## Service in step with science...

The consistently superlative quality of Walpamur Quality Paints is maintained by the application of scientific research, and by rigorous laboratory and practical tests at every stage of manufacture. With Branches throughout the United Kingdom, and Factories and Agencies overseas, The Walpamur Co Ltd matches the quality of its products with an unrivalled service.

## WALPAMUR QUALITY PAINTS

*—the standard by which others are judged*

**THE WALPAMUR COMPANY LIMITED**

**DARWEN & LONDON**

Paints, Enamels and Varnishes for every possible need

OVERSEAS FACTORIES IN CANADA, AUSTRALIA, SOUTH AFRICA, EAST AFRICA AND EIRE

In one office, in every office, the new TEMKON floor-mounted room air-conditioner works silently, unobtrusively, keeping air fit for breathing, keeping staff at peak efficiency all day long. . . .

The cost? With a TEMKON in every room, the cost is still less, by 30-50 per cent, than that of a central station plant.

# TEMKON

**TEMPERATURE LIMITED**  
Burlington Road, London, S.W.6

**Makers of the world's quietest  
room air conditioner**

## FLOOR-MOUNTED ROOM AIR CONDITIONER

Please send full details of the TEMKON floor-mounted room air conditioner.

LEYLAND BEAVER

## WE NEVER STOP LEARNING AT LEYLAND

From long years of experience, the Leyland Group have learnt how to give their trucks and buses everything the big 'uns should have—power, economy, guts. But even at their present high level of performance, we still aim for better things. If a Super Comet now speeds down a motorway at 70 m.p.h., then we want 80 m.p.h.—without sacrificing economy or safety. If a Claymore averages

20 m.p.g. in heavy traffic, then we're after 22-24 m.p.g. And if a Super Constructor hauls gross train weights of 150 tons—let's plan for 200 plus. We'll do all this—and more. For, although the knowledge gained from sixty years of experience at Leyland has brought us outstanding leadership and success, we never intend to stop learning.

## PODBIELNIAK

the versatile  
liquid-liquid centrifugal extractor  
*simplifies the most difficult extraction problem*

### CHECK THESE IMPORTANT FEATURES:

- ☐ Equilibrium reached in minutes.
- ☐ Rapid response to changes in flow rates, solvent ratios and interface positions.
- ☐ Variable inlet positions for the handling of a wide variety of systems in a single extractor.
- ☐ Modification possible for phase separation of co-currently mixed liquids.
- ☐ High degree of self-cleaning.
- ☐ High capacity, compact size.

The extremely effective centrifugal rotor of the Podbielniak extractor accomplishes multi-stage counter-current extraction even though the liquids are in contact with one another for only a fraction of a minute. This means that you can extract liquids of small density differential, those easily emulsified, and those of high viscosity, with no difficulty.

Improve your products and reduce costs while modernizing your plant with a Podbielniak extractor. Make use of our years of experience in solving liquid-liquid phase separation and extraction problems. Write for latest data and, if possible, send us information about your specific needs.

VOLUME CXCIX - NUMBER 6138

# A Year for Tax Reform

WHEN the Chancellor presents his budget estimates next Monday, he can expect for the first time to be drawing in over £6,000 million a year of taxes. Most sober judges of the country's affairs agree that the threat of inflation will make it unsound for him to remit any of this monstrous sum, but the economy's lack of drive makes it essential that he should reshuffle it.

The extent of the reshuffle will be determined by his degree of political courage and administrative drive, not by any shortage of relevant ideas. The first principle for Mr Lloyd should be to increase taxes on the ways in which the British people spend their money, but to reduce taxes on their efforts to earn it. Unfortunately, it seems increasingly unlikely that he will dare to introduce one of the two wide-ranging taxes which some other countries have, and which can yield much more revenue from consumer spending—in a much more sensible manner—than Britain's present system of purchase tax: we are unlikely to see the imposition on Monday of either a flat rate turnover tax or else a flat rate sales tax on all retail sales (including services). But at any rate it must be assumed that, in some form or another, indirect taxes this year ought to go up.

One of the most obvious candidates here, even in a budget that is only cautiously reformatory, is a betting tax. At present the Exchequer draws only £40 million a year from betting duties—wholly from football pools, greyhound totes, and bookmakers' licences on greyhound tracks. All forms of off-the-course betting have remained untaxed because so much of it has taken place illegally on street corners, where even the police—let alone the inland revenue—had no real hope of tracing it. Now, however, cash betting is to take place in licensed, controlled and listed shops; a new source of potential revenue has been served up for the Chancellor on a platter. A second favourite for higher imposts must be cigarettes. Consumption of them is booming, but, because of the switch to tipped cigarettes, tax revenue from them is not. There is a strong case for recouping the revenue that the Treasury has lost from all those pieces of discarded cork-ends—perhaps henceforth for taxing cigarettes by number instead of by tobacco weight.

The next candidate for an increase—much though many people will hate this—must be purchase tax. The best way of increasing the yield from this would be to bring in some goods which are at present not taxed at all; say soft drinks, sweets, ice cream, other manufactured foods—and perhaps to start taxing some services such as laundries, dry cleaning and restaurant meals (particularly now that nearly all restaurants are soon to benefit from the grant of a drink licence). This would be the small beginning of a move towards a general sales tax. But if the Chancellor runs away from this, then he will seriously have to consider raising present purchase tax rates, perhaps particularly those in the 5, 12½ and 25 per cent ranges. The Economic Survey suggested that the present excess of consumers' purchasing power makes some price rises very likely, and expressed concern about the effect that this could have on export prices. A moderate rise in purchase tax rates now might merely siphon into the Exchequer money that would otherwise bid up domestic prices anyway, and it would have the great advantage that this rise would not apply to goods destined for export.

It will be disappointing if the Chancellor cannot raise more than £100 million of new indirect taxes in this way. If he were then to make the two concessions to

the upper income groups that have been most eagerly pressed upon him—to exempt earned incomes below £5,000 a year from surtax (cost about £55 million a year), and to say that working wives' incomes below £2,000 a year should not be added to their husband's incomes for surtax purposes (cost about £5 million)—he would be granting reliefs costing about £60 million in a full year; they would cost considerably less than this in 1961-62 itself, because surtax payments are generally made a year in arrears. A budget in which personal tax changes were confined to these rises and these reductions would therefore have a significant net deflationary effect for 1961-62, which may be what he needs.

### A Reshaped Income Tax?

**B**UT it would also be a budget of only miniscule tax reform. The fiscally historic decision that one would really like Mr Lloyd to take in 1961 would be to prepare to merge income tax and surtax together, with a big reduction in the latter. It is unlikely that in the year ahead there can be many reliefs in income tax itself; if the Chancellor—by raising indirect taxation—did provide himself with the £50 million a year needed to reduce the “standard” 7s. 9d. to 7s. 6d., one would prefer him to concentrate on improving allowances rather than on making this straight 3d. cut in rates. The allowances that might have the best case for improvement this year are the allowance for older children; possibly the wives' earned income allowance (a substantial rise in this at all levels might be an alternative to freeing husbands from paying surtax on their wives' earnings); and, finally, of course, the ordinary earned income allowance itself. The trouble is that any improvement in this last, as it is at present calculated, is very expensive. When Mr Butler raised the earned income allowance to its present level of 2/9ths in 1952, he said that he hoped to push it up to one quarter as soon as possible; but no Chancellor has ever felt able to do this because it would now cost well over £100 million a year.

The best way in which the Chancellor could mitigate this problem, and also proceed to solve his surtax poser, would surely be by replacing the whole system of “income tax rates plus earned income allowance” by the much more logical concept of a separate “earned income tax rate.” At present a man whose marginal rate of tax is the so-called standard rate of 7s. 9d. in the £ pays that rate only on unearned income; if his income is earned (as most people's is), he pays the absurd rate of 6s. 0½d. in the £. It would be easy, even if also not very dramatic, to reduce this to 6s. this year—and simultaneously to knock the odd fraction off the so-called reduced rates (at present nominally 1s. 9d., 4s. 3d. and 6s. 3d. in the £; but really, for earned income, 1s. 5½d., 3s. 3½d., and 4s. 10½d.). One advantage of this change would be that some people might at last begin to be able to work out what the rate of tax on their marginal income really is.

Another and massive advantage is that the Chancellor would then have his way eased to surtax reform. The system of separate assessments to surtax could be abolished, but as people's earned taxable incomes rose above, say, £4,000, the earned income tax rate of 6s. in the £ could go up—so that surtax could be PAYED (i.e., collected at once); this quicker collection would provide the revenue with some compensation for the fact that the top effective marginal rate should certainly no longer rise so steeply and so exorbitantly to 17s. 9d. in the £

(i.e., 89 per cent) on earned incomes above £15,000 a year, as it does now. There would admittedly be considerable transitional problems in thus suddenly turning surtax on earned income from a tax that is collected a year in arrears, by a separate branch of the inland revenue, into an ordinary branch of the income tax; the administrators would certainly need at least a year's grace to make the change (and would probably say that they need much more). But this need not be a disadvantage in the circumstances of this year.

Suppose, as a deliberately over-simplified example, that the Chancellor announced that surtax on future earnings should be exactly cut in half. Surtax receipts this year, at the old rate on last year's earnings, would be unaffected. Even in 1962-63 the Exchequer need not lose much, because although people would start paying surtax at only half rates on 1961-62 earnings, some of them would also start having the equivalent of surtax (the new graduated income tax) directly PAYED—also at half present rates—from their 1962-63 earnings. The effect on the revenue would therefore not be felt until 1963-64. In order to give higher paid executives greater incentives to mobility and risk-taking, Mr Lloyd should be urged to be really bold about this; the sweeping target one would like to set him would be to reduce surtax yield by about three-quarters (i.e., by £150 million or so a year) by 1963-64.

### Capital Gains

**I**F Mr Lloyd did this, it would be right to consider seeking compensation by levying other forms of taxation on the rich, which should also be of a sort that would start yielding revenue mainly after 1961-62. Here one plunges at once into a problem where reasoned economic examination all too often becomes overlaid by emotional political argument. The first important point to make about a possible capital gains tax is that only a stagnationist should think that capital gains, whether they accrue to Mr Clore or anybody else, are a bad thing. They are a good thing, a reflection of increasing national wealth, but there is a logical case for arguing that like the other good things of life they ought to be taxed. The second, and related, point concerns the sort of gains on which tax should be levied. There has been some argument recently that it should be levied only on short-term gains, in order to attack “speculation” in land and stock exchange securities. If this implies that the tax on all forms of speculation should be at a penal rate, it is economic nonsense; it would be unfortunate if anybody who held a piece of land undeveloped for two years found that he paid much less tax than somebody who resells it for productive use within six months.

On land sales, the right incentive to provide would be to try to make people sell empty sites quickly. On stock exchange gains, by contrast, there is a stronger case for discriminating in favour of the long-term investor; it is said that the Scandinavians do this better than the Americans. Other forms of capital gain provide even knottier problems. When owner-occupiers sell their own houses in order to buy houses in other districts (also at today's inflated price levels), it would be absurd to impose a penal tax that would become an impediment to mobility; but the fact that almost all homeowners have made a capital gain in recent years provides one more argument against abolishing or reducing the Schedule A property tax. A simpler system for making claims for repair charges would be a different matter.

The yield on a capital gains tax in any year would be practically impossible to calculate in advance. Last year, for example, there were slightly more capital losses than capital gains on the London stock exchange; the total value of quoted securities existing at the beginning of the year had fallen by some 4.8 per cent before the end of it. In general, the commonsense attitude is not to exaggerate the advantages that could accrue to the revenue from this necessarily complicated tax; but also not to exaggerate its difficulties and not to deny that the tax would be worthwhile if it is the necessary political price of enabling really large reliefs in surtax to be made. One minor argument in favour of the tax is that it is probably the only way in which the Exchequer can finally win its perennial battle against dividend stripping and the like; unless there is a capital gains tax there may well have to be another instalment of—possibly retrospective—action against newly discovered methods of income tax avoidance next Monday.

### Company Tax Reform

**S**o much for personal taxation, which—on the proposals above—would actually be increased slightly in 1961-62, but with the promise of reductions in future years. In the field of company taxation there is need for a similarly major reform in tax collecting methods, but once again without giving anything net away in 1961-62. There has been much talk recently about the desirability of replacing profits tax and company income tax (which is paid at the standard 7s. 9d. rate) by a single corporation tax, on the ground that the occasions when it is right to reduce personal income tax are not always those when it is right to reduce companies' income tax; as politicians are always eager to do the former, but not the latter, this is not an argument with great intrinsic appeal. But if the earned income tax rate was henceforth made an entity of its own, so that the present “standard rate” was applied only to unearned income, the case for a single corporation tax would become stronger; and it would become stronger still if it were made part of a major system of company tax reform. The objects of any new system should be to penalise old-fashioned methods of production and wasteful use of labour, and to give greater incentives to domestic investment and to exports.

The best method might be to impose a payroll tax (i.e., a surcharge on employers' national insurance contributions, which would have the advantage of adding to revenue immediately), but to compensate for the effect that this would have in increasing industrial costs by increasing investment allowances (or else speeding up depreciation allowances), and by levying a new corporation income tax in place of—but at a lower rate than—the present company income-tax and profits tax combined. It would be a good thing if Mr Lloyd could then adopt Lord Amory's recent suggestion and “look again” at the question of a possible variation of this corporation tax “related to the turnover of export business.” There are ways of giving some tax advantages to exporters without running foul of Gatt, especially if Mr Lloyd's tariff policy then proceeded to put Britain in Gatt's good books.

### Down with Tariffs

**T**HERE is a strong case for cutting Britain's protective tariffs on imported goods some time this year. The fiscal loss from cutting these in half would not be great (the yield

from tariffs under the Import Duties Act was £136 million in 1959-60); the nonsense figure of £1,375 million from all customs duties, which has been quoted in the popular press in this context, includes more than £1,200 million a year from tobacco tax, petrol tax and tax on imported liquors). So long as Britain remains a high tariff country, a large part of our industrial effort is bound to be concentrated on making goods which foreigners are producing more cheaply than ourselves; we are cut off from the stimulus of new foreign methods and ideas; and it has become increasingly obvious that this is a main reason for our relative lack of competitiveness and growth. There are signs that the Government has at last been converted to this view—witness Mr Macmillan's call in Boston last week for “Free Trade for the Free World”—but the Treasury is still likely to want to reduce tariffs only after international bargaining for foreign concessions in Gatt, rather than directly and unilaterally through the budget.

It is not so certain that the Treasury should seek to advance so swiftly to free investment in the free world too. The Federation of British Industries has been pressing for a liberalisation of the overseas trade corporation system, so that “income arising overseas in the form of dividends, as in the form of trading profit, could, to the greatest extent possible, be excluded from the scope of United Kingdom taxation and left free for investment overseas.” Some changes in the overseas trade corporation system are needed, but they should not be in a form that encourages Britain to lend abroad still more of a balance of payments surplus which—on all present calculations—it has not got.

**T**HERE, then, is a suggested recipe for Mr Lloyd. It will be said that some of these changes would be politically difficult; but so are any changes nowadays, because it can always be shown with mock indignation that the biggest reliefs quite naturally go to those who pay the biggest tax. Another loud objection to the sort of changes discussed here will be that they would be administratively difficult; the inland revenue is certain to complain that it cannot possibly have vast new burdens laid upon it because, as it indignantly explains, it is already at least 300 men short on its senior establishment. But it would be absurd to hold up the march of tax reform because of the shortage of 300 men; if need be, the Government should even investigate the possibility of mitigating some of the transitional problems by the temporary employment, on a full-time basis, of private firms of accountants. There should be no stuffiness over such an expedient.

There are several other minor reforms to which the Chancellor may well want to set his hand—for example in reshaping what goes above and below the line in the budget accounts, and in adding one or even two new junior ministers to the Treasury's staff. Some of these changes could be positively undesirable, and none would be of major usefulness without simultaneous tax reform. The imperative of tax reform this year is not that Mr Lloyd should be in a generous mood on Monday; if the net effect of his first budget is to add slightly to Britain's tax burdens for 1961-62, this will not be a cause for criticism—indeed it will, on balance, be one for praise. But if he achieves this net effect without very largely reshuffling the way in which his revenue is garnered, then Parliament should stand ready to smite him—fore and aft.

# Leaning on the Shovel

Everyone—and first of all the British—will have to make sacrifices if western unity is to be restored

THE irresistible force of the new President has now met that imperturbable object, the Prime Minister, and there has been no audible sound of collision. Unless the two men found themselves in agreement on almost everything they talked about, which is highly unlikely, the only explanation is that they refrained from pushing the most difficult problems facing them to the point of decision. It is now admitted on all sides that the western alliance is in a state of disarray, which is a polite way of saying that it is unable to decide on the best way of defending itself against military attack, unwilling to stop itself drifting into economic particularism, and even uncertain what the chief purpose of the alliance is.

Equally, it is understood ("all too well," says last Saturday's communique from Washington, with wry honesty but deplorable English) that everyone concerned will have to make sacrifices if unity is to be restored. In particular, there is a widespread feeling that dear old fuddy-duddy Britain must make up its mind what sacrifices it is going to make—a feeling illustrated in the recent television survey of Britain by the Columbia Broadcasting System, appropriately brought before British viewers by the chance of a television studio strike. Like tired treasure-hunters who have located the spot *x* on the map, the members of the alliance now wait each for the other to make the first move with the shovel.

It is tempting to think of the confusion in the North Atlantic alliance in terms of a jigsaw puzzle, and to hope that President Kennedy is a master puzzle-solver who can turn the bits into a tidy picture by carefully matching each country's claim with another's concession, each need with an appropriate sacrifice. Political life is not like that; there will always be unsolved corners and pieces stuck in at random. But certain parts of the puzzle might be improved immeasurably if somebody would make the first move. There is a strong case for this somebody to be the British, and it is a pity that Mr Macmillan's speech at the Massachusetts Institute of Technology last Friday left a marked impression of indecision. What the British—and the other allies—must now do is to look in turn at the two or three main problems involved in what is loosely called the "search for unity"; consider in each case what the long-term interests of the alliance as a whole (as distinct from the particular interests of members) require; and then, having worked out the possible courses of action, act.

Clearly the first problem, in chronological urgency at least, is the economic division of Europe. Here the long-term requirement of the alliance is plain. It is to prevent the breaking-up of the western community into three separate feudal leagues, peering suspiciously over their tariff walls and slitting the throats of each other's traders. Unfortunately, Mr Macmillan's remark last Friday about the need for "bringing together the Six and the Seven" suggests that he thinks it is still an open question which group will come to join the other. But it is not; the possibility that the common market will enter into the looser kind of association Britain wants has long since vanished, and the only real question is whether Britain and its associates are willing to weld

themselves on to the political linkages of the common market.

For the British to submit to this welding operation is no doubt a plunge, if not a sacrifice—the word favoured by Mr Macmillan and Mr Kennedy. But the British can comfort themselves with the thought that others, too, will have to make sacrifices if the common market is widened. The Americans face the prospect that, in the short run at least, their relative export position is going to suffer more and that, in the longer run, it is difficult to see how the spread of unification is going to be stopped from crossing the Atlantic. The French face the prospect that, with Britain in the common market, they will have a powerful rival to their claims of leadership in the group. The point is that economic unity is the necessary foundation of political solidarity, and political solidarity is the basis of military cohesion. Mr Macmillan must prepare himself to start the sacrificial round; unless, that is, he is willing to accept the political and military consequences of letting Europe's economy stay divided.

NEXT comes the question how the West is going to share its nuclear weapons. Here the requirements of the alliance are more complicated. It is necessary to assure the European members of effective protection against nuclear blackmail by the Russians; but, in choosing among the various ways of doing this, care must be taken not to endanger the chances of negotiating a disarmament treaty with the communists by letting the spread of nuclear weapons get out of hand. The worst solution, clearly, is to have more and more countries in Europe build private atomic forces of their own, neither effective as deterrents nor conducive to disarmament.

Nor is it wholly plausible to expect the Europeans indefinitely to depend on the Americans' missiles; their feeling will doubtless grow that the Americans might not choose to blow the world up for Europe's sake. If the talks on disarmament were to show signs of progress within a measurable period of their resumption in the autumn, it would be entirely sensible, and desirable, to extend reliance on the Americans' coverage as long as possible. If the talks get stuck, however, some kind of European-owned deterrent will begin to look inevitable in the next few years. The aim should be to restrict the ownership of this as narrowly as possible in the hope that the disarmament negotiations can be revived later on. Perhaps the best solution—if it could be sold to General de Gaulle as part of a package deal—would be a pooling of Britain's and France's nuclear weapons. Together, the two might provide a credible deterrent; the scheme would not extend the list of nuclear powers beyond four; and it would give the minimum offence to the sensibilities of French sovereignty.

This leads to the third obstacle in the way of western unity—the problem of reconciling the misty concept of "interdependence" with the equally misty British and French claims to have a "special relationship" with the United States. It

would be an enormous help if the British would drop the habit of talking as if history, and the sharing of a common language, had bequeathed to them some mystic link with the Americans. Obviously Britain's relationship to the United States is not quite the same as anyone else's, in the sense that this country's military and political obligations in different parts of the world give it specific jobs within the alliance. Fortunately, there are still many personal links which make the relationship easier. But these characteristics of the Anglo-American relationship are more effective the less they are talked about. To harp on it, to glorify a relationship that is merely distinctive into one that is "special," in the sense of better, merely infuriates the French, the Germans, and everyone else.

PERHAPS ways can be found of satisfying General de Gaulle's desire to speak to the Americans on equal terms with the British. It might help him to feel that his views were being taken into account if Mr Kennedy made a point of consulting with him at fairly regular intervals, and if the Nato Council became a clearing-house for all the allies' ideas about world problems. But in making such arrangements for "interdependence" it is necessary to recall the chief purpose of the alliance. This is to protect the Atlantic community

## Man into Space

Major Yuri Gagarin's brave venture on Wednesday established a date that will certainly appear in the history books of the future

Orbital bomber?

WITH the Wright brothers, man got himself off the ground; now, the Soviet team that shot Major Gagarin round the world in 90 minutes, at a height varying between 100 and 200 miles, has virtually got him out of the atmosphere, the element within which the human destiny had formerly seemed to be confined. Vast though the distances of space are, the escape from the atmosphere, even by a relatively negligible margin, is an achievement full of significance. Is it altogether fanciful to compare this moment to that far earlier one when the first fishy creatures heaved themselves, gasping, a few inches on to dry land?

Man being, at least in some respects, more sophisticated than most fish, this second breakthrough by terrestrial creatures into a new element evokes more complex reactions. While we cannot perceive the ultimate consequences, we can foresee that they will be, in every sense of the world, far-reaching. But, at the same moment as the imagination soars, the intellect applies—to use the jargon of the rocketeers' trade—the brakes. There is plenty of real, as well as official jubilation now in Moscow. If it has a strong chauvinistic tinge, that is a regrettably normal circumstance, familiar not only from the time of the launching of the first sputnik but also

from those of, say, the ascent of Everest, the crossing of Antarctica, and the Olympics of recent years. But, for several reasons, the impact of the new feat on world opinion as a whole is unlikely to prove as dramatic as that of the first sputnik.

Although, like other achievements in the general field of rocketry, this one has come sooner than was thought possible only a few years ago, there has been much lively anticipation in recent months. It is almost a year since the Russians got a vehicle of similar weight (4½ tons) into orbit, eight months since they achieved a successful re-entry of one. They have kept their lead over the Americans, but not over popular expectations. The world will rightly applaud Major Gagarin's courage and the skill of the men who made his venture possible; but it will not be astonished.

Psychologically, and therefore politically, the first man in space ought to be a notable coup. But the successive marvels of the space age are already tending to yield diminishing moral returns. Even in the under-developed countries, now once more urged to acknowledge the superiority of the Soviet system, growing sophistication is bringing with it a suspicion that the lavishing of such resources on rocketry may indicate

a failure to adjust priorities to mankind's real needs.

The Soviet government's statement immediately after Wednesday's triumph emphasised the military aspect by linking disarmament with this new evidence of Russia's lead in rocketry. It might seem that the adequacy of Soviet rockets for the straightforward firing of nuclear missiles at any worthwhile target area on the earth had already been well enough established. If Major Gagarin's whizz round the world has a military importance, however, it lies in the direction of what is termed the "orbital bomber." Manned vehicles that circled the globe several times, apparently at random, before serving as launching platforms for nuclear missiles, might

well prove a more effective instrument for a surprise attack than simple intercontinental missiles whose purpose would be clear as soon as radar detected their trajectories.

There will be time enough, however, for glum speculation of that kind if and when more is revealed about the new Soviet feat. The Russians, who persistently maintained that their nuclear research programme was devoted to peaceful purposes right up to the moment when it produced weapons, have only themselves to blame if others now fix their eyes first on the military potentialities of their latest feats. This moment itself is one to record a new date in the calendar of human achievement.

## Turkey Looks Both Ways

**The soldiers who hold power in Turkey do not want their new regime to end as a tyranny.**

**Our special correspondent lately there looks at the pitfalls in their way**

THE new parliament building, which for many years the Turks have been building in Ankara close by Atatürk's mausoleum, is now being used for the first time by the Constituent Assembly that is drawing up a new constitution and electoral law. These air-conditioned marble halls are a politician's dream come true; there are spacious and well-appointed rooms for party and committee meetings as well as the vast main national assembly hall. Will they fulfil their purpose, or turn out to be a white elephant?

One thing is certain: most of the soldiers who overthrew the Menderes regime last May and who now rule Turkey do wish to work towards the restoration of parliamentary government. They may be divided about the best way, but there is no doubting the sincerity of their resolve not to be corrupted by power. Turkey is still under martial law, but the main trend of General Gürsel's government is back towards normality. The key posts in the administration are still in military hands, but those lesser posts that were taken over by the army in May are being, or have been, handed back to civilians. The press is still not free from the threat of sudden closure, but its situation is very much better than it was under the Menderes regime and its attitude towards the present government is by no means sycophantic. The civilian cabinet is still ultimately subordinate to its military masters in the National Unity Committee, but the degree of its subordination is believed to have diminished considerably. The government is firmly committed to holding a referendum on the new constitution and general elections before October 29th—although no definite date for either has yet been fixed. Normal party political activity is being reintroduced by stages. The registration of new political parties was allowed in January; some dozen had registered by the time the prescribed period ran out some weeks ago. The second step towards party politics was taken on April 1st, when it became legal for the parties to organise themselves and to hold indoor congresses. But public political meetings remain banned.

General Gürsel's cautious approach to the problem of divesting his government of power is a sign of realism rather than reluctance. He and most of his associates are not content

to make do with some counterfeir "popular" or "basic" democracy along communist or Nasserist lines; they want to restore the real thing, to give the Turkish people a genuine right to choose the men who will go to Ankara to rule them. But they are also—naturally enough—determined not to let the country slip back into the bad old ways of the Menderes regime. At his press conference on March 25th General Gürsel made it quite plain that his government would closely watch the development of party political activities in order to make sure that those joining the new parties were "honest and clean persons." In other words, those former Democrats who still actively seek a restoration of the Menderes regime will be excluded. In the circumstances, this line may be the only expedient one to take; but clearly it complicates the task of restoring parliamentary government and it could dangerously undermine the government's good intentions.

It is not clear exactly how real is the threat from former ex-Democrat believers in direct action. But in Ankara one gets the impression that the government is taking it very seriously. There have been a number of arrests of former Democrats in Izmir, Istanbul and elsewhere, and at his press conference General Gürsel spoke of the discovery of a plot by Democrat extremists to sabotage Istanbul power station with the ultimate object of rescuing the prisoners on Yassıada. Obviously any attempt to restore the Menderes regime by force is doomed to failure so long as the armed forces remain loyal to the May revolution. And in the political field the capacity of the former Democrats to make trouble must largely depend on the amount of popular support they still command in the country. This is perhaps the most vexed and controversial question in Turkey today.

EARLY every morning when the court on Yassıada is sitting a crowded boatload of Turkish citizens goes out to the island and fills to capacity the generous accommodation provided for the public in the courtroom. Every evening between 9 and 10 the Turkish radio broadcasts recorded excerpts of that day's proceedings at Yassıada; and listening to the "Yassıada hour" has become a national pastime. But what effect this melancholy show has on those who watch it or listen to it is anybody's guess. Is Mr Menderes's pitifully undignified bearing (in marked contrast to that of ex-president Bayar) irrevocably destroying his reputation in the country? How much will the main constitutional charges, shortly to

come before the court, weigh in the peasant's mind against the material benefits—the new mosque, the new road, the freedom from taxes—that the Menderes regime brought him?

It is understandable that many educated people in Turkey today should repudiate angrily any suggestion that the Menderes regime still enjoys considerable popular support. But a number of impartial outside observers tend to believe, on the basis of their own—admittedly limited—experience, that it does. Some of the officers who carried out the coup will admit that many peasants did well out of the Menderes regime, but they pin their faith on the good sense of the ordinary Turk. Their attitude could prove naïve. Perhaps Mr Menderes's greatest and most abiding disservice to Turkey is not any of the specific misdeeds for which he is now being tried on Yassıada. It is rather that in order to consolidate his own power he taught the Turkish peasant, to a far greater extent than was either necessary or inevitable in the circumstances, that a democratic government was one that gave the voter everything and asked nothing in return.

GENERAL GÜRSEL and his associates hope that the politicians to whom they intend to hand over power will make a more far-sighted and intelligent use of the country's resources than the Democrats did, that they will eschew corrupt practices and resist the temptation to curry popular favour by appealing to the most retrograde and reactionary instincts of their people. The soldiers are said to have divided views about which party is most likely to fill this bill. Some of them favour the Republican People's party, led by Mr İnönü. As the original party of Atatürk and the principal opponent of the Democrats during their ten years in power, the RPP would seem the natural heir to the Gürsel regime. It is, moreover, now well represented in the general's cabinet and has, naturally, a more extensive and experienced party organisation than any of the new parties. But the Republicans are not

united, and they have tended to become identified with the more unpopular acts of the present regime—like the purge of the university professors or the heavy taxation—and this may tell against them at the polls. Their victory is probable but it may not be so overwhelming as many people expect.

The relative strength of the dozen new parties is still obscure. No strong rival to the Republicans has yet emerged. At present the likeliest contenders are the Justice party and the New Turkey party; the latter claims to have considerable support in the National Unity Committee. Many of the smaller parties may not manage to set up a sufficiently extensive national organisation to qualify to run in the elections; but amalgamations among them—if allowed—could yet produce a strong rival to the RPP. Naturally all these parties are angling for the support of the 4 to 5 million electors who at the last elections in 1957 voted for the Democrats. Obviously it is very important that these voters, many of whom would never vote Republican, should be offered some acceptable new political home. On their present form, however, the parties seem tempted—unfortunately but perhaps inevitably—to offer them political refuges decked out with too many of the spurious attractions that the Democrats provided.

Among those who carried out or supported the overthrow of the Menderes regime there is a feeling of euphoria about the task begun in May, and of confidence in their ability to complete it successfully. But the mission that General Gürsel and his associates have set themselves is essentially a political repair job; it is not inspired by any new ideology with wide popular appeal, or by any wide-ranging projects of social reform. Its attraction, therefore, is limited to those Turks who are sufficiently educated to want their country to be governed by the most advanced western standards and its economic resources developed for the general good. The soldiers may succeed. One hopes so. But the path to success may be longer and more arduous than they yet realise.

## NOTES OF THE WEEK

CUBA

### Across the Water

FOR the first time, there seem to be grounds for Dr Castro's repeated assertions that Cuba is about to be invaded by counter-revolutionary forces supported by the United States. The pamphlet which the State Department published last week denouncing the Cuban government bell, book and candle was followed at the weekend by a call to arms from the newly united Cuban exiles in New York, saying that they intended to "expel the tyrant from our soil"

and declaring that "duty calls us to the war."

The exiles have long been saying that they were about to land in Cuba at any moment. But their armed forces are now reported to be in training at camps in the southern United States as well as in Guatemala, which means that their activities have the knowledge—and perhaps the material support—of the United States government. The exiles' leaders, who have been in con-

sultation with American officials, are also reported to have dropped their original intention to launch a single, big attack in favour of a more workable plan for a series of landings by guerrilla groups. There has recently been an increase in the number of acts of sabotage in Cuba; and on Tuesday President Kennedy added to the tension by saying that Dr Castro would grow more dangerous unless action were taken against him now.

If Mr Kennedy has decided to encourage an attack by the exiles, the United States is entering an extremely dangerous period in its relations with Latin America. The exiles enjoy only an unconvincing unity. The "revolutionary council" set up on March 22nd, which says it will turn itself into a "provisional government" when it holds part of Cuba, consists of the Revolutionary Movement of the People, which is willing to

accept the nationalisation of part of the Cuban economy, and the Democratic Revolutionary Front, which stands further to the right. There is also a third faction, not in the united front, which wants the counter-revolution to be led by a non-party figurehead. It is not at all certain that a movement so divided can find enough support in Cuba to beat Dr Castro's very large and well-armed forces. If the exiles cannot do the job themselves (with such clandestine help as the Central Intelligence Agency can give them) Mr Kennedy will have to decide whether to give them more overt assistance. His assertion at his press conference on Wednesday that American troops would not intervene does not preclude other kinds of help. If such help is given, and the invasion still fails, it will be a major disaster for the reputation of the United States. Even if it succeeds, the Americans' support of the rebels, whether it remains unofficial or comes further into the open, will arouse angry controversy. Is this really the way to win friends and influence people in Latin America?

#### CONSERVATIVES

#### Not Sparing the Rod

SIXTY-NINE Tory MPs defied the Whip in order to demonstrate in favour of the birch during the debate on the Criminal Justice Bill this week. It was not surprising that any of these 69—many of them members of what might be called the Tories' anti-intellectual lobby—should have felt personally in favour of Sir Thomas Moore's unsuccessful amendment (which called for restoration of the cane or birch as a means of punishment for second or subsequent

#### NOTES OF THE WEEK

teenage offences of violence). But six months ago less than half of them would have been likely to have gone into the division lobbies against the Government, particularly after a debate which some Tory speakers turned into a personal assault on Mr Butler. Following so soon upon Mr Turton's famous motion about Northern Rhodesia, this vote does signify a new attitude among mildly revolting Tories. It is not so much that the party is moving to the right, as that the right is back in its traditional mid-Parliament mood of assuming that "having a go" against the Government is no bad thing. And Tory MPs of the centre do not see any great reason to exacerbate their relations with the right by rushing eagerly to the Government's support.

In the last Parliament this mood of muttered complaint caught fire much earlier, and took the form of a whispering campaign against Sir Anthony Eden at the end of 1955; at the height of it Sir Anthony even felt obliged to issue an extraordinary public announcement that there was no truth in a Sunday newspaper report that he might be forced to resign as Prime Minister. Some commentators, albeit probably exaggeratedly, have ascribed Sir Anthony's later mistakes in 1956, culminating in the Suez debacle, quite largely to his desire to fend off this petty "party revolt." This time the campaign has not been mounted against the Prime Minister, but is lapping round such subsidiary targets as Mr Butler and Mr Macleod. For the sake of his team's morale, it is important that the Prime Minister should go out of his way in the next few weeks to invite the critics to lay more of their criticisms on to his own broad shoulders; this should be his aim not only in public speeches but also during private appearances in the smoking rooms. Un-

#### THE ECONOMIST APRIL 15, 1961

fortunately, Mr Macmillan is not always very good at this sort of thing.

The need for this initiative by the Prime Minister is particularly great because nobody can tell exactly which ministerial dog the backbench tail will try to wag next. A major question here is whether the undercurrent of backbench criticism may soon spread to economic policy. Not all Tory MPs have yet woken up to the fact that taxes seem rather more likely to go up than down on Monday. A minor Tory revolt against the principle of a relatively tough budget would not necessarily come from the anti-Butler and anti-Macleod wing of the party; on the other hand, any revolt against budget measures designed to make the economy more competitive, and pressure not to be beastly to a few particularly hard-pressed industries, probably would do. How would Mr Selwyn Lloyd react then?

#### THE CENSUS

#### Ten Yearly Count

OVER the next week, every household in Great Britain should receive a form from one of the 80,000 enumerators recruited especially for the taking of the sixteenth census on April 23rd. Nine out of ten households will receive a shorter form than for many years; the tenth, randomly selected, will have to cope with additional questions about jobs, full-time education, change of address and—presumably at the request of the Minister of Science—scientific qualifications.

Cost apart, the British system of relying on the individual to complete the form may have as much to recommend it as the American one of taking down verbal answers, or even more. But, with all the good will in the world, accuracy is hinged to understanding of the questions. The households who recorded a "shared use of a piped water supply" in 1951 were so many as to make it obvious that the question had been misunderstood: this time it is rephrased as a shared use of a water tap. The completed forms are to be checked later with the individuals concerned in a small sample of households and any apparent bias assessed. Nevertheless the census results will not be altered in the light of this small-scale check, and to be wise after the event seems a poor substitute for a little prior care. Before drawing up the form, surely it would have been sensible to have made a small pilot survey to ascertain how different wordings of a question are understood? At the same time a sounding could have been taken of the public's reaction to being questioned about household incomes: it is government policy to exclude any money matters from the census on the grounds that these would be resented. But is there any basis for such a belief?

This time there is to be no repeat of the 1951 innovation of bringing out an analysis of one per cent of the records well in advance of the full reports. But the full-

#### THE COMING BUDGET

IN spite of many adverse prognostications, we venture somewhat confidently to say that there are the materials for a not unpleasant Budget. Some writers have endeavoured to frighten the public by computing the deficit for the year which has just ended. They say that in this year the difference upon the wrong side, between our income and our expenditure,—and some part of the public has not unnaturally been alarmed at the idea,—will be considerable. But we must not overlook two facts:—first, Mr Gladstone calculated in his later estimates, after the outbreak of the Chinese war became certain, and after the deficiency of the harvest became apparent, upon such a deficit. He did not pretend to make the revenue equal to the expenditure. . . . Secondly, we are to observe that the most material consideration is, what is the expenditure of the next year, and what will be its income. The Chinese hostilities have stopped. The bills probably are not all paid, but the operations are now at an end, and the cause of bills has ceased. . . . Mr Gladstone can point with pride

to the state of the Customs revenue, notwithstanding all his alterations—he can show fair, if not stupendous, results from the French treaty—he will have an easy triumph over those rash writers who accused him of having ruined our indirect revenue, of having made a balance of national means and national expenditure henceforth impossible. On the other hand, his opponents will be able to ask how he would have stood if the Chinese war had been still in progress, and whether the funds derived from the Excise duty on paper have not been exceedingly useful to him. . . . But even in answer to these opponents, the great orator—the great master of argumentative finance—will doubtless show us how much there is to be said. How the materials of a good Budget will be used it is not for us to say; but we are sure that, without an oppressive addition to the burdens of the country, without any operation which the money market would ever hear of, it will be easy for a far less accomplished financier than Mr Gladstone to make both ends meet for the year which is coming.

There is more in banking with the National Provincial than the mere possession of a bank account. The first class service, prompt decisions and the ability to obtain friendly and helpful advice and information when required have attracted many firms and companies from all branches of Industry, including some of the largest in the country. The wide experience of the bank is at the disposal of all its customers whether their accounts be large or small. National Provincial Bank could be of assistance to you in your business and its problems.

# EXPRESS SUCCESS!

## WORKS TODAY — SHIP TOMORROW!

Ex works today, alongside the ship tomorrow morning — this is the success story of Export Express. This great factory-to-port service for full wagons and container loads gives exporters next-day delivery to the quayside from the major industrial centres of the London Midland Region.

The service is simplicity itself. There is no additional charge, no extra formalities — yet the exporter has the advantage of a fast dependable service with priority trains running to timetabled schedules.

From its inception, Export Express was welcomed by manufacturers as promising their goods a safe, sure start to their journey overseas. Can Export Express make *your* job easier? Ask your Station Master or Goods Agent about this brilliantly successful service.

EXPORT EXPRESS- PART OF THE NEW LOOK OF TODAY'S

# LONDON MIDLAND

scale analysis is to be speeded up with the aid of an electronic computer, used in these tabulations for the first time. The final report on the 1951 census was not published until December, 1958, a pathetic performance. This time it is hoped to clear everything within three years, starting with preliminary figures of total and district populations within two months. This should not be too ambitious a time-schedule provided the census office has enough "programmers" on the job—contrary to popular belief, an electronic computer does not run itself but needs experts to look after it.

Speedy analysis would make the census a helpful tool for both official and commercial users. Moreover, electronic computation offers facilities for extra analysis to suit particular needs. The Government might consider getting back some of the £3 million cost of the census by making charges which, while producing a profit, would still be cheaper than making their own surveys to firms such as market research organisations. In the past the census was officially looked on as a piece of historical research rather than a basis for policy. The new information it now elicits will be useless if the Government will not back up the processing of it by the necessary funds and drive.

### INDOCHINA

#### *Dangerous Delay*

It is beginning to look almost as difficult to bring the powers together for a conference on Laos as to bring the French and Algerians together at Evian. The Russians and Americans are now accusing each other of using the delay to improve the military situation of their clients in Laos. As the Americans put it, the Russians are increasing their deliveries of military equipment to the communist-led Pathet Lao forces and their "neutralist" allies under Captain Kong Le; as the Russians see it, General Phoumi, the strong man of the right-wing regime at Vientiane, has used newly delivered American helicopters to drop his men behind the communist lines.

To put things in such perspective is to draw attention to the dangers of the present bidding and counterbidding. The blame, however, can no longer be evenly distributed. President Kennedy has made his act of renunciation by declaring himself in favour of a neutral Laos; it is up to Mr Khrushchev to make his by agreeing to stop the flow of arms to Laos and to urge a cease-fire on the combatants.

On the political front, it is welcome news that Prince Souvanna Phouma, the neutralist leader, is to visit Washington. It would be premature to regard the American invitation as proof that the prince is now acceptable to the Americans as head of a government of reconciliation. At least, however, guest and hosts will now be able to size each other up. It will be useful if, as a result, the prince is fully persuaded that there has indeed been a change of

spirit in Washington, and if the Americans, on their side, are persuaded that the prince could unite the Laotian factions without allowing the communists to take over.

Prince Souvanna Phouma holds, briefly, that some Laotian communists are less communist than others; that a cabinet including Pathet Lao representatives will not necessarily come under communist control; and that, in any case, it is now impossible to keep the Pathet Lao out if the fighting is to end. He will not find it easy to convert the State Department to these views. But the Americans will not easily find another candidate for the premiership who would also be acceptable in Moscow, Peking and Hanoi.

### FRANCE

#### *President Canute*

If General de Gaulle were a man given to putting himself in the shoes of others, he might feel less than satisfied with his performance at the press conference on Tuesday. Mr Khrushchev may be pleased to find that someone else can indulge in a wilful refusal to try and make the United Nations work, and can surpass him in ignoring the new forces at work in the world which have made the General Assembly the focus of its hopes and aspirations. Nobody will be pleased by the general's pinning of the flag to his own nuclear weapons project. His allies will be alarmed by his vague strictures on the Nato system. On all these questions he displays a sublime faith in the sanctities of national sovereignty as the nineteenth century understood it which is even less realistic than his calculations of the Algerian future.

What these are is now clear. Disappointed and vexed by the provisional government's refusal to come to the conference table at the time appointed, he professes to attribute their hesitations to inexperience and the influence of "all sorts of other imperialisms." However, he is evidently well aware that the real cause of the delay is the Algerians' distrust of his intentions, and their consequent insistence on recognition as the representatives of Algeria before the talks start. This the general, concerned to preserve the appearance of freedom of action, refuses to do; but, desperately anxious for an agreed settlement in Algeria, he has tried to intimidate the rebels into making the journey to Evian by describing the awful consequences of alienating France. An independent and recalcitrant Algeria would have to do without all French aid; its citizens working in France would be expelled; it would "without doubt" fall into misery, chaos and communism; he added a suggestion that there might be some measure of partition. A negotiated independence, on the other hand, would be met with continuing French benevolence.

It is highly doubtful if the rebels will respond to this sort of thing. They have not fought the French for six and a half

years to give in to threats now. The French president may well find that the only consequences of his conference will be a fresh burst of frenzy from a Right made desperate by his frank willingness to kiss Algeria goodbye; and the renewed alienation of the Moroccans and Tunisians, who have tried for so long to foster an understanding between France and the rebels.

### FISHERMEN'S STRIKE

#### *Grimsby Hangs On*

THE strike of the Hull trawler officers' guild against landings of Icelandic fish swiftly and sensibly melted away last weekend, but the Grimsby officers have remained frozen in petulant immobility. On Tuesday the Grimsby guild issued a set of seven grievances, broadening the dispute and very largely leaving the Icelandic issue on one side. (It was covered simply by the stipulation that all foreign landings should in future be governed by the port regulations landing committee—something less than a total boycott.) The new demands proved to be a curious job-lot. They included an application for voluntary arbitration on a 10 per cent pay claim for skippers (most of them already high in the surtax bracket), mates and engineers; the abolition of food charges for skippers and mates; and demands for a closed shop (not always popular in such an individualistic trade) and for the introduction of restrictive practices. Finally, the unions insisted on being consulted before contract sales to processing firms are negotiated. Contract sales happen to be one of the ways in which the industry is beginning to avoid the lengthy and wasteful exposure of fish in the quayside market.

These demands were not wholly unexpected; the officers began to hint at these "other grievances" soon after the strike against the Icelanders got under way. On Thursday the bulk of the 3,000 crew members threw off their union's restraint and put in a basic pay claim of their own. Grimsby is in a fighting mood, but if the strikers hang on indefinitely it can do them very little good at a time when the fishing industry is facing contraction, and when the capital needed for the redevelopment of the fleet to meet new conditions has to come (if it is to come from anywhere) out of the taxpayers' pocket. It should not have escaped the trawlermen's attention that it is now not only the Icelanders who are diverting their catches to Grimsby, but the Germans, Faroese and Belgians as well. This could all too easily become the pattern for the future.

### SEAMEN'S UNION

#### *Trouble Aboard*

THE National Union of Seamen has a new general secretary, but the old problems remain to plague Mr Jim Scott as they

did his predecessor, Sir Thomas Yates. Last summer the vague discontent with seafaring life felt by many seamen was channelled into an unofficial strike run by a "seamen's reform movement" within the union. This was partly financed by the Canadian district of the Seamen's International Union of America, whose members have priced themselves out of work and have a personal interest in seeing British seamen's wages soar—because they object to the Red Ensign being used as a sort of flag of convenience in the Canadian coastal trade. The election which led to Mr Scott's victory was already under way during last summer's strike, and he was at that time the union's treasurer, so he is no favourite of the would-be reformers. His aim now is to reconcile protestations of loyalty to his former chief with proof of sufficient militancy to take the wind out of the sails of the malcontents, and he is stumping the ports to try to convince his members that he is the man they need. His first meeting in Liverpool was not a great success, for only some 400 seamen, most of them dissidents, turned up; at one time it seemed that the platform would have to be physically defended by the chairman and well-known pugilist, Mrs Bessie Braddock, MP. The union has put a demand for higher wages and improved conditions before the employers, and is defending itself from accusations that it is not asking for enough by refusing to disclose just what it has asked for.

The union's leaders cannot expect to get any great wage increase, in view of the large rise given by the shipowners last year: but improvements in overtime pay, a relaxation of the work demanded while a ship is in port, and possibly the abolition of the penal provisions of the Merchant Shipping Act (under which men were jailed for striking

## NOTES OF THE WEEK

last year) would reduce the seamen's basic discontents and give the "reformers" less fertile ground for agitation. But some of the reformers' demands—for wages at Canadian levels, or for shop stewards on all British ships—are dismissed by the union itself as ridiculous.

The real problem is that, if the employers do not concede enough to make the union leaders look successful, the union may be forced by internal pressure to take some strong action (although a strike is almost out of the question, since it requires a ballot of the union's scattered membership, and seamen cannot legally break their articles of employment). Present wages and conditions are already inadequate to attract enough British labour to man British ships. It may ultimately prove necessary to employ cheaper foreign labour on board (as has traditionally been done on ships plying to the Far East). This would harm nobody except the seamen's union itself.

## GERMANY AND AMERICA

## Another Special Relation

DR ADENAUER went to Washington this week with a purpose similar in many ways to Mr Macmillan's the week before. The Chancellor hopes to restore the close partnership with Washington which has been the basis of his policies—and which has, together with prosperity, done much to give west Germany the confidence to survive the postwar years. The Chancellor had many worries to set at rest. Ever since the American election campaign there have been fears in Bonn that President Kennedy would prove readier than his predecessor to do a deal with the Russians at Germany's expense. Some of the fears may have been allayed by the new Administration's expressions of firmness about Berlin. But the west Germans are still sensitive to foreign criticism of their poor aid effort, and they are aware that their public image is going through a difficult period because of the Eichmann trial.

The Chancellor made it clear in Bonn that he hoped to avoid the subject of the American balance of payments. "I do not understand these matters," he told a press conference on April 10th. But he plainly hopes to use his reputation in America to counter any damaging effects of the Eichmann trial. He will no doubt remind the Americans, as he has reminded the west Germans on television, that west Germany has been paying handsome reparations to Israel and has put the Nazi past behind it. Our Bonn correspondent reports on German reactions to the trial on page 233.

In his anxiety to strengthen the military side of the alliance and Germany's contribution to it, Dr Adenauer also took to Washington a more precise ambition—to press Mr Kennedy to back General Norstad's plan for a Nato nuclear force. The Chancellor put this view to Mr Acheson, Mr Kennedy's special adviser on

## THE ECONOMIST APRIL 15, 1961

Nato questions, in Bonn last Sunday. One German motive in this matter—the desire for a more effective joint political control over existing atomic weapons—deserves sympathy. The Germans, like the French, are understandably concerned that their fate should be entirely in other people's hands. But the plan for a Nato nuclear force also carries a second and much more disturbing implication—that more strategic weapons be stationed in Europe and Germany. At a time when Mr Kennedy is feeling his way towards serious exchanges with Mr Khrushchev, his decision to hold back the spread of nuclear weapons in Europe as much as possible seems right.

## LIQUIDITY

## Sniffing at Triffin

A DAZZLING array of American talent will be in Paris on April 18th and 19th for the second episode in President Kennedy's drive to make the new Organisation for Economic Co-operation and Development an effective instrument of Atlantic economic unity. The drive for an effective joint aid effort to help the undeveloped countries was set going at the meeting of the Development Assistance Group in London on March 27th. The economic policy committee of OEEC (soon to become OECD) which meets next week will have a second task—to co-ordinate the members' economic policies to permit sustained economic growth in the developed industrial countries themselves. The American delegation will include such high-powered figures as Mr Heller, chairman of the Council of Economic Advisers, and Mr William McChesney Martin, chairman of the Federal Reserve Board.

The meeting will have no fixed agenda, so discussion may range wide—over subjects like the co-ordination of interest rates and German domestic policies. But the crux could be a discussion of radical solutions to the problems raised by the shortage of, and unbalance in, international reserves. Mr Heller is expected to bring as a consultant Professor Robert Triffin, perhaps the most interesting name of all. His presence rubs home the fact that a strong school of thought in Washington is coming round to his view that the problem of international liquidity should be solved by a pooling of reserves in the International Monetary Fund or some Atlantic monetary institution.

The one strange feature of next week's meeting is that the British, of all people, still appear to be sniffing suspiciously at the most radical features of this idea, instead of seizing on them with delight. In his speech at Boston on April 7th Mr Macmillan did remark, encouragingly, that ideally there should be a central banking system for all the countries of the free world. But his thoughts do not yet seem to have been translated into practical policy in the Treasury and Bank of England. It will be no surprise next week if the

## THE ECONOMIST APRIL 15, 1961

Swiss or the Germans resist such radical ideas as Mr Triffin's and insist on orthodoxy in international finance. But it would be odd indeed for Britain, whose economic growth has been hamstrung throughout the postwar years by difficulties in its balance of payments, to line up with them against the Triffin ideas.

## TEACHERS

## Slipping the Reins

TO the great delight of many school children, the teachers have continued in high ferment during their Easter holiday conferences. The National Association of Schoolmasters agreed at Blackpool to plan a series of one-day strikes at selected (but carefully unnamed) individual schools to secure satisfaction on its two main claims. These are representation on the Burnham Committee and higher pay for schoolmasters (specifically distinct from schoolmistresses): the association has called for a basic male salary scale of £800-£1,500, compared with the National Union of Teachers' claim for £700-£1,300. The NAS decision was not unexpected, and the local authorities in London and other big cities where the association is relatively strong are eagerly trying to scout out which the selected schools may be. Exactly what good strikes would do the NAS remains to be seen. They may help local recruitment, but as long as the association sports its militantly anti-feminist mask and growls against equal pay the other organisations will fight against it being invited to the staid Burnham table.

Not to be outdone, the NUT delegates threw off their executive's reins at Brighton and planned a (distant) strike of their own. The NUT now wants further training for all graduates entering the service by 1968: this is primarily, although not entirely, a matter of professional status and was, in fact, promised in 1951. It might be thought, however, that doing everything possible to attract graduates (many of whom are reluctant to continue their studies at teacher training colleges, in intellectual surroundings that are often inferior to those they have just left) would be the best way to raise the profession's status—as well as helping to end the teacher shortage. In fact the NUT, again kicking over the traces, had earlier come out in vociferous support for the Scots—who are threatening to strike if non-graduate (but professionally trained) male teachers are introduced into their schools. The logic of the NUT delegates this year has been unusually hard to follow.

Meanwhile the employers—the local education authorities—have begun to publicise their side of the case. Sir William Alexander, secretary of the Association of Education Committees, has pointed out that nearly a third of teachers in primary schools, and just over a half in secondary schools, already earn more than the basic scale. There is a strong case for arguing

## NOTES OF THE WEEK

that a major feature of the next Burnham award should be a big increase in these differentials above the basic scale—especially to assistant masters and departmental heads who carry special responsibilities. It is a serious criticism of the teachers' public debates that, because of the usual union pressure to spread all benefits among everybody, so little attention is paid to differentials in the salary dispute.

## COUNTY ELECTIONS

## First Straws

BY Wednesday midnight voting had taken place in 18 of the 62 county council elections in England and Wales. The opening pattern seemed to be to swing back to the same sort of results as characterised the county elections in 1955, which took place a few weeks before the general election of that year. Here and there, the Tories advanced beyond their 1955 watermark including a near squeak for Labour in Nottinghamshire; this council, which had been labour-controlled ever since the war, showed a dead heat between Labour and non-Labour forces on Tuesday, but after the aldermanic elections Labour will probably retain it. As expected, Conservatives or Conservative-minded Independents held on to all 13 of these 18 early-voting counties which they had controlled after the last county elections in 1958. Apart from Notts, Labour held on to three of its four. Its one clear loss of control in these first three days was Lancashire, which it had won in 1952 and 1958, but which now returned to almost exactly the same Tory majority as in 1955. By contrast, Labour held on to Carmarthen, which it had won in 1958 but not in 1955; because of the pattern of candidacies here, however, the Independents had almost been resigned to this.

On this pattern one would expect the Conservatives to regain control of Middlesex and Staffordshire (which were two of the 22 counties polling on Thursday, as we went to press) and of Essex and the West Riding of Yorkshire (which will poll on Saturday). All of these four were anti-Labour in 1955, but had switched either to Labour control or (in the case of Staffordshire and the West Riding) to a dead-heat in 1958. Northumberland—which was also polling on Thursday, and which was fairly marginally Labour in both 1955 and 1958—would seem a rather harder nut for the anti-Labour forces to crack. But the main news of Thursday's elections, which will be in the newspapers before *The Economist* appears in most readers' hands, will concern the London County Council. Labour had an elected majority here of 76 in 1958, compared with a majority of 22 in 1955 and a presumptive majority of 18 if each London constituency voted now in exactly the same way as it did in the 1959 general election. The bogey score for Labour in London must therefore be to see that its majority is maintained at somewhere around the 20 mark.

## RUSSIA AND CHINA

## Hard Bargaining?

MUCH was made of Chinese-Soviet friendship when delegates of the two countries signed a trade protocol for 1961 in Moscow last week. It is difficult not to suspect, however, that the discussions, which included "certain other (economic) questions" as well, may have strained rather than strengthened the fraternal unity of the two countries.

The communiqué issued after the signing ceremony did not divulge the volume of trade proposed between Russia and China this year. It did reveal that the serious natural disasters suffered by Chinese agriculture last year gave China a trade deficit with Russia; this means that the Chinese will have to default still further, on the repayment of their Soviet loans. The Russians have agreed that this 1960 deficit should be repaid in instalments and without interest over the next five years. They have also undertaken to let the Chinese have 500,000 tons of sugar by the end of August; this the Chinese will gradually repay, without interest, between 1964 and 1967.

This can hardly be called a munificent contribution towards alleviating the difficulties of the Chinese, particularly as the Russians failed to make any helpful gesture at the end of last year when the Chinese first revealed their plight and started to buy large quantities of Canadian and Australian grain. It must, however, be remembered that the Russians themselves had plenty of agricultural difficulties last year. Moreover, they have already paid out large sums in loans to the Chinese (the latest agreement in 1959 was for 5,000 million roubles), and they may be feeling worried about repayment. To what extent politics came into

the negotiations is anybody's guess; it certainly seems rather odd that the talks should have been so protracted—they began early in February in Peking and after about a month were continued at a higher level in Moscow. But if the Russians did try to wring some political or ideological concessions out of the Chinese, it does not look as if they had any spectacular success.

## KENYA

*Facing the Mountain*

JOMO KENYATTA's press conference on Tuesday showed once again that he is the most gifted and magnetic Kenyan of the century. It did nothing to solve the problem of what part he will play, or can be allowed to play, in Kenya's advance to self-government. Mr Kenyatta's virtuoso performance at Maralal was truly Gaullist in its serene ambiguity. Just the same, the mountain could not be observed to budge. He said he had always denounced Mau Mau, and dismissed the Corfield report as a "pack of lies." He neither condemned nor approved the Africans' refusal to join the Governor's government. He believed in a democratic and constitutional advance towards independence; but the Lancaster

## INDIA

*Hot Potato*

EVEN the awesome presence of Mr Suslov as fraternal delegate from Russia has not brought India's troubled Communist party to a settlement of its internal differences. The full congress of the party held in Andhra has failed to agree on a new programme, and the task is being remitted to the newly elected hundred-member national council, which in turn will have to negotiate its draft with the local committee in each of India's states.

The outgoing council had managed to produce, before the Andhra congress, an ostensibly agreed resolution on the Chinese border question, the hottest potato now in the party's smarting hands. This resolution, while calling for negotiations with China about its claims to 50,000 square miles of border territory, upheld the "McMahon line" and India's traditional frontier as being the true frontier. In effect, the party was simultaneously supporting the Indian government's firm stand on its rights, and urging it to seek a compromise with China. It is hardly surprising that this tortuous formulation, which has not satisfied Indian opinion in circles that are normally tolerant of much that the party says and does, has not satisfied the party workers themselves.

## NOTES OF THE WEEK

House constitution of 1960 was out of date already—all this with great good humour and superb Grandoldmanship.

The Kenyan Africans' veneration for this leader's age and position at present overrides the fears of the non-Kikuyu about an early Kikuyu domination of the country. This is why Messrs Gichuru, Mboya and Ngala still refuse to co-operate with his jailers. What was said at Maralal will not change the opinion of the secretariat in Nairobi, the district commissioners, and nine-tenths of the Europeans of Kenya that Jomo Kenyatta is anti-Christian, anti-European and anti-Commonwealth. It cannot be said to have given Mr Macleod a convenient cue. Does this mean that the irresistible force has encountered the immovable object? It depends on who has most to lose if, come May, there is no government to pass the budget and the Governor has to resort to rule by decree. For the present it is unthinkable that the Governor should retreat from his March policy statement. It is still conceivable that the African leaders, doubtless only with Mr Kenyatta's approval, might decide to help to govern now, if the Governor promised his release at the end of the legislative council's first session. Yet even if the Kenyatta security risk could be taken at once, the Government could not accept the immediate jettisoning of the 1961 Consti-

Ghosh: Critic of China

Dange: Support for Nehru?

The strongly pro-Chinese group led by Mr Ranadive had already been angered by the sharp criticism of China's occupation of Indian soil that Mr Ajoy Ghosh and other party leaders had made at the Moscow international communist conference last November. Nor are the consequent strained relations with Peking the Indian party's only trouble. Events in the Congo have also bedevilled the efforts of Mr Ghosh and Mr Dange, despite Mr Ranadive's indignation, to maintain a position of "critical support" of Mr Nehru's government. India is fast becoming the mainstay of the United Nations operation over which presides Mr Hammarskjöld, Russia's current *bête noire*. If the Indian communists campaign loudly for the withdrawal of Indian troops from the Congo, they align themselves not only with Mr Suslov but with Messrs Kasavubu and Tshombe too. The dilemma is embarrassing enough to evoke sympathy.

## THE ECONOMIST APRIL 15, 1961

tution. Before a liberated Kenyatta presses the independence accelerator, the British must try to secure African recognition of some constitutional timetable. But the worst way to secure this recognition would be for the Kenya authorities to push themselves to the point where they may have to incarcerate Mr Mboya and his colleagues—as the price for keeping Mr Kenyatta under permanent lock and key.

## THE DRUGS BILL

*The Doctors' "Which"*

ONE of the recommendations of the Hinchliffe Committee on the Cost of Prescribing was that an independent publication should be started to give doctors up-to-date and disinterested information about drugs. Nearly two years after the committee reported, the first issue of the *Prescribers' Journal* has appeared. How independent is it?

It has a committee of management consisting of a professor of medicine as chairman, two professorial vice-chairmen, four general practitioners, a pharmacist, and professional advisers from the health departments. There is also an advisory panel of experts—ten professors and one consultant physician. But the editorial offices are in one of the Ministry of Health buildings; unlike *Which?*, the magazine of the Consumers' Association, it is not financed from consumers—that is, prescribers—subscriptions, but is apparently to be paid for out of taxes, although no figure for the cost can be found in the health estimates. There might therefore be grounds for suspicion that the journal would be biased towards economy in prescribing at the expense of effective prescribing, but this is specifically denied in the introduction to the first number. The journal is short (a great advantage), will appear six times a year and will be distributed free to health service doctors.

The journal also states, in respect of the three groups of drugs dealt with in the first number, in what category the proprietary brands are placed by the Cohen Committee on the classification of proprietary preparations. Most proprietary drugs are placed in category S and are identical in their therapeutic constituents with "standard" (that is, officially described) preparations, or are modifications of them. They are sometimes, but not always, more expensive than the unbranded preparation. The Cohen Committee, in its latest report (HMSO, 6d.), expresses the view that normally doctors need not prescribe outside the "standard" preparations (for which an unbranded form may not always exist), except for new drugs, of proved or probable value, that are not yet "standard." Although this report is unanimous, it was presented to the Ministers with a comment on this view from the committee's two pharmacist members. They point out that if most of the branded drugs for which there is a standard, unbranded, equivalent cease to be

# Many motorists today are confused by recent developments in motor oil and the claims of rival manufacturers

## WHAT ARE THE FACTS?

NEW KINDS OF MOTOR OILS. New claims for reduced engine wear. More engine power. Cleaner engines. In recent years there seem to have been so many new claims for motor oils that even the knowledgeable motorist is in danger of being confused. But choice of motor oil has such an important bearing on how well an engine runs and how long it lasts that most motorists will want to know the facts. Here they are.

The motor oil situation in Britain changed dramatically when BP Energol 'Visco-static' first appeared on the market. This was a revolutionary kind of oil, providing correct lubrication from ice cold to full engine heat, summer and winter.

Most manufacturers have since followed with their own multi-grade oils. In the meantime the BP Energol 'Visco-static' formulation has been considerably improved and it still offers unique advantages.

## A WIDER RANGE OF PROTECTION

BP 'Visco-static' offers you a single oil that is never too thick and never too thin. For morning starting, BP 'Visco-static' acts like a free flowing winter grade oil. As your engine warms up, it acts as a medium grade oil would at that temperature. And if, in summer, you make your engine run very hard, as on the motorway, BP 'Visco-static' becomes like a heavy grade oil which has ample body even at the hottest part of the engine.

## LOWEST ENGINE WEAR EVER

Because it has the correct viscosity to give perfect lubrication always, BP 'Visco-static' makes a big reduction in engine wear. The danger time for engine wear has always been the first few minutes after a cold start. In fact, this normally accounts for most wear in the life of an engine. But BP 'Visco-static' has put an end to this heavy wear completely. The result is a substantial reduction in total wear, so that your engine does many thousands of extra miles before overhaul.

BP 'Visco-static' is recommended by Rolls-Royce for all their post-war models.

NO NEED TO CHANGE OIL TO  
SUIT THE SEASON

Another big advantage with BP 'Visco-static' is that you do not need to change your oil when the season changes. BP 'Visco-static' is right for every season the whole year through. You will, however, need to make regular oil changes as recommended in your car handbook.

TO GET THE MOST BENEFIT FROM  
BP 'VISCO-STATIC'

Only use BP 'Visco-static' if your engine is in good condition. For the best results, be sure to have your engine drained completely and refilled with BP 'Visco-static'. Ask for it by name. Make sure too that your garage always tops up with it. Although BP 'Visco-static' costs a little more it is still worth it in terms of longer engine life.

Things go better on BP 'Visco-static'.

BP ENERGOL—THE BEST OF THE  
ORDINARY OILS

For those motorists who prefer an ordinary oil there is BP Energol which is available in all regular grades.

## FREE BOOKLET

If you would like the complete technical story of BP 'Visco-static' write to BP (Dept. G12), P.O. Box No. 226, Pwllity House, Finsbury Market, London, E.C.2.

**BP 'Visco-static' for longer engine life**

## Aluminium makes things cheaper to own

# Aluminium is icumen in — increasingly

Down on the farm aluminium is fast becoming as important as sweet land and careful cropping. Because it is light—as strong as steel at a third of the weight. Because it goes on working for generations (without much attention, without rusting, without being painted), and saves the farmer time, trouble and money all its long life.

Study the picture. All the equipment is made from aluminium—supplied by Alcan. It is a cheerful indication that the British farmer knows what he's doing, and how Alcan is helping him to do it better.

**1** Complete control of environment is essential in the broiler house. This is where Alcan helps. Easy-to-clean, double-skin aluminium, with its high reflectivity, ensures that selected temperatures will remain constant in summer and winter. On this broiler house, manufactured by Neata Products (Cheltenham) Ltd., the low pitch of the roof was made possible only by using single aluminium sheets from ridge to eaves.

**2** The aluminium milk churns weigh only 15 lb.—less than half the weight of churns made of traditional materials. They were made by Swifts of Scarborough Ltd. Seamless construction prevents bacteria lodging inside—and the churns are easy to clean. Weight-saving means easier handling and enables greater payloads to be carried with a consequent saving in transport costs.

**3** The irrigation pipes, valve and sprinkler couplings, and the fertilizer applicator, are aluminium, and are part of the wide range of irrigation equipment by Wright Rain of Ringwood (Hants). Easily positioned, they resist rust and corrosion and cannot be crushed by livestock or put out of action by machinery. Smooth interior surfaces reduce water friction, so the most is made of pump power.

**4** A vital item for the broiler house is the heating equipment. This Jamesway flying-saucer gas brooder is the popular choice of farmers, because its aluminium reflector concentrates maximum heat on the chicks' backs.

**5** Farmers today want fences that are light, strong, long-lasting. Aluminium barbed wire is one of the answers. This wire was made by William Bain of Coatbridge, Scotland.

Alcan, backed by the finest research and technical facilities, can answer any question on the use of aluminium. Write to: Alcan (U.K.) Limited, Aluminium Canada House, 30 Berkeley Square, London W.1. Telephone: Mayfair 9721

Britain's most widely used aluminium — from Canada

# ALCAN

prescribed in the health service, the British drugs industry will be unable to recoup its expenditure on research, and Britain will be dependent upon foreign countries for new advances in treatment. This argument, which is repeated every time the drugs industry is under fire about the cost of its products, was, in fact, accepted by the Hinchliffe Committee. But the industry's fears may be premature, for, provided their prescribing is not, as a whole, extravagant, there is no sanction to make doctors abandon the familiar proprietary name for a long formula.

## LONDON

### Deal with a Laundry

*In the last few weeks anybody who criticised a specific action by a particular county council would inevitably have been regarded by half the country as deliberately "playing politics" on one political party's side. The following note, which seems to us to raise a point of principle rather than a point of party politics, has therefore been held over until after the polls concerned have closed. But the point of principle is one to which all new county councils should pay heed.*

THE retiring London County Council was recently told by a High Court judge that its conduct was open to most serious criticism; that its behaviour was a grave misuse of statutory power; that a plan which it had worked out was rather unpleasant; and that he hoped that instances of this sort of conduct were rare. This last hope should be echoed by everybody. The facts of this case were that the LCC wanted to pull down some buildings as unfit for habitation, and decided to make a compulsory purchase order. There were two interested parties: a laundry which owned the freehold and a property company which had a lease expiring in 1979; and orders were made against both of them. They took counsel together and lodged formal notices of objection. So the council was fighting two firms united by a common interest.

This is how it fought its battle. Behind the back of the leaseholders the council talked to the freeholders and bought them off. It said to them in effect "if you will drop your resistance, we will continue against the leaseholder, and when we have won our case we will hand the leasehold interest over to you. That will be greatly to your advantage, for you will get a valuable reversion twenty years before it is due." But so valuable a favour was not to be had for nothing, and the council demanded a payment (could it be called a commission?) of £2,000 from the freeholders. As £2,000 was well below the value of the lease the freeholders agreed and the bargain was struck. The council had made a secret bargain to hand one citizen's property to another, but fortunately the aggrieved citizen fought back and won his case before Mr Justice Ash-

worth. The "rather unpleasant" trick failed and the council proved to be wrong in law as well as in decency. But if the leaseholders had had less fighting spirit the council would have had its discreditable way, and one is left wondering how many times local authorities up and down the country do the same sort of thing without being exposed.

## JORDAN

### Trial Run with the UAR

THE release in Jordan on April 7th of a number of "pro-Nasser" detainees reflects the more relaxed atmosphere brought about by King Hussein's bid for friendlier relations with the United Arab Republic. No-one who reads his letter to President Nasser and the president's reply (both broadcast from Cairo on March 31st) can deny that each is an accomplished statement. The king's approach was dignified and frank, the president's answer encouraging. Most marked was the president's veering away from a purely revolutionary process as a means of achieving Arab union. He abjures intervention in the internal affairs of other Arab countries and declares that the "constitutional forms of unity do not concern us." Both governments now look forward to a trial period of getting along together, and to a meeting between the two heads of state to work more details out.

This is King Hussein's second bid for collaboration with Cairo. President Nasser correctly recalls in his letter that in 1955-56 the "young and heroic" king went far to align their two countries on an anti-imperialist slant. That the final sacrifice then demanded was the king's throne, if not his life, is delicately not mentioned. But those were the days when revolutionary Nasserism was a volcanic eruption in Egypt spilling over its borders, regardless. Today, more controlled and experienced, and with energies dispersed across the whole face of Africa, its impact on Arab neighbours need not necessarily be so harsh.

Just as Syria sought union with Egypt to avert a threatened communist coup, so Jordan seeks friendship on the grounds of internal security. It cannot, for ever, whilst guarding its frontier with Israel, maintain the security forces to treat pro-Nasserism as a sin. Nor are there wide divergences between the Jordanian and Arab Republican outlook—except in their long-term approach to the Palestine question. Jordan has tried to absorb refugees and has absorbed Palestinian territory, while the UAR wants to preserve, and indeed recreate, Palestine as a separate entity.

This would have proved to be quite fantastic if the Jordan alternative had worked. But failure to get western backing for the immense irrigation schemes that might have made Jordan a country for large-scale refugee resettlement is now, at long last, accepted. King Hussein has realised that if he cannot give his refugees a living he must give them a greater hope—even

should it be a mirage—in a larger setting than Jordan, where shared responsibility might somehow lead to shared solutions.

## SPAIN

### General Franco's Mantle

WHEN, from time to time, Spanish attention is directed to the fact that the present regime cannot last for ever, signs of anxious activity are observed among the various competitors for the inheritance. Such a disturbance is visible just now, although it must be said that the Caudillo still shows no sign whatever of going up in his fiery chariot. The feeling is fairly general that the regime is decrepit and ineffective; demands for political, social or economic reforms are heard from many quarters.

Some of General Franco's critics lay especial emphasis on political strictures. Thus, in February three bishops protested against (indeed, they seem to have effectively killed) state proposals for reorganising, without at all weakening, the press censorship. The reason for the episcopal intervention appears to have been a dislike of an arbitrary censorship not regulated by law. The censorship has also been attacked in a liberal monarchist statement supporting the Bourbon-Hapsburg pretender, Don Juan; this manifesto also advocates greater political liberty, a reduction of the excessive powers of the military tribunals, and a more realistic and up-to-date economic policy. The Falange has circulated a document criticising various government policies, and expressing anxiety about the Francoless future, for which, it holds, insufficient provision has been made. *The Times* correspondent reports that a group of republicans has now circulated a manifesto against a return of the monarchy.

It is not yet known how the government will respond to this wave of complaint. Señor José Solís, minister and secretary-general of the Falange, has sponsored the party's criticisms, and presided over a recent conference of the national syndicates (trade union substitutes) at which they were freely voiced. He is probably the most influential of the critics. So far, the only official response seems to have been a suggestion (totally unfounded) that Spain's economic difficulties were due to American stinginess with non-military aid, and other suggestions that a plot against the country is being hatched by elements abroad. A more serious reaction would be the jettisoning of the stabilisation programme, and with it Señor Ullastres, the minister of commerce: Señor Solís and the Falange seem to have made themselves the champions of "controlled inflation." Even if this desperate remedy is avoided, Spain will still be confronted with a decadent political system and a stagnant economy, and with the problem of establishing a relationship with one or other of the European economic groups, this the Spanish government has not so far brought itself to attempt.

HOME REPORT

HOME REPORT is a new section of the paper, in which members of the editorial staff and local correspondents will report on life and happenings in and around Britain.

Schools on Strike?

FROM A CORRESPONDENT IN GLASGOW

It seems probable that before the end of the month the Secretary of State for Scotland will announce substantial salary increases for Scottish schoolteachers. But the big question that remains to be settled is whether Mr MacLay's pay award will be enough to placate the teachers, and especially those in Glasgow who are committed to a week's strike beginning on May 8th unless the Government meets their professional grievances by May 1st. At present the odds are that the strike will go on.

The Scottish teachers want more money: specifically, a 20 per cent increase in basic salary scales and a reduction from 17 to 10 years in the incremental periods. At present there are eight scales: the highest, for male honours graduates, is £780-£1,400; non-graduate women receive £545-£1,000. Even more important, however, the teachers want the Government to abandon its proposals to begin employing non-graduate male teachers, a plan which is stigmatised as "diluting the profession."

The National Joint Council on teachers' salaries submitted its recommendations to Mr MacLay on April 7th. What little has been leaked about these recommendations suggests that the teachers will be reasonably satisfied provided Mr MacLay does not whittle the increases down. The teachers are adamant that the award must be acceptable, but they have warned the Government that even a good rise will not buy off their opposition to dilution. Mr MacLay, for his part, says he will not be intimidated into hastening his decisions on the general issues of teacher-training.

Teaching in Scotland is basically a graduate profession, although non-graduate women substantially staff the primary schools. Since 1926, however, no male has been permitted to teach academic or general subjects without a university degree. Last year the Scottish Education Department flew its dilution kite in a memorandum suggesting the review of teacher-training methods. This was seen by the teachers as a bid to reduce still further their social and economic status in a country that came near to deifying the dominie after the Scottish Reformers introduced their system of popular education four centuries ago.

The teachers' main organisations (often bitterly divided in the past) speedily achieved unprecedented unity in tackling the dilution

threat. Joint talks were held and agreement reached in principle that "coercive action" at national level should be employed if the Government enforced dilution, prolonged salary negotiations, or made an unacceptable pay award. Scotland has just over 38,000 teachers in 3,300 schools, and this united front embraced 34,000 of them in the Educational Institute of Scotland, the Scottish Schoolmasters' Association, and the Scottish Secondary Teachers' Association.

Glasgow's 7,000 teachers decided to force the pace on their own last month. Some 3,000 of them voted overwhelmingly to give Mr MacLay until May 1st to meet their demands. Many other teachers outside the city are willing to strike with Glasgow, and there is little doubt that the EIS national executive is unhappy at such militancy. Unsuccessful attempts have been made to persuade Glasgow to call off the strike until the Government attitude is known, but the fact remains that the EIS itself is pledged to direct action and nobody doubts that, if and when the time comes (perhaps this autumn), "coercive action" will win majority approval.

All but 2,000 of Scotland's teachers are certificated—which means they are either graduates or have completed the minimum three years in training college (at present 17,000 graduates have also done an extra year's teacher-training). The training regulations date from 1931 and it is these that Mr MacLay wants to overhaul to make up for existing shortages. The teachers argue in defence of the regulations that they represent a tradition that the parish schoolmaster was an educated man who had been to college—however little he might have been paid in the past.

Public opinion is, however, divided on whether all male teachers really need to be graduates at a time of shortage. The Scots, too, are well aware that a university degree does not necessarily ensure a sound teacher, but to them graduation represents the best available guarantee of ability and they are reluctant to abandon it. The teachers have sensibly broadened their protest to make it a matter of principle, drawing attention to overcrowded classrooms, lowered standards, and all the irritations that parents have been increasingly forced to endure.

At present Scotland is short of 3,600 teachers and too many children are on part-time education (Glasgow has about 5,000). The teachers feel that dilution is no answer and, tradition apart, recent graduate recruitment rates tend to substantiate their view. Currently, 921 men and women are doing their post-graduate year at training college (compared with the bedrock figure of 634 in 1955 and 894 a year ago). About 930 graduate recruits are needed annually until 1967 to ensure adequate school staffs; the teachers claim that more graduates are re-entering teaching because the real answer is extra money—and a 6½ per cent pay rise was awarded last year.

The feeling is growing in some quarters that an independent inquiry into Scottish education generally might be a good idea. Several EIS branches are now calling for a royal commission—which hitherto has not been favoured by the teachers who claim to know all the answers to educational problems. It is true that there have been expert investigations into several aspects of Scottish education in recent years (notably the Knox committee), but it may be that lasting peace or order will prove unobtainable until an impartial tribunal provides the basis for greater compromise on both sides.

Organised Teachers

THE teaching profession in Britain is divided into complementary and competing organisations whose rivalries come to a head whenever, as at present, salary negotiations are in train. In England and Wales these negotiations take place in the Burnham (Main) Committee, in which the teachers' panel meet represen-

tatives of the local education authorities. (The next meeting in this year's round is on April 20th-22nd.) The Minister of Education has power to accept or reject the Burnham recommendations. In Scotland, which has its own organisations, procedure and (see above) disputes, the Secretary of State can accept, reject or amend the recommendations of the National Joint Council, on which the Educational Institute of Scotland and the local authorities are represented. The main professional organisations are as follows:

| ENGLAND AND WALES                                                  | Founded                            | Membership                                                                                                                          | Burnham Main Representation                                     | Salary Policy                                                                                                                                                                              |

Tory Land of Cotton

FROM A CORRESPONDENT IN MANCHESTER

LABOUR's second spell of power in Lancashire duly came to an end on Monday to the accompaniment of Tory trumpet blasts proclaiming this Conservative victory as a foretaste of a landslide in the rest of this week's county elections. In fact, though, the Lancashire results brought no major surprises. Since Labour won control of the county for the first time in 1952, Lancashire has swung predictably to and fro every three years. On this occasion the

slender lead snatched by Labour in 1958 had already been whittled down by five consecutive by-election losses, so that the party entered the elections with a majority of only two over the combined forces of its rivals. Failure to supplant Labour would have been a severe disappointment for the Tories.

The upshot of Monday's voting, in fact, was to reverse almost exactly the 1958 pattern, when Labour gained 18 seats. The Conservatives captured 17 seats (16 from

Labour and one from an Independent) and lost one to a Liberal. Labour's single new victory was gained at the expense of an Independent. Thus the Conservatives had a net gain of 16 seats, giving them an overall majority of 18 and a majority over Labour alone of 23. This is an ample margin for firm control. The slight preponderance of Labour aldermen—21 to 18 Conservatives—is too small to bridge the gap. In any case there is a standing agreement between the parties not to use aldermen's votes to override a majority of elected councillors.

The reversal of the 1958 pattern was more than simply mathematical. Nine of the 16 seats gained by the Conservatives were among those that they had lost to

Labour three years ago; so were four of the five seats which had passed to the Conservatives in by-elections. Most of them, of course, were highly marginal, with Labour majorities of under or around 200. Since they had been made expressly the targets of the Conservative campaign—and since Labour officials in the area had for some time been bemoaning publicly the inactivity and poor morale of local party members—few observers can have been surprised by the list of seats that changed hands.

SOME commentators, however, have professed to find significance in the fact that the Conservative gains were made mainly in, or about, the industrial areas. Since that is where, in fact, most of the marginal seats lay, the implication that there

has been a new drift away from Labour in its working-class Lancashire strongholds is hardly well founded. But the location of the two main groups of these marginal seats is not without interest. The first group, which yielded some half a dozen gains to the Conservatives, lies among the ring of satellite towns—such as Swinton, Radcliffe, Lees and Ashton—to the north and east of Manchester.

The second group, where the Tories also regained several seats, is contained in the traditional weaving centres between Preston and Burnley—townships like Chorley, Accrington and Rawtenstall and their near neighbours. It was areas such as these, closely associated with the cotton industry, which helped to produce the slight leftward swing in Lancashire at the general election in 1959. The relatively painless way in which the contraction of the cotton industry

has since proceeded—cushioned by compensation grants and a temporary revival in domestic cotton sales—possibly explains the disappearance of that leftward bias at these elections.

One final point. This week's election is a reminder that Lancashire is much more Conservative in its politics than outsiders—who assume a close connection between cotton mills and Labour voting—are apt to imagine. Yet a glance at the chart of parliamentary representation shows the Conservatives to be strongly represented—even in the two big cities. It has to be remembered that in county politics, where Manchester and Liverpool play no part, Labour has only twice succeeded in winning control; that these two victories coincided with the high peaks of Labour achievement in county elections, and that even then Lancashire was won only on very small majorities.

FROM A CORRESPONDENT IN BARNSELY

THE burgesses of the Five Towns (and their raconteur, Arnold Bennett) would have revelled in the desperate struggle in which the Yorkshire borough of Barnsley is imperially engaged. Barnsley wants to extend its boundaries to encompass no fewer than eight neighbouring urban districts. If successful, it will more than double its population of 75,400 and annex an area nearly three times its own size of 7,811 acres.

The Barnsley takeover bid is directed at the alerted and embattled urban councils of Darton, Darfield, Dodworth, Cudworth, Royston, Hoyland Nether, Wombwell and Worsbrough. All but Hoyland lie adjacent to Barnsley. All are firm in their resolve to stay outside the borough boundary.

Barnsley's proposals are contained in a 100-page document submitted to the Local Government Commission in reply to a questionnaire circulated to authorities in the York and North Midlands general review area. Each of the urban districts has submitted observations on the proposals. So has the West Riding County Council. There is no "love thy neighbour" nonsense here.

The county council comments: "A careful review of the case presented to the commission by Barnsley shows that there is emphasis on anything, however trivial and irrelevant, which may be interpreted as being to Barnsley's advantage whereas anything which might be considered as against Barnsley's efficiency is quietly glossed over." It adds: "The statement is full of irrelevancies and half truths and many of the answers given by the corporation in reply to the questionnaire call for some comment by the county council."

The borough says that an extension would enable it to improve local government services in the area. The county replies that existing county services are more than adequate and that greater Barnsley's estimated rateable resources of £8 12s. 1d. per head of population or £50 os. 11d. per acre would be inadequate to sustain a full range of services on a sound financial basis.

Barnsley says that unhygienic incidents occurring in surrounding urban areas have their immediate effect on the borough, but the control of them lies outside it. The county counters with talk of a paratyphoid outbreak in Darfield in 1951

which was directly traced to a Barnsley bakehouse. It claims: "In 1955-56 there was a severe outbreak of poliomyelitis in Barnsley which originated in the borough." It avers that Barnsley was the most dangerous spot for polio in the whole of the West Riding.

With obvious civic pride Barnsley mentions its ancient market, inaugurated by a charter of Henry III in 1248, which still attracts shoppers from the outdistricts. The county is unimpressed. It says: "With regard to the Barnsley market, which is owned by the corporation, the county medical officer reports that this is a disgrace hygienically and does not conform in any way to the food hygiene regulations."

What have the urban districts to say for themselves? Hoyland Nether presses home the fact that it is completely cut off from Barnsley and is dependent on it for nothing. Dodworth conducted a referendum in which 2,419 of its 2,820 voters took part. Of them, 2,097 elected to stay in the West Riding rather than become part of Barnsley. A further question disclosed that 2,240 of them would agree to amalgamation with the neighbouring authorities of Penistone rural and Penistone urban councils in the West Riding.

CUDWORTH and Royston have made proposals for the amalgamation of their two authorities, claiming in the process to annex a strip of Barnsley borough that lies between them. Wombwell, Worsbrough, Darfield and Darton have indicated their strong disapproval of Barnsley's proposals and have formulated counter proposals which, as yet, remain tantalisingly unpublished.

Barnsley councillors are still hopeful, but there is a general feeling among the county districts that the pan-Barnsley movement has tried to bite off a little more than it can chew.

## MR. SMITH ACHIEVES A THREE MINUTE MILE

Nobody's taking much notice of it. There are no crowds to go mad, no flashbulbs to go pop and the only reporter on board is away on the starboard side throwing a nifty quoit.

Normally Mr. Smith's not the athletic type. The only thing he runs is his own business—and very successfully, too. That's why he's got to be

on the top of his form when he gets to Australia. Relaxed. Assured. Confident. That's why he's going by P & O—Orient Lines—the laziest, liveliest, most soothing way ever devised of doing a mile in three minutes flat.

Mr. Smith closes his eyes again. All this activity can make a man sleepy...

## AMERICAN SURVEY

### Special Relations

WASHINGTON, DC

IF President Kennedy's meetings with his two other western political uncles turn out as pleasantly as his discussions with Mr Macmillan, his advisers will be as surprised as they will be gratified. Both Dr Adenauer, who visited Washington this week, and President de Gaulle, whose state guest Mr Kennedy will be in Paris in May, have indicated in advance that they may be difficult. But while Mr Kennedy and his aides found the political skill, personal charm and diplomatic suppleness of Mr Macmillan quite up to expectations, it is fair to report that they are now looking back with some mixed feelings. The scarred British veterans showed their intimate knowledge of the international battlefield; but the Americans plainly felt that they might have come up with more ideas on how the battle—with fresh leadership and fresh troops in the van—might be won.

Such meetings can never be expected to reach more than contingent decisions; the appearance of working out in advance an agreed Anglo-American position on issues that can be determined only by the whole alliance would have generated suspicions (even the emergency Key West meeting irritated General de Gaulle). The Kennedy-Macmillan confrontation was the first part of a single exercise designed to explore ways of healing divisions in the alliance as well as of setting up working relationships and of aligning views on problems ranging from Laos to the needs of the British West Indies. It came logically before the meetings with Dr Adenauer and General de Gaulle for two good reasons.

The first is that in American eyes the division between the two European trading groups, the stronger common market and the weaker Free Trade Association, to which Britain belongs, means that it is up to Britain to propose some *modus vivendi* which the President can urge on President de Gaulle and Chancellor Adenauer in the interest of European unity. Secondly, there are the divisions which run between the United States and Britain on the one side and the rest of the alliance on the other on the part that atomic weapons should play in the North Atlantic Treaty Organisation's arrangements and on the problem of balances of payments. Britain and the United States are increasingly challenged to share the control of the western nuclear deterrent with their allies; equally they are calling on Germany and their other allies to share more fairly the cost of defence and of aid to underdeveloped countries.

These issues certainly formed the core, though not the whole, of the talks last week. The Eisenhower order was gone—the contrast was total—and the new Administration had already shown that it understood the needs of the hour and was receptive to constructive proposals; the President was ready to go into considerable detail himself—indeed, he insisted on doing so—instead of following his predecessor's habit of handing difficulties or decisions over to working parties. The facts were well sifted, plans and attitudes were examined frankly, but no new policies—no new break-throughs, as the Americans say—presented themselves.

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

Indeed there may even have been divergencies. After the talks the British side expressed profound satisfaction at having, as they thought, won the Americans over to their point of view on the Six and the Seven, on having convinced Mr Kennedy that the two could be brought together on Britain's terms—in the words of the Prime Minister's speech at the centennial celebrations of the Massachusetts Institute of Technology, delivered after the talks, "without detriment to our domestic interests or to our Commonwealth association and without injury to any other nation or group of nations." But when Mr Macmillan asked Mr Kennedy directly what he would think of Britain joining the common market, the President replied firmly that American policy was absolutely unchanged: the gain to the political stability of Europe provided that Britain accepted all the political as well as the economic conditions of the Treaty of Rome would far outweigh any economic disadvantage to the United States or anyone else. But Britain must join without reservations of any sort; only then would the United States undertake to try to induce General de Gaulle to make concessions on such obstacles as agriculture, the Commonwealth or the European Free Trade Association. Mr Macmillan smothered this clear-cut American answer in a smoke screen—perhaps to ease it into the forum of British public opinion, perhaps to gain more time, but in a way that looked evasive.

On the "problems of imbalance and short-term capital movements" (to quote the official *communiqué*) American and British ideas are in close agreement, as they are on the problem of long-term aid for development. Better use of the International Monetary Fund to improve world liquidity and counteract short-term movements in the exchanges has been under discussion by the experts since the advent of a new American Administration promised political support for their ideas. Britain is the obvious beneficiary. This did not, however, encourage Mr Macmillan to back up Mr Kennedy's call for aid to underdeveloped countries as a means of preventing political disasters. Even a conditional British offer to contribute to the needed long-term capital would have been a welcome gesture, which would have helped the President both with Dr Adenauer and with Congress, which must pass his foreign aid budget. Mr Macmillan evidently felt too acutely the weakness of the British economy; nevertheless, such an attitude tends to present the British, in economic negotiations, as "nice people, with nice manners, but with no money at all."

IF the state of its monetary reserves gives Britain little room for manoeuvre in economic matters, it has a bargaining counter in its ageing, but still valid, independent nuclear weapon. The new Administration, with ruthless clarity, sees what Britain should do with it: trade it in to Nato in return for the substantial concession of a similar trade-in by France and a renewed self-denying ordinance by Germany; such a deal could also carry with it lightened defence bills for Britain in the future and a stronger claim to be admitted to the European economic club. The President and his advisers see little merit in the previous Administration's offer of five Polaris submarines to Nato so as to create an allied nuclear force which would supposedly satisfy the aspirations of Germany and permit France to discontinue making (and testing) atomic weapons. The new Administration does not see

how the weapons could be "controlled" by the Nato countries while command remained, as it must under American law, with American officers. President Kennedy feels that this proposal was an attempt to evade the real point: that while Britain by insisting on nuclear status has opened the door to the spread of nuclear weapons through Europe, by the same token Britain has the capacity to make a reality of a European deterrent. Perhaps the most significant nuance (it is no more) in Mr Macmillan's speech at MIT (which was rewritten during the talks) was that, while past British decisions to make the atomic bomb were defended, the way was left open for a new policy in the name of the western unity which was the theme of the speech.

It was perhaps on the subject of Russia that Anglo-American differences of approach emerged most clearly. The British feel that they have had long experience of the way Russia blows hot and cold and consider that this is a matter of communist metabolism as much as it is a response to the temperature outside. The new American Administration is less fatalistic; specifically it thinks that the Russians changed their policy, or at least their tone, on Laos, not because of British diplomacy, but because they saw the American Seventh Fleet taking action stations and the American commando-guerrillas alerted in Okinawa. Calling Mr Macmillan to Florida was partly designed to draw the British into a more obvious participation in this display of resolution.

For similar reasons the Americans want to show that they will not accept indefinite procrastination in the negotiations on nuclear tests but that, after due warning, they will not only leave the conference table at Geneva, but also probably start underground testing; they argue that the British contention that it is not practicable to do either of these things will merely encourage Russian intransigence. Again on Berlin, the new Administration told the British side that it would stand firm; and when the practical difficulties of doing so were put forward, the reaction was to order the military representatives to work over their "contingency papers" and return with more precise plans. In these, as in other issues, the new Administration tended to find British experience invaluable, the British analysis of situations realistic, but British conclusions on policy too negative for its taste.

The talks were a success. Mr Macmillan found them exciting and exhilarating; Mr Kennedy's readiness to listen, however, often suggested to his guests that he was testing their quality without committing himself. The meeting put Anglo-American relations on a new footing. The future of the "special relationship" between Britain and America (the phrase was introduced by the Secretary of State, Mr Dean Rusk, not by Mr Macmillan) almost certainly depends on the extent to which Britain can work positively with the new Administration in achieving the wider western unity which was the theme of Mr Macmillan's own speech. In American eyes it means British willingness, above all, to show magnanimity, imagination and leadership where America most wants it shown—not in Africa (though Britain's achievement there is appreciated) but in Europe, in the alliance itself.

Mr Macmillan spoke of the "sacrifices" to be made, the "mental hurdles" to be jumped: in American eyes this means that Britain must go into Europe. To this extent there may be some basis for the press story during the conference—angrily denied though it was—that Mr Kennedy had told Mr Macmillan that, as he meant to be the leader of the West, he would not need Britain's services further as a go-between. Mr Kennedy will use any go-betweens, in Washington or elsewhere, when they are useful. But from Britain, a country which he likes, he hopes for a far greater contribution to the common cause. It is, however, legitimate to wonder whether he felt that Mr Macmillan was the man who could summon up in Britain anything like the necessary resolution. The President may esteem Mr Macmillan as the nicest of his political uncles. But he may be looking over the shoulders of them all at the upcoming generation.

## Back from the Grass Roots

CONGRESS came back to Washington this week to face, as it usually does at this point in the session, the lion's share of its labours—and promptly adjourned to inaugurate the baseball season. Ahead lie the big and controversial topics of foreign aid, federal assistance for schools, farm policy, taxes and the creation, it seems, of a new Department of Urban Affairs. It is no secret that the President hoped that members of Congress, when they put their ears to the grass-roots at home, would hear a strong demand that they should co-operate more enthusiastically with the White House. But popular as Mr Kennedy is personally, there is no sign as yet that the voters are prepared to punish Representatives who frustrate his legislative programme.

Indeed, in the first congressional by-election since last November's returns, the voters of Texas have specifically repudiated the pioneers of the new frontier. Seventy candidates competed for Mr Lyndon Johnson's Senate seat and, although no one won outright, the two who did best and who will have to fight it out at a run-off election in June are both extreme conservatives. The moderates knocked each other out. The sole Republican, Mr Tower, led the field with 326,000 votes but, as the total Democratic vote was twice as great as this, the eventual victor is likely to be Senator Blakley, the Democrat who is serving temporarily in Washington by appointment of the Governor. Nevertheless, the Republicans are cheered by Mr Tower's exceptional performance in a traditionally Democratic state. It makes up, to some extent, for their failure to elect a new Mayor in St Louis. The party attributes Mr Nixon's defeat in the presidential election to its poor showing in urban areas and in St Louis it made great efforts to prove that better campaign organisation could turn the trick. This hard work did, in fact, succeed in increasing the Republican share of the total vote from 23 per cent in 1957 to 37 per cent last week, even with a lack-lustre candidate.

It seems unlikely, however, that the Republican party will ever make big inroads in the urban and suburban vote as long as it appears to stand for obstruction in Washington and not much else. The handful of liberal Republicans in Congress is becoming worried because, with Mr Eisenhower gone and Mr Nixon still lying low, the faces and attitudes with which the party is identified—apart from that graceful and popular reactionary, Senator Goldwater—are those of two middle-western conservatives, Senator Everett Dirksen and Mr Charles Halleck, the Republican leaders in Congress.

They appear on television every Thursday to present the party's point of view and this turn is now known familiarly as "Ev and Charlie." But few Republicans imagine that this elderly pair, with their heavy-handed script, are a match for an attractive young Democratic President. Mr Nixon, who is to end his long silence next month, will be a more effective rallying point for his party and may be expected to outline a constructive programme for it.

## Balanced at Last

IN the last few weeks the drain of gold away from the United States has practically stopped; in fact the country actually added to its stocks of gold during March. In 1960 there was a loss of \$3.8 billion on the country's international accounts to be met out of its gold stock and by a rise in liquid liabilities to foreigners; the present change is the more striking in that the last quarter of 1960 was the worst, with a deficit of \$1.4 billion.

This was due partly to special capital movements, particularly the Ford Company's purchase of stock in its British subsidiary, but also to outflows of speculative capital and private buying of gold. This movement abroad of short-term funds has now been reversed; they are coming into the United States as a result of the boom on the stock market and the confidence which foreigners have in the Kennedy Administration and at the moment the country's international transactions are probably roughly in balance. In Washington there is already a feeling that it might now be safe to reduce the short-term interest rate for the sake of stimulating the domestic economy, but the President is still afraid that this would also stimulate a fresh outflow of gold by driving out foreign funds.

The Administration is also very aware that, even if last year's difficulties with the balance of payments have been overcome, there is danger of a recurrence of the different set of difficulties which caused an equally bad deficit in the country's international accounts in 1959. Then the trouble was mainly the low level of exports and the high level of imports. In 1960 imports dropped and there was an upsurge of over \$3 billion in the value of exports, so that there was a favourable surplus of nearly \$5 billion on the trading account for the year compared with a small deficit in 1959. The trend has been maintained during the first months of this year. But when the 1960 figures are analysed they show an ominous tendency towards the end of the year for exports of industrial products to go down. This accompanied a falling-off in the business activity in Europe and Japan which had been mainly responsible for the increased demand for exports in the first place. If this falling-off continues it could mean a return to 1959, as far as the pattern of foreign trade is concerned, especially since the coming economic recovery in the United States seems sure to bring a renewed demand for imports during the year.

This is why the Administration is putting so much stress on the need to export. The latest effort is the Export-Import Bank's new programme for guaranteeing against political as well as commercial risks private short-term financing for sales abroad. The bank's credit arrangements have also been broadened in other ways and more improvements are coming. American exporters are at last promised credit facilities as good as those enjoyed by their foreign competitors.

## Marriages in the Air

THE Civil Aeronautics Board, the heavy father of the American air transport industry, has reluctantly given the insolvent Capital Airlines in marriage to the huge United Air Lines because there was no other way of ensuring continued jobs for Capital's 7,000-odd employees and regular flights for the public which travels on Capital's 7,500 miles of routes serving 60 cities, including Wash-

ington, Chicago, Miami and New Orleans. United is to return 15 of Capital's 56 turbo-prop aircraft to Vickers-Armstrong and also to pay the British company some \$29 million to satisfy the claims which Capital was unable to meet. United, already the second largest airline in the United States, flies from coast to coast across the middle of the country and as far as Hawaii; by acquiring Capital it will get rid of some competition in the north-east and gain access to the lucrative southern markets. It will now have 20,000 miles of routes, serving 118 cities, and will surpass its old rival, American Airlines. By autumn United's President expects to be providing more and better services than either company could have done separately, by putting big new jet aircraft on the longer routes.

It is these expensive and hard-to-fill aircraft which were responsible for the poor showing of all airlines last year, although the effect of the economic recession on travel also had something to do with it. And it is because worth-while profits only come from these jets when they are used on non-stop transcontinental flights that there was such fierce rivalry for the southern routes from Florida and Texas to California, the only major services which had not been allocated by the CAB. Now they have been and are divided between Delta Air Lines and National Airlines, as shown on the map; other companies were given extra services in the region, but no non-stop transcontinental flights.

The CAB has thus avoided creating an excessive amount of competition, as it has been accused of doing on other occasions to the detriment, notably, of Capital Airlines. It has also, it hopes, succeeded in creating competitors for the four big trunk airlines by strengthening two comparatively small lines or, at least, by making them into attractive matches for other small lines. National, in particular, is in financial need of matrimony and Eastern Airlines, one of the big four, would like to double up on its new southern route—although the CAB is said to prefer Continental Airlines as a mate for National. Now that the last gap in the pattern of American air services has been filled, new routes are no longer to be had for the asking; airlines must be satisfied with what they have or buy new ones. As a result a burst of wedding bells is to be expected.

## Capital Breadline

WASHINGTON, DC

GOVERNMENT is rarely, if ever, a depressed industry, so it is hardly unexpected that the unemployment rate in Washington, a city whose economy is dependent on government, is only a little over half the national average. Nevertheless unemployment there presents a real problem which, like some of the District of Columbia's other social problems, is mainly the result of the steady

immigration of coloured people—130,000 of them in the last ten years, a period in which the white population of the city has fallen by over 170,000 persons, so that coloured people are now in a majority there. These Negroes come in search not of government posts (though some get them) but of unskilled—and often underpaid—work in the shops and other service trades which cater to government and the peripheral activity it generates. The District is sometimes accused of being isolated from the economic realities of the American scene, but during the past winter frequent appeals for charitable funds to succour jobless, destitute and often homeless

families have provided Congressmen with reminders of the distress that is endemic in many of their home districts.

In Washington much of the recent distress has been the result of unusually severe weather which caused building workers and casual labourers, who are not protected by unemployment insurance, to be laid off. But in Washington those who have this protection receive an exceptionally small sum in benefits; the maximum is \$30 a week, less than a third of the average wage, although it is payable for 26 weeks in any year, a period which may be extended by 13 weeks as a result of the emergency Bill passed recently by

## Valkyrie's Bumpy Ride

FROM A CORRESPONDENT IN CALIFORNIA

At the headquarters of North American Aviation, Inc., the big air-space-missile company in Los Angeles, officials are ruminating ruefully over the vagaries of defence contracting. For the second time in eighteen months the government has cut back the programme for construction of the supersonic B-70 Valkyrie bomber, just as North American, the prime contractor, and a host of subcontractors all over the country were getting it rolling once more. The decision by the Kennedy Administration to reduce appropriations for the B-70 to \$220 million for the next fiscal year from the \$358 million proposed by the outgoing Eisenhower Administration has sent the project, on which over \$700 million has been spent, into its second nose dive.

In the spring of 1959 North American Aviation began to let subcontracts on the Valkyrie, but six months later these had either to be cancelled or curtailed sharply when the goal was changed from a fleet of the aircraft to a single experimental one. Last November came another redirection (to use the jargon of the business) when it was decided to build a number of aircraft complete with weapons systems. Now, less than six months later, the programme is to revert to an experimental status. This capsule history illustrates the complexities and the risks inherent in defence contracting in the United States.

The genesis of the B-70 was the decision of the Administration and Congress, on the advice of the Air Force, that America's defences ought to include a strategic bomber capable of flying at three times the speed of sound at altitudes above 70,000 feet. The essential specifications for the B-70 were then submitted to the major aircraft manufacturers, with an invitation to present proposals. After close scrutiny the one submitted by North American was accepted by the Air Force

and by the civilian agencies concerned. At the same time, and by a similar process, the International Business Machines Corporation was chosen to construct the bomb navigation system and the General Electric Company the engines for the Valkyrie.

Though given responsibility as the prime contractor, North American was bound by numerous restrictions in carrying out a project for which taxpayers were footing the bill. First, as a matter of national policy, the prime contractor was instructed to subcontract the work as widely as possible, to take advantage of the best technology available in every field. As a result subcontracts for the B-70 were spread farther over the country than those for any previous defence programme. The sweep is shown by the list of some of the firms which will be affected by the latest cutback—unless it is rescinded:

Convair Division of General Dynamics Corporation, Fort Worth, Texas (wings); Lockheed Aircraft Corporation, Marietta, Georgia, (fuselage section); Beech Aircraft, Wichita, Kansas (emergency starting gear); Westinghouse Electric Corporation, Baltimore, Maryland (defensive armament); Motorola, Inc., Phoenix, Arizona (communications sub-systems); Hamilton Standard Division of United Aircraft Corporation, Windsor Locks, Connecticut (cooling and heating systems); Sundstrand Corporation, Rockford, Illinois (secondary electric power systems).

North American compiled its own master list of eligible firms; but this had to be submitted to the government to determine if there were any important omissions; and many firms solicited business on their own initiative. Then began a painstaking process of elimination. Teams of specialists in engineering, manufacturing, quality control, logistics, and costs were sent to the factories of would-be subcontractors to check their capabilities. However, even when these were equal,

North American was also required to observe other legal conditions.

Any firm involved in defence contracting must see that small concerns are not elbowed aside by their large competitors. Small firms must be given equal consideration in such matters as arranging solicitations and preparing bids, quantities, specifications and delivery schedules. At the same time, the prime contractor is required to do its best to place subcontracts in areas of surplus labour "where this can be done with the efficient performance of the contract, at prices no higher than obtainable elsewhere."

Finally, any decisions reached by North American on suitable subcontractors were subject to review by the Air Force. Because government funds were involved, the aircraft manufacturer also became accountable to the Inspector General and the General Accounting Office, not to mention the Small Business Administration and the watchdog committees of Congress.

The same constraints apply in reverse. When the original B-70 programme was cut back in the autumn of 1959, North American decided to carry out at its own plant in Los Angeles much of the work which previously had been contracted out, and to rely on readily available technology rather than to seek new equipment specifically for the Valkyrie. But official approval was needed and in fact at one point North American was forbidden to cancel certain major subcontracts.

The uncertainties of doing defence work are multiplied by the number of agencies and arms of the government which have fingers in the pie. When the B-70 programme was first cut back, this was the result of an economy move initiated by the Budget Bureau. The reactivation of the project was the result of increased appropriations voted by Congress, which the Executive Branch decided, in the end, not to challenge. Congress may rescue the B-70 again. Senator Russell of Georgia, the chairman of the Senate Armed Services Committee, predicts that it will over-rule President Kennedy and will vote extra funds for the aircraft. Meanwhile, North American and its subcontractors wait in the state of suspense to which they have grown accustomed since they first became involved with the supersonic bomber programme.

LOOK AT THE  
TRAFFIC  
—SEE TO  
SAFE SEATING!

Accident figures must make you think . . . not only of yourself, but of those whose safety is your concern. Every car user needs the protection that Masco G Belts give—and it's easy to install Masco G Belts now that one universal anchorage fits every make of car. Choose one of these Belts now.

**Masco Diagonal Belt** Gives the greatest protection of any diagonal belt. Restrains the body from forward or upward thrusts at moments of impact. Provides the most convenient and comfortable safety for drivers and passengers. 4 guineas.

**Masco Complete Harness** Full shoulder and lap straps for overall protection. No other belt type gives the same safety coverage. £6.12.6.

**Masco Lap Strap** An ideal belt for rear seats. 4 guineas.

All Masco G Belts incorporate the Masco Quick Release Buckle, which allows instant, one handed, adjustment to give the wearer complete freedom of movement—but complete safety in emergencies. If you drive a car, or if you control the cars that others drive, you owe it to yourself and to them to see to safe seating. B.S.I. APPROVED.

Congress. And once an employable man out of work has exhausted his right to insurance benefits (if he has any), he and all his family become almost wholly dependent on private charity: public assistance in cash under the joint federal state scheme is extended only to the disabled, infirm, blind, aged and the dependants of an absconding breadwinner; if he returns to his dear ones, their public assistance is cut off even though he has no job.

Congress is in the process of changing this socially undesirable provision at the President's request, but meanwhile it has not seen fit to set an example for the rest of the country in the District of Columbia, for which it legislates directly, as to how local action can mitigate this harsh lot. In Washington itself no local attempt whatever is made to provide public relief for a man who wants a job but cannot get one, although in twenty-one states and in many communities such attempts are made, with varying degrees of adequacy. A fairly typical scheme of this type, for example, operates in Alexandria, Virginia, a few miles away; in that city, under the local relief programme, an unemployed but employable man is granted a maximum sum of \$100 a month, for three months (consecutively or separately) in a year, irrespective of his previous income or the size of his family.

The only federal assistance for which the Washington unemployed are directly eligible is the national dole of surplus food, which was increased in amount and nutritive value by President Kennedy's first executive order. It consists of flour, cornmeal, dried eggs and milk, rice, butter, lard and peanut oil, and latterly some pork; families with less than \$95 to \$200 a week (according to the number in the family) are entitled to this dole and it is obviously a help when the minimum on which a family of four can "get by" is put at an average of \$84 a week. For families with some money, it makes existence possible; but there are many who have none (only half the unemployed are receiving insurance benefits) and for their rent and other non-food needs these depend on the United Givers Fund, which centralises contributions to the churches and other charitable agencies. This winter the UGF made the first emergency appeal of its history for money for cash

hand-outs, largely to pay arrears of rent. But though the \$58,000 asked for was over-subscribed, these agencies are only able to meet sudden crises, not long-term deficiencies.

It is therefore not surprising that one of the sights of Washington—only on fine days—is the eviction of families from their rooms in the poorer areas for non-payment of rent. They either move in with relatives or, if lucky, are bailed out by a charity. The result, compounded by the vagaries of plans for redeveloping slum areas and the excessively high standards of accommodation prescribed by the National Capital Housing Agency for the 7,800 units of far-from-cheap public housing that it manages, is intense overcrowding in the crumbling privately-owned tenements; in these it is not exceptional for weekly rents to run to \$18 a room or unheard of for thirteen persons to share a room. Clearly the extension of the unemployment benefit period by 13 weeks and the other reforms, such as the change in the law affecting aid for dependent children, will help; but they will not exorcise the distress in Washington. This will remain to test the limitations of the Administration's proposals, as modified by Congress, in front of the eyes of Congressmen.

### A New McCarthyism?

THE prophets of a return to conservatism are far from pleased to be saddled with the militantly anti-communist John Birch Society, a semi-secret organisation which suddenly became news a fortnight ago when it was learned that its founder, Mr Welch, once accused Mr Eisenhower, in a private 80,000-word letter to friends, of being an agent of the Communist party. The society's aims read like a spiteful caricature of the right wing: the impeachment of Mr Warren, the Chief Justice, for softness toward communism; the abolition of the income tax and of foreign aid; a great diminution of government "interference," probably by repealing most of the welfare legislation of the past thirty years. Its methods seem to have been borrowed straight from the communist

### Whose Health is Insured?

IN 1959, according to an experimental study carried out by the United States National Health Survey,\* at least two-thirds of the people living in the country had some kind of protection against high medical costs. The report does not go into the adequacy of the various types of coverage, but it confirms that it is the old and the poor, the people who need health insurance most, who have least of it. The most usual type of insurance pays all, or part, of any hospital bills which may be incurred; surgical insurance pays the fees of the doctor performing an operation and doctor visit insurance pays his fees for other types of care. The survey was confined entirely to private health schemes—Blue Cross and Blue Shield group plans, under which the insurer, not the insured person, pays the hospital or doctor, insurance offered by private companies, and pre-paid comprehensive systems.

Chemicals from Rainham

... and Henry Yeoman's kitchen floor

CHEMICAL  
COMPANIES  
INTERNATIONAL  
ENTERPRISE

Typical houseproud family man—Henry Yeoman. Didn't really mind being asked to modernize the kitchen. And he's found a new type of flooring that's just the job—attractive and easy to clean. Vinyl flooring. And that's where chemicals from Rainham come in.

At Rainham is one of the plants of A. Boake, Roberts & Co. Ltd., a company of the Albright & Wilson Group. The Company produces phosphate plasticisers, ingredients

which make plastics pliable. No end of things benefit—carpet backing, cable sheathing—and, of course—vinyl flooring. The flooring Mr. Yeoman will be laying at Mrs. Yeoman's feet.

This is only one of the ways in which A. & W. chemicals play a part in the life of Mr. Yeoman. As one of the biggest organisations in the British Chemical Industry, the Albright & Wilson Group contributes—but we could go on like this...

THE ALBRIGHT & WILSON GROUP

Men who buy well,

buy **DICTAPHONE** TIME-MASTER

Men who value quality and service are the men who buy Dictaphone Time-Master, because the transistorised Time-Master is the quality dictating machine. It's a precision instrument designed to save time for a man whose time is valuable.

Dictating with Time-Master is as easy and pleasant as normal dictation to a secretary, but

it is much more convenient and time saving. No matter where your secretary may be, you simply speak, and immediately your thoughts are on *permanent* record. Time-Master has these unique advantages because only Time-Master has the DICTABELT record.

The Dictabelt recording is permanent and visible, ensuring complete safety from acci-

dental erasure. Reproduction is crystal clear and placefinding is instantaneous.

Branches throughout the British Isles

The words DICTAPHONE, TIME-MASTER and DICTABELT are registered trade marks.

manual; a membership split up into small chapters to encourage a sense of participation; the organisation of "front" groups and the infiltration of existing bodies such as parent-teachers organisations; deliberate smearing of those suspected of communism; authoritarian control from the top. Its name commemorates a young fundamentalist missionary, of a heresy-hunting turn of mind, who became an effective intelligence officer in China during the war and was shot by the Chinese Communists in 1945—the first casualty, members claim, of the cold war between communism and freedom.

The society was founded only in December, 1958, but it seems to have nearly 100,000 members in 34 states already. Two members of Congress—both from southern California—have announced that they are John Birchers and a third has endorsed it officially. Among the members of its central council are a number of nationally known figures who have long wanted to turn the clock back. In some cities the society's leaders are almost identical with anti-labour groups; in California and Tennessee religious fundamentalism provides ready converts; in the South the society harbours racial hatred. Many of its leaders dissociate themselves and the society from Mr Welch's wilder flights of fancy. But all members share his conviction that communism is making rapid progress in the United States and must be fought by fair means or foul.

There have been a number of calls—including one from Mr. Welch himself—for a congressional investigation of the society, either by the Un-American Activities Committee (which the John Birchers support strenuously) or by the Senate Internal Security Sub-committee. But many people feel that as long as the society simply exercises its constitutional right to freedom of speech and association it should be ignored; the Attorney General has contented himself with calling it ridiculous. No doubt it is so in Washington but in smaller communities in the south and west, which are susceptible to mass emotional movements, some ugly heresy-hunting is already taking place, particularly in the colleges. Here Americans have a chance to prove that they learned something from the McCarthy years. Mr Nixon and the conservative *Los Angeles Times* have proved it already by promptly condemning such "subversion from the right."

### Civil War—Civil Rights

FIRING broke out again on Wednesday, the centenary of the southern attack on Fort Sumter, when North and South fell out once more over the treatment of Negro Americans, this time at the re-enactment in South Carolina of the shots which ushered in the Civil War. The dispute was an inauspicious opening to the four years of ceremonies to commemorate the battles and the bloodshed which first tore apart and later sealed the Union. Over a year ago South Carolina, one of the most backward southern states where race relations are concerned, invited the National Centennial Commission and delegates from the various state commissions to attend this week's observances. But when a Negro delegate from New Jersey tried to obtain hotel reservations in Charleston she found that she would be barred, not only from living in the same hotel as the other delegates, but also from the luncheons and dinners being held in connection with the meetings.

General Ulysses Grant III, the chairman of the Centennial Commission and a less determined man than his famous forebear, was prepared to surrender to southern prejudice. But President Kennedy insisted that the commission, as a federal body, spending federal funds, could not meet under auspices disfigured by racial segregation. The observances were thereupon transferred to the United States naval base outside Charleston although South Carolina, in a painful mockery of its secession from the Union a hundred years ago, insisted on holding its own "lily-white" cere-

monies under the aegis of Governor Byrnes. Unfortunately a southern speaker at the federal dinner tried to carry the war into the enemy's camp by alleging that even in New Jersey there are hotels where a Negro may not register. In the resulting row the representatives of New Jersey demanded the resignation of the "incompetent" General Grant.

No one pretends that the North is perfect; no one denies that the South would be a better and happier place today if it had not been treated with callous brutality after its defeat. But the South has a great stake, both sentimental and financial, in the observances of the next four years. Most of the battlefields are in the South and this is where the money will be spent. It is a good thing that, right at the start, President Kennedy has firmly reminded the South that one of the principles which the victory of the North established was the equality of all men. If the South continues to ignore this, the commemoration of the Civil War will be an empty, limping thing. At Charleston, but for the President's intervention, five northern and western states would have boycotted the proceedings.

### SHORTER NOTES

The Senate, with only one dissenter, has approved the treaty signed in January by President Eisenhower and Mr Diefenbaker for joint development with Canada of the basin of the Columbia River. It has taken ten years to reach an agreement on how the costs and benefits of the project should be shared. These benefits include flood control, water for irrigation and hydro-electric power. The agreement was approved by the provincial government of British Columbia, but it is now having second thoughts and as a result ratification by the Canadian Parliament is being delayed.

The Sugar Act, which expired at the end of March, has been extended until June, 1961, to allow time for a new Act to be drawn up. The suspension of the Cuban quota continues, but the President has been given power to prevent the Dominican Republic from benefiting from this suspension; he can now re-allocate the 3 million tons which would have come from Cuba to other suppliers and is expected to reward other friendly Latin American countries by increasing their share of the United States sugar market.

Although the famous Barnes art gallery in Philadelphia, as well-known for the number and quality of its collection of Impressionist paintings as for the fact that practically no one was allowed to see them, has now been forced to admit the public in order to preserve its tax-exempt status, the number admitted is being kept to a minimum—200 people on two days a week.

General Eisenhower is once again the correct designation of the ex-President, who resigned his commission as soon as he was nominated for office in 1952. Congress has restored his five-star rank but he will not receive the pay and allowances which go with it since as a former President he is already entitled to a pension of \$25,000 and an expense allowance of \$50,000 a year.

This is the season for tornadoes, which kill hundreds of people and do much damage every year, chiefly in the south central states. Hurricanes can be studied over a period of days and people can be warned to take shelter but tornadoes spring up in a few hours; they are both more violent, with winds up to 600 miles an hour, and more unpredictable. To study and, if possible, to tame them, the Weather Bureau has just set up the National Severe Storms Project with headquarters in Oklahoma City, in the tornado belt.

# BOOKS

## Memoirs from the Inner Ring

### The Supreme Command, 1914-1918

By Lord Hankey

Allen and Unwin. 2 vols. 906 pages. 84s.

As with any other historical subject worth studying, the darkness thickens as you near the heart of the great war. This book is written by one who lived among the shadows where the critical decisions for its conduct were made, and could yet see what was passing round him. It will be a valuable tool, both for historians of the war and for other students of the machinery of national and international government. For its author was a man of unbounded competence at taking minutes, filing papers, recalling precedents, with a more valuable gift still—the gift of silence: a man of the utmost discretion, who circulated tactfully among the indiscreet, remembered everything and repeated nothing. His publishers, with a rare modesty in the war memoir market, claim on the dust-jacket that “These pages abound with sidelights on the conduct of the war”; the claim is just.

The author filled for many years positions of entire trust, and was the confidant of leading statesmen of all parties; but he never aspired to be a leading statesman himself, or even a directing figure in the war. He records his narrow escapes from high staff posts in the winter of 1917-18; we are offered Smuts's opinion that “Hankey has a bigger job as Chief of Staff to the War Cabinet. It needs a wider outlook than CGS of the Expeditionary Force.” He correctly appreciated that his own best role was to keep the leading ministers and their technical advisers rolling along the procedural rails he laid down for them. This book adds new details to the well-known story of the emergence of Lloyd George's small efficient war cabinet from the chaos of Asquith's unwieldy succession of committees, without altering the main outline much. Any reviewer must hesitate to question the accuracy on a constitutional point of the principal living architect of the modern cabinet system; but in one respect Lord Hankey does seem unfair to Asquith and his colleagues. The last Liberal cabinet's frequent resort to committees, informal even more than formal ones, is often criticised here; and criticised as an innovation. This it was not: to work through such small groups of ministers had been the usual practice of mid-Victorian and indeed of earlier governments, though it had dropped out of current usage during Lord Salisbury's long virtual dictatorship—at the end of which young Maurice Hankey's rise began. It should not be thought he is hard on

Asquith; on the contrary, he warmly admires that statesman's courage and equanimity, while concluding his own reflections with the meditation that “LLOYD GEORGE WAS THE MAN WHO WON THE WAR.” It was typical of the author's continuous, unobtrusive work at the core of the British war machine that he should have become the close friend of both these rivals. He seems to have made no enemies of importance; the only notabilities to whom his references seem a shade chill are House and Woodrow Wilson, and this is probably due to the resentment felt by the inner circle in Whitehall at America's belated entry into the war. Inevitably this book is centred on Whitehall and its problems. We are led into these deep waters from the shallow end, with an account of the author's prewar career as secretary of the committee of imperial defence; there are some splendid asides by Jackie Fisher (“You can no more tame war than you can tame hell!”), and some new views on the War Book, which was principally the work of A. C. Grant Duff. These lead up to an important pronouncement: “There are two criticisms to which Asquith's government is not open—that it had no policy or that its policy was not arrived at after the most thorough investigation.”

### Science and Government

By C. P. Snow.

Oxford University Press. 94 pages. 9s. 6d.

THIS is not history, but a parable. Ever since these lectures in America came out as a book here, men in the know have been parading in Printing House Square and university common rooms with banners proclaiming “Unfair to Lindemann.” Even a reviewer not in the know can see that Sir Charles Snow's vivid and provoking account of the personal clash between Professors Tizard and Lindemann over air defence before the war and over air offence later neither tells all the story nor reveals the whole men. But, equally clearly, much of the present recrimination from the old back-rooms is beside the point.

Professor Lindemann had no practical alternative to Professor Tizard's picked and properly-seeded programme for radar; what he really wanted to do (and could not do until his patron, Mr Churchill, came to power) was to decide the air defence programme himself, with radar (under its developer, Watson Watt) alongside his own

THE ECONOMIST APRIL 15, 1961

The book is founded on the author's own diary, kept up nightly so far as pressure of business allowed. The account of the war itself, studded with vivid anecdotes of the high commanders, amounts on the strategic side to an essay on the importance of manpower and seapower as the twin creators of victory; and on the administrative side to a mass of authentic detail and judicious advice. For instance, “It is always a mistake . . . for delegates to meet without a secretary, especially where it is a case of discussing a draft. This requires the whole attention of one man, particularly when there are two languages.” There are points here for the constitutionalist: “Departmental Ministers did attend the meetings of the war cabinet whenever subjects which affected their respective departments were under discussion, and while present they took part in the discussion as Cabinet Ministers and were expected to take their share of responsibility.” There are gleanings for the political historian also, such as Bonar Law's remark in 1920 that the 1915 coalition was “merely a stop-gap arrangement and both parties were watching each other closely all the time.”

There is one remarkable omission: the second revolution in Russia in 1917. Neither Lenin nor Trotsky is so much as named; of the four allied powers intervening in Russia, only Japan is mentioned in this context. Of course at the time no one in London understood what was involved; but it is a curious way of acknowledging this to omit all direct reference to such a turning-point of history. These volumes in fact join the historian's pile of evidence; they cannot do his work of insight for him.

## Parable of Two Professors

other devices. When he did get to power on his patron's coat-tails he did, in effect, decide the bombing offensive; Professor Tizard, now armed with only his (and many others') clinching objections both to the bad sums on which the bombing was based and to the subtraction which it made from other war tasks—but with no alternative notion for attacking the enemy—could do nothing to stop it; and he had, anyhow, been brutally excluded from the powerhouse. The tale is not about real, rounded persons at all; it is a parable about the processes of power.

The nub of it is not whether one adviser was good and the other bad. Nor is it that one was clubbable and the other vain and aloof. It is how a government should get and use advice: what is the best way, first, of picking the right questions to answer; secondly, of finding the right answers; and, thirdly, of putting the answers into effective practice? In wartime these choices are heightened by peril at hand. But they are not less important in peacetime, as the new men now in Washington will contend; and Sir Charles Snow, talking very appropriately to an American

THE ECONOMIST APRIL 15, 1961

audience, had first in mind the right twentieth-century place of science and scientists in the process.

The least-discussed but much the most important part of this book is the final third, where Sir Charles tries, tentatively, to draw the moral. Tizard was good in committees, and in working through approved channels, from ministers and civil servants to men on the airfield. Lindemann was bad in committees, and had to have his own channels cut by the man in power, to whom he taught science and statistics, privately. Sir Charles is rightly sure that such “a solitary scientific overlord” is dangerous, though he says—fairly but too faintly—that Lindemann “drove some things through as a non-scientist could not have done”: no single scientist, he says, should have such powers of choice, and some scientists, ridden by their own secretive notions, should have no power of choice at all.

This is in fact a problem of politics and government, not only of science. It is in the right relation between administrators and specialists on the one hand, and the politicians with the power on the other, that the answer lies. It is for the light it tries to throw on this problem, with its comparisons between this country, America and Russia, that this little book deserves to be read and argued about: for instance, the two pages on the “conditions for an effective committee”.

On scientists in government, Sir Charles is still torn: in their creative and obsessional periods, they are not likely either to be interested in administration or good at it; it is their nature to think long and deeply of only one thing, whereas administrators have to be able to think promptly and connectedly of many things at the same time. Yet Sir Charles is quite convinced that “persons of scientific education can make excellent administrators”; that all administrators ought to be scientifically literate, as indeed they should be; and that scientists, because each knows that his own subject “is moving in time,” ought above all to bring foresight to policy—though this particular parable hardly proves that. What it does prove again is the primacy of politics in all the decisions that a society has to make.

## From Flow to Ebb

### Die Nationalsozialistische Machtergreifung

By K. D. Bracher, W. Sauer and G. Schulz. Westdeutscher Verlag, Cologne and Opladen. 972 pages. DM 59.

### The Testament of Adolf Hitler

Edited by François Genoud. Cassell. 115 pages. 12s. 6d.

HERE are two publications of the most contrasting nature and format. The one, in German, consists of three highly detailed analyses of the process of Hitler's seizure of power; the other of a translation of his relatively brief reflections in the last

BOOKS

months of his life; both are impregnated, objectively or subjectively, with his evil spirit.

The first, a composite work by Professor Bracher and two colleagues, is of compelling interest for all students of the period. Professor Bracher is already established as a leading authority by his book, “Die Auflösung der Weimarer Republik.” The book under review dissects the Nazi technique of cheating Germany into dictatorship, the acrobatics, as he phrases it, of legalising what was in substance a *coup d'état*, however cleverly disguised. Hitler superseded democratic government by, among other things, transforming normal elections into forced “plebiscitary acclamation” of his own tyranny with great efficiency but occasionally at exhausting length. Dr Schulz examines the distortion of the country's administration. He has a splendid paragraph on Goering's failure as contrasted with Hitler's success, the one something of a Nero, the other incomparably otherwise. Dr Sauer is concerned above all with the relationship of the German Army to Hitler's organisation of German power; this is a study that surpasses any of its predecessors.

Hitler's diatribes during February, 1945, were, one supposes, intended to justify him in the eyes of posterity. He admits, remarkably enough, to having made one fatal error: this was to have allowed—in truth to have encouraged—Mussolini to fight as his ally. While still repeating his old refrain about never forgetting Mussolini's behaviour at the time of the *Anschluss*, Hitler traces back all his troubles to Italy's belligerency: since Italy was an imperial power in Africa Hitler was prevented, he here complains, from appealing to the Arabs and Africans against Britain. There was nothing wrong about the German invasion of Russia, we are told, except for the six weeks' delay caused by Mussolini's military failure in the Balkans.

Hitler's testament is filled not only with his pathological hatred of the Jews but also with hatred of the French. It contains many lies of whose truth Hitler had no doubt persuaded himself by 1945, for instance, that “Spain was burning to follow Italy's example” in October, 1940, when in fact he had failed to talk Franco into intervention in an interview that lasted nine hours.

It is perhaps worth noting that Hitler, like Mussolini, became increasingly “red” in his decadence. Hitler's testament is full of abuse of the “bourgeoisie” everywhere; he should, he considered, have appealed to the proletariat in France against the ruling classes. And the appeals he yearned after to Asians and Africans seem to fall into much the same category as a Communist speech at the United Nations nowadays. He was right, at least, when he gloated over the fact that he would leave no colonial problems for the Germans to inherit. A postscript dated April 2, 1945, is along the same lines as his actual will. “Germans, stick together and be bloody-minded about Jews,” is a fair summary of his final,

familiar message. He does foresee a world dominated by the United States and Russia and adds at last “I say with all the emphasis at my command that the Germans must at all costs avoid playing the role of pawn in either camp.”

## The Long Walk

### The Arab Revival

By Francesco Gabrieli.

Thames and Hudson. 178 pages. 18s.

### Arabian Adventure

By Anthony Shepherd.

Collins. 256 pages. 21s.

### Three Kings in Baghdad

By Gerald de Gaury.

Hutchinson. 232 pages. 25s.

THE Egyptian struggle for autonomy was so much in the van of the broader Arab nationalist movement that when George Antonius wrote “The Arab Awakening” he confined himself to the exertions of the Arabs of the Fertile Crescent. He did not see that the two movements might converge. Nor, indeed, did the Egyptians themselves. It was only in 1945 that Nuri Said's challenging project to unite Iraq with Syria drew Egypt into pan-Arabism as leader of the larger, but looser, Arab League. Yet Mohammed Ali, the founder of modern Egypt, did, as Professor Gabrieli recalls, reconstitute by his conquests the union between Egypt and Syria, “a revival of earlier and very ancient unions and a presage of others to come.” That union of 1830 lasted only ten years. Nevertheless, from 1840 onwards the two countries always preserved a strong cultural unity, born of their new western contacts, which formed the real core of the awakening Arab world.

Professor Gabrieli presents the Arab revival as a single movement. His study is all the more graphic for being brief. The several threads of the story, that of Egypt, of Arabia, of the Fertile Crescent and of the Maghreb, are skilfully drawn together. As he follows the Arabs out of their Ottoman darkness through the half-light of western tutelage and so through the dawn, in our own times, of their independence, the moral of his tale is plain: theirs was too long a walk. The professor is saddened by how much was lost on the way. Where, he asks, are the old Arab chivalry and liberal sentiment that inspired the earlier nationalists (Mustafa Kamil, for example, Egypt's first great exponent of nationalism, with his motto: “free in our own country, and generous to our guests”)? In the Maghreb he still finds a trace of them but not in the Arab east. There he sees only xenophobic nationalism, something alien to true Arab culture, but the price of having reached independence only in the mid-twentieth century, when liberal values were declining and totalitarian stimulants were needed on the last lap home.

Captain Shepherd got bewitched in a by-road where the long walk is still not finished: the British protected sheikhdoms of south-east Arabia. Seconded in 1957 to the Trucial Oman Scouts, he commanded a squadron in Buraimi and took part in the British-led expeditions on behalf of the Sultan of Muscat against the Imam of Oman's rebels. They were hard, hot days; but he cherished every minute as he trained and deployed "his Arabs," grew absorbed in the life of local sheikhs and tribesmen and tried to dispose of the Imam's mines and gunrunners. One is struck by how tenacious those Omani rebels were. Any reader, however, who seeks political enlightenment on this toy-sized revolt in the desert will not find it. The captain is concerned, as is only right in a soldier, with the personal adventure of it and not the reason why.

Colonel de Gaury is also a British soldier who found his vocation working among the Arabs. But his book rings down the curtain on the courtly Arab world he knew. He writes of the Hashemites in Iraq as a kind of friend of the family and his personal recollections, enlivened by many good stories, give a warm human note to his theme. King Faisal I emerges as tremendously urbane in spite of his desert background. Spoiled Ghazi had too much charm. Young King Faisal II was conscientious from childhood. Only his uncle, the Crown Prince Abdulillah remains a trifle enigmatic. The colonel describes the troubled times they lived in and concludes with a poignant account of that terrible July morning in 1958 when the king, crown prince and nearly all their family were done to death.

## Royal Reassessment

### King John

By W. L. Warren.

*Eyre and Spottiswoode.* 340 pages. 30s.

JOHN, John, bad King John  
Shamed the throne that he sat on."

Dr Warren's clear and lively account corrects this misconception at least, for whatever the impression left by his book, it is not that of an incompetent ruler. John lost Normandy, and signed Magna Carta; but the one was inevitable, and the set-back to his power in 1215 might well have proved only temporary.

The real truth about John is difficult to reach. In many ways he was the strongest of the Angevin kings, and yet defects in his character caused him to use his strength in such a way that he frightened his opponents into action, and in the end he weakened the position of the crown. The legendary picture of an ineffectual and vicious ruler is largely the result of the deep-rooted hostility of the monastic chroniclers in general, and Roger of Wendover in particular. The administrative records used by Dr Warren give a rather different view. They show a "wind of change" blowing through all

departments, and give the impression of a strong and ruthless king working through a small number of highly trained officials, like William of Wrotham, and Reginald of Cornhill who reorganised the embryonic navy, men who, like the king, were anxious to extend and define royal power. In fact it is impossible not to suspect that, far from neglecting the business of government, John interfered too much, and his efficiency in matters of administration, his use of mercenaries and aliens in the government, started a reaction against him, which was intensified by the Interdict. The Interdict gave the king a heaven-sent opportunity to replenish the royal finances at the expense of the church. Church lands were seized and administered by the king's officials, and revenues were appropriated. In fact the king "revealed a remarkable power to coerce and if necessary break a large proportion of his subjects at will." The barons "could not remain indifferent to the spectacle," and the result was civil war.

Magna Carta "is so great, it will have no fellow." Dr Warren gives a full translation of the charter as an appendix. Because of the final substitution of the words "free man" for "baron" throughout, the charter came to have a wider application for later generations than for contemporaries. Yet, even at the time, it was regarded as a re-assertion of the rule of law, and a safeguard against the increasing power of the crown.

Dr Warren's book stands a good chance of becoming the accepted popular life of John. But it cannot make the king an attractive figure. Suspicious and cruel, time and again John threw away advantages gained by his energy and intelligence. He lacked the one great quality essential in a ruler, that of judgment, and he was foolish enough to unite against him the two divergent elements in his kingdom—the church and the baronage. This was his undoing.

## Continuing Phenomenon

### Nationalism: A Religion

By Carlton J. H. Hayes.

*Macmillan Co., New York.* 198 pages. 35s.

It is nearly fifty years since Dr Hayes began to publish studies of the phenomenon of nationalism, and the intervening period cannot be said to have diminished the interest or significance of his chosen theme. His general reflections upon it should be worth having; and his latest work shows that at the age of seventy-eight he has lost neither his appetite for new knowledge nor his sense of fairness. It is certainly a condemnation of nationalism but a measured one. The book is, however, somewhat disappointing in so far as, while noting the importance of the spread of nationalism outside Europe, it does not substantially recast the concept itself in the light of this new experience.

It is true that the importance Dr Hayes attaches to language as the core of the European sentiment of nationality is, he

realises, less easily discernible as a dominant factor in Africa or Asia, and that he recognises that the political importance of language in, say, tropical Africa or in India will only manifest itself as literacy becomes more widespread and social institutions more complicated. But he does not go back from this reflection to Europe itself and ask whether he has not there over-simplified the linguistic factor: does it really make sense to talk of Switzerland as being composed of three nationalities? He tends to talk indeed as though language and growing literacy themselves explain the history of central and eastern Europe in the nineteenth and early twentieth centuries, unrelated to other aspects of social change.

For an historian Dr Hayes is altogether too easygoing with his terminology. The Commonwealth is not an alliance; neither CENTO (miscalled METO) nor the Colombo Plan forms a federation. He is also a little careless of fact. The establishment of quasi-federalism in the Soviet Union is telescoped; Colonel (not Captain) Lawrence is given a vastly exaggerated place in Middle Eastern diplomacy; and whatever Irish nationalists may have done in the way of parliamentary obstruction, no one who had ever visited the House of Commons could have pictured them throwing inkpots about. But all this is less important than the fact that the statement that nationalism is a "religion" is just as likely to confuse as to assist the political analyst.

Of course, there are analogies in the psychological effects; in the role of myth, symbol and ritual and so on. But like Sir Isaiah Berlin's famous analogy between Soviet society and the British public school, it gets you just so far and no farther. The religious impulse may take a social form, but it springs from an individual predicament; nationalism and the sentiment of nationality are social or they are nothing. It would be more reasonable and more illuminating to write of "nationalism: a social cement." But Dr Hayes has, one suspects, retained from his earlier detailed studies a pronounced tendency to relate everything to the French model; and French nationalism does indeed have most of the features that Dr Hayes ascribes to nationalism as such.

## Paperback Selection

Recent paperbacks include several new batches from established series. The latest entrants into the Fontana Library (*Collins*) contain a real bargain in "The Renaissance" by Walter Pater, with an introduction and notes by Sir Kenneth Clark and several plates. Four additions have been made to the Writers and Critics series (*Oliver and Boyd*), and the second issue of the Science Study series (*Heinemann*) has also appeared. The biggest new batch has come from University Paperbacks (*Methuen*), which tend to be more expensive than the others and, though covering a wide field, have a rather unappetising format.

### Economics :—

A HISTORY OF ECONOMIC THOUGHT. By Eric Roll. *Faber.* 540 pages. 12s. 6d.

## The Eichmann Trial

SIR—The Eichmann trial raises issues that are better faced than evaded. Your correspondent's article last week prompts some comments.

First, the purpose of the trial. It is superficial and specious to pretend that the trial is a piece of historical research rather than a proceeding against an individual. The individual is there in the bullet-proof glass dock. If the Israeli government's object really is historical research it should not use the judiciary for this purpose. The result is to abuse the judiciary and discredit the judicial process. There are proper and improper ways of conducting historical research. (It has incidentally been common knowledge for ages that *Sonderbehandlung* meant death.)

Secondly, the trial itself. All is not well. The death penalty has been introduced *post hoc* and *propter hoc*. The minister of justice has threatened possible defence witnesses with prosecution. The prime minister has declared Eichmann guilty in advance of the verdict. According to my information the prisoner was able to find Israeli counsel but was not allowed to have him in court. Thus he has been deprived of the expert and instant guidance on procedure which, as any lawyer will attest, can be vital.

Thirdly, external reactions. I cannot help feeling that ever since the initiating act of kidnapping (an assertion of national jurisdiction beyond the borders of the state), reporting of the Eichmann case has been muffled by two things. The first is the fear that criticism of Israeli actions will be interpreted as standing up for Eichmann, and the second is the wish of the ordinary decent anti-antisemite to remain pro-Israeli. Both these motives are understandable, but they betray moral cowardice and infirmity of principle.

As between Israel and the Arabs there is substantial support in this country for Israel, which enjoys besides widespread admiration for other reasons, but the Eichmann trial presents Israel in a different light at the very moment when it is being invaded by a large corps of the most inquisitive and critical people in the world—500 newspaper correspondents.—Yours faithfully,  
*Bletchley, Bucks* PETER CALVOCORESSI

## Oil Prices

SIR—In the item headed *Price Leader Again?* in your issue of March 25th, the statement is made: "Others (observers in other companies) simply found Jersey's initiative, once again, intriguing. . . ." Your correspondent did not inquire of us. Had he done so, he could have had a simple and direct answer. Perhaps it is not too late to

clear away any wondering that may exist.

Our company is short of residual fuel oil from east-of-Suez supply points for our east-of-Suez markets. This is primarily due to a large increase in the Far Eastern market demand. The lack of availability of exports from Abadan is a contributing factor, but we are forecasting shortages with Abadan operating normally. Our situation on gasoline is the direct opposite, based on our forecasts of outlet in this area.

We recognise, as you state, that substantial quantities of fuel have moved westward through the Suez Canal, as indicated by the December Suez Canal reports. Since that time the increasing demand and tightening of Persian Gulf supplies should have reduced such movements substantially. Unavoidable commitments west-of-Suez may tend to delay the full effect of this change. In our particular case we have not been making residual fuel shipments from Persian Gulf to west-of-Suez for some months.

I think it should be clear that the price changes referred to reflect relative supply-demand conditions for individual products. By raising residual prices, we hope to encourage the availability of additional quantities of fuel from supply sources tributary to the Far East. Similarly, the reduction of gasoline prices lessens the incentive to maintain the past gasoline-residual yield relationship.

Although the question posed by the heading of your item was no doubt rhetorical, I may say that we do not consider ourselves a "price-leader." By the same token, we do not consider ourselves a "price-follower." Our prices are adjusted, and will continue to be, to meet changing conditions of the market as we see them. If our judgments are wrong or ill-timed, other companies can benefit at our expense.—Yours faithfully,  
R. H. MILBRATH

*New York* Esso Export Corporation

Esso increased its fuel oil price by 25 cents a barrel: Caltex, later, did the same. Last week Shell and BP increased fuel oil prices ex Abadan by 10 cents a barrel, and this week Mobil made an increase of the same amount ex Ras Tanura.

## Borneo and Others

SIR—After two voluble articles on Borneo in your usually so well-informed paper I feel I must try to correct the rather theoretical view-from-above they express.

Brunei: The Pengirans look to Malaya for federation, and they have no interest in any pan-Bornean federation. The people (the Malays) are not interested in anything. But —Azahari's new party looks to Indonesia. Indonesian influence on lower level is markedly strong.

Sarawak: Among the Chinese there is a very strong influence, both economically and politically, from Singapore. Every

trader looks to Singapore and not one towards North Borneo or Brunei. Communist influence is strong, especially in the Sibu area.

**North Borneo:** Has no common economic interest with either Sarawak or Brunei (except, just as Sarawak, it would like to have a share from the oil royalties of Brunei to finance development projects). The weaker (economically) west coast looks for imports towards Singapore, but the far more sturdy east coast is much more Hong Kong and Japan-orientated for trade. Fortunately, communist influence is as yet infinitesimal. The Chinese are afraid of contamination (communist) from the Sarawak Chinese in case of federation.

To sum up, the lack of common economic interest in the territory between the three "countries" makes nonsense of any plan for federation or union. Not one (except Brunei) would look to the Federation for any sort of amalgamation—and to propose the Philippines is even more ridiculous, as your reporter does. The only and very grave danger is "big brother" on the same island, who with his large modern army could swamp British Borneo whenever he would so desire. Also, Indonesia has claimed British Borneo.—Yours faithfully,  
Sandakan, Brunei L. F. DE GIDRE

### Marshall Spirit

SIR—Your article on the new US Administration's ideas concerning economic development of backward countries (*Needed—More Marshall Spirit*, March 25th) perpetuates a false and dangerous analogy. It is a common belief that, because Marshall and subsequent aid hastened the postwar reconstruction of Europe, massive shipments of free goods can similarly develop productivity and higher *per capita* output in south-east Asia, central Africa, and parts of Latin America. But, apart from the cost, there is hardly a parallel.

A necessary condition of economic progress in the really underdeveloped areas is cultural change. The quality of the work force must be improved by education and training. Institutions and attitudes must be altered. Barriers of caste and tribe and language must be lowered. Civil service traditions, appreciation of law and order, eradication of superstition, these are all part of the social capital that must also be accumulated. Innovations depend on people more than on grants-in-aid.

The Marshall Plan and its successors had a comparatively easy task. Europe's physical capital was partly destroyed and mostly depreciated. But Europeans were still there, with their knowledge, skills, and traditions, and understanding of a capital creating and using economy. Too few "Westerners" (including north Americans), most of whom have no personal knowledge of the backward sub-continents, realise that the Marshall Plan approach is rather inappropriate to a majority of poor countries.—Yours faithfully,  
Cape Town STEPHEN ENKE

### LETTERS

#### Milk

SIR—Milk quotas need not inhibit milk production for manufacture, as suggested in your last issue because it is possible to devise a two pool system with quotas for the liquid market pool only; the criteria for fixing quotas and the rules for operating the pools can be such as meet almost all the criticisms appearing on this matter in the farming press and elsewhere.

Indeed, it is the present price and pool system which has so distorted the market that the possibility of planned production for manufacture only has been frustrated. With accelerated freeze drying on the horizon, it is important to provide the industry as a whole with the opportunity and freedom to determine the size, pattern and general nature of the manufacturing market.—Yours faithfully,  
London, SW1 ANCRUM EVANS

### Forever Un-American

SIR—It may be questioned whether "most of the public" approves of the House Un-American Activities Committee, as your article of March 11th concludes. Most of the American public goes about its daily affairs with little concern for this or other minor congressional committees, even those which seek publicity at all costs. The committee is, in fact, probably completely unknown to most Americans. At least, we would believe this to be so until polls show differently. We remember that at the height of Senator McCarthy's investigation, a large proportion of Americans had never heard of him, and some of those who had, thought him to be a communist or something other than he was.

We dislike the thought that *The Economist* may be quoted in support of this obnoxious and ineffectual committee, without further evidence than the House vote. Surely, so soon after November this vote could not reflect a fear of the electorate. In our view, it means that existence or abolition of the HUAC is too trivial an issue to serve for challenging traditional support for all established committees.

*Printers' Ink*, a widely-read magazine in the field of advertising, has recently published a series of articles urging adoption of a Senate resolution for a "Code of Fair Procedure for Congressional Committees." This avenue, rather than a partisan battle over the HUAC, would seem to be a preferable approach to ending its abuses.—Yours faithfully,  
G. H. MATTERSDOREFF

### Democracy in Africa

SIR—As one of those who had the privilege of taking part in the work of training the Sudanese to run their own affairs, I can sympathise sincerely with your correspondent Sayed Kamel el Mahdi in his desire for the early restoration of democratic government in the Sudan.

THE ECONOMIST APRIL 15, 1961

But Sayed el Mahdi must face the facts, and your readers will be interested in the following extract from a letter I received three months ago from an old Sudanese friend and colleague who has now retired after a long career in the public service, a liberal minded elder statesman with a wide knowledge of the country and its peoples, which brings up the other side of the picture. He writes: "Things are getting on well in the Sudan. . . . The Government of the Armed Forces seems just what the country needed for the present. I do not disclose a secret when I say that the people seem to like it, and prefer it to past party governments, when the progress of the country was at a standstill. I myself hold the same view."

"The democracy which was carefully and well worked out failed completely and the men at the top were not, on the whole, of the right type. It was a pity."

Yes, it was a pity, and not least for all of us who worked with such high hopes to establish an independent democratic government in the Sudan. But if we study the sequence of events in retrospect, not only in the Sudan but also those other countries in Africa and Asia where parliamentary democracy has been replaced by dictatorship, are we not driven to the conclusion that neither the Sudan nor these other countries were ready for this most difficult form of polity?

This is not a criticism of the Sudanese, but a simple statement of fact, which is borne out by a report I received recently from a friend who had just returned from a visit to Pakistan. There he was told by the Pakistanis that their country was not yet ready for parliamentary democracy, and that the government they now had was that most suited to their needs at the present stage of their development.

Must we not then ask ourselves what lesson is to be learnt from these facts with special reference to East and Central Africa and the other colonial territories which are now graduating to independence? May it not be that if ordered progress is to be maintained and the freedom of the individual, the franchise in the early stages should be restricted to a comparatively small number of electors who hold posts of responsibility or have attained a suitable level of education? Democracy, in fact, should be allowed to grow as it did in England from what might in the earlier stages be described as a form of extended aristocracy with a limited franchise, which would gradually develop with the spread of education into a fully-fledged democracy based on universal suffrage.

To what extent a solution on these lines would be practicable it is difficult to say, but there is clearly a challenge to our political ingenuity and to the common sense of all those who are prepared to set their country's interest above their personal ambition, to see whether we can devise a method of transferring political power without sliding inevitably into the toils of dictatorship.—Yours faithfully,  
Kirkaldy, Fife H. A. NICHOLSON

THE IBM "EXECUTIVE" ELECTRIC, WITH PROPORTIONAL LETTERING, TRACES ITS LINEAGE TO THIS FAMOUS INSCRIPTION AT THE BASE OF ROME'S TRAJAN COLUMN.

## Some advice on letter writing from the Emperor Trajan

The Emperor Trajan (A.D. 53-117) was, as any early Roman schoolboy knew, a man of taste. It showed in everything he did, winning the respect of a people not unfamiliar with perfection. For those of us who have followed, his greatest legacy perhaps lies in a few lines of lettering neatly chiselled in a simple stone tablet.

Trajan was well aware that the only reason for writing anything was to have it read. His deceptively simple idea was to design each letter in all due proportion, providing as much space as it needed to look beautiful and inviting as well as legible. He succeeded so well that the Trajan inscription is given ample credit for the triumph of the Latin alphabet as the medium of written communication for so much of the world.

For our artists at IBM, Trajan's counsel serves as the model—just as it has for serious designers of typography for most of 2,000 years. The IBM "Executive" Electric was, in fact, the first typewriter to feature proportional lettering.

We like to think the IBM "Executive" lives up to Trajan's classic precepts. If the many honours which have come to it are an indication, it does. Even more important for us, it has been the preferred choice of many of the world's leading letter writers. They would probably agree with Trajan's gentle reminder that what is written is not necessarily read.

## The Unibersity of Schweppshire

**MUSICAL CHAIRS WEEK.** Every year, at the height of the Schweppshire summer, the colleges meet each other in their traditional university sport. This year is the three hundred and fiftieth anniversary of these games, and the rivalry is keen, even though Old Keys have maintained their position as head of the chair run for one hundred and twenty-eight consecutive years. Traditionally, the seats or "fits" still bear the shape of the Louis Schwept chairs originally used; and the piano must be played with the soft pedal down to approximate to the tone of the original virginals.

During actual play the college men shout encouraging cries which seem Greek to the uninitiated. "Boast your rims, Huggers," or that never-to-be-forgotten chant "Bo-untz, bounce-bounce-bounce". Religiously, every year old Pinks return to the scene of former glories to discuss the contrasting merits of "parlours," as the chair-meadows are called. Everybody who is anybody knows that the diagonal of All Keys is slightly on the skew, and that the holding qualities of the turf or quad-grass of St. Beavermere's is unreliable. Schwisden's Musical Chairs Almanack is full of strange records and extraordinary coincidences, and woe to the visiting relative who does not know the different accomplishments of Mold (G. W.) and Mold (A. G. K. O.). Particularly valued are the trophies of Mold (T. T. de P.).

## Eichmann and the German Conscience

FROM OUR BONN CORRESPONDENT

**H**APPILY for the tranquillising of touchy patriots it was an American who called his book *The Ugly American* and, similarly, a German who gave the title "The Ugly Germans" to recent reflections in a much respected weekly. Most German travellers today, this commentator wrote, were disturbed by "a perceptible cooling of the atmosphere in their encounters abroad." They felt a chill in the air of not only neutral but also allied countries, such as France and Italy. The temperature dropped at their approach even in the United States, where on the whole the climate had been friendlier to Germans since the war than anywhere else. Nothing personal, of course. It was due to misgivings about the Germans in general, about their challenging material recovery, about late signs of an unimaginative selfishness in their domestic and foreign policies. "One can anticipate only with a shudder," the commentator sighed, "all the resentment that the Eichmann trial will stir up."

The trial has begun. Less than twelve hours before the court assembled in Jerusalem, Dr Adenauer had appeared on television to speak in the name of the German people. Even on this occasion for humility the Chancellor spoke a shade smugly. Nazism and National Socialist sentiment existed no longer, he claimed, either in the German body politic or in the moral life of the German people. "We have become a state founded on the law." Dr Adenauer was on firmer ground when he recalled that Mr Ben-Gurion had recently said that the youth of Germany could not be held responsible for the wrongs done by many of their elders, and that it was in Israel's interest to cultivate friendly relations with Germany. And the Chancellor naturally referred in his brief statement to the financial and economic help which the Federal Republic had been giving Israel since 1952 by way of reparation. (The east German Democratic Republic has contributed nothing, professedly for the reason that Israel is a capitalist state.) All the leading dailies have sent special correspondents to Jerusalem. And by now television viewers are seeing excerpts from the trial in their homes—after the children have gone to bed.

It will be hardly possible to penetrate the innermost thoughts of the majority of Germans as this chapter of their history is restudied in Jerusalem. Probably most of the younger generation will stifle the inevitable awkward question concerning their parents' connivance through conformity. And what many of the older folk may admit in the confessional of their own hearts will not tally with the mitigating circumstances they commonly plead in public. Perhaps Dr Gerstenmaier, the president of the Bundestag, has spoken most representatively for the "decent" middle-aged German who is ashamed of his lack of civil courage twenty years ago. In a television interview Dr Gerstenmaier said:

I expect that the Eichmann trial will heavily burden Germany's reputation abroad, and that in Germany it will kindle in everybody's mind the burning question: how could that happen? I believe that no one is really able to answer the question who has not himself experienced the terrible power and seduction of a

totalitarian police state. But the crimes associated with Eichmann's name will torture and burden us for the remainder of our lives. Dr Gerstenmaier was one of the Twentieth of July conspirators against Hitler. So was Major-General Stieff, whose letter of November 19, 1941, from the eastern front, has been published by the *Frankfurter Allgemeine Zeitung* in a symposium of documents chronicling the systematic destruction of Jewry. After referring to transports arriving at Minsk loaded with Jews marked to die, General Stieff wrote to his wife:

It is unworthy of a so-called cultured nation. Time will take its revenge on us—and rightly so. It is shameful that so decent a nation is being plunged into misfortune on account of a few scoundrels.

General Stieff was hanged for his part in the 1944 conspiracy. It is understandable that his words, and his end, are being recalled now.

How could it happen? The Germans are telling themselves in public that by throwing light on this question the findings of the Eichmann trial should help at least to prevent "it" ever happening again. Doubtless most of them are already convinced that it never will. But a minority, sharing the disquiet that German travellers have lately noted among foreigners, point from time to time to surviving national traits and practices that could nourish the seeds of some future monstrous stampede.

In a recent broadcast, for example, Dr Theodor Eschenburg, professor of political science at Tübingen university, severely criticised what he called the lack of "political style" in the Federal Republic. He singled out the Chancellor for particular censure. It was simplification to the point of "demagoguery," Professor Eschenburg protested, when Dr Adenauer snorted the one word "wrong" in comment on the Constitutional Court's, to him, unwelcome decisions on a complicated series of questions concerning the responsibility for operating public television services. Dr Eschenburg cited several other recent failures, both of the Right and the Left, to keep due watch on the would-be constitutional law-breaker and communal bully. He spoke before *Der Spiegel*—a weekly news magazine much feared by public personages—had come out with a fourteen-page onslaught on Herr Strauss, the impetuous and ambitious defence minister, whom it accused of getting into position to set up a new kind of dictatorship after Dr Adenauer's departure. *Der Spiegel's* righteous championing of democracy might itself have been more reassuring had it not been performed in the style one associates with the late Julius Streicher's *Stürmer*, complete with the most unpleasant photographs of Herr Strauss the editor could lay hands on.

The political blemishes of Federal Germany are being avidly exploited by the propagandists of the east German Democratic Republic. What does not seem to have occurred to the east German ruling group is that they, too, are adding some striking touches to the postwar portrait of "the ugly Germans." For it was in an air of regimentation and artificially bred hatred—characteristic of the Democratic Republic today—that Eichmann flourished.

## The Macmillan Manner in Ottawa

"My dear fellow, that isn't done!"

FROM OUR OTTAWA CORRESPONDENT

MR MACMILLAN'S visit to Ottawa this week was conducted on a precisely opposite principle to that which guided the translation of the new English bible: the style was of vastly greater importance than the substance. Mr Macmillan's style was faultless. He portrayed himself with a technique that the best character actors in the game might envy. In this respect the former governor-general, Mr Vincent Massey, would have been a more appropriate host than General Georges Vanier, who is incapable of acting anything and invariably presents a picture of the devoted Christian servant that he is. General Vanier doubtless appreciated Mr Macmillan's performance. But his reaction would be more like the enthusiasm of the Canadian minister who listened to Mr Macmillan for nearly half an hour at a special cabinet meeting and later said:

He's marvellous. He looks just like a prime minister ought to look. He talked at length and without notes about the most complicated subjects. And he's so modest. We were all listening spell-bound with our mouths open when he suddenly stopped, looked around and said "I hope I'm not boring you."

Mr Macmillan's performance was sustained through a televised "informal" speech to the Canadian Club, two television interviews, a press conference, and even an unexpected walk twice around the parliament buildings, with Sir Norman Brook and Sir Saville Garner, the United Kingdom High Commissioner. His Scotland Yard detective easily persuaded the pursuing newspapermen to follow discreetly with the police escort rather than "disturb" the prime minister, who appeared incapable of being disturbed by anything or anyone.

Mr Macmillan's major appearance before the Canadian public in a televised speech was relaxed, reminiscent and indeed whimsical. He recalled Britain's past glories and said that three elements in the British character, which still persist, accounted for these past triumphs. They were a sense of destiny, which meant believing that providence was on the British side—or if not, it would be too bad for providence; a steady eye for the main point combined with a mastery of detail exemplified in Wellington ("There was no Parkinson in Wellington's camp"); and "a certain lack of imagination," which meant refusing to acknowledge the possibility of defeat even when it was staring you in the face.

MR KENNEDY'S aides in the White House explain the President's determination to visit Ottawa before any other country as his recognition that the good will of the Canadian public is important for every American president. "Even though Canadians don't vote for him," one of them said, "it is a political drag for the president to be unpopular in Canada." If the same thing is in any way true of British prime ministers, Mr Macmillan did a good repair job on his political fences this week. It is less sure that he achieved any closer unity in Canadian and British policies.

Most of his talk to the Canadian cabinet seems to have followed the lines of last week's Boston speech to the Massachusetts Institute of Technology. Though the ministers were fascinated, they show no sign of being converted to a new view of European trading relations. His presentation of Britain's case on the common market and the free trade association was more novel in manner than in

matter, and was not calculated to prompt much change in Canadian attitudes.

Mr Macmillan's advocacy of the British case for emigration from the West Indies had evidently been inflated out of all proportion in the British press, but he did make his gentlemanly pitch on the subject. Mr Diefenbaker himself told a random group of reporters that Mr Macmillan spoke at their final meeting about West Indian problems. He reviewed the prospects for federation, the coming referendum in Jamaica, and the pressure of increasing population exceeding the islands' "economic productivity." According to Mr Diefenbaker, Mr Macmillan discussed the possibility of expanding industrial production in the new federation so that fewer West Indians were driven to emigrate. Inevitably the Canadian prime minister was asked: "Did Mr Macmillan urge Canada to admit more West Indian immigrants?" Mr Diefenbaker replied: "You would never find one Commonwealth prime minister making that sort of suggestion to another." It was a reply that came as near as Mr Diefenbaker's style permits to the wrinkling brow with which Mr Macmillan might say: "My dear fellow, that isn't done!"

The Macmillan mannerisms are of the kind that many Canadians feel an almost compulsive need to laugh at. They are rather funny, as Mr Macmillan probably best knows. But the Canadian laughter is mainly defensive. Whatever President Kennedy may have made of this incarnation of an elder generation, most Canadians are in reality pretty impressed.

## De Gaulle's Alternatives

FROM OUR SPECIAL CORRESPONDENT IN TUNIS

IT is strange for a regular attendee at General de Gaulle's press conferences in Paris to watch the same performance from a distance. Tunis is a singular observation point; here everything is viewed through the prism of the Algerian war. The gaullist jibes against the "Disunited" Nations, the references to the need to reform Nato, the somewhat acid treatment of the United States—all are interpreted exclusively in an Algerian context.

Observers here expected from the general some gestures that would be likely to re-launch the interrupted negotiations. Instead, they heard a lecture explaining why colonialism was no longer a paying proposition. General de Gaulle's claim that he has always believed in decolonisation—with Syria and Lebanon in 1941 thrown in as examples—is taken in Tunis with a grain of salt. Yet it is felt significant that the French president should now find it necessary to insist that he is moving with the wind of change.

But the greatest interest is aroused by the alternatives with which General de Gaulle confronts the Algerians. If Algeria should break with Paris, France will not only stop aid, repatriate those Frenchmen who want to come home, and send back the Algerians living in France. It will also regroup in Algeria "in areas more or less known in advance" those who vote in favour of France. The threat of partition was never brandished more visibly. On the other hand, if the Algerians choose to collaborate, France will continue its aid. It will even grant sovereignty to an Algerian state if this state provides guarantees for Europeans, economic preferences for France, and also the military bases and facilities "necessary for its defence."

For the first time General de Gaulle has admitted publicly that such a statute of association should be negotiated in advance and only then submitted to a popular vote. But he said that this agreement should be reached between the French government and "different Algerian political elements, notably the FLN." Thus on the practical issue of the status of the rebel government, which prevented the Evian meeting, General de Gaulle made

## The Old World made Hercules...

...to-day Hercules

is helping to build the NEW WORLD

It was by meeting the challenges of his age that Hercules of old earned immortality....

To-day, Hercules still meets challenges. More—he anticipates them. For in industrial chemistry, research by Hercules Powder Company has produced many a "break-through" leading to better things. Take packaging for instance. Packaging materials need to be sized, given strength when wet, printed, protected, stuck together. Hercules can claim many important advances in these fields. If the New World is better off for better packages, Hercules has a hand in it.

Hercules has some key-words for his successes. Words like Pexol—Kymene—Pentalyn—EC—Neolyn. You should know what they mean.

HERCULES POWDER COMPANY LIMITED

virtually no concessions. Like M. Joxe, he put the insurgent government on a footing with the other Algerian groups.

Optimists here hope that the concessions that were absent from the general's speech may be made elsewhere in secret talks. That would enable the Evian meeting to take place; and the general's presentation of his alternatives would be merely a tough French starting position. The optimists here are mainly Tunisians, for the obvious reason that the general's offer is one that, according to Mr Bourguiba's tactics, should be accepted. But the Algerian ministers remain silent. They did not obtain publicly the concessions they had demanded. To start the Evian negotiations on the general's present terms would involve a real departure from the neutralist position they have so far taken up in international politics. But a complete break would have serious international consequences. No wonder the Algerian leaders are for the moment weighing their words.

## Mr Menzies Fills Two Houses

FROM OUR CORRESPONDENT IN CANBERRA

### A Parliamentary Victory

ON Tuesday the Australian House of Representatives was packed and television viewers everywhere turned on their disused wireless to hear what the prime minister had to say on the subject of South Africa and how he would answer the Opposition's motion of censure. For once the prime minister seemed to be in a tight spot. He had stuck so resolutely to his unpopular line that South Africa's racial policies were its own affair that even after the Commonwealth conference dispersed he was still battling it out in London in press conferences and speeches. Even then all he would say against apartheid was that it would not work and therefore would end in disaster. Yet this week, in the political committee of the United Nations General Assembly, Australia, like the United Kingdom, voted for a resolution which deplored South Africa's racial policies and required member states to try to bring about their abandonment.

In the light of Mr Menzies's speeches this seemed a complete *volte face*. It gave more ammunition to the press which, in the absence of an effective parliamentary opposition, seems to consider that it should play that part up to the point where its campaigns threaten to put a Labour government in power. Even the Opposition was expected to score some electoral points from Tuesday's debate. It could argue that Mr Menzies, by his stonewalling and by shrugging off Sharpeville with a formula about domestic jurisdiction, had failed to represent Australian indignation about apartheid; and that in giving a warning that the next object of the Commonwealth prime ministers' censure might be Australia's immigration policies, he had not only talked as if this policy were comparable with apartheid but had perhaps put the idea into Asian and African heads. The Opposition could also argue that he had got out of line with Mr Macmillan, who had promptly drawn what advantage was to be drawn from South Africa's departure; and, conversely, that he had followed Mr Macmillan too slavishly in instructing the Australian representative at the UN to join in deploring South African policy.

In London Mr Menzies had certainly gone on firing after the battle was lost, for he had come out of the conference a disappointed and angry man. He, the Commonwealth statesman *par excellence*, had seen his cherished conception of the Commonwealth as a family of nations, finding unity in diversity, disappear beneath a shower of recrimination. He may perhaps have felt that his friend Mr Macmillan had been less than zealous in protecting the common ideal and that a firmer lead from him might have kept South Africa in the Commonwealth. He may have felt,

too, that he should have been more closely consulted at every stage. If he did have such thoughts, no sign of them appeared in his speech on Tuesday. He distinguished between the United Nations putting its finger into every pie and the Commonwealth's violation of a basic principle of its organisation, and pointed out that Australia's attitude to apartheid would have been misunderstood if it had been alone (except, as it turned out, for Portugal) in opposing the resolution. He then went on to explain with a new lack of inhibition his attitude to apartheid, distinguishing between the theory, which he holds to be not reprehensible in itself, and the practices that had lately been associated with it. He avowed for the first time his horror of Sharpeville—an avowal the more striking because he had refused to climb on the moralists' bandwagon before. He left the Leader of the Opposition, Mr Calwell, without enough to say to fill his allotted time but, in any case, Mr Calwell could have saved his breath, for Mr Menzies's victory was already assured.

### A Good Appointment

To have persuaded Lord De L'Isle to be Australia's new governor-general must be another source of great satisfaction to Mr Menzies. It is not easy to find suitable governor-generals, as became evident when Field Marshal Slim retired, since several incompatible considerations are involved. First, public opinion demands a distinguished man. But distinguished men who are still pursuing their careers are unlikely to want to leave them for the stately minuet of Government House at Yarralumla—where for some reason the routine is more regal than at Buckingham Palace. Second, distinguished men who have retired, as the tragic and untimely death of Lord Dunrossil showed, are apt to collapse under the strain. The flights around Australia, the speeches that must sound impressive without actually saying anything, the compulsory intake of cocktails and formal dinners, and, above all, the grinding effort of light conversation with local personages, tend to be too much for all but the young and vigorous. Third, servicemen are the obvious candidates, since they retire early, know the ceremonial ropes and can inspect guards of honour with apparent enjoyment; but there are a number of them already in the Government Houses of the Australian states. Two Australians out of three, according to a recent poll, say that they would prefer an Australian as governor-general. It is hard, however, to think of an Australian who combines the inclination, the lack of political affiliation, the formal dignity of a figurehead and, last but not least, the personality suddenly to receive the prime minister's bow instead of touching his own forelock.

Lord De L'Isle is only 51—that is good. He is a big businessman—that is good here, too. As an ex-minister he understands politics and how to keep out of them—that is very good. He has a VC—that is excellent. Finally, he is a lord belonging to an ancient family—that in an egalitarian country is superb.

## Nepal under Royal Rule

FROM A CORRESPONDENT LATELY IN KATMANDU

THE Gurkha army of Nepal, unlike its far-travelled cousins under British colours, is mostly kept in the Katmandu valley and used for such things as the magnificent parade for Queen Elizabeth. Even the Chinese danger along the border has caused more talk than actual deployment there. But now, within five miles of each of Nepal's 32 district headquarters, a hundred men are barracked.

King Mahendra's youthful ministers, and possibly he himself, foresee trouble. In hope of staving off disorders, they have promulgated drastic orders. One turns landlords and heads of families

into informers: failure to stop or report those who "seek to oppose or organise opposition against the government" can now mean loss of land or government jobs and pensions (including British military pensions, which the government says it could intercept). Another permits confiscation of property for engaging in notified activities or possessing notified goods, such as firearms. Touring purge teams seek "abominable anti-social elements like hypocrites, thieves, liars and exploiters." Unexplained dismissals disrupt the central administration. Journalists are supposed to clear political stories. In a country of Chinese efficiency, these measures would make a terrifying police state; in Nepal the effects are softened by administrative shortcomings.

The new measures are intended to prevent civil disobedience being organised from Patna in India. Exiled members of the Nepali Congress party in Patna say that in due time they will call for nation-wide peaceful strikes—the *satyagraha* of Gandhi which these exiles learned in the Indian independence movement before turning their attention homeward. If strikes should lead to violence, they

Premier jailed—like Lumumba?

King—with dossiers

say, they will not have advocated it; but neither will they retreat from it. They accuse the king of holding down by armed force a country that still supports the imprisoned prime minister, Mr B. P. Koirala.

The popular explanation in Katmandu of why the king jailed Mr Koirala last December 15th and abolished democratic government is based on personalities. The king's charges of corruption, unsound economics, party aggrandisement and the breakdown of law and order had some truth, but they are regarded as a cloak for a personal clash between the garrulous, glamorous, aggressive prime minister and the shy but self-confident king, who was unwilling to be pushed farther into the shadows. A less headstrong personality than Mr Koirala, indeed, would probably still be in office. But behind the personalities lay a conflict of concepts about the nature of Nepal's government.

When the king granted a constitution and elections in 1959, he kept a large measure of control in the palace. Mr Koirala accepted this at first. But the more his promises of economic development fell behind, the less he heeded the king's authority or even his feelings. With some justice, Mr Koirala privately blamed the palace for holding up land reform legislation and creating other obstructions in the judiciary and the public service commission, organs which his Congress party could not capture. When, finally, he began to blame the palace publicly, the king felt personally threatened. King Mahendra's private fear that Mr Koirala wanted to abolish the monarchy became the dominant political fact. And even if it had no intention before of ending the monarchy, the Congress party has now been pushed by the king himself in a republican direction.

The name of Lumumba is often cited in Katmandu to illustrate

the continued appeal of an imprisoned prime minister, without anyone openly recalling Nepal's old tradition of murdering imprisoned challengers. The king frankly admits he does not know what to do with his prisoner. The important thing is to destroy his appeal to the small educated middle class, and to satisfy the incipient desire for land reform which the Congress party and increasing contact with the modern world have aroused.

The king and his new ministers recognise the need for reform and economic progress, but feel that they cannot act with the kind of speed that is politically desirable. This was Mr Koirala's experience also. To his credit he made a start in the right direction. He laid the foundations of a tax system, although he toured abroad when he should have been explaining taxes to the people. He began land reform, although his opponents distorted it into a weapon against him while his party was failing to maintain contact with the peasants. He started schools and other village projects and speeded up some big development schemes, although his local party workers got their hands in the kitty.

Despite denunciations of his "unscientific" methods, the new government is following in his footsteps on some aspects of taxation and land reform—and, this week, in decreeing the end of the feudal system of semi-independent rule by local rajahs. It also faces, as he did, the problem of an inadequate administration, one of the disadvantages of never having been taken over by the British and thus inheriting an official "steel frame." But the king has intensified the lack of experienced administrators, producing from his secret dossiers reasons for dismissing several key men and dozens of lesser ones without explanation. Some of the new ministerial secretaries are out of their depth; one admits to being bewildered. Meanwhile, the government has bogged down in vague talk of future projects. These include village council elections to build up a system of local self-rule (resembling the Pakistan model) which might, in five years, lead to a return of democracy.

The need is immediate. Stagnation will increase the pressure on the king and make Mr Koirala's record look better in comparison. Only economic advance and reforms can solidify support for palace rule. But the minister of finance, planning and land reform is away at the United Nations. The young minister who gives the greatest impression of activity is in charge of "national guidance"; he is simply trying to win wider support for the king.

IN Nepal, as in so many other countries, the government could fall because of unrest in just one or two towns. But the rural situation is potentially more dangerous. The government recognises that the only way to eliminate the continual threat of bankruptcy in its current accounts (development is financed by foreign aid) is to widen the base of agricultural and land taxes. This could best be done while reforming a medieval land holding system; but the administrative, judicial and credit mechanism needed for land reform is largely lacking, so satisfaction of the demand may be too slow to avoid giving the Congress party a chance to exploit unrest. Recent trouble in the next valley northwest from Katmandu, however, was a carry-over from Mr Koirala's time; it merely showed that the king is no more master of the law and order situation than was the prime minister whom he denounced for failure in that direction.

Another recent outbreak of trouble, near the Tibet border, raised the spectre of communism. The king tries to paint the choice as between palace rule and communist rule, cutting the democratic Congress out of the picture. This is incorrect. Nevertheless, the communist party remains a powerful underground force, and its dominant faction would not hesitate to accept Chinese support in border regions.

The king's answer to his opponents for a long time to come until "national guidance" begins to guide or economic benefit

New York 12.00 noon.

## THIS VERY MINUTE HE'S STILL WITH CLIENTS IN EUROPE!

About to start a business trip through the U.S., this Dutch electrical equipment manufacturer checks through Customs at New York's International Airport. Meanwhile, back across the Atlantic, he's still selling to European customers through his *international advertising* in the Atlantic edition of *TIME*, The Weekly Newsmagazine.

In his home city of Amsterdam, for instance, it's 6.00 p.m., the time of day when many prosperous Dutchmen sit down to read *TIME*. Like 3 million other people around the world who want, need, and can afford the best in electrical products, they turn to *TIME* for news of the world's goods as well as world happenings.

You, too, can be on a constant sales tour of the world through *TIME*'s six editions: Atlantic; Asia; South Pacific; Latin America; Canada; U.S. For more facts, ask:—

**TIME**, The Weekly Newsmagazine, New Bond Street, London W.1.

Some men, when they get the sweet smell of success in their lungs, take (literally) a back seat when it comes to motoring. But not Zodiac owners. As it happens, the Zodiac has a very nice back seat, big enough for three broad-shouldered businessmen. But most Zodiac owners prefer the driver's seat—for very good reasons. These reasons add up to the plain fact that the Zodiac is a truly splendid car to drive. With real power from its 6-cylinder engine: with real response from a gearbox tailored for spanking pace up hill and down dale: with automatic transmission for extra motoring ease: with luxury comfort in a car whose every detail gives reassuring satisfaction: with all these, to take the wheel of Ford's sumptuous Zodiac is a grandly rewarding experience. □ £957.7.6 (£675 plus £282.7.6 p.t.) Convertible £1,237.17.6 (£873 plus £364.17.6 p.t.) Overdrive, automatic transmission, disc brakes optional extras. Estate car model also available.

win over the people, will be the 10,000-man army. The only qualified soldier in the ranks of the political generals has been side-tracked from the line of succession to top command and made defence secretary, a post that might lose him popularity with the troops. The army has given no sign that the king should be uneasy about it, but a certain concern would only be natural. For Nepal is now in a lull. How long the lull will last, and whether it precedes a storm or a stir of satisfying progress, are questions that loom over Katmandu like the snowy Himalayan peaks.

## Among Africans

FROM OUR MIDDLE EAST CORRESPONDENT

IMPERIALISM, South Africa and neo-colonialism took a severe verbal beating at the third All-African People's Conference which opened in Cairo on March 25th and ended last week. Streamers bearing slogans in English, Arabic and Swahili rippled in the spring breezes as delegates gathered to discuss their grievances. "Freedom Now" was a slap at imperialism; "Discrimination Shame for the So-called Civilisation" was another at South Africa. Photographs of Mr Lumumba, with the white gash of a smile he wore in his heyday, symbolised "neo-colonialism," the silent return of the colonial powers to their old positions under the mantle of the United Nations. Such catchwords and symbols set the tone of the conference.

More than 70 organisations from 34 African countries had been invited to send delegates. They ranged from the formidable Algerian National Liberation Front to the Pure Whig party of Liberia. More than 50 bodies seemed to have accepted the invitation (exact figures were hard to come by). In addition many observers were present from Asia, Europe and America; they were admitted to public sittings of the conference, but excluded from the private committee meetings. They included some oddities, such as the Cairo correspondent of Tass, who found himself "observing" in the name of Poland.

On the main themes under discussion there was remarkable unanimity. Speaker after speaker denounced the western powers and apartheid. Many called for the withdrawal of South Africa's mandate for South-West Africa, and for its expulsion from the United Nations. Portugal was bitterly attacked for its recent actions in Angola, and the peoples of Mozambique were exhorted to rise in sympathy with their brothers on the west coast. But the proceedings were more than parrot repetition of well-worn phrases. There were differences of emphasis between delegations, and between the weight given to the various subjects under discussion; and some of these nuances were significant.

For instance, old-fashioned imperialism came in for less abuse, by and large, than neo-colonialism. Many delegates seemed to feel that in attacking political imperialism they were beating a dying horse. To them, neo-colonialism is now the danger, all the more because it comes in disguise. President Nasser, one of the most vigorous advocates of this idea, has recently spoken of nations that have achieved independence only to exchange their chains of iron for chains of gold. Others echoed his views. This attitude leaves the United States open to attack, and the attack was in fact pressed hard. So much was foreshadowed on the opening day of the conference, when a goodwill message from Mr G. Mennen Williams was heard in Arctic silence.

President Nasser has for some months past been developing a concept which may be described as the threefold status of Africa: subjection, independence and nationalism. Subjection is the lot of those countries, like Algeria, Uganda and Angola, still under colonial rule. "Independence" is represented by formally sovereign countries which have limited their freedom of action by

treaties or special agreements with the former colonial powers. Nationalism is the third stage of development. It is reached in those territories that have destroyed the last vestiges of the colonial link and have set out to make their way by their own efforts with the help of whatever foreign aid is absolutely free from strings. The exemplars are the United Arab Republic, Ghana and Guinea.

The function of the all-African movement, in the Nasserist view, is to help the independent nations to move towards "genuine" nationalism, and the subject peoples to go straight from subjection to nationalism, skipping the stage of "sham" independence altogether. Such ideas can produce endless argument. Are good relations between Nigeria and Britain really a burden on the Nigerians? Is Soviet aid to selected African countries really stringless? In which category would President Nasser have placed Tunisia two years ago? Where would he put it now? On such points, assertion is easy, proof unattainable. Only the future can show.

THE conference discussed means as well as ends. There was a strong tendency to favour larger state units for Africa, in preference to the Balkanisation of the continent. The small African states, it is felt, would be powerless faced with the giant economic blocks of America and Europe. The future of the continent must lie in federation. This view received full backing from several delegations, notably from the spokesmen for Tanganyika. Other proposals tending in the same direction were for the creation of an all-African trade union federation and of an all-African bank.

Many words were spoken at the conference, many resolutions drafted. What do they all add up to? It is tempting for western observers, who were at the receiving end of almost incessant attack, to dismiss the words as wind, the resolutions as paper. Almost certainly the results achieved will fall far short of the sum total of hopes expressed. But that does not mean the conference served no purpose.

Most of the organisations represented in Cairo are powerful in their own countries. The pressures they exert when they get home can hardly fail to influence their governments. More important still is the fact that, by means of such reunions, the diverse peoples of Africa are beginning to get acquainted. Thus they are made aware not only of their common aspirations, but also of the gulfs that still divide them. It clearly disconcerted many delegates to learn that when a Somali speaks of imperialism, he has Ethiopia in mind; or that "imperialists," in the view of the Afro-Shirazis of Zanzibar, are certain capitalist Arab elements in East Africa. Some violent tirades on these lines were suppressed from the record, on the ground that they gave an impression of disunity "at a time when we are seeking unity." That, perhaps, was the one and only understatement of the week.

## Financing the Public Industries

AFTER ten years of responsibility for the nationalised industries that they inherited from Labour, the Conservatives have come up with some ideas about how those which they do not want to reorganise radically ought to behave economically. These ideas are not particularly impressive. But compared with what they seemed likely to be a year ago, they are not ill-intentioned either; and any signs that ministers have been really thinking about these industries that they have to live with are welcome. Their views on "The Financial and Economic Obligations of the Nationalised Industries," in this week's white paper\* are concerned primarily with the interpretation that should now be placed upon the nationalised industries' obligation to earn revenues at least sufficient, taking one year with another, to cover their operating costs, interest, depreciation, the redemption of capital† and the provision of reserves—which few of the industries have managed to do; and upon the broader question of what kind of return on capital industries like these ought to earn. The formula that they propose—five-year targets for performance—will mean as much or as little as "in the light of [each industry's] own circumstances, needs and capabilities" they choose to make it.

Nationalised industries—the Government is here dealing with coal, electricity, gas, transport, the airlines and, as a newcomer, the Post Office—will from now on be required to break even over a five year period rather than any "average of good and bad years." Since these undertakings are financial entities already in being, each with its own (and sometimes pretty doleful) financial history, the five years will have to be a fixed period starting as soon as is convenient, not any "rolling average." Over and above breaking even, each industry will be required to provide what would be required beyond their depreciation provision at historic cost to cover depreciation at replacement cost; and to make adequate allocations to general reserves which will be available *inter alia* as a contribution towards their capital development and as a safeguard against premature obsolescence and similar contingencies.

The first requirement is a sensible one which most of these industries have already been trying to satisfy in one way or another (they are not being set the exercise of making good all under-provision in the past, which could be a nightmare). The reserve requirement is as long as a piece of string.

There are two different ways in which one could arrive at

what reserves such industries as these ought to set aside; by laying down what sort of return on capital employed they ought to earn; or by laying down how much new investment they ought to finance themselves. As far as new capital is concerned, these are two sides of the same question; if one is concerned with the average return on total capital, they are logically but not so closely linked. These industries have no equities: all their capital is charged at fixed interest. To make them "compete equally" for capital, ought they to pay for new capital what big private industry would have to pay for debentures now—say 6½ per cent? Or ought their "prior charges," which to the private investor would be effectively Government guaranteed, whatever the formula, to pay some higher rate to take account of the equity that does not exist? These industries are now borrowing new capital at 6½ per cent from the Treasury—which has given up any immediate hope of putting any of them back into the market. But right across their capital, borrowed at different times, the average is much less: the Coal Board, for example, now borrowing at 6½ per cent, must be paying on the average of all its borrowings less than 5 per cent. Even as between nationalised industries, there are wide differences in what one might call "real" risk, though the implied government guarantee makes all their new demands for capital equally riskless. How much above the gilt-edged rate would electricity have to pay for new money in a quite free capital market? And could the railways raise new capital at any price?

THE white paper painstakingly compares the gross and net return actually earned on net assets in the nationalised industries with the average return in manufacturing and distribution and with the return (in and out of public ownership) of a sample of 55 steel companies. Its tables, reproduced on the next page, are interesting and indeed intriguing. In terms of income, it will be seen, the public industries compare with the private rather better before than after depreciation. This is not easy to understand. The depreciation provisions of the public industries are shown at historic cost, while some at least of the companies in manufacturing and distribution make provision on the basis of replacement cost, and all the steel companies receive prices high enough for them to do the same. It may be that these nationalised industries added relatively more to their capital during recent years than did the private ones, so that more of their provision is in respect of new and higher-valued assets, and the assets of the airlines, for example, have shorter working lives. But such oddities certainly do not make it any easier to apply any "15 per cent rule of thumb"

\* Cmd 1337. HMSO, 1s.

† This stupid requirement would have required these industries to set aside enough to pay much of their capital back twice over; in practice, the Treasury lends them enough extra to cover their provision for redemption of capital.

of return on private capital to what the public industries ought to be earning. The white paper itself, having gone so far as to make the comparison, withdraws hurriedly, stressing all the differences between the two kinds of industrial animal.

The nationalised industries, it constantly repeats, "have obligations of a national and non-commercial kind, [though] they are not and ought not to be regarded as social services absolved from economic and commercial justification." They "are, or are akin to, public utilities, where a lower return on capital employed is traditional." The boards "have been continuously subject to public opinion [!] to keep their own prices down even when costs and prices elsewhere have been rising." Nevertheless, if they get their money on much easier terms than the rest of industry can get it, they are liable to get too much of the nation's savings; they may charge

too little for their products, artificially stimulate demand, and demand more cheap capital.

How much should they earn, then? The Government expects them "to earn a higher rate of return than the cost of the money to the Exchequer." But it will have to decide, after consultation with each of them, how much each ought to earn (or alternatively how much of their new capital expenditure they ought themselves to finance). If they fail to do whatever it is decided they ought to do over a five-year period, the Government may have to "take a closer interest"—presumably like the expensive interest it is already taking in the Transport Commission. One oddity here is in timing: what the persons concerned, who are both appointed for five years or less, are discussing is, "If you don't do well enough, one of the chaps who succeeds me will deal harshly with the next chairman."

Whatever targets the Government does set must have immediate implications for prices. "Although the Government possess no formal power to fix prices in the nationalised industries," says the white paper delicately, "nationalised

industries have, in fixing their prices, given great weight to consideration of the national interest brought to their attention." Nor does the Government intend to give up this power that it does not formally possess. It thinks that the existing formal arrangements should continue by which these industries ascertain in advance the views of the appropriate ministers when they propose to make price changes. But if a board decided to modify their own proposals by reason of views expressed by the Minister, it would be open to them to require a written statement of those views, which could be published either by the Minister or the board, and to propose an appropriate adjustment of their financial objectives where, in their opinion, this modification would significantly impair their ability to meet them.

This right to protest is not a new one; the National Coal Board has already used it, publishing its objections retrospectively in its annual report. But it is a good thing to have it on record as a reasonable recourse in cases of interference; and it may imply an intention not to interfere often.

WHATEVER financial obligations and objectives the Government puts upon any nationalised industry will have to subsume such elements of "non-commercial responsibility" as they believe to be inherent in the industry. Ministers are not prepared, that is, to do what the Select Committee on Nationalised Industries has sensibly suggested—make specific subventions out of the public purse in respect of particular non-commercial obligations that it has laid upon the industry. That course, if one could ever get any politician in office to adopt it, would certainly put the cost and the responsibility for such interventions much more into the open than, say, requiring the Coal Board to load its price increases disproportionately on to industry; the minister would have to go to Parliament to get the money. The alternative course suggested this week—an easing of financial obligations that the boards would be entitled to ask for, and the minister would be at liberty to allow or disallow to what extent he wished—could be more conveniently lost in the target practice.

It appears that the consultation with these industries about what kind of targets they are to be allotted is already beginning; by the start of each one's next financial year the targets should be set, and presumably published in one way or another. Although the white paper says bravely and very belatedly, that "The Government recognise, however, that the industries must have freedom to make upward price adjustments, especially where their prices are artificially low," it is not easy to see at this juncture where they think these desirable price adjustments are immediately required. It must be remembered that to make them pay competitive rates for new capital would not raise the average rate on their capital much; but to raise their average return to anything like the 8 per cent the Government talks of wistfully would mean draconian price increases for most of them. Moreover, they can no longer price as they or anyone chooses. Coal, electricity and gas have recently put up their prices; coal, gas and transport probably could not again, in their competitive position, and electricity's need is for a refinement of its tariffs, not for a general increase in its prices. With all the apprehensions about a possible resumption of wage and price inflation displayed in the Economic Survey, the Government will probably be cautious, for the moment, about nudging these industries to set their charges much higher, targets or not.

## European Housewives' Choice

ATESTY correspondence erupted in *The Times* last week about the warily non-committal attitude assumed by many shops whenever customers ask them about the quality of their goods. This week, the Consumers' Association announces that its membership has reached a quarter of a million. Both are signs that ordinary shoppers feel more and more the need for outside help and advice when they stand, mesmerised, before the serried ranks of the super-market and listen bemused to the pseudo-technical spiel of the salesman. But providing them with this help and guidance is easier said than done. A cold-blooded assessment of the ins and outs of consumer protection has recently been prepared for the European Productivity Agency by Professor Jean Meynaud under the title of "Better Buying"; he based his analysis on a meeting convened by the EPA a year ago, but the conclusions he has drawn from this raw material may raise the blood pressure of some of those who attended the meeting.

Industry adopts new techniques to improve its efficiency as these come along. The ordinary shopper does not. This fact has been known and deplored for years, yet because of the impossibility of organising shoppers and their families on lines comparable to industry's own streamlining, little has been done to correct it. There seem at the moment to be only three ways of strengthening the shopper's position and none of them is wholly effective. The most obvious method, adopted primarily in Britain and the United States, is the laboratory test that compares different makes of goods on the market and reports on their qualities and—most important this—on their defects. In Scandinavian countries, on the other hand, more stress is laid on labels that give information about the more important features of goods in terms that the shopper can understand. In the Common Market countries, and especially in France and Belgium and Italy most confidence is placed in quality seals that are awarded to manufacturers after their goods have been submitted to test. The consumer organisation that independently tests goods and reports on them to its members has one great drawback that frequently prevents it from ever getting off the ground—cost. Austria, Belgium, France, Germany, Holland, Iceland, Norway and Switzerland all have organisations that correspond roughly to the Consumers' Association in Britain and the Consumers' Union in the United States. But none of them seems to have attracted enough support from shoppers to give them an income comparable to the \$3.3 million of Consumers' Union in 1959 or the £250,000 a year income that Consumers' Association gets in this country from subscribers to its magazine "Which?". Similar associations in some of these countries seem to have entered a vicious circle. They cannot attract subscribers until they have the results of some tests to show them, and they cannot start the tests until enough people have subscribed to finance them. The solution endorsed by Professor Meynaud is to start with small and cheap tests. This gives the organisation results to show potential subscribers, and usually attracts enough support to provide funds for more ambitious work. There are, however, pitfalls in this policy. Britain's Consumers' Association has discovered that tests of cheap household goods often cost a

great deal more than those on expensive household durables. The reason is that in the latter case a fair proportion of costs can be recouped by selling as second hand the cookers, washing machines or vacuum cleaners after they have been tested. But a half-used packet of detergent has no secondhand value whatsoever: the most expensive test ever carried out by Consumers' Association was of washing powders.

Is there some temperamental difference between middle-class shoppers in Britain and the United States, in comparison with shoppers on the continent, that makes the former support testing organisations in usefully large numbers while others do not—or is it just that the Anglo-Saxon countries have more citizens who can afford an annual subscription? No one has yet explored the reason why this form of self-help seems to appeal primarily to the Anglo-Saxon temperament. On the continent, however, the consumer organisations frequently get help from trade unions—as in Holland—or the government, as in Switzerland (although, in this case, the subsidy is very small). Financing tests would probably be a great deal easier if the organisations did not have the feeling, possibly to an exaggerated degree, that subscribers' confidence in their independence would be undermined if their money came from a source that had any connection, however indirect, with industry. They have run into fewer legal difficulties than might have been expected. Organisations in both Iceland and Austria have been taken to court by aggrieved manufacturers but have been able to justify their strictures—in Austria on a dangerous stove and in Iceland on a harmful detergent. In Italy, however, the law makes it impossible to publish the kind of comparative test results that form the whole basis of these associations' usefulness to their subscribers.

How useful in fact can they be? It is impossible to get any direct evidence of their influence either on manufacturers or on shoppers' buying habits. One survey carried out in America suggested that Consumers' Union's system of grading products might lead to a shift in sales of 4.5 per cent in either direction, but Professor Meynaud described the results of this and other inquiries as too patchy to have much meaning. He did, however, courageously attempt to list the drawbacks of comparative tests. The most serious is the tiresome fact that "one brand is rarely better than the others in every way; it is very often superior in some ways and inferior in others." So the "best buy" suggested is inevitably a compromise decided on by the investigator, which introduces an element of personal judgment and the likelihood that some, at least, of the subscribers might have preferred a different combination of properties. The size of the sample to be tested is a specially knotty problem; obviously not even the richest consumer organisation can afford to test what a statistician would call a "proper" sample, but there is a feeling that the organisations could with profit spend rather more time considering their sampling methods. To this Professor Meynaud might also have added that they ought perhaps to steer clear of testing goods where personal preference plays a big part in deciding what is or is not a good buy. Cosmetics is an obvious illustration: brands that suit one

woman need not give the same results on another and one woman's "Best Buy" will be put by her neighbour into the dustbin. Now that some consumer associations at least are finding their feet and are no longer exclusively pre-occupied with problems of finding enough money and enough laboratory space for their tests, they could usefully give some time to considering these wider issues. Meanwhile few people will disagree with the verdict that these organisations have "produced a notable improvement when compared with situations and countries where the consumer was still completely defenceless."

The Scandinavian countries, which have pioneered the use of descriptive labels, believe that the consumer can be given a big measure of protection if he gets an accurate description of certain key properties. But to be effective, descriptions must be standardised and this can mean first working out specifications, so that the special institutes that look after informative labelling in Denmark, Norway and Sweden spend a great deal of their time seeing that the data on the labels are both reliable and reasonably uniform. They insist, among other things, that manufacturers must give all the information listed or none at all; they cannot choose to put down certain properties and leave out others. Then, so the argument runs, the percipient shopper will compare the data on the labels of competing brands and decide which is the best bargain. Professor Meynaud doubts how well this works in practice. Does the shopper, he wonders, know whether it is better to buy the marmalade with the highest proportion of fruit to sugar or vice versa? And what are the odds that the grocer will stock two or more brands that can be compared side by side?

The use of these labels is voluntary. Industry provides a considerable part of the income of the Scandinavian labelling institutes, with the rest coming from the government: Professor Meynaud's report unfortunately contains no data to show how widely the labels are used or over what range of goods. Much the same criticism could be made of the quality seals awarded in France and Belgium to goods which have in this case been submitted to organisations for independent testing. The first of these bodies, started in France after the war, was first financed by the Commissariat Général de la Productivité but now gets all its income from subscribing companies. It lays down minimum technical standards for products, tests those submitted to it to see whether they comply and is said to be quite ruthless in rejecting those that do not. The "Qualité France" mark is not lightly earned. Out of two or three hundred products submitted monthly, it is said that all but 20 are withdrawn when manufacturers realise the hurdles they have to clear, and of that 20, only half survive to win the seal. Belgium has now introduced a similar seal, Italy is on the verge of doing so. If the standards are so high, can this type of quality seal seriously be proposed as a means of protecting consumers in the mass? Is it not more likely to be of value only to the élite of shoppers who are sophisticated enough and—what is more important—rich enough to demand quality and to see that they get it? This objection is, curiously enough, not raised by Professor Meynaud, but he does point out that there is a real danger of the shopper being bemused rather than helped by a multiplicity of confusing labels, and seals awarded by organisations whose names he cannot remember. France, Belgium and Italy propose to standardise their requirements and eventually to have a

common yardstick of quality throughout the Common Market.

SOME attempt has been made to organise consumer protection on an international scale. Here one of the most interesting moves has been the formation of a common organisation by all the consumer organisations that carry out comparative tests (shutting themselves away from their brethren who run quality testing centres financed with manufacturers' money). These national organisations can help each other by using their international centre as a clearing house for information about testing methods, which are still far from perfect.

Professor Meynaud believes himself that governments still have much to do in the way of providing the shopper with that very solid degree of protection that the law, and only the law, can give him.

In particular, he thinks that governments could look over their legislation to see that it does not impede the work of those organisations that are trying to look after the interests of the consumer by, for example, making it impossible to publish the results of comparative tests. It would have been interesting if the European Productivity Agency had in fact found time to discuss the part that legislation plays in consumer protection, not only in banning the sale of bad food, or dangerous stoves, but through broad measures like the British Merchandise Marks Act. This Act provides stiff penalties for misleading descriptions and, by using the term "misleading" instead of the simpler phrase "false descriptions," has with one word greatly strengthened the hand of the magistrate dealing with such cases. Legislation protecting the rights of shoppers could also profitably be clarified; why, for example, should dry cleaners and laundries be able to protect themselves behind so much small type? There are those who believe that this is the most effective way of looking after the interests of the shopping public since it protects everyone, not merely the canny few who subscribe to testing organisations, and it does not depend, as labels and quality seals do, on voluntary co-operation by industry. There is no single, easy way of giving shoppers the kind of stiffening that many of them feel they need, but the more widely the subject is discussed, and the more attempts are made to compare results achieved by different methods in different countries, the better the chances of finding the right answer.

#### SUBSCRIPTIONS TO THE ECONOMIST

Annual Postal Subscription by ordinary mail £4.10; overseas £5  
By air see below

Subscriptions to many countries can be sent either by direct second-class airmail or in bulk by air freight for onward posting from central distribution points. Airmail is invariably more expensive but usually quicker by about 24/48 hours. Where only one service is shown this is because the alternative is either not available or not recommended.

|                  | Airmail | Air Freight |                           | Airmail | Air Freight |

## BUSINESS NOTES

### EXPORT CREDITS

#### Guarantees for the City

IN its attempt to galvanise British industry into greater export mindedness the Government is understandably anxious to make a contribution of its own. In the present framework the scope is pretty limited—though Mr Lloyd could enlarge it on Monday—and it was perhaps inevitable that one main gesture should be an easing in the terms of export credit. Yet at a time when official statisticians have just calculated that Britain can afford to give still less external credit than it previously thought, concessions on this front are bound to cause certain misgivings. If these concessions are applied carefully, and if they do not intensify international competition in easier credit, the net effect could be favourable; but the qualifications are important.

The Government had already had two earlier bites at this cherry: last autumn it announced that it would authorise the Export Credits Guarantee Department to insure suppliers' credits for more than the normal five years' maximum where this was necessary to match facilities granted to a foreign competitor; and early this year the Bank of England announced new facilities for refinancing that make export credits eventually liquid assets for the commercial banks. Now Mr Maudling, President of the Board of Trade, has announced three new concessions. First, after long talks with City institutions, the Government has introduced new facilities to guarantee loans made by banks and other financial institutions to finance over long periods exports of major capital goods, including ships. Secondly, premium rates are being reduced sharply, especially to the weaker markets and on longer credits. Thirdly, a simplified and favourable new scheme is offered to small exporters.

The institution of "export finance guarantees" to finance exports for more than five years does not, it is claimed, form any breach of the code of the Berne Union, since this is concerned only with credits granted by suppliers of the equipment. The guarantees are to be granted direct to the financing institutions, which it is hoped will include insurance companies, on loans granted by them direct to the foreign buyer. They will pay a premium for the guarantee, based on ECGD's premiums on supplier credits to the particular market, and they will presumably recoup this in their interest charge to the manufacturer. The system is seen not as an extension of suppliers' credit but as a modern replacement for the old international bond market. Private finance today is not willing to stand at risk

for long periods in the countries that want to buy steel mills and power stations. The logical alternative might be thought to be a straight government development loan, but in the modern fashion the Government prefers to bring in private finance even when it has to provide the guarantee against loss. Direct loans under section 3 of the Export Guarantees Act are held in reserve as a last resort.

Any such system has inherent dangers. This said, the Government is at least envisaging the right kind of checks to try to prevent abuse. First, the guarantees will be available only to finance sales of large capital projects normally costing not less than £2 million, though this restriction will not be applied to ocean-going ships. Secondly, the term of the guarantee will depend on the life of the assets being supplied, which must be substantially beyond the period of the loan. Thirdly, ECGD must be satisfied about prospects of repayment, and in weaker markets, "exceptional treatment will have to be justified on the basis of good long-term prospects leading to a lasting and profitable connection for British trade." The Government will also consider whether the supplying industry is over-strained or short of orders. Thus the facilities will be selective in a number of ways, and Mr Maudling recognises the general limitation imposed by the balance of payments. But the Government believes that important contracts have been lost for the lack of such facilities, and that the amount financed under these guarantees is likely to be reckoned in tens of millions a year—present estimates can get no closer than that.

#### Big Cut in Premiums

THE cut in ECGD premiums is substantial—on the basis of present business it will amount to roughly one-fifth of ECGD's average income from its "commercial" business, or over £1 million a year. Earlier reductions had concentrated on short term business. Now the main concessions are on medium term business, and the cuts are sharpest—as much as 50 per cent—for the longer credits in the poorer-rated markets, for which ECGD's premiums were higher than those of some of its foreign counterparts. The present cuts arise from a reassessment of likely recoveries in the poorer markets: it is impossible to tell how far they are justified on strict commercial considerations. The Government has also felt that the principle of breaking even over a run

of years permits the occasional deficit as well as surpluses, and that the accumulated credit is a sign that there is something in hand. The Department is aware of the danger that these cuts may encourage unsafe business in poor markets, and it gives a warning that such business may in some instances have to be turned away.

The new policy for the "small exporter"—any firm with an export turnover of under £10,000 a year—is designed to tempt the customer into the shop. Such exporters will be enabled, exceptionally, to insure a single buyer; a flat percentage of 90 per cent of his risks will be covered, and the paperwork will be simplified. This business will be transacted as Section 2 "national interest" business, and firms will not be allowed to use it for more than two years. Details have been sent to 11,000 prospective clients.

### OIL

#### Iraq Talks Break Down

NEGOTIATIONS between the government of Iraq and the Iraq Petroleum Company were cut off abruptly last week when the prime minister, General Qasim, told the company that until they satisfied the government on the issue of "dead rents," negotiations were at an end and that it was to cease all exploration activities. He added that the Iraqi army would be ordered to see that IPC operations were restricted to the producing wells. This issue was a somewhat surprising one to upset the negotiations over: it had been assumed that it would go to arbitration. The result was that some of the knottier and on the face of it larger issues—such as the details of "relinquishment," by which IPC will hand back its concession rights to most of the unexplored territory in Iraq, and the question of an Iraqi shareholding in the company—were hardly discussed at all. As he has done before, General Qasim later had broadcast over Baghdad Radio verbatim records of the two meetings that took place since the main IPC negotiators returned to Baghdad—a fascinating source of material for the contemporary observer of such encounters, but not necessarily helpful to the conduct of negotiations.

"Dead rents" are the rents that an oil company may pay a government during the period that it is looking for oil, but before it finds any. The provisions regarding the financial treatment of these rents after oil is found, in the Iraq concessions, appear to have been obscure and open to different interpretations: that is what arbitration would have considered. In practice, IPC has been amortising the accumulated total

of them out of the proceeds of the oil later and perhaps elsewhere produced. There are precedents throughout the oil industry for doing this. But the government of Iraq complains, as other governments have, that charging it against profits means that they pay half of the repayment out of their 50 per cent share of profits. They contend that it was a payment to them while they were getting no other revenue out of the oil industry, and should not be partly charged against them later. Both sides had agreed to arbitration: the disagreement arose over whether IPC should go on amortising these rents pending arbitration. The company offered to suspend deductions for two years, and later raised this period of suspense to three years provided arbitration had begun within two. The government refused to accept less than suspension for an indefinite period.

The halting of exploration in the area puts IPC in more of a difficulty than the outsider, considering the world oil surplus, might imagine. The company at present has eight to ten exploration teams working in Iraq. Since under the relinquishment arrangements it was liable to have to give up 75 per cent of its concession area straight away and a large part of the remainder over a period of years, it would have a strong incentive to find and develop as quickly as possible any oil in the shrinking areas remaining to it. Moreover, there are minimum production requirements as conditions of the existing concession. Though IPC will have no difficulty in meeting these for the whole country, the declining Mosul area probably would require some development of new fields, over the next few years to maintain its rate of production quota. The government has not acted in any way to curb actual production in Iraq: as the company were made aware at the beginning of the year, it is very anxious indeed to get its oil revenues regularly, if not ahead of time. Nobody wants a full-scale open dispute between any company and any government in the Middle East, now or at any other time: this is not the way anyone wants to test—or perhaps forge—the links of OPEC.

#### IN THE MARKETS

### Just off the Boil

IN the heaviest day's trading for fifteen months nearly 26,000 bargains were marked on Monday on the London Stock Exchange and the *Financial Times* ordinary index went up to yet another new peak, 354.6. But the large number of bargains showed that while some people were convinced that prices would go on rising there were nearly as many who decided that the time had come to take their profit. Turn-over in options also rose, yet another sign that investors were becoming a little more cautious about the amounts they were willing to stake on a further advance. It was

#### BUSINESS NOTES

not surprising therefore that the equity market came off the boil. By Wednesday, the *Financial Times* index had fallen to 350.5. The *Economist* indicator, covering this active week of trading, registered a gain of 2.8 points to stand at 413.5.

Some slight reaction in the markets after their strong advance had been expected. Monday's budget will show whether investors were justified in believing that while not much would be given away in tax reliefs it would be favourable to those tax-payers who were most likely to be interested in stock exchange investments. Prices are at or close to the highest levels ever in the equity market and investors are clearly looking beyond the budget to some growth in economic activity this year. Similarly optimistic views are being taken on the other side of the Atlantic. Among private investors in both markets there is a strong desire to buy for growth, based on projected earnings, rather than to buy on dividend yield considerations. Up to now, British investors have been rather more sceptical about the concept of growth than American ones, and in their recent buying some of them may have been heartened by the fact that, thanks to last year's increase in dividends, the average yield on equities is higher than it was at the beginning of 1960. Then, as measured by *The Economist* indicator, the average yield on blue chips was 3.8 per cent; it is now 4.3 per cent.

But the yield on old Consols was then about 5 per cent and is now 6 per cent, so that the reversed yield gap has widened. The lure of growth in equities, in other words, is even stronger now than it was fifteen months ago. But high running yields on fixed interest stocks continue to attract institutional investors and one of the remarkable features of the recent bull

### Less Cause for Alarm?

ONE passage that attracted a good deal of attention in last week's *Economic Survey* recorded that in the second half of 1960 earnings per head (wages and salaries) were 6½ per cent higher than in the second half of 1959. This was contrasted with rises of 2½ per cent and 3½ per cent during 1958 and 1959 respectively; it was recalled that in the inflationary decade 1948-1958 the average annual increase had been 6½ per cent. This was taken in these columns and elsewhere to imply renewed anxiety about wage and cost inflation.

This week the Treasury said these ominous figures were wrong. During 1959, it said, the increase in earnings per head had been 4½ per cent, not 3½ per cent; and the comparison from the second half of 1959 to the second half of 1960 was 5½ per cent, not 6½ per cent. This did not, the Treasury was at pains to add, wholly invalidate its apprehensiveness about labour costs. But things were not quite as bad as—or alternatively, had started becoming worse earlier—than we had all thought.

#### THE ECONOMIST APRIL 15, 1961

market in equities has been that gilt-edged securities have not suffered very much. Their prices have not moved significantly either way. This week the gilt-edged market was once again quiet, but demand for high yielding stocks was just sufficient to bring a full subscription list for the offer by Stirling County Council of £5 million of a 6 per cent stock, 1974-76, at 99. These terms are identical with those of the Birmingham stock which was successfully issued two weeks before, but the Stirling loan only scraped home and dealings in it began at a discount before the price recovered to par. The market has also been asked to absorb £6 million of a 6½ per cent stock issued by the Industrial and Commercial Finance Corporation; the stock has been placed at 97 among a handful of institutions for a placing commission of one per cent and they have agreed to release up to half the amount to the market at the placing price. Brokers will earn a small commission, payable by ICFC, on any buying orders they find.

### Boom on Wall Street

A correspondent cables:

WALL STREET has the gleam of achievement in its eye. This week the Dow Jones industrial average, whose movements are followed with almost mystical regard despite its acknowledged inadequacies as an indicator of market activity, jumped to a new peak of 692 on Monday and then in the course of trading on Tuesday rose to 700. By the close on Wednesday it was back to 690, but this was still five points higher than its previous peak in January, 1960, and 130 points above its low point in October. Prices have been rising steadily since the end of October and the increase in the volume of trading has been even more remarkable. This week there was no repetition of the record of seven million transactions recorded on the Tuesday of the previous week, but the daily volume of transactions has remained in the region of five million, compared with an average of not much more than three million a day in the last two years. It is not surprising, therefore, that prices have climbed to new record levels, but much of the trading represents switching from one group of stocks to another and profit taking. More investors are coming into the market and the brokers are generally confident that prices will continue to climb, though they may do so at a slower pace.

While institutional buyers have been building up their equity holdings for some months it is buying by private investors that has given this bull market its special flavour. The atmosphere in the market is similar to that in the spring of 1959 and now, as then, the New York Stock Exchange has warned investors to eschew tipsters and, in effect, not to confuse Wall Street with Las Vegas. Many low-priced stocks have been bought irrespective of their reputations or prospects while more sophisticated investors have

#### THE ECONOMIST APRIL 15, 1961

been concentrating on new issues of unseasoned companies in electronics and kindred fields. The market in these issues has boomed again and many of those fortunate to get in on the ground floor have been able to sell out at double or treble the issue price in a matter of weeks, or even days.

The latest jump in prices was stimulated by growing evidence that the recession, the mildest and shortest since the war, is over. But just how much further the market will climb depends largely upon the extent of the recovery. Many equity prices have already been bid up to heights that only the resumption of a fully fledged economic boom would justify and if the expected improvement in earnings is slow to materialise the stock market might go into reverse. But there seems to be no immediate prospect of this happening.

#### GERMANY

### Frankfurt versus Bonn

GERMANY has still to take the necessary domestic measures to back up its small revaluation of the mark. The Bundesbank is pressing for them, the Bonn administration resisting, and an open conflict between government and central bank is developing. The need for action is underlined by the weekly figures of the Bundesbank's external reserves. Revaluation should have reversed the speculative tide; instead it heightened it. The inflow of funds has abated somewhat since the immediate aftermath of the exchange adjustment, when over \$200 million streamed into Germany in a single week; but in the last week of March the inflow was still over \$50 million, bringing the inflow since the beginning of March to some \$425 million, and Germany's total external reserves to the ridiculous amount of \$7,920 million.

When the Bundesbank reluctantly agreed to revaluation, it stated publicly that this would make it easier to bring interest rates down to the international level. Dr Erhard in Bonn saw it differently; to him, the main purpose of revaluation was to act as a brake against the domestic boom and a weapon against price inflation. He opposed a further loosening of monetary policy as liable to increase the danger of inflation and consequently to damage party prospects in the coming election—such are the peculiar electoral pressures in a country that prizes stability above all else. The Bundesbank, for its part, points in its latest monthly report to the limitations in the efficacy of credit restrictions at a time when there is a "structural interest disequilibrium" *vis à vis* the outside world. It says pointedly that in the one sphere where high interest rates might have had a restraining effect, that is in building, this has been offset by large subsidies from public funds. In these circumstances, the report says, the only measures likely to be effective internally are those that

#### BUSINESS NOTES

do not worsen the external problem. Fiscal policy, general economic policy and import policy are specifically cited. Meanwhile, although stopped from cutting the discount rate, the central bank has made a further small release of the frozen deposits of the commercial banks. So far, however, there has been only a small drop in bond yields since revaluation. The Bundesbank view will doubtless receive strong support from foreign quarters at next week's meeting of central bankers and top Treasury officials in Paris, discussed on page 208.

#### STEEL

### No More Into Stock?

THE rise in stocks of finished steel, which added considerably to the pressure of demand upon steel manufacturers and for imports last year, seems to have come to an end, the Iron and Steel Board concludes from the reports it has so far had of movements in steel stocks during the first three months of 1961. As yet this has mainly had the effect of cutting finished steel imports: in January and February imports amounted to only 52,000 tons a month, about half of last year's monthly average, and probably represented, the board thinks, the closing deliveries of commitments made some time ago. New home orders for steel sheet, on the other hand, are still weak despite the recovery in vehicle production and the revival of demand for tinplate.

Most of the reduction in steel output last month from the level of just over 485,000 tons a week in February—which happened also to be the figure for March last year—to about 471,000 tons a week occurred in South Wales, where the bulk of the country's sheet and tinplate is made. Both the motor vehicle and canning industries had become heavily over-stocked; the car firms were responsible for much of last year's greatly increased imports. But while tinplate orders appear to have picked up, the recovery in car production has so far been fed almost entirely from stocks of sheet steel. Admittedly there have been fewer postponements of deliveries already contracted for, but when the car firms actually come back into the market for steel sheet

will depend primarily upon what happens to their exports. Meanwhile, total steel production in the first quarter of 1961, at 6.2 million tons, was equivalent to an annual rate at the lower end of the range of 24-25 million tons which the board had been hoping for 1961 as a whole.

The recovery in the vehicle industry was more immediately felt by the iron foundries, since stocks of iron castings rarely fluctuate to anything like the same extent as those of sheet. Most foundries have been kept very busy by the boom in industrial investment and, with the revival of demand for castings for vehicles as well, there has been a fairly widespread upward movement in their selling prices. In the steel industry the level of prices is still under discussion.

#### THE EXCHANGES

### Sterling at Par

STERLING has shown a firm front in the exchange markets this week. On Tuesday the spot rate against the dollar regained its parity of \$2.80, and no support from the authorities has been needed. Discounts on forward sterling have narrowed a little further. Markets are generally quiet, with the Continent inclined to buy sterling and New York to sell. Speculation has not been resumed. This is a striking vindication of the Bank of England's aggressive market tactics in the teeth of the speculative movement set off by revaluation of the mark and guilder early last month, and also of the new agreement between European central banks to maintain temporary balances in each other's currencies. Although the size of such support is not being directly disclosed, it will be broadly reflected in the figures of sterling balances at March 31st.

The gold market has seen some demand from private sources in the Middle East and Far East, but this has not been sufficient to prevent a slight relapse in the London price, from \$35.09 to \$35.07. There is still no buying by central banks, which have clearly made a mutual agreement to hold off. Nor has there been any resumption of sales of gold in London by Russia, absent since the October upheaval. But it is reported that over 30 tons of Russian gold (worth around £11 million) has arrived in Paris since the beginning of this month.

#### BRITISH PETROLEUM

### Lower Margins

CUTS in posted prices and the further extension of discount selling made an impact on British Petroleum's profit margins in the last half of 1960. The improvement in gross margins recorded in the first half of last year has proved to be only short-lived, and the gross margin at 18.7 per cent is not much above that

recorded in the second half of 1959 while the net margin, largely because overseas tax was higher while the British tax credit set against overseas tax has been reduced, is actually lower at 9.2 per cent. The broad outline of trading results in six monthly periods is set out in the accompanying table, in which the sharp rise in the gross and net value of sales in the second half of last year reflects another increase in the volume of sales of oil and oil products by the BP group.

#### SALES AND PROFITS (£ million)

|                                   | June 30, 1959 | Dec. 31, 1959 | June 30, 1960 | Dec. 31, 1960 |
|-----------------------------------|---------------|---------------|---------------|---------------|
| Six months ended                  | 1959          | 1959          | 1960          | 1960          |
| Gross sales                       | 404.4         | 443.7         | 447.5         | 489.5         |
| Net sales                         | 287.6         | 312.6         | 312.2         | 334.8         |
| Gross profit                      | 57.7          | 57.9          | 62.1          | 62.7          |
| Net income                        | 31.0          | 32.4          | 31.5          | 30.8          |
| Gross profit/net sales, per cent. | 20.1          | 18.5          | 19.9          | 18.7          |
| Net income/net sales, per cent.   | 10.8          | 10.4          | 10.1          | 9.2           |

Over the year as a whole, the volume of sales rose from 63.2 million tons to 72.9 million tons and the net value of sales, after deducting sales taxes and duties, rose from £600 million to £647 million. The group's income before tax rose by £13½ million to £144½ million, but over £4½ million of this comes from an increase in investment income. A sharp rise in tax (partly reflecting a decrease in investment allowances and the increase in British profits tax) has led to a slight fall in net income from £63½ million to £62½ million. The directors, however, have raised the tax free dividend from 2s. 2d. to 2s. 4d. per £1 share (that is from the gross equivalent of 17.7 per cent to 19.1 per cent) and the directors say that they recognise that reserves are at high level and that later in the year they will therefore consider the advisability of making a scrip issue. The stock market had hoped that a scrip issue would accompany the dividend announcement and its immediate reaction was to mark the shares down by 1s. 3d. to 59s. 3d.

#### DUNLOP RUBBER

#### Better Than Expected

DUNLOP shares have been in the doldrums since the directors in an interim report in October said that margins were being squeezed and that profits in the six months to December 31st were unlikely to reach those earned in the second half of 1959 but might be about the level achieved in the first half of 1960. After this statement, it was thought improbable that the ordinary dividend would be raised above its 1959 level of 15 per cent. In fact, in a preliminary statement that records an increase in sales from £261 million to £275 million and in trading profits from £22.5 million to £23.2 million but a fall in net profits from £5.9 million to £5.6 million, the dividend has been raised from 1s. 6d.

#### BUSINESS NOTES

to 1s. 7d. per 10s. share (or from 15 to 15½ per cent).

#### SALES AND PROFITS (£ million)

|                    | June 30, 1959 | Dec. 31, 1959 | June 30, 1960 | Dec. 31, 1960 |
|--------------------|---------------|---------------|---------------|---------------|
| Six months ended   | 1959          | 1959          | 1960          | 1960          |
| Sales              | 127           | 134           | 136           | 139           |
| Gross profit       | 10.52         | 11.95         | 11.18         | 12.05         |
| Net profit         | 3.15          | 4.02          | 3.29          | 3.37          |
| Gross profit/sales | 8.3           | 8.9           | 8.2           | 8.7           |
| Net profit/sales   | 2.5           | 3.0           | 2.4           | 2.4           |

Profits, as the table shows, were in fact better in the second half of last year than the directors had expected they would be and the gross profit margin was higher in that period than it had been in the first half though not as high as in the second half of 1959. Largely it seems because of a higher depreciation charge, the net profit margin did not show the same improvement. But the rise in the gross margin is slightly reassuring in view of the directors' earlier statement about the higher costs of natural rubber and wage increases and the fact that for much of this period British car sales were depressed. Dunlop has a big domestic interest in supplying original equipment tyres, but it appears to have added to its share in the replacement tyre market. This and higher export sales may be the reason why profit margins have improved. But it is only recently that motor sales have begun to pick up in this country and the stock market, though it marked the shares up by 3d. to 25s. 6d. on the higher dividend, is unlikely to revise its ideas about Dunlop until it has some indication about how well it is faring at the moment.

#### THE BUDGET

#### The Loan Account

FOR the first time the Government has this year published estimates of its below-line expenditure before the budget, in a separate white paper that explains the nature of these important capital advances in much more detail than has been published hitherto. The estimates for the new budget year are of course subject to anything the Chancellor may decide to change on Monday; but below-line payments consist principally of repayable loans made under continuing Acts, and with a few exceptions such as repayments of postwar credits are not often affected by budget changes.

As the table shows, more than half of total below-line issues are expected to be on account of nationalised industries. But even after allowing for last year's transfer of the provision for the railways' current deficit to the above-line accounts where it belongs, advances to state industries are reduced for the second year in succession. The growing element below the line is finance for the private sector and overseas assistance. Thus while the local authorities are expected to continue their substantial net repayments to the Exchequer, the building societies are

#### THE ECONOMIST APRIL 15, 1961

expected to raise their Exchequer borrowings. In the steel industry, the Iron and Steel Realisation Agency is expected to contribute only £20 million from the recent sale of steel prior charge stocks, it is lending a further £58 million to Richard Thomas and Baldwins, which will borrow as much again under special powers direct

#### PAYMENTS BELOW LINE

from the government. This company is still nationalised, but £30 million of government money is also likely to be taken up in the loan to Colvilles. In all, the white paper shows total government finance for private industry, above and below line, at over £400 million in 1961-62. More than half of this is for agriculture, yet this total is actually above the capital advances to nationalised industries, and only about a fifth below the probable total after meeting the railways' current deficit.

In all, net expenditure below-line is put at £575 million in 1961-62, some £34 million more than in 1960-61. This spending should not sensibly be grouped together with current budget spending. It represents, for the most part, the creation of capital assets; and in the past year at least, it has been financed in the most orthodox way, through the gilt-edged market. The latest figures show that net sales of stock to the public in the first three quarters of the fiscal year (i.e., April-December) were about £430 million.

#### THE ECONOMIST APRIL 15, 1961

*'I am a mole, and I live in a hole'*

This is the solemn and melancholy chorus our engineers sing round their drilling rigs. They add that they work longer hours than most moles. Also that mole business is not a risky business, whereas oil-hunting definitely is.

Everything about drilling for oil is a gamble. Our engineers may set up their derricks, their pumps and draw-works eight to ten times in jungle and swamp country. After a few months they might strike a gusher, or not find enough oil to pay for

postcards home. Those are the lumps we get in our porridge, and we have to swallow them. So have our competitors, luckily.

However, all these holes drilled all over the world eventually add up to a lot of oil and oil products. Plenty enough petrol to keep the car you'll buy next year on the road. Enough insecticides to keep the world's harvests healthy. Enough polyethylene to wrap everything that needs to be wrapped. On second thoughts, the mole song is a happy song.

YOU CAN BE SURE OF

# ASK BRITISH OXYGEN: THEY KNOW ABOUT PROPANE

Propane is the new fuel serving go-ahead industry. BOC propane in bulk is the new way of buying it. Buy it from British Oxygen and you're dealing with experts in the whole field of industrial gases. They make oxy-propane equipment themselves. Install and service pipe-lines and storage tanks. Analyse your needs. British Oxygen deliver BOC propane by return, on time, anywhere in Britain. Their knowledge and advice are yours for the asking.

## PERSONAL SAVING

### A New Record

THIS year's Economic Survey puts personal savings in 1960 at £1,483 million, a sharp rise of £450 million over 1959's total. This is the continuation of a revival in personal saving that began in 1952 after most observers had convinced themselves that the public had abandoned the habit, leaving new saving to the Government and business houses.

Of the latest rise of £450 million, £134 million was fixed investment in houses, stocks and fixed capital by unincorporated businesses. The major contribution to 1960's rise in personal savings came from the sharp fall in dis-saving through hire purchase: the increase in the public's debt of £27 million compares with an increase of £242 million in 1959. Personal bank deposits, after the deduction of personal advances, rose by £64 million more than in 1959. Loans for house purchase from the building societies and local authorities rose by £20 million. This is a good deal less than personal investment in new houses, which seems to be some indication of the size of the mortgage business done through other

| Source: Economic Survey 1961.                          |              |              |             |

channels. Life assurance and super-annuation funds rose still more steeply, by £780 million, which is more than half as large again as in 1956, the inflows into "National" savings and shares and deposits of building societies were in each case £52 million lower than in 1959, as the higher Bank rate reduced their investment attraction.

The "unidentified" item is a commonplace of white papers. Jokes were made when the statisticians lost £500 million some years ago in the difference between total identified personal saving and total

personal saving calculated as a residual of the income and expenditure accounts. This gap is now £822 million of apparent dissaving. The statisticians have never been able to give any real guide to what assets the public has sold or what strange new debts it has contracted. It is hard to retain faith in the total thrown up by the residual calculation: personal saving, in other words, may be still higher than the white papers show.

## MOTORS

### Good-bye to Short Time

THE motor industry has now ended short-time working, rather later than the rise in demand this year might have led one to expect; the last pockets of short-time at the British Motor Corporation and Rootes finally disappeared this week. They seem to have been in the departments producing parts that could easily be stored, where the biggest stocks had been accumulated during the winter. Production is by now rising steadily, though it is still nearly 20 per cent less than it was a year ago—say around 27,000 a week. By May it should be approaching 30,000 a week again; but it is unlikely to reach last year's peak of 34,000 a week so long as sales of saloons in the United States remain depressed. And until the industry can build up its labour force after the dismissals and wastage of the winter—which it does seem in a hurry to do at present—it could not make so many cars. The big five probably have about 11,000 fewer men on their books than they did last summer, a fall of about seven per cent. The losses vary widely. Standard-Triumph International dismissed the most, 2,000, and probably lost another thousand from wastage, in all about 25 per cent of its labour force last autumn. Vauxhall dismissed 1,400 and lost another 600 or so, totalling eight per cent of its labour force. Ford and BMC dismissed none but lost about 2,000 and 3,500 respectively, four and six per cent of their working force. Rootes sacked 150 and, though it has given no figures, may well have lost a thousand altogether, or seven per cent of its workers.

Overtime has been worked for the last month by Ford and Vauxhall, though the latter has not yet re-started its night shift; and other companies are beginning overtime now, though they are only recruiting workers on a scale that does little more than replace men who leave. BMC is starting Saturday morning work for the men on the Minor and Mini-minor lines at Cowley this week, and expects to introduce it at some other factories soon; Rootes and S-TI are working little overtime so far. Supplies of parts seem to be the chief cause of delay in raising output; their producers have to work up output again, after orders were often precipitately cut last autumn, before car production itself can rise. S-TI finds that there are delays on the delivery of some of its cars, as do other makers, while

its works are still well below capacity operation; the public may well be puzzled when it finds that it has to wait for a car so soon after stocks were so big, but when consumers behave as capriciously as they have in the last few months they are liable to put out the best-laid production schedules. Fortunately for the goodwill of the industry, delays are not long; those who are not too fussy about colour schemes should still get delivery from stock.

### More Power for the Herald

OWNERS of the Triumph Herald have until now been in the embarrassing position of owning a car that—unless it had the optional two-carburettor inlet manifold—gave less performance than its cheaper rivals. The enlarged 1,147 cc engine that is now being fitted to the standard Herald range of saloon, coupé and convertible will spare future buyers this embarrassment; it gives acceleration through the gears that is as good as, if not slightly better than, that of the Anglia and BMC babies, and top gear acceleration that is significantly superior. The price of the more powerful model is only £6 more than that of the old one; interior trim more in the British luxury car tradition—walnut veneer on the dashboard—more comfortable front seats and rubber-covered bumpers are other changes given for the money; on the engineering side, there are also a closer-ratio gearbox and a higher back axle ratio. Enlarging the engine, which has simply been done by boring out the cylinders, has increased its torque, or pulling power, at low speed more than its maximum power—it develops 27 per cent more torque but only 12 per cent more power. This explains why higher gearing is compatible with better top gear acceleration; and the use of higher gearing has prevented the fuel consumption from rising with the performance. A two-carburettor manifold is not available at present, but one will soon be offered as an optional fitting on all three models.

The increased attractions of the standard Herald should help its makers to keep it selling in the market for which it was intended—that for the sporting, rather than sports, small car; but it may soon have to meet more competition in it from Ford. More, one suspects, by accident than by design, a good share of this market has already gone to the BMC babies. The Herald cannot rival such competitors on price; but, by the drastic cuts in the price of the "S" model, which still uses the old 948 cc engine, it has been brought down the price scale to a point where it can compete with other BMC and Ford products, especially for the fleet user market. But the higher volume that should be obtained must be at the expense of lower margins, despite the cost advantages that S-TI's new and bigger assembly building may be providing.

## Presidential Advice

**D**URING his two years as president of the Federation of British Industries Sir William McFadzean has shown himself willing to speak bluntly whenever the occasion required it and to tell industry what he thought was wrong with it. His valedictory presidential address this week, shortly before Mr Cyril Harrison, vice-chairman of English Sewing Cotton Company, was elected to succeed him, was not out of character. After making some remarks about the division of Europe into two trading blocks, which he thought was already solidifying and was starting to create some duplication of industrial investment, but which basically required a political decision to solve it, he spent the greater part of his time dealing with exports.

While the amount of money now going into the expansion and modernisation of industry made him feel in general bullish about this country's capacity to export, he was quite certain that "too little attention is still being given to the tastes and requirements of overseas customers. . . . We are still falling down on delivery and in not notifying customers quickly enough when, often through circumstances beyond our control, delivery is going to be delayed." It may be that other exporting countries do this too, but this should be "our opportunity and must not be our excuse." The number of British salesmen overseas, too, was still too thinly spread compared with

The extension in January of the maximum repayment term from two to three years has had no apparent effect on credit sales by shops, which showed the same movement between January and February this year as last. However, sales through finance houses increased much more than last year; sales of new cars rose by 50 per cent above January and were only 5 per cent less than a year earlier.

Total debt outstanding fell by £6 million during February to £922 million.

## BUSINESS NOTES

those of our principal competitors. To be really effective, he felt, export salesmen should be able to speak the local language so as to "appreciate the requirements and aspirations of the countries to whom they are selling"; and they should have higher status. Sir William said he sometimes wondered if the virtues of being a scientist, a technician, or a production efficiency expert have all been over-boasted compared with those of being a salesman. "Too often . . . the belief is held that any 'dogsbody' will do on the commercial side."

But not all his exhortation was directed at his own members. Any "warm feeling" for Britain overseas was, he reckoned, associated more with our traditions than our modern achievements. Often our publicity was concerned only with our problems: from "leading newspaper reports overseas one gets the impression labour here is constantly on strike, whereas . . . we lose fewer man hours than practically any other western nation". There are too, he added, many factors affecting this country's export performance that are outside industry's control, such as the cost of products and services of state industries, transport and dock facilities, and export credit facilities and credit insurance. Sir William said that he hoped that there is a growing determination among all concerned here "to put their house in order and render the most competitive and effective assistance to the cost of British exports."

## CYCLES

### Contraction

**T**HE closure of four cycle and accessory making factories that Tube Investments announced last Saturday is the latest move in its plans to concentrate bicycle production at the Raleigh works in Nottingham and that of mopeds at the TI works in Birmingham. These moves are being made against the gloomy backcloth of a rapidly falling demand for bicycles on the British market, which brought output down to a record low figure in January—20 per cent below the 1960 level. The factories that will be closed during the next three years are the Norman bicycle and moped works at Ashford, in Kent; the Sun bicycle factory in Birmingham; and two saddle and accessory makers, J. B. Brooks and Wright Saddle, also in Birmingham. Production from the factories closed down will be re-distributed among other factories in the group; the men who lose their jobs will get compensation, and the manner in which the closures are made will be discussed with the works committees before any detailed plans are made.

Home sales of bicycles have been falling cumulatively for more than a year past; as fewer and fewer people want to propel themselves around; the hire purchase restrictions accelerated the fall, but the lengthening of the repayment period has not checked it. Sales are now far below

## THE ECONOMIST APRIL 15, 1961

their previous low point, and there are no signs of a recovery. Exports, however, are running at much the same level as in 1960, a year in which they had risen by 18 per cent. The present level of exports should be maintained for the rest of this year; but the industry feels pessimistic about the long-term prospects, with more and more of its markets preparing to make their own bicycles.

Decline is the only prospect that the cycle industry can now see for its products; so, as well as contracting, it is diversifying. Mopeds were its first new product, but their sales have been disappointing in the past year—though there seemed to be some signs of a recovery with the new year, perhaps a result of the new models that Raleigh has introduced. Lightweight scooters followed from Raleigh last winter, too recently for their impact to be measured; the lengthening of the hire purchase repayment period has done nothing to help sales, for it is the size of the deposit that counts, as it does with appliances. Toys are another new product: as the bicycle sells more and more to a juvenile public, it may seem logical to make such things as toy bicycles and pedal cars. And an increasing part of the work done at the Raleigh factory is now not concerned with any form of bicycle at all, but is sub-contracting for other firms.

## TELEVISION

### Unloading Stocks

**T**HE General Electric Company, threshing around like a beached whale attempting to regain deep waters, has with one flip of its tail sent flying a substantial number of its junior executives; one of its huge flippers has cut roughly £15 off the price of its cheaper and more off the price of its more expensive television sets in an attempt to clear its factory of obsolete stocks. Most television makers have been accepting for their stocks very much what the retailers will offer them, and retailers have been doing profitable business since before Christmas in selling television receivers for less than £50 that are still officially listed by their manufacturers at more than £60. GEC has now become tired of this farce, and accepted the fact that since the public is never again likely to pay 63 guineas for a painfully ordinary 17-inch television set. A company itself may just as well take what credit can be got from cutting its price down to 49 guineas, and so on up the scale.

Television stocks present the industry with no ordinary headache. At Christmas, when stocks at the factories and the shops had between them reached the staggering figure of 1.2 million, or the equivalent of nine months' sales, it was customary to say that between 500,000 and 600,000 of these sets represented normal trading stock, and that the corner would have been turned once the industry has managed to halve the

## THE ECONOMIST APRIL 15, 1961

## Hedley get dazzling results - on Coal

**F**OR GREAT-GRANDMOTHER, washday meant backbreaking toil, and the energetic use of a scrubbing brush and a bar of soap in a choking atmosphere of billowing steam. For her grand-daughter, washday means the flick of a switch and the amazing cleansing power of soap powders like Oxydol and Fairy Snow, detergents like Tide and Daz—all the result of tireless research and modern manufacturing methods.

The three factories of Thomas Hedley & Co. Limited turn out over 500 million packets of washing products a year. When the choice of fuels was examined,

Hedley engineers chose coal because a careful study of operating and capital costs showed it to be the most economical fuel: because coal—mechanically stoked—is smokeless; and because British coalfields can supply all the coal that industry will need both now and in the foreseeable future.

If your voice is a deciding one in the choice of fuels for your factory, remember Hedley. Beneath their smokeless chimneys lies a wealth of knowledge and applied experience. Hedley say coal. The same decision can give your product a brighter future.

| Here are some key facts and figures about the consumption of coal at the three Hedley factories: |                                       |
|--------------------------------------------------------------------------------------------------|---------------------------------------|
| Boilers:                                                                                         | 8 water tube                          |
| Method of firing:                                                                                | 6 Underfeed and 2 Chain grate stokers |
| Steam pressure:                                                                                  | 475, 460 and 160 p.s.i.               |
| Steam temperature:                                                                               | Saturated and 100° superheat          |
| Annual fuel consumption:                                                                         | Over 45,000 tons of coal              |

**SOLID FUEL—more heat at less cost—and it's British**

PROGRESSIVE INDUSTRY IS GOING FORWARD ON

# COAL

ISSUED BY THE NATIONAL COAL BOARD

numbers then held. This ignored the fact that nearly every one of those 1.2 million receivers was obsolete or obsolescent. They consisted almost entirely of 17 inch and 21-inch receivers which are now out, or going out of production since the industry has decided to standardise on 19-inch and 23-inch screens in their place. Those makers who have already put these new sizes on sale do so at prices that differ by only a pound or two from whichever type of old set they replace. And what is even worse, many of the sets now in stock were made some considerable time ago, and their old, sugar-cube design compares most unfavourably when it is placed in a shop next to the slimmer, less aggressive receivers that have been coming into production since the autumn.

This means that although the industry has run down stocks quite appreciably since last autumn, until it is probably half-way towards its target of 600,000, it still cannot relax when stocks are down to that figure because so many of the sets will still consist of ageing designs. Therefore cutting back production is not of itself an answer to the industry's difficulties; in some ways it merely adds to them by running plant well below design capacity. GEC's price reductions are not intended just to reduce stocks; they are intended to get rid of them altogether so that the company can then start to market the 19-inch designs that it has in the back rooms. Whether the cuts are large enough to do this with a status symbol so potent as the telly is anyone's guess.

#### RANK ORGANISATION

### Sting in the Tail

IN recent months, the 5s. shares of the Rank Organisation have had a strong rise and investors were confident that the company's decision to revert to its former practice of declaring an interim dividend would result in a higher payment. They were right, but the interim statement proved to have a sting in its tail—the announcement of a one-for-five rights issue. The price at which the shares will be issued has not yet been announced, but the market has assumed that the issue will raise between £2½ million and £3 million. An interim dividend of 7½ per cent has been declared and it will be followed by a final of 15 per cent on the capital as increased by the rights issue. Effectively, if the one-for-ten scrip issue in October is left out of the calculation, the total payment will go up from 15 to 22½ per cent.

This announcement was accompanied by the forecast that profits in 1960-61 would amount to about £5 million before tax, against £4 million, and to about £1,300,000 after tax and minority interests, against nearly £720,000. In view of the facts that in the current financial year the group will not pay any entertainments duty on cinema admissions and that it has been making

#### BUSINESS NOTES

strenuous attempts to diversify its interests, this is not all that impressive. One brighter spot is that the tidying-up of the financial structure of the group has resulted in a cut in payments to minority interests. The market was more concerned about the pros-

THE ECONOMIST APRIL 15, 1961

pect that shareholders would have to subscribe more capital to relieve the strain upon the group's liquid resources than about the promise to pay out more in dividend and the 5s. shares immediately lost 1s. 9d. to 31s.

#### SHORTER NOTES

In a letter to all companies quoted on the London Stock Exchange, the Council has said that its previously recommended practice of withholding important announcements about dividends and profits until after the market has closed has not worked satisfactorily. The Council has now reversed its recommendation, for while it recognises that the timing of board meetings is a matter for the convenience and judgment of the directors, it now asks that, where possible, important decisions should be communicated to the Share and Loan Department in time to ensure their release before the market closes at 3.30 o'clock.

Metropolitan-Cammell Carriage and Wagon is to take over the contract for 450 underground rail carriages that Birmingham Rail and Carriage Company had asked London Transport to be released from because it found it could not fulfil the order without making heavy losses. Delivery dates will be the same, starting early next year, and Birmingham Rail and Carriage is to pay virtually the whole of the difference in cost to London Transport arising from this transfer.

Final figures show that retail sales in February were not quite as good as the Board of Trade provisionally thought four weeks ago, principally because the recent slight recovery in sales at durable goods shops was not after all sustained. At 112 (1957=100), instead of 113, the seasonally adjusted index number of the value of total sales in February was the same as the average for the last four months.

Figures published by the Association of Unit Trust Managers covering March show that 4,424,880 units, valued at £1,634,945, were repurchased while 3,447,220 units, valued at £1,275,080, were sold. The rise in equity prices was reflected in a rise of about £11 million in the total value of unit trust funds, which at the end of March, amounted to £229.6 million.

Two of the three British producers, Monsanto and Distillers, have cut the price of polystyrene by 4d. a pound. General purpose crystal grade now costs 1s. 7d. a pound for medium quantities and high-

impact 2s. 1d. Shell Chemical, the third producer, is likely to make similar price cuts soon. These reductions seem aimed at widening the market for polystyrene, not at meeting competition from imports—which have fallen sharply this year.

Imperial Chemical Industries will build a plant producing 10,000 tons a year of maleic anhydride at Wilton. The plant will use a new process employing butene, produced by the ICI olefine plants there. Maleic anhydride is used to make polyester resins for reinforced plastics and paint; it also goes into insecticides.

The directors of Associated Newspapers have announced that they have received an offer from Price Brothers to acquire Associated Newspapers' 51 per cent holding in Anglo Newfoundland Development on the basis of two common shares of no par value credited as fully paid in exchange for 11 ordinary shares of \$5 each of AND. The offer is conditional upon Treasury and Exchange Control consents being obtained. An offer on the same exchange basis will be made to acquire the remaining shares of AND (other than shares held by residents of the United States) subject to consent by the Exchange Control.

Simon-Carves has received orders provisionally valued at £7 million to design high-pressure polythene plants for Czechoslovakia, east Germany, Poland and Rumania. The technical know-how for the process will be supplied by Imperial Chemical Industries for an undisclosed share of the sum.

#### COMPANY MEETINGS

## CO-OPERATIVE INSURANCE SOCIETY LTD

### MR S. LEONARD KASSELL'S REVIEW

At the Ninety-third Annual General Meeting of the Co-operative Insurance Society Limited, held in Manchester on April 11th, Mr S. Leonard Kassel, Chairman, said:

It is my pleasure to submit to you the 93rd Annual Report and the Statement of Accounts and Balance Sheet of this Society for the year ended December 31, 1960.

Although technically the Annual Report is made to the Members of the Co-operative Insurance Society Limited, viz. the Co-operative Wholesale Society Limited and the Scottish Co-operative Wholesale Society Limited who between them own the Society's share capital, there is no doubt that interest in the Society's activities is far more widespread, since CIS policies of one class or another are to be found in a very large proportion of homes in the United Kingdom.

Despite strong competition the CIS continued to make good progress in 1960 and the year's results can be regarded as very satisfactory.

The premium income in 1960 was £56,308,819 against £51,855,863 for 1959 showing a very substantial increase of £4,452,956. The principal increases were in the Industrial Life Section (£1,433,622), the Ordinary Life Section (£859,660) and the Motor Department (£1,818,001). For the first time in the Society's history the total new sums assured in the Life Sections (Ordinary and Industrial) exceeded £100,000,000. The premiums paid in the Ordinary and Industrial Sections of the Life Department, which totalled over £39 million were in respect of 11 million premium paying life policies which were in force. The success of our Life Departments is due not only to the efforts of our Field Staff and the regular Home Service given by our full-time Agents, but also I am sure, to the growing recognition of the advantages of saving through life assurance which couples thrift with the protection which such policies provide.

Protection of a different kind is provided by the Fire, Accident, Motor and Marine Departments and when I tell you that these four Departments between them settled over 330,000 claims during 1960 it is quite evident there is great need for the protection provided by various

types of policy which we issue. Incidents such as the severe flooding which took place last Autumn in various parts of the country emphasise the fact that many persons are still inadequately covered or under-insured and many are not insured at all against the many risks to which a householder and his family are exposed every day.

Turning for a moment to domestic affairs, I am pleased to recall that on July 13, 1960, I had the privilege of laying the Foundation Stone for the Society's new Chief Office building. I am glad to say that good progress is being made with the construction and the steel work is already in position up to the 25th floor, which is in fact the top floor and there is no doubt that in addition to further enhancing the prestige of the Society the completed building will make a very important contribution architecturally to the development of Manchester.

It is expected that the building will be completed by the middle of 1962.

As I have stated in previous years, investment of the Society's ever growing assets, which totalled £260,725,239 as at December 31st last, is a matter to which the Directors devote a great deal of their time. The bulk of our assets relate to the Life Assurance Funds so that in considering the investment policy the Board of Directors have to bear in mind that they are investing the savings of our life policyholders and must follow an investment policy which is in the policyholders' best interests.

From that point of view the year 1960, like the year 1959, was a profitable one since long-term fixed interest yields have remained high and full advantage has been taken of this situation which in my view looks like continuing for some time to come.

In addition to purchasing fixed interest securities, the Society has continued to lend under the House Purchase Scheme and to invest in other larger properties.

Despite the fact that the rate of interest on new House Purchase mortgages was increased from 5½ per cent to 6 per cent as from June 13, 1960, such mortgages are still relatively unattractive as compared with other investments

and whilst not closing the Scheme to new business we have nevertheless felt it desirable to limit considerably the new advances with the result that the net increase in House Purchase mortgages as at the year end was only £944,314. The total amount outstanding under House Purchase loans at the year end was £42,401,513, secured upon 44,062 properties. The average House Purchase mortgage outstanding was £962.

Our investments in freehold and leasehold properties show a substantial further growth and having regard to the forward commitments which we have made on advantageous terms this tendency is likely to continue.

Substantial investments in well-secured Co-operative properties were made during the year.

Investments in British Government and British Government Guaranteed Securities amounted to £51,831,500 as at December 31, 1960, being an increase of approximately £1,300,000 and representing 19.88 per cent of our total assets.

It will also be observed from the Balance Sheet that our investments in other fixed interest stocks and Ordinary Shares show considerable increases. Our past investments in Ordinary Shares have been of inestimable value to our policyholders and if circumstances appear to be favourable we shall undoubtedly continue to make such investments.

#### ADMINISTRATIVE COSTS

In 1960 our overall commission and expense ratio showed a decrease at 24.14 per cent as against 24.44 per cent in 1959.

It must be regarded as very satisfactory that the proportion of the total premium income expended in administrative costs has been reduced, particularly when it is borne in mind that the Accounts are already bearing increased charges in respect of our new Head Office premises and that during the past year the salary scales for most of the administrative grades of the staff were increased.

In the Industrial Section the expense and commission ratio was 27.03 per cent as against 27.31 per cent in 1959.

## LIFE DEPARTMENT

I have already mentioned that for the first time in the Society's history the total new sums assured exceeded £100 million. Of this total £49,748,893 was effected in the Ordinary Life Section and £50,365,039 in the Industrial Life Section.

The average sum assured in the Ordinary Section was £756. About £34 million of the new sums assured in that Section was in respect of policies for sums assured of £1,000 or more.

I am happy to be able to link a year of increased new business production with an increase in the reversionary bonus in the Ordinary Section from 44s. per cent to 48s. per cent. This increase of four shillings follows increases of 2s. per cent in 1959 and 1960, so that in three years the reversionary bonus has increased by 8s. per cent. These increases are, of course, in the main a reflection of the success of our investment policy which enables our policyholders to share in the prosperity which has attended the undertakings in which a proportion of our ever-growing funds are invested and the high rates of interest on other classes of investment which have prevailed for some time past.

MARINE, AVIATION AND TRANSIT  
INSURANCE ACCOUNT

The premium income in this account showed a slight decrease on that recorded in 1959 but with these classes of business a large proportion of premiums as well as claims are received in following years and consequently yearly comparisons cannot readily be made as with other classes of business. Moreover it is generally accepted that Marine insurance premiums reflect to a large extent the trend of export and import trade and some fluctuation is therefore to be expected.

## FIRE DEPARTMENT

The premium income in this Department continues to show steady growth and rose during the year by £116,270 to £2,269,703. During 1960 we were involved in a greater number of large fires than in the previous year and our net claims ratio of 50.2 per cent against 46.8 per cent last year can be regarded as satisfactory. There was a reduction in the commission and expense ratios and a sum of £299,875 has been transferred to Profit and Loss Account.

The high rate of fire wastage in the United Kingdom continued during 1960 and the estimated total of £43½ million was only some £500,000 short of the 1959 figure, which was the highest total on record. In addition to the damage sustained by fire, considerable losses have been experienced in recent years from allied perils which are increasingly being covered as extensions to fire policies. It is estimated that insurers in this country had dealt with over 20,000 claims involving over £1 million for flood damage up to December 1, 1960, and further serious floods have occurred since then. The CIS has, of course, had to bear its share of these claims.

## MOTOR DEPARTMENT

In 1960 the Motor Department premium income exceeded ten million pounds for the first time. Although there have been some very large increases of premium income in recent years, there was a record increase of £1,818,001 last year, and this brought the total to £10,688,831. The rapid growth of this Department has thus been maintained; in 1954 the income was only £3½ million and in the short space of six years the income has trebled.

## COMPANY MEETING REPORTS

In recent years the trading results in this Department have been marginal. Last year it will be recalled there was a small underwriting loss although the account as a whole, taking interest earnings into consideration, showed a surplus. In 1960 I am glad to say there was an underwriting profit of £26,126 which is very small in relation to the total premium income being less than one quarter of one per cent of the premium income. In circumstances less favourable that slender margin could disappear and there can be no relaxation of our standards either of prudent underwriting or of economical management. The total surplus amounted to £190,786 of which £155,225 has been transferred to the Profit and Loss account.

Whilst we are happy to know that more and more motorists look to the CIS to provide them with insurance cover, this account is a constant source of anxiety to the Directors as the results are so unpredictable.

## ACCIDENT DEPARTMENT

Personal Accident premiums increased by £13,064 over those of 1959 and owing to an unusually low claims ratio a sum of £63,950 has been transferred to Profit and Loss Account, as compared with £46,225 in 1959. Many Retail Societies have not increased the amount of Personal Accident insurance cover for members of their Committees, Delegates and Senior Officials, for several years and this matter is commended for their earnest consideration.

Losses due to burglary and theft showed no signs of abating but there was some improvement in the cost of Employers' Common Law claims and in connection with this class of business the substantial reductions in premiums introduced in June last should prove a useful saving to Retail Societies.

## PROFIT AND LOSS ACCOUNT

The sum of £914,200 has been transferred to the Profit and Loss Account from the Departmental Revenue Accounts, of which £250,000 has been added to the General Reserve Fund.

## DISTRIBUTION OF PROFITS

After making this transfer and providing adequate reserves for contingencies we are able to distribute the sum of £9,682,430 as a result of our operations for the year 1960. The whole of this amount will be distributed for the benefit of the Society's policyholders; £9,057,430 will go to our Ordinary Life and Industrial Life policyholders and the balance of £625,000 will be payable to Co-operative Societies as a dividend on the Fire, Accident, Motor and Collective Life premiums paid to the CIS during the year. The rate of dividend on Fire and General premiums has been maintained at 3s. 6d. in £ of premium and this should be ample evidence to the Societies and their members of the advantage of insuring with their own Insurance Society.

## TAXATION

The amount of tax payable by the Society in respect of our transactions for the year was £1,991,866. Of this total £337,846 has been reserved for taxation on the profits of the Fire and General Departments; £106,502 charged to the Industrial Life Account, and the balance was paid during the year by deduction from interest earnings.

## BOARD CHANGES

Since the last Annual Meeting Mr Norman Tattersall has retired from the CIS Board in consequence of his retirement from the Board of the CWS. Mr Tattersall served as a Director of the CIS for a period of over six years and

## THE ECONOMIST APRIL 15, 1961

his wide experience in other fields enabled him to make an important contribution to the work of the Board.

Mr Kenneth Noble has been appointed to fill the vacancy caused by the death of Mr Pedlar to which I referred last year, and Mr R. Byrom has been appointed to take Mr Tattersall's place.

Whilst referring to the Board I am sure you would wish me to congratulate our colleague—formerly Mr J. M. Peddie, MBE, JP, now The Lord Peddie of Kingston-upon-Hull—on the Life Peerage which was conferred upon him in January last.

## CONCLUSION

Year by year I have been able to report further general progress even if there are temporary set-backs in particular Departments for reasons beyond our control. The year 1960 was one of our more successful years but I would not wish the staff to believe that the Directors feel that success is automatic and inevitable. We realise quite well that it is only by constant endeavour by all grades of the staff that these gratifying results are achieved. Naturally we hope and expect that these endeavours will continue but I do take this opportunity of expressing our appreciation of the co-operation and good-will of the staff during 1960, which I am sure will be maintained during 1961 and thereafter.

Once again I wish to thank the Retail Co-operative Societies for their loyal support.

The outstanding success of the CIS must redound to the credit of the Co-operative Movement as a whole and for this and many other reasons I am happy to submit such a satisfactory report for the year 1960.

The Report and Accounts were adopted.

THE RIO DE JANEIRO  
FLOUR MILLS AND  
GRANARIES LTD

The seventy-fifth Ordinary General Meeting was held on April 4th in London.

Mr J. H. Hansard (the chairman) presided and, in the course of his speech, said:

Since my Statement was sent to you on March 13th there have been major changes in the exchange regulations in Brazil which have resulted, *inter alia*, in the free exchange rate being quoted at around Cr\$730 to the £, compared with Cr\$538 at the end of last September when your accounts were closed. Substantially increased prices have been fixed for imported wheat. On the other hand, the Brazilian Government has authorised within the last few days a substantial increase in the selling price of flour—the first increase since February, 1959.

In flour milling our trading results to the end of February were disappointing, mainly because of the shortage of wheat, the increased wages and other costs and the absence during this period of any increase in the price of flour. The price changes now authorised should put our flour milling operations on a reasonably profitable basis; much will depend on the availability of wheat supplies.

Our cotton milling results continue to be satisfactory and the Biscuit Division is now in full and profitable operation.

In the last few days the necessary consent to our scheme of reorganisation has been received from the Treasury and it is hoped to post the whole scheme to stockholders for their approval in two weeks from today.

The report was adopted.

## THE ECONOMIST APRIL 15, 1961

CLAYTON DEWANDRE COMPANY  
LIMITED

Manufacturers of Power Braking Equipment

## RECORD OUTPUT AND SALES

## INCREASED NET PROFIT

## MR A. V. PERRY'S REVIEW

The thirty-second annual general meeting of Clayton Dewandre Company Limited will be held on May 9, 1961, at the company's London Office, Time and Life Building, 156-157 New Bond Street, London, W1.

The following is the Review by the Chairman, Mr A. V. Perry, which has been circulated to Stockholders with the Directors' Report and Statement of Accounts for the year ended December 31, 1960:

## GENERAL

Our output is again a record, being some 20 per cent up on the preceding year, and on the present indications it would be fair to assume that it will increase by almost the same percentage in the current year, our order book is high and in a very healthy condition.

The Plants at Lincoln have been worked to full capacity during the year, but with an excessive amount of overtime, which is neither very good for the company nor for its employees. This is a situation which will gradually remedy itself. I refer below to the progress of our Southampton Works (Power Brakes Limited). Another Works is being erected for us, which we shall lease, but this will not be ready for occupation until the end of the year and, therefore, will not be in production until well on into next year.

## THE BRIDGE FOUNDRY COMPANY LIMITED

The extension of capacity mentioned in my comments last year has now been completed. This unit has been affected by the recession in the Car Industry, roughly about half its output being taken by ourselves and the other half in supply to the Light Car Industry. For the latter part of the year under review we worked a four-day week, but things have now improved and we are on full time.

## POWER BRAKES LIMITED

These Works at the end of the year under review were one-third in full production. At the time of writing this has risen to one-half, and by the autumn of this year the whole of the Southampton Works will be in full occupation, not only on Mot-a-Vacs but on machining components for our main supply, and also on hydraulic braking which is being fitted to the new Routemaster bus introduced by LTE.

Mot-a-Vac has been on the market since about the middle of last year, and whilst initial sales were not as large as we could have hoped for, it has nevertheless made a satisfactory impact, and sales in the current year show a gratifying steady growth.

## OVERSEAS

## UNION OF SOUTH AFRICA

Our South African subsidiary came into active

## COMPANY MEETING REPORTS

The capital needs of the Company are naturally being kept under constant review, and, as I have said above, most of the Company's surplus funds have now been employed in increased stock in trade and in equipping Power Brakes Limited, and the South African Company. If expansion continues at the rate we anticipate it is obvious that the drain on liquid funds will increase. These needs will be judged in the fullness of time in the light of the then state of the business and its prospects.

It is with these facts in mind your Directors have recommended placing to General Reserve the substantial sum of £250,000 but after making provision for that your Directors are enabled to recommend an increase in Dividend to Stockholders, which is 2½ per cent higher than last year on the increased capital and 5 per cent higher than on the capital of the previous year, and it will be noted that, after tax, this Dividend is covered 2.7 times.

## ACCOUNTING PERIOD AND ANNUAL REPORT

As we now have the Accounts of three Subsidiary Companies to consolidate, our present timetable for making a preliminary announcement in early March hardly gives our Accounting Staff sufficient time to complete their work and for the Board to consider fully the results. Next year, therefore, the preliminary figures will be announced in early April and the posting of full Accounts and the Annual General Meeting will be approximately one month later than this year.

## PERSONNEL

Our thanks are once again due to our Management and Executive officials, and all our employees, for the excellent work they have done.

## HENEKEYS LIMITED

## ANOTHER SATISFACTORY YEAR

The forty-first annual general meeting of Henekeys Limited was held on April 11th in London, Sir Bernard D. F. Docker, KBE, JP (the chairman), presiding.

The following is an extract from his circulated statement:

We have had what I think is another satisfactory year. The Profit, before Taxation, at £186,453 shows an increase of £13,500; Taxation this year takes an additional £7,500 at £91,611, leaving a net increase of £6,000. Last year £9,500 was brought in, being excess Taxation no longer required, as against practically nil this year.

Since the end of our financial year sales have continued to increase, so also, unfortunately, have expenses. Steps have been taken in an endeavour to keep these two factors in reasonable harness, and in February, 1961, we increased some of our prices per glass—but anyone studying our price-list will still find that we give outstanding value for the high quality supplied.

Turning to the Balance Sheet, the item of Trade Investments has increased by approximately £10,000, as a result of the taking up, by this Company, of part of the "rights" issue of Tomatin Distillers Co., Ltd. As a result of sales of shares, and of the sale of the remainder of the "rights" issue, the Reserve of Profit not subject to Taxation has increased by £7,356 to £31,888, and your Directors recommend a distribution therefrom of 5 per cent not subject to Taxation, to the "A" Ordinary and Ordinary Stockholders.

The report was adopted.

# 80<sup>TH</sup> Annual Report

## Canadian Pacific RAILWAY COMPANY

### Extracts from the report of the Directors to the Shareholders:

There was a slowing down in the rate of growth of the Canadian economy in 1960. Although the gross national product was about the same as in 1959, industrial production lagged during a good part of the year and construction activity dropped sharply. Notwithstanding current economic difficulties, there is no ground for lack of confidence in the future. Accordingly, your Company pressed forward its program of improving facilities and services. In the transportation field the dieselization program was completed, additions were made to the modern train signalling system already in operation over various stretches of main line track, and piggyback and merchandise services were further expanded. The freight traffic department of your railway was reorganized in order to increase the effectiveness of sales effort. An important international route was added by your Air Lines, and the "Empress of Canada" was launched. In other fields, existing communication services were extended to new areas, a new wire-photo facsimile service was inaugurated, and exploration and development of your oil and gas interests in Western Canada continued.

The MacPherson Royal Commission on Transportation which was appointed in May of 1959 continued its hearings throughout the year and the report of the Commission is expected by March 31, 1961. Any remedial action regarding the statutory rates on grain and grain products will necessarily be delayed until the Commission has made its report to the Government of Canada.

Following the failure of the Conciliation Board to bring about a settlement of the dispute between the railways and the unions representing the non-operating employees, the unions declared their intention to strike on December 3. The strike was averted under an Act of Parliament, expiring May 15, 1961, which provided for the continuation of the operation of the railways.

Railway revenue was 4% below that of 1959. Most of the decrease was in freight revenue but passenger revenue was also lower, reflecting in part the policy of your Company of reducing unprofitable passenger train mileage wherever possible. In view of lower revenues, it was necessary to curtail expenses and a reduction was effected despite increased labour rates and material prices. Net railway earnings, at \$33.7 million, decreased 7% and provided a return of 2.5% on your net investment in railway property.

Income from sources other than the railway amounted, after income taxes, to \$12.4 million, a decrease of \$276,000. Increases in dividends from The Consolidated Mining and Smelting Company of Canada Limited and in earnings from hotels and communications were offset by a loss from your steamships compared with a profit in 1959, an increased loss on your Air Lines, and a decrease in net income from petroleum rents, royalties and reservation fees, partly owing to the transfer of certain mineral rights to your wholly-owned subsidiary, Canadian Pacific Oil and Gas Limited.

Net Income, after fixed charges, totalled \$29.0 million. After providing for dividends of 4% on Preference Stock, income per share of Ordinary Stock amounted to \$1.81, as compared with \$1.97 in 1959. After dividends on Ordinary Stock totalling \$1.50 per share, a balance of \$4.4 million was available for modernization and other corporate purposes.

Capital expenditures totalled \$71 million. Of this, \$53 million was expended on railway plant and equipment, \$9 million on aircraft leased to your Air Lines, \$4 million on steamships, \$3 million on communication facilities, and the balance on hotels and other properties.

## LEEK AND MOORLANDS BUILDING SOCIETY

### DISCRIMINATORY TAXATION BURDEN

The one hundred and fourth annual general meeting of Leek and Moorlands Building Society was held on April 10th at Leek, Staffordshire.

Mr Gilbert Tatton (the Chairman) presided, and, in the course of his speech, said:

In the investment department, Investing Shareholders' and Depositors' balances have increased by over £16,500,000 to a record total of almost £60 million.

On the mortgage side total advances to borrowers were £7,900,000, about the same as for 1959, all loaned on carefully selected properties to applicants of good status, the vast majority being owner occupiers.

There is still a very heavy demand for mortgage accommodation and this will undoubtedly continue as the desire for home ownership continues to increase. The total balances now outstanding on mortgage amount to £52 million, an increase of £14,500,000.

Total resources of the Society now stand at £63,329,214 with investments and cash of £10,704,689 and reserves of £2,972,558.

Your General Manager has been appointed to the office of Deputy President of the International Union. I would like to call the attention of the Government and in particular of the Colonial Development Corporation to the fact that the International Union is capable of playing a great part in providing technical assistance to the under-developed countries and it would seem to me that if the funds available for the under-developed countries are to be used to the best advantage, housing, preferably owner occupier housing, should take precedence, for it is obvious that from good housing of occupier owner status will emerge and evolve a truly democratic nation.

### TAXATION

I continue to protest at the burden of profits tax and indeed the taxation of any surplus which Building Societies are able to put to existing reserves. It seems sheer folly that on the one hand the Government is subsidising National Savings, including the Trustee Savings Bank Depositor to the extent of giving tax-free interest at a cost of some £12 million per annum in loss of income tax, whereas Building Societies engaged in the business of national savings through thrift and home ownership are penalised to the extent of having to pay now increased profits tax. In addition we are taxed on the small surplus which is needed to buttress any Society's financial strength and to provide a fund for emergencies. Such utter complacency on the part of the Government, the Treasury and the Revenue, seems to me to be directed against Building Societies and no others. If National Savings such as already mentioned—and life assurance premiums which receive income tax relief—can be given some tax advantage it certainly seems a one-sided bargain that the Building Society Movement of some £3,500 million should be expected indirectly to contribute to the £12 million subsidy given to other forms of National Savings and Life Assurance.

It is very difficult to prophesy what the future holds for us all. I am sure that as far as Leek and Moorlands Building Society is concerned it will continue to go from strength to strength.

The report and accounts were adopted.

## A. & S. HENRY & COMPANY LIMITED

(Manufacturers and Merchants)

### RIISING COSTS ABSORB EXPANSION IN GROSS PROFIT

#### MR FRANK STOCKDALE'S STATEMENT

The seventy-second Annual General Meeting of A. & S. Henry & Company Limited was held on April 12th in Manchester. The following is the statement made by the Chairman, Mr Frank Stockdale, as circulated to the stockholders with the Report and Accounts for the year ended December 31, 1960:

Trading Profit at £854,567 is £44,000 less than the previous year. Group turnover and gross profit expanded, but most of the latter was absorbed by rising costs.

We continue to export to a large number of markets and are still constantly running into difficulties through Government restrictions in many countries; this year Cuba has been an example, where profits have been lost and new business has been stopped.

In our progressive Mail Order businesses we have been unable to avoid substantial extra catalogue and distributing costs. This has eaten into the profits from our steadily increasing sales.

Manufacturing Subsidiaries have worked well and I have no special comment to make on their activities.

I visited our South African factory at Durban during the year, and once again found the position entirely satisfactory.

### VALUE OF STOCK RESERVE

In Dundee we have been faced with exceptional rises in the price of raw jute. The coordinated prices of manufactured goods at present lag well behind the rising costs. The possibility of a decline in the price of raw jute in 1961/62 is bound to make for irregular trading. The stock position is under constant supervision and no undue risks will be taken.

Demand for paper sacks continues to increase. The extension of our Paper Sack factory at Liverpool is now completed and we hope to be in full production this year.

As previously brought to the attention of Stockholders, our trading covers many fluctuating commodities such as paper, jute, cotton, wool. It is for this reason we carry a large Stock and Materials Reserve. We shall, if necessary, utilise this reserve to offset any substantial fall in values of raw materials.

### INCREASED DIVIDEND

The Directors consider the results satisfactory in a difficult year of trading, and feel, that with the strength and liquidity of our cash position and the amount of the Group Reserves, Stockholders are entitled to a substantial portion of the year's earnings. We recommend a final dividend of 20 per cent making, with the 7½ per cent interim dividend already paid, 27½ per cent for the year—an increase of 2½ per cent.

If this recommendation is passed, Group Revenue Reserves will stand at £2,250,312—an increase of £124,369. In addition to the above the Capital Reserve remains at £177,294.

Again on behalf of Stockholders, my colleagues and myself, I express our appreciation to the Managing Director, Mr F. S. Winterbottom, Managers and staff for their efforts during the year.

The Report and Accounts were adopted.

Tonnage milled increased from 1,135,000 tons to 1,179,000 tons, the average yield was the same at 4.90 dwt. Of the 9,695 feet sampled on the Kimberley Reef 43% was payable, averaging 335 inch/dwt. Of the 5,760 feet sampled on the Main Reef, 33% was payable, averaging 238 inch/dwt. The ore reserve was re-estimated at the year-end and showed an increase of 100,000 tons to 5,500,000 tons, assaying 5.1 dwt. over an estimated stopping width of 47 inches.

### BRACKEN MINES, LIMITED

**CAPITAL:** The authorised and issued capital is £7,000,000 in 14,000,000 shares of 10s. each, of which 3,500,000 are fully paid and the balance of 10,500,000 were 3s. 3d. per share paid at the year-end. Arrangements have been made with the National Finance Corporation of South Africa for a loan of £1,000,000 which will be drawn in multiples of £100,000 between 1st April, 1961, and 31st January, 1962, and is repayable within five years from the date of drawing.

**SHAFT SINKING:** No. 1A Shaft has been sunk to its final depth of 2,642 feet. A total of 2,006 feet of station cutting was done and, at the year-end, the shaft was being equipped. The shaft passed through the Kimberley Reef at a depth of 2,336 feet and sampling around the whole perimeter gave 23.3 dwt. over 37 inches, equivalent to 863

All development values have been discounted to conform with adjustments which are necessary in estimating the ore reserve.

inch/dwt. No. 1 Shaft passed through the Kimberley Reef at a depth of 2,363 feet. Sampling around the whole perimeter gave 22.7 dwt. over 23 inches, equivalent to 521 inch/dwt. In addition 883 feet of station cutting had been completed.

**GENERAL:** One 80 drill and three 40 drill reciprocating compressors are in commission and work is in progress on the installation of a 200 drill rotary compressor. The permanent shaft offices, the store building and the initial change house block have all been completed. The permanent general office block is under construction and work on the erection of the reduction plant with an initial milling capacity of 75,000 tons per month started in October.

**EXPENDITURE:** During the period from the inception of the Company to 31st December, 1960, the sum of £3,456,250 was received on capital account while expenditure on property, shafts, plant and equipment, mine development and general expenses amounted to £2,550,359. Trade investments totalled £230,046. Therefore, at the year-end current assets exceeded current liabilities by £675,845.

| <b>Dividends Nos. 9 and 10 of 2s. 3d. and 2s. 9d. per share respectively</b> | <b>2,406,250</b>  | <b>2,993,708</b>     |
| <b>Unappropriated profit carried forward to 1961</b>                         | <b>£2,249,760</b> |                      |

Tonnage milled increased from 1,810,000 tons to 2,004,000 tons and the average yield from 6.17 dwt. to 6.84 dwt. Of the 28,890 feet sampled on the Bosal Reef, 57% was payable, averaging 700 inch/dwt. The ore reserve was re-estimated at the year-end and showed an increase of 1,000,000 tons to 5,000,000 tons, assaying 8.0 dwt. over an estimated stopping width of 56 inches. By the end of June, No. 7 Shaft had been sunk 2,091 feet to its final depth of 5,338 feet.

All development values have been discounted to conform with adjustments which are necessary in estimating the ore reserve.

Tonnage milled increased from 879,000 tons to 906,000 tons but the average yield decreased from 3.77 dwt. to 3.46 dwt. Of the 4,370 feet sampled on the Black Reef, 35% was payable, averaging 258 inch/dwt. The ore reserve was re-estimated at the year-end and showed a decrease of 50,000 tons to 350,000 tons, assaying 3.7 dwt. over an estimated stopping width of 57 inches.

### LESLIE GOLD MINES, LIMITED

**CAPITAL:** The authorised and issued capital is £8,000,000 in 16,000,000 shares of 10s. each, of which 3,000,000 are fully paid and the balance of 13,000,000 were 3s. 9d. per share paid at the year-end. Arrangements have been made with the National Finance Corporation of South Africa for a loan of £1,000,000 which will be drawn in multiples of £100,000 between 1st April, 1961, and 31st January, 1962, and is repayable within five years from the date of drawing.

**SHAFT SINKING:** No. 1A Shaft has been sunk to its final depth of 2,055 feet. A total of 1,870 feet of station cutting was done and the excavation of the loading station has been completed. A start has been made on equipping the shaft with permanent buntlines and guides. The shaft passed through the Kimberley Reef at a depth of 1,476 feet and sampling around the whole perimeter yielded an average value of 80.9 dwt. over 5.6 inches, equivalent to 433 inch/dwt. At the end of the year No. 1 Shaft had been sunk to a depth of 1,602 feet and 577 feet of station cutting had been completed. The shaft passed through the Kimberley Reef at a depth of 1,487 feet and sampling around the whole perimeter gave 16.5 dwt. over 13.6 inches, equivalent to 224 inch/dwt.

**GENERAL:** Reciprocating compressors with an aggregate output of 185 drills are in commission and work on the erection of a 200 drill rotary compressor is in progress. The permanent shaft offices, the store building and the initial change house block have all been completed. In October work started on the erection of the reduction plant with an initial milling capacity of 75,000 tons per month.

**EXPENDITURE:** During the period from the inception of the Company to 31st December, 1960, the sum of £3,937,500 was received on capital account while expenditure on property, shafts, plant and equipment, mine development and general expenses amounted to £3,068,154. Trade investments totalled £230,141. Therefore, at the year-end current assets exceeded current liabilities by £639,205.

## WESLEYAN & GENERAL ASSURANCE SOCIETY

The 120th Annual General Meeting was held on April 11th. Mr A. H. Sayer, MC, JP, the Society's Chairman, in moving the adoption of the Reports and Statement of Accounts for the year ended December 31, 1960, said:

A new middle class has come into being, with money to spend on the refinements of modern living, including holidays abroad.

There is evidence that this new middle class is beginning to sense the responsibility of its status—the need for provision for dependants in addition to that provided by the Welfare State. May I call your attention to our New

Business figures for the last three years—

| Year | New Sums Assured Ordinary Department and Industrial Department together | Average Sum Assured per policy |            |
|------|-------------------------------------------------------------------------|--------------------------------|------------|
|      |                                                                         | Ordinary                       | Industrial |
| 1958 | £9,458,000                                                              | £915                           | £58        |
| 1959 | 11,449,000                                                              | 1,041                          | 65         |
| 1960 | 12,752,000                                                              | 1,100                          | 70         |

The New Life Premium Income in 1960 at the record total of £522,000 shows an increase of 6.9 per cent over that for 1959.

The Total Premium Income from all Departments for the year 1960 was £5,104,000, being £231,000 or 4.7 per cent greater than that for 1959.

The Balance Sheet shows that the Ordinary

Department Fund is £16,847,500 and that the Industrial Department Fund is £19,412,500.

The Funds are covered by Assets standing in the Balance Sheet at over £40,000,000.

The Gross Interest Income has increased from £1,748,000 to £1,929,000, while the Gross Rate of Interest earned has risen from £5 4s. 10d. per cent to £5 9s. 9d. per cent, an all-time record.

The Valuation Surplus in the Ordinary Department was £641,000. This enabled a Reversionary Bonus of £2 4s. 0d. per £100 original sum assured to be declared compared with £2 2s. 0d. a year ago.

In the Industrial Department, for the first time, full Reversionary Bonuses are being declared, instead of merely additions to claims occurring before the next Annual General Meeting.

The premium income of the Fire and Accident Departments now totals £385,000 showing a 9 per cent increase in the year.

## SCOTTISH AMICABLE LIFE ASSURANCE SOCIETY

### ANOTHER VERY SUCCESSFUL QUINQUENNIAL

### PERIOD OF UNPRECEDENTED EXPANSION

The One Hundred and Thirty-fifth Annual General Meeting of the Scottish Amicable Life Assurance Society was held in Glasgow on April 12th, Mr J. T. Dowling, CA (Chairman of the Ordinary Directors), presiding.

In moving the adoption of the Report and Accounts, the Chairman said that last year over 10,000 individual assurances had been issued for sums assured of £18,500,000—a figure which exceeded the previous record by more than £3,000,000. In addition, new group pension and life assurance schemes placed with the Society had provided sums assured of £8,250,000 and pension benefits of £500,000 per annum. Premium revenue had increased during 1960 by more than £750,000 and this represented growth of a very substantial order. The new business figures for the past year included a very creditable contribution from the Society's newly established Australian Branches. The Society's total funds had increased by more than £10,000,000, more than one-half of which had been invested in first-class fixed interest securities so as to take

## COMPANY MEETING REPORTS

full advantage of the current high interest rates. The other major investment during the past year had been a sum of approximately £3,000,000 in carefully selected ordinary shares.

### RECORD SURPLUS

Turning to the quinquennial investigation made as at December 31, 1960, the Chairman said that the valuation disclosed a record surplus in the life assurance and annuity fund of £8,763,805, which compared with a surplus of rather less than £3,250,000 for the previous quinquennium. This increase of over £5,500,000 was, of course, an indication of the very considerable growth which had taken place in the Society's business and profit earnings over the past five years. As had already been announced, a compound reversionary bonus of 52/6% per annum had been declared for policies issued in the United Kingdom, which was 10/-% above the record rate for the previous quinquennium. In the continuance of present conditions, the Society's bonus prospects had never been better than they were today. In these circumstances the Directors had felt justified in giving expression to their confidence in the Society's continued high bonus earning power by fixing the rate of interim bonus payable on claims arising after January 1, 1961, at the same rate as had been declared for the past quinquennium, namely 52/6% per annum. The rate of bonus declared on participating policies on the Australian Register at December 31, 1960, and the rate of interim bonus had both been fixed at 42/-% per annum.

Our Sales Offices in London, Birmingham, Coventry, Manchester, and Bristol, and representatives throughout Great Britain, have worked in close co-operation with our Head Office sales and production staffs and will lose no available opportunities if more difficult times lie ahead.

Our reputation for first-class production facilities, quality and service stands very high and we are very jealous to maintain it so.

While on the one hand catering for the increasingly exacting requirements of our customers, we have at the same time been able to achieve a higher overall quality level than in any recent year.

As at December 31, 1960, I retired from the post of Managing Director, after 41 years' service. I have agreed to continue as a Director and as Chairman of the Board, and also to serve the Company in an executive capacity.

My colleagues, Mr P. R. Brierley and Mr F. A. H. Frey, have signed service agreements as Joint Managing Directors for a further five years.

I wish to express my heartfelt thanks to all concerned for the support I have received not only in the past year but throughout all the years of existence of your Company.

### MR FREY'S SUPPLEMENTARY STATEMENT

The following is a summary of the Chairman's statement made at the meeting:

I have already said our order book reached a peak in October which meant November-December sales exceeded new orders.

This trend has continued, but three months later the order book is only 5 per cent less so there is no great cause for concern in this respect.

## THE ECONOMIST APRIL 15, 1961

### WITH-PROFITS PENSIONS

This was the first occasion on which a substantial share in the surplus had been allotted to policyholders under the Society's with-profit group pension schemes. This new type of policy had met with great success, its outstanding feature being that it was entitled to share in all the distributable profits of the Society, a compound bonus being added at the same rate of bonus as for life assurance contracts. The new with-profit policyholders in this branch of the Society's business had every reason to be satisfied with the results of their first quinquennium as fully participating members of the Society. These comments applied with equal force to the special pension policies issued for the "self-employed"; this rather special class of new business had been very well maintained.

The year had brought to a close another very successful quinquennium during which there had been an unprecedented expansion in almost every aspect of the Society's affairs. Since 1955 premium income had increased from rather less than £6,500,000 to more than £12,000,000, gross investment income from £2,000,000 to £4,500,000 and the Society's total funds from £44,000,000 to £84,000,000. The growth denoted by these figures arose from the great increase, compared with only a few years ago, in the number of people who, either as individuals assured under ordinary life assurances, or as members of pension schemes, had come to be associated with the Society.

The Report and Accounts were adopted.

Sales for the first quarter of 1961 were 10 per cent up on the corresponding period, even though they were 5 per cent below those of the last quarter of 1960.

Profit Ratio in mass production depends greatly on volume so that a lower output with higher wages and other costs has resulted in a reduction for this first quarter compared with the 1960 average.

Last September I described 1960 as exceptional. We had then been under continuous pressure whereas now we cannot always deliver as fast as we can produce, industry being in a cautious frame of mind.

Qualifying optimism with caution, on present form I think the outturn of 1961 should be satisfactory without being so exceptional.

The Report and Accounts were adopted and a Special Resolution was passed adopting a revised Article restricting the borrowing powers of subsidiary companies.

*Summary of Mr. Maxwell Joseph's review for the year ended 30th September, 1960.*

### policy of expansion and modernisation continues

All interests of your Group achieved satisfactory results during the year and our latest venture, **The Londoner**, which opened last June, was extremely well received and should be making its full contribution towards your Group's income for the first time in the current year. Extensions or modernisation are under way or about to be commenced at the **Green Park, Clifton-Ford, Mandeville, Mostyn** and **St. Ermin's** hotels. Some £120,000 was spent in keeping the Group's properties and equipment in an excellent state of repair. Numerous leases of the office block adjoining **St. Ermin's Hotel** are due to expire and we can anticipate an increased income from this source over the next three years.

### capital changes

We are recommending a free issue of one share for every two now held, thereby increasing the issued capital to £767,750 and we are further recommending an increase in the Nominal Capital of £1,000,000 by the creation of 2,500,000 shares of 4s. each and 500,000 7½ per cent. cumulative redeemable preference shares of £1 each.

Preliminary arrangements have been made to raise additional permanent capital in the form of the cumulative redeemable preference shares. The Directors do not have at present any intentions concerning the new 4s. shares.

### outlook

Turnover to date shows an increase over the same period of last year and providing no unforeseen circumstances intervene I expect your Group to enjoy another successful year. In this event after allowing for the dividend on the proposed redeemable preference shares, your Board would recommend dividends totalling not less than 22½ per cent. on the ordinary share capital as increased by the proposed bonus issue, which compares with an equivalent of 18½ per cent. recommended for the year ended 30th September, 1960.

Mr. Joseph concluded his review by congratulating all members of the Staff in achieving record results.

## COMPANY MEETING REPORTS

## APPOINTMENTS

### CHALLENGE

to gentlemen age 30 to 50 years, good background and with wide experience, interested in arduous job requiring intelligence and initiative. Merit only will determine Prospects.—Write Box 1494.

### THE UNIVERSITY OF MANCHESTER

Applications are invited for two full-time posts of ASSISTANT in the Research Section of the Faculty of Economics and Social Studies. The persons appointed will be expected to carry out research in (for one post) Industrial Economics and for the other) Econometrics. The vacancies are in either Grade II (which carries the status of Assistant Lecturer) or Grade III. The salary scales are as follows: Grade II—£300 to £350 per annum; Grade III—£275 to £325 per annum. Applications should be sent not later than May 1, 1961, to the Registrar, the University, Manchester, 13, from whom further particulars and forms of application may be obtained.

### UNIVERSITY OF DURHAM

#### DAVID DALE CHAIR OF ECONOMICS

APPLICATIONS are invited for the David Dale Chair of Economics tenable in the Newcastle Division of the University which becomes vacant on September 1, 1961 by the resignation of Professor D. T. James who has been appointed Chairman of the Air Licensing Board. Salary in accordance with the Professorial scale (£2,600—£3,000 a year), with family allowance and membership of F.S.S.U. Further particulars may be obtained from the undersigned with whom applications (12 copies) must be lodged not later than May 30, 1961. (Candidates outside the British Isles may submit one copy only.)

Registrar,  
University Office,  
46 North Bailey,  
Durham.

April 11, 1961.

D.S.J.R. requires statistician as Scientific Officer, S.O., at Forest Research Laboratory, Princes Risborough, Bucks to advise biological, engineering and other sections of Laboratory on design of experiments and sample surveys, undertaking analysis and interpretation of results, and possibly research into application of statistical methods to forestry problems. Qualifications: 1st or 2nd Hons. degree, or equivalent in statistics with experience in some branch of science or engineering, or mathematics and appropriate qualifications in statistics and some practical science or engineering experience. Interim salaries: S.O. £1,100—£1,180; S.S.O. (at least 3 years' experience) £1,100—£1,180. Appointment upon established initially. Forms from Ministry of Labour, Technical and Scientific Register (K), 26 King Street, London, S.W.1, quoting A.151/1A. Closing date May 1, 1961.

### UNIVERSITY COLLEGE OF THE WEST INDIES

Applications are invited for:—  
(1) Senior Lectureship or Lectureship in Economic Statistics. Duties may include teaching of both elementary and advanced statistical theory and techniques for B.Sc.(Econ) degree.  
(2) Lectureship or Assistant Lectureship in Economics. Duties include teaching for B.A. (General) and B.Sc.(Econ) degrees. Applicants are requested to state their qualifications and interest in the fields of public finance and of the structure and problems of industry.  
Salary scale: Senior Lecturer £1,500 x £75—£2,425 p.a.; Lecturer £1,050 x £50—£1,400 x £75—£1,850 p.a.; Assistant Lecturer £800 x £50—£950 p.a. All pay includes allowance and £250 p.a. (pensionable). Entry point determined by qualifications and experience. Child allowance, F.S.S.U. Unfurnished accommodation at rental of 10 per cent of basic salary. Up to five full passages on appointment, normal termination and furlough leave. Detailed applications (six copies) naming 3 referees by May 10, 1961, to Secretary, Inter-University Council for Higher Education Overseas, 29 Woburn Square, London, W.C.1, from whom further particulars may be obtained.

### AUSTRALIAN NATIONAL UNIVERSITY

Applications are invited for the following appointments, all of which are new posts, in the School of General Studies of the University. Appointees will be required to take up duty on January 1, 1962, or as soon as possible thereafter.

IN THE FACULTY OF ARTS  
Senior Lecturer or Lecturer in English.  
Senior Lecturer or Lecturer in Pure Mathematics.  
Senior Lecturer or Lecturer in Greek.

IN THE FACULTY OF ECONOMICS  
Senior Lecturer or Lecturer in Accountancy.  
Senior Lecturer or Lecturer in Economic History.  
Lecturer in Economics.  
Lecturer in Political Science.

Senior Lecturer in Statistics\*.  
Senior Tutor or Tutor in Statistics\*.

\*Mathematical Statistics or Economic Statistics.  
The salary range for Research Fellows is £1,437—£2,152, with increments of £65 per annum; initial salary will depend on qualifications and experience. Appointment is for three years, with possible extension to a maximum of five years.  
Salaries are under review. Superannuation is on the F.S.S.U. pattern. Reasonable travel expenses are paid, and assistance with housing is provided.

Further details are available from the Secretary, Association of Universities of the British Commonwealth, 36 Gordon Square, London, W.C.1.  
Applications close in Australia and London on May 20, 1961.

## CITY OF OXFORD EDUCATION COMMITTEE COLLEGE OF TECHNOLOGY POST OF LECTURER IN ACCOUNTANCY FOR MANAGEMENT STUDIES

Applications are invited for the new post as Lecturer in Management Studies to be primarily concerned with teaching to the new Diploma. The essential qualifications are a university degree or its equivalent in accountancy and three or more years' experience in industry or commerce. The ability to carry out research work in industry would be an additional qualification. Salary in accordance with the Burgham Technical scale—£1,370 by £35 to £1,850.  
Further particulars and forms of application (stamped addressed envelope) can be obtained from the Principal, College of Technology, Headington Road, Oxford, to whom applications must be returned by May 1, 1961.

THE JOHN LEWIS PARTNER-  
SHIP invites applications for a new  
post in its

### ORGANISATION AND METHODS

department. Candidates, preferably in the age group 27/35, must have had practical experience in the field of operational research, work study and organisation and methods.

The appointment will involve investigation of wide range of problems connected with retailing, warehousing and transport. Starting pay in range £1,000—£1,800, according to experience. All workers are partners and share all profits, with good holidays, sick pay, pensioning discount, subsidised meals and non-contributory pension scheme.

Applications, giving full details of age, education, training and posts held, should be sent to Director of Personnel, John Lewis & Co., Ltd., Oxford Street, W.1.

### UNIVERSITY COLLEGE OF WALES ABERYSTWYTH

Applications are invited for the post of Assistant Lecturer in the Department of International Politics, to take up duties on October 1, 1961. Training in Political Science will be an advantage. Further particulars and forms of application can be obtained from the Registrar, to whom applications should be sent not later than Saturday, May 6, 1961.

For further appointments and other  
classified advertisements see pages  
274 and 275

### UNIVERSITY COLLEGE OF GHANA

Applications are invited for Resident Tutorship in the Institute of Extra-Mural Studies. Candidates must have qualification in Economics, Politics, Public Administration, Modern History or International Affairs. Secondment will be considered and there will be opportunity for research. Salary scale (under review): £1,000 x £50—£1,350; x £75—£1,700; £1,850 p.a., entry point according to qualifications and experience. F.S.S.U. Quota family and other allowances. Passages for appointment and family on appointment, leave and normal termination. Part-furnished accommodation at charge not exceeding 7.5 per cent of salary. Detailed applications (6 copies) naming 3 referees by May 15, 1961, to Secretary, Inter-University Council for Higher Education Overseas, 29 Woburn Square, London, W.C.1, from whom further particulars may be obtained.

### AUSTRALIAN NATIONAL UNIVERSITY

INSTITUTE OF ADVANCED STUDIES  
POSTS IN INTERNATIONAL RELATIONS

Applications are invited for appointments as Fellow and Research Fellow in the Department of International Relations, Research School of Pacific Studies.

The Department of International Relations has studied chiefly the contemporary international politics of the Indian, the South-East Asian and the Far Eastern regions. For the Fellowship, preference will be given to candidates who have had experience of research into the international politics of the Far East, especially China, and of South-East Asia.

For the Research Fellowship, preference will be given to candidates who have had experience of research on the Indian or South-East Asian regions, or on International Organisations.

The salary range of a Fellowship is from £1,832—£2,602; increments are £70 per annum. The successful applicant will, in the first place, be appointed at a salary and an incremental limit fixed by reference to his standing and experience. Appointment is made for an initial period of five years; thereafter it may be made permanent. The Fellow will be entitled to one year's study leave on full pay, plus contribution towards travel and other expenses, in every seven years.

The salary range for Research Fellows is £1,437—£2,152, with increments of £65 per annum; initial salary will depend on qualifications and experience. Appointment is for three years, with possible extension to a maximum of five years.

Salaries are under review. Superannuation is on the F.S.S.U. pattern. Reasonable travel expenses are paid, and assistance with housing is provided.

Further details are available from the Secretary, Association of Universities of the British Commonwealth, 36 Gordon Square, London, W.C.1.

Applications close in Australia and London on May 19, 1961.

# COMPANY AFFAIRS

## Glaxo and BDH

THE 10s. ordinary shares of Glaxo, currently yielding only 2½ per cent on a forecast dividend of 15 per cent, have been regarded as growth stocks for many years, and the setback in the company's interim results came as a shock to the market. The shares were immediately marked down by 6s. 10½d. to 66s. 10½d. and now stand at 65s. 6d. Last year the chairman spoke of "the special hazards of the business," but he had done so on other occasions in the past and the market had assumed that the group would once again overcome them successfully. But, in fact, Glaxo's trading profits in the second half of last year fell to £3,048,000, compared with £3,181,000 in the second half of 1959, and a slightly higher tax charge reduced net profits by about 8 per cent, from £1,668,000 to £1,538,000.

This setback obviously reflects narrower profit margins, for sales rose by 3 per cent in value and to an even greater extent by volume. Competition is particularly keen in export markets, where the group does much of its trading. The directors say that the competitive conditions are likely to continue to prevail. Disappointment with the latest results is all the keener because profits in the first half of 1960 were good, being about £600,000 higher than those earned in the last half of that year. On the assumption that conditions do not improve in the current six months, the fall in gross profits for the year to June 30th could be as much as 11 per cent.

The interim dividend of 6 per cent is being paid on the capital as increased by the scrip issue and the shares issued at the time of the acquisition of Evans Medical. The inclusion of Evans Medical's profits may help to offset the decline in profits earned from Glaxo's other interests. Its directors have estimated that gross profits in 1960 amounted to about £487,000, against £398,000 in 1959. Eighteen months of Evans' profits will be consolidated into the Glaxo's accounts for 1960-61, so that if the estimate for 1960 is projected forward to cover 18 months' trading their inclusion may limit the fall in the gross profits of the Glaxo group as a whole to less than £100,000. But in view of the price Glaxo paid for Evans Medical this is not much comfort to investors who have bought Glaxo shares for growth.

Narrowing profit margins also seem to have affected the results of British Drug Houses, which sold about 40 per cent of its output abroad in 1959. Gross profits in 1960 fell by 10½ per cent from £647,000 to £579,000 and net profits after a higher interest charge, reflecting the group's development programme, fell by 20 per cent from £321,000 to £256,000. Allowing for

the 50 per cent scrip issue, the ordinary dividend has been effectively maintained at 16 per cent, but the earnings cover has been reduced to 1.3 times. These results, like those of Glaxo, disappointed the stock market, where the 5s. shares were marked down by 3s. 9d. to 20s. 9d., to yield 3.9 per cent.

## Hambros and Laidlaw

FORMAL ties with New York are becoming increasingly common among London's merchant banks, and last week Hambros Bank announced a link with Laidlaw and Company of New York, a brokerage and banking house whose fortunes were founded on financing expeditions to the 1849 Californian gold rush. The link will cost Hambros \$5 million; this is the price for a 65 per cent interest in the banking side of Laidlaw's business which has until now accounted for only 10 per cent of that firm's interests. Hambros will be a limited partner and cannot therefore have any connection with Laidlaw's brokerage business which demands unlimited liability from the partners under the New York Stock Exchange rules. The aim of the new partnership is to provide wider financial facilities for Hambros's existing European customers and at the same time to gain the business of American firms that are taking an increasing interest in Europe. Hambros felt that the time was ripe for it "to operate free of restrictions in both currencies" and to offer merchant banking services on both sides of the Atlantic.

## Bank of Scotland

DESPITE a substantial increase in the Bank of Scotland's main earning assets—advances having risen by £16 million to £75 million, hire purchase debt by just under £2 million to £5 million, and acceptances by over £2 million to £33.5 million—the increase in the bank's disclosed profits of 14 per cent from £915,000 to £1,042,000 for the year to February 28th, is only modest when compared with the experience of the other two large Scottish banks and the seven big English banks which reported an average increase of nearly 33 per cent. A recent survey of the shares of these ten banks, carried out by a leading firm of stockbrokers, made the Bank of Scotland the least profitable to an investor on the basis of the income received from £100 invested in January, 1950. But the bank's latest dividend increase, from an equivalent of 14½ per cent to 17 per cent has put it above the Royal Bank of Scotland in this particular league table.

The governor of the bank, Lord Bilsland, in his annual address, criticises special deposits and he suggests that to aid exports the Government should find some workable way of providing incentives to those manufacturers with good export records. But he made no mention of one

\* Date of latest balance-sheet.

of the year's most interesting developments in hire purchase. Last year North West Securities, the bank's subsidiary, advertised a scheme for obtaining income tax relief on interest payments made under a hire purchase agreement. This could have been a profitable line of business for the bank and it would be interesting to know how it developed.

## Trade Indemnity

THE fortunes of Trade Indemnity, Britain's leading insurers of trade credit, are tied closely to general trading conditions. Credit restrictions are bad for credit insurers. In the second half of 1960 the restrictions imposed in April and June spread through the economy and as sales fell there was a marked rise in the number of claims and collections notified to Trade Indemnity and an increase in the number of new insurance enquiries. Trade Indemnity's financial year ends on December 31st but more recent figures given by the company take the story on to the end of March, and in the first quarter of this year the company was called upon to collect debts in 1,743 cases involving £239,365—both record figures. Clothing, furniture and timber distributors, and electric appliance retailers appear as the principal offenders.

The nature of the business necessitates a three-year accounting period and while in 1960 claims paid were materially lower than in 1959, this reflects the easier trading conditions of 1958 and 1959. Profits after tax have risen from £110,000 to £138,000 and the dividend has been raised from 15 to 17½ per cent. But the difficulties of 1960, with higher than usual claims, will not be fully apparent until the present account is closed in 1962.

## Army and Navy Stores

MR DESMOND WAINWRIGHT, the chairman of Army and Navy Stores, says that this department store enjoyed a "satisfactory increase in sales" in 1960-61 when trading profits rose from £440,000 to £556,000 but that the full impact of rising costs, including higher wages, will be felt

this year. But it is not so much the recent or the immediately prospective record of profits that is of interest to shareholders as the fact that the company's valuable Victoria Street premises are scheduled for rebuilding. A development plan has been submitted to the London County Council in conjunction with other large freeholders on the south side of Victoria Street (including the Church Commissioners and the Crown Commissioners). The LCC has welcomed the plan in principle and it is now under discussion, but Mr Wainwright says that while the intention is to build a "modern store of the greatest efficiency," retaining the character of the old one as far as possible, the plan as yet is not definite enough "to determine whether or not it would be economically practicable".

The ordinary dividend has been maintained at 15 per cent on the capital as increased by the one-for-five rights issue and it is covered 1.4 times by earnings, and at 46s. 6d. the 10s. ordinary shares yield 3.2 per cent. This yield is not particularly low in comparison with other department store equities but clearly it looks forward to the successful development of the Victoria Street site.

## Simon Engineering

SIMON ENGINEERING is the product of last year's merger between Henry Simon (Holdings) and Simon-Carves, and its interests in engineering range from fertiliser plants to nuclear power contracts. Last year its trading profits amounted to £3,428,000, 6½ per cent higher than the adjusted aggregate profit of £3,219,000 for Henry Simon and Simon-Carves trading as separate entities in 1959. A heavier depreciation charge and a smaller tax rebate have reduced the net profit for 1960 to £1,345,000, compared with £1,456,000.

At the time of the merger the directors forecast a total dividend of 26½ per cent but they have now declared a final dividend of 17½ per cent, to make the total 27½ per cent. If exceptional expenditure is excluded, this dividend is covered about twice by earnings. It is equivalent to 41½ per cent on the shares held before the merger and compares with a dividend of 35 per cent paid by both companies for 1959. The announcement of a bigger dividend added 2s. to the price of the 5s. shares which at 39s. 6d., yield 3½ per cent.

## Reyrolle

INTENSE competition in the electrical engineering industry has in recent years cut profit margins and in 1959 the trading profits of A. Reyrolle fell back to £2,586,000. But now the preliminary statement for 1960 shows a good recovery, with trading profits rising by 11½ per cent to £2,883,000, the highest figure recorded since 1955. A heavier tax charge has limited the increase in net profits to 9 per cent from £1,428,000 to £1,560,000. For the first time since 1956 the ordinary divi-

dend has been raised—from 8½ per cent to 9½ per cent, covered 2½ times by earnings. After this announcement the £1 shares rose by 3s. 6d. to 49s. to yield 4 per cent.

## C. A. Parsons

THIS company, in which both Associated Electrical Industries and Reyrolle now have a substantial shareholding following their agreement last year to engage on joint research and to exchange technical information, fared even better than Reyrolle did last year. Its trading profits jumped very sharply from £3,479,000 to £5,267,000 and after a substantially increased tax charge its net profits rose from £2,209,000 to £2,700,000. The sharpness of this increase in profits may be related to the dates on which particular contracts were completed, but recent results from other electrical engineering companies suggest that margins in the heavy end of the industry were rather more favourable last year.

The stock market was pleased with C. A. Parsons' record profit and it was even more pleased with the dividend, which has been raised from 9½ to 12½ per cent. That dividend is covered about four times by earnings, so that some increase was clearly justified. But the size of the increase suggests that the directors are confident about the course of future trading. The £1 shares jumped by 8s. 6d. to 70s. after the dividend had been announced and now yield just over 3½ per cent.

## Furnishers' Results

LAST year the trading profits of The Times Furnishing (Holdings) rose by 28 per cent from £925,000 to £1,184,000, as the group benefited from an increase in its cash and short-term credit sales. This helped to offset the decline in hire-purchase sales, which fell below the 1959 level. Hire purchase accounts have fallen from £5.3 million to £4.9 million but the fall in unrealised profits is only about £100,000 to £1.7 million, so that future results should not be much affected. The chairman, Mr Henry Jacobs, says that in spite of the current restrictions the group's turnover in the first quarter of this year was as high as it was in the first quarter of last year before the credit squeeze, and that total sales in 1961 should be higher than in 1960. The ordinary dividend is maintained at 13½ per cent, covered 1¼ times, so that at 15s. 9d. the 5s. ordinary shares yield 4.1 per cent.

The interim report from New Day (Holdings) suggests that it has been harder hit than the Times Furnishing by hire purchase restrictions. The chairman, Mr Oliver Frost, says that the full effect of substantial reductions made in those sections of the business engaged in hire purchase will not be felt for several months and that furniture sales for the year to June 30th will be disappointing. The interim dividend has been cut from 20.8 per cent to 12½ per cent and the 2s. shares have lost 1s. 9d. to 9s. 6d.

## London Stock Exchange

|                 |          |          |          |
|-----------------|----------|----------|----------|
| FIRST DEALINGS: | Mar. 20  | April 10 | April 24 |
| LAST DEALINGS:  | April 7  | April 21 | May 5    |
| ACCOUNT DAY:    | April 18 | May 2    | May 18   |

THE stock market was very busy in the last days of the long Easter account and at the opening on Monday of the new account that will cover the budget. The number of bargains marked rose to a peak of 25,899 on Monday—the highest figure since the end of 1959. Equity prices rose steeply towards the end of the old account; profit-taking was more than offset by the high level of buying for the new account and the market seemed to be unaffected by the fall in the gold reserves in March or the guarded tone of the Economic Survey. But on Tuesday the level of business declined and prices fell slightly; on Wednesday further profit-taking after the recent rises brought prices down a little more. Even so, over the week to Wednesday, *The Economist* indicator gained 2.8 points to 413.5.

The gilt-edged market has been rather subdued, overshadowed by the high level of activity in the industrial market. Immediately before and after the week end small gains were made by the short dated stocks while the long dated and irredeemable stocks lost small amounts. On Tuesday the long dated stocks held steady and then made small gains on Wednesday. Over the week, Conversion 4½ per cent 1964 gained ¼ to 97½, but long dated stocks showed small net losses and both 3½ per cent War Loan and 2½ per cent Consols lost small amounts.

There was a firm demand for store shares until Tuesday when profit-taking developed; Marks and Spencer lost 1s. 3d. over the week to 105s., and United Drapery lost 3s. 9d. to 62s. 6d. Insurance share prices rose ahead of forthcoming results but in spite of profit-taking Pearl showed a net gain of 10s. to 206s. 3d., following its dividend announcement. Decca Record made early gains but lost them on profit-taking, ending 9d. lower at 71s. Unilever gained 1s. 6d. to 161s. 6d. xd following the full report.

The high level of orders for British cars at the New York motor show was reflected in motor share prices; Jaguar "A" continued to rise, gaining 2s. 7½d. to 81s. BMC rose 5½d. to 18s. 3½d. while Leyland advanced 3s. 3d. to 96s. 6d. Several textile share prices rose, Coats, Patons gaining 2s. 9d. to 50s. 6d. and Courtaulds 2s. 4½d. to 44s. 3d. Local demand for oil shares pushed their prices up before the weekend; BP gained 3s. 3d. to 60s. 6d. and Shell 2s. 6d. to 160s. 6d., and the good results from Lobitos pushed its shares up by 1s. 4½d. to 21s. 9d. There was a heavy fall in Kaffir prices before the weekend but Johannesburg buying increased afterwards and some recovery took place. Over the week Anglo-American lost 7s. 1½d. to 128s. 1½d. xd, having touched 125s. at one point.

## THE MONEY MARKET

THE syndicate of discount houses increased its agreed bid by 3d. to £98 17s. 10d. at last Friday's bill tender, and the average rate of discount fell by 11.73d. to £4 8s. 8.68d. per cent. This is the first change in the syndicate's bid for four weeks, and the first increase (reduction in discount rate) since end-January. The move was made in anticipation of a strong demand for bills arising from the redemption this Saturday of the balance of the Government's 2½ per cent Funding Stock 1956-61. It was not prompted by any expectation of a cut in Bank rate. In the event, total applications for the £260 million bills on offer rose by £56 million to £474 million, and the market's quota rose only from 40 to 42 per cent.

There was no borrowing from the Bank of England in the week to Wednesday but with credit more irregular than in recent weeks the authorities offered the market help by the purchase of bills on Thursday, Saturday and Tuesday. On Wednesday however they sold a moderate amount of bills to mop up a surplus. The rate for day-to-day credit has opened at 4½ per cent throughout the week.

## APPOINTMENTS

## LANCHESTER COLLEGE OF TECHNOLOGY, COVENTRY

(Principal: A. J. Richmond, B.Sc.(Eng.), Ph.D., M.I.Mech.E.)  
 Appointment of Additional Academic Staff.  
 Applications invited for following posts, duties to commence September 1, 1961 or from date to be arranged.

**DEPARTMENT OF MECHANICAL ENGINEERING**  
 (Head of Department: J. E. Dickinson, B.Sc.(Eng.), A.M.I.Mech.E., A.M.I.Mar.E.)  
 Two Senior Lecturers, One Lecturer, to teach to H.N.C. and degree standard in Theory of Machines, Strength of Materials, Mechanics of Fluids, Thermodynamics.

**DEPARTMENT OF ELECTRICAL ENGINEERING**  
 (Head of Department: E. A. Hanney, M.Eng., Ph.D., M.I.E.E., M.Brit.I.R.E.)  
 One Principal Lecturer, Two Senior Lecturers, One Lecturer, to teach to H.N.C., Part III I.E.E. and degree standard. Opportunities exist in electronic engineering, control engineering, heavy current work and electro-technology.

**DEPARTMENT OF CHEMISTRY, METALLURGY AND TEXTILES**  
 (Head of Department: M. E. Fook, B.Sc., Ph.D., F.R.I.C.)  
 One Principal Lecturer in Polymer Chemistry and Technology.  
 One Assistant Lecturer, Grade B, in chemistry, mainly for inorganic and physical chemistry.

One Lecturer in Metallurgy, mainly for Physical Metallurgy.  
 One Lecturer in Textiles, for Textile Science and Technology, to teach to H.N.C. and degree standard courses (also A.T.M. in Metallurgy and A.T.I. in Textiles).

**DEPARTMENT OF APPLIED PHYSICS**  
 (Head of Department: F. J. Pearson, B.Sc., Ph.D., A.Inst.P.)

One Senior Lecturer, One Lecturer, One Assistant Lecturer, Grade B, to teach to H.N.C. (Physics) standard and to teach Physics at various levels to engineering and science students in full-time and part-time courses. The Department offers a range of postgraduate courses.

**DEPARTMENT OF MATHEMATICS**  
 (Head of Department: R. Woodbridge, M.C., B.Sc.)

Two Lecturers, to teach Mathematics to H.N.C., H.N.D. and degree standard. Experience in Statistics and/or numerical analysis an advantage.

**DEPARTMENT OF MANAGEMENT AND BUSINESS STUDIES**  
 (Head of Department: W. F. Frank, Dr.Jur., B.Com., M.Sc.(Econ.), LL.B.)

One Principal Lecturer and Deputy Head of Department to act as Senior Course Tutor and organiser for the new (postgraduate) Diploma in Management Studies course.

One Senior Lecturer in Economics.  
 Four Lecturers, one specialising in Government, one in Philosophy and Politics, one in English and General Studies, one in Sociology.  
 One Assistant Lecturer, Grade B, mainly in Accounting.

For all posts, candidates should normally hold University degree or Diploma in Technology and, where appropriate, a professional qualification. Applicants who do not meet these requirements may be eligible by virtue of outstanding experience or other qualities. According to the nature of the post, industrial or professional experience is necessary, while some previous teaching or research experience would be an advantage.

The College is largely housed in new buildings occupied in 1960. The remaining buildings will be occupied during 1963. Equipment and general facilities in the new buildings are excellent and a real opportunity exists for the staff to take part in the many further educational developments which are projected in close and growing co-operation with industry. An outstanding feature of all Departments are many well-supported postgraduate courses of lectures. It is hoped that several Dip.Tech. courses will be offered from September, 1961.

All staff are encouraged to undertake research and/or consulting work.

**Salaries (now under review):**  
 Principal Lecturers—£1,730 p.a. to £2,100 p.a.  
 Senior Lecturers—£1,550 p.a. to £1,750 p.a.  
 Lecturers—£1,370 p.a. to £1,400 p.a. to £1,550 p.a.

In certain circumstances a candidate may be paid commencing salary above minimum of title.

Assistant Lecturers, Grade B, £700—£1,150 p.a. Plus additions at the minimum and maximum for training and degree, which may amount to £235 p.a. Commencing salaries depend on age and experience.

Further particulars and application forms from the Registrar, Lanchester College of Technology, Priory Street, Coventry, to whom applications should be submitted within 12 days of the appearance of this advertisement.

W. E. Chinn, Director of Education.

## VICTORIA UNIVERSITY OF WELLINGTON

New Zealand

## SENIOR LECTURER IN ECONOMICS

Applications are invited for the above-mentioned appointment. Ability to teach advanced classes in Statistics and Econometrics would be an advantage.

The salary will be £1,750 per annum rising to £2,000 per annum, the initial salary being determined according to the qualifications and experience of the appointee.

Approved fees to Wellington will be allowed for the appointee, his wife and his dependent children. In addition, travel removal expenses will be allowed within certain limits.

Further particulars and information as to the method of application may be obtained from the Secretary, Association of Universities of the British Commonwealth, 36 Gordon Square, London, W.C.1.

Applications close, in New Zealand and London, on May 31, 1961.

## SURREY EDUCATION COMMITTEE

KINGSTON TECHNICAL COLLEGE  
 FASSETT ROAD, KINGSTON UPON THAMES

Required September 1, 1961:—  
**DEPARTMENT OF MANAGEMENT, WORK STUDY AND PRODUCTION**

Senior Lecturer in Management Studies; should be graduate or possess equivalent professional qualification and be a corporate member of the British Institute of Management or of appropriate professional Institution. Experience in teaching and in industry or commerce in executive position essential; research experience desirable; should be able to offer range of subjects in final years of new Diploma Course in Management Studies, and will be directly concerned with organisation and development of Diploma Course and with a range of Post Graduate Lectures in Management Studies.

**DEPARTMENT OF COMMERCE, LANGUAGES AND PROFESSIONAL STUDIES**

1. Senior Lecturer in Business Studies, Honours Degree in Commerce or Economics and/or recognised professional qualification and ability to lecture in Commercial Subjects up to and including final degree and professional level.

2. Lecturer in Accountancy, Recognised Accountancy qualification and suitable practical experience either in business or with public body.

3. Assistant Grade B in Economics and related subjects. Honours degree in Economics; should state subjects which qualified and willing to teach.

Salary, Burnham Technical Scale, Senior Lecturer: £1,550 x £50—£1,750. Lecturer: £1,370 x £50/£40—£1,550. Assistant Grade B: £700 x £27.10s. (15)/£37.10s.—£1,150, with appropriate allowances for degree, training and experience. London Allowance payable.

Application forms and further particulars from Principal, to be returned as soon as possible, in any case not later than May 1, 1961.

## UNIVERSITY GRADUATES

required by

AN FORAS TALUNTAIS (The Agricultural Institute) for appointment as Research Officers or Research Cadets in the Rural Economy Division.

ESSENTIAL—Honours Degree in Agriculture, Commerce, Economics, Geography or Statistics. Applications also considered from 1961 FINAL DEGREE EXAMINATION CANDIDATES.

Further particulars and application forms from the Director, An Foras Taluntais, 33 Merrion Road, Dublin, 4. Latest date for receipt of completed forms—May 8, 1961.

THE ECONOMIST INTELLIGENCE UNIT LTD. wishes to make further appointments to the staff of its Research Division. Applications are invited from graduates aged not more than 28 holding a first or second class honours degree in economics or related subjects. Preference will be given to applicants with industrial or commercial experience; knowledge of foreign languages would be an advantage. Salaries according to qualifications and experience. Detailed applications should be sent to "Research," 22 Ryder Street, London, S.W.1.

THE METAL BOX COMPANY LIMITED  
 Market Research Division  
 A MALE GRADUATE

is required for the Industrial Research section of Market Research Division. Applications are invited from graduates aged not more than 28 holding a first or second class honours degree in economics or related subjects. Preference will be given to applicants with industrial or commercial experience; knowledge of foreign languages would be an advantage. Salaries according to qualifications and experience. Detailed applications should be sent to "Research," 22 Ryder Street, London, S.W.1.

The job will be based at Head Office but some travelling within the country may be necessary. Preferred age 23-25.

Apply to Head of Staff Division, The Metal Box Company Limited, 37 Baker Street, London, W.1.

quoting reference GMR/3.

**CENTRAL ELECTRICITY GENERATING BOARD.**  
 MIDLAND REGION  
 APPOINTMENT OF REGIONAL PUBLIC RELATIONS OFFICER  
 VACANCY NO. MR.155.

Applications are invited for the post of REGIONAL PUBLIC RELATIONS OFFICER in the Midlands Region of the Central Electricity Generating Board at Birmingham.

The successful applicant will be on the staff of the Regional Secretary and the duties will include Press relations, internal and external information services, production of booklets, posters, &c., the preparation or collection of material for lectures, conferences and exhibitions, the organisation of visits and the reception of visitors and various other publicity matters throughout the Region.

The appointment will be made within the salary range £1,905-£2,170 per annum.

A knowledge of the organisation of the Electricity Supply Industry would be an advantage, but it is not essential. Applications from suitably qualified persons, quoting the above vacancy number should be addressed to the Assistant Regional Secretary (Personnel), Central Electricity Generating Board, Midlands Region, 53 Wake Green Road, Birmingham, 13, marked "Confidential," to arrive not later than Monday, May 1, 1961.

The G.K.N. Group of Companies wish to make the following appointment.

## INFORMATION ASSISTANT

The G.K.N. Group Research Laboratory wishes to appoint an assistant in its Commercial Information Unit. The job consists mainly of reading and making abstracts from a very wide range of published material, and the collection of information according to its relevance to Group activities.

The basic requirements of the post are—

1. A capacity for almost continuous reading and writing.
2. Ability to write accurate and concise summaries rapidly (and in accurate and concise English) of facts from a wide range of technical and commercial subjects.
3. A lively interest in current affairs. A reading knowledge of some foreign languages would be an advantage.

The position may be of interest to—

1. Persons having experience of commercial intelligence or market survey work in banks, stockbroking, advertising agencies or similar institutions; or in similar departments of industrial organisations.
2. Recent graduates in commerce, economics, history, or other discipline, preferably with some experience in commerce or industry.

Preferred age 24 to 28. Applications will also be considered from those graduating this year.

Applications stating age, qualifications and previous experience should be sent to the Recruitment Officer, Guest, Keen & Nettlefolds, Group Research Laboratory, Birmingham New Road, Lanesfield, Wolverhampton.

## INVESTMENT MANAGER

PHILIPS ELECTRICAL INDUSTRIES LTD. will shortly commence to operate a self-administered pensions fund with an annual income of over one million pounds, carrying considerable growth prospects.

We require a man to plan and to be responsible for the investment of this income.

The person we have in mind must have had extensive experience of institutional investments. He must be able to advise and guide the Trustees on broad investment policy, and to take full responsibility for the implementation of decisions. This is a senior appointment with commensurate salary and other benefits. Applications should be made, in confidence, to

MR. W. BREE, Establishment Personnel Officer,  
 Philips Electrical Industries Ltd.  
 Century House, Shaftesbury Avenue, London, W.C.2.

## UNIVERSITY OF EXETER

Applications are invited for the post of Assistant Lecturer in Economics

(Economic Theory).

Salary Scale: Lecturer, £1,050—£1,850 p.a. (Efficiency bar at £1,475).

Assistant Lecturer, £800—£950 p.a.

Further particulars may be obtained from the Secretary of the University, to whom applications (eight copies—overseas applicants one copy) giving the names of three referees, should be sent by May 8, 1961.

**INFORMATION OFFICER.** A woman not less than 25 years of age is required to fill a vacancy as Information Officer in a large London Advertising Agency. Some years experience in an Information or Statistical Department or Technical Library and a degree in Statistics or Economics are desirable. The position will call for tact, an even temperament and a systematic and methodical mind. Salary according to age and experience. The position is pensionable. Write in the first instance stating age, experience and salary required to the Staff Manager, S. H. Benson Ltd., 129 Kingsway, W.C.2.

## FOR SECURITY AND PROGRESS

## THE CENTRAL ELECTRICITY GENERATING BOARD

wish to recruit

## PUBLIC RELATIONS OFFICER

at Regional Headquarters, Didsbury, Manchester.

Salary within range £1,765-£1,965 p.a. Superannuable.

The successful applicant will be on the staff of the Regional Secretary and will be responsible for press relations, internal and external information services, the production of booklets, posters, etc., the preparation or collection of material for lectures, conferences and exhibitions, the organisation of visits and reception of visitors and various other publicity matters throughout the Region.

The duties may also include the editing of a magazine. Applicants must also have had a wide experience in public relations work and have a marked aptitude for sensing news and recording it in a manner which will have public appeal.

Please write to the Personnel Officer, Central Electricity Generating Board, 825, Wilmslow Road, Manchester 20, by 1st May, 1961, stating the names of two referees. Please quote vacancy No. E.91.144 E.

## RESEARCH OFFICERS in Operational Research

Applications are invited to fill a number of vacancies in the Operational Research Department of The Steel Company of Wales Limited (Steel Division).

**HONOURS GRADUATES** who are stimulated by the prospect of applying scientific methods to contribute to the solution of management problems; for these positions the ability and experience of the individual are more important than the discipline of his initial degree.

**MATHEMATICIANS** to help form a section for the development and application of mathematical methods in operational research projects.

**STATISTICIANS** to join operational research teams and to supply an analytical service to other Company Departments.

**COMPUTER PROGRAMMERS** to join operational research teams and to supply a computing service of a very varied nature to assist research into Company computer developments on the plant as well as in the office. There are opportunities for women graduates as mathematicians, statisticians or computer programmers.

The Department is based on Port Talbot in South Wales, but a newly established section is about to start work based on Swansea.

The conditions of work in the Company are of a high standard.

The salary offered to any individual will depend on qualifications, experience and age, but will be competitive.

Please write for application form to:—

Superintendent, Personnel Services,

THE STEEL COMPANY OF WALES LIMITED,  
 (Steel Division)

Abbey Works, Port Talbot, Glam.

A LONDON Trade Association wishes to appoint a STATISTICIAN for the collection of trade statistics and associated work. Preference will be given to a graduate but applications from others with appropriate qualifications, experience and interest in economics would be considered. Salary according to qualifications and experience.—Please write stating full details to Box 1493.

**WOMAN SECRETARY.** Unusual residential post near London. Applicants must be experienced and able to deal with university students and help organise programmes. Post offers good social life, adequate weekends, holiday arrangements, honours. Also required: JUNIOR GENERAL SECRETARY. Varied duties, including simple accounts.—Box 1492.

## DUNLOP RUBBER CO. LTD.

have a vacancy in their Economic Intelligence Department for a male economics graduate aged 21-24. The work is varied but is mainly concerned with the interpretation of economic trends and their effect on the activities of the Group at home and abroad.

The post would be particularly suitable for a person graduating this year with ability to write clearly and concisely and work on own initiative.

Salary according to age and qualifications.

Apply to: Finance Personnel Manager, Dunlop Rubber Co., Ltd., Dunlop House, 25 Ryder Street, London, S.W.1.

## AIR MINISTRY

PRELIMINARY BUSINESS STUDIES

Two important finance houses  
have joined forces  
for strength and development

Scottish Midland  
Guarantee Trust Ltd

Olds Discount  
Company Ltd

## Owned by two great banks

Olds Discount Company Ltd and Scottish Midland Guarantee Trust Ltd are both well-known and long-established concerns. Since 1958 they have been linked to form a new group, Lloyds & Scottish Finance Ltd, itself jointly owned by Lloyds Bank and the National Commercial Bank of Scotland. Capital has twice been increased, and is now £15,000,000.

This grouping has proved its strength in the past year of restricted demand. Thanks to a prudent and selective policy in accepting contracts, the group has maintained its earnings. Its assets have grown to over £100,000,000, and it has taken steps to extend its profitable overseas interests to Western Europe.

LLOYDS BANK LTD

# Lloyds & Scottish Finance Limited

Assets £100,000,000

Vigo House, Regent Street, London W.1

In many ways the two operating companies fit together to form a balanced whole. Traditionally, Scottish Midland Guarantee Trust Ltd has a large proportion of its hire purchase turnover in the fields of motor vehicles and industrial equipment; Olds Discount Company Ltd, while also doing a substantial vehicle business, has long been one of the leading companies in the financing of consumer durables, and in block discounting. Geographically, too, the group now has a well-spread network of more than 100 branches. With its record of rapid progress since its formation, and its ample financial backing, the new grouping has demonstrated both its strength in difficult times and its capacity for future expansion.

## SHEET PILING FOR MIGHTY WALLS!

Wherever a structure demands powerful, vertical walls with good lateral support, sheet piling, invariably, is the engineer's choice. Sheet piling is widely used in piers, coffer dams, dykes, foundation construction, dock walls, breakwaters, and in a host of other temporary or permanent structures. Yawata's sheet piling have either arch web, flat or Z sections.

For more than 60 years, Yawata Iron & Steel Co., Ltd., has been meeting every industrial need for fine quality steel.

## In The Economist this Week

### INTERNATIONAL

#### BIG PLOTS

President de Gaulle's triumph over the Algerian revolt is also a triumph of those who are seeking to adapt France to the nineteen-sixties over those who stick to the past (p. 419). As the details of the week's drama are pieced together (p. 452), it becomes clear that the army's longer bid to sway the government of France, which had its public opening in May, 1958, has failed (p. 451).

**Cuba**—The fiasco of the Cuban landings has given Mr Kennedy and the American people a jolt which may do them good (p. 441). Already Congress has been shaken into long-awaited activity on the Administration's domestic programme (p. 442). But it has done America no good in the eyes of uncommitted peoples like the Arabs (p. 454).

**Laos**—The proposed conference will start against the background of communist military success (p. 424).

**Neutrals**—Mr Khrushchev has expounded the doctrine that "there are no neutral men" in the east-west struggle (p. 425). Yet it is not the neutrals but the wrangling great powers who have caused the session of the UN Assembly that has just finished to be long and confused (p. 430).

### HOME

#### CRYSTAL GAZING

**Steel**: The industry's plan for the future is some part faith as well as calculation, but other British industries would do well to make similar forecasts (p. 465).

**Gilt-edged**: The budget has cut the Exchequer deficit so much that this year's problem is not how to borrow money in the gilt-edged market but whether to repay it (p. 467).

The revival of demand for gilt-edged since the budget will put renewed pressure on bank liquidity—unless the Government does something about it (p. 474). The Midland Bank is to raise £24 million of new capital, but expansion of the banks generally is limited by the liquid assets the authorities make available (p. 476).

**Supersonic Airliners**: Britain appears to be backing the 1,500 mph passenger jet rather than grappling with the problems posed by even faster airlines—we could be wrong (p. 468).

#### COLD PLUNGE

Mr Macmillan, pushed to the edge of the springboard by statesmen on both sides of the Atlantic, may even be contemplating a header into the European pool (p. 421).

• The mood of Conservatives, after being cold-shouldered in recent by-elections, may help to push the Prime Minister over the brink (p. 425).

#### GREATNESS THRUST UPON THEM?

Reform of the House of Lords is in the air, and should be carefully welcomed, but impetuous radicals do not always appreciate the

April 29, 1961

#### SMALL PLOTS

In the Congo Mr Tshombe has been arrested for a day; in Portugal Dr Salazar has forestalled a coup (p. 426). In Albania communist heretics may be tried as plotters, whether or not there has been a plot (p. 433).

#### AFRICAN QUEST

A conference of African states will meet in Liberia on May 8th in the hope of giving substance to the ideal of African unity (p. 454).

Though part of the newly independent British Cameroons is to link up with its French neighbour, the new entity can only make sense within a broader regional framework (p. 457). Sierra Leone, now independent, is small, poor and divided (p. 426).

In the Central African Federation, however, African nationalists are more "nationalist" than "African" (p. 453).

#### QUEST FOR ECONOMIC GROWTH

President Kennedy wants to encourage industrial expansion by lightening taxes on business, and to make up for the loss of revenue by tightening taxes on business men (p. 445). In Paris the new Organisation for Economic Co-operation and Development is not much more yet than an Atlantic talking-shop (p. 429) but in London a conference of economists has been asking whether French planning methods might be applied to serve the British (p. 433).

Argentina is putting expansion before stability; President Quadros of Brazil is doing the reverse (p. 429).

dangers: the House has proved strangely workable in its present form, although there is a need to adjust the balance between "gentlemen" and "players" (p. 421).

• An easy and immediate reform would be the release from a tedious predicament of Mr Wedgwood Benn: already he has had a filip to his election campaign (p. 461).

• Part of the Lords' work is the detailed examination of issues of minor, but significant, importance. This week they have tackled shortcoming in public inquiry procedure (p. 429), and refused to give Efta's staff diplomatic immunity (p. 430).

#### Grinding Whose Faces?

Some Scottish Labour-controlled councils are charging hopelessly uneconomic rents for their houses, the while mulcting their rate-payers; Mr MacLay is growing impatient with them, but legislation may be necessary (p. 423).

Unrest is endemic in London's docks, but the latest excuse for a strike seems more than usually trivial (p. 426).

#### Wealth, Wages and Profits

• The Economist's quarterly profits survey puts industrial profits on the turn and heading downwards (pp. 472, 500, 501).

• The stags hope to make a killing on the market's newest share—Chatterleys (p. 474).

• An estimate of personal wealth in Britain supports the case for recent surtax reductions—but suggests it would be fair to follow them up by more effective collection of death duties (p. 434).

• The Ministry of Labour analyses industrial earnings (p. 475).

## WORLD ELECTRICAL NEWS IN PICTURES - 14

# In the land of brown coal

**Problem:** how to make brown coal — 'young' coal that is two thirds water — into an efficient fuel for a giant power station?

**Answer:** dry the coal with its own heat by first passing it through hot gases from the furnaces it feeds.

This is the process used in Australia's largest power station — Yallourn, in Victoria. Built on continuous deposits of brown coal, which is only about 40 feet below the surface, Yallourn has made Victoria self-supporting in power. With its neighbouring stations at Morwell and Hazelwood, it will form the greatest centre of electric power in the Southern Hemisphere. The first turbine-generators to send out power from this brown coalfield were supplied by AEI. The 14 sets now installed generate 285 MW. Today larger sets are being built which are more efficient and cut building and other capital costs. Four AEI sets on order will increase the power output from the brown coalfields by 640 MW.

## NEW TOWERS OF LONDON

London has three new landmarks: the huge Shell building on the South Bank, the Carlton Tower Hotel and now the Millbank development. The rising Millbank tower will have 34 storeys and be London's tallest building — 22 feet higher than St. Paul's.

**From AEI:** Emergency lighting for the Carlton Tower;

Miles of cable for the Millbank tower.

25,000 Mazda Kolor-rite fluorescent tubes and 12,000 fittings for the Shell building — one of the largest office lighting contracts ever placed with one company.

## Associated Electrical Industries Ltd

The Overseas Chemical Division of W.R. Grace & Co. shares its world-wide wealth of Chemical experience with industry in many ways, in many countries. Laboratories, Plants and Sales Offices in eighteen countries are continuously developing, producing and marketing the new products and techniques which are the keys to industrial growth. Grace Chemicals match specific industrial requirements and are customer-tailored to particular production needs with the backing of long experience in the field. Grace is one of the

## The man who bends rivers

Joe, taking time off in the boom town of Cooma, is just one of the thousands working on the great Snowy Mountains hydro-electric scheme in south-eastern Australia. He and his fellow-workers have already dammed the eastward-flowing Snowy River, the Eucumbene and other rivers, harnessed them for power and turned them back *westward* through a system of long tunnels deep in the mountains, to carry precious water to the desert interior.

After ten years' heavy work the Snowy Mountains scheme, due

to be completed in 1975, already provides one sixth of the ultimate 1,800,000 acre/feet of irrigation water a year—and more than 10% of its ultimate generating capacity of 3 million kilowatts. Atlas Copco rock drills, fitted with Sandvik Coromant drill steels and driven by Atlas Copco compressors, are being used for much of the work on these tunnels, dams and underground power stations. And this is only one of the major engineering projects in which Atlas Copco and Sandvik Coromant equipment has played a part.

**Atlas Copco**

VOLUME CXCIX - NUMBER 6140

## Fall of the Dinosaurs

AT all times since the decline and fall of the Second Empire the French, among all the nations of Europe, have been the most dominated by memories of a glorious past, and the least able to understand that yesterday's realities are not those of today. This has arisen, in part, from the fact that they have been more shockingly, and more often, confronted than others with the harshest sort of contrast between things as they are and things as they would like them to be; and in self-defence they have sought refuge in illusion. But each resort to the dream has made the next awakening more painful, and there are limits (as the British indeed should know) even to the human power of self-deception.

After the fruitless victory of 1918 came the collapse of 1940, and the terrible moment when every Frenchman had to choose between being a traitor with Marshal Pétain and a traitor with General de Gaulle. French history since then, it may well come to seem, has been dominated by a struggle between those (like General de Gaulle himself) who drew the moral from 1940 that a major work of national reconstruction had become essential, though differing on how to achieve it; and those (like the Algerian settlers and their political and military friends) who still cling to the dream of yesterday. With the generals' rising in Algiers last Saturday, the battle was clearly joined between the two parties. Everyone who thought about it knew now where he stood, as he had not known in 1958; and what may be called the party of tomorrow emerged as, incontrovertibly, the stronger. Even if the military *Putsch* had succeeded in overthrowing the Fifth Republic, its success could not have been enduring. As it has turned out, General Challe has succeeded in uniting France, for the first time, behind President de Gaulle. The most elusive item of the gaullist programme of regeneration has suddenly been realised.

This was the Fifth Republic's hour of decision: the baptism, as it were, that washed away the original sin of its birth. The hour made even that birth look somewhat different. Squalid and dangerous though the conspiracy of gaullists and militarists which exploded on May 13, 1958, clearly was, and inexcusably as the actors in that drama, from General de Gaulle downwards, conducted themselves at various points, in retrospect it does now appear that the gaullists acted on behalf of the party of tomorrow when they captured the 1958 *coup d'état*. No one rallied to the defence of the Fourth Republic: it had affronted too many interests; its institutions were too thoroughly discredited. The Fifth Republic has at least proved to possess the authority to defend itself. This is the measure of General de Gaulle's achievement, and of the failure of the Algiers generals. Well might the generals now feel that their mistake in 1958 was to involve themselves with the politicians. For it was the politicians who diverted a stroke designed to demonstrate the army's vocation as the overriding conscience of France, and to maintain French rule in Algeria at all costs, into one establishing a regime strong enough to declare itself ready to give Algeria self-government and to oppose its will to the right-wing militarists.

General de Gaulle may, in the end, be vindicated in another way by these events. His insistence on "restoring the state," on strengthening the executive at the expense of parliament, has, all too often, seemed illiberal and unwise.

Illiberal it may have been, but at least his institutions passed one test by surviving one of the hardest of knocks. General de Gaulle has, in fact, now overcome the circumstances in which he came to power in 1958. This week's mutineers were then his allies. His policy since then has been one long struggle to free himself from their control. Now we have had the showdown between the president and the president-makers, and he has won. The state has been restored, in however personal a fashion, to sovereignty. It will now be the task of historians to dispute the assumption that the revitalisation of French government could have happened in none but the gaullist way—unless the general proves to be so indispensable that, after his departure, anarchy inherits. His statement that he intends to ensure that "French and republican liberty" shall continue after him suggests that he has measures in mind to deal with this, the last of his institutional problems.

It is not difficult to think of other ways in which France has, in the past few years, undergone a still-continuing transformation. The effort of social reform started after the war has been resumed, though there is still much to do. The economic recovery launched under the Fourth Republic has been continued dynamically under the Fifth. The relinquishment of an empire, hardly to be thought of in 1958, has become generally accepted—as has the need for retiring from Algeria. Internationally, gaullism has at least made France's role more conspicuous, if less agreeable to its allies—as the fourth French nuclear explosion, in the Sahara on Tuesday morning, reminds us. In all these matters, it can be argued that General de Gaulle might have profitably and wisely adopted a different course from the one he chose; but he did, in all cases, choose. No doubt, an unhealthy political apathy has reigned since 1958; but it will not, it is to be hoped, be permanent—and indeed the present crisis may have brought it to an end.

GENERAL DE GAULLE did right to underline, in his speech on Sunday, the fact that the army insurrection threatened all his work:

France's immense effort, by which, in spite of everything, victory was won, independence assured and the Republic restored; and which was resumed, three years ago, in order to refashion the State, to maintain national unity, to reconstitute our power, to regain our rank among the nations, and to pursue our work overseas of necessary decolonisation, all this is in danger of being brought to nothing, on the very verge of success, by the crass and hateful gamble of the insurgents in Algeria.

The French president was here expounding the true significance of the threat that faced him. For the plot could not succeed without a descent on Paris and the overturning of the regime; and it is now fairly clear that the rebels would have made that descent but for the refusal of the greater part of the armed forces to help them. The government appears, also, to have got wind that something was afoot so that they had to act earlier than they had intended. But however swift the collapse, the danger that France has passed through this week must not be underrated. If the dead policy of French Algeria was to be effectively resurrected, General Challe had to impose his will on Paris. He could not do that without killing or cowering the president and his ministers on the spot; and the consequences would have been all that General de Gaulle depicted. Fortunately the president's ship is safely in harbour, and it

only remains to consider why this new version of May 13th was undertaken, and what the victor will do with his victory.

The French army has been a state within the state ever since the first Napoleon, seeing itself—and for long periods being accepted in France—as the guardian of national virtue and honour. During much of this time it has been employed in arenas far from Europe, where it has had to conquer, hold down, and rule "inferior" peoples. It has been the home, the mother, the Alpha and Omega of its members. Cut off in this way from the experience and assumptions of French civilians, from the main stream of French development, it has been peculiarly subject to illusions of its higher mission, as the Dreyfus affair proved. Probably the capital error of the Third and Fourth Republics was the failure ever to face the military mystique with plain language and demolish it. In recent years the army's blindness to all facts and points of view that contradict its cherished beliefs has been matched with a growing bitterness at its perpetual failure to attain victory, a failure which the soldiers have attributed to the "rotten politicians" in Paris. The considerations that induced M. Mendès-France to withdraw from Indochina and Tunisia, and that determined General de Gaulle to concede independence to Algeria, are beyond the army's vision. The army denied the basic contention that France could not win in Algeria.

Instead, it maintained that the "communist rebels" could be defeated, à la Mao Tse-tung, by refusing all negotiation, and by identification between the army and the people (in practice this means, not that the army takes account of what the Algerians ask for, but that the Algerians must accept what they are told for their own good). Against the judgment of some of the officers, General de Gaulle was brought to power in 1958 to enable the army to achieve its victory—by taking care, as the army hoped, of the Paris end. Since then he has made plain his determination to escape from military leading-strings. He has betrayed—so some officers believe—the army and France by behaving as his predecessors and by going even further than they did: none of them dared undertake negotiation with the Algerian rebels. Like his predecessors, then, he had to be ousted. That this was impossible; that President de Gaulle has judged the Algerian problem rightly; and that the war cannot be won, were ideas which the army leaders were incapable of accepting. How far they had retreated into fantasy is suggested by their apparent belief that it was possible for them to hope for support from the Americans, in the cause of the cold war, as much as by their unawareness of what their mutiny meant.

THE walls of Jericho stand. General de Gaulle is now in a stronger position than he has ever been in his career. For a long time it seemed that he must pay danegeld to the men of May 13th who brought him to power; but by methods of supreme ingenuity and tenacity he has outflanked, and now outfaced, them all. The Muslim rebel leaders should now, as wise men, make haste to Evian and the conference table while the general is on the crest. For one thing, there is little doubt that they can get their independence more speedily and more smoothly than would have been possible before the army had been brought to heel. It should now be possible for both sides to be magnanimous. The French government should no longer have to look over its shoulder. The Muslim rebels must surely reflect that it is he, not

they, who has defeated French militarism in the end.

If peace does come soon, General de Gaulle's possibilities for action at home and abroad will begin to match his prestige. The speeches of his in recent months, in which he sees himself presiding over a new birth of the nation, assure us that he intends to seize the opportunity for a reshaping of the social and political fabric. The result is unlikely to please Right or Left. Abroad, he will continue to assert, with redoubled energy and power, France's claims to a place

## Head First into Europe?

THE common market is not a subject on which Mr Macmillan has been in the habit of airing his views. He has tended, for some time, to leave the handling of this particular hot potato to ministers. His decision to enter the arena on Tuesday, and to answer questions at length in the House of Commons, is, therefore, a portent. It is one of many recent signs that the Government has begun to give the matter serious attention—perhaps, indeed, is steeling itself to take the plunge and seek to join.

Typically, the Prime Minister left plenty of room for speculation about his meaning. When Mr Gaitskell asked him whether he contemplated accepting the principles of the Rome treaty, "while making it plain that we must negotiate on particular issues such as the free entry of Commonwealth products," Mr Macmillan agreed that "that is a possible approach." He spoke in a positive way about agriculture, mentioning "the obligation to enter into a single agricultural system for Europe" and the "advantages of going in early and perhaps guiding it in the way we would wish." But he did "not think we ought to rush it." This language might reflect the need to take a decision; it might mask a decision already made, or one in the making.

Despite the smokescreen, however, Mr Macmillan's talk

## The Second Chamber

ONE of the least appropriate remarks this week is that it is now more than fifty years since Mr Asquith said that reform of the House of Lords was a subject that would brook no delay. For the reforms that Asquith sought were in fact implemented without delay, in substance even though not by any formal act. When Asquith spoke, the Upper House still regarded it as its right to flout the will of the Commons; it no longer often does that today, and it knows that it had better not. Ever since Asquith, therefore, proposals for reforming the Lords have been applauded mainly by unduly tidy-minded radicals and unusually far-sighted right-wing Conservatives (who recognise that by implementing radical changes in form, they might manage to reverse—or at least prevent further development of—some of the post-Asquithian changes in the realities of political power.) For precisely this reason, any new proposals must be greeted with more reserve by radical pragmatists.

This was again the pattern of reception when Mr Butler,

in the sun. Nato will have a good deal of old-fashioned nationalism to cope with. But it would be ungenerous to carp just at this moment. It can now be seen that the upheaval that began in 1958 was long drawn-out, the protracted and painful adjustment of a nation, and its institutions, to the demands of a new epoch. The process is not yet over, and the resistance of the dinosaurs has been formidable. Perhaps it took a man with a strong streak of dinosaur in himself to overthrow them.

with President Kennedy on April 7th was evidently a landmark in British policy. Even before the encounter there were suggestions in London that the Prime Minister had made up his mind to embark, on his return, on an attempt to join the common market. The suggestions have so grown in vigour since then that a new British initiative has been widely expected on the Continent. President Kennedy's backing (and Mr Dillon's) for full British membership of the common market—but for nothing less than that—may not only have encouraged Mr Macmillan; he may have thought it would help him in dealing with any domestic resistance. It has certainly encouraged other people to be more open; Dr Adenauer, for one, virtually invited Britain to join on his return from Washington.

When the Prime Minister spoke on Tuesday he did not know how, or how soon, the struggle between Algiers and Paris was going to end. It was not then, he explained, a good moment to start negotiations. Yet Britain's need to have a say in moulding the future of Europe is equally compelling whether France is weak or strong; it would certainly not be diminished if France were in the grip of the dinosaurs. And now that President de Gaulle has emerged triumphant a good many doubts may be set aside.

## Some proposals on how, and how not, to reform the Lords

to the accompaniment of loud cheers from Lord Lambton, announced on Wednesday that a new select committee of members of both Houses is to look into (1) the composition of the Upper House; (2) the possibility of rectifying certain constitutional anomalies affecting the rights of peers in elections to the Commons (anomalies which Mr Butler strove valiantly to pretend do not arise mainly or solely from the case of the second Lord Stansgate); and (3) the question of proper remuneration for some members of the Lords. Mr Gaitskell suggested rather crabbiily that it might have been better to confine the examination to matters arising directly out of the Benn-into-Stansgate case, and added that any discussion of a changed composition for the House should certainly be accompanied by discussion of possible further curtailment of its formal powers. Less cautious radicals than Mr Gaitskell should wish to go rather further than he does in co-operating with the new committee. They should welcome wholeheartedly any inquiry into the question of pay-

ing full-time parliamentarians in the Upper House, as well as any steps to remove disabilities from peers who wish instead to sit in or vote for the Lower House. They should even recognise that some minor changes in the composition of the House may be desirable, but they should also insist that real dangers could arise if these changes went too far.

These dangers are still insufficiently appreciated by some leftwingers, especially those who call (at first sight very reasonably) for "the total abolition of the hereditary principle in the House of Lords altogether." By a series of constitutional and historical accidents, this country has now reached a stage where the powers actually wielded by the House of Lords—like the shaving soap in the advertisement—are not too much, and certainly not too little, but just about right. On paper the second chamber still has rather greater powers than are democratically desirable. A main reason why it does not exercise them is that it knows the principle of heredity makes it look an absurd body; so it recognises that if it did consistently oppose its will to the Commons everybody might agree to sweep it away.

Should it become a less absurd-looking body, stocked entirely with life peers and other distinguished "establishment" figures, there is a distinct probability that it might gradually proceed to exercise greater powers of revision and delay upon Commons legislation. Tidy-minded radicals say that this is why it would be right to accompany abolition of the principle of heredity with formal legislation to curb the Lords' powers still further. But this is really just an excuse to avoid admitting the odd facts of the present situation. One doubts very much whether further formal codification and limitation of the Lords' powers could be effected, except by legislation that went so far as to make it an absurdity to have a second chamber at all—which (a) is not going to be introduced, certainly not by any Conservative Government, and (b) would be a great misfortune anyway.

NEVERTHELESS—this is why there should be some welcome for the new committee—there are some minor reforms in the present strangely workable Lords which obviously ought to be made. The very minor one which is very temporarily most in the news—the fact that ennobled MPs ought not to be conscripted into the Lords if they and their constituents want them to remain in the Commons—could and should be effected very simply: anybody should be allowed to renounce a peerage if he wishes. A more important reform is that the opposition front bench in the Upper House ought to be stocked with a small number of full-time and therefore adequately paid parliamentarians. A government will usually find it worthwhile to have about a dozen peers on the government payroll as ministers or junior ministers. The opposition (at present, the Parliamentary Labour party) ought to be allowed to nominate an approximately equal number of full-time parliamentarians for its front bench in the Lords, to be paid a normal MP's salary. When the Liberal party or any other party gets more than a certain proportion of votes (not seats) at general elections, it might be reasonable to give it an entitlement to a small number of paid parliamentary peers too. This idea of having a small corps of adequately paid parliamentarians in the Upper House is the principle that has long been advocated by *The Economist* under the slogan of having "some players as well as gentlemen in the Lords."

There may now at last be some hope of it being effected.

Life peerages, *per se*, are a different matter. The experiment with life peerages in the last few years has been a reasonable success; on the whole it would probably be better to have more of them. As a general rule, it would be a good thing to give the whole corps of potential royal commission chairmen—the Sir Oliver Frankses and so forth—a forum in the Lords. The main objection to giving more life peerages seems to be the democratic revulsion against having too many people entitled to call themselves "Lord" hanging around. The best, but unimportant, solution to this might be to say that henceforth life peers should not necessarily be entitled to call themselves "Lord"; just as a Mr Smith can become First Lord of the Admiralty, so he might well be nominated, as plain Mr Smith, to become a Lord of Parliament. But life peers who are not to be full-time parliamentarians should not be chosen on a "balanced" party basis; the more of them who are non-party men, the better—as with royal commission chairmen.

Hereditary peers are the useful lump to prevent this brilliant leaven from making the House of Lords into too important an assembly. That is why radicals should regard with some suspicion any attempt to rob the more lumpish peers of their rights of attendance. The "Swinton committee" system that has been in operation during the last few years—whereby peers who do not bother to say that they are going to turn up some time in any session may lose their right to turn up ever—has not so far had any unfortunate political con-

sequences. But Lord Salisbury's favourite scheme, whereby hereditary peers would nominate the 200 or so most politically-conscious of their fellows as members of the House, could lead this politically-conscious 200 to have an altogether exaggerated view of their rights to political importance, par-

## Scots At Home

In most Scottish council houses, the telly costs more than the rent

THE Secretary of State for Scotland must now be working out details of a new Housing (Scotland) Bill, which he will be obliged to introduce some time next year in order to come into line with England. By far the most useful thing Mr Maclay's bill could do would be to grasp the nettle of local authority rents—more purposefully than Mr Brooke's present bill does for England and Wales. If Mr Brooke thinks his councils need persuading, he can thank his stars he is not called upon to encourage the Scots. The average English local authority draws over two-thirds of its housing revenue from rents and less than one-tenth from the rates: the rest is made up by Exchequer subsidies. Before the war the Scottish local authorities made no heavier call on their ratepayers either. But since then, led by the Labour-controlled councils in the industrial belt, the Scottish practice has been to turn the screws on the ratepayer alone. By last year under one-third of the average council's housing revenue came from rents, one-third from the Exchequer, and over one-third from the ratepayers.

This simply means that, during ten years of Conservative government at the centre, the Labour party in Scotland has contrived to put through a housing policy totally at variance not just with that of Tory councils but with Labour practice in the rest of Britain. Compared with the Scottish average, the Labour party in St Pancras was grinding the faces of the poor. Nothing that successive Secretaries of State for Scotland have done has ended this improvidence.

There have been repeated attempts at cajolery. Five years ago a working party set up by the Secretary of State tried to shame the chief offenders into action by showing that occupancy of a postwar four-apartment council house cost, in rent and rates, £16 less a year in Glasgow than in Liverpool (and even £5 less than in under-employed Belfast); that a Clydebank shipbuilder paid £24 less than a Barrow one; and a Lanarkshire miner £33 less than a miner in Ebbw Vale. But no one was shamed into anything. In 1958 the Secretary of State had to descend on Glasgow with a public inquiry, based on the Labour council's failure to undertake a *bona fide* review of rents under the Housing (Scotland) Act of 1950; the result was to raise the average rent in the city from 5s. 2d. to 7s. 8d. a week. Even by this largely nominal increase, Glasgow lifted itself well clear of the Scottish Office's immediate sights.

Last January the Secretary of State turned his legal siege train on Dunbartonshire (average rent 2s. 10d. a week), and this month the county council reluctantly proposed an average of 7s. 5d., including temporary as well as permanent houses. To the council's mortification, and the evident alarm of other councils below the mark, Mr Maclay has refused to accept

particularly during the tenure of office of any future Labour government. It is to be hoped that the new inquiry does not lead to any development of that sort. Certainly, in our view, Labour would be right to resist it. But it should co-operate with the committee to press forward the other minor reforms.

the new average as reasonable—the first sign that he may at last mean business in defining what reasonable means. There seem to be some official hopes that, if Mr Maclay gets tough with Dunbarton, there may be automatic increases elsewhere, and a good deal of diligent jogging of elbows is, in fact, going on. The first response has, however, been from Roxburghshire, a small Border county with fewer than 1,000 council houses and higher than average rents. The hard core of resistance remains in the Labour councils, who are up in arms politically over Government interest charges and who claim (like Dunbarton) that as a matter of social principle council housing charges should properly fall on the rates. If the Secretary of State wished, he could turn his artillery on them in turn; but this is a costly and time-consuming business. Has he to wield a sledgehammer to crack every little nut like Saltcoats (average rent 5s. 4d. a week, last revised in 1937)?

PERHAPS there is a case for giving persuasion one final, and strictly limited, chance. Patience was, in fact, argued by one of Mr Maclay's junior ministers at the annual conference of the Scottish Unionists (the name the Tories go under north of the Border) last week. With unjustifiable meekness, although most of the right points had been made from the floor, the party agreed that to sustain the remaining privileges (and abuses) of local government was better than legislation to bring the offenders into line. The Tories would have done better if they had served notice that, unless persuasion works wonders in the next six months, they would insist on using the next Housing Bill to ensure that council rents should not fall below the revised valuation figures (which are likely to work out at an average of £40-£45 a year). Since it costs £76 a year to provide and maintain the average council house in Scotland this charge would still fall well below the imposition of economic rents. In view of the cost of new building it would fall even further below "replacement cost" rents which would provide an economic incentive to build new council houses; the economic rent to cover the costs of a new council house in most places must be nearer to £200 a year.

Nobody (or at least no politician) is suggesting that Scottish council house rents should be made to leap at once to a full economic level—although Scottish cities should certainly take a new look at differential rent schemes and the ways in which some comparable councils in South Wales balance their housing accounts (Cardiff takes no subsidy from the rates at all). It may be reasonable that Scottish rents should settle down for a time generally below English levels: the latest figures suggest that Scottish earnings are about 7 per cent below the English and Welsh average. It is also true that before the war—although by no means so much since—

### The Economist

APRIL 27, 1861

#### SOCIAL LIFE IN ENGLAND

SILAS MARNER: THE WEAVER OF RAVELOR.  
By GEORGE ELIOT. Blackwood. 1861.

THIS tale is a permanent and no trifling addition to the wealth of English literature. There is no element of power wanting to make it more impressive, and no element of beauty wanting to make it more attractive. The conception is as fine as the execution is marvellous. It does not approach in tragic power some parts of "Adam Bede", because the scope of the narrative will not admit of it,—but it is a more perfect whole; and a more unique and subtle, though not so deep an interest constitutes the plot. No book that we have ever read combines so completely the broadest masculine power with the most delicate feminine insight and finish. Nor is there, as far as we have noticed, a single cynical Thackerayism about the book like those which so often disfigure the introductory discussion-paragraphs to the various chapters in "Adam Bede". . . . One of the most striking features in this striking tale is the strong intellectual impress which the author contrives to give to a story of which the main elements are altogether unintellectual, without the smallest injury to the verisimilitude of the tale. There is no character delineated through whose mouth the author could express a subtle thought without impropriety;—and she herself indulges very sparingly in the descriptive comment which formed so large an element in "The Mill on the Floss" and "Adam Bede". Yet not the less is the tale a most intellectual as well as graphic picture of the most unintellectual social life which has been known in England during the last fifty years. This is managed in various ways. From the outset the eye of the reader is fixed on the psychological facts which the story is intended to illustrate, though there is no attempt to analyse or discuss their metaphysical origin. Again, the intellectual effect is throughout produced by the kind of humour shown in the selection of the traits of life delineated. The turn given to the conversation of the peasants, though never untrue or unreal in them, has almost always a distinct relation to the intellectual forms of the same questions as discussed in modern times by the educated classes,—and hence there is a subtle undercurrent of humour which betrays the mind of the writer even in her most happy delineations of the rural peasantry whom she portrays.

Scottish council dwellings tended to be one room smaller than those south of the Border. No one is going to worry very much about the Highland counties, with a handful of council houses, that have special financial problems. But the fact remains that too many Lowland Scottish councils have paid no regard to the changing value of money, so that real rents in each of Scotland's four big cities are below pre-war levels. Councillors have ignored the rising scale of earnings among council tenants. And they have done this knowingly. The report on Dunbarton spoke of "cynical and deliberate disregard of the duty of trust . . . towards the general body of ratepayers." It is doubtful if mere persuasion can change this attitude now.

The idea of wildly uneconomic housing has become ingrained, partly through doctrinaire ideas; partly as a device to secure political power (in 14 of Scotland's 20 large burghs over 40 per cent of the dwelling houses are owned by the local authority); but mainly through the sheer inertia of the communities concerned. The consequences for the Scottish economy are increasingly visible. Most of the worst offenders need new industry and ask for it unflaggingly. Do they think their rates are an incentive? There are many Scottish workers who ought now to be changing their jobs from the declining to the developing industries. But it is understandable that if a man has a council house at less than the weekly hire of his television set he is not going to budge. If the local authorities are going to pay the teachers more, and meet the rising cost of all communal services, they cannot expect to attract new economic blood by simply adding the whole burden to the existing rates. Hawking round for development grants would be more impressive if some of the cosy subsidising at home were cut out.

Scotland has had to tackle an immense problem in improv-

ing its housing conditions since the war, and an appreciable rating contribution is not inequitable in the circumstances. But the process has plainly gone too far, with the result that authorities that ought to be building still more houses have already saddled themselves and their ratepayers with a crippling burden of debt charges. The reform that is needed is not a drastic or anti-social one, even if it is imposed from

| Cities:—          | Number of Council Houses Pre-war | Post-war | Ave. rent (per year) £ | Housing Revenue Account |        |       | Rates (per £1 valuation) |
|-------------------|----------------------------------|----------|------------------------|-------------------------|--------|-------|--------------------------|
|                   |                                  |          |                        | Rents                   | Grants | Rates |                          |
| Glasgow . . . .   | 52,074                           | 56,647   | 22.05                  | 33.0                    | 37.5   | 36.0  | 27s. 7d.                 |
| Edinburgh . . .   | 15,081                           | 19,425   | 28.91                  | 46.0                    | 31.0   | 22.5  | 18s. 0d.                 |
| Large Burghs:—    |                                  |          |                        |                         |        |       |                          |
| Clydebank . . .   | 2,354                            | 4,006    | 13.55                  | 19.0                    | 25.5   | 53.0  | 28s. 11d.                |
| Dumfries . . . .  | 1,706                            | 2,349    | 32.65                  | 46.5                    | 33.0   | 19.0  | 22s. 0d.                 |
| Small Burghs:—    |                                  |          |                        |                         |        |       |                          |
| Saltcoats . . . . | 796                              | 1,375    | 13.67                  | 21.5                    | 38.0   | 39.5  | 24s. 0d.                 |
| Cowdenbreath . .  | 762                              | 1,154    | 27.26                  | 48.0                    | 34.0   | 17.5  | 23s. 0d.                 |
| Counties:—        |                                  |          |                        |                         |        |       |                          |
| West Lothian . .  | 2,506                            | 3,617    | 15.67                  | 19.5                    | 30.0   | 50.5  | 23s. 9d.                 |
| Dumfriesshire . . | 239                              | 2,610    | 49.07                  | 24.5                    | 34.0   | 39.5  | 18s. 6d.                 |
| SCOTLAND . . .    | 212,641                          | 291,780  | 21.84                  | 31.5                    | 32.8   | 34.7  | 23s. 7d.                 |

above. As illustrations of what needs to be done in each category of council—and of how wide the variations within each category are—the figures in the table for 1960 printed above seem relevant. It will be seen that even the county with the highest average rent in the table (Dumfriesshire with an average rent of £49.07 a year or about 19s. a week, but mainly postwar houses) has a 39½ per cent contribution from the rates. The large burgh with the lowest average rent in the table (Clydebank with £13.55 a year or just over 5s. a week) has a rate contribution of 53 per cent.

qua non of a conference. Although American officials have expressed scepticism that a British-Russian appeal for a cease-fire will be effective, there is no disagreement between London and Washington on the absolute need for one. The Foreign Secretary told the Lords on Tuesday that Mr Gromyko had assured Sir Frank Roberts that the Soviet government was genuinely anxious for an immediate cease-fire. Mr Gromyko, added Lord Home, fully understood that the British government would not be prepared to negotiate under the threat of military action.

It would be surprising if the Chinese or the Vietnamese communists, who virtually created the Pathet Lao, were to share Mr Gromyko's belated enthusiasm for a cease-fire. Indeed, memories of Dien Bien Phu and of Geneva, 1954, will tempt the Vietnamese communists to urge their Laotian allies on, even though the Pathet Lao—like Prince Boun Oum's government—has publicly welcomed the British and Soviet messages. The past week has indeed brought further military successes to the Pathet Lao and its "neutralist" allies under Captain Kong Le. The course now proposed is the best that circumstances will allow; but unfortunately, there is every chance that the May conference, like its precursor in 1954, will meet in conditions that give a negotiating advantage to the communist side.

## Unhopeful Conference

The Laos negotiations promise to start with the West at a disadvantage

IF, between now and May 12th, the Laotians have ceased firing at each other, there is a reasonable prospect that fourteen countries concerned in one way or another with the Laotian problem will meet at Geneva and try to solve it. On paper, the prospect looks firm enough. The British and Soviet governments, as "co-chairmen" of the Geneva conference of 1954, which ended the Indochina war, issued three joint messages on Monday. The first was an appeal for a cease-fire in Laos; the second called on India to reconvene the disbanded international control commission, which is to make sure the cease-fire is observed; and the third was an invitation to the fourteen governments to a conference at Geneva to consider a settlement.

The Foreign Office and its man in Moscow, Sir Frank Roberts, are to be congratulated on the patient diplomatic exchanges that made agreement between the co-chairmen possible. The agreement does, however, rest on precarious foundations. The three messages say nothing about halting the flow of arms—Russian to the communist-led Pathet Lao forces, and American to the pro-western government of Prince Boun Oum; nor do they specify that an effective cease-fire is a *sine*

## NOTES OF THE WEEK

### TORY SLUMP

### What Now?

THE lesson that most politicians refused to imbibe from the county council elections has now been confirmed by last week's two parliamentary by-elections. The Conservative slump is on. Nearly half of those who had voted Conservative at Warrington in 1959 did not turn out to vote Tory again last week; at Paisley nearly three-quarters did not do so. At Warrington most of the Tories' lost legion were abstainers: the newly appearing Liberal there, campaigning largely on the unfairness of the budget, picked up a rather measly 12½ per cent of the poll, of which just over 12 per cent came from the Tories and just under ½ per cent from Labour. At Paisley, many more of the deserting Tories went Liberal: the Liberals' resplendent Mr Bannerman, campaigning on the fact that he was Mr Bannerman, picked up a nearly triumphant 41½ per cent of the poll, of which 29½ per cent came from the Tories and 12 per cent from Labour.

The Tory slump has thus not yet gone as far as in 1956-58, when almost any newly appearing Liberal was liable to pick up over 20 per cent of the poll from them, and when the Tories were liable simultaneously to lose a few percentage points to Labour as well. But British politics will now be operating in a changed situation. On the Opposition side, the big questions will be whether the realisation that Mr Gaitskell might after all be the next Prime Minister will bring waverers in the parliamentary party back to his side; and whether he will be bold enough to use this accretion of strength to cut the left wing of his party adrift—or whether he will go on worrying incontinently about which way which unions will vote on nuclear disarmament. For the Liberals the questions will be whether some by-election may crop up where they can win a Tory seat (there are several constituencies where they now could do so); and then whether they will this time learn that they cannot make lasting advances by saying things they think will sound popular but only by determining to sound controversially distinctive. But the most important immediate question will be the effect of this new situation on the policies of the Government.

During the 1956-58 Tory slump, there was a general myth that the abstaining Tories came from the right-wing middle classes. This time, the swing is more generally believed (as a matter of fact, mainly wrongly believed) to have come after the surtax concessions and after talk of flogging and signs of Salisburyism; there may therefore be a greater feeling that the

people who have to be placated now are the left wing. This could have some important results; in particular (see page 421) there are already signs that Mr Macmillan may be rather surprisingly ready to brave the criticisms of his right wing by making a more determined economic advance towards Europe.

### NEUTRALS

### Shoot the Ref

IT is cheering to be reminded, by Mr Kennedy's speech to American editors on April 20th and Mr Khrushchev's chatty day with Mr Walter Lippmann a week earlier, that both leaders see the world struggle as essentially non-military. (Mr Lippmann's long interview was published in the *New York Herald Tribune*.) There is also a striking (if less cheering) parallelism between the President's urgent warning that "the complacent, the self-indulgent, the soft societies are about to be swept away with the debris of history," and the Soviet leader's expression—not, of course, for the first time—of his "unqualified faith in the predestined acceptance of communism by the underdeveloped countries," in Mr Lippmann's words.

Walter Lippmann: a chatty day with Khrushchev.

On the other hand, a very sharp difference emerges in regard to "neutrals." Mr Khrushchev acknowledges, and to some extent appears to welcome, the fact that America has abandoned the idea that neutralism is immoral. But almost in the same breath he insists that "while there are neutral countries, there are no neutral men." Nowhere among the neutralist but non-communist countries is there a man he

would trust to administer a ban on nuclear tests, to run the United Nations secretariat, or to act as referee or umpire between east and west in any other capacity.

This new communist dogma has slowly emerged during the welter of abusive attack launched at Mr Hammarskjöld since last September. Now it is stated more categorically than ever. Its implications go a long way. If no man in the world, however conscientiously he may try to subordinate his other loyalties to serve an international ideal and scrupulously carry out an agreed mandate, can be trusted, there is little hope of strengthening the peace-keeping powers of the United Nations or of building up a system to supervise and enforce general disarmament. The self-cancelling triumvirates which Russia now wants to see in charge of all important international activities would inevitably block any such developments. But the oddest thing of all is that Mr Khrushchev's newly categorical distrust of all neutrals should come cheek by jowl with his assurance that most of the countries now classed as neutral are bound to swing to communism. Perhaps he does not really expect to see them do so in his own lifetime. Certainly he has had some disenchanting experiences in his efforts to align Asians and Africans with Russia on such questions as the Congo and disarmament.

### NUCLEAR WEAPONS

### To Have and to Hold

SINCE his return from Washington on April 19th Dr Adenauer has tried hard to dispel the widespread impression that Mr Kennedy wants to limit the delivery of atomic arms to west German forces. He told the Bundestag on April 21st that he and Mr Kennedy were agreed that Nat should build up all its armaments, conventional and atomic. Herr Strauss, the west German defence minister, has been backing him up.

In this complicated matter, the generalities of statesmen as well as the detailed schemes of the soldiers can be interpreted in different ways. At this late stage, when German forces are already in possession of tactical weapons, like the Honest John missile, which can deliver nuclear warheads, and are preparing to receive the F104 fighter-bomber, which can carry a small atomic bomb, it may not be easy for Mr Kennedy to deny to the west Germans the physical possession of these means of delivery. What he can do, however (and what he seemed to be driving at in his defence message to Congress last month), is to dissuade the allies from basing their tactics on the assumption that nuclear warheads

will be used; in other words, he can try to ensure that "nuclear-capable" weapons are simply held in reserve as a deterrent to prevent the Russians from using theirs. Such a policy would involve radical revision of Nato's present tactical doctrine, a thing that defence ministries, and Herr Strauss particularly, naturally find upsetting.

Mr Kennedy is also in a position to prevent the over-hasty spread of strategic weapons in Europe. The reinforcement of America's strategic armoury which he has now set under way removes some of the urgency from Nato's search for bases for intermediate-range missiles in Europe. The political advantages of limiting the distribution of these weapons—to keep open the possibility of negotiation about disarmament or about central Europe—are so plain that only urgent military necessity should be allowed to overrule them.

#### SIERRA LEONE

### Poor But Free

**I**MPOVERISHED, small and divided: drawbacks that were at one time thought insuperable obstacles to independence melt in the hot African wind. Sierra Leone, which celebrated its independence on Thursday, has fewer than three million people, with an estimated income of £15 a head a year, a vulnerable economy dependent on the export of minerals, and a government

Third black member:  
Sir Milton Margai

precariouly bridging the classic gulf between an advanced urban minority and a backward tribal majority. Nevertheless, constitutional development in Sierra Leone has gone ahead smoothly enough for the territory to take its place as the third black member of the Commonwealth.

The smoothness of this week's celebrations was safeguarded by the precautionary arrest of most of the key figures in the opposition All People's Congress, including the party leader, Mr Siaka Stevens. The political split is a reflection of the division

#### NOTES OF THE WEEK

between colony and protectorate. The colony, which consists of Freetown and the area immediately surrounding it, was founded at the end of the 18th century as a dumping ground for liberated slaves. Much later, Freetown's schools and colleges and the relative sophistication of its people won for it a reputation as the "Athens of West Africa." But the protectorate, which is about the size of Ireland, did not share this advance; it came under British control about a century later than the colony, and remained tribal and agricultural.

The first serious attempt to unite the two parts of Sierra Leone was made by the present prime minister, Sir Milton Margai, when he formed his National United Front about a year ago. Sir Milton, a wily and experienced politician, the first doctor to qualify from the protectorate and the grandson of a famous warrior chief, is no man to be bossed by the colony. Several colony politicians joined his national front; the more radical are now expressing their active opposition. The prime minister's task of political bridge-building is formidable; his economic problems even more so. Sierra Leone's agriculture is backward, its industry almost non-existent, and in the past the export earnings that came into the country despite the smuggling of diamonds (now virtually checked) have not been put to any great use. Investment is needed in farming, fish and meat production, and, possibly, certain consumer industries. For this Sierra Leone makes a serious claim on outside attention and help.

#### AFRICA

### Congola Continued

**A**PRIL has been a cruel month for military coups. Cuba, Algeria, and, much less conspicuously, Portugal have all demonstrated this. They have also demonstrated the woes that collision with an exploding nationalism may bring. Portugal's contribution to the picture is the rapidly deteriorating situation in northern Angola, where, amid increasing savagery on both sides, something like an Algerian-type war is unmistakably developing. It may, indeed, have been an awareness of the parallel, and an anxiety to maintain "Portuguese Angola" that induced certain generals, in the most legal way possible, to try to dislodge Dr Salazar on the 13th of April. (The Algerian parallels are superabundant.) They entreated the Portuguese president to dismiss the prime minister-dictator; but he stood by "the only great statesman of the century apart from Churchill," and that was that. Dr Salazar's critics, who thought him sluggish, have found that he is not; he has taken over the ministry of defence and is pouring reinforcements into Angola.

Both Angola's rebels and its refugees have crossed the Congo border in large numbers. Between Luanda and Leopoldville the people are mostly Bakongo, President Kasavubu's tribe; half of the

#### THE ECONOMIST APRIL 29, 1961

Bakongo live in Portuguese territory, providing an ominous link between the two hitherto separate areas of conflict. Wednesday's brief arrest at Coquilhatville of Mr Tshombe, the Katanga ruler, by Mr Kasavubu's troops was a sharp reminder of the flimsiness of the recent accords that were supposed to have closed the rifts between the anti-Lumumbist Congolese factions. Mr Tshombe had huffed out of their latest conference, protesting at Mr Kasavubu's new moves toward rapprochement with the United Nations—with which his own Katanga regime remains at loggerheads, in particular over his defiance of the UN ban on foreign mercenaries. Perhaps his painful experience on Wednesday will lead him to reflect that he may yet need what others have been glad of: protection by the UN force against arbitrary arrest.

#### DOCK STRIKE

### Tooley Street Again

**A** STRIKE is spreading through the London docks again, on a pretext even more trivial than usual. A company operating a small dock at which a barge arrives about once a month had applied to the Dock Labour Board for permission to use its own employees for unloading. It said that regular dockers had generally been unwilling to turn up for such very casual labour. Permission was granted, as is customary in such cases. But the regular dockers would not accept the removal of even this amount of work from their preserve, even though it was work that they had often been unwilling to do. By Thursday morning 12,156 men were on strike in the Port of London.

It is four months since workers in the Port of London last "had a go," the people involved then being the tally-clerks, not the rank-and-file dockers. Unrest is endemic among the clannish, fiercely independent dock workers, particularly when work is slack: at such times many of them may take home only £7 a week in fall-back pay, while in busy times they earn up to £25 or £30. There have been nearly 4,000 dockers on fall-back pay in the past week, so that the employment of outside workers has been particularly resented; but no doubt if this grievance had not presented itself others would have done as well.

Not only do dockers' earnings vary enormously from week to week; the conditions of work and the reward for a given amount of effort are also beyond their control. The dockers' trade union officials are competent men, but their membership of the Dock Labour Board inevitably causes their members to regard them more as employers than as allies, which leaves the way clear for the unofficial agitators who are a traditional part of the East End scene. No one has yet worked out a way of giving the docker a sense of security when the demand for his labour fluctuates with the seasons and with the vagaries of world trade (and

# EXPRESS SUCCESS!

## WORKS TODAY — SHIP TOMORROW!

Ex works today, alongside the ship tomorrow morning — this is the success story of Export Express. This great factory-to-port service for full wagons and container loads gives exporters next-day delivery to the quayside from the major industrial centres of the London Midland Region.

The service is simplicity itself. There is no additional charge, no extra formalities — yet the exporter has the advantage of a fast dependable service with priority trains running to timetabled schedules.

From its inception, Export Express was welcomed by manufacturers as promising their goods a safe, sure start to their journey overseas. Can Export Express make your job easier? Ask your Station Master or Goods Agent about this brilliantly successful service.

EXPORT EXPRESS— PART OF THE NEW LOOK OF TODAY'S

# LONDON MIDLAND

many of the men fear that a greater degree of decasualisation would, in removing the risk, also remove the occasional chance of very high earnings). It is becoming more and more obvious that the report of Lord Rochdale's committee of inquiry into the working of the docks ought to be a very radical document.

### OECD

#### Mainly a Forum?

How important a body is the new Organisation for Economic Co-operation and Development going to be? Massive expectations should not be aroused, even although the American team at last week's ante-natal meeting in Paris contained so many of President Kennedy's most brilliant and articulate economic advisers (including Messrs Heller, Triffin, Tobin, Roosa and the central bank chairman Mr Martin). Nominally, OECD has three things to interest itself in: trade, aid, and discussion of economic co-operation. Its trade functions are likely to remain in abeyance until Europe's six and its seven come together. Britain, for one, is quite sure that OECD would not be the right body through which to try to arrange either the preliminaries or the later hard details for that marriage settlement; it is too far removed from high politics for the first job, and too diffuse for the second. As for aid, the old Development Assistance Group is about to become the Development Assistance Committee of OECD, with a permanent chairman; it will busy itself with making estimates about which countries could afford to make bigger contributions, and will try to prod forward the laggards. But there is unfortunately no indication yet (indeed rather the reverse) that there will be any attempt to channel any really ambitious and entirely new forms of aid through OECD itself.

It was therefore with general discussions about future economic co-operation that last week's meeting was mainly concerned; it has set up two working parties—on means of securing economic growth and on the impact of monetary and fiscal policies on balances of payments. But even when these —no doubt interesting—reports are written, the senior civil servants who were at this Paris meeting obviously cannot translate them directly into policy changes. Their meeting was less important in that respect than the usual monthly meeting of European central bankers, who can make decisions about things that they themselves will actually do, such as not converting their sterling balances into gold (with the additional advantage that they do not have to tell everybody everything about them). As things are developing therefore, OECD's main immediate function seems likely to be as a useful forum where top economic advisers to governments in Europe can have more regular personal contact with their bright new American

### NOTES OF THE WEEK

counterparts. "And Paris," said one delegate, even among this week's alarms, "is a good place to have these contacts at."

### LATIN AMERICA

#### One Green Light...

SEÑOR ALVARO ALSOGARAY, who at President Frondizi's request has resigned his job as Argentina's minister of economy, was brought into the government two years ago to enforce and to publicise the austerity programme. Now the policy itself is so deeply out of favour that its publicist no longer fits into President Frondizi's juggling act. The policy indubitably produced results: the cost of living has been held moderately steady, and foreign banks and investors have responded liberally to the evidence of Argentina's economic self-discipline. But, over the last few months, industry has joined with the trade unions in insisting that it was time for change. Argentina's economy has long floundered in a slough of inactivity, and Sr Alsogaray's pleas for another year or so to finish the operation fell on unsympathetic ears. Even the army pressure groups who were once his main support have, for reasons of their own, disowned him.

Argentina's economy is paralysed by the inadequacy of the country's communications system, and no private investor will consider putting money into roads or, even less, into the inefficient and over-staffed state railways. Sr Alsogaray's fall was finally brought about by his opposition to the very large increase in the budget deficit demanded by the minister of public works for roads, railways and houses.

The minister's resignation, and his replacement by Dr Roberto Alemann, economic counsellor in the Argentine embassy at Washington, suggests that Argentina may be ready to start recharging its economic batteries. President Frondizi will have many groups, usually at discord with one another, behind him in his efforts. And one formidable opponent is, at least temporarily, out of the way. Earlier this month, the president out-bluffed his turbulent commander-in-chief, General Toranzo Montero. This has happened before, but this time the general has thundered his way right out of his job.

#### ... And One Red

WHILE Argentina prepares to speed up, Brazil has signalled that it is prepared to hold back its economy. Faced with the accumulated debts left by Sr Kubitschek, President Quadros has reacted first by cutting down government spending, and, secondly, by asking for money from the United States and western Europe. His most important move so far has been to double the import exchange rate for wheat, fuel and newsprint, thus making these imports more expensive and coming closer to

the International Monetary Fund's precept of a single exchange rate. The United States, urged on by the shadows of *fidelismo*, has responded eagerly to these signs of concession; the European banks, less on their toes over Cuba, have shown themselves less impressionable.

One of the more articulate critics of Sr Kubitschek's economic policy, Dr Roberto Campos, is now in Europe trying to extend existing loans and to raise a hefty stand-by credit. British banks are negotiating separately, and stiffly, with Dr Campos; but on the Continent, *Crédit Lyonnais* has taken the initiative in arranging a joint meeting of European commercial banks. Bankers from France, Germany, Italy and Switzerland were due to attend this meeting in Paris on April 28th. In laying a steadying hand on the momentum of Brazil's economic development, Sr Quadros risks much; his courage could have catastrophic results if outsiders fail to help him.

### PUBLIC INQUIRIES

#### The Whole Truth?

THE House of Lords has been looking into two vexed questions over the procedure which should be followed after the holding of public inquiries. Both have stirred up minor hornets' nests of criticism for the Government, and both raise points for departmental attention in the future. The first concerned the Saffron Walden chalk pit case, where the Minister of Housing overruled his inspector's conclusions on the basis of technical information obtained subsequently from his own department and the Ministry of Agriculture. The Lord Chancellor contended that the Minister ought not to have to give aggrieved persons a subsequent chance to rebut advice obtained from his own department, and pointed out that the Ministry of Agriculture's advice was on this occasion of secondary importance. On the basis of the information so far available, it is still probable that the Minister's eventual decision was the right one. But the fact remains that public inquiries lose their point if the critical information, wherever it may be located, is not available. On this occasion the trouble might have been avoided if the local planning authority had sought adequate technical advice before reaching its original decision.

The second question is whether parliamentary discussion of the merits of a planning appeal may upset the inspector's impartiality in weighing the evidence. At the time of the Oxford ironstone inquiry the Lord Chancellor went so far as to suggest that such cases should, in a sense, be regarded as *sub judice*, a view which overlooks the fact that major issues of public policy may be in dispute. Given the virtual irreversibility of Ministerial decisions, it would be wholly wrong to shackle public discussion of these issues while the chance is there. It also seems slightly absurd to

suppose that inspectors would be thrown off balance by their Lordships' measured words while remaining impervious to press or television comment. On Tuesday, Lord Hailsham expressed a much modified version of the Lord Chancellor's view, but he also suggested that "the House would do well, on the whole, to respect the independence of the inspector."

The weak element in the inquiry procedure is not public comment, whether inside or outside Parliament; nor is it the danger that the inspector's impartiality may fail him, or that he will be too often overruled. The main problem is still that important facts and opinions are too often not presented at public inquiries, and that the Minister's private sources of information have to make good what could have been sensibly revealed and discussed earlier.

#### DIPLOMATIC IMMUNITIES

### Unpopular People

THE Lords decided to give Lord Lansdowne a rough passage on Tuesday when he introduced orders to give diplomatic immunity to the staffs of the European Free Trade Association and the Organisation for Economic Co-operation and Development. After a short exchange of fire the Efta order was postponed, and the OECD one got through only when it had been revealed to their Lordships that the organisation was the familiar OEEC writ large and that any delay (on Lord Hailsham's word) would gum up the works of general ratification. It may not be complimentary to Efta to treat its servants with such lordly suspicion, but it is no bad thing to encourage the others by making it clear that privileges are not necessarily granted

#### NOTES OF THE WEEK

to every visiting diplomat (and his clerk) by automatic right.

There are now some 6,000 personages (including 1,800 wives of personages) who enjoy full immunities in this country. The feeling that diplomatic status has been carried too far owes something to mild xenophobia. But it has been reinforced by sufficient doubtful cases, in which the individual citizen has had difficulty in obtaining proper redress for a wrong done, for Parliament to be perfectly justified in asking questions whenever a new body comes along. The argument for giving reciprocal immunities is entirely valid in relation to countries where legal principles are as much honoured in the breach as in the observance. But there is a case not only for re-examining the precise categories which now receive these privileges (OECD has improved on OEEC by leaving families out) but also for trying to get bilateral arrangements to reduce the number of the diplomatically immune, with countries that have roughly the same legal standards.

Efta itself is as good a claimant under the present system as any, and it ought not to be penalised simply because it is a late-comer. Yet would it really be invidious for Britain and (say) Efta's Scandinavian members to reach an understanding on their members of its staff, an arrangement that could eventually be extended to cover their mutual diplomatic representation as broadly as possible? Instead of a growing section of the public resenting all cars with CD plates, attention would then be concentrated on the real culprits, whose diplomatic status is one that usually has to be tolerated, rather than welcomed, in every sense.

#### FIVE-DAY WEEK

### Kipps's Weekend

WITH an anxious eye on their recruitment problems, more and more shopkeepers are trying to find ways of giving their staffs two days off in the week, in keeping with offices and factories. The National Chamber of Trade, at its annual convention of small shopkeepers, has now come out in favour of the five-day week; the Chamber, though, would like legislation to impose compulsory closing for a full day during the week, or to impose yet another compulsory half-day of closing. But if legislation is needed, it should surely be in favour of the shopper, and the best way to help him—and the shops—would be to cut down the restrictive laws which govern hours of opening. The odd thing is that it is now becoming increasingly obvious that this would also be the best way to help shop-workers towards a five-day week as well.

A few department and chain stores have already introduced five-day working for their staffs, within the statutory five-and-a-half day shopping week. But part-time workers to fill the half-day gap are often expensive in both money and customers' goodwill. Many more employers would

#### THE ECONOMIST APRIL 29, 1961

probably be willing to follow the plan which two large chain stores have suggested. Austin Reed's—with 32 retail drapery stores throughout the country—would like to keep them open for six days a week and work their staff for five days. Sainsbury's, with 260 food stores, are trying the experiment at eight branches of closing on Mondays, the slackest day for the food trade.

But, under present legislation, Austin Reed's cannot open six days a week without conducting a ballot of local shopkeepers in the same line of business on the abolition of the compulsory early-closing afternoon. Sainsbury's can close on Mondays only in areas where this happens to be the statutory early-closing day. Elsewhere they would have to close for another half-day as well. The compulsory half-day now shelters the small shopkeeper rather than his employee—and in doing so it subjects the shopper to fiddling regulations, and makes it more difficult and expensive for large stores to give their employees the long weekend they have come to expect. It is in the consumer's interest to do away with this anachronism.

#### UNITED NATIONS

### September to April

SOME commentators have blamed the seventeen new members admitted to the United Nations during the Assembly session that ended on April 22nd for the extraordinary length and untidiness of the session. This seems a little unfair. The seventeen newcomers (all African, except for Cyprus) can hardly be held responsible for the big-top circus act initiated by Mr Khrushchev last September at Turtle Bay, nor for the American election results. Between them, those two events ensured that the Assembly could not get anywhere near the end of its agenda in three months last year, and then could not usefully meet again until March 7th. Now it has managed to adjourn only by sweeping under the carpet such awkward questions, unlikely to evoke productive action, as Tibet and Russia's U-2 charges against the United States; and, much more regrettably, with them into at least a temporary limbo went the American project of a UN aid plan for Africa.

The Assembly's scramble to a bleary finish at six on Saturday morning was complicated by the irruption at a late stage of the Cuban issue, which inevitably raised the temperature of the last few days of debate to a level that affected reasoned discussion of other matters. The Latin American group played a sensibly moderating role over Cuba, producing the only resolution for which a majority could be found—a general appeal to all parties to do their best to reduce tension. But the same group was less happily responsible for the last-minute crisis over the financing of the UN operations in the Congo. Only after the defeat of an Afro-Asian call for further contributions had left the whole Congo programme momentarily facing collapse did enough

#### THE ECONOMIST APRIL 29, 1961

**3 National Best Sellers**  
(any questions?)

### Long Life

In a year, millions of cans of beer are enjoyed in pubs and homes throughout the country. Why? Long Life is the beer that suits today's taste—refreshingly light, clean and clear. It suits today's living too—light to carry, easy to cool and no clutter of empties to bother about. No wonder Long Life has set today's trends in canned beer drinking!

### DOUBLE DIAMOND

Our most popular bottled beer! Well over 100 million bottles worked wonders last year for the vast majority of British beer drinkers. And that's hardly surprising, for this is a real beer-drinker's beer. Strong but never heavy—brilliant and clear in the glass. Brewed by Ind Coope for everyone who ever deserved a first-rate beer. (And who doesn't?)

### SKOL

This light, dry, most successful lager has achieved a sales increase of 65% in the year when imports of Continental lager have actually dropped! Brewed with Swedish plant in the Continental manner. Skol, once a seasonal beverage, is now a full-time favourite—and more people are saying 'Skol' every day!

**IND COOPE**

BREWERS OF 3 NATIONAL BEST SELLERS

If you are a big industrial user...

... your electricity can cost you much less!

#### YOUR PROBLEM IS INESCAPABLE...

Heavy peak-load charges have always worried the big industrial user. For, in addition to paying for the units he consumes, he must pay a capital charge which is based on his peak demand—even if this lasts for no more than half an hour in the year!

#### ...BUT YOUR SOLUTION IS SIMPLE...

The Bristol Siddeley 3,000 kW turbo-generator is a reliable power source which radically reduces peak-load charges for a lower capital outlay than any other installation.

Powered by the Bristol Siddeley Proteus gas turbine engine which gives an exceptionally high output for its size, weight and cost, the Bristol Siddeley turbo-generator delivers 3,000 kW within 2 minutes of a cold start. The set, which starts and runs

#### BRISTOL SIDDELEY ENGINES LIMITED

TURBOJET • TURBOFAN • TURBOPROP • RAMJET • ROCKET ENGINES • MARINE AND INDUSTRIAL GAS TURBINES • MARINE, RAIL AND INDUSTRIAL DIESEL ENGINES • PISTON ENGINES • PRECISION ENGINEERING PRODUCTS

automatically and entirely unmanned, can be housed in a small building with light foundations. It also has a remarkably low noise level and is very easy to maintain.

#### ...AND THE MONEY YOU SAVE IS CONSIDERABLE

The complete cost of a typical 3,000 kW Bristol Siddeley pocket power station (engine, alternator, switch gear, building and foundations) is £29 per kW—lower than for any other set of comparable power. If, for example, you have an annual peak-load requirement of 200 hours, by using the Bristol Siddeley set you can save £10,000 in one year! And this is after all running and normal amortisation costs have been met.

A Bristol Siddeley 15 MW turbo-generator is now being built, and this first set has been ordered by the Central Electricity Generating Board for service in 1962.

For further information, please write to: Gas Turbine Sales Manager, Power Division, Bristol Siddeley Engines Limited, PO Box 17, Coventry, England.

Latin Americans—placated by assurances that they need pay only a fifth of their assessed shares—switch their votes to give the new \$100 million Congo fund the necessary majority.

#### ALBANIA

### Cuban Analogies

LAST week's landing in Cuba provided plenty of grist for communist propaganda mills everywhere. The Albanians, in the forefront as always, have shown themselves ingenious in turning the events in Cuba to their own account. The party newspaper, *Zeri i Popullit*, professed to find a "complete analogy" between the pamphlet denouncing Dr Castro's regime issued by the State Department early this month and a Yugoslav White Book denouncing the Albanian regime published about the same time. Both these "White Books with black contents" are, it is alleged, designed to encourage dangerous and criminal acts; the "aggression against Cuba" is likened to the abortive coup against Albania that Mr Hoxha alleges was attempted, with American and Yugoslav help, last summer. The article admits that the Yugoslav White Book was published after, not before, the alleged coup, but lightly—if not very convincingly—brushes off this discrepancy with the assertion that the delay in publication was due to the failure of the plot.

Mr Hoxha's regime probably has a particular reason for harping on the danger from external enemies. The *Zeri i Popullit* article also let fall the news that the regime will shortly hold a trial of a "group of traitors." Show trials are out of fashion in eastern Europe, but Mr Hoxha is still much of a Stalinist at heart and if he does stage one, it will be quite in character with his self-appointed role as odd man out. Whoever is put in the dock—and there have been many rumours recently of widespread arrests among Albanian Communists—will be accused of trying to overthrow the present regime with foreign help. But the real offence will be, no doubt, their opposition to Hoxha's championship of the Chinese in their ideological disputes with

the Russians. His determination to stick by his Chinese comrades shows no sign of weakening. The news this week that the Chinese have signed a generous technical aid agreement with the Albanians, and that the Chinese loan promised last February amounts to the equivalent of some £45 million, shows that Peking is not ungrateful.

#### BELGIUM

### Spaak Relit

FOR four weeks now since the general election, Belgium's political leaders have been struggling to find a way through the maze of party, religious and regional loyalties to form a government based on a balanced combination of parties. In the end the coalition government which took office on Tuesday fairly reflected the forces that brought the preceding Eyskens government down. M. Eyskens himself has gone. His Christian Social party has got rid of the Liberal partners whose right-wing inclinations were becoming increasingly irksome to left-wing Catholics, and has formed a coalition with the Social Democrats instead. The new prime minister is M. Theo Lefevre, leader of the Christian Social party since 1950. Sharing the honours as leader of the Socialists is M. Spaak, who is deputy prime minister, foreign minister, and head of the once important ministry for African affairs.

The cabinet itself is a careful balance, with eleven members from the larger Christian Social party and nine Socialists; five of each are in the inner cabinet of ten. There has also been a deal over the *loi unique*, in order to take into account some of the objections which set off the strikes at Christmas. A campaign is promised against tax evasion, new taxes on dividends; and there is to be some increase in the turnover tax, despite its impact on lower incomes. The Left is to be conciliated by increases in pensions, by dropping some proposed economies in unemployment benefits, and by some form of supervision of the big trusts and holding companies.

In one respect the new cabinet is better placed than its predecessor as it faces the

country's pressing economic problems. Over 40 per cent of Belgian exports go to Holland, France and west Germany, so the revaluation of the mark and guilder, together with the recent five per cent cut in French tariffs, are bringing benefits equivalent to those of a devaluation of the Belgian franc over nearly half of Belgium's trade. The world outside, however, may be less interested in the new cabinet's domestic economic problems than in its impact on foreign policy. It was in his last period of office as foreign minister that M. Spaak brought the Rome treaties into port. He takes up the post again just when the British relationship with Europe may be entering a decisive period.

#### ECONOMIC GROWTH

### To Plan?

FRANCE's economy has been growing fast: Britain's has not. France, on paper at least, enjoys central economic planning: Britain does not. Are these two sets of facts related? No clear answer emerged from the three-day conference on French economic planning arranged last week in London by the National Institute of Economic and Social Research. How could it? But at least a group of British economists and industrialists had the opportunity of hearing directly from some of the French planners how they set about their jobs, in what is clearly a pretty comprehensive and concerted effort. Behind the 30-man *Commissariat Général au Plan* are twenty-five working parties, involving the unpaid services of over 3,000 people drawn from industry, trade unions and public services. Each working party is concerned with a particular sector of the economy or with one of the common problems such as labour or productivity. The pieces of the jig-saw puzzle are now being fitted together into the fourth plan, within a framework set to expand 24 per cent in the four years 1962-65.

How modest in comparison is the only official target for British growth. Mr Butler's doubling of the standard of living in twenty-five years. Yet, for want of

anything better, this straw in the wind guides many firms' individual forecasts. Is Britain losing by fighting shy of national target-setting? The academic members of this conference were inclined, on the whole, to think yes; the industrialists were more sceptical. With a foot in either camp, Sir Robert Shone, who can claim that the Iron and Steel Board publishes for its own industry (see page 465) the only British plans geared to forecasts of national growth, was not prepared to believe that it was simply a common act of faith that secured the French an annual rate of growth twice as large as that in Britain. He would explain away part of the difference as due to France's higher rate of investment and greater labour mobility; it must also, and always, be remembered that, along with theoretical planning, France enjoys M. Rueff's economic liberalism.

Perhaps the real point is that, by publishing plans, France does manage to get worried when growth industries fail to reach the ambitious targets set for them. Britain tends only to get worried when declining industries fall below their "normal" rates of employment, and so it generally thrusts out government aid to its least economic industries instead of to its most dynamic ones.

#### WEALTH

### The Capitalists

THE total of accumulated personal wealth in Britain has always been a highly disputed figure, as well as not being an entirely meaningful one. When valuations for death duties come round, most people find that their families are officially

#### NOTES OF THE WEEK

richer than they had thought—partly because few people recognise themselves to be getting realistically richer when the open market value of the houses they live in gradually goes up. Nevertheless some interest attaches to some new estimates by Messrs H. F. Lydall and D. G. Tipping (in the current *Bulletin of the Oxford Institute of Statistics*) that personal wealth in Britain in 1954 was of the order of £40,000 million, or around £1,150 a head of the adult population. Pension and trust funds, which are excluded from the analysis, might bring the total to £46,000 million. Disturbingly shaky as the figuring is, based on estate duty returns and an unofficial savings survey, the authors believe they are nearer to the truth than other estimators, who have put the total appreciably lower.

Physical assets—land, buildings, trade assets and household goods—are reckoned to have accounted for about 30 per cent of people's wealth in 1954. A further 20 per cent was in company stocks and shares, 17 per cent in cash and bank deposits, 17 per cent in Government securities, and the remainder in building societies, life insurance funds and miscellaneous assets. Altogether, the authors believe that the British people had accumulated wealth equivalent to about four years' disposable income; for those with incomes over £2,000 the average holding was probably as much as ten years' income. At the top of the pyramid, the authors believe there were 20,000 persons with more than £100,000 each and an average holding of over £250,000; at the bottom, 16 million persons with less than £100 each and an average holding of less than £50.

Inevitably, wealth is still much more unevenly spread than income. In figures that are certain to be quoted all round the place, the authors estimate that in 1954 the top one per cent of British adults owned 43 per cent of total net capital, but the top one per cent of income-holders received only 5½ per cent of declared income after tax; for the top ten per cent the corresponding shares were 79 per cent of capital and 25 per cent of income. The concentration of wealth thus seems still to be greater in Britain than in the United States, although the distribution of income in the two countries is rather similar; the top one per cent of Americans in 1954 owned 24 per cent of personal wealth. In so far as these estimates have any implications for policy, they support the case for the recent surtax reductions—but suggest that it would be fair to follow them up by more effective collection of death duties (not necessarily at higher rates, but perhaps by the imposition of a general gifts-tax to cut down avoidance of death duties by transfers *inter vivos*).

#### SOUTH AFRICA

### No Golden Handshake

How many of Britain's many links with South Africa will survive unchanged

#### THE ECONOMIST APRIL 29, 1961

after May 31st will remain in doubt until the legal complexities have been sorted out. The Government clearly has no intention of trying to salvage them all. Mr Sandys was right, during Monday's debate on the Republic of South Africa (Temporary Provisions) Bill, to argue that simply to continue to confer Commonwealth privileges on South Africa after it had left the club would destroy the value of membership. The Labour Party's general view appears to come close to Mr Sandys's. Mr George Thompson put it neatly: while accepting the technical need for a brief standstill period, he argued that the Commonwealth must not only have, but must be seen to have, a different relationship with South Africa in future. Mr Sandys was definite on one point: that it was not intended to leave unaltered the right which at present South Africans enjoy to claim British nationality.

But, while Mr Sandys expressed a reluctance to destroy mutually beneficial links, the Opposition seemed to want to jettison trade preferences with South Africa, on the grounds that it would be a breach of Commonwealth solidarity even to hint that trade should continue on the same basis. This approach leaves on one side both the advantages British exporters of motor vehicles and machinery derive from present tariff preferences, and the fact that the Ottawa Agreement does not legally depend on Commonwealth membership (although the non-contractual preferences South African exports to Britain enjoy presumably do). A desire not to disturb trade preferences may not endear Britain to those who believe that unrelenting economic pressure is necessary to force South Africa to change its ways. But the Afro-Asian Commonwealth members should not forget that virtually the whole burden of disengagement from South Africa, psychological and material, is falling on Britain. Dr Nkrumah, for one, does not need reminding that Ghana's own vociferous advocacy of the boycott weapon has not prevented exceptions being made for imports of South African mining machinery.

Continuing uncertainty about future commercial relations with Britain will do nothing to check the continuing outflow of capital from South Africa, which has now pulled its foreign reserves down from £152 million at the beginning of 1960 to £84 million, despite the recent £14 million drawn from the International Monetary Fund. The Union's import controls have again been tightened, particularly on products that are available from local industry. Whatever the eventual decision on tariff preferences, British exports are therefore not likely to grow while South Africa hammers out the Schachtian weapons needed for survival in a siege economy. This week's non-stop South African Airways flight between Johannesburg and London (Nairobi may soon be closed to SAA aircraft as well as West African airfields) symbolically underlines the Union's withdrawal into isolation at the far end of a hostile continent.

## LETTERS

### Public Libraries

SIR—As Sir Alan Herbert knows, nobody gets fiction, or anything else, free from a public library. All the activities of a public library are paid for by the community, and the librarian is responsible to the community. This is really Sir Alan's complaint; he would have the librarian responsible to the book trade first, and only afterwards to the community at large.

There are indeed powerful organisations concerned with communication, such as the cinema and the newspaper and periodical press, which are not, even in Sir Alan's peculiar sense, "free." It is precisely because in these organisations the quality of communication is so often disregarded or deliberately debased for commercial reasons, that the public library has a special responsibility to avoid the concept of communication as a business transaction between "producers" and "customers." It is because there are, unfortunately, no "free" films that librarians must continue at least to circulate books without the pressure of the box-office.

Sir Alan selects four public libraries and shows that more than half the books they issue for home reading are works of fiction, implying by this that most of the work of public libraries is now concerned with "light" reading, a luxury that the community ought not to support. Being a novelist, he is forced to deny, in a jocular aside, the truth of this equation, fiction = non-educative distraction. What Sir Alan is doing is to measure the value of the work of a public library, using the issue of a book as his unit of measurement. You can no more accurately measure a public library by counting readers and book issues than you can a school by counting pupils and the examinations they pass.

Of course more money is needed for books and librarians (and not only in public libraries). Librarians have been saying so for years, and it is silly for Sir Alan to pretend concern with librarians' interests as well as his own, yet to say "I do not know exactly what the librarians want." He should ask the National and Local Government Officers Association and the Library Association if he is interested.

Sir Alan says that "Reform in fact is rather feeble on the wing"; but it seems likely that the two working parties considering the "technical implications" of the Roberts report are concerned with the establishment of minimum standards of public library provision, and some measures of control from the Ministry of Education. The reform involved could be a long way from being feeble and, unlike Sir Alan's proposals, would do nothing to jeopardise the position of public librarians as disseminators of information, ideas and

attitudes, almost unique in their freedom from commercial pressures.—Yours faithfully,  
Bromley, Kent

FRANK HATT

SIR—Since I wrote the article which you were good enough to print on April 22nd I have seen the latest statistics of the Library Association. In the year 1959-60 the total "issues," or outside loans, in the United Kingdom increased from 397 million to 440,095,260—43 million in a single year. (And we are expected to sit still and say nothing.) The expenditure on the purchase of books increased also, by £503,777 to £5,053,777. This is much nearer to the "2s. target," but is still less than 25 per cent of the total expenditure: and there is evidence that outside the libraries the sale of books (other than educational) declined.—Yours faithfully,  
London, W6

A. P. HERBERT

### Tax Reform

SIR—In your issue of April 15th you make the somewhat unusual suggestion that the Government might overcome inland revenue staff difficulties, if they propose wide ranging alterations in the tax system, by the temporary expedient of employing private firms of accountants. This suggestion ignores the fact that, in the London area and no doubt in other parts of the country as well, there is a considerable shortage of people with the necessary specialist tax knowledge, and it is difficult enough for accountants to get through their existing taxation work.

I think it would be true to say that, in cases where the taxpayer obtains professional help, something more than 50 per cent of the work necessary in connection with the income tax return and related matters is performed by the professional advisers. Far from professional accountants being able to assist the Inland Revenue to do their half of the work for them, in the event of some of the proposals you make being adopted the professional advisers would be so hard pressed to get through their part of the work that the collection of taxes would inevitably fall into arrear.

One tax reform which is urgently required is for professional fees incurred in assisting with the preparation of the income tax return etcetera to be allowed as a deduction in computing income. The present position weighs most unfairly on the private taxpayer who is not in business and, therefore, unable to charge accountancy or other professional fees in arriving at the income on which he pays tax. This relief is already allowed in America, with the corollary that the professional adviser countersigns the return. This would give the inland revenue considerable powers to deal with

unscrupulous and sometimes unqualified practitioners.—Yours faithfully,  
London, NW1

H. G. POWYS GREENWOOD

SIR—Surtax relief, while it may or may not be an incentive, will certainly increase the mobility of higher-paid staff. Should the Chancellor not carry this a step further and make all pensions transferable?—Yours faithfully,  
Bromley, Kent

S. JOHN ROGERS

### The Balfour Declaration

SIR—In his review of my book, "The Balfour Declaration" (printed in your issue of April 8th), your reviewer suggested that the War Cabinet of 1917 feared that Keren-sky, and the Jews who owned the Russian armaments industry, might take Russia out of the war.

The position, as I described it, was that it was feared that the left wing extremists (Kerensky's opponents) might gain the upper hand and make a separate peace. I did not say anything about any Jewish ownership of the Russian armaments industry. The point I made was that it was also feared that, if Russia did go out of the war, this would result in Russian resources being exploited by the Germans for their own benefit. It was believed that a pro-Zionist declaration might be helpful in obstructing such exploitation, the War Cabinet being under the impression that the handling of various Russian products, and especially the south Russian grain trade, was largely controlled by Jewish middlemen.—Yours faithfully,  
London, EC4

LEONARD STEIN

### The Census

SIR—If, as you say, the Registrar General can produce the census report in three years this time instead of the seven he took last time, this will doubtless result in some backslapping all round. But surely it is not beyond the competence of the census form designers so to arrange the answers to questions that a high proportion could be given by ticking off "appropriate squares" rather than writing (in twelve million different fists) the answers in the columns. Quite apart from obvious advantages in legibility, such a design would enable the "programme" for an analysis by computer to be prepared in the very act of designing the form. Optical scanning devices can "read" marks these days in much the same way that punched card machines can "sense" marks on cards made with a graphite pencil.

It is a curious fact that, in spite of the undoubted virtues of the Treasury O & M Section, Government Departments generally (with the possible exception of the GPO) can still inflict upon us forms that are for the most part badly worded, jargon-ridden, cramped, officious, dull, uninspiring and now, as the 80,000 enumerators will testify, downright inefficient.—Yours faithfully,  
Leeds, Yorkshire.

J. C. L. LEITCH

#### ZOO VISITORS

Three factors in particular influence Zoo attendance. Weather—unexpected fine days rather than long heatwaves draw crowds. Transport—with increasing car ownership families are travelling further for entertainment, to London Zoo's detriment but Whipsnade's benefit especially with the latter's improved facilities for driving inside the park (29,000 cars entered last year). Lastly, special attractions—an example suffices: 1950's stupendous total was due to Brumas.

## BOOKS

### The Other Civil War

#### The Spanish Civil War

By Hugh Thomas.  
Eyre and Spottiswoode. 749 pages. 42s.

#### The Grand Camouflage: The Communist Conspiracy in the Spanish Civil War.

By Burnett Bolloten.  
Hollis and Carter. 350 pages. 30s.

TWENTY-FIVE years on, and though the scars of Spain's calvary are still plainly visible, the civil war of 1936-39 belongs to history; and a new generation is ready to conduct pathological research into the Spanish fever. Mr Hugh Thomas has made an admirable job of it. He describes political and military events on both sides, almost day by day, with an abundance of detail and a sureness of perspective that will satisfy the most fastidious critic. His 625 pages of narrative trace clearly the immediate origins of the war in the political folly of Spain's liberals; the root cause, of course, was the "absolute" quality of the Spanish character, which knows no compromise—together with the geographical differences of the country, which spell social disintegration.

Only a few examples of the accuracy of his judgments can be cited. How, for instance, the religious clauses of the 1931 constitution were in principle sound enough, but practically disastrous: the anti-clerical tradition apart, two-thirds of Spaniards in the thirties were not practising Catholics—hence Don Manuel Azaña's fateful phrase "Spain has ceased to be Catholic," which sowed the wind. How, contrary to interested propaganda, the conduct of the Popular Front elections of February, 1936, was "generally exemplary"; but the minority government of liberals was never strong enough to control the turbulence on the left and the provocation of the right. When the majority of the so-called forces of law and order—the army and the civil guard—made common cause with the insurgents, the floodgates of revolutionary violence were opened. What the various experiments in libertarian communism meant in practice is recounted in fascinating detail by Mr Bolloten in his book on one particular aspect of the Spanish imbroglio.

Mr Thomas gives due credit to the government of Largo Caballero and the Communist leaders for their efforts to bring order out of the political and social chaos of the first year in Republican Spain. He is factually right on the foreign intervention. Germany and Italy exploited a golden opportunity. Communism surged in where the democracies feared to tread—for anyone with eyes to see there was not much "camouflage" about it. The main object of Stalin's cautious policy was, indeed, to

woo the middle classes in order to preserve the alliance with Britain and France against the German danger. But, if the Soviet Union's primary aim was military and not ideological—to prevent a Nationalist victory rather than to implant communism (in fact there were never more than 2,000 Russians in Spain, though indeed, with foreign communists, they occupied the key positions)—the Comintern had its instructions to set up an organisation for the supply of arms, as well as for recruiting the International Brigade. British policy was fundamentally vitiated by the—preposterous as it seems now—supposition that, after the Rhineland occupation and the Abyssinian war, the dictators were satiated.

The author vindicates the reputation of Juan Negrin, whose intellectual arrogance "made him ten enemies a day" but who was no Communist and no mere Russian tool: he was a redoubtable war leader whose realistic opportunism was in true Churchillian vein. He placed his hopes in a world war, which Stalin was all the time trying to stave off.

On the Nationalists' side no comparable figure emerged: "Franco was politically successful because he treated politics as a department of military science." The dice were loaded in their favour from the day when the democracies' leaders showed themselves to be sahibs at sea in the hectic Nazi-Fascist world.

Mr Bolloten was a United Press correspondent in Spain during the civil war. He tells us that he has pursued intensive researches into his subject for more than twenty years, and the result is a monument of industry in a relatively unexploited field. His account of the conflict between the "socialisation" projects of the anarcho-syndicalists and the "nationalisation" measures favoured by the Marxists leaves no stones unturned; unfortunately, he carries the story of the Communists' sway only up to the overthrow of Largo Caballero in May, 1937. This is a serious and, on the whole, objective study—to which title and "blurb" do a disservice—but the general reader may be put off by the plethora of footnotes.

#### Axes to Grind

A Mirror for Anglo-Saxons

By Martin Green.

Longmans. 178 pages. 18s.

MR MARTIN GREEN will not take much account of this notice. Its anonymity, the journal in which it appears and the fact that it will observe certain amenities of tone make it a part of what he regards as

THE ECONOMIST APRIL 29, 1961

England's "dead culture." Every time Mr Green came back from a stay in America, that "deadness" struck him more forcibly. The impression begins on the road from the airport to London:

The houses seemed so small, and the flower-bordered front paths, down which men in three-piece suits came hurrying off to work, seemed too bright and neat and prepared. . . . Bay windows, broad clean pavements, narrow, tarmacked roadways, lurching buses, everything was just as it was in the Ealing comedy movies. It was all nice and wholesome and harmless.

Outwardly, England has grown small, dull, damp and proper. Inwardly, according to Mr Green, much of the British mind is "dead, no longer able to deal adequately with reality." It has assimilated neither of the two world wars. Its great writers—Eliot, James, Yeats, Conrad, Joyce, Shaw—have not been English by birth or sensibility. The language spoken by the BBC and by the educated classes is an artificial vestige of the past. Set Marlon Brando against Gielgud and you have vitality against sterility. The same contrast runs through the whole of modern English art:

The English imagination has been dominated by a feeling of death, decay and hopelessness, and by an aspiration to style and elegance.

There have been rebels, men willing to take a stand for a more robust, eccentric and sincere vision of life. Mr Green's heroes are F. R. Leavis, D. H. Lawrence, George Orwell and Kingsley Amis. He writes of them with the force and insight of admiration. But the Establishment either ignores what they say or waters it down by giving it a kind of officious, academic context. By contrast, America is a nation raw in its uncertainties, alive with doubt and antagonistic persuasions. It is large and various of mind as of geographical space.

Mr Green has written an extraordinarily intelligent book. It captures with acrimonious precision that cosiness and dampness of soul which mildews so much of present-day English life. It has irrefutable things to say about the parochialism and complacency of education at Oxford and Cambridge. Like D. H. Lawrence, he sees in the very beauty of Cambridge a trap: "Continuity and tradition are lies in England, because they make themselves available to only one group, one sensibility, and that one turned away from life." But the entire argument remains shallow. What needs to be asked and studied is whether or not the high achievements of England's body politic—the rule of law, the level of economic well-being, the great latitude of political freedom—necessarily lead to the shrinkage and conventionality which Mr Green discerns. Are length of history and the establishment of spiritual and political tolerance themselves a prelude to a certain diminution of vitality?

These are difficult questions. Mr Green has written of the symptoms rather than the cause. And often the simplicity of his indignation leads to comic results. He compares "Round Britain Quiz" with the "64,000 Dollar Question" and finds the latter far more zestful. Quite so; but we

### THE LIQUEUR YOU PREFER TO BE OFFERED

Next time take the liqueur that everyone is drinking. The ancient recipe for Drambuie includes old Scotch Whisky, heather honey and delicate herbs.

## Drambuie

PRINCE CHARLES EDWARD'S LIQUEUR

PENGUIN

this way to the top

Penguins attach the same importance to choosing the right authors as top management does to picking the right man, seeking always the practical, the expert, and the up-to-date. The result, to the businessman on the way to the top, can be the stimulating companionship of books like *The New Men* by C. P. Snow and *The Organization Man* by William H. Whyte, or the powerful impetus of *The Business of Management*, introduced in the next column. This book can be of really practical assistance to a man or woman who has reached a turning point in a business career.

READ

### The Business of Management ROGER FALK

The author, a director of a leading firm of management consultants, sets down from his own hard-won experience at home and abroad his ideas on successful management as it faces the challenge of the sixties. Is management, he asks, an art, a craft, a science, a technique, or a humanity—or a mixture of the lot? His answer, an invaluable aid to present and future managers, is documented with case-histories of successful and unsuccessful post-war businesses.

know today that the American show was a cunning fraud in which apparently respectable citizens played a revolting farce. What price zest?

## Disabilities

### Underdogs

Edited and introduced by Philip Toynbee. Weidenfeld and Nicolson. 268 pages. 21s.

Is anyone with a grievance an underdog? Subjectively, perhaps, yes; but objectively, an underdog can be defined as a groveller, someone whom someone else wants to kick and then feels guilty about because he is not kicked back. Objectively, hardly any of Mr Toynbee's characters qualify as the underdogs of his title, and by no means all of them as the "eighteen victims of society" of his sub-title.

In fact, perhaps the only character who can be described as an underdog is the one who apparently had most blessings to count: the happily married, university educated, mother of four. She has emitted a long moan about the difficulty of bringing up tiny children in wartime, but only succeeds in provoking—in this reader at least—not sympathy but an intense irritation and impulse to slap her down. By contrast, some of the other characters one feels really sorry for, because—if their stories are accepted—they do seem to have a genuine grievance against society: the unemployed diabetic, for instance, who cannot get a job because his disability disqualifies him from entering a pension scheme and to be unemployed is to be unemployable (if this is really true, here is certainly something that society could remedy); or the man wrongly accused of theft. But genuine underdogery does not usually arouse genuine sympathy. Nevertheless, however miscalled, Mr Toynbee's characters are interesting in their own right. Writing their stories in response to his advertisement in the national press, they have produced accounts that might form part of a psychiatrist's case histories were it not that most of them are too articulate and too aware of their handicaps to be in need of psychiatric advice. They include a homosexual, a pederast, a criminal, two wives (one with a brutal, and the other with an impotent, husband), a former orphanage child, a drunkard's son, a woman seduced as a child, three general failures, and a man with a psychologically provoked "stricture" (who should surely not be here at all, for he does not even feel an underdog and certainly has no grievance). Mr Toynbee has included the "stricture" because the disability is unusual. That, in fact, seems to be the criterion for inclusion: an interesting disability, or an ordinary disability written about interestingly. It sometimes self-justifyingly. Perhaps the best stories in the book come from the "uncharming" (an analytical *cri-de-cœur* from a woman who arouses general antipathy) and from two rebels, who as cases might be diagnosed as

inadequate psychopaths. One is illegitimate and gay; the other an extremely literate ne'er-do-well, the despair of his persevering friends. Both prefer the lone life away from society; but neither is an underdog—they are both too much on top of their own private worlds to grovel.

## Carolean Office-Holders

The King's Servants: *The Civil Service of Charles I, 1625-42*

By G. E. Aylmer.

Routledge. 533 pages. 56s.

THE reforms of the nineteenth century gave us a salaried civil service recruited by examination. Under the early Stuarts the civil service was recruited by patrimony, purchase and patronage. Office-holders were rewarded partly by official fees, pensions and annuities and largely by mulcting the public by way of fees, exactions and bribery. A study of the personnel and working of the civil service in these conditions forms an interesting chapter in English administrative history in itself; it is also valuable for the light it can throw on the highly controversial question of the causes of the Civil War.

Mr Aylmer has applied a comprehensive questionnaire to an immense mass of evidence. He describes the various agencies of the central government, examines the conditions of entry and service, attempts, with great ingenuity, to calculate the rewards and capital value of offices, makes a social analysis of the office-holders that involves twenty-three tables, discusses the relation between office and politics and, lastly, attempts to relate his particular findings to the broad course of English administrative history, to contemporary developments on the continent and to sociological concepts of bureaucracy. It is tempting to suppose that a study of the administration will help to solve some major problems of seventeenth century history. Did the inefficiency of a civil service thus recruited and rewarded explain the predicament of the monarchy in 1640? Or did the reforms attempted by the party of Thorough alienate the threatened officials and conjure up the spectre of efficient absolutism? Can the rising gentry be identified with the office-holders? And can the Civil War be interpreted as a rebellion of the "Outs" against the "Ins"?

Mr Aylmer, though insisting that he is concerned to study the administrative system and not to produce an interpretation of seventeenth century conflicts, raises these questions but is very discouraging about any attempts to answer them. The England of Charles I was not a particularly ill-governed country and the basic failure "was one of sympathy and accord between Crown and country." Using a much more restricted definition of office than Professor Trevor-Roper he concludes that "it is impossible to identify the rising with the

office-holding gentry"; but he is careful to add that "the precise connexion between office-holding and the fortunes of the gentry must remain an open question." It is unfortunate that Mr Aylmer is not able to investigate the type of local office of which Carleton wrote in 1629 that "the place is not one of profit but rather an entrance or an introduction to better fortunes." Perhaps too he is over-rigid in defining rising gentry, for he excludes those who died in debt, and this eliminates men like the Earl of Carlisle who rose to enjoy exceptionally high incomes during their lifetimes. As for any connection between office and political allegiance Mr Aylmer cannot go much further than to say that the divisions among office-holders "may well have reflected with reasonable accuracy those of the English political nation at large."

Specialists will be grateful to Mr Aylmer for his thoroughness, even if he has done more to make clear the limitations of the evidence than to produce any new conclusions. He ends his book by saying that "even the most humdrum administrative details, the pettiest personal concerns, come alive in seventeenth-century English prose." But his very method makes him distrustful of the individual instance or the contemporary generalisation; and he has to comment, rather ruefully, that "if analysis sometimes seems to squeeze human interest out of these chapters, this arises solely from a prejudice against fabricating evidence."

## Problems of Independence

Ceylon: *Dilemmas of a New Nation*

By W. H. Wriggins.

Princeton University Press. London: Oxford University Press. 513 pages. 80s.

CEYLON came happily to independence. It was the richest country in south Asia; its income per head was two and a half times that of India. Except for a small riot in 1915, its civil order was complete; its communities did not kill each other; and there had been no need even for civil disobedience against the British. Half the population was literate, and the death rate as low as England's.

Since independence, the limitations of this good fortune have become clearer. The wealth came largely from foreign enterprise, notably the tea plantations; and the foreigner is now taking money out, not putting it in. The Ceylonese, whether in government or in business, lack the tradition of industrial entrepreneurship that is now necessary. English education has created a wide gap between the élite, who are more westernised than anywhere else in Asia, and the peasant, who clings to his caste and his Buddhism. The population is increasing at one of the world's fastest rates, so that even the great development being achieved hardly raises income per head. Too much money goes to welfare, especially the rice subsidy, and not enough to investment.

Above all, the communities have never

learned how to share power. Under the British, they lived alongside, rather than with, each other; and, as often happens, the minorities were in advance of the Buddhist Sinhalese majority. Ceylon Tamils and Christians had more than their population share of business, the professions, and government service; the Ceylon Tamils may have had as much as a third of all government posts, against a population proportion of one-ninth. The major economic decisions were made by British businessmen; the workers on the estates were largely Indian Tamils. The best schools were Christian. The story of Ceylonese politics since independence has largely been, therefore, one of the reassertion of the majority's values. At first this went slowly. Mr D. S. Senanayake, the father of independence, was inclined to cooperate with the Ceylon Tamils, though he was not prepared to give citizenship to most of his Indians. The turning point came with the MEP victory in 1956, itself largely a result of a new Buddhist Sinhalese political consciousness, and of the advent to political influence of groups educated only in Sinhalese—village school masters, Buddhist clergy and doctors practising ayurvedic (primitive) medicine. They wanted development, but they also wanted jobs and positions for themselves, and status for their culture and religion. Hence the insistence on Sinhalese dress for MPs and the Sinhalese language for administration; hence the deference officially paid to Buddhism and the nationalisation of schools. Hence also the riots of 1958 and the continuing alienation of the Tamils.

The story is still unfinished. As far as it has got, Mr Wriggins tells it admirably. There is no other book on Ceylon with his scope, thoroughness and, above all, understanding.

## Inescapable History?

A History of Modern France:

Vol. 2: 1799-1945

By A. J. Cobban.

Penguin. 346 pages. 5s.

THIS book begins and ends with "Saviours of Society": Bonaparte in 1799 and de Gaulle in 1945. In between comes Louis Napoleon, quite well-meaning and well-informed, whose good intentions were too often warped by his weaknesses. Popularised by his *"Idées Napoléoniennes"* he manoeuvred himself into the Presidency of the Second Republic, and then transformed himself into an Emperor by a *coup d'état* just sufficiently bloody to maintain the Revolutionary tradition. Why does France periodically require "salvation" of this kind? Professor Cobban's compressed but brilliantly clear history provides no ready-made answer; but it will inspire many readers to work out their own. An exceptionally good bibliography should help them to do so.

The more ideological revolutionaries had proclaimed "the People" to be "one and indivisible." But an obstinate preference for unworkable constitutions ensured recurrent crises in which unity could be only temporarily restored by emergency operations. In his first volume Professor Cobban ascribed the initial substitution of revolution for reform to the incurable *frondeurs* temper of the noblesse. But in this volume most politically vocal Frenchmen of all classes seem to be *frondeurs*. Obviously the fatal inability to learn and to forget was not limited to the Bourbons: the monarchy, restored after Waterloo with good prospects, was destroyed by the quarrels and reactionary follies of its supporters rather than by the faults of the monarchs. And in 1830 inherited jealousy prevented Louis Philippe's acceptance of a family arrangement that might have ended a dynastic feud that had split royalism in 1789 and was to ruin its last chances a hundred years later. The Republicans who somewhat grudgingly supported Louis Philippe were equally factious: deputies elected on a narrow franchise of property-owners were oblivious of the bitter social discontents of the voteless, and engaged in a struggle for power that drove out Orleans and brought in mobs, barricades, Cavaignac, and, eventually, a Second Empire.

This pattern repeats itself with variations for nearly a hundred years: the occasion, be it cause or effect, may be catastrophically great as in 1870 or 1940 (and nearly also in 1917); or comically small as in the Boulanger *affaire*; the *frondeurs* may rally for or against Dreyfus, Caillaux, or Chiappe; the battle-cry may be for or against the Church, the Two Hundred Families, or the Croix de Feu; devaluation of the franc, or a French Algeria—no wonder that in concluding his penetrating survey Professor Cobban takes a somewhat pessimistic view of France's ability "to escape from her history."

## Report and Travelogue

North Borneo

By K. G. Tregonning.

Her Majesty's Stationery Office (1960). 285 pages. 30s.

BORNEO, the world's third largest island (if Greenland is reckoned as the largest), is now divided into four political entities: the independent but British-protected Sultanate of Brunei, parent state of all Borneo (to which, indeed, it gave its name) but now by far the smallest of the quartet, although thanks to its oil by no means the poorest; Kalimantan, the former Dutch Borneo and now a part of Indonesia, larger than the other three put together; Sarawak, ruled by the Rajahs of the Brooke dynasty for more than a century and a British colony since 1946; and the subject of this volume. Mr Tregonning, an Australian, is Raffles Professor of History at the University of

Name .....

Address .....

Malaya; this is his second book on the territory still more familiarly known by its former designation of British North Borneo, under which it was long administered by its founder, the Chartered Company of that name. His former work was an historical study, based on the archives in London and Jesselton, of the state under Chartered Company rule; he calls this one a travel book.

The description is true only in the sense that his account of the present-day life of the country, its topography, people, towns and countryside, its industries and social services, its administrative, medical and educational policies and problems, is informed and coloured by personal observation made during a more recent journey undertaken for the purposes of this volume. It is one of the "Corona Library" series published by HM Stationery Office for the Colonial Office, intended to be something between a colonial annual report on the one hand and an ordinary book of travel on the other.

Mr Tregonning takes the country region by region, with separate chapters on rubber, teachers and doctors, and on the once ubiquitous pirates, the need for whose suppression brought the British navy into this part of the China Sea with its base on the small island of Labuan. The author contrives to humanise subjects that, with other treatment, might have made heavy reading. Thus he gives a lively account of the creation and vicissitudes of the metre-gauge railway, whose trains in the early postwar days had to be drawn by jeeps; the pathetic

## BOOKS

account of the dwindling Muruts, a race of minute Stone Age people from the deep interior; the poignant inscription on the tombstone of the two-year-old son of Dutch planters on Marudu Bay: "Here rests our darling. Sleep softly, little one."

Mr Tregonning travels energetically: he investigates one of the birds' nests caves with their rickety ladders and lateral gangways of flimsy bamboo; he catches a glimpse of an orang-utan, member of a vanishing race; he visits the famous *tamu* (market) of Kota Belud where the many races of the country congregate in their thousands, though he misses—owing to mourning for the death of a chief—its most characteristic attraction, the cock-fighting. One omission may be noted. Mr Tregonning might have devoted a separate chapter to a compact account of the autochthonous tribes, the Dusuns, Bajaus, Illanuns, Muruts and the rest, instead of contenting himself with referring piecemeal to those of them whom he encountered. But the book is an engaging and encouraging account of a country of varied interest, whose many races both meet and mingle, living together on the whole in mutual tolerance.

An additional word of praise is due to the excellent photographs, the pleasant drawings in the text, and the clarity of the map.

## Company Obituary

D.H.: *An Outline of De Havilland History*

By C. Martin Sharp.

Faber (1960). 419 pages. 42s.

SEVERAL British aircraft companies have passed their half century, but this is the most ambitious and detailed history yet written by any one of them to mark the occasion. Mr Sharp, who is chief public relations officer at de Havilland, is aware of the kind of criticism to which he has laid himself open and he parries it in advance by declaring that "this is offered as a record of the bare facts, with the hope that . . . others . . . may be moved to take up their pens and bring it to life." This permits him to picture the company's sometimes erratic progress, wars and all, without having to insert those background details that must inevitably wound the company's customers, its creditors, its government sponsors, and many of its own eminent members.

Geoffrey de Havilland, second son of a Hampshire parson, built and flew his first aeroplane in 1910. The Aircraft Manufacturing Company that he joined as designer in 1913 ended the first war as the biggest company in the business. In 1920, the company was bought by Birmingham Small Arms and its aviation division closed down. With some of his colleagues, de Havilland left BSA and founded his own aircraft manufacturing business on loans from a few friends. It is ironic to speculate how different the fortunes of both companies might have been had BSA shown more foresight:

## THE ECONOMIST APRIL 29, 1961

it could have profited from the stimulus that a lively, rapidly expanding industry can give; de Havilland later needed the stability that would have come from being a member of a large and broadly based engineering group, a stability that has enabled Vickers-Armstrongs to ride out storms that would have sunk a weaker company.

The de Havilland company survived on sheer good design combined with an inspired pig-headedness that made it repeatedly back its own judgment in defiance of official displeasure. The Mosquito was the most famous example, but there have been others since then culminating with the most recent thunderous row with officialdom over the Trident airliner. The thunder and lightning are censored from Mr Sharp's deadpan narrative; the most he will allow himself is a quickly repressed flicker of emotion when he comes to the death of two of Sir Geoffrey's sons, both working for him as test pilots, and the disastrous crash of John Derry at Farnborough. The end of the company's history he takes at a fast gallop, as if he could not bear to linger over it: the Comet crashes; the switches in defence policy that cancelled fighter aircraft that would have been powered by de Havilland's huge supersonic engine, and later cancelled its remaining big defence project, Blue Streak. Mr Sharp stops his narrative in December 1959, before the cancellation of Blue Streak had been announced (although the wording of certain paragraphs make it very clear that the announcement had been made before the book went to press) and a week or so before the company was taken over by Hawker Siddeley. This is an obituary as well as a history; perhaps Mr Sharp could not bring himself to write the final epitaph.

## OTHER BOOKS

BRING FORTH THE CHILDREN: *A Journey to the Forgotten People of Europe and the Middle East*. By Yul Brynner. Arthur Barker. 155 pages. 25s.

Yul Brynner in his capacity as a special adviser to the United Nations High Commissioner for Refugees travelled through the refugee camps of Europe and the Arab world asking questions, finding out facts but mainly using his eyes. This volume of photographs, taken by Yul Brynner himself and by Inge Morath, tells the story compellingly.

THE CONCISE ENCYCLOPEDIA OF ANTIQUES, Vol. V. Edited by L. G. G. Ramsey. *The Connoisseur*. 272 pages and 176 plates. 50s.

This is the final volume in a series designed to help the would-be collector of works of art, covering a wide range of subjects. Among those in this new book are fashion plates, Japanese armour, Persian painting, Venetian glass, filigree, Eskimo carving, stump work, knife cases, jelly moulds—a short list, which gives some idea of how specialised antique collecting can be. Nobody can hope to become an expert in one particular subject by reading these necessarily short articles, but this set of volumes provides serious illustrated introductions with, in many cases, suggestions for further reading and useful glossaries.

## THE ECONOMIST APRIL 29, 1961

## AMERICAN SURVEY

## Picking Up the Pieces

WASHINGTON, DC

THE Cuban expedition seems destined for that historical museum of politico-military disasters which have sprung from a fatuity in conception and execution that is forever after a beguiling psychological mystery. Americans compare it with the Suez fiasco—though if President Kennedy's warning of the possibility of unilateral United States action against Cuba in his speech to American newspaper editors last Thursday were to be taken at its face value, the much truer analogy would be with the fatal Jameson raid which was the prelude to the Boer war. So far as a mystery can be dissipated, this has been done already by the indefatigable researches of the American press into every facet of the affair, aided by deliberate guidance from an Administration which is suddenly anxious to impose the doctrine of collective responsibility on American institutions. This increases the wonder about how such a decision could have been made collectively—by the White House, by the Central Intelligence Agency, by the Secretary of State and by the Joint Chiefs of Staff. Two questions stand out: what light does it throw on Mr Kennedy's own judgment and grip on the job of being President, and what does it mean for the policies which his Administration had been building so promisingly?

It is admitted that this was "an American operation," over which the President had control. The United States provided much of the financial backing, the organisation and the equipment which made possible the launching, from a Nicaraguan island under lease to the United States, in American ships and landing-craft, of some 1,200 anti-Castro Cubans with a few tanks, aircraft and a considerable, if obsolescent, armament on to a singularly ill-chosen beach-head in Cuba. It would be vain to deny all this in view of the prisoners that Dr Castro took, including the sons of the unhappy leaders of the insurgents.

Nor is it denied that the Central Intelligence Agency, whose overblown reputation has been nourished rather on the successful landing in Lebanon than on the failure in Laos, subsidised the exiles in Florida by an estimated \$150,000 to \$400,000 a month (wealthy Cubans and American business sympathisers contributed also), provided instructors in guerrilla warfare, commanded disused airfields, set up training camps in Guatemala and caused coastguards to turn blind eyes. The operation began nine months before Mr Kennedy took office, but he did not order it to be discontinued, as he ordered the U2 flights over Russia not to be resumed. Even two weeks ago, when the CIA said the invasion was now or never (because Dr Castro was getting Russian fighter aircraft, because the Cuban underground was collapsing, because the *emigré* front was dissolving in quarrels, because Guatemala was backing out) President Kennedy could still have barred the operation.

He did not give the first order because he knew that the press would raise an outraged outcry. Perhaps, also, it seemed prudent to keep in being an alternative government with a military potential, in view of the CIA's assurances that Dr Castro would soon crack. This decision stemmed from the very caution with

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

which Mr Kennedy was feeling his way in domestic and foreign affairs. But as time went on the preparations grew in scale and readiness. The CIA, sold by its own agents, in turn sold Mr Kennedy the invasion as a Madison Avenue advertising agency sells cigarettes; on the plea of "security" it managed to exclude the State Department's hard-headed career officials and the Defense Department's experienced planning staff from top discussions. A military timetable took shape, demanding decisions. Either the President had to go in even deeper or he had to let the Cubans down ever more heavily. His credulity was increased by his own emotional fixations about Cuba; these had betrayed themselves in the election campaign. One indication that the wish had become father to the thought was the ignoring of British intelligence reports which contradicted those of the CIA.

Nevertheless, the President shared some of the doubts of Mr Dean Rusk and Mr Chester Bowles, his Secretary and Under Secretary of State. He resolved them, it seems, by proclaiming his decision not to commit any American forces (though this was the only thing which would have made military sense of the plan and was an element in it originally). He seems to have thought that the United States was exonerated for transgressing the neutrality laws and the Bogotá Treaty of 1948 by his statement that this was "a struggle between Cubans," along with a warning to the Cubans that if they lost they would not be bailed out.

The Central Intelligence Agency was formed when the national military establishment was reorganised in 1947 and the National Security Council was set up to advise the President on the integration of domestic, foreign and military policies. Since 1949 the council has been part of the President's own Executive Office and the CIA, also in that office, is supposed to help the council by co-ordinating the intelligence activities of all government departments, by evaluating the results, by performing such additional services as in the council's view should be centralised and by carrying out such other functions—among them presumably sabotage and espionage—as the council may direct. It is under this last head that the CIA organised the Cuban invasion. What appears to have been its faulty assessment of the situation there, as shown by its backing of the least effective group of exiles and its misjudgment of the chances of success, raises once again the questions not only of whether the CIA is as efficient as it should be but also of whether it should be allowed to conduct operations as well as to collect information, to take a hand in policy-making as well as to provide the facts—or what it thinks are the facts—on which that policy is based.

The analysts who work for the CIA in Washington are much superior in quality to its agents in the field. Altogether it is said to employ about 30,000 people and to cost the taxpayer many millions of dollars a year. But this is speculation, since Congress has no direct control over the highly secret agency—although certain members get private briefings occasionally. From time to time the establishment of a watch-dog committee, like that which keeps an eye on the equally secret Atomic Energy Commission, has been suggested, but so far the Administration has always managed to avoid this. In the past, criticism of the CIA has not extended to its much respected head, Mr Allen Dulles, the first official to be reappointed by President Kennedy when he took office.

The invasion was to be justified by the internal rising which was expected and the argument to fall back on, if the worst happened, was that it was only a reinforcement of guerrillas. General Lemnitzer is reported to have endorsed a sketchy plan that would have frightened an infantry major. Overborne by the brass hats and the undercover boys, the Harvard contingent in the White House failed apparently to question the assumptions or the logic of the scheme. Caught in this web of circumstance, the President gave the green light.

Everybody was proved wrong; at least that is the party line, to which generals, officials and professors are subscribing with Russian solidarity. The first reaction is a complete review by the usual "task force" of personnel, organisation and policy. General Maxwell Taylor is to deal with the CIA (though this is not spelled out in his appointment to study "paramilitary" questions) with the help of Mr Robert Kennedy, the Attorney General and the President's brother. Mr Ted Sorenson, who excels at being domestic hatchetman for President Kennedy, is to "get into" foreign affairs. The professors are rethinking everything. The Chiefs of Staff are reassuring their colleagues in the North Atlantic Treaty Organisation.

But the basic work of salvage falls on the State Department, to whose shattered top officials Mr Rusk announced dryly on Friday that there had been a "grave miscalculation." First indications are that in Latin America the reaction might have been much worse, though fingers are kept crossed over Venezuela, and though three months of planning and of building up Mr Adlai Stevenson's strong position in the United Nations have been sadly undermined. The State Department is helped by the very quickness of the collapse which frightened even the Latin Americans about the strength of Dr Castro; and by the Algerian revolt, which has diverted both the world's attention and General de Gaulle's criticism.

THE image of Mr Kennedy as a cautious and sure-footed young leader is inevitably tarnished; but at least he has stumbled early in his Presidency and is determined not to be misled again. Politically he has acted with his accustomed skill, spreading responsibility visibly over the Administration and the Republicans, while shouldering gracefully his presidential responsibility. His meeting with General Eisenhower was necessary because the volatile reaction of the public tended to follow the line of "send in the Marines and finish the job" and the reins can only be tightened on popular opinion if both parties pull them.

The strong words of the President's speech to the newspaper editors may not seem to presage any such return to caution. But the speech, scheduled for the day after the disaster, was designed largely to let off public steam and was based on the Churchillian maxim: "In defeat, defiance." It marks no basic change in policy. However, the President did tie his own hands somewhat by his advance assurances that in no circumstances would American forces intervene in Cuba; he has now spelled out the circumstances in which they should intervene, even without the backing of the Organisation of American States—and that is if Dr Castro and the Russians try to follow up their success by making a communist base in Cuba.

The definition of "communist penetration" remains vague. And, while the President said that the Cubans would not be abandoned, in fact there is unlikely at present to be another such Cubans-only excursion: all the trained men have been used up. But neither has the idea of matching communist paramilitary operations been abandoned—though General Taylor's immediate preoccupation is with what is happening in South Vietnam. The possibility of a combined "security force" provided by the OAS is being explored. The other purpose of the President's speech was to remove, if possible, any impression that Mr Kennedy would

shrink from military action if, for instance, a crisis were staged next in Berlin. There is a sudden militancy in the Washington air.

Perhaps the most important, if ironic, result of the Cuban fiasco is that it has given the American people the very jolt that all the President's eloquence since his inauguration failed to do. Last week was the best in Congress that has been enjoyed so far by the Administration's measures and the House approved the \$600 million Bill for aid to Latin America in almost panicky haste. The President also spoke of the need for reorienting "our tactics and other institutions here in this community." If this means that he is looking beyond military gimmicks to an effort to give the United States a better image in the world's eyes, to a more imaginative search for political rather than purely defensive or financial dykes against communism, something substantial could yet be put on the credit side of the Cuban account.

## Compensation in Congress

AN Administration that was in need of some cheer found it last week in Congress, though the two main Bills of the President's programme which are at last making headway—one for aid to depressed areas and another raising the minimum wage—have been standing so long in the wings that their novelty was rubbed off long before the curtain rose on the New Frontier. The two other victories which made April 20th memorable consisted of the Senate's approval of a Bill, which the House had already passed, providing aid for about a million children whose fathers are unemployed, and the endorsement in the House, by overwhelming majorities, of yet another of the perennially popular increases in social security benefits.

The really important, though not unexpected, triumph was the repulse in the Senate of virtually every hostile amendment to the Administration's minimum wage Bill. Now there is a very good chance that its defeat in the House, by a single vote, can be overturned. The House chose to extend the protection of the law, which now covers 24 million workers, to only 1.2 million more and to raise the minimum wage from \$1 to only \$1.15 an hour. The Senate version brings in over 4 million new workers, most of them in service industries, retail trade and construction, and would raise the minimum, in stages, to \$1.25 an hour by 1963. Nearly 2 million workers would benefit almost at once. The final vote in the Senate was 65 to 28, but the crucial division was the vote of 55 to 39 to defeat Senator Monroney's amendment; this would have reduced the numbers covered by 1.7 million by applying the law to retail enterprises only when they operate in more than one state, on the ground that to do more than this would overstrain the interstate commerce clause of the Constitution on which the regulation of wages rests. Senator Monroney owes his defeat not to members of his own party but to liberal Republicans from industrial states where the trade unions are powerful. The last may not have been heard of this constitutional issue, but the immediate likelihood is that the Senate's view on minimum wages will prevail in conference with representatives of the House, though to preserve the \$1.25 hourly minimum some workers—probably those in laundries—are expected to go down the drain.

The depressed areas Bill faced its last hurdle this week: whether the House, like the Senate, will approve a conference version which provides that the lion's share of the money involved—the \$300 million in loans to attract industry to these communities—should be supplied by the Treasury without the need for annual congressional appropriations. Republicans in the House oppose this method of evading the penny-pinching of the House Appropriations Committee. But the conservative southern Democrats, who usually make common cause with the Republicans on this issue, may choose to support the Administration this time because of the benefits for rural areas—largely in the South—which the Bill shrewdly provides.

## Made of aluminium ... or aluminum?

The difference may be slight... but even small distinctions in language and in customs can assume importance, when people in Great Britain do business with people in the United States.

The Chase Manhattan Bank, with the largest network of correspondent banks in the U.S., naturally has close familiarity with American trade practices and usages—and with the ways in which they differ among the fifty states. And after more than seventy years in London, too, The Chase Manhattan is equally familiar with British ways. This understanding of customs on both sides of the Atlantic can be very useful to you in your dealings with the States.

Indeed, The Chase Manhattan can be of service to you almost anywhere you do business. Its network of more than 51,000 correspondent banks, branches and representatives' offices all over the globe can provide you with every type of modern banking service, promptly, efficiently, and on a personal, *localized* basis.

When you do business anywhere abroad... it will help to talk with the people at The Chase Manhattan, in either of the London Branches.

## Taxes: Give and Take

NEW YORK

**L**AST week President Kennedy sent his much-delayed message on taxation to Congress. It does not propose either to increase or to reduce the total of taxes collected, and any very radical changes in the tax structure itself are being postponed at least until next year. What the President considers urgent is to offer tax credits to businessmen who invest in new capital equipment, to an estimated total of \$1.7 billion, and to recoup this lost revenue by introducing taxation at source on dividends and interest payments; by eliminating tax concessions on unearned income; by tightening up the rules on what constitutes a business expense; and by subjecting the foreign operations of American firms to heavier taxation.

The heart of the message (though by no means its only contro-

versial issue) is its plan to prod businessmen into modernising and expanding their facilities so that they can compete more effectively against firms abroad and contribute more to economic growth at home. They may already deduct from their taxable income, over a period of years, the original cost of new plant and equipment. These latest proposals would allow firms, in addition, to deduct from their tax payments 15 per cent of any such spending that exceeds their annual depreciation allowance, and 6 per cent of any spending that amounts to between 50 and 100 per cent of their depreciation allowance. Moreover, any company would be able to deduct 10 per cent of the first \$5,000 of such spending. But no firm's tax bill could be cut by more than 30 per cent. Mr Kennedy believes that this scheme, which provides most help for those who help themselves the most, will produce more additional capital spending for a given loss in government revenue than would any other proposal.

## Fair Trials

NEW YORK

**T**RACTORS and bulldozers are already preparing the ground for the New York World's Fair which is to open its gates in three years' time. A presidential committee selected New York City as host for America's first large international exposition since the war and the choice of site was an obvious one: Flushing Meadow on the inland side of Long Island is one of the few really large open spaces within the city and was virtually created out of swampy land and rubbish dumps to accommodate the 1939 World's Fair; since then these 646 acres have been used as a recreation ground. But having set the ball rolling the federal government is now taking a back seat. It will plan and finance its own pavilion and, in co-operation with the state, it is spending \$95 million on improving the roads in the area. But for the rest it has handed the fair over to private enterprise—to a non-profit corporation formed for the purpose by a group of prominent citizens and businessmen.

Although this body will spend nearly \$100 million before the gates are opened to the public, it is itself acting only as a real estate developer; it is preparing the site (paving roads, laying drains and electric cables, providing car parks and pay gates), soliciting business and supervising the actual running of the fair. It will not build any pavilions or restaurants nor provide any ready-made exhibition space. It has laid out a ground plan, based largely on that used by the last fair, and it is now offering to interested participants plots of land of all shapes, sizes and locations at \$3 a square foot a year in the international area and \$4 in the industrial area. No exhibitor can occupy more than 50,000 square feet; at least 40 per cent of his plot must remain unbuilt on and be "landscaped"; and the buildings must not rise more than 80 feet because of landing aircraft above and marshland below.

While officials have made the best of

UNISPHERE

© 1961 NY World's Fair 1964-65 Corp.

it in public, it was a severe blow to the corporation when the Bureau of International Expositions ruled the New York Fair out of bounds for its thirty (mostly European) members, and particularly when the governments of Britain, France, Italy and Western Germany confirmed that they would not be present officially. In order to prevent unfair competition among fairs, the bureau does not permit more than one international exposition in each of its zones in each decade—and Seattle is holding a fair in the American zone in 1962. Moreover, the New York World's Fair is to have a repeat performance in 1965, essential to cover the initial investment, and the rules of the bureau do not allow it to endorse an exposition that lasts more than one season.

A few member countries (Morocco, Israel and Bulgaria) have already said that they will come nevertheless, under private auspices, and others are making similar plans. Indeed, the organisers are hopeful that, as the project catches on, businessmen in most of these countries will feel that they cannot afford to be left out: Japan, a non-member, as is the United States, has already taken up its full quota of space. British industrialists appear at present to be the least interested, partly because last year's British Fair in New York has left the high cost of exhibiting in America fresh in their minds.

Second, the corporation has been having trouble on the financial front. Apart from the money it expects to receive in advance from leases and sales of tickets, it had intended to borrow \$64 million at 6 per cent to cover its expenditure. But investors have not been enthusiastic (they have taken up only \$10 million so far). Now the City of New York (which will be the main indirect beneficiary of the fair) has come to the rescue by agreeing to give the corporation \$8 million in each of the next three years towards permanent improvements to Flushing Meadow Park. The city will be repaid only if the fair makes a profit. However, the corporation believes that, over the two years, the number of tickets sold will exceed the 70 million required on the original reckoning to break even; the Brussels Fair attracted 40 million visitors in one season.

Third, the corporation has come in for criticism from architects and others who feel that the United States should show to the world a more imaginative and integrated image than that which is likely to result from the largely unguided and unrelated efforts of scores of individual exhibitors. But this, the corporation points out, would cost a great deal more money than it could raise from cautious investors.

The success of the New York World's Fair will thus depend entirely on the quality of individual exhibits (which are expected to involve a combined expenditure of \$550 million). Some 32 firms have already applied for ground space, including such large customers as the General Motors Corporation and the Ford Motor Company. The United States Steel Corporation is giving the World's Fair its symbol—a hollow globe made of stainless steel bars and towering 135 feet into the air. At the 1939 Fair television was launched publicly; so was nylon. And General Motors forecast at the time a wild increase in car sales—to 3 million in 1960; the actual figure last year was just double that. Colour television, beamed across the world off space satellites, is on the menu for 1964, but no other attractions have yet been unveiled.

In choosing this approach Mr Kennedy turned his back on a straight reduction in the tax on corporate profits—now at 52 per cent for larger firms—on the grounds that any concession here would not necessarily lead companies to increase their plans for capital spending. He has also rejected for the time being the possibility of liberalising depreciation allowances—of permitting firms to depreciate their plant and equipment over fewer years, or to concentrate depreciation in the early years of the life of the asset, or to charge off an amount equal to the replacement cost rather than to the original cost. The tax credit scheme is the brain-child of Mr Stanley Surrey, the controversial expert whom the Senate has just confirmed, rather reluctantly, as Assistant Secretary of the Treasury in charge of tax policy.

While any tax credit is better than none, American businessmen are not on the whole enthusiastic about the proposed changes. In the first place, most of them are disappointed by the fairly modest scope of their prospective gains. Secondly, they would have preferred a straight tax cut or changes in the depreciation allowance to the imposition of yet another layer of special provisions. Thirdly, many of them grumble that the relief will be spread unevenly: that it will penalise those firms which have recently carried through a heavy programme of modernisation or expansion and whose depreciation allowances are therefore running at a very high level; and that it will favour new and rapidly growing industries, whose current depreciation allowances are low, against the more established ones. The President considers that this latter argument is a positive merit of his plan.

While businessmen may consider it impolitic to criticise the measure too strongly, many other groups will feel no such reticence. Although the President estimates that this spur to expansion will create half a million new jobs, the trade unions regard it as a "give-away" to business which is as likely to encourage the further replacement of men by machines as to give the economy the general fillip that it needs if unemployment is to be absorbed. There is also serious disagreement among economists as to whether the slack in the economy is being tackled at the right end. On the general principle that you can lead a horse to the water but you cannot make it drink, some would agree with the labour leaders that it would have been better if the consumer and not the businessman had been given the revitalising injection.

ON the revenue-producing side, the new measures are not likely to win many votes, although the decision to deprive businessmen of some of their more lavish forms of entertainment on expense account will get a good hand all round. About one-half of all taxpayers are believed to receive income in the form of dividends or interest on savings accounts, and the taxation of these at source is expected (perhaps optimistically) to produce an additional \$600 million from those who have not reported this income in the past. The country's 15 million shareholders will also be the losers (to the tune of \$450 million) if the tax exemptions on dividend income are ended; at present the first \$50 is deductible from taxable income and 4 per cent of the remainder can be used as a tax credit. It seems doubtful that members of Congress will sanction this bitter pill for their constituents.

So far as the developed countries are concerned, President Kennedy proposes to remove (in two stages starting next year) the tax concessions that have helped to spark the considerable migration abroad of American companies. Under the present law, the profits of a foreign subsidiary are subject to United States taxation only if and when they are repatriated to American soil. This ruling has proved a strong inducement to American companies to expand their overseas operations and, in particular, it has encouraged firms to set up subsidiaries for the sole purpose of accumulating tax-free profits. The President would now restrict this privilege of deferring taxation to investments in under-

developed countries, and would take steps (as yet unspecified) to crack down on the use of foreign "tax havens" to dodge the claims of the Internal Revenue Service.

This part of the message will get a good deal of support on the grounds that it will be of immediate help in the balance-of-payments difficulty; that it will dampen down the current "export of jobs" to countries in western Europe and to Japan; and that it is in any case right to give equal treatment to profits whether they derive from operations in Pennsylvania or West Germany. But few people have much hope that the President's proposals as a whole will emerge from Congress in recognisable shape. The battle will open on May 3rd when the Secretary of the Treasury makes his case to the House Ways and Means Committee.

### PATTERN OF A RECESSION

FROM the current indications—provided that the recent upturn is not abortive—the American economy sank to the lowest point of the latest recession in February. Thus the outline of that recession should be clear from a survey of the course of the gross national product, the measure of the country's output of goods and services, over the past twelve months; GNP is now expected to rise to an annual rate of \$505 billion in the current quarter from \$499.5 billion in the first quarter of this year (for which preliminary figures have just been issued). These figures show a total fall of only just over 1 per cent in GNP during this recession as a whole, compared with one of over 3½ per cent during that of 1957-58. But the period of prosperity in between had been comparatively brief and the very mildness of the latest recession may mean that the recovery from it will be equally mild and perhaps also slow.

The drop in GNP from its peak in the second quarter of 1960 was explained mainly by the falling off of private investment in housing, in manufacturing equipment and, above all, in business stocks (which were admittedly being built up at an exaggerated rate in the first quarter of 1960 to compensate for the losses of the 1959 steel strike). Spending by consumers was also disappointing, considering that their incomes went down remarkably little during the year. But there were two stimulating factors—the steady increases in the surplus of exports over imports and in government spending on defence and on state and local requirements such as roads, schools and sewers.

## New Orders for Mail-Order

FROM A SPECIAL CORRESPONDENT

THE migration of Americans to the suburbs has given a new lease of life to a great innovation of the last century—the mail-order business. While urban department stores have had to pursue their customers to the country, the two largest mail-order houses—Sears, Roebuck & Company and Montgomery Ward & Company, Inc.—were already established there, each with more than 1,000 retail shops and offices for ordering from catalogues. So the new householder can go for his carpentry and plumbing supplies to the same source as his rural grandfather; the suburban housewife can clothe her family from a modernised edition of the same catalogue that her farmhouse grandmother used.

Both Sears and Wards are responding by opening about 25 new department stores each year and by expanding their mail-order operations. After a period of relative decline the business of the mail-order houses is rising as fast as are retail sales in general; in the past decade it has accounted for about 0.8 per cent of the total. Recent increases are due largely to the opening of new shops, but Sears alone sells \$1 billion worth of goods a year by mail-order. Wards sells more than \$100 million, a volume now equalled by two other firms, Spiegel, Inc., and Aldens, Inc., which have grown spectacularly.

Wards was established in 1872 and Sears in 1886 specifically to provide sound, simple wares for the isolated rural population. (The late Eugene Talmadge, Governor of Georgia, used to tell his constituents: "You got three friends—Jesus Christ, Sears, Roebuck and Gene Talmadge.") Both firms were enormously successful and did their business exclusively by post until the nineteen-twenties, when the advent of the motor-car and the consequent success of chain stores in small towns caused them to open retail shops of their own. By the nineteen-thirties half of the sales of each firm were made through such shops. The proportion of business done by post continued to dwindle but has stabilized recently, at 25 per cent for Sears and 12 per cent for Wards. Both consider sales from catalogues an important and integral part of their operations. Each new retail shop has a catalogue department and Sears is opening new catalogue offices twice as fast as new stores. One office, in New York, arranges delivery within 24 hours anywhere in the metropolitan area.

In addition to the convenience of shopping from home by telephone or post, the mail-order firms provide, through their catalogues, a range of choice otherwise unavailable to the suburban shopper. The huge general catalogues of Sears and Wards are tomes of 1,000 pages in which more than 100,000 individual items are described and shown in photo-

graphs. In addition, there are a dozen smaller specialised catalogues—of toys, photographic equipment and so on—or of goods on which the price has been lowered. The catalogues are distributed free to established customers, but are too expensive (Sears prints 50 million a year, costing from 40 cents to \$1.40 a copy to produce) for distribution to the general public, which is encouraged instead to use those at the hundreds of catalogue desks which each firm has.

Neither Wards nor Sears has abandoned its lowest-priced, "working-class" lines of goods, nor its practice of offering, in many items, a range of quality frankly identified as "good," "better" and "best." But their "best" merchandise now equals that on sale at the leading metropolitan stores. With their immense buying power, these firms command the best design and workmanship in America and abroad. In many lines they have their own private labels and brands for merchandise made specially for them by top manufacturers. Often these goods are of higher quality and sell at lower prices than the manufacturers' own brands and in some lines—notably washing machines and motor-car tyres—the leading makes are those of Sears and Wards.

THE mail-order houses have also plunged eagerly into sales on credit. Originally they demanded cash, but they were pioneers in the use of hire-purchase for costly goods and later—somewhat reluctantly at first—they allowed ordinary purchases to be made on credit as well. This type of sales on credit quickly overshadowed those of durable goods and a special "revolving charge account," designed for miscellaneous purchases, was introduced. Under such an arrangement, the customer makes a monthly payment determined by the total amount he owes (typically \$5 for balances up to \$50, \$10 for balances to \$100, etc.) and is charged a 1½ per cent service charge each month. This is equivalent to an interest rate of 18 per cent a year and is ample to cover the costs of the system. Once accustomed to his monthly payment, a customer tends to buy as much as it allows.

Spiegels and Aldens, the two newer large mail-order firms, have been especially successful since they introduced such schemes. Spiegels, which abandoned its few retail stores in 1955 to rely entirely on postal orders, makes 80 per cent of its sales on credit and has doubled its business (which is now greater than Wards's catalogue sales) in the two years since it inaugurated revolving charge accounts. Aldens has seen its

sales on credit rise to 50 per cent of its total, from 18 per cent ten years ago. It reports that a credit customer's individual orders are three times as large, on the average, as those of a cash customer and that he orders four times as much in a year.

Although the early history of the two giants, Sears and Wards, was similar and last year both managed to show increases—of 2.6 per cent and 2.3 per cent respectively—in their total sales, Sears's story is one of success and profit, while Wards continues to battle adversity. The recession in 1960 hurt them both but it was particularly bad luck for a relatively new management at Wards, which is struggling to rescue the company after a long era of mismanagement. For Sears it meant only that the new records it set were not as impressive as usual.

EVEN before the war the management of Sears was the more imaginative and aggressive. It attempted twice to market very small motor cars through its stores, owned and distributed the "Encyclopaedia Britannica" for fifteen years and in 1929 acquired an automobile insurance company, Allstate, that revolutionised the business; operating exclusively through Sears's shops, this has become the second largest insurance company in the country. After the war the paths of the two firms diverged sharply. Between 1946 and 1959 Sears spent more than \$700 million on new shops, largely in areas of rapidly-growing population, and it also invaded Latin America and Canada.

Montgomery Ward, under the rule of the late Mr Sewell Avery, refused to spend any money on modernisation or expansion. Mr Avery refused flatly to pay what he considered inflated prices for new stores and amassed in the firm's treasury no less than \$375 million in government securities with which he confidently expected to build shops cheaply after the severe recession which he considered to be inevitable. Four years ago the company's bulging treasury caught the roving eye of a financier, Mr Louis Wolfson. He failed to win control, but the fight drew attention to Mr Avery's feebleness and forced his withdrawal.

Mr Avery's successors reversed his policies quickly and have been building new shops as rapidly as has Sears. But almost 400 of the company's existing ones are now too small, shabby or poorly situated to meet increasing competition in the suburbs. Last year, during the recession, sales at Ward's old shops actually declined; only its mail-order business and its trade at its new stores increased and its profits were dragged down by the costs of opening new outlets.

Compared with Ward's sales of \$1½ billion (almost the same as in 1948), Sears does a yearly business of \$4½ billion (four times as large as in 1946), and is the world's biggest retailer of general merchandise. More than \$4 of every \$100 spent in the United States on retail goods (exclusive of food, drink, motor cars and petrol) is spent at Sears. There are more than 10 million credit accounts on its books, or one for every five families in the country.

## Criminal Proceedings

IT was no surprise earlier this month when the new Attorney General, Mr Robert Kennedy, asked for new weapons to fight organised crime and, in particular, the big syndicates which profit, so it is said, to the tune of \$20 billion a year from their flourishing country-wide interests in prostitution, illegal gambling, narcotics and so on. They have grown too powerful, too wary and too mobile for state law-enforcement officers. But the federal government can prosecute only on the relatively few occasions when federal laws are broken. Enforcement is fragmented between 70 federal agencies and 10,000 state and local bodies and there is a sad lack of co-operation between them; even inside the federal government actual obstruction is not unknown. The special group which Mr Kennedy's predecessor set up in the Department of Justice to bring notorious offenders to book was short-lived largely for this reason. Moreover, its single outstanding achievement—the indictment and conviction, on a nebulous charge of conspiracy, of some of the sixty or so so-called "overlords of crime" who had the bad luck to be caught "visiting a sick friend" simultaneously at Apalachin, New York, in 1957—was overturned unanimously, on the grounds of lack of evidence, by the Court of Appeals late last year.

The President's brother is not likely to encounter much lack of co-operation from other law-enforcement agencies, but even he has had to shelve, for the time being, his idea of a National Crime Commission to collect and co-ordinate information about the top people of the underworld. Mr Hoover, the head of the popular Federal Bureau of Investigation, dislikes the idea of such centralisation; so do some local bodies. But much of this intelligence work will be done without fanfare in the Department of Justice which is to have an extra \$540 million to fight crime. Among the new tools Congress is being asked to provide is legislation making it a federal offence to transport gambling materials, as well as gambling machines, across state lines and banning the use of interstate communications for betting; most experts are convinced that the profits from illegal gambling are the lifeblood of organised crime.

The chief innovation would be a law prohibiting travel across state lines to promote illegal activities such as prostitution and gambling. Then organisers of crime who live respectably and safely in one state could be nabbed by the federal authorities when they leave it to collect their profits. Some people, including even the sponsor of the Bill in the House of Representatives, have qualms about this approach and fear it may circumscribe civil liberties. The Department of Justice (though not Mr Kennedy personally) is already in some hot water over the unceremonious way in which Mr Carlos Marcello, the alleged gambling czar of Louisiana, was hustled out of the country to Guatemala. The United States has been trying to deport this undesirable alien since 1952 (over 3,000 others have gone already), but after waiting so long it might have let him say good-bye to his wife; it also looks as though Guatemala may have been tricked into receiving him.

## Fresh Furrows

IN putting his agricultural proposals into legislative form President Kennedy has made it more probable that they will be approved by Congress, although to do so he had to weaken the safeguards (the most interesting part of his original proposals) against congressional interference with the details of the various schemes for farm commodities. Such schemes, to be drawn up by the Department of Agriculture in consultation with representatives of the producers, will now be laid before Congress (which will have sixty days in which to veto them) before, instead of

after, being submitted to a referendum of all the producers concerned. This means that Congress will have more say in the details than under the original proposals. Moreover, price supports for the commodity affected will now be reduced only if the farmers themselves reject the scheme, not if Congress does so. Finally, the draft Bill provides that no new controls on marketing can be set up without congressional approval; this is not at present necessary when a scheme is regional, not national.

While there is now a real chance that the Bill will get through at this session, it can hardly do so before the middle of May when plans for planting next year's wheat crop must be made. Wheat is the commodity about which something needs to be done most urgently since it is the one which shows by far the greatest surplus. The draft Bill provides for quick action on wheat but this grain will in fact probably have to be dealt with by special one-year legislation as feed grains already have been—by methods which promise to be successful if farmers co-operate as they seem likely to do. This year price supports on feed grains are going up substantially for farmers who cut their plantings by 20 per cent. Farmers who refuse to do this will get no support at all and will not benefit from other people's restraint since the government is to sell some of its surplus wheat to keep market prices down. Price supports will be available only on normal output so that there will be no point in pushing up yields by using extra fertiliser.

Mr Kennedy's farm Bill also asks for the extension of Public Law 480, under which surplus agricultural commodities are disposed of abroad, until 1966, with \$11 billion being provided for the purpose between now and then. This suggests, as do other things, that some, if not all, of Mr George McGovern's ideas for making America's superabundant agriculture into a positive asset instead of a negative problem are to be implemented. He directs the President's Food for Peace programme and already there have been changes in price support policies so that more vegetable oils and dried milk will be available under PL 480 for children and others abroad. Soon workers in several underdeveloped countries will be receiving part of their wages in surplus food from America, as workers in Tunisia have been doing for some time. These are examples of how Mr McGovern thinks that America's agricultural resources, redirected into new products if necessary, can be used to supplement other types of foreign aid and to stimulate development overseas.

## SHORTER NOTES

The St Lawrence Seaway opened last week for its third season of ocean-going commerce and the authorities hope that the results will come more nearly up to the original hopes for this new trade artery than they have so far. Last season traffic was slightly less than in the first season, but officials believe that neither year was normal, with a steel strike in 1959 and a recession in 1960.

In future fleas which bite dogs will be committing suicide—provided the dog has taken a new pill which does him no harm but makes his blood deadly to parasites.

There was an increase of about 35 per cent between 1950 and 1960 in the number of Americans over 65 years of age. About one in every eleven persons—16.6 million in all—is in that age group; in Florida and Arizona, both states whose climate attracts the elderly, the number more than doubled during the decade.

## THE WORLD OVERSEAS

### Charles and the Kingmakers

FROM OUR PARIS CORRESPONDENT

IN May, 1958, the French army tasted political power. The government and parliament submitted to the will of the insurgent commanders in Algeria and were relieved that the choice of the military men fell on General de Gaulle. The French people sighed with relief; they were spared a fight for their rights. The saviour had once again come to their rescue. De Gaulle would come to terms with the officers in revolt and solve the Algerian problem. Thus one army *coup* was sanctified by a popular vote. The Fourth Republic was buried without tears. Its successor had new institutions, an assembly and a senate, parties old and new—all the trappings of a French Republic. The stature of the man at its helm, and the cult of his personality, concealed the fact that the president was surrounded by a political vacuum. But the first real test revealed that the dialogue that mattered in France was between the President and the army.

General de Gaulle was not burdened by gratitude towards the men who brought him back to power. He never shared their conviction that Algeria could remain French for ever. Gradually, he removed those most committed to this myth from key positions in Algeria, loading them with honours and setting them aside. By September, 1959, he felt strong enough to launch his policy of self-determination for Algeria. Four months later the barricades raised by the settlers in Algiers enabled the army commanders to show their strength during a few days of passive disobedience. General de Gaulle, assuming full powers, exhorted them to obey. He even threatened to use popular backing to crush resistance. At the same time, General Ely, a recognised keeper of "army unity," was sent to Algeria to persuade his colleagues that it was in the army's interest to play the game.

General Challe, who was then commander-in-chief in Algeria, finally decided to carry out the president's orders. The barricades vanished immediately in Algiers. In France, public opinion, scarcely aroused, fell back into its sleep. In a tour of officers' messes in Algeria General de Gaulle assured the army that it would stay there. The penalties for disobedience were virtually reserved for the civilian ringleaders, but again several officers were removed from Algeria.

The compromise was short-lived. The French president was aware that he needed peace in Algeria both to consolidate his position and to make his foreign policy work. After the failure of the talks with Muslim rebel envoys at Melun in June he began groping again towards a negotiated settlement about the end of last year. In recent weeks it has been obvious that such a deal could only be struck with the Algerian government-in-exile and would necessarily lead to an independent Algeria. The question was, would the French officers who for years had taken *Algérie française* as their slogan accept such an evolution? Only last week M. Messmer, the

minister of defence, dismissed this as an idle worry. Clearly he was not informed about the plans of General Challe and his fellow-plotters.

It is easy now for General de Gaulle's critics to point out that his policy of compromise with the army was wrong, and that to indulge the plotters merely encouraged them in their designs. Yet such charges beg the question, ignoring both the origins of the gaullist regime and its structure. The officers in revolt accepted General de Gaulle as president because he was a general as well as a national figure. He, in turn, always had a high place for the army in his concept of the state. Naturally it was an obedient army he wanted, a disciplined instrument of gaullist policy. He sought to fashion this tool circumspectly, by persuasion and gradual manoeuvre, avoiding a clash. A nation situated as France is, with a military power traditionally self-sufficient and traditionally political, needs strong political forces if the civil power is to hold its own. General de Gaulle has never hidden his distaste for the "intermediaries"—the parties and political organisations—standing between the nation and its ruler.

The French paratroopers have been trained to believe in force, not in political communion. The *coup* of Saturday last was staged despite the confirmation by January's referendum that the overwhelming majority of the French nation was in favour of a negotiated settlement in Algeria, and that the *ultras* were a tiny minority in France. This did not prevent generals Salan, Challe, Jouhaud and André Zeller and the colonels in league with them from staging a *coup* and coming very close to getting complete control of Algeria. So far the "unity of the army" was working in their favour. Even if it was true that only the shock troops—the paratroopers and the Foreign Legion—took an active part in the operation, they were helped by the passivity of the rest of the armed forces and the nation. To arouse "all Frenchmen, and first and foremost every soldier" to a sense of their duty, was therefore the main purpose of General de Gaulle's televised speech on Sunday night.

Armed with the powers furnished by article 16 of the constitution (though it was less on constitutional than personal authority that he depended) he forbade all co-operation with the insurgents, and called on the nation to use all means to block their path until they could be subdued. The issue then was whether the bulk of the officer corps was willing to abandon the extremists to their fate and follow this lead. There could now be no compromise between General Challe and the President. Both sides had burnt their boats. For the rebels, the seizure of government was now the only target.

Indeed, a few hours after the President's speech M. Debré, the prime minister, warned the public, and Parisians in particular, that there was reason to expect landings by paratroopers from Algeria that very night. There was something pathetic in his call to Parisians

General Challe: the tide ebbed

to go "on foot or by car, to convince these misled soldiers of their grave error" as soon as the sirens announced the landings. It was a tacit admission that, except for the *Compagnies Républicaines de Sécurité*, the armed forces could not be relied upon. Yet, as the night went by and there were no landings, the situation improved. The trade unions began to rally their members. Volunteers gathered at the ministry of the interior, where members of the neo-gaullist UNR were given precedence in the hasty enrolment that went on.

THE Sunday night alarm proved false. Rumour has since had it that an American warning in Algiers stopped the expedition; but there is no confirmation of this. While the alarm lasted the talk was of some thirty aircraft that were to have brought perhaps 1,500 paratroopers. For the second time in three years the fate of a modern nation seemed to depend on the actions of a tiny body of professional fighting men.

On the morning after the false alarm the government recovered its poise. There was no longer any question of distributing arms to volunteers. General de Gaulle developed his counter-offensive in masterly fashion. Unlike M. Pflimlin in 1958, he was determined to resist. Instead of pleading and imploring he ordered imperiously, as a commander. As soon as some units obeyed his orders, turning from passivity to action, the "unity of the army" began swiftly to work for instead of against him.

The turning point probably came late on Tuesday morning, when the navy fired some warning shots against a paratroop detachment trying to take over the base of Mers-el-Kébir. The tide ebbed at an extraordinary speed. The paratroopers fell back everywhere, and by midnight they had lost even Algiers without, surprisingly enough, offering any serious resistance. The professional knights of *Algérie française* did not even stage a heroic exit. General de Gaulle spoke about his opponents with real indignation. Yet the heroes of May, 1958, have once again rendered him a service, this time unwittingly. For three years he had tried to avoid a head-on clash with the army. They thrust it upon him and then lost so fast that the consequences he must have feared from such a clash did not have time to follow. The passivity and hesitations of the officers' corps did not prove so intractable that they must now compel General de Gaulle to discard the army as a pillar of his regime. They were sufficient, however, to enable him now, if he chooses, to eliminate his opponents, to purge and reshape the army and transform it into a disciplined gaullist force.

Armed with full powers, the French President can do as he pleases in this hour of triumph. He can alter the constitution and get his mandate renewed. Above all, he can try now to reach rapidly a negotiated settlement in Algeria, while the defeated champions of *Algérie française* can offer no resistance. It now remains to be seen to what advantage General de Gaulle will turn his undoubted victory.

## What Went Wrong in Algiers?

FROM OUR PARIS CORRESPONDENT

THE swift end of the generals' revolt in Algeria has been as much of a surprise as the beginning. It would be presumptuous, immediately after the four days' crisis with its extraordinary reversals of fortune, to try to give the whole picture of the coup that has failed. The historians may produce the missing pieces of the puzzle one by one. But it is already possible to raise some questions and suggest some clues.

**Timing of the Algiers coup.**—The coup had the benefit of surprise in Algeria. With one exception the plotters arrived on the scene of action together. The military and civilian commanders were seized, and the take-over met no resistance. But there was no immediate sequel in France. The theory that the moment of rebellion was advanced because of leakages is based on three points: M. Debré's own statement; the fact that in the insurgents' first proclamation the date of April 24th (Monday) was mentioned instead of the 22nd (Saturday); and the fact that General Salan did not arrive from Spain till Sunday. A change in the timetable might have complicated co-ordination between plotters on either side of the Mediterranean.

**The international context.**—Encouraged by the events in Cuba, an extraordinary story circulates in Paris; General Challe, a former Nato commander, had been led to believe by some members of the Central Intelligence Agency that he could rely on the benevolent neutrality of the United States in the name of anti-communism and Atlantic integration. If he really believed that, the prompt American reaction must have soon disillusioned him.

The other plan attributed to General Challe was an attack on the Algerian bases in Tunisia and Morocco. But this would simply have triggered off foreign intervention. The rebels' salvation lay in the seizure of power in Paris.

**Crucial night.**—Several sources suggest that a landing in the Paris area was actually planned for the night of Sunday to Monday. Yet, since 3,000 paratroopers is the maximum figure quoted, their landing must have been planned as a signal for other moves. These probably involved not only right-wing extremists but also army units stationed in France (say, at Rambouillet) or in Germany. Apart from a few arrests, there are as yet no proofs of such a simultaneous plan.

If M. Debré's intention was to wake up the people by scaring them, his Kafka speech over the radio at midnight on Sunday did the job. But what stopped the rebels? One of the factors increasingly mentioned is the behaviour of the air force. Apparently there were fighter units prepared to fire on the invading planes, and some airmen in Algeria are said to have opposed the take-off.

**Time against the rebels.**—Once the rebels failed to land in France, time was working against them for several reasons. First, they could not stage, this time, a comedy of fraternisation on the forum in Algiers. Though the European settlers were wholeheartedly with them, they could not even call them out too often, for fear of the Moslem reaction. The Moslems were watching events in hostile silence. Secondly, the young French conscripts were getting increasingly restive. At first they acquiesced grudgingly; then, gradually, they tried to influence the course of events. In a last desperate fling the junta decided to demobilise those national servicemen who had served more than 18 months and to recall European residents of Algeria to the colours. By then it was too late. Thirdly, when units of gendarmes and of national servicemen finally began to advance the paratroopers had to shoot it out or evacuate. They chose the latter. Knowing that their coup had failed, the generals decided to surrender or run.

**The army and Algeria.**—One thing is certain. On Sunday night (and probably even up to a few hours before victory came) the government was not confident of its ability to rely on a single military unit. There is also plenty of evidence that the insurgents had accomplices or sympathisers throughout the chain of military command. Orders from Paris were held up or distorted. General de Gaulle can hardly now avoid undertaking drastic reforms of the army.

## Calm in Malawi-land

FROM OUR SPECIAL CORRESPONDENT IN BLANTYRE

ONCE upon a time there will have been three ancient kingdoms: Malawi, Zambia, and Zimbabwe. It will happen when the African nationalists of Nyasaland, Northern Rhodesia and Southern Rhodesia can make it so. Nyasaland is nearest to believing in a former nation-state returning to future glory; the other two see their acquired names more in terms of public relations than historical reality. Southern Rhodesia would have been closer to the history books if it had chosen Monomotapa but—Voice and Vision style—the better publicity gimmick of Zimbabwe won out. The fancy names are more than labels: they express the African desire to prove the existence of a past civilisation (Europeans always talk of their 2,000 years), and are evidence of a determination that black men shall rule.

In Salisbury a Zimbabwean politician said "We used to beg the white man to govern us with kindness. Now he is trying to do that but it is too late—we want to be the governors." That is the tragedy of the federation. Whites are being dragged towards policies that would have been progressive five years ago; blacks are thinking five years ahead. Malawi, Zambia, and Zimbabwe differ widely in mood, character, and state of transition. They are united only in their desire to end white rule and, more important, to ensure that the pale monarchs from Britannia do not hold their central African kingdoms together against the black will.

Sadly, it looks as if the two Rhodesias may be disturbed yet again. But calm has come to Malawi-land. The Ngwezi (Hero), Dr H. Kamuzu Banda, is a cooing dove. The responsible hands of the United Federal Party have turned petulant, but there is little danger that they will break things. Intimidation (on both sides) has decreased and there is every chance that the elections, which will be held within a few months, will pass without violence. The change of Nyasaland governors at the beginning of April marked the change in political mood that had been encouraged by the outgoing governor, Sir Robert Armitage, since before Christmas: instead of being sworn enemies, the Malawi Congress Party and the government are edging towards the day when, after the elections, they will become one.

Malawi's contribution to the new mood was a farewell dinner party on April 4th for Sir Robert, who sat on a raised platform between the Great Kamuzu and Mr Dunduza Chisiza, secretary-general of the Malawi Congress Party. They were flanked by Lady Armitage and Mr Orton Chirwa, who was on his very best behaviour. His compère befitted a member of the English Bar, although it may have surprised guests who had seen him at nationalist meetings. There was not a whisper of murder plots, Devlin, or detention. Dr Banda was full of praise for Sir Robert and reminders that political enemies can be personal friends. Sir Robert almost rose to the occasion; his pleasant little talk was like that of a headmaster telling his school that if it were not for the canings and the lines these splendid boys would not have become the men they are today. It was the first real meeting between Blantyre society—black, white, and Asian—and Malawi. No one left without calling it an "historic occasion" and, indeed, in the history of Nyasaland it was.

But the whites have not yet come to trust Malawi. Some are feeling their way; others are certain that the country is doomed. Dr Banda went off to America a few days after the dinner he gave for Sir Robert, and Blantyre stayed behind and wondered whether his new mellowness will last. His policy now seems to be centred around attempts to pacify the whites; the measure of its success will come after the elections. He will need white men.

At the end of 1960 Nyasaland boasted 33 citizens with degree or professional qualifications; 43 Africans were on degree courses

and 29 on diploma courses abroad. On the basis of the present rate of development, it is expected that four trained graduates will be produced in 1966, eight in 1969, and twelve in 1971. With no increase in the rate there would be about 120 trained graduates and professional men available ten years from now; at present 580 posts in the civil service and teaching require degree or professional qualifications. Ways of speeding up the localisation of the civil service, and of providing more trained officers from local sources, have been suggested by a committee under the chairmanship of Mr H. L. Adu of Nigeria. In Blantyre they say that until a second report, on improving the educational system of Nyasaland, is completed, the first will remain much Adu about nothing.

It is difficult to say how much help will be accepted from the Rhodesias. The Federal government is responsible for health matters, and relations between the proud Nyasas and white Southern Rhodesian medical officers have never been good. A scheme to distribute polio vaccine has been shelved because the Federal health department feels its unpopularity amongst the Africans. Dr Banda seems to have advanced his fervour for a Malawi-state (complete with airline) to a point where, even if both Rhodesias went black, Malawi would be reluctant to enter a union.

The United Federal party theory (fondly held by Sir Roy Welensky) is that when Dr Banda comes to power he will see the economic necessity for federation and switch his policy. Estimates of the extent of Nyasaland's economic dependence on the Federation vary according to the source: it is said that between £3 million and £6 million a year has come to Nyasaland because of federation.

Mr Chisiza: Nyasa hopes.

The knots are too tangled for any figure to be acceptable to all. The Malawi party tries to believe that the country could go it alone—its chief economic theorist, Mr Chisiza, says that a case could be made out to prove that Britain is not economically viable if a statistician-economist were determined enough to do it.

Mr Chisiza, who studied economics while in detention and is never to be seen without a pile of economic works at his side, has written a pamphlet of his own, "Africa—What Lies Ahead." Published in New Delhi by the Indian Council for Africa (and shortly to be published in London), it is a remarkable sketch of the "secular and religious problems" facing the new nations of Africa. He describes his economic policy as a "pragmatic pattern of development," but it reads more like a list of the mistakes made (but not admitted) by the independent African states. With a dash of realism rare in nationalist politicians about to fight elections, Mr Chisiza asserts that social security in an undeveloped society is, if it is to be provided by the state, "something very close to a luxury." He warns against neglect of rural areas and the tendency of new countries to produce uneconomic "show pieces" for the benefit of foreign visitors. Sensible, if optimistic, ways of stabilising urban African labour are suggested. Mr Chisiza is hopeful of the prospects of economic growth for Nyasaland—he will soon be in a position to try out his theories in practice.

His pamphlet shows Mr Chisiza to be a conservative politician. His solution to the problem of party dictatorships in the new African countries is a temporary system of "national" governments composed of all parties, to wage economic war against the past. He believes, heretically, that pan-African unity cannot be imposed by political leaders—grass-roots "regional consciousness" must be

fostered first. He warns against "rewarding friends and punishing foes" after independence; against "petty jealousies," personal dictatorships and other mistakes that have been made in parts of Africa (although no names are named). Perhaps surprisingly, Mr Chisiza devotes half of his pamphlet to a call for religious and moral values in Africa. He lectures the missionaries (of all sects) on their mistakes, and describes how they can be rectified. None of this sounds like the wild, "irresponsible" politics so feared in Salisbury. But Mr Chisiza's pamphlet is no more than a blueprint, and one that has not yet been read by many people in central Africa. If Malawi, Zambia, and Zimbabwe go the way the United Federal party predicts they will when Africans take over, Mr Chisiza's work would amount to sedition. The fact that he has written it gives hope that things, in Malawi-land at least, will not be quite so bad as that.

## Cairene Anxieties

FROM OUR MIDDLE EAST CORRESPONDENT

**M**ARSHAL TITO was on a state visit to Egypt when the landing on Cuba was foiled by Dr Castro's forces. He and President Nasser lost no time in issuing a statement of their views on the subject. The habitual intemperance of Arab comment on colonialism (neo- and otherwise) suggests that the statesmanlike language of this communiqué owed much to Marshal Tito's influence. But its very moderation served to underline the completeness with which the American action was condemned.

The two neutralist leaders registered "resentment, concern and great shock," and appealed for "sanity, decency and the rule of law in international relations." Although no statement has yet been published, officials here are confident that President Nasser and Marshal Tito will soon call a conference of uncommitted nations in Cairo or Belgrade to bolster their common front against forcible interference in other countries' affairs. Although, as some western observers here are too quick to point out, the Cuban issue seems pretty remote to the average Cairene, the strength of feeling in official circles is undeniable. The Cuba affair suggests to them that the Suez spirit has not died out.

Anxiety goes further. President Kennedy at the beginning of his term, and the United States as a whole, have suffered a grievous reverse in a traditional American sphere of interest. It is thought here that a bigger and better second attempt is, therefore, more than probable, and that it would bring with it a certain Soviet reaction. Therein, for Cairo, lies the rub. Nobody here thinks it likely that the Russians would intervene militarily so far afield as Cuba. But Mr Khrushchev's pointed mention in his message to Mr Kennedy of American bases in Iran suggests to sensitive Arab minds that a Soviet counter-move might be launched there. Thus further action against Cuba carries with it the danger that cold war tensions would be heightened in the Arabs' own backyard.

The Cairo reaction to the military revolt in Algeria was a mixture of alarm and *Schadenfreude*. Most of the blame was put on the shoulders of General de Gaulle himself. He is accused of hesitation, tergiversation and downright muddle in his Algerian policy. Much as he may have confused Algerian opinion, he has confused French opinion even more; thus, it is held, he has brought trouble on his own head. One senior official in the Cairo government remarked acidly that General de Gaulle could not make up his mind whether he was Joan of Arc or Napoleon.

The collapse of the revolt has been received with relief. The attempt of the rebellious generals is regarded as the dying gasp of the Algerian *ultras* and its failure is believed to remove the most implacable and rigid enemies of the Algerian government-in-exile in Tunis. General de Gaulle's victory is also welcomed in

that there is now no likelihood of the movement spreading to the French troops in Tunisia and Morocco and so threatening the independence of these two countries.

Nevertheless, the air here is full of cautionary exhortations to the Muslim rebels. Their leaders are reminded that General de Gaulle's authority is fully restored and that there is therefore all the more need to be on their guard against his vague statements that may well mask an attempt to induce the Algerians to accept substantially less than their full demand for independence. Another idea gaining ground here is that the time has come to "internationalise" the Algerian issue. This means in effect the discussion of the Algerian problem in the United Nations. The countries who in the past have helped France to block the two-thirds majority that is necessary in order to have the issue brought before the General Assembly should now "realise their responsibilities." Even in Cairo this suggestion is regarded as somewhat forlorn at present, since General de Gaulle's spectacular victory may persuade many countries to give him at least one chance of coming to grips with the Algerian nationalists through negotiation without disturbance from outside.

## Pan-African First Steps

FROM A CORRESPONDENT IN DAKAR

**T**HE conference of African states which is to meet at Monrovia on May 8th could be an unusually important African event. The initiative for it came from Senegal, a member of the "moderate" Brazzaville group. At the beginning of February, the United States proposed a plan to solve the Congolese crisis which was greeted with reserve by most African countries. The Senegalese, for their part, officially declared their disapproval on February 10th; but they proposed instead that the uncommitted African countries—such as Togo, Nigeria and Liberia—should organise a conference at which all African countries would try to reach and define a common policy towards the Congo.

First reactions were sceptical, but gradually the idea caught on, and it has now been agreed that seven countries of remarkable diversity should jointly invite the 27 independent states of Africa to a conference in the Liberian capital. The inviting states are: Ivory Coast and Cameroun, which belong to the French-speaking Brazzaville group; Guinea and Mali, which are among the "militant" countries that took part in the Casablanca conference at the end of January; and Togo and Nigeria, which are known as "uncommitted," because they have stayed out of either group. It has also been decided that the conference should study not only the Congo question but also all international questions of interest to Africa. The Monrovia conference will therefore, if all goes well, be the first meeting of independent African states of all categories, French and English speaking, black and white, moderate and militant, Commonwealth and Community.

Since the beginning of the year the twelve Brazzaville countries have gained considerably in cohesion. When they first met at Abidjan, and even at their second meeting at Brazzaville last December, they lacked self-assurance, and their first objective was to reach a common attitude towards the Algerian problem that would be acceptable to their own peoples, while not cutting them off entirely from the former ruling power. There has been much progress since then; and it is a measure of the growing assurance of the twelve that they now feel able to tackle domestic matters and economic co-operation as well as external problems. At Dakar, at the beginning of February, the technical experts of the twelve drew up a number of plans for harmonising their economic policies and their fiscal and customs legislation; these were adopted by their heads of state when they met at Yaoundé at the end of March.

## Tea in London dinner in Montreal

(and a Rolls-Royce ride between)

Leave London after tea by TCA Rolls-Royce powered DC-8—and dine in Montreal! Of course, there's a slight discrepancy in the clocks—Montreal eats 5 hours after we do. But 3,000 miles in 7 hours 20 minutes is still good going (even for four Rolls-Royce jet engines). If you're bound for Montreal—or Toronto, Halifax, Gander, Winnipeg or Vancouver—fly TCA.

There are plenty of jet services to choose from—12 a week now to Canada, in association with BOAC. Travel in First Class luxury. Or in the thrifty comfort of Economy Class. For just 10% down if you like, under the TCA Pay Later Plan. With 24 months to pay the balance! Fly for only £16.6s. deposit on the Economy Class return to Montreal.

**Fly TCA DC-8 through services to and across Canada**

Your Travel Agent is the man to see

**TCA DC-8 Jetliner** SERVICE

**TRANS-CANADA AIR LINES**  
AIR CANADA

142-4 REGENT ST., LONDON, W.1. WHITEHALL 0851. AND OFFICES AT GLASGOW, SHANNON, MANCHESTER AND BIRMINGHAM

The Yaoundé conference reactivated the customs union of the former French West Africa, which had been dormant for two years, and set up a permanent secretariat with its seat at Abidjan. The conference signed a treaty creating a common investment area and a joint market to be known as OAMCE (*Organisation afromalgache de co-opération économique*), with a permanent secretariat at Yaoundé. A joint company for air transport was also set up, and it was agreed that a joint approach should be made to the European Economic Community. A common defence treaty is to be signed, telecommunications co-ordinated, and legislation concerning justice and nationality harmonised; and the twelve are to consult on foreign policy. New treaties and agreements covering all these subjects are to be presented at the group's next meeting at Tananarive in July.

These decisions reflect the new self-confidence of the moderate states. Last year the twelve were far from certain that they were on the right track in asserting that only bilateral negotiations between the French and the Algerians could solve the Algeria problem; their view was almost unanimously opposed by the other Afro-Asian countries. But the United Nations debate on Algeria was hardly over when the Algerian rebel government-in-exile adopted this thesis. The Congolese question has also changed in a way that helps the moderates. The twelve have consistently refused to condemn what the United Nations has done in the Congo, but they have carefully kept their distance from the UN. Although they support President Kasavubu, and even to a lesser extent Mr Tshombe, they have always argued that it was up to the Congolese to solve their problems themselves; for that reason they have avoided coming out against Mr Gizenga and his rival government at Stanleyville. Thus they have been far less involved in the Congo than Guinea, Ghana, the United Arab Republic or Morocco have; and should the Congolese factions settle their differences and agree on a central government, the Brazzaville group would be better placed than other African states to give it their support.

The twelve have been helped to develop their new self-assurance by the relative failure of the Casablanca group. At first apparently very dynamic, this group soon revealed that it was united only by common professions of anti-imperialism. Guinea, for instance, is clearly finding it more and more difficult to support Ghana in its individual line. In private, President Sékou Touré is vigorously reproaching President Nkrumah for having utterly failed to respect the decisions taken at Casablanca in January. Both the Ghana-Guinea union, and its later extension to Mali, seem lifeless.

Both Mali and Guinea have serious domestic problems. The break-up of the original Mali Federation (Soudan-Senegal), and the financial isolation of Guinea, together with the haste of both countries to socialise their economies while they still lack the necessary trained personnel, have caused serious shortages and wide-spread popular discontent. The twelve are not unaware of all this.

## Nasution in Australia

FROM OUR CORRESPONDENT IN CANBERRA

INDONESIA's young minister for national security, General Abdul Haris Nasution, who has been in Australia this week and last, smilingly argued before the cabinet his country's claim to Dutch New Guinea, and later had talks with Mr Menzies. General Nasution had been invited by the Australian government as part of an effort to be friendly to Indonesia. He was originally expected some months ago, but went to Moscow instead to acquire some more weapons to train on west New Guinea. From Australia, by contrast, all he wants is sympathy.

One practical expression of sympathy could be shown when next the question of west New Guinea comes before the United Nations General Assembly as it is likely to do this year. When last it did so, in 1957, Australia took the view that the Papuans, whether in the Dutch or Australian part of the island, must determine their own future, and the opponents of that view lacked the necessary majority. The new African members have already altered the arithmetic in Indonesia's favour, and the Kennedy Administration seems more anti-colonial than its predecessor. It would still, however, be gratifying for General Nasution to feel that he had weakened the zeal with which Australia would argue its case in the corridors of the United Nations.

General Nasution may also have hoped to talk Australia out of any inclination to give military help to the Dutch in defending New Guinea. This is a point on which Australian intentions have never been made plain. The general cannot ask the question directly, since he has repeated the assurance (which President Sukarno gave when Mr Menzies visited Jakarta in 1959 and which Dr Subandrio, Indonesia's foreign minister, gave in Canberra earlier in that year) that Indonesia would not try to take Dutch New Guinea by force. The Australian government has accepted that assurance, and therefore from both the Indonesian and Australian points of view the question of Australian military help for the Dutch does not arise at present. But for all that, it is in everyone's mind.

CERTAINLY there is uneasiness on the Australian side. Indonesia's huge military build-up of the last three years, the periodically belligerent speeches of its leaders, and lately some signs and portents of imminent aggression, are alarming. So is General Nasution's reference, soon after his arrival, to the possibility of an "incident." Everyone concerned, not least the Australian public, would like to know what Australia would do if the Dutch found themselves involved in anything more than a police action.

The Dutch especially would like to know. It is not that they want to stay in New Guinea; on the contrary, the impoverished colony is merely a source of great anxiety and expense (and not, any longer, of oil). But pride forbids them to flee from Indonesian threats, and conscience prevents them abandoning those whom they have started to develop. They have therefore embarked on a crash programme designed to bring west New Guinea to self-government in ten years or so by concentrating on the coastal belt while in the remotest jungle the tribesmen are left to eat each other in peace for the time being. The Papuan élite are delighted with their new dignity and their new semi-legislative council, and would like to remain under Dutch rule until they are ready for self-determination. There is no doubt, either, that the Dutch are doing their best for them—probably far more than Indonesia would or could do. In these circumstances some Dutch leaders have long felt that the Netherlands is entitled to a declaration of support from Australia—a firm statement of military commitment that might deter Indonesia from staging an "incident."

Australia's attitude is unavoidably ambivalent. On the one hand it recognises Dutch sovereignty unless and until a transfer is agreed between the Netherlands and Indonesia. It knows the Indonesian arguments; when the Dutch relinquished their sovereignty over the former Dutch East Indies in 1949, west New Guinea was specifically excluded from the agreement on ethnic grounds and reserved for further discussion. What the Indonesians had thought was merely a delay proved, when the agreement was reached, to be the permanent exclusion of west New Guinea from their domain. Be that as it may, Dutch sovereignty was never abrogated, and therefore Australia has recognised it unequivocally.

Quite apart from the legal position, there is much to be said, from Australia's point of view, for having west New Guinea under the rule of the Netherlands. It is true that the pace towards self-government set by the Dutch is embarrassingly rapid. "Just

window dressing" some Australians have called it; but it may nevertheless be the envy of Papuans under their rule. On the other hand, it is reassuring to know that so long as the Dutch are there, west New Guinea is both non-communist and co-operative, and the ultimate possibility of a united and independent New Guinea is not ruled out. Indonesia, by contrast, is a relatively unstable power, and not everyone would share the confidence of its present leaders that it will not turn communist.

From this point of view it is in Australia's interest that the Dutch should stay. Why then does it not proclaim that it would help them to do so? The answer is that it also has a vital and incompatible interest in being friends with Indonesia. The Dutch may be in this area for another ten years or so; the Indonesians are there for ever—not 300 miles from Australia's shores, commanding the direct route to Singapore, already eight times as numerous as the Australians, and multiplying faster. Moreover, they are not the only friends whom such a commitment would alienate. Australia's fellow members of the South East Asia Treaty Organisation would hate to see the Australian forces, which are pledged to resist the spread of communism, instead chasing Indonesian infiltrators through the jungles of New Guinea.

In this dilemma, Australia's policy on the question of armed support is to have no policy and meanwhile through friendship to hold Indonesia to its peaceful promises. Peace, however, can only mean capitulation by one of the disputants, since no trusteeship or condominium would suit either Indonesia or, in these days, the UN. Australia may seem to the Dutch to be unheroic and unhelpful. At least however they have the slight comfort of knowing that even after exerting all his charm on the prime minister and cabinet, General Nasution still feels that the Indonesian people too will not be "wholly satisfied" with the Australian attitude.

## Problems for Mr Foncha

BY A CORRESPONDENT LATELY IN THE CAMEROONS

BEFORE dispersing on April 22nd, the United Nations General Assembly settled the future of the British Cameroons. It endorsed the results of the plebiscite held last February, and decided that the Northern Cameroons should join Nigeria on June 1st, and the Southern Cameroons, the Republic of Cameroun on October 1st. Although there were some stormy arguments in the assembly's trusteeship committee about alleged improprieties in the plebiscite of the Northern Cameroons, the territory's union with Nigeria will probably be a comparatively simple affair. But the search for some sort of viable union between the Southern Cameroons and the French-speaking Cameroun Republic is far more difficult, and will be watched with lively interest by the other newly independent countries of West Africa. Africa is at present divided by the vertical ties existing between the ex-colonies and their former masters in Europe. African leaders are becoming increasingly anxious to substitute for this vertical relationship a horizontal solidarity between the English and French-speaking blocks. They feel that only in this way can a fast rate of economic development be combined with real independence.

The people of the Southern Cameroons seem determined that their unification with Cameroun shall be stronger than the tenuous association between Guinea and Ghana; but it is hard to see how initially they can achieve very much. In the first place, despite an extensive common frontier (which is more than Ghana and Guinea can claim) communications between the two territories are practically non-existent; there is no telegraph link, no regular air service and the few roads are shocking. A programme to improve communications is a priority, but will require money and time.

In the second place, the Southern Cameroons is at present as dependent economically on the Commonwealth as Cameroun is on the French Community. Officially, both connections are to be broken after union, but in private nobody takes these official declarations seriously. The main export of the Southern Cameroons, bananas, receives a Commonwealth preference of 150s. a ton; it would be a crippling blow if this were to be cancelled before other marketing arrangements had been made. Both territories depend upon their European associations for the direct aid that is essential for their economic development. Probably, therefore, far from breaking these links, they will try to strengthen them in an effort to get the best of both worlds. This would mean a considerable degree of regional autonomy, which would suit Mr Foncha, the Southern Cameroonian leader, who is not anxious to subject his country to an intensive course of gallicisation. Some British officials, however, fear that this may be exactly what the leader of the Cameroun Republic, Mr Ahidjo, intends; they argue that Mr Foncha, having failed to get an agreement on the division of power before the plebiscite when his bargaining power was greatest, now faces the prospect of having the terms of union dictated to him. Mr Foncha, whose trust in his "Cameroonian brothers" seems boundless, is deeply hurt by any such suggestion. Fortunately, however, Mr Ahidjo is unlikely to want too close a political association, since most of the Southern Cameroonians are believed to support the opposition party in Cameroun.

Presumably, then, unification will be confined to a customs union and a common currency. But even on this Mr Foncha is vague, and seems uneasily conscious of the drawbacks. The cost of living in Cameroun is two or three times as high as in the trust territory, and Mr Foncha says he "will not allow prices to rise after unification." But unless he keeps his own customs and currency it is hard to see how this can be avoided.

The other great problem will be the replacement of the Nigerian staff in government departments that are now the responsibility of the Federal Government of Nigeria. Very few Southern Cameroonians have received more than an elementary education, but it would be neither popular nor easy to try to solve the problem by importing French-speaking Cameroonians from the Republic. Temporary arrangements might perhaps be made with Nigeria for secondment of staff and for the crash training of Cameroonians in Nigeria. Language and cultural differences will make it almost impossible for English-speaking Cameroonians to receive their higher education in Yaoundé.

It is not surprising that, confronted with so many formidable difficulties, Mr Foncha takes refuge in hazy statements about national solidarity. He gives the impression that he has failed to do sufficient homework on the practical side of what is still mainly an emotional issue. Now, however, he can hardly escape the need for some realistic planning.

Mr Foncha: homework neglected

Mr Ahidjo: intentions obscure

# 500 FT.-UNPREPARED RUNWAY!

When there's an urgent lifting job to be done, the giant Lockheed Hercules C130 freighter plays a vital role. Flying food to the Congo, bringing help to earthquake or flood-devastated areas, or airlifting troops to the world's trouble spots, the Hercules fulfils the need swiftly and in good measure. The Hercules is the choice of the Australian and Canadian air forces and is giving sturdy service.

And now comes a new version of this well-proven transport - the STOL C-130 HERCULES. A 62 ton giant, it has the

take-off and landing versatility of a light aircraft. A system of Boundary Layer Control enables this freighter to operate from 500 ft. unprepared surfaces. This means that **whatever and wherever the call** Hercules can be there - airlifting ten to twenty tons over a distance of 2,000 miles. No mission is too big, no one too small for this gentle giant.

Lockheed is prepared to support a licensed manufacturing programme in the U.K. to produce a Race engine STOL Hercules to British requirements.

### Blue Blood in Bristol

FROM OUR SPECIAL CORRESPONDENT

**Bristol  
BACKS  
BENN**

THE Government's plans to make a better place of Another Place have come too late to save Mr Wedgwood Benn from disqualification should he win the by-election at Bristol South-East next Thursday; but, though they were designed to a different end, they will do his cause some service. The Conservatives' move appears to have been timed with exactitude to have the maximum diversionary effect on Mr Benn's thrusting campaign and to force him to fight on the chosen ground of his opponent, Mr Malcolm St Clair—that is, on the Labour party's record. Mr Butler's announcement may, however, prove more damaging to Mr St Clair than to Mr Benn, whose supporters can now not only claim a victory for reason but also resolve any doubts they may have had about their candidate's cause.

And there were doubts. Bristol South-East is not an area of affluence or higher education: its 59,000 voters are ageing manual workers, young technicians, skilled artificers, small traders, living on council estates or in tiny Victorian terraced houses. They are, in the main, content to believe that they have never had it so good, and they are not much disposed to cerebration. They are set in their political habits: for the past 30 odd years they have returned a Labour member to Parliament, and returned him, not because he was Sir Stafford Cripps or Mr Wedgwood Benn, but because he was (in approximate Bristolese) the "Label Paddy": those who voted for the "Tarees" were party-men too. And they are somewhat confused by the personal issue in the impersonal business of politics. Their natural indifference originally looked like hardening into a firm lack of interest.

Mr Benn, however, chose to fight on the issue of his unwanted peerage, and to adumbrate from that particular futility "a deeper malaise in Britain today," "failure to adapt ourselves to modern life," "our fear of the future," our decline in "this exciting world

of the 'sixties" and our need to join The New Generation—none of it talk calculated to arouse the enthusiasm of anyone but people like Mr Benn himself, very few of whom live in his constituency.

To bring this campaign home, Mr Benn has engaged the support of a great many eminent personalities, some of whom will speak in his favour at the meetings before polling day. This is in pursuance of what Mr Benn calls a "summer school for the electors of South-East Bristol" during the campaign. But how many of his electors will turn up to hear dilations on the decay of England in the Space Age? The halls will be packed—but chiefly with people like Mr Benn, drawn from the university and the intellectual Labour supporters living elsewhere in the city.

Mr Benn is a unilateralist (and how Mr St Clair jabs at it!), and has therefore drawn support from the extreme Left, who are less than popular in Bristol South-East, where the general attitude to the bomb seems to be tolerance "as long as it keeps the Commies out." Other supporters are Tories of a colour particularly disquieting to Labour voters—and other peers. None of them endears Mr Benn to his followers. There is also a tiny body of opinion which condemns Mr Benn because he is a peer—"like the mark of Cain," said one of them; once a lord always a lord.

Mr St Clair has worked with great diligence on just the points likely to put Mr Benn in an unfavourable light for his electors: his unilateralism, the strange quality of the support for which Labour is paying and, above all, the wasted vote. Mr St Clair plans to enter the House of Commons by any means open to him after the election, and he has made this clear to the voters. Of course the votes will not be wasted or, as one of Mr St Clair's campaign leaflets has it, "thrown away and be null and void." But the attack has worried Mr Benn. And now that Mr St Clair's eventual expectations of a peerage have been coyly revealed, the voters of Bristol may decide it is high time they struck a blow to end the whole wearisome and complicated business.

## Passive Co-operation

FROM OUR SPECIAL CORRESPONDENT

ONE and a quarter million people—enough to populate a large city or a small country—could vote in this week's election to the management committee of the London Co-operative Society. Five seats out of fifteen are at stake on the committee, whose members are elected for three years. By Co-op standards, this is a thrilling contest: the society has a fully fledged party system, and some people have predicted that this year will see the end of the rule of the London Co-operative Management Organisation which has held power for close on forty years.

The LCMO has ten seats on the committee at present: last year a new entrant, the 1960 Committee, increased its numbers

to five (and won the separate presidential election). The 1960 Committee has vaguely communist affiliations, but supports the

Gaitskell recommendations for a reorganisation of the Co-ops which were indignantly rejected by the movement's Establishment. Also supporting the Gaitskell reforms are the brand-new Co-operative Enterprise Movement, young, non-communist and fairly left-wing.

But even this close-run and crucial election, with two young Davids fighting each other as well as the LCMO Goliath, is not likely to be very exciting. Last year only 6,000-odd of the society's members took the trouble to vote, and the figure will be phenomenally high this year if it reaches one per cent of the membership. Voting is easy, being open to anyone who has made a few purchases and paid a couple of shillings to become a member. It can be done at sectional meetings which take place throughout the week in different areas of London, or all day on Saturday at 221 of

the society's shops.

Perhaps the main reason for the membership's vast apathy is the fanatical democracy with which the society runs its affairs. Each year no fewer than four elections take place, for delegates to the Co-operative Congress, for the management committee, and for the education and political committees. Every three years there is yet another election of the president. The very normal housewives who form the majority of Co-op shoppers no doubt disregard notices of even the most important elections as a permanent feature of the shops' traditional decor.

## The Stamp World

FROM OUR SPECIAL  
CORRESPONDENT

**M**OST collectors of stamps—as, indeed, of such diverse trivia as cheese-labels, matchboxes and orange-wrappers—are adolescent schoolboys steered into a relatively harmless passion by parents fearful of the gap between lead soldiers and girls. It is on this shifting sand that Britain's—and the world's—huge business in stamps is firmly founded: the ceaseless, unspectacular transactions in Commonwealth Beauties, 111 Russia All Differents and Maldivian Pictorials keep many a dealer in daydreams of Penny Blacks. Boys grow up, discard or destroy their embryonic collections, or leave them to younger brothers to build on; but there are some who never get over the craze and pass from mere collection to full-blown philately. And both these developments are good for the stamp trade.

They are good, too, for the post offices of the world, many of which base their accounts on the certainty of selling the greater part of their stamp outputs to collectors and the dealers who serve them. Normal postal issues are, naturally, sold mainly to letter-writers in the countries concerned; but every country, for a variety of reasons, produces each year a number of special issues, and of these, it is estimated, possibly 80 per cent are destined for the albums. Nobody is willing to say how much this trade is worth in Britain, but in the United States the turnover exceeds \$100 million a year. At the meanest guess, Britain's approaches £5 million.

Like other businesses, stamp-dealing depends on buying cheap and selling dear,

Legend tells of the attempt by a newspaper magnate to buy control of a co-operative society, only to find that he had not read the rules properly and all his cash had secured him exactly one vote. But if money cannot do the trick, people could: although a candidate for election must have been a regular shopper at the Co-op for two years, anyone can become an elector. So almost any reasonably competent organisation—say the Empire Loyalists or the Society of British Vegetarians—should be able to rustle up the necessary 4,000 cardholders to get control of one-third of the

and selling dear used to be a matter of patience: the mere passage of time was enough to enhance the value of a discontinued line. Now, however, these leisurely methods are threatened by a new spirit of hard business which has alarmed more than the British trade alone.

**A**T one time a dealer or collector anxious to have a new-issue set would deal directly with the issuing authority, and would pay face value for his stamps; or he went, in a gentlemanly way, to the Crown Agent and bought them there. Now much is changed. Partly in response to the dealers' own demands for more stamps to fill blank albums, new issues have proliferated, and every anniversary or event, important, insignificant or fictitious, is celebrated with a batch of large, cheap and colourful stamps. The number of these new issues has risen to between 2,000 and 3,000 annually and, while in itself this might not have been detrimental to the trade, it was a source of income waiting to be tapped by a sharp mind.

The method was simple. An agent in possession of the sole selling rights of a new issue can charge what he likes for stamps vital to the currency of specialised collections. And it is not difficult to persuade the issuing authorities of the advantages: they do no work apart from ordering the printing, make a handsome profit—as high as 10,000 per cent.—in attractive foreign currency for themselves and are able to get on undisturbed with the design of the next

management committee.

This vulnerability may have contributed to the success of some communist candidates in elections, both to the management committee and for delegates to the Co-operative Congress whose votes on unilateral disarmament have so embarrassed Mr Gaitskell. As it appears, the communists agree with Mr Gaitskell (and with many observers outside the co-operative movement) on how to run the shops commercially. But it seems a funny way to run a retail organisation with a turnover of £59 million a year.

issue—which seems the least risky way of printing unlimited and unsupported paper money. The agent, too, makes a convenient profit. With the negligible exception of the dealers and collectors, everyone is made happy.

For them, costs rise, which is bad for business. After exhausting—at prices as high as a hundred times the face value—the really enthusiastic market, the agent tends to lower his prices to get rid of the unsold precancelled sheets in his stockroom, which is even worse for business. Finally, when interest in the issue is dying, the agent can flood the market with the remainder of his stock at face value, which is the worst thing that can happen to the dealers, left nursing costly but worthless stock. A case in point is the Afghanistan "Olympics" issue: handed over *in toto* to a New York agent, the first (six-cent) values of this series were sold for \$8.50 each. Their value is now considerably lower.

The daily stream of new issues sold legitimately through the issuing authorities is itself beginning to cause anxiety. At the rate of 50 a week—and worth, at face value, an average of 4s. a set—dealers cannot maintain their wonted catholicity of stock: they have neither the resources to carry several sets of each nor the volume of trade to get rid of them all if they could. Their gradual and inevitable specialisation causes many a heartache, ruptures many a sentimental and mutually profitable business association.

**B**UT the dealers are not spending their time in idle wringing of hands. At a joint meeting of the two most powerful trade associations a resolution was produced which, if adopted by philatelic societies elsewhere, may kill off the parasites: stamps sold through agencies and not available at face value over the post office counters of the country of origin will simply not be countenanced as authentic, and hence will remain uncatalogued, unwanted and valueless except as curiosities. If nothing else, this would at least prevent a repetition of the gulling of dealers and collectors alike by a craftsman who, noticing that Cuba had not produced an "Olympic" issue, privately obliged with one of his own design from Italy, where he now languishes, a rich but chastened prisoner.

## The difference between her home and yours is steel

**I**N THE GLOSSY WORLD of 1961, this scene comes as a reminder that there are still parts of these islands where the cooking is done with a cauldron and a kettle over a fire smouldering on the bare stone floor, and water has to be carried from the local pump.

The difference between this spartan interior and your home is largely a matter of steel. Steel is the modern material that goes into cookers, refrigerators, sinks, washing machines, central

heating equipment, and all the other effort-saving equipment needed to turn a mere house into an ideal home.

Steel has a behind-the-scenes rôle too, because it is used in the machines that make all these things. It is used in the lorries and railway rolling stock that transport raw materials and finished goods. It goes into electricity generating stations and into electricity pylons; into gasometers and industrial chemical plant.

Steel has transformed the world we live in because it is strong, cheap, plentiful, easily shaped. Steel can make itself useful in so many different ways. Now flexible and resilient in a spring. Now hard and tough in a cutting tool. Now workable and ductile, so that it can be pressed into the shape of a car body.

Steel is the versatile metal—the essential metal of modern life.

**THIS IS THE STEEL AGE** BRITISH IRON AND STEEL FEDERATION

## Sales under control with I.C.T

Business sails along smoothly when the facts and figures of your sales are young and fresh and always immediately at your beck and call.

I.C.T. data processing will give you comprehensive sales analysis... sales comparisons; sales by area, customer, product, representative; delivery mileages; freight charges; discounts. Order analyses, as well, to help your production planning. You get the facts you need in the form you can use for management decisions—as news, not history.

For constructive advice on how I.C.T. data processing can keep vital management information always under your watchful eye, phone your nearest I.C.T. office, or write to us now.

## Steel: An Essay in Planning

SINCE the war, the British steel industry has aligned its capital investment to accord with three long-term development plans; this week it produced a fourth. No other industry in the country does so in quite the same way. The electricity supply industry is constantly engaged in detailed forecasting of demand for power seven years ahead; and from time to time, when it needs an increase in its borrowings from Parliament to help finance its vast investment programme, it sets the current results down and publishes them. The gas industry on occasion publishes a similar account and justification of its projected investment. The coal industry and the railways committed themselves after the war to very long-term plans, reaching 10-15 years into the future—and both have had to recast them since. One or two quite private industries, such as chemicals, did some years ago publish collective plans, or accounts, of what investment was being done. But only steel regularly carries through and publishes fairly full results of a full-scale exercise that a French *dirigiste*, for example, would recognise as planning. And it is useful at a time when so much vague discussion about long-term plans in British industry is going on to have one British industry actually publishing one (or rather more than one).

In aggregate, the totals postulated for 1965 by the steel plan which has been most fully published\* were already known. The Iron and Steel Board believes that the industry ought to provide capacity to produce 32 million ingot tons by that year; the British Iron and Steel Federation, representing the actual steel companies, thinks that it should have a capacity of 34 million ingot tons. Both these estimates provide for a margin of spare capacity over and above expected demand (which the industry has never before planned for, though it has at times, inadvertently, been left with capacity to spare). The difference between the two central bodies' estimates of the amount of steel that the British economy may actually use and export in 1965 is narrower in absolute terms: the board puts it at the finished steel equivalent of 28.6 million

ingot tons, while the federation said 29.9 million.

Over and above this, the federation allowed for a 5 per cent fluctuation either way, requiring 32 million tons for possible peak demand: and what the companies actually plan to do—giving margins of capacity not simply in terms of crude steel, but for many different kinds of finished steel—appear to promise over 34 million tons in being by 1965. There are some significant differences in emphasis, and even it would appear in economic analysis, between these two exercises in forecasting, of which only the board's has been published in any detail. But the amount of new capacity that is expected to be built does not differ, since it comprises not calculations, but the companies' actual plans to spend money. And whichever estimate of demand turns out nearer the mark, the difference can largely be taken up in scrapping some old plant a little earlier or a little later.

For 1965, the home demand for steel that the Iron and Steel Board is now forecasting is not quite as high as the demand that it thought in 1957 might be reached in 1962: 23.34 million ingot tons for consumption and stocks in 1965, against a figure of 23.91 million tons for 1962 in its forecast then. It also forecast then that direct exports of steel might reach the equivalent of 4.85 million ingot tons by 1962; now it thinks that they may reach 5½ million ingot tons by 1965. This plan exceeds its last exercise in forecasting, therefore, largely by envisaging the building-up of a significant margin of spare capacity, and by raising the ante slightly on exports. In this report the board also briefly glances further forward. It expects a rise of, say, 3 million or just possibly 4 million ingot tons in home market requirements between 1965 and 1970; doubts if there will be much further increase in direct

exports of steel; and there being no need to provide for more than a *pro rata* increase in spare capacity, comes out with a tentative capacity requirement for 1970 of 35 or possibly 36 million ingot tons.

Consumers do not buy crude steel: one of the differences between the steel industry's planning exercise and those that other industries occasionally carry out is the detail into which it has to go

about demand for particular families of steel products for which specialised finishing capacity has to be laid down. The board has to find out the expectations of major consumers of the various kinds of steel and compare these with its own. For example, it says that its estimates of sales in 1965 of, say, 860,000 cars in the home market and 700,000 abroad (plus 605,000 commercial vehicles and tractors) are both slightly higher (!) than those of the motor industry. It has then to estimate demand for steel in motors, allowing for contingencies, and fit this into its other forecasts of demand for sheet; the main contingency here, for which it is allowing an extra 800,000 tons of capacity a year, mainly in sheet, is that by 1962-63 the motor companies plan to have capacity for 3½ million vehicles. The board has to provide against the possibility that, in spite of the forecasts, up to about 90 per cent of this capacity could after all be used by 1965. Technological substitution may upset forecasts in some markets. In 1959, for example, the construction industries built about 47 per cent "more" structures than in 1954, but used 16 per cent less heavy sections; these requirements were about a third less than they might have been on earlier "factors of use". The board has taken the 1959 "factors of use"—i.e. the amounts of steel notionally required for a given volume of building—in forecasting 1965 demand: today, it considers these factors low, but by 1965 it thinks they may have become normal, since more ferro-concrete, better structural beams, and other light sections are being used.

Between the board's estimates of capacity required and the production that the companies expect to be able to achieve in 1965—from schemes already approved by the board—there is a margin of nearly 2 million ingot tons; and other schemes the producers have in mind would add another half a million tons. Against this, there exists at present some 2½ million tons a year of steel melting capacity which the board thinks may still exist in 1960, but which by then will be so obsolete as to be uneconomic, along with nearly a million tons a year of capacity for semi-finished steel and just over a million tons a year of finishing capacity in the same category. The board is not worried about any surplus of capacity over demand; it says approvingly that

for the first time for many years there is the firm prospect that capacity in every section of the industry will be sufficient to meet the probable home and export demand, and this from plant that is modern and efficient or from older units which can compete effectively.

The new capacity that it hopes will be built under this plan, plus other schemes produced in the meantime and an overlap of investment from the 1957-62 plan, may cost the industry, with some Government help, £600-£700 million.

The process of formulating such a plan as this is as interesting as the content of it. From about the end of 1958 onwards, both the board and a working party of the federation were preparing estimates, both jointly and independently, of possible demand in 1965. This meant consultation with all producers, and with major consuming industries: it involved, moreover, consideration of possible growth rates for the economy as a whole, in consultation with Government departments. For this report, the board tried out "models" of the economy, using alternative rates of future growth. In 1957 it reckoned on an average growth of 2.8 per cent in

gross domestic product up to 1962 and for some increase in the "steel intensity" of the economy; so far, neither has been achieved. It is now providing for a rise in GDP from 1959-60 to 1965 of 3.2 per cent a year. That implies quite an acceleration over the performance from 1957 to 1960, or indeed over any five-year period of increase in output per head since the immediate postwar recovery.

To support such an increase in national output, the board has to assume some modestly heroic progress in certain sectors. An economic model postulating expansion at this rate without balance of payments difficulties, for example, must probably have as a necessary condition its assumption of a 7½ per cent annual increase in engineering exports. This would do more than enough to keep Britain's share of world exports in manufactures; but it would be twice what we have been managing recently. And the report provides for a much faster rate of growth of investment (other than in dwellings) than in the whole economy. The rate of growth for which it is providing, indeed, seems to be more than its own more refined calculations would suggest. Its belief that capital-output ratios may be tending to fall in the economy, plus studies of the assets due for replacement, "suggest distinctly lower investment requirements than have been included for 1965". This raises questions about its own forward estimates; its reply is:

The provision made in assessing industrial requirements would allow for a continued reduction in the average age of existing assets, and/or for a growth of industrial capacity about 1965 which would imply that the country would then be equipping itself for a more rapid growth than is assumed for the period up to then.

It has not however reckoned on that rapid later growth itself, in looking from now towards the period from 1965 to 1970. It reckons that by then its country will have no growth in working population to speak of, and its guesses for steel expansion (which on the 1960-65 basis would be the same as its guesses for general economic expansion) are no more than 2½ per cent a year.

In discussing its 1957 report, the board says it is often asked how far the figures estimated then were a "best guess" of what would happen and how far they were an objective of policy. "They were certainly more than the former alone," it says. "The 1957 report did involve taking a view about what was necessary for an expanding and dynamic economy." Of its estimates for steel now it says: "This is not presented as a forecast. It is rather the sort of development that the iron and steel industry ought to be prepared to meet to avoid any risk that good management elsewhere—or good luck—might be frustrated. Such good management is in fact assumed in this estimate."

This is unashamedly, therefore, a plan for steel for growth—more growth than the economy may attain, though no more than it ought to attain; and fortunately no more than the steelmakers are prepared to invest in. There are large elements of faith here as well as of calculation: perhaps in planning there would always have to be. But one difficulty in extending such planning to other parts of the economy is the lack of other bodies that are so independent, so critical, and yet so deeply committed to the industries they serve.

## Should Gilt-edged Rise?

*The gilt-edged investor can very well face the months ahead with just a little more confidence.—Sir Edward Boyle, Financial Secretary to the Treasury, in the budget debate.*

MR SELWYN LLOYD's budget has left the Treasury and the Bank of England with a monetary problem of an unfamiliar kind. By raising taxation to cover almost all Exchequer outlays on capital as well as current account, and by making ready two new fiscal regulators, the Chancellor has lightened the load on monetary policy. The City, which likes an active monetary policy as little as does Mr Harold Wilson, has been less reluctant to cheer. Mr Anthony Tuke, chairman of Barclays Bank, believes indeed that the balanced budget may well have "a profound moral effect." Not everyone is so confident of the public's ability to read the Financial Statement, but some more clear-cut consequences can be foreseen.

In its task of monetary management, the Bank of England has hitherto felt itself to be fighting an uphill battle, in which its attempt to check the expansion of the credit base by selling long-term Government securities to the public has perpetually been undermined by the Government's calls for new money for its recurring net deficit. Now the net deficit is to disappear. Open market policy has at last been given room for manoeuvre. And the problem arises: what is to be done with it?

The problem is given special point because even before the budget there was actually more freedom of manoeuvre for open market policy than was readily recognised in official quarters. On the face of it, the gilt-edged market presented a depressing look. Only briefly in the autumn did prices rise, and then they drifted down, to new low points. But all the time the authorities were in fact selling very large quantities of stock. In the nine months from the beginning of April to the end of December official sales exceeded purchases by £431 million, in spite of continuing large sales by the banks. The popular conception that the gilt-edged market is finished and demoralised cannot stand up to these published figures. In 1960, moreover, the substantial volume of funding took place while market prices were falling. The first downward jolt, in February that year, had an unfavourable effect, as the champions of "funding on a rising market" had always said it would; but once investors felt that prices had probably touched bottom they came in to buy, attracted by the increased yield. Later they were proved wrong, as prices fell further, but the buying went on. In the new year quarter the market became more subdued, but it held up surprisingly well to the attack on sterling in early March. The budget provided an immediate and unexpected fillip; and this week Americans have come back as buyers of War Loan.

The impression that funding was perhaps being pursued too inflexibly occurred to outside observers as early as last autumn, when it became apparent that the liquidity of the banks was being squeezed so far that the authorities might have to take special steps to relieve it. This they duly did, partly by taking gilt-edged securities direct from the banks without penalty.

Now comes a budget with a planned reduction in Exchequer borrowings from £394 million to £69 million, in a year when the Exchequer is likely to get substantial finance both from Lord Mackintosh's National Savings and from the operations of the Exchange Account (which bring sterling into the Exchequer when gold flows out to finance a current deficit, but do not on balance affect domestic credit when gold flows out as a result of the encashment of foreign-owned sterling balances previously invested in Treasury paper). This year's problem is not how to borrow money in the gilt-edged market; it is whether to repay it.

Assuming the Exchequer accounts follow something like their projected course—which has not always happened in the past—the managers of gilt-edged can choose between three policies. They can continue their present policy of selling the maximum amount of long-dated securities and trying wherever possible to replace short-term by longer-term debt; if they do this they will almost certainly force the banks to make wholesale and unjustifiable cuts in their advances—unless special deposits are released at the same time. Secondly, the authorities can suspend this long-range policy of maximum funding and press no sales on the market this year; in that case, unless public demand for gilt-edged dries up altogether, market prices for gilt-edged will tend to rise. Thirdly, they can continue to sell long-dated stocks and push forward the queue of corporation issues (on Thursday they let through an issue of £10 million of 13-15 year stock by Glasgow), but at the same time buy in or redeem at least an equivalent amount of short-dated bonds. In this way they could continue both to lengthen the life of the debt and to keep a check on long-term interest rates, without any further tightening of technical bank liquidity—though the repayments of short bonds would cut into the banks' second line of liquid assets.

This compromise course seems on the whole the most

likely. No doubt it would concentrate the influences making for a decline in interest rates on the short-dated end of the market. But, especially if the Government felt that it was in line with the new international gospel of not coveting one's neighbour's hot money, this might be more acceptable than a fall in long-term rates. The Bank of England now makes little attempt to disguise the fact that it does "take a view" of these rates, as the Radcliffe report urged it to do. But the view itself tends to be pretty long-term—concerned less with shifts of course to correct movements in the business cycle than with the rate of interest at which, over a run of years, the public's savings can be attracted and retained.

The passionate dispute before the Radcliffe committee whether gilt-edged securities could best be sold by raising their prices or by lowering them seems, happily, to have been forgotten. It has been seen that a yield basis of around 6 per cent attracts substantial demand. Having found a basis for successful funding, and for re-establishment of control over the credit base, the Bank of England may not be anxious to see it undermined. And since one can reasonably reckon that the equilibrium long-term interest rate for Britain over the years is more likely to be 6 per cent than 5 per cent, any substantial rise in gilt-edged prices from their present level might seem precarious and to hold disillusionment in store.

This continuing bias among the market managers against the flexible variation of long-term interest rates is understandable. If markets are influenced in accordance with the requirements of the ups and downs of business, prices will fluctuate, and investors who have bought at the wrong time will let out a howl. Next time, the market may anticipate

official response to business conditions so far in advance that rates will start falling at the beginning of an upturn and start rising before recession has begun; that is more or less what happened in the United States last year. Yet if long-term interest rates are made too rigid they will cease to serve as a regulator; and if at the same time they are largely the reflection of the official "view," as is now the case, the "market" will lose much of its meaning. One could logically turn over the whole job to Lord Mackintosh.

These are the difficult issues of general principle which the Treasury and the Bank have to resolve if they mean to preserve open market policy as one of the effective monetary regulators. But, whatever the arguments against inflexibility *per se*, there is no case for letting the market pull prices up now. The present stage of the business cycle is not altogether easy to define. But, certainly, if the Chancellor thought it reasonable (or at any rate politic) to put profits tax up he can hardly find a case for letting interest rates go down.

It may be, of course, that this unaccustomed gilt-edged problem will evaporate. It will do so if trustees sell out very heavily when they gain their new freedom later in the year, or if the general appetite for gilt-edged is damped down by a renewal of inflation or of serious trouble for sterling. In any case, the reduced call on the capital market by the Government seems likely to release money for investment in equities. But, if the public goes on buying gilt-edged, and the authorities want to resist any marked fall in rates, they will have to over-leap some tricky technical hurdles. One wonders, indeed, whether all the consequences of Mr Lloyd's budget have been fully thought out.

## Questions About Supersonics

**M**ORE haste, less speed" is a phrase the Minister of Aviation might ponder when he listens to reports brought back by his technical advisers from the conference on supersonic airliners that ended in Montreal last weekend. Delegates had been all but incarcerated in a hotel for five days and nights worrying, among other things, about metals cracking under heat, fuel bursting spontaneously into flame, pilots landing aeroplanes as long as an office block (200 ft) from a cockpit 50 feet above the ground, and the fertility of the world's 39 remaining whooping cranes.

They had reason to worry. Although aircraft makers in the West can without any question build large airliners to fly at two, three or conceivably even four times the speed of sound, they are a long way yet from producing one that the airlines would be prepared to buy. The need is for research and still more research. How well is this understood in Britain? How widely is it appreciated that no one is sure yet what the right speed of a supersonic airliner should be? In this respect the American attitude is a deal more open minded than the British. The American industry may lean, for commercial reasons, towards an aircraft flying three times as fast as sound, in the region of 2,000 miles an hour. But it has not shut its eyes to the equally powerful arguments for trying a lower target, twice the speed of sound or about 1,500 miles an hour, and is doing a good deal more thinking about this kind of aircraft than it admits in public. But

Britain's effort appears to be concentrated now on the slower aircraft to the exclusion of all else. Mr Thorneycroft needs a good devil's advocate to speak up for the faster machine before the country wakes up to find itself committed to building a £200 million airliner that no one may want to buy.

The airlines are less interested at the moment in the precise speed of the aircraft than in whether public opinion will permit them to fly it at all. A big supersonic airliner is a public nuisance. As it climbs off the ground and accelerates to supersonic speed, it sends back shock waves that reach the ground with an ear- and window-splitting crack; as it levels off, a "sonic boom" travels along the ground beneath like the roll of a bass drum. The size of the aircraft, rather than its speed, will decide the amount of disturbance that this boom is capable of making.

How much of this will the public stand? Not much, if the sharp reaction to jet noise is any guide. Now that the worm has turned at last, airlines are treating it with as much respect as they would a king cobra. They tried, but failed, last week to get some inkling from the licensing authorities present at the conference about the likelihood of a ban on supersonic flying over land—including regions populated only by game (hence the meeting's concern with the neuroses of the whooping crane). Were such a ban introduced, few airlines would be interested in buying the machines at all.

Certainly no American airline wants an airliner that cannot be flown supersonically across the continent.

Even without such a ban, the sonic boom recoils on both the design and the operating economies of any supersonic airliner more seriously than is perhaps realised. To prevent broken windows and collapsing garden sheds from marking each spot where an airliner accelerated to supersonic speed after take-off, airport authorities may order the airliners to delay the transition from subsonic to supersonic speeds until they are high enough to reduce the impact of the shock wave on the ground to tolerable proportions. A height of eight miles and upwards was the figure mentioned. But it is not certain that the kind of narrow delta-winged aircraft which designers are minded to build can in fact meet this requirement so high up. It certainly cannot do so without huge engines of far greater size, weight and fuel consumption than are strictly necessary and more than a modicum of luck in design.

Manufacturers, for their part, are in no hurry to build supersonic airliners. Some of the biggest commercial aircraft builders in the United States have said flatly that they do not have enough data at the moment to start the detailed design of one. To build a military aircraft with a short working life and a small payload is one thing. To sell a civil airliner measuring 200 feet from its narrow nose to its pointed tail, weighing perhaps as much as 170 tons (400,000 lb) and carrying 130 people is a very different undertaking. The airlines reckon, for a start, that the aircraft must have a working life of ten to fifteen years in order to give them time to recover their investment. The makers have no idea at the moment whether they can build an aircraft that will stand up to this work.

For the first time, they have to take account of the fact that these airliners are going to get really hot during flight, up to 250 degrees Fahrenheit for an airliner flying at twice the speed of sound and 500 degrees for one flying at three times the speed of sound. The former could be constructed out of some of the newer light alloys, although this is coming fairly close to the upper limits of the temperatures they can endure; and the latter would certainly need to be built out of a combination of titanium and stainless steel. But no one can yet tell how these materials will stand up to repeated cycles of heating and cooling extended over a working life of ten years or more, and it may take years to find out.

One reason why British designers favour a 1,500 mph aeroplane flying at about twice the speed of sound is because they have data on the behaviour of the light alloys out of which they intend to build it, while seals, lubricants, fuels and other materials will be much the same as those used on present-day aircraft. Designers aiming at three times the speed of sound, who include every major aircraft company in the United States, know that when they have worked out techniques for fabricating large airliners out of stainless steel and titanium they have still to find materials for small but vital components like seals that are not made of metal but which will stand up to supersonic working temperatures.

Fuelling of a 2,000 mph airliner, again, raises three separate questions. There is the technical one—how to stop fuel decomposing chemically in tanks that may get heated to between 200°F and 300°F during flight. There is the question of

safety; how to stop vaporised fuel in the hot tanks from bursting spontaneously into flames (the solution of blanketing the fuel tanks with nitrogen left some of the delegates at Montreal unimpressed). Finally, there is the question of the cost of this super-fuel. The oil companies refused to allow either the manufacturers or the airlines to think that there would be any cheap or easy way of meeting these requirements. And fuel costs could make or break the 2,000 mph design.

**I**F the difficulties are so great, why should anyone seriously consider either building or buying such an airliner? The majority opinion in this country thinks it not worth the effort. The slower, British type of aeroplane has one great advantage over its faster competitor—if anything so nebulous could be called a competitor—namely, it could be built in perhaps ten years whereas the other might take fifteen. But no one, least of all the airlines, seems in any hurry to get quick delivery of supersonic airliners, since there will not be enough traffic to fill them on present forecasts until the early 1970s.

The strongest argument against the British airliner, however, is the fact that it is not capable of further development; the materials out of which it is made will not permit it to be flown any faster. Development costs must be written off within a relatively short space and a fresh start made on a radically different type of steel airliner, capable of better, faster flying. The steel and titanium considered now for aircraft flying at three times the speed of sound could in theory continue to be used for steadily faster aircraft until they approached close to four times the speed of sound—say about 3,000 miles per hour. And this seems as fast as the airlines are ever likely to want to fly around this planet, whatever they might do in outer space. When manufacturers are thinking in terms of world orders for only 150 aircraft, two sets of development costs incurred within a short period of each other hardly seem to make sense.

From the airlines' point of view, the case for the British type of airliner is a marginal one. They expect a minimum of ten years of life from their supersonic equipment, and would like longer. If the 1,500 mph aircraft is in service five years before the more complicated 2,000 mph machine, can it continue to draw traffic during the following five years when it is flying in competition with the newer, faster airliner? In their present mood, and with their present traffic, many airlines might wait the extra five years for the faster aircraft with the longer life.

This is not to say that the British policy is wrong; time could even prove it triumphantly right. But it will be right only if the faster airliner proves too difficult to build, or if the aircraft turns out to have startlingly lower costs than its faster competitor. The 600 delegates at the conference would dearly have liked to discuss costs if they had been given any data to go on. But, in all honesty, most manufacturers had to say they had no idea what the aircraft might cost, and it was a tribute to the general common sense of the conference that what figures were proffered were politely disbelieved. And so they went home, airlines, manufacturers, electronics engineers, oil men, air traffic controllers, pilots' unions, government representatives, radiologists, meteorologists, consultants and your correspondent—some to change their views on supersonic airliners and some, without doubt, to change their designs.

# BUSINESS NOTES

## IN THE MARKETS

### Jolts from the Generals

CUBA and Algeria caused violent fluctuations on Wall Street and the Continental bourses this week, but in the London market did no more than impose a momentary check on the advance. Share prices in the United States and European stock markets are, in terms of their present dividends and prospective earnings, higher and hence more vulnerable than British equities. The failure of the attempt to overthrow Dr Castro and the generals' coup in Algeria certainly battered Wall Street, where on Monday the Dow Jones average fell by over 12½ points. But some reaction from the recent climb had been widely expected and the market remained orderly; and even before the Algerian revolt collapsed the market had recovered much of the losses made on Monday. But there was no strong follow-through and on Wednesday the Dow Jones average stood at 682, compared with its peak of 697 earlier in the month.

The Paris bourse was even more volatile, and this was reflected in quite sharp swings in prices on other Continental exchanges. The Algerian revolt led to heavy selling in Paris on Monday, when prices fell by over ten per cent and in the more speculative North African issues by as much as 20 per cent. The firm stand taken by General de Gaulle, however, steadied nerves on Tuesday and prices began to climb back. The collapse of the revolt pushed prices up very strongly on Wednesday, often to new peaks above their pre-crisis levels.

Throughout these three days of sharply changing fortunes, the London market took note of the crises but, phlegmatically, was not really perturbed by them. While prices fell sharply elsewhere, the London market marked time. Gilt-edged and equity prices slipped back a little but the comparatively big number of bargains marked in equities suggests that much of the selling was coun-

tered by buying. On Wednesday and Thursday, with the crisis in Algeria over, the London market, both in gilt-edged stocks and equities, resumed its advance. The *Financial Times* index rose to a new peak of 359.2 on Wednesday and, spanning the week, *The Economist* indicator rose from 419.1 to 422.6. At the moment, there is plenty of confidence in the London market that prices will move higher. Ideas, it may be, are being adjusted to different concepts of what dividend and earnings yields are appropriate. Those who preach caution appear to be banging their heads against a brick wall but where they argue that particular equities, such as electronics and brewing shares, rather than prices in general are too high their apparent masochism has some point.

## THE EXCHANGES

### Rebound in Sterling

STERLING again came under pressure last weekend. Uncertainties arising from the events in Cuba and Algeria were heightened in some Continental quarters by new talk about a further appreciation of the mark—despite the fact that the exchange inflow for the previous week was the lowest since revaluation in early March. On Saturday morning the sterling-dollar spot rate dropped to \$2.79½. By Monday operators had to reckon too with the weekend coup in Algeria; this unsettled sterling as much as the franc. Both the Bank of England and the Bank of France supported their currencies in the exchange market. The widespread anxiety was evident too in the gold markets. In Paris the Napoléon rose by nearly 5 per cent to 39.30 N.F., and in London private buyers

returned in force, pushing the dollar price up to \$35.09-11. Central banks, which had previously re-entered the market, withdrew.

By midweek when it became clear that President de Gaulle had the upper hand the markets simmered down. Demand for gold in London dried up almost completely on Wednesday and the price dropped back to \$35.08. Sterling was in strong demand, and was bought against dollars by the Bank of France—though there is no clear evidence that this was in connection with the Basle agreement among European central banks to hold each other's currencies. Strong demand for security sterling from New York, partly for purchases of gilt-edged but also, it seems, for one particular transaction, lifted the rate by over 2 cents to as high as \$2.79½ at one time on Wednesday.

The German Bundesbank continues to take piecemeal action to ease credit and lower interest rates other than its official discount rate. It has now permitted the banks to deduct from total liabilities subject to minimum reserve requirements their placings of funds in overseas money markets. These exports of short-term capital should also be encouraged by further cuts in fixed rates on German Treasury paper, to 2½-2¾ per cent on Treasury bills. The German capital market is also preparing for a loan to Japan. But a broader fronted attack on domestic interest rates is needed if calm in the exchange markets is to be restored.

## OIL

### Oddities of the Tax

SOME have suggested that it is naive to suppose that the purpose (of the tax on heavy oils) was to raise revenue and not to give protection to coal. I emphatically deny this and willingly accept the charge of naivety, because I am convinced that coal is in no need of such protection," said Mr Richard Wood, Minister of Power, who had the unenviable task three days after the budget of opening BP's new oil terminal at Milford Haven. He added, "Few things are certain, but this tax will barely check the growth of oil in our economy and more and more oil will certainly come to Britain."

His officials at the Ministry of Power, meanwhile, in consultation with the Customs and Excise department and the Treasury, were trying to sort out some of the new anomalies that the new duties have imposed on the British fuel market. One of these, the fact that gas made from oil quite escapes duty while electricity made by burning oil has to pay, was mentioned in these

columns last week. But gas—and indirectly coal—will probably be slightly affected by it, at least, for the new duty applies to some coal tar derivatives. It seemed clear this week that creosote-pitch mixtures, such as the steel industry has on occasion used to fire steel furnaces instead of fuel oil, would have to pay tax, and probably at full rate. Even road tar might have to; it was perhaps hardly in the Chancellor's mind, whatever Mr Wood may feel about protection one way or another, to give a competitive advantage to bitumen. These tar products never in fact paid the 1937 duty that Mr Lloyd said he was re-imposing: but the excise definition now seems to rest on a question of liquidity at a given temperature, which may pull them in. It is not clear how the duty will affect the use of by-products from coke ovens inside integrated iron and steel works; but there are some presently profitable exchanges of tar for other products between the steel and gas industries that may be quite awkwardly affected. Liquid petroleum gases are not liquid at normal temperatures, and will escape this duty. Its imposition therefore could give a fillip to large-scale sales of this gas to industrial consumers, which are so far only occurring to a limited extent in this country.

## OVERSEAS TRADE

### How Freedom Worked

NO one will be surprised that imports of goods on which controls were relaxed or abolished in 1958 and 1959 have risen more sharply than other imports. But figures compiled by the Board of Trade will scotch exaggerated notions of the part played by these goods in last year's import boom. The classification of commodities used in derestriction orders has been related as closely as possible to the normal classification used for trade statistics and comparisons have been presented between the performance of imports of goods freed in those two years and other imports. Between 1958 and 1960, imports into the United Kingdom rose by £809 million, c.i.f. Imports of the type of goods affected by the relaxations increased by £381 million; but only £175 million of this increase came from sources to which the restrictions previously applied.

If imports of these goods had risen no faster than the 17 per cent increase in similar imports, they would have increased by £50 million. Even if controls had been maintained, extra licences would presumably have been issued in view of the powerful surge in demand—officials had been growing more liberal about the granting of licences for some time and many of these imports would have passed muster as essential or desirable. Frustrated importers would in any case have attempted to get the goods they required, or passable substitutes, from other sources. Whatever is claimed about the effects of earlier trade liberalisa-

tion, no more than a small part of the responsibility for last year's deterioration can be laid at the door of the liberalisation in 1958 and 1959.

The greatest changes have occurred in imports of machinery on which control orders had possibly been an impediment to efficiency: two-thirds of the £96 million increase in liberalised imports of finished manufactures is thought to have consisted

## EFFECT OF RELAXATION OF IMPORT CONTROLS\*

| IMPORTS (c.i.f.)              | 1960  | Change between 1958 and 1960 |         |
|-------------------------------|-------|------------------------------|---------|
|                               | £ mn. | £ mn.                        | %       |

\* In 1958 and 1959. † Other imports of similar goods.

of capital goods. Even so, dollar imports of machinery contributed less than one-tenth to the total increase in the import bill between 1958 and 1960.

The reduction of £5 million a month in seasonally adjusted imports in the first quarter of 1961 was caused by a fall in the value of imported foodstuffs. Imports of basic materials were unchanged in value, but, corrected for seasonal influences, are apparently still rising, as indeed are imports of finished manufactures. With the exception of North and South America, exports to all the main trading areas have increased since the last quarter of 1960. Exports to western Europe have risen strongly since the middle of last year, and improved by a further 5 per cent in the first quarter of 1961. Nearly all the improvement was in exports to members of the Common Market.

## FINANCE BILL

### No Surprises

THIS year's Finance Bill, published on Thursday, follows quickly on the budget and, at first glance, contains no major surprises or controversial interpreta-

tions of the budget proposals. It provides for certain minor reforms, including relief to jobbers from having to pay *ad valorem* stamp duty when they have made use of borrowed stock to complete a transfer. This is a minor relief for, as Government bonds are free of stamp, it will be of concern almost exclusively to jobbers in corporation stocks. The clause dealing with the surcharge on employers provides, as had been foreshadowed by Treasury spokesmen in the budget debate, that different rates of surcharge may be prescribed for "different descriptions of persons"—that is men, women, boys, girls and the retired—who pay separate rates under the National Insurance scheme. This reserve power, and the power to vary revenue duties by up to 10 per cent in either direction, may be introduced by order "if it appears to the Treasury that it is expedient, with a view to regulating the balance between demand and resources in the United Kingdom. . . ." Although the variations will not apply to protective duties, the margins of Commonwealth preference in the revenue duties themselves would be temporarily increased to a very small extent.

## MOTORS

### Back to the Boom

CAR production in March began to rise sharply to match the recovery in sales, but the inevitable delays in getting production going again after the drastic cuts of the winter meant that it reached only 19,557 a week. A year before it had been 32,000 a week; but the sales in the home market were nearly 300 higher this year than last, at the record level of 89,614. Manufacturers report that there has been only a small seasonal fall in sales at home this month. Ford states that sales continue to be higher than last year, and the British Motor Corporation that its programme of deliveries to the home market for the summer is the highest ever. Production too should soon be close to last year's level; BMC states that it has set a production programme for several months ahead that calls for capacity output, or over 15,000 vehicles a week—though the strike at Pressed Steel means that output now is much less than this. Ford has been making as many cars as it can for about a month past, though the loss of labour in the winter and the delays in getting the supply of bought-out parts worked up again mean that output is lower than it was last year. Standard-Triumph International is also affected by the Pressed Steel strike; it reports a record rate of orders for the Herald 1200, but the big cut in the labour force must mean a lower output than last year. Rootes and Vauxhall have both been hit hard by the fall in sales to America, the latter worst of all: no 1961 Vauxhalls have gone to the United States, but both have benefited from higher home sales.

Exports remained the black spot in March; at 26,359 they were even lower than in January or February and only 40 per cent of those a year before. Shipments to the United States remained a trickle—only 1,077. Fewer went to Canada, too; though sales there have not fallen, they have not risen as much as dealers had hoped. They had built up stocks last year and now are running them down. There was also a surprising fall in shipments to some European markets, including Belgium and Holland, where sales seem to be going well; here again stocks had risen last year and dealers may have wanted to reduce them, as they still do in Sweden. This month should have seen a reversal of the downward trend in exports; makers report a seasonal rise in

sales to Europe, and BMC began shipping sports cars to the United States again at the beginning of the month. But there seems no chance at present that exports will return to the level of the last two years.

#### WORLD FINANCE

### Jacobsson Chooses Bernstein

THE chiefs of both the International Monetary Fund and the World Bank have reported to the Economic and Social Council of the United Nations in the past week or so. Dr Per Jacobsson took the

opportunity to declare his intentions about increasing the Fund's resources. The time is now ripe, he said, to replenish the Fund's stock of particular currencies by borrowing, which it is empowered to do under its Article VII. A study of the various possible methods is in hand; but the most appropriate method seems to be

a network of stand-by arrangements with the main industrial countries under which the Fund will be able to use increased amounts of their currencies, whenever the need for such use would arise as part of a Fund operation.

This is in effect the Bernstein plan. Dr Jacobsson stated that in his opinion the present articles of agreement give sufficient latitude for constructive and flexible

### Profit Curve

INDUSTRIAL profits now appear to have passed their peak and to be heading downwards. Profits reported in the four quarters of last year climbed steadily; as compared with the corresponding quarter of the previous year, they rose by 8½ per cent, 14½ per cent, 18½ per cent and 21½ per cent consecutively. In the quarter to March 31st this year, the profits of the 406 companies included in our customary analysis, set out in detail on pages 500 and 501, rose by 14 per cent. Almost all these companies made up their accounts either on September 30th or December 31st. It had been widely expected that the rate of increase in profits would slow down; but that evidence of this should appear in this particular quarter is all the more remarkable because the steel companies have a big influence on the statistics and they reported an increase in profits of as much as 27½ per cent. Other

statistically important groups that reported an increase in profits above the average were: breweries and distilleries (23½ per cent); clothing and footwear (20 per cent); engineering (15 per cent); and motors, cycles and aircraft (27½ per cent). But of no less significance, a less than average increase was reported by shops and stores (10½ per cent); tobacco (8½ per cent); chemicals and paint (10½ per cent); electrical manufacturing (1½ per cent); and in miscellaneous manufacturing, profits actually fell by 5½ per cent.

As tax did not rise proportionately with the increase in gross trading profits, the net ordinary earnings of the 406 companies rose by 17 per cent. More was paid out in ordinary dividends, but the earnings cover on these dividends went up from 2.2 to 2.3 times. This confirms earlier evidence that the tendency to distribute a greater propor-

tion of earnings has been reversed. This is not surprising, for the companies had more invested in working capital and less in liquid form than they had a year ago.

The rise in profits reflected in an average increase from 9.4 to 9.9 per cent in the net rate of return on the net equity capital employed; this increase was less than that recorded in the previous quarter. The net rate of return of the steel companies has risen the most steeply, going up from 10.5 to 12.7 per cent. Elsewhere, the rise in the net return has been modest; the oddity that the net return of shops and stores has fallen from 17.2 to 14.3 per cent arises from the property revaluation of the Lewis's group. But if profits reported in the coming months are sluggish—as they are expected to be—true declines in net returns may occur and this, together with the latest increase in profits tax, may well have an important effect on dividends, especially if the companies concerned have decided to invest more.

THIS  
IS THE  
EAST...

Economic development in Asia is bringing higher living standards to these young people and to the vast population of that continent. Demand for an ever increasing range of merchandise is steadily rising. If you are interested in trade with these expanding markets, you are invited to avail yourself of the

banking and information services of The Chartered Bank and its subsidiary, The Eastern Bank Limited. The combined organisation of the two banks comprises one hundred branches in twenty-five territories extending from the Eastern Mediterranean to the Pacific Ocean.

## THE CHARTERED BANK

(Incorporated by Royal Charter, 1833)

HEAD OFFICE: 38 BISHOPSGATE, LONDON, E.C.2

West End, London branch: 2 Regent Street, London, S.W.1 • Branches in the United Kingdom also at Manchester and Liverpool • Agencies at New York and Hamburg.

The Eastern Bank Limited HEAD OFFICE: 2 & 3 CROSBY SQUARE, LONDON, E.C.3

Associated Banks: Allahabad Bank Ltd. (Incorporated in India) • The Irano British Bank (Incorporated in Iran)

arrangements, and he considers that the problems can be considered calmly and deliberately, since he sees no evidence of any general lack of world liquidity at present.

The Fund has already made a little progress in widening the basis of its operations. Almost immediately after Britain's acceptance of Article VIII in February, sterling was for the first time used for repayments to the Fund, by Burma. Chile has drawn Argentine pesos to repay an accumulated bilateral balance—the first time that a Latin American currency has been drawn. Latin America and other non-industrialised countries are playing a growing part in the Fund's lending.

### Black Warning

THE World Bank too, as Mr Eugene Black points out, is doing more in Latin America, as more countries have achieved relative financial stability. The pace of the bank's lending as a whole, however, seems to be showing signs of slackening. In the nine months to end-March its new loans totalled only \$380 million, compared with the recent annual rate of around \$700 million. In many countries the check is imposed by the borrower's existing debt burden. It is in these instances that finance may be made available through the new International Development Association. For the first projects, not yet announced, credits will be for 50 years, free of interest, and repayable in foreign exchange by amortisation after a ten year period of grace. It is already clear, Mr Black recognises, that the needs of potential borrowers are far greater than can be covered from IDA's slender resources. He hopes that in due course there will be a "substantial increase"—and also that countries contemplating an increase in their aid programmes may channel part of the additional funds through IDA.

At the same time Mr Black gives an urgent warning. All the efforts of industrial countries could be nullified, he declares, if population in the poorer countries continues to grow at its present rate of 2 or even 3½ per cent a year. He argues that to point to the favourable economic effects of a growing population are "widely irrelevant" to the problems of most developing countries today. "We are coming to a situation in which the optimist will be the man who thinks that present living standards can be maintained."

### BANK CREDIT

#### Relief for How Long?

THE April statements of the clearing banks show a marked improvement in liquidity, despite a further substantial rise in advances. The average liquidity ratio rose from 30.4 to 32.0 per cent—higher than in April, 1960—and the three big

### BUSINESS NOTES

banks whose ratios fell below 30 per cent in March are now all above the minimum. One important influence in bolstering liquidity was the maturity of the 2½ per cent Funding Loan on April 15th. This accounted for the bulk of the further decline of £72 million in bank investment portfolios—bringing the ratio of gilt-edged holdings to deposits down to 13.7 per cent. The encashment of these bonds must also be partly responsible for the unusually large rise in the banks' holdings of Treasury bills and other liquid assets in April. For a year or so previously the substantial volume of funding through the gilt-edged

market together with the sterling funds accruing to the Exchequer as the counterpart of the large external deficit had reduced the government's need to borrow from the domestic banking system. The revival of demand for gilt-edged after the budget will tend to put renewed pressure on bank liquidity—unless the authorities do something about it.

The increase of £69 million in net advances in April was spread across most categories of borrowers, and included some known seasonal and temporary influences—a number of big banks showed virtually no change. From now on seasonal influences should become less expansionary. But so far advances have shown surprisingly little response to the slackening in stockbuilding that appears to have taken place in industry. Even with many personal borrowers being held back, the underlying demand for advances is strong.

### ENGINEERING

#### Home Orders Increase

THE Board of Trade's latest figures for engineering output and orders show no sign of any slackening in the total pressure of demand on this group of industries, which make a wide range of capital goods from steel works to small machine tools and some consumer products such as household appliances. Indeed, the flow of new orders appears to have picked up again during

### THE ECONOMIST APRIL 29, 1961

January and February after running fairly level for the greater part of 1960. Virtually the whole of this increased ordering has come from the home market for capital goods of one kind and another: export orders are still running at almost the same rate as a year ago.

| Nov. . . . . | 120                  | 130                          | 133                            | 105                                             |
| Dec. . . . . | 125                  | 115                          | 121                            | 104                                             |
| Jan. . . . . | 111                  | 132                          | 115                            | 105                                             |
| Feb. . . . . | 123                  | 161                          | 120                            | 108                                             |

Engineering production is now about three to four per cent greater than last year but the volume of orders has been higher still. The total engineering order book has therefore begun to lengthen out once again. The back-log of orders for the home market, provisionally estimated as standing at 110 (January 1958=100) at the end of February, is about six per cent larger than at the end of December. Total outstanding export orders, put at 104 at the end of February, are barely any more than at the end of last year.

### PENGUIN BOOKS

PENGUIN-STAGS—or should it be stag-penguins?—are a zoological absurdity. But not so in the City of London, where there was a rush on Monday for application forms to subscribe for 750,000 ordinary shares of Penguin Books at 12s. each and a prompt and massive over-subscription for the issue on Thursday. This, like the recent Jaeger issue, was an instance of the household word. Perhaps it was even more than this, for the sight of the familiar penguin on every bookstall in this country (and a good number abroad) was as much as an advertisement for the offer of 30 per cent of the company's equity as the solid text of the prospectuses published in the City columns.

Unless the shares were offered at an absurdly low yield—which, in fact, they are not—this is one of those issues which simply could not fail. But, for those who care about such mundane things, the financial details are not unimpressive. Net tangible assets amount to just over 5s. per share; but who, least of all the stags, denies the goodwill? Profits have fluctuated widely in the last ten years, as a result largely of variations in the provision made against book stocks. In a bad year, such as 1955,

### THE ECONOMIST APRIL 29, 1961

this amounted to a charge of £107,000 and gross profits came to only £44,000; in a good year, such as 1960, it resulted in a credit of £48,000 which was included in the profit of £365,000; and, on the average, it has resulted in an annual charge of £35,000 against profits. But, over the last decade, the trend in profits despite the increase in competition from other paperbacks has been upwards. Last year, *Lady Chatterley's Lover* added £62,000 to profits and this year it is thought it will add another £50,000. The directors, however, have preferred to make their forecasts ex the lady, saying that, ignoring the £50,000, gross profits should amount to £200,000. Such a profit would indicate an earnings cover of just under 2½ times on the forecast dividend of 13½ per cent. The yield on the issue price is 4.6 per cent. The shares will obviously go to a premium and once the market has settled down the dealers can decide whether to call the shares "Penguins" or "Chatterleys." One hopes they will take the long view and plump for the former.

### BREWERY SHARES

#### ICTA Merger Terms

WHILE shareholders in Ind Coope, Tetley Walker and Ansell's will appreciate the reasons given by their directors for the merger between the three of them to produce the biggest brewing group in this country, they may wonder how quickly the benefits of a merger carried out through the medium of a holding company will be reflected in actual profits. Can all three breweries be expected to drive forward at the same pace? And, if they cannot, then is it not the shareholders in the laggard company that are the gainers? Perhaps, therefore, shareholders should content themselves with the thought that a merger such as this is as much a defensive shield as an offensive weapon. On those grounds, they can look upon the terms of the merger as being satisfactory.

They are based, as had been expected, on earnings and some account has been taken of profits earned since the close of the financial year; this is especially important for Tetley Walker shareholders, for that company has done particularly well since it was created in the autumn by the merger of Tetley and Walker Cain. The terms for ordinary shareholders are: 600 5s. shares in the holding company, ICTA, for every 400 in Ind Coope; 440 ICTA shares for every 100 in Tetley Walker; and 880 ICTA shares for every 400 in Ansell's. Thus about 45 per cent of the ICTA ordinary capital will be attributable to Ind Coope, about 28 per cent to Tetley Walker and 27 per cent to Ansell's. On the basis of the last published figures Ind Coope contributes about 47 per cent of the equity earnings and 54 per cent of the net equity assets to ICTA; Tetley Walker 26

### BUSINESS NOTES

per cent of the earnings and 25 per cent of the assets; and Ansell's 27 per cent of the earnings and 20 per cent of the assets.

Ordinary shareholders in all three companies, on the basis of the dividend forecasts, will gain immediately in income, ICTA will pay a final dividend of 8 per cent for the period to September 30th next; and a reasonable minimum assumption is that in a full year it will pay not less than 12 per cent. If the market prices the ICTA shares on the same yield as Ind Coope (currently offering 3.9 per cent) that dividend assumption points to a price of about 15s. 6d. on the ICTA shares. This, in turn, puts an effective price of 23s. 1½d. on Ind Coope (against a price of 22s. 3d. before the announcement of the terms), 67s. 9d. on Tetley Walker (against 58s. 9d.) and 34s. on Ansell's (against 33s. 3d.). To bid much above these prices for the shares before the merger has had time to produce any

tangible results would be to take a needlessly optimistic view of the future of brewing in this country.

### WAGES

#### The Spread of Earnings

FOR the first time since 1938, the Ministry of Labour has collected information about the spread of industrial earnings as distinct from average earnings, which in October last year were £15 a week for a man working in manufacturing industries. When the usual half-yearly inquiry was made last October, employers were asked to give, as additional information, the numbers of their full-time adult wage-earners receiving weekly earnings within specified earnings bands. In manufacturing

### Fiat Extends Its Range

THE new Fiat 1300 and 1500 models that have been announced this week are not replacements for the familiar 1100, but additions to the range of this Italian group, which now becomes almost as diverse as that of the British Motor Corporation. They are essentially compact, high-performance cars, intended to give much the same performance as the six-cylinder 1800 and 2100 models from which they are derived, and not low-priced economy cars. Though the price has not been announced, they seem likely to compete in performance and capacity with cars like the Volvo, Peugeot 404, Sunbeam Rapier, and perhaps even the Alfa-Romeo Giulietta and Lancia Flavia—but probably selling for about £675, a rather lower price than most of these. If this is so, they should give Fiat a stronger position than it has ever had before in the medium capacity range.

The mechanical design of the 1300 and 1500, which differ only in engine size, is strictly conventional by British standards; the engine is at the front, it drives a solid rear axle, which is suspended on half-elliptic leaf springs, while the front wheels are mounted on wishbones and sprung by coil springs. And following what is almost a British convention by now, disc brakes are fitted on the front wheels. The weight of the car has been kept down to about 18 cwt; with highly efficient engines that develop 65 or 72 bhp, this gives a power-weight ratio roughly the

same as that of the 1800 and 2100. The engines are four-cylinder versions of those that power these bigger cars, but with a slightly longer stroke and bigger inlet valves to increase the power. A top speed of 87 mph is claimed for the 1300, and one of 93 mph for the 1500—speeds comparable to those of the 1800 and 2100 though acceleration, especially in top gear, is likely to be inferior with the smaller engines. These models should prove strong competitors for the new British cars that are expected to appear this year in the same capacity range. Though this would have seemed bizarre only two years ago, some at least of the British cars will be more adventurous in design.

The new cars will not be sold in Britain until next October; the first marketing efforts will be concentrated, it would seem, on the common market. Fiat has ambitious plans for the production of this model, with capacity at first for some 600 a day. This means a total output of 2,700 a day, but by the end of the year Fiat plans to reach a daily rate of 3,000. Eventually, after the present extension plans have been completed, it will have capacity for 5,000 a day. It will then be in the Volkswagen class for total capacity, though not for individual models. But it should be making more of each model, if it can sell all these cars, than most of its other European competitors—with some advantage in costs as the result.

industries alone, returns have been analysed covering about four-fifths of the total numbers concerned.

The table shows that about one-quarter of full-time men in manufacturing had earnings below £11 10s. a week, a quarter had earnings between £11 10s. and £15, a quarter between £15 and £18, and the remaining quarter had earnings over £18. At the top, 10 per cent got over £21, but only 1 per cent over about £28 10s. Women's pay varied less: three out of five earned between £6 and £9 a week, only 3 per cent earned over £12.

The surprising fact that seems to emerge

## BUSINESS NOTES

from this inquiry is that there seem to be numbers of men and women working full-time for less than what would now be regarded as a living wage. This needs some qualification. The analysis is supposed to be confined to whole-timers (excluding office staff, commercial travellers and the like), but the definition of "whole-time" is more elastic than might be supposed. Anybody classified as part-time—working less than 30 hours a week—or who regularly worked less than the full normal hours of his class should have been excluded. But, for example, a weekend watchman working 31 hours would properly be included. More-

## THE ECONOMIST APRIL 29, 1961

over, this inquiry made clear that there were substantial numbers of women who regularly, and by agreement within their establishment, work a shorter week than the legal minimum. Such arrangements help to explain why the average weekly hours worked by full-time women in manufacturing last October was only 40.4 compared with 47.4 for men.

Such inconsistencies may well blur the difference between industries in pay at the

bottom of the scale. At the top end, this survey shows the newspaper printing industry well ahead with 40 per cent of the men in it earning £20 or over, 10 per cent £30 or over, and 2 per cent £40 or over. About a third of men in the motor vehicle industry earned £20 or over and more than a fifth of those in printing, iron and steel manufacture, engineers' small tools, hosiery, cement and the aircraft industry. Industries in which at least 1 per cent of men earned £30 upwards included iron and steel, synthetic resins, industrial plant, shipbuilding and motor vehicles.

## COCOA

### Unstable Still

JUST when it seemed that cocoa was heading for very low prices or that big surpluses would be left in producers' hands, speculators hastened to their relief. Official figures for sales of Ghanaian and Nigerian cocoa were discontinued towards the end of February when disposals had reached 385,000 tons. At the start of this month the marketing agencies of Ghana and Nigeria blandly stated they had only 100,000 tons to sell out of combined main crops of roughly 600,000 tons. Neither

## THE ECONOMIST APRIL 29, 1961

In the first year of insuring their export business a firm of marine machinery manufacturers shipped goods to the value of £12,000. In nine years this figure had reached over £1,000,000.

## MIDLAND BANK

### A New Round—or Catching Up?

THIS week's proposal of the Midland Bank to raise £24 million by a rights issue has boosted an already buoyant market in bank shares and yields are beginning to look very thin. The Midland's shares rose to over 120s. on the news, so that the one-for-three issue at 60s. makes the rights worth about 15s. a share. Coupled with this issue is a one-for-three scrip issue and a forecast dividend rate of 15 per cent on the increased capital, against an equivalent of 14½ per cent last year. Some investors are expecting a repetition of the round of rights issues in 1959 when the Midland led the field and was quickly followed by all the other big banks. This could happen again; but it can be held that this issue simply brings the Midland into line with the other banks rather than carrying it ahead.

A bank is much less dependent than an industrial company on its capital funds. Ratios of issued capital and published reserves to deposits were eroded drastically by the threefold inflation of deposits after 1939, and the 1959 issues made good only part of the erosion. Most bankers probably agree with Lord Monckton, chairman of the Midland, that the capital funds of a bank should be "well in excess of" the balance sheet value of fixed assets—which should be backed by permanent capital rather than short-term deposits. The Midland's fixed assets—investments in premises, hire purchase and other subsidiaries—amounted to £23.8 million last December 31st, covered almost twice over by its exist-

ing capital funds. There are, however, a number of other long-term commitments, such as export credits, which some bankers prefer to be covered as fixed assets, and which may in fact bring the total in excess of the bank's capital and reserves.

But there is no means of laying down what is the acceptable ratio between capital funds and deposits, and the tendency is for banks to keep in line with each other. The Midland had the lowest ratio at the end of 1958 and then raised only £4 million, so that its present capital ratio at 2.6 per cent is well below the average of the other six banks of 4.1 per cent. The Midland's present rights issue, although the largest ever made by a bank, will still not quite lift its capital ratio to this average level. With these ratios roughly in line, an issue on the scale of the Midland's by any of the other banks would push them well ahead.

The £24 million, Lord Monckton says, "is needed to finance the continuing expansion of the bank's business generally." But any gain in cash resources will be limited by the transfer of deposits by Midland shareholders who also bank with the Midland. The bank would admittedly secure some residual increase in resources to help it regain some of the ground it has recently lost to competitors. But if all the banks decided to raise new capital the total of their aggregate balance sheets, and also their total liquid assets, would remain unchanged. Expansion of the banks is limited by the liquid assets the authorities make available, not on new money raised on the market.

An exporter of textile machinery who first insured with ECGD four years ago increased his exports from £2.8 millions in 1957/58 to over £4 millions in the following year. He is now insuring business worth over £6 millions per annum.

Export credit insurance not only protects exporters from loss—at premium rates lower than ever before. Every ECGD policyholder benefits from ECGD's up-to-the-minute files on over 140,000 overseas buyers and unrivalled economic intelligence on each overseas market: the insured exporter can thus offer competitive credit to new buyers in new markets. An ECGD policy assigned to his bank may prove the key to export credit financing. No matter what or where you export, ECGD insurance can help you in more ways than you realise. Write or ring your local ECGD man now.

Russia nor the American government, to whom the rumour-mongers persistently ascribed large purchases, claim the credit for lightening the producers' load. Considerable quantities of cocoa seem to have gone to speculators who either believed that after the chilling fall from 290s. a cwt over the past eighteen months cocoa beans at 160s. a cwt were too good to miss, or despite earlier disappointment, anticipated that price support policies assiduously cultivated by some producers would soon bear fruit.

In the swift recovery in prices that was accelerated by the premature disclosure in America of what purported to be the cocoa stabilisation committee's thoughts, the marketing boards sold still more cocoa at prices ranging up to 185s. a cwt. The producers did in fact appoint a committee to draft an international stabilisation agreement based on export quotas. Proposals will therefore be submitted to participating countries. But in the absence of a firm agreement, the market price reacted sharply, but recovered this week following rumours that Ghana's main crop had been over-estimated. Cocoa bean grindings so far announced for the first quarter of 1961 have been disappointing and the surplus from this season's crop will be about 200,000 tons. Ghana has sold this season's cocoa, thanks to the bumper crop, at no loss in exchange earnings, and seems to have become rapidly acclimatised to a price support scheme.

## RAILWAYS

### Discussion Continues

OFFICIAL replies from the Ministry of Transport and the Transport Commission to last year's report on British Railways by the Select Committee on Nationalised Industries show that there are still certain differences of approach between the ministry and the railway management, particularly on such matters as regional accounting and aspects of the ministry's control of railway investment. As about half of all railway freight traffic and about a third of all passenger traffic now passes through more than one region, railway managers ever since nationalisation welded the former companies into one organisation have never thought there was much value to be got from regional accounts.

They still apparently hold to the same view. In its reply, the commission quotes the firm of accountants it asked last year to advise it on how (not whether) regional accounts could be best established as saying that they will not enable the relative efficiency of the regions to be measured nor have "the same meaning" (whatever that phrase is intended to mean) as the consolidated accounts for British Railways. Clearly, the commission—whose writ has now probably less than two years to run—still prefers its own set of costing and statistical measurements for judging per-

## BUSINESS NOTES

formance and adds, no doubt to underline its point, that it proposes to develop in conjunction with regional accounts a series of costing accounts for the main freight traffic flows and passenger services, setting out for comparison the expenses (other than track and signalling however) and receipts of each. The ministry, in its reply, sticks to the view that the Government "attaches considerable importance" to these regional accounts as a means of assisting the regional boards to "secure the highest level of efficiency and economy of operation."

The ministry's and commission's views on control of railway investment seems to be much less far apart. The commission would like the limit for schemes that have to be vetted by the ministry to be raised above £250,000 and it would also like to have some assurances about probable investment allocations beyond just one year ahead to give a firmer basis to its forward planning. The ministry seems willing to accede to the request for a higher limit once it has got a grip on the process of vetting the schemes set out in the four-year programme of investment that it has more recently received from the commission. And the new Government policy for nationalised industries, which was announced after the ministry dispatched its reply to the select committee, goes some way towards meeting the commission's second request in that the Government will now fix an upper limit on investment by each of the state industries for two years ahead.

The likelihood that the Government will be meeting the railways' losses for several years to come makes somewhat academic the select committee's proposal that the railways should be paid separately for running any uneconomic services that are retained on grounds of social need. But the commission states that there would also be considerable practical difficulties in ascertaining just what losses such services made. Branch lines are relatively easy, but other services, such as commuter trains, Sunday and holiday services, and some freight services would be harder to isolate with precision. It is these services, however, that presumably account for much of the present deficit and which would have to be sloughed off, or subsidised in some way, if the railways are to be turned from a public service virtually "on call" that loses money to a commercially viable transport system that sets out to cater only for "base-load" demand and leaves private transport to meet the rest.

## SOYABEANS

### Unbridled Growth

EDIBLE oils have just seen the decade of the soyabean. Output of soyabean oil has doubled since 1950, outstripping the rise in production of its nearest competitor, groundnut oil, though that came a good

## THE ECONOMIST APRIL 29, 1961

second with a rise of two-thirds over the same period. From the middle of 1958, prolonged drought in the coconut countries of the Far East made coconut oil so scarce and dear that western Europe cut its purchases to little more than half and margarine manufacturers turned to soya-beans to make good part of the deficiency.

Coconut oil is now in surplus, and prices have slumped by one-third from last year's peak to less than the current prices for groundnut and soyabean oils. Liquid oils can be hardened and used as substitutes for coconut oil in the manufacture of margarine, but coconut oil cannot be substituted for liquid oils when its own price falls. Just when soya-beans might be expected to end their good run, a calamity befell the Chinese farmers who produce most of the half of world supplies that the United States does not produce. Speculation broke out in this commodity, whose staidness had become a byword, prices advanced sharply last autumn and they are still rising. A year ago, soyabeans cost £34 a ton; the price is now £49 a ton.

Members of the Common Market take over 10 per cent of all American exports of soyabean oil and one-third of its soya-beans and, unlike customers under foreign aid programmes, they pay cash on the nail. "The Six" has an Achilles heel in so far as half of its requirements of oils and fats have to be imported and their proposed import policy would admit oil-seeds and oilseed meals—but not processed oils—duty free. France may therefore remove the tariff on soyabeans. The United States Department of Agriculture has surveyed this market and its conclusion favours soyabeans. Because of the encouragement of domestic agriculture no one expects that "the Six" will provide an expanding market for imported fats and oils. But higher incomes, a growing demand for animal products and the spread of mixed feeding should ensure greater imports of feeding meal containing soyabeans.

## SHORTER NOTE

Lloyds Bank has revealed this week that the funds administered by its trustee department total £200 million. This may be the largest at any bank—none of the others have disclosed their figures.

## COMPANY MEETINGS

# UNILEVER LIMITED

## MR GEORGE COLE ON INCREASED COMPETITION ON MANY FRONTS

### CHANGING SCENE IN AFRICA

#### THE CONGO IN 1960

The annual general meeting of the members of Unilever Limited was held on Thursday, April 27th at the Hall of the Chartered Insurance Institute, 20, Aldermanbury, London, EC2. Mr George Cole presided.

Addressing the meeting the chairman said:

In the Directors' Report and the Review of Operations which accompanies it, we have tried, as usual, to give a picture of how your business has fared during the year, and, as usual, our chief problem has been how best to give you a sight of the wood without bewildering you with a multitude of individual trees. You will not want me to go over the same ground again this morning. But 1960 was dominated, so far as Unilever was concerned, by one or two dramatic events quite outside the normal pattern of our experience. It is largely about those that I wish to tell you something more today.

#### UNILEVER'S POSITION IN AFRICA

In world affairs, 1960 was above all the year of Africa, a continent in which Unilever has many and diverse interests. Last year we had about £133 million, or nearly 22 per cent of our capital resources, invested in that Continent, and besides that we had £12.75 million invested in Palm Line, which meant 21 ships plying between Europe and West Africa and dependent, while employed in that way, on the prosperity of Western Africa.

By territories, our African investments in order of magnitude look like this:—

|                                                                | Million | Total Unilever capital employed % |
|----------------------------------------------------------------|---------|-----------------------------------|
| Commonwealth W. Africa                                         | 76.5    | 12.6                              |
| Congo Republic .....                                           | 22.75   | 3.7                               |
| West African States formerly under French Administration ..... | 14.0    | 2.3                               |
| Kenya, Uganda, Tanganyika .....                                | 9.25    | 1.5                               |
| Union of South Africa ...                                      | 8.25    | 1.4                               |
| Central African Federation                                     | 1.75    | 0.3                               |
| North Africa and other territories .....                       | .75     | .1                                |
|                                                                | 133.25  | 21.9                              |

#### MAJOR POLITICAL EVENTS

Let me now remind you of only a few of the year's major political events in Africa.

Nigeria achieved independence: this is the country in which we have our greatest invest-

ment in Africa—£48.5 million. Our business there had a most successful year and we continue to find new outlets for our enterprise and our management skills.

Ghana was declared a Republic on July 1st. We have been able to adapt ourselves to the changing patterns of commerce in this country, and our business has done well.

The satisfactory results from Commonwealth West Africa as a whole are the outcome of applying specialised skills to our merchandising business, of developing techniques of marketing and of the introduction of manufacturing processes, ranging from motors to mattresses and from plywood to plastics.

The year saw, too, all the remaining French-speaking dependencies of Tropical Africa achieve full independence and our businesses there, adopting similar specialised patterns of organisation, had a highly successful year. There was, however, the outstanding exception of Guinea, a subject to which I will return.

Over in East Africa the story is less satisfactory. Our main business there, which operates under The United Africa Company, is concerned principally with the sale and servicing of agricultural machinery, motor vehicles and technical goods. Its most important market is in Kenya where political uncertainties have led to a flight of capital. This has caused the business to run at a loss and we have had to trim it. However, East African Industries, in which, in partnership with the Colonial Development Corporation and the Industrial Development Corporation, we manufacture soaps and edible fats, had a good year.

We also have a substantial investment in South Africa. This business has, happily, been unaffected by the political issues which are familiar to you all. It has not only successfully combated increased competition, but returned record sales and profits. And we can report similar results from the Rhodesias and Nyasaland.

#### THE CONGO

But it is the Congo, above all, that has most attracted the world's attention in 1960 and it is there that, apart from our stake in West Africa, we have our largest investment—nearly £23 million. The Congo Republic is a country as big as Western Europe, but with only 14 million people. Over a great deal of it, from the air, you see nothing but forest and river—sometimes only forest—stretching away to the horizon without a trace of human settlement. Leopoldville and the other modern cities are very small indeed in that immensity: most of it is very far removed from city life.

We have three main businesses in the Congo.

First, we have Marsavco, a company which makes and sells soap, margarine and edible oils. The business is a modest one and it is of the same general character as a good many other Unilever businesses scattered about the world. It has been operating since 1922. Its sales have run recently at about £1,400,000 per annum and it may surprise you to know that in 1960, in spite of everything, it achieved nearly 90 per cent of that figure.

Next there is Sedec, our trading business, an altogether larger affair. It operates under its own name and through subsidiaries, throughout the Congo and Ruanda-Urundi. It deals in manufactured goods, including motors, and in the natural produce of the country. It touches the life of the people at many points, and its operations are of a kind essential to a rising standard of living. The operation demands an expert service to seek out goods from all over the world suitable to the people and the territory.

Manufactured goods include both those which are imported and those which are made in the Congo—about half the goods we sell are locally produced—and they are distributed to stores throughout the country: some in very remote places indeed. From these stores the goods are sold wholesale to trading firms run by Africans and expatriates of many nationalities. The business is done mainly on credit and through it Sedec plays its part in financing the country's trade. The Company normally had debtor balances running to several million sterling.

Sedec's motor business, besides dealing in motor vehicles and accessories, tyres and petroleum, also includes tractors, power units, scooters, refrigerators and air-conditioning plant. The motor trade in the Congo, before the troubles, had become as competitive as it is elsewhere, and it was well acquainted with such things as hire-purchase and part-exchange. It did not, therefore, hold out the promise of making an easy living but, in a developing economy, it ought to have a future, and that was how we saw it.

Wholesale trade, through country stores, is a well-established tradition of African business. As well as this trade, and matching the motors business in the way it looks towards the future, Sedec has a retail business which centres on departmental stores in the main towns. In the larger places, in normal times, they would carry the same kind of varied stock as you would find in departmental stores in Europe.

A pharmaceutical subsidiary of Sedec, Pharmaf, operates chemists' shops in a number of the larger towns. Each is in the charge of a

qualified pharmaceutical chemist and we consider that they represent a useful contribution to the health services of the country.

The other main side of Sedec's business is in produce for export. The main commodities are palm oil and palm kernels, but there is also a substantial trade in coffee, particularly from Ruanda-Urundi. Coffee is that territory's main cash crop, and in normal times Sedec finances the processing and marketing of some considerable part of it: at present we have a substantial sum blocked there by exchange difficulties. As well as the things I have mentioned, Sedec's produce trade covers the buying and marketing abroad of a great deal else—hides and skins, for instance, and rubber, cocoa and various oil-seeds.

Sedec's business, as you see, is varied and important, both to ourselves as a profit-earner and to the Congo as part of its essential distributive machinery. It has recently had a turnover running at about £25 million a year divided between manufactured goods and produce roughly in the proportion four to one.

#### SUBSTANTIAL PLANTATION ENTERPRISE

I turn now to our third business, our heaviest capital commitment, Plantations Lever au Congo. We have about 150,000 acres under cultivation, an area rather larger than Middlesex, and we regularly harvest 225,000 acres of natural palmieries as well. Besides that, we have a substantial interest in Cultures au Congo S.A. and Plantations de Bokonge, which have, in all, some 43,000 acres more. To give you an idea of the size of individual plantations, ours vary between 8,000 and 38,000 acres each.

Some of our properties, particularly the group of three near Bumba on the Congo River, are fairly close together, with not more than 80 miles between them, but others are very widely separated, 700 miles or more apart. You must always remember the size of the country. Events in the Congo that you read of in two successive paragraphs of your newspaper may be happen-

ing in places as far apart as are Madrid and Berlin, Ostend and Istanbul, or Tunis and London.

Plantations are more than agricultural ventures, important as that aspect is. There have to be mills and factories, bulk oil tanks and clarifying stations: crushing plant and bleaching plant: all the apparatus of road, rail and river transport, and port installations. All these our plantation enterprise owns and operates, and at the same time we are experimenting with ranches to supply meat to the people who work for us. As well as everything else, we run research units which have had very great success in improving the yield of various crops.

Every acre has had to be hacked from the forest. As we have pushed the forest back, people have come from an uncertain subsistence to find a livelihood where formerly there was none. About 50,000 people are on our payroll for plantations and natural palmieries in the Congo and they live, with their families, in communities which we have set up and which, without the plantations, would wither away—houses, shops, roads, schools, churches, hospitals and all. Taking account of wives and children, there must be about 150,000 people living on our plantations and, as I have tried to indicate, they depend on our activities for the whole material framework of their lives.

Some people think we run these plantations purely as a service to our manufacturing interests in order to provide them with cheap raw materials, but that is not true at all. Our manufacturing companies do, in fact, use material which may well have originated from our plantations, but they buy it from a selling agency, Congopalm, which represents a number of producers and is under a duty to seek the best market price in the interests of all its members. It competes with other selling agencies in the Congo and elsewhere, and its produce competes with other oils from all over the world.

Our plantation enterprise is run as a profit-earner in its own right, and the profit it makes is directly dependent on market prices. It is not

concerned with who eventually uses its produce, and much of what we grow is in any case of no use to any Unilever company as raw material. We make more money out of rubber than out of palm oil: we grow cocoa and coffee and we have made a start with tea. Altogether, last year, our Congo plantations yielded over 90,000 tons of produce worth nearly £7 million.

I have tried to paint a picture for you of Unilever in the Congo. This year marks the fiftieth anniversary of the founding of the first of our businesses there, and I think the total enterprise, as it is today, is something of which we can justly be proud. I have looked at it, so far, as it was in more tranquil times: now let me deal with what has happened since last July.

#### A MAJOR DISASTER

What happened following the granting of Independence in the Congo last year was a major disaster. As the country stood on the eve of Independence, it had a stable administration, one currency and free trade throughout the whole area. These were not advantages to be despised anywhere, least of all in that part of Equatorial Africa, where the mineral resources of some provinces balanced the purely agricultural character of others. As things stand now, the country is split, in fact if not in law, into mutually hostile fragments, with separate governments and separate currencies. The movement of money and of goods has been impeded, partly by the multiplication of currencies and partly by physical obstacles such as the blockade of the Congo River. To all this has been added insecurity of life and property because the administration of law and the maintenance of order have been uncertain and fragile.

Our worst difficulties have arisen in Orientale Province and Kivu and along the uncertain frontiers of those areas. Two of our plantations—Mokaria and Elisabetha—have been severely harried, and the blockade has stopped

the movement of produce down the river, so that work has been interrupted for that reason alone, if for no other. Sedec's business in these areas has also been badly disorganised.

Other parts of the country are calmer, but they suffered disorder in the first months of the troubles. We endured damage and looting, especially in Sedec stores, and in the general terror of the time some of Sedec's customers fled, leaving bad debts behind them. Some have come back and paid what they owed, and things do not now look so black as eight months ago. In the longer term Sedec's most serious difficulty will be the replacement of merchandise that can only be obtained abroad. Except for the Katanga the Congo's economic plight has created a scarcity of foreign exchange, and one result is that many lines of goods cannot be replenished as stocks run down. This is a serious state of affairs for our business.

#### A TERRIFYING EXPERIENCE

The story would have been grimmer if we had not been magnificently served by our people in the Congo. Since last July they have had to bear their full share of discomfort and danger, and some have been very roughly handled. We have a good many African managers and some have been treated worse than Europeans. It has been a terrifying experience for everybody, African and European alike, and some of the labourers on our plantations have been among the worst to suffer.

Before the troubles began, we had arranged for the families of Europeans to leave if they wished, and many did. Communications are especially important at a time of anxiety and danger, and we found our wireless system, established for some years, very heartening to our European staff. Many of them work in remote areas; and by wireless they were linked with their colleagues on other plantations and in Leopoldville. In addition, we had built airstrips on some of our plantations.

Both the wireless sets and the airstrips unfortunately attracted suspicion when the disorders broke out. The wireless sets were taken away from time to time and we were forced to plough up the airstrips.

In spite of all the adversities I have been talking about, things are calm in a great part of the country, and Sedec is indeed at this moment making profits, but in local currency. The plantation results are dependent on our ability to ship the existing stocks, and the signs are that we may be able to do so. Altogether, the African outlook is less dark than one might think.

#### THE PLANTA MARGARINE EPISODE

Now let us come back to Europe.

In the Annual Report stockholders were informed of the unfortunate events that followed the addition of a new ingredient to Planta margarine in the Netherlands. You will have read that the direct losses which resulted from this episode are estimated at a maximum of £700,000 and this amount has been charged against the profits for 1960. The major part of this cost was incurred in buying back margarine which was already in the shops. Claims from those who have suffered from the illness attributed to Planta, which we have voluntarily paid irrespective of legal liability, have so far cost about £80,000.

The report stated that the indirect losses cannot easily be assessed in money. They are mainly the consequence of lower sales. The

total consumption of margarine in the Netherlands in the last three months of 1960 was about 10 per cent lower than normal, and this was, in part, undoubtedly due to the Planta episode, but also in part to the presence on the market of low-priced cold store butter. Our own share of the margarine market fell by about 20 per cent. Since then, however, over half of the lost ground has been recovered.

As stockholders know, a judicial inquiry is now proceeding and its findings are awaited. Meantime, the Board invited Mr Drees, Mr De Monchy and Mr Rykens to form a committee independently of the Company, but with full rights to examine all records and take evidence from any member of the Concern. This very strong Committee was asked to inquire into the events leading up to the introduction of the new emulsifying agent and into any possible shortcomings in the organisation and communications in Unilever, and to ascertain whether the precautions taken when new substances are introduced are adequate.

This Committee has now submitted its findings to the Directors.

#### COMMITTEE'S FINDINGS

The Committee has recognised the correctness of the principle of decentralisation as practised in Unilever but takes the view that responsibility for the addition of new substances to foods and cosmetics should be taken centrally, in order that all factors and experience gained in all countries can, so far as possible, be taken into account.

In conformity with that view, it has been arranged that the final responsibility for all such matters shall rest with one central authority.

As regards the experiments and investigations made before the emulsifying agent was put into use, the Committee believes that, in the light of the knowledge available at that time, it is unlikely that any injurious effect, such as is now imputed to the agent would have been discovered, even

though the tests had been continued for years.

The Committee is satisfied that before the decision was taken to use the emulsifying agent in the Netherlands, many tests of various kinds had been carried out, some of them over long periods. The Committee felt that only experts could express a view as to whether these tests were scientifically adequate. It is a fact that even today the biological explanation of this skin disorder is not known, although a number of scientific bodies have been working on the problem for many months.

As this episode is of particular interest in the Netherlands, my colleague, Mr Tempel, is today giving a rather fuller account of the matter in Rotterdam.

#### THE BRIGHTER SIDE

At the start I mentioned the difficulty of giving you a sight of the wood without confusing you with a multitude of trees. If, today, I have spent rather more time on two particular trees which, in these last 12 months, have in a sense towered above the rest, I hope I have also said enough to show you that they have by no means cast their shadow over the whole of the Unilever wood. Throughout the year many others have been growing and prospering—the metaphor reminds me that not the least of these is our own timber venture in West Africa—and the picture is far from being one of unrelieved gloom.

Even in Guinea, the situation seems somewhat brighter. More than any other territory in West Africa, this country has since independence been largely under the influence of policies usually associated with the Eastern bloc. The application of extreme socialism made it very difficult indeed for our company to operate and our business was gradually brought to a standstill. The government has found, however, that it has not been possible entirely to replace private enterprise by State-owned and regulated organisations.

As recently as March 3rd, President Sekou Toure recognised this quite frankly. In an out-

LIMITED and N.V. are linked by a series of agreements of which the principal is the Equalisation Agreement. This, inter alia, in effect equalises the right of the ordinary capitals of the two companies as to dividends and, on liquidation, as to capital value, on the basis of £1 nominal of LIMITED's ordinary capital being equivalent to Fl. 12 of N.V.'s ordinary capital.

spoken address to the Economic Council of the Republic of Guinea, he acknowledged that the structure introduced was more theoretical than practical, and had failed to produce regular food supplies for the needs of the population. He emphasised that within the framework of national aims private enterprise must have freedom of action. He said that the newly installed methods had resulted in a sacrifice of speed and he spoke of stocks of certain goods being depleted not through the fault of business men but simply from the inexperience of those whom the State had put in charge of business.

We feel that you should know of this courageous recognition of the failure of a state organisation to match the services rendered by private enterprise.

#### INCREASED COMPETITION

Finally, I do not want to leave you with the impression that it was Planta and the Congo that were the only causes of the fall in our profits last year—a fall which took place at the same time as there was an increase in sales. Our Congo and Planta experiences, which were both outside the normal pattern, contributed to the fall. But another factor, which in itself is nothing new, played its part. This was competition, which last year was intensified and more widespread, and to get our sales above their 1959 level we have had to fight very hard. The fight continues, and fighting is always expensive. But competition is a normal part of our lives, and I do not stand here to complain of it. I think our managers are well able to look after your interests.

The Chairman concluded by moving the adoption of the Report and Accounts for the year 1960. Mr J. A. Connel, Vice-Chairman, seconded the motion and it was carried unanimously.

The proposed final dividend of 3s. 1.2d. per £1 of Ordinary Stock and a dividend of 6 per cent on the Deferred Stock payable on May 12, 1961, were approved.

The retiring Directors were reappointed with the exception of Mr F. D. Morrell who for reasons of health did not seek re-election.

The remuneration of the Auditors, Messrs Cooper Brothers & Co. and Messrs Price Waterhouse & Co., who had been re-appointed under the provisions of the Companies Act, 1948, was fixed.

*(Copies of Mr George Cole's speech are available on application to Information Division, Unilever House, Blackfriars, London, E.C.4.)*

#### UNILEVER N.V.

The annual general meeting of the Members of Unilever N.V. was held on Thursday, April 27th, at Burgemeester s'Jacobplein, Rotterdam, Mr F. J. Tempel presided and made a speech in similar terms to that delivered by Mr George Cole at the annual general meeting of Unilever Limited, reported above.

The Report and Accounts for the year 1960 were adopted. The proposed final dividend of 13 per cent on the Ordinary capital (being the equivalent of the final dividend for the same year to be paid by Unilever Limited on its Ordinary Stock, calculated in accordance with the provisions of the Equalisation Agreement) was approved; the retiring Directors, with the exception of Mr F. D. Morrell, and the Auditors, Messrs Price Waterhouse & Co. and Messrs Cooper Brothers & Co., were re-appointed.

## COMPANY MEETING REPORTS METAL CLOSURES GROUP LTD.

### PROFITS PASS THE MILLION MARK

The twenty-fifth annual general meeting of Metal Closures Group Limited will be held on May 17th in London.

The following is an extract from the circulated statement of the Chairman, Mr Keith D. Erskine:

1960 was the first complete year of trading since the merger of Metal Closures Limited and John Dale Limited. Metal Closures Group Limited is now a holding company with Metal Closures Limited and John Dale Limited as its two main operating subsidiaries.

I am glad to report that 1960 was a successful year and we earned well over £1 million before tax. Both Metal Closures Limited and John Dale Limited broke their previous profits records without taking account of the profits of companies acquired during the year.

The net profit of the whole Group before the deduction of minority interests and before taxation amounts to £1,121,177. This compares with the 1959 figure of £856,066 which included a full year's profits of John Dale Limited.

Your Directors recommend a final dividend of 6½ per cent which makes a total distribution of 11½ per cent for the year on the Ordinary Capital as increased. The distribution for 1959 would have been equivalent to 9.6 per cent on this increased Ordinary Capital.

The results show a satisfactory continuation of the growth which has taken place in the business of Metal Closures Limited and John Dale Limited in recent years.

## POLLARD BALL AND ROLLER BEARING CO.

### INCREASING DEMAND FOR PRODUCTS

The annual general meeting of Pollard Ball and Roller Bearing Company Limited was held on April 25th in London, Mr F. C. T. Lane, FCA (the chairman), presiding.

The following is an extract from his circulated statement:

The consolidated Profit and Loss Account for the year ended December 31, 1960, shows that, after deducting all expenses including depreciation, £625,128 was earned before tax compared with £514,950 for the previous year. Taxation takes £291,248 of our earnings leaving £333,880 available as a net result of the year's effort.

Available for distribution, including the amount brought forward, is £470,626. The net dividend on the preference shares takes £3,675 and a final dividend of 15 per cent on the ordinary capital as increased during the year, together with the interim dividend already paid, will absorb £123,901. General Reserve Account receives £203,979 and there remains a balance of £139,071 to carry forward.

#### EXPANSION OF FACTORIES

Whitehouse Industries Limited has been rehoused in its own freehold factory at Pontefract, to which a new bay has already been added and adjoining land has been bought to allow for further growth. The "Philidas" Self-Locking nut had its best year ever and we look forward

## THE ECONOMIST APRIL 29, 1961 FURTHER GROUP EXPANSION

Since the last Annual General Meeting a number of other companies have joined the Group. The policy behind these acquisitions has been to strengthen the Group in the packaging industry at home and overseas. Continuity of management has been preserved and I am confident that these companies will add to the future stability and earning power of the Group.

The demand for almost all the Group's products, which consist mainly of closures, collapsible tubes and other containers, was at record level during 1960.

The urgent need for increasing British exports has become even more apparent in the past year. I am therefore particularly glad to report that the Group's exports reached record levels. Our exports take several forms: the sale of finished products, principally metal closures, the hire and sale of specialised plant to licencees overseas and the export of "know-how" for which we receive payment under licence agreements. There have been increases under all these headings.

In Europe negotiations are in an advanced stage for setting up our own production facilities in order to give us a full opportunity of taking advantage of the expanding demand in the Common Market.

After reviewing the progress of the subsidiary companies in South Africa and Canada the chairman, in referring to the current outlook, said: The demand for our products continues good but competition is increasing and it becomes less easy each year to find further ways to combat rising costs. Nevertheless in the absence of unforeseen circumstances we look forward to another satisfactory year.

to increasing demand for this specialised product.

We have already extended our main building at Ferrybridge, now exclusively used by Pollard Bearings Limited, and are in course of erecting other buildings to cope with the increasing demand for our products.

Pollard Bearings (Northampton) Limited has made a very satisfactory contribution to the trading profits.

Canadian Pollard Bearings Limited has made steady progress and while S.A. Pollard Roulements, our French subsidiary, traded at a small loss in its first full year, some contribution to our wellbeing will be forthcoming from that Company in the future.

1960 gave us a substantial increase in our direct exports and present indications are that this will continue.

#### SATISFACTORY CURRENT ORDER BOOK

Our sales for the first two months of 1961 are in excess of those for the corresponding period of last year and our order book is in a satisfactory condition. Your Board are confident that while margins are tending to narrow, given reasonable conditions of world trade some further progress can be expected in the current year.

The results are due to the willing and happy co-operation of all members of our organisation from the management to the factory floor and our thanks are due to them for their sustained efforts.

The report and accounts were adopted.

## THE ECONOMIST APRIL 29, 1961

## COMPANY MEETING REPORTS

# THE PRUDENTIAL ASSURANCE COMPANY LIMITED

(Incorporated in England)

## ANOTHER VERY SATISFACTORY YEAR

### RECORDS ACHIEVED AT HOME AND ABROAD

The Annual General Meeting of the Prudential Assurance Company Limited will be held on May 11, 1961, at 142, Holborn Bars, London, E.C.1.

The following is an extract from the Statement by the Chairman, Sir Frank Morgan, MC, on the Report of the Directors and Accounts for the year ending December 31, 1960.

I am departing this year from the custom of delivering a speech at the annual general meeting of the Company. And in place of the remarks I would normally have addressed to shareholders on May 11th, I am issuing now the following statement dealing with the progress of the Company during the year under review. The welcome with which changes made three years ago in the form of the Report and Accounts were received leads me to hope that the present change of procedure will also commend itself to shareholders as helping to provide a clearer picture of the Company's affairs than might be possible from a study of the Report and Accounts in isolation.

It is gratifying to report another very satisfactory year.

At home, record business was written in all Branches, thanks mainly to the excellent work of our Field Staff.

Group Pension with profits business has continued its rapid expansion.

Overseas Ordinary Branch business again made new records.

Further substantial increases were obtained in investment income.

Substantial increases were given in policyholders' bonuses, and in shareholders' dividends.

New electronic data processing equipment was ordered.

I have to announce that Lord Spens is retiring from the Board on May 11th. He joined the Board in 1948 after an eminent legal and public career and his services have been invaluable. The Directors are recommending that The Right Honourable Lord Coleraine, PC, be elected in his stead.

#### ORDINARY BRANCH

Record new business figures were achieved, both in the United Kingdom and Overseas.

In the United Kingdom the new premium income was nearly £8 million, securing sums assured of £190 million and annuities of £11½ million per annum. The sums assured under individual policies, which are obtained almost entirely through our Field Staff, were £151 million, showing an increase of 13 per cent over the corresponding figure for 1959.

The 1956 Finance Act provided well-justified taxation concessions for retirement annuities for the self-employed and the Company has welcomed the opportunity of making these benefits widely available. By the end of 1960 the annual premium income from this class of business had reached £24 million, securing retirement annuities of over £5 million per annum,

an increasing proportion of this business being issued with participation in profits. The same Act also remedied the tax basis for immediate annuities, and with the improved rates which we introduced towards the end of 1960 we hope to obtain a larger proportion of this class of business in the future.

In the Overseas branches the total new premium income of over £3 million, securing sums assured of £122 million and annuities of 2½ million per annum, accounted for 28 per cent of the figure for the Ordinary Branch as a whole. Record amounts of new premiums were written in Australia, New Zealand and South Africa, and Canada showed an increase over the previous year. Of the total increase for the year in new premiums written overseas, more than half is attributable to Australia and New Zealand.

In November 1960 the Government of Ceylon introduced a Bill, enacted early this year, enabling it to establish an Insurance Corporation and providing that, from a date yet to be announced, new life business could no longer be written in Ceylon by private insurers, whether foreign or local in origin. Despite the strong representations which were made to the Ceylon Government the legislation makes no provision for compensating life insurers for the loss of the fruits of effort in training staff and building goodwill among the public. Our Ceylon business is, of course, relatively small and last year the new premiums accounted for less than one-half of one per cent of the total secured in the Ordinary Branch. This does not however mitigate this disturbing departure from fair principles.

#### PENSION SCHEME BUSINESS

The Prudential has played a worthy part in the development of occupational pension schemes. At our annual general meeting ten years ago my predecessor, Sir George Barstow, announced the introduction of group pension schemes with participation in profits. Four years later the yearly premium income from such schemes exceeded £1 million. Since then, the business has expanded at a remarkable rate, partly through the introduction of new business and partly through the conversion of existing non-profit business. Last year the premium income exceeded £15 million, of which approximately £13 million arose in the United Kingdom and over £2 million Overseas. It has thus developed into one of the Company's main classes of business.

The growth in public demand for schemes with participation in profits has clearly justified our belief ten years ago that such business would become a prominent feature in British insurance and we are naturally proud to have been pioneers. We have been fortunate in the latter part of these ten years in that favourable investment conditions have enabled us to earn higher interest yields, the benefit of which we have been able to pass on in the form of high bonus

rates under the large proportion of the pension scheme business which is now on a with-profit basis. We look forward with confidence to a continuing expansion of our business in this field.

A major overhaul of the law and practice relating to the approval of pension schemes is however overdue, and radical simplification of the procedures could do much to facilitate the spread of the pensions movement among smaller undertakings.

As was expected, the introduction of the state graduated pension arrangements has focussed attention on provision for retirement generally and has resulted in the setting up of new schemes with the Prudential on an exceptional scale. Many of these did not start until after the close of 1960, although the arrangements were by then already completed, and they do not therefore appear in our accounts for the year. Under the majority of these schemes—and, indeed, under most of our existing schemes where a decision has been reached—those concerned have elected to contract out of the new state graduated pension arrangements.

#### INDUSTRIAL BRANCH

New sums assured and new premium income were again a record in this Branch. Although the provision of death cover is still a basic purpose of industrial assurance, as exemplified in the payment of nearly £15 million in death claims last year, the public are increasingly attracted to policies which combine saving with death cover. Over three-quarters of the 1960 new premium income in this Branch was from endowment assurance business. The average sum assured per new policy last year was £82, three times that in 1938.

For many years endowment assurances for sums assured of £100 and over issued in the Industrial Branch have been granted additional accident benefit automatically, the sum assured being doubled in the event of death by accident. Last year this benefit was extended to new whole life assurances for sums assured of £100 and over, and there has already been an increase in the average sum assured under this class of policy.

#### BONUS DECLARATIONS

You will already have seen announcements in the Press regarding our bonus declarations and fuller details are set out in the Directors' Report and the accompanying Valuation Report of the Chief Actuary. Increased rates of reversionary bonus have been declared for policies issued in this country and in most of the major overseas territories in which we operate. In addition, final bonuses have been declared in both Life Branches at increased rates, applying to policies of assurance issued in the United Kingdom up to the end of 1958 which become claims by death or maturity during the remainder of 1961.

It is five years since we introduced the principle of final bonuses into our bonus declara-

tions. The decision to depart in some degree from our normal uniform reversionary bonus declarations was taken because of the circumstances arising from the substantial increases in the dividends on our holdings of ordinary shares in this country. Our view was that since these increases had largely arisen from investments made in the past and were thus attributable in greater measure to older than to newer policies, the older policyholders had a prior claim on the resulting surpluses. In subsequent years dividends have further increased and we have, therefore, been able not merely to continue these bonuses each year but to make a number of increases in the rates. Last year we also extended the range of policies entitled to participate but, as I then stated, it is not to be expected that the range will be further extended. An aggregate of nearly £10 million had been allocated by way of final bonus from previous years' surpluses to the policyholders of the two Life Branches and this year's allocation has contributed a further £5 million.

The effect of these final bonuses can be seen in the case of a typical Ordinary Branch claim that we paid this month. The policy was a 25-year endowment assurance for £1,000 taken out in 1936 when the policyholder was 28. Over the 25 years he had paid £974 in premiums but this outlay would, of course, have been appreciably reduced by income tax rebate. In return he had been covered against death for £1,000 with bonus additions. At maturity he received the sum assured of £1,000, reversionary bonuses of £407 and final bonus of £172 making a total of £1,579. In addition, therefore, to the security provided by his policy during the period of 25 years, the amount received on maturity represented for the policyholder a most remunerative investment.

#### GENERAL BRANCH

In the General Branch the premium income for 1960, together with that of our American subsidiary, exceeded £22 million, an increase of £1½ million. Nearly half of this total arose from overseas sources.

Our gross underwriting profit for 1960 was £864,000. This was less than the record figure of over £1 million for 1959 but was well over twice the 1958 figure of £334,000. These considerable fluctuations in total underwriting profits illustrate a feature that is to be expected in this Branch, and to which I referred last year.

The over-all underwriting results for 1960 were satisfactory, each of the main Accounts producing a profit. At Home, both the Fire Account and the Miscellaneous Account showed a reasonable profit, although the Fire Account bore its share of the continued heavy fire wastage throughout the country and both Accounts were affected by the floods in the later part of the year. The Sickness and Accident Account produced excellent results. After a number of years of poor results there had been a marked recovery in the profit in our Motor Account in 1959. Although considerably less than the 1959 figure the 1960 profit can still be regarded as having been favourable, but the situation, which is of course kept constantly under review, appears again to be deteriorating.

We have had much evidence of the appreciation of policyholders for the swift and sympathetic treatment of their claims for flood damage. In all the areas affected our staff gave prompt on-the-spot service and large numbers of claims were paid within a few days. This practical experience of Prudential service has not

#### COMPANY MEETING REPORTS

only evoked the gratitude of policyholders but adds once again to the Company's reputation.

Our Overseas business was not as satisfactory as in 1959 but produced a small underwriting profit.

In view of the difficult conditions experienced in the North American insurance market in recent years, the results of our American subsidiary, the Prudential Insurance Company of Great Britain, can be regarded as favourable. The dividend of 10 per cent received in respect of the year 1959 which has been included in our interest earnings for last year was an increase of 2½ per cent over the previous year. A dividend of 10 per cent has again been declared for 1960.

Gross interest earnings have again increased very substantially, with the result that, despite the smaller underwriting profit, the net trading profit of £977,000, after allowing for taxation, exceeded last year's record figure of £936,000.

#### DIVIDENDS

The increases in the distributable surpluses in the Life Branches have again enabled the Directors both to improve the proportion of these surpluses allocated to the policyholders and to increase the dividend to the 'A' shareholders. In each of the Life Branches the policyholders' allocation, which for 1959 was 93.51 per cent of the distributable surplus, is now 93.74 per cent.

The net dividend declared on the 'A' shares is 8s. 4d. per share, an increase of 1s. 0d.

The net dividend declared on the 'B' shares is increased from 1s. 6d. per share to 1s. 10d. per share. The allocations to shareholders from the General Branch are once again well covered by the interest earnings of the General Branch funds after deduction of the relevant taxes.

#### INVESTMENTS

For investors, 1960 commenced in an optimistic mood with ordinary share prices reaching an all-time peak early in January. The strength of the market was not however maintained for long; quite early in the year the overseas trading position of the United Kingdom was seen to be deteriorating and doubts began to be felt about the prospects of certain of the major exporting industries.

As the year progressed it became clear that exports were unlikely to expand sufficiently to cover the higher level of imports arising from increased domestic demand. Credit restrictions were imposed in April which added to the general uneasiness, and there was an immediate re-assessment of the short term prospects for ordinary shares. The fall in values was, however, held in check to some extent by the good trading results that continued to be announced and the substantial increases in dividends declared.

The demand for additional capital by industry during 1960 was substantial, exceeding that for 1959, and many companies took advantage of the active market in equities to raise money by rights issues of ordinary shares. Almost three-quarters of the amount raised from the stock market was in this form. The demand for loans nevertheless continued strong and, although Bank Rate was twice reduced towards the end of the year from the high level to which it had been raised in the first six months, long term rates of interest showed an upward trend throughout the year.

Our funds increased during the year by £77 million and this amount, together with the pro-

#### THE ECONOMIST APRIL 29, 1961

ceeds from sales and redemptions, gave us £99 million for new investment. We had, as I indicated in my speech last year, made a number of forward commitments in 1959, and since the demand for funds during 1960 exceeded the supply available we were able to be particularly selective in our choice of investments.

The change in outlook referred to above also caused us to be more selective in the ordinary share market. Our purchases in this field during the year were £24 million in addition to £10 million subscribed for shares issued by way of rights in respect of our existing holdings. In 1959, when we had felt that the prospects of improving returns on ordinary shares were exceptionally good, we invested £41 million, in addition to £4 million by way of rights issues.

The high interest rates that were obtainable on fixed interest securities made it possible for us to secure remunerative investments in this field and we invested £5 million in securities of or guaranteed by the British Government, £5 million in Commonwealth Government, Provincial and Municipal loans, £15 million in debentures, £20 million in mortgages and £18 million in freehold and leasehold property. The demand for finance for industry and for property continued at a high level and we were able to take an interest in a number of excellent projects on attractive terms. A large part of the commitments we have undertaken in connection with property developments are not reflected in the investments made during 1960 but will prove remunerative outlets for part of our funds during the current year and beyond.

The upward trend in long term rates of interest I have mentioned led to a reduction in the market value of our fixed interest securities. There was also some fall in ordinary share prices during the year. There has therefore been some reduction in the margin between the market value of our investments and the book values but that margin is still substantial.

The revenue from our ordinary shares was much improved as a result of the substantial rises in dividend rates that occurred in the United Kingdom during the year. The income from our United Kingdom equity portfolio, adjusted for new purchases, was almost 18 per cent higher in 1960 than in 1959. This larger revenue from ordinary shares was again the main cause of the increase in the average yields on our funds. The gross yield on the funds increased by 8s. 5d. to £6 10s. per cent in the Ordinary Branch and by 9s. to £6 14s. 11d. per cent in the Industrial Branch.

Although small in comparison with those of the Life Branches, the General Branch funds are now substantial and have been expanding proportionately almost as rapidly. When determining how these growing funds shall be invested it has to be borne in mind that, unlike the Life funds, they are held mainly as a reserve against short term liabilities. In addition to the provisions for unexpired risk and outstanding claims which have to be met in the normal course of business, reserves must always be held against the occurrence of an exceptionally heavy claim experience. It is therefore necessary to invest a proportion of the General Branch funds in readily realisable stocks such as short and medium dated British Government securities even though some reduction of interest income may result. Having made provision for cash demands in this way, we feel free to invest the balance of our funds to the best advantage and these investments are spread over all types of industrial securities including substantial holdings of ordinary shares. With the increase in the funds and the improvement in

#### THE ECONOMIST APRIL 29, 1961

yields generally the investment income has risen materially.

#### ORGANISATION AND STAFF

The Prudential was a pioneer in the use of punched card equipment and for the past forty years has been a large-scale user. In common with other leading commercial organisations, we have been studying the developments taking place in the field of data processing by electronic equipment and we already have some years' experience with small installations which have been used in group pensions work and payroll preparation. Last year we took a further appreciable step by placing an order for a large data processing system and the installation is due to be completed towards the end of next year. The system will be used in the first instance to deal with our 1,250,000 individual Ordinary Branch policies in force in the United Kingdom. We intend to maintain a complete record of these policies on magnetic tape and to revise the whole of the records daily. The task of conversion from the old system of records will be a formidable one and its planning and preparation will occupy fully the time available before delivery.

Throughout the year the quality of the service given by the staff to our policyholders and to the Company was maintained at our customary high level of efficiency, and I express to all grades both at home and overseas our appreciation of these services.

#### ALDFORD HOUSE (PARK LANE)

The Twenty-sixth Annual General Meeting of Aldford House (Park Lane) Limited was held on April 20th in London, Lieut-Col John D. George, OBE, TD, FCA, the chairman, presiding. The following are extracts from his circulated statement:

Your directors decided to declare and pay on March 30th a second interim dividend of 4 per cent in respect of the results of the year ended September 29, 1960. This takes the place of a normal final dividend and conforms to the forecast intention published in the offer for sale on June 15, 1960. Progress so far made in the current year indicates that the net profits available for dividend at September 29th next are likely to exceed the estimate of £90,804.

Taxation continues its heavy burden upon our earned income and governmental edicts are a perpetual obstacle in normal day-to-day business. It is high time that the Government took determined and effective action to revise entirely the maze of taxation legislation by the introduction of an understandable consolidation act and, as regards property companies, to enjoin their assessments as one whole solely under Schedule "D" and to give fair and realistic treatment by admitting that amortisation is an entirely proper charge against such profits as they may earn.

Although Current Liabilities and Bank Loan together amount to some £475,000, the Company has properties free and uncharged which, if charged, should produce a sum considerably in excess of that figure. Your directors are giving their proper attention to this and are not oblivious to the possible opportunities to be explored towards achieving further expansion of profitable interests and activities.

The report and accounts were adopted.

#### COMPANY MEETING REPORTS

### THE "SHELL" TRANSPORT & TRADING CO. INCREASED NET INCOME

The Annual General Meeting of The "Shell" Transport & Trading Company, Limited, will be held on May 15 in London.

The following is an extract from the circulated statement by the chairman, The Rt. Hon. Lord Godber:

Your Company's net income for 1960 was £25,446,546, compared with £23,299,295 for 1959. After providing for the dividends on the first and second preference stock and the interim ordinary dividend paid in November, the sum remaining for distribution, including retained earnings brought forward, is £25,048,435.

We feel that we can recommend a final dividend for 1960 on the ordinary capital of your Company of 3s. 0d. per £1 unit, free of income tax, making the total for the year 5s. 0d. per £1 unit, free of tax.

In addition, you will be asked to approve a stock distribution, by the capitalisation of share premiums of one ordinary share for every £5 of ordinary stock or shares held.

The present balance of the authorised ordinary capital available for issue is insufficient to cover the proposed stock distribution. There has accordingly been included in the notice convening the Annual General Meeting a resolution to increase the authorised capital of the Company to £163,000,000 by the creation of 50,000,000 new ordinary shares of £1 each. Your Directors have thought it prudent to take this opportunity to increase the authorised capital by an amount

in excess of immediate needs, but they wish to emphasise that they have no plans at present to issue any of this additional capital for cash or otherwise.

#### THE ROYAL DUTCH/SHELL GROUP

The net income of the Royal Dutch/Shell Group of Companies in 1960 amounted to £177,485,000, compared with £175,535,000 in 1959.

Sales of crude oil and oil products increased in volume by about 7 per cent and sales of chemicals also showed a considerable advance. Competition in the oil industry was, however, even more intense than in 1959, resulting in lower average prices being obtained from sales to customers. Prices of chemical products also came under pressure during the year. For these reasons the substantial increase in trade was not reflected in a corresponding rise in net income.

In 1961 the demand for oil is expected to continue to rise but the present competitive forces appear likely to be maintained for some time ahead.

The wide spread of Group operations, and the strong competitive position of Group companies in markets where the rise in demand is likely to be particularly marked, gives assurance that the Group will participate fully in the expected growth of oil sales.

The profits of the Group chemical business have so far been relatively modest in relation to the total sums invested. Though this industry is faced with many problems, we are confident that our expanding chemical operations will make an important contribution to total Group earnings.

*Gestetner*

LIMITED

TOTTENHAM, LONDON, N.17

The Company sells the world-famous Gestetner Duplicator and accessories, the electronic Gestefax and the Gestelith office offset duplicator. It has branches throughout the United Kingdom and subsidiary companies or representatives in all parts of the British Commonwealth, in the Americas, the Far East and many countries in Europe. Extensive servicing facilities are available throughout the organisation.

Copies of the Accounts and Chairman's Statement may be obtained from the Secretary, Gestetner Limited, Tottenham, London, N.17.

## OTTOMAN BANK

### REVIEW OF WIDESPREAD INTERESTS—LORD LATYMER'S SPEECH

The ninety-fourth annual general meeting of the Ottoman Bank was held on April 26 at Winchester House, Old Broad-street, London, EC2.

The Right Honourable Lord Latymer, the Chairman, presided and, in the course of his speech, said:—As I mentioned in my address to the Shareholders at last year's Annual General Meeting, our claim in respect of the loss of our business in Egypt following the Suez event was duly lodged with the Foreign Compensation Commission in accordance with the terms of the Anglo-Egyptian Agreement of 1959. I will not be in a position to give any further information concerning this claim until the Commission has given its decision in the matter.

#### TURKEY

The year 1960 was marked in Turkey by an important change in the political scene which has had repercussions on the economic life of the country. These repercussions, however, have in no way affected international trade and payments.

Exports and imports continued in the normal way. Transfers of foreign exchange for the payment of goods imported and services rendered as well as in settlement of sums due in respect of debts previously contracted were not delayed.

Turkey's contacts with international institutions such as the International Monetary Fund and the Organisation for European Economic Co-operation continued as usual. The country profited by the support of these institutions in addition to the assistance provided by the United States of America. In this connection might be mentioned a credit of \$130 million granted by the Development Loan Fund for the foundation of a second ironworks with an initial capacity of some 500,000 tons.

As regards the foreign trade position, the trade balance continues to show a deficit. This, expressed in dollars (for the sake of comparison in view of the rate adjustment during 1960) increased from \$116 million in 1959 to \$146,700,000 in 1960.

In the realm of public finance, the budget adopted in March allows, for ordinary expenses, an amount of Ltq. 5,960,000,000 and includes the record figure for public works of Ltq. 2,718,000,000. Priority incidentally has been given to public work projects already in course of completion: a statutory savings law, intended to finance part of these schemes, has been promulgated.

#### SUDAN

The improvement in the financial situation of the Sudan evident in 1959 continued during 1960.

In consequence, it was possible for there to be some easing of the restrictions on imports, and the control of bank finance for these imports, previously imposed. Importers duly took advantage of these relaxations and by the end of the year there was over-stocking of imported goods. The consequent shortage of cash was, to some extent, made more pronounced by increased customs duty and by delays in transit of goods between Port Sudan and the capital.

As mentioned in our last Report, the Bank of Sudan opened in February and has taken over the currency issue from the Sudan Currency Board. In addition, a Mint was established in Khartoum

in November and the Khartoum Bankers Clearing House was opened in December.

Trade figures were: Exports £S.63,400,000 and Imports £S.63,000,000.

Currency in active circulation at December 31, 1960, totalled £S.21,800,000 against £S.21,300,000 at the same time in the previous year.

#### JORDAN

During the course of 1960, His Majesty King Hussein paid visits to Saudi Arabia, Iran, Turkey and Morocco.

During his tour overseas, he attended and spoke on Jordan's behalf at the General Assembly of the United Nations in New York.

During 1960 every effort continued in order to solve the ever-pressing problem of water supply so that organised irrigation may assist in militating against rain failure.

The trade figures showed surprisingly little variation from the 1959 totals; imports amounted to JD.40,400,000 against JD.39,700,000 in 1959 and exports and re-exports totalled JD.3,600,000 against JD.4,200,000. These exports included 325,000 tons of phosphates of an estimated value of JD.1,350,000. An increase in this production is hoped for during 1961.

The Budget totals for 1960/1961 were: Estimated Revenue JD.34,000,000 of which JD.23,000,000 consists of grants largely from the United States of America and partly from the United Kingdom. Ordinary and Extraordinary Expenditure is budgeted for a total of JD.35,224,000.

Currency in circulation has remained stable, the end of year total being JD.16,397,000 against JD.15,981,000 in 1959.

#### IRAQ

Political stability in Iraq has continued during 1960 and has allowed for further development.

Oil production in 1960 was about 46,000,000 tons and oil royalties, which in 1959 had already reached the record figure of ID.86,500,000, in 1960 rose to some ID.90,000,000.

The over-all trade figures, excluding exports of oil, show total imports in 1960 amounting to about ID.139,000,000 and Exports and Re-exports amounting to ID.11,000,000.

Currency in circulation at the end of 1960 totalled ID.80,273,000 compared with ID.83,033,000 at the end of 1959.

The Chairman then reviewed the Bank's interests in Cyprus and Qatar, and continued:—

#### EAST AFRICA

(Kenya, Tanganyika and Uganda)

In the three territories of East Africa in which the Bank is established (in Kenya, in Tanganyika and in Uganda) economic conditions were decidedly difficult through the year 1960. Nevertheless, each of our Branches has progress to report. Moreover, a new Branch was opened in Kampala, Uganda in February. One of the more disturbing features of the general economy was the flight of capital, to which there have been, as you will remember, a number of references in the Press. This tended not only to unbalance the market but was, of course, a serious matter for the Banks. On the other

hand, the export trade in local produce was steady and prices (with the exception of the price of coffee which, as had been expected, fell) were good. Indeed, sisal prices were better than had been expected. Combined Export totals for the year were: Coffee, £34,600,000; Sisal, £20,100,000; and Tea, £7,000,000.

Reflecting recent political developments in East Africa, the general commercial attitude at the moment is one of caution, and this is likely to continue for some time. In general, however, prospects for the future appear reassuring.

#### SOUTHERN RHODESIA

1960 will long be remembered in the Federation as the year in which Her Majesty Queen Elizabeth the Queen Mother visited Rhodesia for the formal opening of the Kariba Dam. Work on the second stage of the Kariba project (namely, the North Bank power station) is now in progress. It was a year of mixed fortunes: tension in the Union of South Africa and the grave events in the Belgian Congo naturally had their unsettling repercussions in the Federation.

In Rhodesia also, as in East Africa, there has been a certain flight of capital. The markets are noticeably short of fresh funds for investment. The note circulation in the Federation of Rhodesia and Nyasaland at December 31 1960, totalled £20,707,000 as against £19,490,000 at December 31, 1959.

#### LONDON AND PARIS, ETC.

The Paris and London Offices of the Bank as well as the Branches in Casablanca and Marseilles, maintained in 1960 their traditional activity, whilst the Geneva Office showed a satisfactory development in its general business.

#### BANQUE FRANCO-SERBE

The General Meeting of Shareholders of the Banque Franco-Serbe, held May 20, 1960 approved the 1959 results and declared a dividend of NF.1 per share.

#### BALANCE SHEET ITEMS

The Balance Sheet totals show an increase of more than £11 million compared with last year "Current, Deposit and Other Accounts" being up by over £9 million and "Acceptances, Endorsements and Guarantees" by nearly £2½ million.

The liquid position is satisfactory with Cash Money at Call and Bills Receivable totalling nearly 47 per cent. of the "Current, Deposit and Other Accounts." Investments remain a much the same figure as last year, whilst "Advances to Customers and Other Accounts" have increased by nearly £8 million.

The result for the year is a profit of £324,39 (against £301,153 last year), whilst remittance in respect of profits of previous years to be brought into account are £125,102 (against £143,450 last year), giving a total of £449,495. Adding the figure of £24,936 brought forward there is a total profit available of £474,435.

£200,000 has again been appropriated to "Reserve for Contingencies," leaving a balance of £274,435. The Committee proposes that this dividend be maintained at 10s. per share, absorbing £250,000 and leaving £24,435 to be carried forward to 1961.

The report was adopted.

## 1960: Another Good Year for Dresdner Bank

Capital and Reserves Increased to about DM 530 Million - 314 Branch Offices in Western Germany  
International Relations Intensified

During 1960, Dresdner Bank AG., one of the leading West German banks, has further extended its domestic and international business. The number of its domestic and foreign clients increased considerably, the network of branches and offices in the Federal Republic was further broadened, the friendly business relations with its more than 3,000 correspondent banks all over the world were intensified, and the capital structure once again amplified. Total resources of Dresdner Bank increased in 1960 by 5.6% to about DM 8,000,000,000. The Bank's favourable development is also reflected in the considerable growth of the number of clients, which rose, by 150,000, to 934,000, and the increase in the number of accounts kept by the Bank, by 209,000, to about 1,330,000.

The Bank's credit business (debtors plus commercial bills discounted) increased by 12%. Including guarantees for account of clients, the total volume of credits granted at the end of 1960 amounted to DM 5,600,000,000 compared to DM 5,000,000,000 the year before.

Dresdner Bank traditionally devotes special attention to its Issue and Stock Exchange business. During 1960, foreign orders for the purchase and sale of stocks and bonds increased considerably. The introduction of foreign shares for listing on German Stock Exchanges contributed to widen the scope of the Bank's business.

Dresdner Bank's international business developed in line with the further expansion of German foreign trade. The Bank's close links with its many friends and correspondents abroad have been further strengthened in the past year.

New services introduced by Dresdner Bank in the last few years (such as small personal loans and various services to further the use of cheques in Germany) developed successfully. The Trustee Department, which deals with the administration and permanent supervision of clients' property, attracted particular interest abroad.

The expansion of the volume of Dresdner Bank's business prompted it to increase the number of its employees during 1960 by more than 1,300 to 13,000 and to widen its network of branches and agencies. Its Regional Head Offices are situated in Düsseldorf, Frankfurt/Main, and Hamburg. 314 branches and agencies are maintained at 192 cities and towns. Moreover, its fully-owned Berlin subsidiary, Bank für Handel und Industrie AG., has 36 branch offices in Western Berlin. Representative Offices of the Bank are maintained in Istanbul, Cairo, Madrid, and Paris. There are also joint representative offices with Deutsch-Süd-amerikanische Bank AG., an affiliate of Dresdner Bank, in the most important centres of Latin America.

The shareholders of Dresdner Bank, assembled on April 18th, 1961 in Hamburg, resolved the payment of a 16% dividend on its share capital, which had been increased from DM 180 Million to 220 Million last year. They further resolved another increase in the capital, by DM 25 Million, to DM 245 Million. After this increase, capital and open reserves of Dresdner Bank will amount to about DM 530 Million, which represents 6.6% of its total resources at the end of 1960.

#### Main Items of the 1960 Balance Sheet as compared with 1959 (Millions of DM)

| ASSETS                                       | 1960    | 1959    |
|----------------------------------------------|---------|---------|
| Cash and due from Central Bank               | 1,243.4 | 848.9   |

#### DRESDNER BANK

Düsseldorf . Frankfurt/Main . Hamburg

## BRITISH ISLES AND GENERAL INVESTMENT TRUST LIMITED

### HIGHER INCOME AND DIVIDEND DISTRIBUTION

### SIR DENYS LOWSON ON GENERAL CONDITIONS

At the annual general meeting of British Isles and General Investment Trust Limited held on April 20th at Estates House, Gresham Street, London, EC2, Sir Denys Lowson, Bt, the Chairman, in the course of his remarks said:

You will see from the Revenue Account that dividends and interest amounted to £139,105, an increase of £31,967 over 1960. I am pleased to be able to tell you that from a Revenue estimate, which we have prepared for the year to January 31, 1962, barring unforeseen circumstances, we anticipate that our revenue will be well maintained. Your Directors also have in mind the possibility of a small rights issue on bonus terms.

As you will see, the net revenue for the year, after Income Tax and Management Expenses including interest paid on the Debenture stock, amounted to £73,607. After providing for dividends on the Preference stock your directors propose a final dividend of 9 per cent actual on the Ordinary stock making with the interim of 4 per cent actual already paid a total of 13 per cent for the year against 11 per cent paid last

### COMPANY MEETING REPORTS

year. This will leave surplus revenue of £16,032 which will thus allow the carry forward to be increased to £72,778.

Of the total revenue earned by the Company for the year to January 31, 1961, 79.25 per cent is proposed to be distributed by way of interest and dividends; the Debenture stock taking 0 per cent-5 per cent, the Preference stock 5.1 per cent-12.75 per cent and the Ordinary stock 12.76 per cent-79.25 per cent. Our investments had a book value of £1,286,730 with a Market Valuation of £2,242,223, thus showing an appreciation of 74.25 per cent.

### WIDELY DISTRIBUTED PORTFOLIO

Your company's portfolio of Investments is widely distributed. Based on the valuation at January 31, 1961, 83.6 per cent of the Investments are in Companies operating in Great Britain and the Commonwealth, 15.1 per cent in the USA and Canada, 1.3 per cent in Central and South America, while as regards categories, 7.4 per cent are in Bonds, Debenture Stocks and Notes, 5.7 per cent in Preference and Preferred Ordinary Stocks and Shares, and 86.8 per cent in Ordinary and Deferred Ordinary Stocks and Shares.

### EXPORT PERFORMANCE OF VITAL IMPORTANCE

During the year 1960, this country's exports increased by 6 per cent but its imports rose by 14 per cent with the result that our balance of payments showed the worst deficit since 1951. Due, however, to the weakness of the US Dollar

### THE ECONOMIST APRIL 29, 1961

and the high interest rates prevailing in this country at that time, there was an inflow of short-term capital estimated at just over £600 million which enabled our Gold and Convertible currency reserves to be increased by £177 million.

This year has shown that some of these funds have already moved out of the country, following the revaluation of the German Mark and Dutch Florin. If we are to avoid a further reduction in our reserves, it is vital that our performance on current account this year should be a great deal better; in other words, the percentage increase in our exports must be well in excess of the percentage increase in our imports over any given period.

During 1961, the rate of stock-building is expected to fall; this will also mean a decline in imports which should help our Balance of Payments, provided the opportunity is taken to increase our exports. In this connection, the outlook appears reasonably favourable; as, firstly, the USA is moving out of its recession; and, secondly, the exports of goods to Germany will be greatly assisted by the recent revaluation of the Mark.

In conclusion, I would say that our export performance in 1961 is more than ever vital as it would be obviously most unwise to rely on another windfall, of a further inflow of capital funds, on the same scale as 1960.

The Resolution for the adoption of the Report and Accounts was seconded by Mr H. R. S. Stewart, and carried unanimously.

The proceedings terminated with a hearty vote of thanks to the Chairman, Directors and Staff.

### THE ECONOMIST APRIL 29, 1961

## JOHNSON GROUP CLEANERS LIMITED

### A YEAR OF PROGRESS

### MR DOUGLAS CROCKATT ON PROPOSED RIGHTS ISSUE

The Annual General Meeting will be held in Liverpool on May 17th. In the course of his review, Mr Douglas Crockatt says:

Mr Douglas  
Crockatt, JP

Following a disappointing first quarter the trading conditions of 1960 proved favourable. The turnover of the Group showed a healthy increase. Trading profit derived from dyeing and cleaning increased by £70,000. The total profit of the Group, before tax, amounted to £503,000 as compared with £442,000 in 1959. After including exceptional items of income and making full provision for taxation, the Net Profit of the Group is £385,000 against £317,000. Out of this total, £160,000 has been distributed in dividends and £225,000 has been retained in the Group.

Freehold and long leasehold shop properties to a value of £213,000 were sold during the

### COMPANY MEETING REPORTS

year and leased back upon satisfactory terms. Certain other properties, as indicated last year, have been the subject of independent professional revaluations. The enhanced values are now reflected in the Balance Sheet figures.

A new small subsidiary, Johnson Cleaners (South West) Ltd., commenced trading during the year from the works acquired at Plymouth. The Company was operating for a part of the year only and incurred a small initial loss of £1,600. All other companies in the Group traded profitably.

### MODERNISATION AND DEVELOPMENT

Much modernisation is in hand both at works and branches. Vigorous competition is a spur to effort and to constant improvement. Capital costs are likely to continue at a high level during the next year or two, as further shop re-fitting and plant renewals are undertaken. A substantial extension of the Harton Dyeworks at South Shields is now nearing completion. Reorganisation and major building alterations are proceeding at the South Wales works at Cardiff. At our large plants at Bootle, Dewsbury and Acton further re-planning and re-equipment is being undertaken during 1961.

In a Group with so many works and branches spread throughout the country the installation of the very latest machinery and the re-fitting of shops call for careful planning and systematic budgeting. The Group is keeping up to date by the adoption of all new and sound developments in the industry in which it has for so long been the largest enterprise.

### CAPITAL ISSUE

From the circular accompanying the accounts shareholders will see that a Rights Issue is proposed (on the basis of one Ordinary share offered for cash for every four Ordinary shares held) in order to make available about £650,000 of fresh capital. This is the first capital issue to our Ordinary Shareholders for cash in the forty years history of the Group. Since it was formed in 1920, it has been greatly enlarged by the acquisition of additional businesses at a cost exceeding £1,400,000. All this expansion has been financed, save for the temporary assistance of our bankers, from our own internal resources. During the last eight years, since the re-organisation of the Group in 1953, when as will be remembered a large repayment of capital was made to our shareholders, three businesses have been acquired at a cost of over £800,000 and of this sum £600,000 has been found in cash.

These recent purchases and the substantial annual capital needs of the Group are the underlying reasons calling for the Rights Issue. I am satisfied that the sum involved can be profitably employed in the business. An Extraordinary General Meeting will be held at the close of the Annual Meeting to authorise the issue and the changes needed in the capital structure of the Company.

As we look back upon the progress made during a satisfactory year my colleagues and I are grateful for the support of our fellow-workers in management, offices, works and branches throughout the country. Trading in the New Year has started very well and we have a quiet, but robust, confidence in the future of the Group.

The Ordinary Shareholders' Meeting, held in Genoa on the 20th April, 1961, approved the Balance Sheet as at 31st December, 1960. The dividend for the financial year 1960 has been fixed at 10 per cent, namely Lit.50 for each share of nominal Lire 500 fully paid and Lire 25 for each share partially paid in the proportion of five-tenths. The sum of Lire 600,000,000 was placed to Reserves.

## JAS. WILLIAMSON & SON

(Manufacturers of Linoleum, Felt Base, Leathercloth and Lancaster Cloth)

### LARGER NET PROFIT

### IMPROVED OVERSEAS TRADE

### LORD PEEL ON EFFECTS OF FIRE

The thirtieth annual general meeting of Jas. Williamson & Son, Limited, was held on April 20th at Lune Mills, Lancaster, The Right Honourable The Earl Peel, Chairman of the company, presiding.

The Secretary (Mr J. Dunnington) read the notice convening the meeting and the report of the auditors.

The following is the chairman's statement circulated with the report and accounts for the year ended December 24, 1960:

In reviewing our results for 1960, and in comparing them with those of 1959, I must refer first to the fire which occurred at the very beginning of the year and which I mentioned briefly in my last report. This fire destroyed the top storey of one of our main manufacturing buildings and had it not been for the generous action of some of our competitors in carrying out part of the process for us we should have been out of production of one of our major lines for three months. In the event, with their help and by means of improvised methods of manufacture in other parts of our factory, we were able to maintain sufficient production to keep our customers supplied, albeit at considerable extra cost to ourselves. This extra cost is calculated to be £73,000.

### COST OF FIRE DAMAGE

The cost of repairing the damage to the building and plant was, of course, covered by insurance. For many years past, however, it has been our policy not to insure against the consequential loss of profit due to fire or other catastrophe but to set aside substantial sums each year to reserve in order to be able to meet this contingency. In pursuance of this policy, therefore, we have transferred the sum of £73,000 from General Reserve to Profit and Loss Account in order that the figure of net profit resulting from our normal trading operation should be more truly comparable with that for 1959.

In view of continued inflation and of the much higher figures of possible loss involved today by reason of the modern trend to concentrate production in large and costly pieces of plant your Board have decided that it would be wise in future to insure against loss of profit due to fire and breakdown of major plant. This we have now done and a corresponding reduction can be made in the amount placed to reserve by not having to provide for this eventuality.

### RESULT OF YEAR'S OPERATIONS

After taking the above into consideration the Net Profit before tax of £728,638 compares with £622,082 for 1959, an increase of about 16 per cent. Taxation absorbs £346,748 against £284,722 leaving £381,890 against £337,360. From this sum we propose to place £175,000 to reserve and to pay a final dividend of 9½ per cent on the £1,996,272 Ordinary and £665,424 "A" Ordinary Stock making with the interim of 4 per

cent a total dividend of 13½ per cent for the year.

In Linoleum our turnover has increased, particularly in the heavier qualities. As much of our capital expenditure in the past decade has been directed towards this side of our business these increased sales serve to justify the policy which we have adopted. In Lancaster felt base floorcovering our turnover is a little down but our profits have been adversely affected by having to meet severe price cutting. I am sorry to say that the trend away from table oilcloth has continued, for reasons which I mentioned last year, but this section of our productive plant has been occupied largely with the manufacture of Dadolin washable wall-covering, the popularity of which has been undiminished, and we have now extended our range from purely bordered effects for horizontal application to unbordered designs which are for normal vertical hanging. This new development shows every sign of being equally well received. Our Lionide leathercloth business has continued to expand, and we are finding an increasing demand in new fields.

### GOOD RECEPTION FOR "SANDRAN"

You will recall that last year we entered into a joint venture with Sandura Company of America for the sale of rotogravure printed vinyl products. This led to the formation of Williamson-Sandura Limited, the shares in which are held equally by the two Companies. The product, Sandran, has been widely advertised in the national press during the year and has had a good reception at home and abroad. So far all the material sold has been brought from America but we are nearing completion of a building and plant which form the first stage towards manufacture in this country. Williamson-Sandura has earned a profit during its first nine months' trading but no dividend has yet been paid to the parent companies. The success of Sandran emphasises the growing acceptance of Vinyl floorcoverings and it has always been our policy to keep abreast of this development with technical and market research. Our Crestaline Vinyl flooring was one of the first successful products of this type to be manufactured in this country and I am able to report a substantial increase in sales during the past year.

### A WELCOME IMPROVEMENT

I am pleased to record a most welcome improvement in our overseas trade. The relaxation of controls in a number of important markets has enabled us to sell more of our goods abroad and build up our valuable connections still further. Export business, however, tends to become more difficult each year. Foreign Governments are beset with exchange and balance of payments difficulties and their inevitable answer is to pursue a policy of self-sufficiency, protecting local industries by all the devices of modern economic nationalism such as

import licensing, high tariffs and exchange controls.

Nevertheless, we are fortunate in having a most energetic export team who spend much of the year covering most of the countries of the world and it is hoped to maintain and increase our present level of business overseas.

### WEST HAM FACTORY

It will be remembered that all the assets of The Leather Cloth Company Limited were transferred shortly after its acquisition in 1955 to the Parent Company. The principal asset was a factory at West Ham comprising a site of approximately 6½ acres which has been kept running since its purchase. During the year we decided to close this factory and have transferred some of the plant to Lune Mills where all leathercloth production has now been concentrated. The cost of this transfer has reduced our profit for 1960, but I would expect to see a benefit from the concentration of production in succeeding years. Fortunately West Ham is not a depressed area and I believe that alternative employment has now been obtained in all cases by those who were unable to accept employment by us in Lancaster. The West Ham factory is now available for disposal.

Under the Government Scheme for the reorganisation of the Cotton Industry we have embarked on a programme of modernisation at our Cotton Mills, particularly in the weaving section, but owing to the demands being made on plant manufacturers it will be some time before we obtain full benefit from the scheme.

### ADDITIONS TO THE BOARD

During the year it was decided to strengthen your Board of Directors by the appointment of Dr G. R. Gedye and Mr W. Wolfendale. Dr Gedye has been with the Company since 1932, and has been Production Manager since the beginning of 1943. Mr Wolfendale also joined the Company in 1932, and has been Commercial Manager since 1955. His appointment as Sales Director allows Mr Priestley to devote his attention to marketing problems and leaves him free to spend more time visiting export markets. You will be asked to confirm these two appointments to the Board at the Annual General Meeting.

I am sure it would not be your wish that I should allow a year to pass without expressing your thanks to all our employees for the splendid work which they have done during the year. It has not always been easy to obtain all the necessary labour just when it was wanted and there has never been any hesitation on the part of those who were employed to pull out that extra effort which was needed to fill the gap.

### THE FUTURE

For the future I have no crystal ball. Business generally nowadays is bedevilled by factors out-

side the control of the manufacturer. Our research laboratory has a number of promising projects in the course of development. We have further plans for the reorganisation and improvement in efficiency of some of our existing processes. We have a first-class management team and a lot of enthusiasm and excluding any unforeseen circumstance outside our control I see good reason to be confident.

The report and accounts were adopted; the proposed dividend was approved.

The retiring directors, Sir Cuthbert B. Clegg and Mr H. Priestley, were re-elected, as were also Dr G. R. Gedye and Mr W. Wolfendale, who had been appointed to the board during the year.

The remuneration of the auditors, Messrs Viney, Price & Goodyear, was fixed.

## ENGINEERING COMPONENTS LIMITED

### RECORD TURNOVER ACHIEVED

The twenty-sixth annual general meeting of Engineering Components Limited was held on April 25th in London, Mr C. C. Griffith, MC (the Chairman), presiding. The following is an extract from his circulated statement:

The turnover for the year exceeded all previous ones. Every department in your Company was strained to meet the demands made upon it and I am pleased to report that we were able generally to meet these.

From the Group profits of £829,471 your Directors have allocated £6,000 to the Employees' Education, Social and Welfare Fund

leaving £823,471, which after deduction of tax and £26,486 retained by subsidiary companies, leaves £357,054 to be added to the balance brought forward from 1959, giving a total balance of £580,190 available.

Our export sales continue to expand.

Development: Research in connection with gaskets and air cleaners has continued vigorously and we believe we have made some considerable progress in both products.

Prospects: These are most difficult to forecast. Transport, however, is a necessity of our age and as our products are closely allied to this, both in manufacture and upkeep of the vehicles, I think we can look forward to the future with a measure of confidence.

The report was adopted and a total dividend of 20 per cent, less tax, was approved.

# ROYAL DUTCH PETROLEUM COMPANY

N.V. KONINKLIJKE NEDERLANDSCHE PETROLEUM MAATSCHAPPIJ

(FOUNDED IN 1890)

### BALANCE SHEET, DECEMBER 31, 1960

## THE ROYAL LONDON MUTUAL INSURANCE SOCIETY LIMITED

A CENTURY OF SERVICE  
AND SUCCESS

RECORD BONUSES TO LIFE  
POLICYHOLDERS

The 100th Annual General Meeting of the Royal London Mutual Insurance Society Ltd. was held on April 25th at the Chartered Insurance Institute, 20, Aldermanbury, London, E.C.

Mr E. H. Haynes, F.I.A., chairman and joint managing director, who presided, said:—

In one respect, and that a fundamental one, the purpose of the Society has remained unchanged since that day in February 1861 when it was conceived. The Royal London still caters largely for the needs of the small man. His circumstances have changed, it is true, but the link with him, the object which our founders had in the forefront of their minds, has changed not at all.

### ORDINARY BRANCH

The premium income in the Ordinary Branch (including consideration for annuities granted) amounted to £4,836,000, an increase of £277,000 over the previous year. The Fund at the end of the year amounted to £44,012,000, an increase of £2,427,000. The rate of interest earned, after deduction of income tax, was £4 14s. 5d. per cent, an increase of 5s. 6d.

The amount paid by way of claims and surrenders during the year was £3,357,000.

A simple Reversionary Bonus has been allotted to fully participating policies (other than those which were formerly in the Auxiliary Life Fund) at the rate of Two Pounds per cent per annum in respect of the years 1956 and 1957; Two Pounds Four Shillings per cent in respect of the year 1958; Two Pounds Eight Shillings per cent in respect of the year 1959 and Two Pounds Ten Shillings per cent in respect of the year 1960.

In addition to the bonus which I have just announced, fully-participating policies have been allotted a special Reversionary Bonus in respect of the years 1956-1960 at the rate of Ten Shillings per cent of the Sum Assured per annum.

Interim Bonus will be payable during the ensuing year at the rate of Two Pounds Fourteen Shillings per cent per annum subject to withdrawal or modification by the Directors at any time without notice.

### INDUSTRIAL BRANCH

In the Industrial Branch the premium income for the year amounted to £11,489,000, an increase of £475,000 over the previous year. Claims and surrenders amounted to £6,386,000. The Fund at the end of the year amounted to £103,438,000, an increase during the year of £6,661,000. The rate of interest earned, after deduction of income tax was £5 15s. 8d. per cent, an increase of 3s. 6d.

### COMPANY MEETING REPORTS

It gives me great pleasure to announce that a Reversionary Bonus has been allotted on policies issued on or after January 1, 1951, at the rate of One Pound Sixteen Shillings per cent per annum in respect of completed calendar years in the period January 1, 1956, to December 31, 1960, and One Pound Three Shillings per cent per annum in respect of completed calendar years in the period January 1, 1951, to December 31, 1955. Policies issued on or before December 31, 1950, receive a new bonus at the rate of One Pound Sixteen Shillings per cent per annum for five years.

I have also to announce that an additional bonus at the rate of Four Shillings per cent per annum in respect of completed calendar years in the period January 1, 1956, to December 31, 1960, will be allowed on policies qualifying for a reversionary bonus which mature or become claims by death before the next announcement of bonus.

### THE ECONOMIST APRIL 29, 1961

#### GENERAL BRANCH

The premium income for this Branch in 1960 was £1,088,000, an increase of £71,000.

The premium income in this Branch has expanded to its present figure from £730,000 only five years ago. This, I am sure you will agree, is no mean achievement.

The year 1960 was a fitting close to the Society's first century; new business, premium income and funds all demonstrated a vigorous growth. The total income for the Society during the year was £25,530,000, while benefits paid to policyholders amounted to £9,748,000. The total payments to policyholders since the inception of the Society amount to more than £186,000,000.

The report and accounts were unanimously adopted.

### THE ECONOMIST APRIL 29, 1961

## BRISTOL AND WEST BUILDING SOCIETY

The 110th Annual General Meeting of the Bristol and West Building Society was held at the Grand Hotel, Bristol, on April 25th. The Chairman, Mr A. Anthony Scull, JP, reported that total assets had increased by 11 per cent to £28,693,726. During the year, £5,245,039 was advanced on 3,099 securities, over 99 per cent being in respect of properties for owner occupation, and at December 31st last, total mortgage assets amounted to £22,663,381, representing an average mortgage debt of £1,244.

### COMPANY MEETING REPORTS

Share and deposit receipts, including £545,000 received from the Government in re-imbursement for advances made on properties built before 1919, amounted to £5,757,409. Income was at a record level and after providing for Management Expenses, investors' interest, taxation, etc., the Reserves and unappropriated profit were increased to £1,184,950. Liquid assets amounted to £5,465,727, or 19 per cent of total assets, of which £831,472 was in cash or withdrawable at par within six months.

The Chairman welcomed the provisions of the Building Societies Act, 1960, although he said it would have little effect on the manner in which reputable societies were conducted. He men-

tioned the opening in 1960 of the Society's new premises in Exeter, and the subsequent establishment of new offices in Regent Street, London, Plymouth and Yeovil. Later in 1961, the Society's new office development in Swindon will also be completed. In March, 1960, the engagements of the Shepton Mallet Permanent Benefit Building Society were transferred to the Society, and during 1961 the St. Marylebone and Suburban Building Society, with assets of approximately £500,000, will be merged with the Bristol and West.

The Report and Accounts for the year ended December 31, 1960, were carried unanimously, and the retiring Directors were re-elected.

# "We realize that the economy is not a set of statistics—it is people"

### Mr. W. Lionel Fraser's Review

#### GENERAL REVIEW AND PROSPECTS

The story I have to tell is one of activity, record profits and high expectations for the future. Last year the profit of the Group, before tax, attributable to Thomas Tilling Limited amounted to £3,103,554, a source of encouragement and satisfaction to us all. Turnover was much increased, but in some fields in which we work there was fierce competition and margins were consequently trimmed. Nevertheless, total profits were very good and would have been exceptionally so, had it not been for these tighter conditions, and a substantial disappointment encountered by Holyrood Knitwear Limited. A loss was also incurred by Patchett & Company Limited, but only a very small one. In both cases effective remedial steps have been instituted and there is no reason why these Companies, well known in their different spheres, should not recover their balance and soon be profit-earning again.

Perhaps at this time when in the national interests so much urgency is rightly being attached to exports, I ought to say that our Group takes every opportunity of increasing its business with overseas territories. "Export" is high up on the agenda of the Board Meetings of all our companies and we look forward to further extension in the coming years.

Our main emphasis is, as always, concentrated on growth and efficient, progressive management, and these features must characterise any entrant to the Group. We have room for more hand-picked companies with such qualifications. By and large, we place no bar upon the nature of the business, but we are tending more and more to confine admittance to the Group to concerns which will be benefited by the knowledge and experience of our existing companies, or vice versa. Concurrently, we anticipate substantial development and expansion of our present interests, and this will perforce also follow as we continue our policy of extending our participation in subsidiaries, either by the provision of additional permanent capital when needed or by the acquisition of the remaining minority holdings, where this is in accord with the wishes of the holders. New friends, who joined us in 1960 each made a significant contribution and I would like warmly to welcome them to the Group. We now comprise 28 main companies, which in turn have numerous underlying subsidiaries of their own, employing in total some 18,000 persons. In

addition, we now have about 19,000 Ordinary stock and Preference share holdings in the parent company.

Each passing year affords added proof that this conception of ours of a Family of Firms is sound and constructive. My colleagues and I are as convinced as ever of this. We entertain no fuzziness in our thinking and in our actions. We realize that the economy is not a set of statistics—it is people. It is people who decide, whether conditions will be buoyant or depressed; throughout all history people themselves have determined their own success or failure. We know this, and so we encourage our people whenever they show enterprise and initiative and when they are prepared to accept the burden of proper responsibility.

I have said again and again that we are build-

ing for the future. There is not one of our companies, which, animated and supported by us, does not constantly seek new and better means of serving its customers. This is the key to success, and it is success which we expect and count upon and work for. We cannot escape occasional tribulations, nor incidental setbacks, nor the effects of any national economic crisis. I do say, however, that our Group has a rhythm, a zest and a unity of purpose, which form a stout defence against such contingencies, and I consider that the generally first-class performance of our members, in a year which was not easy especially in its last months, is eloquent testimony of this. So I again assure Stockholders that their Company is strong and has splendid prospects over the years. Certainly 1961 has started well.

The above is an extract from the Review by the Chairman, Mr. W. Lionel Fraser, C.M.G. If you are interested in obtaining a copy of the full Review, Report and Accounts please write to: The Secretary, Thomas Tilling Limited, 19, Creeve House, Curzon Street, London, W.1.

The Sixty-fourth Annual General Meeting of the Members of Thomas Tilling Limited will be held at the Federation of British Industries, 21, Tothill Street, London, S.W.1, on Wednesday, 17th May, 1961, at 12 noon.

| 1960 | 3,104                                                         | 5,275†             | 6,208            | 6,323                             | 17,806          | 17.43‡                   | 39.4                           | 20                               |

NOTES: \*The 'Earnings' percentages and the dividend rates which are shown in brackets take account of the one for ten capitalisation issues made in May, 1959, and May, 1960, and are thus properly comparable with the rates for 1960. †Preference Capital 1960 includes the issue of £2,480,001 6½% Preference Shares for which the final call was not made until 29th December, 1960. ‡Including the proceeds of this issue the ratio of Profits to Funds in 1960 was 20.05%.

## THOMAS TILLING LIMITED

A FAMILY OF FIRMS

## J. BIBBY & SONS TURNOVER MAINTAINED

The forty-seventh annual general meeting of J. Bibby & Sons, Ltd., was held on April 21st at Liverpool. Mr H. P. Bibby, JP (Chairman), presiding.

The following is an extract from the chairman's circulated review for the year ended December 31, 1960:

The Group profit after charging £200,000 for the replacement of fixed assets and providing £378,943 for income tax and profits tax was £353,769 compared with £644,057 for 1959. Turnover remained the same at £38 million but profit margins in our main divisions of animal feeds and oil processing and refining have been low.

The directors have recommended a final dividend of 4½ per cent making a total of 7 per cent for the year which is the same as for last year.

### THE YEAR'S TRADING

**Animal feeds.**—Competition has again been very keen and consequently profit margins low. There has arisen in the last few years some over-capacity in the industry and at the present time because of decentralisation we are ourselves suffering from some excess capacity affecting our cost of manufacture. Our sales of animal feeds have again increased by a small amount.

Our new factory at Knockmore, County Antrim, has exceeded all expectations in the efficiency of its manufacture and the volume of its output. This factory has unavoidably withdrawn production from our Liverpool factory causing for the time being some increase in cost there due to lower output. We are now manufacturing animal feeds at six factories—Liverpool, London, Dunball, Adderbury (Twyford), Knockmore and Framlingham (E. G. Clarke acquired early in the year).

During the year we have added to our agricultural advisory service by appointing twelve regional advisors and we now have an efficient and extensive service available. We have also opened a residential training centre at "The Lydiat" in order to provide our sales staff with the most up-to-date information on farming and the part our products play.

### OILSEED PROCESSING AND OIL REFINING

The tonnage of oilseeds processed by the company during 1960 was less than for 1959. This was largely the result of a considerable fall in our input of groundnuts due to the fact that groundnuts were for most of the year uneconomic to process. Because of this and the fact that prices of most oilseeds, oils and oilcakes declined throughout the year, the trading results were disappointing.

**Compound Cooking Fat, Lard and Soap.**—This department as a whole has had a very satisfactory year. Sales of Trex and Green Diamond lard have both been higher than in 1959 and there has been a striking increase of 300 per cent in the turnover of lard processed for other distributors.

Our liquid cooking oil "Twirl" which was introduced in 1958 has experienced an astonishing increase in popularity and sales during the year have more than trebled although the total is still small.

In my last review I referred to the introduction of an instant mashed potato in the form of

### COMPANY MEETING REPORTS

a flake under the brand name "Quip." Marketing of this product is now under way.

I think it dangerous to predict so early in the year what the trading results for 1961 are likely to be but I have no doubt of our increasing ability to make the best of whatever opportunity future trading conditions will give us.

The report and accounts were adopted.

## THE BRITISH WAGON COMPANY LIMITED

### DIFFICULT CONDITIONS

#### MR R. A. DYSON'S REVIEW

The ninety-second Annual General Meeting of The British Wagon Company Limited was held on April 21st in Rotherham, the Chairman, Mr R. A. Dyson, presiding. The profit of the Group for 1960 after taxation was £226,855 (1959—£369,243) and at December 31, 1960, the Deferred Income amounted to £2,864,920 (1959—£2,358,996). The following is a summary of Mr Dyson's statement:

The cost of a substantial increase in borrowings necessary to finance the larger business undertaken has been heavy due to increases in Bank Rate. Last year I mentioned that there was a marked tendency for hire-purchase rates to fall owing to increased competition and that this was not unwelcome if hire-purchase companies insisted on reasonable terms. In the event not only were rates depressed, but the necessary safeguards of a substantial deposit and a limited period were difficult to obtain in the conditions prevailing.

The revenue received in any year derives largely from agreements entered into in previous years. Thus in 1960 we were in the position that while most of our revenue came from business previously accepted at low rates, the greater part being in respect of new goods, money costs rose steeply during the year to our disadvantage.

In addition it has been necessary, particularly in the latter part of the year, to repossess an unusually large number of motor vehicles. The sale of these has become increasingly difficult and in most cases the price obtained has fallen far short of the value in our books. A substantial amount has had to be written off and an increased provision made for losses which we may face in 1961. We have taken all possible steps to reduce such losses.

There is some encouragement for the future in the amount of the deferred income and in the increase in the hire-purchase balances from £21 million to £28 million especially as we were able slightly to increase the hire-purchase rates towards the end of the year. Business in the first three months of 1961 has continued to increase satisfactorily.

This has been a most difficult and frustrating year, but I can assure Shareholders that the whole structure of the Company has been materially strengthened to meet the changed conditions which now obtain in the hire-purchase world.

The Report and Accounts were adopted.

The Scheme of Arrangement for the cancellation of the uncalled liability of £1 on the £2 shares was approved. The authorised capital will be maintained at £3,400,000 by an increase of £850,000, the amount of the cancelled liability. The Scheme now requires the sanction of the Court.

### THE ECONOMIST APRIL 29, 1961

## ALLIANCE BUILDING SOCIETY

### STRONG LIQUID POSITION

The ninety-eighth Annual Meeting of Members of the Alliance Building Society was held on April 21st at Brighton.

Mr Lewis C. Cohen, Chairman and Managing Director, in the course of his speech, said: The accounts show not only another year of success, but the outstanding stability of the Alliance Building Society. In addition to reaching assets of over £76 millions our total of investors and borrowers exceeded 108,000. We were able during the past year to set aside a sum of £400,000 to our free reserves which now amount to over £2,662,000. In addition to these figures I would emphasise that liquidity amounts to a sum in excess of £11,735,000.

When I tell you that the Building Societies Association recommends a liquidity ratio of 7½ per cent, but that instead we keep a liquidity of 15.3 per cent you will then be able to judge the financial status of this Society.

During 1960 we received from shareholders and depositors altogether a sum of £12,327,594 which after payment of withdrawals and addition of interest, increased their balances to a sum of £72,931,703. This large sum represents holdings due to 67,951 shareholders and depositors in all walks of life. The Society was able, during 1960, to advance on mortgage, £13,353,574 representing 7,022 loans.

### A GREAT AND STRONG SOCIETY

One of the greatest of our worries has been the *Alliance Perpetual Building Society*. That organisation has no connection in any way with us and it was an unfortunate error that two Societies with such similar names existed. In the case of the *Alliance Perpetual Society* the Registrar made a certain order. We, of course, advertised widely the fact, which I again emphasise, that that Society had nothing at all to do with us, yet undoubtedly there have been misunderstandings and there have been those who connected the two names. I would like to take this occasion to stress again as strongly as I can that the Alliance Building Society is one of the greatest and the strongest and one of the most liquid Societies in the country and this Society of whom I speak is in no way connected with that other organisation.

### FLOW OF FUNDS

We are at the moment inundated with applications for mortgages and we could advance considerably more if more funds were available to us.

I suppose one of the reasons why all savings organisations are not receiving as much in funds as they would wish is because of the inflationary position of our economy and the constant rise in equities attracts many people to gamble on the Stock Exchange. I would just like to issue a warning. Shares do not always go up. Inevitably there are recessions. Whilst it may be wise to invest in equities to a certain extent, nevertheless to every investor I would say—*always retain sufficient money for emergencies in readily realisable security which is not dependent on the fluctuations of Stock Market prices.*

In this connection you cannot do better than have an investment in a reputable Building Society earning 3½ per cent clear of income tax, with the knowledge that there it is available for you at any time if you require it.

The report was adopted.

### THE ECONOMIST APRIL 29, 1961

## COMPANY AFFAIRS

### Dunlop Rubber

IN raising the dividend from 1s. 6d. to 1s. 7d. per 10s. share, the directors of Dunlop Rubber appear not only to have recognised that the outturn in the second half of last year was better than they had expected but that immediate prospects are encouraging. Clearly, they are not altogether satisfied with the progress made last year, for though sales rose by 5 per cent, from £261 million to £275 million, profits before tax fell from £14.1 million to £13.9 million; profit margins on sales, reflecting higher costs when prices were not substantially higher, fell from 5.4 to 5.1 per cent and the return on capital employed declined from 12.5 to 11.8 per cent. The directors regard that return as too low, and year after year the sums spent on capital account are stepped up. Last year capital expenditure amounted to £12.7 million, against £10.5 million; it will probably be higher than that this year, again with the greater proportion going overseas.

Despite the recession in the motor trade in the last months of the year, profits in this country rose by 15 per cent though sales were only 8 per cent higher and Dunlop appears to have added to its share in the tyre replacement market, where margins are slightly higher than on original equipment tyres. In all, sales in this country account for about two-fifths of Dunlop's turnover and contribute something like one-third of its profits. Last year overseas sales (including exports from Britain which did particularly well) rose by 4 per cent; profits, however, fell by 10 per cent as a result largely of competitive conditions in the United States, France and Rhodesia. There seems to be some reason to hope that, at home because of the recovery in the motor trade and abroad because special factors accounted for some part of last year's fall in profits, earnings will improve this year. Not the least important reasons for this assumption are that Dunlop is adding to the proportion of synthetic rubber it uses and that it bore the big drop in natural rubber prices in the 1960 accounts where as much as £400,000 was written off stocks.

For the longer term, there are signs that recent developments such as disc brakes will soon begin to contribute to profits; that the decentralisation of the group's activities is working well; and that in research and management the group has been strengthened. The confidence the directors have in the future of Dunlop may be reflected in the market price of the shares but the shares are not regarded as growth equities by investors; indeed, at 28s. 1½d. they yield as much as 5.6 per cent, covered twice by earnings.

### Charterhouse

BACKING good management is the watchword of this industrial holding company; but in the case of Charterhouse Credit, the hire purchase company in which it has a 65 per cent equity interest, it seems to have come a cropper by backing bad management. The discovery last October that the credit company had lost £1.3 million came as a "complete surprise" to the Charterhouse directors. The actual loss taken into the consolidated accounts amounts to £333,000, as £800,000 of the total loss is absorbed by the £725,000 of preference capital and outside equity interests and £170,000 by recoverable taxation and available reserves. These sums, plus accrued interest on the preference capital, must however be earned and replaced before the company can start contributing to Charterhouse profits again. New management has been installed, door-to-door hire purchase selling stopped, and the debt outstanding is to be reduced from £6.6 million to £5 million. This year may produce a further loss but after that annual profits of £150,000 to £200,000 are expected. At this rate, with the profits free of tax, the company should in five to six years begin to contribute to the group's profits again.

The net profits of the Charterhouse group fell from £666,000 to £414,000 in the year to November 11, 1960, but the chairman, Sir Nutcombe Hume forecasts "a very much better report" for the current year. Without the hire purchase loss it can be calculated that profits should at least pass the £750,000 mark. Last year's revenue from companies, other than hire purchase, in which Charterhouse has a controlling interest fell from £879,000 to £757,000, but this fall was more than balanced by the industrial investment interests of the group whose revenue rose from £541,000 to £680,000. On a maintained dividend of 8 per cent shares at 36s. 1½d. yield 4.4 per cent.

### Thomas Tilling

A YEAR ago the full accounts of Thomas Tilling gave a detailed breakdown of assets held in the various industrial divisions. This year they reveal the contributions which these divisions make to the profits of this many-sided industrial holding group; but unfortunately the assets figures are not repeated. Gross profits of the group in 1960 rose by 16 per cent from £3,706,000 to £4,316,000, but about two-thirds of this increase came from new acquisitions and margins on turnover fell from 6.1 to 5.6 per cent. Some of this decline may reflect the "big deficit" made by the wholly-owned Holyrood knitwear

subsidiary and the small loss made in a steelworks. The dividend has been raised from the equivalent of 15½ per cent to 20 per cent, covered almost twice by earnings.

The group's biggest earner of profits is the building supplies and services section, which contributed 23½ per cent to total gross profits. Vehicle distribution provided a further 22.8 per cent and record profits from the "Pyrex" producers, James A. Jobling, helped to provide the 19.7 per cent of the glassware section. Last year the group added to its interests in engineering, building, vehicle distribution and road transport. The pattern of the group seems more set now, as the chairman, Mr Lionel Fraser, says that future acquisitions will be confined "to concerns which will be benefited by the knowledge or experience of our existing companies or vice versa." He is optimistic about the current year, which began well; and he expects the unprofitable subsidiaries to be earning profits "soon," though he does not specify when this will be. The 4s. ordinary shares at 26s. 4½d. yield 3 per cent.

### Sears Holdings

OUTPUT of shoes rose by seven per cent last year and, despite the poor summer, sales, including an increasing proportion of imports, rose by more than nine per cent to £285 million. Although it appeared at one time that the multiple retailers were no longer adding to their share of the market, revised figures from the Board of Trade showed a further marginal gain by the multiples. Only the stickiness of profits from its engineering section restrained

| British Shoe Corporation .....  | 4,376 | 5,669  |
| Sears Engineering .....         | 3,772 | 3,915  |
| Mappin & Webb .....             | 244   | 336    |

Sears' profit growth last year. Group profits before depreciation rose by 18 per cent, from £9,968,000 to £11,783,000, but British Shoe Corporation's gross profit rose by 30 per cent, from £4,376,000 to £5,669,000. The engineering division achieved a rise of only about four per cent to £3,915,000 last year, and because of the big strides made by the shoe industry in the past two years the proportion of total profit contributed by the engineering division has fallen sharply. The gross profit of Mappin & Webb, which presumably includes the earnings of Garrards, rose from £244,000 to £336,000.

The ordinary dividend has been raised as forecast from the equivalent of 20½ per cent on the old capital to 25 per cent. A one for five scrip issue in "A" ordinary shares is to be repeated, and once again the directors have said what the dividend on the new capital will be, forecasting a payment of 25 per cent. On the prospective dividend the "A" units at 43s. 4½d. yield 3.5 per cent.

## Elliott-Automation

AMERICAN investors have boosted the prices of electronic and automation shares to stratospheric heights. Some of the young fast-growing electronic companies in America have yet to pay a dividend, but even so their shares have attracted eager—and possibly rash—buyers. It is not therefore surprising that American investors have looked beyond their own national boundaries and bought the shares of such an established concern as Elliott-Automation, which is the only British maker of a full range of automation systems. When the debenture stock was placed in January the directors forecast a "satisfactory advance" on the 1959 profits. The preliminary figures show that gross profits have in fact risen by 24 per cent from £1,016,000 to £1,256,000, excluding the profits of the Rheostatic Company. If these, amounting to £521,000, are included the increase is no less than 75 per cent; net profits, including the Rheostatic contribution, rose from £549,000 to £960,000.

Shareholders will be pleased with the increased dividend of 13 per cent, compared with a forecast of 12 per cent and 9½ per cent paid in the previous year. But they must also wonder whether the present rate of growth can be sustained; this year the rise in gross profits was proportionately equal to the rise in 1959, but it may be a difficult task to maintain this pace in the future. With the 5s. ordinary shares at 36s. 10½d. to yield only 1.8 per cent, covered just over twice, the future is heavily discounted.

## Vickers

LAST September the half yearly results from Vickers showed that the group had fared rather more successfully in the first half of 1960 than in the same period in 1959, but not quite so well as in the second half of 1959. Now the preliminary figures for the full year have shown that a marked improvement occurred in the second half of the year. Over the full year, sales rose by 2½ per cent, from £155½ million to £159½ million, but the group's net profits rose by 27 per cent, from £4,934,000 to £6,252,000. Earnings have thus risen from 15 to 19 per cent; and, though the total dividend remains unchanged at 10 per cent, the market was pleased with the results, marking up the ordinary shares by 1s. 6d. to 37s. 3d., and at the current price of 36s. 3d. the yield is 5½ per cent.

Part of the improvement in the 1960 figures reflects a higher profit from trading; though this is somewhat obscured by the addition of £1.2 million in an exceptional credit to the 1959 profit and the deduction of £802,000 from profits in 1960 to cover the net loss on the termination of tractor production. But the biggest contribution to the improvement has come from the aircraft division, where the development provision has been halved to £2½ million

## COMPANY AFFAIRS

now that the cost of the Vanguard has been written off. The loss on the sale of Viscounts to Capital Airlines cannot be calculated at the moment but it is thought that after tax relief it will be substantially

### SALES AND PROFITS (£ million)

less than the £3 million contingencies reserve which has already been set aside to meet it.

One disappointment is the experience of English Steel Corporation, in which Vickers has a 75 per cent. interest. A heavy increase in the tax charge has cut into its net profits so that the proportion of its profits attributable to Vickers has actually fallen, accounting for only 32½ per cent of the total of Vickers' net profits.

## Gallaher

SHAREHOLDERS in Gallaher, the tobacco manufacturing group, should be pleased with its preliminary results, for they show not only an absolute increase in gross profits but an acceleration in the rate of growth. Last year Gallaher's profits rose by 23½ per cent, from £9½ million to £11½ million; the increase in the tax charge limited the rise in net profits to 17 per cent, from £5,004,000 to £5,834,000. In June the directors forecast that the 20 per cent dividend would be maintained on the ordinary capital after the one-for-six rights issue. They have now formally declared this dividend; in view of the rise in profits this may err on the side of caution but it has also to be noted that the earnings cover has not risen, remaining unchanged at 1.9 times. The market appeared to be disappointed that the dividend was not bigger and after the results were published the 10s. shares gained only 3d. to 47s. 9d. But this is the peak for the year so far and the yield is 4½ per cent.

The rise in profits must reflect a higher level of sales for margins can hardly have improved in 1960, when wages rose and tobacco leaf was more expensive. The rise in tobacco consumption in this country was 3 per cent last year and it seems clear that Gallaher was doing rather better than this in a highly competitive market. In particular, the "Nelson" tipped brand, appears to have won new customers.

## United Drapery Stores

THE market's hopes of good results from United Drapery Stores were justified by the preliminary results for the year to January 31st. Last October a total dividend of not less than 40 per cent was forecast

## THE ECONOMIST APRIL 29, 1961

but the directors have now declared a final dividend of 30 per cent, to make the dividend 45 per cent in all; this compares with 37½ per cent the year before. In addition, there is to be a one-for-two scrip issue and having risen sharply on this news the 5s. shares at 75s. yield 3 per cent.

Trading profits have risen by 12 per cent from £9,025,000 to £10,103,000. In 1959 gross profits were affected by the provision of £686,000 for hire-purchase debts but last year there was a credit of £29,000 on this account; gross profits have therefore risen by 24½ per cent from £7,410,000 to £9,256,000 and after the higher tax charge net profits have risen by 21 per cent from £3,846,000 to £4,663,000. The higher dividend, with the final payment on the

|                            | July 30, 1959 | Jan. 31, 1960 | July 30, 1960 | Jan. 31, 1961 |
|----------------------------|---------------|---------------|---------------|---------------|
| Trading profit             | 4,003         | 5,022         | 4,484         | 5,619         |
| Profit before tax          | 3,261         | 4,149         | 4,013         | 5,243         |
| Taxation                   | 1,570         | 1,857         | 2,030         | 2,463         |
| Available for Ord. capital | 1,627         | 2,356         | 1,915         | 2,848         |

capital as increased by the rights issue, absorbs nearly £2.5 million, against £1.9 million, so that the cover is unchanged at about 1.9 times. The improvement in profits in the second half of 1959-60 is impressively in line with the rate of growth in 1958-59; this tends to confirm the impression that in such a widely based retailing multiple as UDS what is lost temporarily on hire purchase sales is balanced by what is gained on cash and short-term credit sales.

## Royal Mail

FOR all its potential promise, the external trade of the South American countries has lagged behind that of other regions in the past decade. To add to the difficulties of Royal Mail, whose principal interests lie in passenger and freight services between Western Europe and South America, illiberal trading policies are widespread among South American countries, which frequently resort to bilateral trading and flag discrimination. Royal Mail's earnings have fallen steadily since 1956 and the ordinary dividend was cut from 9 to 8 per cent in 1958. It has now been reduced to 5 per cent. Operating profits for 1960 amounted to £1,497,000, compared with £2,017,000 in 1959. The transfer of about £450,000 from reserves for contingencies and repairs has been repeated, and a further credit of £150,000 has been transferred to cover special repairs made to one ship during refitting. Though bunker oil prices were lower last year, operating costs were rising on a broad front, and the strike of tally clerks in the London docks at the end of 1960 may also have reduced Royal Mail's earnings.

Royal Mail's fleet replacement programme is reflected in the rise in interest payable on bank overdrafts from £2,000 to £181,000. Depreciation was virtually unchanged at £1,470,000, but transfers to

## THE ECONOMIST APRIL 29, 1961

fleet replacement reserves have been reduced from £750,000 to £110,000, so that net profit was £166,000, against £331,000. The smaller ordinary dividend absorbed £245,000, compared with £392,000 in the previous year. Royal Mail's £1 shares stand just above par, to yield 4.9 per cent.

## Associated Electrical Industries

LORD CHANDOS had some words of cheer for the AEI shareholders in his statement last week, but, to judge from the stock market's reaction, rather fewer than the optimists had expected. He told them that the outlook for those parts of the business which were predictable was much better than in 1960. He expected more favourable results from most divisions; but he thought that it would be a difficult year for exports, and for the appliance and entertainment divisions. He, however, also said that the volume and profit of the appliance division should be better than in 1960 though this is one division where the results are largely unpredictable, because refrigerator sales depend so much on summer temperatures. The division itself has its hopes of a 50 per cent increase in turnover and profits. The entertainment business—supplying parts for radio and television sets—is, however, likely to run at a much lower level than in the first half of 1960: it would be surprising if it showed any improvement on the second half of last year, at least until the autumn. Profits from this source may well be lower than in 1960. Railway traction was the other black spot that Lord Chandos had to mention; but he was able to say that two-thirds of the faulty transformers have now been modified.

The four divisions that were causing concern last year should contribute something more to profits this year. Rationalisation of the cable division is now practically completed, and though prices are still 17 per cent below the level in April, 1959, profits should be made this year. This should make, Lord Chandos said, "a considerable difference to the profits of the company in the present year." The telecommunications division, which made a marginal loss last year, should give a modest return on the capital employed this year; the improvement in the profits of the lamps and lighting division should continue this year. And more should need to be provided for the loss on the Berkeley nuclear power station, while that at Dungeness should give a modest profit. Shareholders cannot feel too optimistic about their prospects when Lord Chandos complains about the low margins endangering the industry's ability to maintain research and development, and when he maintains that protection of the consumer can be taken so far that the industry is damaged; but the present boom in capital goods and electricity consumption should benefit AEI in the longer term.

## COMPANY AFFAIRS

## Reyrolle

THE results of A. Reyrolle, announced earlier this month, came as a pleasant change to the depressing record among heavy electrical manufacturers of slim margins and declining profits. Last year, in fact, Reyrolle's profits were 11½ per cent higher at £2,900,000. About half of this increase came from trading and the other half from a bigger yield on Reyrolle's investments. The chairman, Mr H. H. Mullens, has said that the improvement took place in a difficult year and that it partly reflected the completion of a number of large contracts.

The outlook, however, seems to be brighter, for full time working followed the increase in orders received in the summer. Then, orders on hand were at a new record level and they are at the moment sufficient to ensure full capacity working for the next twelve months. Although competition is still fierce and profit margins are narrow, the chairman says that the group has demonstrated its ability to compete with foreign manufacturers in export markets. The slowing down of the nuclear power programme and the low level of activity in the early part of 1960 have swollen the group's liquid funds; by the end of the year they amounted to £5.3 million, and Mr Mullens says that some call will be made on them this year to finance further expansion. The shares gained 1s. 3d. after the report had been published and now stand at 48s. 9d. to yield 4 per cent covered 1½ times.

## Burmah Oil

LAST June the chairman of Burmah Oil, Mr W. E. Eadie, said that although trade in the early part of 1960 was seven per cent higher than in the same period of 1959 margins were narrowing. It looks as if this trend towards smaller returns was accentuated in the later months of the year, for Burmah Oil's gross trading profits for the whole of the year fell by 34 per cent, from £5,674,000 to £3,775,000. This, however, has been balanced almost exactly by a rise in "other dividends and interest" from £9,888,000 to £11,782,000; most of this investment income arises from Burmah's holdings in British Petroleum and Shell Transport and Trading. The group's net income rose by three per cent, from £9,523,000 to £9,820,000, so that earnings rose from 11½ to nearly 12 per cent. But the tax free dividend has been raised from 8½ to 9½ per cent; presumably in deciding upon this increase the directors had in mind the latest increases in the final dividends declared by British Petroleum and Shell which will be brought into Burmah Oil's accounts this year. The market seemed to be disappointed that the directors have not decided to make a scrip issue, for the ordinary shares lost 2s. immediately after the results. At 43s. 9d. the shares yield 7 per cent, covered 1½ times.

## London Stock Exchange

|                |          |          |        |
|----------------|----------|----------|--------|
| FIRST DEALINGS | April 10 | April 24 | May 8  |
| LAST DEALINGS  | April 21 | May 5    | May 26 |
| ACCOUNT DAY    | May 2    | May 16   | June 6 |

OVER the week to Wednesday share prices were nearly as much affected by a number of domestic dividend and profit announcements as by the international crisis. Before the week-end the Cuban invasion cast some shadows over the market and afterwards the Algerian revolt made a slight impact, particularly on gilt-edged stocks. Equity prices also fell on Tuesday in sympathy with Wall Street where the fall was the sharpest since late 1958. But on Wednesday the news that the revolt in Algeria had collapsed was followed by a general rise in the price of gilt-edged stocks and widespread gains occurred among equities after the strong recovery on Wall Street. Over the week to Wednesday *The Economist* indicator gained 3.5 points to a new peak of 422.6.

Before the week-end the demand for gilt-edged stocks was centred largely upon short dated issues; Conversion 4½ per cent 1964 gained ½ to 98½ and Conversion 5½ per cent 1974 gained ½ to 95½. Among the irredeemable stocks 2½ per cent Consols gained ½ to 42½. High coupon dominion and corporation loans remained firm over the week, and they, too, moved ahead on Wednesday.

The biggest movements of the week in equity prices occurred among bank shares after the announcement of a scrip and rights issue from the Midland Bank; this, it was widely believed, would be followed by similar issues from other big banks. Midland advanced by 16s. to 123s. 9d. Barclays gained 9s. 6d. to 91s. and Westminster "B" 6s. 9d. to 83s. 6d. Following the gains resulting from dividend announcements by some insurance companies before the week-end profit taking occurred and Royal, for example, lost 5s. to 174s. Although there was some profit taking among industrial equities as the account drew to its close last week-end the *Financial Times* index showed a gain for the week of 5 points to stand at a new peak of 359.2. Store shares were in demand and United Drapery rose by 7s. 7½d. to a new peak of 74s. 9d. after the announcement of a scrip issue. Among electrical shares AEI fell by 3s. 9d. to 43s. 6d. after the chairman's statement but there was a strong demand for automation and computer shares; ICT gained 3s. 1½d. to 103s. 9d. and Elliott-Automation gained 2s. to 36s. 9d. on its results. Fisons gained 3s. 6d. to 58s. 6d. after they revealed plans for a joint nitrogen plant with Esso. Oil shares were depressed early in the week in sympathy with Wall Street but rallied on Wednesday when Shell Trinidad rose by 32s. 6d. after the offer from Shell Transport for the minority shares had been announced. The news of the lower dividend and profits from Royal Mail depressed shipping shares.

*Cable laying ship "Monarch" 8056 tons.*

This photograph, taken aboard the Post Office cable ship Monarch, shows repeater housings for the first section of the new Commonwealth cable "Cantat". C-SENTRY ANODES were chosen to protect these repeater housings from corrosion for a minimum period of 40 years. These anodes were selected and their special shape designed, by the Post Office Research Station. The Monarch will commence laying the cable this month from Scotland to Newfoundland, a distance of 2100 nautical miles.

### HOME

#### EUROPE'S OFFSHORE ISLANDS

With their gaze too fixed on the political trees, Britain's leaders still hesitate to take the country boldly out of the wood—and into Europe (p. 631).

The postponement of a political meeting of the Six gives Britain time to act (p. 642).

Among the distracting flog, Mr Benn should be saved from the backwoodsman's axe (p. 62).

Ireland's Northern Counties: Ulster both gains and loses through being integrated in the United Kingdom—but would gain more yet through integration in Europe (p. 635).

Swindon's dispute over coal wage rates imperilled the further decentralisation of British industry (p. 648).

#### No Substitute?

Wool: too much publicity for the industry's problems is no substitute for publicity of its product (p. 683).

Coal: the budget increased protection against imported fuel oil; now the Government has to decide whether protection against American coal is to stay (p. 681).

#### Schools and a Skinish

Glasgow's striking domies are worried about the state of their nation as well as the lurch of their purses (p. 651).

### INTERNATIONAL

#### RIVAL GIANTS

Russia still has its help for capitalists: Mr Khrushchev's restoration of the death penalty for economic crimes is a reminder that the old Adam of individual enterprise (and profit) is still very much alive (p. 633).

America, emulating Russia, has got its man into space too. The flight has raised America's confidence and prestige; the problem now is to keep them (p. 669).

#### RIVAL LEADERS

President Kennedy is urging his generals under civilian control, but they are fighting back (p. 669). He has made sure, however, that he, and not the generals, will control the new atomic weapons America is offering for the protection of Europe (p. 640).

Mr Nixon is having tussles of his own as he tries to consolidate his position as leader of the Republican party (p. 670).

#### REBEL LEADERS—

Some of the Algerian leaders are in prison, some in Tunis; some have been guerrillas, some politicians. But the long struggle has given them a common loyalty (p. 638).

#### —AND DE GAULLE

Negotiations are approaching, but President de Gaulle's speech on Monday gave no hint of an advance in his negotiating position (p. 662).

Sunshine Holidays: a reshuffle of Britain's school calendar could lend a hand in African education (p. 645).

#### Government . . . Good Ideas

Water: Mr Brooke proposes to prevent it running to waste (p. 685).

GPO: Mr Bevins proposes to give the post office a giro system—and the banks some healthy competition (p. 688).

Export Credits: this year's "profit" vindicates premium cuts (p. 691).

#### Government . . . Bad Ideas

Government Spending: why not publish the Plowden Report? (p. 645).

Payroll tax: climbing down in two easy steps (p. 685).

Spies: secret service should be secret and, in Britain and the US, spies and counter-spies have only themselves to blame when the press publishes their distasteful doings (p. 641).

#### Consumers

Unprotected: valiant Tory backbenchers have killed a sad little bill (p. 691).

Respected: shop-assistants are to go back to school (p. 651).

Unguided: the "Ladies' Directory" is judged unfit for conspiratorial consumption, but the judgment is shaky law (p. 644).

Discriminating: the drawing power of art (p. 645).

#### ASIAN RUCTIONS

A Laos conference is about to open, but it is not clear which Laotians will be there (p. 640).

South Vietnam needs American reassurance, but America needs to avoid identifying itself with a single Vietnamese ruling clique (p. 640).

#### AFRICAN RUMBLINGS

Southern Rhodesia. Removing pinpricks which hurt racial sensibilities has not removed the Africans' inexorable drive for power (p. 659).

Congo. Mr Tshombe's capture may prove a catalyst if it persuades Leopoldville to talk with Mr Hammarskjöld and the other Katanga leaders to talk with Leopoldville (p. 642).

#### EUROPEAN VETERANS

In west Germany Dr Adenauer is offering the electors "no experiments" and scorning coalitions with rival parties. The Social Democrats are offering more welfare and condemning the Bonn set-up as "Portuguese" (p. 660).

In Portugal itself opposition to Dr Salazar runs deep. But it is leaderless, incoherent and divided (p. 666).

#### MIDDLE EASTERN DISCONTENTS

Persia. The Shah wants to lead his country into the modern world, but the monarchy's natural supporters prefer the past (p. 644). He has forestalled discontent by a change of government.

Turkey. The Gürsel government would like to encourage loyal opposition. But it is harrying followers of the Menderes regime by wide arrests (p. 645).

## GRIFFITHS Protective Paints

— offer a complete service to industry

Prime costs vary little between one type of protective paint and another, but a considerable saving can be made in maintenance costs by reducing the frequency of application. The most effective anti-corrosive system can only be arrived at by a careful consideration of the prevailing conditions, and by selecting the most efficient paint to use under those circumstances. Griffiths Brothers maintain a staff of technically competent and experienced Representatives who will investigate your Protective Paint Problem on site and offer you advice backed by our Technical Research Organisation.

### FERRODOR

FERRODOR, is the most efficient and best known of all anti-corrosive paints, and has never been successfully imitated. Only carefully graded and hand picked micaceous iron oxide of the very highest quality is used in Ferrodor.

## Machines that make life modern...

The Francis Shaw INTERMIX has a world-wide reputation as a highly efficient and economical internal mixer for natural and synthetic rubbers and plastics materials. It is used to compound accurately the ingredients of many rubber and plastics products.

The gramophone record, like many other symbols of the contemporary way of living, is made of plastics—perhaps it was processed at some stage in its manufacture by Francis Shaw machinery. There is scarcely an aspect of modern life in which plastics do not play a part... they are light, strong, useful in the electrical industry, hygienic, colourful, proof against water, rust, or corrosion. In fact, they can be made with almost any property or combination of properties... they can be made or processed far more efficiently with Francis Shaw machinery.

Five Clark Model 305 Gas Turbines drive Clark vertically-split centrifugal compressors operating in series. The station is highly automated with only two operators required per shift.

## CLARK Gas Turbines Power Aramco 210,000,000 SCFD Gas Injection Plant

At 'Ain Dar, Saudi Arabia, five Clark Model 305 Gas Turbines are driving Clark Vertically-Split Centrifugal Compressors for the gas injection program of the Arabian American Oil Company. Available fuel for the turbines is sour gas while ambient temperatures soar to unusually high levels.

The 'Ain Dar injection plant draws gas from five gas-oil separator plants at a pressure of 125 psig, compressing it to 2100 psig for injection. Any four of the five series-connected, turbine-driven Clark compressors can provide the necessary pressure ratio for injection. Maximum flexibility is achieved by the use of dual shaft gas turbines. An additional Model 302 turbine drives a 5600 KW generator to power the gas-oil separator plants. Clark Model 305 and 302 Gas Turbines have a standard rating of 8700-9300 bhp.

Proved dependability, minimum maintenance and the low installation costs experienced by other users of Clark gas turbines were important factors in selecting the turbines and centrifugal compressors for the 'Ain Dar plant.

Whether made in Europe, or in the Clark home plant in the U.S.A., all units and components are identical and completely interchangeable. The vast experience of Clark Bros. Co.—in design, manufacture and application—is available to you through the offices listed below.

## RESEARCH LABORATORIES

£275 MILLION TURNOVER

103 FACTORIES

100,000 EMPLOYEES

DISTRIBUTORS IN 140 COUNTRIES

90,000 ACRES OF RUBBER PLANTATIONS

When he experimented with the materials he had bought at a local chemist's shop, John Boyd Dunlop worked with a purpose... to make a practical pneumatic tyre for his son Johnny.

Purpose is still evident in the activities of Dunlop's 20 major laboratories in five continents... and still as practical. This year the Company's main Research Centre at Fort Dunlop has produced a new rubber, and built it into a new tyre with remarkable properties of safety, comfort and silence. Just one example of the forward thinking expressed in the new symbol, designed to identify Dunlop activities, products and services the world over.

# DUNLOP

SYMBOL OF PROGRESS

# FOISTER CLAY & WARD SET THE TREND

It's officially opened! The largest timber-constructed factory in Europe. Built for Foister, Clay and Ward (the 13-factory public company producing much of Britain's finest knitwear, hosiery and underwear), the new factory will handle the increased demand for the group's products. Productivity has been stepped up. Prices, despite rising costs, maintained. Good for Foister, Clay and Ward. Good for everyone!

But this factory is news in itself. Erected in only thirteen weeks in the NEW TYPE 6 system of component construction. A streamlined, automated factory, offering limitless scope in production-planning; built at competitive costs.

For Vic Hallam, Mansfield's bright and spacious new factory means completion of yet another major contract. For Foister, Clay and Ward, it represents a trend-setting achievement on a scale never before attempted.

## THE WORLD!

Do you need aluminium? No matter where in the world you are, Kaiser Aluminum can supply the high quality aluminium you need... when you need it. Our plants, on or near salt water ports in America, have a capacity of 609,500 short tons of aluminium every year. Here is a dependable and continuous supply of primary metal to help you meet the growing demands of the world

...now and for the future. If you need aluminium fast (!) phone: Kaiser Aluminum Company, Ltd., Hyde Park 5677-8; 16 Berkeley St., London W.1; Kaiser Aluminum International Inc., Phone: 47-59-00; Klausstrasse 43, Zurich 8, Switzerland. Also in Bremen.

New leadership in the world of aluminum

## It's a MORGANS world

The shape of things to come?

No: these things have already come to shape our world and your world. They have made it a MORGANS world. On April 1st 1961 The Morgan Crucible Company Limited—as you have known it—became a holding company. Her trading mantle fell on the following subsidiaries,

### IN THE CARBON WORLD...

Morganite Carbon Limited, Battersea, London.

### IN THE CRUCIBLE WORLD...

Morganite Crucible Limited, Norton, Worcestershire.

### IN THE EXPORT WORLD...

Morganite Exports Limited, Battersea, London.

### IN THE CRUSILITE WORLD...

Morganite Electroheat Limited, Wandsworth, London.

### IN THE RESEARCH WORLD...

Morganite Research and Development Limited, Battersea, London.

The established subsidiaries in the United Kingdom continue as in the past to be at your service:—

### IN THE REFRACTORY WORLD...

Morgan Refractories Limited.

### IN THE RESISTOR WORLD...

Morganite Resistors Limited.

### IN THE LIGHT-SOURCE WORLD...

Ship Carbon Company of Great Britain Limited.

### IN THE GRAPHITE WORLD...

Graphite Products Limited.

### IN THE FRICTION WORLD...

Morgan-Mintex Limited.

There will be no change in the activities of our overseas companies listed below:

Morganite Australia Pty Limited, SYDNEY.

S.A. Morgan, BRUSSELS.

Morganite do Brasil Industrial S.A., SAO PAULO.

Morganite Canada Limited, TORONTO.

Etablissements Marshall S.A., ARGENTEUIL, Paris.

Fours Rousseau—Creusets Morgan S.A., ARGENTEUIL, Paris.

Morganite Italiana S.p.A., MILAN.

Morganite Carbon K.K., OSAKA.

Morganite del Caribe S.A. de C.V., MEXICO CITY.

Morganite South Africa (Pty) Limited, JOHANNESBURG.

Morganite A.G., ZÜRICH.

Morganite Incorporated, NEW YORK.

BATTERSEA CHURCH ROAD, LONDON, S.W.11

## NYLON STOCKINGS BEGIN HERE— AT THE CITY OF STEEL!

### NEW PLANT MAKES BETTER BENZENE FOR BRITAIN'S CHEMICAL INDUSTRY

To make iron for steelmaking, coke is needed—in huge quantities. At the City of Steel the coke ovens produce coke from raw coal. Among the by-products is crude benzole. This has always been a vital material for the chemical industry.

The most efficient way of making benzene from crude benzole is by hydro-refining. This results in a purer product and avoids high processing losses and the effluent problem normally associated with crude benzole plants.

Hitherto, Britain has had no hydro-refining plant to refine the crude benzole from coke ovens. For this reason The Steel Company of Wales

welcomed an approach by the Lincolnshire Chemical Co. Ltd. to form jointly The Port Talbot Chemical Co. Ltd. and to build a hydro-refining plant for handling the crude benzole from the Steel Division coke ovens.

This plant is now in operation at Port Talbot and is supplying Britain's chemical industry with the purest available benzene and its associated aromatics, toluene, xylene and naphthas. These are the chemicals that are used for nylon, all kinds of plastics, dyes and inks, paints and varnishes, enamels and lacquers, insecticides, drugs, flavourings, preservatives, motor fuel, penicillin and perfume. There is scarcely any aspect of modern life where these things do not have a place.

And they all may begin at the City of Steel.

*Behind the girl is the hydro-refining plant at the City of Steel. It makes pure benzene from coke oven crude benzole. Benzene and its associated aromatics, toluene, xylene and naphthas are vital raw materials for Britain's expanding chemical industry—for instance, six gallons of benzene will make one thousand pairs of nylon stockings. In 1960 one company used about eight million gallons to make nylon. Since 1949 the annual U.K. production of benzene from coke ovens has increased more than sevenfold, from 6.2 to 47.1 million gallons in 1960. The Port Talbot Chemical Co. Ltd., formed jointly by the Lincolnshire Chemical Co. Ltd. and The Steel Company of Wales, opened the City of Steel plant, the first of its kind in Britain, in October last year. Much of its operation is automatic and the products emerge with 99.7% purity.*

# THE STEEL COMPANY OF WALES LIMITED

*This is Broadsheet No. 24 from the City of Steel*

## Woods and Trees

IT is intriguing to imagine what would happen if one could now introduce into the Palace of Westminster four Rip Van Winkles—who had gone to sleep, respectively, a month, a year, a decade, and a generation ago. Each would surely react to various parts of the current political scene with blank unbelief. The first and central feature of that scene—to 25-year-old Winkle's bewilderment—is that an anti-protectionist Conservative government ("free trade," preaches its Prime Minister, "for the free world") is teetering on the brink of integrating this country into a partly supranational confederation of European states. The main domestic objections to this scheme—here all serious observers must feel equally astonished—seem to be being discussed merely in terms of whether it might hurt a few specialised sections of British agriculture and horticulture. Interesting as such details about the likely degree of competition for some producers of strawberries and tomatoes may be, never in the broad sweep of our history can so great and promising a venture have been launched in so trivial and vulgar a way of coition.

That is why some people have said that, before the Government plunges into the European Economic Community, it should feel obliged to hold a general election on the issue; this is a point that 25-year-old Winkle will understand, for he will remember that Mr Baldwin did the same thing when the Tories took the much smaller step of embracing tariff protection in 1923. But all that Baldwin in fact succeeded in doing in 1923 was to put the issue of the tariff at the mercy of the political swing, in an election which was not really fought in the end about the tariff at all; this is not therefore a very good precedent, especially as the European issue is not at present a party issue (although it might be artificially forced to become one if a general election were ostensibly fought about it, which is one huge disadvantage of even contemplating such referendum-election). Anyway, the argument that there should be an election first too often appears to be a last ditch dodge by those who have refused through the years to make Europe a public political theme.

A short while ago, nevertheless, it seemed just possible that Mr Macmillan might go early to the polls on this excuse, largely because everybody supposed that the current swing was against Labour; this was believed to be an immutable result of Labour's division caused (to the astonishment of ten-year-old Winkle) by a neutralist leader of the Transport and General Workers' Union. Now, however—here it is one-year-old Winkle's turn to goggle—there are some signs of a Labour recovery. This has not been because of a split of opinion on the European issue, but because of an accumulation of petty grievances against the Government, of a sort that often arise in the middle of a Parliament. This week's special bag of grievances, the newspaper headlines proclaim, are that the Conservative government is judged to have been unfair to the eldest son of a deceased hereditary peer; to have been insufficiently tough in tracking down communist sympathisers in the public service; and to have provoked some teachers' strikes by not diverting enough of the national income towards the professional classes. These not exactly traditional socialist causes, it is apparently felt, might be better served if the country swung to Labour.

At this stage, the three elder Winkles will wisely conclude that the current political situation—or at least much of most professional commentators' interpretation of it—is too mad to be likely to last. The Winkle who went to sleep

a month ago, or who (like some professional politicians) takes more than a month to wake up, will probably content himself with denying that the two latest political developments—the swing by the Government towards Europe, and the apparently independent swing by the electorate towards Labour—have necessarily happened. (He is likely to feel confirmed in this latter contention, just as this issue of *The Economist* appears in readers' hands, by the news that several big Labour borough councils have switched in the local elections to Conservative hands; but for assessment of the bogey score against which the swing in the boroughs should properly be measured, see page 641.) Politicians who have decisions to take should not let themselves be deluded by the infant Winkle, but they can reasonably conclude with the elder Winkles that public opinion is unlikely to be swayed by trivialities instead of realities for long. It is indeed probable that some of the individual trees in the forefront of the current political scene loom misleadingly larger than life. All experience suggests that, at what is historically a pretty critical moment for British politics, both the Labour and the Conservative leaderships should plan their future courses by looking at the whole wood instead.

FIRST, then, the priorities for Mr Gaitskell. If he stands back and looks at the events of the last few weeks, the point that he should see most clearly is that Labour's surprising recovery cannot logically be ascribed to any compromising efforts that he has made to unite the party; on the contrary the recovery started at the Small Heath by-election in the very week after he had been accused of splitting the party, by withdrawing the whip from Messrs Foot, Zilliacus and company. The return of moderate Labour voters to the polling booths has since gathered weight throughout the country; it is the realisation that Mr Gaitskell may after all be the next Prime Minister that has played a large part in swinging trade union delegates back to support his line on defence. Unfortunately, the trees that Mr Gaitskell may be more inclined to see are the intrusive Padleyite propagandists who gave him such disastrous advice in the past; their advice to Mr Gaitskell in the present will be to try to outmanoeuvre the left on defence policy (by adopting Crossmanism) and to outbid it on domestic policy (by concocting more and more new versions of old socialist dogma).

If Mr Gaitskell falls into this trap, the odds are that much of the electoral support which he has recently gathered will wither away, and that his party will remain in the wilderness. But they are not unbreakably long odds. Elections are not decided solely by the view that the country has formed of the Opposition; they are also decided, and historically rather more frequently, by the view that it has formed of the Government. The attitude that Labour takes up on certain pivotal questions in the next few months is therefore going to be of considerable national as well as party importance—both because, even while still in Opposition, Labour can have a potent influence on events, and because even an Opposition that is hampered with a fairly mad domestic policy will be universally regarded as a possible alternative to any Tory government that is hindered by a pretty bad record.

The most important and immediate national question about Labour—although few people have asked it yet—is whether

it is going to permit reasonable bipartisanship in the coming approach to Europe. Economically, this should not be difficult for Mr Gaitskell, who can probably be assumed to have been converted to recognition of the economic advantages of European unity at about the moment of the conversion of the average man (even although Mr Wilson certainly has not found it convenient to be converted yet). Even here, however, the long and tortuous advance of this country into Europe could be most gravely impeded if the Government were faced at every step by an Opposition which demanded that the special interests of this, that or the other domestic pressure group must at all costs be safeguarded. Politically, British Labour's attitude to Europe could be transformed if the political complexion of common market countries were to become less deeply conservative than it is just now. Labour, like the rest of Britain, needs to look to the further future and not be transfixed by those political features of present-day Europe that it happens to dislike.

FOR Mr Macmillan, in the not particularly infrequent moments when he regards himself as a party politician, the misleading trees that he should avoid looking at are the tangle of temporary grievances to which some commentators ascribe the recent swing against his Government. Most of the emphasis on these grievances—which change in the headlines from week to week—is really an *ex post* rationalisation of a swing that was almost certainly due to occur for another reason anyway: industrial production has not risen much in Britain for nearly a year now, and it follows that the general standard of living has not been enabled to rise quickly either. If Mr Macmillan can time the next election for a period when industrial production has lately been rising—and this is a legitimate trick—the odds are still strongly that his party should succeed then to its fourth successive period of power; if he concentrates instead on trying not to exacerbate particular pressure groups' special grievances he is much more likely to go down. The issue of joining the European Economic Community is one that is likely to be replete with the manufacture of new special grievances for particular interests, but also likely to breathe a new dynamism into the British economy (even at the earliest stages when it has merely become apparent that we are genuinely seeking to join). It follows that it should be a good political move for the Conservatives, as well as (much more important) a vital move for the country.

THERE is, however, another respect in which the Conservatives' habit of looking at individual trees, instead of at broad woods, could get in the way. It can best be exemplified by reference to the agricultural issue in Europe. At present Germany's system of agricultural protection is much more uneconomic than Britain's, and the German government is much more dependent politically on the rural votes that this system of protection brings in; but when one points out to a German politician that the EEC could theoretically decree a fall in German agricultural prices just before Germany's general election, the response is likely to be a loud guffaw that his allies are unlikely to mess him around like that. The fact is that good Europeans of Dr Adenauer's circle, who like to consider themselves free trading liberals but are in many respects

rather protectionist conservatives, have an instinctive urge to talk themselves into the acceptance of sweeping liberal and supra-national principles; but they also have an instinctive trust, that if special difficulties should arise, their friends will show sufficient understanding not to insist on a contractual right to do them deliberate dirt.

By contrast Mr Macmillan's ministers, who call themselves Conservatives but are really largely free trading liberals, have an initial urge that works precisely the other way; they feel that they owe it to their titular respectability as Conservatives

## Russia's Private Sector

The new Soviet penalties for "economic crimes" serve as a reminder of the persistence of private enterprise 43 years after the revolution. To abolish it altogether would create a real gap in Russian life

DEATH has been the penalty for serious "economic crimes" since 1954 in Bulgaria, 1958 in Hungary and Rumania, 1960 in Poland. Now the firing squads are forming in Russia too. The week that began with May Day ended with a ukase decreeing execution by shooting for several groups of offenders—counterfeiters, prisoners who attack their guards, and "large-scale embezzlers of state property." Dotting the i's in *Izvestia* last Saturday, Mr Roman Rudenko, the Prosecutor-General, dwelt on the last group most heavily. Recently, he wrote, a large number of big embezzlements had been detected; heavier punishments were unquestionably needed. He saw no difficulty about concluding his article by saying that "persuasion and education" are now becoming Russia's chief means of protecting public order.

Persuasion has some way to go, if Mr Khrushchev now has to revive draconian penalties which Stalin abolished, at least on paper, in 1947. Official schizophrenia on this subject has been marked. Recently the Soviet press has been publishing a series of shocking revelations about corruption in high places and, simultaneously, a series of dreamlike dissertations about the quick approach of true communism, with special insistence that crime (as well as the state) will disappear, once there is so much common property about that a man need only reach out for whatever he wants. These parallel themes have never met; indeed, even when appearing on the same page of a newspaper, they have seemed reluctant to catch each other's eye. The more utopian of the two themes will doubtless continue to be plugged; it is part of the build-up for the party congress in October. But it is the firing squads that will hold the experienced eye of the Russian people.

SHOCK treatment is evidently the government's aim. Heads must not only roll, but must be seen to roll. The central committee plenum through which Mr Khrushchev stormed in January was largely a scapegoat-hunt after two lean years on the farms. He played the outraged father of a long-suffering people, bent on ridding them of corrupt hierarchs. Thus, he had a splendid time with the luckless party boss from the Tien Shan, Mr Isaev, who had been caught buying

to examine every liberal utterance that could conceivably ever interfere with such vestiges of pragmatic conservatism as they still practise, and to insist on written escape clauses that would protect them against every dimly-foreseen bogey which might ever arise in the dark. Europeans then naturally assume that Britain would stretch these legalistic escape clauses as far as they themselves are apt to stretch their looser ones. It will be maddening—and a national surrender—if this pettifogging British clerkliness now holds these historic negotiations up. But it is one of our greatest dangers.

butter from state shops and then "delivering" it back to the state to bulk out local output statistics. (Mr Isaev's case deserved its fame. When his sins were first detected, the system of *kombinatsia*, or mutual covering-up, swung into action so smoothly that he was actually promoted to be a minister of the Kirgiz republic, before somebody who had not been squared gave the show away.) There have been many dismissals at various levels, including the premier of the Ukraine, since January; but Russia's dauntless racketeers apparently still run its rocketeers close in the success stakes.

The line is thin between the covering-up swindles to which most party officials and managers have been driven at times simply in order to survive, and the equally common forms of *kombinatsia* in which somebody's personal nest is feathered. Most such deals inevitably involve a bit of both covering-up and buttering-up. In a system in which everyone has something to hide, it is a chancy business which particular *skandaly* get classed as "embezzlement." Does the government, for instance, really want to scare its hierarchs into being so honest that output figures slump to the level of output?

"You can't make pancakes out of statistics," complained Mr Khrushchev in January, as the plenum heard of local officials' skilful padding of crop returns. Can one make *blini* out of bullets? Fear of the firing squad may stop book-cooking, but it cannot make 17 ears of corn grow where 10 grew before, which is what the 1958-1965 farm plan requires—and the last two harvests were actually below the 1958 level.

In *Izvestia*, Mr Rudenko linked the new death penalties with "the right now given to the courts to add deportation for two to five years to the sentence for particularly serious crimes against the state." This presumably referred to the decree, newly applied to the Soviet Union's Russian republic, providing for the deportation to forced labour of those who "refuse to do useful work, obtain unearned incomes, or commit other anti-social acts." Seemingly a new version of a measure first heard of in 1957, this decree permits "public sentence at a collective of workers"—that is, by show of hands at a drumhead meeting called by local party men of the lowest grades. There is no appeal.

These drumhead convictions, like the older established "comrades' courts" and *druzhini* (volunteer policing patrols),

Krokodil, Moscow

are along the ideologically correct line which demands audience participation in the process of arrest and punishment. Probably they give ample scope for real rogues to bluff or bribe their way out, and for party men to victimise innocents against whom they have some score to pay off. The type of victim assigned to these kangaroo courts would seem well chosen. Who could possibly defend "drones, idlers and parasites"—against whom a preparatory campaign of agitation has been waged since August?

Yet, on their accusers' own showing, many of the threatened "drones" must be more active and enterprising individuals than most Soviet citizens. The trouble is that their enterprise is private—and flourishing. They fill many gaps in the economy. As a recent letter to the Soviet press pointed out, they make and market the spades, brooms and other essentials which official sources in the writer's district simply could not supply. Their carts, sledges and even cars can be hired to carry furniture or other things whose owners cannot get the stuff shifted any other way. In one district, 880 of them have been growing onions on land leased from collective farms which seemed incapable of using it themselves. Worst of all, they hire labour—obtaining it, despite the acute shortage of manpower, by the outrageous device of offering good pay. Thus they "undermine labour discipline, and damage the workshop economy." Most of them do all this while "holding some job for appearance's sake."

MANY a large factory has managed to avoid stoppages only by getting from these busy "idlers" the spare parts or other supplies it had failed to get through the proper channels. Many a well dressed party man would be a sorrier sight without the suits and shoes they turn out; hardly a household but turns to them for repair jobs, rather than endure the slow inefficiency of the licensed workshops. In secluded lanes outside Moscow, the "drones" have been busy building houses of above-average quality—and disposing of them briskly in a classic seller's market where an ever-growing mass of money is chasing few goods and fewer homes.

Mass deportation of these people to the bleaker regions of Russia may help to ease the acute labour shortage there, and offset the drift to the cities which continues despite

all the apparatus of passbooks, residence permits, tied homes and other checks on labour mobility. But one wonders who would replace them as solvers of problems which seem to baffle the planners of production and trade; and whether the new decree will really stop local authorities turning a blind eye on their ideologically intolerable, but often very helpful, activities.

The authorities face a similar dilemma over the admittedly still licensed private production of collective farm workers. Mr Khrushchev, in despair at the contrast between this flourishing individual enterprise and the flagging efforts of the collectives on the official plane, has once again raised prices for officially sold farm products; ordered state farms near large towns to grow more of the vegetables which half of Russia still buys from the individual peasant; and launched yet another propaganda drive to induce the farm worker to put more effort into his public duties and less into his private and more profitable life. But the pace cannot be forced here. The farm worker (with, now, the ever more numerous urban allotment holder) owns privately half Russia's livestock (the better tended half), and produces privately nearly all its eggs. Any real showdown with these private producers means short rations for the townsman; and he, as Russia's bustling market places and city alleys show, feels no ideological urge to queue in ill-supplied state shops rather than buy freely from private enterprise.

LAST week's draconian decrees must have aroused mixed feelings among Russians. Few will shed a tear for any corrupt functionaries who may face the firing squads for embezzlement; but many will wonder where their next spade or spare part is to come from if the small fry of individual enterprise are really suppressed. "Creeping capitalism" on the upper levels is a matter of personal graft, and so of indifference to humbler folk; on the lower levels it is a convenience, however offensive ideologically or to those who resent seeing others thrive. Whether the decrees will in fact have any real effect is another matter. If, in the matter of firing squads, Russia goes all out to catch up with and overtake Bulgaria, which has now executed more than 40 people for economic offences in four years, it may still find, as Bulgaria has found, that in an inefficient system of bureaucratic monopoly one cannot stop people from finding ways round artificial economic obstacles—even by putting the fear of death into them.

Krokodil, Moscow

## How Ulster Stands

In sober economic terms, what does Ulster gain today—and what does it lose—from being integrated in the United Kingdom?

CHIPPED off the Irish block when the war of independence ended in 1921 with freedom for the south, Northern Ireland remains one of Europe's most curious political phenomena. A squiggling border, complete with armed police, customs posts, time-bombs and Union Jacks, separates one land of soft brogues, thatched cottages, and green hills from another, similar in every respect except the once vital one of officialdom's religion. Nowadays, despite the occasional explosives of the Irish Republican Army or the offensive invective of the Orange lodges, the division of the country more often gives rise to farce than to tragedy: for example in the case of coal, which the National Coal Board sells at the world price to Eire but at the higher British price to Ulster. An ingenious southern coal merchant, prohibited under his contract from selling to Ulster, devised a method of selling to a "third party," who then undersold the Ulster coal merchants by 30s. a ton—and everyone made a profit. Again Eire enjoys the Commonwealth privilege of sending its exports duty-free into the United Kingdom, but can put protective tariffs on imports; so Ulster furniture manufacturers must compete on their home ground with drawing-room suites from Eire, while their own goods are prevented from competing in Dublin by swingeing customs duties. Ultimately, the overwhelming force of ridicule must reunify this island—at least economically—in some form or other. Meanwhile it is useful to see how Ulster stands, alone.

The quick answer is that, by the standards of the United Kingdom of which Northern Ireland is a part, the province is in a pretty poor way. Unemployment is steady around eight per cent of the working population—despite the large local bureaucracy. The three main traditional industries—agriculture, shipbuilding and textiles—are each beset by characteristic weaknesses. Some 15,000 new jobs a year would be needed over the next ten years to keep pace with the rising population and bring unemployment down to the British level.

Of course, the employment figures do not tell the full economic story: a declining labour force in agriculture is a symptom of the industry's efficiency, and the farms are said to be more highly mechanised here than anywhere in the world. The plight of the shipyards is dramatised by the laying off at Harland and Wolff's of 7,000 wage-earners, out of a peak labour force in this one yard of 21,000 men. Linen is being to some extent replaced by Europe's largest concentration of plants producing man-made fibres; and there are hopes that new processes may make it possible for Ulster to start again growing its own flax, instead of importing almost all of it from Belgium and Holland. But even cunning combinations of artificial fibres with flax may not be able to withstand the competition of cheap linen from overseas.

Ulster's fundamental problem is, in clinical purity, that it is

the outlying region of Britain's economy, which cannot be run flat out all the time. When the United Kingdom enters a boom, Ulster is the last place it reaches; when the boom ends, Ulster is the first place where firms begin to draw in their horns. The limited regional autonomy of the province does not allow it to cope effectively with economic problems—the regional parliament at Stormont was set up primarily as a nucleus for an eventual Council for All-Ireland, on which representatives from the north would sit with their parliamentary opposite numbers from the then Free State. Taxation, except for death duties, motor taxation and entertainment duties, is levied by the Westminster parliament (embarrassingly known as "the Imperial parliament" in Ulster), so that the Stormont government's theoretical powers to legislate on, for example, agriculture, are limited by the amounts which Ulster can wrinkle out of the Whitehall treasury as its share of United Kingdom taxation. The Stormont government also has constitutional powers to establish its own social services, but its staunchly Conservative government voted in and maintains a national health service practically identical with that against which the Unionists at Westminster had voted as an immoral socialist measure.

THE resemblance of the imposing palace in the Belfast suburbs to a real parliament is further reduced by the fact that one party has been in power since its inception in 1921: there are at present 37 Unionists, eleven Nationalists and four Northern Ireland Labour members. The Nationalists are not willing to form Her Majesty's official opposition, so the Labour party does its best; but nobody pretends that bills introduced at Stormont get a very thorough examination. Stormont's constituencies are sometimes gerrymandered to keep out Nationalists. (In local government elections the need for gerrymandering has been reduced by the ingenious expedient of retaining the old property qualifications for local government electors, so that only the richer, ergo Protestant, inhabitants have a vote.)

Because it has its own parliament, Ulster sends only 12 members to Westminster, from constituencies with around 70,000 voters as opposed to 50,000 in Great Britain. Unionists at Westminster are said to be inhibited in their comments on bills introduced there by the knowledge that their criticism of a Tory, or indeed a British, measure would at once be taken up by a chorus of opposition debaters at Stormont.

The main way in which the Northern Ireland government can take economic action is by building factories for rent as a bait for new industries, and by paying up to one-third of the cost of plant installed in them. The Ministry of Commerce also subsidises the price of coal and transport for industry.

Some 40,000 new jobs have been brought into Ulster since the war (not all of them with aid under these schemes): but some of the subsidised new firms have conspicuously failed to employ the expected numbers.

Many of the attractions of Ulster for outside industry are in the form of comparatively short-term and artificial government subsidies. The main long-term attraction which the province can offer is a large reserve of willing and competent workers who are much more likely to stay with a job than their counterparts in England. In most industries, however, rates of pay are governed by United Kingdom agreements and are the same as in Great Britain, so that Ulster's main potential attraction for employers is wiped out. Ulstermen get the same unemployment benefit, national assistance payments and medical care as Englishmen. Around 10,000 Ulstermen emigrate each year to Britain or abroad: Eire has about double the population, but six times as many emigrants.

The Northern Ireland budget is a notoriously complicated document (when a Unionist MP who happens to be an accountant found a discrepancy of £10 million in the figures last year, it was suggested that this was due to the death of the only man in the Ministry of Finance who understood the

traditional way of cooking the figures). But last year Northern Ireland was being subsidised to the tune of some £36 million from Whitehall—£6 million of which was promptly given back in the form of the "Imperial contribution" paid by Ulster as its share of the cost of maintaining Britain's putative Empire. Thus £30 million is the mathematical advantage that Ulster has over Eire, which is not integrated with a rich industrial society to pay for social services that it has not earned. The price Northern Ireland pays for integration is less tangible, but not unreal. Its life is not being drained off by emigration; but it lacks the adventurous, if sometimes chimerical, new ideas which are so prevalent in the Republic at present—with tax concessions, cheap labour and some smart gimmicks, Eire brought in 30 new firms from 11 countries during the last year, even if, as Ulstermen are inclined to say with contempt, many of them are English tax-dodgers or Japanese wizards making green plastic harps for export to Boston. There is a dearth of tourist hotels in Ulster; air freight, the obvious means of exporting agricultural produce overseas, is barely used; almost all Ulster beef is, unbelievably, exported on the hoof, losing weight and quality on the voyage and giving employment in slaughtering, butchering and packaging to Englishmen. When the British forces placed a large order for canned meat, they placed it in Eire, for there is no meat-canning plant in Ulster.

The idealist might be tempted to make some suggestions for overcoming this cushioned lack of enterprise. First, he would wish to separate Ulster's wages from the English trade union bandwagon (although in Ulster he would have to deal with not one but two versions of the Transport and General Workers, one being Mr Cousins's well-known outfit, and the other being based on Dublin—which should make any company's negotiators quail). An Ulster £ could perhaps be devalued just sufficiently below the English £ to give exports the narrow competitive edge they need. Finally, in an impossibly perfect world, Ulster would be fitted out with a genuine parliamentary opposition whose members were not all either directors, or golfing partners of the directors, of Ulster's largest businesses—for in the small Establishment of the province it has sometimes been found impossible to apply Mr Churchill's Westminster directive about the incompatibility of business interests and ministerial posts.

Perhaps the most hopeful feature of the province is that the urban workers, at least, are abandoning their traditional Protestant *versus* Roman Catholic feuds. Even in Harland and Wolff's shipyard there are a few Roman Catholic shop stewards, although about 85 per cent of the workpeople are Protestant. Of course a reduction of sectarian rivalry does not imply that the two Irelands are soon to be reunited; the fact that the north enjoys a British scale of social services adds vast practical difficulties to the already strong emotional obstacles. But at least some of the passionate energies which Ulstermen devote to the preservation of the *status quo* may be turned to the real question before the province—how to reap financial advantage from the two natural resources of a climate ideal for textile manufacture, and a year-round supply of greenest, richest grass. Paradoxically, some Ulstermen are beginning to suspect that the brightest future for this most loyal of British territories would lie in Britain's own integration—and Southern Ireland's—with a European market hungry for stout tweeds, fine linens and rich red beef.

MAY 11, 1861

### REPRESENTATIVE GOVERNMENT

By JOHN STUART MILL.

ALL Mr Mill's books are able, thoughtful, and vigorous in a high degree. . . . Certainly this book is not an exception. . . . For the early portion we feel sincerely grateful to Mr Mill. It is an exceedingly able protest, by the only living thinker of much authority among English Liberals against that helpless and reluctant drifting of the Liberal party into pure democracy which is so melancholy a sign of their political imbecility. Mr Mill has not a vestige of sympathy with pure Toryism, exceedingly little, if any, with mere inert Conservatism; no one represents better the faith in the possibility, nay the duty, of constant political expansion, . . . of drawing a larger and larger portion of the population into the circle of political duties which connect them with the Government, give them a control over it, and interest them in what it does, . . . than Mr Mill. To the Radical party, therefore, he will speak with some chance of being heard. . . . Mr Mill lays down as the two main criteria of good government, first, the degree in which it tends to improve the political qualities of the people governed, . . . and next, the degree in which the machinery is adapted to take advantage of all the political capacity in a people which exists, and apply it to the purposes of firm, intelligent, and just administration. . . . The second end, . . . that of obtaining intelligent and capable and just administration, . . . is often secured nearly as adequately, and with less obvious impediments, Mr Mill points out, in bureaucratic systems, but only at the cost of completely sacrificing the first and still more important end. . . . Mr Mill contrasts very powerfully and ably, as we have so often done in these columns, the principle of representing *All*, with the democratic principle, as it is chiefly known in Great Britain, of representing *all local majorities*, and leaving all the minorities, however closely allied in conviction and however widely distributed, entirely unrepresented. . . . Let us suppose the representative body an exact counterpart of the nation, though on a diminished scale, . . . giving an image of all its blind wants, and passions, and partial intelligence, and limited education and self-control. All such imperfect elements should be represented no doubt, in order to ensure real self-government. But besides self-government, we want good government, . . . in other words, the most skilful use of the national resources which is compatible with self-government at all. . . . If, then, the political system is modified by giving a greater *relative* weight to the votes of the educated classes, the people's political training will be even more perfect, and the security for a well-chosen administration will be far more perfect. The working classes will be more likely to be in that best of all positions, "strong enough to make reason prevail, but not strong enough to prevail against reason," . . . and, moreover, there will be more security for a discriminating and intelligent choice of the actual administration, and of highly-cultivated men out of whom to form an administration.

## LIVELY PLACES IN THE SUN

EDUCATION has high priority in the go-ahead states of West Africa. These secondary-schoolboys of Mian-sipim college, Ghana, like their fellows in Nigeria, will be trained in the universities for new tasks in a more industrial economy.

## Men and energy in West Africa

GHANA AND NIGERIA, two of Africa's most progressive states, are throwing themselves energetically into the development of their new nationhood.

Both countries (and their newly independent neighbour, Sierra Leone) will depend on expanding education to provide trained manpower, hence the many new schools and the fine universities at Ibadan and Accra. Both countries are keenly aware of the need to diversify their economies—to build up new industries rather than depend so much on agriculture, as at present. Both have adopted far-sighted and liberal policies in attracting foreign capital to establish these industries. And both have ambitious plans for producing the electrical energy they will need, from their resources of coal, natural gas, oil and water: Ghana, with her great Volta Dam project, and Nigeria, planning schemes on the Niger and Kaduna rivers, are both preparing to meet the demands of their rising industries with an abundance of power.

### ENGLISH ELECTRIC IN WEST AFRICA

For many years now The English Electric Company has been active in developing power production. As long ago as 1931 a

water turbine generating set was installed at the Kurra Falls power station in Nigeria. In Ghana today, English Electric diesel-generator sets are already on the Volta Dam site, to supply the needs of the workers' town there. There is English Electric generating and distributing plant in industry and public works from Kano airport in Northern Nigeria to Port Harcourt and Lagos in the south, in Ghana and, much further west, in Gambia and Sierra Leone.

Railway equipment is another branch of electrical engineering for which this company is well known—in fact its customers are found in over 35 countries. A delivery of 14 diesel-electric locomotives for Ghana was followed by an order for 12 more; all these are now in service.

English Electric also pioneered the diesel-electricification of the expanding railway system of Nigeria.

And so the fruitful relationship grows. These new and vital countries can depend on the store of technical knowledge, skill and research which lie behind every contract with The English Electric Company, while English Electric gains there further valuable experience in the special requirements of West Africa.

ENGLISH ELECTRIC MOTORS, supplied under a comprehensive contract, driving cotton-processing plant in Kaduna Textile Factory, Nigeria. English Electric has on order equipment for a further textile mill in Nigeria.

ONE OF TWENTY-SIX 750-h.p. diesel-electric locomotives built for Ghana by English Electric. Similar locomotives have been supplied by English Electric to Nigeria.

# Algerian Leaders

Eight men in Tunis and five in French hands make up the FLN's "Provisional Government of the Algerian Republic". Their personalities are now of urgent interest

THE fate of Algeria depends on the talks that will start at Evian on May 20th. Who are the leaders of the rebel FLN who will decide the limits of a compromise on its behalf?

Often supposedly divided into "tough" soldiers and "soft" politicians, they reflect in their different backgrounds the divisions in the nationalist movement before the insurrection broke out in November 1954. There were then two main nationalist parties. One, the Democratic Union of the Algerian Manifesto (UDMA), was led by Ferhat Abbas, now head of the rebels' provisional government.

At 62, the dignified and sad eyed Ferhat Abbas is the elder statesman of the revolution. A pharmacist by profession, he was involved in politics from his student days onward. Once he believed in assimilation to France. He doubted the very existence of an Algerian fatherland. "I have questioned history. I have questioned the living and the dead, I have visited cemeteries; nobody has spoken to me about it." These words of his have often been quoted by his French critics.

Even when he abandoned hope of winning equal rights for Moslems, he still aimed at Algerian self-government in association with France, to be attained peacefully. The French response was electoral fraud and legal obstruction. By 1955, disillusioned, he came to share the rebels' belief that only revolutionary violence would move the French. In 1956 he joined them in Cairo; in 1958 he became head of the first provisional government. His name became a symbol of the rebellion; it echoed through Algeria during last December's Moslem demonstrations. Although the leadership is really collective, he apparently has a casting vote in its councils, often held in his villa in Tunisia; but there is no evidence that he is any less sensitive to the mood of the fighting guerrillas than are his colleagues drawn from their ranks.

His brother-in-law, Ahmed Francis, twelve years younger, has followed closely in his footsteps. A doctor, he has become minister of finance and economic affairs—and thus knows where the FLN's funds (apart from its local levies) come from. He revisited Moscow at the end of March; his

knowledge of the sources of further potential aid may affect his assessment of the situation.

To complete the ex-UDMA trio, a man must be mentioned who does not hold formal ministerial rank. The massive Ahmed Boumendjel has the stuff of which revolutionary heroes are made; the names of Mirabeau and Danton come naturally to mind. Eloquent and witty, he can coin the apt phrase and perceive the historical perspective. Now 52, he was a lawyer who specialised in defending nationalists, and a political figure known in both Paris and Algiers. His younger brother was "made to commit suicide" during interrogation by paratroopers in Algiers. Ahmed headed the delegation to the abortive Melun conference last June. After that, he may have concluded that the light would come from the East—the Far East if need be. If the conflict were internationalised he might be forced to the front of the stage.

## The Ex-Messalists

The second group in the leadership has its origins in the other pre-1954 nationalist movement, that led by Messali Haj, whose dictatorial ways led to a split between him and the central committee of his Movement for the Triumph of Democratic Liberties (MTLD), and who now, as leader of the Algerian National Movement (MNA), is the bitter enemy of the rebel FLN. His MTLD had both a legal and an underground element; it even had the nucleus of a fighting force, its Security Organisation (OS). When it split, the picked men of the OS decided on direct action. Among them were the nine "historical leaders" who gave the signal for the insurrection in November 1954. Three of these are now dead, and five are prisoners in French hands. The only one at large is Belkacem Krim.

Krim, born in 1922, is a small, tough mountain man from Kabylia, with a reputation as a veteran guerrilla. A former corporal in the French army, he lived as an outlaw in Algeria from 1947 until he left it ten years later. In 1954 he took command of *Willaya* 3 (Kabylia). Now deputy prime minister, he has long been in general charge of military operations, and in January 1960 was also

Abbas: elder statesman

Ben Bella: already escaped once

National Council of the Algerian Revolution (CNRA)  
54 members

Regions (*willayas*), each headed by a colonel with political as well as military responsibility.

Messali: now odd man out

entrusted with foreign affairs—involving frequent visits to Cairo, which is still the seat of that ministry in the provisional government. He has now recovered from an operation undergone in March and the expectation has been that he will lead the delegation to Evian next week.

Small, thin, with slightly slanted eyes, Lakhdar Ben Tobbal is almost Asian in appearance and seems a controlled bundle of nerves. Over 20 of his 37 years have been spent in political action. He joined the MTLD while still at school, and went underground in 1950. In 1954 he was among the 22 resistance chiefs who met to approve the future leadership. He was in command of the north Constantine *willaya* in 1957,

Krim: veteran guerrilla

Boumendjel: a witty Danton

Boussouf: ex-colonel at 34

Yazid: misleadingly informal?

when he left to become minister of the interior in the provisional government. In this post, his concern extends to Algerians throughout the Maghreb and in France. He is responsible for the political apparatus as well as for administration and policing. In his MTLD days he learnt the weakness of a movement without contact with the masses. Having worked chiefly among peasants, he is convinced that the masses want land and better living standards as well as the symbols of independence.

Abdelhafid Boussouf, at 34 the youngest of the leaders, comes from the same village near Constantine as Ben Tobbal, and was likewise a follower of Messali Haj in his teens, an OS member, one of the 22. He fought in the Constantine area at first, then commanded the Oran *willaya*. His organising skill and intimate knowledge of the whole country made him a natural choice to be minister of communications. Contact, chiefly by radio, is vital for a scattered resistance movement, and the rebels are very proud of their system. Strong, short sighted, with an enigmatic smile, he seems a man on his guard. In Tunis he retains the mental attitude of the resistance, and diplomacy is to him much like "war by other means."

Said Mohamedi, now a minister of state, is a fourth "ex-colonel"—he succeeded Krim as commander in Kabylia. But the direction of the fighting is done by the triumvirate of Belkacem Krim, Ben Tobbal and Abdelhafid Boussouf.

## The Prisoners

Of the five ministers held by the French, four were captured when the Moroccan aircraft taking them to Tunis in October 1956 was diverted by its French pilot. Best known among them is Ahmed Ben Bella, now in his early 40s, a former warrant officer in the French army with a fine war record, and a national leader of the OS. Condemned to forced labour for life, he escaped from Blida jail in 1952 and reached Cairo, whence he played a key part in staging the insurrection. He is a legendary figure in Algeria.

His companions are all "historical leaders" too. Mohammed Boudiaf was the link between the heads of the insurrection in

tive at many international gatherings since then.

The only Arabic scholar in the government is Abdelhamid Mehri, minister for social and cultural affairs, 35 years old. There is no Arabic university in Algeria, and for the others Arabic is a colloquial mother tongue; but Mehri, though from a poor family, was able to study in Tunisia. His literary polish often comes in useful at international Arab gatherings.

Outside the ministerial ranks, the most brilliant of the younger men in responsible positions is the frail Mohammed Ben Yahia. Not yet 30, once president of the Moslem students of Algeria, a negotiator at Melun, he is now both secretary-general of the

Algeria and their supporters abroad. Mohammed Khider was in charge of the Cairo end, and was helped there by his youthful brother-in-law, Hocine Ait Ahmed, who has a leftist reputation. Rabah Bitat, caught by the French in 1955, was until then in charge of the Algiers region.

Five years behind bars is a long time. The international context of the insurrection has changed since 1956. The question is whether there has been a parallel evolution among the imprisoned leaders, who have been kept informed and have all spent much time in study. It has already been agreed that the Algerian delegation to talks with the French will be able to consult Ben Bella and his companions. Which way will they throw their weight?

## Spokesman and Scholar

Two ministers are neither ex-guerrillas nor ex-Fabians from the UDMA. One is the tall, bespectacled M'hammed Yazid, minister of information, official spokesman, and a familiar figure in the United Nations lobbies. Married to an American, he conducts his briefings in an informal American way; but his easy manner could prove misleading. Born in 1923 into a family that had provided several officers for the French army, he has a long record of nationalist struggle, including a two-year sentence in Algeria and four years in hiding in France. He rallied Cairo in 1954 and has been the rebels' representa-

government and *chef de cabinet* to Ferhat Abbas. Though he never lived in France, he has all the qualities of a Left Bank intellectual. He has views about using the millions uprooted by war in modernising Algeria, and has thought hard about the political implications of an economic deal with France.

The distinction between "tough" soldiers and "soft" politicians has been lost during the years in which former moderates have come to the top of a revolutionary movement, while men reared in guerilla war and underground activity have taken on diplomatic and political responsibilities. Political divisions may reappear with peace; but it was a French illusion that "fighters" and "politicians" were likely to fall out within the leadership in time of war.

The FLN leaders do not seem as yet to know very precisely what sort of society tomorrow's Algeria will be. They tell you of the need for planning and land reform, and speak contemptuously of the reforms carried out by some newly independent states. But they give a general impression of being still uncommitted, "available," much as Castro's *barbudos* probably were in their first hour of triumph. Unlike a communist movement, the Algerian leadership does not have a fixed enough conception of its ultimate aims to determine lightly what concessions it can afford to make in negotiation. But now, at Evian, it will have to decide whether the French price for independence can be paid without betraying the Algerian revolution.

# NOTES OF THE WEEK

## NATO

### In But Not of

NEITHER of the main proposals put to this week's meeting of the Nato foreign ministers in Oslo is as radical as it looks. Mr Dean Rusk's offer, on behalf of the new Administration in Washington, to station five polaris-firing submarines "in the Nato area" is designed to reassure the European members of the alliance who are afraid of being left naked to Russian nuclear blackmail. But the method of reassurance chosen by Mr Rusk is one that entails the minimum possible dilution of the Americans' control over these weapons.

The submarines will apparently sail with the United States Sixth Fleet in the Mediterranean, or with an American naval force linked to Nato on a similarly semi-detached basis. This means that they will have American crews, and be commanded by an American admiral; the lowest level at which un-American fingers will get anywhere near the trigger is presumably the Nato council, which is not designed for quick military decisions. It is reasonable to conclude that these missiles, like the rest of America's nuclear armoury, will not be fired unless President Kennedy says so, and that they will be fired if he does. Thus the submarines do not constitute a "Nato deterrent" in any separate sense. This is a sensible (though perhaps not permanent) solution. The need to give the European allies a sense of security by dispersing the submarines in European waters does not mean that control over them should also be dispersed—unless it becomes much clearer than it is now that the American umbrella is unable to cover Europe.

Clearly the new Administration has not yet made up its mind how long this coverage will last. The trouble is that until it does, the recasting of Nato's military forces, conventional as well as atomic—already several years overdue—will be further delayed. Lord Home's bland assurance on Wednesday that "all the military possibilities are going to be injected into the military review" suggests that 1961 may well be out before a decision is.

Those who want to turn Nato into a supranational entity will also be disappointed by the Oslo meeting's ideas for getting the allies to consult each other more effectively. It is suggested that officials should form a joint policy planning group and small committees on special problems. The obvious comment is that neither device will ensure effective consultation in circumstances where one country wants to act on its own without talking to its allies. The most these committees will do is to diminish the danger of an accidental failure to let

other people know what is going on, and make it slightly more abnormal for policies to be formulated without the rest of the alliance learning about them in advance. But the weakness of the committees is also, in a sense, their strength. There is no suggestion, for instance, that Portugal's representative on the policy planning group can prevent the Americans from voting against Portugal's wishes in a debate on Angola in the United Nations.

## INDOCHINA

### Reluctant Conference

UNTIL the very minute of its opening, the international conference on Laos will have kept participants and public guessing. A baffling development was the assassination in Vientiane on Wednesday night of Major Eckarath Souvannarath, an officer close to one prime minister, Prince Boun Dum, and related to the other, Prince Souvanna Phouma. By Thursday, a number of delegations had arrived in Geneva, but others had not turned up and had given no indication whether they would be there in time for Friday's opening, or at all. Mr Dean Rusk, the American Secretary of State, arriving on Wednesday straight from the Nato Council meeting at Oslo,

Marooned: Vientiane delegation to truce talks at Hin Heup

cautiously remarked that he would take part in the conference "if information from Laos about a cease-fire permits it."

Prince Sihanouk of Cambodia, the man who first proposed the conference but who opted out when he learned of the objections raised by the King of Laos, opted in again. On the Laotian side, Prince Souvanna Phouma's "neutralist" delegates arrived

early, though without their prince, and so did their communist allies, representing the Pathet Lao fighting men. There was no news from Vientiane about the intentions of Prince Boun Oum's government.

Mr Gromyko, an early arrival, was seen to smile on his way to the communist headquarters at the Hotel Metropole, where advance parties of Chinese and Vietnamese delegates had already checked in. From Moscow, Marshal Chen Yi, the Chinese foreign minister, was flying to Geneva on Thursday; so was Lord Home, having stopped in London on his way from Oslo.

That there was to be a conference did not seem, therefore, to be in doubt when *The Economist* went to press. The doubtful points were the number of delegations at the opening session and the identity of the delegates claiming to represent Laos. From Laos itself, the news was that each side was accusing the other of violating the cease-fire and that the reactivated control commission was having difficulty in making contact with the communist forces.

### Mission to Asia

VICE-PRESIDENT LYNDON JOHNSON'S mission to Asia makes sense in the context of reassurance to Asian allies disheartened by the collapse of the pro-western forces in Laos on the eve of the Geneva conference. It would make less sense if it turned out to be a possibly dangerous reaction to the Cuban humiliation. Mr Johnson is to visit south Vietnam, the Philippines, Formosa, Siam, Pakistan and a solitary neutral, India. The most immediately threatened country on his list is south Vietnam, where a few thousand communist guerrillas have gained control of important areas—at any rate, by night—by methods that include terrorism and assassination of government officials.

President Kennedy told the press on May 5th that Mr Johnson would discuss the possible assignment of American armed forces to south Vietnam with President Ngo Dinh Diem. Whether or not American forces are actually sent there, American military aid to that country is to be increased by \$41 million.

It has long been clear that the provision of weapons, on however massive a scale, does not guarantee victory in the kind of war that is being fought in south Vietnam (the Laotian experience should have removed any lingering doubts). American troops might boost Mr Diem's confidence, should it need boosting, but a small force would be ineffectual, and a large force would make sense only if the United States had chosen Vietnam as the best field of battle against communism. Either way, the presence of American troops in Vietnam

## THE ECONOMIST MAY 13, 1961

would be grist to the mill of "anti-imperialists" everywhere.

A pitfall the American vice-president will have to guard against is that of identifying one man, however worthy, with the nation he rules, and perhaps even more of appearing to identify the United States with that man. The new American ambassador to Saigon, Mr Nolting, appeared to avoid it when he arrived there on Monday, by not following the example of an earlier envoy, who made American aid to Vietnam conditional on Mr Diem's remaining in power. As Mr Kennedy has put it, in the final analysis threatened regimes will survive only if they have popular support, and "we cannot do it for them."

## ELECTIONS

### Bogey for the Boroughs

BY the time this issue of *The Economist* is in readers' hands, the results of Thursday's borough council elections in England and Wales will be streaming in. Elections for the smaller urban and rural district councils began on Monday, and have been continuing throughout the week. When these particular triennial council seats were last fought over in 1958 Labour made some 280 net gains compared with 1955 in the boroughs, and some 170 net gains outside the boroughs. So if Labour made compensating losses on the same sort of scale this year—i.e. if in the boroughs it lost about 280 seats net (or approximately one sixth of the 1,600 or so seats that it is defending)—this would still merely be a sign that Labour was back to approximately the same position as it held in 1955, a fortnight before the general election of that year gave the Tories a majority of 60 in the Commons. In the local elections of May of 1960 Labour did much worse than this, and held only about 1,130 borough seats; so only if Labour on Thursday lost between 450 and 500 borough seats would it be doing as badly as it did in that, its most dreadful performance, last May.

In last month's county elections the results were back at approximately the 1955 level, and in parliamentary by-elections since then Labour has done even better. At Warrington three weeks ago the swing from Tory to Labour (admittedly with a new Liberal intervention) was 6 per cent compared with 1959, and at Bristol last week (admittedly in a very peculiar by-election) Mr Benn secured a swing of 13½ per cent. Politics have now reached the stage where it is right to remind people that a maintained swing of 3½ per cent to Labour compared with 1959 would actually make Labour favourites to win any early general election, and that if Labour's net losses in the boroughs have been kept below about 100 (or about one sixteenth of the seats it is defending) that should probably be regarded as a sign that Labour has reached this position of temporary favouritism. In the first three days of urban district council elections, however, Labour still

## NOTES OF THE WEEK

seemed to be doing rather worse than this; it appears to have lost about one-tenth of the seats it has been defending, and some argument can be advanced that on Monday and Tuesday it did rather worse than it did in the counties last month. (Some people think that publicity about its coming home policy statement may already have lost it votes.)

One of the oddities of this year is that even comparatively small Labour losses could lose Labour control of several big city councils. This is because two-thirds of the present councils were elected in the Tories' relatively good years of 1959 and 1960; and it is only because Labour did so well in 1958 (the year of the election of the councillors who are now re-contesting their seats) that Labour has so far retained control of Birmingham, Liverpool, Leicester, Carlisle, Nottingham and others. There is the additional point that the winning side this year can add to its majority by the election of new aldermen, as Labour did in 1958. A short while ago it seemed that Labour must fear very extensive losses among the 50 (out of 83) county boroughs and 70 (out of 177) large non-county boroughs that it controls. Now it looks as if many of these losses may be contained, but that—on the sketchy evidence of Monday's and Tuesday's urban district results—it may still be thrown out of power in some of its biggest municipal citadels.

## SPIES AND THE PRESS

### Mum's the Word

THE essence of secret service is to be secret—from everybody, friend or foe. The cardinal fault in espionage or counter-espionage is to be found out: whether because an American spy-plate is shot down over Russia, or because a British spy turns out to be a Soviet spy and has to be brought to trial. Blame belongs to the controllers of the spies for these things ever happening, and so letting in the light of publicity on these distasteful but no doubt indispensable activities. That is the first answer to any plea by governments that the press should keep these secrets for them: they should keep them themselves, even from the press. When the security service (which sifts all those in positions of secrecy or special trust) brings a Lonsdale or a Blake to book, it should not pat itself on the back for smart detection but kick itself, or be kicked, very hard for having to lift the veil at home, as well as for having allowed the gaff to be perilously blown abroad. Under pressure, the Prime Minister has set up a new inquiry into security procedures by "independent persons," who will report to him. Whether such a report could be made public must be very doubtful. Certainly, the secret service proper can really only co-exist satisfactorily with a democratic system by, to all appearance, not existing at all.

But there are quite other sorts of "secret" affecting the national security

which call for different treatment. These are the pieces of apparently ordinary information which come the way of journalists, but which the authorities may have grounds for wanting to keep from outside eyes and ears. Here the right principle is certainly not to keep the press in the dark. It is just the opposite; it is to take the press into the authorities' confidence, to say what it would be unsafe to publish, and if possible, why.

The difficulty is the natural tendency of officials, when in doubt, always to say "mum's the word," even though the information may already be quite widely known—or be necessary, without really imperilling national security, for the understanding (and criticism) of national policy. The way used in Britain of trying to meet this difficulty is for representatives of the press to sit with officials on the committee which passes on requests not to publish: the decision whether to publish or not still rests with editors.

### Democracy's Duty

GOOD American journalists have often, in the name of democratic discussion and decision, criticised British journalists for being much too co-operative in official secrecy about defence matters: for not digging more obstinately, and more skilfully, into the real facts of defence arrangements. Recently, however, the new American President has retorted by reproaching American editors, implicitly, for giving away the plans for the Cuban landings. The riposte of responsible American journalists is in three tiers: that the intelligence agency (which in the United States has also an operational function, so that it can bamboozle itself with its own "intelligence") fed false facts to the press; that the quite overt (and just as misleading) views and doings of the Cuban exiles were well known anyhow to every journalist; and that the real charge against the press was not that it said too much, but that it said too little, too uncritically.

There is nothing in these arguments to justify in any free country anything that could rightly be called censorship. There are two equal and opposite dangers in these

## Statistical Advisory Service

Modern statistical techniques are a very useful aid to management efficiency. A new E.U. service is available to help business concerns and other organisations with advice on using the "statistical approach" in the understanding and solution of their problems. Further details from:

The Economist Intelligence Unit Limited,  
22, Ryder Street, London, S.W.1.  
WHitehall 0353 Ext. 33

affairs. One is to stifle discussion about defence and security; the other is to imperil national security by printing too much. In arriving at a right conclusion the responsibility of governments is even larger than the very real responsibility of the press.

## EUROPE

### Breathing Space

WHILE Mr Macmillan has continued to hedge on the subject of the common market, the Six have given him a helpful respite. On May 5th their foreign ministers decided to postpone the meeting of heads of government, planned for May 19th, which was to take the next step towards political association. The meeting is put off till July, which gives the British government two months to make its intentions clearer, if it wants to be considered in the new plans.

The postponement seems to have been proposed by the French, but more from resignation than from any change of heart about the way they would like to see Europe organised. The French felt that there was no chance of agreement just now if the heads of government did meet. Evidently the signs of movement in London have stiffened the resistance of their partners to any hasty move without the British. In Bonn the idea even circulated at one time that Mr Macmillan might be invited to take part in the May 19th meeting. That idea clearly had no chance of success while the British intentions remained obscure. All the same, the delay by the Six is a sign of the serious interest that their governments are taking in Mr Macmillan's struggle with his soul.

Meanwhile the communities are not marking time in other fields. While Professor Hallstein is visiting the United States, the European Commission is preparing plans for a second phase in the common market's acceleration plan—the 20 per cent tariff cut due at the end of the year, which will bring the total reduction in the members' tariffs against one another to 50 per cent. This week the assembly of the Six debated the community's association with African countries, which is due for re-negotiation by the end of 1962. A joint meeting at Strasbourg with African parliamentarians is to carry the debate further early in June.

## GERMANY

### Two-Edged Weapon

WHEN the trade agreement between east and west Germany was renewed at the end of December on relatively amicable terms, amid a general easing of the tension over Berlin, some people in Bonn put this to the credit of the west Germans' threat of a trade boycott. The east Germans, it is true, hold exactly the opposite view—that it was Bonn that

## NOTES OF THE WEEK

climbed down. Perhaps both sides, in fact, had second thoughts when they came face to face with the likelihood of a breakdown of trade.

However, the long-term consequences of the west German threat, which are just beginning to emerge, may prove anything but helpful. Late in April Herr Leuschner, head of the east German planning department, returned from talks in Moscow with a promise of bigger Russian supplies of raw materials and other goods, to enable the east German economy to become independent of west German deliveries. Bonn's threat of a boycott, while it worried the east Germans at the time, thus stung them into a decision to work towards complete independence of west German supplies, so that the weapon could not be used again. The rash attempt to use trade as a weapon in the Berlin argument looks like severing one of the few remaining bonds between the two German states.

The consequences are far-reaching. Although east Germany already conducts three quarters of its foreign trade with the Soviet block, 11 per cent of its imports still come from western Germany, and these include some key supplies—special steels and machinery for instance. A decision has also been taken to adapt east German engineering standards—hitherto similar to west German ones—to the Russian model. This process will inevitably take a long time, but once complete it will be even more difficult to reverse than the flow of trade.

The search for independence of west German supplies is one of the factors that have encouraged the east Germans to seek more trade with Britain. If the east Germans are looking for substitutes for their west German suppliers, it is all to the good if they find them in the West as well as in the Soviet block. But one current of feeling encountered from time to time amongst British exporters to eastern Germany—a certain *Schadenfreude* at the west Germans' plight—is wrong. Trade between Britain and east Germany is a minor commercial and political asset; trade between east and west Germany is an important factor in the peace of Europe.

## CONGO

### Prisoner's Base

MR TSHOMBE's captive person is both an asset and an embarrassment to the Leopoldville politicians. To dispose of him as he and they disposed of Mr Lumumba would merely mean killing a goose which may yet lay them some fine copper-bottomed eggs. Katanga's wealth must suggest mouth-watering possibilities in terms of what used to be crudely called ransom; today, it would doubtless rate as a fiscal agreement, under which part of the copper province's rich revenues would again flow to Leopoldville, as they did under Belgian rule. But the longer Mr

## THE ECONOMIST MAY 13, 1961

Tshombe is held at Coquilhatville, the greater the possibility that somebody in Katanga may decide that, as things have not fallen to pieces there in his absence, there is no reason to bargain for his return.

Mr Hammarskjöld has very properly warned his captors of the serious implications of their action. The Secretary-General did not wait to be nudged by a British Government which has itself been nudged by a "Tshombe lobby" including Rhodesian backwoods peers and other interested parties. The UN's representatives have never been in doubt about their duty to oppose political kidnapping. It is too often forgotten that they protected Mr Lumumba from it, until he rashly forsook their protection and fell into his enemies' hands. But they have no better means of rescuing Mr Tshombe now than they had of crushing him at Mr Lumumba's behest last year.

The prudent Mr Adoula, minister of the interior in Mr Ileo's provisional government, has already qualified his colleagues' loud talk of trying Mr Tshombe for crimes committed long before they welcomed him to a place of honour at Coquilhatville. It was hard to take talk of a trial seriously; the Congo has no judges. But there is at least some possibility of constructive progress as a result of this chapter of accidents. Breaking with Mr Tshombe, President Kasavubu and his ministers have begun to try to make some sense out of their crazy relations with the UN; alarmed by his fate, the remaining Katanga leaders have come halfway down off their high horse in the same respect. Obviously unintended, ethically no doubt deplorable, Mr Tshombe's detention may yet prove a timely catalyst.

## PARLIAMENT

### Distinguished Stranger

ON Monday a lobby packed tighter than anyone can remember with peers, MPs, and journalists saw Mr Wedgwood Benn turned back from the doors of the Commons debating chamber by a polite but adamant doorkeeper, who added that the Speaker had given instructions that the exclusion was to be made effective if necessary by physical force. Fortunately his faithfulness to these instructions was never put to the test, and Mr Benn withdrew resignedly to the distinguished strangers gallery where he sat patiently for the next seven hours closely following the debate. It was a debate marked by Mr Gaitskill's sprightly pleading, Mr Brown's ponderous passion, and considerable Tory confusion. But—apart from seven brave Tories who disobeyed Mr Butler's whip—the divisions on the linked questions whether Mr Benn should be heard and whether he should be allowed to take his seat were on strictly party lines.

It is now clear that Mr Butler made a bad miscalculation when he gave his casting

### LESSON 2

## GUINNESS

FLORA and FAUNA

TREES play an important part in British sport, the most popular being the Oaks, the Willow and the Ashes. Most British trees are insidious, like the Spreading Chestnut Tree, and when their leaves get browned off, especially round the Mulberry Bush, they all fall down. The British are very fond of Flora of the genus *Guinnessia Goodforia*. (See illustration).

G.E. 3499.D

For strength the Biceps

THE BRITISH are very fond of Animals. Animals, too, are very fond of the British. That is why there are very few wild animals in this country. The Britons, however, get very wild sometimes when they cannot get a Guinness because the Bear or the Lion is closed.

THE BRITISH do not have Insects the way some people have insects. They have Moths, which live in holes, and Butterflies, which are collected. The most popular of these are the Red General (*omnibus londinium*), the Bridewell Beauty, and the Antigua Puce.

vote on the select committee against bringing in a special Bill to aid Mr Benn; and that he has not really retrieved the brick he then dropped by his subsequent strategy to commit the Labour party to participate in a general reform of the Upper House. The argument that an individual reform is acceptable only as part of a more radical revolution is a strange one to come from a Conservative minister, and it just has not been accepted by public opinion. The Government is in danger of a head-on clash with popular feeling which would make the future of the House of Lords a subject of continuing debate not only at Bristol but in every constituency in the country. This would be an extraordinary situation for a Tory government to have created in the cause of radical symmetry.

Mr Benn's case has now passed from the House to the courts, and this has given the Government a breathing space of which it would be wise to take advantage. It is not too late for Mr Butler to introduce a short Bill to allow any peer to become eligible for a seat in the Commons by executing an irrevocable declaration of intention not to take his seat in the Lords. If the Government did this, it might now actually find it easier—it certainly would not find it more difficult—to secure Labour co-operation in further discussions about reform of the Upper House.

## LAW

### Who Will Join the Ladies?

THE decision of the House of Lords in the case of the "Ladies' Directory" has disturbing implications. No sympathy need be wasted on the convicted Mr Shaw—either on the pseudo-liberal argument that this enterprising scoundrel provided a dubious public service (by letting customers know where prostitutes can be found now that the Street Offences Act has driven them indoors) or on the irrelevant historical ground that there is a long if unrespectable tradition behind his publication. (In the eighteenth century a less puritanical community allowed an earlier edition of the

"Ladies' Directory" to circulate without restriction and the "List of Covent Garden Ladies," which enjoyed a great vogue in Dr Johnson's time, was used freely and openly by whores for advertisement.) But the fact remains that the House of Lords has settled the case by making a sweeping contention that a conspiracy to corrupt public morals is a crime under English law. In a powerful dissenting opinion Lord Reid denied that any such offence existed and underlined the dangers created by this return to the law of three hundred years ago.

An essential principle of English criminal law is that crimes should be closely and narrowly defined. A conspiracy to corrupt public morals is so loosely phrased that it virtually gives the judges *carte blanche* to punish whatever at any particular time happens to arouse their moral indignation. There are certainly precedents for the judicial creation of new crimes, but they are not happy ones. In a famous case in the nineteenth century a man was sent to prison for pointing an ancient pistol at Queen Victoria, who was riding by at high speed and quite out of range. The offence of which he was guilty was never specified. Again in 1933 (*R v Manley*) a woman who had caused trouble to the police by making false allegations concerning a robbery which had never taken place was held guilty of a "public mischief," a new crime which has not found subsequent jurisprudential favour.

Another result of the Lords decision is that it means that the Obscene Publications Act of 1959—with its insistence on judging books as a whole, and its defence of publication in the public good, and its use of experts to assist the court—can now be by-passed. The Act declares that obscene publications shall not be prosecuted at common law, but the House of Lords has now held that this does not exclude prosecution for an immoral conspiracy. It is to be hoped—although judging by past experience this could be an aspiration erected on somewhat shaky foundations—that the Director of Public Prosecutions will not take advantage of this new situation created by the House of Lords in its judicial capacity to escape from the will of Parlia-

ment as expressed in the Obscene Publications Act. But the right to bring a criminal prosecution remains a private one, and so any old lady or public morality zealot can now presumably set the whole machinery of the law in motion against the author, publisher and bookseller of any book they find shocking, alleging that between them they have been guilty of "a conspiracy to corrupt public morals."

## PERSIA

### Diseases Desperate

ACCUMULATED tensions in Persia have driven the Shah to act. On May 5th he dismissed his prime minister, Mr Sharif Emami, and appointed Dr Ali Amini in his place. On Tuesday he dissolved both houses of parliament and spoke of new elections under a revised electoral law. During the interval, to which no time limit has been set, the country will presumably be ruled by decree. Meetings are banned in Teheran, and the government has reminded the public of the terms of imprisonment that await anybody interrupting the orderly life of the city.

The latest reformer: Dr Amini

The dismissed government had a short, unhappy life. Two shots were made at elections to the Majlis, or lower house. The first elections, in August, were so flagrantly dishonest and so loudly criticised that a second attempt was made early this year; this time there was less criticism but, apparently, not much less cheating. The government, discredited before it began, tried to enforce a mild austerity programme. In its last weeks it was harassed by strikes, first of university students and then of teachers. When a teacher was killed during a clash with the police on May 2nd, the rumblings against the government became dangerous, and the Shah, to keep a step ahead of his critics, has acted with the cool initiative that he has shown in previous crises.

Dr Amini, the new prime minister, has been such a fierce critic of the way things were being run that there was not much

question of his being able to work with the former members of the Majlis. An ambitious and experienced politician, he has held a number of government posts, including the economics portfolio under Dr Mossadegh. As one of the chief architects of the agreement with the consortium of oil companies in 1954, he proved himself a tough negotiator. In a speech made two days after his appointment, the prime minister drew a dramatic picture of Persia's economic troubles and promised that given "time, calm and co-operation" he would put things right.

Whether or not Dr Amini's reforming zeal will survive his rise to the heights, it is bleakly improbable that he will be given the preconditions that he asks for. The Shah, in his efforts to bring his country into the modern world, has to depend for support on people who fundamentally want to keep things the way they are. Among those Persians who share his vision of genuine social and economic reform, monarchists are relatively few.

## TURKEY

### Sitting on Dissenters

SOME eighty persons were arrested on Tuesday in Istanbul, allegedly for having tried to overthrow the present Turkish government and bring the Democratic party back to power. Nearly a hundred further arrests were later reported from other Turkish cities. No names have been published, but those arrested are believed to include members of the Justice party as well as some ex-Democrats. These are by no means the first arrests of opponents of General Gürsel's regime under the martial law at present in force in Turkey. Nor is it the first time that the Justice party, by its more or less blatant appeals to former supporters of Mr Menderes, has fallen foul of the authorities. But this week's arrests appear to be the most severe step yet taken by General Gürsel against those who refuse to accept the revolution of a year ago. He evidently feels that he has no alternative but to be tough with them.

The soldiers who now rule Turkey are not the only ones to be perplexed by the problem of restoring democratic rule without allowing the supporters of the Menderes regime to get back to power. A group of Istanbul newspapers recently suggested that the political parties should get together and agree on the principles of Turkey's political future; in particular, the politicians should accept the principles of Ataturk's reforms, and reject the reactionary policies of the Democrats. If carried out, this proposal (which General Gürsel has approved) would not guard against all dangers, but it could be a sizeable contribution towards the construction of solid foundations for Turkish democracy. Those who are prepared to play the party political game fairly have everything to gain from implementing it.

## GOVERNMENT SPENDING

### Publish Plowden Please

LAST week MPs on the Select Committee on Estimates published (and more or less approved) a frankly infuriating Treasury memorandum about a suggested new form of the annual estimates; the Treasury said that this memorandum was in accordance with certain recommendations of the Plowden committee on controlling government spending—recommendations that only the Treasury has so far been allowed to see. The memorandum fore-shadows only the change which is most simple, most obvious and most convenient for the Treasury: it rightly proposes that the annual estimates should be simplified so that instead of the main civil estimates being divided under some 1,700 subheads in a volume of over 1,200 pages (which nobody manages to read) they might be compressed under less than 1,000 subheads in a volume perhaps only a third as large. Even at this level there are several detailed points about simplification which outside consumers of the estimates might like to make.

But the real objections to this memorandum must come from those who want to see discussion of much more radical reforms. So long as the Plowden report is kept secret, that discussion is going to be hampered. For example, most economists would like to investigate the possibility of a switch towards "objective" accounting in the estimates, so that (as Sir Godfrey Nicholson, the most lively MP on the Select Committee, put it), it would be possible to compare the running costs of, say, a military hospital with a non-military one; the Treasury representative agreed that interesting costing operations of that sort were going on, but "I think at the moment they are for internal consumption." Again, many people feel that more government spending might better be assessed by a commercial accounting rather than a cash accounting system; but the Treasury memorandum sticks to the latter, and says with demarcationist primness that "it is the Treasury's task to identify those areas in which the cash accounting system is inadequate as a tool of

management." But it isn't; it is Parliament's task as well.

The memorandum admits that "the Plowden committee asked the Treasury whether there was any tendency to encourage over-estimating and a rush to spend uneconomically in the last weeks of the financial year"; but says in effect (or so it seems) that, after due consideration, the departments all agreed to tell the Plowden committee to go to hell. Perhaps the biggest question of all is whether, in conjunction with the new longer-term budget estimates which Mr Selwyn Lloyd wants to present, Britain might advance to what Mrs Ursula Hicks has called the "cost-benefit approach" of assessing Government spending—i.e. the scientific assessment of "the benefits of the proposed public expenditure set against the costs of the taxes, or loans, which would finance it." There is nothing about this sort of approach in the Treasury memorandum, and so long as the Plowden report is kept secret outside discussion of it is going to be impeded. Is it really impossible to raise a large scale, backbench Tory revolt, with the slogan "Publish Plowden Please"?

## AFRICAN EDUCATION

### Teaching the Teachers

WHAT the Ashby report did to provide a basis for educational planning in Nigeria last year still needs to be done in most of the independent and dependent countries of Africa. The Unesco conference of 40 African states and territories which opens at Addis Ababa on Monday is intended to draw up an inventory of African educational needs that will then be presented to the European powers with responsibilities and experience in this field, principally the British and French: the Americans and Russians are also sending observers. This very necessary exercise could prove to be of greater moment than anything else that Unesco has yet turned its hand to. The task for non-African countries is massive.

The Ashby report estimated that Nigeria

## PERSONAL INCOME

Last year, the British people had 7 per cent more money, before taxation, than in 1959. Wages and salaries, which account for about two-thirds of the total, went up slightly more than this but, proportionately, "property income" went up the most, by over 12 per cent. Professional earnings also rose sharply but the chart shows that, over the last five years, income from self-employment has lagged behind other kinds of income.

## CLASSICAL OR CUBIST?

Gallery-going is increasing; in particular it is the famous controversial artists that now draw the crowds. Even with the advantage of the Royal Academy's central position, would the 1930 Italian Art Exhibition be quite so successful today? Exhibitions become "fashionable," particularly if publicised on television, and a well-known name always arouses interest, even if the quality of the collection might disappoint the connoisseur.

# THERE'S A WORLD OF EXPERIENCE IN EVERYTHING MARCONI'S DO

**The Post and Telegraph Authorities of more than 80 countries  
rely on Marconi telecommunications equipment**

**SURVEYS** ★ Marconi's telecommunications survey teams are at work in many parts of the world. Marconi's is the only company maintaining a permanent research group working entirely on wave propagation.

**INSTALLATION** ★ Marconi's installation teams undertake complete responsibility for system installation, including erection of buildings and civil engineering works as well as the installation of the telecommunications equipment and auxiliary plant.

**PLANNING** ★ Marconi's vast experience is reflected in the quality of its system planning organisation which is constantly employed on planning major telecommunications systems for many parts of the world.

**MAINTENANCE** ★ Marconi's provide a complete system maintenance service and undertake the training of operating and maintenance staff, either locally or in England. Marconi's will also establish and manage local training schools for Post and Telegraph Authorities.

## MARCONI

COMPLETE COMMUNICATIONS SYSTEMS SURVEYED, PLANNED, INSTALLED, MAINTAINED

H2

would require 1,000 teachers from overseas each year between 1962 and 1966 to supervise the local teacher-training programme; it also wanted 7,000 foreign teachers (including Moslems for the Northern Region) to man actual classrooms in the next decade. Since the Nigerians are now looking beyond the Ashby target for a faster rate of development, these figures may have to be regarded as minima. The needs elsewhere are, if anything, even greater, if any impression is to be made on Africa's 80-85 per cent illiteracy rate. How can foreign aid be stepped up?

Britain now has 11,500 African students (over half from Nigeria) receiving full-time higher education in this country: there are also 200 African student teachers receiving grants under the bursary scheme set up after the Commonwealth education conference in 1959. These numbers may rise further as British higher educational facilities expand, but the gap, for African purposes, will still be a yawning one. Plans to send more British teachers to Africa, in addition to those recruited by the Colonial Office, the British Council and the missionary societies, are still in their infancy; but it is doubtful whether more than two or three hundred full-time British teachers can be found.

The most promising approach is the release of temporary British teachers during the summer vacation to run the refresher courses in which the lower grades of African teachers can be brought up to standard. This year applications greatly exceeded the 55 summer posts available in Nigeria's pilot scheme. The future supply might be increased substantially by revising the British school calendar to ensure that enough of the younger and adaptable British teachers, who could profit from their own experience of Africa, were known to be available for at least four months of the year.

### FINLAND

#### The Third Mr K

PRESIDENT KEKKONEN of Finland, who has been visiting Britain this week, is often treated in the West as slightly suspect, on the ground, first, that he is excessively effusive towards the Russians and, second, that he plays party politics with the presidency. Neither charge is wholly just. The Finnish presidency is not an office for a figurehead above the party struggle; it carries wide powers in the conduct of foreign policy and the formation of governments. Since Mr Kekkonen became president in 1956, Finnish politics have been complicated by a split within the Social Democrats—the chief rival, among the democratic groups, of Mr Kekkonen's Agrarian party; one faction of Social Democrats, being vehemently anti-communist, has briskly criticised the president's handling of foreign affairs. Thus the political controversy surrounding Mr Kekkonen cannot be laid solely at his door.

Mr Kekkonen's foreign policy is, in fact,

a continuation of "the Paasikivi line" laid down by his predecessor. This is based on the hardly challengeable maxim that Finland, to survive, must avoid giving offence to Russia; to maximise its liberty, it must exploit the amused and slightly sentimental affection the Russians feel for their tough little neighbour (rather like the feeling, *mutatis mutandis*, the English have for the Irish). When Mr Kekkonen is accused of carrying deference to extremes—as he was last year when he went to Moscow to ask, apparently, if Finland could join the European Free Trade Association—he can reply that his deference is justified by results. Finland has been allowed to attach itself to

Mr Kekkonen: Treated as suspect

Efta; and over the last four years the Russians have let the Finns gradually reduce the proportion of their trade they conduct with the communist block.

This has now produced a new problem for Mr Kekkonen. As the proportion of Finnish exports going to the communist countries has slowly declined, that going to Britain has slowly increased. The Finns now face the possibility that, if Britain joins the common market, the buyer of a quarter of their exports will vanish behind the common market's tariff wall. The best hope would then be that the Russians, having permitted Finland to associate itself with Efta, might decide to go the whole hog and let the Finns link themselves with the common market as well. If that were to happen, Mr Kekkonen's policy of smiling eastward while edging westward would have been triumphantly vindicated.

### DENMARK

#### Saving the Bacon

BRITISH farmers, who have had their troubles in selling pigs and butter recently, can hardly be expected to regret the Danish farmers' boycott, which stopped all deliveries of food to both home and foreign markets for two days this week. Irked by wage increases for farm labourers and by a strike of transport workers, the Danish farmers were using this novel form of pressure to demand an increase in incomes of some £28 million a year from the government. The boycott has now ended,

but with bacon stocks low and Whitsuntide coming the London market began to turn, for a while, to British producers for more supplies. The paragon of European farming nations, so often held up as an example to British farmers, has been shown to have its troubles after all.

The troubles go deep. Since the beginning of the century skill in breeding and effective co-operation in marketing, distribution and farming itself have placed Denmark in the front rank of agricultural exporters. But protectionism in other countries has left little room for expansion in recent years. Farm exports and farm incomes alike have risen only sluggishly in the past eight years. This time the government has found a way to conciliate the farmers by cutting taxes and granting subsidies. But it cannot satisfy their demands for higher incomes indefinitely, so long as Denmark remains an isolated economy, struggling to export food over high protective walls.

It is easy to see why the Danish government has been doing everything it can to encourage Britain to join the common market, so that it can do the same itself. Mr Krag, the Danish foreign minister, was in Paris in April paving the way for this likely step; and he has been pressing the advantages of joining, both for Britain and Denmark, in Oslo and London this week. Because Britain is Denmark's largest customer the Danes still feel that they cannot join without Britain. But an enlarged common market, providing a substantial measure of protection to all farmers, while allowing free competition within that framework, would exactly suit the Danish book.

### TUNISIA

#### The Carthaginian

ARRIVING from Ireland, Canada, and the United States, President Bourguiba will have had his fill of official declarations of goodwill and amity; but he will have more to swallow when he reaches London on Tuesday. Relations between Britain and Tunisia are good, and were lately reburnished by the Queen Mother's visit. Difficulties are liable to beset this friendship so long as the French position in North Africa is unsettled, as was shown in 1958 by the sequel to the French bombing of the Tunisian village of Sakiet. British and American attempts to mediate then helped to touch off the explosion in Algiers which brought the Fourth Republic down.

Mr Bourguiba's patient efforts to repair his relations with France were rewarded at the end of February, when he spent a day at Rambouillet with President de Gaulle. Since then he has been through the anxious time of the generals' revolt in Algiers, which revived for a moment the fear that the French Army might re-enter Tunisia. But this has passed, and if Algerian peace talks are at last about to begin, a share of the credit goes to Mr Bourguiba.

## HOME REPORT

HOME REPORT is a new section of the paper, in which members of the editorial staff and local correspondents will report on life and happenings in and around Britain.

## Swindon Leaves the Rails

FROM OUR SPECIAL CORRESPONDENT

SWINDON is near nowhere in particular, and this is why what is still a Wiltshire market town happens also to be in the middle of its second industrial boom in a century. A hundred years ago the Great Western railway set up their workshops there, half-way between London and South Wales: ten years ago the civic authorities decided to steer the community away from its dependence on this one industry. Rail and road communications are exceptionally good; there is plenty of land for building, with no danger of spreading out to join some nearby conurbation. All that was lacking was a supply of labour, and London's need to get rid of some of its bulging population provided the opportunity. Swindon has grown from 70,000 to 86,000 people in ten years: in 1950 there were 12,000 men in the railway works and 7,500 in other industries; now there are 10,000 in the railway works and 14,000 outside. Flashing new factories dominate the town and housing estates spread across the fields outside. When a new pedestrian shopping centre starts up later this year Swindon will be abreast of all the current fashions in town planning.

Until the early 1950s Swindon boasted the highest proportion of owner-occupied houses in the country, but the rush of new council housing has changed all that. The new Swindonians are almost all youngish couples with families, who have abandoned the slums, the cinemas and the family circle in London to give their children the chance of growing up in healthier surroundings. One of their grumbles is that television reception is bad in Swindon: but soon it will be distributed by wire, and the picture of welfare state contentment will lose its last traces of wobble.

But 4,000 of the new employees work in the motor industry, which has brought its typical problems along with it. The Pressed Steel Company, at its Swindon plant, supplies car bodies and panels to several manufacturers, as well as making machine tools for other buyers and for export. In 1958 there was a strike at the plant when the men claimed parity of wages with workers in Pressed Steel's parent plant thirty miles away at Cowley, Oxford. It ended when the men's trade unions repudiated this claim (the present custom is for firms to insist that the unions make such an agreement before a new plant is set up). Last month, in defiance of the official union representatives, and in breach of this agreement, the skilled men at the factory struck in an attempt to secure a pay rise of 9d. an hour, which would bring them up to the level of the Cowley plant.

These 1,200 skilled men had been working full-time throughout the recession in the car industry, on export orders and on tooling up factories for future production. About half of them are former employees of the railway workshops, which have cut down their labour force since British Railways' conversion to diesel or electric traction: most of these own their own houses and are earning some £5 a week more at Pressed Steel than they ever did before. Many of the others come from outside London, since the capital exports very few qualified workmen: they have probably never earned so much either. The 1,600 semi-skilled men are almost all from London; heavily committed to hire purchase for furnishing their new council houses, they also suffered from short-time working during the winter. Unwilling to stand the hardship of a strike, they have now almost all returned to work.

After three weeks, Pressed Steel dismissed the strikers and advertised in the local paper for skilled workers: new employees must undertake to observe the agreement between management and unions—and it was understood that any striker reapplying for a job would lose his seniority, and thus have to accept a pay cut. On Thursday most of the strikers voted to ask their unions to negotiate a return to work, provided that the company reinstated all those sacked and gave them the rise of 3d. an hour which they had previously spurned.

BOTH sides were determined that they were fighting on a question of principle. The men, in their strike headquarters decorated with a pin-up of a plump Russian girl voting with a smile, said they were resisting attempts to undermine the wage structure of the car industry by setting up cut-price plants outside the areas where the unions are all-powerful. The former railway workers would explain that they had been used to a job where "you are treated like a man, not mucked about like at Pressed Steel": which probably meant that, in contrast to the railway yards, the higher wages at Pressed Steel are earned for hard work closely scrutinised by work-study experts.

The firmness of Pressed Steel had equally cogent motives. As a supplier to car firms everywhere, and as the owner of a new plant being built in Scotland, the company felt it must hold the line against the idea that new plants should necessarily cripple their chances of being competitive by paying wages on a scale divorced from the realities of the local demand for labour. The case of Swindon is certainly an exceptional one in the national picture of redistribution of industry: far from being a depressed area, there has been no substantial unemployment in the town for twenty years, and the present rate is a minimal 0.9 per cent. Some Swindon people even travel to work at Cowley—and understandably those who stay at home resent getting less money for the same job. But, if the company had lost the gamble it took in threatening to sack all its skilled men in a town where there is literally no reserve of labour, it might have been a death-blow to the Government's hopes of persuading firms to set up their new factories in areas where there really is unemployment.

## The pretty patterns of distribution

This canvas is non-representational. And is not for sale. Why did we paint it? Because it symbolises world-wide distribution, and that's one of the things we're very good at.

Being international, we try to serve motor-vehicle users all over the world. To do this, we must maintain an unbroken chain of oil and petrol points. Not just at the crossroads where the easy sales ring up. But everywhere—in oases, jungle

clearings, on mountain slopes, where one man with a few drums of fuel can keep the village lorry or local bus rolling for a year.

To many people fighting off nature in the rawer parts of the world, the motor vehicle is the only means of communication. For them, being within easy tankful of a petrol point is half the battle of progress. We can best help them by covering every corner of our canvas.

YOU CAN BE SURE OF

Some months ago we were very proud to announce the completion of our new '45' Mill, capable of making ERW precision tubes up to 5½' outside diameter. Now these larger 'Tru-Wel' tubes are being used in boilers, textile and printing machinery, and many other places where the highest standard of precision and finish is required. If you have a job for a big Electric Resistance Welded tube, have a word with Tube Products.

**TUBE PRODUCTS MAKE HISTORY TOO** We were the first to make ERW tubing in Europe; first to perfect ERW boiler tubing in the UK; first to develop an ERW tube with resistance welded helical fin; and first to produce ERW steel tubes up to 5½' outside diameter in Europe. Today, TRU-WEL ERW tubes are used in nuclear heat exchangers, boilers, transformers and other electrical equipment, motor cars and heavy transport, bicycles, furniture, dairy equipment, hospital equipment—and hundreds of other things.

## The Old School

FROM OUR SPECIAL CORRESPONDENT

OVER 5,000 Glasgow teachers, the bulk of them belonging to the Educational Institute of Scotland, duly came out on a week's strike on Monday, displaying a solidarity that even reduced classes at the famous and snootier fee-paying schools in the city, including the High School, Hutchesons' and Hillhead. In all, 50,000 disappointed pupils were provided for by the remaining staff and 130,000 had their wildest expectations fulfilled. Whether the teachers who called for the resignation of the Secretary of State for Scotland at a mass meeting in the Kelvin Hall on the same day have much hope of that particular expectation remains to be seen. The demand was backed up by three Labour MPs and the Liberal champion at the Paisley by-election, Mr John Bannerman, from the platform. Mr Maclay, who is by no means the "plastic mac" of Mr Bannerman's description, reserved his answer for the Commons debate on Thursday.

The Glasgow teachers received sporadic support in the neighbouring counties of Lanarkshire and Renfrewshire, chiefly activated by the one-day strike called on Monday by the local branches of the Scottish Schoolmasters' Association, who do not always see eye to eye with the militant ladies of the EIS. They also had the unsolicited assistance of a body calling itself the Associative Pupils' Union (the name suggests at least a minimum secondary education) which was caught distributing handbills outside Allen Glen's School. From Edinburgh the previous Saturday there had come rumbles of a national strike programme drawn up by a special delegate meeting of the EIS. The EIS is determined to have the Secretary of State accept the salary award reached in the national joint council and do away with the threat of "dilution" (the employment of non-graduate male teachers) altogether. Its plans include staggered strikes, withdrawal from the school meals service and refusal to correct papers for the Scottish Certificate of Education.

To the professional, business and genteel Glasgow of Kelvinside and Pollokshields the strike has confirmed its worst suspicions of the teachers' claims to status. Conversation insists on the teachers' Labour sympathies and on the freely expressed accounts of political promotion in the profession engineered from the City Chambers in George Square. (The Glasgow education authority is sympathetic to the strike.) Among older teachers, many of them drawn from this rigidly stratified middle class, the idea of striking would have been insupportable even two or three years ago: often enough, they have come out with hesitation and regrets. The younger men and women are tougher, more strident in their claims, and more conscious, it may be, of the difficulties of keeping up with neighbouring families on the new estates.

Even so, they are plainly unused to mili-

A Plastic Mac?

tancy (the originator of the strike, Mr Arthur Houston, who teaches at a Roman Catholic school in the city, has only been in the profession a short time after fifteen years in the navy) and the danger that confronts them is that, having made the break, they may eventually be unable or unwilling to grasp at a compromise, however favourable. What unites them is not the salary claim (honours graduates admit privately that Mr Maclay's offer to them on that score is unexpectedly good) but the deeper feeling that their demonstration, any demonstration, will somehow help to put Scottish education as a whole back on the pedestal that it once occupied throughout Europe. "Perhaps," said one woman teacher within a year of retirement, "I am really striking for—and against—intangibles." "If we lose our educational standards," said another, "what else will Scotland have left?"

THIS is a feeling that goes beyond any of the precise issues in the dispute with Mr Maclay. Scotland is increasingly nagged by the fear that the times are passing it by, an economic backwater that may be pleasant to live in but where nothing new ever comes from within. This has prompted either a total retreat into the sentimental past ("Culloden: The Fantastic Truth At Last" is the chief bill of a mass-circulation newspaper in Glasgow this week) or inevitable emigration. For years the Scots have been buoyed up at home, and given a racing start in England, by the comfortable knowledge that their education was still second to none. But the great days of their universities, unflaggingly recalled when the talk turns to the avoidably high failure rate of today, ended with the generation before 1914. Now the schools too, even when not markedly understaffed, are beginning to face up to unfavourable comparisons. Scottish teachers find that English pupils who go north at the start of their secondary education are still generally inferior to the native product, but the English advanced level GCE is recognised to be "very high" and "probably even a better discipline than ours."

This is why the teachers who care about

their community (and they deserve credit for it) believe it to be desperately important that the basic grounding that the Scottish education system provides at all stages, the ark of the covenant, should not be tampered with, and that if standards are to be raised in the final years it cannot be done by opening the non-graduate door to dissatisfied secondary modern teachers from England. (It is hard to see where suitable non-graduates would come from in Scotland, with its relatively high university population.) The stand on "dilution" may look unnecessarily hard: some members of the EIS are prepared to admit that there may be certain jobs that non-graduates could do in secondary schools that would not bring down the academic level. But the circumstances that might, at other times, have made for a reasoned discussion of whatever proposals the Secretary of State has been entertaining do not exist now.

It may be that an inquiry into Scottish education, which is beginning to be talked about, would help to clear the air, not by revealing anything very new but by giving both sides a chance to think again about their immediate plans. It may be that a self-governing teachers' council, which the indefatigable Mr Houston is diligently promoting, would, if it ever came into being, give the teachers balm for their hurt pride when they mix with doctors and dentists. But the inner uncertainty and disquiet that the dispute has brought to the surface go deeper into Scottish life, to a reaction against the relaxed standards of behaviour and thought that a mild dose of prosperity has introduced into a harder and, in recollection if not always in experience, more admirable educational tradition. The Glasgow teachers might not accept that the people they are really striking against are the parents and future employers of their pupils. But this is true in more ways than one.

FROM OUR SPECIAL CORRESPONDENT

THERE was a time when the British customer could ill afford to complain of his treatment for fear of involving himself in a scene arising out of the shopkeeper's injured dignity or his assistant's sulks. If a particular joint or an off-ration egg depended on good relations such brushes could be serious. That time is past; but it has left its legacy of bad service.

From the growing bias of the market towards the consumer, however, and from the increasing choice of goods and stores available to him have come some amelioration of this depressed condition: many a corner shop has found, when its customers begin to walk the extra half-mile to the supermarket, that price-cutting is not enough to win them back. The cowed shopper, armed with his memories of what shopping was like before rationing and his copy of *Which?*, is beginning to fight.

The department stores were among the first to realise that something would have to be done to convince the customer that he was wanted, rather than merely tolerated, and today many of them have training schemes aimed at pandering to the customer's feelings of dignity and importance. Their problems are complicated by the swift turnover of juniors, most of them girls, without skills or commercial ambitions, whiling away the time in a secure, unexact-ing and easily escaped occupation until marriage puts an end to their aimlessness.

Often enough, these assistants cannot, even if they would, aspire to promotion, for the multiples hold out hope of advancement to very few of their staffs. They become frustrated, bored and indifferent, and their response to the sometimes intolerable provocations offered by customers is rudeness or shrugs.

In the nature of things, this pool of un-directed adolescents must always be the main source of shop assistants: but an attempt is now to be made to give them some direction, some interest in what they are doing. Research and Marketing Limited have set up a twice-yearly training course designed ultimately to bring light into every large store in the Home Counties.

Obviously they could not treat each hard case individually, and the course therefore concerns itself with staff trainers, a dozen of whom will be intensively indoctrinated at a time, and who will in turn pass on their knowledge to their staffs. Their firms will each pay £160 for 20 days of instruction in the arts of staff manipulation, salesmanship, "promot-ability," work study, organisation and discipline.

Whether their money will be well spent is a matter for conjecture. Ruffled shoppers may feel that it will need more than training to overcome that sour contempt implicit in the attitudes of many assistants towards their customers: perhaps brainwashing, complete conversion to a new faith, is what is needed—a rebirth of confidence in the idea that service and politeness under difficulties are not incompatible with personal dignity. Heaven knows there is enough so-called salesmanship: what is needed is courtesy. If Research and Marketing can ever substitute a cheerfully spoken "Good morning, madam. Can I help you?" for a churlish "Yes, what is it?", they will have deserved well of the consuming classes.

Life with Mum—and the telly

## London's Flatted Kids

By folklore standards children reared in high modern flats are deprived of the rich cultural associations of back-to-back and tenement life. This may make them poorer in companionship: it has certainly made them healthier. But the chief difficulty, according to a report\* published this week by a committee under Mrs Eirene White, MP, is that mothers living above the fifth floor have perpetual jitters that their off-spring will either fall off the balconies or get into other trouble if they play on the ground out of sight.

At present London County Council has 72 blocks of ten storeys or over, housing some 11,000 people: individual London boroughs and a number of provincial cities have built or are building more. Last year 40 per cent of the approved tenders for LCC building were for high flats. Inevitably a growing number of families with young children are likely to find themselves housed in this way, although efforts are made to keep them near ground level. Most parents actually like being high up, but initial worries over play facilities are only natural.

The report offers no comparison of accident rates among children in high flats and

\* Two to Five in High Flats, 2s. 6d. The Housing Centre, London, SW1.

those in old-fashioned city dwellings of three or four storeys. But the effect of parental fears has been that a substantial proportion of flatted children are unduly confined at home, relying on their mothers or siblings for companionship and the television set for their experience of life. It may be that some mothers are simply too lazy or inefficient to provide the discreet supervision that all toddlers need when they are finding their feet on the ground (the report is silent about this), but it is generally true that the type of playground that young children appreciate is hard to come by in many of the new schemes.

The provision of more suitable play-grounds is one remedy urged in the report (although it may be thought that the suggested employment of trained supervisors should depend on the parents' willingness to pay for them). Another obvious need is for better designed balconies, with portable mesh screens to contain the adventurous. The parents who are really dissatisfied would probably not be content unless they had the standard semi-detached and garden of their own—although telly-gazing and restlessness on rainy days are not unknown there either. There is a case for a little more imagination by local authorities, and a good deal more by the mothers themselves.

## LETTERS

## Vietnam

SIR—That your commentator (page 299 of *The Economist* of April 22nd) is entitled to his sceptical attitude toward the Republican regime in Vietnam is a right I do not pretend to discuss here. But what is regrettable is his indiscriminate use of any fact to back up that attitude.

The process is carried to the extreme limit when he professes doubts about Dr Dan's "alleged part" in the November revolt. At the time of the "coup" of November 11, 1960, it was widely reported here that this same Dr Dan was one of the ringleaders. As its "political commissioner" he even convened the foreign press to announce the composition and programme of the "revolutionary committee."

That your commentator is unaware of these facts may be strange, but quite startling is the suggestion that a leader of an armed rebellion should not only be free but also allowed to be a candidate in presidential elections.

This frame of mind may partly explain why he finds the results of the elections "not easy to analyse." On the other hand, he seems to confuse discontent and opposition. The Vietnamese people may not feel extremely happy about their lot: how could they when communist subversion and terrorist activities compel the government to deflect towards military expenditure a substantial part of the budget from work of economic and social development. Consequently, they do not spare the government their criticisms, but when the crucial moment came of entrusting their destinies to an elected president they chose to vote for President Diem, realising that with another man, their condition might be worse. That was the conclusion which should be drawn from our presidential elections.—Yours faithfully,

London, W8

NGO-DINH-LUYEN  
Ambassador for Vietnam

Bernstein, Triffin,  
Stamp...

SIR—You write: "If there is no hope of getting the 70-odd members of the IMF to accept the scheme, why not urge that some such certificates should be issued through the OECD...?"

If the members of the latter would be likely to accept there should be no difficulty about persuading the former (which includes the members of the OECD) consisting as they do mainly of less developed countries.

It is to be hoped that, if this proposal is accepted, the allocation of fund certificates will be made through the International

Development Association and used, for the first few years at any rate, exclusively for infrastructure investment in the developing countries. It could be an invaluable means of helping to finance a World Development Decade on the lines proposed by Mr Paul Hoffman.—Yours faithfully,

GORDON EVANS  
United Nations Association,  
London, W1

SIR—In your article of May 6th, you gave four objections in London to the Triffin plan. Only one is fundamentally political, and if it is invalid the remaining three objections can easily be refuted by the simple logic of Professor Triffin's technical solutions.

The objection is that the British government, in accepting the Triffin plan, "would be sharing with other countries the responsibilities that are now attendant upon (its) management of the sterling area system—and the political influence, particularly within the Commonwealth, which has sometimes accompanied it."

This objection leads the British authorities to pursue a policy which is not in the best interests of the United Kingdom. The Triffin plan is the only plan that would solve the chronic problem of insufficient international reserves, and this problem must be solved if the prosperity and unity of the free world are to be accelerated. Since the interests of the United Kingdom are inextricably linked to the prosperity and unity of the free world the present rejection policy should be reversed.

The British government's fears of losing political influence was one of the primary reasons why Western Europe finds itself split into an Inner Six and an Outer Seven today. But this was a mistake of the '50s; it should not be repeated in the '60s.—Yours faithfully,

TIMOTHY REID  
Christ Church, Oxford

## Hire Purchase

SIR—In your article of May 6th you make the point that the whole concept of hire and purchase is becoming outworn. Nor is it surprising that the public regard hire purchase as a form of borrowing (you buy the goods at a higher price, hence Higher Purchase: this nice mistake is amazingly widespread), when even the finance companies blandly refuse to consider themselves as traders, although they buy the goods and, ultimately, sell them.

But unfortunately (despite the prospects for industrial plant or cows or air travel) the future of hire purchase depends heavily on the motor trade. Finance companies all the

time are thinking up gimmicks to diversify away from the motor trade, but they all know that the growth in this sphere is still great, and their own best prospects depend on it. At the same time the standards of ethics and intelligence in the motor trade are not high, and the finance company which seriously relied on even its best dealers would soon be in trouble. In practice, finance companies must rely on the deposit and the period of hire: with a 25 per cent deposit and 24 months to pay, the balance outstanding can usually be kept below the current trade price of the goods, even after allowing a reasonable margin to cover the likelihood that the dealer sold them for a bit more than they were really worth.

Thus the security of the goods as provided for in the hire purchase contract is a very real one, and until the finance companies buy themselves into the motor trade in a big way I can see no effective substitute. Critics of the system have been misled by the experience of the past two years when companies have been repossessing, at huge loss, vehicles hired on 10 per cent deposits and 36 or 48 monthly instalments. These losses will soon be a thing of the past. Meanwhile, the basic principle of hire purchase, that the hirer should always have an equity interest in the goods, is emerging, I think, all the stronger.—Yours faithfully,

P. J. BISHOP

London, SW15

## Fall of the Dinosaurs

SIR—Pish and Tush. Why all these ungenerous "at least"s and "in the end"s. You were wrong about de Gaulle in 1958. Why not admit it now, in so many words? —Yours faithfully,

C. H. P. GIFFORD

London, NW3

## Cameroons

SIR—Please permit me to make a few remarks on the article, "Problems for Mr Foncha," which appeared in your issue of April 29th. The difficulty in communication lies not so much between the Southern Cameroons and the Cameroun Republic as within the United Kingdom Trust Territory. The telegraph line which passes through Loum and Mundek in the Republic can easily be connected with the one in Kumba, which is in the Southern Cameroons. All year round motorable roads link Kumba and Bamenda, both in the Southern Cameroons, to the Republic. After 40 years of British trusteeship, the only road which runs from the south to the north still becomes impassable at certain times of the year and Southern Cameroonians are obliged to use the Republic roads.

The pessimist view attributed to British officials, who envisage a conflict between Mr Foncha and M. Ahidjo over a Constitution for a United Kamerun Republic suggests inability of Cameroonians to settle their problems through democratic means, since in the long run it is not Ahidjo or Foncha who will decide but the people.

It was born and bred to cross the frontiers of the world, this Rover 3-Litre. It combines the grace and comfort of a town carriage with the dash—and stamina—necessary for long-distance motoring. On the 3-Litre power steering is an optional extra. On all three Rover models—the 80, 100 and 3-Litre—front wheel disc brakes and overdrive are standard equipment.

The '80', £1,396.10.10d. The '100', £1,538.4.2d. The '3-Litre' with conventional gearbox, £1,783.5.10d., with automatic transmission £1,864.0.10d. (Prices include P.T.)

THE ROVER COMPANY LIMITED, SOLIHULL, WARWICKSHIRE. Makers of fine cars and the world famous Land-Rover.

The staff problem, which is not unique to the Cameroons, cannot be denied but it is hardly fair to pinpoint Nigerians and "French-speaking Cameroonians from the Republic." The question is why has the administering authority failed to train, within the past forty years, the few Cameroonians required to fill "the posts that are now the responsibility of the Federal Government of Nigeria?"

"Language and cultural differences will make it almost impossible for English-speaking Cameroonians to receive their education at Yaounde," the article says. If an Englishman can study at the Sorbonne why is it going to be impossible for a Cameroonian to study at Yaounde?—Yours faithfully,  
A. BELINGA  
Paris

### Ethiopian Investment

SIR—In your issue of April 1st you published an article from your special correspondent, "Eternity in Ethiopia." We feel obliged to draw your attention to an obvious inaccuracy with respect to the facts about the Wonji sugar industry, which was founded by our company. It was stated in the article that the Ethiopian government took over this sugar factory and demoted our company to the position of managing agents. This statement is not true, the real situation being that in 1958 this enterprise was brought into a newly founded company of Ethiopian nationality, "HVA-Ethiopia." Eighty per cent of the share capital of said company is owned by our company whereas 20 per cent is in the hands of shareholders of Ethiopian nationality.

The board of this Ethiopian company consists of three members, of which one member, viz. our subsidiary of Dutch nationality, "HVA-Internationale NV," acts as managing director.

We think it important that these facts should be accurately presented so that your readers may not get a wrong impression about the Ethiopian government's attitude with regard to foreign investments.—Yours faithfully,  
VERENIGDE  
HVA-MAATSCHAPPIJEN NV  
Amsterdam, Holland

### Universities and Others

SIR—If the teacher training colleges are to give degrees, as you suggest in your issue of April 22nd, why should they exist at all? The segregation of intending teachers in inferior institutions can only be defended by those who believe in cheap education for the lower orders, or by those who believe that the pool of ability is pretty well dry. Of all people, the intending teacher needs the extensive social and intellectual contacts provided by a university and denied at the best of training colleges by reason of its nature.—Yours faithfully,  
GEORGE PATTISON

Basildon, Essex

## BOOKS

### Foresight and Hindsight

#### The Origins of the Second World War

By A. J. P. Taylor.  
Hamish Hamilton. 296 pages. 25s.

#### All Souls and Appeasement

By A. L. Rowse.  
Macmillan. 130 pages. 18s.

MR TAYLOR'S attempt at a detached analysis of the origins of the German war is already arousing violent controversy; although he himself says that the subject is one nobody bothers with, it has remained very much with us since the end of the war left mankind faced with another, still more colossal, war danger. Statesmen and publicists in Moscow, Bonn, London, Paris and Washington discuss the conduct of east-west relations today in terms of Germany's relations with the powers in the nineteenth-thirties. Mr Taylor is right to the extent that these arguments are not based on any historical study of what happened in 1938 or 1939; more often, the version that is given of those events expresses the statesman's view of what everybody ought (or, more often, ought not) to do now.

Each of the world wars of this century ended with the victors united about the proposition of German war guilt, though unfortunately about little else. German rejection of the charge after the first war took the form of accusing the allies of having really caused the war themselves, by denying Germany the international status appropriate to German power, numbers and talents. After the second, dissent has taken a different line—that the allies helped to cause the war by shameful weakness. Kurt Schumacher used to shock westerners (and Russians too, for that matter, though they have often used the argument themselves against the West) by roundly charging the allies with this form of shared responsibility for the disaster. It was largely because this reproach, coming from a German, was found so shocking that Schumacher's party, the German Social Democrats, were labelled as nationalists and therefore unreliable, a label they are only now getting free of by turning nationalist in earnest. Even some leading men of Dr Adenauer's party have been heard to chide the British with Munich, a reproach they are curiously reluctant to direct at the French, or indeed at their own country. British and American writers have never been lacking to agree with them in assigning a secondary responsibility for the war to the hesitations and temporising of the "men of Munich."

Mr A. L. Rowse in his highly emotional little book puts this thesis as hotly as, perhaps, it will ever be put again. A devoted

All Souls man, he has set out to describe what there was, and what there was not, in the accepted mental cliché that associated Neville Chamberlain, and the policy of appeasement, specifically with his college. In retrospect, what is puzzling about appeasement is not that the men who then governed Britain should have clung so stubbornly to the idea of preferring compromise with Nazi Germany to world war, but that they should have done it with such an unshakable complacency, insisting to the end that if only people would leave them to conduct policy in their way, everything would work out for the best. Greek tragedy (and Mr Rowse does see the whole thing in those terms) would simply have had it that the leading figures were blinded by the gods. A historian cannot quite leave it at that. But Mr Rowse has not written "All Souls and Appeasement" as a historian, he has done it as his contribution to the sources from which history has to be written. He shows the appeasers, some of them his friends, coming and going, wrong-headed and well-mannered, learning nothing from each fresh disastrous turn of events. Not only the record of what they said and did, but also the writer's own feelings about it all, are material for the historian.

To Mr Rowse, these men ruined the country and led the world into a disastrous war, from which the men they had refused to listen to had to rescue us. Mr Taylor would have agreed with him at the time; now, looking back, he writes a different story, "a story without heroes and perhaps even without villains." His characters do what seems, at the time, the obvious thing in defence of the interests they are concerned with; but, partly because of the foolish claims they made to higher wisdom and foresight, things go persistently wrong:

What was done at Munich mattered less than the way in which it was done; and what was said about it afterwards counted for still more.

Mr Taylor offers no answer to the question whether war might have been avoided by greater firmness, or by greater conciliation; merely observing, with a lapse into the wisdom of hindsight, that "the mixture of the two, practised by the British Government, was the most likely to fail."

His keenest blow at the accepted view of the origins of the war is that he questions, as a matter of fact, whether Hitler ever really had in his mind the definite timetable of aggressive actions attributed to him by the anti-appeasers at the time, and by nearly everybody since. After the Munich agreement, in particular, Mr Taylor thinks that Hitler had no particular idea what to

do next, and that what he actually did was prompted from outside, by events.

These controversies are not conducted purely academically, and their consequences are far from academic. The rejection of German war guilt after 1919 made it easier to demolish the Treaty of Versailles as a structure, and prepared opinion in the victor countries for retreat in the face of the German re-expansion conducted by Hitler. After 1945, or at any rate after the Prague coup of 1948, it came to be widely assumed in the West that the Russians had a set programme of aggressive expansion analogous to Hitler's timetable. The supposed lessons of Munich have been applied as proof that any search for accommodation with the Communist powers would be worse than useless. To dissent from this last proposition, it is not necessary to agree with Mr Taylor. But equally, one need not agree with all his propositions in order to pay the clarity and penetration of his reconstruction the tribute they deserve.

### Fifty Years in the Middle East

#### Arab Nationalism and British Imperialism

By John Marlowe.  
Cresset Press. 236 pages. 30s.

MR MARLOWE, who has already written two books that are excellent contributions to the history of British paramountcy in the Middle East, here produces a third that is important on account of his sense of perspective. For the chief feat of this good piece of work is its explosion of the old belief that the Middle East is in all circumstances "vital" to Britain. What it reveals is that the Middle East is important to the west only in two contexts—that of tension with Russia and that of a seller's market for oil. The latter does not apply at the moment; supposing the former were simultaneously to cease to do so, the Arab League states would be endowed with a healthy interlude of obscurity in which to shake down on their own.

Mr Marlowe expounds this piece of realism by telling, chronologically, the history of the last fifty years, including the period of British misjudgment and Arab confusion that followed the not-so-undignified withdrawal from the Suez base in 1954. His crisp summaries of muddles, such as the aftermath of the Suez war when the loser (Egypt) took all, or the contest between Cairo and Moscow for the limp body of Syria, are admirable, and anyone—student or businessman—who wants to try to read the leaves in the Arab teacup is recommended to buy his book.

Several national likenesses are painted, warts and all. The Arabs score few successes because they will not agree to live with circumstances they are too weak to alter. They lose all in Palestine because they never face "the clear-cut issue between

fighting and negotiating," and their league is a façade because no one member is strong enough to dominate it; yet they will not abandon competition for this role, and so are unable to agree on common ends or common action. The best Mr Marlowe can wish them is a period of unimportance during which their new generation of technocrats can come to the top and preach the virtues of attracting investment as opposed to counting on blackmail.

The British are commended for much of the work they did when they were in a position to call out the guard if need arose, and for accepting, after some explicable false starts, that attempts to retain their military foothold in Nasser's Egypt bred subversion instead of countering it. If only they had seen the same point about Iraq there might have been no Suez and Nuri might yet be enjoying retirement.

But perhaps not. Egyptian imperialism is added to the picture, though President Nasser is given more credit for statesmanlike planning than is perhaps his due. In fact he plays his hand rather as King Edward VII was said by an equestrian to play bridge: "When he has a good hand with his dummy he knows how to make the best of it, but he has no knowledge where the unseen cards should be." The collapse of Nasser's bid to dominate the Arab world is ascribed chiefly to his inability to score points against Israel, but surely there are also two other reasons. The first, which is bad luck, is the virtual impossibility—given Egypt's shape, resources and population problem—of achieving the results on the home front that would enable him to set an example to satellites; the second, which is bad management, is the impetuosity that impels him to retort to every critic, sometimes through the medium of subversion in neighbouring countries. These malpractices may not count against him with fellow peoples, but they have done so with fellow governments.

One notable feature of the book is that it was written a whole year before it was printed. Admittedly the year was one in which Britain was friendless, detached and able coolly to assess the advantages to the west (and the annoyance to the Soviet union) of the growing strength of Arab neutralism. Nevertheless the way in which the author's opinions stand up to the test of time says much for his political judgment.

### Memories of a Century

#### Friends and Kindred: Memoirs of Louisa Kathleen Haldane

Faber. 248 pages. 25s.

THE Haldane family are a legend in the land. And, it seems, they marry women as remarkable as themselves. "Old" Mrs Haldane, mother of Lord Haldane and of John Scott Haldane the physiologist, was one of the great characters of her generation, and now "young" Mrs Haldane, her daughter-in-law, has, in her ninety-eighth year, produced a book of memoirs that show

## Famous pencil sharpener gets the sack!

"Stubby" Carver, as millions will remember him

"Stubby" Carver, the man who cut himself out a reputation as the world's finest pencil sharpener, is out of a job.

Yesterday, after 43 years as Personal Pencil Sharpener to the Chairman of Britain's largest importers of camel saddles, he was told that his services were no longer required.

The Chairman has bought himself an electric pencil sharpener.

"Zum noo-fangled gadjit!" was Stubby's description of it.

But the Chairman told our reporter: "It's fantastic, Sir. Entirely automatic, y'know. Not even a switch to press. You simply dip your pencil in, hold it there just a couple o' seconds, and you've got a perfect point."

"It's an immaculate-looking instrument too (not like old Stubby!). Self-contained... no flex trailing about. Looks extremely smart on me desk."

Stubby's dismissal is causing consternation in the pencil sharpening trade, and a Union meeting has been called for tomorrow to "ascertain the seriousness of the situation."

Meanwhile, businessmen all over the country were today sending their secretaries out to buy Kent Kordless Electric Pencil Sharpeners. It looks as though automation is here to stay!

From all  
good

KENT KORDLESS ELECTRIC PENCIL SHARPENER

Made by Kent Kordless Ltd.,  
Studley, Warwicks.

her to be as courageous, and as independent-minded, as any member of that courageous, independent-minded, and notably eccentric family.

It is strange to find the mother of Professor J. B. S. Haldane and Mrs Naomi Mitchison an unrepentant Tory and imperialist, and that not from convention but from conviction. Born a Coutts-Trotter and related to half the aristocracy of the Scottish Border, she has no regard at all for aristocratic convention but an enormous admiration for the aristocratic virtues which helped to build the British Empire. Born before Disraeli proclaimed Victoria Empress of India and living to see India declare itself a republic, Mrs Haldane has been an interested witness of all the most vital stages in that Empire's growth and metamorphosis into the British Commonwealth, and by her work for the Victoria League and for other "Imperial" causes she has played her own not altogether insignificant part in its affairs.

Her memories are, however, more interesting when they deal with personal rather than political reminiscence. Mrs Naomi Mitchison's clear and curiously objective style has for years been a delight to connoisseurs of good writing. Now, it appears, this is not an individual gift but an inheritance from her mother. Rambling and incoherent as the memories of the old inevitably must be, this book is nevertheless very much alive. It is impossible not to regret the heavy blue pencil with which

Mrs Mitchison has avowedly censored her mother's writing. Those who knew the remarkable household at Cherwell would welcome many more stories of Oxford days and characters, with less, if need be, about people dead so long ago that they are no longer even names. Indiscretion is the salt of reminiscence.

### Poetry of Love

Themes and Variations in Shakespeare's Sonnets

By J. B. Leishman.

Hutchinson. 254 pages. 35s.

THERE are too few good comprehensive studies of the sonnets of Shakespeare, though plenty of ink has been spilt in efforts to identify Mr W. H., the dark lady and the rival poet. The lack seems the stranger when one considers how much critical attention has been lavished, during the last thirty or forty years, on Shakespearean themes and imagery. The plays tend to be regarded primarily as poems; but such individual sonnets as have come in for penetrating analysis have been chosen either because of their Donne-like complexity or because they appeared to furnish clues to incidents in Shakespeare's biography.

It is obviously important that we should try to come to terms with the whole collection of sonnets, in spite of—indeed, because of—the fact that they do not form anything like a coherent sequence. What Mr Leishman has done is to select certain themes, common to classical and renaissance poets, and by comparison to suggest the significance of Shakespeare's variations on such perennial topics as the immortality conferred by poetry, time the devourer, the transience of beauty and the intrinsic worth of love. This method achieves a double result. It demonstrates Shakespeare's solidarity with a great European poetic tradition, and at the same time shows his singularity and independence. Mr Leishman's erudition and sensibility enable him to make some very illuminating juxtapositions.

In the latter part of his book, he expounds his thesis that the most characteristic conceptions in Shakespeare's sonnets, those which set them apart from most other love-poetry, are the idea of the beloved as the archetype of all beauty and the idea of love as an activity that compensates for all the evils and deficiencies of life. These conceptions give to some of the finest sonnets a quality which he calls religious. Certainly these poems do reveal a capacity for devotion, constancy and self-abnegation unmatched in English love-poetry. But alongside these sonnets, with their almost feminine evaluation of love as the one undeniably true mode of life, there are quite a number that express disgust and disillusion; and these, with their indecent puns and harsh indictments of human frailty, are surely no less characteristic of Shakespeare than the ones affirming the supremacy of the heart's affections. By leaving the dark

lady out of his calculations and concentrating on the adored friend, Mr Leishman has done less than justice to the rich complexity of the sonnets.

### Pamphleteering on Prices

Resale Price Maintenance and Shoppers' Choice

By B. S. Yamey.

Barrie and Rockliff (1960) for Institute of Economic Affairs. 48 pages. 3s. 6d.

Fair Trade: Resale Price Maintenance Re-examined

By P. W. S. Andrews and Frank A. Friday. Macmillan (1960). 84 pages. 6s.

THE second of these pamphlets was written with the intention of refuting the first one. Thus the consumer who really cares about resale price maintenance can have the arguments both for and against it, all for 9s. 6d.: seldom, one feels, can it have been possible to settle decisively any comparable issue for such a bargain price. Mr Yamey begins with an estimate of the present extent and effects of resale price maintenance in Britain, and summarises the experience of other countries—notably the United States and Canada—in an attempt to calculate what the abandonment of the practice would mean here. He believes that the prices of price-maintained goods would fall by an average of at least five per cent; if true this would amount to savings by consumers of about £180 million a year. The remainder of his booklet is devoted to analysing briefly the case put forth by those who feel that price maintenance has virtues which, on balance, offset any savings that might be made by consumers. His arguments on these points are not new, and he has set them out at a more suitable length in "The Economics of Resale Price Maintenance" (constant readers of *The Economist* should know them off by heart).

The authors of "Fair Trade: Resale Price Maintenance Re-examined" are both more or less publicly committed to their cause. Mr Andrews, of Nuffield College, has testified for respondents before the Restrictive Practices Court, and Mr Friday is an economic adviser to Electric and Musical Industries, which is not exactly a discount house. The first half of their booklet is taken up with counter-polemics aimed mostly at Mr Yamey, who is accused, perhaps rightly, of overstating both the extent of resale price maintenance and the probable amount of price-cutting that would follow its abandonment. There have been some manufacturers who have been made unhappy by "loss-leader" selling, and their experiences are faithfully cited; and it is true that the general level of retail prices may be little affected by price maintenance. But the proposition that some of the prices of 21 (or 23, or 25) per cent of consumers' expenditure could be lower if they were not maintained is not shown to be "just a great illusion": the case for maintenance

must thus be made on its offsetting benefits to retailers, manufacturers or the general public.

Messrs Andrews and Friday attempt to do this by giving a "general analysis of retail trade in which the broad function of rpm can be understood." They conclude that retail trade including rpm is already very competitive (which is irrelevant even if true) and that "to the extent to which a general ban on rpm weakens the thrust [sic] from manufacturers' brands, the whole competitiveness of retail trade will in the long run be weakened; such a ban, in short, must itself reduce an important influence keeping prices in general down." They follow this up by advocating that even if a general ban on price maintenance is enacted, "a very considerable sector of the economy" should be exempted.

Those who are not convinced that resale price maintenance is a good thing may still not feel, as Mr Yamey does, that any attempts to enforce it should be prohibited by law; American experience suggests that the policing of such legislation may be more trouble than it is worth. But certainly manufacturers should not be allowed to use the courts to enforce resale prices, as they can do at present.

### New Model White House?

The Presidency: Crisis and Regeneration  
By Herman Finer.

Chicago University Press. London: Cambridge University Press. 387 pages. 40s.

PROFESSOR FINER has lived long enough in the United States (and it seems that he has become an American citizen since he moved to Chicago sixteen years ago) to know what happens to foreigners, particularly Englishmen, who want to tamper with the Constitution. So it must be presumed that his indignation got the better of his judgment, as it got the better of his book.

The stated object of the book is to discuss the impossibility of the Presidency, as an office, in the modern world and to suggest means of relieving that single elected official of some of its burdens. But it is difficult to avoid the feeling that Dr Finer's plan for redesigning the American electoral system has a quite different purpose: to prevent a repetition of the Eisenhower regime. This reviewer yields to no man in thankfulness that the last eight years of American history are over—or rather he thought he yielded to no man until he met Dr Finer's massive contempt for everything and everyone connected with the last administration.

But when it comes to his positive proposals for avoiding a repetition of 1952 Professor Finer is not persuasive. He advocates the abolition of the presidential primary as "at best irrelevant and at worst injurious to the democratic system"; one election every four years at which the entire Senate and House of Representatives as well as the President and his Cabinet are elected; and the raising of the "influence,

dignity and attractiveness" of the House at the expense of the Senate, which would become a House of Lords (model circa 1920). So far, if it were remotely possible to imagine one hundred senators, who believe themselves for some strange reason to be the greatest deliberating body in the world, voting for their own political emasculation, so good.

But it is with his idea of electing, every four years, not only the President but also eleven vice-presidents, who will become the Cabinet, some having departmental duties and some without portfolio, that Dr Finer moves from the merely unthinkable to the positively dangerous. "To be eligible," he says, "for membership of the Cabinet as President or as one of the Vice Presidents, the candidate must be presently a member of the House of Representatives or the Senate, or must have served at least four years in either house." But they will not remain members of Congress once elected to the Cabinet, though they will sit in the House of Representatives and participate in congressional business.

These twelve candidates for the Cabinet would, however, have to be chosen somehow and Dr Finer can think of no other way than having them chosen, as the President is today, by the party conventions. One can easily imagine the "well-balanced ticket" that would emerge—so many Catholics, so many Jews, the solitary Negro, so many from west of the Mississippi and so many from south of the Mason-Dixon line—but how many prospective Secretaries of State or Defence, how many Stimsones, Achesons, Lovetts or Forrestals?

All these ideas suggest that Dr Finer, although legally an American, remains mentally an Englishman—or at least a European, as there are touches of the constitution of the West German Federal Republic in his proposals. His solution to the problem that he rightly considers the most serious one facing the American people and its system of government today depends on the establishment of a responsible party system. He obviously thinks that, once the Cabinet system is forced on the country, responsible parties will follow. It seems more likely that the parties would have to come first and that Cabinet government must evolve from them.

An attractive book and a brave try—but it will not do.

### Riding Through Africa High Street Africa

By Anthony Smith.

Allen & Unwin. 212 pages. 21s.

IN Capetown with full pockets and plenty of time in which to get back to England, Anthony Smith decided to buy a motor-bicycle and ride it home. The road called the Great North Road, which leaves Capetown docks and heads for Paarl, had become an obsession with him: ordinary though it looked, he could not escape the magnet knowledge that it went on for 7,000 miles,

through the whole length of a Continent, until it came to the Mediterranean.

Nothing particularly dramatic happened during his journey. Mr Smith was cold, or he was hot; he was tired, or he enjoyed a good bed; he was thirsty, or he learnt the full splendour of cold beer. Often he met interesting people, whom he describes well, or more often he met no one. It was a remarkably uneventful journey considering its length and how light he was travelling, but undramatic though the events were, the inherent drama of riding up Africa never failed, and Mr Smith never fails to communicate it.

At one time he began to wonder what he sounded like, a raucous bee buzzing through the endless silence of Tanganyika. He propped his motorbicycle in the road with the engine running and walked away into that silence to listen to himself. Although there are moments when his writing skids into facetiousness, his touch when he describes something like this is extraordinarily sure, so that the reader constantly finds himself sharing an experience most vividly.

No one will learn much about African politics or geography from this book (although when Mr Smith touches on questions of race he does so with insight and humanity), but many people will enjoy it. When asked in Capetown why he was going to make his journey in that way, Mr Smith answered "for fun," and that is his secret.

### OTHER BOOKS

BELFAST AND ITS CHARITABLE SOCIETY. By R. W. M. Strain. Oxford University Press. 349 pages. 45s.

The sub-title of this book is "A Story of Urban Social Development"; from the Belfast Charitable Society's minutes (written over two hundred years almost without a break) and other original documents, Mr Strain has compiled a social history of Belfast from 1752, when the society was inaugurated, to the introduction of the new poor law in the 1830s. Then the society was able to restrict its activities—in particular, it no longer had to supply the growing town with water—and today, as more and more of its earlier functions have been taken over by the state, its sole responsibility is the care of the elderly. In its original building it cares, until death, for 144 aged men and women. Mr Strain has written a fascinating story of how a small charity expanded until it was responsible for most of the services now considered proper to a welfare state and then, after the services had been taken over by the state, found it still had a small but important part to play—the humane and homely care of the elderly.

MANAGEMENT TRAINING: Aims and Methods. By R. J. Hacon. English Universities Press. 253 pages. 17s. 6d.

Mr Hacon is the Education and Executive Development Officer of Joseph Lucas (Electrical) Ltd., a company which has pioneered in training at all levels. Companies wishing to start training schemes will learn much from this clear, but not superficial book. Social research workers will be gratified at the frequent references to their work, even though they will be surprised that anyone who makes them could still write "As long as training can be shown to have been indispensable, that is all that matters." It seems that few training officers will admit how far we are from being able to show that training at the supervisory and management levels has been "indispensable."

### Commonwealth Trade 1959-1960

The latest memorandum in the series issued annually by the Commonwealth Economic Committee. It reviews the main features of the external trade of the individual Commonwealth countries and of the Commonwealth as a whole.

4s. 6d. (post 5d.)

### Company Assets and Income in 1957

A study by the Statistics Division of the Board of Trade covering more than 1900 companies, with assets of £0.5 million or over, engaged in manufacture and distribution in the United Kingdom.

7s. 6d. (post 6d.)

### Shipbuilding Advisory Committee

Report of the Sub-Committee reviewing the prospects and problems of the shipbuilding and ship-repairing industry.

1s. 6d. (post 2d.)

## THE WORLD OVERSEAS

### Removing Pinpricks in Southern Rhodesia

FROM OUR SPECIAL CORRESPONDENT LATELY IN SALISBURY

**H**ALF-FINISHED, Salisbury will one day stand as a monument to what the white man nearly did in central Africa—just as the mysterious Zimbabwe ruins represent what the black man may have done. The city is a curious mixture of one-horse saloons, Victorian double-storey blocks, and next year's skyscrapers—these are dotted about like overblown plastic transistor radios stood on end. Some are beautiful; others complete in ostentation like the Detroit cars parked outside the foam-rubbered houses in the suburbs. On one tall roof a sputnik-sized pearl is held aloft in the concrete arms of a Martian sculpture. Another structure, blue and lovely, has self-opening doors, ponds in the foyer, and a spiral driveway to take certain people's cars to the top. Mosaics and outdoor tiles rise above the dusty little shops in which Africans buy pots and pans and jazz records. Cement lattice-work is as common as wall-paper: it is even doled out, in tiny segments, as decoration for some of the matchbox-houses in the African quarter.

It is the same with Southern Rhodesia's politics. The Africans are getting a little bit of what the white man fancies. Life is a great improvement on two years ago, but black eyes are fixed on the future. There are no more passes—only one document, the *sinupa* (registration certificate) need now be carried. There are African pubs, with light wines and beer on sale, and hard liquor can be bought in ordinary hotels, clubs and restaurants if the licensees decide to go multi-racial. One hotel has. Africans are served first in shops if they get there first, although one or two suburban shopkeepers steadfastly maintain the old system of serving non-whites through a hole in the back wall. Africans can go to some cinemas, although censorship recently forced one multi-racial house to advertise a film as "Not for children under 18" and "Not for Africans."

The Land Apportionment Act is still under review: until large parts of the "European Area" (much of which is unused) are occupied by African farmers the land problem will not have been solved. More than half of Southern Rhodesia is still reserved for its 200,000 whites; 2.4 million indigenous Africans share the rest. But in urban areas Africans are no longer forced to leave their houses when they lose their jobs. All races can now join the civil service. Since January 1960 multi-racial trade unions have been compulsory, but only one African-led union has been registered. The radical African trade unionists see the complex new Industrial Conciliation Act as a device to divide and weaken their growing unofficial movement, and they have fought shy. Black men go where they like in post offices. Well-dressed black men sometimes go where they like in some banks. Africans have appeared in discussion programmes on television (but viewers protested at seeing "natives" when a minstrel show was put on their screens).

Perhaps most significant of all are the words of an African waiter, who said that black men no longer walk in the streets in fear, for they know that, if a white man abuses them, it is possible to hit him and win the case in the courts. The "courtesy campaign" is working, and, if they are still spoken of as "boys" and "kaffirs"

in private, they are often, in the cities at least, "men" and "Africans" in public.

But what some professional Africans are beginning to call the "basic infrastructure of society" has not been changed. Salisbury is still a white man's city: the apartheid is soft and has icing, but it has not disappeared. There is no African representation in local government in Southern Rhodesia and it is necessary to get a permit from the Salisbury council's native affairs department to

visit Harare African township. For a visiting European it is nearly impossible to get a permit for week-ends or nights: the council maintains that it is not safe. Nevertheless, many a correspondent (including this one) has emerged unscathed from a quiet social evening in Harare and neighbouring Highfield—and on a Saturday night, at that. (The council was spared the pain of knowing about this.)

Africans are still governed through a separate ministry—the department of native affairs. Although the future of the department is under review, its continued existence is perhaps the greatest administrative barrier to the formation of a single nation in Southern Rhodesia. "Native education" has a department to itself. Even the terminology is an irritant—the chief information officer says in his 1959 report that the name "Native affairs" (which is enshrined in the constitution) is one of his main obstacles as "many of the more intelligent Africans feel the name is retained expressly to make them feel inferior."

Expenditure on "native education" has increased from £1.6 million in 1955-56 to nearly £4 million in 1960-61, but, as elsewhere in Africa, the money has not been wisely spent. In 1959 the school population of Africans in Southern Rhodesia was 467,567. Only 3,300 of these children were at secondary school; of those 2,669 were in the first two forms. There were 17 children in form V and 18 in form VI; all but three of these were boys. In primary schools there is the same low pyramid structure. Nearly half the children left school after two years of sub-standard "A" and "B" education; fewer than 50,000 (out of 450,000 in primary schools) got past standard three. In effect, a standard three education is as much as most African children can expect to get: this amounts to learning to read and write in the vernacular; learning simple English reading and writing; elementary arithmetic; nature study; and "local history and geography" (in the words of the department's report). Reducing the numbers in schools but increasing the standard of education would be a less popular, but more sensible policy.

The new approach to the "native question" in Southern Rhodesia adds up to what may one day be seen as the last, and the quaintest, of African fallacies. South Africa tried apartheid; the Belgians tried building up a black middle class (but stifling politics); Southern Rhodesia is trying both, and adding "the removal of pinpricks." This, in South Africa today, would be radical; if applied in Southern Rhodesia some years ago it might

have come in time to smooth over the bitterness of the inevitable transition to African rule. In Rhodesia, in 1961, it is tragically out of date.

In their hearts, many thinking white Southern Rhodesians realise this, and it is this that makes them so angry and so despairing. The colony's settlers have been forced into what they consider to be extreme liberalism by the combined pressure of Britain's withdrawal from Africa and local African politicians. In terms of the thinking of the fifties, white Southern Rhodesians have lately made some advances towards the partnership promised at the time of federation. But Africa is far ahead of them. They are often righteous, and often indignant, and somewhat understandably so, feeling that they have done so much and got no thanks for it. With fury at the outside world, they ask, "How far do they expect us to go? Must we marry them?"

The real struggle is yet to come. Africans are determined that they shall rule; Europeans determined that power shall remain in "civilised" hands. The prime minister, Sir Edgar Whitehead, can only allow himself to be forced forward at the pace his voters will stand: the right-wing Dominion party, with about half the voters on its side, is waiting in the wings. Sir Roy Welensky is unwilling to lead opinion (he more than any other Rhodesian could do it), and he fears the diehards in his own party. The referendum on the proposed new constitution is only a few months away, and its outcome is highly uncertain. Whites view the proposed bill of rights plus 15 black MP's in a previously all-white Parliament as a final concession; blacks call the deal by which the constitution was drawn up a "sell-out." In the rest of British Africa, Britain has broken the settler power and gradually handed it over to the Africans. In Southern Rhodesia Britain could do the same thing only if it were prepared to nullify Southern Rhodesia's constitution: a practical impossibility. Both sides must rely on their own resources in the struggle for power; therein lies the danger.

IF there is danger ahead, it has been made worse by the state of Southern Rhodesia's economy. The official estimate is that 80,000 urban Africans are unemployed. The figure is growing daily. Many offices are empty, and business morale has never been lower. Plans for the biggest new skyscraper of them all—it would have cost £1½ million and been 30 storeys high—were shelved "indefinitely" at the beginning of April, and Salisbury's architects and builders called it the "final blow." With nothing to do but attend political meetings, the young men in the townships are in a troublesome mood.

Political leaders in Southern Rhodesia are not all of a high calibre. The best men from the European community go into business or the professions; parliamentarians and administrators must be chosen from the rest. The best Africans are in professions, although most of them have one foot in politics too. But the leaders of the National Democratic party, the African nationalist party, are not drawn from the cream of the black intelligentsia. This is not to say that there are not able men in the NDP. But the party's organisation is not as efficient as the organisation of its counterparts in Nyasaland and Northern Rhodesia (where Colonial Office control has meant more freedom to organise) and the main weapon of African nationalism—the threat of bringing the country to a standstill—is not as securely in NDP hands as it is in others. The leadership is divided, and only a sense of the seriousness of the situation has prevented a split.

But the fact cannot be escaped that the situation has not seemed so serious to the colony's black doctors and legal men and journalists that they have felt a call to full-time participation in politics. These men, who have cars, houses, high level conversation and an eye on the future, place their professions first. Yet they are not selfish men: the pull of conflicting opportunities is the result of the "removal of pinpricks" policy.

Two misconceptions need to be explained. One is that the rural Africans (who are in the majority) are not interested in "politics"; the other is that Southern Rhodesian Africans want federation because they believe they will be helped to advance to independence by being associated with two black states (Nyasaland and Northern Rhodesia) to the North. One National Democratic party leader, the Rev. Ndabaningi Sithole (a leading theorist of black nationalism) answers these misconceptions by telling the tale of the tribesmen and the snake.

In the rural areas of Southern Rhodesia—where there has been some unrest during the past few months—tribesmen object to the policies of cattle culling and land husbandry introduced by white agricultural officers. This has nothing to do with African nationalism, but the tribal elders, who have some years experience of white administration, will say that it is the tail of the snake that is "killing" them; the head of the snake is in Salisbury. That is when they lead their people to meetings of the nationalists—which are banned in the reserves but are held on the borders. That, says the Rev. Sithole, is where urban politics and rural grievances merge.

The nationalists will also explain their case against federation: that, even in Southern Rhodesia, it strengthens the hand of the white politicians, who have two governments—federal and Southern Rhodesian—to use against the black man. Southern Rhodesian nationalists call themselves "Zimbabweans," after the ruins. Unless the direction of Rhodesian politics changes unexpectedly, the feeling in Southern Rhodesia is that the Zimbabwe ruins, like Salisbury's skyscrapers, will be out of the federation before long.

## German Parties Prepare

FROM OUR BONN CORRESPONDENT

WEST GERMANY'S two major political parties, the Christian Democrats and the Social Democrats, have opened their campaigns for the September elections to the fourth Bundestag. In Cologne two weeks ago, at the end of a four-day extraordinary party conference, Dr Adenauer read out the Christian Democrats' 450-word election manifesto. ("A silly word, manifesto," he remarked waywardly at a press conference afterwards, to the vexation of the publicity men.) And in Bonn next morning, at a party ceremony that lasted only three hours, Burgomaster Brandt, the Social Democrats' candidate for the chancellorship, announced his party's "government programme." Save that it runs to some 8,000 words, it is not strikingly different from the Christian Democrats' declaration. Indeed, the competing catalogues of future bounty contain many identical items, ranging from the stability of the world in general and of domestic prices in particular, to more homes and playing fields, speed and safety on the roads, cleaner rivers, and an urban air fit for humans to breathe.

Dr Adenauer has since withdrawn to Cadenabbia for a fortnight's rest before coping with President de Gaulle in Bonn on May 19th. He does not intend to do any more serious electioneering himself before July 16th, when he is to address a big rally at Dortmund, for him the first of some forty speaking engagements between then and polling day on September 17th. In the meantime the lesser luminaries of both parties will be keeping their causes in the public eye. They have especially in mind the three million or so persons between the ages of 21 and 25 who will be voting for the first time, and who, they believe, may appreciably influence the outcome. With their 47-year-old alternative to the 85-year-old chancellor, the Social Democrats like to

Tokyo 10.00 p.m.

## THIS VERY MINUTE HE'S CONTACTING PROSPECTS IN BIRMINGHAM!

It has been a long hard day for this Japanese industrial equipment manufacturer, now relaxing with his art collection. But even now, his *international advertising* in the Atlantic edition of *TIME* is winning new orders for his company on the other side of the world.

In Birmingham, centre of Britain's industrial Midlands, it is 1.00 p.m.—lunchtime and relaxation hour for businessmen, engineers, and other influential prospects who read *TIME* for news of world events and the latest products and services. Like 3 million other influential people round the world they read *TIME*—every week.

You, too, can reach this influential and prosperous readership through *TIME*'s six editions: Atlantic; Asia; South Pacific; Latin America; Canada; U.S. For more information about your opportunities in international markets, ask:—

**TIME**, *The Weekly Newsmagazine*, New Bond Street, London W.1.

think they will cut an attractively dashing and contemporary figure. Their most used slogan at the moment is "Move with the times"; and one of their first illustrated pamphlets, entitled "Trust," has a cover picture of Herr Brandt and President Kennedy grinning amiably at each other. At the Cologne congress, the Christian Democratic stage managers were tactfully at pains to let the limelight fall not only on the world-respected elder statesman but also on the "young team" at his side.

Since political and economic developments have brought the policies of the two parties so close together, many of the new voters may find it difficult to differentiate between them. Their dilemma will not be altogether unwelcome to the Social Democratic party, which is sick of its eleven years in the wilderness and hungry for a taste of power. But it is intolerable to the Christian Democrats. On the eve of the Cologne conference, Herr Herbert Wehner, the strongest political personality on the Social Democratic party executive, and the most restless, had intimated in a speech at Bad Kreuznach that the Social Democrats would be prepared after September 17th to join the Christian Democrats in a coalition government—"like the Socialists and the Christian Socialists in Belgium." Although several important Christian Democrats—among them Herr Strauss, the dynamic defence minister and chairman of the party's more or less independent Bavarian contingent—think that a grand coalition might be desirable, even perhaps before the year is out if there is trouble in Berlin, Dr Adenauer slapped the proposition down at Cologne with such a scornful gusto as to convey that it was too preposterous to be conceivable, at any rate in his lifetime.

DR ADENAUER is never more himself than when he is taunting the Social Democrats with their failure to win federal elections. He conspicuously enjoyed answering Herr Wehner, who he pretended he did not know how to describe except as "the leader of the Social Democrats," thus mischievously belittling both his particular antagonist, Herr Brandt, and the titular party chairman, Herr Ollenhauer. The chancellor claimed that the warmth of his recent reception in the United States was really a tribute to the German people for having had the good sense to support his efforts to identify the Federal Republic unreservedly with the emerging Atlantic community. Recapitulating the stages by which sovereignty had been restored and then secured by fostering economic and military integration with the West, Dr Adenauer pointed out that the Social Democrats had opposed these processes at every stage. Since it had taken them eleven years to discover they had been wrong and to admit it, they had obviously disqualified themselves from having a say in running the country now. The chancellor's lofty confidence—he ignored the possibility of having to govern with the help of the Free Democrats—set the tone of the whole conference.

The specialists of his "team"—notably Dr von Brentano, Herr Strauss, and Professor Erhard—reaffirmed their policies with a like air of the rectitude that is engendered by success; and although more time was given than at past conferences to common delegates to contribute to the discussion, no grievances were aired in public, nor awkward questions asked. The misgivings that some party members expressed in private about the chancellor's apparent complacency at successes that are confined to west Germany's western relations, or about his enduring silence on the subject of his own retirement, were obliterated for the moment by the prevailing collective optimism. In projecting the rather deceptive dual image of Adenauer and Erhard, and repeating the simple shibboleth "No experiments," the Christian Democrats apparently see the surest way of persuading the electorate to return them to power for another four years. They are probably right.

Before Herr Brandt proclaimed the Social Democrats' "government programme," Herr Wehner got a bit of his own back by voicing the doubts concerning Dr Adenauer that deviating Christian Democrats had thought it best to keep to themselves. Herr Wehner accused the Christian Democratic Union of conceiving itself as the embodiment of people and state, and of tolerating in its proximity only such small parties as it could count on eventually absorbing. And he detonated an explosion of applause when he added:

This totalitarian claim is fateful for our nation. The German nation will disintegrate if on one side of the divided Fatherland Russian state concepts are practised, and on the other Portuguese. Herr Brandt, too, was at his most convincing when he promised that should he be elected chancellor he would, in accordance with "the spirit of the times," turn for advice to the country's best minds, regardless of their party sympathies:

Nobody on this earth is capable of governing a nation solely by the method of solitary decisions.

This must have nettled the venerable holiday-maker at Cadenabbia. But he will assuredly take comfort from the ample ammunition for debate with which he has been simultaneously presented. Herr Brandt did not promise pie in the sky. He promised it in the Federal Republic in 1962—and generous helpings for the undeveloped countries, as well. For the lucky Germans there would be longer paid holidays (the minimum of a whole month by 1965), higher pensions, television sets for the old, and more of this kind. A price council would peg the cost of living. The unpopular taxes on coffee, tea and sugar would be swept away. Dr Adenauer must be getting ready to ask some dry questions.

## French Anticlimax

FROM OUR PARIS CORRESPONDENT

"THIS man finds himself only in the hour of crisis." The comment by a liberal Frenchman is symptomatic of the mood of anticlimax that has followed General de Gaulle's broadcast to the nation on Monday. The disappointment was greatest among those who, swayed by the drama of recent events, sincerely believed that the general's triumph would be followed in quick succession by the solution of the problem of the French army, the settlement of the Algerian war and a rapid revival of political life in France. They expected bold plans and clear directives. They heard scarcely anything new.

The one relative novelty in the speech was brought in at the end, when President de Gaulle referred to the need for turning the "plan of national development" into a "crucial institution." Here the trouble is that the ambiguity of gaullist political language reaches its greatest heights when any matter of economic terminology is involved. France has had a *Commissariat Général du Plan* ever since 1946. As if to emphasise the planners' subservience to orthodox financing, this body was recently removed from the control of the prime minister to that of the ministry of finance. General de Gaulle's new emphasis on planning could mean a change of policy, the rejection of the orthodox line followed by M. Pinay and more recently by M. Baumgartner, and a conversion to more active government intervention in economic matters. It could, but nothing in General de Gaulle's actual words warrants the assertion that it will.

Another possibility is that General de Gaulle will try to kill several birds with one stone. The Senate, which cannot be dissolved as the lower house can, has tried to put up some show of opposition to the government. The transformation of the Senate into a body including representatives of science, economics employers' associations and trade unions could both remove the

**Both!** The contrasting world of Wimpey. Building, Civil, Mechanical and Electrical Engineering Contractors extraordinary. Small enough to be competitive on a housing contract and, of course, large enough to construct an £18,000,000 hydro-electric project on the Rio Grande. Why? Wimpey are world-wide, yet Wimpey remain local, with 13 major U.K. Centres each locally staffed and independently operative. Wimpey are mechanised to the tune of £10 million plant, yet Wimpey are people—over 26,000 expert, on-the-spot, friendly, efficient people. So... be it an airfield in Australia, a workshop in Worksop—or a more substantial future for yourself—get in touch with Wimpey.

## THE OLD WORLD MADE HERCULES...

"Vanquish or be Vanquished". That was the uncompromising law of the mythical world wherein Hercules of old was nurtured....

Triumphant then, Hercules will boast that he is no less triumphant to-day. But now his labours bend towards more sophisticated ends. Man's transportation, for example. The Mares of Diomedes have given way to the train, the car, the aeroplane. And by developing skills in industrial chemistry,

Hercules has laboured to some purpose here. Hercules industrial chemicals make compositions tailor-made for transport—lacquers flame-proof or lustrous or low-temperature-resistant, tenacious adhesives, defiant anti-corrosives, new and revolutionary lubricants... To-day if it's in transport, Hercules is there, in such guises as Ethyl Cellulose, Cellolyn, Pamak, Vinsol, Hercoslex and Hercolube. Might they meet your needs?

## TODAY HERCULES IS HELPING TO BUILD THE NEW WORLD

**HERCULES POWDER COMPANY LIMITED**

small political obstacle and give flesh to the old corporative ideas of the Gaullist Rally (the RPF).

President de Gaulle gave no indication of any intention to change the constitution. He did not reveal what he wants to do with the full powers he now holds, or how long he intends to keep them. Even his assessment of the crisis of April 22nd was somewhat enigmatic. At one point he mentioned it as an "incident" which was overcome thanks to the loyalty "of the whole" of the army and the administration. In another passage, he stressed the need to re-establish the authority of the state over both its "secular arm" and its civil service. The logic falls short of being Aristotelian.

What was most awaited in the speech, however, was the President's analysis of the prospects of bringing the Algerian war to an end; and here, contrary to expectation, General de Gaulle

offered nothing new. He repeated his willingness to discuss the future with the Moslem rebels—but with all shades of Algerian opinion as well. He stated once more the menacing alternatives of association with France and partition of the country. He warned the Algerian government-in-exile that if it does not agree to the terms of association at the forthcoming conference at Evian, the new Algerian state will be erected without it. Thus the familiar, by now rather shop-soiled, argument of an Algerian third force has been revived for the occasion.

If the insurgents had been looking for a pretext to avoid negotiations, they could have found it without difficulty in the tone and contents of the speech. But the prevailing view is that Monday's speech was simply for public consumption. On Wednesday it was in fact announced in both Paris and Tunis that talks would begin in Evian on May 20th. The key question now is what France's

## Italia '61

FROM OUR SPECIAL CORRESPONDENT

THE International Labour Exhibition in Turin (which will be open until November) celebrates Italy's centenary of national union and presents the theme of a hundred years of technological and social progress. It is an architectural marvel and—in parts at least—a didactic *tour de force*. But it is no *kermesse*; it calls for an elevated frame of mind and an uncomfortable degree of concentration.

The Hall of Labour, Pier Luigi Nervi's gigantic temple of concrete, steel and glass, is best seen at night when artificial light picks out the ribbing which sustains the roof. Sixteen colossal columns, marching four by four, uphold a roof of huge square slabs resting on, or rather contained within, steel ribs radiating from the summit of each column. Light penetrates between these squares, since every column and its "capital" is a self-contained unit. The effect, suggestive of an Egyptian temple, is majestic.

The temporary interior structure, by another famous architect, Gio Ponti, maintains the Egyptian theme in the angle of the 36-foot wall, which encloses the central pavilions in an irregular geometrical design. It is plated with aluminium covered with an abstract design symbolising man's tools. Although this internal structure interrupts the march of Nervi's columns it has a beauty of its own, while above and between its sections a diagonal of the wonderful pillars is visible from every point of the building.

The content of this extraordinary temple is frankly didactic. A number of countries, and international organisations such as the United Nations, the European Community and the International Labour Office, have each been invited to illustrate a particular subject: communications, sources of energy, automation, and the like. The idea is to illustrate development in the last hundred years, as well as to take a look at the future. Naturally, some contributors have used more imagination

or taken more pains than others. One of the best pavilions is the British, which deals with scientific research. The United States section explains by graphs and diagrams, with the help of light and sound, how man proceeded from the exploration of his own brain to the construction of the electronic computer. The Americans are masters of this sort of painless pedagogy, and it was nobody's fault that, on the day your correspondent visited it, some valves were not working in the apparatus, as well as in your correspondent's own, far from electronic, brain.

In the Russian section one sees how automation has reduced the work of an iron foundry to a press-button operation performed by a nattily dressed gentleman in a screened cabin. A Russian film demonstrates how the space suit prevents an astronaut's blood from boiling in the stratosphere. When it comes to taking a look at the future, there is an evident reluctance of the exhibitors to give away the secrets of their intentions. Future prospects tend to be dealt with on the pseudo-scientific adventure story level, a genre the Italians call *fanta-scienza*.

Another inhibition is perceptible. The organisers of the exhibition set out to show how social improvement follows technological progress. But the omissions suggest that labour organisation is still a sensitive subject; with the ILO stand as a conspicuous exception, the exhibitors, particularly in the central Italian section, tend to suggest that social benefits have fallen like the gentle rain from heaven. The ILO sec-

tion, tucked away in the interior recesses of the central bastion, corrects this impression with a touching display of early labour documents and pictures of some historic strikes. The inhibition affects even the otherwise admirable separate pavilion of the Italian ministry of labour. This illustrates the story of labour legislation in Italy and the present very complex system of health and accident insurance. At the entry to the pavilion stand the impressive and still moving words of the *Rerum Novarum*, Leo XIII's encyclical on the just remuneration and treatment of workers. There follow some clauses of the Italian constitution concerning labour, but not the two celebrated clauses, 39 and 40, which establish the freedom and rights of trade unions—though Italy, as the central panel reminds us, is a "republic founded upon labour."

Outside the hall of labour, but within the exhibition grounds, Italian unity is celebrated in a series of enchanting pavilions near the river. These illustrate the characteristics and particular problems of Italy's nineteen regions. One can also make a lightning tour of the Italian peninsula by means of a nine-panel circular film, produced by Disney and presented by Fiat. This device rushes you by road, plane and helicopter on a breathless voyage to the beauty spots and the centres of industrial progress. If the regional pavilions suggest that economic unity is still lacking, Circarama offers the assurance that unity by communications, at least, is on the way.

terms for association are going to be. General de Gaulle's broadcast suggests, if anything, that the terms may have stiffened in the last three weeks. This could be a bad omen for Evian.

## Dr Salazar and the Barons

FROM A CORRESPONDENT LATELY IN LISBON

THE ease with which Dr Salazar disposed of last month's attempted coup against him suggests that his foot is still firmly on Portugal's neck. But the Angolan crisis may possibly be supplying, at last, the extra factor that has always been necessary if the opposition is to have a real chance of removing him. The story of the plot (which has still not been reported in Portugal) throws some light on this.

It was, in one sense, a ludicrous affair. The minister of national defence, General Julio Moniz, the minister of the army, and other leaders of the armed services, presented the prime minister with a forty-eight-hour ultimatum to hand over power to a junta headed by General Moniz. Dr Salazar, who had had wind of the generals' move, in return gave them all 24 hours to resign. This the plotters dutifully did, making no attempt to resist or to call out their troops. Dr Salazar took over the defence ministry himself and sacked several senior commanders and staff officers; he also took the opportunity to replace the minister of overseas territories who was in poor health. The changes were not inconvenient for Dr Salazar, since they provided him with scapegoats for the sudden worsening of the Angolan situation; he claimed, quite correctly, that the people responsible for Angola's security had been taken completely by surprise by the scale and ferocity of the terrorism (described in *The Economist* of May 6th, page 549).

In fact the "plotters" were anything but liberals, and their chief motive was dissatisfaction with Dr Salazar's own handling of the Angola crisis. They knew that there had been virtually no attempt to shore up the Portuguese position in Angola after the first major attacks on February 5th, and Dr Salazar still seemed to be a victim of his own contention that the whole trouble was due to Congolese infiltrators, and not to the dissidence of the entire Bakongo tribe in Northern Angola. It was not until the attempted coup that the prime minister started to send out reinforcements that were remotely adequate. The campaign against the rebels is now likely to become terrifyingly harsh when the tropical rainy season has ended. Dr Salazar has thus annexed the policy of his scapegoats, and recreated the image of himself as a strong man.

It has long been held that the army was the one power capable of overthrowing Dr Salazar in Portugal. But the laughable ease with which its plot was squashed seems to belie this. The army is only about 30,000 strong; its officer corps is of low grade and largely without political conviction of any sort. Its members seem more concerned to preserve their privileges, such as they are, than to act as arbiters of the country's destiny. Any serious opposition among its senior leaders is therefore isolated; in any case, senior service positions are political appointments within Dr Salazar's own gift.

Possible centres of opposition or resistance have therefore to be sought elsewhere. But while there is wide popular discontent it is without a focus. No public opposition party is allowed. All members of the National Assembly support the government; the press is so severely censored that it reads like a parody of government handouts; and PIDE, the secret police, eradicates all public expression of opposition, with or without the co-operation of the public prosecutor. With no access to any unbiased source of information, and no experience of political parties, it is small wonder that the Portuguese peasants and manual labourers are unsophisticated about politics. Dr Salazar's sympathisers argue

that the public understanding of political issues is so low that the only alternative to the dictator would be a saviour-figure on the Castro model.

But since Dr Salazar claims credit for everything that is done in Portugal, he also gets much of the blame for what goes wrong. Those who have not done well out of the regime were highly responsive to General Delgado's campaign in the 1958 election, for all that he is generally thought to be a paper tiger and palpably incompetent to run Portugal. In the ludicrously short time that he was allowed, he campaigned almost entirely on a personal basis against Dr Salazar. According to the government figures he gained 23 per cent of the votes, but in private it is admitted that he won at least a third. The opposition, and even some government supporters in their cups, say that the votes split 70-30 in favour of General Delgado.

But the liberal or democratic socialist opposition has very few means of tapping the grassroots discontent that these figures suggest. The Church does not have the overriding position that it has in Spain, and although some of its leaders, like the Bishop of Oporto—who had to leave the country as a result—have expressed public criticism, the greater part of the Church fears a return to the pre-1926 persecutions. Until about five years ago, therefore, only the anti-clericals and the communists provided active opposition. The latter are probably still the strongest organisation. But there have recently been successful attempts to bring together the liberal Catholic and socialist oppositions. These do not hope to overthrow Dr Salazar themselves, but they do hope to profit by any take-over of power that may occur. Their programme, if they ever gain power, is not likely to be over-radical.

Thus, in default of a Portuguese Castro, the chief threat to Dr Salazar at present comes from the small and immensely wealthy group of monopolists who have so far been the chief gainers from, and supporters of, the regime. But any change of this kind would be in the nature of a palace revolution; it would not involve the masses, or the tiny middle class, and would not at first lead to any change of policy. (The name most frequently mentioned as a replacement is that of Dr Marcelo Caetano, the former minister of the Presidency, who now runs Lisbon University.) The removal of Dr Salazar, however, would produce an irremediable crack in the whole system. And if it becomes evident that the present policy in Angola is going to be disastrous—and there is no sign that it will not be—this could stimulate the business men into supporting the removal of Dr Salazar.

IF this happened, the big business men would not only be the main sufferers from the international isolation that an all-out colonial war could lead to, but they would have to pay for a war that Portugal simply cannot finance out of ordinary revenues. Thus, while the large companies may at the moment support Dr Salazar's determination to fight for the *status quo* in Africa, the first sign that this is a hopeless task might be the signal for a move against him. It will be interesting to see whether the Krupp concern, which is planning to invest heavily in the iron-ore deposits of southern Angola, will be dissuaded, together with other foreign investors, from taking the risk without a change of Portuguese policy.

When assessing Angola's potentialities as an Achilles heel it must be remembered that most of the Portuguese immigrants into Angola in the past ten years—who have more than doubled the European population—have been poor whites. Removed from the strict hand of the regime in metropolitan Portugal, the settlers have been ripe for opposition themselves. It was no accident that Senhor Galvão chose Angola as his destination in the Santa Maria. For the moment the settlers' mood is chastened by the wave of black African violence. But if Lisbon's present policy fails a separatist movement will be a possibility.

## BRITISH OXYGEN EXPERIENCE: BRITISH OXYGEN PROPANE

British Oxygen have long experience with industrial gases. Supplied by British Oxygen, propane is a fuel with many applications. Economical to use. And practical to begin using. For British Oxygen provide the cylinders and put in propane storage tanks for you: send experts to see what your needs are: deliver BOC propane on time, when and where you want it. Service round the clock. Technical service. Expert service. This is British Oxygen.

## AMERICAN SURVEY

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

### Our Man in Space

TOGETHER the massive publicity given to Commander Shepard's parabola in space and the modesty and intelligence of the astronaut himself made a propaganda triumph out of a short flight which came a poor second, in scientific achievement as well as in time, to the Russian Major Gagarin's orbit of the earth. With every television set and every newspaper following the flight in detail all Americans felt that they had a proud part in Commander Shepard's success. With every detail being given of the astronaut's hard and intellectual training, of his space capsule, of the flight itself and of the safety precautions, the sympathies and admiration of people all over the world—or at least, over that part of it which was allowed to hear the story—were captured as the Russian secrecy prevented them from being by Major Gagarin's more impressive accomplishment. The gamble of allowing full press coverage of what was obviously a risky undertaking has thus paid off impressively, with the help of the restraint of the official reception in Washington where enthusiasm was not drowned in ballyhoo. In that enthusiasm there was a large measure of relief that, after all the frustrations of the last few weeks, the United States had had a genuine success—and in a typically American way.

Commander Shepard was not a mere passenger into space, as the Russian seems to have been, but a pilot performing tasks which were not essential on this occasion but which will be on later, longer, space trips. To find out how a man would react in space was indeed the chief purpose of this particular flight; it was made when the scientists were ready to obtain this information, not when the propagandists needed the flight for purposes of prestige. In fact, the National Aeronautics and Space Administration has been criticised for refusing to hurry its orderly scientific research or to change its plans in the interests of America's reputation abroad. To emphasise the routine nature of last week's flight, Commander Shepard and his fellow astronauts are already back at work, preparing for the next space trip, probably in June, with an orbital flight coming perhaps before the end of the year. President Kennedy himself showed less interest in speeding up space projects after he took office than he had during the election campaign. But even before last week's success he had evidently decided that more money could be spent usefully on such projects: so had many members of Congress. Mr Kennedy is now expected to cash in on the new assurance by asking for an increase of some \$600 million, about 25 per cent, in next year's budget for space.

Like everyone else, the President is said to be looking for ideas

which would put the United States ahead of the Russians in space, not just in research—communications and meteorological satellites—as it is already, but in spectacular ways that catch the world's imagination. The obvious opportunity is that of landing a man on the moon, but there the difficulty, quite apart from the expense estimated at something approaching \$40 billion, is America's lack of the powerful booster rockets with which the Russians have excelled. Big new liquid-fuelled rockets are coming, but not for years. The question now is whether solid-fuelled or nuclear-propelled rockets with the necessary thrust could be ready sooner, if more effort and money were concentrated on them; many experts think that they could.

### New Brooms in the Pentagon

WASHINGTON, DC

THOSE who fear that the forthcoming talks between President Kennedy and President de Gaulle may not go very smoothly might notice that there is at any rate one subject on which they have much in common: this, oddly enough, is the disciplining of generals. Both favour the firm hand, although so far President Kennedy has not actually provoked a *coup d'état* from the opposite shore of the Potomac River. There stands the vast bulk of the Pentagon building which houses the Department of Defence, and which is now sizzling with the resentment of muzzled generals. It may be too soon to say that they will never assert themselves again, for they have powerful allies; but the days when they could pontificate on American foreign policy in press interviews seem to be over. The burning question now is how far they will be allowed to go in laying down strategy or even in deciding what weapons they need.

There are two strands in the struggle between the White House and the Pentagon over civilian control of defence policy which need to be disentangled if this intriguing situation is to be understood. The first, and uppermost, of these is the simple question of security, which became a public issue after the Cuban fiasco was blamed partly on the way in which the press blew the gaff; this provided the President with a useful red herring for heading off recriminations. But calculated breakdowns in security, clearly designed to sabotage the Administration's changes in military emphasis, had caused the wires between the White House and the Pentagon to run hot long before this occurred. This second strand in the struggle gave the Secretary of Defence an opportunity to show that he was boss.

With the President's backing, Mr McNamara clamped down mercilessly, even wielding his disciplinary powers over senior officers, a few of whom have been posted to undesirable places. The military reacted with an old tactic—overzealousness in carrying out orders. For months now even the most respected defence correspondents have found it extremely hard to get any information beyond hand-outs; in addition, the many universities and special organisations that work on defence problems have failed to get the clearance which is normally given for scientific and other papers after all secret material has been excised. This, as the generals planned, produced keen discontent which would probably

have boiled over, with the press needling Congress into intervening, had not the mismanagement of the Cuban affair confused the security issue.

The real reason behind the new toughness toward the press is professional anxiety over a more serious issue than loose-mouthed admirals. It is the determination of Mr McNamara, and the team of civilian experts which he has installed in the Pentagon, completely to overhaul strategy, weapons and military organisation to the extent, some generals feel, of taking these out of professional hands almost entirely. President Kennedy's revisions to his predecessor's defence budget hinted at this. The revisions were set out as a programme (or, to use the new phrase, as a "programme-package") with cogent reasons being supplied why some projects should be expanded and others (notably the B-70 and atomic bombers) discontinued. The emphasis was placed not on the first cost of any programme, but on its total cost over five years, to point up the vast and growing expense of modern systems of weapons. This emphasised the necessity of choosing early and decisively between possible systems, on the basis of their total cost, possible overlapping and ultimate military purposes.

One of the advocates of this hard-headed, cost-aware, task-conscious approach to the problems of military choice is Mr Charles Hitch, who is now comptroller of the defence budget, a little-known but key position in the Pentagon; his recent book,\* which is a manual for Chiefs of Staff, sets out the necessity of choosing between alternatives according to economic and military criteria that he lays down. Mr Hitch points out that, if the slap-happy starting of new defence projects to serve a single purpose without regard to the ultimate side-effects goes on, the defence budget might go up from \$40 billion in 1960 to \$65 billion or even \$75 billion in 1965. This rigorous logic is not wholly alien to the generals or to Congress, but nevertheless their tendency has been to order—or approve—weapons on a basis of need, even if for only one purpose, of availability, and of estimates of first-year costs; the result has been a wasteful process of cutting back later at the comptroller's desk.

Mr McNamara has set up over a hundred military committees to answer promptly and precisely specific questionnaires from his civilian executives on weaponry, organisation and operations. Several of the replies have been sent back twice and thrice as irrelevant, illogical and unthought through, with an explosive effect on military blood pressure. Dilatory and evasive replies to amateurish questions from civilians has been the technique by which the Pentagon has kept decisions in military hands; hence it was said that a new Secretary of Defence took ten months merely to learn his job. But Mr McNamara, Mr Hitch and a score of others are not amateurs and have won several arguments already, making allies as well as enemies in the Pentagon in the process.

WHAT makes the situation so piquant is that these new brooms may also sweep away from the Pentagon's door the theory that a huge and invincible "industrial-military complex" is over-influencing national policy. On his last day in office President Eisenhower warned the country of this sinister ascendancy, exerted through lobbying in the Pentagon and in Congress by the hundred-odd big defence contractors and the network of sub-contractors which touches almost every part of the economy. There is circumstantial evidence for this theory; President Eisenhower was frustrated by his inability to keep defence costs down. But the real reasons for this lay in faulty procedures at the Pentagon. The defence budget is too complicated and uncommunicative either for congressional committees to criticise and control it or for them to perceive its economic consequences over a period of time. Thus they, and everyone else, surrendered

\* The Economics of Defence in the Nuclear Age. By Charles J. Hitch and Roland N. McKinn. Harvard University Press. London: Oxford University Press. 422 pages. 45s.

to the plea that modern weapons could not be evaluated in the former way; and some spleen was directed against the various independent civilian research organisations which were employed by the defence departments to wrestle with these problems, but whose recommendations, it was alleged, were responsible in part for the unending rise in military complexities and costs.

But in the event it is precisely "operational analysts" from these organisations, serving Mr Kennedy on "as-long-as-wanted" contracts, who may come to the rescue; eminent among them is Mr Hitch himself. They gave Mr Kennedy his insight into strategic and military issues during the election campaign; in his expanded missile and anti-missile programmes they have their reward. They believe that they will bring order and logic into military programming and harmonise it with budgetary planning, the absence of which has led to waste, lack of control and military elephantiasis. But in so doing, many brass-hats complain, these civilian experts under-rate professional experience disastrously.

The next round, moreover, may lie with the generals. Congressional hearings on the defence budget have begun. The generals are required to speak up, and they will; the discontented press is prompting Congressmen to ask the questions which the generals want asked. So far the Armed Services Committees of both Houses of Congress have upheld the decision to cut back the B-70 supersonic bomber—that this should be recommended was one of Mr McNamara's successes—though the committees want more B-52 and B-58 bombers than he does. But the military complex is strong and its professional prestige—as distinct perhaps from that of the actual Chiefs of Staff—rose after the Cuban fiasco. The new brooms will not have it all their own way.

## Nixon out of the West

SIX months after his narrow defeat in last November's presidential election Mr Nixon came back from California last week to celebrate the end of his rival's first hundred days in office with a series of political speeches. He concentrated on the Middle West, the heartland of the Republican party, where many politicians argue that his defeat last year was his own fault, that he could have won with a tougher campaign, the region which sends to Washington the congressional leaders who are working so hard to implant a reactionary image of the Republican party on the minds of the voters. For this tour was the beginning of Mr Nixon's bid to take over in practice what is his in theory, the leadership of the party, never an easy thing for a defeated candidate to do, especially when he has no political base—a State Governorship, a Senate seat—from which to work. For the present the conservatives are his most active rivals and he is convinced that, if they are allowed to dominate the party, then all hope is gone that the Republicans may regain the Presidency or even win next year's congressional elections, their immediate objective.

It is too soon to judge how successful Mr Nixon was in bearding the conservatives in their own dens but he was received with old-time enthusiasm by the party's rank and file. With the end of the new President's honeymoon allowance he felt free to criticise Mr Kennedy; but so far Mr Kennedy's failures have been in foreign affairs, where bipartisanship is now a tradition of responsible statesmanship, and particularly in Cuba, where the Eisenhower Administration had begun what turned out to be a disastrous expedition. Then the successful space flight not only pushed up the President's already booming popularity but also stole Mr Nixon's headlines. However, spicing his usual cleverness with sarcasm, he found what seemed to be an effective way out, suggesting that the Cuban failure was evidence of the immaturity and lack of judgment which he had noticed in Mr Kennedy during the election campaign. His main line of attack was that the new Administration was falling

Do my ears deceive me, Fortescue?

I think not, Sir Henry...

You mean this oasis of calm quiet and co-existent peace is the same echoing chamber that was our boardroom?

Precisely. Cullum have finished the job... and our new acoustic tiled ceiling is in. Even Lord Lud's voice will lose the unpleasantly stentorian tone it assumes after you have announced the half-yearly dividend.

Acoustic tiles, eh. Appealing to the eye as well as the ear, are they not? Dash it, what will they think of next!

Nothing new about it, Sir Henry. Cullum have been recognised as the leading distributors of acoustic tiles since the year Trigo won the Derby. Over 30 years in fact.

You are indeed a mine of sound information, Fortescue. Remind me to arrange a vote of thanks to Cullum at the end of the meeting.

# ENJOY HILTON HOSPITALITY WHEN YOU VISIT THE U.S.A.

Wherever you travel in the U.S.A., you will never be far from a Hilton Hotel or a Hilton Inn, for there are 30 located at strategic points throughout the country. And that's 30 opportunities to enjoy Hilton's world-famous comfort, hospitality and service. Almost every major city in the U.S.A. has its Hilton Hotel, and you can make your reservations instantly through any Hilton Hotel in the world. You can also book through the London Office (17-19 Cockspur Street, S. W. 1. Telephone Whitehall 3061).

far behind in implementing its promises as well as proposing to spend on "soothing" social welfare programmes at home huge sums of money which should be spent on national security and foreign aid—a courageous challenge in an area where unemployment is heavy and isolationism strong.

## *Ethical Jungle*

THE President's message on conflicts of interest, which he sent to Congress at the end of April, is the first comprehensive attack any President has ever made on the problem of ensuring integrity in government service. It is much overdue, as the scandals during the Truman and Eisenhower Administrations showed. The existing laws in this field are an over-grown jungle of out-dated statutes and special exemptions. In important respects they fail to protect the government but at the same time—because they treat experts brought in temporarily from outside as career civil servants—they make it difficult and sometimes impossible for the government to obtain special talents which it needs. Five of the seven conflict-of-interest laws were enacted before 1873; they were drawn up without regard to each other and fail to take account of new problems and complexities.

The clearest example of this is the fact that, while it is illegal for a government employee to use his official position to advance against the government a claim in which he has an interest when this involves property or money, the whole sensitive area of applications for television licences, air routes, sites for electric power plants—which are tremendously valuable—is ignored completely. Yet neither a part-time consultant to the government nor his partner nor his firm may handle any claim against the government; for two years after he leaves the government service his freedom to practice his own profession is limited. This makes it almost impossible to recruit lawyers or accountants, whose firms usually have tax cases in hand. Mr Kennedy wants to repeal these restrictions and substitute a permanent ban on government employees "switching sides" on any issue which they dealt with while they were employed in Washington. The Administration also hopes to introduce uniform standards—and more humane ones—for temporary civil servants with rights to private pensions, and share bonuses and with holdings of shares in companies which do business with the government.

One of the thorniest problems concerns the independent agencies. It is how to preserve their right to acquire information about the industries which they regulate without leaving them open to influence when they are acting in a judicial capacity. Mr Kennedy would forbid any private contacts with members on issues which are supposed to be settled solely on the basis of a formal hearing. But for this the agreement of Congress, which prizes its right to advance the interests of constituents, is necessary. Mr Kennedy did not make the mistake of suggesting that many government servants are venal and he noted, with a pointed reference to the conspiracy to fix prices of the electrical equipment industry, that it is hard for the government to require perfect rectitude when businessmen are flouting the law and tax-payers are fiddling expenses.

## *Reuther on Trial*

FROM A CORRESPONDENT IN DETROIT

MR WALTER REUTHER, the president of the United Automobile Workers' union, is facing a testing time. What happens in the next few months may either make him the most important trade union leader in the country or limit the influence which he has today. It is no secret that Mr Reuther is thoroughly dis-

enchanted with the merger of the Congress of Industrial Organizations, of which he was the head, with the American Federation of Labour to form the AFL-CIO, which is led by Mr Meany, formerly of the AFL. Mr Reuther thinks that the new group has not come to grips with the jurisdictional quarrels between the craft unions of the old AFL and the industry-wide unions of the CIO. He also thinks that the AFL-CIO has been dilatory in bringing unorganised workers into unions and in fighting racial discrimination, particularly strong in craft unions.

Mr Reuther now heads the Industrial Union Department of the AFL-CIO, which is composed principally of former CIO unions. His irritation with the construction, or building trades, units of the old AFL boils down to one simple issue: jobs. When a big factory makes changes to accommodate new machinery or turn out new products, who is to do the work—the industrial union which has the plant under contract or outside craft unions of carpenters, riggers and electricians? Leaders of the industrial unions feel so strongly about this question that there are gloomy predictions that the federation of the AFL-CIO cannot last.

But Mr Reuther must win his own battle in Detroit before he can challenge Mr Meany's leadership of the federation. The contract that Mr Reuther negotiated with the motor-car companies in 1958 expires at the end of August. Negotiations will begin late in June or early July and Mr Reuther's prestige is at stake. If he does not get what appears to be a good deal for the 1,250,000 members of his own union, how can he speak loudly in the inner councils of the labour movement?

THE negotiations between the UAW and the Ford Motor Company, the General Motors Corporation and the Chrysler Corporation (which will be going on separately but simultaneously if previous practices are followed), and with the two smaller motor firms will be the most important of any trade union bargaining in the United States this year. One reason for this, apart from the key position of the industry, is the size of Mr Reuther's union and the other important industries beside motor cars whose workers it represents. Another is that the forceful and dynamic Mr Reuther admits freely that he has no interest in being the kind of trade union leader who is concerned only with such things as wages and hours. He wants his union to be an engine of social, political and economic reform.

In the past—assisted for reasons of their own by General Motors and Ford—he has accomplished a great deal. In 1948 he won a wage agreement which provided that the automobile workers' hourly rate of pay would rise with the cost-of-living index and which gave them automatic increases in wages each year as their share in the return from rising productivity. In 1949-50 Mr Reuther won pensions for workers. In 1955 he persuaded the employers to supplement the unemployment benefits paid by the state. But Mr Reuther stubbed his toe in 1958. The country was undergoing a severe economic recession and sales of cars were the lowest in ten years. Moreover, he had no major social or political goal that could capture imaginations and the "Big Three"—GM, Ford and Chrysler—joined forces for the first time. In reciting the gains of the union under his stewardship Mr Reuther does not mention 1958.

This year, as he approaches the negotiations, he must feel very much as he did three years ago. True, the country is pulling out of the latest economic recession, but sales of cars are not going to be exciting; they will probably be the lowest in the past decade, with the exception of 1952 and 1958. And, once again, Mr Reuther has no new, dramatic platform. There is really only one goal for him this year: more jobs. While it is usual to speak of 1,250,000 members of the UAW, in actual fact several hundred thousand of these men are retired, so that the working members of the UAW at any one time are likely to be less than 1 million,

and at present several hundred thousand of these are unemployed.

For years a militant group of UAW members has been preaching that the only answer to automation and structural unemployment is a shorter work week. Just before the union's convention last month that doctrine crystallised into the attractive slogan of "30-40-60": 30 hours of work a week for 40 hours pay, and retirement on full pension at 60 years of age (under present agreements a worker sacrifices part of his pension if he retires at 60 instead of 65). The UAW is a democratic organisation, but Mr Reuther is a master tactician. He managed to avoid being saddled with a demand for what amounts to an increase of 33½ per cent in wages and one which would be ridiculed by the employers. Instead Mr Reuther got what he wanted out of his special convention: a flexible bargaining programme, including a shorter work week without any reduction in pay, but no number of hours of work specified; longer holidays; early retirement; a ban on contracting for outsiders to do repair and reconstruction work inside the plants (aimed, of course, at the building trades unions); control on overtime (without which, obviously a short work week would not increase employment at all); fully-paid health benefits; and annual salaries for production workers, instead of hourly wages—an idea which was supposed to excite Mr Reuther's followers inside and outside the union but which was greeted, rather surprisingly, with boredom.

No Captive Audience

If these seem to be routine trade union requests, lacking the drama and fire of the Reuther programmes of old, it is because Mr Reuther's thoughts are really directed at Washington. He is more and more convinced that he has about come to the end of the social gains which can be extracted from the companies alone. He would like a national law setting the work week at 40 hours only when full employment prevails. When unemployment rises, the work week would drop until full employment returned. The workers would still be paid for 40 hours—from a fund financed by a new tax. He would also like such things as a programme to retrain and educate unemployed unskilled workers; a national health scheme for the aged; some restrictions on where new plants may be built; and government help to establish international "fair labour standards" so that there would be penalties on imported goods made under what the UAW feels are sub-standard conditions.

What are his chances? Practically none at this session of Congress and his prospects of winning a new labour contract embracing all of his "flexible programme" are not much better. With the present contracts expiring at the end of the current model year the car companies will be under little pressure to reach a settlement in order to avoid a strike. Yet to keep his prestige intact Mr Reuther needs new contracts that can at least be made to look good. Last month, outside the hall where the UAW delegates were meeting, a picket carrying a sign walked slowly

back and forth. This was not unusual, as the union has many strong-minded members. But this man's sign was worth a second glance and a second thought, for it read: "Wake up, Reuther. The job you save may be your own."

## Udall the Second

LAST week Mr Morris Udall won the right to represent Arizona's Second District in Congress, a right which his brother, Mr Stewart Udall, had to resign when he became Secretary of the Interior. The family's reputation as the state's greatest political clan is thus maintained. The grandfather of the two came into Arizona in a covered wagon before it became a state in 1912; their father was its Chief Justice, and other members of the tribe have been prominent in public life. But Mr Morris Udall had to fight for his inheritance and came close to losing it, in spite of his name; he won only 51 per cent of the light vote, partly because his brother in Washington had just ruled, in a most unbrotherly way, that squatters must move off federal land along the Colorado River in the Second District.

Nonetheless, Democrats are relieved that a fairly liberal Democrat has been able to beard Senator Goldwater, the Republican prophet of the new conservatism, in his own lair. Traditionally Arizona is supposed to be a Democratic state, but there is a conservative wind blowing in the West and Arizona, which attracts so many wealthy northerners in search of sun and space, is particularly susceptible to this. Many residents of Arizona are "Goldwater Democrats." The state voted Republican in the last three presidential elections and last year it elected a Republican Governor. During the campaign Mr Halleck, the Republican leader of the House of Representatives, struck a blow for his party's candidate, Mr Matheson, by promising him, if he won, a seat on the House Interior Committee; this deals with irrigation, public lands, mining, parks, Indians and other matters close to Arizona's heart.

Republicans must wish now that they had exerted a little more effort in a contest that turned into a straight battle over President Kennedy's new frontier. Mr Matheson dispensed the pure milk of Goldwater conservatism from his dusty station wagon: he deplored the inflationary irresponsible programme of the Democrats and demanded lower taxes. Mr Udall, flying over Arizona's vast empty spaces in a small aircraft (the Second District takes in the whole state except for Maricopa County, in which Phoenix is situated), defended medical care for the aged, a higher minimum wage, and aid to education—all on condition that the budget was balanced. Both candidates, incidentally, are Mormons.

## Clash in Court

FROM A CORRESPONDENT IN WASHINGTON

LIKE most appellate courts in the United States, the Supreme Court hands down its opinions in printed form. But, unlike most of them, it retains the custom of stating its opinions orally from the bench. Usually this is a routine affair; the Justice who has written the opinion of the Court summarises it aloud and the authors of any dissenting or concurring opinions then state their views briefly. But twice in recent weeks the routine has been broken sharply. The Chief Justice, Mr Warren, took violent exception each time to an oral dissent delivered by Mr Justice Frankfurter. He charged Mr Frankfurter with deviating from his written opinion and, in the more recent episode, arising out of the grant of a new trial to a man convicted of murder, Mr Warren criticised the tone of the dissent; it was, he said, "a closing argument by a prosecutor to the jury," and might have been "properly made, perhaps, in the conference room (of the Court) but not in the

*If you are a big industrial user...*

*... your electricity can cost you much less!*

### YOUR PROBLEM IS INESCAPABLE...

Heavy peak-load charges have always worried the big industrial user. For, in addition to paying for the units he consumes, he must pay a capital charge which is based on his peak demand—even if this lasts for no more than half an hour in the year!

### ... BUT YOUR SOLUTION IS SIMPLE...

The Bristol Siddeley 3,000 kW turbo-generator is a reliable power source which radically reduces peak-load charges for a lower capital outlay than any other installation.

Powered by the Bristol Siddeley Proteus gas turbine engine which gives an exceptionally high output for its size, weight and cost, the Bristol Siddeley turbo-generator delivers 3,000 kW within 2 minutes of a cold start. The set, which starts and runs

automatically and entirely unmanned, can be housed in a small building with light foundations. It also has a remarkably low noise level and is very easy to maintain.

### ... AND THE MONEY YOU SAVE IS CONSIDERABLE

The complete cost of a typical 3,000 kW Bristol Siddeley pocket power station (engine, alternator, switch gear, building and foundations) is £29 per kW—lower than for any other set of comparable power. If, for example, you have an annual peak-load requirement of 200 hours, by using the Bristol Siddeley set you can save £10,000 in one year! And this is after all running and normal amortisation costs have been met.

A Bristol Siddeley 15 MW turbo-generator is now being built, and this first set has been ordered by the Central Electricity Generating Board for service in 1962.

For further information, please write to: Gas Turbine Sales Manager, Power Division, Bristol Siddeley Engines Limited, PO Box 17, Coventry, England.

## BRISTOL SIDDELEY ENGINES LIMITED

TURBOJETS • TURBOFANS • TURBOPROPS • RAMJETS • ROCKET ENGINES • MARINE AND INDUSTRIAL GAS TURBINES • MARINE, RAIL AND INDUSTRIAL DIESEL ENGINES • PISTON ENGINES • PRECISION ENGINEERING PRODUCTS.

courtroom," where opinions were reported only to inform the public.

All is not always sweet reasonableness in the marble-pillared courtroom on Capitol Hill but outbursts like this are most unusual. Nor was there anything in the immediate circumstances that led anyone to expect the Chief Justice's explosion. It is true that Mr Frankfurter did not read his written dissent, but he never does; he delivers his views extemporaneously without looking at the printed opinion. Some of his phrases were sharp; he said that the view of the majority of the court was "indefensible" in one case, "absolutely novel" in another. But again there is nothing out of the ordinary in such language from him or any dissenter and, even if there had been, it would hardly have been worth rebutting for the benefit of the 200 or so persons in the courtroom, most of them tourists. Oral opinions are unofficial and are not recorded.

Evidently the Chief Justice's displeasure had deeper causes. For years now Mr Warren has been in a quite consistent minority of four on the nine-man Court, along with Justices Black, Douglas

and Brennan. They have seen in the Constitution much stricter limits on the powers of government than have their five colleagues on, for example, the rights of Congress to question witnesses and of a city to censor films. In his dissent on the very day of the Chief Justice's latest explosion Justice Black called a decision, upholding the power of the states to bar a man from practising law because he would not answer questions about possible links with communism, just one

in an ever-lengthening line of cases in which individual liberty to think, speak, write, associate and petition is being abridged in a manner precisely contrary to the explicit commands of the First Amendment.

If a majority regularly fails to find these asserted "explicit commands" in the Constitution, it is understandable that the dissenters may become frustrated, passionate and even bitter. They are members, after all, of an institution which has ultimate power on many issues and it is the more trying to be outvoted when that is the situation. Moreover, Supreme Court Justices cannot discuss the issues before them with anyone but their colleagues and, to

## Consumers' Choice

SINCE the war the steadiness, not to say the voraciousness, of the buying habits of Americans—and the stability of their incomes—have done much to moderate the severity of recessions and now once more the consumer is being looked to for a sharp push toward higher levels of prosperity. He should have both cash and credit to spare for the job. In the first three months of this year incomes, after taxes had been paid, fell by \$1 billion at seasonally adjusted annual rates, but spending declined by \$1.8 billion; saving rose to 7.9 per cent of disposable income compared with 6.8 per cent a year earlier. The amount of instalment credit outstanding is still about \$250 million lower, after seasonal adjustment, than it was at the end of 1960.

If the past is any guide the steady upward march in living standards should be resumed soon. People generally spend

about 92 or 93 per cent of what they have left after paying their taxes; this disposable income has been rising consistently since 1948—the base year adopted for a study of the changing pattern of consumption published in the January, 1961, issue of the Department of Commerce's *Survey of Current Business*. (Other information in this article is drawn from the February and April issues of the same publication.) After adjustment for changes in prices the \$328 billion which Americans spent on themselves last year is 50 per cent higher than their expenditures in 1948; spending a head was 22 per cent greater. Such "real" expenditures have grown by 3.4 per cent a year on the average.

Compared with 1948, when people were still restocking after the war, non-durable goods now take only 47 per cent as against 55 per cent of the total; services 40 per cent as against 32 per cent; the proportion devoted to durable goods has remained at about 13 per cent. But if allowance is made for changes in prices the switch to services, which have become so costly, is less impressive; in real terms spending on them has increased only fractionally faster each year than spending on durable goods. For example Americans enjoy better housing and medical care than they

did in 1948, but the cost has gone up disproportionately because of the end of rent control and the rise in medical costs. Some services, moreover, are falling behind the average rate of growth—public transport (the victim of the private motor car); entertainment (spectator occupations are being shouldered aside by hobbies, television and such amusements as boating); and even personal services (though more is spent in the beauty shops, the arrival of drip-dry clothes has hurt the laundries and dry-cleaning establishments).

The other great change has come in methods of financing consumption. As the chart below shows, spending has not even doubled since 1948, but new consumer borrowing is over three times as great. The result is that the servicing of hire purchase debt now absorbs 13 per cent of the average American's income, after taxes, compared with 6 to 8 per cent in the late nineteen-forties. Mortgage payments have risen from 2.5 per cent of disposable income twelve years ago to 5 per cent. Unlike housebuyers and businessmen consumers have never had great trouble in obtaining credit, though they seldom benefit when money is cheap.

## PROFITS TAKE A BOW

Bowing is so deep-rooted a form of greeting in Japan that a businessman may find himself bowing during a telephone conversation.

An increasing stream of buyers is being greeted at Mitsubishi Shoji these days. This is because word is getting around of the high profits in trade with Japan. The quality products of this country's industry are finding wider and wider markets.

Many of these products carry the Three Diamonds mark of Mitsubishi companies. There are over a score of them in light and heavy industries, each handling foreign trade transactions through Mitsubishi Shoji, their big general-trading representative.

For 90 years, Mitsubishi Shoji has been showing overseas buyers the profitable way to trade in Japan. Its branches and affiliates are in all the world's trading centers.

## Coal without Protection?

*The Government are convinced that it was perfectly right to take the measures that they did take in the face of the particular fuel facts of the last few years. As the Committee knows, there was a ban on coal imports except from the sterling area; there were severe restrictions on oil from the Soviet bloc. . . .*—Mr Richard Wood, Minister of Power, House of Commons, 20th February, 1961.

*An application by the Steel Company of Wales to import American coking coal was refused last November. The company subsequently renewed its application and made further representations on the subject, which I am now considering. . . . I am considering the important issues involved in this case with my Rt Hon friend, the Minister of Power.*—Mr Reginald Maudling, President of the Board of Trade, House of Commons, 11th May, 1961.

A FEW weeks after the Government effectively increased the protection of British coal against the competition of one cheaper imported fuel—by a duty on fuel oil which Mr Wood has pretended is simply for revenue—it has had to decide whether to reduce coal's protection against another. The application for a licence to import American coal was first put in by the Steel Company of Wales last October, after an increase in the price of all coal that discriminated against the iron and steel industry in particular by charging it more than the gas industry for identical carbonisation coals, and against most industrial users generally by charging too little of the increase on to large coal and too much on to other grades. It was peculiarly embarrassing for the Government, then as now. Then it was embarrassing because it is believed to have been the Government that made the National Coal Board tip the balance of the increase off large coal, used in the home, and on to the railways, on to industry. Today it is again embarrassing because it is presumably the duty imposed in the budget on fuel oil, and indeed on all the oily mixtures burned in steel-making, whether they come from petroleum or coal originally, that has naturally provoked Sir Julian Pöde into renewing his test application for imports. Departmentally, there are embarrassments too. Mr

Maudling, who has been talking, very firmly, about making British industries competitive by reducing their protection, is formally at least responsible for the decision to licence or not to licence imports. Mr Wood, who ten weeks ago, in the debate cited above, was defending the policy that included this ban on imports on the grounds that

completely unfettered competition in the fuel field would endanger our energy supplies in the long run

heads the department responsible for coal—but also for steel. And if Mr Robens, from one wing, has been arguing that large and continued imports of American coal to Britain would soon push up transatlantic freights and make the cif price of American coking coal as high as the Board's own, has not the Iron and Steel Board, offering "advice of a confidential character," been urging upon the Minister the importance of the availability of fuel to British steelmakers "at prices that are competitive with those secured by other steelmakers abroad"? There should be no haste, however, to gloat over the ungainly postures of these ministers. Anyone who knows anything of the issues concerned must share their discomfort.

SIR JULIAN PÖDE has not disclosed how much coal he wants to import, or the fob price plus freight rate at which he could land it in South Wales. Those facts are his business, but in appealing for public support he would have been wiser to make them public. His company was first quoted as saying that it could get American coking coal for 16s. a ton cheaper than the most expensive British coking coal that it was buying; the next day Sir Julian doubled this margin, saying American imports would be 30s. a ton cheaper—which would surely imply that imports would be cheaper than all the coking coal he is getting? On the Baltic Exchange brokers have been inclined to guess that the first statement was based on the rate at which the company could have obtained tonnage on time charter, while Sir Julian, later, was quoting spot freight rates. Outside quotations suggest that one could today land American coking coal for, say, \$13.35 a ton, or £4 17s.—i.e. \$9.60 fob Hampton Roads, plus \$3.75 spot freight across the Atlantic. On a three-year contract, say, one might have to pay about \$15, or say £5 10s. a ton for it. And this is good coking coal, steady in quality, unlike the pretty odd, sulphurous mixtures that the Coal Board sometimes delivers to British steelworks nowadays.

There are certain fascinating technical economic and political ramifications of fuel for steel making upon which one could dwell. The oil duty, if not absorbed by the oil companies, make oil- and tar-based mixtures less competitive for firing open hearth steel furnaces than say coke-oven gas, but many steelworks are under contract to sell theirs to local gas boards. But as development goes on oxygen will in any case be in a fair way to blow most fuels of all kinds out of fresh capacity for hot-metal steelmaking: oxygen is made mainly out of electricity from the grid, which is made mainly out of coal, but in any case this would shift one of the steel industry's fuel problems on to Sir Christopher Hinton's plate. For large-scale cold-metal shops, electric melting will soon be coming in as a pretty economical direct competitor—usually from the grid, but conceivably generated by steelworks themselves. Fuel oil, even if it has to accept some retreat from the steel furnaces, was by way of edging into iron-making via blast furnace tuyères, though Mr Robens's men have been trying to match it there with techniques for injecting powdered coal—which Steel of Wales would no doubt be glad to use with American coal at Margam. In practice, imported liquid petroleum gases, at present conceivably the cheapest rich fuel in the world—ask the Coal Board—might soon be an even better bet than oil or powdered coal to enrich and to reduce coke requirements in the blast furnace.

As to the quantity concerned in this bid to import, it is not part of Margam's two million tons a year that is in question; it is a substantial proportion of the 23-24 million tons a year that the whole iron and steel industry is now buying from the Coal Board—to start with. For a majority of Britain's major steelworks are on the coast or near enough to the coast to import ore, and most of them, if the Steel of Wales application is granted, are ready with their applications too. It is not very easy to generalise about the competitiveness of American coal for other major consumers in the South. Because a larger proportion of American coal than British is of coking qualities, these do not command as large a premium there as here; so lower-grade coals here might generally compete better with American prices than carbonisation coals. Even so, railway freights put a large margin on to the pithead prices of British coals in many parts of Southern England—from London onwards.

There would be plenty of consumers outside the steel industry who would find it worth while getting quotations for imports, at least. Whether Sir Christopher Hinton would find it worthwhile in the South-West is an interesting question. His oil-firing power stations may have had their costs raised somewhat by the budget, though the Central Electricity Generating Board is probably in a bargaining position to get the oil companies to absorb most of the fuel oil duty. (For that matter, steelworks may be getting them to absorb a major part of it; some of the steel industry's arguments that this duty, along with other charges, has put £2 a ton on to steel costs need not be taken too seriously.)

The only economic questions that need to be asked about this proposal are matters of time. Is there any reason to suppose that American coal landed here will become much more expensive within, say, three years? Very substantial imports by Britain, certainly, would harden Transatlantic freights somewhat, but probably not enough to extinguish all of the American advantage in coals that are particularly expensive and transported a long way by rail here. One would

in any case expect a slow continued hardening in these rates. The American industry, again, has dreams of glory about some vast internal demand for power station coal in the seventies; but there is a lot of cheap capacity to spare, as well as time, between now and then. A change in American import restrictions on oil could alter the fuel picture there, but hardly to coal's advantage; the "national fuel policy" that coalowners there are trying to get adopted might do that, but it would be unlikely to hoist export prices much.

On balance, then, one would expect this imported coal to lose some of its freight advantage anyway, and a good deal more if there were a big demand for imports, of the order of, say, 10-15 million tons a year. What about the chances of bringing British coal costs down within three years, which some would say is the crucial point in the argument? These exist, too, even assuming that miners go on getting more pay. But on the industry's present policies, it would be a lot to expect it to be able to meet American prices in areas far remote from mines for its costlier or less plentiful grades of coal. Mr Robens sometimes says he wants this industry, first, out of the red in two years and, then, on to its competitive feet; and sometimes he talks about a guaranteed market for 200 million tons of coal. He may have the strength and ability, in more ways than one, to achieve both objectives; but they are not the same or necessarily even compatible. On the other hand, a complete dismantlement of protection for British coal now might remove any chance of reaching his first objective, which is the right one.

BRITISH steelmakers are certainly entitled to expect to get their fuel at medium-run competitive prices—to take the formula on which they themselves generally explain their own inflexibility in prices. They have never cut their prices significantly in the short recessions they have run into since the war; on the other hand, steel has come out of its recessions, and has not become much less competitive. They have also, however, enjoyed tariff protection and central planning themselves for years, and it has not made them very inefficient. At the least, the steelmakers could fairly argue that their suppliers should not enjoy more protection than they do themselves (Sir Julian is perhaps carrying the ball this time because the tariff on sheet steel, as it happens, is temporarily in suspense). Steel is a customer that the coal industry ought to be prepared to make big efforts not to lose; if it does, indeed, it raises questions not only about the viability of a coal industry in Britain but also of a steel industry here.

One possible expedient, if these are customers that Mr Robens believes in the medium run an efficient British coal industry ought to be able to keep, would be an immediate shift in prices that corrected some of the discrimination that was widened last September. If the board were to cut prices to some of the industrial customers that matter most to it (and which can no longer be treated as captive customers) and then balance this by increases to railways and the domestic consumer, upon which the Coal Board still probably lavishes too much cossetting concern, it would at least show willing (though the Government would have to show willing first). The board is already planning to get coking coal opencast in South Wales for the Newport steelworks; an extension of this cheaper method of coal getting, particularly for steel, would not be popular with the miners but it would be another

move to show the steel industry that British coal has some hope of becoming competitive again.

If one could trust any National Coal Board to act primarily as a central coal supply organisation rather than a promoter of indigenous coal production, there could be another expedient, less purely doctrinaire but with some rough justice to it. This would be to give the Coal Board a monopoly of imports for a specifically limited period, say three to five years, after which import licences would be granted freely; to alter its statutory obligations, putting the duty to supply the British consumer with coal at the most economical and competitive prices consistent with security of long-run supply ahead of any duty to keep an indigenous mining industry technically efficient at any given size: and to press Mr Robens to start coal

## Defending the Flock

The advance of synthetic fibres has alarmed those whose living depends on wool. Does wool get too little publicity? Do the industry's problems get too much?

WHETHER or not sheep fed and clothed Britain for centuries, wool is no longer the money spinner that it was for Britain, its older dominions, or blood relations. But wool is still the one major industry in which Britain still leads the world, albeit by a narrowing margin. Wool has sunk deep into the subconscious of the average Briton; only the sea has been a richer source of metaphor and tradition, but as wool promoters ruefully reflect, when it comes to a choice in the shops between wool and synthetics, the advertising appropriations of the synthetic manufacturers can sway a man's loyalty even from a product that is as English as the long-bow. The wool industry likes to exaggerate the scale and effectiveness of this advertising. To be fair, it costs a lot to launch any new product today. The manufacturers of synthetics have had to spend lavishly and use the gimmicks that have exposed them to rumbustious gying in wool circles in order to overcome the prejudice against substitutes and the centuries of goodwill behind natural fibres.

For an industry in a fairly steady state of expansion at most points, these worries appear near to neurosis. In fact, not all the members of the diverse wool industry are equally impressed with the urgency of the challenge, and there is precious little agreement either about what should be done or who should do it. Attitudes range from near despair to mild concern or plain indifference: "There is no longer a wool textile industry in Yorkshire," claims one cynic, "only a textile industry that uses wool." Wool-growers know where they stand, though they do not quite see eye to eye. Manufacturers who have stuck to wool are more resolute than those with mixed allegiance. But the major grievances of the British wool textile industry are unconnected with the outside threat to wool, though they have helped to swell the impression that wool is in some sort of dire distress.

The most immediate problem is the price of wool itself. Wool has mercifully recovered from its steep decline before a committee set up by Australia to examine marketing methods has completed its task. Its recommendation on the central issue at the enquiry—for or against the free marketing of wool—will be a momentous decision for the industry.

prices downward now. Adequate statutory formulae would probably not be beyond the wit of civil servants: they could look for example at the duties placed upon the Iron and Steel Board. Such a compromise might give Sir Julian Pode his coal cheaper than he has it now, at any rate, if not indeed cheaper than he had it before September. It might give Mr Robens a little more room for manoeuvre against competitors, consumers, and coal-miners: but also a chance to hold on to such output as he is convinced in the medium run can be made competitive through mechanisation. It would also mean that if British miners choose to strike against imports of coal won by much higher-paid miners who do a much better job, they would be striking against their employer—not against Sir Julian Pode and the Government, Robens intervening.

Arguments about supported prices are inextricably entangled with the problem of promotion. The British Wool Federation, for instance, has submitted its views to the committee in this vein: the present system has worked reasonably well for growers and users; an official pricing scheme could be positively injurious; a reserve price system could be more trouble than it is worth; wool is underrated and synthetics over-promoted. Its principal recommendation is therefore an intensified drive to sell wool with a rider in favour of more research and development.

THE core of the differences between wool growers lies in the small Australian farmers' inclination towards supported prices and their aversion from meddling in wool promotion. Larger producers want a stronger campaign to sell wool, and do not wish to get tied up in a price support scheme with less efficient growers, which might bring them a disproportionate share of the burden and perhaps even reductions in output. The International Wool Secretariat, now controlled by the Australian growers, is campaigning for a big increase in levies for advertising; the small growers were delaying their decision until the wool marketing commission made its recommendations, but they met the larger growers this week and agreed that the IWS programme should be backed. New Zealand and South Africa already operate a reserve price system at their auctions. If Australia joined them the ring would be virtually complete. It is now almost certain that a stronger selling campaign for wool will eventually be mounted, whoever foots the bill; the question is whether this alone will be enough to achieve the objects of its sponsors.

The right sort of institutional advertising has done wonders for some pretty dull commodities, but how urgent is the need for a campaign in support of wool? In America, where consumers have the widest experience of man-made fibres, consumption of these materials (after making allowance for the growth in population) is still rising fairly consistently. After the postwar boost, consumption of wool has sunk back to prewar levels. Cotton has suffered a decline in its share

of total consumption of the principal textile fibres from almost 88 per cent in 1920 to 65 per cent last year. According to the *Textile Organon*, wool's share fell from 11 to 8 per cent, and man-made fibres captured 27 per cent of the market. The longer life of synthetics adds to the difficulties of the fibres with which it competes, and wool, unlike cotton, also suffers from an inability to capitalise to the full its greatest asset, warmth, in a centrally-heated society. A shift towards light-weight clothing is already under way and still has far to go.

However, in most years, more wool is being used, not less, and methods of cheapening the finished product without appreciably lowering its efficiency should widen the market. Wool is gradually being invested with some of the qualities of synthetics, and science is reaching the point at which it can explain and supplement the skills of the trade. Even so, most growers judge the state of wool not by statistics of population growth and expanding markets, but by price. But, to extend Dr Johnson's observation on the price of eggs in Scotland, wool may seem cheap not because wool is plentiful, or pence are short, but because growers expect too much. The sheep-rearing Commonwealth countries already enjoy high living standards, and their production costs are rising.

UNLIKE many manufacturers, the British Wool Federation maintains that changing wool values are not a serious drawback. Because the industry is unintegrated and therefore prone to inventory cycles at many levels of processing, it is itself responsible for part of the violence of those fluctuations. The British wool industry has its tender spots; the shoddy and mungo trades, like pawnbrokers, tend to be neglected as prosperity increases, and the use of synthetics has raised nasty technical problems for these reclaimers of raw wool. But exports of wool tops have expanded threefold since 1938; this is one sector that has gained from the growth of manufacturing centres abroad.

The strength of the Bradford topmakers is their very diversity. For blending yarns, worsted spinners use a great variety of tops of combed and prepared wool, and no one country is ever likely to want a complete Bradford itself. By weight, France's exports of wool yarns are leaving Britain far behind, and Italy has romped past in exports of wool cloth; but in exports of wool tops Britain is still tops and has held on to its share of an expanding market. Topmakers still have problems. Consumption of man-made fibres in topmaking doubled last year; manufacturers are ordering more plant

to handle these fibres and they are actually displacing wool. They account for about a seventh of total consumption in worsted manufacturing and in woollen manufactures more than a quarter. Those unequipped to handle the new business are justifiably anxious in this traditionally overcrowded sector of the industry.

TURNOVER of all fabrics was at a reasonably high level last year. Worsteds sold slightly better than woven woollens, but competition from synthetics held back wool consumption in the expanding hosiery industry. As a whole, the wool industry's exports have hardly grown at all in the past decade, and in the first quarter of 1961 they were under increasing pressure. They therefore account for a decreasing, though still important, proportion of total British exports, today about 6 per cent. Imports are not a source of discomfort: in worsteds, where Britain has a traditional pull (though Japan is a rival), imports are negligible, but imports of woollen fabrics, mostly from Italy, are quantitatively a quarter of British exports.

The burden of the industry's complaints is that, given equal opportunity, it could expand its exports, but when it comes to striking trade agreements, all it gets from government officials is an apologetic, "Sorry, chaps." Following the latest reduction in the internal tariffs of the European Economic Community's common market, Italy will have a 2½ per cent advantage in selling wool cloth to Germany. The industry claims that the averaging of the common external tariff without proper weighting will increase EEC duties on a wide range of exports. Reciprocal cuts offered by the United States as part of an all-round reduction in tariffs do not include wool textiles. Therefore, in the country where the industry has done extremely well and could have been expected to do better, it seems that tariffs will prevent it from achieving its potential. In the American market and elsewhere, the industry faces a sterner tussle with producers like Japan. There is a notion in this industry that a textile industry always degenerates once it is consolidated into large groups; but there is no doubt about the strength of the small number of large Japanese manufacturers in export markets. The British industry claims that the gap maintained between Japanese export and domestic prices amounts to dumping.

In the struggle for exports, Britain slipped back last year. Italy, Japan, France and Belgium each achieved an increase of between 7 and 15 per cent in exports of wool fabrics, while Britain's exports fell by 6 per cent. While total consumption expands, wool growers will not ponder on the loosening link between Commonwealth wool and the British industry. However, despite the overall increases last year, wool consumption in the principal manufacturing countries was in fact steadily declining. Because of the industry's longer pipeline, such statistics have little direct bearing on the prices paid for wool at auctions. Over a longer period, it is clear that increased wool production has depressed prices. That is a situation for which a reserve price system is ill-fitted, though it might effectively smooth out season-to-season fluctuations. If higher prices and expanding production are the aim, a vigorous promotion campaign is vital, and the big Australian pastoral companies are ready to back it. Without matching synthetic fibre groups penny for penny in advertising appropriations, wool sales should get a welcome shot in the arm.

## BUSINESS NOTES

### THE ECONOMY

#### Consumption Turns Up

THERE are several signs that spending is on the increase. First, retail turnover in March was at a record level; the final figures confirm that, seasonal factors apart, sales rose by nearly 3 per cent. Ordinary retail trade takes only about half of consumer spending but, at the same time, at the motor dealers, there was a rush for cars, sufficiently sharp to cause hire purchase debt to rise for the first time in eight months. The check that followed reimposition of official restrictions last spring has been brief.

The exceptionally fine weather in March undoubtedly helped retail business, particularly the clothing and food trades, and the early Easter boosted car sales that month. But the demand for cars still seems fairly firm. Moreover, the March figures suggest that there was a genuine recovery in sales of household goods shops. These sales, which would hardly be affected by Easter, were only 5 per cent lower than a year earlier, compared with decreases of 8 or 9 per cent in the previous two months. Although credit sales had some share in this improvement, it was not sufficient to prevent a further fall, of £3 million, in the debt owed to household goods shops; the rise in total debt came entirely from the transactions of the finance houses. Significantly, in the first quarter of this year, credit sales accounted for only 27 per cent of the total sales of household goods shops, compared with 33 per cent a year ago and 35 per cent two years ago.

The full figures of consumer spending for the final quarter of last year suggest that the tide had already turned then. Discounting seasonal factors, incomes remained virtually constant but consumers' expenditure rose by nearly one per cent; this contrasts with earlier quarters when incomes

had gone ahead of spending. At last, the cushion of personal savings was being used, rather than expanded further. This rise in spending did not reflect an increase in consumption because prices went up a little too. But even a level rate of spending in real terms may seem surprising in view of the slump in durable goods. A little less went on tobacco but more went on most other goods and services—2 per cent more on food and nearly 4 per cent more on drink.

### PAYROLL TAX

#### Backing Down?

WHETHER or not Mr Selwyn Lloyd intended his budget proposal for a payroll tax as a *ballon d'essai*, his Cabinet colleagues are losing no time in puncturing it. Shortly after the budget the Prime Minister consoled a party audience with the reminder that this modest but politically loaded tax on employment might never be imposed. Last weekend Mr Butler went further. Even if it is imposed, "it may not be exactly in the form at present suggested. Hence," he told his farming constituents, "there is a good chance that it will not have to be applied to agriculture this year."

Two days earlier, the Chancellor had himself admitted in the Commons debate on the second reading of the Finance Bill that his proposal suffered from not being able to discriminate between areas and industries. The sole advantage he claimed for it for this year is that no new administrative machine is needed for its collection. The immediate purpose is to have an additional regulator available to withdraw purchasing power if necessary. But since the surcharge on employers' contributions will not even do that—in the short term it will cut private saving, not spending—it is difficult to conceive circumstances in which the government would go through with it. It is now clear that the proposal was a bungled attempt to combine two different objects, regulation of consumer demand in the short term and economy of labour in the long term. Mr Lloyd admitted in last week's debate that if the tax were to be aimed solely at the latter objective, "it might have to be much larger in scale, and also it probably would have to be accompanied by changes in company taxation." It certainly would. One must now hope that the Treasury and the Government have not been frightened off that larger objective by the predictable political protests that have been raised against Mr Lloyd's false start.

### WATER

#### A New Policy for Water

THE memorandum the Minister of Housing and Local Government has sent to water supply undertakings, river boards, and other bodies outlining his proposals for a reorganisation of this country's arrangements for getting water is, in its essence, commendably radical. By any measure there is enough water about at one time or another in Britain. The problem, which has been growing more rather than less critical, is basically an administrative and engineering one of collecting and distributing it on a sufficiently large scale. Demand for water has long outgrown the ability of the water industry in its present form, still numbering more than a thousand separate authorities, to cope properly. Moreover, innumerable firms, farmers and house-holders abstract water from their own boreholes, or from rivers and canals passing by their property, free of any kind of real co-ordination that considers how private helping yourself affects present and potential supplies for other users.

Mr Brooke proposes to super-impose upon this unco-ordinated patchwork of private and public enterprise a number of what he provisionally calls "water conservation authorities," based broadly upon one or a group of river basins. They will take overall charge of all water supply, both surface and underground, in their areas. Existing water undertakings will remain in being, but river boards will be swallowed up by the new structure. The functions of the new authorities will be very wide. They will be responsible for surveying water resources, estimating future demand, sponsoring or undertaking research, and preparing an overall plan. They will oversee all new development by existing supply undertakings, and themselves carry out any new works they consider necessary. They will control the use of water, both surface and underground, by means of licences (there are to be certain safeguards for those who already abstract water for their own use). They will be able to arrange for transfers of water between each other, control pollution, and will be charged with the land drainage and flood prevention duties. As conservation authorities the new bodies will be expected to be self-financing, by charging water users, and will not be aided by the Exchequer, though their land drainage activities will continue to qualify for Exchequer grants. To help in financing new works they will have power to levy a small precept (a maximum of a penny rate is suggested) on local authorities.

These financial powers are rather vaguely outlined in the memorandum and will need further consideration. Since one of the

most important tasks of the new bodies will be to build major conservation projects, adequate financial powers will be essential: lack of resources is one of the basic weaknesses of the present set-up. Relations between the new bodies and existing water supply undertakings are also not made very clear. In principle the new bodies will have overall executive authority, but in practice local interests can be exceedingly stubborn. Mr Brooke's decision not to create a new central water authority but to leave overall co-ordination and appellate (for the new licensing system) functions with the ministry may be the right one. In this respect his proposals could be criticised as not being radical enough. But while a few parts of the country, Essex and Suffolk for instance, suffer from a genuine dearth of water, in general the problem of tapping the natural supply of water is still one that can best be tackled regionally rather than nationally, given bodies sufficiently large and powerful to handle their own area's needs and to arrange for any necessary exchanges with other areas. Management of river basins, as the memorandum recognises, is the key, for it is from rivers that this country will get the major part of its increased water supply—and it is into these rivers, too, that it is discharging more and more effluent.

#### BAC'S JET

### Not too much . . . not too little

FOR better or worse, the British Aircraft Corporation has now committed itself to building a medium range jet aircraft; it has passed the point of no return. The company has taken nearly two years to reach this decision, during which time its salesmen have tried to interest airlines in big jets, small jets, intermediate jets, any jets, on the principle "you name it, we'll build it." They could have taken orders during those years, but none of them big enough to justify tooling for production. The big fish have nibbled but not taken the bait that BAC first offered, a 2,000-mile-range jet, the VC 11, and the little fish were so small that the company threw them back again into the water. Competition in this field has become hot, with Boeing capturing the big orders in America, and de Havilland the only sizeable order for this type of aircraft likely to come from this country. There is not room for another manufacturer and BAC has reluctantly conceded defeat.

The formula that it has now chosen is, quite simply, a jet replacement for the Viscount, operating up to ranges of 1,000 miles. But air transport has moved on since the first Viscounts appeared and it does not follow that every airline that has ever used Viscounts will now consider buying the new jet. Many of them are in fact finding that they can use their big

North Atlantic jets quite comfortably on what used to be considered Viscount routes. But BAC has a shrewd suspicion that it can count on enough orders from small buyers to get a reasonable production run. If by chance a few big customers come in as well, BAC might hit the jackpot again, as Vickers-Armstrongs did with the Viscount. Everything depends, as Sir George Edwards pointed out on Tuesday, on whether competition for the new aircraft develops in the United States, as at present BAC regards this design as the only one of its kind in the market—although the company should perhaps spare a backward glance for the Caravelle.

### Sins and Omissions

BAC's decision to put the new aircraft into production was held up until the company was quite sure that some at least of the cost would be underwritten by the Minister of Aviation. Enough has been lost on the Vanguard—including reputation—to make the company chary of shouldering any fresh responsibilities without government help. Even the risk involved in laying down an initial batch of 20 is not as large as it seems, as ten of these and possibly even 15 are being taken by British United Airways. The airline explained that ten small aircraft suited its operations better than five big ones and this may be one of BAC's main selling points. Three American internal airlines, none of them in the first league, are on the brink of placing orders for delivery in four years' time when passengers will have become so sophisticated that they will not accept anything but jet aircraft even over short distances.

But these airlines are going to want assurances that they will get better service than BAC has recently been giving its customers. Complaints about delivery of spares have been coming in from all parts of the world; in Canada, where eight out of ten Vanguards are grounded for one reason or another, and all Trans-Canada's schedules have been thrown into confusion, one complete Vanguard has had to be cannibalised to provide spare parts for the others. Nor has Rolls-Royce come out of the experience any too happily: customers are complaining that Tyne engines in Canada have been breaking down, burning out, shaking to pieces or merely going through an exercise known to engineers as "hunting," which passengers recognise by its uncomfortable ride.

Nor is BAC quite out of the wood at home. The company now has to explain to the Bristol-Siddeley engine company why the latter has been jilted almost at the church door. The new airliner is in most respects very like a small jet that BAC planned with Bristol-Siddeley with this one exception—it now has a Rolls-Royce engine that gives it twice the range the little Bristol-Siddeley engine would have had. Bristol-Siddeley has every reason to resent the change, since it tailored the engine to BAC's specification and could just as easily have made it larger. But it looks as if Mr

Thornycroft is not willing to back two aircraft, BAC, moreover, is in no mood after the Tyne to try another new engine; the Spey jet it has now chosen will be proved first in de Havilland's Trident. People in the industry are sceptical about BAC's hollow-sounding promises to press on with the baby jet too; its market must have been severely reduced, if not killed, by the aircraft announced this week. But at this time the general feeling must be one of relief that the civil side of BAC—in effect Vickers-Armstrongs—is at last back in the market that it knows best, and that some rational shape is beginning to appear in the plans and policies of the aircraft industry.

#### IN THE MARKETS

### Demand for New Stock

ANOTHER Thursday has gone by without a reduction in Bank rate. The foreign exchange market canvassed the possibility earlier in the week, and sterling weakened a shade as a result, but in its tactics in the money market the Bank of England had signalled caution. This contributed to the slight improvement in tone in the gilt-edged market, particularly among the short-dated stocks, in the middle of the week. The market has remained quiet and before the week-end its listlessness was reflected in the failure of the Glasgow loan to attract full subscription lists. This 6 per cent stock, 1973-75, was offered at 99; it opened at  $\frac{1}{2}$  discount, but on Wednesday the price hardened to  $\frac{3}{8}$  discount. There is still a good demand for new fixed interest stocks with a high coupon, as evidenced by the prompt closing of the lists on Thursday for the 6 $\frac{1}{2}$  per cent debenture, 1981-86, issued by BICC at 99 and for the 7 $\frac{1}{2}$  per cent  $\frac{1}{2}$  preference shares offered at par by Grand Hotels (Mayfair).

The issuing houses do not find it difficult to decide upon the price of a new fixed interest stock or to gauge the potential demand for it. But when it comes to equities their calculations can go badly astray. This is particularly true when the industrial market is booming. The boom in equities has been less noticeable this week than it was at the beginning of the month, but the volume of business has remained high. Prices have faltered, but only a little; and in the middle of the week, buying by pension funds and unit trusts was sufficient to counter profit-taking and to push prices up again. In this sort of market, where the new equity issue appears to be a bargain, the stags are hard to control. ICFC made a brave attempt with the W. D. Evans Golden Produce issue, saying it would clear all cheques received and would exclude multiple applications. This certainly helped, though apparently not all investors read the newspapers or the prospectuses for about 4 $\frac{1}{2}$  per cent of the applications were identified as multiple applications and 103 cheques were returned as unpaid. The

issue was still oversubscribed 48 times and the shares, issued at 11s., opened at 15s. and climbed to 16s. 7 $\frac{1}{2}$ d. before falling back to 15s.

This issue was at least slightly nearer the target than the Penguin one. That cannot be said of the placing of 550,000 of the 2s. shares of Gwent and West of England Enterprises. Mr Julian Hodge did not sell any of his family holdings and half the shares were placed with depositors of the Hodge group of companies. They were placed at 7s. 9d. each and, in a hubbub on the Cardiff exchange, the price at one moment shot up to 30s. It is now 25s. 3d., which is still three times the placing price.

#### BUILDING SOCIETIES

### The Tax Burden

IN the first quarter of this year, the net flow of new savings to the building society movement improved a little. From the figures published by the Building Societies Association, relating to 194 societies whose assets represent about 77 per cent of the movement, it would appear that, after making adjustments for interest credits, new savings of about £120 million in the first quarter were £15 million higher than in the last quarter of 1960. Withdrawals, however, rose by more than £6 million to £84 million. Advances at £95 million (including £10 million under the Government's house purchase scheme)

#### RANGING OVER INDUSTRIES

Surprisingly, a quarter of coal-miners working underground were earning less than £13 7s. a week last October; one out of ten got £10 to £11. But the range of industrial earnings generally, summarised in the table below from the Ministry of Labour's special inquiry, is bigger than might have been presumed.

Three-quarters of men (or women) in the industry concerned earned more than the amount shown in the first column, a quarter earned less. Half earned more, half earned less than the amount in the second column and the top quarter earned above the amount in the third column. The figures are not exact to the last shilling.

|                                | 25<br>per cent<br>less<br>than— | 50<br>per cent<br>earned<br>more<br>than— | 25<br>per cent<br>earned<br>more<br>than— |

were the lowest since the second quarter of 1959. This reflects the drop in receipts at the end of last year and to meet their rationed commitments on new mortgages the societies had to draw upon their accumulated liquid balances; this reduced the average liquidity ratio in the three months to end-March from 15.3 to 14.6 per cent.

The societies, however, have some reason to be less worried about the flow of new savings now than they had in the last months of 1960. But they have another cause for worry: the latest increase in profits tax. This tightens the screw on margins another turn and makes the task of maintaining adequate reserve ratios just that more difficult. The association is greatly concerned and it says bluntly that if the burden of tax continues to increase the working margin will have to be expanded. This can be achieved only by raising mortgage rates. The inference of this statement seems to be that while the increase in profits tax alone will not lead the association to alter its recommended rate on mortgages from 6 per cent if it is followed by an appreciable increase in the composite rate of income tax (at the moment 5s. 4d. in the £ and due for adjustment next month) some increase is likely.

#### BEA AND BOAC

### A Tale of Two Airlines

THE Red Queen would have understood what has been going on inside BOAC; she knew how it was possible to have jam yesterday and jam tomorrow but never jam today. It is doubtful whether anyone else does. For the fourth year in succession, the corporation has made a loss; for 1960-61 it will probably amount to about £1.7 million. The corporation's own earnings are down; in a year of booming traffic it just managed to break even on its own operations. The losses of its subsidiaries are up. And the chairman says explicitly that "the taking of positive steps is made difficult by political and other considerations and it should not be thought that the necessary improvements in financial results can be effected quickly." This is not the way to run an airline. If Sir Matthew Slattery wishes to know how to deal with the "political and other considerations" that stand in the way of putting his airline on its feet, then he could take a leaf out of the book of his colleague Lord Douglas noisily rebuffing Government directives to to a deal with the independent airlines and save Mr Thornycroft a nasty scene before the Air Licensing Board.

The attitude of Lord Douglas is doubtless very obstinate and he is bound to be over-ridden in the end. But he is acting in what he considers the best interests of the airline for which he is responsible and this is precisely what the taxpayers have appointed him to do. British European Airways has

many faults, but it is one of the few nationalised industries to show a consistent profit, amounting in 1960-61 to £1 $\frac{1}{2}$  million. This is £750,000 less than the previous year and the fall seems to be due to a sharp increase in capacity that was not matched by an equally sharp increase in traffic. But the result is still a clear net profit, whereas BOAC, in spite of extensive reorganisation, remains in the red. For all its patently good intentions, BOAC seems unable to move with the speed needed to stamp out trouble before it has taken root. Its engineering reorganisation is yielding excellent results, but men grew old, waiting for them to come to fruition. Drastic steps were promised to deal with the losses of subsidiaries many years ago. What obstacles can Sir Matthew have met now that were not known then? He is running an airline planning for a supersonic future, but his own internal organisation moves at a pace more suited to laying down port wine.

#### SOUTH AFRICA

### Siege Economy

AT the end of last week South Africa raised its Bank rate from 4 $\frac{1}{2}$  per cent to 5 per cent and announced a major tightening of import controls. Imports classed as luxuries are virtually excluded and severe cuts are imposed on imports of cars and textile piece goods. The restrictions are designed to save £100 million a year, or around one-fifth of the import bill. They have been necessitated by a renewed fall in South Africa's reserves, to 163 million rands (£81 $\frac{1}{2}$  million). This constitutes a new low point since the Sharpeville disturbances, and indicates that the recent drawing of £13 $\frac{1}{2}$  million from the International Monetary Fund has already been used up. Application for a further drawing is expected in some circles, though this would not be available so freely as the first 25 per cent.

While the import restrictions were designed to offset the capital flight, and the increase in Bank rate and in market interest rates to check it, the outflow of capital in fact seems to have accelerated in the past week. Further heavy sales of South African shares have come from the Continent. There are some fears that while the South African authorities have so far confined restrictions on transfer of money to their own residents—these restrictions were also tightened last week—they might at a later stage feel forced to extend exchange control to non-residents. So foreign investors have been getting out when they can, even at depressed prices. Here is a crisis of confidence that will be very difficult to break out of. So South Africa moves towards a siege economy. As the Johannesburg *Financial Mail* dourly concluded on the eve of last week's measures: "Since that drift towards a siege economy flows from the government's own policies, the government will be wise if it accepts the consequences without delay."

## TRANSFERRING MONEY

## Jolt from the GPO

FOR two months now the public has had available a new means of transferring money through the banks. Instead of settling each bill with a separate cheque sent to the creditor, it has been possible to instruct a bank, on the credit transfer forms provided, to make the payment directly to the creditor's account, giving a single cheque or cash sum to the bank to cover the total. To take advantage of this economical system, however, it is necessary to know two things: first, where the creditor has his account, and secondly, that the system exists. Since few people know either, there has been no rush.

That has not been unduly disturbing to the banks. From the first, they decided to play it slow. They had no wish to see congestion at their counters suddenly increased; less understandably, they seemed undecided whether to induce existing customers to switch to the new system. So while booklets explaining the new facility were made available to customers who cared to take them, these were not backed by advertising as they have to be if the new system is to be put across. The banks may have felt they have done their part; they have provided, as their

## BUSINESS NOTES

critics urged, a comprehensive system for credit transfers. This week, however, the Postmaster-General has intimated that they will not have a clear run.

Speaking to that militant body, the National Federation of Sub-Postmasters, Mr Bevens gave the clearest intimation yet that the Post Office will after all introduce a giro system of its own, to provide a simple means of credit transfers between Post Office Savings accounts.

I feel strongly that it is a project upon which the Post Office should embark and I hope to have some news both for you and the country in the course of the next month or two.

Many bankers had thought that their own improvements had made a Post Office giro superfluous. Not everyone would agree. And it is not every day that a nationalised industry brings competition into the cosy preserve of private oligopoly.

## STOCK IN TRADE

## A Reconciliation of Opinion

THE valuation of stock in trade and work in progress has long been recognised as one of the most difficult of accounting problems. Circumstances vary

## THE ECONOMIST MAY 13, 1961

so widely that no one basis of arriving at the amount to be shown for stock is suitable for all types of business. Differences of opinion have been frequent both in the commercial world and between those responsible for preparing business accounts on the one hand and the Inland Revenue on the other and these differences have led to much controversy between taxpayers and inspectors, both in private negotiations and in cases taken to the courts. Last November the Institute of Chartered Accountants, after careful examination of the principles involved, published its recommendation on stock. This recommendation, which was broadly in line with that of the Royal Commission on the Taxation of Profits and Income, provided that the basis adopted must be followed consistently, that it should throw up a true and fair view of the trading results and, as is obvious, that all stock should be included. Subject to this traders should be permitted to adopt any proper method which is suited to their business.

The taxation aspect of the matter has recently been discussed by representatives of the Institute and of the Inland Revenue and the text is now published of a letter from the Chairman of the Board of Inland Revenue in which he states that the Revenue find the recommendation largely acceptable for tax purposes. There are some reservations. The Revenue thinks that

## A Measure of Petrochemicals

THE growth in the use of petroleum as a raw material for chemicals has been one of the most striking developments in the industry during the last ten years. Just how much so has been estimated by Mr H. P. Hodge, of Esso Petroleum, in a paper read to the Royal Institute of Chemistry and summarised in *Chemical Age*. He shows that whereas 9 per cent of organic chemicals were produced from petroleum in 1949, the proportion had risen to 47 per cent by 1959 and will, he predicts, reach 65 per cent by 1962.

The only old process that has declined in this period, however, is fermentation for the production of ethanol; production from petroleum, by way of ethylene, has been fast replacing fermentation in the last few years; in the early 1950's it was the other way round, with ethylene being produced from ethanol, not from petroleum. The other traditional raw materials for organic chemicals—coal tar, acetylene and coke oven gas—have all enjoyed an increase in output in the last decade, despite the rise in petroleum's share of the market. The amount of coal tar used doubled; most of this increase representing a switch in production from motor benzol to chemical grade benzene. Supplies of this should be adequate, Mr Hodge believes, in the

immediate future, though there are plans to produce some benzene from petroleum.

The rising demand for plastics, synthetic rubber, detergents and synthetic fibres accounts for the great increase in the production of organic chemicals: it rose by 10 per cent a year for the ten years 1949-1959, while that of chemicals from petroleum rose 37 per cent a year. Mr Hodge expects that the rate of increase will be even faster up to 1962. Outside observers may suspect that it would be safer to say that there will be an even greater increase in capacity—not all of which will necessarily be fully used immediately upon completion.

The production of inorganic chemicals from petroleum has grown even faster than that of organics, but it is smaller in total and a smaller proportion of all output of its group. Carbon black, ammonia and sulphur are the only chemicals concerned; output of the former has risen from about

15,000 tons in 1949 to 130,000 in 1960. Ammonia began to be produced from oil, via hydrogen, at the Shell plant at Shell-haven in 1959, and the new ICI and Fisons plants will make much more after 1962. Sulphur is a somewhat undesirable constituent of crude oil; its extraction was encouraged at the time of the Korean war and has gradually grown since. Output of all three, Mr Hodge estimates, was 295,000 tons in 1960.

Price and availability have both aided the growth of petrochemical production; almost any organics can be derived either from petroleum or from coal or other raw materials. In some cases, such as ethylene, both factors have worked together in favour of petroleum as the raw material; with benzene, by contrast, petroleum seems to have little if any advantage. The ambitious plans of the oil industry to increase its capacity for petrochemicals should ensure that the advantages that they have had in both these factors will be preserved in the immediate future.

Middle East Commerce —  
a big future ahead

More factories, roads, dams, bridges, irrigation canals, airports—big new projects are being started in Aden, Bahrain, Iraq, Jordan, Lebanon, Libya, Morocco, Qatar, Saudi Arabia, Sudan, Tunisia and the Egyptian and Syrian Regions of the U.A.R.

The Arab Bank was established in this area in 1930 and has been playing a vital role in its economic development. Its fully paid up capital of £5,500,000 is larger than that of any other bank in the Middle East and North Africa. The 45 branches of the Arab Bank are distributed among the most important business centres throughout the Arab world.

The Arab Bank can serve your interests in the best possible way. It is happy to give you useful information, introductions and service.

## TIME'S ON YOUR SIDE WITH INDUSTRIAL DIAMONDS

Industrial Diamonds in one form or another help to make practically everything from watch cases to washing machines. Only diamond tools can cut, grind or polish with the speed and accuracy needed today.

To find out if diamond abrasives, diamond tools or diamond impregnated wheels can help you in your problem, please get in touch with the Industrial Diamond Information Bureau. This Bureau is backed by the world's largest laboratory devoted to diamond technology - The Diamond Research Laboratory in Johannesburg. For information and advice, without obligation, please write to the address below.

### The Industrial Diamond Information Bureau

2 CHARTERHOUSE STREET (DEPT E), LONDON, E.C.1.  
Telephone: Fleet Street 7157

the Duple case ought not to be taken to encourage the exclusion of overheads where there has been no relevant change in circumstances but it agrees that fixed overheads may need to be adjusted by reference to the normal level of activity. Replacement price, as an alternative to net realisable value, is not agreed as a matter of general principle but in practice is now accepted for stocks of raw material awaiting processing and in future will be accepted for industries where the raw material content forms a large proportion of the total value of stock in process of production and where the price of raw material is liable to considerable fluctuation.

These reservations by the Revenue in no way detract from the importance of the agreement which has been reached. Principles of stock valuation have now been settled which are backed by the authority of the chartered accountants and Somerset House; this should help greatly towards the establishment of sound practice and should remove many difficulties hitherto encountered in computing tax liabilities. This accord will give great encouragement to the research activities of the Institute and it shows that the rethinking about fundamental accounting problems which has been going on in recent years is well worth while.

#### AID TO INDIA

### Up to Europe

BRITAIN has agreed to a further loan to India, of £10 million, in addition to the £30 million development loan approved last autumn. Both loans are made under section 3 of the Export Guarantees Act and are tied to purchases from the United Kingdom, but not to specific products. They form part of Britain's contribution to India's third five-year plan, and drawings are to begin immediately. Britain has also agreed to provide assistance of up to £20 million to finance the extension of the Durgapur steelworks, although the form the assistance is to take has not yet been decided upon.

The adjournment of the Washington meeting of the "Aid India Club" has produced a spate of unconfirmed reports, coming mainly from New Delhi, on the state of negotiations. It is reported, but unconfirmed by the United States Treasury, that the United States has offered India \$1 billion to help meet its foreign exchange needs during the first two years of the five-year plan, on the condition that other members of the consortium—Britain, Canada, West Germany and Japan—are willing to match this sum. This projected total of \$1 billion a year is just about what India reckons it needs. In fact, the collective offers of the European countries fell short of the American figure by \$350 million and an adjournment was necessary while the delegates returned to consult their respec-

tive governments on the possibility of increasing their aid offers. The delegates will reassemble at the end of this month.

#### STEEL

### Stocks on the Turn?

THERE has been a quite sharp reduction in the amount of steel going into stock, but not to the point yet where in total stocks have begun to fall. With about half of the returns in from the March census of users' and merchants' stocks, the Iron and Steel Board puts the increase for the first quarter at about 60,000 tons, markedly less than the increase of 267,000 tons in the last three months of 1960 and the average quarterly gain of about 250,000 tons throughout last year. The motor manufacturers have been running down their stocks, but this has been more than offset by increases elsewhere—especially it seems in merchants' stocks.

#### INLAND STEEL CONSUMPTION ('000 tons)

|             | Actual | Seasonally<br>Corrected | Per cent<br>change over<br>previous year |
|-------------|--------|-------------------------|------------------------------------------|
| 1959 :—     |        |                         |                                          |
| 3rd quarter | 2,983  | 3,280                   | + 1.9                                    |
| 4th quarter | 3,462  | 3,370                   | + 12.3                                   |
| 1960 :—     |        |                         |                                          |
| 1st quarter | 3,799  | 3,660                   | + 21.6                                   |
| 2nd quarter | 3,878  | 3,770                   | + 14.9                                   |
| 3rd quarter | 3,435  | 3,780                   | + 15.2                                   |
| 4th quarter | 3,729  | 3,630                   | + 7.7                                    |
| 1961 :—     |        |                         |                                          |
| 1st quarter | 3,856  | 3,720                   | + 1.6                                    |

These provisional estimates of stocks suggest that the rate of steel consumption during the first quarter, on a seasonally corrected comparison, was hardly any higher than the average for 1960, though it was a little more than in the final three months when car output reached nadir. The levelling off of consumption and the vastly lower rate of stock building has now noticeably affected output. In both March and April steel production fell below last year, though last month's output—at the weekly rate of 471,700 tons—was just a shade higher than in March.

#### ECGD

### Record Surplus

THE record credit balance of £8 million on operations of the Export Credits Guarantee Department for the year to March 31st, following the surplus of £5 million in the previous year, should remove any suspicion that the recent cuts in premiums on medium-term business may not have been justified on strict commercial considerations. The cumulative credit balance is now up to £29 million. The Department's Secretary emphasises, however, that its liabilities increased sharply over the year from £542 million to £640

million, of which £42 million was on medium-term credits. The cumulative credit balance cannot be regarded as clear profit since a substantial part of it represents premiums already received on liabilities that may take some time to run off. Total new business insured by the department during the year was a record at £743 million, compared with £695 million in the previous year.

#### SAFETY

### Consumer Unprotected

A SAD little bill died at four o'clock last Friday afternoon, killed by what the joint under-secretary at the Home Office described, with commendable restraint, as "that small but valiant body" of Tory back-benchers. The origins of the bill, a private member's bill adopted by the Government, went back to the interim report on safety published fourteen months ago, and that report was itself inspired by the epidemic of spontaneous fires in oil heaters, many of which had tragic results, and all of which were frightening. Here was a minor emergency over which the Government was helpless to act. It has powers neither to ban the sale of oil fires until means had been found of making them safe, nor to force manufacturers to make safe designs when the fault had been discovered. It took a private member's bill to make the new standards compulsory. Suppose, the committee argued, history should repeat itself and another apparently harmless piece of household equipment should turn out to be a sleeping tiger, the government would be just as helpless as it was when the dangers of oil fires were first discovered. And no doubt the committee remembered that retailers were in no hurry to act either. From this the committee concluded that the Home Secretary should have powers to issue safety regulations whenever these were thought necessary and to ban the sale of goods not conforming to them. This is just what the murdered bill was intended to do.

It may not have been a very clever little bill, and it looked as if it might have given the Home Secretary dangerously wide powers over an infinite range of goods, but the hearts of its sponsors were in the right place. Its whole purpose was to get dangerous goods off the market quickly. Anyone who reads the reports of consumer organisations like *Which?* on such things as electric blankets, or looks at the statistics showing a startling rise in the number of electrical fires, will realise that there is room for tightening up. When a little girl is nearly strangled on a wringer of a washing machine, is it carelessness on her part, or should some guard be fitted onto the wringer? There is probably not a great deal of dangerous home equipment on sale in this country, but unless it arouses as much public feeling as the oil heaters did, there is not much chance that Parliament

would spare time to deal with it when it is discovered. The back-benchers who killed the bill because they disliked, so they said, delegated legislation, ought to ask themselves whether they would be ready to pass a separate bill to deal with every minor domestic hazard as it occurs.

## RUBBER

### Bought for the Bounce?

DESPITE a seemingly inactive Singapore market, dealers were surprised by the amount of rubber shipped from Malaya in March. Exports were officially stated to be 109,000 tons, 25,000 higher than in February and 20,000 tons higher than in January, when interest in rubber was at its nadir. The immediate supposition that one or two large purchases had gone unnoticed proved wrong; in fact, the increase was well distributed. Exports dropped back to 89,000 tons last month, but disappoint-

## BUSINESS NOTES

ment was shortlived. Rumours of large purchases by Russia were a stronger influence than even Goodyear's forecast that it will produce a near substitute for rubber at 25 cents a lb. Exports in May might well include significant shipments carried over from last month, but in themselves the figures for the first three months of 1961 show signs of recovery.

In the precipitous fall in the price of rubber since the peak of a year ago, the commercial pipeline was probably partially emptied, and the improvement in exports, if it has any significance at all, may as yet be caused by nothing more substantial than the topping up of the pipeline ready for a return to a higher level of manufacturing. What is known about consumption suggests that the recovery has not yet gone far. Political troubles and the constant teasing of the American public with projections of an imminent economic revival have probably induced people who have gone short of rubber to fill in the gaps. Some Americans are said to have returned to the market as speculators, and with spot

## THE ECONOMIST MAY 13, 1961

rubber at 24d. a lb for the premier grade, they were possibly persuaded that the floor was near. Spot rubber has fluctuated between 24d. and 27d. a lb since the beginning of the year and is currently near the upper limit. But the market has little on which to base a stronger rally in prices.

## CUNARD

### Before the Subsidy

FOR the fourth successive year the profits of Cunard have fallen and for the third time the ordinary dividend has been cut. Last year, the operating surplus fell from £5,040,000 to £4,542,000; the net profit came down from £901,000 to £668,000; and the dividend has been reduced from 8 to 6 per cent. In referring to the fall of £498,000 in the operating surplus, the directors say that strikes in 1960 cost the company about £900,000. Without the

Group total assets exceed £445 million.

## PARKING

### Eyes on Woolwich

THE parking scheme that Woolwich Borough Council is introducing on Monday will be closely watched by other local authorities for a number of good reasons. First of all it is the most comprehensive yet to be seen in Britain. Space has been provided, at kerbside meters or in parks off the street, for all the cars that the council has counted as parked inside the area. There are two off-street parks for 60 cars at 5s. a week solely for residents; places for another 360 at meters, at 6d. an hour for up to two hours, to cater for shoppers and visitors; and room off the street for 650 longer parkers at rates of up to 2s. 6d. a day. Secondly, the scheme is on a very small scale, covering at the most an area only a mile across. Since free kerbside parking will still be possible such a short distance away, it has been doubted whether all the parking space provided will in fact be used. But if the scheme is a success then other authorities will be encouraged to follow suit.

The third point of interest is that it incorporates Britain's first completely automatic garage, the "Autostacker," which has been developed by a British company. The present minor wave of garage building (one can hardly yet call it a boom) consists mostly of ramp type garages, and Woolwich would also have built one if it had known at the outset that an adjacent piece of War Office land was going to come on to the market. Mechanical car parks are costlier and their reliability is still doubted, perhaps rather unfairly. But they can cram more car spaces into a given site, fewer staff are needed to run them, and the risk of damaging cars is lower.

The "Autostacker" can be operated by one man. The one at Woolwich will take 256 cars and has eight entrances, so that at rush hour one car can be parked or removed every 10 to 15 seconds. Basically, the "Autostacker" consists of a series of car bays either side of a central gallery containing the lifting and transporting gear. A car is parked, braked, on a con-

veyor at one of the entrances and the driver collects a key from the control kiosk. This key determines in which space the car is to be stacked and removing it from the control panel starts up the process of parking. First the conveyor in the entrance bay moves the car forward on to a "transporter" resting on one of the lifts, then the lift rises to the pre-selected floor, the transporter moves along to the chosen parking bay, into which, finally, further conveyors carry the car.

The Woolwich "Autostacker" cost about £107,000 (nearly £420 per car space) to build, and the site was bought, rather cheaply, two years ago for £50,000. The economic charge for all day parking would be about 5s. But the rental from Shell-Mex and BP for the petrol forecourt and from Dagenham Motors for the car show-rooms on the ground floor, plus a subsidy from the council out of its net revenue from the street meters, has brought the price motorists will actually pay down to 1s. 6d. for four hours and 2s. 6d. all day.

All the most particular kinds of steel for razor blades and nuclear reactors are made by Samuel Fox which is one of US that's United Steel and they have these big electric arc furnaces which are so noisy you can't think when they switch on but all right when they're being tapped into ladles so long as you don't stand too near which I wasn't but just imagine that white hot stuff was

strikes, it seems, there would have been some slight recovery in earnings but, as the directors point out, the latest increase in sea-going wages only took effect for four months last year. It will be felt, they add gloomily, for the full twelve this year. This, it needs no emphasising, is the company which will get a big subsidy from the Government to build another "Queen", and its recent profit record must cause as much despondency in Whitehall as it does in Throgmorton Street.

### COTTON GOODS

#### Cool Hongkong

TWO officials from Hongkong have flown into London this week to discuss cotton exports but not, as might have been expected from the recent furore, to discuss the future of voluntary limitations on exports to this country. For Hongkong has now a far larger fish to fry. If one view on the motive behind the American initiative in calling for an international conference of important importers and exporters of textiles is right, Hongkong's largest export market might soon be restricted by quotas. The American government is under persistent pressure to limit imports, and Japan has already accepted a degree of voluntary limitation. At a meeting of the colony's financial secretary and director of commerce and industry with American officials on their way to a Gatt conference, the future scale of imports from Hongkong will be discussed. Hongkong's exports to the United States were high last year, possibly because of the threat of an imposition of restrictions, but they fell sharply in the first three months of this year, causing under-employment in the Hongkong industry.

The officials from Hongkong will not discuss imports into the United Kingdom except where they are affected by the discussions with American representatives. The Government, as Mr Erroll said on Tuesday, is unaware of any direct communication between the industry in Hongkong and the Cotton Board on this particular topic, for the simple reason that there has been none. Lord Rochdale's recent visit to the colony to discuss the problem of duty-free imports with the industry's leaders was not a direct communication because the chairman of the Cotton Board went in a private capacity.

Official contact must be made soon because talks would have to begin in earnest by September to allow reasonable time for a new pact to be concluded by, say, November. The Cotton Board was thought to be ready at least to go through the motions, even if the Hongkong industry remained adamant in its refusal to discuss the renewal of export restrictions before the current agreement expires at the end of January next. The American problem has now injected more uncertainty into the future of these imports. If America restricts imports from Hong-

kong, does that weaken or strengthen the case for less restriction on imports into the United Kingdom? Most cotton textile industries in developed countries are complaining of competition from cheap Asian imports, and Lancashire would be the last to admit that its plight was less serious than anyone else's.

### CONSTRUCTION

#### Bricks without Straw?

THERE is a whiff of Galbraith in the latest annual report of the Federation of Civil Engineering Contractors. The bigger road programme is dutifully welcomed but "there is much more to be done in the public development of the country. For instance, schemes of water supply, sewerage, and flood prevention are long overdue" and the Government and local authorities are "urged to recognise and act upon the necessity of keeping such works abreast of other forms of capital investment." This is not the usual criticism made of the amount of public investment in this country—in contrast to the United States, the main target of Professor Galbraith's pen—although certain kinds of public works do seem to be stuck rather far back in the queue here. But this is the federation's way of embellishing its claim that the contracting industry could cope with more

work. It could perhaps have quoted in evidence the prices that some contractors are still tendering for road projects. Competition for these jobs does not seem to be quite as intense as, say, a year ago, mainly it seems because more firms are now choosing not to bid so frequently.

But in general the building and civil engineering industry is far from running into imminent recession. Output rose, in volume, by about eight per cent last year and a further increase of about six per cent is reckoned for this year. The supply of labour and certain materials is, moreover, still generally tight. Craft labour is particularly difficult to recruit, and most of the extra output the industry is counting on will have to come from increased productivity. Supplies of steel reinforcing rods, which became very short last year, are now rather easier and imports, plus a five per cent increase in production, should ease any tightness of cement supplies. The principal shortage now is of bricks, in spite of the slowing down of the rate of house building. But this is mainly a local problem: some brickworks in Scotland, for instance, are producing straight into stock, while delivery periods of well over six months are the rule for certain of the more popular types of brick in the south of the country. Brick production is expected to increase by about four per cent this year, from about 7,300 million to about 7,600 million, but this is not expected to cut very far into delivery times.

### SHORTER NOTES

There has been a further swift succession of bids for Hector Whaling; for the second time its directors have recommended acceptance of the offers from Clan Line. These have been raised by the addition of bonuses for acceptances by this Friday (May 12th) to 10s. 6d. for the ordinary shares and 26s. for the preferred shares. The latter bid (not for the first time in this struggle) matches a similar offer from the original bidder, South Georgia Company, which already holds one fifth of the total votes. Its offer for the ordinary shares remains unchanged at 10s.

For the year to March 24, 1961, the total revenue of the Stock Exchange rose from £1.2 million to £1.5 million largely as a result of increases in members' subscriptions, which were raised last year, and in quotation fees. The transfer to the special fund for redemption of debentures and towards the rebuilding of the Stock Exchange was raised by £200,000 to £327,000. No claims were made on the compensation fund but some are likely to be considered in the current year and the provision to this fund was increased by £75,000.

Horlicks has offered four of its 5s. ordinary shares plus 60s. in cash for every £3 of ordinary stock in Burt Boulton and Haywood, the timber importers and tar and paint manufacturers. Horlicks already holds about 11 per cent of total equity of £1,319,000. The directors of Burt Boulton are opposing the bid on the grounds that there is no advantage to the company in becoming a subsidiary of Horlicks.

Following the sale of its commercial vehicle interest to Associated Commercial Vehicles for £150,000 ordinary ACV stock and £950,000 cash, Thornycroft is to reduce its capital. The directors propose to repay the preference capital and repay 8s. on each £1 ordinary share and subdivide the remaining 12s. shares into shares of 4s. each.

### COMPANY MEETINGS

This week, start on

Page 705

# COMPANY AFFAIRS

## Marks and Spencer

ONCE again the results from Marks and Spencer seem to justify the extremely low yield on the shares. They exceeded expectations on every count—except perhaps on the rate of the proposed scrip issue, which is to be on a one-for-ten basis. The ordinary dividend has been raised by 7½ points to 47½ points and absorbs most of the additional available profit.

As in past years the rise in profits has more than kept up with the increase in sales, and profit margins have widened. Not surprisingly total sales for the year did not maintain the 17 per cent rise recorded in the six months to the end of September but the increase of 12½ per cent

|                                    | 1960<br>(£'000s) | 1961<br>(£'000s) |
|------------------------------------|------------------|------------------|
| Sales .....                        | 148,000          | 166,500          |
| Trading profit .....               | 20,116           | 23,101           |
| Depreciation and repairs .....     | 2,310            | 2,606            |
| Tax .....                          | 8,725            | 10,200           |
| Net profit .....                   | 9,081            | 10,295           |
| Ordinary dividend .....            | 5,319            | 6,317            |
| Ordinary dividend (per cent) ..... | 40               | 47½              |
| Trading profit/sales .....         | 13.6             | 13.9             |
| Net profit/sales .....             | 6.1              | 6.2              |

in the full year was well above that recorded by the multiple stores. Clearly Marks and Spencer is still adding to its share of the market, as the numerous extensions to stores are completed. Last June Sir Simon Marks said that 22 projects had been completed in 1959/60, that 24 substantial schemes were already under way and that a further 12 would follow immediately.

This very big programme is the key to Marks and Spencer's growth; the programme is the biggest ever carried out by the company in a two-year period and it should make a sizeable contribution to profits. Clearly the least that shareholders will expect in the current year is that the latest dividend rate will be maintained on the enlarged capital. Even so, with the "A" shares at 115s. 3d., the indicated yield is only 2½ per cent.

## Boots Pure Drug

LIKE Marks and Spencer the shares of Boots Pure Drug yield about 2 per cent and thus the results have to be very good indeed to please the market. Marks and Spencer managed to achieve this and the 5s. shares of Boots were pushed higher in anticipation of equally good results. In fact the group's profits before tax but after a higher depreciation charge of £1.8 million, against £1.6 million, rose from £7.6 million to £8.8 million in the year to March 31st last. The ordinary dividend is 12 per cent, against the equivalent of 10½ per cent and the market's minimum expectation of 12½ per cent. The cover for this bigger payment has been reduced from 2.3 to 2.2 times.

On these results the shares fell back by 2s. to 32s. 4½d. Boots is now in its second year of a five year programme of rebuilding and modernisation, costing about £15 million, and clearly it will be some time before the full fruits of this programme will be seen. But in 1959-60 20 branches were modernised and six new branches were opened and these must have made their contribution to the latest increase. This did not match the 50 per cent rise in profits in 1959-60 and bears out the chairman's earlier forecast that the company was budgeting for increased profits "on a much more modest scale." Boots' prospects both in the medium and long term remain as good as ever but investors must not expect miracles.

## Guest Keen and Nettlefolds

AGAINST the recent trend in equity prices, which were generally lower at the end of a very active account as a result of a good deal of profit taking, Guest Keen and Nettlefolds' £1 shares rose to a fresh peak of 107s. following the profits and dividend announcement. Both were above the forecasts made last November at the time of the one for six rights issue. Gross profits at £30.8 million were £5 million above those for 1959 and compared with a forecast of £29 million. The final dividend on the bigger capital is 11 per cent (against a forecast of 10 per cent) and it raises the total payment from 15 to 16 per cent.

The need for GKN to plough back substantial sums in addition to the £22.6 million raised by the rights issue is reflected in the cover of 3.4 times on this dividend. The company's cash flow last year

|                             | 1959    | 1960    |
|-----------------------------|---------|---------|
| Turnover .....              | 220,807 | 252,473 |
| Trading profit .....        | 33,849  | 39,950  |
| Depreciation .....          | 8,017   | 8,956   |
| Profit before tax .....     | 25,788  | 30,839  |
| Tax .....                   | 12,776  | 15,644  |
| Net profit .....            | 13,012  | 15,195  |
| Ordinary dividend .....     | 3,628   | 4,314   |
| Non-recurring payment ..... | ...     | 987     |
| Retained profits .....      | 9,159   | 10,650  |

|                            |      |      |
|----------------------------|------|------|
| Trading profit/sales ..... | 15.3 | 15.8 |
| Net profit/sales .....     | 5.9  | 6.0  |

amounted to £19.6 million. Earnings are in a sense understated for scarcely any benefit from the injection of new money would be reflected in the 1960 accounts. Another encouraging sign for the future is the improvement in profit margins. The big programme to enlarge and to modernise capacity both in engineering and in the steel making section should lead to a further improvement in margins, but in assessing short-term prospects shareholders should bear in mind the directors' warning in November that the "exceptionally high rate of activity" in 1960 might not be maintained.

THE ECONOMIST MAY 13, 1961

With the £1 shares now yielding a bare 3 per cent this warning has clearly been shrugged off in the market. The directors' view may be proved to be over cautious but even so the current price discounts a good deal of growth.

## Bowater Paper

LAST year Bowater achieved new records both in profits—up from £20 million to £23½ million—and sales—up from £117 million to £142 million. This more than bears out the directors' earlier forecast of more favourable prospects. But excess capacity still exists in the paper making industry and as the table shows the further advance in profits and sales has not been accompanied by any improvement in profit margins. There was in fact a further narrowing of margins in most sections of the group's operations but the fall in the return on capital employed is partly explained by the fact that some part of the

|                      | 1957  | 1958  | 1959  | 1960  |

new capital raised last year has not yet made its full contribution to earnings.

Bowater's policy of diversification and expansion was carried several important steps forward last year—primarily in North America, where Sir Eric Bowater has said that at the moment the growth potential is greatest. The new hardwood mill in South Carolina was opened last August and in line with the trend for the closer integration of both pulp and paper production a paper mill costing £13 million is now being built next to the new sulphate pulp mill at Catawba in South Carolina.

The advent of EFTA has made the highly competitive conditions faced by the Bowater group in this country even more fierce. Bowater's answer is to press ahead with capital developments and to widen its interests. One of the Kemsley Mill newsprint machines has been converted to the production of a new grade of packaging material; the pitch fibre pipe plant has been completed; and production has now begun at the new flexible packaging plant at Gillingham in Kent. The group has also added to its stake in the common market; two French pulp and paper mills were

WORLD-WIDE REPRESENTATION

# THESE DOORS OPEN TODAY

Today the President of the Republic of Ecuador opens the new Guayaquil office of the Bank of London & Montreal—the latest link in the Latin American and Caribbean banking network, created only three years ago by the Bank of London & South America and the Bank of Montreal. Guayaquil, chief seaport and commercial capital of Ecuador, is an historic university city. Pizarro's men reached the Gulf of Guayaquil in the early 16th century, at a time when it was a centre of the Inca empire, and many bloody battles were fought there. In these more peaceful times, this magnificent new building well symbolises the rising prosperity of modern Ecuador, and the part the Bank of London & Montreal has played in it.

NAME .....

ADDRESS .....

acquired last June and an agreement has been made with N. V. Philips for joint operations at the new plant now being built at Ghent for the production of various forms of packaging materials. Bowater's stake in this market now amounts to over £10 million and its directors describe the extension of its interests in this market as "perhaps the most significant event of the year."

Standing now at their peak for the year at 65s. 3d. the £1 shares yield 4½ per cent on the dividend as raised from the equivalent of 12½ to 13½ per cent. The earnings cover on the present capital is only 1.6 times and in view of the directors warning that "there is a continuing measure of uncertainty in trading and economic conditions in the principal countries in which we operate" shareholders would be unwise to be excessively optimistic about increases in the dividend.

### Wiggins Teape

THE growing profusion of packaged goods in the shops is one sign of an affluent society and the profits of leading paper producers in recent years show that they, as well as the housewife, are benefiting from higher living standards. Wiggins Teape is among the leaders in the industry and it may have done better than some of its competitors by not having any substantial interest in newsprint. Its preliminary statement shows that consolidated trading profits rose last year by 34 per cent, from £4,475,000 to £6,008,000; this compares with an earlier forecast of £5.9 million. After higher charges for tax and depreciation but a fall in payments to minority shareholders net profits rose 37½ per cent from £2,141,000 to £2,940,000. Last year's profits include £565,000 in respect of six converting companies recently acquired; in 1959 only £232,000 had been consolidated in respect of three of these companies.

The ordinary dividend has been raised from the equivalent of 12½ to 14 per cent; its cover has improved from 1.8 to 2.1 times. Last year the biggest improvement in profits came in the first six months though the last half of the year was better than the directors had originally expected. Sales for the first three months of the current year show an increase and profits are running at about the same level as in the same period last year. The £1 ordinary shares now stand at their peak for the year of 68s. 9d. to yield 4.1 per cent.

### E. S. and A. Robinson

THE Bristol papermaking group of E. S. and A. Robinson (Holdings) has also done well. In the year to February 28th its trading profits rose by over 19 per cent from £6,027,000 to £7,187,000 but after heavier tax and depreciation charges the rise in net profits is only 11 per cent. The improvement is welcome after the setback that occurred in 1959-60 when the printing strike was partly responsible for a 2½ per cent

drop in trading profits. The ordinary capital was increased last October by a one-for-eight scrip issue but earnings on the increased capital are virtually unchanged at 35½ per cent.

At the time of the scrip issue the directors forecast that the second interim dividend in lieu of a final dividend would be raised from 10½ to 11 per cent, thus raising the total from 16 to 17 per cent. In the event they have raised it to 11½ per cent to make a total of 17½ per cent. Initially the £1 ordinary shares fell back on the results but then recovered sharply to 97s. 6d. which, as with other paper shares, is a new peak. They now yield 3.6 per cent.

### BICC

THE chairman of British Insulated Cables, Sir William McFadzean, says in his statement with the full accounts that the rise in group sales last year from £128 million to £143 million was largely the result of higher production, though acquisitions have swelled the total a little. BICC, along with other cable producers, was hit by the fierce competition which followed the breaking-up of the price ring. Sir William says that low voltage power cables and wiring and general cables continue to be unremunerative but elsewhere margins have improved recently. This improvement seems to be reflected in the rise in the gross profit margin from 6 per cent in the first half of last year to 6.6 per cent in the second half.

The growth of business is reflected in the balance sheet. Stocks and debtors rose from £58 million to £65 million as more stock was held to speed up delivery and further credit extended to overseas customers. The most important consequence is the decision to make an issue of ordinary and debenture stock. This is expected to yield about £15 million after expenses have been paid. The debenture issue is effectively a funding operation as overdrafts had mounted to £9 million last year; it takes the form of £10 million of a 6½ per cent stock 1981-86, and it should yield £9,630,000 at the issue price of 99. At the same time, ordinary shareholders are offered 2,692,378 of £1 shares at 40s. each on a one-for-seven basis. At the present price of 56s. 6d. ex all the ordinary shares yield 4½ per cent covered 2.1 times.

The group is also making a bid for the 39.7 per cent minority interest in the equity of the Lancashire copper concern Thomas Bolton. The offer is a share for share exchange, but though the cum rights price on BICC of 61s. 10½d. compares favourably with Bolton's pre-bid price of 53s. 9d. some account has to be taken of the forecast improvement in Bolton's earnings. Sir William says that results for the year so far are encouraging and that the group's reorganisation should ensure that it holds on to its share of the market while it should at the same time improve its margins. He concludes that given no major dislocation of trade the group should have a successful year.

### Rugby Portland Cement

WHEN the one for seven scrip issue was made a year ago it seemed probable that the Rugby Portland Cement directors would maintain the 25 per cent dividend on the bigger capital. It was then calculated that this would raise the yield on the 10s. ordinary shares to just over 3 per cent. The dividend has in fact been maintained, representing an effective increase of 3½ points, but the yield now is below 2 per cent for over the last twelve months the shares have risen from around 43s. to 65s. 9d.

In a period of low yields the return on Rugby Portland is one of the most slender but it would be a brave man who argues that investors buying at this level are investing unwisely. For fifteen successive years this company has added to its profits; they have risen by as much as 50 per cent in the last three years. There seems little doubt that this enviable record of progress will be maintained in the immediate future. Home deliveries in the first four months of 1961 were 38 per cent above last year's and compare with a rise of about 14 per cent for the cement industry as a whole. This exceptional increase reflects in part an earlier than normal run down of stocks due to the mild weather but it will be a surprise if over the whole year Rugby Portland does not achieve something well above the 10 per cent increase in deliveries forecast for the industry as a whole.

Despite higher sales, profit margins so far in 1961 have been somewhat less than those for the whole of the previous year but this has now been put right by the recent increase in the price of cement. Looking further ahead the Government's programme for further expenditure on roads shows that there is likely to be little let up in demand for cement and Rugby Portland's growing stake in the market should be further enhanced when a new kiln, which will add about 10 per cent to the group's capacity, comes into operation in October. The company is well placed to finance any further expansion for its liquid assets at the end of the year amounted to £3.4 million; in addition its investments, to which substantial additions have been made in the last two years, were then worth £2.1 million. Existing capital commitments of £950,000 are unlikely to make much inroad into liquid resources as they should be comfortably covered by the group's cash flow, which amounted to £1.2 million in 1960. In 1962, however, Rugby Portland will have to repay £1.5 million of unsecured loan stock.

Clearly shareholders can look for a further increase in dividends this year as the latest payment is covered more than three times by earnings. But at their present levels the shares seem to be discounting the future very fully.

### Schweppes

IN the next few years the rate of growth in Schweppes' profits may be slower than it has been in the last few, but it would

## De Beers Consolidated

BEFORE Russia learnt the full extent of its diamond deposits and America succeeded in making synthetic boart on a commercial scale, Africa had almost complete dominance of the diamond trade. Through its own production and agreements with all other major producers, about nine-tenths of the world's total sales were channelled through the De Beers group. In terms of this market hold, these two events seemed momentous, but with its selling agreements with other producers now renewed practically *en bloc* for a further five years, De Beers has consolidated its control over the distribution of diamonds. The pact with Russia to sell all the diamonds it wishes to dispose of to the West has also been renewed for a second year. Last year the flow of Russian stones, presumably mainly of gem qualities, is said by Mr Harry Oppenheimer in his annual review to have been partly responsible for a substantial increase in stocks held by the Diamond Corporation. In fact, sales of gems rose by £418,000 last year, though sales of industrial diamonds dropped by £1,854,000; Russian diamonds are therefore no negligible factor. Total sales in the first three months of 1961 rose to a record £24,302,000. Although Mr Oppenheimer does not expect this rate to be maintained throughout the year, he believes that 1961 will be a good year.

One sign of the challenge to the Central Selling Organisation's supremacy in the distribution of diamonds is the omission of separate figures for industrial diamonds in the latest quarterly statement of diamond

interest" with De Beers in the new company, Ultra High Pressure Units, formed to handle synthetic production. Deliveries of Congo boart have been restored to normal after a disruption lasting only a few months, so that the new synthetic factory will probably operate below capacity.

In Sierra Leone, the official diamond office managed by De Beers has channelled a far larger proportion of that country's output through the Central Selling Organisation. But in Guinea and Ghana, government legislation has severed the connection with De Beers. Ghana's production contains a substantial proportion of diamonds used in drilling. This particular market leans heavily on stockpiling by the American government, and its prospects are uncertain. Even so, to ensure supplies for established

customers, De Beers will spend about £2½ million in erecting additional recovery plant capable of treating old tailings from the Premier Mine in the Transvaal.

Despite extensive exploration in many parts of Africa, no significant new deposits have been found, but prospecting is being intensified, particularly by the Williamson Company in Tanganyika, by an associate in Basutoland and in the group's own areas in Namaqualand. In the meantime the old De Beers mine, last worked in 1908, will be brought back to full production by 1966 at a cost of about £1.4 million.

As part of its policy of diversifying its interests outside the diamond industry, De Beers joined a consortium of large companies in the expansion of Rand Selection Corporation into the biggest investment company in South Africa, and controls half this company's capital. Investment income rose by £2,084,000 to £11,706,000 last year, while the group's income from diamonds was virtually unchanged at £32,631,000. A heavy charge for prospecting and exploration, and an increase of £2,273,000 to £2,726,000 in amounts written off investments, less the surplus on realised investments, reduced the net profit from £24,182,000 to £22,530,000. The deferred ordinary dividend was maintained at 12s. 6d. a share, so that the 5s. shares at 118s. yield 11 per cent. Mr Oppenheimer does not underrate the political dangers that this yield underlines, but he is confident that the South African economy is sound and justifies De Beers' additional investment in its development.

be unfair to dismiss the coming years as a period of consolidation. Some further growth seems to be assured, though probably more overseas than at home and more in jams and preserves than in soft drinks. At home Schweppes is the predominant company in the "mixer" trade and about three-quarters of its soft drink sales are made to the breweries. With the breweries merging, their bargaining power with the soft drink manufacturers is enhanced and, if they are big enough, they can threaten to manufacture soft drinks themselves. Schweppes, on the other hand, has built up a solid reputation and trade and by offering substantial discounts on quantity sales it can reasonably expect to hold on to its share of the market. It plans, indeed, to spend less on advertising in proportion to the volume of its sales in this country.

Outside the soft drink industry, Schweppes has acquired Chivers, W. P. Hartley and Moorhouse and Sons and has thus become a powerful force in the preserves industry. This, as the managers of Schweppes were quick to realise, was an old-fashioned and backward industry. They seem to be satisfied with the prices they paid for entry into it, not because of its currently low profit margins but because the industry presents an opportunity for wide-ranging economies, not least in distribution. Once the reconstruction is carried through, margins are certain to improve and the Schweppes directors look forward to a trebling of jam profits to the £1 million mark in the next few years.

Overseas steady progress is being made and profits from foreign sales are forming an increasing proportion of the total. In particular, the losses made in establishing a market in the United States have been recouped and last year a clear profit emerged. The directors appear to be intent on exploiting this market still further, and though further big sums will have to be spent on promotion this is likely to be a profitable extension.

Schweppes' trade, however, will to some extent always be at the mercy of the weather. Last year, the wet summer brought down profits on soft drinks (particularly on squashes) and it was only because more profits from jam were consolidated into the profit and loss account last year than in 1959 that total trading profit rose from £4,803,000 to £5,038,000. A further improvement in earnings this year depends in part on the weather, but the directors have demonstrated how quietly confident they are by raising the dividend from 23 to 24 per cent, so that at 37s. 1½d. the 5s. shares yield 3.2 per cent.

### Gallagher

IN a highly competitive market the "Nelson" tipped brand introduced by Gallagher in March, 1960, has proved an outstanding success. The share of the market of its other leading brands con-

## HEAD WRIGHTSON *engineering for world industry*

## HEAD WRIGHTSON & CO LTD

THORNABY-ON-TEES-STOCKTON-ON-TEES-MIDDLESBROUGH-SHEFFIELD-LONDON-JOHANNESBURG-SYDNEY-CALCUTTA

tinued to increase, so that last year total sales rose from £278 million to £320 million. Some part of this increase reflects higher prices resulting from the increase in tobacco duty in the 1960 budget.

Largely as a result of increased sales, stocks jumped from £57½ million to £65½ million and debtors from £27 million to £32 million. Factory extensions and new plant and machinery absorbed £2½ million so that the £10½ million raised by the one-for-six rights issue in June has made little impact on the group's overdraft now at £6½ million.

In 1960 gross profits rose by 23½ per cent from £9½ million to £11½ million; what can shareholders look for in 1961? Clearly as Gallaher's share of the market grows so the competition gets that much fiercer and the new chairman, Mr C. W. Mason, tells shareholders that the introduction of further new brands is always under consideration. This points to heavy advertising and other costs are rising too. There are constant increases in tobacco leaf prices; a shorter working week has been introduced and basic wage rates have also been increased. Sales still continue to rise and those for the first three months of the current year show a satisfactory increase, but Mr Mason says that consumption is tending to level out.

The latest budget proposals giving the Chancellor of the Exchequer powers to impose a surcharge of up to 10 per cent on the present tobacco duty brings another element of uncertainty into the calculation. But the market seems convinced that Gallaher will continue to add to its trade at the expense of its competitors and at 47s. Gallaher shares yield 4.3 per cent.

### Richard Costain

ON the maintained dividend of 16 per cent the 5s. shares of Richard Costain at 26s. 9d. yield 2.9 per cent. These shares, like others in this field, have been bid up in price because investors quite rightly sense a bigger demand for the services of the building contractors in the next few years. This is certainly true at home, but even here shareholders should note that in a carefully worded statement the chairman, Sir Richard Costain, refers to extremely keen competition and low tender prices. Abroad, he says, it would not be difficult to expand turnover if proper regard were not made to profitability; in fact, the construction companies do not like to enter into large-scale commitments in the developing countries unless they see a reasonable chance of economic and political stability.

The caution is no doubt justified but it has the corollary that the rate of growth in turnover and profits is slowed down. Investing cash in property as opposed to contracts does not provide the full answer; the company's income from properties has risen but Sir Richard points out that the difficulties of securing sites and planning

approvals mean that the creation of new property investments will take longer than the directors had originally expected and that it will be a few years before the company deploys in full the funds that the directors believe should be allocated in this direction. In all, perhaps, investors have exaggerated the factors making for growth in the construction industries and they may now have to adjust their ideas to a less spectacular rate of progress. This certainly Richard Costain achieved last year when its gross profits rose from £631,000 to £729,000. Ignoring pre-acquisition profits, this reflected an increase of about 10 per cent in earnings and, with the dividend covered over 2½ times, Sir Richard's cautious appraisal that it should be possible to maintain the total dividend at 16 per cent on the capital as increased by the rights issue should not be difficult to achieve.

### Pressed Steel

LAST year Pressed Steel pushed ahead with its expansion programme and this is clearly reflected in the full accounts. Much of the £10.7 million raised by the rights issue has been absorbed in extensions to the factories at Swindon and Linwood and additions to plant and equipment, reflected in the rise in fixed assets from £12.4 million to £18.5 million. Stocks and work in progress also rose sharply, from £10.7 million to £15 million. This seems to reflect changing trading conditions. Production of motor car bodies ran at a high level in the first half of last year but then fell away sharply so that short time working had to be introduced. The railway carriage division worked below capacity throughout the year and refrigerator production was affected by credit restrictions, a poor summer and growing quantities of imported models. Trading profits were thus reduced by 26½ per cent, from £6,807,000 to £5,003,000.

The chairman Mr Alex Abel Smith, says that the beginning of the current year was not propitious. The car body division is now back on full time working at Cowley and Swindon but though Mr Abel Smith hopes that business will improve over the rest of the year he does not expect it to reach the high levels of early last year. The outlook for the railway carriage division offers little room for optimism as no large orders seem likely in the foreseeable future, but refrigerator sales may rise this year as the lack of after-sales service is expected to affect the demand for imported products.

The expansion of car body production will require further expenditure. Capital commitments now stand at about £12 million. Last year the cash flow amounted to only £2½ million, but Mr Abel Smith says expansion will be financed by the proceeds of the rights issue, together with bank overdrafts, retained profits and government assistance.

### London Stock Exchange

|                 |          |        |         |
|-----------------|----------|--------|---------|
| FIRST DEALINGS: | April 24 | May 8  | May 29  |
| LAST DEALINGS:  | May 5    | May 26 | June 9  |
| ACCOUNT DAY:    | May 16   | June 6 | June 20 |

THE close of the account last week saw a good deal of profit taking on the stock market, including the realisation of some option profits, but new time buying for the three week Whitsun account countered this and falls in prices were small. On Tuesday and Wednesday there was more profit taking but it was again offset, with pension funds and unit trusts adding to the amount of investment buying. But the rate at which equity prices rose slackened off as *The Economist* indicator gained only 0.8 points to 327.2. The cut in the West German bank rate and the fall in the Treasury Bill rate here on Friday resulted in small increases in the price of short dated gilt-edged stocks. Over the week to Wednesday Conversion 4½ per cent 1964 gained ¼ to 98½ but 3½ per cent War Loan lost a similar amount to 56½ xd and 2½ per cent Consols lost ½ to 42½. After the poor response to the new Glasgow issue, when 77 per cent of the stock was left with the underwriters, the stock opened at ¼ discount but improved to ⅛ discount.

Profit taking and the continuing flow of results and chairmen's statements set no clear trend in equity prices. There was a continued firm demand for property shares and in spite of profit taking on Wednesday Union Property gained 9s. 6d. to 68s. 6d. Bank shares improved further, Barclays gaining 3s. 6d. to a new peak of 94s. 6d. Insurance shares also gained after the week-end: Pearl rose from 12 to a new peak of 13½. Among brewery shares Vaux were once again in demand and rose even more sharply than last week, closing 16s. 3d. higher at a new "high" of 181s. 3d. Gains in store share prices were limited by some late profit taking but Marks and Spencer "A" rose by 1s. 3d. to 114s. 9d. on the latest results. Among building shares Richard Costain advanced after the results and Rugby Portland Cement gained 5s. 6d. to 65s. 6d. following the chairman's statement. Associated British Foods gained 5s. 6d. although they closed below their highest after the bid for Hemmings.

Motor shares showed small falls but press comment helped ACV to gain 6s. 7½d. to a new high of 85s. 7½d. Among engineering shares Guest Keen gained 6s. 7½d. to 106s. 1½d. xd, but Babcock and Wilcox lost 1s. to 32s. 9d. on the full report. There was some improvement in cotton textile shares and Lancashire Cotton rose by 1s. 7½d. to 62s. 1½d. There was a sharp rise in tin shares as a rise in the metal price led to buying in London and Singapore. Tronoh gained 3s. to 60s. 3d. after profit taking had brought the price down from 63s. 6d. Gold shares fell back as continental selling, apparently from Switzerland, depressed the market; Western Holdings lost 7s. 6d. to 105s.

Traditionally, Drambuie was first made from a recipe given to a Mackinnon of Skye in 1745 by Bonnie Prince Charlie. Since that time this distinguished liqueur has been acclaimed in all parts of the world. The pleasant custom of drinking a liqueur becomes, with Drambuie, part of a tradition that has its origin in the colourful days of the eighteenth century.

### THE MONEY MARKET

THE syndicate of discount houses raised its collective bid by a further 2d. to £98 18s. 2d. for the paper dated Tuesday to Saturday at last Friday's bill tender and bid £98 18s. for the 92 day Monday dated bills. The average rate of discount fell by 9.44d. to £4 7s. 4.27d. per cent. The cut in the German Bank rate from 3½ to 3 per cent was a contributory factor: the London Bank rate is now 2 per cent above both the German and the American. This week, however, the Bank of England has again exerted a check on the discount houses; clearly the Bank has no wish to have its hand forced by a falling-away in the bill rate. Total applications for the £240 million of bills on offer rose by £37 million to £416 million and the market received 49 per cent of its application as against 67 per cent a week earlier.

Credit was short in Lombard Street in the week to Wednesday and the authorities entered the market on all six working days to ease the difficult conditions by special purchase of bills. On Monday a fairly large amount of help proved insufficient for the market's needs and three or four houses were forced to borrow a moderate amount at the penal rate.

\* On May 5th tenders for 91 day bills at £98 18s. 0d. secured 43 per cent, higher tenders being allocated in full. The offer for this week was for £250 million of 91 day bills. \* Allotment cut by £30 million.

### COMPANY MEETINGS

## THE BURMAH OIL COMPANY LIMITED

### FACTORS AFFECTING RESULTS

### INTENSE COMPETITION: PROFIT MARGINS REDUCED

### AGREEMENT WITH BURMA GOVERNMENT—A REASONABLE AND EQUITABLE ARRANGEMENT

### MR W. E. EADIE REVIEWS WIDESPREAD ACTIVITIES AND DEVELOPMENTS

The fifty-ninth Annual General Meeting of The Burma Oil Company Limited, will be held on Friday June 2, 1961, in the Merchant's Hall, 30 George Square, Glasgow.

The following statement by the Chairman, Mr W. E. Eadie, has been circulated with the directors' report and accounts for the year ended December 31, 1960:—

### DIRECTORS

It is with great regret that I have to record the sudden death early this year of Mr. Thomas Taylor McCreath. Mr. McCreath had been a member of your Board since May, 1948. His wise counsel and knowledge of the oil industry in Burma, India and Pakistan will be greatly missed by his colleagues.

I have also to record with deep regret the death in January this year of Sir Kenneth Brand Harper. Sir Kenneth retired from the leadership of your group of Companies on November 1, 1957, and it is a matter of great sorrow to all who knew him that he was spared so short a time to enjoy retirement.

A senior member of our staff, Mr John Alexander Drysdale, was invited to join the Board on 1st March last. Mr Drysdale is well equipped for this appointment by long experience in all sectors of your Group's activities. I have complete confidence in recommending him for election by stockholders.

### ACCOUNTS

At the Annual General Meeting last year I indicated that trade was continuing to expand at approximately the same rate as in 1959 but I warned that pressures on prices could have an adverse effect on sales proceeds receivable by the Group.

In the event, the volume of trade expanded at the rate expected, the tonnage being 7 per cent greater than in 1959. The markets in the Eastern Countries where we operate were affected by the intense competition felt world wide in the oil industry and in consequence profit margins were reduced. This reduction and the cost of an increase in exploration effort in the USA and Canada were the main reasons for the sharp decline in the Group Profit on Trading in 1960.

As the Company's interests in The Burma Oil Company (1954) Limited were reduced to 40½ per cent in September, 1960, a development to which I refer later, only nine months of the profit for 1960 of The Burma Oil Company (1954) Limited is included in the Group accounts. Dividends received from that company will be treated as Trade Investment Income in future and taken into account when they are received. A further decline in the Group Profit on Trading in 1960 is due to the increasing

dependence of Assam Oil Company Limited on crude oil purchases from Oil India Private Limited.

Stockholders will appreciate from my comments later in this statement that it will not be until substantial production from the Nahorkatiya oilfields is sold that we can expect to receive a return from our investment in Oil India Private Limited which has been building up since 1955 and now amounts to £10,500,000.

As will be seen from the Consolidated Profit and Loss Account the profit on trading for the year is £4,973,030 compared with £6,880,434 for 1959. The provision for depreciation of £1,198,429 is little different from that made in 1959. An amount of £777,100 was set aside in 1959 and added to Depreciation. This amount is now treated as retained by Subsidiary Companies to conform with those Companies' final accounts. To facilitate comparison the Consolidated Profit and Loss Account 1959 figures have been amended accordingly.

Dividends from Trade Investments, which form part of your Company's profits from operations and trading, are £55,575 higher in 1960 than in 1959.

Other Dividends and Interest received during 1960, amounting to £11,782,119, are £1,894,447 greater than in 1959 due to the increased dividends on our holdings in The British Petroleum Company Limited and The "Shell" Transport & Trading Company Limited. No dividend was received from The Tinsplate Company of India Private Limited in 1959, but as a result of a successful appeal to the Government of India for revision of the prices of tinsplate, this company paid a dividend during 1960 in respect of the years 1958 and 1959.

The profit dealt with by your Company after charging taxation and the appropriation to Indian Development Rebate Reserve is £9,235,798 compared with £8,899,947 in 1959, an increase of £335,851. Including the balance of £583,738 brought forward from 1959, there is available for appropriation £9,81

countries, it is more appropriate to report on activities country by country.

#### BURMA TRADING

The elections held in the early part of 1960 showed a large majority for the party of U Nu which resumed office in April in place of the caretaker regime of General Ne Win.

The year 1960 saw a continued improvement in the country's general economy, the emphasis being on the further development and diversification of agriculture. Exports of rice and bran for the fiscal year ending September, 1960, constituted a post war record.

While in recent months there have been occasional outbreaks of lawlessness the general improvement in conditions has seen an increasing demand for petroleum products and our share of sales rose by 9 per cent in comparison with 1959.

#### PROSPECTING AND OILFIELD OPERATIONS

The extensive prospecting programme of The Burma Oil Company (1954) Limited was continued during the year.

In the Irrawaddy Delta the testing of a deep well at Payagon indicated only a small gas sand at medium depth; a second well to test the extent of this gas pool was ready to begin drilling at the end of the year.

A deep test well was being drilled at Tharrawaddy at the end of the year, and preparations were being made for other similar tests at Kyun Nyogyi and Aunglanmyo.

In Upper Burma a deep test well was started at Yedwet at the end of the year.

In the Chauk-Lanywa field, development drilling operations were continued in order to meet the increasing crude oil requirements of the refineries at Chauk and Syriam. A study is also being made of secondary recovery prospects. Three deep wells were drilled in the search for new reserves; although no additional oil was found these wells have indicated sizeable reserves of gas with some condensate.

Some development drilling was undertaken in Yenangyaung and small production is now being obtained. A deep test well was also started, but was abandoned at a medium depth after difficulties with very high pressure water sands; deep testing will probably be resumed in 1961.

#### REFINERIES

The refineries of The Burma Oil Company (1954) Limited at Syriam, near Rangoon, and at Chauk, Upper Burma, operated successfully during the year and each increased its throughput by over 9 per cent.

Plans have been made to increase annual capacity at Syriam by some 600,000 tons and the contract has been put out to world tender.

#### THE BURMA OIL COMPANY (1954) LIMITED

In exercise of its option under the formation Agreement the Government of Burma acquired in September a further 17½ per cent of the issued share capital of the above Company by payment in cash to the Oil Companies. This has brought Government's shareholding interest up to 51 per cent.

Under the formation Agreement when Government has acquired a controlling interest, the Oil Company shareholders are not obliged to contribute further capital for new projects.

#### COMPANY MEETING REPORTS

Following negotiations in Rangoon, the Oil Companies agreed to subscribe 49 per cent of the new capital required for the expansion of Syriam refinery and an associated underwater pipeline, while Government on its part agreed not to exercise for a period of 15 years its right to acquire further shares in the Company. Government further agreed to appoint one of our wholly owned Subsidiary Companies as Agents of the Company for certain purposes for a period of ten years.

Negotiations were carried out between Government and the Oil Companies in a spirit of cordiality and mutual goodwill. It is my considered view that the agreement which we have entered into represents a reasonable and equitable arrangement for the continued prosperity and efficient working of the Joint Oil Venture.

The Government of Burma has also decided, again in exercise of its option under the formation Agreement, that The Burma Oil Company (1954) Limited will take over the marketing facilities and installations of our trading Subsidiary Company in Burma and negotiations are now taking place.

#### PAKISTAN TRADING

The year 1960 saw the continuation of public confidence in the administration of President Ayub Khan as evidenced by a gradually expanding economy, and an improvement in the country's foreign exchange reserves.

Competition remained keen and our share of sales of petroleum products increased by some 2½ per cent only.

Total demand for petroleum products in Pakistan is at present at the rate of approximately 2 million tons per annum. Apart from normal expansion to be expected under the country's Second Five Year Plan, a development which of itself will be a major contribution to the country's economy is the Indus Waters Scheme.

Sales of gas during 1960 totalled 21,270 million cubic feet (the equivalent of 514,000 tons of fuel oil) compared with 16,078 million cubic feet (the equivalent of 388,000 tons of fuel oil) in 1959, an increase of 32 per cent. The greater part of this very satisfactory increase arises from the growing offtake through the Sui-Multan pipeline. Extension of this pipeline to serve industry north of Multan is currently under discussion with the Pakistan Government.

#### PROSPECTING AND OILFIELD OPERATIONS

Exploration operations were continued by Pakistan Petroleum Limited during the year.

#### WEST PAKISTAN

The well at Domanda and a further well at Karsal were drilled jointly with Pakistan Oilfields Limited, a subsidiary of Attock Oil Company Limited. Both wells were abandoned as dry holes.

One gravity and one seismic party were employed for much of the year in concessions in the northern part of the Punjab.

The combined exploration operations of the oil companies operating in Pakistan in recent years have resulted in the discovery of large gas reserves, but unfortunately there have been only moderate discoveries of new oil reserves. This is disappointing, but it is proposed that Pakistan Petroleum Limited, jointly in some

#### THE ECONOMIST MAY 13, 1961

cases with other companies, should continue the search for oil. At the end of the year one such well was being drilled at Dasori in Sind jointly with Pakistan Sun Oil Company.

As stockholders may have seen in the Press, the Pakistan Government has decided to undertake exploration on its own account, with the assistance of staff and equipment provided by the Russian Government on a long-term loan basis.

To meet the increasing demand for gas an additional development well was drilled by Pakistan Petroleum Limited in the Sui gas field and two additional purification units were erected at the gas purification plant for the Sui Gas Transmission Company Limited.

The Balkassar field, produced jointly by Pakistan Petroleum Limited and Attock Oil Company Limited, continued to maintain its small but steady production of oil.

Small production is being obtained from the third well at Karsal but results in this area are discouraging.

#### EAST PAKISTAN

A medium depth well was drilled at Fenchuganj and a second deep test jointly with Pakistan-Shell Oil Company at Lalmai; unfortunately neither of these wells was successful.

Last year I reported that a test well at Chhatak had discovered a new gas field. Arrangements were made to take production from this well to a cement works 12 miles away and sales of gas started at the end of July. The offtake should rise to 5 million cubic feet per day in 1961. Although small, this gas production operation is proving satisfactory.

The Sylhet gas field is being prepared for production to supply gas to a fertiliser factory now under construction by the Pakistan Industrial Development Corporation at Fenchuganj. Production is expected to commence in November, 1961.

#### REFINERIES

The rupee company, formed to construct and operate the new refinery at Karachi, was incorporated during the year and the contract for the construction of the refinery has been awarded. Work is going ahead and is due for completion at the end of 1962.

This refinery is owned jointly by your Company, Shell, Standard-Vacuum, Caltex and the public of Pakistan and has an initial planned capacity for 1½ million tons of crude oil per year.

#### INDIA TRADING

Total demand for petroleum products in India in 1960 was of the order of 7 million tons. It has been estimated that this figure will be doubled in the course of the next six years. In a country which is in the process of rapidly expanding its industrial and general economy and where the per capita consumption of petroleum products is as yet insignificant it is not unreasonable to expect that an increase of this magnitude will be realised.

Sales through our Subsidiary and Associated Companies were some 7 per cent higher than in 1959. In my last year's statement I mentioned the negotiation of a new price formula for petroleum products which reduced the margins allowed to the Oil Companies. In the latter half of 1960 the Government of India established an Oil Price Enquiry Committee which is conduct-

#### THE ECONOMIST MAY 13, 1961

ing an exhaustive investigation and is expected to report shortly.

It is perhaps not inappropriate for me to comment here shortly on one aspect which should be given due consideration in any study of petroleum selling prices in countries where petroleum is in short indigenous supply. In such countries there is a very natural and understandable desire to see national petroleum reserves discovered and developed as expeditiously as possible. The greater the number of operators exploring for such reserves, the greater the chance of success and it seems to me that Governments wishing to encourage interested operators (whether national or foreign) should offer attractive concessions terms and should as far as possible provide an assurance of a fair selling price for the commodity and its products. Such a price must provide an acceptable return to the operator taking cognisance not only of the speculative nature of the business but also the need for a continuing search for replacement of reserves as they become depleted.

The competitive commercial prices of world supplies over the years have provided the financial resources which have been required to search for and develop the reserves of petroleum in the world to-day and countries where intensive search for petroleum reserves is desired must, I consider, recognise this price basis as fair and necessary.

#### PROSPECTING AND OILFIELD OPERATION

No exploration was undertaken during the year outside the Nahorkatiya, Hugrijan and Moran concessions of Oil India Private Limited but, following the invitation of the Government of India to express an interest in exploration to which I made reference in my statement last year, discussions with the Indian Government were resumed recently.

Production operations continued in the Assam Oil Company's Digboi field.

In the Nahorkatiya, Hugrijan and Moran areas extension and development drilling has again been successful. Twenty-five wells were drilled, 19 of them being completed as oil wells, 3 as gas wells and 3 were abandoned as dry holes.

#### REFINERIES

The Assam Oil Company's refinery at Digboi and the Burmah-Shell refinery at Bombay continued to operate satisfactorily.

#### OIL INDIA PRIVATE LIMITED

Stockholders will recall that the function of this Company, which is owned two-thirds by your Company and one third by the Government of India, is to develop oil concessions in Assam in the Nahorkatiya, Hugrijan and Moran areas and to transport the crude oil for sale to the Government refineries being constructed at Gauhati and Barauni.

The authorised share capital of the Company is Rs. 50 crores (£37.5 million). The first issue of capital of Rs. 12 crores was made immediately after incorporation of the company in February 1959 and during 1960 there was a further issue of Rs. 9 crores. The funds derived from share capital subscriptions are being utilized for development of the oil fields. The total amount required for that purpose is estimated at Rs. 28 crores (£21 million). At December 31, 1960, your Company had contributed Rs. 14 crores (£10.5 million) towards its two-thirds share of this requirement.

#### COMPANY MEETING REPORTS

Construction of the first stage of the pipeline, from the oil fields to Gauhati, a distance of 260 miles, was started towards the end of 1960 and the target date for completion is the end of October, 1961. Construction of the second stage, from Gauhati to Barauni, a distance of 460 miles, is due to start in 1961 and the target date for the completion of this section is the end of March, 1962. The Burmah Oil Company (Pipe Lines) Limited is superintending the design and construction of this pipeline.

The estimated cost of the pipeline is £35 million. Of this sum £21 million will be incurred in rupees and £14 million in foreign exchange. As mentioned in my statement to stockholders last year, Her Majesty's Government has made a loan of £3 million to the Government of India towards the foreign exchange requirements for this line and your Company has agreed to provide a loan of approximately £11 million for the balance of the foreign exchange. The rupees required will be borrowed in India by Oil India Private Limited.

#### PUBLIC SECTOR DEVELOPMENTS

The Government owned refinery which is being built near Gauhati, in Assam, is due for completion towards the end of 1961.

The second Government refinery at Barauni in Bihar is scheduled to commence operation in the first half of 1962 and to be working to capacity during the latter half of 1963.

The closing months of the year saw the entry into the market of a Government distributing organisation, the Indian Oil Company. The main function of this Company will be the distribution and sale of products from Government refineries but meantime it is distributing and selling imported Russian products. This is a disquieting sign, and it remains to be seen what effect this Public Sector competition will have on market conditions.

#### USA

#### PROSPECTING AND OILFIELD OPERATIONS

In accordance with the agreement reached in 1959 with Murphy Corporation, The Burmah Oil Western Company participated during 1960 in the drilling of 14 wells in the Gulf of Mexico, of which 6 were successful. These wells were drilled by Ocean Drilling and Exploration Company, a Murphy Corporation subsidiary, as operator.

During the year an interest was acquired in a partially developed off-shore field in Eugene Island area. Several wells were reconditioned but production of oil and gas was small. Since the end of the year, however, production has been increased by completion of a good well, and further drilling is being undertaken.

In another field, forming part of the off-shore South Pelto area, five wells were completed as potential producers and arrangements are now being made to take oil and gas production from these wells.

#### CANADA

#### PROSPECTING OPERATIONS

At the beginning of 1960, Murphy Corporation, in conjunction with B.O.C. of Canada Limited, undertook a programme of seismic work in the Liard River area of Northwest Territories, and at the end of the year preparations were being made for the drilling of a well in this area.

#### AUSTRALIA

#### PROSPECTING OPERATIONS

During 1960, agreement was reached for joint operations with Murphy Corporation and Camelot Nominees, an Australian Group, in an off-shore area of 9,500 square miles in the Gulf of Papua.

It was agreed that one of your subsidiary companies should be the operator and preparations were made for a marine seismic survey which was started at the end of the year; the Australian Government is granting a subsidy towards the cost of this operation.

B.O.C. of Australia Limited has been incorporated in Australia as a wholly-owned subsidiary in order to hold and operate your interests in this region.

#### TANKERS

Early in the year m.v. *Yenangyaung* at the conclusion of 22 years' service was sold to ship-breakers in the Far East. The remaining vessels of our small fleet operated satisfactorily and without incident throughout the year.

#### LABOUR

Relations have been almost universally satisfactory during the year and work stoppages have been few. In all countries in which your Group operates workmen are showing increased awareness of their responsibilities both individually and corporately and no better example of this can be shown than the orderliness which prevailed in our operating areas in Assam throughout the linguistic troubles which occurred in the State last August.

In most spheres our industrial relations staff has been fully occupied with reconciliation and negotiating procedures and progress has been general in the direction of improved worker/employer relations and labour working conditions.

#### PERSONNEL TRAINING

The training of students and young technicians both in this country and elsewhere continues and our personnel staff are fully occupied in finding vacancies at colleges and on training courses for these men, since such facilities are becoming more and more difficult to obtain owing to the growing demand.

#### STAFF

More and more of the day-to-day responsibilities of your Group have devolved upon Asian executive staff and our confidence in these men has been fully justified. While a cadre of expatriate staff remains, but in diminishing numbers, I am confident that our Asianisation programmes are meeting to the full the requirements of the respective Governments. The temporary posting of Asian staff, not only to Head Office in London but to other countries, is proving beneficial in widening their knowledge and experience.

It is difficult, it not impossible, to avoid giving the impression that my thanks to your Group's staff is merely a routine repetition each year, but I assure you that this is not so. I can record a year of loyal endeavour and efficiency, on the part of all staff within the Group in the face of difficulties which, though not all apparent, nevertheless confront our men increasingly from year to year. The appreciation of the Board, which I now convey to all management and staff, is sincere and well deserved.

BENEFICIAL RESULTS FROM REORGANISATION  
OF GROUP'S STRUCTURE  
INDUSTRY AND GOVERNMENT—AN ESSENTIAL PARTNERSHIP

### SIR REGINALD VERDON SMITH ON FUTURE PROSPECTS

The Fifty-first Annual General Meeting of The Bristol Aeroplane Company Limited will be held on June 5th at Filton, Bristol.

The following are extracts from the Statement by the Chairman, Sir Reginald Verdon Smith, LL.D., MA, BCL, which has been circulated with the Report and Accounts for the year 1960:

#### GROUP STRUCTURE

In my statement last year I explained the changes which took place in the structure of the Group during 1959 and I referred to further changes which were coming about in 1960. These various arrangements have now been carried into effect and in place of the two wholly owned subsidiary companies, Bristol Aero-Engines Limited and Bristol Aircraft Limited, we now hold investments in three associated companies, Bristol Siddeley Engines Limited, British Aircraft Corporation Limited and Westland Aircraft Limited, and two subsidiary companies, Bristol Aircraft Services Limited and Bristol Aeroplane Plastics Limited, together with our various other holdings in subsidiary and associated companies mostly overseas. The Board considers that these changes have brought valuable benefits to your Company: in place of having two wholly owned subsidiaries we now share with others investments in much larger companies, and we are participating in a much wider range of projects than one company could have expected to sustain effectively in modern conditions.

The changes in the structure of the Group make it difficult, if not practically impossible, to draw direct comparisons between the accounts for 1960 and those for previous years. This is in large measure because the process of transition was itself developing progressively over 1959 and 1960.

After commenting on various changes in the Consolidated Balance Sheet, the Chairman continued:

#### PROFIT AND LOSS

Net profits before taxation show a welcome increase of £309,000 over those for 1959. After deducting from the net profit after tax (£1,237,000) the dividend on the preference stock and the interim dividend on the ordinary stock, there remained £1,050,000 of which your Board has transferred £600,000 to General Reserve. It is now recommended that a final dividend of 9 per cent absorbing £382,000 be paid, leaving £668,000 to be added to the amount carried forward on Profit and Loss Account.

An illustrated booklet circulated with the Report displays the many varied projects upon which the various companies, subsidiary and associated, have been engaged, and in general the trading results of their activities have been satisfactory and profitable.

The Chairman reviewed the Group's interests in Canada and Mexico, and continued:

#### FUTURE PROSPECTS

Changes in the structure of the industry, after a preliminary phase of uncertainty, have successfully brought with them a new sense of purpose and of opportunity. In the groups with which we are concerned an excellent start has been made in the process of reorganisation and integration. The possibility, provided by amalgamation, of concentrating greater engineering strength on each project as it comes forward are being grasped readily and with goodwill on the part of those directly involved. Economies are being effected by avoiding duplication of resources. It is becoming possible to plan on a broader front a wide range of subjects such as the introduction of new plant and equipment, the areas in which research teams should concentrate their attention, the strengthening of overseas sales and service arrangements, the scale and pattern of industrial education and training. All these take time, but as new projects come forward and take the place of those which originated before the amalgamations, there is a growing sense of unity and cohesion, and the ability and determination to deploy to the best advantage the very substantial capacity available are most encouraging.

It is from that viewpoint that we can look into the future. Many factors affecting industry generally invariably make the forecasting of future prospects uncertain and speculative. Such matters as the stability of the national economy, the trend of costs and prices, the effects of taxation, the relations of the Six and the Seven in Europe, the progress and the needs of newly developing countries—all these we in the aircraft industry share with the rest of industry. There is, however, one respect at least in which prospects for the aircraft industry depend upon different and unusual considerations: the nature of our business means that, irrespective of politics, the industry and the Government are in partnership. With that special relationship it is of very great importance to the country that the making of policy should be positive and constructive, and that the implementation of decisions should be firm and brisk. There can be no doubt that the possibilities lying ahead of

this generation in the whole field of aviation and astronautics are immense: it is also clear that they are of such strategic and economic significance that the general course of their development is today, even more than in the past, a national responsibility. The technical achievements and the commercial progress of particular companies, no matter how large and well-established, depend upon those who carry this national responsibility both to recognise the issues at stake and to be successful in the claims they make upon the allocation of national resources. There is no escape from the difficulties or the risks inherent in aviation; whether the immediate question concerns the equipment or the operations of civil air transport in its international setting, or the pattern of defence policy and the selection of appropriate weapons, the rapid development of the several technologies which converge upon aviation imposes a great challenge upon those with whom lies the responsibility for decision. The expectation that scientific development will shortly bring further swift change can all too easily lead to uncertainty in policy and consequent delay in arriving at specific requirements.

The problems are admittedly complex: nevertheless now that so much has been done to consolidate the country's industrial resources it is no less important that the administrative machinery upon which stable and consistent planning depends should not creak, and that there should be no lack of initiative in the places where responsibility lies.

Subject to these reservations the general prospects of the aircraft industry can be viewed with much greater confidence today than was the case two or three years ago. Of course there are as usual great engineering problems to be solved: of course the surrounding economic and industrial conditions are not likely to be easy. Taking a leading place in international aviation is a matter of national policy and requires qualities of courage and judgment in the formation of policy as well as inventiveness and ability in execution but each of these factors affects others as well as ourselves, and in recent months some of our overseas competitors have published results which have shown them to be far more subject to error and far more vulnerable than had been commonly supposed. Both in judging technical possibilities and in bringing them to fruition, our record stands up well to comparison; if we have confidence in our abilities, it should be within the capacity of the country as a whole—and in particular of the companies in which we are interested—to achieve in the future success, both technical and commercial, in a field where over the years we have already achieved so much.

## CANADIAN PACIFIC RAILWAY COMPANY

(Incorporated in Canada with Limited Liability)

75th ANNIVERSARY OF INAUGURATION OF FIRST TRANSCONTINENTAL RAIL SERVICE

SUCCESSFUL OPERATIONS A TRIBUTE TO PRIVATE ENTERPRISE

ACHIEVEMENT AND MAINTENANCE OF COMPETITIVE PRICE STRUCTURE ESSENTIAL  
FOR COUNTRY'S FUTURE PROSPERITY

DEVELOPMENTS TO MEET RAPIDLY CHANGING PATTERN OF BUSINESS ACTIVITY  
AND INTERNATIONAL TRADE

### MR N. R. CRUMP ON REPORT OF ROYAL COMMISSION ON TRANSPORTATION

The Annual General Meeting of the Canadian Pacific Railway Company was held on May 3rd in Montreal.

Mr N. R. Crump, Chairman and President, who presided, said:

I know you would wish me on this occasion to refer to the great loss suffered by your Company early in January in the death of our late Chairman, Mr W. A. Mather. Few in Canadian Pacific have so distinguished themselves in their efforts on behalf of the Company's progress and welfare. Mr Mather's qualities of character and leadership, as reflected throughout his long career in Canadian Pacific, were well known to all of us. His efforts and achievements on behalf of your Company were notable. He is greatly missed, both as a wise and devoted Officer of the Company and as a friend.

This Annual Meeting marks the 80th anniversary year of the incorporation of your Company. It is the 75th anniversary year of the inauguration by your Company of Canada's first transcontinental rail service. It is a tribute to the achievements of private enterprise in public transportation service that your Company, throughout 75 years of business activity, has operated successfully and at a profit in every year except one—1894—when depression combined with disastrous floods in British Columbia to produce a deficit of \$527,000.

The results of railway operation in 1960, of which full details are set out in the Annual Report, were mainly influenced by the lack of buoyancy in the economy last year. It is a matter of considerable satisfaction, however, that in this circumstance, expenses of your Railway were so carefully controlled that only one-ninth of the decrease in railway revenues was reflected in net earnings.

#### DIESELIZATION PROGRAMME COMPLETED

One of the year's significant achievements was the completion of the dieselization programme, which had been under way throughout the post-war period. The total cost of the diesel units and related diesel facilities placed in service throughout that period is in the neighbourhood of a quarter of a billion dollars; the annual savings resulting from diesel instead of steam operation are estimated at some \$55 million. Further economies from this source are likely to be relatively limited, except for those increased savings due to firemen from freight and yard service moving into useful employment as enginemen.

The downward trend of railway revenues has continued throughout the first quarter of the current year. As a result, net earnings for the period, which amounted to \$5 million, were \$1.7 million lower than in the first quarter of 1960. As yet there has not been any indication of a

reversal of present traffic trends, but field surveys made by your traffic officers suggest that revenues over the remaining eight months of the year might at least equal those of the same months of last year, and possibly exceed them slightly. On this premise, it could reasonably be expected that the decrease in net earnings for the year would not exceed what has already been reported for the first quarter. The position will be substantially affected, however, by the action the Government takes to implement the recommendations of the Royal Commission on Transportation, to which I will refer later, and by the outcome of the current wage dispute between the railways and their non-operating employees.

On the request of the Minister of Labour, representatives of your Company and other Canadian railways commenced a series of meetings last week with the negotiating Committee of the non-operating Unions. During these meetings the railways' representatives endeavoured to make a fresh approach to the problem, with a view to formulating proposals that would result in an acceptable settlement. They were led to believe that the Union representatives were adopting a similar attitude. On Friday the railways agreed to the Unions' request for a recess, in the expectation that further meetings would take place shortly. On Monday afternoon the Railways received notification from the Union representatives that they could see no purpose in holding further meetings and that their position now was that they were not prepared to consider any change from the recommendations of the Chairman and the Union nominee on the Milvain Conciliation Board. The Minister of Labour has been informed of these developments.

A second labour dispute concerns your Royal York Hotel. Employees of this hotel enjoy the best wages and working conditions in the hotel industry in Toronto—a community acknowledged as a high wage area. Notwithstanding, the Union representing these employees, except supervisory and stationary engineers, called its members out on strike on April 24th without notice. The Company had offered a general increase of 2½ cents an hour effective April 1, 1961, along with adjustments in certain rates and working rules. This wage increase has been made effective. The Royal York Hotel has continued in operation in the face of the strike and full service is being maintained.

#### COMPANY'S PUBLIC RESPONSIBILITY

The growth and progress of Canada has always been paramount in the policies of Canadian Pacific. History, however, is constantly in the making, and it is the purpose of your Directors to make certain that Canadian Pacific is in the vanguard of national growth and progress today

and in the future no less surely than in the past. The public responsibility of your Company is to meet Canada's transportation needs. Your Directors believe that those needs can best be met under private enterprise, where management is under the discipline of the market and the undertaking is under the discipline of having to live within its means, to pay its taxes and to earn a profit.

To do this, Canadian Pacific must continue its leadership in transportation—both domestic and international. The Company must accomplish this task with the funds secured from investors and supported by earnings from the sale of its services, and it must be resourceful in its policies so that its responsibilities to its shareholders, its customers and its employees will be discharged in a manner consistent with Canada's private enterprise economy. Responsibility to the shareholders, under free enterprise, calls for constant and untiring efforts by management to enable the Company to earn a fair return on investment. Responsibility to the customers and to the public involves equally unrelenting effort to provide the best and most efficient rail and other services at the lowest possible cost. Responsibility to the employees involves assurance to them as participants in the enterprise of fair wages and good working conditions.

#### FORCES OF CHANGE IN THE ECONOMY

Your Directors are not unmindful of the fact that 1960 was a year in which forces of change, at work for some time, became clearly discernible in the economy of Canada and of the North American Continent. The circumstances of change are wellknown. The free world has moved from conditions in which Canada and the United States enjoyed a pre-eminent position as suppliers of natural resource products and capital and consumer goods into an international economy which has become highly competitive.

A new and modern industrial complex has arisen in Western Europe and the United Kingdom. Across the Pacific, Japan has again emerged as a foremost industrial nation and as a formidable competitor, along with Western Europe and the United Kingdom, for world markets. At the same time, newly independent countries in other parts of the world are experiencing striking economic changes which to some extent will bring them into increasing competition with the North American Continent as producers of raw and semi-processed materials and to a degree will lead to new markets for North American exports.

The impact of these developments abroad upon the Canadian economy has been marked. Our rate of growth has sharply declined, overcapacity is temporarily affecting some of our

resource industries as well as manufacturing. Unemployment has increased. Investors and consumers alike have been manifesting caution. Construction activity has dropped sharply. Profits have declined, adversely affecting the rate of investment. The emergence of a highly competitive international economy is to be welcomed, however, and not deplored. For only if other Countries are prosperous can there be any long run assurance that export markets for the products of Canada's mines, forests, farms and manufacturing industries will be found. Our present difficulties, therefore, stem not so much from the changes in the world economic climate itself, as from the failure of the Canadian economy to keep pace with those changes.

Appointment by the Government of the Productivity Council is a welcome and timely indication of official awareness of the need to speed the process of adaptation. Greater productive efficiency, of labour as well as of capital, is no less surely a condition of a return to prosperity than is aggressive salesmanship. Greater productive efficiency, clearly, calls for close and harmonious co-operation between employers and employees and for an end to labour strife which interrupts the production of goods and services and results in unwarranted cost increases. Progress in the face of intensive struggle for markets also calls for recognition of the fact that national prosperity and a high level of employment depend, not upon an ever-rising wage-cost spiral, but rather upon Canada's ability and willingness to achieve and maintain a price structure which is competitive in every sense of the word.

#### THE RECORD OF PRIVATE ENTERPRISE

Other progressive nations now enjoying a high level of prosperity have learned that real growth can be achieved only when costs, whether of industry or of Government, do not place in jeopardy the incentive to invest. When such conditions prevail, the full potential of the private enterprise system is reflected in steadily improving living standards and a high level of employment. When such conditions are violated, the free market system falters, and the sinister spectre of statism with all its ugly implications of regimentation and loss of freedom and initiative, arises to haunt the Country. Canadian history and traditions suggest that our present troubles are transitory. The record of Canadian achievement in the realm of economic growth over the years is the record of private enterprise at work. Canadians, therefore, are not likely to discard or place in further jeopardy a system which experience has shown to be unparalleled as a basis for social and economic progress.

#### MEETING CHANGING CONDITIONS

Your Directors' confidence in Canada's longer-term prospects for renewed growth are matched by a determination that your Company must constantly adapt itself to changing economic conditions. This determination is found in changes already made, and in plans for further changes, in many aspects of your Company's affairs. These changes will enable Canadian Pacific effectively to meet the challenge of its responsibilities in the future.

In your rail enterprise, these changes include constantly improving service to customers, aggressive modern sales methods in the marketing of rail services, organisational changes aimed at even greater efficiency in the use of personnel, innovations and improvements in freight services, and other developments aimed at in-

creasing your railway's share of the transportation market, greater productive efficiency and improved profitability of the rail enterprise.

Freight traffic is the lifeblood of your rail enterprise. Accordingly, no stone is being left unturned to achieve the most effective freight traffic salesmanship possible. The freight traffic department itself has been extensively reorganised to give local and regional officers—the men on the spot—more authority in respect of rates and services, thus improving the railway's competitive position and providing better service to shippers. This is backed by a system of market research, introduced in 1959. Agreed charges are playing an increasingly important part in meeting competition from other forms of transportation. During 1960 nearly 600 new manufacturing, warehousing and distributing facilities were located on or adjacent to your railway's right-of-way. These developments called for some 150 new industrial sidings, requiring 36 miles of new track.

Canadian Pacific is also playing an active part in fostering the development of some 50 industrial parks across Canada. This is being done in co-operation with municipal authorities and with private industry. Through these efforts your Company is assisting municipalities in various parts of the Country to attract new industry and to aid industries which are seeking new or better locations. All of these activities afford Canadian Pacific the opportunity for access to new sources of rail freight traffic.

The development of coal exports to Japan and the movement of sulphur from Southern Alberta are also bringing new traffic to your railway. In 1960, Pacific coast bulk terminals opened its modern bulk loading facilities at Port Moody, British Columbia. The establishment of this terminal is in anticipation of the growth of bulk traffic movements from Western Canada to the Pacific for shipment abroad of potash and other commodities as well.

#### CHANGES IN COMPANY'S STRUCTURE

Changes are also being made in your Company's structure to provide closer control and co-ordination of its varied transportation services and related operations. These changes, part of a continuing programme by Canadian Pacific to keep its organisation tailored to altering business conditions, divides general administration into two broad areas. Each is under the direction of a Vice-President of your Company reporting to the Chairman and President.

Under the new system, rail operations, personnel, purchases and stores, highway services, express, communications, research, investigation and medical services form one broad area of jurisdiction. Freight and passenger traffic, airlines, natural resources, law, public relations and hotels constitute the other. The Company's financial and accounting departments and the Secretary continue to report directly to the Chairman and President. At the same time Canadian Pacific activities in the United Kingdom and Europe, including its ocean steamships, have been placed under control of the Company's Managing Director, Europe, with headquarters in London, England. The change, in keeping with the broad pattern of adjustments carried out since July, 1959, is an integral part of long-range Company policy to strengthen and improve earnings, operations and sales. Re-organisation of the territorial administration of the Company's operation and freight traffic and other departments made in the last two years was a major step towards this goal.

#### CIVIL AVIATION

Developments aimed at adapting to the rapidly changing pattern of business activity and international trade have been no less numerous in non-rail aspects of your Company's activities. Your Company's subsidiary, Canadian Pacific Airlines, faces the problems that are inevitable in a period of transition from the conventional type of aircraft to jet travel. The difficulties of transition, however, in no way lessen the importance to your Company and to Canada of Canadian Pacific's activities in the field of civil aviation.

Your Airline has already established an impressive international route structure providing Canadian travellers and shippers with reliable service to Europe, Latin America, Australasia and the Orient. Your Company's International Air Service helps Canada develop markets abroad. It also constitutes an important service export, earning for Canada a substantial amount of foreign exchange. Your Airline's authorised route pattern, however, does not enable it to serve directly certain of the World's most important markets, such as the United Kingdom. Nor does Canadian Pacific Airlines have access to traffic points in the Continental United States. It is hoped Government action will be taken to enable your Airline to provide such services.

The domestic transcontinental services provided by your Airline are still restricted to one flight each way daily between Vancouver, Winnipeg, Toronto and Montreal. This limitation prohibits flexibility and choice of flight times. Effective competition, under such conditions, cannot be said to exist. You will recall that when your Airline's domestic transcontinental service was approved two years ago, it was proposed that the situation be reviewed early in 1961. Discussions have taken place between officers of your Airline and the Canadian Government aimed at securing a statement of Canadian air policy to enable your Company to share in the growth of the domestic flight market.

#### STEAMSHIP OPERATIONS

Activities in your steamship operations in 1961, are highlighted by the introduction into service of your new flagship, the 27,300-ton *Empress of Canada* which arrived in this port yesterday on her maiden voyage. This vessel is the largest and fastest ever to serve Montreal on the St. Lawrence River route and has the distinction of being the only new liner to enter the trans-Atlantic trade this year. She is also the newest ship in cruise service and will offer a 61 day, 30 port cruise to the Mediterranean sailing from New York on February 9, 1962. In addition, the *Empress of Canada* and also the *Empress of England* will offer cruises from New York to the West Indies next winter.

Last year steamship operations were adversely affected by a series of illegal strikes in the United Kingdom and Canada during the peak summer season. Barring labour troubles this year and particularly in light of the introduction of the new *Empress*, improved results are anticipated. Your steamships' European to Great Lakes Service which operates via the St. Lawrence Seaway with chartered ships is being expanded. Four vessels profitably operated on this run last year. Six have been engaged for the 1961 season. Two large Beaver freighters—the *Beaverburn* and the *Beaverlodge*—were sold because their size and type make them unsuitable for present operations. In the replacement a new 4,600 ton freighter, the *Beaverin*, has been acquired and will join the Fleet in mid-year. Also one other

smaller, more economical vessel has been chartered pending the acquisition of another suitable modern vessel.

#### RESOURCE AND INDUSTRIAL DEVELOPMENT

Your Company through its wholly-owned subsidiary, Canadian Pacific Oil and Gas Limited, and through its holdings in Consolidated Mining and Smelting Company of Canada Limited, continues to be an active participant in Canada's resource and industrial development. The results of the drilling programme of Canadian Pacific Oil and Gas Limited for the year 1960 were 22 gas wells, 2 oil wells and 17 dry holes. At the end of the year your subsidiary owned, through drilling on its own account or in conjunction with other companies, 56 net gas wells and 10 net oil wells. This subsidiary is now well into the investment phase of its development and the programme of exploration and development of oil and gas resources is being continued and expanded in 1961.

The operations of Consolidated Mining and Smelting Company of Canada Limited also reflect the extent to which your Company, through its holdings, is an active participant in industrial development. Diversification of Smelters' activities, underway for some time, has now reached the stage where it is engaged in the production of electronic materials and in the primary production of pig iron. This is the first time that pig iron has been produced in Western Canada from Western Canadian ore. An important growth area of Smelters' activities, too, lies in the production, also in Western Canada, of chemical fertilizers and other chemicals.

#### ROYAL COMMISSION'S REPORT

Of major significance to your Company is the first volume of the Report of the MacPherson Royal Commission on Transportation, which was tabled in the House of Commons early in April of this year. Recognition by the Royal Commission that the railways, while no longer a monopoly, are still essential to the economic well-being of Canada and that they must be properly compensated for services which they are obliged to perform are the guiding principles of Volume I of the Commission's Report. Recognition of these principles in the realm of public policy has been a major objective of your Company for many years. This finding of the Royal Commission confirms our belief that the railway industry will continue to play a leading role in the Canadian transportation scene for as far into the future as anyone can foresee.

In essence, Volume I of the Report of the MacPherson Royal Commission, when implemented, will affect the business of your railway in three ways. First, the Report recommends that the railways be compensated for the movement of Western export grain traffic which, under statutory rates, is hauled at a substantial loss. Welcome as this relief will be, however, its adequacy is open to question in view of the fact that, despite the Commission's findings that traffic moving at statutory rates should bear its proper share of costs including a reasonable return on investment in the railway plant associated with such movements, the rate of return proposed by the Commission is less than 4 per cent. This is substantially below the rate at which the Government of Canada can secure funds through the issuance of risk-free savings bonds.

Second, the Report recommends that the railways be compensated by way of payment from

the Treasury for free transportation which they are required by law to provide.

Third, the Report recommends that other burdens, such as uneconomic passenger train services and light density branch lines, be eased over a transitional period through payments from the Treasury on a diminishing scale.

The Report points out that "within a competitive environment and with the free enterprise philosophy these adjustments must be made internally by each railway and between the railways and railway labour." While the criterion of the Commission in determining which lines are uneconomic is open to question it is nevertheless heartening to find the Report affirming in principle the policy of facilitating withdrawal from uneconomic services which your Company has been vigorously pursuing for some years.

#### FREIGHT RATES

It is the hope of your Directors that on the matter of freight rates the further volumes of the Royal Commission's Report will contain clarification of the Commission's views as to the relationship between the freight rate structure and higher labour expenses, material prices and higher tax costs. In respect of freight rates, Volume I of the Report is disquieting not only because of the obscurity of the reasoning, but also because of the apparent contradiction between the free enterprise philosophy acknowledged as the basis of Canadian economic life in transportation and the recommendation for the imposition of a new artificial limitation on the pricing of railway services.

Only some 40 per cent of the payments proposed by the Royal Commission will accrue to your rail enterprise, with the remaining 60 per cent serving in effect as a transfer payment to alleviate the deficits of the Canadian National Railways. Moreover, insofar as Canadian Pacific is concerned, approximately one-half of the payments proposed under the Royal Commission's recommendations become returnable to the Federal Treasury through the medium of income tax. Thus, the net cost to the Government of the payments to the railways recommended by the Royal Commission amount to some \$17 million in the first year, declining rapidly over a five-year period.

Canadians, not infrequently, pride themselves on the fact that over the last five years the proportion of our gross national product allotted to capital outlays has been running at a higher level than in the United States. It is, nevertheless, a disquieting fact that on a *per capita* basis, Canada's increase in national production over the same period has been less than that of the United States. It is thus apparent that this Country's higher rate of capital investment has not resulted in a correspondingly higher rate of production upon which growth and prosperity depend.

#### STATE AND PRIVATE ENTERPRISE

Among the reasons responsible for this undesirable situation, it would appear, is that Canada, to a greater degree than the United States, is committed to the mixed economy, in which state enterprise and private enterprise function in co-existence. Whatever may have been the reasons underlying the development of this situation in the past, Canadians should objectively re-examine the implications of a public policy responsible for the relatively larger role of state enterprise in Canadian economic life.

For it is a fact that state enterprise is much

less subject to the discipline of the market than is private enterprise. The discipline of the market assures maximum productivity in the allocation of capital material and human resources. State enterprise tends to operate without regard to cost or return on investment, thus escaping the discipline of the market and contributing to uneconomic allocation of resources and to lower productivity than otherwise would be obtained. State enterprise, in certain instances, enjoys access to interest-free capital and also escapes its share of the tax burden to which other businesses and individuals are subject. In the long run, it may well be that the philosophy of state enterprise, lacking as it does the spur of the profit motive and insulated from market discipline, will prove to be a grave disservice to the people of Canada.

Your Directors are hopeful that public policy in the future will devote greater attention to this problem. Evidence that this may be the case is found in the public utterances on the importance of free enterprise philosophy contained in the Report of the MacPherson Royal Commission, and in the position the Government of Canada has taken in respect to Dominion-Provincial fiscal relations.

Concerning the latter, the Prime Minister has pointed out that with the discontinuance of the tax rental system in 1962, "it will thus be open to and up to any of the Provinces to impose whatever taxes, in the three jointly occupied fields, they consider to be necessary to meet their respective financial responsibilities" and that "they will exercise their constitutional right to impose, vary and adjust their levies from time to time as may be necessary in the light of their responsibilities to their provincial taxpayers and without recourse to the Federal Government."

Were state enterprise in Canada subject to these same eminently sound principles of financial responsibility, then it could be said without hesitation that the prospects for new investment in Canada, in transportation and in other fields where state competition exists, would be greatly enhanced and an entirely new dimension of growth would emerge.

#### FIRST PRESIDENT'S REMARKS STILL PERTINENT

In opening this address I referred to the fact that your Company's trans-continental rail service was inaugurated seventy-five years ago. The remarks of your first President, George Stephen, to the 5th Annual Meeting held in that year, are particularly pertinent today. Describing financial transactions, he said: "The Company will then have discharged all its obligations to the Government, and will have honourably paid back in full the money loaned to it, five years before it was due; in this respect standing alone among Canadian and American railways and it will have completed its contract for the construction of the railway within one-half of the stipulated time. In the future it will neither expect nor need anything from the Government but fair treatment, and earnest and judicious effort in the important work of settling up the Country, developing its resources, and promoting the general prosperity of the whole people of the Dominion; in all of which the Government will have the hearty co-operation of the Company."

Three-quarters of a century later there are no words I could use to define more clearly, more correctly or more concisely the position of the Canadian Pacific Railway Company today.

The report and accounts were adopted.

Barclays Bank D.C.O., Lagos, built by Costain (West Africa) Ltd. Architects: Walker, Harwood & Cranswick, F.R.I.B.A.

## Costain policy to maintain the highest possible level of exports

"THE INCREASE IN GROUP'S PROFITABILITY APPROACHING 10 PER CENT. IS A SATISFACTORY ACHIEVEMENT" . . . Sir Richard Costain, C.B.E., Chairman

The Annual General Meeting of Richard Costain Limited will be held on 12th June in London.

In the course of his circulated statement reviewing the year 1960, Sir Richard Costain, C.B.E. (Chairman and Joint Managing Director) said:

The Profits of the Group at £804,853 are 19 per cent. higher than those of 1959 which was itself a record year. During the year we purchased a controlling interest in a contracting business in Australia, and consequently the Group trading profits include profits of that company for part of the financial year prior to the date of purchase. Disregarding these pre-acquisition profits there is still an increase in Group profitability approaching 10 per cent. which is a satisfactory achievement. Your Board are therefore able to recommend a final ordinary dividend of 10 per cent. as forecast making 16 per cent. in all for 1960. The final dividend will be paid on the share capital as increased by the rights issue on the 10th November, 1960. The net dividend is covered 2.7 times by last year's earnings.

### UNITED KINGDOM

It is perhaps remarkable that competition has remained extremely keen and tender prices low, although the increasing volume of business available to the contracting industry in 1959 has continued through 1960. The weather during the late summer and autumn, which was the worst on recent record for contracting work, caused some shortfalls in production with resultant losses. As suitable opportunities have arisen the Group has nevertheless expanded its order book in the home market on those types of construction which enable our technical experience to be used to the best advantage.

After reviewing the Civil Engineering and Building activities the Statement continued:

**Housing:** House-building for sale in the United Kingdom has continued at a slightly higher rate than in 1959 and there has been no slackening in the demand for our houses. The acquisition of suitable land at reasonable prices continues to be difficult but we have made satisfactory purchases sufficient for a further two years' development.

**Concrete:** The numbers of concrete sleepers manufactured and sold in 1960 were greater than in the previous year and this activity continues to be a satisfactory section of the Group.

**Siporex:** Our first plant for the manufacture of the Swedish lightweight concrete Siporex has been in production for several months and the results are encouraging. Present indications are that the demand will fully justify our faith in this material.

### SPECIALIST SERVICES

Several companies in the Group offer specialist services to architects, engineers and the contracting industry, and these businesses continue to expand, with successful trading results. These companies include Foundation Engineering Ltd. for general foundation problems and Piling and Construction Company Ltd. specialising in bored piling.

### ABROAD

Opportunities to obtain new work abroad of a satisfactory nature have been restricted by political and economic uncertainties but nevertheless our overseas turnover has been more than maintained and represented over half of the total value of work executed in 1960. Indications are that future work abroad will depend more and more on the ability to offer credit for terms of seven years or longer. I welcome the recent Government announcement concerning the improved facilities to be offered by the Export Credits Guarantee Department, but the

national policy will have to be kept continuously under review if British contractors are to remain in a competitive position. We may expect that the competition backed by funds from a number of European countries, which is already keen, will be intensified. Your directors will, in the interests of the nation and the shareholders continue to strive to maintain the highest possible level of exports of goods and services.

### PROPERTY INVESTMENT AT HOME AND ABROAD

While, as I indicated last year, some time would have to elapse to allow for the addition to the revenue of your company arising from property investments, it can be reported that some progress has been made. However, although the income from this source has shown an increase, I feel I should strike a note of warning that, in view of the present difficulties, including the time factor, in securing suitable sites and obtaining the necessary planning approvals, the creation of new property investments will probably take longer than was anticipated and it may be a few years before it employs to the full the funds your Board considers appropriate to allocate in this direction.

### FUTURE PROSPECTS

Shareholders will be aware of the political uncertainty existing in many areas in the world, and of the economic difficulties at home and abroad, nevertheless I do believe that your Group is as well prepared as any to face the future with reasonable confidence.

Your Board feels that, apart from any world wide recession in trade or the loss of any substantial part of our business due to political upheaval, it should be possible in 1961 to maintain the rate of dividend which they recommend for 1960.

**RICHARD COSTAIN LIMITED • BUILDING & CIVIL ENGINEERING CONTRACTORS • LONDON • ENGLAND**

## LOW & BONAR LIMITED

### FEATURES OF A SATISFACTORY YEAR

### EFFECTS OF JUTE PRICE MOVEMENT

### CONFIDENCE IN ENGINEERING SIDE FURTHER JUSTIFIED

### MR H. V. BONAR ON JUTE PROSPECTS

The Forty-ninth Annual General Meeting of Low & Bonar Limited will be held on May 31st at Dundee.

The following is the Statement by the Chairman, Mr H. V. Bonar, which has been circulated with the report and accounts:

### REVIEW OF 1960

The year that closed on November 30, 1960, can, I think, be considered a satisfactory year in almost all spheres of the Group's operations. In Jute Spinning, Weaving and Merchanting, results were shown which represented a fair improvement over those of the previous year. I must comment, however, that this improvement was partly owing to the sharp upward price movement both of raw materials and finished goods, and the fact that the Group was well covered material-wise to meet this movement.

Flax had its best year for some time past with a lively demand from all sources and a stable raw materials market at a reasonable price level.

In Engineering, Bonar, Long & Co. Ltd., despite their six weeks' strike in the spring, achieved over the year as a whole a 10 per cent increase in sales with profits only marginally down over those of the previous year. Considering the loss of production caused by the strike this was most satisfactory and further justified the confidence which had been shown in the past—and is still being shown—in committing considerable sums of capital to expanding the capacity of this important part of the Group's undertakings.

The Transparent Packaging Division, which broke through into the black in the previous year, made a further advance in 1960 and we have now had enough confidence to expend considerable sums to increase its capacity.

### OVERSEAS ACTIVITIES

In Canada, both in that portion of our business which is consolidated in the Accounts, and in the somewhat larger part which falls under the heading of "Subsidiary not Consolidated" and which is dealt with in the Notes, a still further improvement was obtained on the previous year's good showing. As far as their textile operations, as opposed to their paper operations, were concerned, however, this improvement was, as in Jute here in the UK, to some degree thanks to the sharp upward price movement in Jute Cloth.

South Africa, The Federation of Rhodesia and Nyasaland and East Africa, despite all their political headaches, and all against my expectations when I addressed you a year ago, produced figures in this past year which were up and not down on the previous two years' showing.

I close this short review of 1960 as I started it, by saying once again that 1960 was a satisfactory—indeed a good—year.

### PROSPECTS FOR 1961

Home, Textiles, etc.: Taking the Group's Jute interests first, as I always do, though with the growth of the Group's other interests they are now by no means predominant, I must confess to some degree of mis-giving. The early months of the current year were, it is true, satisfactory and on a par with 1960 figures, but there are danger signals ahead. Last year at this time I stressed the fact that there was barely enough raw jute then available to carry the world through to the next crop and that prices had consequently risen sharply and excitedly.

In the final outcome there was just enough, but little or no carry-forward. Owing, however, to a prolonged drought the 1960 crop has, in its turn, yielded far less than was hoped for and this, coupled with the lack of carry-forward, has created an even more difficult situation than obtained last year. Prices of grades which stood at £115 to £120 a ton in July (already £15 to £20 a ton higher than a year earlier) rose sharply throughout the late summer, autumn and winter months to reach a peak of nearly £210 per ton in early March of this year. Such high prices and extreme movements do untold harm.

### EFFECT OF HIGH JUTE PRICES

Some traditional customers of jute goods begin to look for alternative materials and all customers, while buying heavily in the early stages of the rise, begin to reduce their buying when the upper price brackets are reached and to cut down their pipeline and run down their stocks and therefore still further reduce their buying once the inevitable decline in prices sets in.

With both Pakistan and India straining every nerve this year to grow a really big crop so as to redress the position and make up for the shortfalls of the previous two years, and with sowings and weather so far proceeding satisfactorily, a considerable decline in price took place between mid-March and mid-April. Although the market has latterly entered a phase in which it is not clear whether over the next month or two the shortage of old crop or new crop prospects will prove the more important factor, nonetheless it seems likely, and indeed it is to be hoped, that in the longer if not the shorter run, further considerable declines will take place. Accordingly it seems likely that we are going to be faced with increasing difficulty over the next few months in maintaining our manufacturing operations at full capacity. At the same time it seems very likely that the current year will be one in which considerable stock losses may be incurred, even on a minimum raw jute pipeline. This latter danger has been provided against by your Board who have increased the existing provision for High-Priced Stocks and Contracts this year by £35,000 odd, bringing it to a total of nearly £170,000. They will not hesitate to draw upon this provision to meet stock losses incurred during the year, should it prove necessary.

Still on the subject of Jute and dangers ahead, I must repeat again the references which I made last year to the fact that various Jute Pricing Agreements in the UK were under the scrutiny of the Registrar of Restrictive Trading Agreements. I said then—"The Government have long admitted the necessity of giving a considerable measure of protection to the Dundee and District Spinning and Weaving Industry against the imports of low-priced Asiatic goods. It is the industry's contention that the various Price Agreements operated by it are the necessary lubricating oil which makes the unusual and somewhat involved form of protection work smoothly and efficiently, and with the maximum fairness to all parties concerned. The industry accordingly proposes to fight for the maintenance of the various arrangements which have stood the test of time so well and been of considerable benefit to consumers as well as manufacturers." This matter has not yet come before the Restrictive Practices Court and therefore I can add no more.

### FLAX

So much for this difficult Jute field. Turning now to our Flax undertakings I am happy to report in much more confident terms. The early months of the current year have seen a continuation, both of the stable raw material conditions and of the good tempo of demand which characterised 1960. The Forward Order Book is good and it looks as if, right through the current year, the major difficulty may well be one of producing enough goods to satisfy the many demands with which this part of the Group is faced. At the moment, indeed, and subject to any unforeseen fall in raw materials' prices necessitating a stock write-down at the year's end, there is a fair prospect of results showing some further improvement over last year. This is a most heartening change from the depressed conditions which obtained in this industry only two years ago.

### TRANSPARENT PACKAGING

As far as concerns the Transparent Packaging Division, we have, as I have already said, been encouraged by progress over the last two years, to commit ourselves to further capital expenditure to increase capacity. Some of the new equipment involved is already erected and should enable increases in sales to be catered for in the latter half of this year. I am hopeful, accordingly, despite the very keen competition with which the Group is faced in this sphere of activities, that we may see some further modest advance in profits over the year as a whole.

### ENGINEERING

In Engineering, Bonar, Long & Company, Limited, continue to work at full capacity and high pressure. The Forward Order Book is excellent and in 1961 this Company should reap the full benefit of the major extension

which was completed in the middle of 1960 and has gradually been brought into full commission over the intervening months.

Throughout the last fourteen years, Bonar, Long & Company, Limited, have invested very considerable capital sums in new plant and buildings. The Company is now almost entirely self-contained for the manufacture of all component parts. During the same period the Company has steadily improved its output and its earnings on capital employed. It is excellently equipped with the most modern facilities to build Transformers up to the largest sizes. In addition its Switchgear manufacturing capacity has been steadily increased and a decision has been taken to build an extension to the factory to house this growing Switchgear Section. This project is scheduled to start in May and be completed by December and will comprise about 55,000 square feet. At the same time the sale of Capacitors is being steadily built up. My expectation at the moment is that their sales should show a further sharp expansion and that profits, subject to any unforeseen contingencies, should show an appreciable increase over the past year. Competition is very keen and will certainly not grow less now that the Transformers Manufacturers' case has been rejected by the Restrictive Practices Court. I should perhaps make it clear, however, that the Company was in no way involved in this case as it was not an adherent to any of the price arrangements concerned.

The Electricity Supply Industry has a rate of expansion of the order of 8 per cent per annum, i.e., the consumption of electricity doubles itself every nine years, Bonar, Long & Company, Limited, as suppliers of Power Transformers and Sub-Station Switchgear equipment, is therefore operating in a rapidly expanding field of industry.

#### CANADA

Looking abroad, the Group's undertakings in Canada have again made a good start. This is the case both in respect of the Eastern part of Canadian operations which are consolidated in the Balance Sheet and Profit and Loss Account, and the still larger Mid-west and Western operations which are not consolidated but are dealt with in Note 1 to the Accounts. The Group now either wholly own, have a majority holding in, or own a considerable share in no less than eleven plants spread across the breadth of the Dominion, and I hope when I am in Canada in June to have the pleasure of opening Plant No. 12—a new paper bag making plant at Fredericton, New Brunswick.

On the paper bag making side, I see no reason at the moment to think that 1961 will not once again prove a fully satisfactory year. On the textile side, however, as with our jute interests in the UK, and as is made clear in the Directors' Report, we seem likely to take sharp stock losses on our inevitably lengthy jute goods' pipeline. Like the Parent Board in the UK, the Canadian Board has foreseen this and has added an additional \$50,000 to their existing provision of \$150,000 for Future Inventory Losses. Similar action has been taken in the Subsidiary not Consolidated. The Canadian Board will not hesitate, if stock losses do indeed occur during the current year, to draw upon these considerable provisions to the degree necessary.

I cannot close this short review of Canadian prospects without making reference to the imposition in the last Canadian budget of a 15 per cent With-holding Tax on dividends admitted by wholly owned Subsidiaries in

#### COMPANY MEETING REPORTS

Canada to Parent Companies domiciled outside of Canada. This has not affected the Accounts before you and may well not affect the different year either, owing to the fact that this With-holding Tax cannot apply to the Subsidiaries of a British Company unless and until the Double Tax Relief Treaty between Britain and Canada is revised. If, in the long run, however, this With-holding Tax is brought into effect, it will mean a net addition to the charge for taxation as at current rates there is little between existing British and Canadian Company Taxation rates. I cannot but feel that such an imposition will be a most unfair reward to those who have helped to develop the Canadian economy.

#### AFRICA

Lastly I turn to the Continent of Africa. As you are aware, we operate as a Group in various parts of that Continent. In the Union of South Africa we have the South African Canvas Company (Pty), Limited with its Head Office in Johannesburg, and branches or depots in practically all the major centres. In the Federation of Rhodesia and Nyasaland we have branches of The South African Canvas Company (Pty), Limited in Salisbury and Bulawayo. In East Africa we have what used to be a branch of the Parent Company and is now our new Subsidiary—Low & Bonar (EA), Limited, while in Nigeria, we have now a controlling interest in the small, but I hope eventually growing, Tarpaulin Industries (West Africa), Limited.

Leaving Nigeria aside, the other areas in which we operate have all been very much in the news of late. In each one of them there are racial and political clouds, though the type of cloud and its darkness varies from one to the other. What the long-term solution to the many and difficult problems involved may be, neither I nor anyone else can forecast. In the short-term, however, the present uncertainties must almost inevitably lead to some degree of economic stagnation and difficulty. Our Companies there must, I fear, face difficult months and perhaps years ahead. Your Board have for some years past followed a conscious policy of holding and cherishing the Group's existing structure in these areas, but at the same time avoiding any new major capital commitments unless they were necessary to sustain that policy. In this last year, and in view of the Group's considerable manufacturing and trading commitments in these areas, the Group's purely Investment Portfolio interest in the same areas has been heavily pruned.

Your Board's past policy is to be continued. In the years that have gone by profits from Africa, particularly Southern Africa, have made no small contribution to the Group's continued expansion. Even in these last two or three years, the Group has benefited substantially from the endeavours of all concerned in our African organisations. Difficult times may indeed lie ahead, but it is still true that if only the political and racial difficulties can be overcome, the areas in question have an immense expansion potential. We intend as a Group to be there to enjoy it.

As far as our immediate 1961 prospects are concerned, the fact that both the Union and the Federation have this year large agricultural crops may well prove to be of considerable help to us in our type of business to meet what one expects to be a generally difficult economic situation. I think perhaps I should close this paragraph for the sake of perspective by pointing out that the percentage of total Group earnings represented by the Group's African Companies amounted last year to 12 per cent.

#### THE ECONOMIST MAY 13, 1961

##### CAPITAL COMMITMENTS

A Group such as yours can only, in the long run, progress if a very considerable part of its earnings are ploughed back each year into the business to be re-deployed in the form of either replacements or improvements of existing capacity, or the creation of new capacity. A review of the past 8 years shows that the Group has done this at an average of £354,000 per annum over that period. During 1961 the Capital Expenditure on Fixed Assets is likely to run at a very much higher figure. There is in plan, or under consideration at the moment, partly already committed and partly not yet taken that length, a total sum of the magnitude of £640,000.

It may well be that all of this will not fall to be paid for in 1961, but I quote the figure to show that the Group is not standing still. It is, as you will see from a careful study of the Directors' Report, in Canada, Bonar, Long & Company, Limited and the Transparent Packaging Division that the main expansion is taking place, but quite sizeable figures are also involved in keeping our Textile Spinning and Weaving both efficient and up-to-date.

##### TRIBUTE TO STAFF

In closing, I should like, as in previous years, to pay my tribute to the efforts and loyalty throughout the year of every Member of the Group, no matter what country they operate in or in what capacity. Year after year they continue to give of their best to promote your interests and once again they have earned your hearty thanks.

#### COMPANY MEETING REPORTS

## UNION CORPORATION LIMITED

(Incorporated in the Union of South Africa)

### THE FOLLOWING IS EXTRACTED FROM THE REPORT OF THE DIRECTORS FOR 1960

On February 14, 1961, the currency of the Union of South Africa was converted to a new basis in which the primary unit is the Rand (R), which is divided into cents (100 cents = R1). The conversion rate between the old currency unit and the new is £1 = R2. Since the Corporation's financial year ended on December 31, 1960, before the introduction of the new currency unit, the 1960 Accounts were struck in terms of the old currency unit. However, a comparative column has been added to the summary of the consolidated results for the year set out below.

As a consequence of the change in currency the share capital of the Corporation which has not altered in the course of the year, is now expressed as R2,500,000 in 10,000,000 ordinary shares of 25 cents each. The Corporation has also outstanding R4,000,000 of 6½ per cent registered unsecured Notes 1974/83 which were issued in 1958 and 1959.

RESULTS FOR THE YEAR. The Consolidated Profit for the year was £3,688,458, the highest in the Corporation's history. Appropriations have been made from it as indicated below.

| 1959<br>£  |                                                                                                      | 1960<br>£  | Rands      |
|------------|------------------------------------------------------------------------------------------------------|------------|------------|
| 2,856,915  | CONSOLIDATED PROFIT FOR THE YEAR attributable to the Corporation (after providing for taxation)..... | 3,688,458  | 7,376,916  |

| 1,146,070  | Balance brought forward from 1959.....                                                               | 1,201,316  | 2,402,632  |
| 2,851,316  |                                                                                                      | 3,657,797  | 7,315,594  |
|            | DEDUCT: Transfer to Reserves of Union Corporation:—                                                  |            |            |
| 150,000    | Exploration Reserve Account.....                                                                     | 150,000    | 300,000    |
| 300,000    | General Reserve Account.....                                                                         | 250,000    | 500,000    |
|            | Transfers to Reserves of Subsidiary Companies:—                                                      |            |            |
| 1,200,000  | Exploration Reserve Accounts.....                                                                    | 175,000    | 350,000    |
|            | General Reserve Accounts.....                                                                        | 1,250,000  | 2,500,000  |
| 1,650,000  | Capital Reserve Accounts.....                                                                        | 600,000    | 1,200,000  |
| £1,201,316 | Balance carried forward to 1961.....                                                                 | 2,425,000  | 4,850,000  |
|            |                                                                                                      | £1,232,797 | R2,465,594 |

The Directors, as on previous occasions, have thought it wise to write down the book cost of certain holdings below both cost and market price to allow for the wasting nature of a substantial part of the portfolio, and have consequently charged the Profit and Loss Account with £150,000, of which £75,000 has been charged in the accounts of a subsidiary company.

The consolidated profit for the year includes the Corporation's equity in a subsidiary mining company's profits, some portion of which was retained for financing shaft-sinking and other capital development and, hence, was not available for distribution. For this reason the Directors have transferred to Capital Reserve Account the sum of £600,000.

The Corporation's commitments to subsidiary mining companies were reduced during the year from £8,800,000 to approximately £6,300,000, which sum it is anticipated will be required during the next couple of years.

When considering the dividend for the year the Directors had again to take these commitments into account. Nevertheless, in view of the satisfactory progress of the Corporation's Kinross area gold mines and of the present dimensions of the Corporation's income available for dividends, they felt justified in increasing the distribution for the year. Furthermore, they have decided that, commencing with the final dividend for 1960, dividends will be declared in South African cents per share and, in the interests of simplicity, free of United Kingdom income tax. The final dividend for 1960 has been declared

at 18½ cents per share, free of tax, the equivalent of a declaration of approximately 3s. 0½d., less U.K. income tax at a standard rate of 7s. 9d. in the £. This makes, with the interim dividend of 1s. 0d. per share, less U.K. income tax, a total distribution for the year equivalent to 4s. 0½d. per share less U.K. income tax, or 24½ cents free of tax, as compared with 3s. 9d. per share (approximately 23 cents free of tax) in respect of 1959.

#### THE UNION CORPORATION GROUP OF COMPANIES

On the East Rand record tonnages and higher profits were achieved by The Grootvlei Proprietary Mines, Limited and Marievale Consolidated Mines, Limited. Operations at East Geduld Mines, Limited, continued to be satisfactory although mining difficulties are increasing, whilst at Van Dyk Consolidated Mines, Limited, which now has only a short profitable life remaining, the profits were substantially less than in 1959. Geduld Proprietary Mines, Limited, whose mine is also approaching the end of its life, announced during the year its intention of consolidating its future by adding to its investments and retaining a proportion of profits for this purpose. Amongst the newer companies St. Helena Gold Mines, Limited in the Orange Free State and Winkelhaak Mines, Limited, in the Kinross area continued to expand both their operations and their profits whilst adding substantially to their ore reserves. At Bracken Mines, Limited and Leslie Gold Mines, Limited, the two new Kinross area companies formed in 1959 to take over lease areas to the west of Winkelhaak Mines, shaft sinking continued throughout the year. Two shafts have now intersected the reef on each property and since the year-end a start has been made on underground development work.

South African Pulp and Paper Industries, Limited had a very good year and has now completed the installation of the first newsprint plant in Southern Africa.

In Mexico, San Francisco Mines of Mexico, Limited had a better year and was able to pay a dividend for the first time for three years—though since the end of the company's financial year the deterioration in the base metal market has adversely affected its results once more.

The principal United Kingdom operating companies of the Group, Bay Hall Trust Limited and Wilkes Berger Engineering Company Limited (in which the Corporation and Bay Hall Trust jointly acquired a controlling interest at the beginning of 1960) both had good years.

Late in the year the Corporation formed a company, Unicares Limited, to set up a plant in the United Kingdom to manufacture corrugated cardboard containers. South African Pulp and Paper Industries assisted in the preliminary investigation of this project and has taken a substantial investment in it.

After the end of the year under review the Corporation's non-African interests were consolidated into a wholly-owned United Kingdom subsidiary company, Unicorpora Limited.

#### EXPLORATION

Exploratory drilling outside the three lease areas in the Kinross field was continued during the year. The Corporation continued to be active in the search for gold and other metals and minerals elsewhere.

#### DIRECTORS

The Directors record with deep regret the untimely death in July last of Mr. A. V. Conrad. Mr. R. H. MacWilliam, a Manager of the Corporation in London, was appointed a Director in September 1960.

The full Report and Accounts (copies of which can be obtained on application at the London Office, 95, Gresham Street, London, E.C.2) include further details of the progress of the companies under the administration of the Corporation, brief particulars of the progress of other companies in which the Corporation is interested, sections dealing with the South African Gold Mining Industry and statistics of World Gold Production, Consumption, Distribution and Reserves and the Corporation's Trade Cycles Chart, revised to date.

# EAGLE STAR INSURANCE

*"I am a great believer in the personal approach and we must make every effort to seek business and give service wherever it may be."*

## SIR BRIAN MOUNTAIN'S REVIEW

The Annual General Meeting of Eagle Star Insurance Company, Ltd., will be held on June 1 at Wimbourne House, 22, Arlington Street, London, S.W.1.

The following are extracts from the statement by Sir Brian Mountain, Bt., Chairman, which has been circulated with the report and accounts for the year ended December 31, 1960:—

Last year I tried to show you how we respond to change and described some of the fundamental ideas on which we are working. In 1960 we endeavoured to carry some of these things into effect but the final proof of our efforts lies in the future.

Some changes are imminent in the higher direction of our Company and it is fitting that I should tell you about them before dealing with the events of the past year.

Mr John Spencer, F.I.A., our Deputy Chairman, who joined the "English & Scottish" sixty-nine years ago, retires from the Board by rotation and does not seek re-election; Mr Harry Routh, F.C.I.I., will also retire from his position as Chief General Manager on 31st July, and it is the Directors' intention that an invitation should be extended to him to join the Board. Mr A. G. Simons, F.I.A., General Manager, will take over as Chief Executive Officer.

From time to time during the past year we have been associated in the news with certain property developments. Although attractive opportunities are presented to-day by loaning money secured on selected property developments at relatively high fixed yields, the interests of the shareholder and policyholder may perhaps be even better served by equity holdings in the developments, which offer not only a stake in the fruits of sound judgment and performance, but an inflationary hedge for the future.

### LIFE

Perhaps the item of most immediate interest to shareholders in the 1960 Accounts is the transfer from LIFE Funds resulting from the triennial valuation of liabilities carried out by the Actuary at the end of the year.

It is not for me to forecast now what the results of the current period will be so far as they affect shareholders. I recall, however, arrangements made last year for policyholders under group pension contracts to

benefit from the prosperity of the fund over and above the pensions secured by the contracts themselves. We have made substantial reductions in rates for both new and existing business and are offering a participation scheme for those who prefer to share in the profits of their section of the funds as they emerge from time to time. This is a necessary piece of competitive service which we are, nevertheless, delighted to be able to give and is designed to keep the respective benefits to policyholders and shareholders in harmony with each other.

In 1960 we were busy coping with the preparatory work arising from the National Insurance Act, 1959, which came into force on April 1, 1961. To our employer friends, faced with problems of contracting out, we have been able to offer useful advice, often contrary to our own immediate interests, but on balance we feel the effects of the legislation should be to make employers more than ever aware of the value of company-administered schemes.

### FIRE

The record of the Fire and General Departments in 1960 was rather mixed. We think of the FIRE department first because we regard it as the most consistent source of profit, but this reputation is suffering as more and more perils come to be included under Fire and "All-In" contracts. However, 1960 gave us some wry satisfaction in being able to help many policyholders affected by the floods particularly those retail traders who found their Shopkeepers All-In policies with "Eagle Star" to be unique in covering flood damage to stock and fixtures. The worst hazards of recent years, however, have been due to the way that industrialisation has multiplied the number of large plants which often cover several acres and form virtually undivided fire risks. We have repeatedly warned about the perils presented by such premises, due to the difficulty of containing and extinguishing fire once it has begun. At last, responsible elements of the market are coming to agree that risks of this nature may warrant an increase of rate rather than a discount for size.

### ACCIDENT

In the ACCIDENT department we cover everything from a few pounds of holiday

baggage to the largest dragline excavator in existence and every day brings unfamiliar problems which call for common sense and experience of a high order. In fact so varied are the risks that one difficulty in transacting Accident classes all over the world is to get enough business of a kind to "make a book" in each place and justify the employment of competent people to deal with it at or near the source. However, we feel that we have this highly technical department well under control and offer as good a service as any.

### MOTOR

The MOTOR department continues to walk the tightrope. We do not ourselves believe there is any panacea for underwriters or, indeed, any really effective remedy other than education in road sense and the encouragement of safe driving by selection and careful underwriting. In spite of the much discussed rating methods used in this country, at least we keep the cost of insurance reasonably low for the average motorist, and lower than most places abroad. This should be borne in mind when arguments for deserving cases are balanced against the need to make both ends meet in a class of business which contributes so large a part of our premium income.

### MARINE

In the MARINE department there has been a distinct improvement in 1958 and subsequent years which has encouraged us to make a modest transfer from the Marine Fund to Profit and Loss. The AVIATION department is battling hard to keep a balance between the desire of airline operators to insure at lowest possible cost, and the need for underwriters to provide for heavy claims by high-valued jet aircraft flying about the world in increasing number. In this respect, we have taken a full part in helping to stabilise the market and I believe our friends, brokers and insured, will see the wisdom of the stand which underwriters are making.

Nothing gets easier, but we are confident in the men and women who serve the Company and I think we may leave it to them to meet the challenge of their times. I am sure the shareholders will join me in thanking them.

# BELL'S ASBESTOS AND ENGINEERING (HOLDINGS) LIMITED

## RESULTS SURPASS ALL PREVIOUS RECORDS

### MR C. W. BELL'S REVIEW OF GROUP'S WORLD-WIDE INTERESTS

The annual general meeting of Bell's Asbestos and Engineering (Holdings) Limited will be held on May 29, 1961, at Slough.

The following is the statement by Mr. Claude Waylen Bell, MC, the Chairman, which has been circulated with the report and accounts:—

A year ago my forecast ran favourably on the Group's immediate prospects as I saw them from my watch-tower; I made the prophecy that the Units most likely to burgeon might attain their most profitable period. My language was based on a close examination and careful analysis of fundamental facts and figures and in the event my optimism was justified. The results now under review surpass all previous records and I am proud to submit them. The Net Profit accruing to the Group amounts before taxation to no less than £737,193 against £580,009 in the year 1959, an increase of over 25 per cent and £52,169 higher than the previous best in 1956. Taxation, allowing for a credit of £19,643 in respect of over-provisions in previous years, is £359,544; subtracting that rather formidable national item and deducting £5,953 for minority interests the residue is £371,696 as compared with £311,067 the year before. Profits retained by the Subsidiary Companies total £129,173, leaving £242,523 for the Holding Company. Adding to this latter amount the balance of £952,696 brought forward from previous years we have £1,195,219 available for appropriation by the Holding Company.

During the year your Directors have declared dividends on the two classes of Preference Shares and an interim of 7½ per cent less Income Tax on the Ordinaries. Last November the Capital was increased by a "Rights" issue of 1,161,000 Ordinary Shares. These new shares rank for the final dividend and add naturally and materially to the cost. But as the increased liability is borne by enhanced earnings, the Board has no hesitation in recommending that the rate of the final dividend on the Ordinary Shares be 15 per cent less Income Tax, a total of 22½ per cent less Income Tax for the year as against 20 per cent for the year preceding. If the recommendation be approved, the balance to be carried forward by the Holding Company will be £1,055,077 which with the balance of £915,036 retained by the Subsidiary Companies reaches a total of £1,970,113 in the unappropriated profits and revenue resources of the Group as a whole. It is always a pleasant exercise to recite the arithmetic of growth.

### COMPANIES IN THE UNITED KINGDOM

#### Bell's Asbestos and Engineering Limited

The operating Company enjoyed more genial conditions of trading and in consequence the turnover and the profits have risen significantly. Acknowledging and appreciating as I am swift to do the encouraging external circumstances I bear in mind the fact that at long last the studiously thoughtful changes in the organisation of our internal affairs and enterprises in recent years have borne fruit and will continue to do so. Vigilant husbandry is prologue to harvest.

The Sales Staff has been strengthened under wise surveillance by the recruitment of representatives who in addition to personal qualities possess technical expertise to market new and exclusive "Speciality Products" which are our pride. The "Bestobell 250" Valve made for the Company at Rotherham by Baines is an example and symbol in the fullest degree of a Group product. There will be others. Exports to certain of the Commonwealth countries advanced in volume and most of the markets of importance to us have been active throughout the year and are currently so. The Aircraft Department is rich and eager in initiative and commands success on its merits. The personnel is lively and excellent so as to ensure efficiency of service to an observant and critical clientele. On the distributing side the sales of Newman-Milliken Valves manufactured at Woodchester by our good friends Newman Hender & Co. Limited for whom we are Principal Stockists and Service Agents were well maintained and of the SECO Hydraulic Valve manufactured by the Stockport Engineering Co. Ltd., of which the rights and duties of Sole Distributors in the United Kingdom are in our keeping, were substantially increased.

#### Ronald Trist and Co. Limited

Advances on all fronts are recorded and in each and every sphere and phase of manufacture Trists throbs with energy. Here at home, on the Continent and in the far distances Trist products are in almost automatic request; the problem of selling is slight; good wine, if I may adopt and adapt a proverb, needs no bush; excellence is a splendid emissary. Thermo-fed steam-operated boiler controls and various forms of MOBREY equipment, deriving from the Mechanical Engineering Works, exceeded all

records in the year now under review; abroad the turnover was half as much again as in the previous twelve months. The programme in capital development was completed last year; the purpose was to double the capacity of the Precision Rubber Engineering Works and provide larger and more modern laboratory facilities. The sequels were significant: the sales of the precision products increased by 60 per cent and the present output is at a level twice as high as in the recent past. The crescendo reverberates through the whole precincts of activity.

#### W. N. Baines and Co. Limited

My report last year was heartening as to the improvements in Baines's fortunes. Success was returning and financial health in process of renewal. The bulletin, to borrow the word, is very encouraging, orders in hand at a record level and the evidence of progress everywhere to be seen. We have long recognised Baines to be one of the Group's distinguished Units and therefore worthy of skilled and concentrated care and of wise modernisation involving a degree of automation. The restoring processes are justifying themselves and in increasing measure will be rewarding to the Group.

#### Venetian Vogue Limited

Making and marketing "Sunway" Venetian Blinds; the progress is unchecked and the possibilities and potentials continue to be exhilarating and exciting. A multitudinous and manifold wealth of windows new and old holds the sure promise of a prosperous future, "Sunway" being elegant and economic, easy to fix, gentle to handle and adjust because the aluminium slats are light as a feather. The blinds are their own eloquence and I need not strive to add to it. Venetian Vogue Limited, launched modestly a decade ago under the aegis of Bell's soon began to attract the interest of householders and housewives and home-lovers. Retailers, less than a thousand at the beginning and now close on seven thousand, responded to the Venetian Vogue and participated in it and the eagerness of customers spreads through towns and cities and villages like rivers flowing to the sea. The decentralisation of manufacture is proving to be profitable. In the current year the geographical pattern will be enlarged further. Publicity in exposition of the virtues of Venetian Vogue, in which "Sunway" are central, grows apace and television is used now to cover the whole of

the United Kingdom. I am intrigued from time to time to observe what I call the versatility of "Sunway"; one example is the use of novel skylights by the Ministry of Works to protect many of the nation's art treasures, as at the Tate Gallery. Exports of "Sunway" grow in volume and in promise. I am pleased to report and to add as a happy postscript that the sales abroad are of no casual nature. Though weather in most parts of Britain was beclouded and adverse in 1960 the sales of "Sunway" reached record size, a memorable milestone but far from being journey's end.

#### Miller Insulation and Engineering Limited

Shipbuilding to the regret of the whole nation has revived but slowly and hesitatingly and therefore and naturally, the competition for such Marine contracts as were on offer has been most severe and Miller's could only keep and increase its share by operating on reduced margins. Estimates for contracts on land also involved meticulous examination, "the nicely calculated less or more," and though a greater volume of interesting possibilities came into view, a fierce price-war brought all tenders under fire. But Miller's tradition inherent in the finest quality of workmanship and enduring excellence and wealth of experience must tell in the end. Meanwhile in the petrochemical and power-station sectors of industry Miller's is exceedingly well-placed to participate. We cannot do other than be patient, not passively but most vigilantly.

#### COMPANIES IN EUROPE

##### PORTUGAL

#### Bell's & Cia. Limitada

The wind of change blowing through Africa, blowing restlessly and constantly veering from one quarter to another, is of concern inevitably to Portugal; events in Angola, whose consequences cannot be discerned nor measured until the tempest gives place to calm, are perplexing. There is little that can be done except to hope for the success of a physically statesmanship among the peoples. We had reason to view with satisfaction the progress to maturity of our young Portuguese subsidiary. During the year under review a substantial increase in turnover was recorded. The omens were good especially in the field of installation and insulation contracting. Whilst in more recent months the Company has felt the less buoyant condition of trade to the extent that the rate of progress has been reduced, I am not unduly apprehensive as to the future.

##### HOLLAND

#### C. W. Todd van 1890 N.V.

Without anything spectacular to report, Todd's turnover in general sales and in insulation contracting has appreciated over the year and the results taken as a whole are more satisfactory. In recent months a joint cutting plant has been added and in this connection I venture a growing business with aircraft and industry generally. We were fortunate to be in possession of suitable accommodation for a manufacturing and distribution unit for "Sunway" Venetian Blinds. Having made a start in that direction, the outcome is awaited hopefully. Todd's are constantly on the watch for new outlets and bigger brothers in the Group are ever ready to extend assistance to this end.

#### COMPANY MEETING REPORTS

##### COMPANIES OVERSEAS UNION OF SOUTH AFRICA

#### Bell's Asbestos and Engineering (Africa) Limited

An influential and important subsidiary which contributes usefully to the Central Group; turnover and profit were both higher and the only forebodings in the landscape arise from decisions in the arenas of national and international discussion; in spite of political uncertainties your Company is conscious of many large financial, industrial, commercial and mining communities far and near which it serves and there is a fundamental confidence in the future.

#### Albert Vaux & Company (Pty.) Limited

This engineering-contracting business was less buoyant in the year now under review and the results therefore were somewhat disappointing but recovery will come when conditions change and fears depart.

#### Ronald Trist & Co. (South Africa) (Pty.) Ltd.

At the close of last year Trist's in South Africa seemed to be set to surpass the record attained the year before but in this instance as in other regions where deep-sea changes troubled the waters the routine of trading was disturbed. All things considered the little company did well and its roots hold firm amid frustrations.

##### AUSTRALIA

#### Bell's Asbestos and Engineering (Australia) Limited

#### Dreadnought Steam Equipment Company Proprietary Limited

#### Falcon Engineering (N.S.W.) Pty. Limited

#### Falcon Engineering (Vic.) Proprietary Limited Clive Skinner Proprietary Limited

My report on the economic well-being and continuing success of the cluster and pattern of companies established in Australia is to say that the sun shines on us down under; turnover and profits prove the strength of the vine itself and its branches; they are emphatically satisfactory. Intensified competition, from Japan and Germany in particular, has been met and in large measure mastered. But there can be no relaxing; we must be of the highest efficiency, every member of the staff keen in effort like an athlete. The Units engaged in the manufacture and sale of ferrous and non-ferrous valves, "Dreadnought," "Falcon" and "Clive Skinner," have made notable advance. A fuller measure of co-ordination has been introduced administratively, the emphasis being on team-work in the fullest sense and with the idea of reducing overheads judiciously and of using to the best purpose the sinews of endeavours. Further extensions to plant are in hand and here as in Baines some measure of automation will figure in the programme. Our policy in the Commonwealth continues to be one of gradual expansion in all units with agreed objectives in mind and I look to the future with much confidence.

##### INDIA

#### Bell's Asbestos and Engineering (India) Private Limited

Severe competition in the field of insulation-contracting inflicted a diminution in profits even though the volume of sales kept at a satisfactory level. Our relationship with Negretti & Zambra Limited is accelerating the response to the demands for industrial instrumentation inherent in India's second and third "Five-Year Plan." By and large the Subsidiary gives a good account

#### THE ECONOMIST MAY 13, 1961

of itself in conditions far from easy and certainly not carefree.

##### MALAYA AND SINGAPORE

#### Bell's Asbestos and Engineering (Malaya) Limited

A year not without its difficulties and anxieties but with confidence tending to be restored during the second six months of the trading year. In Singapore itself, following the announcement by the Government of plans for the expansion of industry, there were feelings of optimism and rather better trading conditions resulted. In the Federation of Malaya the climate was more favourable. Various projects reflected Government determination to meet increasing industrial demands. We are fortunate in having established a Unit in Kuala Lumpur well able to take advantage of developments. Our people in Singapore and the Federation, graduates in patience from the tutelage of events and disillusionments, are not without hope; tides turn, changes come; meanwhile there is renewed activity in certain of the "Bestobell" products and the immediate outlook for insulation contracting is decidedly better than for some time past.

##### RHODESIA

#### Bell's Asbestos and Engineering (Rhodesia) Limited

#### Vermiculite Industrial Corporation of Rhodesia (Private) Limited

These Subsidiaries have taken longer than was anticipated to reach the stage where they could be sure of working at a profit and of proceeding to be a source of gainful gratification to the Group. Not for a moment did we assume that the task in Rhodesia would be other than arduous and we have persevered in the fulfilling of it and in my opinion not in vain. At present the omens of success are brighter and clearer and that is all I venture to say at this hour.

##### CANADA

#### Bestobell (Canada) Limited

The period under review has been an interesting one for our Canadian off-shoot. I am able to report a year of useful progress from which I discern a promise of prosperity in what is and must continue to be a land of immense opportunities. Our wide range of products embracing asbestos packings and jointings, Trist Control equipment and Speciality Valves has enabled us to gain entry into important spheres of activity including Government Departments, Shipbuilding, Generating Stations, Oil Companies, and a useful industrial field. Whilst it will still take time and much earnest endeavour to achieve our objective, I am encouraged to believe that in the long term our effort will be rewarded. Unfortunately, towards the close of the trading year, the recession which then became evident produced its impact, but this phase in the National cycle will, I feel confident, not be prolonged.

##### FUTURE POLICY AND PROSPECTS

Our main business, as you know so well, is directed to applied asbestos, the versatility of which is near to a miracle, and to specialised engineering. Our Companies overseas in many parts of the Commonwealth and elsewhere arose from those intentions and exertions and from the early days we have been export minded, the changing world in the compass of our vision. The far-reaching organisation multiplied the

#### THE ECONOMIST MAY 13, 1961

markets for our products and for those who sought to use our lines of communication and our channels of sales. The pioneering spirit accompanying the British way of life these many centuries has breathed through the history of Bells stirring the pulses and bringing a surprise of opportunities. We have never been afraid of exploring new spheres of trade where possibilities promise an addition to our prosperity. Recently the manufacture of paints of the highest reputation and quality attracted us by reason of the excellence of an existing company and its profits. As a matter of fact it is one of Britain's oldest firms, Walter Carson & Sons, Limited, of Battersea, and we give it, as the phrase runs among the Ancient Guilds in the City of London, a right hearty welcome to the Group. With our selling units at home and abroad ready and zealous to add more strings to their bows the benefits accruing may be significant. Other possibilities in wise diversification are in the offing, and I look into the future without fear even though according to the philosophers the only constant element in an ever-changing world is change itself.

##### TRIBUTE TO THE STAFF

Courtesy, efficiency and enthusiasm are manifested by the members of our organisations in Great Britain, in the Commonwealth and in other parts of the world. On behalf of the Board I acknowledge the desire, diligence and determination on the part of everyone everywhere and under whatever sky to maintain the highest standards of duty in all contacts and circumstances. Those were the words I used last year; they have remained true in the vicissitudes of the twelve months on which I have been commenting.

## SELANGOR RIVER RUBBER ESTATES

The 29th annual general meeting of Selangor River Rubber Estates, Limited was held on May 10 in London, Mr G. D. Wreford-Brown, O.B.E. (the Chairman), presiding.

The following is an extract from his circulated statement:

The twenty-ninth financial year of the Company, comprising Selangor River and Belata River as one group, shows continued progress and a drop of 3,219,000 lbs. against 3,129,500 lbs. for 1959 for the Group, this in spite of the fact that 225 acres were disposed of in August, 1959, and we did not have the benefit of the crop from this area for the last four months of the year.

The profit for the year was a very satisfactory £147,817 and, after providing £64,956 for taxation and transferring £14,604 to General Reserve, bringing that account up to £132,897, we are able to recommend payment of a Final Dividend of 17½ per cent., less tax, on our increased Share Capital, thus maintaining our total distribution for the year at the 1959 level of 30 per cent., less tax.

The Balance Sheet shows a fairly strong liquid position with net current assets of £104,819.

It was felt that Shareholders should receive part of the profit on sale of the Lindores area, by way of a tax free distribution, and 1d. per 2s. share was paid with the interim dividend last November. I should like to make it very clear that it is not the policy of your Board to dispose of any further land.

The report and accounts were adopted.

#### COMPANY MEETING REPORTS

## RUGBY PORTLAND CEMENT

### RECORD RESULTS

#### SIR HALFORD REDDISH'S REVIEW

The Annual General Meeting of The Rugby Portland Cement Co. Ltd. will be held on June 2, 1961. The following is an extract from the speech of Sir Halford Reddish, FCA, which has been circulated with the Accounts:

The result of the Cement Industry's hearing before the Restrictive Practices Court was as we confidently expected it to be: a judicial decision that the arrangements of the Cement Makers' Federation were not contrary to the public interest; that our price-fixing scheme did confer a definite and substantial benefit on the public.

##### AN EFFICIENT INDUSTRY

The Court found that under the Federation's price scheme the Cement Industry has operated efficiently both as respects costs of production and costs of delivery, and that our overall prices have been reasonable. It further agreed that if there were no price-fixing arrangement and therefore unrestricted price competition the average price of cement would have to rise by something between 25s. and 40s. a ton (or costs of production be reduced to this extent) in order to produce a profit level adequate to attract fresh capital to the industry for expansion in the future.

The Court also acknowledged that the industry had acted with a sense of responsibility and accepted the fact that the industry's profits expressed as a percentage of capital employed were less than those of most manufacturing industries.

If the agreement had not been approved by the Court there is little doubt that costs, particularly of delivery, would rise. Without our fixed price for every point of delivery, based as it is on the nearest cement works irrespective of the capacity of that works to supply, there would undoubtedly be much uneconomic and wasteful expenditure on freight, which is comparatively heavy where cement is concerned. In the end the consumer would pay.

##### ORDERLY EXPANSION

Without the orderly marketing and distribution which the agreement ensures it would be almost impossible to achieve the balanced increase in productive capacity which enables the industry to expand just ahead of demand. Expansion would be much more a question of guess-work, which might well mean at times a shortage of capacity and at others large units of plant lying idle. As in modern conditions we regard in most cases a kiln with an output of 180/200,000 tons per annum as a minimum economic unit, this again would mean increased costs which would eventually fall on the consumer.

There are many aspects of the Cement Industry which are essentially long term; and it is the long view which the Court's blessing of our agreement will enable us to continue to take. That is why it is possible for the industry to flourish on a lower percentage of profit on capital employed than would otherwise be the case.

Our own company's deliveries to the home

market in 1960 exceeded those of 1959 by nearly 16 per cent. Our exports increased by 31 per cent but profit margins in the export trade are now negligible. In the end, both the total deliveries of the parent company and the total deliveries of the group were a record and so have enabled us to report a record net profit for the group for the fifteenth successive year. For the first time our trading surplus exceeded £2m. and our group net profit after taxation exceeded £1m.

We propose that the dividend on the Ordinary shares shall be at the same rate as last year, namely 1s. 3d. a share; but this year it is of course payable on the capital as increased by last year's scrip issue which means that the distribution is increased by one-seventh.

The amount attributable to the "A" shares for 1960 is £222,113 gross. We propose that the dividend on the "A" shares should be raised to 2s. 6d. a share against 2s. 0d. a year ago. The amount now carried forward to the credit of the "A" shares after providing for the proposed dividend is £365,077 gross or rather more than 7s. 3d. a share. It is in the nature of a dividend equalisation reserve.

##### FURTHER EXPANSION

The current year opened with an unusually strong demand in the home market, due partly to a substantial increase in constructional activity and partly to the comparatively mild winter weather. Our home trade deliveries in January were the highest for that month in the company's history; February's deliveries were higher still; while those for March were a record for any single month. On the other side of the picture was a further increase in costs in the closing weeks of 1960 and the early weeks of 1961, so that the profit-margin a ton for the first three months of the current year was somewhat less than that for the whole of 1960, in spite of the larger turnover. Nevertheless, it was a good start for what certainly looks like being a very busy and, I hope, profitable year.

Our Southam Works is being extended by the installation of a new unit with an annual productive capacity of 180,000 tons; it should come into production about the end of October.

##### CAPITAL INVESTMENT

A very cheering feature at the present time is the intense activity of most of the capital goods industries, in which for this purpose I include our own. This should mean greater production and greater productivity in the future and in many cases a reduction of unit costs—all of which should improve our competitive position abroad.

I believe that the country's economy is essentially sound and I see no reason for pessimism. If I may invert and adapt a well-known quotation from the other side of the Atlantic—what is good for Great Britain is, by and large, good for Rugby Cement.

A copy of the full speech may be obtained on application to the Secretary, Crown House, Rugby.

# PROVINCIAL INSURANCE COMPANY LIMITED

STATEMENT BY MR. PETER F. SCOTT

The Annual General Meeting of the Provincial Insurance Company Limited will take place at Kendal at noon on the 26th day of May, 1961. The following is an extract from the statement of the Chairman, Mr Peter F. Scott:

The death occurred last June of my uncle, Sir Samuel Scott, at the age of 84. Sir Samuel was a director of the Provincial from its foundation in 1903, and Chairman from 1913 to 1946. Until quite recent years he shared with my father the ultimate responsibility for all important policy decisions of the Company and for many other matters. He was most closely involved in every aspect of the development of the Company in its formative years, taking his part in the work of our small staff and sharing their joys and sorrows. Whilst later, to a certain extent, he withdrew from business life, his interest in the Provincial remained as keen as ever, and his advice was constantly sought by his co-directors.

The following table sets out the main features of this year's account with the corresponding figures for 1959:

|                                      | 1960      | 1959      |
|--------------------------------------|-----------|-----------|
| Premium income .....                 | 9,832,898 | 9,214,737 |
| Underwriting profit .....            | 138,893   | 99,097    |
| Percentage of profit .....           | 1.4       | 1.1       |
| Interest, dividends, and rents ..... | 791,024   | 685,263   |
| Sundry charges, less credits .....   | 71,511    | 113,169   |
| Surplus before taxation .....        | 858,406   | 671,191   |
| Taxation .....                       | 364,725   | 307,044   |
| Dividends (net) .....                | 313,218   | 282,049   |

Since, as I forecast last year, we have further pruned our Canadian business, the increase of premium income by £618,161, is not unsatisfactory. In Canada, though it would be premature to regard our difficulties as entirely at an end, I am very glad to say that during the past year the account has produced a small profit, and we are grateful to our Canadian managers for the efforts which have brought about this result.

Unhappily, our extensive operations in other overseas territories have involved an overall underwriting loss, attributable principally to South Africa, Australia and Venezuela. Good progress has been made in the Far East and in East Africa, and our Nigerian subsidiary, the *West African Provincial*, has contributed a useful initial profit.

At home our various departments have shown marked progress and, in general, reasonable profits, to which I am happy to say a substantial reduction in our management expenses has made an important contribution. We have always to contend with a natural tendency for costs to rise rather than to diminish, and have, indeed, introduced during the current year fresh salary scales, which will add considerably to our expenses. We are continuing our efforts to reduce our operating costs by improved methods and organisation.

## FIRE DEPARTMENT

|      | Premiums   | Underwriting Profit | Percentage of Premiums |
|------|------------|---------------------|------------------------|
| 1960 | £1,600,514 | £78,426             | 4.9                    |
| 1959 | £1,569,711 | £35,454             | 2.3                    |

For the second successive year our home underwriting results were spoiled by our share

of the high cost of fire damage throughout the country, estimated at over £43m., quite apart from consequential trading losses; this figure is only slightly less than that of 1959 and is quite outside the range of experience of earlier years. To the wastage by fire were added, in the last three months of the year, widespread claims for damage by the serious floods which occurred chiefly in the southern and western parts of the country. Unfortunately, there was little relaxation in the pressure of competition on rates, and we must be close to the point—if we have not already reached it—where, far from being able to make concessions, we shall need more net premiums to meet rising claims costs. By way of contrast, our fire account overseas showed the best results for many years and has provided the greater part of the year's profit in this department.

## ACCIDENT DEPARTMENT (INCLUDING MOTOR)

|      | Premiums   | Underwriting Profit | Percentage of Premiums |
|------|------------|---------------------|------------------------|
| 1960 | £6,653,273 | £60,467             | 0.9                    |
| 1959 | £6,287,160 | £63,643             | 1.0                    |

Once again, there was a fairly general increase in the many sections of business which make up the total, the largest being in the motor department. In the home motor account there was yet a further increase in the cost per claim, and although I am glad to say that we were able to make a profit, there appear to be no grounds for confidence that this annual increase in the claims costs can be stopped; higher rates of premium are already being applied to some sections of the account, and if the claims trend continues an all-round increase in rates will become inevitable. The results of other classes of home accident business were satisfactory, except in the goods-in-transit section. We transact a large volume of this business in which, indeed, we were amongst the pioneers. Increasing competition has, in some instances, forced rates to what have proved to be uneconomic levels at a time when the high number of theft claims, especially from haulage vehicles, is giving rise to serious concern. It is more than ever necessary to demand higher standards of security, not only by the fitting of efficient anti-theft devices to vehicles, but by the checking of references supplied by new employees, and by ensuring that valuable goods are entrusted to responsible carriers for safe delivery.

## MARINE DEPARTMENT (INCLUDING AVIATION)

|      | Premiums   | Marine Fund | Percentage of Premiums |
|------|------------|-------------|------------------------|
| 1960 | £1,579,111 | £1,910,856  | 121                    |
| 1959 | £1,357,866 | £1,662,700  | 122                    |

The increased premium income reflects the recovery in world trade and the continued trend towards higher hull values in the aviation account as more jet aircraft come into commission.

I have referred previously to the deterioration in our results in underwriting years subsequent

to 1954. I am glad to say that the lowest point in this trend was reached by a loss in the 1956 underwriting year, and that this loss was not so large that the directors have felt it necessary to make any compensatory transfer to the Marine Fund.

Although the account has recovered some degree of profitability, the future requires a cautious outlook.

The success of the Employee Shareholding Scheme which was launched in 1959, was emphasised by the number of further applications in 1960, when an additional 10,670 shares were taken up. The staff now own 53,690 ordinary shares in the Company, and I am sure that this number will be progressively increased in view of the very favourable terms on which the shares are available.

We gave much thought to the Government's scheme for supplementary pensions before deciding to contract out of it all members of the Company's Pension Fund over the age of 25. At the same time we decided to raise to 25 the age at which employees will in future become contributors to the Fund, thus increasing the "take-home" pay of the younger members of our staff without diminishing their pension rights. This followed a further general reduction from 5 per cent to 4 per cent in the staff's contributions to the cost of their pensions, the Company's contribution being increased accordingly.

Our training college at Yealand Manor continues to flourish. During the year, no fewer than 275 of our staff passed through. An enthusiastic team of officials in Kendal is constantly revising existing courses and creating fresh ones to meet changing needs. We have put this pleasant country house at the disposal of staff, their families and friends, for holidays at moderate charges during periods of the summer when courses are not being held and we hope increasing use will be made of this facility.

The book value of our investments increased by £600,000 during the year, but the appreciation in their market value fell short of the peak figure reached at the end of 1959. Since the end of 1960, however, markets have again moved ahead strongly and we have shared in the movement.

Interest earnings and rents in 1960 at £791,000 gross showed an increase of £106,000 over the previous year, and the directors recommend a dividend of 2s. 4½d. on the ordinary shares, an increase of 3d. per share. This dividend, less income tax, would amount to £294,843.

Before I end this brief review of the year's activities I would like to say a sincere "thank you" to our management in Kendal and in London and at our home and overseas branches, and to all our staff for the loyal and enthusiastic way in which they have approached the problems of 1960. I am conscious of the singular difficulties that our managers overseas have had to face in recent years and it is a tribute to their effort and devotion, which I am all too glad to acknowledge, that our prospects overseas are brightening.

# SCHWEPPE'S LIMITED

## OVERSEAS EXPANSION

The sixty-fourth annual general meeting of Schweppes Limited will be held on June 1st at the registered office of the company, Schweppes House, 1-6, Connaught Place, London, W2.

The following is the statement of the chairman, The Honourable R. Hanning Philipps, which has been circulated with the report and accounts for the year ended December 31, 1960:

Last year I was able to report outstanding profits, partly due to the exceptionally long and dry summer of 1959. The trading year 1960, however, saw the longest and wettest spell for the past hundred years. We are less susceptible to weather vagaries than most soft drink businesses, the last quarter of the year being in fact our busiest trading period. But exceptionally good or bad summers undoubtedly influence our profits.

The increased sales and profits for the first six months of the year, reported at the time of the Interim Dividend declaration, were lost in the succeeding three months. The growth of the business, however, ensured a good recovery at the end of the year which largely restored home profits. With improved overall overseas results, and a full year's profits from our three preserves companies, the aggregate profits after taxation exceed the record results of 1959, and more than fulfil my expectation of a year ago that we should come near to achieving this.

## SCHWEPPE'S (HOME) LIMITED

The increase of sales of both carbonated drinks and fruit juices that took place in the first six and the last two months of the year fully justifies the statement that our business is both sound and expanding. Christmas sales were a record. The introduction of a Canned Bitter Lemon Drink in July after careful research and long shelf-life tests, resulted in most encouraging sales. We have ordered a much larger canning plant to ensure both national distribution of this new line and the production of other flavours in cans. The sale of this new package is mainly directed to the grocery shops, particularly self-service stores. It will thus be complementary to bottle sales through the licensed trade, and should open up a new market for our products.

Costs of raw materials and all supplies during the year were slightly higher than the year before. Despite a wage increase, however, our production efficiency was able to hold our labour costs per unit at the former low levels. The new Sidcup factory is the largest mineral water factory in this country and incorporates the latest techniques of bottling, quality control, and goods handling. The old Vauxhall Squash factory will close at the end of 1961, and its production be taken over by the new plant installed at Sidcup.

The erection of the new factory on the Team Valley Trading Estate, Gateshead, is well in hand and we plan to bottle there in late 1961. We have acquired a site at East Kilbride, near Glasgow, to take the place of our present restricted Glasgow factory, and plan to build and start bottling there by the end of 1963. Extensions to our existing factories at Aintree, Birmingham, Leeds and Hendon have been completed or are in hand and will soon add to our steadily mounting production.

*Rose Kia-Ora Sales Company.* The sales of this company reacted particularly to the wet, cool

summer. In common with other grocery lines, these products are subject to intense competition, resulting in profit margins being cut to the bone. Fierce competition continues, but we have held our share of the total market and are quietly confident of expanding sales. We introduced a new polystyrene cup for the ready-to-drink 'Kia-Ora Squashes,' served in cinemas and theatres. This has substantially increased our sales.

*The Park Bottling Company Limited.* Bad weather also affected this company's sales of 'Pepsi-Cola,' a product which thrives in a thirsty climate. The levels of winter trade, however, for the two past seasons have each been substantially higher than the year before, marking an encouraging expansion of all-the-year round drinking of 'Pepsi-Cola.'

From January 1, 1961, we have added to this company the task of marketing Schweppes Catering Division products. These products are in the main sold in the same markets as Pepsi-Cola, so that the change will enable Park's extensive service department to be used for the maintenance of the thousands of pieces of refrigerated dispenser equipment issued to the catering trade for selling chilled drinks. This arrangement should strengthen both sections of this business.

*Jewsbury & Brown Limited—Manchester.* The production facilities of this company have been fully used by the Group, so that, together with local trading, profits have been maintained at a high level.

*Connaught Food Products Limited.* This company embraces the trading activities of the three preserves companies, Chivers & Sons Ltd., Wm. P. Hartley Ltd. and Wm. Moorhouse & Sons Ltd. This year has been one of reorganisation and consolidation. The profits of these three companies before taxation included in the Group results were £304,979, and capitalised profits of £232,000, due to realisations of trade investments, etc. Manufacture at the Tower Bridge, London, factory of Hartley's has ceased, and plans to close two vegetable canneries at Huntingdon and Hereford after the coming canning season are in hand. Compensation to redundant employees has been, and will continue to be, paid on a generous basis.

We are setting up a Depot distribution service, consisting of some twenty-four depots and 200 modern delivery vans to cater especially for a service to the grocery trade, similar to the extensive Schweppes service to the licensed trade. This will be in operation at the end of 1961, and we shall then jointly market Chivers' and Hartley's products through a new sales company. Moorhouses will continue the expansion of its sales, mainly to the catering trade.

The entire capital of Chivers & Sons Ltd. and Wm. P. Hartley Ltd. is now owned by our Group, the outside holders of the respective preference capital and the Chivers' debenture capital having accepted the offer to exchange into compensating Schweppes stocks.

## SCHWEPPE'S (OVERSEAS) LIMITED

This company continues to serve as a holding company for our overseas investments in subsidiaries and associated companies, for the development of franchise bottlings in many countries, and for the supply of goods for direct exports and ships stores. By the very nature of our business we cannot be large exporters. It does not pay us to send a bulky liquid in glass

containers over a long distance. We still export a certain amount to countries where bottling cannot be done locally; but in general we have two methods of distributing our products overseas: (i) the setting up of our own factories, as in Australia, South Africa, Rhodesia and Kenya; and (ii) making arrangements with firms overseas to bottle our products under supervision, exporting to them our own flavouring materials.

We estimate that this year, for every eight bottles bearing our label sold throughout the world, three will be distributed outside this country. Thus, although we are not large direct exporters—and never can be—we do receive overseas currencies by the sale of flavouring materials, by royalties and from the profits of wholly-owned or associated companies. However, direct Group exports to the North American continent for 1960 totalled over \$2,300,000.

Later in the report you will see how our own overseas companies are faring. As far as our franchise methods are concerned, we are able to report a rapid expansion which now covers North America, most European countries, some African countries not covered by our own companies, and several territories in the Far East such as Ceylon, Singapore and Hong Kong.

In general, a new franchise operation takes some five years to become profitable. For example, Schweppes (USA) Limited started in 1953 and showed substantial losses in the next five years. It was not until 1960 that all these losses were recouped and a clear profit emerged.

A period of considerable spending on advertising and sales promotion is deliberately undertaken in order to create a widespread demand for the product. Substantial profits can then be made both by the local bottler in his trading and by ourselves in royalties or profits on the sale of our own flavouring materials. We can reasonably expect that over the coming years more of our franchise undertakings will benefit in this way. We have opened a total of 104 local bottling franchises throughout the world during the past eight years.

An advantage of the franchise system is that your company's labelled goods are distributed without any capital investment on its part, the capital liability being borne by the overseas bottler.

Our record of overseas profits, before taxation, for the past ten years is encouraging:

|      |         |      |          |
|------|---------|------|----------|
| 1951 | £58,655 | 1956 | £164,857 |
| 1952 | 56,177  | 1957 | 265,325  |
| 1953 | 67,758  | 1958 | 460,081  |
| 1954 | 86,977  | 1959 | 520,623  |
| 1955 | 152,056 | 1960 | 654,660  |

## OVERSEAS COMPANIES

*Schweppes (Australia) Limited.* Our plan to sell 25 per cent of the equity capital of this company to the Australian investor was most successfully completed in January, 1961. Their trading results have again broken a record. During 1960 they completed the acquisition of a mineral water company, Rowlands Pty. Limited, with factories at Melbourne and Ballarat. This will be reorganised to permit their new bottling factory at Melbourne being more fully used. The rapid sales growth of this company reflects the work of its board and management.

In New Zealand discussions are well advanced for a merger of our mineral water business with that of one of the leading brewers. This will greatly strengthen our business there.

**Schweppes (South Africa) Limited.** This company again increased its trading profits for the year. Their introduction of the new line Bitter Lemon Drink has met with an immediate success. We are indebted to the managing director and his colleagues for their skill in maintaining results year by year.

**Schweppes (Central Africa) Limited.** The introduction of Bitter Lemon Drink during the year again met with success, and I am glad to report that this subsidiary showed a good trading profit and now shows every sign of being well established. Their managing director will be visiting us this summer to discuss our business there.

**Schweppes (East Africa) Limited.** We again made a trading loss due to the extraordinarily difficult conditions of intense competition and price-cutting (mainly from American brands) operating throughout the year. Thus the venture continues to be precarious and unprofitable. We do not, however, think it likely that such conditions will continue indefinitely, and already there have been some signs in the opening months of this year that price-cutting is less fierce.

In charge of the business we have a young and enthusiastic chief executive. A year or two ago he was asked to try out an experiment in industrial relations along the broad lines of the pattern we pursue at home. This includes co-operation with the trades unions, a Schweppes code of pay and conditions, joint consultation and the like. The whole of the labour in this factory is African, and they have responded with enthusiasm and great interest to this form of management.

**Schweppes (U.S.A.) Limited and Schweppes (Canada) Limited.** These two companies were hampered by a bad summer, but sales were still further expanded and profits maintained. We have entrusted to their President and his team the gradual franchise development of the Caribbean Islands, as being more easily managed by our New York administration. Our opportunities to expand continue.

#### ACCOUNTS

The consolidated Profit, after charging £1,091,373 depreciation compared with £823,503, but before taxation, is £3,787,860 as against £3,776,184 last year. After placing to Reserves £618,024 there is with the amount brought forward from last year, a total disposable profit of £2,206,623.

Your directors have paid an interim dividend of 7½ per cent in October, last, at a net cost of £323,094, and the dividend on the 5 per cent Preference Stock absorbs £36,425.

Your directors recommend a final dividend of 16½ per cent, less tax, absorbing £710,806, making a total dividend for the year 1960 of 24 per cent, leaving a balance of profit to be carried forward in the Group accounts of £1,136,298.

#### THE RT. HON. VISCOUNT DE L'ISLE, VC

Her Majesty The Queen has approved the appointment of Lord De L'Isle to be Governor-General of Australia. Lord De L'Isle will be taking up his post this summer.

My colleagues and I congratulate Lord De L'Isle on this signal honour, but cannot help regretting that this must mean his temporary loss to our company. Since his appointment on

#### COMPANY MEETING REPORTS

1st January, 1960, as managing director of Schweppes (Home) Limited, his dynamic energy and leadership have inspired all who have come in contact with him, and not least his fellow directors.

Although we can feel proud of his distinction, we shall miss him greatly during the next few years. He in turn has asked me to say how much he has enjoyed working with Schweppes, and to thank on his behalf all who have been so kind as to write and wish him well in the very important task ahead.

#### PERSONNEL

During the year we introduced certain improvements in our personnel policy, notably longer holidays for established employees after five years' service, special consideration for those who are members of Local Authority councils, or who undertake other public service recognised by the company, and assistance to any employee desiring it on behalf of children either specially gifted or specially handicapped. Such assistance is, of course, related to the parent's capacity to pay and employees earning more than a certain salary would not be eligible to participate.

Once more we are indebted to employees for their loyal co-operation throughout the year. Our relations with them, and with their trade unions, continue to be excellent.

#### OUTLOOK

Our trading during the first quarter of this year has shown a substantial increase compared with the same quarter of last year. Since it seems unlikely that we can have as bad a summer as in 1960, we may look forward to continued improvement throughout the present year.

#### THE ECONOMIST MAY 13, 1961

### JOSIAH PARKES & SONS

(Manufacturers of Union Locks and Brass Foundry)

The Ordinary Annual General Meeting of Josiah Parkes & Sons Limited was held on May 5 at Willenhall, Mr C. W. Parkes, J.P. (Chairman and Joint Managing Director), presiding.

The following is an extract from his circulated statement:

The accounts show a rise in profits before tax of 7 per cent over the previous year's figure, which does indicate continued progress by the company. Turnover showed a greater rise than this, but profit margins were again narrower, and costs are still rising in almost every direction.

Parent Company: The intake of orders was maintained throughout the year at a very high level for both home and export trade.

Edwin Showell & Sons Ltd.: A very large increase in turnover created an unprecedented demand on factory capacity and it was impossible to maintain the standard of service to customers that we regard as desirable and normal.

Josiah Parkes & Sons (South Africa) Ltd.: This company enjoyed a very successful year, both as regards turnover and earnings.

We have again started the year with a very full order book, and all the indicators suggest continuation of a high level of demand. However, the difficult problem is the continual rise in costs. So far and as long as possible we try to absorb these cost increases but there are limits to the extent that this can be done. Once again therefore, I must temper optimism regarding the future with the recognition of the possibility of yet more reductions in profit margins. The report was adopted.

## BANCO DI ROMA

Capital: 12,500,000,000 Italian Lire  
Paid-up: 6,750,000,000 Italian Lire  
Reserves: 5,900,000,000 Italian Lire

The Ordinary Meeting of Shareholders of the Banco di Roma held on April 21, 1961, has approved the Balance Sheet and Profit and Loss Account as at December 31, 1960.

The Board of Directors gave an account in its report of the further development of the Institute during the year 1960 in Italy and abroad and in every department of its business. The total assets have increased by a further 75 milliards, thus amounting, with the holding of drafts in circulation, to 854 milliards Italian Lire. The investments which rose to 565 milliards Italian Lire by an increase of 110 milliards Italian Lire during the year, and the unsecured credits amounting to 82 milliards Italian Lire, together form a total of facilities of 647 milliards Lire utilised by customers. The volume of the liquid funds still shows ample margins and this will be of assistance in view of the further boom of credits which is to be expected as a result of the continuing upward trend of the economy. The net profits of 1,131 million Lire have enabled the distribution of a dividend of 10 per cent and the allocation of 500 million Lire to the reserves which therefore amount to 5,900,000,000 Lire or to more than 87 per cent of the paid-up capital.

The Board of Directors which met immediately after the General Meeting has re-elected to office in the Company: as Chairman, Ugo Foscolo, Knight of Labour; as Vice Chairmen: Baron Prof. Dr. Francesco Mario Oddasso and Dr. Massimo Spada. The Managing Directors of the Bank are Grand Officer Raffaele Mancinelli and Dr. Achille Ruta.

#### THE ECONOMIST MAY 13, 1961

## THE LITTLEWOODS ORGANISATION

### MR JOHN MOORES REPORTS 28% INCREASE IN TURNOVER

1960 was an excellent year for the Littlewoods Organisation, and I have considerable satisfaction and—I must confess—not a little pride in telling you that, apart altogether from the Pools, our turnover reached a total of £90,000,000, an increase of 28.6 per cent compared with the previous year. This is the biggest increase we have ever achieved and our dramatic progress is best illustrated by figures for the last five years:

|      |     |             |
|------|-----|-------------|
| 1956 | ... | £48,000,000 |
| 1957 | ... | £53,000,000 |
| 1958 | ... | £60,000,000 |
| 1959 | ... | £70,000,000 |
| 1960 | ... | £90,000,000 |

The significance of this remarkable growth is that it has been achieved without the acquisition of any other interests. It is entirely the result of the effectiveness of our internal creative policies, which have resulted in our rapidly obtaining an ever-larger share of the market. Clearly there is increasing public satisfaction with our Mail Order and Chain Store services.

We have constantly before us the knowledge that we are just as dependent on the goodwill of our customers as the modest corner shop. A big organisation may be able to offer special advantages, but these must never be regarded as a substitute for careful attention to every customer's requirements. From my day-to-day knowledge of all our activities I am satisfied that in Littlewoods we do not fall into this trap.

Our constant objective is to maintain high standards of friendly courteous service, backed by the quality and value of the goods we sell through Mail Order and Chain Stores.

We shall continue to seek still further improvements in our merchandise, and we can do this only with the help of our many suppliers on whom we have made very heavy demands in the past. They have always given us their wholehearted co-operation, and I take this opportunity of thanking them publicly for their help.

I should like also to pay tribute to the Post Office and to British Railways who together handle an enormous volume of mail and parcels traffic for us. Both these organisations come in for more than a fair share of criticism, but so far as we are concerned they do an excellent job.

So far this year trading results have been good and augur well for 1961 as a whole.

We shall have to wait and see how the Chancellor will use the powers he is seeking to vary the rates of Purchase Tax at short notice, because changes in this tax in the past have usually involved all retailers in unsatisfactory operations which ultimately cost them money. In our case, as we issue expensive catalogues twice a year, this could be most difficult.

Also, notwithstanding the introduction of the most up-to-date machinery and the successful use of electronic computers and accounting machines, we now employ a staff of more than 20,000. A payroll tax would, therefore, be a heavy charge for us to bear. However, I welcome anything which will encourage the more efficient utilisation of labour throughout the

#### COMPANY MEETING REPORTS

country, because we can thrive only in a healthy economy, and we can only have a healthy economy if everyone makes an adequate and useful contribution.

In the early days of this Organisation I employed specialists in work measurement so that staffing in all our offices and warehouses could be based on the volume of work to be done; modified and brought up-to-date with modern methods and equipment, the system continues to this day. Nevertheless, the suggested tax must cause us to investigate whether anything more can be done in this direction.

I emphasised earlier the importance of personal service in a business such as ours and I stress the responsibility, in this respect, of every member of the staff. The credit for the success that we have achieved—and few enterprises can offer a better record of progress in such a comparatively short time—belongs to every member of the 20,000 strong team that is the true strength of the Littlewoods Organisation.

#### LITTLEWOODS POOLS LTD.

My brother, Mr Cecil Moores, Chairman of Littlewoods Pools Limited, reports that once again the Company maintains its lead over all other Football Pools, and for the season 1959-60 another world record figure was established for the total amount of stake money. The total figure was £52,043,149, an increase of £8,972,538 over the previous season. In comparison, the total stakes of all the other seven Pools combined were £49,673,867 for this particular season. During this season the Government Pools Tax, at 30 per cent, took a total of £15,612,944 of Littlewoods' gross stakes.

On January 7, 1961, Littlewoods Pools reduced the stake on the ever-popular Treble Chance Pool to a penny a line from two-pence, in answer to the public's demand for a lower minimum stake, and following this reduction, on February 4, 1961, it was again reduced to a farthing a line.

Both these changes necessitated a tremendous amount of highly skilful work and planning by the staff of Littlewoods Pools—great credit to them because they succeeded magnificently in their objectives in a very short period of time.

This season the number of dividend winners exceeded all other Pools, and in one particular week there were no less than 1,197,650 Treble Chance Pool dividend winners, and week after week Littlewoods have returned over £500,000 to winning clients. Towards the close of the season three first dividend winners shared £225,027 on the Farthing Treble Chance Pool.

The Pools Company is continuously endeavouring to cut down overheads and operating costs, so that the clients who are successful in their forecasts receive the maximum possible dividends. To this end the Company is extending its use of electronic appliances. Revolutionary electronic machines to cope with the vast problems of sorting postal orders and checking football pool coupons are already in operation or awaiting early delivery to the Liverpool Headquarters.

The work of the Advisory Committees continues to reap rich rewards for the fortunate Littlewoods winners who entrust their affairs to them, and all the really big winners have enjoyed the services of these Committees. I must thank those gentlemen who guide our winners with their sound financial and legal advice.

#### MAIL ORDER

When I first entered the Mail Order field in 1932, I was warned by well-meaning friends that this form of shopping could not succeed in such a highly urbanised country as ours with a shop around every corner. It is estimated that at least 60 per cent of the adult population now use home-shopping services, finding real pleasure in studying the magnificent catalogues at leisure in their homes and in discussing purchases with their neighbours and friends in the shopping groups Mail Order has stimulated. None of this development would have been possible, however, if we had not first proved that the public could have complete confidence in goods purchased in this way. I am very proud of our own record in this respect and of the Organisers and Agents who are the real backbone of our business. The good name that we and they have won is our most valuable asset and I am confident that there are even greater possibilities for future development.

#### CHAIN STORES

This has been a year of outstanding progress in our Chain Stores Division. We are attracting more and more customers and our new stores are obtaining wide acclaim for their standards of design, the facilities that they provide for shopping comfort and the improved working conditions for the staff.

Our programme of development for 1961 includes new stores at Wrexham, Chester, Kingston and Ellesmere Port and in spite of uncontrollable delays we are pressing on with the complete rebuilding of our Oxford Street, London, store. We plan at least 12 further new stores during the next two years and several very important sites have been acquired for future development.

The modern Chain Store has won acceptance at all income levels by the sheer merit of its merchandise and service. They have achieved a new trading "dignity" and I have great confidence in the future expansion of this branch of our activities.

#### WHOLESALE COMPANIES

The enormously increased level of activity in other divisions inevitably led to extra demands on our wholesale companies. The efficiency with which they handle such enormous quantities of merchandise is a vital factor in the success of our Mail Order and Chain Store operations. And always, at the very hub of our trading pattern, there is our highly specialised buying team who carry, perhaps, the biggest responsibility of all for the good name of Littlewoods.

## THE GENERAL ACCIDENT FIRE AND LIFE ASSURANCE CORPORATION LIMITED

The seventy-fifth Annual General Meeting will be held on 31st May at Perth. The following is an extract from the circulated address of the Chairman, Sir Stanley Norie-Miller, Bt, MC, DL, JP:

### REPORT AND ACCOUNTS

It was appropriate that in the year which saw the 75th anniversary of the founding of "General Accident" we should produce favourable results. Income from all sources advanced by over £8 million to reach £86,794,964.

The Revenue Balance for the year was a record. It amounted to £3,852,501 compared with £3,201,720 the previous year. The amount brought forward from 1959 was £1,517,160, thus making available for appropriation the sum of £5,369,661. From this £1,100,000 has been transferred to the Accident and

Fire Departmental Funds, and £500,000 has been added to General Reserve, bringing the latter to £4,500,000.

In the United Kingdom the appalling weather conditions which resulted in widespread damage by storm and flood, brought a veritable avalanche of claims under Householders' Comprehensive and Special Perils policies. We received many expressions of gratitude for the service we rendered to unfortunate policyholders, whose claims were settled promptly and generously. Hurricane Donna, which struck the eastern seaboard of the United States in September, gave rise to many and costly claims, and there were disastrous fires both at home and abroad.

We had a good year—the most successful in our history—and confidently anticipate equally successful trading in the future.

## ROSS GROUP LIMITED

### A Year of Great Activity and Development

The following are salient features of the Accounts for the year ended September 30, 1960, and the report by the Chairman, Mr. J. Carl Ross, to the Annual General Meeting on May 4, 1961.

"Since my last report to you the policy of broadening the trading basis of the Group has been continued, the year being one of great activity.

The Net Profit wholly applicable to your Company, after Taxation, shows an increase of approximately 80 per cent at £494,213, a figure which does not reflect all the benefits of recent expansion."

The meeting confirmed the payment of a total dividend of 20 per cent and sanctioned the creation of a further 4,000,000 Ordinary Shares of 5s. each. If the recent offer to acquire the issued Ordinary share capital of Sterling Poultry Products is successful, 2,764,685 Ordinary Shares will remain unissued.

### ANALYSIS OF TURNOVER

A comparison of the turnover for 1960 with that of five years ago gives a clear indication of the rapid advance and diversification in the trading pattern of your Group:

|                                                                          | 1955             | 1960              |
|--------------------------------------------------------------------------|------------------|-------------------|
|                                                                          | £                | £                 |
| Value of fish landed from our vessels ... ..                             | 2,000,000        | 4,000,000         |
| Fish Trading at the Ports, Inland Wholesale and Retail ...               | 5,000,000        | 9,500,000         |
| Shipbuilding, Engineering, Motor Transport and Motor Distribution ... .. | 200,000          | 3,500,000         |
| Frozen and other Foods Production and Distribution ...                   | 300,000          | 11,000,000        |
|                                                                          | <u>7,500,000</u> | <u>28,000,000</u> |

The expansion in your Group's interests has continued since September 30, 1960, by further acquisitions, resulting in the issue of 305,872 Ordinary Shares of 5s. each. These acquisitions will strengthen our activities mainly in the Frozen Food and other Food sections of the Group.

Copies of the Annual Report and Review are available from  
The Secretary, 1, HUTTON ROAD, GRIMSBY.

## BUTTERWORTH & CO. (PUBLISHERS) LIMITED

### A RECORD YEAR FOR THE GROUP

The forty-seventh Annual General Meeting of Butterworth & Co (Publishers) Limited will be held on May 29th at the Connaught Rooms, Great Queen Street, London, W.C.2.

The following is a summary of the statement by the Chairman, the Earl of Rothes, which has been circulated with the Annual Report and Accounts for 1960:

The incidence of publishing, together with the recovery of the back-log resulting from the printing strike of 1959, has in no small measure contributed to the successful results before you. These are a record for the Group both as regards turnover and profit.

For the year ended December 31, 1960, the Group profits before providing £205,977 for taxation amount to £396,438 compared with £357,733 in the previous year. The sum of £100,000 has been allocated to General Reserve bringing it up to £513,000 and £9,279 to Staff Contingency Reserve raising that total, after allowing for outgoings, to £51,557. The balance carried forward on Profit and Loss Account is £150,284 against £153,886 brought in from the previous year.

The Directors recommend a final dividend of 20 per cent making 35 per cent for the year—the same as for 1959. The expansion of our existing enterprises and the setting up of new ones, particularly in America, continue to call for substantial sums of money.

The Group sales are approaching the two-and-a-half million mark and progress in all departments has been very satisfactory. Increased costs have inevitably led to a fall in the margin of profit, but much of this has been offset by economies and greater efficiency.

In the latter half of 1960 our new wholly-owned Subsidiary—Butterworth, Inc.—was formed with its headquarters in Washington, D.C. From it sales have started not only of books produced in England and Canada, but also of a major work, Traumatic Medicine and Surgery for the Attorney, produced in America for American lawyers and doctors. Local competition is considerable, but we are satisfied with the progress made so far.

One of our Managing Directors went to Moscow during the year and arrangements have been completed with the Russians for the translation and publication of certain of their scientific books. The other Managing Director toured the Union of South Africa and visited Rhodesia and Kenya, where our business is increasing in spite of the political risks to which these territories are subject.

Our Australian and New Zealand Companies, reorganised last year, both achieved record sales. Particularly in these countries are we successful in local publishing, and it is our policy in any part of the Commonwealth to support the leading experts on any legal, medical or scientific subject, so that their knowledge in book form may be at the disposal of their fellow countrymen.

We are continuing our long term planning and I look forward to the future with modest optimism. We have more new ventures on hand than ever before and I regard them all with confidence, although some may take time to bear fruit.

## LOBITOS OILFIELDS, LIMITED

### CONTINUED EXPANSION IN 1960

The following are extracts from the circulated Chairman's Statement for 1960:

During 1960 further progress was made with the Company's policy of broadening the interests of the Lobitos Group, and consolidating its activities at home and overseas.

The capital expenditure and development programme envisaged in 1957 is now nearing completion and by the end of 1961 will have involved the investment of more than £4,000,000 on the new tanker, investment in Canada and modernisation and re-equipment of the Ellesmere Port Refinery.

The financial position of the Company remains strong and under these conditions it is hoped that in the future the Group's position may be further strengthened and its earning capacity in the United Kingdom improved.

### PERU

1960 was a constructive and encouraging year for your Peruvian subsidiary, Compañía Petrolera Lobitos (C.P.L.). With the maintenance of a satisfactory refined products' price structure in the local market and a stable national economy, normal development of the Company's Concession and markets was possible, and is reflected in the trading results for the year, and a reasonable return on the investment after several years of adverse trading conditions.

Gross production of crude oil from the Concession for the year to December 31, 1960, shows an increase of 15 per cent, which is indicative of the effects of a normal development programme compared with restricted operations in 1959.

Progress was made in developing and consolidating the Company's market outlets for products and its distribution facilities, in order to ensure that C.P.L. may be appropriately organised to operate satisfactorily in an expanding and competitive market.

As Stockholders appreciate, the prospects for your Peruvian subsidiary are largely dependent on the economic and political strength and stability of Peru. During the past year the national financial situation has continued to improve, and Peruvian Government projects for housing, agrarian reform and energy and land development are indicative of its awareness of the necessity for a stable and progressive economy.

A Bill covering revised Petroleum legislation was presented to Congress by the Government in August, 1960, but has yet to come up for consideration. The Government Bill inspired the Opposition and Left Wing elements to introduce a number of alternative projects of Law of a nationalistic character which have been referred to Congressional Committees for consideration.

It is hoped that when the time comes for Congress to arrive at a conclusion on the Petroleum legislation that shall apply in the future, Peru's traditional support of private enterprise and industrial development will be endorsed.

### UNITED KINGDOM AND EIRE

The Refinery operated to capacity throughout the year and processed over 200,000 tons of crude oil.

Contracts were placed and construction began on the new 5,000 barrels/day Distillation Unit, together with the ancillary plant, tankage and utility services. It is planned to have the new unit in operation towards the end of 1961.

The Distribution Companies, British Viscroleum Fuels Ltd., Holmes, Mullin & Dunn, Ltd., and Shamrock Petrol Ltd., have had to contend with increasingly competitive trading conditions, but have continued to consolidate their outlets and to adapt themselves to current market trends.

As I advised you in my Statement at the last Annual General Meeting, your Company obtained a 100 per cent holding in Alfred Hopps Sons & Co. Ltd., lubricating oil blenders and distributors in Liverpool. The acquisition of this Company provides the additional blending facilities required by the Distribution Companies, and the opportunity for development of the Group's lubricating oil and specialty product markets.

As you are also aware, your Company made an offer to purchase

the whole of the Ordinary Stock of Manchester Oil Refinery (Holdings) Ltd. (M.O.R.), which was accepted and became unconditional on July 8, 1960.

The trading results of M.O.R. and its Subsidiary Companies for the year were very satisfactory, and the improvement in profits anticipated by the Chairman of M.O.R. at the Annual General Meeting in May, 1960, was fully realised. Your Board are satisfied that its investment was a sound one, both from the point of view of increased earning capacity and increased corporate strength for the Group.

The acquisition of both M.O.R. and Hopps amounting to some £1,700,000 was financed from the Company's own resources.

In spite of intensified competition and difficult trading, Dussek Bros. has maintained its turnover and profit. A 75 per cent interest was acquired in Claud Campbell & Co. Ltd., an old-established firm of wax blenders and refiners, which the Dussek's Board considers should be a profitable addition to the Company's trading operations.

### CANADA

In Canada progress has continued, production has increased and it is anticipated gas will be marketed by the end of the current year. Holdings in the Arctic have been increased and geological work continued. In all, your Company now holds an 80 per cent interest in over 4,000,000 acres of concessions in the Arctic through Round Valley Oil Co. Ltd.

### ACCOUNTS AND DIVIDEND

The profit after all taxation of £2,015,425 shows a substantial increase. It reflects a full year's operation of your Peruvian Subsidiary at a profitable level, and the inclusion of your Group's share of the post-acquisition profit of the new Subsidiary Companies.

The charge for Peruvian taxation has, of course, increased substantially because of the improved profit, and United Kingdom taxation also shows an increase over the previous year because of the reduced benefit available from Capital and Investment Allowances.

In view of the capital investment already undertaken and the current development programme, which are beginning to bear fruit, your Board consider the capital distribution should now be discontinued and a more liberal dividend policy adopted. They therefore have pleasure in recommending that the final dividend should be increased to 20 per cent, less Income Tax, making a total dividend for the year of 28 per cent, less Income Tax, compared with 14 per cent, less Income Tax, plus a capital distribution of 4 per cent, in 1959.

The liquid position of your Group has remained strong throughout the year and I am pleased to be able to report that the excess of Current Assets over Current Liabilities has increased by £208,804 to £5,580,205 at December 31, 1960.

In looking to the future, it will be appreciated that the Company's prospects are necessarily linked with the highly competitive conditions in the petroleum industry generally, and also the political and economic conditions pertaining in those countries where the Company's main interests lie.

|                                         | 1960              | 1959              |

## SIR WILLIAM McFADZEAN'S STATEMENT

The Sixteenth Annual General Meeting of British Insulated Callender's Cables Limited will be held on May 26th at Brettenham House, Lancaster Place, London, W.C.2.

The following are extracts from the circulated statement of the Chairman, Sir William McFadzean, CA, Companion IEE:

### GROUP ACCOUNTS

Sales of the Group at £143,000,000 increased by £15,000,000 or some 12 per cent as compared with 1959, mainly as a result of higher output. Including income from Trade Investments, the profit for the year at £6,245,000 shows a decrease of £137,000 but with a lower taxation charge the Net Profit improved by £121,000 to £3,652,000.

Exceptional Items produced a further £988,000 to bring the Total Net Profit of the Group up to £4,640,486 of which £4,314,890 is attributable to BICC Stockholders. This compares with £3,946,746 for the previous year. Net Group Assets have increased to £66,400,000.

### THE CABLEMAKING INDUSTRY AT HOME

Our two principal aims in 1960 were to obtain more economic prices for certain of our products, and to achieve the highest overall efficiency in our cablemaking activities as a whole by unifying and concentrating our production and selling arrangements for a number of our main products.

The wisdom of this policy of increasing efficiency by concentrating Group manufacture and selling effort of power cables and wiring and general cables has been proved by the substantial increase in volume achieved. As I said in my Statement to Stockholders a year ago, our policy as the largest cable-making group was to endeavour to give a lead to the industry by raising prices to some extent, so as to prevent the industry drifting to the disastrous position to which pursuit of any short-term advantage under conditions of unfettered competition would lead it. We are convinced this policy is in the national as well as our own interests and we have continued to follow it during the year under review. The benefits should be progressively felt during 1961.

### GROUP ACTIVITIES

**Power Cables.** There has been an increasing demand for supertension cables, and among many important contracts received by the parent Company were those for 132,000-volt cable circuits for Kingston-Wimbledon and Kingston-Chessington, in the London area, and for Kirkby-Boothle in Lancashire.

W. T. Glover & Co. has recently obtained a contract worth £1,400,000 for 132,000-volt cables between Barking, East Ham and Brunswick Wharf, and Scottish Cables received the annual contract for the South of Scotland Electricity Board amounting to over £1,000,000. Among important overseas orders for power cables were that from the Hydro Electric Commission of Ontario for 230,000-volt cables and from the Australian Authorities for 330,000-volt cables for the Snowy

Mountain Hydro Electric scheme in New South Wales.

**Telecommunications.** Our Telephone Cables Division at Prescott, in addition to its large business with the Post Office, has continued to play its full part in the British Transport Commission's electrification and modernisation programme by engineering, manufacturing and installing considerable quantities of telephone cables on various routes.

**Submarine Power Cables and Pipelines.** The most interesting event during the year was the award of a contract worth £2,500,000 for a flexible submarine pipeline to transmit natural gas from the mainland of British Columbia to Vancouver Island. When completed this pipe, which will be made by British Insulated Callender's (Submarine Cables) Ltd. and installed by our Construction Company, will constitute the world's longest flexible submarine gas pipeline. We believe no other manufacturer in the world can offer a comparable product.

**Metals.** In 1960 our Wire Mill Division at Prescott achieved a record output of 107,000 tons of metals. Total orders received by Thomas Bolton & Sons showed a substantial increase over 1959 and output of British Copper Refiners was 9 per cent above 1959. The Telcon Metals Group of Companies has achieved substantial increases over the whole field of its activities.

**Capacitors.** There is growing world-wide interest in our energy storage capacitors, and I am pleased to report the receipt of substantial orders from the USA. The turnover of the Telegraph Condenser Company exceeded that of 1959 which was itself a record year.

**Construction.** 1960 witnessed a further increase in the activities of our Construction Company. On the railway electrification side, the Company continued to be actively engaged. Two schemes were completed under the British Railways modernisation plans, namely the Manchester/Crew and the Liverpool Street / Enfield / Chingford / Hertford (East)/Bishop's Stortford lines, both of which are in successful commercial operation. In addition the Company's constructions teams satisfactorily converted the existing equipment on the Liverpool Street/Shenfield/Southend line from 1,500 volts D.C. to high voltage A.C. operation.

### OVERSEAS AFFAIRS

For many years we have devoted a large proportion of our effort to overseas trade both in the form of direct exports from this country and by way of investment in local manufacture overseas. Total sales effected under these heads amounted to £45,000,000 in 1960 compared with £38,000,000 in 1959, but we are further intensifying our efforts and are determined to improve still further on our achievements.

**The Outlook:** Results to date for 1961 are encouraging and, provided there is no major dislocation in trade generally, I look forward to the BICC Group having a successful year.

April 14, 1961.

**BRITISH INSULATED CALLENDER'S CABLES LIMITED**

## POWER SECURITIES CORPORATION

### A DIFFICULT YEAR

The thirty-eighth Annual General Meeting of Power Securities Corporation Limited will be held on June 1st in London.

The following is an extract from the circulated statement of the chairman and managing director, Sir Andrew M. MacTaggart:

After having increased for several years, the consolidated profit before taxation of £715,142 shows a reduction compared with the previous year of £284,326. After providing for taxation on the profits of the year the consolidated profit at £379,265 is less than the 1959 figure by £141,745.

The year 1960 has been a difficult one, especially in the field of civil engineering construction, an experience which was not confined to our organisation. Tender prices in the United Kingdom have been very keen, and in certain overseas countries political and other conditions have slowed down development to a considerable extent. In Canada, dredging and marine work did not emerge on the scale anticipated, and our Toronto company had to work on a very reduced scale during the year.

One special factor arose in the case of the contract for the Selset Reservoir. Had the Tees Valley & Cleveland Water Board been permitted by the Ministry of Housing and Local Government to make the extra payment to Balfour, Beatty & Co., Limited, in respect of this contract, which the Board has now stated publicly it was prepared to make, the consolidated profit figure would not have been materially different from that of the previous year.

Nevertheless, your Directors feel justified in recommending a dividend on the Ordinary Shares at the same rate as last year, namely, 15 per cent.

### FUTURE PROSPECTS

In the United Kingdom, the group companies engaged primarily in the building and allied industries are carrying out a strenuous programme of work and, subject to conditions remaining comparatively stable, should have a profitable year. In civil engineering construction competition continues to be very keen, leaving little margin to cover any adverse circumstances which may arise during the period of a contract. As a consequence, while these conditions persist, we cannot count on any great contribution to our profits from this source. On the electrical side we should obtain a reasonable amount of the work available.

Overseas, the prospects depend to some extent on the country concerned. The lack of finance or guarantee of tenure is holding up developments in certain overseas territories.

I am pleased to see that the United Kingdom Government is beginning to appreciate the difficulties which we, engaged in private enterprise, encounter in certain under-developed countries, and that it is introducing a form of long-term credits for manufacturers. Whilst this is satisfactory so far as it goes it does not cover schemes of development in countries where we are already established and which have large potentialities for our exports. Unless the Government of the United Kingdom makes available some form of endorsement of security covering the period of such developments, these projects will undoubtedly go to those countries which are prepared to guarantee private enterprise.

## BIRMINGHAM SOUND REPRODUCERS LIMITED

The following are salient features of the Review, circulated with the Report and Accounts for the year ended 31st December 1960 by the Chairman Dr. D. M. McDonald, B.Sc., M.B., Ch.B.

### A RECORD YEAR

The Company achieved record sales, production and net profits in 1960. All sections of the business at home and in U.S.A., Bermuda, Australia and New Zealand, made their full contribution to the results.

### DIVIDEND INCREASED

The directors have decided to recommend a final dividend of 30% less income tax making 40% less income tax on the present £1,500,000 share capital. This compares with the equivalent of 33% for the previous year.

### NEW INTERESTS

Further expansion in the tape recorder field has been made. A controlling interest has been bought in two companies specialising in the manufacture of a vital component for these instruments. These acquisitions, made after the end of the financial year, have made no contribution to the profits under review. Research and development teams are actively extending the range of products, and continuously improving existing models.

### PROSPECTS

The company's factories are more efficient than at any time in its history. Export sales are already more than half of the output and there remains plenty of scope to increase this further. The Group of Companies has never been in better shape.

Manufacturers of the

**Mararch**  
Record Changer and Tape Deck

## BROWN BAYLEY LIMITED

### IMPROVED RESULTS

#### MR J. W. GARTON ON PROGRESS OF SUBSIDIARIES

The fifth annual general meeting of Brown Bayley Limited was held on May 5 at Attercliffe, Sheffield, Mr J. W. Garton, JP (the Chairman), presiding.

The following is the statement by the Chairman which had been circulated with the report and accounts:

The Accounts now presented cover the twelve months ended December 31, 1960.

The Profit and Loss Account shows a balance, after tax, of £207,601 compared with £189,118 in 1959. This is accounted for by the increased dividends recommended by both Brown Bayley Steels Limited and The Hoffmann Manufacturing Company Limited.

The Interim Dividends already paid by the two Subsidiaries and the Final Dividends recommended by them are included in this Account. I would remind the Shareholders that at the time of payment of the Interim Dividend in October, 1960, the Directors of the Subsidiary Companies re-allocated the totals previously distributed to bring the Interim and Final Dividends more into balance. On this basis your Directors have pleasure in recommending a Final Dividend of 9 per cent, less tax. This together with the Interim Dividend of 5 per cent, less tax, already paid, makes a total for the year of 14 per cent, less tax, which compares with a total of 12 per cent, less tax, for 1959.

### SUBSIDIARY COMPANIES

**The Hoffmann Manufacturing Company Limited:** The year 1960 started off with full pressure in the demand from the consumer goods industries, but this side began to fall off by the middle of the year, by which time there was an increased demand for bearings for capital equipment and this helped considerably. The consumer side is coming back and the demand from the capital goods industries is being maintained. Skilled manpower has been a limiting factor in the expansion of this Company, but the Training Schemes, which have been operating for several years, are now beginning to show results and are producing competent and trained young people for all levels from tool-room to management, without which the Company could not grow.

During the year £1,067,000 was spent on new plant and machinery. The majority of this machinery was not ready for production until late in the year and has not had any appreciable effect on the Accounts under review, but since the beginning of the current year it has been working well. In addition the Directors have authorised further capital expenditure which includes the erection of a new factory building at Gloucester. The prices of the products of this Company have to be maintained on a very competitive basis and the increased costs of wages, raw materials, fuel and power, etc., are only recoverable by increased efficiency.

The Accounts of this Company for the year ended December 31, 1960, are published as part of the Directors' Report and show a profit before

tax, but after all other charges, of £1,735,953 and compare with £1,704,511 for the previous year. Income Tax and Profits Tax absorb £686,563 against £717,340 in 1959. The net profit for the year 1960, after taxation, is, therefore, £1,049,390 and compares with £987,171 for 1959.

The Final Dividend recommended is 13 per cent, less tax, which with the Interim Dividend already paid of 7½ per cent, less tax, makes a total for the year of 20½ per cent, less tax.

### BROWN BAYLEY STEELS LIMITED

The improved demand for steel products mentioned in the Statement last year was maintained in 1960 though the demand from the motor industry fell off. Production of stainless steel was at a high level and most departments were busy throughout the year.

The prospects for the coming year are good although increases in costs due to the shorter working week, the wage award, and fuel costs, etc., which have to be absorbed, adversely influence profit margins.

The new plant in connection with the Manningham Road Forge is practically all delivered and some of this has worked over the last few months. By moving the old plant from the Tyre and Press Department to new foundations, space will be available for the next phase in the continued reorganisation, i.e. a Scheme approved by the Iron & Steel Board for the purchase of a new 32" Mill replacing the old existing 27" Cogging Stand. The Scheme which will take four to five years at a cost of about £2 million includes rearrangement of furnaces, buildings, etc., and when finished will give an increased output of about 30,000 tons a year of alloy and stainless steels. The present liquid funds are adequate to meet the initial commitments and it is expected that the total cost will be covered from our own resources. When this Scheme is finished the Company will have installed over a period of ten years a new Steel Melting Plant, a new Forge, and a Rolling Mill.

The Accounts of this Company for the year ended December 31, 1960, are published as part of the Directors' Report, and show a profit, before tax, after all other charges, of £1,080,901, and compares with £672,408 for the previous year.

Income Tax and Profits Tax absorb £478,959 against £293,859 in 1959.

The net profit for the year 1960, after taxation, is, therefore, £601,942 and compares with £378,549 for 1959.

The Final Dividend recommended is 11 per cent, less tax, which with the Interim Dividend already paid of 5 per cent, less tax, makes a total for the year of 16 per cent, less tax.

**The Farnley Housing Association Limited:** The Association have again reduced the interest free loan by £200 and the balance now outstanding is £4,000.

The report and accounts were adopted.

# ROYAL-GLOBE INSURANCE COMPANIES

## REVIEW OF RESULTS FOR 1960

### STATEMENT BY MR T. H. NAYLOR, CHAIRMAN, ROYAL INSURANCE COMPANY LIMITED

The Annual General Meeting of the Royal Insurance Company Limited will be held on Wednesday, May 31st, in Liverpool.

A statement by the Chairman, Mr T. H. Naylor, from which the following are extracts, has been sent to stockholders with the 115th Annual Report and Accounts.

Before reviewing our operations for 1960 I must refer to a development of outstanding importance in our affairs, namely the acquisition earlier this year of the share capital of The London and Lancashire Insurance Company. Stockholders will be aware of the reasons which prompted your Directors to take this step. The combination of interests will result in a consolidation of financial resources and a strengthening of man-power which, over the years, must be of considerable benefit; and we look forward to the future maturing of this new partnership with confidence and enthusiasm.

#### RESULTS FOR THE YEAR

As regards our results for 1960, I am glad to report a satisfactory expansion of business in all major territories, the combined premium income of our Fire, Accident and Marine Departments rising by nearly £7 million to £144 million.

We were encouraged during the year to see an improvement in the underwriting experience of certain sections of our business which had hitherto proved unresponsive to corrective action. This is particularly satisfying. In avoiding extreme measures which could inflict lasting harm on our business we were necessarily denied the advantages of a quick improvement in results; and it is good to see that a greater patience, doubtless wiser in the long run, is bringing its reward. The underwriting result was a surplus of £2.7 million and although this represents no more than a marginal improvement on last year's figure, it was achieved in the face of conditions and circumstances which were manifestly unfavourable.

Our investment income contributed £4.5 million net to our overall earnings; and our consolidated profit, after providing for United Kingdom taxation and Pension Fund contributions, amounted to the record figure of £5.7 million.

#### DIVIDEND

As indicated in my letter to stockholders of January 27th last on the subject of our offer to acquire the stock of the "London and Lancashire," it was decided to settle at that time the rate of dividend payment for 1960. In place of a final dividend in respect of stock ranking for dividend for the year 1960, your Directors have declared a special interim dividend of 2s. 6d. per 5s. unit and this, with the increased interim dividend of 2s. 6d. per 5s. unit paid last November, makes the total distribution for the year 5s., as against 4s. 8d. last year.

#### OVERSEAS

In the United States our premium income increased steadily in all departments, reaching a new record total of \$244 million and in the face of a highly competitive market situation, national fire wastage at an all-time peak and heavy wind-storm damage, our results there can, in the aggregate, be regarded as most heartening.

There was a noticeable improvement in the Casualty account and for the first time for several years a profit—albeit only marginal—was realised. The problem of Automobile Third Party business is still paramount.

In Canada, premium income reached a new high level and the underwriting profit surpassed even the previous year's excellent result. In Australia and New Zealand we made steady headway and continued to expand; and this is true also of South Africa, despite current disturbances in the political scene.

In other overseas territories, premium income was well maintained and losses in the Fire Department were lighter than for several years past. In some areas we encountered disaster in the form of earthquakes, cyclones and floods, but their financial impact on our accounts was not unduly severe.

#### FIRE DEPARTMENT

|      | Net Premiums | Underwriting Surplus | Percentage of Premiums |
|------|--------------|----------------------|------------------------|
| 1960 | £58,159,378  | £1,131,529           | 1.9                    |
| 1959 | £56,501,646  | £1,006,993           | 1.8                    |

The increase in our premium income in 1960 was satisfactory and the underwriting surplus, earned in a period of abnormally high fire wastage, was a little above that for each of the two previous years.

At home, national fire wastage was only slightly below the 1959 peak figure of £44 million. Despite this, we saw a welcome improvement in the margin of profit from our United Kingdom business, notwithstanding the substantial claims which followed the severe floods during the last quarter of the year.

#### ACCIDENT DEPARTMENT

|      | Net Premiums | Underwriting Surplus | Percentage of Premiums |
|------|--------------|----------------------|------------------------|
| 1960 | £79,132,713  | £1,076,459           | 1.4                    |
| 1959 | £74,359,208  | £1,306,818           | 1.8                    |

The growth in premium income was satisfactory, but in many territories abroad our results were adversely affected by a deterioration in the Motor experience.

At home, also, Motor business was our main problem. During the last few months of the year, the increase in the number of claims gathered momentum at a rate out of proportion to the rise in the number of vehicles insured and, in consequence, the ratio of claims to premiums rose significantly. An even more marked deterioration occurred in our Motor experience in Eire.

Claims cost on Burglary and Money in Transit policies has risen sharply. The number of attacks on persons carrying money to and from banks has created a growing demand on the part of employers for Personal Accident cover on persons engaged in such duties.

#### MARINE DEPARTMENT

|      | Net Premiums | Fund as at 31st December | Percentage of Premiums |
|------|--------------|--------------------------|------------------------|
| 1960 | £6,870,989   | £15,147,762              | 220.5                  |
| 1959 | £6,431,742   | £14,544,271              | 226.1                  |

Market statistics show that both in number and in tonnage the loss of vessels in 1960 was the highest since 1946, and the incidence of stranding was also unusually heavy. An increase in fires and explosions in ships' engine rooms gave cause for concern, especially as the complexity of modern machinery means that such losses can now be very expensive.

There was no significant change as regards cargo insurance but the incidents already mentioned naturally have their impact on cargo business.

Premium income in 1960 was a little higher than in the previous year. Our transfer of £485,867 to Profit and Loss Account relates to the 1958 underwriting account which was closed at the end of 1960 and represented a welcome improvement in the results of recent years.

#### LIFE DEPARTMENT

|      | New Sums Assured | New Annuities (per annum) | New Annual and Single Premiums |
|------|------------------|---------------------------|--------------------------------|
| 1960 | £69,019,511      | £1,781,569                | £2,621,205                     |
| 1959 | £56,528,870      | £1,598,065                | £1,994,182                     |

It has become a matter of routine to report each year an increase in new Life sums assured and 1960 was no exception. The amount of the new Life sums assured was nearly five times that for 1950 and more than double the 1955 figure—a fine record of sustained expansion.

#### INVESTMENTS

|      | General Funds | Life Funds   |
|------|---------------|--------------|
| 1960 | £212,758,112  | £100,398,495 |
| 1959 | £202,888,736  | £92,227,251  |

The past year began with signs of over-strain in the British economy. The Bank Rate, which had stood at 4 per cent since November, 1958, was raised in two stages to 6 per cent and was reinforced by other measures, including hire purchase controls and a further call on the banks to make special deposits. In the last quarter of the year, the two reductions in the Bank Rate down to 5 per cent did not represent any real change in the overall policy of domestic restraint. It may well be, with the introduction of new fiscal weapons in the recent Budget, that changes in Bank Rate will be less frequent in the future.

In the stock markets, both at home and overseas, ordinary share prices at times appeared to discount prospects some considerable way ahead but we took advantage of favourable opportunities to add to our holdings, once again increasing the proportion of our assets held in ordinary shares.

#### MANAGEMENT, STAFF AND AGENTS

It is with pleasure that I express to our Management and Staff in all parts of the world our appreciation and thanks for their able conduct of our affairs during the past year. To our Agents at home and overseas, I should like to convey our sincere gratitude for the splendid support we received from them.

# Times Furnishing

## PROFITS UP

The thirteenth Ordinary General Meeting of The Times Furnishing (Holdings) Limited was held on May 4th in London, Mr Henry Jacobs, the Chairman, presiding.

The following are extracts from his circulated statement:

Profits before taxation were £876,878; an increase over the previous year of £228,884.

With the proposed Final Dividend, the Total is equivalent to 13½ per cent, less tax.

HP restrictions were re-imposed in April, 1960. In consequence, the high level of HP trading during the early part of 1960 could not be maintained. On the other hand, cash and short term credit sales improved.

The incidence of HP bad debts remains at less than half of one per cent.

Willerby's Tailoring showed an encouraging increase. The policy of providing a quality product at a competitive price was strengthened by price revisions and improvements in production.

During 1960, Times Furnishing bought E. Rosser (Furnishers) Limited of Worcester, opened a new store in Dudley and acquired The South Wales Furnishers Limited. A new Willerby's shop was opened in Woolwich.

The opening of new branches and the process of modernising existing premises is reflected in the further considerable increase in fixed assets.

Indications are that turnover for 1961 should exceed that for 1960.

The reserve for unearned profit, interest, collection charges, etc., is still high at £1,713,908. A substantial part of this sum will fall into the results of the current year.

The Directors acknowledge the loyalty, enthusiasm and hard work of all members of the staff.

# FRIENDS' PROVIDENT AND CENTURY LIFE OFFICE

Sir Oliver Franks reports on progress

## TOTAL FUNDS EXCEED £104,000,000

New business for the Group over £53,000,000

The One Hundred and Twenty-eighth Annual General Meeting of the Friends' Provident and Century Life Office was held on 10th MAY, 1961, in Carpenters Hall, 1, Throgmorton Avenue, London, E.C.2.

The Rt. Hon. Sir Oliver S. Franks, G.C.M.G., K.C.B., C.B.E., the Chairman, presided. In the course of his Statement the Chairman said: As we review the results of the Friends' Provident we have come to expect new records. Our business is long term and it is appropriate to consider the growth of our Life business over the past ten years.

In this period our rate of progress must be regarded as impressive by any standard, and I think it is with justifiable pride that we saw the Group New Life Sums Assured of £53½ million pass the £50 million mark for the first time, and our Group Funds pass the figure of £100 million. These figures show how we are playing our part in the expansion of the Life Assurance Industry, with its great and growing contribution to the strength of our economy. As the general level of earnings in this country is raised there is a rapidly growing section of the community for whom there comes a new realisation of the value of Life Assurance, in its many forms, as a necessary protection for a man's family during his working life, and as a means of providing the pension which he will need during his years of retirement. The Government scheme for a graded pension related to earnings came into force last month. The pension so provided is modest in amount and it was, I think, right that opportunity should be given to employers with suitable private Schemes to contract out of the State Scheme. This will do much to preserve and encourage the best development of occupational Pension Schemes, which was one of the expressed intentions of the Government.

The growth of our Group Funds sets us the problem of investing something over £1 million each month, and for the successful handling of this important function we are fortunate in having a really efficient Investment Department. Throughout 1960 there were very favourable opportunities for increasing our holding of gilt-edged and fixed interest stocks. We are pleased to see once more the very satisfactory margin of appreciation over book value in our total holding of equity shares.

The rate of interest earned on our Funds at £6 7s. 4d. per cent gross compares with £6 2s. 5d. per cent in the previous year.

In the Consolidated Profit and Loss Account of the Century the transfer from the Fire Account at £123,000 is more than double that for 1959. After showing improved results in the Accident Department in recent years it is disappointing to see a reversal of this experience. In the Marine Department it is possible to make an increased transfer this year while leaving a strengthened balance in the closed accounts and a satisfactory position in the open accounts.

Our Continuous Disability Department has once more made excellent progress, and we are very pleased to see this evidence of the growing popularity of this type of cover.

After making a transfer to bring the Revenue Reserve of The Century to £325,000 a net dividend of £300,000 has been declared. The capital and general reserves of The Century together with the Profit and Loss account balance of that company and its subsidiaries now provide for all likely fluctuations in our trading experience, and give a backing of real strength to the accounts now presented.

# THE HOFFMANN MANUFACTURING COMPANY

## YEAR OF FURTHER EXPANSION

The annual general meeting of The Hoffmann Manufacturing Company Limited was held on May 10 in London, Mr J. W. Garton, JP (Chairman and Managing Director), presiding.

The following is an extract from his circulated statement:

The year 1960 started off with full pressure in the demand for the consumer side of our business, bearings for motor cars, household appliances, etc., and as I mentioned last year we saw some indication of an increased investment in the capital goods industry. By the middle of the year the consumer side began to fall off, but we had a build up on the capital side which, of course, helped considerably. At the moment the consumer side is coming back and the orders in connection with the capital goods side are being maintained. A limiting factor in our expansion is the shortage of skilled manpower, but I am glad to say the Training Schemes which have been operating for several years are now beginning to show results.

The profit of the Hoffmann Group for 1960, before taxation, but after all other charges, including Debenture Interest, amounts to £1,735,953 and compares with £1,704,511 for the previous year. Income Tax and Profits Tax absorb £686,563 against £717,340 in 1959. The net profit of the Group for the year 1960, after taxation is, therefore, £1,049,390 and compares with £987,171 for 1959.

The Directors recommend a Final Dividend of 13 per cent less tax, making a total distribution of 20½ per cent less tax, and this is equivalent to an effective increase of 5 per cent less tax, on the distribution for the previous year.

During the year the Group has spent £1,067,000 on new plant and machinery and this substantial programme has been financed from the internal resources of the Group. The Capital Commitment at December 31, 1960, amounted to £402,912, and is continued evidence of the Board's policy of keeping our production facilities in both factories up to date. In addition, the Directors have authorised further substantial capital expenditure, including the erection of a new factory building at Gloucester for the extension of our production capacity.

Balance Sheet: The value of stocks at December 31, 1960, has risen by £606,677. The higher level of turnover and the increased production it requires are reflected in the higher stock level.

The excess of Current Assets over Current Liabilities at the close of 1960 amounted to £4,699,321 compared with £4,814,473 at the close of 1959.

#### SUBSIDIARY AND ASSOCIATED COMPANIES

Hoffmann Gloucester Limited has again had a successful year and has made a valuable contribution to the Group turnover. This Company will derive future benefit from the expansion programme which took place in 1960 and is continuing.

Hoffmann Tweedales Limited has passed through a difficult period during which new products were being developed and tested. It is, of course, a very small unit compared with the Bearing Works at Stonehouse, Gloucestershire, but makes a useful contribution towards rentals and overhead charges.

The report and accounts were adopted.

# PETROFINA SOCIETE ANONYME

BRUSSELS, BELGIUM

GROUP SALES AND PROFIT UP IN ANOTHER DIFFICULT YEAR

## HARMFUL EFFECTS OF EXCESSIVE TAXATION

The Annual General Meeting of Petrofina SA was held in Brussels on May 12, 1961, and the following are extracts from the Board of Directors' Report for the year ended December 31, 1960.

### SALIENT FEATURES OF THE YEAR

In the Congo operating conditions were affected by the situation which arose during the year. Happily we have had no loss of life, and material damage is not serious.

In accordance with our views on the likely development of the situation in the petroleum industry as a whole we are following a policy of strictly limiting our expenditure by postponing a number of proposals not immediately essential. Further rationalisation of our operations, and reduction of our expenses, have enabled us to bring down our costs again, and strengthen our competitive position. We are continuing in 1961 the same policy of extreme financial caution, and of concentration of development on those parts of our business which offer the best immediate return, without abandoning proposals of long-term value.

### GENERAL SURVEY OF THE OIL MARKET

What appear to be the reasons for our, essentially transitory, difficulties have not changed: potential over-production, Russian exports, newcomers to the international oil business, and wide differences between spot freight rates and the average rates that importers are actually paying.

So far, the only reply of the big international groups has been the traditional one of lowering selling prices in order to hold their established market positions, but it is obvious that this un-economic step cannot remove the cause of the trouble. On the contrary, it is likely to aggravate it by the political and national consequences which it cannot fail to have.

With a willingness to recognise that new factors exist to modify established market positions, in some—and overall a very small—degree, and if the idea of a reasonable co-existence with newcomers was accepted, a situation could be created which would benefit everyone.

Last August, a slight lowering of posted prices for Middle East crudes reduced the amount collected by governments of the producing countries. This led to the formation by them of OPEC—the "Organisation of Petroleum Exporting Countries"—to defend their revenues, stabilise crude oil prices and avoid price reductions by the producing companies without consulting the governments concerned. It is too soon to assess the results, but we think OPEC can make a contribution to some highly desirable stabilisation of prices.

It is plain that the price of crude oil cannot be fixed arbitrarily, but must take into account the normal value of the finished products. By that we mean a value which gives a return on the very large amount of capital invested, and allows a margin to provide the additional capital which is essential for a long-term continuance of an abundant and cheap supply of power.

Our industry has been built on free enterprise and, until recently, solely by private initiative, private exertion and private capital. It is natural, therefore, for the industry to dislike any governmental interference and be apprehensive of its consequences.

We have to adapt ourselves to this new situation and not, simply as a matter of principle and without discriminating, set out to fight against it. But it still behoves governments to restrict their interference to what is absolutely essential and not complicate unnecessarily their administrative machinery, which always moves slowly and is very expensive.

Competition between state undertakings and private enterprise depends on their both being based on the same economic principles. Too frequently in state enterprise economic criteria are replaced by dubious political considerations. The responsible authorities ought to pay serious attention to a problem that reaches the very foundations of the economy of the countries concerned, and goes far beyond the bounds of the oil industry.

Taxation everywhere is a steadily growing burden, and it happens too often that decisions of those in charge of commercial undertakings are influenced by considerations of taxation, instead of on proper business grounds.

### PETROFINA AFFAIRS

Our group sold 8,900,000 tons of finished petroleum products, and 850 million cubic metres of gas, an increase of 11 per cent over the year 1959. We limited our sales of some products in some countries because of the abnormally low prices prevailing.

The last few years have provided fresh evidence that damaging rates of tax on the product are holding back the consumption of motor spirit. Tax increases in Belgium have resulted in consumption being frozen at practically the 1958 figure, whereas in Italy a tax reduction of 18 per cent brought about an increase in consumption of more than 25 per cent and an appreciable increase in the revenue from the tax.

In the United States American Petrofina's production was again severely restricted by the quotas of the producing states in which it operates. In Canada, Canadian Petrofina acquired the assets of New Superior Oils of Canada. The licensing of the export of gas to the United States will result in a considerable increase in sales by the group companies, on the completion, towards the end of 1961, of the pipelines now being laid.

Our group's refineries operated satisfactorily. In Belgium, Antwerp refinery is having its capacity increased to 8½ million tons a year by the end of 1962. In Canada, Montreal refinery worked normally, reducing production costs by higher output. In the United States the production of American Petrofina's three refineries was some 100,000 tons less than in the previous year due to the company's policy of making its contribution to the reduction of stocks of finished products. In Germany, Duisburg refinery is working to full capacity, and extensions are in hand. Mulheim refinery is up to expectations.

In the petrochemical field the plant in Belgium in which we have an interest will be ready by the end of 1961.

Our ships operated normally throughout the year and, in conformity with our policy of keeping down the age of our fleet, we sold the "Purifina Congo."

The advance of our group's distribution in countries where we are established has slowed

down, as we have reached most of the objectives we had set ourselves. The number of our selling points rose from 13,500 to 14,000 during the year, and we have continued our efforts to reduce distribution costs. We have extended our marketing operations to Cyprus.

The group's staff at the end of the year numbered 15,600, 400 fewer than the year before, notwithstanding the increased scope of our operations.

### FINANCE

The increase of capital which was agreed by your General Meeting of April 8, 1960, met with the customary support from our loyal shareholders. The financial structure of your company, whose capital was thus raised from 3,400 million to 4,700 million Belgian francs (approximately £24½ million to £33½ million) has been strengthened by the increase, its own resources and long-term borrowings being more in line with the size of our business.

What we have said under different headings will have given you some idea of the difficult problems which our industry has to face, but which can be considered purely temporary and not of a nature to diminish our confidence in even the quite near future. Our conviction of better times to come is based on factors which are subject only to some quite unforeseen change in the political situation.

In the circumstances we have thought that we are justified in adhering to our traditional policy of giving you a good return on the capital which you have invested and we are recommending the payment of a dividend of 80 Belgian francs per Old share (1959 the same) and 40 Belgian francs per New share, free of ordinary Income Tax, but possibly liable to a withholding tax.

Profit for the year ended December 31, 1960, amounted to 619,595,110 Belgian francs (approximately £4½ million) (1959 approximately £3½ million) including the balance brought forward from the previous year of 83,927,217 Belgian francs (approximately £600,000). This profit has been arrived at after charging the Profit and Loss Account with 301,577,441 Belgian francs (approximately £2,150,000) for depreciation, exploration expenses, research and decrease in the value of assets.

We propose that the profit should be appropriated as follows:

To dividend of 80 Belgian francs (1959 the same) on 5,100,000 Old shares . . . 408,000,000 Belgian francs (approx. £2,914,000) (1959 the same).

To dividend of 40 Belgian francs on 1,400,000 New shares . . . 56,000,000 Belgian francs (approx. £400,000).

To directors' remuneration according to the Articles of Association . . . 34,924,731 Belgian francs (approx. £250,000) (1959, £219,000).

To legal reserve . . . 30,000,000 Belgian francs (approx. £214,000).

To be carried forward . . . 90,670,379 Belgian francs (approx. £648,000) (1959, £600,000). TOTAL: 619,595,110 Belgian francs (approx. £4,426,000) (1959, £3,733,000).

The report, accounts, and the proposals submitted by the Board were adopted.

# ZANDPAN GOLD MINING COMPANY LIMITED

(Incorporated in the Union of South Africa)

## SATISFACTORY DEVELOPMENT PROGRESS

The fifth annual general meeting of Zandpan Gold Mining Company Limited will be held on May 30th in Johannesburg.

The following is the circulated review of the chairman, Mr B. L. Bernstein:

Satisfactory progress continued to be made in the sinking of No. 1 shaft, which on April 13, 1961, had reached a depth of 6,619 feet below the collar. The shaft remained in Ventersdorp lava to a depth of 5,686 feet before traversing the Ventersdorp Contact Reef and entering the Upper Witwatersrand Quartzites. The Ventersdorp Contact Reef in this area has proved to be of no economic interest.

In my review for the year ended December 31, 1958, I explained that in order to expedite exploratory development, No. 1 shaft would be sunk directly from surface to below the reef horizon instead of incurring the costly delay of stopping the surface shaft at the 5,000 feet level

and then sinking a sub-vertical shaft to the full depth. While the overall advantage to be gained from this programme remains unaltered, it is now considered that when your mine reaches the production stage it will become necessary to provide winding capacity at No. 1 shaft in excess of that required for the development stage. This can be done, without losing the considerable benefits derived from using No. 1 shaft as a divided shaft for ventilation purposes, by installing a rock winder on the 5,000 feet transfer level. This underground winder will operate in the upcast section of the shaft and will deliver rock from the 7,400 feet elevation to a transfer loading box serving the surface winder, thus increasing the capacity of the surface winder from about 60,000 tons to 150,000 tons per month. To ensure that this arrangement can in due course be put into effect without curtailing production, the necessary excavations in the vicinity of the 5,000 feet level were made while sinking was in progress.

While excavating a main transfer level and pumping station on the 5,000 feet horizon, exploratory drilling was carried out. This drilling disclosed faulting, which has since been encountered in the shaft and which indicates that, although reef can now be expected at a depth of approximately 6,850 feet below the collar, there is a downward displacement of some 500

feet in close proximity to the shaft. Shareholders were advised in a circular dated October 12, 1960, that it was planned to suspend shaft sinking operations about 100 feet below the reef horizon in order to carry out initial development using shaft sinking equipment. In view of the faulting disclosed it has been decided to complete shaft sinking at a final depth of 7,500 feet and to equip the shaft before starting development. Shaft stations are being cut at vertical intervals of 150 feet between the elevations of 6,500 feet and 7,250 feet below the collar to provide adequate scope for advancing development simultaneously on several horizons. It is estimated that development work will be commenced during the first quarter of 1962.

It is estimated that funds received, together with those for which provision has been made, will be adequate to finance the completion and commissioning of No. 1 shaft and for development during the following year. During this period, the development rate will be built up as rapidly as possible. In order to enable the company to sink No. 2 shaft, to erect a reduction plant and bring the mine to initial production, it will be necessary in due course to raise further capital.

In the interest of economy, operations at the mine are still under the control of the manager of the Hartbeestfontein mine.

# THE CHLORIDE ELECTRICAL STORAGE CO. LTD.

One of the World's Leading Battery Manufacturers

## GROUP SALES 8% HIGHER

The seventieth ordinary general meeting of The Chloride Electrical Storage Company Limited will be held on May 18th at Exide Works, Clifton Junction, near Manchester. The following are extracts from the circulated statement by the Chairman and Managing Director, Mr A. W. Browne, OBE, MIEE.

1960 proved to be a year of great fluctuations. Despite this I am satisfied with the overall results.

The income from trading at £3,854,929 is nearly £82,000 in excess of that for last year, but after adding income from Investments and deducting depreciation, pensions, taxation, and minority interests, the net income for the year is lower than last year by some £124,000 at £1,348,535.

Fixed Assets have increased by some £650,000, which represents additions of £1,130,000 less depreciation. This is a reflection of the expansion schemes mentioned in my statement last year. Some idea of the further increases planned for 1961 may be gained from the figure of capital commitments at £850,000.

### DIVIDENDS

There is £1,766,397 available for appropriation and it is proposed to transfer £700,000 to General Reserve and to recommend a final dividend for the year under review of 15 per cent, which makes a total of 20 per cent for the year.

It is the present intention to pay an interim dividend in October next of 7½ per cent, less tax, to have a closer relationship between the interim and the final dividend in future. I must emphasise however that this increase in the interim dividend must not be taken as an indica-

### Extracts from the Chairman's Statement:—

"Owing to quite keen competition from manufacturers both at home and abroad it was not possible, except in a few isolated cases, to increase selling prices. On the contrary, some had to be reduced and consequently margins were narrower without there being a sufficiently large extra turnover to compensate for this.

"The most important addition of a capital nature has been the erection during the year of our new Calender—a truly massive and most impressive collection of machinery. Unfortunately, it was not possible for us to take delivery of this plant as early as we had expected.

"Our sales overseas continue to increase, and we have taken steps to bring our products to the notice of markets new to us, including those behind the Iron Curtain."

tion that the total dividend for the year will be increased.

#### TRADING CONDITIONS

Total sales for the Group during the year were 8 per cent in excess of the previous year. Margins of profits decreased, with the result that the Group profit for the year is little different from that of last year.

During the first part of the year the demand for automotive batteries was buoyant. With the recession in the motor car industry halfway through the year, and the imposition of measures of credit restriction, the demand fell off substantially. The rate of production in the home factories however was maintained in order to replenish stocks generally.

Alkaline battery sales, which are not affected to the same extent by the motor car industry, exceeded slightly those of last year.

Sales of traction batteries for electric vehicles

## DE BEERS CONSOLIDATED MINES LIMITED

(Incorporated in the Union of South Africa)

DE BEERS WELL EQUIPPED TO MEET THE DIFFICULT TIMES AHEAD IN AFRICA

MR H. F. OPPENHEIMER POINTS TO SIGNS OF 1961 BEING A GOOD YEAR

The following is from the statement by the Chairman, Mr H. F. Oppenheimer, which has been circulated with the annual report for the year ended December 31, 1960.

Sales of diamonds by our organisation in 1960 at £89,700,000 were less by £1,435,000 than in 1959. This comparatively small decrease was made up of a decrease of £1,853,000 in sales of industrials and of a small increase of £418,000 in the sale of gems. These results must be considered in relation to the fact that greatly increased quantities of diamonds produced by individual diggers in Sierra Leone and also a substantial quantity of diamonds mined in Russia were purchased during the year by our subsidiary, the Diamond Corporation. The Russian purchase represents a new addition to the world production but the large increase in our Sierra Leone purchases probably reflects a corresponding reduction in the volume of diamonds previously marketed through illicit channels. While, therefore, our sales for the year must be regarded as satisfactory, the total purchase of newly-mined diamonds from all sources by the market in 1960 were considerably less than in 1959, and our increased purchases from Russia and Sierra Leone, without any corresponding increase in our total sales, was one of a number of factors responsible for a substantial increase in the stocks of diamonds held by the Diamond Corporation. I am glad to be able to say, however, that we have made a very good start with our sales for 1961. Sales for the first quarter of the year amounted to £24,302,000, which is a record figure. While we cannot expect sales to continue at this exceptionally high level, the indications point to 1961 being a good year.

#### EXPANSION AT PREMIER

The policy of the Government of Ghana, that all diamonds produced in that country must be sold through the market in Accra, made it impossible for us to renew our contracts with the Consolidated African Selection Trust and Akim Concessions. Similar action by the Government of the Republic of Guinea prevented the con-

#### COMPANY MEETING REPORTS

and factory trucks were particularly heavy, largely due to the impact of the new designs of batteries which were introduced at the beginning of the year. This is a market where long reliable battery life is all-important, and it is satisfactory to see the average life of our batteries in service steadily increasing.

#### OVERSEAS ACTIVITIES

The Group is now manufacturing batteries in Canada, India, Pakistan, South Africa, Rhodesia, Australia, New Zealand, Holland and Denmark.

Results varied from country to country but the general picture is of increased sales and lower profit margins. In nearly every country, improvement and enlargement of our manufacturing facilities are taking place.

#### RESEARCH

The Central Research and Development

#### THE ECONOMIST MAY 13, 1961

Laboratories continue to be fully active and are well placed to give technical advice and service to our companies at home and overseas and to our various licensees.

#### THE OUTLOOK

Although the business of the Group in other products continues to expand on a profitable basis, batteries for every purpose remain our principal interest.

Surveying the future both in the short-term and looking further ahead, there is every reason to expect a steady increase in the potential available to us. Whilst I am satisfied that we shall increase our share, the competition to which I have referred will mean that a reasonable return on capital will only be obtained by efficient volume production and the maintenance of the highest quality. I believe the Group to be well placed to achieve this.

exhaustive experimental work and testing of the relative merits of natural grit and of the synthetic grits produced by us and the General Electric Company. Our conclusion is that natural diamond is distinctly superior in many operations to either of the synthetic grits. Nevertheless, there is no doubt that the synthetic grit has a very useful function, and we believe that the market for diamond abrasives can be expanded to accommodate both the natural and synthetic products.

#### REOPENING OF DE BEERS MINE

At Kimberley, we have decided to reopen the old De Beers Mine, which has been closed down since 1908. Preliminary recovery should commence in about two and a-half years' time and the mine should be brought into full production by 1966. Production from the De Beers Mine will fill the gap caused by the falling off in the production from our other mines as they become deeper, and will enable us to maintain production from the group of mines in Kimberley at about its present level for many years to come.

During the year we continued with our policy of investment outside the diamond industry and, in doing so, we have further strengthened and broadened the basis of the company. A very important development was our participation with a number of other leading financial houses in Southern Africa, Great Britain and North America in the major extension of the Rand Selection Corporation Limited, Rand Selection Corporation is now the largest investment company in South Africa with an exceptionally sound and well-balanced portfolio. Our interest, direct and indirect, in the Corporation amounts to nearly 50 per cent of the total capital and I am satisfied that this holding gives us particularly attractive means of participating in the general development of Southern Africa outside our own sphere of diamond mining and trading.

The additional investments we have made during the year and the financing of a substantially increased stock of diamonds have been effected whilst still retaining a very strong cash position. The net cash assets of our company and its subsidiaries at the end of the year amounted to £43,016,358 and, in addition, both the gem and industrial marketing companies in which we are substantially interested, but which are not our subsidiaries, maintained strong cash positions for the protection of the trade. The present is an anxious time for all of us who are interested in Africa, but our company is well equipped to meet the difficult times that lie ahead.

#### THE ECONOMIST MAY 13, 1961

## THE EVER READY TRUST COMPANY LIMITED

#### CHAIRMAN'S COMMENTS

The annual general meeting of the Ever Ready Trust Company Limited will be held on June 1, 1961, at Bowman's Place, Holloway, London, N.7. The following are the comments by the Chairman, Mr A. V. Perry, on the report and accounts for the year ended March 31, 1961, circulated to stockholders:

#### CAPITAL

During the year we have realised in whole, or in part, a number of securities which we had held for some time, the present prices of which seemed to us high and the yields at market price meagre. A profit of £114,252 has arisen from these transactions, and after making the provisions set out in the Notes on the Accounts a sum of £95,000 has been transferred to Capital Reserve, making that Reserve in the aggregate £510,000.

The market value of our portfolio is slightly more than double the book value, and in these

## REFUGE ASSURANCE COMPANY LIMITED

The Chairman in a statement submitted with the 1960 accounts mentioned that in the Life Branches the annual premium income of new policies written in the year was £2,580,000, and that this, together with single premiums of £550,000 assured total benefits aggregating some £47 millions. The total premium income of the year was some £21,100,000, and payments to policyholders £14,400,000, of which £10,600,000 was to living policyholders and £3,800,000 payments on death. At the end of the year there were in force 7,800,000 contracts assuring £417 millions, including bonuses, and annuities of £903,000 per annum.

#### APPOINTMENTS

BRISTOL COLLEGE OF SCIENCE AND TECHNOLOGY, Ashley Down, Bristol 7.

#### DEPARTMENT OF GENERAL STUDIES

The Governors invite applications for the post of ASSISTANT LECTURER IN SOCIAL STUDIES.

Applicants should possess a good honours degree and be qualified to lecture in two of the following: Economics, Politics, Philosophy, Psychology, Sociology, Industrial and Social History.

Burnham Technical Scale salary for Assistant, Grade B, within range £290 — £1,435 p.a. Scale at present under review.

Details and application forms from the Registrar. Please quote ref. C/ST 6118.

#### SCHOOL OF ORIENTAL AND AFRICAN STUDIES

UNIVERSITY OF LONDON, W.C.1.

Applications are invited for RESEARCH FELLOWSHIPS in Economics or Economic History, Politics and Sociology of the Middle East. Fellows will be required to carry out individual research with an existing research group of historians and economists.

The appointment will be initially for three years with possibility of extension or of transfer to a permanent post at the School. Candidates must be graduates with high honours or with a higher degree in History, Economics or Politics. Specified knowledge of the area is not required, but candidates should have conducted research in their own field and be prepared to develop a long-term interest in some aspect of Middle Eastern studies. Training in Arabic, Turkish or Persian will be provided and part of the Fellowship may be spent on study leave in the area of the Fellow's specialisation. Salary will be fixed within the range of £1,000 to £1,500, according to qualifications and experience. Applications should be sent to the Secretary of the School by June 1, 1961.

Applications are invited for a RESEARCH FELLOWSHIP in the Department of Demography.

The appointment will be within the salary range £A1,625 to £A2,450 according to qualifications. While initial appointments of Research Fellows are usually for three years, a shorter term would be considered in this instance. The maximum tenure is five years.

Superannuation is on the F.S.S.U. pattern. Reasonable travel and removal expenses will be paid for the Research Fellow and his family. Assistance with housing will be provided.

Further details should be obtained from the Secretary, Association of Universities of the British Commonwealth, 36 Gordon Square, London, W.C.1.

Applications close, in Australia and London, on June 13, 1961.

#### THE UNIVERSITY OF MANCHESTER

Applications are invited for a post at the grade of ASSISTANT LECTURER IN ECONOMICS in the Faculty of Economic and Social Studies. Salary scale £800 to £950 per annum, membership of F.S.S.U. and Children's Allowance Scheme. Applications should be sent not later than June 17, 1961, to the Registrar, The University, Manchester 13, from whom further particulars and forms of application may be obtained.

MARKET RESEARCH. A woman graduate under 24 will be required in June for the Consumer Research Section. Candidates should have the ability to interview and some aptitude for figure work. Previous experience useful but not essential. Details to Mrs. M. Jiratt, Metal Box Company Limited, 37 Baker Street, W.1.

#### AUSTRALIAN NATIONAL UNIVERSITY

INSTITUTE OF ADVANCED STUDIES

#### RESEARCH SCHOOL OF SOCIAL SCIENCES Department of Demography

Applications are invited for a RESEARCH FELLOWSHIP in the Department of Demography.

The appointment will be within the salary range £A1,625 to £A2,450 according to qualifications. While initial appointments of Research Fellows are usually for three years, a shorter term would be considered in this instance. The maximum tenure is five years.

Superannuation is on the F.S.S.U. pattern. Reasonable travel and removal expenses will be paid for the Research Fellow and his family. Assistance with housing will be provided.

Further details should be obtained from the Secretary, Association of Universities of the British Commonwealth, 36 Gordon Square, London, W.C.1.

Applications close, in Australia and London, on June 13, 1961.

#### COMPANY MEETING REPORTS

circumstances your Directors feel that the Issued Capital should be brought more into line with the value of the underlying Assets, and they propose that the sum of £300,000 be capitalised from Capital Reserve and used in paying up in full one new 5s. share for every two 5s. stock units held. The necessary resolutions will be submitted to Stockholders at an Extraordinary General Meeting immediately following the Annual General Meeting.

We have reduced, during the year, the number of our securities from 141 to 136; in terms of geographical distribution the proportions remain relatively the same, with a slight increase in favour of Great Britain.

#### REVENUE

At the end of our previous financial year (March 31, 1960) we had just received, in cash, the sum of £253,500 in respect of the issue of our 4½ per cent Debenture Stock 1980/85. During the year under review, all this money has been fully employed and invested, and this accounts partly for the substantial rise in our gross Revenue from £158,018 to £197,514, or some 25 per cent. Your Directors, therefore, have recommended a final dividend of 13 per cent making, with the interim of 8 per cent paid

The premium income of the Company's subsidiary, the Federated Employers' Insurance Association, which conducts most classes of insurance business other than Life, was £2,126,000. The business as a whole showed a modest surplus, although the underwriting results of both the Motor and Fire Accounts continued to deteriorate.

#### INVESTMENTS

The Company's assets of £172 millions shown in the Balance Sheets included £55 millions in securities of the British Government and Local Authorities, £41 millions in Debentures and Preference stocks, and £26 millions in Ordinary stocks. In addition there are mortgages, largely in connection with House Purchase, of £33 millions and property investments of £7 millions.

#### COUNCIL OF EUROPE

#### RESEARCH FELLOWSHIPS, 1962

Awards of these Fellowships, which are offered annually and are of the value of 6,000 new French francs each, will be made in December, 1961. They are intended to encourage research in the following questions considered in the light of their present-day importance: (a) Political, legal, economic, scientific, agricultural, social, educational, and youth problems connected with European integration.

(b) European civilisation (philosophy, history, literature and the arts). Candidates must normally be nationals of a member State of the Council of Europe or of a State which has acceded to the European Cultural Convention. Refugees from European countries which are not members of the Council, legally resident in the territory of a member State, are also eligible for awards.

Application forms, which must be returned before September 4, 1961, may be obtained from the Universities Department, The British Council, 65 Davies Street, London, W.1.

#### UNIVERSITY OF MELBOURNE

LECTURESHIPS IN ECONOMIC HISTORY

Applications are invited for the following positions in the Department of Economic History:

(1) Lecturer in the Economic History of Europe and (or) in the History of Economic History (one Lecturer).

(2) Lecturer in the Economic History of Asian Countries.

Further particulars and information as to the method of application may be obtained from the Secretary, Association of Universities of the British Commonwealth, 36 Gordon Square, London, W.C.1.

Applications close, in Australia and London, on August 31, 1961.

#### UNIVERSITY OF OXFORD

Notice is given that the Directors intend to proceed to an election to the newly established PROFESSORSHIP OF ECONOMICS. The duties of the professor will be to lecture and give instruction in Economics with special reference to mathematical economics and econometrics. The salary will be £3,000 a year plus children's allowances. Applications are invited in nine copies, naming three referees but without testimonials, to be received not later than June 30, by the Registrar, University Registry, Oxford, from whom further particulars may be obtained.

APPLICATIONS invited from single men in age 27-33 group for appointments for trade country work with large group in Eastern Europe. Starting salary approximately £1,800 rising over period of years to £3,500. Service carries pension and gratuity benefits and usual home leave arrangements. University device desirable and previous experience in Trade Association or similar work an advantage. Reply Box 1504.

#### REPUBLIC OF THE SUDAN

The Ministry of Commerce, Industry and Supply requires the services of a Cost Accountant, preferably with experience in the sugar industry, to be responsible for the installation and management of the costing system in the new Mechanized Sugar Plantation in the Sudan.

Appointment will be on contract for three years, subject to extension to five years. Salary is in the range £S.1,800 — £S.2,100 (with bonus). (F.S.1. = £100. 6d.) Starting salary will be fixed according to age, qualifications and experience. A cost of living allowance, which is reviewed every two months, is payable. An initial outfit grant of £S.50 is payable on appointment. There is no income tax in the Sudan at present.

Holiday leave, with free air passage, accrues at the rate of seven days for each completed month of service.

Application should be made in writing, giving full particulars of age, qualifications and experience, together with copies of two recent testimonials, to the Appointments Section, Sudan Embassy, 3 Cleveland Row, St. James's, London, S.W.1, quoting reference 43105.

Closing date: June 15, 1961.

on December 1, 1960, a total of 21 per cent for the year. The amount required to pay this higher rate of dividend is covered by net income 1.16 times, which is slightly higher cover than (in accordance with our declared policy) we usually aim for. There is every indication that in the future we should at least be able to pay out the same amount in dividend.

#### GENERAL

Towards the end of our financial year we formed a wholly-owned subsidiary Company—Whittingdon Securities Limited—for the purpose of undertaking certain classes of financial transactions in which the Parent Company, as an Investment Trust, cannot participate. This Company was only in operation for some six weeks before the end of the financial year and a trifling loss was sustained, which you will notice in the Accounts; that loss at the time of writing has turned into a profit, but, of course, no real view can be taken of this operation until the Subsidiary has been in existence for a full year, and we are hopeful that it will make a contribution towards the Parent Company's income.

Our thanks are due to the Manager and his staff for the success of their operations, and the hard work they have put in during the year.

#### BONUSES TO POLICYHOLDERS

In the Ordinary Branch surplus of £2,401,000 was allocated to policyholders to provide a bonus on with-profit policies at the increased rate of £2 6s. 0d. per cent on the sum assured in respect of each year's premium due in 1960 and paid. This bonus is the highest paid in the Company's history.

In the Industrial Branch the total surplus allocated to policyholders was £2,280,000. A reversionary bonus at the increased rate of 34s. per cent on the sum assured has been granted on premium-paying policies which were in force on January 1, 1961, subject to completion of one year's premium payments. The scheme for granting paid up policies to whole life assurances at advanced ages has been made permanent, so that all policies whenever they were issued will now receive the same treatment in this respect.

## Financial Analyst

for the Comptroller's Department at Coventry.

University Degree or professional qualification in Accountancy essential plus at least 2 years' industrial or commercial experience.

Age range preferred 24-30.

The post is pensionable and a good salary commensurate with age and qualifications will be paid.

Applications quoting H64/P1 to the:

Personnel and Industrial Relations Manager,  
Massey-Ferguson  
(United Kingdom) Limited,  
Banner Lane, Coventry.

## SCHOOL OF ORIENTAL AND AFRICAN STUDIES

UNIVERSITY OF LONDON, W.C.1.  
Applications are invited for RESEARCH FELLOWSHIPS in the study of the Economics and History of South and East Asia. Fellows will be required to carry out individual research with an existing research group of historians and economists. Appointment will be initially for three years, with possibility of extension or of transfer to a permanent post at the School. Candidates must be graduates with high honours and preferably with a higher degree in history or economics. Specialised knowledge of the area is not essential, but candidates should have conducted research in their own field and be prepared to develop a long-term interest in some aspect of the modern Economic History of Asia. Training in an Oriental language will be provided, and part of the Fellowship may be spent on study leave in the area of the Fellow's specialisation. Salary will be fixed within the range £1,000—£1,500, according to qualifications and experience with entitlement to F.S.S.U. benefits. Applications stating age, qualifications, experience and the names of three referees should reach the Secretary of the School by June 1, 1961.

## UNIVERSITY COLLEGE OF THE WEST INDIES

Applications are invited from persons suitably qualified in Economics, Statistics or Sociology, for appointment to the post of (a) Junior Research Fellow, (b) Research Fellow, or (c) Senior Research Fellow in the Institute of Social and Economic Research. Persons hoping to graduate in 1961 may be considered for appointment to (a). Appointees may be asked to undertake investigations in any part of the British Caribbean Territories. Duties to be assumed as early as possible. Salary scales (a) £800 x £50—£1,350 p.a., (b) £1,050 x £50—£1,400 x £75—£1,850 p.a., (c) £1,500 x £75—£2,425 p.a., plus local allowance of £250 p.a. (pensionable). Child allowance £50 p.a. Unfurnished accommodation at rental of 10 per cent. of basic salary. Up to five full passages on appointment and terminal gratuities. Applications should be sent to the Secretary, Inter-University Council for Higher Education Overseas, 29 Woburn Square, London, W.C.1, from whom further particulars may be obtained.

Esso

In Marketing, Research and Statistics Department  
Marketing Economics

A young man between 20 and 26 is required to fill a vacancy in the Marketing Economics Section of Esso Marketing Research and Statistics Department. He should possess a degree in economics or a similar qualification, or he should have experience in work connected with economics in commerce or industry.

Please apply in writing, giving brief details and quoting ref.: 318/E to the Manager, Recruitment and Training, Esso Petroleum Co. Ltd., 16 Charles II Street, London, S.W.1.

MIDDLESEX COUNTY COUNCIL  
EDUCATION COMMITTEE

EALING TECHNICAL COLLEGE  
Principal: Dr. O. G. Pickard, B.Sc. (Econ.), B.Com., F.I.O.M.

Applications are invited for appointments in the newly created Division of Marketing of the School of Business at Ealing Technical College, duties to commence on September 1, 1961.

The Division will specialise in marketing education and will be one of the first of its kind in the country. The courses to be offered will be based on first hand experience and on research, to be carried out in the Division, into British marketing practice and problems. Successful applicants for the posts advertised will have the opportunity of making significant contributions to British marketing education.

**SENIOR LECTURER.** The successful applicant will be responsible for planning a programme of courses and lectures, the practical work of the new Division, and the supervision of its research programme. Applicants should have had at least 5 years' experience in marketing or marketing research, a good degree and/or professional qualification of high standing, and preferably have contributed to the serious literature of the subject. Permission will be given for consultancy work to be undertaken.

**ASSISTANT, GRADE "B".** Candidates must hold suitable Graduate or equivalent qualifications, and preference will be given to those who have specialised knowledge of marketing research, or overseas marketing, or marketing problems of a particular industry. **TWO RESEARCH ASSISTANTS.** To carry out research into marketing practices under the supervision of the Senior Lecturer. Applicants should preferably have had some experience in marketing research and have a good degree in one of the following subjects: Economics, psychology, or mathematics. The duties attaching to the posts may include a limited amount of teaching. The appointments in the first instance are limited to three years but there will be opportunities for joining the teaching staff of the Marketing Division as the work expands.

Salary within the range: Senior Lecturer, £1,580 to £1,801 per annum; Assistant Grade "B" and Research Assistant, £738 to £1,486 per annum. (These salaries are at present under review.) Application form and further information on application to the Principal (S.A.C.). Closing date two weeks from the date of this advertisement.

C. E. Gore, M.Sc., Ph.D.,  
Chief Education Officer.

## ECONOMIST

\$8,120 — \$9,800

A university graduate in Economics, Commerce or another related field is required immediately to undertake studies related to the analysis and development of Canadian Unemployment Insurance for the

UNEMPLOYMENT INSURANCE COMMISSION  
AT OTTAWA

Candidates must be Canadian Citizens or Foreign Subjects with five years' residence in Canada. For details and applications write to the CIVIL SERVICE COMMISSION, OTTAWA, and ask for Information Circular 61-2256.

## EXPORT RESEARCH ASSISTANT

The Cement Marketing Company Limited requires an assistant for economic intelligence unit, Export Department. Duties include reading and making abstracts from various publications, preparation of statistical reports and surveys. Applicants should be graduates (honours or good general degree) with a qualification in Economics and some experience in similar type of work. Knowledge of French and German useful. Apply in writing giving full details of personal qualifications to Women's Staff Supervisor, Portland House, Tothill Street, S.W.1.

## AUSTRALIAN NATIONAL UNIVERSITY

INSTITUTE OF ADVANCED STUDIES  
POST IN INTERNATIONAL RELATIONS

Applications are invited for an appointment as SENIOR FELLOW in the Department of International Relations, Research School of Pacific Studies.

The Department of International Relations has studied chiefly the contemporary international politics of the Indian, the South-East Asian and the Far Eastern regions, and has also published in the field of international political theory.

Candidates should have had considerable experience in post-graduate research in international politics. The salary range of a Senior Fellowship is from £A3,000—£A3,550; increments are £A90 per annum. The successful applicant will, in the first place, be appointed at a salary and an incremental limit fixed by reference to his standing and experience. Appointment is made for an initial period of five years; thereafter it may be made permanent. The Senior Fellow will be entitled to one year's study leave on full pay plus a contribution towards travel and other expenses, in every six years.

Reasonable travel expenses are paid, and assistance with housing provided. Superannuation is on the F.S.S.U. pattern. Further details are available from the Secretary, Association of Universities of the British Commonwealth, 36 Gordon Square, London, W.C.1. Applications close, in Australia and London, on June 9, 1961.

PERSONNEL ADMINISTRATION LIMITED  
MANAGEMENT CONSULTANTS

## STATISTICIAN

The Directors of a leading and old-established Company engaged in the large-scale manufacture and distribution of foodstuffs, have decided to create a new and important Head Office appointment in order to enlist modern statistical techniques as an aid to management. There are five well-equipped factories, research units, an up-to-date laboratory and a sales organisation covering the whole of the United Kingdom. The total number of employees is approximately 3,000. The successful applicant will be responsible for introducing and operating statistical services wherever these can be productively employed and for generally advising the Board on their use. The essential qualification for this post is a good Honours degree in Mathematics or a formal qualification in Statistics, preferably coupled with some years of practical experience. A knowledge of linear programming would be particularly useful. The salary will be attractive, depending on calibre and experience, and is expected to be in the range of £2,000/2,500. The work will be interesting and varied and there will be prospects of advancement for a man who can justify them. There are generous pension arrangements and help will be given with removal expenses. (Ref. 3604/TE).

The identities of candidates will not be revealed to our clients without prior permission. Applicants should forward brief details, quoting the reference number, to:—

Personnel Administration Limited Appointments Division, 2, Albert Gate, London, S.W.1.

Regional Offices: GLASGOW · MANCHESTER · BRISTOL · BIRMINGHAM · DUBLIN · LEEDS · NEWCASTLE

## CONTROLLER OF EXCHANGE

BAHAMAS

Appointment on contract for three years. Salary £2,300 per annum. Free passages; rent allowance; no income tax. Candidates who must be over 50, should have had previous experience in banking and formation of companies and preferably some experience in exchange and supplies control. Apply, in first instance with summary of personal particulars, to Director of Recruitment, Colonial Office, Sanctuary Buildings, Great Smith Street, London, S.W.1, from whom further details may be obtained. Please quote reference No. BCD 406/27/02 A3 and state full name.

## UNIVERSITY OF AUCKLAND

New Zealand

SENIOR LECTURESHIP AND LECTURESHIP IN HISTORY

Applications are invited for the above mentioned posts. The main teaching requirements are the history of modern Europe, and the history of European expansion and of colonial movements, especially in the 19th and 20th centuries; but special knowledge in other fields may be an asset. It is desirable that one or other of the appointees should be specially qualified in at least one of the following fields: 18th century European history; European history since 1870; a branch of Asian history.

The salary scales are: Senior Lecturer £1,750 per annum, rising to £2,000; and Lecturer £1,250 per annum rising to £1,700. Commencing salary within the appropriate scale will be determined according to qualifications and experience. An allowance is made towards travelling expenses.

Further particulars and information as to the method of application may be obtained from the Secretary, Association of Universities of the British Commonwealth, 36 Gordon Square, London, W.C.1.

Applications close, in New Zealand and London, on June 23, 1961.

## INDUSTRIAL ESTATES MANAGEMENT CORPORATION FOR SCOTLAND

Applications are invited for the post of GENERAL MANAGER to the Corporation. The General Manager is responsible to the Corporation for the organisation and execution of all the duties applicable to the office.

At present, the Corporation owns some 20,000,000 square feet involving 340 tenancies of factories on 21 industrial estates and 40 individual sites in Scotland, and operates 21 canteens. It also has a large technical and maintenance department among whose duties it is to provide space heating and process steam for most of the factories.

The essential qualifications for the appointment are a wide administrative experience and proved organising ability. Technical qualifications of a specialised nature are not essential, but administrative experience of industrial estates would be a considerable advantage.

The commencing salary for the post will be £3,400 rising to £3,900 per annum. The successful applicant will be required to join the Corporation's superannuation scheme.

Applications, containing full details of the candidate's age, qualifications, record and experience, together with the names and addresses of three referees, should be submitted in six copies to the undersigned, not later than May 31, 1961.

The Chairman,  
Industrial Estates Management Corporation for Scotland,  
1 Woodside Place,  
Glasgow, C.3.

ECONOMIC PLANNING  
and  
RESEARCH

An important and expanding Industrial Organisation requires the services of a Director for its Economic Planning and Research Department, with the following qualifications:—

Degree in Economics.

Minimum of five years' experience in economic research. This should be broad in nature and practical rather than theoretical. If possible it should include experience in International Trade (Trade Agreements, Tariffs, Transportation), Currency, Labour (Unemployment, wage rates, productivity) besides general experience in Economics and Statistics.

Ability to make objective analyses, and to supervise the preparation of clear concise reports.

Administrative and organising ability, and experience in the direction and control of senior staff.

Ability to co-operate with other Department executives and to work with a minimum of direction within the framework of policies laid down for the department.

Apply in strict confidence to:—

European Director,  
Jamaica Industrial Development Corporation,  
23 Albemarle Street,  
London, W.1.

## THE LONDON SCHOOL OF ECONOMICS AND POLITICAL SCIENCE

Applications are invited from graduates in the Social Sciences, or holders of honours degrees in Economics, or holders of honours degrees in the Social Sciences, for appointment as Research Officer or Senior Research Officer. The Research Officer will be responsible for the collection, collation and analysis of data, and the Senior Research Officer will be responsible for the collection, collation and analysis of data, and the Senior Research Officer will be responsible for the collection, collation and analysis of data.

Applications, with the names of two referees, should be sent to the Secretary, The London School of Economics and Political Science, Houghton Street, London, W.C.2, from whom further particulars may be obtained.

ADMINISTRATION  
MANAGER

Floyd's Insurance Brokers with Large London Head Office and Branches require a man with outstanding administrative ability. He will be directly responsible to the Managing Director for:

Staff Control and Recruitment Policy.

Departmental and Branch overall expenditure.

The initiation and supervision of organisation and methods work.

The maintenance of good management in all Company affairs.

In itself this is an important and progressive position commanding an initial salary of not less than £2,000 per annum. However, if in addition to the necessary qualifications the successful applicant is a Chartered Accountant, then this appointment would lead to an even wider responsibility. (Secretarial and Finance).

Applications will only be entertained from men under 40 years of age.

Please write giving full details to Box No. 1507.

## LEADING firm of Stockbrokers requires experienced INVESTMENT SALESPERSON

preferably, but not necessarily, with previous stock exchange qualification. Good references and working experience. Write details on separate sheet, enclosing curriculum vitae, to: The Firm, 10, Abchurch Lane, London, E.C.4.

AUSTRALIA  
THE UNIVERSITY OF NEW SOUTH WALES  
SCHOOL OF ECONOMICS

SENIOR LECTURERS

The School of Economics at the University of New South Wales has two hundred and forty students, specialising in economics, statistics, and business administration. Courses are also provided for some students in the faculties of Arts and Science. There is at present a staff of six Senior Lecturers, Lecturers, and Honorary Lecturers. We are seeking to recruit a Senior Lecturer in the field of economic problems. The University intends to increase the staff of the School by appointing:

One Senior Lecturer or Lecturer in statistics, with an interest in econometrics or mathematical economics.

One Senior Lecturer or Lecturer in industrial relations and labour economics.

One Lecturer in economics, with an interest in micro-economics and macro-economics.

One Lecturer in economic history or the history of economic thought.

Economists who are interested in these positions should have the following academic qualifications:

Senior Lecturer: a higher degree or equivalent, and a degree with honours or equivalent.

Lecturer: a degree with honours or equivalent.

At Senior Lecturer and Lecturer may be required to supervise the work of post-graduate students, special interest in research would be particularly valuable.

Salary: Senior Lecturer, £A2,586 (range £A3,036 per annum); Lecturer, £A1,706 (range £A2,471 per annum). Commencing salary is determined by qualifications and experience. After passing a medical examination, the successful applicant will be eligible to join the State Superannuation Scheme.

Successful applicants should be prepared to accept a five-year term of office, with the possibility of extension. The School is located at Kensington, an inner suburb of Sydney.

For further enquiries about the work of the School may be addressed to the Head of the School of Economics, Kensington.

Four copies of applications should be lodged, together with the names of two referees, with the Secretary, General Manager, University of New South Wales, Kensington, New South Wales, by air mail to the Appointments Section, Box 1, Post Office, Kensington, New South Wales, by air mail to reach there before June 30, 1961.

MAKERERE UNIVERSITY  
COLLEGE  
EAST AFRICA

Applications are invited for: (a) Lectureship in Political Science, (b) Lectureship in Political Science, (c) Lectureship in Political Science. Salary scale: £1,250—£2,151 p.a. Entry point according to qualifications and experience. F.S.S.U. Child allowance £50 p.a. per child maximum £150 p.a. Passages for appointee and family (up to five adult passengers) on appointment, termination and leave three months every 24 months. Rent according to quarters provided. Inclusive salary, depending on experience, in scale £1,221—£2,448. Contract gratuity 25 per cent. of total substantive emoluments. Local income tax. Free passages. Generous home leave and education allowances. Free medical attention.

## AUSTRALIA

THE UNIVERSITY OF NEW SOUTH WALES  
NEWCASTLE UNIVERSITY COLLEGE

DEPARTMENT OF ECONOMICS

The University of New South Wales wishes to appoint Lecturers in Economics at Newcastle University College.

The Department offers part and honours courses in Economics to students in the Departments of Arts and Commerce. Approximately two hundred and ten undergraduates are taking these courses in 1961, and there are a number of candidates for higher degrees. Applicants should have a good honours degree, and/or post-graduate experience. The University may give preference to those with special interests in mathematical and theoretical economics, economic statistics, applied economics, or international economics. Salary scale £A2,586—£A3,036 per annum. Commencing salary is determined by qualifications and experience.

For further enquiries about the work and facilities of the Department may be addressed to Dr. W. P. Hogan, Newcastle University College, Newcastle, New South Wales.

Four copies of applications, together with the names of two referees, should be lodged with the Secretary, General Manager, University of New South Wales, Kensington, New South Wales, by air mail to reach there before June 30, 1961.

Successful applicant will be eligible to join the State Superannuation Scheme.

Four copies of applications, together with the names of two referees, should be lodged with the Secretary, General Manager, University of New South Wales, Kensington, New South Wales, by air mail to reach there before June 30, 1961.

## Dresser is everywhere in the WORLD of POWER

Steam-electric, nuclear or hydro-electric—the world of power is served by Dresser penstock couplings, Pacific boiler feed pumps, Roots-Connorsville blowers, and Clark compressors. All are products developed and engineered by Dresser companies, as are Dresser-Ideco electric substations, custom-built to suit the power distribution needs of utilities or manufacturing and processing plants. SIElectronic instrumentation has applications within the realm of power, as do Clark gas engines and gas turbines. ■ Serving the world of power throughout the world, the inter-company teamwork of all Dresser companies makes available to customers their combined global experience, manufacturing facilities, research and engineering services. ■ Although companies within the Dresser group are identified by different names, the spirit of service is the same. You can rely on the products and technical services of Dresser... anywhere in the world.

### INTERNATIONAL

#### EVE OF EVIAN

This week many roads lead to—and from—Evian, where the Franco-Algerian peace talks start on Saturday:

**Peace.** The end of the Algerian war would relieve France, and its allies too, of an incalculable burden. The negotiations will be hard and long; only if they succeed will France be able to turn to its other problems (p. 753).

**Politics.** The health of the Fifth Republic is dangerously dependent on the solitary majesty of General de Gaulle. No provision has been made for the day when France will have to do without him (p. 757). The French communist party hopes to profit when the gaullist tide recedes, and M. Thorez, unlike the general, has taken the precaution of appointing a crown prince (p. 788).

**Economics.** The successful French mixture of free trade and planning provides a lesson for Britain (p. 758).

#### Brink of Europe

Mr Heath has told Parliament why Britain should join the European common market, but has still not committed the Government to the plunge (p. 760).

*Is agriculture an obstacle?* (p. 754).

American views on Asia's sale of textiles, and on African exports of food, may help Britain to solve its difficulties with the Commonwealth if it joins the Six (p. 761).

#### Brief Encounters, and Less Brief

If Mr Kennedy and Mr Khrushchev meet in Vienna they will have avoided the usual summit build-up—and may therefore avoid the usual summit let-down (p. 760).

Mr Kennedy has used his ceremonial visit to Ottawa to sound out the Canadians on their Latin American policy (p. 787).

### HOME

#### Polling

Labour's recovery is confirmed by the borough council elections (p. 796); but the party has slipped in Birmingham, and been justly deserted in Nottingham (p. 797).

#### Packing

##### On the bench

Local governments' selection of their aldermen rests not so much on sharp practice as on shaky tradition (p. 755).

##### On the ground

Scotland's newest new town shows a dangerous trend towards overcrowding (p. 798).

#### Prying

The Radcliffe inquiry into security will have to tread warily on the shifting ground of civil liberties (p. 762).

Erring Health Service doctors need not be publicly named; but they can be privately boycotted (p. 766).

A United Nations Association canvass on disarmament may light a fuse under Mr Gaitskill (p. 765).

Sluggishly and discordantly the Laos conference at Geneva has at last got off the ground, but American reluctance to rub elbows with the Chinese is a reminder of how embarrassing these international encounters may be (p. 785).

General de Gaulle's visit to Bonn may lose some of its glamour to loftier encounters (p. 787).

Twenty African countries have agreed to co-operate (p. 766).

#### American Recovery

The United States economy is recovering with more ebullience than had been expected and a new boom is perhaps in the making (p. 777).

The improvement in the balance of payments has given the Administration an opportunity to make changes in the laws affecting the gold reserves (p. 778).

Trade unions have been holding up work on missile bases (p. 783) and on railway mergers (p. 783).

★  
**Settlers' Fears:** Kenya settlers have no confidence in Whitehall. Mr Macleod's dilemma is to know how many European farmers will stay on in Kenya and how many might be acceptable (p. 788). But unless a compensation scheme is proposed soon, there may be renewed trouble (p. 766).

★  
**Middle Eastern Change:** The change of government in Persia has brought the hope that genuine reform may follow. But familiar difficulties remain (p. 786). The loss of a government in Lebanon may save the skin of a British institution (p. 765).

★  
**Eastern Defence:** Both Siam (p. 791) and Australia (p. 792) are concerned over developments in Laos and their effect on Seato. But both countries probably believe that their ultimate security lies in unilateral agreements with the United States. The change of regime in South Korea reveals the country's basic problems (p. 761).

#### Status Symbols

Sterling: The Bank lets exchange rates slip (p. 805).

Bernstein on Triffin's plan for payments—*Letters* (p. 769).

Motors: Pressing problem for Rolls-Royce (p. 810). Low line for Ford (p. 812).

#### Likely Openings

• **Plastics:** Wide horizons but thin margins ahead for poly producers (p. 801).

• **Brewing:** Some brewers cannot withstand the round of mergers in isolation (p. 809).

• **Banking:** Doors open earlier, but still close too soon (p. 814).

#### Possible Closures?

Airlines: Bush fliers are buzzing up the business of established Canadian carriers (p. 803).

Coal: Dr Tugendhat adds some fuel to the controversy over sources of energy (p. 809). *Mr Robens' target—Letters* (p. 769).

Television: No room for medium-sized producers (p. 812). A divergent view on colour vision (p. 811).

FIBREGLASS LIMITED, ST. HELENS, LANCs. ST. HELENS 4022

## Laying the ghost

Reading to chill your spine and raise your hair is one thing; hearing sudden bumps and groans of anguish in your own home is another that will certainly follow if your wife trips over the Baskerville hound lying dog-eared in a corner or finds the House of Usher fallen in the middle of her housework. Then she's liable to turn your spectres out lock, stock and barrel—and no poltergeist could compete with that! Keep your family phantoms harmless (and unharmed) in a Minty bookcase. Neat and elegant, with sliding glass doors to keep out the dust, it will allow your ghosts to materialise into an orderly gathering so that your wife can do her housekeeping without that haunted look in her eyes. Minty bookcases are sectional, so they can grow to accommodate every member of the spirit world, from Hamlet's father to the whole household of Borley Grange. They can be started from £10.16.0d.—or on deferred terms if you wish. Only at Minty Centres can you see and buy Minty bookcases (and furniture). These Centres are situated so that Minty is within reasonably easy reach of most people, but if for any reason you can't call, Minty will be glad to send you catalogues and full details of ordering by post. Write to Dept. E14, Minty Ltd., 44-45 High Street, Oxford.

**430 enemies**

but  
many thousands  
of  
friends

There are up to 430 enemies of good paper production—430 variables which can spoil the consistency of a paper.

At J. A Weir we have some of the best and most modern plant in the country but this alone is not enough.

Only craftsmanship, wedded to science, can ensure the perfect paper which is part of our tradition and our job is not to mass-produce thousands of tons but to meet the exacting needs of modern printing in more modest quantity. An important man in the constant battle against these variables is the Beaterman, for on his skill and not on the machines alone depends the final properties of the sheet.

We may have 430 enemies but, thanks to our craftsmen, we have many thousands of friends.

*Just for interest you might well enjoy reading 'Talking to Papermakers'. Please let us know if you would like a free copy.*

## CHEMICAL PLANTS FROM SCRATCH

For many of the world's leading chemical and petro-chemical firms, the Kellogg method of executing a capital investment in new plants and plant expansions has proved the soundest way to minimise expenditure.

This economic route to new chemical plants consists of co-ordinating and controlling all phases of engineering, procurement, and construction under an internationally integrated management. It is founded on close teamwork among all Kellogg operations at home and abroad... and with client engineering staffs.

Kellogg's method has improved process and plant engineering... saved money in procuring materials and equipment... increased

labour productivity... expedited erection... achieved the earliest possible on-stream dates... and stayed within pre-determined costs. The result is the plant which achieves the optimum balance of investment and operating costs.

Working with clients on this basis, Kellogg has been responsible for a variety of chemical plants throughout the world.

If you are planning to build new processing facilities at home or abroad, Kellogg would be glad to show you how its engineering teamwork could work to your company's advantage. Please address inquiries to

## Room to breathe in Wales

### Room to expand

The rate of industrial expansion in Wales over the last ten years has been twice that of Great Britain as a whole. And the pace is quickening! There is today a broad pattern of economy embracing more than 400 individual industries. The traditional resources of coal and steel are augmented by cheap power, clean air and water, good and rapidly improving communications, ample port facilities and adaptable, willing workers. Excellent sites for factories are available . . . in many cases with Government assistance . . . and the keenest possible co-operation of the Local Authorities everywhere.

### Room to live

To those who have worked in Britain's crowded industrialised and over-populated centres, Wales presents a new conception of living near the job. Beautiful countryside and a glorious coastline are close at hand, even to the larger towns with their modern stores and spacious residential districts. The educational facilities, extensive and most advanced, are second to none. Wales abounds in provision for recreation for the young and their elders . . .

It is a wonderful land in which to work and relax . . . in which to enjoy a really full life.

Reed Paper Group's growth into world markets

# Unlimited growth in paper markets

## WHICH ARE THE COUNTRIES TO WATCH?

### AUSTRALIA EXPECTS "50% increase in next 10 years!"

Mr. Ray Z. de Ferranti, Chairman of Reed Paper Products (Holdings) Ltd, says:

"Australia is a nation with an exploding population. About 7½ million in 1945, it has now reached 10½ million and, if present trends continue, in ten years' time will be nearly 13 million people. More than half of these will be under 30 years of age.

"To keep pace with the needs of this growing population, Australian manufacturing industry has spent more than £880 million on new equipment in the last 5 years.

"Growth has brought prosperity and high living standards. Australians have a personal disposable income of £352 compared with £293 in the United Kingdom.

"Figures tell only part of the story. There have been big changes in merchandising. The growth of Self Service Stores—they handle more than half of all grocery sales though they represent only 5 per cent of stores—has stimulated the presentation of consumer goods in colourful well designed packages. This has lifted paper sales. Australians are now using about 800,000 tons of paper and paper products a year. Over the next ten years consumption is expected to increase 40 to 50 per cent."

### ITALY SAYS "Demand may double by 1970"

Dr. Luigi Bruno, President of La Centrale Finanziaria Generale S.p.A. of Milan, Italy's leading finance corporation, says:

"In answer to the challenge of a market of 170 million people, brought about by the Common Market, Italian industrial output, although still at a lower level than that of the other member countries, is now making more rapid progress than the rest of 'The Six'.

"Largely because of the demand for industrial and consumer packaging, the Italian paper and board industry has been growing at the rate of about 12 per cent each year.

"The Italian today uses on average only 60 lb. of paper and paper products compared with the average for the rest of the Common Market of about 140 lb. This emphasises the vast potential for the Italian paper industry, mainly in connection with the industrialization of the South which will bring about a further improvement of the standards of life for people living in those areas—together with a widening of business opportunity.

"It is to meet this demand—that may well be doubled in ten years—that we have jointly established SICAR with the Reed Paper Group to create a vertically integrated packaging organization."

### CANADIAN OUTLOOK "Huge market potential"

Mr. Bill Soles, President of Anglo-Canadian Pulp and Paper Mills, says:

"Canada, supplying a strong and growing domestic market, is also the world's largest exporter of pulp and paper. It is, after the U.S.A., the second largest producer of these commodities. Abundant supplies of pulpwood and power, and proximity to the large U.S. market, have led to the development of an industry equipped with large modern plants and utilizing up-to-date techniques.

"In addition to a huge market potential in the highly developed economies of the North American continent, Canada is well placed to supply a major part of world requirements. This is particularly true of the Western hemisphere, where the Latin and South American markets are expected to mirror the vigorous growth experienced in Europe.

"In estimates recently prepared by the U.N. Food and Agriculture Organization, it is anticipated that demand will double in

these areas in the 20-year period, from 1955 to 1975. In total volume the increase in North and Latin America will be twice that in Western Europe. Our Company (which is part of the Reed Paper Group) serves all these markets, and plans to participate in their growth to the fullest possible extent."

### BRITAIN STATES "Britain's prospects are bright"

Mr. Hector G. Paul, Chief Executive and Director of the Paper and Board Division of the Reed Paper Group, comments:

"Last year, on average, each of Britain's 52 million people used two cwt. of paper products. Demand today for paper and board is 96 per cent higher than 10 years ago. This rate of increase will be maintained and indicates a bright future.

"Last year the output of the British paper industry increased by 11 per cent as against only marginal rises in other industries. Increased demand for packaging by the clothing and food industries more than offset the temporary fall in demand by others—such as domestic electrical appliances.

### "NEARLY £30 MILLION INVESTED OVERSEAS—SO FAR"

says Mr. Philip G. Walker, Managing Director of the Reed Paper Group.

"The Reed Group is already anticipating a surge in demand for paper, board and packaging products over the next ten years as forecast by our experts—for instance 50% in Australia, 25% in Canada and 100% in Italy.

"In Australia we are one of the leading makers of packaging products.

"Anglo-Canadian Pulp and Paper Mills Limited, valued at \$65 million (approximately £24 million), is one of the largest pulp and paper manufacturers in Canada, most of its products being exported to the U.S.A.

"In Italy we are in partnership with La

"We are still a long way behind the U.S.A. average consumption of paper of nearly four cwt. per head—and this underlines the enormous potential in the U.K.

"The growth factors are tremendous. Even more paper is needed for commerce, industry and publications of all kinds. New packaging techniques are being developed, and the growing versatility of paper products ensures that this trend will continue in the coming years."

Paper consumption in lbs. per head of population in 1959

Centrale one of Italy's most progressive organizations. There, in addition to our paper and board converting activities, we are building a carton board mill.

"With our partners Sande Tresliperi A/S in Norway we are already well advanced in the construction of a £2½ million pulp and paper mill for the production of corrugating material.

"In our overseas partnerships, we add our technical, research and production experience, to our associates' invaluable knowledge of local markets.

"All these overseas interests apart from their own intrinsic value, give the Reed Paper Group a basis on which to grow in each of the main trading areas of the Free World—the Dollar Market, the Commonwealth, the Common Market and the European Free Trade Area.

"They represent so far a total overseas investment approaching £30 million."

## Barbary Dove

IF the negotiations which open at Evian this Saturday end by bringing a visible peace between the French and the Algerians, it is impossible to exaggerate the benefits that might flow from the settlement. The wheel of colonial history, which has already come full cycle in Asia, will have reached the penultimate turn of the spoke in Africa, too; with the French renouncing the pretence of *Algérie Française*, it will be a matter of time—and not much time—before the last of Europe's remaining colonies move on to independence. The poison that the seven-year-long Algerian war has instilled into the politics of France itself, and into the western world's dealings with brown and black people everywhere, would be dissipated. General de Gaulle could address himself without distraction to the questions of domestic politics and economics discussed on pages 757 and 758. Mr Kennedy could settle down to talk to Mr Khrushchev—starting next month, it is firmly forecast—without fearing that one of his allies was perpetually about to fall apart.

Since the beating of doves' wings over Evian raises these many hopes, it is necessary to sound two notes of caution. In the first place, the fact that the French and the Moslem nationalists have agreed to negotiate does not mean that they will agree on anything else. To the alternatives that General de Gaulle is apparently offering Algeria—either association with France or else partition—the rebels have replied with what looks like a flat contradiction: they demand both independence and territorial integrity (enshrined in the phrase, "the people is one"). But between these rock-like positions a crack of light is visible. The rebels might reflect that the concept of "association" is elastic. If they look to Eire, for instance, they see a country that endured a form of association with its ex-ruler for many years after it had achieved independence, until the elastic eventually became so thin that it snapped. If the rebels were willing to accept a similarly loose link—an exchange of tariff preferences, say, a little joint economic planning, an agreement to consult together at regular intervals—the French might, for their part, be willing to accept a form of protection for the million Europeans in Algeria that did not violate the Algerians' sense of national integrity. One solution might be for the new nation's constitution to embody a number of guarantees for the European community similar to those the new constitution of Cyprus provides, precariously maybe, for the Turkish minority.

The other cautionary word concerns the effect of peace—if peace comes—on France's relations with its allies. The homecoming of the French army, with no imperial dreams left to hanker after, could ease one of Nato's problems by making it possible to create an allied force large enough to guard western Europe without recourse to nuclear weapons. There is no reason, however, to think that it would relieve the alliance's other problems. General de Gaulle, fresh from the triumph of doing what no other French leader has been able to do, would go on insisting the more on what he believes to be essential: the preservation of French sovereignty within the alliance, and the strapping of nuclear weapons to France's belt as a plain token of its return to greatness. The solution of the greatest of France's postwar troubles, even if it could not have been achieved without the general, does not solve the other troubles in the alliance that the general has brought with him. Nevertheless, between a France bled raw by the Algerian war and a France free of imperial delusions and restored to military obedience, the choice is obvious; let Evian prosper.

# Is Agriculture an Obstacle?

What would British farmers really have to fear if Britain joined the European Economic Community?

**A** PARTNERSHIP for Europe consistent with our duties to the Commonwealth, to agriculture, and, of course, to our partners in EFTA." This is how Mr Macmillan has been formulating and reformulating the Government's aims for the past three weeks. There need, therefore, be no apology for returning here to what has become Britain's major domestic political question of the day: are the interests of our farmers really such a stumbling-block to this partnership, and should they be allowed to remain so?

British agriculture is a source of many enigmas. Although it instinctively asks for "protection" from almost every country under the sun, it is very far from being technically or economically inefficient. The productivity of British farmers and farm workers is considerably higher than that of their potential competitors in Europe—with the significant exceptions of the Dutch (inside the common market) and the Danes (outside it). In terms of their equipment, their methods, and standards of husbandry, the top third of British farmers are well placed to meet competition from any quarter. The bottom two-thirds present Britain with something of a "small farmer" problem, but it is a small one indeed compared with that of most European countries. In Germany, Italy and Belgium at least 70 per cent of farms are below 25 acres, while in Britain almost half the farms are at any rate above 50 acres. In the last decade surplus labour has moved out of agriculture in Britain more swiftly than most people realise: the departure of 170,000 regular farm workers, about a quarter of the total labour force, bears witness to the increased mechanisation and productivity of British farms.

**A**t the same time, however, British farmers and farm workers have become used to much higher standards of living than most of their European competitors. The average British farmer earns about £1,200 a year; even if allowance is made for interest on his working capital, his true earnings are about £900. (Within this "average," it is true, about a half of all farmers expect and get only the equivalent of a farm worker's wage, but this serves to underline the point that most of the larger and better ones are fairly affluent.) Farm workers still earn about 30 per cent less than workers in industry, but their cost of living is somewhat lower. It is a fair summary that British agricultural earnings are at least within hailing distance of those of urban occupations, so that farm workers can regard it as a just and sensible goal to try to push towards "parity"; in most of Europe any such idea would seem ridiculous, because an enormous gap between the standards of town and country still exists there. A large part of the British farmer's superiority is the legitimate result of his greater efficiency; but some part at least comes from the more generous and comprehensive system of state support that prevails here.

The same point applies to rural services. Miserable hovels still exist in the English countryside, as they do in English

industrial towns. But the general level of rural services has been brought up to (and in some cases above) the urban level with the aid of generous subsidies. The urban consumer subsidises the rural user of electricity, transport, and postal services. Agriculture is relieved of rates, and government makes good the loss in equalisation grants to rural local authorities, as well as subscribing generously for rural water supplies, roads, cattle-grids, and other special purposes. This situation is accepted as his natural right by the English farmer and countryman, and any deficiency in the arrangements is vigorously publicised; but it is a source of surprise and not a little puzzlement to continental visitors, who are not used to a deliberately civilised countryside.

**I**F Britain were to become a full member of the European Economic Community, there would be no reason why Britain should not continue these subventions for rural services; indeed there might be a case in fairness for increasing them. But Britain's system of supporting actual farm prices would have to be gradually, but drastically, altered in three principal ways. First the cost of agricultural support would need to be largely (although not necessarily wholly) shifted from taxpayers to consumers; we would have gradually to go over to the Community's system of supporting agriculture by import levies and similar devices instead of by taxpayers' subsidies. This would be equivalent to setting free resources for direct tax reliefs (or for higher social security payments) by imposing an indirect tax on food. It is not necessarily the sort of tax switch that one would recommend *in vacuo*; but farmers would be less affected by it than consumers.

The second consequence of succeeding in joining the Community is that support to British agriculture would have to become looser and more flexible. The range of guaranteed products would be reduced. Instead of precise guaranteed prices, some commodities would be protected by looser "target" prices (supported by the purchases of European market organisations) and others by variable import duties and quotas. The £100 million a year paid out in special grants and subsidies to British producers—such as the acreage payments made to British farmers who grow cereals for feeding to their own livestock—would come under attack as a form of unfair competition.

Nevertheless, the initial consequences for British farmers would not be at all unfavourable. To judge from the present level of supported prices on the continent, British farmers should get slightly better prices for their fat cattle and wheat if we joined the European Economic Community; and they would probably do as well as they do now with barley and pigs. For eggs and (especially) potatoes the prices they could expect would probably veer downwards. Liquid milk prices need not necessarily be affected, for milk cannot be exported from other European countries to Britain; the Government's

new milk quota scheme—wildly undesirable though it is on other grounds—will allow liquid milk prices here to be gouged up to any level that the consumer will stand, without increasing the supply of British milk for manufacturing butter and cheese (and the latter is the only point with which continental countries would be concerned). If Britain went into the European Community, competition for British horticulturists would be considerably increased, but this increase is bound to happen anyway.\*

**T**HE third consequence for British agriculture is the one which most alarms farmers and particularly the National Farmers' Union. As a result of a changed support system, the cosy conventions of the annual price review would go by the board. No doubt annual negotiations between the Government and the union would continue to take place, but many of the critical decisions would be shifted to a European plane. To be effective, the union would have to join up with the German farmers, who share many of the same interests, and with other European farm groups. It would become a much smaller fish in a wider and more troubled sea.

The British union has fought hard and successfully since the war to shield farmers from overseas competition. It is therefore natural that the mere mention of "partnership" should make it fearful of an upsurge of European competition, against which it feels that it would be unable to protest effectively. The opposite possibility—that British farmers might successfully invade European markets—is instinctively discounted by it as less probable. But it should not be discounted. Basically, Britain's efficient farmers are well placed to compete anywhere

\* Some of these points about relative farm prices in Britain and the continent are admirably lucidly discussed in an article by Mr Graham Hallett on "British Agriculture and Europe" in a supplement to the Spring, 1961, issue of *Crossbow*.

## Aldermanic Attitudes

The abuse of aldermanic votes to determine the control of local councils calls out for a change in the law

**T**HIS year it has been Birmingham's turn to contrive a dead-heat between the parties in the local elections. The usual manipulations over the control of the Lord Mayor's casting vote, the packing of the aldermanic bench, and the breach of hitherto gentlemanly arrangements have since been in train. As our Birmingham correspondent reports on page 797, an agreement has now been cooked up between the party leaders that will allow Labour to cling to effective power. This kind of rumpus excites one major council or another every so often: there was a dead-heat in the West Riding of Yorkshire and Staffordshire in 1958 and two *causes célèbres* shook London and Glasgow in 1949. Smaller authorities have the same record, although their jiggery-pokery seldom gets beyond the local newspaper. It is by no means

in Europe—provided the market is not rigged against them. This last proviso is vital. The EEC has not yet worked out its policy for agricultural competition in any detail. If Britain is to influence that policy in sensible directions, and ones that will not be disadvantageous to us, it would be wise to jump in and join the club pretty quickly.

This is not to deny that special measures should be taken at home to help British agriculture to make the necessary adjustments. There are at least three fruitful possibilities, all of which ought to be within the rules of the club. One is to devise a much more effective small farmers' scheme than the present one, of a kind that would provide a real incentive to the union of uneconomically small holdings. A second possibility is the development of capital and credit facilities at lower rates of interest, in partial replacement of the numerous special grants. The third desirable development would be a greater measure of aid for farmers' marketing organisations to enable them to develop facilities on a commercial basis, instead of relying on statutory powers of regulation.

All three of these suggestions are directed at overcoming major structural weaknesses within British agriculture as it is. They would help to make all British farmers, not just the best ones, sufficiently efficient to earn their present incomes. And this, in the end, can be British agriculture's only real and acceptable guarantee of prosperity. If Britain joins the European Economic Community, its agriculture will be faced with considerable transitional difficulties—and some considerable long-term opportunities. If Britain stays out, in order to coddle a few particular parts of its own agriculture against any competition, British farmers will have cause to rue the day. For they will then gradually become much less capable of earning their superior standards through superior efficiency than they are now.

unknown for local parties with an actual minority of elected councillors to hang on in office for three more years because they have enough aldermen to swing the vital votes.

Whichever side wins in the clinches, the outcome is invariably a deal of petty recrimination, a resolution by the losers to exact indiscriminate revenge whenever their chance comes, and a determination among precarious majorities elsewhere to grab all the aldermanic seats they can in case a dead-heat ever happens to them. The Liverpool Tories, back in power this year, are likely to follow their opponents' practice and dismiss twenty Labour aldermen, including the redoubtable Mrs Bessie Braddock, at one stroke. Cannot the worst of these struggles and vendettas, which do local government no good at all, be avoided by a change in the law?

At present, aldermen are elected by the local councils in England and Wales for six-year terms: half the aldermanic bench comes up for re-election every three years. When a new council meets, its first duty is to elect the mayor or, in counties, the chairman. Those aldermen who are not due for re-election that year are entitled to join the popularly-elected councillors in voting for the chairman. It is this aldermanic power which can lead to the worst abuses. The dodge is that if the chairman is taken from outside the council, his party can thereby gain both his ordinary vote and, if necessary, his casting vote as chairman. These, in turn, can then be used to secure a majority for packing the vacant aldermanic seats with the party's nominees. In 1949 the Labour party in the London county council retained control in this way, although it had only 64 councillors against 64 Conservatives and 1 Liberal. (The Liberals had done much the same thing in 1895 and the Conservatives in 1910.) In the same year the Glasgow Conservatives used two *ex-officio* seats on the city corporation (Scotland has no aldermen, but its city councils have their own anomalies) to overturn a Labour majority of 1 in elected councillors.

In the face of these two-way squabbles, the Labour and Conservative central offices have been content to leave policy to the local parties themselves—although there have been occasional warnings that too patently sharp practice brings the party as a whole into disrepute. Official Liberal policy is simply to abolish aldermen altogether, on the ground that they have outlived their function, which was to provide a core of experienced local governors whose council seats would not be at the mercy of a fickle and demanding electorate. Some councils have come to local arrangements, under which aldermanic seats are divided in proportion to the parties' strength in elected councillors—a system that usually breaks down when it comes to the bit.

THESE reforming impulses often have their own drawbacks. If aldermen were abolished altogether, it would become even more difficult than it is now to run councils where the ruling party has a majority of only one or two; it is in fact desirable that a party which has won fairly and squarely, if narrowly, should have the opportunity once every three years to take enough aldermanic seats to make its control effective (instead of making it dependent on whether one councillor gets 'flu). Moreover, however great the criticism directed at the quality of some present day aldermen, these co-opted members still often have a real and valuable function to perform. In any large council, like Birmingham's, there is a great difficulty in attracting men of suitable calibre in both parties who can afford the time (and the prospects of promotion and earnings in their jobs) to take part as elected councillors in the multiplicity of committees and sub-committees that exist. Most councils, in fact, stand in need of the financial and other expertise that well-chosen aldermen can provide. The fact that too many Aldermen Bloggses are on the bench now, because no one has the heart to vote the old warhorse off, is an argument against the parties' methods of selection, but not against the system itself. There is something to be said for the various suggested devices that would effectively restrict aldermen to two consecutive terms of office.

Proportional representation for aldermanic elections would

leave most of these problems unresolved. It would also be meaningless in non-political councils and difficult to work in places where Independents, Liberals and Communists secure seats against the big parties. But four lesser reforms, in particular, would seem both simple and sensible:

(i) Aldermen (and in Scotland *ex-officio* members) should not take part in elections for mayor (or provost) or chairman. This would end the scandal whereby some parties with a minority of one can vote themselves into power.

(ii) In the event of a dead-heat after a borough election during a year when aldermanic re-elections are due, perhaps the party previously in control should continue (using the casting vote of the outgoing mayor—or, where the mayoralty is purely formal, of the effective chairman). But it should not be empowered to bolster its position for three more years by electing as many aldermen as it wants. The aldermen who were otherwise due to retire (or their parties' nominees) should continue for one year, when one-third of the councillors will again be due for re-election and the electorate will have another chance to make its wishes felt.

(iii) In the counties, where councillors are elected *en bloc* at three-year intervals, the same procedure could be followed as under (ii), to allow by-elections (which are more numerous than the public realises) to settle the issue.

(iv) The normal (renewable) term for aldermen should be reduced to three years. This would prevent some of the most long-standing illogicalities of the present system, and it might also attract more able men who now balk at an obligatory six years: a sufficient carry-over of conciliar experience can usually be relied upon among the councillors themselves.

These suggestions are not ideal, but they embody principles which seem to be worth further consideration. Another requirement is a new local approach to the criteria governing the selection of aldermanic nominees. For the sake of the sagging reputation of local government the worst abuses of the aldermanic system need to be tackled now, promptly and purposefully.

MAY 18, 1861

### UNIVERSITY REPRESENTATION

THE University of London received a definite pledge from Lord Grey's Government, at the time at which it was first founded, that it should be in every way placed on a basis of equal privilege with the Universities of Oxford and Cambridge. This pledge has yet to be fulfilled by giving to the University of London that right of parliamentary representation which has so long been possessed by its elder sisters. And now that it numbers a body of men quite large enough to qualify it for a public duty of this class, Her Majesty's Government seem to feel, as Lord Granville intimated on Wednesday in his speech to the University, that this pledge ought to be fulfilled. But, besides this, there is a far wider reason why it is exceedingly important to give the London University a parliamentary representation. It is the only University in the kingdom which can claim to speak, not merely in the name of Liberal Education, but in the name of Educated Liberalism. Our readers know that it was long the only University in which English Dissenters and English Catholics, and men of all classes who object to commit themselves to the authority of the National Church, could take degrees; and that it is still the only one where differences of religious creed are carefully ignored. Now, as a natural result of this distinction, the London University represents chiefly the most liberal shade of educated thought. It is true that the section of English-Roman Catholicism which it includes does throw in a certain tinge of conservative feeling, but not enough to affect the University at large. On the whole, the London University represents the intellectual tendencies of cultivated men with far less admixture of traditional prejudices than any other University in either England or Ireland. And it is eminently desirable that such a body should be able to make its voice heard in Parliament.

## Charles the State

VICTORY, like other heady drinks, leaves a hangover. General de Gaulle's triumph over the army rebels in April was no exception. In a way even his prisoners in the Santé must be something of an embarrassment. They must, of course, be punished; but how, and to what end? It cannot be easy for him to decide whether rigour would appear vindictive or salutary, whether magnanimity would seem evidence of strength or weakness—especially in view of the visible resentment against him in the armed forces. But the major difficulties facing the French president, though the same in kind, are in scale far more staggering than worries about what to do with ex-generals and ex-colonels. They, too, proceed from the general's victory and its completeness; but they imply more profound doubts about the future of his regime than were ever raised by General Challe.

Simply stated, these doubts stem from the fact of the general's present indispensability. He and the reluctant conscripts ditched the mutiny between them, and it is highly unlikely that any comparable attempt in the future would succeed any better, especially now that the government has had a thorough fright; but a successful assassination attempt, leaving the state headless, would almost certainly plunge France into an anarchy from which only the extreme right wing or the communists could benefit. Such an attempt must be feared for a long time—just so long as it takes for the Moslem nationalists to establish their control over Algeria. At any time until then it may seem that to cripple France politically by murdering the president is a feasible way of keeping Algeria French. No republic that is so vulnerable to a single death can be called a good life.

This is merely the most concrete expression of the dilemma of the Fifth Republic and its creator. If words mean anything, the general himself recognises that it is important, and proposes to do something about it; what, is unclear. But it is merely a symptom of the fundamental weakness of the regime in all departments. It was not the constitution, it was not the majesty of the French Republic that outfaced General Challe and his allies; it was the majesty, the legend, the character, the height and the nose of General de Gaulle (and the natural reluctance of the conscript to play the condottiere). A nation-state can, of course, as the British delight to say, exist very well without a formal constitution, if its parts are sufficiently well integrated with each other, and if its parties can tolerate a defeat or work for a genuine (that is, a sincerely accepted) compromise. But in France these conditions do not exist; no defeat is accepted as final, either by the supporters of the Fourth Republic or by the supporters of *Algérie Française*, and, with too few exceptions, nobody regards any action to reverse the verdict of events as unthinkable.

In such a country it is therefore not unreasonable from time to time to do as the French did in 1946 and 1958, and tear up the old constitution to make way for a new one. True, this disrupts the continuity, the sense of habit, without which no state can thrive; but it dramatically signals the need for reform, and provides a programme behind which forces of

FRANCE Having crushed the military challenge to the Fifth Republic, General de Gaulle has to find ways of depersonalising his regime without undermining it

reform can gather. The tragedy of the Fourth Republic was that its constitutional programme, as enshrined in its constitution, was a programme of inaction, of defence against gaullism and communism but no more; within the ranks of its defenders there was bitter dissension over almost all political questions. Only the rise of the European community furnished a characteristic and positive note to the frustrated enthusiasms of the period. When M. Mendès-France attempted something more, he was ejected from office and eventually from influence; leadership of the Left devolved upon the gravedigger of the Fourth Republic, M. Mollet, who in his first month of office fled decisively before the tomatoes of the Algiers mob to survive longer in office than any other premier of the Fourth Republic, to launch the Suez expedition, but to achieve nothing positive in a country that desperately needed it.

The same, at least, can hardly be said of General de Gaulle. But although he has left his unmistakable impress on colonial policy and on French diplomacy (his allies are entitled to be happier about the former than the latter), his achievements in these fields are still in jeopardy from his failure to organise support for his constitutional programme or to interest the politically somnolent—a failure as striking as that of the system that preceded him. Sure of his views and certain of his strength, he has refused, except in the ritual "*Françaises, Français, aidez-moi!*", to try to gather strength from the opinions and support of others, for to do so would imply some adjustment to their views. His neglect nearly cost him his power when the generals rebelled; no warning had reached him from Algiers, or, at least, had been heeded. Sometimes self-confidence goes too far.

AT the heart of the president's political thought lies the conviction that a strong executive, "the State" that is not at the mercy of pressure groups but can attend solely to the needs of France, is essential. It is a view which can be reasonably defended, so long as democratic liberties are preserved. But, so far, the gaullist executive has had a chiefly paper strength, except in certain clearly defined places. Personal liberties are preserved, but they are not the whole of a democratic system; and the other parts are, at the least, not over-cherished. Yet, if it is hard to see how the regime can live without modifications of this kind, it will be hard to persuade General de Gaulle to make them.

He has never seen himself as a mere politician or leader of a party; he has often shown himself to be too content with verbal solutions. Twenty years on his own special pinnacle have led him into the habit of believing what he wishes to believe, not necessarily, in spite of his veneration for "*le bon sens*," what is true. And he is elderly, and impatient. "Details" (like the exact prescriptions of article 16 of the constitution) cannot be allowed to hamper his freedom of action. He is sure of his own unique value to such an extent that he cannot really imagine that France will one day have to do without him; so he does not make proper provision for

the necessary day. The tragedy is that France has neither a crown prince, even a Professor Erhard, nor a self-generating political life that might make crown princes redundant. The general's rule may, indeed, be government of, and for, the French people, but in no full sense can it be said to be government by them.

Two extremes of presidential government ought to be avoided. In one extreme the president's freedom of executive action is excessively constricted by the opposition of political parties speaking through the legislature; sometimes it seems that the United States edges dangerously close to this extreme. At the other end of the spectrum is a system in which the president unnecessarily cuts himself off from the flow of ideas, of helpful criticism and of moderating advice that wells out of a healthy political life. It is now General de Gaulle's task

(remembering that criticism, irritating though it is to men of grandeur, is inseparable from good advice) to steer his course between these two extremes.

Perhaps the general has never shaken free from his vision of the national leader whom he described earlier in his thinking on this subject as

the man the people will follow, the man who will take up the burden with his own arms though they should crack, and place it upon his own shoulders though they should break under the strain.

The sentiment is moving in its self-sacrifice; but it is not in the interests of France that one man should carry its future. The problem today is to prepare a broadening of the shoulders that will take up the burden; then, perhaps, it will be possible to see who, and what, will succeed him.

## FRANCE According to Plan

The French economy is already undergoing the "gigantic renewal" called for by President de Gaulle

FOUR years ago a unilateral cut in France's customs tariffs looked as unlikely as a trip to outer space. Now the incredible has happened in French economics as well as in cosmonautics. President de Gaulle's government cut the French tariff on imports from the common market by 5 per cent on April 1st—with larger (10 per cent) reductions on textiles, chemicals and cars, and no reciprocal concessions. The cuts were accompanied by lesser tariff cuts for non-common market countries and by a bonfire of all but two of the remaining quantitative restrictions on imports of industrial products from western Europe and the dollar area. These were only the latest of a series of economic measures which in just over two years have brought seventy years of deep protectionism to an end.

The April cuts were startling not just in size but in character as well. Ever since the war the major industrial powers have recognised that tariff cuts could be useful as bargaining weapons to get barriers to their exports down. But that is a far cry from cutting tariffs as evils in themselves. Now France has followed the example set by Dr Erhard in west Germany and recognised that tariff cuts can be a valuable instrument of domestic policy—holding prices down and stimulating investment in the right place at the same time. The 5 per cent cut, it is true, was an anticipation of reductions that France was due to make in any case at the end of the year. But the voluntary acceleration represents a radical change of attitude in France just the same. The French government has recognised that the nineteenth-century doctrine of free trade has relevance for twentieth century governments seeking the magic combination of growth without inflation.

A formidable change in the attitudes of French industry has followed this recognition. The same industrialists who were bitterly resisting the common market four years back are busily defending it now that they have experienced the pains and opportunities of a 30 per cent cut in the members' tariffs. Even the pill of a 20 per cent cut in the notional external tariff of the common market, itself well below the old French tariff,

has been swallowed after an initial gulp. Today the *patronat* (the association of French employers) is educating its members on the need for a further step towards free trade—a systematic enlargement of quotas on imports of cheap manufactures from the developing countries. The change in everyday attitudes, even in small firms, is remarkable. French business men are travelling more; they have a new "window on the world." Small textile manufacturers who never gave a thought to the comparative costs of different lines or to the possibility of competing in the German market are doing so. The wind of competition and the psychological magic of the common market are forcing French industry to look outward as never before.

The new liberalism would not have been possible without other radical reforms. When France entered the common market in January, 1959, the French government recognised that it had no alternative but to make the economy competitive by tackling the domestic inflation which had blighted it since the war. President de Gaulle's presence gave it the authority to do so. The devaluation of December, 1958, was the first since the war to be carried out not as an emergency rescue operation but as part of a systematic programme of economic reform. Financial retrenchment cut the budget deficit from 10,460 million new francs in 1957 to 6,280 million in 1959. Devaluation plus real financial discipline at last gave French exports a competitive edge which was not blunted, like the benefits of previous devaluations, by a new inflationary slide. The healthier competitive position in turn made free trade possible; free trade in turn kept prices down. A new confidence brought French capital home *en masse*.

Between the last quarter of 1958 and the last quarter of 1960, French exports rose by 38 per cent, bringing, at last, a comfortable trade surplus. Industrial production rose by 18 per cent in the same period, with much of the impetus provided not by inflated home demand, as in the past, but by exports. Gold and convertible reserves have risen by just over \$1,000 million. The familiar cycle of inflation, protection and devaluation has been decisively broken; it has been succeeded by a cycle of stable prices, freer trade and sound economic growth.

France still has its economic worries. In recent months the rate of industrial growth, as elsewhere in the common market, has been slowing down. In the next three years there may be a noticeable tightness in the labour market. But the dazzling process of rationalisation released by the common market and by freer trade has by no means exhausted itself yet. There are, for instance, great possibilities of higher productivity in the distribution system. The government is just settling down to the task of implementing a second Rueff report, this time on expansion, which recommends a new drive for technological education and a bonfire of the restrictive practices which grew up in the stagnant economic climate of the 1930s. Much, of course, still depends on whether a peaceful settlement in Algeria can be achieved. But after 1963 a new stimulus will come from the growth of population, which is expected to add 750,000 to the labour force in industry and services between now and 1970, quite apart from the steady drift of labour from the land. The increase of 4 or 5 per cent in the national product expected this year, and again next year, may not be out of reach in future years as well.

THE policies that have worked the French "miracle" in the past two years have much in common with west Germany's; indeed there has been some conscious imitation. Free trade has stimulated higher productivity; exports have been encouraged by a mild under-valuation of the currency and disciplined financial policies. Low direct taxation provides incentives, while indirect taxes are relatively heavy. But anyone looking for the reasons for France's economic health—to see, for example, if any lessons can be learnt by Britain—must look behind the clean-up of the past two years and the orthodox liberalism that has effected it.

The recent boom has been only one spectacular episode in a much longer period of growth which has seen French industrial

output double in a decade. Most economists would recognise that this expansion owes something to the Monnet plans in the postwar years that built up the basic industries—steel and electric power. Postwar reconstruction played a part, too, making the French railways, for example, the most advanced in Europe. The investment in this reconstruction phase on the continent generally shares one interesting feature with the current investment boom stimulated by the common market. Investment in reconstruction was driven on, not merely by pressing human needs, but by great rewards in higher productivity, giving a high return on the capital invested.

INVESTMENT in the repair of electric mains, or a permanent way, or a single piece of machinery which brings a whole production line back into operation, obviously brings fat rewards in higher productivity. So, it seems, does the investment in rationalisation impelled by freer trade. Last year's French statistics certainly bear out this picture. Investment did not rise. Yet industrial production rose by 10.7 per cent. It all provides an interesting comment on the current controversy in Britain between those who advocate a larger quantity of investment and those who want investment to be better judged. The high rate of investment in Europe's post-war and common market booms was itself the result in part of irresistibly high yields.

French investment does, however, have one characteristic that sharply differentiates it from the rest of Europe. Since 1946 the economy has been guided by a series of plans covering periods of between three and six years; and though the *Commissariat du Plan* obviously does not have powers in any way comparable to those of the planners in eastern Europe, the tradition of Colbert is still very much alive. The French state effectively controls 60 per cent of the country's investment and has a big say in much of the rest of it, less through interest rates than through direct control of the credit system. Nationalised industries get their loans very cheap; private industrial investments supported by the planners get loans only slightly dearer, with a Treasury guarantee; other private schemes have to find their money expensively in the open market. The planners' priorities are decisive; and even where no new money has to be raised, the targets set for the basic industries and the advice given by the planners provide guidance which private industrialists often find it expedient to accept. In his speech on May 9th President de Gaulle emphasised the importance of the Plan in the life of France.

France's planners seem to have made two outstanding contributions to France's economic growth. Their first has been to ginger up weak sectors of industry which might form bottlenecks in the way of growth. The forced pace in the basic industries, when M. Jean Monnet headed the *Commissariat du Plan*, has been followed by a successful attempt to ease the balance of payments by developing indigenous fuel supplies, and an effort in the machine tool industry, as its key place has been recognised. A mixture of cajolery and financial incentives has now brought French machine tool makers to the stage where they are beginning for the first time to find markets abroad. In the common market special incentives of this kind will no longer be possible. But the hope is that the French machine tool industry is becoming strong enough to stand on its own feet.

The second main achievement of the French planners—

one of which they are very conscious—has been to provide industry with a yardstick for its own investment plans and to create a habit of growth. The setting of five-year targets for expansion and the knowledge that the French government has given high priority to their fulfilment have gradually persuaded industrialists to plan for expansion themselves. The planners have also done a lot by simply talking to industrialists. France's recent export successes, in particular, owe much to the efforts of the planners in conversation with industrialists up and down the country, to show them the neglected opportunities of, say, the German market. "When we told industrialists about the first plan in 1946," one of the planners remarked, "they were incredulous and thought us too ambitious. Today, we find them too bold."

THE detailed methods of the French system are in many ways inapplicable to Britain—and, perhaps, uncongenial as well. Quite apart from general arguments about the wisdom of a Big Brother economy, France's large measure of self-

sufficiency makes it easier for its government to plan the economy and plan for growth. French imports and exports are together equivalent to some 20 per cent of the national product, compared with 32 per cent in Britain, 31 per cent in west Germany, and 79 per cent in the Netherlands. With no sterling problem lurking in the background, France has been able to concentrate on expansion.

Yet the French example does contain some morals, not only in its liberal features, but in its elements of planning. The high priority given to expansion, the setting of targets to serve industrialists as a guide, the efforts to invigorate weak key sectors, like machine tools, all provide interesting object lessons. And the French themselves answer the criticism that a trading nation cannot plan with the retort that the common market, and indeed the West as a whole, will be compelled, more and more, to plan together for economic growth and to back growth up by suitable new machinery of international payments. Over-investment in the European motor industry is one outstanding example that is often cited to show the need for co-ordination, if not for a common guiding plan.

## NOTES OF THE WEEK

### EAST-WEST

#### Without a Congress

VIENNA, the mooted rendezvous for Mr Kennedy and Mr Khrushchev two weeks from now, is still stamped on the world's mind as the site of a massive congress that danced its stately course a century and a half ago. Geneva is an all-purpose place; other Swiss lakeside resorts are strongly associated with the more intimate, not to say furtive, forms of diplomacy; the UN glasshouse on Turtle Bay in New York lends itself, for all Mr Hammarskjöld's efforts, mainly to "open" diplomacy in the modern manner, with all the wired apparatus of our age of mass media; but the Austrian capital is, for all time, the waltzing floor of the Congress of Vienna.

Clearly—and mercifully—what Mr Kennedy now has in mind is a good deal less spectacular and grandiose; possibly a bit less genial, too. The Viennese waltz, after all, can be danced by a solitary couple, and without any close embrace. After the sorry experience of the four-power "summits" of 1955 and 1960, the world has become wary of that kind of lumbering diplomatic juggernaut, with its build-up of great expectations followed by a let-down which, whether slow (1955) or supersonic (1960), is in either case a fresh obstacle to progress. America's friends and allies should welcome, not suspect, the President's action in proposing a day at short notice for a *tête-à-tête* which will

presumably have no formal agenda nor any other restricting formalities.

Mr Kennedy's proposal is a bold, and seemingly effective, rebuttal of the argument that "summit" encounters must always be preceded by success in making straight the way at lower levels. Indeed, it is thought that one of his main motives, at a time when the co-existence caravan has been travelling a decidedly bumpy road, is to leave Mr Khrushchev in no doubt about western resoluteness. It is certainly important that the Soviet leader should not, after Cuba and Laos, entertain the dangerous illusion that a disoriented American Administration can now be simply pushed around.

Whether anything more positive than a healthy clearing of the air, and a personal appreciation of each leader by the other, could emerge from their meeting largely depends on how seriously Mr Khrushchev himself takes the recent toughness of Soviet diplomacy. The latest of his periodic rumblings about Berlin has already received a firm answer from the Nato council at Oslo (echoed, as far as concerns Britain, by Mr Heath in the Commons on Wednesday). At the Geneva talks on nuclear tests, once regarded as the main touchstone of Soviet sincerity about disarmament in general, the raising of new difficulties by the Russian reneging on the agreed formula on the proposed inter-

national executive had already soured the atmosphere. On Monday came a threat of resumed Soviet testing if French test explosions were not halted. But is this anything more than a not very clever propagandist gambit? The Russians not only know that America and Britain cannot turn President de Gaulle from his chosen course; they know that the relatively primitive devices he is testing in the Sahara are of no interest to a more advanced nuclear power; above all, they have publicly said that they have nothing to gain by resuming tests—whereas the Americans have a real technical interest in resuming, and would be set free to do so if Russia led the way. This particular Soviet "threat" hardly makes sense—even to Russians.

### EUROPE

#### Going, Going...

THE Government appears to have accepted the necessity for Britain to make an application to join the common market. This was the ineluctable conclusion from Mr Heath's opening speech in the two days' debate on foreign affairs which opened in the Commons on Wednesday. If the implications of Mr Heath's reasoning were historic, the speech itself was anti-climactic, partly because, although it rehearsed all the reasons for early entry into the European Community, it failed to draw this conclusion—and partly because Mr Heath, who was an uncommonly good Chief Whip, is now vying closely with Mr Watkinson to establish his claim to be

the Government's most pedestrian speaker.

In the circumstances Mr Heath's accusation, in a speech that was little better, that the Lord Privy Seal had "over-dramatised" the issue, was grotesque. So was his complaint that the Government had smuggled a long statement on Europe into the course of a foreign affairs debate, which Mr Heath seemed to be suggesting should be reserved for insoluble cosmic problems rather than for those of a more tractable character. His reproach that the Government had failed to provide a special debate on the common market was even more disingenuous, since this is the last thing the Opposition wants. It would reveal Labour to be even more divided and confused than the Tories on the issue.

Mr Heath's speech may have been dull but it was highly significant, in effect an elaborate and carefully argued academic lecture on why Britain should make an early attempt to enter the common market. Mr Heath's Peelite plea of national expediency did not warm the hearts of the handful of fervent Europeans sitting behind him. This was not important since it was not directed at them, but at the uncommitted and anxious backbenchers of the party. He was following Mr Macmillan's speech earlier in the day to the 1922 Committee, which was told that the common market and Africa presented the country with the two greatest problems of the century—adding that the Government felt no need to consult the electorate on how to solve them. (Mr Macmillan has evidently learnt Mr Baldwin's lesson on tariff reform.) Mr Heath went much further than the Prime Minister on Tuesday, whose references to "amendment" and "protocols" to the treaty of Rome exhibited a linguistic flair which a logical positivist might have envied. The Prime Minister clearly approved his boldness and, having listened carefully to his protégé, parted him warmly on the back as he sat down.

Mr Heath not only accepted the principle of a common industrial tariff but also declared that, since British agriculture was competitive (an observation that fell singularly flat), it had nothing to fear from participating in a common agricultural policy and competing on equal terms. He even foreshadowed the end of the European Free Trade Association, though he assured the House that nothing would be done without the fullest consultation with our partners. We should not abandon them, he added in an unintended Butlerism, "in that way," and had hastily to add "or in any other." He even seemed to be welcoming, although in an extremely vague manner, the political implications of the Rome treaty, which should be cheering news for Professor Hallstein if not to Tory backbenchers. Their mood remains one of anxiety, and Sir Anthony Hurd expressed forcefully the apprehensions of the agricultural lobby. Mr Heath was heard in respectful and attentive silence by his party, and there seems little doubt that if the Prime Minister is really prepared now to give a lead his supporters will be ready to follow.

### WORLD TRADE

#### Mr Ball's Weaving

INDIRECT help on two of the problems facing the Commonwealth if Britain joins the common market—African agriculture and Asian manufactures—seems to be coming from across the Atlantic. On Tuesday Mr George Ball, the under-secretary of state for economic affairs in the State Department, paid his second visit to London in two months. This time he was here to discuss, not aid, but the trade side of President Kennedy's drive for closer economic organisation of the western world. In particular, he has been preparing the way for the world conference on the textile industry which President Kennedy has summoned.

Ever since new Japanese factories, with their cheap labour, began to break into world markets between the wars, the textile industry in Europe and North America has been pressing, fairly effectively, for protection against the newcomers. Yet the young industrial countries must somehow be enabled to export, if only to pay for their imports of capital equipment and the money they borrow. The problem lies behind the current argument between Lancashire and Hongkong over quota restrictions, and colours the continental view that Britain cannot enter the common market and maintain tariff-free entry for products from the Commonwealth countries in Asia at the same time. Somehow the rich Atlantic countries have to adapt themselves to a new division of labour in the world—concentrating themselves on capital-intensive industries (say, engineering) requiring a high degree of skill and leaving the labour-intensive industries (toys and textiles) more and more to the developing nations.

President Kennedy's conference will not be able to make this change entirely painless; it certainly ought not to try to stop it. But it might make the change a little less fearful if it could inspire a common western approach to the problem. When toy or textile or camera industries in Japan, India or Hongkong are given sales outlets in only one or two limited markets, the downward pressure on prices and the temptation to dump is great. This is the case at present; Britain gives outlets to Hongkong and India but shuts out Japan, and the United States and Germany help Japan but treat the other two worse. If the nations of Europe and North America could agree to move forward together, gradually enlarging and ultimately removing quotas on the new Asian exports, they might find the problem of adaptation easier than they find it on their own.

#### African Melting Pot

NEW thoughts on trade in Mr Kennedy's Administration are not confined to textiles; they extend to Africa as well. Press reports implying that the Americans
