of public power will suspect is that the announcement was withheld to deprive them of a telling argument.

Mr Gray will presumably find it harder now to persuade Congress to leave him discretion to expand the rapid depreciation programme if the need arises. The scheme, which was used during both world wars, was revived during the Korean War to induce industry to build the facilities which would be needed for full mobilisation. It was interpreted broadly, and firms in 229 industrial categories have been allowed to depreciate $23 billion worth of new facilities over five instead of the customary twenty or twenty-five years. The number of these categories has now been reduced to eight, and five of these are being reviewed.

In practice, rapid depreciation will shortly be available, with one or two exceptions, only to producers of new kinds of military goods and firms doing research for the Department of Defence and the Atomic Energy Commission—the groups to which Senator Byrd and Mr Humphrey, the Secretary of the Treasury, would like the plan to be restricted. Their concern is partly with cost; although if tax rates remain the same, the Treasury eventually gets back the revenues it loses in the initial five years, Mr Humphrey estimates that it will have to pay $3 billion in interest by 1960 on borrowing which would otherwise not have been necessary. But Mr Humphrey also argues that such industrial favouritism distorts the economy, stimulates inflation, and postpones the day of tax reduction for all, including the more realistic depreciation charges all industries favour —and he seems to have convinced the President.

Death in the Dock

FROM A SPECIAL CORRESPONDENT

CAPITAL punishment, which for many years has been a less controversial matter in the United States than in Britain, is now being debated on the west coast. The Legislature of Oregon is considering a constitutional amendment to end the death penalty which has been proposed by Mr Robert Holmes, the state's first Democratic Governor in eighteen years. In his inaugural message the Governor maintained that the state "has an obligation to be civilised," and that "*capital punishment* neither prevents murder nor edifies and refines the society that exacts the death penalty." If the Legislature agrees with Mr Holmes and its decision is confirmed by the voters in November, 1958, Oregon will become the first state in forty years to repeal the supreme penalty. But the abolitionist cause has also gained strength in California from a number of sensational cases, the latest of which involved the execution of a man convicted of murder a few minutes before the arrival of a stay from the Governor. This has built up considerable support behind a proposal now before the Legislature for a five-year suspension of the penalty. Once more the western states, which in the past were laboratories of social legislation, seem prepared to take the lead.

Within broad limitations established by the Constitution of the United States, and with the exception of certain crimes which come under federal law, criminal justice is administered by the states. The form punishment takes therefore varies across the country. In only four of the forty-eight states—Maine, Michigan, Minnesota and Wisconsin—is there no provision whatever for the death penalty. Two others, North Dakota and Rhode Island, are practically in the same category since criminals are executed only for first-degree murder committed while serving a sentence for another first-degree murder. (Under American law murder is in the first degree when it is premeditated or committed in the course of a felony.)

In the remaining forty-two states death may be inflicted, in twenty-four by electrocution, in nine by hanging and in

eight by lethal gas, while in the Mormon state of Utah the condemned man has the choice that Kevin Barry, in the Irish ballad, sought in vain, between being shot or hanged. Although in most of these states there are several crimes which may be punished by death, it is essentially a penalty for first-degree murder and, in the southern states, for rape, when it is committed by a Negro on a white victim. Indeed, the states which have a discretionary death penalty for rape coincide exactly with those that have racial segregation laws, and in Virginia, according to the National Association for the Advancement of Coloured People, although not one of the 809 white men convicted of rape since 1909 has been executed, 52 Negroes have been sentenced to death. Only one and a half per cent of the executions in the years from 1930 to 1950 were for offences other than these two ; they included armed robbery, kidnapping, burglary, espionage and aggravated assault.

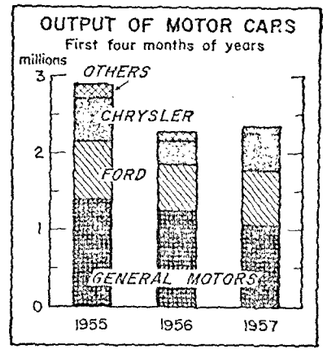
★

Some of the crimes for which the penalty is theoretically available have never been punished by execution, as in the six states which treat train wrecking as a capital offence. But as long as such laws remain on the statute books, they can be invoked ; last month a Negro was sentenced to death after he had been convicted of "first degree burglary" by an all-white jury in Alabama. Federal law makes treason, as well as certain forms of espionage and sabotage, punishable by death. The latest and, as yet, unused, addition to the short federal list was made last year when Senator Price Daniel's narcotics Bill empowered juries to recommend the death penalty in the case of dope peddlers who had supplied heroin to young people under eighteen.

Even for first-degree murder the death penalty is mandatory only in Vermont although Connecticut and Massachusetts only made it discretionary in 1951, when at last the memories of the Sacco-Vanzetti case had grown dim. Outside Vermont the jury has the power to recommend mercy. This usually results in a sentence of life imprisonment, which may in turn be modified, except in Connecticut, by conditional parole or an unconditional pardon after the prisoner serves a substantial sentence. Even without a jury's recommendation, the way is open for executive clemency, again except in Connecticut, where the prerogative of mercy belongs to the State Legislature. Elsewhere clemency is exercised either directly by the Governor or by a board of pardons, both of which are subject to political influence in every sense of the term.

In recent years there has been little discussion of the issue of capital punishment either in learned journals or the popular press, perhaps because the number of actual executions has been going down steadily. It averaged 143 a year in the period 1930 to 1950 ; so far in the present decade the comparable figure has been 79, while, on average, fourteen states a year have had no executions at all. But half a century or more ago the subject used to arouse intense passions. In Oregon the death penalty has already been abolished once and then restored, as it has been in three other states—Missouri, South Dakota and Washington—while in Maine it was restored for a period of four years in the eighteen-eighties before being abolished a second time. In Michigan, where there have been no executions since the admission of the state in 1837, the ban on capital punishment has bent but not broken under frequent gusts of popular sentiment. Proposals to establish such a penalty have been before the Legislature twenty-five times since 1885, usually after the widely reported trial of a particularly brutal murder.

★



Much less public concern is now usually shown over the penalty itself than over the delays in criminal justice which add an unintended refinement of cruelty. The best publicised, though by no means the most typical, instance of this is that of the author-convict, Mr Caryl Chessman, who has been for nine years under sentence of death in California for causing bodily harm to a victim of kidnapping, and has written three books about his experiences. His case came up once more before the Supreme Court this week on a technical appeal arising from the fact that a court reporter had died before his shorthand notes had been transcribed. Mr Chessman has indicated that if this fails he will abandon his ingenious efforts to prolong his life.

Some of these delays are inherent in the federal system, since appeals from state courts of the first instance must go to the highest appellate court of the state, sometimes passing through an intermediate stage, before questions arising under the Constitution can be brought to the United States Supreme Court. These questions, which usually deal with the propriety of the proceedings under the clause of the Constitution guaranteeing due process of law to the accused, rather than with points of guilt or innocence, are often delicate and complex. It may happen that the case when it first comes to the Supreme Court is not in a form in which the federal issue can properly be determined, and must therefore be referred back to the state courts for further proceedings. Some of the delays, however, must be attributed to the casual, if not slovenly, habits of the criminal bar, which notably lacks professional standards. Prosecutors in particular are inclined to place the furtherance of their own political careers before the speedy administration of justice. In an atmosphere so highly political, local judges, often themselves elected, are reluctant to try to accelerate the proceedings.

No Records for Cars

SPRING has failed to spread much sunshine in Detroit, for it has failed to bring with it the upturn in sales of cars which the manufacturers were counting on to raise output substantially above the 6 million automobiles turned out last year. Production is running only about 2 per cent higher than it was in the depressing first four months of 1956, exports are lower, particularly to Canada, and the automobile capital is now resigned to running below top speed at least until the 1958 models are unveiled in the autumn. Then the General Motors Corporation, the giant of the industry, hopes the scheduled restyling of its cars will put it far in front. So far this year, General Motors has turned out nearly 14 per cent fewer cars than it did up to the end of April last year and, in the low-priced field, GM's Chevrolets have let Ford take the lead. It is the smallest of the big three, however, which has recorded the biggest gains in output: the production of the Chrysler Corporation has jumped by 40 per cent over the first four months of 1956 despite recurrent labour troubles. It has captured 21 per cent of the market, compared with 30 per cent for the Ford Motor Company and 46 per cent for General Motors.

Disappointed as they may be in 1957, the automobile industry has comforted itself with the thought that after two mediocre years, 1958 should rival 1955, when a record 7.9 million cars were produced. By next autumn, those who went into debt in 1955 to buy a car should have paid their last instalment, and should be ready to start again. Such calculations have been somewhat dashed by the appearance of the sixth volume of the Federal Reserve Board's study of consumer credit. It is devoted to automobile loans, and concludes that the bumper crop of cars in 1955 was produced by a combination of favourable circumstances which is not likely to recur. There was a liberalisation of credit terms which probably went as far as lenders are ever likely to go ; as the economy recovered from the recession of 1953-54 there was a great spurt in employment and incomes ; and the styles of the 1955 models were particularly beguiling. The result was a 50 per cent increase in the number of cars sold on credit. But the board's analysts suggest that the industry would be foolish to count on it happening again very soon.

Putting Food to Work

WASHINGTON, DC

ANNOUNCEMENT of the agreement under which Poland is reported to be getting $95 million worth of American economic aid, mainly in the form of surplus farm commodities, is apparently being held up until the House of Representatives has extended the Administration's authority to sell such surpluses abroad for local currencies. The Senate has already approved the extension of the Act, Public Law 480, for a further year and added another $1 billion of authority for this purpose to the $3 billion which has been almost exhausted. This law, which also permits the government to barter its stocks of food for more durable goods and to use them for relief abroad in emergencies, is one of two schemes under which farm produce is supplied to other countries for soft currencies ; the other is a provision in the Mutual Security Act by which a percentage of military and economic aid is furnished in this fashion.

The problem now is what to do with the substantial sums of foreign currency which, as a result, are being credited directly to the American government's account. Ten possible uses are authorised by Public Law 480, but two have been paramount : 40 per cent of the money has been allotted to meeting American expenses overseas, for example the costs of Embassies and of visiting Congressmen, and 50 per cent has been lent back to the foreign governments to help their own economic development. The governments have the choice of paying back these loans in dollars at an interest rate of 3 per cent or in their own currency at a rate of 4 per cent. Money is only just beginning to come into American accounts from these sources, since repayment does not start until three years after the loan is made and may continue for as long as forty years. But ultimately very substantial sums of foreign currency will be in American hands ; already $1½ billion generated by sales of surplus farm commodities have been loaned back to receiving countries.

One interesting proposal that is being advanced within the International Co-operation Administration is that some of the interest payments should be used to establish local capital markets and so force down impossibly high local rates of interest. The aim would be to encourage small-scale entrepreneurs to own land and to launch small processing industries which would both mop up urban unemployment and earn extra foreign currency for the backward countries. The ICA is also talking about the possible financing of "swing credits" which would encourage a favourite American objective, the development of regional marketing and trade. For example the Americans might make yen available to India to import equipment for iron mines from Japan and the Japanese would get rupees to import the raw iron for processing and manufacture.

Problem of the Plains

FROM A CORRESPONDENT IN COLORADO

AT last the Great Plains, which cover nearly 600,000 square miles, one-fifth of the area of the United States, seem to be emerging from their five-year drought, the worst in their history. But the catastrophe only accentuated the permanent strains which have made this region the successor of the Deep South as the country's number one economic problem. The fundamental difficulty confronting the people and institutions of the plains springs from the fact that the rainfall is not only inadequate, averaging 20 inches or less a year, but erratic. Most of it comes in the spring and early summer, that is, in the growing season, but if this rainfall fails it means disaster for the region's agriculture, the basic activity of the "breadbasket of the nation." Moreover the light loamy soil is particularly susceptible to blowing in the high winds which are also characteristic of the Great Plains. Recurring droughts, and the progressive ploughing up of the primeval prairie sod, since the region was first settled have meant that billions of tons of the soil have been blown all over the eastern United States and western Atlantic in the famous and feared dust storms ; the most recent of these brown blizzards came only last March.

The national government has alerted all its agencies to the urgency of the immediate problem and has spent enormous sums on specific aid to the people of the drought area. Nearly $700 million has gone for this purpose alone in the latest five years of extreme need and a further expenditure of $150 million has been authorised over the next decade, largely to help farmers to change over to grassland agriculture, that is to cattle and sheep ranching. Yet all this seems like putting a plaster on a cancer—petty, ineffective and failing to reach the cause of the disease. The case has been put most clearly by Dr Carl Kraenzel, a rural sociologist at Montana State College, whose book, "The Great Plains in Transition," has become almost the bible

of people who insist that the problem of the Great Plains needs a wider and deeper approach than has ever been contemplated so far.

Institutions and customs developed to suit the humid parts of the country from which most of the original settlers came have been clamped down upon the plains even though few of them suit a region where people have to learn to live with aridity if they are to survive. The pattern of life and work needs to be adapted to a longer cycle, building up more

THE GREAT PLAINS

reserves in the good years for the bad years which are more frequent and usually much worse than in the coastal areas. Farming techniques, banking and credit regulations, local government, school and road systems, all have been imported and hardly altered. The commerce of the plains has been dominated by outsiders and there is practically no industry, so that almost every manufactured article the people use comes from other regions, often travelling a thousand miles or more, while the raw materials produced in the plains go east or west, at heavy cost, for processing.

This is of course the familiar story of the economic exploitation of a colonial economy from afar. But this, according to Dr Kraenzel, is not the whole difficulty. He points out that in each of the ten states which lie partly (none wholly) within the area of the plains, the inhabitants of that area are a powerless minority; only about 6 million of the 19 million people in these states actually live on the plains. No state capitals lie on them, except for Bismarck, North Dakota, no large cities, except for San Antonio, Texas, no state universities and only a few institutions of higher learning. The states on the western edge look outwards to the mountains, the states on the eastern edge are dominated by the influence of the humid midwest. State Governors and legislators alike take little interest in the problems of the plains, apparently holding that these are a matter for the federal government. But the same fault of remoteness prevails among federal institutions. Dr Kraenzel traced back to the policy-making centres the eighty-eight federal agencies which are active in eastern Montana. He found that local officials had to go to Washington itself, to Salt Lake City, to Denver, to Kansas City, to San Francisco, to a dozen other regional capitals, none of them on the plains, for final orders. An example is the Federal Reserve banking system, which splits this homogeneous region among three districts, one with its headquarters in Minneapolis, one in Kansas City and one in Dallas.

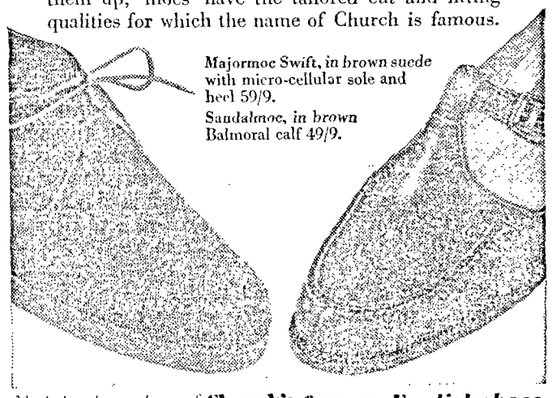
Dr Kraenzel maintains that the plains have never been treated as the economic and geographic whole which in fact they are, and that their people have never been consulted as a group about their own peculiar problems. But now his book has aroused extraordinary interest and "grass-roots" meetings are being held in towns and villages throughout the region to discuss ways of implementing its recommendations. The foremost is that an institute or foundation should be established to study the difficulties of the plains and to call them to the attention of the public.

Carib-Ex

FROM A SPECIAL CORRESPONDENT

LAST month's all-service military exercise in and near the Panama Canal was widely and inaccurately viewed as having a realistic bearing on the United States' ability to defend the canal itself, and keep it intact, in the event of a major war. Nobody of military importance thought anything of the sort. The Canal Zone was chosen for "Carib-Ex" primarily because it is fully under American control (which eliminates both excessive expenditures and elaborate diplomatic arrangements) and because it is a tropical region offering an opportunity for jungle warfare such as might be needed some day in many regions of Central and South America. The United States Army operates all the year round a jungle warfare training centre in Panama to which are sent both officers and enlisted men not only of the United States Army but of most Latin American countries by invitation. The list of observers for Carib-Ex, which included ranking officers as well as ministers of eighteen Latin American states, made it obvious that the exercise was staged at the canal largely to demonstrate, as it did for those guests' benefit, the massive power and high mobility of the American military establishment.

Notable was the swift dash of a formation of F-100 aircraft, which left a Texas airbase well after sunrise, did their aerial refuelling en route, whizzed over the Canal Zone at an altitude so high that only the white vapour trails could be seen against the tropical sky, then zoomed down to low-level just over the observers' heads for the bombing run and were off again on a return trip ending at the Texas base during the afternoon. The point, of course, was that this sort of aid could be delivered at supersonic speed, not only to the canal but to any of the Latin countries which were threatened with aggression and called on the United States for help. At a slower pace, but still more swiftly and efficiently than in the last war, the seaborne forces could come in as they did, to deliver bombers far inland, to parachute nuclear-armed and conventionally-armed soldiers to a trouble spot, to send in marines by helicopter or amphibian alternatively—in both cases avoiding the awful exposure of ordinary, unarmoured landing craft to enemy fire. For most of the observers some of these modern techniques were a stunning novelty.



Wherever there gathers a **queue** of U

. . . there's a **fitting** of

Church's 'mocs'

To Economists and others who concede that the best is the most they can hope for, 'mocs' bring hope that is not in vain. So flexible that you can roll them up, 'mocs' have the tailored cut and fitting qualities for which the name of Church is famous.

Majormoc Swift, in brown suede with micro-cellular sole and heel 59/9.

Saudalmoc, in brown Balmoral calf 49/9.

Made by the makers of **Church's *famous English shoes***

For nearest Agent's address, write to CHURCH & CO. LTD., DUKE ST., NORTHAMPTON

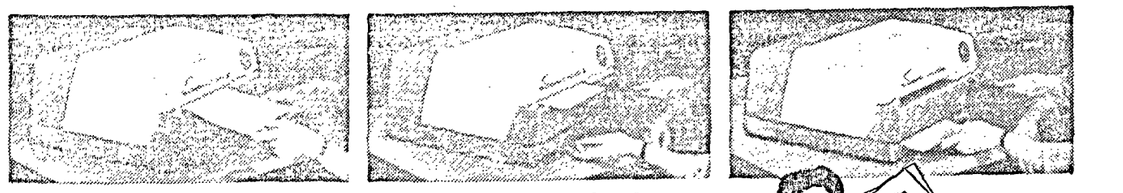
What is a BOOMERANG voyage?

Let P & O tell you. A *Boomerang Voyage* is an opportunity to visit Australia at a moderate cost. You can travel there and back, first class, for £290, a saving of £140 or more on the ordinary fare.

When can you go? You sail outwards between February 1st and May 31st and return between September 1st and December 31st of the same year or next, giving you between 6 and 18 months in Australia.

Are there other advantages? Yes, the voyage itself is a holiday. It's comfortable — nothing's more so than a P & O liner — it's exciting, with colourful places to visit, like Aden, Bombay and Colombo yet you can relax in sunshine and sea air, enjoy the best of food prepared by an expert chef. You will not only like Australia — you will enjoy getting there by P & O.

Ask your Local Travel Agent for details

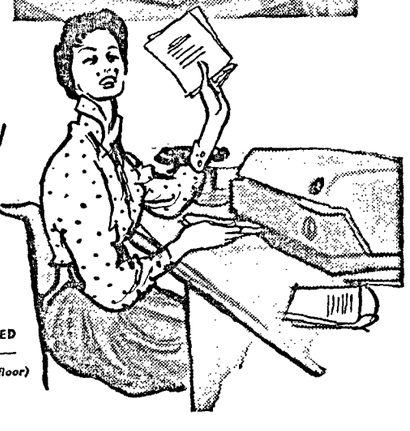


or apply direct to:

P&O

14-16 COCKSPUR STREET, S.W.1
WHItehall 4444

122 LEADENHALL STREET, E.C.3
AVEnue 8000



Direct copies start to finish in 4 seconds

Only the 'Secretary' copying machine has all these advantages

1 The only direct one-step copying method
2 Fastest of all—only 4 seconds per copy
3 Can copy from a different original every 4 seconds
4 The only completely dry copying process
5 Absolute cleanliness—no inks, chemicals or liquids
6 No skill required—can be used by anyone
7 No preparation—no stencils, no negatives or masters
8 And even reproduces photographs

the Secretary REGD. TRADE MARK copying machine

A telephone call, letter or postcard will bring our representative and a demonstration of the perfect 'Secretary' to any convenient place.

PRODUCT OF 3M RESEARCH

THE WORLD OVERSEAS

Ghana on Honeymoon

FROM OUR SPECIAL CORRESPONDENT IN ACCRA

It is only eight weeks since independence, but already a good deal has happened in Ghana, and everyone is attempting to read the signs of the times. There is certainly a perceptible change of direction, which the government describes as beginning to do things in an African way, and the opposition as the lashing out of a power-drunk coterie of politicians. The most spectacular move is, of course, the decision to isolate the prime minister's offices behind the parapets and cannon of Christiansborg castle ; European residents regard this as the continuation of the ominous symptoms which showed themselves when the prime minister's head was placed on the postage stamps. It has been followed by a ban on playing the British national anthem even when the governor-general is present. But the decision whether or not to put the prime minister's head on the new bank notes has been deferred since it threatened to split the government.

Dr Nkrumah's explanation of this hurried suppression of the symbols of the crown is that it is necessary to bring home to the people the change in authority in the country ; but there have been enough other assertions of authority to suggest that he intends simply to show who is boss. The decision to replace the chief regional officers, who are British colonial servants, with political commissioners (supported, however, by permanent secretaries who may still be British) has been indignantly received in Ashanti as proof that the regional devolution secured on paper in the constitution will be whittled away to nothing. Why, the Ashantis ask, are these satraps appointed before the commission to define the powers of the regional assemblies has been set up, far less has reported ? A change was inevitable, but such quick action is regarded as an attempt to exert Accra's centralising power before the regional assemblies get started. The Ashantis find further proof of this in the injunction which the government has taken out against the speaker of the interim regional assembly (composed of the MPs of the region) as being illegally elected, and in the petty way in which it has sought to detract from the impressiveness of the ceremonial opening of the assembly by the Asantehene.

The government is asserting itself in other directions. It makes no secret that it is dissatisfied with Ghana's British-type university and intends to have something much more American in style and more amenable to government ideas of what is suited to a tropical, rising, African state. This, in the view of university people, may not be unconnected with the fact that sympathy for the Convention People's Party among the students has remarkably declined.

It is hardly fair to judge a marriage from the honeymoon. A certain nationalistic ebullience was to be expected, and all that has happened as yet hardly adds up to a definite intention to abandon democratic forms or to break the constitution before it has been tried. There are a number of checks on sudden change. The constitution itself is a rigid one, and until the government can win a regional election either in Ashanti or the Northern Territories—which of course it cannot do until it has set up the assemblies—it cannot begin to think of a republic, since to do so it must have the agreement of two-thirds of the regions and it cannot create new regions without the agreement of the existing ones.

There are also checks within the government itself. It is no secret that Mr Gbedemah, the minister of finance, is firmly opposed to policies which will make his task more difficult. He will not find it easy to raise the revenue needed this year to meet expenditure running into £40 million, compared with half that amount four years ago ; expenditure rises inexorably as the earlier period of rapid capital expenditure progressively loads the budget with recurrent charges. In addition Ghana must pay for its own diplomatic service, its army, and the much increased police force which the government feels is necessary now that imperialism has been crushed. The country's reserves are fully committed to the completion of development schemes already started, to the currency reserve, or to cocoa support. Mr Gbedemah knows that the government's actions now will have a crucial effect on the attraction of new overseas capital. The party demands ever more development—for one thing, to keep government workers employed and provide jobs and directorships for deserving party men. But already foreign firms are revising their plans, postponing decisions for further expansion for six months or more and thinking in terms of short-term investment.

The great Accra boom threatens to peter out. The decision to let an American syndicate investigate the Volta scheme on behalf of some rather vaguely indicated principals, against a first option on a concession, suggests that there is now little or no hope of getting the original sponsors to do anything about it. Sources of new revenue other than cocoa are few ; capital is hard to find ; and this to Mr Gbedemah must indicate a period of retrenchment and consolidation. He must be opposed to extravagant schemes, such as that to set up a radio transmitter and broadcasting services powerful enough to rival Cairo in the task of rousing the African continent ; and he can hardly relish actions, however useful in impressing Ghanians that they are now under entirely African management, which might spoil the hopes that Britain would make a large contribution to the development of the Northern Territories.

Such mundane considerations are apt to isolate Mr *Gbedemah* from his own party ; indeed he is completing the budget in the seclusion of his Togoland home. But he *carries great weight* ; he would be formidable in opposition —indeed would give the opposition the leader it lacks—and so far Dr Nkrumah has not been able to appoint a deputy premier because it would be dangerous to promote anyone permanently over Mr Gbedemah's head.

The Convention People's Party, however, is powerful, and the party needs victories and benefits to sustain it. The government has dissolved the Cocoa Purchasing Corporation, so stringently criticised (along with several CPP ministers) by the Jibowu commission, but has carefully placed its functions in the hands of the United Ghana Farmers Council—a body which is just as completely under the domination of the CPP and may be as little capable of producing accounts to satisfy the auditors. The party will also expect the prime minister's "pan-African policy" to be pursued with appropriate flourishes. Invitations for the meeting of independent African states went out even before much necessary diplomatic routine had been completed ; but it was necessary to assert Ghana's claim to leadership, and indeed a meeting may take place in Accra. The idea is also in the air of a purely unofficial party conference of African nationalist parties. The momentum must be kept up ; the leader must demonstrably be leading ; the party must visibly be the winning side.

It is this party pressure that may determine events ; for example while experienced ministers and senior African administrators know that everything should be done to hold the efficient expatriate officials and technicians in Ghana, party job-hunting may make this increasingly impossible ; the last eight weeks have made it certain that far more British civil servants will take their compensation and go between now and 1959 than seemed likely before March 6th. It is one thing to satisfy the party ; another to give Ghana a sound economy, win the respect of other states even in Africa and gain the full allegiance of the regions in Ghana itself. It will require exceptional wisdom and firmness to do these things.

German Christian Democrats Prepare for Elections

FROM OUR BONN CORRESPONDENT

From the unhallowed vantage point of the press gallery it was observed that there was no drummer in the Hamburg Opera House orchestra when it performed Mozart's symphony in D minor at the Christian Democratic Union party congress on Sunday. It was as promptly explained that obviously no one else would be allowed to have a go at the drums when Dr Adenauer was around. As if aware that witticisms of this kind were in the air, the party chairman throughout the conference showed as much self-effacement as is possible for a Federal Chancellor and Grand Old Man.

He could well afford to. There was not the slightest need for him to assert himself. No elections to party offices had to be faced, as they had to be at Stuttgart two years ago. Dr Adenauer's primacy was undisputed and seemingly unresented. At eighty-one he appeared fresher than most of his colleagues, good for another four years at least ; and at his side, offspring of doubts that troubled the last party conference, sat the three vice-chairmen, Eugen Gerstenmaier, Karl Arnold, and Kai-Uwe von Hassell—all well-behaved hopefuls under sixty. The Christian Democrats know that in Dr Adenauer they have an unequalled electioneering asset. Some day it may occur to the Social Democrats that they, too, require a personality at their head and have nothing to gain by keeping their few men of outstanding ability and style as far away as possible from the centre of the stage.

The Christian Democratic Union and its south German *alter ego*, the Christian Social Union, have only some 250,000 registered party members between them in contrast to the Social Democrats' 600,000. Notwithstanding, by polling 45.5 per cent of the votes cast in the federal elections of 1953, the CDU-CSU won an absolute majority in the Bundestag. At that time they could count on the support of all the right-wing parties against the Socialists, as well. In September it will be different. For one thing the Free Democrats have abandoned them for the time being, hinting that they will have no part in a coalition dominated by Dr Adenauer. For another, the small right-wing parties which have strung along with the Christian Democrats in the past look as though they may not clear the five per cent hurdle at the polls.

★

Premonitions of isolation are acting as an antidote to complacency. The strategists have decided to try to widen the party's appeal. They chose to hold the pre-election congress in Hamburg not solely because it is Federal Germany's greatest city. Hamburg is also strongly socialist and largely protestant, and it lies but a few miles from the artificial frontier dividing Germany. It is probably in Hamburg more than in any other west German city that the Bonn administration is accused of being regional in outlook, clerical in patronage, and doctrinaire in decision. The CDU hopes to refute these charges during the next four months. And they are still sure that Dr Adenauer, for all his association, is the right champion to push to the fore. "The great simplifier," as M. François-Poncet once labelled him, can be counted upon to use language everybody will understand. He did so at Hamburg. The party's fundamental principle, Dr Adenauer underlined at the outset, was "Christian humanity": a principle appealing alike to Protestants and Catholics of all classes, it gave the Christian Democrats a unity that rival parties lacked.

It became evident during the conference that the Christian Democrats intend to make their eight-year record as governing party the main plank of their platform. The catalogue of achievement is indeed impressive, if it is granted that this one party should get all the credit: the end of military government only four and a half years after unconditional surrender ; the restoration of sovereignty six years later ; full employment, houses going up at the rate of half a million a year, tax reductions of eight billion marks a year, wages and pensions up ; and so on. All this would not have been possible, it was repeatedly rubbed in, but for Dr Adenauer's foreign policy, which the Social Democrats had opposed at every turn. There was a shaky moment when *Die Welt* gave great prominence to the report that Washington was dickering with the Russians for a parcel of disarma-

ment without insisting that German unification should be part of the bargain. But Herr von Brentano hurried to the tribune to declare that so long as the Germans gave no cause for the Allies to suspect their loyalty, they themselves had no reason to doubt the loyalty of the Allied statesmen.

As for the next four years, the Christian Democrats ask nothing more spectacular than the opportunity to consolidate. They promise to foster private enterprise, to keep prices stable, and to continue to strive for German unity on western terms, in concert with the West. They will be difficult and confusing years, the line runs. All the the more reason why the electorate should return to power the man whose aims are clearly known and whose word is trusted at home and abroad. Who knows what the Opposition would do in office ? Which wing of the Social Democrats would then rule the roost ?

Such is the line laid down at Hamburg. The election campaign has formally opened. Overnight the Social Democrats set up their own posters alongside each Christian Democratic poster in the centre of the Free Hansa City of Hamburg. " Security for all. Therefore SPD," they proclaimed. " Security for all ? ", the Great Simplifier gently asked. But the Christian Democrats had already provided it, and could offer more : their election slogan would be the three simple words, " Peace, Freedom, and Justice."

IRAN TODAY–II

How to Pay the Piper

BY OUR SPECIAL CORRESPONDENT

An article in *The Economist* last week described the social and psychological handicaps that beset any Iranian reformer bent on narrowing the gap between rich and poor. The financial obstacles to be overcome, though no less awkward, are easier to describe.

The modern name for reform is " development," and funds for this have been coming in from two sources. One is receipts from the operating companies of the foreign oil Consortium ; these were £54 million in 1956 and are likely to rise at least to £67 million in 1957. The other is aid from the American government, which (including technical assistance) totalled nearly $84 million in 1954 and more than $74 million in 1955, but is tapering off as oil revenue gets into its stride. Oil production is expected to rise by 9 or 10 per cent a year.

The income from oil is allotted as to 60 per cent to the Seven Year Plan Organisation, 30 per cent to the National Iranian Oil Company and 10 per cent to the ordinary budget, which also receives any balance unspent by NIOC and all oil revenue in excess of the amounts agreed with the foreign Consortium. This arrangement is due to end in 1958, by which time the two former organisations are supposed to be going to produce enough income to replenish the ordinary budget. The review which follows shows that neither will produce income as soon as that, and that a new tussle over fair shares is to be expected next year.

The exchequer might not need this injection into current account if some finance minister were to pluck up courage to increase taxation, but each is dogged by a disinclination to increase any but the indirect kind, which is easy to collect but falls more hardly on the silent poor than on the vociferous rich. Last year's climb back towards balance after three years in which American aid had met the deficit was achieved by devices which cannot be counted on annually —among them no salary rises, a good trade year which increased the yield from customs and excise, and about £1½ million wrung from NIOC.

Going over to the debit side of the account, expenditure seems bound to rise in a country where its chief heads are defence (on the upgrade) and education (everywhere in demand). Thus, even if the yield from indirect taxes increases as standards rise, the proceeds are likely to be eaten up by new outlays. Civil service salaries and wages, which account for four-fifths of the total outlay, are difficult to cut because of the problem of finding alternative employment, and the cost of pensioning off many thousands of redundant officials is daunting. It follows that the target for any finance minister ought to be more revenue other than from the foreign oil companies. The blueprints are all ready ; a report on taxation was commissioned from an American expert in 1954. Broadly speaking, this pointed out that agricultural land which produces 50 per cent of the national income must be made to produce more than 4 per cent of budget revenue—the present figure. But 1 per cent of the landlords own 56 per cent of the land, and to tax land entails resistance too strong for most finance ministers to contemplate ; there results a fatal inclination to play for time by calling in another taxation expert. Until this resistance collapses, contriving, borrowing and even begging must be the fate of any finance minister until the new developments of the seven year plan start to produce revenue for the exchequer.

★

When will the plan begin to pay dividends ? In the opinion of all Iranians except those actually engaged on the job, " development " ought to be unfolding before their eyes. Their complaints of the Seven Year Plan Organisation are as vehement as those of Iraqis about their Development Board four years ago. The name " seven year plan " has been on Iranian lips for so long that impatience is understandable. Yet the present one (1955-1962) cannot be expected to show major results in its second year. (Its predecessor, which was intended to run from 1949-56, sank almost without trace in Dr Mossadegh's day, and the pundit of today's, Mr Ebtehaj, has had much trouble unravelling the surviving commitments). Today, the second plan has its own blueprints, page on page, and hopes usefully to spend $936 million over seven years, divided as to 32 per cent on communications, 26 per cent on agriculture, 15 per cent on industry and 26 per cent on social development.

What is worrying about the Organisation is not its ability to plan, but its administrative capacity to execute the plans it has thought of. Even jobs that could have been put out to tender quickly, and which could have been approved without much delay, lag at the blueprint stage, either because someone has indulged in the national pastime of postponing final decision lest there should be a catch in the estimates, or else because, to ward off accusations of regional favouritism, the Plan Organisation has tried to cover the whole country with plans instead of finishing something somewhere. If it finds it has costed too low, its corrective is to cut back a little everywhere. It was partly in order to encourage the planners to attempt less, and to finish more, that the World Bank devised the unusual terms on which it lent the Plan Organisation $75 million last year.

The Bank also sought to ease the financing of the first, deficit years while oil revenues are still low. As things stand today, far too little is being spent on finishing the kind of pilot projects that serve as window displays or that excite imitation, and the public, seeing nothing, grumbles accordingly.

A point not much appreciated in Iran is that at present about half the cash the plan is disbursing is being funnelled out through ministries ; the Plan Organisation therefore does not get the credit that it might. This statement is to some extent guesswork, because, while estimates abound, the breakdowns of actual disbursements that would enable the planners to confound their critics are not available. Iran is deficient in this matter by comparison with India or Iraq, where the development organisations run statistical departments that can supply a visiting economist, almost on demand, with breakdowns showing what has been spent on surveys, labour, transport, building purchases and the like. The point that such details serve to reduce criticism seems to escape Teheran.

But, judging by observation at the receiving end, minor local works are quite often being done by provincial authorities who tell the traveller that they have had " some seven year plan money." Such works never catch the eye of the critic in the capital who hankers for huge dams, pulsing generators and a network of pylons marching across the huge wastes between Iran's centres of activity (conceived without taking into account the local price of oil). The number of small works already completed is tiny if measured by Iran's population, or its needs ; but they bring change of the only kind that a primitive peasantry can assimilate, and they will cumulatively grow important—if only the seven years pass without too much upheaval in the ministries. They are, however, more an educative than an income-yielding proposition, except in the very long term.

For quick returns, therefore, the sanguine turn to NIOC. But this, too, must be a spender, not an earner, for some years before it can be a big contributor to the exchequer. For one thing, it loses on distribution ; it felt obliged to continue to sell oil at home at the old cut price made available by the Anglo-Iranian oil company and, though its rate of loss will drop as it increases the distribution by pipeline on which it has started, the capital cost of such networks is high. On its production side, too, new capital works will absorb its available revenue for some years ahead ; by the agreement just initialled with the Italians, they are to pay all exploration costs in the first place, but NIOC has to put up half the capital cost ; and the three concession areas are wholly untried. Even in the national company's most promising area, which is at Qum and which it has kept for itself, expensive new wells must be spudded in before it can be sure of commercial quantities, and then the company—or someone ready to invest in it—has got to build a pipeline of a thousand miles to the Mediterranean.

Perhaps the Consortium and, ultimately, NIOC, will do so well that there will be oil revenue and to spare. But, in addition to the over-dependence on one commodity that such a calculation entails, there is the social snag described in last week's article. Classes for the elimination of illiteracy are all the rage ; if by the nineteen-sixties most young men can read and many more than now are highly qualified, there must come a moment when two of the present characteristics of Iran become intolerable to the bulk of its people. One is the system whereby a ruling clique gets too many of the plums ; the other is the mistrust of everybody outside one's immediate family. There is a proverb: " If companions were to be trusted, Allah would have had a companion " ; this principle of mistrust works well enough in a one-man business in the bazaar, but it will not serve for the task of evolving a modern machine to administer a great country.

Mr Kishi in Search of "Face"

FROM OUR CORRESPONDENT IN TOKYO,

In preparation for his visit to President Eisenhower in June, Mr Kishi, the Japanese prime minister, is busily brushing up his English and practising his putting. He has also been earnestly conferring with the American Ambassador. Formerly one of the world's most insular nations, who made the British look forthcoming, the Japanese under the American impact are fast becoming public relations conscious. They talk about " pr," as if it were a sort of tranquilliser in reverse. Lacking King Saud's flowing robes and having no crippled children, Mr Kishi has so far had to content himself with dispatching a much-publicised ten-year-old orphan to take part in the anniversary celebrations of the American " Wolfhound " Regiment in Hawaii. But his advisers are still on the job, earnestly studying how best the prime minister can score a bull on the heart of the great American public.

Next week, as a prelude to his Washington visit, Mr Kishi is starting on a tour of six selected South-East Asia countries. " I am an Asian," he announced the other day (in English). " The nations of Asia are fast gaining in strength." On his South-East Asian trip, he will be accompanied by a 33-man suite, comprising eight Diet members, eleven Foreign Office officials, and fourteen pressmen. Tartly describing this as a " travelling carnival," the *Yomiuri*, a daily, commented : " Since the plane they propose to charter has a seating capacity of only 31, the general public is looking forward with some interest to seeing whether the prime minister himself will be crowded out."

The six countries that Mr Kishi will visit consist of three " neutrals " (India, Burma and Ceylon) and three that are more or less firmly in the western camp (Formosa, Thailand and Pakistan). Mr Kishi's much advertised protests against

further nuclear weapon tests are calculated to please Asians abroad as well as the electorate at home. Japan would dearly love to play a leading rôle in non-communist Asia, with American backing. But this is not going to be an easy proposition to sell to other Asians. The people of the Philippines are pro-American and anti-communist, but they are also rather strongly anti-Japanese. The Republic of Korea is highly suspicious of Mr Kishi's Asian tour. The Indonesians are incensed by a remark attributed to Mr Kishi, whereby he is alleged to have implied that Japan need not be in a hurry to settle its reparations dispute with Indonesia, because that country's internal crises would soon compel it to settle on Tokyo's terms. Mr Kishi will not visit the Philippines, Korea or Indonesia, or at any rate not until after he has been to Washington.

Whether Washington, and the six South-East Asia countries that have been selected, will relish Mr Kishi's most recent remarks, remains to be seen. He recently told 800 Japanese businessmen in Osaka that the United States had "failed in Asia," despite great sacrifices made for South-East Asian development, through "lack of understanding." The development of South-East Asia, he added, should be carried out by Japan, "in view of Japan's deep understanding of Asia and its capacity to extend assistance." The six countries he proposed to visit, Mr Kishi continued, "lack a sound economic foundation, because they became politically independent only recently." After those home truths, it was something of an anti-climax when Mr Kishi cheerfully wound up by saying that Japan ought to co-operate with those countries "in a spirit of modesty."

★

Mr Kishi is holding off an inevitable reshuffle of his Cabinet—which is bound to rouse the factions in his party—until after his Washington visit. He also intends to remain his own foreign minister longer than that, and indeed as long as possible. The broad aim of his diplomacy is to allay any fears which Washington might be entertaining of Japan drifting into the neutralist camp, while at the same time indicating to the Asian neutrals that he is no stooge of the West. This might suggest that Mr Kishi has a devious mind, but such an impression ought to be dispelled by the remarks quoted above. He is in fact remarkably candid for a Japanese politician. He has affirmed that in Washington his intention is to place frankness above politeness, and to talk rather severely about the future of Okinawa as well as about the revision of the Japanese-American Security Treaty which most Japanese now regard as being hopelessly one-sided.

Japan, in short, is trying desperately hard to regain the "face" that it lost in Asia by losing the war. In the process, it hopes to avoid repeating the sort of errors that led to its downfall. That is why the Japanese are studying "pr." At the same time, they do sincerely believe that nobody is better equipped than they are to help other Asian countries develop themselves—provided the United States will put up some of the money. As for understanding Asia, it is possible to get a Japanese to admit that in the past Japan made mistakes of method, but not that America is doing much better now. He will quickly point out that Americans say so themselves.

When Americans confess, as some are prone to do, to conservative Japanese friends that the United States erred in conferring on Japan the dubious blessings of trade unions (now alleged to be "communist led") and a constitution which, strictly interpreted, would make even the existing inadequate "Self-defence Force" illegal, the Japanese agree, but are by no means mollified by the admission. "That is just the trouble," they retort. "The West cannot make up its mind what it wants in Asia. You told us to democratise ourselves, and to disarm. Now you complain about our Communists, and urge us to rearm faster. You vacillate. At present you urge us not to restore relations with mainland China. If we rebuff the Chinese, and rearm, how do we know you will not in five or ten years change your mind about that also, and leave us at their mercy?"

Japanese politicians have done considerable vacillating themselves since the surrender, but this, they say, was because the Americans had them all confused. The Kishi regime may usher in a new period of non-vacillation. After a long winter, old hopes are putting forth tender new shoots. China is, or ought to be, preoccupied with its internal reconstruction: has not Mao admitted that China is still a "very backward" nation? China can supply Japan with coal and iron, but Japan, not China, is a great trading country as well as an industrial workshop. On the psychological side, there is "pr"; did not the Ambassador of Ceylon declare recently in Tokyo that if it had not been for Japan entering the second world war when it did, Ceylon would not have got its independence?

It is with such reassuring reflections in mind that Mr Kishi and his 33-*man suite will set forth in search of Asian* goodwill and restored "face." If all goes well, the Japanese prime minister may even turn up in Washington to speak on behalf of a fair segment of Asia. That would be almost as good as a Middle East monarch's oil bargaining counter.

No Snow, No Boots, No Bases

FROM OUR MIDDLE EAST CORRESPONDENT

As a result of the recent by-elections, informed opinion in Damascus is expecting—or at least would greet without surprise—a reshuffle of the Syrian government in favour of the Left. The by-elections were the third successive victory, within a few months, of the coalition of Left and Centre elements known as the National Front. The first was the ousting of the Populist (moderate Right) members of the Cabinet and the appointment as acting minister of defence of Khalid al Azm, perhaps the strongest advocate in Syria of the Soviet link. The second was the successful resistance of the left-wing group in the army to proposed army postings that would have weakened its position—notably by the transfer of its leader, Colonel Abdul Hamid Sarraj, from command of the Deuxième Bureau to the post of military attaché in Cairo. It is scarcely likely that the Left will let slip this further opportunity of strengthening its hold. A further incentive to change is the desire to fire off a counterblast against the right-wing coup in Jordan, which, for all the studious official reticence of the Syrians, has caused great worry in Damascus.

Conservative and moderate groups are loudly contesting the validity of the elections on grounds of intimidation and fraud. Mustapha Sibai, the defeated candidate in Damascus, has appealed to the High Court, and the right-wing press has launched a robust onslaught on the government. One paper came out with the remarkable headline: "As a result of government terror, pressure on the public, mobilisation

of all resources of the state, exploitation of ministerial influence, threats and slanders directed against citizens, more than 100 cases of kidnapping, attacks and threats of armed force, and straight bribery, *Malki won by 2,645 votes.*"

Most of the charges are wildly overdrawn. The fact that the government came out in favour of the National Front candidates must have exerted some effect. There was also some jostling at the polling-booths, where Socialist and Communist gangs were better organised and more effective than those of the Moslem Brotherhood. But these methods are unlikely to have spelt the difference between victory and defeat, except perhaps in Damascus, where the winning candidates' majority amounted to only 4 per cent of the votes cast.

The fact that the Left won the elections does not mean than it has a majority in the country. The number of abstentions was large, perhaps 60 per cent. Neutral opinion still gives the edge to the moderates and the Right when it comes to counting heads. But the Left coalition is a more effective political force; its leaders know where they are going. By contrast, the Right is leaderless and divided in itself. Its constituent elements agree on wishing to check the leftward drift. But where, when and how are points on which they fall apart. It was already a considerable achievement for them to agree on putting forward a single candidate for each constituency; but there the effort ended. The various groups, in particular the Moslem Brotherhood, failed to bring their voters out.

One of the main props of the Left position is the genuine popularity of the Soviet Union among the Syrian people. This is due in large measure to Soviet aid before, during and after the crisis in Egypt; Communist party exertions have played a secondary part. The Russians and their satellites have behaved adroitly, eschewing politics. Whatever Marshal Zhukov may say in Moscow, the Russians in Syria talk only trade, particularly trade in arms.

★

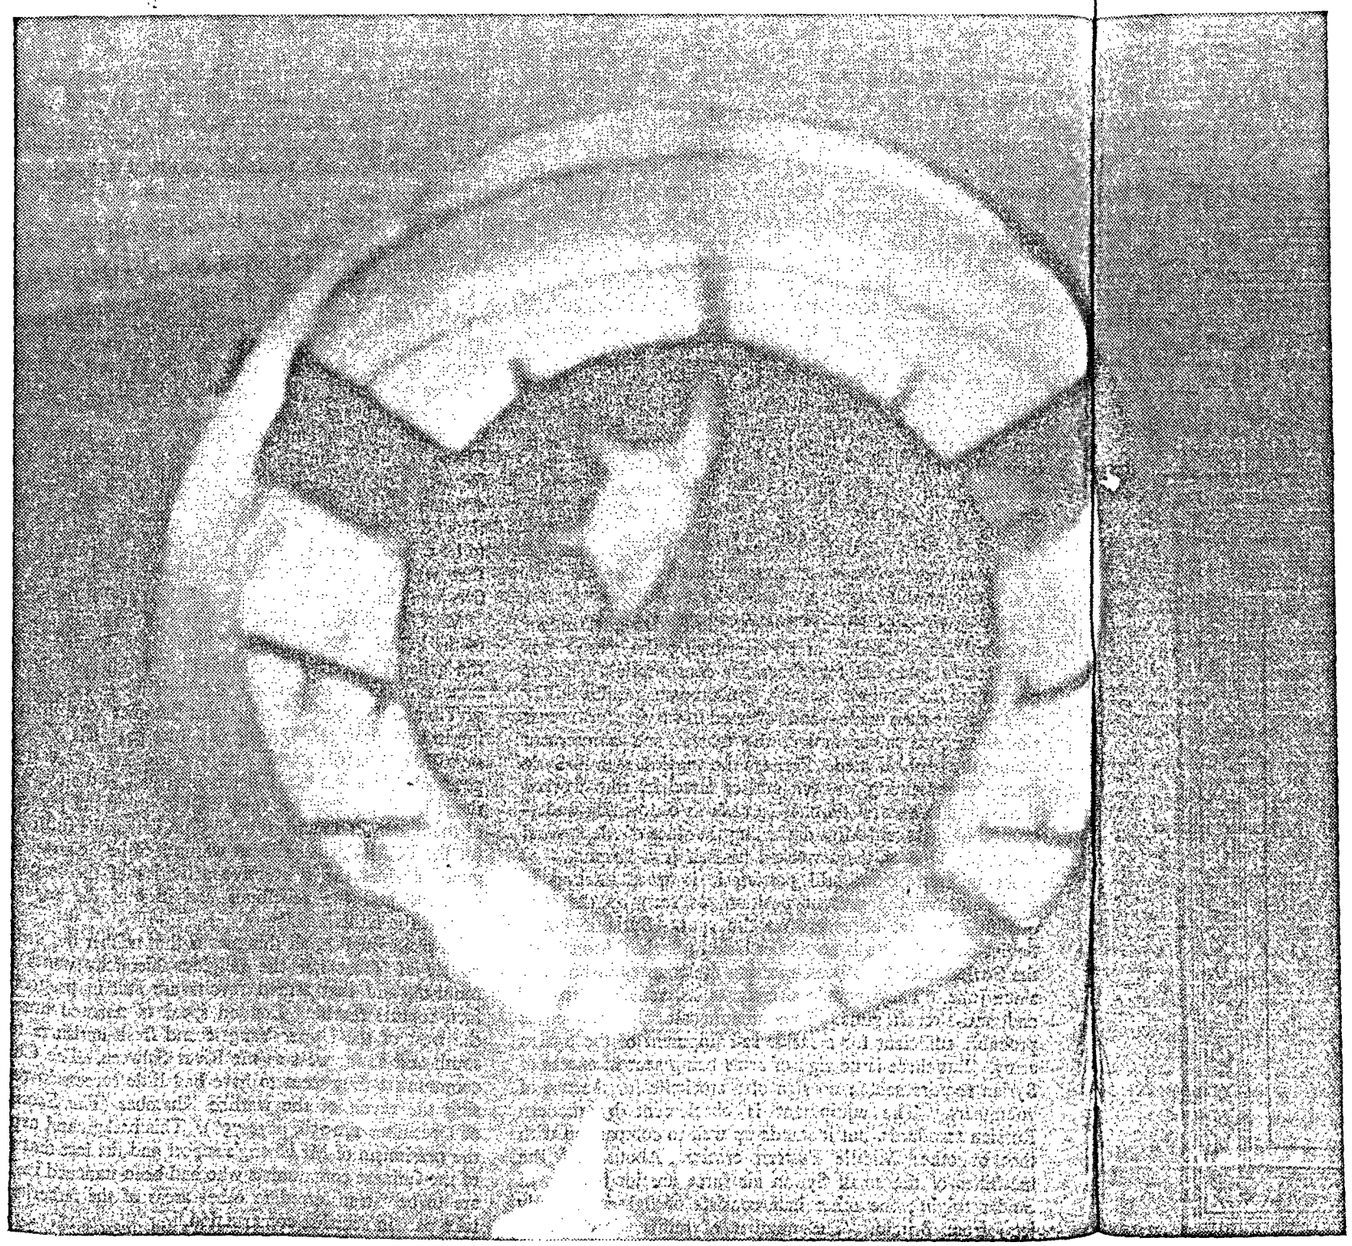
The propaganda barrage against the Syrian government launched from London and Paris during the winter was presumably intended for American consumption. But it penetrated to Damascus, with unfortunate results. The wild charges then made—and repeated in varying forms ever since—aroused anger among the masses and amusement among the sophisticated. Perhaps the angriest men in Syria were the remaining western service attachés, who worked themselves to a standstill chasing *canards* concerning underground hangars and Migs darkening the skies of Aleppo and Palmyra. One of them worked himself into hospital.

As misconceptions still persist, it is worth stating in general terms the present position, as seen by the best qualified neutral observers on the spot. Syria is not a Soviet base. There is no Soviet base in Syria. Arms from the Soviet block have been entering the country in quantity since June. They include aircraft, tanks, vehicles, artillery and anti-aircraft guns. The amount already received is probably sufficient for a major re-equipment of the Syrian army. But there is no sign of arms being sent in excess of Syrian requirements; no sign of a stockpile for the use of volunteers. The equipment is obsolescent by modern Russian standards, but it stands up well to comparison with that of other Middle Eastern armies. About half the machines of the small Syrian air force are jet fighters of Soviet origin; the other half consists of fighters (mostly jets) from Britain. The number of military technicians from the Soviet block now working in Syria may amount to 200, not more. Most of them are from the satellite states.

The arms are bought on a commercial basis. Prices are low and delivery dates unusually favourable. Syrian officials wave aside the suggestion that exceptional terms of trade might conceal a bribe offered for ulterior motives; they claim that it is simply good business. Quick delivery is certainly good psychology. It has had a profound effect in Syria. Within a month of the signature of the first contract last June, the arms began to arrive. The Syrians were pleased by the contrast with the difficulty and delays they had met earlier in screwing arms out of the West, particularly as western arms for Syria were balanced, as a matter of policy, by western arms for Israel.

What the future may hold is another matter. "Once the camel's head is in the tent, it is difficult to get rid of the brute." Those more familiar than the Syrians with the pattern of Soviet expansion may well feel alarm. But to warn the Syrian government of pitfalls ahead is one thing; to condemn it in advance for deeds that it may not commit is another. The Syrians, naturally, look for the motive.

Thursday's Child



The road to socialism, compulsory for all communist colonies, is slower for some than for others. Tibet, it seems, is the backward child of the Chinese communist classroom; having apparently failed its eleven-plus, it will have to wait longer than others for the benefits of people's democracy. This emerges from a lengthy statement by Chang Kuo-hua, the Chinese communist resident in Lhasa. Reporting on the work of the preparatory committee for the autonomous region of Tibet (PCART) Mr Chang says that the "democratic reforms of the Tibetan area" are not to be carried out during the second five-year plan and adds that whether they will be carried out during the third five-year plan will depend on conditions at that time.

Mr Chang, listing shortcomings and errors in the work of the PCART, complains of "inadequate detailed study of the general objective conditions," of insufficient consultations and failure to develop the initiative and organisation of Tibetan "cadres." The jargon becomes more illuminating in later passages. Writing of future prospects Mr Chang says that "certain conditions are necessary to carry out peaceful reforms in the Tibetan area, such as the demand of the masses of people for reforms, the support of personages of the upper strata and so on." And listing the future tasks for the PCART, the resident warns it to be "constantly on guard against the subversive activities of the imperialist elements and the rebellious activities of the separatists against the fatherland."

In plain English, all this means that neither the ordinary people of Tibet nor the religious hierarchy wants communism, and that armed revolts are still in progress. In fact, reports reaching London speak of renewed unrest to the west of the Upper Yangtse and fresh uprisings to the south and as far west as the River Salween. The Chinese communists thus seem to have had little success in repressing the revolt of the warlike Khambas (*The Economist* of December 1, 1956, page 798). This background explains the pessimism of Mr Chang's report and the fact that many of the Chinese communists who had been stationed in Tibet are to be "transferred to other areas of the fatherland to take part in socialist construction."

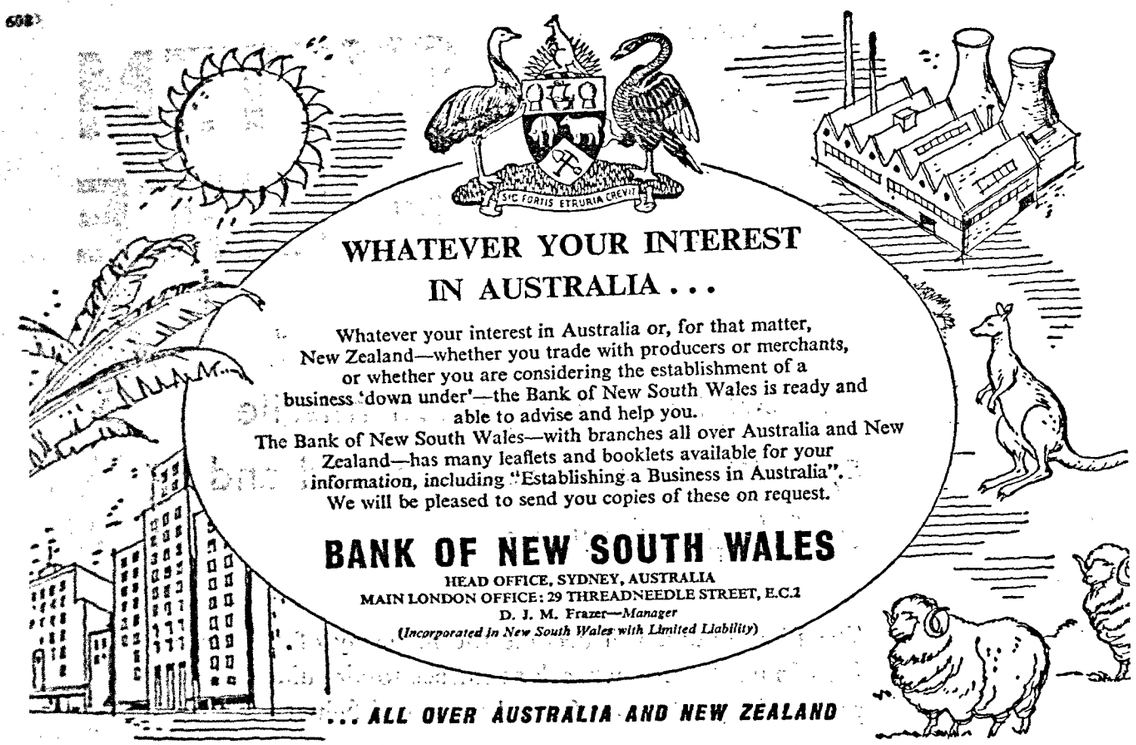
BLOODHOUND COMPLETE DEFENCE SYSTEM ADOPTED AS MAINSTAY OF UK AIR DEFENCE

Bristol/Ferranti guided missile system now tested, proved and in full production

The Bloodhound will become the mainstay of the United Kingdom's defence network as surface-to-air guided missiles progressively take over from the manned fighter.

It is a complete missile system, designed to be linked with existing radar.



Bloodhounds and their Bristol Thor-type ramjet engines are fully developed. The system is already proved under operational conditions and is now in production for the British Forces.

As an indication of the scale of Bristol's guided weapons programme it is—with the exception of the Britannia airliner—the largest single activity of the Bristol Group of Companies.

Steel Plans Again

LAST year's pause in the expansion of the British economy did not mean a pause in the expansion of British steel, though it gave the industry a chance to catch up its customers. Industrial production failed to rise and output in the "metal-using" industries actually fell; but steel production went on rising, at much the same rate—about 4½ per cent a year—as it has averaged ever since the war. Today, with general re-expansion in prospect, the plans for further expansion in steel that have been in the air for many months are crystallising out. So are some of the issues that they raise.

The Iron and Steel Board has now completed a report for the Minister of Power upon steel development from 1958 to 1962—the industry's third post-war development plan—and this may be published within a couple of months. The British Iron and Steel Federation, less inhibited now than when it had the major responsibility for such central planning, has already announced that "the industry is planning to increase total capacity to at least 28 million ingot tons of steel by 1962," and has set down its views on some of the implications of such a programme. A number of the big companies have committed themselves to completely new projects that will be carried out during the period—though here and there in the industry tones of caution continue to be heard, as when Mr Pode of the Steel Company of Wales commented this week:

> Others feel that such a quantity (28 million ingot tons) might not be required until 1965. This latter point is of very little practical significance as it is very doubtful whether the plans could be physically carried out by the former year (1962).

He is not the first spokesman of a British steel company to wish "to avoid the waste of physical resources in premature expansion of the steel industry."

Any recapitulation of the past forecasts of steel demand on the basis of which this industry's development has been planned—and criticised—since the war must certainly induce humility among planners and critics alike. But far more of the errors have come from underestimating the rate at which the British economy could increase its consumption of steel than from overestimating it. The accuracy of this forecasting is obviously crucial for the profitability of such capital investment; and over anything longer than a few months ahead its accuracy must obviously be shaded by growing areas of guesswork; but it has to cover as long a period as the industry takes to bring major new plant into full operation. Postwar five-year plans in steel—like even longer ones in fuel and power—do not arise from some bureaucrats' desire to emulate Gosplanners; the periods are dictated simply by the size and complexity of units of production in such heavily capitalised industries.

IN PRACTICE, perhaps again inevitably, central assumptions for all such long-range planning by industries must come from the Government. The Iron and Steel Board, in order to estimate future demand for steel, must know the rate of expansion that the Government thinks the whole economy may be able to achieve—and, in terms of the balance of payments, may be able to afford. It can consult Whitehall, too, about the rates of change that are postulated in the major sectors of national demand—consumption, investment, Government expenditure, and exports; and of the growth therefore required in production and likely in imports.

To guess how much such expansion will require in extra steel, even in terms of total demand, is not easy; in terms of specific products, for the production of which fairly specific items of steel finishing plant will have to be laid down, it is far harder. Over the first

half of this century total steel consumption in Britain seems to have developed in a fairly constant proportion to total industrial production in the country. But in the last few years there are signs that the proportion of steel needed to support expansion here is growing.

The British economy, which some economists think is at present becoming more "capital-intensive," seems also to be becoming more "steel-intensive." That would not seem surprising; but the one would not be the only explanation of the other. Investment, when strictly defined, probably takes a much smaller proportion of the steel used in Britain than the board assumed four years ago in the second development plan; but the amount of steel used in current consumption seems on closer analysis to be much larger than was assumed. Moreover, expenditure on durable consumer goods, which take a good deal of steel, seems likely to rise much more rapidly than consumption in general if Britain's standard of living keeps rising.

To such estimates of growth in steel demand associated with the main sectors of national demand the steel planners can also bring more direct estimates of forward steel requirements from some of the other major industries, nationalised and private, which make similar long-term plans. The board has carefully not committed itself to agreement with what the steel federation has disclosed of "the industry's plans," though presumably the total output it envisages for 1962 cannot significantly differ. But it does seem possible that differences might arise between the "product mix" that the board thinks might be demanded by consumers in the early sixties and the amounts of different products for which the member companies of the federation prefer to invest their capital in extra plant. Liaison between the board, the development committee of the federation and the major companies is fairly close: the process of dovetailing schemes for expanding output that companies put forward into the estimates of long-term steel requirements that the board is making is not as difficult as it might appear. But on some issues there is plenty of room for legitimate difference—the changing pattern of demand for different products; the raw materials to be used and, therefore, where plants should be built; and the profitability steelmakers require to induce them to invest something of the order of £120 million a year in fixed and working capital.

One major question obviously attaches to the emphasis of demand for flat steel. The check to motor output in this country, plus some misgivings about the extent to which all of Europe's motor industries can achieve their sales targets at once, has made the steel industry reconsider the timing of expansion in wide strip mill capacity for making sheet, strip, and tinplate. Richard Thomas and Baldwins, which a year ago was saying openly that it would build a fourth continuous strip mill, has now taken the curious step of announcing that it will certainly build an integrated steelworks on a site at Newport that could take a strip mill, but that it has not yet decided what kind of finishing capacity it will lay down. How will this plant appear in the board's schedules of finished products in the development programme? And how, incidentally, in the construction programme of the plant builders, which are liable to become too full for lengthy reconsideration as the investment plan proceeds?

All parties in steel, moreover, are today responding to the sharp growth that is forecast in demand for steel plate, to build tankers, pipelines, and atomic power stations (for which total demand bulks small but the qualities required are specialised). Nevertheless, some unresolved questions remain. By the time some of the extra plate capacity planned comes into operation, the crest of the current wave of tanker construction may be passing. To move a given tonnage of oil from the Middle East to the West, a super-tanker will take less steel (though more of some heavier qualities) than the same capacity in smaller tankers over the same route; and the new pipelines proposed would take far less than either. Future demand for oil transport, and for steel to carry oil, must be estimated more upon the growth of world demand than on assumptions that the oil industry will for long be forced to go round unnecessary capes and corners; and the great markets of the West are having second thoughts about future oil imports.

In its second development plan in 1953 the board postulated once again the question that has riven steel planners for many years: how much steel expansion should be based upon Britain's home reserves of low-grade iron ore? Social as well as economic considerations intrude here, and the companies that are the best advertisement for efficient and cheap steelmaking from home ore are by no means necessarily those that believe that new integrated works should be built on the same basis. The federation has this year repeated its own conviction that the development planned for the use of home ore at existing works once again precludes the possibility of any new integrated plant to produce common steel on a new "greenfields site"; the board, which has at times looked on that possibility with more favour, has kept its own counsel. The whole industry, again, seems to accept that the majority of its new plant must be based upon the much richer imported ores, but so far, at least, waves aside the possibility that it might have to use imported coking coal as well. Its confidence looks fairly well founded; but if it should turn out not to be, Continental steelmakers who are putting new plant at Bremen and Dunkirk could gain an advantage in comparative cost in a free trade area.

As the price-fixing authority, the board has moreover kept silence in face of the steel makers' elaborately argued case for higher margins of profit, to allow them to finance a much larger proportion of this vast investment programme than hitherto from internal resources. In its last major price determination in December, the board did for the first time admit the principle that for certain products, where technological change had not been dramatic enough to offset the effects of inflation on total costs, the profit margin should bear some relation to what might have to be earned on a new plant making the same product. Is it prepared to continue this logical course and base prices more and more upon the costs, plus reasonable margins, of an entirely modern plant employing the most advanced techniques to make each product (which would probably not mean uniformly higher prices for all steel products)? If not, is it confident that the capital for the programme can in fact be raised?

From here to 1962, perhaps, the board need be less concerned with what may radically affect the shape of steel planning in the years that follow—what experts in the industry are quite coolly beginning to call "a revolution in technique." The beginnings of that revolution will clearly make their mark during its course: the growing proportion of investment in making steel with oxygen, and in particular in the various forms of oxygen-blown converter that are bringing Bessemer steel back to Britain on so massive a scale, point to rapid and widespread change in steelmaking technique and efficiency. But the further possibilities in which the industry is now actively interested—of importing instead of ore some much more refined "melting base" of iron or very crude steel, possibly in conjunction with the use of direct steel reduction processes to bypass the conventional blast furnace, plus continuous casting to by-pass some of the primary mill capacity—lie beyond this plan. The faster an industry grows, the more room it is always making for new ideas. Any outside observer of steel, in recent years, has been able to sense this quickening of change in what had seemed a successful but pretty settled technology: this industry is gaining confidence not only in economic but in technical advance.

Aircraft Industry Flies Solo

In defence, conventional aircraft give place to rockets; in the market for civil aircraft, requirements are increasingly exacting. Financial and technical consolidation faces the industry.

Capital airlines in the United States have been good customers of the British aircraft industry, yet it has fallen to Capital to deliver an unpleasant jolt to manufacturers still nursing the bruises inflicted by the Defence White Paper. The white paper foreshadowed a cut in production of military aircraft and radical changes in the types required. It left the aircraft industry feeling that the one reliable element in its shifting world was a steadily expanding market for civil aircraft. But the decision of Capital Airlines to defer the orders placed for 14 Comets from de Havilland and 15 Viscounts from Vickers-Armstrongs (to supplement its existing fleet of 60 Viscounts) has thrown some doubt even on this. Rolls-Royce were providing the engines for both orders. Capital Airlines are not now raising the capital to pay for these additions to its fleet; yet in 1956 the Viscounts earned the profit and Capital's older piston-engined aircraft incurred the losses.

The defence cuts have not spread an even blanket of gloom over the industry. At least two companies should positively benefit from the change in weapon policy. One is English Electric. The decision to develop no new fighter aircraft promises a long and varied life for English Electric's P.1 fighter, with no replacement treading on its heels. In addition, the company has secured an order for the anti-aircraft guided weapons that will eventually replace the manned fighter.

The second beneficiary should be Bristol Aeroplane Company. After a trying span of years, during which they have been almost wholly dependent on civil aircraft, Bristol are now re-entering military production with the second, and larger, of the anti-aircraft missile orders. Thus they are broadening their manufacturing activities when those of other companies are narrowing. Vickers-Armstrongs, for example, now finishing the last batch of Valiant bombers, will be building only civil aircraft by the end of the summer, with the exception of the limited development of Navy fighters at their Supermarine works.

Vickers' retreat from production of military aircraft has been a phased withdrawal, spread over several years. This does not hold for Hawker Siddeley, the country's largest aircraft manufacturing group, whose member companies had concentrated their resources on military aircraft, and particularly on types that have borne the brunt of the defence cuts and feel most sharply the implications of the new defence policy. One of the group, Armstrong-Whitworth, recently began to design a work-horse type of civil airliner; the other companies, Hawker, Gloster, and A. V. Roe, have suffered the withdrawal of support for major development projects, and have seen only too plainly the end of existing production orders. It is not surprising that Hawker have been casting round for new fields of activity beyond aircraft; in this country mainly in atomic energy, which is the reason behind its intention to take over the Brush Group.

Hawker have a stake in guided weapons through Armstrong-Whitworth's work on missiles for the Navy,

but Admiralty orders are never so big as those for the other services. This point applies equally to de Havilland's work on the Sea Vixen fighter, but this company made an earlier start and should enjoy an earlier return on its work on guided weapons. Firestreak will be in production sooner than the bigger, anti-aircraft missiles, and will probably remain the standard armament for such fighters as continue to be built in this country.

The Handley Page Victor bomber, like English Electric's P.1 fighter, is likely to stay in production—longer, perhaps than the other V-bombers. The company is now attempting to do what neither Vickers nor A. V. Roe succeeded in doing—to convert its military aircraft into a satisfactory civil airliner: it has a somewhat larger margin of performance in hand with which to do so. This will be the second airliner Handley-Page can offer, the first being the feeder-line Herald.

THE defence cuts suggest an eventual reduction of perhaps 25 per cent in the size of the aircraft industry. At present it employs nearly 270,000 people: the extent of its contraction will depend on the progress it can make in civil aircraft and on the support that the government may offer in their development. Heavy compensation will be payable to various companies for the cancellation of contracts, and this will wipe out much of the saving that the Ministry of Supply would otherwise have shown this year. But the Ministry has gradually and consistently reduced its commitments to the aircraft industry by letting development contracts expire and not extending them. Development contracts, often for specialised research aircraft, have provided bread and butter for many of the manufacturers. Money for pure research in aircraft will have to come largely from the Government in future, but there will be less of it; and research of this kind in future is likely to be done directly by those manufacturers who are going to apply the results in new aircraft, instead of being distributed as a series of subventions to needy sections of the industry. The outlook for the smaller concerns is far from clear.

Vickers-Armstrongs lead in orders for short and medium range civil aircraft; Bristol and perhaps also de Havilland on longer range types. Rolls-Royce, as engine builders, benefit from a diversified policy providing military and civil engines for aircraft builders both in Britain and overseas. All these companies are fighting for orders for new types of aircraft primarily intended to fit the needs of the British airlines, but planned also with an eye to overseas customers. British European Airways want a medium-range jet airliner for their high-density traffic; British Overseas Airways will eventually want a supplement for their North Atlantic American jet airliners. It does not follow automatically that such orders will go to British factories, but if they can offer satisfactory aircraft they will get the first chance to tender.

Present estimates suggest that in the bidding for these two orders, the present balance between Bristol and Vickers is liable to be reversed, with Bristol building a medium-range jet for BEA, and Vickers a long-range one for BOAC. There are, however, other candidates on offer.

It seems still to be expected, both by the Ministry of Supply and by the aircraft industry that if these, or indeed any other contracts materialise, the Government will pay the major part of the cost of development. In the past, such bills have been substantial. More than £6 million has been provided towards the building of the Britannia, £1.8 million for the Viscount, £4½ million for the Comet, and £8 million for the cocooned Princess flying boats. Development expenditure on military aircraft, too, has been heavy. All told, about £600 million has been handed from public funds to the aircraft industry since the end of the war. Now the purse strings are tighter, and some companies have come to dislike the strings attached to government advances for development (which are intended to be repaid from sales). So there is an increasing tendency for companies in the aircraft industry to invest their own money in projects: the Folland Gnat; Hawker's private venture fighter; the Armstrong-Whitworth and Handley Page feeder airliners; and Vickers' huge Vanguard, which may cost at least £12 million to develop. But the principle that the Government finances development work of companies with limited resources stands unchanged. If Vickers build a jet airliner, they are likely to do so out of their own funds, if the market prospects are right. But if Bristol build a medium-range jet, they will probably call for at least some government aid.

AIRCRAFT production has become increasingly complicated. Huge jigs, elaborate tools, milling machines and presses are needed to build the large airframes that can stand up to high-speed flight. Modern aircraft imply large manufacturing resources. Government development contracts, especially for civil aircraft, are intended to help companies that cannot raise the resources for themselves; that is a justifiable policy if it puts tools in the hands of technical genius that would otherwise remain unassisted, but it has also led to support for too many individual companies, the perpetuation of scattered, unco-ordinated factories and the endowment of too many design teams.

Does this policy not also penalise the big companies with the resources and the manufacturing capacity required for modern aircraft production? The fostering of smaller manufacturing groups may at least delay the emergence in this country of a handful of aircraft manufacturers big and vigorous enough to stand comparison with the major manufacturers in the United States and able to meet the Boeings, Douglases and Lockheeds in open market on their own terms. Bigness is not everything, but efficiency and adequate technical resources often go with bigness. The only British company serving the aircraft industry that can claim such independent stature today is Rolls-Royce; it is no accident that Rolls-Royce are responsible for well over half of this country's capacity for making aero-engines.

BUSINESS NOTES

VIA SUEZ

Freights Through the Canal

BRITISH ships are steaming towards Suez, Colonel Nasser is being paid, and petrol is free. But everything is not just as it was before. The surcharges imposed by the liner conferences have been reduced, but they have not yet been eliminated. They were imposed to cover the extra costs of longer voyages round the Cape and the higher prices of oil bunkers. Bunker prices have already been reduced, although not to their original levels, and it will take some weeks for the liner companies to reorganise sailing schedules and issue new sailing instructions. When normal navigation through the canal has been resumed, the remainder of the special surcharge on freight rates will probably be removed, although if the oil companies fail to return bunker prices to pre-Suez levels, it may be necessary to merge part of the remaining Suez surcharge into basic rates.

So far as the tramp dry-cargo and tanker market is concerned, freight rates for some time have discounted the possibility that opening the canal will make more tonnage surplus to requirements. In fact, since the peak rates reached in the first two months of the emergency, tramp and tanker freight rates have been declining steadily, and are already well below pre-Suez levels. The Chamber of Shipping index of tramp voyage rates for April was 134.3, the lowest figure since August, 1955, and far below the peak figure of 189.4 for last December. Tramp freight rates have responded to the effects of the mild winter, which has greatly reduced the consumption and demand for oil, coal and grain, and it is apparent that the anticipated pressure on tonnage due to diversion to the Cape route was overestimated.

The reopening of the canal may, paradoxically, have the effect of increasing employment for tramp ships to some extent, since it is probable that potential charterers have refrained from fixing vessels by the more expensive Cape route on the assumption that use of the canal would not be much longer delayed. Normal seasonal influences are likely to have more effect on tramp freight rates in coming weeks than the reopening of the canal, but if the decline continues much further it will lead to scrapping or laying up of vessels, which has hardly taken place at all for more than a year.

Payments to Egypt

CANAL dues and disbursements by British ships will be paid in sterling to a No. 1 (special) account which has been opened at the Bank of England in the name of the National Bank of Egypt. To make this possible an Exchange Control order has been issued readmitting Egypt to the transferable account area from May 13th. Out of the No. 1 (special) account the National Bank of Egypt can transfer into other transferable currencies at par or into dollars at the transferable rate. But that account will for the present be the only Egyptian account out of which transfers can be freely made. Non-residents may also make payments to Egypt through this account. But the only payments by residents of the United Kingdom that will normally be approved for crediting to it will be those for canal dues and ships' disbursements. If there is any occasion for making other payments by a resident of the United Kingdom the matter must be referred to the Bank of England.

Other Egyptian accounts, which for the time being remain blocked, include the drawing accounts and the No. 2 blocked accounts. The only moderation of the freezing order imposed on them when the canal was nationalised last July is that amounts due to British exporters under contracts entered into before July 28th last year may be paid from the existing No. 1 Egyptian account at the Bank of England; each request for such a payment will, however, be subject to the approval of the Bank of England and the Treasury. Although restrictions on Egyptian accounts remain, these changes are a possible first step towards the resumption of normal Anglo-Egyptian trade and payments. Restrictions on the blocked Egyptian accounts are to be discussed by British and Egyptian officials, who meet in Rome on May 23rd. A start will then be made on the large and complicated exercise of tabling claims and counter claims between Britain and Egypt, and the discussions may be widened to cover the resumption of normal commercial relations between the two countries.

Petrol in a Free Market

STOCKS of petrol in Britain have long been adequate to meet the immediate impact of free demand. But while tankers could not use the Suez Canal, petrol stocks could be replenished only at an exceptional cost in dollars. Although the oil companies are now free to use the canal again, it will take some weeks before all their tankers can be re-routed; there is still no guarantee that the canal will be able to handle as many tankers a day as it did before it was blocked; and the trans-Syrian pipelines are still operating at only 40 per cent of their capacity. But the government now feels that it has enough assurances that the extra 30 million dollars which had to be spent every month on Western Hemisphere oil at the height of the crisis can be progressively eliminated as it becomes easier to ship to Britain more cheaper Middle East oil with a lower "dollar content."

In Britain, the price of petrol is still 4d. a gallon higher than it was before the Suez canal was blocked. About 1½d. of this extra charge is incurred in this country, about 1½d. going to the dealers and ¼d. to the oil companies. The remaining 2¼d. has been attributed to a rise in external costs, including higher basic prices of oil (1d.), higher freight charges (½d.) and the cost of diverting tankers round

the Cape (1d.). Now that the petrol sales of the average garage are approaching normal, the 1½d. a gallon increase in dealers' margins is clearly no longer needed to help them spread fixed overhead costs over a restricted turnover. Refinery operations are now returning to normal, freight rates have fallen sharply, and product prices have begun to weaken in the Gulf of Mexico. It will take time to divert tankers to normal routes and switch from contracts to purchase expensive Western Hemisphere crude oils back to the cheaper Middle East oil—and there are already mutterings of an increase in the price of Middle East oil which (with lower freight rates and the Suez canal in use again) can now easily undercut Texas crude oil delivered to the eastern seaboard of the United States. But the oil companies can now anticipate a progressive reduction in these exceptional costs as they return to a more normal pattern of operation. No case at all has been made for the retention of more than 2d. of the extra 4d. a gallon charged on petrol. And a gesture removing the other 2d. as well, anticipating the reductions expected in their own costs, will add to the goodwill that the oil companies have justly earned in maintaining so efficiently a high level of supplies throughout the winter.

CORPORATION ISSUES

Sorting Out the Queue

A CHANGE in policy about stock issues for local authorities has quietly occurred. The Government broker, who acts as the link between the Stock Exchange and the Bank of England, has informed brokers specialising in such operations that issues and placings for less than £3 million will not be allowed to come forward. The object of the restriction is to reduce the queue of would-be borrowers down to manageable length. At present the waiting list of local authorities wishing to borrow or refund is unnecessarily long, and the queue is shuffling forward at a rate that produces no reduction in its length. A local authority putting its name down today must expect to have to wait a year for its turn. Hence the decision to weed out the small borrowers from the stock list. Now they must try to satisfy their needs in the mortgage market, where money is also scarce and rates higher, or perhaps hope for a kindlier reception by the Public Works Loans Board.

This act of streamlining seems more than a little hard on the local authorities. A few months ago, some of the smaller ones were raising money on placings without standing in the queue ; the trustee savings banks liked the placings and provided a large slice of the money. The flow expanded and brokers with less special expertise in that class of business were attracted to it. To avoid a flooding of the market with placings, they were ordered to take their place in the new issue queue. Now they are marshalled out again, still unsatisfied. The local authorities were rightly driven into the market by Mr Butler in October, 1955. Now a number of them (by no means all small, for £3 million is a fairly high limit) are barred from the most important part of the market where they could expect, with patience, to cover their needs.

Poor Advertisement

IF these borrowers turn to the mortgage market, and if rates there remain unchanged, they will have to pay from 5⅝ per cent to 5⅞ per cent for 10 to 20-year mortgages, or they may borrow shorter at higher rates—say, 5¾ per cent to 6 per cent for 6 to 10-year mortgages. For comparison, gross redemption yields on recent corporation issues through the Stock Exchange have varied from £5 2s. 6d. per cent on Birmingham's probably too finely cut 18 year loan to £5 8s. 11d. per cent on Scarborough's 9-year issue. The difference is not as great as appears, because the costs are different. Mortgage market commission, plus stamp duty on a mortgage of over two years, costs 9s. per cent (or only 4s. per cent if the money is raised on a housing bond not carrying stamp). Full costs, commissions and management expenses on a public issue by a local authority are materially higher. Compounding for stamp duty alone costs 2s. per cent per half year.

Some local authorities will be glad to accept the mortgage market's terms. Others will find means of keeping their names on the waiting list and waiting until they can step over the £3 million limit. But it is hardly creditable for the capital market that gilt-edged borrowers, even small ones, should be turned empty away from the Stock Exchange. The job of persuading local authorities back to the stock market was not easy. For the present predicament, neither the Bank of England nor the Government broker is to blame. The blame lies rather in the narrowness of the market. Could the gilt-edged jobbers not have provided a better welcome for the small gilt-edged issue and placing ? Could the few brokers specialising in this type of issue have made it more attractive to underwriters and investors ? The weakness that has been exposed is regrettable.

IN THE MARKETS

Insurance Share Flurry

WHEN the new Stock Exchange account started on Wednesday prices made a brave attempt at a rally, but the market flattered itself a little. Over the whole week ended Wednesday industrial prices have held nearly steady. There has been a moderate rise in oil shares, but no significant move in shipping shares on the Suez Canal decision and the removal of petrol rationing. *The Economist* indicator has declined a small fraction from 221.9 to 221.4, the *Financial Times* ordinary share index showing a minute move in the opposite direction. Gilt-edged over the same period have sagged, the *Financial Times* index of government securities dropping from 87.00 to 85.63. There has been no encouragement for the market from the trade figures or from the sterling exchange rate, for sterling has also been sagging. On Wednesday the dollar rate touched 2.78\frac{13}{16}$, its lowest for about a month.

Birmingham Corporation and its advisors R. Nivison and Co., in London, and R. Murray and Co., in Birmingham, have surely been most unfortunate in their date for the corporation's issue of £5 million of 1973-75 stock at £98½. Conversion was also offered to the holders of the 2¾ per cent Birmingham stock which matures for redemption on July 1st. So applicants will not know their fate until after the conversion lists have closed on Monday. But the terms—the gross redemption yield of £5 2s. 6d. per cent to redemption in 1975—were finely drawn and made no allowance for a falling gilt-edged market. Cash lists remained open throughout banking hours on Wednesday.

In a week such as this it is hardly surprising that the outstanding market feature should have been a fall based on nervousness and misinformation. Insurance shares came

State pension fund enjoying full investment freedom. But, as the table shows, shares of the life offices, the composite offices and the non-life offices were sold indiscriminately. There is probably an argument for investors to reassess their insurance investments, making new allowances for the continued build-up of retirement insurance that must be expected, and perhaps also to make the opposite allowance on the non-life shares in view of the adverse underwriting experience that continues to be suffered in the United States. This week's flurry was not such a reassessment. It was hurried profit-taking after three weeks of a good market.

UK TRADE

Trade Deficit Up

THE balance of British overseas trade worsened last month, and the decision to send ships through the Suez Canal again will tend to prolong the deterioration. By June, if not before, the import figures will be swollen by the simultaneous arrival of cargoes sent through the canal and of cargoes still arriving via the longer Cape route. Any increase in export shipments, however, is unlikely to be large enough to offset the rise in imports. Hence the trade deficit will temporarily worsen—the reversal of the fortuitous improvement that followed the closing of the canal. But freight rates may fall further, thus reducing the cost of imports at the expense of British earnings from shipping, and imports of dollar oil will fall while British earnings from exports of Middle East oil should increase.

* Provisional.

Last month exports fell by £24.8 million to £272.2 million fob, partly, no doubt, because of the Easter holidays and the engineering strikes. The average value of British exports in the first four months of this year (excluding repayments of silver bullion to the United States) was £275.3 million a month, seven per cent higher than in the same period of last year; allowing for the rise in prices the increase in volume was probably about 4 per cent. Imports in April also fell, by £12.2 million to £349.6 million, and the average value in the first four months of 1957 was £352 million, 7½ per cent more than in the same period of 1956. About one-third of the increase is accounted for by cargoes that would have arrived in 1956 but for the closure of the canal, and the remaining increase is largely explained by higher prices. With re-exports almost halved at £8.6 million, the gross visible trade deficit increased by £20.4 million to £68.8 million; the fall in re-exports probably reflects smaller shipments of rubber to Russia, and the seasonal fall in shipments of furs. If the Suez backlog is excluded from the import figures the Board of Trade estimates that the average deficit in the first four months, actually £63 million a month, would have been close to the average of £56 million in the first four months of 1956.

Shipments to North America remain high; in April they rose by nearly £8 million to £44.1 million, mainly because the returns included the value of the *Empress of England* (about £6 million) recently delivered to Canada; the returns also included a final repayment of £1.5 million worth of lease-lend silver to the United States.

PROSPECTS FOR GAS

Fuel in the Middle

SINCE 1948, Britain's gas industry has managed to expand its total sales rather more than inland fuel consumption as a whole—much more, that is, than coal sales, much less than electricity or oil. But the whole of the industry's expansion has been outside its traditional and still by far its major market, the household. Domestic sales of gas in 1955-56 were actually lower than in 1948, while domestic electricity consumption was up by about 50 per cent, sales of smokeless solid fuels were up by about a fifth, and even the rationed supplies of domestic coal were slightly higher than seven years before. There has been a slow increase in the number of domestic consumers of gas, as would be expected; but the average number of therms sold per consumer has been dropping. The industry reasonably says that gas appliances are becoming more efficient and houses less overcrowded: but as Mr Wilfred Bailey, chief accountant of the Gas Council, said at the annual general meeting of the Institution of Gas Engineers this week, "good reasons do not sell gas nor reverse the trend of sales."

In the industrial and commercial fields, sales of gas have been rising by about 6 per cent a year; together, these two markets now take about half the gas sold in Britain. But the price of gas in these fields is lower than in the domestic market; any substantial switch from the domestic market to these other growing markets will mean a fall in revenue. Since the price relationship between gas and oil—a direct competitor in the industrial and central heating fields—is critical, Mr Bailey felt that such a fall in revenue would have to be offset by reducing costs rather than by raising prices.

Unless cheaper methods of making or supplying gas can be found in the near future, gas will get little or no share of the expanding market; it may even have difficulty in maintaining its present position.

As an accountant, Mr Bailey offered the assembled engineers no opinions about such "cheaper methods." In recent years, much attention has been paid to ways of making gas from oil, particularly for peak load operations and where surplus products in general or tail gases in particular from oil refineries can be utilised. While large coals, including carbonisation coals, have to be imported, liquid methane might prove a cheaper foreign source of gas. But low-grade small coals are the only fuel likely to become "surplus" in the British market in coming years: and there now seems to be a welcome shift of attention back towards systems for the complete gasification of these coals. There are some hopes that radical improvements might be achieved in the economics of such processes. Unlike the steel industry, the gas industry could not afford to buy prior access to Britain's large carbonisation coals by pricing other consumers out of the market. Unlike electricity, oil, and even coal, it is a fuel industry with no safe sphere of monopoly anywhere in its market. Tightly constricted between its costs and the price at which it can sell, this fuel in the middle is being forced to concentrate on technique.

DISCOUNT MARKET SQUEEZE

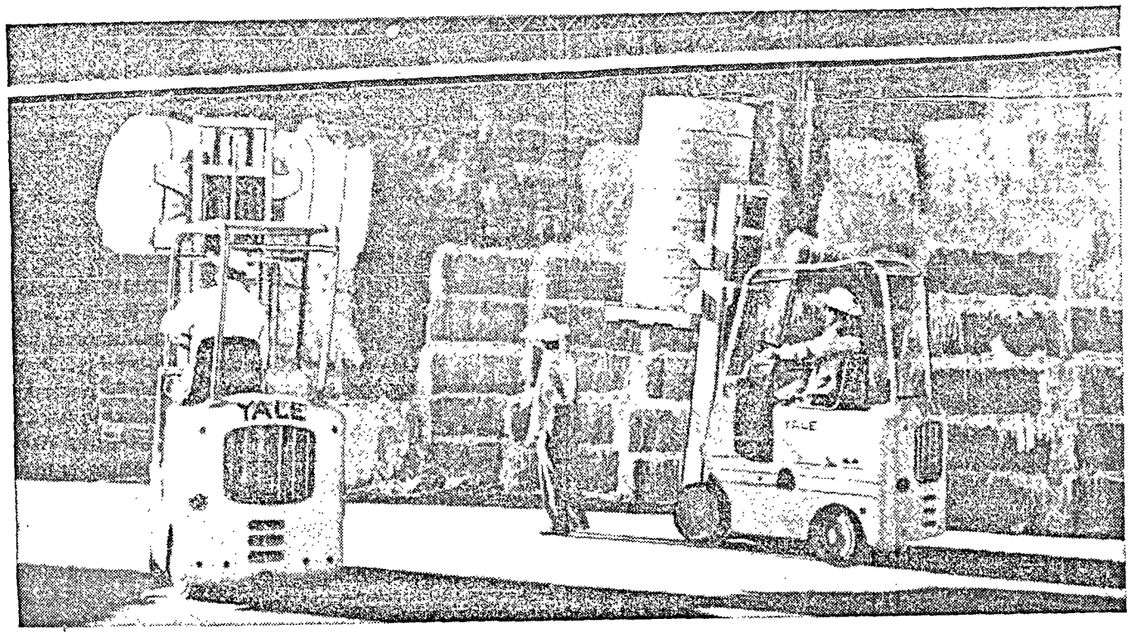
Why Bill Rates Have Fallen

THE fall in the Treasury bill rate was checked at the tender on Friday last week, as the discount market reduced its common bid by 6d. to £99 0s. 10d. per cent (involving a rise in the discount rate on bills obtained at that price of just over 3/32 per cent). As on other recent occasions on which the market has moved to check the decline in the rate, it has suffered a marked reduction in its allotment. Last week, the successful proportion of bids made at the market's concerted price dropped from 50 to 28 per cent. The reduction in the portfolios of the discount houses may not have been as large, because since the beginning of this year houses have been making small individual tenders at non-concerted prices, above the common tender price. These individual tenders normally secure full allotment. But the discount houses have been feeling a squeeze on their bill portfolios. This is attributable both to an increased outside demand for bills and to a reduction in the supply of them. These "real" market factors, as well as speculation on a coming fall in Bank rate, are responsible for the marked fall in the Treasury bill rate—which before last week's recovery was down to 3¾ per cent, ½ per cent below its level on the eve of the reduction in Bank rate to 5 per cent in early February.

The reduction in the supply of tender Treasury bills is most striking, and has continued long beyond the regular seasonal peak of tax collections, which occurs in January, February and early March; even now the issue has risen only modestly above its end-April low point. Since the end of 1956, the tender issue has fallen by no less than £750 million—easily a record fall, comparing with £290 million in 1956 and £150 million in 1955. In consequence the total of tender bills outstanding has dropped to £2,860 million, its lowest for four years. The most important factor in this year's exceptional run down in the total was the large receipt of cash by the Government from the heavy sales of gilt-edged stocks in the early weeks of the year (which had its counterpart in an excess of bonds in the discount market and a weak market in short-dated gilt-edged subsequently).

The rise in demand for bills has come from two sources—industrial holders of liquid funds, and the banks. The banks have been attracted by the high margin obtaining last year between the Treasury bill rate and their call loan rates to the discount houses. Moreover both they and investors outside the banking system have seen special reasons for holding bills in weeks when a reduction in Bank rate seemed on the cards. Bidding for the reduced volume of bills has therefore been strong, and the discount market has been obliged to follow the auction. The Bank of England could have dissuaded the discount market from following the bill rate down by toughly forcing the houses to take larger loans at Bank rate. In that event the mood of the money market as a whole would have been transformed. But while the market has periodically found itself in the Bank, the amounts involved have been small. Official policy towards the downward drift in money rates appears to have been neutral.

INDIAN STEEL



The Race for Expansion

IT remains anybody's bet which of the three integrated steelworks that competing foreign contractors are building for the Indian Government will come into operation first: the Germans, who were first in the field, seem certainly now to have lost their clear lead, and some experts are prepared to back the British consortium's project at Durgapur. Sir Charles Goodeve of the British Iron and Steel Research Association, who recently returned from visiting the iron and steel industries of India, Australia and Canada, is at present placing no bets on this race. But he has no doubt that the three works, built by British, Russian and German engineers, can be completed broadly in the period planned, along with the expansion by American engineers of the existing Tata works; that technically the second stage of expansion, in which it is planned to increase capacity at all these works and to build another, raising the country's output to an eventual 15 million tons a year, is perfectly practicable; and that with the productivity it is hoped to achieve, India's cheap and good ore, and its low wage rates, it ought to be able to make the cheapest steel in the world. Whether the Indians will accept the logical role of becoming a major exporter of steel products into the rest of South East Asia seems less clear.

Even such independent and expert confidence in India's steel expansion will hardly remove doubts here about the absolute need for the heavy engineering industry in India—almost amounting to a complete steelworks plant industry—that the Indian government has now decided to construct. The heavy machine shop and the plant to make mining machinery recommended by a Russian technical mission, plus three of the four plants outlined by a mission from this country—a heavy machine tool plant, a heavy structural fabricating works, and a heavy plate works—will provide a very substantial heavy capital goods industry. Both technical teams were given this remit and asked to suggest how it should be done: the Russians preferred one highly concentrated plant while the British team suggested four separate units located in different areas. The Indian com-

For the world's work:

YALE LIFT TRUCKS

Yale Industrial Lift Trucks solve every storage problem . . . save effort, space, time

WELL-PLANNED storage areas are vital to the profitable operation of plant, warehouse or terminal — a major reason why Yale Industrial Lift Trucks are in use throughout world industry. These rugged, efficient trucks allow you to *systematize* storage—to increase cubic footage as much as four times within existing facilities; to move, lift, stack materials of every sort, tons at a time, quickly and safely; to get more work done each day with less strain on manpower. Inquire about a complete Yale line of petrol, electric, diesel and hand trucks—noted for uniformly high quality wherever built, with today's most advanced lift truck features, and now available in currencies of the Free World. Write your Yale Sales and Service Representative for details.

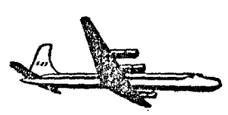
BY APPOINTMENT TO HER MAJESTY THE QUEEN, WEATHERPROOFERS, BURBERRYS, LTD.

The double life of a

'Burberry'

weatherproof

In the city a 'Burberry' weatherproof is like a breath of fresh air from the country. In the country it has an air of more-than-usual smartness. It leads a double life with ease and authority. It is high time you had a 'Burberry' weatherproof.



For men and women, from 7½ guineas.

FROM BURBERRYS IN THE HAYMARKET AND APPOINTED RETAILERS THROUGHOUT THE COUNTRY

SAS

fly superbly

Technical efficiency and reliability second to none... such meticulous maintenance, such strict schedule-keeping... more care for the comfort of passengers (such as the new Royal Viking lounges for trans-Atlantic travellers at no extra cost)... famed Scandinavian hospitality, wonderful cuisine —that's why SAS are acknowledged leaders in World air travel.

all over the world

SCANDINAVIAN AIRLINES SYSTEM

promise achieves both—and even more production capacity than either mission had suggested. The large credit offered by the Russians last year was clearly an inducement the Indians could not easily ignore.

The whole scheme will cost about Rs 800 million to Rs 900 million, of which some Rs 500 million will be spent outside India; and credit terms will also determine where the remaining overseas contracts are to go. The west Germans are intensely interested in the heavy machine tool plant, and are also in the field together with the Czechs for a heavy steel and foundry forge which will be located alongside the Russian heavy machine shop. The Indians are asking for seven-year credits as a minimum. The money could be found in Britain, and so could the capacity —at a pinch. Whether this is where Britain's investment resources should be going, largely to wipe Russia's eye, is another matter.

FOREIGN BANK RATES

Increases in Switzerland and India

THE Swiss national bank has raised its rate from 1½ to 2½ per cent. The move is the first change for nearly 21 years. The Swiss bank rate has throughout this long placid period reflected the fact that Switzerland has been the favoured refuge for hot money and has, therefore, experienced a glut of liquid funds. There has been little change in the inflow of money, but demand has recently been stimulated by a building boom in Switzerland and by an increased flow of foreign loans. The reserve bank of India has raised its rate this week from 3½ to 4 per cent. The official discount rate has long been out of alignment with the true state of the capital market in India. It has been kept there on the argument "why use bank rate when the inflation is due to government spending?" The shift of ½ per cent in bank rate still leaves it unrealistic.

CINEMAS IN DECLINE

Accounting for Rationalisation

IN the cinema trade, like some others, accountants seldom enjoy unmixed popularity; but when they talk, it becomes uncomfortably necessary to listen. Two accountants, one in a dominant position at the centre of the trade, and the other perhaps its best-informed independent observer, talked to the Cinema Exhibitors' Association last week; what they had to say was both brutal and salutary, but impressively well received. Mr John Davis, managing director of the Rank Organisation, coldly analysed the present circumstances of this sagging sector of entertainment; he left the trade none of the comfortable excuses with which it is accustomed to plaster its sorrows, particularly the traditional one of: "It's all the Chancellor's fault":

> However unpleasant it may be as a theory, I hold the view that no final solution to our problems would have been found if a much larger amount of relief [from Entertainments Duty] had been granted this year.

And Mr Clifford Barclay, an independent accountant who has recently acted as chairman of the industry's joint committee on revision of Entertainments Duty, outlined for the exhibitors a complete scheme of "voluntary rationalisation."

Mr Davis's survey of film industry difficulties was world wide. He forecast

> A shift of the main source of film production from Hollywood, and a continuing shortage of American films;
> a larger proportion of dubbed foreign language films in British cinema programmes;
> co-operation between West European production industries, possibly protected by a common film quota for the free trade area;
> a further "material contraction of the number of cinemas in the western world," which "nothing can stop"; and
> eventually, the distribution of films by tape, wire, or a scrambled television network.

His main proposal was simple but comprehensive; consolidation of the industry's 60 trade associations into one combined organisation, to sort out the inevitable rationalisation into "the successful pattern of the future."

Mr Barclay's rationalisation scheme was worked out in greater detail. He suggested that seat prices should be raised; that from the extra Entertainments Duty thus generated, the Chancellor should take over responsibility for paying the levy by which a share of box-office receipts is channelled direct to producers, and allow a slight further general remission of duty. Part of the extra revenue accruing to exhibitors should be paid into a fund for compensating cinemas going out of business. Similar schemes have been familiar in some other industries in decline, and might be logical in this one, given the peculiar financial circumstances in which small cinemas trade. One of its incidental consequences certainly would be logical, though no doubt unpalatable to the Treasury; of making the veiled subvention that it now arranges for British film producers into quite an open one.

BANK CAPITAL SCHEME

Streamlining the Westminster

ONE after another the banks are rearranging their capital structures; they are shedding the uncalled liability on their shares, realising that its security for depositors is purely theoretical, and that a partly paid share is an anachronism. Indeed numerous potential investors are barred from becoming shareholders. Reserves are at the same time being capitalised and "heavy" shares split so as to make bank stocks more attractive and marketable investments. The latest bank to come forward with proposals—proposals that will require the approval of the High Court and therefore cannot be effective before October—is the Westminster. It did a preliminary tidying up operation in 1954 and now has the good fortune to start with a simple capital structure.

The bank's 2,249,167 £1 "A" shares are already fully paid and they are in effect, though not in name, 12½ per cent non-cumulative preference shares. The directors see no occasion to interfere with them. The Bank has also 7,070,990 "B" shares of £4 each of which 25s. per share is paid up, 15s. is callable at any time, and £2 per share is callable only in liquidation. It is proposed to cancel this £2 per share reserve liability, to split each share into two, and then to dispose of the callable liability by capitalising £5.3 million of reserves and paying up 7s. 6d. per new share. In the result, in place of each share of £4 with 25s. paid, holders will have two shares of £1 fully paid. The bank will then in part restore its published reserves by a transfer of £2.9 million from contingency account.

"B" shareholders are also promised an increase in dividend. The interim dividend payable in August on the old capital is to be at the old rate of 2s. per share. But the final dividend next February after the share split is not to be one shilling per share, but 1s. 3d. That would be equivalent in terms of the present capital of a rise in the total annual rate from 4s. per annum (16 per cent) to 4s. 6d. per annum (18 per cent). The plan will commend itself to "B" shareholders. Effectively it does no harm to the "A" shareholders who remain a first charge with unchanged income. A highly theoretical argument can be adduced that the "A" shares rank *pari passu* with the "B" for capital and that the increase in the "B" capital is therefore to their disadvantage. Such an argument would be valid only in liquidation or on distribution of capital assets, which is not a possibility worth considering. The "B" shares rose from 75s. 9d. to 80s. 9d. after the announcement while the "A" shares remained unchanged at 44s.

METALS

The Argument About Copper

Apart from tin, metal prices drifted further this week. Prompt lead closed on Thursday at £94 10s. a ton, a fall of £1 10s. on the week and zinc closed £1 lower at £82 10s. a ton. American zinc producers have reduced prices by another half cent to 11½ cents a lb (£92 a ton), and lead prices have also been cut by half a cent to 15 cents a lb (£120 a ton). Cash tin closed a little higher at £764 10s. a ton and many traders believe that the manager of the International Tin Agreement's buffer stock has bought tin this month. Copper finished the week £1 10s. lower at £236 10s. a ton for cash metal. After falling by £200 in the last fourteen months many people are wondering whether copper has now touched bottom. In London, the majority thinks not. It is argued that the restriction of output has not gone far enough to bring world production into line with consumption, and that lower prices are needed to cut out the marginal producers.

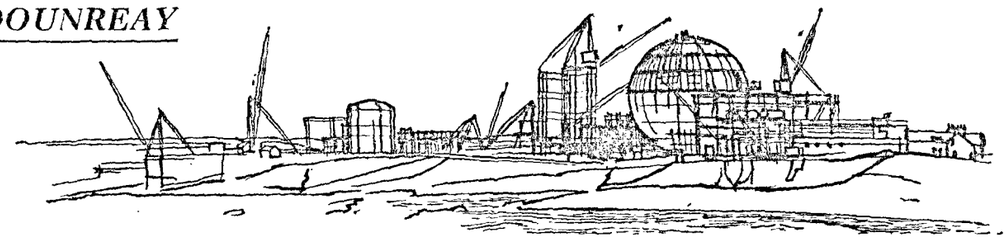
Figures from the Copper Institute, which do not cover all countries, put production of refined copper in the first quarter at 255,000 short tons a month, slightly less than in the fourth quarter but 8,500 tons higher than in the first quarter of 1956. Deliveries to fabricators, which can be greatly affected by changes in stocks, are put at 247,000 tons a month; this was nearly 10,000 tons higher than in the fourth quarter (thanks mainly to an increase in deliveries outside the United States), and slightly higher than in the first quarter of 1956. These figures indicate an apparent surplus in the first quarter of 8,000 tons a month. Refiners' stocks of refined metal at the end of March totalled 369,000 tons, about 15,000 tons higher than at the end of December and 152,000 tons higher than at the end of January, 1956. Guesses about the current rate of surplus vary widely; one estimate is 8,000 to 10,000 tons a month; another is 15,000 to 17,500 tons a month. The surplus for the whole of last year was about 200,000 tons.

The bullish argument points to the fall in consumers' stocks brought about by the lack of confidence in prices, and to the recovery of European consumption of copper and the prospect of an improvement in the United States. The most dramatic run-down in consumers' stocks has occurred in the United States. According to the British Bureau of Non-Ferrous Metal Statistics stocks of refined copper at American wire and brass mills fell by 26,000 tons to 68,000 tons between September and February, though the decline in consumption was negligible. During the same period producers' stocks rose by over 43,000 tons to 136,500 tons. It is argued that consumers will soon have to buy more copper to replenish their stocks, and that prices in London look cheap. The American producers are holding to 32 cents a lb (£256 a ton) and the custom smelters are charging 30 cents a lb (£240 a ton). American copper cannot be landed in Europe for much less than £248 a ton, which is nearly £12 above the current price in London. The next few months will show whether the bulls or the bears are right.

JERSEY STANDARD

Another King in Oil

Last week the operations of the Royal Dutch/Shell group were compared with those of British Petroleum. But the part played by British interests in the world oil industry as a whole can be seen in even better perspective by comparing Royal Dutch/Shell with the biggest American oil company, Standard Oil (New Jersey). "Jersey" is the larger, but Royal Dutch/Shell is by no means dwarfed by its American rival.



Last year the capital expenditure of the companies consolidated in the Jersey group, at £387 million, exceeded Royal Dutch/Shell by only £33 million. Non-consolidated companies add £40 million to the Jersey figure and £34 million to Shell's. While Jersey affiliates produced 2,328,000 barrels a day of crude oil in 1956, Royal Dutch/Shell, after including 411,000 barrels a day received under long-term contracts, came close with 2,074,000 barrels a day at its disposal. By contrast, Jersey's sales and other revenue (excluding import duties and sales taxes) at £2,600 million, were over 40 per cent higher than Royal Dutch/Shell's net sales of £1,836 million; while Jersey's net income after tax, at £290 million, was over 60 per cent higher than Royal Dutch/Shell's £180 million, giving the American company a slightly higher ratio of net income to sales.

Both groups have achieved the strength and flexibility of a wide geographical spread of crude oil production, with Jersey ahead of Shell in the United States, Canada, Venezuela and (excluding long-term supply contracts) in the Middle East, too, while Royal Dutch/Shell predominates in the Far East. Jersey is thus slightly stronger in production, which is usually the most profitable side of the business of any integrated oil company. Jersey, which derives nearly 80 per cent of its income from its operations in the Western Hemisphere (against Shell's 57 per cent in 1956), secures most of its crude oil nearer to its final markets than does Royal Dutch/Shell. On the average, therefore, Jersey's transport costs should be lower, and it has to lock up less of its resources in transport equipment. And by concentrating more in the American market, Jersey has a higher share of the profitable motor gasoline sales there, while Shell is meeting a greater share of the rapidly rising but less profitable European demand for heavy fuel oil.

On its income tax, Jersey receives greater relief than Shell from the 27½ per cent depletion allowance which is granted in the United States. Royal Dutch/Shell's income before tax (but after allowing for depreciation) amounts to nearly 17 per cent of the group's net sales, which is very close

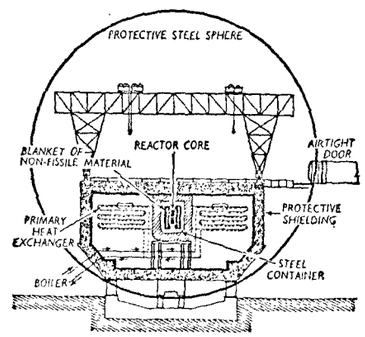
DOUNREAY

On the northern tip of Caithness the winds from the Pentland Firth rake ceaselessly over treeless country and a spade hits granite 18 inches below the soil. Here the Atomic Energy Authority has built the most astonishing atomic structure yet attempted here or in any other part of the world. The Dounreay fast breeder reactor is as experimental and as forward-looking as the power station at Calder Hall is (in atomic terms) conservative, cautious and foolproof.



The intention behind Dounreay is to find whether a relatively large reactor can be designed to manufacture more fuel than it burns. Reactors like those at Windscale and Calder Hall, which manufacture plutonium out of the non-fissile parts of natural uranium, cannot produce more than 8 atoms of plutonium to every 10 of fissile uranium burnt. Research reactors at Harwell have yielded the equivalent of two fresh atoms of fuel for every one consumed; the problem is to get similar results from a plant built on a commercial scale. Dounreay's physical dimensions are about a quarter of the size required for a 200,000 kW power station. If it achieves a "breeding" rate of more than 1.1, it will more than match its engineers' hopes. But to make more than one atom of non-fissile uranium (or thorium) fissile for each one used up opens the prospect of converting eventually a far greater proportion of the nuclear fuel into energy than in reactors such as Calder Hall.

The design of Dounreay calls for a core of almost pure fissile material in quantities that are not easily obtainable. The core of the Dounreay atomic furnace is roughly 21 inches in diameter—not much bigger than a party balloon. It represents the entire output of uranium 235 from the gaseous diffusion plant at Capenhurst over a considerable period.

The view now held in the Atomic Energy Authority, as expounded by Sir Christopher Hinton, is that breeder reactors become economic only when they can draw on an existing chain of Calder Hall-type reactors for enough plutonium to make up their initial fuel charge. By the end of 1965, atomic power stations will be producing plutonium at the rate of 4 tons a year and the seven years from next April, when Dounreay will become "critical," will be spent in developing breeder reactors that will be safe, reliable and efficient—which is not easy.

Calder Hall was commissioned with ease; but atomic plants are not necessarily so biddable and docile. The heart of the Dounreay reactor is housed in a steel pot measuring 10 ft. 6 in. by 20 ft.; the rest of the structure, enveloped in the 135 ft. steel shell that sits like a roc's egg at the seashore, consists of devices to contain, control, cool, damp down, lift out and generally keep in order a ferocious and potentially malevolent hedgehog which is made up of hundreds of thin, spear-shaped fuel rods, and thousands of equally thin, attenuated rods of breeding material (in this case natural uranium) stuck point downwards into a steel plate in the base of the reactor pot.

Heat for power generation is transferred from this reactor core by liquid metal—an alloy of sodium and potassium—in two stages. The primary heat exchanger is directly outside the reactor pot, and within the concrete shielding that contains it. Secondary heat exchangers, which will raise enough steam to generate 15 megawatts of electricity, are outside the sphere. The risk with this type of reactor is that the sodium might catch fire and vaporise the highly radioactive fuel if the cooling system were to break down, or the reactor to become over-heated. The chance that molten fuel in the reactor itself might run together and cause an explosion can

be avoided by seeing that the fuel always runs away and never together. But the fire risk cannot be eliminated in the design of such a plant; that is why it is housed in a steel sphere to contain a fire and the maximum pressure changes that one might set up.

In its present stage this huge structure resembles a half-erected circus tent. Spotlights hang from its sides, the roof arcs away into the darkness; wooden planks and metal catwalks built in concentric circles round the focal point of the tiny reactor run like the Wall of Death round the sides high above the floor. The orange trapeze is a crane to hook out the reactor pot complete with its contents if all other means of controlling it should fail.

A drawing to give a rough idea of how the sphere is laid out conveys nothing of the size or complexity of this undertaking, its engineering problems and its special maintenance requirements. Seven miles of steel pipe and 7,000 welds have gone into the building of a relatively small plant that does nothing but concentrate the radio-active waste extracted from spent fuel elements. The fuel rods themselves are so delicate that they sway at a breath and the manufacture of one single fuel element for a simple test reactor takes a fortnight. Some £17 million will have been spent on Dounreay by the time the present building programme is completed.

It is incongruous to hear such a complex structure described by American visitors as rough and crude. This is not intended as a derogatory judgment, whatever may be thought of some other American comments reported this week from Japan. It is a simple recognition that the unelaborate engineering and the deliberate simplification of the design of Dounreay (almost a signature of Sir Christopher Hinton) persuades them that Dounreay will work, and be freer from teething troubles that are besetting more refined, though smaller, American atomic projects. Local American conditions have dictated one line of atomic power research, and local British conditions have dictated another. Both countries will find export markets where conditions most closely parallel their own.

Continued from page 622

to Jersey's ratio if computed on the same basis. Jersey distributed in dividends over half of its net income in 1956, while the proportion paid out by Royal Dutch/Shell was less than a quarter.

BUILDING SOCIETIES

The Watch Dog Barks

A BLUE book from the Stationary Office is not the most obvious place in which to look for investment counsel. In his report on building societies* the Chief Registrar of Friendly Societies, Sir Cecil Crabbe, shows much concern for the protection of investors in building societies. His first warning concerns go-getting directors who take over old-established and inactive societies and blow them up with advertising:

> The new directors of some of these societies authorise advances on mortgage to companies in which they have financial interests and also advances to themselves. . . . Investors would be well advised to consider carefully the general financial and reserve position before investing in a society that has shown exceptionally rapid expansion after a long period of comparative inactivity.

Another warning concerns the societies that pay shareholders a high rate of interest earned by charging borrowers a premium:

> Where therefore, because of premium income a society is able to pay its investors a higher rate of interest on shares than usually obtains, it is probably because the security for their money is not so firmly based as that of the usual building society investor: they receive more for taking a greater risk.

The Chief Registrar does not spare those societies—even big ones—that fall short of the accounting standards he desires. The Alliance Building Society sustained a loss of about £16,000 by the fraud of a local manager which it included along with other items in its 1955 account in "Sundry expenses of management." The amounts needed to "restore the balances of the manipulated investment accounts" were treated as subscriptions. Sir Cecil pertinently comments:

> The accounts and statements of a building society are intended for the information of members and other interested parties and it is hardly consistent with this object that such amounts should be included in items that give no clear indication of the unusual nature of the transactions involved.

BUILDING SOCIETY GROWTH

New mortgage advances	373	394	339

* Report of the Chief Registrar of Friendly Societies 1956—Part 5 Building Societies. H.M. Stationery Office. 3s.

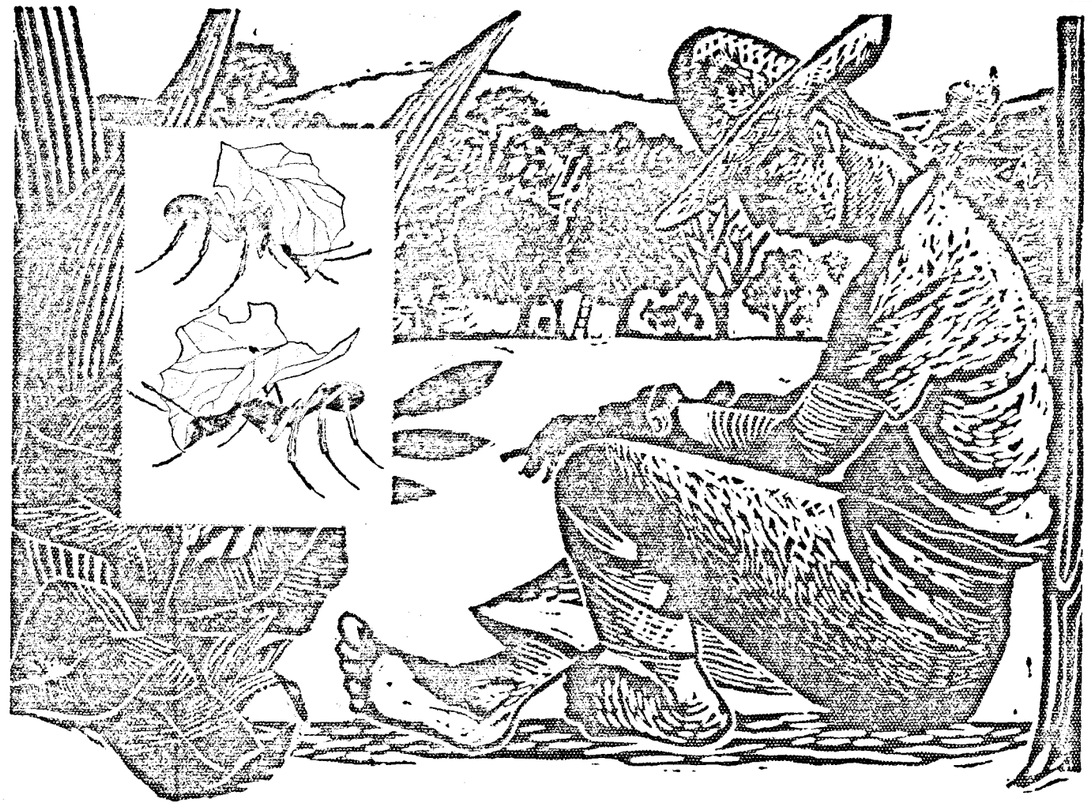
Such comment together with the greater information that now has to be included in the new form of accounts (Form A.R.11) prescribed by the Registrar last autumn can do nothing but good. Indeed the chairman of the Building Societies Association, Mr Fred Bentley, implicitly underlined the advantage of full publicity in his presidential address at the Eastbourne conference this week. He advised investors to be guided by the more incisive information now available for their protection, though he could justifiably claim that building society directors in general have not failed to act prudently. The detailed figures for 1956 now published by the Registrar clearly tell of investors' continued confidence.

EUROPEAN PAYMENTS UNION

Renewal Agreed

THE European Payments Union has been extended for another year from July 1, 1957, to June 30, 1958. In contrast to earlier renewals when the details were agreed at the eleventh hour (and sometimes after the twelfth hour had struck), they were this year decided well ahead of time. Settlement of surpluses and deficits will remain on the basis of 75 per cent gold and 25 per cent credit. The existing *rallonges* (extensions of normal quotas) by Belgium and Switzerland will also be continued. The only major changes relate to France, Italy and Germany. France is to receive an additional credit facility of $50 million, while Italy is to renounce the special additional drawing rights of $12½ million granted in 1955. Western Germany, whose accumulated surplus is now well beyond its quota, will continue to grant 25 per cent credit facilities to EPU, regardless of the level attained by the cumulative surplus, so that Germany is providing an unconditional *rallonge*. The council of OEEC has also urged member countries to conclude bilateral funding agreements to keep the deficits within the quotas.

SHORTER NOTES



If some of Rio Tinto's properties in Canada and its low grade copper-nickel deposit in Rhodesia prove to be economic propositions—and the chairman, Mr Gerald Coke, hopes they soon will be—Rio Tinto will come to the market for more permanent capital. The group will encourage cross shareholdings between associate companies and ultimately intends to invite local subscriptions in the capital of these companies in Africa and Australia, as has already been done in Canada.

* * *

Net earnings of International Nickel Company of Canada in the first quarter of this year amounted to US $23,504,000, equivalent to $1.61 per common share; this compares with $23,702,000 ($1.63 per common share) in the fourth quarter and with $26,614,000 ($1.79) in the first quarter of 1956. A dividend of 65 cents a share payable on June 20th was declared. Nickel prices and deliveries of primary metals were higher than in 1956, but earnings were reduced by the fall in copper prices and by a strike at one of the plants.

* * *

The interim ordinary dividend of Tube Investments has been raised from 6¼ to 7¼ per cent. In 1955-56 the final

no siesta for leaf-cutters

In the plantations at the fringe of the rain forest, noon is dust red, dark shadowed, heat heavy, languid. *And a man must sleep.* At sun high, from the Caribbean to the Matto Grosso, the green world shimmers and dissolves under a bleached sky, sweltering, silent but for the hum of a billion insects. Macaw and marmoset and spider monkey drowse in the high forest fastnesses; puma and anaconda and yaguarundi brood in the shadows. *And in the plantations a man must sleep.*

But for the parasol ants, the leaf-cutters, disciplined, deliberate and undeterred, there is no siesta. Leaves are life to the ravaging sauva ants, and their hunger is as great as their numbers. For years they have been a feared plague and a source of serious loss in the citrus and cacao plantations of Central and tropic South America, for in a few hours foraging workers from a single nest can defoliate an entire tree.

Persistent as all ants but more difficult of location than many, their nests are often vast in extent and descend into labyrinths many feet deep. Control and extermination were difficult, expensive and—dangerous. *Until aldrin entered the arena.*

Aldrin, first of the now-famous group of advanced Shell insecticides, provides umbrella protection from parasol ants and is far safer and less costly into the bargain. Tests have shown that—nest for nest—2½% aldrin dust is *more than seven times cheaper* than alternative methods using toxic, and explosive, vaporising liquids. No small consideration in view of the size of the problem and of the areas affected.

aldrin

payment of 7½ per cent made the full year's dividend equivalent to 15 per cent, as compared with an earlier forecast of 14 per cent.

* * *

Accounts of the Stock Exchange for the year ended March 24th give the first official estimate of the claims by public resulting from the failure of Banyard Lacey and Co. Before meeting those claims the compensation fund stood on March 24th at £132,161. The Council has since paid public claims which it is estimated will amount to approximately £57,000. Losses suffered by other members of the Stock Exchange cannot be claimed against the fund.

* * *

Wool prices in London were fully comparable with values in the Commonwealth markets when sales opened here this week. Merino wools were 5 to 7½ per cent dearer than at the close of the last sales on April 5th; crossbreds were generally about 5 per cent dearer but some fine wools advanced by 10 per cent.

* * *

The major Belgian airline, Sabena, has gone into the car ferry business in partnership with the British independent airline, Air Charter. The two airlines will operate the service on a pooled basis between Southend and Ostend, starting with 24 flights a day this summer and reaching 50 a day by 1958.

* * *

Television sales during the first quarter of this year were 23 per cent higher than in the same period of 1956; radio sales were 21 per cent higher. Sales of radiograms jumped 54 per cent. But in March, television sales were 16 per cent lower, at 79,000 receivers, than they were in February. About half the television sets and radiograms were bought either on hire purchase or credit terms.

COMPANY AFFAIRS

ROLLS-ROYCE

ROLLS-ROYCE could not grow as quickly as it has done or intends to do without the help of the capital market. Just over a year ago, when it had firm orders on hand of over £70 million, it raised about £4 million by a rights issue of ordinary shares. This year, with firm orders on its books of over £100 million, it will raise another £10 million, again by a rights issue of ordinary shares. Orders from the Government will probably be reduced, but this is likely to be more than offset by an increase in commercial business (which a year ago was running at the order of £23 million a year) and Rolls-Royce's industrial capacity must therefore be booked for several years ahead.

Consolidated earnings:	1954 £'000	1955 £'000	1956 £'000
Gross profit	4,416	3,911	4,605
Total income	5,259	4,644	5,331
Net income	1,969	2,129	2,131
Ordinary dividends	596	626	863
Retained profits...	1,373	1,503	1,267

The new money is to be raised by offering ordinary shareholders 2,157,250 new £1 ordinary shares, as rights at 95s. per share in the proportion of two new units for every £7 of ordinary stock held. After the announcement, the existing stock fell by 4s. 9d. to 121s. 3d. and then rallied to 124s. 6d. At this price the rights are worth 6s. 6d. per share. The new shares are being offered on a yield of 4⅜ per cent, for the directors expect to maintain the dividend at 20 per cent on the increased capital. They have raised it from 17½ per cent to that level for 1956 on the old capital, following an advance from £3,911,369 to £4,604,868 in gross profits last year.

The new shares carry an assurance of expansion. The motor-car business is showing a "healthy revival"; the atomic and guided missile divisions are both "active in projects for the British Government"; but the "most important expansion" will take place in the aero-engine division. Here the Conway and Tyne engines "will supplement the substantial business" in Dart and Avon engines and the oil engine division is being moved to the Sentinel (Shrewsbury) premises to "release factory capacity and labour at Derby for the expansion of the aero-engine business."

MARKS AND SPENCER

SINCE the 100 per cent free scrip issue, which raised the ordinary capital to £18,093,966, there has been a firm expectation that for the year to March 31st Marks and Spencer would pay a full year's dividend equivalent to 30 per cent on the new capital, against the equivalent of 25 per cent in 1955-56. That expectation has now been fulfilled. The drop of 3d. to 47s. 9d. on the announcement was not significant and a day later the stock went up to 50s.; at that price the yield on the 5s. "A" ordinary shares is still only 3 per cent.

Earnings:	Years to March 31, 1956 £	1957 £
Gross profit	12,103,604	14,426,581
Taxation	5,175,000	7,200,000
Net profit	4,954,681	5,606,029
Ordinary dividends..	2,601,007	3,121,806

What is significant is the growth in the company's profit margins, in a year in which almost all other profit margins, whether industrial or retail, have been reduced. The turnover of Marks and Spencer went up by about 6 per cent, from £118 million to £125 million, but gross profits rose by over 19 per cent, from £12.1 million to £14.4 million. The charge for repairs and maintenance was down from £1,281,012 to £743,894, but depreciation went up from £692,911 to £876,658, while taxation rose from £5,175,000 to £7,200,000. Net profits rose by 13 per cent, from £4,954,681 to £5,606,029.

Multiple stores, concentrating upon the mass clothing market and trading for cash, as Marks and Spencer does, usually work on smaller mark-ups percentage than do the department stores, but with their big cash turnover a slight increase in profit margins has a big effect on absolute levels of earnings. This certainly happened with Marks and Spencer, where the ratio of gross profits to sales went up from 10¼ to 11½ per cent and of net profits to sales from 4.2 to 4.5 per cent.

DUNLOP RUBBER

THROGMORTON STREET knew that Dunlop Rubber Company would have to reduce its ordinary dividend for 1956. But it did not know how big the cut would be. When the directors announced that the dividend had been cut from 14 to 10 per cent, the 10s. stock dropped from 18s. 10½d. to 18s. 3d., then recovered to 18s. 9d. and a day later moved up to 20s. There can be only one explanation of these fluctuations: there was a "bear" account in the stock and the bears, after the dividend announcement, decided to cover.

One reason why they covered was that, though the full year's gross profits fell from £17,508,519 to £15,094,662, the figures indicate a strong recovery in profits in the second half of last year. In half yearly periods, beginning in January-June, 1955, the trend is as follows: £9.1 million; £8.4 million; £5.7 million; £9.4 million. The big fall in profits thus occurred in January-June, 1956. Then Dunlop's stocks were piling up as the motor manufacturers cut back production and rubber prices were falling; Dunlop Rubber made

heavy inventory losses. That it did so is not unconnected with the fact that, although recently the company has made greater use of hedging facilities in the rubber market it has never wholeheartedly believed in hedging; indeed, it would be difficult for it to hedge all its stock. In the second half of last year, rubber prices were forced up by the Suez crisis and Dunlop Rubber could not have made losses on stocks; indeed, there is the possibility that it gained.

That possibility must exist because profits in the second half of the year were so high—higher even than in 1955. Yet the company did not announce an increase in tyre prices until last December; it had probably to face an increase in working costs through that period; and the recovery in vehicle production came so late that it could have had little or no effect on the 1956 results.

In looking at the fall in the consolidated net profit from £4,376,514 to £2,734,547 (from which the 10 per cent dividend absorbs £1,108,655) and in considering the possibility of a restoration of the dividend to 14 per cent this year, investors have to take account of the effects of the increase in tyre prices and of the marked recovery in vehicle production. Moreover, petrol rationing has ended—a fact which cannot but benefit a company which gains more from the sale of tyres in the replacement market than it does from its sales of original equipment to motor manufacturers.

VICKERS

"For the Vickers Group, 1956 was a year of expansion." That is how Lord Knollys begins his review. A few figures from one of the most attractive and informative sets of accounts published this year illustrate this statement. Sales went up from £131 million to over £163 million; stocks and work in progress rose from £118 million to £139 million, while the counter-balancing item, instalments received on contracts, went up from £80 million to £89 million; trading profits went up from £12 million to over £12.6 million; and orders on hand expanded from £301 million to £315 million. These—and there are others—are all impressive figures. But there are also two which show that even this bright coin has another side to it: the rate of return on capital employed went down from 13.9 to 13.5 per cent, and the ordinary dividend, covered 2.3 times by earnings, was left unchanged at 10 per cent.

The key to the dividend decision is that expansion always has a capital cost. Last year the group's total cash outlay on capital account was £23 million, over two and a half times the 1955 outlay of £9 million. The group was able to plough back only £3.7 million from its net trading income. Thus it had to borrow another £9.2 million from the banks (bringing the total of its bank loans to £11½ million). Further capital expenditure will be entailed if the group is to exploit its opportunities fully. The loss of some defence orders may almost be regarded as a blessing in disguise, for it may help to provide additional factory space and labour needed to meet commercial orders. With a step up in the production of the Viscount planned, with the development of the Vanguard still to be completed, with new shipbuilding orders in excess of production, with full order books in the English Steel division and with the engineering works "fully loaded," the Vickers group is a prospective borrower in the capital market.

BRISTOL AEROPLANE

Disappointing was the verdict passed on the decision by the directors of Bristol Aeroplane to leave the ordinary dividend unchanged at 10 per cent in the face of an advance in gross profits of £630,197 to £4,016,387 in 1956. Three arguments can be advanced to support this conservative policy.

First, the group's rapid expansion cannot be supported by retained profits alone. Last year its sales grew to over £50 million and the value of orders, which in 1955 exceeded £100 million, grew to £130 million. Stocks and work in progress rose by over £8 million in line with the increase in sales and the group spent over £4 million on fixed assets. Capital commitments were of the order of £1½ million at the end of last year but Sir Reginald Verdon Smith says, "further outlays will be required in most of the company's undertakings." And last year bank overdrafts grew from £3½ million to £8 million. They have increased still further since then and it will not be long before the company makes an appeal for permanent capital finance.

The second point is that Bristol Aeroplane has not recovered all the money it has put into the production of the Britannia. Most of the development cost was carried by the Government, but Bristol will not recover its own share until over 100 aircraft have been sold. So far, it has orders for 70 aircraft, and Sir Reginald hopes "that this number will steadily increase as the practical evidence of Britannia's qualities become apparent from BOAC's operations."

The delay in bringing the Britannia into airline operation has added to costs. This helps to emphasise the third point: production costs are rising and rates of return on capital employed are falling. All three arguments support a case for dividend conservatism now. The first two, plus the fact that Bristol is very active in the development of guided missiles, also point to future growth so long as a watchful eye is kept on the third factor, the rise in costs.

DE BEERS CONSOLIDATED

When the directors of De Beers announced an unchanged dividend of 10s. per 5s. share, their statement was criticised in these columns because it included only the profits of the parent company, which were there shown to have fallen in 1956. In the full accounts the consolidated statement now shows receipts on the diamond account up from £30 million to £33.7 million and "interest and dividends on investments" from £5.5 million to £6.4 million. The consolidated gross profit before tax advanced from £29,360,721 to £29,759,321, after writing off £2,680,094 (against nil) from investments. This writing down presumably relates largely to De Beers' indirect interests in Orange Free State gold mines.

About three-quarters of De Beers' consolidated income comes from diamonds. The demand for gem diamonds is still much in excess of supply but in his review Sir Ernest Oppenheimer says that, since the United States has ceased to stockpile industrial diamonds, he is prepared for smaller sales of these stones in 1957. Was he speaking of quantity or of value? Recently prices have been increased. In any event total receipts from the diamond account this year hardly seem likely to lag far behind 1956, while the income from De Beers' non-diamond interests is likely to grow.

Sir Ernest estimated the net market value of non-diamond interests—largely but not exclusively in Kaffirs and ranging out to include copper and its indirect interest in African Explosives and Chemical Industries—plus cash and near liquid assets at about £83 million at the end of last year. That figure will have changed little since then. In market values, De Beers' interests in its diamond subsidiaries are worth about £9½ million and its diamond stocks have a value of about £5¾ million. Thus the market worth of De Beers' own deferred stock (currently about £79 million) and its own preferred stock (currently about £11 million) is more than covered by this rough "break-up" value of £98 million, which takes no account at all of the value of the productive capacity and goodwill of the parent company.

ROYAL MAIL LINES

The shipping industry is especially favoured. It need not publish its accounts in accordance with the full rigour of the 1948 Companies Act and thus it can create and maintain hidden reserves. And it is most favourably treated for tax, especially after this year's budget which raised from 20 per cent to 40 per cent the investment allowances on new ships. Yet, like Oliver Twist, the chairman of Royal Mail Lines asks for more. Mr Walter Warwick in his statement to shareholders attacks the "balancing charge," under which tax is charged on any proceeds of a sale of a ship in excess of its written down value. In effect he asks the Chancellor—as shipowners often have done—to exempt the shipping companies from this charge.

Mr Warwick's concern is understandable. The group has about £11½ million in liquid resources but has in prospect a fleet replacement programme of more than double that amount (in round terms £23½ million). And when four of the old "Highland" ships are due for

replacement they might easily realise substantially more than their nominal written down value. Yet a request for further tax relief looks odd besides the fine results of Royal Mail, which trades largely to South and Central America. Last year its operating profits, thanks to the rise in freight rates and a bigger volume of trade, jumped from £1,768,302 to £3,329,907 and Mr Warwick says that, though freight rates have fallen, current prospects are "not unfavourable" and if there is no recurrence of last year's strikes there should be "another satisfactory year's trading." Last year the ordinary dividend was raised from 12 to 15 per cent. That is to be followed by a 100 per cent free scrip issue; Mr Warwick says that "it must not be anticipated that a dividend at this rate (15 per cent) will be maintained on the increased capital." The yield of just under 6 per cent on the £1 units at the current price of 50s. 3d. xd. suggests that some investors are looking for an effective increase in the dividend though not for its doubling.

GALLAHER

Last year was eventful for Gallaher, the tobacco company. From the capital market it raised nearly £13,400,000, enabling it to finance an increase of £6,250,000 in stocks and to reduce its bank overdrafts and short-term Bills by £8,500,000 (to just under £9 million). It was a year of keen competition between the cigarette manufacturers but Gallaher secured an increase in sales and in profits (which advanced by nearly £1 million to over £4,230,000). Indeed, Gallaher's manufacturing capacity could not quite meet all the demands put upon it and twice during the year—in the summer holidays and in December—it could not meet the demand for its "Senior Service" brand of cigarettes in full.

This is a strong base from which to advance this year, a year in which the chairman, Sir Edward de Stein, expects "even keener competition than at any time since 1939." To keep and, if possible, to extend its place in this market, Gallaher is adding to its manufacturing capacity; when the American auctions open it will buy additional dollar leaf to improve the duration of stocks over and above twelve months' supply; it intends to "watch closely the development of any new sales promotion methods used by competitors." The group will have to absorb higher costs and competition may trim margins. But since January the group has been able to meet all its orders in full and sales in the first four months of the year show "a steady improvement" over the corresponding months of 1956. But Sir Edward does not expect the group to achieve "anything like the same rate of increase in profits" as was achieved in previous years. On the 1956 dividend of 17½ per cent, the 10s. ordinary stock units yield 7.7 per cent at 22s. 9d.

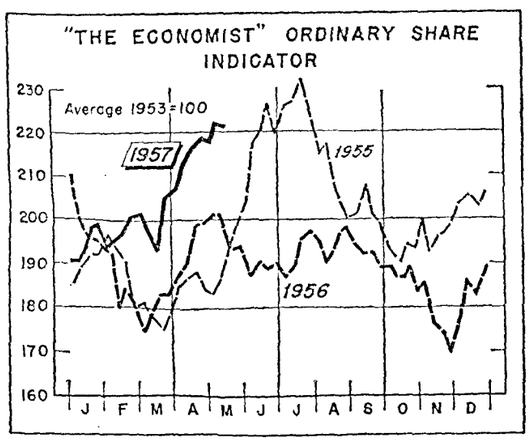
CAMMELL LAIRD

The reconstruction of Cammell Laird's shipyards, enabling it to build bigger ships, will cost £17 million and take about eight years to complete. The group, which held about £6 million in liquid assets at the end of last year, will have to seek additional finance from the capital market to cover the cost of its programme. The directors have not yet made any decision as to the timing or method of the issue but they have cleared the way for it by proposing an increase in the company's borrowing powers. In weighing the yield of 6.2 per cent offered by the 5s. units at 11s. 3d. on the maintained ordinary dividend of 14 per cent, investors must always keep this need for new money in mind. It is as significant for them as the fact that the group has big order books. On the immediate prospects, the statement by the chairman, Mr J. C. Mather, gives investors little help. But last year the operating surplus rose by only £217,000 to £1,490,000 and that figure included the results of the newly acquired subsidiary, Patent Shaft and Axletree. Trading results in the current year will be affected, just as the 1956 results were, by strikes and increases in labour costs.

London Stock Exchange

FIRST DEALINGS:	May 1	May 15	May 29
LAST DEALINGS:	May 14	May 28	June 18
ACCOUNT DAY:	May 21	June 4	June 25

The rise in the Treasury bill rate caused gilt-edged to fall in the early part of the week, and although a slight recovery took place on Wednesday, and was maintained on Thursday, appreciable falls were seen on balance. 4 per cent Consols and 3 per cent Gas stock 1990/95 both lost 1⅛ to 78⅛ and 67-⅝ respectively. 3½ per cent War Loan declined from 71⅞ to 70¾ and 2½ per cent Consols from 52¾ to 52⅝.



The Labour party's pension plan caused weakness in insurance shares, and among those which fell, Commercial Union declined from 85s. to 81s. 6d. and Legal and General from 31¼ to 30⅛.

Business remained active and the account closed on Tuesday with markings above 14,000, with just over 16,000 for the previous day. This compares with markings around 9,600 a year ago. The best prices of the week were not always maintained and some irregularity was seen. *The Economist* indicator showed a fractional decline at 221.4. Special features in the industrial market were provided by Borax Deferred, which rose to a new peak for 1957 to 32s. in an active market on news that the shares of its US subsidiary are to be listed on the New York market, while demand for Montague Burton carried the shares from 29s. 3d. to 34s. 3d.; Hunt Partners scored a spectacular rise on the offer from Bowater Paper, the shares rising from 15s. 3d. to 23s. 9d.

The end of petrol rationing brought strength to the oil market, which became firmer on Thursday, British Petroleum rising from 147s. 3d. to 153s. 7½d. and Shell from 182s. 6d. to 187s. 3d.

Kaffirs were quiet and irregular. Free State Geduld firmed up from 58s. 9d. to 59s. 4½d. and President Brand from 45s. 9d. to 46s. 6d.

Base metals were weak, Consolidated Zinc established a new low of 71s.

(1) Relates to wholesale prices in Athens and Piraeus only for Greece. Figures for Ireland from 1955 onwards are for home produced goods only. Figures for Germany, F.R. are producers' prices of industrial products. (2) July-December. (3) Relates to prices in capital cities only for Austria, France, Greece and Turkey. Austria and Belgium exclude rent. Denmark includes direct taxes. Figures for Ireland are based on August, 1953=100. (4) Including direct taxes. (5) Including trade with Faeroe Islands. (6) Index numbers of unit value which compare the current average value of trade with its value in 1953; they are influenced by changes in the composition of trade as well as price movements. (7) Deposit money and notes and coins held by business, individuals and foreigners. Except for Greece holdings of the issuing authority and other banks are excluded. (8) Holdings of the government and central bank at end of period. Foreign exchange figures for Norway exclude government holdings; Netherlands, Norway and Sweden include foreign investments. Ireland includes some long-term securities. (9) Beginning May, 1954, a new drachma equal to 1,000 old drachmas was introduced. (10) Average for fourth quarter.

Financial Statistics

EXCHEQUER RETURNS

For the week ended May 11, 1957, there was an "above-line" surplus (after allowing for Sinking Funds) of £18,835,000 compared with a surplus of £61,526,000 in the previous week and a surplus of £12,102,000 in the corresponding period of last year. There was a net expenditure "below-line" last week of £10,110,000, leaving a total deficit from April 1st, of £5,836,000 (£22,479,000 in 1956–57).

THE MONEY MARKET

THE discount market reduced its bid for the £200 million of Treasury bills on offer on Friday of last week by 6d. per cent to £99 os. 10d. per cent. Credit had been tight in the preceding week, pushing the average cost of the market's money uncomfortably close to the bill rate.

Outside applicants, however, made no corresponding reduction in their bids. The upshot was that although total applications fell by £5.4 million to £360.9 million, the allotted portion of bids at the market rate dropped from about 50 to 28 per cent, and the average rate of discount on the whole allotment rose by only 1s. 5d. to £3 16s. 1.84d. per cent. At yesterday's tender, the offer was cut by £10 million to £190 million.

Credit has remained in keen demand during the past week. Two or three houses had to take loans (of a very small amount) at Bank rate on Monday, despite moderate official help through special purchases from the banks. On Tuesday market funds were just adequate—though discount houses paid up to 3¾ per cent for money. Wednesday was the clearing banks' make-up day; and the Bank gave no special help. As a result the market was again "in" the Bank, two or three houses taking a small amount.

Business in the London gold market has been moderate this week, with marked buying from the Middle East. On Wednesday the price edged up by 1½d. per ounce to 250s. 5d. per ounce.

Salient points from Joint Chairmen's Review
Annual General Meeting May 14, 1957

Four Dance Halls were acquired in 1956, and Three New Catering Establishments were opened, and all are enjoying a satisfactory volume of business. We are well satisfied with the increased Trading Result of the First Quarter 1957. Our wonderful new premises in Colonial House, Mark Lane, have just been opened and Two more new Cafeterias will shortly be opened in the City. A Freehold Site has been acquired in Bradford, on which we hope to build a new Dance Hall. The possibility of further extensions is being continually examined.

A further Issue of Mortgage Debenture Stock is being considered to provide for expansion.

Proposals for Capitalisation of Profits will be presented at a later date.

COMPANY MEETINGS

THE BRISTOL AEROPLANE COMPANY, LIMITED

SIR REGINALD VERDON SMITH'S REVIEW

The Forty-seventh Annual General Meeting of The Bristol Aeroplane Company will be held on June 6th at Filton House, Filton, Bristol. The following is the Statement by the Chairman, Sir Reginald Verdon Smith, which has been circulated with the Report and Accounts for the year ended December 31, 1956:

THE BOARD

It is with deep regret that we have to record the death on February 19, 1957—the forty-seventh anniversary of the foundation of the Company—of my father, Sir William G. Verdon Smith. Sir William became a Director of the Company in 1927; he was appointed Chairman in the following year and continued in that capacity until 1955, when he retired from the chair but remained a member of the Board until his death. The progressive expansion of the Company during his chairmanship is clear evidence of his qualities of judgment and leadership: I trust that my colleagues and I will maintain successfully in the future the high standard which he set both for himself and for others in the conduct of the Company's affairs.

STRUCTURE AND ORGANISATION OF THE GROUP

The year 1956 was the first in which the manufacturing Divisions of the Company operated as subsidiary Companies. The changes in administration and in accounting arrangements have been carried through smoothly, and your Board is satisfied that the development of increased responsibility and of delegated authority is working out to good advantage in the widening fields of activity in which we are engaged. It is customary for the Chairman to express the thanks of the Board to all staff and employees who have contributed to the Company's progress, and this I most warmly do on this as on previous occasions.

Although the year was by no means free from difficulty and anxiety, much progress was made, the turnover of the group was substantially increased and although trading profits did not expand proportionately to the increased volume of work undertaken the year's results should, I believe, be regarded as reasonably satisfactory. It will be convenient in this review to follow the pattern of previous years, commenting first on the financial results of the Group as a whole and thereafter upon the activities of each of the constituent members and associates both at home and overseas.

FINANCE

It is evident from the Accounts for 1956 that there has been no relaxation in the expansion which has characterised the Group's affairs in recent years. Although the volume of production reached a new high level and turnover exceeded £50 million, the value of orders held, which in 1955 was reported to exceed £100 million, increased substantially during the year and currently stands at approximately £130 million.

The trading profit of £4,016,387 shown in the Consolidated Profit and Loss Account, before charging depreciation is £630,197 more than the corresponding profit of £3,386,190 in 1955. On the other hand, despite the increase in turnover the rate of return on capital employed by the Group has been reduced both by lower profit margins on trading and additional costs arising from the delay in getting the Britannia into airline operation, to which I refer later. As before, we have written off part of the preliminary expenditure on projects in the development stages.

Against the trading profit there is an increase from £1,583,349 to £1,861,257 in the charge for depreciation, leaving the trading profits, after depreciation, at £2,155,130 compared with £1,802,841 in 1955.

Dividends received from Associated Companies, including Rotol Limited and Short Brothers and Harland Limited, amount to £72,927 compared with £21,120 in 1955.

Interest on Bank Overdraft (less Interest received) of £362,437 is considerably more than £54,699 charged in 1955.

The interest on Canadian Bonds is less than for 1955; it is convenient at this point to record that the original Bonds have now been fully repaid, but we have recently arranged a new issue of $1½ million 6 per cent Bonds maturing 1969/70 of which $1¼ million were issued in 1956 and $250,000 are to be issued in 1957.

The taxation charge of £781,949 although slightly higher than the 1955 charge of £762,191 is fractionally less as a proportion of the profits for the year due to the benefit of Investment Allowances. The effect of these allowances has been to reduce tax payable in respect of 1956 by £265,000 (compared with a parallel reduction of £200,000 for 1955) and we have again taken account of this saving in the transfer made to General Reserve.

The effect on productive industry of the high level of taxation which has been imposed over a prolonged period is clearly illustrated by the extent to which your Company has been obliged to supplement the profits already retained as working capital and for fixed investment in buildings and plant, by calling on additional facilities from its bankers during 1956 with a consequent increase in the interest charged against profits to which I have already referred. The Group is not alone in having to face this problem, and it is disappointing that the Chancellor, whose Budget was in other respects so encouraging to initiative, did not feel able this year to lighten the burden carried by industry: the re-equipment and further development of the productive capacity of industry remain vitally important especially in a phase of rapid technological change such as we are currently experiencing in the aircraft industry. Some measure of relief in relation to capital expenditure is afforded by the Investment Allowances on scientific research capital expenditure but this will continue to be a limited benefit unless the increase in the Investment Allowance granted to the shipping industry in this year's Budget is the forerunner of an early restoration of the allowance on other industrial capital outlays.

The net profit after taxation amounts to £1,065,028 compared with £977,363 in 1955; before reference is made to the disposal of this balance the main items in the Consolidated Balance Sheet call for comment.

The value of the Stockholders' interest in the group represented by the total Capital, Reserves and Surplus, has increased by £1,280,329 to £15,970,338 at the end of 1956, representing net profits retained in the business, and including a transfer of £650,000 to Contingencies Reserve from certain provisions considered to be in excess of requirements following a review made during the year.

In my statement on the 1955 Accounts I referred to the high level of capital expenditure which would be required in future years. In 1956 the total expenditure by the Group on Fixed Assets amounted to £4.3 million; at the end of the year there were capital commitments of £1.5 million, and further outlays will be required in most of the Company's undertakings. Items of note during 1956 included the completion of our new Wind Tunnel, a Deuce computer installation and new Test Plants for high-powered turbo-jet engines and for ramjets, whilst the largest single heading of expense relates to machine tools (£1.4 million) and other improved production facilities.

In the process of building up the Group turnover there has been a considerable rise, amounting to £8.2 million during 1956, in the value of Stocks, which is mainly responsible for the increase over the year from £3.3 million to £8 million in the bank overdraft.

To the net profit for the year of £1,065,028 there falls to be added £366,905 brought forward from 1955, out of which your Board has transferred £118,384 to Capital Reserve (representing profits earned by the original Canadian holding company which was wound up during 1956 on completion of the reorganisation in Canada to which I referred last year). From the £1,313,549 remaining £500,000 (1955—£450,000) has been transferred to General Reserve, which is thereby increased to £4,150,000 at the end of 1956.

After payment of Preference Dividends and an interim dividend (less Income Tax) on the Ordinary Stock there remains a balance of £637,859 for appropriation. The Board recommends a Final Dividend of 6½ per cent on the Ordinary Stock, making 10 per cent for the year—the same rate as for last year.

This absorbs £259,009 and the balance of £378,850 will be carried forward.

In the light of what I have said about the rate of return on capital employed and the pressure on resources as well as of the rising cost of production to which I make reference later, Stockholders will not be surprised that we have not found it possible to recommend a higher rate of dividend than last year.

The level of borrowing from the Company's bankers has been further increased since the end of 1956, and your Board has under consideration the steps which should be taken to provide that some part of this borrowing should be placed on a more permanent basis. Meanwhile Stockholders will observe that the Board is seeking authority to increase the Company's borrowing powers, and in conformity with modern practice we have recommended that borrowing, which under the present articles is limited to twice the issued capital, should be authorised to the extent of twice the issued capital, reserves and surplus of the Company.

The following table displays a breakdown on the Company's income during 1956 on a percentage basis:

Materials, subcontracted and bought out parts	47·86
Wages, Salaries and Employees' benefits	33·86
Depreciation	3·49
Other expenses	10·60
Interest on borrowed money	0·72
	96·53
Taxation	1·47
Retained earnings	1·18
Net dividends	0·82
	100·00

BRISTOL AIRCRAFT LIMITED

The three principal tasks of the Aircraft Company were the Britannia airliner, Helicopters and Guided Weapons; in addition, good progress was made in the production of Plastic Drop Tanks, Rocket Motors and on certain research projects for the Defence Programme.

The Britannia was, of course, the major project of the Company, and nine aircraft were completed during the year. As is well known, the introduction of Britannia into Airline Service was delayed by the discovery that dry ice could accumulate in the power plants, particularly at certain altitudes in tropical latitudes; in consequence, although a total of ten aircraft had been delivered to BOAC by the end of 1956, they did not begin scheduled operations until early this year. The setback both to sales and to the flow of production, and the consequential effect upon the Company's trading results for the year were a great disappointment to us; it is encouraging, however, to record the vigour and determination with which the problem, hitherto unknown, was diagnosed and attacked, and it is appropriate to record our appreciation for the co-operation which we received from the Royal Aircraft Establishment and many others. We are confident that the Britannias now in service with BOAC will rapidly establish themselves with the travelling public, and that they will shortly be followed into service by the successive variants of Britannia ordered by other airlines and for RAF Transport Command. In Canada, following our agreement with the Canadian Government under which Canadair Limited have developed a maritime reconnaissance version of the Britannia for the RCAF, and are now proceeding with a transport version, a further agreement has recently been concluded with Canadair licensing them to sell their version of the Britannia transport in certain civil markets.

During the year a Weston Division was formed within the Aircraft Company. This Division is concerned primarily with development and the production of Bristol Helicopters, but it includes the plant which is engaged on Rocket Motor Tube production and the development and production of Pressure Vessels.

Production of the Bristol Sycamore continued steadily at Weston, to which factory it was transferred from Filton early in the year. In addition to the further orders for the RAF, a substantial order has since been secured from the German Government, which will keep the Division busily engaged for the next two years. Development of the twin-rotor helicopter was continued, attention being increasingly concentrated upon the turbine-powered version, for which Napier Gazelle engines will become available this year.

Substantial progress was made on the Guided Weapon side of the Aircraft Company's business. Past years of intensive research and development were rewarded by a substantial production order for the Bristol surface-to-air weapon now officially named Bloodhound. In a memorandum covering the recent Air Estimates the Secretary of State for Air stated that Bloodhound would be in use for service trials at the first RAF Missile Station now being built at North Coates in Lincolnshire. To facilitate the execution of this order Bristol Aircraft Limited occupied early in 1956 a Government factory in South Wales, the adaptation and equipment of which have since been carried out. Further development of this weapon continues and marked progress has been made in firing trials both in this country and Australia.

Certain revisions in defence policy may bring changes in the future types of weapon we have under study, but our technical team and resources are likely for some time to come to be engaged at full pressure on the programme ahead of us.

BRISTOL AERO-ENGINES LIMITED

The efforts of Bristol Aero-Engines Limited were mainly devoted to the development and production of their comprehensive range of gas turbines, including turbojets (Olympus and Orpheus), turboprops (Proteus and Orion) and ramjets (Thor and others). The Olympus 2-spool axial turbojet is now with the Royal Air Force in the Avro Vulcan and is the most powerful jet engine in service use. A more powerful version, known as the Olympus 6, has been type-tested at 16,000 lb thrust (dry) and is the most powerful type-tested engine available in the world today. The Company had to fight a prolonged battle to avoid its cancellation during 1956, but we have recently been assured that the Olympus 6 will be used by HM Government, and our confidence in it has been justified by other encouraging prospects as well as by the rapid and successful course of its technical development.

The Orpheus turbojet shows great promise: it has been flying in the prototypes on new British, French and Italian light fighters, and is already the subject of licences in several countries, including in particular India, where we have entered into an agreement with the government to provide extensive technical advice in the construction of an aero engine plant in which the Orpheus will be built. The development of the Orpheus has been made possible by the support accorded to it by the Mutual Weapons Development Programme on behalf of Nato and its adoption by one country after another promises to be a notable realisation of the policy of collective defence. Its simplicity of design and adaptability to a variety of applications make it particularly suitable for licensed manufacture.

The Proteus turboprop has established itself as an outstandingly reliable engine. It is the most powerful turboprop to go into airline service so far and has secured a notable list of "firsts"—it is the first axial engine in airline use, it has the lowest specific fuel consumption of any gas-turbine in service, it is unique in having the advantages of the free-turbine principle and it is remarkably quiet. In addition to its aircraft applications, the Proteus is being developed for marine use in high performance craft, both naval and civil.

The Orion turboprop is being developed as the successor to the Proteus. This new engine first ran on the test bed in December, 1955, and made its first flight in August, 1956. Results have been most encouraging and include a recent successful 150-hour development test run carried out in conformity with British and American airworthiness conditions. The Orion which will power later versions of Britannia has been selected by the Royal Canadian Air Force for their military transport version of the Britannia—the Canadair CL-44.

There are welcome signs of increasing American interest in Bristol gas-turbines, and Stockholders will be aware from recent Press reports that important negotiations have been taking place between the Company and the Curtiss-Wright Corporation of America with a view to American manufacture of the latest Bristol types. It is a feature of these negotiations that they should bring valuable dollar-earning work, both on development and on production, into our factories at Bristol.

Bristol ramjets are being produced in increasing numbers for the Bristol Bloodhound surface-to-air missile: development of more advanced and more powerful ramjets has continued and the Company has established unique facilities and a dominant position in this field. A vast background of experience and "know-how" of supersonic work has been accumulated and an engineering team of outstanding quality has been built up over the years. The future of this section of our business is, of course, closely linked with decisions about defence policy currently under consideration.

The manufacture of Bristol Centaurus and Hercules piston engines continues—the former for the Blackburn Beverley Transport in service with the RAF and the latter by our licensees in France for installation in the Noratlas transport which is now to be built in Germany as well as in France. These well established engines are being used by some thirty-seven operators and continue to give a good account of themselves in a variety of aircraft in all parts of the world.

The activities of Bristol Aero-Engines Limited include, too, the operation of aero engine repair shops at the Company's Whitchurch premises, a large and growing spare parts business and the maintenance of a world wide network of engineers' services. The experience gained over the years in backing Bristol piston-engines in transport aircraft throughout the world is proving an invaluable basis for the support of the airlines who have selected Bristol gas turbines.

BRISTOL CARS LIMITED

The current model of the Bristol 2-litre car has made many friends for itself in the specialised field with which this Company is concerned, but the restriction of credit at home and abroad and the rationing of petrol affected sales, and output was accordingly curtailed. Your Board does not feel that the time is ripe for any large-scale development in this direction and the facilities of the company have been increasingly utilised on work for other companies in the group.

ROTOL LIMITED

Rotol Limited and its subsidiary British Messier Limited, had a successful year's trading, and there are good prospects for an increase in turnover this year.

SHORT BROTHERS AND HARLAND LIMITED

Although your Company holds only a small percentage of the capital of this associated company the link between Bristol and Belfast is of great importance to us and we look to Short Brothers and Harland, Limited, for a large part of the Britannia programme. The trading profit for the last financial year was affected by changes in defence orders and so far the rate of return on our investment in the Company has not been as satisfactory as we could wish. We hope, however, to see its excellent facilities and the abilities of its management and workforce turned to fuller account in the years ahead.

Europe.—In France, SECA and, in Spain, TABSA, our associated companies, have made satisfactory progress—the former having considerably expanded its sales during the year thus justifying the increase in capital to which I referred in my report last year.

Canada.—The Canadian group of Companies, with plants in Montreal, Winnipeg and Vancouver, has again made a valuable contribution to our turnover and profits. Prospects of work ahead are encouraging, but in Canada as elsewhere there are inescapable requirements for additional funds, both for plant and for working capital: the Vancouver plant is being adapted to provide for the overhaul of Proteus gas turbines which will soon be in service with Canadian Pacific Airlines and the Winnipeg plant is being adapted and extended to meet the overhaul programmes of the RCAF and to carry out manufacturing subcontracts.

Latin America.—The Mexican subsidiary of our Canadian group, the formation of which we reported to you last year, is making steady progress and should commence engine overhauls in its new factory later this year.

United States.—The successful completion of negotiations with Northeast Airlines for the sale to them of Britannia aircraft and the active pursuit of further business in the United States have led us to establish a further overseas subsidiary under the title The Bristol Aeroplane Company (USA) Incorporated with the object of representing the Bristol group in the USA, promoting sales of Bristol products and ensuring first-class after-sales service.

Australia and New Zealand.—In Australia activity was again limited by the scale of the market and by an outlook on the part of our customers, both military and civil, which favours American equipment. Despite our best efforts to persuade them to buy Britannias the leading Australian overseas airline decided to place orders for further American aircraft, whilst on the military side the Prime Minister of Australia has recently declared his Government's policy to standardise the Australian forces largely on American equipment.

Our subsidiary company in New Zealand representing our own Group and other British aircraft interests is operating satisfactorily.

GENERAL REVIEW

Against this background of a year of great activity but at a time of change for the aircraft industry it is important not only to report on the past but also to consider the future. The state of the British economy, the need for cost stability, changes in Defence Policy, technical developments in aviation—both civil and military, the immense scale and competitive power of the American industry, the emergence of the European common market—all these are factors of major importance which must profoundly influence the judgment of anyone considering the prospects of your Company.

With regard to defence policy, I believe we can claim that our engineers had recognised correctly and in good time the changes that have been forced upon this country by the hydrogen bomb and by the development of the means of delivering it, in that we have concentrated upon three major needs, viz.: providing power for the delivery of the deterrent (Olympus engines for the Vulcan Bomber); providing the defence of the bases from which the deterrent is launched (surface-to-air missiles); and providing a long range heavy load carrying transport force (Britannias with their Proteus gas-turbine engines). We have thus undertaken a role of the greatest importance and value to the defence of this country and to the primary object of policy, the prevention of war.

With regard to commercial air transport our immediate hopes are concentrated upon the success of the Britannia. We are all well aware of its importance both to your Company and to the prestige and the export trade of this country. As is not unusual in this exacting branch of engineering its development has taken longer and its cost has been greater than we had intended. Some part of this cost has been carried by the Government (and will in due course be recovered by the Government in the levy on sales which we pay to the Ministry of Supply), but our own share is an outlay of several million pounds which will not be fully recovered until over 100 aircraft have been sold at satisfactory prices. Orders so far received total 70, and we hope that this number will steadily increase as the practical evidence of Britannia's qualities becomes apparent from BOAC's operations.

Looking ahead, it is evident that the number of new aircraft projects undertaken in this country will be fewer, the competition to secure them will be keener, and the proportion of business related to civil and military transport, as distinct from combat types, will be greater than in the past. We believe that we are well placed to secure a good share of such work and to carry it out effectively. Speculation on the extent to which we can hope to be successful raises the general issue whether the aircraft and aero engine industry of this country can compete with that of the USA, as long as the latter has the backing of a massive volume of Government business and a scale of sponsored research and development which this country, weighed down with the cost of past wars and today's social services, finds too expensive. If brains and skill and application to the task are the decisive factors we shall not disappoint you.

But in many ways the most worrying factor affecting our prospects is this country's continuing failure to achieve reasonable stability in costs. It is worrying to industry because inflation is outside the control of any single industrial undertaking, especially one concerned with an end-product, and in recent months it seems once again to have proved to be beyond the control even of a Government which had the intention of curbing it. It is worrying too because it is so closely linked with the stability of our labour relations: in so many other aspects of industrial relations wise and progressive policies are being jointly pursued with much success, but when the question of wage rates is mentioned, wisdom and progress give way to pressure for annual increases irrespective of productive efficiency or the effect upon the real value of money. These wage demands have now become a chronic disease of the economy, and no remedy has yet been found which the patient is willing to accept and adopt. Yet it is no longer possible to treat such demands with sympathy as though they were the result of price increases, when it is openly acknowledged that claims are put forward in anticipation of price increases to be expected later on. It cannot be too often repeated that the overseas buyer upon whom we all depend for our standard of living is only interested in quality, price and delivery date—not in the domestic problems of the British economy. Whilst a national wages policy may be disagreeable and difficult the present display of unenlightened sectional self-interest is foolish and short-sighted, and totally removed from the objectives of thrift, saving and increased productive investment which the country needs so urgently.

It is greatly to be hoped that, recent events having pointed to the necessity for change, fresh efforts can now be made to develop and adopt new methods and procedures, both nationally and within the engineering industry itself, for the settlement of wage differences; but however excellent the procedure, it will be the attitude of mind and the sense of responsibility displayed by all concerned which will decide whether we can as a nation grasp the opportunity of industrial progress which scientific developments have made possible, and which in a competitive world we cannot afford to lose.

THE UNITED SCOTTISH INSURANCE COMPANY

The annual general meeting of The United Scottish Insurance Company Limited was held on May 15th in Aberdeen, Mr R. H. McLeod (the chairman) presiding.

The following is an extract from his circulated statement:

The accounts show an over-all increase in premia but losses have been frequent and heavy.

Fire and Accident Premia increased from £525,333 to £567,887. In both Departments results have deteriorated although the Fire Department continues to produce a profit; after providing £17,022 for additional reserve, a loss of £17,256 has been transferred from Profit and Loss.

The Marine Account, for the first time, includes Aviation business. Premiums have benefited by the inclusion, despite which there is an over-all decrease of £16,981 compared with the previous year. The 1954 Account has liquidated favourably and the sum of £12,500 has been transferred to Profit and Loss Account.

In the Profit and Loss Account your Board recommend that £5,000 be transferred to Investment and Contingencies Reserve; that the dividend on the Ordinary Shares be maintained at the rate of 10 per cent and that £50,905 be carried forward.

Balance Sheet.—The Investment and Contingencies Reserve has been reduced by £1,821. This is due to a loss of exchange on Foreign Currency which has been realised during the year and to a small loss on the sale of certain Securities.

The extension of the Company's business mentioned in the last report continues to receive special attention and will, I am sure, well repay this in the future.

The report and accounts were adopted.

THE LITTLEWOODS ORGANISATION

MR JOHN MOORES ON 'CREDIT SQUEEZE'

THE GROUP'S PROGRESS MAINTAINED

1956/7 has been an important year for us. On the one hand the effects of the credit squeeze, to which I shall refer in more detail later on, have slowed down the expansion of some parts of our business. On the other hand, we have carried through certain reorganisation which will, I am convinced, prove of the utmost benefit during the coming year. Perhaps I would best describe the past twelve months as a period of consolidation. Nevertheless, our gross turnover, irrespective of Pools, has increased by over 6 per cent and now stands at £48 million per annum, against £45 million per annum for 1955/6.

LITTLEWOODS POOLS LIMITED

As is our legal obligation laid down in the Pools Betting Act of 1954, we published our Accounts on August 31, 1956.

The now very recognisable cycle caused by rising material and labour costs is very naturally reflected in an operation which employs many thousands of men and women and a very considerable quantity of materials of which paper forms a very large part; therefore, due to circumstances beyond our control, the costs of running the Pools have slightly increased.

However, the Executives of the Pools are continually investigating new methods for increasing efficiency with what must be subsequent economies. The efforts over the years have proved their considerable success, because our average operating costs have been and still are lower than any other Pool in this country.

It is our constant endeavour to see that we return to our successful investors, after the statutory deduction of the Pools Betting Tax of 30 per cent, the greatest possible amount of the total money invested in the Pool, and everyone in the Organisation is conscious of this, our No. 1 precept.

In my last report, I mentioned the attention we paid to the well-being of those who win large sums of money on Littlewoods Pools. I think it must be of considerable interest to financial people, Economists and Sociologists to know that our careful records of investigation prove that in a very high percentage of the cases of the big dividend winners, after supplying the requirements of the family, paying off the house mortgage, the acquisition of a small car, they invariably devote the rest of their money to investment in Government Savings, Gilt Edge Securities and other sound propositions yielding them attractive regular incomes without dispersing the bulk of their capital, which is devoted to the furtherance of the country's Industrial and Economic progress.

MAIL ORDER STORES

I am happy to report that our Mail Order business continues to prosper. We founded it in 1932 as a cash club business, and it has developed along the lines laid down at the start, growing steadily on a pattern profitable to our public and ourselves. In the past year our Organisers who collect both orders and cash and then forward them to us, have found that more and more their customers want their goods quickly. We have helped organisers to meet this need by encouraging them to deposit money with us at 5 per cent interest, in return for our allowing them to take goods in advance of payment, in proportion to the value of their deposits. The response has been extraordinary. The idea was welcomed as a real contribution enabling Organisers to serve their members better and to do better business for themselves. Many people have asked why we had not started this system before. We had to reply, I admit it, that we just did not think of it.

This system is now a success and deservedly so For our part we are proud that people are prepared to deposit money with us, and, from a purely objective point of view, we are satisfied that by relating the value of the goods forwarded to the amount of money deposited, we have a sufficiently tight control to enable us to prevent this unique trading device from being inflationary to any extent

One of the problems in retail selling, whether it be by Mail Order or in Stores, is keeping adequate but not swollen stocks, and being in the position to supply by return any one of the tens of thousands of items on our list but at the same time never being overstocked.

We pride ourselves that we do this reasonably efficiently, but we have always sought ways and means of utilising the tremendous statistical information at our disposal. But so far this has been extremely difficult, if not impossible, because of the time it would have taken.

Now, with the application of electronics to commercial work, we think we can see the answer to this problem, and have ordered an electronic computer which will cost us around £80,000. In doing this our objective is not to dispense with labour, but to achieve a more efficient stockkeeping by taking advantage of this most up-to-date scientific device, and whilst we are proud to be leaders in the field of applying electronics to retail business, we are much prouder that we shall be able to improve our service to our customers.

CHAIN STORES

The main points to be noted as marking progress over the last year are the improved standards of styling we have introduced into our clothing ranges, both for men and women; and the considerable increase of the sale of food in the Stores.

No one can sell clothes successfully today without a high degree of fashion awareness. We have always known this; but we also know that just to accept this axiom without making an all-out effort to put it into practice merely breeds that most dangerous attitude, complacency. And so, over the past year we have not hesitated to integrate many of our people who are not engaged in the Buying Departments into the vital discussions which contribute to the completing of a successful range of fashion merchandise. For we have come to believe that the opinions of the girls and women working in the Littlewoods Organisation can, when properly analysed and weighted, materially assist our buyers and the top management in determining which aspects of the latest fashion trends will really mean something to our customers, and which are ephemeral and will have no lasting appeal.

As for food, we have developed this side of our Chain Store business as a direct result of an increased demand by our customers. As soon as we introduced food into the Stores, just after the war, we found that it had an exceptionally ready sale. By constantly stepping up our standards of hygiene and presentation, and steadily increasing the range of products for sale—we have recently introduced complete butchery departments into four of our major stores—we can now say without fear of contradiction that Littlewoods Stores sell a larger proportion of food, fresh as well as canned, than any other competing chain.

THE CREDIT SQUEEZE

We opened six new stores in 1956, but nevertheless I am bound to report that the credit squeeze has hindered extension of the Chain as a whole. Obviously this is a setback and means that our target of 12 new stores per annum has to be shelved for the time being.

What is so deplorable about it from the point of view of public interest is that because Littlewoods acquired many valuable sites before the restriction on credit came into force, many of these sites lie derelict today.

To quote an example, we purchased a site in Glasgow on which it was planned to erect a £1 million building. Littlewoods would have occupied the ground floor and basement, while a major Public Utility had agreed to occupy the rest of the building. A start was made, the basement was excavated, then came the Government's announcement about the restrictions on credit.

Thus, the situation now is that what could have been a valuable amenity in the third largest city in the United Kingdom is—quite literally—just a hole in the ground.

Again, we want to improve and extend our premises in Oxford Street, London. We have acquired an important site, almost derelict because of war damage, next door to our present store, and we were looking forward to putting up a magnificent building which would add greatly to the trading amenities of the most popular shopping street in Great Britain. But under the present circumstances we have had to stay our hand. The façade of Oxford Street continues to bear an unsightly scar; and our public, though continuing to support us loyally, must buy their goods in premises 20 years out of date.

Then there is the site at Kingston-on-Thames. This is a shopping area we believe ourselves particularly well suited to serve. A growing community, youthful, modern and forward-looking in the best sense of those words, is precisely the market to which Littlewoods chain stores are geared. The ever-increasing accent on fashion in our Clothing Departments, the continued high standards over the whole range of our merchandise are just those qualities that such men and women are looking for. But, for the moment, we find ourselves unable to provide them in Kingston because of the credit squeeze.

I have spoken in detail about these three sites; I could speak in equal detail of half a dozen more. The outlook may seem frustrating but I refuse to be depressed. I refuse to be depressed because I am convinced that our economy, as a whole, is a sound one; and that it is only a matter of time—and hard work—before we can take great new strides forward; and I also remind myself that during the whole trading life of Littlewoods Chain Stores there have only been four years when we were entirely free from restrictions on building—one year before the war, and three years since.

Nevertheless, we have built up our business progressively through what has been perhaps the most difficult trading period for a century. That proves that we are on the right lines, which is the main thing.

CENTRAL BUYING

Checked in one direction, we have continued to make improvements in our organisation. One of these is the establishment of Central Buying Office situated at Crosby near Liverpool.

Until quite recently we had two Buying Departments, one for our Mail Order business, the other for Chain Stores. There had grown up a tradition that buying for mail order was in some way a specialised art, differing from buying for sale over the counter. It is true, of course, that certain aspects of selling by mail order—the vast turnover in blankets and other household textiles for instance—are not reflected in Chain Store sales. But the fact remains that the prime object of all our buying is to provide the best possible goods at reasonable prices, and that the division between the two sides of our retail business was artificial. I believe that now we have set up the Central Buying Office, we are more efficiently organised. And I wish to take this opportunity to say a special word of thanks to our Buyers for the strenuous efforts they have made while the reorganisation has been taking place.

I also want to thank all those suppliers and manufacturers who have supported us so loyally durjng the year. We appreciate their wholehearted co-operation in the maintenance of the quality, finish and presentation which we require so that we can give an unconditional guarantee to our customers of complete satisfaction, or money refunded.

Similar thanks are due to the staffs in our own factory who have also served us well.

THE LABORATORY

To be able to sell quality merchandise one must have the most complete arrangements possible for testing and checking samples before bulk purchases are made. We have recently extended the Laboratory at Crosby which now covers more than 7,000 sq. ft. and from first to last has called for an investment of more than £50,000.

I would stress that the Laboratory has no concern as to the price of the samples submitted to it. It exists to provide standards and to see that merchandise complies with these standards. It is also the duty of the Laboratory to see that shipments are equal in quality to the samples. Finally new developments in fibres, textile finishes, electrical appliances, etc., have to be tested and checked. Liaison, therefore, has to be maintained with major research and development laboratories so that all new items can be considered long before the marketing stage is reached.

ANXIOUS TIMES

If I concentrate largely on domestic matters it is not that we are not acutely aware of the dangers of the world we live in.

All of us have been deeply disturbed by the revolt in Hungary, the Suez Canal crisis, and the strikes which threatened the shipbuilding and engineering industries. Engaged in the retail trade as we are, we might well have suffered grievously. But when we look at the situation in detail, the effect of these profound shocks to public confidence has not been nearly as great as might have been anticipated. I attribute this to two things. The first is that we offer exceptionally good value for money. In a difficult situation people who, after all, must continue to buy essentials will continue to support a concern where their money will, they know, be spent to the best advantage.

Littlewoods has made a feature in recent years of selling the very highest quality goods at reasonable prices. We believe that we have established a trading policy which is now well understood and appreciated, and that it will stand us in good stead in bad times as well as good.

PUBLIC SERVICE

As I said, the times we live through have not left us unmoved. During the Hungarian crisis, we were able to help by flying to Vienna a plane-load of clothing for the refugees who were pouring into Austria. And later, when the same unhappy people were in transit to America we were able to offer hospitality and rest to some hundreds as they passed through Liverpool. I am sure it was our duty to make this contribution. Large scale organisations such as ours have a responsibility to the whole community.

And where can this responsibility be better carried out than in the organisation's "home town"? That is why Littlewoods is actively co-operating with the Walker Art Gallery, here in Liverpool, in organising an art exhibition this Autumn which, by offering substantial prizes, will encourage the most forward-looking artists in the country to show their works on Merseyside.

ROAD SAFETY

I have said "the whole community." That has a national implication in one aspect of which we have been able to take a part. We have gone to considerable lengths to co-operate in road safety campaigns, both national and local. For instance, we have given various Road Safety awards and all our printed material now bears road safety slogans. Again, we have printed these slogans on all the bags used in our Chain Stores.

I should add this: when we first undertook this particular task, we were astounded at the simplicity of it. If other firms would do the same thing, we could all help to create and maintain a national conscience—today practically non-existent—that would effectively reduce the appalling annual total of road tragedies.

CONCLUSION

It remains for me to thank all our people for their hard work in the past 12 months and this I do very sincerely. I am very proud of the vast numbers of people we employ in our many enterprises, and I attach very great importance indeed to the many schemes we have for Training, Staff Welfare, Pensions, Sports activities, etc., etc., as I believe that a successful business must have a happy staff. In this connection, it is most gratifying that every year more and more members of the staff qualify for the gold watch we present for 25 years' unbroken service.

Not everything has gone right, as I have told you, but our trading philosophy of a fair deal for everyone has been maintained and calls for no modification. We look forward to the coming year with confidence, for I believe that we are better equipped to deal with the problems ahead than ever before.

TRAWLERS GRIMSBY BUILD FOR THE FUTURE

Fine New Fleet in spite of Soaring Costs and small margin of profit

The trading profits of the Group including income from investments were £452,445. This was £23,619 less than in the previous year, almost entirely due to violent increases in the price of coal and oil, amounting to £48,000.

Profits and Distribution of Profits

1956 will go down in the Company's books as a year of very bad weather, both at home (fruit and vegetables) and on the high seas.

On the credit side of our review it is noteworthy that our new trawlers played a substantial part in contributing to our profits.

The net profit of the Group is £113,761. After crediting tax provisions made in previous years and now no longer required amounting to £35,712, as against a similar item last year of £22,068, your Company has a net profit after taxation of £149,433, an increase of £12,272.

	£
Preference Dividend Takes ..	7,763
Ordinary Dividend 16% takes	57,500
Retained for Development ..	84,170

Trawler Building Programme

This year has seen further progress in the development of your Company.

During the period of the Accounts three new vessels were delivered: ST *Kelly* and ST *Stella Aquila* in March, 1956, and the MT *Ross Lion* in April, 1956. Since the close of the year three further vessels have been delivered: ST *Rodney* in January, 1957, the MT *Ross Tiger* in February, 1957, and the ST *Kipling* in March, 1957, whilst another three new vessels are due to arrive in Grimsby before December 31, 1957.

It will be seen that at September 30, 1956, a sum of £332,758 was outstanding under "Vessels and Cold Store under construction," a large sum to be totally unproductive.

Analysis of Turnover and Profits

One cannot but be impressed by the small margin of profit realised throughout the fishing industry, and this is again confirmed by the fact that for the year under review a net trading profit after tax of only £113,761 has been realised on a total turnover of £7,948,024, which gives a rate of profit of 3.4d. per £ sales.

Your Company's fishing fleet landed in the year under review 5,671,330 stones of fish. This realised £1,899,526 which after deducting expenses yielded a net profit after tax of only £46,660. This net profit is 6d. per £ sales and only .14d. per lb fish landed.

Our wholesale fish and poultry businesses trading at all the main fishing ports and large inland centres of population had a turnover of £5,637,340. The turnover in weight was 5,138,449 stones which resulted in a net profit after tax of £50,788, or 2.15d. per £ sales or .17d. per lb weight of fish sold.

Consumer Packs

Consumer packs of "SEASPARKLE" brand fish and "WESTWICK" brand fruit and vegetables are becoming increasingly available throughout the country where centres of distribution have been established.

Further progress has been made in the development of our packs of quick frozen fruit and vegetables at Westwick in Norfolk.

The new Cold Store referred to in my report last year, with a capacity of some 750 tons, is now in operation.

JAGUAR CARS LIMITED

SUCCESS OF NEW MODELS

SIR WILLIAM LYONS'S STATEMENT

The Twenty-third Annual General Meeting of Jaguar Cars Limited was held on May 9th at the registered office, Browns Lane, Coventry.

In his speech, which was circulated with the accounts, Sir William Lyons, the Chairman, said:

The year under review marked the return of the Industry to a buyers' market, and the introduction of the credit squeeze. These factors adversely affected our sales on the home market, and, in consequence, we did not achieve our planned programme, although our exports more than equalled their previous level. Nevertheless, we were able to maintain a full five-day week.

Our American Subsidiary, Jaguar Cars North American Corporation, has made most satisfactory progress, and has completed the considerable reorganisation which was commenced last year, covering the whole of the United States and Canada. Jaguar is now represented in the North American continent by over 300 efficient Sales and Service organisations, backed by heavily stocked Spares Supply Depots in New York, Los Angeles and Montreal. On the continent of Europe, our sales were more than twice as great as in any previous year. Unfortunately, many markets still remain closed to us, and the restriction on Australian imports has continued.

Whilst these aspects may be considered as satisfactory having regard to the circumstances, our profit margins, due to rising costs, have become dangerously low. Although our turnover is up on last year by one-third, the profit, except for some favourable tax adjustment, is approximately the same. The net profit does, in fact, amount to about 6d. in the £ on turnover, a very small sum indeed out of which to meet new wage awards. Last year I expressed our anxiety on the subject of increased costs and the danger they presented to the efforts we were making to preserve our selling prices at levels necessary for meeting world competition. Unfortunately, the gravity of the situation confronting our Industry is not understood by all, with the result that costs, already disproportionately heavy by reason of wage levels amongst the highest in the country, are continually being forced upwards by demands for even higher wages, which I sincerely believe many of our workpeople themselves realise is a danger to their future livelihood. I must make it clear that we do not criticise high wages. We desire our workpeople to enjoy the highest possible standard of living, but if wages price our goods out of the market the country must face a serious recession. Productivity, such a popular word today, may be the answer to increasing costs in the case of popular low-priced goods, but there is most certainly a limit to the target at which one can aim, without undue risk in the medium and higher-priced bracket products.

Referring to Accounts, it will be noted that the results show an increase on last year, although, as I have already stated, they do not reflect the substantial increase in turnover.

The expenditure on buildings, etc., has reference to the factory extensions mentioned in the Report last year.

Material purchases show a higher figure reflected in the larger amount for Stock-in-Trade and Work-in-Progress. Much of the latter is accounted for by shortage of shipping which resulted in accumulation of finished cars awaiting shipping space.

Taxation is still a dominant factor in the Accounts, but for this year is lower as a result of the benefits accruing from Investments and Capital Allowances in respect of the large purchases of plant and equipment made in recent years, also, although the planned expansion to which I have referred in the last two years has been completed, we have deemed it prudent, in view of the ever increasing need to maintain efficiency by taking advantage of the most up-to-date production plant and equipment, to provide a higher figure in the Reserve for Plant and Replacement than we did last year.

NEW MODELS

Introduced at the Earls Court Motor Exhibition last October, the new Jaguar Mark VIII Saloon is universally acknowledged to have set a standard of refinement and performance unmatched even by cars costing many times its price. A point of interest in connection with this car is that the demand for the automatic transmission model now far exceeds that for the orthodox manually operated gearbox model.

Following the introduction of the 2.4 litre model which has now become well established as an outstanding success, we have introduced the 3.4 litre model in response to an insistent demand from America for a car of this type. Large shipments have already been made to America where it has been so well received that we are confident it will prove to be a valuable addition to our range and a source of further dollar revenue.

Another new model which has created a considerable amount of interest and for which a demand has arisen in excess of conservative expectations is the Jaguar XKSS. This is a development of the world-famous Jaguar "D" type and is presented with full-width screen, folding hood, bumpers, luggage grid and all the appurtenances necessary for a comfortable sports car for normal road use.

Development work on other new models yet to come proceeds without interruption, and in such directions as will ensure that Jaguar cars will continue to remain in the forefront of design and performance.

INTERNATIONAL COMPETITIONS

Once again our cars demonstrated their superiority in the field of international motoring events by winning that most famous and gruelling of all sports car races, the Le Mans 24-Hour Grand Prix d'Endurance. This is the fourth time in six years that Jaguars have won this race, but on this most recent occasion added lustre was brought to Jaguar's success by reason of the fact that the race was won by a car privately owned and entered by a team of Scottish enthusiasts known as "Ecurie Ecosse." When two of the three works-entered Jaguars were put out of the race in the opening minutes due to a multiple crash, the privately owned Scottish Jaguar carried on to beat the best that British and foreign works entries could pit against them.

Prior to this fine victory the Jaguar works team had scored yet another outstanding success at the Rheims Grand Prix meeting where, in the 12-Hours Sports Car Race, they finished 1st, 2nd, 3rd and 4th, broke the course record and set up a new lap record at 118 mph.

At the Silverstone meeting, where, ever since its inception eight years ago, Jaguars have registered an unbroken chain of successes, the Touring Car Race was again won by Jaguar with a Mark VII Saloon. This was Jaguar's fifth annual successive victory in this particular event which was instituted five years ago.

In the International Production Car Races held at Spa in Belgium, Jaguar again won the Sports Car Race, setting up a new record at 115 mph. Special interest attached to an additional Jaguar success at this meeting, since the Production Touring Car Race was won by a 2.4 litre saloon, this being the first appearance of this model at an international race meeting.

WITHDRAWAL FROM RACING

At the close of the 1956 season, the Company announced that it would not take part with officially entered works cars in competition motoring events in 1957. This decision was made only after serious consideration and was due to the very heavy strain imposed by racing on the directorate and staff of our Engineering and Development Division. It has to be borne in mind that the primary function of this Division is to apply itself to the design and development of the Company's products. Any considerable absorption of its time and energy brought about by the additional and extraneous work of developing and preparing cars for use in a full programme of racing events throws an unreasonably heavy burden on the personnel concerned. That they have carried this burden for so long, and with such marked success, is an indication of the loyalty and enthusiasm which, I am proud to say, is characteristic of all who make up our organisation.

I am mindful of the immense amount of publicity and world prestige which our long record of success in international racing has brought to us, and also, I might be allowed to add with propriety, to our country. I hope that the occasion may arise in the future when we shall find ourselves able to re-enter the lists.

ROYAL VISIT

During the month of March, 1956, the Company was accorded the signal honour of a visit from Her Majesty The Queen and His Royal Highness Prince Philip. In the course of a detailed tour of inspection lasting for over two hours, Her Majesty and Prince Philip displayed the keenest interest in our methods of manufacture and were greeted in every department with spontaneous demonstrations of loyal affection.

THE FIRE

In February, 1957, public attention was again focused upon our Company but this time in unhappy circumstances, for on the night of February 12th a serious fire occurred which, but for the efforts of all the Fire Services and all others concerned in dealing with it, might have developed into a total disaster. The fire destroyed approximately one-quarter of the main factory block, the Despatch Shop, containing a large number of cars, the major part of the Assembly Lines and the Main Assembly Stores, the Saw Mill and a large portion of the Service Department. Fortunately no damage occurred to the valuable plant and machinery which we have installed at considerable cost in recent years. The details of the fire and many events arising out of it have been so widely reported that I feel it is unnecessary for me to elaborate further on them all. Nevertheless, there are certain aspects to which I would like to make special references. First I would like to reiterate my thanks to Her Majesty The Queen for her gracious telegram of sympathy and encouragement. Next, I would like to take this opportunity of offering my sincere thanks to the senders of the enormous number of messages of sympathy and offers of help which we have received. These came from every part of the country, from overseas, from people in every walk of life and from organisations both great and small inside and outside the Motor Industry. All of these messages, numbering many thousands, have demonstrated in a most striking manner the extremely high regard which is felt for this Company and have given us great encouragement in our work of recovery.

I would like to pay further tribute to the many who have helped us to move so rapidly along the road to this recovery. Throughout a critical period our workpeople, the apprentices and staff have displayed the very highest degree of loyal co-operation for which I tender my sincere appreciation. No less deserving of thanks are the outside contractor firms and their workpeople who worked night and day with so much vigour and determination in clearing away debris and effecting the considerable structural repairs necessary for enabling production to be resumed.

Finally, I would like to place on record my grateful thanks to our suppliers of material for the magnificent help they have given us in replacing losses and in ensuring continuity of supplies, and to the Insurance Companies and Assessors for their help.

In conclusion, I am glad to be able to report that our production has now been built up to the level of output at which we were running before the fire.

The retiring director, Mr W. M. Heynes, was re-elected.

The report and accounts were adopted.

AFRICAN AND EUROPEAN INVESTMENT COMPANY LIMITED

(Incorporated in the Union of South Africa)

RECORD PROFIT OF £1,235,000

OFS GOLD MINES' FURTHER PROGRESS

The following is an extract from the review by the chairman, Mr T. Coulter, which has been circulated with the annual report and accounts:

ACCOUNTS

For the first year since its inception in August, 1904, the company made a profit exceeding £1 million. The net profit for 1956 at £1,235,233 exceeded that earned during the previous year by £316,757. This is the more gratifying in view of the relatively small contribution to the total made by profits on share transactions when compared with previous years.

Income in the form of dividends and interest at £994,249 was £360,643 higher than in 1955. The substantial improvement in this item of revenue is, of course, principally due to increasing returns on the company's considerable investment in the Orange Free State goldfield and we can look forward to further improvements in our revenue from this source in the next few years. In addition, higher dividends were received from certain colliery interests.

After adding in the unappropriated profit brought forward of £252,026 an amount of £1,487,259 was available for appropriation. This was dealt with as follows:

Provision for taxation absorbed £78,500, the book value of shareholdings in subsidiary and other companies was reduced by £250,000, and an amount of £200,000 was transferred to general reserve.

The dividend on the ordinary capital was raised to 3s. 3d. per stock unit as compared with 2s. 6d. for the previous year. An unappropriated profit of £150,288 was carried to the balance sheet.

At December 31, 1956, shareholdings and other interests, apart from those in subsidiary companies, had a market value of £14,740,190, which was slightly in excess of the figure for the previous year. The book value of these assets was £8,030,600.

Loans to affiliated companies and others show a substantial reduction compared with the previous year, reflecting the provision of £500,000 which it was decided to make in respect of doubtful loans to certain companies.

Revenue reserve now stands at £3 million.

OFS GOLD MINING INDUSTRY

During 1956 a further impressive improvement was achieved in the overall operating results of the eleven mines currently producing in the Orange Free State. A total of 9,409,000 tons was milled and, at a grade of 6.732 dwt, 3,167,011 ounces of gold were recovered to give a working profit of £14,644,277, an increase of £5,651,488 over the previous year.

President Brand Gold Mining Company Limited distributed a total of 3s. 6d. per share and President Steyn Gold Mining Company Limited 1s. 9d. per share. The third company in which we have a large shareholding namely, Welkom Gold Mining Company Limited, has not yet reached the dividend paying stage but improved gold operating results and the start of uranium production hold promise for the future.

In addition, of course, considerable profits are being derived from the production of uranium oxide. During 1956, 1,802,629 lb of uranium oxide were recovered by Orange Free State producers and working profit from this source was £4,512,780—more than double the amount earned in the previous year. The current output of the four uranium plants in the Orange Free State is approximately 180,000 lb of uranium oxide per month, giving an estimated monthly working profit of £470,000.

There appears to be every prospect that the demand for uranium will continue after termination of the existing ten-year contracts. By that time the cost of the uranium plants will be fully amortised and loans raised through the Atomic Energy Board to finance the construction of the plants will be repaid. The producing companies should therefore be favourably placed in securing a participation in any future production programme for the sale of uranium from South Africa.

THE SOUTH AFRICAN COAL INDUSTRY

Following upon increases in the controlled price of Transvaal and Natal coal during 1955, the operating results of all collieries have shown an overdue improvement.

The internal consumption of coal continues to increase and the total sales output for 1956 at 35,569,818 tons was approximately 2,500,000 tons more than for the previous year and 5,500,000 tons more than 1954. Estimates indicate that demand will continue to increase steadily.

Profit Margins.—Increased recruiting costs and higher wages on the one hand reduce the already small margin of profit allowed to South African collieries and on the other hand, mechanisation, if undertaken to any significant extent, involves heavy capital expenditure on which no adequate return can be expected. Price increases are, of course, granted from time to time but in the nature of things only when they are overdue. It will therefore be appreciated that the benefits arising from increases granted for Transvaal and Natal coal in 1955 are already being reduced—and this despite continuous improvements in efficiencies.

Some pride can be taken in the fact that the industry can still operate profitably with pithead prices of the order of 10s. 9d. per ton in the Transvaal and 17s. per ton in Natal but the long-term problems created by narrow profit margins must be recognised and sympathetically treated by the Government and by Government departments. This means that the question of prices for bituminous or other coals must be considered not only against rising costs of labour, pneumoconiosis liabilities, equipment and other such factors but also against the financial demands which will be made on the industry if it is to meet its obligations to supply the country with ever-increasing quantities of coal.

Sales.—During the year 1956 the total sales of coal mined in the Union amounted to 35,569,818 tons, as compared with 33,065,650 tons in 1955. Collieries in which your company is directly or indirectly interested sold 14,182,093 sales tons, representing 40 per cent of the total.

Excluding coke produced by the South African Iron and Steel Industrial Corporation Limited, for its own purposes, the total Union output of coke in 1956 was 769,347 tons, of which a colliery in which your company is interested produced 502,964 tons equal to 65 per cent of the total.

BOWMAKER LIMITED

CHAIRMAN'S ADDRESS

The twenty-ninth annual general meeting of Bowmaker Limited was held on May 10th in London.

Sir Arthur Morse, CBE (the Chairman), who presided, said:

Ladies and gentlemen, in my Circular to you on February 5th I told you of your Directors' intention to defer the Annual General Meeting until after the proceedings involving the former Managing Director had been concluded.

It is a matter of the greatest regret to your Directors that a servant of the Company who, at the time he began his fraudulent actions, enjoyed the confidence of his colleagues and of many other men of business with whom he came in contact both within the Company and elsewhere, should have abused this confidence and his high office to such an extent that not only has he been convicted of the crimes with which he was charged, but has been sentenced to seven years' imprisonment.

Robertson was the senior whole-time executive of the Company and, as such, responsible for the carrying out of the policy formulated by the Board. He consulted me frequently in regard to the Company's activities and sought my advice, but, I believe like the Chairmen of other companies, I did not regard it as one of my duties to check the authenticity of the documents he produced or the accuracy of the statements he made to me. It is to be remembered that Robertson, who joined the Board in March, 1954, became Deputy Chairman in June of that year. He was appointed Managing Director in March, 1955, and during the time he was in office he did much that contributed to the prosperity of the Company, as you will have seen from the Balance Sheets of recent years.

When in 1956 his conduct was first questioned I asked our auditors to look into the matter but asked them to try to do so diplomatically in the Company's interests, and without causing embarrassment to Robertson. In due course the auditors reported to me that they were satisfied that the matter in question was in order, and letters were produced to confirm this. As we now know these letters were forgeries. However, some months later my attention was drawn to certain entries in our books and records, and in December 1956 our solicitors, after examining the evidence then produced to them, reported that such evidence revealed no irregularities but advised that having regard to the nature of the transactions as recorded in relation to the shares in Olds Discount Company Limited it would be desirable and proper that the auditors should make inquiries at the Bank about these transactions. Before such inquiries were made additional evidence became available as to the matters the subject of inquiry and our solicitors advised that the Fraud Squad at Scotland Yard should be informed. As a result Robertson was arrested on December 20, 1956.

Provision has been made out of this year's profits for the losses in which Robertson has involved the Company and whilst I do not think there is any prospect of recovering any significant amount from Robertson's assets we shall take whatever steps we are advised and consider appropriate to minimise the loss to the Company.

No Board of Directors is proof against its most senior executive who turns out to be a forger. Although it is easy to be wise after the event, and although a poor consolation, it is a fact that many men in prominent positions outside the Company were as completely deceived by Robertson as I was.

In the Accounts which have been circulated to Shareholders you will see that out of this year's profits a provision of £118,000 has been made in respect of the losses in which Robertson has involved the Company. I am satisfied that this figure represents the Company's maximum losses and it takes no account of any possible future recoveries. I would mention again, as advised in my Circular of February 5th, that the Directors considered it advisable to have an investigation made by the Auditors, of the Company's books and records from the end of the last financial year to December 19, 1956, on which date the former Managing Director was removed from office.

THE ACCOUNTS

I now turn to a review of the Accounts for the year.

It will be seen that the Group Profit before tax, but for the Special Provision to which I have referred, would have shown an increase of approximately £90,000. It cannot be said that all of this arose from increased business because, although revenue was higher than in the previous year, almost half of it resulted from transactions entered into in previous years. Our overdraft facilities were reduced in January, 1956, for reasons of Government policy, of which you are well aware, and of no less than seven Control Orders affecting our business during the year under review the one which had the greatest influence on our results was that of February, 1956, imposing a minimum deposit of 50 per cent on nearly all Hire Purchase Agreements. This resulted in a material fall in our purchases of all classes of merchandise except industrial plant and machinery; these factors also explain the decline under the headings of Debtors and Unearned charges in the Balance Sheet.

If you will refer to the Consolidated Profit and Loss Account you will see that, although the Profit for the year before tax is lower by £27,707, taxation thereon is higher than in the previous year. This is explained by the fact that the amount of £289,917 deducted for taxation was calculated on Profits including the amount of the Special Provision to which I have referred, pending clarification of the Company's liability for tax on that amount.

After deducting an amount of £35,566, which was the Profit retained by the Subsidiaries, Dividends and Profits Tax and other items, and adding the balance brought forward from last year, all of which are explained in the Accounts and Notes thereon, there remains the sum of £97,843, which has been carried forward as Unappropriated Profit. You will also have seen from the Accounts and the Notes thereon that an amount of £60,000 arising from the sale of shares of Bowmaker (Ireland) Limited, has been added to Capital Reserve.

In my Statement last year I referred to an unfortunate transaction in which we and other financial institutions were involved. The winding up of this affair has proved more complex than anticipated, and while proceedings against the offenders have been completed, there are civil actions still pending. The matter is in the hands of a receiver and a number of liquidators and I am afraid that completion of the matter may be prolonged. We have already received a considerable sum as our share of assets realised, and there is hope of more to come. However, we have considered it prudent in the circumstances to make full provision in our Accounts after taking into consideration an amount known to be due to us. Our share of any further recoveries will accrue to profits of future years. I should mention that throughout this whole affair we have worked in close consultation with the banks and with other Hire Purchase finance companies concerned.

OPERATING SUBSIDIARIES

As stated in the Report of the Directors, the profits earned by the operating Subsidiaries are considered satisfactory. The profit of Bowmaker (Plant) Limited was less than in the previous year but allocations of import licences for machines were delayed with the result that there were no sales of some models until after the close of the financial year. The main feature of our operations in the Republic of Ireland was the sale of 40 per cent of the shares in Bowmaker (Ireland) Limited to which I referred earlier.

Last year I referred to the possibility of extending our interests into overseas territories and you will have noted in the Report of the Directors already in your hands that a Company was registered in the name of Bowmaker (CA) (Pvt) Limited, at Salisbury, Southern Rhodesia, in May last year. The share capital is now held in equal proportions by the Hong Kong and Shanghai Banking Corporation, Messrs Tozer, Kemsley and Millbourn, Limited, and your Company.

Mr Hunt, whose appointment as a Director you are asked to confirm today, undertook to go out to Rhodesia and form this Company; indeed most of his time was spent out there during the period now under review and he has visited the Federation again during the current year. I would like to pay a warm tribute to the way in which Mr Hunt carried out this operation and the success so far attained is, to a great extent, due to the solid foundations he laid. Those whom he invited to join the Board and direct the affairs of the Company are gentlemen with wide knowledge and long experience in the Federation and whose services I am sure will be of great value to that Company.

PRESENT POSITION AND PROSPECTS

Due to the necessary postponement of this meeting until after the time when it is normally held I am able to say a little more than usual about the present position and prospects. Business in the early months of the current year continued at much the same rate as in the latter part of our last financial year, but I am pleased to tell you that with the easing of restrictions business has steadily increased from January onwards to a point at which we are making full and profitable use of our available resources.

I wish to thank our Bankers, other financial institutions and our numerous Depositors for their patient understanding and uninterrupted support and encouragement.

My thanks are also due to the management and staff for their loyal support and efficient service during the year covered by the Accounts now before you and in the months which followed.

YEOMAN CREDIT LIMITED

In conclusion, I wish to inform you about *definite steps which have been taken with a* view to strengthening the direction of your Company's affairs. Informal negotiations have taken place, and are now in an advanced stage, with this object in view, and with the simultaneous object of acquiring another company.

The company in question is Yeoman Credit Limited, which, in my opinion, since its inception a comparatively short time ago, has demonstrated its ability to expand its activities and increase its profitability. It is intended that the purchase consideration will take the form of an issue of a number of Ordinary 5s. shares of your Company in exchange for the transfer to your Company of all the shares of Yeoman Credit Limited at the date on which the terms of the transaction are finalised. When negotiations are concluded, it is proposed that Mr M. A. Colefax and Mr G. J. F. Samengo-Turner, the Chairman and Managing Director respectively of Yeoman Credit Limited, should join the Board of your Company and take an active interest in its affairs.

Ladies and Gentlemen, I now move that the Directors' Report and Statement of Accounts for the year ended October 31, 1956, be received, approved and adopted, and when the motion has been seconded, if any shareholder has any question to raise arising out of the Directors' Report and Statement of Accounts, that will be an appropriate time to do so.

The resolution was duly seconded and carried without dissent.

HAMBROS BANK LIMITED

EFFECT OF CREDIT RESTRICTION

MR. R. OLAF HAMBRO'S STATEMENT

The FORTY-FIFTH ANNUAL GENERAL MEETING of Hambros Bank Limited will be held on Thursday 6th June, 1957, at the offices of the Bank 41, Bishopsgate, London, E.C.2.

The following is the Statement of the Chairman, MR. R. OLAF HAMBRO, circulated with the Report and Accounts for the year to 31st March, 1957 :—

When I issued my statement with the Acounts of the Bank last year, I stated that, although we were doing our best to comply with the request of the authorities to restrict credit, in a business such as ours, where contracts for the sale of goods are made some time ahead it was impossible to do so during one year without serious inconvenience to our customers. The enclosed Accounts reveal that many of our customers have now been able to comply with our desires; this is shown in the decline of £5,080,700 in Acceptances and £212,053 in Loans and Advances.

MOVEMENT OF FUNDS

The drop in Deposits has no special significance; they fluctuate from day to day and the end of March is always a period when large payments and transfers of sterling are made on foreign account. The movement of funds was particularly evident this year, chiefly no doubt as a result of the unsettled industrial labour relations existing at that time.

Our holding of British Government securities has been brought into the Accounts in the same way as last year. These securities are all short- and medium-dated and are valued at or under cost and below their redemption prices. As stated last year, any difference between the market quotation and the valuation is more than covered by inner reserves.

The Profit and Loss Account shows a slight contraction, largely due to heavy taxation and increasing costs and does not reflect the gross earnings of the Bank which were maintained during the year. The Directors have decided to recommend an increase in the final dividend to 15 per cent, making 20 per cent for the year, and to transfer £175,000 against £200,000 last year, to the Contingency Reserves. In making this transfer the Directors are confident that, in view of the amount standing to the credit of the Contingency Reserves, any larger transfer this year would be unnecessary.

ACQUISITION OF MOCATTA & GOLDSMID

As announced in the Press, we have recently acquired the business of Messrs. Mocatta & Goldsmid, which has been formed into a limited company and is now a wholly-owned subsidiary of the Bank. We have always had an active Foreign Exchange Department and the facilities which we obtain through the ownership of a firm of bullion dealers fit in well with this. We hope to enlarge the business of both concerns.

During the year we have increased the ordinary capital of another subsidiary, Hambros Investment Trust Limited, from £1,250,000 to £1,750,000. This Trust gives the Bank a good return and the increased value of its investments over their cost constitutes a very considerable reserve for the shareholders of the Bank.

NEW OFFICES FOR HOLBORN

We have also acquired new offices in Charterhouse Street, with new and modern installation to accommodate our Holborn Branch, our diamond trading clients and our own diamond interests. The Building is situated opposite the new offices of the Diamond Corporation, the Chairman of which, Sir Ernest Oppenheimer, is also a Director of our Bank.

In conclusion I extend my thanks, and those of my colleagues on the Board, to the Officials and Staff of the Bank for their continued loyalty and support.

HAMBROS BANK LIMITED

Head Office: 41, Bishopsgate, E.C.2.

STATEMENT OF ACCOUNTS AT 31st MARCH, 1957

LIABILITIES

	£
Current, Deposit and other accounts	49,974,122
Acceptances	19,523,266
Paid up Capital	3,000,000
Reserve	3,000,000

ASSETS

Cash in Hand, at Bankers and at Call	21,097,627
Bills of Exchange	8,684,778
British Government Securities	8,341,024
Loans, Advances and Other Accounts	14,850,693
Investments in Subsidiaries	3,000,000
Liabilities of Customers for Acceptances	19,523,266

MAPLE & COMPANY LIMITED

BUOYANCY OF COMPANY'S BUSINESS

The sixty-seventh annual general meeting of Maple and Company Limited was held on May 9th in London, Mr H. Stanley Wharton, President of the Company, presiding.

The following is an extract from his circulated statement:

I would like to draw your particular attention to the increase in the Profit of the Group before taxation which is of the order of 12 per cent. There is thus a continuation of the upward trend which has been apparent in the Group's affairs over the past few years. This satisfactory outcome demonstrates the buoyancy of the business of your Company and its increased profitability is constantly becoming broader based, in that the actual number of customers is growing, as is the total volume of turnover. Simultaneously the size of the average individual purchase tends to decrease, whereas the proportion of Cash to Hire Purchase Sales has risen. All this in my judgment is healthy.

The policy of opening Branches and acquiring Provincial businesses over recent years is beginning to show real results and is being instrumental in spreading the profit earning capacity of the Maple Group. Your Company's substantial manufacturing and contracting interests have also played their important part in the overall result.

In the past year not only have we had greater costs in wages, salaries and general maintenance, but we have had, as we anticipated, a very heavy addition to the rates on all our Freehold and Leasehold properties amounting to over £30,000.

Rebuilding: During the year our War Damage rebuilding programme has proceeded and we anticipate having two further extensive Blocks open by the end of 1957.

NEW BRANCHES AND TRADING PROGRESS

Our new store in Bristol was duly opened on July 11, 1956, and we are very pleased with the volume of business being done there, and we look forward with confidence to the results of its first full twelve months of trading. In July, too, we opened our new Branch in The Headrow, Leeds, and we look forward here also to our first full year's trading results.

After reviewing the activities of the Subsidiary Companies, at home and overseas, the Chairman said: All our other Branches have generally maintained their trading figures.

Contracts: Our Contract Department and the Maple-Martyn Organisation have had a good year and have produced a further advance in sales; they have executed as usual, many important contracts both at home and abroad.

Overseas: Exports have expanded further. There is no doubt as to the national importance of this side of your business, and no effort has been, or indeed will be, spared to encourage our overseas sales.

Current Trading Position: The Turnover here and abroad, and also the number of visitors to our London Store have continued to expand. I am confident that, given reasonably stable conditions, your business should continue to prosper.

The report was adopted and the final dividend of 10 per cent, making a total of 12½ per cent for the year, was approved.

THE NORTHERN ASSURANCE COMPANY LIMITED

121st ANNUAL GENERAL MEETING

NEW LIFE BUSINESS AGAIN A RECORD

The one hundred and twenty-first Annual General Meeting of The Northern Assurance Company Limited will be held on June 6th in Aberdeen.

The following is an extract from the Statement by the Chairman, The Right Honourable Lord Glenconner, which has been circulated with the Report and Accounts:

At home we have made further progress in the reorganisation of our Group of Companies. This has been based on the two principles of standardisation of the terms and conditions of which we write business and the decentralisation of underwriting responsibility to Branch level. This has enabled us to carry through a policy of integrating and merging of certain Branch Offices of the individual Companies. New Group Branches of this type are already in full operation in Manchester and Glasgow and plans are in hand to extend this to all provincial centres in which we are represented. This reorganisation, together with the mechanisation of accounts, which is continuing, will enable us to handle the growing volume of business with increased efficiency and despatch.

Overseas we have opened an office to serve and develop the business which we transact in Brazil. In West Africa also the growth of our business since the war has been both rapid and considerable, and we have, therefore, opened another office at Dakar which will serve our agencies throughout French West Africa and the Belgian Congo.

CAPITAL REORGANISATION

A matter of exceptional importance during the past year was the reorganisation of the Company's share capital and the issue of 1,465,000 new ordinary shares of £1 each at a price of 52s. 6d. It is not necessary to recapitulate what has already been made known to you in the various documents which you have received in connection with this issue. This simplification of the Company's capital, which now consists of 6,151,610 £1 ordinary shares, is, of course, an essential part of the reorganisation of our business as a whole. The new funds, amounting to approximately £3,750,000, which have been made available, are necessary to finance further expansion both at home and overseas which we are now in a position to undertake.

In particular, new branch office accommodation at home must be provided, while overseas we are in need of new Chief Offices. In Sydney and in Salisbury plans have already been approved for the erection of important new buildings. An existing building has been purchased in Johannesburg and over the years to come similar steps will be taken in Melbourne and in Canada. Meanwhile, we have been able to invest these new funds at a satisfactory rate of interest.

LIFE DEPARTMENT

1956 will be remembered for the change in the law affecting the taxation treatment of several of the types of life policy which we issue. The most important change concerns deferred annuities issued to the self-employed to enable them to provide for their own retirement. The premiums on such policies now receive full relief from Income Tax and Surtax and we are able to accumulate our corresponding funds at a gross rate of interest. There has been considerable competition amongst Life offices to secure this new type of business, and we have taken special pains to explain the details of the new legislation to our agents during its passage through Parliament. We have also been successful in devising a contract which, while satisfying all the conditions laid down by law, gives policyholders the greatest measure of choice as to when their pensions should begin, and as to provision for widows' or dependents' pensions. I am glad to be able to tell you that in the first six months since we started transacting this business we have obtained an annual premium income amounting to over £500,000 from this source alone. The new legislation also makes it an attractive proposition to apply the proceeds of a maturing endowment assurance to the purchase of an annuity and we have, therefore, devised a special endowment assurance policy for providing pensions.

Excluding the deferred annuities to which reference has just been made, our Life business for the Group has continued to grow and new Life sums assured were again a record at £28,952,893, or an increase of 7½ per cent on the figure for 1955 which was also a record figure at that time. A contributory factory to this new business was a special scheme for educational assistance involving endowment assurances. This type of scheme is creating increasing interest and we have received a number of inquiries on the subject, which should help in the continued expansion of our Life business as a whole.

Our Life business in South and Central Africa has also continued to grow, so that we have now appointed an Actuary to give technical advice to our Chief Offices in Salisbury and Capetown.

FIRE AND ACCIDENT DEPARTMENTS

Our Fire and Accident premium incomes for the year 1956 amounted to £11,032,004 and £11,601,780 respectively. This combined total of £22,633,784 constitutes an increase of £2,596,116 or some 13 per cent on the corresponding figure for 1955. This is a substantial and a satisfactory advance. Unfortunately, however, adjustment of premium rates has not matched the deterioration of underwriting experience, particularly in the case of motor insurance, where a serious problem is the constant rise in the cost of repairs. In addition we are faced with a continuing increase in administrative costs due to the gradual fall in the value of money. Competition has been particularly severe in both America and Canada, where like other groups we have suffered adverse underwriting experience. As a result, profit in the Fire Branch for 1956 is only £63,726, whilst for Accident there has been a loss of £278,967. These figures have been reached after making our customary provision of 80 per cent of the premium income for unexpired risks.

MARINE DEPARTMENT

Turning to our Marine business, costs are still continuing to rise throughout the world and so far show no signs of becoming stabilised. As a result, however, of the deteriorating experience of the last few years there has been a hardening in the attitude of Marine insurers generally which has led to the adoption at the beginning of 1957 of a higher scale of penalties under the Joint Hull Understandings. The chief loss among the major casualties was that of the Italian liner *Andrea Doria*, which sank following a collision with the Swedish liner *Stockholm* in July. A loss of this magnitude is bound substantially to affect the accounts of the particular year to which it applies. The transfer from the Marine Account to the Profit and Loss Account for 1956 is £299,722, against £251,146 in 1955, and the fund shows an increase from £8,289,692 to £8,444,608.

PROFIT AND LOSS ACCOUNT

The transfers to Profit and Loss Account from the Fire, Accident and Marine Accounts total, therefore, only £84,481, compared with £390,139 in 1955. On the other hand, gross income from investments held in the shareholders' non-life funds has increased again—from £1,204,051 to £1,297,990, or from £705,003 to £762,312 after providing for British Income Tax. In addition there is a profit on exchange of £15,778, against a loss last year of £113,432, and the group's gross profit, including other items, amounts, therefore, to £1,437,737, against last year's figure of £1,524,625. Taxation at home and abroad, at £900,578, takes no less than 63 per cent of the gross profit, against 57 per cent last year, and the group's net profit thus shows a fall from £655,858 in 1955 to £537,159 for the year under review. Of this it is proposed to allocate £100,000 to Contingency Reserve.

An interim dividend of 10s. per share, less Income Tax, was paid in November, 1956, on the 401,661 issued ordinary shares, and a second interim dividend of 90 per cent, less Income Tax, equal to 18s. per share, less Income Tax, was paid on the same shares in May, 1957, making 28s. per share for the year. In accordance with the provisions of the Scheme of Arrangement a special dividend of 12 per cent, less Income Tax, was also paid in May, 1957, on the 502,500 ordinary shares held under conversion from the 67,000 preference shares. This payment was in addition to the fixed dividend on the preference shares for the half-year ending December 31, 1956. The total net cost of these dividends amounted to £375,345.

In conclusion, the book value of our Stock Exchange securities has shown a further increase from £48,244,539 to £52,554,498. According to the Actuaries Investment Index there has been a further substantial fall in market quotations during 1956 amounting to as much as 9 per cent on industrial equities of all classes, with much the same figure for Government securities, debentures and preference shares. I am glad to be able to say, however, that there is nevertheless a surplus in the total market value of our holdings compared with their book values.

NORTH BRITISH & MERCANTILE INSURANCE COMPANY LIMITED

ESSENTIALS FOR ECONOMIC STABILITY

LORD BRAND ON NEED FOR CONFIDENCE IN STERLING

The one hundred and forty-seventh nual General Meeting of the North British d Mercantile Insurance Company Limited as held on May 9th at the Registered Office the Company, 64 Princes Street, dinburgh.

The Right Honourable Lord Brand, CMG, CL (Chairman of the General Court of irectors), presided.

The Chairman said:

I have given in my statement, already irculated to the shareholders and published n the papers, full information with regard o the Company's results during the past ear. I shall supplement it only by a few additional remarks today.

First of all I should like to say how glad we are to have present with us today Mr W. L. Nolen. Mr Nolen, as our shareholders will know, is in charge of our highly important business in the United States. He has been since 1952 the Manager of the United States Branch of the North British and Mercantile and is also President of all our associated companies in that territory. Mr Nolen has our complete confidence. Mr Harman, in the Autumn of last year, spent some six weeks in the United States and Mr Nolen is now making a return visit in order to have further discussions with him, not only about matters in connection with our own business but also about the general situation relating to fire and casualty business in the United States which, as you are aware, has recently been causing concern not only to British but also to American companies. We must expect some ups and downs, more particularly in so developing, competitive and quickly moving an economy as that of the United States. I hope and expect the insurance world there will take measures which will before long bring about a very definite improvement. I feel sure that the shareholders will understand why, the circumstances being as they are, the Directors felt that it would be wiser to make no material change in the dividend.

APPOINTMENT OF A ROYAL COMMISSION

This country, as you know, has not recovered that secure and stable economic and financial position which is so greatly to be desired. I am glad the Government has appointed a Royal Commission to make a wide inquiry into this problem. I hope that the Commission's terms of reference as given by the Chancellor in his Budget Speech can be interpreted in such a way that it will not be precluded from commenting on economic matters lying rather outside the pure field of currency and banking. The Commission should be able, if it thinks fit, to draw attention to the ways in which unwise decisions in other fields can entirely frustrate the working out of even the wisest possible policies which the Bank of England can pursue in the monetary sphere.

"OUR FIRST AIM"

What our first aim should be is in essence a simple one. We must move away steadily from our present position of running into one crisis after another because we have not sufficient surplus on our balance of payments to meet all the demands of a capital nature that we make on it. Take, for instance, the year 1956. We had a surplus on our Current Balance, that is on our visible and invisible trade, of £233 million. This compares with a deficit on the year 1955 of £79 million. Therefore the year 1956 shows a remarkable improvement. The Balance of Payments White Paper puts our average net long-term investment abroad for the last four years at about £200 million a year and this is an essential first charge on our Current Surplus. That leaves, even with a Current Surplus like that of 1956, very little indeed either to meet repayments of sterling held by Commonwealth and foreign countries—and our Sterling Balances held by other countries amount to about £3,500 million—or to add to our gold and dollar reserves, which are now much too small. In fact in 1956, partly owing to withdrawals by foreign countries for political reasons, our reserves fell by almost £200 million, excluding our drawing upon the International Monetary Fund, and they are now lower than they have been for eight years.

REQUIREMENTS OF THE SITUATION

What is essential, if we are to get into a position where crises can be avoided, is that our policy shall be such as will enable us not only to have a sufficient surplus to make investments abroad but also enough to add steadily each year to our reserves, thus indicating to the world that we are steadily improving our position instead of fluctuating wildly up and down. It is only in this way that we can hope slowly to restore sterling to its old repute in the eyes of the world. Our debts are so large that confidence in our soundness as bankers is essential to our economic stability. Until the constant fear of withdrawals by nervous foreign depositors and creditors is removed we shall never escape from the danger of any long-term policy of expansion being sabotaged by the need to impose restrictive short-term expedients in order to prevent renewed flight of capital from this country.

To meet these requirements we want at least Mr Butler's £300 million surplus on our Current Balance and it would be nice to have Mr Gaitskell's £500 million if one only had some idea how he was going to get it. We are nowhere near these figures at present. We are therefore faced with the necessity either of increasing our production or reducing our internal demands whether for current or capital expenditure and whether by the community at large or by the Government, or both, and in consequence proportionately increasing our savings. But while our aim can be stated in simple terms, to achieve it is by no means a simple matter. Most modern industrial countries are suffering with us, from inflation and a continual rise of prices. There may be more than one cause but essentially it seems to me that a modern democracy aiming at absolutely full employment attempts to get more than a pint out of a pint pot.

Continuing serious inflation will, in the end, in my opinion, destroy a community's faith in its currency.

I make no apology for a brief reference to these all-important matters. I do so believing that the solvency of our country and the stability of sterling concern the shareholders of British Insurance Companies just as much as anyone else.

As you know this is my last appearance as Chairman of your Company. Having been a Director for 41 years it is, of course, a wrench to say goodbye to my colleagues, whether on the Board or in the Management, and to the shareholders. I am glad to say that a highly competent Chairman, Mr Cyril Kleinwort, will take my place. I wish him and our great Company all success in the future.

A shareholder asked that the Board of Directors should give consideration, at an early opportunity, to an increase in the rate of dividend.

On the motion of the Chairman, seconded by the Honourable Arthur O. Crichton, the Report and Accounts were approved and adopted.

Following the re-election of the Directors, extraordinary and ordinary, and the adoption of the resolution regarding the fees and expenses of the Auditors, Messrs. Lindsay, Jamieson and Haldane, CA, which was proposed by Mr Walter G. Scott and seconded by Mr J. H. Eddison, the proceedings terminated with a cordial vote of thanks to the Chairman and Directors, proposed by Mr Alexander Harrison, CBE, CA.

GEORGE MALLINSON AND SONS, LIMITED

SALES MAINTAINED

The twentieth annual general meeting of George Mallinson and Sons, Limited, was held on May 9th in London, Mr Dyson Mallinson (chairman) presiding.

The following is an extract from the chairman's circulated statement for the 52 weeks ended February 16, 1957:

The Accounts show a Nett Profit (after making full provision for Taxation) of £123,143, a decrease of £2,160 on the previous year.

The Plant and equipment has been maintained in good order, and we consider the depreciation written off is adequate.

Liquid Assets exceed Current Liabilities by £931,655 (an increase of £40,294), and the Directors recommend a Final Dividend of 30 per cent, making a total of 40 per cent for the year.

The extra depreciation we have allowed on the new machinery installed during the year has helped to reduce the Trading Profit, but owing to the value of wool having risen we have not been involved in any stock losses on raw materials.

Sales have been maintained at a high level, but shortage of labour is still our chief problem.

Production costs continue to rise, but we have orders on our books to ensure full time running for some months to come, and in the absence of any circumstances over which we have no control I feel we can look forward to a satisfactory result from the present year's operations.

We have appointed Mr James Harpin to be a Director. His long experience of the textile trade should prove to be a valuable asset.

I should like to take this opportunity of thanking all our Directors, Executives and Employees for another year of loyal and able service.

The report and accounts were adopted.

DE BEERS CONSOLIDATED MINES LTD.

(Incorporated in the Union of South Africa)

DEMAND FOR GEM DIAMONDS STILL EXCEEDS MINES' PRODUCTIVE CAPACITY

GROUP'S £80 MILLION INVESTMENTS OUTSIDE DIAMOND INDUSTRY

The following extracts are from the Statement by the Chairman, Sir Ernest Oppenheimer, DCL, which has been circulated with the annual report and accounts.

The Group Profit, after providing £9,167,065 for taxation, was £20,592,256. The net profit attributable to our Company was £18,145,649 (£18,616,909 in 1955).

The Consolidated Balance Sheet shows total assets of £153,300,344. In addition, the Group held a stock of diamonds valued at £5,747,175 on the basis of cost of production in the case of the Mining Companies and cost or market value, whichever was the lower, in the case of The Diamond Corporation, and a stock of Mining Stores and Materials valued at £1,526,929.

The Group has large financial reserves which, together with the £15 million capital resources of the marketing companies, not only provides a strong protection for the diamond trade, but also permits of the investment of substantial sums in other companies, to which I will now refer.

INVESTMENTS OUTSIDE THE DIAMOND INDUSTRY

Through substantial holdings in De Beers Industrial Corporation, Limited, and De Beers Investment Trust, Limited, the Group has very valuable investments in varied undertakings not connected with the diamond industry.

The principal interest of De Beers Industrial Corporation is its joint holding with Imperial Chemical Industries, Limited, of the equity share capital of African Explosives and Chemical Industries, Limited.

The latter Company is benefiting from the large capital expansion programme it embarked upon some years ago, and is undertaking further major extension schemes to keep pace with development in Southern Africa.

Our investment, which incidentally originated in 1898 when our Company established the first dynamite factory in the Union, will become increasingly valuable with the expansion of African Explosives and Chemical Industries. We take particular pride in this Company.

De Beers Investment Trust, Limited, continues to participate in the economic development of both the Union and the Rhodesias. Its interests range from investment in industrial concerns, in gold mines on the West Rand and in the Orange Free State, to coal, and to copper in the Rhodesias.

Income by way of dividends from these investments is steadily increasing and, in due course, De Beers Investment Trust will prove to be an important contributor to the revenue of our Company.

The value of non-diamond investments, including loans to concerns similarly unconnected with the diamond industry, plus the Group cash assets less liabilities totalled £83,070,538 (1955—£73,339,394).

DIAMOND RESEARCH LABORATORY

As it is 10 years since the establishment of the Diamond Research Laboratory I feel it is appropriate for me to outline the results so far achieved. The examination of recovery methods by the Laboratory has led to the use of totally new methods as well as the improvement of existing processes, not only by ourselves here in South Africa, but also by producers in the Belgian Congo, Angola, Tanganyika and West Africa.

Work done on the application of diamonds to industry has resulted in more efficient use of diamonds, and a consequent wider application of diamond tools. A method has been found of considerably extending the life of a diamond drill bit.

On the subject of research I should like to refer to the manufacture of synthetic diamonds announced last year by the General Electric Company. The scientists concerned must be congratulated on a striking scientific achievement.

It is too soon to make predictions as to where this achievement may lead. However, in the field of abrasives, it is apparent that further investigation is called for before the synthetic article can compete with the natural one, both as regards cost and quantity.

PROSPECTS OF THE DIAMOND TRADE

The diamond market enjoyed a record year, and the sustained heavy demand for gem diamonds continued in excess of the productive capacity of the diamond mining companies.

Since the beginning of 1957 the United States has ceased to stockpile industrial diamonds. There has also been a slight decline in sales of industrials.

In view of these two factors we must be prepared for smaller sales of industrials in 1957. However, taking everything into consideration I look to the future with much confidence.

THE SOCIETY OF INCORPORATED ACCOUNTANTS

The seventy-second annual general meeting of The Society of Incorporated Accountants was held on May 15 in London.

Sir Richard Yeabsley, CBE, FCA, FSAA, the President, presided and, in the course of his speech, said: This is indeed a momentous year for the Society, but the seventy-second annual report of the Council calls for little amplification. Our main preoccupation during 1956 was with the negotiations which resulted in the publication on December 20 last year of proposals to integrate the Society with the English, Scottish and Irish Institutes of Chartered Accountants. As you must all know, the Schemes of Integration have now been approved by each of the English, Scottish and Irish Institutes.

The alterations to the English Institute's Charter and Bye-laws and to the Scottish Institute's Bye-laws have been submitted to the Privy Council for approval. A further general meeting of the Irish Institute is to be held on May 30 to approve the alterations to the Bye-laws of that Institute, and thereafter these will be submitted for approval of the Government of the Republic of Ireland and of the Governor and Privy Council of Northern Ireland.

An extraordinary general meeting of the Society will be convened to be held on June 19 to approve of the Schemes.

That is all I have to say on matters referred to in the report, and I now propose to direct my remarks to certain developments in accounting which merit careful thought by members of the Society.

Referring to the vast changes in accounting techniques, the President said: Are we prepared for the great changes that have recently been introduced? I refer to electronic accounting and the use of computers. The machines are complicated but the fundamental features as to input, accumulation, storage and output are there. It is for us to understand what they can do, their advantages and their limitations. We must be prepared to play our part in the rapid developments that are now taking place. Opportunities are available for the study of electronic accounting and its implications. Let us take advantage of them and create others.

Another development in recent years is the growing demand for interim statements. This subject is not only one of growing importance but one on which the profession has yet to state a positive view. In my view there should be published significant figures at reasonably frequent intervals and not unduly delayed, and that such as are published should be the responsibility of the directors. However, we should do all we can to ensure that the appropriate figures are made available and available when they are wanted, but that those concerned are well aware of the purpose for which they are given and the inferences which can reasonably be drawn from them.

Other developments which the President discussed were the form of presentation of accounts and the exchange of information on manufacturing techniques and costs.

The report and account were adopted.

McINTYRE & SONS LIMITED

(Constructional Engineers)

NET PROFIT MAINTAINED

The fourth annual general meeting of McIntyre & Sons Limited was held on May 10 at The Waldorf Hotel, Aldwych, London, W.C., Lieutenant Colonel W. D Gibbs (chairman of the company) presiding.

The following is the Chairman's statement circulated with the report and accounts for the year ended December 31, 1956:

I am pleased to report that the increased Net Profit of your Company last year (£36,427) has been maintained and is shown at £38,360 for the year under review. Taxation absorbs the high figure of £20,581, so that the Net Profit after taxation comes out at about the same figure, viz., £17,779.

As already announced, it is proposed to recommend the payment of a dividend of 15 per cent less tax on the increased capital of £90,000 which is the same as last year's dividend of 15 per cent and bonus of 7½ per cent (both less tax) on the lower capital of £60,000.

COMPANY FULLY ENGAGED

Your Company was again fully engaged during the year and most contracts proved profitable on completion. The additional plant purchased justified the outlay so that further capital expenditure in this respect is being incurred during the current year.

It was hoped that steel would have been obtainable more promptly but this has not proved the case and one still has to look well ahead.

Your Company may have to relinquish a rented stockyard which it has used for over twenty years and is experiencing difficulty in obtaining suitable alternative accommodation so resources have to be conserved with a view to the purchase of a suitable site when found.

The recent strike adversely affected your Company but it is hoped that the final outcome will make for a better understanding, particularly as there are signs of fewer projects moving, due, no doubt, to the credit squeeze.

In conclusion, I again express my appreciation of the co-operation shown by my colleagues on the Board and by the staff and workpeople employed by your Company.

The report and accounts were adopted.

HUMPHREYS LIMITED

(Building and Civil Engineering Contractors)

LARGE ORDER BOOK BUT PROGRESS HAMPERED

The sixty-fifth annual general meeting of Humphreys Limited will be held on June 4th at Winchester House, Old Broad Street, London, E.C.2.

The following is an extract from the statement by the Chairman, Mr A. V. Bridgland, CBE, which has been circulated with the report and accounts:

Considering the difficulties encountered and the extra cost caused by slower output as the result of strikes the result shown is not unsatisfactory.

The Balance Sheet shows that current liabilities total £816,836 whilst current assets equal £1,149,925, giving a surplus of current assets over liabilities of £333,089, of which £103,420 is in cash.

Our South African contracting business has been a disappointment this year and has shown a small loss. The conditions surrounding this result have now been eliminated and during my recent visit to South Africa various changes were instituted which should prevent its recurrence. We have three main departments there, civil engineering, building and woodworking. Civil engineering is still expanding, but new buildings are almost at a standstill due to increased costs and low rents. Woodworking looks like making a very good return on capital this year.

As to the quarries, they are still earning good profits, but as I pointed out last year, we are under considerable political pressure to close them. To offset this and to make provision for increased demand for crushed stone, a new area is now being tested so that we can meet all contingencies.

PARENT COMPANY

We ourselves have still a large order book, but like all Companies operating here our progress is hampered by credit restrictions, strikes, restrictive practices, and Government interference. Probably no industry is so heavily handicapped as the building industry and our clients work under the greatest difficulty in starting new projects. The immense sums that are lost each year through delays in approving plans, obtaining necessary official approvals, and other forms of interference, coupled with labour troubles of all kinds, can only be conjectured but that they run into many millions is no exaggeration. Sooner or later a day of reckoning must come, and when it does the result could be astonishing.

Another matter to reckon with is our high taxation. Of course, this is mentioned by nearly every Chairman in his report, but one of the catastrophic results is the difficulty of holding trained technicians in this country. Only the most drastic economies by the Government and a reform of the present system of taxation will provide the incentive that is so necessary if we are to remain a country capable of meeting world competition.

You may ask what, therefore, are our prospects. On the basis of our national economy of today I think we are as well equipped as others to meet present difficulties. We have no reason to be afraid of our future if the Government stands firm in its efforts to improve our economy.

Finally, I want to thank the staff for their help in bringing the Company through another successful year.

POSITION IN BRIEF

	£
Earned profit before taxation ...	119,374

VINE PRODUCTS LIMITED

PEAK WINE SALES

At the thirty-first annual general meeting held on May 9th, Viscount Marchwood, chairman, in the course of his speech, said: Group sales of our British Wines in 1956 reached a new postwar peak. The increase in revenue so produced was, however, insufficient to meet the continually rising costs of our imported raw materials, bottling materials and freight charges.

Thus, in spite of stringent economies such as the adoption of lighter-weight cartons and the greater use of Depot facilities, we are faced with a reduction in profit before tax of £56,613. This figure is almost doubled after tax has been deducted. I would like to emphasise that 1955 was an exceptional year in that the accounts for that year were credited with the recovery of Excess Profits Tax amounting to £26,528 which had accumulated during postwar years.

Another difficulty encountered in 1956 was that a major customer, for whom one of our subsidiaries had produced Egg Flip and British Wine Cocktails since these products were first introduced, decided to go into production on their own account.

"FILLIP" AND "QUIZ"

We, therefore, resolved to market our own Egg Flip under the name "Fillip," and a range of British Wine Cocktails under the name "Quiz," selling at a lower retail price to the public and showing a larger margin of profit to the Trade. Although this venture did not commence until the latter part of the year, both have had a very good reception.

BritviC Fruit Juices have continued to enhance their reputation for quality and excellence and in spite of increased competition have easily been able to maintain their supremacy in this field. Meanwhile their Mineral Water subsidiaries are being successfully reorganised to the advantage of the Group as a whole.

COMMONWEALTH COMPETITION

One of the most significant developments during the past year has been the amount of money which the Wine Producing members of the Commonwealth have expended in this country to subsidise the advertising and promotion of their products. It is a matter of concern to your company and to other members of the British Wine Industry that the Government is prepared to tolerate a state of affairs in which the Commonwealth producer is enabled to produce a Blended Wine at a lower rate of Duty than the home producer with whom he is directly competing. It is to be hoped that this position will be remedied in the near future.

On February 1st of this year we reluctantly put up the price of our Low Strength Bottled Wines by 6d. a bottle to the consumer, the first increase we have made since 1947; even since that price increase, however, the cost of some of our basic raw materials has shown a further substantial advance.

With regard to the future, sales are being well maintained; the cost of outside finance should steadily decrease and constant attention is being given to effecting economies wherever possible and I have every confidence, therefore, that your company will continue to maintain its pre-eminent position in the Trade.

The report and accounts were adopted.

THE RIO TINTO COMPANY

BOARD'S POLICY OF DIVERSIFICATION

MR GERALD COKE ON EXPANSION OF INTERESTS

The eighty-fourth annual general meeting of The Rio Tinto Company, Limited, was held on May 15th in London.

Mr Gerald Coke (the Chairman) presided and, in the course of his speech, said:

Since the end of the year under review, your Company has acquired a further holding in The Rio Tinto Mining Company of Canada, which now gives it an interest of just over 50 per cent in that Company.

As I pointed out in my remarks last year, your Company's investments in the Rhodesian Copper Belt remain its principal source of income. The increase in the profit which is shown in the Accounts under review is almost entirely due to the increase in the dividends received from these investments. The dividends paid by your Company will continue to depend on this source of income during the period when the properties of our associated companies in the Commonwealth are coming into production and are engaged in repaying their prior charges.

WIDENING BASE OF OPERATIONS

As an active mining group it is indeed our business to explore for and develop mineral resources in any part of the world where such operations can be profitably carried out. Your Board feel that the greatest strength can be achieved for the Group by building its activities on a wide base—wide both in the geographical sense and in the types of minerals mined. We hope to achieve this strength mainly within the confines of the British Commonwealth with its greater security of working conditions and where our activities can bring the most benefit both to this country and to the Commonwealth as a whole. We aim, moreover, at building up, both for the parent company and for the principal company in each country in which a main base of activity is established, a portfolio of investments representing a spread over a range of different metals and minerals.

In order to widen still further the functional base of our operations, your Board have felt that the Group should have an interest in oil, which will give it a stake in a more traditional method of producing power, to balance our substantial interest in uranium. We have, therefore, made an offer to the shareholders of the Kern Oil Company, which we hope and believe will be accepted.

Moreover, it is our ultimate intention to invite local subscription to the share capital of the Group's main holding companies in Africa and Australia, as has already been done in Canada. We feel that it is to the benefit of those shareholders if the shares acquired by them represent interests and assets not only in their own country but in other parts of the world where the Group is operating.

A UNIQUE ACHIEVEMENT

Within the framework which I have outlined, each of our associated companies has been going ahead with the exploration or development of its properties. The Rio Tinto Mining Company of Canada is, of course, farthest advanced in this respect because of the eight uranium mines in the Blind River area which are managed by that company, three are already in production and the remainder will come into operation between July of this year and March 1958. This bare statement hardly does justice to an achievement which must surely be unique in the world of mining. The magnitude of the achievement can be appreciated when it is remembered that from the time when the first contracts for uranium were signed and when the Blind River area was still untouched woodland and lakes to the time when the first mine was in operation was only about twenty months; and it will be under three years by the time all eight mines are in production.

The speed and importance of this dramatic development in mining can be assessed when its relation to some of the other mineral products of Canada is stated. By 1958, for instance, uranium will become the metal of greatest gross value produced in Canada.

In Northern Rhodesia our exploration has continued, in association with other mining houses, at an intensified rate. In Southern Rhodesia our main concern has been with the Empress Nickel deposit. This deposit is a large mass of low-grade nickel/copper ore first discovered by Mrs M. M. J. Leslie. By the beginning of this year we had obtained sufficient knowledge of the deposit to decide to exercise our option to purchase the rights from Mrs Leslie and our task will now be to prove the extent of the deposit in order to ascertain whether sufficient ore exists to operate on a scale large enough to make the proposition an economic one.

In the Union of South Africa the principal matter engaging our attention is the Palabora copper deposit.

In Australia the principal activity of our Australian associates is the development of the Mary Kathleen mine. In this task they have been faced with a number of difficulties and problems, not least those arising from the location of the mine and the nature of the country in which it is situated. We know that the energy and spirit of the team in Australia will make light of all obstacles, and it is satisfactory to be able to report that the townsite is already nearly completed, though the mine is not expected to come into production before the end of next year.

QUESTION OF FINANCE

From this brief survey of the Group's principal undertakings in the Commonwealth it will be evident that requirements for further capital to develop promising mines will arise from time to time. In meeting these requirements it will be our policy to retain, in every case, management, even if not de jure, control of the undertaking and we shall always secure for the Group an interest of sufficient size to ensure this. There are some developments, notably the Empress Nickel mine and one or two of the properties of The Rio Tinto Mining Company of Canada, which we hope may in the near future turn out to be sufficiently profitable to bring to the stage of production. If this proves to be the case, I shall have some proposals to lay before you in due course in connection with the raising of the necessary capital.

The report was adopted, and the dividend of 15 per cent, free of tax, was approved.

AMALGAMATED BANKET AREAS, LIMITED

The twenty-first annual general meeting was held on May 14th in London.

Major-General W. W. Richards, CB, CBE, MC, Chairman, presided. The following is an extract from his circulated Statement: The year ended on September 30, 1956, proved one of the most difficult in the Company's postwar history. The Strike of African employees, which lasted from November 20, 1955, to February 27, 1956, cost the Company in direct maintenance charges the sum of £137,996. The net loss for the year of £206,000 was almost entirely due to the labour dispute, and in no way discredits the intrinsic value of the Company's undertaking and assets.

The Consulting Engineer's report contains a detailed appreciation of the Pepe Open-Cast area, and the factors which persuaded the Board to discontinue open-cast operations in August, 1956, and concentrate work in the future on the higher grade underground sections. This was a major policy decision, reached only after detailed investigation and sampling had convinced the Engineers that open-cast operations could no longer be conducted profitably.

We are now conducting development operations at an expenditure rate of £217,000 per annum, as compared with an average rate of £132,000 per annum for the past six years.

The total ore reserves at September 30, 1956, were computed at 1,568,706 tons, of an average value of 5.675 dwts per ton of a width of 40.19 inches. It is anticipated that the present high rate of development will henceforth add progressively to the reserves.

The report and accounts were adopted.

ADAMS PEAK TEA ESTATES LIMITED

The thirty-seventh annual general meeting of Adams Peak Tea Estates Limited was held yesterday in London, Sir Charles Miles, OBE (the Chairman), presiding.

The following is an extract from his circulated review:

The profit for the year ended December 31, 1956, after charging Depreciation, is £46,570, which compares with £25,753 for the previous year. Sales proceeds are up by some £26,000 despite the smaller crop produced, but upkeep expenditure shows a slight increase over 1955. The lower outturn is attributable to the drought which occurred early in 1956.

Your Board has decided to transfer £3,000 to General Reserve and £4,125 to Contingencies Reserve. We recommend a dividend of 25 per cent, less Income Tax, leaving £20,065 to be carried forward.

Our teas realised good prices and a very high standard was maintained. Since the turn of the year, however, values for all descriptions of tea have fallen by over 2s. per lb, and it is too early to say whether the decline in the market has been finally checked. At present, it seems probable that the results for the coming year will not be so favourable as were those for 1956.

In regard to the current year, crop to the end of March is 244,732 lb, an increase of 66,466 lb over the same period last year, but latest reports indicate that the April crop may be down, owing to near drought conditions now prevailing. Export duty still remains at 65 cents, or nearly 1s. per lb.

The report was adopted.

MINERALS SEPARATION, LIMITED

MR J. N. BUCHANAN'S STATEMENT

The Fifty-second Annual General Meeting of Minerals Separation, Limited, will be held on June 5th, at the Chartered Insurance Institute, 20, Aldermanbury, London, E.C.

The following is the Statement by the Chairman, Mr J. N. Buchanan, which has been circulated with the Report and Accounts for the year ended December 31, 1956.

In the autumn of 1956 Minerals Separation purchased further shares in Foundry Services (Holdings) and we thereby brought our holding in that Company up to 60 per cent. of the issued ordinary capital. Foundry Services (Holdings) thereupon became a subsidiary of our Company, and the Group Accounts now before you include the Foundry Services Group results, subject to the deduction of profits attributable to outside shareholders. This is the main cause of the substantial variation in the consolidated figures of our accounts as compared with last year. It is not, however, the whole reason for the satisfactory improvement in our profits. You will notice that our income from dividends rose from £279,000 to £326,000, partly due to higher dividends from Rhodesian and other investments, and partly also to a fuller return upon the moneys raised by the Debenture Issues made in 1954-55. A clearer comparison of the results of the year may perhaps be seen from the net figures. If a deduction is made of the sum attributable to outside shareholders and pre-acquisition profits, £49,000, from the balance of £305,000, there remains a figure of £256,000 to compare with £224,000 last year. It is to be noted, too, that tax provision this year takes £395,000 as against £230,000 last year.

The Group Balance Sheet similarly reflects changes, resulting from the grouping of Foundry Services, both in the premium paid on acquisition of the shares, and in the substantial increase in most of the items under Fixed and Current Assets and Current Liabilities.

When it is remembered that the Foundry Services Group is a world-wide organisation with wholly or partly owned subsidiaries in USA, Canada, South Africa, France, Germany, Italy and Austria, the amount of work that has been necessary to bring to completion these Accounts may be appreciated. Owing to the time lag that is inherent in the preparation and auditing of all those Companies' Accounts individually, and thereafter in the Group, it is probable that we shall have to present our fully audited accounts later than we have been accustomed to in the past. Moreover, we think it wiser to await such audited accounts before declaring our final dividend, which next year, therefore, will probably not be declared before May or June.

REVIEW OF INTERESTS

I will now refer to the following of our interests in detail.

We received increased dividends from all our Rhodesian holdings. These should be regarded as exceptional; owing to the fall in the price of Copper, we cannot expect dividends on a similar scale for the current year. Nevertheless, we look for a satisfactory return from our Rhodesian investments, which are all in well managed enterprises commanding our continued confidence.

Another successful and progressive year was experienced by the Foundry Services Group. In the UK turnover increased, although in common with many other manufacturers, increased costs have brought about some lowering of the profit margin. The new factory at Drayton Manor went into full production, and the "Opening Week" attracted nearly 1,000 visitors from our customers and others in foundry circles, who showed lively interest and expressed satisfaction at what they saw.

The overseas interests continued to expand. Subsidiary Companies in Canada, South Africa, France and Germany increased their turnovers and profits; in the latter two countries additional factory space is now required, and plans are being studied to meet this position. In Italy and Austria, where the pace was slower, progress continues. In Japan a new Company has been formed which began operating at the beginning of 1957, and the prospects are considered promising. Other countries have been visited, and further plans of expansion are continually under review.

As stated last year, it is in the USA that the greatest potential scope lies. Although the turnover for the year under review was doubled and an increased profit made, we have felt for some time that our future development in that country was not easy to guide and control by ourselves alone. After careful enquiry and detailed negotiations, we have in the last month made an agreement with Messrs. J. H. Whitney & Co. of New York whereby they will in effect join us as partners in our American enterprise. Under that agreement they have acquired from us a substantial minority interest in the shares of Foundry Services Inc. They will take an active part, not only on the Board of that Company, but also at the executive level in direction and planning. We warmly welcome this association, which greatly strengthens our whole position in that field.

J. W. Jackman & Co. Ltd. had a good year with a record output and a good profit margin. The work in progress at the end of the year stood at a high figure and the value of orders on hand was also satisfactory. A new bay and new heavy machine tools were brought into operation during the latter part of the year. The first of the orders for large moulding machines mentioned in this report last year was delivered and other machines new to this country were also successfully introduced during the year.

The over-all position of the Howard Pottery Group did not improve during the year, and there was a small loss on the year's Accounts. Although, as a result of the writing down we have made in the last two years our financial interest at stake in the Group is now small, we are naturally anxious to restore the trading position. It will be remembered that the original owner and controller of the Group, mainly responsible for building up its earlier prosperity, was Mr D. K. Bailey, who, after we acquired control in 1947, continued as Managing Director until his resignation in 1954.

During the year, your Directors decided to invite Mr Bailey to resume his control, and I am pleased to report that this invitation was accepted, and he rejoined the Howard Pottery Group in December. We welcome his return. It must be appreciated that he has a difficult task of re-organisation before him, but both he and we are hopeful that better results will follow in due course.

Finally, our thanks are most sincerely tendered to all those in our Group who, by their loyalty, intelligence and work, have contributed to the results put before you this year.

ALLIANCE ASSURANCE COMPANY, LIMITED

Extract from the Review of the Report and Accounts for the year 1956 by the Chairman, Mr T. D. Barclay

The business continued to expand, the total premiums in the Fire, Accident and Marine Departments having increased by approximately 8½ per cent from £15,629,620 to £16,963,793. The total underwriting surplus from these three Departments was £1,107,234 as compared with £1,642,058.

LIFE DEPARTMENT

The net new sums assured completed during the year amounted to £11,273,090 compared with £10,240,898 in the previous year. This increase of about 10 per cent is in line with that achieved by the Life Offices as a whole.

During the year the Life and Annuity Funds increased from £32,468,433 to £34,473,889.

FIRE DEPARTMENT

The net premiums rose from £6,812,777 to £7,293,974 and the claims from £2,519,083 to £3,348,179. It will be seen that the increase in the claims was nearly double that in the premiums and, in consequence, the underwriting surplus carried to the Profit and Loss Account was approximately £550,000 less at £314,984.

The business both at home and abroad continued to expand and the overall increase in premiums of about 6 per cent can be counted as satisfactory in the light of the very competitive conditions now obtaining.

MARINE DEPARTMENT

The net premium income shows a small reduction at £2,137,712 as compared with £2,170,140 in 1955.

The Underwriting Account for 1954 has now been closed with a balance of £426,216. Of this amount £195,751 was required to settle claims arising from previous years' accounts leaving £230,465 available for transfer to the Profit and Loss Account. This compares with £231,445 in 1955.

ACCIDENT DEPARTMENT

The net premiums in the Accident Department amounted to £7,532,107 as against £6,646,703 in 1955. The claims amounted to £3,632,142 as against £3,170,543 and the surplus carried to the Profit and Loss Account shows an increase of about £20,000 at £561,785.

The increase of £885,404 in the premium income, representing over 13 per cent, is remarkable even for this Department which has been expanding very rapidly for some years. Perhaps it is too much to hope that expansion will continue at this rate but I believe the prospects are still bright.

The Motor Account has again shown a loss, though less than that for 1955. At home the year opened badly and much worse results were only avoided by the most stringent underwriting policy aided by a comparatively mild winter and the restriction of motoring caused by petrol rationing.

TRUSTEE DEPARTMENT

The total fees received during 1956 amounted to £28,115, which represents a small increase over the previous year.

INVESTMENT DEPARTMENT

There was a further substantial fall during 1956 in the market prices of Stock Exchange Securities, in consequence of which the portfolio of the Alliance Life and Annuity Funds showed an excess of Book Values over Market Values by an amount of rather less than 2½ per cent of the total assets of the funds. It is noteworthy, however, that this depreciation was entirely eliminated by the general recovery which was experienced within the first few weeks of 1957; of more permanent importance is the very large ultimate increment which the investments in definitely redeemable stocks, which form a very large part of the whole, will show on maturity.

The average gross income yield on the whole Fund (ignoring increments on redemption) rose from £4 18s. 5d. per cent to £5 1s. per cent.

In the case of the Members' Funds it will be seen that the securities held by certain Subsidiaries were written down by the transfer of £78,458 from Profit and Loss Account; the favourable margin between the Book and Market Values at December 31st for the Group was, however, still substantial. The gross investment income on the Members' Funds rose in 1956 by some £87,000 to £1,120,938 and has thus nearly doubled since 1948.

PROFIT AND LOSS ACCOUNT

The profit of the Group, after making provision for taxation and other outgoings, amounted to £1,224,201 as compared with £1,458,625 in 1955.

As you are aware, the Board has decided to declare a dividend for the year at the rate of 3s. 9d. per share, less Income Tax. This compares with 3s. 6d. in the previous year.

TELEGRAPH CONSTRUCTION & MAINTENANCE

INCREASED TURNOVER

The ninety-third annual general meeting of The Telegraph Construction and Maintenance Company Limited was held on May 16th in London, Sir John Dean, BSc, ARIC, FIRI (Chairman and Chief Executive) presiding.

The following are extracts from the Chairman's circulated statement for 1956:

The earnings of the Group have fallen only slightly below the 1955 figure and the Group Profit before taxation shows a decline of 7½ per cent as compared with the 1955 figure, despite an increase in turnover amounting to 14 per cent. The directors have recommended a final dividend of 3¼ per cent and a cash bonus of 1 per cent on the Ordinary shares, as in 1955.

With the sole exception of the Cables Group, all sections of the company have operated in a highly satisfactory and profitable manner during the year.

Once again we start the year with a very satisfactory order book and look forward to further increases in our turnover so long as crises, which always seem to loom ahead, do not seriously interfere with our production programmes.

The outstanding event of 1956 was the successful completion of the manufacture of 92 per cent of the cable required for the first trans-Atlantic telephone cable system which was inaugurated in September last.

The report and accounts were adopted.

CRUSADER INSURANCE COMPANY LIMITED

MR HARVEY BOWRING'S STATEMENT

In his annual statement, the Chairman of the Crusader Insurance Company Limited, Mr Harvey Bowring, stated that in 1956 *new Life sums assured, other than Group,* amounted to a record £3,552,490. Reversionary bonuses of 47s. and 40s. per £100 assured on "With Profits" Whole Life and Endowment Assurances respectively, were declared for the year to December 31, 1956.

During the past year the Company had introduced a Deferred Annuity contract for controlling directors, self-employed persons and non-pensionable employees, a comprehensive scheme with a wide measure of flexibility. An applicant did not need to decide in advance on what date he wished to retire, or the guaranteed period of the annuity which besides being eligible for bonus additions each year during the premium paying term, would attract a final bonus at the time it vested, a valuable feature likely to have a material effect on the rate of pension payable.

Net premium income in the Fire branch was £151,238, £35,966 over 1955. Sickness and Accident and miscellaneous business included weekly premiums of £363,021. The installation of 62 Group Life and Pension Plans and 38 Group Sickness and Accident Plans brought the number of Group Plans in operation to 670. The results were proof indeed of the energy and enthusiasm shown by the staff in their work.

CROSSE & BLACKWELL (HOLDINGS) LIMITED

The annual general meeting of Crosse & Blackwell (Holdings) Limited was held on May 15th in London, Mr H. L. Roy Matthews, CBE, the chairman, presiding.

The following is an extract from his circulated statement: The total sales increased substantially and constitute a record for the Company. This advance in sales was reflected both in the home and export trade, but the improvement was proportionately greater at home than abroad.

The increase in sales is distributed over our various trading companies in the Group, but particularly satisfactory advances can be recorded both in regard to the Crosse & Blackwell and Tobler products. As regards the Keiller Company difficulties in the marmalade and preserves market still persist.

The trading profit has increased to £1,265,962 and the net profit to £543,633.

As has already been announced your Directors propose to issue additional capital to the extent of 450,000 Ordinary Shares. These shares are being offered to Stockholders on a basis of one in five at a price of 30s per share.

It is proposed to use the fresh money by still further modernising the Company's existing plant to enable actual and potential sales demand to be fully met. Furthermore, it is intended to develop certain new lines.

Increasing costs, both as regards wages and raw materials remain with us and it is inevitable that the price of certain of our products must increase in common with those of our competitors. The report and accounts were adopted, and a total dividend of 12½ per cent for the year was approved.

THE PYRENE COMPANY

LARGER TURNOVER

The forty-third annual general meeting of The Pyrene Company Limited will be held on June 4th at Great West Road, Brentford.

The following is an extract from the circulated Statement by the Chairman, Mr Francis A. J. Harrison, for 1956:

Group turnover for 1956 was up by 6.5 per cent, but wages and salaries increased by 9.8 per cent and costs of materials by 9.0 per cent. Group Trading Profit was £630,820, which is £282,457 lower. Unfortunately taxation at £272,635 was higher and reduces the consolidated profit to £223,246 against £28,117 for last year. Out of the proceeds of the rights issue made last December your Company acquired, shortly before the end of the year, the entire issued share capital of the C-O-Two Fire Equipment Company of Canada Limited.

The Pyrene Company Limited: The Parent Company's sales were just over 2 per cent higher than in 1955. Although this is a small increase, it constitutes a record. Direct exports were 3 per cent higher, and shipments were made to 93 overseas territories. Direct and indirect exports combined accounted for 41 per cent of sales.

Canada: Sales of Pyrene Manufacturing Company of Canada in 1956 were 13 per cent higher than those of 1955 and operating profit was increased. At the end of 1956 the company received a contract for Airfield Crash Trucks for the RCAF. The value of this contract is approximately one and a half million Canadian dollars. These crash trucks are being produced by the Parent Company who in addition is already producing Foam Crash Tenders for the Canadian Government's Department of Transport for use on civil airfields in Canada.

Minimax Limited: The development of production on the new plant for fire extinguisher manufacture took longer to finalise than was anticipated. Despite this, profits were nearly double those of the previous year. There is every reason to expect improvement in 1957.

High Pressure Components Limited: Sales of this company's special valves and couplings are increasing steadily.

Sun Engineering (Richmond) Limited: This company has in hand a considerable number of orders for the foam pump type of vehicle for which it is well known.

Looking Forward: The Parent Company's shipments over the first four months of the year will be somewhat lower than at April, 1956. This is not due to a lower order book, but rather to the changes in the products required. From May onwards the rate of output of Bumpers required by the Motor Industry will be approximately the same as over the corresponding period of 1956.

The Metal Finishing Division's demand in April has also increased and is in fact level with April of last year.

Work on the development of larger Dry Chemical Fire Extinguishing Units is nearing completion and will shortly provide useful additions to the company's range of products. Other developments in hand include a new type of portable tower for applying foam to oil and petrol storage tanks and the development of equipment and methods for dealing with special fire risks in the atomic energy and guided missile fields. Whereas the first half of 1956 was the better half, it will be the second half of 1957 that will help the year to finish better than the earlier months would indicate.

THE ANGLO-PORTUGUESE TELEPHONE COMPANY

A FULL AND ACTIVE YEAR OF CONTINUED PROGRESS

SIR ALEXANDER ROGER ON EFFORTS TO MEET RAPIDLY EXPANDING DEMAND

The seventieth annual general meeting of The Anglo-Portuguese Telephone Company, Limited, will be held on June 6th at Strowger House, 8 Arundel Street, London, WC2.

The following is an extract from the statement by the Chairman and Managing Director, Sir Alexander Roger, KCIE, which has been circulated with the Report and Accounts:

The Accounts for the year to December 31, 1956, give details of the continued progress of your Company.

Total Revenue at £2,564,829 is £276,173 higher than in 1955, mainly due to the large scale additions to the Company's networks in recent years.

Total Expenses, including Royalties to the Portuguese Government, Renewals and Depreciation, Taxation, Debenture and Loan Interest, Sinking Fund Instalments and Capital Issue Expenses, amounted to £2,185,826. This compares with £1,790,501 in 1955, a year which had the benefit of substantial taxation relief resulting from claims arising out of the very heavy capital programme undertaken in that year.

Net Revenue at £379.003 compares with the 1955 figure of £498,155, the difference of £119,152 being due to a higher provision for taxation.

You will have noted that the Chancellor, in his recent Budget, proposes to institute a new system for the taxation of certain Companies which are controlled in the United Kingdom but which carry on their business abroad. The Finance Bill giving effect to these proposals was published on April 30th last and is being studied but, until its final form is known, it will not be possible to assess its effect on the Company.

It is proposed to pay a final dividend of 5 per cent on the £3,985,500 issued Ordinary Stock making, together with the 3 per cent Interim dividend paid in November last, a total of 8 per cent for the year. It is also proposed to pay a dividend of 8 per cent on the "A" Ordinary Stock.

After providing for the above dividends which, together with the dividend on the 6 per cent Preference Stock, require £222,433 and after transferring £150,000 to General Reserve, the Carry Forward is increased by £6,570 to £235,073.

In October, 1956, an issue was made in Portugal, the first by your Company outside the United Kingdom. The issue, which was of 80,000 5 per cent Obligations of Esc.1,000 each at par, was highly successful, being over 2½ times subscribed.

The issue was entirely in Escudos but, for the purposes of the Accounts, conversion to Sterling has been made at an Exchange Rate of Esc. 80.50 to the £, the rate used throughout the Accounts.

The annual investigation of the telephone plant and equipment has been made by our Consulting Engineers and upon their recommendation, the Provision for Renewals has been increased by £206,245 to £2,388,963 which is 21.8 per cent of the original installed cost of the plant and which, in the opinion of the Consulting Engineers, is adequate.

The Provision for Renewals, together with the other Reserves of the Company, continues to be invested in the business.

GENERAL PROGRESS OF THE COMPANY

A large part of the capital expansion carried out during 1956 consisted of providing service to new subscribers by connecting up lines which had been made available in our exchanges in the previous year.

The net expenditure on Telephone Plant during 1956 again exceeded £1 million and, although this was substantially less than in the previous year, the number of new stations brought into service during 1956 at 18,960 was actually slightly above the corresponding figure for 1955 and created a record for the Company.

At the end of 1956 the number of stations stood at 189,715 including Exchange Lines of 145,260. The 200,000th station will be installed during 1957 and it is a mark of the ever growing importance of the telephone in a modern community that, whereas it was not until 1950, the 64th year of the Company's operations in Portugal, that the first 100,000 stations were completed the second 100,000 will have been added in less than seven years.

During 1956 extensions were made to existing exchanges, in both Lisbon and Oporto, at Lumiar, Graca, Norte, Almada, Lapa, and a number of smaller exchanges. In addition considerable work was undertaken which will become revenue earning during 1957.

CONSTANT DEMAND FOR TELEPHONES

Over the past ten years the number of telephones per 100 of the population of Lisbon and Oporto has more than doubled. Despite this unusually progressive rate of development, the Company continues to receive new applications for service at the rate of over 19,000 each year, which provides a measure of the continuing and beneficial new business open to us.

Our two concession areas, Lisbon and Oporto, are being developed rapidly. New houses, flats, shops, offices and factories are being speedily built and, consequently, it is essential that the company should anticipate demand, so far as possible, particularly in the newly developed sections of the cities. For this reason, the whole of our systems is under constant review. Existing exchanges have to be enlarged and often new exchanges must be built to relieve the pressure.

Our development planning has been brought to a very high standard of efficiency. Our aim is always to keep as short as possible the time between the drawing board and the bringing into operation of the exchange and we are always seeking new and improved methods of installation which will reduce the period during which, inevitably, capital is locked up. The sooner new exchanges are earning revenue the sooner are we able to turn our attentions to the installation of the further plant and equipment which is continually required.

The telephone group of which your Company is a member has a long record of

manufacture, operating and finance in many parts of the world and all the combined knowledge of the group is at our disposal.

Your Directors have continued their policy of obtaining from our associated company, Telephone and General Trust Limited, the short-term financial assistance which has proved so convenient and economical over the years. This assistance takes the form of day-to-day loans as they are required to meet the cost of materials needed for the purposes of our business in Portugal.

The loan stands today at approximately £475,000 and will be substantially increased by the end of the current year. Plans are closely under review for the issue of further Ordinary Shares on a "rights" basis.

Apart from a very small balance, the whole of the Authorised Capital of your Company has been issued and it is proposed, therefore, at the forthcoming Annual General Meeting, to create a further 2 million Ordinary Shares which will be available for issue when required.

LIMMER & TRINIDAD LAKE ASPHALT COMPANY, LIMITED

ANOTHER SUCCESSFUL YEAR

CHAIRMAN'S STATEMENT

The eighty-fifth annual general meeting of this company will be held on June 7th in London.

The following is an extract from the circulated statement by the Chairman, Sir John Hathorn Hall, GCMG, DSO:

The gross trading profit of the Group has increased from £711,255 in 1955 to an all-time record of £794,928, and the Group's profits, after deducting depreciation, constitute for the fifth successive year a record at £523,130, compared with £489,638.

This has only been made possible by means of a notable expansion of turnover, representing 17½ per cent over 1955, which in turn was 15 per cent above 1954. But this expansion has been achieved in the face of increasingly severe competition and, in consequence, at the cost of a general reduction of profit margins.

Your Board recommends a final dividend of 9 per cent, making a total of 15 per cent on the increased capital.

An exceptionally mild winter and fine spring have greatly assisted our outdoor work, and given us an excellent start for the year and, with the present satisfactory state of our order book, it may well be that the financial results for 1957 will in the event measure up to those of 1956.

If this should prove to be the case, and if once again our business expands and prospers, our success will be primarily due to the fact that we have got a first-class organisation possessed of ample and up-to-date plant and equipment and, infinitely more important, supremely well staffed and served at all levels.

APPOINTMENTS

GOVERNMENT OF CYPRUS

Trade Union Adviser required to encourage development of sound trade unionism, and to advise trade unions on organisation, methods and negotiation. Experience as a trade union officer in an established United Kingdom union, preferably as an organiser, and including experience as a negotiator, essential. Four-year contract. Salary £2,277, with gratuity. Outfit allowance. Normal tour, 21 months. Quarters provided, if available, at low rental. Free passages. Generous home leave. Low Income Tax.—Further particulars and application forms from Director of Recruitment (Overseas Service), Colonial Office, Great Smith Street, London, S.W.1, quoting BCD 132/17/03. Closing date for receipt of initial enquiries, May 31, 1957.

CORNER BROOK

CANADIAN PROVINCE OF NEWFOUNDLAND
CITY MANAGER

Applications are invited for the post of Manager of the City of Corner Brook (population 23,000) situated on the west coast of the Province of Newfoundland, Canada. The duties of the successful candidate will be similar in some respects to those of a Town Clerk but are better compared with those of a General Manager reporting not to a Board of Directors but to the City Council. Experience of municipal administration is essential. Salary $Can. 12/15,000 per annum.—Applications and requests for further particulars, should be sent to Box 694.

TARIFF SPECIALIST. A very well-known and expanding Company, with Head Office and chief manufacturing unit in the provinces, invites applications for an important appointment in its Market Research Section. The position is an exacting and responsible one, requiring sound judgment and high intellectual ability. Duties will be connected entirely with tariffs and related problems affecting the Company's activities and interests and will extend over a wide range of products and markets. Essential qualifications are a University degree with first or second class honours and at least two years' experience as a Tariff specialist in industry or a trade association. Applications, which will be regarded as strictly confidential, should set out full personal history.—Box 692.

J. SAINSBURY LIMITED

Food Distributors and Manufacturers operating in London, South East England and the Midlands, desire to appoint a man to take charge of investigations leading to the installation of an Electronic Computer and then to manage such installation.

Applicants should be between 30 and 35 years of age, of good education with a university degree or professional qualification demonstrating a good mathematical ability. Preference will be given to those applicants having experience in Organisation and Methods, and general, but not necessarily detailed, knowledge of electronic computing.

Commencing salary according to qualifications and experience; a figure in the neighbourhood of £1,500 is envisaged.

The post is permanent and pensionable.

Applications, giving details of age, education, qualifications and experience, should be sent to:

The Secretary, J. Sainsbury, Ltd., Stamford House, Stamford Street, Blackfriars, S.E.1.

UNIVERSITY OF GLASGOW

LECTURESHIP AND ASSISTANTSHIP IN SOCIAL AND ECONOMIC RESEARCH

Applications are invited for a Lectureship and for an Assistantship in Social and Economic Research, tenable from October 1, 1957. Salary scale: Lecturer—£900-£1,650; Assistant—£700-£850. Initial salary according to experience and qualifications. F.S.S.U. and family allowance benefits.

Applications (6 copies) should be lodged, not later than June 15, 1957, with the undersigned, from whom further particulars may be obtained.—Robert T. Hutcheson, Secretary of University Court.

A LARGE manufacturing company in the West Country has vacancies in its expanding Market Research Section for women university graduates, aged under 25, with good degrees in Economics. The work, which is in a new and interesting field, involves interviewing members of the public and assisting in analysis and reporting of the data collected. Retail surveys are also undertaken. About six months in the year is spent interviewing both in London and the provinces. A full training will be given.—Apply to Box 693.

RESEARCH MANAGER

Young executive wanted to organise and supervise product and market research for American company in Britain. Excellent opportunity for right man. Salary open.—International Latex Corporation, Playtex Park, Port Glasgow, Scotland.

BEN JOHNSON AND CO. LTD. requires a Technical Assistant of superior education and good background, with a sound grasp of chemistry and physics. Acquaintance with Letterpress, Lithography and, if possible, Gravure is desirable, though this last is not vital. The successful applicant would be trained in the latest printing techniques and would be required, amongst his other duties to visit Trade Exhibitions, leading Print Houses here and abroad, and manufacturers of Printing Machinery, with a view to improving his ability to make suggestions on the latest developments in the industry. Commencing salary £750 to £800 per annum.—Write, giving age and full details of education, personal background and practical experience, to the Secretary, Boroughbridge Road, York.

THE UNIVERSITY OF SHEFFIELD

DEPARTMENT OF EXTRAMURAL STUDIES

Applications are invited for the post of Staff Tutor in Industrial Relations/Economics to take day-release and normal evening classes, and to begin duties as early as possible in the session 1957-58. A new salary scale is being introduced, and is expected to be £700 x £50-£850, with F.S.S.U. provision and family allowance. Initial salary according to qualifications and experience.—Further particulars should be obtained from the Registrar, to whom applications (12 copies) should be sent by June 8, 1957.

UNIVERSITY OF NATAL

INSTITUTE FOR SOCIAL RESEARCH DURBAN
SOCIOLOGIST OR SOCIAL ANTHROPOLOGIST

The Institute for Social Research will be undertaking a study of certain demographic aspects of recent developments in the Swaziland Protectorate. The scheme, which is sponsored by the Colonial Social Science Research Council through the Swaziland Government, provides for the appointment, for a three-year period, of a sociologist or social anthropologist.

Applications are invited for this post, which will be on the salary scale, £1,050 x £50—£1,400, starting salary being dependent on seniority, qualifications and experience. Applicants should be suitably qualified in sociology or social anthropology, familiar with demographic techniques and prepared to learn the Swazi language. Some academic training in economics or law will be a recommendation.

A married appointee would receive a cost of living allowance which would be at the Swaziland rate (at present 12 per cent of salary up to a maximum of £132) when in the field, and at the South African rate (at present £234) when in Durban, e.g. when writing his report during the final nine months of the scheme. Housing at Swaziland Government rates (10 per cent of salary with a maximum of £150 per annum) and free medical service would be provided during service in Swaziland. This scheme makes provision for passages, local travelling, camping and research equipment, subsistence allowance when away from headquarters. Pension fund contributions, where applicable, will be paid.

Application forms and further details about the scheme are obtainable from the Director, Institute for Social Research, University of Natal, King George V Avenue, Durban. Application forms should be submitted in triplicate, one copy going to each of the following:

The Permanent Under Secretary of State for Commonwealth Relations, Downing Street, London, S.W.1.
The High Commissioner for the United Kingdom, Hill Street, Pretoria.
The Director, Institute for Social Research, University of Natal, King George V Avenue, Durban.

The closing date for South African and Federation candidates is June 15, 1957; and for United Kingdom candidates: July 15, 1957.

A PRODUCTION ENGINEER FOR MANAGEMENT CONSULTANCY

A British firm of management consultants, well established in this country and having overseas subsidiaries, has, as a result of expansion, a vacancy for a production executive or engineer. Applicants should be between 28 and 35 years of age and should be experienced in modern production management, shop-floor relations and work study. An honours degree is preferred. This is an outstanding opportunity to advance quickly to a high salary level and to gain a wide experience of large sections of British industry. Starting salary is up to £1,750 per annum with progress to between £4,000 and £5,000 per annum in 8 to 10 years. Movement is confined to small regions at all times and after four years' service all assignments are within daily reach of home. On the other hand, service in other parts of the United Kingdom or overseas including the USA can be arranged for those who prefer it.—Please communicate, in strictest confidence, giving short outline of age, education, experience and salary, through Box 695.

CAREER OPPORTUNITIES IN CANADA

Leading Canadian Trust Company, which performs a wide range of fiduciary functions and offers careers in estate administration, corporate financing and investment management, has attractive openings in its various offices for graduates (aged 22-35) in Arts, Law, Economics or Accountancy, with excellent opportunities for advancement in this rapidly expanding organisation.

Persons interested are invited to submit detailed accounts of their background, giving names of two references and accompanied by two photographs, to:

Messrs. Thomson, Dickson and Shaw, W.S., 1 Thistle Court, Edinburgh, 2; Messrs. A. and L. Goodbody, 24 Dame Street, Dublin, Eire.

Arrangements will be made to interview selected applicants in the latter part of June.

CENTRAL ELECTRICITY AUTHORITY

HEADQUARTERS

Statistical Assistant required in the Utilisation Research Section of the Commercial Department in London, E.C.2. Candidates should have a knowledge of statistical methods, especially sampling, analysis of variance and multiple-regression. Salary £851-£929 per annum.—Applications, stating age, qualifications, experience, present position and salary, should be forwarded to D. Moffat, Director of Establishments, Winsley Street, London, W.1, by May 31st. Quote ref. L/207.

RESIDENT MANAGER for Mediterranean Office required by London Chartered Accountants. Applicants should be qualified and aged about 30-40 years. Salary $2,500 for initial Contract of two years with possibility of accession to London partnership later. Write, with full particulars to T.K., Box 277, Reynells, 44, Chancery Lane, W.C.2.

APPOINTMENTS

LONDON OFFICE of national newspaper group requires a young male arts graduate with two or three years' experience in industry, not necessarily in newspapers or advertising, for its Research and Promotion Department. Required qualities: Aptitude for working with figures (but not a statistical background) and some ability to write (advertising, "copy" as well as marketing reports). Applicants should give details of education, experience and present salary.—Box 691.

KUWAIT OIL COMPANY

requires
BUDGET ASSISTANT
for their London Office.

The Company seeks a man who has had experience of Capital Programme and Budget preparation, subsequent control, and preparation of pay-out studies for projects. Alternatively he could be a qualified Cost and Works Accountant with Oil Company or Civil Engineering Contractors' experience. Age 25-35. Salary according to age and experience. Luncheon Vouchers. Pension Scheme.—Applicants should send brief details, quoting L.O.241 to Box W/1102, c/o 191 Gresham House, E.C.2.

NEWBATTLE ABBEY COLLEGE

DALKEITH, MIDLOTHIAN

Applications are invited for the post of Resident Staff Tutor, with special responsibility in the social sciences. Good Honours degree in Economics, Economic History, Political Economy, or an allied subject desirable. Salary £700 x £50-£1,350 (less appropriate reduction for residence). Starting salary according to qualifications and experience. Probationary period of two years.—Further particulars and Forms of Application, which should be lodged not later than May 31, 1957, may be had from T. M. Jinkins, W.S., Secretary to the Governors, 20 Castle Street, Edinburgh.

THE UNIVERSITY OF MANCHESTER

Applications are invited for the full-time posts of Assistant in the Research Section of the Faculty of Economic and Social Studies. The successful candidates will be required to pursue research in Economics, Economic Statistics, Government, Social Administration, Social Anthropology or Sociology, and should be graduates in any of these subjects or in Modern History or Economic History. There are vacancies in both Grades II and III. The salary scales are at present under review and are expected to be as follows: Grade II—£700 to £850 per annum. Grade III—£600 to £650 per annum.—Applications should be sent not later than June 8, 1957, to the Registrar, The University, Manchester, 13, from whom further particulars and forms of application may be obtained.

THE UNIVERSITY OF MANCHESTER

Applications are invited for the temporary post of ASSISTANT LECTURER IN ECONOMIC STATISTICS. The appointment will extend for a period of two years from October 1, 1957. The salary scale is at present under review, and is expected to be within the range £700 to £850. Full Superannuation membership of the Children's Allowance Scheme.—Applications should be sent not later than May 25, 1957, to the Registrar, The University, Manchester, 13, from whom further particulars and forms of application may be obtained.

UNIVERSITY OF HONGKONG

Applications are invited for the post of Lecturer or Assistant Lecturer in Economics.

Annual salary (Superannuable) is as follows: Lecturer, £1,575 x £50—£2,175 (man), or £1,200 x £40—£1,680 (woman). Assistant Lecturer £1,375 x £50—£1,525 (man), or £1,040 x £40—£1,160 (woman), together with an expatriation allowance of £225 a year if applicable. The equivalent of income tax in the Colony is comparatively low.

First-class sea passages are provided for expatriate staff and their families on first appointment and leaves.

Applicants should have an academic degree and qualifications for teaching in the fields of Applied Economics (Public Finance, Money and Banking, International Economics) and Economic Theory for undergraduates. Ability to give courses also in Statistics or Business Administration would be an advantage. Appointment to the Lectureship or the Assistant Lectureship will be made according to qualifications and experience. The post gives ample scope for research in economic problems of the Far East.

The successful applicant will be required to take up duties on September 1, 1957.

Further particulars and information as to the method of application may be obtained from the Secretary, Association of Universities of the British Commonwealth, 36 Gordon Square, London, W.C.1.

The closing date for the receipt of applications, in Hongkong and London, is June 21, 1957.

RHODES UNIVERSITY

GRAHAMSTOWN, SOUTH AFRICA

Applications are invited for the post of Lecturer or Senior Lecturer in Native and/or Public Administration, from January, 1958.

The salary scales are: Senior Lecturer, £1,050 x £50—£1,400 per annum; Lecturer, £800 x £50—£1,050 per annum.

In the case of married persons only, a variable cost-of-living allowance, at present £234 per annum is payable in addition. Previous experience and academic qualifications may be taken into account in fixing the commencing salary.

Full particulars and application forms may be obtained from the Secretary, Association of Universities of the British Commonwealth, 36 Gordon Square, London, W.C.1.

The closing date for the receipt of applications, in South Africa and London, is June 15, 1957.

ASSISTANT ADVISER

UNILEVER LIMITED requires a qualified accountant or cost accountant, age 28-40, for advisory work in the fields of Organisation, Production Study, Budgetary Control and Distribution Cost Analysis. The successful applicant will be based on Head Office in London but may be assigned for short or long periods to any of the operating units in this country in which case expense and travel allowances will be paid. He must possess a first-class professional and/or industrial background, a sound knowledge of modern methods of cost control, and the ability to express himself clearly.

Starting salary will be dependent on age and experience but not less than £1,350 p.a. The post will offer the opportunity for original thinking and the broadening of experience over a wide field of subjects, and should lead eventually to a more senior appointment within the Concern. Pension scheme. Interviews in London or the North.

Replies, stating age, qualifications, current salary and brief details of education and experience to date, should be sent to Personnel Division (PRB/1155), Unilever Limited, Unilever House, London, E.C.4.

ASSISTANT TO COMPANY SECRETARY.—A large firm of Electrical Manufacturers, with offices in Central London, wishes to appoint an Assistant to the Company Secretary. He will be required to assist in dealing with problems falling within the province of the Company Secretary, particularly those of a legal nature. Candidates should preferably be men under 35, who have graduated in law and have also studied economics. Commercial or industrial experience, or practice as a Barrister or Solicitor, would be desirable. Alternatively, it might be possible to consider a recent graduate if it was thought that he had exceptional promise. A commencing salary of up to four figures would be paid, according to age and experience.—Please send detailed applications to Box 690.

IBM UNITED KINGDOM LIMITED, manufacturers and distributors of Punched Card Accounting equipment and Electronic Data Processing Machines, require men of outstanding ability, capable of meeting and working with senior executives. This is intensely interesting work comprising the investigation of accounting, computing book-keeping methods and systems, the preparation of reports and proposals, and the subsequent installation of recommended machine accounting methods. In other words, this is a specialist consultant's job.

Applicants should be under 35, preferably with a degree or professional qualification, or with a wide experience of commercial and/or industrial systems and methods, or experience in a large Punched Card installation. Recent graduates without experience will, however, be considered.

Up to two years of training is given, and good salaries, based on individual earnings and needs, are paid during this period. Subsequent earnings will be in the high income group. Vacancies exist in the London, Birmingham, Manchester, Newcastle and Scottish areas, and applicants for the next course (September, 1957) should write, giving full particulars of education, qualifications and experience (with recent photograph—returnable), to the Personnel Manager, 101 Wigmore Street, London, W.1, quoting Reference No. DP/EAM.1.

NIGERIAN INSTITUTE OF SOCIAL AND ECONOMIC RESEARCH

UNIVERSITY COLLEGE, IBADAN, NIGERIA

Applications are invited for appointments on the research staff of the Institute. Applications considered for investigations in any of the fields of social study. Appointments will be in one of the following grades according to qualifications and experience.

JUNIOR RESEARCH FELLOW, £800 x £50 to £950 p.a.
RESEARCH FELLOW, £1,000 x £50 to £1,300; £1,400 x £50 to £1,625 p.a.
SENIOR RESEARCH FELLOW, £1,700 x £75 to £1,925 p.a.

Allowance for up to three children, £50 p.a. per child resident in Nigeria, £100 p.a. per child resident elsewhere. F.S.S.U. Part furnished accommodation at rent not exceeding 7.7 per cent of salary. Outfit allowance £60. Passages for Fellow, wife and up to three children under 11 years on appointment, overseas leave and termination. Detailed applications (10 copies), naming three referees, by June 15, 1957 to Secretary, Inter-University Council for Higher Education Overseas, 29 Woburn Square, London, W.C.1, from whom further particulars may be obtained.

TAXATION ASSISTANT

Qualified Accountant (aged 23-28) required by large British industrial organisation with world-wide connections to start in the London Head Office Taxation Department. Good opportunities for promotion to executive posts at home and abroad later.—Applications, in strictest confidence, to Box 689.

AUSTRALIAN NATIONAL UNIVERSITY

CANBERRA
RESEARCH SCHOOL OF PACIFIC STUDIES

Applications are invited for three Research Fellowships in the Departments of Anthropology, Geography and Far Eastern History.

In the case of the post in Anthropology, preference will be given to applicants who are prepared to undertake research in the New Guinea Highlands within the Department's programme.

The successful applicant for the post in Far Eastern History will be expected to work on Chinese or Japanese history.

Salaries for Research Fellows are within the range £A1,224-£1,824 per annum. The appointments will be for three years, with a possible extension to the maximum of five years. Reasonable removal expenses will be paid, and superannuation on the F.S.S.U. pattern is provided.

Further details should be obtained from the Secretary, Association of Universities of the British Commonwealth, 36 Gordon Square, London, W.C.1.

Applications close, in Australia and London, on June 3, 1957.

AUSTRALIA - CANBERRA UNIVERSITY COLLEGE

Applications are invited for appointment to the post of Lecturer in Economic History.

Salary range: £A1,224—£A1,774 per annum. Salary within the range will be determined in accordance with the qualifications and experience of the applicant. Annual increments are £70.

Further particulars, conditions of appointment and the summary form which must accompany applications may be obtained from the Secretary, Association of Universities of the British Commonwealth, 36 Gordon Square, London, W.C.1.

Applications close, in Australia and London, on June 15, 1957.

THE BUILDING ADVISORY SERVICE invites applications from men aged 30-40 years, with a technical qualification and experience in the building trade, for a management consultancy post. After training in consultancy techniques work involves advising building firms on management problems, lecturing to courses, &c. Travel in U.K. involved. Starting salary will be appropriate to experience in building trade.—Applications, which will be treated as confidential, should state age, education, training, experience and present salary and be addressed to the Director, NATIONAL FEDERATION of BUILDING TRADES EMPLOYERS, 82, New Cavendish Street, London, W.1.

YOUNG QUALIFIED ACCOUNTANT required by Important City Company. Opportunity will be afforded to gain experience in financial forecasting, budgeting, investment analysis, etc. Age about 25. Commencing salary £850-£1,000 per annum, and contributory pension scheme.—Write, with particulars of age, education, qualifications and experience, to Box Y.239, c/o Streets, 110 Old Broad Street, E.C.2.

UNIVERSITY COLLEGE OF GHANA

INSTITUTE OF EXTRA-MURAL STUDIES

Applications are invited for Resident Tutorship specialising in either (a) Trade Union Studies and Industrial Relations, or (b) Economics.

Salary scale £950 x £50 to £1,600 p.a. according to qualifications and experience. Allowance £100 p.a. per child (maximum £500 p.a.). Outfit allowance £60. F.S.S.U. Passages for appointee, wife and maximum of five children on appointment, normal termination and leave. Part-furnished accommodation at rent not exceeding 7.5 per cent of salary.

Detailed applications (eight copies), naming three referees by June 18, 1957, to Secretary, Inter-University Council for Higher Education Overseas, 29 Woburn Square, London, W.C.1, from whom further particulars may be obtained.

THE ECONOMIST · 22 RYDER STREET · ST. JAMES'S · LONDON · S.W.1

VOLUME CLXXXIII · NUMBER 5935

Who are the most likely prospective customers for cars, washing machines, refrigerators and other durable goods?

A RECENT ARTICLE in The Financial Times* shows that expenditure on durable household goods and motor cars in 1956 amounted to £923 million. This is an increase of 37 per cent on 1952, when expenditure was £675 million. Moreover, only a small part of this increase is due to higher prices.

Who are the people responsible for this colossal rise in buying?

A table of ownership of certain durable goods gives this picture.

Obviously, but significantly, the upper and middle classes are far heavier buyers of durable goods than the working class.

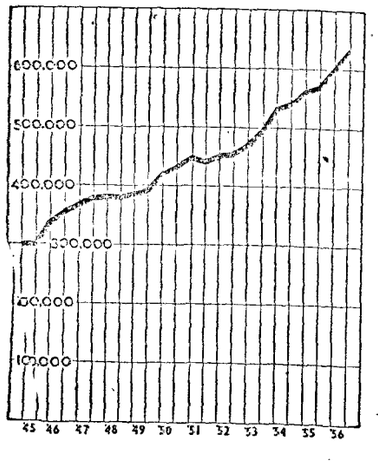
The figures on the right also suggest strongly that the upper and middle class market for these goods is far from saturated. And this market offers the most immediate likely prospects.

OWNERSHIP OF DURABLE GOODS BY CLASS

	Middle Class %	*Working Class* %
Lawn Mower	65	29
TV Set	55	45
Telephone	50	7
Car	41	12
Washing Machine	37	20
Refrigerator	25	5
Motor Cycle	6	7

How to reach these prospects

The Hulton Readership Survey for 1956 and the I.P.A. National Readership Survey for 1956 give the *readership* of The Observer as 1,880,000 and 2,056,000 readers respectively.



Three-quarters of The Observer's readers belong to the middle classes as defined by The Financial Times, which contain 4,212,100 adults—*the top 11%* of the population.

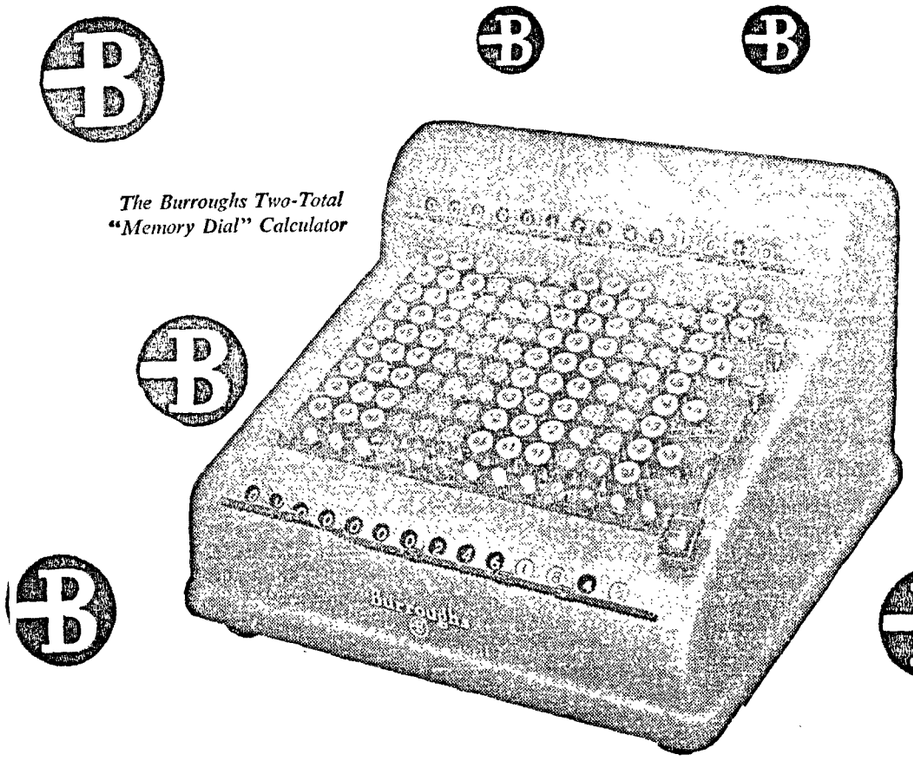
Thus The Observer is an unexcelled advertising medium for durable household goods—not only those in the Financial Times' list but many other household goods traditionally thought of as mass-market rather than quality goods.

Not only does The Observer provide an audience of the most likely buyers, but it provides it most economically with a minimum wastage. Nor is this audience small—a glance back at the readership figures shows it to be surprisingly massive.

Manufacturers of durable household goods, motor cars and other automotive products, and their advertising agents, are cordially invited to write or phone for further details to Norman Berridge, The Observer, 22 Tudor Street, E.C.4. Fleet Street, 9991.

* *Taken from an article by Mark Abrams in The Financial Times of Saturday, March 16, 1957*

THE OBSERVER



The astonishing growth of The Observer's circulation

The circulation of The Observer has doubled since the war from 298,619 to 633,064 It is still increasing.

Last year alone, The Observer's circulation went up by 10.4%—the largest increase of *any* Sunday paper. And this was *in a* year when Sunday papers as a whole lost 1.2% of circulation.

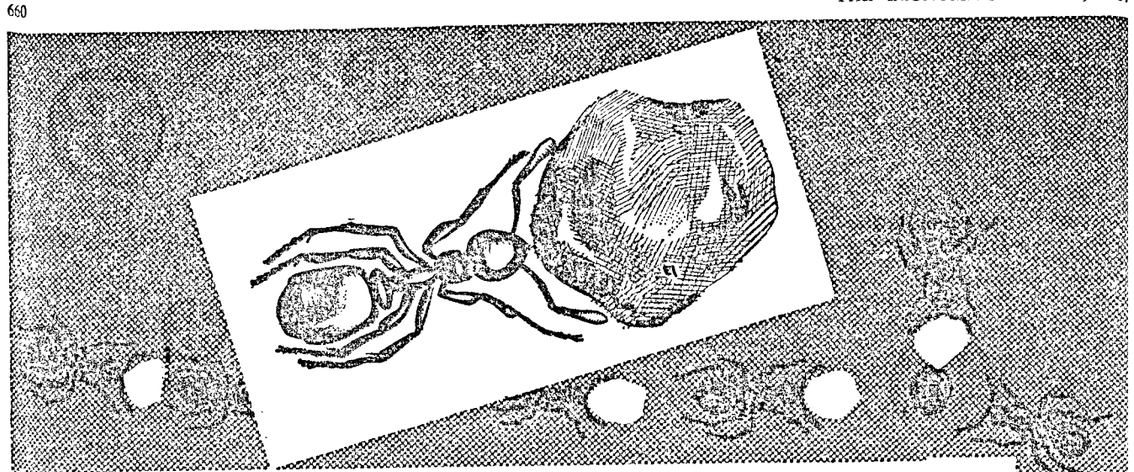
The Hulton Readership survey for 1956 indicates that it has the highest number of readers per copy of *any* national daily or Sunday paper.

According to the latest available Hulton figures, The Observer has a higher percentage of readers who read only one Sunday paper, than any other of the Sundays.

The Burroughs Two-Total "Memory Dial" Calculator

Final net totals arrived at with only one handling of the figures!

The Burroughs Memory Dial Calculator has two answer dials—you calculate in the front dials and accumulate totals in the rear dials. With these Duplex features and live key action you get figure production no other calculator can equal. Direct subtraction of single items or totalled-up deductions is easy—you simply press the subtract bar. The amounts are instantly subtracted from the gross total in the rear dials.



All Burroughs Calculators have rubber shock mounts which give quiet cushioned operation, and the new colour scheme—amber grey and brown—is pleasing and blends easily into any office decoration scheme.

95% of business figuring involves adding, multiplying, subtracting—with a large volume of figures. You need speed and exactness on all this figuring and Burroughs Calculators are unequalled.

Get in touch with your local Burroughs branch office or write direct to Head Office for more information about these machines. Our address is: Burroughs Adding Machine Ltd., 356-366 Oxford Street, London, W.1.

Burroughs

The most experienced manufacturers of Adding, Calculating, Accounting, Typewriter-Accounting, Statistical and Microfilm Equipment. Factories: Nottingham—Strathleven.

Focus on Lightweight Strength

The phenomenal strength possessed by many of nature's smaller creatures has often been envied by man. In engineering, particularly aircraft engineering, his striving for greater strength for less weight has resulted in the development of a new metal—TITANIUM. Until recently this metal has been expensive owing to the scarcity of an essential raw material TITANIUM TETRACHLORIDE. Now, however, titanium tetrachloride is being produced in bulk and titanium will soon be available to larger sections of industry. Titanium tetrachloride is produced by

TITANIUM **INTERMEDIATES LIMITED**

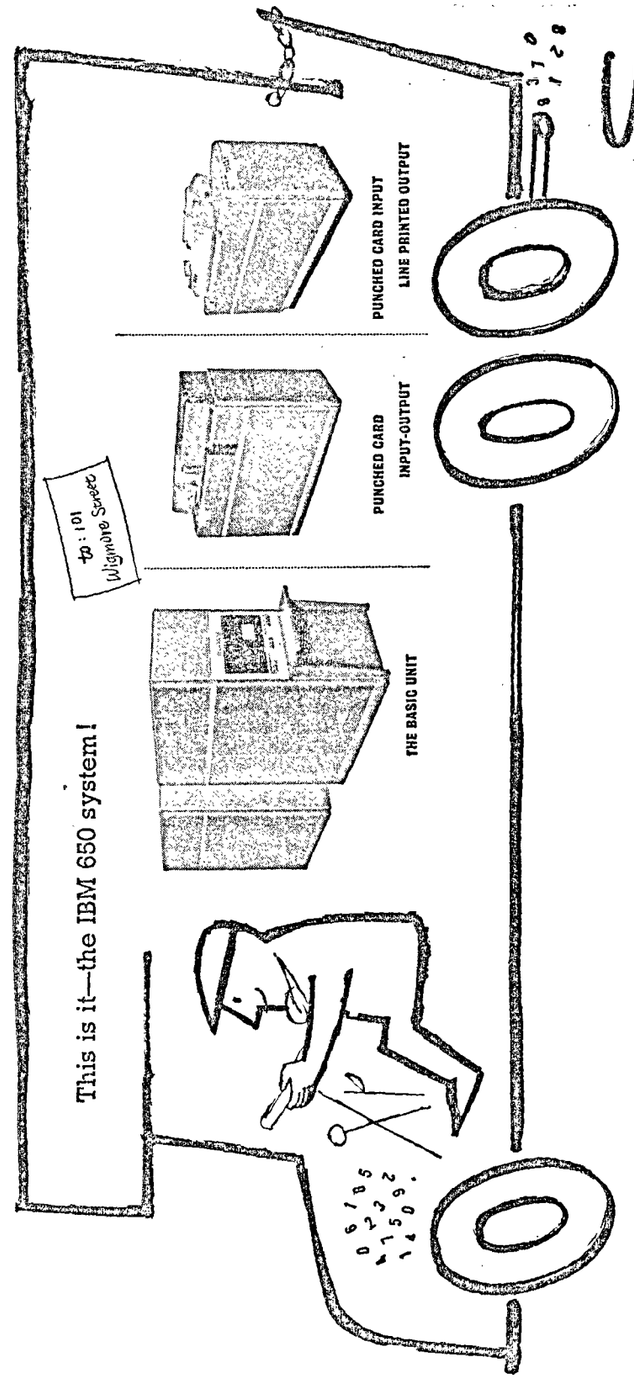
(Jointly owned by British Titan Products Co. Ltd. & Peter Spence & Sons, Ltd.)

Noise can be taught to tiptoe

WE may as well acknowledge at the start that we've yet to come across any part of industry which can function without noise. Let's face it—this machine age ensures that every part of our life is affected by noise to some degree. Try walking round any factory and see how many different voices noise can have. Start with the offices where maybe twenty typewriters clatter ceaselessly; walk through the workshops, foundries, assembly lines; call in at the canteen. Listen to the scream of severed metal, the crash of giant hammers, the racking roar of drills and the tintinnabulation of tin trays. Everywhere you walk noise walks with you in hobnailed boots. Let's see how we can teach it to tiptoe.



As a matter of technical interest, those plaster walls in the typing pool absorb only 2% of the sound impinging on them—and that's not much. Yet it is quite practicable to absorb as much as 75% of sound generated—that's quite enough to make conditions bearable. Throughout the entire factory, machines and equipment can be muted by the application of the principles of acoustic insulation efficiency.

The installation of insulating materials such as Newalls (Reg'd Brand) Paxtiles can relieve noise pressure by as much as 75%. Their application, by Newalls experienced technical staffs, can, in many cases, be effected without structural alterations and without interrupting working arrangements.

If your working efficiency—and profits—are being impaired by too much noise it may help to bring in Newalls for preliminary investigation and consultation. You will be under no obligation whatsoever.

We're in!

IBM's first British Data Processing Centre is open

At 101 Wigmore Street, W.1. we now have a new Data Processing Centre with all the room and facilities to demonstrate a computing system such as the 650. A system that makes 78,000 additions or 138,000 logical decisions in a minute.
A system already at work for hundreds of business and industrial users throughout the world from insurance to petroleum and chemicals to aircraft. Applications range from the familiar problems of inventory and production control, payroll, sales and market research to the complexities of nuclear physics and operational research. Whether you are a business man, a scientist, a government official or an industrialist, you will find this centre of vital interest. Here are consultants, expert mathematicians and 'programmers' and a unique computing library. Here is the 650 with a great deal of associated equipment including punched card calculators, accounting machines, etc. Here, in fact, is a centre ready to take on *any* computing problem however large. We hope you will use it.

Three Quarters Magnificently

THE Prime Minister has cleared his own Suez Canal. Now is the time to assess how much long-term damage the Conservative party has suffered, above and below the water-line, from the Egyptian venture. The damage is probably very much less than seemed likely six months ago, but somewhat greater than it may seem to some optimists now.

Any commentator who talks of "long-term damage" necessarily tends to mean damage to the prospects of keeping in forward march the sort of Conservative party he himself would like this country to have. It is open to very many Government supporters to say that the sort of Conservative party that *The Economist* would like Britain to have is the precise opposite of the sort of party they want; and none of us can say dogmatically that only the sort of party we want is likely to secure majority approval from the British people. But the sort of Tory party that this journal would like will be clear enough to most readers: a party committed to a belief in change rather than in stasis; a party that eschews the superiority complex which is the besetting emotional sin of its right as much as Labour ought to (but does not) eschew its inferiority complex; a party that believes in progress, economic expansion and a wholesale purloining of liberal clothes. Probably, too, the body of opinion which wants this sort of Tory party accounts for a sizeable proportion of that not wholly statistical abstraction, the floating vote. How far have hopes that modern Toryism will continue in this image been spoiled by the Egyptians?

If progressive moderates in the Conservative party (and they include the majority of ministers in Mr Macmillan's Cabinet) want to know what other moderates fear on their behalf, the best man to ask for a historical explanation might be Lord Attlee. Just before the last general election, which took place two years ago tomorrow, *The Economist* was describing the internal organs of the Labour party as an

> oligarchy of the faithful, who are, almost by definition, more fanatical than the voters and less realistic than the leaders. The strong bias towards extremism and irresponsibility that this creates in the party . . . can be corrected only by great force of personality among the leaders.

Up to 1955, that bias had not been corrected by Mr Attlee and his lieutenants. The misfortune of these last six months is that a right wing "oligarchy of the faithful" has been aroused to a similar position of potential nuisance value within the Conservative party. Nobody can be sure yet how far this development—which has owed much more to the party's disunited march out of Suez than to its almost united march into it—has gone. It could still be checked by the fact that Conservative associations contain more cool heads than constituency Labour parties; its origins have been more psychological (which may serve to make it more transitory) than political. But there can be no doubt that the views of a recognisable group of right wing backwoodsmen in local Conservative

associations have suddenly become more important, because their battlecries have suddenly been made to sound more respectable.

Before the Suez misadventure the assault of innate reaction in the Tory party was chiefly against the "softness" attendant upon the welfare state; and it was so obviously vote-repellent that it had to be hushed. But now the right wing appeal can be to a vague concept of "making Britain great"; the assault can be, and is, against the "gutless" who have "let this country down." These are cries that can be shouted from the battlements, and to which active politicians can be required to subscribe at the pain of being branded as "not Conservative." They are curiously similar to the parrot cry of Labour's left against the capitalist: like it they are made more raucous by being based on a traditional dogmatism's recent (and to them bewildering) failure. In departing from the dashed objectives of his predecessor, Mr Macmillan, in these last four months, has been hard up against these forces. He has been in the kind of predicament in which Mr Attlee found himself several times—for example, when he knew in 1951 that Labour ought to retreat from the nationalisation of steel, but knew, too, that this would land him in trouble in the party.

So much for the pressures. What of the leaders' reactions to them? It should be said immediately that Mr Macmillan has met his first task three-quarters magnificently. When Mr Attlee came under pressure from his left wing, his shrewdest course would have been to absorb the Bevanite men but to reject their policies; instead he usually half-absorbed the policies, while his lieutenants intermittently set about trying to swat Mr Bevan and his supporters with a knobkerry. Mr Macmillan has rightly tackled the job the other way round. He has reversed the Suez policy, *de facto* but not *ex cathedra*. He has absorbed some of the individual Suez rebels; those who have left him, Lord Salisbury (who is making an important speech as this issue goes to press) and the eight independent dwarfs, have left of their own free will—and there has been no vindictive central Conservative pressure to push them further into the wilderness. In all this Mr Macmillan has laid himself open to only one criticism. While consistently liquidating the Suez policy, he has said just as consistently that he was doing precisely the opposite.

Does this matter? Many will argue that it does not. In rough water in politics, as in a rowing boat, it is sometimes easier to move more swiftly in one direction if one's eyes are fixed pointedly in the other. But it is precisely because Mr Macmillan's recent tactical achievements have been so obvious that it is important to draw attention to the one equally obvious fly in this soothing verbal ointment. There is a danger in these smooth assurances by Mr Macmillan that Conservative policy is the opposite of what it is, and in last week's declaration by Mr Oliver Poole that the local Conservative associations have greater powers of autonomy than they really have. It is that the local associations may come to believe these assertions. No doubt, even so, they will not in fact capture much more influence over immediate policy. But there could be an effect on the sort of Conservative candidates chosen for by-elections—and for the next general election.

This effect could be felt long after the immediate divisions over the Suez issue are forgotten, if the right wing forces really are now to be allowed confident vent for uncontradicted views. No doubt it is as easy to exaggerate this danger as it seems to be to ignore it. It would be silly to pretend that new progressive Conservative candidates (of, say, the Iain Macleod or proto-Butler type) will from now on be rejected wholesale by local selection committees. It may be only a minor factor that some "new Tories" may recoil from the prospect that—like moderate Labour candidates who have to say that they believe in the "nationalisation of all means of production, distribution and exchange," even when they obviously do not—they may be under increasing compulsion to trim their real opinions at their adoption meetings. But a much bigger difficult may now inhibit some of the best of this type of Tory from presenting themselves as candidates. As a result of the developments of the past six months, many of them must now fear that, if they should become Conservative MPs, they will be subject to constant interference and attempted supervision from their local associations.

This possibility is a direct consequence of the way in which Mr Macmillan has sounded his Suez retreat. The most disturbing incidents have, of course, been the announcements of the local Conservative associations at Bournemouth East and Norfolk Central that they intend to eject their MPs because they abstained from supporting the Suez invasion. Mr Macmillan, whose ministerial team includes some members who took precisely the same attitude to the invasion as did Mr Nicolson and Sir Frank Medlicott, could have afforded to give some public intimation that such attempts to limit the leftward compass of the Conservative party do not meet with his approval. The fact that he has not done this reflects the one weakness of his recent policy. He has been determined to avoid giving any offence to the party's Blimpdom in any of his speeches, while reversing their policy by all of his deeds.

The Prime Minister has thereby given the appearance of power and influence to precisely the people who would like to lead Conservatism along the rightward road that he himself must most wish to avoid. No independent voter can discount altogether the risk that this ceding of the appearance could lead to a gradual ceding of part of the reality. This is the one-quarter of Mr Macmillan's handling of the post-Suez adjustment of policy that has not been magnificent. Unless he takes steps to reverse it, he or his successors may progressively find that it has not been very good long-term politics either.

The French Succession

M. Mollet has been brought down by deputies who, approving of his Algerian policy, resent paying for it. France's politicians now have to face some unpleasant realities

It is impossible to describe the French political crisis as just one more turn of the familiar governmental merry-go-round. M. Mollet had been Prime Minister throughout the life of the present Assembly, which was elected early in 1956. He had emerged apparently unscathed from the Suez debacle, while Sir Anthony Eden, a sorely sick man, fell by the wayside. Although a Socialist heading a predominantly Socialist government, M. Mollet seemed to have found a formula for ensuring right-wing support. After so long a period of stability his fall came as a shock, even though it was half expected.

In one vital respect, the new crisis fits the (unhappily) established pattern. Seldom do French governments yield the floor (as elsewhere) to a new team with a clear alternative policy. The only exception to this rule in recent years was the mandate given to M. Mendès-France in 1954 to end the war in Indo-China. Political logic would indicate that, since Algeria was at the heart of M. Mollet's tasks and problems, his successor should be a man with a new plan, or at least new methods, for tackling Algeria. But it was not the critics of his Algerian policy who brought him down; it was the conservative "Independents," who thoroughly approve of that policy. What laid him low was the refusal of these very men to pay the bill for it.

Conservative critics in last week's debate had one valid point: M. Mollet could not simultaneously follow all the courses to which he was committed. France now faces the need to invest heavily in order to survive the competition of the world at large, and of its prospective European partners in particular. It needs to broaden its fuel base, to intensify its agriculture and to modernise its equipment. It may be doubted whether such structural changes could safely be combined even with M. Mollet's limited social welfare programme. But in any case the question has become academic; for all France is also shouldering the burden of a colonial war involving over 400,000 troops and costing nearly £500 million a year. The effects have included swollen public expenditure, a growing budget deficit and something perilously near bankruptcy in foreign exchange. The franc is in grave danger, despite the most solemn assurances against devaluation. Some time ago people expressed the fear that France might "tiptoe" into inflation; the prospect now is a gallop.

M. Mollet's successor will inherit, without any modification, both the mounting pile of unpaid bills and most of the awkward problems that faced the Socialist premier when he took office sixteen months ago. Some of those problems are now even more acute. Preoccupied with Algeria (and with the Egyptian expedition—in French eyes the two are intimately linked), M. Mollet never achieved his projected reforms in the fields of education and national health. He pushed the European common market and Euratom treaties as best he could, but the Assembly was not due to debate their ratification until next month. M. Deferre's new statute for overseas territories, setting them on the road to some sort of Commonwealth status, may very well be recorded as the Mollet government's only major achievement.

The struggle in Algeria has created among French intellectuals a mood and a division reminiscent of Dreyfus days. The moral integrity of the government and its servants have been brought in doubt by numerous tales of atrocities. M. Mollet's inability to take any steps likely to bring a political solution in Algeria any nearer not only alienated his chief partner in the 1956 Republican Front, M. Mendès-France; it also left the government at the mercy of the Independents, who grew more frustrated with each month out of office and more confident with each new by-election. Last weekend conservative deputies returned to Paris from their constituencies with a strong feeling that their supporters had had enough of a Socialist-led government, whatever its Algerian policy.

Yet the Socialists retain their key position in the Assembly. As long as the 150 Communists and the forty Poujadists remain outside the parliamentary pale, any new prime minister needs the approval, open or implicit, of the great bulk of the remaining deputies in an Assembly of fewer than 600. Possible ministerial permutations may indeed be many and varied, but a workable majority can be found only within narrow limits. Parliamentary arithmetic still puts a premium on bargaining and conciliation; immediately after M. Mollet's fall, the two men tipped as most likely to succeed him were MM. Pleven and Mitterrand—both members of the UDSR, a tiny centre group close to the Radicals. Since the next premier will need the votes of the Socialists or the MRP or both, he will have to promise these "European" parties that he will go forward rapidly with the ratification of the two European treaties.

Nothing could be more disastrous than a prolonged

interregnum. Any sense of relief that the fall of a Socialist-led government may bring to businessmen would soon be outweighed by the perils of uncertainty. Financial embarrassments that can still be overcome could quickly turn into a financial catastrophe—in which a forced devaluation of the franc would be by no means the final stage. The European treaties would also be endangered. And, lastly, whatever one's views of M. Mollett's Algerian policy, matters could scarcely be improved by no policy at all.

Against this alarming possibility of paralysis there may be set the hope that a change of ministry, however closely the new resembles the old, could open the way to a change in policy—for the better. Admittedly, no aspiring premier could now stand up in the Assembly and promise Algeria independence ; but there are less dramatic ways of escape from the present blind alley. A government slightly further to the right might not be as sensitive as M. Mollet has proved to the accusation of defeatism ; the Socialists, out of office, would be les tightly committed to a "firm" policy ; the departur of M. Lacoste, the present minister-resident, fron Algiers might incline the rebel leaders toward compromise. Together, these things might give th Tunisian premier, M. Bourguiba, the chance of dis playing his talent for discovering face-saving formulae— though M. Mollett's last-minute decision to suspen credits to Tunisia was hardly the happiest prelude t such a development.

Economic considerations cannot alone dictate th policy of a government in France or anywhere else but the economic implications of a never-ending wa cannot be ignored. France's quixotic rearguard actio in the matter of Suez Canal dues shows that some o its leaders have burked the harsh realities of the balanc sheet. If the renewed political crisis injects som realism into French thinking about Algeria, it will no have been an unqualified misfortune.

Alliance of Arms

Better defence at smaller cost could be attained through a better co-ordination of Europe's arms production. Herr Strauss's visit to London may be a step towards this goal

THURSDAY'S meeting between Herr Strauss and Mr Duncan Sandys had one central purpose. This was to concert the two Defence Ministers' efforts to adapt the forces of their countries to the demands of tactical atomic war. Mr Sandys's white paper pioneered the revolution in European military thought and methods. But Herr Strauss, too, has ideas on the "new model" forces. He was appointed, indeed, to give the embryonic West German forces a new shape—small mobile divisions, difficult to hit and swift to move into the desolation left by a tactical atomic weapon, instead of the cumbersome formations planned by his predecessor, Herr Blank. Herr Strauss has been quick to realise —though German politicians may have been, understandably, slower—that one day German forces may have to be armed with tactical atomic weapons. But both British and German policies have had the faults that go with imagination and drive ; they have each been pushed through ruthlessly and with some disregard for allies' feelings. The meeting in London was politically urgent.

To many of West Germany's allies all talk of placing atomic weapons in German hands seems shocking. It raises, more acutely even than did German rearmament itself, the question whether the rearmed ally can be safely controlled. True, the problem is not immediate. Tactical atomic weapons are unlikely to be in German hands for perhaps another two years. Even then they would be supplied by the United States or Britain. There is no question yet of West Germany producing atomic weapons. The Federal Republic renounced the right to do so in the 1954 Paris agreements, accepting at the same time a European agency to supervise arms production. An encouraging account of the agency's first year's work has just appeared. It has begun to develop methods of inspection, and has found the Federal Republic most co-operative. It is not the control of a Germany armed with atomic weapons that presents the immediate problem. The problem with which the Ministers have to grapple now is a different one—and it lies in the field of economics.

THE British white paper on defence was a spectacular recognition that no European nation is now wealthy enough to carry alone the burden of both atomic and conventional arms. The case for closer working relationships between the members of Western European Union is reinforced by pressing economic arguments. And closer ties with Western Germany are particularly timely. German arms production and German forces are only just coming to life. It is essential that they should be, from the very beginning, part of a common allied arms programme and a common strategy.

The urgency of this has been bleakly exposed by a report from the defence committee of Western European Union, which was entrusted with the task not only of controlling German rearmament, but of strengthening the collective defence effort. The report gives a frightening picture of the weakness of ground defence in Europe. The forces under the Supreme Commander are too weak for effective resistance on the line of the

iron curtain—the "forward strategy" which is politically essential for the Atlantic alliance. Little except the great nuclear deterrent prevents the Russian troops from walking through to Calais. In part, this weakness is due to the failure of the main European allies to fulfil their ground commitments—the reduction of French forces in Germany to one division, the snail's pace of German rearmament, the cut in Britain's forces on the continent. But the alarming weakness of the "shield" is also the result of inadequate co-ordination of national forces and armaments. The Supreme Commander cannot even plan a common mobilisation to meet a sudden attack, for each country has a separate mobilisation timetable. And an alarming inflexibility is imposed on Nato's forces by national differences in equipment.

DIFFERENT transport and supply arrangements make it difficult for the Supreme Commander to move forces from one sector to another. Blatant examples are cited of the economic waste of separate national arms efforts. The WEU committee visited a centre in France where at a cost of £10 million an anti-aircraft missile has been developed three years after a similar one was produced in Britain and several years after a similar development in the United States. "A complete impression of duplication was left." The removal of such anomalies is an elementary approach to better defences at less cost. The Assembly of Western European Union has recommended a new drive to standardise arms, to undertake joint research and development of weapons, and to allocate production rationally amongst the allies. It seeks, within the European, if not the Atlantic, alliance, something like the intimate partnership and planned allocation of arms production between Britain and the United States during the last war.

The WEU report perhaps paints an unduly harsh picture of the patient efforts Nato has been making for some years to standardise arms. Nato has made some progress in standardising the simpler parts—vehicle batteries, wireless equipment, and now at last a common cartridge—where interchangeability in battle is of more vital practical importance than, say, the possession of a complete standard tank. Standardisation of arms, too, does present appalling practical problems. In the case of aircraft and other complicated weapons, development may take ten years ; with Nato only eight years old it may not be surprising that there is no common Nato aircraft. Even Britain's new PI fighter, not yet in service was conceived before Nato was born. And the moment when countries need replacements for a weapon do not coincide. When Britain, for instance, required a new rifle and chose the Belgian FN, the United States had no such need ; it will in 1965, but it has since developed a better rifle of its own. Yet the gap stands stark, with all that it costs in separate efforts and in lack of common equipment. The difficulties will have to be overcome if the armaments of European countries are not to become more and more obsolete and expensive, and the defence of Europe correspondingly weaker.

It is not, however, in the field of the conventional weapons of today, but in that of guided missiles, the weapons of the future, that the need for common effort is most exigent. No one European country has the resources to produce a modern range of these weapons by itself. If Europe is to have any significant arms production of its own in the missile age, the electronic industries of France, Italy and Germany, as well as Britain's, must be brought into a common effort, each pursuing research in different fields and specialising in the production of different parts or weapons. Guided missiles present a precious opportunity of making a new start. The main problem, frankly, is security. If the secrets of missiles are discovered years before they are ready for use, a potential enemy has time to find a counter to them. At first, bilateral arrangements for common research and development—like the two months old link between Britain and France—could perhaps be made more safely than multilateral ones. But they could be broadened later to bring in all the WEU countries.

Talk of pooling arms on a European basis may seem unrealistic in one fundamental respect. Europe is bound to remain partly dependent on the United States in these new fields of missiles and atomic weapons. It is in the matter of bringing European and American types into line that Nato's past efforts at standardisation have been least successful. The simplest answer to the problem would be to let the Americans make the lot. Yet, political factors apart—and the ability of European countries to contribute themselves directly to the deterrent could be crucial in the ultimate decision—a strong European arms industry has an obvious contribution to make to the alliance. The United States has shown much sympathy with the idea of a European pool. Ideally standardisation ought to be carried out on a Nato basis ; but much might well be achieved, and more quickly, in a smaller European group. If, as atomic weapons become more commonplace, the pressure to bring German scientists into atomic research becomes, as it may, inexorable, the existence of a common arms pool for the European allies may prove invaluable. German atomic scientists would then move not into a national but into a European system. Europe, the western world, and peace itself might gain.

On becoming a Cat

What with a ministerial circular, a report on the training and supply of teachers and a conference of the Federation of British Industries, technical colleges were in the news last week. Our special correspondent visits one of the new Colleges of Advanced Technology, at the top of this particular tree

THERE are many unsuspected ways of putting one's foot in it, and one of them, as your correspondent found, is to ask the Principal of what used to be called the Northampton Polytechnic whether his clock is right. "What a question to ask," said Dr Tait, "at the National College of Horology." But this proud subtitle is about to be surrendered now that Northampton has earned a far more distinguished title. It has been designated as one of the new Colleges of Advanced Technology. Alas, they are known in the business as "cats," but their eminence is unquestioned, and springs from last year's white paper (Cmd. 9703), as a result of which Britain's technical colleges are being sorted out into three grades.

At the bottom of the scale are the "local colleges," where elementary work only will be done ; in the middle are the "regional colleges," where there will be some advanced courses and some elementary work ; and at the national level are these "colleges of advanced technology." Here Northampton (which, by the way, is not in Northampton but in Islington, London) finds itself in the company of colleges at Birmingham, Bradford, Cardiff, Loughborough, Salford, Battersea and Chelsea.

To qualify for its new and august description, the college has had to fulfil certain conditions. For the sake of prestige, it must have an independent board of governors, as opposed to being run from the local council's education offices ; and its courses must lead to advanced qualifications only—to university degrees, the higher national certificate, or to the new Dip. Tech. Northampton had no trouble in fulfilling the first qualification. It was founded in 1891, built in bulbous red brick on land given by the fourth Marquess of Northampton, and supported partly by certain city companies—the Clockmakers, the Needlemakers, the Saddlers and the Skinners. Today, as everywhere, the authorities have taken over. The London County Council, as the education authority concerned, pays 85 or 90 per cent of the cost of running the college ; but as this is a CAT, they get back 75 per cent of the cost (as opposed to 60 per cent on less advanced work) from the Ministry of Education. The remaining 10 or 15 per cent comes largely from fees, paid either by the local authorities in whose areas the students live, or by the firms for which they work, or—in very rare instances indeed—by the students themselves. In spite of this the link with the Skinners' Company is still strong. The company has given many prizes as well as a generous grant for the library ; and the college governors meet in its board room to keep up the connection.

AS to the second condition—the provision of advanced courses only—this has not been quite so easy. The problem of staffing, it is true, is not at present serious. Northampton has always had a tradition of advanced work, and is staffed accordingly. But the college now expects to have its senior staff strengthened by the addition of readers—a new grade in this *milieu*—comparable in pay and status with university readers. Existing lecturers could be promoted to these posts, but presumably Northampton will also try to get the services of what Dr Willis Jackson's committee, in its report published last week, christened "special lecturers or readers"—that is, senior staff members of industry, lent by their firms on a part-time basis. The staff of this, as of every other technical college, have little time for contact with industry. Quite apart from the fact that, in the technical colleges as a whole, an extra 7,000 full-time and 8,000 part-time teachers are going to be needed by 1960, the quality of teaching would gain from the addition of men fresh from industry, as well as from the periodical release—also recommended by the Willis Jackson committee—of existing teachers for factory experience.

In recruiting staff, the technical colleges are in competition with the universities as well as with industry, but they are for the most part sadly at a disadvantage. Their holidays are rather shorter, and, as the Willis Jackson committee points out, there is far less time for the lecturer's own research. But at least the pay is no worse. A senior lecturer, under the scales that came into force last year, gets £1,350-£1,550 ; a reader £1,550 to £1,800; a head of department anything up to £2,250, according to his grade ; and a principal gets up to £3,200. Local authorities, it is true, are sometimes rather mean in grading posts in their technical colleges—and therefore get the calibre of staff that they deserve. One of the Willis Jackson committee's recommendations is that they should mend their ways in this regard. Your correspondent did not like to raise such personal questions, but heard not a word against the London County Council.

Northampton's staffing problem is made easier in the short run because, as a first result of its becoming a CAT, a large proportion of its students are being asked to go elsewhere, on the ground that their work is not advanced. This weeding out, however, brings its own problems. Much telephoning goes on to find them suitable places ; in the event, most of them are going to Hackney Technical College, and the equipment for their courses is going with them. That means goodbye to those working, for example, for the general certificate of education, the City and Guilds examinations, and the ordinary national certificates in the various branches of engineering and in applied physics and chemistry. Some of these partings—for example, with the students for the ordinary national certificate in physics, the course for which is largely the brainchild of the present head of the physics department—will be sad. Northampton would also hate to see the clockmakers and the ophthalmic opticians go, in view of their special place in the college hitherto.

Among the courses that will continue are courses leading to the BSc (engineering) of London University. Students at this technical college do not, as they do at many other advanced technical colleges, work for London external degrees. The college is what is called, in that university's administrative jargon, "an institution with recognised teachers," and this qualifies its students to take internal degrees (for the minute fee, incidentally, of three guineas for each year's lectures). But it is expected that more and more students will prefer to work for the Dip. Tech.—the new award that is being supervised by a council under the chairmanship of Lord Hives. Two such courses—in electrical engineering and physics—are already going strong ; and nine other courses—in five branches of engineering, applied physics and mathematics, industrial chemistry and instrument technology—are being developed.

The task of the technical college, in this connection, is not only to provide the courses, but also to "sell" the Dip. Tech. to industry, as a qualification peculiarly suited to its needs. The course usually lasts four years, with six months in college alternating with six months in industry throughout that time ; this will give a "feeling of the shop floor," as one lecturer described it, that could not be acquired from a degree course. Some employers are enthusiastic about this new sort of "sandwich course"; others are less so—especially as it is usual for industry to pay the fees of the students whom it designates, at a cost of about £2,000 a head for the whole four years. By contrast, most of the full-time students for degrees or other advanced courses are paid for by their local authorities.

Another matter on which the college needs the co-operation of industry is in integrating the academic and practical sides of the course. In the old type of sandwich course the student was a student only while he was in the college ; in the works he was just a cog in the productive machine. The new idea, however, is that he should be trained in the works, too, and some firms are setting up special departments for this purpose. There is also a sensible idea that small firms should get together to plan a joint training.

FINALLY, the developing college is faced with the task of providing for its students some of the "extra-curricular" features of university life. This is in line with government policy. The encouragement of college societies and corporate life was recommended in a circular issued last week by the Ministry of Education, as a means of "liberalising" technical studies. When "the bulge" leaves school and clamours at the narrow gates of the universities in the 1960s, the colleges of advanced technology must receive many of those who, at present standards of entry, would have got a university place ; it must combat the feeling, which they will undoubtedly have, of being fobbed off with an inferior substitute.

Northampton boasts a swimming bath, right in the midst of the lecture rooms, a rifle range, and some playing fields at Palmers Green ; the common room has actually acquired a carpet, and the library is beautiful, if not very well stocked with books. Soon a residential hostel will be built nearby, for now that Northampton is a CAT it will be drawing students from all over Britain for the courses in which it specialises. It has a students' union, of which membership, in case the students do not appreciate it, is compulsory, and this is to be housed in a new building, of which so far only the site exists. And to encourage the young men and women to raise their noses from the laboratory bench, they are to be given two hours for lunch on Thursdays, in the hope that perhaps half this time will be spent in extra-curricular activities other than eating.

Even so—no ancient stone, no college plate, no punting on the river. Perhaps the literary genius of the next few years will present for us the angry young man of the technical college, with a chip on his shoulder because he did not go to a redbrick university. Perhaps, indeed, if the educational system could be planned from scratch, we should be building new universities, not developing existing technical colleges. But if they get co-operation from industry, the technical colleges will do great work. And their alumni have the satisfaction of knowing that there can be no question about whether their education is worth the taxpayers' money. Armed with their Dip. Techs. and their engineering degrees, they will at least have the confidence that the nation is crying out for them.

CHRISTMAS ISLAND

Coming Clean

If the statements made by Ministers since the first explosion in the Christmas Island area give an accurate picture of what happened there, their arguments for proceeding with the British tests have been strengthened. The hydrogen bomb that was dropped ten days ago, presumably a two-stage fission-fusion device, appears to have been a pretty "clean" one (the remark that it was "as big as a bathroom" seems almost too apposite). There have admittedly been reports of radio active rain falling in parts of Japan this week, but its origins seem uncertain. The political fall-out has also been notably limited. In India, Ceylon, Japan and elsewhere there have been fresh appeals and expressions of anxiety, but they have mostly been couched in sober terms, and on the whole the political atmosphere, like the physical one, seems no more highly charged than it already was before the Penney bomb dropped.

More details, and more tests, have to be awaited. It is fervently to be hoped that the elaborate precautions taken on May 17th were completely effective, and that the rest of the British series of tests will maintain the "clean" record. If so, Mr Macmillan's claim that these tests will not significantly increase general radiation hazards may carry conviction. There will also be added justification for the Government's sceptical attitude to the Russian offer to suspend tests without permitting any supervision of the suspension. (It would be interesting to know if Soviet scientists are in fact capable of detecting a "clean" and relatively small mid-Pacific explosion at long range.) And the technical prowess of the British scientists who seem to have advanced not merely into the megaton range, but right past the stage of massive and unpredictable fall-out with which the Russians are apparently still struggling, must evoke admiration. That admiration should neither be confused with, nor contribute to, the dangerous illusion that Christmas Island can restore to Britain the kind of ill-defined "greatness" that some people hanker for. It is the defence of human freedom that is in question—not a hot fomentation to comfort a bruised national psyche.

FOREIGN SECRETARYSHIP

Dropping the Scapegoat?

One obvious feature of last week's foreign affairs debate was that both the Tories and Labour were ganging up on Mr Selwyn Lloyd. In the beastly business of politics, this is usually fatal for anybody who holds as high—but not summit-high—an office as the Foreign Secretaryship. The same sort of thing happened with the shadow foreign secretaryship last year; Mr Selwyn Lloyd now seems to be in approximately the same parliamentary position as Mr Robens was then. His usefulness as a screen behind which past policies could be changed, while the Government pretended that they were not being, has also worn out; and, under present brutal parliamentary conditions, his advocacy of any new policy would probably harm it.

This does not mean that any change in the office is thought to be imminent. It also does not mean, however, that too much succour for Mr Selwyn Lloyd need be read into Mr Macmillan's widely expected rallying to his defence in his speech to some Conservative women on Wednesday. There would be political and personal disadvantages if the Prime Minister seemed to be firing his Foreign Secretary under such recent taunts as Lord Hinchingbrooke's and Mr Bevan's. With the summer recess only ten weeks away, and a Commonwealth Prime Ministers' conference to be hurdled in the meantime, the general if cynical belief in the lobby seems to be that Mr Macmillan will wait until about the time of the party conferences in October, and then see if there are any high legal appointments or usefully vacant governor-generalships lying about.

Replacing Mr Selwyn Lloyd, if he is to be replaced, will be no easy matter. One of the explanations of the undercurrent of agitation against him is the very proper feeling that the Foreign Secretaryship should now return to the position of Cabinet eminence it held in Sir Anthony Eden's and Mr Bevin's days. Some of Mr Butler's defeated admirers are therefore reviving the argument that Mr Butler would be the best Conservative Foreign Secretary, and that Mr Butler would be wise to press Mr Macmillan to ask him; one can accept the first, while doubting the second, of these propositions—and also doubting the probability of either coming to pass. Until last week the favourite successor in the betting—apart from a few whispers for Mr Sandys and Mr Lennox-Boyd—was Mr Heathcoat-Amory. Now there is a sudden rush of discussion about Mr Macleod. If one supports the plea for eminence, there is this much to be said for that discussion: while in Mr Heathcoat-Amory the Conservatives have long seemed to have a distinguished future elder statesman, Mr Macleod can more easily be seen as one of the best temporarily future Prime Ministers they have got.

BURDEN ON MINISTERS

Root and Branch

The inquiry into government machinery, and the burden on ministers, should have one basic aim: to give ministers more time to think out policy. No one will envy Lord Attlee and his little group of elderly Privy Councillors the task of trying to think out how to enable them to do so. The weight of any ministerial burden, of course, always depends partly on the nature of the man. Technically, the administrative burden laid on any British minister is much less than that laid, for example, on the President of the United States; yet there sometimes seem to be ways of

running the latter office as almost a part-time job. One peculiar difficulty of the British system, however, is that ministers have to be continually hurrying away from their desks to go to the House of Commons. It is not going to be easy to interfere with this. All recent experience shows that MPs remain jealously anxious to keep ministers at least as fully answerable to Parliament as they are now, if not more so. Ministers certainly need to be kept answerable at question time, even though there may be ways in which even that institution could be improved. Whether they should be obliged to turn up at so many divisions (proxy votes perhaps?) is another matter.

Mr Macmillan has said that the Attlee committee will only be carrying out an informal, preliminary study, designed to help him to decide whether there is a need for a full, formal inquiry. One's own inclination is to say that there should be such an inquiry, and that it should be thrown wide. There is a strong case for examining whether the pattern of Government departments is now out of date; the question whether more direct authority should be given to Ministers of State and Parliamentary Secretaries needs to be explored; and the investigation might also profitably extend to the organisation of the upper reaches of the civil service. The whole inquiry should be treated as a matter of urgency. Over the past ten years more than half of the few British statesmen of major stature have been affected, at least in part, by the strain of their work. National leaders are not so thick on the ground today that we can afford many more casualties; and the periods when the strength of these people has been impaired—when they have become casualties but do not realise it—are the worst periods of all for national policy.

ITALY

Monochrome Experiment

Italy is again trying the experiment of a "one-colour" minority government, this time under Senator Zoli, the much respected, if somewhat self-effacing, president of the Christian Democrat national council. The experiment has been tried three times before during the life of the present parliament. Signor Pella's minority government in 1953 lasted five months; the other two never survived their first presentation to the Chamber. Whether Senator Zoli can get over this hurdle will not be known until next weekend.

The cabinet that he will present to the Chamber is marked by the removal from the foreign ministry of the Liberal, Dr Martino, whose conduct of foreign policy, apparently not forceful enough to satisfy President Gronchi and a section of the Christian Democrats, contributed towards the downfall of the Segni government. But his successor, Signor Pella, is unlikely to make any important changes in policy. When he was foreign minister as well as premier in 1953 his strong nationalistic line over Trieste won him approval throughout Italy. But he is also a good "European," and will doubtless do his best to secure ratification of the common market and Euratom treaties. The only non-party member of the cabinet is Professor Carli, in charge of foreign trade. He has been on the executive board of the International Monetary Fund, and has been either chairman or member of the EPU managing board since it was set up. The removal of the right-wing champion of private enterprise, Signor Togni, from the ministry recently set up to control and co-ordinate state-owned undertakings, looks like an attempt to secure the good will of the socialists.

Signor Zoli's chances of gaining the approval, or at least the toleration, of the Chamber are improved by the lack of any alternative short of a recourse to the polls this autumn instead of next summer. All the four former coalition parties, including the Christian Democrats, have declared their disapproval, in principle, of a "one-colour" government. But the strains and stresses between them have apparently reached a point at which principle cannot be put to practical effect. Signor Zoli, commanding only 263 votes out of 590, will be condemned to limp painfully along picking up what votes (or abstentions) he can on each specific issue. One hopes he will not have to stray too far to the right in search of support. He has declared stoutly that he does not mean his government to have a merely transitional character. But if he tries to tackle anything controversial (like the long pending land tenure bill) he will be hard put to it to keep in the saddle.

MIDDLE EAST

King With A Mission

The communiqué which concluded the visit of King Saud to King Feisal of Iraq last weekend and the cheerfulness of Nuri el-Said at his subsequent press conference suggest that the understanding between the two kings is something more than royal politeness. Taken together with King Saud's imminent visit to Jordan, this marks an important change in the political complexion of the area, which has long been coloured by the enmity of the Saudi and Hashemite royal families. Ever since the formation of the Arab League in 1945, Egyptian dominance in Arab affairs has been made possible by the support given by Saudi Arabia simply for reasons of opposition to Iraq.

King Saud has struck out on a line independent of—although not necessarily opposed to—that of Egypt. He is reported to be anxious to mediate between Iraq and Egypt in order to end the internecine political strife in the Arab world and, to that end, he seeks to avoid an open break with Egypt. This is a wise policy. It is more important that he should have good relations with Iraq than that he should turn against Egypt; for it is from the middle position that he can do most to end the spate of angry propaganda which is disturbing the area and driving the nationalists into more extreme positions. According to the *New York Times*, King Saud believes that President Nasser "can still be won back to moderation."

President Nasser may now have good reason to be more moderate. British and American correspondents have reported from Cairo that the trade relations between Egypt and the Soviet block had been marked by tough bargaining on the communist side and that Egypt had become "cool and cautious." They also reported that Egypt has been just as tough with the Soviet block as with western countries over canal dues and that Russia, Hungary and Poland have protested because dues were demanded in dollars or Swiss francs. (*Pravda* has, naturally, denied all this.) And the Syrian foreign minister, who keeps close to Egyptian policy, has told British newspapermen that he wants to improve relations with Britain.

The time may therefore be opportune for King Saud to attempt to bring some commonsense into Arab politics.

The discussions which started yesterday between British and Egyptian delegations in Rome, on claims for damages and the removal of restrictions on Egyptian sterling, should throw some light on the prospects.

One Pipe First

THE last-minute decision of the seventeen oil companies which conferred in London last week to plan one new giant pipeline for the Middle East, instead of two, does not mean that two pipelines will not eventually be laid. The companies have to raise the wind before they lay the pipe, and practical considerations about how and when to do so have led them to modify their general plan at this stage. The companies will still need means of moving an additional 70 million tons of oil from the Persian Gulf area by about 1963.

One new pipe of about 40 inches diameter could handle about half the additional flow and there is little doubt that the companies could, if compelled to, transport the remainder by loading existing facilities to the limit and increasing the tanker facilities beyond what is already planned. It would, of course, be better to have two new pipelines; but that would cost about £300 million, and presumably the companies will want to feel more confident about the security of such a large investment than they have been since Syria blew up the pumping stations on its territory last November.

The original plan has now to be redrafted to provide for only one pipeline. The companies will then enter the stage of consultations with the producing governments, Iraq, Saudi Arabia, Kuwait and Iran. They know how to finance and build a pipeline if the governments approve the plan.

UNIONS

Strings on Whom?

THE disunity in the Confederation of Shipbuilding and Engineering Unions is another indication that if the strikes in these industries had been withstood from the start the unions would not have been likely to win them. It is also indicative of something even more interesting. The definition of a left-wing trade union leader in 1957 is apparently to be one who votes for accepting less money than his members could get. On Thursday the engineering workers, under the leadership of Mr Carron of the Amalgamated Engineering Union, settled with their employers on an increase of up to 11s. a week—but subject to "strings" which would include a "twelve month freeze." By contrast, the shipbuilding workers, under the leadership of the rumbustious Mr Hill, seem to have decided that they will have nothing to do with the strings; although Mr Hill is still making threatening noises about the possibility of reopening the strike, the indications are that the shipbuilding unions may be more ready to accept an offer of 8s. 6d. without conditions (which the courts of inquiry recommended, but the shipbuilding employers have not yet made) than the 11s. offer with them.

Mr Hill has been supported by the left wing throughout the confederation's debates. In part, the left's opposition to the strings has been based on the political objection that to accept even a twelve months' standstill would be tantamount to accepting a partial wage freeze under a Tory Government; this point may have weighed particularly heavily with Mr Cousins, who has consistently cast the votes of his Transport and General Workers' Union to the left in the confederation's decisions—but for whose massive general union engineering and shipbuilding wages are necessarily only a small part of a wider wage struggle. It is not so clear why unions whose main interest lies in shipbuilding, such as Mr Hill's boilermakers, should be so opposed to the standstill. Any advantage the shipbuilding workers may derive from keeping themselves free to get any 1958 claim on to the bargaining boards a little earlier than the engineering workers seems most unlikely to outweigh the disadvantage of getting 2s. 6d. less a week for the next twelve months. The conclusion is irresistible that one of the major objections of the leaders of some shipbuilding unions is to that part of the employers' conditions which seeks to assault the plethora of restrictive practices in the shipyards.

There is a personal interest involved here. With some twenty-one unions having a stake in the shipyards, there are too many union officials chasing too little work there; the militancy they display and the restrictive demarcation agreements they establish are sometimes designed not so much to protect status and make jobs for their members, as to protect their own status. That is one reason why the officials of some shipbuilding unions so bitterly resent attempts to tie wage increases to any discussion of these practices. The tangled restrictions in the shipyards already diminish opportunities for higher earnings there; the refusal to discuss them may now be going to keep down the basic wage there as well. But the workers involved, even though the season for most of their annual conferences is now opening, seem unlikely to offer a word of protest.

Israel and the Suez Canal

ISRAELI shipping has never been allowed through the Suez Canal. The only vessel flying the Israeli flag which has tried to get through was the *Bat Galim*, which in 1954 arrived at Port Suez carrying hides and meat from Eritrea. Both ship and cargo were confiscated by the Egyptian authorities, the crew was detained in Egypt for several months, and at the Security Council debate which followed the incident the Egyptian delegation made it plain that no Israeli ship would be allowed through the canal. At present less than a quarter of Israel's trade is carried in its own ships, but tonnage amounting to about 400,000 tons is on order in German shipyards and by 1962 Israel should have about four times the shipping capacity it has now.

Ships carrying Israeli goods but sailing under another flag are allowed through the canal but they are denied services such as bunkering, water or repairs at all ports on the way. Since 1949 a black list has been kept of ships which are known to have called at Israeli ports, and these vessels—even when not carrying Israeli goods—are refused facilities at Egyptian ports. Moreover such ships run the risk of being searched and their Israeli cargo being confiscated; since 1953 the contraband list has included "foodstuffs and all other goods likely to strengthen the Zionist war potential." Although such seizures have happened only on isolated occasions—for instance, a cargo of meat from an Italian ship and motor cycles from a Norwegian freighter, both in 1953—the risk of interference makes shippers think twice before accepting Israeli goods. The stringency with which the Egyptian embargo is enforced depends on the heat of anti-Israeli feeling at the time. Many shippers take precautions such as calling at other ports beside Haifa or even getting the goods trans-shipped by way of Genoa. This is expensive for the Israelis; it also means that when there is a run on shipping space, Israeli traders are put far back in the queue.

Effects on trade. Israel's hope of building up trade relations with East Africa and the Far East depends on securing regular shipping services through either the canal or the Gulf of Aqaba. Although the gulf may eventually be the more important of the two to Israel, it will be some time before the port of Eilat can carry heavy traffic.

At present Israel trades almost exclusively with Europe and the western hemisphere; its small trade with the east is either carried slowly and expensively round the Cape or else taken riskily through the canal by chartered vessel. Israel badly wants new markets for its minerals (and in return needs oilseeds and timber from East Africa, and rice and jute from the Far East), but it will be difficult to break into these markets except by offering cut prices or quick delivery. Both these inducements are out of the question under present conditions. Except with Burma, Israel's trade with the east is on too small a scale to be commercially worth while. But the Israelis believe that the rapid expansion of trade with Burma is an indication of what could happen elsewhere if the trading route were open.

BY-ELECTIONS

The East Ham Actors

BY far the most interesting of next week's three by-elections will be that at East Ham North. The other two (Edinburgh South and Hornsey) will be dull affairs of counting swings and calculating whether there has been any slowing in the rate of fall in two comfortable Tory majorities. But East Ham, though a safe Labour seat, is going to present a rare opportunity to test strengths of opinion and emotion right across the political spectrum. To the left of Labour will be an Independent Labour Party candidate, standing on the main plank of opposition to the hydrogen bomb; this could be an interesting test of emotions in itself, although there are some doubts whether the ILP candidate will prove to be a very good vote catcher. On the right of the Tory candidate, however—and some observers think likely to push him out of second place—is Mr Edward Martell of the People's League for the Defence of Freedom. Mr Martell is the chairman of his movement, which can be compared, according to taste, with Poujadism or true Liberalism: he regards the contest more as a test of opinion than as a battle to be won. He chose East Ham because his potential supporters there need not be afraid of splitting the anti-socialist vote—since, split vote or not, Labour is plainly going to get in anyway.

The League's case is based on a dislike of "trade union tyranny and arrogant bureaucracy"—with much emphasis on the faults of the unions. Mr Martell believes that he will gain votes if there is a further outbreak of trouble in the Briggs works, many of whose employees (and, more important, their irritated neighbours) live in the constituency; he wants to introduce legislation to make it compulsory for ballots to be held before strikes could be called. This, and his determined opposition to all things smacking of socialism, will undoubtedly win some support among Conservatives in the constituency. Mr Martell is an extremely capable electioneer; in 1946, when he fought Rotherhithe as a Liberal, the Labour candidate won but the Tory lost his deposit.

The main interest next Thursday will be to see how near he can come to repeating this performance, how many of the so-called "Tonbridge-type" Conservative abstainers he can get to vote for him. One difficulty, however, is to see in which of the local houses his prospective supporters are supposed to live. There can be few retired majors, on whose abstentions the Conservatives are apt to blame their recent lack of support, living in East Ham. The constituency is very largely an industrial workers' area; apart from an enormous cemetery, it contains a section of docks and much factory workers' housing. It is much less of a middle-class area than Lewisham, where Miss Greene—a right-winger who was admittedly much less moderate than Mr Martell in the expression of her views—recently failed to save her deposit.

FARM SURPLUSES

Rotting Potatoes, Wasted Milk

THE Minister of Agriculture was asked in the Commons last week "what he considers to be a fair price for a rotten potato." The answer, given by Mr Heathcoat-Amory, in an understandably elliptical manner, is between £13 and £14 a ton. This is the support price at which the Potato Marketing Board stands ready to buy all ware potatoes, not actually diseased, which the market will not absorb at higher prices. Its normal practice is to ask farmers to store their own surplus potatoes, until either market prices improve or the board can itself dispose of them for stockfeed. This year's surplus is so large that although the board is urging farmers to "buy back" their own potatoes for feed (at the taxpayers' expense), and is also exporting subsidised potatoes, quite a lot of potatoes are rotting in their clamps. But they still have to be paid for at the support price, and 95 per cent of this year's sizeable bill for unwanted potatoes will fall on the taxpayer—with the board graciously carrying the remaining 5 per cent.

The problem of surplus milk is proving equally embarrassing. Since butter and cheese manufacturers are now getting all the subsidised milk they can handle, the Milk Marketing Board has been reduced to dumping unwanted skim milk in fields. This has given rise to complaints—about its effect on public health. In this case, since the Government has limited its liability for surplus milk, the major loss falls on milk producers collectively. A number of milk producers are now agitating for the introduction of a scheme that would reduce the returns of any producers who expand their output.

There is, of course, only one answer to this problem of rotting potatoes and wasted milk, and to that of Britain's crates full of unwanted and subsidised eggs (of which Her Majesty will have heard quite a lot in Denmark): the need in each case is for a cut in the guaranteed price. The potato support price was originally intended to be an insurance against severe market depression, not (as it has turned out to be) a positive inducement to farmers to switch to potatoes, and to grow them moreover from the exclusive viewpoint of weight instead of quality. The egg

guarantee was similarly intended to be a genuinely minimum price, not a price habitually above market level. For both eggs and potatoes, the Government has let itself be duped by the farmers. Milk is a more complex case, but here it is equally plain that the only solution lies through lower off-farm prices and a larger liquid market—not through elaborate schemes for penalising the more efficient producers.

MALAYA

Citizens of Tomorrow

THE representatives of the Federation of Malaya who completed their constitutional talks with the Colonial Office this week may perhaps ask themselves whether, in retrospect, their conference was strictly necessary. The legal implications of Commonwealth citizenship, which formed the principal debating point, had been made quite clear before the conference began, and the truth, when repeated by Mr Lennox-Boyd, can have been neither more nor less true than when it first fell from the lips of the legal experts. But the conference may have had its value for the Chief Minister, Tengku Abdul Rahman, who can now use the Colonial Secretary's reassurances to mollify those who had misunderstood the citizenship proposals of the Reid Report (an article on page 701 discusses the objections raised in Malaya).

A bleakly uninformative communiqué on Tuesday night merely recorded complete agreement. It is understood that the Tengku and his delegation accepted the British proposal that Malayans who are now British citizens—mainly Chinese living in Penang and Malacca—should be given Commonwealth citizenship in addition to Malayan citizenship when the Federation becomes independent on August 31st. They would owe undivided loyalty to Malaya, as recommended by the Reid Report. Indeed, Commonwealth citizenship will confer no special privileges on them beyond that of free right of entry into and residence in the United Kingdom. But the British Government appears to have conceded that Commonwealth citizenship should not be hereditary and should not be granted to anyone born after August 31st. It has also been agreed that Islam is to be the state religion and that the special privileges of the Malays will be extended to Penang and Malacca. A white paper on the talks will not be published until the Malay rulers have approved the decisions reached.

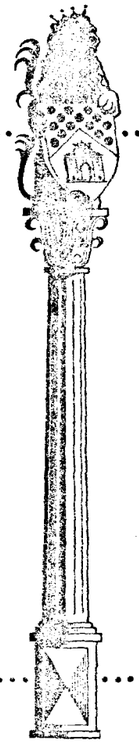
With the Tengku's agreement, Mr Lennox-Boyd also received an unofficial delegation of Chinese associations who want the qualifications for citizenship to be widened to include many Chinese now disqualified, and recognition of Chinese and Tamil as official languages. Although he said he had taken these views into account, there is no evidence that he has allowed himself to be swayed by them.

POLAND

Mr Gomulka's Middle Road

SEVEN months after its memorable meeting during which Mr Gomulka was brought back to power, the central committee of the Polish Workers' Party has just held a new plenary session. Mr Gomulka seized this opportunity to define at length his middle road between the two evils of Stalinism and "revisionism." Although he paid tribute to Soviet achievements and stressed the need for "proletarian internationalism," he also declared that, quite apart from the mistakes of the Stalin regime, the Soviet road "is neither indispensable nor suitable" for other countries which must take their own circumstances into account. He is reported to have summed up his attitude with the terse phrase: "Internationalism, yes; servility, no."

In this first speech, Mr Gomulka concentrated his attack on the revisionists, whom he accused of falling into "bourgeois" deviations. It seems, however, that later in the debate he was provoked into a violent outburst against the diehard Stalinists of the so-called Natolin group. He was apparently encouraged to do so by the mood of the meeting, which was more hostile to the diehards than was originally expected. That Mr Gomulka won the day once again was shown by the election to the party secretariat of Mr Kliszko and Mr Morawski, two of his close collaborators. But there is still no clear balance of forces among the communist rank and file, many of whom are disgruntled and bewildered at being asked to carry on their political work without recourse to the old tough and repressive methods. Mr Gomulka has succeeded in getting the Party Congress postponed until December in order to give himself a better chance of securing a firmer grip on the party first.



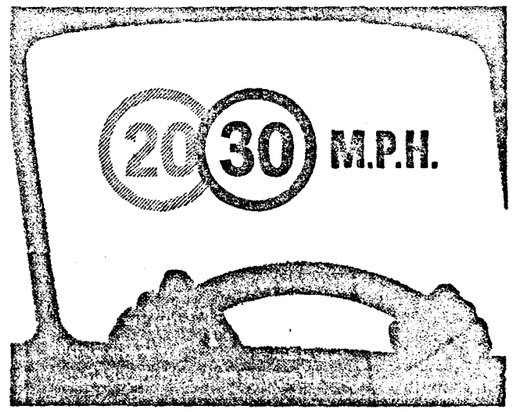
He may soon be faced with yet another showdown. At last week's meeting he defended the new conciliatory attitude towards the Church not on ideological grounds, but because communism and Catholicism will have to live together in Poland for years to come. The echo from the Vatican, where Archbishop Wyszynski has gone to receive his cardinal's hat, was not encouraging. In an encyclical letter addressed particularly to the Poles, the Pope had not a word of praise for the new regime. He merely warned the faithful against pitfalls and exhorted them to show firmness. The tone of the letter was in strange contrast to the blessing that Cardinal Wyszynski gave to Mr Gomulka's experiment last October. Last week, Mr Gomulka appealed to the cardinal to "follow the Polish road." If the reply now comes that all roads must lead to Rome, there is little prospect of continued understanding between Poland's two main powers.

DOCTORS' PAY

A Salaried Service?

THE medical profession might have thought that the question of a salaried service of general practitioners had been settled once for all in 1948. Doctors, by a large majority, then refused to enter the health service until Mr Bevan agreed, among other things, to put into legislative form the government's promise not to introduce a full-time salaried service by regulation. However, at the annual conference of the Socialist Medical Association Mr Blenkinsop, a Parliamentary Secretary to the Ministry of Health in the last Labour government (and possibly a prospective full Minister of Health in the next one), raised the issue again. The present method (capitation fees) of paying general practitioners, he said, encouraged doctors to keep their lists of patients as big as possible by handing out drugs like tranquillisers too readily. This pressure from patients for unnecessary drugs would be eased if doctors would accept a salaried service.

If there is much undue pressure from these drugs, and its extent is probably greatly exaggerated, the most effective way to check it would be through the prescriptions charge.



What you Will

The disposition of property, the creation of a family trust, the problems of partnership and private companies—these, and many similar and related matters, arise daily in the faithful discharge of the responsibilities laid upon us as executors and trustees. We are well fitted to act for you for we possess the knowledge and experience to handle your affairs with skill, courtesy and sympathetic understanding. Our care for the best interests of your dependants can do much to alleviate your own care for their future.

National Provincial

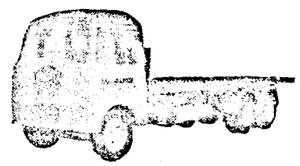
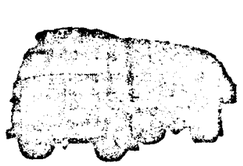
NATIONAL PROVINCIAL BANK LIMITED



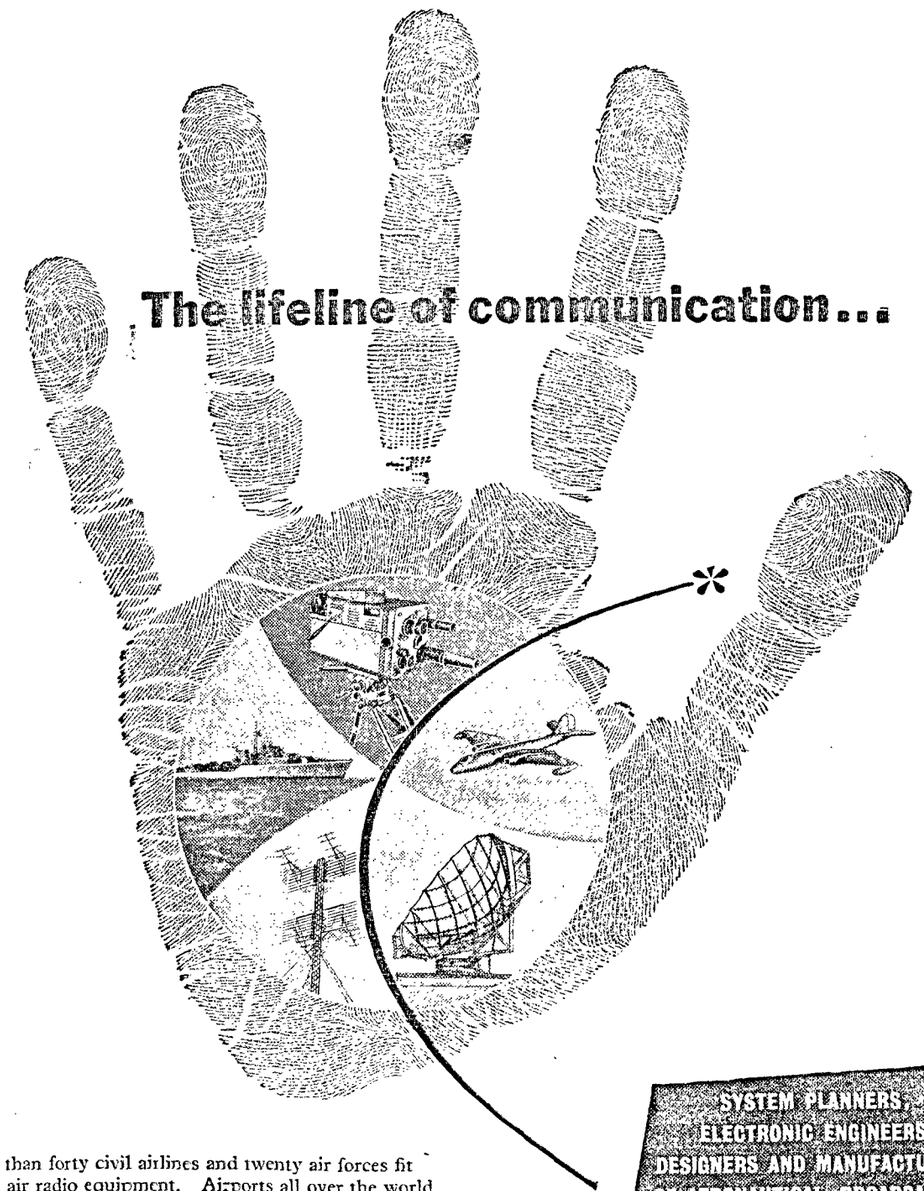
NOW MORE THAN EVER A.E.C's ARE MILES AHEAD



Given the speed, there are sound arguments for using a big capacity diesel-engined vehicle. The diesel engine has a relatively low fuel consumption; properly maintained, it needs little attention, runs for long periods between overhauls and lasts for years. From May 1st every diesel-engined A.E.C., from the 14-tons gross 'Mercury' to the 24-tons gross 'Mammoth Major', will be allowed to travel at 30 m.p.h. For users of small vehicles this opens up a new concept of big vehicle operation. A.E.C. goods vehicles, built for economical running and sustained reliability, are used by hundreds of operators all over Britain. They know that the big capacity vehicle pays. Let us show how the operation of A.E.C.'s will pay you too.

'Mercury'. 9½-tons payload. 14-tons gross. Bodies from 10 ft. 1 in. - 21 ft. 4 in.

'Mammoth Major' 8. 24-tons gross. Bodies from 16 ft. 10 in. - 24 ft. 7 in.



'Mammoth Major' 6. 20-tons gross. Bodies from 18 ft. 10 in. - 24 ft. 7 in.

Power, Performance, Capacity . . . *and 30 m.p.h.*

It is a remedy that Labour would not, of course, consider for a moment, even though other countries have satisfactorily established a system by which life-saving drugs are free and not strictly necessary drugs are paid for. But perhaps Labour could be persuaded to consider the effects of a salaried general practitioner service. That it would lower the standard of general practice by removing the incentive to work harder and better is probable. Mr Blenkinsop's comparison between general practitioners and salaried hospital doctors in this connection is irrelevant, because the latter do not work in isolation, but, like teachers, have colleagues to keep them up to scratch. In any case, it has been thought desirable for hospital doctors to have an additional incentive in the form of merit awards. But what is much more certain than the lowering of professional standards is the abolition of free choice of doctor that would follow from a salaried service. If all general practitioners are to be paid the same salary, varying only with age, obviously they will expect to work much the same hours and look after the same number of patients. Patients who want to leave Dr X, not because he refuses to hand out the tranquillisers, but because they think he is a bad doctor—or simply because they do not like him—will find that they are his patients for keeps. The capitation system has disadvantages, but at least it upholds the patient's freedom to change.

WEST INDIES

The Hailes Storm

THE Caribbean federation poses for its first Governor-General an exacting and intricate task. During his term of office he will have to guide towards independence *in unity* islands which are jealous of each other, have very different economic levels and are separated by miles of ocean. He will not be able to give this guidance unless he has the confidence of the political leaders in the different islands. It is in this context, not on the score of personal ability, that the appointment of Lord Hailes (formerly Mr Buchan-Hepburn) has rightly given rise to a fuss. Whatever the strict constitutional position in relation to a dominion which has not yet come into existence (the only parallel case was the Central African Federation where Lord Malvern was fully consulted), the most important factor governing the appointment should have been to pay maximum attention to the wishes and susceptibilities of the men with whom the Governor-General will have to work. In this case, the suspicion (not least among West Indians) will be that the most important factor has been Mr Macmillan's desire to give alternative office to an ex-minister for whom he embarrassingly had not found room in his own cabinet. The chief ministers of Trinidad, Jamaica and Barbados were consulted about the qualifications (but not the name) of the Government's candidate. But, apart from the difficulty of discussing qualifications in the abstract, consultation implies the acceptance of advice as well as the handing out of information. Although the Caribbean leaders were apparently not happy about the appointment of an ex-party manager with no West Indian or colonial experience, their advice went unheeded.

If the Government wanted to avoid appointing an ex-colonial Governor to this non-colonial post, there was another course they could have taken, in preference to the appointment of Lord Hailes. Governor-Generals in the past used invariably to be from the United Kingdom. Recently, South Africans, Australians and Canadians have been chosen to represent the Crown in their own dominions. Logically a next step would be to choose a Governor-General from any dominion for any other, and there was an opportunity to do this by appointing a Canadian (with experience of the West Indies) to the Caribbean federation. Canada takes a special interest in the West Indies, and the link between old and new dominion might have been cemented by a personal exchange at the highest level. Many people will feel that a chance of strengthening the fabric of the Commonwealth has been missed.

CHINA TRADE

Embargo in Eclipse

THE divergence of view between the United States and its allies on the China trade embargo has evidently become once more a yawning gulf. There have been efforts at compromise in "Chincom," their China trade committee, where a Canadian proposal evidently won the support of Japan, and there are reports of pressure in the United States for a less stringent line; but Britain is unwilling to budge from the essential principle that the anomalous differences between the restrictions on trade with Russia and with China be removed. And unless the United States moves a long way from its original proposals there may be no agreement.

Britain's wish to relax the China embargo stems not only from the impracticability of having two sets of rules for China and Russia, but from the size of China's sterling balances, which clearly make it a promising buyer. Reports

£ million	1952	1953	1954	1955	1956
Chinese exports to sterling countries	86	96	78	93	118
Imports into China from sterling countries	79	65	63	53	51

last year that these balances had grown to well over £100 million—and that a (partly political ?) decision to turn some of them into other European currencies at the time of the Suez crisis could have been a significant factor in the flight from sterling then—may find some support in some figures given in an answer to a parliamentary question last week. These figures seem to suggest that China's favourable balance of trade with the sterling area grew steadily from a mere £7 million in 1952 to £67 million in 1956. They tend to inflate China's actual export receipts as some freight and insurance charges that are really paid to foreign firms are included in them; but this is probably offset by the fact that China also receives substantial sums in sterling in remittances from Chinese living in Malaya and other Far Eastern sterling area countries.

IRAN

Who will the Opposition oppose?

"IF only the government would put up two candidates for me to choose from," said a disgruntled Iranian to a correspondent of *The Economist* in February, "at least I would have the illusion of choice and I think—mind you, I make no promises—but I *think* I would be more contented." Perhaps the long ear of the Shah overheard him,

for His Majesty's Opposition has now been officially created. It will, presumably, present candidates next time an election falls due. Meanwhile, what will it be allowed, or encouraged, to oppose ?

There could be more than one motive for forming it in a country that has a hand-picked parliament and permits no unofficial formation of parties. Perhaps the Shah wanted to open a safety valve for critics. Perhaps he believes, as did Ataturk's successor when he founded a similar party in Turkey in 1946, that a two-party system ought to be everybody's goal, and must be imposed because it would never develop out of the countless personal followings that so often form as soon as there is unbridled party life. Perhaps—a more sinister thought—there was a desire to insure against the gathering of too much power into the hands of a strong prime minister. The characters of the new prime minister, Dr Eghbal, and the new opposition leader, Mr Alam, suggest that this was part of the plan.

Dr Eghbal springs from the disgruntled professional class (he is a specialist in infectious diseases) and has long been known as a thruster and a tremendous worker. He was the Shah's choice in 1954 as Minister of Court, and his transfer to the premiership has kindled a spark of hope in a class that resents the supremacy of the *deux cent familles*. Mr Alam is a landowner from the south-west, a contemporary of the Shah and closely associated with many of his ideas for rural reform ; but he has not yet made any great mark on the many rural problems which, until lately, he handled from the Ministry of the Interior. The two men are as different as chalk from cheese. Whether their work as political opponents will promote the social changes that most Iranians want to see will remain in doubt till they have tried the system.

The Economist

MAY 23, 1857

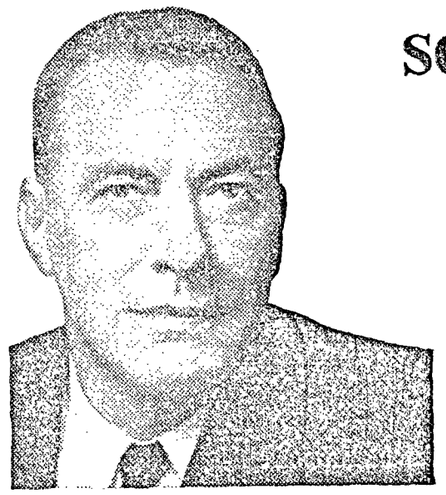
ENGLAND'S INFLUENCE

One of the soundest and best characterstics of the English nation—we mean its entire freedom, not from the authority of fixed political *principles*, but from the monotonous tyranny of fixed ideas—in other words, the great flexibility of the English political system and its adaptation to the totally different exigencies of totally different occasions—is often the source of considerable confusion in the impression we produce on foreign nations. . . . Unlike America, whose defined and isolated position among the nations cannot easily change from year to year—scarcely even from half-century to half-century—unlike the arbitrary Powers of Europe, whose leanings are at once determined by territorial temptations or territorial fears—the elements of English politics are at once sufficiently complex and sufficiently independent of external influence, to render her opinion in foreign affairs something which really varies with the varying circumstances of the case—something not absolutely predetermined by over-ruling abstract considerations, but changing with the changing aspects of justice and international obligation. Hence her public opinion is watched with deep and often breathless interest by the Continental Courts, and her Ministers are respected and influential in conjectural proportion to the sympathy in which they are supposed to stand with the deeper springs of the national life. It is not that any fickleness is attributed to English opinion; but it is known that that opinion is not a mere stereotyped political necessity on the one hand, nor on the other a matter which can be easily tested by the votes of a body of men selected for a different exigency and during the predominance of a very different class of interests. Hence a Cabinet is powerful abroad in proportion to the demonstrable directness of its descent from the great representative classes of English society. If it depends, or seems to depend, on the favour of a Parliament elected in a different crisis, and therefore, we might even add, by a very different body of electors . . . it will have a very different kind of influence abroad from that which it wields when stamped afresh with the deliberate approbation of a roused and unanimous people.

SMALL TOWNS

A Suggestion from East Anglia

THE little borough of Thetford, in the remote Norfolk Breckland, is the latest town to reach agreement with the London County Council upon a scheme for expansion under the Town Development Act. The initial plan is to build 1,500 houses, develop industrial sites, and improve local services and amenities, with the LCC doing most of the development as agents for the borough council. A similar scheme has already been agreed for the Suffolk town of Haverhill. The idea of transplanting cockney families to remote corners of East Anglia, and persuading London industrialists to go with them, certainly appears both curious and ambitious. Yet the auguries for these schemes' success are fairly bright. Can the idea be extended?



The land is available for such an extension. East Anglia is the ideal field for the kind of modest expansion schemes which were originally envisaged under the Town Development Act. It contains large numbers of little towns struggling with the problems of decline as their marketing and service functions are absorbed by larger centres. In Norfolk and Suffolk there are about 25 towns of between 2,000 and 10,000 population, as well as several rather larger ones. Many of these places have an ancient industrial tradition, and one or two local industries often of a "family" type. The prospect of a "London influx" is not alien to them, but they naturally want a moderate amount of development rather than a pell-mell expansion that would overwhelm the town and drown its character.

The main difficulty is that of organisation. The small local councils are ill-equipped to nose out prospective industries and to undertake development schemes. The London County Council's ability to act as absentee fairy godmother is inevitably limited by the divergence of its own interests (which point in the direction of larger, speedier housing schemes) and by doubts as to how long its ratepayers will subsidise development 100 miles from home. Despite its useful but precarious successes at Thetford and Haverhill, the Town Development Act is limping badly ; a great deal of effort and good will has gone into these two schemes, and many equally promising ones have fallen by the wayside. A much better solution might be to create a development corporation for East Anglia, similar in structure to the new town corporations, which would be charged with aiding or promoting development in a dozen or so suitable towns. Such a body would have the staff and resources to undertake good-quality housing and attract suitable industries, without being tied to the day-to-day exigencies of reducing the London housing list and satisfying London ratepayers.

Famous American firm sees 61 sites—

Northern Ireland

selected for new plant

GROUND CLEARANCE FOR CHEMSTRAND'S £3½ MILLION PLANT IS AHEAD OF SCHEDULE

"Northern Ireland has what we need"

says Mr. ARVON L. DAVIES, Managing Director of Chemstrand Ltd.

CHEMSTRAND LTD., U.K. subsidiary of the Chemstrand Corporation of U.S.A., recently acquired a 70 acre site at Coleraine, County Londonderry. (The Chemstrand Corporation is jointly owned by the Monsanto Chemical Company and the nerican Viscose Corporation.)

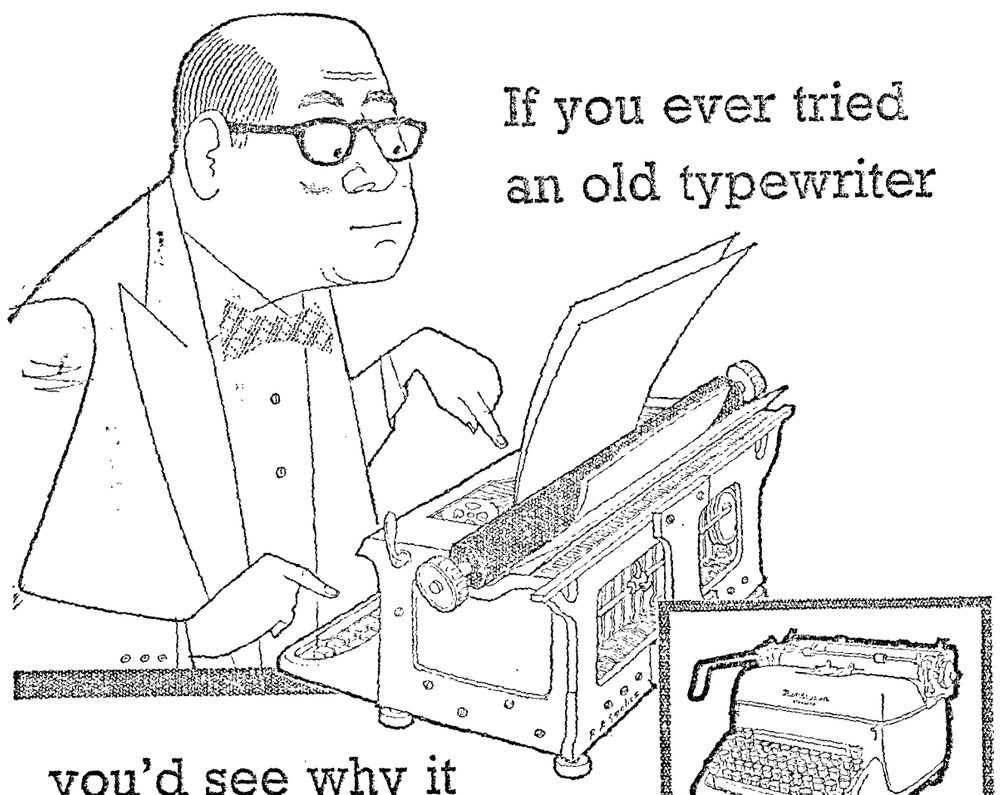
Site clearance is ahead of schedule, and in 1959 a labour force 400, mostly men, will work seven days each week in three ifts to produce 5,000,000 lb. of "Acrilan" man-made fibre. oduction will be doubled in 1960.

"Northern Ireland has what we need", says Mr. Arvon L. avies, Managing Director of Chemstrand Ltd. "We looked at sites in the U.K. Our decision to go to Coleraine was based on a detailed assessment of costs per pound of fibre. When the ures for alternative sites were close together, factors such as our availability, services, housing, schools and recreational ilities came into play.

We found the Ministry of Commerce more than helpful, ompt and easy to reach. We had good reports of the workers, t they were industrious and able to learn quickly. We are oud to be in Coleraine and to make there a primary product ich will diversify the economy of Northern Ireland."

Announcements of new developments in Northern Ireland have been made in recent months by

DU PONT COMPANY (UNITED KINGDOM) LTD.
BRITISH OXYGEN CO. LTD. · FLEXIBOX LTD.
BESSBROOK PRODUCTS LTD. · SUMMERSON HOLDINGS LTD.
F. M. ASPIN (TOOLS) LTD. · BALLANTYNE SPORTSWEAR CO. LTD.



They will join over 100 new firms which have set up there since the war. Twelve new Government factories are planned or building now to rent (for as little as 9*d.* per sq. ft.). Also available are factories on repayment and capital grants for plant, machinery and new buildings.

Northern Ireland—
centre of growing industry

If you ever tried an old typewriter

you'd see why it costs so much

As it grows older, a typewriter may still do a job: but it's a slower and more expensive job. Recurring faults waste time and paper; bring costly maintenance bills.

You are actually paying more for bad typing than you would for the best in the world—that is, Remington.

Remington is the machine that uses your typist's skill to the full. The machine that is undemanding in maintenance throughout its long working life. The machine whose work enhances your company's prestige wherever it goes.

Remington make a complete range of office typewriters, brilliantly engineered by Scottish craftsmen, beautifully styled by outstanding designers. They incorporate the most advanced ideas in time- and labour-saving. One of them is exactly right for your office. And it will save you money every day.

See, too, the Remington Ultravox dictating machine and its exclusive sound sheet. With Remington Ultravox, those costly, time consuming 'dictation bottlenecks' become a thing of the past.

The Kashmir Problem

SIR—May I put some proposals before your readers, in the light of Mr Jarring's report explaining his inability to secure any agreement upon possible methods of solving the problem of Kashmir?

Both India and Pakistan have strong arguments in favour of the accession of Kashmir to each of them. The greatest strength of India's case lies in the facts that she entered Kashmir in response to an appeal for help against invading tribesmen, and that she exercised circumspection before eventually accepting the accession of Kashmir; whilst the greatest strength of Pakistan's case lies in the fact that she is willing that a plebiscite should be held and hence that she relies predominantly upon the principle of "self-determination"—a principle which should appeal to all democratic peoples. These cases fail to join issue. Hence it is impossible to resolve them by agreement.

I therefore maintain that there is only one solution which can secure the approval of all concerned. This is that Kashmir should federate at one and the same time with both India and Pakistan.

An agreement could be signed on behalf of India, Pakistan and Kashmir that steps should be taken to construct a constitution for Kashmir providing for federation with both India and Pakistan, which would eventually be accepted by the national assemblies of the three countries. The problem presented by the occupation of the existing two parts of Kashmir by Indian and Pakistani troops could be resolved by an agreement to withdraw those troops, simultaneously, on a given date, their place to be taken by a Kashmiri defence militia, which would in the meantime be organised and trained separately in each "half" of Kashmir, but would finally be united by a High Command. All federal expenditure in, or contributions to, Kashmir would be borne in an agreed proportion by India and Pakistan, whilst all payments due from Kashmir would likewise be paid in an agreed proportion to India and Pakistan.

More autonomy would have to be given to Kashmir than to other states and provinces, but this has already been conceded in principle by both India and Pakistan. Special arrangements would have to be made to meet problems arising from differences between India and Pakistani policies, but there is in many respects great similarity between the ideals and policies of the two countries. Space forbids further discussion here of such difficulties and possible solutions. My one objective is to secure consideration of an unprecedented but nevertheless feasible constitutional solution.—Yours faithfully,

VERA ANSTEY

University of London

The Statesman's Burden

SIR—As one who passed a large part of his life in the Civil Service I appreciate the importance of your article of April 27th. Would it not be possible, in this, to learn from local government and provide for national government the equivalent of the aldermen in county and borough councils?

The demands of his constituency on a Cabinet Minister are no negligible part of his activities, and to relieve him of them would go an appreciable way towards freeing him to concentrate on the serious national problems with which he has to deal.

The change might take the form of allotting, say, 40 aldermanic places in some agreed, equitable way between the parties in the House of Commons, the selection of their own representatives, in effect, being left to the parties themselves.

While this would be a considerable constitutional change, such an arrangement has for many years worked smoothly in local government and should not arouse any party controversy. In effect it would be no more than a new redistribution of constituencies and should at least be worthy of further investigation.—Yours faithfully,

HAMMOND B. JENKINS

Hadstock, Cambridge

Aid for Poland?

SIR—An article in *The Economist* of April 20th discussed the outlook for western aid to Poland, and particularly the idea of helping to re-equip Polish industries, such as coalmining, thus assisting the Poles to stand on their own feet.

May I add the suggestion that the West, and Britain first of all, should also help Poland to remedy her lack of up-to-date scientific and technical knowledge, due to the isolation of recent years. My experience is that this is keenly desired in Warsaw, both in communist and in non-party circles.

The British Council and the Ford Foundation are providing scholarships for Polish students in Britain and the United States, but this can only meet a small part of the demand. British industrial firms, for example, might be willing to take Polish managers, foremen and apprentices for a period of attachment, if the language problem could be met. It might be worth while to set up a central office in London to deal with the possibilities in every field.

I have heard the objection made that such a programme "might annoy the Russians and make the Polish situation more difficult." I believe this attitude to be not only unduly timid but ill-informed and unfounded. Moscow undoubtedly approved the visit of a Polish economic mission to seek aid in Washington. The Soviet leaders have themselves made substantial economic concessions to Poland. They must be well aware that, if the present economic crisis in Poland continues, there is a real risk of public discontent setting off a repetition of Hungary, but on a much larger scale, which they must wish to avoid. Why, then, should Moscow object to technical aid from the West for Poland? The Soviet military grip on Warsaw remains unchanged.

We are offered what we have long awaited, an opportunity for breaking through the barrier and developing new contacts with Poland for our mutual benefit, on a practical, constructive basis free from political conditions. Poland is still deeply rooted in the western civilisation and now looks to the West, and especially to Britain, with fresh hopes. Are we to let the chance go begging?—Yours faithfully,

Berlin GUY HADLEY

Bank Clerks Militant?

SIR—The note in your issue of May 11th contains (I am sure quite unintentionally) a mis-statement of fact. Staff association officers are appointed by their associations, not by the banks, and in this as in all other matters the associations have perfect freedom of action in relation to the employers. As to banks preferring to negotiate with their staff associations rather than the union, this is also the preference of the staffs, or staff associations would not flourish as they do. The union may, as you say, claim that staff associations have no power to look after their members, but the majority of those working in banks do not wish to be looked after by the trade union. Nothing is more certain than this.—Yours faithfully,

A. W. B. PAYNE

Central Council of Bank Staff Associations, London, S.E.1

Blackball from Oslo

SIR—In view of the comment in your May 4th issue, I feel compelled to communicate that General Franco's Government is not "grudgingly tolerated" and "its end eagerly awaited," as your correspondent says. General Franco is unanimously appreciated here as much as your gracious Queen could be loved in England; all the governments make errors, including General Franco's, Sir Anthony Eden's (Suez), and Mr Macmillan's.

In connection with the fact of a sure contemplation of our future, I must point out that the Succession Law of the Spanish State appoints as the future King HRH Prince Juan Carlos de Borbón y Borbón.

Lastly, Nato never will be embraced with enthusiasm by the Spaniards. We can defend our nation by ourselves again (as happened in our 1936 civil war), but certainly we don't like to lose our lives for others.—Yours faithfully,

S. GROSSO BURNHAM

Gibraltar

SIR—It is odd that you should publish such an ill-informed letter in your issue of April 27th. There are no Spaniards living in Gibraltar except a few refugees of 1936 vintage and a number of temporarily resident maidservants, waiters and cabaret girls. As for the Gibraltarians themselves they are mostly of Genoese origin and have a liking for garlic anyway. As for the English, mostly doing a tour in the Services, most of the sensible ones quickly become addicted not only to bullfights, lotteries and flamenco, but to garlic in their cooking as well.—Yours faithfully,

Gibraltar DARRELL BATES

Oxford's Roads

SIR—Now that the Oxford roads problem has gone back to the Minister it is to be hoped that he will look at the matter broadly, not forgetting the problem that we share with every other town—the problem of inducing the man who lives in the suburbs and works in the town to use public transport instead of his own car.

Two simple changes in Mr Sandys's scheme would go a long way toward this:

(*a*) The Meadow Road should pass under or over St Aldates, and should permit no northward turn until it reaches a car park near the station.

(*b*) Magdalen Bridge should be closed to all motor vehicles *except city buses under a 20 mph limit.*

The inhabitants of the huge dormitory that now extends from Marston to Littlemore would then have two options—either to drive round the city to the west, park their cars and walk or bus back to town, or to ride up a relatively empty High in a bus. The second is so obviously the better choice that hundreds of cars would be left at home. Later, a similar restriction might be placed on the north end of Cornmarket, after the construction of a north-western relief road through Jericho to the station. We should then have an inner city or precinct comparatively free from traffic and noise.

Nothing in this letter suggests that outer by-passes are not needed. They ought to have been finished years ago.—Yours faithfully, H. B. BARWISE

Oxford

Shops Bill

SIR—Mr Walter Padley's intemperate and pig-headed letter in your issue of May 4th cannot fail to arouse the indignation of any working woman who has kept house on both sides of the Atlantic. Nothing can be more irksome and impractical than London's closing hours. When I lived there, food shops opened just as I left for work and closed shortly before I got back from a city office in whose neighbourhood there were no facilities for household shopping. In addition, the department stores were closed on the one afternoon a week when any person working a normal week can get off—Saturday. One cannot travel from Ludgate Circus to Oxford Street or Knightsbridge to shop in a lunch-hour.

Here my grocery opens from 9 am to 9 pm, though the chain store next door is open until 9 pm only one night a week. Elastic closing hours and credit policies are the main defence of the independent grocer against the cut-price chains. It is true that I pay a little more for food, but I pay for the convenience of not having to do all my food shopping on one day of the week, as I should have to do in London.

This city's department stores are open until 9 pm two nights a week, and until 6 pm on Saturdays. There are also all-night groceries and pharmacies, since shopkeepers recognise that many industrial and some government enterprises are on a three-shift day (as are hospitals) and that their employees have money to spend.

The spread-out shopping hours help to ease the traffic problem and provide business for cinemas and restaurants on shopping nights. Store employees (who get an employee discount on their purchases) are many of them married women, students and so on, who are glad of a part-time job even at comparatively low wages. I should like Mr Padley to be able to talk to union members here; they would be horrified at his blind devotion to restrictive practices which, in what even he admits is a "progressive" country, have long been recognised as bad for everyone. And any intelligent person should be annoyed by his bland ignorance of a basic principle behind every "service" industry—that people will pay extra for comfort and convenience.—Yours faithfully, J. S. RIDGELY

Baltimore, Maryland

Secret Justice

SIR—It may not be generally appreciated that people are sometimes sent to prison after a private hearing in the High Court, where neither the public nor the press is permitted to be present. It arises in the Queen's Bench Division where a judge in chambers directs the issue of a writ of attachment for the breach of an injunction. This is the normal procedure of that division; it is of long standing.

This procedure is not followed either in the Chancery Division or the Probate, Divorce and Admiralty Division, where a writ of attachment is only ordered to be issued in open court.

For a judge to send a person to prison when he is sitting in his private room would appear to violate the maxim that not only must justice be done, but it must be seen to be done.

I urge that the matter should receive the attention of Parliament.—Yours faithfully, EDWARD F. IWI

London, N.W.11

BOOKS

Goodness is not Enough

Fulness of Days

By The Earl of Halifax.
Collins. 319 pages. 25s.

"COMPARED with my private school," Lord Halifax recalls, "Eton was very tolerable, but I cannot say I *enjoyed it.*" So, too, he writes of Parliament years later, when he was about to be Viceroy of India: "I had no particular regrets at leaving the House of Commons since it had no particular appeal for me." What, then, were the sources of the remarkable career which kept him for so long in so many of the seats of the mighty, when he was never one of the mighty himself?

The sources were three: family, the Church and Oxford. "In the interval between adoption as candidate and the coming of the election in 1910, I had been concerned with two main preoccupations. One was writing a short life of John Keble . . . and the other was getting married." And of Christ Church, All Souls and Oxford he writes with a quiet lifelong love. These were what he *was* and, after three-quarters of a century, still is; politics and public office were what he *did*, always dutifully.

No doubt Lord Halifax was called upon to do what he did because he was what he was. No man in his lifetime ran so wide a gamut of public positions: Under-Secretary for the Colonies (under Churchill), President of the Board of Education, Minister of Agriculture, Viceroy of India, President of the Board of Education again, Secretary of State for War, Lord Privy Seal, Lord President of the Council, Secretary of State for Foreign Affairs, and British Ambassador in Washington—and Chancellor of the University of Oxford. It sounds like the recital of the titles of the Duke of Wellington in Guedalla's famous funeral chapter. Yet Lord Halifax could make no claim to any kind of greatness; though he was fleetingly Mr Churchill's only rival to follow Mr Chamberlain in 1940, he has never been a political force, even in the sense that Lord Salisbury might be a force today.

But the secret is not just Lord Halifax's connections. It is his character: public office has been for him, simply and honestly, public service. "The setting of life," he says of his father's influence on his childhood, "was one of order against a religious background that was never far away"; and so it has stayed. (The parallel with Sir Stafford Cripps, with whom he worked in the Christian Action movement, is nearly as interesting as the glaring contrast between them.) He has neither needed nor wanted to be ambitious.

It must indeed be doubted whether, chosen so, the man matched his high calling. Lord Halifax added very little through all these years to the content of public policy: he contributed most abroad, abortively in India when he did his best to safeguard Indian unity by shaping self-determination federally, and successfully in the United States when, in the teeth of sceptics and detractors, he kept and won so many wartime friends for Britain. At home, whatever his responsibilities, he never seems to have been responsible for the big decisions, though he never shirks his share. In this most modest, human and attractive book, he records only two initiatives: his advice to Mr Chamberlain to seek a national government after the Munich agreement and to Mr Churchill to suggest a meeting with Stalin after the Fulton speech. Both were ineffective.

It is all written in the accents, not of an actor, but of an observer who was there, with his friends, at the time. This detachment makes it almost unkind to enter a verdict; his contacts with the Nazis take on an unreal, even naïve air. His faults were of omission not commission. Here he was out of his depth; there out of touch. He was, at worst, in the wrong place; and it was an absurd turn of fortune (as he, to his characteristic credit, saw at once) that made him the alternative to Mr Churchill when the reckoning came.

The truth is that, duty apart, he was in fact detached. His heart has been all his life, as Edward Grey's was, outside of politics, in the whole rewarding compass of country and college life, with his family and his friends. Where Grey watched birds, he hunted foxes, diplomatically with Goering or at dead of night in Kentucky, but for a lifetime over the peaceful English fields which, with the Yorkshire wolds, he loves so well. There is some reason for sadness that Lord Halifax is one of the last of his kind in politics.

The Paradox of France

The French Nation: *From Napoleon to Pétain, 1814-1940*

By D. W. Brogan.
Hamish Hamilton. 328 pages. 25s.

THE history of France between the defeat of the First Empire and the defeat of the Third Republic is intensely dramatic, mingling tragedy with comedy and sometimes with farce. Until 1870 it was avowedly nostalgic, an often conscious restaging of the same three-act drama of Monarchy, Republic, Empire that had occurred in that sequence between 1789 and 1814. The surface turbulence concealed the more steady progress and deeper continuity that existed in economic and social life. After 1870, French history became the story of a parliamentary democracy haunted by wars and the aftermath of wars. The surface continuities of the Third and Fourth Republics concealed a deeper and rapid change—the belated but important industrial revolution connected with the first world war, the social decay of the inter-war years, the economic revival since 1945.

There is thus, in both halves of the story, a curious lack of correlation between constitutional and political history on the one hand, and economic, social and cultural history on the other. The story is full of the play of paradox. The revolutionary tradition is more traditional than revolutionary, more backward-looking than up-to-date. The instabilities of governments are accompanied by an *immobilisme* of economic life; crises arise because of inertia; national solidarity is born from the disintegration of defeat.

Here is a theme admirably suited to Professor Brogan's brilliant talents of scholarship, style and wit. Yet the book he has written is in some respects disappointing. His intention to weave together political, economic, social and cultural history has been only partly fulfilled, sometimes because he has not fully accepted and explained the inherent disjointedness of these aspects, sometimes because political detail has been allowed to smother such significant developments as French scientific thought and artistic achievement. The story of government has been handled much more systematically (and with more sureness of touch) than the story of French social change or of cultural contribution. The author is at his very best on the Third Republic, about which he has already written a well-known and brilliant book. He is at his least illuminating on the defeat of France in 1940, which should have been the climax of his story. One outcome of his vast learning and miraculous memory is a mosaic of hard facts which builds up into an impressive, concrete account of certain events, like his summary of the Dreyfus case. But another result is an occasional sentence so allusive as to be intelligible only to the expert. "If Nachod was a new Magenta (with Verdy du Vernois, son of a gentleman of the household of the Comte d'Artois, as the new and bolder MacMahon), Sadowa was no Solferino, but a victory as complete as Wagram if not as Austerlitz."

The book is packed with information, and based on great learning. Parts of it are memorable prose. Much of it is illuminating. For all its defects, it is a valuable survey of an important subject. But it would have been better for more systematic analysis, and for explanations made more explicit.

Humane Witness

My Indian Mutiny Diary

By William Howard Russell.
Cassell. 315 pages. 30s.

RUSSELL of *The Times* came late to the Mutiny. Delhi had been stormed and sacked. The Lucknow Residency had been relieved. He came in time to witness the final taking and looting of Lucknow and the long-drawn-out mopping-up operations in Rohilkhand and Oudh, the province where the Mutiny did take on some of the character of a national rising. Russell's diary of his stay in India has now been condensed by Michael Edwardes, who in his introduction makes a worthy contribution to the re-examination of the place of the Mutiny in imperial history. Here, in these republished pages, are displayed a keen eye, a quick intelligence and a sense of decency and humanity.

Russell came to India with the power of a man who by his pen had toppled a Government out of office. Lord Canning, the Governor-General, was friendly, and the Commander-in-Chief, Sir Colin Campbell, who had known Russell in the Crimea, was quick to make a pact with him to show him all the dispatches and signals. Few war correspondents can have been so fêted; few of them can have been so powerful.

Above all else, Russell was a great journalist. He had the eye of a cinécamera and the ability to recreate a scene in sturdy prose. He was able to express the "feel" of a landscape or of a battle. In all the voluminous accounts of the Mutiny—and they are voluminous, for the Mutiny fascinated the Victorians—there is nothing better than Russell's description of the third battle of Lucknow. It is an extraordinarily vivid eye-witness account, not a piece of tactics to be mulled over on a map. It begins with the fantastic panorama of the crenellated and domed skyline of Lucknow. It narrows down to Sir Colin Campbell damning one regimental commander for taking his troops into fire in close column of companies. It broadens to show the columns hunting and killing the sepoys without quarter or mercy, only to narrow again to the Irish soldier offering Russell a small fortune in precious stones for two mohurs and a bottle of rum. It reveals the terrible incongruity of war in a garden of blood-stained statues, where "leaning against a smiling Venus is a British soldier shot through the neck, gasping, and at every gasp bleeding to death."

Russell brings that great sprawling mass of soldiers and camp followers which was an Indian army on the march as much to life as he does the battle. The close columns, stifled in the heat, stagger along, with the men in the ranks crying out continually for the bheestie. Then, at the end of the march, there is the sudden luxury of the camp, where champagne is served and complaints are made about the camel-borne port.

Russell's descriptive and re-creative powers are sufficient reason for recommendation. But that is not all. Russell was a man with a conscience in a land and at a time when the British lost all sight of conscience in an almost prurient desire for bloody retribution. Atrocity bred atrocity. The humanitarian Russell comments: "all these kinds of vindictive, unchristian Indian torture, such as sewing Mohammedans in pig-skins, smearing them with pork fat before execution, and burning their bodies, and forcing Hindus to defile themselves, are disgraceful, and ultimately recoil on ourselves." There were not many British voices which said that then—or later. More radical than the newspaper he represented, Russell questioned the idea of empire, writing: "In effect, the grave, unhappy doubt which settles on my mind is whether India is the better for our rule, so far as regards the social condition of the great mass of the people. We have put down widow-burning, we have sought to check infanticide; but I have travelled hundreds of miles through a country peopled with beggars and covered with wigwam villages." Not many said that then—or later.

British Essays in American History

Edited by H. C. Allen and C. P. Hill.
Edward Arnold. 357 pages. 30s.

THE tradition of British scholarship in American studies is a long and reputable one. Yet in the prewar years when an insular trend in British historiography coincided with an enormous expansion in historical output in the United States, it seemed as if in scholarship or in diplomacy a new isolationism was on its way. In fact, the exact reverse was true. The thirties were, one can now see, a germinating period in Britain when a new generation of scholars were having their interest in American history awakened by visits to American graduate schools and by the inescapable impact of even isolationist America upon Europe. Of the seventeen contributors to this volume of "Essays," about half can be identified as falling within this category, while most of the rest represent the postwar generation who have grown up in British universities where at last the study of American history and American politics is coming to have an assured and substantial place in the curriculum. This volume may therefore properly be hailed as a symbol of the interest and talent which American studies now command in British universities.

The editors, however, have made it something more than that. Skilful selection and arrangement make the book almost an outline history of the United States. Although contributors have obviously fastened on subjects that interested them, they have subordinated private enthusiasms to public weal and general interest, so that the book can in fact be read as a whole. Moreover, though plain story-telling is not eschewed, the narrative treatment of a topic has often been deftly related to an exposition of the way American historiography (and popular myth-making) have subsequently handled it. Thus few of the essays are a mere rehash of facts available elsewhere; they almost all have the great merit of introducing the reader to at least the main interpretative themes of the American past. Brief bibliographies appended to each chapter serve as further signposts for anyone who wants to read further.

The editors point out that they have aimed their publication to coincide with the three hundred and fiftieth anniversary of Jamestown. Loaded down as that event has been with all the symbolisms that orators and editors have attached to it, it yet, one hopes, will tolerate this one modest tribute more. For it is a fitting one. The study of Britain's past has benefited so enormously from the labours of transatlantic scholars that the present balance of payments is as lop-sided academically as financially. Perhaps "British Essays in American History" is an augury, three hundred and fifty years after Jamestown, that substantial westbound exports will be beginning again.

Indifference, Maps and All That

Theoretical Welfare Economics

By J. de V. Graaf.
Cambridge University Press. 188 pages. 22s. 6d.

THE analysis of theoretical welfare economics is to the layman about as remote, impractical and gratuitous a form of intellectual gymnastics as can be found within the general rubric of economic studies; this in spite of the fact that its conclusions have an immediate bearing on such eminently practical matters as the tax system, the pricing policy of public enterprises, and the degree of control to be exercised over private industry. No layman, it is safe to say, will even try to read Dr Graaf's study, which is "intended for professional economists and advanced students" and is a stiff specimen even of its uncompromising kind—though its mathematics has been mercifully segregated in appendices to the relevant chapters.

This is perhaps just as well, for the reaction of the common sense lay mind to the disappearance, into a whirl of symbols and a tangle of curves, of the apparently simple notions "better off" and "worse off," is likely to be a robust dismissal of the whole argument in favour of whatever combination of naïve belief in competitive optima and naïve belief in political interventions happens to suit its unexamined preconceptions. And indeed a great deal of Dr Graaf's argument concerns the conclusions to be drawn *if* certain assumptions fantastically more unrealistic even than those of "perfect competition" were fulfilled; *if*, for instance, all conceivable hypothetical choices between different methods of production and between different patterns of consumption were simultaneously known to an "observing economist," what could that economist say about the comparative results of these choices in terms of welfare?

Yet from these explorations of the theoretical empyrean Dr Graaf returns with an eminently common sense precept, disappointing to those economists who for the past thirty years have been kicking against the pricks of Professor Robbins's "Nature and Significance of Economic Science." "The job of the economist," he says, "is not to try to reach welfare conclusions for others, but rather to make available the positive knowledge—the information and the understanding—on the basis of which laymen (and economists themselves out of office hours) can pass judgment." Given "information and understanding" he does not for a moment believe that society would plump for the policies suggested by what he calls "*laisser-faire* welfare theory." But it would be less likely to pursue policies which were incongruous either practically or—and here the painstaking analysis of welfare concepts comes into its own—ethically.

The Heiress

The Unhappy Countess: *and her Grandson John Bowes*

By Ralph Arnold.
Constable. 213 pages. 21s.

THE author says that this book explains how two Earls of Strathmore changed their surnames from Lyon to Bowes and why the tenth Earl's son remained Mr. John Bowes. But, fortunately, it does more: it tells the story of Mary Eleanor, daughter of George Bowes, great landowner and colliery proprietor, the first MFH in County Durham, who left her a fortune of £600,000. She was "a catch"; and she was caught, despite her mother's warnings, by her infatuation for the ninth Earl of Strathmore, handsome, dull, bibulous and delicate; who bored her and was irritated by her intellectual affectations, lack of common sense, and perverse dislike of her eldest son. His visits to health resorts separated them for long periods; but when he died in 1776 she claimed that all her five children were his. She had, however, acquired a lover, George Grey, who was expected to marry her; but this time she was caught by an Irish half-pay captain, a cross between Thackeray's Barry Lyndon and Fielding's Fitzpatrick; who first arranged a correspondence in the *Morning Post* about her relations with Grey, and then a duel with its editor in which the alleged wounds he gained on her behalf won her foolish heart.

The tragi-comedy which followed this marriage in 1777 is suggestive of Sheridan rewritten in terms of Victorian melodrama; and happily it occupies more than half the book. Andrew Stoney was an unmitigated blackguard, promiscuous and cruel. He squandered the estate which his dupe settled on him, even felling the woods that were the glory of George Bowes's planned landscapes at Gibside. His mental and physical ill-treatment drove her to flight in 1785; but while she was instituting proceedings, secular to safeguard her property, ecclesiastical to secure a divorce, and Stoney was convalescent after a pretended suicide, his bravos kidnapped her in Oxford Street and hurried her north by night and day, coach and pillion, in November weather. She was eventually rescued, more dead than alive, by a posse of Durham miners, led by a village constable, fortified by a *habeas corpus* writ and the promise of a fifty pound reward; and Stoney was escorted to King's Bench Prison, where for twenty-two years he lodged in sufficient comfort to father several illegitimate children, and litigiously plague Mary Eleanor and, after her death in 1800, her executors.

The rest of the saga is comparatively conventional. The tenth Earl, Mary Eleanor's son, rebuilt Gibside, replanted the woods, and revived the stud; but omitted to marry his mistress in time to qualify her son for the Strathmore title, though he gave him the Bowes name and fortune. With this Mr. John Bowes acquired a theatre in Paris for his actress-wife, won three Derbys and an election, and founded the Bowes Museum at Barnard Castle.

Mr Arnold's style is somewhat heavy; but he has skilfully used the life of Stoney Bowes by his doctor Jesse Foot, and the Countess's "Confessions," which Stoney purloined and published, to produce a drama that provides its own excitement. The book is illustrated by portraits well reproduced: the Countess's suggests that in no walk of life could her face have been her fortune.

At Home in Sarawak

Borneo People

By Malcolm MacDonald.
Cape. 376 pages. 32s. 6d.

THIS book is a by-product of the many years when its author held high office in south-east Asia; but seldom has a proconsul written so humanly and with such sympathetic insight of his *ressortissants*, especially when these have been members of primitive and still partly pagan races. Despite its title, the book treats only of those "Borneo People" who inhabit Sarawak, one of the four territories into which the world's third greatest island is divided; and although the only monarchy left in Borneo since the departure of the Brooke dynasty in Sarawak—the Sultanate of Brunei—is Malay, the Malays are a minority of later advent in Borneo. Mr MacDonald is here concerned mainly with members of the now indigenous races, with the Ibans, Kayans, Kenyahs, Melenaus and others; with life in the jungle which these vigorous peoples inhabit; with the social system of the long-house; with the problems and difficulties attending the impact of mid-twentieth century conditions, as they penetrate inland from the coast, on ancient ways of life

Mr MacDonald deals with these fascinating themes not as some scientist dissecting his specimens with analytical detachment; he introduces his readers into the homes of these people, some of whom he came to know so intimately that he became an adopted member of the family and even brought his adopted parents, brothers and sisters straight from the Borneo bush to stay for weeks as his guests in sophisticated Singapore. We see the change, as it can affect these quasi-aboriginal primitive races, operating at almost cinematographic speed. The attire of a particular family of five brothers and sisters, the author notes, "seemed to separate them by generations as well as continents." His principal object is to portray the lives, characters, thoughts and problems of these once fierce and savage tribes as they seek to face not only the future but an increasingly confusing present as well, but he also gives a clear, sober, well-balanced account of the Brooke dynasty's paternal rule; of the once vexed question of the cession of Sarawak to the Crown by the third white Rajah; of the complications inherent in the development of the new colony's heterogenous population of many kinds and stages of civilisation.

Mr Macdonald writes sympathetically and well, and the book abounds in pleasant verbal touches. And he must be congratulated not only on his writing, but also on the endurance with which he participated—so actively and with such gusto as to become the life and soul of the parties given in his honour—in the incessant long-house ceremonies that continue without a break from dusk to dawn. On the other hand the book is marred by the lack of an index and, even

more regrettably, a glossary. Almost every page is liberally besprinkled with native terms; and, whereas words such as *kampong* and *prahu* are probably familiar to those with but a superficial acquaintance with the Far East, it is a serious omission to leave the reader to guess the precise significance of the titles *temonggong, penghiran, penghulu* and the rest; of the names of ceremonies, meats, drinks, garments, types of boat and many other things with which the author assumes for his readers a familiarity equal to his own.

It should be added that the excellent photographs pleasantly and helpfully illumine the text.

More About the Far East

The Far East in the Modern World

By Franz H. Michael and George E. Taylor.
Methuen. 734 pages. 50s.

Far Eastern Politics in the Post-war Period

By Harold M. Vinacke.
Allen and Unwin. 497 pages. 40s.

THE proliferation of American academic studies of international affairs goes on unchecked. The phenomenon may be inseparable from the American concept of the proper function of teachers in seats of higher learning, but it undeniably leads to duplication of effort. Thus the first of these books covers almost precisely the same ground as "The Far East," by Professor Claude Buss of Stanford University (which was reviewed in *The Economist* of January 21, 1956). On the whole, the newer work is the better of the two: it is stylistically more pleasing and rather fuller in treatment—a point perhaps worth mentioning since both books are gargantuan in scale. But it must be added that Messrs Michael and Taylor of the University of Washington do not appear to have brought to their monumental undertaking anything noticeably new in research or original in interpretation; not, at any rate, to an extent that justifies another book in an admittedly important but well-trodden field.

Minor errors are apparently inseparable from an enterprise of such scope. And since the authors ask for such errors to be pointed out to them, their attention is drawn to pages 590 to 593, in which the control of the Vietnamese police in the early days of Mr Diem's government is ascribed to "the Xuan sect," the leader of which is given as "General Nguyen Van Xuan." In fact, the gang of vice-monopolists then in control of the police was known as the Binh Xuyen, whose leader was General Le Van Vien; the police was under the orders of a member of the Binh Xuyen named Lai Van Sang; and General Xuan, a respectable officer of the French army, was at no time in control of the police. In itself, this error is of little consequence; but its existence undermines the reader's confidence in what is in more general terms an impressive work of scholarship.

"Far Eastern Politics in the Postwar Period" fulfils perhaps a more demonstrably useful function. It is more concise, less expository, more interpretative. It provides a lucid and dispassionate analysis of American policy in the Far East, through its wavering course from its greatest failure in China to its more recent successes in the containment of communism.

SHORTER NOTICES

Union Democracy: *The Inside Politics of the International Typographical Union*

By Seymour Martin Lipset, Martin Trow and James Coleman.
The Free Press, Glencoe, USA. 483 pages. $7.50.

This book seeks by the methods of sociological research to answer a question of the political scientist: can power, in an industrial society, be effectively dispersed among organisations, such as trade unions, in order to avoid the dangers to freedom from its increasing concentration in the state? It is a case-study of the International Typographical Union — unique because a flourishing two-party system operates within it. The book is lucid and readable; it shows how the best methodology and research can be the most intelligible. The material was mainly gathered from a random sample of New York printers. A comprehensive interview was devised, which permitted refined analyses and scaling of replies. The findings underline the conditions in which "union democracy" can flourish; they throw light on the basis for a two-party system, the extent to which officials can be opposed at elections without threats to unity, and the reasons why officials do not fear reduction to the ranks.

Yet the question remains: how far can the special conditions of the ITU apply elsewhere? The fact that printers are a closely knit community, wherein differences between officials and members are narrow, constitutes a powerful reinforcement to the two-party system, but the technological and social nature of other industries must increasingly separate officials from their members. Moreover, in Britain, the major unions are affiliated to the Labour party, so there is less scope for a formal two-party system. Granted that the ITU is exceptional, this study confirms that there are good prospects for democracy in voluntary bodies.

Studies in the Quantity Theory of Money

Edited by Milton Friedman.
University of Chicago Press. London: *Cambridge University Press.* 270 pages. 37s. 6d.

The quantity theory approach to monetary problems has had comparatively little attention, at the higher levels of discussion, since the Keynesian revolution; it has indeed acquired a bad name—at least partly earned, as Dr Klein freely concedes, by "much of the literature on policy that was spawned by quantity theorists." At the University of Chicago, however, a vigorous oral tradition has kept quantity theory alive and applied its analysis to current events; and the present collection of essays is designed to demonstrate the usefulness of quantity theory concepts and the conformity of a number of historical sequences to its principles.

The argument is largely mathematical and statistical. There is a formal "restatement" by the editor; a study of seven cases of hyperinflation, by Dr Phillip Cagan; an attempt to apply the theory to the suppressed inflations of the second world war—the author, Dr John J. Klein, earns a certain mistrust by perpetuating some elementary howlers about the British rationing system; a study of inflation in the Confederacy during the American Civil War; and a record of changes in monetary velocity in the United States. From the evidence presented there emerges a conviction that quantity theory can indeed illuminate just those fields which the new orthodoxy leaves darkest; for it reintroduces rationality into that irrational entity the demand for money. It is perhaps significant, however, that no attempt is made here to apply the analysis to periods of depression.

The History of Japan: *Revised Edition*

By Kenneth Scott Latourette. New York and London: *The Macmillan Company.* 305 pages. 35s.

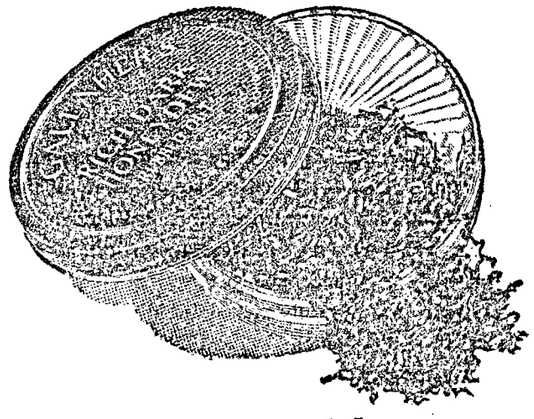
Any attempt to compress the history of Japan into a book this size must be unreadable or highly selective. Mr Latourette selects. His account of Japan up to the Meiji restoration is only a short background essay on Japanese social and religious development that barely touches on feudal politics. This is followed by a concise, unbiased and well-written outline of Japanese foreign policy and fighting during the last hundred years. The corresponding chapters on internal development are not quite so good, largely because Mr Latourette seems determined not to involve himself in any description of the party factions; since these are the mainstay of Japanese politics his account leaves a good deal unexplained.

But it is the postwar years that have suffered most from condensation. Only twelve pages have been allotted to the section in which, according to the publishers' blurb, "all the historically important events" since the war have been incorporated. This is a pity and will detract considerably from the usefulness of the book for any reader who wants a general background to modern Japanese politics.

Economic Co-operation in Europe: *A Study of the United Nations Economic Commission for Europe*

By David Wightman.
Stevens. 299 pages. 21s.

This case study of the techniques and problems of international economic co-operation was sponsored by the Carnegie Endowment for International Peace. In it Mr Wightman traces in detail the history of the Economic Commission for Europe from its birth in 1946 until 1954. He is as much at home disentangling diplomatic history and the reasons why ECE became a half-abandoned orphan of the cold war, as he is in explaining the detailed workings of its committees and showing how the organisation remained active. The result is a most competent work, which will provide a valuable record for those who are specially interested in the subject. Apart from the introductory and concluding chapters, it is, however, too specialised a book for the general reader—unless he is interested in the workings of international committees on coal, timber, inland transport and other such subjects.



From 1907 to 1957 EDEKA has grown from modest beginnings to the largest trade union of retail grocers in the western part of Germany and Berlin. To-day 36,300 independent retail grocers are voluntary members of the EDEKA.

Dictaphone Company Limited,
183 Hope Street, GLASGOW, C. 2.

Dear Sirs,

As you know, last June we agreed to your carrying out an Observation Survey and Time Study of our office correspondence methods, and your survey revealed that, in our particular case, by adopting the Dictaphone Time-Master system, we could increase *efficiency* and reduce our costs.

After considerable thought, we agreed to adopt the recommendations made in your Survey, and installed the quoted amount of Dictaphone Time-Master units.

The equipment has now been in use in this office for approximately six months and we are delighted with the results. In fact, in recent months the correspondence volume has increased and we now find that not only will the Dictaphone system handle this new high volume but the work is, in fact, being dealt with by 11 Dictaphone girls and 5 copy girls, where previously 27 girls were required.

The economies effected in stenographic labour and by increased output from dictators are now so *evident* that we are going ahead with the installation of machines in London, Bristol and our Birmingham offices, realising the enormous benefits that can be obtained.

Yours faithfully,
for A. R. Stenhouse & Partners Limited,

Director.

WHO LAID THE RAILS TO U. S. MARKETS?

European businessmen helped lay the rails to U. S. markets. Throughout the 19th century they financed a large part of the American railway system as well as other basic industries.

Today European businessmen are interested in reaching American markets on a greater scale than ever before, but there are many problems in selling products in the United States.

Banks abroad desiring to obtain a favorable position for their customers in U. S. markets are invited to use the facilities of Manufacturers Trust Company. Through our complete branch coverage in New York City and our thousands of correspondent banks throughout the United States, we are exceptionally well equipped to obtain data on local market conditions in the United States and to handle all types of banking transactions.

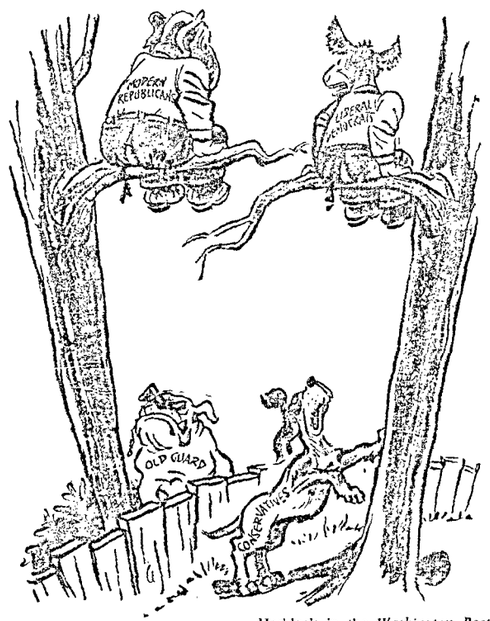
AMERICAN SURVEY

AMERICAN SURVEY is prepared *partly* in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.



No Party for the President?

WASHINGTON, DC

On Tuesday, for the second week in succession, the President went over the head of Congress to plead with the voters for his Budget. His first televised *talk* had discussed the Budget as a whole; his second dealt almost exclusively with foreign aid, the item which, to judge from Congressmen's mail, the voters considered the most expendable. Yet contrary to all expectation Mr Eisenhower got a much better response this week than last. Perhaps it was because of the almost evangelical zeal he brought to his theme. In any event, the White House was able to announce a strong flow of favourable letters and telegrams, a welcome change after its dismal experience of the week before. And when Mr Dulles went before the Senate Foreign Relations Committee on Wednesday to defend the President's new streamlined version of foreign aid, he was greeted with smiles all round. This unusually friendly reception doubtless owed much to the tactful incorporation in the new proposals of many of the features suggested by outside studies commissioned by the Senate.

Apart altogether from the *merits of the* fiscal arguments, the battle of the Budget, which has turned out to be the main political theme of the congressional session, is of striking interest because of the light it throws on President Eisenhower's leadership. Six months ago he received the second largest majority ever given to a President. He promptly interpreted this as a national endorsement of "modern Republicanism." Since then he has received disheartening lessons on the distinction between popularity and power. The very concept of modern Republicanism has been ridiculed on the floor of the Senate by Senator Goldwater of Arizona, the most articulate spokesman of the party's conservative wing, in terms that have been taken up by Republicans across the country. The official leaders of the President's party have deserted him repeatedly in both the Senate and the House of Representatives. The series of regional meetings which the new chairman of the Republican party has been convening to plan a congressional comeback in 1958 have turned into demonstrations of protest against the Republican President.

"Boy, Do You Look Silly"

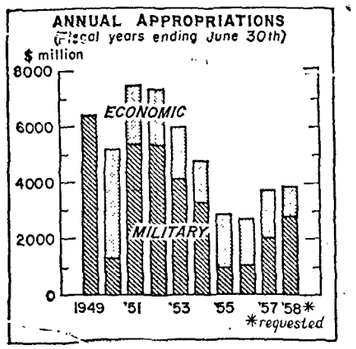
Herblock in the *Washington Post*

Genuinely puzzled by all this, the President has taken his case to the country. His first talk, on the Budget as a whole, was crisply written and delivered, from behind his desk in the White House, in his best paternal manner. Observers in Washington, admiring the performance, waited for the impact on the country. It was disappointing. Relatively few of the voters, especially in the midwest and west, were looking in, and a good many of those who were switched off before the end. The response in letters and telegrams to the White House was unimpressive; the letters reaching Senators and Representatives continued to be heavily in favour of cuts in the "superluxury" Budget. The President, in the privately-spoken words of more than one of his associates, had "laid an egg." Morever the very day after he had taken his solid stand on television Mr Eisenhower, in characteristic fashion, sold the pass that he had just so tardily occupied by conceding that he did not feel strongly about parts of the Budget he claimed to have drawn up.

Last January, when television speeches would have done him more good, coming immediately after his electoral triumph and before so many politicians had publicly committed themselves to the cause of economy, the President was behaving as if the Budget did not belong to him. Attacks on it by prominent Republicans, including by implication the Secretary of the Treasury, produced a widespread popular response. The Chambers of Commerce, sensing a breeze blowing in their direction, sent teams of speakers up and down the country to work it into a gale. Conservative Republicans, who have felt cheated of victory by the Eisenhower Administration's endorsement of most of the policies of the New Deal, saw the chance of emasculating with the fiscal axe what they lacked the power to repeal.

The Democrats, in their turn, have begun to exploit some of the advantages of their own party's divisions. When there is economic distress, or a popular interest in social reform, Mr Truman is pushed to the front, flanked by Senators Morse and Humphrey and the liberal Governors of Michigan and New York. When it is conservatism and economy that are in demand, there for all to see is the Democrats' other face, featuring Senators Byrd, Russell and Lyndon Johnson hacking away at the extravagant Republican Budget. Nowhere is this inconsistency more dramatically illustrated than over defence. Last year Mr Charles Wilson, the Secretary of Defence, was accused of being unduly dominated by budget considerations and was forced by Democratic Senators to take $900 million he did not want. This year he is in danger of having $2.5 billion clipped off his estimates by Democrats in the House of Representatives.

The extent to which the President has been let down by his own party has been strikingly illustrated, though in rather different ways, in both Houses. In the Senate the Democratic leader, Mr Lyndon Johnson, in league with the conservative Republicans, carefully timed a stroke that was particularly humiliating to the President for the day after his television appeal. Mr Eisenhower had made a special plea for an enlarged appropriation for the United States



Mutual Security for 1958

In the setting-out of his request for new funds for next year's foreign aid programme, the President has recognised last year's demand for a new approach to the programme. That demand was also expressed in a series of studies, by experts, by government officials, by legislative committees; all of them accepted that, in some form or other, both military and economic assistance to foreign countries was, and would continue for some years to be, essential to the security of the American people and to world peace. President Eisenhower argues that if "the tested and proven mutual security programmes" are not supplied with adequate funds, there will be a risk that spending for American defence, the main obstacle in the way of a tax reduction, will be forced up to a level far higher than it is today.

Defence Assistance

It is to emphasise the close connection between defence spending at home and military aid abroad that the President wants two of the *four main changes* which he has recommended in the programme.

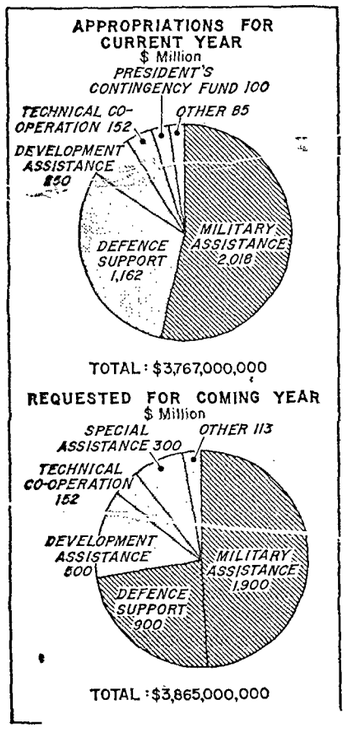
1. *Defence Assistance*—"our and other free nations' common effort to counter the Soviet-Chinese military power"—is to include both direct *military aid*, weapons and training in their use, and what used to be called *defence support*, which is superficially economic aid, covering such things as uniforms and food for troops, but which in fact enables friendly countries to maintain greater military forces than they would otherwise be able to do.

2. Funds for these purposes, if the President has his way, are to be included, after this year, in appropriations for the American armed forces, although in a separate section of the Bill, and they are to be granted under a continuing authorisation.

Economic Assistance

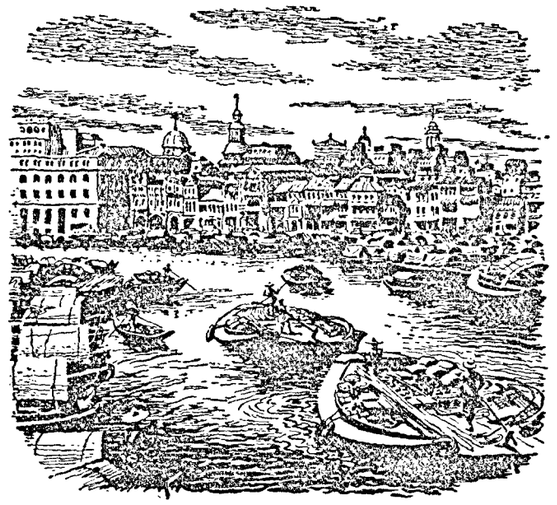
As a result of separating military from economic assistance, the constructive side of the programme will be seen clearly for what it is and for how comparatively little it is; only just over $1 billion is requested for next year and half of that will be in the form of loans, not grants. The President wants aid for economic development to be supplied through a loan fund which will provide not only a clear statement of the intention of the United States to help to develop the economies of backward countries, but also an assurance that such help will continue.

3. This *Development Loan Fund*, for long-term projects only, is not to compete with, or take the place of, existing sources of credit, whether private or governmental, and there will be a "reasonable expectation of repayment" although "presently demonstrable financial soundness" will not be demanded. An initial appropriation of $500 million is asked, and authority to borrow $750 million from the Treasury in each of the two succeeding years.



The *Technical Co-operation Programme* (Point Four), which provides expert advice and help, should be closely related to the new fund and the President therefore asks that it be authorised on a continuing basis, although money will be appropriated annually.

Special Assistance



4. This is a new category intended to meet emergencies, whether economic or military, and the President wants the money to be free of some of the legal restrictions on other foreign aid funds, in order to allow for greater flexibility in its use. Some of the additional needs for the Middle East under the Eisenhower Doctrine will be met from this source.

Other Programmes

This category includes the American contribution to such international projects as aid for refugees and children, the development of peaceful atomic energy, and the administration of economic assistance.

Only BTH projectors have all these special features

★ High-speed, high-inertia flywheel which eliminates 'wow' and 'flutter'.
★ Reverse-running—quick re-wind without interchanging spools.
★ Available with magnetic/optical sound system (Model 451) or optical sound system only (Model 450).
★ New design of take-up mechanism—smooth-acting and trouble-free.

TWA introduces the swift

JETSTREAM*

A new concept of air travel. TWA now proudly announces the largest and most luxurious airliner ever built—the JETSTREAM! This great Lockheed Starliner flies at higher altitudes, over weather, and can even take advantage of the jet stream—the smooth winds of the upper air.

Its giant wingspread makes the JETSTREAM capable of flying from Los Angeles to London *non-stop*, with fuel to spare. Experience the pleasure of JETSTREAM flight... soon!

Quieter, smoother, more comfortable flying. With exclusive synchro-phased (anti-vibration) propellers and engines placed far out on the wings, the Jetstream offers you the quietest transatlantic flight in history. The interior of this wonderful aircraft is cheerful, roomy, tastefully appointed. You will enjoy friendly service second to none — because TWA welcomes you on board and enjoys making every flying moment a memorable pleasure.

BOOK NOW FOR FIRST FLIGHTS!

Daily non-stop Jetstream flights begin June 1st to New York at low Sky Tourist fares. Across the USA the Jetstream will offer Ambassador luxury service as well as low fare Sky Tourist flights between New York, Los Angeles, San Francisco, Chicago and other major cities. For information or reservations, see your local travel agent or nearest TWA Ticket Office.

*Jetstream is a service mark owned exclusively by TWA

Information Agency to exploit divisions in the Communist world and build up American influence in Africa. Last year, to underline his personal interest in the agency's work, he had appointed Mr Arthur Larson, modern Republicanism's bright young intellectual, as its director. The House of Representatives cut out most of the extra funds the President had asked for. Then, partly because Mr Larson was not very happy in presenting his case, and partly because it was addressed to a group containing only conservatives of both parties, a Senate subcommittee recommended unanimously that the agency's funds should be cut still further. When the report was brought to the Senate floor, only fourteen Republicans and one Democrat were prepared to support the President's request. In the House of Representatives, a different pattern emerged over the appropriations for the Department of Health, Education and Welfare. Most of the proposed cuts in the social services were defeated, but in twelve key votes the President's proposals were upheld by a majority of Democrats and opposed by a majority of Republicans.

In these circumstances one might have thought that the President would give special encouragement to those few modern Republicans in Congress who were willing to defend his policy. Senators Javits, Case, Cooper and Bush have been working closely as a team to rescue what they can. It was not very encouraging for them to hear the President's remark at his press conference that he did not see how it was possible for him to work with the Republican group in Congress "except through their elected leadership"—men such as Senator Knowland and Senator Dirksen, who are openly defying the President.

Whatever his mistakes, Mr Eisenhower's experiences with this Congress have brought out strongly some of the peculiar features of the American system. In the first place, the Administration's case has to be argued by proxy and, since there is no guarantee that the party's leaders in Congress are loyal to the Administration, there is no certainty that the official case will ever be put intelligently by anyone senior enough to carry weight. Secondly, the only possible way of providing cohesion lies in the President's devoting a major part of his time to the manipulation of Congress from the outside. This President Eisenhower has consistently failed to do. It may very legitimately be argued in his defence—and this is perhaps the most serious criticism of the system—that this is not the most valuable thing that a President can do with his time. He is, after all, charged with the chief responsibility for foreign affairs and defence. But one thing is clear: that President Eisenhower's recognition that his illnesses would force him to conserve his strength for his most important duties means that one of his chief aims in seeking a second term—the desire to see his legislative programme enacted—is unlikely to be achieved.

Open Minds on Open Skies

WHETHER or not he was directly reprimanding Admiral Radford, the chairman of the Joint Chiefs of Staff, for his declared refusal to trust the Russians on anything, President Eisenhower's concern that the United States should not seem recalcitrant on disarmament is certainly an expression of his own determination to keep an open mind. He does not intend to allow suspicion, however well founded, to interfere with what he feels is a real possibility that something constructive may at last be coming out of ten years of negotiation on disarmament. Although both the President and Mr Stassen, his personal representative at the London conference, are well aware of the domestic political advantages they would gain from an agreement on disarmament, both are also genuine enthusiasts for what they believe is the only hope of easing world tensions. Both are therefore resolved that this week's interdepartmental attempts in Washington to translate into practical terms the principle of at least slightly open skies, which has been agreed in London, should not produce American proposals which would rebuff the new Russian readiness to consider some sort of aerial inspection.

The President believes that this Russian readiness is a sign that the cost of today's weapons is putting economic pressure on the Soviet government as it is on the American. That the Russians would allow such pressure to deflect their international plans is doubted by the many government officials who share Admiral Radford's view and who think that, after years of negotiation, they are better able to understand the Soviet mentality than is the President. These professional sceptics, who are found in the State Department as well as in the defence agencies, argue that the Russian approach is simply a recognition that the United States is drawing ahead in the armament race and must be checked. The test of whether the President's and Mr Stassen's cautious optimism is justified will come when the Russians show, or do not show, readiness to compromise on the zones of inspection and on the other controls which are the essential safeguards of any disarmament agreement, however limited.

Pinch at the Treasury

WHEN Mr Humphrey steps down, his successor at the Treasury will inherit a headache. The latest symptom was the demand for cash on the part of holders of 28 per cent of the $4.2 billion in notes which came due last week. The Treasury, pinched like everyone else by tight money, offered in exchange an 11-month certificate at 3½ per cent, or a 4¾-year note at 3⅝ per cent—the highest interest paid since the bank holiday of 1933. Yet the demand for cash, chiefly from corporations with better uses for the money, was the greatest in six years. The Treasury attributed this not unexpected short-fall to better business sentiment and the great flood of corporate, state and local financing, which in the first four months of the year exceeded, by $1.9 billion, the record reached in the first four months of 1956. In addition, the clear preference of the market for the shorter term security shows why Mr Humphrey has made so little progress toward his admirable aim of lengthening the maturity of the public debt.

The mere rumour that the Treasury was considering the issue of a long-term security to pay off certain savings bonds drove the prices of outstanding long-term issues down to near their historic low points, and prices did not recover until the Treasury announced that, as the market was "not receptive" it would issue, instead, $1.5 billion worth of tax anticipation certificates to meet its immediate needs, among them the $1.2 billion it has had to pay out in cash. In June or July it will be raising another $3-4 billion in new money, to replenish its balance for the months when

revenues are always low, and it has, in addition, nearly $30 billion of short-term notes to refinance this year.

Unfortunately short-term financing, on which the Treasury is so dependent, is no longer cheap. The cost of servicing the public debt has risen from $6.4 billion in 1955 to at least $7.3 billion this year. The Administration is painfully aware that if the Treasury has to ask Congress for another extension of its privilege of exceeding the statutory limit on the public debt, it will be handing ammunition to the Democrats, who seem determined to turn Senator Byrd's approaching monetary investigation into an arraignment of the Administration's tight money policy. But Mr Humphrey may not have any choice. Military spending has been running ahead of the estimates and, unless tax payments from individuals last month were better than rumour suggests, this year's surplus may be less than the $1.7 billion on which the Administration has been counting.

Soil Bank Hold-up

WHEN the House of Representatives suddenly voted last week to close down the soil bank after this year, it seems not only to have been speeding the economy campaign but also to have been declaring bankrupt the whole American farm policy. The soil bank itself will probably be saved by the Senate, at least until it has had a fair trial ; in any case this scheme, under which farmers are paid for taking cropland out of production, was only intended to be a temporary measure, until the government's holdings of surplus crops had been dissipated. Neither the Administration nor Congress has ever been enthusiastic about it and it has not had time to become popular with farmers ; this is its first full year of operation. It is definitely disliked by businessmen in rural areas, since the demand for their services —repairs of agricultural machinery, cotton ginning and so on—suffers when farm output is cut back.

More important, southern representatives in Congress feel that in practice the soil bank helps only the wheat and maize farmers of the middle west. It has opened up the cracks which have been deepening in the congressional farm block as the growing diversification of agriculture in the south has brought that region into direct competition with other farm areas. With members from rural districts no longer voting together whatever their politics, agriculture has ceased to be a nonpartisan affair. In the vote on the soil bank the House divided on almost strictly party lines.

But greater—perhaps too great—significance is being read into this vote. It is being taken as a sign that Congress has given up hope of solving the farm problem by present methods and that even farmers themselves are beginning to have doubts about a price support system which is not only expensive but self-defeating. For some time the Secretary of Agriculture, Mr Benson, has been encouraging such views : he holds that the technological revolution which is responsible for the present agricultural abundance requires an equivalent revolution in farm legislation. In general what he wants is to broaden the markets for agricultural produce and to move farmers off uneconomic land. Congress is now in a mood to consider such a revolution and is pressing Mr Benson for specific proposals. But it is unlikely to look with favour on his immediate recommendation—that he should be allowed to lower price supports even further in order to prevent the accumulation of surpluses.

welcome

Slum Clearance Saved

FOR all its ostentatious wooing of the taxpayer, Congress is not going to let economy stand in the way of rescuing the distressed housebuilding industry. In its Bill passed a fortnight ago, the House approved in all the use of $2.1 billion to pump new federal credit into the market for homes ; even the more cautious Senate Banking Committee is prepared to grant more than the Administration asked. By comparison, the $250 million which now seems safe for next year's slum clearance is a small sum, but it is at least the full amount the Administration requested before it began to cut corners to appease Congress.

Now that the postwar demand for cheap homes is, in the main, satisfied, measures to encourage the rebuilding of blighted town centres ought to have priority over the suburban growth which has contributed to the flight from the cities and the decay which has followed it. Title One of the 1949 Housing Act authorised the federal government to pay two-thirds of the net cost of buying up deteriorating areas and re-selling them to private developers, and $1 billion has been provided for this purpose. Only $88 million of it has actually been paid out because the cities were slow to seize their opportunity and to draw up their plans. But now they wholeheartedly agree with Mr Cole, the Housing Administrator, that a city which does not have an urban renewal plan by 1960 will face bankruptcy by 1965. Unfortunately, almost all Mr Cole's money had been earmarked by the time the economy blizzard struck and he announced that no more large projects could be approved.

Protests from all over the country have saved the slum clearance programme, but the noisiest have come from New York City, where Mr Robert Moses's ambitious and ever-growing scheme for Lincoln Square seemed to be in danger of having to be abandoned. This is a project for replacing rotting slums on the west side of Manhattan with blocks of flats, shops, a cultural centre, theatres, and a new home for the Metropolitan Opera. In the compromise reached early this month part of the plan, including the theatres, has had to go, but the city has been promised a total of $30 million, compared with the $42 million it wanted for Lincoln Square, and another $25 million toward ten other schemes. Philadelphia, where blight is even more serious, has been reassured. But the queue of applicants stretches across the country. Even the $250 million a year Congress now seems prepared to grant will not go far toward arresting the decay at the heart of America's urban civilisation.

Junior Colleges

FROM A SPECIAL CORRESPONDENT

THE proper role of the colleges and universities, on the one hand, and of the secondary schools, on the other, continues to be a subject of controversy in the United States. Between the two levels, however, lies an intermediate one, that of the junior colleges. A good many of the controversialists, though they may agree on nothing else, are hopeful that the junior colleges may help to solve the dilemma sometimes summed up as "mass *versus* class education." The number of young people seeking higher education is

increasing much faster than the number of places in the traditional colleges and more and more educationists are looking to the junior college to deal with the overflow.

The term "*junior college*" covers virtually any institution offering a two-year post-secondary school course instead of the usual four-year university course, whether it is technical, vocational, devoted to general education, or a mixture of these. Such institutions are rooted in the conviction that all Americans ought to be able to have some higher education, regardless of whether they can afford to go away to college, or have taken the proper courses in secondary school to prepare them for it, or have any interest in the subjects that traditionally comprise the academic curriculum of the universities. It will readily be seen that the clientèle of the junior college is a mixed group: some financially poor but intellectually well-endowed students, some not academically inclined at all, and some (far more, in fact, than were originally expected) much older than the usual college student.

Given this diversity of background and purpose among its students, the junior college has been hard pressed to meet the demands made upon it. Within its walls, "terminal programmes" for those whose formal education will be over when they leave must co-exist with a general course designed to run parallel to the first two years of the regular four-year college, and to prepare students for transfer to such a college or university. The enthusiastic supporters of the junior college movement, it is perhaps fair to say, are primarily interested in the terminal programmes. It is these that most clearly distinguish the junior college from the more familiar liberal arts variety, and they are designed for students whose needs are not readily met in the four-year college.

HISTORICALLY, the junior college has often grown out of the secondary school system. Chicago Junior College, with over 20,000 students, began forty-five years ago as a modest programme of studies for thirteen students of Crane High School who wanted to go on beyond the normal four-year secondary school course but could not go to college. Sometimes the junior college is an integral part of the city or county school system ; three-quarters of its staff are, on the average, former high school teachers ; and the two years of its curriculum often seem to be regarded more as a continuation of high school than as the beginning of a university course.

The dilemma of the junior college stems partly from its uncertain position half way between secondary and higher education, and partly from the fact that no one has clearly established whether it is to be the means of broadening still further the already generous scope of American higher education, or of narrowing it, and perhaps bending it somewhat towards the British or European conception. Some university leaders, such as Dr James Conant, the former President of Harvard, have dared to express the hope that the junior colleges may relieve the four-year institutions of their considerable burden of non-academically inclined undergraduates: in short, that American parents may reverse their current tendency to regard a bachelor's degree as the *sine qua non* of respectability, and settle for a junior college Associate of Arts degree for the non-professional man or woman. But this would mean perpetuation of the adjective "junior," just when many of the two-year colleges are trying to escape it by calling themselves "community colleges," offering a wider range of instruction and often a four-year course as well.

For the many cities and towns not placed near a Harvard, a Yale, or a State University, the community college would serve as a cultural focus, sponsoring concerts and lectures, providing refresher courses for adults as well as post-secondary education for the young, and in general serving as a local province of the republic of ideas and the arts. At the same time, it would continue to offer vocational and technical courses, moulding its curriculum to the particular industrial and commercial employments of its community.

THOSE who favour this trend consider that it is in the best tradition of American education—a flexible programme which can be adjusted to the needs of society unhampered by conventional notions of what constitutes higher education. They have in their favour the undeniably increased need for trained persons at a sub-professional level, and the probably immutable American tendency to consider a college degree as the culmination of the average middle-class education, rather than the mark of the scholar or professional person.

Some critics of this development, however, see it as blurring still further the line between real higher education and mere continuing instruction—a line already far from clear in the United States. Even the teachers in junior colleges, grounded for the most part in the older academic tradition, are often sceptical of the "practical" and vocational training they provide. It is sad but true that the staffs of junior colleges are full of people who wish they were teaching in a university. The doubters are not reassured by much of the literature in support of junior and community colleges. Nor is this surprising when they scan the titles of articles in the *Junior College Journal* ("Why Worcester Junior College Converted Its Registration to Manual Punch Cards") or read, in *The Public Junior College*, published by the National Society for the Study of Education:

> The values of a course in fly- or bait-casting is (*sic*) considered far below one in mathematics, whereas in terms of human happiness and mental health it may be far above.

At their most pessimistic, the sceptics see the proliferation of such colleges as the ultimate triumph of the "life adjustment" school of educationists, advancing upon the defences of higher education from their prepared positions in the primary and secondary school systems. It has long been true that the academic value of an American bachelor's degree cannot be estimated even approximately without knowledge of the particular institution that granted it. Rare is the college teacher in the United States who has not suffered at one time or other (usually while reading examination papers) from the nightmare vision of a nation of semi-literate Bachelors of Arts—college for everyone, and higher education for none.

But the junior colleges, with a scant 700,000 students, almost half of them concentrated in the single state of California, are at least as yet no octopus. They represent an attempt to supplement, not supplant, the existing structure of higher education. Most Americans, whether parents, students or educators, are well aware that Contra Costa Junior College and Harvard College are in fact different kinds of institution, with different and not necessarily conflicting aims and achievements.

New "Law" in Jersey City

THE crushing defeat, in last week's municipal elections, of the candidates backed by Mr John Kenny, the boss of Jersey City, is also a blow to Governor Meyner, the personable Democratic Governor who is running for re-election next November. In 1953 a split in the Republican ranks enabled Mr Meyner to become the first Democrat since 1940 to win the Governorship of this normally Republican state. Now Mr Meyner has trouble in his own organisation. Hudson County, which encompasses Jersey City, was until eight years ago the impregnable Democratic fortress of Frank ("I am the law") Hague; in 1953, under Mr Kenny, it rolled up half of Mr Meyner's winning margin of 153,000 votes. But in 1956, even Jersey City floated along with the Eisenhower tide; the President won the state with twice as many votes to spare as he had in 1952. Jersey City's defection was a sore point with some Democrats and a nail in Mr Kenny's coffin.

Although Mr Murray, the man who vanquished the Kenny machine, is a Democrat, he is no friend of Governor Meyner, and he has lost no time in announcing that the price of his support is a veto over all state appointments in Hudson County. To surrender to so blatant a demand for political blackmail from a Democratic boss would be particularly damaging to Governor Meyner. His chances in the election depend on his ability to win independent votes and some Republican ones by a sterling display of good and non-partisan government.

More is at stake for Mr Meyner than the Governor's mansion. If he wins a decisive victory, he will be well in the forefront of the contenders for the Democratic presidential nomination in 1960. The Republicans, for their part, have put their Eisenhower foot foremost in Mr Malcolm Forbes, a wealthy, young, and energetic publisher who has been, early and late, a consistent supporter of the President. The cracks in the Republican party in the state have been hastily papered over, and Mr Forbes is to have the full support of the Republican national organisation in his effort to prove that an Eisenhower Republican can win even when the President is not in the field. Between these two attractive candidates there is little to choose in the way of issues; the campaign is likely to be a popularity contest.

Barter Suspended

WASHINGTON, DC

ALTHOUGH the Department of Agriculture has promised to resume, in a revised form, its bartering of farm surpluses for foreign supplies of metals which, in theory at least, are not sufficiently plentiful in the United States to provide a strategic reserve for emergencies, the news that this bartering had been suspended remains an unpleasant shock for the American lead and zinc mining industries. Originally they were suspicious of barter arrangements, but more recently these have won a good name for themselves by holding up the world price of metals and by syphoning off the market foreign supplies which would otherwise have competed with American output in the form of ordinary imports. At the same time came an official reminder that government purchases of domestic lead and zinc for the strategic stockpile, which have been tapering off for some time, are likely to end in a "matter of months," both because the reserves are now large enough and because funds are running out. The two news items together had a spectacular effect on zinc prices, which dropped by 2 cents to 11½ cents a pound, while lead went down from 16 to 15 cents a pound.

Barter, as operated by the United States, is not as pre-capitalist a device as it sounds. The first approach comes from a private importer of metals; if the exchange seems fair and other conditions are met, a contract is issued by the Department of Agriculture. The importer then arranges to sell off quickly abroad the farm commodities thus acquired, but he does not have to deliver the metals in exchange for several months, if not years. Thus the importer acquires an interest-free loan from the American government. These deals are highly complicated, usually involving at least three countries, and a whole brokerage industry had grown up with firms making large profits on very small capital by bringing together dealers in metals and farm commodities. During April there was a suspiciously sudden rise in the volume of barter sales involving cotton. The Department of Agriculture has had great success in unloading its surplus stocks of cotton on the world market by offering them for competitive bidding. But large numbers of successful bidders have now started using their option of notifying the department within three days after the sale that they have made deals with metal importers. As a result the department is cheated of its cash and can only look forward to receiving in a year or two's time a load of metal which it can no longer be certain of passing on to the stockpile.

Even now the Office of Defence Mobilisation, which is in charge of the stockpile, rendered cautious by cuts made in appropriations by an economising Congress, has failed to take off the Agriculture Department's hands some $300 million worth of metals which have already arrived and there is another $300 million worth due to arrive under contracts already signed. It is this, coupled with the fact that, as the cotton situation shows, some of the barter sales have clearly been competing with the department's own cash exports, which led the department to suspend the programme, about which it has never been enthusiastic in any case.

SHORTER NOTES

Last week the President dissolved his emergency committee for Hungarian refugee relief, which was created last December and has helped 32,075 Hungarian refugees to enter the United States. Most of them came in as "parolees," under an obscure clause in the immigration law, without the right to remain in the United States and acquire American citizenship which ordinary immigrants have. This backdoor into the United States is to remain open to Hungarian refugees in Austria, and will be extended to Hungarian refugees in other European countries with relatives in the United States or with special skills.

* * *

No sooner had the President signed the Bill permitting an increase of ¼ per cent in the interest paid on 3 per cent savings bonds than the Treasury put it into effect by adjusting maturities. So far, however, the change has not slowed down redemptions, which for months have been exceeding sales and subjecting the Treasury to a steady drain.

THE WORLD OVERSEAS

India Squeezes the Pips

FROM OUR CORRESPONDENT IN INDIA

MR T. T. KRISHNAMACHARI, India's Finance Minister, has accepted more advice in one budget than any of his predecessors in a whole term of office; the result is the severest budget in Indian history. Some of the advice has come from Mr Nicholas Kaldor, the Cambridge economist, who last year recommended to the government a wealth tax, an expenditure tax, and a reduction of the maximum rate of income tax and supertax together to 45 per cent. Mr Krishnamachari has introduced a wealth tax and an expenditure tax, and reduced the maximum rate to 77 per cent on earned income and 84 per cent on unearned income; previously it was 92 per cent. The world's first expenditure tax will be levied on all those whose assessable income exceeds £4,500 a year—perhaps 5,500 people—and on all expenditure above £1,800 a year plus an allowance of £375 for each child. The wealth tax will affect all individuals with net assets of more than £15,000, at rates rising from ½ to 1½ per cent, and—probably to Mr Kaldor's own astonishment—all companies with net assets of more than £37,500, at a standard ½ per cent.

Some of the advice has come from the Chambers of Commerce. Mr Krishnamachari has eased some of the business community's bitterest grievances. He has reduced the supertax on dividends paid by a subsidiary to its parent company to 10 per cent; he has made the tax on dividends above 6 per cent somewhat less intolerable; he has amended the burdensome Section 23A, under which companies in which the public (according to a very artificial definition of "public") was not largely interested had to distribute sometimes 60 per cent, sometimes 100 per cent of their profits or pay a penal supertax; industrial companies will now have to distribute only 45 per cent. Above all, he has eased the burden of direct taxation on the salaried, who carry more of the revenue burden than any other section of the community. A married man with an earned income of £4,000 will now pay £120 a year less tax. Indian rates are still amongst the world's highest, but they will no longer crush all incentive.

Some of the advice has come from officials. Delhi had been impressed by the discovery that, while Chinese food prices were the same as India's, Chinese cloth prices were twice as high, and that the difference was explained by the Chinese turnover tax on cloth. Last year the excise on cloth was pushed up to a height which has again freed 1,000 million yards for export. This year the sugar excise is being doubled in the hope that this will make available at least 100,000 tons to ease India's foreign exchange crisis; and there have been other, less drastic, increases on tobacco, tea, coffee, vegetable oil, petrol, matches and paper.

One wonders, however, who can have advised the Minister about his increase in company taxation by roughly 7 per cent. Like the wealth tax on companies, this may be tolerable in a year when the aim is to damp down private industrial expansion; three quarters of bank deposits are already tied up in advances, which have increased by nearly a third in sixteen months, and steel and cement are so short that Mr Krishnamachari has sharply increased the excise on both. But if the present level of taxation continues, it may well neutralise the impetus which has produced a rise in industrial production of 8 per cent a year; one cannot do much expanding when burdened with a tax which begins at 51½ per cent on undistributed profits and rises to 81½ per cent on that part of distributed profits which pays a dividend of more than 18 per cent.

With the inclusion of the increase in railway freights announced in the railway budget, Indian taxation will now go up by some £80 million a year. This is not much by British standards, but the figure must be multiplied by at least ten to obtain a measure of the relative sacrifice involved. In the last six years the central government's revenues have been increased by three quarters, and the tax level of 1951-52 was already as stiff as wartime Finance Members had dared make it. The taxpayer is being squeezed to the pip, and if he gasps rather than groans, it is only because the government has successfully persuaded him that all this, and more next time, and the time after that, is necessary if the five-year plan is to succeed. Last year's and this year's measures will provide the whole amount the plan expected from extra taxation, and also the extra £300 million which the plan left uncovered. But the Finance Minister—Oliver Twist reincarnate—calculates that he will still need another £400 million to cover the increases sanctioned in the plan to meet price rises and transport needs, and to permit some reduction in the very large amount of note printing originally contemplated. Cereal prices are some 15 per cent higher than last year, and, though prices have hardly risen for the last six months, the Minister is obviously queasy when he contemplates the effect that this year's £200 million of deficit finance may have when it is piled on top of last year's similar amount. Last year India ran its sterling balances down by nearly as much as its deficit. That performance cannot be repeated, though many of the goods bought last year are still there to drain money out of the market this year.

Mr Krishnamachari has been immensely courageous. Already edge has been given to wage demands, and the communists have been muttering about demonstrations. India seems prepared to make the sacrifices required to make the plan go through in its five years ; somehow or other, the internal resources will be found. One great question still remains. Can the foreign exchange be found too ? Mr Krishnamachari has made his gestures. Taxation on the foreign investor has been fractionally eased ; the foreign resident will not pay tax on his wealth or on expenditure out of it at home. Now everybody is waiting to see what the foreigner will do, and particularly whether the World Bank will lend the railways their £150 million.

The Fall of M. Mollet

FROM OUR PARIS CORRESPONDENT

THIS week's crisis in Paris had the look of a double exposure. Superimposed on the stylised patterns of a French parliamentary crisis, which need not mean any real change in policy, was the long shadow of Algeria, which is quite another matter. Seen together, the two images were naturally blurred.

The tense parliamentary atmosphere had begun to build up when the Radical party congress, influenced by M. Mendès-France's " young Turks," attacked the government's Algerian policy, with the implicit threat that the thirteen Radical ministers in M. Mollet's team would have to give up their portfolios. The divisions within the Radical party probably made the immediate danger more apparent than real ; but it quickened the impatience of the conservative backbenchers, whose constituents disliked the Socialist-led government's financial tactics. The threat to the government thus became focused on its finance Bill, which proposed budget cuts of £250 million and new taxes amounting to £150 million, intended to limit the budget deficit and halt inflation. The conservative " Independents " demanded that M. Mollet should renounce his proposed reforms in the fields of health and education, and, more generally, that he should give them direct influence in government as their price for his continuing in office.

The Algerian shadow, however, has subdued the natural exuberance with which French parties normally take turns on the governmental roundabout. MM. Mollet and Lacoste themselves have admitted that the conflict in Algeria will be a long ordeal of attrition. The pretence of quick solutions has long been abandoned. The conservatives know this, and their leaders have been less anxious than the rank and file to assume responsibility for Algeria. They would have preferred to wait at least until the Mollet government's financial debacle had emerged more visibly. Yet, with the traditional economic inconsequence of French party politics, they refused to admit that Algeria was a major factor in causing inflation, and claimed that they could mend matters simply by dropping M. Mollet's " social extravagance." They were anxious and angry about the government's failure to stop the drain on France's foreign exchange, now running, partly as a result of speculation against the franc, at a rate 50 per cent higher than last year's alarming losses. This anxiety of the conservatives, despite their political attitude to the Algerian problem, was the first symptom of restlessness in face of its consequences. It may in the last analysis be the most important aspect of the crisis.

From another angle, M. Mollet's fall is a victory for M. Mendès-France, who was openly gunning for him on Algeria. Though M. Mendès-France did not want to be responsible for a crisis and offers no clear alternative Algerian policy, he certainly aims at a more flexible one. The Socialist party itself, if it is no longer committed to a prime minister of its own, may return gradually to its old preference for negotiations. Significantly, the minority of Socialist critics of M. Mollet obtained a much better hearing than in the past at the Socialist National Council a fortnight ago. As for public opinion, despite the evidence of the by-elections, it does not seem to be wholly blinkered about Algeria. It seems tired of seeing no results. Thus, though M. Mollet has been overthrown by the conservatives, who are at least as eager as him for M. Lacoste's " pacification," a change of government does reintroduce a certain flexibility that was sorely lacking. It will have to be matched by the rebels, whose intransigence has hitherto made it difficult for liberal opinion to suggest roads to a compromise.

The common view on the night of M. Mollet's fall seemed to be that a politician slightly to the right of the Socialists, like M. Mitterrand, the Minister of Justice, had the best chance of forming a government which might include the Socialists and the MRP, but probably not the conservatives. (This would have the disadvantage of not forcing the conservatives openly to acknowledge the link between Algerian and financial troubles.) It is a sign of the climate that M. Mitterrand himself, well aware of all this, came out over the weekend in favour of a federal solution in Algeria (leaving the door ajar for slightly more diverse interpretations than M. Mollet) and of the European treaties. One thing is certain: the foreign trade position being what it is, France cannot afford a long political vacuum which would intensify speculation in francs.

Light on the Long Knives

FROM OUR BONN CORRESPONDENT

IF one can point to any one date early in the Nazi era that marks how fatally the rot of acquiescence in illegality had already penetrated responsible Germans it is surely Saturday, June 30, 1934. For the German community as a whole that particular weekend marked the official beginning of the summer holidays. Even the four million brownshirts of the SA had been told there would be no need for any of them to report for duty throughout July. When at the close of that incongruously superb June day the wireless was turned on, in and out of doors, and the news came through that six senior SA commanders had been shot (apparently for treason), and the Chief of Staff of the SA had been arrested, no one seems to have been disturbed by unreasonable doubts concerning the legality of Hitler's action. One may excuse the half-listening waiter in the Wannsee beer garden whose reassuring comment among the startled tables was: " A fine fellow, the Fuehrer! There's a man who knows what he wants! " But what of the officer commanding the Berlin military district, General von Witzleben, who, on being told that the shootings meant that the Party was getting rid of its wild men, replied approvingly: " Wish I could have been there " ? Almost exactly ten years later, Field-Marshal von Witzleben, senior officer in the July 20th conspiracy against Hitler, was himself to be hustled to the gallows after a travesty of a trial.

Most of the principal actors in the drama of June 30th have since suffered their violent ends. But the law has caught up at last with two survivors who had a hand in the killings, and at Munich this month they have each been sentenced to eighteen months' imprisonment. The one-time SS General Sepp Dietrich did not deny that he had superintended the execution of the six SA commanders in Stadelheim prison, Munich, on June 30th, and he related uninhibitedly how, with a smug " Heil Hitler! ", he had informed each victim in turn of his impending death. Clearly, notwithstanding all that has happened since, Dietrich has had no doubts or regrets. The Fuehrer had ordered the executions. That was good enough for him.

Michael Lippert, who was found guilty of having played an active part in the shooting of Ernst Roehm, the SA chief of staff, was doggedly evasive. Roehm had refused to accept the " privilege " of ending his own life with a proffered pistol. He was shot in his cell next day under the direction of Theodor Eicke, then commandant of Dachau concentration camp, whom Lippert had accompanied at least as far as the cell door. There were witnesses to incriminate Lippert still farther, and by the end of the trial he had cut a repulsive figure—except in his own eyes, of course. Self-righteously he told the court how sincerely he hoped that the German Federal Republic would be served as loyally as was the Third Reich by those who unhesitatingly carried out the Fuehrer's orders at that moment of crisis.

★

Had there really been a crisis ? The trial added nothing to what is already known about the overmighty subject Roehm and his four million bully-boys who were beginning to wonder restively by the summer of 1934 whither they should go next. The defence called a few witnesses, chiefly old Reichswehr hands, to testify that Roehm and his fellow-victims had indeed constituted a threat to law and order, and that this had been a case, if ever there was one, of good riddance to bad rubbish. They, too, seemed not to have been troubled by the reflection that the dead men were never put on trial. Happily for the German Federal Republic it can be recorded that the presiding judge and most of the German journalists reporting the trial noted and duly publicised this facet of the case.

When the Reichstag met in July 1934 to endorse unquestioningly Hitler's claim that for forty-eight hours he himself had been the supreme court, it was already beginning to be widely known that the company of those who had been summarily executed that week-end was very much larger and more various than had been officially admitted. By then Hitler was ready to concede that fifty-eight had been killed, including such prominent " conspirators " as Gregor Strasser and Generals von Schleicher and von Bredow. He did not acknowledge the truth of what was being whispered furtively from house to house—that simultaneously hundreds of political and private scores had been murderously settled ; that some innocents had been struck down by mistake, such as the music critic of the *Muenchener Neueste Nachrichten*, who had had the bad luck to have been born with the undistinguishing name of Schmitt. These tragedies were widely known among responsible people. But they asked no loud and insistent questions. The fatal rot had set in.

Malaya Prepares for Independence

FROM A CORRESPONDENT IN KUALA LUMPUR

THE Chief Minister of the Federation of Malaya, Tengku Abdul Rahman, has been in England again for final discussions on the constitution for an independent Malaya that was drawn up by the Reid Commission. The Reid report's proposals on citizenship have aroused misgivings in Malaya. These attempt to deal with the special problems of Chinese residents who are British subjects and of those who are not. The report proposes that the first group should be given Commonwealth as well as Malayan citizenship ; for the second, there should be easier Malayan citizenship qualifications, and they should swear allegiance to the Federation, renouncing any rights they might have as citizens of another country—for instance, China.

At first these proposals seem to have been misunderstood by most people in Malaya, and among them, by the leaders of the ruling Alliance party (which includes the United Malays National Organisation and the Malayan-Chinese Association) who rejected them outright on the ground that a new nation could not be founded with people who could swing from one nationality to another with the ease of a perfoming monkey as and when it suited their personal desires. The Malays in particular believed that the Chinese would eventually swamp them by sheer weight of voting numbers. The rulers at first accepted Commonwealth dual citizenship, then swung round to the Alliance point of view ; they may change their minds again in view of the agreement now reached in London.

But dual citizenship outside the Commonwealth (for instance, Chinese and Malayan citizenship) is quite another matter and there was no question of it being accepted by the Tengku—or indeed pressed upon him by Whitehall.

The Reid recommendations have given the opponents of the Alliance political ammunition which they are using for communal attacks. The man who has led the rest in this dangerous political game is Dato Sir Onn bin Jaafar, once Member for Home Affairs in the last nominated government. Dato Onn hates the Chinese and is said to be a bitter man—bitter over his defeat in the Federal elections, and bitter over the defection of his former supporters in his own Party Negara. He has accused Tengku Abdul Rahman of " selling the Malays down the drain " because the citizenship laws framed by the Alliance and largely accepted by the Reid Commission, will let more non-Malays on to the electoral roll.

Third year of Publication

The Paper Bulletin

The 9th quarterly issue contains three special reports :
1. The Fibre Board Packing Case Industry.
2. The Irish Paper Industry.
3. Trends in British Paper Output.

The issue also contains : A Summary of the Contents ; Guide for Paper Users ; Raw Material Notes ; Reports on Paper Using Industries ; General Notes ; Comprehensive Statistics ; Charts.

The March monthly supplement dealt with the implications of the European free trade area for the paper industry.

Full details from :

THE ECONOMIST INTELLIGENCE UNIT LTD.
22, Ryder Street, London, S.W.1. Whitehall 1511, Extension 144.

The Chinese mutterings might be summarised as demands for nationality by birth, equal rights for all citizens, multilingual legislatures, and a five-year residential qualification for citizenship. In one of his most straightforward speeches the Tengku told a Chinese audience: "This is the time when we must make up our minds to sink or swim together. Unless we do this, there will always be this fear, this distrust for one another which can ruin our efforts to build a strong Malayan nation." This did not, however, stop the powerful group of Chinese guilds and teachers' associations from deciding to send a three-man deputation to London.

No single community has obtained all that it wanted from the Reid Commission; Probably the Malays will end by having greater benefits and privileges as "owners" of the country. The Reid Commission went beyond the Alliance's own agreed memorandum on citizenship and on Malay rights and privileges. It gave the Chinese more than the MCA had thought it prudent to ask of Umno, and recommended limiting the rights of Malays for fifteen years. This set the Malay nationalist cat among the pigeons but the Chinese tactfully took Tengku Abdul Rahman's hint that they should for the time being accept only what they had agreed on in the tripartite memorandum to the Reid Commission.

★

The Chief Minister's problems will increase with the declaration of independence. Apart from the racial issues —which need only a silly impulsive move by either an ignorant Malay or a Chinese to lead to violence—he will still have to contend with the Emergency, which enters its tenth year next month. The Communist terrorists are obeying orders to lie low. They are conserving their strength, stockpiling food and waiting for an end by negotiation after independence. It is becoming more and more difficult for the Commonwealth security forces to find their hiding places. The abysmally low surrender rate in the last few months is an indication of the tight hold that the district leaders and field officers have on their small units. As a result, information is slowly drying up.

The Emergency will turn more and more from a military into a political and administrative problem. Tengku Abdul Rahman will undoubtedly find pressure being placed on him by certain Chinese sections to end the war by negotiation and to use the money saved for building more schools, hospitals, and roads. At the moment he is determined not to end the war by negotiation, since this would mean victory for the Communists and an overwhelming shift of allegiance among the Chinese, who would see the writing on the wall growing larger and would wish to protect themselves. The Tengku plans to continue the present Emergency Operations Council, though its membership will be changed, and to appoint a new director of emergency operations responsible to the new Defence Council of which the minister of defence—probably the Tengku himself—will be chairman. The Commonwealth forces will continue to augment the Federation army and police.

There are only about 2,000 armed terrorists left in the jungle. The number has never been smaller. But a dangerous complacency over the emergency exists in Malaya, and the situation is not improved by the political troubles that occupy the minds of the people and will continue to occupy them for months to come.

The Race for Perón's Cloak

FROM A CORRESPONDENT LATELY IN BUENOS AIRES

It is a well-worn café joke in Buenos Aires that if General Perón had been asked for a good date on which to be overthrown, he could not have chosen better than the autumn of 1955. His administration had thrived on the accumulated wealth of Argentina. Money was spent lavishly on luxurious workers' flats, new stadiums, magnificent public buildings. Then, when the dictator was nearing the limit of his spending spree, he was overthrown and so spared the morning-after. Moreover, General Perón was not overthrown by a popular uprising. His downfall was brought about by a small military group supported by the middle classes. To the workers, General Perón has remained an extremely popular figure and the economic chaos which followed his fall has been interpreted as proof of the efficiency of his administration.

The austere economic regime made necessary by the dictator's lavishness would in any case have been extremely difficult to maintain because Argentinians are about the least austere people in the world. But the revolutionary regime simply does not have the political or popular support to maintain a systematic and unpopular policy of austerity. The Prebisch plan which advocated such a policy soon had to be revised to make it more palatable. One of its key items was a combined wage-freeze and a gradual policy of liberalisation of price controls. The wage-freeze soon had to be abandoned and price controls were put back last April to check an imminent wave of strikes.

The government's most serious problem is the country's balance of payments. The year 1954 ended with a favourable balance of $47 million. By the end of 1956 there was a deficit of over $210 million. This dramatic fall was caused by the world wheat surplus helped by the United States policy for getting rid of its agricultural surpluses. Brazil, for instance, which used to be one of Argentina's main buyers, has received American wheat and will be a closed market for Argentine wheat at least for this season. Moreover, this year's maize crop has been 60 per cent below normal. But even if Argentina were to have a bumper crop of any agricultural product, there is not the transport to move the crop to the ports. Transport, capital goods for heavy industry, fuel and power; these are the bottlenecks of Argentina's economy. Rising fuel costs have made matters worse. Buenos Aires has a partial black-out every evening from 7 to 10. In addition, there is a power rationing scheme which restricts supplies in whole districts, industrial and otherwise, for several hours every week.

Politically, the steady deterioration of the economy has had one important consequence; nobody wants to be identified with it. This, added to the fact that General Perón's popularity is daily increasing, has transformed political activity into a scarcely veiled competition between the parties to pose in front of the electorate as the heirs of a "revised peronismo" stripped of all its undesirable qualities but preserving its popular ideas of social reform. Not one of the political leaders interviewed by your correspondent had any doubts about the outcome of a hypothetical election in which General Perón could participate: he would be the winner.

In the race to put on the neo-peronist cloak, the Radical party leader Dr Arturo Frondizi looks like an easy first. Although the Radical party is divided into at least five warring factions, Dr Frondizi controls the most powerful faction and, in addition, he counts on the support of important industrial pressure groups, a sizeable sector of the middle class and, perhaps, the largest portion of the working class vote. Although he became General Perón's bitterest political opponent, he has now succeeded in convincing many of the General's former supporters that he is the presidential candidate most likely to continue Perón's good work while abandoning the excesses of "*justicialismo.*"

Dr Frondizi, when interviewed, agreed that his movement was closely identified with the social and political forces of "peronismo" but he denied that he was trying to become the dictator's unofficial heir. "The Radical party embraced the cause of social and economic justice many years before Perón. What Perón did was to steal our programme and our slogans and use them for his own purposes. During his regime, in order to present a solid opposition to the dictatorship, we also appeared as opposing all his policies—that was a strategical necessity. Today we have regained our traditional position as interpreters of the progressive, democratic aspirations of the people."

★

President Aramburu has called for elections for a constituent assembly on July 28th. This move has been severely criticised both from the left and from the right. Many feel that a new constitution should wait until a democratically elected government is in power. Whichever party assumes power after the presidential elections promised for February, 1958, might feel justified in revoking this hastily prepared constitution in favour of the 1949 constitution, which is still legally binding. Others fear that the call for a constituent assembly is a last-ditch effort by the military groups to remain in power by declaring the assembly a sovereign parliament and then asking it to elect another provisional president for an indefinite period. Dr Ricardo Balbin, the leader of an anti-Frondizi faction of the Radical party, has gone so far as to say that the only alternative to free presidential elections in February, is civil war. President Aramburu is already facing a revolt of senior army officers. The minister and the under-secretary for war have both been forced to resign and on Wednesday the chief of the army was removed from his post and arrested. The President will need all the naval support he can muster to weather this military storm.

Two unknown factors in Argentine politics are the possibility of General Perón's return, and the future policy of the powerful trade union movement. The exiled dictator undoubtedly wants to stage a comeback, and can certainly count on vast popular support. But the political parties which are now so hopelessly divided and so eager to appear as followers of certain peronist policies, would immediately reunite and start a civil war rather than allow the ex-dictator to regain power.

The trade unions are solidly opposed to the present government. Under the dictatorship, they were privileged, but since the revolution they have come down in the world. In fact, the "deperonisation" of the trade union movement has been carried to such lengths that Dr Frondizi is not alone in feeling that the revolutionary government, supported by the right wing, has systematically destroyed the complex trade union machinery built by General Perón. Some observers believe that the trade unions are so disorganised that they can no longer play an important role in political affairs. But the trade union leaders are convinced that their united vote can easily decide the next presidential election.

Danish Eggs and Bacon

FROM OUR CORRESPONDENT IN COPENHAGEN

"Eggs and bacon," it has been said, "are the only things that count in Anglo-Danish relations." Happily, this need not be interpreted too literally; it would have taken a great deal more than the Danish annoyance at the dumping of subsidised British eggs in Germany to affect the warm welcome that was given to the Queen and the Duke of Edinburgh in Copenhagen this week. But the matter is of sufficient concern to Anglo-Danish relations to have been referred to by the Queen in her speech at Tuesday's state banquet; and it was pleasantly appropriate that the British Government should have announced on Wednesday that it had agreed to take steps to prevent subsidised British eggs from doing serious damage to normal Danish export markets.

The Danes consider that their arguments against British dumping, based on Article 16 of Gatt (they have complained to the Gatt organisation) are incontrovertible. In their eyes, Britain is hypocritically preaching European free trade while, in practice, adopting export subsidies. Britain formerly took two-thirds of Denmark's egg exports. When domestic egg production drove the Danes from the British market, they painstakingly built up alternative markets in Germany, which are now endangered by the sale of cheap British subsidised eggs that are undercutting Danish eggs produced at half the cost. Britain insists that the egg surplus was an accident, unlikely to recur, but the Danes are less convinced.

At Strasbourg, Hr Lannung found cold comfort in Mr Ormsby-Gore's undertaking to reduce the minimum prices guaranteed to farmers, because only small reductions are permissible in the annual farm price review. The Danes would like to see an outright ban on subsidised agricultural exports, before British exporters have built up markets and acquired vested interests in the trade. The shrillness of their outcry is intelligible in the light of the present economic crisis. After Christmas, the terms of trade deteriorated sharply. Imports, largely solid and liquid fuel, were 5 per cent dearer this February than a year before, while the prices of Danish agricultural exports, notably bacon and butter, were 12 per cent lower. At present there is a slight improvement; the price of Danish bacon exports has risen twice in a fortnight, domestic egg prices have improved, and export prospects have brightened.

The import surplus has led to an alarming depletion of foreign reserves; on May 1st the deficit at the National Bank was £19 million. But for last week's general election the government would probably have moved three to four months ago, and when the new government is formed its first task will be to halt the drain. The situation, aggravated by difficult economic conditions last year, calls for more

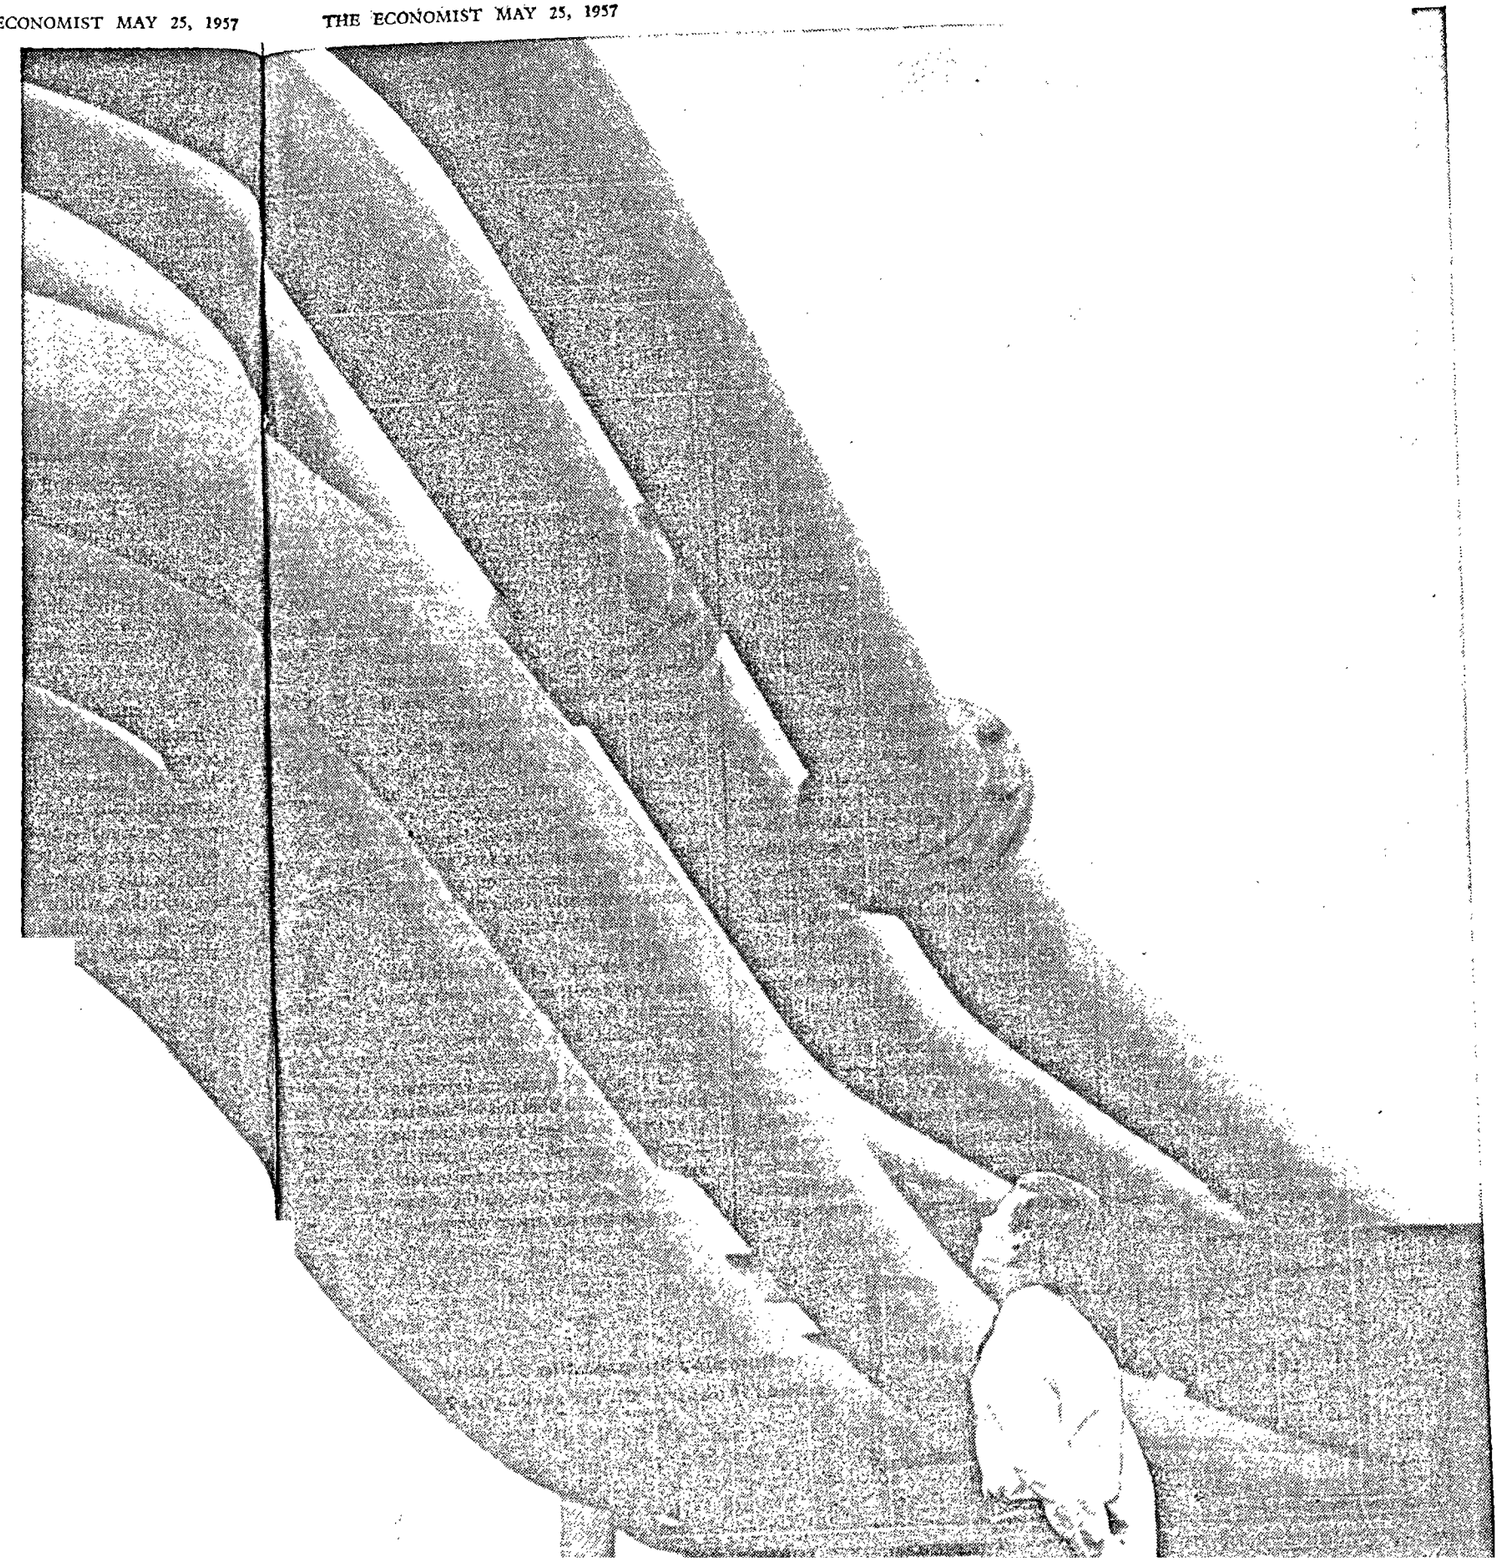
Oil

. . . it has the power

to keep you prosperous.

And your children

POWER IS NEEDED, the power to turn wheels, generate heat and light, keep factories going. Power, in fact, to maintain output—and full employment. And oil must provide it, for all other sources, fully stretched, cannot meet the increasing demand.



Unless oil makes its powerful contribution, quite ordinary comforts could soon be harder to come by—and costlier. So at Shell-Mex and B.P. Ltd. the best brains in the business are bent to the task of ensuring full supplies from the enormous resources of Shell, Eagle and BP on both sides of the globe. And guiding the application of oil to industry. Now more than ever.

Think about oil. Because today in this country, oil is a vital question.

And Shell-Mex and B.P. Ltd. can provide the answers.

Shell-Mex AND **B.P.**

will supply the oil

"Give us the tools and we will finish the job."

(SIR WINSTON CHURCHILL)

A war time cry now applied to industry by the

REMPLOY SPONSORSHIP SCHEME

The Remploy Sponsorship Scheme has been inaugurated to serve two purposes. One, to provide an existing factory and labour force for firms wishing to expand but who are unable to do so by lack of those. Two, to provide continuous employment for disabled or otherwise handicapped persons.

Remploy Ltd., has at present ninety factories in various parts of the United Kingdom and, as a result of training in these factories, 6,000 disabled men and women working at trade union rates are producing all manner of goods for domestic and industrial use at a high quality standard and in fair competition with normal industrial undertakings.

It must be remembered that the main purpose of the Remploy organisation is to keep the hands and minds of these disabled people occupied as part of, in some cases, their therapeutic treatment, and to restore their feelings of usefulness to society despite their handicap.

To assist towards that end, the Government allocates an annual subsidy of £2,500,000. But against that subsidy, there must be set the taxes paid to the Exchequer from the wages of these disabled employees, and the non-payment of unemployment benefit or national assistance in some form or other which would otherwise become a charge. Therefore what at first appearance would be a charge to the Nation of £400 per person per year is reduced to something nearer £200 a year. And the benefit to these disabled people in their re-establishment as useful employable citizens is incalculable.

The Remploy Sponsorship Scheme is an extension of Remploy usefulness in that, in addition to guaranteeing greater security of employment to disabled people, it provides a direct benefit to Industry, to these firms where, as already mentioned, extra space and labour force is needed for expansion. It also presents some benefit to the Exchequer in the possibility of a reduced subsidy.

The Scheme briefly is as follows: The sponsoring firm equips an existing Remploy factory with the necessary plant (if such plant is not already established in the factory), provides the technical knowledge needed, supplies the raw materials, and buys back the finished products at an agreed economical price. No concessions are expected by Remploy in the quality or accuracy of the products produced under this Scheme. These will be fully up to the standards required in the sponsoring firm's parent works and will be vouched for by careful supervision and management, as will also be strict adherence to delivery dates. One stipulation must be agreed by the sponsoring firm—a guarantee of a continuous flow of orders over a long period, as obviously changes in methods cannot readily be made with the class of labour involved.

The Scheme is of particular interest to firms which have a section of their own factory at present engaged on the continuous production of component parts in large quantities and in constant demand. By removal of that section and its equipment to a Remploy factory, the sponsoring firm is able to free both its own factory space and labour force for expansion of present productions or development of new projects.

Again, the Scheme can also present great advantage to firms wishing to reorganise their production lines and methods while still requiring to retain older plant for the supply of components and spares.

The Scheme was instituted a little over a year ago. It is working with great success at Remploy factories at Bristol and Sheffield, and other projects are being studied.

If you are considering expansion and are precluded from this by shortage of space or labour—if you feel that the Remploy Sponsorship Scheme can in any way be of some advantage to your Company—we will welcome the opportunity to discuss the matter with you.

Remploy SPONSORSHIP SCHEME

The Remploy Sponsorship Scheme serves Industry. Can it serve you?

For further details of the Remploy Sponsorship Scheme, please write to:-

MANAGING DIRECTOR, REMPLOY LIMITED, 25/28 BUCKINGHAM GATE, LONDON, S.W.1. (TELEPHONE: VICTORIA 6621)

Continued from page 703

stringent budgetary policies. Danish officials pooh-pooh any suggestion of devaluing the currency, which would, they say, provide at best a temporary respite. They look instead for improved agricultural prices and determined government action.

Denmark's fundamental weakness is its lack of natural resources (oil, coal and minerals) which make it dangerously dependent on agricultural exports to pay for its imports. Moreover, its choice of markets is strictly limited, with Britain holding a dominant position. Postwar agreements allocated to Britain 90 per cent of Danish bacon exports, 75 per cent of butter and two-thirds of eggs. Britain's consumption of butter has, however, declined sharply since before the war, and Danish butter has to compete with both butter from the Commonwealth and elsewhere and with margarine.

Nearly every industrial country has protection for agricultural products, and domestic price support. The Danes, thanks to superior efficiency and know-how, are unique in dispensing with subsidies. They find it paradoxical that, with free trade areas planned throughout the world, foreign farmers remain the *enfants gâtés*, feather-bedded by tariffs and subsidies against the chill winds of competition. They maintain that this policy brings high prices and long-term disadvantages to the countries which follow it and that it leaves Denmark too little room for manœuvre.

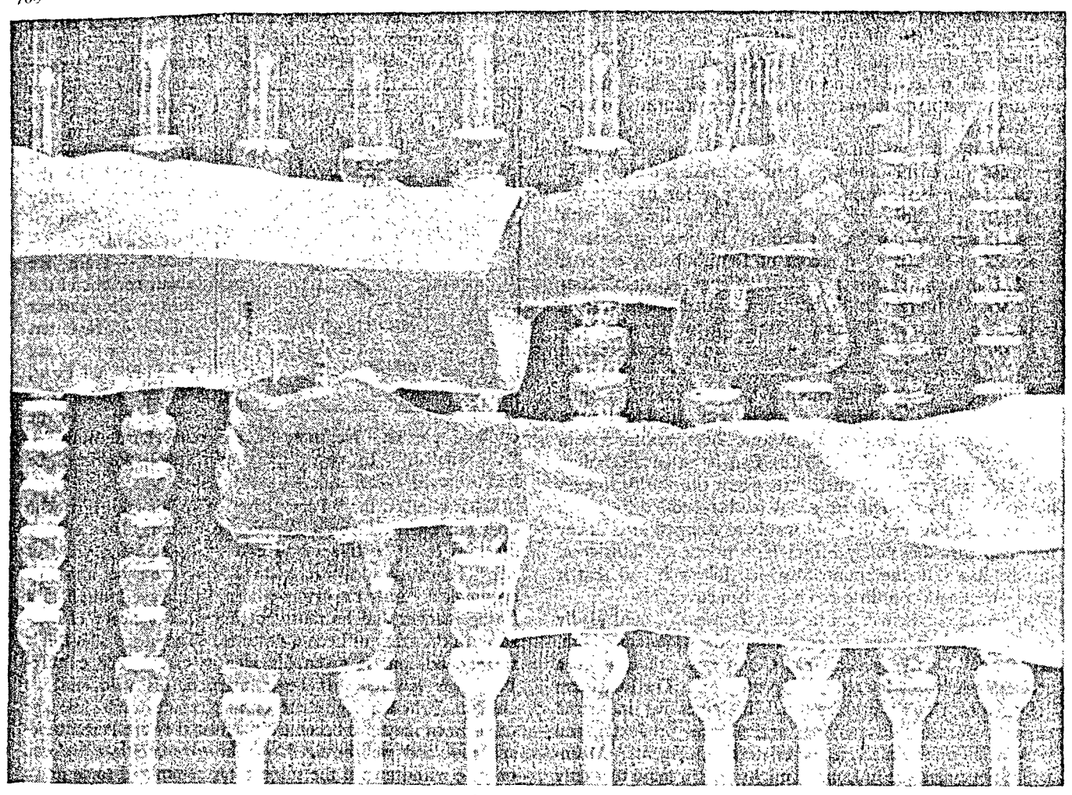
In return for British concessions, Denmark would gladly recognise Britain's special position in the Commonwealth. At present Danes suspect that Commonwealth ties are a specious argument for retaining protection. The long-term solution of Danish problems lies in increasing industrial exports, further diversifying agricultural products, and seeking alternative markets and bilateral agreements. Meanwhile, policy makers in London might bear in mind that only a prosperous Denmark can remain a good customer.

Portugal's Civilised Natives

FROM A CORRESPONDENT LATELY IN MOZAMBIQUE

PORTUGAL has no colonies. But it has a number of "overseas provinces," subject to the Ministry of Overseas Provinces in Lisbon, which in its turn is subject to Dr Salazar. Among the overseas provinces are some remarkable places: bits of India and China and an island called Timor, which is divided between Portugal and Indonesia. But by far the most important possessions are Angola and Mozambique. Angola—the richer—produces diamonds, coffee and huge quantities of fish. Mozambique makes its living through cotton, copra and sisal. Both do a roaring trade in transit traffic as anyone can see who stands on Beira docks and contemplates the serried ranks of Austins and stacks of water-closets Rhodesia-bound. The railways from Beira to Salisbury and Nyasaland are clogged with British goods, for the port carries 80 per cent of the overseas traffic of the Federation. The new railway from Lourenço Marques to Bulawayo will also carry a heavy share of traffic, for this line is 500 miles shorter than the old route to Bulawayo from Port Elizabeth. It is, indeed, land-locked Rhodesia which removes the greater part of the yearly deficit in Mozambique's visible balance of trade. The remainder of it and more is wiped out by the earnings of Portuguese natives working in the Rhodesias and the Transvaal.

But the remarkable thing about Portuguese East Africa is the colonial system itself; it might be described as "strength through inertia." The Portuguese have in their own eyes a *mission civilisatrice* but they are clearly in no hurry to achieve it. Meanwhile the population is neatly divided into "civilised" and "uncivilised" — there are about 100,000 of the former class and six million of the latter. Those who are white, yellow, Indian or half caste are deemed to be civilised *per se*. Negroes, on the other hand, must be "assimilated." In 1950, 4,345 of them in Mozambique had achieved assimilation.



What is called the "Portuguese native" is the negro who does not qualify to be a Portuguese citizen. How can he cease to be a "native"? He must be eighteen years of age: he must speak accurate Portuguese; he must be economically self-supporting; he must behave himself in a fitting manner and he must not have had a heavy charge-sheet in the army or been a deserter. The negro who fulfils these conditions is given his identity-card. The culture-barrier is lowered. If he is married, his wife and his children (whether legitimate or illegitimate) under the age of eighteen may also become citizens if they are Portuguese-speaking and well-behaved. Once given, citizenship can only be withdrawn if the subject has committed some grave crime.

The Portuguese assimilation technique makes an interesting comparison with the Belgian one. In the Congo there are two categories of persons: Belgian citizens and *nationaux belges de droit colonial*. There is no promotion from one category to the other. Whereas Congolese can never become Belgians, the Portuguese can claim to have actually fabricated fully-fledged Portuguese out of African material. These *assimilados* are few but impressive. For instance, the Goanese—who are to be found in Mozambique—are full Portuguese citizens who are in no sense comparable to the native intelligentsia of British Africa; they are managers, not politicians. The *assimilados* do not, of course, have full electoral freedom; but neither do the metropolitan Portuguese who are citizens of what the 1933 Constitution calls a unitary and corporate republic.

The "uncivilised male natives" are made to do useful work for six months in the year. This is done both in the economic interests of Mozambique and, the authorities claim, in order to civilise the natives. Labour is not plentiful in the province partly because of the exodus to the neighbouring territories, and the system is controlled by an inspectorate. It cannot exactly be called forced because the natives have the right to choose their employers.

The atmosphere of overseas Portugal is not unhappy. The government is severe and rather humourless. It is intensely Roman Catholic. Education is almost a monopoly of the Church. But, in Mozambique, as in the Congo, the African is not unsettled and his standards are slowly and steadily improving.

Two-way technique for technical achievement

Paper making nowadays is no longer purely a craft industry. Technical efficiency is vital to the creation of the huge variety of paper products upon which our modern life depends. How is this best achieved in so diverse an industrial body as the Reed Paper Group, which includes 19 separate major companies concerned with every aspect of making paper and paper products?

The Reed technique is both practical and *flexible*. The technical departments of the mills and companies are responsible for the day-to-day operational tests and inspections required for close technical control of production; the Group Central Laboratories engage both in short-term development work and fundamental long-term research to pioneer new processes and products. However, between the technicians in the mills and companies and those in the Central Laboratories there is constant *personal* liaison . . . . . *In fact, a two-way traffic in ideas, training and personnel.*

Whenever necessary, Central Laboratories teams are called in by the mills to help with operational problems; likewise the specialised knowledge of the mill technicians is often called upon by the Central Laboratories in carrying out specific research projects. Thus is achieved whatever is best for *you*, the customer.

The underlying principle is this — each Reed company, while having access to Group resources, retains its individuality and independence, and understands the character and aims of the Group so well that it can think and act *for itself*. This is why your every meeting with a Reed manager, technician or salesman can be so particularly satisfying and profitable. It is why your every dealing with a Reed company can give you the best and right materials for *your* needs.

"YOU profit from the initiative of each Company backed by the resources of the Group"

Reed

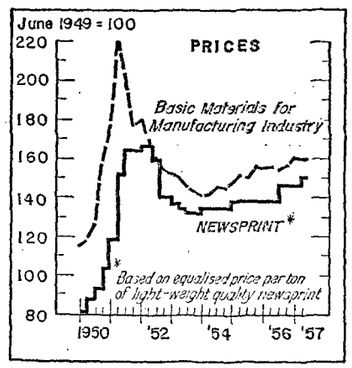
THE BUSINESS WORLD

The Press under Pressure

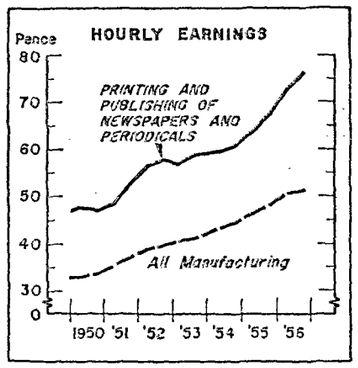
THERE are no typical newspapers in Fleet Street. Each selects, by its editorial objectives, most of its own circumstances along with its own public, and how well it manages continuously to adapt its operations to both is its own responsibility. It would be unrealistic to seek to explain the vicissitudes now admitted to be besetting what are sometimes called " the unpopular populars " among national newspapers wholly in economic terms—and embarrassing to speculate about private manœuvres to escape from their peculiar plights. But it is undoubtedly true that the time at which these vicissitudes have suddenly become apparent—and similar difficulties have shown themselves among periodical and provincial papers—has been decided by a number of general economic factors, partly beyond the control of the British press, that are at present intensifying competitive pressures within it and upon it.

It is only by stages over the last two or three years that the British press, somewhat reluctantly, has again become free : not until December last year were newspapers, for the first time since 1939, allowed to publish as many pages in every issue as they chose and could afford (though officially they still do not accept unsold returns). Newsprint control did not suppress competition in Fleet Street, but for the most part canalised it simply into circulation, selling as many papers as one could without enlarging them. And because of the peculiar nature of newspaper economics, the years of control have delayed the full commercial impact of this postwar competition—protecting, for a time that has now ended, the " weak sisters " from the strong.

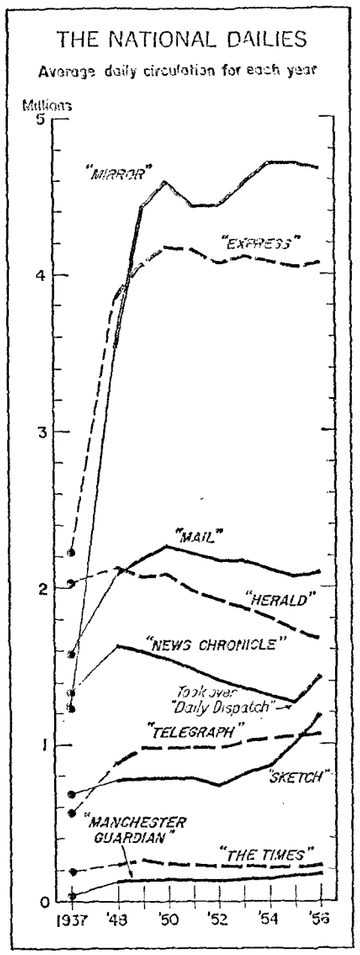
A newspaper ordinarily seeks to increase its circulation not simply to spread its overhead costs over more units of output, but also to maximise its " overhead income "—advertising revenue. And control over the number of pages in the average issue, limiting the sheer space in which they could accommodate advertisements, robbed the two competitors that surged so far ahead in the postwar circulation race, the *Daily Mirror* and the *Daily Express*, of the full reward in that overhead income that they could otherwise have expected during those years. Some margin of advertisements that simply could not be accommodated in these intensely economical " mass media " was spread over the rest of the national newspapers; and since the space that all the national papers could offer was in its turn limited, the periodical press and some of the provincial papers also received more benefits from the boom in national advertising than they could have hoped for in free competition. As restrictions on paging have successively been moderated and finally removed during the last few years, advertising revenue, across the whole competitive array of Britain's press, is at last moving into line with circulations and pulling power—though the *Daily Mirror*, for various reasons, still does not carry as much advertising as its huge sales might be expected to bring into its pages.



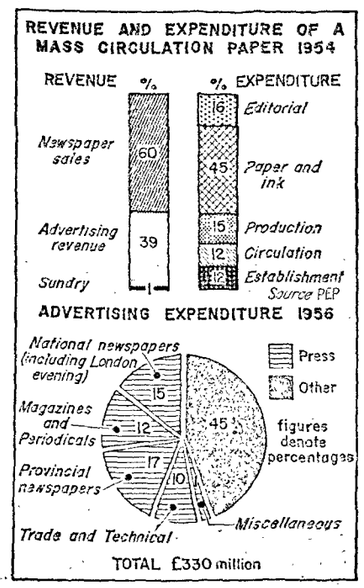
ONE does not decide where to put an advertisement simply by counting heads ; quality as well as quantity counts in circulation. Market research provides the media department of an advertising agency with the most elaborate cross-sections of the class, age, sex, habits and purchasing power of the readers of Britain's newspapers and periodicals ; and " keyed " advertisements, demanding a specific response, may somewhat less certainly supplement its judgment of the pulling power of a particular paper. For certain classes of product certain classes of readers are irrelevant, however many a paper has of them. The specialised appeal of



Newspapers as a Business



NEWSPAPER production is a highly capitalised industry selling two commodities—newspapers to its readers and access to the attention of those readers to its advertisers. The price at which it sells to readers is fairly stable, relatively cheap and generally below cost. The price at which it sells advertising space to make up the difference is a changing price settled competitively in two interlocked free markets: competition for circulation and the supply and demand for advertising space throughout the press—and now for advertising time on television.



With the different patterns of male and female, "AB, C1, C2, and DE" readers, young and old, that different newspapers select for themselves by editorial policy and appeal, they can obtain varying prices for their "single column inches per thousand readers"—an advertiser will have to pay well over a shilling "milline rate" for access to the specialised and presumably well-heeled readers of the *Financial Times* to little over a penny for the more plebeian millions of the *Daily Mirror*.

Within the sphere chosen for it by editorial objectives, the key question for the business management of any newspaper is "How many pages—editorial and advertising—should we aim at?" This is a recurring question answered in practice for every issue of every paper, but also a long-term question integral to the whole policy of any paper. And without getting the long-term answer right no paper can prosper to the full—for then too much circulation may begin to be financially embarrassing, as well as too little.

NEWSPAPER PROFITS Earnings of few single newspapers are individually identifiable. In this table extracted partly from filed returns at the Inland Revenue Department, there is some double counting. The *Daily Herald* belongs as to 51 per cent to Odhams and 49 per cent to the TUC. Profits of the *Daily News* embrace the earnings of the *News Chronicle* and the *Star*.

"quality papers" that sell for more than the rest, such as the *Financial Times* and *The Times*, enables them to charge rates "per single column inch per thousand readers" far above that of the popular press, and keeps them in business with a very small fraction of the daily circulation of the *Mirror* or the *Express*. The *Daily Telegraph*, at present "popular" in price though its "average reader" would probably work out in a slightly higher class than certain more expensive quality papers, is highly profitable at a circulation of about 1,100,000, well below the level at which some "popular" papers of the same price are floundering in financial loss; it has a special strength in classified advertising. The *Daily Mail* gains significant advantages in advertising revenue, among the middle-circulation dailies, from its more middle-class appeal; and even at the top, the *Express* charges higher rates, and relies for much more of its total revenue upon advertising than the *Mirror*.

BUT though advertising advantage does not depend simply on circulation totals, for a mass of nationally advertised consumer goods the two probably gear more closely than they were allowed to do during the years of newsprint control. The trend towards greater equality in purchasing power, and particularly in households' "disposable income" since before the war, means that more and more of the buying even of relatively expensive advertised goods is done by the working class, the young, and—among all ages and classes—by women. For many consumer goods, the advertiser logically appeals to these buyers through the media that reach most of them most cheaply—the mass circulation dailies, the women's magazines and, increasingly, television. There seems a growing tendency, with the easing and eventual abolition of newsprint control, for advertising campaigns to be concentrated rather than peppered across a wide range of media.

This delayed concentration of advertising effort towards papers offering the greatest economic advantage in quantity and quality, moreover, seems to be occurring at a time when total newspaper circulation in Britain seems more likely to decline slightly than to grow further. With more newspapers bought per head of population than any other country in the world, Britain must be practically a saturated newspaper market; and larger papers may tend to make fewer people buy more than one at a time. The total national daily circulation, about two-thirds higher than in 1937, has not changed much from the level it first reached in 1949 (the peak was in 1950); the two mass dailies still hold just over half of this, but some transfers of circulation have taken place between other papers. From now on, it seems prudent to assume that any national paper's growth in circulation must be at the expense of others. Moreover, each successive rise in price has had an immediate effect on sales, from which it has taken individual papers some time to recover. Further price increases, too, could further thin the margin of people who buy more than one of what are still the world's cheapest daily papers.

Newspaper owners are today compressed more or less tightly between this possibly declining total market for what they sell, major changes in the shares of total press advertising income that each receives, and the fairly steadily rising costs of what they buy. Newsprint prices are at present on the crest of the second upward wave they have experienced since the war; a further price rise is indeed imminent, though buyers guess that after that prices will stabilise and may slip a little; and there is at best only a temporary respite in the round-by-round succession of wage claims in an industry beset by restrictive practices.

UPWARD swings in newsprint prices, even temporary ones, have since the war killed off more than one weak paper; but the long-term upward trend is now and for a long time is likely to be one of the facts of life of the newspaper business, and any paper that cannot live with it cannot expect to stay in that business. The "equalised" price is today nearly £60 a ton, rather less than in 1952, five or six times the artificially low level that prevailed in the thirties, when many of the world's major producing companies were in very low water; only about a third higher than in an inflationary peak just after the first world war, and about four times the price during much of the twenties. The pulp from which newsprint is mainly made is short, and supplies can only be increased at growing cost. Newsprint manufacture involves very heavy capital investment and is a good deal less remunerative than making the same raw materials into many other paper products. Producers are not prepared to expand capacity rapidly, and Britain has no great bargaining power in the world market, with some 10 per cent of a world consumption that is rising far more rapidly abroad. Since the war, at least, the price of newsprint has not moved radically out of line with those of other basic materials.

Nor have wages in this industry risen faster than wages in general manufacturing, though printers have maintained their substantial extra margin as one branch of "the aristocracy of labour." The canker in the newspaper industry's labour relations arises less from the level or growth of wages than from the union grip upon manning in this industry, with gross overstaffing in certain departments, while in others key men are short and the entry of fresh apprentices is restricted. Labour relations in the physical production of newspapers have suffered, over the years, from bitter inter-union rivalries, on the one side, and from weakness among certain sections of employers on the other. It is not easy to see any likelihood that the bargaining pressure—exerted in recent years alternately upon newspapers and periodicals—will be moderated.

Strength to withstand these pressures from below and overhead varies very widely between the national

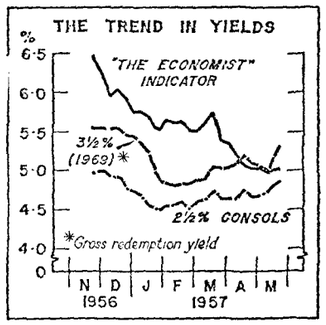
newspapers, the periodicals, and provincial groups—all of which have at least some cushion of local advertising support. Dependence upon advertising revenue varies very widely in Fleet Street, but among newspapers the shift in advertising revenue seems to have been more important in current financial difficulties than changes in costs. On the side of costs, the mass circulation papers are affected more by rises in the cost of paper and less by increases in printing costs than papers of "middle" circulation—which include the nationals now under the greatest pressure. Certain of the large newspaper groups have substantial interests in paper companies making newsprint; they integrate the production of national dailies with Sunday papers and London and provincial evenings; and some have extended their interest into the *Reveille* type of weekly and into papers for women. Provincial evening papers, once again, are both cheaper to produce and more secure from national competition than the provincial morning papers, though the spread of television may affect them more.

The stock market assessment of this beleaguered industry is simply indicated. Whereas equities in general have risen by just about 20 per cent over the last 15 months, the prices of a general sample of quoted newspaper shares have fallen by about 12 per cent (a significant exception being Beaverbrook Newspapers). It is not easy to disagree with this judgment of its prospects; though the need for selectivity between groups argues itself. Total advertising expenditure in Britain is now nearly back to its 1938 share of national income, and seems unlikely to grow as fast as it has since the war; television is certain to secure a sizeable slice of the increase, so that expenditure on other media cannot be expected to grow even as fast as the total. Pressure within the newspaper industry seems certain to be forced in upon the weaker groups—some provincial morning papers and the national papers with no edge either in quantity or quality of circulation. A decline in the number of national newspapers, in particular, seems economically inevitable; whether consolidation could avert or slow this seems to depend largely upon the quality of editorial inspiration and business management now available in Fleet Street.

BUSINESS NOTES

IN THE MARKETS

Friendless Gilt-Edged



It appeared in the first half of this week that the heavy decline in gilt-edged stocks of the last few weeks was coming to a stop but on Thursday the market resumed its fall, War Loan reaching 69½, the lowest point of the year. The *Financial Times* index of government securities touched 84.66 on Monday, rallied fractionally to 84.70 on Tuesday and Wednesday, but the fall was resumed on Thursday when it dropped to 84.16 also its lowest of this year. The selling wave has at no time been heavy. But there has been a succession of small selling orders and it is general experience that a thousand sales of £1,000 stock have more effect on prices than one sale of £1 million stock, if only because the smaller bargains tend to pass through the small gilt-edged jobbers, who then seek to even their own books by dealing with the big jobbers.

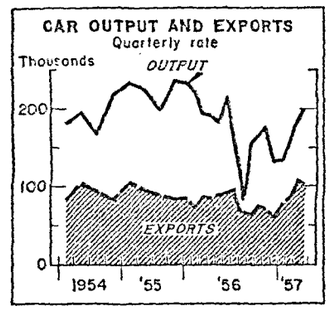
The Demand for Equities

Unquestionably the cause of the fall in gilt-edged has not been the succession of small sales, so much as the absence of buyers. Institutions have switched their buying from the gilt-edged market to the industrial share market and to a less extent to industrial prior charge stocks. The change in the composition of insurance company and pension fund portfolios towards a higher proportion of industrial stocks and smaller proportion of gilt-edged has extended over many years. There are no vast floating supplies of industrials such as would make it possible to carry it out quickly. But there are nevertheless periods when the distaste of the institutions for gilt-edged makes itself felt in the market and the last few weeks has been one of them. A number of influences have helped to speed the process. The greater freedom of investment now available to Lloyd's underwriters was one such. The publication of the Labour party's pension plan and the results of the local elections were others. And there are those who see in current wage negotiations the signs of renewed inflation.

The fact that equities were rising through much time as gilt-edged stocks were falling and that the rise in industrials stopped almost at the moment when the fall in gilt-edged was checked seems to confirm the diagnosis. It is highly improbable that the shift in institutional portfolios is completed. But equally it seems unnecessary to suppose that it will continue to force gilt-edged prices down regardless of the level that gilt-edged have reached. To the insurer concerned in a fixed contract maturing at a known date—and that covers a high proportion of life business—yields on gilt-edged stocks of the appropriate dates, now overtaking industrial share yields, must have begun to look attractive.

Two Rights Issues

The fall in equity prices brought *The Economist* indicator down by 2.7 points to 218.7. One factor that the equity market always has to keep in mind is the continual flow of new issues. And two such issues from expanding industries came along this week. To step up its steel production, John Summers is raising about £4½ million from a rights issue of 4,500,000 new £1 ordinary shares at par in the proportion of one for two. The issue, which was not underwritten, was adroitly managed, and dealings in the new scrip (nil paid) began on the morning after the announcement. The old shares stood at 34s. 6d., indicating an ex-rights price of about 30s. The new shares (nil paid) opened at a premium of 10s. 10½d. On Wednesday, when steel shares suffered a shake out, the premium came down to 9s. 4½d. and the old shares lost 1s. to 29s. The profits of John Summers have been running at a higher level than they did a year ago, and the directors expect to pay a final dividend of not less than 8 per cent, for which the new shares will rank.



A smaller issue, designed to raise about £1.3 million, has been announced by John Thompson in order to finance its new nuclear energy commitments. The issue, which is underwritten by Lazard Brothers, takes the form of rights to 1,048,227 new 5s. ordinary shares at 25s. each in the ratio of one for seven. On the eve of this announcement the old shares stood at 35s. The issue is backed by a preliminary statement which shows that in 1956 the company's profits advanced from £2,113,866 to the record figure of £2,550,961. The ordinary dividend was left unchanged at 25 per cent, the rate which the directors expect to maintain on the increased capital this year. Thus the new shares are offered at a yield of 5 per cent (against a yield of about 3¾ per cent ex-all on the old shares). That is not a big yield, and presumably the appeal to investors is the glamour of nuclear power stocks—a glamour which has been known to dazzle.

CAR OUTPUT

Recovery Sustained

This year's improvement in the fortunes of the motor industry is still gathering pace. In April, the latest month for which full figures are available, output of cars reached the rate of just under 3,400 a day, a good fifth higher than in March and all of three-fifths higher than in January. It was, moreover, a better performance, allowing for the fall of the Easter holidays, than in April last year and it was only 10 per cent short of the record number of cars leaving the industry's factories two years ago at the peak of the boom.

Thriving export sales are the mainspring of this sharp recovery, and shipments have in the last two months regained the record level of two years ago. But the home market has also been getting noticeably firmer since hire purchase restrictions were eased at the beginning of the year. In March registered home sales shot up sharply from the very low level of 22,800 in the two previous months to 35,200 (against 53,100 in March, 1955). Since Easter, and particularly since the end of petrol rationing, they appear to have been doing better still. The number of new cars bought on hire purchase was twice as high last month as in January, and second-hand car prices have been hardening sharply in the past few weeks.

Commercial vehicle manufacturers have not been experiencing quite as good a revival. Their sales, both at home and overseas, have been picking up, but since February the rate of production has remained almost constant at a little over 1,000 vehicles a day, still a fifth or more lower than last year. This sluggishness is found throughout the whole range of vehicle types, though it is rather more marked among the very small vans of less than 15 cwt capacity and also among the lighter types of lorries of between 3 ton and 5 ton capacity.

The American Market

In one overseas market, the United States, British cars have done outstandingly well this year, and in two others, Australia and Eire, outstandingly badly. It is only fair to say that in Australia import restrictions were largely to blame, and these are now being relaxed; in Eire sales have been handicapped by the special import tax imposed last August. Shipments to the United States in the first four months of this year amounted to a record 27,000 units, more than three times larger than in the same period of 1956. It may be too much to hope that that rate of increase will be

maintained throughout the year, but it may be that Britain has now regained top place among foreign suppliers to the American market. Britain's success cannot be compared with that of other exporters over the whole period, for their figures are less up to date. But Germany's exports to the United States are believed to have increased; French exports in the first three months, 8,866 units, were more than eight times higher than in the same period of 1956 (thanks mainly to the success of the Dauphine), and Italian exports, 500 units, were nearly four times higher.

BRITISH EXPORT OF CARS AND CHASSIS

(January to April, thousand units)

	1956	1957		1956	1957
United States ..	8·3	27·0	Sweden	4·5	6·5
Canada	8·5	9·4	Belgium	4·4	5·5
Australia	25·4	13·3	Holland	2·9	3·5
New Zealand ..	10·6	11·6	Denmark	1·6	2·4
Rhodesia	3·3	3·7	Switzerland ...	1·0	1·3
Singapore	2·6	2·1	Austria	0·8	1·5
South Africa ...	10·5	10·7	Eire	4·8	0·9

There was a heartening recovery in British car exports to several European countries in the first four months of this year, notably to Sweden, Holland, Belgium and Denmark. Shipments to New Zealand and Rhodesia rose too, while shipments to South Africa showed little change and shipments to Singapore and Malaya fell. Shipments to all countries in the first four months totalled 125,294 units, 6½ per cent more than in the same period of last year. The latest figures for other exporters cover only the first quarter of the year, when their exports were rising faster than Britain's. Germany maintained its lead as the major exporter, shipping 118,324 units, an increase of 21 per cent on the same period of 1956, and French exports, at 45,978 units, increased by 31 per cent. Italian exports rose by seven per cent to 20,493 units, while Britain's rose by four per cent to 90,677 units.

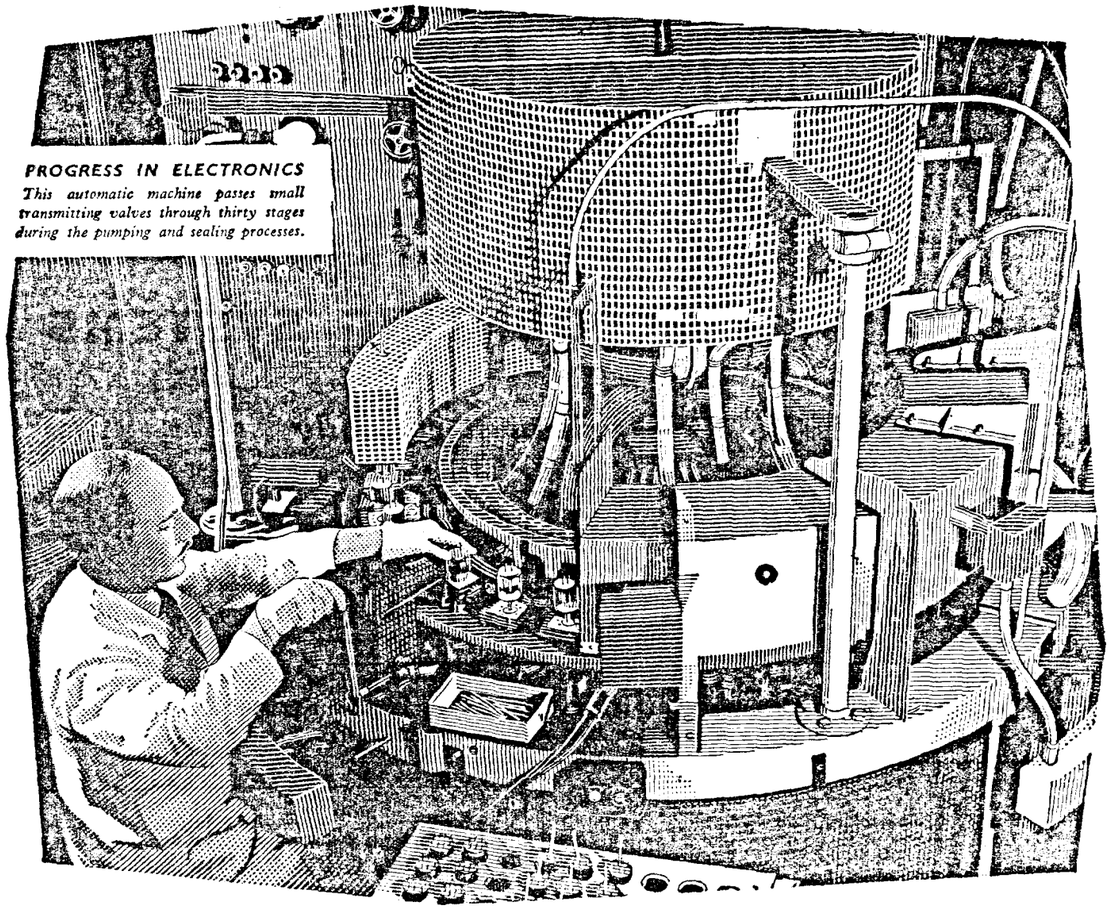
INTERNATIONAL MONETARY FUND

Scarcer Dollars

It may not come as hot news that the American dollar is becoming a scarce currency, but in the technical sense of the International Monetary Fund's articles the dollar does seem at least to be becoming scarce. In the tough haggling at the Bretton Woods Conference of 1944, when the blueprints of the IMF and the World Bank were drawn, it was agreed after much resistance from the United States that complete multilateralism of trade and complete freedom of payments must be hedged by escape clauses. The most important of those clauses is in Article 7 on scarce currencies. This establishes that if the Fund finds a "general scarcity" of a particular currency developing, it must first issue a report expounding the causes of the scarcity and give recommendations to bring it to an end. If that report does not produce immediate results, the Fund may then attempt to replenish its holdings of the currency either by borrowing or by buying it against gold from the member country. If in spite of all those measures the demand for the currency still outruns the Fund's ability to supply it, the Fund "shall formally declare such currency scarce." The formal declaration enables any member, after consultation with the Fund, to impose restrictions on the freedom of exchange and to discriminate against imports from the country in question.

Has the US dollar now at last become in that technical sense scarce? Article 7 avoids specifying the standards by which scarcity is to be judged. But, in the IMF's own thinking, if the Fund's holding of a currency falls below half that country's quota the currency is entering the realms of scarcity. That 50 per cent yardstick was reached by the dollar last February, since when France and India have bought additional dollars from the Fund. At the end of February the US dollars held by the Fund had fallen to $1,290 million and represented only 47 per cent of the US quota. At the beginning of the Fund's last financial year (May 1, 1956) the figures were $1,784 million and 65 per cent. Moreover, a responsible financial assessment must also take account of unused dollar facilities under standby credits. At the end of February these unused and still available credits amounted to $1,066 million, constituting a contingent liability even though it is likely that the bulk of the drawing rights they represent will not in the end be used.

No Precipitate Action



No step towards declaring the US dollar a scarce currency has yet been taken. No report has been drawn up. If it were it would no doubt point the finger of accusation, not at the United States, but at the main drawers of dollars: the United Kingdom for engaging in overseas adventures that precipitated a run on sterling; France for persisting in an overvaluation of its currency that puts its balance of payments into chronic deficit; and India for allowing its industrialisation and imports of capital goods to outrun the bounds of discretion. Nor has the Fund yet proceeded to reconstitute its holdings of dollars by sales of gold to the US Treasury; the gold held in reserve amounted to only $1,419 million on January 30th last. The ultimate sanction—the threat to discriminate against dollar imports—has been used by various members of the Fund for a decade, even though the dollar has never been declared scarce.

Openly to condone restrictive measures by declaring a scarcity would presumably be most unwelcome to the new managing director of the Fund, Mr Per Jacobssen, but he is aware of the problem. In a recent address before the Economic and Social Council of the United Nations he reported that "a fair amount of the Fund's liquid assets has thus been committed, which gives occasion to the exercise of a certain amount of caution concerning new drawings and commitments."

JUTE IN DUNDEE

Protection for How Long?

It is not difficult to guess what the President of the Board of Trade and leaders of the Dundee jute industry talked about when they met in Glasgow this week. More than three years ago the Government assured the industry that the existing form of protection against cheap Indian goods would continue until other safeguards could be introduced. The Jute Control has thus remained the sole importer of jute goods; it buys from India what cannot be supplied from Dundee, and sells those goods at the higher prices that

This machine is part of the product

In the final stages of manufacture, Mullard valves and television tubes part company with the machines on which they are processed. But until they do, the machines are virtually part of the product.

Machines on which electronic valves and tubes are manufactured can be used for no other purpose. Their design is so closely related to the design of the product that the introduction of a development in one is rarely possible without a modification or adjustment in the construction of the other. In many cases, the valves or tubes are activated while still on the machines which process them.

That is why the greater part of Mullard machinery and equipment is designed, developed and built in Mullard's own engineering department. Constant research into manufacturing techniques and progressive development of plant and machinery are among the reasons why Mullard products enjoy a world-wide reputation for performance and reliability.

Dundee charges for its own products. When the working party on jute reported in 1948, and found in favour of protection, it estimated that a tariff of about 20 per cent would be necessary to bridge the gap between Dundee and Indian prices; today the gap is probably at least twice as wide, mainly because export prices of Pakistan jute (the raw material for Dundee) have risen more than the price of Indian jute goods. In practice, an arrangement introduced during the war now not only restricts shipments of Indian goods to Britain by volume, but also subjects them to an effective duty of roughly 40 per cent. By treaty India is guaranteed freedom from quantitative restrictions and duty-free entry.

Protection at anything like the present rate could hardly be maintained indefinitely; in one respect it may even be harming Dundee by encouraging the substitution of paper for jute bags. And the prospect of a European free trade area has hastened the need for a new policy. Imports of jute goods from other members of the free trade area would eventually be freed from quantitative restriction, and the present duty of 20 per cent on foreign goods would disappear. India would then be at a disadvantage against foreign as well as British manufacturers. India has tacitly accepted discrimination up to now, but it would not willingly allow imperial preference to be thus stood on its head. The government knows that alternative methods of protection are all objectionable in one form or another. Is it not time to consider whether the need for protection could gradually be removed? Some cotton textile firms, faced with competition from low-cost Asian producers, are beginning to spread their manufacturing interests into other fields. Is this not the only sound solution for Dundee? The industry is progressive, and if it were given a period of grace in which to diversify it would probably do so. The government, having shied away from the problem for so long, could hardly refuse a helping hand.

AIRCRAFT ORDERS

An Airliner for 1963

FEW details are revealed of the new VC 10 jet airliner that BOAC is to buy from Vickers-Armstrong. It was selected from three other preliminary specifications submitted by de Havilland, Handley Page and Bristol, and is still on the drawing board. But BOAC wants an airliner to operate on its Far Eastern, African and Australian routes in the 1960s, and Vickers intended that the design and development should be financed without the help of government money, so some advance support from BOAC was clearly acceptable.

The total order of £68 million is for 35 aircraft and initial spares. Delivery is due to start in 1963, and then, so Vickers claims, the VC 10 will be "a strong competitor" with American jet airliners of the same class. It will have certain "unusual features" and good take-off characteristics, but what these are remains unrevealed for the time being. It will seat up to 147 passengers in a "double-bubble" fuselage, and will be powered by the Rolls-Royce Conway by-pass engine, which has a high power-weight ratio and a fuel consumption lower than a straight turbo-jet. For both Vickers and Rolls-Royce, this statement of intention from BOAC represents a notable success, and helps to fill out their respective order books comfortably into the next decade.

CENTRAL MINING

Preference Share Victory

MUCH is heard about the voteless and helpless preference shareholder. A battle for preference shares that are over-endowed with voting rights has been fought out this week. The shares that carry the votes are the 5 per cent preference shares of Central Mining and Investment Corporation—one vote for each five of the one million preference shares against one vote for each eight of the four million ordinary shares—and the victors are a group of bankers and mining finance companies. Messrs. C. W. Englehard and Gordon Richdale of New York, Anglo American Corporation of South Africa, Union Corporation, N. M. Rothschild and Sons, J. Henry Schroeder and Robert Benson and Lonsdale, have announced that they have got 80 per cent of the preference shares from the institutions at 24s. per share net and are offering the same figure for the rest. The new group is also taking over from its participants a substantial holding of Central Mining ordinary shares but it makes no offer to the public for ordinary shares which have fallen in recent days from about 75s. to 62s. 6d. The battle for the body of Central Mining—a battle that seemed inevitable when the merger with Consolidated Goldfields fell through—is over. The potential counter bidder, Mr Sam Glazer, the South African property dealer, is resoundingly defeated; it is now confirmed that the Rio Tinto company was not among the bidders.

To those who wish to calculate who now holds effective control of Central Mining the order in which the members of the successful syndicate appear should provide the clue, C. W. Englehard and Gordon Richdale (the Baker Platinum group) comes first, Mr Richdale being an ex-mining engineer of Central Mining; Anglo American comes next. To those who wish to foresee what may happen now, the answer is more complicated. A new company with a capital of about £5 million, predominantly British and South African owned is being formed in South Africa to take over the shareholding and the Central Mining—Rand Mines group will be offered a participation in it. The capital of Central Mining and the voting rights attached to it would not themselves have made the 5 per cent preference shares attractive to the syndicate at 24s., if it had not been known that a meeting was due next week to reorganise the preference capital, reducing its voting rights and raising the dividend to 6 per cent. Then will be the time for Lord Baillieu to map out the future.

A Problem of Tax

THE new company in South Africa will assist the group's expansion not only in Southern Africa, but in other countries as well. It may be guessed that it will become a main channel of investment outside Africa for the finance houses concerned. The list of its members shows that it has acquired an important American investor and Central Mining has already acquired a useful investment footing in Canada. Nothing has been done without the agreement of the chairman of Central Mining. Central Mining is well supplied with money, thanks to its £8 million Trinidad oil profit, but investors may feel that one day the expansion of Central Mining may call for new funds and for revigorated management; the directions from which these

sinews of progress are to come seem to have been mapped out.

When a new South African company acquires effective control of an old British one there is necessarily a tax aspect. In this instance there are several. There is first the question of the liability to British tax of the £8 million Trinidad Oil profit. Central Mining was a dealing company when its Trinidad oil sale was made even if it is now an investment holding company. There may be room for argument, but the probability seems to be that the Trinidad Oil profit will be taxable. Secondly, there is the liability to profits tax—a liability that would be different depending on whether or not the new company has mathematical control of the old one. It would be useful to have confirmation whether voting control has been obtained. That confirmation has not been given because Central Mining shares in foreign ownership are voteless and Paris has a big holding. Mathematical control if it does not still exist after the rearrangement of the preference voting rights could be maintained by buying ordinary shares in the market; distributed profits tax would then be avoided. Thirdly, there is the question whether Central Mining is in any case an overseas trade corporation. It seems clear that the mining finance houses in general are not, because of their share dealing profits.

FOREIGN EXCHANGE

Franc Without a Government

THE inherent weakness of the franc has been accentuated this week by the fall of the French Government. There will be an interval of uncertainty during which more psychological pressure will be brought to bear on the currency. The state of apprehension is reflected in the widening of the discount on the forward rates, the three months' rate being now quoted at 30 francs "sellers only"; though in the Paris market a strictly insulated quotation of 8 to 9 francs premium for three months' sterling is maintained. No arbitrage in forward is possible between Paris and foreign centres.

Although France has lost about $1,000 million of reserves in the last 15 months, including the amount drawn from the IMF, many well-informed bankers still think an early devaluation improbable. They argue that the recent loss of reserves is only partly due to continuing factors such as the military expenditure in Algiers, but partly also to temporary influences such as heavy capital imports (which should soon yield foreign exchange income) and last year's harvest, which was as bad as this year's promises to be good. France is now running into its seasonal peak of foreign earnings.

The franc remains near its gold export point in relation to most European currencies, including sterling. Its weakness and the continued drain on the French reserves has brought some indirect relief to sterling which this week has strengthened slightly against most European currencies. Against the dollar the official rate, which dipped below $2.79 towards the close of last week, has recovered to $2.79⅛.

BUSINESS WITH EUROPE

Our three-monthly reports on business conditions and prospects in the countries which may become associated in a common market and free trade area have been grouped in *two new REGIONAL SUBSCRIPTIONS* at specially reduced rates.

COMMON MARKET COUNTRIES
FREE TRADE AREA COUNTRIES

A new leaflet describing this service of three-monthly reports is now available from:

FLAMMABLE CLOTHING

A Perverse Report

THE committee set up last July by the British Standards Institution to consider how readily clothing textiles catch fire has produced a most disappointing report. Its first conclusion that "clothing will not catch fire unless it is exposed to a source of ignition" is no doubt fundamental, if unsurprising. But some of the other findings of the committee, which consisted of no less than 51 members, nominated by the industry, government departments, and various other bodies, plus two secretaries and a chairman, are equally unhelpful and more debatable. It turns down flat any idea of a detailed grading of fabrics according to their resistance to flame, which was the question it was set up to answer—although it states quite positively and clearly that "it is possible to calculate the flame-resistance possessed by any fabric, and to express this in terms which will permit valid comparisons with other fabrics, provided that all of them are tested under the same conditions."

Its alleged grounds for rejecting such a grading of "flammability" are that it would be "misleading and dangerous" and "engender a false sense of security." Instead it wants the government and other "appropriate organisations" to be primed immediately of the need for a campaign of public education to emphasise that "all kinds of exposed flame in proximity to textiles create risk." The three factors in accidents involving the burning of clothing that appear most controllable, as the report itself points out, are exposure to ignition, garment design and type of fabric. Common sense and publicity can surely take care of the first but the BSI report was intended to deal primarily with the last two. The type of yarn and process of manufacture do not seem to affect "flammability," but the weight of a fabric, the type of fibre, and laundering can. Cotton, linen, viscose or cuprammonium rayon fabrics, for example, however made up, will catch fire more easily than wool, silk, and acetate fabrics of the same weight. Some thermoplastic fabric fibres, such as nylon and Terylene, unless they are stiffened with certain synthetic resins or dyed with particular chromium dyes, have a relatively small risk of catching fire. There are a few "highly flammable" fabrics, but since they are little used the committee rejects any suggestion of banning them, even though some are prohibited in other countries.

Two recommendations the committee makes are good, as far as they go. A standard for fabrics that may be regarded as flame-resistant should be established by BSI—though this would apply to only a small quantity of the clothes the public now buys; and the development of processes that make fabrics flame-proof or flame-resistant should be further promoted. There are already several suitable proofing processes on the market but they are expensive. Surely a

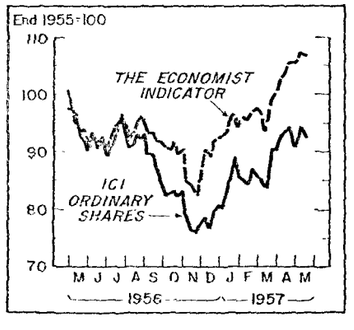
IMPERIAL CHEMICAL INDUSTRIES

Capital Intensity Grows

GROWTH in such a large and dominant concern as Imperial Chemical Industries is automatic and self-perpetuating. ICI has about 100 works in this country, producing 12,000 different products and employing over 115,000 people, and its research and capital expenditure programmes have to be geared to guesses about markets several years ahead. The drive is towards more capital intensive operations—the assumption being that capital will be freely available even if the right sort of labour in the right places is not. This type of forward planning must produce occasional mistakes. Some cygnets turn out to be ducks and some ugly ducklings to be swans. Errors are wasteful of resources but they are submerged by the successes, the investor getting a wide industrial spread in a single shareholding. ICI has the means to finance its capital programmes. It has a ready access to the capital market (as the recent £40 million issue of convertible loan stock showed) and it can always plough absolutely large (though not necessarily sufficient) sums back into the business.

Last year ICI tucked away £16.1 million in reserves and £23.5 million in depreciation. That is only £300,000 less than in 1955, even though in 1956 ICI's profit margins were being squeezed. Its sales to customers in Britain went up from £235.5 million to £243.7 million and to overseas customers from £175.5 million to £191.6 million. The fob value of ICI products exported from this country rose from £71.1 million to £73.1 million; of these exports £18.7 million worth went to Europe and it is not surprising that the directors welcome the opportunity the common market will give ICI to expand its European trade. In all, sales rose by 5.9 per cent (much less than the 16.7 per cent increase in 1955) but gross profits came down from £56.5 million to £53.4 million. Every division felt the impact of increased working costs but, with the exception of the leathercloth and metals divisions (which were both affected by the recession in the vehicle industry), all the manufacturing divisions achieved an increase in sales. Some of the newer products, notably "Terylene" fibre and titanium, made "a significant contribution" to this increase, though sales of another man-made fibre, "Ardil," are described as "disappointing."



Greater production and sales were achieved with the net addition of a mere 100 people to ICI's labour force. They were achieved through the more intensive use of capital. About £44 million was spent on ICI's capital programme in Britain (making £267 million in all the post war period), another £12½ million by subsidiaries and another £12 million (about 3.1 per cent of turnover) on research. Hence, the amount of capital equipment per ICI employee in this country went up from just under £3,000 to £3,329. Not all that expenditure was immediately remunerative; its cost reduced net liquid resources from £23½ million to almost nothing.

That is by no means the end of the programme. Indeed it might be asked whether there will ever be an end? ICI has raised nearly £40 million on the convertible loan stock (not reflected in the end-year balance sheet) and it has sanctioned capital expenditure of about £83 million at home and another £25 million by overseas subsidiary and associate companies. That does not reflect the continual expenditure on research, which for such products as dyes and pharmaceuticals can exceed the expenditure required for new plants. And the directors emphasise the proportion of ICI's resources devoted to research (split as to 40 per cent on existing products and processes, 40 per cent on new ones and 20 per cent on basic scientific and technical information) "is similar to that of the more progressive American chemical companies."

The prospects of growth for investors in the ICI stock stretch out—like the capital programme—several years ahead. The use of a convertible loan stock as a means to finance expansion explicitly recognised the slow maturity of such a programme. It is easy enough to label the ICI equity, yielding 4.4 per cent on the maintained dividend of 10 per cent, as a growth stock. It is easy, too, to recognise that immediately ICI will plough back a hefty proportion of its profits and that, even so, it remains a potential borrower in the capital market. But what sort of growth stock is it?

More capital is being used but profit margins are being squeezed. And the directors are obviously reluctant to break with the policy of price stability in which they have long taken pride. Some prices were increased early last year but last July the directors said that for twelve months most home trade prices would be frozen and that promise has been kept. Thus the rate of gross profits to the capital employed in the business has fallen from 11.6 to 10.5 per cent and may fall again this year. And the ratio of the ordinary dividend to the net worth of the business applicable to the equity came down from 4.6 to 4.3 per cent.

Looking still further ahead—say to the time when research schemes and capital expenditures started this year become productive—it is also apparent that the shift in emphasis away from batch production towards continuous flow production will result in still more capital (and less labour) being employed per unit of output. Unless ICI is prepared to raise its prices and to continue to shift towards more generally valuable products, the return of profits on capital employed may continue to fall. That could be as significant for the investment prospect as the "lag" element which must always be present in a capital programme as big as ICI's. Investors have recognised the presence of the second element, for the price of the ICI stock over the last nine months has run at a slightly lower level than the prices of leading blue chips as measured by *The Economist* indicator. But have they recognised the presence of the first?

system of grading, which the committee admits is feasible, would help promote a public demand for these processes and thus lower the costs of their production, as well as bringing the danger of clothes catching alight home to the public more effectively and cheaply? Or is it difficult for manufacturers to admit this?

COTTON TEXTILES

Lull in Home Demand

NEW business in the cotton textile industry has slackened off, but most mills still have enough work on hand. With the capacity of the industry much reduced and some areas still short of labour there seems little danger of short-time working this year. A slackening in orders was to be expected. The seasonal revival last autumn was accentuated by the need to build up stocks after confidence in American cotton prices had been restored. Stocks have now been replenished and the industry is experiencing the usual lull in home demand. Exports have picked up, though merchants are not expecting a substantial recovery abroad. Opportunities in the Australian market have been increased by the relaxation of import restrictions, but sales of cotton textiles to certain Asian countries, financed by deliveries of surplus American cotton to Britain, are coming to an end. Meanwhile imports of duty-free textiles from Commonwealth countries are again increasing, and Lancashire's attempts to persuade these countries to restrict their shipments have been rebuffed.

WEEKLY AVERAGE OUTPUT IN LANCASHIRE

	Single Yarn : mn lb		Cloth : mn yds	
	Total	Cotton	Total	Cotton
1st quarter, 1956	17·13	12·25	45·9	32·3
4th quarter 1956	17·33	12·14	45·9	32·6
1st quarter 1957	17·95	12·68	47·3	33·4

Both Hongkong and Pakistan have refused to accept a ceiling on their own shipments, though the Pakistanis suggested that consideration should be given to a common quota that would allow each of the three countries to compete for their share of trade. Pakistan is naturally loth to hamper the development of its own export trade, and thinks that its modern mills could more than hold their own against India's. The Indian industry, which is by far the largest exporter to the British market, had previously agreed to restrict its own exports to the 1956 level, provided that the Hongkong and Pakistan industries would do the same. It seems unlikely that India would accept a common quota. If that proves to be so, the Cotton Board will not be slow to appeal again to the government for protection. Having failed to secure protection in the way suggested by the British government, the board would no doubt feel that its case for government action had been strengthened.

BUILDING OUTPUT

No Sign of Decline

EXPECTATIONS are still that the rate of new investment in building and civil engineering work will slacken off this year, but there is no sign at all of any such easing of the pace in the Ministry of Works' returns from the industry in the first three months of this year. The value of all work done, at £525 million for the quarter, was a good 11 per cent more than a year ago, and this was achieved moreover with a labour force of just about the same size. The cost of finished work rose by about four per cent, so the gain in volume of output was a little over six per cent—and the increase was somewhat greater in new work than in repairs and maintenance.

BUILDING & CIVIL ENGINEERING OUTPUT
(January—March)
(£ million)

	1955	1956	1957
Housing—public	79	73	78
„ —private	46	57	60
	125	130	138
Industrial—private	44	59	71
Other—public	85	97	111
„ —private	26	36	44
	111	133	155
Total new work	280	322	364
Repairs and maintenance	140	152	161
Total	420	474	525
Index of volume of output (1948=100)	109	116	123

The rate of house building is tapering off, but that is the only major kind of new construction that is. Private development in factories and other types of new building was more than a fifth greater in value than twelve months ago, and in the public sector spending rose by nearly 15 per cent. It is still thought, however, that spending on private account will slacken later this year; at least the past flow of new contracts suggests that though builders may find it possible as a result to complete the contracts more quickly. But new building for and by public authorities is expected to continue growing, and the industry's total output in 1957 should still be higher than last year.

THE STOCK EXCHANGE

A Costly Future

THE Stock Exchange in Throgmorton Street cannot be rebuilt for a good many years, though plans to improve the building are in hand and these improvements can be financed largely out of existing resources. But in his speech to the annual general meeting of the proprietors, Sir John Braithwaite spoke of the need to prepare the ground financially for rebuilding now. He envisaged the creation of a rebuilding fund "sufficient to bridge the gap between total cost and suitable finance by debenture or mortgage."

Considerably increased expenditure on stock exchange publicity, including the possibility of national advertising, will also, Sir John thinks, become "increasingly desirable and advantageous." And, turning to another matter, he said that the compensation fund will need to be increased to a "more substantial figure." The failure of Banyard and Lacey is likely to cost the compensation fund £57,000; the allocation of £25,000 to the fund this year, against £30,000 in 1956-57, will restore the fund to £100,000. Sir John presumably has a larger figure than this in mind for the ultimate size of the fund.

No one can dispute the wisdom of these three proposals. But they will all cost money, and members of the Stock Exchange will have to provide most of it. Sir John is blunt on the matter, saying:

> Some help may be obtained from outside sources of revenue, but the main cost must fall on the membership. If we are to plan for the future in the way I have suggested, a substantial increase in our annual revenue will be necessary by one means or another.

Sir John did not specify by what means. But his warning has all the more point after a year (which ended on March 24th) in which the Stock Exchange's accounts showed a net deficit of £20,139, against a profit of £32,286. Salaries and wages have been rising, and so too have the costs of printing the Stock Exchange's publications, and receipts from the entrance fees of members and clerks and from quotation fees have been falling. If the London Stock Exchange is to become as strong a citadel of private capitalism as the New York Stock Exchange is, members will have to pay more for the privilege of belonging to it.

DEFENCE PRODUCTION

Price List for Weapons

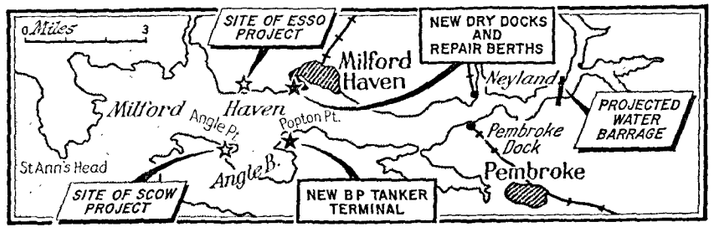
THIS year's white paper on defence made an allowance of nearly £550 millions for production and research during this coming year, although production orders for some of the most expensive types of equipment—namely aircraft—have been drastically cut back and several new projects abandoned. The following table attempts to calculate the cost of some of the main items of defence equipment and it shows, for example, that an order for as few as 100 modern fighters can approach £20 million.

Guided weapons appear relatively cheap in comparison with aircraft, but they are highly expendable pieces of equipment; while an aircraft on test by the services usually completes its trials intact, it is customary to have to fire as many

Super-tankers for Milford

MILFORD HAVEN has never quite attained the prosperity its magnificent natural deep water harbour ought, one would have thought, have made its due. The Welsh name for it, Aberdaugledau, means "the mouth of the two harbours." But apart from short-lived periods of stimulated activity, primarily during times of war, the lack of any substantial and accessible industrial hinterland and of decent onward communications overland from this tip of Pembrokeshire has left the haven comparatively undeveloped and in recent decades in a state of positive decline.

Ten years ago, too, when the ambitions of oil companies were running only as far as super-tankers of 25,000 tons deadweight, Milford Haven offered them no special advantage over other British estuaries that happened to be closer to the main areas of oil demand. But the choice of sites for ocean terminals capable of handling the super-tankers of 60,000 to 100,000 tons that the oil industry is now thinking of building is narrower; and much the same applies to iron ore terminals for the size of ore carriers the steel industry may soon be using.



By extending jetties and by undertaking costly periodic dredging operations the capacity of many present British tanker terminals can be kept abreast of the growth in tanker sizes right up to, in some places, 100,000 tons. But Milford Haven will take vessels of this size and bigger with ease at low tide, and in the last few months four separate schemes of new development there have been made public (not counting the local authority's water barrage project and others that may yet be unveiled).

Poor overland communications will still make it necessary to trans-ship, build pipelines, or set up oil refineries on the estuary and move the refined products by coastal tankers. Thus British Petroleum, which has a refinery already some 60 miles away at Llandarcy, near Swansea, is intending to lay a pipeline from there to the terminal it plans to build at Popton Point. Swansea Docks, which now supply Llandarcy, can at present take tankers of only up to 20,000 tons, but Popton Point will have a 1,550 ft. jetty capable of handling simultaneously two 60,000 ton tankers or one of 100,000 tons and one of 32,000 tons. The terminal and the pipeline will have an initial capacity of 5 million tons of crude oil a year and will cost about £5 million.

Esso's plans have not yet been finally settled. But it is thinking of building a £20 million refinery and terminal on a site it has acquired on the north side of the estuary. This refinery will also probably have an initial capacity of about 5 million tons of crude a year, but the refined products will be shipped around the coast to other ports.

The third scheme is also not yet fully formed. This is the deep water iron ore unloading terminal Steel Company of Wales and Guest Keen may build on a site they have bought to the west of the BP terminal. Probably the ore brought there by very large carriers would have to be trans-shipped into smaller vessels and taken to other South Wales ports. But the fourth scheme, that of the Milford Docks Company itself, is firm. This is the construction, for an outlay of about £9 million, of two dry docks, five wet repair berths, and an oil discharge pier, capable of accommodating tankers of up to 100,000 tons, a little to the west of the present harbour. This project and the local council's plans to construct a water barrage across the river Cleddau will provide the necessary repairing and fresh water facilities for the other three—and any others that may follow.

Until last January, however, each of these schemes had been prepared more or less in isolation and at least two of them clashed. But a liaison committee has now been set up, pending the establishment of a conservancy authority to supervise navigation. The authority is unlikely to be established this year, but the haven can at least look for a sharp and imminent revival in its fortunes, with a firmer foundation than any previously attempted programmes of development.

as 100 rounds of any one guided weapon before it is accepted for service and training must consume a certain number. In the United States it has already been discovered

COSTS OF DEFENCE EQUIPMENT

	Approximate price £'s

that missiles are not the short cut to economy that they sometimes seem. The German V-Is founded this legend because they were cheap and simple to make, but subsequent generations of missiles have become both more complicated and more expensive.

DOLLAR INVESTMENTS

IFC on Tour

MR ROBERT GARNER, president of the newly formed International Finance Corporation, arrived in London this week to begin a tour of Western Europe designed to bring the facilities that IFC can offer to the attention of the banks and industrialists in Western Europe. This offshoot of the World Bank, established in July last year with an authorised capital of $100 million (of which $92 million has been paid up by 49 member Governments), has done no business yet. The main flow of enquiries that have reached it has come from United States firms seeking investment in Latin America. Mr Garner wishes to make his institution truly international by bringing Europe and the Commonwealth into it. There is, however, a serious currency problem. The whole capital (unlike that of the World Bank which has a mixed bag of currencies to lend) is in dollars. The IFC can in normal course only lend dollars, and some potential borrowers may be unwilling to take the transfer risk involved in accepting dollar investments made outside the dollar area.

Much work remains to be done in publicising the kind of business that IFC can undertake. It is intended to foster private enterprise and as far as possible to act in partnership with private investors. The corporation will attempt to keep its capital turning over and therefore will give its help in such a form that the securities of its subscribers will be suitable for resale to the public. Since the IFC is debarred from holding equities, while the public taste is for such securities, the IFC will tend to subscribe for convertible stocks; for example, fixed interest loans that can be converted into equity stock or shares when the IFC wishes to divest itself of its investment.

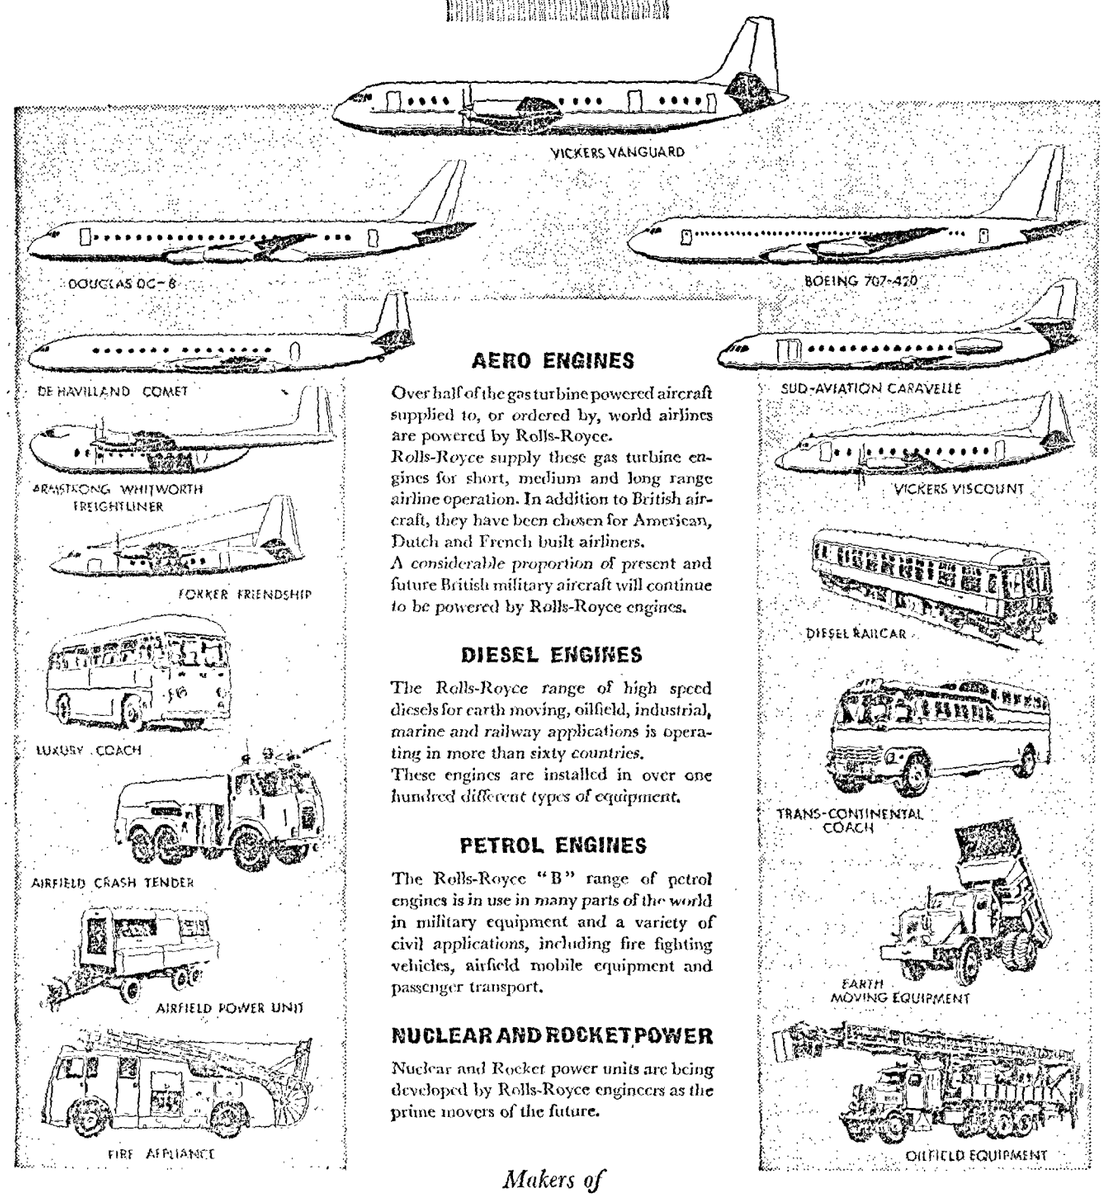
AUSTRALIA

Precarious Balance

SINCE the Commonwealth government published its first annual economic survey a year ago Australia has restrained the boom of 1953-55. Higher taxes and tighter credit have slowed down the growth of expenditure and output and—less successfully—the rise in costs. Thanks mainly to a substantial increase in export earnings, notably from wool, the trade balance swung round from a deficit of £A36 million in the second half of 1955 to a surplus of £A91 million in the second half of 1956. After allowing for invisibles, including capital receipts of £A59 million, Australia's reserves rose by £A70 million. Since then exports have increased further, and import restrictions have been relaxed by about £A100 million a year. The latest survey, *1957 and Beyond*, thus looks forward from a year of progress, but it finds the economy still precariously balanced and the central problem of growth without inflation unsolved.

In 1957-58 the ceiling for imports is £A775 million fob, or roughly £A900 million cif; other invisibles may well bring total payments to more than £A1,100 million. If invisible earnings continue to run at about £A160 million a year and net capital receipts at £A90 million (the average of the last five years), export earnings of at least £A850 million will be required. Though exports are likely to exceed that figure this year the survey emphasises that there is no margin of safety in prospect. Export earnings and capital receipts can fluctuate sharply and the level of imports is still inadequate. As in Britain, the only way to avoid recurrent crises is to increase exports so that Australia's reserves, now over £A500 million, are large enough to withstand future shocks. The last part of the survey examines the conditions of growth for a nation which is allergic to saving and which yet looks on expansion as the natural and proper order. Throughout it urges the need to avoid repeating past attempts to do too much too fast. The survey candidly observes that the postwar expansion, "especially at some stages, was anything but an efficient performance."

RADAR AT SEA



Training is Vital

A CONFERENCE ended at Genoa last week which had been called to examine the use of radar at sea. Italian opinion has been shocked by the loss last year of the *Andrea Doria* (which was about the latest and also the largest passenger ship in the Italian mercantile marine), and this conference was held at the instigation of Italian maritime lawyers. The collision of the *Andrea Doria* and the Swedish *Stockholm* was a classic example of two modern ships, fitted with every navigational aid and manned by officers of the highest quality available in their two countries, which detected each other by radar in ample time and then proceeded to collide.

To use the well-known phrase from naval gunnery manuals, "this should not be possible," but the fact remains that it is: and it is natural that the Italians wish some international action to be taken to render the possibility at least less likely. Except to the extent that the radar set may be blamed for offering less information on the whole than is available to the human eye in daylight, the fault cannot be attributed to the equipment. The human element is the weak link in this chain.

In this field, Britain has given the rest of the world a useful lead. Radar observer courses have for some years been available at a number of the nautical training colleges in Great Britain; in other countries such courses are either few or non-existent. It is true that until recently these

Powered by ROLLS-ROYCE

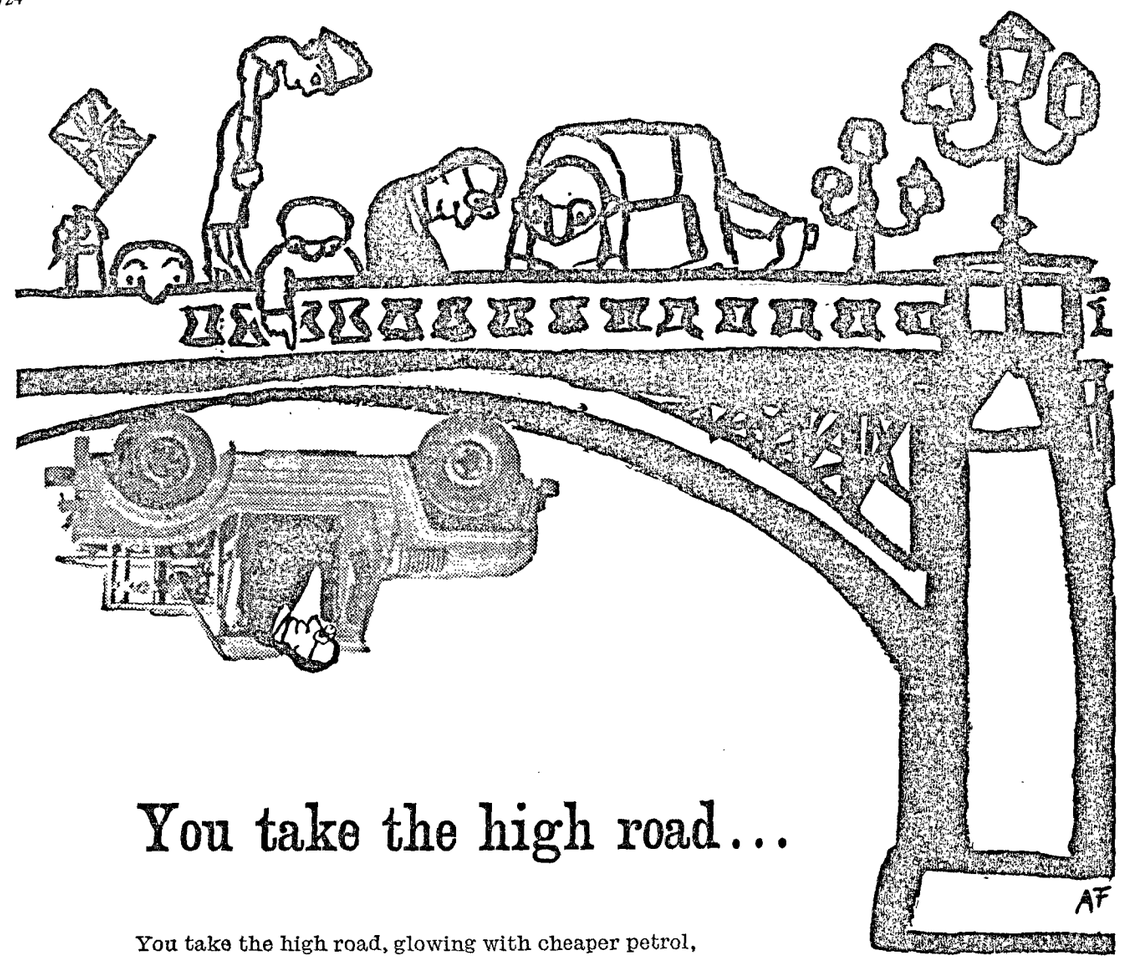
AERO ENGINES

Over half of the gas turbine powered aircraft supplied to, or ordered by, world airlines are powered by Rolls-Royce.
Rolls-Royce supply these gas turbine engines for short, medium and long range airline operation. In addition to British aircraft, they have been chosen for American, Dutch and French built airliners.
A considerable proportion of present and future British military aircraft will continue to be powered by Rolls-Royce engines.

DIESEL ENGINES

The Rolls-Royce range of high speed diesels for earth moving, oilfield, industrial, marine and railway applications is operating in more than sixty countries.
These engines are installed in over one hundred different types of equipment.

PETROL ENGINES



The Rolls-Royce "B" range of petrol engines is in use in many parts of the world in military equipment and a variety of civil applications, including fire fighting vehicles, airfield mobile equipment and passenger transport.

NUCLEAR AND ROCKET POWER

Nuclear and Rocket power units are being developed by Rolls-Royce engineers as the prime movers of the future.

Makers of

THE BEST CAR IN THE WORLD

You take the high road...

You take the high road, glowing with cheaper petrol,
confident of your judgment, your engine, your suspension,
your brakes, your everything . . .

We'll take the low road, doggedly making sure your car's locks never fail you.
You take it easy . . . We'll be out on a corrugated track for six
days at a time, dragging one swooning driver after another from the
wheel of our special, squat, welterweight testing vehicle.

You enjoy yourself . . . We'll be out there pitching and tossing,
over Belgian pavé and herringbone-wrinkle, up and up the Thirty-nine
steps and down the rocky glen, testing new prototype locks
under what we always refer to as "actual road conditions".

The findings, automatically recorded, are important both to us and to you.
They go to explain why Wilmot Breeden components — locks, handles,
bumpers, window-winders, steering-wheels and all — are part of virtually
every British car on the actual roads today.

courses have not been well supported, but this has now been rectified in a manner which gives a further lead to the world. From June 1st it will be compulsory for British candidates for mates' certificates to have attended an officially-approved radar observer course lasting two weeks.

Various suggestions were put forward at the Genoa conference for amendments to international agreements in the maritime field, including a proposal for an alteration to the Rule of the Road that would have allowed for a more "intelligent" approach to the use of radar. Such ideas are more attractive on paper than in practice, and the majority of delegates favoured the resolutions that were finally passed unanimously. Among these the two most important were one advocating general instruction in the use of radar and the other the taking of bold evasive action when ships meet in fog, instead of the small alterations of course often practised. The second of these is admirable as a guide to the instructors at the new courses that one hopes will be set up in maritime countries, but it is the first that really matters. If the British lead here is followed, it should do much good.

BANKRUPTCY

Fewer Failures in 1956

One effect that could be expected from a credit squeeze would be an increase in the number of bankruptcies—and exactly the opposite happened last year.* Receiving orders fell from 2,163 to 2,136, the lowest figure since 1948. In 1938, the last complete prewar year, the number was 3,105. The liabilities estimated by the debtors last year fell, too; they amounted to £6.7 million compared with £7 million in 1955 and £7 million in 1938—a small fall perhaps compared with prewar in terms of sterling, but an astonishingly big one if allowance is made for the change in the value of money. The Inspector-general in Bankruptcy reports that the number of bankruptcies in the first half of the year was steadily increasing; by the end of June, 1956 was showing a lead of about ninety orders over the first half of 1955. Thereafter the number decreased particularly in the months of July, September and December. The trades that lead in the bankruptcy race number pick themselves out clearly; they are builders (240), farmers (154) and grocers (121).

EAST WEST CLEARING

East West Payments Scheme

The shape of a new scheme for payments between countries of the political East and of the West has been quietly worked out by financial experts during the recent 12th Session of the United Nations Economic Commission for Europe. It aims at introducing more flexible arrangements in the narrow bilateral methods by which trade debts between countries of the East and of the West are at present settled. The plan has been under consideration since September, 1955; it has been hampered by the opposition of Britain and Germany, and by the refusal of the Bank for International Settlements to act as agent. All these would have preferred a more direct approach to multilateral clearing. The present scheme is a modest one. There is to be no formal agreement and no automatic clearing arrangement, and there will be no new credit facilities.

All governments participating in the work of ECE are to notify the ECE Secretariat of any foreign balances they wish to compensate. The ECE acting as central agent will then prepare and transmit compensation proposals to particular governments with whom a compensation circuit seems possible. Governments may notify the ECE of the amounts they wish to compensate; but they need not report their total balances. Moreover, and necessarily in these circumstances, each compensation transaction will require the consent of all the governments directly concerned.

Supporters of the scheme hail this proposal as a step away from strict bilateralism in trade between East and West, but Britain, acting as spokesman for a group of countries including Western Germany, Italy, Belgium and Turkey, takes the opposite view, arguing that to soften bilateralism may lead to its perpetuation and will make the desire for a broad multilateral arrangement less keen. A British counter proposal submitted to governments suggested that the western countries should simply make their currencies freely transferable within EPU, even when held by eastern countries. Sterling, D-marks and some other currencies already conform to this requirement.

AIRLINES TO AFRICA

BOAC and CAA

Negotiations over the future of Central African Airways, during which the British Overseas Airways Corporation, the independent airline Hunting-Clan and at one time even Pan-American World Airways all appeared interested in taking over the airline, have ended in a compromise. Central African Airways remains an operating entity responsible for the internal services in the region, but for the next 10 years its international services will be operated by long-range aircraft on charter from BOAC.

The agreement with BOAC will relieve the smaller airline of the difficulties inherent in international operation on a small scale. The reasons that led the Federal government to reject Hunting's offer to buy a 55 per cent interest in CAA have not been spelled out in detail. It means that Hunting loses the opportunity to acquire traffic rights on an international route without the strings that hamper the operation of long-range services by independent airlines based on this country.

SHORTER NOTE

The first reduction of Australian tariffs negotiated in the new UK-Australian trade agreement came into effect this week. It was stated in Canberra that the most favoured nation rate of duty on a wide range of capital and producers' goods has been reduced to 7½ per cent from previous rates of 12½ per cent or more. These goods, which generally are not manufactured locally, remain free of duty if imported from Britain. It was also announced that the Commonwealth government has rejected the Tariff Board's recommendations for higher duties on wool tops, woollen yarns, blankets and piece-goods, and also on alkali chlorine and chlorine products.

* Bankruptcy General Annual Report for the year 1956. HM Stationery Office. 1s. 6d.

COMPANY AFFAIRS

DUNLOP RUBBER

THE full report of Dunlop Rubber Company tells of the past. It says *nothing about* the future, leaving shareholders free to hope that it will be brighter than the 1956 reckoning when trading profits fell from £17,508,519 to £15,094,662 and the ordinary dividend was cut from 14 to 10 per cent. Over the last two financial years the results, divided into half-yearly periods, are as follows: a profit of £9.1 million was earned from sales (including inter-group transactions) of £144 million; £8.4 million from sales of £158 million; £5.7 million from sales of £147 million; and £9.4 million from sales of £165 million.

Thus in 1956 sales (including inter-group transactions) went up in value from £302 million to £312 million and sales to customers from £219 million to £224 million, though in volume the sales to customers fell by about 5 per cent. The margin of profit on sales fell from 5.3 per cent in 1955 to 3.6 per cent in 1956; but that margin was only 2.1 per cent in the first six months of 1956, compared with 5 per cent in the last six months. The results for the first half of the year were affected, as the directors explained in October, by "the non-recovery of high material costs in selling prices and of inventory losses from fluctuations in the price of natural rubber."

There was a further small loss on inventories in the second half of 1956. The directors have drawn attention to the contrast between the company's experience in the home market and its experience in overseas markets. In Britain, sales turnover was 9 per cent lower, owing to "difficult conditions in the motor industry" which affected the sales of tyres, wheels and Dunlopillo. Moreover the inventory losses occurred mainly in Britain. Profits arising from trading in Britain were "very low."

On the other hand, the directors describe the export trade and trade from Dunlop's overseas factories as "very satisfactory," especially as "there was a noticeable improvement in several countries in the second half of the year." As a result, and despite serious competition in overseas markets, the total profit from overseas operations "accounted for well over three quarters of the total group profit" of £15 million.

The group's expenditure on its capital programme is split almost equally between overseas factories and those at home. Last year the total capital expenditure was £11.6 million (against £12.4 million), of which £5.5 million (against £6.1 million) related to overseas factories. Most of the cost of the synthetic rubber plant will be borne this year, but the Dunlop group has trimmed the total of capital expenditure.

UNITED MOLASSES

TWO photographs are printed in the full report of United Molasses for 1956. They are not, as some investors might have expected, a sugar cane and a tanker. One is a photograph of the American plant of Olympic Portland Cement (in which United Molasses acquired a controlling interest in 1955); the other is of a passenger liner belonging to the subsidiary, Anchor Lines. Each draws attention to the diversity of the United Molasses group.

But molasses and shipping are still its principal interests. The advance in trading profits by £1,930,879 to £7,101,533 last year reflected the inclusion of the full year's results of Olympic Portland Cement and E. N. Bray, the electrical control gear manufacturers, but it was primarily due to the increased level of tanker and general cargo freights prevailing during the year. And, though the group has spent money on increasing the factory space of E. N. Bray and is spending money to increase the capacity of Olympic Portland, its biggest capital commitment is its ship building programme. That commitment is of the order of £7,700,000, which the group should have no difficulty in meeting from its liquid balances of about £14.7 million.

On the immediate trading prospects, the chairman, Mr G. W. Scott, is cautious without being pessimistic. The year started well; shipping freights were satisfactory and profits on molasses and manufacturing were "well maintained." But single voyage freight rates have fallen since then, though, having said that, Mr Scott qualifies any inference from it by adding that the company's tankers "are fully employed and a number are trading under remunerative long-term charters." On the molasses side, the high level of prices has reduced consumption. Mr Scott, therefore, sums up the prospect as being that "the profits for the ensuing year should be reasonable and sufficient to cover distributions at the rate for 1956." In that year, the ordinary dividend was raised from the equivalent of 19.32 to 24.64 per cent. The 10s. stock units yield 6½ per cent at 38s. xd.

BURMAH OIL

ONE figure dominates the accounts of Burmah Oil. It is the market value of its investments (made up largely of holdings in British Petroleum and "Shell" Transport and Trading). On December 31st it was just under £213 million, against a book value of £32 million. Currently the £1 ordinary stock units of Burmah Oil are quoted around 112s. 6d. xd. The market capitalisation of its equity is thus around £232 million. A comparison of these two figures suggests as it so often has done that the stock market has put an absurdly low estimate of worth on Burmah Oil's own interests in the distribution of oil, petrol and natural gas in India, Pakistan and Burma.

Those interests cannot be ignored. Last year, they made the biggest contribution to the growth in Burmah Oil's income. The company's trading profit rose by £1,566,576 to £7,584,750, while its investment income, thanks to the bigger dividends of British Petroleum and Shell for 1955, rose by £1,082,834 to £8,018,336; there will be a further growth in investment income this year as Shell has effectively raised its 1956 dividend, though British Petroleum has not. Burmah Oil's net income went up from £5,990,453 to £7,123,896 and the ordinary dividend was raised from 17½ to 22½ per cent.

The increase in trading profits followed on a 12 per cent rise in the group's sales in Burma, of 7 per cent in India and of 2 per cent in Pakistan. The chairman, Sir Kenneth Harper, has this to say about the prospects of this side of the business: "The petroleum products trade in all our markets and perhaps particularly in India is a 'growth industry' and given normal conditions in the domestic as well as the international sphere we can look for a gradual annual expansion in volume." Similarly in Pakistan, sales of natural gas from the Sui Gas pipeline, after a disappointing start, have begun to improve. The snag is to be found in Sir Kenneth's reference to "normal" domestic conditions. *What in India is normal?* The cumulative effect of some of the measures the Indian government has taken must, Sir Kenneth says, "be taken into account whenever we have to consider investing further capital in India."

PROFITS FROM PAINT

THE paint industry is intensely competitive, and competition keeps its prices low. But last year costs were rising, so that without exception the paint manufacturers were earning lower margins of profit. Their trading results vary quite widely. Some have reported lower total profits, some higher, as the accompanying table shows. Where profits are higher there has usually been an increase in the company's sales. Most of the large manufacturers also have a big overseas business and, though here too competition was keen, that business stood them in good stead last year.

At home, the situation can be summed up in the words of the directors of ICI writing about the company's paint division. They say: "Conditions in manufacturing industries were none too favourable for the Paints Division in 1956, for among the biggest consumers of its paints and other finishes are the motor industry and the makers of such goods as washing machines, refrigerators, furniture and other domestic equipment,

all of whom were hit by the credit squeeze. In spite of this, home sales were appreciably higher." They then add that this was due in the main to successful sales of decorative finishes. Many of the other manufacturers draw a similar picture. But competition in the "do-it-yourself" market is also keen and several spokesmen of the industry have pointed to the heavy costs of national advertising campaigns—another reason for smaller margins. In the first months of this year sales have been rising, but margins are still low and the chairman of British Paints says "we have about reached the peak so far as the price of paint is concerned."

Consolidated earnings:	Previous year £	Latest year £
British Paints		
Gross profit	1,089,002	1,101,443
Net profit	411,048	359,750
Ordinary dividend	25%	25%
International Paints		
Gross profit	1,617,600	1,641,359
Net profit	718,572	792,933
Ordinary dividend	20%	22½%
Goodlass Wall & Lead		
Gross profit	2,984,000	2,826,000
Net profit	1,451,000	1,281,000
Ordinary dividend	16%	18%
Blundell Spence		
Gross profit	341,168	303,716
Net profit	160,768	67,646
Ordinary dividend	15%	15%
Sherwood's Paints		
Gross profit	42,038	231
Ordinary dividend	27·08%	6¼%
Indestructible Paint		
Gross profit	126,302	112,028
Net profit	54,677	44,220
Ordinary dividend	18¾%	18¾%

The investor in paint shares has then to look for the well-established company, with resources big enough to support a heavy advertising programme, with big overseas interests and with a stake in the market for decorative and household paints. He should note, too, that the manufacture of maritime paints can give profits a fillip at a time of large shipbuilding orders.

J. AND P. COATS

FOR the third year running, the profits of J. and P. Coats, the thread manufacturers trading on a big scale in almost every corner of the world, have expanded and for the third year running the directors have left the ordinary dividend unchanged—at 8¾ per cent. The immediate reaction in Throgmorton Street was to mark the £1 ordinary stock down 1s. 3d. to 26s. 3d. But the stock soon rallied to its original price of 27s. 6d. (to give a yield of about 6⅜ per cent).

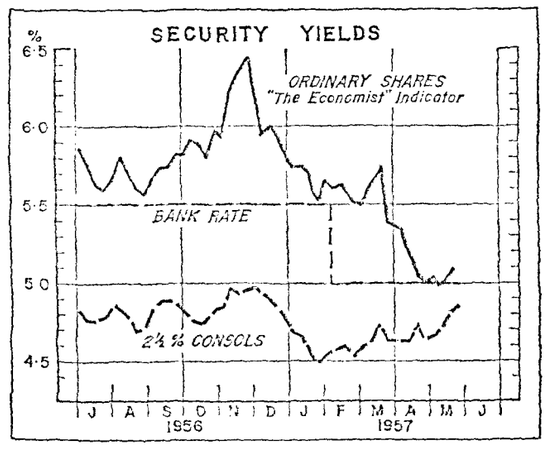
There were two reasons for second thoughts. First, the 12 per cent increase in gross profits (from £10,878,524 to £12,238,591) shows that the company has done well. Its net profits went up from £5,376,123 to £6,225,807, giving a cover of about three and a half times on the ordinary dividend, and if, strong as it is in the international market, the group can match its 1956 profits this year there must be a chance that the directors will abandon their ultra-conservative dividend policy. Secondly, the group last year set aside £3,708,229 in foreign taxation (against £2,304,229 in British tax). Thus J. and P. Coats looks to be an obvious candidate for the tax reliefs granted to overseas trade corporations.

EVER READY

A BIGGER dividend, a free scrip issue and slightly better profits from a company which could not have been unaffected by the credit squeeze would at first sight be all that investors should take delight in. Yet when Ever Ready announced that its profits in the year to March 2nd had risen from £1,749,743 to £1,797,810, that the ordinary dividend was to be raised from 35 to 37½ per cent and that £1,515,603 was to be capitalised from reserves to make a 100 per cent free scrip issue, the company's 5s. stock was marked up only 3d. to 37s.

At that price the yield is 5⅛ per cent. That yield provides the clue to the coolness of the stock market's welcome. An increase in the dividend had been anticipated and the free scrip issue was put down merely as a book-keeping transaction without any implication about the size of the next dividend payment.

London Stock Exchange



FIRST DEALINGS:	May 15	May 29	June 19
LAST DEALINGS:	May 28	June 18	July 2
ACCOUNT DAY:	June 4	June 25	July 9

WEAKNESS continued in Government funds and a considerable number of low points for the year were established this week. A steadier tone developed on Wednesday, though small selling still persisted and the decline was resumed on Thursday. Birmingham 5 per cent 1973/5 issued at 98½, 82 per cent of which was left with the underwriters, opened on Tuesday at 1¼ discount, eased to 1⅞ and closed at 1¾ discount.

The oil market has provided the most spectacular section, mainly in Trinidad issues. Apex Trinidad rose from 54s. 9d. to 60s. Shell Trinidad from 120s. to 146s. 3d., Trinidad Central from 43s. 9d. to 50s. 9d. and TPD from 83s. 9d. to 90s. British Borneo Petroleum have moved up from 59s. 9d. to 68s. 7½d. and Ultramar put on 1s. to 78s. 3d. Considerable speculation in Channel Tunnel 4s. shares, 1s. 9d. not long ago, rocketed to 29s. 6d. at one time on Tuesday, and touched 17s. 3d. on Wednesday. Activity has continued in industrials on a slightly lower level than last week. Movements have generally been downwards. *The Economist* indicator eased again from 221.4 to 218.7. Among textiles, Crosses and Heatons rose from 16s. 9d. to 19s. 6d. and Fine Spinners from 17s. 10½d. to 19s. 1¾d. Steel shares were weak. Stewarts and Lloyds eased from 29s. 9d. to 28s. 6d. and United Steel from 34s. 7½d. to 32s. 6d.

Copper shares weakened on lower dividend announcements, Rhokana dropped from 38 to 37, but a firmer tone developed and the price recovered to 37½. Tin shares displayed firmness, Pahang hardened 4½d. to 17s. 7½d. and Amalgamated Tin from 9s. 9d. to 11s.

Gold shares became a brighter market on Wednesday. Ofsits rose 1s. 3d. that day to 48s. and Western Holdings also put on 1s. 3d. at 60s.

(1) This covers mining, manufacturing, electricity and manufactured gas with the following exceptions: Denmark excludes mining; Greece, mining and manufactured gas; Ireland and Sweden, electricity and manufactured gas; and Austria, manufactured gas. Germany excludes West Berlin. (2) Special trade (excluding re-exports) with the exception of Ireland which covers general trade with exports seasonally adjusted. Belgium includes Luxemburg. Italy includes Trieste. (3) New drachma introduced May 1, 1954 (1 new drachma = 1,000 old drachmas). (4) Thousand million drachmas. (5) Bizonal area.

Financial Statistics

EXCHEQUER RETURNS

For the week ended May 18, 1957, there was an "above-line" deficit (after allowing for Sinking Funds) of £21,650,000 compared with a surplus of £8,835,000 in the previous week and a deficit of £5,626,000 in the corresponding period of last year. There was a net expenditure "below-line" last week of £11,981,000, leaving a total deficit from April 1st, of £39,467,000 (£38,414,000 in 1956-57).

THE MONEY MARKET

THE discount market made no change in its rate for Treasury bills at the tender on Friday of last week, bidding at £99 0s. 10d. per cent, equivalent to just over 3⅛ per cent. However, outside tenderers generally raised their rates in consequence of the market's move at the previous tender, and the average rate of discount rose slightly, by 5½d. to £3 16s. 7¾d. per cent. And although total applications rose by nearly £8 million, whilst the allotment was reduced by £10 million (to £190 million), the allotted portion of bids at the market price was stepped up from 28 to 33 per cent.

Credit has been consistently short in Lombard Street through the week to Wednesday; at each session the Bank aided the market through special purchases, at times of moderate proportions. Nonetheless the market was "in" the Bank, taking a small amount of loans at the penal rate, both on Friday and on Monday. Moreover, most of the special aid has been given indirectly through the banks, which have passed the money on at rates of 3½ per cent, and at times even 4 per cent.

The banks have also succeeded in securing August maturities at up to 3¾ per cent, though 3⅝ per cent has been the more general rate. The discount houses have thus suffered serious inroads in their margins on their bill portfolios, which last year were at comfortable levels.

A sad case of over-heating

This once-fiery furnace tube was found in a state of collapse after a bout of over-heating. And the reason was entirely due to that old boiler gremlin causing loss of water and jamming the low water alarm valve.

What Vulcan say about it

Neglect, mechanical defects, or electrical faults: those are the three main reasons for failures of boiler controls. The prevention of breakdown and possible explosion demands regular and scrupulous inspection. For this exacting job, the eagle-eyed experts are Vulcan's Engineer-Surveyors.

They are the specialists who know where to look for likely danger and disaster in every heating plant going—or not going. In lifts, hoists and cranes, too: anywhere there's an accident coming up, they're down on it before it has even thought of starting. In other words, *safety first* is Vulcan first.

COMPANY MEETINGS

THE BURMAH OIL COMPANY LIMITED

CONTINUED EXPANSION OF ACTIVITIES

VIGOROUS PROGRAMME OF EXPLORATION MAINTAINED

SIR KENNETH B. HARPER'S STATEMENT

The fifty-fifth annual general meeting of The Burmah Oil Company Limited will be held on Friday, June 14, 1957, in the Merchants' Hall, 30 George Square, Glasgow.

The following statement by the chairman, Sir Kenneth B. Harper, has been circulated with the directors' report and accounts for the year ended December 31, 1956.

ACCOUNTS

Once again I am glad to be able to report a year of continuing trade expansion with Group trading profits for 1956 at £7,584,750, an increase of £1,566,576 over the corresponding figure for 1955. Sales continued to expand, while our profit margins were on the whole little different from those obtained in 1955.

I refer later to the formation of a new Rupee Company with Indian participation to take over the oilfield at Nahorkatiya and certain other areas in Assam. Pending the formation of this company we have gone ahead with a comprehensive development programme in the areas to be taken over by it, the cost of which we have carried forward in our Accounts.

Depreciation at £1,243,080 is rather less than that for 1955, in which year there was an exceptionally high charge mainly in respect of the new seaboard installation in East Pakistan.

Dividends from Trade Investments have this year been shown as part of our trading income in the Consolidated Profit and Loss Account, in order to bring out more clearly the profit arising from all our trading interests. These dividends are brought into account as and when they are received and this year include the first dividend on our holding in Burmah-Shell Refineries Limited. The amount of the dividends actually received during the year from our other main Trade Investments was less than was received last year.

Dividends and interest on Other Investments received in 1956 amounted to £8,018,336 and are £1,082,834 up on 1955, due mainly to larger dividends received on our holdings in The British Petroleum Company Limited and in The "Shell" Transport and Trading Company Limited.

Full provision has been made for UK and Overseas taxation amounting in all to £9,550,543, compared with £7,642,386 in 1955. No account has been taken of the possible effect of the recent budget proposals, but as we already pay relatively little UK taxation on our overseas trading profits by reason of double tax relief the benefits that may accrue to us from these proposals are unlikely to be material.

The net profit for the year is thus £7,123,896, compared with £5,990,453 in 1955, an increase of £1,133,443. After adding the balance brought forward from 1955 there is available for distribution £7,764,382, from which falls to be deducted the interim dividend of 5 per cent paid on the Ordinary Stock on November 23, 1956, together with the dividends on the Preference Stocks. From £6,407,108 remaining for disposal your Board have appropriated £1,650,000 to General Reserve and recommend that a final dividend of 17½ per cent be paid on the Ordinary Stock on July 5, 1957. This, if approved, will absorb £4,146,710, leaving a balance of unappropriated profit of £610,398 to be carried forward.

The continued expansion of the activities of our Subsidiary Companies and the development of the new productive areas in Assam are reflected in Fixed Assets and Current Assets and Liabilities in the Consolidated Balance Sheet.

Trade Investments increased during the year due mainly to the call up of further capital by the Burmah-Shell Marketing Companies in India and in Pakistan to provide additional distribution facilities to meet the expansion of trade.

TRADING

Our Group's own production and purchased oils are marketed by our wholly owned Subsidiary Companies in Burma, Assam and part of East Pakistan and by Burmah-Shell in the rest of India and Pakistan.

By comparison with the previous year the Group's sales increased by 12 per cent in Burma, 7 per cent in India and 2 per cent in Pakistan.

The increase in Burma was satisfactory having regard to the state of the country which is still subject to outbreaks of insurgency despite the Government's efforts to suppress them.

The demand for motor spirit tended to slacken off during 1956 but this was more than compensated for by increases in the kerosene and furnace oil offtake. There has been more purchasing power in the hands of the cultivator and the demand for kerosene last year expanded in spite of quite an extensive electrification programme coming into operation. The demand for furnace oil is growing as new industrial units come into commission.

In Pakistan a contributing factor to the small increase in sales was some loss of trade in furnace oil because of displacement by Sui gas, but to us the loss of the former was partly offset by the latter.

The organisation for the development and sale of Sui gas is now as follows:

(1) The gas is produced by Pakistan Petroleum Limited at Sui.

(2) That Company sells it to Sui Gas Transmission Company Limited, who own and operate a pipeline for transmission of the gas to Karachi.

(3) Sui Gas Transmission Company Limited resell the gas for distribution to industrial and other consumers.

(a) on the pipeline route, to Indus Gas Company Limited;

(b) in Karachi and suburbs, to Karachi Gas Company Limited.

Your Company has no financial or management interest in either of the two retail companies, which are 100 per cent Pakistani owned.

Our interest in the ownership and management of Sui gas therefore goes no further than the Karachi end of the main pipeline. Sales of gas were running at the rate of 23 million cubic feet per day at the end of the year. This is less than earlier estimates, partly because the retail companies had not got fully into their stride in this new business and partly because of difficulties in getting import licences for equipment. Sales have been improving steadily this year.

Disappointing in some respects as the rate of offtake was, it has already begun to make a valuable contribution to Pakistan's foreign exchange balances. Last year's sales of gas were equivalent in value to about £1 million in terms of imported fuel oil.

There was a satisfactory expansion of trade in Assam which is Digboi's main supply area. The increase was in all products and particularly in furnace oil for which our chief customers are the tea gardens.

In the rest of India the distribution of petroleum products was affected by a continuing shortage of tankwagons, but the most marked feature of the trade was an increase in sales of diesel oil for automotive use alongside an almost negligible increase in motor spirit. The increases in our Group's sales of these two products were 31 per cent and 1 per cent respectively. The increased demand for the former is in keeping with the encouragement given by the Indian Government to the production of diesel engined vehicles in the assembly works sponsored by them. Imports of petrol driven cars were restricted in favour of cars assembled in India, which were for the most part of the small, lower powered variety.

The petroleum products trade in all export markets and perhaps particularly in India is a "growth industry" and given normal conditions in the domestic as well as the international sphere we can look for a gradual annual expansion in volume. This expansion should become more marked as the Government's industrial plans take practical shape but expansion calls for more and more facilities and therefore more and more finance. The Government of India has shown appreciation of this position by granting development allowances under its taxation law. This has been welcomed but it goes only part of the way.

The finance required for expansion of the

oil industry has for the most part to be generated by the industry itself, and selling prices must accordingly be allowed to remain at a level to meet this need as well as providing an acceptable return on the capital employed.

OILFIELD AND REFINERY OPERATIONS

Burma.—Our interest in these operations in Burma is through our 55 per cent shareholding in The Burma Oil Company (1954), Limited. The Union Government holds one-third of the equity in this Company and is helpful and co-operative, in the spirit of partnership in a joint venture.

The "1954" Company maintained crude oil production at Chauk and Lanywa—the latter field having been developed originally by one of the other shareholders—at the level required to meet Chauk refinery needs, and has since increased it to provide also the required throughput of the new refinery at Syriam, which came on stream in February this year.

The capacity of this new refinery is about one-quarter of our pre-war Syriam refinery which we were ordered to destroy in 1942 to deny it to the Japanese enemy, but the combined throughput of Syriam and Chauk is now sufficient to supply the whole of Burma's present requirements of the main petroleum products, thus making a valuable saving of foreign exchange which Burma has since the war had to find for imports.

Pakistan.—Production of crude oil at Balkassar and of gas at Sui is in the hands of Pakistan Petroleum, Limited, in which our partners are the Pakistan Government (29.3 per cent) and the Pakistan public (0.7 per cent). Relations with the Pakistan Government are cordial and the Company receives every assistance from it.

The small quantity of crude oil derived from Balkassar is refined under contract at the Attock Oil Company's Rawalpindi refinery.

At Sui no new wells were drilled during the year. Those already completed are capable of supplying all the gas required for some years to come.

Despite unprecedented floods, the Sui Gas Transmission Company's main pipeline from Sui to Karachi continued to operate successfully, delivering gas to the two Pakistani owned retail distribution companies to which I have referred.

India. — Assam Oil Company's new "field" consists of the three contiguous areas near Nahorkatiya, i.e., the original discovery area, the Nahorkatiya Extension and Hugrijan, and now a fourth area, Moran, about 25 miles to the south-west.

During 1956, out of eleven wells drilled on these areas nine were oil producers, one a gas producer and one a dry hole. All four areas have now been proved and the production target has been raised from one million tons a year, as reported last year, to two and a half million tons.

Outstanding progress was achieved in increased drilling speeds, with in consequence satisfactory reductions in cost per foot drilled.

It was a condition of the grants in 1953 of concession rights in these areas to Assam Oil Company that if oil were found a rupee company would be formed to develop it and that a prescribed percentage of the equity would be reserved for Indian participation. This percentage has been agreed at 33⅓ and the Indian Government has decided to take up this shareholding interest itself.

Throughout last year and up to the present date discussions have been going on with the Government regarding the formation of this rupee company and in the last few weeks have reached the stage where a formal agreement appears to be in sight. In the course of these discussions our main difficulty has been to reconcile the development of the valuable oilfield we have discovered with Government's restrictive policy towards this kind of private enterprise.

At Bombay, the Burmah-Shell refinery had its first full year of operation and treated nearly two and a half million tons of crude oil imported from Iran and Kuwait. This refinery company refines crude oil for your Group, Shell and BP and the products are sold through Burmah-Shell's marketing organisation.

At Digboi, Assam Oil Company's refinery had a trouble-free year. For many years past it has been quite normal to record that the transport of petroleum products to markets outside Assam had been interrupted by breaches in the railways, through flooding or landslides. In 1956, Assam Oil Company suffered no major interruption to its operations from this cause and, with Nahorkatiya to draw upon to supplement its crude oil production at Digboi, the refinery enjoyed a record throughput.

PROSPECTING

Burma.—During the year the "1954" Company made good progress with the geophysical survey of the Irrawaddy Delta.

The terms and conditions governing future exploration in Burma have been under discussion, and this survey was undertaken on assurances received by the Company in that respect.

A test well in the Delta area and another at Ondwe, 30 miles south of our old Yenangyaung field, will be started when formal licences have been granted.

Discussions are taking place between the Government of Burma and the "1954" Company for the grant to the oil industry in Burma of taxation conditions on the same lines as those granted in other countries where the search for oil is recognised as an important industry.

Pakistan.—Pakistan Petroleum Limited has continued its vigorous programme of exploration in both East and West Pakistan. A second well at Sylhet in East Pakistan repeated the indication of a useful natural gas field, first disclosed by the well which was destroyed by fire in 1955. Unfortunately, no oil was found in either of these wells, but if further drilling confirms results to date, this Sylhet gas, while not on the same scale as Sui, should prove valuable to industry in East Pakistan. The development and utilisation of the gas is now under consideration with the Pakistan Government. Meantime, the search for oil has moved further south to Lalmai, where a test well will be started in the current year.

In West Pakistan, two test wells were started, one is still drilling, so far without success, and the other found poor quality natural gas in considerable quantity but of no commercial value. Testing continues at the latter well in the hope of obtaining evidence which will assist in the search elsewhere.

The Pakistan Government during the year concluded an agreement with Pakistan Petroleum Limited which provides, mainly by taxation arrangements, additional incentive to the Company's prospecting effort.

India.—Apart from continued drilling to prove the value of the concessions at Nahorkatiya, Hugrijan and Moran, no prospecting was undertaken in India during the year.

By a Resolution on Industrial Policy which was announced early in the year, private enterprise is to be permitted in future to prospect for petroleum only by means of a rupee company in which Government itself will have a majority shareholding and, therefore, the controlling voice. Your Board feels unable to recommend any further expenditure of stockholders' money on prospecting for new areas in India so long as such conditions persist.

Our Group has been prospecting in India for 40 years, though with more disappointments than successes, and has been responsible for developing and producing all the oil that has so far been found in India. We have served both India and ourselves well in the process, and we would like to continue to do so, but only on conditions that will benefit both.

PRIVATE ENTERPRISE IN INDIA

Last year and the year before I referred to the difficulty we were finding in determining the place of private enterprise in India's "socialist pattern of society," because verbal encouragement was not being matched and, indeed, was being contradicted by legislative and executive measures. There were further instances of such measures last year, for example :

(1) The Seventh Amendment to the Constitution legalised the setting up of State Trading Corporations to compete with normal private enterprise.

(2) The Resolution on Industrial Policy to which I have already referred deprives private enterprise of the opportunity to develop the country's natural resources, except as an instrument of Government.

(3) The Finance (No. 3) Act of 1956 contains provisions under which a company cannot qualify for the benefits of depreciation allowances for income tax purposes unless it deposits a substantial part of its current and accumulated profits and reserves, not represented by fixed assets, with the Reserve Bank of India. Any release of the deposits requires the approval of Government.

Each of these measures could directly and adversely affect our business and their cumulative effect is such that it must be taken into account whenever we have to consider investing further capital in India.

TANKERS

Our small fleet usually trades in Indian waters, for which the ships were specially designed, returning to the United Kingdom only for Special Surveys or repairs which cannot be undertaken in yards in India and Pakistan. Two of our ships came home for these reasons during the year, and both have now returned to the East.

The remainder of the Fleet continued to operate steadily and satisfactorily.

During the year the Government of India acquired their second tanker.

STAFF

The staff of all the Group Companies at home and overseas, and on the seas, have given us another year's good service. The East is no longer "unchanging" and new situations constantly arise. Our Managing Directors, Managers and Staffs cope with them with understanding and in an admirable spirit, and our gratitude is due to them.

THE PRUDENTIAL ASSURANCE COMPANY LIMITED

(Incorporated in England)

YEAR OF CONTINUED EXPANSION

LIFE PREMIUM INCOME EXCEEDS £100 MILLION

In the course of his remarks at the Annual General Meeting held on May 16th, at 142 Holborn Bars, London, E.C.1, Sir Frank Morgan, MC, Chairman of the company, said:

Last year the combined premium income from our Life Branches exceeded £100 million. Eleven years earlier it was less than half this figure. The premium income of the Industrial Branch was then £30 million and is now nearly £50 million, while the growth of the Ordinary Branch has been even more spectacular—from a premium income of £18 million to over £51 million. In the combined figure of over £100 million we recognise, of course, the element of altered money values ; nevertheless it does represent a landmark in the Company's progress. Our overseas branches are entitled to a full share of the credit for this achievement, their contribution to the Ordinary Branch premium income having grown from £3 million in 1945 to nearly £14 million.

In recent years I have commented on the large part we play in encouraging and facilitating regular saving, to the advantage of millions of individual policyholders and their dependants and to the corresponding benefit of the country at large. Taking the increase in the funds of our Life Branches as a broad measure of the net saving achieved by means of Prudential life policies we find that last year, for the United Kingdom alone, this saving exceeded £32 million.

BONUS DECLARATIONS

Details of our bonus declarations have already appeared in the Press and in the Directors' Report. The rates of reversionary bonus declared for assurance policies issued in the United Kingdom are unchanged at 42s. per cent in the Ordinary Branch, and 32s. per cent in the Industrial Branch.

In both Branches we have also continued the special bonuses which we declared last year. They are at the same rates as before and still apply only to those policies effected prior to January 1, 1954, which become claims during the present year.

When speaking to you a year ago I explained why we had decided to declare special bonuses. It will be sufficient now to remind you that there had been an exceptional increase in the dividends on our holdings of ordinary shares in this country and that the special bonuses gave effect to our view that, since these increases largely arose from investments made in the past, the older policyholders had a prior claim upon them. I repeat that, whilst giving no guarantee, we hope, out of future surpluses, to declare similar special bonuses in the coming years on claims arising from the same range of policies.

DIVIDENDS

With increased distributable surpluses in the Life Branches the Directors have again been able both to improve the proportion of these surpluses allocated to the policyholders and to increase the amount allocated to the shareholders. In each of the Life Branches the policyholders' allocation, which for 1955 was approximately 92.3 per cent of the distributable surplus, is now 92.6 per cent.

The net dividend declared on the A shares is 26s. 6d. per share, an increase of 1s. 6d., and £93,750 has been transferred to the Dividend Reserve Fund. The net dividend declared on the B shares is unchanged at 3s. 6d. per share.

The sum set aside for the dividend on the B shares, together with the corresponding provision from the General Branch for dividend to A shareholders, is again more than covered by the interest earnings of our General Branch funds after deduction of the relevant taxes.

ORDINARY BRANCH

In the Ordinary Branch the total new sums assured under individual and group life assurance policies issued at home and overseas during 1956 amounted to £176 million. In addition to these new assurances the Company transacted a substantial amount of group pension and other annuity business. Our with-profit group pension business continues to expand at a satisfactory rate.

The total Ordinary Branch premium income for the year, including £11,200,000 in respect of deferred annuities, amounted to £51,600,000 and showed an increase of £3,800,000 over the preceding year.

FINANCE ACT, 1956

The Finance Act, 1956, made important changes in the basis on which the annuity business of a Life Office is taxed and also in the tax liability of individuals in respect of purchased annuities. The provisions relating to the taxation of annuity business distinguished two classes of such business—pension annuity and general annuity business—and improved the taxation position of pension annuity business. This class comprises schemes approved under Section 379 of the Income Tax Act, 1952, and the new class of individual pension policy permitted by the Finance Act, 1956.

Whilst we have been able this year to increase the annual rate of bonus on all our with-profit group pension schemes, the improved taxation position has enabled us to make a specially large increase for those policies which come within the definition of pension annuity business. In the case of the corresponding non-profit group pension policies we have made substantial reductions in our rates of premium, the improved rates being applicable to future premiums whether in respect of new schemes or of schemes already on the books ; we have also been able to allow ex-gratia increases in the deferred pensions that have already been purchased.

In the field of individual policies there has been a considerable demand for the new class of pension policy now permitted by the Act, not least from those who already have Prudential policies giving protection to their dependants. Although it was not until August that we were able to offer such business, annuity contracts providing over £1,800,000 per annum had been sold by the end of the year, involving an annual premium income of £800,000. As the types of life assurance and annuity contracts available increase in number and in degree of specialisation it becomes more than ever necessary to rely on the advice of the experienced insurance representative. It is necessary, for example, to appreciate that the Act imposes certain conditions on policies of the new class. They cannot be surrendered or pledged as security for any loan or bank overdraft, and the pensions cannot be commuted. These facts make it advisable to weigh carefully, in the light of individual circumstances, the merits of this new policy against those of the traditional endowment assurance policy, under which the maturity sum may be used to purchase an annuity. We have representatives throughout the country who are trained to give expert advice on this and all other aspects of individual provision for retirement.

The provisions of the Act by which the capital content of purchased annuities is no longer subject to income tax represented a much-needed reform which is of real benefit to annuitants. Previously the burden of taxation had fallen unfairly on savings invested in a life annuity.

STATE RETIREMENT PENSIONS

Over the years there has been an increasing awareness of the need for making provision for old age, and this has been manifested at different levels—at a national level, within occupations and among individuals. The life offices have played a big part both in developing an appreciation of the need and in meeting it. For individuals great numbers of endowment assurances, deferred annuities and immediate annuities are issued which in their different flexible ways have, as part of their object, provision for old age. Further, and more particularly in the last twenty years, there has been a great development in employees' pension schemes. In all that has been done it has been shown that it is possible to adopt the soundest principles of thrift and to provide good pensions without throwing the burden on future generations.

I would say to anyone who is considering any development of the State pension scheme that if promises of higher pensions are given there should be a full realisation by the country of the cost involved and of the inescapable fact that this cost must be met by somebody, somehow and at some time. It is very tempting to promise improvements in the lot of pensioners without paying sufficient attention to the other side of the picture.

The proper sequence of events is that the saving should take place first, and that those savings should be invested to fructify in increased productivity, so that finally pensions can be drawn from these additional resources. The need for some immediate provision may, however, be urgent, and up to a point it may be necessary for the State temporarily to ignore this sequence. But it should not be ignored merely because to ignore it—to postpone meeting the cost—is the easier way, the way giving the largest immediate benefits for the smallest current outlay and therefore the more popular way. The position of this country would inevitably be worsened if unsound extensions of the

State pension scheme were made and if sound habits of thrift were undermined by too easy promises that the State would do the providing.

OVERSEAS LIFE BUSINESS

New sums assured written by our Overseas Branches amounted to £68 million, which included £6 million under group assurances. This was again a record, despite the loss of our Indian business. The Overseas Branches which are now transacting new business wrote £12 million more than in 1955.

The achievement of the Canadian Branch was outstanding. They wrote £29 million new business, an increase over 1955 of 32 per cent, which was considerably above the average of life offices in Canada.

In the Australian and New Zealand Branches record amounts of new business were again written in 1956. In Australia the new sums assured amounted to over £18 million and in New Zealand to over £3 million.

Our Branch for the Southern and East African territories also achieved a record, writing over £14 million new sums assured. With-profit group pension business in this Branch continues to develop well.

It is a matter for great satisfaction that we have such well-established organisations in Australia and New Zealand, Canada and Southern and East Africa. The expansion which is taking place in our business in these territories augurs well for the future.

INDUSTRIAL BRANCH

In the Industrial Branch the new sums assured last year were nearly £95 million, compared with £86 million in 1955. The average sum assured per policy issued showed a further increase to £69.

With continuing efforts by our field staff there has again been a reduction in the rate of lapse among policies which have been less than a year in force, and less than one-tenth of new Industrial Branch policies now lapse within that period. Among policies on which premiums have been paid for a year or longer the rate of discontinuance remains below 2½ per cent, and in all of these cases either a free policy or a cash surrender value is allowed.

A sum of over £11 million has been allocated to policyholders from the surplus of the year to provide the Industrial Branch reversionary and special bonuses to which I have already referred. The allocations from surplus to policyholders in this Branch since the inception of the profit-sharing scheme in 1908 have now reached a total of £153 million.

GENERAL BRANCH

The General Branch premium income for 1956 exceeded £13,300,000, showing an increase of over £900,000. In addition, premiums of nearly £1,900,000 were written by our American subsidiary. The expansion has been mainly in our Home business, but nearly one-half of the total premium income still arises from overseas sources.

The underwriting experience in this Branch last year was very unfavourable and overall showed a loss. A profit was shown in the fire, sickness and accident and sinking fund accounts, but the profits were lower than in 1955 and were more than offset by the heavy loss on the motor vehicle account and a small loss on the miscellaneous account. Last year I expressed concern at the unfavourable motor experience and drew attention to the increasing cost of road accidents, both in this country and overseas. It was hoped that the revision of our home motor rates in December, 1955, would help to alleviate the position but, in common with the experience of other insurers, the results for 1956 in this country were again poor. In the early part of this year petrol rationing provided some relief, which should assist this year's account. A further increase in premium rates is, however, clearly justified and such an increase has recently been announced.

Certain overseas business, including some reinsurance contracts, which had proved unprofitable in the past and which contributed to last year's underwriting losses, has been cancelled. The adverse motor insurance results in several important overseas territories continue to cause serious concern and endeavours are being made to improve the position. Our experience in marine, aviation and transit insurance business continues to be very satisfactory and this fund is in a strong position. From it we have released £100,000, which includes the customary provision for taxation.

The gross interest earnings brought into the profit and loss account amounted to £695,000, showing a further substantial increase. Allowing for the underwriting loss the net surplus, after provision for taxes and excluding the amount brought forward, amounted to £237,000. The contingency and additional reserve funds in this Branch are substantial and its financial position remains strong.

The figures of our American subsidiary, The Prudential Insurance Company of Great Britain, are annexed to the accounts before you and show a small underwriting loss for the year. The overall position is, however, strong and a dividend of 7½ per cent has again been declared on the capital of $1,500,000.

INVESTMENTS

The year 1956 was not an easy one for the capital investment market. The major factors affecting the situation were, first, the intensification of the restrictive credit policy at home and then, during the latter part of the year, the events in the Middle East and the severe drop in our gold and dollar reserves. In spite of these difficulties the volume of money raised by industry in the new issue market during 1956 was comparable with the amount raised in 1955. This was an achievement that owed much to the support of institutional investors. There was, as might have been expected, a greater tendency than in 1955 to raise money in the form of debentures and loan stocks but, nevertheless, a substantial proportion of new finance took the form of ordinary capital. We participated in the majority of the new issues that were made, including a number of industrial issues of large size.

During the year we invested, in total, a sum of £63 million. The chief items were debentures £13 million, ordinary shares £11 million, property £9 million, and mortgages £18 million. The total of mortgages shows a large increase over the £7 million recorded last year. This is due to increases in both commercial mortgages and house purchase loans and also to the resumption, after an interval of some years, of direct loans to municipal borrowers, which are expressed in mortgage form. The increase in house purchase loans was mainly due to a temporary shortage of funds from other sources that normally provide finance for this purpose. The reduction of £8 million in the Balance Sheet figure for securities of, or guaranteed by, the British Government is due to some further writing down of the book values.

The gross rates of interest earned on the Life funds, £5 10s. 2d. per cent in the Ordinary Branch and £5 11s. 7d. per cent in the Industrial Branch, were higher than in 1955 by 2s. 11d. per cent and 3s. 1d. per cent respectively. These increases were mainly due to a further modest rise in ordinary share dividends in 1956 but the higher yields obtained during the year on new investments also contributed.

There was a further fall in the market values of fixed interest securities during 1956 and ordinary share values also declined. Nevertheless at the end of the year the total value of all our securities was in excess of book values and there has been a substantial improvement in market values in 1957.

There has been much public discussion of the problem of providing funds for the large programme of tanker construction which is now in progress. The useful working life of a tanker is such that the corresponding finance is required for a term of years that is longer than is generally acceptable in current banking practice, and shorter than is really appropriate for the long-term liabilities of life assurance companies. At the same time there is the problem of the management and operation of these expanding fleets of tankers. It is becoming clear that these problems are by no means intractable and solutions are being found in varying forms which should enable a substantial part of the finance to be provided on terms acceptable to life funds. Negotiations have been proceeding in recent months with some of the leading companies in this field under which we expect to provide over £13 million for this purpose during the next few years.

I do not often refer specifically to the question of the investment of the Life funds of our Overseas Branches, which are growing rapidly and now amount to some £70 million, but I can assure you that this matter receives the same careful consideration of the Board as does the investment of our home funds. A notable feature of the last two years in the major overseas territories in which we operate has been a movement to higher interest rates comparable to the movement which occurred in the United Kingdom. In line with our investment policy in the United Kingdom we have, in these overseas territories, taken the opportunity provided by this feature to make sound long-term investments at attractive rates of interest. We have also, in some territories, entered into investment commitments which will absorb an appreciable part of the investible funds arising over the next few years in propositions based on terms which reflect the present level of interest rates. This course of action should do much to strengthen our position in these territories.

APPOINTMENTS

Since our last meeting the Directors have appointed Mr R. S. Skerman, FIA, to be an assistant actuary and Mr P. B. Cockshutt to be senior solicitor.

STAFF

In this review of our activities you will have had in mind the large number of men and women who comprise our staff, both at home and overseas. Their knowledge and sense of responsibility well fit them for the many and varied parts they play in our organisation, and in their hands rests largely the reputation we enjoy.

I know you would wish me, therefore, to express on your behalf our continued appreciation of the efforts of the staff wherever they may serve; this I do with pleasure, knowing that they, too, are proud of their association with this great Company.

CEREBOS LIMITED

RECORD VOLUME OF SALES

FURTHER EXTENSION OF GROUP ACTIVITIES

OVERSEAS TRADE EXPANDED

MR W. ARNOLD INNES'S REVIEW

The fifty-third annual general meeting of Cerebos Limited was held on Thursday, May 23rd, at Cerebos House, London, N.W.10.

Mr W. Arnold Innes, the Chairman, presided.

The following is his Review, which has been circulated with the Report and Accounts for the year ended December 31, 1956:

Before proceeding to review our operations for the past year, I have to report that, in accordance with the indication which I gave in my previous statement, the following Chief Executives have been promoted to the Board —Mr John Robert Richardson, Mr Reginald Roland Seddon, Mr George Seddon and Mr Guy Chignell. Their appointments are within our policy of recognising the valuable contributions which can be made to our counsels by Chief Executives who have gained experience in the Group and possess specialised knowledge of various facets of our activities.

ACCOUNTS AND DIVIDEND

The Consolidated Balance Sheet and Trading Statement with the comparative figures for the previous year clearly set out the position of the Company and its Subsidiaries as at December 31, 1956; I offer a few comments on these which may be of assistance to Stockholders in their appraisal of the position.

The Authorised Capital of the Company has been increased during the year from £2 million to £4 million represented by 16 million Units of 5s. each. The Issued Capital at the same date, however, has remained unchanged.

As Stockholders will be aware from my notice dated January 7, 1957, we were fortunate in having an opportunity to add to the Group the business of Northern Enterprises Limited and since the turn of the year £76,350 of the new Stock has been issued to the Members of Northern Enterprises Limited in exchange for their holdings in the equity shares of that Company. Issued Capital of Cerebos Limited therefore now stands at £2,076,350.

The value of the Fixed Assets of the Group in the form of Land, Buildings, Plant and Equipment after making full provision for depreciation together with the premium paid on the acquisition of Shares in Subsidiary undertakings amounts to £3,151,245, an increase of £116,379 on last year's figures. In the main this increase reflects the further expenditure incurred during the year on the Middlewich factory reconstruction and re-equipment programme and by the Australian Company on their new factory at Melbourne. It is anticipated that both operations will be completed in the latter part of this year.

Productive capacity and the trend of Group sales have been upward and this position is reflected by the increase in Stock-in-Trade and Trade Debtors and again it is satisfactory to note that the sound liquid position has been well maintained and now shows an excess of Current Assets over Current Liabilities of £2,327,329, an increase over the corresponding figure for 1955 of £373,049.

Reserves and Surplus, including the sum set aside out of profits in cover of the deferred liability for Taxation on those profits at £3,089,291 show an increase of £485,851 over the previous year.

Outside Interests in Subsidiary Companies at £389,283 comprise the Share Capital not held within the Group and reserves and undistributed profits attaching thereto.

Group Capital Commitments amounting to approximately £410,000 are £40,000 lower than the corresponding figure for 1955.

The Trading Profit of the Group for the year is, as shown by the Directors' Report, £1,767,232, an increase of £224,082 over the 1955 figure. The estimated liability for taxation thereon, including Profits Tax of £206,000, amounts to £951,327.

The nett Profit of the Group for the year after providing for taxation and making due allowance for outside interests in the profits of Subsidiaries amounts to £791,770 and to this must be added £481,722 brought forward, making a total sum available of £1,273,492, out of which the following appropriations in the accounts of Cerebos Limited are recommended to the Stockholders for approval:—

(1) To write off £9,139 from Investments to reduce these to market value at December 31, 1956.

(2) To increase the General Reserve to £1,500,000 by the transfer of £500,000.

(3) The payment of a Final Dividend of 20 per cent (less tax) of £238,780, which, with the Interim Dividend of 10 per cent (less tax) paid in November last, makes 30 per cent (less tax) for the year.

These appropriations amount in total to £862,919 and will leave £410,573 to be carried forward to next year, which by reason of the increase in the proposed transfer to General Reserve, is £71,149 less than the corresponding figure for the previous year.

HOME SALES, MARKETING AND ADVERTISING

I am glad to report that the position in the Home Market is most satisfactory. Sales of our branded products, comprising the Cerebos, Bisto, Saxa, Stag, Paxo and Scott's range, continue to expand in both tonnage and value, the results achieved in 1956 constituting a record volume in all respects.

We have succeeded in achieving a continuous annual increase of sales over a period of many years, and the present high level which has been attained reflects great credit upon all concerned. It has been made possible only by maintaining the high standard of quality for which our products are renowned and by the pursuance of vigorous sales, advertising and marketing policies together with the expeditious service which we give to our numerous customers in the Wholesale and Retail Trades who co-operate with us so willingly in the distribution of our products.

The goodwill of any business, especially in the Food Industry, depends upon the satisfaction and value which it offers to the Housewife and it is evident that the Cerebos Group of Companies has been successful in this direction, and is continually adding to those millions of customers whom it already has the privilege to serve.

We have constantly before us the necessity of keeping our activities as wide as possible having due regard to economic factors. As sales in certain lines continue to increase year by year, the annual rate of increase must inevitably diminish and, moreover, those lines become increasingly vulnerable to attack by competitors. We have therefore a twofold policy, first to protect those lines by extensive advertising and effective salesmanship and, secondly, and simultaneously, to develop the popularity and consequently the sales of other lines where more room for expansion exists. Commercial television has opened up a new and exciting medium of advertising of which, as no doubt many members suitably located will have seen, we are taking advantage.

EXPORT AND OVERSEAS TRADING

The world wide character of our export trade has been well maintained despite the dislocation caused by the temporary closure of the Suez Canal. This has naturally affected our Middle Eastern trade and added considerably to the cost of freight, but otherwise we have not seriously been affected inasmuch as the time occupied in transit to our major markets is not materially increased by the voyage around the Cape of Good Hope. The events which led up to this international difficulty have given us a further warning of the world wide changes which are taking place and must inevitably alter considerably the pattern of future world trade.

Salt deposits are world wide, but the production of a highly refined salt suitable for table use requires a modern factory with all the equipment necessary to purify the material, convert it into fine crystals of regular shape and pack it into handy-sized containers for distribution throughout the market. This requires the investment of a very large amount of capital and only where natural deposits of salt are available, is it possible to do this successfully.

As the tendency in most countries today is to make themselves independent of imported salt, we are paying increasing attention to the export of those products of the Group which do not lend themselves so readily to substitution and I am very glad to say that our exports other than prepacked and bulk salt continue to expand, and are becoming increasingly popular in distant overseas markets.

Our Associate Company in Australia experienced a very good year in 1956, sales and profits being quite satisfactory. Unfortunately, difficulties of various kinds have

delayed the completion of the Factory, but very shortly the building will be ready for occupation and it will not take very long to install the necessary machinery provided we are granted the facilities for importing that part of the equipment which is not obtainable locally. We shall then be able to produce all the prepacked salt necessary to meet the local demand and to transfer to much more spacious and convenient premises the manufacture of Bisto and Gravox. We are quite satisfied with the development of our plans and that our Australian Company can look forward to a successful future.

Trading conditions in Europe are likely to be improved by the proposals now being considered by the Western Powers for a considerable measure of Free Trade, but sufficient information has not yet been divulged to enable any estimates to be made of the scope of these proposals as affecting our business.

PRODUCTION

Throughout the year production in the Group has been maintained at a level which, on the one hand, has been adequate to meet the demands of our customers, on the other, has been restricted to true requirements, thus avoiding the carrying of excessive stocks. Demand for our products varies from month to month and the control of production and of stocks distributed in the Company's warehouses throughout the country is a matter calling for skill and imagination.

The increase in the cost of producing our various products is due very largely to causes beyond our control, e.g., costs of raw materials and packing materials purchased, rates on premises, and carriage charges on goods inwards. Increased wages rates have been offset substantially by greater productive efficiency.

Keeping our factories and mills up to date as far as is economically prudent is always one of our main objectives. Greatham and Middlewich factories are now substantially complete in that respect. Extensions are in hand at Crampton's Manchester factory designed to give more space for the housing of additional machinery and the more economical supply of process heat in one form or another.

The concentration of the production of Scott's products in Mills at Colinton and Cupar only, is proceeding satisfactorily and space made available at Leith, together with that at property recently acquired at Mid-Calder, has now made it possible for John Inglis & Sons Limited to enter the Animal Food Market with the production of specially fortified Pig and Poultry Foods packed and marketed under the trade name "Hy-Line."

The recent acquisition of the businesses owned by Northern Enterprises Limited (referred to earlier in this review) is a further incursion into the Animal Food business and the economic production, by more up to date methods, of "Stamina" Dog and Cat Foods is receiving special attention.

However, bearing in mind the fact that the principal function of the Cerebos Group in the national industrial field, is the production of high quality foodstuffs for human consumption, the necessity of maintaining, and wherever possible, improving the standards of quality and purity of our products, receives our continuous attention. Research work designed to this end is constantly in hand, both by the Company's own staff of skilled engineers and chemists and, as occasion demands, by specially qualified outside agencies.

The Company now owns the following Factories in Great Britain:

The "Cerebos" Factory at Greatham (Co. Durham).

The "Cerebos" Factory at Middlewich (Cheshire).

The "Crampton" Factories at Manchester and London.

The "Scott" Mills at Edinburgh, Leith and Cupar (Fife).

The "Seddon" Works at Middlewich, and the recently acquired "Northern Enterprises" Factories at St Helens and Bootle, in all, ten Factories in Great Britain and, in addition and subject to minority interests, one each in Eire and Australia and two in France.

At all times the greatest possible care is taken to ensure that experience and knowledge acquired in all establishments is brought to bear on development plans affecting any one or more of them.

So far as this country is concerned, rapid intercommunication is essential to efficient operation and a teleprinter service now links our main producing units and the Head Office.

DISTRIBUTION

The vehicles concerned in our delivery services continue to function satisfactorily and we are giving an efficient distribution service to our customers, which is undoubtedly as important as any other aspect of our business. I am glad to report that our Transport Department succeeded in largely overcoming the special difficulties created by the Suez Canal crisis, and it is due to their improvisation that our service did not unduly suffer.

In my remarks two years ago I referred to the necessity of enlarging our Willesden warehouse to accommodate additional traffic. This has involved the absorption of the existing repair shop space and the building of new workshops. These extensions are now complete and we have been able to provide approximately 50% additional storage space, together with adequate facilities for the maintenance of vehicles.

The erection of a new depot at Nottingham has commenced and a suitable site has been found near Glasgow where we propose to erect a large depot from which the needs of most of our customers in Scotland will be met.

We have been able to overcome, to a certain extent, the problem of rising costs by taking advantage of modern methods of storage and distribution. We continue to review constantly our distribution arrangements in the light of changing circumstances in order to provide an efficient and economical service.

PERSONNEL

I am indebted to our Executives, Staff and to our Workpeople for a splendid year's work only made certain by friendly co-operation. I am also proud of the efforts of our Sales Representatives who, more than in most other industries, are our ambassadors of goodwill. The happy association we have with our many trade friends depends very largely on the courtesy, cheerfulness and confidence of our outdoor staff. We are indeed fortunate in having, within the Group, such loyal and enthusiastic teams and I welcome this opportunity of recording our appreciation of their combined efforts.

I am pleased to report that the introduction on July 1, 1956, of the Widows' Pension Scheme was most favourably received and the Company has met its obligation to provide the capital sum necessary to cover the element of Back Service. The welfare of our Employees is of paramount importance and this extension of the pension benefits is a further expression of our efforts in this connection. It is interesting to note that the book value of the Assets of the Pension Fund now amounts to £737,260.

In conclusion I should like to express my thanks for the unfailing co-operation and assistance accorded to me by my Colleagues on the Boards of both the Parent and Subsidiary Companies.

The Report and Accounts were adopted.

Mr W. Arnold Innes, the Director retiring by rotation, was re-elected.

Mr J. R. Richardson, Mr R. R. Seddon, Mr. G. Seddon and Mr G. Chignell, who were elected Directors during the year, also retired and were re-elected.

The proceedings terminated with a vote of thanks to the Chairman.

EVANS MEDICAL SUPPLIES

SETTLEMENT OF NHS PRICES

The Annual General Meeting of Evans Medical Supplies Limited was held on May 20th in Liverpool, Mr Ian Fergusson (chairman and managing director) presiding.

The following is an extract from his circulated statement: Some increase in sales just failed to compensate for reduced margins and increased expenses, so that Trading and Manufacturing profit fell from £373,321 to £362,922, whilst the year's available balance was reduced by £5,173 to £98,091. The proposed transfer of £40,631 to Reserve and the payment of a dividend at the same rate as a year ago, although now on the larger ordinary capital for the full year, will leave £89,179 to be carried forward compared with £86,655 brought in.

The construction work of most of the buildings for The Burma Pharmaceutical Industry is complete and we are now building up to full production.

NATIONAL HEALTH SERVICE

The negotiations with HM Government regarding prices paid for certain proprietary medicines prescribed under the National Health Service have been concluded. The Minister of Health announced this settlement in the House of Commons on April 8th last.

I have been privileged to serve as Chairman of the Negotiating Committee appointed by the Association of British Pharmaceutical Industry to represent the industry, and am gratified that after more than two and a half years discussion of the complicated issues involved, a settlement which seems to be fair to both the tax payer and the industry has been achieved.

A new Subsidiary Company, Evans Medical (Nigeria) Limited, was registered in Lagos on May 19, 1956 to develop our interests in this important market.

We shall continue to wage war on rising costs, which, with a further wage increase just agreed at National level at the time of writing this statement, becomes an increasingly arduous task. Nevertheless we believe that the new trading year will be one of opportunity, particularly in overseas markets which now take nearly one half of our production, and we shall strive to take full advantage of all such opportunities.

The report was adopted and a total distribution of 6½d. per 5s. Stock Unit on the Ordinary Stock was approved.

RICHARD COSTAIN LIMITED

YEAR OF SOLID ACHIEVEMENT

CONTINUED HIGH LEVEL OF ACTIVITY OVERSEAS

SIR RICHARD COSTAIN ON NEED TO ENCOURAGE INDUSTRIAL EXPANSION

The twenty-fourth annual general meeting of Richard Costain Limited will be held on June 12th at 111 Westminster Bridge Road, S.E.1.

The following is the statement by the Chairman and Joint Managing Director, Sir Richard Costain, CBE, which has been circulated with the report and accounts for the year ended December 31, 1956:

You will see from the Consolidated Profit and Loss Account that our Group Trading Profit is roughly the same as last year and that, after crediting income from Trade Investments, our Group Profit before tax is slightly lower. As I mentioned last year, the figures for 1955 included some exceptional items, so that I regard this year's results as reflecting a more solid achievement. The net balance available in Richard Costain Limited (after retaining £72,213 in subsidiary companies) is £101,152, from which must be deducted the provision for Preference dividend and the proposed Ordinary dividend of 10 per cent. This leaves £48,494, to which must be added the balance of profits brought forward of £229,405, making a total carried forward to next year of £277,899.

During the year we have made further capital profits. After applying part of this surplus to writing down investments in subsidiary and other companies we are left with a carry-forward figure of £247,203 in the Parent Company, which is available for distribution as capital profits.

BALANCE SHEET FEATURES

Turning to the Balance Sheet you will see that our current assets have increased by nearly £1 million. The principal factors were in respect of our large opencast coal contract in Northumberland, undertaken by Costain Mining Limited and the Kariba Township contract undertaken by our Southern Rhodesian company. The figures are also affected by the inclusion this year of the assets and liabilities of a property development company in which we increased our shareholding from 50 per cent to 100 per cent. In payment for these shares we issued 20,000 shares in Richard Costain Limited at the market value at that date. The increase in the proportion of contracts undertaken by subsidiary companies has resulted in an apparent drop in net current assets in Richard Costain Limited which is offset by the increase in amounts owing on current accounts by subsidiary companies. We have increased our holding of plant and the majority of this is attributable to opencast coal. Too much significance should not be attached to year-to-year fluctuations in the depreciation figure of the Group: the depreciation rate on plant varies substantially with the length, type, and location of contracts on which the plant is used and the figure of profit before depreciation has little significance.

You will notice that the Group general reserves have been increased from £350,161 to £600,161. This results from a transfer to reserve from the profits of one of our overseas subsidiary companies made in conformity with our policy of providing for future expansion abroad from the profits earned in areas of lower taxation in preference to remitting funds from the United Kingdom.

In February this year we sold our half share in Costain-John Brown Limited to John Brown and Company Limited. As the press announcement stated at the time, it was thought by both parent companies that the future development of Costain-John Brown would be facilitated if that company were under single rather than joint control. Each company was prepared to buy the other's shares, but it was agreed that Costain-John Brown's advancement, particularly in some of its latest developments, would fit in better with the interests of the John Brown group than with those of the Costain group.

AT HOME

For the first time since before the war the building of houses for sale has made an appreciable contribution to the profits at home. In this field our proposal to develop a free enterprise new town at All-Hallows-on-Sea was refused by the Ministry of Housing and Local Government, despite the favourable comment which we received from a substantial body of informed opinion, including such papers as *The Economist* and *The Manchester Guardian*.

On the contracting side the results for the year showed an improvement on the previous year and the volume of work available enabled us to be more selective in the contracts undertaken. It appears most unlikely that these conditions will continue. There has already been a substantial falling off in the smaller type of work undertaken by our area offices and the postponement of industrial development programmes by the credit squeeze will almost certainly result in a lower level of new industrial building work this year. Although it probably takes less time to start up industrial building programmes than to slow them down, the Government will have to give more encouragement fairly soon for the industrial expansion which is so vital to this country if we are to avoid a serious falling off in investment programmes in 1958.

On our large opencast mining contract at Acorn Bank, Northumberland, we completed the excavation of 10 million cubic yards of rock from the initial cut and commenced production of coal. Despite considerable difficulties caused by rock-slips in faulted strata, production of coal has now increased to over 12,000 tons a week, which is the highest output from an opencast site achieved in this country. The persistent slips in the faulted strata involved us in a considerably larger initial excavation and delayed the budgeted production of coal. As a result we have been involved in a larger investment in this contract than we would have liked, but the contract still has another 7 years to run and we hope that it will show a proper return in the end.

The Building Division has maintained its turnover during the year and had a satisfactory order book at the end of the year. Among the more interesting work it has been awarded are the contract for the temporary West London Air Terminal for Air Terminals Limited, acting for British European Airways and also the contract for the British Pavilions at the 1958 Brussels Universal and International Exhibition.

The Civil Engineering Division, United Kingdom, has also maintained its turnover and carried out substantial contracts during the year. Our Soil Mechanics Department expanded the scope of its activities during the year and achieved very satisfactory results. The division has recently been awarded a unique contract for the removal of several million cubic yards of peat and silt by dredging from a new opencast coal site at Westfield, Fife. The contract will be carried out in conjunction with our Dutch associates, D. Blankevoort and Zoon, N.V.

The Property Division.—The new Rent Bill should enable us to obtain in future a fair economic return from our properties, which has certainly not been the position in the past. The policy of your company will be to endeavour to enter into longer tenancies with reasonable increases in rent and clauses to cover future increased costs, rather than to seek substantially higher rents.

Despite the refusal of our proposals for All-Hallows-on-Sea, which I have mentioned, the division has sufficient developable land to maintain its present turnover for some time to come. Apart from a short period last year when Building Society finance tightened temporarily, our estates have experienced a steady demand for houses, which has continued this year. The division have also been engaged in the provision of new office accommodation and it is hoped that some of this will begin to show a modest return in 1958.

Costain Concrete Company Limited.—Substantial orders have now been placed with our Scottish factory for the improved type of concrete sleeper and both Scottish and English factories have increased their production of prestressed concrete products, including some large orders for bridge beams for the new road programme. Flooring programmes, on the other hand, have stabilised as a result of the credit squeeze.

WORK ABROAD

Work abroad continued at a high level during the year. It is perhaps worthy of note that over half your company's turnover at present arises from work overseas, and since contractors are the spearhead of exports, your investment in this company is making a very substantial contribution to the country's export drive.

Nigeria.—Costain (West Africa) Limited continues to show satisfactory results and to increase its reputation. The Ebute Metta Causeway contract, undertaken by Richard Costain Limited, has made satisfactory progress despite difficulties caused by the nature of the ground.

Rhodesia.—The Kariba Township contract has made excellent progress and will almost certainly be finished well ahead of schedule. We have been most gratified by the favourable comment which this contract has received in Rhodesia, the United Kingdom and elsewhere, and there is no doubt that

our Rhodesian companies have added to their laurels.

Middle East.—Your company increased its activities in Persia during the year, taking advantage of the considerable experience it had gained there before 1951, but international competition has increased considerably and it is doubtful whether we will be able to regain the share of work which we enjoyed previously. In particular some projects are financed by loans from other countries, the terms of which oblige the borrower to employ contractors selected by the tender.

Canada.—On the contracting side we completed our more unsatisfactory contracts during the course of the year. On the property and development side we are, with our Canadian partners, A. E. Le Page Limited, proceeding with plans to develop 1,600 acres west of Toronto. We have formed a company, Meadowvale Developments Limited, to undertake this venture and have issued some of the shares in Canada to assist in the financing. If the expansion of the Canadian economy continues at the present rate, we consider that the return from this company should be good, although work is not due to begin until next year and it is unlikely that any material results will be shown for two or three years.

Malta.—The Soil Mechanics Department have been engaged on a contract in Malta to establish the best method for increasing the Island's underground water supplies. Operations are proceeding satisfactorily and will continue well into 1958.

FUTURE PROSPECTS

The results for 1956 have proved better than appeared likely when I reported to you last year and I think that the improvement will be maintained in 1957. Looking further ahead is much more difficult. I am increasingly confident that we have, as a group, consolidated our position after the considerable expansion of the last few years. On the other hand, we are facing increased foreign competition abroad and the prospect of a falling off in capital expenditure at home unless the Government take action in time. I would like, too, to feel more confident than I do that the private building of property for sale and rent was finally out of danger of unwise political action.

STAFF

Your directors wish once more to place on record their appreciation of the enthusiasm, loyalty and hard work of the staff, who have had to work in all kinds of arduous conditions at home and overseas to make these results possible.

BOARD CHANGES

In February this year we appointed Mr H. F. R. Catherwood to fill one of our vacant seats on the Board and we propose to ask you at the Annual General Meeting to ratify this appointment. Mr Catherwood joined us as Financial Controller. He was appointed Secretary in 1954 and General Manager in 1955 and has proved himself a great asset to the company.

ELLIOTT BROTHERS (LONDON) LIMITED

A YEAR OF PROGRESS

MR R. E. F. DE TRAFFORD'S STATEMENT

The fortieth annual general meeting of Elliott Brothers (London) Limited, will be held on June 14th, in London.

The following is an extract from the statement by the Chairman, Mr Rudolph E. F. de Trafford, OBE, circulated with the report and accounts:

In October of last year your Company made an offer to acquire the entire capital of Associated Insulation Products, Limited (AIP) on a share-for-share basis and now owns the whole of the capital.

The year 1956 has been one of further progress for the Automation Group—the Elliott Group—the turnover of which has again increased. The profit before tax rose from £260,685 in 1955 to £292,818 in 1956.

I am glad that the hopes I expressed in last year's statement have been realised and I am hoping for continued improvement in the current year. The Order Book has continued to expand and is spread over the wide range of our activities.

We continue to pursue our aim of developing our interests in Automation. This is a vast new field, and although it takes time to develop, we can foresee that in the next few years applications of these modern automation techniques will grow at an increasing rate and will bring with them a very large demand for all kinds of automation equipment.

Arrangements were entered into with The National Cash Register Company Limited, under which that Company would market in this country our Digital Electronic Computers for all business applications.

Your Company continues to expand its interests in the field of scientific and mathematical computers. Among our new activities in automation I should like to refer to our development in Electronic Industrial Weighing.

Our Nucleonics Division is engaged on contracts for the instrumentation of Nuclear Power Stations and has been entrusted with the design and construction of the control systems and instrumentation for the nuclear-powered submarine "Dreadnought." Our Aviation and Guided Weapons Divisions are very active.

The interests of the AIP Group fall mainly within two categories: one consists of subsidiaries in this country engaged in the manufacture of electrical insulation materials, glue film and other resin films, and the other includes merchanting activities at home and overseas and mica mining.

Taking all the factors into account, your Board feel that, subject to unforeseen circumstances, the prospects for your Company in 1957 continue good and the indications are that your Company's long-term plans are maturing in the manner hoped.

The total shareholders' funds, as shown in the Company's Balance Sheet, exceed £4 million.

The Profit and Loss Account shows the profit of the AIP Group attributable to your Company, namely, £272,798 before tax and £117,890 after tax. The corresponding figures for the Group as a whole are £565,616 and £240,542.

At the time of the acquisition, both your Company and AIP paid interim dividends of 10 per cent, less tax, on their Ordinary share capital.

Your Directors now recommend the payment then foreshadowed of a final Ordinary Dividend of 10 per cent, less tax, which compares with 17½ per cent for the previous year on the capital then in issue.

BEYER, PEACOCK & COMPANY, LIMITED

(Locomotive Builders and General Engineers)

STRONG AND LIQUID POSITION

MR HAROLD WILMOT ON WIDESPREAD ACTIVITIES

The annual general meeting of Beyer, Peacock & Co., Limited, was held on May 21st in London, Mr Harold Wilmot, CBE (Chairman and Managing Director) presiding.

The following is an extract from the Chairman's circulated Review:

The accounts continue to show a strong and liquid position with revenue reserves further increased.

Trading conditions were not easy. For example, in December, 1955, we secured an important locomotive order from the South African Railways Administration for 35 powerful Beyer-Garratt Locomotives. An essential condition of the contract was a delivery commencing in seven months. On the face of it this seemed impossible. Only by straining to the utmost our friendly relationship with suppliers and by the adoption of unconventional methods in the manufacture of certain essential components were we able to meet our obligations. The first locomotive was in steam and under test at our Manchester factory one month before contract date and we were happy to have the General Manager of the South African Railways and Harbours at Manchester to witness that achievement. We are most grateful to all who contributed towards the success of that exceptional exercise. This is a small example of what can be done in the export field when men of goodwill co-operate in a determination to achieve the apparently impossible.

For many years the delivery record of your Company has been almost free from blemish. It is good to record this—especially in view of public comment which has often been critical of British Exporters in this respect. Shareholders will appreciate that efforts such as the one described are, however, costly and the direct profits from this contract naturally suffered somewhat as a result. Nevertheless, I believe that in relation to the goodwill maintained and strengthened the cost was relatively trivial.

TRADING ACTIVITIES

The results of the year are on the whole fairly satisfactory. Such small decline as there was is likely to be recovered in the current year.

Metropolitan-Vickers — Beyer Peacock Limited (Diesel Electric and Electric Locomotives) continued to make satisfactory profits and have a reasonable forward order book.

Our Subsidiary Companies have been somewhat re-organised for greater convenience of control. Some new models have been introduced and indications are that they will sell well in normal trading periods.

There are indications that subject to no further industrial or political disturbance our factories will be operating at satisfactory levels throughout 1957. Profit margins should also be reasonable.

Your Board consider it desirable that the ordinary capital of your company should be made transferable in units of 5s., so as to increase its marketability. The preference capital of the Company will continue to be transferable in £1 units.

The report and accounts were adopted and the proposed final dividend of 6 per cent, plus a bonus of 6 per cent, making 16 per cent, less income tax, for the year, was approved.

BAH LIAS RUBBER ESTATES

SIR ERIC MILLER'S SPEECH

The forty-sixth annual general meeting of The Bah Lias Rubber Estates, Limited, was held on May 17th, in London.

Sir Eric Miller, chairman, in the course of his speech, said: The crop harvested on the Sumatran estate during the year under review was 2,780,671 lb. A satisfactory standard of upkeep and cultivation has been attained.

On the main division of Bah Lias estate approximately 259 acres were replanted in 1956 with modern high-yielding material. The young plants are reported to be well established. This year preliminary work is already under way on the replanting of a further 200 acres and a new clearing of approximately 60 acres. The cost is being met out of unremittable rupiah, and in due course this expenditure will enable us to claim the release of a corresponding amount from the compulsory deposit with the Bank of Indonesia.

The rupiah profit, after Indonesian Company Tax and provision for remittance levy, was Rp.1,314,817. Approximately Rp. 1,520,000 has been remitted since October 31st, yielding £47,348; under current regulations Rp. 596,000 should eventually be remittable in respect of 1955/1956, though it is impossible to say when a permit will be granted.

PROFIT AND DIVIDEND

The parent company's sterling accounts show that the year's sterling profit is again mainly derived from our investment in Kulai Rubber Estate, Limited, only small balances in respect of past years having been remitted from Indonesia during the year. The balance on profit and loss account after taxation is £27,506 and the directors recommend the payment of a dividend of 20 per cent, less tax at 8s. 6d. in the £, absorbing £29,146, leaving £20,189 to be carried forward against £21,829 brought in.

This is the right time to determine the minimum sterling working capital which should be retained by Bah Lias. After reviewing the whole position the Board reached the conclusion that the Company's resources in London permit the repayment to members of the Share Premium Account, equivalent to approximately 4.41d. per share, together with a capital repayment of 1s. in respect of each of the present 2s. shares, both free of tax, which together will absorb £173,365.

Indonesia's financial condition has been rapidly deteriorating and it yet remains to be seen whether their government are capable of stopping the rot. Our estate there is a potentially valuable asset which we are keeping in good shape and which is helping the economy of the East Coast of Sumatra. I want to make it quite clear to all shareholders that we have sent none of our sterling resources to Indonesia since the war, and that we have no intention of doing so pending a complete transformation in the situation there, which is certainly not in sight at the present time.

The report was adopted and the proposed capital repayment approved.

SPICERS LIMITED

(Paper Makers, Paper Merchants and Manufacturing Stationers)

FACTORS AFFECTING RESULTS

CONFIDENCE IN LONG-TERM FUTURE OF PAPER TRADE

MR LANCELOT SPICER ON NEW DEVELOPMENTS

The sixty-ninth annual general meeting of Spicers Limited will be held on June 14th in London, Mr Lancelot Spicer, DSO, MC (the Chairman), presiding.

The following is an extract from his circulated statement:

Our profits for the first half of the year 1956, £454,949, which were announced in October were similar to, though a little higher than, those for the second half of 1955, £419,136. The figures for the second half of the year 1956 are, however, not so good and at £296,465 show a marked diminution in profits. The total profit of the Group for this year before taxation is therefore £751,414.

The final result is not as good as your Directors anticipated when they made their forecast as to the probable dividend prior to the Rights Issue in the Spring of last year. Nonetheless, after careful thought, your Directors do not propose to depart from their forecast and are now recommending a final dividend of 6 per cent, making 10 per cent for the year.

During the year 1956 the Paper Trade has inevitably been affected by the economic situation in this country, directly in the early part of the year by the strike in the Printing Trade in London, indirectly later by the decline in the Motor Industry, by the increase in advertising allocations to ITV; combined with the Chancellor's request to the banks to restrict credit facilities this has, throughout the year, created a general desire to reduce stocks—an operation which always takes longer than is expected due to the time taken to absorb previous commitments but which at once curtails demand.

Although I am being advisedly cautious as to the immediate future prospects I should like to assure you that I am not unduly pessimistic. The long term future of the Paper Trade must be good, with the rising standard of living throughout the world and the increase in education. We may, however, have to go through a period of two or three years when production temporarily exceeds consumption, and these are the times when the skill of management is fully tested.

During the year a Rights Issue of £1,500,000 at par was made to the Stockholders. The issue was a complete success. The amount of the issue has been used for reducing bank overdrafts, for replacement and general development of plant and buildings and as investment in additional working capital.

CONSISTENTLY HIGH SALES LEVEL

The sales of the Group have remained consistently high and at £21,960,000 are only £300,000 below those of 1955.

In the home market the merchanting side of our business has continued profitably, though on a reduced scale compared with a year ago.

An interesting feature of your Company's development in 1956 is the acquisition of the right to operate in this country under licence from an important Italian industrial concern a patented process developed by them of "bi-ondulating" paper and other materials. This can be used for producing an attractive and unusual packaging material which will be marketed under the name of CARBION. It had a favourable reception when exhibited at the Packaging Exhibition in January of this year. Production in a new factory at Loughton, Essex, has just begun.

The Chairman then reviewed the progress of the main Subsidiaries in the Group at home and overseas, and continued:

Our Sawston Paper Mill (Edward Towgood and Sons Limited) which has had much attention during the last few years, is today in good order. A considerable part of the output of this mill is on speciality industrial papers, for which we have developed a good trade. We are developing this market whilst not neglecting ordinary commercial papers.

Our Board Mill at Retford continues to prosper. Good management has increased the output of this mill without any spectacular additional investment in machinery, and consequently we have been able to maintain profits in a competitive market.

British Waxed Wrappings, an important subsidiary group, has had a good year. Their Canadian Company, acquired in 1955, is making a valued contribution to their profits. It is a tribute to the management of British Waxed Wrappings that despite all the trading difficulties the group of companies had a very satisfactory year.

In Australia the activities of the Company continue to expand and, as forecast in an earlier statement, we have proceeded with the construction of a new factory and warehouse premises at Sydney and this fine new building will come into operation about the middle of this year. This has enabled us to re-house and expand our existing manufacturing activities in New South Wales and also to provide improved storage and warehousing facilities for our paper merchanting side at reduced costs.

Spicers (South Africa) are still handicapped by import restrictions and particularly by government policy in issuing import licences whereby in many cases the licence for paper which normally we import has now been given direct to our customer. Our South African Company has in the past made substantial profits and we believe in its future, but it is going through a period of reduced profit making.

Our Export Company which trades in all those areas overseas where we have not got our own resident company has maintained its position. During the year we have opened our own office in Hongkong in which area we have previously traded through agents. I referred last year to our business as overseas agents for various types of printing machinery. In this connection it may be interesting to note that we have accepted the agency in the Far East for the Linotype Machinery Company. We believe this will be a mutually valuable connection. In Canada our new warehouse is operating successfully and our market there is steadily increasing.

West Africa, which is a growing area, is commanding our very close attention, and our efforts are bringing a proper reward.

In Latin American countries, within the limitations of exchange facilities, we are making satisfactory progress in most areas.

THE FUTURE

Referring to the short-term future of the Paper Trade throughout the world the prospects for Europe and those export markets served from Europe seem reasonably steady with a tendency towards temporary over-production due to new plant coming into operation. There are also two possibilities which must be watched carefully—reduction of armaments and the European Free Trade Area. Regarding the first, whilst it may have some direct influence on specialised sections of the packaging and wrappings side of the trade in the main the effect will be indirect. As for the European Free Trade Area no plan of this kind, beneficial as it may be to the country as a whole, can be introduced without causing difficulties in some directions. In the case of your Company the distribution side should be able to adapt itself readily to whatever may be the demands of the market.

This year has seen the expansion of our distributing organisation in the arrangements made with three important paper mills, the extension of our conversion activities in Australia and our entry into the packaging field in the production of Carbion. These ventures together with the normal demands of every one of our trading units will keep us well occupied during the coming year—but your Board will always be ready to examine any new developments which may seem suitable for addition to your Company's activities.

OLYMPIC PORTLAND CEMENT CO., LIMITED

The forty-sixth annual general meeting of this company was held on May 22nd in London.

The Honourable Gerald H. G. Williamson, chairman, in the course of his speech, said: The accounts cover a period of nine months from April 1st to December 31, 1956—a period in which some major decisions were taken, the most important of which was to double the kiln capacity at Bellingham from one to two million barrels per annum.

It was resolved to increase the Authorised Capital from £500,000 to £1 million. Consent of HM Treasury to an issue of 500,000 new shares of £1 each at a price of 30s. per share having been obtained, Renounceable Provisional Allotment letters were posted to shareholders on December 28, 1956, and upwards of 97 per cent accepted the offer.

I concluded my remarks at the last meeting by telling you that we had contracts which with the normal business should make the production during the period to December 31, 1956, reasonably satisfactory. These expectations were not fulfilled.

An increase in production costs was inevitable because of lower production, while lower deliveries meant lower profits. Trading profits amounted to £146,655 before taxation. For the twelve months to March 31, 1956, profits before tax were £219,505. The increase in cement prices which became operative in March, 1956, has, however, had the effect of offsetting the increase in the per-barrel costs for the nine months to December 31, 1956, and of leaving a little over. I had the privilege to visit your plants last month and I look forward with optimism to the future. The report was adopted.

G. & J. WEIR LIMITED

ANOTHER YEAR'S EXCELLENT RESULTS

THE HONOURABLE J. KENNETH WEIR'S STATEMENT

The sixty-third annual general meeting of G. & J. Weir, Limited, will be held on June 11th at Glasgow.

The following is an extract from the circulated statement by the chairman, the Honourable J. Kenneth Weir, CBE, for the year 1956:

This Statement records another year's excellent results, a proposed change in our Capital structure, an important acquisition to our Group, and heavy demands for our products, resulting in record Order Books.

The Consolidated Profit and Loss Account shows that the trading balance for the year is £3,338,752. This is a reduction of £85,346 compared with the previous year, which was a record for your Group. The reduced earnings are the result mainly of a drop in output of the Parent Company, coupled with the general incidence of higher costs.

AN IMPORTANT ACQUISITION

Wm. Simons & Company Limited.—During 1956 your Board had under particular review the capacity available in the Group to undertake the manufacture of heavy plant, such as evaporating and distilling plants for the production of fresh water from sea water or some of the equipment required for nuclear power plants. Installations such as these involve the machining and erection of very large units, tying up heavy machinery and assembly space for considerable periods. Moreover, there has been a substantial increase in the size of modern turbo-alternators and their ancillary plant such as feed heaters, de-aerators and boiler feed pumps, which are our products. We have also over the past few years secured several contracts for land condensing plants, and here we have been compelled to sub-contract the manufacture of the condensers themselves, as our existing equipment has not been large enough to deal with them.

All these considerations pointed to the desirability of acquiring an existing business having heavy machining and erecting capacity, and in addition having unused land for future development. These requirements appeared to be met in Wm. Simons & Company Limited, the well-known and long-established Shipbuilders and Marine Engineers, of Renfrew. We, therefore, decided to make an offer to purchase the Company, and, as Stockholders will have seen from the press, our offer was successful.

On the shipbuilding side the Company has at present on order a large suction hopper dredger for the Calcutta Port Commissioners, two diesel electric fish factory trawlers and two diesel electric paddle tugs for the Admiralty, and they have recently received a further order from the Admiralty for two boom defence vessels. This order book should ensure continuity of work for a reasonable period, and under today's conditions we would expect no difficulty in keeping the yard employed for some time.

SURVEY OF PERFORMANCE

G. & J. Weir, Limited.—As mentioned previously, the output of the Parent Company fell somewhat short of the record figures of the preceding two years. This reduction was mainly due to the completion in 1955 of the large individual contracts for distillation plants for Kuwait and Aden which so materially contributed to our output in 1954 and to a lesser extent in 1955.

On the other hand, our sales were exceptionally high. In my Statement last year I referred to the considerable increase in orders which began during the latter half of 1955. This agreeable state of affairs continued throughout 1956 so that by its end our Order Book had expanded to a figure well in excess of the previous record set up in 1952.

Last year I referred to the receipt of an order from the Island Council of Aruba for the world's largest plant for distilling fresh water from sea water—a total production of 10,000 tons of fresh water per day, the contract being valued at a figure of £1,500,000. Later in the year we received an order from the Island Council of Curacao for a plant for the combined production of fresh water and electricity. The value of this order was £1,400,000.

While the two large distillation plant contracts naturally take first place in a record year of orders, we enjoyed a year of high demand for our ordinary products.

Our research work continues to increase; the new Research building has been completed, and the extra space has enabled us to increase our staff and equipment. Development has proceeded along the lines I indicated last year.

Drysdale & Company, Limited.—The output from the Yoker Works has again been considerably increased, with the result that we were able to have another record year.

As I indicated last year, the size of units for Power Stations, Graving Docks, etc., continues to grow, and we have found it necessary to provide heavier building and plant to cope with this work.

The Argus Foundry Limited.—In 1956 there was an increase in the level of output, although during the last quarter demand lessened somewhat and production fell accordingly. In total, however, earnings showed an improvement over the previous two years.

Zwicky Limited.—Output during the year was maintained at a high level. The new factory and office buildings have been completed and are now occupied.

Weir Housing Corporation Limited.—I am pleased to report that the results for 1956 were very satisfactory indeed. The output of houses at 3,250 was higher than the previous year, and earnings were also at a higher level. It is gratifying to note that, of the total Local Authority houses completed in Scotland during the year, 13 per cent, or one out of every eight, was a Weir House, so enabling us to maintain our pre-eminent position in Scottish building.

Competition for housing contracts in 1957 is keener than ever before, but it is hoped that the output for 1957 will be maintained at the present level.

Weir Valves Limited.—The output during the year turned out to be better than anticipated and was maintained at the 1955 level. We have completed various large special contracts and have produced an increasing number of new standard designs.

Currently we are engaged in designing valves for use by the Oil Industry, and it is anticipated that production will commence on a large order towards the end of 1957.

BLOCK & ANDERSON, LIMITED

(Manufacturers and distributors of Office Machines and Equipment)

SALES AGAIN A RECORD

MR W. E. BLOCK'S STATEMENT

The twenty-sixth annual general meeting of Block & Anderson, Limited, was held on May 20th at the registered office, 58-60 Kensington Church Street, London, W., Mr W. E. Block, chairman and joint managing director, presiding.

The secretary (Mr W. Crosskey, FCWA) read the notice convening the meeting and the report of the auditors.

The following is the chairman's statement circulated with the report and accounts for the year to November 30, 1956:

The growth of your company continued during 1956 and the record sales of the previous year were again exceeded. Due to the constantly rising costs of production, sales and service, which could not always be passed on to our customers, the group profit, before taxation, is approximately the same as in the previous year, namely, £231,962 as compared with £235,793.

In addition to the interim dividend of 10 per cent paid last November, your Directors propose a final dividend of 25 per cent. less tax. This represents a total distribution on the Ordinary capital of £61,250 before tax as compared with £54,250 in the previous year. The balance of undivided profit to be carried forward in the Consolidated Balance Sheet after allowing for the above distribution, the dividend on Redeemable Preference shares and the scrip issue, dated March, 1956, of £56,250, amounted to £230,135 against £214,420 brought in.

NEW BRANCHES

At home we opened three more branch offices and now have twenty-two. In Canada new branches have been started in Halifax and Calgary, which brings the number of branch offices in that country to five besides the Head Office in Montreal. Our South African subsidiary showed particularly good results within the possibilities allowed by import restrictions.

The export of our Banda Spirit Duplicating and Systems machines also showed an increase. We actually exported 65 per cent of the total number of Banda machines sold last year and these went to 89 different countries. In the USA we concluded an Agency agreement with a well-known firm and exhibited our Banda machines for the first time at the New York Business Show, where they attracted considerable interest.

PROPOSED "RIGHTS" ISSUE
