have taken a new initiative to get rid of all the remaining preferential links between Europe and its African ex-colonies may go a little far, but there is no doubt about the Administration's distaste for these remnants of colonial attachments. It has made this plain to both the Six and Britain.

The view is certainly right. As the new African states emerge to independence, the economic and political case for a merger of the British and French preferential systems inherited from the past becomes overwhelming. Yet such a merger would obviously be bad if it meant a new and high wall of tariff preferences in Europe against imports from the tropical countries of South America or, say, the Commonwealth countries in Asia. As Africa hives off from Europe, it may have to be helped less by tariff preferences than by new kinds of non-discriminatory aid. A cut in European excise taxes on products like coffee might help to raise consumption. Commodity stabilisation plans, like those used in Ghana and the French community, might be discussed jointly. A new aid effort by Europe and America to some joint African body might help to foster the unity of which last week's conference of African states in Monrovia was an augury.

Ideas of this kind are exercising minds in both Washington and Brussels, where it is recognised that the independence of most African countries, actual or imminent, requires a new kind of relationship, based on equality, to be worked out between the common market and its African associates. Thinking in Whitehall has not gone so far. A recent British memorandum to the Six confined itself to the suggestion that the French and British preferences be merged and reduced. In the current atmosphere of rethinking in Brussels the initiative was well timed but hardly bold in conception. The French (and some of their former colonies), who inevitably attach more importance to preferences than the other members of the common market do, may not be easily persuaded to remove them unless Britain can think up a replacement that has imaginative appeal.

### KOREA

#### Chang or Change?

BEHIND the revolution in South Korea on Tuesday which replaced Dr Chang, the elected prime minister, with General Chang, the leader of a military junta, lie the three basic facts of South Korean politics. The first is the decisive power of the army. The world's fourth largest—600,000 strong in a nation of only twenty-two million—it can, if united, overthrow any government. It has not done so in the past, partly because ex-President Rhee used to keep its eyes riveted on the possibility of a "march north" to occupy North Korea, and partly because it was inhibited by the presence of two American divisions

and an American general commanding the combined force. This inhibition has now snapped, and the American commander, General Magruder, echoed by the State Department, has been left faintly—and on Thursday afternoon still ineffectively—telling General Chang that he ought to let Dr Chang back into office.

The second point is that the scope for reform open to Dr Chang, the overthrown prime minister, when he replaced ex-President Rhee last year was simply not enough to make a dent on the country's problems. The change gave the South Koreans, for once, a reasonably free election. But the perpetual economic crisis—the fact that South Korea lives on American aid and spends so much of the aid on its vast army—is no nearer an end. In fact, the recent devaluation of the currency (though technically necessary) coupled with a poor crop has increased hardship in both the towns and the countryside. Nor has Dr Chang managed to root out corruption in an army and a civil service in which badly paid men are surrounded by tempting goods paid for by American cash. The combination of poverty and corruption has produced in Seoul the beginning of what might become a genuine social revolutionary movement, dedicated to austerity, honesty and self-denial; but old habits die hard.

The third basic fact is that neither of the other two problems is likely to be solved while Korea stays divided. The two halves of the country—the north rich in natural resources and equipped with heavy industry, the south fertile in agriculture—fit together as naturally as a plug and a socket. So long as they are cut in two, their wasteful armies will go on glaring at each other; and in South Korea, the change from Dr Rhee to Dr Chang, or even from Dr Chang to General Chang, will be unable to produce economic self-sufficiency. Some of the students who overthrew Dr Rhee last year have recently (but unsuccessfully) been calling for contacts with North Korea. If the new military regime survives, the most interesting question will be whether it encourages, or suppresses, this trend.

## POLITICS

### Revolts Contained

MR PAUL HILL, businessman and biographer of the sex murderer Neville Heath, with the slightly guarded support of some Conservative MPs—but alas with no saving sense of irony—has now launched his Anti-Violence League; its professed aim is to secure 5 million members at half-a-crown each, pledged to work for the return of birching and the extension of capital punishment to poisoners, sex murderers, and accessories in murders where violence is used. This is the sort of reaction that *The Economist* feared would result from the resumption of national agitation by the

## NOTES OF THE WEEK

Campaign for the Abolition of Capital Punishment. Fortunately for the Government, the league has not had a very propitious send off. Its committee had hardly been formed when the House of Lords decisively rejected Lord Ferrers's clause to reintroduce corporal punishment, by the surprisingly large margin of 88 votes to 31. The vote was all the more significant because Lord Ferrers's motion was comparatively moderate, calling not for indiscriminate flogging but for caning for those under 17 and birching for those between 17 and 21 who had committed a second or subsequent violent offence. The debate on the subject was moderate too, perhaps partly because Lord Teviot was closedured by Lord Jessel.

The fact that only 31 peers bothered to turn up to vote for the birch is important for Mr Butler, who would have been in a very hot spot if the Lords had mobilised a majority against him on this issue. So, incidentally, would the whole issue of House of Lords reform. Mr Butler must still fear that the Conservative party conference in October will pass a specific motion in favour of flogging, but Labour has taught the Tories what to do with party conferences.

In this latter respect, Mr Gaitskell's position continues to go from strength to strength. At this week's meeting of the Parliamentary Labour Party, only a tiny handful of Labour MPs voted against him on a motion that was meant to criticise his disciplining of left-wing rebels. Mr Gaitskell has also managed to shunt off consideration of Labour's coming (and potentially frightening) home policy statement into a committee that ought to spend at least a month watering it down. Altogether, this has been a good week for party leaders in their battle to secure control over their extremists.

## RADCLIFFE INQUIRY

### Some Curtailment?

THERE is a real need to watch out lest this spring's spy fever should have permanently adverse effects on Britain's free society. The Opposition has hugely enjoyed hounding the Government about the Blake and Lonsdale cases, and has now hounded it into a wide-ranging inquiry. Labour may not realise what it has done. During the eagerness of pursuit, and grasping firmly at the wrong end of the stick, Mr Pannell spoke of a

suspicion, particularly among industrial workers who may have even a rather tenuous association with the Communist party, that if they are suspect at all they are quietly got out through the gate . . . in contradistinction to the closing up that takes place in . . . the civil service.

In fact, anybody who knows anything about these matters knows that security checks on industrial workers in defence

## THE ECONOMIST MAY 20, 1961

industries are at present much looser than those within the civil service.

The danger is that, after the Radcliffe inquiry, the ferreting out of people with unorthodox left-wing views in both fields may be carried much further. In answer to Mr Pannell, the Prime Minister said:

It may well be that in all walks of life men who have anything to do with the public service or the secrets affected have a greater degree of responsibility, and that greater—what shall I call it?—curtailment of their thought and statements will have to be made.

When that happens, it will be right for guardians of civil liberties to ask questions.

Is it really true that, in what Mr Macmillan called "the new kind of battle we have come to," the security net needs to be cast ever wider? Much of the "top secret" scientific work in progress nowadays is so complicated that it relates to weapons that could not be ready for several years anyway, and will not certainly be relevant even then. It is not facetious to

Lord Radcliffe: no McCarthyism

point out that if the Russians five years ago had had a widespread espionage service of communist shop stewards, reporting on the new component parts being made in every British defence factory, the Kremlin would merely have become as badly misled about the probable shape of Britain's actual defence effort in 1961 as the British government of that time itself proved to be.

Our own advice to the Radcliffe committee would be to define the range of real top secrets very narrowly (obviously it should include details of Britain's own espionage service such as Blake apparently betrayed), and to tighten security checks only around them. The unhappiest outcome of the inquiry would be a growth of industrial McCarthyism up and down the country—during a wave of emotion engendered partly by the security service's ruffled feelings after it has been under political attack, and partly by Britons' national addiction to thrill to the reading of Agatha Christie sort of stuff.

## In Stalin's Land

CENTRAL Asia seems to be the main target for the current Soviet spring-cleaning. Last month, the whole leadership of the Tadzhik republic was swept aside; this month the broom has been turned on the leaders of Kirgizia. Mr Razzakov, who had been party secretary in Kirgizia for eleven years, has been removed from his post and Mr Dikambayev has been expelled from the premiership. In the latter's case, the accusation was the now fashionable one of turning a blind eye on people who had been swindling the economy. But the fact that the purge is particularly drastic in the Moslem republics of Central Asia supports the guess that it is probably not unconnected with nationalist troubles.

While the purge was going on in Kirgizia, Mr Khrushchev was travelling in another traditional hotbed of nationalism, the Caucasus. Visiting Armenia and Georgia, he spoke on foreign affairs in comparatively mild terms, suggesting that he would welcome a meeting with Mr Kennedy, particularly on subjects such as disarmament. But

he also spoke of home affairs and of the past. On each occasion he stressed the part played in the revolutionary movement by that well-known native of the Caucasus, Joseph Vissarionovich Djugashvili—and each time Stalin's name was apparently greeted with applause. Mr Mikoyan was a notable absentee from these celebrations. Himself an Armenian, he has quite a record in the Caucasian communist movement. Mr Mikoyan is reputed to have prompted Mr Khrushchev's famous "secret" indictment of Stalin's crimes. His absence need not mean that Mr Khrushchev is now changing allies. It is, nevertheless, interesting that the latter prefers to forget attacks on the cult of personality when going into Stalin's home territory.

## LEBANON

### Lack of Discretion

A GOVERNMENT job for all is not, the Lebanese have discovered, the answer. On Tuesday, the 18 members of Lebanon's cabinet admitted the unwieldi-

## NOTES OF THE WEEK

ness of so large a government for so small a country by handing in their resignations. For the time being they will stay at their jobs until a new government, probably smaller but again led by Mr Saeb Salam, is formed. The difficulty in Lebanon, with its intricate constitutional system of checks and balances, is to find a government large enough to represent the various communities and religions and at the same time cohesive enough to govern. The cabinet that has just resigned was formed after the elections last July; it was splendidly representative but far from cohesive. The simple formula of placing political opponents side by side on the government benches did not prevent their public disagreement.

One of the most forceful critics of his own government was the Druze leader, Mr Kamal Jumblatt. As minister of education, Mr Jumblatt picked as one of his targets the Middle East Centre for Arab Studies (Mecas), an Arabic language school run by the British Foreign Office at Shemlan, a small village high in the mountains above Beirut. The fact that Mr George Blake, the recently convicted spy, was a student at Mecas, when he was brought home to London for his trial might have provided the school's critics with an unlooked-for weapon. In the event, the prime minister's statements about closing the school have been comfortably contradictory, most of the Lebanese comment has been surprisingly moderate, and, by the time a new government is formed, there seems to be a fair chance that Mecas will avoid becoming an additional, and lamentable, casualty of the Blake case.

Mecas is primarily a school in Arabic language and history for the British foreign service, but it also accepts employees of British firms, mainly from oil companies and banks, members of the armed services and, when there is room, private students from the Commonwealth and elsewhere. It was set up in Jerusalem in 1944, but moved to Lebanon in 1947, and has been there ever since except when it was briefly closed during the Lebanese insurrection in 1958. Its tuition is excellent, but as a foreign institution on Lebanese soil its position is bound to be vulnerable. Whoever it was who made the decision that Mr George Blake should learn his Arabic at Shemlan was not greatly gifted with tact.

## UNIVERSITY ENTRANCE

### The "S" Men

THE examination for the advanced level of the General Certificate of Education will be revised after next summer in two ways. There will be a uniform system of grading passes (A to E), which should give the universities and employers a better standard measure than the differing procedures and quirks of the various examining bodies. There will also be special, or "S," papers designed to test, not simply know-

ledge, but the candidate's "intellectual grasp and capacity to think about his subject": these will replace the state scholarship papers that are due to disappear (with the scholarships) next summer.

There has been much to-ing and fro-ing between the Secondary School Examinations Council and the universities over these changes, but the schoolmasters seem to have come out on top. This is reasonable enough in the basic "A" level examination, which crowns the normal sixth-form career. But the dons have cause to complain that Sir David Eccles's acceptance of the SSEC case on the "S" papers, whose chief function is to pick out the swans from the geese among university applicants, means that the examination will be of rather less use to the universities than it might be.

In an attempt to discourage the weaker brethren, only those pupils who are likely to get a "distinction" or "merit" in the "S" papers are to be allowed to attempt them at all—and "S" results will be announced only for candidates in the top 35 per cent (A, B and C grades) in the basic "A" level examination. This exclusiveness could be hard on the unusual mind, sometimes worth a university place, that might not show up in the normal examination. As a palliative, the SSEC has now agreed to let the universities have privately the marks of all "S" candidates.

The universities' second complaint (voiced by the Principal of London University last week) is that the results only become available in mid-August, when they are often too late to help in deciding places. London suggested that the "S" papers—confined to the candidate's best subject and following the "A" level syllabus—should be taken on a single day earlier in the academic year, possibly early in the second term. This would certainly help the dons (and thereby reduce the candidates' uncertainties about where to get in). Would it really be intolerable in the well-ordered sixth form?

## UNITED NATIONS ASSOCIATION

### Naïvely Disarming

WHEN putting questions to the public, it is important to be sure not only that the questions are the right ones, but also that the answers will be put to the right use. The United Nations Association may not have borne this firmly enough in mind when organising its current inquiry into public attitudes on disarmament. The association, through 200 of its local branches and through affiliated organisations such as trade unions, is sending out some 700,000 copies of a questionnaire containing seven yes/no propositions. They range from "Are you in favour of general world disarmament, including the total abolition of all nuclear weapons, under United Nations inspection and control?" (what, incidentally, if you are in favour of it but couldn't care less who does the inspecting and controlling?)

This 'card'...

...is the heart of the  
RANDOM ACCESS MEMORY\*  
of the *National* 315  
BUSINESS DATA  
PROCESSING COMPUTER.

## \* an entirely new concept in magnetic memory systems

THIS MAGNETIC CARD is the heart of the National 315 Random Access Memory... an unparalleled advance in economical magnetic file processing.

In effect, a reel of magnetic tape—3½ inches wide—has been cut into 256 strips forming addressable magnetic cards. A single card is capable of storing 21,700 alpha-numeric characters. Each card contains 7 recording tracks that can be addressed electronically by the central processor.

The 256 cards (5,555,200 alpha-numeric characters) are housed in a removable cartridge that can be changed in less time than it

takes to change a reel of magnetic tape! Up to 16 Random Access Memory file units can be operated on-line with the National 315... providing 88,883,200 alpha-numeric characters... an unprecedented capacity for a Random Access Memory.

This unique system combines all the advantages of random and sequential processing... eliminates rewind time... requires fewer files... speeds sorting, up-dating, and reporting routine.

INVESTIGATE THE NATIONAL 315 for investment. Its unusual expansibility. Its high speed. Its balanced processing. Its economy of programming. Its ease of operation.

1039 Offices in 121 Countries

to "Do you think that, as national armaments are cut down, the United Nations should begin to build up an international force which would be strong enough to keep the peace in a disarmed world?" In the middle are two more pungent questions, on unilateral disarmament and on the admission of China to the UN.

The aim of the association, in framing its heavily loaded questions, has obviously been more to persuade than to elicit already formed opinions. The one question on unilateral disarmament is also the only one framed in a completely neutral way. The answers suggested by the wording of most of the other questions would not be likely to cause dismay in the chancelleries of either the east or the west (although, even here, the questions about whether disarmament should concentrate first on missile-launching sites, and whether the west should accept some risk that inspection systems in Russia might not be watertight, are preceded by an explanation of why the respondent should answer "yes"). But the real danger is that those who bother to reply—and particularly those in the more left-wing of the unions which are distributing the questionnaire—may tend to give a certain type of answer, with the unilateralists heavily over-represented. The results, however carefully handled by the UNA, could provide splendid ammunition for leader-writers and orators with a grievance against Mr Gaitskell. He should be glad that the campaign will be going on until the end of September, so that its results will not be out before the Labour party conference in October.

#### KENYA

### On Edge

MR IAIN MACLEOD said this week, "There is damn well not going to be another Congo in Kenya." He was speaking to two farmers from Kenya, Mr Philip Scott and Mr David Broatch, who had come to London to urge the Government to do something to protect the lives and property of Europeans in rural areas. They allege that there is "a subversive build-up of hatred among the Kikuyu" and, to make matters worse, a lack of liaison between police districts. The murder of two European women in the last fortnight, coupled with the escape from prison of some ex-Mau Mau convicts, has naturally led the European community to assume that a second Mau Mau movement is well under way. Their suspicion is strengthened by the open hostility of the largely Kikuyu Kenya African National Union to the government of Mr Ronald Ngala, which it has refused to join. Mr Macleod has said that there is no evidence whatever to connect the murders with a neo-Mau Mau conspiracy, and has emphasised the ample size of Kenya's military and security forces. But whether or not the settlers' fears are

#### NOTES OF THE WEEK

justified, their resentment against the Government in London is mounting.

In these circumstances there is a special argument why the Government might be well advised to shore up its policy by making a well-publicised move towards establishing an adequate fund or compensation scheme for European farmers, as suggested in *The Economist* of March 4th. There is a danger that if this is not done, and if Mr Macleod continues to rely on optimism and sweet reason, some sections of the European community in rural areas will demonstrate their feelings by provocative actions. The consequence would almost certainly be a genuine renewal of African terrorism and the collapse of Mr Ngala's government. The prospect of political equilibrium might then be lost forever.

#### AFRICA

### The Co-operators

TWENTY African nations (fifteen of them represented by their heads of state) conferred amicably and without melodrama at Monrovia last week. They included the twelve former French colonies of the Brazzaville group and three English-speaking West African states, Nigeria, Sierra Leone, and the host country, Liberia. Sir Abubakar Tafawa Balewa, the prime minister of Nigeria, proved himself a most able conference man, at least a match for the chairman and host, President Tubman, or the two French-speaking magnates, Mr Houphouët-Boigny and Mr Leopold Senghor.

The conference rejected the idea of pan-African integration in favour of co-operation between governments. It agreed that countries should refrain from interfering in each other's affairs, except in the case of colonial territories—especially Angola. On current affairs, the delegates smoothly avoided controversy. They agreed on im-

#### THE ECONOMIST MAY 20, 1961

mediate sanctions against South Africa, but only mildly condemned France's nuclear tests in the Sahara. They supported the presence of the United Nations in the Congo, disapproved of Mr Gizenga and Mr Tshombe, but deleted a resolution condemning Mr Lumumba's assassination. Nobody slung mud at former colonialists or present neo-colonialists.

Last week's conference aroused the wrath of the so-called Casablanca powers (Ghana, Guinea, Mali, the United Arab Republic and Morocco), who refused to take part when it became clear that the others were unwilling to put off the Monrovia conference until the Casablanca group had produced their "African charter." Dr Nkrumah has roundly accused the twenty nations of betraying Africa because they lack the courage to pool their sovereignty. The opposite point of view was put by Mr Houphouët-Boigny on his return to Abidjan. Saying that the unity which has been "caressed throughout the ages" would not be made in a day, he declared that Africa should lay the foundations of co-operation "without going as far as political integration." It looks as if the advocates of co-operation, as distinct from unification, have the advantage in numbers and weight at the moment. Even among the Casablanca powers, it is reported that Mali may return to the fold of the Monrovia group when it meets in Lagos to set up an inter-African secretariat.

#### DOCTORS

### Anonymous Shortcomings

PRESSURE was put upon the Minister of Health in the House of Commons this week to publish the names of doctors and dentists who have been fined by executive councils of the health service. If a complaint is made against a doctor or dentist, it is first investigated by a service committee of the executive council, consisting of an equal number of lay and professional members with a lay chairman. If the committee considers the complaint proved, it reports its findings to the local executive council, together with its recommendation on what the penalty should be. The executive council may fine the practitioner, or warn him, or take no action, and both practitioner and complainant have a right of appeal from the council's decision to the Minister, who himself acts only upon the advice of an *ad hoc* committee. Should the executive council decide that the case is bad enough to warrant the dismissal of the practitioner from the health service, it forwards its recommendation to the health service tribunal. The practitioner has a right of appeal to the Minister if the tribunal decides to dismiss him; if it decides not to, there can be no appeal by the complainant.

The name of the doctor, or dentist, is published when it has been removed from

#### THE ECONOMIST MAY 20, 1961

the health service list. This, of course, can be regarded as a shutting-the-stable-door procedure, and it is arguable that the public has a right to know about a doctor's inefficiency even when it does not warrant his dismissal. But, as Mr Powell emphasised in the House of Commons, the proceedings in the service committees and executive councils are primarily concerned with breaches of contract to perform certain services. They are not conducted like courts of law; the penalties may be imposed, not for bad doctoring, but for not keeping the rules; and even when the breach of contract is apparently serious (such as failure to visit a patient) the doctor's defence, which would not necessarily be published (and sometimes for a patient's sake could not be), may throw a very different light on the charge.

In any case, the health service proceedings are not the end of the matter for serious cases. Such cases are reported to the General Medical Council, the proper body for investigating professional conduct. Patients themselves can take civil action to obtain redress, and their best sanction against inefficiency lies, not in indiscriminate publication of names, but in the exercise of the consumer's right to change practitioners, after they have found out whether a particular doctor measures up to their own needs.

#### GUILDFORD CATHEDRAL

### The Unexpected Dean

THE diocese of Guildford has had its share of controversy ever since it was carved with its twin diocese of Portsmouth out of Winchester in the nineteen-twenties. Sir Edward Maufe's massive Gothic edifice, which won an open competition in 1931, has not commended itself to all as the ideal form for a modern cathedral, and its imposing but inaccessible site on the summit of Stag Hill has been another source of lively dissension. At the consecration of the cathedral this week the diocese was still reverberating with the

Not the ideal edifice

acrimony generated by the latest Guildford contretemps, the Boulton affair.

Until this year Mr Boulton was both vicar of Holy Trinity (the pro-Cathedral) and provost of the diocese. Provosts are found in the Church of England in those dioceses where the cathedral is also a

#### NOTES OF THE WEEK

parish church; the parochial duties are discharged by the provost and the administrative ones by the dean. The statute of Guildford cathedral provided that on the cathedral's completion Mr Boulton should resign his provostship. He voluntarily relinquished the incumbency of Holy Trinity as well. Mr Boulton had enjoyed a highly successful ministry at Guildford and it was generally assumed in the diocese that his resignation would be no more than a technical preliminary to his appointment as dean.

In fact, the deanery, which unlike the provostship is a crown appointment, did not go to him but, as was announced on Tuesday, to Dr Clarkson, the bishop suffragan of Pontefract. Dr Clarkson has undoubtedly had far wider administrative experience than Mr Boulton, but the whole affair has been ineptly handled by Downing Street, and is a fine example of the shortcomings of the system of crown appointment to ecclesiastical offices. No account was taken of the strong local opinion that Mr Boulton not only would but should be appointed dean, or of the intention of at least some of the drafters of the cathedral statute that the provost should succeed automatically to the deanery. Given these factors Mr Boulton should only have been denied the succession if he was manifestly unsuitable. No such suggestion has ever been made. The long delay between informing Mr Boulton that he would not succeed and the announcement of Dr Clarkson's nomination allowed all the Boultonite forces to gather and to become vocal in the erroneous belief that they could influence an appointment which had already unofficially been made. Mr Boulton is now temporarily in limbo, an uncomfortable position for him, and one calculated to cause the maximum discomfort and embarrassment to the incoming dean.

#### ELGIN MARBLES

### Put Them Back

DURING the Greek War of Independence, some quarter century after Lord Elgin removed the sculptures from the Acropolis, one of his successors at the embassy at Constantinople had grave fears that the Turks were going to destroy most of the remaining antiquities in Athens. He wrote, "In this event the danger of being classed with the Goths and Elgins of other times would not deter me from offering" to buy the caryatids and the remaining reliefs on the Parthenon. The mixed feelings towards the problem of preserving Greek antiquities that are reflected in these words of Mr Stratford Canning have again been stirred up by a parliamentary question on the future of the Elgin marbles put by Mr Francis Noel-Baker last week. In reply Mr Macmillan was non-committal, but he rightly acknowledged that this was a very important matter.

Athens in Bloomsbury?

a museum in Athens than in the halls of the British Museum. And of those who take the trouble to go and see them in Bloomsbury an ever-increasing number are able to visit Athens.

One need not maintain that the modern Greeks have a prescriptive right to the treasures of ancient Greece; or that works of art should always remain permanently in their country of origin. But in this particular case, it is possible to hold, for reasons that have nothing to do with moral judgments, or legal rights, or political advantage, that the Elgin marbles should be returned to Greece simply as a gracious and generous gesture.

#### NORTH ATLANTIC PASSAGES

Twice as many people flew the North Atlantic last year as crossed it by sea.

Not only is the shipping companies' share of the traffic declining; during the last three years the number of passengers that they carry has been falling too.

The use of glass fabric for reinforcement in moulded plastic products is now virtually standard practice—the best technical advances in the reinforcement itself are embodied in TYGLAS.

TYGLAS is available in many forms and finishes to suit specific needs.

For full information about TYGLAS write to The Marketing Officer, Fothergill & Harvey, Harvester House, Peter Street, Manchester, 2.

## LETTERS

### Bernstein on Triffin

SIR—I believe that your article of May 6th, “Bernstein, Triffin, Stamp . . .”, does not provide your readers with the information they need to judge the merits of my plan for reforming the International Monetary Fund.

My proposal consists of two parts: (1) To integrate the present quotas of the members of the IMF with their working reserves; (2) to finance capital movements and the conversion of currency balances by having the great trading countries undertake in advance to lend the IMF stated amounts of their currencies for this purpose.

The first part of my proposal would require the IMF to permit members to draw freely on their quotas, without prior approval, to meet balance of payments deficits. At the same time, it would enable the United States and the United Kingdom to draw on the IMF as a matter of course whenever they use their own reserves. It should be noted that the United States has never drawn on the IMF and that the United Kingdom has drawn on the IMF only in the crises of 1947 and 1956.

You say that my plan would not increase total world liquidity. On the contrary, my plan involves a substantial increase in liquidity now. Consider what it would mean if the reserves of the United States and the United Kingdom were regarded as including the \$5.7 billion and the nearly £900 million which represent their net creditor positions plus their quotas in the IMF. For the future, it should be possible to have a more frequent review and revision of quotas.

By contrast, the Triffin plan is highly deflationary. It would start by converting the net position of the United States, \$1.6 billion, and the United Kingdom, £180 million, into deposits with the IMF. At the same time, it would make them large debtors of the IMF, the United States for about \$3.5 billion and the United Kingdom for nearly £1 billion. These enormous debts would be funded, but they would have to be repaid over a period of 20 years. Furthermore, any dollars or sterling acquired by other countries hereafter would be converted by them or the IMF into gold.

While the IMF, under the Triffin plan, would have the power to create reserve credit for its members this could be far more difficult than is generally recognised. That is why Professor Triffin would have his proposed institution empowered to buy securities in the New York and London markets when this is necessary to increase reserves. With a balanced pattern of world payments, these operations, even if they could avoid disrupting the money

markets, would impose on the United States and the United Kingdom a far greater burden of providing reserves for the rest of the world than they have now under the gold exchange standard.

Some critics of the Triffin plan are concerned that it will become an instrument of inflation. My own fear is that it will become an instrument of deflation. It is impossible to give an international institution the credit-creating power of the Triffin plan without imposing on it a responsibility for policy that is much more likely to be exercised for restriction than for expansion. I cannot see how the Triffin institution could avoid being the ultimate judge of the fiscal and credit policies of all of its members, including the United States and the United Kingdom.

I am disturbed by the prospect that the Triffin plan would eliminate the United States and the United Kingdom as reserve centres. This is not because I attach great importance to the foreign exchange earnings of Wall Street or the City. Rather it is because the capacity of the United States and the United Kingdom to finance international trade and investment and to maintain efficient markets in exchange, commodities and international securities would be impaired if they were to cease to be reserve centres. Incidentally, I have made the point that it would be helpful if additional reserve centres were to emerge in the next few years.

The IMF is a useful institution. The practical approach is to modify its arrangements as new conditions arise. This requires a moderate degree of foresight and understanding. In 1952 I wrote a memorandum for the Managing Director suggesting that the IMF secure commitments from the great trading countries to buy its interest-bearing debentures if additional resources should be needed. In 1953 and 1954, I wrote two memoranda on the factors that determine which currencies are drawn from the IMF, with special reference to the dollar and sterling. In 1958, in a speech at Harvard, I presented a full statement of my present plan. On a number of occasions since then I have urged the United States and other Governments to act promptly to meet the problem of the reserve centres. I have not been alone in this. My former colleague, Professor Triffin, has presented his plan in an imaginative way. My friend Governor Zolotas of the Bank of Greece in 1957, and again in 1958, urged on the IMF a plan similar to mine for the provision of additional resources through standby arrangements with creditor countries.

Finally, while there is nothing reprehensible in being fairly conservative, this classification cannot properly be applied to me. I have been discussing monetary policy for over 25 years and it would be difficult to cite anything I have said or written that has not been based on a liberal view of the needs of the world economy and the responsibility of the great trading countries to meet these needs in a generous way.—Yours faithfully,

EDWARD M. BERNSTEIN  
Washington, DC

### Robens on Coal

SIR—“Coal Without Protection?” in last week’s issue had the qualities usually to be found in *The Economist* surveys of this kind: it was objective, stimulating and constructive.

May I point out one inadvertent error, however? You quoted me as having talked about a *guaranteed* market for 200 million tons of coal.

This case has been argued by other people, but not by me. I have always said that this was about the size of the annual market the coal industry ought to be able to win for itself in competition with other fuels. *The Economist* can safely give this aim its support.—Yours faithfully,  
ALFRED ROBENS  
National Coal Board, London, SW1

### Agony in Angola

SIR—I feel that the article in your issue of May 6th calls for one or two comments.

It contains not the slightest expression of horror at, or condemnation of, the pitiless slaughter of white, black and mixed-race men, women and children that is being perpetrated by savage bands of terrorists instigated from outside Angola by organisations the source of whose inspiration and finance is surely not in doubt.

The only condemnation is for the reaction of the Portuguese. It would be interesting to know how, in the conditions of terrain and resources in men and equipment, your correspondent would conduct operations in Angola against the terrorists. Or is one to presume he would take no action and allow them to chop men, women and children to pieces to their hearts’ content?

It is really a little sickening to see now some people, believing all the hearsay reports served out to them, close their eyes and their minds to reality and take up a “holier than thou” attitude, devoting themselves to the doubtless congenial task of denigrating those who object to being chopped up and are determined to do something about it.

Unfortunately, such people do not even realise that on their shoulders must rest a share of moral responsibility for the suffering and bloodshed which, by their utterings, and by their implied or overt support, they have helped to make possible.

Another point which I noticed about the article was the absence of any reference

to the six-year development plans which the Portuguese government launched some ten years ago both in Portugal and in the overseas provinces, the second of which is at present being implemented.

Perhaps the omission is understandable. After all, your correspondent was out to have it believed that the situation in Angola is static, and it would not do to refer to anything that would tend to show that it is not.

The implementation of these plans is creating conditions of increased prosperity through improvements in the fields of agriculture, industry, transport, communications and social advancement. Indeed, encouraging results are already visible, and it may well be surmised that those who have fomented, organised and launched the present wave of terrorism knew that if the plans were allowed to come to fruition the opportunity would be lost to exploit discontent and to stir up trouble.—Yours faithfully,

A. POTIER  
Press Counsellor

Portuguese Embassy, SW1

### Vive Les Armées

SIR—It was 30-odd years before poor old Military Intelligence discovered that the British Army had been taking on the French Combined Services when they played *l'armée française* at rugby. I am surprised, however, that your own correspondents still make the same mistake and translate *l'armée* by "the army," a mis-translation shown to be particularly misleading in the current Algerian situation. *L'armée* is, in fact, an abbreviation for *les forces armées* sometimes known as *les trois armées, de terre, de mer et de l'air*.—Yours faithfully,

T. F. H. HUDSON  
Whitchurch Hill, Oxon

### Katanga

SIR—You say Mr Tshombe (May 6th) was "egged on by the Belgian mining companies" to take the lead "in starting the

fragmentation of the Congo." Katanga, the size of France, is hardly a "fragment." With communications as poor as they are in this huge sprawling territory, it is difficult enough to control the remoter parts of Katanga (where the Baluba battles have been continuing for a century) let alone rule the whole of the Congo. That Belgium should have succeeded in its administration for so long is, on reflection, miraculous.

As one who has met Mr Tshombe on more than one occasion I can only say (perhaps naively?) that had the Belgian mining companies egged him on to any particular course of action, he would probably have chosen an alternative. He has no great love for his former masters (what recently independent country has?), but he is a realist and does acknowledge that he needs at least one generation before he can hope to extend his take-over bid.

The sooner Mr Tshombe is released the sooner the chances of stability returning to the unhappy Congo.—Yours faithfully,  
Oxshott, Surrey KENNETH MASON

either the behaviourists or the Marxian determinists.

In respect of method he makes only one important modification. He tries, while demurely apologising for his narrowly classical education, to answer the critics who charged him with using only an "Hellenic" model as the pattern beside which to set all other civilisations by toying with the experiment of applying the "Sinic" model of successive states of dissolution and unification. He emerges with a compound Hellenic-Sinic model to which, as he somewhat perfunctorily demonstrates, other civilisations either do or do not conform in varying degrees.

As to his conclusions it may be said that reconsideration has led him more often to restatements than recantations. Often he adopts the formula: "If I have done what my critics have said I have done, I have erred, but..." Nevertheless there are one or two points about which he confesses to have been taught the truth. He no longer regards the western and Byzantine Christian civilisations as affiliated merely to Hellenic civilisation but as being the joint offspring of both the Hellenic and the "Syriac." The recognition of the function of the Near East in the formation of Christendom does not, however, lead him to any recantation of his harsh views about the Jews and Zionism, which are reaffirmed in this volume at some length. Secondly he has taken account of the revolutionary work done by archaeologists in America to reduce the number of his pre-Columbian civilisations in America to one. The bare ten pages on Russia have no significance for the development of Dr Toynbee's thought, which is not surprising, for he still sees communism as merely another inconvenient Christian heresy.

The last part of this volume is about Pro-

fessor Toynbee, a subject in which he is as much interested as are his critics. He takes his classical education and the happy accident of his having been born neither earlier nor later than 1889 as the theme for a discourse on his own advantages and shortcomings. There is also in this volume the sermon he has led us to expect; it is characteristically entitled "The next ledge" and exhorts us to saintliness, a sense of responsibility and love for our fellow men.

So ends a great work, our modern *Civitas Dei*, unique in this century for its size, stimulation and confident courage. Its twelve volumes have increased our knowledge of history, for none of its readers can have been so well informed as Dr Toynbee on so many chronologically and spatially disparate topics. Whether it has added to historical knowledge is a different question. It has given us another pattern in which past and present human relationships may be arranged, and a new arrangement is a creative act. This one has the great merit of having stimulated a lot of people to think about history.

### Change and Recurrence

An Economic History of England, 1870-1939

By W. Ashworth.

Methuen (1960). 447 pages. 36s.

THIS is the concluding volume, but the second to appear, of a five-volume economic history of England edited by Professor T. S. Ashton. It is essentially a university textbook. Learned monographs are easy to write; textbooks are quite a different matter. The author must be abreast of his subject, but he must not on the one hand simply regurgitate other men's facts and opinions, nor on the other depart too far from the consensus of opinion in pursuit of his own bright ideas; he must give a feeling of the complex depths of the subject, but must also provide enough generalisation to prevent the student sinking. Professor Ashworth handles with considerable success the opportunities and limitations of this difficult genre. He seems to have mastered all the literature worth reading, and though he has quarried facts and ideas from a wide range of sources they are cemented together by his own good sense, sound scholarship and independent judgment.

His qualities show to best advantage when he is dealing with specific and limited topics, and his chapters on government policy, labour problems and transport and banking developments are shrewd and well balanced. When he attempts to discuss the course of economic change over the whole economy, his touch is less certain, and some of his generalisations seem not to have been fully thought out. He is also more successful in the period before 1919 than in the inter-war period. For these latter years there is a superfluity of explanations for the course of events, and what the reader most needs is a clear order of priorities.

Professor Ashworth is too eclectic; he gives us an intelligently compiled anthology of most of the relevant factors without much attempt to establish their relative importance. His style is not particularly bracing, and the general approach is on occasion aridly statistical; there is a great deal about trends, conditions and influences and not enough about specific individuals. In particular one would have liked more entrepreneurs to have appeared in person. Nevertheless, when all is said and done, Professor Ashworth has written an extremely useful book, the first systematic attempt to make some sense of these critical years. It will be a godsend to teachers and students alike.

For the general reader the book would have been more attractive if it had included the second world war and its immediate aftermath, a period which Professor Ashworth is unusually well equipped to cover since he wrote one of the best of the civil histories of the last war. Even so, it sheds a good deal of light on the historical origins of contemporary economic problems. For example, one cannot fail to be struck by the constant recurrence of concern about the British balance of payments, by the strong family resemblance between current anxieties about export prospects and those of the 1880s and 1890s and the interwar years. Are these merely signs of periodic bad luck? Or do they indicate deep-seated and persistent habits, which impede Britain's economic performance? For the failure of British exports to do as well as those of their main rivals before 1939 there were plausible explanations: for historical reasons Britain concentrated on exporting to primary producing markets types of export, particularly textiles, for which world demand was expanding least rapidly. But since 1939 we have been moderately successful in tailoring our own basic industries to meet the changes in the world economy; and yet our anxieties persist. One cannot help feeling that the explanation all along lay not in the fact that Britain had an industrial revolution to liquidate but in the social habits of an old and stable society, a society much less open and acquisitive than the American, and not galvanised by the ravages of war as were many continental countries. Like most English economic historians, Professor Ashworth prefers economic to sociological explanations. But influences of a sociological kind are surely crucial to the general performance of an economy over long periods of time.

### Victorian Proconsul

Sir George Grey, KCB, 1812-1898:

A Study in Colonial Government

By J. Rutherford.

Cassell. 726 pages. 84s.

IN one sense Sir George Grey was a Victorian proconsul *par excellence*. For a quarter of a century—from 1842 to 1867—he held office as governor, first in South

## Did you expect war in Cuba?

IT is now officially and widely believed by the Cubans that the United States intends to destroy their revolution. They believe that the Central Intelligence Agency in Washington is financing a counter-revolution based on Miami to repeat their Guatemalan success of 1954".

This was Patrick O'Donovan writing in The Observer last February, over two months before the invasion of Cuba. He went there at the beginning of this year and wrote three articles about the island's mood that even today give a deeply revealing insight into the character and ideas of the men in power.

If you saw O'Donovan's articles, neither the fact of invasion nor its failure came as a surprise to you. And such ahead-of-the-news reporting is very characteristic of the paper.

### Khrushchev and Mao

Sometimes this can have spectacular results. As for instance when Edward Crankshaw, for many years The Observer correspondent on Soviet affairs, gave the full facts about Russo-Chinese discord, and the bitter exchanges between the two leaders.

Crankshaw's report was recognised as being of diplomatic importance. It was taken up and broadcast right across the Western world.

Recently, The Observer published exclusively in Britain the tremendous exchanges between Khrushchev and Walter Lippmann, America's leading diplomatic reporter. This was a fascinating document, and an important revelation of Khrushchev's aims, intentions and beliefs.

So much for the recent past. What and where next? I don't know; but I am sure that these journalistic feats are not isolated flashes. They are the result of a great deal of thought and care.

All over the world there are men from The Observer placed strategically to see what is going to happen, as well as what is happening. Often they arrive at political nerve centres well before others have realised that those nerves are jangled. You can read the results of their probings in The Observer this and every Sunday.

ADVT.

## BOOKS

### End of an Enterprise

A Study of History, Vol. XII: Reconsiderations.

By Arnold J. Toynbee.

Oxford University Press for Royal Institute of International Affairs. 740 pages. 45s.

WITH this volume Professor Toynbee brings to an end the great enterprise on which he embarked forty years ago. Much history has been made and much written since he drew up his first draft in 1921 and it is natural that he should want to examine his work in the light thereof. He is not indeed here much concerned to analyse and correlate with his pattern the new societies that have grown up since then in eastern Europe, Germany, the United States, the Middle East and China, for he regards them not as new "civilisations" but as deviations or filiations from older ones; but he is concerned with what has been written, not so much by historians, but by archaeologists, sociologists and "metahistorians," and particularly by the motley array of critics whom he has, much to his delight, provoked to praise or blame.

The primary interest of this volume is the extent to which Professor Toynbee has thought fit to modify his assumptions, method and conclusions.

It is hard to see that he has modified his assumptions to any significant extent. He still believes that the truth about human relations can be ascertained only by the pro-

cess of analysis, comparison and classification. He claims that no other process (for example by narration) is legitimate because no other can possibly produce results, which seems an oddly pragmatic argument for seeking a body of truth that, after all, may well be non-existent or unascertainable. He is equally firm in sticking to his thesis that there exists, besides what is knowable through the senses and ratiocination, a body of "metahistorical" truth ascertainable by some extra-rational perception, intuition or inspiration. This higher knowledge is vouchsafed to man through the "higher" religions, whose place in Professor Toynbee's scheme is even more honourable and influential in this reconsidered version than it was in the earlier volumes. Indeed one of the few major modifications he has been led to make is to explain the higher religions, those "attempts to put individual souls into direct communion with absolute spiritual reality," not, as he first did, as mere factors within and part of civilisations, but as independent and creative elements in the historic process. He makes no attempt to consider communism as one of the higher religions, well qualified as it would seem to be in virtue of its generality, its claim to uniqueness and its proselytism. Another assumption about which Professor Toynbee will make no concession is that of man's freedom to choose. So assured is he that freedom is necessary if there is to be any understanding of history that he crosses no sword with

Australia, later in New Zealand and South Africa, and finally in New Zealand again. Still more unusual, seven years after he stopped being a governor he became a member of the New Zealand Parliament, where he sat for another twenty years, during two of which he was Prime Minister. In fact, however, his career was considerably more chequered than this brilliant record suggests. In 1859 one exasperated Colonial Secretary (Bulwer-Lytton) recalled him from South Africa. Eight years later he avoided dismissal by another (Buckingham) only "out of respect to his long service and because the expiration of his government was so near as to render it needless." His latest and most judicious biographer is constrained to describe his period as Prime Minister as "a fiasco." Nor was his private life unclouded: just after he took up his first governorship, his only child, then five months old, died. Whether or not his later estrangement from his wife, whom he seems to have held responsible, began thus early, they finally separated in 1860 and lived apart until just before their deaths in 1897.

To write a life of such a man is, indeed, a daunting prospect. So much of the political and social history of the three very different countries in which Grey's career was spent must be reconsidered if his own contribution is properly to be appraised. Grey's determination to have his own way and his conviction that he was always right (common enough characteristics in pro-consuls) were, moreover, associated with a peculiar skill in presenting his own case, which led an embittered Colonial Office clerk to observe: he "throws out such a cloud of words that it is difficult to know what he does assert and what he does not." The problems Grey had to handle included most of those fundamental to imperialism. The basic conflict between native peoples and settlers eager to acquire their lands; the question whether the economic and social assimilation of such peoples to western models is either desirable or practicable; the impracticability (so evident to us, but not to Grey) of any such programme without large scale aid both in men and resources; the reconciliation of colonial democracy and imperial unity—all these and many others of the problems central to the impact of people of one society on those of another surrounded Grey throughout his life, and have made his governorships a subject of still lively controversy.

Professor Rutherford has been engaged

The Index to *The Economist* is published quarterly. The subscription rate is 10/- a year; single copies are priced at 2/6 each. The Index to Volume CXC VIII (January to March 1961) is available from: **The Publisher, 22 Ryder Street, St. James's, London, S.W.1**

for years on this truly monumental study, which is not only the definitive life of Grey but also a major contribution to the history of the three countries concerned.

## Consul and Ambassador

**The Camels Must Go: An Autobiography**  
By Reader Bullard.

Faber. 300 pages. 25s.

ONCE upon a time—from 1876 to 1936—the Foreign Office kept a poor relation called the Levant Consular Service. Its consuls formed the hard core of British expertise on the Middle East, but the highest posts normally open to them were the ministerships in Albania and Jedda and the oriental secretaryship at the embassy in Cairo. Sir Reader Bullard was one of those who soared beyond this level. He spent the last six years of his service, which were the war years and the year of Soviet experiments in pressure on the Middle East (1946), as ambassador in Teheran.

There, he handled high policy and the highest politicians ("the stream of purposeful visitors provided us with constant stimulus"), but much of his service was given in posts where self-stimulus was a necessary recourse. Long spells were passed among poor communications and in bad climates, and one is struck by the amount of time these caused him to spend apart from his wife and family. In this respect the lot of his generation compares ill with that of the mid-century diplomat endowed with air-conditioner and cheap air fares for his children in the holidays—a fact worth noting by all who lament the good old days in Arabia.

This Sir Reader never does. He is infinitely adaptable, and one of the charms of his endearing book is its evidence of a capacity for making the most of odd situations and out of the way places. He is almost alarmingly observant, and never misses the implications of a scene or gesture, whether moving (as when a tear leaves Ibn Saud's eye and runs slowly down his worn cheek as he speaks of an execution in Palestine) or comic (as when King Hussein, leaving the Hedjaz for exile on board the government steamer, cables his successor, first, "Your steamer has run aground" and, immediately afterwards, "Our steamer has floated off again."). To read the book is to understand why so many colleagues recollect that, whenever Sir Reader was in charge of reports from Jedda or Moscow, they opened these in pleasant anticipation of entertainment as well as interest.

Another of the book's attractions is the good sense that it exudes. No matter what happens, one must get on with life, wear its harness and keep the wheels turning. Readers will discover why the title signifies this home truth, and how the job can be done with pleasure and dignity all the way from a humble home in Walthamstow to the mellow glow of the Bodleian and the coal fire in the senior common room.

## The Period of "Total Victory"

**Documents on German Foreign Policy, 1918-1945, Series D, Vol. XI: The War Years, September 1, 1940—January 31, 1941**

Her Majesty's Stationery Office. 1,361 pages. 45s.

VOLUME XI of Series D of the German Foreign Office Documents covers a period in which Hitler was kept extraordinarily busy explaining to all the world that he had won a total victory although the British were so blind as to be unaware of it. During these five months he in turn harangued Mussolini, Pétain, Franco, Molotov and Antonescu (among others). The first four presented him with little but vexation. His brother in arms and ideology, the Duce, launched his catastrophic attack upon Greece towards the end of October, 1940, thus cutting across Hitler's plans and undermining the fantastic prestige which the collapse of France had brought to the Axis alliance. In a letter of December 13th, Pétain, of whom Hitler had at first approved as a "more spiritual Hindenburg," eloquently thanked the Fuehrer for "bringing the mortal remains of the Duke of Reichstadt to the vault of the Invalides," but at the same time announced his dismissal of Laval. Unwillingly Hitler began to agree with Mussolini that the Marshal was not to be trusted. Franco with superb obstinacy refused to join the Axis powers in the war or to agree to allow them to seize Gibraltar. Lastly, Molotov, when he saw Hitler in Berlin on November 12th and 13th, maddeningly demanded that the Germans should define their terms and failed to appreciate the Axis guarantee of Roumania's diminished frontiers, which had been coupled with the German occupation of the Roumanian oilfields. Only the Roumanian Conducator, Antonescu, who began by shouting Hitler down over Transylvania, proved a true friend. But it had been the German move into Roumania that provoked Mussolini to the invasion of Greece.

In fact the documents show, as the accompaniment to all these abortive conversations, the signature of a series of German secret military directives. No. 18 on November 12th included preparations for action against Russia "regardless of what results these discussions will have"—the conversations about to begin on the same day with Molotov. Directive No. 19 followed on December 10th for Operation Attila or "the speedy occupation of the still unoccupied area of metropolitan France." This again preceded, this time by three days, the offending French action of dismissing Laval, but was not to be carried out for nearly two years. On December 13th, the day that Pétain wrote to Hitler, directive No. 20 for Operation Marita was signed, that is, for the assembling of a German force in southern Roumania to be employed "via Bulgaria for the taking of the northern coast of the Aegean and—

The Anglia makes adventurers of us all. Light and lively, swift and sturdy, it urges you to point its nose towards faraway places with exciting possibilities. Fast (up to 75 mph) and frugal (up to 50 mpg), the dashing Anglia's the sportiest of saloons (1-2-3 in its class, African Safari Rally), the roomiest of light cars. There's

no car in its class to touch the Anglia for motoring magic—easy hp terms, low insurance rates, fixed-cost service and high re-sale value make it an outstandingly economical investment—and of course it's soundly backed everywhere you go by quality Ford Service, ready to give your Anglia all the care it will ever need.

# ANGLIA

Men who buy well,

buy **DICTAPHONE** TIME-MASTER

Men who value quality and service are the men who buy Dictaphone Time-Master, because the transistorised Time-Master is the quality dictating machine. It's a precision instrument designed to save time for a man whose time is valuable.

Dictating with Time-Master is as easy and pleasant as normal dictation to a secretary, but

it is much more convenient and time saving. No matter where your secretary may be, you simply speak, and immediately your thoughts are on permanent record. Time-Master has these unique advantages because only Time-Master has the DICTABELT record.

The Dictabelt recording is permanent and visible, ensuring complete safety from acci-

dental erasure. Reproduction is crystal clear and placelinding is instantaneous.

Dictaphone Company Limited, 17-19 Stratford Place, London W.1. Tel.: HYDe Park 9461. Branches throughout the British Isles

The words DICTAPHONE, TIME-MASTER and DICTABELT are registered trade marks.

should this be necessary—the entire Greek mainland.” Lastly, on December 18, 1940, comes Operation Barbarossa, which opens with the words that “The German *Wehrmacht* must be prepared to crush Soviet Russia in a quick campaign even before the conclusion of the war against England.” And, although Operation Sea-lion had been indefinitely postponed on September 17th, directive No. 21 stated that “The main effort of the Navy will remain unequivocally directed against England even during an eastern campaign.”

There is one sensationally unexpected document in this collection, and it concerns Switzerland. On October 1, 1940, Köcher, the German Minister in Berne, reported to Berlin that Colonel Wille, son of the Swiss General in the first world war, had said to him that “it would be best if they [the Swiss] demobilised altogether.” This was because Wille wanted to get rid of General Guisan, who had had secret military conversations with the French at an earlier date, earlier indeed than Wille knew. Although the Wille family was known to be pro-German, it is startling news that Ulrich Wille should have spoken to Hitler's envoy in such disloyal terms: General Guisan had done nothing technically incorrect in preparing, in collaboration with the French, for a German invasion.

### *Threat to the Lifeline*

**The Fiercest Battle: The Story of Convoy ONS.5**

By Ronald Seth.

Hutchinson. 208 pages. 21s.

BECAUSE convoy battles were so prolonged, and took place over such vast stretches of ocean, they are far more intractable material for the historian to handle than straightforward sea fights such as Matapan or Midway. However, the slow North Atlantic convoy whose fate is here described certainly deserves a book to itself: it marked one of the climacterics of the war. If the amount of detail given sometimes obscures the main issues involved, Mr Seth's narrative does give a clear picture of how a convoy was conducted, and of what went on in the minds of the crews of the escort vessels and merchantmen.

The early spring of 1943 was an extremely anxious time for those responsible for the defence of merchant shipping. In the previous year the Allies (and especially Britain) had suffered appalling losses—the U-boats alone sinking 1,160 ships totalling over six million tons; and in March, 1943, one particular homeward convoy suffered a serious disaster, losing 22 ships. Nearly all the losses took place in the “air gap” south of Greenland, which only the few “Very Long-Range” aircraft possessed by Coastal Command could reach. The U-boats lay in wait on the edge of the gap, and attacked furiously while the convoys were crossing it.

Towards the end of April, convoy ONS.5, which consisted originally of 42 ships, set

out from Britain in charge of Commander P. W. Gretton's escort group. The weather was terrible: continuous storms, fog and ice were encountered, the merchantmen became badly scattered, and the escorts could not refuel at sea. On the 29th about 30 U-boats began to close in, and the battle, which was to last for a week, opened. But the danger was realised in the Admiralty, and two of the recently formed “Support Groups” were ordered out from Newfoundland to reinforce the escort. The three groups together managed to hold their own, if by a very small margin. Though twelve merchantmen were lost seven U-boats were destroyed and many others were damaged during the convoy's passage. On May 11th Commander Gretton's ships set out homeward with another slow convoy; this time no merchantmen were lost and five more U-boats were sunk. The double operation was thus a clear-cut victory, for on May 23rd Dönitz withdrew the survivors, and silence fell on the Atlantic battle ground. We now know that, since the first of the month, no fewer than 33 U-boats had been sunk, which was a greater rate of loss than could possibly be sustained. Although the U-boats returned to the fray later in the year they never again came so near to cutting Britain's lifeline as in March and April, 1943.

Mr Seth deals very competently with all the intricacies of these operations, and his account of the climax of the battle of ONS.5 during the night of May 5th-6th is thrilling. He has evidently studied the records with great care, and he skilfully uses the recollections of the men involved to amplify the bald statements of the official reports. Although his book is not free from minor blemishes, it contains only one important mis-statement. It is quite untrue to say that it was only the sinking of the *Athenia* on September 3, 1939, that caused the Admiralty to adopt convoys. Worldwide preparations were in fact put in hand well before the outbreak of war, and the first mercantile convoy actually sailed from Gibraltar the day before war was declared.

### *Artist into Story Teller*

**Dangerous Corner**

By Maurice Vlamincq. Translated by Michael Ross.

Elek Books. 171 pages. 25s.

AFTER a spate of books about the lives of artists in which truth is indistinguishable from fiction, it is rather refreshing to be presented with an artist's own writings about himself. Possibly giving as lop-sided a picture as any biographer's, it is nevertheless presumably how the artist would have us see him.

This book provides an English translation of the first of Vlamincq's autobiographical volumes “*Tournant Dangereux*,” published first in France in 1929. Art historians may decide that Vlamincq's influence on French art was short-lived, yet his Fauve

pictures show unquestionably that he was one of the innovators of the contemporary school. Unquestionably, too, he had an exceptional personality and his dramatic, colourful sense, dash and vigour, so evident in his landscape painting, pervade his writing.

Not that this book tells the reader much about Vlamincq's contributions to art (although the excellent introduction from Mr Sutton does); nor will it suit those who are curious about his love life and his two marriages. Instead, with a happy disregard for chronology, Vlamincq tells stories of his childhood, his early careers as musician and racing cyclist, before he turned to being more than a Sunday painter, and in particular of his experiences as a conscript in the first world war, when he was drafted eventually into a munitions factory. They are stories in the best sense of the word. Taking the account up to the late 1920s, some of the choicest of the anecdotes—and there are many—relate to a visit to London.

But, of course, his passion for art runs through his story-telling. “I have always loved painting for itself, just as one can love a girl who has no dowry.” . . . “For art to be great, it must be serious. This is a rule, just as in love.” . . . “Painting: Painting is nothing more than a means of expressing yourself in an original manner, without cashing in on the heritage of artists since dead, without the need to resurrect Corot or to improve on Courbet, without talking of Poussin as though he were a close relative.” As he touches on his early friendship with Derain, his admiration for Van Gogh, his schooling with Cézanne, his aversion to Cubism, there are glimpses of the artistic world. This is an enjoyable book.

### OTHER BOOKS

ICELANDIC ART. Text by Kristján Eldjárn. Thames and Hudson. 14 pages and 70 plates. 42s.

No medieval buildings have been preserved in Iceland, no medieval murals remain. But, with excellent reproductions, this book illustrates the minor arts of Iceland, the ornamental arts of wood-carving, metal-working, manuscript illumination and embroidery.

EMERGENCE AND CONTENT OF MODERN ANALYSIS. By William Fellner. McGraw-Hill. 473 pages. 58s.

This synthesis of economic theory and the history of economic thought is an original way of presenting economics to the newcomer. It has some major advantages. Mr Fellner broadens the scope of the subject and at the same time successfully shows how analysis becomes adjusted to the changing problem of the times. The linking of the various “schools,” from those of Adam Smith to Keynes, is completely side-stepped in most textbooks, as is the crucial distinction between economics proper and the politics of economic policy.

But there is a price to pay. Anyone who wants to get at the core of economics as it stands today will have to do a lot of thumbing before he finds it here. Moreover the style is compressed and some of the exposition would certainly not be at all easy for the beginner to understand. It is more a second than a first year textbook. But Mr Fellner has rung a welcome change on the usual collection of curves and equations which passes for economic theory in many introductions to the subject.

## AIR CARGO SPECIALISTS\* PLAN NEW FREIGHT SERVICES WITH SWING-TAIL FORTY FOUR

In the light of current developments in Air Cargo, we challenge you to consider this statement: the time has come to make a searching reappraisal of air freight operations if they are being conducted with obsolete piston-powered passenger aircraft that have been converted for cargo use. We are convinced that these aircraft, although they may still represent a multi-million dollar book investment, should now be disposed of, notwithstanding current market prices, and replaced by the modern all-cargo Canadair Forty Four.

## ARE YOU READY

Inevitably, the disposal will result in a "profitable loss," because it can be shown that the Forty Four is the only all-cargo aircraft able to operate at a profit, either domestically or internationally, under the new low freight rates. In a short period of time, the losses incurred on the sale of the outmoded converted equipment will be recovered by the swing-tail Forty Four. Any General Dynamics or Canadair official would welcome the opportunity to discuss this in more detail.

# AMERICAN SURVEY

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

## Recovery Takes Shape

FROM A CORRESPONDENT  
IN NEW YORK

THE economists of the New Frontier are taking their second look at the national economy and having their second thoughts about its health, a re-examination that President Kennedy promised to conduct when he submitted his first proposals for ending the recession. Early in January, before the new Administration took office, one of its task forces called for a moderate amount of anti-recessionary spending—and easier credit—should the downturn prove to be mild and short-lived, and an across-the-board cut in income taxes should recovery fail to make itself felt by the spring. Once Mr Kennedy took over, his economic advisers pushed for the remedies needed to counter a mild decline while they talked as if they expected far worse. The reappraisal which they are now making has led them to change their tune or at least their tone. They admit that the recession is over, but they are thinking, apprehensively, in terms of a mild and sluggish recovery, rather than a vigorous new boom.

This view may prove over-cautious, for economic activity is expanding on practically every front and is rebounding sooner, and with more zest, than had been generally expected. The Federal Reserve Board's index of industrial production, which hit a peak of 110 last May and then declined to 102 in January and remained there in February and March, registered an impressive advance to 105 in April. This may be nothing more than the reflection of a temporary need to rebuild stocks. If this turns out to be the case, then there will be justification for the scepticism over the recovery expressed by the President's Council of Economic Advisers. The council has precedent on its side; historically, the sharpest recoveries have followed prolonged and deep declines, while mild recessions have normally and recently led to mild and gradual recoveries.

Yet a strong argument can now be made for expecting a speedy and ebullient revival in business activity, and not only in Wall Street, which has been at the head of those who believe that a new boom is in the making. The Federal Reserve authorities note that the improvement in output has continued into May, with contra-seasonal rises occurring in motors and in steel, and "wide-spread" gains in other durable goods. Indeed, there is a good chance that the liquidation of stocks, which was largely responsible for the decline in industrial production, has come to an end. Stocks were drawn down heavily in the first quarter, but there was a significant shift in the process; most of the fall was attributed to retail traders rather than to manufacturers, who had been cutting back for some time. Manufacturers now report that new orders are rising faster than shipments, which suggests that a lengthy period of restocking may be ahead.

A sharp recovery would not necessarily fly in the face of his-

torical precedent. For, while the late recession qualifies as one of the shortest and most moderate on record, it has had severe repercussions on some sections of the economy, particularly on steel and other cyclical industries. And these are the areas where the largest gains are now appearing. The same pattern is visible in construction, which fell in dollar volume in 1960 for the first time since the war. Now construction is climbing at a rapid pace, with the increases most marked in public works and commercial building; a revival in residential construction, which has been beset by slackening demand as well as bad weather, is also under way. Capital spending on new plant and equipment is still declining, but it rarely rebounds in the first stages of a recovery; a brisk upturn is predicted for the second half of the year, which would provide another stimulus to business.

These factors should carry the index of industrial production—and the gross national product—to new high ground fairly quickly, more quickly in fact than the Council of Economic Advisers—or many business economists—expect. Unquestionably, some of the credit is due to the Administration. It has gained the co-operation of the Federal Reserve authorities whose easy money policy is providing the funds for future expansion. And it has taken a number of steps, some of which required legislative approval, that have helped to promote the present recovery. Government spending, for example, has been pushed up substantially, with the result that the Budget, which was showing a surplus a year ago, is now running at a deficit. At the same time, spending by state and local authorities has increased, partly as a result of federal measures.

THE stage may thus be set for a strong advance on a broad front, although a sustained rise must await a resurgence of the consumer demand which was mainly responsible for the sharp recovery from previous recessions. So far consumers are not showing any of the enthusiasm that was so evident in either 1953-54 and 1957-58. Retail sales, for example, rose slightly in February and March, aided by an early Easter, but they remained below the level of a year ago, and in April sales declined once again. This disappointing course is certainly ammunition for the CEA's argument, but consumer demand may yet prove explosive. Personal income, which had been declining, moved up in March, partly because the government accelerated the payment of dividends on servicemen's life insurance, partly because wages increased. Hire purchase debt also increased in March after two months of net repayments. Indeed, consumers have increased their savings substantially. This indicates hesitancy, but it is also evidence that they are in a position to make new commitments.

But even if consumers run true to form, the Administration's economists do not feel that their spending will be sufficient to solve the problems of excessive unemployment and under-utilised productive capacity. In the short run this is certainly true, for industry can increase its output considerably without taking on many new people, simply by giving up short-time working. The Administration is therefore taking the line that new measures are needed to ensure a fast rate of economic growth and to reduce unemployment. The CEA can no longer propose "anti-recession" measures. But it is preparing a fresh series of recommendations designed to stimulate demand and reduce unemployment. (These

plans for more spending may have to be cut if the Administration decides that it must spend more on defence and on space programmes.) In addition, the CEA is still calling for lower interest rates as a means of encouraging borrowing by businessmen and by prospective home buyers. In effect, the council appears to assume that, as the patient has already demonstrated rather surprisingly great recuperative powers, a little extra dose of the same mixture may produce miracles.

Increasing the dose, however, may not do much good—and it might have some harmful after-effects. The idea of encouraging a drop in interest rates is not shared by all the Administration's officials. The Treasury, for example, has been in favour of maintaining the short-term rate above 2 per cent, partly because it does not want to encourage a renewed exodus of short-term capital. If the demand for credit begins to rise, as it should with the increase in economic activity, any further lowering of money rates might inject a massive, and potentially inflationary, dose of credit into the economy and might also provoke a new outflow of capital. By the same token, any additional funds voted for public works would have little effect at present, when the economy might derive some benefit from them; the real impact would come later, at a time when they might add to the pressure for higher wages and costs, and might produce a big deficit similar to the one that plagued the Eisenhower Administration in 1959.

When a recovery is in its early stages it is always difficult to spot the forces that will provide continued momentum. But recoveries, like recessions, tend to feed upon themselves, and too much tinkering—with the interest rate structure or programmes of public works—can be a mistake. Given the CEA's scepticism about the vigour of the recovery, it should have worked harder for reductions in income tax when it had the chance. But now that the recovery is underway the President's economic advisers might be wise to hold their hands until the times are economically—and politically—ripe for the acceptance of measures calculated to stimulate economic growth. At the moment the economy seems to be doing well enough without further help.

## Golden Opportunity

**P**LEASED as it is at the revival of confidence in the dollar the Administration is not throwing its cap in the air over the big improvement in the balance of payments in the first quarter of the year. Partly this is because it is unlikely to last, partly because Congress still has to act on several measures to reduce the international deficit and to equip the government to deal with any renewed run on the country's stock of gold. The will to tackle these measures might evaporate if members of Congress think that the problem is no longer urgent simply because gold is no longer flowing out of the United States.

Congress has finally passed a Bill to promote travel in the United States by foreigners, and this week the House voted to reduce the duty-free allowance on goods bought abroad by American tourists. On technical measures to make it more attractive for foreigners to hold their dollars in American securities and bank accounts, rather than turn them into gold, the Administration has had one success. The President has just signed a Bill exempting from federal tax the interest on Treasury securities held by foreign central banks. But the importance of this is only that it puts an end to uncertainty about the bureaucratic device by which such interest has been exempted from taxation in the past. A more important Bill, which would allow commercial banks to pay interest of more than 3 per cent on time (savings) deposits of foreign governments, by freeing these deposits from regulation, still lacks a sponsor in the House because few Democrats like to be associated with higher interest rates—especially for foreigners.

The aim of another Bill, on which hearings were expected to start in the House this week, is to permit the Administration to use the whole of the country's gold stock, if necessary, to settle international payments and thus defend the dollar. Under the Act creating the Federal Reserve System nearly forty years ago, a gold reserve must be maintained equal to 25 per cent of the deposits of the Federal

Reserve Banks and of the currency issued by those banks. This amounts at present to \$11 billion of the gold stock of \$17.4 billion. In fact the requirement can be suspended. To abolish it—as many monetary experts have urged—while gold was flowing out might have caused alarm, but the present moment provides a golden opportunity for reform. The Administration's spokesmen and even Mr Martin, the head of the central bank, are expected to support the measure although the Administration is anxious to have it look as though the initiative came from Congress. The arguments against it are that to require such a reserve limits any inflationary expansion of the supply of money and spurs the search for means of reducing the international deficit. But not all members of Congress are even this rational about gold; not long ago certain members of the House proposed that they should go in person to Fort Knox to weigh and count America's hoard.

## Minow and a Whale

**L**AST week Mr Newton Minow, once one of Mr Adlai Stevenson's bright young men and now the brave new chairman of the Federal Communications Commission, challenged the National Association of Broadcasters to swallow him up with a public speech as hard-hitting as any ever addressed by a government official to the representatives of an industry. Mr Minow accused the owners and operators of the country's television stations of wasting a great natural resource, the air waves which they are licensed to use "in the public interest" but which in fact they use merely to provide what they think interests the public. In Mr Minow's opinion, and that of many other observers, including the NAB's own president, the broadcasters are catering only to the people's whims, not to their needs, filling the television screens with violence, crime cowboys, family comedies, audience participation shows and commercials, and providing little or nothing for the minority of viewers who would like something better. Moreover Mr Minow, a critic of the system by which the popularity of programmes is rated, is not sure that these dissatisfied viewers really are a minority.

Mr Minow denies that he wants to interfere with the content of individual programmes, although the industry is of course accusing him of "censorship" and "dictatorship." But he intends that station licences shall no longer be renewed automatically by the FCC every three years. Broadcasters should be required to prove that they have fulfilled the promises, made when the original licences were granted, to provide diversified programmes and to devote time to local concerns and public service. The viewing audience in the station's area should be invited to say whether it is satisfied with what it is being offered. Whether the other six commissioners will go along with Mr Minow's drastic proposals remains to be seen and he has certainly made it less likely that Congress will approve

the President's plans for reorganising the FCC since these would give the chairman more power.

He believes that, if a licence to broadcast depends on good programming, broadcasters will compete to provide better programmes. To increase the competition he is expected to encourage pay television schemes, more educational television stations and more commercial stations using the ultra-high-frequency channels in which there is still plenty of room. This means that more sets able to receive UHF broadcasts must be manufactured and the FCC was already working on this before Mr Minow took over. But the broadcasters say, with relish, that he will be defeated by the economics of television. Good news and public service programmes cost much more to put on the air than westerns and "situation comedies" but their lack of popularity with audiences makes it difficult to find sponsors. Thus they bring little or no revenue to stations carrying them and the industry insists that it cannot afford them.

## Curb Curbed?

**T**HE Securities and Exchange Commission, the government agency that polices the stock market, announced this week that it is to conduct a thorough examination of the American Stock Exchange. Still known as the Curb, in memory of its early days when business was conducted in the street, the American Stock Exchange is second only to the "Big Board"—the New York Stock Exchange—among the country's thirteen security markets. It handles many of the glamorous growth shares and low-priced stocks which have led the recent feverish rise in the stock market and in the past year its volume of trading has risen from roughly a million shares a day to four million on some occasions. On one day last week its turnover was higher than that on the NYSE.

## NICE JOB OF WORK

Although the number of people out of work remained at a disturbingly high level in April, employment in non-farm jobs went up substantially more than usual in the month, to 52 million, an increase of 400,000, the first since last autumn. Particularly encouraging was the number of people employed on construction, which had risen more than expected for the second month in succession, and the absence of the usual spring decline in factory work. There were even gains in employment in durable goods industries, for the first time in over a year. Moreover, the time worked in factories went up again, to an average of 39.2 hours a week, making an increase of 30 minutes a week since the beginning of the year in this significant indicator.

## Wells for Wastes

FROM A CORRESPONDENT IN COLORADO

**A** UNIQUE well, more than two miles deep, which is being drilled in the prairie near Denver is a reminder of the enormous expense and trouble to which man may be put to dispose safely of his own multiplying waste products. This well is being supervised by the Army Engineers at the Rocky Mountain Arsenal where weapons for chemical warfare were made during the war; later pest-control products were manufactured there and both were chemical, not atomic, substances. Originally the waste materials were run into ponds on the prairie but the bottoms of these were porous and gradually the spreading wastes poisoned the subsoil moisture which supplied water for crops, animals and humans alike. People round about were driven from their homes and forced to bring water several miles by tank-truck for domestic uses. These poisons will go on spreading for years, until they are rendered harmless at last by time and dilution. But no one knows when that will be.

The Army sought to make amends by asphaltting its ponds and by providing water for scores of families. It also set itself to find a completely safe means of disposing of these wastes. What was needed was a porous stratum deep underground, through which such waste liquids could drain away safely, covered by impermeable rock to keep them from making their way up again. Geologists had to go down to 11,400 feet to find a safe depository. To drill a well so deep is an elaborate undertaking; the contract price is about \$265,000. It has to be cased in from top to bottom, and the casing has to be clothed with plastics to resist corrosion either from within or without. Moreover, works to treat the sludge before it is pumped down the well will cost another \$375,000. This has to be done with great care, because if the wastes should combine with chemical elements in the deep bed and "gel," nothing at all would drain away and the well would become useless.

This costly business may, however, help to solve the immense problem of disposing of all the new kinds of wastes now being produced, including atomic wastes. The Atomic Energy Commission has asked the Geological Survey to study better means of getting rid of the fearful by-products of atomic fission, such as strontium-90; a few grams of this could poison the whole country's water supply. Many other atomic by-products will be noxious for years, perhaps for centuries. At present such dangerous wastes are stored in concrete tanks. But Dr Roedder of the Geological Survey estimates that by the year 2,000 the world will have had to find a safe place for 16 million tons of such deadly stew.

He can think of only one such place—a porous formation several thousand feet down, covered over by an impervious stratum. This is

much the same solution as the one the Army has adopted. He suggests drilling deep wells a few feet apart in a great circle 1,600 feet across. Down these would be pumped some kind of liquid cement which would spread between them and harden, making a giant leak-proof silo. Then another ring of wells would be drilled just inside this and down these would be pumped the atomic wastes. These in turn would drive up a central well the original waters of the formation, like the "water-drive" which revives exhausted oil-wells. The porous formation at the bottom would hold all the atomic wastes the United States produces in two years. The cost is estimated at \$10 million which, Dr Roedder says, would make this far cheaper than other suggested means of disposing of atomic waste.

## Those Who Work in Glass Houses

NEW YORK

ALTHOUGH few of the thousands of New York's office workers who now spend their days in huge rectangular cases of steel and glass would want to return to their conventional old quarters, some of them take a layman's delight in the things that go wrong in these highly-planned new projects; several of the new buildings, for instance, proved a good deal less than water-tight when the first heavy rains came. And, while glass exteriors have certainly given these fabulous developments a light and almost transparent appearance from the street, many within find it vaguely disturbing to be on quite such intimate terms with the world outside. One man about to move into offices with wall-to-wall windows demanded a brass rail to steady his nerves as he gazed down several hundred feet to the street below. Thanks to New York's clean air, these large expanses of glass let in altogether too much daylight. Venetian blinds exclude the glare (and with it the view) but are less successful at intercepting the heat from the sun—which puts a considerable strain on air-conditioning equipment.

Climate in the new office buildings is wholly man-made but tastes in this matter vary widely, and some of the systems have proved altogether too inflexible. One hardy Briton with the control at his finger tips kept a roomful of typists in their overcoats until the technicians moved in to break this inter-dependence. In another building secretaries constantly complain that they get heat and air only if the boss leaves his door open. Sealed windows have a lot to be said in their favour: they are cheaper to install and easier to clean, they keep out the dirt and noise, and they make things simpler for heating and air-conditioning systems. But at the same time they remove a simple mechanism for adjusting temperature to individual whim and they also have the psychological effect of persuading many people that the air is "stale" when really it is not.

Ceilings are usually much lower than in older structures, partly because of the economic need to cram in as many offices

as possible and partly because of the space required by heating, lighting and ventilating systems. A very large proportion of those employed get the individual office that is believed to be their choice, but the almost universal complaint has been that while they can no longer see their colleagues they can certainly hear them. One remedy is to build a low-pitched hum into the air-conditioning system; another is to lay wall-to-wall carpeting.

In these new offices there is a quite unprecedented emphasis on interior decoration; nothing is merely functional. Union Carbide claims that its new headquarters is the most completely integrated office building in the world; even the stapler on each desk is designed in two tones to match the scheme of the particular room and the IBM computers wear the company colours. In such buildings floors, walls and curtains are nearly always in cool, neutral tones with colour only in small, strong doses—an orange occasional chair, a modern painting. And to offset the severity of so much glass and metal, potted plants have been imported in their thousands. For instance, there is what amounts to a small tree growing in the cafeteria of one of these glass houses, one wall of its dining room consists of an exotic hedge and in most of the offices

foliage of one sort and another is doing its best to make filing cabinets look alive.

There have been a few hair-raising stories of employees who have had to pile their books on the floor because the interior decorator would not allow a larger bookcase and of shelves and files at knee-level where they look nice rather than at a height where they can be reached. Elegant low white plastic desks may have special accommodation for typewriters but none for the knees, corners that cut and drawers (very few of them) that run back only nine inches. And Top Persons probably have no desks at all, but sit casually at round marble-topped tables without a single drawer.

To judge from its new office buildings the American corporation is today as concerned about its appearance as any fashionable woman. In some companies there is even a distinct feeling that the staff should live up to its surroundings; on moving into new quarters one firm asked its female employees not to wear jumpers or flat-heeled shoes. Today's business style is not exactly what J. P. Morgan would have ordered, but it performs the same function that oak panelling and large desks did in his time—adding prestige to executive officers and giving them points in corporate lifemanship.

But there is more to it than this. In the first place management now has no doubt that it pays to give employees attractive working conditions; several firms say that their labour turnover has dropped since they moved into glass offices. In the second place, in the new buildings, with floor areas approaching that of Waterloo station, large numbers (usually the majority of workers) must pass their days in the windowless interior and, with the current fashion for giving each individual a room to himself, shut up in a small box. It is for interior designers to create an impression of light and air to make this human beehive habitable; some of them have been remarkably successful—an achievement which is their main defence against the accusation that they have been heavy-handed in imposing professional taste and too much uniformity on the occupants.

## How Mitsui Builds World Trade

Since 1957, more than 12,000 tons of frozen tuna meat were shipped to the U.S. and France from these New Hebrides fishing facilities—the result of a joint venture between Mitsui and local industry.

**JOINT ENTERPRISE**—This New Hebrides fishing base is another example of how Mitsui joins with local industry to promote economic growth. As Japan's largest trading company, Mitsui knows that joint ventures can save local outlay of foreign exchange and speed industrial development throughout the world.

**DIVERSITY OF PRODUCTS**—All of Japan's quality products are available through this big trading company. It maintains close contact with hundreds of leading firms to give you quotations based on an intimate knowledge of the current market. In addition, Mitsui is a member of the Mitsui Group, and can call on the experience of 50 "Group" firms in virtually every field to expedite your imports.

**GLOBAL TRADING NETWORK**—Mitsui's 40 offices in Japan and 73 offices and affiliated companies in trading centers around the world can answer all your questions. Perhaps Mitsui can lower your cost of doing business with Japan.

the world trades with Japan through MITSUI

## Missiles in Slow Motion

WORKERS on the country's urgent \$3 billion programme to build bases for missiles have earned themselves a bad name for their frequent unofficial strikes, restrictive practices, low productivity and fat overtime—in American terms "feather-bedding." After holding eight days of hearings—at which it was brought out that nearly 170,000 man-days had been lost since 1956, half of them at Cape Canaveral—Senator McClellan, back at his old job of curbing labour abuses, is ready to propose a ban on strikes or other stoppages on defence programmes. At a time when the President is calling, however unspecifically, for sacrifices from all Americans, it would not be hard to work up a good deal of sympathy for such a law. Fortunately Mr Goldberg, the Secretary of Labour, is determined not to make the workers the scapegoat for all the delays which have bedevilled the missile and space programmes—delays for which the government, the military designers and the contractors all bear some responsibility.

"Careful You Don't Set The Whole Dormitory On Fire"

That there have been scandalous abuses no one denies. One electrician managed to earn \$648 a week through generous overtime and it is alleged that workers deliberately went slow to spin out the projects and collect premium pay. Last year, which was the worst, the number of man-days lost through strikes was eight times the average in industry generally. What

Senator McClellan's investigation failed to bring out, however, is that there has been a big improvement this year in spite of the fact that the missile programme is poised dangerously over the deepest fissure in the trade union movement. This divides the craft unions, particularly those in the building trades, and the industrial unions which take in workers in all the plants in an industry. Firms with contracts to build missile bases find that it is usually cheaper and more efficient to prefabricate many parts in their plants, which are organised by industrial unions, but the craft unions claim the right to do the work at the actual site and often to "assemble" parts which have already been assembled. Strikes flare up easily unless the contractor, for the sake of peace, pays craftsmen for work they have not done; often, under pressure from the military for results, he has given way—at the taxpayer's expense.

Mr Goldberg's aim is to set up a labour board to consider grievances; in return the unions would be expected to honour a no-strike commitment. It is not expected that this board would have powers of compulsion and individual workers might flout both the board and their union. But patriotism—and publicity—are powerful weapons; there has not been a strike at Cape Canaveral since the Senate hearings began.

## Green Light, Red Light

AFTER a grim first quarter in which many of them lost money the railways are, if anything, keener than ever about the mergers which many of them feel are necessary if excess capacity is to be squeezed out, if the industry is to flourish once more and if the public is to be provided with an efficient service. But there are contradictory signals along this line. The Supreme Court has

just helped by clearing away one obstacle—or at least a potential obstacle. It has ruled that when railways join forces and workers become redundant, the Transportation Act of 1940 does not require all of them to be kept on—as long as they are paid sufficient compensation. This has been the general understanding for the past twenty years, but two railway trade unions challenged it in the case of the merger of the Erie and Lackawanna railways. Compensation for employees discharged after a merger is already so adequate that it would be easy to exaggerate the monetary importance of the decision. The railways are bound for four years after a merger to find new jobs at the same pay for displaced workers or to pay the difference between the new and the old rate, even if the men take jobs in other industries. But if the union had won its case there would have been no incentive to look for other jobs.

This dim green light does not show up very brightly, however, among the red ones blinking up and down the line. There are fourteen applications for permission to merge before the Interstate Commerce Commission and a few months ago it seemed that many of them would be granted promptly. But the trade unions, which fear the loss of some 200,000 jobs if these industrial marriages are permitted, are being backed up by states and communities that have taken fright. All are putting pressure on Congress for a "freeze." The Department of Justice is also taking a sharper interest in the effect of railway mergers on competition. Most important of all, railways which fear that they may be badly hurt by the proposed mergers are now trying to block them.

The largest of these is the New York Central Railroad which tried and failed to be included in two proposed mergers; it is now petitioning the ICC to establish two "balanced" railway systems in the East, one built, naturally, around the Central, the other around its great rival, the Pennsylvania Railroad. The Department of Justice is supporting the Central's view that all the mergers proposed for railways in the East should be considered together. The Railroad Labour Executives Association would go further. It wants Congress to ask the ICC to draw up a master plan for mergers and to forbid any other consolidations. If mergers are to be used to rescue weak, inefficient or unneeded lines, the operation loses much of its point. Moreover, prosperous railways would comply only under compulsion. Yet in the public interest some of the weaker lines have a strong claim to survive.

## Father of TVA

THE actual centenary of the birth of George Norris comes in July, when a commemorative stamp will be issued, but Congress will be so busy then that a conference was held this week in Washington to honour the memory of a man who probably did more to shape modern America than any other Senator. In the forty years during which this plain-spoken, sometimes stubborn, idealist represented Nebraska in Washington he led the fight to break the iron grip of the Speaker on the House of Representatives; preserved, almost single-handed, the hydro-electric dam site at Muscle Shoals which became the heart of the Tennessee Valley Authority; sponsored the "lame duck" amendment to the Constitution under which power is handed over to the new President and Congress in January rather than in March; joined with Fiorello LaGuardia to curb the use of court injunctions against trade unions; and sponsored the Rural Electrification Act under which electric power has been brought to over 2 million farms. Originally Norris was selected by the Republicans to halt Nebraska's swing to the Populists, who were agrarian reformers. But he himself was too much of an independent and reformer to please his party for long. Even this week most of the people taking part in the observances—with the exception of Senator Aiken, a progressive Republican—were Democrats in sympathy with Norris's achievements in the field of public control of natural resources.

## THE WORLD OVERSEAS

### The Reluctant Conference

FROM OUR SPECIAL CORRESPONDENT IN GENEVA

**R**ELUCTANT beyond reasonable bounds, the "international conference for the settlement of the Laotian question" started on its discordant course on Tuesday evening. It was not merely four days after the appointed date; it was even one hour later than the time—5 o'clock—that had been officially announced, Prince Sihanouk of Cambodia having telephoned while motoring up from Nice to ask for a later start. He telephoned a second time to ask for a further half-hour, but in the event he was at the Palais des Nations at 6 pm, breathless but speech in hand, to take the chair at the opening session.

As the Cambodian leader rightly reminded his audience, it was he who first proposed the present conference, and the political wisdom that inspired this suggestion permeated his opening speech. To the general surprise the remedy he proposed for the Laotian patient was neutrality, not on the Cambodian model—which is voluntary and self-regulating—but on the Austrian model, which is defined by state treaty and internationally guaranteed. Lord Home also supported a controlled neutrality extending not only to imports of arms but even to the creation of an international body to administer all economic assistance to Laos.

It may fairly be commented that the experience of the various control commissions set up in Indochina after the 1954 Geneva conference discourages any thought that arms control is going to be easy in Laos, while the complexity of administering aid systems as different as, say, the Soviet and the American surely condemns the attempt in advance. The Americans, however, seem convinced that uncontrolled aid would be incompatible with Laotian independence and Lord Home, in advancing this principle, seemed to be agreeing with them. The Laotians, when their time comes to speak with a united voice, will doubtless argue that controlled aid would be incompatible with their sovereignty. This question alone seems likely to fill many debating hours.

Still on the opening day, Marshal Chen Yi, veteran of the Long March and Peking's foreign minister, attacked, as might have been expected, the United States and the "aggressive Seato block." His opening speech, however, was punctuated with moderate phrases that read, in contrast with the more extreme ones, almost like caresses. Mr Rusk, the American Secretary of State, replying on Wednesday, was all moderation and vastly more constructive than Chen Yi. Only mildly polemical, he proposed that any aid scheme for Laos should be administered by south-east Asian neutrals and invited the Soviet Union to join the United States in underwriting it. On Wednesday afternoon, Mr Gromyko in turn presented a carefully drafted agreement providing for the controlled demilitarisation of Laos under the supervision of the international control commission. Its weakness, as the British spokesman remarked later, is that it would subject all the commission's decisions of substance—but not of procedure—to the rule of unanimity and therefore to the communist veto.

Reluctance and discord will surely be remembered as the key-notes of Geneva, 1961. The manoeuvres and posturings of the

Lord Home and Mr Gromyko: co-chairmen co-existing.

four wasted days between Friday and Tuesday were, however, far from irrelevant, for they reflected—more faithfully than any formal speeches—the attitudes and relative strengths of those involved or interested in the Laotian conflict. As we have seen, Prince Sihanouk, who had been sulking in his tent, did at last turn up with his reluctant Cambodians. The reluctant Siamese and South Vietnamese—who share disbelief in the value of talking to communists—did not leave their respective countries in time for the delayed opening. The still more reluctant royal Laotians (those of Prince Boun Oum, reckoned by some to be more royal than those of the neutralist Prince Souvanna Phouma) turned up in relays, but refused to attend the opening session. This surprised observers who had supposed them to be puppets of the Americans, and a Chinese communist journalist remarked to your correspondent, with a coexistential leer, that the tail was now wagging the dog. This unkind remark was not entirely without substance. It is one thing to be a puppet and quite another to be seen to be one. The truth is that Laotians of all shades are tired of being pushed around and that Prince Boun Oum's Laotians in particular were incensed by what they regarded as the cavalier treatment accorded them by their American protectors. They particularly resented a remark by Mr Harriman, President Kennedy's envoy-at-large and permanent head of the American delegation at this conference. When the King of Laos told Prince Sihanouk two weeks ago that he considered the very idea of an international conference on Laos to be illegal, Mr Harriman, who was in Vientiane, publicly commented that the king spoke only for himself, thereby offending all Laotians from the pro-western right to the neutralist left.

When Prince Boun Oum's delegation reached Geneva late on Saturday and learned that the Americans were weakening in their resolve to keep the communist-led Pathet Lao delegation out of the conference, it was in a mood to dig its heels in. This was indeed all that the right-wing Laotians could do to delay consideration of their fate by non-Laotians and protest against the affront to their legitimacy inherent in the presence of rival Laotian delegations. Digging their heels in was likewise all the Americans could do, but whereas the Laotians could save their faces only by holding out, the Americans could not hold out for long without incurring the odium of delaying a conference which the communists were only too eager to start.

The situation that developed was farcical and damaging to western prestige. The message of the British and Soviet co-chairmen of the 1954 conference—the progenitor of the present

one—inviting the other twelve participants to Geneva did not specify which government was to represent Laos. Not unexpectedly, each co-chairman invited the one his government recognised, the Russians sponsoring the Souvanna Phouma government and the British the Boun Oum one. What took the westerners by surprise was that the Russians also invited the Pathet Lao. Mr Rusk rightly objected that the Pathet Lao was a movement, not a government, and that it had no right to be present on an equal footing with either the Boun Oum or the Souvanna Phouma delegations. In law doubtless the Americans were right; in the context of Laotian realities the Russians were. Legitimate or not, the Pathet Lao represented a major factor in the Laotian equation and in Laos, as Prince Sihanouk remarked, “the Pathet Lao is everywhere, including the zones which it does not yet occupy.”

The Chinese spokesman seized the chance of accusing the Americans of sabotaging the conference while Lord Home and Mr Malcolm Macdonald (the permanent head of the British delegation) plied back and forth with patient good humour looking for a way out. Their task was not made easier by the absence of the “western” Laotians in the early stages or by their intransigence when they did turn up. In the end the agreed compromise was that each of the three Laotian groups could be invited to participate by any other participant. As we have seen, the Boun Oum delegates refused to sit in the presence of Laotian communists even when invited by the Americans. By Wednesday midday news from Laos suggested that the various factions were sinking their differences and forming a government of national unity; this made nonsense of the dissensions at Geneva.

In retrospect, however, the image that will symbolise most aptly the reluctant conference of 1961 does not concern Laos at all: it is the image of Mr Rusk and his team sitting alone at the conference table on the opening day for six minutes while the other delegations greeted Prince Sihanouk in the lobby. It was not reluctance to greet the prince that kept the Americans apart, but unwillingness to rub elbows with the Chinese communists. Those who watched this curious scene were reminded that things have changed dangerously little since the Chinese and Americans last met in a general conference seven years ago.

## Persia at the Edge

*A special correspondent in Teheran last week describes the background to the army and civil service purges now being carried out by the new government.*

FOREIGN contractors and foreign cabaret artistes are flying out of Persia. Both are leaving for the same reason. Persia's new prime minister, Dr Ali Amini, says the treasury has been looted and is now empty. At first it may seem as if the Persians are behaving in a way that proves that Mr Khrushchev was right when, in his talk last month with Mr Walter Lippmann, he said that Persia was tottering on the verge of anarchy and required no push from him. Like actors on cue, Persia's schoolteachers (led by an inspector of schools) launched a nation-wide strike, which led to the collapse of the government. Dr Amini took over only to announce that the country was virtually bankrupt.

But Mr Khrushchev may have pronounced his negative prognosis a fraction too soon. In Persia, one detects a feeling almost of gratitude to him. In a flash of loquacity, he revealed to Persians how close the cliff edge was. Many of them feel it is not so close that Persia cannot by an effort of national will draw back from it. People in Teheran are more cheerful than they were before the debacle. There is actually a new spirit of confidence, but this will not endure long unless the promised reforms are speedily carried out, not just talked about. People feel the crisis has at last cleared

the way for reforms. They also feel it is worth being told they are bankrupt, if the result is a leaner but fitter nation. They will not, however, tolerate feeble half-measures.

In 1955, Persia launched an ambitious, seven-year development plan. But after the Iraq revolution in 1958, it was decided to spend a lot more money on the army and the security forces, while, at the same time, continuing with the economic development programme. The army, and internal security, have been costing about £65 million a year—excluding the military hardware given by the Americans—and the plan has been costing about £50 million a year. Oil revenue, the government's main source of income, comes to about £100 million a year. Thus, much prudence would in any case have been needed to keep the accounts in order. But there has been inevitable mismanagement, helped by the fact that about one Persian civil servant in three is illiterate. And there has also been much corruption, which Dr Amini rightly calls “the curse of Persia.” Several of the security chiefs, when not busy terrorising the population, have been building themselves palaces and acquiring other real estate. The police in the cities and the petty officials in the provinces have not been far behind.

AN end to corruption, oppression, and foreign entanglement are likely to be the three chief slogans of the reformers. Dr Amini's determination to bring the guilty to book, and empty their pockets of ill-gotten gains, could easily end in an all-embracing witch-hunt. He would probably like to cut the military forces which now number 200,000 men. This would only partly be to save money; it would also be inspired by the fact that it is very hard indeed to find a Persian who has much use for the Central Treaty Organisation (Cento). If Dr Amini continues to support Cento, many Persians will feel confirmed in their belief that the new prime minister is the choice of Mr Dean Rusk rather than the Shah; Moscow has practically said so already.

Dr Amini was ambassador to Washington until 1957, when he lost his post because his name was linked with the unsuccessful coup of General Qarani. He is a wealthy landowner who has, however, long urged a break-up of large estates. He now promises to carry out this and other reforms, but his first act was to advise the Shah to dissolve the Majlis and the Senate without calling for new elections immediately. This does not please the National Front, a coalition of parties ranging from the centre to the extreme left which hope to win elections when and if these are honestly held. Dr Amini represents “moderate” political forces to the right of centre—excluding those whom the Shah's new security chief roundly calls the “bloody fools of the extreme right.” But the National Front clearly hopes to take over the reins from Dr Amini, whose supporters are not very well organised, whereas the National Front leans rather heavily on experienced left-wingers.

The Shah as usual is painfully torn between the two great political aversions of his life. He has always recoiled from the ruthless totalitarian methods of his late father, but is hardly less appalled by the prospect of democracy in Persia again degenerating into the excesses and follies that flourished in the heyday of Dr Mossadegh. Whether or not Dr Amini was picked as the politician best qualified to get further urgently needed funds out of Washington, the Shah no doubt welcomes the prospect of real reforms at last being carried out by a determined man.

Nevertheless, it is the National Front that both the Shah and Dr Amini will have to reckon with, for, while the front has proposed almost exactly the same sort of reforms as Dr Amini, it is ready and eager to be tested in elections, which the prime minister has said will not be held for at least six months. One consolation is that the National Front leaders do at last seem prepared to dissociate themselves publicly from the communist Tudeh party. This is something that either did not appear in Mr Khrushchev's crystal ball, or that he forbore to mention to Mr Lippmann.

## Mr Kennedy in Ottawa

FROM OUR OTTAWA CORRESPONDENT

FOR state visits and international goodwill missions one could hardly find a more attractive couple than President and Mrs John F. Kennedy, and they timed their first foreign visit to coincide with Ottawa's very best weather. The crowds which greeted the young President and his wife were large for Ottawa, but one of the disadvantages of having a capital city of only 300,000 people is that there just are not enough people to produce impressive crowds.

The ceremonial aspect of the visit was undoubtedly in Mr Kennedy's mind, as it was in Mr Diefenbaker's political thinking, when the President accepted Mr Diefenbaker's somewhat obtrusive, bid to get Canada at the top of the list for his attention. But Mr Kennedy characteristically made excellent use of the opportunity to influence Canadian thinking, both privately in his talks with Mr Diefenbaker and in his televised speech to the joint meeting of the Senate and House of Commons. Refreshingly, Canada's more parochial worries about its relations with the United States were almost entirely absent from both the public and the private talks. President Kennedy established his own perspective on Canada-United States relations from the beginning and stated it bluntly in his speech. “Whatever problems may exist or arise among us,” he said,

my associates and I will ever be ready to discuss them and take whatever steps we can to remove them. But I can assure you that these problems shrink in comparison with the great and awesome tasks that await us both as free and peace-loving nations.

Mr Kennedy also made it very clear what he wants Canada to do. In his long talk with Mr Diefenbaker on Wednesday he laid particular stress on his desire to bring Canada into the inter-American orbit. Without actually urging Canada to join the Organisation of American States, he told Parliament that all the OAS states would be “both heartened and strengthened by any increase in your hemispheric role.” Mr Diefenbaker replied in private to these solicitations, but an official briefing officer made it clear that his answer was sympathetic though indefinite. He said that Canadians were taking a greater interest in Latin America and the government was considering the best way of increasing its participation in inter-American affairs. Mr Howard Green, the minister of external affairs, had recently put it more frankly when he told a Commons committee that the government was waiting for the Canadian public to develop some interest before it proposed joining the OAS.

ADVANCE reports had announced that President Kennedy intended to urge Canada to give more economic and financial assistance to Latin America. This, as it turned out, telescoped two subjects into one. During the long talk with Mr Diefenbaker, attended by three officials from each side, he did urge greater assistance to the under-developed countries, but talk about foreign aid was mostly in the context of the Development Assistance Group. It was the total that he was concerned with rather than the direction of Canadian aid.

It would appear that outstanding and fundamental differences between Ottawa and Washington about Cuba were handled very gently on both sides. Events in Cuba were presented by President Kennedy as one major reason for his emphasis on Latin American affairs. American policy towards Cuba apparently was not discussed directly. That was almost precluded by the unfortunate hints dropped by Mr Green to American correspondents in Europe recently about Canada's readiness to “mediate” between Dr Castro and Mr Kennedy. These, not surprisingly, were quickly and very

definitely turned down by Washington. Mr Diefenbaker therefore merely took the chance to assure President Kennedy that Canada had no thought of trying to mediate between the two. Reluctantly the Canadian government has accepted the fact that the time for any such suggestion has passed.

The general discussion about Nato, south-east Asia and the need for larger defence forces did not get down to outstanding questions in Canadian defence policy. But when Mr Diefenbaker introduced President Kennedy at the joint session of parliament, he confirmed the trend of thought which has been apparent for several months—certainly since his United Nations speech last autumn. Mr Diefenbaker has switched his emphasis from independence to interdependence with the United States in opposing the threat of communism. Acute political observers are saying that whenever the next general election comes, Mr Diefenbaker will be fighting it as an outspoken anti-communist and a most faithful ally of the United States. If he does not put it so succinctly, his theme will be the one President Kennedy neatly stated in his speech: “Geography has made us neighbours. History has made us friends. Economics has made us partners. Necessity has made us allies.”

## No Outsiders at Rhoendorf

FROM OUR BONN CORRESPONDENT

FOREIGN ministers, state secretaries, ambassadors and other worthies “on the outside, trying to look in,” complain that they still have not been able to discover precisely what President de Gaulle and Dr Adenauer said to each other at Rambouillet on July 29th last year. Yet since hope springs eternal, even in the jaded diplomatic breast, the same people are making arrangements—recently timed to come into operation next Monday—for sniffing out the gist of this Saturday's exchange of views between the two self-contained, self-willed, and often exasperatingly uncommunicative statesmen. It seems increasingly likely that, if they succeed, they will be disappointed by the insipidity of most of it.

When President de Gaulle's visit to Bonn was first projected in February, it was expected to have considerable glamour and significance. It was then imagined that it would crown a meeting of the heads of government of the European Economic Community at which the foundations of a political confederation had just been laid. Two days were accordingly set aside for entertaining the French president; and much thought was given in Bonn and the surrounding countryside to such technical details as securing a long enough bed. But in Bonn on May 5th the foreign ministers of the EEC, largely at M. Couve de Murville's insistence, postponed the meeting of heads of government until an unspecified date in July. In the meantime President de Gaulle will be having a heart-to-heart with President Kennedy, and President Kennedy, it seems, with Mr Khrushchev. Obviously, the further ordering of European affairs must wait on the outcome of these momentous encounters.

The French president is now due to arrive at ten o'clock on Saturday and leave the same day. The planners are emphasising that it is not a state visit, as had been originally anticipated. It is to be a “working visit.” The ceremonial will be modest to austere, and the public will have little opportunity to see the president. He will not touch Bonn on his way from Wahn airport to Dr Adenauer's home above the village of Rhoendorf on the east bank of the Rhine. At Rhoendorf he will be alone with the Chancellor for the remainder of the morning and for luncheon. It is planned that he should then pay a visit to Schloss Ernich, the French ambassador's even more sequestered residence near Remagen. Later in the afternoon he will spend an hour or two at the chancellery in Bonn, where he and Dr Adenauer will impart to their foreign ministers, ambassadors,

and a sprinkling of senior diplomats such of their thoughts as they deem fitting. Early on Saturday evening it will be all over, and the outsiders' guessing game can begin.

As no irrevocable decisions are to be taken, the German participants will be interested mainly in determining whether recent events have strengthened the French president's misgivings about Nato, and his ideas about political collaboration within the EEC and the desirability, extent and price of British involvement. The British Government seems to be counting upon Dr Adenauer to represent its point of view reliably and to counsel patience. But no message has come from London on the eve of the talks to assure the Chancellor that a British decision to enter Europe is in the offing.

## The Thorez Succession

FROM OUR PARIS  
CORRESPONDENT

THE stage-managers of the French communist congress at Saint-Denis, last weekend, could not conceal the fact that the real drama was being played behind the scenes. Yet they put on quite a show in the soberly decorated hall where they staged the official proclamation of the heir-apparent. For the first time in his thirty years' reign M. Thorez, though present, did not deliver the official report. The task was entrusted to 56-year-old M. Waldeck Rochet. By Sunday this faithful, though rather dull, follower of M. Thorez was nominated assistant secretary-general, a new post designed to accommodate the official *dauphin*.

But the real drama took place on the eve of the congress during the lengthy secret session of the political commission. There two former ex-members of the party's politbureau refused categorically to recant publicly their heretical views. M. Marcel Servin, who as party secretary was responsible for organisation, and M. Laurent Casanova, who was in charge of the intellectuals, declined to pay this classic price for political survival. As a result, they and most of their allies were duly removed from the party's central committee and other responsible posts.

As usual, the views of the opposition have to be read between the lines of the indictment. The open attack against M. Servin and his colleagues was launched only last January, after the referendum on Algeria had revealed the weakness of the fascist fringe in France. The timing was clever, since the main charge against the group was that, by overestimating the threat of the extreme right-wing, it forgot that gaullism in power was the chief enemy. This alleged softness about gaullism has given rise to interesting speculation. Since M. Casanova received a Lenin prize only last year, it has been suggested that the opposition may have had some Russian backing. After all, hardly more than a year ago Mr Khrushchev was flirting with General de Gaulle and, apparently, hoping that the general's schemes would put a spanner in the Nato machine. It is not utterly absurd to surmise that some French communists thought, at the time, that they ought to revise their policy to bring it into line with the Russian attitude. The indictment, however, is full of contradictions. The opposition is accused at one and the same time of hesitation in the anti-gaullist struggle and of attempts to strike bargains with other left-wing groups with a view to organising activities that were obviously anti-gaullist.

What makes any assessment particularly difficult is the way in which most of the discussion centres round an analysis of the nature of the gaullist regime worded in pseudo-Marxist jargon.

Beneath the crude ideological quarrels, however, the controversy is really about the methods and tactics of the leadership. Indeed, the third of the chief heretics, M. Kriegel-Valrimont, has been openly accused of criticising the party line for the last five years. The date is significant, since it goes back to the famous 20th congress of the Soviet party. The secret indictment of Stalin that Mr Khrushchev then made must have shaken the French communist party, reputed to be the most stalinist in the western world. Two years later, although the French communists regularly collected a quarter of the popular vote, they proved utterly unable to offer any real resistance to the gaullist *coup*. After such setbacks, men like M. Servin, who were in charge of the party machine, may well have concluded that it needed a thorough overhaul.

But any condemnation of the past and any attempt to change the existing structure would obviously be blows against the man who for over thirty years has had control of the party machine. The counter-offensive which M. Thorez was bound to mount has now been successfully concluded. It did, however, meet with resistance. The opposition had sympathisers, and not only among the students, economists and other intellectuals linked with M. Casanova. M. Servin for his part was, apparently, liked by many of his subordinates in the party apparatus. Yet although all this support proved of no avail, M. Thorez was forced to call a congress and most of the heretics refused to recant.

The opposition has been dealt with, but the question of the party line remains. The communist leaders watch the gaullist regime with a mixture of fear and hope. They fear that the general will use his vast powers to damage the communist party and its trade unions. They hope that the absence of political life and of any other effective opposition will benefit them when the gaullist tide finally recedes. Last month's abortive *coup* gave some idea of what rewards they might hope for. The communist-dominated CGT now finds it easier to stage strikes in co-operation with other unions. The party is reported to have improved its position among the young, particularly in the armed forces. Even the recruiting of new members has looked up. These favourable after-effects of last month's events are unlikely to last, but they increase communist hopes for the future.

Thus the evolution of the French communist party is intimately linked with that of the regime. The immediate question is whether M. Thorez will try to exclude his defeated opponents from the party. If they are allowed to stay in, the party will for the first time have alternative leaders within its ranks. This would be useful, should the French communists prove unable to emerge from their isolation without a radical break with their stalinist past. This is certainly not M. Thorez's view; he seems convinced that no change is necessary and that the anti-gaullist wave will send the communist ship on its way to new successes. Although only 61, he has a long political past behind him; he is, moreover, troubled with ill-health. In M. Waldeck Rochet he has chosen a successor who could take over the helm without changing course.

## Between Kenyatta and Macleod

FROM A SPECIAL CORRESPONDENT LATELY IN KENYA

Those who accept citizenship of Kenya will have equal rights and

## CAN BRITISH CARS TAKE IT?

## Can British cars take it in America in 1961?

### ASK PRESSED STEEL

Can our cars face the new challenge over there? Can they compare for ride, comfort and solidity with the new American compacts at American speeds on turnpikes and motorways? We can answer for the British cars we know, because we make their bodies.

These cars are tried in almost Le Mans conditions at the MIRA testing ground in England, and under extreme conditions abroad. They're flogged day after day on high-speed banking capable of being lapped at

150 mph. They're checked for high-speed stability in Europe's only true car wind-tunnel. They're tested against corrosion, heat and cold. They're braked viciously; driven through dust tunnels to check their sealing; turned in ever-decreasing circles for roll and steering tests.

We say British cars can face any kind of challenge in America in 1961. Because they give a good ride, because they're good value. And because they last.

PRESSED STEEL COMPANY LIMITED, Car Body Division: Cowley, Oxford; Swindon, Wilts; Theale, Berks.

Prompt to the minute, millions of words on miles of paper bring the news and the angles on the news to the world's breakfast table every day. Helping the press to hold the mirror up to life are I.C.I. chemicals—caustic soda for making paper, bleaches to whiten it, pigments to tint or colour it, quick-drying solvents for all kinds of ink, acids for etching the printing blocks. And now a whole versatile new family of I.C.I. products—the polyurethanes—is beginning to figure in the rush to print the news. In the form of inking rollers for high-speed presses, they run faster and wear longer than anything known before. As flexible foams, they ensure a soft landing for the ½-ton reels of newsprint as they roll off the lorries—even give an extra touch of resilience to the editorial chair. With scientific advances like this, I.C.I. is providing new angles on many old problems.

## LIFE HAS MANY ANGLES

IMPERIAL CHEMICAL INDUSTRIES LTD., LONDON, S.W.1

equal protection for all spheres. Therefore, no one should have any fear as long as he does not want to hold on to old privileges. The Kikuyu leader went on to say that he had never advocated eviction from the White Highlands; that a lot of land lying idle should be taken over and given to landless Africans, but that those European farms that were being properly run were quite safe. Europeans would retain their land titles. Evidently the Kenya settlers still feel themselves caught between the upper and nether millstones, Kenyatta and Macleod; and it is indeed hard to piece together what Mr Macleod is really thinking about their fate.

In a short adjournment debate on Kenya before Easter, Mr Hugh Fraser, Mr Macleod's ministerial lieutenant, reiterated the Government's 1960 policy for the White Highlands. This may be summarised as no compensation, no racialism and no bad farming.

A compensation scheme would emphasise the racial ownership of land, whereas our whole policy is that land should be regarded primarily in economic terms and as an economic asset.

If there were a comprehensive compensation scheme, said Mr Fraser, the Europeans would probably get out as soon as the scheme started. That would be a bad thing.

It would leave behind unmanageable agricultural deserts and would, while making it impossible for the more intrepid European to farm on, destroy for ever the conception of a society in which each individual, whatever his race, can develop his skills and talents to the full.

The British Government, it appears, has no intention of disbursing the £100 to £130-odd million which, on a 1959 valuation, all the white farms might have fetched. It hopes for permanent white farming by the "intrepid"; and is determined to avoid an organised withdrawal of skill and capital.

UNFORTUNATELY, the Government is in as bad a fix as the European farmers whose fate it controls. Having shrunk in 1955 from implementing the recommendations of the royal commission that land reservations should be abandoned, it now suavely supposes in 1961 that its land proposals will, to quote another of its documents, "once and for all draw the emotional sting of the land problem." The essence of the new proposals is that the Land Settlement and Development Board, which is not yet fully operational, should settle Africans in certain areas of the ex-White Highlands on undeveloped land of high potential. The White Highlands cover some 7,250,000 acres; so far the new board has bought 5,000 acres. The idea is to settle two classes of Africans: "yeomen farmers" on holdings of 250 acres—they must have a net cash income of £250 a year—and "peasants," on holdings of 50 acres, whose net cash income has to be £100 a year. (The Kenyan *per capita* income is £12 a year.) In addition the Government welcomes private schemes whereby the European farmer sells a part, say a fifth, of his farm; the African yeoman is then settled on it and receives advice and training from his European neighbour. The last scheme's contribution to interracial harmony is obvious.

In Nairobi the new proposals are described as the extension of the Swynnerton Plan into the European area. In the last eight years, at a cost of between £8 million and £9 million, Mr Swynnerton and his staff have vastly improved the productivity of the African land of high potential, notably in the Nyeri, Kiambu and Fort Hall districts. Their work has been in a sense perfectionist. By means of compulsion and close supervision the agricultural officers have ensured that a limited number of smallholders should be prosperous. Resources have not been wasted and failures have been few. Those who have tackled the agriculture of the Black Highlands make no secret of the fact that the money about to be spent on settlement in the former European reserve could be better spent in the African area; for instance, to grow much more tea.

The new scheme commands a total of £5,090,000 from British Government sources. In addition, the World Bank has offered £3,000,000, which, by the terms of the loan, is presumably for

development only, not settlement. Mr Bruce Mackenzie (minister of agriculture until recently, now succeeded by Mr Michael Blundell) is also looking to the west German government to replenish Kenya's Land Bank; and there has been vague talk of an international consortium which might produce a further £10 million. As things are, there is probably a total of about £8 million to be spent during the next three years. To those who ask for longer-term financing and a speedier settlement, the British Government has hitherto replied that it cannot commit funds beyond the term of this Parliament; and that it has not enough agricultural officers to move faster. Mr Mackenzie has already been looking, with what success it is not clear, for staff in Britain, Switzerland and Denmark.

The new funds are fairly large and will be expertly spent. But the belief that they will "draw the emotional sting from the land problem" seems to come straight from looking-glass land. To take over, as the present scheme intends, 180,000 acres for African settlement in two and a half years is merely to scratch the surface of the African land problem. This speed would doubtless have suited the nineteen-forties; but can so small a scheme be seriously envisaged in the new political context? Land hunger in Kenya is such that any elected politician must press for speedy settlement. The unemployment curve adds increasing impetus to the demand for land. It will be very easy for Mr Kenyatta and the Kenya African National Union to decry the government's land policy. Mr Kenyatta has not yet even praised the Swynnerton plan.

It is certain that no new land policy in contemporary Kenya can work unless it has political punch. Despite Mr Kenyatta's disparaging remarks at Maralal, the Swynnerton plan is thoroughly popular at least with the 140,000 Africans who have been settled under it with titles to their holdings. To the landless, a promise of further extensive settlement from the mouths of African politicians actually in office should have at least some effect. As to the Europeans, the meetings of settlers during recent weeks have shown how complete their lack of confidence in London is. The main trouble seems to be that Mr Macleod has not yet chosen to estimate either of two things: the number of "intrepid" European farmers who will stay in Kenya under the best conceivable African government; and the number of possible European farmers that such a government could find acceptable. Some rough guesses on these and other related quantities could lead to a rough decision by Mr Macleod concerning the number of acres he might wisely buy in Kenya now. After the Lancaster House conference, Mr Peter Marrian, then president of the National Farmers' Union, urged the Government to raise a stabilisation and resettlement fund of £25 million. This might not suffice to support Mr Ngala now. But it would at least give him a sporting chance in the battle which he (and the Governor) will soon be waging against Kanu on a wide front. Perhaps Mr Hugh Fraser will re-examine these issues during his forthcoming visit to Kenya.

## Siam and Seato

FROM A CORRESPONDENT IN BANGKOK

THE South-East Asia Treaty Organisation came into being after a great defeat for the West by the communists—the fall of Dien Biên Phu. Seven years later, Seato has to choose between intervening in Laos under unfavourable military conditions and in a hostile climate of world opinion, or acquiescing in the establishment of a government with substantial communist participation. For Siam, the only Seato member country adjacent to Laos, the decision is of crucial importance.

Foreign policy is not usually a major consideration for the military oligarchy which rules Siam. Alone among the south-east Asian nations, the Siamese were never colonised and they are far from regarding themselves as members of the Afro-Asian block.

Laos, however, is of immediate concern. The people of Laos are a branch of the Thai race, sharing the same religion and virtually the same language. The Siamese strong man, Marshal Sarit, comes from the Lao-speaking north-east and is in fact a cousin of General Phoumi, his counterpart in the Boun Oum government in Laos. The north-eastern provinces of Siam have always been politically sensitive, both because they are economically backward and because they have a history of separatism.

The Siamese naturally feel grave apprehension at the prospect of an unfriendly, or even neutralist, regime across the Mekong river. They regard the Lao as members of the same family, but with themselves very much in the "big brother" role. Many of them have a half-conscious feeling that if the French had not come to Indochina the Lao principalities might, like those of northern Siam, have come under the rule of Bangkok. Furthermore, substantial Siamese investments, have been made in Laos and these are clearly threatened.

From the very beginning of the crisis in Laos the Siamese have been advocating a forward policy. They discounted the theory that Seato intervention would automatically provoke a reaction from the Vietminh and the Chinese communists. Originally they felt certain that they had the Americans on their side and blamed the French and British for what they called prevarication. They undoubtedly provided moral and material support to the Phoumi-Boun Oum group in ousting the Souvanna Phouma government from Vientiane. Although there are no organised Siamese military units fighting in Laos, a considerable number of technicians and pilots are helping the royal forces.

It is now clear that the Kennedy Administration is reluctant to take military action in Laos. It remains to be seen whether the Siamese will accept assurances that a change of government in Laos in no way weakens the determination of Seato to protect them. If the energetic Russian ambassador, who operates with the help of an attractive female interpreter, had his way, Siam would revert to its traditional policy of sitting on the fence.

Marshal Sarit has always felt that it was somehow unfair that neutralist countries like India and Cambodia should receive American aid on almost the same scale as pro-western Siam. In a more politically sophisticated way, the Siamese foreign minister, Nai Thanat Khoman, was apparently very conscious, when he was at the United Nations early this year, of the fact that Siam was regarded by many merely as an American puppet. A display of independence in foreign policy might, it is felt, lead to greater international respect for Siam without causing the Americans to reduce their economic assistance.

Without losing faith in Seato the Siamese have been conscious of the fact that the divergence of interest between the member states is very great. The French, quite apart from the fact that Souvanna Phouma has always been their protégé in Laos, are firmly resolved not to be involved in any more wars of attrition in Indochina. The British, while regarding the Anglo-American alliance as so important that they will almost certainly commit a token force if the Americans do take military action in Laos, would prefer a neutralist government in Laos to a long struggle with the Pathet Lao. The other Seato nations are relatively distant from Laos and would certainly not commit forces on the scale that would be expected of the Siamese.

Assuming that Seato does not take military action in Laos, the Siamese will probably come to rely more on a unilateral agreement with the Americans than on the machinery of Seato. At the same time, although remaining pro-western, they may try, by a few judicious gestures, to persuade the Russians to use their influence against subversion or infiltration. This would, of course, be almost meaningless if the direction of communist policy in south-east Asia should gradually pass from Russian to Chinese hands. But this is a development that the Siamese have not even begun to take into account.

## Australia's Three Defence Pillars

FROM OUR CANBERRA CORRESPONDENT

IN the last few weeks, while Laos has seemed to be slipping bit by bit behind the iron curtain as the powers conferred and exchanged notes, an important part of Australia's policy has been in hazard too. Australian defence rests on three pillars: first, on a military understanding with Britain and New Zealand; secondly, on an alliance with the United States; and thirdly, on collective security against communism in south-east Asia. If the third of these pillars, the South-East Asia Treaty Organisation, were to collapse through failing at the first test to implement its undertakings, Australia would feel that the roof could quite easily fall in.

Australia's dependence on concerted action with its allies is dictated by economy. It has no nuclear weapons; it does not have what military men call an independent capability even for purposes of a limited war. It spends only 3.5 per cent of its gross national product on defence, compared with Britain's seven per cent and America's eleven per cent; and its justification for this relative parsimony is that with limited resources the best contribution to allied defence in this area is to build up its population and industrial strength. This argument is valid only for a limited war, since both Australia's population and its industrial strength are concentrated in the great coastal cities that would be perfect targets for a submarine's nuclear missiles. But then it is only for a limited war that Australia is geared—although it would give its allies what help it could in a global struggle.

The oldest ally is, of course, Britain, to whom Australia with blind faith once looked for its protection. The mood of disillusionment that set in on a day in 1942 when Singapore fell like a ninepin has lasted to this day, and it is now on the United States that Australia fixes its hopes. In co-operation with Britain and New Zealand, however, it maintains the Commonwealth strategic reserve in Malaya, contributing to it a battalion group, three squadrons of aircraft and two or three ships. This reserve, which went there originally to deal with communist terrorists and was allowed, indeed encouraged, to stay on, finds Malaya a good training ground for the type of war that it might have to fight. There is nothing to prevent the reserve from being withdrawn in order to fight in Laos or anywhere else, but Tengku Abdul Rahman says that his country must not be used as a base for operations elsewhere. His successor might not allow the reserve to remain at all, so the foothold in south-east Asia is rather precarious.

MORE solid from the Australian point of view is Anzus—the treaty between Australia, New Zealand and the United States. When it was signed in 1952 the menace in mind was Japan, which under the peace treaty was to be allowed to rearm. Today the only direct threat seems to come from China, and Anzus is the ultimate guarantee against it. Such a possibility, however, is over the horizon and in the short run Australia is more likely to have to send aid—albeit token aid—for America than *vice versa*, for the treaty covers attacks on American shipping and bases.

Anzus is the ultimate security, or so Australia hopes. But in the meantime only Seato seems to stand between Australia and the march of communism towards its northern shores. Only Seato tries to cover the modern techniques of infiltration and subversion by which all current advances are made. There was a time not long ago when Australia was as anxious as Britain and France that the Seato powers should not get involved in the jungle until all hopes of a political solution were exhausted. But now Australia has reason to be more anxious than Britain and France lest the cease-fire should be ineffective and Seato, acting too late or not at all, be revealed to the world as a crumpled paper tiger.

## ANYWHERE IN THE WORLD YOU'LL FIND THE PRODUCTS OF YALE & TOWNE

TURIN, Italy—High stacking in extremely narrow aisles by Yale Warehousemen increases storage capacity in this plastics factory which supplies components for Fiat and Lancia automobiles. Not only do these compact manoeuvrable Yale Warehousemen save warehouse

space but time and money too. Yale industrial lift trucks, in capacity ranges from 1,000 to 200,000 pounds, assure you of fast, efficient, dependable movement of goods. Ask your Yale representative how Yale trucks can help reduce your handling costs.

• Yale makes the world's most complete range of petrol, LP-gas, electric, diesel and hand lift trucks.

• All Yale industrial lift trucks are uniformly high in quality, wherever they are manufactured.

• All Yale materials handling equipment is available in the currencies of the free world.

• For further information contact your Yale sales and service representative, located in principal cities of the world.

STOCKHOLM, Sweden—Yale's pneumatic-tyre petrol truck at the Scania Vabis plant quickly loads truck cabs on this unique over-the-road carrier. Yale lift trucks keep up with fast shipping schedules—help move goods to market to meet delivery dates.

*World's fastest naval vessel—a 96-ft “fast patrol boat” speeds at over 50 knots . . .*

## **...AND BRISTOL SIDDELEY SUPPLY THE POWER**

One of the largest manufacturers of motive power units in the world, Bristol Siddeley Engines Limited produce the Marine Proteus.

Adapted from the outstandingly successful Proteus aero-engine which powers the Britannia airliner, the Marine Proteus has been chosen by the Royal Navy for the “Brave” class fast patrol boats. These boats have been developed by the British Admiralty in conjunction with Vosper Limited, the builders. Three Proteus give a

total of 10,500 hp—propel these boats at over 50 knots. Other orders for the Marine Proteus have been received from the USA, Germany and Sweden.

The Marine Proteus is quick-starting, flexible, reliable and holds large reserves of power for acceleration. It is also very compact, easy to maintain and in its latest form gives 4,250 shp for a weight of 2,900 lb.

## HOME REPORT

HOME REPORT is a new section of the paper, in which members of the editorial staff and local correspondents report on life and happenings in and around Britain.

## Labour's Recovery

FOR once all the indicators point the same way. From the polls, the by-elections and the county council contests, it looked as if the Labour party was on the way to recovery. Now the boroughs confirm this impression. The popular press is still talking of a continuing swing to the Right. But in fact the pendulum is returning moderately to the Left, or at least to a midway position. The best measure of what is happening, as our table shows, is that in the borough elections last week Labour won 1,339 seats; this was 208 more seats than it won in May of 1960 and 20 more than in May of 1955. In last month's county elections Labour also did slightly better than in 1955. As the Conservatives held twenty fewer seats in the 1955 House of Commons (elected just after the local elections) than in the present one, a general election now might enable Labour to recapture 25 or 30 parliamentary seats.

## LABOUR SEATS

|                           | 1955  | 1956  | 1957  | 1958  | 1959  | 1960  | 1961  |
|---------------------------|-------|-------|-------|-------|-------|-------|-------|
| County Councillors .....  | 1,028 | ...   | ...   | 1,289 | ...   | ...   | 1,070 |
| Borough Councillors ..... | 1,319 | 1,563 | 1,600 | 1,600 | 1,348 | 1,131 | 1,339 |

This would still leave a Conservative government in power. The Tories can also justly point out that Labour is still doing very slightly worse than it did in May of 1959 (five months before the last general election), and very much worse (to the extent of 261 borough seats) than in its peak years of 1957 and 1958. The councillors returning this year were elected in 1958; that is why the papers have been able to proclaim 225 net Labour losses in the boroughs (the difference between this figure and our figure of 261 is explained by changes in by-elections since 1958 and by different treatment of new seats) as well as 200 net Labour losses in the urban districts.

The other reason why "Labour losses" were in the headlines last week is that 1961 is an aldermanic year. Every three years half the aldermen are re-elected or replaced; an unusually large number of boroughs is therefore liable to a change of political control. As 1956, 1957 and 1958 were all good years for Labour, the Socialists were able to consolidate their gains at the last aldermanic elections in 1958, and captured a record number of towns then. In each of the last three years they have lost seats, and 1961 brings the reckoning; among the cities which will fall to the Conservatives are Liverpool, Nottingham, Leicester, and Bradford. Yet these changes are the belated consequences of last year's defeat—not of this year's stalemate. No doubt the Popkess affair dominated the 1960 election in Nottingham, when Labour won only two seats out of seventeen. But this time nine Labour councillors were returned. At Bristol, where last year the "Citizens' Party" (i.e., Tories) took all but 6 of the 28 seats and won control of the council, they returned a minority of this year's crop of councillors.

Last year's figure of 1,131 municipal seats was not quite rock-bottom for Labour since the war (in 1947 and 1951 it held only 800). But for normal purposes the 470 borough seats between the 1960 trough and the 1958 peak can be taken as marginal; it will be seen that Labour this year recovered about 45 per cent of them. It seems to have done best in southern and south-western England and the West Riding of Yorkshire (where the county council, normally marginal, stayed in Labour hands in April). In these areas Labour recaptured more than two-thirds of the

marginal municipal seats. But the proportion drops to half in the north-east and Midlands, to a third in Lancashire, and to a quarter in Wales. Labour's worst failures were in Middlesex and Essex and on Merseyside; again, the pattern of the county elections was reproduced in the boroughs.

Looked at from another angle, the situation becomes less favourable to the Conservatives. For Labour's failures were heavily concentrated in the party's own strongholds; there, fewer than 20 per cent of the marginal seats were regained. In Tory towns, Labour did better, picking up half the marginal seats. But Labour's best performance came just where it could be most useful: in the marginal boroughs. These, which include seventy of the four hundred boroughs, have 150 of the 470 marginal municipal seats. Labour won 90 of them.

The reason for the recovery is quite simple. In 1960, almost everywhere, a large number of Labour voters stayed at home. In 1961 most (though rarely all) of these defectors came back. Meanwhile the Conservative vote remained relatively stable. For instance, in Birmingham the Tories polled 130,000 in 1959, 124,000 in 1960 and 125,000 this year. The Labour vote in Birmingham was 128,000 in 1959, only 87,000 in 1960 (when a third of Labour's voters failed to turn out) and back to 113,000 this year.

THE Independents without Tory support held their own, with 70 gains and 73 losses in the boroughs, 95 gains and 96 losses in the urban districts. The Communists did fractionally better than last year, though their vote remained derisory. But the success of the Liberals on the municipal scene, with 200 borough and 150 urban district councillors, has naturally caused something of a sensation. In two years they have doubled their municipal representation. How far does this seem to be a portent?

The most striking Liberal advances were made south of the Thames, where they increased their strength in the boroughs from 15 in 1959 and 24 last year to 57 in 1961. In particular, they had some remarkable victories in the Conservative-minded resorts and spas, doubling their 1960 representation there at the expense of both the big parties. Most of their gains were from Labour in the north and from the Tories in the south; but in those southern towns where the Labour party did exceptionally badly this year the Liberals were often responsible for Labour's defeat (e.g., in Poole, Cheltenham and West Ham). Over the whole country nearly half the Liberal net gains were from Labour.

These are substantial achievements, but they should not be exaggerated. The Liberals have been reaping a harvest in places where they were unrepresented until two years ago; from these newly penetrated towns come a third of their members. Next year the first of these councillors will come up for re-election, and we shall have an opportunity to assess the solidity of their hold. In the meantime, something can be gleaned by looking at the boroughs where the habit of voting Liberal was already established before 1959, and from which two-thirds of the Liberal councillors still come. The party's strength increased in 20 of these 49 towns, stayed the same in 18, and fell in 11; the net gain was only from 117 seats to 134. The Liberals' successes are a reward for hard organising work by a devoted band of followers and a heartening sign of upsurge for them. But a second election, like a second novel, is sometimes a stiffer test than the first.

## Birmingham's Dead-Heat

FROM A CORRESPONDENT IN BIRMINGHAM

THE Conservatives' failure to win an absolute majority in the municipal elections in Birmingham has produced a party whip's nightmare. By winning two seats the Conservatives brought their tally of councillors up to 57—exactly the same as the Labour group. Thus the control of the council depends on the aldermanic elections next Thursday, when the lord mayor will also be elected.

After a meeting between the two party leaders on Thursday of this week, it emerged that an exquisitely British compromise had been reached. Labour agreed to give the Tory nominee for lord mayor, Alderman Eric Mole, his due. But in return it insisted that the new lord mayor should not exercise his casting vote against Labour in the subsequent aldermanic elections.

Under a 30-year-old agreement between the Birmingham parties one alderman is

elected for every three councillors, which meant that the Conservatives had a claim on the two Labour aldermanic seats which were due for re-election, along with all 16 Conservative aldermen and the lone Independent (a Tory supporter).

The Tories, flushed with the success of gaining more votes throughout the city than Labour did (a further 706 votes, strategically placed, would have won them four more seats outright and saved all this trouble) had stoutly demanded equality in aldermen. Labour equally firmly dug its heels in and refused to cede control.

LABOUR could have decided to use its existing majority to make its own nomination for the lord mayoralty, and vote its candidate in. Theoretically it could then have used the majority thus gained to throw the Conservative aldermen off the

## Tories on Stage

FROM OUR SPECIAL CORRESPONDENT

NOTTINGHAM is a town of the Midlands which are, as Belloc sang, sodden and unkind. Not even a borough council as convinced of its divinity as Nottingham's has been can do much about the weather: but, if promises are to be believed, the city's new Tory masters will be something less unkind than the Socialists to whom it has been in thrall for many years. For Labour has lost Nottingham not in a swing from the national party but in repugnance at its members' on a council which had (to quote the local *Guardian Journal*) "abused its power," perpetrated "a shameful and arrogant misgovernment" and become "so far obsessed with power that it forgot from whence it was derived."

A demonstration of this was the Popkess affair. In 1959 three Socialist councillors spent some time in east Germany: the circumstances of their going out and their coming in were not, in the eyes of politically less tolerant councillors, entirely blessed. At the same time allegations of financial interest in council decisions were aired, and representations were made to Captain Popkess, then chief constable, to investigate the supposed irregularities. Captain Popkess chose to hand the matter over to Scotland Yard, which duly inquired and reported. The Watch Committee, in an access of affronted self-righteousness, demanded the report. It was, said Captain Popkess, none of their business; and he declined to give it up. He was suspended from his duties.

The outcry was swift and strident: delegations passed back and forth between London and Nottingham; the Home Secretary,

Athelstan Popkess: for rehabilitation

in a notably chilly directive, ordered Captain Popkess's reinstatement, which was reluctantly accomplished. No apology was ever made to him—indeed, the order was canvassed as an example of Tory swinishness.

Perhaps as a result of these shenanigans, Labour was less successful than before at last year's elections, and found itself in parity with the Conservatives. Council decisions were taken, therefore, on the lord mayor's casting vote—and one of these decisions was the implementation of Labour's plan for a civic theatre.

When the city's gas undertaking was nationalised, £250,000 passed to the council, to be used "for the improvement of the borough and the public benefit of the inhabitants." In 1956 it was decided that these terms might best be met by the building of a theatre, to cost the estimated sum of £150,000, rapidly rising to £170,000. By January, 1958, it was £200,000, whereupon the Conservatives began to worry,

council entirely. The likely political repercussions have, however, dissuaded Labour from this course.

Instead, the party has decided to retain the two aldermanic seats due for re-election and give itself a governing majority of four. As part of this arrangement the Tories have been offered certain of the less important committee chairmanships—welfare, children, rating and valuation, establishment and libraries—while Labour keeps the policy and the trading committees, such as housing management, finance, transport, catering, airport, and general purposes. Since these committees control those aspects of the local Labour party's policy which the Tories have most violently attacked—mounting capital debts, exhaustion of reserves, indiscriminate housing subsidy, increasing municipalisation, and the direct building and civic catering departments—the Tories will need wide throats to swallow their pride.

But if the Tories had not compromised a year of sterile controversy would have followed, bringing local government into disrepute. Next year, too, Labour will be in a much stronger defensive position at the polls than it was this time.

mainly about whether a charge on the rates would be involved.

No amount of argument swayed the Labour group, however, and the theatre was duly designed and at once condemned as wasteful and grandiose by the Conservatives. By June, 1959, the estimate had gone up to £300,000, and the Conservatives promised to suspend the scheme when they came to power. By June last year the price was higher, £400,000, and demolition and compensation had begun on the lord mayor's casting vote. When tenders were called for early this year, the lowest was for £358,000, exclusive of architects' fees and money already paid out.

INTO this ocean the Theatre Trust dropped £60,000 and, over the dead bodies of the Tories, the contract was signed, shortly before it became clear that the cost would be £386,000. The Conservatives repeated their promise to suspend the operation. Work began, somewhat sadly, at the end of March. Six weeks later, the Tories now control Nottingham's destinies.

Diligent questioning has so far failed to produce a guide to their policies on either Captain Popkess (now in retirement) or the theatre. It has been affirmed that Captain Popkess's reputation will be rehabilitated, and it is as well that it should be. But an embarrassed silence is maintained on the theatre: it has been pointed out that suspension will cost at least £100,000 in fees and penalties; and a leaked plan to finance continued building from private and Government sources has done nothing to resolve the dilemma. Either £100,000 totally lost or a charge on the rates would be lethal in the hands of Socialists (and an electorate) with short memories.

## Building New Slums?

Flats at Harlow

FROM A CORRESPONDENT

Good building land around Britain's cities and big towns is becoming increasingly scarce and valuable. As the competition for it has grown, so has the pressure for higher densities of development. This policy of tightening up living space has the blessing of the Government and the applause of architects who like "urbanity." A view has grown up that the new towns in particular waste space, but the facts hardly bear out this contention.

The pattern of densities is indicated in the diagram:—

Naturally, the density of development decreases from the larger towns to the smaller rural settlements, and the same sort of decrease, even more marked, is also apparent for housing alone.

The modest place held by the new towns in the hierarchy is very evident. Far from lying at the extreme of openness, they are actually found to be planning for an overall density which is almost identical with that of large and medium settlements of over 10,000 population—mainly municipal boroughs and large urban districts. The county boroughs are much more tightly built-up, but small settlements, and especially those in the south and east of England, show a much looser density of development of a kind which is normally attributed to the new towns themselves.

It is the same with housing. The London

new towns are aiming at a provision of land for their residential areas which is similar to that for large settlements: it works out at an average of just under an acre for every 30 persons. Broadly speaking, this is the level of density which, on the basis of the famous Tudor Walters recommendations after the first world war, was then considered to be a reasonable, but certainly not over-generous, standard of living space for health, privacy, and general well-being. And this, it should be remembered, was in a largely non-motorised age. Although the county boroughs, with an average density of over 50 persons to the acre, are again considerably below this standard, small settlements, from such incomplete information as is available, rise well above it. So much, then, for the idea that "prairie planning" is rampant in the new towns.

Government policy since the publication of "The Density of Residential Areas" in 1952 has been towards a tightening of housing standards to upwards of 60 or 70 persons per net acre. In other words, the general objective seems to be the attainment in new

Hemel Hempstead: Prairie Planning?

THE ECONOMIST MAY 20, 1961

development of something considerably above the present average density to be found even in the county boroughs, with their high proportion of overcrowded northern industrial towns. It almost looks like an attempt to put the clock back towards the nineteenth century.

Fortunately, this is not altogether true, for an analysis of development plans submitted for approval to the Ministry of Housing and Local Government shows that in all categories of settlement a lowering of density is envisaged. This applies to both housing and to the overall urban area, and suggests that the planners on the spot do not find many places where any general tightening up is either desirable or possible.

Even so, the suggested loosening out of many large towns represents only a very meagre improvement when taken as a whole. At present it may be inevitable that a certain proportion of accommodation at 136, or even 200, persons per acre must be accepted in London and other major cities, but this is no good reason for the increasing tendency to regard this as a matter of pride rather than an unpalatable necessity. Even the Town Planning Institute, at a recent meeting, was inclined to agree that proposals for residential development at 100 persons per acre were "something of the right order." This helps to give a measure of how much backsliding in space standards there has been since the 1930s when about half this density was considered a minimum requirement for housing.

IRONICALLY enough, an important and, indeed, ominous example of high densities is provided by the most recent new town—Cumbernauld in Scotland. It is hoped to achieve there an average residential density of about 85 persons per acre, not by building "high," but by the use of terraces and low flats. This is a greater average density for housing than Middlesbrough has with its acres upon acres of "by-law" dwellings dating from the last century.

It can be argued with some justification that, because of limited space, Britain cannot reasonably hope to emulate in all new development the more liberal standards which are being adopted, with rising standards of living, in the United States and several Commonwealth countries. But Britain is certainly not so short of land that low housing standards should be necessary for any section of the community, particularly when the acres of underused agricultural land are remembered. There is quite enough room available, provided it is sensibly allocated on a regional basis, to allow every family that requires it a moderately spacious house-plot without detriment to agriculture or the countryside in general. The English new towns have shown that it is possible to build both compactly and to reasonable standards. It is at least their space standards rather than those of the last century that we must now adopt, or surpass, if we do not want the housing of today to be the slums of tomorrow.

## Less Profit from Plastics?

BRITAIN'S plastics industry has got into the habit of alternating one year of dizzy growth with another of more modest progress; so the present check to its sales has not affected its expectations of long-term growth. But it does recognise that the cuts in prices that have been forced upon it by the fierce price competition in the American plastics industry are unlikely to be reversed, and may well go further; for a time at least, the fat profit margins that used to make this industry so attractive an investment will be just a happy memory. In their more philosophical moments, some people in the industry say that the present state of affairs reflects the fact that it has now grown up. Plastics are no longer high-priced novelties but common industrial materials, the prices of which are much determined by international supply and demand as those of other commodities. And lower prices mean wider markets in the long run, as plastics become more competitive in price with metals and fibres.

The British industry feels vulnerable to foreign competition; it is protected by an import duty of only 10 per cent, and last year it exported 30 per cent of its output. The nature of plastics production and the state of the American industry combine to make this a threat to the world price level in times of recession. Capital charges form a high proportion of the total costs: the break-even point is said to be often as high as 75 per cent of capacity. The cost of marginal output is low, and the pressure on a producer is therefore strong to sell it at a lower price than the rest of his output, in different markets ("dump" is the ruder name for this), in order to spread overheads. Markets that depend entirely on imports have regularly been getting their plastics cheapest; and whenever surplus capacity appears, they and any other potential export markets are offered plastics at even lower prices. Surplus capacity appeared on the grand scale among the producers of most plastic materials in the United States in the recession of the past year. From this stem many of the present troubles of the British and European plastics producers, and it is on a revival of demand in the United States as much as anything that they depend for a recovery in their own profits.

Over-capacity has been endemic in the American plastics industry for several years past. American prices of low-density polythene, polyvinyl chloride and polystyrene have been cut and the cuts have been followed by cuts in prices of polythene and polystyrene in Britain. The price of pvc has not had to be cut in Britain because it was lower than the American price before the recession started—and demand has remained high. But the pressure of over-capacity

in America last year was so great that prices there fell by more than 25 per cent, roughly to the British level. The recovery that is now beginning in the United States should lessen the pressure to dump on American producers, though they will still have over-capacity and so remain tough competitors in export markets.

WHAT are the prospects of the British industry this year? Home demand has risen from the winter level, now that the motor industry is getting back into top gear, though it seems that there has been little increase in sales to the appliance and television set makers. The high level of retail sales means continued buoyancy in the sales of packaging materials and clothes, while industrial uses, such as cables and plant, should rise too. The building boom will continue, and the sales of floor coverings should improve. But exports, though they have gained from the slackening of home demand, are unlikely to rise much more in face of foreign competition.

How will the different plastics fare in this situation? Low-density polythene, for so long the golden boy of the industry, seems likely to be hit hardest. Sales to export markets were nearly as high as those at home last year, making it especially vulnerable to American competition: by the last quarter fallings exports had reduced sales to below the previous year's level. For the year, sales amounted to only 70 per cent of capacity—though a good deal more was made and put into stocks, which had been low at the beginning of the year but were excessive by its end. This year capacity will rise by about 7 per cent, with an increase of about 20 per cent due in 1962-3: delays in completing the Shell plant at Stanlow have saved the industry from serious over-capacity this year. Sales should benefit from the rising demand for wrapping material, while domestic uses will extend into larger items than the sink bowls with which most homes must now be equipped—dustbins and coal bins, for example. But it seems unlikely that total sales will rise by as much as 10 per cent, which would mean production at under 80 per cent of capacity during the year—a level which would make the profits of the manufacturers pretty small. Longer-term prospects depend on new uses like the polythene sack; if the price falls from its present 1s. 10d. a lb to 1s. 6d., as ICI seems prepared to let it, such new uses would become more probable.

Polyvinyl chloride seems to have a much brighter immediate future than polythene, though in the industry's last recession,

in 1958, it was the plastic for which prospects looked blackest. Now British makers are planning to increase capacity by about 60 per cent over the next two years. Last year demand exceeded capacity, and even in the worst of the motor industry's recession—large amounts of pvc go into car upholstery—there was little sign of slack in the industry. A completely new market is appearing in the building industry, which is only just beginning to realise that pvc can replace much wood and iron at little extra cost to the builder, and the saving of his painting bills to the buyer. With the high temperature-resisting Geon pvc developed by Goodrich in the United States, all the hot water pipes of a house can be made of the plastic too. The building boom is one factor accounting for the activity of the cable industry, which has by now largely replaced rubber insulation with pvc; and more pvc is going inside houses as floorings or wall covers. The sales of pvc clothing seem to be remaining high. And plastic-coated steel provides a new market for pvc. So future prospects seem bright even for pvc, even if there is little sign that the increased capacity for it will be fully employed immediately it becomes ready.

Polystyrene, the third of the "old" thermoplastics, has never enjoyed such dramatic growth rates as polythene and pvc. As the plastic most dependent on the appliance and radio industries, which take about 40 per cent of British production, its sales were immediately affected by the hire purchase restrictions last summer. But by exploiting other uses, and by turning to the export markets that had been neglected while home demand had been so importunate, manufacturers were able as a whole to prevent sales falling, though these amounted to only about 80 per cent of capacity. Its latest reduction in prices should help expand the market for polystyrene in competition with other plastics, as in packaging; but it is unlikely to make much difference to demand from the appliance makers. These have already gone about as far as they can in using polystyrene for refrigerators and though television set makers are beginning to make whole cabinets of polystyrene, this market is unlikely to take all that it might this year, with heavy stocks. Sales this year are therefore unlikely to be significantly higher than they were last year; and as stocks are now high, output will have to match them, which would mean operations at little over 80 per cent of capacity. At this level production should still provide some profit; polystyrene is made on a rather smaller scale than other plastics, and costs rise less steeply as output falls.

The older thermosetting materials have continued to enjoy a modest prosperity. Though they have lost ground in relation to the thermoplastics, the building and car booms have kept up demand for moulding powders, while the rising output of chipboard has meant more demand for thermosetting resins. New but smaller markets such as that for polyester resins, used in glass fibre mouldings, have more interest to the big companies; Distillers has put much effort into entering this market in the last six months. Conversely, it has stopped production of cellulose acetate, one of the oldest of thermoplastics, where the market is small and not likely to grow.

It is the new plastics on which the industry must depend for most of its future growth; the full consequences of the catalytic polymerisation methods discovered some seven

years ago by Dr Ziegler and scientists in American companies are only beginning to be felt, with high-density polythene and polypropylene beginning to find their uses. Output of these two materials is expected to rise fast, as shown by ICI's decision to double the capacity of its polypropylene plant by 1963. But the probability that further new plastics, with qualities that make them even stronger competitors with metal than these two are, makes the industry even more optimistic about its long-term prospects.

Polypropylene itself seems likely to become one of the major plastic materials. It is more rigid, harder and stands higher temperatures than polythene—even of the high-density variety, which comes between ordinary polythene and polypropylene in these qualities. It can be used for mouldings where polythene is unsuitable, and it should not cost more in large-scale production; it can replace metal castings or sheet in certain car parts, and may even prove suitable for body panels. But fibres seem likely to prove one of the biggest applications; ICI expects that they will account for a third of sales, at least until outdoor uses begin. Polypropylene fibres will come between nylon and cotton in price, and their characteristics in staple form will not be inferior to nylon for clothes, if a suitable dye can be discovered. Carpets, blankets, ropes and nets are all possible uses besides clothes. ICI has an exclusive licence from Montecatini for fibres under 0.2 of a millimetre in diameter, which covers all those suitable for clothes.

High-density polythene is unlikely to have as big a market as polypropylene, but Distillers and Shell expect that it will find uses to suit its characteristics; it can be mixed with low-density polythene which polypropylene cannot, which may give it one advantage in sales. The polycarbonates and polyformaldehyde, two more plastics that are strong enough to replace metal, are expensive; their uses are therefore limited to small parts, where they can compete with die-casting.

Foamed materials are a quite different type of plastic that is beginning to find a mass market, as cushioning in their soft forms and as an insulating or stiffening material in their rigid forms. Polystyrene makes much the cheapest foam, and is used for insulation; it can also be made into a paper-like material that can compete with waxed paper or cardboard. Phenol-formaldehyde is second cheapest, and fire-resistant, like polymethane it can be foamed in situ. The latter is used mainly for cushioning.

In the long run, therefore, the plastics industry seems to have as good reasons as ever for optimism about the future volume of its sales. But the chances of a return to higher profit margins as new materials reach really large volume production are slight. They can only do so by taking markets away from metals, and other natural materials. To do so necessitates low prices—and may well call forth retaliatory measures from the threatened producers. The aggressive marketing policy of ICI, which is of necessity followed by other companies, in itself makes for lower margins but higher volume; so does the common reaction to increasing competition: "build a bigger plant to cut our costs." But plastics offer a clear example of Royal Dutch/Shell's observation this year that petrochemicals are at present offering only about half the rate of profit that major oil companies can secure in a world oil surplus; and if there should be any serious check to general prosperity, this industry would be more likely than most to get into trouble.

## Small Man's Airline

BY OUR CORRESPONDENT RECENTLY IN THE BACKWOODS

At this time of year, depending on the lateness of the spring, the ice breaks on the Canadian lakes and flocks of little aircraft are hauled up on to the shore to have their skis replaced by floats ready for the summer flying. These are the bush aircraft, a mongrel pack that includes biplanes, wartime torpedo bombers, patched veterans and spanking new aircraft; they are a breed as far removed from the prissy executive aircraft as a husky from a freshly shampooed poodle. These bush aircraft and the bush operators who own and fly them provide the sole means of transport across huge tracts of Canada where there is neither road nor railway.

There is, however, water, sometimes more water than land. And wherever there is a lake, there is also a natural airfield. Other men hack landing strips from jungles or deserts, but the Canadian bush pilot picks the nearest likely patch of water and settles on it like a gull. Even the fiendish Canadian winter makes certain that for six months of the year the ice is thick and strong enough for an aircraft to take off and land with skis. But for two months of the year it is not. This is the dead period during the spring and autumn when the ice is breaking or reforming on different lakes at different speeds. Then a company's fleet will be grounded for three to six weeks at a time, while customers call hopefully at the ticket office and the treasurer bites his nails wondering how ten months' earnings are going to cover twelve months' expenses.

This "dead time" is the biggest hurdle to making bush flying pay. The other hurdle is the uncertainty of traffic. In many ways, the bush operator has an easy life. With lakes in plenty all over the northern part of Canada, he can fly his customers pretty well anywhere they want to go. There are no landing fields to maintain, no air traffic control, no expensive navigation aids to carry, no hanger rents or landing fees. All that he needs is an airworthy machine and a pilot, usually himself, with that special quality known as "bush sense." The chief ingredients seem to be an uncanny sense of direction, fair mechanical competence and the ability when necessary to live off the land at temperatures of minus 50°C.

Successful businesses have been founded in this way with a capital of as little as 50 shillings, but it is generally easier to get into the business than to stay there. The difficulty is to get a steady, year-round flow of work. Plenty of foresters, trappers, government surveyors, prospectors, geologists, mining engineers, tourists, and drilling teams want to be flown in and out of the bush; there are the sick to be flown to hospital, and forest fires to be fought from the air—although the bush airlines look on this as a tiresome chore. Mobile radios, which allow men in the bush to call up the airline when they want to be fetched, or their groceries delivered, have put operations on an efficient 24-hour basis; but the fact remains that the aircraft can only fly during daylight, of which there is little enough in winter, and can only fly when they are needed. The rest of the time they sit like so many idle taxis on a rank. In some territories where the bush is dense and

the going on foot exceedingly rough, government surveyors mapping the huge areas still white on the map prefer to work in winter, when the snow makes it easier to move across the country. This gives some airlines a better spread of work between winter and summer. But in others, the surveyors work only during the summer, in spite of the flies, and flying tends to get bunched into a few months, with a peak during the hectic 10-day moose-shooting season in the autumn when hunters from all parts of North America queue to be ferried into the bush.

After the government, with its foresters, its surveyors and its medical services, the mining companies are probably the bush airlines' most dependable customers. But the amount of business they generate is directly linked to the state of the world metal markets and to a lesser extent, to fur markets. Northern Canada is rich in minerals, and when prices are high, exploration goes with a swing and so does the business of flying in geologists, prospectors, engineers and drilling rigs. When prices drop, so does the amount of exploration and the bush airlines' business.

Even under the best conditions, this business is short-lived, for if exploration is successful, and a mine opened, operations immediately become too big for the bush airlines—for the biggest aircraft that can fly from a lake carries little more than a ton. Airstrips are built to take larger civil transports, roads and ultimately railways have to be cut to carry away concentrates. One of the secrets of successful bush operation is to stay one jump north of the railways.

There are only two conditions under which bush flying can be run as a profitable business. One is to get reasonable use out of the aircraft, and the other is to charge rates high enough to give a proper commercial return on capital employed. One of the most consistently profitable bush operators, Fecteau Transport Aérien, was established 21 years ago with \$7, and now has a capital of \$1.2 million, of which nearly \$800,000 represents the company's 19 aircraft, written down at the rate of 30 per cent a year. Fecteau records profits of 34 per cent before depreciation, ploughs back almost the whole of this into the company and leaves a net profit after meeting all charges of \$85,000. There are two explanations for these solid results. The first is that the company got during the year in question (1959) an average of 750 hours flying out of each of its aircraft (a normal commercial airline aims at, but does not always achieve, 3,000 hours). This is less than the 1,000 hours that Fecteau achieved at the height of the mining boom, and may be higher than the company averaged for 1960. But other bush airlines getting less than 500 hours out of their aircraft lost money. The second reason for the profit was high rates. Taking the de Havilland Beaver, with its  $\frac{1}{2}$ -ton payload, as the standard bush aircraft (this is

the aircraft shown in the two sketches), then Fecteau's charge is roughly 4s. 8d. a mile (bush aircraft are hired, like taxis, by the hour or the mile). This rate is 10 to 15 per cent higher than that charged by most other airlines around Northern Quebec, where Fecteau operates, and is as much as 35 per cent higher than those of the airlines on the other side of Hudson's Bay. It follows that many other bush airlines earn enough to cover only their day-to-day expenses with nothing for overheads.

This has serious consequences when, as at present, the government removes the element of protection that bush airlines used to enjoy, namely, a ban on any new bush airline within 25 miles of an established base. Now anyone with a patched-up flying jalopy can get a licence; and the fact that many of these shoe-string airlines go out of business within a season does not prevent them from skimming the cream off the market in the meantime and pushing established airlines into the red. This is particularly serious in areas further south, where bush airlines draw a good deal of their custom from tourists on a hunting or fishing holiday. These are much more sensitive to a price difference of a few cents a mile than the big mining and fur trading companies would be. The latter place more store by service and reliability: much of Fecteau's commercial success is said to be due to intense specialisation and the wooing of these big customers with, among other things, new and well-maintained aircraft, mainly de Havilland Beavers and Otters bought at upwards of £18,000 each. But this policy does not necessarily work in other regions.

Very big customers can sometimes be as fickle as small ones, and when a bush airline has expanded its fleet to handle a big customer's traffic the loss of a contract can be disastrous. The Canadian government has had to face a major headache of this sort over the contracts to supply the American Dew Line radar stations in the far North, contracts that called for bush-type operations on an unprecedented scale. These contracts have just been withdrawn from the two Canadian airlines that had held them from the outset of Dew Line operations and given instead to a third, understandably jubilant, airline. In the welter of recrimination and counter-recrimination it is difficult to judge whether the switch was politically engineered, as some people say it was, or was the result of re-costing by the American services who were footing the bill. But there is no doubt that the change has caused a great deal of bad feeling and led many people to wonder whether there is any real future left in bush flying.

THE answer depends on what future one believes exists for the Canadian north and its untapped mineral riches. The bush airlines played a key part in opening up the Canadian backwoods in the 1930s; some people believe that they will do the same again for the Canadian north in the 1960s. But they are operating against considerable difficulties. The oldest airline in Canada belongs to Tom Wheeler, whose experience of bush flying goes back forty years and who enjoys a very special prestige as a result. Wheeler Airlines held one of the original Dew Line contracts but sold out—at the time unwillingly—to another, larger company which has since lost the business. Wheeler now concentrates exclusively on bush operations and holds a much-coveted contract to spray the forests of Eastern Canada against budworm (for which it uses as many as 200 biplanes and converted torpedo bombers

recruited from all parts of the United States). Yet this airline, with a highly experienced management, a capital of more than \$1 million and no debts, made a loss last year of nearly \$64,000. Some of this was due to the difficulty of reorganising after the sale of the non-bush flying part of the company's business, but the company is budgeting this year for little more than a token profit of \$14,000, and all of this has to be earned during the four summer months.

One difficulty which faces airlines like Wheeler's, which operate far into the North, is that they must lay in caches of fuel at all their northern depots, and the fuel can only be delivered by sea once a year when Hudson's Bay is open to shipping, so that needs have to be worked out 12 months ahead. Petrol that costs 2s. 2d. a gallon under ordinary conditions will have cost the company nearer 9s. a gallon by the time it has been carried by sea and air to the northern bases, and the price can reach 22s. a gallon. With several thousand gallons in each cache, and the 45-gallon drums themselves costing more than £4 apiece, a bush airline has to make a very considerable capital outlay in fuel at the start of each flying season—in Wheeler's case, amounting to \$1 million. By long tradition, anyone in need could help himself to these caches and replace or repay when he could. But traditions are changing and the growing theft of fuel is causing the airlines some concern.

Tom Wheeler has probably done as much as anyone to widen the market for the bush airlines by developing a tourist business, based mainly on hunting and fishing and backed up by his own and his family's hotels and hunting lodges. But the number of tourists who can afford to hire an aircraft is limited. Even a 200-mile flight into the bush, involving two double journeys, is beyond most pockets and some of the best sport is 600 miles from base. Wheeler airlines needs 600 hours flying a year out of its aircraft to be sure of a profit. Last year it did not get 500, and there must have been many other bush airlines in the same position. This puts the Canadian government in an awkward spot, because large areas of Canada do still depend on these airlines for their only means of transport. They are not going to thank the government if they have to go back to dog sleds and canoes because the bush airlines have gone out of business. And the airlines, with one or two exceptions, say flatly that the government's new policy of unlimited entry is driving them out of business. This is causing the government to have second thoughts, for it would cost a great deal to provide permanent landing strips, or lay even the standard Canadian dirt road into areas now served by the bush fliers. And this would still leave unsolved the problem of the scattered Indian trappers whose welfare weighs so heavily on the North American conscience. A sharp reversal of the present policy of unlimited competition is therefore not only likely, it is likely very soon.

## BUSINESS NOTES

### OVERSEAS TRADE

#### Nearing Balance?

BRITAIN'S landed imports fell sharply in April, and on the seasonally adjusted basis the fall was the third in succession. Exports again showed little change, continuing at about the same level as a year before though a little higher than in later quarters of 1960. The upshot was that the crude trade gap, between exports and re-exports valued fob and imports valued cif, was reduced to no more than £24 million on the actual figures and £36 million seasonally adjusted. Since the cif valuation for imports and other distortions swell the gap by about £40 million a month, this implies that the balance of merchandise trade, as valued in the payments figures, was again on the right side in April. This was probably a freak result, though the size of the special influences have been exaggerated.

There was, once again, a London dock strike to reckon with. The strike began on April 22nd but affected a substantial proportion of the labour force only on the last two days of the month—which may in practice be reflected only in this month's returns. However, since imports in April fell by the unexpectedly large amount of £20 million, even after allowing for normal seasonal fluctuations, the Board of Trade statisticians cautiously assume that there may have been some effect from the strike, though probably only of a few million pounds. Exports, at the same time, were swollen by deliveries of two ships worth £12 million together; without these, exports would have fallen a shade. Making rough allowance for these influences, the crude trade gap may have been something over £50 million. This would still indicate a visible trade deficit, but it compares with

a gap of over £70 million a month in 1960. The fall in imports, as has been pointed out, is unlikely to go very much further, but it is a natural and indeed belated adjustment to the stockpiling of 1960; there is nothing artificial about it. But the continued sluggishness of exports is disappointing. As the dock strike ended on May 4th its effects should be mainly worked out in the May figures, but some export shipments that just missed their sailings may have been delayed until later months.

### THE EXCHANGES

#### Sterling Under Pressure

EQUITY prices on the London stock exchange received a stimulus from the April trade figures, but not sterling. The rate against the dollar has been drifting down steadily in the past week, and on Wednesday it touched \$2.7930. This is close to the low point in the feverish speculation that followed Germany's revaluation at the beginning of March. It was at this point that the Bank of England launched its massive counter attack, flinging in dollars from the reserves and driving the rate back towards the parity of \$2.80. Since that initial week of bear selling, the withdrawal of foreign funds has been on a far smaller scale. But it has continued. The unwinding of the bear position against the dollar and of the bull position in sterling is still in process. Treasury bills and other short term assets held in London were not always sold immediately but are withdrawn as they mature. This unwinding process could be over by June: the question then will be whether the normal seasonal pressures against sterling are super-imposed, or whether they are found to have been displaced by the previous bear sales, as they might be if confidence turned.

This week there have been some sales in front of the long Whitsun weekend. But London exchange dealers find the situation puzzling. The volume of selling has not been heavy. New York is believed to be long of sterling and trying to arrange forward dollar swaps. The same is true for Switzerland. But while the Bundesbank talks about the end of the German surplus and the possibility of a deficit, the German market has been going short of sterling; and a good deal of selling has also originated in London. The Bank of England has evidently not seen fit to counter this trend

by holding the rate. It has apparently limited its support, and by letting the rate fall has sensibly brought new uncertainties for the bears. The amount of exchange that has been lost through its supporting operations is veiled by the special accumulations of sterling balances by Continental central banks. This expedient has not entirely removed foreign fears about sterling, especially as it has coincided with the depressing official revisions of Britain's payments balance, but it has checked the speculative spiral, and that is a considerable achievement.

The market's attention this week also focused on the South African rand after the South African Reserve Bank announced that it would no longer grant forward cover for stock exchange transactions or imports of consumer goods. London dealers in Kaffirs and other South African securities have been taking advantage of such cover in the past few months, as they normally sell securities in Johannesburg for payment after a fortnight or more. The foreign exchange market has not felt inclined to create any market in forward rand on its own, and London jobbers have therefore been obliged to adjust their prices to take account of the exchange risk. Their prices are now at a margin of 5 to 7 per cent below South Africa. Business is at a low ebb, while investors await, some with hope, the inauguration of the republic on May 31st.

### THE ECONOMY

#### Still No Change

INDUSTRIAL production remained unchanged in March. At 120 (1954=100), the seasonally adjusted index number was the same as in February. It has now stayed at roughly this level, with only a point or two variation, for fifteen months. This failure of output to show any sign of increase as yet is not very surprising.

Although industrial investment is still going very strong, exports of manufactured products have hardly increased at all and it was not until towards the end of the first quarter that consumer spending seemed to be picking up. Possibly, too, there has been some running down of stocks. The winter's large stocks of cars and household equipment have certainly acted as a drag on the rate at which the more recent improvement in sales has affected factory schedules. Steel output, too, has now been hit by the markedly lower rate of stockbuilding by steel users.

Indeed apart from plant and machinery and construction materials, there are not many bright patches. Production of chemicals, paper, foodstuffs and electricity has been higher than last year, but not greatly so. Textile production has fallen, partly because of a labour shortage and partly because of reduced ordering, coal output has continued to be cut, and shipbuilding is rapidly going into a major depression. Despite the pick up in sales in the home market, passenger car output during the first quarter was only about half the rate of the year before. The coming months should see a firmer revival in vehicle output. But any general scaling down of the level of stocks could postpone a recovery in total industrial output for some months. The investment boom still seems set to continue, however. The drop in new machine tool orders in February—both for home and export—is reckoned by the industry to be the result of no more than an accidental variation in the timing of ordering. New orders in January were exceptionally large. The machine tool industry as a whole, moreover, still has just over a year's work on hand.

#### STEEL

#### Towards Higher Prices?

IN rejecting the steel industry's case for an increase in prices last autumn the Iron and Steel Board took into account the increases in costs arising directly and indirectly from rises in the prices of coal and coke, but not the wage increases that the steelmasters have since agreed to pay. These, the British Iron and Steel Federation said this week, amounted to about £11½ million a year on its existing labour force (though it may be able to reduce the burden per ton of steel by increasing labour productivity, or rather measuring against labour cost the extra efficiency that it is getting out of investing say £200 million a year). Since then higher road haulage charges and insurance and pension charges have put costs up by another £4 million or so a year, and the duty of 2d. a gallon has been put on the "oil" fuels that the industry uses (i.e. about £1 13s. a ton on tar and creosote pitch, £1 19s. a ton on fuel oil, and £2 4s. a ton on gas and diesel oils burned in the works). The steel

industry is at present using about 3½ million tons of such fuels in its furnaces: the federation therefore puts the cost of the duty to the industry as "say £7 million." What the actual cost turns out to be will depend on the bargains steel customers can strike with their suppliers, so far as actual oils are concerned: they have nobody else to absorb any of the duty on tar and pitch mixtures that they produce themselves.

If one were to assume that the oil companies could be obliged to absorb half of the duty (some people in steel seem more optimistic than this) then the federation's estimate of cost increases, apart from those due to rises in coal prices which the board turned down last autumn, would amount to some £25 million a year, which would be well over 25s. a ton of finished steel. This would narrow the margins by which British steel prices are cheaper than American and German home prices, and widen the margin by which they exceed French prices.

#### DRUG PRICES

#### A Question of Principle

THE Minister of Health has taken what many people will regard as a rather odd step in his latest move to reduce the national health service bill. There is every sympathy with the dilemma in which Mr Powell finds himself. New drugs are almost invariably patented, and manufacturers rely on the protection given by their patents to make a profit and recoup research costs while they still have what amounts to a monopoly of this fast-moving market. However, the degree of patent protection varies from country to country; in Italy, for example, and probably behind the Iron Curtain too, drugs are manufactured without too much regard for the patents held by the companies that originally developed them.

Hospitals in the national health service are spending about £1 million a year, a fourteenth of their total drug bill, on three fairly new drugs, two of them antibiotics and the third a diuretic. Recently manufacturers, mainly in Italy, have been offering to supply hospitals with these drugs at prices a third below those charged by the subsidiaries of United States companies that make them in Britain. But the Italian companies have not taken licences from the American inventors of the drugs, nor do they pay them royalties. Does this account for the wide price difference? No one can prove it does. Meanwhile a few hospitals have been gladly taking advantage of this new, cheap source of supply although there have been misgivings about their quality.

They probably could not have continued to do this indefinitely; at some stage manufacturers in this country would have gone to the courts to protect their patent rights. But the Minister has saved them by intervening—in a way that has shaken the drug industry. His advisers have told him that

the hospitals could reasonably be regarded as a service belonging to the Crown, in which case the Minister can invoke a clause of the Patents Act of 1949 which gives the Crown the right to waive certain of the rules governing patent protection. This is a power usually used only in relation to defence contracts; its applicability to the health service may have to be tested in the courts. But in the meantime, Mr Powell intends to invite manufacturers at home and abroad to tender for bulk supplies of the three drugs in question, and the Ministry will distribute these to the hospitals. The Ministry will then negotiate the payment of royalties with the companies that own the patents if he decides to buy from an "unlicensed" (some might say a "pirate") supplier abroad. There is a difference of £350,000 a year between the £1 million Mr Powell would have to pay for these drugs at home and the price at which he could, on present showing, buy them abroad.

Mr Powell is obviously calculating that royalties cannot possibly consume the whole of that saving; if they do, he is a poorer negotiator than anyone believes him to be. The American parent companies have probably gone already hot-foot to the State Department demanding quick action to protect them from the horrid consequences of his new ploy. But before the flags are put out, there is one question that people ought to be asking themselves. Will his action be read as an open invitation to pirate new inventions in the drug industry, if not elsewhere? If so, is it an action that ought to have been taken by a Minister of the Crown, however sorely tried?

#### IN THE MARKETS

#### The Short Run

IN the excitement caused by small issues and placings of new equities on a booming market, it has been easy to overlook the steady and quite sizeable calls being made on institutional funds by new fixed interest issues. A number of local authorities have come to the market and there are others waiting to do so. Some industrial companies have offered debentures as well as making rights issues of ordinary shares; there will be others following them, and at the same time the institutions will have to meet further calls on the steel prior charges. At a time when the gilt-edged market is subdued, and sterling is under some pressure, these demands for money have not been easy to absorb.

It was on this market that the government of New Zealand offered a new stock. Along with Australian issues, New Zealand loans always command the finest rates in the market for Commonwealth stocks, and it had been known for some time that New Zealand was anxious to borrow money on the London market. But the issue is a big one, £20 million as against the £10 mil-

CENTRAL HEATING IS AS GOOD AS THE BOILER THAT FIRES IT

## Pick a Potterton — it's a skinflint with your fuel bills

Every Potterton boiler is guaranteed to deliver the rated output claimed for it. And because you can closely control its operation a Potterton is ruthlessly efficient and economical in the consumption of fuel. This means a definite saving on fuel bills.

A Potterton is designed to save you money. Potterton design makes it possible to glass coat the flueways, a Potterton exclusive which gives extra protection against corrosion. Because this glass coating helps prevent heavy deposits forming, a Potterton maintains its high heat-producing efficiency and needs only the very minimum of maintenance.

Every Potterton boiler is cast in solid iron — the most reliable metal for boilers. After 40-odd years in continuous operation, early Pottertons are still going strong. As yet, no one knows just how long a Potterton will last.

If you are thinking of putting in central heating, think about a Potterton to run it. Fully automatic. Effortless.

Reliable as a best friend. Thrifty with fuel. Oil-fired or gas-fired. Elegant to look at. You'll get the quality, the sure performance, the long life you expect for your money.

The Potterton in the picture is the Diplomat 44 gas-fired boiler. As a guide, it will heat 6 radiators and give all-day hot water. Take a look at it in your local Gas Board or Potterton Appointed Distributor's showrooms. Or, if you would like to know more about Potterton boilers first, post this coupon or phone.

Miss M. Meredith, Thomas Potterton Limited,  
20-30 Buckhold Rd, London SW18. VANDYKE 7202.

A MEMBER OF THE DE LA RUE GROUP

lion the market had expected. The terms of the latest offer—a 6 per cent stock issued at 98½ and redeemable in 1972—were marginally a little more attractive to the lenders than recent issues and gave a reasonable turn on existing Australasian stocks. When the terms were announced the market was favourably impressed with the flat yield of £6 1s. 10d. per cent and the redemption yield of £6 3s. 8d. per cent but on Thursday the underwriters heard that they had been left with 88 per cent.

Compared with recent weeks, the equity market has been quiet. Dealers reported a slackening in business, which they attributed to the approach of the Whitsun holiday. Quite why the closing of the market for one day should affect the volume of trading is not very clear and it may be that investors, having seen prices climb to yet another peak just after the weekend, feel that there is no urgent need to add to their commitments. Indeed, more of them were taking their profits and this was reflected in a shading of prices in the middle of the week. In contrast prices on Wall Street climbed to a new peak on Wednesday, when the Dow Jones average closed at 705. The new wave of buying was touched off by the handsome rise shown by the Federal Reserve index of industrial production for April and it was concentrated largely on the so-called cyclical stocks, such as steel and machine tool issues, rather than on the more speculative and highly priced growth stocks.

### The Longer View

IN a paper delivered at the annual conference of the Chartered Institute of Secretaries, Mr William Nursaw, the trustee manager of Atlas Assurance, addressed himself to the problems of trustee investment. In doing so, he has produced a valuable and comprehensive survey of the whole field of stock exchange investment.

Inevitably, some of the author's preferences and judgments peep through between the lines. Clearly he sees a place for fixed interest stocks in most portfolios and he does not support Mr Ross Goobey's advocacy of 100 per cent of equities in a pension fund. Indeed, he mentions one pension fund, apparently with approval, that has only 25 per cent of its fund in equities. At another point, he says:

Irredeemable stocks have few friends at the present time and tend to be undervalued. Irredeemable stocks when depressed in price are very suitable for permanent funds such as charitable and pension funds.

This would seem to be based on his belief that interest rates are now high; that they will remain high for a number of years; but that they will not go much higher—if at all.

Mr Nursaw pays more than lip-service to fixed interest stocks; but if he can be said to have a bias it is towards the element of growth and the hedge against inflation afforded by equities. On charitable trusts,

for example, he argues that income is of supreme importance but goes on to say:

Equities are, of course, very suitable for charities which have few commitments against capital and to which year-to-year appreciation and depreciation are of no consequence. Clearly, if there is ever a case for 100 per cent in equities, charities make the case—assuming of course the trustees are expertly advised.

As Mr Nursaw sees it, the equity cult has been in full swing for the last few years and is being followed in more and more places. He estimates that each year insurance companies put £120 million into equities; pension funds £60 million; banks and insurance offices acting as trustees £10 to £15 million; and the public trustee and other trustee funds an unknown amount. The pressure on equities is therefore strong and it will, in Mr Nursaw's opinion, become stronger when the Trustee bill becomes law. Before, however, trustees put all the money they can in equities they should read what Mr Nursaw has to say about the importance of timing. Instinct as much as calculation is, he explicitly admits, at the heart of any investment decision.

### BREWERIES

#### Midlands Merger

THE answer to the amalgamation of Ind Coope, Tetley Walker and Ansell is not, as had been at one time rumoured, a merger between Bass, Ratcliff and Greeton and Watney Mann but one between Bass and Mitchells and Butlers. The merger, strongly recommended by both boards of directors, is planned through the formation of a new holding company, Bass Mitchells and Butlers. Two of the 5s. ordinary shares in B.M. & B. will be offered for every 5s. Bass share and five of its ordinary shares for every £1 Mitchells and Butlers share. On the forecast dividend of 11 per cent for B.M. & B., shareholders in both companies gain slightly in income, for the Bass's 1959-60 dividend was equivalent to 10 per cent and Mitchells and Butlers' to 10 4/15 per cent. On the basis of current yields, a price of 14s. 6d. to 15s. on the B.M. & B. shares would not be surprising. Just over 48 per cent of the equity in B.M. & B. is attributable to Bass, which contributes slightly less than this in assets and earnings and this was reflected in the sharp drop in Mitchells and Butlers' shares that followed the announcement of the terms of the merger.

This merger will produce the third largest brewing group in this country, Ind Coope Tetley Walker being the first and Watney Mann the second. It will own over 4,200 licensed premises, largely in the Midlands where both breweries are centred, though Bass has a number of widely separated public houses in other areas. Mitchells and Butlers has always been a regional brewery; it has acquired other Midlands breweries and it has an agreement with another, Ansell,

on the building of new public houses. Bass, on the other hand, is one of the original national breweries, in the sense that its leading bottled brands are sold by most other breweries. It has some reciprocal trade agreements, notably one with Watney Mann, but, like Guinness, it has succeeded largely in selling its beers in other breweries' outlets without any formal ties. It has done this by brewing distinctive and high quality beers and by promoting a brand image to create a demand that the other breweries felt they had to satisfy by stocking Bass's products. The margins they received for doing so were good, but as the number of mergers and trading agreements proliferated Bass's bargaining strength has steadily weakened. Moreover, it is argued in the trade that tastes are swinging away from the heavy beers, of which Bass, Worthington and Guinness are prime examples.

One obvious defensive move was to merge with another big brewery with a good number of tied outlets, to assure points of sale and to reinforce bargaining powers. This Bass has done, and in so doing has forged an indirect link with Guinness, for Mitchells and Butlers is one of the breweries which will join Guinness in producing and marketing "Harp" lager. Both Bass and Guinness, in fact, are moving away from isolation. They have to do this if they are to keep their sales high in an industry which is becoming increasingly dominated by giants competing hard to add to their share in a market that is not growing at all rapidly.

### IMPORTING FUEL

#### Sketch of a Policy

"NO other major energy producing country subjects its fuel industries to total freedom of imports, so why should we? Some half-way house between a total embargo determined by the domestic producer and complete free trade in fuel can be found," argues Dr Georg Tugendhat in his pamphlet "The Sources of Energy," published by the Conservative Political Centre this week. Dr Tugendhat is still putting forward the "case for cheap energy" that he has been arguing from so many platforms over the last few years: but here he is taking rather more account than before of ways and means.

He still believes, for example, that the National Coal Board ought to be producing about 120 million tons of coal a year from its best mines, not talking about 200 million tons: but he has accepted the fact that one cannot close a third of the coal mines overnight, and now proposes

a substantial tariff on imported fuels, gradually to be reduced, but in the meantime to be used to finance concentration of the coal industry and redevelopment and retraining of the mining labour that further rapid reduction in output would make redundant, and

## Rolls-Royce: Profits and Problems

THE more confident note struck by Lord Kindersley last year about the prospects of Rolls-Royce has certainly been justified by the 1960 results. Shareholders are to receive for the first time in four years a higher dividend; it has been raised from 10 to 11 per cent. An exceptionally low tax charge of £2 million as a result of substantial capital allowances means that ordinary earnings of 25½ per cent cover the bigger dividend just over twice. Total revenue in 1960 rose by 12 per cent from £97½ million to £109½ million, but as yet there is no indication as to which sections of the business contributed most to this increase. In part it must reflect the recovery from the fire at the Mount-sorrel factory two years ago which badly hit the production of aero engines.

But in fact gross profits hardly reflect the more favourable sales, for Rolls-Royce had to find £2 million more for development expenditure, largely on aero engines. This heavy charge now represents one and a half times the group's gross profits and shareholders will be anxious to know whether the company will have to provide similar sums in future years or whether it will revert to the level of between £5 million and £6 million in 1958 and 1959. One of the financial rewards of this intensive development, moreover, may in future bear a heavier tax liability: the decision by which payments for knowhow were ruled to be sales of capital assets was recently reversed on appeal, leaving these to bear tax as income, with a net bank overdraft of £1 million at the end of 1959 and the further heavy rise in development expenditure it is not surprising that Rolls-Royce is considering raising additional capital by an issue of debentures.

One of the attractive features of the market for aero-engines is that the sale of an aircraft, whether civil or military, creates a steady demand for spare parts and spare engines. A civil airliner replaces its engines completely about every three years and can stay in service 20 years or more. Much of Rolls-Royce's present buoyant business is the outcome of sales made throughout the fifties; it has been rather less successful in finding new business for new engines.

This is partly due to hot competition at home from the Bristol-Siddeley company whose system of vertical take-off seems, at least for the time being, to have ousted the alternative method sponsored by

Rolls-Royce. It is also due in part to the fact that neither the Comet nor the Vanguard—both using Rolls-Royce engines—have sold in really large numbers, and Rolls-Royce has also run into major technical troubles with the Vanguard's Tyne engines. But against this, prospects for civil sales have brightened considerably with the decision of the British Aircraft Corporation to use Rolls-Royce, rather than Bristol-Siddeley engines in its jet-powered Viscount replacement.

ITS oldest activity—making motor cars—is now one of Rolls-Royce's more pressing problems. The provision in the budget that limits to £2,000 the sum on which tax allowances can be claimed by the buyer of a car for business uses hits the company hard; more than a third of its sales go to business buyers on the home market. Production has been rising in the last few years, and reached 2,400 in 1960; a substantial fall would add to production costs. Lord Kindersley has stated that orders have been cancelled, and that production of Rolls-Royce cars may have to be stopped. This, he says, would lose Britain prestige and export earnings; about half Rolls-Royce production is exported, and in 1960 some 500 of these cars were sold in the United States. One may doubt whether the present Rolls-Royce car brings so much prestige that it needs to be subsidised, and wonder whether it might not be able to survive with only a third or a quarter of its cost subsidised at home if it is really the best car in the world. Most of its users in Britain must have benefited from the cuts in surtax in the budget; perhaps they will use some of their own money for the cars they travel in. And could they not emblazon their company's name on the car, and charge it to advertising?

Perhaps necessity will mother a new generation of low-priced limousines, even if they are unlikely now to have the coach-built charm that their predecessors possess; glass fibre seems the more likely material for a modern small-volume car, and it hardly can claim the appeal of hand-beaten panels. But there is nothing to stop a director choosing to travel in an old Rolls—which will cost his company much less than £2,000—and gaining as much dignity and perhaps more elegance than a new one could provide.

writing down the NCB's fixed interest capital in line with cuts in output: with no equity capital, any cuts below the 200 million tons a year that Mr Robens would like to see would begin to increase overhead costs on the tonnage actually mined, to a level that would offset some of the reductions in cost that might flow from concentration and mechanisation.

Whatever one's estimate of the amount of British coal that can be hoped to compete with the price of imported fuels in the medium run—some independent observers would put it higher than Dr Tugendhat, though lower than Mr Robens—this might be a reasonable approach which would give British industry cheaper coal without cutting down mining here too rapidly.

An alternative way of dealing with the steel industry's proposal to import American coking coal was suggested in these columns last week—to retain, for a specifically limited period, the Coal Board's monopoly of importing coal, but to direct Mr Robens to import and to bring prices down. (Dr Tugendhat says "The coal industry in particular will have to be put into the position of making transport arrangements in the same manner as is now being done by the oil industry.") Both expedients have the same purpose—to make protection of indigenous energy open but to reduce it over time, giving the coal industry a limited period to concentrate and reorganise for efficiency.

### More Competition for Oil

AS an oilman, Dr Tugendhat does not criticise the protected position of the oil companies in the British market quite as sharply as he does that of coal: but he does not burke this issue either. Indeed, he would seem perhaps to overstate the difference in oil prices here and on the Continent. He now specifically quotes the "official" prices for fuel oil here as "between £8 and £10," comparing these with seaboard or ex-refining prices on the Continent of 50s.-100s. a ton "to which sales and other taxes have frequently to be added," for Italy, North-Western Europe

### RETAIL SALES

April seems to have been another good month for retailers. Provisional estimates suggest that, after making allowance for seasonal factors, turnover rose about 1 per cent above the already high level reached in March.

except France, and Scandinavia. In practice, sizeable British customers too were getting big discounts—£4-4 10s. a ton—below the published prices: by the time the German tax, for example, was charged the actual prices paid by big customers may not have differed nearly so much from those paid in Britain as would appear.

Dr Tugendhat would like the gas industry and electricity to have "gone into oil": how far, he does not quite define, but certainly as far as buying on the world market, not simply through the major companies established here. He says approvingly that "Planners and free traders [on the Continent] are agreed on the advantages to be derived from the new supplies of oil gas and coal from Russia, the Sahara, and the export potential of the American coal industry." Whether or not this is an accurate assessment of the actual energy policies existing in the Common Market—which are mostly in practice protectionist or *dirigiste*, whatever lofty sentiments the

spokesmen of the communities profess—it is a logical extension of his argument about relying on cheap energy. Not everyone, in Britain or on the Continent, would follow Dr Tugendhat as far as that, or accept all his calculations; his ideas are often in themselves much more impressive than his figuring. But the single-mindedness with which he pursues his argument for a new policy, as ever, demands respect.

### AIR FREIGHT

#### The New Tariff

AFTER months of deadlock, the international airlines running regular scheduled services across the North Atlantic have formed a joint front against the common enemy, the chartered freight airliner, and agreed on a new scale of air cargo rates that, if they don't match the

rates that can be obtained by chartering penny for penny, do reduce its attractions to a level where—it is hoped—freight shippers will just not think chartering is worth the headache of trying to fill the aeroplane they have hired. Only half the new tariff had been made public by the time this issue of *The Economist* went to press. That gave a sliding scale of reductions for general freight, so that while it would cost 15s. 9d. a kilo to send small shipments across the Atlantic, it would cost only 5s. 2d. a kilo to send consignments weighing more than a ton. This is 61 per cent less than present rates. But the airlines have also agreed special rates for certain special cargoes, these have not yet been published. Since many goods can already cross the Atlantic, in small packages, for less than the new cargo rates, no real idea of the new rates can be formed until it is known how the airlines have agreed to treat these specially favoured commodities, car spares among them.

### COLOUR TELEVISION

#### Gimmick or Break-through?

ON Monday evening, half a dozen engineers from the Mullard company's research laboratories demonstrated a radically new system of colour television to an almost full house at the Institution of Electrical Engineers. Before this tough professional audience, they explained why they thought there was no future for colour television so long as it was tied to the present design of receiver, and what arguments had led them to put forward their own—very unconventional—alternative. They admitted frankly that it was an open question whether their system will get beyond the laboratory, but one suspects they will be six disappointed men if it does not.

In the present type of television receiver used all over the world, the picture is built up on the face of the cathode ray tube; the receiver screen is actually the flat end of the tube with a stubby "electron gun" projecting behind it to pick up the signals from the transmitter. As these hit the screen in a stream of varying force they cause a temporary glow in its luminescent phosphorus coating and so build up a black-and-white picture. To turn this into a coloured one three new phosphors have to be incorporated which glow in one of the three basic colours, red, green and blue. Which colour lights up then depends on the strength of the signal as transmitted down the electron gun. Briefly this involves providing three separate electron guns in one cathode tube; and although the end results are good, the tubes become monstrously complex and the receiver costs

about three times the price of an ordinary black-and-white one. It is also a great deal bulkier, and the picture can only be seen in a darkened room.

These reasons explain why the collectors of status symbols have bypassed colour television although colour programmes have now been transmitted in the United States for several years. Sales are disappointing, which has led electronics engineers to think that perhaps the public is not so gullible after all and will not pay for what it considers to be a grossly overpriced product.

The only way to reduce the price is to simplify the design of the most expensive single component, the cathode tube. Mullard's engineers have, however, carried the process of simplification so far that the listening electrical engineers began to wonder whether they might not have gone too far. They have dropped any idea of presenting a coloured picture on the flat end of the tube; their cathode tube is nothing but a long cylinder with a single electron gun sticking on to one end. The three phosphor coatings are laid in hori-

zontal strips the length of the tube and the signal, as it comes from the electron gun, hits whichever strip it needs to give the appropriate colour. But this gives only one of the 405 lines that go to make the black-and-white television picture on the ordinary screen.

How Mullard builds up the rest of the picture is highly ingenious and, to the electronics engineer, slightly shocking. Neither radio nor television receivers have any mechanical moving parts. But Mullard's engineers have thrown in mechanical and optical systems to get them out of their difficulties. They mount three optical lenses on a drum that revolves at 1,000 revolutions a minute around the cathode tube. The lenses each pick up a single line of picture from the tube and throw it in turn on to a curved, hyperbolic mirror that arches above the set. This mirror incorporates a number of optical tricks that magnify the picture, iron out distortions and give the viewer a steady, bright coloured picture that loses very little of its intensity even in a powerfully lighted lecture hall. Because of its shape, Mullard has called its tube a banana. The picture shows the arrangement of the laboratory models that were demonstrated (the lower part of the set was filled with circuits, mechanical drives, etc.).

The banana tube is so simple that it should cost no more than a normal black-and-white one; this is an asset not only to the set maker but to the customer who will have to replace those tubes during the life of the set. But are the complicated mechanical and optical parts going to eat up the rest of the saving? This will really decide whether the Mullard system has an edge over other designs of colour receiver, which pack all the complication inside the cathode tube and leave the rest of the circuit relatively simple.

## URBAN TRANSPORT

## A Sense of Priority

LIKE many other disinterested observers before, Political and Economic Planning, in its latest pamphlet on "The Cost of Roads,"\* has some hard things to say about the present order of "priorities" in new road construction. Fast new motorways across the country are relatively easy to build, they are generally much cheaper than comparable urban road works, and they are certainly popular. But they are not a particularly fruitful investment in relieving congestion if they merely deliver more vehicles more quickly at the outskirts of cities already packed tight with traffic. PEP calculates that even in the present year as much as three-quarters of the £76 million the Government proposes to spend on new roads will still be going into motorways and trunk roads between cities. And not all the remaining £19 million will be spent on urban road schemes, though most of it will be. Successive ministers of transport have claimed that the five major trunk road and motorway projects have been selected as likely to bring most benefit to industrial traffic. But, as PEP says, it is very doubtful whether they will do this. Both road and rail traffic will still have to crawl through congested streets at either end of its journey, probably nullifying any benefits from slightly faster travelling in between.

The pamphlet holds firmly to the view that road construction alone will not meet the urban traffic problem. The benefits of particular road schemes can be swallowed up by congestion further along or by the extra traffic the improvement itself generates. "Even road investment which results in increased speeds may not provide the least expensive method of achieving this faster flow of traffic; even after taking into account all the social costs of restrictions and inconvenience, restrictive measures and subsidised public transport may be a cheaper way of relieving congestion." But in no city in this country is there any single authority that can take this broad view of the way in which public and private transport might be harnessed together.

## RADIO INDUSTRY

## More Amalgamations

THE winter slump in television sales has convinced many medium-sized set manufacturers that the time has come to amalgamate or sell out. The mergers between Pye and Ekco, and between the bustling Sobell business and the General Electric Company have now been followed by Thorn Electrical Industries' purchase of the set-making side of the business of Ultra Electric, one of the smaller of the com-

\* PEP Planning No. 452. "The Cost of Roads." 3s. 6d.

## BUSINESS NOTES

panies in the medium-sized group. The price paid to Ultra is £2.4 million in cash. Only a few days earlier, Plessey had bought the small Regentone company.

The amalgamations have been caused by the growing realisation that medium production runs are no longer economic when faced with the challenge of a giant like Thorn which becomes, with the acquisition of Ultra's capacity, the unchallenged leader of the industry in terms of size. But it follows that Thorn's rate of output made it specially vulnerable to last year's slump from which retail sales are only slowly recovering. And ironically it was Ultra that precipitated the industry from a slump into a crisis by becoming the first company to put a 19-inch television set on the market two weeks before Christmas. Until then, the industry might have been concerned over the mounting size of its stocks, but could have expected to liquidate them gradually by cutting back production. But the appearance

## MOTORS

## Ford Improves Its Status

THE new Consul Classic 315 is the latest move in the campaign to make it smart to own a Ford. And, though the price has not been announced in Britain where it will not be available until June 17th, it seems likely to be a cheap car; £720 to £780 seems the likely price range in Britain for the different models, two and four door, standard or de luxe. In Belgium it will cost £580, five per cent less than the comparable Ford Taunus—which has proved a great success there since it was introduced last autumn—about as much as the Peugeot 403 1300, and £10 more than the Simca Aronde Elysée. Fiat has waited for the Ford to announce the price of its new 1300: it will probably cost a little more; but it should be able to offer a superior performance in return, for its engine develops nearly 20 per cent more power.

One may expect, therefore, that the Classic will sell well abroad and at home; here, sales of the Minx, Victor, A55, Oxford and the old Consul seem likely to turn down, at least until the expected replacements for some of these appear later in the year. Ford has not stated its capacity to make the Classic; at present it is made on the old Prefect line—output of which ended in March—at 70 a day; 300 a day would seem the immediate target, though there can be much flexibility between the Classic and the Anglia. On the continent, such old models as the Simca Aronde are likely to be affected, though one can again expect more changes in the 1½ litre class before the end of the year.

There are some close similarities between the Ford and the Fiat 1300. Both are designs of unimpeachable orthodoxy, except for the use of disc brakes on the front wheels: but Ford must have gained a significant advantage in production costs by building the new model almost entirely of

## THE ECONOMIST MAY 20, 1961

of Ultra's 19-inch set made all those stocks of 17-inch receivers obsolete overnight—at least in the eyes of retailers. Other manufacturers had no option but to market their own new 19-inch sets, which they had hoped to keep under wraps as long as possible, and reconcile themselves to disposing of existing stocks for the best price they could get.

Thorn appears to have had a clearer appreciation than some other makers of the importance of speed. The manufacturers that came best out of the winter are those that were shrewd enough not to let their stocks get out of hand—Sobell is reputed to be among this select band. Thorn did the next best thing; it sold its receivers for what retailers were prepared to offer. Not all shops passed on the full saving to their customers, but those who did were able to sell Thorn's Ferguson sets for a bare two-thirds of their list price. By March 31st, Thorn claims to have reduced its stocks to normal proportions.

Anglia mechanical parts, while the Fiat is largely a new car. The engine of the Classic differs from that of the Anglia only in its crankshaft and connecting rods; the gearbox is the same. Apart from the engine stroke, the disc front brakes, the tyre size, and the track of the rear axle are the only mechanical features in which the two cars differ. Even the ratios of the rear axle and gearbox are identical.

## With Style and Performance

DESPITE this sweeping measure of standardisation mechanically, nothing is shared in the body between Ford's Anglia and its new Classic. And whilst it shows some signs of being designed down to a size, and so has something of a bob-tailed look, the stylists of the Classic have felt no pressure to seek compactness at the cost of other advantages, and have produced a car that has a tail of American length—which has allowed them to put the spare wheel at one side behind the rear wheel, and so to provide one of the biggest boots on any British car. Inside, however, it is only a four-seater. The style of the car clearly owes much to the American compacts; 1½ inches lower, seven inches wider and seventeen inches longer than the Anglia, it brings the long, low look of the current American car to a British product for the first time. By doing so Ford has made its own larger models look decidedly dated. The hint from Sir Patrick Hennessy that more new models will be coming soon may mean replacements for these cars as well as the sports coupé version of the medium-sized car that has been long expected.

The Classic outperforms the Anglia and the Consul: its bigger 1,340 cc engine gives

## THE ECONOMIST MAY 20, 1961

it better top gear acceleration than the Anglia, and the maximum speed is claimed to be 4 mph higher. The wider track means that the car rolls less on corners; and the disc brakes are so powerful and fade-free that competing makers cannot long delay adopting them.

## SHIPPING

## New Freight Rate Indices

FOR the third time since the Chamber of Shipping first published an index of tramp shipping freight rates forty years ago, it has become necessary to change the basis on which the index is compiled. Since the last revision was made in 1952 there have been considerable changes in the relative importance of commodities and routes as well as changes in charterparty conditions as to loading or discharging rates and terms. The present pattern of trading was compiled from information supplied by British tramp shipowners. This showed that more than 93 per cent of the total freight on voyage charter during 1958 was earned in the carriage of coal, grain, sugar, ore, fertilisers, timber and sulphur and these are

## BUSINESS NOTES

the commodities which are used for the new index. They are the same as for the old index except that sulphur has been brought in and esparto excluded, but there have also been changes in the weighting given to each commodity. Considerably more weight, for example, has been given to fer-

tilisers and substantially less to coal. The old index was confined to fixtures in sterling, but the new index again includes dollar fixtures, provided they are open market fixtures and not rates which are available only to vessels flying the American

## US Treasury on the Mark

BY A NEW YORK CORRESPONDENT

ONE of the positive results of the speculation against the dollar following the half-hearted revaluation of the mark and the guild in early March has been the resurrection of the moribund US Exchange Stabilisation Fund. Originally established in 1934 with the profits of gold revaluation, the Fund played a minor role between 1934 and 1939 in dampening the daily fluctuations of the major European currencies against the dollar, especially after the European markets had closed for the day. Between 1939 and 1960 the Fund remained little more than a book-keeping entity in the Treasury's accounts, its capital being available to meet worthy international purposes without the need of going to Congress.

The revival of the Fund as an operating entity in the last two months is a clear sign that the United States authorities have finally shed their view that the best way to protect the dollar is to sit passively on the gold stock. The Treasury accepted a sizeable amount of marks as part of the \$587 million repayment of German postwar debt, and made it known explicitly that the purpose of this operation was to put it in a better position to throw marks on the market whenever it observed a speculative shift from the dollar to the mark.

Thus far its intervention has been confined to the selling of forward marks.

Because there are a lot of buyers of forward marks these days but few sellers, the forward mark is at a premium of the equivalent of 1½ per cent per annum against the dollar. For United States operators placing money in Germany, this means that in addition to the differential in interest they can secure in Germany, the equivalent of a further 1½ per cent per annum can be obtained by covering the swap back into dollars, through a sale of forward marks. Official sales of forward marks will tend to reduce the premium, and thus remove one incentive (but only one) for arbitrage movements to Germany.

The exact details of the manoeuvre have, quite properly, been kept under the wraps—including the size of the commitment and the way the Treasury gets rid of its short position. Moreover, it is not clear how long these positions are carried, though it does appear that the operation involves more than simply covering the market after it closes in Europe. Technically, all the Treasury has done in accepting marks as part of the repayment is to provide itself with a ready supply of marks instead of having to obtain them openly from the International Monetary Fund or from the German Treasury either by a drawing or a gold sale. In practice the effectiveness of the manoeuvre has been lessened by the fact that the size of the Treasury's holdings of marks has in-

flag. Fixtures for tankers in the US Gulf/India grain trade are taken into consideration, but not in other routes.

Freight rates in 1960 were considerably lower than in 1952, so that the new numbers are correspondingly higher than the old. On the old basis the average for 1960 was 74.2, but this provides only a rough link between the two series—as can be seen in the chart—because of the different commodities, routes and weightings. Oil-fired steamers are now excluded from the calculation of the time charter index as most charterers now take only motor ships; and the lower size limit has been raised from 8,000 to 9,000 tons deadweight. On the old basis the average time charter index for 1960 would have been 65.4, as against 100.

## RUSSIA

## Moscow Window

WHATEVER effects the British fair in Moscow may have on trade, the jamboree is certainly having an impact on the Russian public. Even before it opened nearly a million tickets had been sold. Next week Mr Maudling will start trade

advertently become calculable. The recent announcement that a large part of the \$537 million reduction in foreign official holdings of government securities was due to German sales strongly suggests that the total acquisition of marks by the Treasury is in the vicinity of \$100 to \$150 million. By allowing this to become known, the Treasury has merely bought itself a little time.

How far the United States authorities are prepared to go in this new venture is still unclear. Official forward intervention on the mark-dollar rate seems to foreshadow a general policy to minimise the flow of short term interest-sensitive funds whenever they appear to jeopardise the ability of the authorities to pursue measures appropriate to the domestic economy. And indeed forward intervention is a much less costly means to this end than following that line of advice freely being given by old gold standard hands, who have been proclaiming the need for greater central bank co-ordination in the manipulation of short-term interest rates.

It seems unlikely that the acquisition of marks is the initial step towards building up a large basketful of foreign currencies. If the mark holdings prove adequate to waylay the speculators well and good. And if not, the United States authorities are likely to move quickly towards more formal arrangements for checking the speculators, either within the arrangements of the International Monetary Fund or outside them.

talks with the Soviet government. They will not be concerned with detailed quotas but with the general progress of trade and discussion of a more formal treaty of Trade and Navigation—a largely ornamental structure by which the Russians set political store. Since Sir David Eccles signed the present four-year trade agreement in March, 1959, both exports and imports have been expanding steadily. Exports to Russia still represent less than 1 per cent of Britain's total exports, but they rose to £37 million last year compared with £23 million in 1958.

The Russians seem to relate their imports of consumer goods fairly closely to the amount they sell. There is plainly a case for a steady enlargement of British quotas. The Russians, however, will certainly point out to Mr Maudling, as they always do in trade talks, that the one way in which they can earn more sterling on a big scale and quickly, is by selling Britain oil.

#### BANKING HOURS

### Irritating the Customer

BRANCHES of the clearing banks in England and Wales are to open and close 30 minutes earlier on Saturdays. From July 1st opening hours will be from 9.00 to 11.30 in the morning—as they already are in the City of London. A good few of Britain's bank clerks will be home for an early Saturday lunch, and the banks no doubt hope that they will be pleased and not press quite so hard for a five-day week. But for the customer who already finds the noon close on a Saturday inconvenient, it will be yet another irritation: what will those bank counters be like at 11.25? Of course the banks have a problem. Saturday opening has long been a great handicap to staff recruiting. But if the banks are really to widen their business, they will not do it by closing their doors earlier. The Post Office, which may shortly introduce a rival system of credit transfers, is open until 6 p.m. on a Saturday. On weekdays it is open when people go to work and when they come home. The banks are not. They must do some hard thinking and decide whether they really want these new customers. The only solution, surely, is flexibility. Evening opening in the suburbs, an early morning counter service with a limited staff, mobile banks at the factory gates on pay day—how seriously have these been considered at top level?

#### TROPICAL CROPS

### Trouble in the Treetops

COFFEE is the most important agricultural commodity entering world trade; together with cocoa, tea, rubber, bananas and coconuts, it accounts for not far short

of a quarter of all international trade in agricultural produce. These tropical tree crops are mainly the products of underdeveloped regions whose economies hinge upon them, and much of the trade is hedged about with protected markets. These commodities could prove economic and political dynamite. A growing breach between EFTA and the European Economic Community might cause a deeper economic partition in Africa, too. Unless tariffs are harmonised, there will be a sharper distinction between the produce of territories within British, French, Belgian and Portuguese influence. The predicament of the Latin American coffee producers who could supply the whole world for a couple of years from their towering stocks has brought America into the arena. First and foremost America wants to keep open European markets for Latin American producers, and if possible, to gain parity of treatment for them together with a reduction in the taxes that these commodities seem to attract in Europe.

Though, by their nature, crops that grow on trees ought, apart from normal hazards of plague, drought, tempest or radical improvements in cultivation, to be susceptible to some degree of prediction, this really is a wood that cannot be seen for the trees. In its annual review of commodities, the Food and Agriculture Organisation of the United Nations spotlights the danger. For many of these commodities, the acreage, numbers, age and yields of existing trees are unknown. High prices in the early 'fifties induced more planting, which is now maturing. Even those crops that have so far known no problems might be concealing a future surplus or shortage. The FAO therefore wants a big improvement in statistics about tree crops. Though that is a tall order when dealing with some bushes and bushmen, it would certainly make the task of price stabilisation committees easier, if not dispensable.

#### NON-FERROUS METALS

### Uneven Recovery

PRICES of the principal metals seldom diverge for long, but the first half of 1961 seems to be one of those rare occasions when tin, copper, zinc and lead all appear to have put a different foot forward. Since the start of the year, three months' tin has risen well over £80 a ton to £872 a ton. Copper hung about £225 a ton for the first three months of the year and then burst into life bringing three months' metal up to £245½ a ton. Zinc has drifted aimlessly; spot supplies are no higher than at the beginning of the year, and three months' delivery at £82 a ton is scarcely better. Lead got a once-for-all boost of £4 a ton from the imposition of collective output restrictions this year, but three months' lead has since stuck at £68 a ton. Tin is now close to the price at which the International Tin Council's buffer stock

manager must sell off his reserve; copper is at a level which producers have said is satisfactory, and, if maintained, may induce them to reconsider their output restrictions; zinc is stalemated at a point which doesn't call for further action, and lead has fully justified the restrictions clamped upon its production.

The tin buffer stock manager has entered the market sporadically. The ITC's main activity has probably been transferred to another plane. Next week's meeting of the ITC may reveal whether any agreement has been reached for the release of stocks of American government-owned metal. Although the United States is not a member of the ITC, the country that holds the stocks now holds the aces, and the balance of influence has therefore swung sharply towards America.

The figures of the American Copper Institute fully confirm the recovery in American demand for copper in April. By the end of the month world stocks showed a sizeable fall. With the Kennecott wage issue in the offing, American demand cannot be trusted too far, but most suppliers have raised their prices by a further cent to 31 cents a lb, and forward prices have ranged up to 32 cents. Supplies are much tighter in America than in Britain, where the shortages are only in specialised qualities.

On the other hand, the prices of certain grades of zinc in the United States have been cut, and New Jersey Zinc has made a cut in output of refined zinc and has closed a mine. The Administration's scheme for aiding the domestic lead and zinc industry will be put before Congress this month. Meanwhile, the barter arrangements under which America will mop up the surplus of lead produced last year are being completed.

#### SHORTER NOTE

Standard-Triumph International has announced an estate car version of the Triumph Herald 1200. It will sell for £799 in Britain; the body is similar to that of the saloon as far back as the door pillars, behind which the roof is carried straight back to an upward-opening rear door. The mechanical specification is the same as that of the saloon.

## ROYAL EXCHANGE ASSURANCE

### 24th ANNUAL REPORT

### A YEAR OF CONSOLIDATION

### LORD KINDERSLEY'S TRIBUTE TO EXECUTIVES AND STAFF

The two hundred and forty-first Annual General Court of the Royal Exchange Assurance will be held on June 7th at the head office of the Corporation at the Royal Exchange, London, E.C.

The following is the statement by the Governor, The Right Honourable Lord Kindersley, CBE, MC, which has been circulated with the report and accounts for the year ended December 31, 1960:

Before I review the Report and Accounts for 1960 I must refer to the very sad loss we sustained last August by the death of Lord Weeks who had been a director since 1947. He was held in affection by us all and we greatly miss his presence and his wise counsel.

Last May Mr T. G. Calvert, one of our Assistant General Managers, retired. During his 45 years with the Corporation he successfully held a number of important posts and we hope he will enjoy his well-earned leisure. There was one other change in the Head Office Administration. Mr K. J. T. Boag retired from the position of agency manager on December 31st last after 41 years service. He takes with him our best wishes for the future and we welcome as his successor Mr John P. McLelland, formerly our branch manager at Liverpool.

Since the merger with the "Atlas" to which I referred in my statement last year we have been busy with the reorganisation of our group affairs and a number of far-reaching changes have been made from which we expect beneficial results.

We now have a group Investment Department with Mr J. P. P. Tyndall, Mr D. C. Kelly, AIA and Mr D. W. Allen as investment secretaries responsible for the supervision of the substantial investment portfolios of all our companies. The establishment of a group mechanisation department was recently announced with Mr E. C. Swinson, FCA as manager. It will be equipped with a De La Rue Bull 300 computer and apart from many additional functions which it will undertake, considerable work will be transferred from existing equipment to the new machinery. A group home fire department is now in operation with Mr W. A. Jackson as manager and we are working towards a similar arrangement in the home accident department.

#### OVERSEAS ORGANISATION

For the better control of the large volume of business of all kinds which we transact abroad a group overseas department has now been established in new offices at Austral House here in London. Mr H. C. Brett has been appointed manager of this department and Mr R. W. Warwick deputy manager and we have made a number of managerial changes in various parts of the world.

In Australia our new building in Sydney named Kindersley House, to which we have now moved our control office for that country as well as our Sydney branch, was opened last September

by the Governor-General, the late Lord Dunrossil, in the presence of a large number of distinguished guests. I was very happy to be present and to have with me Mr Rudolph de Trafford, the Chairman of the "Atlas," and Mr H. R. Roberts, our Deputy General Manager. It was a pleasure for me to meet on that important occasion not only the members of the "Royal Exchange" and "Atlas" Australian boards but also many of our friends there as well as the members of the staff; and to be with Mr F. H. Egerton, our manager for the territory, and Mr E. V. Elder, our associate manager. While I was in Australia I also had the pleasant duty of laying the foundation stone for our new building in Adelaide which we hope to occupy before the end of 1961.

In New Zealand an integration of our group business has been successfully carried through under Mr K. W. Millage and it has at once resulted in a more economical and fruitful use of our field staff with much better service to our agents and clients.

Since I last reported to you I have twice visited Canada and I came away well satisfied with the considerable measure of integration which has been achieved there by Mr J. T. Buttery, our group manager, and Mr D. J. Dunlop, our associate group manager. We decided to establish a new wholly owned Canadian subsidiary and this was incorporated last October with the title of The United Canada Insurance Company. For the present, the members of the "Royal Exchange" Canadian Advisory Committee constitute the board, with Mr J. T. Buttery as President.

I have also been in the United States again where, I am sorry to say, our Advisory Committee has been sadly depleted by the death of Mr Roderick McRae. We are fortunate to have Mr Samuel H. Woolley in his place. Whilst there I saw our United States manager, Mr G. Leicester Parker and other members of the New York staff, and across in San Francisco I was particularly pleased to be able to visit Messrs Rathbone, King & Seeley and Messrs Deans & Homer, two very good friends and agents of ours in the Pacific Coast territory.

There have been changes in our branches in Southern Africa. Mr L. F. Duncan has been appointed group principal officer for the Union of South Africa whilst continuing to act as South African manager for the "Royal Exchange." Our chief office for the Federation of Rhodesia and Nyasaland, which now reports direct to London, has been moved from Bulawayo to excellent new premises in Salisbury and the operations in that territory of the "Royal Exchange," "Atlas" and "Motor Union" have been merged, with Mr H. N. Roper as manager.

Mr H. J. Burt, formerly our manager for India, has just recently been given the important new appointment of resident secretary for the group in Brazil where we have a substantial and growing business. Mr J. T. Dunlop, based in

Calcutta with the title of eastern manager now looks after India, Burma and Ceylon for all our companies, while Mr D. G. Whyte controls Pakistan from Karachi. Both these officials have done a splendid year's work and have successfully surmounted many difficult problems.

Every territory abroad in which we have a branch has been visited by a member of the Head Office executive during the past eighteen months and, while the benefit of the changes which have been made may not be apparent immediately, I am confident that before long the results will justify the hard work and tremendous amount of overseas travelling which they have entailed.

On the subject of our overseas business generally the year 1960 yielded, even by postwar standards, more than its fair share of problems and not a few of them had a political flavour—notably those associated with African territories. Impending legislation affecting the conduct of our affairs in a number of countries also required close study. Some of the features with which we had to contend included two severe cyclones in Mauritius and two earthquakes in Chile; and we encountered special difficulties in Cuba. There was heavy damage by flooding in Western Europe at the time of the floods in England.

The uncertainty of the future relationship between Great Britain and the countries of the European Common Market gives rise to problems which affect us in a number of ways and it is clearly desirable that the issue should not remain undecided for too long.

Our business in the United States, while not yet on a profitable basis, continued to receive the closest attention during the year and with a further encouraging drop in the expense ratio the result was a great improvement on 1959 in spite of heavy losses caused by hurricane Donna in September. I would like to record our thanks to Mr S. V. Bangert and his colleagues at the "Sun"—with which office we operate under common management in the States—for the time they have devoted to our joint interests. We also greatly appreciate the untiring efforts of Mr Leicester Parker in New York.

#### LIFE AND ANNUITY FUNDS

| Year | ROYAL EXCHANGE            |                                       | Total of Life and Annuity Funds at end of year |
|------|---------------------------|---------------------------------------|------------------------------------------------|
|      | Net New Life Sums Assured | Total Life and Annuity Premium Income |                                                |
| 1958 | 11,191,381                | 3,966,493                             | 33,291,604                                     |
| 1959 | 16,026,967                | 4,795,404                             | 36,254,059                                     |
| 1960 | 22,204,254                | 5,291,750                             | 39,529,515                                     |

The foregoing table amply illustrates the tremendous progress made during the triennium which has just ended and we were in the happy position of being able to declare a bonus on life assurance policies at the highest rate in our history—namely 60s per cent.

An increased rate of bonus was also declared on all participating annuity contracts.

## ATLAS

| Year | Net New Life Sums Assured £ | Total Life and Annuity Premium Income £ | Total of Life and Annuity Funds at end of year £ |
|------|-----------------------------|-----------------------------------------|--------------------------------------------------|
| 1958 | 10,303,875                  | 4,483,679                               | 36,531,893                                       |
| 1959 | 16,377,760                  | 4,485,918                               | 39,718,437                                       |
| 1960 | 16,821,937                  | 5,202,130                               | 43,821,110                                       |

This fund has also had another very successful year, and in addition to its record life business new deferred annuities of £1,026,214 per annum were completed in 1960—again a record.

The next bonus declaration by the "Atlas" falls to be made at the end of 1961 and in the light of the present strong position we look forward with confidence to the outcome of the triennium.

The mortality experience continued to be favourable for both offices and the year's operations resulted in very satisfactory surpluses.

In the departmental reviews which follow the figures are on a consolidated group basis.

## FIRE DEPARTMENT

In the United Kingdom 1960 was notable for a continuance of the heavy fire wastage which, estimated at nearly £44 million for material loss alone, was practically the same as that of the previous year.

Whereas the major part of the increase in the wastage in 1959 coincided with an abnormally long, hot, dry spell, 1960 was officially described as being the wettest for 100 years, so in addition we had unusually severe losses caused by storm and flood—particularly in Wales and the West Country—in the closing months of the year.

The following analysis illustrates again that comparatively few very large fires have been responsible for an unduly large proportion of the annual wastage. It once more emphasises the fact that modern large, freely-communicating buildings provide fire loads too great for brigades to control and at the same time expose too great a value to the risk of destruction by one incident—

| Proportion of annual wastage caused by :— | 1958 | 1959 | 1960 |
|-------------------------------------------|------|------|------|
| 3 largest fires .....                     | 11%  | 20%  | 20%  |
| 6 largest fires .....                     | 15%  | 25%  | 25%  |
| 10 largest fires .....                    | 19%  | 29%  | 30%  |

The vital necessity for industrialists to segregate these vast risks by adequate fire breaks and to provide sprinkler protection is high-lighted by the disturbing fact that in each of the last two years at least 30 per cent of the national fire bill was caused by less than 0.02 per cent of all the fires in buildings attended by fire brigades in these periods. It is a very expensive matter for this country and deserves serious attention.

Insurers are anxious to make their experience and specialised knowledge of these matters available to industry and they particularly invite all who are responsible for planning or operating large factories and warehouses to consult them.

The world-wide premium income written in the fire department in 1960 was £18,566,518 and resulted in a surplus of £296,008 to which both the home and overseas fields contributed.

## MARINE DEPARTMENT

Our 1958 underwriting account was better than the previous year and at the present time the outlook for 1959 is favourable, largely due to the absence of total losses. In recent months, however, there have been numerous and heavy casualties which I am afraid must influence the results of our 1960 account.

So far as hull insurance generally is concerned there has been, apart from the North American continent, a relative stabilisation of ship repair costs and this of course is a very important factor in the final result of hull underwriting. But with the danger of higher costs in the shipyards there is real anxiety that we may be heading for another inflationary period similar to that experienced some years ago when hull underwriting accounts were so seriously affected.

The cargo side of the business still remains very competitive indeed and although our own experience has been reasonably satisfactory this has been largely due to our good fortune in missing a number of total losses. In all parts of the world claims for theft and pilferage remain far too high with, unfortunately, little sign of any improvement—in fact in certain areas the position has deteriorated to a distressing extent.

We are able to transfer the sum of £349,485 to the Consolidated Profit and Loss Account and leave the Fund at £5,050,929 representing 174.77 per cent of the premium income.

## AVIATION DEPARTMENT

A year ago reference was made to our decision to enter the aviation insurance field and the aviation department started operations at 37 Lime Street on September 1st last.

While no clear indication of results can be forthcoming for another year it would appear that a modest but satisfactory start has been made. Meanwhile we welcome into the Corporation's service Mr C. F. R. Ward, our aviation underwriter.

## ACCIDENT DEPARTMENT

The world-wide premium income in this department increased last year by £1,813,476 to reach a figure of £29,249,216. A surplus of £153,251 has been transferred to the Consolidated Profit and Loss Account.

It is interesting to reflect that in 1950 the total accident premiums of the companies now included in our group amounted to a little over £12 million; thus in the space of ten years the account has more than doubled.

With the rapid expansion in the use of motor transport it is only to be expected that the largest single contribution to this growth comes in the motor account, but the non-motor classes—personal accident, employers' liability, public liability, burglary and so on—have shown comparable increases.

The remarkable progress of accident insurance at home and abroad over the past decade has only in part been achieved by a development of the traditional classes of business: the changing conditions in which we live have presented to accident insurers numerous challenges, and a spirit of adventure has been seen in the development of the new classes of insurance that have been offered to the public.

For example, the various forms of cover now available to travellers arose from the demand created by the increasing popularity of holidays abroad; again, a legal decision that emphasised the liability attaching to a private individual to pay heavy damages for the consequences of careless walking led to a demand for insurance protection. The policies devised provide insurance against a wide range of personal liabilities, at a very low price, and have become deservedly popular. In these and other ways accident insurers have evolved policies whereby the individual for a modest sum may relieve himself of risks which could otherwise become a crushing burden.

Accident insurers may well take pride in their past achievements in serving all sections of the public and I am sure that we may look forward to the continuance of this trend in the future.

## TRUSTEE AND EXECUTOR DEPARTMENT

The aggregate trust funds together with the nominal amount of debenture and loan stocks for which the Corporation acts as trustee exceeded £379 million at the end of 1960, which compares with £300 million in 1957. To the former figure must also be added this year the funds similarly administered by the "Atlas" trustee department and this results in a combined total of over £407 million.

The inflow of new business has continued at a good level. A feature has been the increasing appeal of the service offered in managing and supervising the investments of private individuals and of company pension schemes.

## INVESTMENTS

The London stock market at the beginning of 1960 seemed to be pervaded by a false spirit of confidence but as the year wore on falling quotations reflected increasing pessimism about economic affairs in both the United Kingdom and North America. The following table based on well-known investment indices illustrates the adverse movement in respect of securities such as are to be found in all insurance funds:

|                                                                                    |                          |
|------------------------------------------------------------------------------------|--------------------------|
| Approximate percentage fall : end December, 1960 compared with end December, 1959. |                          |
| British Government Securities .....                                                | 7 1/4% (Financial Times) |
| Other Fixed Interest Securities .....                                              | 8 1/2% (Financial Times) |
| Equities .....                                                                     | 9 3/4% (Financial Times) |
|                                                                                    | 4 3/4% (Actuaries)       |

These movements can be explained in retrospect by the disappointing level of the country's industrial output coupled with its adverse balance of payments and the reluctance of the authorities against this background to relax credit and other restrictions.

However, falling security prices and an active new issue market presented many investment advantages to the group's life and annuity funds which annually generate a large volume of new money. To these funds we were able to add some £4 1/2 million of British Government loans upon particularly attractive yield bases. Over £1 million was added to mortgages but there was some net disinvestment in the other categories of fixed interest bearing securities.

It will also be seen that considerably over £1 million was added both to ordinary shares and to properties. In the latter category of investment we have formed associations with certain experienced property developers and we expect these to operate to our mutual benefit.

The gross average yields of interest income upon the life and annuity funds show a satisfactory upward trend:

| Fund                                 | 1958    | 1959    | 1960    |
|--------------------------------------|---------|---------|---------|
|                                      | £ s. d. | £ s. d. | £ s. d. |
| Royal Exchange Life .....            | 6 3 2   | 6 5 8   | 6 12 2  |
| Royal Exchange General Annuity ..... | 6 6 1   | 6 5 3   | 6 14 1  |
| Royal Exchange Pension Annuity ..... | 5 3 8   | 6 3 0   | 6 4 11  |
| Atlas Life and Annuity .....         | 5 17 4  | 5 19 4  | 6 7 7   |

Our investment policy in relation to the general funds has also been well rewarded with a rise in the consolidated total interest, dividends and rents of £515,000 to a total of £3,375,893.

With these funds one of our main investment preoccupations has been—and is likely to continue to be—the improvement of accommodation

for our branches both at home and overseas. I have already referred briefly to the completion of our new office block in Sydney and to the start that has been made upon a new building in Adelaide. In addition to these we are adding several more floors to the modern "Atlas" property in Melbourne. In New Zealand we intend to build a new group headquarters in place of our two smaller buildings on Customhouse Quay, Wellington.

In the United Kingdom plans are well advanced for the construction of new group offices in Liverpool, Birmingham and several other large provincial cities. In Eire we are to re-develop upon our fine site on College Green, Dublin.

The Court of Directors had this substantial building programme in mind at the time of our new capital issue in 1959 and these properties will certainly represent quite a large amount of money. They are all being "purpose designed" in whole or in part for our own occupation and they are expected to prove remunerative investments quite apart from helping to fulfil our group integration plans.

## CONSOLIDATED PROFIT AND LOSS ACCOUNT

The major items of revenue comprise gross interest of £3,375,893, transfers from the general departments of £810,334; also £173,802 being the Proprietors' share of life valuation surplus of earlier years.

Against the total income of £4,363,696 taxation amounts to £1,457,173 while the pre-acquisition profits of "Atlas" brought into that Company's books in 1960 account for £137,371. The profit for the year of £1,790,476 is carried to the Profit and Loss Appropriation Account where there remains, after deducting the cost of

the interim dividend and making provision for the recommended final dividend as well as the supplementary transfers to the trustees of the group pension funds, the sum of £4,227,414 to be carried to the Balance Sheet.

## DIVIDEND

In the light of the results disclosed, the Court of Directors has recommended that a final dividend at the rate of two shillings and three pence (less income tax) be paid for each £1 stock, making a total distribution of three shillings and nine pence (less income tax) for the year.

All in all 1960 was a very busy year for us throughout the world and I think it might fairly be described as one of consolidation. But little could have been achieved without the willing and active co-operation shown by the directors of all our associated companies and the team-spirit which was so evident among our executive officers throughout the group. I would like on your behalf to thank them, the departmental and branch managers and the whole staff at home and abroad for their efforts during the year.

At the end of June this year our General Manager, Mr H. A. Walters, will complete his two-year term of office as Chairman of the British Insurance Association, a position which he has held with great distinction, following on two years as Deputy Chairman. It is a matter of congratulation both to Mr Walters and to the Corporation that he should have been chosen for this high office and our thanks are due to him for carrying out these duties with such conspicuous success and for the extra burden which he has borne for the past four years. He has now expressed a wish to be allowed to retire

and your directors have agreed that he should do so on September 30, 1961.

Mr Walters entered the service of the Corporation 47 years ago and, apart from four years 1915 to 1919—with the Armed Forces, mainly in the Middle East, he has been continuously with the Corporation covering service at our branches in Paris, Brussels, Madrid and Budapest. After six years as Assistant General Manager he was appointed General Manager in 1954. I have had the pleasure of close collaboration with Mr Walters for the past fifteen years and I have learned to appreciate his wisdom, his administrative qualities and the human touch he has always displayed in dealing with staff matters. I know that all connected with the Corporation will wish both Mr and Mrs Walters many years of good health and happiness in which to enjoy his retirement.

Fortunately we have Mr H. R. Roberts, our Deputy General Manager, to succeed Mr Walters as General Manager. Mr Roberts has had 41 years of uninterrupted service with the Corporation. He has spent 25 years overseas—in Ceylon, India and South Africa, the last seven years of which he was manager for South Africa. I have worked closely with Mr Roberts for the past ten years and I have no hesitation in saying that he will be a worthy successor to Mr Walters and I wish him every success in his new and responsible position.

Finally, I send world-wide greetings to our local boards and advisory committees as well as to our agents and other friends. We greatly value the advice and support which we continue to receive from them in increasing measure. I must also thank the Sub-Governor, the Deputy-Governor and all members of the Court for the help which they have constantly given to me personally.

## BANCO DI SANTO SPIRITO

Established 1605

ROME

THE ANNUAL GENERAL SHAREHOLDERS MEETING was held in Rome on April 10, 1961, the Marchese Giovanni Battista Sacchetti being in the chair. In the course of the meeting the following Balance Sheet was approved :

## BALANCE SHEET AT DECEMBER 31, 1960

| LIABILITIES                          |                      | ASSETS                                   |                      |

|                                      |                      |                                          |                      |
|                                      | Lit. 321,743,501,769 |                                          | Lit. 321,743,501,769 |

It was further resolved to transfer Lit.250,000,000 to reserves and to distribute a 10 per cent dividend (*pro rata* on new shares).

# NORTHERN & EMPLOYERS ASSURANCE

## FIRST GROUP RESULTS

### EXCELLENT LIFE PROGRESS CONFIRMED BY QUINQUENNIAL VALUATION

#### LORD KNOLLYS' REVIEW

The annual general meeting of Northern & Employers Assurance Company Limited, will be held on June 14th in London.

The following are extracts from the circulated statement of the Chairman, the Rt Hon Viscount Knollys, GCMG, MBE, DFC:

These are the first Annual Accounts of the Northern & Employers Assurance Company, which bring together those of The Northern Assurance Company and The Employers' Liability Assurance Corporation. I am confining my remarks to the joint results of the two Operating Companies in order to give to shareholders as clear a picture as possible of the first year's results of the new Group.

#### PROGRESS OF INTEGRATION

In the United Kingdom a joint Staff Department and a joint Property Department are already in operation. Integration of the other Home Head Office departments has been planned to take effect by January 1, 1962, and the aim is to complete integration on the Home side, including that of branches, by the end of 1964. Each of the companies in the group will continue to operate under its own name, but within the general designation of "Northern & Employers Group."

Integration has already been completed in the United States by the merging of The Northern's United States Branch, the American Marine & General and The Halifax into a company named "The Northern Assurance Company of America." This came into being on January 1, 1961, and is being operated as a member of "The Employers' Group of Insurance Companies." Integration plans for other Overseas territories are now in the discussion stage.

#### RESULTS FOR 1960

The total underwriting profit of our group of companies for 1960 on Fire, Accident and Marine Accounts was just over £450,000. This is not so good a result as that which was achieved in 1959, but you may remember that for The Employers' that year was an exceptional one. Our total profit after taxation was £2,266,000, an increase of 23 per cent over the combined net profit of our companies in 1959. The interim dividend of 8½ per cent, together with the final dividend of 11½ per cent now recommended (making rather more than the total of 18½ per cent forecast in the offer to shareholders when the merger was announced last year), requires £1,277,868 net. The Northern is adding £100,000 to Contingency Reserve and the amounts carried forward on the Consolidated Profit and Loss Accounts of the two Operating Companies (after provision for their dividends) add up to £4,857,544.

The total non-Life premium income of our group increased during the year by £5,310,000, or 7.2 per cent, to £78,874,000. Some £1,000,000 of this increase was accounted for by substantial alterations in our reinsurance

arrangements in the United States. After allowing for this the percentage increase is fairly evenly spread between Fire and Accident business and is rather higher in North America than in the rest of the world.

The results for the United States show a comparatively small loss following a good year in 1959.

Canada's excellent underwriting profit, which was over £500,000, or 10 per cent, was the only one of any size. The results in most other Overseas areas and at Home were unprofitable in varying degrees.

#### FIRE

In the United Kingdom our companies, like very many others, suffered both from their participation in certain very large fires and from flood losses in November and December.

In Canada there were good results on our Fire Accounts. In the United States, where hurricane Donna cost us over \$1,000,000, we made a loss, a certain part of which was a book loss of a non-recurrent kind.

#### ACCIDENT

Here again our branches in Canada made the brightest showing, with a total result even better than that for 1959. At Home The Northern and The Employers' each made a small profit.

In the United States a loss on Motor business was more than made up for by fair profits on Workmen's Compensation and certain other Accident classes. Motor rates have been increased in certain States, some of them important to us, and we shall get part of the benefit of this in 1961.

#### LIFE

The Clerical, Medical and General Life Assurance Society is, as shareholders are aware, taking action to attain complete mutualisation, which will mean the end of its association with our group of companies, but shareholders can feel, I am glad to say, that the new Northern & Employers can count on the large, active and growing Life Account which has come to it with The Northern.

That this is so is evidenced by the results of the quinquennial valuation of The Northern Group made at December 31, 1960. As the result of this it is recommended that, out of the profits for this quinquennium on the Life, Annuity and Capital Redemption funds, £1,160,000 should be transferred to shareholders. This compares with a transfer of approximately £150,000 five years ago. Both figures are net of income tax, and the amount now recommended to be transferred represents a gross profit of over £1,900,000. As in the past, the amount transferred will be placed in a Shareholders' Reserve, from which it will pass to Profit and Loss Account by five equal instalments of £232,000 net of tax over the period 1960 to 1964 inclusive.

These gratifying figures are a reward for the policy of expansion of Life business which has been pursued vigorously by The Northern and its associated companies for the last fifteen years. New Life, Sums Assured in 1950 were approximately £7,000,000, in 1955 £27,000,000, and in 1960 £60,000,000.

The Northern has a separate Life Participation Fund for its with-profits policyholders, who are entitled to the whole of the profits of that Fund. As a result of the valuation as at December 31, 1960, bonuses have been allotted for the past five years at the satisfactory rate of 58s. per cent per annum. Furthermore, we are currently allowing interim bonus at the rate of 55s. per cent per annum on policies becoming claims in the present quinquennium.

In the United States The Employers' Life Insurance Company of America, in which we have a 49 per cent participation, wrote new sums assured of over £8,500,000 in 1960.

#### MARINE AND AVIATION

The Group's Marine premium income continued to rise during 1960, and satisfactory transfers were made to Profit and Loss Account. The casualties which occurred at the close of the year are, however, bound adversely to affect the settlements for that year's account during 1961.

In the Marine Account the improving trend was nevertheless continued, and each of the three open years showed a smaller loss ratio than its immediately preceding year at a corresponding stage.

Apart from the mid-air collision over New York of a DC8 and a Super Constellation last December, The Northern Group's own Aviation

#### SUMMARY OF THE CONSOLIDATED ACCOUNTS OF THE OPERATING COMPANIES

|                                                                              | Total<br>£'000 | Northern<br>£'000 | Employers'<br>£'000 |

| Marine .....                                                                 | 539            | 514               | 25                  |
| Total .....                                                                  | £458           | £79               | £379                |
| Life Profits .....                                                           | 306            | 232               | 74                  |
| Shareholders' Investment Income before Tax .....                             | 4,216          | 2,026             | 2,190               |
| Net Profit after Tax .....                                                   | 2,266          | 1,227             | 1,039               |
| Total Resources of the Group (excluding Clerical, Medical and General) ..... | £189,582       | £115,924          | £73,658             |

Account has enjoyed a relative freedom from major casualties, and this has resulted in a reduced first-year settlement.

#### INVESTMENTS

As a result of the merger, the Total Resources of the Group at the end of last year, excluding those of the Clerical, Medical and General Life Assurance Society, amounted to £189,600,000. The amount of funds invested, nearly half of which are attributable to the Life Assurance Funds of The Northern Group, grew by £12,000,000 to £154,000,000. The gross investment income derived from non-Life funds, that is to say, the investment income which accrues to shareholders, rose by £722,000 to £4,216,000, which should be looked upon as an exceptional increase. The Employers' has always held the major proportion of its investments in the United States, while The Northern's percentage in that country has been small. The joint world-wide holdings of the two partners now provide a more even spread between American and non-American investments.

Our total non-Life investments at market prices at December 31, 1960, showed an excellent appreciation over the values at which they stood in our books. Moreover, the trend of the markets since the end of the year has been such that there would be a further appreciation if our holdings were valued again at present prices.

## LISBON ELECTRIC TRAMWAYS

The sixty-third Annual General Meeting of Lisbon Electric Tramways Limited will be held on June 7th in London.

In the course of his circulated statement, the Chairman, The Right Honourable The Lord Rathcavan, commented on the considerable changes which had taken place in the traffic pattern in Lisbon following the commencement on December 29, 1959, of the running of the Lisbon Underground Railway. Under the terms of their contract with the Lisbon City Council, on May 15, 1960, the Company was called upon to withdraw certain tram services which ran along the route of the new Underground Railway. These were substituted by three new bus routes. The changes had had a detrimental effect on the Company's revenue.

Passengers carried, 377,717,367, showed a decrease of 3,991,678; miles run at 30,839,252 showed an increase of 42,460.

Although revenue has increased slightly in total, operating expenses have increased by a similar proportion. Due to the traffic changes previously mentioned tram operation has become exceedingly expensive and, despite every endeavour it has not been possible to cut expenditure in the same proportion as the decrease in revenue.

Of our net profit of £69,223 no less than £32,203 is derived from advertising revenue and sundry income. During the year the Company contributed £498,257 to the State Revenue of Portugal and to the Municipal Revenue of Lisbon, an increase of £8,069.

The profit for the year after all charges and Depreciation Reserve amounts to £69,223. This compares with £46,806 for 1959, an increase of £22,417. The Directors recommend an ordinary dividend of 6 per cent net for the year.

## THE LONDON ASSURANCE

### A MEMORABLE YEAR

The Annual General Court of The London Assurance will be held on June 7th in London.

The following is an extract from the circulated statement of the Governor, Mr Harald Peake:

The year 1960 has been a memorable one for the following reasons:

The Issued Capital has been increased from £2,550,000 to £5,053,750.

The Sea Insurance Company Limited, together with the Beacon Insurance Company Limited, and its other subsidiaries has been acquired.

For the first time the Group Assets exceed £100,000,000.

Following the Quinquennial Valuation of the Life Assurance Fund made on December 31, 1960, larger bonuses than ever before have been declared. In future, valuations are to be made every three years.

The yield on investments has continued to increase.

Good progress is being made with the gradual integration of the group business.

**LIFE DEPARTMENT:** The business of "The London" continues to expand. New sums assured in 1960 exceeded £14,000,000 and constituted a record. Total premium income has increased from £2,804,970 to £2,937,140. Interest earned on the fund has continued to increase, the rates being £6 9s. 0d. per cent gross and £4 18s. 5d. per cent net. At the end of the year the fund exceeded £33,000,000.

The Quinquennial Valuation of the fund was made at December 31st, 1960. The surplus arising has enabled us to declare a compound reversionary bonus of £2 15s. 0d. per cent per annum which is 10s. per cent over the rate declared five years ago. In addition, a special bonus has been declared on this occasion out of realised profits on the sale of investments. In the current series this special bonus amounts to £1 per cent per annum, thus making a total declaration of £3 15s. 0d. per cent per annum on a compound basis.

The figures disclosed in the Life Assurance Account of Beacon Insurance Company Limited, a subsidiary of "The Sea" are good and the premium income for the year has risen to £1,559,944.

**FIRE ACCOUNT:** Both "The London" and "The Sea" groups have returned a modest increase in premium income, the consolidated total being £11,282,965. The transfer of £41,417 to Consolidated Profit and Loss Account, whilst being higher than a year ago, is disappointing. Excellent results in some parts of the world have been offset by substantial losses in other parts.

**ACCIDENT ACCOUNT:** Premium income of both "The London" and "The Sea" groups has increased considerably from a total of £15,440,979 in 1959 (including "The Sea") to £17,198,164 in 1960. It has been necessary to charge an underwriting loss of £357,780 against a profit of £35,910 transferred a year ago in respect of "The London" only.

**MARINE ACCOUNT:** This department has had another very good year resulting in a transfer of £700,000 to the Consolidated Profit and Loss Account compared with £350,000 (for "The London" only) in 1959. Both "The London" and "The Sea" have contributed to this increase which is very creditable in view of the more competitive conditions.

**PROFIT AND LOSS ACCOUNT:** The Group profit for the year after taxation amounts to £1,651,326. The directors have recommended dividends on the Ordinary Shares totalling 1s. 9d. per 5s. share. The amount of profits retained in the business as a result of the year's operations is £736,918.

**PROSPECTS:** During recent years the insurance industry has been in a state of transition with progressive grouping into larger units. Our recent acquisition of "The Sea" and the "Beacon" fits well into this pattern, following as it does other amalgamations in previous years.

Your directors do not think that size alone will necessarily provide better services to policyholders, improved conditions to employees or larger dividends to shareholders. They believe that benefits will accrue to all concerned by a gradual and closer integration within the group and that medium sized and very personally conducted branches are likely to expand existing connections and to attract new business.

In spite of the difficult conditions for underwriting in many parts of the world I think that the future can be faced with confidence.

## BANQUE FRANCAISE DU COMMERCE EXTERIEUR

The Meeting of the Shareholders of the Banque Française du Commerce Extérieur was held on March 22, 1961, under the Chairmanship of Mr Georges Assémat, Vice-Chairman and Managing Director.

On opening the meeting, Mr Assémat made a speech referring in high terms to the late Chairman, Mr Jacques Belin, who will be sadly and universally missed by all his colleagues on the Board and by his collaborators in the Bank; he gave a brief account of Mr Belin's career, and outlined the work performed in the Bank of which he was the Founder.

Mr Assémat, on behalf of the Board of Directors, read out the Report on the Company's financial year 1960.

Thanks to the expansion of business with foreign countries and growth in the Bank's activities, the total of the Balance Sheet has increased by 35 per cent against 18 per cent during the previous financial year. Despite the improvement in business, the net profit shows a slight reduction, because the financial year suffered over one whole year from the incidence of the reductions of terms decided upon in December, 1959, and which were of considerable importance as regards business with foreign countries.

The net profit, after deduction of all charges, amounts written off for depreciation and provisions, amounts to NF4,118,949.46 against NF4,923,870.84 in 1959.

After having made provision for statutory allocations in favour of shareholders, staff and welfare services, the Board allocated NF1,300,000 to the General Reserve Fund and placed at the disposal of the Meeting of Shareholders a balance of NF1,395,159.56.

The Meeting, after having heard the Report of the Auditors and taken note of the approval of the Welfare Committee, unanimously approved the accounts and, in particular, resolved to allocate to the shareholders an additional dividend of 5 per cent and to transfer to the General Reserve Fund a sum of NF250,000.

The whole of the Bank's own funds, excluding provisions and depreciation, will accordingly reach a sum of NF38,372,000.

## SNIA VISCOSA

SOCIETÀ NAZIONALE INDUSTRIA APPLICAZIONI VISCOSA

(Manufacturers of Man-made and Synthetic Fibres)

MILAN, ITALY

The Annual General Meeting of SNIA VISCOSA was held in Milan on April 15th, with Mr Franco Marinotti in the Chair, and the following are details of the report presented by the Board of Directors:

### REVIEW

The Report begins by reviewing the artificial and synthetic fibre industry's development in Italy and throughout the world.

In 1960, new world records were achieved both in production and exports. Moreover, activity in the Italian industry was marked by a particularly favourable trend, with a production of 443 m. lb of fibre representing an increase of 8 per cent over the previous year. Exports of natural and man-made fibres also showed considerable increases.

Particular reference was then made to the development of the SNIA VISCOSA Group which in 1960 produced 242.5 m. lb of fibre. Full information, of an economic and technical nature, was supplied regarding these fibres, as well as in respect of the activities of the various companies in the Group. Production and sales of rayon and staple fibres were satisfactory. There was an increase of 45 per cent in the production of "Lilion" polyamide fibre. The situation as regards "Merinova" proteic fibre improved considerably. The increase in the production of acetate fibres was higher than the national average.

The Experimental and Research Centre contributed largely to placing SNIA VISCOSA in a prominent position as regards technical progress and achievements. The new process for the production of caprolactam was the object of positive acclaim all over the world. Licences for the use of this process were granted to foreign Groups of world standing and further negotiations are pending. As for the production of "Lilion", it was stated that the construction of a new polymerisation plant and a new staple fibre plant will shortly be completed. Caprolactam produced by the process evolved by the SNIA VISCOSA Group proved to be most efficient plastic material. Production on an industrial scale also began of "Velicren" polyacrylic fibre. Finally, it was stated that the methane based carbon sulphide plant was put into operation.

### ASSOCIATED COMPANIES

The Report also gives details of the activities of the various companies in the Group, both in Italy and abroad.

In particular, S.A.I.C.I. considerably increased production of cellulose as well as chemical products, agricultural products and electric energy. A plant for the production of polyvinyl chloride is in an advanced stage of preparation. Construction of a new hydro-electric plant has started.

Gisa Viscosa, in addition to its normal activity, started the production of transparent cellulose, "cisafan," and the production of material in sheets.

Cotonificio Vittorio Olcese and Cotonificio Veneziano, both made marked progress, whilst Società per la Filatura dei Cascami di Seta also recorded satisfactory results.

As regards companies operating outside Italy, the Report mentions that the SNIA VISCOSA Group now has an interest in South India Viscose, which has a plant for rayon, staple fibre, sulphuric acid and carbon sulphide in an advanced state of construction.

The Spanish subsidiary, Sniace, closed the financial year with favourable results, thanks to the cellulose plant which helps to produce staple fibre, and also sells textile cellulose and paper cellulose on the Spanish market.

In Argentina, Sniafa was able to pay a good dividend at the close of the financial year, as its regular output was fully taken up by the market.

Fibra S.A., the Brazilian company, was affected by the difficult economic position of the country, but the improved plant should provide good results in the current year.

In spite of keen competition, Cechisa and Vichisa, the two Mexican subsidiaries, managed to achieve a satisfactory output to meet the demands of the market.

### CHAIRMAN'S SPEECH

During the discussion, the Chairman, Mr Marinotti, further developed several points already mentioned in the report, and in particular he emphasised the need for large-scale investments, especially for scientific research, in order to keep the SNIA VISCOSA Group to the fore in its particular field. At the same time, the important foreign Groups which share in the company's capital, were also aware of the necessity and economic value of the financial effort required. He then gave some facts regarding the Group's turnover and the labour force employed, which were the source of the progressive strengthening of the Group itself, both at home and in international markets.

### RESULTS

The Meeting then unanimously approved a resolution which expressed satisfaction with the favourable results, appreciation of the technical progress achieved, and confidence in the prospects of new products at low prices. The same resolution also expressed thanks to the Chairman who, together with the Board of Directors and all employees, is firmly leading SNIA VISCOSA towards a secure future.

The Meeting also approved the Balance Sheet and the Profit and Loss Account which had closed with a net profit of Lit. 4,300 m., a considerably higher figure than the Lit. 2,900 m. recorded for the previous year. The Balance Sheet showed that Lit. 6,000 m. had been appropriated to the Sinking Fund as against Lit. 4,500 m. in the preceding year.

The Meeting then approved the proposal to distribute a dividend of Lit. 140 for each old share and of Lit. 70 for those shares participating in profits as from July 1, 1960, as against Lit. 120 in the previous year.

## ATLAS ELECTRIC AND GENERAL TRUST LTD.

CONTINUED INCREASE IN REVENUE

The fifty-third Annual General Meeting of Atlas Electric and General Trust Limited will be held on June 8th in London.

The following is an extract from the circulated Statement of the Chairman, The Right Honourable Lord Remnant, MBE:

Gross Revenue of £1,579,460 shows an increase over the previous year of £128,064, or 8.8 per cent, whereas the previous increase was £161,619, or 12.5 per cent. Additional income received from Double Taxation Relief has fallen from £172,693 to £119,946. This amount will inevitably fluctuate from year to year.

This year we have received income from some of our few remaining fixed interest investments in excess of the amount applicable to one year.

Based on the valuation of the investments, the average gross return is 4.9 per cent.

Expenses show an increase of £4,226, whilst taxation on our larger net revenue has increased by £50,355 to £593,571.

The ordinary shareholders are participating fully in the continuing prosperity of the Trust. The actual dividend of 9 per cent compares with the equivalent of 7½ per cent last year.

It is satisfactory to note from the statistical record, which is contained in the Report, that in the 14 years since the Company became solely an Investment Trust, there has been a uninterrupted rise in its gross income and net revenue, and in dividends paid on the Ordinary Shares.

The valuation of the investments at £32,055,551 is satisfactory, being £3,658,133 or 12.9 per cent greater than the previous year. During the year we have continued to pursue the policy of improving the quality of our portfolio. In doing so we have reduced the total number of investments, which now number 992, and sacrificed the high return obtainable on some of the stocks, principally fixed interest stocks, which we have sold.

Nothing has happened during the past year to shake our conviction that the policy of reducing our fixed interest investments is the right one. Our holdings of such have now been reduced to a fraction over 2 per cent of the whole. Geographically, holdings in Great Britain still comprise by far the largest part of the total. We have slightly increased our investments in the USA and Canada and the percentage of such investments in the USA has risen from 13.08 per cent to 14.42 per cent and in Canada from 2.88 per cent to 3.18 per cent.

After reviewing the events of the year—the continual changes in the financial sphere and the many aspects of national and international affairs—which had a bearing on the problems of investment, Lord Remnant concluded:

Despite all difficulties, there is undoubtedly a growing feeling of optimism. Great Britain's present export trade of some £3,000 million a year may well be a springboard from which a further substantial advance can be made, and there can be no denying the inventive genius of the British race.

Having regard to the very substantial increases in our gross income which we have enjoyed during the last two years in particular, I cannot anticipate a continuance of such a rate of increase but I am of opinion that we shall show some increase during the current year.

## COMMERCIAL UNION ASSURANCE

INCREASED PREMIUM INCOME

The Annual General Meeting of the Commercial Union Assurance Company Limited will be held on June 5th in London.

The following are extracts from the Review for 1960 by the chairman, Mr Ronald C. Brooks, OBE, MC:

We were sorry to lose in May last year the services of Lord Portal, who found it necessary to resign from the Board on becoming Chairman of the British Aircraft Corporation Limited. Lord Portal joined us in 1949 and we wish him well in this new and important appointment.

The departmental results are given in some detail later in this review but, in general terms, the year 1960 has been a difficult one. Our business again increased in practically every territory in which we operate and our net premium income in the Fire, Accident and Marine Accounts expanded to over £112 million. The Life Department had another very good year, with net new sums assured reaching a record £73 million. The Fire and Accident Accounts both produced an underwriting loss, due primarily to another unsatisfactory year in the United States, where the damage caused by hurricane Donna largely offset the substantial improvement which would otherwise have been seen. The continued underwriting losses in America are not unnaturally a cause for concern but we are beginning to reap the benefit of more economical working as we gradually integrate the various component parts of the Group organisation, and, provided there is no major economic disturbance, there is reason to hope that the fundamental improvement which is now evident will continue in the present year. In the Marine Department the Accounts for 1958 have been closed and the surplus of £756,084 has been transferred to Profit and Loss Account.

You may have seen some reference in the national press to the purchase by this Company of buildings in Great St. Helen's and an adjoining site in St. Mary Axe. The growth of our organisation in recent years has resulted in our having to operate from a number of separate offices in the City of London, and it has long been our intention, as and when opportunity arose, to build ourselves a new headquarters for the entire Group. The purchase of this site has given us the opportunity we have been looking for and we hope to carry out its development over the course of the next few years.

**Fire Department.**—Net Premium Income 1960 £47,723,463 (1959 £47,001,988); increase £721,475. The ratio of claims paid and outstanding was 55.44 per cent, commission 21.42 per cent and expenses of management 23.20 per cent. After adjustment of the provision for unexpired risks there was an underwriting loss of £390,846 (82 per cent of the premium income), which has been transferred to Profit and Loss Account. The Fire Fund now amounts to £36,361,731, or 76.19 per cent of the premium income.

**Accident Department.**—Net Premium Income 1960 £59,727,139 (1959 £55,439,027); increase £4,288,112. The ratio of claims paid and outstanding was 60.48 per cent, commission 15.62

per cent and expenses of management 21.29 per cent. After adjustment of the provision for unexpired risks there was an underwriting loss of £146,740 (25 per cent of the premium income), which has been transferred to Profit and Loss Account. The Accident Fund now amounts to £32,640,856 or 54.65 per cent of the premium income.

**Marine Department.**—Net Premium Income 1960 £5,289,143 (1959 £4,984,798); increase £304,345. The claims paid amounted to £3,530,360, and out of the surplus of the 1958 underwriting year and previous years now closed, the sum of £756,084 has been transferred to Profit and Loss Account. The Marine Fund now stands at £7,638,156, which is 144.41 per cent of the premium income.

**Life Department.**—New Sums assured £73,327,371 (1959 £62,217,750); increase £11,109,621; new annuities £2,733,658 per annum (1959 £2,729,831); increase £3,827; claims by Death £2,565,467 (1959 £2,359,936); increase £205,531. Matured Endowment Assurances £4,688,370 (1959 £4,607,778); increase £80,592. All these figures are net, after allowance for reinsurance ceded, and they represent the aggregate of the figures of the Commercial Union and North British and Mercantile Life Funds and of the Life Fund of The Dominion Life Assurance Office of New Zealand. All these Life Funds remain open for the transaction of new business and all have produced record figures.

The Commercial Union Fund increased by £7,018,635 to £79,237,011 during the year, and the gross income from interest, dividends and rents now represents a yield of £6 2s. 6d. per cent on the total invested assets.

In the North British and Mercantile activities the Life Fund and the Annuity Fund are invested separately and together they increased during 1960 by £5,400,064 to the impressive total of £80,673,358.

The Dominion Life Assurance Office of New Zealand operates exclusively in the country of its title. Its financial year ends on September 30th and the figures have been incorporated with those of the other Life Funds, whose years all end on December 31st. During the year ended September 30, 1960, the Dominion Life Office Fund increased by £1,098,523 to £9,362,698 and the effective gross yield thereon was £5 1s. 11d. per cent.

**Profit and Loss Account and Appropriation Account.**—Gross interest, dividends and rents at £8,133,991 show a very substantial increase, to which, of course, the investment of the proceeds of the share issue we made last July has contributed. Underwriting profits, however, have fallen and there is a small reduction in the total of our Life and Leasehold Redemption profits.

At the time of the new share issue last July the Directors forecast for 1960 an Ordinary dividend of 2s. per 5s. share on the increased capital, and an interim Ordinary dividend of 1s. per 5s. share was paid last November. In view of the substantial increase in our interest income, it is satisfactory that in this our Centenary year

the Directors are able to recommend a final Ordinary dividend of 1s. 3d. per 5s. share, making, with the interim dividend of 1s. paid in November, a total for the year of 2s. 3d. per 5s. Ordinary Share. Our revenue from interest, dividends and rents, together with the Shareholders' Life Profits, is more than sufficient to meet all taxation thereon and the net cost of the dividends paid and recommended.

## BEYER, PEACOCK & CO., LIMITED

(Locomotive Builders and General Engineers)

MR HAROLD WILMOT'S SURVEY OF WIDESPREAD ACTIVITIES

The Annual General Meeting of Beyer, Peacock & Co., Ltd., was held on May 17th in London, Mr Harold Wilmot, CBE (Chairman), presiding.

The following is an extract from his circulated review:

In 1960 the working of the Holding Company type of structure which was instituted in the previous year and the organisation of the Group as a whole have brought some improvements in our operations and given indications of useful further development.

With Beyer, Peacock & Co., Ltd., as the Holding Company all the other Companies are grouped under five principal subsidiaries, i.e. Beyer, Peacock Gorton, Ltd., Richard Garrett Engineering Works, Ltd., Denings of Chard, Ltd., Anti-Attrition Metal Co., Ltd., and Air Control Installations, Ltd. These are the major operating Companies (excluding, of course, our associated Company Beyer Peacock [Hymek] Ltd.). Each of the five groups has made a profit in 1960.

The reorganisation of the factory at Gorton is complete with regard to the change-over of productive facilities from being wholly steam to being predominantly diesel traction. The first of a series of ninety-five main line diesel hydraulic locomotives ordered by the British Transport Commission successfully underwent its trials approximately three months ahead of schedule and it is more than gratifying to be able to report that our first major effort in this field has commenced so smoothly. Great credit for this must be given to Mr James Hadfield and executives at Manchester, and to our Hymek partners—Bristol Siddeley Engines Ltd. and J. Stone & Co. (Deptford) Ltd. After all that has been said in the press and elsewhere concerning late deliveries by British manufacturers I feel that shareholders will like to know the degree of success of your own Company in this connection.

As I indicated last year the Richard Garrett Engineering Works of Leiston have increased their production of machine tools and have also made deliveries of some new machinery (which is applicable to the packaging and cartoning industry) as a result of a twenty-year agreement we have made with the S & S Corrugated Paper Machinery Co. Inc. of Brooklyn, New York. Your Board feels that the packaging industry has considerable expansion ahead of it and entry into this field in collaboration with one of the American leaders is likely, over a long term, to be highly advantageous to our Group and to be a significant Group Export contribution.

The agricultural equipment industry has suffered in 1960 by reason of the credit squeeze imposed by the Chancellor. It was, therefore,

vital to fill the obvious gaps by additional export work and our efforts in this direction were satisfactory.

Anti-Attrition Metal Co. Ltd. emerged at the end of 1960 with a result considerably better than the previous year. I reported to the shareholders of Anti-Attrition when their accounts were recently posted to shareholders that although by means of increased sales pressure our total turnover for the year was increased, this was at the expense of profit margins. The Board of that Company is considering by what means the fortunes of Anti-Attrition can be still further improved.

With regard to Air Control Installations Ltd.'s activities I am pleased to be able to say that the licence agreement we made with Svenska Flaktfabriken of Stockholm, Sweden, in connection with their "Velovent" High Velocity System for Air Conditioning is showing every indication not

## COMPANY MEETING REPORTS

only of adding to our range of production but also of being satisfactory in the financial sense.

You are aware that until recent times our Gorton Works was fully engaged on the production of main line Beyer-Garratt steam locomotives. We were, nevertheless, not slow to appreciate that the modern trend in railway operation was away from steam and towards diesel and electric traction and we formulated our long-term plans accordingly. In consequence, as our Gorton Works was fully occupied in the construction of Beyer-Garratt locomotives, the Metropolitan-Vickers-Beyer, Peacock Company was formed some eleven years ago for the purpose of manufacturing diesel electric and straight electric locomotives.

In view of the reduced demand for steam locomotives, our Gorton Works has been reorganised and is now capable of meeting all foreseeable demands on your Company for

THE ECONOMIST MAY 20, 1961

steam, diesel and electric locomotives, so that the capacity at Stockton-on-Tees has become surplus to our requirements. We have, therefore, along with our partners in this enterprise, decided to place the Metropolitan-Vickers-Beyer, Peacock Company in voluntary liquidation.

In summarising the results of 1960 I think I can say that the forecast I made last year has been borne out by the events. I see no reason to expect that the results for 1961 will not be at least as good as those for 1960.

On December 31, 1960, I came to the end of my service contract as Managing Director of Beyer, Peacock & Co., Ltd., having attained the age of 65. As a result of this the Board have appointed Mr James Hadfield, MBE, to be Managing Director of the Holding Company, and to be either Chairman and/or Managing Director of a number of the other subsidiaries.

The report and accounts were adopted.

THE ECONOMIST MAY 20, 1961

COMPANY MEETING REPORTS

## G. & J. WEIR HOLDINGS

### REDUCTION IN TRADING VOLUME AND PROFITS GROUP DEVELOPMENTS

The sixty-seventh Annual General Meeting of G. & J. Weir Holdings Ltd., will be held on June 7 at the Registered Office, Cathcart, Glasgow.

The following are extracts from the Statement of the Chairman, The Viscount Weir, CBE, which has been circulated with the report and accounts for the year ended December 31, 1960:

#### GENERAL REVIEW

As a result of the year's trading your Group of Companies shows a reduction of 10 per cent on total output compared with 1959, when the output achieved was over £21 millions. Despite the reduction in trading volume, 1960 was in other respects a year of genuine growth and progress for the Group.

An outstanding technical event was the successful introduction of the Weir Multiflash Land Evaporating Plant, exemplified by the starting up of the installations at Kuwait and Guernsey. This was the successful culmination of three years' intensive research and development, and emphasises our pre-eminence in the important sea water distillation field, with its marked possibilities for future expansion.

Notable product development also continued throughout the Group, particularly at Drysdale's and Zwicky's, with all the promise of future benefits. We are not, however, content to rely exclusively on our own efforts and your Board has continued its policy of growth in increasing the diversification of your Group's activities both through the acquisition of other companies and by agreements for manufacture under licence. Licensing is a relatively rapid method of supplementing our product range through the addition of well-tried and established designs and we continue our efforts in this direction.

#### THE ACCOUNTS

The current year's output which, as I have already mentioned, was approximately 10 per cent lower than last year, resulted in a Trading Surplus of £1,796,323 against £2,476,387. As well as having a direct effect on profits, the reduced output also resulted in unabsorbed overheads and this, together with the effects of keener competition and higher costs, resulted in profits being disproportionately lower than the fall in output.

Taxation absorbed £971,111, a higher proportion of gross earnings than the comparable figure in 1959 which received the benefit of a substantial over-provision from previous years.

The resultant Group net profit was £795,993 compared with £1,256,143, and after deduction of a reduced amount retained by subsidiary Companies, the available profit of the Holding Company was £700,690 against £1,041,365. With the addition of £590,188 brought forward from last year, the amount available for disposal was £1,290,878 and your Directors have applied £148,297 of this sum to General Revenue Reserve. They now recommend a Final Dividend of 12 per cent, thus maintaining the previous year's total distribution of 18 per cent.

Under Fixed Assets you will note the increased investment in Associated Companies due mainly to our newly acquired interest in WEIRITAM SA. There is also included under this heading

the initial capital of Weir-Chicago Bridge Inc. and a 50 per cent participation in a small selling Company incorporated in Spain. The additional amount of Trade Investments is accounted for by a rights issue of unsecured convertible Notes made by our Australian Associate, Federated Engineering Industries Limited, during the year. The other Fixed Assets, namely, Buildings, Plant, etc., show a reduction compared with last year due to the depreciation charge being in excess of the amount expended on new equipment.

The investment in net current trading assets showed a slight reduction on last year reflecting the somewhat lower output and shorter order books. As a consequence, the liquid position has improved on what was already a very healthy figure.

A considerable amount has been transferred from Capital Reserves to Revenue Reserves so that the former now includes only gains on sale of Fixed Assets and Investments in excess of original cost of assets sold. Previously the Capital Reserves reflected gains in excess of book value of assets sold.

The only other item to which I would draw your attention in the Consolidated Balance Sheet is the heading "Other Specific Provisions" which includes £225,000 in respect of the replacement of equipment supplied to an Overseas customer in 1959. As explained in the Directors' Report £175,000 of this amount has been provided out of existing provisions and reserves of G. & J. Weir, Limited, at December 31, 1959, leaving £50,000 to be charged against net profits in 1960.

#### DEVELOPMENTS

The following are the major developments of your Group since my last Statement:

**Weiritam.**—In March, 1960, G. & J. Weir, Limited, announced they had acquired a substantial interest in the issued capital of Société Anonyme Installations Thermiques et Auxiliaires de Machines (ITAM). ITAM is a long-established French Company with a high reputation as designers of heat exchange equipment and complete feed systems for both marine and land applications.

Weir and ITAM have also entered into an agreement for the co-ordination and exchange of technical effort on products in which they are jointly interested and, in addition, ITAM will act as exclusive agent for the sale of all Weir products in France and Belgium. Having regard to the development of the Common Market I feel that this association is one likely to prove of considerable future value to your Group.

**Alley Compressors Limited.**—In November, 1960, G. & J. Weir, Limited, purchased the trading assets of the Compressor business of Alley and MacLellan (Polmadie), Limited, and arrangements were made to continue manufacture of compressors to Alley designs at Cathcart and to maintain the service and spare parts to the former customers of the Polmadi Company.

**Weir-Pacific Valves Limited.**—An important development by Weir Valves Limited was announced in December. This Company has entered into an agreement under which it made an issue of Shares to Pacific Valves Inc. of Long Beach, California, in return for which Weir

Valves were given the right to manufacture and market Pacific Valves Inc. products throughout the world excluding the United States and Canada.

As a result of this agreement, Weir Valves Limited, although still remaining under the control of the Holding Co., has now changed its name to Weir-Pacific Valves Limited.

**Weir-Catton Limited.**—In 1958 your Company acquired 50 per cent. of the issued capital of Weir-Catton Limited, a Holding Company with two wholly-owned operating subsidiaries—Weir Foundries Limited (formerly Argus Foundry Limited) and Catton & Company Limited, Leeds. As indicated to you in my statement last year, the company made good progress and I am glad to report that in respect of the current year the results have also exceeded expectations.

In view of the continuing good prospects for this undertaking, your Board decided that it would be advantageous to the Group if we could acquire the whole of the issued capital, and arrangements to this end have been successfully concluded.

## CHERSONESE (F.M.S.) ESTATES LIMITED

### MR T. B. BARLOW'S REVIEW

The Fifty-first Annual General Meeting of Chersonese (F.M.S.) Estates Limited was held on May 16th in London. The following is a summary of the review by the Chairman, Mr. T. B. Barlow:—

The profit for 1960 was £85,132 compared with £113,000 for the previous year, the difference was caused by the fall in the profit on copra from £35 to £21 a ton. £24,000 has been provided for taxation and £25,000 has been transferred to Replanting Reserve. A dividend of 5d. per 2s. stock unit, less income tax, requiring £38,828 is recommended.

Replanting in 1960 cost £31,900 but most of the arrears of this work has been done and expenditure under this heading will diminish.

The rubber crop was 839,775 lbs. and as the young areas are reported to be in good order a substantial increase is expected in the second half of 1962 and may well reach 2 million lbs. in three year's time. Similarly the crop from the 600 acres of young coconuts is also increasing.

The high price of 42d. attained by spot rubber, caused by a technical shortage, was detrimental to the Plantation Industry as it stimulated plans for more synthetic factories. This industry's output has risen from 535,000 tons in 1950 to 1,887,500 tons in 1960, a formidable increase until it is recalled that consumption has risen in proportion.

No great disparity between consumption and production of natural rubber is expected and therefore the recent price of 25d. may prove to be the year's average.

Copra is usually a steadier market and the present price of £54 a ton in Malaya leaves a moderate margin of profit providing labour costs are not increased by high rubber prices. Wage rates in Malaya for all estate labourers are tied to a scale based on the price of rubber. The local demand for copra is steady. With rubber and copra to rely on the current year should be reasonably satisfactory although unless something unforeseen occurs it will not be as good as 1960.

The report and accounts were adopted.

## Bayerische Hypotheken- und Wechsel-Bank

MUNICH

Theatinerstrasse 9-18

Kardinal-Faulhaber-Strasse 10

279 Branch Offices in Bavaria, the Palatinate, and Baden-Württemberg

Offices of the Mortgage Department

Regensburg, Saarbrücken, and Würzburg.  
Agent for Southern Baden at Freiburg i. Br.

At the General Meeting held on April 12, 1961, it was agreed to distribute a dividend of 16 per cent and a bonus of 5 per cent on nominal DM 100,000,000.—Common Stock for the business year 1960. Payment will be effected as from April 13, 1961, through any branch of our Bank and the other pay offices that have been publicly announced against presentation of coupon No. 11 and less 25 per cent capital revenue tax, 10 per cent of which can be recovered upon request, in accordance with the Anglo-German agreement on double taxation.

#### The following are some figures from the Balance Sheet as per December 31, 1960:

|                                                                   |                          |
|-------------------------------------------------------------------|--------------------------|
| Capital (capital stock and reserves) .....                        | DM 255,000,000.—         |
| Deposits with the Banking Department .....                        | about DM 2,301,654,000.— |
| Savings Deposits included therein .....                           | about DM 948,462,000.—   |
| Pension Fund .....                                                | about DM 73,717,000.—    |
| Debtors .....                                                     | about DM 1,217,409,000.— |
| Long-term Loans of the Mortgage Department .....                  | about DM 1,686,858,000.— |
| Outstanding Bonds and Borrowings of the Mortgage Department ..... | about DM 1,789,006,000.— |
| Net Profit .....                                                  | about DM 21,177,000.—    |

Munich, April, 1961.

THE BOARD OF DIRECTORS.

# DICTAPHONE COMPANY LIMITED

A YEAR OF STEADY PROGRESS AND ACHIEVEMENT

MR LLOYD M. POWELL ON CONSTANTLY EXPANDING OPERATIONS

The Annual Meeting of Dictaphone Company Ltd. was held on May 10th in London.

Mr Lloyd M. Powell, the chairman of the Company, and president of Dictaphone Corporation, presided and, in the course of his address, prefaced his statement by referring to the annual meeting of the parent Company, Dictaphone Corporation, which covered the same period under review, that being the year ended December 31, 1960.

He explained his election to the board, of which he had been appointed chairman, followed the death of Mr C. King Woodbridge during a visit to this Company in October of last year, and paid tribute to the previous chairman, who was responsible for the formation of this company and had guided its destiny with remarkable skill and ability for nearly twenty-five years.

Continuing, the chairman reported that the sales of the Dictaphone 'Time-Master' dictating machines had exceeded those of any other period in the history of the Company. He went on: "The year has been one of steady progress and our achievements will compare very favourably with the improved picture, I find, of British industry generally."

The market shows a particularly satisfactory increase, and the sales of Dictaphone 'Time-Master' dictating machines and Dictabelt records have increased by 15 per cent over the previous year. I think, I may claim, without fear of contradiction, that the Dictaphone 'Time-Master' is the world's most successful dictating machine. It is as ideally suited to the needs of overseas business men as it is to the British, and it is chosen for the same reasons. Only Dictaphone's exclusive Dictabelt record gives you all these advantages: (1) Clearest recordings; (2) Visible recording; (3) Unbreakable plastic; (4) Mailable; (5) Filable; (6) Low cost and non-erasable records.

## DIVERSITY OF BUSINESS

While the Company's major business is Dictaphone 'Time-Master' dictating machines, and Dictabelt records, it also is constantly expanding its field of operations, and has found a large potential market of increasing interest in recording and reproducing machines for a variety of applications. Dictaphone is the oldest name in our fields of operation and is the registered trade mark of Dictaphone Corporation. The new Dictaphone 'Time-Master' is the most advanced dictating machine in the world. Our range includes machines for monitoring radio broadcasts and a host of others for such useful tasks as air traffic control, telephone recording and police and fire calls. Our notable time-announcer, best described as a 'talking clock', remains popular and our recent entry into the educational field has met with unprecedented success. In our electronic classrooms, students are instructed by recorded lessons.

## A UNIQUE INDUSTRY

Ours is a highly integrated organisation, unique in its industry. It plans, designs, researches, engineers, manufactures, sells and services its own products directly. Therefore it has complete control over every phase of its business—and not the least of the benefits is a

quality control that extends through all phases of marketing and service as well as manufacture.

## DIRECT SALESMANSHIP

Every Dictaphone product is bought ultimately from a Dictaphone salesman or authorised agent; no dealers are involved. Dictaphone salesmen are selected and trained not just to sell but to serve. In calibre and stature they rank at the top of the office equipment industry. They are business men who believe in their business. To help them sell and serve, the Company continually brings its message to the public through a programme of advertising that is both extensive and intensive.

## COMMON MARKET

During the period covered by the accounts, this Company, being alive to the scope that has been offered in Europe by reason of the establishment of the Common Market, decided on a major development in West Germany. In line with our policy of firmly grasping sound opportunities, a wholly owned subsidiary company, Dictaphone Company mbH., has been formed with sales offices and service facilities at Düsseldorf. From this headquarters, development throughout Europe has already begun.

## APPOINTMENTS

There have been some changes made in the executive control of this Company necessitated by the ever increasing responsibilities that arise during a period of rapid growth and development.

The Company is fortunate in having as its overall supervisor Mr Robert W. Belcher, with fourteen years of Dictaphone Corporation experience including four years as managing director of this Company. He has been appointed general manager of the International Division, and has been elected to a seat on the board of this Company.

Mr Clement Shread, who has had twenty years of sales and administrative experience in the office equipment industry in Great Britain, Europe and the Middle East, has been appointed managing director of Dictaphone Company Limited.

## THE DICTAPHONE OBJECTIVE

'Service' is the motivating thought in the Dictaphone objective. It is based on the conviction that proper use of what the Dictaphone organisation offers can truly 'double a person's capacity to get things done!'

During the last 12 months we have developed and augmented our sales force both here and on the continent of Europe. We are employing more people, we are increasing our activity, and, while we are never complacent, we have reason to be pleased with the efforts that are being made to meet the receptive market we find ourselves facing, and to meet the increased demand for our products, our factories in Acton are again being expanded."

The report and accounts were adopted and the retiring directors re-elected. The proceedings terminated with a hearty vote of thanks to the chairman moved by the deputy chairman, Mr C. Harold Vernon, and seconded by Mr F. Graham Maw.

# TAYLOR WOODROW LIMITED

The Twenty-sixth Annual General Meeting of Taylor Woodrow Limited will be held in London on June 6. The following is an extract from the Statement by the Chairman, Mr. Frank Taylor, which has been circulated with the Report and Accounts for the year ended 31st December, 1960:

The trading results for the year ended 31st December, 1960, are lower than those for the previous year and this position is in the main attributable to the unfavourable weather conditions experienced on building and civil engineering sites in the United Kingdom during the year, coupled with continuing intensive competition which adversely affected profit margins. Overseas, too, international competition for suitable contracts is particularly intense.

In previous Statements I have frequently stressed the necessity for judging the results of a Building and Civil Engineering business such as ours over a number of years rather than a single year and I wish to emphasise this point once again when you are considering the results for the year.

## ACCOUNTS

The profits for 1960 after taxation at £446,003 compare with £702,812 for 1959. The turnover of the Group for 1960 (not including associated companies) was £33½ million compared with £29½ million in 1959.

The Directors recommend a final dividend for the year of 7½d. per share on the ordinary issued capital which is the same as the previous year.

## AT HOME

Building and Civil Engineering—The year under review has not been an easy one for building and civil engineering work at home. A reduction in profits despite increased turnover reflects the unfavourable weather conditions which persisted throughout the year.

A highlight of the year was the success of the tender which, in association with English Electric and Babcock and Wilcox, we submitted for the 580,000 k.W. Atomic Power Station at Sizewell in Suffolk. In conjunction with our Partners, designs and tenders are being prepared for further atomic power stations for both home and overseas customers.

Myton Limited—During the year a number of important contracts were completed including two multi-storey office blocks in the City of London, Austral House and Kempson House, and progress was made on other substantial office developments under construction in the City. Good progress was also made with our Zidpark Automatic Multi-Storey Garage adjoining Southwark Bridge.

House Building—The position of the Company's land ownership has improved over the past year and a steady build-up of output is now planned.

Arcon Export and Home—1960 brought the anticipated improvement in business forecast twelve months ago. Export orders obtained from Overseas customers during 1960 showed a 50 per cent increase over 1959 in terms of superficial area of structures to be shipped but continuing competition restricted Profit margins.

# Getting upward...

We can again look back on a successful year. Deposits and advances have been further considerably increased.

The raising turnovers of our foreign business of which — joining the old tradition of our institution — we especially care for show the prosperous development of German trade. Own foreign representations as well as a close network of corresponding banks guarantee prompt and reliable services all over the world.

During 1960 the number of orders in the stock exchange business has been almost doubled and there were quick returns in foreign securities. We took part in introducing foreign shares at the German stock exchanges.

For the year 1960 we pay a dividend of 16 per cent to our more than 20,000 shareholders. Before that we added the amount of DM 22 million to the reserves and so our total resources amount to DM 360 million. In consequence of the intended increase of capital our own resources will be further enlarged by DM 20 million.

| BALANCE SHEET AS OF DECEMBER 31, 1960                               |                                                     |
|---------------------------------------------------------------------|-----------------------------------------------------|
| ASSETS                                                              | LIABILITIES                                         |

# SUN ALLIANCE INSURANCE LIMITED

## EXTRACT FROM THE REVIEW OF THE REPORT AND ACCOUNTS FOR THE YEAR 1960 BY THE CHAIRMAN, MR T. D. BARCLAY

Reporting on the combined results of Sun Insurance Office Limited and Alliance Assurance Company Limited.

### FIRE DEPARTMENT

|          | 1960         | 1959         |
|----------|--------------|--------------|
| Premiums | £ 19,294,667 | £ 18,791,081 |
| Claims   | 9,253,418    | 8,677,220    |
| Surplus  | 1,427,165    | 1,814,080    |

The increase in the premiums has come from most parts of the world where we operate and would have been much greater but for a reduction in the Sun's fire income from the United States where a considerable amount of business that has proved unremunerative has been discontinued.

The claims show a marked increase with the result that the total surplus available from these Accounts, for transfer to the Profit and Loss Accounts is reduced by some £387,000. One of the main causes of this rather disappointing result has been what I might call weather damage, i.e. floods and windstorms. These catastrophes affect large tracts of country causing thousands of claims, mostly relatively small, but in total coming to a very large figure. Insurance against these perils has become very general and this is bound to lead from time to time to considerable fluctuation in the results of our Companies' Fire Departments.

### ACCIDENT DEPARTMENT

|          | 1960         | 1959         |
|----------|--------------|--------------|
| Premiums | £ 22,553,364 | £ 21,629,186 |
| Claims   | 12,765,075   | 12,107,728   |
| Surplus  | 1,254,080    | 1,245,399    |

The growth of the Companies' business in this Department, which covers a wide variety of perils, has been considerable resulting in an increase in premium income of over £900,000.

The major class of business coming into this Account and producing nearly 50 per cent of the premiums is Motor insurance which, as you know, has been a most difficult class to undertake profitably. The combined results of the two Companies for this class of business resulted in a loss, entirely due to unfavourable experience in the United States, but I am glad to say that at home the two Companies together succeeded in making a profit. This is a tribute to the very careful underwriting policy adopted by both Companies for there is much evidence that the incidence and cost of road accidents continues to increase.

### MARINE DEPARTMENT

|                                   | 1960        | 1959        |
|-----------------------------------|-------------|-------------|
| Premiums                          | £ 3,624,290 | £ 3,654,309 |
| Fund at end of the year           | 5,933,065   | 5,575,222   |
| Transfer to Profit & Loss Account | 166,822     | 1,645 Loss  |

The premium income of the two Companies in this Department shows a slight reduction as compared with 1959 but, as you will see, the transfer to the Profit and Loss Account has increased.

The cargo side of the market remains highly competitive and after losses from perils of the

sea have been provided for, there is little, if any, balance of premium left to cover extraneous claims such as theft and pilferage which remain at a high level almost throughout the world.

### LIFE DEPARTMENT

|                                       | 1960         | 1959         |
|---------------------------------------|--------------|--------------|
| Net new sums assured                  | £ 20,925,293 | £ 18,632,138 |
| Premium income thereon                | 455,748      | 424,706      |
| Total life premium income             | 3,368,415    | 3,270,064    |
| Total annuity considerations          | 1,650,570    | 1,291,235    |
| Claims by death                       | 917,623      | 669,316      |
| Life and Annuity Funds at end of year | 44,082,598   | 40,929,398   |

The Sun Insurance Office does not transact Life business and the results shown here relate to the Alliance Life Department only. New business continued to expand satisfactorily but at a rather slower rate than in the previous two years. Progress in the latter part of the year was noticeably slowed down by the reimposition of credit restrictions which affected the amount of business received from our important Building Society connections.

The gross income yield on the Fund showed an apparent decline from £5 12s. 6d. per cent to £5 10s. 2d. per cent. This is, however, entirely due to the fact that the past practice of accruing estimated dividends on equity investments has been discontinued. This is, of course, a non-recurring accounting matter; no actual loss of

income is involved and, in fact, if the change had not been made the yield would have again shown a substantial increase.

### PROFIT AND LOSS ACCOUNT

Underwriting profits total £2,848,067; this is a reduction of approximately £200,000 as compared with a year ago and arose almost entirely from the less favourable experience in the Fire Department.

The investment income credited to the Profit and Loss Accounts of the two Companies is increased by £331,213 to a total for the year of £3,160,063. This continued growth in our investment income, which is a satisfactory feature, has contributed to the increased net profit of the two Operating Companies.

The provision for taxation is on this occasion somewhat lower than usual and after making full provision for this and for contributions to Pension and Widows and Orphans Funds, the final profit of the two Operating Companies amounts to £2,862,967 as compared with £2,724,733 in the previous year. In the light of this increased profit and of the steady expansion in the investment income, the Operating Companies have increased their dividends payable to the Holding Company, in the case of the Sun from 10s. 6d. per share, less income tax, to 11s. 3d. and, in the case of the Alliance, from 5s. per share, less income tax, to 5s. 4d. This has enabled Sun Alliance to declare a dividend of 2s. 8d. per share, less income tax, for the year compared with the equivalent of 2s. 6d. in the previous year; an interim dividend of 1s. having already been paid, the balance of 1s. 8d. per share, less income tax, will be payable in July next.

## BANCA TOSCANA, FLORENCE (ITALY)

### BALANCE SHEET AT 31st DECEMBER, 1960

| ASSETS                                                |                   | LIABILITIES                                   |                   |
|-------------------------------------------------------|-------------------|-----------------------------------------------|-------------------|
| Cash                                                  | £ 2,206,629,046   | Savings Accounts                              | £ 58,924,395,103  |

In extraordinary session the General Meeting also resolved to increase the Capital from Lire 1,500 million to Lire 2,500 million.

# DEUTSCHE BANK

## 1960 — a favourable business year

The balance sheet total of the Deutsche Bank grew by 7.1 % from DM 10,500 million to DM 11,200 million in 1960. All business sectors took a successful development. The turnovers with our customers (except those with banks at home and abroad) rose by 13.7 % to DM 403,900 million.

The cash balances held by the Deutsche Bank amounted to approximately DM 1,400 million. The overall liquidity came to 47.2 %.

Deposits increased to DM 9,900 million (+ 6.6 %). DM 2,200 million of that sum fell to savings deposits.

At the end of 1960, the Deutsche Bank had outstanding loans in a total sum of approximately DM 7,000 million. The utilizations of loans for import and export transactions were by about 15 % higher than in 1959.

The General Meeting of Shareholders on May 4, 1961, decided

- to allocate another DM 50 million to the special reserve fund;
- to distribute a dividend of 16 %;
- to increase the share capital by DM 50 million to DM 300 million — in a ratio of 5:1 (one for five) — at an issue price of 100 %.

After the capital increase, the bank's own resources amount to DM 600 million.

At the end of 1960, a staff of 19,106 persons worked in 410 branches of the Deutsche Bank.

## STEEL CONSTRUCTION : CONCRETE PRODUCTS : BUILDERS JOINERY

## WIRE &amp; WIRE PRODUCTS : FENCING : BUILDERS EQUIPMENT

**Boulton & Paul Limited**

The Annual General Meeting of Boulton & Paul Limited was held on May 9th at Norwich. The Chairman, Mr J. H. Treslon, presided. The following is an excerpt from his Statement circulated with the Report and Accounts.

**The Year's Results**

The results have turned out a little disappointing and below our expectations if we exclude the special stock surplus. In particular Moreland Hayne made a loss pending reorganisation of their steel fabricating works. However, in total the results are good and profits before taxation have generally continued at a satisfactory level.

Conditions are still reasonably favourable in our fields of operation. In steel we have a good order book; the scale of house building should benefit our joinery interests; in wire and wire products margins continue to be narrow; the demand for our mechanised steel fabrication plants is active; in builders' equipment we look for improved results and in concrete products, expansion continues.

**Developments**

Moreland Hayne & Company, Limited, is being equipped with a Boulton & Paul fully mechanised fabricating plant.

Other factories and plants have also seen a number of additions. Our largest future development will, however, be in joinery. Since the end of the financial year we have acquired a large site at Lowestoft where, ultimately, we shall have a unit manufacturing joinery in advance of any in this country.

**Structural Engineering**

The combination of Boulton & Paul and Moreland Hayne, gives us a much enlarged capacity and despite keen competition and narrow margins, we have managed to increase our turnover. The past year has not been an exceptionally good one on the structural engineering side. But we look forward to an improvement in the future.

Our fully mechanised automatic plants for structural steel fabrication continue to meet with increased demand.

**Wire and Wire Products**

The year under review saw the completion of our wire drawing and wire galvanising plants in the Midlands. The trade in wire netting

remained difficult and highly competitive, but turnover in wire and wire products increased. The fencing department has had a good year with increased output and profits in the face of intense competition.

**Timber Products**

We have great difficulty in meeting the demand for our joinery, but we shall take steps

to increase our output by developing at Lowestoft.

With our record turnover this year, the results of our joinery efforts have been most satisfactory.

**Builders' Equipment**

Stephens & Carter Limited continued to make progress. Their steel scaffolding both for erection and hire was in excellent demand. A new depot is being built at Luton and two scaffolding businesses at

Norwich and Ipswich have been acquired.

**Concrete Products**

Our associated company, Anglian Building Products Limited, and its subsidiaries had a most active and successful year. Very substantial orders for the railways, motorways and building work generally were executed.

Several additional depots for "readymixed" concrete were opened, and the main works at Lenwade near Norwich are now an impressive size and extremely well equipped.

**Balance Sheet**

The totals of the Consolidated Balance Sheet have risen by £1,300,000, on account of the new share capital.

Capital and Revenue Reserves now exceed £1,000,000 and have fully overtaken their level at the time of our last scrip issue.

On the other side of the accounts, Fixed Assets have risen by £300,000. Current Assets by over £1,100,000, with the main increase (£800,000) in stocks, which reflects substantially increased turnover.

**Group Profits**

The profits of the Group before taxation were at the £400,000 level. We have again made substantial allocations to reserves. After providing for the fixed return on the Preference shares, and paying an interim ordinary dividend of 5 per cent., we are recommending a final ordinary dividend of 7½ per cent., making a total of 12½ per cent. for the year.

**Summarised Results**

|                               |       |          |
|-------------------------------|-------|----------|
| Group Profits before taxation | 100 % | £412,967 |
| Taxation                      | 47 %  | £193,565 |
| Minority Shareholders         |       | £2,785   |
| Retained Profits              | 28    | £115,581 |
| Distributed Profits           | 24½   | £101,036 |
|                               | 100 % | £412,967 |

GROUP PROFITS, as above, attributable to Ordinary Shareholders before Taxation as a return on:

|                                                   |            |       |
|---------------------------------------------------|------------|-------|
| ISSUED ORDINARY CAPITAL                           | £825,000   | 45 %  |
| NET TANGIBLE ASSETS                               | £2,110,498 | 17½ % |
| ORDINARY DIVIDEND before Taxation as a return on: |            |       |

|                         |            |       |
|-------------------------|------------|-------|
| ISSUED ORDINARY CAPITAL | £825,000   | 12½ % |
| NET TANGIBLE ASSETS     | £2,100,498 | 5 %   |

\* Before new issue at year-end.

The Report and Accounts were adopted.

**LIMMER & TRINIDAD  
LAKE ASPHALT****SIR JOHN HATHORN HALL'S  
STATEMENT**

The eighty-ninth annual general meeting of The Limmer & Trinidad Lake Asphalt Co., Ltd., will be held on June 22 at the company's offices, in London.

The following is an extract from the circulated statement of the Chairman, Sir John Hathorn Hall, GCMG, DSO, on the 1960 accounts:—

Nowadays when a considerable amount of new road construction is being undertaken we find ourselves carrying out an increased proportion of our paving work in the capacity of sub-contractors to a main contractor instead of directly for the employing authorities. The advantages which such authorities derive from being able to deal with one contractor in respect of the whole of a large contract rather than with a number of contractors specialising in different aspects of the work are fully appreciated. Nevertheless the practice does entail the main contractor sub-letting relatively substantial contracts for specialised activities such as Asphalt paving, and while I realise that the employing authorities whether they be of Ministry, County or Municipal status, stand in no direct contractual relationship to the sub-contractors, I submit that there is at least a moral obligation to introduce a code of practice which may go some way to protecting the sub-contractors' interests.

Too often there is the temptation for the small contractor to "have a go" at large-scale work which he has not the capacity to undertake and it cannot be of satisfaction to Government Departments and Local Authorities to know that such work, frequently obtained at the fiercely competitive prices prevailing in the civil engineering industry, is sometimes done at the expense of unpaid sub-contractors.

It would, I feel, be sad if the splendid prospect of our National road programme were to be marred by the avoidable failures of general contractors who have endeavoured to operate beyond their resources.

**LARGER PROFIT AND DIVIDEND**

For 1960 the Group's trading surplus before depreciation is some £50,000 in excess of that for 1959. As is to be expected, however, in an expanding business depreciation absorbs more, so that the Group profit before taxation at £530,979 is £26,000 greater than in the previous year. Taxation is a great leveller, and after this has been charged and minority adjustments made the improvement has been whittled down to £11,500.

After taking into account, the profits retained in the Subsidiary Companies, the amount available for distribution in the Parent Company is £343,901. Pension Reserve absorbs slightly more this year, and your Directors recommend the transfer of £100,000 to General Reserve and the payment of a final dividend of 13 per cent., making a total distribution for the year of 19 per cent. compared with 17 per cent. for 1959.

Looking at the prospects for 1961 generally, I think I can sound a reasonably optimistic note. Our operations in this country during the early months of this year have continued at a very high rate, and if we are able to maintain this throughout the year we should be able to better the 1960 results.

**NORTH BRITISH & MERCANTILE INSURANCE****UNFAVOURABLE UNDERWRITING EXPERIENCE IN THE UNITED STATES****NEW LIFE BUSINESS AGAIN A RECORD****MR CYRIL H. KLEINWORT'S STATEMENT**

The one hundred and fifty-first Annual General Meeting of North British & Mercantile Insurance Limited was held on May 11th in Edinburgh.

The following statement has been issued to the shareholders by Mr Cyril H. Kleinwort, Chairman of the General Court of Directors, in connection with the accounts for the year ended December 31, 1960:

Before dealing in detail with the Accounts for the past year there are two matters I should like to mention.

The first concerns our London Head Office building in Threadneedle Street, which has been our chief London address for nearly one hundred years, as we took possession shortly after the "North British and Mercantile" was formed out of the merger of the "North British" and "Mercantile" in 1862.

The building is adjacent to the Stock Exchange and we were approached for our co-operation when the rebuilding of the Stock Exchange upon its present site was first under consideration, as such a plan was only feasible if its present ground area could be extended.

In the general interests of the City, the General Court of Directors agreed to sell 61, Threadneedle Street to the Stock Exchange to enable the re-building to take place and no doubt you have seen reference to this sale in the Press.

We were naturally reluctant to leave the building in which we have been housed for so many years but with the accommodation now available in our Group offices we felt that we should assist in a project so important to City interests generally which could not take place without our help.

The other item for mention is that Mr L. H. Campling, who was appointed an Assistant Manager in June, 1949, retired in June last after nearly 45 years' service with the Company. He has our best wishes for a long and happy retirement.

Turning now to our Accounts for the past year, I am sorry to say that our overall experience has been unsatisfactory as we have underwriting losses to report in both our Fire and Accident Departments although the results in the Marine Department have been satisfactory.

As I have mentioned on previous occasions, our figures are materially influenced by the experience in the United States where we have such important interests. Unfortunately, 1960 was a poor year there from the underwriting standpoint, not only for us but also for many other Companies working in that field. You will recall that a major hurricane—known as "Donna"—swept the Atlantic seaboard last September doing extensive damage to property and causing very substantial losses to Insurance Companies. Such visitations must unfavourably affect our results in a year when they occur but it is nevertheless disappointing to have to report a setback after the improvement we were able to record in the previous year. On the Casualty

side too our results in the United States of America though showing some improvement are still not satisfactory and we again incurred an underwriting loss.

**FIRE DEPARTMENT**

The total Fire premiums at £19,079,039 are very little different from those for 1959 but losses at £10,776,506 have increased during the year by £563,434. Expenses increased by £82,229.

After adjustment of the Provision for Unexpired Risks on a 50 per cent basis, there is a loss on the year's working of £503,935, 2.64 per cent of premiums.

I have already referred to the United States of America. In the United Kingdom, Fire losses again reached very high figures—almost level with the hitherto highest recorded total in 1959 of £44,000,000. We naturally had our share of those losses and in addition there were the substantial storm and flood losses in the latter part of the year which adversely affected our Home Fire figures. I am pleased to say that there seems to have been some improvement in Fire losses in the United Kingdom in recent months and it is greatly to be hoped, in the national interest, that that improvement is maintained.

Canada and the rest of the Overseas field I am glad to say showed satisfactory increases in premiums with excellent profits.

**CASUALTY DEPARTMENT**

Total Casualty premiums were £12,678,911, an increase of £676,003 over the 1959 figure of £12,002,908. Total claims incurred were £7,207,147, an increase of £335,863, but the percentage of claims to premiums of 56.8 per cent was slightly less than the corresponding figure for 1959 of 57.2 per cent.

After adjusting the Provision for Unexpired Risks on the usual basis which, following the increase in premium income, entailed an addition in 1960 of £270,402 against £1,926 in 1959, there is an underwriting loss of £54,527, .43 per cent of premiums compared with an underwriting profit of £123,129, 1 per cent of premiums for 1959.

Our Home business continues to develop satisfactorily but the results are somewhat overshadowed by the experience in the United States of America to which I have already referred. In the remainder of the Overseas field our experience has varied: it has been less favourable in Australia and South Africa but our Canadian business has been very good.

**MARINE DEPARTMENT**

The premium income was £1,952,031 compared with £1,844,045 for the previous year and the overall experience has been quite satisfactory, with the run-off of the 1958 and 1959 Accounts encouraging.

Unfortunately, in recent months there have

been a number of major casualties which without doubt will have an influence on the final outcome of the 1960 underwriting.

I referred last year to a levelling-off in the cost of ship repairs. There are some indications that this improvement may be difficult to maintain which would be regrettable because if a further rise should occur hull insurance will be again considerably affected.

On the cargo side of our Account, whilst conditions remain very competitive the overall position has been satisfactory to us.

We have transferred the sum of £333,516 from the Marine Fund to Profit and Loss Account.

**LIFE DEPARTMENT**

I am pleased to be able to say that the new business secured by the Life Department constituted yet another record, with new sums assured of £22,800,000. This figure represents an increase of 12 per cent on the total for 1959. We transact a very considerable proportion of Group business which is liable to fluctuate appreciably from year to year, and the effect is sometimes to mask the underlying rate of progress of our Life business as a whole. New business under individual contracts again showed a very satisfactory increase in 1960.

The introduction of the Government Graduated Pension Scheme, whilst it has stimulated public interest in the provision of pensions for employees, has inevitably entailed for our specialised staff the expenditure of much time in advising and assisting holders of our existing schemes with problems arising out of this complicated piece of legislation. We are glad to have had this opportunity to be of service to our connections in spite of the considerable additional work involved.

The gross rate of interest earned on the Life Fund in 1960 was £5 16s. 6d. per cent—an increase of 7s. 6d. per cent on 1959. The Life expense ratio was 12.2 per cent against 12.4 per cent in 1959.

Our progress during the year is shown by the advance of our Life and Annuity Funds which together total £80,000,000, an addition of £5,000,000 in 1960, and in the increase of just over £250,000 to £1,500,000 in our combined new Life and Annuity Premiums and Considerations.

**INVESTMENTS**

During the whole of 1960 interest rates on long term fixed interest securities remained at a relatively high level and the opportunity was taken of increasing our holdings of Debenture Stocks. At the same time, substantial additions have been made to our Equity holdings. Although there was a fall in many market prices ruling at the end of 1960 when compared with those at the close of the previous year, the value of our investments still showed a considerable surplus over the value placed upon them in the Balance Sheet.

## CONSOLIDATED PROFIT AND LOSS ACCOUNT

This Account summarises the results of our operations for the year 1960. Gross Interest on Investments shows an increase of £263,392 over the previous year at £2,446,632. As I mentioned last year, it is our intention to make our next valuation of the Life Branch at the end of 1963 and the Shareholders' profit from the last valuation is spread, therefore, over four years. Accordingly, credit has been taken for a further one-fourth of the profit arising in 1959 leaving two-fourths in reserve. The operations in the Fire, Accident and Marine Departments during the year resulted in a net loss of £224,946.

It is proposed to maintain the dividend of 2s. 6d. per share, of which 1s. 3d. is being paid as an interim dividend. The total dividend of 2s. 6d. per share, with the dividend on the Preference Stock, will absorb £885,062.

After charges for taxation amounting to £1,158,354 and transfers to the Staff and Widows' Pension Funds of £311,000, the final balance on Profit and Loss Account is £13,574,525.

No annual review of our activities would be complete without an expression, with which my colleagues of the General Court warmly associate themselves, of cordial thanks and appreciation to all those who throughout the past year have so loyally and efficiently devoted themselves to the Company's interests. These include not only those who have assisted us in directorial capacities and the officers and staff of the "North British" and Associated Companies both here and overseas, but the many agents who represent us throughout the world.

The report and accounts were adopted.

## HUDSON'S BAY COMPANY

The 292nd Annual General Court of the Governor and Company of Adventurers of England trading into Hudson's Bay was held on May 12th in London, Mr W. J. Keswick, the Governor, presiding.

The following is an extract from the report to the proprietors:

The Company's move into the major Eastern Canadian markets through the merger with Henry Morgan & Co. Limited, Eastern Canada's third largest department store organisation, was the highlight of the year.

The trading profit was £5,229,000 but excluding special items, the trading profit was £4,893,000 (£4,952,000) and the profit after tax was £2,432,000 (£2,495,000). The total sales of the Group were £88,032,000. The proposed final trading dividend is 14 per cent (total 24 per cent) and the proposed final Land Account distribution is 2½ per cent (total 5 per cent).

During the year the Company continued its policy of modernisation and expansion.

The difficulties experienced by the Canadian economy in 1960 are vividly shown by the marked drop in the rate of increase in Gross National Product for 1960 which was 2 per cent compared with over 6 per cent average from 1954-59. Against this economic background it proved impossible to maintain the rate of increase in the Company's retail sales achieved in recent years. Nevertheless, the increase this year of 3 per cent on a comparable basis was not unsatisfactory.

The report was adopted.

## COMPANY MEETING REPORTS

### THE PYRENE COMPANY

#### INCREASED TRADING PROFIT

The Forty-seventh Annual General Meeting of The Pyrene Company Limited will be held on June 8th in London.

The following are extracts from the circulated statement by the chairman and managing director, Mr Francis A. J. Harrison:

In a year when the Motor Industry's activity has been seriously curtailed it is good to report that at £912,506 your Company's Group trading profit shows an increase of £57,891 and that Net Profit before tax is £54,297 higher at £755,825 (£387,758 after tax). This result has been achieved despite various increases in wages and salaries and after considerable charges for plant changes and product development.

The directors recommend a final ordinary dividend of 18½ per cent, less tax, making 30 per cent, less tax, for the year against 27½ per cent, less tax, last year.

#### THE PARENT COMPANY

The Pyrene Company Limited: The Company's over-all sales increased by 2.6 per cent which though only a modest gain was in fact a new record for total sales. Home sales and rental-maintenance of hand fire extinguishers were up by some 7 per cent. Although many thousands of "Pyrene" Home Fire Extinguishers have been sold, this wonderful new product has not yet been bought by enough home occupiers to achieve the reduction of home fire losses for which we introduced it.

Metal Finishing Division produced another sales record, being 10 per cent above 1959, a very creditable achievement.

### ABERDARE HOLDINGS

The 25th ordinary general meeting was held on May 16 in London, Sir John Pascoe (the chairman) presiding. The following is an extract from his circulated review: Group net profits amount to £343,784 as against £378,164. We are recommending a final dividend of 10 per cent, making 17½ per cent for the year.

**Aberdare Cables Limited:** In spite of the unremunerative price level which obtained throughout the year the Cable Company operated at a profit. At the present time, we are obtaining slightly higher prices, and with the improved turnover it should make a greater contribution to Group profits during the year.

**South Wales Switchgear Limited:** The rate of increase in turnover was well maintained.

**Treforest Electrical Services Limited:** Operations of this Company have been merged with South Wales Switchgear, with the result of an expansion in our range of products of low voltage switchgear, and this, combined with the development in the Company's main factories, has meant that the range of switchgear products has been considerably extended.

**Transformer Division:** The range of transformers manufactured has been considerably increased.

The expansion of the turnover of South Wales Switchgear Limited, generally, has been largely responsible for the Group's satisfactory results.

**Aberdare Engineering Limited and the African Subsidiary Companies:** Encouraging progress continues to be made.

The report was adopted.

## THE ECONOMIST MAY 20, 1961

The value of Export Sales was somewhat lower although the effort devoted to this Department was increased. Sales were made to 114 countries during the year.

The Parent Company's increase in profits was just two-thirds of the total Group Trading Profit increase. The value of orders in hand at the turn of the year was some 47 per cent higher than twelve months previously.

#### WHAT'S AHEAD

We have orders on the Parent Company's books to the value of about two-thirds of the anticipated year's sales. Actual shipments in the first quarter of the year are 7 per cent lower than those of the first three months of 1960. Sales of fire equipment are actually higher, but this is more than offset by lower deliveries of bumpers and metal finishing products to the Motor Car Companies. The demand, however, is now increasing.

Fire Extinguisher sales at home, due to the effect of the Factories Act, are running at a higher increase than we had anticipated. An important development which has just been started is the setting up of a separate Fire Detection Division. Some months will be required to complete supplies and bring the Division into full operation. Then it should provide an essential fire safety service in many locations.

After a slower start to the year the Parent Company expects to increase sales during the second quarter and go steadily on in an upward direction (unless any limiting factor is applied to the Motor Car Industry). Every effort will be made to run the business as economically as possible. The Group is a hive of industry and I do trust that by the end of 1961 there may be a commensurate weight of honey to be taken.

### UNITED MOLASSES

The Thirty-fifth Annual General Meeting of The United Molasses Company Limited will be held on June 6th in London.

The following is an extract from the circulated statement by the chairman, Mr G. W. Scott, CBE:

The gross profits of the Group for 1960 amount to £4,516,674, a reduction of £303,001 over the gross profits for 1959, and the net profits of the Group at £2,007,799 show a reduction over the previous year of approximately £182,000. These results are somewhat better than could be anticipated last year when I indicated the Group profits might well show a reduction from those of 1959. It is recommended that the ordinary dividend be continued at the same rate, free of tax, as for 1959. Your directors have decided once again to supplement the return to ordinary stockholders by recommending a cash distribution of 4½d. per unit, not subject to income tax.

The financial position of the Company remains strong and the balance sheet indicates that current assets of £18,519,237 exceed current liabilities, provisions, etc., by £12,116,496.

We are facing a difficult year. Molasses trading has been unsettled by the political situation in the Caribbean which, aided by the continuing low tanker freight market, has made competitive conditions more difficult. Prospects for shipping continue to be depressing with no evidence of the likelihood of a material improvement in either dry cargo or tanker freights. However, your directors hope once again, barring any unforeseen occurrences, to be able to recommend dividends out of revenue profits for 1961 at the same net rate as for 1960.

## THE ECONOMIST MAY 20, 1961

## COMPANY MEETING REPORTS

### REICHHOLD CHEMICALS LIMITED

#### FACTORS AFFECTING PROFITS

#### THE LATE MR WALTER H. BREUER'S STATEMENT

The Ninth Annual General Meeting of Reichhold Chemicals Limited will be held on June 13th at Winchester House, Old Broad Street, London, EC.

The following is the statement prepared by the late Mr Walter Hugo Breuer, Chairman and Joint Managing Director, which has been circulated with the report and accounts for the year ended December 31, 1960:

The Annual Accounts for the Ninth year are presented in established form and reflect the year's operation of our Group.

During the second half of the year many difficulties arose and these have had an unsatisfactory impact on Profit margins.

An Interim Dividend of 7½ per cent less Income Tax on the Ordinary Share Capital of the Company (as increased by the issue of 704,102 New Ordinary Shares of 5s. each fully paid on July 6, 1960) was paid in October. A Final Dividend in respect of the year to December 31, 1960, of 15 per cent less Income Tax at the Standard Rate ruling on the date of payment is now recommended thus maintaining the 22½ per cent overall dividend on the Capital increased both by the bonus issue February, 1960, and the Rights Issue last July.

The large Capital Expenditure programme of the operating Companies makes it essential for us to "plough back" money each year, in addition to the provision we make for depreciation and it is proposed to place a further £125,000 to General Reserve.

#### THE SUBSIDIARIES

BECK, KOLLER & Co. (ENGLAND) LTD. A drastic shortage of Naphthalene developed in the early part of the year and it was essential to safeguard resin production by the purchase at high prices of Phthalic Anhydride. During the later months however the supply position became and remains normal so it was necessary to dispose of the surplus stocks at a substantial loss.

Apart from this set-back a desperately short supply position developed in Maleic Anhydride and World prices were trebled with limited amounts available. In order to meet the increasing demands for Polyester Resins based on this essential Raw Material, contracts were placed for delivery during the remainder of the year.

In September the World supply position changed suddenly. Prices were rapidly reduced and supplies became much freer so that the Beck, Koller Company were confronted with having to accept contracted deliveries at a premium resulting at the end of December in writing off a substantial amount in respect of Maleic Anhydride stocks held at that time.

The stock losses on these two Chemicals amounted to some £45,000. These factors are not likely to be repeated during 1961.

VINATEX LTD. Modern plant at New Lane, Havant is expected to be in full production within a few months and should increase the present rate by one-third.

Months of delay in plant delivery and subsequent teething troubles have substantially reduced the profit earning capacity of that Com-

pany during the period under review.

The transference from Carshalton of this activity has proved more costly than envisaged and we expect that for the second half of the current year a material improvement of its profit-earning capacity will result from the installation of the latest type of Plant which should yield substantially increased output.

VINYL PRODUCTS. During the last quarter of 1960 fierce competition developed without any substantial reduction in Raw Material costs and sales, due in some measure to the effects of the Credit Squeeze, showed a downward trend.

With the removal of the Vinatex Company to New Lane, Havant the congestion at Carshalton will become easier.

The Directors have decided to defer for the time being plans for building the proposed new Vinyl Factory at Brockhampton.

There are signs during the last few months of a welcome reversal of the earlier trend and on a note of cautious optimism I would expect an increasing improvement in profitability during the present year from this Company.

#### GENERAL

During the year all Companies were faced with very substantial increases in labour costs. Due to exceptional weather conditions the installation of the new Resin Plant at Speke could not be completed as hoped in December last but in spite of unexpected delays in delivery of Plant it should be in production by the end of this month.

I deplore that due to the reasons stated the Group has sustained a "set-back" but I do not believe that these factors will affect us as adversely in the current year.

We continue to enjoy full interchange of technical information with Reichhold Chemicals Inc., and their affiliate Companies throughout the World and the arrangement concluded between Beck, Koller & Co. (England) Ltd. and Spencer Kellogg & Sons Inc. (as mentioned in my previous report) should shortly result in a welcome addition to the manufacture and sales of our new resinous products.

It is with feelings of regret that owing to increased Managerial responsibilities in connection with my commitments on the Continent I have decided to resign as Chairman at the conclusion of the Annual General Meeting but shall remain a Member of the Board. I am happy to know that my colleague, Mr G. S. Bache, our Joint Managing Director, will be appointed in my stead.

Once again I am sure you will wish to associate yourselves with the tribute I am happy to pay on behalf of the Board of Directors to all Factory Employees, Technical and Administrative Staffs and Directors of Operating Companies for their loyalty and enthusiastic support during the unexpectedly difficult period under review.

MR WALTER H. BREUER

Mr W. H. Breuer, who was killed in a motor-car accident on April 26, 1961, was appointed

Chairman and Joint Managing Director of Reichhold Chemicals Limited, on the formation of that Company in 1952; he had previously been closely associated with the Beck, Koller Company for many years.

As the Executive Vice-President for European Affairs of Reichhold Chemicals Inc., of the U.S.A., he had had, during the last few years, increasing managerial responsibilities on the Continent.

His wise counsel, geniality and charm will be sadly missed by all his colleagues and friends.

### THE LUNUVA (CEYLON) TEA & RUBBER ESTATES, LIMITED

#### EXTRACTS FROM CHAIRMAN'S STATEMENT

In 1960 the company produced the largest tea crop harvested in the 54 years of its existence. This achievement represents the result of much anxious thought over past years and attention to improving the yielding capacity of the bushes, whilst maintaining the standard of the made tea. It is disappointing that the company should not have benefited in increased profit from the bumper crop of tea. On the contrary, the trading profit on tea was about £32,000 lower than last year, the net average selling price for our 1960 teas being about 1½d. less than that for 1959. This was offset to some extent by the larger quantity sold and, as a result of the increased crop, the all-in cost of production was slightly lower than that for 1959, after absorbing payments to the compulsory Government fund for estate labourers.

The contribution to trading profit by rubber showed a reduction of about £23,800 owing to a smaller area in tapping, a smaller crop, lower selling prices and higher costs.

The taxation to which the company and its products, tea and rubber, were subjected for the past year totalled £635,000 (of which £492,000 was in respect of export duties and cesses and £143,000 tax on profits plus land tax) equivalent to almost 75 per cent on the issued capital of the company.

It will be apparent that the poor results for 1960 are not due primarily to lower selling prices of our products but to crippling taxation.

In the circumstances explained, the Board consider that a final dividend of 4 per cent, making, with the interim dividend paid in November last, a total of 6 per cent for the year, is the maximum which can be justified, and they recommend it accordingly. This will leave £97,959 to be carried forward.

*Orders and copy for the insertion of Company Meeting reports must reach this office not later than Wednesday of each week and should be addressed to: The Company Meetings Department, The Economist, 22 Ryder Street, S.W.1.*

## LONDON BRICK COMPANY LIMITED

PRODUCTION AND DELIVERIES REACH NEW PEAKS

BENEFITS ACCRUING FROM RECENT EXTENSIONS  
OF OUTPUT FACILITIES

MR A. T. WORBOYS ON CONTINUING HEAVY DEMAND  
FOR ALL PRODUCTS

The 61st Annual General Meeting of London Brick Company Limited was held on May 16 in London.

Mr A. T. Worboys, CBE (the Chairman) presided and, in the course of his speech, said:

The Profit on Trading and Sundry Income for the year is £2,989,806 compared with £2,855,468 for 1959. After deducting various items, including £500,000 for Depreciation of Fixed Assets, the net profit before taxation amounts to £2,409,924 compared with £2,315,598 for the previous year.

Taxation amounts to £1,220,613 and the net profit after taxation is £1,189,311 and, after adding the balance of the Profit and Loss Account brought forward at the beginning of the year, there remains an available balance of £1,618,561. Of this sum we have transferred to General Reserve the amount of £500,000 which compares with £600,000 in the previous year, but this increased appropriation in 1959 was influenced by the larger taxation adjustment in that year of £100,533. After deducting the net dividends on the 8 per cent Cumulative Preference Stock and the net interim dividends of 1½ per cent on the Ordinary Stock, there is a balance carried forward of £402,242. The Directors do not recommend any further dividend for the year 1960.

Dealing now with our two Subsidiary Companies, Stewartby Housing Association Limited continued in full operation.

With regard to Transformers (Watford) Limited, our manufacturing Subsidiary, the output during the year shows an improvement over that of the preceding year, notwithstanding severe competition both in the home and export markets, a condition which is continuing.

### THE PARENT COMPANY

Returning to the Parent Company, let me tell you at once that the satisfactory results have been obtained during a year which was beset with difficulties and problems, not the least of which was the very bad weather in the second half of the year which gave rise to atrocious working conditions. It is at times like these that our policy of mechanisation is fully justified and proves its value. The high degree of mechanisation which we have achieved so far has enabled us, in spite of the appalling conditions, to attain new records in production and deliveries.

The year was one of general progress in the fields of production and engineering. The extensions which we have undertaken during the last two years have called for considerable planning and extensive shop work and much has been achieved as a result of close liaison between the departments directly concerned. Our efforts continue to be mainly directed towards furthering our programme of mechanisation which, in

addition to safeguarding our rate of production in adverse weather conditions, becomes an increasing necessity when faced with a shortage of labour.

The extended use and development of new equipment in our engineering shops will give increasing output to cater for the growing needs of our production units.

Our research programme has continued to give priority to improving the performance of our plant and processes with the primary objective of increasing productivity. Such improvements have undoubtedly made a significant contribution to our high production figures.

### LABOUR RELATIONS

Negotiations with our Trade Unions on matters of wages and conditions of employment were more frequent in 1960 than in any previous year. Two consequences of the negotiations may be mentioned as being of major importance. One, the reduction of the standard working week to 42 hours without loss of pay has meant a consequent advance of something over 5 per cent in the basic hourly rate, and the other was the introduction of a weekly payment to employees who are absent from work through sickness or works injury.

Through our Joint Advisory Councils, and in less formal ways, the Company has continued to derive much benefit from consultation on matters of mutual interest, for it must not be forgotten that, whilst management must maintain its right to manage, employees have points of view which deserve consideration.

### YEAR OF INTENSE ACTIVITY

1960 was a year of intense activity in the building industry. It is estimated that the value of output in building and construction rose about six or seven per cent over the previous year and, as far as housing was concerned, where the greatest consumption of bricks takes place, ten per cent more houses were built in the first three-quarters of the year than in 1959. During 1960 economic conditions were still favourable towards a high level of building, but the same could not be said for the weather. As bad weather can still greatly hinder building progress, the increased output of the industry in 1960 is the more remarkable.

With building at such a high level, the year was one of continuing heavy demand for all the Company's products. In spite of the fact that the total deliveries of bricks and hollow clay blocks were higher than ever before, the demand continued to exceed the capacity to supply. In circumstances like these the task which faced our Sales organisation was not an enviable one, their job being to ensure that available supplies were distributed fairly and in accordance with a system that would apply equitably to our

customers. Broadly speaking, the effect of this system during the year under review was that all orders were accepted and were dealt with in strict sequence according to the date they were sent in and delay periods were the same for all customers coming under one sales office. Each sales office, and therefore each area of the country, had a fair share of the total deliveries.

Whilst all varieties of "Phorpres" bricks were in heavy demand, the overwhelming popularity of our newer types of facing brick was most evident. Architects and planning authorities are becoming increasingly interested in the use of colour in the design of modern buildings. Whilst many forms of cladding material cater for this need, the traditional facing brick still provides the ideal material for adding colour and texture to overall design. Not only are the colours produced more attractive and subtle, but the architect's client has the satisfaction of knowing that no maintenance will be required and that time will enhance the beauty of the brick finish. The call for colour has meant that in 1960 the demand for our Sandfaced, Golden Buff and Dapple Light facing bricks was particularly heavy. The production of each of these types was increased and provision is being made for still further increases by the installation of additional facing machines which are built in our own engineering shops.

Last year, after a period of price stabilisation lasting over three years, it was with great reluctance that we had to impose advances in the prices of all products, one on July 1st and another on December 1st. The price advances were not regarded by the industry as excessive, coming as they did after over three years of price stabilisation.

It has been a good year for our trade in hollow clay blocks. Production and deliveries have been higher and orders for future work are most satisfactory. Hollow clay flooring, for which we provide the bulk of the clay floor blocks used, also continues to more than hold its own with its competitors.

### CURRENT PROSPECTS

Now, as to the prospects for the current year, I do not want in any way to embark upon the role of a prophet but, as I have already stated, we are working at full capacity and are now reaping the benefits of our recent extensions. Our general orders and contract commitments are heavy and the demand for our products at the present time exceeds our ability to supply.

We have now completed almost five months trading of the current year and the results are satisfactory and exceed those for the same period of last year. We therefore face the future with confidence and, unless anything unforeseen crosses our path, we hope to produce results for 1961 that will give our Stockholders satisfaction.

The report and accounts were adopted.

## BANK OF WEST AFRICA, LIMITED

CONTINUED FLOW OF FOREIGN CAPITAL INTO AFRICA  
VITALLY NECESSARY

MR SYLVESTER GATES ON THE CONCEPT OF NATIONALISATION  
IN UNDERDEVELOPED COUNTRIES

The sixty-seventh annual general meeting of the Bank of West Africa Limited will be held on June 8th at the office of the company, 37, Gracechurch Street, London EC3.

The following is an extract from the statement by Mr Sylvester Gates, CBE, the Chairman, which has been circulated with the report and accounts for the year ended March 31, 1961:

The Balance Sheet shows no change in the capital of the Bank; but the Reserve Fund has been increased by £600,000, of which £200,000 has been allocated from the profits of the past year and £400,000 transferred from Contingencies Account. The total of the Reserve Fund is now £3,300,000. Our inner reserves remain amply sufficient for their purpose.

Current, Deposit and other Accounts show a small decrease by comparison with a year ago, mainly due to the fact that issues of Treasury Bills by the Governments of Ghana and Nigeria have attracted many millions of pounds which would otherwise have been left in the banking system. The changes on the assets side of the Balance Sheet reflect the increased demand for accommodation made upon us in the course of the year owing to the exceptionally heavy crops and the general buoyancy in trade.

Money at Call and Short Notice is lower than a year ago but there is an increase in our holdings of commercial bills, while our Loans, Advances and other Accounts are very sharply increased at £36,789,937. Though our liquidity ratio is thus lower than that of a year ago it will rise over the next two or three months as our seasonal advances are liquidated.

I am glad to be able to report that the business we have done over the year in West Africa and with other countries who are developing a greater interest in West Africa has not only met our increasing costs but has resulted in a better profit enabling your Board to recommend to you an increase of 1 per cent in the dividend.

The changes which have swept over the continent of Africa during the past decade have been so swift and spectacular, have so deeply affected agriculture, industry and social and political relationships that we must view them as forming parts of a great revolution whose final pattern is not yet discernible. One prediction, however, can safely be made.

Unless foreign investment continues to flow into Africa on a massive scale, the upward surge we have witnessed will prove to have been largely abortive, and the newly emerged nations will be in danger of relapsing into a poverty all the more embittered by the brief glimpse they have had of better possibilities.

The new states are confronted by two fundamental tasks—to create national unity and to build up a diversified economy. In order to mould their peoples into national entities with a common purpose political leaders must of necessity foster national sentiment.

But unfortunately, the easiest way to arouse it is to deflect grievances outwards so that they become directed against foreigners, and more

particularly against the very people who are providing the money and the skills without which the second aim of economic development cannot be carried out. Threats of nationalisation and discrimination against overseas companies are perhaps the most harmful of the manifestations of which I am thinking.

It is not enough for a government to give guarantees and pledges; these must be seen to be backed by public opinion in its country. More than once highly placed persons have expressed hostile views at variance with official policy, and though the more extreme of such statements have been quickly repudiated by the government, the threats live on in the minds of the threatened.

### THE CONCEPT OF "NATIONALISATION"

But there has been some lack of understanding in the investing countries as well. One cause of distrust and hesitancy has been an emotional reaction to the concept of "nationalisation." In Britain it has popularly become associated with the suppression of private enterprise, compulsory acquisition, inadequate compensation, inefficiency and waste.

In West Africa and other countries with like problems, the term has a different connotation. These are places where liquid capital in private hands is relatively small and immobile compared with the reserves which have come into the keeping of public bodies. So it is reasonable that public funds should be used to participate in new industries; indeed, the readiness of overseas investors to set up major ventures in Africa is often conditional on such collaboration.

The prospects of growth in Nigeria and Ghana, their substantial holdings of funds overseas, their small national debts, their wealth of natural resources, the potentialities of their domestic markets and their proved determination to protect their new industries, should provide an attractive setting for industrial enterprise. These nations have only to prove their political stability to ensure the continuing support of private investors abroad.

### TREMENDOUS NEED FOR DEVELOPMENT

Wherever one looks in Africa one finds territories, mostly now independent, which, whatever their local problems, have one thing in common—a tremendous need for development that only foreign capital can provide. Sometimes that capital will be in the form of money, sometimes in other forms. Whatever shape it takes, however, it is bound to come from the goodwill, or, if you prefer, the enlightened self-interest of some highly industrialised states.

Though there are comparatively few of these states they appear hitherto to have made little attempt to co-ordinate their efforts. Their assistance over the past fifteen years has certainly been of great value in Asia, Africa and Latin America, but it would have been far more valuable still had it been made as part of a carefully thought out plan.

This is not an original idea of course, but it is worth repeating because far too little has yet

been done—through such instruments as the International Bank for Reconstruction and Development and the International Development Association—to turn it into a reality. The day we get real co-operation between all countries able to contribute—and I think here particularly of the extremely valuable help that could be given by Western Germany—I am sure that the future of those countries which this Bank exists to serve will be much brighter.

## COMPAGNIE MARITIME BELGE

AN EVENTFUL YEAR

The following is an extract from the Report by the Board of Directors which was submitted to the Ordinary General Meeting held on May 3, 1961:

During the year 1960, a certain improvement showed itself in marine freight, due to the following factors: uniform improvement in the transport of goods by sea throughout the world, the substantial speeding up of the breaking-up of old ships and the considerable reduction in deliveries of new ships.

Discussions between shipping lines have led to some modest adjustments in certain rates which have clearly fallen below the profit-earning level.

The shipping business continues to suffer from the ill-effects of practices entailing flag discrimination which is being intensified in many countries.

Our Company has been unable to derive any benefit from the slight general improvement which we have just explained, on account of two events which affected its business during this financial year. The first in date, and by a long way the most important, was the Congo crisis.

After outlining the events and the steps taken to meet the situation, the report continued:

The overall volume of trade is being restored to a certain equilibrium and our resources combined with those of the Compagnie Maritime Congolaise are no longer excessive: whence an improvement in the results of the voyages. This stage, however, remains below the possibilities of the Congo, the trade of which with foreign countries, could be quickly re-established, in a secure and orderly manner, since its economic machinery is practically intact.

The position with respect to our African lines therefore remains a precarious one, although on the occasion of several contacts which we have had with the authorities of the Congo, we were pleased to observe a constant anxiety to do everything possible to restore normal trading relations as soon as possible.

Our business was furthermore affected, at the end of the financial year 1960, by strikes which prevailed in Belgium and paralysed activities in the port of Antwerp for several weeks; they had a harmful influence on several of our services; the effects were considerable up to the beginning of March of this year.

### SUBSTANTIAL INTEREST IN ARMEMENT DEPPE

As we have indicated in official statements to the press, we have taken up a substantial interest in the ARMEMENT DEPPE, the oldest Belgian shipping business. We have co-ordinated the working of both fleets so as to secure the maximum return.

NORWICH UNION  
INSURANCE SOCIETIESANNUAL MEETINGS  
LIFE SOCIETY

After eliminating three small vessels, overhauling one freighter and delivery of two new ships, this shipping concern will have at its disposal an efficient and homogenous fleet of ten vessels, providing the following services: Europe-Cuba-Mexico-Houston; Europe-Florida-American Ports in the Gulf of Mexico; Europe-Near East.

Briefly, the financial year 1960 has therefore suffered from the impact of events in the Congo, from the disturbances which followed therefrom in some of our lines and, at the end of the year, from incidents at the Port of Antwerp.

Our business has now been re-adapted and tonnage is being allocated to the Congo line at a level which we consider to be a minimum.

The participation which we have taken up in the Armement Deppe is evidence of our wish to develop unceasingly the headway made by the Belgian flag and offers us the means of extending our sphere of activity.

Included with the Report was an analysis of the Balance Sheet and Profit and Loss Account as at December 31, 1960. With Fr. 795,748 brought forward and Fr. 58,136,244 earned during the year, the year's profit is Fr. 58,931,992. If Shareholders approve the Board's proposals the dividend for 1960 will be payable at Fr. 125 net.

over the profits of the previous quinquennium. The rates of bonus in the United Kingdom were 13s. per cent higher than at the last distribution.

## FIRE SOCIETY

At the one hundred and sixty-third annual meeting of the Norwich Union Fire Insurance Society Limited, Sir Robert Bignold said last year consolidated fire premiums totalled £14,106,256, compared with £13,698,909 in 1959. Although fire losses generally in the United Kingdom last year equalled those of 1959, the Society's underwriting profit of £356,309 was a considerable improvement on the 1959 figure of £115,302.

There was a further increase of £1,644,213 in the Home and Overseas accident income to the record figure of £16,627,654, but unhappily the account showed an underwriting loss of £232,557.

Marine premiums at £3,380,041 also showed an increase on the previous year, and £105,000 was transferred to the profit and loss account (against nil in 1959) leaving a Group Marine fund of £3,834,608.

Total group premium income was £37,910,288, an increase of £2,568,138, whilst assets had grown by £4,592,604 to exceed £81 millions.

## COMPANY AFFAIRS

## Beecham Group

As is usual, profits of the Beecham Group dipped in the second half of the year to March 31st, but the fall was not quite so marked as in the previous year, being 9.2 per cent, against 11.7 per cent, in gross income. Thus profits of the group for the full year rose by 7 per cent from £7,424,000 to £7,950,000 and net profits by 9 per cent from £3,790,000 to £4,127,000, to leave unchanged the two-fold cover for the ordinary dividend as raised, as had been expected, from 27 to 30 per cent.

Profit margins have continued to decline and with advertising expenditure particularly heavy in the second half of the year this was not unexpected. In the last few years Beecham has had to spend large sums on research, notably in the field of antibiotics, and the fruits of this expenditure should be seen as sales and royalties in this field increase. The expansion of overseas

| Six months ended | Sept. 30, 1959 | Mar. 31, 1960 | Sept. 30, 1960 | Mar. 31, 1961 |
|------------------|----------------|---------------|----------------|---------------|
| Sales            | 24,525         | 25,434        | 26,988         | 29,356        |
| Gross income     | 3,943          | 3,481         | 4,166          | 3,784         |
| Taxation         | 1,925          | 1,693         | 1,965          | 1,842         |
| Net income       | 2,018          | 1,788         | 2,194          | 1,933         |

|                    | % 1959 | % 1960 | % 1961 |
|--------------------|--------|--------|--------|
| Gross income/sales | 16.1   | 13.7   | 15.4   |
| Net income/sales   | 8.2    | 7.0    | 8.1    |

markets has also meant that larger sums have had to be spent on promotion and advertising and sales in these markets seem likely to have shown a further marked advance. Investors' confidence that margins will improve and that at least the present rate of growth will be maintained is reflected in the yield of 3 per cent offered by the 5s. shares now standing at 49s. 10½d.

## Albert E. Reed

EXPANSION was the keynote for Albert E. Reed in 1960 and indeed the acquisition of Anglo Canadian Pulp and Paper Mills and Imperial Mills altered the scope of the group by giving it an increased interest in newsprint. Outside North America

SALES AND PROFITS  
(£'000s)

| Year to March 31  | 1960   | 1961   |
|-------------------|--------|--------|
| Sales             | 74,000 | 87,000 |
| Trading profit    | 6,957  | 9,103  |
| Depreciation      | 1,804  | 2,513  |
| Gross profit      | 5,153  | 6,590  |
| Tax               | 1,860  | 2,800  |
| Net profit        | 3,293  | 3,687  |
| Ordinary dividend | 1,555  | 1,940  |

the Reed group acquired interests in Norway, Australia and in the common market through the formation of an Italian company in which Reed has a 50 per cent interest.

The impact of this expansion programme is already apparent in some measure in the

results of the group for the year to March 31st. They include, for instance, four months of the earnings of the major Canadian acquisition and they show a rise in sales from £74 million to £87 million; in the current year sales are running at an annual rate of over £100 million. A direct comparison of the latest results with those for 1959-60 is hardly possible, but the directors say that profits in this country changed little over the year, so that all the increase in profits came from overseas.

That profits in this country remained virtually unchanged is not surprising, for since July the reduction of tariffs on imported paper under the EFTA agreement has been reflected in lower prices and profit margins and competition in paper and packaging has become even more vigorous. Shareholders are warned that profit margins are likely to come under still greater pressure and that so far in the current year demand for the group's products has not been quite so strong as it was. On the dividend of 16 per cent the £1 shares at 52s. 3d. yield 6.1 per cent.

## Shell Transport

THIS week's annual meeting of the "Shell" Transport and Trading Company was marked by the retirement of the chairman, Lord Godber, after 57 years' service with the group. In his valedictory statement he must have pleased many shareholders when he said that in the "not too distant future" the directors intended

## Discount Houses

PROFITS in the London money market and changes in Bank rate are closely related. The four discount houses that reported at the turn of the year all recorded lower profits, having suffered the effects of two increases in Bank rate on bond portfolios and a narrowing of the margins between the rates at which they could borrow and employ their funds. A further six houses have now reported and all but Smith St Aubyn have achieved increases in net profits, the best performance being that of King and Shaxson with an increase of 50 per cent. These houses have enjoyed the advantage of the reduction in Bank rate to 5 per cent for four and in some cases five months, while the effects of the first Bank rate increase last year were borne by the 1959-60 accounts.

|                            | Date of accounts | Net profits | Per-centage change | Dividend | Middle price, May 18, 1961 | Yield |
|----------------------------|------------------|-------------|--------------------|----------|----------------------------|-------|
| Allen Harvey & Ross        | April 5          | 136,000     | + 3                | 14       | 59½                        | 5.6   |
| Clive Discount             | March 31         | 137,000     | + 9                | 10       | 32½                        | 6.3   |
| Jessel, Toynbee            | March 30         | 111,000     | + 11               | 10       | 38½                        | 5.3   |
| King & Shaxson             | April 30         | 218,000     | + 50               | 12½      | 72½                        | 4.4   |
| Secombe Marshall & Campion | April 30         | 97,000      | + 7                | 10       | 47½                        | 5.3   |
| Smith St Aubyn             | March 31         | 248,000     | - 3                | 17½      | 82½                        | 4.9   |

to split the £1 stock units. The market's initial reaction was to mark up the shares to 166s., a price which, as the chairman pointed out, was regarded as rather "heavy." Before any action is taken the directors will proceed with the proposed one for five scrip issue. After this issue and assuming a split into 5s. shares the price would be brought down to about 34s. 9d. At this price they would be more likely to attract the smaller investor, who is understandably reluctant at the moment to receive only 12 shares for £100. But it is by no means certain that the new shares would carry a par value of 5s. The shares have a New York quotation, where institutions are supposed to look unfavourably upon too low priced shares, and a four for one split would bring the price below the prices of other British shares quoted in New York.

SALES AND INCOME  
(£ million)

|                  | Quarter 1 | 1960  | 1961 |
|------------------|-----------|-------|------|
| Sales —          |           |       |      |
| Including duties | 661.5     | 663.1 |      |
| Excluding duties | 498.6     | 494.8 |      |
| Gross income     | 79.5      | 78.7  |      |
| Net income       | 41.8      | 42.1  |      |

Gross income/sales\* 15.9 15.9  
Net income/sales\* 8.4 8.5  
\* After deducting sales taxes, excise duties, etc., from turnover.

The first quarter's results gave no immediate justification for a rise in the price of the shares, whatever their par value. The table shows that both the sales and profits of the Royal Dutch-Shell Group showed very little change from those of the first three months of 1960 or indeed of any of the other quarters in that year. The burden of sales taxes, particularly in Venezuela, continues to grow and only increases of £2 million in dividend income and reductions of a similar amount in both

## APPOINTMENTS

MORGANITE EXPORTS  
LIMITED  
(A Member of The Morgan Crucible Group)WANT —  
a man aged 26-32 to be trained as a  
FOREIGN REPRESENTATIVE

This vacancy has arisen through the expansion in our overseas commitments. We are looking for a man with balanced judgement and all-round experience, and preferably also having a sound knowledge of one or more foreign languages and/or technical experience in industry. The successful candidate can expect to attain executive status in the U.K. or overseas.

Apply, giving career details and quoting ref. AT/54, to the Staff Manager:

Morganite Exports Limited,  
Battersea Church Road, London, S.W.11.

THE UNIVERSITY OF  
MANCHESTER

Applications are invited for the CHAIR OF ECONOMIC HISTORY. Duties to commence as soon as possible. Salary not less than £2,600 per annum. Membership of F.S.S.U. and Children's Allowance Scheme. Applications (twenty copies), giving full details of qualifications, publications, experience, etc., and the names and addresses of at least three persons to whom reference may be made, should be sent not later than June 17, 1961, to the Registrar, The University, Manchester 13, from whom further particulars may be obtained. Overseas candidates may submit one copy of their application.

UNIVERSITY OF MELBOURNE  
SENIOR LECTURESHIPS AND  
LECTURESHIPS IN ECONOMICS

Applications are invited for the above-mentioned posts. For one of the senior lectureships preference will be given to a candidate with special qualifications in value theory, welfare economics or economics of industry. For one of the lectureships some experience in economic statistics would be an advantage. The salary ranges are: Senior Lecturer, £2,400 to £2,950 per annum; Lecturer, £2,100 to £2,650 per annum. Initial salary will be determined according to qualifications and experience. Superannuation similar to F.S.S.U. in Great Britain will be provided. Conditions of appointment may be obtained from the Secretary, Association of Universities of the British Commonwealth, 34 Gordon Square, London, W.C.1. Applications close in Australia and London, on June 30, 1961.

LONDON MERCHANT  
BANKING GROUP

requires additional

## INVESTMENT ANALYSTS

The group provides investment services on a widely diversified geographical and industrial basis. A large research department is maintained. Applicants, who must be under 30 years of age and have some experience in the analysis for investment purposes of industries and companies and a background in economics or finance, should write to Box May/82, c/o 95 Bishopsgate, London, E.C.2.

UNIVERSITY COLLEGE  
LONDON

Department of POLITICAL ECONOMY requires Assistant Lecturer or Lecturer. Duties to commence October 1, 1961. Salary ranges: Assistant Lecturer: £2,000-£2,500 p.a.; Lecturer: £2,050-£2,850 p.a., plus £60 London Allowance p.a. Initial salary according to qualifications and experience. Superannuation and family allowance. Applications, to be received by June 19, 1961, should be sent to the Secretary, University College London, Gower Street, W.C.1, from whom further particulars may be obtained.

## WOOLWICH POLYTECHNIC

LONDON, S.E.18.

Principal: Harold Heywood, D.Sc., Ph.D., A.C.G.I., Wh.Sc., M.I.Mech.E., M.I.Chem.E. Applications invited from Honorary Graduates for an Assistant Lecturer in Economics (Theoretical and Applied) including work to B.Sc.(Econ.) degree standard. Candidates should have research and/or teaching experience. Salary within £2,800-£3,400 according to qualifications and experience. Particulars and application form from Clerk to Governors, to be returned by June 3, 1961.

## E.M.I.

## Programmer/Investigator

An interesting vacancy has occurred in the Group Data Processing Department of E.M.I. Ltd., for a Programmer/Investigator. He will be required to programme the EMIDEC 1100 and to develop systems for Computer Service Bureau customers.

Applicants should be able to give evidence of a successful career to date in either the Commercial Accounting or O & M fields. Experience of Computer Service Bureau work would constitute a distinct advantage.

Initial salary will be based on qualifications and experience and it is a company policy to review salaries annually. Please write, quoting ref. CEN/DP/1, to:

Personnel Department,  
E.M.I. Ltd.,  
Blyth Road,  
Hayes,  
Middlesex.

ADAMANTLY—Assistant Statistician required for service in London. Applicants must be British subjects and possess either 1st or 2nd Class Honours Degree in Maths or Economics with Statistics as a Special subject. London salary scales £1,793 to £1,282. Starting pay depends on experience. Superannuation is provided through F.S.S.U. Annual leave: 4 weeks 2 days plus public holidays. Write giving age, full details of qualifications and experience, to: Manager (P.E. 1781), Ministry of Labour, Professional and Executive Register, Atlantic House, Farnham Road, London, E.C.4. Only those candidates selected for interview will be advised.

For further appointments and other classified advertisements see pages 842 and 843

THE UNIVERSITY OF  
SHEFFIELD

Applications are invited for a post of ASSISTANT LECTURER IN ECONOMICS to begin duties on October 1, 1961. A candidate should be interested in Economic Theory. Initial salary according to qualifications and experience on the scale £2,000-£2,950 with F.S.S.U. provision and family allowance. A grant towards removal expenses will be made. Further particulars may be obtained from the Registrar, to whom applications (four copies) including the names and addresses of three referees, should be sent by June 5, 1961.

THE Royal Institute of British Architects have a vacancy for a Research Assistant in the Economic Research Department. A young graduate in statistics, economics or other social science with statistics as a main subject, is required, to work on a series of enquiries relating to the architectural profession and the building industry. Some experience of research work desirable but not essential. Salary in the range £700 x £500—£1,250—Further information and form of application from the Secretary, R.I.B.A., 66 Portland Place, London, W.1.

NATIONAL FOUNDATION FOR  
EDUCATIONAL RESEARCH IN  
ENGLAND AND WALESRESEARCH OFFICER/  
ASSISTANT RESEARCH  
OFFICER (STATISTICS)

Applications are invited from graduates who have taken STATISTICS as an important part of their degree. The successful candidate will be required to assist with the analysis and research data. Students who expect to graduate in July will be considered for the A.R.O. post. Salary: Research Officer, £1,100 x £50 to £1,450; Assistant Research Officer, £750 x £50 to £1,000.

Application forms and further particulars from Director, 79 Wimpole Street, London, W.1.

THE UNIVERSITY OF  
MANCHESTERRESEARCH STUDENTSHIPS AND  
RESEARCH GRANTS IN ECONOMIC AND  
SOCIAL STUDIES

Applications are invited for the above. Studentships and Grants for research in Economics, Economic Statistics, Government, Social Administration, Social Anthropology or Sociology, tenable for one year in the first instance, and renewable for a further period not exceeding two years. The studentships are normally of the value of £350 or £400. They are offered to candidates who have obtained the degree of Bachelor or Master in this or any other approved University. Applications should be sent not later than July 1, 1961, to the Registrar, The University, Manchester, 13, from whom further particulars and forms of application may be obtained.

THE LONDON SCHOOL OF  
ECONOMICS AND POLITICAL  
SCIENCE

Applications are invited for appointment to a Research Fellowship in the Economics of Latin America. The Fellow appointed will be required to pursue research with a view to publication, research in that subject. Salary within the range £2,000-£3,000 a year with superannuation benefits and family allowances. Tenure for three years in the first instance, but with the possibility of renewal for maximum of seven years in all. Provision has been made for necessary travel and research expenses. The Research Fellow and for secretarial assistance. Further particulars should be obtained from the Secretary, London School of Economics and Political Science, Houghton Street, London, W.C.2, by whom applications should be received not later than June 8, 1961.

depreciation and taxation enabled the groups to report a tiny increase in the net profit margin.

### Vickers

THE preliminary results for Vickers were well received and on the publication of the full accounts the £1 ordinary shares improved further to 37s. 7½d., to yield 5.3 per cent. This is close to their peak for the year and is justified by the better results and the review's optimistic tone on the immediate outlook. At the same time the yield is still above average and it reflects the company's poor trading record in recent years. Sales in the engineering, steel and shipbuilding divisions all rose in 1960 and they all seem likely to do at least as well this year. The swing away from Vickers' traditional interest, armaments, continues and the engineering subsidiary has moved into new fields, notably chemical plant design and manufacture. Output of English Steel's foundry exceeded that of any previous year and the fall in production in the motor industry, to which the company is a major supplier of billets and bars, had had no serious effect on output at the end of 1960. Any revival in sales of cars should ensure full production of these products in 1961. Demand for heavy forgings was still only moderate.

Work has now begun on the £26 million expansion scheme at Tinsley. Arrangements have been made for short and medium term

borrowings amounting to about £20 million; these will be eventually repaid from the cash flow. Longer term capital amounting to about £15 million will be raised in due course, partly by a further issue of English Steel debentures and partly by the issue of further ordinary shares to the parent companies, Vickers (75 per cent) and Cammell Laird (25 per cent). These two companies jointly own Metropolitan Cammell Carriage and Wagon which had another difficult year as fewer orders for rolling stock were placed with private contractors; competition for export orders has also intensified. Vickers' shipyards remained in full production last year and should do so again this year; but orders are still extremely scarce.

### COMPANY AFFAIRS

The formation of the British Aircraft Corporation, in which Vickers participated with English Electric and Bristol Aeroplane, was a major event for Vickers, but it will be some time before the effects of the merger are seen beyond the balance sheet. Aircraft in production or design at the time of the merger were excluded from it, so that the Viscounts, the Vikings and the VCros still remain Vickers' sole responsibility. Thus the substantial reduction in aircraft development expenditure represents not the effect of the merger but the fact that the Vanguard's development costs have now been completely written off. These have amounted to about £15

Two themes reoccur in recent statements from the spokesmen of the insurance companies: first, the benefits arising as a result of the many mergers of insurance companies and secondly the abnormally high fire losses. But it was Lord Blackford, the chairman of Guardian Assurance, who stole the thunder this week with the announcement of a two for one rights issue of 5s. shares at par. Since the shares stand at 160s. in the market the issue clearly contains a big bonus element and the rights are worth no less than 113s. 6d. The issue will raise £5½ million and will be used mainly to finance property developments required as a result of the mergers with Caledonian Insurance and more recently with the Union Insurance Society of Canton. Guardian's underwriting profits rose last year by £78,000 to £951,000 but the margin of profit showed little improvement; investment earnings, as expected, again rose sharply from £2.1 million to £2.7 million. Lord Blackford does not support the view that interest income should be treated as a trading profit; he considers that the main object is to make a profit on underwriting accounts but that it is from increases in investment income that shareholders must look for bigger dividends.

The combined fire and accident income of the Commercial Union group (which now includes North British and Mercantile) rose by a further £5 million to £107½ million but the better underwriting results of 1959 were not repeated, largely it seems as a result of the American hurricane Donna, and in these two offices there was a loss of £538,000. Investment income, including rents, rose substantially from £7.2 million to £8.1 million but this partly reflected the investment of the proceeds of last year's £11 million rights issue. At the time of the issue a dividend of 2s. a share was forecast but the payment has in fact been maintained at the 1959 rate of 2s. 3d. a share.

The rights issue of London Assurance brought in just under £5 million last September but this could not have much effect on investment income, which rose last year from £1½ to £2½ million. This substantial increase appears to reflect in part the

### THE ECONOMIST MAY 20, 1961

million in the last five years. Whether similar provisions will have to be made in the future depends on the success of the VCros. BOAC has so far placed an order for 45 of these jet airliners.

Though the 1960 provision was halved it was still equal to the net ordinary dividend payment, so that any further reduction in it might enable the directors to raise the dividend above the 10 per cent paid since 1955. But clearly such a decision must rest on the trading experience of the company's other interests, and while on balance it would seem likely that profits may improve further this year it will not be by any appreciable amount.

### Insurance Reports

merger with the Sea Insurance Company. The group now has a very strong marine account and it made an underwriting profit of £700,000 in 1960. This compares with an underwriting loss of £358,000 incurred in the accident department.

Unlike some other newly merged insurance groups the Sun and the Alliance still present separate accounts and trade as separate entities. The chairman of the combined companies, Mr T. D. Barclay, says that Donna contributed to the loss suffered by the Sun on its important American fire account. But the total underwriting profits of the companies have been fairly buoyant, falling by only £200,000 to £2.8 million even though they fell by £400,000 in the combined fire account.

While the business of the Royal Exchange Assurance in the United States is still not yet showing a profit Lord Kindersley, the governor, says that despite the heavy hurricane losses there was a great improvement in 1959. This is reflected in the substitution of a profit of £296,000 for a loss of £260,000 in 1959 on the fire account. In referring to the serious fire wastage the chairman makes the point that in the last two years 30 per cent of fire damage has been caused by less than 0.02 per cent of all the fires in this country and he urges industrialists to provide adequate fire breaks and sprinkler protection.

Lord Knollys in the first annual report of the combined Northern and Employers Assurance points to the many buildings still in use which are neither designed nor adapted to be reasonably proof against the spread of fire. The companies reported a total underwriting loss of £295,000 on this account, Northern reducing its loss and Employers adding to its profit. The integration of the two companies has been completed in the United States; in this country joint staff and property departments are already working. The amalgamation of other head office departments in this country is planned for the beginning of 1962 and the aim is to merge all branches by 1964. Since the distribution of the two companies' business is much more complementary than is the case with some other insurance mergers the scope for economies should be greater.

### THE ECONOMIST MAY 20, 1961

### Spicers

AFTER Spicers had declared a dividend of 12½ per cent for 1960, compared with an earlier forecast of a maintained payment of 10 per cent, the jobbers marked the shares down by 1s. to 51s. Then, on further consideration of the trading results, the shares were marked up to 51s. 6d., to yield 4½ per cent. The market's second thoughts were nearer the mark than its first, for the preliminary statement shows that the improvement in trading profits in the first half of last year was maintained in the second half. Over the full year trading profits rose by 11 per cent from £1,119,000 to £1,243,000 and after a smaller depreciation charge gross profits rose by 22 per cent, from £784,000 to £956,000.

The group sold British Waxed Wrappings for £3 million and last year's results do not include any of that company's profits; but they do include part of the profits earned by two companies purchased last year as well as interest on that part of the £3 million not absorbed by the group's capital programme designed to improve administrative and technical efficiencies. Ordinary earnings now amount to 26 per cent and compare with 19 per cent in 1959; the cover on the dividend has thus risen from 1.9 to 2.1 times. Last month Spicers paid £1.7 million for the Percy Boyden paper group so the figures for the current year should include nine months' profits from this acquisition.

### Granada

FEW company chairmen have ever been so happily placed as Mr S. L. Bernstein, the chairman of Granada group, in being able to tell shareholders last January that profits in the current year were likely to be two and a half times greater than in 1959-60. The reason for the chairman's confidence was soundly based, for the net working agreement with Associated Redifusion was ended last July. This had proved to be a great boon to the company in the early days of commercial television, but in the last two or three years it has meant that Granada had had to pay out some millions of pounds.

The first indication of what this will mean to shareholders has come with the announcement of an interim dividend of 45 per cent, against the equivalent of 16½ per cent. The market's reaction was to mark the shares up sharply by 8s. 9d. to 66s. 6d. and it is now looking for a total payment of at least 100 per cent (against the equivalent of 36½ per cent); this would put the shares on a yield of 7½ per cent. Not quite all the benefit from the ending of the networking agreement will be reflected in the current year's profits for the television subsidiary ends its financial year in April, five months earlier than the group. By 1961-62 the results should reflect for the first time the full profit earning capacity of the group, but the current ITA licence expires in 1964.

### COMPANY AFFAIRS

### Anglo-Israel Securities

IN November, 1959, Anglo-Israel Securities made an offer in London of 850,000 £1 shares at par and by January 31, 1960, £493,000 had been subscribed; a year later the authorised capital of £1 million was fully paid up, though the average amount of paid up capital in the year to March 31, 1961, was about £660,000. The gross profit on this amount of capital from August 4, 1959, to March 31, 1961, was £44,000, or 6½ per cent. This reflects the paucity of equity investment opportunities on the Tel Aviv stock exchange; this has limited the amount of buying which the directors could do in line with their policy of keeping their holdings of unquoted securities to a minimum. Thus it was not surprising that on March 31st the trust held £350,000 in short-term loans in this country.

The return the trust earns on its investments must have been affected by the sharp rise in equity prices in Israel, which has pushed yields down from the level of 9 to 10 per cent eighteen months ago to about 5 to 6 per cent today. But the reverse of this coin is capital appreciation and the company's investments in Israel securities now stand at a market value of £888,000, one-third over their book value of £664,000. The directors intend eventually to invest all the trust's funds in Israel. At the moment no Anglo-Israel shares are quoted, but the directors are now seeking a quotation on the London stock exchange. On its record to date and its strong appeal to Jewish investors its shares should be well received.

### Bowater Paper

UNDER the chairmanship of Sir Eric Bowater the Bowater Paper Corporation has built up a reputation for the fair manner in which it treats its shareholders. The company was among the first in this country to provide something a little out of the ordinary for shareholders at the annual company meeting. Several of them have been held at the company's mills and now they are held at the Festival Hall and often include a film of Bowater's operations.

The latest example of fostering better relations between shareholders and the directors is seen in Bowater's plans to deal with the small remnant of the £15 million issue of convertible unsecured loan stock which has so far not been converted. Holders have a last opportunity to convert in July and they are warned that once the conversion rights expire the price of the stock would fall from the current level of 140 to about 92. So that no stockholder should needlessly suffer this loss the trustees of the loan stock will exercise the conversion option on August 1st on any stock which has not been converted and the resulting shares will be sold and the proceeds distributed to the stockholders. Stockholders would be well advised, however, to exercise their conversion option and to retain the ordinary shares.

### London Stock Exchange

| FIRST DEALINGS: | April 24 | May 8  | May 29  |
| LAST DEALINGS:  | May 5    | May 26 | June 9  |
| ACCOUNT DAY:    | May 16   | June 6 | June 20 |

BEFORE the week-end there was a substantial amount of profit taking but this selling was more than matched by fresh investment buying and with the supply of equities limited prices continued to rise. This week the pressure of selling has become stronger and buyers have tended to hold off before the Whitsun holiday. The amount of business done declined steadily to Wednesday and *The Economist* indicator fell slightly by 0.3 points to 426.9 over the week—its first fall for three months. Gilt-edged stocks have again had a quiet week, with a slight overall tendency for prices to slip back. Before the weekend long and undated stocks were in demand, and on Monday some medium dated stocks were bought but by mid-week the market was generally dull. Among the short dated stocks Treasury 5½ per cent 1962 was unchanged at 101½, but at the other end of the spectrum both 3½ per cent War Loan and 2½ per cent Consols lost 7½ to 56½ and 42½ respectively.

Insurance shares met profit taking after the weekend and their prices fell back over the week although Guardian was a notable exception, the shares gaining 16s. 3d. to a new "high" of 161s. 9d., after news of the rights issue. Bank shares rose slightly and several of the leaders touched new peaks. Among brewery shares interest focussed upon the latest merger so that Mitchells and Butlers lost 1s. 6d. over the week despite earlier gains of 2s. after the interim dividend. Bass also lost 1s. 6d., to 28s., but Vaux continued to rise, gaining 5s. to a new peak of 186s. 3d. Among contractors Costain lost 1s. 9d. to 25s. 1½d. and Wimpey lost 12s. 6d. to 159s. 4½d., after its disappointing results. Among electrical shares Ultra attracted American investors and gained 2s. 3d. to 28s. 9d. despite a fall on the news that it had sold its radio and television interests to Thorn, which gained 6d. to 59s. The hope that steel prices might go up caused rises in leading steel share prices; Dorman Long gained 1s. 1½d. to 37s. 7½d. and United Steel 2s. 1½d. to 68s. 4½d. Some industrial blue chips showed gains after the weekend, with Schweppes gaining 2s. 1½d. to 42s. 3d. and Beecham did not hold their early gains and closed 4½d. lower at 50s. 3d. Motors tended to fall slightly and Jaguar "A" lost 2s. 3d. to 81s.

Before the weekend paper shares reflected the market's pleasure at the continued good results from this sector, but the news of the high level of stocks caused prices to be marked down. The recent rise in property share prices came to a halt this week; London County Freehold lost 9d. to 38s. Cotton textile shares also fell back on renewed fears of heavier competition from Hong Kong. Kaffirs tended to drift lower as a result of the South African ban on forward currency dealings for covering share transactions.

Did you know that  
**this nut**  
could buckle your business?

A steam loco-type crane runs on a track. If the track is faulty—if, for example, a nut is loose on a fish-plate, chair, or sprag, a travelling crane may wobble, tilt, and topple, to end up overturned. The cost of such a mishap is impossible to predict: while it may be measured in time lost, profits lost, it could also very possibly spell a life lost.

### Vulcan know

Cranes overturn for a number of reasons—most often for a combination of reasons only discernible to the expert eye. That eye belongs to the Vulcan Engineer Surveyor. He not only knows where to look for the likely faults but is trained to see any potential danger spots in the immediate vicinity. Industrial accidents need never happen if he regularly inspects machinery—your machinery. The inspection and protection of boilers and cranes, lifts and hoists is what Vulcan provide. It is a specialist's job. Vulcan are the specialists. That's why insurance brokers know that safety first is Vulcan first.

## Vulcan are specialists

May we send you FREE 'Vulcan'—a Journal for all users of plant and machinery with reports of accidents and safety hints. Write to Dept. 17.

### Investment Opportunities in Japan!

In 1959 Japan attained the highest economic expansion of all the industrial countries of the world. Its gross national products that year increased by 16 per cent over the previous year and has seen a yearly increase ever since. This upward trend has increasingly induced overseas investments in Japanese securities.

Daiwa Securities, as one of the four largest securities companies in Japan... capitalized at £8 million sterling and having 4,000 employees... is engaged in a wide range of business, acting as broker, dealer and underwriter of securities and distributor of investment trusts. The "pioneering spirit" which has been the motivating power behind its 60 years of expansion is still very predominant today.

Make your money work for you in Japan's booming industries by investing through expert and experienced hands. For investment trusts, etc., write

Joined for strength and owned  
by two great banks

Scottish Midland  
Guarantee Trust Ltd

Olds Discount  
Company Ltd

two important finance houses  
are organized for expansion

Olds Discount Company Ltd and Scottish Midland Guarantee Trust Ltd are both well-known and long-established concerns. Since 1958 they have been linked to form a new group, Lloyds & Scottish Finance Ltd, itself jointly owned by Lloyds Bank and the National Commercial Bank of Scotland. Capital has twice been increased, and now stands at £15,000,000.

This grouping has proved its strength in the past year of restricted demand. Thanks to a prudent and selective policy in accepting contracts, the group has maintained its earnings. Its assets have grown to over £100,000,000, and it has taken steps to extend its profitable overseas interests to Western Europe.

In many ways the two operating companies

fit together to form a balanced whole. Traditionally, Scottish Midland Guarantee Trust Ltd has a large proportion of its hire purchase turnover in the fields of motor vehicles and industrial equipment; Olds Discount Company Ltd, while also doing a substantial vehicle business, has long been one of the leading companies in the financing of consumer durables, and in block discounting. Geographically, too, the group now has a well-spread network of more than 100 branches.

With its record of rapid progress since its formation, and with its ample financial backing, the new grouping has demonstrated both its strength in difficult times and its capacity for future expansion.

**Aluminium makes things cheaper to own**

1 This 15-ft. speed boat is ideal for water skiing. It saves hard labour on the slip-way because, being entirely made of aluminium, it's light for its size. Only the engine requires maintenance, and the entire boat is 100 per cent salt-water resistant. It seats five and, with its powerful engine, can travel at 40 m.p.h. Makers, and general fabricators in aluminium: G. & E. Engineering Ltd.

2 Here's one of the most portable and robust outboard motors in the world. Its crankcase, gearbox housing and cylinder head are all made of lightest aluminium. The motor (2-3 h.p. category) weighs only 28 lb., and develops more thrust for its weight than any other outboard engine. The British Seagull Co. Ltd. built it with salt-water service in mind. Their designers chose Alcan.

3 Leading small boat helmsmen of the world use aluminium masts like this, made from Alcan-based tubing by Ian Proctor Metal Mast Ltd. Representatives of 13 nations chose them for the last Olympics. With a better strength-to-weight ratio, light alloy masts are tougher. They are unaffected by excessively hot climates, and consistent in flexibility. They also give utmost drive from the sails, greater stability, and need the minimum of maintenance.

4 An all-aluminium hull means that two pairs of hands can easily lift this Windboat outboard runabout. You can take it to the water out of top of your car. It's 12 ft. 10 in. long, weighs 180 lb., seats four, and will travel at up to 34 m.p.h. Graham Bunn (Wroxham) Ltd. make it of hardwearing Alcan alloy. It is popular with water-skiing enthusiasts, and serves equally well as a fishing launch.

Alcan, backed by the finest research and technical facilities, can answer any question on the use of aluminium. Write to: Alcan (U.K.) Ltd., Aluminium Canada House, 30 Berkeley Square, London W.1. Telephone: M.A.Y. 9721.

**ALCAN**

## Aluminium waives the rules

The old rules for messing about in boats meant that you spent most of your time ashore, scraping rusty metal, caulking and repainting. Not any more. Designers and boat builders have discovered aluminium. Now days afloat are longer—and happier in small craft of all kinds. Aluminium cannot rust and never needs painting. Its use reduces maintenance by 90 per cent.

Boatmen in the know use Alcan aluminium. Study the picture. Everything's ship shape because all the aluminium equipment is Alcan.

### INTERNATIONAL

#### DAGGERS DRAWN

Mr Kennedy and Mr Khrushchev have been swept by events into a confrontation at Vienna. One of their tasks is to seek a set of rules for the cold war that might keep it non-violent (p. 867).

President Kennedy may have been manoeuvred into meeting Mr Khrushchev but it may be no bad thing from his point of view (p. 889).

Protected by Swiss police, helicopters and television, the Algerian delegates at Lake Geneva must ponder the alternatives of association with France, or continued war (p. 908).

The course of the other Geneva conference might surprisingly give France a footing again in Laos (p. 874).

South Korea's new regime is long on suppression and short on guarantees of a return to constitutional life (p. 875).

#### SWORDS CROSSED

Angola: There is no reason to disbelieve Portuguese claims that the rebels are receiving outside help, nor to disbelieve the scale of the Portuguese reprisals (p. 876).

South Africa: To herald the new republic, Africans plan to use their only non-violent weapon: the general strike. The government has counter-attacked with mass arrests and a show of overwhelming force (p. 905).

Pakistan: Badshah Gul and his merry men have been handing out Russian arms and Afghan promises to the Pathans of the Bajaur hills (p. 873).

### HOME

#### PAYING UP

A major boom in domestic car buying in 1962, and a slump in 1963—will this be the result of the Government's changes in hire purchase regulations? An important research study is examined critically (p. 913).

The need (and possibly now the chance) in trade union law is to place the responsibility for unconstitutional strikes squarely where it belongs (p. 868).

Cornwall is expanding its tourist industry, and the Cornish are sharpening their separate practices (p. 902).

Free coal for the miners looks like being incompatible with Yorkshire's smokeless zones (p. 901).

House buyers are likely to have to pay more for their loans in the near future (p. 921).

#### CUTTING DOWN

Slimming is one of Britain's most energetic new industries (p. 871).

The argument that joining the common market would inflate Britain's food prices is thin when cut to size (p. 875).

Tory discipline in parliament is too procrustean for the liking of the brightest young politicians (p. 874).

Alabama: The race riots are strengthening the moderates in Alabama and in Washington (p. 890).

#### BURYING HATCHETS

• To attend to the considerable British interest in a friendly, prosperous and politically rational Spain is the kind of thing foreign secretaries (but not, as a rule, home secretaries, even when chairmen of the Tory party or leaders of the House of Commons) are for (p. 870).

• President de Gaulle's visit to Bonn had more significance than the becalmed state of western European politics would suggest (p. 873).

• The post-mortem on Cuba is bringing a number of hopeful new moves in the United States approach to Latin America (p. 891).

• Painfully achieved "agreements" in the Congo have yet to be put into practice (p. 876).

A Bird in Washington: A British visitor to the capital of Mr Kennedy's America comments on the new Administration (p. 891).

#### CANADIAN SURVEY

Our special correspondent has sought the answers to three broad Canadian questions—What happened to growth? Who is guiding the economy, and in what direction? What is the price of independence? (p. 915).

The agitation against Polaris is not only irrational: it is not noticeably swelling the unilateral ranks in the Labour party (p. 874).

Bank liquidity has tightened again, and the banks cannot hope for much relief with the Exchequer's needs almost entirely covered from revenue (p. 922).

#### SPREADING OUT

Universities: the education planners must follow Britain's economic boom, not stumble along according to Baedeker (p. 875).

Cambridge is still largely sunk in its secular peace (p. 898).

Technical training: the case for coercion (p. 879).

World food: the cupboard may be less bare than had been feared (p. 879).

#### Trade and Payments

Sterling area trade is changing shape and its members are running deficits (p. 925). The Anglo-German arms deal will apply a welcome salve to Britain's declining exports to Germany (p. 925).

The Gas Council hopes to import methane from Algeria to supply Britain's consumers with cheaper gas. A struggle with the Coal Board is on the horizon (p. 920).

Professor Triffin has amplified his plans for international liquidity (p. 922).

Detailed contents on page 867

## Room to breathe in Wales

### Room to expand

The rate of industrial expansion in Wales over the last ten years has been twice that of Great Britain as a whole. And the pace is quickening! There is today a broad pattern of economy embracing more than 400 individual industries. The traditional resources of coal and steel are augmented by cheap power, clean air and water, good and rapidly improving communications, ample port facilities and adaptable, willing workers. Excellent sites for factories are available . . . in many cases with Government assistance . . . and the keenest possible co-operation of the Local Authorities everywhere.

# WALES

## Land of opportunity

*For further information or a copy of "Wales, Land of Opportunity" please contact G. S. F. Ritson, Chief Executive*

DEVELOPMENT CORPORATION FOR WALES  
15 PARK PLACE · CARDIFF · TEL: 21200

*Chairman: Sir Miles Thomas, D.F.C.*

### Room to live

To those who have worked in Britain's crowded industrialised and over-populated centres, Wales presents a new conception of living near the job. Beautiful countryside and a glorious coastline are close at hand, even to the larger towns with their modern stores and spacious residential districts. The educational facilities, extensive and most advanced, are second to none. Wales abounds in provision for recreation for the young and their elders . . .

It is a wonderful land in which to work and relax . . . in which to enjoy a really full life.

# LION'S SHARE

**75%** *That's the share of Britain's export orders for turbine-generator plant that AEI won in 1960*

**F**IERCE COMPETITION—on design, delivery and price—confronts the British manufacturer in overseas markets today.

In meeting it—and in securing such a large share WORTH £11,000,000 of last year's turbine-generator business—AEI is the first to acknowledge the importance of the home market. The Central Electricity Generating Board, by its advanced forward planning of power generating equipment, has done much to enable AEI and other British electrical manufacturers to compete effectively abroad.

**THINK BIG.** Here, as abroad, the demand is for ever higher efficiencies, and that means two things: larger sets and higher operating steam pressures and temperatures. AEI is now building Britain's largest single unit—the 550 MW two-speed cross-compound set for Thorpe Marsh as well as one of Britain's first 'super-critical' sets—a 375 MW for Drakelow 'C'.

Abroad, AEI is supplying the largest turbine-generator sets to be installed in Canada, Australia, South Africa and the Argentine.

**AEI** Associated Electrical Industries Limited

# Some facts you should know before you ship overseas

*Read how Pan Am Clipper Cargo can help you make money*

More cargo capacity to more places than any other international air cargo carrier. Pan American serves 73 cities with the world's largest fleet of over-ocean jets and all-cargo planes. Pan Am Jets carry as much as 5 tons of cargo. Bring *your* cargo aboard!

The only all-cargo flights to the Midwest U.S.A. In addition to regular Jet Clipper Cargo service, Pan Am offers you direct all-cargo flights to Detroit and Chicago. From Europe you have a total of ten Pan American all-cargo flights a week to the U.S.A.

Reserved Cargo space on all Pan Am flights lets you meet tight delivery schedules with time to spare. Pan Am's Cargo Reservations System helps you plan ahead. And Clipper Cargo rates are as much as 38% lower than they were just a year ago.

Call a Pan Am Clipper Cargo specialist. He'll make an on-the-spot analysis of your shipping operations. Working with you or your shipping agent, he can help you expand your market abroad.

Clipper, Trade-Mark, Reg. U. S. Pat. Off.

**FASTEST DELIVERY TO  
ALL THE WORLD**

*What you see is the sugar for your breakfast table. But behind is a vast concern handling sugar from the cane to the shop—with several problems solved by Burroughs.*

## SUGAR-SHIFTERS AT WORK

TATE & LYLE, the world's biggest sugar refiners, deliver from their Liverpool Refinery to consumers in the British Isles north of the Severn and the Wash.

**PROBLEM**—to keep tight control of refined sugar stocks in depots and ensure that all 2,000 deliveries per day are invoiced to customers promptly.

**SOLVED**—with five Burroughs Sensimatic accounting machines.

**METHOD**—by 9.30 every morning the Sensimatic machines have prepared a complete record of the previous evening's position in all grades of sugar and syrup in depot stocks. Other Sensimatics summarize deliveries for invoicing and analyse consignments by region and class of consumer.

**RESULT**—in three years the installation of the Burroughs machines had paid for itself and continues to save Tate & Lyle £9,000 every year. The machines have since coped with 25% increase in work volume.

**SIMILAR PROBLEMS ARE BEING SOLVED  
EVERY DAY WITH BURROUGHS MACHINES**

THE BUDD COMPANY...

Leader in solving electronic design problems with plastics

Example: Continental-Diamond Fibre plastics measure up to the particularly demanding specifications for printed circuit panels in the TIROS I weather satellite now circling the Earth in outer space. The satellite was developed for the National Aeronautics and Space Administration by Radio Corporation of America.

Many other problems in space age developments and diverse electrical and industrial applications are being solved by plastics created by Budd's subsidiaries, CDF in the U.S.A. and La Fibre Diamond in France. These laminated and molded

plastics are meeting unprecedented requirements for electrical insulation strength, lightness and heat resistance. Many other plastics—in the form of sheets, rods, tubes and tapes—play an important part in improving a wide range of products and lowering their cost. This pioneering in plastics closely complements Budd's skills. These skills in engineering... metallurgy... tooling... welding... research... testing... production and progressive development for international industry, help place Budd high among the world's 250 largest industrial concerns. ## The man who bends rivers

Joe, taking time off in the boom town of Cooma, is just one of the thousands working on the great Snowy Mountains hydro-electric scheme in south-eastern Australia. He and his fellow-workers have already dammed the eastward-flowing Snowy River, the Eucumbene and other rivers, harnessed them for power and turned them back *westward* through a system of long tunnels deep in the mountains, to carry precious water to the desert interior.

After ten years' heavy work the Snowy Mountains scheme, due

to be completed in 1975, already provides one sixth of the ultimate 1,800,000 acre/feet of irrigation water a year—and more than 10% of its ultimate generating capacity of 3 million kilowatts. Atlas Copco rock drills, fitted with Sandvik Coromant drill steels and driven by Atlas Copco compressors, are being used for much of the work on these tunnels, dams and underground power stations. And this is only one of the major engineering projects in which Atlas Copco and Sandvik Coromant equipment has played a part.

Group Headquarters: Atlas Copco AB, Stockholm 1, Sweden.

## At the Confluence

THREE words might usefully be expunged from the diplomatic lexicon before Mr Kennedy and Mr Khrushchev meet at the end of next week. To describe the conference in Vienna as taking place "at the summit" does violence both to the topography of the Danubian plain and to the events that have led to the meeting. The image of the summit, so dear to cartoonists, has come to be dangerously misleading. It implies a deliberate and carefully planned ascent, preceded by a conquest of the lower slopes of the diplomatic mountain-side and culminating in a novel (if slightly breathless) view of the surrounding scenery; the metaphor has come to have a life of its own.

In fact, Mr Kennedy's ventures in diplomacy next week—both his visit to General de Gaulle on Wednesday and his talk with Mr Khrushchev at the weekend—require a different image. The proper picture is not that of a mountain, but the lowlier one of a river. The participants, after some eddying in the shallows (Cuba and Algeria) and some bumping over sandbars (Laos and the nuclear test talks), have suddenly found themselves swept together in midstream by the current of events. They approach their meeting, not as the climacteric of an ordered progress, but as an effort to steady themselves before the stream sweeps them on.

To look at the coming week's events in this light, instead of as an adventure in mountaineering, is the only way to make sense of them. Neither Mr Kennedy's visit to Paris nor that to Vienna is the result of successful negotiation at the preliminary stages of diplomacy. Indeed, both trips have become necessary precisely because negotiation at lower levels has got nowhere at all; just how necessary is shown by the fact that they have led the President to break his self-imposed rule (already cracked by last week's excursion to Ottawa) to spend his first six months in office at his desk in Washington. The comparison with the movement of water is irresistible: when a stream finds its customary channel blocked by the face of a cliff, it seeks a way round, following the line of least resistance. No doubt it is inconvenient for leaders of democracies (and irritating to the champions of orthodox diplomacy) that the line of least resistance should take the form of personal intervention by the great men themselves. But the events of the last four months—the efforts of Mr Kennedy, so swiftly stultified, to delay an encounter with Mr Khrushchev—suggest that occasional meetings of this kind have unavoidably become part of the duties of a head of government.

Clearly no one but President Kennedy has the slightest chance of persuading General de Gaulle to come to terms with his allies over the differences within the western community. Neither Mr Gayin, the American ambassador in Paris, nor Mr Dean Rusk, the Secretary of State, has managed to discover through conventional methods of diplomacy whether the general is willing to allow Britain to enter the common market or whether he will compromise on his demands for nuclear sovereignty and an inner committee to run world-wide policy for the North Atlantic alliance. Yet Mr Kennedy's policy on many other matters waits upon the answer to these questions. Moreover, a possibility of compromise exists. Now that France has acquired a degree of nuclear weapons technique, there is a stronger case for arguing that Britain or America might reasonably offer the French technical help in this field in return for French concessions elsewhere. Quite possibly not even Mr Kennedy can persuade General de Gaulle to strike such a bargain; but, since he is the only person who might, he must try.

It is a similar process of elimination that takes the President to Vienna to talk to Mr Khrushchev. The civility between Moscow and Washington that marked Mr Kennedy's first few weeks in office—when Mr Llewellyn Thompson played Mercury in an interchange of courtesies between the gods—has swiftly degenerated into an angry quarrel which no one but the senior Olympians is competent to settle. It is no longer fruitful for observers to discuss (and it will be fatal for Mr Kennedy and Mr Khrushchev to argue) just how much of the trouble in Laos and Cuba should be blamed on past and present errors of judgment, Russian or American. The basic fact is that, by words and actions, the two men have reached a situation in which they appear to be threatening each other with a world-wide contest in subversion and counter-subversion. In the two conferences at Geneva where their delegates are in contact, negotiations are near deadlock. Two fundamental questions have been laid bare; one is what kind of international body the great powers will allow to police them, the other is what they mean by "neutrality" and "independence." Nothing short of direct discussion between Mr Kennedy and Mr Khrushchev can begin to work out the answers.

If the flow of circumstances has inexorably carried Mr Kennedy towards his meeting with Mr Khrushchev, it also suggests what the aim of their conversation should be. This meeting is not simply, as some people have suggested, an opportunity for the two men to make each other's acquaintance. In happier circumstances there might have been a case for a purely introductory encounter, which would have let them get straight down to brass tacks when they met for serious negotiations later on; but, after the turbulences of the last few weeks, it is clear that they will at once have to deal with matters of substance. This is not to say that they will engage in negotiations, a prospect that makes Mr Kennedy's allies and his professional diplomats raise their hands in simultaneous horror. Between the extremes of true negotiation and a chat about the world's weather, however, lie two matters that are proper subjects for a meeting of this kind.

## Damages for Some Strikes?

There is a strong case for introducing new trade union legislation, and there may even be a new possibility of it

At the time that we went to press the legal advisers to the Association of Engineering and Shipbuilding Draughtsmen had not yet announced whether they were going to appeal in the case of *Rookes v. Barnard and others*. But if last week's judgment in this case does eventually stand, either unappealed or after appeal, a new situation in regard to unofficial strikes could be created in many industries. It is therefore proper—indeed for industrialists and all who are interested in public affairs it is essential—to discuss what that situation could be, without reference to the rights or wrongs of this particular case.

The essence of Mr Justice Sachs's judgment was that a member of a trade union who threatens to break his contract of employment is, when sued for damages in the courts of

First comes the extent to which it is safe for Mr Khrushchev to exploit the difficulties in which the United States finds itself just now in south-east Asia and Latin America, and may soon find itself in over Berlin. There is a danger that, because Mr Kennedy is young and new to office, and because the Russians misunderstand the meaning of the Democratic victory in last year's election, Mr Khrushchev may conclude that the United States will be slower to resort to force, if threatened at a point which it regards as vital, than it was in Mr Dulles's time. The President's recent speeches may already have disabused him of this idea. If they have not, it should be Mr Kennedy's first task to remind the Russian leader that history shows Democratic presidents to be not a whit more inclined to appeasement than Republican ones. In addition, recent developments in the Democratic party—the growing importance of the Catholic vote, and the defection of the South from liberal internationalism—have increased the pressure on Democratic presidents to follow a "policy of strength." If Mr Khrushchev wants to compromise, he would be wise to do so while compromise is still acceptable in America.

The other necessity that forces itself on the two statesmen is to begin, if with no excessive hopes, the search for a system to keep the conflict between them within non-violent bounds. By making the control of nuclear weapons one of his main objectives—an objective on which Mr Eisenhower's Administration was never able to agree—the President has come face to face with the problem of deciding how the international authority that would apply this control is to be organised. By giving his blessing to the idea of a neutral Laos, he has raised the possibility of setting certain parts of the world out of bounds to the cruder forms of pressure and subversion: in other words, of establishing a set of rules for the cold war. Both these questions go too deep to be settled quickly; but, now that the tug of events has borne Mr Kennedy and Mr Khrushchev together, they might at least seize the opportunity to start to search out each other's thoughts, not in airy generality, but on the urgent and ugly matters that now threaten to ring the alarm bells.

this country, in just the same position as any other citizen; and in this respect he judged that it makes no difference whether the trade unionist acts in combination with others, or whether he acts in furtherance of a trade dispute. In last week's case Mr Justice Sachs ruled that damages of £7,500 should be awarded against three officials of the Association of Engineering and Shipbuilding Draughtsmen because a non-unionist in the drawing office at London Airport had been sacked after they had allegedly threatened to call a "closed shop" strike in what was held to be a breach of the contractual negotiating procedure at the airport; the jury had already decided that the non-unionist draughtsman had suffered damages of that amount as a result of his dismissal.

In many other work places besides London Airport there

are complicated agreements—voluntarily entered into by the trade unions, often as part of a past wage bargain—about the procedure that will be followed before a strike can be called. Everybody who reads the newspapers knows that these agreements have often been insouciantly broken. This has been true in the case of unofficial strikes in the docks, and of unofficial (and even some official) strikes in many other industries. If last week's judgment stands, so far as one can see, there is an increased prospect that those who suffer damage through an unofficial dock strike could sometimes seek to recover these damages from the people who had incited the strike. So might other people—whether they be workmen who had lost jobs and earnings, or commercial concerns baulked in proper pursuit of their trade—who had suffered damage because some production line had been suddenly stopped by a "breach of contract" strike.

Two points should be made here. First, even if actions for damages of this sort are shown to be possible, nobody is suggesting that these actions will lie against the instigator of any and every unofficial strike; the prospect is only that they may lie against those who have instigated strikes that are in plain breach of a contractual agreement entered into by their union on behalf of its members. Secondly, such actions would not lie against the funds of the trade unions themselves; section 4 of the Trades Disputes Act of 1906 gives an absolute protection to any union and the officials acting on its behalf. But the distinction here is that this section 4 has never been interpreted to protect individual members of trade unions or officials in their individual capacity. ("An individual sued in his individual capacity is not protected even though he acted on behalf of his union": Halsbury's Laws of England 32: 831. See *Vacher v. London Society of Compositors*, 1913, A.C. 107, and *Bussy v. Amalgamated Society of Railway Servants*, 1908, 24 TLR 437.)

Some trade union leaders will say that these facts considerably limit the practical importance of *Rookes v. Barnard*, even if the judgment in it is confirmed. First, they may say that it would not be worthwhile for anybody who has lost thousands of pounds as a result of an unlawful strike to try to secure recompense from unofficial strike leaders at, say, London docks; those strike leaders, in their individual capacity, have not got thousands of pounds of assets upon which to distrain. But the point is that they have got some assets; and, fairly or unfairly, the knowledge that legal actions might lie would serve as a disincentive to many inciters of strikes that would be in deliberate breach of contract. Secondly, the unions will say that employers have presumably long been able to sue workmen who have directly broken contracts with them, but that employers have recognised that for diplomatic reasons they had better not do so; the same imperatives of diplomacy, however, may not work so effectively upon the customers of these employers and upon individual workers who (like Mr Rookes) feel that they have been damaged unlawfully—if they conclude that a new road to suing for recompense has been opened up before them.

Thirdly, and more determinedly, the trade unions may say that, if this judgment is confirmed, they will not sign any more agreements which "put them at risk" by obliging them to send disputes through some formal arbitrational or other pro-

cedure before a strike is called; and that they will demand that employers should allow them to denounce agreements that are in force already. One answer to this is that a wholesale scrapping of such agreements would not necessarily be an unmitigated blow to the economy. Some of these formal arbitrational agreements started out as a mechanism for industrial peace, but have ended up as a built-in engine of national inflation (or un-growth). When they have seemed likely to work in the unions' interests, they have been scrupulously honoured; when they have not done so, they have sometimes been dubbed as "unrealistic" and ignored.

Obviously, however, this has not happened in every case. Sometimes employers have regarded the renewal of "no strike without arbitration" agreements (even when they cannot be enforced) as a valuable *quid pro quo* from the unions at times when they have granted them an annual wage increase. But in these cases the union leaders (especially those who are not of a sort to call unconstitutional strikes themselves) may well feel that, if they withdraw the *pro quo* in future, they cannot expect to get so many annual increases in quids; those of the agreements that have actually been kept in the past (and have therefore been most valuable) may prove to be the ones that are most likely to be renewed, and to be given added effectiveness. Moreover, whenever any element of individual choice is allowed, customers might tend to push their orders towards firms that have concluded these (now more enforceable) agreements with the unions; it would be a legitimate commercial interest to prefer to deal with a supplier who had secured some safeguard against the sort of wildcat and unconstitutional strike that can cause grave losses by holding up supplies, completely without prior negotiation or notice. This is only one of the ways in which the whole pattern of industrial relations could conceivably be subtly changed. Another and even more important respect could be the strengthening of individualist workers' freedom against some of the bullying that has too often gone on and sullied the trade unions' name.

The fourth thing that the trade unions may say is that, if last week's judgment is confirmed as the correct interpretation of present law, then every effort will have to be made in Parliament to get the law changed. The history of trade unionism in this country is a story that is closely entwined with adverse court decisions in 1867, 1901 and 1909—which, after strong political pressure, were more or less completely rectified for the trade unions by new legislation in 1875, 1906 and 1913. The unions can also say, with some justice, that a ruthless exploitation of last week's judgment could have some very unfair and undesirable results. In some circumstances, it could conceivably bring down ruinous financial penalties on small men who had merely shown insufficient courage in swimming against the local tide of their own workmates' opinion, or who had made technical procedural lapses, when doing voluntary work for their union. This, in turn, could mean that in future only fanatics would be willing to take up some voluntary union jobs, in view of the personal risks involved—quite apart from the effect that a new situation could have in causing the discontinuance of some national agreements that seek to ban or delay strikes.

There is force in some of these arguments. Yet it is doubtful whether public or political opinion would now be

in a mood to give to the trade unions quite the same blank bill of indemnification after an adverse court decision as the Conservatives gave them after 1867 or as Campbell-Bannerman gave them after Taff Vale. There has been too much realisation recently of the changed social position of the unions. In the swingeing powers that shop stewards possess to inflict conformism on all who wish to work in particular industries, in the wide latitude accorded to them to act sometimes as a positively anti-productive force, and in the extraordinary freedom that they have hitherto seemed to enjoy against being sued for any breach of contract, the trade unions have become at once the repositories of mighty social power and the beneficiaries of unusual legal privilege; it is not entirely a joke to say that the last group of people to enjoy a similar combination of great power and special privilege were the French aristocrats just before 1789.

The happiest escape from this, even if it should now be discovered that some union officials have all along overestimated the true extent of the legal privileges under which

they act, would not necessarily be to spring over to a system under which the smallest, part-time, voluntary workers in the unions could conceivably suffer heavy financial penalties for making genuine mistakes. It would be happier to set up a committee or royal commission to try to chart the way forward to a much fairer, and if possible agreed, legislative reform by Parliament.

The aims of any new legislation should be to redefine the rights of individualistic workers towards trade unions that wield power in their trades; to redefine the extent to which trade unions themselves should be bound by the law of contract; and perhaps to provide that injunctions could be swiftly served on minor officials who are performing unlawful acts and that they should become liable to pay heavy financial penalties only if they disobey these. Such an inquiry and such a legislative reform would be the best public outcome, at the end of the long legal day, of the arguments that have now been so importantly re-kindled by the High Court judgment in the case of *Rookes v. Barnard and others*.

## Goyesca

Relations between Britain and Spain are well worth a Foreign Secretary's visit. They are better served by diplomatic patience than by military (or political) brainwaves

LORD HOME, when he arrives in Madrid on Monday, will be treading new ground. No doubt his predecessor, Mr Selwyn Lloyd, talked with important people during his holidays on the Costa Brava. A more dignified age saw Austen Chamberlain, cruising off Majorca, visited on board his yacht by the Spanish dictator, General Primo de Rivera, and his foreign minister in September, 1927. More stately still, Edward VII received the Spanish prime minister and foreign minister of the day in the royal yacht off Cartagena in April, 1907, with the permanent under-secretary of the Foreign Office in attendance. But no British Foreign Secretary before Lord Home has ever paid an official visit to Spain.

This does not mean that the visit is to be attacked or treated as sinister. Circumstances have long confined Spain to a relatively passive role in European affairs. But circumstances can change; it is much to be hoped that they will, since Europe is small enough nowadays, even when such outlying, insular members as Spain and Britain are included. Spain is important. The British interest in a friendly, prosperous, and politically rational Spain is considerable, and it matters materially to this country whether its relations with Spain are good or bad. To attend to such matters is what foreign secretaries (but not, as a rule, home secretaries) are for.

Thus it is plain enough that Lord Home is right to go. It is less apparent, to the naked eye, what Lord Home is going to talk about with his Spanish opposite number, Señor Castiella, or with the bearer of political power, General Franco, himself. What with the Goyas and the Velasquez, the two mammoth memorials of the Escorial (sixteenth century) and the Valley of the Fallen (twentieth), and a trip to Toledo (where it would be a pity to neglect the El Grecos entirely for the sake of the civil war legend of the Alcazar), Lord Home's two days and a morning promise little room for talks of substance. What room there is will be eaten into, no doubt, by those perennial points of friction, the

remaining Spanish restrictions on movement in and out of Gibraltar, and the continuing disabilities of the very few Protestants in Spain.

These are real complaints, but one must hope that the talks will somehow get beyond them. Spain and Britain are two countries on the edge of western Europe that are still puzzling over their future relationship with the continental body. Britain, as it should have, has got further along the road of self-examination, and is nearer a decision, in this respect. Spanish studies of the subject have not got so far as the British. The obstacles of separateness, political, social and economic, are enormously the greater in Spain. Some men in the Spanish government—Señor Castiella, Señor Ullastres, Señor Navarro Rubio, and even the controversial Señor Solis—know that they wish to steer towards Europe, not away from it. This is as far as they have got, but their next decisions would be made easier if they could know what Britain's course was going to be and therefore what shape the European organisations were going to take.

OPINIONS may differ on the possibility for any outside powers of influencing the course of Spanish affairs. If there is a way of influencing Spain usefully, it is almost certainly through helping the country into association with Europe in economic and civil matters, and not by putting military integration first. The lesson of the dead European Defence Community ought by now to have been learnt, but evidently it has not; when Anglo-Saxon statesmen, fleetingly, turn their attention to Spain, they tend to fix automatically on the idea of bringing Spain into Nato. This would be to do things in the wrong order. It would at present be good neither for Nato nor for Spain, and there is no evidence that the Spaniards are seeking it.

When Lord Home treads this new Spanish ground, there-

fore, he can usefully select the solid patches to tread upon; in that way he may avoid putting his foot in it like Mr Butler. Why the Home Secretary had to make a political speech at all after his pleasant dinner with the Spanish notables on Sunday night is a mystery. He was only passing through Madrid, on another of those statesmen's holidays. A week before the Foreign Secretary's arrival was, one would have thought, not the moment to let the air out of Lord Home's tyres. But Mr Butler thought it right (and, for himself, properly assertive politically) to assure his Spanish hosts that they had suffered wrong in being so long kept out of their rightful place in the western world; and more besides.

ZEALOUS officials in London and Madrid can hardly be blamed for trying to sweep Mr Butler's characteristically impish speech under the red carpet that awaits next Monday's visitor. But the hints that are evidently being tactfully dropped to the effect that the Spaniards had moved too fast in releasing the speech, or that they had read more into it than Mr Butler said, are wrong and unfair. The release was made after

proper, even generous, consultation. Mr Butler, as a matter of fact, did not say a shade less than was reported; he said a good deal more. The Spanish listeners did not imagine that Mr Butler was supporting the entry of Spain into Nato; they heard him say it. It was not they who raised the subject; and there is no way in which they can be blamed.

In this idea that the North Atlantic Treaty is the royal road by which an isolated nation may arrive at the blessings of free institutions, Mr Butler is not alone among ministers. But Nato has already more tough propositions in its body than its digestion is able to cope with. Spain, for its part, has many more urgent needs. There is plenty to be done in the way of helping Spain to bring its society, its material condition, and its political standards closer to the European mean. These are things which a wide body of Spanish opinion of many shades can be got to support, and which, therefore, once done, may escape being violently undone. Possibly, Lord Home may share Mr Butler's opinion, though he would hardly defend Mr Butler's right to express it. Whatever he says in Madrid, it is to be hoped he will not say it from a bonhomous desire to please his hosts.

## Slimming Gyms

"Bring out number, weight, and measure in a year of dearth"—Blake, Proverbs of Hell.

IN his unending search for finely graded shades of expression which avoid the coarseness of common English, Aldous Huxley in the late nineteen-twenties sieved out of his devious vocabulary the word "callipygous" to describe the figure then fashionable among young women: they had pretty behinds. This Huxleyism, if it serves no other purpose, is mildly corroboratory of the belief that it was in the first flush of female emancipation that the foci of "the figure" shifted from face and waist to buttock, breast, and undernourished bone.

From Solomon to the bawdies of World War I "buxom" and "plump" described the admired form, inadequacies in which were disguised by bustle or corset. The somewhat uncomfortable lines of the hourglass were in vogue. Yet these extravagances were only upward (and downward) refinements of the true womanly (i.e. childbearing) shape: narrow of shoulder, majestic of bosom and broad of hip, women refused to follow the dictates of anatomy only in the matter of their cruelly tiny waists. Paradoxically, the perversion of this essentially feminine shape came into vogue on the heels of feminism. The emancipation from disability by Pankhurst had its concomitant in a release from function by Stopes. The combination, perhaps aided by the frenetic destruction of ancient morality, led to the imitation of the male form: broad shoulders, a not noticeably tiny waist, insig-

nificant breasts (tremendously superstructural screen stars are admired, but not desired) and narrow hips decorated with uncomfortably lean bottoms. None of this has proved quite incompatible with the production and rearing of children, and all of it is regarded as eminently suitable for less inhibited behaviour in modern life.

From this new shape stems the slimming craze. Originally, and sensibly, slimming took the form of a reduction of food intake. Horrendous diets were the staple cures for fat women in the nineteen twenties and thirties; they continued to torment them until after the second world war. Then the effects on appetite of certain militarily useful drugs became apparent: Dexedrine and other appetite killers removed the necessity of will-power which alone could keep a woman to enriched milk or bananas for days on end. There were, of course, other cures—in the shape of bath salts, crispbread, creams, massage, plastic suits; but their efficacy has been found somewhat less uniform than optimistic advertising would indicate.

The truth is that two ways only are known to be successful: exercise and a reduction in intake of food. Lack of food, whether induced by drugs or enforced by strength of purpose, has its own dangers. Undoubtedly the best way is exercise; unlike most slimming "cures," it has good side effects. It need not be strenuous exercise, provided it is regular and functional, but few women have that sort of resolution when

unaided. In aiding them, a flourishing business is growing in this country as it has in America. In the last few years at least four establishments have appeared in London devoted to the proper cultivation of the female anatomy. Some work on the active principle (women's work is never done), and one on the "passive" system where those who can afford it have themselves moulded nearer to heart's desire.

THE active gymnasia ("health clubs") are much of a type, with minor variations of size and opulence. They are low-ceilinged, expensively carpeted, suffused with indirect lighting and Muzak—and in one case with the smell of sweat—and filled with chrome-plated machinery far removed from the barbell-and-press-ups thought sufficient for mere males. All of them are looked after by young men of exemplary size and structure. If they smack of high-powered and refined torture chambers, there is also the less unfortunate feeling in them of an efficient, cosy and secure harem, lacking even the drawback of a sultan. The passive salon is run on different lines: the slimmer does no exercise, but is manipulated mechanically by a "live" table in an atmosphere of quiet chic which would do credit to a fashionable undertaker. None of them encourages the sort of diet which reduces cheerful but obese women to irritable skeletons in a matter of weeks; but all of them recommend "sensible eating"—few carbohydrates—and their attitude to proprietary cures, foods and food substitutes is mixed (one of them serves a successful "non-food" as a soft drink). The "active" gymnasia have all installed the now discredited (as a slimmer) Turkish bath.

## The Economist

MAY 25, 1861

### DELINQUENT STATES

Among those "experiences" at the Foreign Office of which the present Premier occasionally gives the House of Commons and the public the benefit, none was more significant than that which related to the comparative morality of strong and weak States on points of international obligation. Lord Palmerston, in answer, if we recollect rightly, to some imputation of adopting a different standard of treatment in proportion to the means possessed by the State in question of resisting or resenting interference, avowed a difference of tone, and justified it by the fact that the weaker the nation is, the less sensitive it is to those considerations of national honour and integrity which are the basis of our intercourse with the greater Powers and of our friendly appeals to them on any international difficulty. The weaker States—he told the House in so many words—speculated on their own weakness, and on the probabilities of the forbearance which the disparity of forces would secure, or of the sympathy which they might obtain from the ignorance or jealousies of other nations, ventured on gross breaches of international law and solemn engagements which greater States would have shrunk from as national dishonour. How to deal with such delinquents,—who are always parading their weakness as a sevenfold shield, and under its shelter setting at defiance all the ordinary comity and duties of nations,—is a problem which even Lord Palmerston has not found it easy to solve consistently with the conflicting claims of humanity and justice. A strongly-worded despatch, a biting Parliamentary allusion, or even a naval demonstration, have proved but feeble antagonists to this sublime insolence of the weak. It is, we fear, an inevitable concomitant of the superior urbanity of modern Governments, and can only be slowly removed by the wider spread of feelings of national morality. One great hope is derivable from the fact that the delinquent States are by this time so well ascertained, and their real character is becoming so much a matter of general notoriety, that the plea in *misericordiam* will not be much longer admitted in the tribunal of civilised nations. Bondholders and philanthropists—differing widely as they sometimes may in their views of political and social morality—are agreed on this point.

The number of patients is high. Most of the businesses are established in the richer parts of London, and some market researchers might have thought that there were not enough disfigured women among London's rich to keep them going. But the membership of the three active clubs is over 12,000; and the passive treatment is meted out 50,000 times a year to possibly 2,000 women. In the active clubs "normal membership" costs between £22 and £30, with an additional—and quite substantial—fee for massage. Passive treatments cost 15s. a time, and the usual course is 30 treatments. The turnover of this slimming gym business from treatment alone cannot be less than £300,000 a year in London. It is probably over half a million pounds a year in the country as a whole (there are five provincial salons). In addition, a good deal of ancillary business is done in clothes, soft drinks, restaurants, hairdressing concessions and other balms to the adipose spirit.

The largest of the active clubs has—as they all do—its roots and principles in the United States; but in size it outstrips anything similar in the world. Twenty-five thousand square feet of floor space are filled with equipment, hairdressing saloon, restaurant and offices, and in a part of London which is by no means cheap, the figure given as capital investment employed, £100,000, is probably an underestimate (another admits to having spent "in excess of £50,000"). But the returns are all that could be desired: 7,000 women pay £22 a year to use the biggest club; even allowing for the large overheads, not much less than a 100 per cent annual return on capital should be expected both in this club and in others. It is not surprising that some diminution of this extraordinary rate can be afforded, and there are various bonus schemes to induce yet further returns: members introducing new members have prizes—or reductions—awarded them, and sufficient introduction now means free membership.

IN the physical as in the financial field the slimming gyms' results are not to be sneered at. Naturally the cases marked for exhibition are not those whose progress has been negligible. But some spectacular ecydyses have been achieved. Poundage losses of between 30 and 40 are not rare, and cumulative inchage losses of over 40 (on 9 or 10 different measurements) are not unknown. Nor are all the patients middle-aged and going flabby: the youngest so far come across is 15, the oldest 79.

The tendency among many women—no doubt disappointed in the use of other slimming "cures"—is to regard these institutions as "gimmicks" or rackets; and there is no doubt, on medical grounds at least, that similar results could be obtained, without spending £25 a year, by exercising intelligently at home. But there are few women who have the ingenuity, time and fortitude necessary for devising their own exercises or following their doctors' instructions. Before the advent of these institutions the reaction of rich fat women has usually been either to over-exercise, strain themselves and give it up—or else to go on to one of the commercial diets, in many cases useless, often dangerous, and sometimes unbelievably expensive. And, if one is reasonably well-heeled as well as well-padded, the fee for the slimming gym does not seem cruelly large for the facilities afforded for gossip, womb-like luxury, and the undying sympathy and friendliness of others in the same boat.

# NOTES OF THE WEEK

## PATHANS

### North of the Khyber

BIDS from Kabul for the allegiance of frontier tribes in Pakistan have long ceased to be "news." This week, however, a sharp Pakistani reaction to Afghan infiltration across the Durand line (the recognised border) made headlines. The Bajaur hills, north of the Khyber pass, have been disturbed this year by the activity of one Badshah Gul, who handed out to the tribesmen Russian arms, Afghan promises, and money from one source or the other. He and his mixed bag of local dissidents and Afghan emissaries slipped back into safety across the border whenever the Pakistan authorities tried to catch up with them in these tangled mountains. In March the Pakistanis, having word of an ammunition dump in a Bajaur village, resorted to the time-honoured Frontier procedure of strafing it from the air after dropping leaflets warning local inhabitants to get clear. This humane technique may have enabled Badshah Gul and his merry men to get the arms and ammunition clear too; in any case, their arms build-up was resumed, and this week's reports of fresh fighting indicated that not only machine guns and mortars but even Afghan soldiers have lately been brought across the border.

Personal and clan feuds in and around Bajaur have helped the fomenters of disorder. A local quarrel in March over a road building scheme led to a fight in which tribesmen from Afghan territory were killed. But, while the judicious use of guns and gold can often stir up the personal passions of Pathan tribesmen, there is no sign that the Kabul dynasty is making any headway in its efforts to win their allegiance. The Afghan government, beset by an acute shortage of food and other troubles, may have judged this a good time for a distraction in the shape of a fresh appeal to the Pathans of Pakistan to transfer their loyalty; but its "Pashtunistan" campaign now

amounts merely to flogging a very dead horse. Although Mr Khrushchev has publicly backed the Kabul monarchy's ambitions, India, originally a much more significant sympathiser, has lost interest. And the Pathans on the Pakistan side of the frontier are not only much more prosperous than their Afghan cousins; they are now also, far from being a downtrodden minority, very much the leading element in Pakistan—from President Ayub Khan himself downwards.

## FRANCE AND GERMANY

### Bridging the Rhine

LAST Saturday's meeting between Dr Adenauer and President de Gaulle at the Chancellor's home had a familiar flavour of high-level cordiality, but it would be wrong to think that it had no practical significance. Although the glamour of the occasion had been tarnished by the postponement of the conference of the common market's heads of government, the symbolism of President de Gaulle's first visit to the west German capital was not without significance for the Franco-German partnership. When the two men got down to serious discussion, they made more progress than the ups and downs of six-nation politics in the last half year might have led one to expect.

The meeting was overshadowed by the announcement, four days before, that President Kennedy and Mr Khrushchev were to meet in Vienna. Not surprisingly, this led the two European statesmen to agree to stand firm on Berlin, a sentiment which President de Gaulle will put to Mr Kennedy next week. In return, Dr Adenauer has fallen into line with some, at least, of France's European plans. Thus he confirmed his support for regular meetings between the six heads of government. In one important respect he seems to have gone further than before—by agreeing that these gatherings might discuss military matters as well as politics. Hitherto the west Germans had argued, with the Dutch, that military affairs should be left to Nato. This time, it seems, Dr Adenauer undertook to try to talk the Dutch round. The agreed Franco-German viewpoint is to be put to a meeting of the six foreign ministers late in June. If it is accepted, the first meeting of the six heads of government will take place early in July.

Other traditional differences, however, persist. On Nato questions Dr Adenauer backs integration; President de Gaulle is still pressing for a more prominent place for France. On common market problems the French assented to the German view that the existing communities should be sustained and developed, but pointed out that this required a more effective German contribution on the agricultural side. All the same, if any conclusion is to be drawn from the brief encounter at Rhöndorf, it is that it would be a mistake to underestimate the Bonn-Paris relationship, particularly when east-west talks are in the air. Dr Adenauer brought up the question of British membership of the common market. He was coolly told that the question would have to wait till the British had made up their minds. And with that it was set aside and attention turned, once more, to developing the Europe of the Six.

## LEGISLATION

### Laws' Delays

THE Government is badly behind time in its legislative programme, and although an extra week has been gained by cutting the Whitsun recess some of its bills will have to be dropped. One likely casualty is the Weights and Measures Bill, which still awaits a second reading in the Commons. It is also exceedingly improbable that the Road Traffic Bill will pass into law this session—a delay that would not be a total loss as the Lords debate gave an opportunity for widespread discussion of its more controversial proposals. Of the other major Government bills, the Criminal Justice Bill has made good progress recently in the Lords, where a number of Government amendments were made, but these will now have to be agreed to by the Commons. The Licensing Bill (or "drinkers' charter") has been a very long time in committee in the Commons and has still to pass through all its stages in the Lords. It is late but not in any real danger.

The Housing Bill is still in its Commons committee stage, where the committee is meeting three times a week but making slow progress; it is expected in the Lords in July, but its implementation will probably have to be delayed. The Rating Bill has been through the Commons and is likely to have a swift passage through the Lords—unlike the Land Drainage Bill which suffered long delays in the Upper House. The Covent Garden Market Bill is through the Commons, but is likely to have a stormy passage in the Lords. The Cunard Bill is waiting

for a committee of the whole House and has also to go through the Lords. Of the minor bills the Human Tissue Bill is making slow progress, and the bill abolishing the crimes of suicide and attempted suicide has still not had a second reading in the Commons. The Trustee Investment Bill has been heavily amended by the Commons in committee and will have to return to the Lords. The royal assent is expected in July. The Finance and Army and Air Force Bills have their usual long committee stages ahead of them, and on these both the Opposition leaders and the Labour rebels will probably cause the maximum trouble. Very few of this session's large crop of private members' bills are likely to get through.

For these delays, the Government is apt to blame Labour's filibustering tactics at the time that Mr Powell introduced his new health charges. Were those tactics a pointless and expensive folly? On the one hand, Labour's recovery in the country did not start at the time of those all night sittings, but in fact really got going at a time when Labour whips were worried about an opposite problem—namely the poor attendance record at the House of some Labour MPs even during the daytime. On the other hand, there is no doubt that the events of this session have increased the Labour front bench's morale, so that Parliament is at present fulfilling its function as a political forum rather well—even if it is also falling behind in its other function as an efficient grinding machine for the production of new legislation.

#### HOLY LOCH

### Getting the Point

THE Whitsun scuffle at the Holy Loch base passed off with nothing more serious than duckings and dowings: but it was a remarkably silly business for all that. The one incident that has left an aftermath (in the shape of an Argyllshire police inquiry into allegations of unnecessary violence) arose when the police cleared a path through the squatters at the entrance to Ardnadam pier, the landing stage for the depot ship *Proteus*. It is right to question whether this need ever have happened. The Clyde estuary has a multiplicity of piers, jetties and small craft, all perfectly suitable for embarking boatloads of American officers and the contents of a hundred bread vans. In deciding on the recapture of Ardnadam the authorities seem to have shown something less than a mastery of tactics.

On its side, the anti-Polaris brigade has trailed away from the loch leaving the argument behind its demonstration as murky as ever. Since the Direct Action Committee stepped up its most flamboyant demonstrations, Labour party and trade union sympathies have slipped steadily away from the straight unilateralist line: some people attribute at least part of Mr Gaitskell's

#### NOTES OF THE WEEK

recent recovery to the fact that the ordinary trade unionist thinks that it is plain daft for anybody to express a political viewpoint by sitting down in the street. But the unilateralists are still hoping, as Mr Ted Hill told an audience in Moscow last week, that at least a motion against Polaris bases may be passed at this year's Labour conference, even if the other parts of Mr Gaitskell's defence policy are approved.

There would be no logic in this. Most people should by now have grasped the points that this second-strike nuclear weapon of Polaris is precisely the one that will not be set off by mistake and need never go off at all unless the West is first devastated by Russian missiles; that Polaris is therefore a boon beside the Thors and V-bombers;

Retreat from Argyll

and that Labour would be hard put to it electorally to explain why western defence should be conducted without the one really credible retaliatory weapon that has yet been developed. But the anti-Polaris campaign has the advantage for the extreme left that it can be conducted with specifically anti-American overtones. It has also been entirely convenient for the anti-Gaitskellites that the Holy Loch happens to be next door to Labour's old "Red Clydeside" stronghold, where diehard resistance to a modernised party policy on such matters as Clause 4 remains unyielding. The anti-Polaris agitation in the west of Scotland has therefore been developed and sustained with an evident political purpose in mind. Mr Cousins and Mr Michael Foot have both been at pains to address meetings in the neighbourhood in the past three weeks.

#### CONSERVATIVES

### Youthful Inhibitions?

CONSERVATIVE MPs have rightly reacted sharply to Mr Redmayne's peremptory warning to parliamentary private secretaries that if they vote against the Government they might lose their jobs. These secretaries are not members of the Government: they are paid no salary, and are selected personally by the minister concerned. Appointment as a PPS is generally regarded as a first step to ministerial office, and one that promising backbenchers can reach at a relatively early age. To burden them with

#### THE ECONOMIST MAY 27, 1961

handcuffs while thus in their ministerial swaddling clothes would—or should—reduce the number of able young men who are willing to become a PPS. None of the great historical leaders of the Conservative party would have agreed to pledge himself never to vote against his party's line in early youth. To deprive these men of the opportunity to vote against the Government would also substantially increase the proportion of Conservative Members (now 1 in 4) committed by their position to support the Government on every issue or resign from office. While it is reasonable to expect a PPS not to vote against the Government on an issue where his own chief is involved, to extend this duty to cover the whole Government is not; the proper course is simply for the secretary's chief to pass on a quiet word of explanation and attempted dissuasion when some particular revolt would be especially embarrassing.

As so often, the Conservative hierarchy's excuse in this matter may be that Labour did it too. Mr Attlee set a thoroughly bad precedent in dragging the PPS in 1949, when he ordered five of his ministers to get rid of their secretaries who had voted against his government at the committee stage of the Government of Ireland Bill. Mr Redmayne, who up till now has been a reasonably popular chief whip, has clearly been rattled by recent Tory revolts over the Benn case (15 dissidents including 1 PPS) and over corporal punishment (69 pro-floggers including 5 PPS). Some people have suggested that Mr Redmayne may have been looking ahead to major ructions in the party as the Prime Minister draws closer to Europe; but in fact there is rather more evidence that his real concern is that some expected Tory revolts on the Finance Bill (particularly on the oil tax) should be nipped in the bud.

#### LAOS

### A Small French Bid

FRANCE, the almost forgotten factor in Indochinese affairs, could well emerge from the present conference on Laos in Geneva with its power to influence events slightly enhanced. The basis for this unlikely proposition is communist support for the Geneva agreements of 1954, which allowed the French to maintain two bases and not more than 5,000 military instructors and maintenance personnel in Laos. At Tuesday's session of the Geneva conference M. Chauvel, France's ambassador in London and permanent head of the French delegation, proposed an international charter for Laotian neutrality. M. Chauvel would ban all foreign troops in Laos as well as foreign installations or military instructors—other than those permitted under the 1954 agreements.

Surprisingly, this pregnant qualification appears to be supported by the Americans who, since 1954, have supplanted the

#### THE ECONOMIST MAY 27, 1961

French in training the Laotian army. In his speech before the conference on May 17th, Mr Dean Rusk, the American Secretary of State, laid down that "foreign military personnel, except for those specified in the Geneva accords, should be withdrawn from Laos." The Russians, though eager enough to support any initiative that would reduce American influence in Laos, seem unready to go that far. Although Mr Gromyko, speaking on the same day as Mr Rusk, described the 1954 conference as a good basis for fresh agreements, he went on to propose that all foreign military units and personnel should be withdrawn from Laos within thirty days of the signature of a new agreement; he did not allow for exceptions. The definition of Laotian neutrality, indeed, seems likely to absorb many weeks of discussion. The Polish and Chinese foreign ministers have already said that one essential step would be to remove Laos from the sphere of action of Seato, the south-east Asia treaty. It remains to be seen whether the communists would settle for a small French presence in Laos if Seato itself (to which France, somewhat halfheartedly, belongs) agreed to see nothing and hear nothing in Laos.

#### KOREA

### Generals' Generalities

IT is difficult to feel heartened by events in south Korea. True, President Yun, who had resigned last Friday, has since withdrawn his resignation, thus giving a semblance of legal continuity to the regime. The semblance, however, is very thin, and nobody knows what pressure was put on him by the military junta now ruling the republic. The new regime is long on suppression and short on guarantees of a return to constitutional life. Parliament has been dissolved and freedom of speech curtailed; more than 2,000 people, including the premier, Dr John Chang, have been arrested. These are facts; in the realm of promises, the military junta offers precious little beyond generalities.

In domestic affairs, it has pledged itself to "wipe out all corruption and evil in society," to improve living conditions, relieve hunger and try to make the economy self-sufficient, to "cope" with the communists and reunify Korea. Only when these grandiose aims are achieved will it "prepare to shift the administrative powers to fresh and conscientious politicians," though without specifying how such politicians are to be found or chosen. It has neither pledged itself to hold elections nor set itself any time limit for its attempt to succeed where "corrupt and incompetent politicians" failed.

In foreign affairs, the junta promises to observe the United Nations charter, carry out its international obligations and strengthen its ties with the United States. Although these pledges are accompanied by

#### NOTES OF THE WEEK

an uncompromising statement of anti-communism, they have not, so far, mollified highly placed Americans in Seoul, who continue to view the junta with distaste or suspicion. A four-hour conference on Tuesday between General Magruder, who commands the United States and United Nations forces in Korea, and General Chung Hi Pak, the strong man of the new regime, broke up in deadlock. The American chargé d'affaires, Mr Marshall Green, is concerned about the legality of the new regime and has virtually said so in public. There is even talk of a reassessment of American economic aid to south Korea. A trial of endurance may therefore be on the way between Generals Chung and Chang (the titular premier) and the Americans, who can scarcely abandon south Korea but might prefer it to be ruled by some of the younger and more democratic officers said to be waiting in the wings. On Wednesday, the American government showed how it feels by rebuffing an attempt by General Chang to go to Washington and put his case to President Kennedy.

#### AGRICULTURE AND EUROPE

### Brave Statistics

MR COLIN CLARK, the director of the Agricultural Economics Research Institute at Oxford, has long deserved a medal for very brave statistics. His latest and bravest estimates concern the effect on British food prices and agriculture of joining the common market. Even without making allowance for price reductions in manufactures, Mr Clark believes that the impact of a new system of agricultural support on food prices would be to raise Britain's total cost of living by less than 1 per cent, or about 1s. per person per week; this is less than the rise in prices that has taken place in Britain, while outside the common market, during the last two months alone. One may question some of Mr Clark's individual estimates; while agreeing that Britons would get their potatoes and vegetables more cheaply in Europe, one doubts whether the average Briton would really be allowed to pay 3.6d. per week less for his liquid milk. But obviously these relatively tiny figures—the biggest individual increase he foresees is 8d. per head a week more for our meat—are approximately of the right total order of magnitude. A rough independent check on them is that Britain's present agricultural subsidies of about £250 million a year are equal to only between 1 and 2 per cent of total consumer expenditure of around £16,000 million a year; so that even if the whole burden of financing these was shifted from the taxpayer to food prices, a rise of between 1 and 2 per cent in the price of the total package of things bought by the consumer is presumably the most that could be expected.

Despite farmers' preparatory cries of woe, Mr Clark estimates that British and

Commonwealth farmers (if they continued to supply food in the same total volume as they do now) would between them enjoy an increase of income of about £145 million a year if Britain joined the common market. He says that farmers would earn more from their meat animals (substantially), their cereals, butter and cheese; but less from liquid milk, potatoes and horticulture. Once again, one has a reservation about his estimate of a fall in milk prices; and the assumption of a stable volume of production after Britain joined the market is obviously a very wide one. But, more and more, every serious study of this problem points towards the same broad conclusion: the domestic "agricultural obstacle" in the way of Britain joining the European Economic Community is being shown up as, quite largely, a red herring. In this respect an interesting letter from Labour's agricultural peer, Lord Walston, appears on page 881.

#### NEW UNIVERSITIES

### Waiting for Robbins

THE new universities authorised at Canterbury, Colchester and Coventry are to be followed by a fourth, within the next three months. Possibly it will be at Lancaster, since the north-west has been ignored in recent dispensations. After that Sir Keith Murray and the University Grants Committee will make no further recommendations until the Robbins committee on higher education has introduced new criteria into the selection system. Eight new found-

Sir Keith Murray: snail's pace

dations have now been approved since the war, in addition to the rise of university colleges at Hull and Leicester to full status. But fourteen years from now, assuming Brighton's and not Keele's rate of progress is aspired to, they will still be providing only some 24,000 places between them; this is an advance at a snail's pace.

There is a temptation to plump for new sites in atmospheres of cloistered calm. (Canterbury is a prime example; another is

the preference of Colchester to Chelmsford.) These sites may be attractive to non-scientific staff, but they involve further expenditure on residential accommodation without serving the immediate needs of the bulk of potential students drawn from the large conurbations. The greatest need is for a crash programme to cater for the qualified school leavers in this decade, not those of the late seventies and eighties. Coventry, which can expect to attract non-residential students from its immediate area, is a good choice now. For the post-Robbins round, places like Croydon would surely have much more to offer than decaying Baedeker symbols that want a new industry. If a suburban drive upsets some established donnish spheres of influence, so much the better.

The case for setting up second universities in the major cities (where, often enough, the existing foundations are past the stage where size brings economies) is a powerful one. The chief *caveat* lies where the local authorities already have an overspill problem, as in Birmingham and Manchester, and do not relish the prospect of universities (which create five new jobs per student) when other factories are being turned away. But cannot higher education lead the way in, and eventually become the focus of, the overspill operations? One other suggestion, which is not meant to be bizarre, is that the local authorities could do worse than look at the broad acres surrounding their present mental hospitals, some of which, the Minister of Health has said, will soon become defunct as more and more mental patients are passed to other forms of treatment. Why not turn some of these into universities?

## CONGO

### Doubtful Gains

SNAKES still outnumber ladders on the Congo board. Each painfully achieved agreement is liable to be followed by a slip back toward chaos. The United Nations force has improved its position, and the immediate danger of civil war has receded. Mr Hammarskjöld's envoys have induced President Kasavubu to accept the Security Council's resolution of February 21st calling for the reorganisation of the Congo army, the removal of foreign mercenaries and political advisers, and the convening of parliament. The secretary-general has likewise received assurances of Belgian acceptance of the resolution. The mercenaries are mostly either in the bag or in a promising state of demoralisation; the Congolese soldiery is reported to be behaving itself for the moment; and Mr Kasavubu has announced that he will convene parliament as soon as his Coquilhatville conference produces a new constitution. Unfortunately, the reality behind these outward signs of progress is less pleasing.

As Mr Hammarskjöld reported last week, "Belgium's position still falls far short of what is required by the Security Council

## NOTES OF THE WEEK

resolution." The worth of Mr Kasavubu's word is dubious, in the light of his record; his ability to make "his" troops accept reorganisation is even more questionable; and he may use the return to duty in Leopoldville of the chief UN representative, Mr Dayal, as a pretext for going back on the new agreement. Meanwhile Mr Hammarskjöld's other flank is still being savaged by the Russians, who are complaining bitterly about delay in implementing the resolution of February 21st—although they were alone in objecting to that resolution at the time.

### Conclave at 'Coq'

AT Coquilhatville, a constitution which breaks the Congo down into more than 20 tribal components has been emerging from the curious conclave over which Mr Kasavubu presides, and down the back of whose neck General Mobutu's soldiers breathe. The participants have not found it easy to leave. Mr Tshombe, who tried to, remains under guard, reportedly suffering from nervous strain. This week Mr Kalonji's followers in south Kasai sent an aircraft to fetch him away, and it was promptly impounded. In the circumstances, Mr Gizenga can hardly be blamed either for turning down the original invitation to

Mr Gizenga tells his troops

"Coq" or for viewing with suspicion the idea that parliament should meet in "Leo."

His counter-proposal that parliament should meet at the Kamina base, under UN guard, calls for serious consideration. He and General Lundula (whose often rumoured defection from him has still not occurred) hold the north-east at least as firmly as their rivals hold the west. Whether or not a parliamentary quorum could be mustered without their goodwill, no parliamentary consensus on which the Congo could base its political future can be achieved by pretending that Mr Gizenga does not exist.

## ANGOLA

### African Province

NEWS about Angola escapes with the thousands of refugees who have fled the country, and who have presented the Congo with a burden of human suffering it is in no position to alleviate. Estimates of the

## THE ECONOMIST MAY 27, 1961

number of casualties vary, but it seems that many hundreds of Portuguese and mixed blood Angolans have been killed; on the other side the number of African dead is measured in thousands, or tens of thousands. Killing has been indiscriminate. All Portuguese Angolans are armed, and they are supported by about thirty thousand troops. The work of the troops is not observed by accredited non-Portuguese correspondents, but it is believed to be starting in earnest now that the rainy season is coming to an end. An air traveller from Johannesburg to Brazzaville last week saw tiny patches of fire regularly breaking the boredom engendered by hundreds of miles of desolation.

There is no reason to disbelieve Portuguese claims that the rebels are receiving outside help. The Bamileke tribe in the Cameroon Republic was for long given arms and support by organisations whose headquarters are in Accra and Conakry. No African nationalist expects change to come peacefully to Angola. Ghana has admitted buying arms from Eastern and Western countries; the Portuguese have reported the capture of 71 Ghanaian guerrillas. But to Africans in many parts of the continent, Angola is their province rather than Portugal's.

The Portuguese government is deluding itself, however, if it believes its own statements to the effect that the revolt is not essentially Angolan. Two Angolan organisations have long plotted to start it; the leader of one of them, Roberto Holden, works from a headquarters in Leopoldville. If they are getting help from other sources, it is not the first time that outsiders have come to the aid of one faction in an Iberian battle. There is danger of a second self-delusion, an old one in Africa. There are indications that Dr Salazar is thinking in terms of economic and social reform to stave off the demand for political change. This has not worked in the rest of Africa: it is unlikely to be successful in the Angolan province.

## MALTA

### One Agreement

THE belated agreement between the Colonial Office and Bailey (Malta) over the government loan for the conversion of the naval dockyard at Valletta into one suitable for repairing merchant ships, will do something to reduce the feeling of uncertainty about Malta's economic future. After the campaign against Mr Mintoff by the Catholic church, no doubt there will be hopes that the Maltese will be convinced that God and Mammon have allied against him. But the delay of a year in reaching agreement has weakened faith in the possibility of making the dockyard a commercial success, and put back the date at which it can become truly competitive for repair work.

The dispute between Baileys and the

## THE ECONOMIST MAY 27, 1961

*Have a heart, Harvey! It makes the place so untidy!*

We're sympathetic, naturally. We know that a man's morale can only stand just so much. And that doesn't include the worries and frustrations of getting a big engineering or building project 'off the ground'.

Why not come to Costains? Costains are geared to handle the whole operation, from the idea stage onwards. From the moment you and your consultants contact Costains the specialised knowledge and enthusiasm of the entire organisation are at your disposal.

We plan—we work fast. You save time, expense...and your sanity.

# THERE'S A WORLD OF EXPERIENCE IN EVERYTHING MARCONI'S DO

*The Post and Telegraph Authorities of more than 80 countries  
rely on Marconi telecommunications equipment*

**SURVEYS** ★ Marconi's telecommunications survey teams are at work in many parts of the world. Marconi's is the only company maintaining a permanent research group working entirely on wave propagation.

**INSTALLATION** ★ Marconi's installation teams undertake complete responsibility for system installation, including erection of buildings and civil engineering works as well as the installation of the telecommunications equipment and auxiliary plant.

**PLANNING** ★ Marconi's vast experience is reflected in the quality of its system planning organisation which is constantly employed on planning major telecommunications systems for many parts of the world.

**MAINTENANCE** ★ Marconi's provide a complete system maintenance service and undertake the training of operating and maintenance staff, either locally or in England. Marconi's will also establish and manage local training schools for Post and Telegraph Authorities.

## MARCONI

COMPLETE COMMUNICATIONS SYSTEMS SURVEYED, PLANNED, INSTALLED, MAINTAINED

COMMUNICATIONS DIVISION, MARCONI'S WIRELESS TELEGRAPH COMPANY LIMITED, CHELMSFORD, ESSEX, ENGLAND.

Colonial Office had arisen when the company decided, after its original scheme to modify the docks had been accepted and a loan of £6 million granted, that it would need to spend £2 million more to make the dockyard a commercial success. The increasing number of super-tankers meant that the dry docks would be too small to take an important part of the tanker fleet on which Baileys expected to depend for most of its custom. But the Colonial Office was reluctant to advance more money, and seems to have become suspicious about Baileys' intentions—a somewhat illogical feeling that helps to account for the delay in reaching agreement. Baileys has now agreed to accept a loan of £7½ million, which will mean that the extension of one dry dock will have to be postponed; but this sum will pay for the extension of one dry dock to take ships of up to 85,000 tons and of another to take 38,000 tonners, the lengthening of the main wharf and the building of a tank cleaning farm—where tankers can have their oil tanks cleared of sludge. Now that the United States is showing signs of ratifying the convention that restricts the dumping of oil at sea, and there is a chance that the terms of the convention may be stiffened next year, such facilities are becoming more essential in a repair yard.

Baileys will soon be putting the civil engineering work out to tender, and hopes that the yard will be finished by the end of 1963. In the meantime the Navy will again be expected to keep the men employed, with such commercial work as can be obtained with the present facilities—and the work on the yard itself. It is to be hoped that when the yard is finished, Malta will prove to have the same attraction for merchant ships seeking repair as it has had for warships over the last few thousand years.

### TECHNICAL TRAINING

#### Is Persuasion Enough?

THE Commonwealth technical training week, which begins on Monday, deserves to be wished well. It is to be a full-dress, all-round-the-Commonwealth occasion (except, apparently, in St Kitts and the Falkland Islands), with Prince Philip and the Prime Minister due to put in an appearance at St Paul's next Thursday and "10,000 major events" promised throughout this country. It happens to be true that the more young people in the Commonwealth continue to be exposed to British systems of training the easier British exporters will find it to hang on to their markets: the barrier of technical idioms still counts for a great deal in a range of industries from electricity distribution to plastics. But the chief moral that needs to be drawn lies nearer home.

If publicity can help at all to improve the lagging British record in further education of all kinds, any sort of publicity is worth

trying. But is persuasion getting anyone in Britain anywhere? For every congratulatory address and pious aspiration voiced in the next seven days, some hard facts need to be kept in mind. Only about one-third of British boys and less than one-tenth of girls leaving school now enter apprenticeships or other courses for skilled occupations. These proportions are likely to fall next year when the "bulge" pushes an extra 30 per cent (172,000) of school leavers into the labour market. It may be that the absence of easy employment prospects in some areas will encourage the more foresighted to get themselves what training they can—although existing unemployment areas, like Scotland, tend to have the worst record in technical education. But there is little sign of industry increasing its training facilities to cope with the "bulge," and the impetus towards day-release after the 1956 White Paper has lost most of its drive. The increase in day-release students in the two years 1957-58 was more than 50,000; in the two years 1959-60 it was less than 9,000.

Despite progress at higher levels, the ordinary fifteen-year-old still has little incentive from parents or employers to do other than go for quick money in a dead-end job. The outcome of the Government's long-winded explorations with education authorities, employers and trade unions on the right to day-release is likely to be more important than anything said or done in the coming week. Some local authorities are doubtful if they could cope with a flood of applicants, particularly of fifteen-year-old girls, but there is little doubt that most of the existing facilities are grossly under-used. A pilot experiment in compulsory day release in selected areas is overdue.

### WORLD TRADE

#### Prelude in Gatt

BIT by bit the features of the world-wide trade discussions that seem a logical complement to any British move to join the European common market are taking shape. Two new ideas—a joint western effort to increase imports of manufactures from the new industrial countries, and a joint effort to help Africa with aid and trade—were discussed on page 761 of *The Economist* of May 20th. Next week a practical start will be made on a third—world-wide tariff talks, designed to bring down the tariffs of all the major western countries.

The talks, the first major round of bargaining in the General Agreement on Tariffs and Trade since 1951, have their origins in the creation of the common market. Some of the signatories of the Treaty of Rome felt from the start that their new common tariff would be a powerful bargaining weapon for bringing American tariffs down, but many people felt this was a pious wish until the Six, anxious to disarm outside critics, offered last spring to cut the tariff laid down in the treaty by 20

per cent, provided others reciprocated. The move was encouraged by Mr Dillon, then assistant secretary for economic affairs at the State Department, who offered cuts of up to 20 per cent in the American tariff. The talks that start, after some delay, next week, have been called the "Dillon round." The British Government at first seemed less enthusiastic, but the recognition that the British tariff was the highest of the three, and that cuts in the common market tariff would only be made if Britain gave something in return, have brought a welcome change of attitude in the Board of Trade. All three major industrial powers now seem prepared for serious bargaining, and important cuts, particularly in the higher European tariffs, should result.

All this is relevant to the problem of joining the common market, because the common market tariff is still too high to suit certain countries in the Commonwealth and the Seven. If it can be brought down in the Gatt talks, and perhaps reduced still more in a further bout of discussions with America when and if Britain joins, low tariff countries like Sweden and Switzerland will find it easier to participate in the customs union. Canada, too, whose manufactures might have to surmount the common tariff if Britain joined, would obviously benefit if the barrier were low. The Gatt talks thus provide a useful prelude to the main drama, the inevitable European negotiation.

### WORLD FOOD

#### Tempered Optimism

SINCE Malthus started the fashion in 1798, there have been periodic scares that the world's population would outstrip food resources. That these gloomy fore-

### WORLD MOTOR CENSUS

According to the *American Automobile* there were 126 million vehicles in use at the beginning of 1961, 7 million more than at the beginning of 1960. Nine of the sixteen million vehicles produced in 1960 were replacements. In the United States alone 4,250,000 cars were scrapped. The United Kingdom's figure of 250,000 is expected to rise this year because of the 10-plus test.

bodings have never been fulfilled may be attributed entirely to science and enterprise; or it may be in part that the problem of hunger is peculiarly prone to over-statement. On this latter point, Dr P. V. Sukhatme, of the Food and Agriculture Organisation, told the Royal Statistical Society last week that between one-third to one-half of the world's population suffer from hunger or malnutrition—a less sombre conclusion than the widely-publicised one reached by Lord Boyd Orr in 1950 that “a lifetime of malnutrition and actual hunger is the lot of at least two-thirds of mankind.” Further study seems to have brightened the picture; indeed, some estimators have gone further than Dr Sukhatme and declared that the proportion of people seriously undernourished today is extremely small.

The plain truth is that the enormous difficulties in, firstly, defining undernutrition or malnutrition and, secondly, assessing food consumption, have never been resolved. Nevertheless Dr Sukhatme has made a new appraisal of the evidence which deserves study. His broad conclusion is that average food supplies fall short of requirements, in terms of calories, by about 11 per cent in the Far East; in the Near East, Africa and Latin America they are just about sufficient regionally, although obviously varying considerably from area to area; in Europe, North America and Australasia people eat a fifth more than they need. With about a quarter of India's population reckoned to be underfed and perhaps nearly a fifth of China's, the proportion of hungry people in the world is put at 10 to 15 per cent, implying that between 300 and 500 million people are underfed. Not surprisingly, since over

## NOTES OF THE WEEK

three-quarters of the calories in many of the under-developed countries are derived from cereals, starchy roots and sugar, it is suggested that the incidence of malnutrition is far higher.

What is needed to fill the hunger gap, especially as population rises? Dr Sukhatme makes some sophisticated calculations to show that in the Far East supplies of cereals would have to be more than doubled, and those of animal products multiplied six times, to bring an adequate level of nutrition by the end of the century. For the world as a whole, on the assumption that nations who are over-eating today will continue to do so, he reckons that food supplies would have to be more than doubled by 1980 and tripled by 2000 to “bring about a moderate improvement in the level of nutrition of the people of the world.” This would require an increase in world agricultural production of slightly less than 3 per cent compound per year over the next forty years, an expansion that seems both desirable and entirely possible.

## AID

## Indian Test-Case

PRESIDENT KENNEDY's drive for a bigger and better aid effort by the West is already meeting its first test in the search for funds for India's new five-year plan. The Indian plan provides a textbook example of the need for long-term commitments by the West instead of the sporadic help given in the past. With this in mind, the American administration offered early this month, when a consortium of donor countries met in Washington, to give a billion dollars in the early years of the plan if Europe would do the same.

The total of \$2 billion together with World Bank aid, would go far towards covering India's needs. But so far the European response has fallen short of the target by \$350 million. Next week, when the aid consortium meets again in Washington, the Europeans will have a chance to raise their bids. The main target of American pressure is west Germany, which offered \$331 million in Washington, with a part of this consisting merely of renewed short-term loans. But if the Americans' goal is to be reached Britain too, which offered only \$204 million, will have to make a larger contribution; a bigger British offer would increase the pressure on west Germany to give more.

## SOVIET UNION

## Drones Through the Net

RUSSIA's new legislation against “parasites” has been quickly put into practice. The first batches of culprits have already been condemned to deportation. But will the new law in fact get rid of

## THE ECONOMIST MAY 27, 1961

“speculation”? A perusal of recent Soviet court cases suggests that it may not. The middlemen whom the new law seeks to eliminate are a natural product of shortages and deficient planning. Since the housing shortage is most acute of all, it provides obvious scope for illicit profit through subletting or key money. But there is plenty of room for other forms of private enterprise.

Soviet consumption has risen considerably in the last decade; but it has risen from a very low level, and shortages are still intensified by the vagaries of distribution. In one Russian town you may be quite unable to find electric irons or prams or thermometers. Elsewhere these very goods may be plentiful, and an enterprising middleman can buy, transport and resell them with a very handsome profit. The same is true of agricultural products: you can apparently make millions selling Caucasian oranges in Siberia. A third possibility of private gain is open to craftsmen. Tailors or shoemakers who work in co-operatives often also work privately in their spare time. But they need material to work with, and there is a good reward for the man who can find it in a leather or cloth factory.

In Stalin's time it was somewhat harder to earn extra money because a worker was almost tied to his bench by very strict labour laws. In that respect, the last few years have been more propitious for private enterprise. But even Stalin's harsh laws proved inadequate to suppress activities that sprang naturally from scarcity. It is only through a greater supply of consumer goods and a better system of distribution that the Russians can hope to find a solution. Deportation is no cure, but an admission of failure.

## JORDAN

## Quiet Wedding

ROMANTIC love found its way into mediæval literature through the love songs and ballads of Islam. Arabs are able to accept, at least as philosophically as Europeans, the notion that the hazards of love can strike kings and beggars alike. After the first shower of criticisms in the Egyptian press, the Arab world has been noticeably, and courteously, reticent in its comments on the marriage between King Hussein and Miss Muna el-Hussein (once Miss Toni Gardiner) arranged to take place this Thursday. The king's wish to have a very quiet wedding has been respected; his private life, as he insists, is his own, and if his subjects are not enthusiastic about the proceedings, neither are they rude. While it is evident that some people's hesitation to congratulate the king unreservedly stems from a sincere respect and concern for his welfare, the frozen embarrassment of some British comment has not gone down well in Jordan. It would be more seemly to wish the young king contentment and domestic serenity in a life that has so far been overcharged with responsibility and harassment.

## THE ECONOMIST MAY 27, 1961

Although by itself the marriage is unlikely to develop into a major political issue, especially as the king is not to make his wife his queen, it would be unrealistic not to admit that it has added to the king's vulnerability. Should Cairo have wanted to pick a new quarrel with Amman, King Hussein's choice of a bride might have been as good a pretext as any. As things are, a meeting between the two leaders is still on the cards. A couple of weeks ago, after a delay of more than a month, President Nasser replied, rather curtly, to the king's second letter. While making it clear that he saw no use in continuing this correspondence, he wished the king success in achieving his aspirations and welcomed the prospect of their meeting in person. For the time being, at least, the truce between the United Arab Republic and Jordan continues.

## SUMMITRY

## A Mosaic of Neutrals

PRESIDENTS TITO AND NASSER have sent out about thirty invitations to a summit conference of uncommitted countries to be held some time before next autumn's session of the United Nations General Assembly. Some twenty of those invited have already

## NOTES OF THE WEEK

replied favourably; they include President Sukarno, whose own proposal, made in March, for a new summit meeting *à la Bandung* seems to be holding fire, and Mr Nehru, whose response to the earlier Indonesian invitation was unenthusiastic. Some Latin American countries, including Cuba, have been invited as well as Asian and African countries. Ambassadors and officials have started consultations in Cairo

Marshal Tito: moving spirit

to decide the time, place and agenda of the meeting, and whether any other countries qualify for invitations.

It is a safe guess that Marshal Tito is

the moving spirit behind this enterprise. During his recent African tour he frequently referred to the need to strengthen the unity of the “non-aligned” countries so that—without, of course, themselves forming a third force—they could act as a moderating influence on the western and eastern blocks. In itself this is a sensible aspiration, especially as both the two major powers are now more anxious than ever to present an attractive image of themselves to the uncommitted countries. But as Marshal Tito said during one of his African speeches, the uncommitted countries are a “mosaic” of different state and social systems—and of points of view. Uncommitted between the two big power blocks, they represent many diverse mental, ideological and practical commitments towards specific problems. To get the uncommitted countries to form a united front on, say, the Congo, or disarmament, would be a startling achievement.

Yet a gathering at which the noses of the uncommitted countries are firmly rubbed in the hard and intractable realities of disarmament and other problems could be a useful and salutary affair. If this conference comes off, it is to be hoped that the—older and more experienced neutrals, like India and Yugoslavia, will seize the opportunity of giving some short, but not easy, lessons in the facts of international life to their less experienced associates.

and in my quality of acting leader of the Free Democratic Party of Vietnam, I want to point out that Dr Dan graduated from Harvard University, is a well-known anti-communist fighter and a pro-western leader who, for six years, has continuously opposed Diem's despotism and who, with strong support from the population, won a sweeping victory at the 1959 elections. But Diem, who considers Dr Dan as his most dangerous rival, has resorted to unlawful means to prevent him from taking his seat in the National Assembly.

As for the part played by Dr Dan in the recent military coup, it should be noted that Dr Dan joined the Revolutionary Committee only five hours after Mr Diem had officially recognised that committee and solemnly promised basic reforms (*Journal de l'Extrême-Orient*, November 12, 1960). The unavowed purpose of Dr Dan's arrest was to prevent him from taking part in the presidential elections of April 9, 1961, which he would certainly have won if he had been authorised to run.

The Vietnamese people do not feel happy about their lot: how could they when communist subversion and terrorist activities are growing in the country, stimulated by popular discontent against Diem's regime, characterised by despotism, nepotism and corruption.

As for the recent presidential elections, Mr Diem practically ran alone. Dan has been imprisoned and the two candidates permitted to oppose Mr Diem were political unknowns. There were no elections, it was merely window-dressing.

## Vietnam

SIR—Answering the letter from Mr Ngo Dinh Luyen (one of Diem's brothers) published in *The Economist* of May 13th,

## GRADUATED PENSIONS

During the seven weeks to May 12th, a further 137,000 employees were contracted out of the graduated pension scheme, bringing the total number of non-participants to 4,294,000. With a little less from contributions and rather heavier expenditure anticipated, the surplus of the national insurance fund this year is now expected to be £29 million compared with the £40 million estimated six months ago.

## NATIONAL INSURANCE BALANCE SHEET 1961-62

To close my letter, may I cite Walter Lippmann (*New York Herald Tribune*, May 4th): "Our man (Diem) is extremely unpopular, his government both reactionary and corrupt." That is the truth.—Yours faithfully,  
PHAM HUY CO  
Paris

### Restrictive Practices Court

SIR—In your review in your issue of May 13th of *Fair Trade: Resale Price Maintenance Re-examined* by Mr Friday and myself you said that we were both "more or less publicly committed to their cause" and you justify that so far as I am concerned by pointing out that I had "testified for respondents before the Restrictive Practices Court."

In fact I have given evidence before the court only once, in connection with Water Tube Boilers, and as this plant may well cost several million pounds and is supplied by the manufacturers direct to the user, it is difficult to see what rpm has to do with it.

The point I wish to raise is, however, of more general importance, namely, the assistance which economists can and ought to give to the Restrictive Practices Court in cases of this kind. As I see it, the prime duty of an economist witness is to the court; and, although it is no doubt true that a particular industry would not ask him to give evidence if his own views were not on balance in favour of the particular practices before the court, he should hold himself free to assist the court in argument as an expert in the theory of industrial economics whichever way the argument may tend. In other words, he is not before the court either to uphold or condemn at all costs any particular practice in industry but only in so far as in the particular circumstances he thinks those practices are or are not economically in the public interest.

The court is composed of a judge sitting with laymen who are not economists. It has constantly to solve economic problems. The Registrar in the selection of his arguments is commonly advised by an economist who frequently gives evidence; and it seems to me that the court should have the advantage of hearing the contrary economic arguments properly expressed. In the Water Tube Boilers case I undertook this

### How Ulster Stands

SIR—The tone of the article in your issue of May 13th is such that one would be pardoned for assuming it was written by someone with a Southern Irish background who has obviously never forgiven Ulster for choosing to remain in the United Kingdom when the Irish Free State seceded in 1922. The author writes glibly about the "occasional explosives of the Irish Republican Army" but glosses over the fact that during the last four-and-a-half years there have been 300 major raids on Ulster—they are still going on—in which five policemen have been murdered, 26 policemen and others wounded and nearly a million pounds worth of damage caused to property. The "armed police" mentioned in the article are the legacy of Southern hostility since the Ulster Parliament was established.

The truth about the coal situation mentioned by the author is that the National Coal Board fixes coal prices, not Northern Ireland.

The author sees something sinister in the fact that the same Government has been in power since the Northern Ireland Parliament was established. This, of course, is the will of the people expressed clearly at every election since 1921. Would the author deny to Ulster the right to elect the Government of its choice? Then there is the gerrymandering allegation—old stuff, indeed. The parliamentary election results under the existing single-seat system are almost identical with those in earlier years under the system of proportional representation.

Although unemployment still continues to be the major problem, 160 new industries have been introduced. While some have failed to employ the expected numbers, many others have far exceeded the employment target. Ulster's advance factory programme, under which ready-made factories are built by the Government, has been an unqualified success. Only one factory has failed to attract a tenant. The fact that nine American concerns, including such giants as Du Pont and Chemstrand, have plants in Ulster amounts to a vote of confidence in the country's stability and its attractiveness as a location for new industries. American business concerns are not particularly noted for their sentimentality. Ulster's persistent unemployment problem has been tragically aggravated in recent months by a run-down in employment in the shipyards and further contraction in the linen industry—in both cases due to factors which are outside the control of the Ulster Government.

Total trade and exports—worth £680 million and £322 million respectively—have doubled in value in the last decade.

### THE ECONOMIST MAY 27, 1961

The farming industry produces about eight per cent of the gross output of the United Kingdom as a whole although it comprises only 2½ per cent of the total area. Remarkable advances have been made in the health and hospital services and Ulster has the lowest death-rate as well as the highest birth-rate in the United Kingdom. One in three of Ulster's school population is being taught in a new school and more than one in four of the entire population has been re-housed. Ulster has spent on houses, schools and hospitals relatively more than Great Britain.

Unemployment was heavier and distress a great deal more widespread when Ulster, rejecting any idea of a united Ireland, chose in 1921 to maintain her centuries-old association with Britain, with which it has common ideals, loyalties and outlook. Advantages have undoubtedly accrued to Ulster—the same is true of many areas in the United Kingdom—but there have been obligations too. These Ulster has fully honoured. Ulster stood steadfastly beside Britain in its darkest and finest hour, all its manpower and resources being at Britain's disposal.—Yours faithfully,  
London, SW7 RATHCAVAN

### Invisible Production

SIR—You write that "industrial production has not risen much in Britain for nearly a year now, and it follows that the general standard of living has not been enabled to rise quickly either." But does it follow?

I suggest that even though industrial production might not rise at all, it would still be possible for the general standard of living to rise very considerably if a policy of unilateral tariff cuts, making the same amount of money go further, were accompanied by an invisible export drive. The advantage of invisible exports compared with visible is that they do not require the importation of, and payment for, raw materials.—Yours faithfully,  
OLIVER SMEDLEY

Free Trade Union and  
Cobden Club, EC2

### London Docks

SIR—In your article "The Docks Nettle" of May 6th you say "... when importers ensure that lorries do not have to hang around for nonsensical periods waiting for a load..."

My company is an importer of a considerable number of small consignments and I shall be interested to know in what way the writer of the article in question thinks that we could have any influence whatsoever on the time wasted by our lorry drivers while waiting to be loaded at the docks. In common with very many other importers we find ourselves completely frustrated in all our dealings with the London docks, both import and export and we shall be very glad indeed to receive any concrete suggestions as to what we ourselves can do to ease the situation.—Yours faithfully,  
Enfield, Middlesex R. D. PEACHEY

### THE ECONOMIST MAY 27, 1961

## BOOKS

### The Second New Deal

*The Age of Roosevelt, Vol. III: The Politics of Upheaval.*

By Arthur M. Schlesinger, Jr.

Heinemann. 749 pages. 63s.

IF the title of Professor Schlesinger's third volume has a rather indeterminate ring this is only a fair enough echo of the character of the years he is now describing. We have left behind the glorious try-everything-once biennium of *The Coming of the New Deal*; the third volume opens with the President, despite his midterm successes at the polls, baffled and indecisive; it ends with him triumphant in every state of the union save Maine and Vermont; but the line from frustration to victory is not a direct or single one. These are years which resist the formative hand of historiography.

For all that, Professor Schlesinger has had a very good try at imposing order on the welter of events. His main shaping concept is the idea of a Second New Deal. The first was an attempt to plan the economy with NRA and AAA as the main planning agencies and with anarchy and irresponsibility as the enemies. The second rests on a willing acceptance of competition and diversity but seeks to reform the rules of the game to protect the weakest and curb the strongest. It revives the Brandeis hostility to bigness and draws on the budgetary techniques of Keynes. This distinction is elaborated at length in what are perhaps the most persuasive pages in this always fascinating volume. But with commendable frankness Professor Schlesinger also prints (among the jumble of footnotes stowed away like luggage "Not Wanted on Voyage" in the 50 odd pages of his hold) a rather impressive dissent from Mr Leon Keyserling, who argues in effect that both New Deals were incoherent and that the second derives what character it has from a loss of momentum and a political switch from a "strategy of unity" to a "strategy of division."

The difference is fundamental. If Mr Keyserling is right, then the old anti-Roosevelt charge that for constructive purpose he substituted the fomentation of class hostility gains in credibility; if we accept the Schlesinger thesis, then we will worry less about the author's slightly offhand treatment of the opposition case. (This, incidentally, does not extend to Professor Schlesinger's handling of the Landon campaign in 1936; these are among the freshest and most balanced pages in the book, backed by some very illuminating material from the Landon papers.)

Whichever we accept, however, there re-

mains in the crowded panorama of these years a colourful jumble of events that cannot be reduced to any intellectual pattern and which Professor Schlesinger has wisely been content merely to record, with appropriate relish, for what they are. The Louisiana hay-ride of Huey Long, the ugly proto-fascist movements of Father Coughlin and Gerald K. Smith, the touching crusade of Dr Townsend are all phenomena of a period when political energies are released faster than they can be harnessed. They make splendid reading and are excellently told. They get drawn together only as the currents of politics suck every minor movement into the irresistible onrush of the 1936 presidential campaign, with which this volume closes. Here in a smooth and gripping (if not very analytic) final sequence Professor Schlesinger, as both historian and campaigner, brings his immensely readable and stimulating history abreast of another milestone in its progress. Let us hope that the distraction of the New Frontier will not delay the appearance of volume four.

### Motivational Research

*The Strategy of Desire*

By Ernest Dichter.

T. V. Boardman. 320 pages. 25s.

IT is reported that Dr Ernest Dichter can justify the considerable fees he charges for his services to American advertising agents by just sitting and talking. Even though they may not buy, for their customers' products, the full motivational research treatment which he sells (incidentally, anyone who is led by his title—President of the Institute of Motivational Research—into thinking that Dr Dichter is not selling anything will soon be put right by this book) there is always a good chance that they will pick up from his conversation the germ of a few good gimmicks. But from now on they will be able to buy this book and dispense if they wish with the personal consultations. For into a single volume Dr Dichter has thrown—"thrown" is certainly the word to describe the effect produced—dozens of the sort of ideas that have earned him the title of father of 'motivational research.'

Here also is some of the evidence of the validity of his claim to that title—some but not all, for no thorough and systematic account of individual motivational research studies is here given. It is clear that Dr Dichter is constantly asking himself *why* consumers are buying particular products.

It is also clear that he applies psychological techniques to this question. After that anything might happen. The "answers" which are suggested to some of the questions he has been asked include a few that look like very shrewd common sense and some that look like—and are—pretentious, pseudo-scientific nonsense. But most of it is good fun if you do not take it—as some solemn social investigators appear to have done—as a serious contribution to philosophical and psychological inquiry.

The most illuminating comment on the book is contained in its own implied claim to be the answer to Mr Packard's "The Hidden Persuaders." Both books are miscellaneous collections of quaint stories roughly classified under chapter headings and only vaguely connected with the vast morals drawn from them. The main differences are, first, that Dr Dichter is an originator of stories whereas Mr Packard is a retailer of them and, second, that Mr P. has slightly more skill in arranging his material than Dr D., who has no skill whatever in that direction.

### Long Sight

George Orwell

By Richard Rees.

Secker and Warburg. 160 pages. 18s.

SIR RICHARD REES, who was a friend of Orwell's for the last twenty years of his life, has written a very sympathetic study of

## BUSINESS FINANCE

F. W. Paish, M.C., M.A. 2nd edition. Since the first edition of this book was published in 1953, much has happened in the financial world. Therefore, for the new edition the contents have been completely revised and new statistics have been incorporated, so that the book is fully up to date. "As always, Professor Paish expresses himself with admirable lucidity and directness. He writes with an intimate practical, as well as theoretical, knowledge of his subject, and his book should be invaluable not only to students of economics but also to budding bankers and stock-brokers and accountants, and indeed to any young man or woman intending to make a career in the City or business administration."—*Economic Journal*. 15/- net

## PITMAN

his works and character. It is not a biography: only so much information is given about his life as is needed to explain his writings. For all Orwell's pessimism and suffering, the impression left is a singularly happy one. The time was out of joint, but not the man. He reacted to it with abnormal sensitiveness; his short-term views and feelings were often rather distorted; but he was one of the few real prophets of his time, and when he focused his view on the long term, he had no equal for sanity, perception and goodness. Justice was his passion; and he opposed lying and bullying wherever he found it. No one was less a dupe of contemporary fallacies.

Several people recently—Sir Richard Rees among them—have grouped Orwell with others who typify revolt in various forms against the tradition which is most unfashionable today: the groups vary, but always include D. H. Lawrence and usually Dr Leavis. Orwell stands alone among such type-figures in this, that everyone accepts him, revolters and traditionalists alike. His deepest beliefs were those of the *honnête homme*, and his analysis of the way we all betray them so glaringly simple—once it had been done by a man of genius—that no one can resist it.

It is the two great satires that are likely to last. How long, perhaps, depends on the development of nations; but one can prophesy a good life to books that have added words and ideas to the language and have lifted the scales off the political eyes of many men. Sir Richard Rees's book can be recommended to anyone who has read "Animal Farm" and "Nineteen Eighty-Four" and wants encouragement to go a little further.

### Merchant Princes

Rathbones of Liverpool, 1845-73

By Sheila Marriner.

Liverpool University Press. 259 pages. 30s.

IN the early nineteenth century the Rathbones, a long-established merchant family, were mainly concerned with the import of American cotton. During the depressed years of the 1840s, and stimulated by the sons of the family, the firm started to diversify its activities, and in the mid-Victorian trading boom it conducted a widespread business, primarily as a commission house, in tea, silk and breadstuffs. Rathbones had houses in China, London and New York as well as in Liverpool, and they were merchant bankers and ship-owners as well as shipping and insurance agents. Their growth was prodigious, and their capital rose from under £40,000 in 1842 to £600,000 thirty years later. They left behind a business correspondence so extensive that it partly makes up for the absence of surviving accounts, and from their papers Miss Marriner has written a scholarly and well-organised account of their operations during their most flourishing years. Her book is not just another

house history, but an outstanding contribution to the history of the organisation and finance of international trade in the nineteenth century.

The great expansion of world trade in that century is too readily taken for granted as the inevitable outcome of falling transport costs and marked differences in comparative advantage. But much depended on the ability of trading houses to handle successfully the complex problems presented by new products and new sources of supply. A merchant house like Rathbones was, of course, in a good position to expand, since the organisation devised to trade in one commodity could be adapted to deal with others. But to acquire the necessary expertise, establish a network of correspondents and agents, build up reputation and confidence, assess changing risks and devise methods of dealing with them—all this called for abilities of a very high order. Such abilities the family and its associates evidently possessed, particularly William Rathbone the sixth (the father of Eleanor Rathbone, MP) and their London agent the vigorous Mr Lidderdale, who became Governor of the Bank of England.

Towards the end of the century the firm ran down. Better communications reduced the scope for commission business. A firm with such a diversity of interests was not well adapted to survive the competition of more specialised concerns. They might have developed their acceptance business and like many merchant houses have ended up as a finance company and issuing house; but they did not in fact do so. The main cause of their later contraction seems to have been a weakening of the desire to make wealth and the increased calls of philanthropy and politics. The family had made enough to pursue these activities and were not keen enough to adapt their methods to changed circumstances. Miss Marriner has concentrated on the decades of expansion, but in doing so she illuminates the defects as well as the great merits of the family firm as a form of enterprise.

### The Liberal Democrat

Locke's Two Treatises of Government.

A Critical Edition with Introduction and Notes

By Peter Laslett.

Cambridge University Press (1960). 534 pages. 55s.

Locke on War and Peace

By Richard H. Cox.

Oxford University Press (1960). 240 pages. 35s.

JOHN LOCKE, more than any other, is the theorist of liberal democracy. We had to wait, however, till 1957 for an authoritative biography, given us by Mr Cranston; and now at last we have a critical edition of Locke's masterpiece of political theory, the "Two Treatises of Govern-

ment." This is a work of careful scholarship, in which the editor has tried to realise Locke's intentions as Locke himself, despite frustrating wrangles with his printer, was never able to do. Since 1948, scholars have had access to the Lovelace Collection of Locke's papers now in the Bodleian, Mr Laslett has worked besides through Locke's own library, still in one collection in the possession of the Earl of Lovelace. As a result, some remarkable blows have been struck at the Locke mythology.

The long-accepted legend that the "Two Treatises" were written in 1689 to justify the Glorious Revolution is now certainly refuted. It seems that they were substantially completed between 1679 and 1682, before Locke's exile in Holland, and that he did not have access to the manuscript again until 1687, or even until 1689. They were occasioned, then, not by the Revolution, but by the Exclusion Bill controversy, and by the plots that followed it. Mr Laslett's story has something of the fascination of a detective story and a spy thriller combined. Locke seems to have been involved in the Whig intrigues with Monmouth and in the Rye House Plot, not simply by association with Shaftesbury, but on his own account. So we need not wonder at his extreme caution and secretiveness, and at his disclaimers, almost to his death, of the authorship of the "Two Treatises."

Mr Laslett believes that the second treatise no less than the first was directed against the patriarchal theory of Sir Robert Filmer, and not, as some critics have supposed, against Hobbes, who was already discredited anyway, and whose work Locke professes not to know. Nevertheless, there are certain resemblances to the "Leviathan." However, according to Mr Laslett, Locke's book is "quite unlike it in doctrine." Locke "rejected Hobbes's psychological assumptions and also his entirely rationalistic, unempirical view of natural law."

According to Mr Cox, however, so far from attacking Hobbes, Locke agreed with him on all essential points. But because Hobbes's doctrines were dangerously unfashionable, he skilfully concealed the real trend of his argument. For instance, the state of nature described in the second chapter of the second treatise appears to be a social state, under a rational law of nature, and distinct from a state of war. Men exchange it for civil society only on account of certain "inconveniences." But by the time we reach Chapter XIX, we learn that the dissolution of government leads to a condition much like Hobbes's state of nature, the war of each against all. Again, Locke's theory of natural law seems at first to echo Hooker, as an account of moral obligations. But it turns out, according to Mr Cox, to be a theory of rights depending on interest and inclination, above all on the inclination of every man to preserve himself. So Locke is found to be echoing not Hooker but Hobbes. In this Mr Cox disagrees with Mr Laslett, who

Chemicals from Vancouver

...and Henry Yeoman's Sunday treat

CHEMICAL COMPANIES INTERNATIONAL ENTERPRISE

Knows what he likes—Henry Yeoman. Knows what his family likes, too. So at weekends he brings home ice-cream in cartons. Handy, hygienic cartons made from good, strong card. And that's where chemicals from Vancouver come in.

At Vancouver is a plant of the Electric Reduction Company of Canada Ltd., one of the companies of the Albright & Wilson Group. The plant produces sodium chlorate, used in bleaching wood pulp to a high degree

of whiteness. The pulp is then shipped to England to be made into card. Card from which high-quality cartons are made. Like these cartons which bring ice-cream to millions of Yeomans!

This is only one of the ways in which A & W chemicals play a part in the life of Mr. Yeoman. As one of the biggest organisations in the British Chemical Industry, the Albright & Wilson Group contributes—but we could go on like this...

THE ALBRIGHT & WILSON GROUP

## THE MAN WHO ARRIVES EARLY GETS AN AUSTIN A99

The Austin A99 is not for back-seat drivers. It's for men who like the feel of the wheel.

They're drive-ahead and ambitious: like a car to be the same. They've a sure appreciation of strong visual points: a penchant for the flowing unhurried line, a prejudice against fripperies. They want big performance. They want surging power. They've a taste for interior opulence, but not much use for a chauffeur. They've found there's a new sensation in driving—the high-powered motor car with the nimble soul of a sports car. They won't rest happy until they've experienced it. To these men the A99 is something more than a car—it's another big way to live life to the hilt. *Safety point: all necessary fittings for seat belts are now provided.*

**GET INTO AN  
AUSTIN AND  
OUT OF THE  
ORDINARY**

### THE PRIZE

By unanimous consent the finest car Austin have ever created. With all the extras, except the chauffeur, built-in and gratis. Overdrive, disc brakes and dual-toning are normal equipment. The A99 accelerates like a sports car. Shows the new Italian line at its most grandiloquent. Price: £1,148.12.6 (£810 plus £338.12.6 P.T.).

Lordly extra: automatic transmission is a mere £71 including tax. We repeat £71 (that's a good deal less than you'd pay for it elsewhere). It makes the A99 just about the most carefree car in history.

By Appointment to  
Her Majesty The Queen  
Motor Car Manufacturers

detects in Locke a belief in a "natural political virtue"—a kind of social conscience. Again, Mr Cox seems to disregard altogether Locke's assertion that we have a duty to God to preserve ourselves, as His creatures and therefore His property. Our natural rights are ultimately conditions for carrying out this duty, at least as much as for realising our interests.

Mr Cox does not rely simply on a logical analysis of Locke's apparent inconsistencies. These are not, he believes, accidental. Locke was following a deliberate policy of concealment, but he carefully provided, in his analysis of Filmer's methods of insinuation, a key also to his own. Mr Cox deciphers the treatises, with a thoroughness and ingenuity that sometimes recall the more imaginative interpretations of the Book of Revelations. Thus he finds it significant that Locke's shift of position on the state of nature begins, according to Mr Cox, in Chapter IX, which is precisely the midpoint of the Second Treatise: "There are 243 sections in the Second Treatise, and Chapter IX begins with sec. 123."

Nevertheless, Mr Cox's examination of Locke's inconsistencies is very persuasive; and if his explanation seems improbable, it is at least a better one than Mr Laslett has to offer. For Mr Laslett tells us that Locke's political theory is not philosophy at all, and does not set out to be. And so, it seems, we need not take his contradictions too seriously.

The point of Mr Cox's interpretation is to develop its consequences for the theory of international relations. For if the state of nature is really a state of war, and the law of nature only a potentiality in nature, international relations are necessarily lawless. The "federative power," which is Locke's term for the functions of the Foreign Office and defence ministries, is not the side issue in Locke's theory that most commentators make of it, but is the most important of all sides of government, since the problem of security is paramount. And this leads Mr Cox to a different view of individual rights in civil society from the one usually offered. If Locke scholars are not disposed to accept Mr Cox's case, he has at least made out a claim to an answer.

### Unhonoured Inventor

F. W. Lanchester

By P. W. Kingsford.

Edward Arnold (1960). 246 pages. 30s.

F. W. LANCHESTER was one of the greatest of British inventors, with a mind so versatile that his achievements ranged from the theory of flight to the improvement of machine tools. The car to which he gave his name was only an incident in his career; and, though it represented the only original work in automobile engineering done in Britain during the pioneering epoch, it had little influence on the more empirical engi-

neers who fitted better into the life of the industry. His work on aerodynamics, which began in 1894 with a paper that formulated the vortex theory of lift—and was rejected by the Physical Society—culminated with his two volumes on aerodynamics, published in 1907 and 1908. These have had much influence on aircraft designers, though many of those in Britain were the last to appreciate the value of Lanchester's ideas. Unhappily, his only attempt to produce an aeroplane was abortive, so that he was denied the fulfilment of his abilities and the industry their use. He was instead limited to the role of a member of the Advisory Committee for Aeronautics, where he had to try to advise those who could not understand his book. After the first war, his creative gifts began to decline: his last venture, into high-fidelity sound reproduction at the time of the slump, lost him his savings. In between his major studies he had found time to invent air-supported domes, among other ideas that have since been adopted, and to make some of the first studies in operational research. He died in real poverty in 1946, embittered against a society, and two industries, which he felt had cheated him.

Mr Kingsford's book is the first biography of Lanchester to be published; and, though it does contain much interesting information on his life and work, it is disappointing as a portrait of a genius. One would like to know more about Lanchester's methods of work on the many subjects that he studied, and to have a rather less muted account of the disputes with lesser men—and he was never reluctant to let people know that they were his inferiors—which marked his life. It is unfortunate that Mr Kingsford did not inform himself better about the early history of motoring or about the technicalities of car design; his failings limit the value of his writings on this aspect of Lanchester's career. The absence of an index largely nullifies the book's value as a collection of facts about Lanchester's career.

### The First Roué

The Scandalous Regent: A Life of Philippe, Duc d'Orléans 1674-1723 and of his family

By W. H. Lewis.

André Deutsch. 228 pages. 21s.

THE seventeenth century Dukes of Orléans might fairly be called delinquents: Gaston instigated, and subsequently deserted, almost every conspiracy from the Day of Dupes to the Fronde; the Regent's father was a scent-soaked pervert suspected of murdering his first wife; rumour accused the Regent himself of trying to poison the King of Spain, and of successfully poisoning two Bourbon relatives who obstructed his path to the throne. These suspicions were unjustified; but they were not unreasonable; nor was the equally popular story of his attempt to seduce the

Spanish Queen, or the belief that his excessively indulgent affection for his daughter was incestuous.

Mr Lewis makes no attempt to whitewash Orléans's private life; but his complaint that Louis XIV's jealousy denied the duke adequate opportunities for exercising his alleged military and diplomatic talents is unconvincing. Louis mistrusted Orléans's character; the duke's courage was unaccompanied by commonsense, and there was no reason to believe him capable of turning the tide of war against Marlborough or Eugene. Nor was his mission to Spain a recommendation of his diplomatic reliability: doubtless he was innocent of designs on the king's life or the queen's virtue, but he dabbled indiscreetly in futile discussions of his own pretensions to the Spanish throne. It was, therefore, only because there was no alternative that Louis, almost on his deathbed, made him Regent of France in 1715.

Orléans now had an opportunity of changing his own reputation and the course of French history. Unfortunately, he was quite unequal to it. His task was far from hopeless; for Louis had, contrary to Mr Lewis's opinion, left France richer and more powerful than he had found it. He knew what reforms were needed; but he lacked the will power to carry them out. He sacrificed the chance of reuniting French Catholics to the desire of his disreputable friend Dubois for a cardinal's hat; the political education of the younger nobles to his own lazy preference for easy political expedients; and the potentialities of Law's pre-Keynesian experiments to the prejudices of conservative bureaucrats who impeded, and the greed of unscrupulous speculators who exploited, them.

This well documented biography picturesquely completes the story told by Mr Lewis in his earlier books, "The Splendid Century" and its "Sunset." The central figure is no longer the great king—but a regent who, in the brutal slang of a society which broke men on the wheel, might well be called "The First Roué."

## Do you ride on the tube ... or the subway?

The difference may be slight... but even small distinctions in language and in customs can assume importance, when people in Great Britain do business with people in the United States.

The Chase Manhattan Bank, with the largest network of correspondent banks in the U.S., naturally has close familiarity with American trade practices and usages—and with the ways in which they differ among the fifty states. And after more than seventy years in London, too, The Chase Manhattan is equally familiar with British ways. This understanding of customs on both sides of the Atlantic can be very useful to you in your dealings with the States.

Indeed, The Chase Manhattan can be of service to you almost anywhere you do business. Its network of more than 51,000 correspondent banks, branches and representatives' offices all over the globe can provide you with every type of modern banking service, promptly, efficiently, and on a personal, *localized* basis.

When you do business anywhere abroad... it will help to talk with the people at The Chase Manhattan, in either of the London Branches.

# AMERICAN SURVEY

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

## Post Haste to Vienna

WASHINGTON, DC

LIKE Alice, the more firmly President Kennedy turned his back on the summit, the quicker he found himself climbing up to it. Even before his Administration took office few things were stressed so much as its determination to postpone personal talks between the President and the Soviet leader until it was firmly in the saddle and until visible progress had been made towards better relations with Russia through normal diplomatic methods. Yet little more than four months after the inauguration, after a series of setbacks in foreign affairs, a drop in prestige abroad and a fresh exchange of acrimony between Washington and Moscow, Mr Kennedy is to meet Mr Khrushchev face to face.

In the looking-glass world of politics it is common to do in office what one denounced when in opposition. And the present Administration can add firmly that the Vienna meeting is no full-dress summit; indeed, it hoped—vainly—that the emphasis on the non-negotiatory nature of the meeting in the announcement from both capitals would make the very word "summit" unprintable. What, then, is the meeting intended to be? The explanation offered is that it is a continuation of the policy laid down last February and, indeed, earlier: to maintain contact with the Soviet Union notwithstanding any incidental or peripheral flare-ups in the east-west struggle. All along it was foreseen that to keep on speaking terms with Moscow in spite of the individual battles of the cold war would eventually require a personal meeting between Mr Kennedy and Mr Khrushchev. It was even foreseen that certain battles would go against the West. All that was not foreseen was that these initial local defeats would be, temporarily, so humiliating—or that circumstances would conspire to bring about the long-discussed *tête-à-tête* so soon after them.

As in the Cuban adventure, the timing has been forced on the President by many considerations. To some extent his allies have been responsible. They insisted on seeing him promptly, which compelled him to visit President de Gaulle in Paris; and this provided Mr Khrushchev with a perfect opening, shortly after the full effects of the Cuban fiasco became clear, to suggest that Mr Kennedy's presence in Europe provided a most convenient moment for a meeting. To refuse, it was felt, would have prejudiced the basic plan for keeping open the channels of contact with the Russians. To refuse might also have given the Russians an immediate additional card to use in their propaganda to the neutral countries; they could have said that Mr Kennedy was uncooperative or cowering after his defeats. To that extent, Mr Khrushchev finessed the trick. Having made the President vulnerable, both Mr Macmillan and General de Gaulle had to give him their overt support though Washington soon found the former to be no more than lukewarm at the prospect of the meeting and the latter distinctly less than that. (The Germans, under presidential displeasure for backsliding on their promises to join wholeheartedly in the programme of aid for underdeveloped countries, were not consulted seriously.)

The disadvantages of talking to Mr Khrushchev in the West's

present disarray are obvious enough. None of the Administration's plans for strengthening the alliance, reviving the North Atlantic Treaty Organisation, obtaining joint (including Canadian) action against communist penetration in the western hemisphere, winning neutral support and putting the development of the underdeveloped countries on a new footing has yet begun to come to fruition. Meanwhile, a despairing debate on American foreign policy has broken out in the American press over the alternatives to the collapsing policy of containment and the answer to communist infiltration and guerrilla tactics is still being sought where it is least likely to be found—in the Department of Defence. Mr George Kennan in his new book\* can offer only the dour hope that as Russia acquires more territory from the West it will be as frustrated by its friends and allies as the Americans are now. Against this Mr Khrushchev's serene pronouncements that communism is the wave of the future provide a contrast that is hardly refuted even by President Kennedy's demosthenic orations.

BUT there are, in the view of the White House, practical considerations to be set against all this. Mr Khrushchev, significantly, wanted four full days of talks; the President, urging the pressure on his time-table, has been able to reduce this to two. Thus if the talks go badly they will be brief, and if they go well they will serve as *hors d'œuvres*. Brevity also minimises the negotiating aspect of the talks with Mr Khrushchev but at the same time it enhances the importance of the trip to Europe; for after Vienna Mr Kennedy is to go to London, while Mr Rusk reports back to General de Gaulle and Dr Adenauer is presumably let into the secret also. Thus the occasion will become an expanded and perhaps more effective inter-allied conference. And because the meeting is brief and the notice of it short, the world's press cannot build exaggerated hopes on it (or so the Americans trust), giving the Russians a chance to blame the disappointment of such hopes on Mr Kennedy's "intransigence" in pursuance of the cold war.

The Vienna meeting will, it is thought in Washington, strengthen Mr Kennedy's hand with his allies and more particularly with General de Gaulle. After the Cuban fiasco there was much head-shaking over the prospects for the Paris meeting which will affect the future of the alliance itself. That meeting is still the focus of the President's trip, though General de Gaulle is displeased that it is no longer the sole reason for it. But now he can hardly say or do anything that makes the President's task in Vienna more difficult; he will be asked for counsel in the spirit of his own demand for "big three" consultation on policy so that he can hardly adopt an unaccommodating attitude on everything else. Washington expects the General to demand that the United States align its African policy (from the Mediterranean to the Cape) with France and Britain and he may express his resentment over American meddling in North Africa. But his resistance until now to Britain's entry into the common market, softened by his contemplation of a post-Adenauer Germany, may be further moderated by President Kennedy's case for strengthening European solidarity and the Atlantic alliance. It is even felt that the way is

\* Russia and the West under Lenin and Stalin. Little, Brown and Company. Boston. \$5.75.

open now to reasoned discussion on France's barracking in Nato—which is optimism indeed. To this extent, by manoeuvring Mr Kennedy into a meeting, Mr Khrushchev has helped the President to deal with his awkward squad of allies.

Another argument for accepting an early meeting was the need to be armed with personal experience of Mr Khrushchev's moods when talking not only to allies but to neutrals also. The rules of the summit club involve being "blooded" in this way before one can speak with authority. Finally, Mr Kennedy's domestic position affected the decision. No close connection is to be traced between it and Mr Nixon's call for such a meeting two weeks earlier, but Republican criticism has been silenced (or almost) and Congress—despite private misgivings voiced in the corridors—has approved it publicly. It might be disingenuous to think that the President will not exploit his trip to Vienna to exhort the American people again on the need for greater, even if still unspecified, efforts on their part; his *alter ego* and speechwriter, Mr Ted Sorenson, as well as an aircraft full of journalists is going along. But this may serve the practical purpose of getting the foreign aid Bill (the sheet anchor of anti-communist planning) through Congress intact.

Such questions of timing leave unanswered those of what the President is to say to his antagonist. The press assumes that he will warn him that Berlin will not be another Laos. The American ambassador in Moscow recommended agreeing to the meeting on the ground that such a warning against miscalculation might now be necessary; and from him the argument commands respect, poorly as the President may be placed after Cuba to draw a line. Presumably he will also warn Mr Khrushchev of the consequences of the Russians forcing the talks on banning atomic tests into failure and thus avoid the blame falling on the United States if they do. Mr Kennedy can probe Russian intentions on the critical issue in the discussions on Laos—whether the control commission is to have effective powers. If Mr Khrushchev gets tough, Mr Kennedy will be able to galvanise both his allies and American public opinion. If, on the other hand, Mr Khrushchev tries to blandish the President with charm and sweet reason and with tempting minor concessions, Mr Kennedy can, indeed must, retort that the proof will be found in Russian co-operation over the control commission for Laos and over inspection for nuclear tests.

When Washington adds up the sum like this, there seems every reason to go to Vienna now: yet there is still another. On the basis of the President's own grim assessment that things will worsen before they improve, the pessimists point out that if he waited longer, ultimately he might go to the meeting under the shadow of greater disasters in his affairs abroad. Mr Khrushchev is obviously aware of this and Washington is somewhat apprehensive of the surprise he may spring. But perhaps, feeling that history is with him, he is merely in a hurry to look over the young champion he is so sure he can throw.

## Ride for Freedom

VIOLENCE and imprisonment in Alabama and Mississippi have not slowed down, indeed they have probably quickened, the flow of "Freedom Riders"—mostly young Negroes, with a few white sympathisers, who are determined to challenge illegal discrimination in the defiant heart of the old South. Dr Martin Luther King, the symbol of the non-violent protest which has proved effective in breaking down racial barriers elsewhere, prophesied this week that there would be Freedom Riders on most of the buses leaving Montgomery, Alabama, in the near future and with the approaching end of the college term the Attorney General's appeal for a "cooling off" period may fall on deaf ears. A massive and many-pronged assault on the segregated

waiting-rooms, restaurants and other facilities, maintained in defiance of the Supreme Court's ruling against racial segregation in transport, may strain the federal government's determination to protect all travellers. It may also defeat the desire of other states to have no repetition of the appalling scenes in Alabama—even if, as happened in Mississippi this week, the un-

welcome guests are thrown into prison allegedly for "inciting to riot." The Freedom Riders are being sponsored by the Congress for Racial Equality, a bi-racial organisation which has led "sit-ins" all over the South to end discrimination at restaurants, lunch-counters and other public facilities.

Mr Robert Kennedy, the Attorney General, has used his powers both effectively and discreetly. The 700 federal marshals dispatched to Montgomery were not moved until it was plain that the state authorities were not honouring their promise to prevent violence; unlike the paratroopers whom President Eisenhower sent to Little Rock four years ago they are an arm of the civil power. This week as groups of Freedom Riders entered Mississippi on their way through the "Black Belt" to New Orleans, their protection was left to the state authorities. But the federal government has moved quickly to punish leaders of the mobs in Alabama; it has also secured a court order to prevent the Ku Klux Klan from interfering with travellers and is attempting to have the order extended to four police officials in Alabama.

The Administration's aim is to rally the sympathy and support of the moderates, in the South and in Congress, mainly because this is the only hope of orderly progress but also because Southerners hold the key to the success of the President's legislative programme. So far it looks as though the Administration is succeeding. But this is due as much (or more) to the folly of Mr Patterson, the Governor of Alabama, as to the deftness of the Attorney General. Alabama is probably the state where racial repression is worst and feeling runs highest, yet the Governor all but invited violence against "outside agitators." He does not seem to have tried to maintain law and order. When the federal marshals

appeared he threatened to arrest them. At the height of the crisis he became "unavailable"—even to the President. The impudence of Alabama's defiance is summed up in one incident; when the Attorney General's own representative was beaten and left unconscious in the street for half an hour, the excuse was that all the white ambulances had broken down. Other southern Governors and many southern Representatives in Washington feel that Mr Patterson has done great harm to the cause of the South; even Senator Talmadge of Georgia, who is no moderate, has condemned publicly Mr Patterson's failure to preserve the peace.

## Picking Up Latin Pieces

CUBA, scorning "capitalist bribes," will not be represented at the Latin American economic conference to be held on July 15th at Montevideo at which President Kennedy, very possibly in person, is to launch his Alliance for Progress—a joint effort to raise the standard of living in the other nineteen Latin countries. But Dr Castro will not lack some American aid of his own, if he holds to his offer of exchanging 1,214 captured members of the Cuban invasion force for 500 tractors and bulldozers. A private committee, headed by Mrs Roosevelt and with the Administration's open, if unofficial, approval, is already receiving contributions to pay this ransom, in the name of humanity and to demonstrate friendship toward the Cuban people.

For the time being the President is having to swallow not only Dr Castro's cynical offer, but also the fact that there is no likelihood of persuading the Organisation of American States to take any joint action against the present Cuban regime. Dr Quadros, the President of Brazil, the largest of the Latin American countries and the one most in need of massive American aid, has flatly refused to do more than consider measures to prevent the spread of subversion to other countries. The Administration's plan now is to send Mr Adlai Stevenson on a good-will tour in June, to see if he can charm Latin Americans into holding a political conference after the economic one. Meanwhile, at home the Administration is at last moving to clarify responsibility for Latin American affairs. Mr Adolf Berle, who with his Latin American task force is reaping much of the blame for the Cuban fiasco, seems to be moving out; Mr Cabot, the experienced ambassador to Brazil, is about to be appointed ambassador to the OAS and the long-overdue appointment of an Assistant Secretary for Inter-American Affairs is said to be in the offing.

In moving back to the attack on Latin American poverty, which is the only way to prevent new Castros, President Kennedy is building on his legacy from the Eisenhower Administration; Congress has just approved an appropriation of \$500 million for a long-range programme of help to stimulate land and tax reforms and low-cost housing. But this is not likely to be enough either in the long or the short run. Brazil has had to have first-aid: a \$1 billion package, made up of about \$500 million in new money from the United States and the International Monetary Fund and perhaps \$150 million from European banks, and over \$400 million in postponement of payments on existing debts. Bolivia is also being given emergency aid and Venezuela will probably get some too. What gives greater hope to Latin Americans is that for the first time the United States has placed on the agenda of an economic conference means of stabilising the export prices of the depressed commodities on which they depend and has put its stamp of approval on a Latin American Free Trade Area. These are not the only innovations; part of the American loan to Bolivia is for a government-owned oil industry which in the past could have expected no help from capitalist America.

## Innocent on the New Frontier

OUR SPECIAL CORRESPONDENT  
RECENTLY IN WASHINGTON  
OFFERS SOME IMPRESSIONS

THREE days before it happened a wise and liberal professor in the President's team was arguing, "We cannot let these good Cuban patriots down." The commitment was complete and failure rocked the confidence of the Kennedy brains trust—to the point that Mr James Reston, in the *New York Times*, urged them not to pack their bags; the nation needed them still and if they left Mr Kennedy alone with his political handlers they would desert their trust. They remain, worrying out the problems of Vietnam. Kennedy fans in Britain, rejoicing a little early at the victory of new ideas, might note another rebuff for brains—the comparative calm with which newish ideas have been turned down in the economic sphere. A President all for growth, surrounded by Harvard teachers of economics, has opposed a steady orthodoxy to their heterodox proposals—to reduce short-term interest rates, for instance, or declare a tax holiday.

Invited at his press conference to discuss the prospects for the economy, Mr Kennedy dodged the broad question and instead rubbed in the risks of renewed losses of gold. Is this the man who, the bankers said, would ruin the dollar? Recovery has come more smartly than seemed likely at the beginning of his hundred days. The current game of guessing what the annual rate of national output will be by the end of this year yields some odd comparisons; \$515 billion is in the air which the Council of Economic Advisers breathes, but over at the Federal Reserve Board they talk of a possible \$535 billion. Twenty billion is the range between those who are urging special encouragement and supplementary budgeting and those of the "leave it to the market" school. At this moment President Kennedy seems to be fairly impressed with what the economy is doing to help itself, and to be leaving a massive assault on the bad spots for later campaigning.

Grave stories are already in circulation of the bitter differences that have arisen between the CEA and the FRB; (it is interesting to reconcile these with the fact that the chairman of the central bank attended the recent Paris meeting of the Organisation for European Co-operation and Development as a member of an American team led by Professor Walter Heller, the CEA's chairman). The view that Mr William McChesney Martin, Jr, is an impediment to economic progress is widely propagated by interested parties; in fact, the head of the FRB exudes humane good sense on unemployment, money, fiscal policy and a full share for the consumer in the benefits of expanding productivity. Where bankers congregate there is much talk of preventing the CEA from running the American economy as a lecture room model—a caricature, too, though it reflects something of the ambition of Professors Heller and Tobin to make the American economy "get up and go."

Of all the toilers in the Kennedy Administration, none works harder than the President himself. He finds it necessary to absorb the essence before delivering the decision—which means going most of the way with the experts before making up his mind. How long this burden can be carried worries his keenest supporters. So far there is some putting on of weight (he might think of Mr Truman's misty morning tramps through Rock Creek Park), some trace of puffiness, a few more sentences trailing unfinished in his press conferences, but no hesitation under pressure. Mr Kennedy's recovery from the Cuban fiasco was a masterpiece of

political dexterity; he rode off on international communism, side-tracked pressure to "send in the Marines" and left his advisers with the agonising reappraisal of an outside-chance adventure of a kind that they will never repeat.

Cuba brought discomfiture to everyone except the President, who proceeded to build on it. His political lieutenants have been insisting that he should pick his own time for getting his way in domestic policy and the major concentration has been on external policy—communism, Cuba, Latin America, Laos, Vietnam, Europe and Canada—where the dividends are bound to be slow. But popularity at home has been built up. Before the

Cuban episode Mr Kennedy's advisers were apprehensive whether he could deliver the vote in Congress; he has since shown unmistakably that he can—and conceivably this is in some part a reflex action that would not have happened apart from Cuba.

None of the President's aides is more impressive (though many are more likeable) than the young political masterminds in the north-west wing of the White House. What ought to be done is a matter for the Bundys, the Rostows and the Hellers; what can be done rests largely on the views of these artists of the possible. They link the enormous sophistication of the President's buzzing thinkery with the slowly paced, predominantly conservative opinion

## Aluminium Goes Abroad

FROM A CORRESPONDENT IN CALIFORNIA

**S**USPENSE over the proposed hydro-electric and aluminium project on the Volta River in West Africa came to an end in March with the news that the government of Ghana had awarded a \$10.5 million contract to the Kaiser Engineers International division of the Henry J. Kaiser Company, of Oakland, California. It will be responsible for preparing detailed engineering designs, procuring major equipment and inspecting construction. In its capacity as consultant to the government of Ghana, the firm has been evaluating bids for construction of the \$169 million Akosombo Dam and power plant, the first step in an undertaking which, it is estimated, will take twelve years to complete. Kaiser also heads the consortium of American producers which are members of the Volta Aluminium Company (Valco), with headquarters in the Republic of Ghana. It is now holding discussions with the American government over the financing of a proposed \$178 million plant which would use electric power from the dam to produce aluminium from local deposits of bauxite.

The aggressive part which Kaiser has played in the Volta River development has captured the spotlight, but it is only one case out of many. American producers of aluminium, who have hitherto been more or less confined to the western hemisphere, are now active all over the world, taking part in projects to develop bauxite and hydro-electric resources, planning aluminium reduction and fabricating plants, and buying interests in the aluminium enterprises of industrial countries, notably those of the United Kingdom. Among those taking part are such leading producers as the Aluminium Corporation of America (Alcoa), the Reynolds Metals Company and the Olin Mathieson Chemical Corporation as well as the Kaiser interests.

They give three main explanations for this upsurge in international activity. One is the depletion of the resources of bauxite in the western hemisphere, as demand in

North America has expanded, and the need to ensure supplies for the growth which is expected. The second is that American businessmen recognise that during the next few years the rate of growth abroad in markets for aluminium products may be even greater than it is in North America. Last—and perhaps least—the big aluminium firms in the United States, which are among some of the largest enterprises in the country, are convinced that foreign investment which stimulates economic growth in both under-developed and industrialised countries can be a powerful weapon in the cold war.

Demand for the primary metal in the United States has been rising at the rate of about 7 per cent a year, or double the rate of growth for the economy as a whole. Although there has been a temporary slowing down in the past two years or so this trend is expected to continue over the longer term. Demand in other countries is also expected to increase substantially. Even in the highly industrialised countries the amount of aluminium used a head of the population falls far short of the figure for the United States—about 22.4 pounds last year.

In the search for raw materials, Africa is the favourite hunting ground, because its tropical areas are believed to contain about 25 per cent of the world's reserves of bauxite ore and because African rivers

such as the Congo, Volta, Konkoure, Kouilou and Sanaga are vast untapped reservoirs of the hydro-electric power needed to extract the metal from the ore. In the next decade Africa's contribution to the free world's supply of aluminium may rise from the present 1 per cent or so to around 15 per cent. Other projects reach into the distant corners of the earth.

The list below, which is not exhaustive, gives an indication of the far-flung interests of the major producers and fabricators:

**Olin Mathieson Chemical:**  
Republic of Guinea, 48.5 per cent interest in FRIA Compagnie Internationale; Exploratory studies in other African countries.

**Reynolds Metal:**  
United Kingdom, 47 per cent interest in the British Aluminium Company, 49 per cent interest in Reynolds T.I. Aluminium Ltd.; Greece, participation in an alumina plant; Venezuela, joint venture with the government of Venezuela to build a reduction plant; Exploratory studies in Africa.

**Kaiser:**  
United Kingdom, through 50 per cent control of James Booth Aluminium Ltd.; Australia and New Zealand, with Consolidated Zinc forming Comalco Industries Ltd. on 50-50 basis; India, 27 per cent interest in Hindustan Aluminium Ltd.; Argentina, 49 per cent interest in Industrias Manufacturera del Aluminio, SA; Spain, four ventures with the French Pechiney company.

**Alcoa:**  
United Kingdom, 49 per cent interest with ICI in Imperial Aluminium Ltd.; Venezuela, in partnership with the Montecatini company of Italy and local investors; Mexico, minority interest in a new Mexican company; Surinam, the country's first aluminium smelter and hydro-electric power project; Japan, about one-third interest in Furukawa Aluminium Company, Ltd.

All these enterprises have been undertaken because they are good business. Nevertheless, they also have political overtones. As they forge links with the newly emerging nations and with the industrialised countries of the free world American producers of aluminium feel that they are helping to strengthen western democracy.

of the country. A campaign for economic growth can be mounted at the very moment when Americans begin to want it. When unemployment strikes the public conscience, and begins to react on Congress, policies for curing it will be ready. There are some difficult items, too, that the public has to be persuaded to swallow—foreign aid for one and trade policy for another.

In sheer professionalism, this apparatus of government is nowhere rivalled now, or perhaps in the past. A good deal of the effort is wasted along the labyrinths of the American constitutional system; if it were delivering its full force under, say, the British system of government the results would be spectacular and perhaps even unbearable for ordinary democrats. The first hundred days brought no crisis, save Cuba, which ought to count as a disaster but somehow does not, and they heralded the double K meeting in Vienna in a week's time. Old Mr K will not have to ward off any fatal charm in young Mr K—that is not a dominant quality—but he will be pinned down to a confrontation of plain facts, quick analysis and cool unflappability. And Mr Khrushchev, of all people, will recognise the political quality that the Americans, by so narrow a margin, chose for themselves.

## Du Pont Divested

FOR the second time the Supreme Court has reversed a decision of Judge LaBuy, of the Federal District Court in Chicago, in the du Pont-General Motors anti-trust case, involving two of the largest firms in the country. First, in 1957, the Supreme Court ruled that, contrary to Judge LaBuy's opinion, E.I. du Pont de Nemours and Company was in fact violating the anti-trust laws by holding 23 per cent of the shares of the General Motors Corporation. Now the court has rejected his remedy for this situation, which was that du Pont should continue to own the GM shares but pass on to its individual stockholders the voting rights that went with the shares. Justice Brennan, who wrote the Supreme Court's opinion, argued that the du Pont stockholders would be just as likely as the company's officers had been "to vote in such a way as to induce General Motors to favour du Pont"—in purchases of paint for cars, for example—which was what had been found illegal in the first place.

While it is now for the lower court to devise some other remedy, Mr Brennan made it clear that the most effective means of protecting the public interest would be for du Pont to divest itself completely of its holding in General Motors and this will now presumably be ordered. The Department of Justice is delighted at this vindication of its attack although it would have liked a more solid majority; the vote was four to three, as it had been in 1957, with two members of the nine-man court abstaining because they had been involved in the case before going to the bench. The dissenters, led by Justice Frankfurter, insisted that Judge LaBuy was right in disapproving of divestiture because it would bring "great and unjustifiable loss to innocent shareholders" in the du Pont company.

That it will be difficult to avoid this is undeniable. If du Pont puts its 63,000,000 shares of General Motors stock on the market, the average dealings in the stock—28,100 shares a day in 1960—will be doubled even if the sale is spread over ten years, as the court has allowed, and prices will obviously suffer. If du Pont distributes its GM holdings among its own shareholders, these "dividends" will be taxable at the same rate as ordinary incomes—the total tax to be paid might come to \$1 billion or more—and price-depressing sales in order to raise the money would be inevitable. While investors in these shares have known of this particular risk since the case was first brought twelve years ago, nevertheless there is clearly a good argument for some form of tax relief, already proposed in Congress.

## Meetings in May

NEW YORK

IN April and May thousands of Americans indulge in the largely seasonal pastime of attending the annual meetings of the companies in which they own shares—a sport that has been gaining considerably in popularity. This year's meeting of the American Telephone and Telegraph Company, held in Chicago for the first time, attracted some 20,000 shareholders, thus outdrawing by a good margin the Chicago White Sox who opened their baseball season the previous week. While few companies are in anything like the same league as the giant AT & T, scores of them can count the shareholders at their meetings in the thousands.

Time was when American shareholders (like their British counterparts today) were content to draw dividends and leave the running of the company to the management. But they are no longer so passive. Most meetings continue to be largely routine affairs, but some provide plenty of action—like that of the Allegheny Corporation on May 1st; at this, it has just been announced after a lengthy count of votes, shareholders gave control of the big holding company, and victory in one of the most expensive proxy fights of all time, to the Murchison brothers of Texas, apparently on the ground that under the direction of Mr Allan Kirby Allegheny has pursued an unimaginative investment policy. Last year, in the wake of the television scandals, one shareholder of the Columbia Broadcasting Corporation arrived with mop, pail and apron to "clean up TV," while at the Chrysler Corporation's stormy meeting this year a Detroit lawyer brought along a card table on which he piled ledgers said to contain evidence of corruption, favouritism and mismanagement within the company.

To some extent the companies have themselves to thank for the growing interest of shareholders in their affairs. Nervous at their size and wealth—and with one eye on the anti-trust laws—many corporations have made a point of telling shareholders that "this is your company." Shareholders are further egged on to do their corporate duty by a group of semi-professionals who buy a small number of shares in a large number of companies and make it their full-time business to protect the rights of shareholders. Best known among these are Messrs Lewis and John Gilbert, brothers who spend their time on their feet at company meetings and even issue their own reports on their activities to subscribers. Another vocal figure at many a meeting is Mrs Wilma Soss, head of the Federation of Women Shareholders in American Business Inc, whose first concern is to protect and promote her own sex, but who sometimes joins forces with the crusading brothers.

THE influence of these "active" shareholders, such as it is, is due more to their nuisance value than to any real power since, in most cases, their combined voting strength is fairly negligible in relation to the number of shares outstanding. Thus, at this year's Chrysler meeting the management faced four hours of relentless heckling from an angry group of shareholders, but even so, when absent friends were included in the tally, it was returned to office with a 98 per cent vote. Nevertheless, the prospect of being grilled at the next annual meeting is certainly a factor that management must take into account. American law gives the shareholder the right (if he demands it) to a great deal of information about his company, and as a rule he feels no delicacy at, for example, making top officials divulge at the meeting their total take-home pay. There has also been a big increase in the number of law suits brought against managements by shareholders who believe that their interests have not been protected and in some cases these have had a very considerable impact on the company in question.

Some firms go out of their way to get shareholders to their

## SAFETY IN OUR TIME

On the low road, the high sea or anywhere in Upper or lower Space, life or death relies on electricity. In fact, there is just a faint line between sheer enjoyment and madness. But in our time sheer enjoyment is taken for granted. No solid citizen in his right mind anywhere would drive at night without lights, any more than a ship's captain or the pilot of a jet.

We take electricity as part of our heritage, in such forms as light, heat and power, all vital factors of our better living.

Hitachi, Ltd. is a leading force in the development of electricity in the Far East, manufacturers of everything electric and electronic from gigantic generators to tiny tubes and transistors. These Hitachi products, now world-renowned, are contributing to today's modern, better, and safer living.

But Hitachi's research scientists, never satisfied, are daily engaged in all-out efforts to enlarge the usefulness of electricity, to make tomorrow's living better than that of today.

**Hitachi, Ltd.**  
GABE JAPAN  
HITACHI, TOKYO

meetings, particularly if the company is new and expanding, if it has new products which it wants to promote, and if its record gives the officers much to be proud of. A sure way to swell the ranks of shareholders is to offer free refreshments; the prospect of a box lunch on the company seems to be irresistible to many people (particularly women) with ample bank balances and otherwise reasonable palates. Some companies go further and search for an original gimmick to attract the attention of stockholders. This year, one held its meeting in a large tent with the management seated on a circular and revolving platform in the centre. A fast-growing company in Florida entertained its shareholders in its "Seaquarium" outside Miami, with skin-divers and animals co-operating; a penguin waddled to the rostrum with an annual report under its flapper.

Other companies are more interested in checking the flow of shareholders to annual meetings. A particularly effective device is to provide no refreshments. Another is to shift the location of the meeting so as to cut down the attendance of the "regulars" who have grown brazen and tiresome with the years or even to hold it in a place that is far removed from the homes of shareholders; a western railway company, for instance, meets regularly on the east coast, though most of its shareholders live on the west coast. The free box lunch can also be deployed in the interests of brevity; if it is available only when business is completed the sense of the meeting is usually in favour of a speedy adjournment.

Privately, many managements regret the day that anyone mentioned "corporate democracy"; for some the annual meeting is a modern form of torture for which they have to be well drilled in advance. But in public they maintain a stoical smile, realising that the days when the internal operations of the company were no business of the shareholders have gone for good.

## Senate Goes to School

By the time this article appears the Senate will almost certainly have passed a Bill, satisfactory to the Administration, providing \$2.5 billion in federal funds over a period of three years to be used by the states for building class rooms and paying teachers in the tax-supported schools. But this will be the fourth time in five years that the Senate has passed such a Bill and each time it has been defeated in the House of Representatives—and this year the House is showing itself particularly unwilling to co-operate with the Administration. So it is not surprising that the main concern of those responsible for the Bill in the Senate is that it should emerge in the form most likely to please the House.

The basic objection to aid for education comes from the conservatives who dislike both government spending and federal interference with states' rights, of which the responsibility for education is one of the most jealously guarded. Until now conservative opposition has always centred in the South but this year a number of Southerners are comparatively friendly to the Bill. This is partly because the formula under which the federal money will be divided among the states favours those with low incomes and lots of children—and Southerners have both of these. Partly it is because Southerners are already spending all that they can afford on their schools and the pressure of the school-teachers' lobby for more money is just as well organised in the South as it is elsewhere. Finally, Southerners have always feared that federal aid would mean forcible mixing of white and Negro children in the class rooms; now more and more of them realise that this is coming anyway.

Nevertheless one of the amendments that had to be fought off in the Senate would have stipulated, in effect, that government money would not be denied to schools which were still segregated

racially. The Administration has in fact no intention of doing this but northern liberals refused to accept a Bill that said so specifically. Their attempts actually to prohibit federal grants to segregated schools were also defeated; such an amendment would have alienated the South completely. The third important amendment to be shot down was put up by an avowed opponent of the Bill. He proposed that federal funds should be available for building private schools, that is, for the Roman Catholic institutions which, in the Administration's view, it is prohibited from aiding under the constitutional division of church and state.

But apart from this the Bill's managers have succeeded in keeping out of the debate the religious questions which promised earlier to make this year's school Bill more controversial than ever before. This has been done by arranging to bring up in the near future a Bill which would provide federal loans, not grants, to build class rooms in parochial schools. At one stage it was thought that it might be better strategy to combine the two measures but finally it was decided that the school Bill should go to its fate in the House stripped of all but the essentials.

## SHORTER NOTES

Embezzlers, the Supreme Court ruled last week, must pay income tax on the proceeds of their crime. But because the court had ruled precisely the opposite in 1946 the embezzler in question had his conviction reversed; he might have relied upon the earlier ruling in making up his income tax return. How this conclusion will affect other cases before the courts is far from clear. But from now on embezzlers are to have no advantage over honest taxpayers. The dissenting Justices argued that the proceeds of embezzlement belong to the original owner and that to tax them will make restitution more difficult.

*Correction:*—In 1959 the New York Zoological Society received more than \$500 thousand in gifts, grants and legacies and was visited by 2,119,685 people; the figures were given incorrectly in the article on page 544 of *The Economist* of May 6th.

## FAMILY INCOMES

The total personal income of families and "unattached individuals" in America came to \$385.6 billion in 1960, up from \$184.6 billion in 1947 and \$365.6 billion in 1959. The number of families with incomes of \$10,000 and more, before paying taxes, was at a record high of 9.7 million and the number with incomes of \$2,000 or less was at a record low of 7.2 million in 1960, according to an article in the May issue of the Department of Commerce's *Survey of Current Business*.

## Old Father Camus

FROM OUR SPECIAL CORRESPONDENT

It is still the most beautiful town in England, and is likely to remain so; but its face is changing somewhat. Old buildings are being torn down, for good reasons and bad, and are being replaced by new ones of very varying quality. The bad new buildings, of which there are several, are provoking a vast amount of passionate argument among the inhabitants, but it is doubtful if the visiting tourist will notice much difference in the dear old place until the Cavendish fulfils its monstrous threat, and builds its fifteen-storey tower in the very centre of the town.

Until now the new buildings have shunned the limelight, even Mr Basil Spence's new block at Queens' blending invisibly into the Backs. Churchill College is still no more than a huddle of plum-coloured little boxes at the top of a long green slope on the Bedford Road; Sir Hugh Casson's magnificent Arts Faculties buildings have to be content with putting the kitchen quarters of Newnham out of countenance, and the Clare Hostel is cunningly hidden behind St Giles's Church and the grim villas of Chesterton road. To the tourist, or returning alumnus, Cambridge seems unchanged and unchangeable, above all in the early summer, the city's season of seasons.

Nor is this impression misleading, for the same might be said, in less purple terms, of every aspect of the university. The name of Crowther starts no spirits there. Any question about the approaching bulge, or the need for an enormously increased number of university places if Britain is not to enter on a period of national decline, is met by a firm: "It's none of our business." Indeed, there is a widespread hope that the numbers of undergraduates can actually be reduced, and it is declared university policy to cut down the intake.

Some colleges, it is conceded, will be unable to resist the temptation of raising their income by continuing to grow, or will be unable to face the loss of revenue that cutting down would bring; and no-one has

yet discovered how to stop dons plotting to bring to Cambridge any new subject, and consequently new professors, in which they have an interest, though it is widely felt that Cambridge has quite a wide enough range of studies already. But on the whole the university intends to stay at its present population of 9,000 and proposes to leave "the provincial universities" to deal with the bulge.

ANY Cambridge resident, whether townsman or gownsman, knows how even the present numbers are straining almost to bursting point a structure never meant to deal with so many. While it is not a necessary part of a liberal education to have your bed made and your china broken by hags, and your food served cold by college waiters, a bed and food you must have, and to find either without an enormous waste of time and money could easily become as difficult as it is in London. More positively, it is felt that Cambridge does very well as it is at present, and that its problem is to do better what it does now, not, by swelling, like Aesop's frog, to destroy itself.

The base of this feeling is loyalty to the college system. This still dominates Cambridge socially though the days when the university was little more than a convenient fiction are gone for ever. But even now, in spite of the government subsidies which are channelled through the university, in spite of the huge laboratory buildings, in spite of the fact that, in almost every faculty except history, there are more university teachers than there are fellowships available for them, the colleges continue to set the educational as well as the social pace. It is they which choose the undergraduates, get their men through the examinations, keep their private lives from disaster and strive, throughout, to accomplish the educational task of bringing out, as one head of a college put it, each individual's potential in terms of imagination and originality.

This conception of the purpose of "going

up" is fundamentally at odds with metropolitan Benthamism, and inhibits any expansion of numbers. Dons cannot be manufactured as quickly as undergraduates, and if the college system of tuition is to be maintained, so must the present ratio of senior to junior members. That the system might, perhaps, be sacrificed is a conclusion that would be generally resisted. It is conceded that the colleges, if they are to justify their continued existence as independent entities rather than as mere halls of residence, must continue to be efficient teaching establishments. It is admitted that there is room for improvement. But it is still widely felt that lectures, seminars and university classes produce swots and crammers unless corrected by the genial relations of pupil and teacher in the colleges.

Many instances show how this college faith works in practice. Thus, research students—graduates, that is, who undertake a course of study resulting in a PhD or MLitt thesis, or in a fellowship dissertation—are universally agreed to be the proletarians of Cambridge. Exiled to the horrors of "digs" by many colleges which make no provision for them; coming, often, from outside Cambridge; embarking upon a career which necessitates a high degree of intellectual isolation, in sharp contrast to the undergraduate's traditional gregariousness, they are a new, numerous, and perplexing problem to colleges and university alike. But the university has deliberately referred the difficulty to the colleges, whose negligence created and maintains it.

Again, some colleges regret their inability to pay salaries sufficient to attract, as fellows, individuals, whether scholars or not, who have valuable educational abilities but no turn for lecturing, and hence no supplementary university wage. But a suggestion that the state might subsidise college salaries as directly as it does university ones is rejected in the name of academic freedom, of which the colleges see themselves as the last guardians.

All these tendencies, and many others,

# MASTERPIECE

A masterpiece in automobile engineering, and by any standards of coachwork and design, today's best-looking, most luxurious quality-car value. Its high performance, fully-proven 3-litre engine, front disc and large rear brakes, and superb interior appointments, provide a standard of power, elegance, safety and silence

unrivalled by any other car approaching its price. £1050 plus purchase tax £438.12.6. Optional extras include fully-automatic transmission, power-assisted steering and individual front seats; also overdrive on normal transmission models. can be seen at work in Cambridge's youngest and most vigorous child. Churchill College was created as Cambridge's answer to the needs of the modern world, but it is a singularly unrevolutionary one. In one respect, indeed, it is reactionary: the greatest scandal in Cambridge at present is the ludicrously inadequate provision made for women's education, yet Churchill is not only an all-male college on the old basis, but arose to draw money to itself at just the time when New Hall, youngest and smallest of the women's colleges, was in desperate need of funds to enable it to grow.

Churchill has, however, done something to make up since. It will provide quarters on its doorstep for married research students, whose wives and children are therefore certain to modify, to some extent, the masculine austerity of the college; and its fellows all agreed, somewhat to their own surprise, to admit ladies as guests to High

Table, whatever their academic or personal status, every night of the week. The sensation this caused can, perhaps, only be understood by Cambridge men. One don went so far as to describe it, with evident passion, as "a retrograde step."

The incident throws light on Churchill's conception of its mission. The colleges are to be reinvigorated, not abolished. It regards itself as the exemplar of the new college which will demonstrate the system's continuing virtues to the new world. Thus, rooms will be found in the college buildings, at some stage of their careers, for all research students, of whom Churchill will have far more than the other houses. The 70-30 ratio of scientists to arts men will foster the disciplines of which Britain is most in need, and do something to bridge the gulf between the two cultures—Sir Charles Snow is one of the "extraordinary" fellows. His status as such, incidentally, is

planned to enable the college to benefit, as All Souls does, from the presence of men who are not academics in any real sense—there are others, and will be more. Lastly, the invention of visiting fellows, of whom there is to be a large and rapid turnover, will do something to look after visiting lecturers who, at present, tend to find themselves totally ignored by the natives once they have left their rostra.

So the reverend sire, as Milton so perceptively remarked, foots it slow, and sees no reason for ceasing to do so. Churchill's example has not been without its effect—Peterhouse, the oldest college, was perhaps taking a hint from the newest when it decided to build a bar, hall, and some sets for its research students, and elected Mr Kingsley Amis a fellow. More such gentle innovation can be expected, but fenland sleepiness will try to put a brake on anything else.

## Home Fires Burning Bright

FROM A CORRESPONDENT IN LEEDS

THE National Coal Board employs about 116,000 miners at more than 100 pits in Yorkshire. Each of them receives concessionary coal, amounting to anything up to 13 tons a year. But because new smoke control zones will restrict the use of free coal, the Board is now in the middle of complex negotiations with the National Union of Mineworkers.

For more than half a century, "home" coal, usually about 12 tons a year, has been acknowledged as part of the men's remuneration. The trouble is that every pit management and union branch has negotiated its own home coal agreement in the past with an eye on its particular problems. At one pit, for instance, the miners may have an arrangement for supplying miners' widows with three or four free tons of coal a year from their own home coal supply. A neighbouring pit may make the same grant to old age pensioners. Yet another may give the hand-out to retired miners or disabled colleagues.

There are varying opinions as to the amounts of free coal to which miners should be entitled. The old Yorkshire range which miners' wives stoked with a bucketful of coal at a time is obsolete and many miners find it impossible to burn 12 tons of coal a year on modern ranges. At many pits this fact has been acknowledged, and miners who do not take delivery of the whole of their entitlement receive 15s. or £1 a ton if they

leave their coal at the colliery. Old union men constantly frowned on this practice, maintaining that it undermined agreements striven for in the past. As it turns out they were right, for the NCB has used this as a lever for negotiating new compensation rates.

On the face of it the issue seems simple. The board could give the miners smokeless fuel or a sum of money to buy smokeless fuel. In fact the national executive of the NUM and the Board have agreed in principle that miners should receive some £42 a year in lieu of concessionary coal. The board reserves the right to supply solid smokeless fuel instead of cash at its discretion. But this agreement has yet to be ratified and there are indications that the mining rank and file are not entirely satisfied. They ask what is to become of the widows, the pensioners, the retired and disabled who have been receiving coal merely for the price of its carting. The NCB, understandably, says this is really not its concern.

One aspect of the problem which probably does not reach the conference table is the fact that the clean air drive will probably end many illegal but extremely lucrative black market deals. It is no secret that, rather than leave their "spare" coal at the pit head and collect £1 or 15s. from the management, most miners have it delivered to their homes and then sell it

to non-mining neighbours for perhaps half the normal price of coal. This saves the neighbour perhaps £4 a ton and is a pleasant "pick-up" for the miner.

The cost of smokeless fuel in Yorkshire varies between 8s. and 11s. a hundredweight, so that, on average, the miner will be able to buy about four and a half tons of smokeless fuel with the £42 the NCB gives him. A table of comparative heating efficiency published by the Solid Smokeless Fuels Federation says that one and a half hundredweights of solid smokeless fuel (burnt in an inset open fire with back boiler) provides the same heat as two hundredweights of coal. One may therefore assume that four and a half tons of solid smokeless fuel will provide the equivalent heating efficiency of about six tons of coal—which may be about the amount of concessionary coal a miner burns every year.

Mineworkers' officials in Yorkshire are maintaining a discreet silence on their members' views on the agreement. They appear to be taking refuge in the fact that negotiations have been conducted entirely on a national basis and, one feels, they anticipate adverse criticism of their national executive. The fact that the NCB will supply smokeless fuel at its own discretion suggests that the board will take whichever course is cheaper. It is thought that this points to future decreases in the cost of production of solid smokeless fuel.

SOME critics doubt whether the board will be able to meet any great demand for smokeless fuel for some considerable time. Mr Roy Mason, MP for Barnsley, in the heart of the Yorkshire coalfield, criticises the "complete lack of co-ordination between the central government, local government and the National Coal Board". He maintains that the Clean Air Act and the smokeless zones registered by local authorities

should not have been proceeded with until the NCB had given an assurance that it could meet the tremendous increase in public demand. Mr W. H. Sales, chairman of the north eastern division of the NCB, said when launching a solid fuel sales drive recently that the pilot plant for producing solid smokeless fuel was overcoming teething troubles and that, by 1965, it was hoped that there would be a number of plants producing the fuel in the division.

Mr Mason may have lost sight of the fact that private concerns in Yorkshire and Derbyshire are buying coal from the NCB and producing their own particular brands of solid smokeless fuel in appreciable quantities. An official of the Coal Utilisation Council said he felt that any increase in demand as a result of the sales drive could be adequately met.

The NCB is not merely selling smokeless solid fuel but is concentrating on maintain-

ing and possibly increasing the sale of coal which may be burned smokelessly in a variety of industrial appliances. After a period of coal stocking and indifference about production figures, the board in Yorkshire is striving for increased output to meet present and future demands. It is expected that, in 1965, 45.5 million tons of coal a year will be produced from the Yorkshire coalfield, 5 million tons more than at present.

THE ECONOMIST MAY 27, 1961

THE ECONOMIST MAY 27, 1961

## Cornish Costas

FROM A CORRESPONDENT IN CORNWALL

THE Cornish still talk of "going to England" when they cross the Tamar, and country girls who marry outside the tribe still find their husbands labelled "foreigners." Anglo-Saxons who go to Cornwall on holiday may find this insistence on a separate identity rather quaint at first, but they soon learn that it has a good foundation both in past history and in present differences.

Cornish people are not, in fact, as English as the rest of us. They are the descendants of races that lived in Britain long before the English arrived: of stocky, round-headed people from the Mediterranean who came in search of dyes and metals and settled where they found them just as they had done in Galicia and Brittany. And later, of course, the Celts moved in.

The names on any modern map of Cornwall are part of the legacy of these invasions, and neither the Romans nor the Anglo-Saxons or the Normans were able to change them much. Nobody talks Cornish now, but fishermen from Brittany coming ashore at Newlyn in their clogs somehow find their Breton sensed and understood by local men, who are strangely alike in looks, and voice and temperament. They rarely, for example, keep appointments, and if they do, as late as not, they will be an hour, or a week, or a year late.

The Cornish are not in the least diffident about being different. They are proud of it and even arrogant. They tolerate the English as convenient and profitable neighbours, but they always take them with a pinch of salt, plus of course whatever percentage they can get. But although the Cornish have always been different it is only recently that they have turned it into a commercial asset. What started as natural separatism has now become a major tourist attraction.

According to a recent survey carried out by the British Travel and Holiday

Association about 30 million Britons—nearly sixty per cent of the population—spent their holidays away from home. Of these 17 per cent went to the south-west of England. More than five million people now spend not far short of £100 million in Devon and Cornwall in a single year. The money spent by British holidaymakers even in the most popular countries like France and Italy and Spain is chicken feed compared with this. About ten times more people went to Cornwall in 1960 than to all the brave and sunny Costas of Spain.

It is, of course, more the sun and the beaches and the sea that attract the Londoner and the Midlander to Cornwall than the Cornish themselves. They are factors of attraction all the same, as much, certainly, as the medieval churches and the "quoits" and the relics of King Arthur. Every spring, before the Easter influx, the fishermen of Sennen start polishing up their ear-rings and their patter. In five months they will earn enough from trippers' tips to keep them in idleness and television through the winter.

But, like the Spaniard, the Cornishman somehow manages to fleece the foreign tourist without losing his individuality and his dignity in the process, as the Italian, for example, is apt to do. He goes on using his six-letter words in public just as often in the tourist summers as he does in the empty winters, and if your maiden aunt doesn't like it, Well, his tone implies, next time she had better go to Devon. . . .

"It's like being in a foreign country," say visitors from Rochdale and Reigate, "and think of the money you save on the fares." The money you save on the fares is, however, all you are likely to save. Attics and sheds that are occupied free by cows and mothers-in-law in the winter are whitewashed at Easter and let at 12 guineas a week, and farmers and fisherfolk evacuate their own homes in August for the sake of £100 or so. But visitors don't complain at the prices, much.

SOME of the Cornish coastline is as beautiful and as unspoilt as any in Britain. But for the most part it is not a lovely county. The buildings are grey and ugly, the countryside is often dull and treeless, and many of the inland towns are frankly squalid. Why then do so many people go there? "Ah," they say, "it's warmer there and sunnier, and the sea isn't so ruddy cold." There are charts and statistics in Penzance and Newquay to prove it, too. They are a great consolation, to be sure, while you shiver in an August drizzle and when you switch on the sidelights of the car as you thread your way through a clammy midsummer fog in St Buryan.

And yet . . . five million people went there last year, and this year there will probably be even more. There must be lots of good reasons for it, and one of them perhaps is the feeling that many people get when they cross the Tamar that they are somehow crossing a frontier: an easy, warm and friendly frontier, and Customs-less both ways.

## He's a tough customer

For Svenska Metallverken, that is. These Hasselblad cameras are precision jobs from start to finish — and precision starts with the component parts, many of which are supplied by us. Even the light alloy castings for the housings have to be made to a tolerance of  $\pm 0.002$  (by our Väsby Division). A complicated part like the bayonet plate for holding the lens attachment, also of light alloy and anodized a silky black, is in places machined down to a thickness of 0.012" and with even smaller tolerances (at Skultuna). Eagle eyes at Hasselblads keep us on our toes — and the entire Metallverken organization, with its raw materials and research, help our manufacturing divisions keep such tough customers. But we welcome challenges — so if you have a tough problem, let us hear about it. Maybe we could help you too.

**SVENSKA METALLVERKEN**

EXPORT DIVISION • VÄSTERÅS • SWEDEN

### Svenska Metallverken for "semis"

Precision is the keyword also for the main output of Svenska Metallverken — semimanufactured products of aluminium, copper and brass, as well as other copper alloys — in the form of plate, sheet, strip, extruded and drawn shapes, tubing, rods and wire. With our efficient modern plants, and advanced know-how covering a variety of fields, maybe we could be of help to you, too, in simplifying your assembly and fabrication problems. Drop a line to our Export Division you will quickly hear what the possibilities are.

# Every **FORD** starts on Coal

## Vast Dagenham expansion includes new £1,250,000 Coal-fired boilers

Five Star Motoring—gleaming, colourful, swift and safe—begins at Dagenham, a giant factory that covers over 550 acres of a once desolate marsh. The judgment and business acumen of the men who have made Ford one of our great key industries is reflected in every operation in the factory, every decision in the boardroom.

The ever-increasing demand for Ford cars—both here and abroad—will be met by a vast expansion of the present Ford plant and coal-fired power station. And once again, coal will be the fuel that will fire the £1,250,000 boiler plant which has just been ordered.

It will create a great new power source for the existing steam power plant that supplies the present Dagenham factory. Coal has been chosen because pulverised coal—fired in powder form—gives accurately controlled heat with the lowest fuel bills. Coal has the invaluable long-term advantage that it is a home-produced fuel which can supply all the fuel needs of British industry for decades to come.

If your voice is a deciding one in the choice of fuels for your factory, remember Ford. Beneath its smokeless chimneys is a wealth of knowledge and applied

more heat at less cost—and it's British**

# THE WORLD OVERSEAS

SOUTH AFRICA REVISITED—I

## The One Sane Country

BY OUR SPECIAL CORRESPONDENT

AFRICA two years ago was mostly colonial and the world, in Afrikaner eyes, was mostly sane. Now the continent is mostly black and the world, to Afrikaners, has gone mad. But South Africa is as it was in 1959—and, indeed, in 1949. The white population has been hit in the stock exchange and in the headlines, but it is still one of the most prosperous communities in the world. Political Africans have been hit on the head and in the statute books. The list of events is long, but they have caused little change: the country's course is set and there seems no way of turning back.

When Dr Verwoerd cast the Commonwealth loose, South Africans confidently awaited the police raids; these came a few days later, on March 20th. There were many more at the end of April; and at 4 a.m. on May 3rd thousands of detectives and uniformed officers knocked on doors to search for pamphlets and haul away "subversive elements." On Wednesday this week they did it all over again and, for good measure, the army reservists were called up. The raids are Dr Verwoerd's answer to the threat of a nationwide three-day strike, which has been called for the end of this month to mark the birth of the Republic.

Nearly all of this has happened so often before that it is now a normal part of South African life. African leaders have long looked on the nationwide strike as the only effective non-violent political weapon, but no organised "stay-at-home" has ever really come off. Strikes are prohibited by law; calls to stay at home are normally followed by raids and arrests. A police and army show of strength on the designated day is now accepted practice. If African politicians had no other way of spreading the message, the presence of tanks in the townships would do it for them.

Africans who stay away from work risk losing their jobs. The automatic result of dismissal is that they are ejected from their homes and face the danger of losing their permits to be in the city at all. A successful stay-at-home in the face of these odds would be impressive evidence of an organising ability that Union Africans have not so far possessed; it would also demonstrate a new spirit of resistance in the country. No stay-at-home has received so much publicity in the press as the one called for next week: if there is any new feature to South African life it is that the newspapers are at last taking serious notice of African plans.

But the African political organisations are banned, and many of their leaders have been arrested. On Thursday it was not known who had been caught in the latest raids; until then, at least half-a-dozen of the top leaders, including Mr Nelson Mandela, chief organiser of the strike, had managed to evade the police by sleeping in a different bed every night. This was an advance in political ability on two years ago. Another sign of the advance is that leaflets have been distributed to most houses in Johannesburg's townships by night: formerly the distributors stood on the station platforms in the mornings and were soon arrested.

An official who is responsible for the administration of the 600,000 Africans who live in Johannesburg believes that his charges are "about thirty per cent better at agitation than they

were in 1959." This is an advance on a low base. It is possible, through intermediaries, to meet the men the police are seeking. The safest place to talk is in one of the "shebeens"—speakeasies in which African city-dwellers take their drink. For about a year raids on shebeens have been slackening off (one city has cut its 1961 budget estimate for income from fines by half). It is, therefore, not too difficult to talk politics over a glass: one of the less dusty backyards in which this can be done is not very far from the Johannesburg office for the administration of Africans.

These conversations bring to light the remarkable degree of moderation that still prevails in black political thinking in South Africa. At his home in Natal, Chief Luthuli tells visitors that what he wants is not an "African majority," but a "Democratic majority," and that he believes black voters will one day vote for white candidates if they are the best men. This is far to the right of the nationalism in the rest of Africa. The Chief is also known to discourage talk of violence by pointing out that non-violent methods have not yet been given a proper trial.

IN the shebeen in Johannesburg, Chief Luthuli's executive officers may be a little more radical than their leader, but they are still, by African standards, conservative men. The banned African National Congress believes firmly in multi-racialism, while African nationalists elsewhere talk of black men's countries. But black nationalism is contagious. The ANC leaders underground have grown little beards that match the ones worn north of the Limpopo; and if the rest of their slogans differ, "one man one vote" has become firm policy.

There is a reason for this moderation. Africans in South Africa's urban areas—about a third of the country's African population—are closer in their aspirations to American Negroes than they are to Africans in the rest of the continent. South Africa has three million white people, and it is very near to being a modern industrial country. It possesses a wealthy, established and extensive western society. For most city Africans, political ambition means the wish to take part in this society rather than the northern wish to take over a backward country and get a black face into the United Nations. The ANC's vision of a multi-racial society has in it a genuine place for Europeans. It is a different situation from one in which there is no need to think of anything besides "Uhuru" and the removal of the "British imperialists."

This is why urban Africans in South Africa are a political force of a different—and in some ways less tough—character than Africans in other parts of the continent. On the other hand, Union Africans have a much harder battle to fight: there is no outside force (such as the withdrawal of the British) to aid them. It is in the rural areas that the South African government has come up against the strongest resistance. Last month the Transkeian territorial authority, run by supposedly pro-government chiefs, surprised everyone by politely requesting the independence that Dr Verwoerd promised last year they would have one day.

South Africa's white electorate was quickly reassured that the Transkei is nowhere near ready for it.

African nationalism is making inroads into South Africa through the flow of ideas from the north; through the migrant labourers from the British Protectorates; and through the Pan-African Congress, a breakaway group from the ANC. The power of the PAC has waned since the Sharpeville massacre, but those of its men who are not in jail are making attempts to co-operate with the ANC in adversity, and it seems likely that the result of their influence will be a tougher political line.

Equally important is the change in the attitude of the leaders of South Africa's one-and-a-half million mixed-blood Coloured people. Traditionally, white policy has been to treat the Coloureds as a political appendage to the Europeans. The Nationalists have cast them away, and Dr Verwoerd has said that there shall be

no compromise on treating them as a separate group, with a government Department of Coloured Affairs in charge of them. (The CAD is as unfortunately named as the Bantu Administration Department, steadfastly called "the BAD" by Africans.)

This treatment of the Coloureds has driven many of their leaders to threaten joining the African camp. Afrikaner Nationalists, knowing how the Coloureds come into the world, are divided on what to do with them: there is a strong movement in the Cape to give them direct representation in parliament. To Dr Verwoerd this is treasonable; to English-speaking South Africans it seems a sensible way of preventing them from giving their support to the Africans. Many South Africans believe that the course of the next few years will be determined by which way the Coloureds go. If they go all the way towards the Africans they will infuse new ability into the anti-government forces.

## Old Ports in a New Europe

FROM OUR BONN CORRESPONDENT

BEFORE they have had time wholly to recover from the bombing and dismantling of the nineteen-forties, the North Sea ports of western Germany are anxiously appraising maritime and commercial developments which they know they must adjust themselves to, or gradually wither into insignificance. The leading four, in order of turnover, are Hamburg, Bremen, Emden, and Wilhelmshaven. All but the last are some distance from what is considered nowadays to be deep water. And the phenomena that haunt their dreams are monsters of 100,000 tons swimming around in search of a berth, rogue pipelines breaking into Germany from the south, and a *danse macabre* of cut-throat ports including Stettin, Rostock, Amsterdam and Antwerp—the performance culminating in the terrible appearance of Rotterdam, hand in hand with the new Europoort, together stealing the show and everybody's wallet.

Various costly schemes are being canvassed along the flat North Sea coast with the object of ensuring survival. Some have already been adopted, others are awaiting approval or money. Yet, for want of central direction, the local planners seem to be about to make the mistake of subjecting their respective ports to a great deal of injurious and unnecessary competition among themselves. It would not be in keeping with the national character if the postwar German federation did not engender excesses of regional fancy. The Free and Hanseatic City of Hamburg (its

badge a door) no more likes to be told what to do than does the Free and Hanseatic City of Bremen (a key). The Land government of Lower Saxony has a strong say in the affairs of Emden and Wilhelmshaven; but the two are none the less jealous and suspicious of each other, and both resent what Bremen is doing today and what Hamburg talks of doing tomorrow. With a look at the expanding ports of the Low Countries, which are nearer to the centre of the European common market, cooler German heads maintain it is high time that at least a federal plan should be devised for the North Sea ports, if not an all-embracing German-Benelux plan.

Emden, which has had to struggle for centuries against sea and sand and was heavily damaged during the war, is perturbed while it rebuilds by the likelihood of the transoceanic ore-carrier of the future being a ship of between 50,000 and 100,000 tons. Emden is chiefly an ore port. About four-fifths of the ore arriving at German ports comes through Emden, roughly half being carried to the Ruhr by barge along the Dortmund-Ems canal, and the other half by rail (which is to be electrified as soon as possible). A substantial share of the Ruhr's wheat and timber goes by the same route and bulk cargoes of iron, steel, coal and coke move in the reverse direction. Yet only ships of less than 30,000 tons can put into Emden; and although work is in hand to make way for 32,000-tonners, the largest vessel that could

possibly be accommodated—after additional heavy outlay—would be of 35,000 tons. The port is consequently much at pains to make the most of its distinguishing assets:—These are its proximity to the eastern Ruhr (the Dortmund-Ems canal is being adapted to take barges of up to 1,350 tons); its special installations, by which 30,000 tons of ore can be unloaded in thirty hours; and the space that it has—and the Ruhr hardly has—for storing 100,000 tons of grain and 700,000 tons of ore (to be extended shortly to hold 2.2 million tons).

But the increasingly serious handicap of shallow water, and the new interest being shown by Wilhelmshaven and Bremen (let alone Europoort) in handling ore, are compelling Emden to encourage alternative sources of income for its 45,000 inhabitants. The Rheinstahl-Nordseewerke, which can build ships of up to 28,000 tons, and other local yards that specialise in barges, employ some 5,000 persons. Since last summer the Erdölwerke Frisia (sponsored by Duttweiler) has been refining oil landed at Emden at a rate of 1.5 million tons annually, and is planning to increase production to over two million tons. Büssing, the lorry manufacturers, are about to instal a subsidiary plant in the docks area. And there are plans for developing market gardening in the surrounding countryside.

Wilhelmshaven, with deep water at the door, is brisk with ideas and optimism, despite the devastating punishment it received for harbouring so much of the German navy. An artificially created town, Wilhelmshaven used to be governed from Berlin (today by an absolute majority of local Social Democrats—as also are Emden, Bremen, and Hamburg). In its heyday, the port was the home base of 100,000 sailors and could offer little work outside the naval establishments. The 100,000 people now living in the town have had to adapt themselves to very different circumstances. No more than a quarter of the harbour, it is reckoned, will be occupied by the new federal German

Among the whites, the government grows stronger all the time. It has increased its majority at two by-elections during the last six weeks, and the cabinet has cited this as evidence that white voters support Dr Verwoerd in discarding the Commonwealth. Nationalists are sure that the world, which is temporarily insane, will come round to their view when the rest of Africa collapses under black bad management. "Insane" is not an exaggeration. The editor of the leading Nationalist Sunday newspaper has called the world mad in print; the editor of a government daily says privately that this is his belief.

Among the thinking Nationalists the talk is of a future federation of states. Some will be black, some white, some (like the English-speaking Natal and the Eastern Province) will be multi-racial. Dr Verwoerd envisages black "Bantustans" in a "Commonwealth" relationship with white South Africa: Coloureds and

Asians will each have their separate parliaments existing side by side with the white parliament at Cape Town. The opposition United Party talks of a racial federation, but blots its copybook in Nationalist eyes by bringing the Coloureds into the white camp and recognising urban Africans as a permanent part of the community.

Far out to the left is the Progressive Party, whose policy resembles that of Sir Roy Welensky's United Federal Party in the Rhodesias. The Progressives scraped up 1,703 votes against the United Party's 2,993 in a 42 per cent poll in a by-election at the beginning of this month. The Africans, who seek "one man one vote," will also not speak to the Progressive party, whose leader, Dr Jan Steytler, expects to acquire a following when the economic consequences of apartheid and isolation hit white South Africans.

navy. A hundred or so companies of one kind and another, together employing 30,000 persons, have gone into business since the war in the Wilhelmshaven area; the largest is Olympia, maker of typewriters and other office machines. Yet it is upon the sea, and its own deep fairway, that Wilhelmshaven's hopes are mainly fixed.

Tankers of up to 65,000 tons can already moor alongside the special pier from which oil is pumped through the north-west pipeline to the Ruhr and Cologne, and arrangements could be made without much trouble to handle ships of 100,000

for methane gas. All these potentialities naturally disquiet Emden, Bremen, and Hamburg. For a while they troubled even mighty Rotterdam. But since the Rhine can hardly take all the traffic that Rotterdam, Europoort, Antwerp and Amsterdam could pour into it, peace of mind, it seems has returned to the worriers in the Low Countries.

Bremen, lying 44 miles up the Weser, will never be accessible to ships with a draught of more than 31 feet. The port specialises mainly in the transhipment of piece goods. Yet, to the concern of Emden and Wilhelmshaven, Bremen too

has entered the ore-importing business, Klöckner (of the Ruhr) having recently built an integrated coke and steel plant near the Bremen docks. The big ore carriers of the future, which will not be able to come up as far as Bremen, will be able to unload at the outer harbour of Bremerhaven, which is used by

tons. Last year 10.6 million tons of crude oil passed through Wilhelmshaven. This year the total is expected to reach 13 million tons; and it is hoped that it will eventually run to 22 million tons, competition from the Rotterdam-Ruhr and Mediterranean pipelines notwithstanding.

In view of Germany's increasing use of ore from overseas (25 million tons imported in 1960 and an estimated requirement of 34 million tons in 1970), and of the fashion in large carriers, the Wilhelmshaven planners are talking seriously of building an ore harbour and setting up local plant for manufacturing not only ore concentrate but also steel, the latter fired by coal imported cheaply from the United States. There is an even more forward look to the day when Wilhelmshaven might well be Germany's principal port

the big trans-Atlantic liners. Bremen's alacrity to adapt itself to new conditions and opportunities is understandable, for some forty per cent of its population is dependent upon the port, which has lost a sizeable part of its prewar central European hinterland, though not so much as Hamburg has. Like Hamburg, Bremen is insuring itself against the possibility of a further lessening of transit traffic by fostering local industries that will stimulate the port as well as provide employment. Cadbury of Bournville, it is expected, will be one of the next industrial settlers in Bremen, with some 2,000 jobs to offer.

Hamburg, which since the war has been uneasily watching Rotterdam respond to the expanding opportunity of a hinterland linked by the Rhine and other waterways, while the Elbe no longer leads to

friendly markets, is now disturbed by Wilhelmshaven's resurrection. Wilhelmshaven is already helping to feed the new Ruhr refineries that have put Hamburg's own into the shade. The upstart's plans for coping with ships of 100,000 tons make invidious reading in Hamburg, which, although it is Germany's busiest port, is inaccessible to loaded ships of more than 35,000 tons. Hamburg has been making a tremendous and highly successful effort to promote local industries. In order further to make good some of its lost hinterland, it is also pressing for the construction of a link between the Elbe and the Mittelland canal, which would give access for Hamburg traffic to the network of west European waterways.

Hamburg's latest idea—though still little more than an idea—is to build an outer harbour on Scharhörn-Neuwerk, an island in deepish water off the mouth of the Elbe. The island belongs to Lower Saxony. Negotiations have been opened that may lead to Hamburg acquiring the island in exchange for its old sovereign rights in Cuxhaven, an enclave within Lower Saxony which the state government would like to develop as a fishing port. It goes without saying that this project is viewed with misgiving in Bremen and Wilhelmshaven. Indeed, the more one hears about all these ambitious plans and their underlying rivalries, the more necessary it seems to be for the North Sea ports of western Europe to agree upon the tasks they should be individually carrying out.

Added up, the forces ranged against the government in South Africa are not strong. They have no chance of victory at the polls; their strength in tactics of non-violence outside parliament will be tested again next week; so far they have rejected methods that go further. The government faces a greater danger from the loss of foreign capital and foreign exchange, from the economic attacks of the outside world, and from the possibility of a spread of the Algerian-Angolan virus. But, for the immediate future, three million heavily armed white people sitting on the world's richest gold mines are in a strong position.

## Over Lake Geneva

FROM OUR SPECIAL CORRESPONDENT

THE lake of conferences can have seen none quite like this. It is not only that it takes place on both sides of the water. The French stay in the small thermal resort of Evian, where the police now far outnumber the visitors who have come to take the cure. Twice every other day, helicopters bring the Algerian delegation up from Geneva. Journalists who try to commute by land between the two poles of attraction have to brave innumerable check-points. The Algerian delegation, secluded in a villa on the outskirts of Geneva, is protected by Swiss police who keep their fingers on their triggers. The Algerians give their press conferences from a distance. The journalists gather in front of a big screen on which, through a closed television circuit, Mr Belkacem Krim and his colleagues appear and answer questions—like Chinese shadows, say the wits.

Such heavy precautions are a defence against bombs or other acts of terrorism by French extremists. They also illustrate the peculiarity of this conference. True, the neighbouring Laotian meeting is also concerned with ending a war and its predecessor, the Indochinese conference of 1954, set out to end a conflict that had immobilised strong French forces for some years. But the 1954 conference opened in a moment of French defeat, while, in Algeria, the French have not been defeated in battle. Instead, in the seventh year of war Paris has grasped that military operations are a Sisyphean task and is trying, through negotiation, to salvage French economic and strategic interests.

In this context the French opening gambit was clever rather than far-sighted. Last Saturday, even before M. Joxe had greeted Mr Krim at Evian, Paris announced a unilateral cease-fire, under which French troops would suspend military action for a month, except for purposes of self-defence. The gesture was more spectacular than generous. An organised army, in control of the bulk of the territory, can remain on the defensive without much difficulty. Areas near the Tunisian and Moroccan frontiers, where rebel troop movements might be strategically dangerous, were excluded from the truce. In other areas French troops maintain their right to reply to attacks, and the truce may be suspended or extended according to circumstances. Tactically the move was adroit, since it confronted the FLN with an unpleasant choice. Aware of the impact of a truce on the morale of guerrilla fighters, the rebel leaders have always said that they would not lay down arms until they obtained political guarantees. Yet if they now stick to this principle the contrast between French generosity and Algerian intransigence could be used to confound Algerian as well as international public opinion.

The Algerian delegation, therefore, reacted angrily. Insisting that progress could only be achieved by mutual agreement, it described the French move as a manoeuvre and a piece of blackmail. Other French measures, announced simultaneously, were also greeted coolly. The freeing of 6,000 political internees was countered by the argument that hundreds of thousands still remain in prison and "two million in concentration camps." The transfer

of Ben Bella and his companions to quarters about a hundred miles from Paris was condemned as insufficient. The Algerians are asking for their complete liberation or, at least, for means by which they can communicate with them directly. At present they can get in touch with Ben Bella only through the French ministry of justice. This week's bloody rebel ambushes in Algeria show that the Algerians are refusing to play the game that Paris has proposed. The French have undoubtedly scored a point. But when association is the aim, a success of manoeuvre can be a doubtful gain.

Temperatures calmed down during the Whitsun recess and by mid-week the conference had got into its stride. Both sides agreed to hold sessions on alternate days and to preserve a veil of secrecy over the negotiations. However, enough news has filtered through for it to be clear that so far they are sticking to their traditional postures. The Algerians have emphasised the territorial integrity of Algeria (including the Sahara) and the unity of its people, ruling out the possibility of self-determination by individuals or groups. The French have restated their case, the gist of which is that Algeria can have its independence if it chooses to be associated with France, but if it chooses to secede the country will be partitioned.

M. Joxe's comment that the Sahara is "a question on its own," set against the rebels' strong insistence that it forms an integral part of Algeria, has led to the report that sovereignty over the Sahara is the main obstacle to agreement. But this is to put the cart before the horse. If the rebels accept a form of association with France, and if the Algerian state remains in the franc area, tied to France by a variety of economic links, the legal question of sovereignty over the Sahara will be secondary. The French want to put the Saharan issue at the end of the agenda because they are, as yet, uncertain about the future relationship between France and Algeria. The rebels insist on territorial integrity because they are uncertain whether the French terms for association are acceptable.

General de Gaulle has already provided the framework for association. Negotiation should fill in the content. The French ask for an "organic statute" for the different communities. This implies a guarantee of their physical safety, their property and their political rights. Might the special status of the European community prevent an Algerian government from carrying out a land reform programme or from nationalising certain industries? Similar questions may be asked about the French demand for special economic relations. Finally, the Algerians must decide whether the French request for bases and other military facilities is compatible with their often proclaimed aim of neutralism.

Both sides talk eloquently about self-determination and guaranteeing a free vote. Yet everybody knows that if they agree on a solution the vote will be no more than the formality of ratification. If they fail to agree the French army can, as it has done in the past, stage-manage a referendum designed to go France's way. Association or war—these are the alternatives the Algerian delegates have to ponder.

## Greece's European Challenge

FROM OUR ATHENS CORRESPONDENT

"WE have plunged into the water," wrote a leading Greek financial editor after the treaty of association between Greece and the European Economic Community had been initialled; "we may now either sink, or swim ashore to prosperity." Only a few Greeks accept this gloomy epigram at its face value. Yet whether this venture leads Greece up or down hill largely depends on the Greeks' own response to the gigantic task of readjustment which even a gradual integration into the powerful European economic group imposes.

Greece's plight has not been under-development alone, but also the discouraging realisation that the Greeks would never catch up with the elusive standard of contemporary prosperity unless their rate of advance became faster and faster. Accelerating progress, however, involves a drastic change of mentality and geographical outlook; it requires a "Europeanisation" of the Greek mind, which perhaps through the centuries of submission to, or contact with, the Orient has become blissfully complacent.

Now the Greeks, whether they realise it or not, have allowed themselves the span of only a generation within which to effect all these drastic changes, or to sink. After twenty months of complex negotiations, Greece and the Six have evolved a formula of association that affords Greece special protection, softens the shocks of integration, and grants comfortable delays for the structural and psychological readjustments needed for the ultimate objective of full membership in the common market economy. It is a challenge. The Greeks will have to become alert to the unlimited opportunities which a unified market of 170 million Europeans will offer. Above all, they will have to show courage and imagination in averting the perils of massive competition, and perhaps reconcile themselves to some ruthless sacrifices.

It had been expected that the 76 articles of the treaty, initialled in Brussels on March 30th, would have been brought before the Parliament of Little Europe for ratification before the end of this month. But last-minute snags have been caused by Italy's request for certain readjustments. These are to be discussed with the Greeks before the council of ministers meets on May 29th. Once the treaty is officially signed, the long process of national ratification will follow. The agreement is unlikely to become operative before January 1, 1962. The formula of association features three fundamental advantages for Greece: Greek exports are to enjoy at once the reduced internal tariff rates granted to full members; Greece will be allowed to maintain tariffs intact for ten years to protect local industry, before embarking on the 12-year process for the gradual abolition of duties; and, to accelerate economic development, it will receive a loan of \$125 million from the community's bank. The loan, to be supplied over five years, will be repayable in 25 years at current interest rates.

The six common market countries have been taking nearly 40 per cent of all Greek exports in value. Last year, however, was a bad export year and the proportion dropped to 32 per cent, while at the same time Greek exports to the countries of the Communist block rose sharply, from 16 to 22 per cent. These figures suggest how exposed Greece would be if it remained outside the main stream of Europe's unified trade: to offset declining purchases by the West, the Greeks would have to rely more and more on eastern markets to sell their products.

Association with the common market will not alter perceptibly the pattern of Greek trade with the Communist block through clearing agreements. The negotiators obtained the sanction of the Six to grant tariff quotas to these bilateral trade partners so as to preserve those markets for some vital agricultural exports. If, however, the Communists were to cut down heavily on imports from Greece for political reasons, the Greeks could always fall back on their common market partners. In that respect, the association will give the Greeks a greater sense of economic security.

Four-fifths of Greece's exports are farm products; tobacco provides the bulk of export revenue. When the treaty comes into effect most of these products will gain an advantage of cut-rate duties over their external competitors. Tariffs on Greek tobacco and currants, two staple exports, will be cut in half at once, and will be abolished completely by the end of 1967. Quantitative ceilings—which are, however, satisfactory to Greece—have been placed on the common market's imports of certain Greek fruits to

safeguard the prior interest of Italy, a full member. Although association with the Six will favour Greek agriculture, no spectacular growth in Greek exports is likely at once. Much will have to be done to improve and standardise the quality of farm products and reduce their production cost before they can be fully competitive. The Greek Agricultural Bank has already prepared an exhaustive five-year investment plan costing about £14 million to create food industries that will meet the new competitive requirements.

While Greece will follow its six partners by reducing tariffs on nearly 64 per cent of its industrial imports from the common market area, almost all manufactured and handicraft goods produced in Greece today will enjoy protection; and this, with certain limitations, will be extended to new Greek industries until the full abolition of duties by 1984. To meet the coming challenge, some Greek manufacturers, for example, in the textile industry, have moved towards the formation of export combines which will not affect their domestic operations, but will unite them in facing competition and in taking advantage of new export opportunities.

The main emphasis, however, is on attracting foreign investors who would co-operate with Greek manufacturers in expanding Greek industry with fresh capital and imported technical knowledge. Officials here stress that the new arrangements offer investors from countries outside the common market a singular opportunity to supply the domestic Greek market under strict tariff protection from outside competitors, and to expand their exports throughout the community unhindered by the external tariff wall. Investment opportunities are enhanced by low labour costs, price stability and favourable tax treatment to importers of foreign capital. Locally produced raw materials are an added asset. There is unexploited mineral wealth, high-quality cotton, and excellent possibilities for establishing local food industries which should find ready European markets.

The \$125 million loan from the community was originally linked to a Greek pledge to settle Greece's still outstanding prewar foreign debt; but the Greek negotiators in Brussels apparently managed to detach this string. The common market is expected to state in writing its wish that Greece should settle its outstanding bonded debt soon. The Greeks have officially stated their wish to liquidate these liabilities, but no further acknowledgement is required of them. The loan is to be granted for specific development projects approved by the Greek government. The Six propose to subsidise the interest rate on two-thirds of this loan if it is spent on unproductive infra-structure projects. Further loans from the community's bank have been promised.

Thus the stage has been set. Success will depend on how the Greeks—one and all—react to responsibilities so sharply opposed to their traditional individualism. Perhaps the need for survival will gradually create enough pressure for the necessary adjustments to be made.

## THE BUSINESS WORLD

### New Regulators for Old

Some new research on hire purchase contracts  
deserves careful study

THE most likely problem of the next few months," the Chancellor of the Exchequer declared on Whit Monday, "is such heavy demand here at home from consumers' larger incomes, new Government spending, and new investment programmes that our resources cannot quite meet the requirement." In that case, Mr Lloyd implied, he might have to use his two new economic regulators—the first to vary purchase tax and revenue duties by up to 10 per cent and the second to impose a surcharge on employers of 4s. a week for every employee on the books. It would be astonishing if the payroll tax were implemented in its present form, for its limitations have been referred to by the Prime Minister, Mr Butler and even by the Chancellor himself. The Treasury must decide whether it wants an economic regulator (for which it would have to persuade the Cabinet to accept a variable surcharge not on employers but on employees) or a long-term deterrent to wasting labour (for which a surcharge on employers is the right instrument, but at a much stiffer rate and variable between different industries and areas). As both these proposals would be sure to raise a political storm, one may reasonably assume that for the time being Britain has in reserve not two new regulators of consumer spending but one. The power to vary indirect taxes would itself work more effectively and more smoothly if it were applied to a single flat rate sales tax or turnover tax, and if its practical operation were eased by a decimal currency.

But this at least is a weapon of substance: its potential effect on purchasing power of £200 million in either direction exceeds the net impact of the average budget.

How far will this new and powerful instrument of control replace existing instruments? Monetary policy, the Chancellor was quick to point out, is not being dispensed with. But he admitted that international considerations were inhibiting the free use of Bank rate as a domestic regulator. Thus at the end of last year, Bank rate was reduced in order

to help to take pressure off the dollar. This was sensible, addressed to the first priority of the time. But central bankers and finance ministers should be careful to ensure that short term international co-operation of this kind does not slide into attempts to rule out properly founded differences between interest rates. Balance will not be restored to world payments if interest rates in leading countries are kept off the level that is appropriate domestically. In Britain, it is important to ensure that "international co-operation" is not used as a cloak for inaction by those circles, in the City as well as Whitehall, that have become sceptical of the effectiveness or practicability of using interest rates as an economic regulator. Ten years ago an active monetary policy was often regarded as a panacea for all Britain's problems, including that of how to reduce taxes during a raging boom; recently it has become fashionable to swing to the other extreme.

This is to be resisted. But a concurrent swing in fashion against that hybrid control, the regulation of hire purchase contracts, is wholly welcome, and long overdue. Each successive piece of evidence and analysis of the effect of these controls reinforces the case against them. In Whitehall the point has been partly taken. The Government now professes an attitude something like this: "Hire purchase controls are undesirable in principle and discriminate unfairly against a few industries; but their effects have been proved to be

prompt and substantial, so the Government could not be expected to renounce them unequivocally." This is close to the view of the Radcliffe committee that, because of their undoubted efficacy, hire purchase controls should be held in reserve for emergency use. The dangers of any such view were painfully illustrated in the reimposition of controls in 1960. There was no emergency then and the controls were in fact imposed in the last stages of a hire purchase upswing; the effects were so violent that relaxations had to

be made after less than nine months, and would have been justified a good deal earlier.

But quite apart from these difficulties of timing, it can be maintained that the actual effect of changing the regulations is very different from what the controllers intend. It has been clear for a long time that changes in the regulations themselves generate major swings in the hire purchase cycle. But a precise working through of what people actually do when hire purchase terms get tighter or easier has been inhibited by lack of information on two fronts: on the habits and the economic circumstances that govern the way in which people take out hire purchase contracts; and on what these contracts actually are. By making a set of arbitrary though not unreasonable assumptions about the first, and obtaining figures from one large finance house on the second, Mr J. R. Cuthbertson has been able to analyse in this month's issue of *Economica* the impact of changes in HP regulations more fully than has been attempted before. The conclusions are startling. As any essay in model making must be, this ambitious projection is open to important qualifications when applied to the practical world, but it deserves close attention.

THE core of Mr Cuthbertson's argument—which is confined to the car market—is that the prime influence affecting new hire purchase contracts at any given time is not the size of the minimum deposit or the maximum length of repayment but the incidence of completions of past contracts. The basic assumption, which is a widely accepted one, is that the hire purchase buyer will continue to set aside part of his income for monthly instalments. Applied to cars, this means that as soon as the car has been paid for, the buyer thinks of trading it in for a new one. It follows from this that the size of the deposit will normally be unimportant, as it is covered by the trade-in. The experience of the finance house that Mr Cuthbertson looked at also shows that about half its vehicle buyers are not greatly affected by controls on repayment periods, so long as the maximum is not less than two years; and that in 1959 about half its total vehicle business was being done on two-and-a-half and three-year contracts.

It follows from these assumptions that changes in regulations will have relatively small effects on the current volume of hire purchase contracts taken out. But, by advancing or postponing the date at which contracts will be paid off, these changes will have a sharp effect on the level of hire purchase business two and three years ahead. Past regulations rather than present ones are, on this theory, the major determinant of the current volume of instalment business. Thus

THE MODEL

|                     | Repayment<br>period (years) | New contracts<br>will mature in | Contracts maturing<br>were started in |
|---------------------|-----------------------------|---------------------------------|---------------------------------------|
| Year 1 (1958) ..... | 2/3                         | 1961                            | 1956                                  |
| Year 2 (1959) ..... | 3                           | 1962                            | 1957                                  |
| Year 3 (1960) ..... | 3/2                         | 1962                            | —                                     |
| Year 4 (1961) ..... | 2/3                         | 1964                            | 1958                                  |
| Year 5 (1962) ..... |                             |                                 | 1959                                  |
| Year 6 (1963) ..... |                             |                                 | 1960                                  |

the falling off in new business in 1960 was "in no way" connected with the controls imposed in 1960. It is attributed rather to a depressed level of terminations, which reflected first the successive two-year reverberation of the levelling off in 1956 and secondly the relaxation of restrictions in late 1958. The switch then from two-year to three-year contracts created

a future gap in maturities in "year three." Buyers who took the maximum term of repayment will have completed no contracts between the summer of 1960 (when the last of the two-year contracts were paid off) and the summer of 1961 (when the first permitted three-year contracts are repaid). By the same process, the return to two-year contracts last spring threatens to produce a bunching of maturing contracts in 1962—when these two-year contracts will be completed at the same time as the three-year contracts of 1959. So a major boom in domestic car buying is foreshadowed for 1962. And this is to be followed, on this projection, by a slump in 1963, since the return to three-year contracts at the beginning of 1961 implies a dearth of maturities two years later—Mr Cuthbertson's "year three" effect again.

How precisely can one reckon on all this? The question about any theoretical model is its assumptions. Mr Cuthbertson probably has gone too far in dismissing the immediate impact of a tightening of terms. Even if his assumption about trading-in is true for a substantial sector of hire purchase buyers, in recent years there have been perhaps more buyers than usual going straight to a new car, and others have found that their prewar model has lost all value even as a trade-in. In such cases the size of the deposit may be more significant (as it is in any case for consumer durables other than cars). There is also evidence, on Mr Cuthbertson's own figures, that the stringent deposit of 50 per cent imposed early in 1956 caused a marked fall in new contracts, in face of the continued rise in terminations—this seems to be the one place at which Mr Cuthbertson's correlation breaks down. To the extent that changes in regulations do have an immediate effect, the future ups and downs in Mr Cuthbertson's projections would be modified. Recently, moreover, the finance houses have not been so anxious to encourage buyers to go for the maximum three-year repayment, and many new contracts are still for two years. This diffusion too will modify the "Cuthbertson effect". It is also true that only about one-quarter of new cars are bought on hire purchase. But this is not necessarily significant, since the whole market for new cars is strongly influenced by the second-hand market, which governs the value of the trade-in; in practice, total new home registrations follow the curve of hire purchase sales of all cars, old and new, quite closely.

Mr Cuthbertson's model-making has not proved that there is bound to be a major boom in 1962, and a major slump in 1963. It has, however, provided a forcible reminder that one of the most important forward indicators of consumer spending, the projection of hire purchase terminations, has been neglected. "It seems to be too little realised that the day 5s. a week comes free can mean an order for nearly 200 times 5s. worth of goods." These are figures that all finance houses have and could produce. The Government should get them. The next requirement is to find out more about what makes people act as they do in buying cars and other things on hire purchase. The importance of consumer psychology grows with the importance of durable consumer goods: the car market, above all, is the poor man's stock exchange. This is one for the depth boys. Instalment buying is still imperfectly understood. The Government should brush up its knowledge, and until it has done so, beware of meddling.

## Canadian Questions

Canada's friends are puzzled by the stodgy condition of the Canadian economy and distressed by the vituperative character of public debate about it. Our special correspondent recently spent some time in Montreal, Ottawa and Toronto seeking answers to three broad questions and hoping to find conclusions that would point to renewed expansion, to a firmer grasp of economic policy and to strengthened national confidence. His analysis is tinged with scepticism at a number of points, but it does not share the dark mood of doubt that afflicts much Canadian thinking on the future of the economy.

### What Happened to Growth?

A BUSINESS upturn is on the way in Canada; it is attracting the minimum of attention and it affords the minimum of consolation in a country perplexed by its longer-term future. A quarter of a century of rapid growth during and since the war is over. In four years the rate of unemployment has doubled, averaging 7 per cent for the whole of last year and rising through last winter to over 11 per cent. Not all of this represents total hardship, but it does mean production and income forgone. The stimulus of a 30 per cent increase in population from 13.7 million to 17.8 million in the fifties has had no follow through; and if by 1970 Canada finds herself with 22½ million people, formidable gains in production will be called for during the sixties to employ them and satisfy them. Glancing back over the course of the past decade, Canadians find good grounds for their present doubts. Between 1949 and 1956, the real growth of the Canadian economy averaged about 6 per cent a year; since 1956, the rate has been about 1 per cent, and per head there has been a fall in real output of more than one per cent. What worries Canadians is how they can possibly match in the sixties the kind of advance that gave them an increase in their real spending power of nearly a quarter during the fifties. They fear, with some reason, that their economy has entered a period of seriously slow growth.

In this period of questioning, no voice has been more persistent than that of the Governor of the Bank of Canada, Mr J. E. Coyne. A speech he made two months ago included this formidable exercise in economic re-examination:

A review of developments during the so-called "fabulous fifties" leads to the question, "What went wrong?". With one-third more capital investment each year in proportion to gross national product than in the United States, why did our gross national product not increase significantly more than in the United States to a level above that of the United States? Why did we have a continuing balance of payments deficit on a scale no other country in the world has ever experienced? Why did net foreign investment in Canada quadruple from four billion dollars at the end of 1949 to seventeen billion dollars at the end of 1960? Why did our costs of production in secondary industry rise more than costs of production in secondary industry in the United States? Why has secondary industry in Canada producing for domestic consumption languished while a tremendous increase occurred in our imports of the products of secondary industry abroad?

Mr Coyne's role as Grand Inquisitor of the Canadian economy has become a matter of acute controversy about which more will have to be said later. In his latest catechism, he manages to include pretty well all the factors about which Canadian economists are arguing—though not all of them share the pessimistic implica-

tions of his questioning, or would expect a satisfactory rate of advance throughout the Canadian economy necessarily to match the United States in all respects.

Mr Coyne has answered many of his own questions on many occasions. He believes that higher employment and output could be achieved "through measures designed to reduce the large deficit in our current account balance of payments" (a phrase that keeps his critics guessing, though they suspect some dark kind of autarky). He also argues for "increases in spending of a selective character likely to increase production in Canada, rather than through measures designed to raise the level of total spending by Canadians." Certainly it is not through any deficiency of money supply that the Canadian economy has become stationary; since 1954 there has been an increase of 35 per cent and through the past winter a further big injection has occurred. All this massive stimulation has produced the minimum of effect on the economy. Mr Coyne's warnings on the dangers of excessive reliance on money creation deserve respect; he is not the only central banker to advocate remedial measures outside the field of central bank action.

### Vulnerable Balance

BUT Mr Coyne's main theme, in a series of pronouncements over the past two years, has been the vulnerable state of Canada's balance of payments and its consequences for the economy. Every year since 1952, and particularly since 1956, the account has shown a large net deficit sustained by large imports of capital. Since the deficits have not been followed, so far, by increased production or export earnings, he reaches this stark conclusion:

At a time of relatively high unemployment in Canada . . . the continuing very large deficit in the balance of payments . . . is indicative of an excessive capital inflow as well as structural weaknesses in the Canadian economy which result in excessive aggregate spending on goods and services provided from abroad to the detriment of the production of goods and services of a similar character in Canada.

According to this view, there is a direct connection between an average rate of unemployment running up to 7 per cent in the last three years and a payments deficit amounting to nearly 4 per cent of Canada's gross national product. If more of Canada's total spending had been on Canadian production, unemployment of Canadian resources would have been much lower. To the outsider, the fact that the Canadian dollar remains at a premium over the US dollar seems almost bizarre, since it exacerbates the flow

of imports and discourages Canada's secondary industry both in its own market and in exports. The end result is that in 1959 the average Canadian imported \$230 of manufactured goods, while his average share in GNP was about \$1,900. But the capital continues to flow in, particularly from the United States, despite the fact that Canada's growth industries have seemed to be fully developed, in relation to demand, for the past four years. In 1957, rather over 27 per cent of GNP was devoted to fixed investment of all kinds—a remarkable figure probably unmatched in the free world. There has since been a significant fall, to about 23 per cent, but this does not suggest that Canada's troubles arise from inadequacy of capital formation.

It does, however, pose Mr Coyne's biggest worry. Between 1950 and 1955 Canada's capital formation was financed to the extent of about one-fifth from foreign sources; between 1956 and 1959, the proportion was more than one-third. To talk of moderating the capital inflow to Canada when the pressure of the inflow remains so strong is hardly realistic. Nor does the governor's analysis entirely clear up the question whether the deficit promotes the capital inflow, though his general argument suggests that it does. From this view emerge his main policy conclusions, on which his critics have pounced: that foreign borrowing is a primary cause of instability because it makes possible investment expenditures that otherwise would not be made; and that foreign funds permit an excessive inflow of imports which involve unemployment for Canadian resources, together with distorted growth and political dependence.

The two parts of the argument do not hang together conclusively, and some of his critics, at least, see them as stemming from an unduly nationalistic and austere view of the potentialities of the Canadian economy. It cannot be accidental that Canada's growth up to 1957 was conducted with a high degree of dependence on foreign capital (though not so high as it has since become), that the growth of public debt was moderate in relation to the growth of the economy, and that the balance of payments did not go badly awry. The development of Canada's primary resource industries on any other terms would have been inconceivable, and the inflow of funds followed a well-established pattern of American interests in Canada.

### The Price of Independence

A STRICTLY puritanical "do it yourself" approach to Canadian development is therefore too late, whatever might be said for it in austere principle. Half of the foreign investment in Canada in the past decade has been direct investment in productive resources which has clearly been good for Canada and does not leave her vulnerable to a flight of capital or to difficulties in servicing it. Whether the volume of borrowing of Canadian provinces and municipalities on the New York market (which makes up most of the other half) is so estimable is another question. The objections to the inflow are only in part economic. Nationalistic instincts are aroused by the fact that two-thirds of Canadian industry is foreign controlled, with a much higher proportion in cars, oil and nickel. Any reasonably profitable business in Canada feels vulnerable to an American take-over. "We have," a Canadian has said, "an automated industry with the push buttons in the United States." It is these things, rather than condemnation of "living

### THE BUSINESS WORLD

### THE ECONOMIST MAY 27, 1961

beyond our means" that make an impact in Canada, sometimes to the point of obscuring the fact that what matters is not ownership but operation. If the ownership of Canadian industry was more Canadian, or more diversified, it would not alter the increasing dependence of the Canadian economy on the American market.

The question, then, is whether economic independence for Canada is a practical goal that can be achieved at a tolerable price—whether, in Mr Coyne's words,

we are prepared as a nation to live by our own exertions, to save out of income what we think we need for future growth and development, and to finance and control our own development to such a degree that the Canadian interest in Canadian industry shall in future increase instead of continuing to decrease.

He holds that this can be done by a concerted national effort to restore growth, flexibility and progress to the Canadian economy, with greater diversification of output, increased employment to absorb the present unemployed and new entrants, a sound currency and a rising standard of living. It is a tall order, and before examining whether it can be done, we must ask how it is that Mr Coyne has stepped so far out of the accustomed role that central bankers assume and how responsibility for economic policy falls in Canada.

### THE ECONOMIST MAY 27, 1961

## Whose Hand at the Wheel?

CONTROVERSY about Canada's economic future has stirred plenty of controversy about Canada's economic direction. In many quarters, Mr Coyne is denounced with excoriating abuse. Not all of this is just. If there is some odd mixture of shyness and intellectual assertiveness about him, there is certainly no forked tail. All this follows from the fact that the governor has constituted himself a unique official source of economic comment and opinion, in a spate of speeches that contrasts sharply with the silences of Mr Donald Fleming, the Finance Minister. The most dramatic reaction to Mr Coyne's self-appointed task as national economic counsellor has been a demand for his dismissal in a letter signed by 29 Canadian economists addressed to the Minister, which says in part:

We are facing serious economic difficulties in Canada, both in our domestic economy and in our trade and financial relations with other nations. The undersigned economists wish to express to you that we have lost confidence in the ability of the Bank of Canada under its present management to play its proper role in ameliorating and resolving these difficulties.

These are extreme words. One of the principal signatories of the letter, Professor H. Scott Gordon, has added that attack was made on the person rather than on the policy because this group of economists had "powerful reasons for believing that the present Governor of the Bank of Canada is an independent source of economic difficulty and instability in Canada... we wanted to say, without disguise or ambiguity of any kind, not only that the policy and operations of the Bank are wrong, but that, as professional economists, we have lost all faith in their ever being made right under the present management."

Professor Scott Gordon has spelled out these charges in a pamphlet that nails the governor with a series of hard punches that could well have put him out of office. His own sense of duty, coupled with an element of personal pride, has so far kept him there, serving out the last months of his seven-year term that ends in December. He would hardly obtain reappointment even if he were to seek it. The time has clearly come for change, for the office is of greater importance than the man.

### Monetary Irresponsibility

BUT it is not a reappraisal of the Bank's management or even its functions alone that is needed. There is also the matter of irresponsibility (in the literal sense) on the part of the Government for Canada's monetary affairs. Mr Fleming holds that the government does not exert any sway in the field of monetary policy, and he is not the first Minister of Finance to put forward that view, even though he argued in the opposite sense when he was in opposition. The argument is that, through the Bank of Canada Act, parliament placed the responsibility and power over monetary policy in the hands of the Bank. It seeks to draw a sharp distinction between monetary policy, which is for the Bank and for the Bank alone, and fiscal policy and the management of the debt, for which the Government is responsible. Mr Fleming has repeatedly insisted on this demarcation and has characterised as "demagogic rot" the assertion that it imperils Canada's financial and governmental system.

Obviously, such demarcation is unreal in a modern economy. Even in the United States, where steps have been taken to keep the

money supply out of politics, the Federal Reserve Board is ultimately responsible to the President. In Canada, it is producing the most embarrassing situation. Mr Coyne is on good ground when he declares that further monetary expansion cannot right what is wrong in the Canadian economy. On the demarcation principle, that leaves it solely to the Government to work on fiscal policy to put matters right. This is a false view, and it does credit to neither side in the current controversy. Mr Coyne has spoken in outright and even extreme terms about the things he feels to be wrong; but when it comes to positive proposals for putting them right, he has been surprisingly unforthcoming—as his recent testimony to the Senate Committee on Manpower and Employment showed ("I am here," he said in introduction, "at your request."). There are many ways, he asserted, by which governments at all levels can remove difficulties in the way of Canadian business enterprises and increase employment opportunities. Asked to name them, he said that the committee had already a long list of suggestions to which he had nothing to add, since he had nothing "very specific or detailed in mind."

This negation is baffling to the outsider, and to some Canadians undoubtedly infuriating—though his harshest critics noted that while Mr Coyne eschewed monetary expansion, he also opposed controls over imports and foreign payments. In the anti-Coyne hate, this has been labelled "evasive," though it puts the Coyne record on controls completely straight. But the silences of Mr Fleming also need explanation. Of all the ministers, Mr Fleming has emerged as the most hardworking and the most adept in his own department (the competition is not too impressive, but the compliment is not intended to be backhanded). He would claim that he has made plenty of speeches about economic policy, including his "baby budget" before Christmas, and that there was no gap for Mr Coyne to fill. Others say that Mr Coyne has felt the responsibility to inform the Canadian public of his ideas simply because ministers were not prepared to speak often enough or strongly enough on economic policy. The reaction has been a studied silence from the Minister of Finance, suggesting resentment of the governor's excursions into the widest economic fields (and therefore into matters of government responsibility), reluctance to widen the argument by denial or counteraction, and powerlessness to say "stop" to him.

Fleming

Across the street but never meet

Coyne

## Economic Management

So from both components in the apparatus of economic management, the Canadians are offered a differently coloured *non possumus*. Mr Coyne, one feels, would if he could; Mr Fleming, on his construction of the law, holds that he cannot, and feels no superior power of will and responsibility. It is a dismaying misfit that must be remedied—and a misfit only in part of personalities, though that is important enough since the two gentlemen, though only a few yards from each other across the street, never appear to meet each other unless it is over the formalities of a government loan operation. Mr Coyne's speeches have clearly shown that a modern central bank is bound to concern itself with the broadest and highest functions of economic policy; yet they have denied that monetary policy and interest rates could contribute effectively towards a solution of economic problems. Mr Fleming's insistence on demarcation is meaningless and even dangerous for democratic government; and when it comes to the pinch (as in August, 1959, when the treasury bill rate got out of hand because of misjudgment by the Bank) the minister has to act.

It is more than time to set up a widely ranging inquiry into the instruments of economic policy available to Canada. The Senate investigation into manpower and employment will no doubt throw

## What Price for Independence?

AN Italian vegetable grower in Toronto this winter took his car and three friends down south on a golfing trip, took one look at Pinchurst and decided it was too wet and proceeded to Hollywood Beach, Florida. The green fees, he said, were a bit stiff, and the electric buggies cost \$14 a day, but the party had a good time. It is easy for an outsider to sound stuffy about this style of living, for this is, after all, a man who will get no vacation this summer. Yet episodes like this illustrate the complaint (voiced not only by Mr Coyne) that Canadians are living too high off the American hog. To the visitor, the perplexing thing about Canada's present mood of introspection is that it provides powerful (sometimes contradictory) analyses of what is wrong without offering anything very conclusive in the way of remedies. Mr Coyne's recent reticence before the Senate committee did him less than credit. His critics concentrate on him, and on where they think he goes wrong, but rarely offer any policy solutions of their own. Somewhere between the confusion of responsibility between government and Bank, a number of dubious policy decisions have made Canada's difficulties worse than they need have been: mistakes in debt management in the past three years, and in the monetary policy attending them, are obvious. But the questioning is now reaching out far beyond domestic argument into the realm of Canada's long-term external relations, both economic and political. The following passage comes from a recent commentary by a well-known Toronto bond dealer:

Perhaps the next major Senate enquiry might ascertain how our 18 million of people are going to co-exist with two large European trade blocs, plus the United States. Do we plan to work for an Atlantic Trade Area, or should we work out a gradual industry-by-industry integration with the United States? Or should we pretend the Sixes, Sevens and US don't count, hiking tariffs by reclassification until retaliation, and the shock of a United Kingdom

up valuable suggestions here. Apart from the basic issue of responsibility for economic policy, there are many day to day questions. Many people criticise the Bank's competence in its market operations (some of its bitterest critics would use the word honesty instead of competence). What explains its manifest inability to get on with people outside, whether with the Minister across the way, or the bankers and bond dealers in Montreal and Toronto? Why is there no regular consultation with the financial community to explain the Bank's broad aims? What foundation is there for the Bank's view that bankers are unresponsive to signals? What possible justification is there for a merely residual Bank rate which the Bank denies any power to control ("it is all determined by the market")? Is a government bond market conducted by telephone to Ottawa the best way of organising loan dealings?

Proper investigation of all this would take time. Long before conclusions are within sight, changes will be needed in the Bank's structure. It is important to be clear about the reasons for this. It is not because of Mr Coyne's speeches and policies of the last two years. These have fulfilled a public service, though they may not have enhanced the authority of the Bank as an institution. The reason is that the Canadian Government cannot in the end shrug off responsibility for the Bank; a wise constitution would recognise this nexus and build a broader authority for the Bank by doing so.

*modus vivendi* with Europe, panics us into ill-advised *ad hoc* action?

In his Lennoxville speech over two months ago, Mr Coyne ended as he had begun on a note of nationalism, putting the case for independence in the strongest terms:

Canada was established as a nation, not as a natural economic unit. The very idea of Canada implies nationalism at its root, and nationalism is nothing if it is not an expression of emotion . . . self-development is better for the rounded life and continued vigour of a nation like Canada, and will do more to satisfy national aspirations of every kind, than the most ideal kind of purely economic development, if the latter involves perpetuation of large deficits in our balance of payments, continued reliance on endlessly growing foreign debt, and a continuously shrinking proportion of industry under domestic ownership and control.

The trouble is that a "little Canada" policy will not give Canadians a good performance from their economy, plentiful employment, social improvement, and freedom of choice. They want maximum unemployment of 3 per cent and minimum growth of 5 per cent and they are not getting them. There is nothing in Mr Coyne's diagnosis to show how they are to be got. Some measures immediately suggest themselves to the visitor. Mr Diefenbaker's cry of "Free Enterprise versus Socialism" is impotent under conditions where business has become so little enterprising. Entirely new planning arrangements, bringing together the public and private sectors, are urgently necessary. A new purposive sense is needed in the federal government's economic thinking.

There is another consequence of Canada's rapid and uneven growth that urgently needs remedy. This is in the field of education, and particularly of technical education. One of the current anti-Americanisms is that Canadian companies controlled by American

parent companies get no research work. There are several reasons for this, not all xenophobic—one is that the manning of good technical research in Canada suffers from the scarcity of adequately educated young people. The lack of training in elementary applied techniques is frightening in relation to the number of young people who are emerging, not only into industry but also into family and social life. Canada is now starting virtually from the bottom with measures to improve productivity. Quebec, which is a liberal stronghold, has lately introduced a scheme to provide \$10 a month for youngsters who stay at school until 18—but even blind alley jobs pay more than this. Unless real vigour is applied to education, the social waste and permanent handicap to the Canadian economy of unskilled young people entering the labour market will be inescapable.

## An 80-Cent Dollar?

The exposure of Canadian secondary industry to international (not merely American) competition, has revealed the weaknesses of its high cost conditions. Behind their tariff wall, these industries have been geared to a limited home market; their capacity for expansion has been limited, their efficiency and productivity relatively low, and their part in Canadian development essentially passive. Canadian industrialists accept virtually without question that there is an essentially non-competitive quality about much of Canadian secondary industry. Some of them say that they would need an 80 cent dollar to become competitive, but this is an extreme view—a depreciation of 5 to 10 per cent is a more frequently heard view. Others, more thoughtful, find it absurd that Canada should be attempting so wide a range of secondary industrial output and argue that concentration on particular lines of output would have a significant effect on costs. It is impossible to ignore the defeatism among businessmen responsible for secondary industry. They react favourably to Mr Coyne's nationalist arguments and are quick with protectionist replies when one asks about the need for dynamism. But it is difficult to see how the near-viable can be sorted out from the plain hopeless in Canadian secondary industry without government influence and help. Until the existing structure of these industries is greatly strengthened, it is difficult to imagine a positive policy for development. Notions that they can be put right by a massive depreciation of the Canadian dollar leave out of account the forces playing on the Canadian price and cost structure which push it up irrespective of serious under-employment of resources.

Canada's resource industries, whose selling prices are determined in export markets, can claim an efficiency, thanks to massive capital investment since the war, as high as that of comparable industries anywhere else in the world. But Canada was not the only country that overbought the arguments of the Paley report that the pressure

of demand on raw materials would become compounded as the world economy expanded. Forestry, mining and oil employ no more Canadians than ten years ago, and agriculture far fewer. Their rapid expansion in the middle fifties means that they will have to wait, *pace* Paley, for demand to come up to their potential. The sixties will not help Canadian agriculture; in non-ferrous metals the world

has surplus capacity; in aluminium the next phase of expansion will not be in Canada; uranium has proved to be a short-lived boom. Paper is no longer a Canadian and Scandinavian preserve. Iron ore exports are big and will grow, but petroleum promises nothing spectacular in this decade. And in secondary industries it is impossible to see any break-through from the marginal state of its profitability until concentration, better management and more realistic ideas about wages have come to prevail. The increase of nearly one-quarter in wages costs per unit of manufactured output during the past ten years and the heavy falls in employment in such important sectors as automotive and electrical production cannot be merely coincidental.

Canada's ever-increasing weight of foreign payments demands a more intense export effort, coupled with all reasonable methods this side of *dirigisme* to limit the bill for imports. (The present exercise for using more Canadian crude oil for domestic consumption may not suit the oil companies' book, for they have more, and cheaper, crude outside Canada than they know what to do with; but given the present huge deficit, any Canadian government would by now be getting rough about its oil bill.) It remains difficult to put too great faith in optimistic projections of output and prosperity in this decade. To take up the present slack, to find jobs for a labour force increasing by over 2 per cent a year, and to secure growth per head at almost the same rate—all this would no doubt increase total output by nearly three-quarters and the average family income by one-third, and even allow for the balancing of the external payments account without further resort to borrowing. But how does Canada secure the time to experiment with this growth model? Given all the necessary components, in education, technical expansion, industrial research, and more effective harnessing of domestic resources to investment, can the job be done?

## The Canadian Make-Believe

It may be that these ambitions will take root and produce a flourishing and more self-sustained economy. But it is not easy to find much support for them at this moment. Capital continues to flow in to support the Canadian make-believe. Common stocks are readily bought at prices that many industrialists (who should know what they are earning) regard as quite excessive. Most significant of all, the very people who argue for the preservation of Canada as an independent country and who point to the economic opportunities that might be grasped are those who concede, with Mr Coyne, that Canada is not a natural economic unit. But an enormous country full of raw materials and thinly supplied with people cannot enjoy rapid development on Operation Bootstraps. Nor is it clear that Canadians would now prefer an austere self-sufficiency to a better living financed in part from abroad, such as they have known in the past decade. Only part of the choice will be theirs. They cannot afford to count indefinitely on the provision of capital from the United States at anything like the recent rate. They cannot pretend to an American standard of living. They have to find a workable political formula for steady and soundly based expansion (in this, the election which is expected in the summer next year will be crucial). And they will want something that has been conspicuously lacking in the past three years—an effectively integrated fiscal and monetary policy.

If ultra-nationalism becomes a main plank of Canadian policy, independence will be bought at an outrageous price. The notion that Canada must fight to the end against absorption by an alien society is as untenable as the opposite view that Canada's eventual economic salvation lies in integration, political as well as economic, with the United States. The practical possibilities for a healthy Canadian economy must lie between these extremes.

# BUSINESS NOTES

## THE POUND

### Sterling and the Markets

STERLING has held its own in the exchange markets this week. The selling pressure that persisted through the week before Whitsun dried up after the holiday. Business has been small, and sterling has been quietly firm at \$2.79½. The market has not detected any evidence of official support. Dealers report some demand from New York and the Continent, and London seems to have stopped selling. (Through the whole phase of recent pressure it seems that London has been taking a poorer view of sterling than Zurich.) There are few signs of outright bear speculation. The cost to a non-resident of borrowing sterling on the Paris market (there is a ban on overdrafts to non-residents in London) is not, at 5½-5¼ per cent, at any large premium over rates on the London market. The turnover in the market, for these funds, which some people call Euro-sterling, remains small—probably not much over 10 per cent of the European market in dollar deposits. This market in "Euro-dollars" is founded on much greater rigidities in the New York money market, and notably on the statutory limitation on deposit rates in the United States.

The financial world is keeping an anxious eye on South Africa as Republic Day draws near. The reserves of the Union central bank fell again in the week to May 19th, though at £1.6 million the fall was notably smaller than in previous weeks. Since March 16th, when it became clear that South Africa would leave the Commonwealth, the reserves have fallen by over £22 million, to £74 million.

THE stock markets, meanwhile, have been reacting to last week's weakness in sterling. Gilt-edged securities weakened after the Whitsun holiday, showing their first significant decline since the budget. The Chancellor's reference to his new regulators played some part, and also acted as a restraint on equities. But the worries in the gilt-edged market stem basically from fears about sterling. Previously, these left unusually little impact on gilt-edged, no doubt because investors have felt that other influences point the opposite way. The budget certainly does. But the renewed pressure on sterling before the holiday visibly changed the immediate Bank rate prospect. The discount houses smartly reversed direction at the Treasury bill tender and raised their discount rate by about ¼ per cent, so that the average rate rose to £4 8s. 3d. This week the discount houses are also reported to have been sellers

of bonds. Selling of gilt-edged has not been heavy in total, and seems to have been more or less confined to professional dealers who had bought in anticipation of an early rise. But the selling has been sufficient to reduce prices right through the lists. War Loan on Thursday touched a new low point of 55½ xd.

The equity market is having its quietest spell for some months and there has been a steady decline in recorded bargains. Selling has been light since the holiday and buyers have reappeared slowly, but prices have failed to recover much of the pre-Whitsun setback and over the week the *Economist* indicator fell by 5.8 points to 421.1. However, the weight of money available for investment is still heavy. Vickers has raised about £6½ million by placing with financial institutions 1,375,000 of its 4,750,000 ordinary shares of International Computers and Tabulators, at 95s. (compared with a market price of 104s. before the deal was known) to yield about 2½ per cent. With bank advances of £13.6 million at the end of 1960 Vickers finds this the cheapest way to strengthen its holding in ICT from 38 to 26 per cent.

Almost daily, companies attracted by the present low yield basis are coming to the market for new money. By far the largest of these is Distillers, which is to make a rights issue on a one for ten basis. No terms have yet been announced, but there are 200 million shares in issue standing at 40s., and the offer may be in the region of £25 million.

## GAS

### Application to Import

EITHER during this week, or within a very short time, the Gas Council intends to put in a formal application to the Ministry of Power to be allowed to import methane from Algeria for supply—reformed into town gas—to British gas consumers. The council is at present undertaking a joint study with the National Coal Board of the comparative economics of using reformed methane alone, methane plus gas produced from low-grade coal in pithead Lurgi plants, or Lurgi gas enriched with other imported or home-refined hydrocarbons. But one could hardly expect a result from this study before, say, six months' time. And there is little doubt that the Gas Council would like to get approval

for the import of methane before that.

In the council's application to the minister it has the powerful technical and economic backing—not without political influence—of the Shell group, which has a large interest in Conch International Methane, a company formed to promote the ocean transport of liquified gas. The council faces powerful political and technical opposition from the National Coal Board, which thinks that town gas can be supplied more cheaply by mixing imported gas with Lurgi gas made from low-grade coal than by straight reforming of methane. It also faces the more guarded scepticism of some of the other major oil companies—which would not be sorry to sell the British gas industry much larger volumes of refinery products of one kind or another, from home or abroad, and remain dubious about the economics of shipping methane refrigerated.

Some people in these other groups think that natural gas piped from the Mediterranean coast to the Channel coast, after being moved in one way or another from Algeria to France, might eventually be a better bet than methane shipped all the way by tanker: others wonder whether some methane might not be made available from the large new fields recently located (by Shell and Esso) in the Netherlands. But Conch and the French semi-nationalised companies at present in control of Saharan gas and oil are offering the British gas industry methane on a long-term contract at a landed price that would give it town gas cheaper than it can at present make gas in many parts of Britain. And the Gas Council, understandably, feels that it has waited long enough: other ways of getting natural gas here—or even getting firm quotations for what it might cost at Atlantic seaboard terminals—would simply mean more delay. The ministry itself, so far as one can gather, is inclined to think there is a good technical case for the use of methane in one way or another. It is also still smarting because its opposition to a duty on fuel oil was overruled by the Treasury this spring—and hence, perhaps, disinclined to give coal protection against yet another imported fuel.

### Lurgi Economics

IN these circumstances, the Scottish Gas Board's display to the press of a new Lurgi plant in Scotland this week had some irony. One organ of the industry was celebrating the commissioning of a type of plant of which other leaders of the gas industry, in the short run at least, do not want to see any more started. The Lurgi plant at Westfield in Fifeshire is not as large as the ones Mr Alfred Robens would like to see built near the Midlands pitheads. It is getting rather better coal than it was

designed for: on the other hand, it is paying rather more for its "enrichment," butane from Grangemouth, than some of the prices being quoted nowadays. The Scottish Gas Board has not given a figure for its final cost of town gas, but unofficial estimates put this at 8d.-9d. a therm.

Even technical questions about this process tend to be answered somewhat according to the sympathies of the experts one happens to ask. In the report of the Robson committee on coal chemicals last year, for example, the thermal efficiency of the Lurgi process—from coal to gas—was given as 50 per cent. A few months before an engineer of the Scottish Gas Board, talking about the Lurgi plant that has finally been opened this week, predicted that the yield of gas from the total thermal value of all the coal used in gasifiers, steam and power for the plant would be 64.6 per cent. This week this yield was again quoted as 65-70 per cent.

Technical disagreements of this kind offer rich chances for delay in the joint study of Lurgi economics by the gas and coal industries; and until recently this does appear to have proceeded at a snail's pace. There are now indications that expert technical advice is being sought, in the form of invitations to "tender," on a paid basis, with design and cost studies for Lurgi plants of a specified size on specified sites.

Whether a ministerial decision on methane will await the results of all this, however, is a question of politics at various levels rather than an economic or technical question. The politics are not merely national; the course of discussions at Evian, with their implications for the ultimate ownership and control of Saharan oil and gas, could possibly influence this British issue. The gas industry is mainly interested in the chance of cheap gas without more delay, free of the irritations of coal, with most of the capital requirements borne by private or foreign investors, and the superb technical resources of the Shell group to smooth away any problems that arise. The Coal Board thinks town gas can be made equally cheaply, on equally long-term contracts, from coal supplied at a profit to Lurgi plants, with the lean gas produced there enriched with hydrocarbons of one kind or another from refineries either in Britain or securely in the West. The minister would have to approve the import of methane; or equally the capital investment involved, in Lurgi plants, whoever built them. It is a straight issue of energy policy—and not the only one now facing the Government.

## MOTORS

### Delayed Recovery

CAR production in April was slightly lower than in March, at 19,351 a week; this did not reflect a check to the recovery in demand for cars, but some special factors that depressed production during the month. The chief of these was

the strike at the Pressed Steel Swindon factory, which lasted from April 11th to May 12th, and meant a sharp drop in the production of the British Motor Corporation's Farina line models and the Sprite during this period. The assembly lines were stopped for a time, and many thousands of cars were lost—which was especially embarrassing to BMC when it had just announced its plans to raise production to its capacity of 15,000 vehicles a week for the summer. Ford, also, may have had a slight cut in production during the month as a result of the change in production from the Prefect to the Consul Classic. The other manufacturers report little change in output compared with March; but all those in the Midlands would have had one more day of holiday than in March.

Demand showed little change in April other than the expected seasonal moves. Home sales were 16,000 fewer than in March at 73,855, no bigger a fall than had to be expected since Easter came at the beginning of April. Exports rose more than 5,000 from the March level to 31,784, but were still less than half the level of April last year. Stocks of vehicles must have fallen sharply again, with exports and home sales, less imports, some 19,000 more than production; they must now be so low that scope should exist for stock-building during the winter. Canada took most of the increase in exports, but there was so significant rise in those to the United States, and most European markets also took fewer cars than a year ago—which seems to reflect over-stocking during the winter rather than a fall in sales. The drop in exports to Australia and South Africa follows the restrictions placed on sales in these markets. May, however, is expected to be a better month for both exports and home sales—as would be seasonally expected; the trade thinks registrations at home will reach last May's level of 84,000.

Commercial vehicles continued to sell well at home and abroad in April, and production remained at near-capacity levels; exports in April and for the first four months of this year were the highest ever recorded for these periods. Tractor exports were also at record levels: it is only private cars that have suffered so sorry a decline.

## ENGINEERING

### Unravelling the Enigma

THE sharp jump in engineering orders in March, 17 per cent up on a year ago compared with the miserable increase of one per cent or so in January and February, is more in keeping with industrialists' earlier statements to the Board of Trade that they expected to spend about 30 per cent more this year than last on new schemes of expansion and modernisation. Orders from the Central Electricity Generating Board for new power station equipment served to inflate the March figures: when generating sets for stations of 2,000 MW can be

ordered in one go this is bound to happen. But the Board of Trade states that home demand for plant and machinery generally was running pretty strongly. Export orders are still very disappointing, however. As against last year, they were eight per cent down in March and nearly three per cent down for the first quarter as a whole. Home orders in comparison were running about 27 per cent above last year during these three months.

Virtually the only effect of this sustained pressure of home demand has been to lengthen order books. At 112 (January, 1958 = 100) at the end of March, orders on hand were nearly eight per cent greater than at the beginning of the year and fifteen

| 1961 I..   | 120                        | 153                             | 126                              | 112                                |

per cent greater than at the end of March, 1960. Output for this mixed group of engineering industries as a whole has remained virtually level. In the first quarter of this year it was hardly three per cent higher than in early 1960. The inclusion of such depressed sectors of "engineering" activity as the domestic appliance makers and the railway wagon builders cannot account for the whole of this sluggishness. But, though other recession centres, such as shipbuilding, motor car manufacture, and possibly aircraft are excluded from these figures, such industries buy in a considerable part of their gross output from what might best be described as intermediate engineering firms, which are included. The car manufacturers in particular cut back their ordering of bought-out components quite sharply when car sales collapsed last autumn and winter. It is only now that car production is beginning to get back to something approaching its former level. Subsequent figures of engineering output ought to show some signs of this revival.

## BUILDING SOCIETIES

### Jumping the Gun?

A WEEK after the Building Societies Association had decided against any immediate change in its recommended interest rates, the Provincial Building Society, a member of the Association and the sixth largest society in Britain, announced increased rates. For new borrowers the interest rate on mortgages is raised from 6 to 6½ per cent and the interest rate on investments from 3½ to 3¾ per cent. Existing borrowers are still to be charged 6 per cent for the time being.

So far no other societies have followed Provincial's lead, but Mr Hubert Newton, general manager of the Leek and Moorlands Society, declared last week that a rise in rates seemed inevitable unless the Government eased building society taxation. The higher rate of profits tax has squeezed further the societies' narrowing margins but the association is clearly waiting on the annual adjustment soon to be made to the societies' composite rate of income tax, at present 5s. 4d. in the £. Anything but the smallest increase in this rate is likely to mean a general upward adjustment in mortgage rates and probably a smaller increase in interest rates as well.

#### AIR TRANSPORT

### Jets and Profits

THERE are now nearly 400 jet aircraft flying in the West with another 400 or so still to be delivered. Last year, airline profits took a nose-dive. Is there any connection between the two? If there is, it lies most probably in the rate at which jet airliners were leaving the factories during 1960. According to the International Civil Aviation Organisation, 258 were delivered during the year, and more than half of them were Boeings and DC 8s. Total airline capacity went up by more than 16 per cent, its biggest increase since the last major re-equipment drive in 1955. But traffic was growing at the same steady jog-trot of the past ten years, nearly 14 per cent per annum and this came nowhere near to filling the extra seats. The yardstick of an airline's commercial health is the proportion of seats that it manages to sell over the year. In 1960, the airlines in the West were flying half empty on average—with only 55.5 per cent of their capacity sold against nearly 57 per cent the year before. As the chart shows, the difference of a few decimal points can halve profits.

Airlines have never yet managed to gauge their re-equipment programmes in a way that will prevent them from having too few seats to sell one year, and too many the next. They can reasonably expect traffic to begin to catch up with all this extra jet capacity some time during 1961, but in the meantime, BOAC will not be the only large European airline to find itself in the red. Last year's rate of profit for the industry

#### BUSINESS NOTES

as a whole amounted to 1 per cent of turnover; ICAO calculates that revenues probably came to \$5,505 million, all but \$1 million of it from passengers, while profits probably amounted to \$57 million. This may look an uncomfortably small margin, but it is important to remember that it includes the returns of a substantial number of exceedingly badly-run airlines, many of which are kept in business solely for reasons of prestige, and these tend to pull down the industry's average rate of earnings. Air transport in the 1960s ought not to be unprofitable, otherwise British independent airlines would not now be clamouring to the new Air Transport Licensing Board for permission to extend their routes.

#### INTERNATIONAL FINANCE

### Rival to IMF?

ALTHOUGH the leading lights of the world of international finance have pretty clearly, and not unexpectedly, come down in favour of the less ambitious scheme for extending international credit put forward by Mr E. M. Bernstein, the campaigning season is by no means at an end. Both Mr Bernstein and Professor Triffin, proponent of a much more radical scheme, have been doing some personal canvassing in Europe: they have just missed each other in the City of London. Not all the parties concerned have yet been convinced of the need for even the least ambitious reform. The German authorities have indicated their willingness to make available stand-by credits to the International Monetary Fund on the lines of the Bernstein plan, but the French are reported to be dragging their heels, and resisting any formal commitment.

Professor Triffin seems to recognise that his plan has little prospect of immediate acceptance. "Something will undoubtedly be done within the next few months to increase the resources of the Fund, but I am afraid it will remain far short of the mark." He now points to the administrative inflexibilities of the world-wide IMF, with nearly seventy member countries. His present feeling is, therefore, that instead of being implemented through the IMF alone, his reforms should be in large part carried out through regional organisations, and notably the new OECD. "The members of OECD could distribute their international deposits between the IMF and [an] Atlantic Monetary Organisation in rough proportion to their pattern of international trade and payments." Certainly many continental central bankers have their reservations about IMF, in which they have relatively small voting rights, and are in any case reluctant to commit funds which as they see it might be used in inflationary ways by under-developed countries. But bankers of this school may not be enamoured of even a European Triffin plan. Moreover, any scheme for improving the international credit machinery through OECD would

#### THE ECONOMIST MAY 27, 1961

have to start from scratch; there is an obvious danger that a diffusion of efforts to improve the international credit machinery might weaken the whole operation.

#### BANK CREDIT

### Liquidity Tightens

BANK liquidity has tightened again. The relief that was secured in April derived largely from a large Government bond maturity. But the budget, with its encouraging pointers for gilt-edged, enabled the Government broker to unload a substantial amount of stock for a few weeks, and this correspondingly reduced the Government's need to borrow from the banking system. In the last week or two these sales have dried up, as the gilt-edged market has taken a turn for the worse. But unless the Government finds it necessary and expedient to provide substantial net sums to support that market, the banks have no reason to expect a net increase in their liquid assets in the coming year, since the domestic needs of the Exchequer are, on the budget estimates, covered entirely

from revenue; and this is hardly a time for releasing special deposits. Nor, unhappily, is there any likely prospect that the Exchequer will need to find large sterling sums to finance a large external surplus.

Faced with this prospect of continued stringency, the banks must be relieved at the indications that some of the steam is at last going out of advances. The increase in the four weeks to April was £25 million, after making allowance for transit items and for State Boards. The slackening is in line with the seasonal trend, but the May increase is notably smaller than in 1960 or 1959.

The banks' May statement also showed the smallest liquidation of investments this year, at £8 million. As liquid assets fell by £35 million, this reduced the average liquidity ratio from 32.0 to 31.5 per cent—and pushed Barclays to a bare 30.0 per cent, the Midland to 30.2 per cent and Lloyds to 30.8 per cent.

#### THE ECONOMIST MAY 27, 1961

*Packing your bags?*

Holland, Honduras or Honolulu—it doesn't matter where you're going or what your purpose—there's nothing to match the work, worry or pure joy of preparing to go abroad. It's one of life's pleasures. And whether your trip is on business or holiday you'll be all the better equipped if you've read our booklet, "The Joys of Travel".

THIS little guide for the traveller to foreign parts first appeared six years ago. But the years between have brought so many changes in currency regulations that we felt it was time to bring the booklet up to date. The result is an informative answer to the problem of taking—and spending—money abroad. Foreign currencies, Travellers Cheques and exchange rates are among the topics briefly explained in simple, easy-to-read terms.

The booklet is available to everyone; all you have to do is ask for a copy at your local branch of the Midland Bank.

### OVERSEAS TRADE

#### A Boost in Time?

**R**APID implementation of the first part of the Anglo-German arms deal would apply a welcome salve to British exports at a point that is becoming increasingly tender. Since the start of the year, exports to West Germany have been slipping more perceptibly below the level of a year ago; in the first four months of the year they fell £1.9 million to £55.7 million. Although exports to all other members of the European Economic Community increased, the psychological impact of this disappointment in the largest and most competitive market within the "Six" at this stage in its development is much more important. Imports from West Germany, which look full advantage of the buoyant British market for manufactured goods, continued to rise in this period.

The Board of Trade believes that, seasonally adjusted, imports fell by 5 per cent between September-January and February-April. Imports of foodstuffs fell most abruptly, but imports of industrial raw materials also dropped 4 per cent and imports of semi-manufactures were cut by 7 per cent so that they at last reflect the long standstill in industrial production. In general in all these categories, imports have declined month by month since the start of the year. However, imports of finished manufactures have risen a further 2 per cent in the three months to April.

Eliminating seasonal variations and dock strikes, the Board of Trade reckons that exports in the three months from February to April were 1½ per cent higher than in the previous five months. Since the end of 1960 there has therefore been no significant rise in exports, but what rise there has been has come in exports of engineering products other than cars, although motor exports began to revive in April. However, the down-turn in imports and staunch rear-guard action in exports has succeeded in substantially narrowing the trade gap. In the three months to the end of April the trade gap (with exports valued fob and imports on a cif basis) averaged £54 million a month after seasonal adjustment. The average monthly deficit in 1960 was £72 million.

### STERLING AREA

#### Third Party Intervention

**T**HE sterling area that is emerging from the straightjacket of trade restrictions is a far more awkward beast than the adolescent sterling area of before the war. By 1960, it seemed to have its timing all wrong: the vaunted stability of the system that normally compensated for a change in the United Kingdom's overseas trade by a

converse movement in that of the rest of the sterling area was shaken by both partners simultaneously running large deficits. Britain's overseas trade is still roughly comparable with that of the rest of the sterling area; in fact, in trade with non-sterling territories, the imports and exports of both partners had an almost identical value last year. That in itself is an indication of change permeating the system; there is no longer such a pronounced triangular trade as in earlier years, with the overseas sterling countries exporting primary products to third countries and importing manufactured goods mainly from Britain.

In the late 'fifties the non-sterling trade of the overseas sterling area exceeded its trade with sterling countries, and this trend accelerated last year. Total sterling area exports excluding Middle East oil rose by 6 per cent in 1960, while imports expanded by 15 per cent. Between the first and third quarters of last year imports of the overseas sterling area adjusted for

\* Based on Board of Trade statistics. † Excluding United Kingdom.

seasonal variations rose by 29 per cent, but in the last quarter they fell about 3 per cent, preceding the decline in the United Kingdom's own imports, which the Board of Trade reckons probably brought total imports into the sterling area in the first three months of 1961 down to about the average level for 1960. Australia, New Zealand and South Africa have tightened their belts and with Britain's imports showing a more perceptible decline this year there should be a simultaneous narrowing of the trading deficits of both parts of the sterling area.

Although commodity prices fell steadily throughout 1960, after the previous recovery they started at a comparatively high level. Higher prices accounted for half of the 5 per cent increase in the value of exports of the overseas sterling area last year. In the last quarter of 1960, lower prices contributed to a fall in exports, but since the beginning of this year prices of several key commodities have recovered. Imports into the overseas sterling area rose by 15 per cent in 1960; of the major suppliers, the lowest rate of increase was in imports from the United Kingdom, which rose by 9 per cent, while imports from North America rose by 27 per cent, and from Japan by 40 per cent. The only sterling country apart from Britain in which Japan failed to make a striking advance last year seems to have been Hongkong, where

the gain was 22 per cent. Japan's exports to the overseas sterling area are now running at a quarter of the value of Britain's, and exceed those of Germany.

### CHEMICALS

#### Enter Mobil

**S**OCONY MOBIL's bid for O. and M. Kleemann will gain it an entry to the British chemical industry. At the offered price of 19s. 6d. for the ordinary shares and 22s. 6d. for the preference, Mobil is valuing the company at £6.7 million, with an earnings yield of only 5 per cent. These are generous terms, but the ordinary shares had been up to 20s. recently and stood at 18s. 8½d. before the bid was announced. At the beginning of the year they were only 8s. 6d., but buyers have been expecting a bid. As the directors and their friends own 42 per cent of the ordinary capital and will accept Mobil's offer, it seems certain to succeed—even if some recent buyers must be disappointed by the terms.

Mobil has at first sight made an odd choice in bidding for Kleemanns; the companies have no common interests. Mobil's only chemical interests are an ethylene plant being completed this year in Texas, and an aromatics plant that is being built at Naples. Kleemanns is concerned with marketing moulding powders and producing semi-finished parts. It markets polystyrene resins which Shell Chemical makes for it under a long-term contract, and uses some of these to produce polystyrene sheet, extrusions and other parts for sale to the makers of finished goods. It produces casein and cellulose acetate resins for sale as moulding powder, and acts as the British agent for the polystyrene resins made by the American National Distillers Company. Until two years ago the company also made plastics articles, like combs and toys, but this part of the business was sold because it meant competing with the company's customers, for moulding powder.

If Mobil sets up in plastics manufacture in Europe, Kleemanns could provide a British marketing organisation—all the better if its agreements with Shell Chemical and National Distillers had expired. But as Mobil has yet to start building a plastics plant, any such use for Kleemanns is looking a good way ahead. Petrochemicals retain an irresistible attraction for oil companies; but for the present this merely helps to keep profit margins small.

### RADIO INDUSTRY

#### What Happened to Trade

**W**HAT would the radio industry have done last year without steam radio? While television production continues to slide, output of radio sets is still rising. It

was seven per cent higher in the first quarter of this year than last, while deliveries in 1960 amounted to 1,846,000 radio sets, which was more than the number of television receivers that the industry sent to the shops. Deliveries of television sets last year were down to 1,817,000, against 2,776,000 in 1959, and this included large numbers of cut-price sets that manufacturers were unloading before Christmas.

Although the industry has been making more cheerful noises during the past few weeks, trade in the first quarter of the year gives little ground for comfort. Deliveries to the shops were down to 344,000 television sets. This was 19 per cent less than in the same three months last year, when trade was already beginning to turn down, and 34 per cent lower than during the same time in 1959, the last "normal" period of trade before the industry embarked on its switchback course of boom followed by the sharp reaction that led to the present slump.

#### COLVILLES

### Essay In Expansion

WHEN in 1959 the Government decided to site a semi-continuous hot strip mill at Colvilles' mill at Ravenscraig near Glasgow and its ancillary cold rolling mill at Gartcosh some eight miles away, there were arguments about the economic wisdom of that political choice. Although production of pig iron and steel were already being expanded there, as part of a large modernisation and development scheme costing some £40 million, Ravenscraig is not on the coast, so that imported iron ore has to be transhipped and railed 17 miles to the works to meet the coal brought in from Scotland's eastern coalfields. And in putting the cold rolling mill another eight miles away from Ravenscraig, further rail costs were added before the sheet was ready for delivery to the consumer. Colvilles rejoined that there were obvious advantages in integrating the hot strip mill with the plans for greatly extended steel making capacity at Ravenscraig; and that in any case it would be a mistake to underestimate the value of having the mills close by a community with long experience in iron and steel production.

Bucked by the right to borrow up to £50 million from the Government at a rate of interest similar to that paid by nationalised industries, Colvilles has gone ahead with the strip mill project which is now well up to schedule. When completed in 1962 it will bring crude steel output at Ravenscraig up to 1.26 million tons and provide 675,000 tons a year of strip mill products. With the completion of other development projects, which include a new slabbing and blooming mill, a 4-high plate mill at Clydebridge works, and the modification of the heavy section mill at the Lanarkshire works to roll universal beams, Colvilles expects its steel output to total 3.3 million ingot tons by the end of 1963. Of this output about half will consist of sheet and light plate suitable for

the lighter engineering industries manufacturing durable consumer goods such as refrigerators and motor cars.

Whether Colvilles will, without financial strain, be able to pay the interest on the Government loan (of which the first £15 million was drawn earlier this year), and repay the drawings when due in 1978-81 as well as find the generous dividends due to shareholders for the confidence they have shown, clearly depends on the extent to which new light engineering industries are attracted to the Scottish lowlands now that sheet steel from local sources will soon be available. They have stayed away in the past not only because there was no sheet but also because they would be far from the main consuming centres in the Midlands and the South. So far only BMC, Pressed Steel and Rootes have been attracted to put some capacity in the north by Colvilles' ambitious development. More customers will have to follow if the sharp upturn in the curve of steel output expected in the next two years is to be underpinned by an equally sharp increase in orders for Colvilles.

#### STEEL

### A Coat of Many Colours

ONE way of meeting competition is to take over one's competitor. This, in a sense, is what the steel industry has tried to do in solving the tricky problem of giving steel a thin coating of plastic. The colour range, warm appearance, and resistance to corrosion of pvc plastic sheet is thus combined in a single material with steel's strength and ease of working. It is rather more expensive to buy than ordinary steel sheet or strip—about two and a half to three times as much, in the more standard sizes. But steel with a layer of plastic does not need to be painted and the consequent savings, in money and factory space, of a paint shop can for a number of purposes make plastic-coated steel cheaper to use. The makers say that plastic-coated steel is as easy to fabricate as uncoated steel: it may be deep drawn, folded, punched, crimped, sheared and expanded without risk of the plastic coat fracturing or coming unstuck. Pieces can be joined together by most conventional metal joining techniques, such as lock-seaming, riveting, bolting or screwing. It can also be welded, by a modified form of spot welding, or by the hot air and high frequency methods used for vinyl.

The steel industry has been keenly interested for quite some time in this combination of steel and rigid plastic sheet, not so much because of opportunities it might give of opening up new outlets, but because of the stronger standing it offered steel in markets where it has been under heavy competitive pressure from other materials. The range of applications already successfully tried out is indeed impressive: household appliances, motor

#### BRAZIL

### Billion Dollar Package Deal

THE International Monetary Fund and the United States have announced a programme of large scale financial assistance to rescue Brazil's virtually bankrupt economy. The assistance involves about \$1,000 million in new and extended credits. Negotiations with representatives of Belgian, French, German and Swiss banks, now in their final stages, are confidently expected to produce a further \$150 million as stand-by credits.

If the European negotiations are successful Brazil will receive in all \$648 million of new credits—\$338 million from the United States, \$160 million from the IMF, and \$150 million from Europe's commercial bankers. The IMF has also arranged an extension of the repayment period on \$140 million under previous drawings due to be repaid by 1962, while the United States has

car trim and interior panelling, furniture—both domestic and industrial—drum containers, ducting, and as a partitioning and panelling material in buildings. (It lines the walls of the "Travolator" at the Bank underground station in London.)

John Summers was the first British company to market plastic-coated steel, just over three years ago. Since then Richard Thomas and Baldwins, who produce it in the form of sheet but not in coil form, as does Summers, and several smaller companies who sell it as strip have come on to the market. Dorman Long hopes to produce plastic-coated sheet later this year. A certain amount is also imported, principally from the Phoenix company in Belgium and from Columbus in the United States, where it has taken on even more rapidly than here.

None of them is very anxious to say how much plastic-coated steel is now being bought in Britain. In sheer tonnage it can hardly be very significant yet. Even more understandably, they are reluctant to reveal exactly how the trick, of bonding the plastic to the steel, is done. The secret lies in the adhesive and the way the steel is prepared beforehand (when it is also galvanised) and "cooked," or processed, after the plastic layer has been applied. There is more than one way of doing it. Summers and RTB use a broadly similar method in that both marry the plastic, in sheet form, to the steel, whereas the technique developed by Dorman Long can be described best as rather like squeezing the plastic as if it were toothpaste on to the sheet, before rolling and bonding the two materials together.

## Message to Exporters!

#### TAKE NOTE

Barclays Bank is the only British bank with its own overseas subsidiaries in East, South and West Africa, France, the Mediterranean and the West Indies.

#### TAKE HEART

Help in such matters as market reports, credit information and the whole machinery of export finance for these territories is readily available through any of the 2,250 branches of Barclays Bank Limited in this country.

#### TAKE ACTION

Get in touch with your local Barclays manager. Tell him your problems: he will tell you whether we can solve them, either from our own resources or through our network of agents and correspondents throughout the world.

Alternatively, please write to

Group total assets exceed £445 million

“...and when no.3 ethylene came on stream...”

“No. 3? That's the big one, isn't it?”

Yes—the biggest outside the U.S.A.—as big as the other two together.

Sounds impressive—but you were going to say what you do with all the ethylene now you've got it. . . .

It finishes up all over the place—about a third of it we turn into ethanol—industrial alcohol to you, and there's a whole chemical industry based on that. Two thirds ends up in plastics—polyethylene, polystyrene, and there'll be

p.v.c. as well when our ethylene dichloride unit comes in. And that's only part of the story—last year BHC made more than two hundred thousand tons of chemicals for industry.

That's something like production—you surely need big uses to keep pace with that.

Too true—and they're there all right as far as anyone can see. Increasing demands will keep us on our toes like this for years.

## British Hydrocarbon Chemicals Ltd

HEAD OFFICE: DEVONSHIRE HOUSE · MAYFAIR PLACE · LONDON W1 · TEL: MAYFAIR 8867

TA-CI

agreed to postpone the repayment of \$305 million of Brazil's debt of \$530 million to the Export-Import Bank. Postponements are also expected on Brazilian debts to private European industry and the Brazilians are already negotiating along these lines on the \$200 million owed in commercial debts to United States industry. The re-scheduling of these credit repayments is designed to alleviate Brazil's crushing burden of overseas debt. This already totals \$3,802 million, and \$700 million of this originally fell due in 1961.

Brazil's acute exchange difficulties can be attributed to three factors: the fall in export earnings from coffee, the inflationary development programme of the previous President, Sr. Kubitschek, and the piling up of short-term debt to finance long-term development. The aid will be used to support Sr Quadros's measures to combat inflation and to achieve balance of payments equilibrium within the framework of a (slightly) simplified exchange system. The government's programme includes steps to reduce the enormous budget deficit, estimated at \$900 million for 1961—about as high as a previous estimate of total revenue. The Bank of Brazil is to restrain private credit, and government purchases of coffee under the price support system are to be financed by levies on coffee exporters.

### DISC BRAKES

#### Wanted—But Dear

FORD's decision to make Girling disc brakes a standard fitting on the front wheels of the Consul 375, Zephyr and Zodiac as well as the new Classic means that about a quarter of British car production will now be so equipped. But the cost of disc brakes seems to be taking a disappointingly long time to fall—which may be making other manufacturers hesitate before following Ford's example, and fitting these fade-free brakes to provide an extra margin of safety for those who drive their cars fast. Ford is adding £18 to the price of its cars that are now having disc brakes as a standard fitting, though these three models will be taking 2,500 disc brake sets of the same type a week, with 1,500 more of a different size for the Classic when its immediate production target is reached—and probably more later.

Brake manufacturers have argued in the past that discs are not inherently more expensive than drum brakes, and that the difference in cost is the result of lower production volume. But now that production is approaching that of drum brakes, the gap seems to remain wide. Part of this can be explained by the argument that the Consul and Zephyr are of the size in which disc brakes have the greatest difficulty in competing on price. They are just heavy enough for a servo system to be needed with disc brakes, while it was not needed with drums, and they are light enough to have

had relatively small drum brakes. The larger the size of brake, the easier it is to make the actual disc brake unit as cheaply as that of a drum. Another part of the explanation, no doubt, is the desire of the brake manufacturers to write off their development and tooling costs for disc brakes quickly which conflicts with the equal desire to widen the use of discs as fast as possible.

Car manufacturers are traditionally liable to scrimp on the cost of the brakes they fit, which explains why some popular models are still sold with brakes that can be made to fade. These manufacturers are unlikely to rush to adopt disc brakes if these are going to add substantially to costs, unless they feel that they are losing sales to competitors who have so equipped their cars. Ford has now put this fear into the minds of the makers of all but the smallest cars. Decisions about the next generation of new models will already have been taken one assumes—in knowledge of Ford's move—and if these have not been to use discs, their makers will soon be under pressure to change their minds.

### PEPPER

#### A Peck at Stability?

THE cult of price stabilisation schemes has caught up with producers of that hot commodity, pepper, and its reputed seven-year cycle. Exploratory talks have been held in Bangkok between Cambodia, India, Indonesia and Sarawak under the auspices of the United Nations' Economic Commission for Asia and the Far East. Not the least notable aspect of this assemblage, which came as a surprise to traders in London, is the absence of consumers, the slightly incongruous presence of Singapore and the reported non-representation of the host country and small exporter, Thailand. But this conference stems from an earlier discussion of inter-regional trade and does not have the pretensions of a major United Nations commodity study group.

Pepper price stabilisation must necessarily be discussed in the shade of shaky statistics and in the light of several practical lessons in propping up pepper demonstrated by Singapore's merchant princes. A white pepper syndicate ran the price up from 2s. 9d. to 8s. 9d. a lb last year; it made a fortune but still had more than enough pepper on its hands when prices crashed again. There is only one large market for pepper, and Singapore attracts most of the output of the surrounding producing areas, giving its merchants the opportunity to exploit a commodity peculiarly susceptible to price manipulation.

Fixed prices could sound the death knell of the trade in Singapore, but probably no such vigorous policy is contemplated. However, producers possibly have a genuine grievance in the fact that the price they receive bears a slender relationship to world prices. Sarawak has attempted to loosen Singapore's hold, which extends to financing

foreign producers, by starting its own finance and warehousing scheme. But this dash for independence was overtaken by last year's decline in prices. After its protracted fall, white Sarawak pepper has risen about 6d. to 4s. a lb., but the main influence on pepper prices is production; consumption shows an inexplicable lack of buoyancy despite rising living standards. Other areas can grow pepper besides the traditional oriental suppliers, and since Brazil entered the market two years ago, its production has already reached 6,000 tons, compared with a fairly static world consumption of about 60,000 tons of black and white pepper.

### SISAL

#### Unfashionable Growth Stocks

THOUGH guaranteed price farming has encouraged a mild profligacy in the amount of twine used for binding and baling too bountiful harvests, it does not detract from the remarkable consistency of the sisal industry's expansion. Trade in sisal has been growing steadily for the past seven years. For an agricultural product, prices have been untypically stable, and apart from the recent dip, have been rising gently over the past three years. Production in Tanganyika has risen to more than twice the prewar average. In Kenya, the advance has been even more striking; output has risen about 60 per cent in four years.

Already one of the cheapest fibres, sisal has few competitors on price or, in its principal use as agricultural twine, on convenience. Sisal quietly fades away when its tour of duty is done; wire litters farms with treacherous tangles. But last year brought the unhappy coincidence of too little rain in British East Africa, where the bulk of the crop is grown, and too much in Europe when the harvest was due. Stocks had been increased in anticipation of political trouble

| Company                 | Ord. earnings | Ord. dividend | Current price | Yield |
|-------------------------|---------------|---------------|---------------|-------|

\* Excluding capital distribution.

in Africa and they depressed prices this year at the time when the estates customarily sell forward a considerable part of their output. America's increased consumption of twine has been met mainly by imports from Europe, while the domestic spinning industry has been sliding into eclipse. The American industry recently failed to persuade its government to impose a 30 per cent duty on imported twine, but the stimulus given to purchases of sisal by European manufacturers was short-lived. So far this year sisal producers have sold less of their output than usual and the

recovery in prices that has lifted supplies of ordinary grade three sisal by £3 to £86 a ton seems to prove them right.

This year drought in British East Africa has delayed growth and temporarily stopped factories dependent on large quantities of water in the processing of sisal leaf. Production on the estates may fall by 10 per cent, but though that could bring the biggest reduction in output for many years, the extra quantities of leaf natives can pluck from the hedgerows they have been encouraged to plant with sisal could help to make good the deficiency. But politics have done far more damage than drought, curbing development and crumpling share prices, so that despite the industry's enviable record, yields are now astronomical.

#### IDA

### Fifty Years, Interest Free

THE International Development Association, the latest addition to the world's lending institutions and under the administration of the World Bank, has granted its first development credit. The recipient is Honduras, with a credit of \$9 million to cover two-thirds of a highway development programme. The credit is for fifty years, is free of interest, and is repayable in foreign exchange by amortization to begin after a ten-year period of grace. Thereafter 1 per cent of the principal will be repayable annually for ten years and 3 per cent a year

#### THE NPL

The National Physical Laboratory is one of the most important of the DSIR's laboratories. One example of their aid to industry is the success of the bulbous bow which the ship division recommended to a firm of trawler owners. Work in hand includes hovercraft, a machine for translating Russian into English, optical masers and ultra-high-speed computers using cryotrons. Projects for the future include research into noise measurement, high polymer physics and a proposed nuclear reactor for standardisation work in nuclear physics. If the Weights and Measures Bill is passed by Parliament, the NPL will be instrumental in defining all derived units and standards in Great Britain.

#### DISTRIBUTION OF STAFF IN 1960

#### BUSINESS NOTES

will be repayable for the final thirty years. IDA's administrative costs will be covered by an annual service charge of three-quarters per cent on amounts withdrawn and outstanding. These generous terms do not necessarily set a fixed pattern for the future. But IDA is specifically designed to aid countries whose ability to borrow on conventional terms has been checked by lack of foreign exchange or the burden of existing debt.

IDA now has 42 member countries, initial

### SHORTER NOTES

Higher costs, the expense of trial running of new plant and the cost of promotional publicity of women's magazines cut the trading profit of the Daily Mirror group from £4,179,000 to £2,897,000 in the year to February 28th. The figures include a full year's dividend from Anglo-Canadian Pulp and Paper Mills, though the group sold its shares to A. E. Reed last year. Net profit fell from £3,479,000 to £2,961,000 but the ordinary dividend is raised from the equivalent of 13 per cent to 15 per cent.

Denmark has raised its Bank rate from 5½ to 6½ per cent, the highest level since the war. The central bank draws attention to the potential exchange strain arising from the large volume of commercial debts contracted abroad. It may also fear the effects of pay increases following the recent labour unrest.

The Comptroller-General of Patents has been able to report the first decrease for eight years in the number of patent specifications awaiting examination: though a fall of only 372 out of some 37,000, it came in a year when the number of new specifications received rose by 1,800. This improvement reflects an increase of twelve in the staff of examiners.

Clan Line was successful in its struggle with the South Georgia Company for control of Hector Whaling. Its offers of 26s. for the preferred shares and 10s. 6d. for the ordinary shares were accepted by holders of more than 50 per cent in each class.

British Aluminium is to build a 172-inch aluminium rolling mill at Falkirk as part of a £10 million expansion programme. The mill will be the widest of its kind in the world, and add about 100,000 tons a year to existing capacity. British Aluminium is jointly controlled by Tube Investments and Reynolds Metals of America.

#### THE ECONOMIST MAY 27, 1961

subscriptions equivalent to \$863 million, and a list of potential borrowing customers in Africa, the Middle East, Asia, the Far East as well as Latin America. Their needs are likely to be far greater than IDA's slim resources. The World Bank hopes that once IDA is well under way, members will agree to a substantial increase in subscriptions and that countries considering an expansion of their aid programmes may channel part of the additional funds through its new subsidiary.

The Moscow institutions that were recently asked to put up more capital for the Moscow Narodny Bank Limited can now enjoy some of the rewards of this bank's remarkable expansion in the London market. With net profits in 1960 almost doubled at £161,000, the dividend has been raised from 9 to 12 per cent—tax paid. So far there has been no call from Mr Khrushchev for dividend restraint.

Showerings, the maker of Babycham, has made a cash offer through its subsidiary, R. N. Coate, of Somerset, for the 233,750 £1 ordinary shares of William Gaymer and Son, the Norfolk cider-makers. The offer is 13s. per share and has been accepted by the directors of Gaymer, who together with the family hold over half the equity. The deal could make Coates and Gaymer the second largest cider producer in the world; the brands would retain their separate identity but there would be some rationalisation of distribution.

The Engineering Industries Association has produced a very useful *vade mecum* for small businessmen explaining the various ways in which a firm's growth may be financed and how to approach the financial institutions available. The booklet costs five shillings and covers pretty well every likely source of new money, from trade credit to machinery leasing, from the Amstel Club for export finance to government grants to assist the transfer of key workers.

### MR CHARLES CLORE'S REVIEW

The Annual General Meeting of Sears Holdings Limited will be held on June 12th at the Dorchester Hotel, London, W.1.

The following is an extract from the statement by the Chairman, Mr Charles Clore, circulated with the report and accounts for the year ended December 31, 1960:

#### TRADING RESULTS FOR 1960

The year 1960 was a prosperous one for the Sears group and once again I am pleased to be able to present accounts which clearly indicate a continuation of the progress which has been achieved every year since 1953, when I became Chairman of the Company.

The total sales of the group further increased in 1960. Whilst I do not believe that it is in the best interests of the Company or its shareholders to publish the amount of our sales, I am prepared to lift the curtain momentarily on this occasion in order to disclose that we can now regard ourselves as being in the £100 million class.

As a group we have done our utmost to answer the appeals of the Government and to assist the economic position of the nation by increasing our exports. Despite the fact that a large proportion of our turnover represents "over the counter" retail sales in shops, we calculate that our total export sales in 1960 approached 20 per cent of our total turnover.

The total trading profits of the group, after charging depreciation and all outgoings (other than interest amounting to £210,000 on Debenture Stocks and Loans) reached £10,416,000 in 1960. This was an increase of £1,520,000, or 17 per cent, over the corresponding profits of the previous year.

The following analysis of the trading profits

shows that, with the exception of the motor distribution business, the increased profits have been spread over all sections of the group:

|                                | 1960<br>£   | Percentage<br>of Total | 1959<br>£  | Percentage<br>of Total |
|--------------------------------|-------------|------------------------|------------|------------------------|
| British Shoe Corporation ..... | 5,774,000   | 55                     | 4,436,000  | 50                     |
| Sears Engineering .....        | 4,003,000   | 39                     | 3,790,000  | 42                     |
| Motor Distribution .....       | 295,000     | 3                      | 410,000    | 5                      |
| Mappin & Webb group .....      | 344,000     | 3                      | 260,000    | 3                      |
|                                | £10,416,000 | 100%                   | £8,896,000 | 100%                   |

In the later paragraphs of this statement I shall review the individual groups in detail, both as regards their trading and their development.

#### APPROPRIATION OF PROFITS AND DIVIDEND

Out of the trading profits of £10,416,000 shown above it has been necessary to provide for the ever present burden of taxation, amounting to no less than £5,200,000, interest, minority interests and the dividends payable on the preference shares of Sears Holdings Limited. This leaves £4,653,000 available for the ordinary shareholders.

The issued ordinary and "A" ordinary capital has been increased since last year by £2,137,805 as a result of the fully paid scrip issue made in June, 1960. Thus the total issued equity capital is now £12,826,828, represented by 51,307,312 shares. On this increased capital your Directors recommend a dividend of 25 per cent less income tax. This is equivalent to an increase of one-fifth compared with the dividend paid for 1959, when allowance is made for the increased capital. The proposed dividend will absorb £1,964,000, leaving £2,689,000 to be retained in

#### PROPOSED SCRIP ISSUE

Elsewhere in this review I shall explain that, despite the absence of any major acquisitions by the group during the past twelve months, we have major plans for the development and expansion of our various subsidiaries. The consequential capital expenditure and the additional working capital involved necessitate the retention of a substantial proportion of our net profits. It is this policy which will keep your Company in the growth class.

We feel we should recognise this retention of profits, and also demonstrate our confidence in the future, by making another fully paid scrip issue to the ordinary and "A" ordinary shareholders equivalent to approximately the amount which we are retaining out of profits; this also ensures that the issued capital is appropriately increased as the capital employed in the business increases. Your Directors, therefore, recommend that the balance of the Share Premium Account of £1,297,758 plus £1,267,607 out of the Retained Profits, shall be used to pay up in full 10,261,463 "A" Ordinary Shares of 5s. each, to be allotted to ordinary and "A" ordinary shareholders in the ratio of one new "A" Ordinary

Share for each five Ordinary or "A" Ordinary Shares held at the close of business on April 29, 1961.

I must again repeat what I have said in previous years about our dividend policy. It remains our intention to preserve a reasonable balance between profits retained in the business for expansion and profits paid to shareholders in the form of dividends. Therefore the amount of the recommended dividend on the Ordinary and "A" Ordinary Shares will be dependent on the amount of profits earned. Even on the basis of the 1960 profits and taking into account the higher rate of profits tax which will have to be borne out of the 1961 profits, however, a dividend of 25 per cent on the capital as increased by the scrip issue would be covered nearly twice. I can, therefore, safely forecast that, if nothing unforeseen occurs, we shall be in a position to recommend at least the same rate of dividend as for 1960, i.e., 25 per cent on the increased capital, when we come to consider this matter a year hence.

#### ORGANISATION OF THE GROUP

Each of our subsidiary holding companies—British Shoe Corporation; Sears Engineering; Scottish Motor Traction; and Mappin & Webb—are now groups of closely associated trading companies, enjoying the advantages both of autonomous management and of group co-operation. We have thus avoided the creation of the large and costly central head office organisation which is normally considered essential to service and to hold together a large number of more or less diverse businesses. It is our intention to develop our overall organisation on these general lines, so that Sears Holdings Limited will remain the parent of a series of substantial but largely self-contained subsidiary groups.

#### BRITISH SHOE CORPORATION

All Divisions of the group enjoyed substantial increases in sales in 1960 and, despite increased costs, the group was able to show a satisfactory improvement in profits.

The output from our factories has both increased in quantity and improved in quality. An all-out effort is being made to increase our export trade from these factories.

During 1960 we opened a considerable number of new branches and nearly fifty branches were completely modernised, usually with some extension being undertaken at the same time.

The total capital employed in the British Shoe Corporation has increased during the year by over £1 million, of which more than £600,000 represents the net increase in fixed assets, the balance being the net increase in working capital.

Our programmes for additional shops, extensions, modernisations and other developments in 1961 are likely to involve substantial further capital expenditure. Increased working capital, also, will be required to finance not only the additional trade at these new and extended branches, but also the increased trade which we anticipate will be enjoyed by our existing branches. The capital employed in the business in respect of both fixed and working capital will, therefore, again increase in 1961, but we are fully confident that a satisfactory return can be earned on this increased investment.

The magnitude of this expansion programme demonstrates our confidence in the future. Sales achieved so far in 1961 give us good reason for believing that I shall have another satisfactory story to tell a year hence and I believe

#### COMPANY MEETING REPORTS

there is still much scope for long-term expansion in the retail footwear trade, so long as we continue to improve both our efficiency and the values we offer to our customers and so long as the standard of living of the population is maintained.

#### SEARS ENGINEERING

The main Divisions of this important engineering group comprise:

(a) The Bentley Engineering hosiery knitting machinery group;

(b) Furness Shipbuilding, with its pipework subsidiaries;

(c) Findlay, of Motherwell, engaged in the fabrication and erection of structural steel;

(d) Pegson, manufacturers of quarry plant, pumps and a range of contractors' plant;

(e) Parmeko, makers of transformers and other electrical equipment.

#### (a) THE BENTLEY GROUP

As I forecast a year ago, our output of hosiery knitting machines has broken all previous records; so have the profits of the Bentley group, which, therefore, remains the largest contributor to the profits of Sears Engineering.

A larger proportion than ever before of the Bentley group's output was exported in 1960 and during the past year we have received substantial orders from the USSR, which, we believe, will soon become an important outlet for all the products of this group.

We are building a large new extension to our works at Loughborough. This and other expansions and developments in the Bentley group will result in our total expenditure on fixed assets exceeding £1 million during 1961.

Improved production methods have enabled us to absorb recent wage increases with only minor adjustments in the selling prices of some of our models, but it will not be possible for us to continue this policy indefinitely; and if further wage demands force us to raise our prices, our sales, particularly in export markets, are bound to be affected in the future. Nevertheless we have every confidence in the future of this progressive business and we already anticipate a further substantial increase in sales, both home and export, and a further improvement in profits in 1961.

#### (b) FURNESS SHIPBUILDING

During 1960 the Furness yard has again been fully occupied. Three large tankers were launched, whilst two tankers and one dry cargo vessel were completed and handed over to their owners. The yard will be fully occupied through 1961 and well into 1962 on existing orders including a recent contract for a floating dock for Poland.

Substantial sums are being spent on the re-equipment of the shipyard so that our facilities shall be kept in line with modern techniques. In particular heavy expenditure is being incurred in developing the steelwork fabrication facilities, which will be available to extend our trade in constructional steelwork. This will both fit into the pattern of our shipyard development and provide a further outlet for our labour and facilities.

#### (c) ALEXANDER FINDLAY

A year ago I referred to the fact that the outlook for constructional steel was uncertain

#### THE ECONOMIST MAY 27, 1961

and that competition was extremely severe. Despite this and for the reasons which I then indicated, Findlays have had another satisfactory year and continue to enjoy the advantages of their specialised skill and exceptional facilities. Competition remains severe, but our order book is satisfactory and we have no reason to fear that, so long as we continue to equip ourselves to handle the largest types of contract which are offered, we shall be short of reasonably profitable work. It is possible to forecast that 1961 will also be a busy year and profits should be at least maintained.

#### (d) PEGSON

This relatively small member of the engineering group has been fully occupied during the past year, thanks largely to our policy of maintaining the works in a high state of efficiency and to the unrelenting sales drive, particularly in overseas markets, of the management and sales representatives.

We are continuing a programme of steadily extending our production facilities so that we can improve our position as one of the leaders in the industry which we serve. The year 1961 has begun with a satisfactory order book and the capital expenditure we have incurred in recent years should be reflected in improved profits in the present year.

#### (e) PARMEKO

Parmeko have recovered from the effects of the falling off in demand for their principal products, to which I made reference in my statement relating to the accounts for the year ended December 31, 1958. During most of 1960 the works have been operating at full capacity, mainly on their traditional product, transformers, but to an increasing extent on magnetic amplifiers and other forms of electrical equipment developed in our own research laboratories.

Whilst the development of new products of this kind is a slow process we are confident of a growing demand for the types of industrial control equipment for which the Company is already becoming an established supplier. We are sufficiently confident of the long term prospects in these fields to have authorised, recently, the further extension of the Parmeko factories in order to provide capacity for increased output. Whilst these increased production facilities can only be partly remunerative in 1961, we believe that they will provide a useful increase in profits in due course.

#### (f) GENERAL

Reviewing the Sears Engineering group as a whole, the two features which stand out are, firstly, the increasing opportunities for profitable investment arising from the expansion of our existing businesses; and, secondly, the fulfilment of the forecast made a year ago, that any decline in our shipbuilding profits would be more than made good by increasing profits from other members of the group.

During the past year expenditure on buildings, plant and other capital equipment amounted to over £600,000, whilst expanding turnover, together with the incessant demand for longer and longer credit from our export customers, have necessitated an increase of more than £2 millions in the total amount of stocks and debtors. The plans to which I have referred above indicate that we shall continue to increase our investment in our engineering businesses and have confidence in the prospect of Sears

#### THE ECONOMIST MAY 27, 1961

Engineering Limited remaining a growth business.

#### MOTOR DISTRIBUTION

The year 1960 has been a difficult period for our subsidiaries engaged in motor distribution and servicing. During the early months of the year the high prosperity enjoyed in 1959 continued, but the position was reversed following the imposition of hire purchase restrictions and the increase in the Bank rate. During the second half of the year, turnover declined and losses were incurred as a result of the sudden drop in the value of used cars.

I am glad to report that since the turn of the year, sales generally have shown a tendency to improve and confidence in used car values has been restored. Whilst trading conditions in 1961 are likely to remain highly competitive, we believe that our profits in this present year will show an improvement.

#### MAPPIN & WEBB

It will be seen from the figures quoted earlier in this statement that the Mappin Group which includes Garrards, made progress during 1960.

Late in the year, the first Mappin & Webb provincial store was opened in Birmingham and we believe that this will prove to be the first step in the expansion of the retail trade of this famous business. We are spending considerable sums in modernising the Sheffield silver and silver plate factories, whose production in 1960 increased by about 20 per cent and will further increase as the re-equipment programme progresses.

The first stages in the development of this business into a growing member of the Sears group, have thus made satisfactory progress.

#### GENERAL

I have deliberately refrained from referring earlier in this statement to new acquisitions. We have not changed our views on this subject and will only add new businesses to the Sears group if they can be acquired on satisfactory terms and if either they can be conveniently integrated with our existing businesses or they are of sufficient magnitude, with adequate development prospects, to justify the effort and the employment of our capital resources. We have no need to acquire new businesses in order to maintain the growth character of Sears Holdings Limited.

During the past few years, the various businesses which we have acquired and brought together in Sears have clearly responded to the new potentialities with which we have sought to inspire them and they have demonstrated the real existence of these latent potentialities. Thus there can be no question but that the first call on our resources should be the expansion of our existing businesses; it is axiomatic that the deployment of capital in the well conceived expansion of a thriving well established business, will normally produce a better return than investment in a new venture, particularly if a high price, which largely discounts potentialities, has to be paid for such new business.

In my review of the affairs of the Sears group in 1960, I have stressed the fact that in almost every section we have substantial plans for development. I anticipate that total expenditure in 1961 on additional or more modern buildings, plant and equipment will exceed £5 millions and that the expansion of business which will

#### COMPANY MEETING REPORTS

result from this and from programmes instituted in previous years but which have not yet become fully effective, will necessitate the employment of several million pounds more in stocks, work-in-progress and book debts. It is very gratifying that the businesses should have demonstrated their growth potentials sufficiently to justify this additional investment.

Thus, whether or not Sears Holdings adds to its family, I look forward to being able to present this time next year another report which will show a continuation of the progress made in recent years.

#### 1953 TO 1961

At the beginning of this Statement I mentioned that I became Chairman of the Company in 1953. It may be of interest to remind shareholders that in April of that year holders of 'A' Ordinary Shares of 1s. each had the option of selling their shares at a price of 7s. 6d. each. Thus a holder of 1,000 'A' shares could choose between retaining his shares or accepting £375 in cash for them. If he retained them, he would now hold 2,250 'A' Ordinary Shares of 5s. each worth (on the basis of the Stock Exchange price at the time of writing this review) over £4,500; whilst including the dividend for 1960, his gross income over the same period would have been £545, equivalent to an average dividend yield of 21 per cent per annum.

#### STAFF

Once again I am glad to place on record the thanks that are due to our large staffs for their hard work, energy and enthusiasm. It is only as a result of their efforts that the plans and policy of management can be transformed from theory into practice.

## EDWARDS HIGH VACUUM

Specialists in high vacuum equipment for :  
INDUSTRY · RESEARCH · ATOMIC ENERGY · MEDICINE · EDUCATION

The 21st annual general meeting of Edwards High Vacuum Limited was held on May 24 in London, the Rt. Hon. Lord Wilmut of Selmeiston, P.C., J.P., presiding.

The following is an extract from his circulated statement:

It has been a year of record turnover with the trend established during the previous two or three years being well maintained. The Group trading profit after taxation has increased from £148,000 in 1959 to £176,000. Your Directors recommend a Final Dividend of 10 per cent on the Ordinary Shares making a total of 15 per cent for the year. This compares with 13 per cent for the previous year if allowance is made for the one-for-two scrip issue during July, 1960.

There has been a substantial increase in the total figure for Stock and Work in Progress, and this is some indication of the diversification of high vacuum equipment with further increases in our range.

The extensions to premises at Crawley are nearing completion and will come into operation during the second half of 1961. The research part of the extensions will contain some of the most advanced and comprehensive equipment for high vacuum techniques.

The Instrument Division has completed new premises of 5,000 sq. ft. on a new three acre site at Eastbourne, to be extended by a further 10,000 sq. ft. of production area later this year.

In order to secure facilities for the future production of essential components your Directors have negotiated the acquisition of the Issued Capital of J. H. Holmes & Son Limited. As a principal sub-contractor to our Company,

Head Office: Manor Royal, Crawley, Sussex.

CANADA · ITALY · GERMANY · U.S.A.

## ROYAL MAIL LINES

The Annual General Meeting of Royal Mail Lines will be held on June 14th in London.

The following is an extract from the statement of the Chairman, Mr H Leslie Bowes, CBE:

Difficulties arising from strikes in the United Kingdom and abroad, the loss of cargo due to the discriminatory practices of foreign governments, and uneconomic freight rates have combined to make 1960 a disappointing year. In view of the fall in profits and the urgent need to conserve cash resources, the Directors consider it necessary to reduce the rate of dividend from 8 per cent to 5 per cent.

"HIGHLAND MONARCH," "LOCH RYAN" and "TEVIOT" were sold in 1960. With the delivery of "ARAGON" and "ARLANZA" the Company's immediate building programme has been completed, and these two ships have joined "AMAZON" on the South American route.

The year 1960 will be remembered for the number of specially frustrating examples of unofficial and reckless strike action in the United Kingdom. Troubles in the field of industrial relations at home have not been the only problems with which we have had to contend, for our old enemy flag discrimination is on the increase, and in some of our trades has reached such a point as to make normal trading impossible. There is little a shipowner can do by himself to fight such discrimination and we feel that any improvement must be negotiated as between Governments.

Commenting on the outlook, the chairman said: Directors and management are alert to the constantly changing conditions and it may be confidently assumed that the fleets will always be employed to the best advantage.

## THE FINANCIAL NEWS LIMITED

### LORD ROBBINS REVIEWS YEAR OF FURTHER PROGRESS

Lord Poole resigned from the Chairmanship of the Company at the end of December and your Directors did me the honour of electing me as Chairman in his place. Lord Poole rendered signal services to the Company as Chairman, and we are extremely gratified that he has agreed to remain a member of the Board so that we may continue to enjoy the benefit of his wise judgment and wide experience.

We are happy to welcome as a member of the Board Mr R. A. Allan, M.P., who has rejoined the Group after ceasing to be a member of H.M. Government. Before Mr Allan joined the Government he concerned himself particularly with the management of the Investors Chronicle and The Banker and he has resumed these functions as well as undertaking other duties on behalf of the Company. In particular Mr Allan has been elected Chairman of British Telemeter Home Viewing Limited, a company to which I shall make reference later in my statement.

The accounts before you show that the Group as a whole has enjoyed another good year's trading. The profit of the Group for the year ended December 31, 1960, before charging taxation, amounted to £1,047,368 against £772,142 in the previous year. After taxation and taking credit for provisions no longer required, and after deducting the profit attributable to outside shareholders in The Financial Times Limited and its subsidiaries, the profit attributable to The Financial News is £327,497 compared with £263,505 in the previous year.

We are recommending a Final Dividend of 30 per cent which together with the Interim Dividend of 15 per cent already paid makes a total of 45 per cent for the year.

The Consolidated Balance Sheet reflects a general improvement in the overall financial position of the Group. You will see that there is an increase in the item Goodwill and Copyrights of the Company and its wholly owned subsidiaries from £127,660 to £266,009 and this increase arises from the purchase by The Practitioner Limited of the medical publishing business of E. & S. Livingstone Limited.

In accordance with our normal practice I will now give you some account of the activities of the various companies in the Group.

#### THE FINANCIAL TIMES AND ITS SUBSIDIARIES

A copy of the statement which is being circulated to stockholders in The Financial Times Limited is being sent to all shareholders in The Financial News Limited. A full discussion of the affairs of The Financial Times Limited is included in that statement to which I would refer you for an account of the development of that company during the year under review.

#### THE INVESTORS CHRONICLE

In the year under review the Investors Chronicle celebrated its 100th anniversary. It was a happy coincidence that the same year saw its greatest prosperity.

Though in the second half of the year circulation fell off slightly, I am glad to say that that loss has now been regained. The audited net

sales for the first half of this year are expected to be around 40,000.

An increasing number of companies are recognising the value of advertising in the Investors Chronicle and the paper now carries much prestige advertising. As a result the revenue continues to grow. Costs have risen too. Both in circulation and prestige the Investors Chronicle remains pre-eminent in its field, and we can look to a satisfactory profit in the current year, although it seems unlikely that last year's record will be attained.

#### THE SOUTHERN AFRICA FINANCIAL MAIL

The Southern Africa Financial Mail, which was launched by the Investors Chronicle in partnership with South African Associated Newspapers in March, 1959, has continued to maintain the high standard set by its first issues.

Originally published fortnightly, it became a weekly in July, 1960, and the rising trend in its circulation and revenue from advertisements indicates that it is meeting a need in South Africa; in spite of recent political developments there we have confidence in its future.

#### THE BANKER

The readership of The Banker continues to grow, particularly overseas. Fully one-third of its circulation is now accounted for by overseas readers—spread over no fewer than eighty countries.

Besides circulating widely among bankers and economists, it is read by industrialists, senior administrators, and institutional investors. The past year has provided ample opportunities for displaying its special blend of lively yet considered comment. These opportunities have been skillfully exploited by its distinguished editor and The Banker's high reputation has been further enhanced.

#### THE PRACTITIONER

The Practitioner, now in its 93rd year of publication, attained an all-time record in circulation during the year and its profit was well maintained. Although costs have risen, the necessity for increasing the subscription rate, which has remained at the same level for many years, has been avoided.

During the course of the year The Practitioner acquired the whole of the capital of the well-known firm of E. & S. LIVINGSTONE LIMITED, specialising in the publication of medical books. We are confident that the merger will be of benefit to both enterprises. Your directors considered that it was not practicable in 1960 to change the accounting date to correspond with that of the group. The Consolidated Balance Sheet, therefore, includes the assets and liabilities of E. & S. Livingstone Limited as at March 31, 1960, but no profit figures for the period to December 31, 1960 were available for inclusion in the Consolidated Profit and Loss Account. It is intended to change the accounting date to December 31 in 1961, and future group accounts will fully reflect the contribution of this new subsidiary to the profit of the group. In absolute terms this contribution will be relatively modest, but it will, we hope, reflect a very satisfactory return upon the capi-

tal that we have invested in this excellent company.

The present pre-eminence of E. & S. Livingstone Limited in the field of medical publishing is a tribute to the work of its Chairman, Mr Charles Macmillan and his team of full-time working Directors, all of whom continue to serve the Company in the same capacities as before. Mr Macmillan himself has joined the Board of The Practitioner, and we welcome him as a colleague.

E. & S. Livingstone Limited has continued to expand since our acquisition of the business, and profits for the year just ended are the highest on record. The expansion in the export of books to all parts of the world is particularly gratifying. Many important new books are scheduled to appear in the near future.

#### THE ECONOMIST

This Company owns 50 per cent of the share capital of The Economist Newspaper Limited. During the year the circulation of The Economist achieved a record level, as did the volume of advertising carried by the paper. Profits were extremely satisfactory. The Economist Intelligence Unit has fully maintained its unique position.

#### BRITISH TELEMETER HOME VIEWING

During the year, the Financial News Limited, in company with the Financial Times Limited, acquired a small interest in British Telemeter Home Viewing Limited. This is a British company formed to acquire the United Kingdom rights from the Paramount Pictures Corporation of a Pay Television system developed by Paramount in the United States under the name of Telemeter designed to enable viewers to buy programmes of their choice. The programmes are transmitted either over the air or through wire in a "scrambled" form. A particular device which can be attached to an ordinary television set "unscrambles" the picture on the insertion of coins in a meter. This system is operating in a suburb of Toronto where 6,000 subscribers are served.

Should the Government authorise the introduction of Pay Television in this country when it reviews the ITA and BBC charters, British Telemeter Home Viewing Limited should be able to play an important part in developing this new television medium. Our partners in the enterprise are British Lion Films Limited, Granada Group Limited, The Manchester Guardian and Evening News Limited, Paramount Pictures Corporation, Schlesinger Investments Limited (with whom Sir Michael Balcon is associated), and N. M. Rothschild & Sons.

#### PROSPECTS

It is too early for me to forecast the outcome of the current year's trading. In the aggregate, profits of the Group for the first four months show an improvement compared with 1960. But I should be hesitant to predict that the present high level of activity will continue. All I can say is that we have extremely able staffs throughout the organisation, and to the extent that the country continues to prosper your Company will continue to progress.

## THE FINANCIAL TIMES LIMITED

### SATISFACTORY RESULTS

#### LORD ROBBINS ON YEAR'S PROGRESS

The thirty-third annual general meeting of The Financial Times Limited will be held on June 13th at Bracken House, Cannon Street, London, E.C.

The following is the statement by the Chairman, Lord Robbins, CB, circulated with the report and accounts for the year ended December 31, 1960:

At the end of December Lord Poole resigned from the chairmanship of the Company and your Directors did me the honour of electing me as Chairman in his place. Lord Poole agreed to become Chairman when we were faced with the sudden loss of Lord Bracken in August, 1958, but he then indicated that pressure of other duties would allow him to remain in that position only until other arrangements could be made. We are grateful to him for his services to the Company as Chairman and are pleased that he remains a member of the board so that we continue to have the benefit of his advice and counsel.

#### PROFIT AND DIVIDEND

The accounts for the year to December 31, 1960, are drawn up in their usual full and informative way and I need not go over the figures again in detail. The consolidated profit for the year amounted to £873,088, compared with £649,990 in the preceding twelve months. After allowing for tax charges and adjustments, the interests of outside shareholders and providing for the loss of a subsidiary, the profit attributable to your Company for the year was £497,202 compared with £381,909, a satisfactory increase. Your Directors have given careful thought to the amount of the final dividend that they should recommend, having regard both to the figures before you and the general trend of the Company's progress over the past few years. They recommend a final payment of 30 per cent making a total of 45 per cent for the year compared with 35 per cent for 1959.

The balance sheet does not call for detailed comment, except to repeat with appropriately more emphasis the remark of the Chairman last year that it shows a sound position with ample cash resources available for developments in the future or to deal with any contingency that might arise in a business which is necessarily dependent on the ups and downs of the general economy. The item £68,878 advanced for the development of an associated company represents a payment to the exhibition company in which we have an interest, £39,000 of which has since been repaid.

The Financial Times again had a satisfactory year. The paper continued its expansion on a broad front and the results before you reflect the vigour and enterprise with which both the editorial and business affairs have been conducted during the year. That the paper has expanded in contents is obvious to any reader: the average size in 1960 was, in fact, 18.35 pages compared with 16.8 pages in 1959. The success of the editorial policy in appealing to an increas-

ing range of readers taking an intelligent interest in the business affairs of the world, is shown by the continued steady growth in sales. For the six months to December, 1960, the average daily net sale figure was 122,505 compared with 109,374 for the same period in 1959. Since the end of December the sales have shown a further advance.

#### GROWTH IN ADVERTISING

As the paper has expanded and the readership grown, so has its attractiveness to advertisers, and last year advertisement revenue from all sources showed an increase of 21.5 per cent—almost the same percentage increase as in the previous year, although the actual increase was, of course, higher.

The biggest increase was easily in revenue from industrial display advertising which last year in total accounted for about 58 per cent of all our advertising revenue. In the year 1938, the last complete pre-war year of the old Financial Times, this percentage was 17. Our appeal then was much more confined to financial or 'City' affairs and our sources of revenue were correspondingly restricted. The Financial Times remains pre-eminent as the paper for financial advertising but it is gratifying to record in this tangible way the success over the past fifteen years of the policy of broadening the appeal of the paper to a wider circle of readers.

There is another aspect of this matter. Newspaper costs, as the public has learnt from some tragic examples during the past year, have mounted relentlessly since the end of the war. We have had to face increases in successive years of the order of 20 per cent and more, and the rise still continues. Had the paper remained in the pattern of pre-war days, and dependent solely on its former sources of revenue, it would have had a hard struggle to survive. It is the success of this policy of expansion under the inspiring editorship of Mr Gordon Newton that has enabled it to reach out to new sources of advertisement revenue and thus surmount these rising costs and, at the same time, to find money for the post-war expansion and development. A Royal Commission is at present inquiring into the whole question of costs and other matters affecting the well-being of our industry and we await with interest such enlightenment as in due course its members can throw upon our problem.

#### ST CLEMENTS PRESS

Reference is made in the accounts to the trading loss of a subsidiary. This is our printing business, St Clements Press, in which we hold an 80 per cent interest. Although a trading loss was incurred, it was greatly reduced by comparison with 1959, but heavy non-recurring expenditure was incurred in the closing down of the former Speights division of its business. Some important plant and the freehold site in North Kensington have not yet been sold. We

expect to achieve an overall profit on the realisation. The Company has not yet filled to capacity the enlarged printing plant installed in Bracken House two years ago, but it has expanded the sales of its City Printing Service and its Service to Advertising Agents, the two sectors to which it must mainly look for its future prosperity.

#### HISTORY TODAY

History Today completed its 10th year of publication in December and had another year of unspectacular but steady progress. Under the joint editorship of Messrs. Peter Quennell and Alan Hodge, this monthly magazine has developed a gratifying net sale of 23,308. It has a widespread distribution both at home and overseas. During the year we were pleased to welcome back to the board of History Today, Mr John Rodgers, MP.

#### INDUSTRIAL AND TRADE FAIRS

Industrial and Trade Fairs, our associated company of exhibition organisers, is now well into its stride. Last year it ran the Photographic and the Engineering Materials and Design Exhibitions in London and the Factory Equipment exhibition in Manchester. Its biggest enterprise so far is the British Trade Fair in Moscow—a major event in the UK's export drive—the organising of which has called for quite extraordinary efforts and resourcefulness on the part of the staff of that company. It has also been actively concerned in the arrangements for the reciprocal Soviet exhibition in London this year. We are partners in this Company with the George Newnes Group, and our partners and ourselves, together with Beck & Pollitzer, jointly purchased towards the end of 1960 the business of F. W. Bridges & Sons Ltd., a well-established company of exhibition organisers. Industrial and Trade Fairs is also organising the International Construction Equipment exhibition at the Crystal Palace this summer.

The successful launching of Industrial and Trade Fairs and its development since has been largely due to Lord Drogheda, its Chairman, and Mr V. G. Sherren, its Managing Director and moving spirit. The Company traded at a profit last year.

#### CAPITAL PROPOSALS

I wish to say a few words in explanation of the proposals with regard to the capital of the company that are being submitted to an extraordinary general meeting following this meeting. The resolutions embodying these proposals may appear complex but in essence they are simple and, I trust, such as readily to commend themselves to you.

Over the past few years, an appreciable proportion of the profits has each year been retained in the business and added either to the general reserve or the balance of unappropriated profits. In the balance sheet before you these sums total

## IMPERIAL CHEMICAL INDUSTRIES

### MR S. P. CHAMBERS ON TAXATION PROPOSALS

The Thirty-fourth Annual General Meeting of Imperial Chemical Industries Limited was held on May 18th in London.

Mr S. P. Chambers, CB, CIP, the chairman, presided and, in the course of his speech, said:

I feel that the Press reports of what we are doing and propose to do at Rotterdam may inadvertently have led to some misunderstanding about the timetable of these developments. After a most thorough examination, we decided that it would be a good, long-term policy to establish ourselves as substantial manufacturers of chemicals within the European Economic Community. Holland is well placed both for manufacturing facilities, including raw materials, and for access to markets. We have therefore taken an option on a lease from the Port Authorities of Rotterdam with the intention of developing this site as opportunity offers in the years to come. As yet there are no cut and dried plans about the manufacturing plants to be erected but there is every reason to expect that this large site at Rotterdam will develop so that ultimately, which means over a period of a number of years, we shall have a complex of integrated chemical plants working efficiently in the European Economic Community which will be comparable in size to those already operating at Wilton and now in course of construction at Wernside. We have come to the conclusion that manufacture on this site is likely to prove sound and profitable whether Britain becomes more closely associated with the European Economic Community or not.

Nearly £40 million of capital expenditure was sanctioned during 1960; already in 1961 we have approved the expenditure of a further £45 million. This is some indication of the large developments which are now in hand although it will be some time before the expenditure on these new projects will be completed.

#### CURRENT POSITION

In the first half of 1960 our sales were particularly buoyant. So far sales in 1961 are about equal in volume to those in the corresponding period of 1960, but profit margins are likely to be kept down by competition both at home and overseas. Taking everything into account there is no evidence which would justify any modification of the statement made by the Directors when announcing the new capital issue in January of this year that we would hope to maintain on the increased capital the same total rate of dividend as is proposed for the year 1960.

The new capital issue of one share for every £20 of ordinary stock held was a most successful operation and the Company's capital and reserves have been increased as a consequence by a sum of £34 million.

I cannot let this opportunity pass without some reference to the taxation proposals in the Budget which the Chancellor introduced last month. The reliefs from surtax in respect of earned income have been long overdue and the starting point for surtax of £2,000 which had remained unchanged for 41 years, notwithstanding the fall in the value of money, was perhaps the greatest anomaly of our taxation system. The Chancellor's action in raising the effective starting point for surtax on earned income to

£5,000 is bold and imaginative. I believe it will go a long way towards solving the problems which arise from the difference between net earned income for business executives in Britain and those in competitive countries such as Germany and the United States. There are a number of ways in which this change in the taxation of the middle range of executives will act as a spur.

I am less happy about other proposals in this Budget. Profits tax, which is payable in addition to income tax and is not allowed as a deduction in arriving at the profits to be charged to income tax falls entirely upon the profits belonging to ordinary stockholders, and some of us have been campaigning for years for the abolition of this tax on enterprise. In the days of the Labour Government we were assisted in this struggle by Mr Selwyn Lloyd himself and can feel disappointed that he has so far fallen from grace now he is in office as to do the very opposite of what he advocated fourteen years ago. He then opposed the introduction of Profits Tax; today his increase of Profits Tax to 15 per cent puts British company taxation up to 53.75 per cent, which is above that in the United States and other countries, and above that which in 1948 he described as fantastic and which he considered would cause the lingering death of private enterprise in this country. Capital is as important for modern industry as labour, yet the reward for saving and investing in private enterprise continues to be singled out for special punishment not meted out to any other income.

#### FUEL OIL TAX—A BAD FEATURE

Another bad feature of this year's Budget is the tax on fuel oil. This tax, coming after Ministerial statements that they would let consumers, and particularly industrial consumers, have an unfettered choice of fuels and would not seek to protect the coal industry by taxing oil, has come as a surprise and a deep disappointment. Less than 10 per cent of this tax will fall upon private consumers and most of the rest will fall upon private industry or the cost of generating power.

At a time when British industry is being urged to reduce costs, this direct addition to costs will be a serious blow to the competitive power of substantial sections of British industry, both in its export trade and in the home market where the competitive power of British industry against foreign imports is just as important as exports. Ministerial statements about the need for exports and reducing costs sound rather insincere when the Government's own deliberate action adds substantially to manufacturing costs. To argue that there are one or two other countries which have imposed a tax of this kind is no answer in this country where the balance of payments position is critical and action putting up competitive costs seems rather irresponsible.

In spite of these tax changes, I believe that the Company's strength and technical developments at the present time are such that we can hold our own and make substantial further progress both at home and overseas in the rest of 1961 and in the years to come.

The report and accounts were adopted.

## CADBURY BROTHERS LIMITED

TOTAL SALES OF NEARLY £87M.

GRATIFYING EXPANSION OVERSEAS

COMPANY'S CONTRIBUTION TO WEST AFRICA'S PROSPERITY

### MR PAUL S. CADBURY ON THE COCOA MARKET

The sixty-second annual general meeting of Cadbury Brothers Limited will be held on June 12, 1961, at Bournville, Birmingham.

The following is a statement by the Chairman, Mr Paul S. Cadbury, which has been circulated with the report and accounts:

#### RAW COCOA

For fifty-two years we have been buying cocoa in West Africa. In the early years both the scope of our operations and the size of the whole cocoa industry were small. In the 1960-61 season the crop was an all time record. In Ghana alone the total crop is estimated at 430,000 tons, worth £80,000,000 on the world market. The amount bought by the Cadbury Fry Agency on behalf of the Cocoa Marketing Board was 61,000 tons and was also a record.

This is the last season, however, in which we shall be buying cocoa directly from Ghanaian farmers. Since the formation of the Cocoa Marketing Board during the war, we have only been able to buy cocoa as licensed buyers for the Marketing Board. Our factories have had to buy from the Board for their own requirements, and thus only a small proportion of the cocoa handled by our Buyers in Ghana has in fact been secured for our own use. The changes, therefore, are unlikely to make much difference to us. In spite of this we regret the severance of what has been a long and happy association. We have made many friends in Africa. As customers for the cocoa they grow we hope to retain these friendships.

Fifty years ago our staff consisted of European buyers with African drivers and storekeepers. Over the years we have increasingly trained and appointed Africans to positions of trust so that now there remain only a handful of Europeans and the main day to day responsibility for selection, grading and purchase of cocoa rests on our African supervisors and buyers. Cocoa must still be bought and I am glad that our trained African staff are being absorbed within the new Government-controlled buying organisations.

I should like to pay a warm tribute to the Europeans, who though few in numbers have for over 50 years ensured the success of our activities in West Africa. The presence of our buying agency has undoubtedly improved the standard and quality of cocoa produced on the Coast, and this in turn has contributed to the prosperity of West Africa. The policy which the Agency has followed of encouraging and trusting their African colleagues will ensure that this hand-over of responsibility will be achieved with great good will on both sides. The existence of trained African buyers will ensure the continuance of high standards of quality and integrity in the new conditions.

As I have already said, the Ghana crop is an all time record and crops have also been good in the other cocoa growing territories of West Africa. In the 1957-58 season Ghana produced

207,000 tons, Nigeria 81,000 tons, and what were then the French Territories of the Ivory Coast and Cameroons, 109,000 tons. It is estimated that the figures for this season will be 435,000, 185,000 and 165,000 tons. In only three years a serious world shortage has become a substantial surplus. In 1957-58 the spot price ranged between £272 and £407 per ton, and today the spot price is about £180 per ton. The effect of the shortage and the consequent high prices was a diminished use. The effect of the present surplus is inevitably a diminished price. In the long run this will ensure increased use, but in the short run stocks of cocoa will rise. Violent fluctuations are always bad both for the grower and the manufacturer.

As individual manufacturers we cannot influence the world market price. Nevertheless we are watching with interest the activities of the FAO Cocoa Study Group which has for some time been considering whether an international price stabilisation scheme is possible for this industry.

Our own operations are naturally affected by these violent fluctuations. We dislike high prices, as they reduce the value we can offer to our customers, but a steep fall in prices carries its own problems. The scale of our operations is so large that even though by holding large stocks we avoid the peaks, we cannot always wait for the valleys. I reported last year that at the end of 1959 we had followed our usual practice of writing down the value of our stock to its market value. We have followed the same practice this year.

#### TRADING EXPERIENCE, HOME AND EXPORT

Our group sales increased from £85,000,000 in 1959 to £86,700,000 in 1960. Sales on the home market were only slightly up, which in view of a cooler summer was disappointing. On the other hand export sales showed an encouraging increase of 10 per cent. This was shared by our two chief dollar markets, USA and Canada, and by our general exports to other parts of the world. Total sales of Cadbury products to these dollar markets were over 4,890,000 dollars, divided in the USA equally between block chocolate and chocolate biscuits. In Canada, where we manufacture block chocolate in our factory in Montreal, imports from this country are mainly chocolate biscuits and, to a lesser extent, chocolate assortments.

#### OVERSEAS FACTORIES

In Australia, New Zealand and Ireland our companies have all had a successful year's activity. In every case sales have increased and profits are satisfactory. Trading conditions in both South Africa and Canada have been difficult. Our operations in India are severely limited by the restrictions imposed on the importation of both machinery and raw cocoa. Nevertheless we have had a good year and sales have increased. At present we are manufactur-

ing in two small factories in Bombay. We are purchasing land outside the city, so that, if and when control regulations are relaxed, we shall be able to expand our output further and to develop an up to date factory on the site.

Since the war our trade in Western Germany has steadily increased. At first this was export trade. When it became clear to us in 1954 that exports must soon come to an end, we started what, for this Firm, was an entirely new venture. We appointed a German manufacturer, the Hanseaten-Schokoladen-Werke, as agents, to manufacture our goods locally in Western Germany. This firm has a well-equipped factory at Bremen. From September, 1955, Cadbury's Vollmilch and Cadbury's Bournville Chocolate were produced at Bremen under licence. This business grew, and by last year more than three-quarters of the output of the Hanseaten-Werke factory consisted of Cadbury goods, mostly block chocolate. Our Firm has now formed a company, registered in Germany in the name of Cadbury-Fry GmbH, which has taken over the whole of the Hanseaten-Werke firm and factory in Bremen, as well as the firm and organisation of Max Schierbeck in Hamburg who from the outset have handled the sales side of our German business.

I recently visited the factory in Bremen and the Firm's new offices in Hamburg and was impressed not only with the potential importance of this undertaking to our Group but with the ability and enthusiasm of the local Directors and Staff.

The combined sales of our overseas companies now exceed £17,800,000.

#### J. S. FRY AND SONS

Cadbury Brothers Limited and J. S. Fry and Sons Limited were amalgamated within the British Cocoa and Chocolate Company Limited 41 years ago. Although in buying, engineering, export, transport and some aspects of production the two Firms are very closely integrated, in the home selling field both the organisation and the good will have been developed as two separate entities. Fry's sales, home and export, at £12,200,000, are a record for the company and represent an increasingly important part of our group turnover.

#### FACTORY DEVELOPMENT

A large new manufacturing block was completed at the Fry Somerdale factory during the year and a start was made on the further developments at the Moreton Cadbury biscuit factory. At Bournville, where we have to pull down old buildings before we can build new ones, work on the first of the three phases of redevelopment started at the end of the year.

#### RESULTS

In 1959 results were affected by a large writing down in the value of our stocks of cocoa. As

I forecast a year ago, we recovered a large part of this during 1960. In spite of some further writing down at the end of the year the consolidated net profits are £4,954,431. Of this £3,000,000 has been transferred to Revenue Reserve and will be available to meet the com-

mitments of the Company for the future including the establishment of our Germany Company and the provision of new buildings at Bournville and Moreton to which I have already referred.

In conclusion I would like to thank all our

employees for their loyalty and enthusiasm. In business men and women are of greater importance than buildings and machinery and the continued progress of the Company depends very largely on the efforts of individuals within the organisation.

## THE CUNARD STEAM-SHIP COMPANY, LIMITED

### THE PRICE OF STRIKES

Sir John M. Brocklebank, Bart, Chairman of the Company, in a statement to stockholders for submission at the eighty-fourth Annual Meeting to be held on June 14th, says:

At this time last year all the evidence available led me to believe that our 1960 figures would show a modest improvement over 1959, but instead the operating surplus is down by £498,000. The seamen's unofficial strike and the strike of London tally clerks in 1960 cost the company nearly twice that amount. Cunard Eagle Airways came into the consolidated accounts for the first time and from a profit of about £100,000 in 1959 incurred a loss of approximately £100,000 in 1960. The valuation of aircraft at the year end of £1,030,651 features the main asset of our new venture. Since the year end further aircraft have been acquired and the fleet is now worth approximately £1,860,000. Port Line did slightly better than in 1959 but the drop in Brocklebank's profits was not wholly arrested as I had hoped a year ago. The year's surplus has fallen by £232,817 from £900,560 in 1959 to £667,743 in consequence of the reduced operating surplus and increased depreciation, compensated by the saving in taxation. The directors recommend a dividend of 6 per cent.

In fairness to all concerned, and particularly to the Management in view of the £498,000 drop in gross operating profit, I think you should know the following facts and figures. The strike of the London tally clerks cost the group £261,000. The seamen's unofficial strike, coming at the height of the passenger season, cost £398,000 in direct and accountable loss. This figure is only part of the damage because we undoubtedly lost many more passengers who failed to use our services because of the uncertainties of future sailings, caused by the strike. Statistics can mislead but over the years we have found that two-thirds or more of our passengers emanate from the USA and Canada and that our eastbound carryings in the first half of the year are usually a good indication of what we can expect westbound in the second half. Up to the strike which began in early July, profits were encouragingly up on the previous year but after early July our bookings both ways fell off alarmingly and we calculate that passengers who deviated to foreign ships or airlines account for another £250,000 loss of profit. This deviation of trade was not confined to passengers and we had on occasion the irritating and almost ridiculous experience of being asked by shippers to transfer cargo bookings from Cunard ships to a Swedish cargo ship on time charter in order to insure against the uncertainties attached to a ship manned by a British crew. How many more parcels of cargo we lost to foreign competitors for this reason is not known, but the amount must be considerable. You will see, therefore, that in gross operating profit the group lost,

as a result of these two strikes, not less than £909,000.

### INCREASED CREW COSTS

Most people are bored by repetition of the obvious but it is my duty to reiterate that unlike most other industries shipping has no home market and in the case of Cunard the majority of the competition both sea and air is foreign. In short, increased British crew costs can seldom be passed on to the customers. Last August wage increases raised the crew costs of one of our large units by 14 per cent. At the time of writing another wage demand is being negotiated which if granted in full would mean that the crew costs of our larger units would rise by approximately 48 per cent in under a year. I know of no comparable increase in any other industry. The goose that lays the golden eggs is not by any means dead but unless we have a period ahead of reasonable stability her actuarial expectation of life must inevitably be shortened.

Cunard Eagle Airways had a good year in 1959 and a disappointing one in 1960. This decline in profits in their first year in the Cunard Group is in the main accounted for by three factors. Firstly, their plans for 1960 were made before the terms of the Civil Aviation (Licensing) Act 1960 were known and for policy reasons it was deemed expedient to make certain changes in the 1960 programme which had to result in a short term loss. Secondly, we were faced with opposition on the Miami/Nassau shuttle service which was unforeseen as we were under the impression that it was beyond the terms of that particular competitor's licence. Negotiations are in progress which we hope will improve the profitability of the service. Thirdly, the whole of the Eagle headquarters including office buildings, maintenance facilities, equipment and spares had to be moved from Blackbushe to London Airport and all the costs of this move are included, although they are non-recurring. The hearing of our application for a passenger licence across the North Atlantic is scheduled for May 16th; the outcome is of tremendous importance to your Company.

We have always maintained that sea and air should be complementary and I think the far-seeing comments of the late Sir Percy Bates, 19 years ago will be of interest. "Then, too, we have the air. I think our Company will need to enter this element in one way or another even though given a fair field the sea can probably hold its own. But once the possibility exists it will be availed of, and in any case there will be a passenger traffic created out of nothing by the new possibility and not in itself competitive with the sea. The situation would change if air traffic were to be subsidised to an extravagant degree and there will be much pressure in this direction. I think we shall have to take to the air, or at the very least maintain a direct association with it."

### TENDERS FOR Q-3

On the replacement of the *Queen Mary*, the "Memorandum of Points of Agreement between The Cunard Steam-Ship Company Limited and Her Majesty's Government" have been printed as a White Paper together with the explanatory and financial memorandum on the North Atlantic Shipping Bill of March 22, 1961. There is no point in my elaborating on these two documents in view of the wide publicity given to them and at the time of writing the Bill has been through the second reading in the House of Commons and is now in the Committee stage. Invitations to tender for the new ship, together with detailed specifications have been sent out to the six yards capable of constructing a ship of this type (you will no doubt have read in the Press that for this venture Messrs Vickers and Messrs Swan Hunters are proposing to join forces), and we expect to receive the tenders at the end of July. For administrative convenience and in agreement with the Government it has been decided that the ship should be operated by a one-ship Company and for various reasons the Cunard White Star Company lent itself readily for this purpose.

### U.S. BUSINESS IMPROVEMENT

Last year has shown that it is difficult, if not impossible, to forecast the future. We have learnt from bitter experience that any recession in the American economy has an immediate effect on our business, but there are signs that American business in general is now tending to improve. Passenger business to and from Canada was disappointing in 1960 and there are no signs of improvement, understandable in view of the present high unemployment percentage. Over the years the Canadian passenger trade has always shown violent ups and downs but if one has faith in the future prosperity of the country which most of us have, bearing in mind the vast natural resources, it is reasonable to suppose that there will in the near future be another upsurge of immigration as Canada is unlikely to be able to make full use of its potentialities unless there is a sizeable increase in population. We have four modern ships built for the Canadian trade and are in a position to take full advantage of any increase in passenger movement. On the freight side there are faint indications that some freight rates are to be increased but the fact remains there are still too many ships for the cargo available which in turn means that tramp rates are unlikely to rise appreciably in the immediate future. Sooner or later this situation will alter but I can see no cause for short term optimism.

In conclusion, to all who loyally serve our Group, ashore, afloat and in the air, and to our worldwide agencies, I send our warmest thanks for their untiring efforts, hard work and achievements, more often than not in the face of adverse or frustrating circumstances.

## KOCKUMS MEKANISKA VERKSTADS AKTIEBOLAG

MALMÖ, SWEDEN

(Shipbuilding)

The Annual General Meeting of KOCKUMS MEKANISKA VERKSTADS AKTIEBOLAG was held in Malmö on April 27, and the following are details of the Report presented by the Board of Directors.

### SALES AND PRODUCTION

World economic developments have not resulted in any noticeable improvement in the freight market. Nevertheless, as the volume of laid-up tonnage fell considerably as a result of the extensive scrapping of older vessels, it appears that a gradual improvement of the freight market position can be expected. Despite the continued weak freight market, demand for new tonnage was stronger than during the last few years. It is felt that the world shipbuilding industry will find it difficult to ensure full utilisation of its facilities. Competition has become keener and profits on new orders are less satisfying. The demand for considerable long-term credits increased whilst capital for this purpose became scarce on the Swedish money market. Both the works and the engineering offices continued to find difficulties in recruiting adequately trained staff.

Rationalisation activities were further intensified in efforts to save costs and manpower.

Demand for repair and refitting contracts was moderate. The shipyard received new orders for merchant vessels which, in deadweight tonnage, slightly exceeded the year's deliveries. The rolling stock department received orders in sufficient quantities to ensure full employment during the present year.

A sales company AB KOCKUM-LANDS-VERK EXPORT COMPANY, was formed to capture a greater market for the products of the Company and of AB LANDSVERK.

Invoiced sales amounted to Kr. 274 million, as against Kr. 318 million for the previous year. The following nine merchant vessels were delivered.

| Name of Ship                                                          | Tonnage d.w. |
|-----------------------------------------------------------------------|--------------|
| M/S "AGNETA BILLNER" ...                                              | 19,960       |
| M/S "KAUPANGER" .....                                                 | 19,950       |
| T/T "ESSO BRUSSELS" .....                                             | 40,800       |
| T/T "TEXACO ALASKA" ...                                               | 41,050       |
| M/S "BLACK OSPREY" .....                                              | 8,650        |
| M/S "PEARL SEA" .....                                                 | 6,130        |
| M/S "CORAL SEA" .....                                                 | 6,130        |
| M/S "ALEPPO" .....                                                    | 15,350       |
| M/S "BONITA" .....                                                    | 15,300       |
| Two further ships were also delivered, following extensive refitting: |              |
| M/S "WORLD CAVALIER" ...                                              | 21,680       |
| M/S "WORLD CITIZEN" .....                                             | 21,680       |
| Total .....                                                           | 216,680      |

(Total d.w. Tonnage last year 206,180.)

The submarine *Uttarn* was delivered to the Royal Swedish Navy.

### PLANT

The plant for the rational handling, blasting and cutting of steel plates was put into commission. A new shop is under construction which will enable the Company to assemble larger ships' main engines.

### PERSONNEL

An average of 4,245 workers and 1,330 other staff was employed during the year compared with 4,320 workers and 1,257 other staff during previous year. Wages and salaries amounted to Kr. 53,567 million with Kr. 1,230 million going to the Board of Directors, Managing Director and other top executives, and Kr. 28,088 million to other officials.

### VALUATION OF THE COMPANY'S ASSETS

The value of buildings was reduced in accordance with the relevant depreciation policy. The book value of machines and equipment, which had increased as a result of renewals during the year, was depreciated by 30 per cent as before. Stocks of material and unfinished work as well as the price-reinsurance reserve have increased slightly.

### INVESTMENT FUND

A total of Kr. 3 million was set aside for the investment fund and Kr. 8,984 million was appropriated from previously allocated funds to an additional buildings depreciation provision.

### RESULTS

The Board of Directors proposed that the 1960 profits of Kr. 12.2 million, which together with the balance of Kr. 3.82 million brought forward from previous year produced a total of Kr. 16.02 million, be allocated as follows:

|                                                                                                                                  | Kr.        |
|----------------------------------------------------------------------------------------------------------------------------------|------------|
| To Reserve fund ... ..                                                                                                           | 1,240,000  |
| To Emergency fund ... ..                                                                                                         | 6,000,000  |
| To Distribution of Kr. 7 dividend on Preference Shares against Coupon No. 63 and on Ordinary Shares against Coupon No. 47 ... .. | 4,200,000  |
| Carried forward ... ..                                                                                                           | 4,580,000  |
| Total                                                                                                                            | 16,020,000 |

The report, the accounts, and the proposals put forward by the Board of Directors were adopted.

### BOARD OF DIRECTORS

Having completed 22 years on the Board, the Company's Chairman, Bank Director Ernst Cason Herslow, now wished to retire. He was replaced by Mr Stig Sahlin, Swedish Ambassador in Copenhagen. The other members of the Board are: Frans Kockum (Vice-Chairman); J. Malmros, Gösta Lundeqvist; Nils Holmström (Managing Director); Gunnar Kockum, E. Wikander, Einar Hansen, Ian D. Hamilton.

## THE HALIFAX BUILDING SOCIETY.

ONE HUNDRED AND EIGHTH ANNUAL MEETING

Statement by  
ALGERNON DENHAM, JP

The one hundred and eighth Annual Meeting of the Halifax Building Society will be held on May 29th, the President, Mr Algernon Denham, JP, presiding. The following are extracts from his statement:

Nineteen-sixty will probably be mainly remembered among building societies for the coming into effect on October 1st of the Building Societies Act, 1960. This was a comprehensive piece of legislation designed to provide additional safeguards to the investor, and with this object we are in full sympathy; indeed, it accords with what the Halifax has advocated over many years.

The clauses governing lending policy should do much to ensure that building society funds are not used for purposes other than those which were in the minds of the founders of the movement, while the additional powers conferred upon the Chief Registrar fulfil the hopes I expressed a year ago that he would be able to take effective action at a much earlier stage than was hitherto possible.

Much has been said and written recently on the question whether building societies tend to hold a larger proportion of their assets in readily realisable securities than is necessary and the Halifax has not been immune from such comment. Under the House Purchase and Housing Act, 1959, a ratio of liquidity of 7½ per cent to total assets is the minimum permissible if a Society is to enjoy Trustee status. In my view, however, any tendency to regard that percentage as a maximum as well as a minimum should be avoided. To begin with, the fact that a standard has been laid down below which a society wishing to retain Trustee status must not fall makes it most desirable to maintain a substantial cushion of liquid funds over and above that standard. Secondly, although, while the going is good and a society conducts its operations prudently, there should be no need for substantial inroads to be made upon liquidity, we must at all times be ready to guard against exceptional circumstances.

The Society's reserves, including the balance carried forward on revenue account, now stand at £17,236,853 or 3.51 per cent of total assets compared with £15,960,667 or 3.62 per cent in the preceding year. Last year I was happy to record that the reduction in the standard and composite rates of income tax in 1959 had enabled us to increase the surplus available for adding to reserves. In 1960, however, the composite rate was increased to 5s. 4d. from 5s. 1½d. in the £ while we also suffered from the increase in the rate of profits tax to 12½ per cent. These factors, added to rising costs and additional administrative expenditure caused by new legislation, make it increasingly difficult to place sufficient to reserves to enable the reserve percentage to keep pace with the growth in assets. The Government could, of course, make a valuable contribution by recognising that profits tax is totally inapplicable to an institution such as a building society working on mutual lines for the social benefits of the community. Our bill for profits tax in the year just past is £477,524, a figure which speaks for itself. The extra 2½ per cent proposed in the recent budget will on present figures cost us over £100,000 annually in future.

## BLOCK & ANDERSON LIMITED

### A VERY SUCCESSFUL YEAR

#### GROWTH OF EXPORTS

#### MR A. E. BLOCK'S STATEMENT

The thirtieth annual general meeting of Block & Anderson Limited, was held on May 24th at the registered office of the Company, Banda House, Cambridge Grove, Hammersmith, London, W., Mr A. E. Block, Joint Managing Director, presiding.

The secretary (Mr R. W. Finnemore) read the notice convening the meeting and the report of the auditors.

The following is the Review by the Chairman circulated with the report and accounts for the year ended November 30, 1960:

I am pleased to inform you that this year has been a very successful one for your Company.

The group profit of £317,861 before taxation compares with last year's figure of £242,043. In May of last year the one-for-one scrip issue increased the paid up Ordinary capital from £236,500 to £473,000, and in November an interim dividend of 7½ per cent was paid on this increased capital. Your Directors now propose a final dividend of 17½ per cent. This represents a total distribution, including Preference dividends, and before deduction of tax, of £124,250 this year as compared with £97,250 last year.

After absorbing £86,982 towards the scrip issue of shares, and allowing for the dividends, the balance of unappropriated profit of the

#### COMPANY MEETING REPORTS

Group to be carried forward amounts to £379,120 compared with £391,498 brought in.

#### TWO NEW PRODUCTS

As a result of our vigorous policy in development, during the last year we introduced two new products, namely the Bandatronic and the Bandaprint.

The Bandatronic is an Electronic Sterling Computer which calculates for as many as six typewriters used simultaneously. It was developed in co-operation with Messrs Pye Limited and will be available in the New Year.

The Bandaprint is a Diazo Systems machine designed to provide a simple, fast and efficient method of producing multiple copies of varying size from a translucent Master. It is of particular advantage for certain order and billing routine applications.

We shall continue our development efforts with a view to further increasing our range of products as well as keeping in the forefront with our present range.

#### LARGER PREMISES

Continuing our policy of expansion, we are in the process of obtaining larger premises on a freehold basis for several of our branches, and the capital commitment you see noted in the Balance Sheet is mostly in respect of these premises.

In March of this year we availed ourselves of the opportunity to occupy the remainder of our Hammersmith premises, representing more than 40,000 square feet floor space, which we had previously sub-let. This increases our total floor space at Hammersmith to approximately

#### THE ECONOMIST MAY 27, 1961

150,000 square feet and we are constructing a group of entirely new showrooms on the first floor of our main building. These should be completed this summer. Our previous London Showrooms at Kensington Church Street thereby became redundant and we consequently disposed of them.

#### SALES EXPANSION CONTINUING

Both our home and export sales continue to expand and the results of the year to date have been satisfactory. It is interesting to note that last year more than 70 per cent of our output of Banda Spirit Duplicators was exported. Our South African subsidiary continues to give excellent results and, whilst the economic situation in Canada gave rise to certain difficulties, energetic steps have been taken to deal with them.

It is with deep regret that I have to inform you of the death in March of my brother and co-Director Valentine H. Block, who joined the firm of W. Block and A. Anderson in 1929 and later became a Director of our Company. He was greatly esteemed by all who knew him and will be sadly missed by his colleagues and many friends.

Finally, on behalf of my co-Directors and myself, I wish to express our appreciation and thanks to all the management and staff both at home and abroad, and to our agents and suppliers for their valued services and co-operation.

The report and accounts were unanimously adopted and the proposed dividend was approved.

The retiring director, Mr W. Crosskey, FCWA, was re-elected and the remuneration of the auditors, Messrs Peat, Marwick, Mitchell & Company, was fixed.

| Dividends ... ..          | 629    | 581         | 393    |

**TRADING CONDITIONS.** Narrowing profit margins were offset by a 10 per cent increase in turnover of the UK factories and by improvements in plant and techniques. There is evidence that expanding road and bridge construction, railway modernisation and building will bring substantially increased requirements for our wire, which the Company is now well placed to meet.

The benefits of a major plant reconstruction in the Hood Haggie Group should begin to be felt in the last quarter of this year and its results should then progressively improve.

**OVERSEAS.** Total exports from the UK factories amounted to £5 million. Since 1955 the parent company's exports have increased by over 40 per cent in spite of the increase in the number and size of our overseas manufacturing units.

**PROSPECTS.** Profit is becoming more and more dependent upon efficiency of methods, and in future, will depend increasingly on an active and vigorous research and development effort. The increased level of Profits Tax and the threat of a pay-roll tax reduce the money available in industry to finance expansion and, together with the tax on fuel oil, will serve to increase costs and make competitive selling in export markets more difficult.

# THE NATIONAL BANK OF GREECE

## and the Implementation of the Five-Year Development Programme of the Greek Government

The address of Mr. D. E. Helmis, Governor of the Bank, to the Shareholders' General Meeting of 30th March, 1961

### THE ACTIVITIES OF THE BANK IN 1960

Presenting the Report of the Administration of the Bank for the year 1960 Mr Helmis stressed the favourable perspective created for Greece's economic future by the implementation of a rational development programme.

The fact, he said, that the acceleration of the increase in national income is attained without any disturbance in the stability of currency and foreign exchange conditions, proves that the systematic efforts made by the Government in order to give the country's economy a wider and stronger basis have been successful.

The outlook for developments in the near future is favourable. There are many indications that under the pressure of an increasing domestic demand, a further advancement in the economic growth of the country

will be achieved. Not only the increase in incomes already obtained, but also an enlarged programme of public investments will contribute to the expansion of economic activity.

The real capital of the country is continuously increased by the construction of new public infrastructure works, as well as by the establishment of productive units through private initiative.

The efforts to make Greek economy more self-supporting have been planned and realised with a view to the imminent close cooperation of this country with the highly developed industrial countries of the West.

1960 has been the first year of implementation of the Greek Five-Year Development Programme. The results obtained so far, thanks to the systematic and rational activity

displayed by the Greek Government, prove that the goals set out in the Five-Year Programme have been attained in due time.

As regards the development of the operations of the National Bank of Greece, the Governor emphasised the favourable results realised during 1960, which permit the distribution of a dividend of 80 Drachmae per share as in the years 1958 and 1959.

The following figures (in million Drachmae) show the evolution of the Bank's business:

| End of year | Total Loans and Advances | Total Deposits |
|-------------|--------------------------|----------------|
| 1954 .....  | 4,560.1                  | 2,762.2        |
| 1955 .....  | 4,550.4                  | 3,076.2        |
| 1956 .....  | 5,532.8                  | 4,344.6        |
| 1957 .....  | 7,243.2                  | 6,616.2        |
| 1958 .....  | 8,667.1                  | 8,080.6        |
| 1959 .....  | 9,875.0                  | 9,911.0        |
| 1960 .....  | 11,387.1                 | 11,159.9       |

## BAIRNS-WEAR LIMITED

### FACTORS AFFECTING RESULTS

#### MR C. L. O'CALLAGHAN'S

### CONDEMNATION OF TAKE-OVER RUMOURS

The 26th annual general meeting of Bairns-Wear Limited was held on May 19 at Notting-ham, Mr Clement L. O'Callaghan, FCA (the chairman), presiding.

The following is an extract from his circulated statement:

Although sales in 1960 showed a small increase on the previous year it has not been possible to maintain the same level of profit. The principal factors affecting our results were the writing-down of wool stocks by £50,000, our inability to make and deliver all late orders for the spring and autumn seasons, and an increase in the charge for maintenance and repairs. The tendency for the retail trade to order later and in smaller quantities continues and shortage of labour in certain sections aggravated our difficulties. The labour situation is being remedied by a continuous training programme, the cost of which has also had an effect upon profits.

The repairs include a sum of £27,000 expended in 1960 on our Workshop premises, being part of a course of expenditure necessitated there in circumstances which are the subject of pending proceedings for recompense brought by the Company in the High Court. It is inappropriate at this stage for me to give any estimate of the total cost of the further repairs which are necessary.

The Accounts now submitted show a Net Trading Profit for the year of £189,392 as compared with £303,424 in the previous year. The charge for taxation has been reduced by bringing back provisions made in previous years which are now unfrozen following agreement with the Inland Revenue as to the basis of valuation of our stocks so that Net Profit after taxation is £136,366 against £153,348. Your Directors recommend a final dividend of 7½ per cent (less income tax) on the Ordinary shares and a cash bonus of 2½ per cent (less income tax) making with the interim dividend of 2½ per cent already declared, a total distribution of 12½ per cent for the year. They also recommend the transfer of £65,000 to Plant and Buildings Reserve and £15,000 to Stock Reserve Account.

#### THE OUTLOOK

The Company's Accounts are published too early for me to venture on any forecast of the prospects for 1961. I will only say that sales to date are maintained and wool prices have shown a small rise since the turn of the year. We shall, however, in the current year feel the full effect of the reduction in the working week from 45 to 42½ hours and also the increase in productive wages. Taking a longer view competition is becoming even keener and its effect upon profit margins is noticeable. The emphasis of direction in our export trade will undoubtedly be affected by the European Common Market. Rising costs on the one hand and marketing problems on the other can only be surmounted satisfactorily by increased efficiency and productivity and the Board has these objectives constantly in mind.

Although this paragraph may perhaps be thought to go beyond the matters normally dealt

with in the Chairman's Statement, it affects the interests of the shareholders and I make no apology for it. In April 1960 the Stock Exchange quotation of the Company's Ordinary Shares was 8s. to 10s. Throughout 1960 small advances occurred which were accelerated in December and by March 1961 the price had reached 17s. I take this opportunity of announcing that I know of no special reason for this rise in market price which I can only attribute to what I regard as the unhealthy "chasing" of a possible subject of acquisition. I have no knowledge of any prospective "bid" and should one be made the fact would be published immediately and communicated to the shareholders as soon as there was anything to report. The vague rumours which appear to have been rife in recent weeks unsettle the Company's management, staff and workpeople and are a hindrance to efficient production. They should, in my opinion, be condemned in the strongest possible terms.

The report and accounts were adopted.

## EQUITABLE LIFE ASSURANCE SOCIETY

MR JOHN H. BEVAN'S SPEECH

The 199th Annual General Meeting of The Equitable Life Assurance Society was held on May 24 in London.

The following are extracts from the speech of the President, Mr John H. Bevan:

When we met here twelve months ago, I referred to the retirement from the Board, just prior to the meeting, of Mr J. N. Buchanan and Sir George Cooper, both of whom over a long period of years rendered great services to the Society. It is with deep regret that I have to record that Sir George died last January. The first of the vacancies on the Board has been filled by the appointment of Mr J. L. Lowther.

I am pleased to be able to report that new life assurance business for the aggregate net sum of £8,425,000 was written during 1960, a figure which exceeded the previous record established in 1958.

The ratio of expenses to premium income actually fell from 7 per cent for 1959 to 6.7 per cent for 1960.

The rates of interest earned on the funds of the Society, gross and net after deduction of tax, both improved, the former to 6½ per cent and the latter to nearly 5 per cent per annum.

An item in the balance sheet to which I should draw your attention is our holding of ordinary shares: a considerable part of the new money available for investment has gone into them.

Arrangements have been made for the opening of a new branch at Albion Street, Leeds; we hope thus to provide an improved service in Yorkshire and North-Eastern England for our members.

I turn now to a matter which is very much in our thoughts, the celebration in 1962 of the 200th anniversary of the foundation of the Society. I said last year that this event will be unique, for it will mark not only our own bicentenary but the bicentenary of the foundation of scientific life assurance itself. We are to have a number of gatherings, formal and informal in character, to mark the occasion.

## THE THARSIS SULPHUR AND COPPER COMPANY, LIMITED

IMPROVED TRADING RESULTS

MR W. P. RUTHERFORD'S REVIEW

The Annual General Meeting of The Tharsis Sulphur and Copper Company, Limited, was held on May 19th at the Registered Office of the Company, 136, West George Street, Glasgow, C2.

Mr W. P. Rutherford, Chairman of the Company, who presided, said:

I propose, if you agree, to take the Report and Accounts posted on April 25th as read.

I shall supplement the Report in the following review.

### SHIPMENTS

Last year, our shipments of pyrites showed an increase of 71,101 tons over the previous year with a total of 708,884 tons. In a rather dull market, I consider this increase fairly satisfactory. We also shipped from our old heaps at Calañas Mine pyrites residues of high quality as an iron ore, a welcome addition to our revenue.

### MARKETS AND PRICES

As regards the European market for pyrites, I have spoken of the competition from sulphur on former occasions. I must emphasise that pyrites hardly ranks as a competitor to sulphur, although the reverse is certainly the case. Under the onslaught of the internecine sulphur competition, however, pyrites producers have required to defend their market by successive reductions of price. Sulphur, which unlike pyrites has no defence from by-products, has suffered greatly from price reductions, lowering the price to a level very substantially below its former rightful standard. There are signs that this situation is being remedied. It is to be hoped that the upward movement of sulphur prices towards the end of last year, reversing the downward trend for several years past, will continue until the price reaches its proper level. It is not to be expected that works that have left pyrites and expensively converted to sulphur burning will reverse the process. While pyrites was forced to fall in line with the price reductions of sulphur, it cannot follow the upward trend so long as the acid makers continue to replace their pyrites burning plant by the less costly sulphur burning equipment, but an end to the recent price war will be very welcome, and in the long run must be beneficial to both sides of the trade. The demand for sulphur material is fairly active generally. In Spain, the fertiliser season was poor due to climatic conditions, but the Spanish chemical trade is expansionist.

I regret to say that the price of pyrites fixed in Spain remains much too low, and this continued control is unexpected after the financial reforms of 1959, and puts too heavy a burden on the mines.

### MINES

It was an uneventful year at our mines. At Tharsis, the principal activity is the removal of overburden in the opencasts. This is performed by diggers loading into dumpers—an efficient method. Interruptions are caused by rainy periods, when the slate, which composes the overburden, is churned into clay by the heavy vehicles. In the drought of summer the dust

is also a handicap, but on the whole the climatic conditions are favourable to opencast working. The earth moving equipment is expensive and a heavy item of expenditure.

In view of the progressive silting of the Port of Huelva, the Government placed an order for a dredger in Holland. This was delivered towards the end of last year, and in conjunction with the existing equipment it is expected that the river and bar will be brought up ultimately to the full requirements of a modern port. As we loaded last year 187 ships, and this number will, we hope, increase, this is favourable news and should help our chartering.

On the social side, which looms so large in our enterprise, all went smoothly. In conjunction with the neighbouring mines, we have in recent years invited our Buyers to visit our respective mines. We have already received our principal Buyers from Germany, and last year we had visits from our Belgian and French Buyers. These visits have been highly successful in allowing our friends to see "where the pyrites comes from," and the suppliers to make friendly contacts.

### ACCOUNTS

The net profit of £196,705 is higher this year by £40,818, due to our heavier shipments of pyrites, and particularly to a sharp increase in our production of cupreous mineral. In addition, the shipments of calcined residues were higher by over 50 per cent. Although the sales price of pyrites remained steady throughout the year, there was a fall in the average price due to the reduction in the last quarter of 1959 about which I spoke a year ago. On the other hand, I am pleased to state that we have managed to maintain the mining costs at the same level for the third successive year, but it must be recognised that the greater production was an important factor in this connection. You will have observed that the amount written off Property and Plant has been increased by £26,253 in continuance of the conservative policy of your Directors and in recognition of the ever-increasing cost of new buildings and equipment. We have allocated £100,000 to General Reserve and if the recommended dividend of 12½ per cent is agreed there will be a carry forward to 1961 of £218,138. Turning to the Balance Sheet, it will be observed that our affairs are in a satisfactory liquid position and that the heavy bank overdraft has been extinguished.

### GENERAL

I desire at this meeting to say a word of praise of the services of our Manager and Staff in Spain, as also our Staff on this side, who have served us so well.

Last year, we suffered the loss of our Auditor, Mr Hugh Cowan-Douglas, by sudden death. He was a distinguished Accountant with wide industrial interests in the West of Scotland. We extend our sympathy to his widow.

I now propose that the Directors' Report and Statement of Accounts for the year ended December 31, 1960, be and are hereby approved and adopted and that a dividend of 12½ per cent on the capital of the Company be now declared,

payable, less Income Tax on and after Friday, May 26, 1961.

The report and accounts were adopted, the retiring directors, Mr Hugh Hogarth and Mr Neil Rutherford, were re-elected, and the re-

## LONDON AND MANCHESTER ASSURANCE COMPANY LIMITED

RECORD NEW BUSINESS AND RECORD BONUSES

PREMIUM INCOME NOW EXCEEDS £8 MILLIONS

The Ninety-second Annual General Meeting of London and Manchester Assurance Company Limited was held on May 10th in London.

The Right Hon Lord Grantchester, OBE, MA, FCI, the chairman, who presided, said:

### RECORD NEW BUSINESS AND RECORD BONUSES

The Directors' Report and Accounts for the year ended December 31, 1960, have been in your hands for some time, and I presume that, following the usual procedure, you will allow me to take them as read.

I am pleased to be able to report that, in the year under review, we wrote a record amount of new business in both life branches, and the total figure of new sums assured at £17,600,000 exceeded that of the previous year by more than £2½ millions.

The total premium income in the two branches advanced by £500,000 and exceeded £8 millions.

The premium income of our special Investment Trust Retirement Annuity business continues to expand and the fund now stands at over £1½ million.

The rate of reversionary bonus allocated to Ordinary Branch with profits policies is £2 10s. 0d. per cent, the highest in the history of the Company, and the bonuses granted to

## E. POLLARD & CO. LIMITED

IMPROVING CURRENT TRENDS

The forty-ninth annual general meeting of E. Pollard & Co. Ltd., was held on May 24th in London.

Mr H. Edward Pollard (chairman and managing director) presided and, in the course of his speech, said:

The Net Profit of the Group after providing for Taxation is £101,000 as compared with £176,500 for the previous year.

The depression in our Shopfitting and Building Sections which started during 1959 continued into 1960. The reorganisation that was carried out to meet this situation has been extended, and now our orders are improving and the Shopfitting factories are working at a more economical level of production.

Our Engineering Factories had a busy year but prices became increasingly competitive especially in the Haskins Steel Shutter section.

The Hammond & Champness Electric and

muneration of the auditors, Messrs Brown, Fleming & Murray, CA, was fixed.

The proceedings terminated with a very cordial vote of thanks to the Chairman, proposed by Mr Robert Ogilvie.

Industrial Branch policyholders are also the best we have ever declared. For the first time the cost of the normal annual bonuses granted to Ordinary and Industrial Branch policyholders exceeds £2 millions.

### INVESTMENTS

Investments increased during the year by over £6 millions. This included an increase of £1,340,000 in mortgages on property, and £470,000 in mortgages on shares. This latter reflects the growth of the Company's unique Endowment Share Purchase Plan which we are glad to see is being well supported. Fixed interest securities increased by rather more than £4 millions, including an increase of £1 million in first-class debentures and preference shares.

The selection of investments has continued to be based upon the merits and suitability of each individual security. The market value of stock exchange securities at December 31, 1960, considerably exceeded their book value, though to a less marked extent than last year.

The gross rate of interest earned on the funds again shows a reasonable increase and reviewing our investment portfolio I think we may confidently expect that the rate earned will increase considerably in the next few years.

### DIVIDEND

When the capitalisation was approved at our last annual meeting, the Directors forecast an amount available for dividend this year at least equal to last year's transfer to Profit and Loss Account, plus interest earned on the increased capital. The amount we have been able to transfer this year exceeds this forecast and enables us to recommend a distribution for the year of 2s. 8.25d. per share, free of tax, which compares with the equivalent of 2s. 4.5d. per share paid last year.

The report and accounts were adopted.

Oilraulic Lift business had a good year. Orders and production again increased in spite of the shortage of skilled labour and the substantial Wage increases which add considerable difficulties to the fixing of long-term priced contracts in this industry.

The Morris Singer Company found orders for Architectural Bronze Metal Work steady and at reasonable selling prices, but in the Steel Case-section orders showed a decrease. This, however, had been anticipated and a good deal of development work was put into stainless steel curtain walling. As a result this company is now carrying out a number of large orders for this type of work.

As regards the future, prospects remain much the same. We are faced with substantial increases in Labour rates, and even higher Overhead Expenses, but we started 1961 with our Work in Progress standing at over £1 million. Shopfitting enquiries are improving and providing we can maintain orders for the Group at their present level, I hope 1961 will be a better year.

The report was adopted and a dividend of 12½ per cent approved.

## THE YORKSHIRE INSURANCE COMPANY

LORD MIDDLETON'S REVIEW

The Annual General Meeting of The Yorkshire Insurance Company, Ltd., was held on May 24th at York.

The Right Honourable Lord Middleton, KG, MC, LL.D, the chairman, said:

*Life and Annuity Account.*—Again the volume of new business transacted by this Department constitutes a record. Total new sums assured amounted to £50½ millions, compared with £45½ millions in 1959. The number of new policies issued was also a record.

*Fire Account.*—Operations in the Overseas field as a whole again produced satisfactory results. There has been a welcome further increase in home premium income.

*Accident Account.*—In the year the Accident and General Account has shown marked expansion. The volume of premium income has risen by £751,276 to £9,274,820.

*Marine Account.*—The total premiums in 1960 amounted to £2,213,986 compared with £2,249,809 for the previous year. Our Marine Fund now stands at £3,424,204 which represents 155 per cent of the premiums in account compared with 143 per cent at the close of 1959.

The Directors have recommended a final dividend of 2s. 6d. per share, making 4s. 2d. per share for the year compared with 3s. 8d. for the previous year. The total assets are now in excess of £82 millions compared with £75 millions in the previous year.

The report and accounts were adopted.

## GEORGE MALLINSON AND SONS

INCREASED PROFIT

The Twenty-fourth Annual General Meeting of George Mallinson and Sons Limited was held on May 25th at Leeds.

The following is an extract from the circulated statement of the Chairman, Mr Wilfred Wagstaff, for the 52 weeks to February 18, 1961:

The Accounts show a net Profit of £128,712, an increase of £9,926 on the previous year. The directors recommend a final dividend of 22½ per cent, making a total of 27½ per cent for the year.

Liquid Assets exceed Current Liabilities by £875,458, a decrease of £165,309. We consider this most satisfactory in view of the repayment of Preference Share Capital, the amount spent on New Machinery, and the additional amount required for Taxation.

During the year, new machinery of the most modern type has been installed. Orders for further machinery have been placed, but the delivery will be spread over the next two years due to the makers' extended order book. Plant and Equipment have been maintained in good order and we consider the depreciation written off is adequate.

Demand for our products has been good, orders on hand will ensure high activity for several months ahead, and if this continues we can look forward with confidence to satisfactory trading.

I should like to take this opportunity of thanking all our Directors, Executives and employees for another year of loyal and able service.

## GILL & DUFFUS LIMITED

### RECORD TURNOVER

#### MR J. I. MURRAY'S STATEMENT

The Annual General Meeting of Gill & Duffus Ltd. will be held on June 15 at the offices of the company, 23, St Dunstan's Hill, London, EC.

The following is the Statement by the Chairman, Mr J. I. Murray, circulated with the report and accounts for the year ended December 31, 1960:

The results now presented have not been achieved without a great deal of hard work and once again I would like to pay tribute to my colleagues, the Managing and Executive Directors and all those in the employment of our Company both at home and abroad and to tender to them on your behalf our sincere thanks for their valuable services.

I am sorry to have to report the decision of Mr W. Huysman not to seek re-election at the Annual General Meeting on account of his health. While we greatly regret Mr Huysman's decision and still more the reason for it, we have no alternative but to respect his wishes. In all his long association with our Company he has been a most loyal friend and a most respected colleague. Fortunately his unrivalled knowledge of the cocoa manufacturing industry will not be lost to us as he will be available for consultation and in his son we have on the Board a most worthy successor.

#### TURNOVER

Under the influence of larger crops the price of cocoa remained relatively stable throughout the past year. Lower prices tended to stimulate consumption with the result that in spite of reduced values the group turnover rose from £37.5 million in 1959 to £42 million in 1960. The turnover was easily a record in the history of the Company both on a value and a tonnage basis and is, I am sure you will agree, no mean achievement having regard to the physical effort involved in putting through such a volume of business in one year.

The produce department had a satisfactory year's trading but £60,000 of development and other expenditure on its new project, to which I shall refer in more detail later, was written

off out of revenue and this, of course, affected the overall result. The Subsidiary Companies according to their various circumstances all earned reasonable profits but in total these were on a somewhat reduced scale as compared with 1959.

#### INCREASED GROUP PROFIT

Taking these factors into account the group profit for the year was £624,758 as compared with £534,526 in 1959—an increase of £90,232. The provision for taxation requires £251,186 and after deducting this and the profit attributable to minority shareholders there remains a consolidated net profit applicable to members of £363,690. The preference dividend requires £7,718 and the ordinary dividend of 27½ per cent, of which 7½ per cent was paid in December takes £138,960 leaving as surplus revenue for the year £217,012. Deducting the amounts retained in and capitalised by Subsidiary Companies there remains to be carried forward to next year a balance of £1,155,666. Of this sum £643,438 is attributable to the Parent Company and £512,228 is retained by subsidiaries.

#### A STRONG BALANCE SHEET

Ever since the Company became a public one in 1949 it has been the policy of the Board to plough back a substantial part of each year's earnings. As a result a very strong balance sheet has been built up over the years. Fixed assets have been very substantially written down. As at December 31st last current assets less current liabilities amounted to £2,878,605 represented by readily realisable assets in the form of stock, debtors and cash. As I explained last year, we require substantial bank overdrafts, particularly at the end and beginning of each financial year when we are taking up new crop merchandise, but as the Company's own resources are built up year by year the need to depend on bank facilities for our normal trading tends to diminish. At December 31st last bank advances outstanding amounted to £1,655,114 as compared with £2,504,745 at December 31, 1959—a decrease

vision requires to be made for tax, and after bringing in the balance from last year, there was £28,522 for allocation. Your Directors recommend a dividend for the year of 15 per cent, less tax at the standard rate, requiring £13,781 net and leaving £14,741 to be carried forward to the current financial year.

As stockholders were advised in the circular dated August 8, 1960 improving conditions permitted the restarting of the dredge and operations recommenced on September 22, 1960. As anticipated, the returns were poor in the first three months of operations, only 48½ tons of tin being produced during the quarter October/December 1960 but, in January of this year, 57½ tons were produced and the figures for February and March were 25 tons and 89½ tons respectively. The dredge is now working

on the year of £849,631. Furthermore, earnings retained and depreciation charged in last year's accounts amounted to £331,148. In the light of these facts we hope that in future a more liberal dividend policy will be justified.

#### CAPITALISATION OF RESERVES

From the Directors' Report it will be seen that a resolution will be put to the Annual General Meeting proposing to increase the Authorised Capital to £1,750,000 by the creation of £350,000 of unclassified shares of 5s. An amount of £206,250 will be required for the capitalisation issue of one new stock unit of 5s. for every four held as already announced leaving a balance of £218,750 available in the form of unclassified shares of 5s. When we announced the dividend and the proposed capitalisation issue we said it was our intention to increase the Authorised Capital to £2,000,000 but since we have at present no projects in view requiring the issue of additional capital we decided after further consideration that it would be preferable to restrict the Authorised Capital for the time being to £1,750,000.

#### CURRENT YEAR

The current year has started well and subject to any sudden change in the outlook which is not at the moment foreseen I would anticipate that profits for 1961 will be similar to those of 1960. Bearing in mind my remarks earlier in this statement on the subject of a more liberal dividend policy such results should allow us to maintain a dividend of 27½ per cent on the ordinary capital as increased.

I now turn to the new project mentioned in my Statement last year. This is an automatic plant for shelling cashew nuts and for the extraction of the valuable liquid contained in the shells. Like our Brazil nut shelling plant developed five years ago, it is an entirely new process and although now in production, there is still a lot of development work to be done. We can only expect, therefore, a modest contribution from this plant during the current year.

I referred last year to the position of West African Mills at Takoradi. I am glad to say that negotiations with the Ghana Government have been brought to a satisfactory conclusion resulting in a long term agreement for the supply of cocoa beans, which would enable the Mills to work at full capacity. We are indebted to the Ghana Government for their understanding of the Mills' problems and look forward to a continuation of the existing close co-operation.

to full capacity and it is hoped that a satisfactory average rate of production will be maintained during the remainder of the current financial year. It should be borne in mind, however, that the nature of the once-dredged ground through which the dredge will be operating for the next few years is less predictable as to recoveries than virgin ground would be, and considerable variations in outputs from month to month must be expected.

In view of the limited remaining life of the mine by dredging methods, the project to develop an open-cast mine in the northern portion of the company's property is of special interest. Careful planning is essential and detailed proposals from the General Managers for consideration by the Board are awaited.

The report was adopted.

## MAPLE & COMPANY LIMITED

### SUBSTANTIALLY INCREASED SALES

The 71st annual general meeting of Maple & Company Limited was held on May 25th in London, Mr G. R. Holman, President of the Company, presided.

The following is an extract from his circulated statement:

You were informed last year that our main premises had just been completed, and that it was hoped to derive great benefit from the modern spacious showrooms which had been planned and equipped especially for our requirements. This forecast has, I am glad to say, proved correct and a substantial increase of sales in London has been reflected in the general improvement of our year's trading, which is now set before you. Every department in the House has shown an increase in turnover and as a proportion of our overheads is static, this increase has, as we hoped, been directly responsible for the enhanced profitability of your company.

The Balance Sheet demonstrates a position of considerable strength.

Fixed Assets during the course of the year have increased by just over £439,000 reflecting your Board's policy of further expansion into the Provinces.

#### PROFIT AND DIVIDEND

After the proposed transfer of £160,000 to Revenue Reserve, the latter stands in the Balance Sheet at the very satisfactory figure of over £2 million. The Profit and Loss Account shows that the net profit for the period after payment of Debenture Interest, has increased from £527,000 to £717,000, or 36 per cent, and

## SINGER & FRIEDLANDER LIMITED

### CONTINUED STEADY PROGRESS

The twenty-seventh annual general meeting of Singer & Friedlander Limited was held on May 24th in London, Sir George Rendel, KCMG (the chairman), presiding.

The following is an extract from his circulated statement:

During the accounting period covered by this statement we have continued to make steady progress. To this our American subsidiary has made a useful contribution.

The proposed Final dividend of 6½ per cent

without this year's exceptional Subsidiary profits of £50,000 by over 26 per cent. It is proposed to pay a final ordinary dividend of 12 per cent, making a total of 17 per cent for the year, with a Capital Distribution of 3d. per £1 unit of Ordinary Stock in addition.

The fact that these satisfactory results have been achieved has been made possible by reason of the substantially increased turnover, which has had the effect of enhancing the gross profit on trading by over £½ million. In a year when the furniture trade has been quoted generally as being in the doldrums, these highlights in the Accounts are assuredly pleasing.

This satisfactory trading has not occurred only in London but, on the contrary, nearly all sections of our Group have recorded steady progress. Never has our claim to be "the largest and most attractive furnishing establishment in the world" been better demonstrated than is the case today.

Having reviewed in detail the progress of the branches of the Parent Company and the retail subsidiary companies in the United Kingdom and overseas and of the manufacturing subsidiary companies, the President continued:

Exports.—For this trading period last year's satisfactory figure has been maintained and again we have exported to no less than 72 different countries.

Lastly, I know you would wish me to say something of the future. In the face of constantly rising costs, any forecast made at such an early stage of any year must necessarily be hazardous: I think I can only say that since the year-end, the volume of sales has continued to be reasonably satisfactory, and providing there are no untoward political or international upheavals, I look to the future with measured optimism.

The report was adopted.

makes, with the interim dividend of 2½ per cent paid in October last, a total dividend of 9 per cent on the Ordinary share capital in respect of the year 1960.

The Consolidated Balance Sheet total is again substantially higher. It now stands at £13,350,992, which is an increase of £2,912,805 over the amount shown at December 31, 1959.

For the first time since 1937 your Company is making an issue of Ordinary Shares otherwise than by the Capitalisation of Reserves. During the intervening period our Consolidated Net Assets have risen from £330,000 to £2,689,544. The main purpose of the proposed rights issue is of course to bring our resources more into line with the growth of our business and to improve the relationship between them and the total of our liabilities.

## ASSOCIATED FISHERIES

The annual general meeting of Associated Fisheries Limited was held on May 19th in London, Sir Hugh Fraser, Bt, DL, JP (the chairman), presiding.

In the course of his circulated statement the chairman said that the total production from Distant Water Fishing Ground continued to fall but that deficiency was more than made good from other sources. The average price realised rose by one-third of a penny to practically 7d. per lb. resulting in the average daily earnings of trawlers showing a slight increase which more than compensated for a rise in catching cost. For similar reasons, their own fleet produced an improvement on last year's contribution to the Group net profit.

The chairman continued: The national consumption of frozen foods increased by approximately 20 per cent during the year under review while our sales rose by more than double this figure resulting in an increase in our "Eskimo" brand share of the total markets.

The total turnover of the Group rose during the year by over £1,080,000 to a record total in excess of £14,000,000. After covering all costs, including Depreciation, the profits remaining out of every 20s. of income is 10.1d. of which taxation will absorb 2.9d. Of the remaining 7.2d., the net Dividend recommended for the year will account for 3.6d., leaving a similar amount retained to assist in financing development of the Group undertakings.

In the opening months of the current year, the earnings of the Group are ahead of the comparable figures for last year and in the absence of unforeseen circumstances, there seems no reason why this improvement to date should not be held.

The report was adopted.

The results achieved during the first three months of the current year are gratifying and augur well for 1961. Activity in all sections of our business continues at a high level. I am glad to report that our experience in Leeds, where we opened an office six months ago, is very encouraging.

There are strong indications that the mild recession in the USA has run its course and that, if there is no political setback, world trade should again expand. This and certain developments which may ultimately lead to a substantial increase in international liquidity, should make it easier for the authorities in this country not to be unduly sensitive to temporary adverse movements in the Balance of Trade.

The report was adopted and the board's capital proposals approved.

## HONGKONG TIN

### MR ADDINSELL'S STATEMENT

The thirty-second annual general meeting of Hongkong Tin, Ltd., was held in London on May 23. The following is from the circulated statement of the Chairman, Mr Jack Addinsell:

During the year under review the Company's quota of permissible sales of tin ore, under the Malayan Tin Control Regulations, continued to be produced within the General Managers' Group of Companies on a profit-sharing basis. The Company's share yielded £51,515 over the twelve months, and after taking account of interest and sundry receipts, and charging mining expenditure and overheads, there was a profit of £14,602. By virtue of previous losses no pro-

vision requires to be made for tax, and after bringing in the balance from last year, there was £28,522 for allocation. Your Directors recommend a dividend for the year of 15 per cent, less tax at the standard rate, requiring £13,781 net and leaving £14,741 to be carried forward to the current financial year.

As stockholders were advised in the circular dated August 8, 1960 improving conditions permitted the restarting of the dredge and operations recommenced on September 22, 1960. As anticipated, the returns were poor in the first three months of operations, only 48½ tons of tin being produced during the quarter October/December 1960 but, in January of this year, 57½ tons were produced and the figures for February and March were 25 tons and 89½ tons respectively. The dredge is now working

to full capacity and it is hoped that a satisfactory average rate of production will be maintained during the remainder of the current financial year. It should be borne in mind, however, that the nature of the once-dredged ground through which the dredge will be operating for the next few years is less predictable as to recoveries than virgin ground would be, and considerable variations in outputs from month to month must be expected.

In view of the limited remaining life of the mine by dredging methods, the project to develop an open-cast mine in the northern portion of the company's property is of special interest. Careful planning is essential and detailed proposals from the General Managers for consideration by the Board are awaited.

The report was adopted.

# COMPANY AFFAIRS

## Hawker-Siddeley

TO the usual problem of comparing results following the change in a company's financial year, Hawker-Siddeley's results for the 17 months to December 31st offer the additional difficulty that three new companies, de Havilland, Blackburn and Folland, were brought in during the period. The accounts include the results of de Havilland and Folland for 15 months and of Blackburn Aircraft for nine months.

The bulk of the increase in profits has been absorbed by writing off £15½ million on design and development expenditure on aircraft projects. This charge, the directors explain, covers expenditure on the Armstrong Whitworth Argosy, the Avro 748, the de Havilland Trident and the same com-

\* After depreciation.

pany's Canada Caribou and Gnome engine. To all of these the directors ascribe a promising future, though some might think this expectation a little early for the Trident. At any rate, such heavy charges should not be incurred again in the immediate future. Further, the directors report that companies on both the aircraft and industrial side are fully occupied, while in Canada, where the results of the A. V. Roe subsidiary suffered an expected sharp setback, there are some slight signs of a recovery in business.

The results and the optimistic undertone of the preliminary statement pleased the market and the £1 ordinary shares rose by 1s. 9d. to 32s. to yield 6.6 per cent on the scaled down equivalent of 10.6 per cent for the dividend.

## Anglo American Corporation

WHATEVER else closes in South Africa next week (and present indications are that almost all offices and works may be shut by the stay-at-home strike of non-Europeans) the gold mines will continue

working normally. This illustrates the unique position held by gold (and other) mines in South Africa; the gold mining industry forms a vital part of the South African economy, but many of the mines and their employees are pretty well isolated from the rest of the country.

While the mines remain virtually undisturbed by the present political tension, its effect is clearly seen in the latest report of Anglo American Corporation of South Africa, the biggest of the mining finance houses. In 1960, its income from investments, which cover the whole range of mining and industrial activity in Southern Africa, rose from £7.1 million to £8.2 million, but this was offset by the £1.2 million needed to write down many of the Corporation's investments. This action followed the sharp falls in share prices sparked off by the Sharpeville riots, which cut the market value of Anglo American's portfolio from £130 million to just under £100 million at December 31st, though the book value rose by £1 million to £55 million after writing down.

These end year valuations have again been outdated by events and principally by the decision to leave the Commonwealth when South Africa becomes a republic next week. Gold shares as measured by the *Financial Times* index have fallen so far this year by over 20 per cent. Anglo American's investments include a large stake in diamonds—here De Beers shares have fallen by 27 per cent and in copper, where an improvement has put Rhokana and similar shares above their end-year level.

Despite a rally this week, Anglo American ros. shares at 122s. 6d. have fallen by about

a quarter this year and now yield 7½ per cent. On the mining side, the prospects suggest a much smaller advance in profits: income from gold mining should continue to rise, particularly from the newer OFS

mines; copper profits are certain to be lower on the cutback in production; profits from diamonds and coal are likely to be no more than maintained. Further writing down of investments may well be necessary this year and events in the next few days and weeks could be decisive in determining whether investors' confidence in South Africa can be revived. Mr Harry Oppenheimer's speech to shareholders in a couple of weeks' time will also be closely watched.

## Cunard

LAST year Cunard Steamship again ran into heavy weather; for the fourth consecutive year profits went down and the dividend was trimmed, this time from 8 to 6 per cent. The operating surplus fell from £5 to £4½ million and net profit was down to £668,000 compared with £901,000. There is little to lighten the gloom in the picture that Sir John Brocklebank paints. The prime causes of the slump in the operating surplus were the strikes of seamen and the London tally clerks; these cost £659,000 directly and are estimated to have frightened away sufficient potential customers to lose another £250,000 in profits. Eagle Airways showed a loss of £100,000 compared with a profit of that amount in 1959; but most of the factors behind the fall seem likely to be non-recurrent though the chairman makes no prediction for the current year's profits. These losses, combined with the effect of a wage increase in August cut sharply into receipts.

Against this background, shareholders might have looked for an improvement in the current year. But Sir John effectively kills any such hopes. Freight rates are still depressed with no sign of appreciable improvement in the immediate future. The Canadian passenger trade seems likely to remain at a disappointing level. Last year's figures showed only a foretaste of the impact of wage increases which at the higher rate will affect the whole of 1961 and not a mere four months; what is more, current negotiation could mean an increase in the crew costs of larger units of 48 per cent within a year. The balance sheet shows the effect of falling profits; net liquid assets fell from £6 million to under £2½ million.

The profit margin which the group earned on its equity assets last year was less than 1½ per cent, which underlines the importance of Cunard's new ventures. But it is not clear whether the replacement for the *Queen Mary*, in spite of its excellent pedigree, will prove a good earner; on the most optimistic assumption it can only earn 7 per cent for Cunard—though on present performance such a rate of return would be extremely welcome. Eagle's application to buy two Boeing 707 airliners is a forward-looking move but it has encountered opposition from critics of the new subsidised liner and opposition from BOAC, and has yet to be approved. In view of the results and the uncertainty surrounding its own and the shipping industry's future it is not surprising that the £1 ordinary shares at 16s. 6d. yield 7½ per cent.

## Imperial Chemical Industries

THE general tone of Mr S. P. Chambers's speech to the shareholders of ICI was optimistic:

I believe that the company's strength and technical developments at the present time are such that we can hold our own and make substantial further progress both at home and overseas in the rest of 1961 and in the years to come.

But this statement did not attract the market. Against the background of several disappointing profit statements, it fastened on the warning that profit margins were likely to be kept down by competition at home and overseas. Yet Mr Chambers demonstrated some of the ways in which ICI is combating declining profit margins. It is building an oil refinery and planning to replace coal by oil in its fertiliser and chemicals plants. Mr Robens cannot have been pleased with this passage:

This changeover from coal to oil is in line with a worldwide trend and is not to be attributed to the high cost of coal; the particular new processes which we have worked out are technically so much more efficient that we would adopt them and abandon coal as a raw material even if the coal cost us nothing. ICI is now taking a larger stake in Europe and Mr Chambers looks for further increases in sales there:

There is every indication that the increase in sales to Europe both East and West will continue and that these markets will give the security and resilience in our exports as a whole which would be absent if we had too great a concentration on the Commonwealth and the Americas.

On the Rotterdam project there are as yet apparently no "cut and dried plans"; development will be spread over a number of years and whether Britain goes into the common market or not, manufacture there should prove "sound and profitable."

Already £45 million of capital expenditure has been approved for 1961 compared with £40 million in 1960. This bears out the directors' warning in the full report that capital expenditure would return to the high levels ruling before 1958. The directors hope to maintain the present 13½ per cent dividend on the capital as increased by the 5 per cent scrip issue. On this basis, the £1 shares at 79s. yield 3½ per cent.

## Sears Holdings

ON the take-over front, 1960 was a particularly quiet year for Sears Holdings although not for its chairman Mr Charles Clore who was heavily engaged elsewhere in property mergers and take-overs. But Sears was far from idle—£1½ million was added to fixed assets and £860,000 was put into investments which now stand at £1,042,000 in the books and were worth £1.2 million at December 31st. These holdings are shrouded in secrecy but Mr Clore says they are regarded partly in the nature of trade investments which might mean stepping boards to further acquisitions.

Mr Clore still insists that new businesses will be added to the Sears group only if they can be acquired on satisfactory terms. The substantial development plans he outlines follow his principle that there is "no need to acquire new businesses in order to maintain the growth character of Sears Holdings." They include over £5 million for new buildings and plant, with several million pounds more for working capital as business expands further.

This expansion will mean the retention of a substantial proportion of net profits but Mr Clore confidently forecasts at least the present dividend of 25 per cent on the capital after it is increased by the one for five scrip issue. This confidence is based not only on the group's strong financial position with a cash flow of £4 million backed by liquid assets of £7½ million but

|                    | 1959<br>£ | %<br>of<br>total | 1960<br>£  | %<br>of<br>total |
|--------------------|-----------|------------------|------------|------------------|
| Gross profits:—    |           |                  |            |                  |
| British Shoe Corp. | 4,436,000 | 50               | 5,774,000  | 55               |
| Sears Engineering  | 3,790,000 | 42               | 4,003,000  | 39               |
| Motor Distribut.   | 410,000   | 5                | 295,000    | 3                |
| Mappin & Webb      | 260,000   | 3                | 344,000    | 3                |
| Total              | 8,896,000 |                  | 10,416,000 |                  |

on the trading prospects of the various divisions in the group where total sales now exceed £100 million. Sales of the British Shoe Corporation showed a substantial increase in 1960 and results so far in 1961 suggest another good year. A further improvement should come from Bentley Engineering which has received good orders from Russia for its knitting machinery. From behind the iron curtain has also come a Polish order for a floating dock; this and other orders should keep the Furness shipyard fully occupied well into 1962. After last year's setback, profits of the motor distribution subsidiaries are expected to regain at least some lost ground while the newest member of the Sears group, Mappin and Webb, is making satisfactory progress. The past record of growth and Mr Clore's confident assessment of the future justify the present return of 3½ per cent on Sears 5s. "A" shares at 43s. 7½d. on the forecast dividend.

## Thomson Newspapers

THE weakness of Thomson Newspapers' capital structure was clearly shown at the time of the proposed merger with Odhams Press. The scheme for a reverse bid with Odhams offering its shares for Thomson Newspapers proved vulnerable to a straight and more attractive bid for Odhams shares from the Daily Mirror. The capital reorganisation scheme now proposed should give much greater strength to Mr Roy Thomson's arm in any further take-over bids.

Holders of the present 5s. preferred ordinary units will exchange their holdings into 30 per cent cumulative preference units and will receive in addition one ordinary 5s. unit for every two preferred ordinary. Further, in compensation for giving up their present voting rights for those more usually

conferred on preference shares, holders will receive a scrip issue in preference shares on a one for ten basis. Of the 10 million units in issue 4 million are held by Mr Thomson's own Thomson Scottish Investments, which also holds all the 8 million deferred ordinary 5s. units. These units are to be converted into 9.4 million ordinary 5s. units.

After the reorganisation Thomson Newspapers will be left with an ordinary capital of £5.6 million held as to 77.7 per cent by the present deferred ordinary holders and to 22.3 per cent by the preferred ordinary holders. The latter stand to gain considerably in income; at present they are entitled to a cumulative 30 per cent dividend and a quarter of the remaining profits after deferred holders have received 15 per cent. Thus for 1960 holders are to receive 35 per cent as forecast at the time of the proposed merger. Profits last year rose by a third to £4.1 million and a further improvement is expected in the current year to cover twice a forecast ordinary dividend of 24 per cent. Thus the income of the present preferred ordinary holders from both preference and ordinary shares is effectively raised from 35 to 45 per cent. The preferred ordinary shares now stand at 30s.

## Murrayfield Real Estate

THE latest amalgamation into the City Centre Property group of Mr Cotton and Mr Clore has been on the cards ever since 1959 when Murrayfield Real Estate and City Centre (then ex Clore) exchanged shares. Murrayfield sold its City Centre shares at a loss to finance the acquisition of a 75 per cent interest in Whitehall Court; the remaining 25 per cent is held by City Centre which as a result of the exchange already owns one third of Murrayfield's 4½ million 4s. shares.

Now Mr Cotton and Mr Clack, the managing director of Murrayfield, have agreed that the two companies should merge completely. For the 1.4 million shares owned by Mr Clack and his associates, City Centre has made an offer of three 5s. units for every seven Murrayfield shares and for holders of the remaining 1.6 million shares a slightly better offer of one 5s. unit for every two Murrayfield shares. With City Centre standing at 59s. 6d. the offers value Murrayfield shares at 25s. 6d. and 29s. 3d. respectively and are worth in all about £4½ million. Murrayfield, whose shares fell back by 1s. 9d. to 28s. 6d. on news of the merger, owns properties in a number of cities in Britain and also in Paris.

## Royal Mail

AT the meeting last June, the retiring chairman of Royal Mail Lines said that revenue for 1960 might show an improvement over 1959 if the more settled state of affairs in South America continued. However this has not been the case and the group has also suffered from several of the influences which affected Cunard.

## APPOINTMENTS

### Technical Secretary for The Eurochemic Company

Interesting and challenging position with the European Company for the Chemical Processing of Irradiated Fuels, one of the international joint undertakings of the O.E.E.C. European Nuclear Energy Agency, which is now building at Mol, near Antwerp in Belgium, an experimental pilot plant for separating fission products and extracting plutonium and uranium from used nuclear fuel elements.

**Main responsibilities:** Editing Technical Reports, Progress Reports, Company's Annual Report, a quarterly Newsletter and various other publications.

**Qualifications:** Technical education, preferably to University level in chemistry. Ability to write and edit in English essential; some knowledge of French; another language (especially German) an advantage.

**Salary:** Range \$4,000 to \$5,000 equivalent per annum, plus 15 per cent expatriation allowance (30 per cent if married).

Write to: General Manager, Eurochemic Company, 35 rue Belliard, Brussels.

### UNIVERSITY COLLEGE, DUBLIN

Professorship of Political Economy and National Economics of Ireland. Applications are invited by the Governing Body of University College, Dublin for the post of Professor of Political Economy and National Economics of Ireland. The holder of the post will be responsible for the teaching of the subject in the University of Dublin. The salary will be £1,000 p.a. plus £1,475 (bar); £1,475 x £5 = £1,850 p.a. Further particulars may be obtained from J. P. MacHale, Secretary and Bursar, University College, Earlsfort Terrace, Dublin.

### THE LONDON SCHOOL OF ECONOMICS AND POLITICAL SCIENCE

Applications are invited for appointment to Research Fellowships in the Economics of America. The Fellow appointed will be required to pursue a view to publication, research in that subject. Salary within the range £2,000-£3,000 a year with superannuation rights and family allowances. Tenure for three years in the first instance, but with the possibility of renewal for a maximum of seven years in all. Provision has been made for any necessary travel and research expenses of the Research Fellow and for secretarial assistance. Further particulars should be obtained from the Secretary, London School of Economics and Political Science, Houghton Street, London, W.C.2, by whom applications should be received later than June 8, 1961.

**THE ECONOMIST INTELLIGENCE UNIT LTD.** has to appoint an economic and financial journalist to the staff of its Press Department. This Department is concerned with the production of the press and other bodies and with the publication of current affairs. The successful candidate should have a good honours degree in economics, some experience in this kind of work and a bent for administration. The salary is £575 x £30 = £7,275. Applications should be sent to the Bursar, The Economist Intelligence Unit, 25 Abchurch Lane, London, E.C.4. Copies of full particulars, including present salary, should be addressed to "Press," EIU, 25 Abchurch Lane, London, E.C.4.

### UNIVERSITY OF READING DEPARTMENT OF AGRICULTURAL ECONOMICS

Applications are invited for the post of Assistant Lecturer in the Department of Agricultural Economics. The successful candidate will be required to teach the subject in the Department of Agricultural Economics. The salary is £575 x £30 = £7,275. Applications should be sent to the Bursar, The University of Reading, Whiteknights, Reading, RG2 2AA. Copies of full particulars, including present salary, should be addressed to "Agricultural Economics," The University of Reading, Whiteknights, Reading, RG2 2AA.

## SURREY EDUCATION COMMITTEE

**GUILDFORD COUNTY TECHNICAL COLLEGE**  
STOKE PARK, GUILDFORD  
Required September 1, 1961. Assistant, Grade A, to teach a variety of Commercial Subjects which young graduates in Commerce, Economics or P.E.E. must be fitted to teach. Prospects of early promotion. Salary, Burnham Technical School, Surrey.

### COMMONWEALTH OF AUSTRALIA

Applications are invited from graduates under 30 years of age for the position of Research Officer in the Department of Trade, High Commissioner's Office, London.

**SALARY:** £1,324-£1,418.

**QUALIFICATIONS:** Good honours degree in Economics or Commerce. Experience in office procedures and report writing.

**DUTIES:** Assist the Investment Liaison Officer with reports relating to investment in Australia involving research. Prepare correspondence and deal with general enquiries.

**APPLICATIONS:** Forms obtainable from the Recruitment Officer, Australia House, Strand, London, W.C.2.

Closing date: June 17, 1961.

### UNIVERSITY OF MELBOURNE

LECTURER OR SENIOR LECTURER IN INDUSTRIAL ADMINISTRATION

Applications are invited for the above-mentioned position. Applicants should have a good honours degree or its equivalent with a specialisation in industrial or public administration. The holder of the post will be responsible for the teaching of the subject in the University of Melbourne. The salary will be £2,000 p.a. plus £1,475 (bar); £1,475 x £5 = £1,850 p.a. Further particulars may be obtained from the Secretary, Association of Universities of the British Commonwealth, 36, Gordon Square, London, W.C.1. Applications close, in Australia and London, on July 15, 1961.

### UNIVERSITY OF BRISTOL

Applications are invited for two posts of Tutor for the newly established School of Management Studies. The appointments will be full-time for a period of not more than six years in the first instance and will date from August 1st or as soon after this date as possible. Initial salary within the scale £1,050 x £50 = £1,400 x £75 = £1,475 (bar); £1,475 x £5 = £1,850 p.a. Further particulars may be obtained from the Registrar, University, Bristol 8. Applications should be submitted by June 10th.

### UNIVERSITY OF BRISTOL

Applications are invited for two Lectureships (Grade II) in Economics. Candidates should have particular interests in one or more branches of applied economics including the internal and external economic problems of private and public enterprises, industrial economics, the economics of marketing and distribution, labour economics. The appointments will be full-time posts tenable from August 1st. Initial salary within the scale £1,050 x £50 = £1,400 x £75 = £1,475 (bar); £1,475 x £5 = £1,850 p.a. Further particulars may be obtained from the Registrar, University, Bristol 8. Applications should be submitted by June 10th.

### BRIGHTON EDUCATION COMMITTEE BRIGHTON TECHNICAL COLLEGE

Principal: G. E. Watts, C.B.E., M.A., Ph.D. (Cantab.), B.Sc. (Lond.), F.R.I.C.

Required September 1, 1961. Assistant (Grade B) in ACCOUNTANCY AND OFFICE ORGANISATION to teach to final professional standard. Ability to offer Costing an advantage. Degree or professional qualification essential.

Salary: £700 x £27.10s. = £1,927.10s. plus training and graduate allowances if appropriate. Increments may be allowed for approved experience.

Further particulars and forms of application from the undersigned to be returned to the Principal, Brighton Technical College, Richmond Terrace, Brighton, by Monday, June 5, 1961.

W. G. Stone,  
Director of Education,  
54 Old Steine,  
BRIGHTON.

**TELEVISION:** Leading career affairs programme seeks successful, responsible journalist as full-time reporter-interviewer. You must have a degree or diploma in Agriculture, Journalism or Economics. The appointment is in the grade of Accounts Clerk and the salary is £575 x £30 = £7,275. Applications should be sent to the Bursar, The University of Reading, Whiteknights, Reading, RG2 2AA. Copies of full particulars, including present salary, should be addressed to "Agricultural Economics," The University of Reading, Whiteknights, Reading, RG2 2AA.

## CITY OF PORTSMOUTH COLLEGE OF TECHNOLOGY DEPARTMENT OF COMMERCE

Applications are invited for the following full-time appointments:

(1) LECTURER IN BUSINESS ADMINISTRATION (Salary Scale £1,370-£1,550). Candidates should be graduates with industrial experience and have experience of work with Full-Time B.Sc. (Econ.) Degree students. Commercial Diploma (Sandwich Course) and Professional Courses.

(2) LECTURER IN ECONOMICS (Salary Scale £1,370-£1,550). Candidates should be graduates with special qualifications in the field of Monetary Economics, and able to assist either in the teaching of History, Law or Statistics at final B.Sc. (Econ.) Degree level, or of Modern Languages.

(3) ASSISTANT GRADE "B" IN ACCOUNTANCY (Salary Scale £700-£1,150). Candidates should be graduates and/or hold professional qualifications in Financial and Cost Accounting.

(4) RESEARCH APPOINTMENTS. Applications are invited for Research Officer in the Marine Resources Research Unit involving the study of the economics of the fishing industry and fish marketing. The appointments will commence on September 1, 1961, duration being either two or three years. The work is directed to the attainment of Ph.D. or M.Sc. degrees.

For six hours' lecturing weekly, approximately £750. Applicants should possess an Honours Degree in economics or commerce, but consideration may be given provisionally to those taking final examinations this summer.

Further particulars and forms of application, to be returned as early as possible, may be obtained by sending a stamped addressed foolscap envelope to the Registrar, College of Technology, Park Road, Portsmouth.

### THE UNIVERSITY OF MANCHESTER

Applications are invited for the post of LECTURER IN GOVERNMENT (with special reference to international relations). Salary scale £1,050 to £1,850 per annum, initial salary according to qualifications and experience. Membership of F.R.S.S. and Children's Allowance Scheme. Applications should be sent not later than July 3, 1961, to the Registrar, The University, Manchester, 13, from whom further particulars and forms of application may be obtained.

### A number of vacancies exist in the MARKET RESEARCH DEPARTMENT

of a leading London advertising agency for Assistant Research Executive trainees. The work of the department consists mainly of planning and organising sample surveys of the general public and of interpreting the results of these surveys to management and other departments in the agency.

Selected candidates will in the first instance assist Research Executives by whom they will be trained in the techniques of market research. It is expected that Assistant Executives will eventually assume full executive responsibility for market research on a group of the agency's accounts.

Applicants should possess a first or second class honours degree in one of the arts, social sciences, or mathematics. Starting salary will be between £650 and £750 p.a., depending upon qualifications. Application forms can be obtained from the Staff Manager, Box 1508.

### THE LIBERAL PARTY

Research Assistant required in Liberal Party Research Department. Graduate in Economics, Politics or related subjects. Write with full details to Director, Liberal Party, Research Department, 56, Victoria Street, S.W.1.

## SURREY EDUCATION COMMITTEE

**GUILDFORD COUNTY TECHNICAL COLLEGE**  
STOKE PARK, GUILDFORD

Required September, Assistant Grade B to teach Economic History and British Constitution to G.C.E. 'A' level. Salary, Burnham

When your  
consumption function  
is greater than unity  
*brother,*  
*you're broke!*

Perhaps you always see your way clearly in matters of finance. If so, you're an exception. But you don't have to look far to see the point of one aspect of finance—Life Assurance. When you take out a Life Assurance policy you're joining together with other wise people. You save; you protect your family. So do all the others. It's as simple as that. Your money is looked after by experts. In the end the whole community benefits, because money put into Life Assurance helps to finance industrial expansion, new housing, all kinds of public projects.

**You get a good deal from LIFE ASSURANCE**

*Issued by The Life Offices' Association, London, and Associated Scottish Life Offices, Edinburgh.*

## TOW FOR YACHT IN TROUBLE IN SURF

TENBY, PEMBROKESHIRE. At 1.10 on the afternoon of the 10th July, 1960, the coastguard informed the honorary secretary that a yacht was apparently in trouble and was drifting towards Pendine. Someone on board was waving a shirt. The life-boat Henry Comber Brown was launched five minutes later in a moderate south-westerly breeze. The sea was rough, and it was one hour before low-water. When the life-boat reached the area indicated she found two yachts on the beach, one of them labouring violently in the surf. A line was passed to this yacht, and the life-boat towed her to Saundersfoot. The other yacht was not in trouble. The life-boat then returned to her station, which she reached at 3.15.

*This is another true story of the Life-Boat Service—typical of the work that is going on day and night, year in, year out.*

The Royal National Life-Boat Institution is supported wholly by voluntary contributions.

YOU CAN HELP. SEND YOUR CONTRIBUTIONS TO:—

## Have YOU tried a SpacesaVer drive?

This SpacesaVer wedge-belt drive transmits 25 h.p.—in the space of three fingers!

# SpacesaVer

BETTER THAN BELTS  
COMPACT AS CHAIN  
GENTLER THAN GEARING

Look how SpacesaVer Wedge-belt Drives are already proving their worth. Scottish Agricultural Industries Ltd. of Glasgow were recently faced with an unusually difficult problem. An air blower, directly-driven by a 25 h.p. motor, had to be stepped up in speed from 1480 to 1660 r.p.m. but the shaft extension was only 21". Even so, a SpacesaVer drive of 25 h.p. capacity could be mounted. SpacesaVer pulleys 9" and 8" diameter (face width 2.73, boss length 1 1/2") and three No. 710 Beta-section belts did the trick. In fact, as the works' engineers then commented, "SpacesaVer is the complete answer . . ."

MADE ONLY BY:— Are you using SpacesaVer drive catalogue 135/20 yet?

## Raising the Question?

To advance the technique of modern surgery to heart operations, British Surgeons needed an apparatus and a pump to match closely the delicate functions of the human heart. After long and careful experimentation with five basic pumping mechanisms against damage to blood corpuscles and for blood flow relationships, the Mono Pump was established by the Hospital Research Team as a superior means of pumping human blood.

Can this be regarded as confirmation of the Mono Pump as a superior principle of trouble-free pumping for industrial service? Or can the huge numbers used on a wide range of industrial duties be regarded as confirmation enough?

This is the small Ormond Mono Pump specially produced in one size only for use on Heart Lung Apparatus. Where meticulous hygiene is necessary and an output of up to 5000 m.l. per minute is required, the pump has useful application to Laboratory or Hospital Plant. There are other various types of Mono Pumps ranging in capacity up to 16000 gallons per hour to cover any pumping duty.

reasons why  
Japan should be on  
your trading map

#### Reason No. 1:

Japan produces a vast range of quality products under a tremendous industrial boom sparked off by widespread technical innovation and improvement in productivity.

#### Reason No. 2:

The rate of Japan's economic growth has been and still is the highest in the world, even surpassing that of West Germany, and the introduction into Japan of much more foreign capital is required.

#### Reason No. 3:

Japan has adopted a policy of gradual liberalization of her foreign trade and new business opportunities arise daily in Japan.

#### Reason No. 4:

Japan has already freed foreign exchange to a significant degree. The establishment of the Non-Resident Free Yen Account System, under which Yen is freely convertible into the main foreign currencies, will especially facilitate overseas investment in Japan.

Business transactions with Japan promote your business development

CABLE**

C-Sentry Anodes were chosen to protect the repeater housings for the first section of the new Commonwealth cable "Cantat". These anodes were selected and their special shape designed by the Post Office Research Station. They are fitted to protect these

repeater housings from corrosion for a minimum period of 40 years. The cable ship Monarch 8056 tons will commence laying the cable this month from Scotland to Newfoundland, a distance of 2100 nautical miles.

## Britain into Europe

pages 981-983

# THIS IS ALUMINIUM!

The impressive superstructure

of the 'Canberra' is made of

# BRITISH ALUMINIUM

The name 'Canberra' means in the language of Australia's aborigines, 'meeting place'. This superstructure is certainly a meeting place of a lot of fine ideas, both practical and aesthetic. The main practical advantage is a saving in topweight by using more than 1,000 tons of aluminium supplied by The British Aluminium Company. This has made

possible an extra deck and the accommodation of 300 more passengers. The aesthetic value of aluminium is evident in the outstanding design.

The P & O-Orient Line are to be congratulated on this splendid addition to their fleet, as are the builders Harland & Wolff Ltd.

### INTERNATIONAL

#### NORTH AND SOUTH

To Africans the differences between North and South are greater than those between East and West. Whatever their differences with one another they resent other people organising them. The West's best course is not to try to enlist them, but to help them to unite (p. 975).

Mr Hammarskjöld has rebutted Mr Khrushchev's attacks on his own neutrality (p. 988).

#### JACK AND THE GIANT

The round in Paris between General de Gaulle and Mr Kennedy has gone to France (p. 977).

The Evian talks between French and Algerians are slowly getting under way (p. 986); the talks on Laos between East and West are not (p. 986).

At home Mr Kennedy is still unproved as a President (p. 999). His message to Congress before he left home was intended to ensure that Mr Khrushchev would take him seriously (p. 1000).

The Republican victory in the senatorial election in Texas presages a two-party South (p. 1001). North of the border, in Canada, Mr Diefenbaker has had an unexpected political success (p. 988).

#### MAC AND THE MOUNTAIN

The interests of Commonwealth farmers still pose the main problems in negotiating British entry to the Common Market (p. 981). But neither the Seven nor home politics seem likely to stand in the way (pp. 982 and 983).

### HOME

#### WRONG IDEAS

Sterling is once again under fire and there is loose talk of devaluation. It is high time that the counter-arguments were publicly set down (p. 1023).

#### RIGHT LINES

Dr Becching will need all of his five years to knock the railways into shape. His first task must be a management spring-clean (p. 1025).

#### HARD BARGAINS

Trade unions have come to stay for the British middle-class (p. 979).

Civil Service clerks have rejected a bad new pay scheme and got a rise under a bad old one (p. 985).

The teachers' pay award from the Burnham committee presents the Government with a ticklish yea or nay (p. 985).

Wanted, a wages policy—and not only in Britain (p. 985).

More jobs for fewer unemployed (p. 1028).

Educating the workers: the TUC hopes to spend more and do much more (p. 1018).

#### CUT . . . . .

Power failure: how the Generating Board tripped and plunged south London into darkness (p. 1029).

The first European assembly to meet in London was disappointed when Mr Macmillan gave no hint that a move was on the way (p. 983). Once made, the move could precipitate world-wide steps to free trade (p. 983).

Spain and Portugal are anxious to be brought into the European family; Lord Home has been exploring some of the obstacles (p. 984). He is not the only tourist to give Spain a window on the outside world (p. 1014).

The new West Indian member of the Commonwealth family is finding it hard to attain a viable unity (p. 978).

#### PLOTS

France: Two rebel generals have been condemned, but the trial leaves the attitude of the army still far from clear (p. 1008).

Dominican Republic: The assassination of the dictator Trujillo opens the way to reform, but provides no guarantee that reform will follow (p. 984).

#### TYRANNIES

Tibet: Popular resistance has forced Mao Tse-Tung to go slow on collectivisation (p. 1011).

South Africa: The Afrikaner is preparing for siege (p. 1008).

#### TIGHTROPE

Persia: The new prime minister's reforming zeal runs the risk of counter-attack from the army, the propertied class and the re-emerging political opposition (p. 1007).

Iraq: The durability of General Qasim's government may turn on the success of its policy of modest collaboration between Arab states. This presents Cairo with a challenge (p. 1012).

Atlantic subsidy: Cunard's application to fly the Atlantic has shaken Mr Marples's sea legs (p. 1028).

Magazines: of seven women's magazines under one roof, five survive and two get the hoof (p. 1028).

Junior tycoons of Eton's magazine empire (p. 1020).

#### . . . . . AND THRUST

Oil: Jet Petroleum and Continental Oil are a combination that ought to worry the majors (p. 1030).

Nuclear energy: two mammoths fall out and the result is fruitless competition (p. 1029).

Hire Purchase: the finance houses may soon offer a rival to the banks' personal loans (p. 1033).

Minicabs: second thoughts on how to inject new life into London taxis (p. 1032).

Drug addicts: the rare connection (p. 988).

Burglars: new ways to catch a thief (p. 1019).

Psychopaths: a new deal (p. 989).

Fishy business: cold cod and sharp shooting (p. 986).

Foxy moves: the RSPCA, too, has its unilateralists (p. 989).

INDUSTRY AFTER INDUSTRY, all around the world, has found that new Polysar® rubbers, produced by the Polymer Corporation Limited, have helped to solve a wide variety of raw material problems. The result has been a steady growth in production, leading to the present pre-

eminence of Polymer among world rubber suppliers. Additions are constantly being made to these versatile elastomers. One of them could supply you with the answer to your raw material problems. A letter to the Marketing Division, Polymer Corporation, Sarnia, Canada, will put you in

touch with a Polymer representative in one of 43 countries.

The Overseas Chemical Division of W.R. Grace & Co. shares its world-wide wealth of Chemical experience with industry in many ways, in many countries. Laboratories, Plants and Sales Offices in eighteen countries are continuously developing, producing and marketing the new products and techniques which are the keys to industrial growth. Grace Chemicals match specific industrial requirements and are customer-tailored to particular production needs with the backing of long experience in the field. Grace is one of the

**GRACE**

world's foremost Chemical Companies. Its principal products include: films, plastic bags and pouches for the packaging of food products, can sealing compounds, cap lining compounds, battery separators, high density polythene, synthetic rubber and resins, polyvinyl acetate, plasticizers, synthetic catalysts, ammonia, ureas,

fertilisers and agricultural chemicals, sulphuric acid, silica gel and other desiccants, nuclear reactor materials, jet engine lubricants, ultra highpurity silicon and other industrial chemicals.

## Squirrels have the right idea or do they?

You probably thought this advertisement was going to draw a neat little parallel between the nut-storing efficiency of the squirrel and Lansing Bagnall equipment. So did we. Regrettably, the squirrel let us down.

Contrary to what seems to be a common supposition, squirrels do *not* efficiently stock-pile their winter food in holes in trees. They randomly bury it all over the place, one nut at a time, and then have to go scratching around whenever they feel hungry. . . Never mind; delightful little creatures, aren't they! Even so, and our strong British love of animal life notwithstanding, it might be an idea not to introduce squirrels into any discussion you may raise with us. Mention "Mechanised Muscle" by all means—no disillusion there! "Mechanised Muscle" gives your handling and storage the high efficiency which modern conditions demand. You can depend on it.

## PAY LESS FOR THE WORLD'S GREAT HOLIDAY IN '61—IT'S 'VISIT INDIA YEAR'

**INDIA '61 Means luxury air travel at new low costs.** On domestic air routes linking 70 great cities, the Indian Airline Corporation with a flying record of twenty million reliable aircraft miles per year offers a 5% concession on selected tours.

**INDIA '61 Means air-conditioned rail travel at new low costs.** Indian Railways, one of the world's largest efficient networks, offers a 25% rebate. Also, combined travel-as-you-like tickets for thirty days carry a lump-sum concession. The cost of travel in India ranks among the world's cheapest.

**INDIA '61 Means superb food and accommodation at new low costs.** The Federation of Hotels and Restaurants of India offer 5% concessions on normal rates. In India, hotels compare favourably with the world's best in luxury. Many more tourist bungalows and converted palaces are now available. In India the best food (Oriental and European) is inexpensive.

**INDIA '61 Means big game hunting at new low costs.** The Shikar Outfitters' Association offer a 5% concession on schedule rates.

**INDIA '61 Means front row seats for national festivals.** All State Governments and cultural academies will co-operate to ensure this.

## SHIP - sign of Tufnol

Those people born under the sign of the Ship go full sail ahead to the top of their profession. Ship men become chief purchasing officers, chief engineers, chief draughtsmen and chief designers. Ship men are perfectionists who would sail the seven seas to find a material that com-

bines the properties of many materials—a material that is light yet strong and hardwearing, resistant to corrosion and a good electrical insulator. They also expect this ideal material to resist deterioration in storage, to machine easily with ordinary tools, and to be available in sheets, tubes, rods, angles and channels. Many Ship men have both their feet on dry land now that they have discovered this remarkable material—"SHIP" brand Tufnol. They have also discovered that Tufnol is available in eleven other brands, each with predetermined properties.

All brands of Tufnol are laminated plastics; each formulated to satisfy specific requirements—your requirements. If your birthday falls between January 1st and December 31st, this could be your lucky week—the week you discovered Tufnol.

\*Phone or write to your local Tufnol Branch Office and we predict you'll thank your lucky stars.

## Dresser is everywhere in the WORLD of CHEMICALS

Is pressure involved? Dresser provides it... with centrifugal and reciprocating compressors and centrifugal pumps. Dresser confines it... with compression fittings of many types.

Must materials, liquid or solid, be handled or moved? Dresser equipment pumps them, or blows them. Do complicated processes require monitoring or cycling? Dresser electronic instrumentation may be the answer.

And... Dresser makes highly efficient, multipurpose centrifugal solvent extractors that have earned a global reputation for separating and

removing many elements from liquids.

Refineries, constructors, food processors, manufacturers of pharmaceuticals, plastics, paper textiles... these and many more are faithful Dresser customers speaking many languages... located on every continent.

The world of chemicals is a Dresser world. One that Dresser understands and supplies through a world-wide group of integrated companies and licensees. Call on the men of Dresser... rely on the products and technical services of Dresser... anywhere in the world.

# SCOTLAND'S LARGEST APPLIANCE FACTORY

*Cubitts' precision planning speeds construction*

Architect: Wylie, Shanks and Partners. Quantity Surveyor: James Barr & Sons

Mr. A. E. Hitchcock, B.Sc., Technical Director of Morphy-Richards (Astral) Limited, says: "Having been closely concerned with the development of the project, I have been able to appreciate the way in which the many problems of site preparation and construction had to be overcome. Building for industry requires the closest co-operation from the Contractor who must combine speed of construction with an understanding of the specific needs of his Client. The completion of this plant on schedule demonstrates the value of this kind of co-operation."

Mr. A. F. Keary, Managing Director of Holland & Hannen and Cubitts (Scotland) Ltd., says: "From commencement to completion of a contract we like to work in very close collaboration with the clients and their consultants. Such a relationship ensures an up-to-the-minute appreciation of clients' requirements and job problems. At Dundee this close co-operation has enabled extensive areas of the factory to be handed over to Morphy-Richards (Astral) Limited for plant installation many months before the due completion date."

Close programming of construction enabled Cubitts to make half the factory floor area available for plant installation four months ahead of schedule. Thanks to this time-saving the largest domestic appliance factory in Scotland can go into production earlier than anticipated.

The new Astral factory at Dundee, covering 350,000 sq. ft., is an excellent example of how Cubitts' policy of precision planning saves time—and benefits the client. From the very beginning, Industrial Estates Management for Scotland, Morphy-Richards (Astral) Ltd., the consultants and Cubitts co-operated on detailed construction planning.

Every major operation was work studied—for example, it was discovered that the best way to tackle the initial clearing of the eight acre site was by using only one excavator and ten dump trucks. They moved over 100,000 cubic yards of earth and rock within a few weeks.

Then, in under three months the vast steel framework measuring 750 feet by 450 feet was erected, and the remainder of the construction work moved forward swiftly according to plan.

Part of the floor area that Cubitts made available for machinery installation four months ahead of schedule. Production in full swing: one of the cabinet spot welding lines in action.

**BACILLUS ANTHRACIS**  
Popularly known as anthrax, a deadly disease conveyed by animal hair, hides, wool, etc.

**CLOSTRIDIUM BOTULINUM**  
The organism causing the dreaded botulism.

**CLOSTRIDIUM TETANI**  
This is the lockjaw-causing organism that makes strict sterilisation essential of such things as talcum powder, hospital dressings and sutures, etc.

**STAPHYLOCOCCUS AUREUS**  
A scourge of modern medical nursing. Develops a resistance to penicillin and other antibiotics. Almost anything used in hospitals needs protection from it.

## These are the problems

### Sterilisation IN BULK is the new answer for hygiene

In industry and medicine expenditure of man-hours in the fight to repel infection is a cause of mounting concern.

Sterilisation of raw materials and other industrial merchandise medical and otherwise, has been difficult and found to cost a nation more than almost anyone imagined.

This is largely because sterilisation has had to be carried out before packaging thus wasting highly skilled hands on what should properly be a mere routine.

To this problem one answer is supplied by Vickers-Armstrongs: sterilisation *in bulk* by exposure to the cobalt-60 radio-isotope.

Advantages are great. Plant offered by Vickers-Armstrongs is completely mechanised and thus economical in man-power. Your sealed packaged goods to be sterilised are conveyed through the plant and emerge on the conveyor with all their contents surgically sterile and with no risk of re-infection.

Because neither heat nor steam is involved, most materials unsuitable for sterilisation by to-day's normal methods present no kind of difficulty and are unharmed.

Designed in conjunction with the U.K.A.E.A. Radiation Laboratories at Wantage, Vickers-Armstrongs plants are planned for throughputs of 2,000; 6,000 to 25,000; and 90,000 lb. a week, assuming a density in the packs of 6-30 lb. per cubic foot. Operation of the plant is simple, straightforward and completely safe to use and there is no residual radioactivity.

As a contribution to world health, Vickers-Armstrongs are ready to undertake design studies for particular applications of their plant with interested governments and organisations.

## VICKERS-ARMSTRONGS [SOUTH MARSTON] LTD

South Marston Works Swindon England Telephone Stratton St. Margaret 3241

### ALUMINEX DECK LIGHTS can be fixed so easily

Permanently weatherproof aluminium construction. Light, strong, fixed in minutes. Economical, corrosion-free — they need no maintenance. You hardly know they're there — except of course for the wonderfully comfortable daylight they give.

ALUMINEX DECK LIGHTS at the new Velindre Works of the Steel Company of Wales provide overhead daylight at the lower levels. The decklights shown, on the general stores building, supplement the general lighting of the main building by Aluminex Sidewall glazing.

Consulting Architects: Sir Percy Thomas & Son.  
Engineers: W. S. Atkins & Partners.

**WILLIAMS & WILLIAMS** forward looking building products

Williams & Williams make RELIANCE steel windows of every description, ALOMEGA and other aluminium windows, ROFTEN movable steel partitioning, ALUMINEX patent glazing, WALLSPAN curtain walling and many other products, all of which can be seen at our permanent exhibition at 36, High Holborn, W.C.1

WILLIAMS & WILLIAMS, RELIANCE WORKS, CHESTER · WILLIAMS HOUSE, 37-39 HIGH HOLBORN, LONDON, W.C.1

# WASHINGTON

(by George!)

## NOW! DAILY SERVICE TO WASHINGTON BY BOAC 707 JETS

Rolls-Royce your way to Washington this summer! Starting this month, BOAC is introducing a new service from London to Washington/Baltimore Friendship Airport by Rolls-Royce 707s, finest of the 707s. Daily flights, First Class and Economy, via New York or Boston. Economy Class single £101.15s; return £184.5s; First Class single £184.12s; return £333.8s.

### Over 80 Transatlantic flights weekly!

BOAC with its associates offers this tremendous choice! BOAC Rolls-Royce 707s thrice-daily London-New York, including convenient morning departures... daily to Detroit, Chicago, Boston, Washington, Montreal, Toronto... plus three a week to Los Angeles, two to San Francisco. Also frequent Air India and Qantas 707s to the USA, and T.C.A. DC8s to Canada—besides BOAC flights by jet-prop Britannia. Grand total, over 80 flights every week to N. America. Economy and luxury First Class, to suit your business or holiday schedule!

### And across the Pacific too!

BOAC 707s from London can fly you out westwards to Tokyo and Hong Kong via San Francisco and Honolulu, with easy connections at Tokyo or Hong Kong with BOAC's Eastern Route Comet services.

Book now! Consult your local BOAC Appointed Travel Agent or any BOAC office.

## No Black Pawns

EAST is East, and West is West; or so they think—the more so when the twain meet in the persons of men at “the highest level.” But Mr Kennedy and Mr Khrushchev should take note that a large part of humanity is coming to regard them both, almost impartially, as North. In the eyes of the non-European world, both Russians and Americans are, at bottom, Europeans. That world views, say, the Berlin question with indifference as a private European quarrel.

Increasingly it views the involvement of the great northern powers in such “southern” affairs as Laos or the Congo with irritation and alarm. It looks hopefully to Vienna, or to any other sign that the great powers may be able to moderate their differences. But it reacts sharply against any suggestion that an accommodation between them may amount to marking out spheres of influence. This is an old concept whose vocabulary has been enriched by modern terms like containment, deterrence, blocks and satellites. But its significance remains unchanged in the eyes of those who do not wish to be either power's portion.

The writ of the great powers no longer runs as freely as in the days of the nineteenth-century meetings at which the powers sought accommodations in the Balkans, or arranged the carving up of Africa. The nuclear giants may carry bigger sticks than ever, but, when they are wise, they walk softly. Dr Castro is one reminder of the new possibility of defying them on their own doorsteps. President Tito is another. The proposed “summit” conference of “uncommitted” states reflects one facet of the new resistance to great-power pressures. Competitive feting in Moscow and Washington of Asian princelings and presidents of wobbly fragments of Africa reflects another facet. One more “i” has just been dotted by the founding of an “all-African” trade union federation which, weakly and new-born though it may be, promptly kicked out with a ruling that its members must disaffiliate from the global trade union groups identified with “East” and “West.”

Africa is now the main repository of lingering illusions about the extent of the great powers' influence—illusions that feed on the visible weakness and, often, disarray of its small new states. The communist powers, not content to await the African swing into their camp that their dogma proclaims to be inevitable, are toiling to hasten it—not always very cleverly, as their repeated loss of contact with African views on the Congo has revealed. Western thinking about Africa is recurrently apt to drift into the single channel of consideration of how to stop the continent going communist.

Yet the plain fact is that Africans as a whole clearly do not want to be anybody's pawns. It is political death for any African leader to become labelled as a pawn of the West. (Many people here would be surprised to learn the extent to which this danger bothers even Mr Tom Mboya.) Equally, Moscow has repeatedly found its favoured protégés disappointing—and basically for the same reasons; rather than be seen to be in Mr Khrushchev's pocket, even Guinea has at times gone along with the other Africans in voting Russia down the river in United Nations debates on the Congo.

The new African states are now divided. The conferences of five governments at Casablanca in January, and of twenty at Monrovia in May, have formalised the division between them. Outsiders, and Africans themselves, need to understand more clearly than they do what this division means. The twenty Monrovia

countries are not simply in the West's pocket, nor the five Casablanca ones in Russia's. The anti-western element in the Pan-African movement is not of communist making; and western, not Soviet, actions will largely determine whether this element grows or diminishes. It would be a fatal error for the Pan-Africanists to dismiss the "moderates" of Monrovia as puppets, and an equally fatal error for the West to count on them acting as puppets.

Theoretical schisms between the rival groups may at present seem profound. The argument is not only about retaining or severing connections with former rulers in Europe; it also concerns the future organisation of Africa. The latter is really the more sensitive issue. In practice, while Guinea, Mali and Ghana may wax indignant at their ex-French neighbours' overt acceptance of French financial, administrative and military aid, Guinea relies for revenue on French mining companies (an awkward parallel with Mr Tshombe's Katanga); Mali remains in the franc zone; Ghana's army still uses British officers. But Pan-Africanist fervour for political union is viewed with natural caution by many leaders of small states which, having only just won their sovereignty, are not eager to lose it again.

**H**ow real is this disputation? Africa has indeed become sadly over-balkanised into small units of doubtful viability; but few would regard the merging of all these into a super-state as a practical possibility in our time. The outwardly enthusiastic experiment in unity on a much smaller scale which Ghana, Guinea and Mali have been carrying on has virtually nothing to show yet in the way of results. On the need to overcome the barriers of language and procedure that frustrate co-operation between ex-French and ex-British states, there is no divergence between the Monrovia and the Casablanca groups. On the working level, the twelve ex-French republics (called the "Brazzaville" group) are already further advanced toward integration than the proclaimed Pan-Africanists.

But outsiders must tread very carefully here. The ideal of Pan-Africanism is as noble as that of any other struggle to knock down barriers between nations. Africa's frontiers are more artificial than those of any other continent, being mainly the hasty creation of the European "scramble" of the 1880s. The loyalties of the new states' inhabitants are more often to the tribe than to the state, and small, weak states may succumb more easily to unashamed tribalism than would larger unities. And unity, if attainable, would obviously strengthen African hands in dealing with the outside world.

The last point alone suffices to explain why any western move that seems to complicate the task of increasing African unity is seized upon as evidence that the West wants to keep Africans divided for its own advantage. All such moves should be avoided. It would be abysmally stupid to pursue a policy that can only increase African hostility. And what genuine interest can the West have in seeing Africa politically unstable, permanently explosive, impoverished by artificial divisions, an unfruitful trading partner and a permanent claimant for economic assistance? Pure Pan-Africanism may be an unpractical ideal, but it must be left to Africans themselves to discover their scope for possible and beneficial unity.

Ironically, one might argue that the best service the West could do Pan-Africanism would be to serve as a dragon for its champions to cut down. That role, however, seems one that Dr Salazar and Dr Verwoerd are very willing to fill. (African nationalists who had been shaken by the Congo's slide into chaos have lately taken grim note of the thousands of refugees—many maimed by indiscriminate bloodletting—who have found sanctuary in this chaos from the dedicated civilisers of Angola.) As a general rule, some of the ill-will engendered among Africans by any white nation's actions will stick to any other white nation that does not articulately dissociate itself from them. Moreover, any wave of anger that emanates from Angola or South Africa, Algeria or the Congo is liable to force the leaders of independent Africa—"moderates" and others alike—into courses that may imperil not only western relations with Africa, but the stability of independent Africa itself.

At the Monrovia conference three weeks ago, the "moderates" made their sensitivity on this point abundantly clear. Their chances of succeeding in closing the gap between them and the Casablanca group depend largely on the conduct of the European countries with which they retain friendly connections. The Monrovia and Casablanca groups have an essentially common goal: to stand Africa on its own feet. The dispute is whether to cultivate western support for this purpose, or to assert the African personality by repeated gestures of defiance (while milking both western and communist sources of aid). The position of the "moderates," however, is undercut by every western error, and weakened by every rift which, dividing Africans themselves, excites irrational passions. The sharpest such rift is over the Congo: the Casablanca governments' commitment to Mr Gizenga, and the commitment of the Brazzaville governments to Mr Kasavubu, have left the really moderate "moderates" unhappily in mid-air. Unless the Congo wound itself is healed this year, the poison from it is bound to spread to East Africa, where Tanganyika, for one, may be forced to declare for one side and against the other.

The fact that the line-up of the African states on the Congo issue has not fallen into a simple East-West pattern should be enough to show how much more they are concerned with African matters than with great-power alignments. If, say, Mr Nyerere were to find himself siding with Mr Gizenga, that would not mean he was siding with Mr Khrushchev. The "pro-western" tag pinned on to the Monrovia conference did not lead it to give any comfort to Mr Tshombe in his run of bad luck. Africans want to be themselves, not somebody else's black pawns (a role in which they have had much experience). The lesson for the white outsider—Russia needs to learn it as much as the West—is neither to try to make Africans take sides, nor to take sides oneself when they are divided; but to support, wherever possible, their efforts to unite.

pages 981 to 983

# The Power and *La Gloire*

Mr Kennedy, on his way to Vienna, has had talks with General de Gaulle. Our special correspondents in Paris scrutinise the inscrutable

**M**YSTERY, General de Gaulle believes, is an essential attribute of leaders of men. It was certainly his prescription for this week's meeting with President Kennedy. A silence as golden (for the purposes of diplomacy, if not of journalism) as the sunshine that welcomed Mr and Mrs Kennedy to Orly airport on Wednesday morning descended upon the inter-presidential exchange the moment it began. On Wednesday evening Mr Pierre Salinger, Mr Kennedy's press secretary, gave new force to the word "briefing" by telling a large assembly of newspapermen, most of whom had flown the Atlantic for the occasion, that the two men had had lunch on opposite sides of a rather large table and had talked for two and a half hours during the day about Berlin, south-east Asia and unspecified parts of Africa, though what they said he could not tell. This performance by Mr Salinger was watched with benign approval by his predecessor, Mr Jim Hagerty, now at the receiving end of the process. The French spokesman, M. Baraduc, has been keeping equally mum in French. Those who know somebody who has been somewhere near the room where the two Presidents have been alone with their translators report that they have presented their views alternately without any attempt at persuasion or exploration. The technique is known to students of Greek tragedy as stichomythia.

Deprived of inside knowledge, observers have had to make do with outward symbols. There have been plenty of these, from the huge French and American flags in the Place de la Concorde, which trailed on the ground when the supporting wind from the west failed, to the size of the crowds. These have been a good deal smaller than either Mr Khrushchev or Mr Eisenhower got on their visits to Paris, according to local experts, though the weather has admittedly been less kind. Most fascinating of all the sights, however, has been the physical juxtaposition of two men separated in spirit by far more than an ocean and a generation: Mr Kennedy, on his feet in the presidential car, smiling, waving, the exponent of perpetual motion; beside him, General de Gaulle, sitting immobile with an old man's erectness, peering straight ahead into his private visions. President Kennedy has come to France as the representative of the centre of power in the western alliance, and as a man who believes that one can cut through any difficulty by a process of analysis, reasoning and decision. In General de Gaulle he has met a wholly different cast of mind, intuitive to the point of mysticism, as impervious to the cutting edge of Mr Kennedy's approach as water is to scissors. If their first meeting proves anything, it is that in such a confrontation of personalities victory does not necessarily go at the first round to the champion of cold reason and the possessor of the greater material power.

Clearly the two Presidents have had a meeting of minds this week only in the sense that a circle and a line meet at the tangent. They have not even wanted to talk primarily about the same things. Mr Kennedy's chief interest was to

discuss the strains in the western alliance that have been caused by General de Gaulle's ideas on sovereignty and national grandeur. The general wanted to tell the President what to say to Mr Khrushchev at the weekend. Mr Kennedy's counsellors, foreseeing these difficulties, advised him simply to present his views to General de Gaulle and listen to the general's views in return. To judge by the first day's reports, he has been following their advice. In fact, he had little choice. Quite apart from the problems caused by the gulf between the two men's mental processes, Mr Kennedy has laboured under the necessity of preserving the appearance of western unity before his meeting with Mr Khrushchev in Vienna. The onus has thus been on him not to push his differences with General de Gaulle to the point where a rift might have become publicly visible.

The consequences of all this could be foreseen before Mr Kennedy's aircraft touched down at Orly. It is significant that the one subject discussed in the first day's conversation on which the spokesmen were willing to say that there had been even "general agreement" was how to deal with a renewed crisis over Berlin. General de Gaulle, it is believed, faithful to the understanding he reached with Dr Adenauer on his visit to Bonn a fortnight ago, urged the President to take an uncompromising stand on Berlin, even to the extent of getting ready to implement the contingency plans drawn up by the allied military staff. These provide for the deployment of an allied force, if need be, against the point at which the lines of communication between west Germany and Berlin enter communist territory. It is also believed that Mr Kennedy readily assured the general that he would be uncompromising.

**E**VEN here, however, the announcement of "general agreement" may conceal continued differences of interpretation. It is not clear whether General de Gaulle thinks that the contingency plans should be put into operation if and when the communists try to cut the lines of communication with Berlin, or (a quite different matter) if the Russians merely hand over the control posts to the east Germans—in other words, whether force is to be used for the sake of saving Berlin or simply for the sake of not giving *de facto* recognition to the east German government. Even if General de Gaulle is ready to take military action for the lesser reason, it is highly unlikely that President Kennedy has firmly committed himself to do so (as distinct from hinting that he might, in the hope of deterring Mr Khrushchev from taking any action at all).

It is quite proper that the two Presidents should have discussed Berlin, although it is doubtful whether Mr Kennedy, if left to his own devices, would have put it as the first item on the agenda—as it turned out to be on Wednesday. But it is when one turns to the urgent problems inside the western alliance that it is possible to see just how firmly the advantage in this week's conversations has lain with the French Presi-

dent. There are two reasons for this. The first is that General de Gaulle can afford to wait and therefore was able to lay on Mr Kennedy's shoulders the responsibility for raising this divisive subject at the inopportune moment just before he meets Mr Khrushchev. Since the general made his famous approach to Washington and London about the alliance in 1958, he has acquired the beginnings of nuclear power, and has made the allies worry more than they used to worry about what France thinks. Thus General de Gaulle had no need to prod Mr Kennedy; he could leave such unfraternal behaviour to the President.

The other reason why Mr Kennedy has been in difficulties is that he is at a tactical disadvantage just now on each of the main points at issue within the alliance. On the question of Britain's membership of the Common Market, for instance, he has not been able to approach the French with a public and unequivocal British offer to join. Even if he had, he could hardly have hoped to extract from the French more than a general promise to consider the application favourably. The detailed negotiations on agriculture and the Commonwealth that will be necessary if Britain decides to join the Common Market are too complex for the two Presidents to go into; the most Mr Kennedy could do this week was to urge General de Gaulle to approach such negotiations as technical matters to be settled by the experts rather than as an opportunity to block British membership by setting impossible conditions.

**I**n the same way, Mr Kennedy's hope of enlisting French aid in controlling nuclear weapons has been handicapped by the reluctance of Congress to share America's nuclear secrets with France—the price the general would presum-

ably demand for stopping French tests or (if any price could buy this) submitting French weapons to joint control. And once again, even if Mr Kennedy has been dropping hints that he might persuade Congress, or the British Government, to share Anglo-American nuclear secrets, he still has no assurance that General de Gaulle will not blithely accept the offer and then insist on continuing with his own nuclear plans as well. It is not surprising that this week's talks seem to have been genuinely little more than an exchange of views, and that Mr Kennedy's views have tended to roll off General de Gaulle's back more readily than *vice versa*.

The one area in which observers in Paris see some hope of progress as a result of the presidential discussions is in getting the allies to consult each other more effectively. Neither Congress, nor the other members of Nato, will allow Mr Kennedy to accept any system of consulting with France that remotely approaches a French veto on American foreign policy; but something less than this might be both acceptable and useful. As M. André Fontaine has pointed out in *Le Monde* this week, the French foreign ministry has recently found itself getting a better flow of information from the State Department than it used to. This week's discussions are evidence of the allies' awareness of the need to pull, rather than push, General de Gaulle into co-operation. Perhaps an extension of these interchanges might go some way, if not very far, towards satisfying the French President's wishes. But the problems of inter-allied relations also depend on what happens between Mr Kennedy and Mr Khrushchev. If their meeting in Vienna this weekend offers a promise of better understanding, General de Gaulle's challenge to American leadership of the western alliance will lose much of its nuisance value.

## The Federalists

With two provisos, even a weak federation in the West Indies would be better than none

**T**HE West Indian federation which is likely to emerge from the constitutional conference that began at Lancaster House on Wednesday may, with difficulty, be identifiable as a new nation state. But the difficulty looks like being considerable. All that the federal government seems assured of is responsibility for a diplomatic service, two battalions of troops, a post office, a university and an annual revenue of £6½ million drawn wholly from tariff duties and the profits of a currency issue. Even Lancaster House has hardly sent any more puny infant into the world.

Yet what is the alternative? The constitutional scheme confronting Mr Macleod is the product of eighteen months' dickering between Mr Manley of Jamaica and Dr Williams of Trinidad; the Port of Spain agreement that they reached a fortnight ago is not for the system that would govern the West Indies best, but simply for the arrangement that divides two most populous and prosperous islands least. Jamaica accept anything stronger; when Mr Manley holds referendum, it may not even approve the flimsy

Sir Grantley Adams.

Dr Eric Williams.

Mr Norman Manley.

federal structure it is now asked to sustain. Dr Williams has declared, for his part, that if Jamaica opts out, Trinidad will not carry the eight other island colonies by itself. Rather than see the bigger islands go it alone in the political cross-currents of the Caribbean (with the smaller ones remaining permanent British pensioners) Mr Macleod should plump for the lesser evil—but on two conditions.

The first condition should be that the federal government's eventual right to raise revenue by direct taxation is written into the constitution itself. Jamaica will insist on an interim period in which the power of direct taxation is reserved to the separate island governments. This may have to be as long as nine years (the time now proposed before the full implementation of an internal customs union); even then the federal proportion of total direct taxation may be as little as 5 per cent, sufficient only to give effect to the beginning of federal responsibility for economic development. Preferably, however, any arrangement should be subject to review after the federation has been a going concern for four or five years,

when some momentum towards greater unity may develop.

The second condition on which Mr Macleod should insist is that no device is planted in the constitution, at the behest of Jamaica or anyone else, that would give any one island the effective power of veto over the eventual transfer of direct taxation to the federal government. The Jamaicans are believed to have come up with this idea at Port of Spain. They have no intention of being saddled with the cost of other people's industrial development when they have at least half their own population under-employed. In practice, however, the needs of the smaller islands are likely to go on being met by the British taxpayer after federation, as they have been before it (to the tune of £8 million in the past five years). Jamaica, which has done well out of bauxite development, has attracted secondary industries, and has profited from the diversion of American tourist and other interests from Cuba, possesses far brighter prospects than the smaller islands of setting its house in order. Given time and the tug of new loyalties it should be better able to take on responsibilities and recognise new interests than it is ready to do now. If Britain is to underwrite the federation economically in its early stages, it has to say that the federation itself should aim at becoming a viable and coherent entity, and should reflect this principle in the initial bias of its constitution.

**T**HIS is not to underestimate the political problem that Mr Manley faces in selling the federal idea to his electorate. His decision to hold a referendum was partly inspired by the political capital that his Jamaican rival, Sir Alexander Bustamente, has managed to make out of the anti-federal cause, but he saw that it would also give him the strongest of weapons in bargaining on Jamaica's behalf with the advocates of close federation, principally Dr Williams of Trinidad. Mr Manley's success is reflected in the Port of Spain compromise, which has allowed Jamaica to increase its representation in the federal parliament from 17 seats out of 45 to 31 out of 64; which has delayed the internal customs union for nine

## More Starch for the White Collar

The swiftest growing section of the trade union movement is among white-collared workers

**W**HEN the staffs of some savings banks in Derby last year fought and won an industrial dispute, they inaugurated a new era in the history of middle-class Britain. The Scottish—and some English—teachers who have downed chalks since then have merely been following a precedent. In the less class-conscious societies of France and Italy, bank clerks and teachers have for long been among the most strongly organised trade unionists in their communities. Britain's white-collar workers have been slow to start on this tricky path, but the movement is now gathering pace.

In the past five years, membership of the unions affiliated to the Trades Union Congress has risen by only 21,000; the early recruiting drive just after 1955 has completely petered out, and the TUC's membership has actually fallen by 209,000 in

years; and which promises to keep direct taxation firmly in the hands of the separate island governments. Dr Williams has swallowed this, although the federal premier, Sir Grantley Adams, faced with the indefinite prolongation of an authority that might have been made to measure for a *roi fainéant*, is naturally protesting about it. Mr Manley can now approach his recalcitrant followers with the rather tepid argument that federation will cost the island little more than a fully independent government at Kingston, with its own diplomatic corps and defence force, would do. But the real need is still to present the federal idea as a purposeful experiment, something of major importance in Caribbean and world politics. In the United Nations, for example, a united West Indies, with good internal race relations and bridging the gulf between the Atlantic powers and the coloured peoples of Africa, could expect to play a crucial part. This prospect is not beyond Mr Manley's undoubted powers of political presentation.

The West Indies' misfortune is that they are setting out in the decade of Dr Castro with the same problems of geography and introspection that confronted the scattered Canadian and Australian colonies a century ago. Trinidad is now to Jamaica, 1,200 miles away, as, in a sense, British Columbia was then to Quebec and Western Australia to New South Wales. Inter-island contacts, except in cricket, have been few: each colony has looked directly to London. Inter-island trade has been minimal, running on average at some 3 per cent of the whole. At the same time communities that might rate the status of a small Welsh county council have grown accustomed to the pretensions and trappings of governors and prime ministers of their own. Federal artifacts develop only when there is an initial determination to see that they do. The West Indies will continue to look to Britain for aid, for markets and for emigration to relieve population pressure (certainly federation will not work if the safety-valve of jobs in Britain is suddenly shut off). Mr Macleod may have to be content with small beginnings—but the prospect of a fuller and more complete West Indian union must be made visible and practicable even in this first constitution if it is ever to be grasped.

the last two years. By contrast, unions affiliated to the National Federation of Professional Workers have grown by 90,000 members since 1955. The National and Local Government Officers' Association has grown by 38,000 members, the National Union of Bank Employees by 5,500, and the National Union of Teachers is rising towards the quarter of a million mark (which NALGO has already passed). The civil service unions, which have for so long given discreet service to the satisfaction of the government as well as of their members, have acquired a new vociferousness. Even a parson who proposed the creation of what might be called a white-collar-back-to-front union has been calmly refuted by other ecclesiastics, instead of being mocked as a hopeless eccentric. Among the few groups of white-collar workers who still lack a trade union of their own are the employees of trade unions.

The topmost professional people, such as barristers, doctors, or accountants, have always organised themselves collectively to safeguard their professional standards and some of the

resulting bodies operate practices which look pretty restrictive to the outsider. Some more eccentric groups, such as musicians, actors or journalists, more recently accepted trade unionism as a fact of their working life, and often as a condition of employment; unlike the barristers, they call their trade union spade a spade. So do white-collar associations in industries in which the manual staff are traditionally organised into trade unions. On the railways, for instance, there have for long been three unions, organising respectively the mass of the employees, the footplate men, and the clerical staff. The conflict of interest between three such groups can be genuine and sharp. It has been illustrated again recently by a group of engineering supervisors who, dissatisfied with the Amalgamated Engineering Union's concentration on the interests of unskilled workers, have broken away and formed their own union. The post office engineers—most of them men with skilled technical qualifications—have always kept themselves aloof from the mass of post office workers: the history of their own white-coat union, which has split and reformed again and again, is at present at a stage where they are making more militant threats than the horny-handed staff.

**B**UT the biggest change in the past ten years has been in industries which have never been organised before—or in which organisation had previously taken some form different to that of the traditional union. Thanks partly to their aspirations to a higher social status, many insurance officials or office workers have until recently not wanted to be mixed up in the somewhat vulgar activities of manual workers' unions; now, as more and more children of manual workers are enabled to get a good education, this class stereotype is being broken down.

The banks provide an example. All the major clearing banks have for long had staff associations, encouraged by the managements, provided by them with premises, and empowered to negotiate on conditions and (to a rather lesser extent) on pay. Many bank employees, understandably, prefer to belong to the staff associations: but the strength of the National Union of Bank Employees, which affects in its public pronouncements to regard the staff association members as dupes or even as quislings, has grown rapidly in recent years. The staff associations point out that those who belong to the union are often not in banking as a career—and no doubt those who hope to become managers often feel that it is better to stay in the staff association. But precisely the people who most feel the need to be represented in negotiations are the girls and young men who take a job in a bank for a while, but do not regard promotion to a managership as their vocation. However much the banks, and in some cases a majority of their employees, may regret the passing of the days when loyalty to the house made membership of the union unthinkable to all but coarse eccentrics, the day of the union has arrived. It is going to arrive in other white-collar occupations as well, as the Automobile Association learned to its cost during a small-scale typists' walk-out last year.

The rise of the white-collar unions is something that should be welcomed by all who would like to see the trade union movement possessed of a few new ideas. This wish is not simply inspired by the memory of how some white-collar trade union leaders spoke up in support of Mr Gaitskell's defence policies at last year's Trade Union Congress: many white-

collar unions, like NALGO, do not in any case affiliate to the TUC, and many of those that do refuse to affiliate any part of their membership to the Labour party. Both affiliations are the subject of perennial argument among white-collar trade unionists, some saying that many of their potential members refuse to join an organisation presumed to be sympathetic to socialism. This may well be true of the link with the Labour party; but membership of the TUC would hardly taint any organisation irremediably, and a million-odd new white-collar unionists, disposing of funds comparatively far larger than those of the manual unions, could surely help to influence the TUC in the direction they want.

For this purpose it might be a good thing for the TUC if the more political resolutions at its annual congress were voted on only by unions with a Labour party affiliation, and only in the name of those members who pay the political levy. Better still might be a decision to hold two separate congresses a year—one industrial and one political—as the Co-operatives do: the Co-operative Congress tries to discuss mainly commercial questions, while the Co-operative Party Conference can busy itself with political excitements.

This is the kind of radical new idea which some forward-thinking trade union officials will contemplate, at least in private. They recognise that the white-collar unions have some useful lessons to teach them. The latter are setting the pace, for example, in proper payment of top union officials, a matter which badly needs more attention from manual unions which are already facing problems over the recruitment of the best men for the job; NALGO, for one, pays its general secretary £4,450 a year. The white-collar unions can be forcing houses of other novel ideas, such as that thought up by ASSET when it wanted to have a say in the Air Transport Licensing Board because many of its members work on airfields. The union simply bought up a defunct airline—for a song—and claims to appear before the board as an operator.

The spreading of the trade union ethic up the social scale brings with it some dangers and problems—particularly for the government which now employs so many of the first generation of white-collar unionists. Pay negotiations for civil servants and teachers are now rigidly based on the principle that salaries should be fixed in relation to pay in comparable jobs in private employment: National Assistance Board clerks or lighthouse keepers are slotted into Procrustean compartments whose advantages and liabilities are assessed in intangible terms for equation with outside jobs. This is obviously artificial. It too often leads to shortages of people with particular kinds of qualification, because of traditional taboos—such as, for example, that administrative officers should not be paid less than scientific staff. But this is to say that employers—particularly the Government—should insist stoutly that they will pay most in high differentials for the particular men they most need: that relative pay scales, even within officialdom, must be determined by market realities, not by any abstract principle of “traditional status” or of fair wages all round for inflation. It provides a case for guarding carefully that the growth of white-collar trade unionism should not introduce more starch and restrictionism into the economy, but not for ignoring the commercial and social implications of this growth, or for wishing idly that they would simply go away.

## BRITAIN INTO EUROPE

Mr Macmillan's caution about Europe when he spoke to the assembly of Western European Union on Monday may be partly explained by the problems of Commonwealth farmers. These may have to be solved in a world-wide context. If they can be, neither British politics nor the Seven seem likely to stand in the way of a British move to join the Six

### THE COMMONWEALTH

### Six Months for Decision

**O**NCE again, the Commonwealth difficulty is looming over Britain's European decision. With commendable courage the British Government has now faced up to the need to budge two of the purely British interests—the farmers and the remaining preferences enjoyed by British industry in the Commonwealth—that stand in the way of British membership of the Common Market. But in a characteristic British way it is evidently finding it much more difficult to face up to the delicate matter of persuading other people to adapt themselves. The inevitable warnings that came from Australia, New Zealand and Canada when officials met in London late last week, and the shriller cries that have been coming from New Zealand since, encouraged Mr Macmillan to retreat into philosophical generalities when he spoke to the assembly of Western European Union in London on Monday. Those of his audience who had begun to take heart from Mr Heath's speech of May 17th, and to look at the British difficulties with more sympathy and less suspicion, were plainly disappointed.

The worries of the white dominions, it is true, were not shared by the whole Commonwealth at last week's meeting. The African and Asian members are beginning to recognise that what they lose on the roundabouts, in terms of privileges in the British market, they may well gain on the swings, in the European market as a whole. Canada is worried about its exports of manufactures, but these are tiny in scale; the Canadians may have to be satisfied by talks in Gatt, and the appointment of Lord Amory as a placatory High Commissioner. The heart of the Commonwealth problem is the farm products of Canada, Australia and New Zealand. New Zealand's dairy industry was built up to serve the British market. Australia sends a quarter of its exports here. Wool, one of the principal exports from the two countries, should wholly benefit from British membership, since it could expect to enter the common market duty free. But three staple products—grain, meat and butter—will all be profoundly affected if the British market is merged in a common European one, surrounded by import levies and guided by common policies. The Commonwealth is still nervously seeking guarantees, in what is after all an unknown economic landscape.

Two main ways of satisfying Commonwealth interests have been suggested. One way is to try to negotiate tariff quotas to allow Commonwealth agricultural products to come into Britain duty-free after all. This way appears attractively similar to the *status quo*, but it would in fact mean driving a hole through the common agricultural policy. The second way is to accept fully the implications of a common agricultural policy and price level and concentrate on getting the prices

down. This would mean placing the responsibility for Commonwealth interests squarely on the shoulders of Europe as a whole.

The choice of method ought to be related to the tussle about agriculture that is going on within the Six. Broadly speaking the French, Dutch and Italians, all farm exporters, are anxious to get the common agricultural policy under way. The highly protected Germans are not. So far the Germans have been allowed to procrastinate, on the excuse of their coming elections in October, but once these are over the clash will come.

The next six months may therefore be decisive for the debate within the Six, as well as for diplomacy between the Six and Britain. The French hope to use as means of pressure on the Germans two big decisions which have to be taken by the community. The first, due by the end of June, is the decision to complete the acceleration plan agreed last year. The second, due in the autumn, is the even more important decision, required by the Rome treaty, to move forward from what is called the first phase of the treaty to the second. The treaty laid down that at the point now reached the further progress of the customs union, which has a fixed timetable, would be held up for two years unless all six members were satisfied on other vital matters and agreed to go ahead. On both decisions France is threatening to use its veto unless the agricultural policy moves ahead this year. This situation contains temptations for both Bonn and London. The west German ministry of agriculture makes no secret of its hope that if Britain comes in, the common agricultural policy can be held up altogether; and if the French hold up the acceleration, the German farming interests will accept this philosophically. Obviously it must be tempting in London to take the same view, or to try at least to negotiate tariff-free quotas on a scale that would effectively water down the common agricultural market.

But in agriculture, as in broader matters, getting into the common market requires French concurrence; and the French are well aware of the dangers. If the British, with the Germans nodding silent assent, try to solve the Commonwealth problem by asking for a great many exceptions, the French will simply continue to block British entry. On the other hand, once the British agree to accept the common policy with minimal exceptions, they can expect to find themselves on the same side as the French in the debate on what the common policy is to be. The French, after all, like the Commonwealth, are anxious to keep prices down, in the belief that low price levels, slashing the protection round the German peasant, will open up new export markets for them. The French see Britain (and Denmark) as potential allies, once Britain accepts the

common market conception. Both the speed and the success of Britain's European negotiations this year thus depend on its willingness to find common ground with the French view.

Can any guarantees be given to the Commonwealth that prices will in fact be low and policy liberal enough? Suggestions that the Commonwealth be guaranteed a certain statistical share of the market encounter little enthusiasm on the Continent. If guarantees are necessary, the arrangement of a review between one phase and the next would provide a strong safeguard but avoid endless quibbling. A vote on further progress after a first phase of British membership would push the problem out of the limelight, allow everyone a veto later, and force the members to find a joint solution in the meantime. More immediately, the Six also seem prepared to make wider use of a device already used in Gatt—the fixing of a ceiling on levies and prices. And there is a widespread willingness for special talks with New Zealand about butter.

**G**ROPING for a solution to their problems, Australia and New Zealand have inevitably hit at one time or another on the more radical idea of association with the enlarged community, which would give them a say in the common agricultural policy and a special place in the European market. "Can Australia join?" is a characteristically venturesome first reaction to the subject. But while close association would obviously have big political advantages for the Commonwealth, there are two big objections. Quite apart from any doubts the Europeans may have, it is not at all certain that

either country would be prepared to reduce its industrial tariffs in return. And where they would, there is a disposition to bargain for markets, not just in Europe, but elsewhere—in the United States, and still more, Japan. The United States, too, though it may tolerate European discrimination against its manufacturers for the sake of European unity, is not likely to go so far as to swallow a new worldwide preferential arrangement in favour of its main agricultural competitors.

The problem of temperate agriculture can indeed probably be solved only in a new joint effort by all the major farming nations of the western world—in Gatt, perhaps, or in an Organisation for European Co-operation and Development enlarged to include Australia and New Zealand. Contact in this Atlantic grouping might help to assuage the chilly sense of political isolation which increasingly afflicts the two faithful Pacific dominions. And the problems will be pressing whether Britain joins the Six or not. Within a few years surpluses of wheat and butter will throw a shadow over the world markets if present trends continue. The group might both study the difficult question whether surpluses can be used more effectively to feed the undernourished half of the world's population, and make a start on opening the markets of Europe and America to each other. For Washington, this will be much the most difficult of its new ventures into trade co-operation; so far President Kennedy has been more tender to the farm voter than his predecessor was. But if Britain joins the Six, America will be faced not just with an agricultural problem, but with a change in the facts of world power. The way could be opened for many new ideas.

## POLITICAL CHOICE

### Obstacles Fading in Britain

**E**ACH of the internal political difficulties in the way of a British application to join the Six looks steadily less formidable. So far less than a dozen Conservative MPs (of the Lord Hinchinbrooke genre) have protested really loudly at the way things are going; the agricultural issue, which was expected to weigh heavily with about a hundred other Conservative MPs, seems to be fading in importance as more and more Tories are willing to accept that British farmers would probably gain from the change. Lord Salisbury is said to be a moderate pro-European, and no cabinet minister at present seems likely to resign to lead a revolt with the Hinchinbrooke dozen as his only lieutenants. At the other end of the pole, 13 Conservative backbenchers have signed Lord Gladwyn's memorandum in favour of Britain's formal and prompt acceptance of the institutions and ideals of the common market; several of them are notably up-and-coming young men, clearly of future junior ministerial material. Lord Gladwyn's document has also been signed by an imposing roll-call of names from Britain's intellectual Establishment and by enough prominent ex-civil servants to suggest that theirs is the majority voice in Whitehall; one very interesting signatory is Sir Robert Hall, who was chief economic

adviser to the Government until he reached retirement age a month ago.

Equally important things are happening on Labour's side. To its embarrassment the Trades Union Congress last week received a letter from Mr Finton Walsh, president of the New Zealand Federation of Labour, which averred that "this drive to herd Britain into Europe comes from the greed of industrialists" whom he portrayed as once again intent on happily and deliberately sacrificing the British and New Zealand worker for their profit. This sort of language has an effect that is the exact opposite of what had been intended, because it makes opposition to European union look rather cranky. The TUC has also to take note that the Gladwyn document was signed last week by three pillars of the miners' union (Messrs Sam Watson, Ernest Jones and Sir Will Lawther); at the Coal Board Mr Robens also believes that signature of the Rome Treaty would be good for coal. In all, 17 Labour MPs and about fifteen other prominent Labour figures have signed the Gladwyn manifesto; they range from three or four figures of the pretty far left (including the chemical workers' Mr Edwards and the Methodist Dr Soper), through a sizeable crop of Labour lawyers and intellectuals (including—shades of his

"Schuman plot" speech of 1950—Mr Strachey), most of the prominent Roman Catholics in the party, a leading cotton trade unionist (Mr Thornton) and Labour's best-informed agricultural expert (Lord Walston), to the Croslands and Wyatts. Among Labour doubters, Mr Denis Healey has rightly said (in an article in *The Observer*) that this issue "faces Britain with the most fundamental decision in her history," but has then somewhat inconsistently opposed it because he fears a short-term dilution of British foreign policy under pressures from the elderly Adenauer and de Gaulle. Mr Wilson and Mr Jay will continue to hound the Government at every point where they think that some special interests' votes can be picked up as a result of any diminution in protectionism; but probably no more than that. On the far left, Mr Michael Foot is opposed to European unity, root and branch. But the net effect of all these cross-currents—and of the fact that Mr Gaitskill's own views on this matter are very similar to the Prime Minister's—seems to be that Labour cannot now possibly make any Government advance towards Europe into a major and clear-cut inter-party issue; if Britain is still kept out of EEC, it is unlikely to be internal political difficulties that shut the door.

## THE SEVEN

### On the Move

**T**HE appearance of a British intention to seek membership of the common market has shattered the quietude of the European Free Trade Association and set its members on the move, seeking to protect their own interests. Reappraisal has gone a long way in most of the capitals. Quite apart from Denmark, which has said that it will join as a full member if Britain does, and Norway which seems likely to follow suit soon after, the Swiss, Austrians and Swedes have all been putting out feelers to Brussels to explore the possibilities of association. Austria and Switzerland, indeed, seem already to have abandoned the idea of multilateral negotiations by the Seven as a group, and to have accepted the idea of bilateral talks. Only Sweden still clings to the idea that the Seven must negotiate as one.

What are the prospects for bilateral associations for the neutrals, if the issue comes to a head? If the common market tariff settles at or below the new low level pro-

posed by the Six in the General Agreement on Tariffs and Trade, there is little ground left for the old objection to a customs union from the low-tariff countries, Sweden and Switzerland. But the Swiss may get into trouble if they try to protect their agriculture at all costs. About institutions, the Six are on the whole more inclined to sympathise with the political difficulties of the Austrians and Finns, who, they feel, are victims of *force majeure*, than with the Swiss, whose neutrality appears to them as a matter of taste. Still, on the whole, the attitude of the Six towards the neutrals is not unfriendly.

America's view remains the big unknown. The United States, willing to accept economic losses for the sake of bringing Britain into Europe, may not be so inclined to be charitable for the sake of Swiss exports. The case for bringing in the neutrals may well have to be put in Washington by Britain, which has, after all, an obligation to them.

## WEU

### Symbol without Power

**S**YMBOLIC anticlimax is really the only description for the meeting of the Assembly of Western European Union in London this week. It was obviously appropriate and exciting that a European assembly should be meeting in London for the first time at the moment when the decision to commit Britain to Europe hangs in the London air. But there was no disguising the disappointment of the deputies when Mr Macmillan treated them to a philosophical discourse which gave absolutely no hint of what the British Government's intentions are.

All this tended to give a certain air of unreality to the debates that followed. The keener of Britain's European friends (and most of the deputies in WEU are friends of Britain) were left to console themselves by

quoting enthusiastically from Mr Heath's recent speech in the House of Commons, and by listening to their British colleagues explaining that they thought the decision was on the way. On Tuesday a useful report was adopted from the assembly's general affairs committee, explaining how the Commonwealth problem could be solved if Britain joined. But though it was presented by a Tory agricultural MP, Mr Robert Mathew, and if anything neatly dodged any particularly difficult Commonwealth points, there was a good deal of feet-dragging from other Conservative MPs, still uncertain, perhaps, of their government's policy. If there was no doubt that the members of the WEU assembly wanted Britain in Europe, there was none, either, that the decision was in other people's hands.

## GATT

### Straining at Gatts

**T**HIS year may go down to history as the year when the great trading nations at last started to swallow the real camels, but were still straining at Gatts. The real camels are, first, the possibility of forming a common market right across Europe; secondly, President Kennedy's bold idea of a joint western effort to increase imports of cheap manufactures from the developing countries, and, thirdly, the possibility that, if only the problem of imports from cheap labour countries can be shifted to consideration under some such new and liberal scheme, the advanced industrial countries of Europe and North America might at last start to

realise that tariffs between themselves are an uneconomic illogicality. When and if Europe is united economically, it is a perfectly sensible hope that the next great advance in trading relationships may be towards something approaching a free trade area between it and North America. All these burgeoning thoughts are tending to overshadow the officials of the 36 big trading nations who have been gathered since last September at a Gatt meeting in Geneva which itself started off with what once seemed to be a major objective.

The broad objective is to make this the Gatt session of the 20 per cent tariff cut.

The United States has the power from Congress to make some tariff cuts of up to that amount; it has never intended to make such concessions in full, but it hopes to conclude agreements about some of them and has always emphasised that it must have time to get such agreements ratified before early next summer (when its present powers from Congress expire). The common market Six announced some time ago at Geneva that they would be willing to make a 20 per cent cut in their own projected tariff with the outside world, on pretty well all industrial products right across the board; but first they were obliged to make "compensatory" agreements with other countries to make up for the fact that this common tariff will itself oblige some members of the Six to put up their individual tariffs (in breach of some previous bound agreements). Britain, for its part, had at last begun to realise last year that even unilateral tariff cuts would be good for the British economy, because they would foster more competition; it had come to Geneva willing to make cuts that should average approximately 20 per cent too.

Unfortunately, so long as the pettifoggery Gatt system of bargaining still obtains, pettifoggery keeps on rearing its head. Both the Six and some of those bargaining with them have acted rather crabblily in the preliminary negotiations about individual compensatory cuts; it had originally been hoped that these preliminary negotiations would be over by January 1st, but final agreements had still not been reached by last week and the remainder of these negotiations have now had to be merged into general negotiations about the 20 per cent cuts. In this new round, the Americans are in the awkward position that they cannot give as big concessions as they hope to get from other people. The British Government, after preliminary soundings with British industry, has also apparently decided that it would be politically inconvenient to offer a 20 per cent cut in British industrial tariffs right across the board, but may try to balance smaller concessions in the awkward cases by offering more than a 20 per cent cut in others.

One factor that might give the British unworthy reason to pause is the fear that if any industries really did start being hurt by these preliminary Gatt reductions, that might raise political opposition at home to the later and bigger negotiations about joining the common market. It would be a bad mistake by the British to pay too much heed to this fear. The real British need now is to keep up the dynamic towards free trade in the free world, in order to give more power to President Kennedy's elbow when the reciprocal trade legislation comes up for discussion in Congress next year. (What goes for trade, goes also for aid—especially in the current Aid for India Club negotiations in Washington.) It is important that this common sense judgment should underlie the instructions that the Government sends out to Sir Edgar Cohen, the British representative in Geneva, during the next few weeks.

# NOTES OF THE WEEK

## THE CARIBBEAN

### Death of a Benefactor

GENERAL RAFAEL TRUJILLO'S hold over his feudal barony, the Dominican Republic, was so all-enveloping that his death had long been predicted as the only instrument of change. His assassination on Tuesday night opens the way for something new: perhaps for a less old-fashioned order. But just as possibly—given the circumstances of his removal—the way may have been opened merely for disorder. Other authoritarian regimes in Latin America have been swept away by liberal movements within the armed forces, smothered by the pressure of increasing opposition, or, in the case of Cuba only, overwhelmed by popular revolution. In each case there was a group ready to take over authority, even if only in a caretaker capacity. But in the Dominican Republic there will be many competitors for the power that General Trujillo had wielded since August, 1930, and it may be several weeks or months before the convulsions that are now likely to shake the country throw up a responsible government of any kind.

For thirty years *El Benefactor* has dominated the republic's political, economic and cultural life. Surrounded by a network of secret police, backed by an army of 100,000 men, many of whose officers were deeply implicated in his acts of suppression, he had, until now, been able to anticipate the

plots against him and ignore the writing on the wall. All the signs that in other Latin American republics have been the prelude to change have been written large in the Dominican Republic, but General Trujillo, secure in an atmosphere that to one correspondent chillingly recalled George Orwell's *Nineteen Eighty-Four*, was able to treat them contemptuously. Murder, in this outpost of autocracy, had to precede revolution.

Over the last year or so the general had become more and more isolated within his own domain. Nearly every other Caribbean government had become his avowed opponent. Cuba, after the first bravado of Sr Fidel Castro's challenge, has had troubles enough of its own; but Venezuela, since General Trujillo's ham-handed support for a murder attempt on President Betancourt, has persistently urged the American states to take action against the Dominican regime. But the Dominicans have reserved their retaliatory anger for the United States. Washington's decision last autumn to join the other members of the Organisation of American States in censuring the Dominican Republic, and urging economic sanctions, the effect of which has been largely theoretical, was treated as a vile betrayal. Even if the step came late, the United States is on the right foot in this corner of the Caribbean.

## BRITAIN AND SPAIN

### Duet with Obligato

LORD HOME cannot exactly have been helped by having to conduct his exchange of courtesies in Madrid this week against the obligato of apologetics and re-priming that has followed Mr Butler's now famous dinner with Señor Castiella. Perhaps inevitably, the Prime Minister defended Mr Butler in the Commons on Tuesday by attacking those people whose bitter memories make them unable to countenance any sort of civil intercourse with General Franco's government. There are such people; it would be strange if there were not. But it is not only they who think it misguided to rush at the Spanish question by seeking to drag Spain into Nato when so much about Spain's internal affairs, and about Spain's relations with Europe, needs more urgent attention.

Lord Home, to do him credit, has been conducting himself in Madrid as if he understands this. Britain and Spain, he said on Monday, were two countries with tradi-

society, a more rational housekeeping, and political standards less remote from the western European norm.

No British Government can expect to assert a decisive influence in Spain. But, without much doubt, these tendencies are helped when British ministers show themselves interested in Britain's Spanish relations, and they would not be helped if the pious doctrine prevailed that it is better to keep aloof. Lord Home was, therefore, right to pay his call in Madrid. There is still plenty to find fault with in Spain; and the subject is still one on which the British easily get heated. But it would be a pity if this were to cause British ministers to keep away.

## BRITAIN AND PORTUGAL

### Home Hints

IN Lisbon, where his visit ended on Sunday, Lord Home seems to have talked to the Portuguese much as Mr Macmillan talked to the South Africans last year. His speech at the Portuguese foreign minister's dinner on May 25th was directly reminiscent of the "wind of change" speech. In the mildest Macmillan manner the Foreign Secretary reminded the Portuguese that it was the British aim in colonial policy to establish self-governing societies. He spoke of the British experience which taught that in African matters it is "necessary both to name a political goal and to be seen to be making progress towards it." It can be assumed that Lord Home said more in private conversations: that is the least that could be expected of a friendly ally.

The difference in the Lisbon speech lies in the timing. If Mr Macmillan had spoken after Sharpeville, and not before, he would have been criticised for apparently condoning, by his presence and his friendly manner, the methods of a government with blood on its hands. Lord Home's visit was arranged before the Angola massacres, and before the affair of the *Santa Maria*. It is unfortunate that it has come immediately after the outbreak of Portugal's colonial war, for many of the more vociferously anti-colonial peoples of the world will read into the visit British support for what has taken place. Few such people will hear the details of the Foreign Secretary's speech; they are likely to do no more than register that he was there, and that he was not unfriendly.

On the other hand, it is neither possible, nor particularly admirable, to administer diplomatic snubs to every government that gets into trouble and then, when in trouble, does regrettable things. If Portuguese colonial policy were to take a turn for the

## THE ECONOMIST JUNE 3, 1961

better, complaints about the timing of the visit would, in retrospect, seem churlish. To follow British advice to its logical conclusion would, however, mean for the Portuguese facing the eventual loss of their colonial empire. There is no sign of this kind of rethinking in Lisbon.

## TEACHERS' PAY

### The Burnham Bill

THE Burnham committee has agreed on a basic teachers' salary scale of £600 rising to £1,200 after 16 years' service (compared with £520-£1,000 under the existing agreement). The committee's recommendations have now gone before the interested parties, including the Government, for acceptance or rejection. It is by no means certain that the Government will accept them. The crucial fact for the Treasury must be that the cost of the increases will be some £60 million a year; if accepted, this would be the biggest rise ever given to the teachers. The questions are whether the total sum is too great and whether the distribution of the taxpayers' money under the revised scales is such as to ensure the best educational return; whether too much money is being given to the large number of young women who enter the profession for a couple of years before marriage, instead of being concentrated in the key sectors like heads of departments and honours graduates teaching mathematics and science to "O" and "A" level in the General Certificate of Education. There must be some doubts on each of these scores, although the actual claim by the National Union of Teachers (a basic scale of £700-£1,300 after ten years, involving a rise of £100 million in the cost of education) has been toned down inside the Burnham committee.

The most commendable feature of the new recommendations is that salaries are stepped up substantially after five and six years' service on the basic scale, and earlier on the trained graduate scales. Thus a good honours graduate, with four years' study and training behind him, will attain a four-figure salary after four years in the profession. This incentive is important to a young man taking on family responsibilities, and may encourage young women (among whom the wastage rate after an expensive training on public grants is now serious) to continue teaching after marriage. In the more responsible posts heads of departments will receive a nominal increase of £20-£30, although a new grade carrying an additional salary of £545 is to be introduced. The rise for most grades of head teachers will be some £115, and for deputies £55.

In April the Secretary of State for Scotland ruled that a committee award for Scottish teachers should be amended, and a smaller rise given to new entrants at the bottom of the basic scale, where there is no shortage of prospective recruits. Sir David Eccles is not in a position to amend the

## NOTES OF THE WEEK

Burnham recommendations for English and Welsh teachers: he must either accept or reject outright—and rejection now means inviting the prospect of a general teachers' strike. For the long term, this award greatly strengthens the case for saying that the Government, which has to foot the bulk of the Burnham bills, should be associated more directly in future in the earlier stages of negotiations. But for the short term, it confronts the Government with a very delicate economic and political decision.

## CIVIL SERVANTS

### Civil Inflation

THE conference of the Civil Service Clerical Association this week threw a spanner nearly into the newly worked out scheme for evaluating the pay of civil servants: the delegates also stood and cheered the announcement of a pay increase awarded under the old scheme by their arbitration tribunal. The pay increase restores the clerks' differential over certain post office technical staffs, and destroys an attempt by the Post Office and the Treasury to make the technical jobs relatively more attractive than the clerical ones, and thus to attract more technicians. The award of the arbitration tribunal rebukes the Post Office and the Treasury in terms which show clearly that it considers itself bound to assess pay with regard to the "relative value of the work performed" by the various grades of public servant, and not at all with regard to the essential matter—which is the relative difficulty of getting men to do the various jobs.

It has been suggested that, had the arbitral award been announced on the previous day, the clerks would not then have rejected the new pay evaluation scheme. This tidy scheme was worked out over eight patient years. Its principle was that the pay research units, which evaluate the comparability of civil service work with that of jobs in outside industry, would normally take a look at each group of civil servants every five years: the group's pay would then be fixed, and the staff negotiators would not be entitled to ask for a rise unless the industrial wage index had risen by five points in twelve months, in which case negotiations on behalf of all civil servants would begin.

The advantages of this plan were that it was thought to be a dignified way of evaluating civil service pay, and that it would rationalise the work of the pay research units, which are at present hopelessly behind with their fantastically complicated job. Its gross disadvantage was that it would strengthen the pressure on the Government to grant an inflationary wage increase to civil servants just at the moment when inflationary salary increases in industry were doing their worst damage to the economy. That the present system of working out civil servants' pay is unsatisfactory is proved by this week's award to the clerks: now

that the clerks and the post office unions have combined to ensure the defeat of the new and equally unsatisfactory scheme, and that the Burnham committee has dumped such a massive problem on the Government's plate, it is time for loud voices to proclaim that the whole arbitral mechanism for pay increases within the public service demands radical overhaul and rethinking. In this respect, the advice given to Britain by an OEEC report this week, set out in the following note, assumes especial relevance.

## PRICES

### Wages Policy Wanted?

BETWEEN 1953 and 1960 the cost of living rose in all the twenty countries of free Europe and North America. Turkey did worst with a rise of 126 per cent. France was fourth in the list with 34 per cent, Britain ninth with 21, Germany fifteenth with 14, America seventeenth with 11, Portugal, Luxembourg and Switzerland were equal best with only 8. A group of prominent economists from six countries have now published a detailed analysis for OEEC\* of the reasons why. They think that the economists' usual whipping boy—excess demand—was a dominantly important factor in such countries as Turkey, Spain and Iceland, and in France during 1956-58; but that for most countries the excess of demand was relatively mild and existed in only part of the period. In Britain they consider that that period existed only between late-1954 and mid-1956 (though with some question marks also over early 1960). They judge that price increases caused by monopolistic producers seeking higher margins of profit have also not been an important factor in Europe since 1952, though they may share some of the blame for inflation in America.

Apart from special factors, such as bad harvests, this leaves them with the main fact that the collective negotiation of wages "can be an independent cause of inflation when it produces higher wage increases than would be produced by a freely competitive labour market." They do not find that this has been a real source of inflation in countries such as Italy, Switzerland and Germany (except perhaps in 1956-57), but the summary of their report lists it as a main factor in:

Denmark, the Netherlands, Norway, Sweden, the United Kingdom and the United States. As demand pressures were less in the United Kingdom, the United States and Denmark than in the other three countries, it can be said that wage pressure was more important in them in accounting for the price rise that occurred. It is significant that economic growth was less vigorous in these three countries.

What should be done about this, especially in countries like Britain where the wages of

\*The Problem of Rising Prices, by W. Fellner, M. Gilbert, B. Hansen, R. Kahn, F. Lutz and P. de Wolff. Available from HMSO. 21s.

over four-fifths of all employees are covered by collective agreements?

The majority of the economists are convinced that it would be in the interests of the "working population and the nation" if all governments now adopted a national wages policy: if they announced a "norm" beyond which they deemed that average rises in wages would be inflationary. Governments should then see to it that average wage increases for employees in the public sector do not get out of line from this norm; in private industry the burden of proof should be upon any group in labour or management which wanted to deviate from it; and government intervention through reference to arbitration tribunals, courts of inquiry and the like should not be directed towards preventing strikes but towards preventing average wage increases from breaching this norm (some wage increases in any year should be above it, but an equal number below it). In a minority report the Swiss and American economists on the group dissent from some of this emphasis on the need for a central wages policy, but they agree with the majority's points about wages in the public sector and about courts of inquiry. The report should be compulsory reading for all politicians; it is in precisely these respects that British economic policy has most signally failed since the war.

#### ALGERIA

### Heart of the Matter

WITH the preliminary skirmishing over at Evian, the French and Algerian negotiators are tackling a problem of priorities which, in a sense, goes to the heart of the Algerian problem. The French team, headed by M. Joxe, would like the Algerians to agree on the form of a future association between a sovereign Algeria and France before they discuss the referendum in which the Algerian people would vote for their own future. The Algerian team, headed by Mr Belkacem Krim, wants to settle the form of the referendum first. The Algerians see the referendum as the means of establishing the independence of Algeria in the eyes of the world; once independent, the future Algerian republic could choose whether or not to seek an association with France, and on what terms.

There is, in fact, no question of holding a referendum until the two sides have agreed on the intractable issues that now divide them. These include the status of the European community in an independent Algeria, and the integrity of Algeria's territory; the Algerians seek a guarantee that neither the Sahara, nor the predominantly European areas, will be amputated from the body of the country as it stood when the nationalist insurrection began in November, 1954.

The French are on strong ground in arguing that there must be an agreement on

#### NOTES OF THE WEEK

the form of the future relationship between the two countries after Algeria is independent. Indeed, the Algerians, by inference, concede the need for an agreement; they do not wish, however, to bind themselves before they get power in Algeria in their hands. The whole argument raises the question whether the French do, or do not, admit that the National Liberation Front (FLN) represents the Algerian people. Until very recently, the French have denied any such claim. The Algerians, however, have exposed a French weakness by pointing out that the French team, if it insists on reaching a definitive agreement at the present talks, will in effect have recognised the representative character of the FLN.

Quick results should not be expected. It is at any rate good news that the difficulties are being tackled in what appears to be a fairly reasonable frame of mind on both sides.

#### LAOS

### Marking Time

SLOW to start, the international conference on Laos at Geneva is now reluctant to continue. Inspired perhaps by the memory of Mr Molotov's stonewalling, the head of the Soviet delegation, Mr Pushkin, is now saying *nyet* with monotonous regularity each time a western delegate makes a suggestion. By Monday, the Americans were talking of going home, and an atmosphere of failure and frustration hung over the Palais des Nations. When *The Economist* went to press, however, it seemed unlikely either that further progress would be made at the conference, or that it would collapse, until the two Ks had talked things over in Vienna.

The cause of the deadlock is a cart-and-horse dispute whether to give priority to the Soviet proposals for Laotian neutrality, as Mr Pushkin insists, or to western complaints that the Laotian communists are violating the precarious cease-fire. Mr Averell Harriman, who leads the American delegation, has pointed out with vigour that a controlled cease-fire was to be the *sine qua non* of western attendance at the conference. Mr Malcolm MacDonald in Geneva, and Sir Frank Roberts in Moscow, are giving him energetic support. The British and Americans are asking that the conference should give fresh instructions to the three-nation control commission in Laos, and are on strong ground, for the commission itself, frustrated by conflicting accusations and hampered by inadequate facilities, requested further instructions in its report of May 20th.

The problem is simplicity itself. If the communists are going to continue to press home their military advantage, then the conference becomes pointless, and the Americans will be thrust back upon other, more dangerous, means of dealing with the situation on the spot. This, it may be supposed,

#### THE ECONOMIST JUNE 3, 1961

is going to be part of what President Kennedy says when he meets the other Mr K in Vienna today.

#### FISHERY DISPUTES

### Mr Wood's War

THERE seems to be no good reason to regard Mr Ted Wood, of the Aberdeen trawler *Red Crusader*, as in any sense a national hero because he decided to cut and run from arrest by a Danish frigate off the Faroes on Monday. Yet it was Mr Wood—not Dr Verwoerd or Mr Butler or anyone else—who got the main banner headlines on Wednesday morning, even in newspapers like *The Times*. Like Mr Jenkins (whose ear was not, in fact, cut off by the Spaniards two centuries ago), he has earned himself a place in our rough island story.

The Danes say that they caught the *Red Crusader* fishing inside the Faroese limits, and Mr Wood seems initially to have concurred, since he agreed to be escorted into the port of Thorshavn. But then, apparently, he changed his mind and set off southwards with the Danish prize crew (whose part in all this seems to have been essentially passive) still on board. The Danes opened fire (naval officers have their pride, like trawler skippers), contrived to hit the *Red Crusader* in such a way that there was no damage to life or limb, and, when Mr Wood still held on his course, refrained from blowing him out of the water. If a British fishery protection cruiser had done this in similar circumstances, it would have been equally within its rights; but it is a fair point that there would have been an even louder subsequent outcry from some people against its gunboat diplomacy. Both Danes and Britons should in fairness consider what their reactions would have been if the boot had thus been on the other foot.

The Danes have been annoyed recently by British fishermen cutting across their nets off the Dogger Bank, and their naval patrols have been given tougher orders in consequence. The British trawlers, too, have been incensed by the extension of fishery limits by Iceland and Norway, and, to send blood pressure still higher, the Danes and Faroese have been talking in the past month of revising the six-mile limit that has been in operation off the Faroes since 1959. While slipping inside limit lines is an old-established sport off everyone's coast, the consequences of serious disputes can be important politically, as well as financially damaging to the owners. Whatever the rights or wrongs of Mr Wood's case, the Danish reaction has already been such that the 1959 agreement

Choice keeps television free

may not even run its three-year term. At a time when Europe is intent on moving towards freer trade on other matters, both sides need to be reminded that these hot tempers about cold fish make very bad counsellors.

## DRUG ADDICTION

### A Reassuring Report

THE incidence of drug addiction in Great Britain is still very small. That is the opinion of the inter-departmental committee under the chairmanship of Sir Russell Brain, whose report was published last week (HMSO 1s. 3d.). The number of addicts known to the Home Office in 1960 was 454, of whom more than half (at least 255) were women. There is no registration of addicts in this country, and there is no law against addiction.

But under the law relating to the manufacture and distribution of dangerous drugs, including the issuing and dispensing of prescriptions for them, the number of addicts receiving supplies of a particular drug licitly—that is, on prescription—can be ascertained by regular inspection of doctors' and chemists' records. According to the committee, the amount of the illicit trade in drugs of addiction, and the number of addicts obtaining supplies illegally, are so small as to be negligible. This is a reassuring statement, even though the implication that the number of nurses known to be addicts—14—represents virtually the total of addiction in their profession arouses scepticism.

Because drug addiction is not a grave

## NOTES OF THE WEEK

social problem in Britain, the committee sees no reason to alter the existing liberal attitude towards it on the part of society. (It may, of course, be that addiction is not a problem because of the liberal attitude towards it.) Registration and compulsory treatment are, therefore, turned down. But it should be pointed out that the committee defined addiction more strictly than the layman would tend to. It distinguishes drug addiction, which among other things produces a physical as well as a psychological dependence on the effects of a drug and severe symptoms if the addict is deprived of it, from drug habituation. The layman might equate the two, but it is consumption of the potentially habit-forming drugs—sedatives, hypnotics, tranquillisers and stimulants—that has increased considerably in recent years. In some people a drug of this sort may produce addiction, and these people are not included among the known addicts because the drugs are outside the scope of the Dangerous Drugs Act; but the cases are rare enough for the committee to recommend no further action other than was proposed in its interim report. As a result of that report, certain drugs affecting the central nervous system can be sold only on prescription.

Habit-forming drugs, as the committee points out, have a detrimental effect primarily on the individual, unlike the drugs of addiction whose effect is detrimental to society as well. Habitual drug-taking, in fact, so often pleaded in extenuation of a crime, is usually only another symptom of an unbalanced personality, not a cause of it. The cases of abuse that hit the headlines should not be allowed to obscure the undoubted benefits to patients, particularly in psychiatric practice, that such drugs as barbiturates and tranquillisers have brought.

## CANADA

### Triumph for Dief

BY retaining three out of four seats at the by-elections held on Monday, the Canadian Conservative party has confounded the Gallup polls and even surprised itself. Although the party had to contend with the traditional unpopularity of a government in its third year of office, as well as the memories of a winter when the rate of unemployment was exceptionally high, its success in three widely scattered constituencies shows how strong it still is. Mr Diefenbaker, who himself kept strictly out of the campaign, now has to decide whether it would be prudent to hold general elections in the autumn rather than wait another year—and through another winter.

One of the deciding factors may be developments in the New party, the alliance of the former Co-operative Commonwealth Federation and the Canadian Labour Congress. Although the New party has not yet been officially established—it will hold its founding convention on August bank holiday—it managed successfully to split the opposition in

## THE ECONOMIST JUNE 3, 1961

Esquimalt-Saanich, British Columbia, which was the only constituency that it contested. This seat, a suburb of Victoria, with deep British and naval traditions, used to be more or less the personal fief of General George Pearkes, who has now retired from Parliament to become lieutenant governor of British Columbia. On Monday, in a five-cornered fight, the Conservatives won 8,600 votes and the Liberals 7,800 votes; the New party came a good third with 6,700 votes. Mr T. C. Douglas, the dynamic prime minister of Saskatchewan, has been persuaded to lead the new alliance, and Mr Diefenbaker may conclude that it would be wiser to wait for his general elections until next summer when Mr Douglas will have had more time in which to scatter the government's opponents.

## UNITED NATIONS

### Dangling Man

WITH quiet and ruthless logic, Mr Hammarskjöld, in his Oxford speech on Tuesday, demolished Mr Khrushchev's case against him so finally that the argument (as opposed to the shouting) may be said to be over. The Soviet leader's demand for the secretary-general's dismissal is based on the charge that he has shown a lack of "neutrality"; by extension, it is now apparently Soviet doctrine that "no man can be neutral." Mr Hammarskjöld points out that acceptance of this doctrine means that "we would be thrown back to 1919." The League of Nations, in its regulations, and the UN in Article 100 of its Charter, insisted that international officials must have only one loyalty, and must take no orders from any other authority. Russia, which signed and ratified the Charter and has hitherto defended it as a sacred text, would now destroy this whole principle by subordinating the UN secretariat to a trio of chiefs whose loyalties would be explicitly partisan. It is pursuing its goal by putting unrelenting pressure on the secretary-general to resign, although it had accepted the general conviction of the 1945 San Francisco drafting conference that he must be protected against such pressures.

Mr Hammarskjöld shows how Article 98, with its general requirement that the secretary-general "shall perform such other functions as are entrusted to him," and Article 99, which gives him an explicitly political role, have led to his being assigned urgent tasks in which the member governments, by leaving him dangling with imprecise instructions, have knowingly required him to use his own political judgment, often in cases where any decision must necessarily offend one faction or another. He points out that the easy course of avoiding criticism by taking no action at all in the absence of precise orders is not open to him. To act thus would be to fail in his duty. The international civil servant may seek guidance both from "case law" and through consultation; he must, like any judge, consciously keep his personal

## THE ECONOMIST JUNE 3, 1961

sympathies from influencing his actions; but in the end,

if integrity in the sense of respect for law and respect for truth were to drive him into positions of conflict with this or that interest, then that conflict is a sign of his neutrality and not of his failure to observe neutrality.

The secretary-general's reasoning fully sustains his conclusion that any abandonment of the struggle for internationalism of which the service is a symbol might "prove to be the Munich of international co-operation." It will be interesting to see if Moscow can produce a reasoned rejoinder.

## HOSPITALS

### Centres for Psychopaths

THE working party on the "special hospitals" (Broadmoor, Rampton and Moss Side), which reported in April, recommended the establishment of diagnostic and treatment centres for "difficult psychiatric cases." These were defined as patients with aggressive, anti-social or criminal tendencies, who also present special problems of diagnosis, treatment and management. Psychopaths would be expected to form most, though not all, of the centres' patients, and the working party suggested that eventually a patient whom it was proposed to transfer or send to a "special hospital" would first be sent to a centre for assessment. Transfer to such a hospital would then follow only if the centre could not treat the patient itself and if it decided that no ordinary hospital could do so either.

## ART AUCTIONEER

Sotheby's, founded in 1744, is the largest fine art auctioneer in the world. Its income is derived almost entirely from the 10 to 15 per cent commission which it charges on sales; this is about half that of its overseas rivals which may account for the increasing flow of business from New York. The 1960-61 season has followed much the same pattern as 1959-60 with a peak turnover of nearly £1½ million in November and if the last three months of the season make up 44 per cent of the total which has been the average in recent years, the £8 million mark will be reached.

## NOTES OF THE WEEK

The north-west metropolitan hospital board has now decided—had, in fact, decided before the working party reported—to build two centres, one for diagnosis and assessment and one for residential treatment. Unlike the centres envisaged by the working party, the board's centres are declared to be specifically concerned with psychopaths; but in the event, since the term psychopathy can cover such a wide variety of anti-social behaviour, both board and working party appear to have the same sort of patient in mind, and both emphasise the importance of facilities for research. The board's diagnostic centre will probably be in London, because it will take outpatients as well as a few in-patients. The residential centre will be in the country.

The cost of building the diagnostic and assessment centre will be almost entirely met by a gift from Lord Nuffield of £100,000; the other centre, which will not be built for some time, will be paid for out of ordinary funds. It is a small beginning, but the working party recommended that such centres should start in a small way and be developed in the light of experience. Shorn of the jargon surrounding the announcement of its establishment, the new centre can be welcomed as the beginning of an attempt to remove the mental hospitals'—and the prison service's—most persistent headache.

## ARAB REFUGEES

### Threatened Landmark

MR MUSA ALAMI, who was in London this week, is a Palestinian Arab who wears his rue with a difference. The vocational training centre for orphan refugee boys that he runs near Jericho is one of the few constructive landmarks in a desert landscape; the 400 boys who have passed through the school have quickly been able to find jobs for themselves and so leave for ever the barren half-life of the camps. But, unlike other orphanages, the training centre has no endowments or grants and is financially entirely dependent on the profits from a nearby experimental farm—another of Musa Alami's projects.

Despite various calamities, this arrangement worked until the beginning of the year. The farm, an important experiment in desert reclamation, managed to keep itself and the orphanage going by selling out-of-season fruit and vegetables to the Arabian American Oil company at Dhahran. Last December, at a week's notice and under pressure from the Saudi Arabian government, Aramco cancelled its contract, and the farm, unable quickly to find alternative markets, has had to sack about half its staff and has been ploughing its produce back into the ground. Musa Alami is hunting for new markets, particularly in Germany and Switzerland, but the farm is bedevilled by transport difficulties and it may take at least three years before the situation is redeemed.

In the meantime, supporters of the scheme, the Arab Development Society, are trying to raise money from private subscribers in Britain and the United States. Should they fail to get enough, the centre may have to close and the boys, who fall through the wide-meshed net of the United Nations Relief and Works Agency, would not even be entitled to free rations, let alone a home or schooling. Should they succeed, there is still the bleak background of 35 boys competing for each place in the orphanage, and for orphan girls no refuge at all.

## RSPCA

### The Dogs of War

THE Royal Society for the Prevention of Cruelty to Animals has 19,000 members and spent £592,600 last year, which makes the RSPCA one of the country's strongest pressure groups. In its battle for a four-legged welfare state, the society claims credit for much legislation; it maintains 240 permanent inspectors and 100 clinics staffed by qualified vets, a plushy cats' home, a hostel at London Airport for dumb friends in transit, and organises courses for children on how to be nice to animals. But, like other middle-of-the-road reforming organisations, it is apt to fall foul of ginger groups. At present they are attacking the society on its official attitude to fox-hunting, which is that hunting is only bad so long as it is fun, but that where hunts exist they can maintain the collective security of chicken-runs in a way no more cruel than poison, guns, gas and other deterrents. The ginger-groupers would like to see the society impose a total ban on fox-hunting: a rise of 3,000 in the membership last year is said to be due to the infiltration of large numbers of adherents of this importunate ban-the-hound movement.

In the past year the society was forced to hold an extraordinary general meeting, at which the council met its Scarborough: the meeting voted against hunting, but society to a new policy. The annual general meeting went better for the council, and reversed the decision. The ginger-groupers are now trying for two of the eight seats which fall vacant on the council this year: the society's Establishment argues, rather weirdly, that controversy among its members would interfere with the society's practical work. This, they say, is too technically complicated an issue for a general ballot of the society's members.

The RSPCA controversy broke into the open slightly before the startlingly similar one in another large organisation devoted largely to the promotion of welfare. Mr Gaitskell can now reflect calmly that he is not the only leader who finds himself lodged firmly in the cleft stick of the humanely ideal and the humanly possible; perhaps he and the RSPCA can exchange some ideas on tactics?

# LETTERS

## Disarming

SIR—Your readers will no doubt be familiar with the programme for general and complete disarmament, under effective international control, unanimously adopted by the Commonwealth Prime Ministers' conference. But how many people are? And how many believe its achievement is only a far-away dream and not, as the Prime Ministers concluded, "the most important question facing the world today"?

The purpose of our Inquiry on Disarmament, to which you refer in your issue of May 20th, is not to carry out a public opinion survey. Other organisations are better equipped to do that scientifically. Our aim is to start people thinking along the lines of the Commonwealth Prime Ministers' statement and some of our questions are unashamedly "loaded" with that deliberate object in mind.

The United Nations Association would be no less disturbed than Mr Gaitskell if a majority of those who reply were to favour unilateral disarmament, for it would show how much more work we have still to do. But, on present showing, there seems little risk of such a result and it will certainly be interesting to see the replies of those members of your "more left-wing of the unions" who take the trouble to complete the questionnaire and return it to us.

UNA branches in many areas will be conducting the inquiry from door to door and using the questions as a means of getting people to discuss the problems raised. In addition a number of affiliated organisations, including some of the trade unions, are sending the questionnaire direct to their own members. Replies from the members of each of these trade unions will be counted separately and separate figures will be published in the final report. There can therefore be no question of any one organisation heavily weighting the total results.—Yours faithfully,

CHARLES JUDD,  
Director-General,  
London, W1 United Nations Association

## The Census

SIR—It would be quite possible, as Mr Leitch says in the letter which appeared in your issue of April 29th, to design a census form in which many of the questions could be answered by "ticking-off appropriate squares"; and there are, as he says, mechanical devices which can read the marks. But the lesson that we drew from the experience of others in this sort of work was that success largely depends on a higher standard of marking than could be expected, without some practice or training

THE ECONOMIST JUNE 3, 1961

first, from the "twelve million different fists." I may say that in some of the current census operations where conditions are favourable mark-reading procedures are being used.

It is perhaps too much to expect that there can be agreement about forms between those who have to design them and those who have to fill them up. But I think that it is more likely that the results will show that most people have well understood what was wanted.—Yours faithfully,

E. M. T. FIRTH,  
Somerset House, WC2 Registrar-General

## Municipal Liberals

SIR—In your analysis of the municipal election results (Home Report of May 20th) you observe that "the Liberals have been reaping a harvest in places where they were unrepresented until two years ago; from these newly penetrated towns come a third of their members. Next year the first of these councillors will come up for re-election, and we shall have an opportunity to assess the solidity of their hold."

You appear to have overlooked that 1961 was the opportunity to assess the solidity of Liberal gains. In every municipal election campaign since 1954 Liberals have had a net gain of seats (1954, 3 gains; 1955, 8; 1956, 5; 1957, 11; 1958, 49; 1959, 17; 1960, 51; 1961, 86). It is clear that 1958 marked the beginning of the Liberal move into local government. In an election year when so much was made of the fact that Labour was on the defensive because of its 1958 gains, it is surprising that nothing was said about the Liberals being on the defensive with their second biggest crop of postwar gains.

I think, therefore, that we can claim that the solidity of the Liberal hold has been tested and found firm. I have not been able to make a detailed analysis of the results in the 49 seats where Liberals were seeking re-election after their gains in 1958, but we do know that only 26 seats were lost out of all those being defended. All this is on a small scale and Liberals will not be deluded into imagining that a smooth upward path lies ahead, but equally there is no reason to be faint hearted.—Yours faithfully,

Exeter DAVID MORRISH

## Southern Rhodesia

SIR—The article in your issue of May 13th gives, generally, a very fair picture. But your special correspondent omits the one factor which appears to some people to be the most important in our political future.

"Whites view the proposed Bill of Rights plus 15 black MPs in a previously all-white parliament as a final concession. . . ." They do, as regards the B roll members. But what about Africans elected on the A roll? There will probably be at least two of these

THE ECONOMIST JUNE 3, 1961

in the next parliament, and, if prosperity returns to us, an increase at every subsequent election.

If Africans were less reluctant to register as voters, they could expect to win possibly five seats on the A roll at the present. This reluctance to take advantage of their rights has been attributed to three factors: the fear of having to pay income tax after declaring their income for voting purposes, intimidation by the NDP who are discouraging the registration of voters for the present, and apathy.

It is possible that in, say, twenty years' time the B and A roll African MPs will outnumber the whites in parliament. No one can predict with any accuracy when this will happen, it depends primarily on economic factors. But, outside the Dominion Party, an African majority is not feared. We hope that many of them will be supporters of the policy of the present government. But we will not support a franchise or a system of representation which would give power to those Africans who are interested only in power—and nothing else.—Yours faithfully,

Macheke, S. Rhodesia D. K. DENTON

## Pension Funds and Equities

SIR—I am most grateful to you for your appreciative references to my paper on "Investments in Trust" which I recently introduced at the annual conference of the Chartered Institute of Secretaries. You stated I mentioned "one pension fund, apparently with approval, that has only 25 per cent of its fund in equities . . ." and here you have misread the reference on page 55 of my paper.

Under Pension Funds (page 52) I was referring to the importance of getting a proper balance as between fixed interest and equities, and I emphasised that this involved not only long-term but short-term considerations. I gave the figures of total pension fund assets as submitted to the Radcliffe Committee and I showed that 21 per cent of pension fund assets were at that time invested in ordinary shares but that the net investment in ordinary shares for the last accounting year was 37 per cent, thus indicating a change in the pattern of investment. I then mentioned that one large pension fund was 100 per cent invested in equities, and I then made the statement "I know of one pension fund, which is still growing rapidly, which is invested by admitted experts who are working at present on the following ratio: 40 per cent British Government, 35 per cent debentures and 25 per cent equities." In making this statement I desired to emphasise that so far as new money was concerned this particular set of experts apparently took the view that fixed interest stocks were 3 to 1 more attractive than equities at the present time for their pension fund.—Yours faithfully,

London, EC2 WILLIAM NURSAW

LETTERS

## Building New Slums?

SIR—It is common knowledge that it is not high density but bad design and misuse that leads to slums; and those who doubt the "prairie-character" of the new towns have only to visit them to see what I described in another connection as "houses gazing distantly at one another across wasted space."

Your correspondent has evidently learnt nothing and forgotten nothing since he sat at the feet of Ebenezer Howard and Raymond Unwin, and still looks back nostalgically to the Tudor-Walters era. The quite remarkable development in recent years of constructional techniques, design and planning have passed him by. He would cheerfully see further tracts of open country suburbanised and dismisses the loss to husbandry and amenity by an airy reference to "acres of underused agricultural land." It is surely not the "planners" but your correspondent who wants to put the clock back.—Yours faithfully, A. W. ACWORTH  
London, SW1

## Agriculture and Europe

SIR—You omit to mention one vitally important agricultural aspect of joining the common market. British livestock production always has been, and is today, based on converting low priced coarse grains bought on the world markets into meat—and dairy products. The acreage payments to cereal growers who are an essential part of the cycle of mixed farming, prevent the complete elimination of cereal growing.

I fail to see how beef, pork, poultry, eggs and dairy products can do other than greatly increase in price to the consumer, if producers are to be deprived of this cheap raw material as well as the present system of price support. I don't visualise the continental grain grower agreeing to the entry into the tariff ring of these low priced grains.—Yours faithfully, SIDNEY GASKELL  
Warrington

## Indonesia

1961. Is there a Republic of the United (federated) States of Indonesia as was envisaged in 1949?

What we have now is a Republic of Indonesia, centrally governed from Djakarta: and incidentally bankrupt, but for support from two rival world powers. From the Dutch point of view, President or Dictator Sukarno has successively repudiated loans, nationalised and expropriated: finally he has broken off diplomatic relations, preparatory to an armed invasion of West New Guinea if the mere threat should prove insufficient to his purpose. Your issue of May 6th demonstrates that the aggressor is likely to

**"You don't know  
a good surgeon  
till you see what  
happens to his  
patients"**

"PAIN makes you a devil. Pain never improved anybody" . . . "You don't know a good surgeon till you see what happens to his patients" . . . "Some of the big names in surgery think a lot about money . . . Having money is very nice" . . . "There's the surgeon, standing centrally like a high priest. No, like God Almighty, down from heaven."

Fair? Or plain outrageous? In either case, they are the forthright words of a famous surgeon. With a great many other sharp-edged observations they are to be found in the verbatim report—to be published in two parts in The Observer, beginning this Sunday—of a conversation that Kenneth Harris has had with this eminent man.

On the 'mystique' of surgery, and the public's attitude to it; on the history of surgery and the incredible manual skill of the 'rum and laudanum' era; on nerve and intuition, on quacks, on telling the truth to the dying . . . his pungent and racy comments are as interesting to the profession as to laymen. This Observer series is going to be talked about.

JUNE 1, 1961

### HOW TO KEEP OUT OF IT

**Q** The more the mercantile community reflect on the possible consequences to them of the civil war in America, the more anxious they feel upon the subject. There cannot be a doubt or a question but that at any moment very trifling transactions may hurry this country into conflict with one or other of the belligerent parties. Painfully petty transactions have been commonly the cause of the great maritime wars of the world, and in the present case there are several reasons why petty quarrels are more than usually likely at sea. . . . In the first place, the cruisers of the North may search our ships for Southern goods, and may then and there seize those goods. The South have abandoned this right unasked, and without any solicitation or negotiation of ours; but the North adhere to the old rule which we explained at length last week: they take the enemies' goods whenever they can find them in English vessels. They have by special treaties abandoned this right as respects several other countries, but in our case it remains in full force. Our position, therefore, is this: the cargoes of our ships may be seized by the privateers and cruisers of one of the belligerents, although that belligerent

does not pretend to seize similar cargoes in the vessels of other nations, and the other belligerent would not seize them in any. We say advisedly that such a state of things must not continue. English ships must be put on the same footing as other ships by the Northern States of America as well as by the Southern. . . . Secondly, it is most necessary that our traders should know what ports are only blockaded, and what articles are contraband of war and what are not. . . . The subject before us is not a light one. A war with either of the belligerents would be a terrible calamity, but a war between England and the Northern States of America would be the most affecting misfortune which could happen to civilisation. The single good hope of the present painful instant is that the North may rise into a great, a free, and a noble community, free from the taint of slavery, and able to take that moral place in the world which the United States ought to have taken, but which they have long ceased to take. If England should be unfortunately hurried into a collision with this people at the crisis of their history, the results must be awful to them, to us, and to the world.

be appeased, with the approval of the Americans, the Russians and *The Economist*.—Yours faithfully,  
G. H. GANDY  
Huizen, North Holland

SIR—It may be clear to you that the reinforcements sent by the Dutch government are defensive in purpose, but to Indonesians who can still remember the overt support given by the Dutch to rebellious movements—among others the notorious Captain Westerling and the rebels in the Moluccas—such an inference is far from obvious.

While it is true that the Round Table Conference of 1949 left the status of West Irian to be determined by further negotiation after one year, this is far from the full picture. Previous to the Round Table Conference the Dutch government had given categorical pledges that West Irian would not be separated from the rest of Indonesia. When the question of West Irian was brought up in the Denpasar Conference of December, 1946, Dr H. J. van Mook, who attended the conference in his capacity of Lieutenant Governor-General, repeated bindingly the undertaking: "From the proposed addition by the Government (to Art. 1) it is clear that it is the intention to keep the territory within the framework of the United States of Indonesia."

The claim of successive Dutch governments that the terms of the Round Table Agreement leave Holland free for an indefinite period to retain control over West Irian if no agreement is reached amounts to legalistic trickery. Why, all they have to do to keep it is not to come to an agreement.—Yours faithfully,  
H. ALSEGAFF  
London, SW11

### Finland

SIR—In "The Third Mr K" in your issue of May 13th, you write: "... if Britain joins the common market... the best hope would then be that the Russians, having permitted Finland to associate itself with Efta, might decide to go the whole hog and let the Finns link themselves with the common market as well."

Negotiations leading to Finland's association lasted about two years; during this period the Finns often despaired of ever being allowed to have a link with Efta; now they have been "allowed" (apologies to Finnish nationalists), only by signing a separate tariff agreement with the USSR enumerating the commodities and giving them exactly the same tariff advantages as if they came from Efta countries.

To hope, then, that the Six will tolerate any such arrangement between Finland and the USSR, leave aside the hope that the Russians will allow the Finns to link themselves with the common market, is surely to let yourself in for many an "agonising reappraisal."—Yours faithfully,  
V. SHAH  
London, W11

## BOOKS

### For Short-haired Eggheads

#### An Econometric Model of the United Kingdom

By L. R. Klein and others.  
Basil Blackwell. 324 pages. 60s.

DR KLEIN is one of the best known makers of econometric models. He has participated in the construction of two relating to the United States, one for Canada and now one for the United Kingdom. This report on it, together with some articles that were written after the book went to press, represent a major research effort which has taken several years. It therefore deserves respectful attention.

The book is, in fact, likely to command more respect than understanding. Most people will be impressed rather than informed when they read that the computation procedure involved maximising likelihood functions, each "formed from the joint distribution of the stochastic terms in the reduced forms for the endogenous variables entering into the equation." This may suggest that the book is required reading only for the longest-haired eggheads (if there be such creatures) and that is probably right. Nevertheless, it is a good idea for at least the short-haired eggheads to know what the whole thing is about. Is it a waste of scarce and highly skilled manpower, or could it actually be useful?

An econometric model, to put it briefly, is an attempt to provide a quantified description of how the economy works. This involves discovering and then trying to measure relationships between such things as aggregate consumption, investment, the wage-rate index, employment and so on. For instance, one such relationship might be that the consumer price level in any quarter equals 36, + 0.4 times the current level of wage earnings, + 0.2 times the import price level two quarters earlier, + 0.01 times the net rate of indirect taxation, plus a seasonal correction factor (all these magnitudes being measured as index numbers with 1948 = 100). This means, for example, that a ten point rise in both earnings and import prices would produce, on the average, a six point rise in consumer prices in addition to any seasonal changes. The part of this increase due to the earnings increase would work through quickly, while the part due to the rise in import prices would take half a year to show itself.

If a number of relationships like this (Dr Klein and Co. have no less than thirty) are put together, they form an articulated whole—a model. The different relationships are interlinked because the same magnitudes occur in several of them. Thus wage earnings not only appear as one of the factors determining prices but also as one of the

factors determining income and hence consumption expenditure. Another relationship relates earnings to wage rates, productivity and the tightness of the labour market.

The present model has some interesting features stemming from its use of quarterly data, not annual. Since not all the series the authors needed were available at the time they were working, they had either to do without or make them up. Quarterly national income figures, for example, were not then published, so the model says nothing about national income and centres instead upon industrial production. Quarterly figures of the wage bill were also lacking, so the authors invented their own. They have shown great ingenuity and resourcefulness in meeting these problems. It is true that their treatment is not always very satisfactory, but an unsatisfactory treatment is better than nothing at all.

These remarks serve only to describe, not to evaluate, the work of the authors. Models such as this serve two purposes. One is to describe how the economy works and the other is to forecast how it is going to behave—two obviously useful results. The trouble is, as an article in the February *Oxford Bulletin of Statistics* shows, that the model does not forecast at all well. (Its predictions are compared with others on page 1032. The Chancellor would probably do better without it than with it.) The trouble is that this suggests that the model is not very good at its first task either, since poor prognosis may imply poor diagnosis. Indeed, a recalculation of the relationships, using more up-to-date statistics, makes some of them come out rather differently. This might mean that the economy has been changing or, alternatively, that the relationships were badly measured in the first place. It is for the pundits to choose between these alternatives, while the plain man will reflect that either of them reflects on the ability of the model to forecast successfully.

All this may suggest that the book is a waste of effort. Such a conclusion is, however, quite unwarranted. In economics knowledge grows and rarely leaps. Just as the first flying machines were not useless, even though they barely left the ground, so this model is not useless. It is a stimulus and a challenge to further research.

### Keir Hardie to Gaitskell

A Short History of the Labour Party  
By Henry Pelling.  
Macmillan. 135 pages. 21s.

MR PELLING enjoys a well earned reputation as a scholar and populariser of left wing history, and his latest work amply

# EXPRESS SUCCESS!

The success story of the Midland Pullman began on July 4 1960, when this blue-and-white de luxe train made the first of its regular high-speed journeys between Manchester and London. On the way it was often carrying its passengers at over 80 mph—yet with a comfort they'd never known before, a smoothness and quietness which turn a long journey into an enjoyable, relaxing trip.

The success of the Midland Pullman is emphasised by the fact that today seats must be booked in advance to make sure of travelling—inter-city travellers, on business or pleasure, have found the speed, comfort and convenience of this new concept in rail travel very much to their taste.

The Midland Pullman's success points the way to further developments of this kind, typifying the new look of today's London Midland along with the great modern freight expresses which every night cover the country in a network of regular high-speed routes.

MIDLAND  
PULLMAN—PART OF THE NEW LOOK OF TODAY'S  
**LONDON MIDLAND**

maintains the standard he has set. Into this slender volume he packs the Labour party's journey from Keir Hardie to Gaitskell, successfully pointing out the major landmarks on the route. Yet brevity brings blemishes: a lack of profundity in parts of the analysis—for instance, inadequate treatment of the current and highly relevant problems of trade unions; a strange inaccuracy—the *Jolly George*, bound for Poland with munitions for use against the Bolsheviks, which Bevin's dockers refused to load, is misnamed the *Jolly Roger*; a slight telescoping of events in the treatment of the not-so-distant Bevanite controversy, such that an observer might say, "Yes, it happened thus, but not quite thus."

In the upshot, the significance of Mr Pelling's study is as much immediately topical as historical. Of the Labour party it can truly be said, "*Plus ça change, plus c'est la même chose*." To many, Mr Gaitskell's collision with the party conference over defence last year may have seemed, at the time, cataclysmic either way. Yet, to judge by Mr Pelling's more sophisticated observations, collisions have occurred before. There have always, given the historical origins of the Labour party and its federal structure, been contradictory, non-homogeneous elements in both its parliamentary and non-parliamentary wings. The early days in Parliament were not easy, with the need to reconcile the socialist tradition of the ILP, the non-political attitude of many trade unions and the problem of accommodation with the Liberals. But it is the inter-war years that assume the greatest importance in Mr Pelling's history. Two factors stand out. First is the undoubtedly but inadequately recognised contribution of Ramsay MacDonald in the moulding of the Labour party into an effective participant in the parliamentary system. Second is the significance of extra-parliamentary power in the 1931-39 period, when Citrine and Bevin brought trade union influence to bear against "fissile" tendencies on both left and right.

In the light of all this, we can see the Gaitskell and especially the post-Scarborough era in perspective. The Parliamentary Labour Party, for all its eminence, counts for little if it entirely fails to carry the movement with it. Ramsay MacDonald grossly over-estimated his own ascendancy in 1931; Attlee, in contrast, saw the need for the widest measure of popular party support when he went into the Coalition Government of 1940. Yet it is also a fair inference from Mr Pelling's discussion that, such events aside, decisive leadership has, at many stages of the party's history, been the effective prerogative of the Parliamentary Labour Party.

Mr Pelling is neither fatalistic nor a wishful thinker for the future. He is fully aware that it is in the nature of the political wind to change rapidly. His concluding words, manifestly written some months ago in more uncertain days, are peculiarly topical:

It would therefore be a rash prediction that

the future leaders of the Labour party, whoever they may be, will never again find themselves in popular favour, and able to take their places once more upon the Treasury Bench.

## Communists at Large

International Communism and World Revolution

By Günther Nollau.

Hollis and Carter. 372 pages. 35s.

DR NOLLAU, whose book first appeared in German in 1959, is concerned with two aspects of his subject: clandestine activities; and the operation in practice of the concept of "proletarian internationalism." Communism as an idea (persuasive or repellent) with significant political implications lies outside the range of his interest. On the first—his lesser theme—and on the creation and deployment of subsidiary communist "front" organisations, he does not claim to have added anything new. It is to the interesting and elusive question of the limits of international discipline in the communist movement that Dr Nollau is drawn, and in this sense his work is original. He traces his quarry back to Marx's statutes for the International Workingmen's Association, and follows it up to the present differences between the USSR and China; but the greater part of his book deals with the Third (Communist) International. Like the First and Second Internationals (though in a wholly different context) this met its end in war, but while it was in existence, solidarity was expressed not in internationalism as understood earlier, but in unconditional support of the Soviet Union and its policies.

The case is scarcely open to question, but because he is so intent on tracking down his subject, Dr Nollau is led to make a number of superficial judgments. It was not because "the Russian party was incapable of any further revolutionary effort" in 1921 that "the communist parties of the West were diverted from revolutionary aims"; the wave of unrest and insurrection that followed the war had spent itself. To equate the objects of the "popular front" with the "united front" is not helpful—the popular front was the one policy thought up by the Comintern (or rather the French Communist party) which found a genuine response. In so far as it was successful, it was not because it was "more subtly handled," but because it appeared to meet a real need that served other interests besides the Russian.

The book has many factual errors. Indeed, from the preface, which refers to the Russian Workers' Party instead of the Rumanian, to the index with its inconsistent spellings, the number of errors and mistranslations is startling: at the time of the 1919 Berne Conference the Two-and-a-half International had not been founded (p. 42); the split in the KPD which led to the formation of the KAPD occurred in October, 1919, not in

1920 (p. 48); Shatskin represented the Young Communist International, not Turkey, at the Comintern (p. 54); it was not as a result of the adoption of united front tactics that the British CP was "recommended to penetrate the Labour Party" (p. 76); it was not the Chemnitz Conference which "called off the revolt" in Germany in 1923 (p. 84); Joffe was not Ambassador to China in 1923 (p. 100); the fifth Comintern congress was not held in March, 1924 (p. 106); the statutes in force at the time of the sixth congress obliged congresses to meet "at least once in two years," not "once a year" (p. 106); the office of Comintern president was abolished after Zinoviev's fall, not Bukharin's (p. 108). Mistranslations are also abundant: Zen-tristen are centrists, not centralists, the "Lehre" of socialism in one country is not the "lesson" of socialism in one country, and where the German edition says that "the right-wingers had not yet been excluded," the English (p. 106) says "the 'right' course had not yet been officially abandoned" (which is incorrect); the popular front pact in France was concluded in 1934 (as in the German edition), not 1927, as here (p. 116); a "gemeinsame" statement is not a "mutual" statement, and so on and so on.

In the German edition there are 928 footnotes (in the English they are not numbered consecutively) which give some useful pointers to recent publications, though it might be thought unnecessary to document the statement that Hitler's policies aroused anxiety in France. Dr Nollau has done his homework, but has given too little thought to digesting his material.

## Tramland

Victorian Suburb: A Study of the Growth of Camberwell

By H. J. Dyos.

Leicester University Press. 240 pages. 30s.

SO powerfully has Mr Betjeman influenced contemporary sensibility that the very words "Victorian suburb" are rich in poetic overtones. This admirable study examines in fascinating detail the stuff such dreams are made on. In writing the history of Victorian Camberwell Dr Dyos begins by clearing our minds about what a suburb is and goes on to show why and how a typical specimen developed. He ends by describing the quality of life to be found there in its late Victorian heyday, before the tide of population began to ebb in the years before the first world war, a life that will soon seem remote indeed as its last physical traces, except for the churches and the pubs, disappear to make way for new roads, offices and blocks of flats.

The author is ideally equipped for his task. Himself a Londoner, though now expatriated to Leicester, he unites a keen topographical sense, an eye both for the idiosyncrasies of Victorian architecture and

## Potterton heats hotel or home handsomely

Potterton make boilers—oil-fired or gas-fired—rated from 31,000 to 2,000,000 B.th.u./hr. They are automatic, efficient, economical and purpose designed.

## Famous pencil sharpener gets the sack!

"Stubby" Carver, as millions will remember him

"Stubby" Carver, the man who cut himself out a reputation as the world's finest pencil sharpener, is out of a job.

Yesterday, after 43 years as Personal Pencil Sharpener to the Chairman of Britain's largest importers of camel saddles, he was told that his services were no longer required.

The Chairman has bought himself an electric pencil sharpener.

"Zum noo-fangled gadjit!" was Stubby's description of it.

But the Chairman told our reporter: "It's fantastic, Sir. Entirely automatic, y'know. Not even a switch to press. You simply dip your pencil in, hold it there just a couple o' seconds, and you've got a perfect point."

"It's an immaculate-looking instrument too (not like old Stubby!). Self-contained... no flex trailing about. Looks extremely smart on me desk."

Stubby's dismissal is causing consternation in the pencil sharpening trade, and a Union meeting has been called for tomorrow to "ascertain the seriousness of the situation."

Meanwhile, businessmen all over the country were today sending their secretaries out to buy Kent Kordless Electric Pencil Sharpeners. It looks as though automation is here to stay!

From all good stationers 75/-

KENT KORDLESS ELECTRIC PENCIL SHARPENER

Made by Kent Kordless Ltd., Studley, Warwicks.

## BOOKS

the less easily discerned niceties of social gradation, with a scholar's mastery of his sources. There is a firmness, a solidity of foundation, in this work such as was not, one feels, characteristic of the speculative building estates of Camberwell. And this virtue is attained without a sacrifice of any of the graces. Dr Dyos is a clear and elegant writer, never bored and never boring.

Then, as now, the crucial question for the suburban—to use an old word that the author has happily revived—was the question of transport. The early bus services were far beyond the means of the labourer and even the railways were at first too expensive. The introduction of the workman's ticket in the seventies and the spread of the tramway system both exerted a profound influence over the development of those parts of Camberwell that were not within easy walking distance of central London. In this, as in much else, the author establishes the point that the Victorian suburb was not so much the product of design as the cumulative result of changes and demands that had no necessary relation to each other. How different the life of that organism was to the modern suburb this volume amply shows. To take but one instance, it is unlikely that any modern candidate for holy orders would expect to perform the duty that apparently fell to the lot of the curate of St Chrysostom's of fitting "really deserving cases" with artificial teeth.

The book is handsomely produced with an excellent street plan and an introduction by Sir John Summerson.

## Guidance and Dividends

### The Social Credit Movement in Alberta

By John A. Irving.

Toronto University Press. London: Oxford University Press. 382 pages. 48s.

THE political explosion that in 1935 brought the first social credit government in the world into power in Alberta, one of Canada's western provinces, has been the subject of a series of political and social studies. This tenth and final volume examines the triumph of social credit doctrines under the aggressive leadership of William Aberhart. The story of his transformation from high school principal to premier is a fascinating and frightening one; his personality played a decisive part in the mobilisation of his long established and popular evangelistic movement for the promulgation of social credit doctrines, leading finally to political power, despite repeated denials of any political objective.

Alberta in the 1930s was a community uniquely ripe for conversion to Aberhart's personal version of social credit. That remarkable amalgam of evangelistic fervour, economic emotionalism and political simplicity found ready acceptance among

## THE ECONOMIST JUNE 3, 1961

people who were enduring economic and social disaster. They have had a social credit government ever since. As early as 1921 they had shattered the traditional party system by electing a United Farmers of Alberta government, whose leaders were themselves deeply suspicious of the eastern "money power," an attitude natural in a frontier community, heavily in debt to banks, mortgage houses and farm implement dealers.

As the depression of the nineteen thirties deepened and it became clear that the UFA government was powerless to find remedies, the electorate turned to the "glorious new movement," responding enthusiastically to Aberhart's confident assurances that social credit was the divine plan for economic salvation, a plan which, moreover, would not destroy private enterprise. Aberhart's use of radio and of a province-wide network of "study groups" to spread first fundamentalist beliefs and then social credit beliefs is an especially interesting feature of the astonishing political triumph of an able and domineering man who used to say to his high school mathematics students: "Never mind why."

## Complex Reign

### The Hollow Crown: A Life of Richard II

By Harold F. Hutchison.

Eyre & Spottiswoode. 296 pages. 30s.

A BIOGRAPHY is possibly the easiest way for the general reader to get a picture of a complex age. In the case of Richard II this is particularly true, because the events of the reign are so involved that the central thread of the king's personality is a useful focal point.

Culturally the reign is one of the most brilliant in English history. It saw the development of the perpendicular style in architecture, the completion of the naves of Winchester and Canterbury cathedrals, and the roof of Westminster Hall. It also saw the emergence of English as a literary language, with the works of Chaucer, Langland and Wycliffe; and, in painting, the Wilton diptych and the portrait of Richard in Westminster Abbey. Politically it is one of the most dramatic. The early years saw the Peasants' Revolt, when London was pillaged, and the situation saved only by Richard's personal courage. The king's first attempt at personal government was abruptly halted by a group of powerful lords known collectively as the Appellants, who forced him to dismiss or execute all his friends and advisers. Richard managed to free himself with the help of his uncle John of Gaunt, and finally in 1397 was strong enough to exact revenge. In 1399 he was deposed by his cousin Henry IV.

The reasons for Richard's downfall are still a matter for controversy. What is certain is that the proximate causes were, in the first place, his alienation of the feudal

## THE ECONOMIST JUNE 3, 1961

landowners by his disregard for the normal laws of inheritance, when he seized the Lancastrian estates on the death of John of Gaunt. The second cause was his departure for Ireland, leaving behind an uneasy baronage, many of whom had private armies, and Henry of Derby (Gaunt's heir) in exile in France. When Derby landed to claim his inheritance he found a large measure of support, and could face Richard with superior strength on interior lines. Richard, forced to leave his army in Ireland, found only a handful of supporters, and was tricked into deposition and death. Mr Hutchison does not follow the theory that Richard was mad or seriously unbalanced, but sees him as a man obsessed by the idea of revenge on the Appellants, and determined to strengthen the crown by the establishment of a strong official class of administrators.

Mr Hutchison has written a readable life, with some interesting references to contemporary sources, but he fails to be sufficiently clear or stimulating, and this complex and brilliant reign still lacks an authoritative popular account.

## Paperback Selection

Some idea of the size of the publishing stake in paperbacks is provided by the exhibition organised by the National Book League. Over 2,000 paperbacks, coming from 60 publishers, are on view, about half of them fiction, and they were all published within the twelve months ended April 1961. Many of them were published in America and are distributed here by British publishers.

Below is a guide to the paperbacks that have been received for review by this journal in the last six weeks.

## LORD DALTON'S HIGH TIDE and AFTER

This is the very stuff and substance of the political life of our day. It tells of the successes and failures of men and policies, of clashes of ambition and personal intrigue.

To write this vivid, fascinating story, Hugh Dalton has drawn on the diaries he kept at the time when he was one of the leading figures of the post-war Labour Government. This is the first really intimate account since the war of what goes on behind the unchanging facade of Westminster and Whitehall.

There is Stafford Cripps trying to unseat Attlee as Prime Minister and install Bevin in his place. There is Bevan shouting at Dalton across the Cabinet table. There is the amazing story of the Budget leak that cost Dalton his job as Chancellor of the Exchequer. There is the astonishing scene between Churchill and Herbert Morrison at Strasbourg.

This, in fact, is politics as it really is, governed by the goodness and frailty, the pride and the passion of men. Without doubt, these memoirs will provoke sharp and bitter controversy once again.

LORD DALTON'S STORY BEGINS  
IN NEXT MONDAY'S

## EVENING STANDARD

**TIME FOR A SEARCHING REAPPRAISAL**

In the light of current developments in air cargo, we challenge you to consider this statement. The time has come to make a searching reappraisal of air freight operations if they are being conducted with obsolete piston-powered passenger aircraft that have been converted for cargo. We are convinced that these aircraft, although they may still represent a multi-million dollar book investment, should now be disposed of, notwithstanding current market prices, and replaced by the modern

all-cargo Canadair Forty Four. Inevitably, the disposal will result in a "profitable loss," because it can be shown that the Forty Four is the only all-cargo aircraft able to operate at a profit, either domestically or internationally, under the new low freight rates and will recover in a short period of time the losses incurred on the sale of the outmoded converted equipment. Any General Dynamics or Canadair official would welcome the opportunity to discuss this in more detail.

## AMERICAN SURVEY

AMERICAN SURVEY is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

### America's President

**MR JOHN F. KENNEDY**, President of the United States, a Democrat and a Roman Catholic, 44 years old, elected last November by nearly the smallest majority in history but yet by almost a record number of Americans, comes this week to Paris, Vienna and London to meet General de Gaulle, Mr Khrushchev and Mr Macmillan. On this challenging journey may depend his future prestige at home as well as abroad and on his prestige may depend his success as a President. He comes not to negotiate (at least not with Mr Khrushchev) but to establish personal contact, not to settle differences but to clarify views—and to give warnings that America is even more determined to preserve freedom than it is to preserve peace. A correspondent in Washington who first described Mr Kennedy eighteen months ago, when he was only a Senator,\* now describes him as a President.

**A**FTER four months in power Mr Kennedy is still in the preliminary, tentative stage of his Presidency. His Administration has not yet taken on durable shape or substance. There is about it an air of improvisation and expediency, of high hopes rather than solid accomplishment, of calculated public gestures rather than deeply considered policies. To an extraordinary extent the President and his immediate associates act as if they were still campaigning for election rather than governing a nation and leading a world-wide coalition. There has been much attention to approach and appearances, suitable for a political campaign which is a competition in illusions, but the gritty, stubborn realities of being in office remain largely untouched.

Mr Kennedy's personal manner, elegant, drily witty, aloof yet urbane, has distracted attention from these fundamentals of his task as President. A notably friendly press has co-operated enthusiastically with the White House in laying down a barrage of personal publicity about the President and his attractive wife and children. But he has not yet assumed his part as the country's teacher on the great serious issues; the public mood remains as benignly complacent as it was during the Eisenhower years and popular understanding of impending problems is not discernibly greater. For example, Mr Kennedy criticised his predecessor for failing to provide "moral leadership" on Negro rights, but last week he himself kept almost silent during the racial violence evoked by the Freedom Riders' protest.

While the underlying popular mood remains the same, Mr Kennedy's activist approach has changed the surface tone of government after the passivity and immobility of the Eisenhower period. At press conferences and in impromptu speeches, where his predecessor's syntax wandered broken and homeless, Mr Kennedy is crisp, literate, sometimes humorous. Where General Eisenhower and Mr Truman operated in a formal way through statutory government bodies like the National Security Council, regular committee meetings and large staffs, Mr Kennedy works informally, cuts across bureaucratic lines of authority and tries to impose his personal stamp on decisions great and small. It is an impressive display of initiative and energy that has beguiled the press and the public.

But in terms of positive results achieved, what this means is not yet clear. The Cuban fiasco suggests grounds for doubting

its efficiency; the Eisenhower Administration's much-ridiculed lethargic, stately system of committees could scarcely have produced a worse result and by its very slowness it might have deterred that ill-conceived adventure. Nor have the President, the intellectuals on his White House staff and Mr Rusk and his senior officials in the State Department been able to concert their forces and work their will effectively on the important basic problems. Mr Kennedy, having sought the power of the Presidency single-mindedly for several years, now delights in the exercise of that power but the question persists whether he is fully in command of it. Some men are happy only when they are at the summit of affairs, but happiness is not the same thing as mastery.

Mr Kennedy's difficulties as President of the United States are quite different from those which he has solved in attaining his easy success as a popular public figure. Nor is that success necessarily wholly helpful to him in his new function. First, as the nation's leader, he has been unable to resolve the conflict between his intellectual insights and his political instincts. Secondly, as was noted when his personality was analysed in these pages earlier, there was very little in his previous experience as a legislator and politician to "demonstrate the depth and character of his convictions." The time for testing those still lies in the future. As an intellectual looking at his country's problems and the course of the cold war, he sees the need for bold, dramatic, far-reaching solutions. This is what impels him to sporadic bursts of rhetoric about sacrifice, hard work and dark days ahead. But as a politician he wears a mask of caution.

As he demonstrated by outdistancing his older rivals for his party's nomination, holding the issue of his Catholic religion under control, and edging past the favoured Republican, Mr Nixon, in the campaign, he is adept at gauging the public mood and at calculating nicely what line will be popular. He knows that at the present time hard measures and specific sacrifices would be most unpopular. In consequence there has been the odd gap between his militant rhetoric and his modest programme. His domestic measures have consisted of a shopping list of miscellaneous items,

\* See *The Economist* of December 12, 1959, page 1067.

many of them on the legislative docket for a dozen years or more. To clear the docket is commendable, but it does not represent pioneering on any "new frontier." Abroad, the President has made a worthwhile initiative in his "alliance for progress" for the economic development of Latin America, but on many fronts the shape of the Administration's policy remains vague.

**P**RESIDENT KENNEDY'S performance in these first four months has raised incipient fears that he may, like General Eisenhower, be guilty of regarding his personal popularity as a private treasure to be hoarded for future campaign purposes rather than a resource to be expended on behalf of unpopular causes and badly understood public needs. The President's associates, understandably enough, reject these fears as unfounded. They point to the incontestable fact that he never enjoyed the traditional "honeymoon" in his relations with Congress. The critical struggle with the conservative coalition in the House of Representatives over reform of the obstructive Rules Committee, an issue decided by only five votes, came at the very outset of the legislative session. Most of the Administration's Bills have been carried; particularly in the House, by comparatively thin margins. Less persuasively, Mr Kennedy's friends offer the question-begging argument that there is not the necessary support in the country for measures more vigorous than those which the President has proposed.

There seems little doubt that the narrowness of Mr Kennedy's victory last November has had an inhibiting effect on him. In the days immediately after his victory he was buoyant and confident, but as the time for his inauguration approached he acted more and more like a man hedged in by circumstances, aware more of his difficulties than of his opportunities. The loss of twenty Democratic seats in the House of Representatives contributed to this growing sense of constraint. The confident campaign talk about brave new departures in the first ninety days in office gave way to suggestions that perhaps only after the mid-term elections of 1962 or, indeed, in the President's second term after 1964 could bold measures be attempted.

He made in the pre-inaugural period the basic decision to which he has adhered—to assimilate the conservative Eisenhower past to the "new frontier" rather than to make a clean break with it. This has been particularly striking in his gingerly approach to the question of deficit financing and in his handling of the recession. In the foreign field the President reaffirmed this policy most recently in the aftermath of the Cuban affair by engaging in an elaborate round of consultations with former Presidents Hoover and Eisenhower, General MacArthur and Messrs Nixon, Goldwater and Rockefeller—all Republicans. These were not the consultations of a worried policy-maker in search of wisdom, but rather the instinctive manoeuvres of a canny politician wishing to blunt criticism of a mistake. Mr Kennedy would not be averse to enjoying his predecessor's status "above politics" and his immunity to personal attack.

President Kennedy tries to conduct something approaching a national, rather than a party, government. He chose Mr Douglas Dillon, a hold-over from the Eisenhower Administration, as his Treasury chief and selected little-known, unpolitical personalities for the chief portfolios of State and Defence, passing over leading figures in his own party. Beyond his judgment of the political necessities there is much in this national rather than partisan approach that is congenial to Mr Kennedy's temperament. His liberalism is cerebral rather than the product of his own experience. It represents not his passionate faith but his reasoned judgment. He is not insensitive, for example, to the human misery which unemployment represents, but he is disturbed more profoundly by it as an item of waste when the nation should be making full use of its men and resources to combat the communist strength. The same might be said of his attitude toward

racial discrimination. This outlook puts him in political agreement but not in emotional identity with his liberal supporters.

The paradox of large aims and mild measures, of liberal programmes and moderate men, of portentous rhetoric and a slow pace accounts for the tentative air, the unsettled quality of the Administration, and also for the undefined, unfinished, presidential style of Mr Kennedy. The situation, like the man, remains open—open to new experience, to facts, to reasonable arguments from ally and adversary alike. Poised, intelligent, well-informed, President Kennedy visits Europe this week confident that he can yet master the diverse tides of change that are running. His confidence, if not his record thus far, sustains the hope that the fresh access of energy, idealism and dedicated intelligence which he and his colleagues represent in American government will prove adequate to the need.

## Message Extraordinary

**E**XCEPT on the occasion of the statutory State of the Union Message in January it is unusual for the President to address Congress in person and it is even more unusual for him to present it with a package of requests ranging from more money for men in the moon to more money for small businessmen. Mr Kennedy's unexpected appearance on Capitol Hill last week underlined the urgency of his requests in order to impress Congress, the American people—and Mr Khrushchev. The President's latest proposals, he said, were to meet dangers which had become increasingly clear since he took office. But there was little in the message that was really new; chiefly it amounted to an acceleration, sometimes a very sharp one, and a broadening of existing programmes.

Nevertheless the message as a whole was a challenge to the Russians and particularly so in the race for the moon, in which Mr Kennedy now wants to enter the United States as a serious competitor, with 1967 as his target date for getting a man there. This change in his attitude from only a few weeks ago means presumably that he has been convinced either by his scientific experts that the United States has a real chance of being first on the moon or by his propaganda experts that the United States cannot afford not to be. It will be an expensive effort; the estimate is for an addition of \$531 million this year and \$7-\$9 billion over the next five years to the already high cost of the space programme. Mr Kennedy put the responsibility for deciding whether the effort was worth the money squarely on Congress and Congress seems almost certain to say "yes"; indeed so far the legislators' only doubts seem to be whether Mr Kennedy is asking for enough.

But Congress looks quite differently on his other request for a really large increase in spending—on foreign aid. He wants \$535 million added to his original request for \$4 billion for the coming fiscal year; of this addition \$250 million is for his contingency fund, to be used in emergencies, and the rest is for extra military aid for Latin America and south-east Asia. Military aid is now to be dealt with in a separate Act and economic aid is to be concentrated in a new Agency for International Development in the State Department. But this effort to revitalise the administration of foreign aid will hardly be enough to allay congressional suspicions of a proposal which is the heart of the President's request (and of his hope of making the programme more effective). This is his desire that much of the economic aid be put on a long-term basis and be financed by borrowing from the Treasury, thus avoiding the uncertainties of annual appropriations by Congress.

Among the President's various other requests for increased spending, the only ones related to the domestic economic situation, so recently his most pressing concern, are for increased loans to help small businessmen and for training schemes for the

long-term unemployed. This is a recognition not only that the recession is over but also that unemployment, as this week's figures demonstrate again, remains a serious problem. Liberals were disappointed that the President did not single out the improvement of social conditions at home as a matter of urgency but he himself is now obviously more worried about the inflationary potentialities of his latest proposals. They would add altogether about \$724 million to actual outlays in the coming fiscal year and as a result the deficit in June, 1962, is now estimated at \$3.5 billion. President Kennedy, however, argues that this will be cancelled out by increased tax revenues if the economy improves as rapidly as now seems likely. But the congressional conservatives will not take the prospect of an unbalanced Budget so calmly.

## Republican Texas?

**R**ECENTLY Mr Blakley, the Democrat appointed to take Vice President Johnson's place in the Senate until a special election could be held, sold his interest in Braniff Airlines to "devote himself full-time to his senatorial duties." No doubt Mr Blakley counted on the fact that Texas had not sent a Republican Senator to Washington since the days of Reconstruction, nearly a hundred years ago. But last Saturday, by the narrow margin of 8,000 or so votes, Texans picked a Republican, Mr John Tower. Ideologically there was little to choose between the two: Mr Blakley boasts that he has voted against every bit of President Kennedy's "new frontier" legislation and Mr Tower boasts that he has never supported a liberal cause. But unquestionably young Mr Tower was the more attractive candidate; tight-lipped, multi-millionaire Mr Blakley strikes many people as looking like an unfriendly undertaker and he is a poor speaker.

The underlying reason why Texas overturned its Democrat-only tradition is that memories of the Civil War have now been supplanted by the realities of present-day industrialisation; this has given Texas an urban civilisation, a prosperous middle-class and many northern immigrants who have no hesitation in supporting Republicans. The first sign came when Texas voted for Mr Eisenhower in 1952 and when Dallas sent a Republican to the House of Representatives. Mr Tower helped himself tremendously by putting up a strong fight for the Senate last November. Until then many conservatives thought that a vote for a Republican was a vote wasted in a Democratic state like Texas. Mr Tower was also aided by a relatively small turn-out; this gave more weight to the cities where he was strong and where the Republican organisation, fired by energetic young businessmen, was doing its best for him. He carried all the main cities—Houston, Dallas (Mr Blakley's home town), Fort Worth and San Antonio.

Finally, the Democrats were apathetic. Their leaders in Washington, with their big congressional majorities, had no incentive to make great efforts to save a reactionary candidate; indeed, some expect that Mr Tower's "Goldwater Republicanism," which is too right-wing for Mr Nixon, may prove to be a stone round Republican necks. In Texas itself some liberal Democrats "went fishing" on election day; others voted for Mr Tower to speed the coming of a two-party system which they hope will syphon the conservatives into the Republican party.

Such special circumstances suggest that the Republicans will have to work hard to consolidate and extend their victory. Moreover, Texas is at least as much a western as a southern state and a vastly wealthy one. Nevertheless Mr Tower's victory is a milestone on the road to the two-party system which is coming sooner or later in the South, bringing with it far greater competition in ideas than has existed under one-party rule.

## Tonics for Housing

**A**LTHOUGH the number of new houses on which work has begun has been moving up steadily since January, neither the government nor private house-builders expect a real boom which would push the economy as a whole on to higher ground. April was a disappointing month in that the increase was less than seasonal and, even if housing starts are, as expected, 4 or 5 per cent higher in 1961 than they were last year, this would still leave the total substantially below the million and a half new houses put in hand in 1959. Private builders report that there is simply not the market that there used to be for houses for sale; most of the demand comes from young couples or old people who cannot afford to buy or do not want the responsibility. While the dollar volume of all construction was slightly higher in April than it had been in April, 1960, it also was lower than in 1959.

To stimulate more demand in a basic industry, the government is moving on two fronts. One is to bring down the rate of interest on mortgages so that more people can afford to own their homes. Last week the Federal Housing Administration was ordered by the President to reduce from 5½ to 5¼ per cent the interest that can be charged on private mortgages which it insures. This is the ceiling

which already prevails on mortgages for ex-servicemen which are insured by the Veterans' Administration, and the reduction is the second ordered by Mr Kennedy. Higher prices will also be paid by the Federal National Mortgage Association, which buys insured mortgages in order to release more private funds for lending. Together, it is hoped, these moves will bring down rates in the other, larger, part of the market which does not benefit from government insurance. The Home Loan Bank Board also announced that many of its member banks are lowering the rate of interest which they charge to savings and loan associations; it is expected that this saving will be passed on to borrowers. None of these steps is likely to make the monthly cost of buying a house a great deal lower. But it amounts to giving notice to investors that the government is not going to allow economic recovery to force long-term interest rates up; this may unfreeze funds for mortgages and so press interest rates down.

The other approach is through the housing Bill which committees in both the House and Senate have just approved. It provides roughly \$5 billion (\$6 billion if loans to ex-servicemen are included) over a number of years for a wide variety of housing programmes, including authority for the FHA to insure 40-year mortgages, at limited interest, for middle-class houses; no down-payment would be required. This Bill is one of President Kennedy's "big five" and the one over which there has been the least controversy; indeed Congress seems more likely to add to the President's requests than to subtract from them, although the outnumbered conservative Republicans continue to complain that the measure is extravagant and inflationary.

## Castles in Florida

FROM A CORRESPONDENT RECENTLY THERE

TOGETHER with coca-cola, hamburgers and self-improvement, the state of Florida must be classed as a national addiction. Without ever going down there to see what it is like, thousands of American couples dream of moving to the sunshine state as soon as their last pay cheque comes through, leaving their roots far behind them. Even the young and active respond to the call of America's southernmost state: three out of five of those questioned in a recent survey of industrial workers in Detroit said that they

would live in Miami if they could get a good job there. Florida's claim to fame is its climate. Night and day, summer and winter, temperatures never wander far from the annual mean of 75 degrees. In an average year, Miami has only eleven days in which the mercury goes above 90 degrees or below 50, while New York has 208 such intemperate days and Cleveland 242. For this, Florida-fanciers are prepared to overlook the long stretches of the summer during which the atmosphere has a good deal in common with a Turkish bath and the flat and uninteresting landscape.

During the last decade, property developers have been hard at work exploiting and fostering this addiction. As a result land values have soared. In many cases choice waterfront building sites have doubled in value every twelve months or so, while even land

## Taking Account of Expenses

WHEN Mr Dillon, the Secretary of the Treasury, appeared before the House Ways and Means Committee recently to testify in support of the President's tax programme, he carried a fat green book which sent shivers of apprehension through the members of America's famous "expense account society." It was a "Study on Entertainment Expenses" drawn up by the Treasury and based on 38,000 or so income tax returns by business firms which had been examined during the last three months of 1960. The total deductions claimed originally for spending on meals, lodging, transport and food and beverages bought in the line of business entertainment could not be extracted without putting an undue burden on both the taxpayers and on employees of the Treasury. But the rest of the tax deductions claimed—for fishing camps, yachts, African safaris and other exotic business expenses—totalled \$67 million; of this less than \$8 million was disallowed.

In many cases the law does not permit the Internal Revenue Service to be more stringent; in others the courts have come to the rescue of the taxpayer who feels that he is hardly done by. The report is full of startling examples. One concerns a dairy firm which claimed a deduction of \$16,818 that it had spent to send its president (and principal shareholder) and his wife on a six-month safari to Africa. The IRS allowed only \$1,200 of the total, but the Tax Court noted that the trip resulted in favourable publicity for the company and allowed the firm the whole of its claim. In another case a manufacturing corporation claimed \$463,000 in tax deductions for a luxurious resort which it maintained on a sub-tropical island to entertain executives of the firm and its customers. Fishing cruises were provided; so was air transport to and from the island. The tax authorities deducted sums which it felt were personal expenses of the firm's officers and employees but allowed \$269,000 for the upkeep of the resort, \$90,666 for air travel and \$15,277 for depreciation of the aircraft.

An undertaking firm succeeded in shift-

ing to the government part of the cost of a yacht on which it entertained visiting colleagues and clergymen; so did a shoe manufacturer who maintained a yacht on which to demonstrate a non-skid rubber sole. Indeed, firms which felt compelled, for business reasons, to maintain yachts included a metal fabricator, a cake bakery, a law firm, a brewery, an automobile dealer, a horse-racing handicapper, a manufacturer of paint and even a ship-

"Private enterprise has been dealt another blow. The government wants us to pay for this ourselves."

building concern. The president of another corporation, who is an enthusiastic sportsman, goes to Wyoming every year with four fellow-enthusiasts who, unluckily for the taxpayer, are in a position to send business to the firm; under the present law the cost of this yearly shooting trip must be accepted as a business expense. Such generosity—which is most characteristic of small, tightly-held concerns—costs a firm which pays a profits tax of 52 per cent only 48 cents out of each dollar—provided a tax deduction can be established. Sometimes, however, the tax authorities can get their own back by proving that such largesse constitutes taxable income for the recipient. Tax deductions are not allowed—as a matter of public policy—for the entertainment of government employees.

The biggest headache for the IRS and its agents is how—and where—to draw the line between business and personal expenses. Officials have been trying to solve the problem for forty years and consider that it will never be settled to the satisfaction of both taxpayer and tax collector. There are also headaches in substantiating expenses. In theory the claimant has to justify his expenses by presenting receipted bills but the IRS recognises that this is not always possible. In practice it follows the Cohan rule, which requires a revenue agent, when necessary, to try to reconstruct the allowable expenses from other sources. For costs of travel this is possible though time-consuming; but for the costs of entertainment there are few guides. Credit cards, as records of expenses, are unsatisfactory because they often omit details and do not distinguish between personal and business costs. All this fussing over expenses wastes time and effort and often gives the IRS a bad name with taxpayers; moreover even when the IRS is convinced that there has been fraud it often cannot prove—as the law requires—that the taxpayer meant to cheat the government.

The President's cure is to do away with the whole practice of tax deduction for entertainment. In his tax message he said he hoped the phrase "It's deductible" would vanish from the scene—but this depends on Congress. No tax deductions would be allowed for the entertainment of customers at cocktail parties, night-clubs, country-clubs, theatres and prize fights; or on yachts, fishing camps and so on. The deduction on individual business gifts would be limited to \$10. And—hardest of all—deductions for living expenses on business journeys would be limited to \$30 a day; by comparison government employees may receive \$16 a day for their expenses when travelling on their jobs if a Bill now before Congress is approved. Many businessmen contend that \$30 a day is not enough in big cities. But so far few voices—except those of hotel and restaurant keepers—have been raised in defence of the safaris or the costly business lunches. They may be the first of the new sacrifices which Americans are going to make for their country.

London 5.00 p.m.

## THIS VERY MINUTE HE'S WITH CUSTOMERS IN TORONTO!

Three floors above the hum of Piccadilly's traffic this British airline executive plans new flight schedules. Three thousand miles away in Toronto he's meeting new customers through international advertising in the Canada edition of *TIME*.

Many citizens in lunch-time Toronto, including the people who use airlines frequently for both business and pleasure, are reading through *TIME* Canada, deciding where to go and how to get there. They, like 3 million other important men and women around the world, take *TIME* for news of the world's people, places and events as well as for services.

You too can meet your customers and assist your local offices through *TIME*'s six editions: Canada; Atlantic; Asia; South Pacific; Latin America; U.S.; separately or all together, depending on the markets you want to reach. Ask:—

in association with Brown Knight & Truscott Ltd. (Printers and Lithographers) and Engineering Ltd. (Publishers of Engineering)

that is remote from shops, roads and (sometimes) the sea itself can now claim a high price. A couple of years ago, when the boom was at its height, each week nearly a thousand people in the North were buying land which they had never seen. To drum up this degree of public interest, development companies embarked on massive promotional programmes which included direct appeals through the post as well as the placing of advertising booths at railway and air terminals and at other strategic points in northern cities. The acquisition of building plots on hire-purchase terms has also been encouraged; usually these require "\$10 down and \$10 a month."

For the first time since the boom got underway in 1952 land values have been moving downward. According to one estimate, prices have dropped about 10 per cent on the average, though some particularly high-priced plots have been selling at much larger discounts. A housing surplus became apparent in the Miami area about a year ago and since then it has spread to most other residential centres. Florida's construction industry—now the state's largest employer after the tourist trade—has been badly hit; for the last six months new housing starts have been running at 30 per cent or more below those of the previous year. In earlier postwar recessions Florida continued to attract new residents and

new industries in sufficient numbers to keep its construction industry working at full speed but this time it has experienced decidedly more than its share of the general slump in building and construction.

The lull in Florida's land boom is causing a good deal of consternation. The wild and disastrous speculations of the early nineteen-twenties, when investors convinced themselves that every mangrove swamp would someday support a future Monte Carlo, have not been forgotten altogether. But while many onlookers have for years been shaking their heads at the exuberance of Florida's postwar boom, few really think that a crash of anything like the proportions of 1926 is in prospect. For one thing, the earlier boom was largely a "paper" affair; little remained after the bubble burst except a few half-built communities intended for millionaires and some bizarre stretches of four-lane highway leading only to uninhabited swampland. By contrast, most of the land that has changed hands in recent years has been bought not for quick profits but for use, and a large amount of new building has already gone up. Moreover, Florida has a much more substantial population now—nearly 5 million compared with only 1 million in 1920—and one that is growing five times as fast as the national average. Some people already see signs of an improvement. One of the big promoters has reported a sharp increase in sales in March and April, both of houses and of sites.

It is even being argued that the drop in land values may have been a good thing. Much of the new development is in the hands of a few large and solidly-financed companies—the General Development Corporation, the Arvida Corporation and the Lefcourt Realty Corporation of New York. But there is also a substantial fringe of less reputable operators who depend on a constant flow of new sales to cover the costs of improving and selling their

existing holdings, and whose representations to the public have been a good deal less than accurate. It is these firms that have been threatened by the recent downturn in values and, if they are squeezed out of the business, no one will be sorry. More important, a drop in the cost of land will help the housing market. One of Florida's main attractions has always been the relatively low cost of its houses which, because of the climate, require neither central heating, insulation nor basements. But this advantage has been progressively eroded by soaring land values, and many people have felt that houses in Florida were pricing themselves out of their largest potential market, that provided by retired couples of modest means.

### *Voyage to Asia*

MR LYNDON JOHNSON is finding, as Mr Nixon found, that it is not easy for a Vice President to keep fully employed. Constitutionally, his only task is to preside over the Senate; this is no challenge to a man who used to hold that august body in the palm of his hand and Mr Johnson has seldom been seen wielding the gavel. Although the President has made a great show of consulting Mr Johnson, the chance to perform a useful mission in Asia—and to keep himself in the public eye—must have come as a welcome change to the energetic and ambitious Vice President. Primarily the purpose of his trip was to reassure the worried and sceptical countries of south-east Asia that the United States will not stand by idly and let them share the fate of Laos.

The unrestrained tributes which Mr Johnson paid to such authoritarian leaders as General Chiang Kai-shek and President Diem of South Vietnam, the Vice President's insistence that the new Administration has no intention of recognising Communist China and his promises of more military supplies for South Vietnam and Thailand have aroused some concern in Congress. Verbally Mr Johnson may have been exuberant, but substantively, in spite of his free-and-easy Texas ways, he does not seem to have had much rope. He carried letters from President Kennedy to each Head of State; the statement drawn up after the Vice President saw President Diem had to be approved in Washington before it was released; no American troops were promised; and Mr Johnson emphasised that his task was to listen and learn. It even looks as though the promised increases in economic and military aid for south-east Asia may have been decided upon before the Vice President left Washington. Usefully, however, Mr Johnson reminded each country that social and economic reforms were expected to follow. Like Mr Nixon, who also conducted himself like a politician on his travels, Mr Johnson made a great effort to get among the people—partly no doubt from gregarious habit, but partly also as an example to Americans stationed in these countries who are sometimes too fond of their air-conditioned comforts.

The effect of his trip on the Vice President has not been negligible; after two weeks, he has come back "a zealot for aid" and full of at least surface optimism about raising the standard of living and thus undercutting the appeal of the communists. Recent events in South Korea, however, provide some sobering thoughts. This is a country into which the United States has poured \$3 billion in aid and in which it controls the armed forces. Yet under the very nose of General Magruder the freely elected (if not very vigorous) government of Mr Chang has been ousted by the military. The new men say that they do not mean to establish a permanent dictatorship, but the dissolution of all political parties is not promising. It looks as though once more the United States will be forced to support an anti-democratic government for lack of an alternative—and because a democratic government was so slow to suppress corruption and introduce reforms.

## boy on wheels

Eight hundred and fourteen, eight hundred and fifteen... far too many to count and they're all railway wheels made by Steel Peech & Tozer which is part of US and still warm from the mill because they make them by the thousands you wouldn't think there were so many trains but Steel Peech & Tozer make wheels for railways all over the world as well as British Railways so they are part of the export drive and a Good Thing as everybody knows.

## THE WORLD OVERSEAS

### Dr Amini's Fifty-Fifty Chance

FROM OUR MIDDLE EAST CORRESPONDENT

Teheran

ANYONE who knows what is really going on in Persia must be grossly misinformed. However, so far as one can see June 9th promises to be a fateful day for Persia if the unofficial opposition, the National Front, sticks to its present plans. By then parliament will have been dissolved for a month, and according to the present constitution it will be time for general elections. Although the Shah's decree dissolving the chamber waived this clause in the constitution, the National Front leaders declare that they do not recognise the validity of the waiver, and that from June 9th they will regard Dr Amini's government as being in breach of the law. They threaten to register their protest by widespread demonstrations, supported by strikes—some of which seem to be beginning ahead of time.

The prime minister has committed himself both in his public statements and in private conversation to several drastic reforms. These include a cut of perhaps 10 per cent in government expenditure, the reduction of luxury imports, the division of big estates, and a purge of corrupt elements in the government machine. He has used strong language in denouncing past malpractices and has said that he will resign if he is hampered in carrying his policies out. By stressing the radical nature of the government's programme, the more outspoken members of the cabinet have already disturbed the conservative groups in the country. It is in the nature of things that any drive against extravagance and corruption must antagonise the established ruling class in direct ratio to its effectiveness.

Caught between this cross-fire from the conservatives on the one hand and the National Front on the other, Dr Amini has perhaps been over-bold in provoking hostility from other quarters as well. Last week there was considerable effervescence in the army because five generals were arrested without similar action being taken against civilians of equivalent rank. This, together with the ban on army officers wearing their uniform while off duty, suggested that the government was singling out the army for its special attention. There is reason to believe that the Shah, although abroad at the time, was able to smooth out these differences at least temporarily. Now that he has returned to Teheran this is undoubtedly one of his main preoccupations.

There has also been a dispute between the government and the press which began with a government announcement that the press law was to be applied more strictly than in the past. This led to a mildly farcical incident when about thirty newspaper publishers sought "sanctuary" in the press club, only to file out again when soothed by official explanations. Despite its funny side, this episode has done little to endear the government to the press or to that proportion of the public (probably small) that is influenced by what it reads in the newspapers.

The public outcry against corruption is not as easy to satisfy as might appear at first sight. Although it is common knowledge that corruption is rampant in Persia, the most important offenders have naturally been careful to cover their tracks, and factual

evidence that would be acceptable in a court of law is hard to come by. As Dr Amini has announced his intention of acting within the framework of the law, culprits may find it easy to slip through the net. There is also the practical consideration that if every case of corruption were tracked down and the offender punished there would be precious few experienced people left to run the country.

There are also serious political obstacles in the way of Dr Amini's attack on corruption. Much is topsy-turvy in this country: the fact is that the roots of evil lie high up. If the prime minister really intends to eliminate the malpractices he must reach towards those rarified levels that have hitherto enjoyed a virtual immunity from attack. As all prime ministers derive their authority from the Shah, he therefore risks sawing off the branch he is sitting on. Strength and weakness are delicately balanced in Dr Amini's position. His strength derives partly from the fact that he is certainly "a personality" with a deserved reputation for political shrewdness. He comes from one of the best known families in Persia (though this in certain circumstances could become a source of weakness). Above all, he enjoys the support of the Shah; and as long as he continues to do so the prestige of the monarchy should counterbalance the hostility of the conservatives. His weakness is that he is politically independent and has no popular organisation behind him. Provided he has the support of the army, he can control the National Front. On the other hand, if he could come to reasonable terms with the National Front, he might be able to stand up to the army, especially if the Shah continued to give him his open support. But in his present isolated position between the army and the front he must walk warily if he is to have a fair chance of survival. So far he has disdained to do so.

ALTHOUGH the National Front has chosen to fight Dr Amini on the issue of immediate general elections, this is a constitutional dispute that finds little echo among people who are much more interested in the fight against corruption and the rising cost of living. Therefore, the front is certain to intensify its propaganda on these two issues; and unless Dr Amini can point to real progress before June 9th he may be in for serious trouble. The Shah has always shown himself sensitive in the matter of public disorder.

Fortunately for Dr Amini the National Front is not a strongly organised political force. It is a loose grouping of intellectuals and business men who have made themselves spokesmen for popular grievances of every description. They are pressing for immediate elections in the confident and well-grounded expectation that if these were held they would be the victors. What would happen then is anybody's guess, except that it is fairly certain that the front would immediately split into fractions of varying political complexion. The one true cohesive force within the front today is the unacknowledged presence of members of the communist Tudeh party, who, by virtue of their discipline and their relatively clear

aims, exercise an influence out of proportion to their numbers. They enjoy the advantage that, never having been in power, they can approach the public with hands that are clean.

In the present fluid circumstances where no firm estimate can be made of the real intentions, let alone the real strength, of the political forces at work, the best placed prophets here are notably cautious. Few would give Dr Amini either more or less than a fifty-fifty chance of survival. Inevitably there is speculation about the chances of a coup staged either by the army or by the National Front. A third possibility, based on the assumption that the army and the front are not distinct entities but shade into one another at certain levels, is a National Front coup backed by some army officers. This from the point of view of the regime would be the most dangerous of all. Much will depend on the Shah's personal appraisal of developments, and on his decisions now that he is back from his travels in Europe.

## Generals on Trial

*Generals Maurice Challe and Marie-André Zeller were each sentenced in Paris on Wednesday to 15 years' penal servitude. Our Paris correspondent gives his impressions of the trial.*

FACING the nine judges of the special military tribunal General Challe looked like a rugged player sitting for a team photograph, not knowing exactly what to do with his massive arms. Yet, even in mufti, he kept a certain air of authority. Sitting next to him, General Zeller looked insignificant, a broken old man; when his turn came to speak, he mumbled and collapsed. Since the two other members of the junta, Generals Salan and Jouhaud, are still at large, together with the colonels who inspired the insurrection, the trial of the Algiers coup of April 22nd was, in fact, reduced to the trial of General Challe.

In the crowded, ornate courtroom, it was hard to realise that, not six weeks ago, France faced a major crisis. What about that threat to drop paratroopers on Paris? According to the defence, it was no more than a figment of M. Debré's imagination. General Challe's intention, so he now says, was quickly to end the Algerian war and then hand over to Paris a pacified French Algeria. The scheme failed not because of the active resistance of officers loyal to the government, but because too many commanders were lukewarm and hesitated, and because national servicemen were undermined by the "communist cells" in their midst.

The story of General Challe is sadly grotesque. Appointed commander-in-chief in Algeria by General de Gaulle in December, 1958, he was relieved from his post in April, 1960. It is hard to see how he hoped to achieve in a few weeks what he had failed to bring about in fifteen months of command. Yet, for all the incredibility of its main argument, the defence handled the trial with greater facility than the prosecution. Reasonably enough, their case was helped by the fact that it was in everybody's mind that three years ago another regime was brought down by officers to the same tune of *Algérie française*. It was simple, too, for the defence to prove that the army was given repeated assurances that it was to stay in Algeria, and thus to present the officers as men driven desperate by the conflict between discipline and conscience. But the defence did not over-emphasise its points; rather, it behaved as if a tacit agreement had been reached to minimise the whole affair. The prosecution's case was made more difficult by the flimsy available evidence of loyalty within the officer corps. Asked how many commanders categorically refused to join him, General Challe replied that he himself had thought they could be counted on the fingers of two hands, but that his colleagues had argued that this was an over-estimate.

"What would have happened had the loyal officers resisted?" The conditional in the question of M. Patin, the president of the tribunal, strengthened General Challe's point. General Gambiez, who as commander-in-chief in Algeria was arrested by the insurgents, tried to explain the officers' bewilderment by the fact that an officer does not learn at Saint Cyr how to fight against his colleague. In many respects, the coup was a family affair. Commanders consulted one another, discussed the pros and cons by telephone or over lunch. There was no clear-cut frontier. Most officers hesitated to join the Challe venture not because it was wrong, but because it was unlikely to prove successful.

Earlier this year, in a different courtroom of the same Parisian Palais de Justice, the so-called barricades trial dragged to its farcical end. It was farcical because the prosecution confined its case to civilians, refusing to examine the ambiguous part played by the military command (that is, by General Challe and his colonels) in the insurrection of January, 1960. This time, the preparations were swift, the trial lasted only three days and the verdict was severe. Yet the feeling remains that the tribunal did not go to the heart of the matter. Maybe the Fifth Republic has some difficulties in judging its officers' corps. After all, where the military commanders are the main body to be consulted before policy decisions are made, the tendency appears inevitable for the military pronouncement to replace the time-honoured ritual of the parliamentary crisis. The Challe trial is over, but it has not given a clear picture of the ambiguous place which the armed forces occupy in the political life of General de Gaulle's Republic.

## SOUTH AFRICA REVISITED—II.

### Battle-Ready

BY OUR SPECIAL CORRESPONDENT

WEDNESDAY was South Africa's Day of the Republic. Inside the laager Afrikaners dance, and often pray, as they await the savage war-whoops of an alien world. When the barbarians come charging down the hill they will meet the bullets of a nation whose God is in His heaven, and whose powder is dry. Six weeks before, Senator Wessels told his fellow legislators once again the story of how the Creator introduced Christian civilisation from Europe into South Africa. It was He whose hand could be seen in the discovery of the Cape; in the coming of the Huguenots; in the Great Trek; and in the advent of Union in 1910. "As He gave the land of Canaan to the Israelites, He also gave us a measured inheritance in Africa." The same hand appointed the leaders of the nation. There were trials for the people, yes, the hand of the Father had often chastised them, "but it moved us to greater dependability and unconditional trust," proclaimed the senator.

Dr Verwoerd also has great temporal forces at his command. The anxious days have driven a number of white South Africans towards liberalism, but for every new recruit on the left there are at least four or five new Nationalists. Entrenched in parliament, the party answers the handful of doubting Afrikaner intellectuals and theologians by quoting election results. As a long-term policy the more dangerous critics can be weeded out and destroyed by the inexorable force of the *Broederbond*—the secret organ of the Afrikaner establishment.

This week the extra-parliamentary opposition was proved still unable to meet the power of a well-armed police force backed by a ruthless administration. Not all the available shots were fired by the government. Since 1948, when they gained control in parliament, the Nationalists have steadily added to the stock-

## Electrical Aids in Industry

## Data Sheet No. 18

### Factory Heating-1

The space heating of factories by electrical means can be achieved in a variety of ways which will be dealt with in the next Data Sheet.

Before deciding on any form of factory space heating—whether by means of electricity or not—it is as well to have clearly in mind all the components of the total annual running cost, and not merely the fuel cost, of the installation.

They are:

- (A) The cost of the fuel or the electricity,
- (B) Interest and depreciation on the capital cost of the installation,
- (C) Labour,
- (D) The cost of running auxiliary plant such as fans and pumps,
- (E) Maintenance,
- (F) Insurance.

In comparing fuel costs it should be borne in mind that electric heat is refined heat and has had all the fuss, bother and dirt of the conversion of fuel into heat taken out at the generating station.

In arriving at the true figures for capital cost and depreciation, maintenance and insurance, those connected with such items as boilerhouse, chimney, fuel store and access road should be included; labour costs should

include such tasks as ash disposal. None of these items occurs when electricity is used, although space will be required for the electric boiler and storage vessels in the case of the type (h) following.

Electricity provides the ideal answer to the requirements of the Clean Air Act, the impact of which has introduced an important new factor during the last few years.

The following list gives the main types into which electric heating installations fall:

- (a) High temperature ("infra-red") overhead heaters operating at near red heat.
- (b) Medium temperature panels operating at surface temperatures of 400° to 600°F.
- (c) Extended surface heating in the shape of floorwarming operating at temperatures up to 80°F.
- (d) Oil and water filled radiators.
- (e) Tubular heaters.
- (f) Unit heaters.
- (g) Storage block heaters.
- (h) Electric boilers and water heaters operating in conjunction with hot water radiators or panels either with or without water storage.

All these methods of electric heating can be divided into two distinct classes:

- (a) Those that utilise electricity during "off-peak" hours and store the heat so generated for use at a later period.
- (b) Those that use electricity whenever the heating system is in use (i.e. direct electric heaters).

The use of a heat storage system in a small works on a block tariff takes advantage of the lower tariff offered for an off-peak supply, and in the larger factory on a Maximum

Demand tariff means that the heating load will not incur any M.D. charge. Alternatively there may be cases where the use of direct

### Available for Space Heating

electric heaters can be integrated with other factory loads in such a way that they are not used during the factory peak periods and will thus incur no additional M.D. charge.

For further information, get in touch with your Electricity Board or write direct to the Electrical Development Association, 2 Savoy Hill, W.C.2. Tel: TEMple Bar 9434. Excellent reference books on the industrial and commercial uses of electricity are available. An example is "Higher Industrial Production with Electricity" (price 8/6 each, or 9/- post free).

E.D.A. also have available on free loan in the U.K. a series of films on the industrial uses of electricity. Film and Book catalogues and Publications List sent on request.

pile of oppressive legislation started by the Smuts government at the end of the war. The police-state republic is still partly hidden in the statute books: a stroke of the president's pen could bring it fully into action. Yet, like generals who worry over their nuclear fire-power, the Nationalists still feel the need of new legal weapons. At the beginning of May they whipped through a bill giving the attorney-general power to detain anyone for twelve days without trial. This was expressly designed to deal with the proposed three-day strike. But by simply declaring another emergency, the government could have called on far wider powers.

Against the fear of increasing non-white opposition, a widening range of tactical legislative devices is assembled. The choice, already rich, is likely to grow richer. South Africa remains the rare country where black people are not winning victories. Elsewhere the power attacked by the black revolution has itself been divided. In Africa, the blacks were helped to ascendancy because the British and the French withdrew; in America federal troops and federal justice weigh the scales in favour of the Freedom Riders. Even Angolans, seeing what is happening to French Algeria, can hope for a change in Portuguese colonial policy. In South Africa the Africans are alone. It is hard to see how increasing desperation on both sides can be avoided. The police state must come fully into the open. If the Nationalists have a political weakness at present it lies in the lip service they pay to democratic methods when dealing with Europeans. This cannot last.

**S**OUTH AFRICA'S economy can probably stand a lot more battering than many people think. The talk everywhere is of a "siege economy"; the likelihood is that the siege will last a long time. Most business men expect a slower rate of expansion to be forced on them in the next few years; some expect a reduction in the standard of luxury living; very few fear a complete economic collapse in the near future. About half the country's annual imports are accounted for by exports of gold and uranium; sales of diamonds, wool and basic metals account for a large part of the rest. Even if fruit exports were wiped out by boycotts (in fact sales increased last year), this in itself would not be a mortal blow.

There is plenty of room for belt-tightening, as the latest round of economic measures shows. At the beginning of May the government took steps to stem the outflow of capital by putting up Bank rate, cutting down loans, tightening import controls and closing some of the many loopholes in the exchange regulations. Much more could have been done, and may yet be done. Bank rate went up by only ½ per cent, tourists can still take out £500 each a year, emigrants can still take £5,000, and cuts in imports of motor components and cars could be much harsher. Foreign-held capital can still move freely. Eleven home made components are now compulsorily included in all locally assembled cars, and the proportion is increasing. The state-owned oil-from-coal plant, Sasol, could not produce enough to meet the country's requirements of oil, even in a "siege economy," but few South Africans believe that, at a time of a world oil surplus, a total embargo on sales of oil is likely. A partial embargo might be a blessing in disguise, for although the government is reluctant to incur unpopularity by further reducing the amount of motoring pleasure available to South Africans, about a sixth of the country's import bill goes on cars and oil. Petrol rationing may have to come in any case.

The danger point will be when industry is prevented from importing raw materials unobtainable elsewhere. Industrialists say that the country is already too near this point, but in fact it is only near to the point where more expensive substitutes will have to be bought locally. In the short run, many local industries will benefit from import controls and this may stave off widespread unemployment. In any case, the first employees to be dismissed

in any industry would almost certainly be Africans. Job reservation laws prevent specific racial groups from doing designated jobs and the government is about to take further powers to control the movement of Africans. Previously Africans could not normally be sent to the reserves if they were born in urban areas, but under the new laws it would be possible to dismiss Africans and send them to the tribal areas, filling their posts with jobless whites.

All this adds up to a prospect of a slow, steady reduction in one of the highest standards of living in the world. Economic warfare will not immediately defeat South Africa: what is more likely is a long-drawn-out bleeding to death. And while there is gold there will be immense reserves of strength to help the victim bear the pain.

The military threat to South Africa is not immediate. Yet, at the end of April, the minister of defence, Mr Fouché, announced that South Africa was to be put on a "battle-ready" footing, with the accent on internal security. The Citizen Force was to be brought to "wartime strength" with a nine-month continuous call-up instead of the previous six months spread over three years. The force will be armed with automatic weapons, and can rely on the support of an expanded, fully trained regular army and a modern air force, including two squadrons of Sabre jets and seven jet helicopters.

Officers have studied French methods in Algeria, and the first battalion of paratroops is in training. Fifteen men were sent to Britain for preliminary training last September. Two million pounds has been spent on Belgian machine-guns and automatic rifles; 160 concrete watchtowers are being erected to guard military installations. The chairman of the state iron and steel corporation, Dr F. Meyer, has been given the task of mobilising local industry to produce military requirements within the republic. "Mobile watches" armed with tanks and armoured cars have been set up to move quickly to regional areas of trouble. These changes complete the Nationalist reorganisation of the defence force, which began in 1958. The majority of officers are now Afrikaans-speaking government supporters; the principle of conscription by ballot has been introduced: the accent has been put on internal security. South Africa is well set to face a guerrilla army—the only kind that could reasonably be expected to appear in the immediate future.

Few can doubt that Afrikaner nationalism will one day come to an end. But perhaps only Senator Wessels ("God is the Giver of all things which we enjoy") could safely predict how and when it will happen.

## Tibetan Go-Slow

FROM OUR HONGKONG CORRESPONDENT

**T**IBET stubbornly remains a thorn in China's face. For the second time in four years, the Peking politburo has been compelled to announce a postponement of five years in "democratic reforms for the socialist transformation" of Tibet. The glum awkwardness with which this second respite has been announced reflects considerable official embarrassment. It may indeed be reasonably surmised that Chairman Mao Tse-tung, having blundered twice, will not revoke this 1961-66 reprieve as rashly and prematurely as he ended its 1957-62 precursor. The new retreat has been bravely sounded by Comrade Chang Ching-wu (the politburo representative in Lhasa who runs Tibet):

In order to consolidate the achievement of democratic revolution in Tibet, the Chinese Communist Party, under the inspired leadership of Chairman Mao Tse-tung, pledges that it will not launch socialist transformation (in Tibet) in the next five years, and will not establish agricultural and livestock-breeders' co-operatives or people's communes in that period.

Here is a dismal echo of Chairman Mao's benevolent acknow-

ledgment in 1957 that some primitive Tibetans—indeed, alas, most of them—were not then “quite ready and prepared for collectivisation,” and his indulgent assurance that the Communist party, firmly resolved never to impose even the wisest reforms upon the unwilling, would amiably tolerate this backwardness until 1962. “Consolidation” was then, as now, the magic word. However, the coincidence of the desperate 1959 uprising in Tibet and the intoxicating exhilaration of the “great leap forward” in China was strong and heady enough to induce Chairman Mao to revoke his reprieve and to seek to force speedy and ruthless collectivisation on the Tibetan laggards.

Clearly, Mao's second humiliating reprieve once more reflects difficult conditions inside China as well as inside Tibet. On the one hand, the new and chastened party line of harder planning, lowered industrial targets and priority for food production in China; on the other, the frustrating mood of passive resistance,

Retreat from Lhasa

obdurate conservatism and continued guerrilla fighting in Tibet. Evidently, the guerrilla resistance in the wild border regions, however patchy, is pinning down large forces of the People's Liberation Army, while the “liberated serfs” themselves are ungratefully refusing to co-operate with the Chinese party cadres and the “mutual aid teams” which were acclaimed as shining successes last year.

Real and practical deficiencies of communication also play a part. The two roads to Lhasa from China, which were completed in 1955, are still impassable at some points for several months of the year, and the projected railway from Sining is still in blueprints. Until these communications are made properly effective, Peking cannot substantially increase military reinforcements or the flow of “colonisers” needed to co-operate with the liberated Tibetans in the “socialist transformation” of the region. The Dalai Lama has recalled with anguish in exile that Chairman Mao genially assured him in 1956 that the population of Tibet would eventually be increased from two to ten millions by massive and selfless Chinese immigration.

It may well be, in fact, that the current five-year respite for Tibet sets a realistic timetable for the improvement of communications with China. In any event, the harassed politburo is probably well satisfied to relax doctrinal and ideological pressure in Tibet if this restraint will at least ensure that, in the agricultural crisis, a partly placated Tibet will produce enough grain and food for the local population, the Chinese army garrison and the regional party establishments and cadre forces. Some diverting contradictions mark the party's somewhat red-faced attempts to rationalise this second postponement of Tibet socialisation. Thus, deputy chairman Pebola Choliehnamje, of the preparatory committee for Tibet, argues nervously that the delay in introducing infallible party reforms for increased agricultural and livestock production “will undoubtedly create a direct impetus for the development of agricultural production and animal husbandry.” He also makes a memorable point in double-talk by stressing that “the task in 1961 is to carry out continuously the democratic reform movement,”

although the theme of his apologia is that democratic reform is being withheld for five years.

The Panchen Erdeni, who continues to collaborate faithfully with his Peking masters, makes one significant claim which, if true, would indicate that the party at least stands pat on a solid base for consolidation during the respite. He asserted that in April this year there were 13,000 “mutual aid teams” (embryonic co-operatives) in Tibet, embracing 140,000 “emancipated peasant families.” The previous official figures (in November last year) were 15,000 teams and only 100,000 families; thus the trend has been towards increased conscription into fewer, and therefore larger, organisations. Peking's expedient decision to bow again to adverse conditions is, in fact, a retreat, not a defeat, and another example of the Mao regime's realistic flexibility. It is a humiliating and frustrating retreat, all the same.

## Baghdad's Arab Policy

FROM A CORRESPONDENT

AFTER three years in power General Qasim's future survival may well depend as much on the success of his Arab policy as on any development at home. The systematic unfolding of this policy over the past eighteen months or so is one of the most solid achievements of the regime, and may eventually take the stuffing out of the assaults of the extreme Arab nationalist opponents. In essence, the policy consists of a gradualist, unemotional approach to the goal of Arab unity, resting on three propositions. First, that no one Arab state has all the qualifications required for leadership; second, that different social and political systems should not be an obstacle to closer inter-Arab relations; and, third, that Arab states should, to begin with, unite on a basis of equality, frank speaking and mutual confidence around an institution—such as a reactivated Arab League. Next month the league is going to make another attempt to put teeth into its feeble sixteen-year-old charter.

This may not sound like a revolutionary programme, but its chief architect, Iraq's foreign minister, Dr Hashim Jawad, considers solid foundations, however humble, more valuable than vast,

## CATERPILLAR U.K. STERLING SOURCE FOR THE WORLD'S FINEST EARTHMOVING EQUIPMENT

No one company can lead an entire industry as Caterpillar does in earthmoving except by a long history of service. In earthmoving success comes the hard way, after long battles with the varying toughness of the earth's surface. Only constant quality of thinking, design, engineering, performance and service could have raised Caterpillar to such leadership. Caterpillar now offers a range of quality products from Britain, including tractors, Traxcavators, bulldozers, scrapers, rippers and a large inventory of genuine parts. This British source increases the availability of these famous big yellow earthmovers. Standing solidly behind this equipment is a world-ranging Dealer Service Organisation of the utmost reliability. Caterpillar has become a legend in its lifetime and the built-in quality of its products is to the same high standards in Britain as in products from any other Caterpillar plant throughout the world.

dreamy edifices. He believes, too, in the salutary effect of more candid talk between Arab leaders on both Arab and international questions. "Arabs," he told your correspondent, "must learn to disagree without giving offence. Frank discussion of the real situation in each Arab state is more valuable than unanimous, but vacuous, resolutions."

Dr. Haskim Jawad: no dreamer he of a single Arab state "from

the Atlantic to the Gulf" for at least another generation. Cairo's reaction has been sceptical. The press, linking Dr Jawad's strategy with King Hussein's recent overtures to President Nasser and Tunisia's return to the Arab League, finds evidence of a great conspiracy against the United Arab Republic. Mr Hassanein Heikal, the president's confidant and editor of *al-Akhbar*, has written of a "spring offensive," inspired by the imperialists. Behind these charges is the fear that Nasserism is threatened with containment by friendship, and that its revolutionary Arabism may be blunted with smiles and sweet talk about Arab solidarity.

These seemingly unexceptionable views have had a mixed reception. Some Arab nationalists in Iraq believe that Dr Jawad's policies are no more than a blind for Iraqi separatism, while others grant his good intentions but maintain that his step-by-step approach will set back the goal of a single Arab state "from

the Atlantic to the Gulf" for at least another generation. Cairo's reaction has been sceptical. The press, linking Dr Jawad's strategy with King Hussein's recent overtures to President Nasser and Tunisia's return to the Arab League, finds evidence of a great conspiracy against the United Arab Republic. Mr Hassanein Heikal, the president's confidant and editor of *al-Akhbar*, has written of a "spring offensive," inspired by the imperialists. Behind these charges is the fear that Nasserism is threatened with containment by friendship, and that its revolutionary Arabism may be blunted with smiles and sweet talk about Arab solidarity.

Dr Jawad vigorously denies any such sly intention. "There has been," he says, "no contact between Iraq, Jordan and Tunisia with a view to creating a front or to isolating any Arab state. There is only one axis and that is an Arab axis." The Iraqi authorities criticise the tone of Egyptian declarations on Arab questions. The UAR has pledged itself to combat feudalism and imperialism as well as to struggle for Arab unity and social justice. In the name of one or other of these slogans it has, at one time or another, launched attacks on most of its neighbours.

This, Dr Jawad maintains, runs counter to the charters of the

## Spain's Fabled Shore

FROM OUR BARCELONA CORRESPONDENT

SPAIN is expected to have more tourists than ever before this year. The Easter traffic was exceptionally heavy and bookings for the rest of the year already show a big increase—travel agencies talk of 30 per cent more British visitors to the Costa Brava. Last year foreign visitors to Spain numbered more than six million, a jump of 46 per cent over the previous year's figure.

An important point is that the proportion of foreigners who make some sort of stay in the country—as distinct from day excursions, cruise parties and so on—is high compared, for instance, with Italy. Tourist spending last year is officially calculated to have been more than £100 million, which would have paid for nearly half the country's imports. The fact that such earnings are likely to continue, and increase, is of immense importance at a time when the future of Spain's exports, and the possibility of developing its industries to compete with other countries, are still in doubt. It is particularly welcome at the moment because internal trade has not yet recovered from the stabilisation policy.

Spain, of course, has always had its attraction for foreigners, and certain resorts, such as Majorca, Sitges, Alicante, Malaga, and the Andalusian towns, have an old fame, particularly among retired people and those wintering abroad; but the present tourist boom is only a matter of the last ten years. In 1951 the figure for foreign visitors passed the 14 million mark and during the subsequent period the number of hotels in Spain has more

than doubled—without taking account of the private rooms to let, which have often increased more than the hotels.

The tourist boom has occurred almost entirely on the Mediterranean coast and islands. Andalusia still draws foreign visitors, but has not developed in the same way; the Canary Islands, for long a winter resort, have only very recently started to attract a summer tourist traffic; and the north coast of Spain, even San Sebastian and Santander, has not shared in the expansion—Spaniards appreciate its fresh sea breezes more than foreigners. It is on the now famous "costas"—the Costa Brava, the Costa Blanca, and the Costa del Sol—and in the Balearics that the changes are to be seen.

Ten years ago the Costa Brava was hardly known as a holiday resort. By 1955 there were 119 hotels. By 1960 the number had risen to 437, and this gives only a limited idea of the accommodation available for visitors, as the villas, flats and rooms to let, the hotel "annexes" and the 25 camping sites have probably increased accommodation by half as much again. The expansion is far from ended—new hotels are being put up and extensions made all the time—and is all the more spectacular because mostly concentrated in the central stretch of the coast, particularly between Lloret and Playa de Aro, since the north-east end, near the French frontier, is comparatively quiet. Similarly the Costa Blanca—the coast round Alicante, including the now well-known resort of Benidorm—was only

launched on its present success five years ago, when British European Airways publicised the name and started its London-Valencia air service. On the Costa del Sol—the province of Malaga—it is the same story. Although Malaga itself is an old winter resort, the tourist traffic to the adjacent coast only started, slowly, about ten years ago, and the real expansion only dates from the charter plane services in 1955. In 1959, the last year for which figures are available, there were 51,000 foreign visitors to the hotels of Malaga and Torremolinos alone, and, allowing for other forms of lodging, the figure for the coast as a whole is estimated to have been something near 120,000. The Costa del Sol is now fashionable not only with foreigners—British first, followed by French and Americans—but also with Spaniards: it draws the smart set from Madrid as well as international celebrities.

BUT Majorca, which was already a magic name to Mediterranean holiday makers and retired British officers and civil servants before the "costas" were discovered, is still the outstanding success of Spanish resorts. In 1948 it had 46,000 visitors; but last year it had 370,000, and the figure refers to hotel visitors only—people who rented houses, together with cruise parties and visiting navies, would add another 60,000. The little island of Ibiza, further south, is having a tourist boom that is spectacular in that it started from practically nothing only six or seven years ago.

In many places this sudden influx of foreigners has revolutionised local life. Its effects can be imagined when it is considered that Lloret, on the Costa Brava, for instance, had, in 1959, only 3,300 local inhabitants but a population of well over 14,000 at the height of the season; and that Benidorm, whose inhabitants, making

United Nations and the Arab League; it also represents a false conception of history. Many states with vastly different social and political systems and international obligations co-operate amicably. The Arabs must learn to do the same.

How does this Iraqi-UAR debate affect the balance of forces in Iraq itself? The credo of the nationalist opposition is Arab unity—that is Iraqi membership of the UAR. But, in the last year or so their ardour for an immediate merger has been tempered. One reason for this is that they have come to realise the strength of the forces at home that oppose union. There are the large ethnic and religious minorities, Kurds and Shi'is, afraid of being swamped in the Arab mass; few people are prepared for the thought of sharing Iraq's oil revenues with their Arab brothers; and, perhaps most important, the army tends to stand for Iraqi separatism, the senior officers wanting power and plum jobs for themselves. The Communists, thrown on the defensive in Iraq, remain dedicated opponents of Arab unity on President Nasser's terms. Their current tactic—in Iraq as in the UAR and Lebanon—is to clamour for democratic freedoms, less out of conviction than to avoid proscription. It is on both these counts—opposition

to Nasserism and defence of democracy—that the Communists now seem desirable allies to Mr Kamil Chaderchi, the veteran leader of the National Democratic party, who has come out in favour of a popular front.

Another consideration influencing the nationalists is Syria's experience within the UAR. Most of them would agree that this was a lesson in what to avoid rather than in what to emulate. There is no question of their accepting the dissolution of political parties, as happened in Syria. If and when they come to power in Iraq, the nationalists—who have recently grouped themselves into a Nationalist Front—envisage a grand confrontation with President Nasser. They intend to challenge him to abandon his authoritarian ways and remake the UAR, so as to include Iraq, on an entirely new and democratic basis. Some would even say that any such new arrangement would have to allow for a considerable measure of local autonomy for each member state in the union. Nationalist thinking has indeed come a long way from the heady days after the revolution when immediate, unconditional union was the goal. It may even, one day, shade into Dr Jawad's own gradualist, empirical approach.

a hard living as farmers and fishermen, had been reduced by emigration to 2,000 before the growth of the tourist trade, now has a peak seasonal population of 30,000. The fishermen find that during the season it is more profitable to act as porter, guide, boatman and entertainer to tourists than to fish. They also let rooms, and the farmer, the shopkeeper or anyone who can rake together some money starts building a villa or a "casita"—sometimes no more than a two-roomed pillbox—to let to visitors. Some of these "casitas" are abandoned half-finished when the money runs out. Enterprising people who can find the money put up hotels, often with little regard to suitable sites or to providing conveniences and service. Customary local standards are thrown into confusion by the cosmopolitan invasion, and there is reckless overcharging and jerrybuilding. In some resorts—such as Majorca, Sitges (on the Barcelona-Tarragona coast) and Benidorm—the local authorities have managed to control development; but the abuses are glaringly obvious, for example on the Costa Brava and in Ibiza, an island of peasants and fishermen where the price of building land is now soaring.

The huge increase in the summer population puts a great strain on the public services. Railway communication is often bad, some roads are rough and dangerous, drainage and water supplies are inadequate, telephone and telegraph services inefficient. Majorca has excellent air communications; but every year, at the height of the season, there are not enough boats from Barcelona, and Ibiza is badly served both by boat and plane.

The Spanish government is active in trying to promote the tourist trade and correct failures. The *Servicio de Credito Hotelero* has had its fund multiplied many

times over since it was established in 1942 and had financed a tenth of the hotel accommodation by 1958. Hotel prices are fixed according to the hotel's category and fines for overcharging are frequently imposed. A national tourist plan was drawn up in 1953 and entrusted to inter-ministerial commissions, and the result has been a number of regional studies and proposals for orderly development. Work on a plan for the Costa del Sol is expected to start this year. It includes modernising

the coastal road, building landing stages and improving the drainage and the water and electricity supply, as well as re-afforestation and the provision of access to beaches. A stricter control of new building has already resulted, since it was discovered that nearly three-quarters of building work was undertaken without licence from the town council and that it was the general practice to ignore regulations and standards. A plan for improving the drainage and water supply of the Costa Brava, to be completed in three years, was recently approved by the cabinet, and work has started on improving the roads from Barcelona to the coast. Commissions have also been studying the development of other areas at present less

frequented by foreigners—the Barcelona-Tarragona coast (now officially named the Costa Dorada), the coasts of Almeria and Murcia in the south, and the much-neglected resorts of the Pyrenees. Tourists will hear before long of the Costa Verde (the splendid but rainwashed northern shore on the Bay of Biscay); and the search is going on for an appropriate, not too bibulous, name for the extreme southwestern shore adjoining Cadiz and Jerez. Apart from all this promotion, the Spanish state continues its admirable standard-setting work with its chain of *paradores*, excellent hotels usually converted from historic houses.

SPAIN has great natural advantages to enable it to maintain its place in the European tourist trade: the charm and grandeur of the landscape, the noble and lovable qualities of the people, the singular flavour of Spanish life, and the sun. The pull of the sun and the sea upon the great mass of holiday-makers account for the concentration on the Mediterranean resorts and the success last year of the efforts to increase winter traffic. But Spain is also benefiting at the moment from the devaluation of the peseta in 1959 and the fact that prices since then have remained fairly stable. Now that multiple exchange rates for the peseta have been done away with, the Spanish foreign exchange reserves are at last getting the benefit of the tourist boom. Food, drink and lodging are still appreciably cheaper for foreign visitors than in France, Italy and other Western European countries. This is a variable factor, like the travelling taste itself. Though booming, the Spanish tourist industry is not yet secure; it needs to acquire efficiency, and maintain stable prices for a time, if its present success is to be put on a firm basis.

# WHEREVER THINGS ARE ON THE MOVE

## THESE ARE DEPENDABLE TRUCKS—

stake your life or your load on them!

They're built to work, built to keep big loads moving on schedule, built to give maximum economy of operation, built to last—with less time off for service and much lower maintenance costs.

## THESE ARE POWERFUL TRUCKS—

with a range of husky diesels and many mechanical refinements which combine to give bonus power and high volume payloads, thriving on heavy-duty use around the clock.

## THESE ARE TOUGH TRUCKS—

precision-built thoroughbreds that roll up money-making miles through tropical forest, Arctic waste and modern metropolis—without ever faltering.

## THESE ARE THE TRUCKS FOR YOU!

With G.V.W./G.C.W. ratings ranging from 13,440 lb. (6097 kgs.) to 40,000 lb. (18,144 kgs.) and 48 Forward and Normal Control models to choose from, you can be sure that there's one job-rated for your special needs. Whatever you carry, wherever you carry it, around the world Dodge—Fargo—De Soto—deliver the goods!

## HOME REPORT

In HOME REPORT members of the editorial staff and local correspondents report on life and happenings in and around Britain.

## Unions at School

FROM A CORRESPONDENT

LAST year, at Douglas, Isle of Man, the general council of the Trades Union Congress presented a long report on the present state of trade union education in the United Kingdom and proposed sweeping changes for the future. The report was accepted by the delegates—though there was no discussion on it—and the general council this week considered a plan from the TUC education committee for a new system of trade union education which would involve adding 2d. a year to the present affiliation fee of 9d.

Unlike the trade unions in many western European countries—those in Sweden and western Germany particularly—the British trade unions have not yet developed a unified and centrally controlled trade union educational organisation. Yet British trade union education, in one form or another, is much older than the systems in these other countries. In 1899 Ruskin College was established to provide further education for working people. In 1903 the Workers' Educational Association was founded. And in 1910, after a breakaway from Ruskin, the more left-wing Central Labour College was formed. In 1921 the National Council of Labour Colleges—an organisation that elected to remain independent of all university and state educational bodies—was set up. The NCLC was responsible for running the Central Labour College until the college closed in 1929.

The result of these developments is that trade union education today overlaps considerably with the work of the organisations providing general adult education—the extra-mural departments of the universities and the WEA. The Amalgamated Engineering Union in Leeds and Bradford, for example, has arranged for the extra-mural department of Leeds university to provide its senior shop stewards and district committee members with two courses of lectures covering industrial relations, collective bargaining and the national economy. But, this overlapping apart, it could be said that the two main organisations providing trade union education are the NCLC and the WEA, with the latter's subsidiary group, the Workers' Educational Trade Union Committee.

Altogether, according to the general council's report, 80 unions affiliated to the TUC, with a total membership of nearly 7 million, have educational schemes with the NCLC or the WETUC or with both—though the number of trade unionists who actually take advantage of these educational facilities, on which the TUC spent £79,000 last year, is another matter. Last year 700 trade unionists also attended short residential courses organised in London by the TUC. In addition, some trade unions have their own educational schemes and full-time education officers, and, in the case of the Transport and General Workers and the General and Municipal Workers, have a postal courses department. All this involves considerable duplication and much waste of money.

Trade union education should be designed to train functionaries for responsibilities in all levels of the movement, and a very wide range of subjects are—and should be—taught. The NCLC's postal courses, for example, now include more than 60 subjects, ranging from

English to automation and including elementary economics, science and industry, industrial law, national insurance and work study. Ruskin College's postal courses for external students cover many of the same subjects. So do most of the local classes run by the NCLC and the one-day and weekend schools run by the two main organisations and by some individual unions.

Many unions also take advantage of a wide service of branch lectures on contemporary topics. The TUC's courses in London train union officials, branch secretaries, shop stewards and others not only in subjects like chairmanship, secretaryship, trade union branch administration, but also in industrial management, industrial law, and work study methods. This college was formed some ten years ago when the Anglo-American productivity teams recommended more education for active trade unionists.

This system has achieved much for the trade union and Labour movement over the past forty years. Most trade union leaders—and some political leaders such as Mr James Griffiths or the late Aneurin Bevan—have given credit to the guidance they got from their movement's own educational bodies in their early days. But the unions are not at all satisfied that the money they allot to education is being spent as economically as it could.

If the TUC rationalises the whole system and brings it under a central controlling body the NCLC, the WETUC, some of the individual union schemes and the TUC's educational department will all be merged. The WEA will not be brought in because that organisation has always offered, and undoubtedly will continue to offer, a much greater variety of subjects than a trade union educational scheme would need. It is not intended to bring Ruskin College into the new scheme because Ruskin, while it has strong trade union connections, is still an independent college.

It is quite likely that the new organisation the TUC has in mind would be something like the present NCLC nation-wide machine. This would mean the appointment of district full-time educational officers who would be responsible for local programmes, but it would also include a postal courses department, presumably based in London, and facilities for short residential courses, branch lectures and weekend schools. Its success, however, will depend on whether the unions agree to raise their affiliation fee when they meet in congress next September.

What is certain is that with central control by the TUC more money would be available for running courses, providing suitable local premises, and paying the fees of specialised lecturers. If this scheme succeeds the unions should be assured of a steady supply of highly trained and competent future officials. It should help to answer the call for more highly qualified shop stewards so strongly urged by the Minister of Labour's committee on the motor industry. But at a higher level the unions would still face the danger that their brightest trained men may be lured away by better pay outside the trade union movement.

Epstein at the TUC

# Alarms and Incursions

FROM OUR SPECIAL CORRESPONDENT

NIGHT raids on banks in quiet suburbs receive much publicity from a press otherwise poorly supplied with sensation; and it is something of a disappointment to discover that the value of breaking-and-entering loot is (at least in London) less than £1.5 million annually. The chagrin caused to conscientious burglars by this figure will be somewhat mitigated by the qualification that only non-residential properties are concerned: the additional losses from houses and flats of film starlets' jewels, lady magnates' furs and expense-account Jaguars do much to restore the professional respectability of criminals.

That the loss is as low as it is from the richest sources is due largely to the skill and tenacity of the makers and installers of

alarm devices; for the police, ever thinner on the beat, could not begin to keep an effective watch on every building containing theft-worthy property. Skill and tenacity are needed. As the alarmers point out, the criminal classes are in their methods far from being contemptible: indeed, on their view, £1.5 million must be taken to be small reward for the efficiency, determination and devotion to duty displayed by Britain's burglars. It is to the alarmers' credit that they manage to keep ahead of these baleful intelligences.

Burglar protection tends to mean (even to industrial widows with £30,000 worth of diamonds to leave in their dressing-tables) barred windows, a safe or a loudish bell operated by door or window contacts. But

bars are as butter to bolt-croppers, safes are less than absolutely safe and bells (should even the most elementarily incompetent thief omit to derange them) are habitually ignored by passers-by. These things have their place in the best systems for keeping the ungodly from one's gains; often, however, they are mere fronts for devices designed effectively to frustrate the most diligently cautious of burglars.

The idea behind all alarms is to gain time, and during that time to mobilise the nearest police force and get it to the scene. For it is the police who must be set to catch the thief: in Britain, such efficient means of retaining one's ownership of goods as man-traps, self-locking doors, automatically guillotining grilles, spring-guns and port-cullises designed to pin down the thief *in situ* are not allowed. It is not unknown for thieves to claim damages from the erectors and owners of burglar-alarms which have injured them; and in any case the burglar, no less than anyone else, is entitled to protection from physical assault. It is felt, too, that the blocking of escapes from enclosed spaces might provoke in the thief a violence he would not otherwise have thought necessary.

BEING limited to detection, then, alarms must give the earliest possible forewarning of the crime: once the thief has got to his target undetected, there is no way of preventing him from hitting it hard

## East Anglian Airport

FROM A CORRESPONDENT IN NORWICH

NORWICH Corporation has recently been offered by the Ministry of Aviation civil flying facilities on the big fighter airfield of Horsham St. Faith's, which lies immediately on the outskirts of the city, and has now gone into reserve as far as the RAF's operational requirements are concerned. The proposal, which is under negotiation, is that civil airlines and the RAF shall have joint use of the field, and that the RAF shall operate the airport on payment of landing fees.

This comes after fifteen years of frustration, during which Norwich, although surrounded by military airfields, many of which are now disused, has been unable to re-establish the hopeful little civil airport for light aircraft that it possessed before

the war. Now it is promised the use of a field, within ten minutes' drive of the city centre, that will take any size of aircraft. But for the moment the question is how much internal traffic it may be able to develop as a feeder station for the main airports, and possibly as a helicopter port: customs facilities and international services are still in the lap of the future.

Norwich has good claims to air-mindedness. The Boulton and Paul structural engineering works built 2,500 FEs, Camels and Snipes in Norwich in the first world war, and in 1919 designed and built the first British all-metal aeroplane. Later on the firm pioneered a revolving gun-turret, and also built the tubular steel structure of the ill-fated airship R 101.

In 1930, Norwich corporation developed its own modest airport, run by the local aero club. During the war, however, the airport was bombed and its buildings destroyed. It later became a housing estate, and the survivors of the aero club, and their aspiring successors, raged that the fruits of the pre-war enterprise had been lost. Norwich, though pervaded by the scream of jet fighters from the military airfield on its boundary, was itself grounded. Nevertheless, there has lately grown up a proliferation of light aeroplane and gliding clubs on fields fifteen or twenty miles from the city.

Hopes are now fixed on Horsham St. Faith's—a field of a capacity beyond anything the corporation was ever likely to provide for itself. Many people regard its prospective use as a civil airport as not undue compensation for the years of disturbance suffered from the manoeuvres of jet fighters. But there are dissenters among the inhabitants of the adjoining suburbs who, rejoicing in their new-found quiet, are not looking forward to the expected helicopters and possible airliners of the future. There are signs that there is still a battle to be fought with the suburban parishes before Norwich gets its airport.

(and very little hope of getting back what he takes: in 1959 only 11.7 per cent of stolen property was recovered). It is to achieve this early-warning without the knowledge of the thief that most systems are designed. Some pressurise the room to be guarded and trip when the pressure differential between the room and the outside air is disturbed; others depend on the accurate collection of inaudible sound, and others again on multiple infra-red beams and photo-electric cells. If the prospective loot is small, it is put into a safe, which in turn is enclosed in an easily penetrable box heavily impregnated with alarm contacts, so that any tampering is registered long before the target is reached.

In most of these systems the intruder is unaware of his detection: for who is to take the slight draught from a surreptitiously opened door as the signal for the ringing of tocsins in the ears of policemen, or to know that his vanity in adjusting his little black mask before a mirror begins an automatic telephone conversation with Scotland Yard, or to appreciate that the telephone wire he cuts as a matter of routine has been transmitting continuous coded pulses whose interruption will shortly bring the truncheons down about his ears?

In a side street in Holborn, perhaps unintentionally concealed behind an innocent façade, lies the chief of fourteen control rooms operated by one of the largest of these companies whose business it is to see that the wages of sin are lower than union rates. Into this cubicle, packed with enough electronics to keep a small town in telephones for ever, run over 7,000 private lines, each monitoring the firm's equipment in buildings as various as banks and betting shops. The most elaborate analysis is undertaken of each building's workings, and the client co-operates by keeping to a strict daily routine. Any deviation from the standard opening and closing times or techniques will trigger the alarm, so that even an authorised person working at an unauthorised time cannot go undetected.

**T**HE control rooms are necessary in London and large cities, where the undermanned police cannot afford the time or men for the invigilation of alarm systems (there are over 20,000 in London). But in country towns, lines are fed directly to the police station. The efficacy of the latest alarm devices is not in doubt, and the knowledge that they are so good is a major deterrent to the burglar looking for a soft touch—much more so than the mere installation of a safe, vault, strongroom or citadel which is not proof against a really determined thief using modern equipment. But no protection or deterrent is perfect, and if, after having spent anything between £25 and £5,000 on an intricate and delicate system, one is told it is fool-proof, it is as well to remember that among the dedicated cracksmen there are some who are by no means fools.

## Eton's Ephemera

The Fourth of June is, in a modest way, a publishers' occasion

FROM OUR SPECIAL CORRESPONDENT

**M**OST English public schools have, in addition to annual or quarterly magazines, occasional collections of school writing for distribution on speech days and high days. These ephemeral journals are produced, by and large, by the conscientiously literary sections of the school population; and this has been so for a surprisingly long time. Those at Eton are thought to have originated in the late eighteenth century, and certainly during the nineteenth century (when they numbered Shelley among their editors) they flourished mightily. Old copies afford fascinating glimpses of the very great when young, but the harsher pressures of mid-twentieth century education (which leaves little time for dilettantism) have reduced these papers to a level of literacy which would have lacerated the sensitive Shelley.

The run of ephemera is a good deal more concrete in its economics than in its content. Printing is not cheap, and it is a crafty (and not entirely unassisted) editor who can produce the average 36-40 pages of bilious verse, derivative gun-fiction, kafkaesque nightmare and parodic Swift for less than £300. They are distributed, at about half-a-crown and by a system of extortion, to parents and boys on (at Eton) June 4th and St Andrew's Day, and as many as 4,000 may be printed and sold, of a good product. Their titles do little to assist their sale: *Spasm*, *Fresco*, *Taboo* accord ill with the accepted picture of Etonian parenthood, if not with that of Etonians. But in recent years only one has lost money.

**F**OR this June 4th Eton has produced two ephemerals, neither of which has any connection with that repository of the college's skill at letters, the Praed Society.

One was produced entirely by the boys of a single house—and is no worse, nor no better, for that. The other is somewhat more interesting: called *Kryptos*, it is produced by six science specialists with the avowed aim of proving that, when it comes to publishing a magazine, the new science man is no whit inferior to the senile humanist. Which may well be true. What is certainly true (and this is perhaps not exclusively the attribute of scientists) is that a certain business sense inhabits the editorial mind of *Kryptos*: its advertisements paid for its printing and more, and its printing was done not in grasping Slough but at philanthropic Crewe for something less than two-thirds of the expected amount. At the end, if they sell not a copy more than the worst ever recorded (1,500), they should be well in the black, and the Eton Mission at Hackney Wick will profit accordingly.

The note it strikes is less one of eager stylistic exhibition than one of weighty self-importance which, in the event, is less unpleasant than it sounds and preferable at least to much of the self-conscious aestheticism that has gone before. It is well backed with mature and, indeed, distinguished talent. But apart from its guest contributions the material of *Kryptos* is almost unrelievedly portentous and solemn; and it is remarkable for uncovering, embedded in its concern for Oxford scholarships, the Gough loudspeaker cabinet and Art as Seen in a Humanist Framework of Ideas, a pervading preoccupation with the horror of The Bomb, evinced in its reviews and stories. Whether this is other than a healthy preoccupation is open to question: but it at least possesses the admirable journalistic quality of the unexpected. Humanists had always supposed that this was their particular field of worry.

## Airman's holiday

Lying here on the beach he has time to reflect with pleasure upon the interest in electronics which crystallised into intense enthusiasm by the time he was twenty. For it is because of that—and Air France—that he now finds himself relaxing in the Caribbean\* sunshine. Call it an airman's holiday if you like; this off-duty spell that he is enjoying with his wife and which will take in Barbados, Port of Spain, Georgetown and Martinique before returning home. He has been a Radio Operator with Air France for ten years. At the moment, he is based at Anchorage in Alaska. He flies twice a week from there to Tokyo when his crew take over the Boeing Jet Intercontinental for the second leg of its 8,000 mile flight Europe-Japan over the Pole. You can imagine that he appreciates this change of scene from arctic to tropics.

\* Twice weekly you can leave London in the morning and reach the Caribbean via Paris late the same afternoon; and there are two additional overnight flights. All by Air France Boeing Jet Intercontinental, of course.

Depend on **AIR FRANCE**

... THE WORLD'S LARGEST AIRLINE

For World Timetable and Fares, see your Travel Agent or write:

New daily jet service from Manchester starts this summer.

## Merchant and Investment Bankers

We have a century-and-a-half of experience behind us in the City of London, and amongst our clients are some of the largest and most progressive companies in the country. Besides providing acceptance credit and other specialised banking facilities, we can also offer our services in the following fields:

### Company Finance

Loan and Share Capital Issues, mergers, acquisitions, capital reorganisations, the conversion of private into public companies—these are some of the operations we undertake.

In all such matters an important factor for success can be the skill and standing of the "House" behind you.

### International Banking

Successive generations of our partners and principals have built up close personal friendships with bankers and industrialists in many countries abroad. In New York we have unique advantages through our affiliation with the J. Henry Schroder Banking Corporation, and we have too our own offices in Europe and in Rio de Janeiro and Buenos Aires.

### Investment Management

We are well placed to assess developing trends in industry and commerce. We also keep in daily contact with the main Stock Exchanges and with leading institutional investors.

Our organisation is thus a clearing house of information and opinion on which we can draw to aid us in the management of our many investment portfolios, which include Investment Trusts, Pension and Endowment Funds.

These can be managed either under a specific arrangement or at our discretion.

both at home and abroad.*

# THE BUSINESS WORLD

## What Danger for Sterling?

ONCE again sterling is under fire. Selling has not been very large, or continuous, and the pressure is in no way comparable with the scramble out of sterling that followed the 5 per cent revaluations of the mark and guilder in early March. But the fears and uncertainties that followed that bungled operation, although initially countered by the belated essay in central bank co-operation, have remained near the surface, and recently they have been rising. How long will the Continental central bankers hold on? If sterling is weak in early summer, what will it look like by autumn?

"The economic history of Britain since the war is really very boring," an academic economist complained drily at a private gathering this week. "One sterling crisis after another—seven, is it, or eight now?—each greeted with pained surprise and each followed by carrying on exactly as before." But one of Britain's present troubles is that the existence of this past sequence has acquired a force of its own. People have come to expect autumn difficulties for the pound, to expect Zurich to sell sterling short, and as a result shadow and substance have become hopelessly confused. Certainly this year it has been in London that fears for the pound were raised first. In the recent phase of pressure the main weight of selling has been quite conspicuously on domestic account—by traders and bankers, more than by professional speculators. Such action is quickly noticed abroad, and has led in turn to distrust of sterling in some Continental circles, and notably Germany. Americans on the other hand seem to take a calm view: there has been a tendency for sterling to pick up in late afternoon, as New York opens.

It was always fanciful to believe that the fate of the pound was in the hands of the bankers of Zurich rather than the people of Britain. Now, moreover, the influence that is exerted by movements of private funds from country to country is being countered by concerted action by central bankers, and plans are in train to develop a continuing means for such counter-action through the International Monetary Fund. These schemes, if they are properly carried through, would indeed provide that "freedom from Zurich" for which the boldest spirits were crying a few years ago. They could not, of course, shore up a continuing deficit in the balance of payments. But they could go a long way to remove Britain's special disability arising from the large overseas-held sterling balances, which have remained remarkably stable in the aggregate over the postwar years, but represent a huge contingent danger at times of strain.

If the new arrangements are to command the full confidence of the public, however, they must first command the full confidence of the central bankers. Unfortunately this cannot be said of the present arrangement, under which European central banks build up short-term balances in centres from which funds are being withdrawn. The central bankers who met at Basle immediately after the exchanges had been thrown into upheaval by the German revaluation were visibly pushed into mutual co-operation by force of circumstance. While the details of the arrangement are a well kept secret, the reservations that some central bankers have about it are not. The Swiss National Bank, it is widely said, is trembling for the fate of the 700 million Swiss francs (just under £60 million) that it has accumulated in foreign balances in the past three months. Why is it trembling? Most of the help given under the Basle agreement is believed to be in the form of forward swap transactions, which have their own built-in exchange guarantee. In any case, the central bankers know, even if the wider public too often forgets, that under the European Monetary Agreement any balances held by a European central bank are in effect automatically guaranteed against depreciation beyond the existing lower support point—\$2.78 in the case of sterling. The guarantee is in dollars and not, as most bankers would now prefer, in gold, but at the worst it puts sterling on a par with the dollar in this respect. When the Basle arrangement is supplemented, as it ought to be later

\*Regional figures for non-sterling countries not quite comparable.

this year, by a Bernstein-type system of medium-term loans to and borrowings from the International Monetary Fund, the gold guarantee would be applied universally.

So what are the creditors worrying about? Where else can they hold interest-bearing gold? If in the end the support operations turn out to have been misplaced, if the deficit of the borrowing country can after all be reversed only by a depreciation, the cost of the miscalculation will fall not on the lenders but on the borrower. Here is a system for guaranteed credits to give time to countries that feel they need and can use time to sort out their difficulties. The Basle agreement, stumbled upon as it was, ought to mark a milestone in the development of international central banking. In practice, too many people have the impression that it is something the central bankers are worried and rather ashamed about. Its psychological effects on the exchanges would obviously be very different if the central bankers made it clear beyond a doubt that, in one form or another, the system is here to stay: specifically, that the Basle arrangements will be renewed until IMF gets in enough marks and other Continental currencies for a drawing by Britain in these currencies. Events are in any case drifting in this direction. The magic factor of confidence would surely be better served if the authorities were more clearly seen to be guiding them.

Confidence at present is more than usually difficult to measure, as a result of the supporting operations themselves. Thus the published fall in Britain's gold reserves for the last three months—the figures for May are due to be published shortly after this issue appears—has been reduced by the accumulation of central bank balances. The extent of these accumulations is again obscured in the figures of sterling holdings published earlier in the week. These are also distorted by the temporary inclusion of £131 million for the Ford take-over included at December 31st. Allowing for this, balances of North American countries—which are not directly affected by the Basle agreement—fell by £29 million to £143 million in the first quarter, and balances of Latin American countries were also sharply reduced, by £17 million to £48 million. West European balances, on the other hand, rose by £48 million to £747 million; here the really interesting question is by how much official balances went up and private balances went down. Some light should soon be thrown on this in the quarterly bulletin of the Bank of England.

STERLING at the beginning of 1961 was more than usually vulnerable to foreign withdrawals, since so much had come into London in 1960. The identified inflow of sterling balances and short-term capital amounted to £550 million, and a good deal came in unidentified. The British authorities, it should not be forgotten, made specific provision for meeting part of any future outflow by voluntary payments to IMF, which together increased Britain's drawing rights to \$2½ billion—almost as much again as the central gold reserves. The outflow of private funds so far, on the most pessimistic unofficial guess, has been far short of the 1960 inflow; so that there is a good deal more money that could still go out.

So far, with the exception of the short panic in March, there have been few disorderly withdrawals; the tendency has rather been for bills or short-term loans not to be renewed

on maturity. Bankers and traders everywhere are reluctant to leave exchange risks uncovered or to carry open positions. German banks have again put money into dollar deposits—secured by the guarantee provided free by the Bundesbank. But German businessmen have become determined to avoid the risk of a second loss on claims held in foreign currency; and since no foreign importer wants to commit himself in marks, and since the forward market in marks is almost entirely one-way, German firms have redoubled their efforts to match their future claims in foreign currencies by taking foreign credits. The Bundesbank estimates that in March alone these operations caused an exchange inflow of DM 800-1,000 million—up to £80 million. And Britain shows a rise in acceptances outstanding to non-sterling countries in the three months to end-March of £29 million to £122 million.

EUROPE'S confidence in exchange stability, regained for two years after the move to convertibility, has not yet recovered from the shock of early March. In the wisest banking houses one hears the view that anything may happen. But what is in everyone's mind is whether anything is going to happen to the pound. It is normally best, if one does not believe in it, to ignore any talk about possible devaluation, as talk on either side leads some people to believe that the issue is being considered officially. There is not a jot of evidence that this is the case; and it seems time that the counter-arguments to devaluation were publicly set down:

(1) First and foremost, there is no question of Britain's hand being forced by withdrawal of short-term funds. The facilities available at IMF, aside from any central bank co-operation, are sufficient to look after that.

(2) The proper point of issue is Britain's balance on current and long-term capital account. The official estimate of an apparent current deficit of £344 million in 1960 was admittedly a shock, though too few people noticed that this was more than accounted for by unidentifiable inflows of money, of which, on the basis of past experience, around £100 million is likely to have been in current receipts. The true deficit is likely to have been a good deal less than half the extraordinarily large increase of £570 million in domestic stocks in 1960. This year the payments balance is getting relief as stockbuilding slows down. It is still too early to make any realistic forecast for the whole year. Exports so far have shown a rather disappointingly small increase, though export orders have risen in engineering and this could mean better figures in coming months.

(3) The weakness of Britain's current balance in the last few years is attributable to a number of separate factors—increased imports accompanied by an inadequate increase in exports; lower net earnings from oil, shipping and investments; and higher government spending abroad. The deterioration of the trade balance does reflect a worsening of Britain's competitive position, but the other two factors are not connected, and it is bad luck that all three turned sour together.

(4) The main revision in the balance of payments was to increase the estimate of overseas profits earned and re-invested in Britain. This is a reduction in net current earnings that correspondingly reduces net capital outgoings. The relatively high interest rates prevailing in Britain in fact draw in long-term as well as short-term funds, and to that extent they relieve, for a time, the burden on the current balance. This, too, is a temporary rather than a permanent relief. The lasting solution, everyone can agree, must come from an improvement in the competitiveness of British industry. The point of the whole debate is whether devaluation is the means to achieve this.

One devaluation of recent years has been an outstanding success. That is the French operation of December, 1958. It was accompanied by a stringent programme of retrenchment made possible at a time when the political power of the parties and the industrial power of the unions was more or less broken. In other circumstances, the fate of France's previous devaluations, and of Britain's own devaluation in 1949, were very different. Pretty drastic internal measures to hold down money incomes are necessary to make sense of a devaluation. And since there is no evidence that British prices at present are out of line, there is no reason to think that these would not be enough to correct the situation by themselves.

But there are two more factors involved, arising from sterling's position as a world currency. A devaluation would certainly raise a great cry that Britain should compensate the holders of the sterling balances even where, as is mostly the case, there was no formal guarantee. If Britain felt unable to assume this considerable burden, there would be an obvious danger of massive withdrawals to escape a third depreciation; and the likely result would be to force Britain into an ordered funding of these obligations, which total £2½ billion to other sterling countries and more than another £1 billion to others, involving a very heavy continuing burden of repayment.

Secondly, and perhaps most important of all, it is still far from certain whether it is possible for Britain to effect a relative devaluation of its currency, even against the major industrial countries. One of the most respected exchange dealers in Zurich made the point himself this week:

Suppose, then, that the pound is devalued. What happens? It depreciates, and everyone rushes in to buy. What do they rush out of? The dollar. So that will be next. And that's why I don't think it's going to happen.

## The Doctor's Task

The railways acquired a new leader this week, but he would probably be the first to recognise that their problems cannot be quickly solved

FOR the past two months Dr Richard Beeching has spent his time moving between two giant organisations that could hardly be more dissimilar. He may well have found it difficult to convince himself that they exist in the same country and the same century. The utter contrast between Imperial Chemical Industries, with a glittering array of high-grade managerial talent able to cope with all the demands placed upon it, and British Railways, where good managerial ability is so scarce, might frighten almost anyone.

Blame for the crucially weak state of railway management today can perhaps be traced as far back as the amalgamations of the twenties, which brought virtually a complete halt to management recruitment. The rate of intake was still dismally low during the slump and the days of the "square deal" campaign that followed. Since then, too, there has been hardly any proper system of management training, formally or by responsible delegation. This lack of highly competent people tends to perpetuate itself. It creates a situation in which good top men never decentralise anything. But what-

The fact is that Britain's industry has been insufficiently competitive, and its current surplus inadequate, not for the past two years, but for the past forty. Devaluation is not an untried instrument and, while it has its place, it has not proved an especially effective one for Britain in postwar years. The steps that the Government has been tentatively taking to open Britain's economy to freer competition are likely to be much more rewarding, though the Government still lacks sufficient urgency. Is there any way in which the desired effect could be better achieved than by a sharp unilateral cut in tariffs now? One should no doubt search for piecemeal measures to shore up the payments balance in the meantime. Interest rates should certainly be kept high, the Government should reconsider whether it was wise to give actual tax incentives to firms not to remit their overseas earnings, and it should make an attack on the £215 million of its own military expenditure abroad—which some pundits question on military grounds.

But no one should expect too much from such shrimping. The draught of foreign competition is much more important, and provides one of the few practicable means of checking inflationary tendencies in Britain without slowing down the whole industrial machine. The first effects to emerge in the Treasury white papers might not be favourable. With the help of the new international financial credit arrangements, this need not matter. The Bernstein plan may not be the ideal long run solution, but it should look after the pound and the dollar for five years. It should make Britain no more—though also no less—vulnerable to temporary external deficit than countries that are not still saddled with their war debt on current account. And those inclined to forecast perpetual external deficit should remember what has happened to this kind of forecast in the past.

ever the reasons, clearly this is one of the first tasks of the many with which Dr Beeching now has to concern himself on assuming the chairmanship of the Transport Commission and as the designated chairman of the future British Railways Board. Without first-class managers, at the centre and out in the regions, no amount of shining new equipment, no charter of freedom from age-old restrictions, no new contrivances of costing and regional accounting will by themselves assure a lithe, efficient and viable railway system.

Renovation must start at the top. During the discussions before the Government formed its plan to reorganise the railways it was sometimes argued that an injection of really good people at various points lower down the hierarchy could invigorate the structure and create a sound managerial pyramid in several years' time. But however good the talent may be lower down in any organisation, there is always a dominant tone throughout that can only come from the top. Besides, recruiting this kind of younger talent is, and will remain, extremely difficult. The railways may have huge,

technical problems to test the single-minded, but they are not exactly exciting problems; nor does the work offer the glamour, or even the definite future, that is now attached to various other forms of engineering, and to other industries. Railways have nothing but sheer money to offer to get good people, and none too much of that compared with prospects elsewhere. Recruiting a few key managerial people is the prime need; most of the rest will have to be grown within the organisation itself.

Even this will not be easy. Too often, for a railwayman, the fact that his predecessor a generation ago combined, say, four responsibilities, A, B, C and D, makes him feel compelled to go on doing them—to take on chaps to do C or D would merely imply that he was not able to do his job. In big private firms like ICI the pressure on everyone to decentralise his job and get other people to take responsibility is pervasive: it can even be exaggerated. But on the railways this hardly happens at all. Even if the new broom does succeed in bringing in some outside administrative reinforcement and if the dearth of available ability pushes him initially to more centralisation than he would eventually like on some things he will not earn popularity, but it may be the only way to get the management spring-clean going.

THE proper balance between control at the centre and responsibility by the region—and between what should be delegated at any level of railway management and what should not—is not immutable over time. The Government's own ideas in the white paper last December, in which it was stated that the main board would "perform only those central functions which are essential to the running of the railways as a single entity" were perhaps deliberately vague. It is quite clear, however, that in some matters the present balance between the centre and the regions is not right. For example, freight traffic, especially merchandise traffic (as distinct from coal and minerals), is so unpredictable and diverse and consists of such a profusion of small, intermittent streams crossing and re-crossing the entire system that it demands some general operating control—and analysis—at the centre. At present, this does not exist.

There are, however, a great number of matters of day to day, month to month, or even—at certain levels—of year to year operation that can best be handled by the region, district, line or even lower. But devolution of authority becomes meaningless if the responsible local manager is not equipped with the information on which he can base sound decisions. How, for instance, can the commercial staff know the minimum price they can afford to accept for a particular consignment of freight if they do not know what it will cost the railways throughout its entire journey? Regional accounting certainly can be made useful; but much more essential will be a parallel system of costing. Because of the large elements of arbitrariness in railway costing it can never be made perfect. But a struggle for perfection, since the railways first began to take serious interest in costing some ten years ago when commercial freedom came into being, seems to have prevented them getting even moderately good costing done. Most businesses are able to arrive at some formulae to allocate overheads that cannot be precisely assigned. The railways run a rather more complex operation than most: in essence they produce a vast number of joint products and in

batches rather than in one continuous flow. But it should not be impossible to find ways of arriving at a fairly good idea of what each part of the business earns.

The railways will, indeed, have to do so if they are ever again to pay their way. The Select Committee last year came to the view that "a large-scale British Railway system can be profitable." This was largely a statement of faith. To make it true the new railway managers will have to make good an operating loss of about £60 million a year, pay capital charges that, even after writing off a large part of the railways' indebtedness, will amount to another £60-£70 million a year in four or five years' time, and hope in addition for some surplus for reserve and replacement—all from a business that last year grossed about £480 million. It is clear that modernisation has fulfilled few of the financial hopes that were even by now to be expected. But it is equally clear that the Government cannot now radically change its commitment. To withdraw altogether from investing in the railway system would merely mean that it would soon be faced with demands for extra road capacity that it could not possibly contemplate.

The Government is entitled to expect, on the other hand, that future modernisation borrowings will be spent in a wiser and more economical manner than hitherto. In default of a sufficiently taut control of investment schemes by the top railwaymen themselves, scrutiny by the Ministry of Transport seemed perfectly reasonable, and justified, when it began a year ago. The costing of many capital projects had been sloppily done; railway engineers have too often shown themselves addicted to lavish construction designed to last for centuries, and few of the financial estimates for individual projects have been checked back afterwards to see how good they were. There have been some serious and avoidable mistakes of planning—the fiasco over vacuum braking for mineral wagons, for instance. But the Ministry of Transport is not the best place for this kind of vetting exercise, and the task will soon have to be passed back where it belongs—to central management.

EVEN on what, one imagines, are the railways most productive schemes of modernisation, the expected rates of return hardly seem impressive. Concentration of marshalling yards in the north-east region, involving closing down about sixty old yards and building four large, modern ones, is reckoned to yield a net return on new capital invested of only between 12 per cent and 20 per cent. The London Midland's main-line electrification scheme is expected to earn about 13 per cent net—or 19 per cent if the figuring is done in a different way. Railwaymen say that these yields have been conservatively estimated. That may be so, but these examples are two of the key projects, on which hopes of viability are mainly founded, in a railway system that is presently making a loss equivalent to a shade over 10 per cent on its written-down capital. The railways will have to do better than that, and there is not much doubt that they could. It is difficult to believe that the best use has been squeezed out of their new toys: wagon turn-round time, for instance, has actually increased since modernisation began. The obvious concomitant of modernisation is a new production plan, or timetable, particularly for freight. This can properly be done only at the centre, on a picture compiled piecemeal from lower down. The opportunity will arrive when more major schemes have reached

fruition. But there is very little sign of preparation for it so far.

This may be because no firm view has yet emerged about the size and shape of Britain's railway system of the future. Dr Beeching can hardly be expected to arrive at an immediate answer to this, nor has the Government yet made the basic choice that would enable him to do so. Boiled down to its essentials, the issue is simply how, in practice, the railways reconcile, or are expected to reconcile, their two principal but conflicting duties—paying their way and providing a public service. Between the two extremes, for example, of lopping off dead branch lines which even in aggregate do not save much, or of closing down great mileages in Scotland, which would save a great deal but would be politically indigestible, there is plenty of room for determined and feasible retrenchment. A sharp knife ought to be applied to stopping services and the stations they stop at. If the railways were themselves able to go into the bus business, as they can in trucking to collect and deliver freight, or to charter any outside passenger carrier to run train feeder services, public acceptance might become less of a stumbling block. But attitudes of public service are also ingrained deep in the railwaymen themselves, to an extent that sometimes seems almost ludicrous. Because the chairman of one of the former railway companies is known to have said that he "paid his dividends out of bank holiday excursions," his successors faithfully put on the same trains every year. This may be virtually the only time the local staff can really play at trains, and finding a path for these specials through the timetable can be a fascinating exercise. But how many of them any longer make a profit? How many of the coaches trotted out at peak holiday times spend the rest of the year in the siding empty?

If the railways could indeed turn themselves into a "base-load" transport carrier, refusing all peak and "on call" traffic

that was just not worthwhile taking, there would be no doubt at all that they could become profitable. Assumptions of public obligation apart, there are a number of practical obstacles. By far the biggest is the entrenched position of "C" licence fleets, which take much of their owners' regular traffic and largely leave the difficult and the irregular loads to the public carrier. A recent decision of the Transport Tribunal, making easier the carrying of return loads for other firms in private lorries, will make even grimmer (if it is upheld on appeal) the position of the public carrier. So will the motorways, which largely follow the pattern of trunk lines laid down by the railway pioneers a century or more ago. But a permanent improvement in the reliability of railway freight services could make some difference: it is reliability, rather than speed and cheapness, that seems to be the decisive factor in competition between road and rail. Ultimately, making ends meet may well turn on how successfully the railways meet this challenge of the "C" licence. Conversely, it could be that over the course of decades mounting congestion on the roads will make essential the permanent retention of an extensive railway network, whether it pays or not. What Dr Beeching does over the next five years could largely determine which alternative it is to be.

The circumstances of his arrival will put him in a much stronger position than his predecessor, Sir Brian Robertson, in the uneasy relations that prevail between the chairman of a state board and the politically responsible minister. Indeed, Mr Marples will find that dealing with a tough business administrator is a very different matter from dealing with a general. Sir Brian served the railways and the country with comprehension, diligence, and uprightness; it was his quality, but also his fault, that throughout his seven years he was too loyal to his political masters and too ready to put up with their caprice.

## BUSINESS NOTES

### IN THE MARKETS

#### *Shadow from Sterling*

THE setback in equity prices has gone farther and faster this week. *The Economist* indicator fell by 8.4 in the week to Wednesday to 412.7. Then on Thursday the market had its worst day for months and the *Financial Times* index dived by 7.4 points to 344.1—6 per cent below the mid-May peak. The market is not surprisingly feeling the backwash of its early exuberance, which carried equity prices up by more than a fifth between December and May. Now it is again turning its attention to the likely hazards, which are not new, but which were largely ignored while investors were in their buying mood. Company chairmen have for many months given warnings of pressure on profit margins. It is only in the past fortnight, with weighty warnings from ICI, Guest Keen and Stewarts and Lloyds, that the market has taken heed of them.

The underlying cause of the change of mood is the pressure on sterling. The first impact from the weakening in the exchange that began just before Whitsun was on the gilt-edged market. This week the fall was temporarily checked, with War Loan around 55½, and the big impact was on equities. Investors are still sensibly reluctant to revert to old habits and to regard bear points for gilt-edged as bull points for equities. They also fear that the Chancellor's new power to raise indirect taxes by 10 per cent may be implemented before long. Certainly the Bank rate prospect has changed right round within a few weeks.

Meanwhile demands on the capital market continue to rise. The compilation made by the Midland Bank shows that issues in the first five months of the year totalled £240 million, compared with £215 million in 1960. This week the terms of

the proposed Rolls Royce debenture have been announced. The issue will be of £12 million 6½ per cent stock 1981-86, offered at 99. Another call on the institutions' money has come from Granada, which has arranged a private placing of 350,000 "A" shares from the holdings of the Bernstein family trust. The placing is at 59s. 3d., a small discount on the market price.

In an unusual operation, Derbyshire County Council has advertised, directly, an offer of 8-year bonds at a price of 98. No limit is set on the offer, and the bonds are not marketable. Advertisements for money by local authorities have become a familiar sight in the local and occasionally the national press, but the distinguishing feature of this one is the discount on the offer price, giving the usual tax-free bonus on redemption. Only a few local authorities have acquired the right of issuing bonds at a discount, and the size of this is regulated by the Treasury, at ¼ per cent for each year to maturity with a maximum discount of two points. A direct offer of this kind is in a sense a means of by-

passing the queue of corporations waiting to borrow in the gilt-edged market. But the lack of marketability, as well as in this case the not too popular eight-year life, is bound to limit the response, and City institutions say they are not worried.

## MANPOWER

### Pressure on Labour

ON May 15th there were 299,272 people out of work in Britain, 40,789 fewer than when the previous count was taken on April 10th. Unemployment usually falls at this time of the year and although the latest decrease was more than seasonal, it did no more than compensate for a smaller decrease than usual in the previous month. Indeed, the fall between mid-February and mid-May of 58,000 in the numbers wholly unemployed, excluding school-leavers, was exactly what would have been expected seasonally. The underlying trend in unemployment is no longer downwards; it has steadied off a little below the average for the last twelve years and at about the same level as in the autumn of 1957, at the outset of the recession.

But, as the chart shows, the demand for labour is increasing. On May 10th there were 353,519 unfilled vacancies notified to the labour exchanges, some 63,000 more than in February, although the usual increase in these months is about 40,000. The fact that employers are looking for extra hands gives some support to the opinion expressed this week in the National Institute's *Economic Review* that from now on output should rise. The argument behind this view is that although demand rose appreciably in the first quarter, output did not react because of the lower rate of stockbuilding; but the "stock effect is probably mainly over". In the absence of Government intervention, the Institute predicts that by the end of the year the national product should be some 3½ per cent or more higher than a year earlier.

## BUSINESS NOTES

### CUNARD SUBSIDY

#### Investing Backwards

THE Conservative election "promise" to help Cunard replace the *Queen Mary* was ill-considered, and the Government's implementation of it has been miserably conducted. The committee stage of the bill that will authorise this grant and loan of up to £18 million was this week marked by low votes and by the lowest Government majorities in this Parliament. The new Parliamentary Secretary to the Ministry of Transport was obliged, by the contrast between the qualification to the Government's commitment two years ago that "there were genuine commercial prospects of a successful service" and the plain fact now that there are none, to split invisible hairs between "commercially justifiable" and "commercially attractive". The only possible shred of justification the Government can produce for pouring money into the Atlantic is prestige, and the value of that is exceedingly doubtful.

Vice-Admiral Hughes Hallett also had the sorry task in a maiden speech from the despatch box of explaining away the contradiction between Mr Marples' statement less than a month ago that Cunard simply "could not find enough capital, either from its own resources or by borrowing on the market" to put into the new liner more than £12 million of the total cost of £30 million, and the evidence of the Cunard chairman, Sir John Brocklebank, to the Air Transport Licensing Board a few days later on Cunard Eagle's application to fly across the Atlantic, in which he said that it was not inability, but unwillingness. The group could find the resources, Admiral Hallett admitted, by not investing in other new ships or by mortgaging its assets, but £12 million was as much as it was prepared to put at risk on this project.

Even if the Government had come clean in the first place it would hardly have earned any more support. The real issue is whether the weekly express liner service across the Atlantic ought to be maintained: not how it could be, which is what the Chandos committee was asked to discuss. The only liner other than Cunarders now providing a five-day crossing is the *United States*, to be joined shortly by the *France*. Both are new, but both are heavily subsidised and both are smaller than the liner Cunard wants to build—53,000 tons and 60,000 tons respectively against 75,000 tons. Cunard argues, and eventually prevailed upon the Chandos committee to agree, that a ship of this size is needed to ensure a cruising speed of 29½ knots, an economic balance between working space and revenue earning capacity, and the "right" kind of public and private passenger accommodation. A smaller vessel—such as the *United States* and the *France*, or the *Canberra* which left on its maiden voyage this week—would simply not do, the company said. Admit-

## THE ECONOMIST JUNE 3, 1961

tedly, the *Canberra* has been designed for the Pacific and Far East trade where competition from sea and air is less intense, though increasing. But it is only two knots slower, can carry slightly more passengers, and its price of £16 million is half what the new Cunarder is expected to cost. It is no secret that most British liner companies remain totally unconvinced by Cunard's argument.

## GOLD

### The Deadline Passes

ON Thursday, June 1st, it became illegal for citizens of the United States to hold gold anywhere in the world. The deadline set by General Eisenhower in mid-January as one of his last presidential acts has fallen on a gold market that bears little resemblance to its feverish condition in the last months of the Eisenhower administration. President Kennedy in fact succeeded very quickly in scotching the idea that he would raise the dollar price of gold, and speculative buying of gold gave way to a small stream of liquidations. As these were accompanied by a resumption of sales by Russia—which also seems to take the Kennedy administration at its word on this point—the price of gold soon came tumbling down. In early March it fell below the price of \$35.08½ at which New York sells to central banks. Central banks have conspicuously avoided any aggressive buying on the London market, and the price has stayed steady in quiet markets.

This week demand has revived, and the price in London has risen a shade from \$35.06 to \$35.07½. Some private buying from the Continent has been reported. It is not certain whether this modest revival in business above the stagnant level of recent weeks is connected with the American deadline: it may be that some intending buyers had been holding off in the hope of picking up cheap gold from American liquidations. In fact there has been little evidence of last-minute sales. Most well-placed observers guess that over the months United States holders have sold the bulk of last winter's purchases, which are now put more conservatively at around \$100 million. But United States holders who are really determined to hang on and are prepared to act against the laws of their country have obvious means of doing so. Meanwhile some operators feel that \$35.06 is a good level at which to buy. They are taking less of a risk than those who bought last October at \$41.

## MAGAZINES

### Two to the Wall

THE two illustrated women's weeklies that were killed by the Daily Mirror group last week-end did not die for lack of

## THE ECONOMIST JUNE 3, 1961

readers: one was selling nearly a million copies a week and the other close on three quarters of a million. These are impressive figures by any standard. But there is not enough advertising money in the country to support seven mass circulation women's papers, however widely read. Those who like this kind of reading like it very much indeed and buy several magazines a week—there was no sign that the women's reading market had reached saturation even with seven competing papers. But this success carries the seeds of its own destruction, since advertisers can reach as many people by buying space in two magazines as they could by buying it in all seven. This is precisely what they have done. As they switched their spending, and somehow stretched their advertising budgets to cover higher television charges and more elaborate press advertising, so the fat papers for women grew fatter and the thin ones grew thinner.

Yet as long as there were two competing magazine publishing giants, neither was willing to lose face by shutting a magazine that was losing money. The Odhams-Mirror merger has changed all this and the two sickest papers in the group, the Mirror's own *Woman's Illustrated* and Odhams' (originally Newnes') *Woman's Day*, have gone to the wall. The papers with which they have been merged may, if they are lucky, pick up perhaps a third of the joint circulations of the two defunct weeklies—they cannot expect more since so many women must already have been buying both papers.

The question that must greatly exercise the Daily Mirror board is whether the process will stop here. Is there enough advertising to keep five women's weeklies alive, or will a new rot begin to attack the next two papers at the bottom of the league? The selling price of highly coloured journals like these covers less than half their cost; they are much more dependent on advertising revenue than, for example, the more expensive monthly magazines printed in colour. There are signs that the Daily Mirror group may be planning changes in editorial policy that would make some of the remaining five more specialised, and so make it less easy for advertisers to switch from one to another. And it is, presumably, planning new magazines to use surplus colour printing capacity.

## THE POWER FAILURE

### Too Close to the Margin

THE power failure in the south and south-east one Monday evening last month was caused by a series of errors of judgment and the committee of inquiry set up by the Central Electricity Generating Board has been frank enough to say so. The first mistake was faulty setting of an automatic tripping device—a kind of fuse—at the Wimbledon sub-station. This isolated the

## BUSINESS NOTES

sub-station before its load had become critical and before the regional controlling engineers had expected. A chain reaction—"cascade tripping" to the electricians—then started as other stations became overloaded and were cut out in turn. Further errors hastened this process when certain loads were disconnected to safeguard essential supplies but the fall in the speed of the generators became too great to allow recovery.

The failure would not have been so widespread had the entire system not been operating so uncomfortably close to the margin. Three of the six transmission lines linking the blacked-out area with the rest of the grid system were out of commission for normal maintenance. When Wimbledon failed, pressure was immediately put on the two remaining links, Chichester and Deptford West, and when these automatically cut out, the whole of the 132,000 volt grid in the south-east was isolated. The total demand in the area was then more than could be supplied from the plant available, and station after station was closed down, automatically or by the engineers, to prevent damage to the generators.

Although maintenance has to be done at some time, the initial surge of load that started the trouble at Wimbledon—said to have coincided with the end of *Wagon Train*—was by no means exceptional and ought to have been allowed for. A seemingly minor mistake at one sub-station, caused by unfamiliarity with a new type of equipment, has revealed the tight fit between peak demand and available capacity in an area where the load has been increasing by an average of ten per cent a year. The CEBG has said it is taking steps to reduce the chances of the same mistakes recurring. But the situation will only be eased, as Sir Christopher Hinton forewarned more than eighteen months ago, when the south-east is connected to the 275,000 volt super-grid. This will not be accomplished for another four or five years—primarily because, Sir Christopher could not resist emphasising, of the time taken attending to public objections to new power lines. Until then, he could not guarantee that similar power failures would not happen again. But it might in the meantime be a good idea to learn to use automatic tripping devices properly and to see whether maintenance arrangements can be improved.

### Straws in the Wind

THIS happens also to be the week chosen by the Generating Board for the formal opening of its £2 million nuclear laboratory, an installation that will cost about £1 million a year to run and will employ between 250 and 500 people. There is nothing that this laboratory can do which could not be done equally well by the Atomic Energy Authority, using plant and research teams already in existence and very probably under-employed. The question arises, therefore, why the Generating Board ever decided to build it; and the answer lies

in the strained relations developing between these two mammoths, the same kind of strain that arises when a bride is asked to share a kitchen with her mother-in-law.

Up to the present time, the Generating Board has been paying the Atomic Energy Authority an atomic consultancy fee running to about £300,000 a year, in return for which the AEA advises the Generating Board on nuclear power station tenders, keeps it in touch with new trends in design and carries out certain types of research on its behalf. The Generating Board is plainly getting tired of this arrangement, and is showing a tendency to criticise and find fault with the AEA's work. Sometimes it has reason to grumble, and to feel that the Authority has been over-complacent—although it is perilously easy to be wise after the event. But a great deal of the Generating Board's dissatisfaction with the Authority is based, quite simply, on the fact that the Generating Board does not intend to remain permanently *in statu pupillare* in nuclear matters. It has been recruiting over the years some of the AEA's best—and most dissatisfied—scientists, and has now taken the logical next step of providing them with a laboratory in which to work. It has done a great deal to encourage industry to go into the business of manufacturing nuclear fuel so that it will have an alternative supplier to play off against the Authority. The next step may well be the ending of the consultancy arrangement with the AEA, preceded or followed by a momentous clash of wills over the next stage in nuclear power station design.

The opening of the CEBG's Berkeley laboratory is merely one of several straws in the wind, pointing towards a reduction in the role and importance of the Atomic Energy Authority and the de-centralisation of nuclear research and engineering. This is a normal and healthy development always provided that it is accompanied by the appropriate reduction in the AEA's physical size; otherwise it is merely so much duplication of effort. But is the Authority closing departments as the Generating Board takes over some of its business? This is perhaps a question for the Minister of Science to ask Sir Roger Makins when next they meet.

## ATOMIC ENERGY

### An Important Decision

THE decision of the US Atomic Energy Commission to cut the prices of enriched uranium fuel by between 20 and 24 per cent is most important and will spread its ripples far beyond the American pool. The AEC has held the price of enriched uranium unchanged since 1956, in spite of protests from American companies that the price of natural uranium from which it is made has halved and that this ought to be reflected in the price asked for the finished product. On the published American prices for enriched fuel have been

based all estimates of the cost of power from reactors using enriched fuel in preference to natural uranium. In the last few months these prices have put such power producing reactors at a distinct disadvantage compared with reactors using natural uranium costed at today's low market prices. Now all these sums must be worked out again in the light of the new AEC figures. They do not mean that enriched uranium has suddenly become cheap—it can never be that. But they do give designers of enriched reactors the option of lower fuel costs or simpler engineering, and both spell lower power costs. By the stroke of a pen, the AEC has altered overnight the prospect for nuclear power. The effect of these lower prices extend over the whole field of nuclear design, to reactors planned for the mid-1970s as well as those discussed for the end of this decade. The fact that the AEC has at the same time cut the price it will pay customers for their used reactor fuel merely injects a note of reality into the proceedings. Public utilities dislike this kind of notional bonus and it is already counted for little in British calculations of nuclear power costs.

#### ISSUES BY TENDER

##### *A Trial Run*

IT is almost eighteen months since the Stock Exchange Council turned down the suggestion that offers for sale by tender should be reintroduced for equities. Since early in this century issues by tender have been restricted to water companies. Substantial oversubscription of many recent issues and the large premiums over the issue price to which the shares have soared have now persuaded the council to allow this method to be used for a small issue next week.

When applications for such an issue were received last year the council members decided that they could not give permission until they had fully discussed with other interested parties "all safeguards which may be necessary under modern conditions". The scheme devised by Kleinwort Benson seems likely to meet these requirements. In offering the shares for sale by tender, Kleinwort Benson will state the minimum sale price at which the shares have been underwritten. To protect those who submit too high a price and to ensure a sufficiently broad distribution the highest applications will be accepted only if they are in numbers considered adequate by the issuing house both to cover the issue and to give a fair spread of shareholdings. If not, such tenders will be included with those at a lower price and the price at which all shares will be allotted will be the lowest price accepted.

Such safeguards are clearly designed to make sure that the small investor is not at a disadvantage with the professional stags, who have been doing well lately. But the small investor might be dissuaded from making applications because of ignorance of what a reasonable price might be, although

#### BUSINESS NOTES

he ought to find a fair amount of advice on that score—it will be interesting, indeed, to compare the performance of the financial columns in spotting the right price for successful tender. The stag moreover is a resolute animal and there are already suggestions in Throgmorton Street of a possible consortium putting in a tender. The Stock Exchange Council stresses that this offer is an experimental one. An equally satisfactory result could be obtained if issuing houses (rather than investors) were able to make closer judgment of the right market price for their issues.

#### SPACE RESEARCH

##### *Closing the Ranks*

IF the Minister of Aviation gets European support for the development of Blue Streak as a launching rocket for satellites, then the British and Western European aircraft and electronics industries will have to arrange among themselves who builds what. This is equivalent to asking a wolf pack to share out the bones but it must be done if the space club is not to be torn apart by quarrels among its members. And the urbane atmosphere of the biennial Paris Air Show, now in its closing stages at Le Bourget, provides as good a background as any for preliminary discussions. It is important for the aircraft industries in Britain, France, Italy, Germany, and Sweden to be able to present their separate governments with a united front, but it would help their case considerably if they were also able to join forces with the telegraph companies and put forward a joint plan for a system of communications satellites based on Blue Streak.

The attitude of Sir Harrie Massey, the Royal Society's spokesman on space research, shows plainly how tepid scientists are towards Blue Streak; this is a much larger rocket than is needed to launch scientific satellites, and scientists in Britain and Western Europe have their own joint space research programme in which Blue Streak plays no part. Unless the governments of Western Europe decide privately that they want to get into the ballistic rocket business, the only excuse for reviving Blue Streak is to launch commercial communications satellites. Scientists generally agree that such a network is feasible and offers bright commercial possibilities, but governments might find it easier to make up their minds if some of the European telegraph authorities showed the same enthusiasm and gave some indication of how much they were prepared to venture in such a network.

#### SOUTH AFRICA

##### *Devaluation Talk*

SOUTH AFRICAN gold shares have been rising in the past two weeks: but this recovery has an ominous foundation. It

#### THE ECONOMIST JUNE 3, 1961

reflects fears that the South African rand may be devalued. Mr Dönges, the South African Finance Minister, has denied these "unfounded" rumours. The financial community nowadays places little faith in such affirmations from finance ministers; but since South Africa's difficulties arise wholly from withdrawals of capital on political grounds, there is a good case for saying that devaluation is by no means the appropriate remedy.

The rises in gold shares have been less sharp on the London stock exchange than in Johannesburg. This is a result of the South African Reserve Bank's recent ban on forward exchange cover for stock exchange transactions, which has hit arbitrage business badly. London dealers have had to adjust their prices to cover themselves on the exchange risk, and the price differential against Johannesburg has widened.

Forward cover is also withheld for imports of consumer goods, to back up direct restrictions on imports. Together with exchange controls and the raising of Bank rate, these moves add up to a serious attempt to stem the vast outflow of capital, which has more than halved South Africa's gold and currency reserves from £150 million at the end of 1959 to £73 million. It would be surprising if the government were to consider devaluation until the effects of these measures can be assessed. The government has indeed implied that there are many more restrictive steps that could be taken to offset the outflow of capital. Moreover, devaluation would have only a small impact on South Africa's payments balance, as many of its external debts and also freight charges are denominated not in its own currency but in sterling.

But whether South Africa will be able to mark its first weeks as a republic without a major financial crisis may depend on the report of a three man delegation from the International Monetary Fund which recently visited the country in response to South Africa's request to draw a second tranche of £13½ million. Such a drawing will not be so freely available as the first; South Africa's loss of reserves has stemmed entirely from a lack of confidence in the policy of the Nationalist government. The IMF delegates can hardly have been given assurances on this score.

#### OIL

##### *More Weight to the Wedge*

THE marriage between Continental Oil and Jet Petroleum is of mutual convenience. Continental, which has bought for an undisclosed price the whole of the capital of Jet, needs European markets badly. It is a member of the consortium of three American producer companies with one of the biggest finds in Libya, and in about a year's time will have ready a pipeline with a capacity of about 300,000 barrels a day to bring the crude oil to the Mediterranean coast. Neither Jet, which claims about 1½ per cent of the retail gasoline

#### THE ECONOMIST JUNE 3, 1961

THIS  
IS THE  
EAST...

Economic development in Asia is bringing higher living standards to these young people and to the vast population of that continent. Demand for an ever increasing range of merchandise is steadily rising. If you are interested in trade with these expanding markets, you are invited to avail yourself of the

banking and information services of The Chartered Bank and its subsidiary, The Eastern Bank Limited. The combined organisation of the two banks comprises one hundred branches in twenty-five territories extending from the Eastern Mediterranean to the Pacific Ocean.

## Post-Mortem on Forecasting

THE National Institute has always been bold about its predictions, avoiding the vaguenesses and qualifications that are only too tempting. Now, with exemplary courage, it has made public a check on their adequacy. From an article in the current *Economic Review* the table below assembles the forecasts the Institute made in January and May of the last two years against the showing of the official statistics.

The results are not very good. Broadly, the Institute underestimated the strong upsurge of demand in 1959 and its rapid levelling out in 1960. It was too pessimistic about growth in 1959, too optimistic about it in 1960. The May forecasts did not make sufficient allowance for the acceleration of demand released by Mr Amory's give-away budget or for the damping-down effect of the credit restrictions last year. Indeed, rather disconcertingly, if the forecasts for the two years were reversed, they would probably have given truer pictures as a whole. On the other hand, some of the individual forecasts were very near to the mark.

The Institute has had at its disposal few basic data beyond those available to other investigators, although it has carried out its own surveys of spare capacity in industry. Its methods of prediction are informal; it does not rely on rigid formulae. The estimates of public spending, for instance, are based largely on the Government's own estimates; the export forecasts are produced after an assessment of market prospects in different parts of the world; and prospects for fixed investment depend largely on the Board of Trade's inquiries into intentions together with data on the state of order books. Investment in stocks is "little more than a guess." Assumptions are made about the growth of incomes, hours of work, productivity and prices and the final forecast of the change in national product is

arrived at by piecing together all the separate items and then "juggling them until they fit into a consistent pattern."

If all this seems a bit haphazard, what is the alternative? Considerable research was done on the Oxford econometric model before it was tried out at the end of 1958. Close on forty equations were brought into play to predict that industrial production would fall substantially in the first half of 1959; it rose. Prediction with the aid of advanced mathematical techniques was much wider of the mark than the results obtained much less formally by the National Institute, the Government or the London and Cambridge Bulletin. This is not to damn econometric forecasting. But judgment enters into this type of prediction, too, particularly on the variables that should be fed into the equations. Moreover, it is only too likely that the equations will have over-simplified the relations between different economic quantities. Econometric forecasters cannot escape the same problems that afflict other forecasters.

Whether these problems can be overcome is anybody's guess. But the Institute hopes for improvement as it gains experience with some of the newer statistics. As yet, nobody is too sure how to interpret the Board of Trade's collection of industry's investment intentions which have not always compared closely with what was actually spent. Nor is a great deal known about the significance of the data now published on order books. Perhaps the greatest gains will come from better use of the four-monthly questionnaire sent out by the Federation of British Industries which, according to the Institute "appears in retrospect to have been a sensitive indicator."

On the other hand, is there much hope for an improvement in the forecasting of exports? This has proved so difficult, has

gone so badly wrong and yet is so important in determining the general picture of demand. The assessment of export chances is an immense task, involving trends and policies throughout the world. At least the National Institute has sized up the problems in forecasting and can claim that its forecasts, if not on the bulls-eye, are at least as good as any others.

market in Britain, nor Sopi, the small independent distributor in Germany and Austria which Continental bought last year, will solve Continental's marketing problem, but they will provide a useful toe-hold. The company has yet to say where it will refine its oil. One of its partners in the consortium, Ohio Oil, plans to build a refinery in Spain, but it seems more likely that Continental will prefer to make arrangements with—or perhaps to buy—one of the independently-owned refineries in Italy or Germany.

For Jet, the take-over would appear to be clear gain. It gets a permanent supply of petrol, in place of short-term contracts with independent refineries on the mainland of Europe, and it will have readier access to capital to achieve its ambition of doubling or trebling in the next few years the number of petrol stations it supplies—at present about 400—in an endeavour to get nationwide distribution. But, while the present chairman and managing director of the company are to remain, they will no longer be their own masters. Continental Oil sells petrol at cut prices in the United States; and Jet has said that its prices here, which are about sixpence a gallon below the majors', will not be changed. Continental may decide however that, while a cut-price policy and short-term contracts with dealers may be right for a small distributor, an attempt by a producer to broach the British market in a big way, and permanently, may call for a somewhat different strategy. It will have to find markets for the heavier refined products as well as gasoline. Although Libyan oil is a light crude and although Jet already sells some fuel oil, derv, and distillates, this could be another reason for mounting a more normal type of marketing programme. The cost of entry into the British market does not encourage cheap prices.

### MINICABS

#### Making Them Legal?

WELBECK MOTORS, the car hire firm that aims to inject more life into London's transport services with "minicabs" later this month, has evidently had second thoughts about the advisability of directly challenging the present taxi licensing regulations. It has now decided not to allow a minicab driver to carry a customer after radioing his order to the central control room. Instead the driver will act solely as a booking agent: the order will be met by sending another cab. Welbeck will use some of its cabs simply as mobile booking offices, cruising the streets between parking at certain strategic points. This will mean that the cab fleet will be used less intensively and that their customers will have to wait longer, but Welbeck believes that it will make its service incontestably legal. If, however, it finds it is mistaken, it will run the service purely on telephone bookings, in the same way as the other

minicab services already running in London.

The cabs will be distinguishable from other red Renault Dauphines by posters: this advertising space will improve the economics of the venture. Gotham Advertising has formed a company called Minicab Advertising and has contracted to buy all the advertising space available at £70 a year for each cab. On a fleet, initially planned to number 500 cars, Welbeck will thus get about £35,000 a year. Without this revenue, fares of 1s. a mile, with 1½d. a minute waiting time when stationary in traffic jams, would be out of the question.

### SUGAR

#### Price Problems

THE International Sugar Council has been flattered, if not a little embarrassed, by the ready response of prices to the measures it has taken to control the sugar surplus. Spot sugar in London recovered from below £26 a ton to £30 a ton. In New York, where Cuban sugar is now *non grata*, supplies of other sorts have been driven to a premium of up to £1 a ton over Cuban sugar, which virtually had the free sugar market to itself. Other producers with sugar to spare have been busy calculating their probable share in the re-allocation of import quotas for the remaining 1 million tons of sugar needed by the United States this year, on which suppliers will receive the American premium over world prices. But politics run deep in sugar: the assassination of Trujillo might pave the way for the restoration of full rights for Dominican sugar in the American market, and it will certainly inject an added spice of uncertainty. At its last meeting, the council chose as its price indicator the mean of London and New York values, converted to represent a fas price in Cuba. The discrepancy between these two sources has ranged up to 0.15 cents a lb, and the council has now decreed that when the difference exceeds six points, the lower price will be taken, augmented by 3 points and used as its guide.

The council's calculated price on the old basis had momentarily touched 3½ cents a lb, which, if sustained over 17 trading days, would have brought the automatic restoration of the 2½ per cent cut in export quotas made in February. Though not in keeping with the real state of the market, an increase of 150,000 tons at this point would not do too much harm, except perhaps to the council's rather neat equation of free market supplies with requirements at 8½ million tons after allowing for some members falling short of their quotas by a million tons. Together with the recent reaction in prices, basing the price indicator in effect on the lower London value, now £29½ a ton, has made this contingency a little less likely.

Cuba, going it alone without American direction, can (contrary to some people's

expectations), produce 6 million tons of sugar a year. This leaves Cuba with an uncomfortably large surplus, which might amount to about 1½ million tons at the season's end after filling all its expanded quota in the free market and exports to communist countries. India, a non-signatory of the International Sugar Agreement and therefore unable to sell more than limited quantities of sugar to members, desperately needs an outlet for 1 million tons of high-cost sugar. Adding confusion to the market's devious structure, white sugar from Europe's beet surplus is being offered below the cost of raw sugar. Occasionally, unrefined sugar can command a genuine premium over refined: Japanese consumers will not accept beet sugar as a substitute for cane; in Ceylon, some sugar is consumed raw, so that reconverting refined sugar could even be good business. There is certainly a grey market in sub-production-cost white sugar inching into raw sugar's territory.

### SCIENTIFIC POLICY

#### Trial and Error

THE Department of Scientific and Industrial Research has grown considerably in stature since the appointment of a Minister for Science. As a Minister without a ministry, Lord Hailsham has no experienced departmental heads to advise him on matters of scientific administration and there are signs that the DSIR is moving in to fill the breach. In its report for 1960\*, the Department sounds some sensible warnings about the pitfalls in drawing up long-term plans for research. Here the DSIR can speak with some authority, based on its own experience. When it was freed some years ago from annual Treasury control and given a five-year budget, the DSIR immediately attempted to draw up a five-year research plan over which to allocate its new-found wealth. This was a failure. As the current report points out, research is essentially unpredictable; projects can crop up unexpectedly and a research organisation must be able to fit them into its plans without throwing its entire budgetary arrangements out of kilter.

DSIR has now proposed a new form of five-year budget to Lord Hailsham and the Treasury, in which a firm figure will be given for the next twelve months' expenditure, based on knowledge of work already in hand, and a moderately firm estimate proffered for the following two years, based on assumptions about how work ought to progress. For the fourth and fifth years of the plan, it will propose what the report describes as "less definite forecasts." This kind of plan will be revised every year, so that DSIR will always be thinking five years ahead, never reaching the end of its road.

Before research can be started, scientists must be found to do it. Some branches of

science, including biophysics or oceanography, are temporarily out of fashion. DSIR is trying to coax students and teachers back into these fields by special grants to universities. Will this horse drink? The report points out that it is easy to see the gaps in Britain's research effort, but more difficult to persuade the universities or industry that they need filling; DSIR may have found a new and potent weapon in the probings and reports of its new economics division into the research needs of various industries. Machine tools and shipbuilding have become noticeably more research conscious since this spotlight was turned on them. The Department is now turning its attention to the foreign office and to the importance of scientific attachés at British embassies—of whom there are only five.

### HIRE PURCHASE

#### Towards Personal Loans?

THE Industrial Bankers Association has a good record of bright suggestions. Its latest is that the finance houses should consider making personal loans. Plans at the moment are fairly sketchy, but it has in mind the system already widely used on the Continent and in North America in which the finance house grants credit directly to its customer, allowing him to buy goods on instalment from stores and dealers of his choice.

Under this system the customer would own the goods and not merely hire them, as he does at present, and the finance company would lose the right of repossession

### SHIPBUILDING

The lament over the shortening of order books continues and at the end of March shipbuilding in the United Kingdom was at its lowest level since 1945. There were 249 ships under construction and 96 "preparing," i.e., their plans had been approved or materials ordered. Activity in nearly all yards has been sharply reduced over the last year—in Clydeside work in hand has been cut from 647,000 to 449,000 tons gross.

\* Cmnd. 1365. 4s.

for a lien over the goods. But the real security for the loan would be the customer's credit-worthiness, which the company would have to assess at first-hand, and not through dealers. The loan interview would allow many questions to be asked, especially on earnings and commitments, which the present hire purchase form conspicuously omits. Personal loan interviews, however, as bankers will readily admit, are tricky, and the finance houses' first problem would be to find adequate skilled staff for this delicate task.

For the customer the scheme would mean lower charges, since the dealer's commission is eliminated; a single payment to one finance house for any number of credits purchases; and income tax relief on the loan interest, which the Inland Revenue will not allow on hire purchase charges. For the finance houses it could mean the opportunity of building up goodwill independent of the dealers, and no responsibility for defective goods (which the courts thrust upon a finance house in a recent hire purchase dispute).

The main obstacle to the introduction of personal loans by the finance houses appears to be the Moneylenders Act, which in effect limits the rate of interest chargeable on loans to a true rate of 10 per cent or flat rate of just over 5 per cent. The banks are exempt from the provisions of the Act and most charge a flat rate of 6 per cent on their personal loans which, on the average balance outstanding, is a true rate of nearly 11½ per cent. This and other legal and administrative problems, especially the question of credit control, are being studied by the Board of Trade and the Treasury. If all goes well, the finance houses may soon be free to develop a class of business which outside commentators have been recommending for some time.

## COTTON

### Clouded Futures

THE United States has not been a leading light in international schemes to support commodity prices, but the rock-like consistency of American cotton export

## BUSINESS NOTES

prices since 1958 is certainly sheltering smaller producers, who would feel aggrieved if prices were to collapse. American production has not risen over the past decade; because of acreage restrictions the cotton area has contracted from a pre-war average of 28 million acres to something like 18 million acres this year. But other producers have planted at least 10 million acres more. China now has almost as much land under cotton as America and India has more. But acreage restrictions in the United States have produced such a big improvement in yield that it still produces about one-third of the world's output off only one-fifth of the total cotton acreage, and as largest consumer and exporter has the market firmly in its grasp. That is just as well because the International Cotton Advisory Committee forecasts a rise in world stocks this season after four years of reduced surpluses.

What is meat to the Latin American and African countries where cotton is an important cash crop is poison to the cotton futures market in Liverpool. For more than two months the spot price of American middling 1-inch cotton has stood at 24.10d. a lb. Throughout most of last month the transaction of a bargain in the futures market was an event. Demand for actual deliveries has also faded as order books of the cotton manufacturers which once ranged up to eight months have been run down, though orders for raw cotton have piled up in America where the increased export subsidy of 8½ cents a lb will be paid on all cotton hoisted aboard the steamers after the end of July.

Next week, the Liverpool Cotton Association meets to discuss a scheme for its reorganisation to preserve the raw cotton market in Liverpool. The £100 shares of the association, £20 paid, once changed hands at £1,000 a share. They were worth £600 when the exchange was reopened after the war, but slumped to £45 before the possibility of a capital reorganisation arose. Though traders agree that in the present straitened circumstances of the British cotton industry, two cotton exchanges would never be built, hopes that the Liverpool and Manchester Associations might be amalgamated have come to nothing.

## AERO-ENGINES

### Rolls-Royce and Napier

THE decision of Rolls-Royce to buy a half-share in the Napier aero-engine business of English Electric ties up some of the loose ends in the government's scheme for rationalising the aircraft industry and, possibly the most important aspect of the deal, brings Rolls-Royce for the first time into the helicopter market. Napier has been dogged by bad luck since the war. It developed an outstanding turbo-prop engine, the Eland, only to find that no British aircraft manufacturer had an aeroplane that could use it. The Fairey Rotodyne has outgrown the engine, which

## THE ECONOMIST JUNE 3, 1961

powered the prototype, but is unlikely to be used for future versions of the Rotodyne if, indeed, any are built. It is only recently, several years after the Eland was first available, that the engine has begun to find a market in troop transports for the Canadian Air Force and as a conversion for piston-engined Conquairs in need of modernisation. Other projects, such as small rocket motors, were cancelled through no fault of Napier's, but the tide seems to have turned at last with the development of the Gazelle turbine engine designed specially for helicopters. Big military orders during the past twelve months have boosted production of the Wessex and Belvedere helicopters, both powered by Gazelles.

This is a field new to Rolls-Royce, and obviously of great commercial value to the company. Details of the arrangement reached between Rolls-Royce and English Electric have not yet been made public but the two companies intend to form a jointly owned subsidiary, Napier Aero Engines, which will take over the aero-engine side of Napier's business leaving the rump of the company, with all its general engineering work, as a wholly-owned English Electric subsidiary building, among other things, diesel engines, and de-icing equipment. This consolidates the production of every important aero-engine built in this country with one exception in the hands of two companies, Rolls-Royce and Bristol-Siddeley. The exception is the de Havilland Gyron; de Havilland's engine company is now part of the Hawker Siddeley group and so is the small engine division of Blackburn. The only engine builder still outside the big five is Alvis.

## FOOD PRESERVING

### Food by Sublimation

WHAT is claimed to be the first plant for the accelerated freeze drying of food on a commercial scale has been built by Vickers for the Irish Sugar Company at Mallow, Eire. Much has been claimed for this process, which extracts the moisture from food after it has been deep-frozen. This is said to make the final product virtually indistinguishable from fresh food, once the water has been replaced, because nothing else has been removed. Normal drying methods remove salts as well. But if the water in the food is turned into ice, and the food is then heated in a vacuum, the ice will turn into steam—it is, in the technical phrase, removed by sublimation—and after eight hours the food will be completely dehydrated but otherwise almost unchanged. Its advocates maintain that freeze dried food can compete with quick-frozen: it does not require refrigerated transport or storage space. But the complexity of the process and the airtight packages it needs may more than offset the advantage of easier storage. Its appearance may also be against it.

Unilever has taken the most interest so

## THE ECONOMIST JUNE 3, 1961

far in developing freeze drying in Britain. Unilever recently bought the Ministry of Agriculture's research plant at Aberdeen, where the process used by the Irish Sugar Company was developed, but plans to undertake more research before going into commercial production. Little has yet been said about the likely retail cost of freeze dried food. Irish Sugar has said nothing so far. Until it does, the commercial prospects of the process remain uncertain. Coming after quick frozen foods have become established, the task will not be simple.

## BARLEY

### Flop of the Season

DEFICIENCY payments, which appear to graft the form of a free market cleverly on to a system of guaranteed prices for farmers, can yield a ridiculous hybrid. The crash in barley has exposed the danger of mixing these two incompatibles in the wrong proportions. Britain's barley goes from strength to strength; output reached 4½ million tons last year, only 169,000 tons short of production in Canada, and exports are at a useful level. By contrast, imports have contracted sharply in the past two years. In 1960, they fell to about 700,000 tons, little more than half the 1958 level, though in the first four months of this year they have risen from 172,000 to 409,000 tons, of which 239,000 tons have come from foreign countries which together did not sell a thousand tons here in the same period of the previous year. An extra 250,000 acres has been put under barley in England and Wales this year, compared with 3.4 million acres planted in Britain in 1960, and unsold stocks are higher than is normal at this time. There is therefore less room for outsiders in the British market, and it may prove more difficult to sell all the domestic crop than at any other time since the end of the war. But any producer is free to sell in the British market, though imports of unprivileged foreign barley are subject to an import duty of ten per cent.

A year ago Canadian wheat fetched £27½ a ton, maize £21½ and barley £21½; now wheat costs £27 a ton, maize £19½ and a seemingly inexhaustible amount of French or Russian barley can be bought at £15 a ton before payment of 30s. import duty. The market price is now dictated by Russia's apparent need of sterling (any tactical advantage gained in the market should be short-lived) and France's attempt to clear its bins to find space for the new crop after discovering that its delivered crop was much greater than its estimated one. Canada and Australia concluded timely deals with China and have thankfully bowed out of the market. America has exports of 2 million tons of maize at stake in this market, but though compounders of animal feeding stuffs can shift between barley and maize and may take up to 20 per cent more

## BUSINESS NOTES

barley because of the present extraordinary price differential in its favour, America has not increased its export subsidies to a level that would make its maize competitive. Compounders have to use a certain amount of maize and the economics seem to favour holding off at this stage, and meeting only these minimal requirements.

Compounders pay the market price for the barley they use; deficiency payments are stretched to cover the gap between this

## SHORTER NOTES

The Austin-Healey Sprite and 3000 are now being sold in Mark II versions. The Sprite has a new bonnet, with the headlamps mounted in the wings and a grille resembling that of the Innocenti version of the car; engine power has been increased from 42.5 to 46.5 bhp. It costs £641, £10 more than the old model. The Mark II 3000 has a three carburettor engine which develops 132 bhp instead of 124 bhp, and is claimed to use less petrol. Its price is unchanged at £1,168.

The directors of Stewarts and Lloyds say that higher labour and material costs have cut profit margins, and profits for the current year will therefore be lower than those for the year ended October 1, 1960. The interim dividend is raised from 3 to 5 per cent on the £27 million ordinary capital before the April rights issue, solely to reduce the disparity between the interim and final dividends. A final dividend of 10 per cent is forecast on the increased £33 million capital. For 1959-60 a total dividend of 15 per cent was also paid.

From August 1st, imports from the dollar area of wine, beer and gin will be freed of import control. Canned apples, grapefruit, orange and grapefruit juice remain controlled, but imports of all other canned fruits will be freed. Controls were maintained on some categories of imports after the liberalisation of dollar imports in 1958 and 1959 for reasons other than protecting the balance of payments. After August, rum will be the only alcoholic drink remaining controlled. The vestigial dollar import controls include coal, potatoes, pharmaceuticals and large aircraft.

English Electric has made an offer worth more than £2 million for the whole of the share capital of W. H. Dorman which makes diesel engines at Stafford. For every twenty of Dorman's 11 per cent non-cumulative preference shares, eleven £1 English Electric ordinary shares are offered; for every 14 of the 592,000 2s. ordinary shares, five £1 English Electric shares; and for every

figure and the farmers' guaranteed £27 11s. 8d. a ton. Anomalous prices may not persist for long; the pressure of French sales was relaxed on Wednesday. If they do, they may prove a far more punishing experience for the Exchequer, which has to make deficiency payments on upwards of 4 million tons of barley, than for the two contestants in this minor war over a corner of the barley market here and on the continent.

four of the 2,330,000 2s. "A" ordinary shares one £1 English Electric ordinary share plus 2s. in cash. The directors have accepted the offer on their own behalf and are recommending acceptance to other shareholders.

Building is still going from strength to strength. New construction and repair work amounted to £669 million in the first three months of 1961, eight per cent more in volume than the year before and two per cent higher in price. For the first time for years output in the first quarter of a new year was higher—by 2½ per cent—than in the last quarter of the preceding year.

The British Motor Corporation is now fitting attachment points for safety belts to all its cars. It has chosen a belt which combines a diagonal strap and a lap strap, costing £5, and made by Britax. The standard Britax diagonal belt has already been chosen as an approved accessory by Rootes, Standard-Triumph International and Vauxhall.

Penguin Books has agreed to buy privately from the executors of the late Mr Howard Samuel his holding of about 40 per cent of the 258,000 ordinary shares of Associated Book Publishers. The two companies are to discuss ways of developing this link.

### BRAZIL

This report considers the forceful measures by which the Quadros administration is tackling the country's serious economic predicament, particularly the introduction of a far-reaching exchange reform, and the use applied to public over-spending. It also deals with the vital support given to this policy by the massive aid provided by the U.S.A., the I.M.F. and European Creditors.

## COMPANY MEETINGS

## CAMMELL LAIRD &amp; COMPANY LIMITED

CONDITIONS REMAIN DIFFICULT BUT PROFITS SHOW IMPROVEMENT

MAJOR RECONSTRUCTION SCHEMES COMPLETED

COMPETITIVE POSITION STRENGTHENED

## ADMIRAL SIR MICHAEL DENNY'S REVIEW OF GROUP'S ACTIVITIES AND PROSPECTS

The ninety-seventh annual general meeting of Cammell Laird & Co. Ltd. was held on May 31st at Birkenhead, Admiral Sir Michael M. Denny, GCB, CBE, DSO (Chairman), presiding.

The following is the Chairman's Statement circulated with the Report and Accounts for the year ended December 31, 1960:

I am glad to be able to report an improvement in the profits of the Group for the year ended December 31, 1960, compared with 1959. Our thanks are due to the Management, Staff and Workpeople of all our Companies for their continued loyalty and hard work which have produced this improvement. So far as Shipbuilding is concerned conditions have remained difficult but there are more enquiries and we feel that we have obtained a reasonable share of the business available. Our steel-making Subsidiary Company, The Patent Shaft Steel Works Limited, is not yet out of the wood and I deal with its affairs in more detail below. I also deal with the future prospects of our other Subsidiary and Associated Companies under their respective headings, but in attempting to assess the overall picture I do not take too pessimistic a view. The profitable development of the Group is, of course, ultimately dependent upon a revival in shipbuilding and wagon building, both of which industries are, for the time being, somewhat depressed. Our reconstruction programmes have, however, placed us in a strong competitive position.

During the year we have appointed to the Board Mr Roderic Aylward O'Connor, TD, MA, Barrister-at-Law. Mr O'Connor is Vice-Chairman of W. and R. Jacob & Co. (Liverpool) Limited, and Joint Managing Director of Associated Biscuit Manufacturers Limited. We welcome Mr O'Connor to our Board and feel sure that his experience in other fields will be of value to us.

## ACCOUNTS

## CONSOLIDATED PROFIT AND LOSS ACCOUNT

We have slightly altered the form of our Consolidated Profit & Loss Account to conform with modern practice, in that we have now shown the Group Profit after charging and crediting the items shown inset.

The Group Profit for the year ended December 31, 1960, amounted to £311,834 compared with £427,192 for the previous year. This is a considerable improvement, but less satisfactory than at first sight appears, since the main cause of the improvement is the carry over of completions in shipbuilding from 1959 into 1960 as a result of the strikes from which our Shipbuilding Company suffered during 1959.

Depreciation for the Group is much increased following upon heavy capital expenditure both at Wednesbury and at Birkenhead. Loan and Bank Interest is also much increased. Dividends and Interest received on Investments are less than in 1959, with the exception of Trade Investments, which have produced a little more than during the previous year. Our income from English Steel Corporation Limited was somewhat greater in 1960 than in 1959 but Metropolitan Cammell Carriage and Wagon Company Limited has, in common with other rolling stock manufacturers, been suffering from the lack of orders, and our income from that source has therefore been reduced. Other Investment Income and Interest has been reduced as the result of earlier realisations of investments.

Because of increased profits there is a considerable reduction in income tax credits compared with the previous year. The Net Group Profit for the year amounted to £606,017 compared with £272,391 in 1959. Taxation and other adjustments in respect of prior years are much reduced, compared with 1959, at £14,837, and subsidiary companies in 1960 retained £318,770 compared with net withdrawals from subsidiary companies of £346,772 in the previous year.

The Net Profit dealt with in the accounts of Cammell Laird & Company Limited, in respect of the year ended December 31, 1960, is therefore, £302,993 compared with £575,541 in the previous year, and the balance brought forward from 1959 amounting to £97,296 must be added thereto, to give an amount of £400,289 available for appropriation. Against this must be charged the Interim Dividend of 3 per cent, less tax, paid on October 29, 1960, and your Board now recommends the payment of a Final Dividend of 9 per cent, less tax, for the year 1960 amounting to a further £293,541. If this recommendation is accepted this will leave £8,901 to carry forward to 1961.

## CONSOLIDATED BALANCE SHEET

The Fixed Assets of the Group have increased by more than £1,675,000 during 1960. This is largely a measure of the continuing investment in our Birkenhead Shipyard where our big new No. 5 Dock is now taking shape.

The decline in the excess of Current Assets over Current Liabilities during the year is attributable mainly to the use of current resources for the financing of capital expenditure.

## PARENT COMPANY'S BALANCE SHEET

During the year, we paid the outstanding

liability on our Patent Shaft Steel Works Shares, so that these Shares are now fully paid and the previous contingent liability in respect thereof no longer applies.

Inter-Company balances still continue to be influenced by Subvention transfers, and, so far as can be seen, this will apply for some time to come. However, since our Steel-making Subsidiary is now making smaller losses, the taxation recoverable, after providing for current taxation, is a smaller amount.

## CAPITAL COMMITMENTS

Contracts for capital expenditure at December 31, 1960, were £1,165,000, being £925,000 for our Shipbuilding Subsidiary and £240,000 for our Steel-making Subsidiary.

## CAMMELL LAIRD &amp; CO. (SHIPBUILDERS &amp; ENGINEERS) LIMITED

During 1960 this Company was actively engaged upon the construction of a wide variety of tonnage for the Merchant Navy and the Royal Navy, including a dumb barge, tugboats, tankers, a bulk sugar carrier, a refrigerated cargo liner, a passenger liner, a cable repair ship, a passenger/car ferry, submarines, an anti-submarine frigate, and a guided missile destroyer.

We were honoured by a visit from Her Royal Highness Princess Alexandra of Kent in June, when she launched H.M.S. "DEVONSHIRE," a prototype guided missile destroyer for the Royal Navy. Another outstanding event was the completion for the Union-Castle Mail Steam-Ship Company Limited of RMS "WINDSOR CASTLE," the largest passenger liner so far built in our shipyard, and we are at present preparing a tender for the new Cunard ship.

Our Engineering Department built and tested three sets of steam turbine double reduction geared machinery and completed six sets of water tube boilers for merchant and naval vessels. Work has also proceeded on various contracts for the Admiralty and the department has supplemented its engine building and boiler making activities by undertaking a considerable amount of sub-contract work for firms covering a wide range of engineering products, for both the home and export markets. A boiler plant has been erected in the Engine Shop for shop testing and overspeeding of turbine machinery, and this installation will also be used for the heating of the Engine Shop in the winter months. In collaboration was Messrs. Babcock & Wilcox Limited, a detailed tender and specification for the machinery and reactor for a nuclear-powered

## THE ECONOMIST JUNE 3, 1961

65,000 tons deadweight tanker was prepared and submitted to the Ministry of Transport.

Our Ship repairing Department has again experienced extremely competitive conditions, but was successful in obtaining a fair share of business. In November the Rock Ferry Tanker Cleaning Installation was officially inaugurated and it is expected that this additional service will help us to increase our ship repairing activities in the future.

Although the recession through which the shipping industry is passing has resulted in intense competition between shipbuilders in this country and overseas for new business, towards the end of 1960 and earlier in the current year we were successful in obtaining orders for the construction of a passenger ferry vessel, a cable layer and a submarine. These contracts have been undertaken at very keen prices.

During the year representatives of our management have on several occasions visited shipbuilding, marine engine building and ship-repairing establishments in Europe and in North and South America and they have been impressed by the efforts which are being made in some of these establishments to achieve greater efficiency and economy in production. If we are to maintain a reasonable volume of work in our shipyards we must at least match, if not better, the efforts of our overseas competitors, and this can only be achieved by all, management and employees, giving of their best and obviating all wasteful methods which tend to make us uncompetitive.

Whilst the outlook for our industry continues to be uncertain, I am confident that with the wholehearted support of all our employees in achieving the most economic use of our reconstructed shipyard, we shall be successful in obtaining further business for the various departments of our Company and thereby avoid any unwelcome gaps in our shipbuilding, marine engineering and ship-repairing programmes.

The year 1960 has seen the completion of two of the major schemes in Phase I of the reconstruction of our shipyard, namely, the extension of the shipbuilding shops in the South Yard and, as I have previously mentioned, the construction of the Tanker Cleaning Installation at Rock Ferry. The reorganisation of the yard electrical supply progressed satisfactorily and, with the completion of the North Yard main intake station, the changeover to the National Grid for our power and lighting supplies is now complete.

During the year our new No. 5 Dry Dock was extended from 850 ft. to 950 ft. and it is hoped that this dock will be ready for use by the end of the year. The construction of the new No. 5/6 jetty in our South Yard proceeded satisfactorily although not without some interference with shipbuilding work. A specially designed 100 ton double rail track vehicle for moving larger welded assemblies to the shipbuilding berths has proved very satisfactory on the new tracks which connect the shops with No. 5/6 Jetty. During the year the first of two 100-ton travelling jib-crane was completed and the first major heavy lifts carried out by the crane were the shipping of two 83-ton boilers into the 65,000 tons tanker "SEPIA" preparatory to her launching from No. 6 slipway.

It has been decided to make further improvements to our engineering facilities and a scheme has been recently approved which will involve the re-arrangement of our Engine Shop and the acquisition of some new machine tools.

During the year we introduced a non-contributory scheme of retirement, death, and sickness

## COMPANY MEETING REPORTS

and accident benefits for male employees in our shipyard, and we hope that this Triple Benefit Plan will bring a measure of security and satisfaction to all those concerned. The cost of this plan (in the case of 1960, £57,000) has been charged against the profits of the Shipbuilding and Engineering Company.

It is with regret that I have to report the death in November of Mr A. Gardner, Commercial Manager and a Director of the Company, and I wish to place on record our very sincere appreciation of his long and loyal service to our Company.

It is with much satisfaction and pleasure that I also record the awards by Her Majesty the Queen in June, 1960, of the MBE to Mr H. Radford, our Dock Master, and of the BEM to Mr J. B. Taylor, a Turner in our Engine Shop.

## THE PATENT SHAFT STEEL WORKS LIMITED

In my statement last year, I explained in connection with this Company that by the end of 1959 the new plate mill had been completed and was in operation, while work on converting the furnaces to oil burning was proceeding. During 1960 the work of furnace conversion was finished, and thereafter the works could be operated in the manner envisaged when the plans for the reconstruction of the works were agreed five years ago. It is unfortunate, now, that this conversion has rendered the Company liable to pay the tax on fuel oil recently introduced in the Budget proposals, which will cost us about £90,000 during the year ending December 31, 1961, and about £130,000 in a full year.

Considerable technical and organisational difficulties were met and resolved during the year. There was a steady improvement in efficiency and by the end of the year steel production and the output of the new plant generally was not very far short of that contemplated by the reconstruction plan. Improvement in production has continued since the end of 1960 and is still continuing.

Unfortunately, the financial reward for the successful efforts of the management and workpeople in respect of production has not so far been satisfactory. During the year wages and other costs increased substantially. The Company has also had to meet during the period the high interest rates which have followed the high bank rate, although during the final months of 1960 there were two reductions. The result has been that the trading profit earned during the year, £346,476 (compared with a trading loss of £214,333 for 1959) has not been enough to cover depreciation, £425,479 (£280,928) and interest £553,609 (£394,237), and after these charges, therefore, there has been a consequential loss of £632,612 (£889,498) which has been offset, as was done last year, by a Subvention payment.

The management is considering actively how best to improve the profitability of the plant.

Another problem which this Company has to face is whether to modernise its two small mills, which absorb part of the output of steel from the furnaces and produce a very wide variety of finished steel products. These mills were not included in the reconstruction plan. They fulfil a useful function as jobbing mills, but they are old-fashioned, and faced with the competition of modern mills it has become increasingly difficult to operate them profitably within the price structure of the industry. This problem is under consideration at present.

Throughout 1960 the demand for the Company's products was high, and the order book

remained good. Since the end of the year, I regret that orders have fallen off. Although the works are still on full production, demand is less, and, with new plate and other steel-making facilities elsewhere in the country coming into production, the prospects for the next few months are not encouraging.

During the year, the Board of this Company has undergone some changes. It was strengthened by the addition of Mr James Mitchell, CBE, who brings to its deliberations many years' experience of the industry and its problems. The Company is fortunate to have secured such an able adviser. I regret that during the year the Company lost the assistance on its Board of Mr C. G. Wallace, one of the nominees of Metropolitan-Cammell Carriage & Wagon Co. Limited, on his retirement. His place has been taken by Mr W. Scott, C.A., whose help as a Director is most welcome. Since the end of the year, Mr Bryan Bruce-Gardner has been appointed Managing Director and is now responsible to the Board for all sides of the Company's activities.

## METROPOLITAN-CAMMELL CARRIAGE &amp; WAGON COMPANY LIMITED

The output of railway vehicles by Metropolitan-Cammell Carriage & Wagon Company Limited during the year considerably exceeded the value of new orders received and this has resulted in a fall in the volume of work in hand at the year end. This is a reflection of the continued decline in orders placed with private contractors for new rolling stock for British Railways and the fewer export orders received due to the increasing intensity of worldwide competition, not only in very low prices but also as a result of the credit terms offered.

Amongst orders received were 57 additional Tube Cars for London Transport Executive, 17 Diesel Railcars for Jamaica, 1,000 Wagons for Pakistan and two smaller lots of wagons for British Railways. Deliveries of passenger vehicles included the completion of previous contracts for sleeping cars, standard coaches and diesel railcars for British Railways, the remainder of the five new Diesel Pullman de luxe express trains and also a number of Pullman cars for other long distance trains, while 271 Tube cars were delivered for London Transport Executive and 15 coaches for Rhodesia. The smaller volume of output of wagons included shipments to East Africa, Nigeria and Liberia and side tipping, hopper ballast and twin-silo discharge wagons for British Railways. Nineteen mechanical structures for Electric Locomotives for South Africa were also completed.

No improvement in the difficult trading conditions for railway vehicles can be foreseen during 1961, but the Company has made some progress in obtaining alternative work and is continuing its efforts to widen its field of activity.

Output of buses was again increased from the previous year and included shipments to Jamaica, Spain, Cuba and Ghana.

In the export field the continued success of the "Olympic" buses was reflected by the further repeat orders from Jamaica and Uruguay, whilst in the home market the popularity of the "Atlanteans" was maintained. Efforts continue to expand exports, and there are prospects of a steady future demand in the home market, but no relaxation is expected in the prevailing keen competition for bus orders.

## ENGLISH STEEL CORPORATION LIMITED

English Steel Corporation had a successful year. The outstanding features of 1960 were a

greater volume of sales, somewhat higher profits, a larger order book and the commencement of work on the new £26,000,000 development scheme at Tinsley. When in full operation the scheme will increase capacity for special carbon, alloy and stainless steel production to 850,000 tons per annum. This will ensure the continued predominance of the E.S.C. Group in the field of special steel production.

With few exceptions, nearly all sections of the Group were well occupied and ended the year with a volume of orders in hand greater than that with which the year commenced. The increase in tonnage of steel melted for ingots and castings from 464,200 tons in 1959 to 572,000 tons in 1960 is a measure of the increased overall activity. Peak steel production was in 1956, when 591,000 tons of steel were melted.

The demand for heavy forgings continued weak and the reconstruction of the 8,000 ton press unit was, therefore, accomplished without inconvenience to customers. There was a welcome increase in demand for medium type press forgings which provided full employment for all personnel in the Forge and Machine Shops throughout the year, but a shortage of skilled labour to some extent limited output.

The capacity of the Drop Forge was filled throughout the year and the reduced production of motor cars had no serious effect on output during 1960.

Alloy and special carbon steels are supplied in billet and bar form to all sections of the engineering industry. In the Rolling Mills overtime working was necessary to meet customers' delivery requirements during 1960, but a tendency to reduce stocks and restrict orders which commenced in the later months has necessitated a reduction of output to normal levels in the early months of 1961. High speed and tool steels have remained in strong demand both at home and overseas.

The Steel Foundry was fully occupied and achieved an output in excess of that of any previous year. The continued demand for heavy steel castings for capital developments in the steel and engineering industries and the wider acceptance of the specially designed castings for railway rolling stock, should ensure full production during the current year.

The new Spring plant at Tinsley was in use during the year. Full production of laminated springs for the motor car industry was not attained, due to the severe cuts in requirements which arose in the last quarter.

There was an increased demand for all types of engineers' tools and all skilled employees of English Steel Tool Corporation were fully occupied. During the year buildings were erected and plant installed at Dandenong, near Melbourne, Australia, initially for the production of twist drills and taps. The Managing Director of English Steel Corporation attended the opening ceremony in February, 1961, which was performed by Mr H. E. Bolte, the Premier of Victoria.

Darlington Forge has operated at a reduced level and is unlikely to be employed to full capacity until there is a much greater demand for forging and castings from the shipbuilding industry. A shortage of skilled labour has restricted opportunities for obtaining orders for its traditional products from other industries.

Throughout the world, few orders have been placed for new railway rolling stock and in consequence the production of wheels and axles by Taylor Brothers at Trafford Park, Manchester, has been very much below capacity. For

## COMPANY MEETING REPORTS

similar reasons, the new plant erected by Canadian Steel Wheel Limited is operating at a rate below the planned level of production and the wholly-owned subsidiary, Steel Wheel and Axle South Africa (Pty.) Limited, is similarly handicapped.

Firth-Vickers Limited, with its subsidiary, Shepcote Lane Rolling Mills Limited (in which it has a two-thirds interest), had a very successful year, in which orders for its products at home and overseas could not wholly be met. The usage of stainless steel continues to expand, and is spread through a large range of industries. Additional plant to increase output has been authorised during the year and is expected to be in full production early in 1962.

The English Steel Corporation's scheme for providing a new melting and rolling mill plant at Tinsley Park, Sheffield, at an estimated cost of £26,000,000 has been approved by the appropriate authorities. With working capital, a total sum of £30,000,000 will be required and arrangements have been made for short and medium term finance. Site preparation began in November, 1960, and the scheme is planned to be completed by the end of 1962.

Capital expenditure incurred by the E.S.C. Group during the year amounted to £2,228,000 and was largely devoted to improving the efficiency of existing plants.

So far, in 1961, production is being maintained and, on present prospects, this should continue.

There is natural concern as to the future effect of the increases in costs of coal, electricity, gas and transport, as well as the incidence of the new Rating Bill. Every effort must be made to counteract the adverse effect of these increases, which can otherwise affect the competitive power of the industry.

The report and accounts were adopted and the dividend, as recommended, was approved.

Mr R. A. O'Connor, TD, MA, Barrister-at-Law, Mr J. H. Bromfield and Mr P. J. D. Toosey, CBE, DSO, TD, JP, were re-elected to the Board and the remuneration of the auditors, Messrs Cooper Brothers & Co., having been fixed, the proceedings terminated.

## Salient points from Joint Chairmen's Review

## Annual General Meeting 6th June, 1961

New Premises opened last year include Norwood Rooms Banqueting Suite, Norwich, and Dance Halls in Birmingham and Coventry. In January, 1961, Hammersmith Palais was acquired by an exchange of shares. This year new Dance Halls are being opened at Basildon, Bradford, Stevenage and Hull and a Banqueting Suite at Newcastle, and new Dance Halls are being started at Burnley, Portsmouth, Hanley, and the Empire, Leicester Square.

The first Quarter's Profit of 1961 shows a consistently favourable increase compared with the same period for last year, and we are very pleased with the Trading Results of the Hammersmith Palais and all our recent acquisitions.

We have started Bingo as a means of recreation, in many of our Dance Halls, at times when these Halls were not in full use, but this does not affect our Policy of Mecca Dancing which has proved so highly successful for so many years.

## MR ALEX. ABEL SMITH'S CONFIDENCE

The 34th annual general meeting of the Pressed Steel Company, Ltd., was held on May 30th in the Queen's Room, Baltic Exchange Chambers, 14/20, St Mary Axe, London, E.C., Mr ALEX. ABEL SMITH, T.D., J.P., presiding.

The Secretary (Mr J. S. Kean, C.A.) read the notice convening the meeting and Mr G. Richards, representing the auditors, Messrs. Price, Waterhouse & Co., read the report of his firm.

## PROFIT AND APPROPRIATIONS

Ladies and Gentlemen, The accounts for the year show a profit, after charging debenture interest, depreciation and all taxes, of £1,872,527.

Provision for taxation after investment allowances of £1,280,000 on capital expenditure incurred and after charging £175,000 for tax equalisation amounted to £1,052,534.

From the profit of £1,872,527 there must be deducted the amount of the regular dividends on the two classes of Preference Shares and the interim dividend of 9 per cent paid last November on the Ordinary Shares, which together, less Income Tax, total £386,844. This leaves £1,485,683 to be added to the balance of £2,189,728 carried forward from 1959 and gives a figure of £3,675,411 to be considered.

Your Board recommends a transfer to General Reserve of £500,000 and the payment of a final dividend on the Ordinary Shares of 21 per cent, less Income Tax, which absorbs £809,897. This leaves £2,365,514 to be carried forward on profit and loss account.

## BALANCE SHEET

You will note the large increase of £6,122,047 in fixed assets; this is accounted for by further extensions to our factories at Swindon and Linwood and by new plant, machinery and equipment.

You will note also on the assets side of the Balance Sheet the increase of £676,886 in the item "Interests in Subsidiaries." This increase arises mainly from the formation of our new subsidiary, British Executive & General Aviation Ltd. (BEAGLE) to which I refer below.

The increase of £80,000 in trade investments arises from the subscription of 80,000 shares of £1 each in Prestcold Finance Ltd., to which Company I also refer below.

On the liabilities side, the increase of £1,933,354 in 7,733,416 issued Ordinary Shares of 5s. each is accounted for by the rights issue last May of 7,151,013 Ordinary Shares, by the issue of 264,019 shares as part consideration for the purchase of the share capital of Auster Aircraft Ltd., subsequently transferred to BEAGLE, and by the issue of 318,384 shares as the result of the conversion during the year of £241,200 5½ per cent Convertible Debenture Stock, by

which latter amount you will note the Long Term Liabilities have decreased. The increase of £9,272,744 in Capital Reserves represents mainly the premiums realised in connection with these issues of shares and credited to Share Premium Account.

Revenue Reserves and Amounts set aside for Future Taxation now include a sum of £550,000 for tax equalisation.

Outstanding commitments for Capital Expenditure at the end of the year amounted to £10,650,000, since when the figure has risen to approximately £12 million. These commitments arise largely from the developments at Swindon and Linwood, of which you are already aware and to which I make further reference below.

## THE PAST YEAR

*Motor Car Body Division.*—During the first half of the year our body business was at record levels and profits were very satisfactory. Signs of hesitation appeared in July, but business improved again in August and September, although there was not the same buoyancy as there had been earlier. In October business started to fall away sharply, necessitating short-time working, and the decline continued to the end of the year. Only our tool-making facilities remained fully employed, this work being of a long-term nature.

Steady progress was made with the expansion programme which was announced last year, with the exception of one project, namely the plan to erect a new factory at Jarrow for the manufacture of press tools. Unfortunately, despite prolonged negotiations with the Unions concerned we were unable to come to a satisfactory understanding along the lines of the agreements previously reached with the Unions both in Scotland and in South Wales; therefore we had no alternative but to abandon the project.

In the course of the year the first bodies were shipped from the Linwood plant but the decline in business prevented the build-up of production to the levels that we had hoped to attain.

*Railway Carriage and Wagon Division.*—As I forecast in my speech last year, new orders placed by the British Transport Commission were on a much reduced scale. As a result, the Division operated at below capacity throughout the year.

Two prototype Roadrailers were delivered to the British Transport Commission and I refer below to the further developments which have taken place.

*Prestcold Division.*—The hope which I expressed last year of attaining record sales of domestic refrigerators was not achieved due to three principal factors—the effect on sales of

the action taken by the Government in putting a restriction on the terms permitted for hire purchase transactions; the bad weather experienced throughout the greater part of the summer and the impact of imports of refrigerators from abroad in excess of 180,000 units. As a result, sales failed to reach the levels attained in 1959, despite an improvement in exports.

On the other hand, the commercial refrigeration side of our business continued to develop well and sales exceeded by a satisfactory margin the volume of the previous year.

The gradual build-up of production at the new Swansea factory proceeded according to plan.

Prestcold Finance Limited commenced business on March 1, 1960. The services which the Company offers were well received, both by our distributors and by our customers. I can say that a satisfactory start has been made.

*British Executive and General Aviation Limited (BEAGLE).*—The experience gained over 18 months in the operation of two executive aircraft, equipped with up-to-date aids to navigation and landing which permit flying in almost all weather conditions, left your Board in no doubt of the outstanding advantages offered by this method of executive travel. As a result, with the knowledge and approval of the Minister of Aviation and of the Society of British Aircraft Constructors, the Company announced in October the formation of BEAGLE. At the same time the announcement was made of the acquisition of the whole of the share capital of Auster Aircraft Limited. Subsequently the Company also acquired through BEAGLE the aviation interests of F. G. Miles Limited. These are two well-known companies, both with first-class reputations in the field of light aircraft.

It is our intention that BEAGLE will concentrate on the design and manufacture of a new range of executive and light aircraft for the home and export markets.

This move into aviation represents, in the opinion of your Board, a logical extension of the Company's interests into another field of transport which will enable it to apply its specialised production expertise to the manufacture of light aircraft. I would remind shareholders that during the whole of the war years, and in fact until 1957, the Company was engaged in the manufacture of aircraft sub-assemblies including the rear fuselage for the Hawker Hunter jet fighter.

## THE OUTLOOK

In the *Motor Car Body Division* business in January of this year showed no improvement from the low level reached in December; in February, however, there was a slight upturn and

this more favourable trend has continued throughout March and April, particularly during the past few weeks. As a result, we have been able to resume full time working at Cowley and at Swindon.

Our confidence in the future remains unimpaired, and our expansion programme continues to go forward as planned.

At Swindon the new 723,500 sq. ft. building incorporating a press shop and assembly floor is nearing completion. Installation of equipment has started and we expect to be in a position to begin production by the end of this year. It is my hope and belief that by that time the recovery will have progressed sufficiently far to enable us to make good use of these new production facilities.

At Linwood work will shortly be starting on another 500,000 sq. ft. building, for the production of completely painted and trimmed motor car bodies.

The overall capital expenditure involved in these projects is of the order of £14,000,000; a substantial amount of additional working capital will also be needed when production gets under way. In view of the Glasgow area being designated a Development Area, we made application to the Board of Trade Advisory Committee for financial assistance in connection with the Linwood expansion. I am glad to say that our application has been approved. This means that the finance available from this source, together with the proceeds of the Rights Issue made last year and estimated retained earnings, should cover the greater part of our existing capital requirements, leaving substantial bank overdraft and acceptance credit facilities in reserve to be drawn upon in case of need.

#### RAILWAY CARRIAGE AND WAGON DIVISION

In the *Railway Carriage and Wagon Division* output continues at much the same level as last year. While we have obtained in the face of stiff competition our share of such new orders as have become available, including one from Pakistan for goods wagons, business in hand will do no more than permit us to maintain output at about current levels.

Having regard to the large wagon and coach building capacity of the British Transport Commission itself, I see little likelihood of large orders becoming available in the foreseeable future.

There has, however, been an encouraging development in the receipt of an order from the Commission for 50 "Roadtrailers" for completion early in 1962. This indicates the successful completion of the first stage of tests and the intention to move on to the second stage, namely, running trials as complete trains and evaluation of the commercial potential.

Meanwhile the export business, as I have indicated before, continues to be extremely difficult and we must consider ourselves fortunate in having obtained the Pakistani order.

#### PRESTCOLD DIVISION

The Prestcold Division is hopeful of a rather better demand for domestic refrigerators than last year. Imports of foreign manufactured refrigerators are expected to be lower, the public having realised that a lower priced product is only a worthwhile buy if it is backed by an efficient and country-wide after-sales service organisation.

Purchase tax and credit control inevitably

#### COMPANY MEETING REPORTS

have an important effect on sales and the powers taken by the Chancellor in his recent budget increase rather than remove uncertainties; however, if, as we are given to understand, the purpose of these powers is to avoid the violent changes to which the industry has been subjected in the past, it is slightly more reassuring.

As regards commercial refrigeration, our large refrigerators, showcases and coldrooms are increasingly in demand. Last year we obtained over 20 per cent of the market and we hope to improve on this in the current year.

Satisfactory progress has been made with new lines of household appliances, some of which will be announced this year.

Within the next few months we expect to complete the move of this Division to the new Swansea factory with the transfer of the compressor production lines from our Theale factory, which will be turned over to the manufacture of motor car body components. We shall then be in a position to obtain the full benefits of this ultra-modern lay-out provided a large and steady flow of production can be maintained.

#### BEAGLE AIRCRAFT

I can report good progress with the new BEAGLE range of executive and light aircraft. These aircraft will, we hope, in due course make a major contribution to an aspect of British aviation development and production which has been neglected since the war. Our range of new aircraft, in their specialist categories, will compete with the most up-to-date machines on offer in both the civil and military fields.

The first of this range, the new BEAGLE-Auster Airfield is now in production and gives promise of being outstanding in its class. Developments of earlier Auster aircraft with improved performance are also in production to meet continuing and expanding demands for them as trainers as well as for other purposes.

A lease has been taken of Oxford Airport, which has been equipped with a modern control tower and is now operating successfully as a commercial airport.

To supplement its other activities in the field of aviation the Company is also building up a business in operating and maintaining executive aircraft for other owners.

#### POSITION SUMMARISED

To summarise, the start of our year has not been propitious. Although I do not look for a return this year to the high level of activity in the motor body division experienced in the first half of 1960, I am hopeful that business will continue to improve and permit a more profitable level of operations for the remainder of the year than we have experienced in the first four months.

I am also hopeful that the Prestcold Division which, in addition to disappointing sales of domestic refrigerators, has had to carry the expense of moving to a new factory and of training new labour, will have a better year.

It will of course be some time before BEAGLE can be expected to make a contribution to the Company's earnings.

In considering the outlook it must be recognised that as our various production facilities expand, increased overheads have to be carried which, to be economic, call for the maintenance of a high level of overall activity. Results for the current year will be dependent largely on

#### THE ECONOMIST JUNE 3, 1961

the volume of output that we are able to maintain between now and the year end.

Looking further ahead, I repeat that we have every confidence in the future. The timing of the introduction of new production facilities inevitably involves a nicety of judgment. I am hopeful that, provided nothing unforeseen upsets our forward thinking, the timing of our expansion programme may prove to have been reasonably accurate.

#### BOARD CHANGES

During the year Mr Peter G. Masfield and Mr R. N. Davies joined the Board. Mr Masfield brings with him many years' experience of aircraft design and operation. He will devote his time chiefly to our aviation interests. Mr R. N. Davies has been associated with the Company for thirty-four years and has been appointed Director in charge of Group production.

Mr S. C. E. Lewis has been appointed a Local Director and Mr S. A. J. Frampton and Mr A. H. Pether, Divisional Directors.

At the year end, Mr W. E. Lambourn, who had reached the retiring age for executives, retired from the Board and left the Company's employ after thirty-four years' service.

It is with great regret that I have to report the sudden death on April 19th last of Mr E. G. Rowledge, a Local Director, who had completed twenty-seven years' service with the Company.

I would like to pay tribute to the valuable contribution made by these two Directors during their many years of service.

#### TRIBUTE TO EMPLOYEES

I should like on your behalf to thank all those who work for the Company for their contribution during the year, which was a difficult one, ranging as it did from a very high volume of production to short-time working.

The report and accounts were unanimously adopted: the proposed dividend was approved; and the retiring directors, Mr Henry F. Tarks and The Rt. Hon. Lord Ashburton, DL, JP, who retired by rotation, and Mr P. G. Masfield, MA, FRAeS, and Mr R. N. Davies, who had been appointed during the year, were re-elected.

#### COMPANY MEETING REPORTS

## HARLAND AND WOLFF, LIMITED

### SEVERE COMPETITIVE CONDITIONS

### RECORD VOLUME OF TONNAGE LAUNCHED

### MR J. S. BAILLIE ON EFFORTS TO REDUCE COSTS AND IMPROVE EFFICIENCY

The seventy-sixth Annual General Meeting of Harland and Wolff, Limited was held on May 25, 1961, at the Registered Office of the Company, Queen's Island, Belfast. Mr J. S. Baillie, Deputy Chairman, presided.

At the outset Mr Baillie announced an apology from the Chairman and Managing Director, Sir Frederick Rebbeck, who was unable to be present owing to indisposition. He was, however, pleased to say that Sir Frederick was making excellent progress and hoped to resume shortly.

The Secretary read the Notice convening the meeting and the Report of the Auditors.

Mr Baillie said:

As the Report of the Directors and Statement of Accounts for the year ended December 31, 1960, have been in your hands for some time, I propose with your permission to take them as read. (Agreed.)

As you will see from the figures before you after providing £743,982 for depreciation of Fixed Assets and £150,250 for specific Contingencies, the Profit on Trading at £371,515 is substantially lower than the corresponding figure for the previous year, due to the necessity of making adequate provision for anticipated losses relating to work carried out during the year under review on contracts which were in progress at December 31, 1960.

Shipbuilding, ship repairing and marine engineering form the major part of our activities, and in a situation where the world's shipbuilding capacity is now much in excess of foreseeable demand for some time ahead, competition is bound to be severe, and many contracts are being placed at unremunerative prices. While this state of affairs continues it is difficult to hold out an early prospect of a substantial recovery in the profits available for distribution, whatever the long-term prospects may be. Although the end of this depression is not yet in sight we have faith in the future and are continuing to use every endeavour to reduce costs and improve the efficiency of our undertakings, with the acquisition of modern machinery and the adoption of new techniques. Work on the reorganisation and improvement of a number of the larger slipways in our Belfast Shipyard, to which the Chairman referred at our Annual Meeting last year, continues. The first phase of this project will be completed and fully in operation by mid-1962. Plans for the second phase have now reached an advanced stage. As the Chairman pointed out last year, it was not possible to commence this work earlier as our heavy shipbuilding programme necessitated the uninterrupted use of these particular slipways.

#### OUTPUT

The year's output in terms of tonnage launched was the largest ever recorded by the Company. Thirteen merchant vessels and a number of small craft totalling in all 229,173 gross tons were launched from the Company's Shipbuild-

ing Yards. The 45,000 ton passenger liner *Canberra* for The Peninsular and Oriental Steam Navigation Company was handed over to her owners last week, after the completion of very satisfactory trials, and she is now preparing for her maiden voyage from Southampton on June 2nd. This remarkable vessel has captured the public imagination and each stage of her construction has been followed with great interest. I am sure you would wish me, on the eve of her departure, to send our good wishes to *Canberra* for many years of successful and profitable life in the service of her owners. If I may repeat the words of Sir Donald Anderson, the Chairman of the P & O Company, *Canberra* is a "ship full of original ideas and new techniques and few who have not been involved can imagine how much work goes into the building of ships of this type."

The remainder of the year's varied output of vessels launched comprised the 20,000 ton passenger and cargo liner *Arlansa* for Royal Mail Lines Limited, and cargo liners, bulk carriers and tankers for British and foreign owners. *Arlansa* and her sister ship *Aragón*, launched the previous year, were completed and joined the third of this notable trio, *Amazon*, on South American service.

#### BUILDING PROGRAMME

I am glad to report that the Company's building programme at Belfast includes a number of naval contracts. Throughout the year work proceeded steadily on the Light Fleet Carrier *Vikrant*, for the Indian Navy, which has since been completed and formally commissioned and renamed by Her Excellency The High Commissioner for India, Mrs Vijaya Lakshmi Pandit. The Frigate *Berwick* for Her Majesty's Navy will be commissioned next week while work is proceeding on a *Leander* Class Frigate and the Guided Missile Destroyer *Kent*.

Although we still have in hand or on order at our Shipyards both in Belfast and Glasgow a number of vessels which will keep us fairly well employed throughout 1961, the departure of *Canberra* from Belfast has inevitably resulted in a falling off in demand for the finishing trades. The volume of the redundancy has been accentuated by the absence from our programme for the first time in many years of passenger liner contracts. In spite of the decrease in our shipbuilding activities I would emphasize the fact that our current commitments necessitate the employment of some 27,000 men throughout our organisation.

In common with five other leading British shipbuilding firms, your Company has been invited to tender for the construction of the new 75,000 ton passenger liner for the Cunard Steamship Company Limited, and we are at present engaged in preparing our tender for this important project. We have had unique experience in the design and construction of passenger-carrying vessels of the largest dimensions and our Belfast establishment, as every-

one knows, is fully capable of undertaking a contract of this magnitude.

#### DIVISIONAL ACTIVITIES

The Marine Engineering Division was fully employed during the year and, apart from its output of main and auxiliary machinery installations for vessels under construction in the Company's shipyards, we have undertaken, as in previous years, the contracts for a number of important main machinery installations for vessels building in the yards of other shipbuilders. The impact on the Division of the overall reduction in shipbuilding activity will be partially offset for some time by this additional work. Within recent weeks we have received an order for four main propelling diesel engine units for two vessels for Shaw Savill & Albion Company Limited. The sustained and expanding popularity of marine diesel engines of the B. & W. type is a source of satisfaction to your Board.

I am pleased to be able to report some improvement in the volume of work handled by the Company's Repair Establishments at London, Liverpool and Southampton, but there is as yet no appreciable sign of recovery in the ship-repairing industry.

As stated in the Directors' Report, the output of the Company's Industrial Engine and Electrical Divisions continued at a satisfactory level during the year, a feature being a considerable increase in the output of H. & W.—Cooper-Bessemer gas compressors.

Despite some diminution in overall demand, our Steel Constructional Division obtained a satisfactory volume of new business during the year and the Division continues to be well employed.

#### DIRECTORATE

As recorded in the Report of the Directors, Mr H. R. Humphreys and Mr W. H. Park resigned from the Board in June, 1960, after a long association with the Company both as Directors and executive officers. I regret to record the death of Mr Park later in the year.

We are pleased to welcome to the Board Mr R. R. G. Cameron and Mr J. A. Watt, executive officers of the Company who were appointed directors in June, 1960, both of whom had already given the Company many years of valuable service.

In conclusion, I should like to take the opportunity of thanking all members of our organisation for their loyal co-operation and service throughout the year.

The Report and Accounts were adopted; the proposed dividend was approved; the retiring Directors, namely, Mr R. R. G. Cameron, Mr J. A. Watt, Mr J. S. Baillie, Mr N. McCallum and Mr R. Newell were re-elected. The remuneration of the Company Auditors, Messrs Price Waterhouse & Company was fixed.

The meeting terminated with a unanimous vote of thanks to the Chair.

Sweden

## NEW RECORDS IN PRODUCTION AND SALES

### COMPETITION KEEPS MARGINS LOW ON ALL MARKETS

#### INCREASING DEMAND FOR LONG-TERM CREDITS

The following is an excerpt from the Annual Report for 1960, the Company's seventy-eighth year of business.

#### SUMMARY

Characteristic features of the activities of the Asea Group during 1960 were a high rate of orders and increased production. The turnover of the Group amounted to 1,353 Mkr. (1,222 Mkr. in 1959) and of the Parent Company to 735 Mkr. (653) (Mkr. = Million Kronor = £69,000 approximately); both these values are the highest ever achieved.

The net profit of the Parent Company amounted to 29.9 Mkr. (25) after allowing 14 Mkr. (13) for taxes, 27 Mkr. (0) for the investment fund and 15 Mkr. (15) for the Asea Pension Fund.

At the end of 1960, the Asea Group employed 30,681 persons in Sweden (28,428 the previous year) and about 2,700 elsewhere.

The Board of Directors and the Managing Director propose an unchanged dividend of 8 Kr. per share.

#### THE PARENT COMPANY

The average number of persons employed by the Parent Company was 18,511 (17,576 the previous year), of whom 8,202 were salaried staff (7,820) and 10,309 were wage-earners (9,756).

#### PRODUCTION AND INVESTMENTS

The supply of unskilled labour has been satisfactory, and the number of wage-earners has increased during the year by about 800 persons. However, as previously, there has been some shortage of skilled and specialist labour. In order to cover the more urgent requirements, skilled labour has been recruited from abroad to a limited extent.

The major part of the building work on the heavy welding and machinery workshops, in the Finnsälåten area on the northern outskirts of Västerås—the largest concrete industrial building in Sweden—was completed during the year, and work is now going on to finish the interior.

A new chemistry and physics laboratory is now in use at Västerås. A laboratory has been built at Vällingby on the outskirts of Stockholm for research in the increasingly important field of semi-conductors.

#### MARKET CONDITIONS

In 1960, orders increased in all branches of activity, and the value of these orders was the highest ever recorded. However, a characteristic feature of the year was a high rate of production combined with reduced sales margins. A number of Asea's foreign competitors still appear to have a surplus of productive capacity. The competition for almost every major item sold both in Sweden and abroad was very keen. As far as com-

petition on the export market is concerned, the often considerably higher rates of Customs duty and a sentimental preference for domestic products have caused Asea some difficulties. Another disturbing tendency as far as export sales are concerned is that more and more major purchases are coupled with demands for long-term credits.

As a result of the reduction in pace in the building of Swedish hydro-electric stations, the demands for heavy power-station equipment remained low on the Swedish market.

The high rate of investment activities in Swedish industry was reflected in a still greater increase in orders from practically speaking all branches of industry.

On the export market, the Company's efforts to obtain orders for large generators, transformers and high-voltage switchgear have been successful, and new markets have been captured. A most satisfactory development is that, in keen competition with American and European manufacturers, the first orders from the U.S.A. for large generators and transformers have been secured during the year.

The overseas demand for industrial equipment, which doubled during 1959, continued to rise, and this also applied to the sales of standard products. In all, export orders amounted to 28 per cent (25 per cent the previous year) and export deliveries 27 per cent of the total orders and deliveries of the Parent Company.

#### TECHNICAL DEVELOPMENTS

A characteristic feature of the work of development and design has been the employment of measures to achieve more effective utilisation of all materials, from the mechanical, thermal and electrical points of view. A thorough standardisation of material, design elements and components is also continuing.

An entirely newly designed series of transformers for use in rural networks is in full production.

A lightning arrester with magnetic blow-out has been developed for high-voltage networks. Contraction-type, oil-minimum circuit-breakers have been developed and improved in the High-power Laboratory at Ludvika until they now have higher breaking capacity than was previously thought possible, for example, 3.5 million kVA at a service voltage of 145,000 volts.

New geared motors, including a series of bevel-helical geared motors, have been designed and put on the market. Other new products on the market are travelling deck cranes running on tracks and mine hoists with friction pulleys of welded shell design and hydraulic disc brakes.

#### ORDERS AND DELIVERIES

Orders have been received from the U.S.A.

for two generators, each rated at 40,000 kVA, and for one 62,500 kVA, and two 58,000 kVA, generators for customers in Norway. Two synchronous condensers, each rated at 75,000 kVA, have been sold to customers in Australia and two, each rated at 60,000 kVA, to customers in New Zealand.

For the final stage of electrification of the Oslo-Bergen line, the Norwegian State Railways have ordered seven 5,800 kVA mobile converters and equipment for three converter stations. The appropriate transformers are being manufactured by an Asea Group company, A/S Per Kure, Oslo.

The Swedish State Power Board has ordered a 350,000 kVA transformer which is auto-connected between 400,000 V and 140,000 V and which has the record transport weight of 225 tons, as well as a shunt reactor rated at 150,000 kVA at 220,000 V.

Overseas orders include twelve transformers with a total rating of 840,000 kVA for the Corps of Army Engineers in the U.S.A., and several large units for Thailand and South Africa.

Sales of high-voltage circuit-breakers have been brisk. Orders have been received for a considerable number of circuit-breakers rated between 132,000 and 420,000 V for Australia, Canada, India and Eastern Germany.

The Swedish State Power Board has taken into service a three-phase transformer bank with a rating of 1 million kVA at 400,000 V, and, as far as is known, this is the largest transformer bank in the world.

The Industrial-plant Department has received important orders for electrical equipment for rolling mills. Most of these are for the steel and non-ferrous-metal industries in Sweden, Belgium and the U.S.A. In rolling mills, pressductors have been installed to measure roll pressure and strip tension, which latter is a new sphere of use for the pressductor. Rolling-mill pressductors have been sold to customers in Sweden, Britain, France, Germany and, above all, the U.S.A.

Large arc furnaces have been ordered by Swedish customers. Asea has received its first Australian order for a large arc furnace. Induction stirrers for arc furnaces have been sold in Sweden, Japan, Italy, Czechoslovakia and Germany.

Two high-frequency vacuum furnaces have been sold in Great Britain; they are of a type similar to that previously supplied to customers in the U.S.A. for the manufacture of special high-quality steel.

A considerable number of large complete mine hoists has been sold. Amongst these, mention can be made of six hoists for South Africa, of which the largest are for a net load of 11 tons, and have a hoisting speed of 15 m/s and a hoisting depth of 1,300 m. Also of interest are two mine hoists for the

extension of the central shaft at Kiruna and hoists for customers in South Korea and the Philippines.

Large orders have been received for electrical equipment for paper and cellulose mills, including the electrical equipment for a newsprint machine for a wire width of 7,100 mm. built in accordance with the sectional-drive principle for a maximum speed of 900 m/min., the highest so far in Sweden.

As far as the printing industry is concerned, orders have been received from companies in Sweden, Britain and France. In particular, mention can be made of electrical equipment for a Swedish newspaper which is installing presses which have an individual printing capacity of 70,000 copies per hour and are among the most rapid in the world. The motors for these presses are fed via transducer-controlled, semi-conductor rectifiers. The latter replace d.c. generators and are characterised by high efficiency, compactness and simplicity of installation.

Sales of deck machinery have increased. The first ships' winches of a new worm-gear type, and provided with a.c. multi-speed motors, have been sold to a Swedish shipping line. A new type of hydraulic steering gear has been put on to the market.

The sales of sugar centrifugals have been extended to the Argentine and Mauritius. Important orders have also been received from old customers in other parts of the world.

The Swedish State Railways have ordered 100 traction motors, each rated at 1,500 h.p., the largest traction motors which, as far as is known, have ever been designed for a frequency of 16 $\frac{2}{3}$  c/s.

Deliveries to the Swedish State Railways include seven ore locomotives, of which three have a tractive effort of 80 tons and are among the most powerful locomotives in the world, six three-coach, light-weight train sets and a trial delivery of two three-coach sets for Stockholm suburban traffic. Further, in collaboration with AB Svenska Järnvägs-verkstäderna, 27 coaches have been supplied to the Stockholm Underground Railway.

The demand for standard products has increased considerably both in Sweden and abroad.

Sales of insulating material and fibre-glass products have markedly continued to rise.

#### NUCLEAR POWER

The manufacture of the equipment for the Ägesta reactor (R3/Adam) is proceeding, both in Asea's own workshops and those of the sub-contractors and the suppliers of components.

The main design and the cost calculations for the reactor at Marviken (R4/Eva) are to be completed by the middle of 1961 now that certain guiding principles on the design have been determined during the past year. The preparatory investigations are being carried out jointly by Asea and Nydqvist & Holm AB on the instructions of the Swedish State Power Board and AB Atomenergi.

A detailed tender has been worked out by AB Reaktorteknik, which is owned jointly by Asea and Nydqvist & Holm AB, in collaboration with General Electric Co. for a boiling-water reactor with an electrical output of 50 MW and submitted to a Swedish consortium.

A research reactor, R2-0, has been supplied

to AB Atomenergi at Studsvik. It was possible to keep within the very short delivery time of twelve months and the reactor became critical on June 20, 1960.

#### ACTIVITIES OF THE MAJOR AFFILIATED COMPANIES

##### SURAHAMMARS BRUKS AB

(Steelworks)

Ore was mined in the company's own mines on a larger scale than in the previous year. The manufacture of pig iron and chills at Spännarhyttan has increased.

Production has increased at the steelworks at Surahammar.

An installation for the vacuum casting of steel was taken into use at the end of the year.

##### AB ELEKTROHELIOS

(Domestic appliances, industrial heaters, etc.)

The activities of the company during 1960 developed satisfactorily.

Sales of combined sink-and-cooker units developed according to plan.

The demand for the company's table-top hot plates and cookers, and small domestic equipment—irons, toasters, etc.—has increased.

The combined refrigerator and chilled larder which was introduced the previous year is now selling well and the demand is good.

The demand for refrigerators and freezers continued to increase. In order to meet this, production has been organised in two shifts.

The demand for the company's industrial kitchen equipment and other industrial equipment continued to increase both in Sweden and on the export market.

The activities of the company's four foreign subsidiaries developed according to plan. Exports increased considerably. The German and Norwegian companies started their activities in April while the Dutch and British companies were in operation during the entire year.

The company's fifth foreign subsidiary—the Danish one—started its activities on January 1, 1961.

##### AB LILJEHOLMENS KABELFABRIK

(Cables, capacitors, etc.)

The transition to plastic as an insulating material and cable sheathing continues, but the production of rubber-insulated and paper-insulated cable has also increased. The increase in orders is greatest in the case of high-voltage, paper-insulated cables.

Yet another world record in capacitor manufacture has been achieved in that a 400 kV series-capacitor rated at 185,000 kVA has been taken into use at Vittersjö. As during previous years, the greater part of the capacitor production has been exported.

##### HISS AB ASEA-GRAHAM (formerly Graham Brothers AB)

(Lifts, escalators, special lighting equipment)

Among major orders, mention can be made of four high-speed lifts for the fifth skyscraper to be built in Stockholm, lift equipment and airfield lighting in the building of the Arlanda airfield, transistor converters for lighting purposes in passenger coaches on the Swedish State Railways, lighting-control equipment for the Royal Dramatic Theatre in Stockholm, and equipment for airfield lighting in Mozambique.

By virtue of an agreement with Asea, the company took over the lift manufacturing activities of Asea at the end of the year.

##### AB ASEA SVETSMASKINER (Aseaweld)

(Electric welding equipment, electrodes)

During the year, sales of the company's products increased considerably.

The orders received include, amongst other things, a butt seam welding set, five sets of equipment for the manufacture of heavy chain, eleven automatic flash-welding machines for welding steam-boiler tubes, several projection welding machines for welding heat-exchangers, two large flash-welding machines for a maximum welding area of 16,000 mm<sup>2</sup>, and a similar one for a maximum welding area of 25,000 mm<sup>2</sup>, and two large pneumatically operated spot-welding machines and three seam-welding machines for joining wide strips for continuous annealing.

A new high-yield electrode of rutile type, Z18P, has been much in demand. Several types of electrode for use in the nuclear-power industry have been developed and put on to the market. Multi-operator rectifiers of germanium type rated at 2,000 A have been designed and delivered.

##### AFFILIATED COMPANIES OUTSIDE SWEDEN

During 1960, sales by these companies showed a considerable increase both as far as products from Sweden, and products manufactured at the companies in question, were concerned.

The factory installations in Oslo (transformers, electric furnaces, electric stoves and ranges), São Paulo (transformers), and Melbourne (motors, transformers) are being extended.

Preparations have been made to set up new subsidiary companies in Mexico, Colombia, Uruguay, Argentina and Portugal and for a factory for the manufacture of motors in Mexico.

#### CONDENSED STATEMENT OF CONSOLIDATED ACCOUNTS FOR 1960

|                                                                                                                                        |             |

# GALLAHER LIMITED

(Incorporated in Northern Ireland)

## EXPECTATION OF GOOD RESULTS REALISED

RECORD NET PROFIT EXCEEDS £5,800,000

## INCREASE OF CAPITAL APPROVED

## MR CECIL W. MASON ON THE OUTLOOK

The sixty-fifth Annual Ordinary General Meeting of Gallaher Ltd. was held on May 31st at Granite House, Cannon Street, London, E.C., Mr Cecil W. Mason, Chairman, presiding.

The Secretary, Mr George Iliff, ACA, read the notice convening the meeting and the report of the auditors.

The following is the Chairman's Statement circulated with the report and accounts for the year ended December 31, 1960:

In his Statement last year Sir Edward de Stein said that, despite several unsatisfactory factors, your Directors remained confident in the future of your Company and hoped to be able to show as good, if not better, results for 1960.

I am, therefore, glad to be able to say in my first Statement as Chairman that the results have justified his remarks. My colleagues and I appreciate the lively interest Sir Edward, who is now our President, continues to take in all the Company's activities.

### TRADING RESULTS

The Group profits, before tax, for the year 1960 at £11,743,277 show an increase of £2,225,600 over 1959. The charge for taxation of £5,908,977 shows a substantial increase in relation to profits as the 12½ per cent Profits Tax rate applied to nine months of the 1960 profits whereas the 10 per cent rate applied for the complete year 1959.

In the 1961 Budget the rate of Profits Tax payable on profits earned after April 1, 1961, has been increased from 12½ per cent to 15 per cent. Based on the 1960 profits an increase of 2½ per cent in the Profits Tax rate would have cost the Group approximately £300,000.

The Group net profit after tax for 1960 is a record at £5,834,300. The Directors have transferred to General Reserve Account the sum of £2,500,000, which increases the balance on the Group's General Reserve to £10,000,000. An interim dividend of 5 per cent, less tax, was paid in 1960 on Ordinary Capital of £24,062,500; the Directors recommend a final dividend of 15 per cent, less tax, on the increased Ordinary Capital of £24,300,000.

After the appropriation to Reserve referred to and after making provision for dividends and appropriating £100,000 for pensions, the carry forward in the Consolidated Profit and Loss Account is £3,954,044, compared with £3,887,714 brought forward from 1959.

As a result of the increase in tobacco duty imposed in the April, 1960 Budget the Group has made an exceptional profit after all relevant taxation of £491,568, which has been carried to the credit of Reserve for Contingencies. The exceptional profit is, in fact, only about one quarter of the £2,000,000 required to finance the values, as increased by the 1960 Budget, of Duty Paid Stocks and Debtors.

### CURRENT ASSETS

Total current assets in the Consolidated Balance Sheet amount to £97,692,128, an increase of £12,755,035 over the 1959 figure. The largest single item contributing to this increase is stocks of leaf tobacco. It has been necessary to increase our stocks of tobacco to preserve durations in relation to the increased turnover.

Stocks of work-in-progress and of finished goods at the end of 1960 are substantially greater than in 1959. This has been brought about both by the expansion of the Group's turnover and the higher value of stocks caused by the increase in tobacco duty in the 1960 Budget.

The increase in Debtors is due to two factors: namely, the increase in the volume of the Group's sales and the higher prices arising from the increased rates of tobacco duty.

### FINANCE

During 1960 the issued Ordinary Capital of the Company was increased from £20,625,000 to £24,300,000 by two separate issues. First, the Ordinary Stockholders were offered one new 10s. 0d. Share at a price of 30s. 0d. for each £3 of Ordinary Stock held. The gross proceeds of this issue amounted to £10,312,500.

Secondly, the Directors wished to give to employees an opportunity of taking a financial interest in the Company, and the balance of Authorised Capital which remained after the rights issue referred to above, namely £237,500, was offered at 20s. 0d. per 10s. 0d. Ordinary Share to employees, with the restriction that those who received allotments could not sell their Shares for a minimum period of three years. I am pleased to say that this offer was over-subscribed and that about 1,700 of the Group's employees applied for and were allotted Shares.

As a result of these issues, the issued Ordinary Capital was increased by £3,675,000 and the sum of £6,894,623 was credited to Share Premium Account, being the gross premium on the Shares issued less the expenses of the issues.

The net proceeds of the Share issues during the year together with the retained profits have enabled us to finance the higher value of fixed and current assets, and, in addition, to reduce our borrowings on Bank overdrafts and Bills negotiated by about £2,300,000.

All of the Company's capital is now issued and fully paid. Your Directors have arranged for an Extraordinary General Meeting to be held for the purpose of increasing the Authorised Capital from £30,000,000 to £40,000,000 by the creation of 10,000,000 Unclassified Shares of £1 each.

There is no present intention of issuing any of the new Shares, but your Directors consider it is advisable that they should be in the position to issue new Shares if the need should arise.

### LEAF SUPPLIES

During 1960 we were able to improve our

stock position and bought more than twelve months' replacement of leaf tobacco. This was, of course, rendered necessary by the increase in the Group's sales and the need to maintain the duration of our stocks in relation to usage. The overall cost of our purchases again rose and this increased cost is being reflected in current costs of manufacture. The constant increase in leaf prices in all markets continues to be a disturbing factor.

The 1960 USA crop was particularly suitable to American manufacturers but, nevertheless, we were able to purchase our requirements.

The 1960 Southern Rhodesian crop was a record, but owing mainly to drought the quality did not come up to our expectations. The auction of the 1961 Rhodesian crop commenced in the middle of March and present indications are that there will be another record, and we have hopes that the quality will be more suitable for UK requirements.

The 1961 Canadian auctions were completed in March and the crop was only of average quality. We were unable to buy our full requirements owing to a shortage of some of our grades and our overall purchase price was fractionally above last year. Prior to the present auction system which started three years ago, the Canadian tobacco-growing industry had the highest reputation for grading and handling their tobacco. Since then there has been a deterioration and this year the standard left a great deal to be desired. I sincerely trust that in the industry's own interest there will be a marked improvement next season.

### SALES

During 1960 the Group's turnover again increased to a record figure of £320,000,000 compared with £278,000,000 in 1959. In part this is due to the higher prices charged for all our products as a result of the increase in tobacco duty rates imposed in the 1960 Budget, but it is mainly accounted for by our increased sales, which include 10 months' sales of our new tipped brand "Nelson."

Throughout 1960 competition was more intense than ever before in all classes of cigarettes, with many new brands and styles of packing being introduced and heavily advertised.

Nevertheless, our main cigarette brands continued to increase their share in their respective markets, and "Nelson" tipped, which we introduced in March, 1960, has been an outstanding success in this highly competitive market.

Despite the fact that the overall pipe tobacco trade is no longer an expanding one, due partly to a change in smoking habits and partly to cost, your Company has retained its share of this trade and its main brands have shown a modest increase in sales.

Cigar smoking continues to increase in popularity and there has been some expansion in our cigar business.

### GENERAL MATTERS

In last year's Statement we informed you of the steps which were being taken to increase our manufacturing capacity. The extension to our factory premises at Lisnafillan in Northern Ireland has been completed and is now in full production. The new factory in the Manchester area commenced production in September, 1960.

These additions to our manufacturing capacity have enabled us to take some of the strain off other factories where there has been a considerable amount of overtime and double-shift working.

The new cigar factory in Cardiff for J. R. Freeman & Son Limited is nearing completion and production should commence in four or five months' time.

### SOUTHERN RHODESIA

At the commencement of the 1961 buying season our Salisbury building and re-equipment programme was completed. This has included considerable additions to our packing factory, plant and machinery, new administrative offices and modern welfare facilities, and has been greatly appreciated by our European and African employees. Our thanks are due to the local management and all concerned for the highly efficient organisation, of which we are justly proud. Your Deputy Chairman has recently returned from Salisbury and is full of praise for what has been accomplished.

Rhodesian tobacco is now a considerable factor in our overall leaf purchases and we have encouraged and will continue to encourage this important industry. It is very desirable that every effort is made by the growers to continue to improve the standard of their crops, which is in their best interests and most important to us as manufacturers.

### ENGINEERING SUBSIDIARY

I am pleased to be able to report that our engineering subsidiary has had a satisfactory year and has increased its profits. Great credit is due to all concerned in the management of this subsidiary.

### OUTLOOK

Our sales for the first three months of this year have shown a satisfactory increase over the corresponding period of 1960, in spite of there being a tendency for consumption to level out as a result of last year's Budget increase. We attribute this increase in our sales to the quality of our products.

Your Directors are very much alive to the present intense competition and have plans to strengthen further your Company's position by the introduction from time to time of brands in categories in which we are not fully represented.

During the year the working week in our factories was reduced from 44 to 42 hours without loss of wages, and, in addition, basic wage rates were increased. This increase in wages costs and the higher prices of leaf tobacco to which I have already referred, combined with the intense competition, must have their effect on our profit margins.

In the 1961 Budget the Chancellor of the Exchequer is seeking powers to enable him by

Order to impose a surcharge or allow a rebate, not exceeding 10 per cent of the duty otherwise due, in respect of goods including tobacco, and also to impose a Payroll Tax.

We hope to be able to present satisfactory results for the current year, but this must be coloured by the uncertainty as to whether and when these powers will be used.

### DIRECTORS AND EMPLOYEES

Mr R. G. Knight, who has completed 35 years' service and has been Chief Accountant of the Company for the past 15 years, will be retiring at the end of May this year. I take this opportunity of wishing him many happy years of retirement.

In view of the increasing size and complexity of the Company's business the Directors have appointed a Board of Management consisting of senior employees representing all departments in the business. The Board of Management meets regularly under the Chairmanship of the Managing Director and is proving to be of great assistance to him, and I am confident will make a valuable and vigorous contribution to the Company's future.

I extend my sincere thanks to everyone in the Company for their loyalty and enthusiasm which have so greatly contributed to the success of your Company.

The report and accounts were unanimously adopted; the retiring directors, Mr Cecil W. Mason, Mr M. R. Norman, OBE, and Mr J. N. Hogg, were re-elected.

At a subsequent Extraordinary General Meeting the proposed increase of capital was approved.

# TOZER KEMSLEY & MILLBOURN (HOLDINGS) LIMITED

The thirteenth Annual General Meeting of the Company will be held in London on June 21st.

The following are extracts from the circulated statement of the Chairman, Mr J. R. Millbourn:

There are certain contingencies in respect of our business in the USA and the Congo Republic, the final outcome of which is difficult to assess at this time. We have therefore considered it prudent to set aside a special retention of £100,000 to cover the contingency of any additional losses which might arise.

It is proposed to capitalise part of the unappropriated Profit by the issue to ordinary shareholders of fully paid ordinary shares in the proportion of one for ten.

The improvement in turnover for the first quarter was maintained in our traditional Commonwealth Markets, but orders fell away substantially in the last quarter due to economic and political difficulties in some of our markets.

Trading conditions generally are not buoyant and we must expect to feel the effects of credit restrictions particularly in Australia, but I see no reason why we should not look forward to reasonable trading results in the current year. Provided no unforeseen circumstances arise your Board expect to be able to recommend dividends on the ordinary share capital as increased by the proposed bonus issue at rates not less than those paid or proposed for last year.

# DUNLOP

Rubber Company Limited

## RECORD TURNOVER

The Sixty-second Annual General Meeting of the Dunlop Rubber Company Limited was held on May 29 in London.

Sir G. Edward Beharrell, the chairman, presided and, in the course of his speech, said:

The year 1960 has been one of considerable growth and the volume of goods sold was greater by about 5 per cent when compared with the previous year. Turnover increased from £261 million to a further record figure of £275 million. Our sales in the last few months were, of course, affected by the recession in the motor industry in several countries but sales in other directions were well maintained.

The benefit from the increased volume during 1960 went a considerable way towards offsetting the cost of increases with which we were faced during the year. Of these the price of rubber was the principal factor—and this is referred to and illustrated in the Directors' Report—but increased labour rates were also important. In total these two items increased our costs, when compared with those of the year before, by several million pounds. On the other hand, selling prices were not raised to a commensurate degree; but as a result of greater efficiencies and the additional turnover our profit was only slightly lower than in 1959. A noteworthy feature was the fact that the overall profit from our United Kingdom operations was 15 per cent higher, and the results achieved by some of our units were considerably better than in that year.

### DIVIDEND

Taxation absorbed a higher proportion of our net profit for the reasons already stated in the Directors' Report, and this of course affected our disposable profit. Nevertheless, the Directors consider that the results and prospects justify an increase in the final Dividend from 1s. 2d. to 1s. 3d. per 10s. stock unit, thus making the total dividend for the year 1s. 7d. or 15½ per cent. I hope stockholders will approve their recommendation. At the same time I would like to point out that in each of the last four years the ordinary dividend has been increased and that, allowing for the bonus issue in 1959, the total rate paid and recommended for 1960 is over 40 per cent higher than the rate paid for 1957, whilst the dividend is still twice covered. I would also like to advise stockholders that the Board has decided that the present disparity between the interim and final payments should be reduced. Therefore, in the absence of unforeseen circumstances, the interim dividend for 1961, to be announced in October, will be at a higher rate than in 1960, although this must not be taken to imply a higher distribution in total for the year.

It would seem that the time of accord between the countries of the Common Market and the Free Trade Association may not be far off. At the very least, the ultimate probability of a grander economic design has ceased to be a flight of fancy. This is the time of the count-down, and for the country and the individual firm we are entering a period when the possible consequences of the alliance should be carefully and urgently considered. We have the chance now to temper our enthusiasm with facts.

For one thing, too much should not be expected too quickly from the larger trading area. Even when tariffs have disappeared and fiscal policies have been suitably related, there is no reason to believe that problems of production and distribution will disperse in a spirit of economic unanimity. Too much, perhaps, is sometimes read into the example of the Iron and Steel Community. I would find it very difficult to visualise, for example, the fast emergence of a single sales policy within Europe for some of our major products even after other discords have been harmonised.

The fact is that very real natural differences exist between countries, and they can be expected to continue beyond the point of economic unity. In our experience we have found significant national distinctions in tastes and outlook; road surfaces and other physical conditions vary quite startlingly between countries; there are noticeable contrasts in the characteristics of the cars and trucks manufactured in Europe; and driving habits are seldom the same. These differences, and others like them, will disappear in time, of course, but only in time, for the business of getting to grips with them is not always as straightforward as it might seem. As an instance, when something like standardisation is being discussed between national groups the spirit of co-operation may be willing but the translation is often weak. As Professor Beloff recently emphasised, the discussion of ideas among nations is not made any easier by the subtle way that words can change in translation.

### OPPORTUNITY FOR GROWTH

It is already obvious that even in its preparatory stage the Common Market, with its blend of idealism and determination, has achieved a character of its own. It possesses a spirit of confidence and enthusiasm which augurs well for the continued growth of the area. Of course, even in a dynamic economy not every company is dynamic, and it would be as well if we all accepted the fact that the closer association of economies makes available the opportunity for growth, not growth itself.

For a number of years, with this thought in mind, your Company has been examining how best it could prepare itself for any eventuality. Obviously, the divisions and companies within the United Kingdom would not necessarily be affected in the same way. For some there would be the excitement of broadening horizons and how best to take advantage of them; for others there would be heightened competition. In any event each division has been required to study the European market, to consider the modifications that may have to be made in its organisation and products to take account of changing conditions, and generally to equip itself for the future challenge. Needless to say, an exercise of this kind, even if primarily directed towards Europe, strengthens a division's effectiveness in other markets as well.

On a smaller scale and in less detail, the French and German companies have reproduced the general pattern of diversification of Dunlop in the United Kingdom. The French company, whose factory at Amiens is one of the most

advanced tyre manufacturing units in the world, also produces wheels and rims. It is first among French producers of latex and other foam products, and has substantial interests in synthetic rubber manufacture. The German company, which was rapidly rehabilitated after the war, soon consolidated its position as an important tyre manufacturer. Then it turned its attention to foam products, flooring and sports goods. More recently chemical products and rubber industrial products are being developed.

There are, then, major Dunlop manufacturing units within the European economic areas. In addition a number of selling companies, a large and long established direct export business to the whole of Europe and an arrangement under which we have tyres manufactured for us in Italy provide the Group with opportunities for full participation in the Common Market and the Free Trade area. As the growth of these areas accelerates, your Group is in a position to take advantage of them whether they remain apart or come together. It is worth emphasising again, perhaps, that the larger units provide no more than an opportunity for growth. In Dunlop we intend taking that opportunity.

Research: In my statement in June, 1959, I said that so much research had been carried out in the rubber industry throughout the civilised world that for any progress to be made in the current period of development it was essential to delve more deeply into the fundamentals of rubber technology. I stressed that the Company was completely alive to the importance of following such a policy, and was therefore directing a substantial portion of its research capacity to fundamental work of this kind.

I am pleased to be able to say that the results of carrying out this policy are now beginning to show themselves.

One of the main items of fundamental research over the last few years has been meeting the increasing and exacting demands of the vehicle tyre of the future. Much attention has therefore been given to finding out what molecular structure should be built in to a synthetic rubber to give a balance of properties between safety and performance. This work has resulted in the production of the first of a new line of "energy-absorbing" tyres, the "Elite" tyre, with exceptional anti-skid and breaking properties.

### CURRENT YEAR

In contrast with the early months of 1960, but in accordance with our expectations, the current year started quietly, largely due to the recession in the motor industry which persisted until fairly recently.

For the year as a whole it is too early to say how we shall fare. Like all manufacturers as widely based as we are, we cannot isolate ourselves from the economic conditions of the world's many parts. We are not, however, dissatisfied with the prospects and forecasts of most of our divisions and companies and we have good reason to hope that our current year's results will show further progress.

The report was adopted.

## Consolidated Balance Sheet at December 31, 1960

(condensed)

| LIABILITIES                                | DM                   | ASSETS                        | DM                   |
|--------------------------------------------|----------------------|-------------------------------|----------------------|
| Share Capital . . . . .                    | 630,000,000          | Fixed Assets . . . . .        | 1,130,300,000        |
| Reserves . . . . .                         | 475,700,000          | Participations . . . . .      | 237,600,000          |
| Provisions . . . . .                       | 422,500,000          | Stocks . . . . .              | 438,300,000          |
| Current Liabilities                        |                      | Accounts Receivable . . . . . | 603,800,000          |
| Loans . . . . .                            | 200,000,000          | Liquid Assets . . . . .       | 289,500,000          |
| Long and middle term liabilities . . . . . | 509,800,000          |                               |                      |
| Short term liabilities . . . . .           | 354,200,000          |                               |                      |
| Profit . . . . .                           | 107,300,000          |                               |                      |
|                                            | <u>2,699,500,000</u> |                               | <u>2,699,500,000</u> |

**Turnover** Compared with the previous year, the total turnover in 1960 rose by 21.7 per cent. to DM 2,700 m. which means an increase of DM 481 m. From this amount, DM 317 m. account for home sales and DM 164 m. for exports which alone represent 33 per cent. (DM 884 m.) of the total turnover.

**Capital Expenditure** In 1960, a total of DM 422 m. was invested. Since 1952 when the Company was re-founded, a total of DM 2,000 m. has been expended of which more than 57 per cent. could be financed from depreciation accounts. In 1961, capital expenditure will be maintained at the same high level.

**Research** In 1960, DM 113 m. or 4.2 per cent. of total sales were spent for research and development. 20 per cent. of total sales are of products introduced during the last five years.

**Personnel** During the year under review, the total of workers

and employees was increased from 43,363 to 50,332. Turnover per head has risen from DM 50,000 in 1959 to DM 56,000 in 1960.

**Share Capital** In 1960, the share capital was increased by DM 68 m. to DM 630 m. and in the beginning of 1961 by DM 70 m. to DM 700 m. The funds obtained from these capital increases will be used for further capital expenditure, thus enabling the Company to maintain a sound ratio between equity capital and borrowings. The Annual General Meeting of May 16, 1961 has authorized the Executive Board to increase the share capital by DM 100 m. until May 1, 1966, by the issue of new shares (authorized capital).

**Dividend** At the Annual General Meeting it was resolved to distribute a dividend of 18 per cent. for the business year 1960. To judge by the good results of the first months of this year, a satisfactory business development can be expected also for 1961

# THE ORION INSURANCE COMPANY LIMITED

## SCOPE OF OPERATIONS OUTLINED

## POLICY OF BRANCH DEVELOPMENT

## MR DUDLEY R. SCHOLEY ON THE YEAR'S RESULTS

The thirty-first Annual General Meeting of The Orion Insurance Company Limited will be held on June 15 at 70/72, King William Street, London, E.C.4.

The following is the Statement by Mr Dudley R. Scholey, the Chairman, which has been circulated with the Report and Accounts for the year ended December 31, 1960:

Mr W. A. Osborne, who retires from the Board by rotation this year, has decided not to seek re-election owing to advancing years. He has been a Director of the Company since 1953 and we shall miss the kindly presence of a loyal and valued colleague.

Sir Geoffrey Barnett accepted our invitation to join the Board and he was elected a Director on January 17, 1961. Shareholders will be asked to confirm his appointment at the Annual General Meeting. Sir Geoffrey has wide commercial interests and his long experience will, I am sure, be of great value to us.

### OPERATIONS AND DEVELOPMENTS

The number of shareholders has considerably increased since our last Annual General Meeting and before commenting upon the results for 1960 I feel that shareholders will be interested to know something of the scope of our present operations and of certain developments which are in contemplation.

Broadly speaking, the Company transacts all classes of insurance business, at home and overseas, except Life Assurance and, as yet, Motor business in the United Kingdom. Our overseas operations, conducted through Branches and Agencies, are mainly in Canada and Australia but we are also represented on the Continent of Europe, in the Sudan, East Africa, the West Indies and Hong Kong.

Furthermore, the Company acts as sole Underwriting Agent for The Drake Insurance Company Limited and for The Sphere Insurance Company Limited for Marine, Aviation and Non-Marine business and in both these Companies it has a substantial, though not controlling, financial interest. In respect of Aviation business only, the Company also acts as Underwriting Agent for The Victoria Insurance Company of Australia and The New India Assurance Company of Bombay.

Marine Insurance, which was the basis of our entry into the Insurance world, still constitutes our major Underwriting Account and it has, over the 30 years of our existence, contributed substantially to profits.

Aviation Insurance, which we commenced writing at a later stage, has now grown to be a considerable Account and our entry into this most difficult field has, we feel, been fully justified.

Our Fire, Accident and Miscellaneous business is underwritten and controlled from our Underwriting Room in Lloyd's Building and from our Head Office in London. The major portion of our Non-Marine income at present emanates from Lloyd's Brokers and of the total premiums

obtained from this source a substantial part consists of United States business placed in the London Market.

In addition, through the Underwriting Agency of Alexr. Howden & Company Limited, the Company writes a highly specialised Account of Excess of Loss Reinsurance business which has, over the years, been a welcome contributor to profits.

We have for many years held a substantial, but nevertheless minority, shareholding interest in Alexr. Howden & Company Limited, with whom we have had a long and happy association since our Company's formation, but we, of course, take no part in the direction or management of their business. The excellent dividends we have received from this source over the years have very amply justified our acquisition of this holding and are, in themselves, a tribute to the Chairman and Directors of that Company.

### NEW BRANCH OFFICES

With the object of securing a better balance within our Fire, Accident and Miscellaneous Account, we are endeavouring to expand our business in the United Kingdom by the opening of Branch Offices. So far, only two have been established, one at Manchester and another at Bristol. We hope, before next year, to set up two more, at Glasgow and at Birmingham, in both of which cities we are already assured of a reasonable measure of support.

That this policy of Branch development will, in the long run, be justified I have little doubt but, in the early years, I am bound to say the process is an expensive one. Although we must expect progress to be slow having regard to the competition in this field, we believe the Company has much to offer to the insuring public and to Insurance Brokers through its good service, its independent rating approach and the scope of cover afforded by its policies.

I have mentioned earlier that the Company does not, at present, undertake Motor Insurance in the United Kingdom. We consider the time has now come when we should commence transacting this admittedly difficult class of business, since we believe that the ability to grant Motor Insurance cover is a service which will aid our development plans.

Turning to the results for 1960, you will notice that the Profit and Loss Account and Balance Sheet are presented in a new form which I hope you will agree is more in accord with modern practice.

### MARINE AND AVIATION DEPARTMENT

Conditions in the Marine Market, for both Hull and Cargo business, continue to be difficult. Although there are slightly more hopeful indications for the future we have, nevertheless, considered it prudent to institute a degree of curtailment in certain sections of our growing Account.

I stated in my report last year that the 1957 Underwriting Account, the one under closure

this year, would probably develop along similar lines to that of 1956, which closed with a very small loss. The 1957 Underwriting Account has, in fact, closed with a small margin of profit. The 1958 Underwriting Account, which will be closed at the end of 1961, shows a definite improvement at this stage upon that of 1957. With regard to the Open Underwriting Accounts of 1959 and 1960, I refrain from making any forecast concerning final results other than to say that, to date, these Accounts indicate that the improvement in 1958 is at least being maintained.

Taking into consideration the overall position and the impact of taxation on our Marine figures, your Directors have deemed it to be proper to transfer the sum of £25,000 to Profit and Loss Account out of the balance of profits retained in the Marine Fund in respect of 1957 and previous closed Accounts.

The premium income shows an increase on that of the previous year and the Marine Fund now stands at £2,360,288 (132.4 per cent) compared with £2,103,176 (131.3 per cent).

The 1957 Aviation Account, the figures of which are included in the Marine total, has closed with a small profit which in the light of Market conditions we regard as satisfactory.

### FIRE, ACCIDENT AND MISCELLANEOUS DEPARTMENT

I regret that this year I have to report the necessity of a transfer from Profit and Loss Account of £14,907. This adverse result is due to the continuing high level of Fire and Burglary losses on the Home side and to losses arising out of Venezuelan Bond Reinsurances placed in London.

The United States business in the Account which, as I have already stated, forms quite a substantial proportion of the total, is now showing a welcome improvement.

Canadian Insurance appears to be slowly emerging from its difficult period, and although Market conditions are improving it would be prudent to refrain from undue optimism regarding the future even though a small profit has been made in the year under review in our own Account and our Agents report more favourably on the situation.

With the exception of Australia and Italy, where our results have not been good, our operations elsewhere overseas have come out on the right side.

### PROFIT AND LOSS ACCOUNT AND BALANCE SHEET

The increase in the Authorised Share Capital to £1,000,000 as approved at last year's Meeting, and the subsequent issue of 150,000 new Ordinary Shares, are given effect to in the Accounts. The new money totalling £375,000 has increased the Issued Share Capital by £150,000 to £650,000 and the Share Premium

### THE ECONOMIST JUNE 3, 1961

Account by £225,000 to £372,750. Shareholders' Funds at £1,390,555 compare with £970,272 last year. Total Assets are now £9,077,518 against £7,608,480 last year.

Income from Investments amounted to £310,156 being an increase of £57,529 over last year. The market value, or where there is no quotation, the estimated value, of our Investments at December 31, 1960, was, in the aggregate, in excess of the Balance Sheet figures.

### GENERAL

My statement upon the year's activities would indeed be incomplete without expressing warm appreciation of the services rendered to the Company throughout the past year by the Management, Senior Officials and all members of our staff both at home and overseas.

To our Agents and friends, in the United Kingdom and abroad, we also tender our thanks for the valued support they have given us throughout the year.

## "LA RINASCENTE"

### GENERAL MEETING

An ordinary and extraordinary General Meeting of Stockholders was held in Milan on April 21st. The Meeting, chaired by Dr Aldo Borletti, was attended by 82 participants representing directly or by proxy 74,290,074 shares.

The Meeting, sitting in ordinary session, approved the Directors' ample report, which illustrates the further progress made by the Company during the financial year with the opening of another 5 Uniprice Stores (at Leghorn, Monza, Palermo, Rome and Turin) and a Branch of the Department Stores at Genoa; gross sales for the Company's 88 stores exceeded 80,000 million lire during the financial year. The Meeting then approved the Balance Sheet as of December 31, 1961, and the distribution of profits; the Profit and Loss Account, after deduction of L. 450,000,000—for depreciation, shows a net profit of L. 940,634,424—allowing the distribution to stockholders of a dividend of L. 7 per share (as compared with L. 6 for the previous financial year).

The Meeting, sitting in extraordinary session, approved the Board of Directors' proposals and resolved to increase the Company's capital from L. 6,000,000,000 to L. 9,000,000,000 by means of the issue of 60,000,000 new shares of par value L. 50 each, of which 20,000,000 ordinary and 40,000,000 preferred shares, all ranking for dividend as from February 1, 1961, to be offered to stockholders at the price of L. 102 per share on the basis of 3 new shares (1 ordinary and 2 preferred) for each group of 6 old shares at present held.

With a view to favouring a wider basis of shareholding and strengthening staff interest in the Company's efficiency and development, all personnel having a minimum length of service were reserved the right of subscribing, on the same terms as the stockholders, to 1,146,584 preferred shares devolving to the Company on the shares held by the Company itself, as shown in the Balance Sheet.

The increase in the Company's capital thus resolved by the meeting and for which the prescribed authorisations have been obtained, will, after homologation by the Court, be carried into effect during the last ten days of May.

Meanwhile the dividend of L. 7 per share is payable at the Banks appointed thereto, as from April 27, 1961.

### HIGHER PROFITS AND DIVIDEND

The Twenty-fifth Annual General Meeting of New Broken Hill Consolidated Limited will be held on June 20th at 6 St. James's Square, London, SW1.

The following is an extract from the Statement by Mr L. B. Robinson, the chairman, which has been circulated with the report and accounts:

In 1960 the output of ore was appreciably greater than in 1959, but was regulated so as to extract a far lower average lead grade and a higher average zinc grade. The result was to maintain the average cost per ton of ore close to that for the previous year, to keep lead output in line with the reduced level of realisations agreed at the meetings of the International Lead and Zinc Study Group and at the same time increase appreciably production and realisations of zinc concentrate. The average London Metal Exchange prices during 1960 were £72 2s. 11d. for lead, compared with £70 15s. 7d. for 1959, and £89 5s. 11d. for zinc, compared with £82 4s. 8d. for 1959.

The result for the year was a trading balance of £2,075,534 compared with £1,531,700 for 1959.

Depreciation amounted to £301,450 compared with £333,140 for the previous year, and after deducting other charges and adding miscellaneous income the profit before taxation amounted to £1,806,472 compared with £1,190,847 for 1959.

The provision for Australian and United Kingdom taxation on the profits for the year amounts to £669,087 compared with £394,609 for 1959.

The result is a net profit of £1,137,385 compared with £796,238 for 1959.

A transfer of £395,000 has been made to mine amortisation reserve, compared with £245,000 for 1959.

The directors are recommending that a final dividend should be paid at the rate of 2s. 0d. per share, free of tax, compared with 1s. 6d. per share, free of tax, last year. This gives a total free of tax dividend of 3s. 0d. per share compared with 2s. 3d. per share for 1959.

The company agreed in December 1960 to acquire at par 25 per cent of the share capital of Sulphide Corporation Pty. Limited, a company producing sulphuric acid and fertilisers at Cockle Creek, New South Wales and about to operate a lead/zinc smelter on the same site. N.B.H.C. Pty.'s proportion of the share capital will be £A1,875,000 of which £A1,400,000 was subscribed in December 1960 and the balance will be subscribed in mid-1961.

### DEVELOPMENT AND DIAMOND DRILLING

In my statement last year I referred to the progress made in the work of delineating the high-grade zinc sections of the siliceous zinc lode between Nos. 12 and 16 levels. These zinc-rich sections of the mine are the means of providing flexibility in the production of zinc concentrate as opposed to lead concentrate. This is particularly important in times like the present when the demand for zinc concentrate is greater than that for lead concentrate.

During 1960, diamond drilling was continued on Nos. 14 and 16 levels to outline the general shape of the orebody. Developments for extraction were carried out on No. 15 level. The drive south on No. 16 level had reached a point 3,256 feet south of our northern boundary at the close of 1960. This drive has now intersected the siliceous zinc lode, the upper limit of which passes below No. 14 level at approximately 3,460 feet south of our northern boundary. Testing of this orebody will be continued during 1961.

Results of exploration to date indicate that major sections of these zinc-rich areas will be amenable to large-scale mining methods.

An area between Sections 75 and 82 has been selected for the initial mining by sub-level blast-hole methods.

# ALUMINIUM-INDUSTRIE-AKTIE-GESELLSCHAFT, CHIPPIS (AIAG)

Head Office: ZÜRICH, SWITZERLAND

## OUTPUT INCREASED IN ALL PLANTS—MR FRITZ SCHNORF'S STATEMENT

The Seventy-second Annual General Meeting of Aluminium-Industrie-Aktien-Gesellschaft was held in Zürich on April 21st and the following are extracts from the statement of Mr Fritz Schnorf, Chairman of the Board, and details of the Report presented by the Board of Directors.

### MR FRITZ SCHNORF

After reviewing in detail the development of the Company's activities in Switzerland and throughout the world, Mr Schnorf concluded by saying:

In the era of jet air traffic it is hardly surprising that our Company should show interest in distant countries for future markets. Quite often an advisory service and agreement to operate under licence represents the first steps to industrial activities. In this field, AIAG has taken the initiative in the Asian countries.

Perhaps you will allow me to peep into the future. Now, as ever, we view with optimism the long-term possibilities of aluminium. Today aluminium consumption amounts to only 2 per cent of steel production. Each advance in the colossal field covered by steel opens up valuable markets for aluminium. On the other hand, plastics represent an important competitor for aluminium. Until now, these two industries have not clashed. They complement each other rather than compete. In certain applications they are even used together. However, the progress made by the plastics industry in respect of the various qualities of the material such as mechanical strength, heat resistance, anti-corrosive properties, etc., must not be disregarded. In this respect the future possibilities of the Petrochemical industry are to be carefully examined by our management.

We expect increasing competition to arise from the economic integration of Europe. Within the framework of the EEC, French competition is very active. If the extensive aluminium plants in Norway come into being, there will also be increased competition within the EFTA. It is not improbable that, under pressure of competition in important economic areas, prices will give way. All our efforts are concentrated on offsetting any losses by reducing cost through rationalisation. The technical unit of the central administration, the research institute in Neuhausen, and the individual plants are continually striving to improve production methods so as to cut costs, whilst continuing the development of new processes.

Finally, I would like to express the thanks of the Board of Directors to the Management and their collaborators at all levels, both in this country and overseas, for their work and achievements during 1960.

The following are details of the report:

### REVIEW

The employment position in the aluminium industry during the year under review varied even more than in previous years. North American producers were unable to make full use of existing capacity, even at a time of increased exports and growing stocks. Unused production capacity exerted international pressure on prices. European aluminium works were fully employed and plants manufacturing

semi-finished products were also doing well.

During the year under review world production rose further in spite of weak consumption in the United States; it passed from 4.07 m. tons in 1959 to 4.47 m. tons in 1960. The United States produced 1,827,000 tons, Canada 700,000 tons, Western Europe 848,000 tons, the remaining 190,000 tons coming from other Western countries. Production of the Eastern block is estimated to amount to 900,000 tons or approximately 20 per cent of world output.

Official prices remained unchanged. The United States quoted 26 cents per pound of virgin metal on the home market during the whole year. The Canadian export price remained at 23½ cents per pound. In international transactions, however, lower bids were the rule rather than the exception. The European price level remained fairly stable. France raised the price slightly in two stages, Italy introduced a small reduction in January 1961. The Swiss price for virgin metal has remained unchanged for 4½ years. Quotations for semi-finished products and foils remained stable.

Sharp competition occurred between exporting countries, mainly Canada, the United States and Norway, developed in Germany, Great Britain and the Benelux countries, all three traditionally large importers of virgin aluminium. Spain appeared for the first time as a metal exporting country. Rolled and pressed products sold at much lower prices in spite of full employment in the semi-finished products industry, particularly in the Benelux countries and in Norway.

### PRODUCTION

The three alumina plants were in full production and were again able to increase their output slightly. The new power plant of *Martinstwerk GmbH*, Berghem, near Cologne, has not yet started to operate. *Società Alluminio Veneto p.A.*, Porto Marghera, and *Société Française pour l'Industrie de l'Aluminium* at Marseilles are experiencing increases in production costs, mainly in respect of wages and raw materials. The French factory lost the advantages of the last devaluation, owing to gradual increases of production costs.

The alumina plant *FRIA, Cie. Internationale pour la Production de l'Alumine* at Kimbo (Republic of Guinea), in which AIAG has a 10 per cent holding, started production last April. By the end of the year the Company had obtained 56,850 tons of alumina from Guinea.

Production of electricity exceeded the average of many years. *Rhonewerke AG*, Ernen, generated 455 m. kWh in the Mörel and Ernen power stations, an increase of 29 m. kWh over the previous year. *Ilisee-Turtman AG*, Oberems, generated 111 m. kWh against 108 m. kWh in 1959. *Rheinkraftwerk Neuhausen AG* (AIAG participation 80 per cent) also produced slightly more than in the previous year with 4 m. kWh. *Elektrizitätswerk Rheinau AG* (AIAG participation 41.8 per cent) suffered from the irregular flow of the Rhine and production amounted to only 204 m. kWh. *Kraftwerke Gongra AG*, Siders (AIAG participation 30 per cent) has not yet completed the diversion of the Lona river

into the Moiry reservoir. Total current production amounted to 332 m. kWh, out of which 32.5 m. kWh are used for pumping.

The Canton Valais authorities have granted concessions for the utilisation of the Aegina, a southern tributary of the Rhone in Goms, and for a tunnel into the Ticino to supply *Maggia Kraftwerke AG*. Plans regarding the utilisation of the Rhone from Gletsch to Bitsch are being followed up.

A greater than average water supply, savings in current consumption and improvements in production, enabled the four AIAG plants to increase output of virgin aluminium again by approximately ten per cent. The *Mosjøen* plant in which the Company has a third interest, could only partly utilise its increased capacity, owing to exceptionally unfavourable water conditions in Northern Norway.

Production in AIAG plants making semi-finished goods increased by 17 per cent in the year under review, and the foil plants increased their output by 12 per cent. The capacity of the Company's processing plants is somewhat above the total output of its foundries. As AIAG also supplies virgin metal for processing to other companies in Switzerland, Germany, the United Kingdom and Italy, it had to buy from other producers considerable amounts of virgin metal for its own plants manufacturing semi-finished products in Germany, Belgium, the United Kingdom and North and South America.

Sales of *Raffinal*, *Gallium* and its alloys developed favourably.

Preparations for the extension of the rolling mill and the extrusion plant at Siders (Valais) were concluded and building is to start soon. Building will also start shortly on a new reduction plant at Steg.

In the past year the research institute at Neuhausen has also done intensive work to improve production methods and products. Swiss plants and those situated abroad have competed in the rationalisation of production methods to reduce costs.

### PARTICIPATIONS

Although *S.A. des Bauxites de France* at Marseilles did not reach last year's production figures, *Società Alluminio Veneto p.A.* at Porto Marghera obtained somewhat larger quantities of bauxite from its own mines in Apulia and the Abruzzi. Supplies for AIAG plants again came mainly from other countries, such as Yugoslavia, Greece, India and Dutch Guiana.

The Italian power stations report favourable water conditions. The new station at Zevio on the Adige has been in full operation since April. Building on the Val Schener dam began in November. Waterflow in Austria was better in the second half of the year than the average for many years.

Power output in the Company's plants together with its share in affiliated power stations, exceeded 2,000 m. kWh.

The Company's own reduction plants at *Cluppis*, *Rheinfelden*, *Porto Marghera* and *Lond* were again able to increase their production. The first three set up output records. Electricity consumption in the production of metal could be

## THE ECONOMIST JUNE 3, 1961

further reduced. The *Mosjøen* plant in which AIAG holds an interest suffered from a particularly bad flow of water, necessitating the closing down of some furnaces.

The *Robert Victor Neher AG* foil plant at Kreuzlingen was able to utilise its capacity fully and to increase output considerably. *Lavorazione Leghe Leggere* at Porto Marghera was also able to increase sales of rolled and extruded semi-finished products. Favourable results were recorded by *Aluminium-Walzwerke Singen GmbH*, Singen a/Hohentwiel and *Star Aluminium Company Ltd.*, Wolverhampton. Both enterprises are expanding their plants. *Laminal Rusconi Fraschini*, Nembro, was able to use its installations fully.

The American affiliated company, the *Consolidated Aluminum Corp.* of Jackson, Ten-

## COMPANY MEETING REPORTS

nessee (formerly *Aluminum Foils Inc.*), increased production of foils and foil strips. The expanded *Raffinal* plant started work at mid-year.

The new works of *Aluminium Belge S.A.*, Liège, suffered from teething troubles but the pressing mill of the affiliated company *Aluminio Industria S.A.*, Pindamonhangaba (Brazil), increased its output to reach full capacity as planned.

*Allega AG*, Zurich, selling semi-finished products from stock, again showed a considerably higher turnover.

The *Anglo-Swiss Aluminium Co. Ltd.*, Sheffield, which is placing virgin metal in the United Kingdom, increased its sales.

The newly established affiliated company in Nigeria, *Aluminium Manufacturing Company of*

*Nigeria Ltd.*, Lagos, started production of aluminium hardware in August.

## PROFIT AND DIVIDEND

The profit and loss account showed a net profit of Sfr 18,159,742.25, which, together with Sfr 2,062,761.26 brought forward from the previous year, produced a total of Sfr 20,222,503.51. It was accordingly proposed to distribute a gross dividend of Sfr 120 on each share of Sfr 1,000 nominal; to allocate Sfr 2,000,000 to the special Reserves; to allocate Sfr 2,000,000 as reserve for additional depreciation of plant; to transfer Sfr 1,000,000 to the Provident Fund and to carry forward the resulting balance of Sfr 2,432,918.51.

The report, the accounts and the proposals put forward by the Board of Directors were adopted.

# UNION MINIERE DU HAUT-KATANGA

## PROGRESS OF OPERATIONS

## INDUSTRIAL ACTIVITIES PRACTICALLY UNAFFECTED

## BY EVENTS IN THE CONGO

The Annual General Meeting of Shareholders was held at Brussels on May 25, 1961, under the chairmanship of Mr Paul Gillet, Chairman of the Board of Directors.

The meeting approved the balance-sheet and the profit and loss account for the year 1960. The gross result for the year was 3,928,591,153 francs. After deduction of capital equipment amortisation, provision for income tax, interest, duties and various royalties, the net profit amounted to 2,365,820,563 francs.

The meeting fixed the net dividend for 1960 at 1,500 francs per share (or 150 francs per tenth of a share): taking into account the 600 francs paid in January, 1961 (60 frs per tenth), the balance to be distributed is 900 francs per share (or 90 frs per tenth). Half of this balance will be payable from May 26th onwards. The Board will decide on the date of payment of the remaining half at a later date.

Mr E. Sengier asked to be relieved of his functions as Chairman of the Permanent Committee, but remains within the Management of the Company in the quality of advisory director. The Board expressed to Mr E. Sengier as well as to Mr J. Cousin, Chairman of the Managing Committee, in Elisabethville, an appreciation of the services rendered to the Company during their 50 years career.

The General Meeting re-elected Mr P. Gillet and elected Mr M. Van Weyenbergh, Vice-Chairman of the Managing Committee at Elisabethville, as Directors. Mr G. Devillez, Director and Count Capelle, Commissary, decided not to seek a renewal of their mandate.

## RESUME OF A MESSAGE FROM THE CHAIRMAN, MR P. GILLET

The hopes expressed last year to see the newly independent Congo follow its destiny in an atmosphere of peace and order have been dashed. However, the trial has been less serious for Union Minière; the events of July, 1960, only upset the life of the Company during two or three days and were practically without any repercussion on its industrial activities as a whole.

Commercial operations carried on normally but, in 1960, the Company had to face up to important currency transfers ordered first by the Belgian Congo and then, from July, 1960, by the Katanga Government.

As regards recent events, the chairman pointed out that at the Luilu plant, the second section of 50,000 tons of copper per annum was brought into service in March, 1961. The Kambove concentrator with a capacity of 720,000 tons of ore per annum, was brought into operation in April, 1961.

An improvement in copper prices is showing itself at present due to a reduction of stocks and to an increase in deliveries to industry. It enables the future of the copper market to be viewed with a certain optimism.

Concerning the future structure of the Company, the chairman recalled that since Union Minière has become a Belgian limited company it has decided, within the framework of the Belgian Law of June 17, 1960, to bring to companies having registered offices in Elisabethville, the property necessary for the exercise of certain Union Minière activities in Congolese territory. This project is being elaborated.

Union Minière is giving close attention to the interests of its shareholders and is particularly preoccupied with the material and moral fate of its personnel, to whose devotion and courage the chairman rendered homage.

The Chairman hopes that it will be possible to maintain the order which reigns in Katanga and to save from the ruins of the rest of the Congo the economic structures created by the joint effort of the Belgians and Africans.

## MAIN POINTS OF THE BOARD OF DIRECTORS' REPORT

**Results:** The sum deposited by the Company in the form of dividends, royalties and various taxes amounted to 4,294 million francs in 1960. Of this figure, the Congolese Government, the Government of Katanga and the Belgian State received 2,617 millions—i.e., 61 per cent, and the private shareholders 1,676 millions—i.e., 39 per cent, the share of the Belgian State being only 88 millions.

In fact, if one takes in account the tax paid by individual shareholders on drawn dividends, the real share of the Public authorities is more than 65 per cent. Moreover, Union Minière bears heavy educational and other expenses on behalf of the African Public authorities.

**Industrial activities:** Ore extraction was as intense as for the preceding year and remained centred on the Kipushi and Western mines.

Copper production, albeit reduced voluntarily by 10 per cent from the end of September, with the idea of contributing to the stabilisation of prices, nevertheless amounted to 300,675 metric tons, an increase of some 20,000 tons on 1959. The average selling price was slightly higher than that for 1959.

Production of cobalt was 8,222 tons. The price was again reduced to \$1.50 per lb. on March 1, 1960.

The production of zinc concentrates amounted to 193,004 tons at 56.6 per cent, an increase of 50 per cent on the 1959 production.

Deliveries of uranium oxide to the United States ended in 1960 but the European market was still supplied.

The Company delivered 27.6 grams of radium.

In addition, Union Minière produced 25,101 kgs. of germanium (against 13,643 in 1959), 208,959 kgs. of cadmium (against 98,841 in 1959), 123,258 kgs. of silver and 45 kgs. of gold.

The important event of the year has been the entry into operation of the new copper and cobalt electrolysis plant at Luilu in April 1960. These installations, started with an initial output of 50,000 tons of copper per annum, have given entire satisfaction.

Electrical energy produced by Union Minière's power stations amounted to 2,008 million kWh.

## SOCIAL SITUATION

On December 31, 1960, the working personnel numbered 19,731 to which figure can be added 1,145 temporary workers who have been engaged with a view to easing the unemployment situation.

The staff consists of 1,755 agents which includes an increasing proportion of Africans. The promotion of African personnel remains, in fact, one of the principle concerns of the Company and good progress has been made in this respect.

More than 20,000 children attend the Company's schools and the scholastic level increases year by year. In addition, the social climate has remained very good. The order which reigns in Katanga has been a decisive element in the good progress of the Company's operations.

# THE CONSOLIDATED ZINC CORPORATION

## PARTICIPATION IN COMMONWEALTH ALUMINIUM PROJECT

### WORLD LEAD AND ZINC MARKETS REVIEWED

#### MR L. B. ROBINSON'S STATEMENT

The twelfth annual general meeting of The Consolidated Zinc Corporation Limited will be held on June 20th at 6, St James's Square, London, SW1.

The following is an extract from the Statement by Mr L. B. Robinson, the chairman, which has been circulated with the report and accounts:

The group profit before mining royalty and taxation amounted to £3,636,434 compared with £3,969,759 for 1959, a decrease of £333,325.

The Zinc Corporation, Limited increased the output of ore by nearly 10 per cent but the production was adjusted to achieve a lower average lead grade and a higher average zinc grade. As a result lead output was reduced below that for the previous year while production of zinc concentrate was increased and with a slightly lower average cost per ton of ore a substantial increase in profit over 1959 was achieved.

The various activities of Consolidated Zinc Proprietary Limited maintained profits at approximately the same level as for the previous year.

In the United Kingdom trading profits on zinc smelting at Avonmouth and on sulphuric acid showed a satisfactory improvement over 1959, but these were more than offset by heavy expenses incurred at Swansea with the closing down of the horizontal retorts and the costs of bringing the first large-scale Imperial Smelting furnace up to full production and efficiency; by a decline in the profits on pigments due to competition and lower profit margins, and by some loss on writing down stocks. The overall trading results in the United Kingdom were therefore substantially lower than in 1959.

Income from trade investments amounted to £1,105,786 compared with £914,667 for 1959. The increase is almost wholly attributable to the considerably higher dividends received during the year from New Broken Hill Consolidated Limited and British Trian Products Company Limited.

Depreciation amounted to £1,462,227 compared with £1,270,357 for 1959, an increase of £191,870 attributable to the new plant commissioned during the year.

The consolidated net profit for the year amounted to £2,295,660 which shows a decrease of £367,607 compared with 1959.

Following the practice initiated last year, a transfer has been made to exploration reserve of £225,000 compared with £280,000 for 1959. Transfers to general reserves have been made of £625,000 compared with £950,000 last year.

The directors recommend that a final dividend should be paid at the rate of 2s. 9d. per share, the same as last year, giving a total distribution for the year of 4s. per share, the same as for 1959.

At an extraordinary general meeting held on December 29, 1960, shareholders ratified an agreement with The British South Africa Company Holdings Limited by which that company and certain of its associates would subscribe £10,000,000 of 5½ per cent unsecured loan stock. As shareholders were advised at the time, the purpose of this loan is to raise part of the funds

which the company will be required to provide for the Comalco project.

#### COMALCO

Since my statement last year far-reaching changes have occurred affecting both the activities of Commonwealth Aluminium Corporation Pty. Limited (Comalco) and the interests with which we are associated.

Since 1957 The British Aluminium Company Limited had been an equal partner with us in Comalco. To that partnership the British Aluminium Company had contributed important work on the study of the hydro-electric potential of the river systems of Papua and on the bauxite resources at Gove in the Northern Territory. During the past year, however, the British Aluminium Company and ourselves reached the conclusion that our interests would best be served by a free and independent approach to development of the individual assets contributed by each of us to the joint venture. With the consent of the Australian Government the Gove bauxite lease and a grant in respect of New Guinea water rights were transferred to the British Aluminium Company, an appropriate financial adjustment being made with that company to allow us to resume full ownership of Comalco.

In November it was announced that we had entered into a partnership agreement with Kaiser Aluminum and Chemical Corporation for equal participation in the development of a new integrated aluminium industry in Australia and New Zealand. The announcement of the programme with Kaiser Aluminum marked an historic point for this group which until now has been mainly concerned with lead and zinc and closely related industries. It is an historic point, too, in the development of economic resources of Australia and New Zealand.

The plans provide for the construction by mid-1966 of an integrated aluminium industry based on the bauxite resources of Weipa in North Queensland and the hydro-electric power potential of Lake Manapouri in Southern New Zealand.

#### LEAD AND ZINC MARKETS

In reviewing the world lead and zinc situation, I would like to stress that although these two metals originate in most cases from the same orebody their consumption is showing an increasing tendency to grow at different rates; and for this reason it is important that the prospects of each should be examined independently. Although both the metals come under discussion at the meetings of the International Lead and Zinc Study Group they are generally considered quite separately. In this connection you may recall that early in 1960 it was unanimously proposed by the Study Group that all restrictions on the sale and production of zinc should cease, and this recommendation has proved sound inasmuch as the price outside the United States has continued to be reasonably remunerative despite the setbacks in automobile production both in the United Kingdom and the Continent of Europe.

The general recession during the past year in

the United States has, however, proved burdensome to the zinc producers in that country and, notwithstanding the protection afforded by import quotas, stocks of zinc in producers' hands increased materially. This increase has occurred despite major strikes which affected more than one of the principal producers. However, in recent months some attempt has been made to alleviate the position by voluntary production cuts by major companies.

I believe it is possible that, with the strengthening of the United States economy during the second half of this year, producers' stocks will be reduced to more normal levels and if the present encouraging growth of zinc consumption continues in the rest of the free world, we can look with some measure of confidence towards the future. I consider that the London Metal Exchange price between £80-£90 per ton can assure the maintenance of an adequate rate of production without incurring any serious risk of substitution by other materials.

The history of lead during the same period has been an unhappy one, despite the agreements which had been reached by certain exporting countries to restrict their sales and/or reduce their production. Stocks both in the hands of overseas producers and also in the United States have increased and now stand at very high levels. The fear that these stocks might have to be liquidated on the world market at some future date destroyed consumers' confidence in the price level, with the result that buying has been on a hand-to-mouth basis. At the end of 1960 the price of lead on the London Metal Exchange fell to £62 a ton which is well below any figure reached since the market was freed in 1952. The pressure of the London market had its inevitable consequences in the United States where many of the domestic producers again started to clamour for more and more protection against foreign imports and also to demand subsidies to help maintain production from the smaller mines but, so far, the U.S. Administration has taken no action.

At the Study Group meeting held in Mexico City at the end of March 1961 the U.S. Administration renewed its generous proposal, originally put forward in Geneva in September 1960, to absorb in the barter stockpile some of the overseas producers' excess lead stocks on condition that such producers who might benefit by the lifting of their stocks should restrict their mine and metal production to match a reduced level of sales. Action to reduce mine and/or metal production was announced by Australia, Mexico, Peru, Sweden, the United States and the countries of the European Economic Community. In addition to this action, specifically taken at the meeting, it was noted that the Canadian industry had previously announced action to curtail lead mine production in 1961. Yugoslavia also announced its intention to reduce either production or exports in 1961. As a result we calculate that supplies of lead in 1961 will be of the order of 40,000 to 50,000 tons below estimated world consumption. The meeting expressed the hope that countries who had not announced cut-backs would take no

#### THE ECONOMIST JUNE 3, 1961

action that might nullify the effect of these curtailments.

In the case of zinc the meeting agreed at Mexico City that no action was necessary to reduce supplies.

Jointly with the other Broken Hill companies we are actively negotiating with the U.S. authorities to barter our surplus stocks of lead accumulated under the international restriction arrangements prior to December 31, 1960.

The Mexico City meeting also established a special working group which is to meet shortly

## AMALGAMATED METAL CORPORATION

### SIR PAUL BENTHALL'S REVIEW OF ACTIVITIES

The thirty-second Annual General Meeting of Amalgamated Metal Corporation Limited will be held on June 22nd at Princes House, 93, Gresham Street, London, EC.

The following are extracts from the statement by the Chairman, Sir Paul Benthall, KBE, which has been circulated with the report and accounts for the year ended December 31, 1960:

Before reviewing the affairs of our company I would like to refer to the retirement of the Hon. R. M. P. Preston from the Board of which he had been a member since 1930, and to thank him for the services he has rendered.

The profit for 1960 before providing for tax is £932,479 compared to £1,004,652 in 1959 and £817,662 in 1958. There was a slight increase in the volume of our trading in metals and other commodities during the year under review and at this point I would remind shareholders that, as indicated in my last two annual statements, the profits on sales of shares by subsidiary finance companies were larger than average in both 1958 and 1959.

The net charge for taxation is £406,680, and after also deducting minority interests the 1960 group profit after taxation is £516,318 compared to £604,044 for the previous year. It is proposed that the final dividend should again be at the rate of 8 per cent, the total dividend on the ordinary capital thus being unchanged at 11 per cent.

Dividends will absorb in total a sum of £331,937.

#### THE BRITISH METAL CORPORATION

The trading activities of the British Metal Corporation in non-ferrous metals and ores were maintained at a slightly higher level than in 1959. Vivian Younger and Bond Limited also had a satisfactory year, and that company's organisation in Nigeria continues to expand. Its clearing and forwarding business is now well established and is operated by a new wholly-owned subsidiary called Intercoira Limited, which is registered in Nigeria.

Brandhurst Company Limited has always produced good results since we acquired the Company in 1949 and in 1960 its sales of cobalt and other metals continued at a satisfactory level.

Our investment in Western Credit Limited, a hire purchase finance company, was the subject of a notice sent to shareholders last December following a few enquiries about the extent of our interest, as losses sustained by many hire purchase companies had received considerable publicity. It was stated in the notice that our hold-

#### COMPANY MEETING REPORTS

ing is just under 9 per cent of that company's issued capital. We understand that arrangements for a much closer check on borrowers are now in operation and hope that the Western Credit business will again expand but on a sounder basis.

I am pleased to be able to report that the British Metal Corporation (Australia) Pty. Ltd. has lived up to the hopes expressed in my last statement. The company's past losses, incurred during its difficult earlier years, had been fully recovered by the middle of 1960, and the year's results were very satisfactory. It is unfortunate that Australia, as often happens with fast developing countries, is now going through a period of recession in trade which is affecting our earnings in the current year, but we have full confidence in the long-term outlook.

The British Metal Corporation (Canada) Limited, our oldest overseas subsidiary, also had a good year. The earnings of BMC (India) showed a considerable increase over those for 1959, and BMC (Pakistan), operating in a country where trading conditions are still difficult, made a small profit.

Our subsidiary in the Union of South Africa had another satisfactory year. As regards Rhodesia, in my statement with the 1959 Report and Accounts I reported that substantial provisions had been made in the accounts of BMC (Central Africa) against advances on chrome, but although the total provisions have not had to be further increased I regret to say that there appears to be little prospect of any improvement in the position.

The Report and Accounts show clearly the distribution of the Company's investments, and what small variations appear between this year and last are mainly consequent upon the alterations in the Stock Exchange prices.

Our holdings in Debentures and Preference Stocks show an increase over last year reflecting to some degree the wide margin between Fixed interest and Equity rates. This ratio may well change back to a more normal relationship between the two if equity prices continue at the present high level.

The year we are now in has started well and I would estimate that our Revenue, in terms of cash, will again show an increase, and I feel therefore that we will have no difficulty in paying as good a dividend as we are now.

We anticipate some decreases but we are confident that increases will counteract them. If as seems probable, this country should join the European Common Market—in one form or another—keen competition and narrower margins of profit will be inevitable in some spheres of industry but I believe that these will be more than made up by the benefits which will accrue in other directions.

The report was adopted.

HENRY GARDNER & CO.

Henry Gardner & Co. traded in the traditional non-ferrous metal lines and the results from that section of the business were fully satisfactory. The very severe falls in the price of Rubber, Cocoa and Coffee during 1960 made trading extremely difficult in these commodities and the results were rather less favourable than usual.

The Gardner Subsidiary Companies produced net trading profits substantially ahead of 1959 and of the Sandilands Buttery & Co. Ltd., Malaya, had its best trading year for some time. In Canada, Drew Brown handled an increased volume of business but results were affected by the general tightening of economic conditions and trading profits for 1960 were rather less than in the preceding year.

I take this opportunity of pointing out that the fixed assets of the group are largely warehouses, office buildings, and other things required by merchants. We depend for our success only to a small extent on machinery and industry processes, and to a great extent on the loyalty, energy, and skill of the directors and staffs of our subsidiary and affiliated companies, at home, in Commonwealth countries, and elsewhere, to whom our thanks are due for the continued progress made during the past year.

## THE MUNICIPAL TRUST COMPANY LIMITED

### REVENUE IMPROVEMENT CONTINUES

#### SIR ROBERT ADEANE ON CURRENT YEAR'S OUTLOOK

The eighty-first annual general meeting of The Municipal Trust Company Limited was held on May 24th in London.

Sir Robert Adeane, OBE (the Chairman), who presided, said:

The pattern of improvement in your Company's Profits has continued this year, if anything at an accelerated tempo, and Revenue rose from £171,000 to £205,000, an increase of approximately 20 per cent.

You will not be surprised to note a small increase in Expenses, (including Debenture Stock interest), from £32,500 to £34,000.

Earnings on the Ordinary Capital, which we feel sure you will agree are satisfactory, amounted to 23.8 per cent as against 20.7 per cent last year on a smaller capital. We now have pleasure in proposing a Dividend of 17 per cent, which is a 2 per cent increase on last year. After the dividend is approved and paid there will remain £27,000 to be ploughed back into the Company as against £21,000 last year.

At the year end, February 28th, the break up value of the Ordinary shares was 22s. 10d., 1s. 3d. down on last year but, as I have said before, you do not need to give too serious consideration to this as the Company is not likely to be broken up and as you are no doubt aware markets are a great deal higher today than they were last February. In other words, the break up value is of passing interest but not of great moment.

The Report and Accounts show clearly the distribution of the Company's investments, and what small variations appear between this year and last are mainly consequent upon the alterations in the Stock Exchange prices.

Our holdings in Debentures and Preference Stocks show an increase over last year reflecting to some degree the wide margin between Fixed interest and Equity rates. This ratio may well change back to a more normal relationship between the two if equity prices continue at the present high level.

#### THE CURRENT YEAR

The year we are now in has started well and I would estimate that our Revenue, in terms of cash, will again show an increase, and I feel therefore that we will have no difficulty in paying as good a dividend as we are now.

We anticipate some decreases but we are confident that increases will counteract them.

If as seems probable, this country should join the European Common Market—in one form or another—keen competition and narrower margins of profit will be inevitable in some spheres of industry but I believe that these will be more than made up by the benefits which will accrue in other directions.

The report was adopted.

## GUEST, KEEN & NETTLEFOLDS, LIMITED

TURNOVER EXCEEDS £250,000,000

The annual general meeting of Guest, Keen & Nettlefolds, Limited, will be held on June 22nd at Birmingham.

The following is an extract from the circulated statement by the Chairman and Managing Director, Mr K. S. Peacock:

Turnover in 1960 for the first time exceeded £250,000,000 and was over £31,000,000 up on 1959, reflecting a high rate of activity in most of our works. The greater volume enabled the Group overall to improve slightly on the rate of profit to turnover of 12 per cent achieved in 1959 and resulted in an increase of £5,000,000 in the surplus on trading to a new record of £31,600,000. The high rate of activity was, however, mainly in the first nine months of the year.

In my letter of November 26, 1960, to Ordinary Stockholders announcing the rights issue of 6,582,011 new Ordinary Shares, to which fuller reference is made in the Report of the Directors, I told you that the Board had declared an interim ordinary dividend of 5 per cent, less tax, from the trading profits of 1960 and, in addition, a special non-recurring dividend of 2½ per cent, not subject to tax, from profits on the realisation of quoted investments. Both these dividends were paid on December 31, 1960, on the amount of Ordinary Stock existing before the rights issue.

### DIVIDEND

I also said that the Board intended to recommend a final dividend at the rate of 10 per cent, less tax, payable on the Ordinary Share Capital increased by the rights issue. This view was based on the expectation that the profit, before tax and exceptional items, would be not less than £29,000,000; this figure was estimated conservatively and in the event the actual profit was £30,800,000. After taxation the net profit was £15,194,929, before exceptional items, an increase of £2,183,000 over 1959 which itself was £1,769,000 up on 1958.

The Board, after carefully considering all the factors in the situation, including the recent increase of one fifth in the rate of Profits Tax and the probable trend of trading conditions in 1961, feel justified in recommending a final Ordinary dividend of 11 per cent, less tax, for 1960. This dividend payable on the Share Capital increased by the rights issue will amount to £3,104,241 compared with £2,418,889 for the final dividend of 10 per cent, less tax, paid for 1959 on the Share Capital then in issue.

### CAPITAL EXPENDITURE

The decrease in capital expenditure in 1960 to slightly below the expected level of £18,000,000 was accounted for by the expansion schemes at the three steel works being temporarily slowed down to permit various alterations and additions in plans arising out of important technical developments taking place with great rapidity in the steel industry. Those alterations and additions together with increases in the costs of construction make it appear likely that the total of approximately £20,000,000 to be spent on major schemes in the steel works over the five years 1960 to 1964, to which I referred last year, may well be in fact of the order of £28,000,000.

The Board during 1960 continued to approve substantial schemes of modernisation, and in certain cases expansion, at other works so that at the end of the year specific sanctions outstanding for the Group as a whole amounted to £26,000,000 compared with £18,600,000 outstanding at the end of 1959. In addition there is about £16,000,000 out of the £28,000,000 overall total for the steel works, for which the Board had not given detailed approval at December 31, 1960.

### FUTURE OUTLOOK

A few words about the future. Firstly the short term. In certain directions we have experienced a continuance into the current year of the decline in trading conditions which began in the latter part of 1960. Now, however, conditions appear to be on a slightly improving level although we do not expect the year 1961 to match the record profits of 1960. Apart from the question of volume of business, we are finding increasing difficulty in maintaining our profit margins due to substantially increased costs arising from increases in the price of coal, fuel oil, higher wages and local rates, etc.

Secondly, taking the long term view it will be difficult in the present decade to maintain the rate of growth achieved in the ten years to 1960. Our sales in the home market and as exports from the United Kingdom will be subject to strong competitive influences from the Common Market countries and elsewhere, notably Japan. It must be stressed that most of our products do not go direct to the consumer but to the works of customers who embody them in products sold to consumers; consequently our turnover and our profit margins do not depend only on our own efforts and efficiency but quite largely on the success of our customers in themselves maintaining their trade and their own profit margins in the face of ever increasing world competition.

Our considered policy to meet this situation is to reduce our costs wherever possible, which usually involves capital expenditure, often in very large amounts, and to expand along two broad lines. We must step up output of those products where required by expanding demand from our customers, and we must continually seek to broaden our range of products, which is already very wide.

### GROUP EXPORTS

Exports have been a major pre-occupation of the Group during the past year. We are indirect exporters on a large scale, as well as direct exporters—that is, we supply components for assembly into finished products exported by other industries, for example motor vehicles, as well as exporting our own products direct. In both capacities we are especially concerned over the continued exclusion of the United Kingdom from the European Economic Community. As direct exporters we have already begun to suffer from the raising of the tariffs of some members of the Community to the common external level observed by the Community as a whole; and purchases formerly made from us are, in consequence, being diverted to suppliers from within the Community. As exporters, and particu-

larly as indirect exporters, we cannot but regard the exclusion of this country from the large and prosperous market represented by the Community as an impediment to the long-term growth of the industries which we serve, and we earnestly hope that the Government's efforts to bring about some reconciliation between the Community and the E.F.T.A. countries will have a speedy and successful result.

Whilst there is very little we ourselves can do to increase our indirect exports, every endeavour is being made to increase the proportion of the Group's output which is directly exported. Group companies, for instance, having regard to their particular products and circumstances, are being asked to aim at export targets to which they will try to adhere no matter how strong the pull of the home market; for unless the foreign buyer can count on continuity of supply his custom is likely to be diverted elsewhere.

There are those who contend that many British firms are organised on too small a scale to enable them to export and that one of the reasons for the national failure to export more is to be found in the structure of British industry. One of the strengths of your Group is that each Group company, no matter its size, can continue to enjoy flexibility in its day to day operations, whilst at the same time being able to draw upon the central services which are provided by a large organisation. Two years ago I reported to you the formation of a central advisory service on exports—the GKN Group Export Services Organisation—to gather intelligence on export markets and assist Group companies on export problems. I am happy to say that the Organisation is functioning well and proving a useful and valuable service.

I myself believe that a deeper reason for our national inability in recent years to achieve a better export performance is to be found in the Government's stop-and-go attitude towards industrial investment. Repeatedly in post-war years the Government has tried to encourage exports by taking measures to restrict home demand. In the short term such measures may indeed have a beneficial effect on exports in that industry faced with a falling home demand is forced to export more in order to keep capacity fully employed. The long term result, however, must be to diminish investment and therefore to limit the capacity available to accommodate both a rising home demand and a large volume of exports. What is helpful to exports in the short term is thus inimical to them in the long term.

What is needed is a steadier attitude by Government towards capital investment and the acceptance of industrial growth as an objective of first priority. It will have to be seen whether or not the Government's new powers to regulate the economy between annual budgets will in practice contribute to a smoother growth of investment. British industry must strive to keep abreast of its competitors abroad and, to a large extent, this must depend upon the scale of capital investment in improving techniques with a view to increasing productivity and lowering costs. On the other hand, it is the responsibility of the Government to keep the country's finances in order by a rigid control of Government expenditure and avoidance of recurrent crises on balance of payments.

## THE LAWLEY GROUP LIMITED

QUALITY PRODUCTS AT COMPETITIVE PRICES

### LORD POOLE ON EFFORTS TO EXPAND EXPORT TRADE

The thirteenth Annual General Meeting of The Lawley Group Limited was held on June 1st at Stoke-on-Trent.

The following is an extract from the circulated statement of the Chairman, Lord Poole, CBE, TD:

In my statement on the Company's accounts for 1959 I forecast that the 1960 earnings would be maintained at the 1959 level. I am glad to be able to say that the trading profit, before deduction of tax, for 1960 totalled £512,487 after writing £10,000 off the book value of our Portland Pottery now closed, by comparison with £476,602 for 1959.

Our turnover for 1960 was higher than it was in 1959 and that helped us to meet the increased cost of wages and materials.

Taxation on the 1960 profits absorbed £288,704 leaving £223,783 net profit for the year, out of which it is recommended we distribute £73,500 as a dividend of 20 per cent on the Ordinary Share Capital of the Company, as compared with 15 per cent for the previous year. An amount of £128,537 has been carried forward.

During the thirteen years since its formation there have been considerable changes in the composition of The Lawley Group. It may be of interest if I give some brief particulars of the Group as at present constituted.

We are principally engaged in the manufacture of Bone China and Earthenware Tableware. Our major concern is to produce in large quantities ware of quality to sell both at home and abroad at competitive prices. Continuous effort is put into improving both the quality of our ware and the attractiveness of its patterns without increasing its cost.

We were much encouraged in 1958 by winning the Annual Award made by the Council of Industrial Design, and our products are frequently on display at their centres, and exhibitions overseas. At the same time we maintain a very high production and it is worth noting that our Bone China and Earthenware Factories together regularly produce over 1,000,000 pieces of domestic crockery a week.

### BONE CHINA

Our most modern and most highly mechanised unit is the Coldlough factory at Regent Works, Longton, which is the largest producer of Bone China Teaware in the world. Towards the end of 1960 we purchased adjoining premises to provide space for the further extension of buildings and plant. Work thereon is now proceeding.

At the Paladin factory we make Adderley Fine China Tea and Dinnerware. We still produce one of the original designs first made in 1789, "Blue Chelsea."

In addition to Tableware we manufacture at our Adderley Floral factory, a modern unit completely built and equipped since the end of the War, a very wide range of Bone China

Flower Clusters, Figurines, Birds, Animals and other articles.

### EARTHENWARE

Our Booths Fine Earthenware range consists of high quality traditional patterns, whilst our Ridgway and Swinnerton Tableware cater for the more popular mass markets both at home and overseas.

On a site of 47 acres at Baddeley Green we have a factory unique in the Pottery trade, an up-to-date Earthenware unit all on one level, built within the past four years by our Subsidiary Company, Swinnertons Ltd. The Decorating Section of this factory is not yet complete, but construction is proceeding and there is on the site ample room for the expansion which we anticipate will be necessary.

Other Earthenware factories, the Church Bank Pottery of Booths, the North Staffordshire Pottery, and the Vulcan Pottery of Swinnertons, have all been extensively reconstructed and modernised.

Our last remaining Coal-Fired intermittent "Bottle" Oven ceased to operate during 1960 and all ware firing in our factories is now done either by Gas or Electricity in continuous and intermittent Ovens and Kilns.

Our Catering and Hotel Ware, Vitrocks Earthenware and Globe Vitrified Ware are used extensively both at home and overseas. In particular, our Ridgway factories are suppliers to British Overseas Airways Corporation, Cunard Steam-Ship, Canadian Pacific, British European Airways and many other well-known concerns.

One of the smaller factories specialises in the manufacture of the well-known Abcock, Lindley & Bloore Brown Teapots, which still maintain their popularity.

To service our factories we have at Stoke-on-Trent a Mill for processing flint and stone and glazes.

### SALES

Whilst our major interest is in manufacture, we also operate in this country a chain of Retail China and Glass Stores and Wholesale and Importing Companies. Our best known and biggest store is in Regent Street, London, and it carries on, in addition to the large home trade, a considerable export trade with visitors from abroad. An extension to this store is being planned. Our stores make an important contribution to our profits and they have within the past few years, been modernised, redecorated and re-equipped. In recent years we have acquired a number of well established retail China and Glass businesses, and it is our policy to continue to acquire such businesses whenever suitable opportunities arise.

We export 40 per cent of all our production and overseas markets require close attention, particularly where demand is likely to be subject to variation because of changes in national fiscal policy. To this end we are constantly seeking to develop new outlets for our

products, and we are in particular studying closely the requirements of the European markets. In addition to our agents throughout the world we have our own agency Company in Canada.

### THE OUTLOOK

The industry is faced with a further wage increase of 6 per cent to Pottery operatives in 1961, and other costs continue to rise.

However, although world conditions these days tend to be unpredictable, if there are no international or political upheavals during 1961 I can say that, having regard to conditions existing at the present time, we should maintain our results for next year at least at the same level as those of 1960.

The report and accounts were adopted.

## DARWINS GROUP LIMITED

VALUE OF DELIVERIES EXCEEDS £6½M.

The thirty-second annual general meeting of Darwins Group Limited was held on June 1 at Sheffield, Mr F. Thompson-Schwab, the Chairman, presiding.

The following is an extract from his circulated review:

As I informed you last year the results for the first quarter of the year 1960 showed a very satisfactory improvement on the corresponding results for 1959 and that the prospects for the remainder of the year were most encouraging. This opinion, I think you will agree, has been borne out by the results.

The value of the deliveries made in 1960 was over £6,500,000, which showed an increase of £1,200,000 over the previous year. This has resulted in an increase of 39 per cent in Trading Profit from £444,217 to £617,250. The net profit after all charges is £496,325, from which must be deducted £235,000 for taxation provision. In view of the improved results your Board recommend a final dividend of 10 per cent less tax, making a total for the year of 16 per cent, which compares with a rate of 12½ per cent paid last year, on a smaller capital.

So far as the present year is concerned, we started off with good order books and there has been a continuing steady demand for our products. The setback in the motor car industry had little effect on the Company's trading. The value of deliveries for the first quarter of the year shows an increase over the first quarter of 1960.

For many years we have had business contacts in numerous Commonwealth and foreign countries and fully appreciate the necessity, in the national interest, of increasing our exports. We intend to increase our representation in countries where we have not hitherto done much business with a view to increasing our business in those countries.

After a period of cost stability which has been very welcome, I regret to say that we are again faced with increasing costs this year. In spite of that, owing to our increased production capacity and providing that demand for the Group's products is maintained at the present level, I am confident that we will this year be able to achieve satisfactory results.

The report and accounts were adopted.

# RECKITT & COLMAN HOLDINGS LIMITED

## FURTHER INCREASE IN WORLD SALES

### MR. J. B. UPTON'S REVIEW OF GROUP'S ACTIVITIES

The eighth Annual General Meeting of Reckitt & Colman Holdings Limited will be held in the Connaught Rooms, 15 Great Queen Street, London, W.C.2, on Friday, June 16, 1961, at 11.30 a.m.

The following is an extract from the Chairman's Statement in respect of the year ended December 31, 1960:

The global figures of sales to customers outside the Group show an increase of 13 per cent for 1960 over 1959, which is an improvement on recent achievements. Approximately 60 per cent of those sales are made abroad. Profits, however, for various good reasons, did not increase though the equity interest attributable to ordinary shares grew from £43,301,000 to £45,771,000. Some time ago your Directors decided that a revaluation of the fixed assets of the Company should be undertaken and that revised figures of the value of properties and plant should be brought into the books as from the beginning of 1960. The surplus which arose on revaluation of our properties and plant was £7,719,000; it was almost wholly used to write down the figure for goodwill. Much of the value formerly attributed to goodwill arose from our practice of bringing into the Consolidated Balance Sheet at their book values the Fixed Assets of the business acquired by our Company since its formation in 1953.

#### A SATISFACTORY RESULT

Trading Profit at £9,921,000 is £71,000 less than last year's £9,992,000, but even this small difference is more apparent than real as last year's figure would have been about £100,000 lower had depreciation on the new basis then been in force. Even though your Directors did, at one time, expect better profits they regard the result as satisfactory in the conditions which prevailed during the period under review; moreover there were several untoward and, I hope, non-recurring events outside our control which temporarily reduced our overseas earnings.

Competition increased and in many markets greater expenditure on sales promotion was and still is necessary. Heavy introductory advertising was also used for several new lines and to increase the sales of recently acquired businesses. A satisfactory measure of success has been achieved in this direction and future profits should benefit from this work as they should from the economies which will be possible as a result of the gradual integration of new businesses into the Group.

Provision for taxation has required £4,608,000 after relief of £610,000 in respect of overseas taxation which itself cost £2,369,000.

#### HEAVY BURDEN OF TAXATION

This weight of taxation represents a heavy burden on industry and there are few signs of reductions in any part of the world. Indeed, one of the virtual certainties in the Finance Bill now before the House of Commons is that the Company will be faced with a higher charge for Profits Tax. The extension of the duty on

petroleum of various grades will also affect our Company as will the proposed tax on television advertising which is an unwelcome tax because it is discriminatory against companies such as ours for whom efficient selling presupposes good advertising. The proposed regulatory powers are interesting though I consider that purchase tax should have been rationalised before seeking to use it in this way and I hope that the suggested pay roll tax will never be used; it is bound to be inflationary and to add to the cost of producing goods for export.

The new Group Pension Scheme has been in operation since April 1, 1961. The capital cost of the improved benefits offered by this scheme, in so far as they are attributable to past service, will be met by the Company. The best present estimate of the cost is £500,000. It will provide benefits, including widows' benefits, more generous in relation to the contributions paid by the subscribers than those provided by any of the old funds, while the basic pension, for anyone who has served the Company throughout his working life, will be sufficient, when added to the new State Pension, to ensure an income of not less than two-thirds of a member's pay at about the date of retirement.

#### DIVIDEND

The Consolidated Profit for the year, after taxation, is £5,083,000 compared with £5,371,000 for 1959. Out of this sum your Directors have recommended the payment of the same final dividend as was paid in respect of 1959.

When this rate of dividend was established last year I told you that our 1960 results, at that time, were in accord with your Directors' expectations. Whilst sales came up to expectations, profit margins declined. For 1961 a further increase in sales is forecast and, provided the economic situation does not deteriorate, I expect that the profits also will be higher.

The increase in World Sales to which I have already referred is largely on account of businesses acquired in recent years though what may be referred to as existing businesses also returned better sales figures—especially overseas. In some overseas markets rising costs made it necessary to increase prices when such action was possible but only minor adjustments were needed at home.

So far during 1961 our sales returns are satisfactory and even from the less settled parts of the world we have reassuring reports.

RECKITT & SONS LTD. and its subsidiaries again had a good year. The Company increased its sales and, after advertising at a higher rate than usual, more than maintained its profits without altering the price of any of its products. J. & J. COLMAN LTD. and its subsidiaries also improved both their sales and profits figures. CHISWICK PRODUCTS LTD. and its subsidiaries recorded the highest sales and profits in their history. SISSONS BROTHERS & COMPANY LTD. and its subsidiaries have had a difficult year but one for which the performance is not easily comparable with that of 1959 in that considerable reorganisation has taken place. THE R. T. FRENCH COMPANY of Rochester,

USA, was as successful as had been expected in a difficult year. It again beat its sales record but did not improve its profits.

#### OVERSEAS ACTIVITIES

RECKITT, COLMAN, CHISWICK (OVERSEAS) LTD. and the group of overseas subsidiaries controlled or advised by it had a mixed year. Total sales were up to original expectations and showed a satisfactory increase over 1959. Total profits dropped somewhat, partly because of the cost of developing new trade, in some cases against fierce competition.

Our businesses in AUSTRALIA had another good year and their sales and profits increased. NEW ZEALAND maintained its record for progress of both sales and profits. In CANADA a good increase in sales was obtained but the profit was not so satisfactory. Canada is a very competitive market and the cost of advertising, especially development advertising, is very high.

In SOUTH AFRICA, despite the troubles and uncertainties of the past year, the sales of most of our established lines were well maintained and the growth of the newer products increased our total turnover; profits, however, were static though better earnings in 1961 are expected. It was, of course, with great sorrow that we heard of South Africa's decision to leave the Commonwealth. So far as our substantial business in the Union is concerned, I do not think that this particular political action will in the long run make much, if any, difference. So long as gold retains its value the country will be economically strong and capable of developing still further its latent wealth. Meanwhile, the purchasing power of its inhabitants of all races is higher on average than that in any other part of Africa; there is, moreover, every reason why it should increase and our business is well organised to serve it.

Our INDIAN Company had another good year though taxation there is high. Sales progressed and brought their proper reward. In PAKISTAN sales did not quite reach the exceptional level of 1959. In CEYLON our trade has developed well. It has been based on exports from the UK but, because of the government's plans for expanding secondary industry, we are proposing to set up a small factory there.

In CENTRAL and SOUTH AMERICA progress was adequately maintained and the important markets of Argentina and Brazil did well although inflation and currency depreciation are continuing problems in this part of the world. The new factories in Chile and Venezuela have been working smoothly for over a year and both office and factory enlargements are taking place in several other countries.

#### PROGRESS IN EUROPE

In EUROPE our business progressed though competition is keen, especially in the Common Market countries. France is still our largest market and there both sales and profits were satisfactory. Our new factory at Chartres is now in production and will be a good investment. The new businesses of Jensens in Denmark and

### THE ECONOMIST JUNE 3, 1961

Heine in Germany are being reorganised and developed during which process we do not expect them to be profitable. We are paying great attention to the development of our interests in Germany, where they have never been as strong as they are in other European markets. Western Europe has developed remarkably in recent years and continues to do so, while the economic consequences of the "six" and "seven" can provide problems as well as opportunities. In most countries we are well equipped to cope with

## HARRODS (BUENOS AIRES), LIMITED

### MR O. R. GUARD'S REVIEW

The forty-eighth Annual General Meeting of Harrods (Buenos Aires), Limited, will be held on June 22, 1961, at Winchester House, Old Broad Street, London, E.C.2. The following is a précis of the Review by the Chairman, Mr O. R. Guard, for the year ended August 31, 1960, which has been sent to shareholders:

I must begin by paying tribute to my predecessor, Mr F. A. Stacpole, who died suddenly last November. It is sad that his unexpected death not only robbed his colleagues and the company of a wise leader, but prevented him from putting into effect plans for development on the foundations he had laid.

#### TRADING 1959-60

The late Chairman's Review for 1958-59 drew attention to the sudden change in the economic climate in Argentina at the end of that year, which was affecting our subsequent operations. Up to that time, inflation had proceeded apace for a number of years, so rapidly towards the end that it was not rare to find the cost of replacing merchandise sold catching up or even overtaking retail prices in the shops.

That situation came to an abrupt end when the Argentine Government imposed its austerity plans in July 1959. These produced a marked reduction in public demand and many retailers resorted to marking down prices in order to move stocks acquired in anticipation of continued inflation.

## INNS & COMPANY

(Public Works Contractors, Asphalters, Sand and Gravel Pit and Quarry Owners, etc.)

### ANOTHER SATISFACTORY YEAR

The twenty-sixth annual general meeting of Inns & Company Limited was held on May 20th in London, Mr Walter Wallace (Joint Managing Director) presiding.

The Chairman, in the course of his speech, said:

The consolidated trading profit of the Group for the year amounted to £885,605. This is approximately 10 per cent below the figure of the preceding year, the reduction being due to the effect of the weather on the activities of the Road Surfacing Department. The summer of 1960 was the wettest in our recollection and this not only reduced the Department's turnover, but added to the costs of the work actually executed. In fact, our other Departments showed

### COMPANY MEETING REPORTS

the first and to take advantage of the second. Our total Exports from the United Kingdom were worth £5½ million and represent a useful contribution to this country's economy. The figure could well have been higher but for the political disturbances in the Congo and their effect on other African markets. I referred last year to the tendency of overseas governments to foster local industries and to the effect such policies must have on exports from the United Kingdom. In addition to a probable factory in

We throughout adopted a policy of not buying in excess of expected requirements and were therefore not so heavily stocked as some others, though we were faced with higher stocks than the reduced level of sales demanded. However, by prompt action and determination not to make unnecessary sacrifices of good merchandise, the problem had been reduced by August 31, 1960, to certain lines in certain departments without incurring material losses.

In all the circumstances, the ordinary dividend of 6d. per share less tax recommended is as high as your Board consider prudent.

#### EXCHANGE

The disinflationary measures of the Argentine Government succeeded in halting any further fall in the value of the peso which has now remained at about the same level since August 1959. In fact, there was a very small appreciation during the year under review, so that for the first time since exchange restrictions were lifted in 1955-56 we have not had to provide for any exchange loss.

#### THE CURRENT YEAR ENDING AUGUST 31, 1961

The first three months of the current year showed no clear indication of an improved trend in sales. By December, however, a distinct change in tone was beginning to be noticeable. In January, Sr Zappa, our Director and General Manager resident in Argentina, flew to London and we outlined immediate and medium-term plans for the active development of our trade.

The renewal of confidence in Argentina among bankers and industrialists in Europe and North America is evident. In a free market the ex-

increased turnover and profits for last year. Having regard to the circumstances, the Directors regard the year's results as satisfactory and are recommending the payment of a Final Dividend of 20 per cent as forecast, on the present Ordinary Share Capital.

The Consolidated Balance Sheet shows that the cost of fixed assets is increased by a total of approximately £328,000. This expenditure, together with the considerable increase apparent in stocks and debtors has all been met out of our own resources, and explains the reduction in the cash position. Nevertheless, it should be noted that the total current assets exceed current liabilities by approximately £850,000. The fixed assets continue to be written down in accordance with our standard practice.

Reverting to the higher figure of fixed assets, particular mention should be made of the increase last year in Freehold Land and Buildings—some £200,000. Land purchased by the Company is not always acquired for immediate development, but is bought with the long term view of ensuring continuity of supply of sand,

Ceylon it is likely that in 1961 we shall have to start manufacturing in East Africa and possibly in other markets as well. A manufacturer's urge to export is helpless in the face of action by overseas governments designed to discourage imports; nor will the situation be improved by uncertainties about, let alone increases in, future production costs whether they are the result of a possible tax on manpower or due to any other cause which does not affect our foreign competitors.

change rate has remained stable since August 1959. Though there may be many difficulties still to face an important corner may well have been turned. Ministerial changes in the Argentine Government were announced as this Review went to press. It is too early to assess their implications fully but there seems to be no present indication of any drastic change of policy.

We shall have to envisage embarking more of our funds in working capital in Argentina to support the progress we are planning to produce. So long as exchange fluctuation was an ever-present risk, we naturally have been chary of exposing our reserve sterling resources to that particular danger, which has cost us so dear in the past. We shall be careful not to do too much too quickly. We aim rather at promoting a steady expansion of sales step by step so that we can consolidate our position as we go.

I am pleased to say that shortly after his return to Buenos Aires, Sr Zappa advised me that he had put the first steps of our plan into effect and that our managements had reacted with enthusiasm.

I was able to appreciate this personally, when I paid a visit to Argentina in April, in order to renew my impression of our stores in Buenos Aires and to see on the spot how our business was going. Up to the time of my visit, sales in Buenos Aires had fulfilled our expectations. In the provinces, last year's recession took longer to make itself felt and consequently recovery has been somewhat delayed. I was greatly impressed by our stores which have undergone many changes for the better and also by the confidence with which our managements are tackling their tasks. I feel sure that, so far as our trading results depend on our own efforts, improved profits can be shown in the current year.

gravel, and other stone, over a wide geographical field, for many years.

After providing for the Capitalisation issue which took place last year, the General Reserve now amounts to £650,000.

In February of this year, Shareholders were informed of the acquisition by this Company of the whole of the issued Share Capital of Land Reclamation Co. Ltd.

In the explanatory circular it was fore-shadowed that the profit of that Company for the year ended March 31, 1961, would be in the region of £55,000. I am pleased to tell you that the estimate has been exceeded, the final figure of profit, subject to audit, being approximately £60,000. This new Subsidiary should make a valuable contribution to the earnings of the Group.

The current year has started well, with an increase in turnover, and as your Group of Companies is well placed to meet all normal demands, I feel confident that last year's performance will be improved upon.

The report and accounts were adopted.

## THE SANDVIK STEEL WORKS CO. LTD.

(Iron and Steel)

### CONTINUED HIGH DEMAND FOR PRODUCTS IN 1960

#### EXPORTS INCREASED BY 29%

The annual general meeting of Sandvikens Jernverks AB was held at Sandviken, Sweden, on May 6th. The following is an extract of the report circulated with the accounts.

#### REVIEW OF THE TRADING YEAR

The invoiced sales of the Sandvik Group of Companies for iron, steel and tungsten carbide products amounted to £31.3 million, an increase of 21 per cent compared to 1959. The corresponding figures for the Parent Company show an increase of 28 per cent over 1959 and amounted to £24.5 million.

The value of exports rose to £16.5 million (29 per cent over 1959) and represent 68 per cent of the Parent Company's sales.

#### SUBSIDIARY COMPANIES

The Parent Company now owns all the shares in See Fabriks AB, at Sandviken, who manufacture steel tube specialities.

A new subsidiary, Sandvik Asia Ltd., has been established in India. A plant to manufacture tungsten carbide products is under construction at Poona, and the Parent Company is putting qualified technical and sales personnel at the disposal of the new subsidiary.

The Argentine subsidiary, La Metalurgica Sueca S.A., is now wholly owned.

The two UK subsidiaries, Sandvik Swedish Steels Ltd., Halesowen, Birmingham, and Sandvik Steel Band Conveyors Ltd., Selly Oak, Birmingham, have had an encouraging year of improved trading.

#### INVESTMENT PROGRAMME

During 1960 the Parent Company's investment programme was more extensive than ever before in the long history of Sandviken. In addition to the plant including six-ton high-frequency electric furnaces completed a year ago, a ten-ton high-frequency furnace has recently been installed and commissioned for the additional production of high-quality stainless steel. A new mill for the cold-rolling and heat-treatment of steel tubes began production at the end of 1960, while a bigger plant for the extrusion of stainless steel tubes will start production in 1962. The capacity for cold-rolling strip and wire products, as well as other finished goods, has been increased, and further extensions are under way.

A metallurgical laboratory was commissioned in 1960, and a further new research laboratory is now approaching completion, and will be officially opened in June by the King of Sweden. It includes X-ray equipment and an electron microscope for research into the molecular physics of ferrous metals.

To meet the increased demand for hard metals (tungsten carbide, cutting tips for machine tools and rock drills) the Company's present plant outside Stockholm is being extended and a new plant for the production of tungsten oxides is under construction. Two new workshops were completed during 1960, one for the production

## COMPANY MEETING REPORTS

of rock drill bits and the other for the manufacture of turning tools.

### RESULTS

The trading results of the Parent Company after depreciation of plant and machinery by 30 per cent and buildings by £200,000 was as follows:

|                   | 1960<br>£ millions | 1959<br>£ millions |
|-------------------|--------------------|--------------------|
| Profit before tax | 4.36               | 4.02               |
| Less Reserves:    |                    |                    |
| Pension fund      | 0.12               | 2.62               |
| Investment        | 0.69               | 0.28               |
| Stock reserve     | 2.49               | 0.34               |
|                   | 3.30               | 3.24               |
| Taxes             | 1.06               | 0.78               |
|                   | 0.42               | 0.31               |
| Net profit        | 0.64               | 0.47               |

### NEW CAPITAL

Loans amounting to £1.72 million and £970,000 have been obtained by the issue of Debentures and Notes respectively.

The increase of the share capital recommended by the Board was approved at the Annual General Meeting and 276,666 shares—each of a nominal value of 100 SwKr—will be issued. This represents an increase of the share capital from £5.72 million to £7.63 million. The present shareholders will be given preferential right to buy one new share for every three held.

### BOARD OF DIRECTORS

Gustaf Söderlund, Chairman; Hugo Stenbeck, Vice-Chairman; Tage Wärm; Wilhelm Haglund, Managing Director; Georg Ekman; Lennart Magnuson; Göran Lindblom.

### HUPFIELD BROTHERS

(Makers of Injection Moulding Machinery)

#### FURTHER EXPANSION

The twenty-fourth annual general meeting of Hupfield Brothers Limited was held on May 29th in London. The following is an extract from the circulated statement by the Chairman and Managing Director, Mr. A. Hupfield:

The Company became a Public Company just over a year ago. The accounts refer to the financial year ended December 31, 1960, and they show a satisfactory increase in Profit over the comparable period in 1959.

During the year, apart from increasing our current turnover by some 45 per cent several steps have been taken to provide a solid basis for further expansion. In July of last year, your Company acquired the whole of the Share Capital of Link Engineering Ltd., and the productive capacity was almost entirely turned over to the production of Plastics Machinery by the end of the year.

Our factory at Daventry came into operation during the year and made a satisfactory contribution to our total result. In November, work was started on the extension to the main factory and offices at Hendon and it is expected that this will be available for occupation by the middle of 1961. These steps should enable us to meet the increased demand for Plastics Machinery which must inevitably result from the published increase in output of raw materials which is anticipated in the next 10 years.

Long term prospects are promising. Our orders in hand are sufficient to ensure full production at all our factories for many months to come.

## THE ECONOMIST JUNE 3, 1961

### CHIESMANS LIMITED

The annual general meeting of Chiesmans Limited was held on May 26th in London.

Mr C. S. Chiesman, chairman and joint managing director, presided and, in the course of his speech, said:

It gives me much pleasure to report a satisfactory increase in the net profits of the Group, both before and after tax.

Profits before tax totalled £176,146 compared with £135,487 in the previous year, and after provision for tax, £104,222 compared with £62,189.

This increase in a year of expanding sales, but ever increasing costs, contains, I am pleased to say, a contribution from each of the seven Stores in the organisation.

Because I am able to report that all the businesses in the organisation are in sound condition and are all contributing to an increasing Group profit, your Board has pleasure in recommending an increase in the ordinary dividend to 15 per cent. In accordance with our Capital structure, this will have the result that, for the first time since the "A" and "B" ordinary shares were created, they will rank for a dividend of 2½ per cent (the excess over the 12½ per cent).

Turnover during the current trading year is in excess of that during the comparable period for the year ended 31st January, 1961, and there are sound reasons for believing that your Company's business will continue to prosper.

The report was adopted.

## COMPANY MEETING REPORTS

### BARTON & SONS

The twenty-fourth Annual General Meeting of Barton & Sons Limited was held on May 31st in Birmingham.

The following is an extract from the circulated statement of the Chairman, Mr H. Prichards:

The group trading for the year 1960 resulted in a record profit before taxation of £1,135,113, an increase of some 9 per cent over the previous year which itself was a record. A substantial contribution to group profits is now made by the three companies engaged in the production of steel tubes and fittings and our output of these products again constituted a record.

With the proposed final dividend of 12½ per cent the effective distribution for the year totals 20 per cent and compares with 17½ per cent in 1959.

The fixed investments of the company are now much in excess of the issued capital and in order to bring these more into line it is proposed to make a scrip issue of one new share for every four ordinary stock units held.

The Group Net Profit for the year after meeting all charges including taxation is £587,971 compared with £545,217 last year.

The first three months trading of 1961 compares quite favourably with the corresponding period of 1960 and I see no reason why satisfactory results should not be produced in the current year.

The report was adopted and resolutions increasing the capital of the Company to £3,500,000 by the creation of 4,000,000 additional 5s. Ordinary Shares and giving effect to the one-for-four scrip issue were approved.

### VOSPER LIMITED

(Shipbuilders & Engineers)

The 24th annual general meeting of Vosper Limited will be held on June 2nd at Portsmouth.

The following is an extract from the circulated statement of the chairman, Mr. Owen R. Guard: Despite an increase in turnover, profit margins have suffered owing to the delay in receipt of orders for the fast patrol boats, which is our traditional business. A promised order for two Gas Turbine engined fast patrol boats from the German Ministry of Defence was much delayed, and when eventually received, was too late to be of benefit to the year's accounts.

The accounts show a net loss of £29,828, which compares with a net loss of £17,142 for the year ended December 31, 1959. Your Directors regret they are unable to recommend payment of a dividend.

As a result of the order from the German Ministry of Defence, our Sales Department are now in close negotiation for a number of similar craft for some of the more important navies of the world.

Taking into consideration the world-wide difficulties in the class of work we undertake, it would seem we are obtaining more than our share, while the rapid expansion of our roll damping, electrical, research and other new divisions indicates a very live concern determined to keep out in front technically.

Whilst it is always difficult to forecast future trading results in this specialised business, our better balanced order book and the high level of export enquiries give grounds for reasonable optimism for the coming years.

## M. BERTISH & CO. LTD.

# TERN

by Consulate

### NAME CHANGED TO "TERN-CONSULATE LIMITED"

#### PROFIT AND DIVIDEND FORECAST EXCEEDED

The fifty-second annual general meeting of M. Bertish & Company Limited was held on May 30 in London, Mr M. A. Nachman (Chairman and Joint Managing Director) presiding.

The following is an extract from his circulated statement:

Although this is the fifty-second Annual General Meeting of the Company it is the first since our shares were placed on the London Stock Exchange.

The Consolidated Profit for 1960, before Taxation, was £266,559, as compared with £205,098 for 1959 and £220,000 as forecast in the Advertisement dated November 29, 1960.

In view of the increased profit your Directors feel justified in recommending a dividend of 25 per cent less tax, which compares with the forecast of 22½ per cent made in November, 1960.

Sales so far for 1961 compare favourably with 1960, but I think it too early to forecast an estimate of what this year's results will be as, in spite of a tendency for prices of some of our raw materials to rise, it is the declared policy of your Directors to maintain the current retail prices of our products as long as possible. Nevertheless, I feel confident that our profits for 1961 will again be satisfactory.

Referring to the Board's proposal to change the Company's name to "Tern-Consulate Limited," the Chairman said: Your Directors feel that as the Company's trade mark is "TERN" by Consulate it is desirable that the name of the Company should in future be more easily identified with its extensively advertised products.

I would like to explain that in the past it has been the practice of the Joint Managing Directors to alternate in the holding of the post of Chairman. We wish to continue this principle and propose that the change should take place each year at the conclusion of the Annual General Meeting. Accordingly, I have great pleasure in introducing to you Mr D. G. Bertish, who will be your Chairman for the ensuing year.

The report was adopted and the change of name approved. The Chairman then made the following additional remarks:

I am very pleased also, to inform you that our forward order position again shows a most encouraging increase compared with last year.

Furthermore, your Board has considered the question of paying interim dividends, and we have decided to implement this on or about November 30th Next.

## RAND MINES, LIMITED

(INCORPORATED IN THE UNION OF SOUTH AFRICA)

### SUMMARISED BALANCE SHEET, 31st DECEMBER, 1960

| CAPITAL AND RESERVES          |                                                 | PROPERTY AND NET ASSETS                                                                                                                                                                              |            |

In terms of the Decimal Coinage Act, 1959, of the Union of South Africa, decimal coinage was adopted in the Union with effect from 14th February, 1961, the rate of conversion being one pound equals two Rands, i.e., £1—R2.

The full Report and Accounts may be obtained from the London Secretaries, A. Moir & Co. Ltd., 4, London Wall Buildings, London, E.C.2.

## JOHN BRIGHT & BROTHERS

### TURNOVER AND PROFITS SUBSTANTIALLY INCREASED

The Thirty-eighth Annual General Meeting of John Bright and Brothers, Limited, will be held on June 21 in London.

The following is an extract from the Statement by the Chairman, Mr Fred Train, circulated with the Report and Accounts for the year ended March 31, 1961:

As a result of an increase in turnover and other benefits from improved operating, the Group Profit after deducting the charge for Depreciation and the cost of the Staff Pension Scheme, but before charging Taxation, shows a material improvement at £553,893 compared with £389,839 for the previous year. This result fully justifies the Board's decision in December last to restore the interim payment on the Ordinary Stock to 10 per cent which, with the proposed final dividend of 15 per cent, brings the total distribution for the year up to 25 per cent as compared with 22½ per cent for each of the two previous years.

At the Annual General Meeting recommendations will be put before you to bring the Issued Capital and the Capital actually employed in the business more into line. We are suggesting an increase in the Authorised Capital from £1,500,000 to £3,000,000 by the creation of 6,000,000 Ordinary Shares of five shillings each and the Capitalisation of the sum of £1,200,000 to be applied in the paying-up in full of 4,800,000 Ordinary Shares to be issued to exist-

## THE DRAYTON REGULATOR AND INSTRUMENT COMPANY

### PROFITS AGAIN INCREASED

The twelfth annual general meeting of The Drayton Regulator and Instrument Company Limited was held on May 30 in London, Mr P. H. Lloyd, TD, DL (the Chairman), presiding.

The following is an extract from his circulated statement:

It will be remembered that last year I forecast a rise in the cost of raw materials, wages and services. These rises have come about and have had an effect upon the trading conditions of your Company but I am happy to report that, notwithstanding this, the profits for the year have again increased.

The consolidated trading profits for the year amounted to £351,842 compared with £327,814 last year. After deducting depreciation and taxation, the profits for the year amount to £152,389 compared with £143,320 last year.

**Production.**—Reorganisation of our shops is proceeding and production has further increased. The new factory was finally taken over in November and is in the course of being occupied. Naturally, the benefits of its acquisition were not felt in the results for the year under review.

Having reviewed the satisfactory progress and outlook of the subsidiaries and joint companies, namely, Drayton Controls (Heating) Ltd., Drayton Johnson Ltd. and Drayton-Southern Ltd., the chairman, in referring to two further projects launched since the last Annual General Meeting, said:

**Drayton Castle Limited.**—Your Company has joined the Wilmot Castle Company of Rochester, USA, in forming a Company in which your Company holds 51 per cent of the share

## COMPANY MEETING REPORTS

ing holders of Ordinary Stock in proportion to their respective holdings as set out in the Resolutions of which you have notice.

Group turnover has again been substantially increased, and the uplift in Group Trading Profit of 30 per cent reflects the benefits of increased output resulting from the concentration of production and greater use of shift-working.

### EXPANSION AND DIVERSIFICATION

We have taken a further step forward in the widening of our interests by the installation of a plant for the production of yarn required in the manufacture of Tufted Carpets. This is a new venture and one which we feel will be advantageous to the Company. In addition, we are erecting a building to house a specialised unit for the production of hose by a modern method of circular weaving. This is complementary to our plant laid down some years ago for the weaving of circular fabric on flat looms which has proved so successful as a base for present-day fire-fighting equipment. These are points of expansion and diversification within our own industry and are quite apart from our general policy of modernisation. Our confidence in the future is clearly illustrated by forward Capital Commitments of £425,795. This is a large sum and it must be encouraging to you to know that we are able to finance such projects from our own cash resources.

This year will be a period of consolidation when our efforts will be directed to the speedy completion of the plans in hand. The improvement in trading seems likely to continue and consequently I feel we may look forward to another successful year.

capital. Our partner is one of the leading manufacturers of sterilising equipment, operating theatre lights and operating tables in the USA. Manufacture of the Wilmot Castle range has already commenced in our new factory. We view the prospects of this development with considerable optimism.

**Drayton Greaves Limited.**—It is felt that with the industrial expansion in India the profitable sale of our products will be of increasing importance in that country; consequently your Company has joined with Greaves Cotton & Company Limited of India to form this Joint Company in which we hold 49 per cent of the share capital.

**Shipping Industry.**—The growth in our marine department has been most gratifying. A few years ago the turnover was quite negligible, but uses for Drayton products have been developed to such an extent that a very large proportion of the new British Ocean-going liners carry Drayton controls of one kind or another as part of their equipment. The export market is being cultivated with encouraging results.

**Brewing Industry.**—Steady progress is being made in this field.

**Small Geared Motor Units.**—Substantial orders have been received and prospects are good.

**X Valves.**—Our range of valves for use with automatic controllers is being extended.

**The Future.**—In general, trade is buoyant but competitive. Sales to date are ahead of last year and at the time of writing there is no reason to suppose that they will not continue to be so.

The report was adopted and a total distribution of 25 per cent (22½ per cent) was approved.

At subsequent special meetings, the board's proposals concerning the change of the company's name to "Drayton Controls Limited" and alterations to the Articles of Association were duly sanctioned.

## RUMIANCA S.P.A.

### Turin, Italy

(Fertilisers, Chemicals, etc.)

### PLANS FOR EXPANSION IN SARDINIA

The annual general meeting of Rumianca S.p.A. (Corso Montevecchio 37, Turin), took place in Turin on April 29, under the chairmanship of Avv. Riccardo Gualino, and in the presence of more than 200 Shareholders representing, either personally or by proxy, a total of over 7,200,000 shares.

The Meeting received with warm appreciation both the Report of the Board, and the extensive information supplied by the President regarding the industrial progress realised by the Company and the projected plans for the future industrial expansion programme. These include the construction of a large complex of installations in Sardinia.

It was subsequently proposed to distribute a dividend of Lit.100 per share, payable on May 8, equivalent to 10 per cent on the current capital, and to carry forward to next year the resulting profit balance of Lit.429,330,605.

The report, the accounts and the proposals put forward by the Board of Directors were adopted.

## THE FRIARS INVESTMENT TRUST

### LARGER REVENUE & DIVIDEND

The thirty-fourth annual general meeting of The Friars Investment Trust, Ltd., was held on May 29th at 33, Cornhill, London, EC, Mr J. N. Buchanan, DSO, MC, chairman, presiding.

The following is the chairman's statement circulated with the report and accounts for the year ended February 15, 1961:

The year just ended has been a satisfactory one. Gross income is £342,666, against £303,119 for the previous year, the increase being entirely due to a rise of £40,000 in dividend and interest collections. After payment of all expenses, interest and taxes, the net revenue for the year is £174,568. This is equal to earnings of 14.25 per cent, against 12.48 per cent a year ago.

### RESERVE STRENGTHENED

The board recommend a final dividend of 8 per cent, which with the interim dividend of 3 per cent already paid, makes a total of 11 per cent for the year. The dividend paid for the previous year was 10 per cent. The good results have enabled the board to transfer £45,000 to the General Reserve Fund, which now stands at £150,000. Subject to unforeseen circumstances, the board intend to pay an interim dividend of 5 per cent in the current year. This increased payment does not indicate an increase in the total dividend for the year but is being made only to reduce the disparity between the interim and final payments.

The valuation of our investments at the date of the Balance Sheet amounted to £7,779,000, against £7,259,000 a year ago. A detailed classification of the investments, which number 445, is again included in the report and shows the wide spread of the portfolio.

# COMPANY AFFAIRS

## Report from Industry

At this time of year the chairmen of some of Britain's largest companies give some interim indication of trading trends. The cautionary note struck by the chairmen of ICI and Guest Keen and Nettlefolds is echoed by several others.

Sir Edward Beharrel, chairman of Dunlop Rubber, speaks of a quiet start to the year as a result of the motor industry's setback, but offers good reason to hope that the group will make further progress this year. The present wide disparity between the interim and final dividends is to be reduced, but is not to be taken to imply a higher distribution for the year. In Europe Dunlop has opportunities for full participation in both the common market and EFTA whether they come together or not, but Sir Edward warns shareholders that this closer association affords the opportunity for growth which has then to be achieved.

Another company closely connected with the motor industry, Pressed Steel, is now operating its motor body division at "a reasonable level," although well below the peak achieved in 1960. The chairman, Mr Alex Abel Smith, reports some improvement in the demand for refrigerators, though not to the level he would like to see. Gloomier news was that an important

tooling contract had been lost as result of the unofficial strike at the group's Swindon factory.

Mr Bridgeman's description of the trade of British Petroleum in 1960 as "increasing demand coincident with increasing competition" applies equally to the first four months of 1961, when sales rose by 8 per cent compared with 15 per cent for the whole of 1960. Mr Bridgeman describes this increase as "not unsatisfactory" in current conditions, but declining margins throughout the oil industry suggest that the increase in profit this year is likely to be slim.

With the completion of the *Canberra* for P & O, Harland and Wolff is for the first time in many years without any passenger liner contract. Mr J. S. Baillie, the deputy chairman, says of the proposed new Cunard liner that Harland and Wolff's "unique experience in the design and construction of passenger carrying vehicles" makes it fully capable of carrying out such a contract. Since the annual meeting it has been announced that the maintenance of the Queens is to be taken over by Harland and Wolff later this year. Given the present state of the shipbuilding industry, Mr Baillie holds out no early prospect of a substantial recovery in distributable profits.

## Guest Keen and Nettlefolds

In the last ten years sales of Guest Keen and Nettlefolds have risen from £68 million to £252 million and the capital employed by the group from £57 million to almost £180 million. Ordinary shareholders have enjoyed even greater expansion; net profit attributable to them has soared from under £3 million to £15 million while the £4½ million paid out in ordinary dividends in 1960 (excluding the special non-recurring dividend of almost £1 million) compares with £890,000 for 1951. Few companies can claim such growth and Mr K. S. Peacock, the chairman, now warns shareholders that it will be difficult to maintain it over the next ten years. He points to the strong competition from Japan and from the Common Market. Already the group is beginning to suffer from higher tariffs and the chairman hopes for a speedy reconciliation between the common market and the EFTA countries.

The latter part of last year saw some fall in the volume of business, which is only now beginning to pick up; but this, coupled with the difficulty in maintaining profit margins, is likely to mean that profits in the current year will not reach the record level of 1960.

While profits may not record a seventh successive increase, there is to be no let up in the group's capital expenditure which is likely to exceed the level of recent years. Expansion schemes at GKN's three steel works were slowed down in 1960 so that plans could be adjusted to take in certain technical developments in the steel industry. Now the cost of these schemes in the period 1960-64 is expected to be about £28 million rather than the £20 million estimated last

|                            | 1951          | 1955           | 1959           | 1960           |
|----------------------------|---------------|----------------|----------------|----------------|
| Turnover                   | £'000s 68,333 | £'000s 145,913 | £'000s 220,807 | £'000s 252,473 |
| Total net assets employed  | 57,388        | 104,445        | 157,723        | 179,908        |
| Trading surplus            | 9,226         | 18,777         | 26,550         | 31,620         |
| Net equity profit          | 2,907         | 8,205          | 12,794         | 14,964         |
| Ordinary dividend          | 890           | 1,597          | 3,628          | 4,314          |
|                            | %             | %              | %              | %              |
| Trading surplus/turnover   | 13.5          | 12.9           | 12.0           | 12.5           |
| Trading surplus/net assets | 16.1          | 18.0           | 16.8           | 17.6           |

year. In addition the directors have approved substantial modernisation schemes for other of the group's works and commitments at the end of the year amounted to £26 million against £18.6 million. With the receipt of the final instalment of last

November's rights issue, liquid assets must amount to about £31 million while the group's cash flow is now running at an annual rate of £18 million.

As this last figure implies, cover for the ordinary dividend is well above average—3½ times—and the shares are on an earnings yield basis of 11½ per cent. Not surprisingly, the chairman's cautious view of GKN's future prospects caused a sharp fall of 11s. to 93s. and they now yield 3.4 per cent on the dividend.

## Associated Portland Cement

It was disappointing profit figures rather than the bigger dividend and the proposed one for two scrip issue that caught the market's eye in the preliminary statement from Associated Portland Cement. But for the issue, the shares would have no doubt been marked down more than by 6s. 1½d. to 87s. 9d., at which they yield 2½ per cent on the dividend raised from 11 to 12½ per cent.

Not for the first time the results of Associated Portland have proved disappointing, not only against the background of a buoyant building industry (reflected much

| Ordinary dividend (per cent) | 11.0          | 12.5          |

more clearly in the sharp rise in profits of Rugby Portland Cement) but also in relation to the interim report of last October. Then the directors told shareholders of higher deliveries of cement to the home market and of slightly lower exports but with higher profit margins.

Selling about two thirds of the cement used in this country, APC at present stands to gain less than some of the smaller companies in an expanding market and it remains to be seen whether the large expansion programme for the home market which will raise APC's capacity by about one million tons a year will be reflected in sharper increases in profits. Meanwhile the recent increase in the price of cement should have made up for any fall in margins.

## Turner and Newall

ALTHOUGH Turner and Newall's trading profit was a record last year, it exceeded the previous peak in 1956 by the barest margin. It also seems that only a large expansion in turnover restored profits to their former peak. Despite the stock's African flavour, Turner and Newall's £1 ordinary shares at 68s. 9d. yield only 3½ per cent. One influence on this low yield is the recent liberalisation of dividend payments. The interim dividend for the year to September 30 has now been raised from the

**Wilmot Breeden**

equivalent of 2½ per cent to 4 per cent. Despite the customary disclaimer, this may well be the prelude to a further rise in dividend from the equivalent of 12 per cent paid last year. Reduced profit margins have not prevented a slight rise in the net profit earned by the manufacturing companies in the first half of the financial year, and the trading profits of the mining companies were higher, but one subsidiary, British Industrial Plastics, suffered a reduction in profit despite maintained turnover.

The directors of Turner and Newall say that the trading results for the first six months of the financial year were satisfactory and that the same should hold true for the remainder of the year. Europe's building boom should certainly bolster sales. Last year's ordinary dividend was covered 2.3 times by earnings, leaving sufficient scope for an increase in the dividend this year.

**United Drapery Stores**

OF the increase of £1.1 million in United Drapery Store's trading profit for the year ended January 28, 1961, £864,000 came from increased profits from the group's existing businesses and £213,000 from new acquisitions. Mr Joseph Collier tells shareholders that new businesses are increasingly difficult to find on reasonable terms but following last October's £4 million rights issue UDS has the advantage of being able to offer cash for anything but the biggest. At the end of January, cash holdings totalled £6.1 million and while the group's capital expenditure plans are considerable, they seem likely to be largely financed from the cash flow which is now at an annual rate of £2½ million.

Lack of suitable acquisitions has not lessened the growth potential of UDS. Besides substantial extensions to various department stores 16 new multiple clothing shops were opened last year and 19 new credit branches. Capital expenditure in the current year is expected to amount to £3 million out of total commitments of over £4 million. Many of the new shops have been built into office blocks and soon UDS will have 85,000 square feet of offices available or let in good positions. This should swell further the group's rental income which amounted last year to about £400,000 from property let to tenants outside the group.

Sales so far in the current year have shown a substantial improvement over those for the first quarter of 1960 which, as Mr Collier points out, was a period without hire purchase restrictions. Thus while sales on hire purchase have declined, "budget" and short term credit sales have risen sharply so that the provision for unearned profits has fallen only slightly from £3.5 million to £3.3 million. On the sharply raised dividend, 45 per cent against 37½ per cent, the 5s. shares still yield only 2.9 per cent at their current price of 77s. This low return looks forward—and back over the past dozen years when the massive expansion in the group's assets was matched by sharply rising trading profits.

LAST year the output of British cars rose by 14 per cent but the increase was concentrated in the early part of the year and by December output was running at 55 per cent of the peak June level. This setback, coupled with rising costs, lowered the trading profit of Wilmot Breeden for the first time in eight years, by 12½ per cent from £2,392,000 to £2,085,000. Margins on sales seem to have narrowed, and have no doubt been squeezed further by the long-term expansion plans of the group which have been continued through this phase of excess capacity involving growing expense at a time of falling receipts.

However the group is not dependent upon the British motor industry alone. It has interests in flight components and electronics but the most important subsidiaries are those engaged in car component production in France, which give Wilmot Breeden a springboard into the Common Market. For the French companies, which make car seats and mechanisms, Wilmot Breeden has subscribed £600,000 in new capital, and working capital has been bolstered by an additional £1.2 million from a French State Loan and a non-repayable state subsidy. The expenses of forming these companies have now been written off and they should begin to contribute more freely to earnings in the current year. The chairman, Mr D. L. Breeden, says that the fall in car production will lower profits and it is not yet clear whether output will rise significantly during the rest of the year. The group's other activities are all yielding higher profits though they are hardly big enough to provide a sufficient hedge against the slackness of the motor industry. With the ordinary dividend effectively unchanged at 11½ per cent covered 2½ times by earnings, the 5s. ordinary shares at 16s. 3d. yield 3½ per cent.

**Consolidated Zinc**

THE fall in Consolidated Zinc's consolidated trading profit from £4,163,000 to £3,871,000 in a year in which the value of lead and zinc rose output increased and mining costs fell shows how much more than a mere producer of lead and zinc concentrates the group has become. Installing the group's Imperial Smelting furnace at Swansea has evidently been more costly than expected. This, together with lower profits from the sale of pigments and some stock losses, more than offset bigger profits from the Avonmouth smelter and from sulphuric acid. In his review, Mr L. B. Robinson implies that the new smelter was not fully into its stride until the end of the year. It has now surpassed its rated capacity, and the chairman seems optimistic that still greater efficiency will be achieved.

Revenue flowing from the licensing of this smelting process to other producers dropped by £159,000 to £283,000 last year, but its successful debut at Swansea appears to have awakened interest in it. The

Swansea project absorbed a large part of the £6 million invested by the group in buildings and plant during 1960. Liquid assets were drawn down from £8,077,886 to £1,724,144 but at the end of the year capital commitments were reduced to £3,765,000. This year the group receives two instalments of £1¼ million on the £10 million loan stock subscribed by the British South Africa Company to finance part of the Comalco aluminium project. A loan of £1 million for financing the construction of the group's new building in Melbourne also remains to be drawn.

Since breaking with British Aluminium and linking with Kaiser last year, Consolidated Zinc has been vigorously expanding its aluminium interests. A fabricator, Austral Bronze, has been acquired and new rolling facilities, hot breaking down mill and foil rolling plant will be installed. Output of the Bell Bay smelter in Tasmania is being increased from 12,500 to 28,000 tons a year and a further expansion to about 50,000 tons is under consideration. But Mr Robinson explains that the fruits of its huge aluminium project are still a long way off. Meanwhile he is optimistic about the future of both lead and zinc on which the group will rely for financing the extension of its interests. At 76s. 6d. the £1 ordinary units yield 5.2 per cent on an unchanged 20 per cent dividend.

**Land Securities**

YIELDING only 1.8 per cent at 34s., the 10s. shares of Land Securities Investment Trust are clearly a long term investment. Mr Harold Samuel emphasises this view when he tells shareholders that no marked improvement in income is to be expected before 1963. No major development was completed in the year to March, 1961, but in the provinces 82 shops and 11 stores were built. Rental income less ground rents rose from £2 million to £2.3 million but with interest charges up from £1.5 million to £1.9 million net profits rose by £56,000 to £614,000. The ordinary dividend was raised from the equivalent of 5½ to 6 per cent.

The current year should see the completion of the East Island site in Oxford Street, much of which is already occupied, as well as the first phase of the Esso office and shop development scheme in Victoria Street. In both streets, further areas have been acquired for development and the group has also applied for permission to build a large office building on the corner of Albert Embankment and Vauxhall Bridge. A further 71 shops and 5 stores are under construction in the provinces but the major provincial scheme is in Liverpool where the Ravenscroft subsidiary is to redevelop 5 acres in the city centre. The project which will include 100 shops, a large hotel and covered parking for 1,000 cars, will incorporate such features as heated shopping arcades, escalators to take shoppers to a new high level market and the

exclusion of motor traffic from the shopping areas.

Fixed assets have increased from £44.8 million to £55.2 million, largely financed by the taking up by the Legal and General of the remaining £3 million of the 6¼ per cent convertible debenture stock and by further bank loans, up from £2.2 million to £8.6 million. The group has raised a further £1 million in mortgages and this should be a growing source of finance as new developments are completed. But, with capital commitments of £6¼ million and with obligations under building agreements of £2.2 million, the group may well have to seek further funds particularly for its longer term projects.

**Stoll Theatres and Moss' Empires**

THE long awaited report on Mr Prince Littler's three theatre-owning companies is rather a damp squib. When he beat off the Clore-Cotton attempt to acquire Moss' Empires, Mr Littler asked S. G. Warburg to submit plans for the three companies, Stoll, Moss and Howard and Wyndham, and their properties, bearing in mind that in considering the development of any property the operation of the theatres should be viewed as a circuit.

Market interest rested on the development potential of the properties over and above their value as theatres but on this the investigation proves disappointing. For Stoll this surplus is estimated at £1¼ million and for Moss at £600,000, while for Howard and Wyndham there is no significant potential at present. On a share basis these surpluses work out at about 3s. per Stoll 4s. share and 1s. 6d. per Moss 4s. share; Stoll's control of Moss would add about a further 6d. to their worth.

There is no suggestion of a merger of the three companies or of Stoll and Moss or of the separate companies that Moss and Stoll are to form to develop the properties which have been specified as having a development potential. In tackling their properties in this way the companies will be following the precedent of Watney Mann, which again after a take over bid from Mr Clore, established a separate company to develop the properties. If the developments are successful, it is suggested that a merger of the property subsidiaries should then be made and that the Moss and Stoll directors should consider obtaining a quotation for the shares in the merged company which would then be distributed to the shareholders of the two companies.

Last November many people were asking whether Mr Littler could really do justice to his shareholders by remaining a theatre owner and justify the seemingly high price paid for control of Moss Empires. The present circular leaves the answer to that question still at large and it is not surprising that the shares of all three companies have fallen. Moss' Empires lost 3s. 4½d. to 10s. 6d. and Stoll Theatres

1s. 9½d. to 8s. 7½d. and Howard and Wyndham 1s. 6d. to 15s. 3d. but the latter's shareholders can derive some consolation for their company's lack of participation in any property development. The recent capital reorganisation scheme of Thomson Newspapers now makes it possible to place a value on Thomson Scottish Associates, in which Howard and Wyndham has a 10 per cent stake. This holding is worth about £1¼ million or 13s. 6d. per Howard and Wyndham share.

**Rubber Companies**

THERE now seems little chance of estates obtaining an average price for their rubber this year as high as in 1960. Despite further increases in output, the chairmen of London Asiatic Rubber and Highlands and Lowlands Rubber both forecast some reduction in profit this year. These two groups are of roughly comparable size, but Highlands and Lowlands has attained this size by a series of comparatively recent acquisitions and since the end of last year has acquired two more rubber companies. London Asiatic assimilated Lanadron Rubber and the Oriental Rubber Company last year. The chairman, Sir Eric MacFadyen says that the sole aim of this expansion is to enable the group to rationalise its production. One of its other estates, acquired only a year earlier, was sold to allow resources to be concentrated on the development of its new properties.

Further disposals are being negotiated; the group's policy is to sell for cash to help finance replanting programmes without squeezing dividend payments. Last year the group's costs rose by ¼d. a lb. while the average price realised for its output fell by ½d. a lb. But production, including that of the newly-acquired estates rose by 10 million lb. to 28 million lb. A further increase of 1½ million lb is expected this year. After tax of £375,000 and the deduction of pre-acquisition profits, group net profit for 1960 was £926,000, against £668,000 in 1959. Replanting and additions to fixed assets absorbed £357,000 and the ordinary dividend, reduced from 50 to 45 per cent, cost £449,000. At 5s. 10½d., London Asiatic's 2s. units yield 15.4 per cent.

The heavy cost of replanting, which is essential to keep natural rubber competitive with synthetic substitutes, compels rubber companies to retain large cash reserves to be drawn on when profits are too low to finance the programme. London Asiatic held £1,270,000 in liquid assets at the end of December. Highlands and Lowlands had liquid assets of £2,306,000 at that date. Its average realised price for rubber rose by about ¼d. a lb last year, but costs increased by about 1d. a lb. Trading profit was only £26,000 higher at £1,455,000, but net profit rose from £785,000 to £893,000 because of the incidence of pre-acquisition profits in 1959. The ordinary dividend was raised from 39 7/12 to 41 2/3 per cent and the 2s. units at 5s. 8½d. yield 14 per cent.

**London Stock Exchange**

|                 |        |         |         |
|-----------------|--------|---------|---------|
| FIRST DEALINGS: | May 8  | May 29  | June 12 |
| LAST DEALINGS:  | May 26 | June 9  | June 23 |
| ACCOUNT DAY:    | June 6 | June 20 | July 4  |

As the long Whitsun account drew to its close last week-end the equity market was quiet and prices tended to fall back as the small amount of "new time" buying was offset by heavy sales of option stock. On Monday some selective investment buying made prices firmer, but by mid-week prices slipped back under the influence of cautious chairmen's statements about future profits, particularly from Guest Keen and Stewarts and Lloyds, and the forecast of balance of payments difficulties by the National Institute of Economic and Social Research. Prices continued the fall which began a fortnight ago and over the week to Wednesday *The Economist* indicator fell by 8.4 points to 412.7, its lowest level since the beginning of April. The gilt edged market was also dull with business at a low level; until Wednesday small sellers outnumbered buyers and an improvement in prices then went some way to offset earlier falls. But over the week short dated stocks lost further ground, 5½ per cent Exchequer 1966 losing 16 to 99½; among the undated stocks 3½ per cent War Loan lost ¼ to touch their lowest point for the year at 55½, but improved to 55½ by Wednesday.

After the new account opened bank shares came on offer, and their prices fell back; Barclays lost 5s. to 88s. 6d. and Lloyds 2s. 6d. to 71s. 6d. Insurance shares also reflected the market's uncertainty about the future of industrial profits; Commercial Union fell from 78s. 10½d. to 72s. 6d. and Legal and General from 37 to 35½ xd. Although the general movement among equity prices was downwards, store shares moved against this, helped by the full report from United Draperies which put on 1s. 10½d. to 79s. 3d. xd. Debenhams rose by 7s. 10½d. to 73s. 10½d. on rumours of a bid, which were denied. Among chemical shares ICI again fell back, from 78s. 10½d. to 77s. 6d. After a large private placing below the market price, Granada "A" shares lost 3s. 9d. to 61s. 9d. xd. Brewery shares fell; Bass lost 2s. 3d. to 23s. 6d. xd, but Vaux recovered some of last week's fall, closing 1s. 6d. higher at 182s. 6d.

Steel shares were depressed by the interim report from Stewarts and Lloyds which lost 3s. 10½d. to 51s. 4½d. Guest Keen fell by 7s. 6d. to 97s. 1½d. with the news from Stewarts adding to the misgivings following their own chairman's statement. Motor shares changed little, Jaguar "A" gaining 9d. to 81s. and BMC 3d. to 16s. 4½d. Lower profits from shipping lines depressed share prices and P. and O. deferred lost 1s. 6d. to 40s. 6d. Textiles eased further; Courtaulds lost 1s. 6d. to 43s. 6d. There was a further recovery in Kaffir prices, with buying from Johannesburg; Free State Geduld gained 7s. 6d. to 93s. 9d., but tins fell back after their recent sharp rise, Tronoh losing 3s. 9d. to 59s. 3d.

## THE MONEY MARKET

FOLLOWING the sharp reduction of 7d. in its previous Treasury bill tender, the syndicate of discount houses maintained the agreed bid of £98 17s. 10d. last Friday. The average rate of discount, however, rose by 5.56d. to £4 8s. 8.74d. per cent as outside bidders adjusted their offers to meet the previous week's rise in the rate. Total applications for the £270 million of bills on offer rose by £8 million to £440 million, and the market received the satisfactory allotment of 50 per cent, following the previous week's quota of 33 per cent.

For the second week running the market balanced its books without recourse to the Bank of England. Credit was in plentiful supply until the week-end and rates for over-night money fell to the clearing banks' minimum of 3½ per cent fairly early on each morning. After the week-end funds were in short supply, and on the three days to the end of the month the authorities assisted the market by moderate to large special purchases of bills. Next week a further £270 million bills will be on offer against maturities of £240 million. In New York the three month bill rate has risen for the fourth week, from 2.354 per cent to 2.438 per cent.

## APPOINTMENTS

# A career in management as a specialist officer in today's R.A.F.

In this country or abroad, much of the day-to-day "management" of the R.A.F. on the ground is the responsibility of the Equipment and Secretarial Branches.

Equipment Officers are the logistics experts who organise the flow of equipment and the movement of personnel.

Secretarial Officers are concerned with a wide range of administrative duties from accountancy to intelligence.

There are two types of commission. One guarantees you a full career to age 55 and is open to university graduates and professionally qualified candidates under age 30; the other (in the Secretarial Branch only) guarantees service to age 38 (or for 16 years, whichever is the longer) and is open to candidates under age 39 with at least G.C.E. (or equivalent) at 'O' level in 5 acceptable subjects. Both offer a generous pension and tax-free gratuity.

Write for further information, giving your date of birth and qualifications, and saying which branch interests you, to:—

Air Ministry (M.9) (EO817), Admiralty House, London, WC1

**RESEARCH OFFICER** required to work with a group of public relations officers in the field of public relations. First-hand knowledge of public relations as well as research experience in public relations is essential. Salary according to age and experience. Royal Institute of Public Administration, 20A New Cavendish Street, London, W.1.

**MARKETING RESEARCH** F.E.I. Ltd. is an Anglo-Swiss marketing research organisation. In association with consulting companies, we specialise in the study of distribution problems, the introduction of new products and the analysis of potential markets in Europe. We are expanding, as are European trade increases, and can offer valuable training and experience to men with a degree in economics or in engineering and three years' experience of marketing, research or development. We have two positions to fill: one from, is concerned with the home market and the other in our European division, in which the applicant must be able to speak a European language and be willing to travel. Salary range: £1,500 — £1,800, depending on age, experience and qualifications. Write, giving full particulars and salary requirements to: F.E.I. Ltd., 185 Piccadilly, London, W.1.

**UNIVERSITY OF BRISTOL**

Applications are invited from graduates and those expecting to graduate in 1961 for the post of **RESEARCH ASSISTANT** in the Department of Economics, to work with the Professor of Accounting in a study of diversified businesses. The appointment, which will start from October 1, 1961, will be for one year in the first instance, renewable annually, and will carry a salary within the range £500 to £600 p.a.

Applicants should have at least a second class honours degree in Economics. Some knowledge of Statistics would be an advantage. A knowledge of Accounting is not required. Applications should be sent not later than June 12, 1961, to the Registrar, the University, Bristol 8, from whom further particulars may be obtained.

## THE POLYTECHNIC 309 REGENT STREET, W.1. SCHOOL OF COMMERCE

Applications are invited for a full-time appointment as **LECTURER** TO TEACH Mathematics and Mathematical Statistics to Institute of Statisticians and economics degree final standard. Candidates should possess a good honours degree (1) in Mathematics and be interested in mathematical statistics, or (2) in Economics with Statistics.

Duties to commence on September 1st next, or January 1st, 1962. The salary scale commences at £1,370 and rises to £1,550 per annum, plus London allowance of £38 or £51. The post is subject to superannuation and some concession in this respect may be made for previous industrial employment. Application form to be returned by June 15th, may be obtained by sending a stamped addressed envelope to the undersigned.

J. E. RICHARDSON,  
Director of Education.

## COURTAULDS COMMERCIAL LIBRARY

A vacancy exists in the Company's Commercial Library, London, for a Senior Reader (Woman) of newspapers and journals with a real interest in information work and preferably 2½ years' experience in commerce or finance. Ability to read some languages, preferably German and French, is important. A graduate in economics would be particularly suitable. The successful candidate will be expected to act as deputy to the Head of the library.

Candidates should write for a detailed form of application to the Director of Personnel, Courtaulds Limited, 16 St. Martin's-le-Grand, E.C.1, quoting reference number E.16/14.

## AUSTRALIAN NATIONAL UNIVERSITY

Institute of Advanced Studies  
RESEARCH SCHOOL OF PACIFIC STUDIES

Applications are invited for appointments as **RESEARCH OFFICERS** in the New Guinea Research Unit. This Unit was established in 1961 to conduct inter-disciplinary research into practical and applied problems in the Territories of Papua and New Guinea.

A vacancy exists for a specialist in the processes associated with urban growth, particularly in the tropics. A candidate with some experience in the administration of rapidly moving urban areas in addition to an appropriate academic background would be preferred. Further vacancies exist for work on problems of land tenure and use, of organisation for productive activity, of the recruitment of indigenous peoples and of communication between persons of widely divergent cultures. Applicants are invited to indicate in what problem or problems they have particular interests and any particular methods, if any, they would prefer to use.

The salary range is from £A1,625 — £A2,450, with annual increments of £A75. Appropriate allowances in relation to costs of living in the Territories of Papua and New Guinea will be determined for those required to work there. Arrangements will be made for periodic leave from the Territories during some part of which the Research Officer will be expected to reside in Canberra and work at the University. The term of appointment will normally be three years, but the Council may extend a Research Officer's tenure to five years. Appointments for periods shorter than three years may be made in appropriate circumstances. Research Officers are eligible for re-appointment. Superannuation is on the F.S.S.U. pattern. Reasonable travel and removal expenses are paid and assistance with housing is provided. Further details are available from the Secretary, Association of Universities of the British Commonwealth, 46 Gordon Square, London, W.C.1.

Applications close, in Australia and London, on July 3, 1961.

## AUSTRALIAN NATIONAL UNIVERSITY

INSTITUTE OF ADVANCED STUDIES

Applications are invited for a number of appointments in the **DEPARTMENT OF ECONOMICS** of the Research School of Pacific Studies. The Department is a new one, and was formed in 1961 under Professor Sir John Crawford, who is also Director of the School. The primary role of the Department is the study of both underdeveloped and primitive economies, with particular, but not exclusive, emphasis on the economies of development. It offers scope for theoretical work in the economics of development. It also offers a primary role to build up a new body of scientific economic knowledge of the region. Studies in current problems of economic growth and of Australia's economic relations with the area are also contemplated. A particular field of study of several departments of the School is the development of New Guinea.

The specific appointments to which applications are invited, are as follows:

Reader ..... not less than £A3,250  
Senior Fellow ..... £A3,000 — £A3,500  
Fellow ..... £A2,120 — £A3,000  
Senior Research Fellow ..... £A2,620 — £A3,100  
Research Fellow ..... £A1,625 — £A2,450

Initial salary within each range will depend on qualifications and experience. Appointments as Research Fellow or Senior Research Fellow are initially for three years, with possibility of extension to a maximum of five years. Appointments as Reader or permanent, and appointments as Senior Research Fellow or permanent, after an initial period of five years. Superannuation is on the F.S.S.U. pattern. Reasonable travel expenses are paid, and assistance with housing is provided. Further details are available from the Secretary, Association of Universities of the British Commonwealth, 46 Gordon Square, London, W.C.1.

Applications close, in Australia and London, on July 10, 1961.

## BUSINESS AND PERSONAL

## SUBSCRIPTIONS TO THE ECONOMIST

Annual Postal Subscription by ordinary mail £4.10; overseas £5. By air see below

| Subscriptions to many countries can be sent either by direct second-class airmail or in bulk by air freight for onward posting from central distribution points. Airmail is invariably more expensive but usually quicker by about 24/48 hours. Where only one service is shown this is because the alternative is either not available or not recommended. |             |                                |             |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------|--------------------------------|-------------|

### INTERNATIONAL

#### RELATIONS . . . . .

**Moscow and Washington:** Any hopes raised by the polite and sober atmosphere of the Vienna talks (p. 1089) must take account of the renewed fighting in Laos, which has disrupted the talks at Geneva (p. 1093). Nor, though all that he asked from the American people on his return from Europe was their support for foreign aid, is President Kennedy going to get all he wants (p. 1110).

**Moscow and Cairo:** *Pravda* has cracked the whip over President Nasser, suspecting him of wanting to be too neutral (p. 1095). **Cairo and Cyprus and Israel:** The Egyptian President and President Makarios respect each other as neutrals in the big cold war (p. 1096).

*But the archbishop may have received less sympathy from the colonel for his neutrality in the Israeli-Arab vendetta. An agreed solution to this is the prerequisite of any abatement of Israel's siege mentality, with all that this wind of change would imply for the future of the young state* (p. 1122).

#### RUSSIANS . . . . .

**... and Berlin:** Mr Khrushchev and Herr Ulbricht will content themselves with peaceful pressure until the autumn; if without success, stronger methods will be revived (p. 1119).

**... and Agriculture:** The Soviet model of collective farming has been faithfully followed by most of the East European satellites, and trouble has thrived accordingly (p. 1092).

**... and Albania:** Defendants in the recent Tirana trials were found

guilty of plotting with the Americans, but their real crime may have been sympathising with the Russians (p. 1096).

#### RESPONSIBILITIES . . . . .

**British:** The withdrawal of South Africa from the Commonwealth has drawn attention to the problems of the Bechuanaland protectorate (p. 1122). African "acquiescence" in—much less "consent" to—either the new Rhodesian constitutions or the continuance of the federation remains highly doubtful (p. 1093). . . . New and old conflicts in Zanzibar make the presence of the British army necessary to prevent further bloodshed (p. 1094).

**Australia** is anxious to be reassured that Britain is not forgetting its obligations to the white dominions in its anxiety to please the coloured and to solve the problem of the common market (p. 1125).

**Unilateralists:** Those who do not want the German army in Nato to rely too much on nuclear weapons ought, in logic, not to obstruct the training and equipment of conventional forces; or, indeed, conscription either (p. 1102).

#### REFORM?

The new development corporation may have to tackle all Burma's many economic problems (p. 1127).

**Saudi Arabia** needs to do more than swap camels for cadillacs to enter the twentieth century (p. 1120).

General Trujillo the Second may soon find it difficult either to keep or to break his reforming promises in the Dominican Republic (p. 1099).

#### AMERICAN SURVEY

**The Freedom Riders in the South** have begun a new stage in the human drama of their country's race problem (p. 1109).

The Republicans are in an aggressive mood (p. 1110).

### HOME

#### PUFFED UP

Britain's economy is being inflated by wage awards: the pressure should not be relieved by restrictive measures, but by stopping the pump (p. 1087).

For a start, the air might be let out of some teachers' complaints about their new salary scales (p. 1094).

#### Clammed Up

Mr Kennedy kept his mouth firmly shut in London—which spoke clearly enough of a new footing for Anglo-American relations (p. 1132).

#### Lumped Together

Welshmen do not like the plan to amalgamate their counties—and very likely it will not work: but the Principality could benefit from a more radical reconstruction (p. 1090).

One-third of Britain's people live in its six largest cities, and most of the rest of them are in the South (p. 1134): but London is less crowded than it was; and some of the City's firms are finding the suburban air more to their liking (p. 1133).

#### SLIPPING UP

The equity boom has been checked by a recurrence of old afflictions (p. 1137): and sterling takes more punishment (p. 1141).

#### Locking ahead

The gloves are now off in the fight between the gas and coal industries over future gas supplies to British households (p. 1141). Far-sighted exhibitors at Moscow did not expect an avalanche of orders, and have been careful not to leave their prototypes behind at the fair (p. 1142).

#### Up and up

Higher interest rates on mortgages are a step in the right direction; but the building societies may not have gone far enough (p. 1139).

The cost of smoking has risen (p. 1149): sales of clothing fell in April, but durable goods continue to recover (p. 1146): hire-purchase debt is growing again (p. 1143).

#### Turned Down

The Government has resisted attempts to "reform" the Licensing Bill (p. 1099) and life imprisonment (p. 1096). A hard look should be taken at proposed reforms in the press (p. 1102) and the dock labour situation (p. 1096).

*or wherever you go...*

## BARBER-GREENE ASPHALT FINISHERS PAVE THE WAY

All over Britain you find Barber-Greene finishers busily at work surfacing roads better and more economically than ever before.

Yet today for every machine that remains in Britain 49 go overseas. 98% export proves that the world agrees—it's quite a machine, the Barber-Greene.

These highly efficient road surfacing machines are designed and built by the Barber-Greene Company of Aurora, Illinois, and are manufactured in the United Kingdom by Rubery Owen (Warrington) Limited for Barber-Greene Olding & Co. Limited.

British engineering skill and American design were fused in a world-beating piece of equipment which is making a significant contribution to British exports of road making equipment.

Rubery Owen (Warrington) Limited is a member of the Owen Organisation, and these road finishers are good examples of the ability of the group to make almost anything in metal, however complex. They are sold and serviced by Barber-Greene Olding & Co. Limited of Hatfield, Herts., through a world-wide dealer organisation.

## Breakdown—the price of false economy

Can you afford doubtful protection of the machines in your production line?

You can insure yourself against breakdown. Install Ellison Starters for full protection against motor burnouts. The finely adjustable solenoid-operated self-resetting releases act instantly at any pre-determined overcurrent. Time lags prevent unnecessary shutdowns due to transient surges. Ellison Starters are totally enclosed and cannot be tampered with, thus protecting the operator.

Other forms of Ellison Switchgear include switchboards, oil and air-break circuit breakers and fuse switchgear. Every piece is robustly constructed to give long, reliable service. Advanced design ensures easy accessibility and eliminates the need for frequent maintenance. Ellison provide a comprehensive consultancy, after-sales and spares service—backed by over half a century of specialised engineering knowledge. Ellison Switchgear is known and respected as the world's most reliable switchgear.

## SKILLED MANPOWER, CREATIVE ENGINEERING

Skilled manpower and creative engineering is the essence of progress which today rules the Seven Seas. This progress is constantly evident in the new luxury passenger ships, the rapid passenger-cargo ships, the sleek tankers, ore and bulk carriers dotting the globe. The Mitsui ships stand out anywhere—everywhere, in fact, where there's water. And each ship is the symbol of Mitsui manpower and engineering, skill and creativity without peer today and unchallenged tomorrow.

*Air Trac®... AIR TRAC®... Air Trac®... Air Trac®...*

... wherever there is hard rock to move, you are sure to hear the name Gardner-Denver "Air Trac." Among construction men—at a hydroelectric plant in Australia, a seaway in Canada, a highway in Costa Rica or a dam in Italy—"Air Trac" is the most respected name for crawler-mounted rock drills. Ex-

perts in other fields as well, mining, petroleum and industrial, depend upon the reliable product performance and ready service of this century-old company.

Now, from a fast-expanding international network of plants, Gardner-Denver products and local service are readily available.

La situación comercial de l'Angle-terre demande dass wir mehr exportieren. Goering thought the alternative to not exporting was death through starvation; the P.M. thinks exporting's fun. We think it's plain common sense. With hire purchase, bank rates and special deposits subject to such peripatetic movements, how often have we blessed the fact that 45% of our business is transacted beyond these islands' shores. What stability of employment and turnover—

though not always of profits—have we enjoyed through the cushioning effects of exports. We've been exporting since 1860 and even in those days we published our sales literature in five languages. Bilingualism is a commonplace with us; many of our staff are quinquelingual—even the Managing Director speaks three languages. We've subsidiary and associated companies in a dozen countries overseas, and agents or dealers in nearly all the others—so there's

hardly a country in the world we don't visit or where you won't find a Morgans product. We're sorry if this sounds like boasting but we're proud of our export tradition. And with all the gloom about exports that seems to be fashionable at the moment, we feel this is the occasion to pay tribute to all the employees of the Group who help to develop, make and sell the products on which our export performance depends.

## MODERN INDUSTRY REQUIRES MODERN STEEL MATERIALS

Nippon Kokan (Japan Steel & Tube Corp.) has the advantage of over 50 years' experience as Japan's leading steel maker and shipbuilder. A major supplier of standard and speciality steel, the most exacting requirements are applied to NKK's tubular products for the oil and gas industries and for plate and sections for ships and industrial structures—from blast furnace to the finishing mill.

NKK is also proud of having in operation this year the largest and newest galvanizing sheet plant in the whole of Asia—capable of producing with the latest Sendzimir Process every kind of superior galvanized product.

Boys in the kitchen could mean trouble—but there's a special protective ingredient in THIS kitchen. It's melamine.

You never see melamine, but this remarkable chemical plays an important part in your everyday living. It's in cups and saucers and plates tough enough to withstand the rigours of family life, yet beautiful enough to grace your dining room table.

The dinnerware is based on melamine crystal developed by Cyanamid. This pure white substance is a chemical that gives longer life, higher gloss and durable beauty to your everyday surroundings. That refrigerator and stove owe their sparkling finish to melamine-based enamel. Melamine gives strength as well as resistance to heat and stains in table tops, such as this one in FORMICA decorative laminate.

Even your curtains owe something to melamine—they are drip-dry.

Cyanamid pioneered the commercial development of melamine and now, at Gosport, Hampshire, a new Cyanamid plant is turning out large quantities of melamine crystal for Britain's industries. It is one of the many remarkable chemical products which stem from Cyanamid research and production.

In this and in a thousand other ways

# How to Avoid Restriction

THE prospect presented by the British economy in this summer of 1961 is dun and drab. It looks as if the authorities may soon feel obliged to take some measures to restrain demand and production—and this at the end of a year when industrial production has not risen at all. The conclusion is so depressing that it is a natural instinct for a British observer to shudder away from it if he possibly can. But shuddering is not a policy; the need is to search for an escape route. If the Chancellor and the country are to find one, they cannot do so by the fool's paradise tactic of ignoring the worst of the figures that are now causing some foreign bears to shy out of the pound.

Externally, despite some recent improvement on both import and export account, Britain is still in balance of payments deficit, and the sterling area as a whole is probably running a current deficit (as orthodoxly defined) of around £1,000 million a year. We are being saved from a larger outflow of short-term capital from London by various patch-and-plaster-up arrangements with our European friends, which they will not necessarily be willing to continue indefinitely. Internally, the labour market in Britain has tightened recently so that there are now just under 300,000 unemployed, against just over 350,000 registered unfilled vacancies at the labour exchanges; but either labour is going to or being retained in the wrong places, or else last year's bargained reduction in working hours is having a worse effect than originally expected, for the seasonally adjusted index of industrial production obstinately refuses to rise. At the end of March it was at the same level as a year earlier, although the total labour force in British civil employment had risen by about 1½ per cent, which can be roughly interpreted as meaning that productivity per head had fallen by that amount. Meanwhile the index of weekly wage rates suggests that British workers are being paid between 4 and 5 per cent more per head as a reward for this lower productivity, so that the recurrence of cost and price inflation is not at all surprising.

That there has been a recurrence of cost and price inflation is not now open to doubt. When the latest available cost of living figures were collected, on April 18th last, the cost of living index was 3 points higher than a year before, and all but 0.2 per cent of this rise had occurred in the seven months since September. Since April bread, beer, tobacco and other things with a heavy weight in the index have gone up further, which suggests that the pace up the spiral is now quickening; a plausible guess is that for the first time since 1957 we may at least temporarily be back in a stage of 4 or 5 per cent price inflation a year. Some people draw comfort from the fact that this period of inflation has at any rate seen a record boom in real investment in British industry, and say that production almost certainly has started to rise since the last official figures were published in March. They argue that this would be very much the wrong moment to cause industrialists to falter in their readiness to install new machinery just as it may be about to be more fully used; if the Government feels obliged to take any restrictive measures in the next few months—and in this context it may unhappily hardly matter what form the restrictions take—it seems only too likely that industrial investment programmes may be the first things that are restrained.

This last point provides an additional reason for wishing that the Chancellor should delay, if he can, in taking deliberate measures of restriction. Restriction is no more a cure than shuddering. But when all this has been said—and when

the real hope of a rise in British exports to the quickly recovering United States economy during 1961 has also been noted—the present recurrence of price inflation and of a strain on sterling are inescapable facts. What other means of checking them are there, except the policy of restricting production to which British governments have so often resorted? An accurate mirror of the way that foreigners now regard us can be found in the words of one distinguished international banker who was on a private visit to London this week: “To the outsider, Britain seems to have followed a reasonably sound budgetary and monetary policy for several years. Yet it is always running into crisis. Some thing or things within this economy must therefore surely be basically very wrong.”

**I**N point of fact, as every intelligent British voter and politician must know in his heart, there are at least two main things that are basically wrong. The first of these defects—the lack of a spirit of thrustful competitiveness in British industry—may now be slowly on the mend. To look back, this country has suffered unexpectedly severely from the fact that, unlike continental Europe, most of its big enterprises did not have to be built or rebuilt from virtually nothing just after the war by men of desperate push-and-go. This is not to say that the quality of Britain's top management in this period has been exceptionally bad, but it has perhaps suffered from a surfeit in managerial demeanour of clever conformism and a shortage of extremist ideas. Because fewer organisations than on the continent have been starting really from scratch, able executives have sometimes seen that the safest way to promotion within their firm is not to flutter too many doves by wanting to change too many of the well-established ways of doing and selling things; later, when leading their firms, they have too often felt that the gentlemanly way to progress may be by not running too deliberately foul of other existing producers in their trade. This deadweight burden of tradition in British industry was greatly increased by the catastrophic Crippsian policy of “raw material allocations according to past production entitlement” before 1951 and, to a lesser extent, by some Tory tenderness for trade associations after that.

But in the last few years the Restrictive Trade Practices Act has been shown to have teeth (at least against manufacturers); resale price maintenance has begun to break down despite Britain's outdated legal props for it; there has been a new feeling around of ants in the pants in the boardrooms; tariff cuts and abolition of import restrictions have become respectable; and the country has even come to the brink of joining the common market. Of course, old attitudes take a long time in dying—Britain will not have got very far until it is regarded as automatic that we should grant a welcoming freedom to such things as minicabs and should not grant subventions to Cunarders—but recent advances are gradually becoming apparent.

Unhappily, Britain is still gravely handicapped because it has made no progress to remedy its second basic defect. An OEEC committee pointed it out frankly last week. It found that Britain was one of the three western countries where inflation had plainly been due less to demand pressure than to the fact that collective negotiation of wages is an independent cause of inflation here, because it produces higher

wages than would be produced by a freely competitive labour market; the other two were Denmark and the United States, and the OEEC committee reported it as “significant that economic growth was less vigorous in these three countries” than in any of the others that it studied.

Nobody can really doubt that this process of wage inflation is now Britain's major wasting disease. It is a disease with an almost unvarying prognosis. If demand and production, after having remained stagnant through most of 1960, now have to be cut down by new regulators in 1961, the main object will be to cause a little more unemployment in 1962 so that by the end of that year the trade unions may give the next wage round a miss, and allow expansion to be resumed in 1963, perhaps in time for the general election of 1964. This is what happened in the last Parliament. The stagnation-cum-inflation of 1956 had to be turned into a minor recession by the emergency measures of late 1957, so that (aided by the defeat of Mr Cousins's bus strike that May) there was a standstill in wage claims in 1958, which allowed production and real earnings of the workers to increase at a record rate in 1959. By the end of 1959 the idea that it was right to get courts of inquiry to cut down the country's real earnings by increasing paper money wages had caught hold again, and it culminated in the nation's decision to run away from a railway strike in February of 1960, which promptly had the effect that every reasonably experienced observer feared would happen at the time. The stagnation-cum-inflation that has lasted from that month to this can most accurately be called the Guillebaud Slowdown in Our Standard of Life.

**T**HE question for 1961 is whether Britain can escape from inflationary awards again without having to impose a new period of temporarily increased unemployment first. Probably the Government could still just avoid the need for using its new regulatory weapons if it started resolutely to refuse all inflationary wage awards that come to it for ratification. As it happens, a plain test case has now been laid upon its plate. Everybody should agree that those who make a lifetime's profession of teaching are still badly underpaid; it is a cruel paradox that this should be so when so much tribute is paid to the national need for more and better education. But a major part of the large new wage award recommended by the Burnham Committee will go to increase by some £80 a year the salaries of the large number of young women who enter teaching only for a couple of years before marriage, and of whom there is at present no market shortage whatever.

If the Government boldly turned down this part of the Burnham award, perhaps adding the sweetener of individually large (but *in toto* much less expensive) increases in senior posts higher up the scale, it would set a pattern of political and industrial fortitude—a pattern which, though it would cause an enormous immediate row, should save it from the need to screw down demand in the whole economy later in the year. But the assumption of most observers in London this week was that it will not dare to do so. If it does not, then resort to Mr Lloyd's new regulatory devices (and to the forced pushing of the British economy into a small recession) is likely to have to follow as the night the day; and the choice between renaissance and restriction will again go the cripplingly wrong way.

## Viennese Visions

Having restored the civilities, Mr Kennedy and Mr Khrushchev must now try to meet each other on points of substance

**N**OBODY expected miracles,” said Tuesday's *Pravda*, a paper to which one does not normally turn for unobtrusive common sense, but “both sides considered it useful.” The subject was last weekend's brief encounter between Mr Kennedy and Mr Khrushchev; and *Pravda's* judgment, though wobbling in its reference to a consequent “wave of moderate optimism” (a ripple is the most the facts justify), is essentially correct. The meeting between the two men went as well as could reasonably have been expected. Those who are disappointed that it went no better may belong to either of two schools of incorrigible miracle-seekers. The first school seems to have hoped that Mr Kennedy and Mr Khrushchev would tidy up the world's problems over the weekend in a grand and comprehensive exchange of concessions, like players at Monopoly; this being real life, they were unable to do anything of the kind. The other school, which includes the anonymous officials who have been trying to tell British and American newspapermen what to say, appears to be struck by gloom because Mr Khrushchev did not renounce his aim of extending the area of communism by all means short of war. Not surprisingly, Mr Khrushchev failed to make this act of contrition, just as Mr Kennedy failed to renounce his hopes of extending the sway of liberal ideas by all means short of war.

Miracles being unavailable, the meeting in Vienna produced perhaps the next best thing. In its own sober way (the adjective chosen by Mr Kennedy in his broadcast to the Americans on Tuesday night) it was almost a model of how a confrontation between the two most powerful men in the world should be conducted. It avoided the twin extremes of hysteria which made the meeting at Geneva in 1955 seem like the beginning of a new world, and that in Paris in 1960 like the imminent end of the old one. The leaders of East and West, unencumbered except by translators and the fewest possible advisers, talked privately, politely and, by all accounts, penetratingly. Above all, they talked in secret.

Those who saw the spokesmen of the two delegations, Mr Salinger and Mr Kharlamov, holding fifteen hundred journalists at bay on Saturday and Sunday evenings, for all the world like two company directors required to tell the shareholders that the balance sheet was being kept in a safe, saw a sight that was both entertaining and instructive. It is not entirely irreverent to suggest that the one major improvement that might be made in the procedure next time Mr Kennedy and Mr Khrushchev meet would be to dissuade such vast numbers of journalists from attending. Having been bumped round half of Europe, deprived of sleep, wet by rain, and given nothing more to chew on than a surfeit of schnitzels and *coq bourguignonne*, some of those who accompanied Mr Kennedy on this trip may decide next time that discretion is the better part of journalism. It is in everyone's interest to diminish the temptation for the Russians and Americans to score propaganda points off each other at these meetings—a temptation which both sides nobly resisted on this occasion, but might not on another.

To suggest that the main achievement of last weekend's meeting was its unreportability, however, is a little negative. What else did it yield? It seems to have produced three main results, none of them very far-reaching or necessarily permanent, but all modestly encouraging.

In the first place, the discussion has restored the interplay of emotions between the United States and Russia to what it was in January and February—in other words, to a relationship of polite disagreement instead of abusive denunciation. After the exchange of courtesies that followed Mr Kennedy's inauguration, the Russians' conduct in Laos, and at the nuclear test talks in Geneva, seems to have led many Americans (including Mr Kennedy, momentarily at least) to conclude that the Soviet Union had given up the idea of settling things by negotiation and had decided to settle them by a contest of naked force instead. It is not entirely fanciful to think that Mr Kennedy's actions in Cuba, and his talk of training guerrillas for a “relentless struggle in every corner of the globe,” may have had the same effect on Mr Khrushchev. The first achievement of the meeting in Vienna is to have restored to each man's mind the belief—however warily held—that the other is still sharply aware of the dangers of a “relentless struggle” and is therefore willing to give negotiation another chance before resorting to rougher methods of argument. So long as this delicate balance of trust continues, neither side is likely to take actions that stretch the other's patience to the snapping point.

**S**OME observers from communist countries who followed Mr Khrushchev to Vienna suggested that this revival of trustful courtesy was his sole object in going there. If this is so, Mr Khrushchev was unduly modest in his aims. For either Mr Kennedy or Mr Khrushchev to say, in effect, that he is not going to give an inch on a single issue but that he is going to be civil in his obstinacy, will not do. The deterioration of Russo-American relations after the events in Laos and Cuba showed how thin the previous veneer of civility had been; having cracked once, it can crack again just as fast. Fortunately, the second achievement of the weekend's conversation is the apparent recognition by both men that affable stubbornness is not enough and that it is necessary to try to meet each other on points of substance. Admittedly, there was no sign of compromise on the subject of a nuclear test ban, where both sides stood fast on their contradictory ideas about how the international control body should be organised. Nor did they get around, it seems, to discussing any general rules to regulate their competition for the allegiance of the uncommitted countries. But on other points the carefully cocked ear can detect a distant whisper of compromise.

On Laos, for instance, a number of sources report that someone in the Russian delegation—either Mr Khrushchev himself or Mr Gromyko—hinted that the Russians were ready to drop their demand for a tripartite structure (and hence a Soviet veto) in the organisation supervising Laotian neutrality.

Mr Kennedy, in turn, is said to have reaffirmed the Americans' willingness to let the pro-communist Pathet Lao take part in a Laotian government of national unity. If this is true, it explains Mr Kennedy's reference on Tuesday night to "some immediate prospect of accord" on the subject; so rosy an estimate is hardly justified by the ambiguous blessing which the participants publicly bestowed on "neutrality" and an "effective cease-fire." It is necessary to see whether the hints dropped in Vienna are translated into reality at the conference in Geneva and whether the still trigger-happy Pathet Lao take the point.

**S**IMILARLY, on the subject of Berlin, Mr Khrushchev left the Americans with the clear impression that he was not going to precipitate a crisis for the next few months. It appears that Mr Kennedy, for his part, very sensibly concentrated on the allies' right to keep their lines of communication with Berlin open, and not on the technicalities about which set of communists has the right to control the lines of communication. This is the nub of the matter; if Nato is to go to war, it must be for the sake of Berlin and not merely for the sake of not showing one's pass to an east German official. Thus the possibility of an accommodation, at least for a time, re-opens. If the allies are willing to deal with east German frontier guards as stand-ins for the Russians, they can leave the east German government to draw whatever implications of "recognition" it likes from this, provided they get Mr Khrushchev's confirmation of the allies' right to go to and from the city.

This leads to the third main point that emerged from the meeting. Mr Khrushchev is unlikely to prolong his self-denying ordinance on Berlin much past the summer. The

west German elections in September, and his own party congress in Moscow in October, give him both the occasion and the motive for seeking some international success to present to his equivalent of an electorate. It might be either a negotiated settlement of the Berlin question, or a triumphal tour of the Soviet Union celebrating the togetherness of the Khrushchevs and the Kennedys (for, it must be remembered, friendship with America is still popular in Russia). In either case, it is probable that last weekend's meeting will be repeated, perhaps before very long. The most encouraging feature of the confrontation in Vienna, therefore, was the evidence it provided that a personal relationship is feasible between the two men, capable of bearing the strain of argument. The possibility of civilised communication between America and Russia has survived not only the turbulence in Laos and Cuba but also the advent of a new President.

This might not have been so. In the meeting of the Kennedys and the Khrushchevs in Vienna it was easy to see the confrontation of two conflicting visions of man's development. Mr and Mrs Kennedy, both young, rich and handsome, straight out of the American dream, stepped from their vast jet aircraft as the embodiment of sleek material power, physical grace and intellectual curiosity. Mr and Mrs Khrushchev, descending from their train, came as the representatives of an earthier tradition that puts more weight on instinct and a lumbering will-power than on the virtues the Americans prize. It was possible that the personal understanding evident in 1959 between Mr Khrushchev and Mr Eisenhower would not be repeated in the case of the new President; that to the clash between the two ideologies would have been added the clash between two incompatible personalities. This has apparently not happened; both of them, and the rest of the world, can now let their breath slowly, and still cautiously, out.

## Re-drawing Wales

**The proposed merger of Welsh counties is unlikely to work, a Welsh correspondent believes, and an even more radical break with the past may be necessary**

**O**NE of the curses of Wales," Lord Ogmore once said, "has been parochialism." When his grandfather was a boy, he explained, the whole of his village used to go out with sticks and beat up the people in the next village, across the River Ogmore, whom they regarded as "foreigners." The first reactions to the draft proposals of the Local Government Commission for Wales suggest that Welshmen have changed little since those days.

Civic dignitaries along the banks of the Conway in the north and the Dulais in the south have already reacted sharply to the logical suggestion that a mountain massif makes a more natural county boundary than a river which appears, to an outsider at least, to bisect a natural community. A request to move certain territories from Denbigh into Caernarvon or from Carmarthen to Glamorgan is being discussed as fiercely as if it were an invitation to sign the Treaty of Rome. Only in Glamorgan, where no major change has been suggested, are the commission's proposals likely to be well received.

Merthyr, with less than 60,000 inhabitants, will fight to retain its county borough status, but it seems unlikely to repeat its 1935 success on this front.

The commission's recommendation to merge all the Welsh counties, save Glamorgan, into four new authorities is unlikely to find favour with any of the councils. Most unpopular of all may be the union suggested between sparsely populated Radnorshire and Breconshire (75,000 people altogether; rateable value less than £800,000) and rapidly expanding Monmouthshire (population 331,150; rateable value over £3 million). A similar reaction probably awaits the suggested union of Flintshire and Denbighshire (combined population 317,870; rateable value over £4½ million) with the far-flung and economically feeble Montgomeryshire (population 44,720; rateable value £368,382).

Yet these two proposals are at the heart of the commission's master plan: "If the mid-Wales areas are to enjoy the standard of local government services to which all counties are entitled," it states, "a way must be found of transferring to mid-Wales some of the economic benefits enjoyed by the coastal areas." Two shot-gun marriages are therefore proposed—to enable "the strong to help the weak." The omens

suggest that these would hardly work out in practice. The farmers of Montgomery and Radnor are far from certain that they will be properly looked after by a council with a majority of steel-workers and town-dwellers from Shotton or Llanwern. "The David and Goliath arrangements of the commission," as one countryman has already said, "will only ensure that the mid-Wales counties are outvoted and ignored in the council chambers of the new blocks."

**I**F one takes the opposite view from the commission on this point and gives up the attempt (which is bound, in any case, to fail) to produce authorities that are less dependent for their revenue upon rate equalisation grants, it is possible to produce workable counties which have a greater natural coherence and unity.

The three mid-Wales counties of Brecon, Montgomery and Radnor have a combined population that is just short of 120,000. This has declined by about 12 per cent during the last forty years. In Montgomeryshire the fall in total population has been going on steadily for 160 years. Mid-Wales's depopulation problem is thus one of long standing. The same sort of movement away from the countryside is going on all over Wales. Even in counties where the total population is falling, the size of the towns is tending to grow slightly, while the number of full-time workers on the land is continuing to fall: the figure of 25,100 in June, 1960, was 2,080 less than a year before.

This is one aspect of the slow improvement in agricultural efficiency that is taking place. Even so the great majority of farms in rural Wales are still too small to be economic units. Three-quarters of them are less than 100 acres in size; most of the flocks of sheep and herds of cattle are smaller than the size (500 and 100 respectively) which the Welsh Agricultural Land Sub-Commission regarded as the minimum for profitability. Amalgamation into larger units is taking place extremely slowly. This process has probably not been accelerated by the Small Farms Act (over 80 per cent of the eligible holdings have applied for grants, and about £4 million has already been committed on approved farm plans). Nor has the necessary process of amalgamation been made any easier by the spread of owner-occupation: in some areas, where twenty years ago only 40 per cent of the farms were owned by the occupier, more than two-thirds are today.

It is much to be hoped that future policy will do less to perpetuate these small units. They are so scattered that they represent little in the way of community life. For there are in Wales very few of the nucleated villages which provide the focus of life in rural England. The few country towns are the only real centres in mid-Wales. Young Welshmen will be persuaded that it is worth staying in their native counties only if there are more opportunities to work on larger, more

prosperous farms—where they can afford to run a car or a motor-cycle to get to the life of the towns. In the long run the only sound type of farming in most parts of the area will probably prove to be large scale cattle and sheep ranching. This is expanding slowly—and may be encouraged by entry into the common market.

The population of the country towns themselves can be maintained only by the growth of tourism (a big money-spinner) and the arrival of small industrial ventures. Considerable progress of this kind is now being made in Caernarvonshire and, with the development around Milford Haven, in Pembrokeshire. Nuclear power is making a contribution in Merionethshire and will probably do so in Anglesey as well. The much more limited progress that has been made in mid-Wales has been largely due to the efforts of the Mid-Wales Industrial Development Association, whose strength has lain in the fact that it represented the area as a whole. A county authority of similar scale would probably be the best body to negotiate the entry of a substantial overspill population (and industry) from the Midlands.

**A**LL this suggests that the Local Government Commission would be wise to think again about the wisdom of dividing mid-Wales—and attaching it in pieces to the north-east and south-east counties which it proposes. Some people are wondering whether a more radical revision of approach may not eventually be required. If counties have to be so physically large before they become capable of handling expensive services like technical education or the police, will the councillors ever be found who will be willing to travel the great distances required? Even the present councils may be getting short of talent: at the recent elections 130 out of 162 candidates in Pembrokeshire, Cardiganshire and Carmarthenshire were returned unopposed. And most of the district councils are too small to be effective units: none of the second-tier authorities in mid-Wales is responsible for more than 10,000 people.

There is therefore a great deal to be said for transferring technical and further education to a body like the Welsh Joint Education Committee, ambulances to the regional hospital board—and police to an all-Wales police authority along the lines recently suggested by the Inns of Court Conservatives. Most of the district councils could then be combined into single-tier authorities, over areas as large as the present counties, and reasonably able to bring local knowledge to bear on services like primary and secondary education, housing and roads. The commission and the Minister for Welsh Affairs have an intractable task ahead of them, whichever way they tackle it. They might find it worth breaking sharply away from the two-tier county pattern, which is scarcely natural to the charming but under-inhabited countryside of central Wales.

# Cold Comfort Collective

Collectivisation of the land is almost complete in Eastern Europe—but so is disenchantment

MUCH has been heard in recent months about the failures and back-slidings of Soviet farmers. But down on the farm in the rest of eastern Europe there is trouble too. Since the communists came to power there always has been trouble. But in the present chorus of recrimination and exhortation there is an added note of urgency, provoked perhaps by the fact that, if matters had gone as they should, this ought to have been a time of rejoicing. Throughout eastern Europe this spring (with the notable exception of Poland, where Mr Gomulka has an agricultural policy of his own) the collectivisation of agriculture has been either completed or brought near to completion. In Bulgaria and east Germany the job was already done; in both Czechoslovakia and Hungary, where over 90 per cent of the arable land has been collectivised, the process is now virtually complete; even in Rumania, where the peasants have been particularly recalcitrant, the figure is said to be around 84 per cent.

To bring agriculture within the "socialist sector" has, of course, been a major ambition of the communist regimes of eastern Europe. Over the past ten years or so, they have never lost sight of the goal, although at times they have pursued it with the utmost caution, and even at times apparently abandoned it. Now, however, although they may for ideological reasons rejoice that the goal is largely reached, on practical grounds their raptures have been severely modified. In March, the Czechoslovak minister of agriculture stated flatly that so far the results of large-scale agricultural production "do not correspond either with the needs or the possibilities of the national economy." In April, Mr Zhivkov, the top Bulgarian communist, forced some abject self-criticism out of his minister of agriculture at a special session of the Bulgarian central committee; taking another leaf out of Mr Khrushchev's book, Mr Zhivkov has turned up at several district party meetings devoted to finding scapegoats for agricultural failures. This mood of disenchantment with progress on the farms is common to all the countries that have pushed ahead with collectivisation. It is substantiated by persistent reports—and official admissions—of shortages, particularly of meat and dairy products, as well as by frequent complaints that particular production targets have not been fulfilled.

Many leading communists have shown themselves not unaware that collectivisation in itself solves none of their problems. One Hungarian newspaper admitted early in January that "discussion of the difficulties arising out of collectivisation has now become one of the chief topics of conversation both in town and country." And a Hungarian agricultural expert said that "by establishing collective farms we have only done half the work. . . ." In other words, the communists still have to overcome the deep-rooted preference of most peasants for the old ways, and they still have to train men accustomed to small-scale farming in the far more intricate and involved problems of running large collective farms. They may succeed in time. The pity is that they should in the first place have felt compelled to push collectivisation

through when they still possessed such pitifully meagre stocks both of goodwill and of technical and administrative expertise.

Collectivisation in eastern Europe has not, of course, been the dramatic and violent affair that it was in Russia. Neither the compulsion to join, nor the resistance to joining, has been comparable. On the whole, however, the process of collectivisation can be called "voluntary" only by courtesy; there are plenty of methods of pressure other than downright violence. And, on occasion, the peasants have openly demonstrated their hostility; indeed in Rumania earlier this year peasant disturbances appear to have caused the government to call a temporary halt to its collectivisation drive. Much more important, however, than sporadic outbursts of hostility is the sullen non-co-operation of so many of the new collective farmers. Bitterly resentful in any case at having this major change in their way of life virtually forced upon them, they are thoroughly disillusioned by the inefficiency and mismanagement found in so many of the new collectives. Supplies of fertilisers, tractors and other machinery are often inadequate; spare parts are frequently unobtainable; what machinery there is tends to be badly maintained and inadequately used; shortages of agricultural experts, of book-keepers and of managers lead to confusion and neglect. In these circumstances it is not surprising to read that in the new Hungarian collectives indiscipline, slackness, and even looting of collective property are common, and that an alarming number of farmers are migrating to the towns; or that in Czechoslovakia, Mr Novotny has sharply criticised a tendency to fiddle statistical returns, pointing out that "tricks and paper reports will not supply us with milk, meat and eggs."

EVERY effort will evidently be made to put matters on a better footing—and not merely by way of exhortations and pep talks. (In Hungary, hundreds of "people's educators" have been descending on the countryside "taking," in the near-biblical words of *Népszabadság*, "the word of the Party from house to house.") Agriculture is not the Cinderella it once used to be in the east European economies, and although industry still gets the lion's share of investment the benefits of the greatly increased share of investment in agriculture in recent years should be increasingly apparent. Efforts are also being made to overcome the deficiencies in the administration of agriculture and to speed up the supply of agricultural experts.

But the most important task is to make the individual peasant feel that he has a worthwhile stake in the new collectives. At present so many of them are mismanaged that he feels the stake to be pretty paltry and uncertain. And, as Mr Kadar recently remarked, with unconscious humour, "it requires a good deal of class consciousness to work throughout the year" without knowing what you are going to get for it. Clearly, if the efficiency of the collectives can be improved, the individual members will get more out of them. The difficulty is to overcome the initial reluctance of the members to play their part in making a go of the new system. On the whole, one gets the impression that the communists are relying too much on the powers of persuasion of party activists and not enough on material and financial incentives

In the meantime, however, having brought most of their agriculture into the "socialist sector," the east European communists are proceeding with some caution. The amalgamation of the collectives into even larger units, which the Russians have carried out, is not being attempted, except by the Bulgarians, who completed the process three years ago; the Czechs began it but have suspended operations for the time being. Above all, the communists seem to be aware that they would be ill-advised to tamper with the peasants' private plots because to do so would not only antagonise the peasants still more but also jeopardise an important part of each country's food production. Although the communists complain that the peasants attach far too much importance to their private plots, they themselves make no bones about the quite disproportionate value of private farming at present, especially in livestock and dairy products. In Hungary, the minister of agriculture revealed in March that 40 per cent of the beef, 60 per cent of the milk and pork and 90 per cent of the poultry are produced privately. In Bulgaria, where collectivisation is longer established and better consolidated than elsewhere, Mr Zhivkov has recently condemned the illegal seizure of private plots and repeated earlier warnings that their production was still essential to the national economy. Yet although at present forced to protect them the communists must regard these plots in the long run as undesirable remnants of capitalist society. Only Mr Novotny, however, has had the temerity to refer

openly to "the gradual limitation and elimination of private plot farming."

With their collectivised agriculture making such an inauspicious start, the east European communists must have listened uneasily to the scathing criticism passed on Soviet agriculture—collectivised these thirty years—by Mr Khrushchev, particularly at the meeting of the Soviet central committee last January. (Not surprisingly, these strictures of the Soviet leader were not widely publicised in eastern Europe, except in Czechoslovakia.) But it is very unlikely that having reached, or nearly reached, their goal they will retreat from it. To communists (unless they have the quite exceptional realism of a Gomulka) it is intolerable that the large and vitally important agricultural sector of the economy should remain in private hands. They are very conscious too of the immensely improved opportunities for political control and indoctrination provided by the new agricultural organisation. Mr Novotny stated quite openly in March that the setting-up of the collectives was "an important, in the first place political, step" towards "a truly socialist large-scale agricultural production." It is also the first step towards turning the farm worker into a paid employee of the state, virtually indistinguishable from the worker in the factory. But the communists have still a very long row to hoe before they succeed in persuading the peasants that this is as desirable a consummation as they think it is themselves.

## NOTES OF THE WEEK

### LAOS

#### Guns and Words

AT the beginning of the week, the subdued optimism of Vienna had generated a story that Lord Home, Mr Dean Rusk and M. Couve de Murville would be returning to Geneva to meet Mr Gromyko. By Wednesday, official spokesmen were letting it be known that no such travelling was envisaged. Between Monday and Wednesday, the communist Pathet Lao troops had rained shells on the government-held village of Pa Mon, then overrun it. This was a clear case of cause and effect and, as if to underline the fact, a projected meeting of the international conference on Laos was cancelled on Wednesday.

The conference was thus exactly where it had been before Mr Kennedy and Mr Khrushchev met, with the Russians still saying that plans for a neutral and united Laos should be discussed even if shells were still flying in Laos itself, and the Americans still refusing to table their detailed plan until the firing stopped. The renewed fighting has put both sides in a difficult position. Practically the only hard and fast undertaking Mr Khrushchev committed himself to before leaving Vienna was to respect an "effective cease-fire" in Laos—a phrase which, though not very precise, can hardly

be squared with the events at Pa Mon. The Americans have to decide how long they will stay at Geneva if the firing continues. A senior member of the American delegation in Geneva is reported to have said that the Americans will not rejoin the sessions until the Russians have agreed to tighten the truce arrangements. But President Kennedy, back in Washington, has said that the Americans will stop on at Geneva; thus it seems that some kind of conference will keep going, even if informally.

In a sense, the centre of gravity of the conference had shifted to Nice, from which Prince Sihanouk of Cambodia had invited the three princes who, between them, comprise Laotian politics—Boun Oum, Souvanna Phouma, and Souphannouvong—to meet in Geneva to settle their differences. Prince Boun Oum conferred with Prince Sihanouk last week, then went to Paris, within convenient reach of Nice and Geneva. The princes Souvanna Phouma and Souphannouvong left Hanoi for Geneva together, saying they were ready to meet Prince Boun Oum and find a way out. Their words would carry more conviction, and the way would be easier to find, if the guns could be silenced.

### THE RHODESIAS

#### Expedients

"ACQUIESCENCE" is the British government's favourite private word on the central African federation. Pouting acquiescence is the best result that can be hoped for from the new round of Rhodesian crises due this month. In both the Rhodesian territories, diametrically opposed groups are being asked to agree to new constitutions that none of them really wants, in the belief that this will bring about eventual acquiescence in a continued federation. It will not.

The Prime Minister of Southern Rhodesia, Sir Edgar Whitehead, has reached agreement with Mr Duncan Sandys, but with nobody else, on the form of the new constitution to be put before the mainly white Southern Rhodesian electorate in a referendum next month. Legislation to ratify Britain's end of the agreement (relinquishing most of the reserve powers over the colony's constitution) is likely to be introduced in Parliament next week, and without doubt it can expect Labour opposition. In Southern Rhodesia, the right-wing Dominion Party will fight for an adverse vote in the referendum. The African National Democratic Party has rejected the agreement in advance, holding out for the

right to address meetings in the African reserves and for an end to the reservation of the greater part of Southern Rhodesia's land for whites.

There is a possibility that the proposed new constitution for Northern Rhodesia will turn out to have been amended in a direction intended to satisfy white voters in Southern Rhodesia. Mr Macleod's original proposals, published in February, would, in practice, mean the end of rule by the settler United Federal Party in Northern Rhodesia. Any changes designed to allow the UFP to come back into power and stay there will mean an end to the moderation steadfastly practised by Mr Kaunda's nationalists since Christmas. Mr Kaunda has gone out of his way to reassure white opinion; his party claims 200 white members. His leadership may not be able to survive any marking-time in Northern Rhodesia's constitutional advance. As for the continued existence of the federation, none of these manoeuvres is likely to bring about black acquiescence, let alone the consent called for by the Monckton Commission nine short months ago.

#### ZANZIBAR

### New Wounds

LAYER upon layer, new peoples have for centuries been borne across the seas and put down upon the islands of Zanzibar. The latest eruption is partly due to fossilized hatreds built up when Arab masters imported African slaves. Intermarriage has created a small population of Zanzibaris among whom it is impossible to tell Arab from Shirazi, or Comorian from central African. For the rest, it is easy enough to distinguish between the 40,000 Arabs who own the land, the few thousand Asians who run the businesses, and the 300,000 Africans who do the work and most of the politics. This would leave room enough for antagonisms even without the new topsoil of African nationalism which the mid-century has laid down.

Supported by Mr Julius Nyerere of Tanganyika (and by President Nkrumah of Ghana), the pro-western Afro-Shirazis won ten seats in the elections on June 1st to the Legislative Council, which were followed by some days of riots. If the party did nothing to incite violence against Arabs—scores were killed and hundreds injured—there is not much evidence that it went out of its way to combat racialism. Ten seats were won by the Zanzibar Nationalist party, which claims a majority of African members but which is in fact led by Arabs. The ZNP is on courting terms with President Nasser and flirting terms with Chairman Mao: it has been able to form the new Zanzibar government by winning the allegiance of the non-Arab Zanzibar and Pemba People's Party, which won three seats. In return the leader of the ZPPP, an African, has been given the Chief Ministership over an otherwise ZNP executive

#### NOTES OF THE WEEK

council. The two government parties command strong electoral support. Even so, it has been necessary to send in five companies of the King's African Rifles to keep a peace threatened both by the old wounds of the past and the new conflicts of the present.

#### TEACHERS' PAY

### First Rejection

THE executive of the National Union of Teachers, whose representatives have a dominant voice on the teachers' side of the Burnham committee, has bowled up a nasty one to the Government. It has promptly rejected last week's award, citing as too niggardly precisely those aspects of the award that should, because they really seem too extravagant, have made the Government chary of accepting it. The teachers claim that the starting salary (£600 a year after what is at present a two-year training course) is too low, the gap between primary and secondary teachers too wide, and the operative date (next January 1st) too

Teachers' Tail Wags

late. Although there is likely to be a clear majority for rejecting Burnham at a special union conference at Margate next Saturday, not all local executives (including some big city associations) are happy about the rejection, and certainly not about the reasons given for it. The union dog appears to be being wagged by its long tail of younger (and often temporary) teachers, and by the newly militant generation of girls and young men in the training colleges.

The Government cannot possibly see a case for increasing the starting salary by more than Burnham did. It needs to be repeated that there is no present shortage of entrants at the lowest level: the real problem there is the wastage among young women who, by current practice, expect to marry within two or three years anyway. The need is to encourage them to return to teaching later, and to sustain the young men with family responsibilities—which is exactly what the Burnham salary "steps" after five and six years are designed to do. The other part of the award which is certainly right, even probably still too small, is the supplement for teachers in responsible positions. The professional man's normal incentive in his

#### THE ECONOMIST JUNE 10, 1961

early years is to know what he can aim at.

The primary teachers rest their case on the belief that the balance of power will return into their hands as the new "bulge" enters the schools in a few years' time. Even before that Sir David Eccles has to get through his year of intermission (1962-63) when the colleges will be retaining their trainees for an extra year. The NUT wishes to diminish (not abolish) the gap between primary and secondary scales, but the money cannot be found for this without either reducing the Burnham award to beginners or reducing the secondary teachers' own expectations. The present assumption of most people in the profession is that there will be a second round of negotiations before September, and that strike talk need not be taken too seriously until then. But meanwhile the union is letting itself be edged out by its militants on to what could be a pretty dangerous limb.

#### UNION CONFERENCES

### New Departure

SIR TOM WILLIAMSON, whose impending retirement from the leadership of the National Union of General and Municipal Workers was announced at the union's conference this week, was the surviving stalwart of the redoubtable trade union triumvirate of the early 1950s, of which the other two members were Arthur Deakin and Sir Will Lawther. When Deakin died, Sir Tom did not prove to be of the temperament to lead the right wing brothers against the left wing Cousins; his influence remained quietly great among his own folk rather than nationally vital. It may therefore have been fitting that the conference at which his impending retirement was made public was also the occasion for some trend-setting speeches. Mr Gaitskell chose this level-headed forum to make his sharpest counter-attack yet against the latest tactics of the nuclear disarmers: they are now assailing him exclusively on the question of the Polaris base (against which they hope to secure a majority at Blackpool) not on that of full unilateralism (where they know that

Mr Jack Cooper: new leader?

#### THE ECONOMIST JUNE 10, 1961

they have lost). Mr Gaitskell can hardly have intended his remarks to influence the NUGMW's delegates, who are mostly as firmly committed to multilateralism as they are to sobriety in industrial matters.

But their sobriety does not inhibit new ideas, among the more important of which was the decision taken last year to launch into investing in equities, in a switch out of fading gilt-edged securities; this has been a profitable piece of capitalist business, and the book value of the union's investments has risen by £90,000 in a year. Having also increased its weekly subscriptions by 3d. to 1s. 3d. a week, the NUGMW has put itself in a powerful financial position.

The successor to Sir Thomas's position will almost certainly be either Mr Fred Hayday or Mr Jack Cooper. Neither, at first sight, looks tailored to fit Arthur Deakin's seat; but then nor did Mr Deakin when he first took over from Mr Bevin. Moreover, Mr Cooper, in his chairman's address to this week's conference, presented a carefully argued case for the abandonment of union autonomy in some spheres, and the establishment of a common wages policy designed to distribute the benefits of rising productivity more generally among unskilled as well as among skilled workers; he is the sort of man who rather believes in trade union leaders working with governments on committees. The country's third largest union, which he may soon lead, is not the swiftest moving—but momentum in public affairs is a product of movement multiplied by weight.

### Cudgels Ready

MR GAITSKELL'S other speech to a union conference this week was before the National Union of Vehicle Builders, a left-wing organisation which demanded a rather more soft-footed approach: he got round the problem very well by proclaiming that a man can perfectly well be a good socialist and own a car, a formula designed to appeal to both the emotions and the self-interest of the average revolutionary panel-beater. This had not prevented the NUVB making some rude remarks about him on the previous day, and striking some fairly militant industrial postures. But the really militant conference this week was that of a whitish collar union—the Post Office engineers—who threatened strike action in support of their pay claim.

The National and Local Government Officers' Association, too, accepted an unwontedly militant proposal to give itself power to call a strike: but fortunately there is no danger of a mass walk-out by council clerks as a result. The union has a few members who work for private bus companies and feel themselves to be severely underpaid; and it is for their benefit that this most respectable of associations has—not without some qualms—decided to take up the knobkerry. The union also adopted, against its leaders' advice, a startlingly silly resolution asking for pay

#### NOTES OF THE WEEK

increases to be restricted to members of the union which had negotiated them—which would give councils a strong incentive to employ cheap non-unionists. More serious is the formal announcement, expected for some time, that the mineworkers have repudiated their no-strike agreement with the coal board: the union is now in a more militant posture to resist what it does not like about any plans for coal that may be announced by the board's new broom, Mr Robens.

#### EUROPE

### Midsummer Activity

LATE June and early July will be a busy period in the diplomacy of European integration. On June 22nd there is to be another meeting between British and French officials. On the 28th the foreign ministers of the Six will meet in Rome to prepare for a meeting of their heads of government. This summit meeting put off in May and now to be held in July, is to discuss the next phase of political co-operation. On Monday, and again on July 2nd, the Council of Ministers (probably in fact the same foreign ministers under a different hat) will meet to decide whether to adopt the commission's proposals for a common agricultural policy.

Whether any of these gatherings will decide anything at all is another question. The Anglo-French meeting is unlikely to make significant progress unless the British Government has gone far enough—in its own thinking and in exchanges with the Commonwealth—to be able to find common ground with the French on the tricky terrain of Commonwealth agriculture. Nor does the meeting of the Six on their own agriculture problem look like achieving much. At one time it was thought that a bargain might be struck, with the French agreeing to complete the plan to accelerate the common market as a whole, in return for acceptance by the council of the broad lines of the commission's agricultural plan—a guarantee, in a sense, of German action later on. Now it looks as though the whole linked question of agriculture and the further progress of the common market will be postponed until after the German elections in the autumn. Nor, at this stage, is it at all clear whether the Dutch will allow the discussion of political integration between the heads of government to make headway.

The temptation for the British is to wait and see what the Six do—on both politics and agriculture. But it is a temptation full of dangers. One factor behind the current hesitations of the Six is the growing expectation that Britain will soon make a move to join them. But a diet of expectation is not satisfying for long. Both Dr Adenauer and M. Spaak, who as Belgian foreign minister is once more playing an active part in the European movement on the Continent, believe that Britain's final hesitations can best be overcome by de-

veloping the political unity of the Six. The present pause seems to provide Britain with time to act but not to drift.

#### NEUTRALISM

### Moscow's Riot Act

A WARNING growl from Moscow set the scene for the preparatory meeting of the uncommitted governments that began in Cairo on Monday. The delegates, representing 20 countries and including nine foreign ministers, are to fix the time and place of the neutral "summit" conference, and to decide who should be invited and what they should all talk about. The Soviet Union, less than benign towards a project that is largely the brain-child of President Tito, has chosen this time to give the host country a heavy rap over the knuckles. On May 31st an article in *Pravda*, ostensibly objecting to a couple of articles that had recently appeared in Egyptian papers, reminded President Nasser (in the worst traditions of international philanthropy, that he who pays the piper calls the tune. Cairo radio, seldom slow to battle, has responded with heat to this implied interference with Cairo's domestic processes.

A new, more critical tone has been noticeable for some time in Russian press and radio comment on both the United Arab Republic and Iraq. As long ago as last summer the Russians were complaining about the clock-watching and the muddle on the Aswan high dam. Comment grew sharper after the November meeting of the world's Communist parties in Moscow. Although at the time Mr Khrushchev seemed to have won his point against Peking in favour of supporting "independent national democracies," Moscow radio from then on began broadcasting loaded remarks about the suppression of local communists in Egypt, Syria and Iraq.

President Nasser's acceptance of Russian money, munitions and friendship never made any difference to his policy of keeping all known Egyptian and Syrian communists in prison or under house arrest. The Soviet Union turned a diplomatically blind eye. Even in 1959, when it looked as if a battle of words between Moscow and Cairo was blowing up, Mr Khrushchev deflated the quarrel and resisted any impulses to attach obvious conditions to trade, aid or moral support.

This may happen again. Possibly, the riot act having been read, the matter will be dropped. But the Egyptian articles to which *Pravda* took exception contained, in fact, only a fairly mild reiteration of the thesis that political friendship, and gratitude, do not entail the acceptance of communist ideology. So far, the UAR has taken Russia's side on most of the issues that divide East and West. The timing of Moscow's rebuke indicates that the Soviet Union is concerned lest President Nasser's ambition to become one of the leaders of the uncommitted inclines him too far towards the centre.

## Neutral between Neutrals

CAIRO'S most distinguished tourist this week was President Makarios on his first official visit to the United Arab Republic. Cyprus is not one of the countries represented at the present conference of "neutral" planners, but President Nasser, welcoming the archbishop as a fellow warrior in the cause of freedom and justice, impressed on his visitor that the struggle for peace was being pursued this week in Cairo even as it was last weekend at Vienna. While they stick to first principles, the two leaders can glide along on an exchange of congratulation. But President Nasser is likely to have raised two matters that would have embarrassed a statesman less astute than the archbishop.

The first is the British bases in Cyprus. At a dinner in honour of his visitor, President Nasser referred obliquely to the matter when he equated independence in Cyprus with security for the UAR. But the retention of the bases has always been regarded in Cairo as directed solely against the United Arab Republic. The second issue is one about which it is much more difficult for the two leaders to find a common point of view. Cyprus is an obvious loophole in the Arab blockade round Israel. Israeli tourists flock to Cyprus as one of the few accessible places within reach of their purses, and Cypriots are glad of the money they bring. Cyprus is also the staging point for nearly all foreign visitors who want to visit Israel as well as the Arab countries. This, while a tiresome addition in flying hours to the tourist, makes a useful contribution to the Cypriot economy. It might have been wiser, and it certainly would have been more courageous, if foreign governments had never agreed to accept the face-saving and humiliating device of two passports and detours through Nicosia. But as things are, the archbishop will do well to stick to his neutrality in this particular cold war.

## DOCK LABOUR

### Less Casual?

MR FRANK COUSINS is to give his full attention to the ludicrous situation in the nation's docks: he and the chairman of the port employers, Mr Crichton, are to sit together on a small working party about it. The late Ernest Bevin's dock labour scheme, so revolutionary at the time it was set up in giving every docker a weekly fall-back payment, has been attacked by everybody after the recent London strikes as being now plainly out of date: neither employers nor union have proved able to control the men.

The main hopes now are being placed in the notion of more decasualisation—the assigning of more dockers to a specific employer, instead of the present method whereby employers draw most men as needed from a pool. The biggest advantage of this could be a long term one. The regular employment of particular teams in

## NOTES OF THE WEEK

one place could aid the introduction of mechanical handling devices, and make the docker's work—and attitudes—more like those of a skilled man. At present, shifting from job to job and dock to dock, the men are more valued for their brawn than for the brains they would need to man the machines to work for them.

But it would be a mistake to be easily optimistic about this. It will be impossible to lay down a general principle for all ports: in some the amount of work done varies far more according to the season than in others. And there is no correlation between the regularity of work and the strike-proneness of ports; indeed London, which already has one-third of the dockers working regularly for one employer (more than any other port except at Hull)—and where the flow of work is most even throughout the year—has had by far the worst strike record recently. Perhaps, too, high hopes should not be laid on the point that decasualisation "should enable the men to build up some loyalty to their employer," and help the employers to understand more adequately the men's difficulties and thereby to cut costs. Employers cannot predict how many men they are going to need from week to week, and nothing could be more expensive—or more likely to promote strikes—than paying men to sit around on the docks playing cards and talking grievances while there is no cargo to unload. And when the proportion of permanently employed men in the docks reaches a certain height, those who are left in the pool as casual workers are bound to feel that they will be called in only for the nasty or the marginal jobs; how to grant compensation to this remainder could be one of the knottiest problems of all.

## LIFE SENTENCES

### Without Discretion?

THE latest penological (e)motion tabled by a handful of Tory backbenchers—which seeks to substitute a minimum sentence of 25 years' imprisonment for the present life sentence for non-capital murder, and thus virtually to abolish the Home Secretary's discretionary power to release convicted murderers—is wildly ill-conceived. Another Conservative member, Mr David James, in an amendment to the motion, has set out succinctly the principle that should guide the Home Secretary in this matter. No one, says Mr James, should be released from life imprisonment "as long as he or she is likely to be a danger to the general public, even though in some cases this may involve either rapid release or else imprisonment for the term of the prisoner's natural life."

At present, for sane persons, natural life terms in this country are exceedingly rare. As the Lord Chief Justice pointed out recently, the traditions of English law are opposed on grounds of public policy to sentences so long that the criminal is likely to die in prison. In the United States such sentences are commoner, although even

## THE ECONOMIST JUNE 10, 1961

there the average life sentence is only 10 years and seven months. In the past, life sentences in Britain were certainly longer than they are today, although they were never generally for the natural term. Sir George Grey, when Home Secretary in 1886, laid down a minimum sentence of twenty years which, by the end of the century, had become a conventional maximum. After the first world war the average sentence was between twelve and thirteen years. Since then there has been a further reduction—partly, it seems, because of a shortage of prison accommodation and staff—but the figure of nine years which is being so freely bandied about is misleading. This average includes survivors of suicide pacts, mothers who kill their children, mercy-killers, who are sometimes released very quickly indeed. Furthermore, it does not take into account those sentenced after the 1957 Homicide Act came into operation for what would previously have been hanging offences, and whose sentences may now turn out to be much longer.

It must be admitted that today a sentence of fifteen years' imprisonment would be considered exceptional. As and if fewer murderers are hanged, the public safety may demand that more really bad cases are imprisoned for such periods, or longer. No one should want murder to be treated as a trivial offence and the sentence should always reflect the objective gravity of the crime. But, whatever happens, it is obvious that the Home Secretary's discretion should be kept as wide as possible. In the past it has been so well exercised that there has been only one case this century (and that an increasingly doubtful one) where it has ever been suggested that a convicted murderer committed a second murder after release.

## ALBANIA

### Treason and Plot

THE eight Russian submarines that have passed through the English Channel this week in an ostentatiously peaceful manner are believed to have been on their way home from the Soviet submarine base in Albania. Their journey may be what is called a routine naval movement; but inevitably it is suspected of being connected with the present coolness in Soviet-Albanian relations.

Whether or not these suspicions are

In happier days: Mr K and Mr Hoxha

NATIONAL PROVINCIAL BANK LIMITED

# EXPRESS SUCCESS!

The success story of the Midland Pullman began on July 4 1960, when this blue-and-white de luxe train made the first of its regular high-speed journeys between Manchester and London. On the way it was often carrying its passengers at over 80 mph – yet with a comfort they'd never known before, a smoothness and quietness which turn a long journey into an enjoyable, relaxing trip.

The success of the Midland Pullman is emphasised by the fact that today seats must be booked in advance to make sure of travelling – inter-city travellers, on business or pleasure, have found the speed, comfort and convenience of this new concept in rail travel very much to their taste.

The Midland Pullman's success points the way to further developments of this kind, typifying the new look of today's London Midland along with the great modern freight expresses which every night cover the country in a network of regular high-speed routes.

**MIDLAND PULLMAN** – PART OF THE NEW LOOK OF TODAY'S  
**LONDON MIDLAND**

right, there is certainly no sign of any serious attempt to heal the breach between Moscow and Tirana. According to the latest rumours, the Russians have recently expelled the Albanian military attaché in Moscow in retaliation for the expulsion of their own military attaché from Tirana. More important, the complete silence preserved by the press and radio of the Soviet block (except for one Bulgarian paper) about the recent Albanian treason trial suggests heavy disapproval by Moscow of the whole business.

Held in a Tirana cinema between May 15th and 27th, the treason trial was a careful imitation of a stalinist show trial. The ten defendants were accused principally of conspiring to overthrow the regime with the help of armed intervention by the Greeks, Yugoslavs and Americans. Although, to judge by the broadcast excerpts, they seemed word-perfect in their self-incriminating and often very improbable lines, this did not save them from the firing squad or gaol (four were executed last week). The public prosecutor seized every opportunity of harping on the "aggressive nature" of "US imperialism" which, he said, had been proved by the trial and threatened the whole socialist camp. These may not have been tactful sentiments to utter when Mr Khrushchev was on his way to meet Mr Kennedy; or Moscow may have felt that it was not the Americans, but the Russians, who were being got at as the supporters of Mr Hoxha's enemies.

Mr Enver Hoxha may, however, accept philosophically a further worsening of his relations with Moscow if the trial has succeeded in what was presumably its main object of effectively cowering his internal enemies. According to Yugoslav sources, in addition to the public trial there have recently been a number of secret trials of the regime's opponents. Nothing is known at present of the fate of two prominent party members, Liri Belishova and Koci Tashko, who were disgraced last autumn. Pro-Soviet sympathies are believed to have been their crime.

## MALI

### Guinea for a Lesson

WESTERN foreign ministers who find it hard to believe that Africans mean what they say when they talk of neutrality would do well to look at the President of Mali, Mr Modibo Keita, who spent five days in London this week. President Keita is a militant African; his country is aligned with Ghana and Guinea in a group often suspected of being more neutral towards the East than towards the West. Yet, since it split with Senegal last year, Mali has built up both its contacts with western countries and its reputation for being as angrily anti-colonial and anti-imperial as any Touré or Nkrumah. The West, while tut-tutting, has sent money and polite advisers. Aid from France has continued, despite Mali's departure from the French Community, and

as many trade agreements have been signed with western as with eastern countries. The visit to Britain is expected to produce another agreement and more substantial aid than the three Dakotas given by the British Government to Air Mali. President Keita's words show him willing to accept gifts from anyone but "neo-colonialism" from no one.

The roots of this relationship lie in the vote taken by Guinea in 1958 for independence from France. The amputation that followed was quick and cruel. Deferring to the French, other western countries were slow to offer assistance, and the communists seized the opportunity to take their place.

Mr Modibo Keita: lesson taken

Even so, Guinea is the worse off for not having either French administrators or French money, and President Touré is no less dependent on eastern assistance than he might have been on French. Mali, on the other hand, receives from everyone, including Ghana, and yet is not afraid of criticising everyone as well. President Keita may yet decide to join the moderate Monrovia group of states while remaining in the militant Casablanca group. The lesson of Guinea has been as well taken in Africa as in the West.

## DRINKS

### Nearly Undiluted

UNEXPECTEDLY, the Licensing Bill did not finish its report stage in the Commons this week. Part III of the bill, which deals with the sale and supply of intoxicating drinks in clubs, has still to be considered, and after the third reading the bill has to go through all its stages in the Lords. So far on report the temperance lobby has persuaded the Government to sponsor a clause banning the sale of intoxicating liquor on the motorways; but, against this, Mr Vosper has introduced two new clauses permitting greater flexibility in the distribution of permitted hours. One proposes that the afternoon break, instead of being limited rigidly to the period between 3 p.m. and 5.30 p.m., should be for not less than two hours after noon; the other gives

justices greater discretion in fixing opening hours. Mr Vosper also produced a clause freeing the sellers of liqueur chocolates from the absurd requirement of applying for a justice's licence, but the new clause itself is a prize example of the mad draftsmanship that has characterised too many "compromise clauses" in Home Office legislation recently. Liqueur chocolates will be able to be sold freely only if the shopkeeper is sure that they do not contain "intoxicating liquor in a proportion greater than one-fiftieth of a gallon of liquor (computed as proof spirit) per pound of the confectionery." They must also consist "of separate pieces not weighing more than 1½ ounces" or else be "designed to be broken into such pieces for the purposes of consumption." To prevent the corruption of youth, sale to those under 16 is prohibited, a restriction which contrasts oddly with the complete freedom enjoyed by any five-year-old to take away hooch from an off-licence.

Some determined efforts were made by the Labour temperance lobby, supported by the inevitable Sir Cyril Black, to de-liberalise the bill further. A group of Welsh members made a fruitless but time consuming effort to restrict the proposed referendum on Sunday opening in Wales by stipulating a minimum of a 50 per cent poll as a condition for any change. Another group of Labour members (plus Sir Cyril) tried to except Saturdays from the special hours certificate that will allow certain restaurants to remain open until 3 a.m. the following morning, on the ground that it outraged sabbatical feeling. This attracted significantly small support. One minor concession made to the temperance group is the reduction of drinking-up time from fifteen to ten minutes. Mr Vosper compensated for this by allowing pubs to close at 10.30 p.m. on Sundays instead of 10 p.m. He did not, however, accept Lord Balmiel's sensible amendment which would allow drinking until 1 a.m. when music is provided "by one or more live performers"; but he declared that the idea commended itself to the Government. Since this certificate would provide some much-needed night life for the unwealthy classes, it is to be hoped that its "commendability" will produce something tangible later on, such as a Government amendment incorporating it in the Lords.

## DOMINICAN REPUBLIC

### El Beneficiario

GENERAL RAFAEL TRUJILLO the younger, whose proficiencies in the past have been proved in pursuit rather than in consolidation, has shown some dexterity in maintaining the old order in the Dominican Republic. As his father's successor he has combined strong preventive measures against local opponents with a more nimble approach to the outside world. Following the promise of revenge made at his father's tomb, General Diaz, alleged to be the

leader of the assassination plot, has been shot dead by security police, and a very large number of suspects are believed to

Rafael II and Madonna

be in prison. At the same time he has competently taken the wind out of his critics' sails by welcoming a mission sent by the Organisation of American States to investigate charges of police terror and brutality. The mission, consisting of representatives from the United States, Colombia, Uruguay and Panama, arrived in the Dominican Republic on Wednesday.

His father had always sturdily refused to allow an inspection team into the family *hacienda*. Rafael the Second seems more confident that all is under control; a government decree has promised protection to anybody who complains to the president's office of official misconduct, and the powerful chief of security, Colonel Garcia, has been sacked. Meanwhile, President Balaguer, a poet, lawyer and diplomat, who was appointed last August as part of an unsuccessful attempt to persuade the American republics that the Dominican Republic could be democratic too, has

## NOTES OF THE WEEK

promised elections next May. With some forty American warships patrolling off the Dominican coast, both General Trujillo and President Balaguer have declared that their overriding interest is the best possible relations with the United States.

The fact that a Trujillo is still running the Dominican Republic confirms the suggestion that *El Benefactor's* murder was more a spontaneous act of revulsion or revenge rather than a phase in a revolutionary plot. The opposition is neither united nor ready to take over, and General Trujillo *filis* moved swiftly. But he will need to be a skilful operator if his gestures towards liberalising the regime, and the need to silence a rekindled opposition, are not soon to prove incompatible.

## FRANCE

### The Best Butter

IF only because of its triumphant demonstration that Mrs Kennedy is worth at least her weight in gold when it comes to fostering goodwill between nations, her husband's trip to Paris was well worth while. But General de Gaulle and Mr Kennedy also went through the motions of protocol with dignity and smiles, and the press of the two nations played up. It was hard to say who was echoing whom, when, on the Kennedys' arrival at Orly, General de Gaulle, as if following the example of the *New York Herald Tribune*, remarked that "the French land" had "never known the Americans except as friends and as allies," and when President Kennedy used the General's phrase "America, daughter of Europe." Mr Kennedy showed that he had the measure of his host's foot, whether in presenting him with a letter of George Washington's applauding France's services in the war of independence, or in acclaim-

## THE ECONOMIST JUNE 10, 1961

ing "your vigour, your leadership, your sense of history," now "more necessary than ever."

The carpenter, however, did not seem to notice if the butter was spread too thick; he seemed, indeed, very pleased with himself and his guest. Neither statesman ventured to disrupt the harmony by hard bargaining over the various points at issue between France and the other allies, such as the nuclear question, or the French role in Nato; but, as President Kennedy said on his return home, "no question, however sensitive, was avoided." Both were delighted to be able to arrive at "general agreement" about the need to stand firm in Berlin on the eve of the Vienna meeting.

It is easy to smile at such ceremonies, but unwise. In the course of the conversations Mr Kennedy, by introducing such topics as aid for Latin America, went some way to gratifying General de Gaulle's long-standing ambition to be consulted by "the Anglo-Saxons" over the whole range of western *Weltpolitik*. He was also anxious to assure the French President that the United States could and would continue to stand by its European allies; some of his remarks can be construed as a gentle reminder of what it has already done for Europe through the Marshall Plan. Obviously it is an excellent thing to have achieved, as Mr Kennedy thinks he has, the sort of reciprocal confidence and respect that gives extra weight to such assurances. Now it must be hoped that this new White House-Elysée amiability will survive the strains of somewhat more businesslike exchanges in the future.

### Straws in the Calm

LOCAL elections, especially in the French countryside, are local: which makes them especially teasing to the psephologist who wants to deduce national trends from their results. The outcome of the elections to the Conseils Généraux (roughly, county councils) on June 4th furnished no exception to this rule. There were more abstentions than for thirty years, and 3 per cent more than last time. This has caused some concern to commentators anxious about the political health of gaullist France. The British may be excused for being less impressed: whereas 57 per cent of the French thought it worth their while to interrupt their weekend to vote, only 34.7 per cent of Londoners turned out in the recent London County Council elections, and this was regarded as pretty good. The rout of the extreme right, symbolised by the fact that M. Poujade and his wife failed to secure re-election in their department, confirms that the fanatics of French Algeria have lost their drawing power; but even this is no longer news.

Calm reigns in France. The election campaign was of the quietest. It is impossible to say whether the great days of French party politics are over permanently, or whether the old system will spring back to life after the departure of President de

## The Economist

JUNE 8, 1861

### THE DEATH OF COUNT CAVOUR

THE foremost statesman in Europe,—the man whose life was of the highest political value to the world, and second only in importance to that of the Emperor of the French,—is no more. . . . That such a statesman should be cut off while Rome is still in the hands of Austria, and Venetia still in the hands of France, and Venetia still in the hands of Austria, is more than tragic,—for in tragedy the intertwining threads are all cut together,—but here the country's need continues, though the man who could best satisfy it is gone. In no one else can the same powers be found united;—the capacity for ruling rightly, and the capacity for convincing a free people that they are ruled rightly;—the power to win the confidence of an Italian Parliament as no one else could win it, and the power to use the authority so gained as no one else could use it. No English statesman except Pitt has ever gained a power so nearly equivalent to a dictatorship as Count Cavour has exercised for the past nine years over the growing State of Sardinia. Nor is such a combination of practical sagacity and intellec-

tual sagacity,—of the passion that aways, the reasoning that guides, the strength that retains, and the humour that fascinates men,—often seen combined in the same person. . . . But that firm faith in the destinies of his country expressed in his last hour by the dying statesman has been sown by him in so many Italian hearts that it will be impossible for them to despond. It was the last crowning triumph of his life to reconcile all the great men who had assisted him in the glorious work. And now, though in the bitterness of their loss, when they look at Rome and Venetia, many may feel inclined to echo the melancholy old words of patriotic despondency, "The harvest is past, the summer is ended, and we are not saved,"—they will not allow themselves to doubt that the same Power which raised up Count Cavour for his work, and engraved its purposes on the marvellous triumphs of his short administration, will find instruments noble enough to complete what he has so nobly begun.

Gaulle. In one sense, indeed, that departure (if the Fifth Republic survives it) could revitalise local elections, for the members of the Conseils Généraux form part of the electoral college that chooses the President. Such a choice has little reality at present, and many may feel content to vote for General de Gaulle indirectly.

In this context it is not without interest to note that one of the features of the recent contest was a small but useful increase in the Union de la Nouvelle République, or gaullist, vote and representation. Hitherto the party has been weak at the grassroots, in marked contrast to its predecessor, the Rassemblement du Peuple Français, or to the *omnium gatherum* party it looks like replacing, the Radicals.

## DEFENCE

### Unilateralist Inconsistencies

THE left-wing Labour MPs who specialise in attacking the Government's Nato policy have been making hay in the House of Commons in the past fortnight. Two Welsh members, Mr Emrys Hughes and Mr S. O. Davies, have renewed their protests against the proposal to allow German troops to train in Wales. Mr Michael Foot and others have been peppering Mr Heath and Mr Watkinson with questions about the decision by Western European Union to permit the German navy to build destroyers of up to 6,000 tons.

To oppose German rearmament is one thing; to oppose the indiscriminate reliance of western forces on nuclear weapons is another. Those people who do not want nuclear weapons to be used in every small engagement have to consider, if they are not pacifists, what can be done to make defence effective. President Kennedy's policy of holding back the spread of nuclear weapons in Europe, and strengthening conventional forces instead, deserves their support.

Unfortunately few of the left-wing questioners seem prepared to draw logical conclusions from their doubts. If Germany is to be well armed with conventional forces

—because Nato needs the forces and countries like Britain do not provide them—then it is no use splitting hairs about every relaxation in the Brussels treaty. The west German forces need proper equipment, and they need training grounds, some of them outside Germany. If these are not to be sought in Spain—and the political disadvantages of that will hardly be disputed by the Labour left—then Nato's existing members must provide them. Facilities in Britain are an essential consequence of partnership.

The Labour snipers seem even further from accepting the logic for British policy of their dislike of nuclear arms. On June 1st Mr Watkinson made a speech which has drawn criticism—in *Pravda*, and nearer home—for its emphasis on nuclear weapons. But how many unilateralists are prepared to follow Mr George Wigg and Mr Crossman and accept that nuclear disarmament by Britain, and even nuclear-free zones in Europe, would probably require this country to restore conscription?

## PRESS

### Accredited or Discredited?

MR PETER BENENSON'S lively Fabian pamphlet on "A Free Press" has much that is thoughtful, sound and liberal in it. Probably he is right in wanting to strengthen the law of trespass against newspapermen, when they make unlawful entry into a private home by deceit as well as by force. He puts up the interesting idea of a joint working party from the press and the legal profession to inquire into Britain's uniquely strict rules of contempt of court, including the case for permitting some comment to be made on pending civil proceedings. But inevitably most attention (and, in Whitehall, stark horror) has been raised by Mr Benenson's principle that, save in security matters, "all information in the hands of public servants should be public property," and that "there is no sufficient reason why public servants should be able to claim the privilege of secrecy for their usual inter-departmental minutes."

Warming to this theme, and recognising that the files could not be opened to all and sundry, Mr Benenson wants to see a further formalisation of the different groups of accredited correspondents—e.g., Lobby Correspondents, Diplomatic Correspondents, Labour Correspondents, Aviation Correspondents, etc.—with special privileges in their own field. If, says Mr Benenson, there were at each government department "an officially and publicly recognised group of accredited correspondents, it would have its own esprit de corps and its own disciplinary sanctions against an over-zealous member."

Unfortunately, this is the exact opposite of the right recipe for an improved press. It has been extraordinary in recent years how, whenever such a group has become more formalised (and several have done),

the standard of writing on its subject has tended to go down. When a man becomes accredited to a particular department, it becomes difficult for him to criticise it: the principals are apt to be "my very good contacts." An even bigger difficulty is that, once the only man a newspaper can send out on a story is the man with a certain accredited card, its treatment can become cramped and inept. This is true even of the lobby correspondents; the extravert who may be best at finding out who is next likely to stab whom within the Labour party or the Cabinet is not always the right man to have to send along to get a preview of a white paper about a forthcoming Trustee Investments Bill. It can be even more important that the man a newspaper sends along to the Ministry of Labour during a wage dispute should sometimes be a man with a specialised knowledge of the industry concerned, or even sometimes of the state of the national balance of payments—instead of having to be the man with the right card whom the Ministry of Labour knows and whom they can therefore trust to ask only the usual labour correspondents' questions. The greatest recent failing of British press comment is that, even more than government policy, it has become too departmentalised instead of taking broad national views. It would be a great pity if so liberal a pamphlet as Mr Benenson's encouraged anybody to push further the "accredited correspondent" system that has borne a lot of the blame for this.

## PORTUGAL

### Senhor Galvão Again

EVEN if Lord Home's visit to Lisbon was justified by his "breeze of change" suggestions when he got there, the refusal to grant a visa to Senhor Galvão is not. It may be necessary to handle Dr Salazar with tact in the hope that his government will behave better in Angola, if not in Portugal. But it is hard to see why delicacy need go so far as to deny our shores to the man whose *Santa Maria* exploit first dramatised the situation. It was in protest against Portuguese methods in Angola that Senhor Galvão first parted company with Dr Salazar; and few now would deny that he was right.

Labour members wanted to know why General Delgado is allowed into Britain while Senhor Galvão is not, and why Senhor Galvão was less deserving, or more dangerous, than, say, Garibaldi. Mr Renton, for the Home Office, failed to answer the first question and was frankly absurd about the second. "There is a considerable difference," he said, "between the Portugal of today, which is a member of Nato, and the Italy of Garibaldi's time." It would have been interesting to hear Mr Gladstone, who described the Neapolitan government of 1851 as "the negation of God erected into a system of government," on this.

# LETTERS

## US National Output

SIR—Your "Innocent on the New Frontier" (May 27th) reports: "The current game of guessing what the annual rate of national output will be by the end of this year yields some odd comparisons; \$515 billion is in the air which the Council of Economic Advisers breathes, but over at the Federal Reserve Board they talk of a possible \$535 billion." The air from which your roving correspondent has picked his numbers is not the air we breathe at the council.

No council projection—not even the one we made in January on the basis of the Eisenhower budget—has guessed national output in the fourth quarter of 1961 to be running as low as \$520 billion. And we have estimated that additions to the budget proposed by President Kennedy will add \$7.10 billion to the nation's fourth quarter rate of output.—Yours faithfully,

WALTER W. HELLER,  
Chairman, Council of Economic Advisers  
Washington, DC

## More Starch for the White Collar

SIR—As one of the white collar unions mentioned in your article of June 3rd and affiliated to the Trades Union Congress we are only too familiar with the problem of party politics.

Like many other unions in our field we have no political funds or party ties, yet our opponents still try to work the socialist tar brush because of our TUC affiliation. We therefore welcome your observation that nowadays "membership of the TUC would hardly taint any organisation irremediably." We also welcome your observation on voting when TUC discusses "political business." It has often struck me as unethical, to say the least, that unions who have no political affiliations cast votes on these occasions.

If you contract out you must stay out! This is the way our organisation sees it and we have always strictly observed our own belief that we have no standing in party political matters. Therefore, whenever chairmen at TUCs announce that a political resolution has been carried "unanimously" it is due to the fact that it is almost impossible to count those hands—or cards—that are not raised when the vote is taken.—Yours faithfully,

WALTER N. BERNARD  
National Union of Bank Employees  
London, SW1

SIR—In your stimulating article of June 3rd, talking about the effects in negotiation of the fair comparisons "doctrine" of the Priestley Commission, you say that the doctrine leads to shortages of people with

particular kinds of qualifications because of traditional taboos "such as, for example, that administrative officers should not be paid less than scientific staff."

In the civil service, scientific staff are consistently paid much less than are administrative and executive staff. Taking the administrative class as compared with the scientific officer class, the career value of an ordinary career is some £20,000 less for a scientist than it is for an administrator.

What I suggest is really needed is that the Government as the biggest employer of scientific labour should set up a consistent policy of encouraging young men and women to take up scientific and professional careers by ensuring that in the civil service the career open to such persons was at least no less valuable than that open to those who enter the administrative and executive sides of the service. This, I suggest, would be a forward thinking use of the power the Government could undoubtedly exercise in setting an example.

There is every reason why a constructive pay policy should be used to direct persons into the socially most desirable channels of employment. So far as the civil service is concerned the inducement at the present moment is not in this direction.—Yours faithfully,

STANLEY MAYNE  
General Secretary,  
The Institution of Professional Civil Servants  
London, SW1

## Vietnam

SIR—I wish to point out some misconceptions in Dr Phan Huy Co's letter on the Vietnamese elections in *The Economist* of May 27, 1961, the opinion expressed by my brother having been based on errors of facts.

The allegation that President Diem "officially recognised" the "Revolutionary Committee" is totally unfounded. It is furthermore a most dubious view to assume that even a presidential recognition of an armed rebellion can confer legality on the men and their undertaking. The President is granted no power constitutionally by the people to do so even if he so wished.

In this matter, the least Dr Co can do is to credit his leader Phan Quang Dan with enough sense to know what he was doing and risking when he chose rebellion. On the other hand, the choice by the people has been made plain and clear by the resounding majority vote they cast for President Ngo Dinh Diem.

Even when allowing for the argument by your correspondent that there was no opposition in the elections, one cannot simply create an opposition *ex machina*, or rather *ex nihilo*, as he should know. As you say, you can take a horse to the water,

but you cannot make it drink. The people in Vietnam could have found plenty of excuses for not going to the polls, when the Viet Cong was promising bullets for ballot. Even if they had been corralled to the voting stations, which was certainly not the case, they could have cast blank votes, if they so wished: the voting was secret and free, as witnessed by the world's foreign press.

The massive majority for President Diem showed that the people are sufficiently discerning to choose the right medicine for their country.—Yours faithfully,

PHAM HUY TY  
First Secretary  
Embassy of Vietnam, W8

## Bernstein, Triffin, Stamp

SIR—Having been overseas, I have only now had an opportunity of reading the article in your issue of May 6th. Your strictures on the Bernstein plan and your praise of the Triffin plan are both based on the contention that the western world is suffering from a general, a global, lack of international liquidity. You have provided no evidence to support your contention, nor has Professor Triffin, nor has anybody else. Calculations that the ratio of gold held by central banks to global imports or similar ratios of gold plus foreign exchange reserves to global imports have declined over the last 10 or even 30 years are no such evidence. *Pari passu* with global imports global exports have risen, providing the means to pay for imports, so that the global balance has not altered.

What has happened and is relevant is a change in the balances and reserves of individual countries. We have experienced indeed a shift of reserves from one group of countries, i.e., the US and UK, to another group of countries, i.e., mainly continental Europe. It is the merit of the Bernstein plan to recognise this change and some of the problems arising from it and to suggest a solution, though limited, that could be quickly applied. It would speed up the process, already under way, of various currencies of continental Europe becoming "key" currencies in addition to dollars and sterling.

However, the whole discussion in the three plans of Bernstein, Triffin and Stamp and in your comments appears to be on a par with playing Hamlet without the Prince. Nowhere has there been an indication that the present weakness of dollar and sterling and the consequent decline in their capacity to serve as liquidity reserves, has arisen out of vast outpourings to developing countries of grants and long-term investments by the US and UK that are no longer sufficiently supported by loanable surpluses from the "key" currency countries' international earnings, but supplied by borrowing short abroad. Nor has there been an appreciation of the attitude of leading countries of continental Europe which have accumulated vast claims against "key" currency countries and so reduce the latter's international liquidity. They are not acting out of perversity. The basic fact remains

and marriage certificates. In Canada loopholes in passport regulations allowed a Russian to assume Canadian identity. The authors' viewpoint appears somewhat naive. They assume that the next spies sent from Russia will follow the same method, will use much the same equipment, and employ the same type of transmitter. This surely is underrating the Russian spy mind. Also they explain the encouragement given to the newspapers and the court to allot the case such publicity as a reply to the incident of Francis Powers and the U.2. This may have made some impression on the rest of the world, but not on the Russians, for there was no Russian representative at the trial, and the case was not reported by *Tass*. One doubts if Mr Khrushchev was seized with remorse or indeed paid any attention to this *tu quoque*.

The book shows signs of being put somewhat hurriedly together: the main incidents are well set out, but some of the minor episodes are rather loosely tied in, and to some extent the authors have padded the book with conjecture. But it has the prime quality necessary for publication: it is readable, and it should be read.
