While attempts to reshuffle the production and financial bodies of the North Atlantic Treaty Organisation are well on the way, the Treaty Powers are also trying to shake out the tangled chains of political and military responsibility. The obvious way is to reduce the number of links in the hierarchy; and this, on the political side, is what they intend to do. They are on the point of accepting the gist of a Canadian proposal to resolve the three existing ministerial committees into one, a supreme Atlantic Council on which not only the Foreign Ministers but the Defence and Finance Ministers would be entitled to sit as appropriate. In the ordinary course of business there are at the moment three points at which the recommendations of the working committees can be upset or distorted by politicians: the Foreign Ministers' deputies, the Defence or Finance Ministers (according to subject) and the Foreign Ministers in the Council itself. In future, the line will run straighter and, it is to be hoped, stronger, direct from the working committees to the deputies and thence to the Council.

But cutting out the links is not a panacea to be indiscriminately applied. On the military side there are at present three bodies: the Standing Group of Britain, France and the United States in Washington, the permanent twelve-powered Military Representatives Committee, and the Military Committee where the chiefs of staff of all three services in all twelve countries meet spasmodically in London. Unlike the political hierarchy, there are good reasons why these military

bodies should be so thick on the ground. The point of the Standing Group is strength through concentration, and not even the nine nations which it does not represent seriously want to make it more diffuse. What they do want, however, is that the Standing Group should know all about, and take full account of, their interests. Hence, the military representatives, in constant session, over whom the Standing Group forms an accepted steering committee. The military committee, on the other hand, is to some extent an anachronism, dating back to the days before the military representatives had been invented. It may or may not wither away as the new arrangements get into their swing. It does not matter very much which it does, since it is in no sense a competitor with them. The important thing to establish is that the coexistence of the Standing Group and the military representatives is the only means of ensuring, to everyone's satisfaction, a firm hand in control of military affairs. It would serve no good or useful purpose to swell the Standing Group and abolish the representatives, as was suggested in London last week.

Egypt and Procedure

Though the Government carried by three votes—its narrowest margin on a major issue in this Parliament—the division at the end of Tuesday's debate on the agreement with Egypt, there is no doubt that the feeling of the House was against it. On a free vote, the Government would certainly have lost the day. The Conservatives would do well to study the fact that a serious discussion on a question of major policy brought the Government nearer to defeat than any of the much publicised wrangles that have developed out of the harrying tactics of recent weeks. It certainly affects opinion in the country more deeply than any parliamentary squabble. The best proof of this is given by the reaction of the Liberals. They have thrown their weight against the Conservatives on the question of late night sittings, but on Egypt they were solidly ranged against the Government.

The vote on Egypt, being formally on the adjournment, cut out the discussion, which had been planned at the request of the Opposition, about the methods of appointing standing committees. Here the dispute had arisen from the Government's insistence that the standing committee, which will have to deal with the recent Conservative private member's bill to amend the Transport Act, should be constituted on a different basis from other standing committees in this Parliament. Until now, these have consisted of 25 Government and 25 Opposition members (24 Conservatives and one Liberal). The Government has insisted that the total should be reduced to 45, giving Labour a majority of one over both Opposition parties. Although the Government made and defended this change very clumsily it is difficult to feel much sympathy for the state of righteous wrath into which the Conservatives have lashed themselves. The standing committee is a device to conserve the time and attention of the House by appointing a body of members, weighted in accordance with the balance of the parties in the House itself, to make a detailed examination of bills between their second and third reading. The relevant phrase of standing orders is somewhat vague, merely stating that appointments to these committees must "have regard to the composition of the whole House." Where any strict proportion between the parties can be expressed only in fractions of a member, the only practicable way is clearly to give the Government the benefit of the fraction so that they may have a majority in the committee, as they have in the House. To do otherwise would be merely to create a great deal of unnecessary labour and waste of time when the bill comes back for discussion by the full House, since the Government would then have to use its majority to reject committee decisions which it was not prepared to accept.

Atom Bombs

A report, issued by the Press Association last Saturday, that Britain is to manufacture the atom bomb, has produced a stunned and embarrassed silence in Whitehall and Washington, but, as yet, no official disclaimer. It is difficult to believe that Britain has undertaken the full scale manufacture of atomic bombs, and if it is true, it is impossible to feel enthusiastic about the idea. There is no strategic reason which makes it imperative for Britain to make its own bombs—an atomic war which did not involve the United States is unthinkable. And if the concept of strategy is broadened to include the balance of economic resources among the allies there are imperative reasons why Britain should not undertake such a task. It would impose a gigantic burden upon the already strained resources of the British engineering and chemical industries. Any British manufacture of atom bombs could not profit from the economies of size, which are enabling the United States to increase the rate of output while keeping cost per unit from rising astronomically. No midnight fears that the rate of Russian production of atomic bombs might overtake or equal that of the United States could justify such a policy at this late stage, and Mr Churchill's repeated suggestion that it should be undertaken has been one of his least responsible acts.

This is not to say that Britain should play no part in the development of the military use of atomic energy. The advances of British scientists in fundamental and applied physics can make contributions in this field which the Americans cannot ignore. If it is felt that British scientists have better designs for atomic weapons—or for their fuses or casings—than those at present being produced in the United States, the proper course is to press for a greater exchange of information and for British scientists to work with the Atomic Energy Commission in the United States. Can it be that the tragedy of Dr Klaus Fuchs has created such barriers between the two countries in this field as to cause a strategically wasteful division of labour?

What Resources Allow

A brief, bright and belligerent pamphlet on housing* has been published by the Conservative Political Centre. As its author, Mr Marples, is secretary of the Conservative Parliamentary Housing Committee, it can be taken as an expression of official Tory policy on housing. A short preface recognises that no one can yet estimate the effect of rearmament on the output of houses. "As far as is humanly possible we intend to build as many houses as possible." Last autumn's commitment to 300,000 houses a year—adopted as Conservative policy after the defence programme was launched—has, in other words, been very quietly dropped.

Mr Marples has deliberately written less a political than a simple technical tract. He does less than justice, however, to the difficulties and achievements of the Government since 1945. He also aims some shrewd and well-deserved blows. The temperamental changes in housing investment policy, with the consequential disorganisation of the cement and brick industries; extravagance in building standards; delays due to excessive administrative control; failure to amend the rent restriction Acts; the lack of competition and incentives—all these are soft spots in the Government's case and Mr Marples makes the most of them.

On the positive side, Mr Marples says many sensible things about methods of increasing the use of unskilled labour, improving the liaison between architect and contractor, and providing a larger number of houses with a given allocation of labour and materials. His suggestions for increasing the number of two-bedroomed houses, for reducing the size of three-bedroomed houses from 1,050

* *Housing*, by E. Marples, M.P. 6d.

square feet to 850 square feet, and for reducing costs by the omission of trimmings have all been advocated in these pages. The question at issue is whether these improvements and economies would increase the output of houses by 50 per cent, to the Conservative target of 300,000 a year, if rearmament did not take labour away from house building. On this Mr Marples is not convincing. Nor does he grasp a number of the most prickly problems in his way. With more building by private enterprise, what exactly is to be the role of the local authorities? How will an adequate standard of quality be ensured? Would a Tory government be able to prevent the demand for houses from eating up the resources required by industry? At such points of general policy there are gaps in Mr Marples's argument. On the way to get houses built more efficiently he has given good advice reasonably and simply.

Between Strasbourg and Paris

The meeting held at the end of last week by the Committee of Ministers of the Council of Europe shows that the Council has come to stay; it is something to be reckoned with. The nature of the meeting's decisions also confirms the trend that was apparent at the last session of the Assembly in favour of a functional approach. In this, the third year of the Council's existence, it is beginning in fact to develop along lines which will almost certainly continue for some time. At the first session of the Assembly in the summer of 1949, little was accomplished except to meet and see what meeting felt like. At the second session, last year, those who wanted to raise the stature of the Council by bestowing on it wide federal powers were in effect defeated by the realists who sought specific powers over specific subjects. Since then, the two outstanding trends have been the continued emphasis on the importance of the Assembly in relation to the Committee of Ministers, and the attempts to associate more of the work of the Council with detailed planning in Europe.

For the British Government this certainly means that a turning point has been reached. All the minor concessions which it has been able to make, it has made. If the Government's policy of frowning on the Council is to be continued, it can only be done at the practical cost of surrendering more and more of the moral leadership which Britain still retains on the Continent. The change of Foreign Secretaries provides a good opportunity to think again about this problem, particularly at a moment when, if London is not to lose some of its power to influence policy in Washington, it needs the backing rather than the criticism of the Continent.

Of the detailed decisions just taken by the Committee of Ministers in Paris, all the constitutional ones, although significant in themselves, did little more than regularise the position already existing. The progress made, however, in linking the work of the Council of Europe with that of OEEC (the Organisation for European Economic Co-operation) was of real importance. A seven-man liaison committee of the two bodies, meeting first in February and again on March 5th, examined the recommendation for closer contact with OEEC which the Assembly passed last August. One result is that when the Assembly next meets on May 5th it will hear a special report by the OEEC on the economic state of Europe delivered in person by a minister selected from the Committee of Ministers; the Secretary-General of OEEC is also to be present.

These reports will be delivered whenever the Assembly meets. They will certainly enhance the importance of the Council of Europe, while at the same time providing a new focus for the work of OEEC—a prospect already welcome in view of the gradual winding up of Marshall aid, and the eventual risk that this singularly successful European body might be lost in the quickening vortex of the North Atlantic Treaty Organisation. It would be a fine thing for both

Britain and Europe if Mr Gaitskell, the Chancellor of the Exchequer, could be the first minister to deliver an OEEC report at Strasbourg.

* * *

Strike Pressure on France

Just before the French President, M. Vincent Auriol, left Paris for Washington—where he will stay for a week as Mr Truman's guest—France was hit by a new wave of strikes, the most serious since the big coal strike of October and November, 1948. They are at present largely concentrated in the Paris area, where public transport, gas, electricity and water distribution have been affected. But they have created a very difficult situation here; they have begun to extend to other areas and they threaten to spread to other industries. Already some main line trains are not running and there is trouble in the steel plants of Lorraine.

The Communists are undoubtedly exploiting the present conflict. They are certainly happy at the coincidence between the present strikes and the presidential journey to the United States; and they welcome anything that may be harmful to the mutual confidence of the signatories of the Atlantic Pact. But there are, nevertheless, genuine economic grievances behind the strikes. The trouble started in the Paris bus and metro services where the non-Communist trade unions combined with the Communist-controlled CGT to demand higher wages. It is a revealing fact that when the Communists tried to mobilise the workers behind political slogans—for instance against General Eisenhower—they met with failure; but with the rapid rise in the cost of living they have found it easy enough to start a strike about wages. Many enemies of the Communists blame the administration for its failure to deal resolutely with the prices and wages problem. It now finds itself obliged to do in haste and under pressure what it could and should have done carefully and calmly. Meanwhile the National Assembly is still discussing electoral reform, the complexity of which puzzles everybody including the deputies. Once again, France's petty politics stop policy making.

* * *

Confusion in the German Economy

There is every reason for concern about the continued inability of the Federal German Government to cope with the problem of its deficit with the European Payments Union and the general post-Korean economic strains. Confusion still prevails in Bonn. Dr Adenauer has surrounded himself with half-a-dozen different economic advisers, whom he seems to prefer to his Minister of Economics. Dr Erhard himself remains optimistic, though he has come curiously close to the moderate Socialists in demanding controls. Some voices are stating home truths about the lawless and extravagant manner in which the Germans live. Dr Noelting, for the Socialists, has affirmed that evaded taxes amount to DM 3,000 million, and that capital to the extent of some DM 600 million has been illegally exported. The Vice-Chancellor, Dr Bluecher, has bravely warned industrial circles that the Germans are in danger of being called "fraudulent bankrupts" abroad. The steps taken so far to correct the foreign trade weakness have had to be deplorably restrictive. Western Germany proposes to cut imports from the EPU countries to the point at which earnings cover purchases, invisibles and also repayment of the \$120 million credit from EPU. This means that imports will be at the rate of only \$140 million a month, compared with some \$215 million between October and January last. The whole of this amount will be needed to cover licences issued before the recent ban was imposed. No fresh licences will be issued, it is estimated, until June.

B.O.A.C. proudly presents . . .

THE **Monarch**

LONDON-NEW YORK DIRECT—OVERNIGHT!

It's the last word in luxury air travel!

Relax in the double-decked spaciousness of a pressurized Stratocruiser Speedbird . . . meet congenial companions in the lower-deck lounge with its well-stocked bar. Three stewards and a stewardess constantly study to please you.

Enjoy cocktails, a seven-course dinner with wine or champagne, then liqueurs . . . all served with the compliments of B.O.A.C. Finally, you may retire to the privacy of a comfortable full-size berth (only £8.19.0 extra). Breakfast in bed, if you wish!

Complimentary "Speedbird Overnight Bag" for every passenger . . . an "Elizabeth Arden Beauty Kit" for every lady.

Yet, you pay no surcharge to travel by this luxurious new overnight service to New York—*not a penny extra!*

Free advice and information available on request from your local B.O.A.C. Appointed Agent, or B.O.A.C., Airways Terminal, Buckingham Palace Road, London, S.W.1. Telephone: VICTORIA 2323. Early reservation advisable.

Whenever Export figures are quoted there comes the accustomed reference to 'expert British Craftsmanship.' But . . . have you ever stopped to ask yourself . . .

"Who are Britain's Craftsmen?"

Introducing Frank Cantello. He has been making rubber tyres for 43 years—from tyres for pioneer motoring days to the monsters for the wheels of modern transport. Today, his skill is applied to retreading giant agricultural tyres—helping the salvage drive, helping home food production, and helping boost exports of new tyres to higher levels.*

But does craftsmanship mean only handcraftsmanship? In the manufacture of tyres today more and more

processes have been mechanised . . . but skill is as necessary as ever. In machine design . . . in setting up . . . in operation. And must there not be craftsmanship at every stage if the finished article is to be a masterpiece? Monsanto think so, and they follow this rule in making a range of chemicals for the many activities of the rubber industry.

Monsanto make over 200 chemicals for use in industry. Of widely varying application, they all conform to the highest standards of craftsmanship in chemical manufacture.

SELF-RESPECT

IS it really possible that there are even a few railway signalmen who have a slipshod attitude to their work? It is a horrifying thought, but it has been raised by Brigadier C. A. Langley, railway inspecting officer, in reporting on recent mistakes. He suggests that the railways' fine record of safety may have to depend more on fool-proof mechanical devices because the human element cannot be trusted so implicitly as it used to be.

The Brigadier may not be right in suggesting that there is a slackening of self-discipline and the sense of responsibility in such a vital branch of the railway organisation, but there are many people who see these disquieting signs throughout industry as a whole.

Pride in the job, they say, has been diminishing steadily over the years. They trace this to the great mass-production changes which have meant fewer skilled craftsmen in proportion to the huge numbers of semi-skilled, giving rise to an atmosphere of "couldn't care less." The "don't care" brigade, the argument runs, now set the tone of much of the industrial community, and the qualities of character that made British industry are being swamped.

This analysis is certainly far too pessimistic, but there is enough in it to cause thought by everyone who cares for this country and for democracy.

A man without pride in how he does his work is a man without pride in himself and is hardly a man at all. Management ought to do much more to show workers that their part in the scheme is not pointless, but when that is said it remains true that only the individual can make himself a creditable human being.

Democratic liberty is based on everyone taking responsibility for his own job first. "Couldn't care less" is the language of personal decay. It is the language which, if it became general, would spell democracy's death.

HOTELS

personally and independently recommended by
Ashley Courtenay

"A joint of mutton and any pretty little kidneys."
Even in these days of restrictions there is no need to stay at an hotel where you cannot get enough to eat. Kitchens, courtesy and comfort are three essentials in selecting my recommendations. A few of my personally recommended hotels are included in my "Stop Window" below. For other districts, please write to me, enclosing stamped-addressed envelope, to 68, St. James's Street, London, S.W.1.

BEWBRIDGE, I.O.W. for your holiday. ROYAL STITHHEAD HOTEL offers comfort and good food. Direct access to beach. Sports. Family parties welcomed. Fully licensed. Brochure on application. S. C. Selwyn, Resident Managing Director.

BROADWAY, Wores. THE LYON ARMS. Always in season, though there are many who feel its mellowness is enhanced when the curtains are drawn, for it is then they appreciate the log fires, cooking in the best English tradition, and a pleasantly warmed bedroom complete in its comfort. Tel.: 8.

BRIMHURST, Kent. COLLINGWOOD HOUSE HOTEL. In this historic and lovely Georgian home, the art of gracious living is still practised. Warmth, unusual comfort and a high standard of catering will be your lot. For Brochure write: N. Allan-Smith. Tel.: 3550.

JERSEY, C.I. ST. BRELAD'S BAY HOTEL. (Det. Register). 11 hrs. light from London. Flowers, sunshine and an equable climate. Completely sheltered, facing the sea and the south. Early booking advisable. Details with pleasure from R. H. Colley. Tel.: St. Aubin 1.

MINEHEAD, Somerset. NORTHFIELD. Situated in 3 acres of grounds, sits at high standards of catering and comfort AT ANY TIME OF THE YEAR. Convalescence? A honeymoon? Or just in holiday mood? Exmoor, the sea, and Northfield make a happy combination. Tel.: 864.

NEWQUAY, Cornwall. HEADLAND HOTEL. Re-opens April 2nd. Billiards, Bridge, Dancing, Tennis, Surfing, magnificent views. 18-hole Golf Course adjoining. Good food, well-stocked cellars, attractive Cocktail Bar and Sun Lounge. Every room with a sea view. (Private bathrooms available). Early booking advisable. Write W. Polglaze. Tel.: 2211.

NR. NEWQUAY, Cornwall. GLENDORCAL. Nigel Lunge offers you the perfect holiday by the sea. Private steps to Atlantic surf-bathing and golden sands. 10 acres of private coastline grounds. Own farm produce: cream, milk, children's paradise; comfort and rest for adults. Tel.: Newquay 2949.

ST. MAWES, Cornwall. HOTEL TRESANTON. Lovely Country House in sheltered bay. Beautifully furnished, every modern convenience. First-class cuisine; Club bar; tennis from 20/- per day. Trains met Truro. Resident Manager, A. Miles Hurrebert. Tel.: 322.

SAUNTON SANDS HOTEL, Mr. Braunton, N. Devon. Overlooking Bideford Bay. All that is best in a modern Hotel. Squash, Dancing, etc. Golf at Saunton Golf Club. Fully Licensed. Spring terms 25/- daily. Trains met by appointment. Tel.: Croyde 212.

SIDMOUTH, Devon. BELMONT HOTEL. A.A. Appointed. A first-class luxury hotel, noted for its excellent food, and occupying the finest position extending to the sea front. Through-coaches daily from Waterloo. Private Suites. Gas fires. Private bathrooms. Lift. Fully licensed. Tel.: Sidmouth 1261.

RAVENSCAR, Scarborough.
RAVEN HALL HOTEL

A completely self-contained, fully licensed holiday hotel. Heated sea-water Bathing Pool, 9-hole Golf Course, Putting, Hard Tennis, Bowls, Billiards, Dancing (Orchestra)—all free to residents. Riding available. Fully inclusive terms 35/- to 47/6 per day. Tel.: Cloughton 233.

SCARBOROUGH ROYAL HOTEL

Comfortable, Civilised, Stimulating.
For all that it offers, the value is extraordinary.
Terms 29/- to 39/- per day.
Managing Director, T. Laughton.

TORQUAY'S GRAND HOTEL

Grand in name, grand in position, grand in everything it offers.
With a view to a grand family holiday this year, write E. Paul for detailed brochure. Tel.: 2234.

Tradition

When in 1485, King Richard the Third cried:—"A horse! a horse! my kingdom for a horse"! a Catesby was there to serve his need.

Successive Generations of the House of Catesby offer the same tradition of service to the Leaders of Commerce and Industry of to-day in Catesbys Office Furnishing—for a complete new office or a single item we invite your enquiry to our Director of Contracts.

Your enquiries for floor-coverings, and for any assistance are cordially invited.

CATESBYS

64/67 TOTTENHAM COURT ROAD
LONDON, W.1

Our only address. Telephone: Museum 7777

To save the principles of liberalisation and non-discrimination, Bonn proposes to allocate 60 per cent of the amount of foreign exchange available to imports under liberalised lists, and the remainder to goods on quota. The goods remaining on the liberalised list will be divided into 34 groups and global allocations will be made for their import. An attempt will be made to tighten up the licensing system, which has been out of control.

The Bank deutscher Laender sees the need to cut down internal purchasing power if manufactures are to be deflected from the home market, and if the drastic cut in imports is not to create further inflation. It has revealed that, in spite of the credit restrictions imposed at the time of the first EPU crisis last autumn, the amount of money created by banks has been at the rate of about DM 400 million a month. Short-term credits have risen since Korea by nearly DM 2,500 million. As one, admittedly inadequate, step in the right direction, the Bank has ordered all financial institutions to cut down their short-term credits by DM 1,000 million in the next two or three months. But powerful influences are working against an anti-inflationary and sensibly directed investment policy. The Trade Union Federation demands that nothing shall be done to touch purchasing power, while industrialists threaten a collapse if profits used for self-financing are taxed.

In this sorry situation, the Federal Government can claim that its initial credit with EPU was far short of the needs of its rapidly expanding foreign trade, and that its calculations have been upset by the great increase in prices for raw materials (which, however, have been imported for hoarding as well as current consumption). The figures of trade for January and February this year show that imports were 47 per cent higher and exports 106 per cent higher than in the same period last year. Moreover, Germany still has unused capacity in factories and manpower—a fact which serves as a powerful argument for obtaining raw materials whatever the country's present credit position.

Reforming the Health Service

The conference on administrative problems of the health services, held last week by the Institute of Public Administration, has come at an opportune time—just before the Budget. The national health service is an obvious target for economy. Nevertheless, nothing could be more senseless than the sort of all-round percentage cut in expenditure of which Whitehall is so fond. The real trouble with the health service, as this conference amply demonstrated, is that it is not giving value for money—that wasteful expenditure in some directions is having bad social results, while medical research, for instance, which can yield great benefits for a modest outlay, is, comparatively speaking, skimped.

The trouble again is not, as most people assume, that Whitehall is dictatorial. On the contrary, it has consistently taken the line of least resistance on major issues and has then tried to make good its mistakes by a fussy attention to details. The best-known example is the overpayment of dentists in general practice, which has resulted in such an exodus of dentists from local authority service that, according to one speaker,

only a tithe of the conservative dentistry which school children need is being undertaken, and preventive medicine in the widest sense has suffered a severe setback.

Again, it is impossible, without incurring fantastic administrative overheads, to conduct an efficient check of dentists' and doctors' expenses and chemists' bills, while the economies of bulk purchase of drugs and equipment are still unrealised. The Government has taken little thought of how to stop up the holes through which public money steadily leaks.

Strange social results, which were apparently not foreseen and are still ignored, emanate from a free hospital service.

It is now cheaper for a mother to have her baby in hospital than at home—but it costs the public a great deal more. The hospitals may become a dumping ground—at the public's expense—for aged relatives unwanted at home. The high status given to specialists is known to be undermining the position of the general practitioner, who could, together with the local authority welfare services, take some of the pressure off the hospitals if enabled to do so. A Government which wants to reform the health service must have courage—a willingness to impose some charges on some patients, to reform some of the methods of payment, and to correct administrative and medical defects before the new interests get dug in.

False Teeth

The Government's decision to act on the majority recommendation of the Monopolies Commission's report on dental goods brings to a head the question whether the problem of monopoly should be tackled industry by industry or practice by practice. There is a case for the former approach, the one now being adopted. The Minister of Health made a valid point, though in rather intemperate language, when in answer to the suggestion that he should await the report on three or four industries before taking action, he declared that if a burglar broke into his house he would not ask the police to wait until ten other cases had occurred. If a beginning is not made somewhere it will not be made at all. Moreover, the refusal to incorporate in the original Monopolies and Restrictive Practices Act any criterion of public interest—the reliance, by analogy with the common law, on the accumulation of precedent through successive inquiries—implied from the beginning just that procedure which is in fact being followed. *Solvitur ambulando* is not a hope which can be fulfilled without taking a first step.

This argument may formally justify what the Government is now doing; it does not justify its failure to do what the Lloyd Jacob Report unequivocally recommended, that is, to outlaw over the whole economic field the particular practices—price maintenance backed by collective boycott—that the Monopolies Commission condemned in the dental industry. There is undoubtedly a wide, debatable zone of practices, actually or potentially restrictive in effect, to which the cautious one-industry-at-a-time approach is appropriate; such, indeed, is the conclusion to be drawn from American antitrust experience. About this particular practice there is no doubt at all. To have prohibited it in general would have signalled a genuine intention to attack monopoly. The present move looks less like evidence of such an intention than like discrimination in favour of the dental industry's ultimate customer—the Ministry of Health.

Not So Good for China

"We have let a lot of air out of the inflated Chinese Communist military reputation," said General Ridgway to war correspondents in Korea on March 12th. The military situation is indeed very different from what it was two months ago, and Mao Tse-tung may by now be regretting that he failed to make the show of moderation in the hour of victory which would have enabled him to take advantage of the mood of appeasement in the United Nations after the Communist recapture of Pyongyang and Seoul. Since General Wu delivered his prepared insults at the United Nations instead of trying to negotiate, the Chinese army in Korea has suffered very heavy losses both in men and material.

Unless Peking can reverse this trend by a successful offensive of its own in Korea, it faces the unpleasant choice either of climbing down from the position it took up as

victor at the end of last year, or of carrying on indefinitely a major war which must impose an intolerable strain on China's low-grade economy and may even bring political disaster to the regime itself. A short, successful war is one thing for a revolutionary dictatorship; a long, unsuccessful war is quite another. So far the Chinese press and radio show no sign of any weakening of policy on the Korean issue. They continue the intensive "anti-imperialist" propaganda of which some specimens are quoted in an article on page 691. There are, however, indications that Chinese Communist publicity is already hard put to it to explain why there are no more victories. It has now accused the Americans of using poison gas in Korea and claims that it has been "a long-harboured intention of the American warmongers to use poison gas against peace-loving peoples." Although it is claimed that the American troops in Korea are "doomed," in spite of their resort to chemical warfare, the suggestion that the Chinese army now has to face more than normal and legitimate weapons avoids loss of face for military reverses which cannot be entirely concealed.

The principal device used for whipping-up Chinese popular enthusiasm for the Korean war has recently been propaganda about Japanese rearmament, which awakens memories of the brutalities of Japanese rule in China. Mass demonstrations are reported from many cities expressing "the wrathful voice of the Chinese people against the remilitarisation of Japan by American imperialism." At the same time great prominence is given to Japanese Communist protests against a separate peace treaty with America, in order to show that the Japanese people is really anti-American. There seems, however, to have been a cessation of the charges of French violations of the Vietnam-China frontier which were not long ago building up a pretext for Chinese armed intervention in Vietnam. Peking has perhaps come to the conclusion that one war at a time is enough, and if the first item on the programme turns out to be

Atlantic Crossing

To the Editor of the Economist

Respected Sir,—As a shipowner and constant subscriber to *The Economist* for four years, I return you grateful thanks for all the benefits I have received by perusing it, although I may occasionally dissent from your arguments. I have perused with careful attention your article on "National Rivalry" in your last issue, and conceive you have too strong a leaning to award praise to the competing American steamers, at the expense of our own. Your information appears to be obtained chiefly from American newspapers, which give only the favourable side. You state that the "American steamers have made two of the shortest eastern passages." This is disputed; but even allowing it to be true, they have also made two of the longest eastern passages, being eighteen days, and a third of their steamers, the "Atlantic," was compelled to put back in a dismantled state. Last month, the British steamer "Asia," on the western passage, beat the American steamer "Arctic" thirty-six hours; and the "Africa," which arrived last week, beat the "Baltic," her competitor, twenty hours, and the "Washington," another American steamer, five days. These facts I deem it necessary to lay before you, in order that we may know both sides of the question. We have at present building on Clyde for the Cunard Line, two of the most powerful steamers ever constructed: they will have cylinders of 103 inches, and a stroke of 10 feet, and are expected to have no competitors as its respects both safety and speed.—Thine respectfully, J. H. W.
Scotland, March 18, 1851.

The Economist
March 22, 1851

more costly than was anticipated, the second may have to wait for quite a long time.

A Bomb in Albania

The report of a bomb explosion in the Soviet Embassy in Tirana about a month ago—which now appears to be confirmed—draws attention once more to Moscow's colony on the Adriatic. Ever since the breach between Marshal Tito and the Cominform, Albania has been almost completely cut off from the outer world; and its neighbours by land and sea are its enemies. Lack of essential supplies has made the Albanian economic plan even more difficult to achieve than those of the other satellites. As usual in Stalinist countries, scapegoats have had to be found for economic failures, and recently the Minister of Industry, Rita Marko, and the Vice-premier, Spiro Spano, were dismissed from their offices. The collectivisation of agriculture has also caused unrest. Though conducted more slowly than in Bulgaria, it is likely to meet with strong resistance from the peasants. It may find some support among the smallholders and labourers of the coastal plains, but it is not likely to appeal to the tribesmen of the northern mountains who have been hostile to the Communist regime ever since it came to power.

Since the Soviet break with Yugoslavia, Albania has been ruled by the Russian military "technical" experts who then flooded into the country from Belgrade. To these colonial officers and officials of the Soviet Embassy, Albania must appear a sort of European Tannu Tuva or Kirghizistan. In the eyes of the "natives," the Soviet privileged caste probably differs little from the emissaries of Mussolini ten years ago. It is to be expected that all the different forms of economic, religious and political discontent felt by the Albanian people should be concentrated against the Soviet Embassy, the symbol of all their misfortunes. An isolated bomb outrage will shake neither the Hoxha regime nor Soviet determination, but the possibility of serious resistance in the mountains cannot be ignored. Albania occupies an important strategic position and deserves more attention than it has hitherto received, not only in the west but also in Athens, where the lamentable tendency to regard all Albanians as barbarians still persists.

It is, of course, possible that the whole affair is a frame-up by the Cominform. It will be remembered that in 1938 the Nazis decided that von Papen, the German minister in Vienna, was expendable in the interests of the *Anschluss*. Whether Soviet diplomats are so regarded by any of the numerous subversive organisations centred in Moscow is not known. But it is possible that the Cominform might exploit an incident of this sort as a means of increasing pressure on Yugoslavia.

* * *

The First R.

The illiteracy of service recruits during the war (like the verminous condition of evacuated children) shook public opinion. Since that time various wild statements have been made about the amount of illiteracy among schoolchildren and adults, and it has been taken to reflect as much on the competence of the schools as on the intelligence of the children. The Minister of Education was therefore well advised to institute a careful inquiry, with the object of discovering how far the ability to read had been affected by the war. The results have now been published by the Ministry of Education. What is perhaps most important is that a standard has been set up against which future improvements or losses can be measured. The standard is not perfect, but it appears to be workable. To have such a standard is particularly valuable when methods of teaching children under eleven are changing. It is possible that the present fashion for "activity" methods and the reduction in formal teaching may slow down the acquisition of certain

skills, whatever they may do to encourage other desirable attitudes. There is a particular danger at a time when the urge to read is diminished by the cinema, television and the "comic."

The tests covered 3,400 pupils aged 15, 2,800 aged 10-11, and 3,000 service recruits; they showed that 1.4 per cent. were illiterate (that is, they could read less than the average child under seven) and 4.3 per cent. were semi-literate (that is, they could read less than the average under-nine). The ability to read of pupils of 11 and 15 was found in the average to be behind that of their fellows ten years earlier by 12 and 22 months, respectively. These schoolchildren had suffered six to ten years of wartime and postwar disturbances, and the amount of retardation is not surprising. What is crucial is that the lost ground should be regained.

A separate investigation of writing ability is now being planned. For the purposes of normal life the second R is less essential than the first, but as a test of schooling it is equally important. The grammar schools are complaining that far too many of their creamed and selected entrants are incapable of writing even the simplest essay, and that they are compelled to teach the rudiments of composition. Here again an objective test of primary school methods would be invaluable.

Health or Hypochondria?

How much the public should be told about disease and its treatment is an old subject of debate. Many doctors argue that the less their patients know the better, because they cannot be relied upon to use their knowledge sensibly. In practice it is quite impossible to check the public's appetite for news of medical interest, and the right policy would appear to be to try to concentrate on giving information of real value. Education in health matters is not new, and it was greatly stimulated by the Ministry of Health's efforts in the war.

Unfortunately, much of the good work done in the clinics and elsewhere to enlighten people on the basic facts of health and disease is often undone by sensational stories in the popular press and by the publicity given to the discovery of new drugs. The British Medical Association is, therefore, to be congratulated on its attempt to educate the public through the medium of popular journalism. Its new periodical *Family Doctor* (monthly, price 1s.) is designed to instruct, but to instruct the easy way. It is aimed primarily at the housewife—which is natural since she is the family nurse—and a large section of the first number contains matter that will be found in most women's journals (recipes and advice on bringing up babies), though all with a medical flavour. The special features section is of more general interest and contains articles on such varied subjects as eggs, allergy and the training of boat race crews.

It is impossible to prophesy whether *Family Doctor* will be a commercial success, still less whether it will succeed in its aims. Its sponsors hope that as a result of its instruction people will be weaned from their faith in a bottle of medicine—patent or otherwise—and will know when they are really in need of medical advice. The problem of all health education is how to encourage people to seek advice in good time without turning them into chronic hypochondriacs. It will be interesting to see whether the British Medical Association's new technique offers a solution.

The T.U.C. Blows its Trumpet

If the shy, grey mare of Mr Low's cartoons could read, she would be somewhat surprised by the account of her doings published by her masters this week.* The butterflies

* "What the TUC is doing." Published by the TUC. 6d.

which used to hover so tantalisingly above her nose have gone; if she does not yet gallop to work, she at least seems to move at a good, brisk trot. The past six months have been particularly busy for the TUC. The end of the official restraint on wages in September, the subsequent rounds of wage claims, the problem of rising prices, the rearmament programme, the arbitration Order, trade union developments in the colonies and in international affairs, welfare and education—all these have kept Transport House busy.

There is every justification for Sir Vincent Tewson's claim that "Trade union influence is at work in all the nation's affairs." The trade unionist should feel assured that his interests are being well looked after when he reads that, for example, the TUC has obtained an assurance from the President of the Board of Trade that middle-men will not be allowed to profit from the increased cost of raw materials; that the Minister of Fuel and Power has been asked to co-ordinate the electricity, gas, coal and oil industries; and that the Home Secretary has promised to consider the TUC's views on employing children on the stage and in film studios. The rest of the country may be less pleased to find the TUC exercising so much influence over so wide a field; it may even be alarmed to think what would happen if the grey mare kicked over the traces. The trade unionist may also wonder whether the TUC should devote so much of its time to extra-mural activities when there remain to be settled such pressing questions of union policy as the denial or affirmation of the doctrine of the closed shop and the demarcation lines between rival unions.

The Spanish Riots

Last week's riots in Barcelona have now given way to an uneasy calm. They were the result of a fortnight's growing tension ending in a general strike against the rising cost of living by some 300,000 workers. The strike was brilliantly organised in secret by word of mouth and spontaneously supported among the mass of the people. Strikes are illegal in Spain, and it took an exceptional combination of courage, desperation, and sense of communal feeling for the crowds to assemble in the *ramblas* and march on the Plaza de Cataluña against the armed police and local militia of the regime. The only comparable occasion in the whole history of the Franco government was the strike of iron-ore workers at Bilbao in May, 1947. Madrid has attributed the strike and riots to the clandestine Communist-inspired United Socialist Party of Catalonia. If this is true—and it is described in Barcelona as nonsense—it is certainly not the whole truth. Members of the Falange itself were among those who took a hand in the demonstrations.

The important question is: what next? There is little that General Franco can do to improve the economic position in Spain, without obtaining money from America on a far larger scale than any so far granted under the recent special-purpose loans. Yet for Washington to pour money into Spain in its present condition would almost certainly be to risk repeating the process of aiding Chiang Kai-shek; some of the funds might never reach their proper destination, and there might be very little to show for those that did. On the other hand, even though the regime has had to climb down on its orders to employers to victimise strikers, a single day of fireworks in Barcelona is a very long way indeed from heralding the overthrow of the Generalissimo. It would be quite wrong to see in this episode the beginning of a serious crack in Spain. Franco's temptation now is bound to be to tighten the reins. The statesmanlike course would be to attempt the reverse, to initiate, in fact, a policy of associating the people more closely with the government, in its task of tackling the appalling economic problems now facing the nation as a whole.

Letters to the Editor

Town Planners' Dream

Sir,—Your article of March 3rd seems to me to confuse the issues. I wholly agree with its opening thesis that the improvement of living and working conditions was the promise on which planning powers were obtained, and that public enthusiasm has flagged because this promise is now less in evidence than the planning restrictions and the development charges. Partly this is due to the fact that the official plans could not appear for three years, and that in the meantime a new administration has had to make interim decisions while the public is in the dark about the relation of restrictions to aims. When the plans appear in the course of this year the public will undoubtedly want to be satisfied that what planning can do justifies the controls that it involves.

It is agreed, as you say, that past mistakes—urban congestion, suburban sprawl and rural spoliation—must not be repeated, and must be set right as soon as possible. That cannot be done except by restrictions on the placing and form of development and redevelopment. The "economic factors" that one part of your article seems to prefer did in fact, and would again, promote urban congestion and sprawl, and sporadic building on the best farm land. And if we restrict these things, elementary fairness demands compensation to owners suffering loss thereby. Thus, while it is most desirable to consider whether the financial clauses of the 1947 Act can be amended, we cannot scrap the principle underlying them without either gross hardship to owners or abandoning the social purposes of planning.

Your article does not distinguish between the rebuilding and modernisation that must go on continuously, and the decisions as to its arrangement on the land. Rebuilding is inevitably costly, and the pace of it must obviously be subject to economic circumstances. Planning as a function does not govern its pace or control its cost; it simply guides its placing and pattern to subserve public interests. Some economic and social-scientific theorists who flutter on the fringe of planning have extended too far the range of considerations that land-planners should take into account. I think your article pays too much regard to these theorists. There is no warrant for the fear that the official development plans due this year will be too ambitious or in any way impracticable. My own fear is that, under current pressures, they may set urban living-space and play-space standards too low to fulfil the main promise in which the masses of people are interested.

I suggest therefore that this is the wrong moment to attack the planning mechanism as a whole. But it would be of great value to have a skilled examination of the undoubtedly vexing question of the land fund and the development charges.—Yours faithfully,
F. J. OSBORN
Welwyn Garden City

Sir,—You state in your issue of March 3rd that "Development charges act primarily as a tax on enterprise rather than a device for scooping off unearned increments in land values." If development has been limited, have not the shortages of materials and other controls on building been the deciding factors? But even assuming that development charges are ruling out the construction of buildings of marginal profitability, it must also be remembered that the tax is inefficient as a "device for scooping off unearned increments" in the other direction. Many purchasers, putting a high subjective valuation on a piece of land, are prepared to pay more than the existing use value as well as a development charge. Owing to the highly differentiated nature of the commodity land, and to the diversity of its possible uses, the land market is far from being the perfect one apparently assumed by the Act. Land using is, moreover, one of those economic activities in which social values may diverge widely from private values and the problems arising under the present Act seem to emanate from the failure to assess this divergence and to embrace private values within the framework of the social valuation of land use.

The main objects of the Act are presumably to prevent indiscriminate development and to nationalise unearned increments. I feel that there is not as much disagreement as to the desirability of these objects as the amount of criticism of the Act would suggest. There is hope, then, that the fate of our (very limited) resources of land may be lifted above party bickering and that these problems may receive the attention of our ablest economists and administrators of all parties.—Yours faithfully,
CARLEEN O'LOUGHLIN
Girton College, Cambridge

The Commonwealth and Malan

Sir,—In your article of March 17th you state "what would be fatal to future relations between the white and other races in the Commonwealth would be for the (membership) line to be drawn on grounds of colour alone." This is undoubtedly true so far as it goes, but surely the question is far wider, for it would be equally fatal to race relations within the Commonwealth—if not, indeed, to the Commonwealth itself—for the line to be drawn on grounds of race alone.

On this basis your further assertion that "there is an increasingly strong case for making the rules of the club more precise if they are to fit the rapidly shifting pattern of the modern world" becomes a dangerous paradox. In a world of revolution "the only golden rule is that there are no golden rules" and even your "logical" criteria of suitability and maturity court all the fictions of prejudice. We agree that Dr Malan is wrong

to view the Commonwealth within the smaller context of the African colour problem. But it may be just as mistaken to conceive the Commonwealth as a body of nations with (in some sense) similar politics, for it implies that narrow view, common among Australians, of a Commonwealth of predominantly "English-speaking" traditions.

The Commonwealth has indeed reached a turning point which cannot be settled until it is agreed where its true interests lie. A Conference has to decide, not so much what the rules of admission should be, as whether there should be any, or whether admission should be on the sole criterion of benefit to the Commonwealth and to the peace of the world. We have still to decide whether ours is a Commonwealth of cases or of code, whether its role in the world should be one of ever-widening reconciliation of national, racial and sectional differences—as the protagonists of admission for European nations appear to hold—or whether it is fundamentally a closed shop, an unshakable combination of power bent on securing a pool of stability in a world of flux. Is the Commonwealth to be an exclusive club or an inclusive community?—Yours faithfully,
J. A. BALDWIN
St. Catherine's Society,
Oxford

The Waiver

Sir,—An article in your issue of March 10th recommended that, preferably as the outcome of a discreet initiative from the other side of the Atlantic, Britain should exercise her rights under the interest-waiver clauses of the American and Canadian loan agreements. Your concluding argument in favour of this course—that it would conduce to "a more realistic approach to the problem of external debts left as a relic of the war and postwar settlement"—is surely open to question.

Since 1945 public awareness of the need for fair shares in the financial burden of the common defence—the principle of joint contributory responsibility of nations and citizens in accordance with income—has grown rapidly. In 1945 it was still possible for statesmen and experts to plan for an increase in the financial contribution to the common cause made by, *inter alia*, the impoverished citizens of India—as witness the proposed cancellation of part of India's wartime sterling balances. Who today, in the atmosphere and arithmetic of Colombo, would urge this course?

Not only the growth of public awareness, but events themselves have made the whole of the 1945 machinery obsolete. To operate any part of it today, instead of installing entirely new plant, would ill serve the productive defence effort now demanded from Britain and the entire Atlantic community.—Yours faithfully,
J. L. GIBSON
Caterham

Books and Publications

The Untidy Pioneer

The Conditions of Economic Progress. (2nd Edition.) By Colin Clark. Macmillan. 534 pages. 50s.

More sheer hard work must surely have gone into the writing of "The Conditions of Economic Progress" than into any other economic textbook of the first rank. It is a pity, therefore, that Mr Clark's untidiness in layout and the lack of definition of units used in his tables makes this second edition also sheer hard work to read. The impression is still that of a brilliant but badly edited scrapbook, in which Mr Clark has managed to collect (and reduce to a common denomination in dollars of 1925-34 purchasing power) estimates of real income, production and consumption patterns, and rates of capital accumulation for an astonishing number of countries over an astonishing run of years.

The greatly increased productivity (and numbers) of official statisticians in recent years has enabled Mr Clark to pour much new wine into his old bottles—and surprisingly well have those daringly constructed containers stood the test. It is inevitable, however, that the main source of interest in the book should have changed. When the first edition appeared eleven years ago, Mr Clark's bold estimates of relative real incomes in different countries were as novel as they were badly needed. *The Economist*, in a leading article in September, 1940, pointed out to a then beleaguered Britain that the annual real value of production in Germany and its satellites was barely half the annual real value of production in the English-speaking world. Some of the same type of news value can be found in this second edition; Mr Clark's estimate of the national income of Soviet Russia, an estimate rather lower than those that have been given publicly elsewhere, puts the real value of Russia's annual production at just over one-quarter of that of the United States in the last year for which figures are available (1940). But the value of this second edition as a unique source of reference is inevitably

lowered since Mr Clark's pioneer estimates in this field are no longer the only, nor indeed the latest, available; he seems to have stopped the compilation of statistics for this book in early 1948, although he intends to carry on emendations made possible since that date in a new periodical entitled the *Review of Economic Progress*.

It is as a guide to probable long-term trends of production, consumption and labour distribution in developing countries rather than as a reference book that the present edition should now have its widest appeal. In this field Mr Clark's statistics seem to have a gloomy tale to tell. His panoply of tables stretch over such extremes of annual productivity as the Bedouin Arab (120 international units per occupied person) and the United States worker (2,566 international units per occupied person)—and then proceeds to suggest that the wit of economic man can do little to hasten the bridging of this gap. Even if capital funds are available and competition relatively free there seems to be no necessary tendency towards the distribution of resources most desirable for progress; labour remains immobile between strata of society and, in any case, the operation of increasing returns (which are very widespread) presents theoretical difficulties. In individual firms there seems to be little tendency towards optimum size—there may indeed, be no one optimum; while in agriculture (where productivity ranges from 2,006 international units per head in New Zealand to 46 international units per head in China) Mr Clark's statistics suggest that

only the shock of migration to a completely new country and circumstances may suffice to shake the agriculturist out of his less efficient traditional methods and enable him to realise the full economic possibilities of his own labour.

Unfortunately, one can hardly develop the backward areas by first depopulating

them. Against all this, however, the figures show that when rapid development really gets under way (as it did in Japan fifty years ago) the marginal productivity of capital and the rate of saving can both rise to astonishing heights. The first lesson of the new technique of factual economics, which Mr Clark has done so much to pioneer, may be to show that economic progress is largely a matter of kangaroo leaps from one pattern of economic impetus to another rather than of the straight ploughing along a single furrow that orthodox marginal analysis has tended to assume.

Battle for Humanity

Warrior Without Weapons. By Marcel Junod. Jonathan Cape. 318 pages. 12s. 6d.

This book is far more exciting and moving than many best-selling novels. It deals with the work of the Red Cross in wartime, not in the form of a dry documentary report, but as seen through the eyes of a leading member of the International Committee of the Red Cross. In 1936 Marcel Junod, a Swiss doctor, went to Abyssinia to organise Red Cross ambulance services for the Ethiopian Army. From 1936 to 1939 he worked in Spain, where he saved many innocent lives by arranging exchanges of hostages and prisoners of war condemned to death, and ran a private news service for prisoners and civilians cut off from their families. In 1939 he went to Berlin as head of the International Red Cross delegation. His various activities included visiting and organising supplies for prisoner-of-war camps and the camps of interned allied civilians, and the provision of food supplies for occupied Greece. In 1945 he travelled via Moscow and Siberia to Manchuria to try to examine conditions in the Japanese prisoner-of-war camps and arrived in Japan itself in time to be one of the first to investigate the effects of the atomic bomb dropped on Hiroshima.

This bald summary gives a slight indication of the width of Dr Junod's experience of Red Cross work. But it can give no idea of the generous and

This book describes the important stages in the growth of the Social Insurance and Assistance services; it shows how, from the early days of the Poor Law, the national policy has developed into the comprehensive National Insurance system of today, and it explains in detail how the modern services operate. The author has fulfilled a need by providing a complete study of the subject in one volume. Will be of particular interest to the social worker and student. 20s. net.

imaginative humanity and the indefatigable energy and courage with which he and his colleagues on the International Committee (all Swiss) interpreted and carried out their duties. Even Dr Junod's modest account of his work cannot hide this. He prefers to concentrate attention on all those whom the Red Cross was able to help. And, above all, he is preoccupied with the millions whom it could not help—the thousands of starving women and children in Poland and other occupied countries, the countless inmates of the concentration and slave labour camps, and all the prisoners-of-war who, for one reason or another, were not protected by the Geneva Conventions.

fell outside the scope of the International Red Cross was not the fault of the organisation but of the lethargy of governments and the inhumanity of man. The authority of the International Red Cross delegates is derived from two conventions, the first concerning the treatment of wounded and sick soldiers, which has been almost universally ratified. The second, which covers the treatment of prisoners-of-war, had by 1939 been ratified by thirty-six governments, but not, however, by either the USSR or Japan. That the scope of these two conventions is quite inadequate in the conditions of modern total warfare has been recognised for some time. In 1934 an international Red Cross conference considered a new convention for the protection of civilians who might be bombed, interned or deported; but in 1939 not a single government had ratified it. Dr Junod's experiences show that ratification of a convention by no means guarantees the observance of it, but they also show how much these legal documents can strengthen the standing and authority of the delegates. During the last war everything that the Red Cross men could accomplish for those not protected by the Geneva conventions was due principally to their own initiative, persistence and courage. What they were able to do in this way may have been small in relation to the total sum of human misery involved, but in relation to the small number available for international Red Cross work and the meagreness of their resources, it represented no mean achievement. As Dr Junod points out, the "spirit of the thing" often worked wonders even when there was no legal authority to back it.

The Nine Lives of H. G. Wells

H. G. Wells. By Vincent Brome. Longmans. 255 pages. 15s.

"We must imagine that which we know," said Shelley—surely the most pregnant statement ever made about creative literature. Biography written by a straightforward narrator who merely knows, and has not creatively imagined, his facts, may be dull or superfluous; it can never be so crashingly and embarrassingly bad as biography whose author aspires to creative reconstruction but lacks the creative gift. Since Mr Brome offers no strictly new knowledge on his subject, he could only hope to score by reason of a more intensely imagined, more profoundly and justly interpreted presentation of the inner, rather than the outer, man. He has resorted to intuitive psychological reconstructions, to speculative analysis, to metaphor and rhetoric, with disastrous effect. The chapter on Wells "the lover" has a teeth-on-edge quality compounded of gossip-column coyness and of what the *New Yorker* calls Rich, Beautiful Prose; and the rest of the book runs it close.

It would be hard to write a dull book about Wells, and this book is not dull. It does present a possibly fruitful hypothesis—that Wells was a multiple, imperfectly integrated personality at once seeking and fearing to find his own essential nature. The quality in him

which made him a liberating force, a voice continually asking "Why not?" stemmed not only from his positive powers, his gifts of illuminating synthesis and presentation, but from something negative. He lacked a sense of limits, he lacked appreciation of continuity, he not merely lacked but actively detested and ridiculed *pietas* in all its forms, religious or civil. He gained for himself the reputation of a cocksure popular prophet blind to everything which could not be fitted into a scientific generalisation. And yet scattered through his writings—in "First and Last Things," as Mr Brome points out, in the early chapter of "The Bulpington of Blup," in which the romantic hero, later to be savagely pilloried, is drawn with as loving and autobiographical a sympathy as Kipps himself—there are explicit intimations of a diametrically different Wells, a mystic whose attitude before the universe is one of worship not conquest, whose search for knowledge is motivated by love not desire for power. Mr Brome's picture of nine or ten different Wellses fighting like Kilkenny cats and "bombinating with complexes" may be ludicrously overdrawn and tastelessly presented, but it does indicate a clue. Buried in a very bad biography, in fact, there is to be found a stimulating essay.

Light and Shade

Winter in London. By Ivor Brown. Collins. 320 pages. 12s. 6d.

London the City. By Claud Golding. Robert Hale. 303 pages. 15s.

These two books on London are as alike as two pictures of Piccadilly Circus painted by a Chinese artist and a London Transport poster artist. One is all mist, a few essential figures and a quirk of humour; the other is so packed with personalities and facts crowding on each others' heels that the spectator is satiated without satisfaction.

Like the wintry atmosphere of London Mr Brown's book emanates a charm which is a little remote, sometimes almost unreal, but illuminated with humour, affection and knowledge. The hideousness of Southwark, Tottenham Court Road or Highgate Cemetery is not denied, but they are made less stark and made more interesting because he sees the details which explain their essential character. Mr Golding may be as knowledgeable but his book possesses no atmosphere at all, nor has he the gift of setting down his information, historical or topical, in such a way as to convey perspective or historical proportion. The effect is of a scrapbook, pleasantly illustrated, full of facts, less dry than the usual guide book, but without conveying the personality of the City or of the author sufficiently to hold the book together.

Mr Brown is of the fraternity of J. B. Morton and James Bone. He wanders with no particular purpose, but with a seeing eye and a voluminous knowledge of past history which he has the taste to display with caution. His meanderings cover a wide field, but each chapter has a reasonable unity of its own. Thus the

reader wanders with a fair sense of direction among, say, London's Wells—Clerkenwell, Muswell or Sadler's Wells—or in the fresh air from Southend to Hampstead Heath or among London's battlements from the Tower to Eltham in Kent. Nor are these wanderings wholly in the past. Mr Brown is equally ready to reflect on a rugger match at Twickenham or the continuity of pantomime. In fact the book is a series of essays, of somewhat uneven quality, on different aspects of London.

Mr Golding deals only with the City, which is a much more compact and recognisable unit, yet he fails to convey this. For an American visitor walking the courts of Fleet Street or the pavements of Cheapside, Mr Golding can offer a series of disjointed stories and historical sketches. To the tourist they can provide useful local colour. Any serious inquirer must feel a sense of irritation at the failure to select the important from the unimportant and at the miscellany of information which results.

Publicity and Generosity

The Lipton Story. By Alec Waugh. Cassel. 277 pages. 12s. 6d.

The biography of any man with so colourful and so powerful a personality as Sir Thomas Lipton could hardly fail to be interesting. Born in 1850, the son of a small Glasgow grocer, he was a millionaire before he was forty, an intimate friend of King Edward VII, and a sportsman of trans-Atlantic renown. He is remembered now chiefly for his successful marketing of tea which he brought within the reach of the poorest family and for the failure of his racing yachts, all of them named *Shamrock*, to win the America Cup. He was also, however, one of the great figures of the age of *laissez faire*, a man whose life brought out the best features of private enterprise and of whom the only harsh thing that seems to have been said was that he was overfond of publicity.

Advertising was indeed the key to his success. He spent the first few years of his manhood in America, and perhaps for this reason he was one of the first businessmen in Britain to appreciate the importance of constant and forceful advertising. From his early successful attempts to improve his father's trade

in Glasgow by driving two fat porkers through the city streets under a large banner emblazoned with "Lipton's Orphans" to the enormous five-ton cheeses which he used to fill with gold sovereigns, like sixpences in a plum-pudding, he led the field of all his contemporaries in ingenious and successful advertising methods.

It was not until he was well in his forties that he allowed his thoughts to turn from work. Until then, he had no pastimes, no relaxation; he never married. In the year of the Jubilee, however, as a result of a magnificent gift to a fund started by Princess Alexandra, he became acquainted with the Prince of Wales who was delighted with his forthright and entertaining personality. He entered Edwardian society where his wealth and his flair for easy, friendly relationships soon established him as one of its leading figures. At the same time, he made the first of those challenges for the America Cup which established him as a figure in American as well as English society. It was the heyday of his life. With work, wealth and pleasure on both sides of the Atlantic in great abundance, he presents a figure that must fill the most generous heart with envy.

Mr Waugh has been fortunate in his subject and has written a most readable and fascinating book.

A Great Memorial

Victorian Years, 1841-1895. By Elie Halévy. Benn. 507 pages. 21s.

When Elie Halévy died, he had completed almost all his life's work, "A History of the English People in the Nineteenth Century," except the volume which were to be the keystone of this great monument of understanding and affection. Having written "England in 1815" before the first war, he then constructed the other end of the arch and traced the transformation of Britain into a popular democracy between 1895 and 1914. The next two volumes carried the main span from 1815 to the fall of the Whigs in 1841. But of the great central volumes which were to bridge the period between the accession of Peel and the retirement of Gladstone, only one was finished at his death, dealing with the period from 1841 to 1852, and that not in a complete form. It was first published

in English in 1948, but in re-publishing it as the fourth volume of the complete edition of the History, Ernest Benn have decided to bridge the missing span between 1852 and 1895 by an excellent essay by Mr R. B. McCallum. This makes no attempt to follow Halévy's range or depth of knowledge, but it is nonetheless a near perfect essay in itself.

There is no doubt of Halévy's place in the first rank of great historians. One sign of greatness was his refusal to narrow his terms of reference for the sake of ease or simplicity, and he was at once a pioneer scholar in social, political and economic history. His contribution to an understanding of the order and significance of political events is enormous. But his description of events, particularly great events, like the Repeal of the Corn Laws, or the failure of Chartism, suffers from a certain Gallic scepticism which does not do adequate justice to the passions and qualities which they evoked. On the other hand, no historian of the nineteenth century has ever had such a delicate nose for the developments which lay behind politics. Halévy had planned to make a pause in this volume and survey the nature of English society in 1852—the moment when the effects of the triumph of Free Trade were clear—as he had done in 1815. He had completed only the chapter on religion—which he always held to be the clue to an understanding of British history in the nineteenth century—and in it his scholarship and his sense of nuance reach great heights. In a sense this fourth volume is Halévy's obituary and memorial, and for all its incompleteness, it is a fitting one.

Shorter Notice

Spicer and Pegler's Income Tax and Profits Tax. 19th Edition by H. A. R. J. Wilson, FCA, FSAA. HFL (Publishers) Limited. 760 pages. 27s. 6d.

Since its first appearance in 1907 the aim of this publication has been to set out as clearly and simply as possible the law and practice of income tax. This, the 19th edition, deals with the provisions of the Income Tax Act, 1945, and includes a supplement on the Finance Act, 1950. The explanations of the principles and practice of the laws are illustrated by cases and examples are of special importance or difficulty.

AMERICAN SURVEY

The Democrats' Dirty Linen

Washington, D.C.

COLUMNS of precious space were given by the British newspapers to the Lynskey Tribunal hearings; but the American press paid scant attention to what was going on in Church House. Now the Americans have been having a comparable public washing-day for the dirty linen of the Reconstruction Finance Corporation, and the situation has been reversed. Some of the discernible differences between washing-day in the average home in Chiswick on one hand and in Chevy Chase on the other are interestingly reproduced on the political plane. The tailor-made suits and bottles of sherry the Lynskey Tribunal investigated look as artless, beside the phenomena Senator Fulbright is dealing with, as the dolly-tub and rubbing-board look beside the standard American electric washer, dryer and ironer. In this technologically advanced nation the political laundry is disposed of in larger quantities, and at a greater rate.

The RFC is itself an institution whose development would have been unlikely anywhere but in the United States. It was established by Congress at the beginning of 1932 and for one year—only one year. It was to lend government money to financial, agricultural, commercial and industrial concerns which were struggling against the collapse of confidence and of credit which had accompanied the great depression. But, as has often been observed, nothing is so permanent as a temporary government agency. Congress, whose sub-committee is now raising its hands in horror at what the RFC has become, extended the agency's life in 1933 and gave it new powers to disburse relief. During the war it was invested by Congress with authority to make large subsidy payments and to invest in war plants and commodities; and in 1948 Congress revised the law to extend the life of the Corporation until 1956 and its lending power until 1954. Since its inception it has authorised 61,022 loans, amounting to \$4.7 billion, to business enterprises; but only about half this total has been paid out and of this only \$435 million is still outstanding. The losses on these loans so far have amounted to \$63.5 million.

The case for the RFC is not difficult to make. It did tremendous wartime work, building and leasing plants, establishing flying schools and in many other ways helping the national effort. It may well perform a similar role during the current rearmament programme. Mr Henry Kaiser's west coast steel plant was acquired after the war with RFC help when financial interests were sure that a depression was coming and that Mr Kaiser was merely laying up excess steel capacity. A lending agency which will not succumb to such fleeting fears is needed. And since it was created the RFC has made a profit for the taxpayers of more than \$600 million.

"AMERICAN SURVEY" is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

But the case against the RFC, as is now being demonstrated, is much more fun to make and covers more ground. The Council of State Chambers of Commerce has pointed out, for example, that

quite apart from RFC's business lending programme, the extensive use which Congress has made of that agency to by-pass regular Congressional appropriations is fraught with particularly dangerous implications. This is a short-cut method of financing governmental activities. . . .

Congress has not so far shown any conspicuous interest in this phase of the indictment. What is now echoing through the land, in language both more specific and more gaudy, is the Hoover Commission's finding that

direct lending by the Government to persons or enterprises . . . invites political or private pressures or even corruption.

There can hardly be anyone in America who does not now know that a former examiner for the RFC who was the husband of a White House stenographer acquired an \$8,540 "natural royal pastel mink coat" for her which was paid for by an attorney representing a New York furrier then negotiating for an RFC loan. Senator Fulbright's sub-committee, with the enthusiastic co-operation of a free press, has also made it widely understood that various officials have stayed free at a most elegant and expensive hotel in Florida which had been in need of RFC money and that an effort to take over a firm into which the RFC had put \$37 million, but which is now bankrupt, was made by a group which was said to include the husband of the White House stenographer with the mink coat.

President Truman, who began by describing the initial Fulbright report as asinine, and who later sent to Congress a scheme to abolish the board of directors and put the RFC under a single administrator (as the Fulbright group had suggested) last week went to bat for his colleagues, declaring them to be all honourable men. The President had earlier given the whole RFC investigation story a notable lift by sending for copies of correspondence which Senators and Congressmen had addressed to the agency. The delicate hint that pressure for loans might have come from more than one direction did not inhibit Senator Fulbright from further researches; and these in turn brought to light testimony that there had been Senators of both parties who had stayed, free, at the Florida hotel, and that one Senator had recommended the RFC to approve a loan to another Florida hotel which his son, a lawyer, was representing in consideration of a \$21,000 fee.

Senator Fulbright is a Democrat. So is Senator Kefauver, the chairman of the other Congressional committee which, pursuing its investigations into organised gambling in the United States, has made an impression upon the public consciousness during the last few weeks at least as great as that which Senator Fulbright's sub-committee has made and perhaps, all things considered, even greater.

The evidence of law-breaking by a "secret government of crimesters" (as the committee's recent interim report called it) may not be as conclusive as the headlines sometimes

make it appear. But the Kefauver investigations, with their attendant television cameras, have not only made by-words of the men who are alleged to be the Cabinet Ministers in this extra-legal government; they also have implanted in the mind of the average American a conviction, which the committee endorses, that a new need has arisen to seek out the official corruption at federal, state and local government levels without which the secret government of law-breakers plainly would be unable to operate. What is more, Mr Kefauver, like his fellow-Democrat Mr Fulbright, has produced in many minds the feeling that the major blame for the conditions the testimony has revealed is to be laid at the door of the national and local Democratic administrations.

It is true that another inquiry into the methods which were used in Maryland by or on behalf of the newly elected Senator Butler, a Republican, to defeat Senator Tydings, a Democrat, is encouraging the notion that the accusing party may not be altogether without sin. But the Republicans laid a foundation some time ago, when the "five per-centers" investigation was in flower, for the argument that the level of morality on which the Democratic Party can be shown to work is not good enough. Moreover, there may be more revelations to come. It has been charged that federal jobs have been offered for sale in Mississippi.

The Republicans are making a good deal of President Truman's recent statement that he had no evidence that "illegal" influence had been exerted on the RFC. Is the only standard for official conduct to be what is not illegal? Already it is a matter for discussion whether the outline of a domestic issue on which the Democratic party may be defeated at next November's Presidential election has appeared. One school of thought holds that this may well be so. Another is inclined, somewhat sardonically, to note that the Teapot Dome scandal, which revealed, in the days of Republican ascendancy, an official corruption beyond anything remotely approached by any of the present or past disclosures in Washington, did not prevent the Republicans from securing their continuance in power in 1924.

Gun and Butter Boom

[FROM A SPECIAL CORRESPONDENT]

A REMARKABLE acceleration in the tempo of the American economy occurred in the final quarter of 1950, when the gross national product reached a rate of \$300 billion a year. Included was no less than \$90 billion of investment in construction, plant and equipment outlays, additions to inventory and consumers' durable goods. All the details are described in the Department of Commerce's annual review number of the "Survey of Current Business." A comparison, for the chief items, between the final quarter of 1950 and the calendar year 1949 shows how great were the gains:

	Annual Rate in Final Calendar, Quarter, Gain		
	1949	1950	
(In Billions of Dollars)			
Gross national product	255.6	300.3	44.7
Personal consumption:—			
Non-durables and services	154.9	165.8	10.9
Capital formation:—			
Consumers durable goods	23.8	30.0	6.2
Producers durable goods	19.5	25.1	6.6
Gains in inventories	—3.7	11.2	14.9
Construction	17.3	22.9	5.6
Total	56.9	90.2	33.3
Foreign investment deficit	—0.4	3.4	3.8
Government purchases of goods and services	43.3	47.6	4.3

How completely investment and capital formation dominated the American economy in 1950 is revealed by the fact that the gain in such capital formation was three times larger than the gain in output of all consumers' goods of the non-durable classes. Total capital formation in 1950 was equal to the total product of the American economy in 1939. Capital formation measures the output flowing into the "roundaboutness" of any modern industrial economy. That indirect effort to enlarge the subsequent flow of consumable goods is also a measure of the amount of "hard goods" or engines of construction (in peacetime) which can be converted to military hardware or "engines of destruction" in time of war.

In 1950 the volume of output in the United States rose by 7½ per cent and the market value of the total output rose by 9½ per cent. Output per head increased by 5.6 per cent. The large increase in outlays on plant in 1950 is expected by the Department of Commerce to produce another large rise in real output in 1951. In fact, a slightly more moderate rate of war production than is now contemplated could be wholly sustained by gains in output, without in any way entrenching upon civilian production, once the stockpiles and new arsenals have been built. Such a consequence would be entirely in line with American experience during the last war, when extra effort and extra output not only supplied all war needs, but also raised the standard of civilian living.

★

Conversion of industries has no place in American thinking. It may be necessary temporarily to suspend the production of some things, such as automobiles, electric appliances of every type and wireless sets, which disappeared between 1942 and 1945. But this may be avoided and the goal is an economy so productive that it can turn the last war's "guns and butter" into "guns, butter and automobiles and television, too." Other things being equal (for example, levels of taxation), the attempt is sure to produce stiffer inflation in the nineteen-fifties than did the all-out war effort. Then, when there was little to buy, personal savings rose more or less automatically from \$3.5 billion a year in 1940 to \$35.5 billion a year in 1944. Today prices are more likely to be forced up by consumers enjoying increased money incomes at a time of decreasing supplies.

How strong is the stimulus of an enlarged income, so enlarged as to dwarf any likely budget deficit? Because American workers now can expect a continuation and even steady increase in their incomes, the purchases of consumers have been growing rapidly. This growth is revealed by the production of durable goods and homes. It is well known that American homes are almost saturated with washing machines, vacuum cleaners and wireless sets. Yet the market for these "staples" increased very substantially in 1950. The number of homes built last year was almost twice the number of families formed. These are the figures for the output of these goods in the past two years:

	Number of Units Produced		Percent Gain
	1949	1950	
Houses started	1,000,000	1,350,000	35
Automobiles	6,254,000	8,003,000	28
Electric refrigerators	4,450,000	6,200,000	39
Electric cookers	1,056,000	1,830,000	73
Television sets	3,000,000	7,464,000	149
Vacuum cleaners	2,837,000	3,529,000	22
Wireless sets	10,500,000	14,590,000	39
Washing machines	3,033,000	4,290,000	41
Non-durable goods:—			
Rubber tyres	76,369,000	92,700,000	21
Men's suits	19,220,000	23,200,000	21

Another area of investment, that made up of business expenditures for new plant and equipment, was unchanged in 1950 from 1949. Such outlays in the first quarter of 1950 were well below the same period of 1949. But from the early part of 1950 to the end of the year the gain was almost 50 per cent. The boom in the second quarter of 1950 was due to four causes: the continuing stimulus of tax reduction, inventory accumulation, an extraordinarily large disbursement of GI insurance funds early in the year, and the great stimulus to housing flowing from new finance arrangements approved by Congress. The effects of the Korean conflict quickened the pace still further. Because the stimulus to high activity and inflation will continue in 1951, the Department of Commerce estimates that such outlays for additional business plant and equipment in 1951 will rise 20 per cent above 1950.

This expansion is due to greatly improved prospects for profits and high wages. The influence of high wages is very substantial, provided business is at high levels. It might be possible to adduce that expenditures by business in the next five years will be equal to the \$130 billion of gross business investment in the past five years. That much would be economical because of high wages alone; machines now cost much less than men.

Thus the American boom scales new heights. Whether it will be followed by the "bust," in the usual American pattern, will depend upon the duration of the need for war production. But a sharp reversal is unlikely, principally because war production is very deliberately being held far short of what could be produced under an "all-out" effort. The defence effort will no doubt be for two or three years. As a result, once again the 1941-45 economic pattern will be repeated: growth in income, the accumulation of liquid assets, and a great accumulation of demand unsatisfied both absolutely and in relation to the new income and liquidity levels.

American Notes

Latin America's Store Cupboard

When the Foreign Ministers of the twenty-one American republics meet in Washington immediately after Easter the United States will try to get agreement on a number of policies designed to safeguard the Western Hemisphere against the threat of international Communism. The chances of obtaining such agreement are better than they would have been before Mr Edward Miller took charge of Latin American affairs for the State Department, for he has at least stopped the postwar rot in the Good Neighbour policy. But

at the meetings of the Economic and Social Council of Uno at Santiago the US representatives have had a disturbing foretaste of the reluctance of the Latin American countries to accept the view that rearmament must take precedence over economic development.

The United States hopes that some method of checking Communist infiltration and espionage in Latin America will be worked out at the conference and also that the other republics can be induced to apply export controls in order to prevent goods of strategic value from reaching the Soviet Union and its satellites. But what are really essential are the natural resources of Latin America—its copper, tin and lead, its manganese and oil, its abaca and its wool. Output of such minerals and raw materials, Latin America's main contribution in the last war, was then stepped up with United States help, both financial and technical. As soon as the war was over, however, the projects were halted, with what seemed to Latin Americans unnecessarily painful abruptness, and the United States transferred its attention to European reconstruction. So it is not surprising if some Latin Americans regard Washington's sudden revival of interest in its own hemisphere as cupboard love, and are setting their own price for unlocking the doors of their store cupboard.

The Latin American representatives at the conference are expected to ask for assurances that this time any new developments will be carried to completion and will not be dropped if the international tension eases. There will be a demand that such projects include industrial, as well as agricultural and mineral, development, but with United States industry itself embarking upon an unprecedented expansion, the necessary tools and equipment will not be easy to provide. Nor will the consumer goods on which Latin Americans will hope to spend their dollars when they earn them—at least not without some system of export priorities, which might be resented by US residents who would have to go short. Moreover, when it comes to making contracts for strategic materials once again, memories of how dollar earnings melted away last time under high American prices are likely to carry more weight than warnings from US officials about the inflationary effect of high profits on the unstable economies of the other Western Hemisphere republics.

Meeting Labour's Terms

The trade union leaders who walked out of the defence and stabilisation agencies a month ago are still on the picket line, still proclaiming that Mr Wilson is unfair to organised labour. The President has refused to appease them by sacrificing his Director of Defence Mobilisation. But at other levels great efforts are being made to soothe labour's fears and satisfy its demands. Mr Frank Graham, a member, from 1942-45, of the War Labour Board, who enjoys the confidence of the trade unions, has been appointed Defence

Manpower Administrator in the Department of Labour—an assurance that the unions will be consulted on manpower policy and that there will be no conscription of labour unless some great and unforeseen emergency arises. The unions will also have direct access to the President on mobilisation problems—by-passing Mr Wilson—through a new Mobilisation Advisory Board.

The immediate occasion of labour's walk-out was the wage formula adopted by the Wage Stabilisation Board. But the unions also are determined that the WSB should be empowered to decide all labour disputes, as the War Labour Board did. They know that strikes against the rearmament effort will get short shrift from the public, even if a no-strike pledge is not requested, and they are anxious to have some substitute for the economic power they are giving up. The alternative is to continue using the hated Taft-Hartley machinery. The employers have taken the position that to send all disputes to the WSB would swamp the board and would mean an abrupt and unnecessary end to collective bargaining.

Mr Johnston's suggested "compromise" inclines heavily toward the union viewpoint. He would have an enlarged board—of eighteen instead of nine members—empowered to hear all cases if both parties agree to submit them, but also empowered to refuse to consider those in which it believes the possibilities of collective bargaining have not been exhausted. Mr Johnston cannot issue a final ruling; he must await the agreement of management and the unions. And at the moment, both have turned him down. But Mr Johnston's refusal to intervene in the meat packing case and other disputes may encourage a more conciliatory attitude. Here the employers and the unions have agreed on a rise of 11 cents an hour. This violates the wage formula which limits increases in wages to 10 per cent above 1950. The unions involved threaten to strike on March 26th, but Mr Johnston insists that only the Wage Board, revived by the return of its trade union members, can decide whether there is a case for a special dispensation.

Martin for McCabe

Two events last week made it look more doubtful whether the Treasury's decision three weeks ago to issue a 2½ per cent bond, followed by the unpegging of 2½ per cent bonds on the market, was a defeat rather than a temporary strategic withdrawal in its battle to keep money cheap. The two events were Mr Thomas McCabe's resignation from the chairmanship of the Federal Reserve Board and the announcement of a new programme for "voluntary credit restraint."

Mr McCabe has been anxious to resign for some time; and the official explanation is that he felt in a position to carry out this intention because the Federal Reserve Board had at last reached "a satisfactory understanding with the Treasury." No one else seems prepared to regard the long struggle between the Board and the Treasury as so firmly settled. There is little doubt that it is this struggle which made Mr McCabe want to resign, and he probably feels that in the "agreement" with the Treasury he got as near as is possible to establishing the Board's position—that interest rates should not be kept down by credit expansion. But, in stressing that "it is vitally important that this accord be maintained," he may have been expressing more a hope than an expectation.

President Truman immediately appointed as Mr McCabe's successor the Assistant Secretary of the Treasury in charge of international finance, Mr William McChesney Martin. This translation of Mr Snyder's lieutenant is not, perhaps, likely to mean in practice so complete a victory of the Treasury over the Federal Reserve Board as might appear at first sight. Mr Martin is believed to have played a large part in negotiating the compromise with the Board. As a former

president of the New York Stock Exchange, he is acceptable to the business and financial community, and he is probably also the one Treasury official whom the Senate is likely to confirm in the appointment. It by no means follows that there will be no weakening in the Federal Reserve's opposition to cheap money policies. Just before Mr McCabe resigned, the Federal Reserve Board issued a plan for the voluntary restriction of credit that holds out no great promise of effectiveness. Banks and insurance companies are asked to restrict their loans for non-essential purposes; the definition of what are "essential" purposes is vague enough for no one to know what the policy can mean in practice. With the best will in the world it is not easy for lenders to distinguish what loans will "increase or maintain production, processing and distribution of essential goods and services." With rising costs and prices the demands for credit for every industrial purpose are bound to be heavy, and it will be very surprising if a sieve of voluntary examination according to purpose can in fact reduce at all the total volume of credit granted. It is anyone's guess what the next moves by both the Federal Reserve and the Treasury are to be.

* * *

Postman's Round

The postman's round, like the policeman's lot, is not a happy one. A prospective deficit of \$521 million has brought the Postmaster-General knocking once more at the door of Congress for the permission to raise his rates that was denied last year. Mr Donaldson has no moral objection to losing money, if that is what Congress wants and will pay for. But he objects to being blamed for inefficiency when rates set generations ago fail to cover the cost of delivering the mails, and he has to curtail services. Half of the 36 billion pieces of mail posted each year fail to pay their way. For example, the one-cent postcard was established 80 years ago; it now costs 2.8 cents to handle. The really big losses, however, are incurred in carrying free mail for the government (including Congressmen anxious to keep in touch with their constituents) in paying air mail subsidies, and in subsidising the carriage of newspapers and magazines. The first two account for nearly \$160 million of the yearly deficit, the second for \$200 million.

The Administration is not seeking to wipe out the whole Post Office deficit at one blow. It hopes to cut it in half, by raising the postcard rate to two cents, by asking second-class mail—that is, newspapers and magazines—to pay another \$40 million a year, the increase to be spread over three years, and by doubling the rate on advertising circulars, bringing it to two cents. An increase on parcel post rates, which cover book carriage, also is being sought.

This last measure will virtually wipe out the subsidy on book post, but it is the publishers of magazines and newspapers who have raised their voices in Washington in defence of popular enlightenment. When second-class rates were determined, the intention was to subsidise the distribution of magazines and newspapers, as an instrument of public education. What was not foreseen was the eventual size of the subsidy, and the degree to which wealthy advertisers and powerful publishers would profit. It is true that as a magazine or newspaper carries more advertising, it pays a higher rate, but for second-class mail as a whole, even if the new rates are accepted, more than half the cost of delivery will continue to be met by the Post Office.

Although Congress, in the past, has always been enthusiastic about raising the salaries of Post Office workers, who vote in satisfactory numbers, it has been reluctant to pass the cost on to the posting public. The mounting Post Office deficit, coupled with Mr Truman's warning that his tax requests must be raised if nothing is done to reduce it, may produce a change of heart this year.

THE YEAR'S OPERATIONS:

Throughout the year the demand for our Company's products exceeded our capacity to supply. This situation existed in all the major divisions of our Company's operations—chemicals, chemical yarns and fibers, and plastics. Our facilities were operated substantially at capacity, with the exception of a limited reduction in the fourth quarter caused by the occurrence of some raw material shortages.

In an effort to meet the demand, steps were taken to increase production through process improvements, standardization of operations within individual plants, and by adding facilities to our existing plants. As a further step, construction of a new acetate staple fiber unit was begun at the Celriver plant, scheduled to come into production late in 1951.

As another step in our program to assure continuing and expanding sources of raw materials, the cellulose plant near Prince Rupert, British Columbia, was brought almost to completion by our Company's subsidiary, Columbia Cellulose Company, Limited. Production from this plant, which is scheduled to begin operations soon, should go far toward relieving the world-wide shortage of high grade cellulose.

The plant has been designed so as to be capable of expansion as our Company's requirements increase. This de-

velopment ranks along with our chemical plant operation at Bishop, Texas. By these two long-range measures, a supply of our principal raw materials is being provided for use in the manufacture of our finished products, as well as for many defense requirements.

A further development in Canada was initiated late in the year with the organization of Canadian Chemical Company, Limited, with the object of producing cellulose acetate and industrial chemicals on a large scale, near Edmonton, Alberta, utilizing natural gases drawn from the extensive oil fields in the Province. Original processes for the manufacture of chemicals from natural gas, developed by our Company and utilized in the operation of its Texas plant, will be utilized extensively in this Canadian development.

Another significant development was the extension of our operations in Latin-American countries, particularly Mexico and Colombia.

Our Company stands on the threshold of a new era of development, not only for our domestic economy but for the economic growth of Canada and of other countries in the Western Hemisphere.

1950 *marking 26 years of growth and progress*

PLANT EXPANSION:

Plant expenditures for the year were directed largely to completing our Company's long-range program of bringing existing plants to their maximum productive capacity.

Since the war more than \$150,000,000 has been expended by our Company and its affiliates in the expansion of plant facilities; with the bulk of this expenditure falling in the years 1946 to 1948.

In the last two years efforts have been directed largely to rounding out these facilities, bringing them to peak efficiency. Expenditures for additional plants in the United States for the year amounted to \$6,056,064.

Major additions of the year were the installation of fa-

cilities at the Celco plant for the production of acetate staple fiber, resulting in a substantially increased capacity, and additional facilities for the production of acetate filament yarn at the Celriver plant.

Construction was started on an acetate staple fiber unit at the Celriver plant which is scheduled to come into production late in 1951. The completion of this unit will increase the output of staple fiber substantially.

This places our Company in an advantageous position to initiate our new program of plant expansion. Plans have been drawn for new plant facilities which will provide a large-scale expansion of our production.

OUTLOOK FOR 1951:

We are starting a new page in the history of our Company. In addition to meeting the demands of the new markets we are creating, and of those arising from the country's normal growth, we are directly concerned with the pressing needs of a defense economy. With the country facing a shortage of cellulose, chemicals and plastics, all of which are vital to our defense, we are planning to expand our production facilities.

Since June, 1950, the entire output of our present facilities for the production of "Fortisan," our strong yarn, has been allocated for defense purposes. The maximum production possible with our present facilities falls far short of satisfying military requirements.

Plans have been made for additional chemical facilities in Texas to meet the greatly increased demand for industrial chemicals for both civilian and military uses.

In Canada, we plan to proceed rapidly with the construction of the chemical plant in the Province of Alberta through our affiliate, Canadian Chemical Company, Limited. This plant will manufacture many basic organic chemicals never before produced in Canada, which will

have broad applications in defense and peacetime economies and which will contribute to the industrial self-sufficiency of the Dominion. This company will utilize the highly successful Celanese process of direct oxidation of petroleum hydrocarbons in which our Company pioneered. Acetic acid produced in the new plant will be combined with wood pulp from the Prince Rupert plant of Columbia Cellulose Company, Limited, to produce cellulose acetate, the primary material used in the manufacture of acetate yarns and plastics.

As a result of the many additional activities that are planned, an expansion of the cellulose plant near Prince Rupert becomes essential as soon as the plant reaches full production.

This far-reaching program of expansion is directed at meeting the needs of a peacetime economy as well as the requirements of industrial mobilization for defense and the economic development of other countries of the free world.

THE WORLD OVERSEAS

The Spirit of the Soviet Soldier

(By a former Soviet Staff Officer)

IN order to understand the nature of the Soviet armed forces it is essential to grasp clearly that they are first the armed forces of a Party and only second those of a nation. It would be misleading to concentrate on the number of aircraft, divisions or tanks, or even on the potentialities of the Soviet war industries, without considering first and foremost the Party, particularly its attitude to war, its writings on war as an instrument of policy, and then the kind of psychological atmosphere which has been created among the millions of people subject to the Kremlin, who are now under arms or likely to be called to the colours in the event of war. For it is only if these points are understood, especially the attitude of the ordinary Soviet soldier, that the strength and weaknesses of the Soviet forces, their strategy and even their tactics, can be assessed.

One of the chief doctrines of the Party which controls the Soviet armed forces is that war is a product of class society; accordingly, so long as the capitalist system (by which is understood everything non-Soviet) continues to exist, so long will there be wars. Further, in the sacred writ which bears the title "A Short Course in the History of the CPSU (B)" it is said that Bolsheviks approve of a *just* war, which has as its aim defence against external attack or the liberation of peoples from capitalist slavery or colonial peoples from the yoke of imperialists. Similarly, the dialectical and historical materialism which serves as a theoretical basis and philosophy of Bolshevism teaches that the liberation of the working class from the capitalist yoke is inconceivable otherwise than through revolution; the class struggle must be developed to its logical conclusion, that is to the violent armed overthrow of the capitalist system—in short, to war.

This philosophy forms the cornerstone of the military thought of the Kremlin. There are many passages in the works of Lenin and Stalin to amplify it. But the important thing to note is, first, that this attitude has become so deeply rooted in the consciousness of the ordinary man in the Stalinist Empire, that any talk about peace which does not imply the forcible destruction of capitalism seems to him to be empty words. When he is asked during his political training whether he wants peace, he gives the following perfectly simple answer: "Of course I do, but for that capitalism must first be liquidated."

The second thing to note is that, according to Soviet doctrine, any war against Britain and America would be a *just* war, because it would pursue the aims stated above; on the other hand, any war against the Soviet Union would be *unjust*. It is on this formula that the whole psychological training of the armed forces of the Soviet Union rests. That is all that Ivan is required to know; that much he has assimilated like a religious doctrine and nothing can convince him, since there are no opposition parties and foreign journals or newspapers are hard to come by. There is not even the flight of his own fancy. If an armed soldier knows that he is doing something just, and that his opponent is doing something unjust, then his strength to fight will be immeasurably greater than it would be if such a conviction were absent. Stalin attaches special importance to this, and he considers that there can be no question of his armed

forces being strong without a thorough assimilation of the principles of the just and unjust war.

The logical result of all this is that the Soviet Union is one of the most highly militarised states that has ever existed. It is probably extremely difficult for the British people who are quite free from war hysteria, to imagine the extent and forms of Soviet militarisation, especially as the Soviet press does not give even a hundredth part of the truth. But, in fact, at endless meetings of the Party, Komsomol, trade union and other organisations the word "war" is driven into people's consciousness without any beating about the bush. In thousands of lectures, reports, films, plays, exhibitions, monuments, placards, books and journals the soldier is portrayed as a physical and spiritual superman, as a very paragon of cleverness, ability, uprightness, strength and of unboasting greatness. The glamour of uniform, the clink of medals and the roll of drums turn the heads of men whose judgment is not burdened by any more weighty considerations. The cult of fanatical devotion to the Party of Lenin and Stalin is being propagated by making use of the heroes of the last war, who are sometimes real, but more often invented. The military profession has become the most honourable in the Soviet Union. From all this propaganda the ordinary soldier and citizen concludes that the aims and tasks of the Red Army are indeed sacred.

A New Style of Patriotism

Parallel to this one must remember the attitude of those in high places. It is reported that when Poskrebyshv told Stalin that the Pope was preparing to send him a Note of protest, Stalin exclaimed in surprise, "A Note of protest from the Pope?; and how many divisions has he in order to send us Notes?" At a meeting of the Politburo Stalin once said to me: "If we have super-powered rocket bombers which are able to fly to New York and Washington, then Mr Shopkeeper Truman can be put in a straitjacket. We live," he added, "in a crazy age, in an age when force becomes the only effective diplomacy." Many comments of the same sort have been made by his son, General Vassili Stalin, who once said: "Problems are decided by bombers and not by Notes of protest."

What, then, is the atmosphere created among Soviet people by all this? It is perhaps a strange term to use, but it could be summed up as "Soviet patriotism." Few people in the west seem to understand what this phrase means, and it should therefore be useful to record a few facts about it. Up to 1922 the Russian Federation was designated in the minds of Soviet people as "our country." Between 1922 and 1939 outer Mongolia and the whole of Turkestan became "our country." In 1939-40 the title was extended to include Eastern Finland, Estonia, Latvia, Lithuania, Western White Russia, Western Ukraine, Bessarabia and Bukovina. Between 1942 and 1946 the title was extended to East Prussia, Memel, the Kurile islands, Dairen, Port Arthur, Southern Sakhalin and the Carpathian Ukraine. What guarantee is there that tomorrow "our country" will not comprise Bulgaria, Poland, Rumania and Czechoslovakia? The Soviet Union is a state whose frontiers have not been finally established. If Turkey becomes Soviet tomorrow,

Ankara will become "our country"; if England becomes Soviet, London will become "our country." Everything depends on the success of the world revolution. From this arise the peculiar implications of the words "Soviet patriotism." It is a means of coercing people of many races to fight for the aims of the Politburo, of creating mass fanaticism, and a blind willingness to die in the name of any aims which the Kremlin may have. The model "Soviet patriot" is the man who cries even on the gallows: "Long Live Stalin!"

One could point to many examples of how, in the last war, hordes of inadequately armed fanatics advanced without crouching, but with cries of "Hurrah," against lines of deadly machine-guns. Such people were robots, machines on two feet. Of course, the whole army does not consist of such robots. Nevertheless, for twenty-four hours a day military commissars are working at the job of creating them; and in the rear the job is being done by Party, Komsomol and trade union organisations. All this must be taken into account along with the tanks, the aeroplanes and the guns.

The Propaganda of Chinese Communism

THE propaganda of Communism everywhere conforms to a pattern determined by basic Communist doctrine and theory of revolutionary method. A few essential themes are ceaselessly reiterated, though with a great variety of application, and the definiteness of the Communist objective, combined with the Communist exclusion of dissenting opinion, ensures that there is always an effective concentration of publicity forces for a psychological offensive at any time, even though there may occasionally be moments of confusion when one of the notorious "somersaults" of party policy is taking place in Moscow. These general characteristics of Communist propaganda are evident today in China no less than in European Communist-ruled countries, but the Chinese propaganda output has some features of its own which deserve study.

The dominant theme is the task of preserving world peace by fighting the Americans, as laid down at the Second World Peace Congress in Warsaw, which was attended by a strong delegation of 65 members from China. The head of the delegation, the writer Kuo Mo-jo, thus reported to the Central People's Government Council:—

What were the circumstances under which the Second World Peace Congress was held? On the one hand, we have the aggression clique led by US imperialism madly engaging itself in an armament programme, intensifying its war propaganda, continuously threatening the world with atomic weapons and actively rearming Germany and Japan. . . . On the other hand, we have the invincible world peace camp led by the great Soviet Union, its strength greatly surpassing that of the aggression clique. . . . As was described by Chairman Joliot-Curie, the Congress was truly a real international council of the broad masses of the peoples of the various countries. . . . the Congress tried its best to dissuade some of the "pacifists at all costs" in order to achieve complete unanimity among the delegates on the overall principle that "to safeguard world peace, aggression must be opposed." . . . We Chinese people are now engaged with great vigour in the sacred campaign to resist America, aid Korea, protect our homes and safeguard our country. This is what the Chinese people have done to carry out most faithfully and effectively the decisions of the Second World Peace Congress.

The war in Korea is thus presented as a struggle in defence of peace, in which China has not only the support of the Soviet Union and the People's Democracies but also the backing of the World Peace Congress representing all the peoples of the world—in contrast to the United Nations,

which is dominated by the American imperialists. Great efforts have been made to build up the Peace Congress in Chinese publicity as the true parliament of mankind. In the principal cities of Manchuria mass meetings were held and addressed by the delegates on their way back from Warsaw to Peking, and at the capital they were welcomed by General Chu Teh, the Commander-in-Chief of the People's Liberation Army:—

Speaker after speaker urged that a wide campaign be launched immediately to spread the message of the Congress throughout the length and breadth of People's China. They proudly proclaimed that the most concrete and best contribution China could offer to universal peace at this time was in fighting against American aggression in Korea.

Combined with this propaganda of the international struggle for peace is the anti-American hate campaign which lives up to the best standards of Communist invective:—

The American and Syngman Rhee butchers carried out a policy as utterly blood-curdling as the worst perpetrated by the Hitlerite fascists. The war as exemplified by the MacArthur cave-men in Korea is not a war between nations. It is a war between men and beasts in human form.

For those Chinese who still remember American philanthropic activities in China in the medical and educational fields, a special propaganda line is adopted:—

Through their economic exploitation the US sucked the blood and sweat of the Chinese people and then hoped to buy off the Chinese people with a small portion of what they had squeezed from their toil. The US imperialists specially intensified their cultural aggression against China with a view to spiritually benumbing the Chinese people. They made big investments to subsidise religious, cultural and relief bodies in China. . . . But the US imperialists are completely mistaken in thinking that they can really buy the hearts of the Chinese people with a few of their dirty, blood-stained dollars.

Plans for DEVELOPMENT

Business men who have plans for development in overseas and colonial territories which call for medium or long term finance should write for our new booklet. It explains what the Corporation can do for you and gives details of the countries in which we operate. Please write to the Manager at the address given below.

BARCLAYS OVERSEAS DEVELOPMENT CORPORATION LIMITED

54, Lombard Street, London, E.C.3

Although America is the principal target, British iniquity is not forgotten. A spokesman of the Foreign Ministry asserted two months ago that the "concentration camps" of Malaya were "filled with innocent overseas Chinese," that many Chinese had been "killed and tortured to death" in these camps, and that 400,000 had been made homeless. He demanded that the British Government "immediately put an end to the policy of persecuting and deporting overseas Chinese," release all those detained and pay them compensation for losses suffered. These demands were adopted in resolutions by youth, labour and other federations.

Fortunately the People's Government is able to assure the people that it has nothing to fear from the imperialist instigators of war. In the words of *People's China*:—

Efficient and brutal in killing peaceful civilians, levelling homes, devastating cities, burning, looting and raping, the American troops have proved themselves impotent and even imbecile on the battlefield when pitted against patriots and democrats. . . . Alarm and despondency spreads among the American satellites. . . . Mistrust grows in the thieves' kitchen, and particularly mistrust between the US and Britain and France

The Chinese people, according to the argument, have for several thousand years been "in the front rank of world culture," but for the past century they were "ruthlessly oppressed" by the capitalist imperialist nations. But Chinese patriots "found the truth of Marxism-Leninism as a weapon to free the Chinese people." This has enabled China "to surpass the Western capitalist nations ideologically, politically and even militarily." With its Russian alliance China is now invincible:—

The alliance of the victorious Chinese people and the Soviet people is not only the alliance of the countries of the largest populations and territories in Asia and Europe; it is also the alliance of the most advanced and most consolidated countries. Therefore, such an alliance is matchless.

Persia in Trouble—I

Murder and the Majlis

[FROM OUR SPECIAL CORRESPONDENT IN PERSIA]

(Delayed) Teheran, March 12th.
If murder in a Teheran mosque becomes a habit in Persian politics, no one will benefit except the Soviet Union. That of the Prime Minister, Ali Razmara, on March 7th was the second of its kind. Like its predecessor—that of the Shah's representative in the cabinet, Mr Hazhir, in the autumn of 1949—it was the work of a religious fanatic. But this time the motive was different. The murderer declared on arrest that he felt bound to rid Persia of a man who had sold the country to foreigners. (Razmara was alternatively dubbed a British or an American stooge according to the local mood of the moment, and according to personal taste.) The murderer struck in a frenzy of religious ecstasy, but the instigator who had told him his deed would carry him straight to heaven was without doubt a mullah named Kashani. So long as Kashani is loose in Persia trouble from the crowd is round the corner. For the moment his potentialities as a troublemaker have been harnessed by the National Front, which is Persia's only semblance of a party; it is the noisy minority of eight deputies led by Dr Mossadegh which has achieved considerable prominence and popular support, thanks to its programme for the "nationalisation of oil." This means, in more specific language, the expropriation of the Anglo-Iranian Oil Company. Few sober Persians go as far as Mossadegh, but all want a bigger slice than has yet been offered of the Company's cake.

The immediate requirement, if tranquillity is to be maintained in Teheran, is a successor to Razmara possessed of the moral courage to banish Kashani and to plod on with the financial and banking changes upon which his prede-

cessor was ineffectually engaged. Otherwise the army threatens to go unpaid, the civil service without its New Year bonuses (due towards the end of March) and the wheels of administration to run down.

High hopes had accompanied Razmara's sudden emergence as a politician last summer. He had been an excellent chief of staff; he was the Shah's nominee; he was above graft and he was a hard worker. People hoped that he would grip the country's problems as he had gripped the army's. But these hopes had crumbled before his death. Out of uniform, he became a less significant figure. He had a disappointing start. His finance minister over confidently took on more than one man could manage and, while on a mission abroad, simply deserted. Then his praiseworthy plans for the decentralisation of local government into provincial hands were smashed, from armchairs in Teheran, by undemocratic critics who prefer to keep all power in the hands of landlords and of the capital. After that, he seemed to lose heart and stamina. He was good at the jobs a soldier understood—improving Teheran traffic control, drafting the flocks of hungry unemployed from the north—whose empty stomachs, aided by Moscow radio, prompted them to invade Teheran last year—on to useful work on roads and railways. But his attempts at progress on a big scale were a failure on account of his inability to manage Parliament—that is, the travesty of responsible government which is the Persian lower house or Majlis.

To understand the powers of negation which the Majlis so frivolously wields, it is necessary to know a few facts about Persia's constitutional and political life. First, a Persian proverb remarks that if companions were to be trusted, Allah would have had a companion. Though proverbs are not evidence, this one throws much light on the noisy scene in the Majlis, and also on the safeguards against individual action which team in the constitution and in practice. Nothing much can get done unless Shah, Cabinet and Majlis push in the same direction and simultaneously. Secondly, the Persian cabinet does not sit in the Majlis; it is formed by some outside personality summoned by the Shah. Thirdly, parliamentary elections are in most constituencies a ramp in which it is easy to hire illiterate voters; therefore few deputies give a thought to responsibility towards the nation at large. Apart from Dr Mossadegh's group, there are no parties; too few people trust "companions." Tudeh, the "mass" party under Russian direction, is forbidden and is chiefly busy in schools and universities. Most Persians, nervously mindful of their experiences in the last years of their arbitrary dictator of the 'thirties, Reza Shah, are so fearful of dictation that, though they decry the Majlis, they lie down under its irresponsibility. It remains to be seen whether the Senate—a new and sober body—can moderate Majlis transports on any major topic.

French Parties in the Paddock

[FROM A CORRESPONDENT IN PARIS]

THE pre-election period in France has begun. The Plevin cabinet fell over the question of electoral reform; and it was to this question that the Queuille government first turned its attention. It managed, last week, to bring the question to a vote in the Assembly. The different parties are beginning to take up their positions on the starting line for the polls. Several dates for the event—particularly June 3rd—have been suggested. But the present Assembly shows little disposition to die so quickly and it could try to last at least until the autumn. Nevertheless, the chances are that the Queuille cabinet will be the last in this Assembly; indeed its appointed task is to prepare for the elections.

The French people will have to choose between three

political forces—Communism, the RPF of General de Gaulle, and the governmental parties (principally the Socialist party, the MRP, and the Radical party). This is, of course, a familiar situation. For several years French political life has been divided between these groups. But what is new is that for the first time the RPF will play a separate part in the general elections, and consequently the French Right will present itself in force to the electorate. This means that the flirtation which has for a long time brought together the RPF and certain elements of the Centre is ended. Both sides have disowned a liaison which they believe to be compromising. The governmental Centre will therefore be more united than anyone would have thought possible a few weeks ago.

The three principal groups in the majority have just reached agreement on the problem of electoral reform. Of these three parties, the MRP has been most afraid of the forthcoming elections because it knows very well that it will be principally at its expense that the new candidate, the RPF, will gain votes. This is why during the last ministerial crisis M. Bidault tried to form a government with the help of the Gaullists, which, however, they refused to give him. This is also why, at the time of the fall of the Plevin cabinet, the MRP wished for proportional representation, or at least for a single ballot which it hoped would protect it against any alliances concluded on its Right between the Gaullists and the Radicals. The agreement which has now been reached should satisfy it. The Radicals, having obtained for one of themselves the Presidency of the Council and the Ministry of the Interior—a most important strategic position during an electoral period—have consented to abandon the two-ballot system in which lay their strength under the Third Republic, and have accepted an extremely complicated system based on a "majority vote by single ballot according to lists for each department," which is designed to allow alliances between the centre parties.

General de Gaulle has contributed to this *rapprochement* between the MRP and the Radicals by his speech at Levallois on March 11th. Not only did he in effect announce his refusal of all electoral alliances, but he made several direct allusions to a "coup d'état" for which "he has not wished" but which he said he could have made succeed "if he had wished." Although hedged about with disclaimers such expressions as these were bound to scare the "old Republicans" of the Radical party. Three days later M. Herriot, the declared enemy of the Radical party, had little difficulty in carrying with him the executive committee of his party. General de Gaulle had made his task much easier for him.

Thus the Centre will have undergone very little regrouping when it marches to battle on two fronts against the Communists and the Gaullists. It is generally believed that the Communists will lose a good number of seats because of the electoral reform; it is after all principally against them that this has been undertaken. General conditions are also less favourable to them than during the last few years. They may regard their "peace campaign" and their propaganda against "the rearmament of Germany" as trump cards; but the fact remains that although the rise in prices has not been stopped it has been better controlled during the last two years than it was in the immediate postwar period.

The real strength of the RPF is not known. Although it was first presented as being "above the parties" it has since become a party just like all the rest. Its authoritarian bias has thereby been strengthened. Moreover the RPF's statutes give to its leaders, and particularly to General de Gaulle, an almost uncontrolled authority, and it is difficult not to conclude that the General thinks of the government and the Republic in much the same way. It is, therefore, those electors who are tired of the parties, perhaps even of the Republic, who might be attracted to the RPF. The cabinet crises, so numerous and so difficult to understand—particu-

Don't fight shy of this simple symbol.

larly the last—have certainly aroused very strong disgust, and many people feel that the RPF may easily have the most seats in the next Assembly.

By comparison with the two vigorous movements on the extreme right and left the three government parties give the impression of going into battle without much enthusiasm. They have hardly any nice presents to offer the electors. The only basis of their alliance is a common sense of hostility towards the two extremes and their programmes contain nothing very uplifting. But it must not be forgotten that ever since the *Boulangisme* of the end of the nineteenth century French electors have never ceased to show their attachment to those parties which emphasise their "republicanism." The way in which General de Gaulle has begun his campaign at Levallois seems to show that he will be an involuntary, but effective, ally of the governmental parties.

The Indian Budget

[FROM OUR CALCUTTA CORRESPONDENT]

THE 1951-52 budget is a startling revelation of India's increasing financial weakness. In the three-and-a-half years since independence, India has reduced the opening cash balance of Rs. 376 crores left by the British (enough to cover the revenue budget for one year) to Rs. 91 crores. By the end of 1951-52 this would have fallen to Rs. 12 crores if taxation had not been increased. The 1951-52 budget shows a deficit on revenue and capital accounts taken together of Rs. 52 crores, which brings the deficits accumulated in the past five years to over Rs. 500 crores. These deficits have caused a creeping inflation which has sent the wholesale price index from 297 in 1947 to 424 in February, 1951. The consensus of informed opinion is, moreover, that Indian production has not so far been increased by the capital works for which these deficits have been incurred. Every one of these "nation building" schemes has been the subject of public criticism and controversy; for example, while India hopes to import some 8,000,000 tons of food in 1951, the Grow More Food scheme was to have seen India self-sufficient, also by 1951. The prefabricated house scheme has ended in the Indian equivalent of the African "ground-nuts" scandal.

The combined effects of recurring deficits, heavy taxation, and inflation have dried up the capital market for both the Government and industry. The Government's borrowing programmes in the past three years have resulted in the net repayment of Rs. 100 crores. Last year's much advertised Government economy drive has ended with increased expenditure in every item of the budget. Total expenditure on current revenue and capital accounts is no less than Rs. 129 crores higher than the 1950-51 estimates. In order to maintain his cash balances the Finance Minister has imposed new indirect taxation, estimated to bring in Rs. 31 crores, which still leaves an overall deficit of Rs. 52 crores.

Thus the 1951-52 budget implies that expenditure cannot be checked, that inflation is to continue, and that the Government no longer expects to finance capital expenditure by borrowing and has instead to fall back on fresh taxation. The last fact is particularly disquieting both to industry and to the individual taxpayer as indicating that all hope of reduction in taxation has vanished. Fresh savings cannot come from budget deficits nor from overburdened taxpayers. Where are they to come from? Pandit Nehru's public utterances show that he has long ago grasped that half the battle against inflation is increased production; he is constantly adjuring his countrymen to work harder and produce more. But he apparently remains unconscious that the other half is control of public expenditure and that the capital expenditure schemes of his own Government have failed to add to

production, and also are depriving his Government and Indian industry of the sinews of increased production.

The plight of the middle classes is a commonplace in all western countries burdened by inflation and punitive taxation, but if they have an important role to play in the west their function is vital in India, where the economic advance of the illiterate masses numbering some 400 million depends on the administrative and technical skill, knowledge and initiative of a middle class which, according to the number of income tax payers, totals a mere 500,000. The Congress Party was a mass movement only in the sense that the masses were mobilised by the Party's middle-class leaders. The disillusion in this class today is widespread, and owing to lack of economic education is dangerous; the symptoms of India's ills—rampant black markets and corruption—are taken to be the causes. If any of India's political leaders grasp the significance of these facts, they certainly say nothing in press or parliament to educate public opinion.

The overall picture that emerges—of a country floundering amidst economic maladies, and politically increasingly disillusioned—does not suggest that India can play any vigorous role on the international stage in the next twelve months—to look no further ahead.

Insubordination Within the Czech Army

THE ramifications of the Sling-Smerova-Clementis conspiracy have been explored and it is now the turn of the Czech army to undergo the upheavals which the Czech Communist party itself has recently been made to suffer. General Rejcin, the deputy Minister of Defence, who used to be regarded as a trusty henchman of Moscow, is the most illustrious of the army officers now known to be under arrest as "accomplices" of Clementis. It is, of course, impossible to say whether disaffected elements in the Czech army have, in fact, been as hand-in-glove with Clementis and Sling as Dr Cepicka, the Minister of Defence, has now made out. But there is no doubt that the army has always been a thorn in the flesh of the Czech Communists and their efforts to bring it into line through constant purgings have seriously affected its strength and efficiency.

Last spring the replacement of General Svoboda as Minister of Defence by President Gottwald's forceful son-in-law, Dr Cepicka, was generally thought to presage an all-out drive to sovietise the Czech army. And, indeed, to all outward appearances, the army did appear to be adopting the characteristics of the Red Army. Czech soldiers put on a Soviet-type uniform, and on October 1st, they became subject to a new disciplinary code based entirely on Soviet military law. But Dr Cepicka has now confessed that this was largely only a facade. He has told a gathering of army officers in Prague that "some orders issued in summer of 1950 have even yet either not been executed or only to an unsatisfactory degree"; and he added that some of these orders were of fundamental importance. They are, for instance, still many commanding officers who do not rely on the army Party organisations and army political workers in exercising their authority and jurisdiction. And the introduction of working-class officers has not been a success, owing to the obstructive and unco-operative attitude of the old guard of officers. This pre-occupation with the political outlook and class structure of the Czech army can hardly help to improve its efficiency as a fighting machine. But since Moscow clearly cannot afford to tolerate a Czech army which is not pro-Soviet, and since the Czech Government must naturally not be anxious to have another Marshal Rokossovsky foisted upon it, political reliability before fighting fitness will probably continue to be the order of the day.

It started 158 years ago

This excavator shovel, the smallest Newton Chambers make, has a capacity of over a ton. Its toughened steel teeth are designed to dig rapidly into rock and stone, yet in spite of its size and strength, and the immense driving power behind it, the shovel can be made to work with almost the flexibility of the human hand.

It was 158 years ago that men first dug with hand shovels at Thorncliffe—for coal and ironstone upon which Newton Chambers' industries were founded. Today, giant mechanical diggers are among the many products made by a seventh generation of Thorncliffe foundrymen and engineers.

BEVERLEY BAXTER joins the SUNDAY EXPRESS

Beverley Baxter, renowned across the world as one of the most knowledgeable, human and delightful writers of his generation, has joined the Sunday Express.

He will contribute a weekly column of a type new to Sunday journalism.

It will span the life of our day.

While not a social gossip column in the usual sense of the phrase it will tell you about people and events both important and interesting.

It will reflect current moods and opinions.

Its purpose will be to give life colour by weaving through news and views a golden thread of warm humanity.

Beverley Baxter's experience of life is unusually wide and rich. In politics (he is M.P. for Southgate), in the world of the theatre (he is the foremost critic of our day), in social life, and in industry he is in personal friendship with the outstanding men and women of our time.

No journalist is more adequately equipped to report life and to reflect upon it.

Each week in the Sunday Express he will do both.

READ HIS FIRST COLUMN NEXT SUNDAY

EXPRESS

Aspects of enterprise

No. 11.

For forty-two years Simon-Carves have almost continuously maintained a resident engineering staff in India on coke oven construction. The first Simon-Carves ovens in that country were built in 1908 and the latest were put to work in 1950. Eleven of the fourteen batteries now working in India have been built by Simon-Carves, and a large new battery was recently ordered. The eleven existing plants handle nearly 85 per cent. of the $3\frac{1}{2}$ million tons of coal carbonised annually in Indian ovens, and the completion of the twelfth will bring the figure to nearly 95 per cent.

Report on Gas

NATIONALISATION of the gas industry was carried through with a judicial care that most of the other acts of nationalisation lacked. In the case of gas, the issue was not hopelessly prejudiced or embittered. It followed upon a study made by an independent committee, which had concluded that only public ownership could bring about the changes in structure the industry needed; and the need for these changes, if not the method of effecting them, was conceded by the leaders of the gas industry itself. These former owners, though they opposed nationalisation, did not withhold from the Ministry of Fuel and Power their advice about the form that such a reorganisation, if decreed, should take; and on the vesting day in 1949 the publicly owned industry succeeded fairly amicably to the services of most of the central and local organisations' expert staff. The industry's structure under the 1948 Act, moreover, is happily free from the tendencies towards over-centralisation and empire-building that have characterised other nationalisation measures; its decentralisation arises not from any rethinking of principle, but simply from acceptance of the manifest requirements of the industry itself. Integration in larger units is generally accepted as necessary for the improvement of gas supplies; but equally it is accepted by all who have studied the industry that further concentration of these larger units under any close-knit national system of control would not be justified either on technical or economic grounds. In addition to the responsibilities for promotion, co-ordination of policy, and labour relations that it inherited from former central organisations, the Gas Council is responsible for advising the Minister, for research, and for the capital transactions of the industry as a whole. But the duties of developing and maintaining economic supplies of gas, coke and coal chemicals rest squarely upon the twelve area boards (whose chairmen, under a chairman and deputy chairman from the centre, make up the Gas Council); and the long-term plans for the industry's development are to be framed by them.

The industry's first report and statements of accounts, published last week, display some of the same non-controversial respectability. They are excessively late, and they cover only an awkward eleven-month period from the vesting date in 1949 to March 31, 1950. This initial period was taken up to a large extent with the assumption of powers by the new publicly owned council and boards, the revision of accounting procedures among the diverse undertakings acquired, the maintenance of gas and coke supplies, and the study and prosecution of developments inherited from the former undertakings. Nevertheless, the Council is able to report a start on certain integration projects within the area boards' supply systems; and in the eleven months it just managed to break even financially.

Not too much importance should be attached to the tiny surplus of £2,663 which, subject to certain provisos,

the Council and boards managed to amass from a turnover of £192.5 million. After paying interest of £7,600,000, and contributing £250,000 to the statutory Central Guarantee Fund maintained by the Gas Council, the area boards together showed a net deficiency of £10,579 on eleven months' operations, eight of them having made individual surpluses and four individual deficits. The Gas Council, which drew its income from a levy of 14s. per million cubic feet of gas sold by each area board, achieved a surplus of £13,242 on the period (no provision being made for any liability to income and profits taxes, which is being discussed with the Inland Revenue). The central organisation, therefore, was just able to keep the gas supply undertakings, taken together, out of the red. A more fundamental weakness of the industry's finances disclosed by the report, however, is the failure, common to a number of other nationalised industries, to provide for depreciation of its assets upon a basis remotely approaching the replacement costs of its equipment. By contrast, many of the former gas undertakings operated wholly or partially upon a renewals basis, charging the costs of new equipment to revenue in the years during which they were incurred. The area boards, adopting depreciation accounting, "have it in mind," according to the report, to make appropriate allocations from surpluses for funds to meet such higher costs, but in the initial period none did so. In the event only £9,000,000, or just over 4 per cent, was provided for depreciation upon fixed assets valued at £219.6 million; the bulk of this equipment was installed before the war, and the historical costs upon which depreciation is being calculated may well be no more than one-third of current costs for the same plant.

Striking differences of size, density of population, and standards of consumption between the twelve gas areas have a marked effect upon the different boards' markets, which vary from the North Thames' 208 consumers per mile over 8,497 miles of main to the Southern's 118 per mile over 4,523 miles or the North Western's 151 consumers per mile over 11,216 miles of main. The size and distribution of the undertakings and the efficiency of gasworks owned by the boards vary as widely; of the 1,037 undertakings transferred to public ownership, the deputy chairman remarked last week, some 300 non-statutory companies produced a mere two per cent of the total supply, many being literally run by one man. Some were running at a loss, while in others little provision was being made for maintenance or renewal of plant; certain undertakings had deferred increases in price long after they were due, and in some districts gas was selling at its prewar prices. The boards, apart from their duty of putting these finances upon a sound basis, were faced with an immediate rise in the cost of coal, which took place within a month of the vesting date, while the prices obtained for tar and other chemicals produced at their gasworks tended to decline during the period. During the initial period certain revisions were

made in the diverse scales of prices within areas (the Eastern Area, for example, inherited 444 different tariffs); the immediate need for higher revenue to meet increasing and deferred costs tended to take priority over the need to secure uniformity in method (not necessarily in level) of tariffs within and between areas.

While inadequate provision for depreciation means that consumers are not bearing the full costs of production, the report indicates that the industry is chafing under the restriction of the national investment programme. Its share of capital investment for the calendar year 1949 was £30 million, and in the eleven months reviewed the industry spent £27.8 million; this compares with £114 million allotted for electricity development during the same period. "Even with a substantial increase in capital expenditure," the Council believes, some years would elapse before the demand for gas could be fully met throughout the country. Industrial demand for gas, already 50 per cent more than before the war, is still rising, having passed the wartime peak; it is being applied more widely in specialised industrial processes such as baking, core drying, pasteurising, and ceramics manufacture. A considerable proportion of the industry's capital expenditure, therefore, has been upon plant for carbonisation of coal (and for the production of carburetted water gas, which can be produced quickly to meet the industry's peak loads); some economies have been possible in the dovetailing of different undertakings' plans, but in most places the pressure upon plant is such that no reserve of capacity exists. Some capital expenditure, however, has been possible upon the linking of undertakings by transmission mains, one of the most tangible forms of integration: mains extensions that, for example, have linked Sheffield to Rotherham (eliminating supply cuts in the larger city), Liverpool to Prescot (obviating the reconstruction of obsolete works nearby) and Colchester to Braintree (enabling the closing of the small Braintree works but extending the area

of supplies in Essex) offer a promise of greater savings from such developments in the future.

No useful judgment can be passed, therefore, upon the operations of the gas industry outlined in this laggard report; a few beginnings, and apparently in the right directions, have been made. The task of securing considerable gains in efficiency for the industry, within the circumstances of public ownership and decentralised control that impartial observers have judged necessary, lies entirely before the Gas Council and the area boards. Hard thinking upon the important questions of tariff policy, of recruiting the expert staff of which the industry in the past has been deficient, of evening out peak loads upon the industry's plant, and of developing more efficient appliances, may be going on in the industry, but it is reflected little in the report's pages; and though the Council succeeded, apparently, to an insufficient and unco-ordinated programme of research, its own approach to reorganising this seems rather leisurely. After all, technical developments such as the complete gasification of coal, which is reported to be in the pilot stage, might profoundly disturb the balance of the industry's economy; their effects need close study in advance. In the wider field, the Council's main need may be to disabuse other authorities of an inadequate conception of this important chemical industry. The tendency to think of it as a slightly outmoded, nineteenth-century fuel and power industry still exists (and can be detected even within the industry when the report calls £42 million worth of carbonisation chemicals "by-products"); local and central authorities seem sometimes to be slightly dazzled by the more "modern" glamour of electricity. The gas industry, while carrying through its own internal reorganisation, must take care, in negotiating on central policy with the noisier and better-publicised nationalised coal and electricity industries, not to become too easily the Cinderella of the British fuel and power family.

The roles played by the oil distributing companies and the motor manufacturers in this process of evolution have, in the past, to some extent diverged. Except for short-lived experiments, the oil distributing companies stayed out of the retail market and have, until recently, made little attempt to influence the layout and structure of the filling station. In the years preceding the war some of the major oil companies did seek to uphold reasonable standards by refusing supplies to petrol stations with shoddy premises and unsatisfactory service. In addition the Motor Agents Association laid down standards for its members covering the technical qualification of staff and the equipment and floor-space of the establishment. But the effect of such measures was limited; even now only 15,000 garages, half the total, are members of the MAA. In contrast, vehicle design and the sales and service policy of the motor manufacturer were having a considerable effect on the status of the

garage even before the last war. In each sales area an experienced and well-equipped dealer was appointed as the official distributor and acted as a channel for all orders from sub-distributors and free-lance dealers. Mechanics from the main distributors were invited to train in the factory schools; car manuals admonished owners to entrust overhauls only to the approved service stations for their particular model. The close tie between the motorist and his local garage was loosened.

★

The Ford Company carried specialisation further and led a development that is only now exerting its influence on the garage trade in Britain. The Ford system as practised throughout the world is to carry the principle of mass production beyond the stage of vehicle manufacture. Replacement parts are supplied through a network of official, exclusive distributors, and the repair and overhaul of components is largely replaced by their exchange for units reconditioned in the factory.

Although the Ford system is an extreme case even in the United States the attitude there towards car maintenance and fuelling is in line with American practice in cheap mass production. Major repairs are done by repair factories, while a host of smaller establishments specialise in jobs such as relining brakes, carburettor

adjustment and other minor functions. Car dealers rarely do repairs, but handle straightforward trading-in and new car deals; they rarely run a filling station. Filling stations concentrate on their main job of the mass distribution of petrol and oil, supplementing this only by carrying out light routine servicing, stocking batteries and tyres and often providing refreshments. It is not uncommon for the large American stations to have a throughput of up to 500,000 gallons a month—approximately twelve times the highest throughput of service stations in England. Competition in the United States stimulates continuous experiment; self-service stations are the latest innovation.

In Britain, though much more slowly, a tendency has been emerging towards the concentration of repairs at the main car distributors; in this the motor manufacturers with American associations, Ford and Vauxhall, have taken the lead. The war necessarily interrupted this encroachment on the traditional function of the garage. But there are signs that the trend towards specialisation has since been resumed, stimulated by the post-war scarcity of new cars in the home market. The motor manufacturers, conscious of the need to maintain their goodwill at home for the future, have sought to facilitate overhauls by supplying new and reconditioned components for replacements; this is the "canned unit" principle that the conventional repair garage already regards as a menace to its trade. Many companies—Standard, Austin, Morris—have been at pains to organise an adequate supply of reconditioned units, and the dealers are provided with a float so that they can instal, say, a reconditioned engine without keeping a car out of service for more than a couple of days. The Rootes group, recognising the customer's appreciation of trouble-free maintenance, lays special emphasis on its specialised after-sales service with guaranteed factory-rebuilt units, and factory training for the dealer's staff. Vauxhall have followed the Ford system of standardising the charges to be made by their agents for standard maintenance and replacement jobs. The factory maintenance scheme has also been extended to many items of motor equipment that are made by independent specialised firms for the motor manufacturers.

It is evident that the maintenance of motor vehicles is rapidly achieving the quality and speed appropriate to a mass-production industry. At present, however, there are a great number of old cars still on the road that do not fit into standardised repair schemes, and their condition inflates the demand for repair work. Current registrations amount to approximately 2,250,000 and the sum of new registrations made since 1939 is only 730,000, so that, even if one assumes all the cars registered in the last ten years to be still in service, there remains a balance of over 1,500,000 cars that are ten years old or more. It is these older cars that still provide the small garages with the piecemeal work for which their craftsmen mechanics were trained. But when new cars are once more available, the staple business of these minor garages is likely to disappear on the junk heap. Meanwhile, the distributors have probably won over the bulk of the new car trade, in view of the motorist's present need to place his order for a new car with the most influential dealer he can find. What is more, the private motorist, who in the past regarded his car as a hobby, has had his personal appetite for tinkering more than sated by the prolonged need to make do and mend.

The Garage Trade—I

From Can to Pump

EASTER, traditionally, begins the season of motoring for pleasure: and this Easter, unlike any other since the war, that phrase has something approaching its old meaning for the private motorist. He may not have the car he wants; but he can have as much petrol (still Pool, but couponless) as he chooses to buy. His familiar garage, offering again not only the overhaul but the fill-up, is re-establishing a pattern that dates from the early days of motoring. Chemists were the first traders to dispense petrol, but cycle agents, coach builders, ironmongers and blacksmiths saw the potentialities of the trade and took out licences to deal in petroleum spirit. Many of these made themselves specialists in repairs and maintenance for their localities, and began to act as a channel for transmitting orders for new cars to the manufacturers. Last of all the horse dealer adapted himself to the times by setting up as a motor car agent. This combination of services into one trade was a natural development. But it was already subject to certain dividing influences before the second world war put private motoring into cold storage. Today the motorist can descry the beginning of radical changes in the garage trade.

Private motoring in the early years of this century was too thinly dispersed to make it worth while for the petroleum distributor to establish special stations for the sale of motor spirit and oil. It was sufficient for the oil companies to make use of traders associated with the motor industry, with many of whom they were already in contact through sales of kerosene. Indeed, the use of the 2-gallon can as the unit of distribution made it impracticable to tie up particular retailers to any one oil company, since the retailer could afford to distribute his stock easily among competing brands of spirit in accordance with the preferences of his customers. By the time roadside pumps came into common use the system of independent retailers was firmly established; in 1925 about 14,000 sites were retailing petrol for less than a million customers. By 1930 most of the present retail selling points for petrol had been established; there were some 30,000 of them. Two-thirds combined their business with repairs and maintenance, and those who were not official agents for a particular make of car acted as freelance agents.

Business Notes

The Fall in Gilt-Edged

The slide in gilt-edged prices gathered a new impetus towards the end of last week and the beginning of this; on Monday the falls ranged up to $\frac{1}{4}$ point. A more moderate movement in 4 per cent Consols (1957 or after) attracted particular attention, since it carried the net price below par and raised the redemption yield, calculated to 1957, to £4 1s. 1d. per cent. The only new technical factor was the fiasco of the Northern Rhodesian loan, public subscriptions for which, as noted here last week, amounted to a mere 6 per cent; the scrip opened at 2 discount, which later widened to 2 $\frac{1}{2}$. By Monday evening it was apparent that this friendless market was oversold; and on the following day precautionary bear-covering on the approach of the holiday, combined with small institutional buying, produced a sharp technical rally. Even so, prices at the moment of going to press show appreciable further declines on the week. The irredeemable and longer dated stocks have fallen between 3 $\frac{1}{4}$ and 4 $\frac{1}{2}$ points net since mid-January, and most of them have thus lost more than half of the ground gained since 1949. Old Consols now stand only 2 $\frac{1}{2}$ points above their lowest closing price in November of that year—before the dramatic intervention of the Government broker.

The slide since mid-January has thus reached the proportions of a major movement. Its original cause was the impact of steel nationalisation, which is still, of course, exerting a depressing effect. The stream of selling of steel stock is no

longer large, but the whole market is very thin, and there is the knowledge that considerable blocks of stock are still held by industrial allottees who may be regarded as potential sellers. It would be wrong, however, to attribute the market's behaviour mainly to this special cause. Investors are realising at last that the defence outlays are almost bound to involve a continuous basic disequilibrium in the nation's capital account, and they are no longer relying upon the assumption—very common last year—that the authorities will use physical controls and other arbitrary devices to prevent this disequilibrium from putting constant pressure on the gilt-edged market. This change of opinion naturally owes much to the marked inactivity of the authorities; and especially to the fact that they have made no attempt whatever to soften the impact of the steel operation. The credit expansion that was permitted last year had seemed, for a time, to lend some support to the earlier view, but now that it is possible to get a better perspective of official tactics, it

becomes apparent that there has been no departure from the post-Daltonian policy of refusing to resist any major trend.

In these circumstances, it is scarcely surprising that more and more people in the City are beginning to ask whether official policy may not become still more orthodox, by taking a tighter hold of the reins of monetary control. In this context, the City has been following very closely the discussions in Washington, and has duly noted their most significant outcome so far—the lowering of the peg for the 2 $\frac{1}{2}$ per cent bonds that are the subject of the new conversion offer into “unmarketable” 2 $\frac{1}{4}$ per cent stock. In this technical sphere, however, the contrast between America's problem and Britain's is probably more notable than the superficial similarities.

* * *

Bigger Table for Commodity Talks

The central group of the international materials conference in Washington originally consisted of Britain, the United States and France. This triumvirate has now been expanded to bring in Australia, Brazil, Canada, India, Italy and representatives of the Organisation for European Economic Co-operation and the Organisation of American States. The purpose of widening the membership in this way is to allay fears on the part of smaller countries that the conference will be dominated by the three initiating powers. It also provides a means of representing OEEC and OAS, and allowing a more effective voice to important suppliers of raw materials in the Commonwealth, including Canada and Australia. The Commonwealth is in fact represented by four, not necessarily unanimous, voices.

The central group will continue to work as a steering committee and its first meeting in this new form is to take place this week. The bigger committee of ten will find it more difficult to co-ordinate the work of the commodity committees than a restricted group of three. This expansion of the central group does, indeed, challenge the conception of the conference. The commodity committees are to remain autonomous and they will discuss their commodities on their own merits. But at some point bargains will have to be struck, and the intention was that, after these detailed commodity reviews, the bargaining would take place outside the conference rooms. Clearly the danger now arises that such bargaining will begin to absorb the attention of the larger central group, under the sacred name of “co-ordination”; if this is so, the separate commodity committees will have no opportunity of doing a useful task. When the scheme was started, the central group was designedly left with no executive power, and Britain, the United States and France still accept the view that their task should be to co-ordinate. It will take a strong chairman to ensure that the work of the larger group is confined to pure co-ordination.

Five commodity committees are at present at work. The three dealing with non-ferrous metals and the one dealing with sulphur have virtually completed their task of getting an agreed statistical picture of supply and demand, and the stage is set for the second act—to discuss means of expanding production and ensuring an equitable distribution of available supplies. The cotton committee is expected to adjourn until the first estimate of this year's American crop is available. The wool committee that meets on April 2nd will have representatives of ten countries—Australia, Belgium, France, the Federal Republic of Germany, Italy, New Zealand, South Africa, the United Kingdom, the United States and Uruguay. The speed at which the conference has gone into operation has not been as great as certain consuming countries would have wished, but the possibility of some form of international allocation for at least some of the commodities seems greater than it did three months ago.

Stockpiling and Commodity Prices

There are growing signs that the general scramble for commodities has begun to exhaust itself and that the American change of front on stockpiling is making markets hesitant. Free market prices for non-ferrous metals have declined quite significantly during the past ten days, although they are still well above the official American quotations. Tin has been hovering around £1,300 a ton, which is nearly £200 a ton lower than three weeks ago. Rubber has also weakened, though at 5s. 2d. a lb. it is much dearer than producers foresaw last November, when the expansion in American synthetic production in the first half of this year was expected to bring the price of natural rubber down to around 4s. a lb. Grain prices have eased slightly in the past two weeks. Tungsten, which declined last week for the first time for twelve months, fell further this week, by 87 $\frac{1}{2}$ s. to 525s. a unit. Egyptian cotton prices have also

Coal Cheer

In the last three months the coal industry has achieved a surprising spurt in activity, following the disappointing autumn during which a continued loss of mining manpower reached a point at which, in some pits, men leaving ancillary jobs underground had to be replaced by men taken from the coal face. Mr Noel-Baker's congratulations to the industry this week upon its high output in what he called the “little bull” week preceding Easter were justified: a labour force smaller by 5,400 men than that in the corresponding week of 1950, working more shifts per man than for years, mined 4,500,300 tons of coal, 300,000 tons more than last year. Since the eleventh week of the year began, deep-mined output has been 1,857,000 tons more than in the same period of 1950, and total output 1,423,400 tons higher; the “Prime Minister's target” of three million tons “extra” by the end of April seems certainly more feasible now than when it was announced.

The rise in total output for the first eleven weeks of the year, in fact, has just kept pace with the rise in inland consumption: by slashing exports and reducing bunker supplies, total consumption of coal has been reduced by nearly a

million tons compared with that in the same period of 1950. In the event, it has not been necessary to restrict all industrial customers to the extent that was expected when the emergency measures of fuel economy began; last week, for example, industry consumed roughly what had become its "normal" quantity during this winter—a million tons—and stocks held by electricity undertakings, water companies, and railways rose slightly. Total distributed stocks fell during the week by only 66,000 tons. The industry is now considering stock building for next winter—a problem that is somewhat eased by the readiness to restrict exports to whatever level may be necessary to meet growing home demands. This policy, logical enough, may be financially painful for the National Coal Board; in the long run, however, it will only postpone a return of the major problem—which must be attacked from the side of efficient coal utilisation as well as of efficient production.

Egypt's Sterling Balances

The threat of the Opposition in the House of Commons to bring up the financial agreement with Egypt on a motion for the adjournment of the House, was duly implemented this week and led to a division in which the Government carried the day by the narrow majority of three votes. The debate brought to light very little fresh factual material on the situation. The Opposition's attack was launched on two fronts: the first on the alleged generosity of the releases from Egypt's sterling balances provided for in the latest agreement, and the second on the undertaking to supply oil to Egypt against payment in sterling and without gaining any *quid pro quo* by way of relaxation of the restrictions now imposed by Egypt on oil traffic through the Suez Canal. The first attack misfired badly. The Chancellor of the Exchequer was able to show that the releases envisaged under the agreement, namely from £10 to £13 million a year, compared with an average of £28 million in the three previous years and was relatively much smaller than the releases agreed to in other agreements with sterling creditors, notably those with Israel and Jordan.

Mr Eden and Mr Churchill brought forward the familiar argument that counter claims should have been put in for saving Egypt from invasion; and Mr Churchill emphasised that it had been repeatedly and solemnly agreed in the War Cabinet that such counter claims would be made at the end of the war. He was, however, unable to assert that this intention had been imparted to the Egyptians, or indeed to any other of our creditors. These sterling credits were accumulated without any condition or qualification; to have introduced conditions *post facto* and by unilateral decisions would have done damage to Britain's credit, financial and political. A request for voluntary cancellation was made to the Egyptian Government in 1947 but was refused then and since. The lesson of this episode is the all too familiar one that nothing is ever gained by postponing a politically inconvenient decision to another day. If the War Cabinet meant what it thought on this issue of counter claims, it should have made that intention quite clear when the debts in question were being incurred. It is now too late to bring these mental reservations into the open.

On the question of oil, however, the Opposition had a stronger case and the Chancellor of the Exchequer, as main defender, a much more difficult task. The main burden of Mr Gaitskell's defence, that this was a "purely financial agreement," carries very little conviction. It was no answer at all to the argument most lucidly put by one of his own supporters, Mr Crossman, that for many months Britain had been deprived of the dollar earning capacity of the Haifa refinery and that it was ironic that the responsible country should be given special privileges to prevent her losing dollars in buying oil. This was an accusation in reply to which the Front Bench was strangely silent except for its

assurance that there was no lack of co-ordination between the Treasury and the Foreign Office and the implication that this was an issue that the Foreign Office had in hand.

Admiralty Orders

Although a sharp increase in warship construction had been expected under the rearmament programme, the figures given by Mr Callaghan in the debate on the Navy Estimates caused some surprise. He stated that the proportion of the labour force of the shipbuilding and ship-repairing industries engaged on naval work, which in 1948 was 2 per cent, was now 11 per cent and would rise to 30 per cent by the end of 1952. His words were no doubt intended to impress, but they might perhaps have been better chosen: the first impression that they give, that one-third of British shipbuilding capacity will by then be engaged on warship construction, is not altogether correct.

If this were the case, a good proportion of the many orders that shipbuilders have received in recent months would be subject to considerable further delay, and the programme of tanker construction that is the most noticeable feature in shipyards today would be seriously held up. In fact, however, the number of major yards affected by the naval programme will be comparatively small. Of the 218 vessels to be built under the rearmament programme, 24 are frigates and the remainder are coastal minesweepers or smaller craft. Two of the frigates are being built in Royal dockyards; most of the rest will probably be laid down by the firms which normally undertake destroyer construction. Some of these, such as Vickers-Armstrongs and Cammell Laird's, are large firms also building tankers; others, such as Thornycroft's and Yarrow's, build only smaller ships.

Much of the remainder of the programme is being deliberately placed with very small firms, whose capacity would be needed for this work in the event of war. Many of the builders of the first 41 minesweepers, as listed in the Estimates, normally build only fishing vessels and yachts, and in any case have not lately been working to capacity. Thornycroft's have been appointed "parent" firm to this group of small builders. Another important part of the Naval programme is the conversion of 45 destroyers to fast frigates; the Royal dockyards will no doubt take a good deal of this work, but some is likely to go to ship repairers, whose capacity is also not fully occupied at present. The continued refitting of the reserve fleet, as well as the modernisation of some ships, will also form part of the programme; much of this work, too, will go to ship repairers. The dislocation of merchant shipbuilding will thus not be as great as might be imagined; the effect will no doubt be noticeable, but it will not be disastrous.

* * *

Incentive Wage Schemes

Postwar competition for labour has led to an extraordinary growth of incentive and bonus wage schemes that is threatening to defeat their true purpose of increasing output and reducing costs. The Ministry of Labour's new supplement to the *Industrial Relations Handbook** should go some way towards stopping this haphazard introduction of ill-devised schemes that are tending, like bad money, to drive out the good. The supplement gives details, noting the advantages and disadvantages, of a large number of different methods of payment by results and of calculating time rate bonuses for extra work. Those described range from the Halsey system of piecework rates to the less precise profit-sharing and industrial co-partnership ideas that are beginning to gain ground in some industries. Whilst it is recognised that different industries and factories need

* Stationery Office, 1s. 6d.

different schemes, the supplement emphasises throughout the need to adhere to certain principles. The schemes must not be merely disguised forms of wage increases; work-study is essential before fixing piecework rates or basic times; there must be consultation with the unions; quality must not suffer; and incentive payments to groups should be made as soon after the extra work as possible.

The main drawback of wage incentive schemes, however, is that a few bad ones in an area can so spoil the labour market as to destroy the advantages of good schemes in the same area. A method, for example, that makes it possible for every worker in a factory to increase his earnings without much more than a token increase in production inevitably attracts workers away from other factories where real extra work is needed to earn more than the basic rate. Moreover, such schemes increase costs out of all proportion to the results they achieve. It may also be doubted whether, in the present situation of high real wages and full employment, financial incentives mean so much to the worker as is generally supposed. No firm, perhaps, can now afford to be without some sort of wage incentive scheme; but often other methods of better management and organisation hold out more hope of increased output and reduced costs.

Trends in Trade

An analysis of the detailed trade figures for February provides little relief to the somewhat dismal story revealed by the provisional figures, discussed in these columns last week. Exports of all the manufacturing groups were smaller than in January, partly because of the shorter working month. But some groups actually dropped below their levels of February, 1950, despite the intervening rise in prices. Coal exports, for example, were barely a third of their last year's figure. Exports of machinery, electrical goods and pottery were also smaller than a year ago. Those of wool textiles, however, were nearly 50 per cent larger on the year, and substantial increases were also recorded for chemicals, non-ferrous metals and cotton goods.

The vehicle group (including aircraft and ships) was still by far the largest export category, although shipments to the United States, Canada and South America fell quite sharply during the month. The total number of new cars exported was only 24,093, compared with 28,340 in January; the dock strike in Britain was partly responsible for this decline. Machinery exports to South Africa, India and Brazil were smaller than in January, while shipments to the Soviet Union amounted to barely £50,000, compared with nearly £1,500,000 in February of last year. Exports of cotton goods to virtually all markets declined, but the biggest fall was in those to South Africa, West Africa and South America. In wool textiles the main decline occurred in shipments to South Africa.

The world shortage of raw materials has not yet been reflected in British import figures. On the whole, imports during the first two months of this year have been somewhat larger than in the same period of 1950. But that is no cause for complacency, as last year imports were insufficient to maintain consumption and the deficiency was made good by drawing on stocks. Imports of softwood were substantially larger, and those of raw cotton and raw wool slightly larger than in the first two months of 1950; increased supplies of Egyptian cotton offset the smaller imports of American cotton. Imports of sulphur in January and February were maintained at about last year's rate. Much more aluminium, copper, and tin has been imported this year, and more zinc, manganese and nickel. On the other hand, imports of lead were much smaller, while the amount of tungsten received was about half that imported in the first two months of 1950. Larger quantities of flax, jute and hemp have also been imported. Among the foodstuffs, larger supplies of grain (particularly maize) have been received than a year ago, more

butter, cheese and tea. Meat imports, owing to the hold-up in Argentine supplies and the shipping delays from Australia and New Zealand, have been little more than half last year's quantity. Imports of cocoa and sugar have also declined. On the import side, the picture is not as black as it might be, but it has already a greyish tinge.

Sugar from Cuba?

Britain's negotiations with the Cuban delegation at the Torquay tariff conference for a possible long-term contract for British purchases of Cuban sugar have raised a storm of protest in the Commonwealth. It is probably true that the negotiations were started before Commonwealth producers were advised. But when the new Commonwealth sugar agreement was signed in London fourteen months ago it was made clear that Britain would still buy a certain quantity of sugar from Cuba. Aggregate exports of sugar from Commonwealth countries were then fixed at 2,375,000 tons a year for the period 1953 to 1957 (the period has since been extended to 1958), and of this quantity Britain undertook to buy 1,643,000 tons a year at guaranteed prices; these prices were to be negotiated annually, but for 1951, which is still under the old contract, Britain has agreed to raise the price from £30 10s. a ton to £32 17s. 6d. a ton. Britain's annual requirements are estimated at 2,325,000 tons, so that something like 700,000 tons will be purchased at world prices from Commonwealth or foreign producers.

Cuba is the largest sugar exporter in the world, and in the past its exportable surplus (that is, the part of its crop that is not sold in the American market) has set the world price. Cuba could therefore undercut any of the Commonwealth producers, and it was to prevent this happening that suggestions were made nine months ago to resuscitate the international sugar agreement, under which Britain would give

Time for Eastern trade

Ten-fifteen in England and the London, Manchester and Liverpool offices of The Chartered Bank of India, Australia and China have already opened to the public. At New York the day's work has not yet begun. In the East at Colombo it is tea-time and in Hong Kong business is finished for another day. But wherever business men engaged in the Eastern trade may be, they will find at the nearest branch of The Chartered Bank up-to-the-minute information, skilled assistance and efficient banking services.

Liverpool Branch: 27 Derby House, Liverpool 2.
New York Agency: 65 Broadway, New York, 6.

Branches of the Bank are established at most centres of commercial importance throughout Southern and South-Eastern Asia and the Far East.

Cuba a share in its market. The Canadian Government announced some time ago that in future it would buy sugar in the cheapest market, which could mean that it would buy from Cuba rather than from the Commonwealth, despite the tariff preference Canada accords to Commonwealth sugar. Moreover, the Canadian delegation in Torquay has offered Cuba a reduction in its tariff on foreign sugar in return for lower Cuban tariffs on Canadian manufactures. The British move, by contrast, would seem merely to be a way of assuring Cuba some share in the British market—a share that would be accorded in any case under any international sugar agreement; if a long-term contract were agreed between Britain and Cuba, the reintroduction of the international sugar agreement would be a mere formality.

Such a contract would also mean that Britain would be assured of sufficient supplies of sugar to permit the abolition of rationing. Indeed, Lord Lyle stated recently at the annual general meeting of Tate and Lyle, Limited, that 2,500,000 tons of sugar were available to Britain even without any expenditure of dollars. Certainly this year's bumper world crop is sufficient to meet Britain's unrationed needs and to satisfy the demand for private hoarding in the United States. But that does not mean that sugar rationing will necessarily be abolished this year. The fateful experiment in freeing confectionery in 1949 has made the Ministry cautious, and this time it is unlikely to move until it has more than adequate stocks. Moreover, the abolition of the sugar ration would also make necessary the abolition of the sugar subsidy (at present about 14d. a lb.), and that decision would be politically unpalatable to the Government.

Tobacco Supplies and Prices

The Rhodesian Tobacco crop is expected to show a big fall this season. The target was set at 120 million lb, and but for drought this figure would have been reached. But on present indications, the crop is not expected to yield much more than 75 million lb, compared with last year's crop of 104½ million lb. If heavy showers occur in the next two weeks the harvest might be higher by 10 million lb. Last November British manufacturers signed a six-year agreement with Rhodesian tobacco growers under which they undertook to buy 75 million lb this year or two-thirds of the crop, whichever was smaller. They expected to get 75 million lb; but their purchases under the agreement are unlikely to reach much more than 50 million lb, compared with 70 million lb last year. Presumably there is nothing to prevent British manufacturers from buying more if they are willing to bid up prices at the auctions.

Consumption of tobacco in Britain last year increased slightly and was back to the 1948 level. Net clearances from bond, which give some indication of the rate of consumption, fell steadily from 1946, when they averaged 20.9 million lb a month, to 1949, when the average was only 17.6 million lb. The monthly average for 1950 was 17.8 million lb. Imports in the past two years, however, have increased, though they have remained much smaller than before the war, and stocks of leaf have been accumulated. At the end of December, 1950, they amounted to 441 million lb, their highest level since the war; 21 million lb was added to stock during the year. Provided that purchases of tobacco from other sources remain unchanged, the shortfall in Rhodesian supplies could therefore be made up from stocks, without any need for a deliberate cut in consumption.

The higher cost of leaf since the war has not been passed on to the public, though prices of cigars and certain pipe tobaccos have been increased. Sir Robert Sinclair, chairman of the Imperial Tobacco Company, in making this point at the annual general meeting, contended that it was "not only in the national interest but also in the interest of the tobacco trade" to avoid as far as possible any increase in price.

Tobacco prices are determined mainly by the very high rate of duty rather than by manufacturing costs, and Sir Robert hinted that they were already at such a level that any further increase might reduce demand. Such a reduction would, of course, affect the trading prospects of the Imperial Tobacco Company, whose turnover last year amounted to over £500 million compared with a total personal expenditure on tobacco in Britain of £769 million in the same period.

BEA's Helicopter Service

The experimental helicopter passenger service operated by British European Airways in Wales last year will be replaced this summer by a similar service between London and Birmingham. The route has been chosen to get experience of landing helicopters closer to a city centre. The Welsh service was operated from local airfields some miles outside Liverpool and Cardiff, but this summer, although helicopters will leave from Heathrow and Northolt, they will land and take off in Birmingham on a recreation ground about three miles from the centre of the city. A full service between city centres cannot be operated until helicopters with at least two engines are in service—single-engined machines can make a forced landing with comparative safety but neither operators nor manufacturers think this is a risk that should be taken over a heavily populated area.

No multi-engined helicopter has yet flown in Britain. In fact, the only British helicopter with a certificate of airworthiness is the Sikorsky, built by Westland Aircraft under licence from American Sikorsky Aircraft, a division of the United Aircraft Corporation. It carries three passengers—a payload that is too small for economic operation. BEA is the one airline running a scheduled helicopter service, but the point at which this ceases to be experimental and becomes a commercial form of transport depends on the date at which machines with an economic payload become available. An interdepartmental committee of the Ministry of Civil Aviation has been studying helicopters since 1948 and in its first report, published this month, suggested that such a machine would have to carry about 20 passengers at a cost of 6d. a passenger mile. A machine of this size raises many problems of design, and even a prototype is not likely to fly for several years. But if 6d. a passenger mile is to be regarded as an economic operating cost, the committee may have reached an unduly pessimistic conclusion. The Bristol Aeroplane Company is developing a twin-engined helicopter carrying 10 to 12 passengers; the prototype will make its first flight within the next two months. Using cost estimates prepared by Bristol in 1948, the committee decided that this machine would cost 10d. a passenger mile to operate and would at that price be uneconomic; it was described in the report as "an indispensable stage in the development towards a fully commercial machine." As the prototype developed, Bristol revised its cost estimates and the company now believes that the machine in its present form will show an operating cost of about 6.5d. a passenger mile. Costs are bound to rise before such a machine is in service, but not in such a way as to change the ratio of cost between the larger and smaller machine. Assuming that development proceeds smoothly, the Bristol helicopter could be in service in three to four years' time.

Helicopter development should proceed more rapidly now that the military value of the machines is becoming recognised. In Korea the American army have used them with great success to transport casualties from the front line and the British Navy has recently carried out successful deck landing trials. The fact that military orders have been placed for helicopters should give British designers the extra experience they seem to need in order to obtain wholly reliable performance in, for example, the rotors and rotor attachments of their machines.

Production in 1950

Industrial production last year can now be reviewed in the light of two almost complete statistical series—the index numbers produced independently by the Central Statistical Office and the London and Cambridge Economic Service. Full official details are not yet available for December, 1950, but provisional figures for the total and main groups have been published. In total, the achievement is impressive. The official index records a total increase of 8½ per cent in industrial output in 1950 and shows an advance of 40 per cent over the 1946 level; in manufacturing industries alone, the increase last year was nearly 10 per cent. The "B" series of the London and Cambridge index (the most nearly comparable to the official index) shows a more restrained rise of 7 per cent in total production last year and an increase of 35 per cent above 1946.

The difference between the two results hardly calls for close analysis. In part it may be connected with the fact that the London and Cambridge index excludes finished munitions, which are mainly included in the official

one, and this will be a factor of increasing importance. Viewed against an increase in employment of only some 1½ per cent, last year's increase in industrial output reflects an impressive rise in productivity, at least in some sections of industry.

Some reservations about the coming year are suggested by a more detailed analysis of last year's changes in production. Those sectors of industry that registered the largest increases last year were: manufacture of non-ferrous metals (11.0 per cent); vehicles, including military and civil aircraft (15.7 per cent); engineering, shipbuilding and electrical goods (8.6 per cent); chemicals (14.3 per cent); textiles (9.9 per cent); and paper and printing (20.5 per cent). These results are all from the official series, taking eleven months of 1950 against the corresponding period of 1949. The same industries in general feature high up in the show-

ing of the London and Cambridge indices. Thus the most important industries in which production rose last year by more than the average rate are those most vulnerable to raw materials shortages and to the disturbing effects of a switch-over to defence production. To sustain industrial output at the end-1950 rate (which is what a 4 per cent increase implies) will need great effort and great good fortune.

The Knockshinnoch Report

Sir Andrew Bryan's report upon the Knockshinnoch Castle colliery disaster in Ayrshire last September, when 13 miners lost their lives and 116 others were cut off underground until they were rescued two days later, confirms certain of the misgivings about local organisation and the safety regulations that the evidence at his inquiry had already prompted. The Chief Inspector finds that the accident was caused by an inrush of peat and moss into a mine heading that was being driven steeply upward to break through to the surface. The presence of this peat deposit, though marked upon the geological survey map of the district, was overlooked; no proper examination of the nature of the ground in the field was made either by the colliery management or by the local planning engineers; and, owing to a weakness in organisation, the engineers were inadequately informed of progress made in working this upward heading, and of its deviation from their development plan for the mine.

Sir Andrew concludes that the regulation governing working under moss, which calls for special precautions when working under a deposit of peat less than 60 feet below the surface (or ten times the thickness of the seam) was contravened. He recommends, moreover, two additions to these regulations: before any working approaches within 600 feet of the surface, geological advice about the nature of the intervening ground should be taken, and secondly, no working should approach within 150 feet until the nature of the covering ground has been ascertained by boring or other approved means. He recommends also that the National Coal Board should clearly define the status and responsibilities of planning engineers and surveyors in relation to those of colliery agents and managers. These recommendations have been accepted by the Board, while the Minister of Fuel and Power announced this week that action is being taken upon Sir Andrew's technical recommendations concerning light breathing apparatus, more heavily protected telephone cable, and rapid surveying methods. The National Union of Mineworkers, however, is to press a £100,000 claim against the Board on behalf of the 13 lost miners' dependants; and miners at Knockshinnoch are demanding changes in their management before the pit is reopened.

Delays in Port

The annual report of the Liverpool Steam Ship Owners' Association, following so closely that of the Chamber of Shipping, brings its own emphasis to bear on a number of urgent problems, including the replacing of obsolescent tonnage and the dangers of the present level of taxation. The Liverpool association, however, speaks principally for the liner companies, and for this reason the special attention it gives to the subject of delays in port is remarkable.

The worst effects are noticed in Australia. There were no fewer than 402 sailings of liners from the United Kingdom to Australia during 1950. Apart from the 47 mail ships engaged in this trade, which handle comparatively little cargo, each ship now takes an average of four weeks longer to discharge in Australian ports than in any other ports of the world. The result is that more than 350 months of unnecessary idleness have been suffered, or the equivalent of one year's trading capacity for 30 ships. The tonnage thus wasted would have amply covered the British coal import programme from the United States, which caused such an upheaval in the freight markets. The retiring chairman of the Liverpool association, Mr C. D. Storrs, speaking at the annual meeting, instanced the experience of his own company's fleet. The average time spent by each ship in Australian ports last year was 82 days, compared with 60 days in 1949, 56 days in 1948 and only 27 days in prewar years. His experience in New Zealand was worse.

There are many reasons for such delays in Australia and New Zealand, but Mr Storrs maintains that the primary cause is one from which United Kingdom ports now also suffer—Government interference with the industry. In Australia and in the United Kingdom, the control of labour has been taken away from the port employers and placed in the hands either of Government officials or of boards jointly controlled by employers and trade unions. Until control and discipline of port labour are once more made effective, indiscipline will continue to cause waste and the efficiency of the industry will deteriorate, causing an artificial shortage of tonnage and adding to the cost of sea transport.

* * *

World Tanker Fleet

A net increase of nearly 1,000,000 tons deadweight in the world tanker fleet during the last half of 1950 is recorded in statistics prepared by John I. Jacobs & Co., Ltd., which give the total at the end of December as 27,615,815 tons dw, compared with 26,677,747 tons at the end of June.

Intelligence

Specialists and research workers, statisticians and overseas correspondents: all these contribute to the columns of *The Economist* each week. Through The Economist Intelligence Unit, the same sources can be put at the disposal of business firms and other organisations. Perhaps you could obtain the facts and appreciations that you need by applying to:

The Economist Intelligence Unit
22, Ryder Street, St. James's, London, S.W.1
(Telephone: WHItchall 1511, Ext. 13.)

The British tanker fleet has increased by some 250,000 tons to 5,684,030 tons (20.59 per cent of the total), and the Norwegian by about 275,000 tons to 3,809,476 tons dw (13.8 per cent). United States tanker tonnage decreased during the period by about 90,000 tons to 8,608,082 tons (31.17 per cent), but allowance must be made for the substantial amount of American-owned tonnage registered under the flags of Panama, Honduras and Liberia. Panama, with 2,720,890 tons dw, is the fourth and Liberia with 548,558 tons now the eighth, tanker fleet in size according to registry.

The rate of expansion of tanker tonnage particularly in proportion to dry-cargo tonnage, is accelerating noticeably. Of 5,600,000 tons dw of tanker tonnage under construction or on order in the world at the end of December, more than 2,000,000 tons are due for completion during this year, a similar quantity during 1952 and the remainder in 1953; yet already this year further orders for more than 1,000,000 tons dw have been placed for delivery during 1953. The world tanker fleet at the end of 1953, it is estimated, will amount to some 32,500,000 tons dw on the assumption that the present low rate of scrapping is maintained. This total is more than twice the 1939 total, and represents an even greater increase in carrying capacity, owing to improved efficiency and higher speed. On the other hand, high freight rates are probably keeping in service many tankers which would not be economical to run under more normal circumstances, and tanker owners in future years will have a burden of obsolescence that they have never had to carry before.

For this reason, considerable interest is afforded by the detailed age analysis of the world tanker fleet supplied by John I. Jacobs, Ltd., for the first time. This shows, for example, that tankers amounting to 3,450,000 tons dw (12.5 per cent of the whole fleet) are more than 20 years old and of these more than half are over 25 years old. Owing to the corrosive action of their cargoes, tankers are usually reckoned to have a much shorter life than dry-cargo ships; even the present unprecedented rate of construction is likely only to compensate for deferred replacement, unless the demand for tankers decreases in the next few years instead of expanding. More than 70 per cent of the existing fleet, moreover, is less than 10 years old, and half of this was built during the war. When this block of tonnage becomes due for replacement through obsolescence, more problems will arise. It is not without significance that the British tanker fleet has the worst showing as far as the age of its ships is concerned. More than 16 per cent of the tankers under the British flag are over 20 years old, compared with 14.6 per cent for Panama, 7.38 per cent for Norway and only 4.38 per cent for the United States. On the other hand, 64.25 per cent of the British fleet is less than 10 years old, compared with 86.15 per cent for America and 77.1 per cent for Panama, although only 56.98 per cent for Norway.

Expansion of Farm Chemicals

The Ministry of Agriculture has published a list of safety precautions to be taken by farm workers handling certain types of weedkillers and insecticides; these are based on the findings of a working party set up to study the hazards of using these chemicals and it is a measure of the urgency of the problem that the Ministry has issued the recommendations in advance of the report itself. The chemicals in question are the di-nitro weedkillers and the newer phosphorus compounds. The latter, which are probably the most dangerous, are being produced in two forms, parathion which makes the sprayed surface of the plant toxic to all insects, and a systemic insecticide which is absorbed into the plant through the leaves or roots and makes the sap toxic. Both types have particular uses, but in a number of applications they are competitive. They were used in this

country on a large scale for the first time last year and are likely to be more prominent in this year's spraying programme.

The chemical industry is taking an increasing interest in the production of farm chemicals. By its recent decision to set up a plant to produce parathion, Monsanto Chemicals is entering the British agricultural market. ICI's subsidiary, Plant Protection, is one of the largest producers of parathion; it was intending to market a systemic insecticide this spring but it is now uncertain whether the chemical will be in production. Pest Control also produces parathion, and is the only firm at present making a systemic form of insecticide. This company has developed a considerably less toxic systemic insecticide which is intended for normal retail sale; by tacit agreement among the producers, none of the dangerous chemicals are sold retail. Since this chemical is less persistent than the highly toxic version, it will have the less interest for commercial growers and for big farmers except for use shortly before crops are gathered. Shell Chemicals is probably the only large undertaking in the insecticide field that is not making parathion.

There is a useful export trade in farm chemicals to Europe and to African territories where they are used for the control of crop diseases spread by insects. For such purposes, the systemic insecticides seem to be particularly promising and they can be applied in ways that avoid the high cost of spraying. It now appears that this type of insecticide is just as effective when it is added to the irrigation water and absorbed through the plant roots. Shortages of raw materials do not threaten the development of these phosphorous compounds, but they may well affect the output of certain chemicals based on sulphur and copper during the course of this year. Production of benzene hexachloride, which has been developed by Plant Protection and is used against wire-worm, may also be affected by the shortage of sulphuric acid; so will the output of DDT.

The safety measures suggested by the Ministry for using these chemicals may seem elaborate and irksome, but it is entirely right to take their hazards seriously. Consideration might at the same time be given to safeguards to secure that crops treated by these dangerous new chemicals are marketed in a safe condition. Their main feature is their great persistence in the substance of the plant, and risks could arise if a treated crop were marketed before the poisonous residues in the plants had been reduced to a safe level.

Shorter Notes

Mr John Wilgress, the present Canadian High Commissioner in London, who has been one of the principal foster parents of both ITO and GATT for the last four years, delivered a funeral oration on ITO at a lunch given by the British National Committee of the International Chamber of Commerce this week. He recalled that even in the days of the Geneva conference three years ago it was difficult to instil a sense of urgency into discussions on the ITO charter, which was the product of a compromise between United States free trade ideology, the protective instincts of developing countries, and the views of advocates of more positive planning. The GATT, by concentrating on upholding a code of commercial principles and leaving such things as development and commodity problems to outside bodies, had good hopes of proving to be one of the most useful and enduring of the new international organisations.

*

The International Monetary Fund has announced the establishment of an initial par value for the Pakistan rupee at 3.30852 rupees to the US dollar, thus endorsing the Pakistan Government's eighteen month old decision to maintain the dollar value of its rupee at the level ruling before September, 1949.

I SEE ENGLAND

not dispirited, not weak, but well remembering that she has seen dark days before; indeed with a kind of instinct that she sees a little better on a cloudy day, and that in storm of battle and calamity she has a secret vigour and a pulse-like cannon. I see her in old age not decrepit but young and still caring to believe in her power of endurance and expansion, with strength still equal to the time, still wise to entertain and swift to execute the policy which the heart and mind of mankind require at the present time.

EMERSON (1856)

WHEN EMERSON wrote this wise appreciation of England, Marshalls were eight years old. In Gainsborough the first generation of Marshall craftsmen lived through the days of the Crimean war and the Indian Mutiny. Their sons, grandsons, and great-grandsons were contemporaries of the Boer war and the first and second World Wars. Each one of these three or four generations saw "a little better on a cloudy day" and they also knew in their hearts that it is faith more than fear which has contributed to progress throughout the centuries.

Today in 1951, we in the Marshall Organisation fervently uphold this view. We know that penicillin has saved more lives than the atom bomb has destroyed. And we—in common with our fellow countrymen—face the future with that faith which will enable us to do our duty cheerfully and with confidence.

THE MARSHALL ORGANISATION

Gainsborough · Leeds

Company Notes

International Nickel.—The report of International Nickel for 1950 fittingly commemorates the death of Mr Robert C. Stanley last month. "It was his vision and courage and capacity for accomplishment which raised the nickel enterprise to its present position in the world of industry." This is indeed a just observation on the work of International Nickel's greatest architect.

The company's progress in 1950 is to be measured by record deliveries of nickel in all forms for any peacetime year, and deliveries of special rolling mill products have also established a new record. Deliveries of nickel in all forms rose from 209.3 million lbs. to 256.4 million lbs., but there was a fall in deliveries of refined copper from 221.1 million lbs. to 212.9 million lbs. Operating earnings rose from \$60,609,692 to \$86,980,227, while earnings per common share, on which the dividend of \$2 per share is maintained, increased from \$2.08 to \$3.21. This was accomplished in a year of rising costs; wages were increased twice during the year so that the average weekly pay, although hours of work have been reduced, is more than double the average paid in prewar years. In order to compensate for the greater burden of costs of all kinds, the price of electrolytic copper was raised to stand at 50½ cents per pound at the end of the year. Although supply costs per unit of nickel have risen by 82 per cent above prewar levels, the price has been increased by 46 per cent, compared with a rise in the price of copper of 120.5 per cent.

Consolidated earnings :—	1949	1950
Operating earnings	60,609,692	86,980,227
Total income	61,855,428	88,260,565
Taxation	17,975,014	27,597,615
Depreciation, depletion	8,195,037	8,963,374
Net earnings	35,685,377	52,699,576
Earnings per common share	2.08	3.21
Paid per common share	2.00	2.00
Common dividends	29,156,338	29,156,338
Earnings surplus	98,698,983	116,374,595
Cons. balance sheet analysis :—		
Fixed assets, less depreciation	134,535,289	144,255,321
Net current assets	137,413,855	150,329,694
Stocks	68,804,666	64,655,128
Cash	25,697,060	27,537,490
Capital surplus	60,606,500	60,606,500
Earnings surplus	98,698,983	116,374,595
Common stock	60,766,771	60,766,771

Common shares at \$73½ yield 4½% per cent.

The company's first responsibility is to complete the programme of expansion of underground mining with all speed and without interruption to the company's current production of nickel. The programme will provide a capacity for hoisting more than 13 million short tons of ore annually. Surface ores will soon be mined out and in anticipation of this fundamental physical change the company embarked more than ten years ago on the enlargement of underground workings and the conversion of metallurgical processes. The programme has absorbed the greater part of \$100 million of capital expenditure in the last ten years; during 1950, capital expenditure amounted to nearly \$18.7 million, of which \$13.4 million was spent on the programme for the expansion of the output of nickel from underground operations, and in 1951 capital expenditure is estimated at \$20 million, the bulk of which will be devoted to the same purposes. In 1950, the mining of underground ores was expanded from 5,000,000 to 5,700,000 short tons, while ore mined from open pits fell from 4,900,000 to 4,100,000 short tons, while the deepening and expansion of existing mines and the sinking of new shafts continued apace.

The rearmament drive has resulted in a general dislocation of commercial markets for nickel and copper, but while rearmament continues, "there will be a need for all the nickel and other metals" which the company are able to produce.

Monsanto Chemicals.—At the end of 1949, some 60 per cent of the manufacturing capacity of the newly constructed Newport factory of Monsanto Chemicals was in production and it was expected that the rest of the company's new projects would be largely completed in 1950. Without doubt the bringing into production of the bulk of this major programme of capital development has played an important part in the striking advance in Monsanto's group trading profits from £959,127 to £1,685,897. The rise in profits and turnover may also have been further assisted by the slackening of the pressure of American competition in the export markets which the chairman noted immediately after devaluation in the last quarter of 1949. It would not be surprising if this factor was of even greater importance throughout 1950 despite the corollary that devaluation increased the group's costs.

Consolidated earnings :—	1949	1950
Trading profit	959,127	1,685,897
Total profit	963,768	1,686,478
Taxation	377,139	669,124
Depreciation, obsolescence	233,664	364,712
Group earnings for ord. stock	264,446	541,240
Ord. divs.	222,750	272,250
Added to c/f	41,696	268,990

Ord. ordinary stock at 61s. 3d. yield 4½% per cent.

Monsanto has been prepared to pass on to equity shareholders an adequate return for the risks that they undertook in financing this extensive capital development scheme. The ordinary dividend has now been raised from 45 to 55 per cent, an increase that is comfortably covered by a considerable improvement in distributable earnings. In addition, there is the satisfactory news that the Treasury has consented to the two-for-one issue of 7,200,000 5s. ordinary shares, credited as fully paid from the share premium account, which totalled £2,414,000 at the end of 1949. This will raise the issued ordinary capital to £2,700,000 and with the proposed issue of £1,500,000 £1 cumulative preference shares the issued capital will be brought more in line with the real capital employed by Monsanto Chemicals. A broader capital basis to support the expansion of the company's operations that is now gathering momentum seems in every way desirable.

Courage and Company.—The past year was one of disappointment for the brewing industry. Apart from those breweries having a considerable share in the manufacture of bottle beers, profits of most brewery companies fell, and in some cases appreciably. This is hardly surprising in view of the decline in consumption of beer. In 1946, consumption per month averaged 2,610,000 bulk barrels; by 1949 monthly consumption had fallen to 2,260,000 bulk barrels, and in 1950 the average consumption each month was no higher than 2,170,000 bulk barrels. The market for brewery shares was further depressed by the figure for production in January, 1951, of 1,580,000 bulk barrels. Courage last year did not escape the unhappy experience of its fellows; group trading profits have fallen from £1,068,419 to £987,709 and the ordinary dividend has been reduced from 20 to 18 per cent. The fall in beer consumption was particularly marked in the south of England, where the company's interests lie. The chairman emphasised in his review last year that only a substantial reduction in the rate of beer duty could possibly mend matters. This seems to be a remote possibility for the coming budget and the comparatively high yield of 4½% reflects these uncertainties.

EXCHEQUER RETURNS

For the week ended March 17, 1951, total ordinary revenue was £67,701,000, against ordinary expenditure of £77,008,000 and issues to sinking funds nil. Thus, including sinking fund allocations of £19,347,000, the surplus accrued since April 1st is £770,393,000, compared with £648,211,000 for the corresponding period a year ago.

IMPERIAL TOBACCO COMPANY

NEED FOR SOUND AND ADEQUATE STOCKS

EFFORTS TO COUNTER UPWARD PRICE TRENDS

LARGER PURCHASES FROM NON-DOLLAR SOURCES

HIGH TAXATION: AN ENCOURAGEMENT TO INFLATION

SIR ROBERT SINCLAIR REVIEWS PROBLEMS FACING THE INDUSTRY

The forty-ninth annual general meeting of the Imperial Tobacco Company (of Great Britain and Ireland), Limited, was held on March 20th in Bristol.

Sir Robert Sinclair, K.C.B., K.B.E., the chairman, who presided, said: You will observe from paragraph 8 of the directors' report that since the last annual general meeting, Mr W. S. Thorn has resigned from the board, and Mr C. H. Clements and the Honourable F. A. H. Wills have been appointed directors. Mr Thorn had a long record of active service with the company—41 years—and for 12 years he has been a member of the board. In expressing on behalf of the board our regret that considerations of health impelled him to tender his resignation, I would like to acknowledge our warm appreciation of the services he has rendered to the company, and on your behalf to extend to him the best wishes of all present.

COMMENTS ON THE ACCOUNTS

Turning to the accounts—I would propose to deal now with what I believe to be the main features, and to amplify the necessarily somewhat restricted comment in the directors' report. The figures which I will quote are those relating to the holding company. As you will have seen the difference between them and the consolidated figures is relatively slight.

The first item to which I would refer is that of stock-in-trade, which shows an increase of some £16,500,000, as compared with the previous year. Stock-in-trade consists mainly of unmanufactured leaf in bond and in transit, leaf in course of manufacture and stocks of our manufactured goods and general materials and stores. The value of the stocks of general materials and stores does not differ significantly from the figure last year. There is a substantial increase in the value of our duty-paid stocks. As I indicated a year ago, the level of our factory and depot stocks at October 31, 1949, was on the low side, and the reason for the increase is that during the year under review we were able to build up these stocks to a satisfactory level at October 31, 1950. The greater part, however, of the total increase in value of our stock-in-trade is due to the increase in value of stocks of unmanufactured leaf. The total quantity is slightly greater, the increase in holdings of non-dollar leaf having exceeded the decrease in those of dollar leaf. The average price, however, is substantially higher, partly on account of the increase in leaf prices in all markets, but mainly on account of the higher sterling cost of dollar tobacco by reason of devaluation.

Having regard to the world situation, it would perhaps have been surprising if the upward trend of prices on the tobacco markets had not persisted throughout 1950. While I think it may give some cause for concern that the price increase in many sterling area markets has been as high as it has been, we must recognize that, to some extent, that has

been a consequence of a world shortage of suitable leaf tobacco. Although we can never forget that tobacco is a crop peculiarly susceptible to climatic risks, there is every reason to believe that over the years the general production position will gradually improve so as adequately to meet the demand.

DOLLAR LIMITATIONS

I should, however, make it clear that our total leaf stocks are still very little better than a bare working minimum. Our purchases from the dollar area are, of course, limited by the availability of dollars; and we have been purchasing all the suitable tobacco we can obtain from non-dollar sources. I look forward to the time when, even at the expense of further increasing our financial commitments, we can increase our stocks again and therefore be more independent of the vagaries of climate and other factors which may affect the value (in terms of quantity and quality) obtained for our expenditure on the tobacco markets.

At this meeting a year ago I pointed out that devaluation must have a considerable effect both on our capital requirements and on our manufacturing costs. Devaluation increased the sterling cost of dollar tobacco by some 40 per cent. on leaf purchased in the United States and 30 per cent. on leaf purchased in Canada. This clearly called for exceptional measures and for some special provision for the increase in replacement costs which is thereby incurred. I think the accounts show that what we have done is consistent with prudent management. Out of profits in the previous year we set aside, after tax, £1,500,000 to leaf replacement reserve, so making a contribution towards the additional capital we should in due course require. During this last year, as is explained in the report and in the notes on the accounts before you, the cost of all dollar tobacco cleared from bond for manufacture has been converted to sterling at post-devaluation rates of exchange. A considerable portion of that tobacco was purchased before devaluation, and what we have done is to exclude from normal trading profit the difference represented by the effect of devaluation on the replacement price of such tobacco. As is stated in the report, however, various manufacturing economies have been effected, and, in the result, we have been able, at the expense of showing a reduction in the balance of net profit of £1,127,000, to provide in our leaf replacement reserve an additional sum of just over £3,000,000 and to go a considerable way towards meeting the full eventual increase in our manufacturing costs in so far as that increase results from devaluation. The overcoming of our difficulties to this extent has been assisted by a somewhat larger volume of sales and by an increase in the proportion of non-dollar tobacco in our operations; but it would be only right that I should pay a tribute to our manufacturing branches, who have shown great skill and adaptability in dealing with the many and varied manufacturing problems brought about in these last few years by shortage of leaf

supplies on the one hand and continually rising costs on the other.

So far, with the exception of cigars and some of our pipe tobaccos, we have avoided any increase in prices to the public. The increase in the prices of certain pipe tobaccos came into effect just after the conclusion of the year under review. At the present time, when the cost of living is so high and tending to rise, and when the rate of tobacco duty is at its present fantastically high level, we conceive it to be important, not only in the national interest, but also in the interest of the tobacco trade itself, to avoid as far as we can increasing the prices of our products to the public—and, where that is impossible, to keep the increases to the minimum.

CAPITAL AND RESERVES

As stockholders will know, your directors have been for a long time concerned at the company's increasing dependence on short-term finance. During the year we issued and offered to our stockholders £20 million 4 per cent. unsecured loan stock, 1960-1970. The issue was subscribed many times over. In such cases the administrative work involved tends to increase in proportion to the popularity of the issue, and I would here like to offer a word of warm appreciation to the National Provincial Bank and our own registration department, who together handled the work so efficiently and so well. Only a quarter of the new money was receivable by October 31st, so that, if other things were to remain equal, we might look forward to an appreciable reduction in our short-term borrowings at the end of the current year. With, however, devaluation having its full effect in the value of our leaf stocks and with other rises in costs, our capital requirements are likely still further to increase. This year's allocation of £3,000,000 to leaf replacement reserve, to which I have already referred, certainly helps to alleviate this position. Nevertheless, even if sterling were revalued so that that reserve was not required for the purpose for which it has been provided, it is quite clear that it would still be needed in the business as working capital.

TAXATION

The charge for United Kingdom taxation in our accounts this year is the very large figure of £12,500,000. This provides an outstanding example of the disability which industry suffers today by reason of the profits tax and the high rate of income tax on sums put to reserve. A year ago I elaborated on the dangers to industry from this aspect of present taxation. Today I would like to say how strongly I support the representations that have been and are being made against the high rate of taxation on sums put to reserve, and, in particular, against the application of profits tax to such provisions.

It is only prudent for a manufacturing business to provide against the charge of increased replacement costs. To make such provision subject to income tax and profits tax so that more than 10s. in the £ is taken away is not only a discouragement to prudence but a positive encouragement to inflation. There is no need to elaborate on the danger of that to our national economy today. I venture to think, however, that it is not sufficiently widely appreciated that in a period of inflation and under present taxation it is, in all cases, difficult, and in some impossible, to make adequate provision from a firm's own resources for increased replacement costs. Moreover, since it is only natural that responsible management should endeavour to make such provision as far as possible, the effect of the taxation is to accelerate or exaggerate raising of prices or otherwise increase so-called profits to a greater extent than would, under a sounder system of taxation, be necessary. In short, high taxation of sums put to reserve has the effect of a levy on

industrial capital; it adds to inflationary pressure at home; and it reduces our competitive power abroad.

I will have something to say later about current rates of tobacco duty.

DIVIDEND

After having set aside £578,000 to write off the discount and expenses of issue of the loan stock, a dividend at the same rate as last year on the ordinary stock is recommended. It will be generally recognised that the current rate of distribution on our ordinary stock, although it appears high in relation to the nominal capital, is yet a modest figure in relation to the capital employed in the business and to our turnover. A total distribution of some £7,000,000, of which a not inconsiderable part is derived from investments, is certainly not large in relation either to working capital of at least £150 million, as measured by book values, or to a turnover of over £500 million. And here let me say that I am sorry that it is not yet possible to recommend even a partial restoration of the cut in dividend sustained a few years ago. We must all realise how heavily taxation presses on the individual in these times and how hardly hit, relatively to other members of the community, have been those whose income is mainly derived from dividends which for many people represent the interest on hard-earned savings. But if we are to make reasonable provision, as your directors feel we must do, for increased costs of replacement, and if we are adequately to conserve our resources and maintain the considerable financial strength of this company in these uncertain times, an increase in the rate of ordinary dividend is not possible this year. I hope, indeed, that stockholders may feel that, in the light of the difficulties with which we have had to contend, the results of the year's operations are by no means unsatisfactory.

GIFT TO STAFF AND WORKPEOPLE

As will be seen from the report, the directors have decided, in accordance with our long-standing practice, to make a gift to staff and workpeople over and above their ordinary salary or wage. The rate of the gift is the same as last year—namely, 15 per cent. of the total salary or wage received from the company during the 12 months ended October 31, 1950. As in past years the directors reserve to themselves a discretion to grant or withhold a share in the gift in any case that may appear to them to require exceptional treatment. The gift is made in recognition of good and loyal service, and I am happy to say that our relationships with our employees are excellent. We have a long tradition in this company of good team work, and those responsible for its management will continue to do everything in their power to maintain that tradition. This gift, particularly when regard is had to the fact that it is paid on salaries and wages which have been substantially increased, may seem very generous recognition. I believe it is generous, but I also believe that the employees themselves so regard it and will continue to make their contribution to that steady increase in productivity which is one of the greatest national needs of our times. It is interesting to record that about one quarter of the company's employees in the British Isles have completed 25 years' service with the company. That, I believe, is an indication of good relationships, good conditions and good service.

THE OUTLOOK

Anything that can be said about future prospects must be conditioned by circumstances over which we, as a company, have no control. The clear necessity for this country to play its full part in defence pre-

parations, so as to reduce the risk of further aggression and avert war, undoubtedly retards our country's economic recovery. As an important unit in the national economy we, as a company, must directly or indirectly feel the effects of that situation. It would be surprising if a number of our costs did not further increase but we have tried to anticipate, as far as we may, the impact of additional expense. There is clear evidence that the level of prices of tobacco goods—a level which is, of course, mainly determined by the very high rate of duty—has been, and is increasingly, affecting demand; and in the aggregate the shortage of supplies in relation to demand is very much less than it was. Since, however, the brands of your company's manufacture stand high in the public favour, and are in every way fully competitive, I see no reason why our trade should not be fully maintained in the current year, provided the duty is not increased.

If it were possible in these critical days to take a long view, there could be no shadow of doubt that the long term interests of this industry and of the revenue would be well served by an immediate reduction in duty that would make possible an appreciable reduction in price to the public. And I feel I must emphatically express that conviction even although what the Chancellor has said about the inevitable cost of defence could hardly be regarded as encouraging the hope that a reduction might be made this year. As I have already indicated, we, for our part, will do our best to avoid any general increase in our prices. But I could not, nor indeed would you expect me to, give any firm assurance on this point—partly because of the considerations I have already mentioned and also because the prospective circumstances and conditions are extremely difficult to gauge.

Nevertheless, I can, without, I am sure, exciting undue optimism, assert my belief in the soundness and strength of this company and in its ability to surmount the difficulties that can be foreseen. Indeed, I know of no reason why the results for the current year should be any less favourable than those that are now before you.

The report and accounts were unanimously adopted and the dividend recommendations were approved.

AUDITORS

The chairman continued: That concludes the part of our proceedings directly related to the accounts, and before passing on to other matters I would like to call your attention to the fact that, as recorded in the directors' report, Messrs Deloitte, Plender, Griffiths and Company have indicated their willingness to continue as auditors and they will therefore automatically be reappointed auditors of the company for the current year in accordance with the provisions of Section 159 of the Companies Act, 1948. It is pleasing to recall that Messrs. Deloitte, Plender Griffiths and Company have been associated with this company since its formation in 1901—and we are very glad to see Mr Godfrey, one of the senior partners, here today.

RE-ELECTION OF DIRECTORS

Ladies and gentlemen,—I would like to have the privilege of proposing a resolution under the heading of "Re-election of Directors," which reads as follows:—

"That the Rt. Hon. Lord Dulverton of Batsford, who is aged 70, having been born on March 28, 1880, and who is retiring from the board by rotation under the Articles of Association, be and is hereby re-elected a director of the company."

You will, no doubt, recall that two years ago I informed stockholders that we have not seen fit to take powers under our Articles to appoint or re-elect directors over the age of 70 without approval by the company in

general meeting. I am sure there is no need for me to elaborate in any detail the great contribution which Lord Dulverton made to the growth and prosperity of this company. He was chairman of the company—and, I may say, a very active chairman—for 22 years. Since his retirement in the spring of 1947 he has been president of the company. The wise guidance he gave to our affairs and his great knowledge of our business provide a background against which his continued attendance at our meetings and practical interest in our affairs are of inestimable value. I am sure that you all share with me and with all his colleagues a sense of very real pleasure that he is willing to continue as a member of the board.

I have the greatest personal pleasure in proposing this resolution, and I will ask the deputy chairman to second its proposition.

Mr G. W. Anson, deputy chairman, seconded the motion, which was carried with acclamation.

The Rt. Hon. Lord Dulverton, in course of acknowledgment, said: Mr Chairman, ladies and gentlemen,—It is very pleasing to me to find myself once again in these familiar surroundings, and to recognise, as I do, many old friends among this audience. I would like to thank you, Sir, with all sincerity for the generous references which you and the deputy chairman have made to my past services for this company, of which we are all so proud and to which we are so devoted. I am deeply grateful to you, ladies and gentlemen, for having accepted his resolution for my re-election.

VOTE OF THANKS

Proposing a vote of thanks to the chairman, Mr B. H. Harrison said that it was indeed a privilege and a pleasure for him to propose this motion. It was four years since Sir Robert had become their chairman, and he had always held that very important office with conspicuous success, following his predecessor, Lord Dulverton, whom the meeting had so sensibly re-elected to the board.

In succeeding to the great traditions of the past, Sir Robert had not only produced the very highest personal qualities needed for that very responsible position, but had also displayed exceptional ability and an almost unlimited capacity for hard and sustained work. It was indeed a further tribute to Sir Robert's ability and capacity that in spite of the many and varied calls on his time he had always managed to pay visits to the manufacturing branches and subsidiary companies, which was appreciated by all sections and grades of employees. This personal touch was perhaps one of the most important of his many attributes.

The proposer concluded by expressing the wish that members would have the good fortune to retain Sir Robert at the head of their company for many years to come.

The motion was seconded by Mr H. S. Burn and carried with acclamation.

In a brief acknowledgement the Chairman thanked the meeting for their reception of the motion, and said that, proud as he was to be the leader of a magnificent team, he regarded the resolution essentially as a tribute to those who share with him the responsibility for directing the company's affairs.

Orders and copy for the insertion of Company Meeting reports must reach this office not later than Wednesday of each week and should be addressed to:—

CO-OPERATIVE INSURANCE SOCIETY LTD.

MR ANEURIN DAVIES ON THE YEAR'S PROGRESS

At the eighty-third annual general meeting of the C.I.S., held at Manchester on Wednesday, March 21st, Mr Aneurin Davies, chairman, said:—

In considering the nature of my comments to the shareholders on the eighty-third annual report, statement of accounts and balance sheet, I am faced with the problem of keeping my statement to a reasonable length and yet at the same time giving an adequate review of the multifarious activities which during 1950 enabled us to increase our premium income by £2,313,512 to £25,980,149, and our funds by £9,830,790 to £108,050,413. You will see that during the year our premium income passed £25,000,000 and our funds passed £100,000,000.

In order to give service to the co-operators and many others who regard the C.I.S. as their insurance society, we have a network of 220 branch and district offices throughout the United Kingdom and Northern Ireland, and a total staff (including 7,360 full-time agents) of over 11,800.

We are proud of the progress we have made in recent years because it has been controlled development. The essential need for economical management and for giving our policyholders prompt and efficient service has been kept always to the fore since otherwise we should quickly lose the advantages which we derive from our association with the Co-operative movement and our co-operative methods of trading.

It has never been the practice for the chairman of the C.I.S. to give his views on matters of national economics or politics. You will appreciate, however, that our regular contact, through our staff, with a large proportion of the population gives us exceptional opportunities for discerning economic tendencies, and long before it was publicly recognised, we were aware that for various reasons, increasing numbers of people were finding it more difficult to save.

This eventually became apparent through the heavy withdrawals which took place in Saving Certificates and from other savings organisations.

Notwithstanding this trend, however, the C.I.S. policyholders as a body have continued to increase their savings, and in my opinion this emphasises once again the importance of the difference between the results achieved by voluntary saving and the saving by people who have contracted to make regular payments, particularly where facilities are provided by regular visits from a collector.

In view of the repeated emphasis by responsible Ministers on the national duty to save and avoid all forms of expenditure which are not absolutely essential, there can be no doubt whatever that the C.I.S. and other similar organisations are playing a most important part in the national life today. Apart from this aspect of our business, we know that saving through life assurance gives protection which no other form of saving can provide.

INVESTMENTS

The foundation of our investment portfolio will always be British Government Stocks, and it will be observed that our holdings of British Government and British Government Guaranteed Securities now total £57,129,918 and form 52.9 per cent. of our assets, which is a slightly smaller proportion than at the end of 1949. In order to raise the average yield on our securities, we have also invested in first-class debentures and in preference and ordinary shares.

Once again, one of our main and more

remunerative avenues for new investment has been our House Purchase Scheme. Notwithstanding a very conservative selection of properties on which to grant loans, gross advances during 1950 amounted to nearly £5,500,000. After allowing for repayments, the net increase in advances was £3,861,000. The amount at present outstanding under our mortgages now totals £18,793,304, secured on 31,934 properties, so that the average mortgage is only £589. Our losses continue to be insignificant.

Our constant aim has been to increase the interest earnings on our funds and we shall continue to select our investments with this in mind, never forgetting the necessity for maintaining the security of those funds.

ADMINISTRATIVE EXPENSES

Despite the continued increase in the costs of all materials which we use, and in overhead expenses generally, I am very happy to record once again that our overall expense and commission ratio has been reduced. This result has been achieved only by a most careful watch on all items of expenditure. Unlike most trading concerns, we are unable to pass on increased charges to the majority of our existing policyholders, and even if we were to increase the rate of premium for new business, it would not be possible in that way to meet the additional charges on existing business.

The class of business in which the expense ratio receives most publicity is, of course, the industrial life section. Our overall expense ratio in that section in 1950 was 28.47 per cent., as against 29.13 per cent. in 1949 and 30.25 per cent. in 1948.

Our industrial life premium income increased by £972,097 to £14,906,533 in 1950, so that you will appreciate that a reduction of 0.66 per cent. in the expense ratio represents a very substantial saving.

LIFE DEPARTMENT

In the ordinary section the new sums assured completed amounted to £20,700,000, and this is the fourth consecutive year in which our new sums assured have exceeded £20,000,000. Very few other offices (including only one industrial/ordinary office) completed more new business during 1950 than the C.I.S.

We have already announced an increase from 24s. per cent. to 28s. per cent. in the rate of bonus on immediate profit policies in the ordinary section.

In the industrial section the new sums assured amounted to nearly £34,000,000, and I am glad to say that we were able to maintain our prewar rate of bonus in this section.

The amount of profit to be distributed to our life policyholders this year as a result of our operations in 1950 will amount to over £2,000,000 divided almost equally between the ordinary and industrial section policyholders.

In addition to this, we are again returning to collectively assured societies practically the whole of their credit balances, the proportion this year being 99.4 per cent., for which the sum of £192,962 will be required.

MOTOR DEPARTMENT

The premium income of this department increased by the very large sum of £429,651 and reached a new record total of £2,325,726.

However, this expansion of business combined with increased motoring as a result of the cessation of petrol rationing resulted in

a 50 per cent. increase in the number of claims reported during the second half of the year as compared with the first half.

The continued high cost of repairs to motor vehicles, and the heavy damages awarded for personal injuries, made it a difficult year for motor insurance. It is gratifying to report, however, that as a result of careful underwriting the account shows a surplus of £65,352. It should not be overlooked that this has been achieved notwithstanding the fact that our premiums for commercial vehicles and motor cycles still remain at prewar levels. Whether we can maintain these low rates is very doubtful, but there can be no doubt that during 1950 we provided the motoring public with a first-class insurance service at a minimum cost.

FIRE DEPARTMENT

The steady progress of the Fire Department has been maintained, net premiums for the year amounting to £1,152,307, representing an increase of £131,691 over 1949.

Fire waste in Great Britain continues to cause anxiety and there have been many serious fires in which the Society has been concerned. The number of claims actually paid during the year was 50,163, representing an increase of 6,727 over 1949.

ACCIDENT DEPARTMENT

I am able to report an increase in the premium income in the Personal Accident account to £113,653 despite the fact that during the year substantial reductions were made in the premiums charged to retail Co-operative Societies for Collective Personal Accident policies for members of their management and other committees. These reductions necessarily affected the total premium income.

The general insurance account shows a premium income of £878,542, an increase of more than £80,000 over the corresponding figure for 1949.

When the Industrial Injuries Insurance Scheme came into operation in July, 1948, employers still required to cover their liabilities to their employees at common law, and it was necessary to prepare schedules of premiums for covering this risk, although there was no means of ascertaining what the claims were likely to cost. In many cases claims are not settled until several years after an accident, so that a considerable time must elapse before the claims experience can be related to premiums for any particular year. It is too early to say with any certainty whether the premium rates fixed in 1948 will prove adequate, but from the experience we have had up to now, it seems likely that the rates at present being charged will need to be increased.

As you know, burglary insurance has been difficult for some years. I am pleased to report, however, that the position seems to be improving, and if this improvement continues, we hope to be able to make some reduction in the premium rates within the next year or two.

CONCLUSION

1950 was a year of considerable anxiety to the nation as a whole, and there is every prospect that the next few years will be even more difficult. Our society, which is so intimately connected with the lives of a large section of the public, cannot hope to be unaffected by the disturbance to our national life which will be caused by the rearmament programme and the increased burden of taxation which must inevitably follow. Nevertheless, there is no doubt that insurance in all the forms which we undertake will still be vitally necessary, and I look forward with confidence to further progress by our great insurance society.

The report and accounts were adopted

THE BOWATER ORGANISATION

SIR ERIC VANSITTART BOWATER'S REVIEW OF THE AFFAIRS OF

THE BOWATER PAPER CORPORATION LIMITED AND ITS SUBSIDIARY COMPANIES

The annual general meeting of The Bowater Paper Corporation Limited was held on March 15th at Caxton Hall, Westminster, London, S.W., when the chairman, Sir Eric Vansittart Bowater, who presided, said:

Ladies and gentlemen, I am confident that, having regard to the wealth of information relating to the corporation and its subsidiaries contained in the booklet of accounts that has been sent to all of you, it would not be your wish that I occupy your time today by delving into a mass of detailed figures.

In my opening remarks at our last meeting I said "there lies before us a period of transition which will not be without its difficulties" and, despite what I believe you will regard as the satisfactory results that I am indeed proud to be able to lay before you today, the period through which we have passed and through which we are still passing has been and is still beset with many difficulties. Referring to the period of transition which then faced us, I used the phrase that it would be "a testing time for all concerned," and this in fact has proved to be the case, while the prevailing conditions and circumstances under which we conduct our affairs today are such that I am not only unwilling but indeed quite unable to give you any reasonable accurate or reliable opinion in regard to the future.

The marked improvement in the corporation's earnings for the year under review was attributable in a large measure to the full operation of the paper mills of the operating subsidiaries in the United Kingdom. For the first time for a decade those mills operated to capacity, whereas it will be within your recollection that in the two previous years they had operated at approximately 67 per cent. and 40 per cent. respectively of their capacity; this improvement in operation, of course, resulted in a higher degree of operating efficiency and a much wider spread for overhead expenses. Moreover, the earnings of our important Canadian subsidiary showed a substantial improvement over those for the previous year, as did also the revenues for our converting subsidiaries, grouped under Associated Bowater Industries.

REVIEW OF CONSOLIDATED ACCOUNTS

The consolidated profits for the year were some £1,700,000 higher than for the previous year, and amounted to £5,395,488. As in former years the larger part of these earnings was attributable to our overseas companies, including, of course, our American, Australian and South African companies, but the margin between home and overseas earnings has appreciably narrowed and the contribution made by our many companies in the United Kingdom was substantially greater on this occasion than has been the case for many years past. Here I think you would like to know, as may also those others who take so keen an interest in this matter, that only about 20 per cent. of the total earnings of the organisation were derived from the manufacture of newsprint in the United Kingdom, the remainder of those earnings being attributable to the manufacture of a wide range of other grades of paper and the many ancillary operations arising thereout and, of course, to our overseas companies.

Of our total earnings of £5,395,488, depreciation has required £1,444,888, the increase of more than half a million pounds over the previous year's allocation in this

regard being mainly attributable to our Canadian subsidiary whose provision for depreciation has been increased by the directors of that company to the full amount allowable under Canadian taxation laws. After deducting depreciation and interest on the loan capital of overseas subsidiary companies, an amount of no less than £1,890,000 for taxation, and the dividends on the Preference stocks of subsidiary companies publicly held, the net profits then remaining amounted to £1,628,028. By far the larger part of this amount, namely £1,084,644, has been retained by the subsidiary companies and applied by them in the manner shown in the consolidated statement of profit and loss, only the balance of £543,384 being brought into the accounts of the corporation as representing its net profits for the year.

ORDINARY DIVIDEND

As is our custom, we gave the fullest and most careful consideration to the rate of dividend that we should recommend be paid on the Ordinary stock and, having taken into account all the factors involved, reached the conclusion that on this occasion some modest increase over the amount distributed for the previous year was fully justified. We are, therefore, recommending to you that the dividend to be paid on the Ordinary capital should be at the rate of 15 per cent.—an increase of 2½ per cent. over that paid for the previous year—with a corresponding participating dividend of 2½ per cent. on the Seven and a-Half per Cent. Cumulative Participating Preference stock.

In arriving at our conclusions in regard to the amount that we would recommend to you for distribution on the Ordinary and Participating Preference capital of the corporation, we had to keep in the forefront of our minds the very substantial sums now required in connection with the general finances of the corporation's subsidiaries, particularly in relation to the great volume of raw materials necessary for their operation and the high level of prices now reached for those materials; then, too, we had to take into account the funds that are and will be necessary for the proper maintenance and development of our many plants in this country and overseas.

INCREASED CAPITAL AND ASSETS

The capital of the corporation was increased during the year by the issue of 300,000 Ordinary and 300,000 Seven and a-Half per Cent. Participating Preference shares which were offered in September to existing stockholders of those classes at 37s. 6d. and 30s. a share respectively. These issues were, I am gratified to say, readily taken up and the proceeds provided approximately £1,000,000 of additional capital, which is, of course, reflected in the item of cash, which at the date of the accounts amounted to £4,207,599, in addition to which £950,000 was held in tax reserve certificates.

The consolidated assets of the corporation and its subsidiaries have increased to £38,000,000, which amount is calculated after deducting approximately £11,600,000 in respect of depreciation. Reserves, you will have noted, now amount to nearly £7,100,000, while current assets have increased by over £3,750,000 and now exceed current liabilities by some £12,750,000.

During the year we decided that the time had arrived when the corporation's investments in its subsidiaries should be valued on a more realistic basis than heretofore. Accordingly, such investments have now been valued by your directors, in consultation with their professional advisers, on the basis of the net tangible assets of the respective companies exclusive of the reserves and undistributed profits of those companies that have arisen since the corporation acquired its interests in them. As a result of this the value of our investments was increased by £740,276, and you will have noted that a corresponding amount now appears in that balance sheet as a capital reserve.

The published accounts of all subsidiaries which have been made available to you, and in which the corporation owns 100 per cent. of the Ordinary or Common stock, as the case may be, show a strong and highly satisfactory liquid position and in every case they have been able to increase the amounts they have distributed either by means of an increase in the rate of dividend or cash bonus paid, or, as in the case of the Canadian subsidiary, by maintaining the same rate of dividend on an increased capital.

DIVERSIFICATION AND DEVELOPMENT

Particularly gratifying are the results of Associated Bowater Industries, which, from the accounts of that company, you will have observed were more than double those of the previous year.

It is largely through the medium of Associated Bowater Industries that we are carrying out our policy of the diversification of our business. In this connection it has recently formed a new subsidiary, Bowaters Multiwall Sacks, Limited, to operate the factory now in course of erection for the manufacture of multiwall sacks, which is making good progress and which, it is hoped, will come into production in the early summer. However, the time now required for any form of building work and the installation of plant and machinery is much longer than in former times; as a result, the completion of the bleached straw pulp plant at our Sittingbourne mills and the extension of our wall-board factory adjacent to our Kemsley mills and the development that is being undertaken by the Bowater-Riegel Corporation have been delayed.

We acquired during the year the whole of the ordinary capital of The Irish Wallboard Company, Limited, which had then only recently commenced the production of wall-board at an entirely new and well-equipped factory at Athy in Eire. However, difficulties were subsequently encountered in regard to adequate supplies of straw—the raw material which the factory had been initially designed to consume, and these difficulties are now being surmounted by the adaptation of the plant to the use of either straw or wood.

THE OVERSEAS MILL COMPANIES

Our Scandinavian mills did not enjoy the same degree of prosperity for the year under review as for the preceding year. This may seem something of an anomaly having regard to the present inflated prices for the ground-wood pulp that they produce, but there was a period at the end of 1949 and during the early part of 1950 when prices for most pulps fell to uneconomic levels, and this, of course, adversely affected the trading results of our mills in Scandinavia for the past year. I think the position of those mills is possibly best described in the circumstances by the phrase I used last year—that they had a relatively satisfactory year's trading. In one respect they may be better situated than the ordinary run of pulp mills in that we are now again able and, of course, will continue at all times to take their entire production, thereby assuring to them a constant outlet at a fair market price.

The trading profit of the Canadian company for the year amounted to \$7,916,972, or nearly 2½ million dollars more than for the previous year.

You are by now all aware of the decision of the Supreme Court of Canada in regard to the Canadian company's tax status. Provision has been made in the accounts of that company for the year under review, as it will have to be in future years for its liability to Federal income tax, which on this occasion amounted to \$1,077,000.

It is important to remember in this connection that the profits the Canadian company distributes to your corporation, as the owners of the whole of its common stock, carry with them the right to the relief from United Kingdom taxation that is allowed by the Double Taxation Convention which exists between the United Kingdom and the Dominion of Canada.

Having regard to the company's new tax status, and the very substantial capital sums that have been expended upon its properties in recent times, the directors of that company decided that the annual amount provided for depreciation should be increased to \$1,828,000 and to make a special provision of a further one million dollars in respect of the year under review. After deducting the provision for depreciation and for taxation the net profits for the year amounted to \$2,977,710—to which must be added the balance of the earned surplus brought forward from last year that remained after the deduction therefrom of the amount of \$1,540,000 capitalised during the year, making an available balance of earned surplus of \$8,027,942.

The directors of the Canadian company again recommended the payment of a common dividend of 8 per cent. on the now increased capital and after providing for this dividend and for the dividends on the 4½ per cent. Cumulative Preference stock, the balance of earned surplus to be carried forward to next year's accounts amounted to \$6,942,242.

The continued satisfactory results of the Canadian company are reflected in a very marked improvement in its liquid position. Bank loans, which at September 30, 1949, had amounted to nearly \$8,300,000, have been entirely liquidated, and despite the inclusion of the provision that has become necessary for Federal taxation, current liabilities have been reduced and are now covered more than five and a half times over by current assets.

HIGH LEVEL OF OPERATIONS

Production of newsprint during the year was the highest recorded in our Canadian company's history. Orders on hand for both newsprint and sulphite pulp are today more than sufficient to ensure full production during the current year and, in respect of newsprint anyway, for many years to come. Similarly, subject to the necessary dollars being made available as they now have been in respect of the current year, a ready outlet should also be assured for the entire production of the export sulphite pulp mill.

The export of pulpwood in the form of logs to our mills in the United Kingdom has also been resumed, and in this connection I think you may be interested to learn that the planned cut of wood for all purposes for the current season has been raised to nearly 650,000 cords—which will be by far the greatest cut ever undertaken by our Canadian company and probably as great as, if not greater than, any other company has ever previously undertaken.

MODEST INCREASE IN U.S. NEWSPRINT PRICE

In September last the Canadian dollar was freed from control and allowed to reach its own level vis-à-vis the United States dollar. This resulted in the advantage that Canadian producers had enjoyed during the preceding twelve months, of what was in effect a premium on their sales to the United States, being substantially reduced overnight. The

modest increase in the price for newsprint for which they subsequently asked by way of recompense in this regard, and towards meeting their undoubtedly substantially increased production costs that had occurred during that period, was, I am satisfied, more than justified.

The increase in price asked by some of the leading Canadian newsprint manufacturing companies had been ten dollars a ton. But there was a great outcry from some of the publishers in the United States against this moderate price increase and subsequently it was reduced by four dollars, making the base price for newsprint 106 dollars delivered New York, at which level it still remains.

A Congressional Committee in the United States has been conducting an inquiry into the newsprint industry of North America and the suggestion has been made by that Committee that there has been deliberate curtailment, or holding down of production, by the Canadian newsprint industry, with the object of maintaining an artificially high price for its product. This contention will not, I think, hold water, for the Canadian newsprint industry in recent years has increased its productive capacity by no less an amount than 600,000 tons per annum.

True, as far as I am aware, only one new newsprint mill is presently projected in Canada, although several projects are said to have reached the "talking" stage. The reasons for this, I think, are plain. Firstly the high capital cost of constructing new plants—and today a two-machine unit, the usual unit of production in the industry, would in all probability cost not less than fifty million dollars, excluding any hydro-electric power development—and secondly the availability of raw materials at a cost which will ensure their economic operation, and this of course will depend on the price structure prevailing in the newsprint industry.

RAW MATERIALS ARE THERE

I have heard it suggested that there is a dearth of the raw materials required for the manufacture of newsprint, but that is a view I do not share. Provided the newsprint industry can be assured of a permanent economic price structure it is my belief that the necessary capital could be attracted into it and the much needed new mills constructed. The raw materials to feed them, in one form or another, would then also be forthcoming, as an assured and adequate price for newsprint would, in my opinion, enable sources of pulpwood supplies to be tapped which are at present regarded as too remote or too costly to develop.

I believe that the solution of the vexed problem of a supply of newsprint sufficient to meet all needs is largely, if not entirely, one of economics, and this fact will have to be recognised by publishers throughout the world if they desire to find a permanent solution to this problem.

If the growth of consumption of newsprint continues only at its present rate, a situation may well develop where even the present meagre supplies available to those publishers outside the dollar area will be still further curtailed. I am convinced that the long-term solution to this problem can only be found in the construction of more newsprint mills, but the necessary encouragement to implement this solution, as I see it, must stem from the publishers themselves.

As a result of the exceptionally wide publicity that in recent times has been given to the problem of an adequate supply of newsprint for the British Press, and for the Press of the Dominions and Colonies, you will, I am sure, be familiar with the gravity of the situation in this respect as it at present exists, and you may be interested to hear from me something of the contribution we have made, or are seeking to make, towards its solution.

INSTALLATION OF NEW NEWSPRINT MACHINE

I have told you of the contribution of our Canadian company in this respect, and here I would remind you that that company is one of the very few that since the war have installed an additional newsprint machine as distinct from speeding-up existing machines. In addition, during the year under review the mills of the Bowater Organisation in the United Kingdom produced upwards of a hundred thousand tons more newsprint than in the previous year. This, in itself, was a substantial contribution to the very tight newsprint situation in this country, but in recognition of our obligations as the largest manufacturers of newsprint in the United Kingdom, we have decided now to proceed with the installation of an additional newsprint machine at our Kemsley mill, where the buildings for the purpose are already in existence. But here I should perhaps make it clear that some part of the production of this new plant, assuming it to be installed, will be in the nature of a replacement of the production of machines at our other mills which were turned over to the manufacture of other descriptions of paper when production of newsprint was restricted.

We are fully cognisant of our obligations to the Press and shall endeavour to meet those obligations, but unless the economy of the newsprint industry in the future can be shown to rest upon a sounder economic foundation than it has done in the past the time may come when we shall, perhaps, be compelled to turn over further machines to the production of those descriptions of paper and board which show a more adequate and steadier return on our investment.

In addition to the new machine we have also decided to install a new steam-raising and power plant at our Kemsley mill, which will much improve the efficiency of that mill, and, what is of the utmost importance, will save a large amount of coal, also nowadays in short supply, and greatly reduce our annual fuel bill, as well as placing us in an even more secure position in regard to a continuous supply of the necessary electrical power.

As I have already indicated to you, the present-day costs of installing new plant and machinery are many times greater than in former years, but provided an adequate return upon the very substantial capital involved can be assured, we do not feel that this alone should stand in the way of the proper development of our enterprise either in this country or overseas.

From the point of view of the economy of our mills in this country, the manufacture of newsprint continues to be less attractive than that of other grades of paper, and here let me say that this is so despite the prices now prevailing for newsprint of British manufacture. The selling price of newsprint in this country continues to be controlled, but obviously the control price must have regard for the cost of raw materials, which in recent times, it is no exaggeration to say, have sky-rocketed.

SCRAMBLE FOR RAW MATERIALS

The whole question of raw material supplies is the cause of very real and very great anxiety to your directors. As a result of a scramble for the available supplies of pulps of every description, and of pulpwood, that has resulted from the dollar situation and the ever-increasing consumption of paper products especially in the United States, prices for these raw materials, and consequently for most grades of paper, have attained fantastic levels and I fear have not yet reached their peak as prices for paper will undoubtedly have to be further and materially raised towards meeting the ever-increasing cost of raw materials; thus is the spiral of inflation given impetus.

Such is the present situation in regard to the prices now demanded for pulp that I

feel impelled to utter a word of warning to the producers. In my view they have adopted an unwarrantable and extremely short-sighted attitude in forcing prices up to their present levels during what, in my belief, is only a temporary situation, thus bringing about the present almost chaotic state of affairs.

Why the owners of pulp mills—I refer particularly to those situated in Scandinavia—should seek to obtain from their old and traditional customers a level of prices which they must be aware that, economically, neither the paper makers nor the consumers of paper in turn can afford to pay, is beyond my understanding or comprehension.

PRICES NOT THE ONLY PROBLEM

I am completely at a loss to understand the present attitude of many pulp and pulpwood producers in relation to deliveries as well as to prices. Deliveries against contracts in all too many cases have not been adhered to and there have even been a number of quite unwarrantable cancellations on one pretext or another; in this connection I would cite the case of the unilateral cancellation of an important contract with Poland for the supply of pulpwood for our Kemsley mills.

The raw material situation has not been helped by the serious shortage of shipping tonnage, which results from Government purchases of coal from the United States and the heavy movements of grain and various commodities for stockpiling by many countries in the world.

We had, as we thought, covered the bulk of our requirements of raw materials for our mills in this country, but so serious is the situation that has developed consequent upon the circumstances that I have just described, that we have recently been compelled to close down plant for lack of raw materials, and may soon have for a period to shut down further plant for the same reason. It is to be hoped that this situation may improve to some extent with the reopening of northern ports to navigation and the easing of the shipping situation, but I fear that these circumstances may further adversely affect the already aggravated newsprint situation.

IMPORTANCE OF OWN RESOURCES

All I have said in connection with the raw material situation will, I think, serve to illustrate to you the wisdom of our having in years gone by adopted the policy of ownership of sources of supply of some part of our huge raw material requirements.

We shall continue to explore every means of increasing our self-sufficiency in respect to supplies of raw materials, but this, of course, is a long-term policy, and necessarily entails substantial capital expenditure. In our endeavours in this connection, I am confident we shall receive the whole-hearted support of our many newspaper and other publisher customers, here and overseas, for it is as much in their interests as it is in ours to protect this position.

OUTLOOK FOR THE FUTURE

I do not want it to be thought from anything that I have considered it my duty to say today that the fortunes of our organisation are in any wise jeopardised, for the contrary is the case. We have a magnificent and expanding business, but at the moment are passing through a testing and difficult time of transition.

As I earlier said, I feel unable to embark upon prophecy in regard to the future, and must be satisfied with repeating the substance of the concluding paragraph of your directors' report, which was to the effect that subject to the factors with which I have dealt at some length today, particularly those relating to raw materials and to the many unpredictable factors inherent in the present international, political and economic situation, it is the opinion of your directors that the

outlook for both the home and overseas activities of the organisation would on the whole continue to appear not unsatisfactory.

So far this year earnings generally have been maintained, and while those of our mills in this country may, and probably will, be adversely affected during the remainder of the year, those of our ancillary and converting companies should continue to be fully maintained. In all probability our Scandinavian companies will enjoy a better year and the level of earnings of our Canadian and other overseas subsidiaries might well be somewhat higher than those for the previous year, and it may well be that in the aggregate this position can be maintained.

The report and accounts were unanimously adopted and the dividends recommended were declared.

At the extraordinary general meeting which followed, the resolution for the adoption of new Articles of Association for the Corporation was carried by an overwhelming majority.

CONSTRUCTORS LIMITED

INCREASED OVERSEAS DEMAND FOR PRODUCTS

MR. H. J. FINER ON EXTENSION OF GROUP'S ACTIVITIES

The twenty-ninth annual general meeting of Constructors, Limited, was held on March 21st, at Nickel Works, Erdington, Birmingham.

Mr R. S. Dyball, deputy-chairman, presided in the absence of the chairman, Mr H. J. Finer, who is at present on the company's business in South Africa.

The following is Mr H. J. Finer's statement which has been circulated: During the last few years I regret to say that my health has deteriorated and recently under medical advice, I have been able to do little more than attend board meetings and to interest myself in the company's overseas activities. I therefore feel that it is only right that I should relinquish the chairmanship and the position of joint managing director, thereby giving effect to the position which has existed for some little time. My colleagues have asked me to accept the office of president of your company, in which capacity I shall always be available for consultation and shall continue to give the company the benefit of my experience in the direction of its future developments and policy.

It will be necessary for the company's Articles of Association to be altered to allow for the office of president. An extraordinary general meeting will be called for this purpose in due course.

PROFIT AND APPROPRIATIONS

In my statement in July last year I refrained from making any forecast on the profit for 1950, and said that "progress to date" had been maintained. You will see from the consolidated profit and loss account that the group profit for 1950, before charging profits tax, is £118,864, compared with £118,433 for 1949. This is regarded by the board as satisfactory, in view of the rises in wages and costs of material during the year.

Charges for taxation and the various appropriations are shown clearly in the directors' report, and after bringing in the balance from last year of £67,246 there is a disposable balance in the group accounts of £110,640, against £79,908 last year.

Among the appropriations you will see a transfer to capital reserve of £6,912. This transfer is made to increase the capital reserve of the parent company to £50,000, being the sum required to effect in 1951 the

capitalisation of reserves to which reference was made in my statement last year.

Regarding the distribution to shareholders, Preference dividends were paid during the year. An interim dividend of 5 per cent., less income tax, has been paid on the Ordinary shares and the board recommends a final dividend of 20 per cent., less income tax, payable on June 1, 1951. The 200,000 new Ordinary shares of 5s. each which it is intended to create on March 15, 1951, and to issue by way of capitalisation of capital reserves, will participate in the final dividend if the board recommendations are approved.

After providing for all dividends and appropriations there is a balance on the group profit and loss account to carry forward to next year of £86,853, against £67,246 brought in.

CAPITAL EXPENDITURE

If you turn to the balance sheet of the parent company you will observe that £12,428 has been expended on the company's freehold factory and there is a note to the effect that the company is committed to further capital expenditure of approximately £23,000. This is in connection with an extension to the company's factory at present in progress, and which should come into production during the current year. The group's liquid resources are sufficient to finance this extension and to provide for the extra working capital.

It is rather early in the year to attempt any forecast of the profit for the current year. The order position of the group today is as good as it was at this time last year. I do not wish to pre-judge the nationalised steel industry, but I sincerely hope that it proves as efficient as it did under private ownership and that sufficient steel will be readily available to convert these orders to sales. While on this subject, I should like to mention the cordial relationship which has always existed between your company and the steel industry, and to thank our suppliers of steel for their very close co-operation in the past.

OVERSEAS BUSINESS

During the year subsidiary companies have been registered in the Union of South Africa and Australia. The demand for the company's products in the overseas markets has increased and it is possible that in the future it may prove beneficial to manufacture some of the company's products in the Dominions. I refer here particularly to the manufacture of your company's Adastra Pole.

With a view to extending the group's range of products, we have recently negotiated, in 1951, the purchase of the share capital and undertaking of Seldex, Limited, a company whose business is the manufacture and sale of office filing systems and the like, which your directors think will combine usefully with the company's present range of office furniture.

As part of the company's policy of providing for the welfare of its employees, the company's pension scheme has been extended, from January 1, 1951, to include all employees in the group.

Finally, on this occasion, I particularly wish to thank your directors, the staff, and employees, who have made their contribution to the past successful year's trading and who have been such help to me during my illness.

The report and accounts were adopted, the proposed dividends were approved; the retiring director, Mr A. N. Waide, was re-elected and the remuneration of the auditors, Messrs Thomson McLintock and Company, was fixed.

At the extraordinary general meeting held on March 15th the necessary resolutions were passed sanctioning the capitalisation of £50,000 of the company's reserves by the issue to the Ordinary shareholders of 200,000 Ordinary shares of 5s. each credited as fully paid.

ENGLISH ELECTRIC COMPANY

SIR GEORGE NELSON ON THE YEAR'S ACHIEVEMENTS

The thirty-second annual general meeting of The English Electric Company, Limited, was held on March 20th in London.

Sir George H. Nelson, F.C.G.I., M.I.Mech.E., M.I.E.E. (chairman and managing director), presided, and in the course of his speech said that the increase in net profit to £928,566 arose from increased production and turnover and was the result of good use of the plant purchased with new capital and money ploughed back into the business since the war. The directors recommend that £500,000 be transferred to the general reserve. Although the earnings of their works' employees and most of their staff had more than doubled and the remainder of their staff nearly doubled, for the same employment as in 1937, the rate of ordinary dividend during the same period had not changed, in spite of the fact that the company's earnings had steadily and substantially increased. The directors therefore submitted for approval that a final dividend of 11 per cent. be paid, making 15 per cent. for the year. This was a very modest return to the ordinary stockholder on the book value of the capital employed in the business. Allocations to depreciation reserves during the year were on the usual Inland Revenue basis, plus a proportion of the initial allowances. He repeated again that he deplored the fact that that department would still not allow depreciation to be calculated on the cost of replacement and thus enable the efficiency of the earning capacity of industry to be maintained from depreciation reserves.

The Government had paid a tribute to the company's design, engineering skill and productive capacity by adopting certain of its products for defence work and by placing substantial orders with the Company. To help in solving the problem of housing extra labour transferred to its works districts, the company had erected more than 1,000 houses of attractive design for its workpeople.

He mentioned that when he left England six months ago he was a warm supporter of the efforts being made to avoid inflation by restraint in dividends, stabilisation of basic wages and the principle that increased reward should come only through increased output. It was indeed a shock, therefore, when he arrived at the other end of the world to find in the countries producing basic commodities employing a relatively small amount of labour as compared with their output and value, that without extra efforts the prices of certain of their commodities had soared to highly inflated levels in a few months. Turning to the subject of the North Atlantic Treaty, he said they should be thankful that appropriate Committees were being initiated by the signatories, and it was to be hoped that the activities of those bodies would cover the whole field of material supply and not be limited to what were known as defence requirements.

CHAIRMAN'S TOUR

A significant piece of work during the year had been the strengthening of ties with the Commonwealth both by the development of overseas factories, the licensing of others to manufacture some of their specialised products, and the carrying out of important contracts for the generation and control of power and for diesel electric locomotives in those territories.

He had recently returned from a five months' tour of Canada, Australia, including Tasmania, New Zealand, India and Pakistan, and during that tour he had visited the company's branches and associated companies

in those countries. He was thrilled and greatly inspired by the loyalty, ability and enthusiasm of those who represented the company in the British Commonwealth. In every country he found that the reputation of British products stood high in the estimation of the people, and particularly was this true of the company's manufactures. The only thing that was not fully understood was the difficulty this country had had to overcome in the postwar years. He had found the warmest feelings for Britain in all the countries of the Commonwealth and he was sure that so long as they were convinced that industry and the Government would work together to ensure deliveries they would buy from this country.

AN OUTSTANDING ACHIEVEMENT

He supposed that the company's most outstanding achievement in 1950 in the public eye had been its twin-engine jet bomber, the "Canberra," which recently had made the flight from east to west in four hours and forty minutes, or 30 per cent. faster than the previous record, and this in spite of the fact that the best weather conditions had not been chosen. The confirmation that this aircraft was to be adopted by the U.S. Air Force was indeed a compliment to this country, and a great achievement by this company. Negotiations for a licence enabling the Glenn Martin Company to manufacture it at Baltimore were in hand. Of the steam plant commissioned by the British Electricity Authority in 1950, one quarter of the total was manufactured by the company; the total h.p. of steam-turbo plant delivered for home and export was twice that of 1949 and ten times that of 1946. The Ontario Hydro-Electric Power Commission of Canada had entrusted the company with an order for a third 60,000 kW. hydrogen-cooled turbo-set, and they and the company were therefore playing their parts to assist dollar balances so essential to both their countries.

In October last Her Majesty the Queen had graciously opened the Loch Sloy Hydro-Electric Power Station, where four of their 32,000 kW. hydro-sets, etc., were installed. In Portugal, they had put into operation what they believed was the most powerful vertical reaction set so far built in Great Britain, of 57,400 kVA., 63,000 b.h.p.

The company's research and development activity had continued at a high level and, in this field, they employed 4,500 people at a total annual cost of £4,500,000.

Their turnover in 1950 was £17 million greater than in 1947, a very great achievement involving an immense effort on the part of their managerial staff. The completed orders of the Group, exclusive of special defence orders, continued to increase in amount and volume, and a substantial portion was for export to dollar and Commonwealth countries. The company's production capacity was adequate to meet the delivery commitments it had entered into.

In conclusion, he paid tribute to the staff and workpeople of the company for their loyal, enthusiastic and splendid efforts during the year.

The report was adopted and a final dividend of 11 per cent. (making 15 per cent. for the year) declared on the ordinary stock.

CABLE AND WIRELESS (HOLDING)

EMINENTLY SATISFACTORY RESULTS

The twenty-second annual general meeting of Cable and Wireless (Holding) Limited was held on March 21st, in London.

Sir Edward Wilshaw, K.C.M.G. (the Governor), in the course of his speech, said: This is the first meeting and presentation of accounts since the company was reconstructed following the distribution of compensation received for the nationalisation of the telegraph part of your business.

The results of the year are generally agreed to be eminently satisfactory. I feel, and I hope you will agree, that the accounts now before you show that we have already gone far towards achieving all that we promised when the directors' proposals for the re-organisation of the company's capital were put before you. When I last addressed you I should have been thought rash indeed to have forecast that it would be possible to declare a dividend of 6 per cent. within so short a period of nine months, although it is the dividend which I had hoped would be possible, and which everyone of us, directors, officials and staff, have striven hard to achieve. We have been able to achieve it, and later in the meeting you will be asked to approve the payment of a dividend of 6 per cent. This I think can be prudently done and at least be maintained in the foreseeable future, subject to economic reactions beyond your directors' control. Further, given reasonable conditions during 1951 it would seem that we shall have even less difficulty in earning at least a similar return this year.

STOCKHOLDERS' CONFIDENCE

It is a remarkable thing that approximately 70 per cent. of the stockholders, prior to the scheme, still remain with us. It may interest you to know that:—

43 per cent. of the stockholders do not hold more than £100, and a further 44 per cent. do not hold more than £500.

This, I think, is a complete justification for the maintenance of an Investment Trust by affording the small investor the opportunity of investing in an organisation which provides them with the security and benefits arising from a world-wide spread of investments covering the widest possible field.

Those who have supported us through nationalisation and continue with us have done very well. Their confidence is both appreciated and is an encouragement. Especially is this so in respect of the large number of stockholders who own only comparatively small amounts in the Company.

TWOFOLD POLICY

The company's policy is twofold. First, to secure and maintain a minimum dividend of 6 per cent., and then to seek for an increase by way of additional income from medium and long-term projects, which should be beneficial not only to you but to the Dominions and Colonies in fostering public works and enterprises in less developed areas.

When we were in the communications field we created a great organisation, and it is still our policy to continue to do something creative rather than be static.

I want to assure you that the directors desire the company's reputation to be on the highest level of security and enterprise. It would be foreign to their policy and ideals if it became to be regarded as speculative. It is the intention that this Trust is a Trust and it will be conducted on those lines.

The report was adopted and at the subsequent extraordinary general meeting the proposed new Articles of Association were approved.

BRITISH HOME STORES LIMITED

IMPROVED RESULTS

The twenty-third annual general meeting of British Home Stores Limited was held on March 21st in London. Mr Horace Moore (the chairman), who presided, reminded stockholders that an extraordinary general meeting would be held on March 28th to consider the directors' proposal to issue to Ordinary stockholders one new unit for every four held.

The following is an extract from the chairman's statement circulated to stockholders:—

The accounts show profits, before taxation, of £959,239, as against £811,335 in the previous year. An appropriation of £295,830 to general reserve has been made and the final dividend proposed per Ordinary stock unit is 9d., less tax.

TRADING CONDITIONS

In 1950 costs of operation continued to rise and profit margins were lower, but these factors were more than offset by substantially increased turnover. The number of customers served during the year once again showed an increase. During the early part of the year there was a growing tendency for supply to out-run demand in many kinds of goods with consequently improved quality and value. Such conditions continued until the Korean war news broke, since which time the trend has been halted and in most cases reversed.

Once again it is my pleasure to thank our growing list of suppliers for the splendid support they have given us during the year. The mutual approach given to the production of suitable merchandise solves for the supplier the problem of continuity of outlet for a proportion of his output, while we on our side are assured of regular deliveries of goods of a guaranteed standard. During the year many outstanding values have resulted which, when offered on our counters, have met with a reception well beyond original anticipations.

DEVELOPMENT

The increase in selling space during the year has been negligible and we have only one item to report. Our Lewisham store, which was almost completed in 1939 but was never operated, was released from Government requisition in two stages during the year, and we were able to get it into partial operation. The work of completion is now in hand. For this year we are pleased to be able to tell you that a trickle of development has started. We are now rebuilding our blitzed Southampton store which, when completed, will be the largest unit in our chain and we are hoping that it will be in operation during the year. Also, at Exeter, we have commenced work on a section of our large new store there. This consists of a temporary building, but we are hopeful that work will be started on the main store building during the year. We also anticipate that we shall be able to make small extensions to one or two existing stores, and we shall continue with our modernisation programme to several other existing branches. The programme outlined is very modest, but, even so, it has had an encouraging effect on us all.

We are very fortunate in having such a loyal and willing staff. They have the team spirit to the full, and in times of emergency are always willing to give just that extra service which means so much to any organisation. It is my duty, and indeed my privilege, on behalf of the board, and I feel sure stockholders, to thank them one and all for the splendid service they have given.

The report was adopted.

MITCHELL COTTS AND COMPANY

RECORD RESULTS

MR LEONARD ALDRIDGE'S STATEMENT

The thirty-first ordinary general meeting of Mitchell Cotts and Company Limited will be held on April 10th in London.

The following is an extract from the circulated statement of the chairman, Mr Leonard Aldridge, C.B.E., F.G.S.:—

Last year I said that on a short-term basis I considered that our prospects remained good, although I doubted then whether we should be able in 1949-50 to repeat the results achieved during the preceding few years. It is a source of satisfaction to your directors that this forecast has proved conservative. The overall results for the year constitute a record in the company's history.

The profits for the year show an improvement of £120,664 over those of the previous year, being £892,724, compared with £772,060. We have paid the usual preference dividends and two interim dividends totalling 25 per cent. (less tax) on the ordinary shares, which absorbed £150,997, compared with £130,632 in the previous year. We have decided to transfer £150,000 to contingencies reserve, thus increasing it to £350,000. The remainder of the year's unappropriated profit we propose to add to the carry forward, which will then stand at £485,503.

Our shipping companies, which continued during 1950 to suffer from the depression in freight markets, are now benefiting from the recently improved conditions. Our South Africa coal trade has again proved satisfactory, and our relations with the Natal Navigation Group of Companies and the Transvaal Navigation Collieries and Estate Company, Limited, both of which have in their own year's accounts shown gratifying results, have continued to be intimate and cordial. Provided we can successfully meet the difficulties of rail and sea transport, the solution of which we are seeking in close collaboration with our colliery associates, there is every reason to hope for continued prosperity in our South African coal trade.

SERVICES TO COMMONWEALTH

An important section of the Group's activities, of which we are justly proud, consists of services we are able to render to our own Commonwealth and other governments. During the year under review the most noteworthy achievement under this heading was the contract negotiated by our wholly owned subsidiary Mitchell Cotts and Company (Sharqieh), Limited, with the Saudi Arabian Government on behalf of Braithwaite and Company, Engineers, Limited, who, in conjunction with Thos. W. Ward, Limited, has undertaken the building of a modern road from Jedda to Medina. The value of this contract is estimated to be £3,000,000.

Our subsidiary, Fraser and Chalmers (S.A.), Limited, has successfully completed the supply and erection of the new surface plant for the Premier Diamond Mine near Pretoria which has adopted the American Cyanamid Company's modern process of heavy media separation. This plant is the largest of its kind in Africa.

The total value of the group's exports from the United Kingdom for the year under review was nearly £5,500,000—the small decline from the previous year being mainly attributable to the restrictions on imports imposed by the Government of the Union of South Africa.

As to the current year, it is difficult to give a reliable forecast, but we have no reason to be dissatisfied with the results achieved so far. Unless world trade is adversely affected by any new crisis in international relations, we have no reason to fear an unsatisfactory result for the current year.

STANHOPE STEAMSHIP COMPANY

UNPRECEDENTED SHIPPING DEMAND

The sixteenth annual general meeting of the Stanhope Steamship Company Limited was held on March 20th in London, Mr J. A. Billmeir, F.I.C.S. (the chairman), presiding.

In the course of his speech the chairman said: During the year, the two oldest units in the fleet—the "Stanhope" and "Stanland"—were sold, and the fleet now consists of four tankers and twelve dry cargo ships of an average age of ten years.

Our profit on trading amounts to £482,411, as compared with £664,459 for last year. The proposed final dividend, with the interim dividend, makes a total distribution of £55,000, the same as last year.

This meeting is, of course, dealing with a financial year which ended six months ago and covered what was undoubtedly a very difficult year for shipping companies generally, but since September a complete transformation has taken place. In November the balloon really went up when this country was suddenly faced with having to import two million tons of coal from the United States of America, followed by other European countries who also found themselves in a similar position. At the same time merchants throughout the world who had been waiting for lower freight rates rushed to cover their essential needs. The demand for dry cargo ships today is greater than the oldest among us in shipping can remember. This has resulted in a scramble for tonnage the world over.

Rates of freight are today on a sound level and there seems no sign of any change in the near future. Practically the whole of our fleet is now very profitably employed until the end of the present financial year.

The report was adopted.

HILGER AND WATTS

CONTINUED SATISFACTORY DEMAND

The third annual general meeting of this company was held on March 19th in London.

Mr G. A. Whipple, M.A., M.I.E.E. (chairman and managing director), in the course of his speech, said: The net profit for the year amounted to £35,753, or £4,475 less than for the previous year. The directors are recommending a first and final dividend on the ordinary shares of 7½ per cent., the same rate as last year.

Trading in the period concerned was not easy, since the major portion of the company's orders were for export and consequently were subject to the many hindrances attributable to foreign import licence control and to the availability of sterling in the countries concerned.

The demand for our products continues to be satisfactory, the most noteworthy feature being the increase in orders from the United States of America.

I referred last year to the establishment of companies in Canada and South Africa by Scientific Exports (Great Britain), Limited. You will be interested to learn that as a result of this development Canadian business is expanding.

Work in our research and development departments was intensified through the enlargement of facilities at Camden Town. The economic benefits obtained are of continuing value in all our productions.

Your company is best known as makers of high-quality optical and mechanical instruments. It is a sign of the times, and a pointer to the future, to note that the trend of modern development in these fields has required that a substantial and capable electronic section be constituted in our research department.

The report was adopted.

THE ASSOCIATED PAPER MILLS, LIMITED

IMPROVED TRADING RESULTS

STRONG FINANCIAL POSITION

SCARCITY OF RAW MATERIALS

MR L. W. FARROW ON THE INCREASING DEMAND

The 29th annual general meeting of the Associated Paper Mills, Limited, was held on March 16th, at Winchester House, Old Broad Street, London, E.C., Mr L. W. Farrow, C.B.E., the chairman, presiding.

Mr Barrington C. Gain (deputy chairman and secretary) read the notice convening the meeting and the auditors' report.

The following is the chairman's statement which had been circulated with the report and accounts for the year ended September 30, 1950:

I am pleased to be able to put before you trading results much more satisfactory than those for the year ended October 1, 1949.

The improvement is due to a variety of reasons, among them being a greater demand for paper, a larger output, particularly of processed papers, and advantageous purchases of raw materials. The supply of these latter, both wood-pulp and esparto grass, has become increasingly shorter as the year progressed, and prices have risen constantly almost week by week until now, when they stand at very high figures. Selling prices have had to be raised to meet these increases and this, of course, has been of additional benefit to those mills which have had supply contracts at lower prices than those prevailing.

DEMAND EXCEEDS SUPPLY

The demand for all forms of paper, particularly of board for packaging, has been much in excess of that available, and in many cases, in common with other manufacturers, we have had to institute a form of unofficial rationing with a view to disposing of the paper available as fairly as we can. This position is now being accentuated by reason of Government demands for supplies arising out of the international situation. The trade generally has agreed to do its utmost to meet these demands, which is likely to decrease still further the supplies available for industry and the public generally.

With raw materials so scarce and no sign of an improvement in the supply situation there is little encouragement to expand productive capacity; in addition to which, as you will be aware, the delays in obtaining new machinery and the difficulties with regard to permission to erect new buildings to house it are as great as ever. A new factor which has recently come into the picture is the coal situation, the possible effects of which I need not elaborate.

DIVIDEND RECOMMENDATION

I think you will agree that the results for the year ended September 30, 1950, have justified the directors' decision to maintain the ordinary dividend in respect of the year to October 1, 1949, even though this meant drawing on our reserves.

Having regard to all these factors which I have just mentioned, your directors have thought it wise to transfer £50,000 to contingencies reserve. This not only replaces the £35,000 that we drew the previous year but adds an additional £15,000, bringing the contingencies reserve up to £230,000.

If past experience can be relied on in these days, there is bound to come a time when there is a steep and sudden drop in raw

material prices, and just as we are benefiting now from being covered ahead, so in the future we shall have to be prepared for losses when this drop comes.

We have also transferred £25,000 to general reserve, bringing this up to the round figure of £150,000.

You will remember that last year I mentioned that a wages increase was granted by the trade to the workpeople in 1948. In August, 1950, a further increase in wages was granted by agreement with the trade unions, which in a full year will cost the group £25,000.

These increases in wages were made necessary, at least partly, by the depreciated value of our money, and your directors feel that when profits are available it is right that the rate of ordinary dividend should be raised. They have accordingly recommended the payment of a final dividend of 20 per cent., making with the interim dividend of 5 per cent. already paid, a total of 25 per cent. for the year.

I have previously mentioned what a small percentage the ordinary distribution of 20 per cent. (paid for the past three years) represents on the capital originally invested in the company, owing to past reductions of capital, and I will now point out that this dividend amounts to only $\frac{1}{10}$ of 1 per cent. on the capital originally invested.

THE ACCOUNTS

We have endeavoured to further simplify and improve the accounts. We have this year omitted the profit and loss account of the parent company as it is the results of the group as a whole that are material, and these are given in the consolidated profit and loss account.

We have also altered the lay-out of the balance sheets and made consequential adjustments in the figures at October 1, 1949.

If you will turn to the consolidated profit and loss account, you will observe that the trading profit of the group after providing for depreciation is £204,502 higher at £327,691 and that the net profit (before taxation) is £206,638 higher at £306,023.

Taxation on the year's profits (calculated at the current rates) amounts to £157,050 against £71,168, but this time we have a credit to bring in of £10,497 in respect of previous years (mainly in respect of excess profits tax reserve no longer required) against £4,016. Income tax on initial allowances on plant is again dealt with on the conservative basis that I explained in my statement to you last year and results in a charge for the year to September 30, 1950, of £15,065, against £5,677 for the previous year. The total tax charge is £161,618, against £72,829.

I have already dealt with the transfers to reserve and the dividends and after providing for these the balance of profit carried forward is slightly higher at £31,070.

PROFIT ALLOCATION

I give below a table showing how the profits for the year to September 30, 1950, as compared with those for 1938-39 and 1948-49, have been dealt with, taking the total net profits before taxation as equivalent to 100 per cent.

	1938-39	1948-49	1949-50
Taxation	39.6	70.2	47.9
Retained in business	22.8	...	30.4
Dividends to shareholders (net)	37.6	58.9	21.7
Withdrawn from reserves...	...	129.1	...
	100.0	100.0	100.0

From the consolidated balance-sheet you will see that the financial position of the group continues to be strong. Current assets at £1,167,426 exceed current liabilities by over £767,000 as compared with an excess of £685,000 at October 1, 1949.

The increase in the value of stock and debtors is mainly accounted for by the higher prices prevailing in the closing months of the year.

Secured indebtedness has been reduced by £13,798 during the year by the normal redemption of the parent company's debenture stock and the repayment of the Bond of Brown Stewart and Co., Ltd., of £9,000.

THE OUTLOOK

With regard to the results for the current year, the profits for the first four months to January 31, 1951, are in excess of those for the corresponding period of the previous year and provided we can continue to obtain the necessary coal and raw materials and in the absence of any further deterioration in the international situation, I anticipate another successful year.

TRIBUTE TO EXECUTIVES AND STAFF

I would like to express the thanks of the directors, and I am sure of the shareholders also, to the managers, staff and workpeople of the whole group for their continued loyalty and endeavours in the interests of the companies. The good results have not been achieved without a great deal of forethought in arranging and rearranging output programmes, often involving considerable overtime work for all, to deal with such raw materials as were available and to try to meet the increased and varied demands of our customers.

The report and accounts were unanimously adopted and the dividend recommendation approved.

The retiring directors, Mr Barrington C. Gain and Mr J. G. Kipling, were re-elected, and the remuneration of the auditors, Messrs. J. B. Boyd, Wrigley and Co., having been duly fixed the proceedings terminated.

BRITISH ASSETS TRUST, LIMITED

The fifty-third annual general meeting of the company was held at Edinburgh on March 22nd, Mr W. H. Fraser, chairman, presiding.

In moving the adoption of the report and accounts, the chairman said:—

It is a great pleasure to welcome Lord Polwarth as a member of the board, and you will be asked to confirm his appointment.

Our income total for the year under review is an all-time high and shows a very satisfactory increase on that of the previous year. For the first time for some years, after paying the preference dividends, there is over 50 per cent. of the gross income available for the ordinary share capital. After the proposed dividend, 15.1 per cent. of the gross income, or 28.7 per cent. of the amount available for the ordinary, remains undivided and is added to our already large revenue reserves.

The balance sheet calls for little comment. The company had some £500,000 in Steel

Nationalisation stocks and for some weeks prior to the year end we had been anticipating receipt of Government stock resulting from nationalisation and investing when favourable opportunities occurred. This accounts for the increase compared with a year ago in our indebtedness to our bankers. Our investments in the U.S.A. and Canada represent 26.8 per cent. of the total valuation—as in previous years no credit is taken for the London premium.

January 15th is proving an increasingly inconvenient date for the close of the company's financial year and we, therefore, propose to change this to September 30th. This will involve a change in dividend dates. An ordinary dividend for the 8½ months' period to September 30, 1951, will be paid next December, and thereafter an interim dividend will be paid in June and a final dividend in December. Preference dividends for 8½ months to September 30, 1951, will be paid on October 15th, and thereafter the half-yearly dividends will be paid on April 1st and October 15th in each year. Interest on the debentures and debenture stocks will be paid on the same dates as formerly.

The report and accounts were unanimously adopted.

MERGUI CROWN ESTATES

INCREASED PROFIT AND DIVIDEND

The nineteenth annual general meeting of Mergui Crown Estates Limited, was held on March 16th in London, Mr W. J. C. Richards (the chairman) presiding.

The following is an extract from the chairman's statement for the year ended June 30, 1950:

There are, I think, two items in the balance sheet which call for comment. The first is the newly created capital reserve account of £13,611 which represents this company's proportion, less expenses, of the *ex gratia* payment made by H.M. Government to commerce and industry in Burma in respect of capital losses arising out of the Japanese invasion. The second is the strong liquid position which is disclosed. Total current assets amounted to £88,781, from which current liabilities of £28,267 have to be deducted, leaving a surplus, after providing for the dividend now recommended and all taxation on the accounts to date, of over £60,000 against an issued capital at the date of the balance sheet of £65,585.

The profit for the year amounted to £21,519, which is a substantial advance on that of the previous year, and the dividend recommendation is increased to 20 per cent. against the 5 per cent. we have been able to pay each year since rehabilitation was completed. None of our crop realised the prices at present ruling and the average net price obtained was in fact no greater than 1s. 3d. per lb.

Since the close of the financial year we have, with the approval of stockholders, acquired the entire share capital of K. H. Syndicate Limited, which directly owns a rubber estate in the State of Kelantan in Malaya, particulars of which have already been circulated.

For the current year the prospects are favourable. It is true that no worthwhile production has been obtained so far this season from our Palaw division, but this, we believe, be more than offset by the crop which can be expected from our recently acquired Malayan properties, only a small proportion of which has been sold forward. Production from our Milaungchaung areas in Burma is proceeding normally; none of it has been sold for forward delivery and it is realising current prices.

The report was adopted.

DECCA RECORD COMPANY

IMPORTANT NEW DEVELOPMENTS

At the twenty-first annual general meeting held in London on March 19th, the chairman Sir Cyril F. Entwistle, K.C., M.C., said: The net profit for the year, after taxation, amounted to £88,427, against £94,694 for the previous year. Your directors recommend the payment of a final dividend of 70 5/6 per cent., less tax, on the Ordinary shares, bringing the total to 112½ per cent., less tax, for the sixth year in succession.

The most important development during the current year has been the introduction to the home and export markets of long-playing 33½ r.p.m. microgroove records and suitable machines on which they can be played. Our records were introduced under the London mark on the American and Canadian markets in the Fall of 1949 where the sales reached large proportions. In those countries the introduction of long-playing records was a major event and provided a great stimulus to the record industry as a whole. We decided to launch long-playing records here in July of last year and are well satisfied with the progress made. Already the sales of long-playing records represent a significant proportion of our turnover.

In both home and export markets our turnover in records for the current year to date shows a considerable increase over that of the similar period last year. The domestic business is, however, still handicapped by the heavy purchase tax of 66½ per cent.

Decca Navigator hirings continued to expand during the current year, contracts for hirings now exceeding 1,000 installations. Additionally, a large number of receivers are being supplied to the Royal Navy.

FLIGHT LOG

The most important new developments have been in connection with the aviation side of the navigator business, in particular the introduction of the Flight Log. This instrument, which works in conjunction with the normal navigator receiver, enables the pilot to see his position continuously on a map, and actually records the exact course he has flown. This invention has been welcomed in aviation circles as a major achievement. The flight log has been used extensively by the chief test pilots for flight testing by the Air Speed "Ambassador" and the Bristol "Brabazon." A production programme for the flight log is now being planned.

We have recently received a contract for the construction of a Decca Navigator Chain in West Germany. Negotiations for the erection of a Decca Chain in France are virtually complete. These chains will be erected primarily for air purposes and I am confident that in the not distant future the Decca Navigator will become a standard air navigational aid for aircraft operating over this country and a large part of Europe.

Sales of Decca Marine Radar have expanded in a remarkable way during the current year. To date, orders have been received to equip over 800 ships of all types. Every effort is being made to speed up production to meet the growing demand and we believe that already the rate of output is the greatest in the world for merchant marine radar.

A year ago I forecast that profits for the year ending March 31, 1950, would show a recession. This year I am equally confident that results for the year ending March 31st will show a substantial improvement.

The report was adopted.

MAX TELE

The fifty-th this company London.

Sir George M.I. Mech.E., M the course of his for 1950 shows a a corresponding ris which has been ach costs and keener com. £154,539 is arrived charges. Your directo. dend of 7%, less tax, on.

In the past year we for both home and export any previously recorded. clearly show the very imp played by our company in essential home and export t the same time, making a vit to the national rearmament pro. exports amounted to nearly h and were directed to no less different territories, of which man countries.

The year has seen outstanding ments in broadcasting transmiss. result of research and development Marconi Company. As to televis August, 1951, the B.B.C.'s high Northern station will be initiated at 1 Moss, for which a complete Marconi ex ment was manufactured during 1950.

Your company is of immense value to nation in these days when in nearly eve phase of industrial and commercial activi electronics play such an important part. Particularly is this true in the case of the armed forces to whose requirements we are able to make such an important contribution.

The report was adopted.

PHILLIPS RUBBER SOLES LIMITED

PHENOMENAL DEMAND

Mr Charles E. Pettit presided at the twenty-fourth annual general meeting held in London on Thursday.

He stated that the net profit for the year after provision for taxation was £55,616, as compared with £48,377 for the preceding year. The provision for taxation comprised not only income tax but also £30,000 for profits tax and this extra and, in his opinion, unjustifiable burden on the company's earnings, seriously curtailed the amount available for reserves. After the addition of £10,000 to general reserve, the directors recommended a final dividend of 11½ per cent. on the ordinary shares, making a total of 15 per cent. for the year, leaving a balance of £39,573 to be carried forward as compared with £33,557 brought in. The balance sheet again showed a strong liquid position with current assets totalling £725,433, which was over three times the total of current liabilities.

As regards the business, the two outstanding features during the year had again been rising costs of production and record sales, including a substantial rise in export. The company's efforts were being seriously hampered by the world-wide shortage of vital materials, but it was to be hoped that these shortages were only of a temporary nature, and that the company would be able to satisfy the phenomenal public demand for Phillips Superfine Stick-a-Soles, the merits of which were recognised today more highly than ever before.

In referring to his retirement from the board he expressed his warm thanks to all working in the business for their constant support and cordial co-operation.

The report and accounts were unanimously adopted.

ERT BRANDON AND PARTNERS, LIMITED

Advertising and Public Relations,
47, Albemarle Street, London, W.1.

Civil Service Commissioners invite applications for permanent
appointments as Senior Scientific Officer and Scientific Officer
by competitive interview during 1951. Interviews began
early and will continue throughout the year; but a closing
date of the receipt of applications earlier than December, 1951, may
only be announced. Successful candidates may be appointed
directly. The posts are in various Government Departments and
a wide range of scientific research and development in most of
the major fields of fundamental and applied science. Candidates
must have obtained a university degree with first or second class
honours in a scientific subject (including engineering) or in
mathematics, or an equivalent qualification, or possess high pro-
fessional attainments. Candidates for Senior Scientific Officer posts
must in addition have had at least three years post-graduate or other
approved experience. Candidates for Scientific Officer posts taking
their degrees in 1951 may be admitted to compete before the result
of their degree examination is known.

Age Limits: For Senior Scientific Officers, at least 26 and under
31 on August 1, 1951, for Scientific Officers, at least 21 and under 28
(or under 31 for established civil servants of the Experimental Officer
Class) on August 1, 1951. **Salary Scales** for men in London Senior
Scientific Officers, £700 x £25-£900; Scientific Officers £400 x £25-£550.
Rates for women are somewhat lower.
Further particulars from the Civil Service Commission, Scientific
Branch, Trinidad House, Old Burlington Street, London, W.1,
quoting No. 3339.

THE Air Ministry invites applications for a limited number of
appointments as Civilian Statistical Officers (Male) at Royal Air
Force Group Headquarters at home and abroad.

Candidates must be at least 25 years of age and should possess
an honours degree in statistics or some other evidence of statistical
or mathematical training. They should have a practical knowledge
of the handling of statistical problems, a wide experience in
administration and possess a good personality.

The salary scale for posts in London is: £675 x £25 to £800 a year.
The salary for posts outside London is slightly lower.
Annual leave—30 days rising to 36 days after five years' service.
The appointments are non-pensionable.

Successful candidates must undertake to serve anywhere in the
United Kingdom or abroad.

Applications stating age, qualifications and experience should be
addressed to Air Ministry S.5(g), Cornwall House, Stamford Street,
S.E.1.

CENTRAL Office of Information: Temporary Senior Information
Officer required for Research Section of Social Survey Division.
Candidates should be graduates with knowledge of statistics and
practical experience of organisation and reporting of research
preferably in fields of Health and Housing. Knowledge of research,
requirements of Government Departments an advantage. Salary
£900-£1,075 (men) and £775-£910 (women). Written applications giving
date of birth and education. Full details of qualifications and
experience of posts held (including dates) should be addressed to
Appointments Officer, Ministry of Labour and National Service,
1-6, Tavistock Square, W.C.1, quoting reference number J.N.37 within
14 days of appearance of this advertisement. In no circumstances
should original testimonials be forwarded. Only candidates selected
for interview will be advised.

BOOKS Bought: Please send lists of any standard or rare books,
runs of learned journals, for disposal.—W. Heffer & Sons, Ltd.,
Penny Cury, Cambridge.

WOMAN Barrister, professional and administrative experience,
languages, desires legal/administrative post with private
enterprise at home or abroad.—Box 606.

RESERVE FUND - - £3,000,000

London Office:

6 & 7 KING WILLIAM STREET, E.C.4

Branches in all the Principal Towns in EGYPT and the SUDAN

THE OXFORD UNIVERSITY TUTORIAL CLASSES COMMITTEE
invite applications for full-time tutorships in North Staffs, Bucks,
and Kent. Candidates should have a good University Honours
Degree in Economics, Politics, Sociology, or History. Knowledge
of trade union and industrial problems will be an advantage. Salary
on scale £450-£850.—Particulars from Organising Secretary, Rewley
House, Wellington Square, Oxford. Closing date April 15th.

CENTRAL Office of Information: require a Temporary Assistant
Information Officer in Coding Section of Social Survey Division.
Work is primary analysis of information collected by interviewers
from the public. Candidates should be capable of devising codes
to condense and classify such information. Essential qualifications
required are ability to supervise and brief staff, both individually
and in groups and to prepare clear written instructions. Field
survey interviewing experience and/or knowledge of elementary
statistics desirable. Salary:—£230-£575 (men) and £230-£460 (women),
according to age, qualifications and experience. Written applications
giving date of birth and education, full details of qualifications and
experience of posts held (including dates) should be addressed to
Appointments Officer, Ministry of Labour and National Service, 1-6,
Tavistock Square, W.C.1, quoting reference number J.N.9, within 14
days of appearance of this advertisement. In no circumstances
should original testimonials be forwarded. Only candidates selected
for interview will be advised.

MANAGEMENT and Industrial Consulting, Production-Engineering
A Ltd. invite applications from qualified Engineers and Chartered
Accountants, preferably with university degrees and with a real
interest in the problems facing management today; there are excep-
tional openings for first-class men with initiative requiring permanent
posts in this type of work; engineers should have served an appren-
ticeship and should also have had good practical experience and an
executive position in industry; accountants should have experience
of modern developments in financial control and its application in
industrial management; after training there is a four-figure starting
salary as well as life assurance and superannuation schemes; ap-
plicants should be between 27 and 35. Write, giving age and full
details of education, qualifications, and experience, to Production-
Engineering Ltd., 28, Bruton Street, London, W.1.

NO Capital Depreciation and a return of 2½ per cent. (income tax
paid by the Society) are the terms offered for Share Investments
by the 73-year-old Chelsea and Waltham Green Building Society. Write
for Leaflet F to 110-112, Kings Road, Chelsea, S.W.3.

Policy for Korea

FIGHTING has been going on in Korea for nine months and once
again the extraordinary campaign enters a new phase. This is
not just because a hideous winter is past, the iron-hard paddly fields
have melted into track mud, and the heat and dust of another
Korean summer are on the way. Public attitudes about Korea are
changing too; there is a feeling that something new has happened
in the last two months—even though the stalemate in the field con-
tinues, in the sense that neither side has won, or is likely to be able
to win, a decisive military victory. Three events have helped to
create the impression that the situation has changed. These are the
United Nations advance northwards and the huge Chinese losses.
Nearly all along the line, the United Nations forces under Lieutenant-
General Ridgway's command now stand once again on the 38th
parallel—a most striking recovery from the winter setback when
Chinese forces intervened, and an event that General Ridgway
himself said only three weeks ago would represent “a tremendous
victory.” Equally, General MacArthur's self-inspired invitation
to the Chinese commander to call a cease fire, whatever may be
said about its propriety, was at any rate a call from strength, a
summons with more than a hint that if the Communists did not
comply Manchuria would eventually be bombed and the Chinese
mainland invaded. Thirdly, there is renewed activity in the United
Nations to draft a new declaration of policy about Korea; this would
be based on a recognition that the cost in blood and effort of regaining
territory up to the parallel has made the General Assembly's aim of
unifying the country out of date since it was laid down last October.

General MacArthur's latest statement of policy, made as usual
without consulting Washington, has caused the most violent anger in
the Administration. It was at first well received in many parts of
the world—not excluding this country—because it seemed to coincide
with the heartfelt longings of all who want military victory to lead
to peace instead of further war. But it is in reality one of the most
mischievous of all his pronouncements and it cannot be excused by
the argument that General MacArthur has had to make policy for
himself because no one at Washington had sufficient courage to lay
down policy for him. Anyone who could bring the war in Korea to
an honourable end would do unique service to humanity. But General
MacArthur included in his remarks to the Chinese and Korean
Communists two points that were not his to make, and they cut right
across United Nations policy and may do irreparable harm.

Every effort to end the Korean war by negotiation with the
Chinese has rightly emphasised at some point the need to discuss
other Far Eastern problems too—not just, as General MacArthur
proposed, to settle Korea “on its own merits.” Secondly, China's
original armed intervention in Korea was partly due to a groundless
fear of the consequences to itself if it did not intervene. Everyone
in the west knows that there was no intention whatever of the United

Nations forces crossing the Yalu River last December and marching on Manchuria—but the very existence of statements like General MacArthur's latest sally simply confirms the Chinese in their suspicions, and makes good propaganda material everywhere for the enemies of the United States. It is of course intensely galling for any military commander to have to fight a limited war, to see his men suffer and die because one hand is tied behind their backs. Yet the essence of war is often to choose the lesser of two evils, and the price of impatience in Korea may be a lengthening and widening of the struggle.

During the past few months everything possible has been done—and still is being done—to get the Chinese to negotiate a political settlement. But since their arrogant rejection of the United Nations cease-fire proposals in January, no answer has come from Peking. The only possible course for the United Nations has therefore been to press on with military measures in the hope that the Chinese, seeing the stalemate turned into a war of attrition, would eventually talk. In pursuing this policy, the United Nations have been fortunate in the increasingly close and direct touch established between the Pentagon in Washington and their field commander in Korea, General Ridgway; as a long-standing protégé of General Marshall he is not the man to regret the gradual cutting out of Tokyo's influence on the campaign. After two months of skilful and restrained offensive action, General Ridgway is now awaiting a Chinese counter-attack, which is to be expected within the next month. It would be wise to assume that their offensive must be checked and beaten back before the Chinese are likely to change their minds about talking; the Indian ambassador in Peking is, in fact, reported to be advising his government to "wait a bit."

★

Both in Washington and at the United Nations in New York, meanwhile, ideas about the nature of a political settlement in Korea have been slowly changing for some time. Even in January Mr Lester Pearson, at that time representing Canada on the Good Offices Committee, felt constrained to apologise for the cease-fire proposals by emphasising that they did not "betray" the principles previously adopted by the United Nations on Korea. These proposals were for an immediate cease-fire followed by consideration of further steps: for all non-Korean forces to be gradually withdrawn; for the Korean people freely to express their own wishes about their future government; for temporary arrangements for the United Nations to administer Korea; and for the establishment of a special United Nations body to negotiate a final settlement. These proposals are still alive. They say nothing about unification and presuppose in effect that the two republics of North and South Korea will be restored.

The fact is, then, that while the long-term problems presented by the Korean dispute have not altered, the position of the United Nations has changed. It is now possible to consider the implications of two months of attrition in the field, and of the shifts of thoughtful public opinion as the Korean campaign has again swung in favour of the forces representing international law. Are the United Nations to go on with a war of attrition and wait indefinitely for the political skies to clear?

If not, what more can they do to end the Korean dispute? Probably the biggest difficulty will be to decide about a policy of continued attrition. For if the coming Chinese offensive fails, the temptation is likely to be very strong to take the opportunity to advance far into North Korea again. If the United Nations forces do not move forward, they will stand with a military vacuum in front of them and commit the cardinal military sin of losing contact with the enemy. What becomes of attrition then? But it is imperative that the United Nations forces should not repeat the mistaken attempt to reach the Yalu; if it is true that the Korean campaign cannot be ended by military action alone, it would be folly to risk the disastrous strategical error of becoming involved in a full-scale war in north-east Asia with overt Russian participation on the other side. Militarily, the United Nations must choose the best defensive line across a narrow part of Korea, preferably around the 38th parallel, and stick to it. It takes two to settle a quarrel, and the Chinese at present hold the political initiative in refusing to negotiate.

★

But meanwhile, in the new mood induced by waiting, there are several steps that the leading powers in the United Nations should take. They should see that the Chinese are made absolutely certain of the peaceful intentions of the outside world. It would be advisable for the United Nations to make a new statement of purpose about its aims in Korea, in simple, unequivocal terms, and repeated often. Means should also be contrived, if they do not already exist through the Indian or Swedish ambassadors in Peking, to enable the Chinese to talk privately to Washington, should they want to do so. This is not to raise any question of Anglo-American or any other differences on Far Eastern policy, but simply to emphasise that, after all, the American forces in Korea form the main opponents of the Chinese and that there are severe disadvantages in diplomacy shouted from the housetops. Lastly, if the Chinese do not prefer to negotiate directly and outside the United Nations, Uno must itself seek negotiation by any means in its power.

It does not matter how this is done, so long as the leading members of the United Nations involved in the Korean dispute remain clear about their basic objectives and do not surrender them. These must be to leave Korea honourably, having beaten aggression and bequeathed a workable political framework in which the men of South Korea can live in peace and freedom, with the hope that one day it will also be possible for the North Koreans to do so. To guarantee this security, even if and when Peking has agreed to a settlement, may be next to impossible, but to use this difficulty as an excuse for not taking every proper step to reach a settlement would be unforgivable. In pressing relentlessly for an honourable settlement, the United Nations could do worse than hammer home in the East the fact that at the Cairo Conference of 1943—to which Peking alludes with satisfaction over Formosa—China as well as America and Britain guaranteed that Korea should "become free and independent"; this principle was accepted by Russia at the Moscow Conference of 1945. An attempt must be made to apply it to any eventual settlement in the Far East.

The Defence of Britain

THE naming last week of the subordinate commanders who will serve under General Eisenhower makes it possible to gain a clearer picture of the strategy which he intends to use. General Eisenhower's command is subdivided into three areas of which the central one, which includes Western Germany, the Benelux countries and France, is clearly the most important. It is here that the greatest number of troops and aircraft will be concentrated, and the strategic battle—the co-ordination of air, naval, and land forces—would be conducted by the Supreme Commander himself. The Northern area, which includes Scandinavia, the Baltic and the North Sea, will be commanded by a British Admiral, Sir Patrick Brind, with an American general in command of the air forces, and a Norwegian and a Danish general in command of the land forces of their own countries. The organisation for the Southern area, which presumably includes Austria, Italy, Portugal and North Africa, is not yet determined since there is still a number of political as well as military problems to be settled. It is possible that the defence of the Mediterranean, which is primarily a naval matter, may have to be separated from the defence of south-western Europe.

Whatever final solution is found for the Southern area, enough details have been given to show very broadly what is in General Eisenhower's mind. If war comes, the enemy must be met and defeated in Western Europe. But to make this certain, it is necessary to guard against the possibility of a flank attack. As it is, there is too little depth for manoeuvre in Western Europe, and if the Russians were to gain Norway, as Hitler did in 1940, or begin to gain a secure footing in southern Europe, the difficulty of defending the main continental area would be enormously increased. The flanks will be guarded by the national forces of the countries in that area knit together by a centralised system of command.

But as the framework of Western defence begins to rise above the welter of blueprints and committees, it becomes evident that there is one area—the British Isles—that will not be covered by this central system of command. The defence of Britain remains entirely a British responsibility. At first, this seems so obvious and so sensible an arrangement as to need no comment. Britain is the only country in Western Europe which is guarded on all sides by the sea. Of all the Nato countries in Europe, it is the least vulnerable, and the Russians would have to overrun the whole of continental Western Europe before they could contemplate the launching of a seaborne invasion. Britain has itself recognised that the defence of the continent is vital to its own security by agreeing to station a large number of troops and aircraft in peacetime on the continent of Europe.

All this is true in terms of land warfare. But the increase in the range, diversity and lethal effect of airborne methods of destruction does mean that Britain remains a very vulnerable part of the European defence system. Britain as a whole is the most important industrial target in Europe and there are four areas in Britain—London and the south coast ports, the industrial Midlands, Lancashire and the West Riding, and Clydeside—that are probably more important to the prosecution of a war in Europe than any industrial concentration on the

continent. If the Russians decided to attack Western Europe, it is inconceivable that they would not attempt to destroy or neutralise the industrial output and the communications of these areas. Indeed, it seems almost certain that Russian military planning must have taken account of Hitler's greatest military defeat—the failure to neutralise Britain. As long as Britain survives, no military conqueror can rest secure as the master of Europe. Conceivably, a Russian attack on Western Europe might be preceded by a limited offensive to gain control of either Norway or the Rhine delta in order to establish airfields and rocket launching sites from which to pour a continuous rain of bombs and guided missiles on to British factories and docks. It would be technically possible to launch attacks by airborne troops from the airfields which the Russians already possess in Eastern Germany. In the last war, neither German bombers nor German guided missiles could break the will or neutralise the industrial output of Britain. But no moral drawn from the last war could afford to ignore the size of the Russian air force, the effect of atomic bombing, and the vast increase in the range and power of guided missiles.

★

These are familiar facts and they are recapitulated not in any spirit of alarm, but merely to draw attention to the special problem which confronts Britain as a partner in the defence of Europe. To argue from them that Britain should cease to play its part in the defence of continental Europe—that its contribution of divisions and squadrons should be limited to a token force—would be criminal folly. Apart from the moral effect that such an argument would have on Britain's continental partners, who are only too ready to notice signs of isolationism in British defence policy, it would be wholly unsound from a military point of view. If the Russian army is not met and defeated on the continent of Europe, it would eventually have to be met, and would be very hard to defeat, among the fields and hedgerows of southern England. From the most callous calculation of self interest, if for no more important reason, it is essential for Britain to contribute as much as is possible to the joint defence of continental Europe.

Equally it would be unrealistic to argue that the United States or Britain's European allies should contribute to the defence of Britain. The defences of continental Europe are still desperately undermanned, and it is not likely that there will be any margin of safety for some years. There could be no question of demanding that French or Dutch squadrons should be stationed in Britain when they are urgently needed elsewhere. Moreover, there is a strict limit to the forces which the United States can contribute—or which Congress will allow to be stationed in Europe in peacetime—and every radar unit, interceptor fighter or anti-aircraft unit which is sent must be used for the defence of Europe. It is probable that Canada and the other Commonwealth countries would be able to assist in the defence of Britain—as they did in the last war—but, apart from such help as they can give, Britain must bear the full burden of its own defence.

Taken together, these two facts—that the Russians

must attack Britain if they are to be masters of Europe and that Britain alone must be responsible for its own defence—mean that the British chiefs of staff must approach the problems of defending the continent with something of a split mind. The dilemma presents itself in its most acute form in the allocation of the scarcest of all the defensive weapons—fighter aircraft. It is becoming clear that only the very newest types of aircraft—types that are just emerging from the drawing board—are good enough to meet the threat of high level air attack, so that the rival needs of European and British defence will persist for a number of years until the deficiency in the new types is overcome. Another field in which the two demands conflict is in anti-aircraft defence. Anti-Aircraft Command is a very large consumer of manpower, including a lot of skilled trades. The imperative necessity to defend Britain's industrial targets means that a smaller proportion of Britain's mobilised strength is available for service abroad than is the case with any other of the Nato partners.

The allocation of scarce resources is a special problem which can be solved only by the professionals. But there is a wider point which affects everyone in Britain. In theory, military planning has always had to provide for the possibility that Britain itself might have to be defended at a time when a large part of its land and naval forces were occupied elsewhere. In fact, a threat to the islands themselves developed in the past only after British forces had been driven off the continent and back on to their home base. The vastly increased speed of modern war, together with the size of the Russian forces, suggests that an aerial assault on Britain might have to be met when most of the British army and a large part of the RAF were deeply committed in

Europe. Britain is no longer the long stop in Europe. This means not only that preparations for the defence of Great Britain—primarily, of course, air defence—must be highly organised in time of peace, but also that ordinary citizens must be prepared to play an even larger part in their own defence than they did in the last war. Specifically, this means that the organisation for civil defence must be fully established and staffed before any threat of trouble develops. After a slow start, recruiting for civil defence is more encouraging; membership of the Civil Defence Corps rose from 73,000 in November to 122,000 at the end of January, or from 1.69 to 2.8 per thousand of population. Some excellent training courses are now provided, and new techniques are being evolved. But the country cannot feel easy about its own ability to withstand air attack while only three civilians in every thousand are actively studying the problem.

If the organisation of civil defence is making a slow beginning, there is no sign that other preparations are under way. One of the simplest precautions, the creation of a new Home Guard, meets at present only official indifference. It is not necessary at this stage to call out and equip a complete Home Guard unit in every locality. But it would seem both urgent and relatively simple to create a cadre of commanders and staffs in every important area, round which the organisation could be speedily constructed in the event of danger. An airborne attack designed not for military conquest but to destroy vital installations is a real possibility and one which can be dealt with very effectively by a well organised *maquis*. Mr Churchill once observed that "wars are not won by heroic militias." But they may very well be lost for lack of them.

Stalinism and the Peasant

WHEN Stalin decided more than twenty years ago to "liquidate the kulaks as a class," and to force the peasant masses into collective farms, there were independent correspondents in Russia who could report to the outer world the convulsion and horrors that took place; and Soviet statisticians had not yet fully "mastered Marxist-Leninist methodology" in the presentation of their material. Thus it was possible, for example, to learn from official Soviet publications that between 1928 and 1933 the number of horses in the Soviet Union declined from 33 million to 15 million, of cattle from 70 million to 34 million, and of pigs from 26 million to 9 million. Plenty of information was available on the interpretation by Soviet Communist organisers of the word "kulak," the method of his "liquidation," and the scale of starvation in the fertile plains of the Ukraine.

Since the aim to collectivise agriculture was announced for Eastern Europe in the summer of 1948 there has been far less reliable information. From official sources certain facts may, nevertheless, be learned.

The drive for collectivisation in *Jugoslavia*, which was fierce during 1949, slowed down during 1950. At present about a quarter of the country's arable land is collectivised. This process has not been accompanied by "liquidation of the kulaks as a class," and there can be no doubt that collectivisation in *Jugoslavia* has been much more humane than was the original Soviet policy.

At present the *Jugoslav* leaders seem more concerned to increase the efficiency of the collective farms that exist, and to convince the peasants of the merits of the system, than to increase their number.

In neighbouring *Bulgaria*, on the other hand, the speed greatly increased during the last year. At the end of 1949 the proportion of the arable land held by collectives was about 11 per cent: at the beginning of 1951 it had risen to 44 per cent. The Five-Year Plan's target for 1953 of 60 per cent is well on the way to achievement. If recent unconfirmed reports of a further speed-up prove true, the target may be greatly exceeded, even at the cost of earlier plans for industry.

In *Hungary* collective farms hold only seven per cent of the arable land, and state farms a further six per cent. Although these results are still modest, the speed with which they were obtained is striking. In a speech on August 22nd last year, the chief Communist economic expert in *Hungary*, Ernő Gerő, declared:

During these ten days we have to persuade not a few hundreds but a few tens of thousands of men and women and families voluntarily to join the co-operatives.

As a result of the Party's efforts at "persuasion," the Premier, István Dóbi, was able on September 9th to announce that during the last weeks, 35,000 families had joined collective farms in addition to the 70,000 which already belonged. In the last months of 1950 the speed was reduced, but once more rose in January and

February, this year. On March 10th, however, the Government decided to permit no new collectives to be formed until after next harvest.

In *Czechoslovakia* a quarter of the villages contain collective farms, which together possess throughout the country more than 1,000,000 hectares, or nearly 14 per cent of the Republic's arable land.

In *Poland* the number of collectives has increased from 243 at the beginning of 1950 to 2,500 today, but they possess only a small proportion of the land. *Rumania*, with 1,000 collectives holding only two per cent. of the arable, has made least progress in the region. In all the Cominform countries the drive against the kulaks is intense. They are not allowed to join collectives, are expelled from membership of trade co-operatives, and are assessed at disproportionately high rates for both money taxes and deliveries of produce to the state. Even the official press shows that there have been acts of mob violence against them.

The purpose of collectivisation in Eastern Europe is the same as it was in the Soviet Union twenty years ago. In order that the enormous targets of the industrial plans may be achieved, despite shortage of skilled workers and machines, great masses of peasant sons and daughters must be mobilised and directed to the factories, mines and public works. Jobs which could be done by one skilled worker with a machine must be done by two or three or five pairs of bare unskilled hands. The men and women must be brought from the villages, and they must be fed by those who remain on the land. The collective farm is above all a means of administrative—and political—centralisation. Its purpose is to extract from the peasants increased food supplies and a more rapid flow of labour recruits. It is hoped that mechanisation of agriculture will ultimately improve output per acre. But until this is so, the collective farm system provides the means to ensure that, if anyone has to be undernourished, it shall be the peasants. The more backward the country, the more urgent is the need for the new coercive apparatus. That is why collectivisation is being conducted so much more quickly in *Bulgaria* than in *Czechoslovakia*.

The collective farm is administered by a managing committee, in theory elected by its members, in practice appointed by the Communists. The chairman of the committee may or may not be a party member, but will certainly be a person approved by the party. Side by side with the hierarchy of the collective farms is the hierarchy of the "machine-tractor stations" (MTS); they own and operate the tractors on which the cultivation of the

fields will be increasingly dependent. The MTS personnel are closely controlled by the party. A decision of the Polish Politburo in December, 1950, created "political sections" in the MTS whose task was to "combine the strong influence of MTS technology and agronomy with the authority of the Party organisation." These sections are a direct copy of the *Politotdel* set up in the Soviet MTS in 1933-4. In the Soviet Union at present the party's control in the MTS is ensured by a "political assistant-director," who is a party member and is the most important political figure in his area, more powerful than the chairmen of the collective farms which his organisation serves. As the MTS become more important in Eastern Europe—they are not yet adequately supplied with machinery—their party organisations will become, as in Russia, the principal executive organs of the party's will in the countryside.

*

Though the political significance of collectivisation is quite clear from the experience of the Soviet Union and Eastern Europe, its economic consequences are uncertain. It is doubtful whether mechanisation has greatly increased the output of Soviet agricultural land. It is doubtful whether great units of land are the best for all crops. The case for producers' co-operation is of course strong, but better results have been obtained in *Denmark*, by voluntary means and with respect for private property, than in the Soviet Union by compulsion, arbitrary standardised plans and onslaught on private property. Soviet policy, which is now being imitated in Eastern Europe, has been doctrinaire, inhuman and wasteful mainly because the supreme planners, for political and military reasons, have set impossibly high targets to be achieved within an impossibly short time. The welfare of agriculture is a secondary aim. Even less attention is given to social justice. The old social stratification of the Soviet village has been replaced by another, within which the contrasts are probably greater. There has appeared a caste of privileged persons: party officials, *kolkhoz* chairmen, book-keepers and administrators in *kolkhoz* and MTS, tractor drivers and MTS mechanics—who live immensely better than the mass of depressed agricultural labourers among whom they dwell. The same social stratification is now being effected in Eastern Europe. It will doubtless lead in time to the same mass of concealed unemployment or under-employment as exists in the Soviet Union, where much labour is wasted in superfluous administrative jobs.

collectivisation of agriculture in Eastern Europe is of necessity limited, there is one general conclusion that can be confidently drawn. It is that the transformation of East European village life will gravely disorganise the whole area. Even if the Communist regimes proceed much more tactfully than their predecessors in the Soviet Union—and it is by no means certain that the international tension and the impatience of their commanders in Moscow will allow this—they will meet with an opposition far fiercer than the Russian peasants, with their heritage of serfdom and their long tradition of communal village organisation, were able to offer. If the Soviet Union had had to wage war during the years of economic chaos and famine between 1929 and 1933, the whole fabric of the Stalinist state would have collapsed. Today the confusion in Eastern Europe is already considerable; it will grow as the process spreads, at increased tempo, to the countries hitherto least affected. At the same time in the Soviet Union the

“third agrarian revolution” is going ahead with the conversion of village *kolkhozy* into “agro-towns” (described in *The Economist* of January 27th). Its physical and moral dislocation will hardly be much smaller than those of the thirties. These vast changes in the Soviet empire will not make for strength.

The west does not intend a preventive war against the Soviet bloc, nor does it regard the people of Eastern Europe as “expendable” in its own interests. To urge these peoples to premature revolts, doomed to bloody suppression, would be criminal folly; but the west cannot disinterest itself in the future of Eastern Europe. Its hundred million people cannot be left as cannon-fodder and factory-fodder for the Stalinist imperialists to use for the destruction of the west. Every means that may present itself should be used to strengthen these forces in Eastern Europe which can one day bring about its liberation. One of the strongest of these forces is the peasant's devotion to his land and to his village life.

The British Universities—II

Money and the Arts

FOR six years the universities of Great Britain have been given great opportunities and have seized them. Prosperity has altered the character of the younger universities and brought much controversy into the old. To these growing pains have now been added the difficulties that rearmament's demands on the national resources must create. Will the universities be forced to retreat from their advanced positions, will they be able to consolidate their present status, or will they be permitted to continue their development, though at a reduced rate?

The problems of the universities in the next five years involve five main issues. Two are concerned with finance. The first is the amount of money the nation can and ought to spend on its universities. Is £23 million or even £33 million an excessive amount of public money to devote to university education at a time of economic difficulty? The second issue is financial control. At present the universities are extraordinarily favoured, for they receive large sums of public money without the elaborate scrutiny of Treasury control. Can this freedom continue? The third issue is concerned with numbers. The universities want to maintain an equilibrium at the present level of some 84,000 students. Does this accord with the long-term interests of the nation? Fourthly, there are the problems that turn on the balance between arts and science. Are the arts being eclipsed? Should the further growth of scientific education take place inside or outside the universities? Fifthly, what of the status of the provincial universities? What can be done to secure their new position and to give them some of the cultural and aesthetic advantages which are so conspicuously lacking in industrial towns?

The financial future is at present uncertain. The quinquennial grant, once given, cannot be tampered with, and money on revenue account is therefore safe until July, 1952. But capital expenditure has already been reduced by the Treasury device of delaying approvals for six or nine months—which is not called “cutting.” In the short run, however, the new Civil Estimates allow for an increase in capital expenditure

for 1951-52 of nearly £2,000,000 (from £5,500,000 to £7,300,000). For the next quinquennium the University Grants Committee has asked universities to make their applications in a new form, distinguishing between “consolidation” and “development.” Money is likely to be available for carrying out plans that have already been set in train; but there is more uncertainty about new developments. Quite apart from the claims of rearmament, there is much to be said for the view that the universities have bitten off about as much as they can chew, and that a period of digestion is required. It would, however, be very bad for university morale if no money at all were forthcoming for the adventurous. Though the universities are taking ten times as much public money as they did in 1939, £23 million is still a drop in the ocean of public expenditure in the welfare state. And no investment, wisely made, can earn higher dividends. The last war forcibly demonstrated the value of university-trained scientists and administrators. Their importance is equally great in the peacetime economy of this country. Liberal provision for the universities—not only for the indispensables of laboratories, equipment and lecture rooms, but also for the civilising amenities of university life—can be justified on good economic grounds.

Freedom from detailed financial control is a more delicate subject. In two successive years the Public Accounts Committee has commented on the universities' exceptional freedom from close financial control. On both occasions this freedom has been ably defended by the Treasury. It would indeed be a catastrophe if the universities had Civil Service methods imposed on them at the centre. It is vitally important that universities should be free to make mistakes, to waste effort in the false starts inseparable from original research; Civil Service methods are designed precisely to avoid mistakes and waste (and consequent Parliamentary questioning). On the other hand, £23 million is a large sum of money, and the universities would be wise to forestall criticism. What has been done with the earmarked grants for oriental studies, for the social sciences, or for educating

dental and veterinary students? From the University Grants Committee it is impossible to obtain any general picture, even for a single subject, except in the quinquennial report—and that is very brief. Some fuller and more frequent method of telling the public how the money has been used is now needed.

The next problem is that of numbers. It was accepted in the previous article that the universities had a good case for marking time with a student population of about 84,000. A rapid expansion beyond this number would probably require a lowering of standards. An immediate expansion would probably produce many graduates unable to find jobs commensurate with their hopes. Reports issued by the Ministry of Labour indicate that, although a continued shortage of chemists, chemical engineers and metallurgists is expected, the universities are, or very soon will be, producing enough scientists and technologists of other types. The output of arts students is also sufficient to fill current openings except in a few subjects.

This, however, does not settle the issue of policy. The demand for graduates is fixed by certain conventions. Conventions can and perhaps should be altered. How many managers in industry should have university degrees? How many teachers? How many farmers? It is clear that the United States has benefited greatly from the wide spread of full-time education to the age of 21. Much of this college education is not of a university standard, at least as that is understood in Great Britain, yet it is none the less beneficial both to the individual and to industry. The question is not whether this country can afford another three years' education for another 100,000 students, but whether it can afford not to give it. This does not mean that another 100,000 should flood into the existing universities. As other countries have demonstrated, universities are not the only form of advanced education.

★

At this point the third issue leads on to the fourth. Is it possible, and is it even desirable, to keep anything near the old balance between the arts and sciences? There is no doubt that arts faculties are temporarily at least in the doldrums. Men and money are pouring into the science and technological faculties. Scientific development is news; science professors can justify their demands by arguments of national needs; industry is prepared to lavish money on the universities for equipment and research. This atmosphere makes it extremely difficult for a university senate to tell its scientists that they have had enough. As a result, many projects have been started that will grow of their own momentum. Many are expensive in buildings and equipment—£250,000 for a cyclotron; £200,000 for a new engineering laboratory.

There are three kinds of response to this assault on the universities' resources. There are the defeatists, who say that the arts faculties must decline in importance. There are those who accept the master technologist as a power within the university, but one with which the arts faculties can make reasonable terms. Thirdly, there are those who recognise that the further growth of technological study is inevitable and desirable, but would have it take place outside the universities.

It is difficult to believe that the recent proposals for a Royal College of Technologists with power to confer

degrees on students who take technical colleges will yield a technologists, as distinct from technicians. The crabbing control is not calculated to attract or encourage the independence that a work. Yet the universities cannot burden. As a start, it appears reasonable to create two advanced Institutes of Technology. Their status should be created. They ought to be, but close to, existing universities. They would thus have opportunities for co-operation with sister university, and the governing body, some professors from the university. The scheme is that the institutes should be independent as great as that accorded to the universities. The Manchester College of Technology might be the nucleus of one such body. Cambridge, with its highly developed science and engineering, might foster another. Too much time has already been lost in attempting to placate the local authorities and more omnivorous members of the university. A decision ought to be made.

There are, finally, the special problems of the provincial universities. They hold the big new developments of the future in their hands, for the older universities are full to capacity and already work to very high standards. Several of the provincial science departments can hold their own against Oxford and Cambridge and draw teaching staff out of their magnetic fields. In the arts, this is rare, and the tendency is for all staff to be drawn to Oxford, Cambridge or London as soon as they have earned sufficient laurels elsewhere. Yet it is in the big urban centres that it is particularly important to encourage the study of the humanities and the enjoyment of the arts. In the science faculties, there is money and a sense of urgency and self-importance that overcomes many of the disadvantages of non-collegiate life. A number of things might be done to increase the self-confidence of the arts departments in the black cities. Some universities in an attempt to be universal extend subjects and staff beyond their real capacity. Nothing discourages teachers more than to be part of a “weak” department; nothing stimulates them more than to be one of a good team. The attraction of like minds is part of the magnetism of the older universities. The others, could increase their strength by concentrating more on their better departments and abandoning some of the stragglers. Similarly, if money was spent generously to build up better libraries, to increase research scholarships and travel grants, and to free staff from excessive teaching duties, new life might be put into the arts faculties.

The purpose of this article is not to urge the Government to bestow largesse upon the universities. There are extravagances that should be cut. But the value of the universities to the nation is so great that it would be the falsest of economies to prune them at the moment when six years of careful tending have put the harvest within sight. For six years the universities have laboured against shortages of staff and accommodation. They are greatly in need of the means to spread themselves a little, to establish firmly the new developments they have started. Money spent on higher education, both within the universities and outside them, is the price of cultural and technical advance.

(Concluded.)

NOTES OF THE WEEK

an

The storm centre of a turmoil that entire Moslem world from Rabat (in ai (in Pakistan). Much will therefore now happens in Teheran where the rival Great Powers and the laxity, cupidity of local politicians are the main causes in policy in Persia must now be positive and essential and somewhat obvious objectives to The first is the maintenance of public order a Government. This is not easily achieved in mere religious fanatics, nationalists or members eh (Communist) Party can with little effort and financial outlay capture the popular imagination—ant of threats—usually threats of assassination—the security forces from carrying out their duties. y, it must be made quite clear that neither the British ment nor the Anglo-Iranian company will conduct r negotiations under a threat of force; lastly, the British rnement are fully entitled to receive from the Persians an anation of what is meant by “nationalisation,” in order at the new situation may be considered on a realistic basis. his information is needed in order to draw up new proposi- ons in which the popular catchphrase of “nationalisation” may be harnessed with the interests of the Persian people and of the petroleum company, which has vast and complicated activities ranging far beyond Abadan.

The wise introduction of martial law, first in the capital Teheran and later in the area of the petroleum fields, has enabled the Persian police, assisted by the army, to maintain order and to check the activities not only of the extreme Persian Nationalists but of the Tudeh Party which is undoubtedly partially responsible for the recent strike of 3,000 workers in the oilfields. The timely arrival of British warships in the Persian Gulf should strengthen the hand of moderates in the capital and the oilfields.

In view of these stabilising factors it is hoped that the Persian Government will very soon draft a reply to the British Note which was presented on March 14th in order that the situation concerning “nationalisation” may be clarified and new British proposals drafted. It is believed that the Persians would thankfully clutch at any proposal that would save their faces and help them out of their present impasse. There is little hope that the Petroleum Commission set up by the Majlis, which is so anxious to expropriate the oil, will have any idea of what they wish to do next. someone must make a proposal and the party which does so is the one most likely to have its own way.

* * *

How Persia Keeps Solvent

The precarious state of national security in Persia has improved during the past few days and there is a hope, albeit a faint one, that disturbances are over for the moment. Our Special Correspondent recently in Teheran estimates that there is “about a fifty-fifty chance” that the forces of law and order will collapse before the “nationalisation” affair comes to a head. Be this as it may, the future appears to depend to a large extent on the outcome of the present financial crisis, which is discussed in detail in an article on page 746. The army and, even more important, the police have not been paid owing to a shortage of currency. As the Prime Minister's efforts to pass the new finance Bill through the Majlis failed and the compromise one put forward at the

last minute by a private member is unlikely to be effective, the vital question remains: how long will the security forces work without their wage packets? Servants of the Persian crown are well accustomed to receive their pay in arrears, but they like it none the more. The petroleum company workers are not, however, accustomed to be paid in arrears and, although the company may make some emergency arrangements for payment in kind, the situation is not a pleasant one and might in time become menacing if the Tudeh Party should again become active.

National solvency has only been maintained during the past fifteen months by large contributions from the Anglo-Iranian company, which amount to about one-third of the Persian budget. These payments have prevented national bankruptcy, but as they have unfortunately been made in secret few Persians are aware of this particular debt they owe to the company. The figures are enormous. During 1950, in addition to £14 million paid in advance royalties, the company paid a further £25 million; and this year a lump sum of £5,000,000 was paid two months ago which will be followed by further payments of £2,000,000 monthly. It is somewhat surprising that these significant figures appear to be so little known in London or Teheran.

* * *

Pressure for Subsidies

There is probably a majority of Labour Members of Parliament which will regard rearmament as less of an evil the more it can be carried out by the methods of a war economy. It is this attitude that lies behind the recent appeals to the Government to subsidise and ration utility clothing. The Board of Trade issued over the Easter week-end a denial that it was working out any such scheme, but that cannot be taken as the end of the matter. This and similar ideas will recur, and will be pressed with increasing vigour, as the consequences of higher import costs and expanded defence production are more sharply expressed in higher prices and shortages in the shops.

Ministers, as well as their followers, are probably still very far from accepting in full the doctrine that higher prices for raw materials should be allowed to exert their natural force to restrain consumption. But even a Government entirely determined on this as a general policy would be concerned about the price increases now in prospect for utility clothing. The utility scheme was devised and first operated when raw material prices were relatively stable. It was based on the assumption that for a range of standard goods price increases could be kept to modest proportions. If they are now to be rapid the scheme has lost much of its social and psychological point. The proper response would probably be to drop it altogether. But Mr Wilson has already ruled out that possibility, for reasons which have never been adequately explained, and many Labour politicians continue to believe that somehow it is wicked for working-class shops to contain some things too dear for some people to buy.

The same politicians are, of course, earnest in their belief that “inflation” has to be avoided. They do not recognise that the Chancellor can this year manage without a very severe Budget, sharply increasing the taxes falling on the workers, only on the assumption that prices rise to mop up purchasing power while consumption in real terms is reduced. If clothing prices were kept down by subsidies, taxation would have to be correspondingly higher instead. The advocacy of subsidies is something more than vote-catching only if this cost is recognised; if it is recognised, few people can doubt that the lesser evil is to let prices rise.

Instruments and Prayers

It is not yet possible to tell whether the tension between Government and Opposition over the arrangement of parliamentary business will have been at all eased by the Easter recess. Much depends on the extent of the difference of policy between Mr Chuter Ede, as Leader of the House of Commons, and Mr Harold Wilson at the Board of Trade. There is certainly a difference in temperament between them, and that, in these circumstances, may amount to much the same thing as a difference of policy. It therefore remains to be seen whether Mr Ede's ideas for revising the procedure under which delegated legislation comes before the House ever reach the point of public discussion.

In the meantime, it is worth looking at the present procedure. The Statutory Instruments Act, 1946 (which came into operation in 1948) governs the publication and annulment of statutory orders of various kinds. It deals in detail with three classes of “instrument”: those which are to be laid before Parliament when made; those which may be annulled by Parliament within forty days of being made (it is this class which is annulled by a “prayer”); and those which are to be laid before Parliament in draft before they are made. The Act does not apply to those measures which need a positive resolution of both Houses before they become operative (save to direct that all statutory instruments shall be numbered and printed). Its principal limitation, as a piece of constitutional machinery, is that it is passive: it leaves each individual Act to prescribe what kind of instrument shall be issued under it—in particular whether the instrument may be annulled by a prayer or not.

The Opposition has always claimed also that the Act is defective in that it only permits a prayer for the annulment of the whole of an instrument, not for its amendment in detail. In 1949, a Conservative private member's Bill sought to lay down a general rule that all statutory instruments coming into force automatically on signature should be subject to annulment by prayer. The Bill did not reach the statute book. The only other general check on statutory instruments is the Select Committee of the Commons entrusted with the duty of examining them and of reporting to the Commons those which seem, amongst other things, to be an unusual or unexpected use of the power given to a Minister. During the 1950 Session, this Committee examined 632 instruments and reported seven to the House. Its duty is to report when the horse is stolen.

Whatever moral verdict is passed on the recent spate of prayers, Conservative backbenchers' activities are a reminder that a vast stream of statutory instruments emerges each year (the last serial number in 1950 was 2,144), that this is likely to continue under any government, and that in six years the Government has failed to devise any generally acceptable machinery either for their automatic classification by someone other than the department that makes them or for their amendment in detail when it is only a detail that is questioned. It is to be hoped that Mr Chuter Ede's proposals, if and when they are made, will deal with the whole subject and not be confined to a rearrangement of the hour of the day when prayers for annulment are taken. That would be as useful as altering the time of an appointment with the dentist.

* * *

Bill for the Health Services

The absence of any supplementary estimate for the health service in the financial year just ending showed that the Ministry of Health had obtained some control over its total cost, which has risen so fantastically over the original estimate given in the National Health Service Bill of 1946. The new estimates for 1951-52 show that this control is being used to keep total expenditure steady. The net cost of the health service to the taxpayer—that is, after allowance

has been made for the contribution from the National Insurance Fund and other appropriations in aid—will be £398 million, compared with £393 million in 1950-51. If the cost borne by the ratepayer is added, the full burden of the health service in the coming year will be nearly £417 million (against £411 million), which gives it the distinction of being the most expensive of the social services, costlier even than the food subsidies.

In view of the inevitable rise in prices in the next few months, this small increase in the cost of the health service

	(£ Million)		
	1949-50†	1950-51†	1951-52†
Grants to local health authorities	15.4	18.4	18.6
General practitioner service	47.0	48.2	48.4
Pharmaceutical service	35.3	32.0	34.6
Dental service	48.2	46.9	39.9
Supplementary ophthalmic service	24.1	28.1	16.6
Advances to hospital boards	220.7	256.0	273.4
<i>Of which:—</i>			
Maintenance expenditure*	210.0	244.3	259.7
* Less “direct credits” (mainly recoveries from staff for board and lodging.)			
† Actual 1949-50 (except hospitals' maintenance expenditure which is estimated). Estimates 1950-51 and 1951-52.			

means that its demands on the real resources of the country are being slightly reduced. Unfortunately, there is every reason to assume that, as inflation marches on, the Ministry of Health will be faced with fresh demands for wage and salary increases. As is shown in the accompanying table, giving the distribution of health service expenditure between its main branches, no provision has been made for any increase in the capitation fee paid to general practitioners. Yet the long-deferred discussions with the British Medical Association on this question will take place in the near future,

Self help

Investors themselves make the final decisions about changes in their holdings. Professional advisers can only advise—responsibility rests with the investor. How much more fitted will he be to see where his advantage lies, if he reads THE FINANCIAL TIMES every day. A sensible investor wants to see the market as a whole. The sort of guidance he gets in THE FINANCIAL TIMES enables him to think for himself.

Read

THE FINANCIAL TIMES

every day

even if you have to borrow a copy

and the Ministry of Health can hardly maintain any longer its fiction that the betterment factor to be added to the Spens Committee's recommendations—which were made in terms of prewar values—should be only 20 per cent. In the hospital service, even if higher salaries for specialists and nurses are out of the question, there may well be demands for increases from the "other staff," whose salaries in the coming year are estimated at some £65 million. Food, accounting for about £30 million of the hospitals' gross maintenance expenditure, is also likely to increase in cost. Nor does it appear, from the estimates for local health authority services, that any account has been taken of the higher salaries recently agreed on for medical officers of health and dentists in local authority service.

* * *

Some Progress in Paris

It is not Mr Gromyko's personal fault that progress at the Palais Rose is so slow. If it were, it would be strange to find him so stubborn in the conference room and so affable at lunch. The fault lies rather with his masters who, true to form, appear to have kept him on too short a rein for him ever to be able to test the paces of his opponents. The Kremlin wants to discover whether there is any chance of the western powers reconsidering their policy on German rearmament, without themselves having to decide or reveal what inducements or threats might be offered from Moscow.

This has been the significance of the apparently pedantic wrangle over the order of the agenda, which will decide whether the Foreign Ministers are to meet. If they had sat down with the first agenda offered by the Russians, the west would have found itself discussing German rearmament under the shadow either of half-threats (already made in Soviet Notes to Paris and London), or of unspecified inducements to change their course. They would, in fact, have been put in the box to face the charge of rearming the Germans before they had a chance to cross-petition or to explore the mutual advantages of a settlement out of court. If, on the other hand, the Foreign Ministers had worked with the first western agenda, the Russians would have found themselves discussing their whole policy in Europe and pressed to reveal from the outset whether they were really prepared for general negotiations or not. They would have been at liberty to open with the question of German rearmament; but they would also have had to face, and publicly reply to, the west's contention that it was the level of Soviet arms and the violation of the satellite peace treaties that had compelled them to consider the formation of West German divisions.

As *The Economist* goes to press Mr Gromyko appears to have been given another loop of rope from Moscow. He has proposed an opening item for the agenda in a form which makes the following concessions to the western views: it puts the causes of tension in Europe first; it brings the demilitarisation of Germany into a broader context; and the emphasis on fulfilling Potsdam is dropped. The log-jam is loosening, but there remains the objection that the Russian way of raising "the demilitarisation of Germany" constitutes an accusation rather than a proposal for discussion. It is still presented as the first cause of international tension and is given priority in the new Soviet draft over the "existing level of armaments"—which, in the western view, should be the starting point for the Foreign Ministers. Beneath all the arguments lie the two essential, contrasting facts: that the arming of Western Germany has not begun whereas the arming of Soviet Europe goes on apace.

* * *

No Parallel in Germany

Strong nerves and cool heads will be needed in the coming months in Western Germany. The Soviet German

"National Front" organisations have now launched a campaign in the Federal Republic designed to overthrow the Adenauer Government, create economic chaos and rouse the public against the Atlantic defence forces on German soil. Now that the Federal Parliament in Bonn has finally rejected Herr Grotewohl's appeals for all-German talks on "unity," the Communists have reverted to their previous efforts to create a national resistance movement in the west. They are evidently preparing to do so with every means in their power, from organised propaganda and illegal strikes to outright sabotage. The Communist headquarters have reorganised their propaganda machine, and are purging their ranks of the many unsatisfactory members who resent having to collaborate with ex-Nazis and Social-Democrats.

To do their work the leaders of the Communist campaign will rely largely upon fear. They do not even hesitate to put into the public's mind the comparison with Korea, where the rejection by the South of Russian-sponsored appeals for "unity" was followed by a Russian-sponsored invasion from the North. On the contrary, speeches from Eastern Germany attempt to show that the situation is the same as it was in Korea (according to Moscow). The charge is made that, just as "the Americans invaded Korea," so they are preparing to invade Eastern Germany unless they are prevented in time. Following the same propaganda directive, Herr Grotewohl has said that

the Oder-Neisse line is to be Germany's 38th parallel—that is why Adenauer is demanding the extension of the dictatorship of the United States to the Polish territories east of that line. By doing so he is in effect demanding the declaration of a third world war.

Herr Dieckmann, the "Liberal Democratic" speaker of the Soviet People's Chamber, has added a personal threat to the western political leaders. Taking up Dr Schumacher's warning against the "Trojan cavalry" with which the Soviet Germans were trying to capture the west by a flood of organised propaganda and secret agents, Herr Dieckmann threatens that "Herr Dr Adenauer and Herr Dr Schumacher will be struck deaf and blind when this Trojan cavalry does what is necessary to re-establish Germany's unity."

It is evidently hoped that the West Germans have worse nerves than Marshal Tito and his Jugoslavs, who have been given similar treatment by Moscow for several years now. The parallel with Korea is, of course, misleading. Although Russian policies for acquiring control both in South Korea and Western Germany have been basically alike for a long time past, the situation in Germany became entirely different as soon as the United States and its allies decided to build up their forces in that country. The Germans cannot be too often reminded that Communist invasion came in South Korea as the consequence of an American withdrawal.

* * *

Threat of Famine in India

India is heading for serious trouble. This year's famine now looks like exceeding the Bengal disaster of 1943, if not approaching the long remembered horrors of 1897-99. The statistics of stocks show how tragic an emergency is likely to arise in the next few months and there seems little, if any, possibility of the American gift of 2,000,000 tons of grain arriving in time to save the situation. Although President Truman has proposed the gift—in two equal instalments—legislative action has yet to be completed in Washington. Moreover, assuming shiploads of 8,000 tons, it will take no less than 250 vessels to transport the grain; and that is a very tall order in the time available between now and mid-summer, which is the peak of the annual shortage in India.

Sixty years ago India produced in a normal year all the grain it needed although, by modern standards, proteins and vitamins were deficient even then. Today the population has nearly doubled, while food production has gone up by perhaps no more than 25 per cent. At present the average

Indian consumes only about 1,500 calories a day, which is appreciably less than the Chinese who are estimated to get a little over 2,000 calories. The immensity of the problem is shown by the fact that America's two million tons of grain would in any case raise average daily consumption only to about 1,800 calories.

In a bad year when the monsoon fails, as it often does in some parts of the country, the danger of actual starvation is very near. This year's special crisis is due to two things. There has been a phenomenal run of bad luck during the past nine months, in which floods, drought and the Assam earthquake have between them destroyed six million tons of food. In addition the government, hoping for too much from its grow-more-food campaign, in view of the encouragement it has given to the cultivation of cash crops in order to beat the shortage of raw jute imports from Pakistan, has failed to purchase enough food abroad, particularly Burmese rice.

The real trouble, of course, is the perpetual increase in the population. Drought has made the problem particularly acute at the moment, but unless some means can be found to restrict this endless growth the Indian outlook is grim indeed.

* * *

Plimsoll Line for Employment

The British Government has acted on the resolution passed last year by the Economic and Social Council of the United Nations, suggesting a full employment "standard." In reply to a Parliamentary question the Chancellor of the Exchequer announced last week that the United Nations had been told that the British standard was 3 per cent of unemployment at the seasonal peak. This is regarded as the level to which unemployment can be kept consistently with the avoidance of inflation. The figure is reached by taking the seasonal maximum of 2 per cent apparent during the last few years and adding to it a "small allowance" for external factors beyond national control, such as shortages of raw materials or a decline in the demand for exports. "It must be stressed," said the Chancellor's statement, "that the choice of this standard does not mean that the Government would allow unemployment to reach 3 per cent without taking vigorous counter measures." The practical effect is that the Government still regards the state of employment during the past three years as the standard to maintain.

There are circumstances in which the declaration of a standard would be genuinely useful. If the avoidance of inflation, overt or repressed, were really regarded as a *sine qua non* of policy; if unemployment figures took account, in inflationary conditions, of the wastage of manpower in semi-idleness on full pay; if the choice of a standard percentage were uninfluenced by any desire to display a superior economic morality before less security-minded or less fortunately-placed neighbours—then the public definition of each country's Plimsoll line for employment would indeed provide a framework of possibilities within which international measures could be rationally shaped. As a matter of hard reality all institutional and political forces, not only in Britain but elsewhere, now push towards inflation; warning lights are needed not to make governments realise that unemployment is rising too high but to show that it is falling too low. In taking the British unemployment figures of the last few years as an example of what can be achieved compatibly with "the avoidance of inflation," the Government displays either a remarkable unwillingness to use words in the sense generally understood both by economists and by the public or something which it would be kind to call blindness to the facts. Although much of the previous inflationary impetus was unexhausted, prices had already risen by 20 per cent since 1945 before the new impetus of rearmament took over.

Only too evidently, in fact, unemployment index of less than 3 per cent; and the policies designed to maintain a maximum if unemployment rose above 3 per cent. Mr Gaitskell's statement is either intended strictly for home consumption or as a declaration of an indefinitely accelerating, depreciation of the value of money.

* * *

The Closed Shop

The debate on the second reading of the member's bill on the closed shop—which was introduced before the Easter recess—should be much more than that on the action of Durham County Council. Nigel Davies, who has presented the bill, seeks to make it illegal for any local or public authority to insist on membership, or non-membership, of a trade union as a condition of employment. The bill is blessedly concise, and concerned only with the membership of trade unions, that of any other organisation. It does not, therefore, interfere with the Government's policy of refusing to negotiate with Communists on confidential state business.

As it stands, the bill meets the wishes of the large number of opinion that objects to the principle of the closed shop in general and to its application by Durham County Council in particular. It should receive a wide measure of support and not only from the Conservatives and Liberals. Most trade unions today would like to see the principle of the closed shop established, but few indeed relish the idea of their work being done for them by the employers. A man who is forced to join a union against his will seldom makes a good member and may well become a disrupting influence. Moreover, if an employer is entitled to insist on membership of a union as a condition of employment, another employer may be equally entitled to insist on non-membership of a union.

There is nothing in the bill to stop trade unions from continuing to campaign for a closed shop if they wish to do so; it aims only at preventing discrimination by local or public authorities—the only employers likely to attempt such discrimination today. But the bill avoids making an issue of the principle of the closed shop in general, and such a limited and necessary measure ought to receive the support of the Government as well as of the Opposition.

* * *

The Rate of Progress

The article in the January issue of the US Department of Commerce's *Survey of Current Business*, giving estimates of the American national income from 1929 to 1949 on a constant-value-of-money basis, was mentioned in the "American Survey" of *The Economist* of February 10th. The wider implications of the figures, however, justify a return to the subject.

The gross national product of the United States, in terms of 1939 dollars, was \$85.9 billion in 1929, which was a year of reasonably full employment. It fell to \$61.5 billion in 1933—a fall of 29 per cent from the top of the boom to the bottom of the depression. Then there was a steady rise, interrupted only in 1938, to \$115.5 billion in 1941. The war took the total to \$156.9 billion in 1944 and after the decline immediately after the war, the total recovered to \$142.3 billion in 1949.

Over the twenty years this represents an average annual rate of increase in the real volume of national production of about 2½ per cent. But there was a large increase in population. On a per-head basis (leaving out the sphere of

me is the sailor...

peaked cap is on the peg. For four glorious months I leave after an arduous two years' spell of duty in the Foreman. His ship is one of a fleet of eight that patrols looking after the submarine cables of Cable & Wireless which spread like the tentacles of a beneficent octopus out the greater part of the globe. All's fair at the fair!

THE Canadian International Trade Fair opens in Toronto on May 28th. Here is a great opportunity to make personal contact with Canadian and American buyers. Valuable dollar business will be yours for the taking. Fly to Toronto yourself in less than a day by Trans-Canada Air Lines from London or Prestwick. T.C.A. service is designed to meet your business requirements. The mighty T.C.A. North Star

Skyliners offer friendly comfort with meals and snacks to suit you — and prompt arrival enables you to keep to your business schedule.

SOMEWHERE TO STAY?

If you've any problems about hotel accommodation in Toronto, T.C.A. may be able to solve them. Provided you let your Travel Agent know in time, the T.C.A. Visitors' Bureau in Canada will do their best to help you.

CANADA—only a day by **TCA**

Full information and reservations from your Travel Agent or from Trans-Canada Air Lines, 27 Pall Mall, London, S.W.1. Tel: WHITEhall 0851 (Passengers and Air Cargo). Scottish Address: Prestwick Airport, Ayrshire, Scotland. Tel: Glasgow Central 3428 or Prestwick 7272 (Ext. 268/269).

government activity, which is difficult to "value"), the rate of increase in "real product per person engaged" was about 1½ per cent per annum. There are two further corrections that might be applied to this figure, but as they amount to about ½ per cent per annum each and work in opposite directions, they can be forgotten. (One of these is the correction for the fact that average hours of work were lowered in the twenty years; the other for the fact that part of the improvement is simply due to a migration of labour from low-productivity agriculture to high-productivity industry.)

The salient conclusion is, then, that the rate of progress—the rate of increase in what the average man can produce and therefore the rate of increase in what the average family can consume—is still, as nearly as can be measured, 1½ per cent per annum compound, the rate that seems to have prevailed in the industrial communities of the west, with remarkable consistency, for some two hundred years; there is no speeding up in the rate of material progress. And if that is true in America, it must be at least as true in other countries where less attention is paid to productivity. It is true that the period of the calculation covers the Great Depression. But that can be made the basis for more optimistic conclusions only if governments can be trusted not merely to abolish depressions but also to do so without putting brakes on the growth of productivity—which, as things stand now, is a very large double assumption. The prudent conclusion is that any plan or programme for future material progress should be looked at with great scepticism. If it assumes, over a long period, any rate of increase in total national income more rapid than 1½ per cent. Planners, please note.

Baghdad Follows Suit

A group of eighteen Iraqi deputies, including a majority of the right wing Istiqlal (Independence) party, have introduced a bill into Parliament demanding the nationalisation of all petroleum companies in Iraq. "Nationalisation" means expropriation, and the demand as well as the use of the word have been inspired by events in Persia. There is as yet no evidence that the proposal is receiving strong left wing support; but, to judge from the tone of recent broadcasts in Arabic from Moscow and the Iron Curtain countries, there is little doubt that the Russians mean to exploit the situation in Iraq as they did during the period when left and right worked together in noisy agitation to prevent ratification of the Portsmouth Treaty with Britain.

The Iraq Petroleum Company, which works the petroleum concession in Iraq, is owned by Anglo-Iranian (British), Compagnie Francaise des Petroles (French), Royal Dutch-Shell (Dutch-British) and Near East Development Co. (American), each holding 23.75 per cent of the shares; the remaining five per cent are held by Mr C. S. Gulbenkian, a British subject now normally resident in Lisbon who was a citizen of the former Ottoman Empire, was prominent in the original negotiations with the Porte for the Kirkuk field concession. The IPC was the first petroleum company to operate on a large scale in the Middle East, and it has the enterprise to construct the first large pipe line in the Western Hemisphere which runs from the Kirkuk fields to the Mediterranean—one branch terminating at Haifa in Israel and the other at Tripoli in the Lebanon. The original 12-inch pipes have recently been augmented by a second 16-inch pipe line, but since the beginning of the Palestine war the Haifa line has been cut by the Iraqis in an effort to prevent petroleum reaching Israel. Thus the large refinery at Haifa, with which IPC is associated through its Anglo-Iranian and Shell connections, has been virtually out of action for the past three years.

The IPC is moderately enlightened and senior posts have, in the past few years, been opened to Middle Eastern

nationals on terms of social and economic equality with Europeans and Americans. The Iraqis would do well to note that executive positions are not open to educated Arabs working for certain American companies in the Persian Gulf. Nuri Said Pasha, the Prime Minister, can be expected to be tough with agitators, for he wants no disturbances likely to endanger the long-term irrigation and draining projects for which he needs technical and economic help from the West. But Nuri Pasha will drive a hard bargain with the petroleum company, and already he has stated that he wants royalties for Iraq to be "no smaller" than those received by its neighbours. It is not without significance that Nuri Pasha is the chairman of the Iraqi Air Line, which is a subsidiary of BOAC. While he remains in office the Nationalists will have little chance of success, especially if the company puts forward new proposals to cover the remaining forty-nine years of the concession.

Germans Query the Defence Bill

It is psychologically unfortunate that Federal Germany's first contribution to western defence should have to be demanded in the form of an increased estimate for Allied expenses, labelled "occupation costs and mandatory expenditure." However, the Allied High Commission, which recently presented their estimated bill for 1951-52 to the Bonn Government, have done their best in a covering memorandum to remove from it the stigma of occupation. They point out that the increase is due to Allied troop reinforcements carrying out the security guarantee given by the Foreign Ministers last September to Dr Adenauer at his own request.

The Allies also stress that they will still be bearing the major part of the expenditure on their forces in Germany, and that they have made big economies in the part borne by the Germans. Moreover, new construction, undertaken to avoid requisitioning of buildings, accounts for DM 1,600 million out of the total of DM 6,600 million. In days to come the Germans will benefit from this expenditure, as well as from such projects as civil aviation. Estimated expenditure in the British Zone is about two-thirds that in the US Zone, in part because the cost of maintaining a British division is far less than the American minimum.

Though Dr Adenauer is conscious of the need to make a defence contribution in face of growing American displeasure, Dr Schaeffer, the Federal Finance Minister, has publicly complained about the size of the increase. He puts it at 2½ times the High Commission's figure; he also voiced resentment at the dictatorial manner in which the bill has been presented, and the wasteful expenditure of the Occupation Powers. He declared that the German Government would not consent to the demand until they had examined it from the point of view of international law, and of its social and economic consequences. The final expenditure would, he estimated, be several thousand million marks more than the Allies forecast, whereas the German taxpayer could never provide more than DM 6,000 million. By counting Germany's probable loss of Marshall aid, expenditure on refugees and various other irrelevant items, Dr Schaeffer manages to prove that Germany is already providing its share in western defence.

Juggling is not needed to argue that Germany is in no position, economically or socially, to stand the payment of 6.3 per cent of its gross national income on occupation and defence. Capital has been largely destroyed and no less than 12 million people are receiving state aid, out of a total population of 47½ million. This extraordinary figure includes the unemployed, together with 4,000,000 disabled ex-soldiers and dependants of the killed of two wars. Allied experts, on the other hand, have noted that gross national income has been, and still is, rising by leaps and bounds. Moreover, a reformed taxation system could certainly do much to prevent the new charge from increasing the already

Over 10,000 work in this "IDEAS DEPARTMENT"

The "Ideas Department" of the Hoover Organisation numbers over 10,000 men and women — for the entire staff is eager to improve efficiency, and ideas and suggestions are always welcomed from any source, down to the youngest apprentice.

Suggestion boxes are placed in each section of each factory, and every week large numbers of suggestions are received. Contributions also come, of course, from members of the sales organisation and others whose work is away from the factory.

All suggestions which are put into effect — a very considerable number — win awards for those who submit them. Sugges-

tions are of many kinds. Some are of a technical nature — for improving Hoover products or methods of manufacture; some deal with organisation and administration; some are concerned with staff activities, and so on.

The suggestions are not only valuable in themselves but are a further indication of the friendly and intelligent co-operation that has always existed between Hoover staff and management.

Communists and the Unions

The first of this year's annual conferences of the big trade unions has resulted in a major defeat for the Communists. At Blackpool this week the executive council of the Union of Shop, Distributive, and Allied Workers received overwhelming support for its rejection of a Communist-sponsored motion calling for a change of British foreign policy towards Russia and Communist China. The debate on a subject so foreign to normal trade union matters was particularly significant because it is likely to be repeated at the annual conferences of other unions—and, eventually, to influence the policy of the TUC and the Labour Party.

The Communist argument is cleverly put. To defeat it the non-Communist union leaders have to steer a wary course between traditional Labour pacifism and the real need for adequate defence preparations. In demonstrating Communist motives and methods to their members, union leaders have to be very careful not to fall into the trap of also appearing to denigrate genuine pacifists. The executive council of the distributive workers' union found an admirable way out of the dilemma in a resolution that deplored the threatened use of military force by any country; that saw no solution in the Communist "peace" campaign which ignored Soviet intransigence in international affairs; and that called on all governments to seek a compromise solution to avert war. It is the sort of resolution to which no one can object and which at the same time clearly establishes some degree of Communist responsibility for the present situation. It can only be hoped that the leaders of other unions in their turn reveal the same skill in dealing with the Communists.

* * *

Appeals by Assisted Persons

"Assisted Persons," a phrase that only a civil servant could have decided to use, are those people who are given financial assistance in the courts under the Legal Aid Act. In a recent case before the Court of Appeal, the Lord Chief Justice commented rather sharply on the results of the new Act as shown in the appeals coming before the court. In dismissing the appeal by the assisted person, he said that the result would be that the state paid the appellant's costs while the respondent, given a favourable verdict, had no hope of recovering his costs from anyone—and he had had to pay, amongst other things, £100 for the cost of a transcription of the shorthand notes of the evidence given at the trial itself. The Lord Chief Justice suggested two lines of possible remedy, one that the committees which authorise the granting of legal aid should give a closer scrutiny to the merits of each case, the other that there should be no right to appeal unless the trial judge or the Court of Appeal itself allowed it.

This comment is of wide interest. No one yet knows what proportion of cases before the court will be brought or defended by assisted persons. In some branches of law it is likely to be surprisingly high; after all, the majority of the population has not a "net disposable income" of £420 a year, which is the upper limit of those who may be given some help. The purpose of the scheme is to see that those who cannot pay the full costs of an action get a chance of having their complaint heard by the courts of the land, including the Court of Appeal. It would be most unfortunate if the committees of lawyers who make the first investigation were told, in effect, that it is for them to make a

careful assessment of the chances of success and to refuse aid to anyone who they thought might lose his case; the assisted person's complaint would then be judged, not by the courts, but by an informal committee of anonymous lawyers. The second remedy would be much the better; indeed, there is really no reason why it should be limited to cases in which one of the parties is an assisted person.

New Party in Indo-China

With the renewal of what is probably a major Viet Minh offensive against Hanoi comes news of a fundamental change in the Viet Minh political organisation: the formation of a new Workers' Party, the Lao Dong. Its programme represents the most correct Communist party line yet heard in Indo-China, and therein lies the importance of the event. Here is a really skilful mixture of the most orthodox Stalinism with the great pearls cast before the people of Asia by Mao Tse-tung. Hitherto there has always been some doubt whether the Party regarded the line taken by Ho Chi-minh as reliable; now, however, he is named as the leader of the Lao Dong. For the past nine months there has been a sharp struggle for power within the rebel Viet Minh movement, and the aim of the strict Communists has been to gain full control by merging the Viet Minh and the Lien Viet (or National Front). This was scheduled to take place by the

Unhallowed Monopoly

No class of men have benefited more by the abolition of the Corn Laws than the millers. It brought to their mills corn of all descriptions, from all quarters, while it in no way lessened the market for their produce. At the same time it permitted the flour from other countries to be brought in, that they might not have a monopoly of the manufacture both against the corn-grower and against the consumer. . . . By the repeal of those laws the millers had at least 1,500,000 more quarters of wheat to grind than they would have had had those laws been continued. This great boon does not satisfy them, because it is shared by others; and they now propose to get up a Millers' League, in order to prevent the competition of foreign millers, and exclude the people from the benefit of cheap flour. . . . The art of milling, for want of competition, has not gone forward like other arts in this country. The backwardness has only been discovered since competition began; and since then the best of our millers have introduced many improvements from France into their own mills. . . . The object of the proposed League is foolish as well as wicked, and the more brilliant the success of the millers, the more completely they excluded foreign flour from our market, or the higher they raised the protecting tax, the more intense would be the competition amongst themselves, and the less in the end would be their gains. We advise them to confine themselves to honest industry, and not take up the despised game of beggaring their neighbour. The field is open and free to them and to others; what more can they want? They have the advantage of cheap coal; they have cheap corn; they have admirable wheelwrights at their service. . . . It would be better for them to improve their gear and their grinding than to employ themselves in devising a tax on the people. . . . The scheme seems so monstrous, that we are half inclined to believe that the circular is a hoax. . . . Under this supposition, however, the scheme is worth notice as a specimen of the unhallowed things about us, awaiting only the glow of Protection to warm into loathsome and destructive activity.

The Economist

Galvani was lucky . . .

In the year 1780 Professor Galvani, a leading anatomist, was dissecting a frog on a table in his laboratory at Bologna. His assistant touched the frog with a scalpel which had become accidentally charged by contact with a nearby static electrical machine. The frog's leg twitched violently and important discoveries in electrical theory resulted.

... but we don't rely on accidents

Discovering facts which enable better materials and processes to be developed is more often a matter of patient investigation and extended trials than of luck. We do not rely on the happy accident. We have a well-equipped Research Laboratory and a staff of experienced metallurgists and engineers. Their approach is scientific and their object is to overcome difficulties in fabrication and to develop improved materials to do a practical job.

If you have a problem affecting the choice of a material, write to us about it—our services are freely at your disposal.

THE MOND NICKEL COMPANY LIMITED

Sunderland House, Curzon Street, London, W.1

end of last year, but the "final" conference for this purpose has only just been held this month.

The question therefore arises whether the new offensive and the formation of the new party represent signs of strength or of weakness in the Communist camp. The first impression that these events represent confidence and strength is not proven. An offensive has been expected for some time but, so long as the Chinese do not intervene, General de Lattre is confident that he can hold it; his success last week in obtaining from Paris the promise of reinforcements may have encouraged the Viet Minh to strike at once. As to the Lao Dong, it may well be that the Communists, having failed to hustle through the merger between the Viet Minh and Lien Viet which they considered necessary to get full control, have decided to go ahead with a new party. The fact remains that there are still many waverers in Viet Nam, undecided between Bao Dai and Ho Chi-minh. This new Workers' Party may be expected to turn the heat on them, and whoever in the end wins the political struggle in this sector of the 'cold war' will have to gain their support. For the time being, the most effective counter to the Communists' new party would be another resounding Viet Minh military defeat.

* * *

French Financial Crisis

The French Government has succumbed to the pressure of the strikes and has decided, in principle, to raise wage levels in the nationalised industries and in the Civil Service while at the same time allowing increases in the price of coal, electricity and other basic commodities. This decision sent the strikers back to work except those in the Paris transport services where the strike wave started. Even here, however, the right to work has been respected and the strikers have made no attempt to upset the emergency services which have been put into operation. There is, in fact, a noticeable lack of the revolutionary fervour of 1947-48. For this reason it would be all the more pity if the Government failed to redress the legitimate economic grievances of the workers.

At the time of going to press the Cabinet is still wrestling with the exact details of the wage and price increases and with the appalling problem of how to finance the additional expenditure to which it must commit itself. The estimated increase in the state's wages bill will add up to 100 billion francs to the estimated budget deficit of about 470 billion francs—only 320 billion of which is covered by loans. The Government, therefore, has in any case an uncovered deficit of about 250 billion francs on its hands. And if it follows the advice of those who wish to moderate the increased price of coal, electricity, etc., by larger subsidies, it will be faced with an even greater deficit. In fact, however, subsidies will probably be kept to a fairly moderate level. Even so, the Government seems bound to make an effort to raise additional taxes. In a pre-electoral period this will go even more against the grain with the politicians than usual; but M. Petsche, the Finance Minister, has announced his firm determination not to become a "Minister of Inflation." Paradoxically, the absence in Washington of M. Auriol is a steady influence as no one is anxious to resign in his absence.

The present financial plight of the French Government is, of course, principally due to the failure of successive governments to tackle resolutely the problem of fiscal reform. But it is also due to the enormous rise in the cost of raw materials following the Korean war. Whatever its budgetary policies the French Government could not hope to cope successfully by itself with the increase in international prices. It is felt in Paris that this problem of securing a fair distribution of raw materials at reasonable prices must be tackled immediately and effectively if the unity of the western powers is to be preserved.

Letters to the Editor

What Resources Allow

Sir,—On March 24th you discussed my pamphlet on "Housing" and I write about two points. First, you state that last autumn's Conservative policy on housing has been "quietly dropped." Not at all. Last autumn Mr Churchill said:

You have demanded that the target that we should put in our programme should be 300,000 a year. I accept it as our first priority in time of peace. No one can tell how the rearmament burden may strike our industry and finance, but however our fortunes may go and from whatever angle the pressure of life may come, the Tory Party puts homes for the people in the very forefront of all schemes for our development.

And page 1 of "Housing" says that the Conservatives "set their target at a minimum of 300,000 houses a year, subject to Defence requirements." The difficulty is that even the Government does not know what it is going to build for defence purposes. On March 20, 1951, the Minister of Works was unable to estimate how many bricks and how much cement is wanted for defence.

Secondly, you ask if private enterprise builds more houses "how will an adequate standard of quality be ensured?", and you say I have not grasped this "prickly problem." You must have overlooked page 20 of the pamphlet, which reads:

There are those who accuse private enterprise of jerry-building. They claim that prewar "speculative" building was inferior and sub-standard. But who passed all the plans? Local Authorities. Who supervised the execution of the work? District Surveyors. If the local authorities did their work before the war so inefficiently that the quality of the houses was poor, what has happened to make them qualified, as agents, to build almost all the houses for which permission is granted?

The only way to ensure satisfactory building is to settle a standard which shall be observed; then the industry itself must apply the discipline to enforce it.

And I then go on to advocate an expansion of the scheme worked out by the National House Builders' Registration Council. This scheme is working well in practice.—Yours faithfully,

ERNEST MARPLES
House of Commons, London, S.W.1

Moral Disarmament

Sir,—I was surprised and disappointed to find your article of March 24th reaching the same woolly and ineffectual conclusion which so many articles on this subject in the last year have reached. After an admirable analysis of the roots of Communist propaganda, you conclude that "a permanent machine for Western political warfare should be created." You go on to say that the theme of our propaganda, "if it is to be really effective, must not be defensive." The double negative is a horrible warning of what is to come. For your idea of attack is "a full-scale onslaught on the fraudu-

lent, sinister 'peace' campaign," and, again, "an unremitting attack . . . on Russian imperialism."

This is not the stuff of attack at all. It is a purely defensive attitude. The Russians say they stand for peace, and we say they do not, and the point to note about this simplification is that the initiative is permanently with them. By this negative and defensive attitude, by the familiar emphasis that comment attaches to the analysis and exposure of Communist aims, all we are succeeding in doing is giving further publicity to the whole Communist ideology (including, of course, the "peace" campaign). In matters of propaganda, he who shouts first shouts loudest: the denials and exposures never have the force or persuasion of the original contentions. It is not by any means wasted effort to examine and refute Communist propaganda. But let us do this for what it is—an intellectual exercise—and not delude ourselves into thinking that it is a bold and imaginative attempt to convince great populations of the superiority of the Western way of life. Refutation, denial and exposure will convince no one of this.

If we really want to convince the world of the superiority of the democratic way of life—and we shall not survive unless we do—we must proceed quite differently. We must start differently, and instead of analysing Communism we must analyse democracy. Why and in what respects is our way of life superior? In what does its virtue consist? Why do its practices offer the citizen of any country a greater chance of happiness than the practices of any other way of life? How does it work and progress, and why has its standard of living, over the years, continually risen? Are there practical and topical proofs of the superiority of our system?

What is stopping us from a planned and aggressive policy of this sort? I very much hope that you will use your influence to haul down this wretched banner of the double negative and put something constructive and positive in its place.—Yours faithfully,

London ALASTAIR SCOTT

Sir,—It is good to find you supporting, in your issue of March 24th, a theme which I first advocated in the House of Commons over two years ago. Since then the same theme has been taken up by Mr Truman in America and Mr Spender in Australia. But we and the rest of Europe lag sadly behind.

Truth, pursued with equal vigour and determination, will in the end defeat the lie; and it is upon the lie that Communism largely relies. But truth must be pursued with equal vigour and determination, and that is exactly what we have not been doing. Consequently, many otherwise reasonable people among my constituents come to me to protest their desire for peace; as though anyone could disagree with that.

If the cold war is to be fought by hot air, let us at least have plenty of it; and let the organisation diffusing truth be as strong and active as the Cominform. But they are the simple truths about life behind the iron curtain which are needed: the illegality of the strike, the forced labour camps, the denunciation of one member of a family by another, the low standard of wages.—Yours faithfully,
J. R. H. HUTCHISON

House of Commons, S.W.1

Sugar from Cuba

Sir,—The article in *The Economist* of March 24th under the heading "Sugar from Cuba" calls for a reply.

It will suffice, perhaps, to point out that during the negotiations for a Commonwealth Sugar Agreement and apropos the International Sugar Agreement:—

It was not "made clear that Britain would buy a certain amount from Cuba";

It was not "agreed that something like 700,000 tons of sugar would be purchased at world prices from Commonwealth or foreign producers"; and

It was not "to prevent Cuba underselling any of the Commonwealth producers that suggestions were made nine months ago to resuscitate the International Sugar Agreement."

Again,

It is not correct to say that "a share of the British market would be accorded to Cuba in any case under the International Sugar Agreement"; and

It is not correct to say that "a contract with Cuba would mean that Britain would be assured of sufficient supplies of sugar to permit the abolition of rationing."

In fact, the Commonwealth Sugar Agreement is intended to secure a preferential market for some 2,375,000 tons of Dominion and Colonial sugars, leaving a residual market of some 300,000 tons per annum in the United Kingdom for free market suppliers—e.g., Cuba, the Dominican Republic, Peru, Brazil, and continental Europe.

The fears and misgivings of Dominion and Colonial sugar representatives regarding these negotiations, between the United Kingdom and Cuba on the one hand and Canada and Cuba on the other, were expressed in a resolution passed at a meeting held in London on March 20th. As the representative of the Commonwealth of Australia on the International Sugar Council, and speaking on behalf of the Australian sugar producers, I am in entire accord with the terms of that resolution.—Yours faithfully,

L. H. PIKE, Agent-General
Queensland Government Offices,
London, W.C.2
This letter is referred to on page 761.—
EDITOR.]

The Virtue of Obstinacy

Sir,—Surely your condemnation of any meeting between "someone really persuasive and authoritative" and Stalin in the Kremlin overlooks one important fact.

Even if such talks were foredoomed to failure they would be worth while because they would convince the British public that everything possible had been done to prevent a drift into war and therefore would make more acceptable the heavy sacrifices that rearmament must involve.

That would be a great gain and you never know, the talks might not fail, so what harm could there be in trying?—Yours faithfully,

CYRIL OSBORNE

House of Commons,
London, S.W.1

The Record on Korea

Sir,—Your analysis of the record on Korea rests on two silent assumptions which I feel I must challenge. The first is the assumption that the United Nations are entitled to employ force to achieve what is described as "the establishment of a unified, independent and democratic government of Korea" against the resistance of a large minority of the inhabitants. If that were so there would be no moral objection to advancing up to the Yalu River a second time. Secondly, there is your implicit identification of "a unified, independent and democratic government" with the

government of Dr Syngman Rhee. The real choice facing the Koreans is not between two ill-defined political theories but between the rule of the North Korean government and the no less tyrannical rule of Dr Syngman Rhee—just as China was forced to choose not between communism and democracy but between Mao Tse-tung and Chiang Kai-shek. It is these confusions and false identifications which still leave many who are "far from being Communists" unhappy and unable to accept your assurance that "there is no obscurity about the moral or legal position."—Yours faithfully,

MAGNUS T. WECHSLER

London, W.11

The Importance of Tito

Sir,—I would like to answer Mr Keller's letter of March 3rd, with which you "entirely agree" and with which I do not agree. There are two matters concerning the naming of Communist China as an aggressor which Mr Keller overlooks, and which throw a different light on the picture.

First, the British Government refused to sign the American resolution to condemn China not because it named her as an aggressor, but because it also called for economic sanctions to be imposed. To impose these sanctions would have been absurd. The world has already had one or two examples of an attempted imposition of sanctions under conditions far more favourable than are found in China. These attempts failed miserably.

The failure would be even more miserable in the case of China since not one of the countries on her north, west or southern frontiers would be able or willing to impose the necessary restrictions. The sanctions would have two results: they would compel China to throw herself into the arms of Russia, and they would make the United Nations the laughing stock of the world. The British Government's restraint resulted in the removal of this ridiculous and dangerous appendage to the American resolution condemning Communist China as an aggressor.

The second matter which Mr Keller overlooks, and which prevented the Commonwealth from hurriedly signing the American resolution, was that the Commonwealth Cease Fire Committee was negotiating with China at the time in an attempt to bring about a cessation of hostilities. The Commonwealth could hardly have condemned Red China as an aggressor while these negotiations were continuing, and while there was still a slight hope for an agreement.

I have spent the past ten years in the United States and have become an ardent admirer both of the country and of the people. However, I believe that the United States often tends to be impulsive and over-hasty. In this particular case the British Government acted wisely in restraining this impulsiveness and in preventing a move which would have been regretted as soon as it had been made.—Yours faithfully,

HUGH NOYES

Ventnor, Isle of Wight

"South African Sherry for me every time

So I've converted you, too, then?

You certainly have! Do you remember you told me to look specially for the *fine* South African sherrys. Since then I've found some which are just exactly to my taste. And don't you find them easy on the pocket, too? That means something these days!

Yes, how is it they can send us such remarkably good wines at such a reasonable price?

Well, there are two reasons: that amazing climate of theirs at the Cape, and then the Preferential Duty.

No wonder South African Sherry is becoming so popular, then.

It deserves to be. Do you know they've been making wine in South Africa for nearly 300 years. With all that experience behind them and the splendid organization they have now built up, they're able to produce the very highest quality. Their really fine wines are matured for many years before they're shipped to this country.

I suppose we can now say, then, that South Africa is one of the leading wine producing countries?

Well, wouldn't you say it was, from the taste of this sherry? Let me fill your glass!"

(LONDON) LIMITED

WHEN IT'S A QUESTION OF TIME...

WHENEVER THERE is a possibility of disagreement about time, whether it be the employees' arrival or departure time, or time taken on a job, there is a possibility of industrial unrest. And the responsibility for all time accuracy in industry rests on Management.

T.R. Time Control removes any possibility of doubt. It provides uniformity of visible, audible and recorded time throughout the premises and the precise records so essential to the computation of wages, bonuses or job costing.

Far Ahead of the Ant

Of Societies and Men. By Caryl P. Haskins. Introduction by Vannevar Bush. New York: W. W. Norton. 282 pages. \$4.50.

Here the biologist comes to the aid of the liberal philosopher with his observations of ants, lichen and jelly-fish; and the biologist is himself rescued from the limitations of his lenses by his study of human institutions and ideas. To the layman's surprise, the specialist's message is of hope and intense faith in the individual and in democratic society. By comparing the associative activities of man—for example, his behaviour in the family or the locality—with the integrative activities of the culture within which he works and examining both in the light of biology, paleontology, and genetics Mr Haskins reaches some conclusions of the utmost importance. If he seems once or twice to tremble on the brink of saying that the end of evolution is the Constitution of the United States, that in no way detracts from the weight and insight of his argument. And if his style falls here and there into transatlantic Teutonic he must be forgiven; for he is trying to be precise in his terms and clearly "ideation" to the biologist is not quite what the philosopher understands by "thought."

When one has finished this fascinating volume one realises that the scientist will be content to read it in the order of chapters prescribed by the writer, whereas the layman should start at chapters 12 and 13, entitled respectively "The Society of Human Culture" and "The Modern Scene." For him to start at the first chapter is to plunge into a surfeit of comment on insect life without any clear idea of where it is leading to. Then suddenly it becomes clear that the question disturbing Mr Haskins is this: accepting the fact that societies like species develop towards ever greater complexity, is it inevitable that the totalitarian state should be the final form of political society? Is the free society old-fashioned, inefficient, and in conflict with the processes which can be observed in the animal world? Most emphatically No, says Mr Haskins. The totalitarian state is "a wave from the past"; it is based, moreover, on a profound misunderstanding of analogies from the animal world—for instance, with the ant or the Portuguese man-of-war.

Man as a social organism—in the free "associative" grouping of family and locality—is at a low state of integration, and his basic biological nature is satisfied. On the other hand, as a member of the culture society—in which ideas take the place of genes, and change proceeds at a much faster pace—man shows an "integrating trend" which may reflect the integrative properties of his own mind. This has brought him far ahead of the ant and its highly developed society: in 10,000 years man has "equalled and exceeded the whole experience of the highest social insects which took 50 million years." Three

hundred generations of men have outstripped the social efforts of ten million generations of ant queens. There is in human culture an "immense evolutionary dynamism" working through the individual.

It is a tribute to Mr Haskins' treatment that during his early chapters one feels very puny indeed beside the intricacy of the jelly-fish society and the struggle for existence of the lichen. And then one comes to the point of exclaiming "What a piece of work is man!" and is delighted that this re-statement of faith should come to old Europe from young America. Mr Haskins will gravely disturb such Professors as Joliot-Curie and Bernal when he says that the Leninists and Stalinists

neglected to point out that in the development of an integrated society, selection and evolution of its members take place, not on the basis of their individual merit and advantage, but in a pattern to promote so far as possible the welfare and success of a few individuals within that society—the queens of ants and bees, the rulers of a totalitarian state. They omitted any mention of associative social forms or of the manner in which these evolve. They neglected the duality of human civilisation.

Oxford Studies

Oxford Studies in the Price Mechanism. Edited by T. Wilson and P. W. S. Andrews. Oxford University Press. 274 pages. 21s.

This book is divided about equally between new essays and reprints or summaries of articles that appeared in the earlier issues, now out of print, of "Oxford Economic Papers." Students and others will be particularly glad to have in book form the reports and essays arising from the well-known inquiry into the effects of rates of interest. The reprinted material is accompanied by a new essay by Professor Sayers, attempting to reassess its significance. His view is, broadly, that the more sweeping conclusions drawn from the inquiry were mistaken. He is "inclined" to think that "changes in the interest rate may have considerable effect on business activity through their effects on both capital outlay and consumption outlay." In general, "the efficacy of the interest rate has changed and will go on changing continuously, some forces tending to dull its edge while others sharpen it." This is a victory for common-sense over too simple a faith in direct questioning of business men as a means of establishing economic truth, and Professor Sayers' case is well and stimulatingly argued.

Professor A. J. Brown contributes an essay on the attempts made in recent years to calculate some of the most important elasticities of demand and supply

in international trade. It is accompanied by a reprint of his theoretical study of the conditions, as regards elasticities of demand and supply, required for exchange stability. Probably the most important article in this collection, however, is still the well-known "Hall and Hitch" study of the policy adopted by businesses in fixing prices and output. It is a pity that here there is no postwar investigation or theoretical reappraisal to accompany the reprint. Mr Andrews provides a useful review of industrial theory since Marshall and pleads for what amounts to a restoration of the Marshallian theory of competitive industry; he claims to offer an equilibrium analysis for the individual firm that is consistent with this approach, and rejects the prewar theories of monopolistic competition.

Also new is an oddly disjointed essay by Mr B. D. Giles on the ways in which the price mechanism works in agriculture. It challenges effectively some orthodox but unfounded assumptions about the behaviour of farmers. Finally, Mr H. W. Robinson summarises skilfully the prewar studies of the mobility of labour made by the Oxford Institute of Statistics, and follows it with a suggestive analysis of war and postwar manpower movements. He shows that mobility in the early war years remained very low, and makes shrewdly some familiar points about postwar policy.

The quality of the essays in this collection necessarily varies greatly, but it is disappointing to find the prewar work on the whole much better than the postwar. If only for the sake of the reprints, the book serves a useful purpose.

Discipline or Information

The Scope and Methods of Geography and the Geographical Pivot of History. By H. J. Mackinder. London: The Royal Geographical Society. 44 pages, maps. 2s. 6d.

The Spirit and Purpose of Geography. By S. W. Wooldridge and W. G. East. Hutchinson's University Library. 176 pages, maps. 7s. 6d.

Sir Halford Mackinder's continuing relevance is amply attested by those lurid vulgarisations of his "heartland" maps so popular in the United States, and doubtless (with arrows reversed) in the USSR. "The Geographical Pivot," written on the eve of the Russo-Japanese War, has even a prophecy of the Korean bridgehead, admittedly with the emphasis reversed. One may however feel that there are unstated, probably unrealised, assumptions which detract from objectivity; one might even query whether the true pivot of world history is not rather the overlap between land and sea power in South-west Asia—an area which itself is brilliantly analysed. The over-simplification and under-valuation of Asia was natural in Mackinder's day; even when he appeals to us "to look upon Europe and European history as

subordinate to Asia and Asiatic history" he remains Europe-centred. Asia is a mere catalyst, a negative force. Yet the continent, whence we obtained, amongst other things, that system of numeration without which it is difficult to conceive of *The Economist*, has surely played a more positive role. That this is not merely "reviewer's hindsight" may be attested by reference to Meredith Townsend's "Asia and Europe" of 1901.

Nevertheless anything which Mackinder wrote on this theme displays such grasp and insight that it is rightly regarded as compulsory reading for students of world affairs. This reprint, admirably introduced by Mr E. W. Gilbert, is accompanied by an earlier paper which has had comparable significance in the more limited sphere of British academic geography. This excellently reasoned manifesto of "The New Geography" of 1887 asks, and answers with a convincing affirmative, the question, "Can geography be rendered a discipline instead of a mere body of information?" Yet 64 years later Professors Woodbridge and East still find it necessary to ask the same question; their reply is no less convincing.

The close linkage of modern geography to so many arts and sciences spells both delight and danger to the intellectually curious undergraduate; he is not likely to find a surer or more stimulating guide than "The Spirit and Purpose of Geography." Academic colleagues or inquiring laymen will find a rewarding survey of a study central to the understanding of our world; the initiate will seize upon many points of debate, particularly perhaps in the incisive discussion of the place of the physical basis in geographical discipline. No book so short and addressed to such diverse quarters can escape pitfalls or inequalities in the plane of argument; one doubts if there should be a place in an introductory survey for what are virtually hints on how to make a dot-map. Conversely, allowing for enforced brevity it is yet a little surprising to find no mention of recent genetic classifications of boundaries, or of Unstead's regional hierarchy. But these are small criticisms in comparison with the author's generally high level of exposition; the chapters on economic geography and on regionalism, for in-

stance, are little masterpieces of methodology. In this book geography definitely is what Mackinder said it ought to become: "a standing protest against the disintegration of culture." No higher praise, surely, could be given either to the study or the book.

Swedish Portrait

Background to Sweden. By Terence Heywood. Constable. 332 pages. 25s.

For the English-speaking world Sweden in the last two decades has suffered in the literary field from the excessive attention of experts—or of those who popularised what the experts disdained. Sociologists, architects, social reformers and brassy reporters have come, seen and written. Few stayed any length of time, fewer spoke Swedish; and not many got beyond Stockholm and a small number of show places. The result is that there is an unsatisfactory sameness about both contents and illustrations of the majority of books on Sweden in English. The material and superficial are stressed because they are obvious, but little insight is given into Swedish life and history.

Mr Heywood's is a well-written, well-informed, and sensitive book, for it has a richness and depth quite unusual in writings about the North. An Oxford graduate, who studied at Upsala immediately before the war, Mr Heywood arrived in Sweden without *idée fixe*. Wide interests led him on many fascinating excursions into out of the way places and topics. A perceptive observation and practised literary style enabled him to note and record his impressions for the instruction and delight of the reader. One cannot help thinking, moreover, that Mr Heywood was fortunate in that he apparently found his feet in the mellow atmosphere of Upsala before being exposed to the self-conscious and hygienic modernity of Stockholm.

The book describes travels in the centre, south-east and south-west of Sweden, and illustrates them with excellent photographs. The crayfish suppers and the peasants of Dalarna are there as usual. Unusually, they are in perspective as merely one, although a spectacular, facet of Swedish life. But Mr Heywood raises questions far more interesting than why the Gustavian

era is barely reflected in English drama; how the English proselytised the North; the extent to which Swedes participated in Viking raids on England (Mr Heywood's speculations have received interesting confirmation in the Sutton Ho ship-burial finds); and the early history of steam-baths or of ski-ing. It is indicative of the high quality of the work that it gains rather than loses from the fact that it deals with Sweden before the war.

For the Wide-awake

The Magic People. By Arland Ussher. Gollancz. 158 pages. 10s. 6d.

One of the deplorable concomitants of the modern situation of the Jews is that they are increasingly considered as a "problem" rather than as human beings. No other people is so hedged about with caveat, veto and sweeping diagnosis, and Mr Ussher's brilliant but over-complicated psychoanalysis accentuates the very self-consciousness which hinders that quiet integration sought by liberal minded Jews and Gentiles alike. Even while his flashes of insight illumine rarely perceived aspects of the dilemma, he declares that he talks to his Jewish friends "not in my personal idiom but in the lingua franca of culture, the language of the better magazines." How impossibly artificial! The first and indispensable step towards resolving the greatly fomented tension between Jew and Gentile is that each should consider the other, not as a member of an alien group, but as an individual who either possesses or lacks the qualities of loyalty, dependability, sensitiveness and intelligence necessary in a friend.

It must be stressed, however, that this study is a *tour de force*. Mr Ussher's hypotheses are irresistibly provocative, and his sincerity and wit compensate for the maddening irruption of parentheses which pepper his pages with dash, bracket and footnote, so that reading him is like a conversation with several people—all interrupting. This sometimes obscures the issue and engenders exasperated fatigue; but at the end, we are left in no doubt that we have been in the company of one who deplores prejudice, hates anti-semites, and loves "the races that walk alone." Torpid people should not attempt this book. It is written for the wide-awake.

AMERICAN SURVEY

Freeing the FRB

Washington, D.C.

THE agreement between the Treasury and the Federal Reserve Board, announced early this month, may be the means of enabling the FRB to escape from a ten-year servitude to the Treasury during which, with growing reluctance, it pegged the price of government securities and thus encouraged the "monetisation" of the federal debt. Yet the agreement does not make future Treasury financing unduly costly, nor does it make it impossible to maintain an "orderly" market in government securities. But, more important than the actual provisions of the settlement, is the fact that any agreement has been reached at all—the more surprising in the light of the bitterness of the preceding dispute. Now there is the prospect of a systematic fiscal and monetary programme jointly conducted by the two agencies. Without that, all else would have been futile. No possible legislative mandate, no righteous assertion of independent action by the FRB, or, on the other hand, no Presidential ukase vesting exclusive power in the Treasury, could have ensured an effective monetary policy or inspired public confidence in it.

The principal specific step to be announced was the Treasury's offer to refund \$19.6 billion of two bond issues maturing in 1972 but callable in 1967, carrying 2½ per cent interest and not eligible for bank investment. In exchange, the Treasury offered an issue of longer maturity (1975-80) at 2½ per cent, also not eligible for bank holdings and in addition not directly marketable. A holder who wants to turn these bonds into cash has first to convert them, par for par, into a new issue of five-year 1½ per cent notes; these will be saleable on the market in the usual way—but probably only at a small discount and therefore at a slight penalty.

The purpose of the offer is to create a more permanent home for the long-term issues, and thus to strengthen the market. The obvious hope is that this will be strong enough to maintain bond prices close to par without further open market buying by the FRB.

In the past, when the FRB had to support these issues by standing ready to buy them at the stabilised price, the differentiation between cash, short-term issues and long-term obligations had been minimised, if not completely obliterated. Given a sure, immediate market and no penalty for selling, the long-term 2½ per cent bonds were simply "interest-bearing cash." Investors bought them almost as if they were short-term notes and sold them, without risk of loss, whenever they needed cash for something else. The hope is that the added one-quarter of 1 per cent interest will be a sufficient payment for non-marketability to make the exchange a success. It is too early to be sure of this, but present indications are encouraging.

An integral part of the Treasury-FRB accord, unannounced but soon obvious, is that the FRB will no longer peg the price of government bonds at a precise figure. The Federal Reserve Board continues its traditional and unexceptionable function of assuring an "orderly" market. But on at least half of the trading days since the agreement was announced

the FRB has been out of the market entirely. For the first time since the early days of the last war there has been free dealing in government bonds.

As a result, there has been some decline, up to 1½ to 2 points for some of the longer-term issues. The professional shar, pencil dealers have for a decade been making a nice profit, automatic as clockwork and as safe, from movements in bond prices of two or three thirty-seconds, and a fall of two points seems by contrast an enormous drop. Actually it is nothing of the sort, either in terms of prices or of changes in yields. There is, moreover, some basis for believing that the free market will maintain prices around the present levels and that the FRB will no longer have to absorb surplus offerings and therefore will no longer be compelled to monetise the public debt.

The Treasury faces the prospect of having to refund the staggering total of \$39 billion of maturing obligations during the last half of this year. Admittedly, the operation presents many problems unless, as some economists predict, opportunities for private investment dry up so rapidly in the next few months, as a result of shortages of materials, that money will have no place to go except into government securities. But even if investment does not fall, there is no reason to suppose that the Treasury's task cannot be carried out without a heavy addition to the interest charges on the Federal debt.

★

The principal architect of the agreement, on the Treasury side, was its Assistant Secretary in charge of international finance, Mr William McChesney Martin, the "boy wonder" who became president of the New York Stock Exchange at 31. Soon after the agreement was reached the chairman of the FRB, Mr Thomas B. McCabe, resigned his post and prevailed on President Truman to name Mr Martin as his successor. Mr McCabe resigned not because of disappointment or disagreement with the settlement; on the contrary, the agreement he helped to create, by restoring harmony on monetary policy, provided the opportunity for Mr McCabe to realise a long-cherished desire to return to his home and private business. Mr Martin's appointment to the chairmanship of the FRB cements the accord. But, although Romeo marries Juliet and the Capulets make peace with the Montagues, neither house takes over the other. The Federal Reserve Board remains much more than a mere adjunct of the Treasury.

It is not yet clear, however, how, if at all, the agreement affects the basic monetary problem. Commercial banks, with \$60 billion of federal obligations bought during the war in their portfolios, may still be all too capable of expand-

"AMERICAN SURVEY" is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

ing credit. Obviously, if the FRB is still committed to buying short-term securities whenever short-term interest rates tend to rise, commercial banks will equally be able to sell their holdings at will to get reserves against which to make new loans whenever an attractive opportunity offers.

There is still much debate about whether this practice, formerly so freely indulged in, can be sufficiently discouraged by permitting a still greater flexibility in the market for short-term government securities, as some economists contend. A bank, it can be argued, must scan a loan application with a much more hesitant eye if it is uncertain about the price at which it can cash a Treasury security in order to make the loan. But a new committee including the Secretary of the Treasury, the chairman of the FRB, the chairman of the Council of Economic Advisers and the Director of Defence Mobilisation has been charged with investigating more direct restrictions on the inflationary expansion of bank credit, should it continue.

Four methods could be used. One is a programme, already under way and certain to be intensified, to curtail loans by voluntary methods such as exhortation and joint agreement. A second is the creation of a capital issues committee, to examine applications for new finance. A third method would be to seek Congressional authority to raise the reserve requirements for commercial banks or, more accurately, to require the creation of a special additional reserve. The fourth method, to be avoided if possible, is direct limitation of bank credit by government order. Legislation has long existed that provides sweeping authority for such a step, but if direct government control of lending is inevitable, the Administration almost certainly will have to go to Congress, make its intent abundantly clear, and request specific new authority.

THROUGH THE CHASE BANK... NOT ONE DOOR, BUT MANY

Many American doors are open to expanding British export trade. In selecting the most desirable, the Chase National Bank, through its London offices, can prove extremely helpful. Our officers have full, up-to-the-minute information on market, credit and trade situations in all parts of the United States.

Farmers Under Pressure

[FROM A CORRESPONDENT IN THE UNITED STATES]

As he put one more weld in a patched-up machine near the end of the last war, many an American farmer swore never to be caught short of equipment again. As a result, agriculture is well prepared for the new period of pressure for more production. During the brief interval of consumer plenty a dream-like quality has been imparted to many a farm home: some 90 per cent of all farms are connected with a central electric power station, as against only a third in 1941, and into the new outlets are plugged substantial numbers of deep-freezers, washing-machines and radios.

The business side of the farm enterprise has been even more strikingly mechanised. Since 1941, tractors on farms have increased from 1,700,000 to 3,800,000, automobiles and lorries from 5,400,000 to 8,000,000. Milking machines have replaced the half-gallon bucket and the personal touch on most farms where milk is the major product: there are 710,000 in use now as against 210,000. On the grain farms the number of combines has nearly tripled; mechanical maize and cotton pickers have come into use at a still faster rate.

This mechanisation, together with the use of fertiliser—more than doubled since 1940—increased total farm production by more than a fifth between 1941 and 1950, despite an 8 per cent drop in the number of workers. Man-hour output is up by 28 per cent. A third important factor in increased output has been the improvement in animals and seeds, and in farm practices: land and water conservation, reforestation, contour ploughing, cover crops and diversification, particularly through the addition of livestock. Hybrid maize has come into use so fast that more than three out of four acres planted to maize last year used these varieties; yields have risen in the past decade from 28 to 37.6 bushels an acre. The 1950 model hen produced four eggs for every three laid by her 1940 counterpart. Milk production has been expanded less rapidly, but now averages over 5,000 pounds a cow compared with 3,800 in 1909 (these averages owe something to such records as that of Carnation Milk's prize Holstein, Carnation Ormsby Madcap Fayne, with 41,943 pounds in one year).

This modernisation of the farm enterprise has been made possible by earnings from prices sustained by a very high level of consumer demand. In 1947 net farm income was \$17 billion; from that peak it dropped to \$13 billion in 1950; estimates run some \$200 million higher for 1951. The 1939 figure was \$4 billion.

But the farmer now engaged in spring planting has serious problems, for all his new equipment—largely, in fact, because of it. He is now as dependent on the city as the city is on him. The horse and the mule are going and gone, and he is raising cash crops on the acres formerly devoted to keeping them. But the petrol pump beside the machinery shed has to be filled; no deliveries, no farm power. Farm motor fuel consumption last year was about 10 billion gallons. With electricity, the story is the same: farm use went up 25 per cent last year, as new farms were connected with central supplies, and more farm equipment consumed more kilowatts everywhere.

Even sharper is the farmer's competition for minerals and chemicals. Fertiliser shortages this year, especially of phosphate, are certain. While the output of nitrogen will

be up by over a fifth, demand will still exceed supply, since current livestock numbers can only be sustained by expanded production of feed, and two pounds of nitrogen, properly applied, can increase maize yields by a bushel an acre.

Chemical spraying of commercial orchards, defoliation of crops such as cotton, dusting by airplane, use of DDT and 2,4-D, put the farmer into the centre of the struggle for such scarce items as benzene and chlorine. He competes for metals, too: steel for containers for the new chemicals, steel for parts for the machinery that he has, steel for the machinery that he lacks and wants to buy.

Sharpest of all is the farmer's competition with the services and the cities for men. American farms have traditionally produced the country's major crop of children as well as animals and food; and the former, like the latter, have traditionally moved towards the city. In times of high employment the movement is accelerated. Moreover, now that farms are mechanised, the very mechanical skill that makes the son or the hired man difficult to replace gives him a premium value in the factory. So many a prudent farmer has already had a word with the draft board about his highest-skilled man, and is making private calculations as to the pay or the perquisites necessary to keep him. Farm wage rates rose about 7 per cent last year.

★

In the effort to stabilise the economy, agriculture has a special position. Under existing law, farm prices cannot be controlled as long as they are below "parity" (the price assumed to give the farmer a fair return), and a considerable number are below, some of them well below. But the prices of the items most in demand—meat among foods and cotton among fibres—are well over parity and are feeling the strains which come with regulation. Actually, meat supplies will be greater this year than last; they may reach some 151 pounds a head compared with 148 pounds in 1950. But even so, demand will be greater than supply. It was consumer impatience for meat which broke the back of price control at the end of the last war; uninspected slaughter at the back of the barn by the light of the moon channelled meat away from normal distribution into black markets. Mr DiSalle, the Price Administrator, advised by his wartime predecessors, has, he hopes, devised means by which meat will move along orderly lines this time, with price ceilings fixed one stage beyond the farm. If these work, and if man and weather succeed in securing large feed supplies for the record number of animals, it may be possible to avoid both rationing by coupon and rationing by the purse.

So far man does not seem to be doing his utmost in this direction: at the beginning of the month farmers were not planning to plant as large acreages to feed crops as the Department of Agriculture had hoped, but there is still time to spur them to greater efforts. Weather remains the biggest unknown in the farm equation; beneficent year after beneficent year has smiled on American fields for twice the Biblical seven, and farm economists with memories of 1934 and 1936 in America, and statistics before them of India now, Yugoslavia last year and France in 1945, hesitate to calculate what a drought might do to such numbers of livestock as the United States now boasts.

In fighting inflation by increased production, this year's farm output will be a crucial factor. Food now takes the largest single slice of the consumer's dollar and, in addition, as the supply of durable goods is reduced through diversion of basic materials to defence, many of the dollars usually spent on them will compete for foodstuffs.

American Notes

Screening Crime

In its last two weeks of public hearings the Kefauver Committee, investigating the nation-wide ramifications of organised crime, played to the largest audience that has ever assisted at this or any other performance. There was room for only a few members of the public in the court room, but in twenty cities owners of television sets and their friends could (and some 20 million did) see and hear the proceedings in their own homes. Beds went unmade, food purchases were crowded into the midday recess of the hearings, Easter bonnets drooped unbought in shop windows, children were excused from school and as many office hours were spent before the television screen as at the desk.

The witnesses who were screened were nearly all alleged to be concerned in the influencing of the New York City government by bookmakers and other illegal gamblers. By the end of the hearings their replies, or refusals to reply, to the harsh questioning of the committee's counsel had left little doubt that the allegations had at least some basis in fact. Action is already being taken against some of the minor players: the deportation of one of the more notorious is being discussed and a city official has been forced to resign. He has now been indicted for perjury on three counts; one of the charges is that he denied receiving a "good-will gift" of \$55,000 from the local firemen's association.

One of the stars of the show, Mr O'Dwyer, once Mayor of New York and now Ambassador to Mexico, is also involved in this charge, for he has denied receiving \$10,000 from the same source. The fireman who claims to have handed over the money in a red envelope is perhaps more likely to have committed perjury than is the Ambassador, but Mr O'Dwyer's own admissions on the witness stand have given rise to suggestions that he may not be a suitable representative of his country abroad. The other star of the hearing, Mr Frank Costello, sheltering behind laryngitis, refused to admit much, but nevertheless it is now accepted by almost everyone except himself that he is indeed the king of the book-making world. Whether this can, or will, be proved in the courts is another matter, but the federal authorities are trying to get at him, and nearly 2,500 other supposed racketeers and criminals, through the traditional loophole of income tax evasion.

★

Governor Dewey, asked to give evidence about gambling at Saratoga Springs, has shown an understandable reluctance to take the cruelly revealing spotlight away from the Democrats who administer New York City, by putting in an appearance himself. Since that light has been consistently turned on Democrats, the Republicans are naturally anxious to give the Kefauver Committee a new lease of the life which is due to end this week. But Mr Kefauver would like to have more time for his neglected constituents; furthermore, he considers that his committee has obtained all the evidence required to prepare legislation, and that the further investigation which is certainly needed should be carried out by a permanent federal commission.

★ ★ ★

Citizenship by Television

The Kefauver hearings had all the qualities that make a first-class television programme: an exciting plot with plenty of light relief and frequent climaxes; two gallant leading men, Senators Tobey and Kefauver; a chief villain, Mr Costello, and a number of runners-up, including Mr "Greasy Thumb" Guzik; an accomplished actor, Mr O'Dwyer; and lively feminine interest in the shape of Miss

Virginia Hill, the gangsters' girl-friend. It would be unrealistic to suggest that the record television audiences were attracted or held by anything but the entertainment value of the hearings. Nevertheless some at least of the audience must have gained a better understanding of the possible manifestations of corruption in local government and of how it might be checked. Since the only effective answer to the conditions revealed by the hearings is a greater readiness on the part of the public to undertake the responsibilities of citizenship, there can be little argument that in the present instance the televising of the proceedings was justified.

But whether this particular example should be made the basis of a general rule is questionable, and Senator Wiley is asking Congress to consider and make recommendations on the problems that would arise if the proceedings of either house or of their committees were televised regularly. Those in favour point out that this would merely be an extension of the right of individual citizens to attend open hearings and of the principle of a free press. They contend that the public interest demands the fullest possible coverage of Congressional proceedings by all available means of information. In practice, however, it is unlikely that all Congressional investigations would be televised, since the broadcasters would be interested only in the more sensational; publicity-seeking legislators would therefore be tempted to initiate inquiries not so much because they were needed as because they would attract a television audience, and to conduct them in such a way that they would hold that audience. Already Senator Kefauver, almost unknown a year ago, is mentioned as a possible Presidential candidate without any effort on his part.

Of more fundamental importance is the threat to the constitutional rights of the witnesses themselves. Some of them refused to testify before the television cameras, and it is thought the courts might uphold this refusal on the grounds that a witness unaccustomed to television appear-

ances might fail to do himself justice through nervousness. After such an appearance it would be even more difficult than it usually is to find an unprejudiced jury, should the witness be brought to trial. Some of the witnesses refused to answer the questions put to them on the grounds that they might incriminate themselves, a refusal which may also be upheld by the courts. The wide range of questioning at present permitted in Congressional inquiries, which pay little attention to the legal rules of evidence, and the fact that those accused are not allowed to call witnesses in their own favour, is another objection to the televising of the hearings.

A Check for Inflation

Even though the cost of living rose in the month ending on February 15th by 1.3 per cent, in spite of the price freeze, to a record high level, there are signs that inflation is now being checked for the first time since the Korean war began. The wholesale price index held steady during March and the index for sensitive commodities has been falling. Household appliances, including television sets, are being offered at cut prices and clothing sales are likely to follow the poor Easter trade. Housewives, squeezed between the high price of food and heavy instalment payments on washing-machines and refrigerators bought last autumn, evidently decided to do without spring suits this year—and the cold weather over Easter justified their decision. With the shops fuller of goods than they ever were, customers are waiting for clearance sales instead of buying against future shortages. Shopkeepers are in turn reducing their purchases from manufacturers and living off their inventories. As a result the next few months may bring a noticeable business recession.

The country has in fact been taken by surprise by the huge amount of civilian goods that have continued to flow from the factories, in spite of restrictions on raw materials and the growing volume of defence orders. Military contracts are now at last really moving on to the production lines, and by the early autumn civilians will have reached the end of their unexpected months of plenty. For this reason the recession, if it comes, can hardly be either severe or prolonged: textile manufacturers, for example, who are likely to be the hardest hit, will have more than enough to do before long making cloth for uniforms. But it is possible that such a recession would give the stabilisation officials time to catch up with the inflation which they have been chasing ever since last autumn, and to put strong enough reins on it to keep it from getting out of hand again.

However, the check that may give the stabilisers this opportunity also makes it unlikely that they will succeed. For one of the reins they need is a new Tax Bill and Congress's reluctance to give it to them will be strengthened by any signs of recession, however temporary. It will be further strengthened by the probability, now almost a certainty, that the present fiscal year will end on June 30th with a budget surplus, instead of the deficit which was foreseen in January, in consequence of the lag in military spending and the unexpectedly heavy yield of existing taxes.

* * *

Labour on the Sidelines

The great indignation meeting summoned by the United Labour Policy Committee in Washington last week suggests that the trade unions, which are still boycotting the mobilisation agencies, will not be easy to mollify by a few concessions on specifically trade union matters. As Mr Walter Reuther said, what is sought is not the satisfaction of a number of small grievances; what labour wants is an "entirely new contract" based on equality of sacrifice. It demands effective price and rent controls, the plugging up of holes in the Defence Production Act, more flexibility in

wage controls, fair distribution of the new tax burden, and an authoritative voice for the unions, consumers, small businessmen and farmers in the defence programme. All those who attended the rally—the first joint mass meeting of the American Federation of Labour and the Congress of Industrial Organisations since the latter split off in 1936—were instructed to go home and spread the gospel and to bring pressure on their Congressmen and Senators through letters, the press and the radio.

The "Declaration of Principles" adopted announced significantly that labour's support for any wage stabilisation policy could only be temporary, since the authority to stabilise wages and prices in the Defence Production Act expires on June 30th. A short-term settlement may be in sight; the Administration is considering the calling of a labour-management conference to discuss the jurisdiction of the Wage Stabilisation Board over labour disputes. Under the Production Act, a formal agreement between management and labour must precede the creation of any new disputes machinery, and management seems reluctantly prepared to concede to the Board the right to hear disputes of all kinds, rather than merely those which concern wages and wage policy.

But the Administration has been warned, in effect, that if it does not display a new energy in trying to secure from Congress a better deal for labour and consumers, it may be faced with another labour walk-out in a few months' time, and will not be able to count upon the whole-hearted support of the unions at the next election. Both Mr Johnston, the Economic Stabiliser, and Mr Wilson, labour's *bête noire* at the Office of Defence Mobilisation, agree (though they were denounced as tools of big business at the rally) that without more effective control of prices and profits, wage stabilisation is hopeless. Consequently Mr Truman, within a week or so, is expected to ask Congress not only to renew the Act, but to add to it authority to fix all farm prices

and food processors' margins, to enact tighter rent control, and to reorganise the Wage Board. But Congressional, and particularly Senatorial, enthusiasm for price controls is waning as the need to fix prices on the farm becomes more apparent and as signs of checks to higher prices appear. The Administration will be hard put to it to fight off demands for exemptions from its present powers; to extend them it will need all the pressure the embattled trade unions can bring to bear on Congress.

Shorter Notes

A special Bill, correcting one of the most publicised inequities in the Internal Security Act, has just been signed and "involuntary" members of Nazi, Fascist or Communist organisations will now be allowed to enter the United States. This means that American servicemen will be able to bring home German brides who joined Nazi youth groups when at school, and it will also make it easier for Italian musicians to undertake concert tours in the United States. It also means that Senator McCarran will no longer be so liable to ridicule for the Act that bears his name, which presumably explains why he was so ready to facilitate passage of the new Bill.

*

The creation of a National Science Foundation, delayed for three years by disagreements between Congress and the President, became a reality this month with the appointment of Dr Alan Waterman as its director. The function of the Foundation is to co-ordinate private and governmental projects in basic research in physics, chemistry, and medicine, to avoid duplication and fill in any gaps which may be left. The foundation will stimulate research through loans, grants and scholarships.

THE TIMES

LITERARY SUPPLEMENT

Week by week *The Times Literary Supplement* offers a full and varied panorama of the world of new books.

In endeavouring to take all knowledge for its province, from economics to poetry, from the art of the Quattrocento to nuclear physics, it reviews not only English and American books but also a selection of new books in most European tongues. Its criticism is ample in scale and objective in method. A very large team of reviewers—by tradition anonymous—range from the eminent in letters and learning to the as yet unknown.

Masterpieces still refuse to grow on mulberry bushes, but good books continue to be written. The constant aim of *The Times Literary Supplement* is to distinguish them from the rest.

The long "front-page" article on a subject of outstanding interest, the "middle-page" article on a theme of literary biography or criticism, the leading articles, the Letters to the Editor, the "back-page" article on a bibliographical subject and the general body of reviews of new books of every kind provide lively stimulus and sound critical guidance.

THE WORLD OVERSEAS

Persia in Trouble—II

Living from Hand to Mouth

(From Our Special Correspondent in Teheran)

AN article in *The Economist* of last week dwelt upon the mistrust that riddles Persian politics, and the consequent paralysis of government action. An outstanding example of this mistrust occurs monthly over the budget. Since 1943, no Majlis has entrusted any cabinet with a full year's funds; each pursues the grudging and pernicious course of voting a month or two's expenditure at a time. The financial straits described below are the fault as much of the Majlis as of successive cabinets, and the remedies for them—all distasteful, and all shouted down by those out of office as soon as proposed—will have to be pushed through by someone; if not, the country will continue on its present long, slow, downward slide towards bankruptcy, unpaid servants and chaos.

The Persian financial year ends in March and an optimistic budget for 1951-52, balancing at about 10,000 million rials by dint of intended economies in civil service salaries, had been drafted before the murder of Razmara. Figures for actual government expenditure and revenue are given with some reserve because they are seldom published in detail. But up to 1948-49 the balance of actual revenue and expenditure was favourable. In 1949-50 a different story began. The preamble to the 1950-51 budget Bill complained that "All reserves and resources capable of facilitating the payment of current expenses during the year have been exhausted." The downward slide continued in 1950-51 when, after reaching the limit of capacity to borrow from the National Bank, the government raided other government agencies including—it is said—the pensions fund. The cash deficit in the year now ending is, at a guess, somewhere between 1,000 and 1,500 million rials, of which perhaps one fifth represents stocks, and is reimbursable.

There are two causes of this sudden unbalance since 1949. The major one is that in that year the government inaugurated a capital works programme, known as the Seven Year Plan, which it intended to finance from extraordinary sources—larger oil royalties, National Bank advances, World Bank loans. But when the first and third of these did not materialise because the Persian Government disliked the terms on which they were available, it pursued the plan by drawing off from the ordinary budget some 12 per cent of the revenue available. There was nothing against this act provided that steps were taken to reduce ordinary expenditure or to collect fresh revenue to replace the loss. But in 1949 the government and Majlis had passed a new tax law which was less progressive than the old, which allowed more exemptions and which characteristically established a higher rate of tax for earned than for unearned incomes.

The second cause of unbalance is consequent on the first. Once arrears set in they gather momentum as men whose salaries have not arrived compensate themselves by slacking off or else awarding themselves some perquisites. Current expenditure in 1950 was met only thanks to borrowing advances on royalties—first £6,000,000 then £8,000,000 and finally £25 million—from the Anglo-Iranian Oil Company.

This unsatisfactory state of affairs is aggravated by a simultaneous serious and urgent internal currency crisis. The ceiling of the Persian note issue is fixed by law, and so is

provision for 100 per cent cover. The disease of mistrust, added to fear of an inflation such as was caused by the incursion of the Allied occupiers during the war, causes all those who are ignorant of modern currency practices to set store by both rules. An ex-director of the bank of issue, which is a well-run organisation, tried to establish elasticity to meet the expansion and contraction of business in a fast-developing economy; but he was shouted down. Now a combination of a greatly expanded economy, of undue government drawings on the bank without compensatory in-payments, and of increased exports of wool and cotton since the Korean war (which has put notes into the pockets of peasants who do not bank them), has rendered a change imperative. The new Bill, which is less good than its predecessor in that it simply raises the fixed ceiling from 7,800 million to 10,000 million rials, still at 100 per cent cover, had been well explained by Prime Minister Razmara, and was being queried by the Majlis largely out of personal dislike for him. Unless it is pushed through by his successor, the National Bank may shortly not be able to meet its obligations.

Unpalatable Remedies

Four possible remedies for the current unbalance in the budget present themselves. Unfortunately all are unpalatable. One is to tax the rich; the disinclination to do this on the part of a Majlis composed of the local *deux cent familles* has already been mentioned. Another is to reduce the civil service, which is most grossly overstaffed with underpaid and underworked people. Ninety per cent of national expenditure goes on payrolls if the army (40 per cent) is included. Official figures just published admit to an 82 per cent increase in eight years. Successive prime ministers and would-be prime ministers express their readiness to do the necessary weeding; but no one dare set afoot the grumbling and Tudeh-joining that would ensue if townsmen were sent to farm the provinces. No one takes even the obvious step of removing redundant staff from the offices in which their chatter interrupts business.

Short of taking these internal measures, the next best solutions are two: one is to come to an agreement with the oil company—a vexed question which will be discussed in a separate article. The other is to borrow abroad. The only possible leaders are the western states or bodies that see in improvement of Persia's economic and social conditions a way to combat Communism. But they have many calls on their purses; and in view of the state of the country's internal management, even they prefer small, experimental beginnings. Persia, which had expected milliards as a rightful reward for services in the war, tends to spurn such conditions. At the moment, a \$25 million line of credit, waiting to be opened by the Export-Import Bank, is held up because the Premier said he could not give an assurance that it would be serviced in accordance with the Bank's wishes; and the Majlis is too preoccupied with a Bill for nationalising oil to have time for balancing the budget. The Persian genius for putting off parliamentary action that is unpleasant or unpopular triumphs everywhere. With every day that it continues to do so, it deals another trump to the banned but active Tudeh (or "Masses") Party.

Malaise among the Princes

[FROM OUR INDIAN CORRESPONDENT]

THE Indian princes are fretting. In 1947, when India became independent and British paramountcy over the states lapsed, the rulers surrendered their sovereignty to the Government of India in exchange for certain privileges such as legal immunity, exemption from taxation and privy purse. It was truly a bloodless revolution in which some 400 odd princes, of which a dozen perhaps mattered, were liquidated gracefully. The man to whom all the credit for the integration goes is the late Sardar Vallabhbhai Patel. Patel had no intrinsic love for feudal autocrats, whom he did not even credit with any real bargaining power with their own people, or with the capacity to organise themselves effectively against the new India. But Patel was a strong opponent of confiscations, and feared that if India began by penalising the princes instead of compensating them, the same principle would be applied to zemindars and industrialists, when India was not in any way equipped to run nationalised industries. Therefore Patel fought the princes' battle for them and succeeded in including the guarantee of their civil lists given by the covenants in the constitution. Article 291 refers to the tax-free privy purse, but Article 363 says that disputes between a ruler and the Government over provisions of the covenant are not justiciable. In any case a prince is only a "ruler" under the constitution by presidential recognition.

The Government of India is paying out over £4,000,000 a year in tax-free political pensions and it is therefore understandable that the princes feel an undefinable malaise in the anticipation of things to come. Many things may come: the Government may, as it ought to have done already, introduce death duties (only the privy purse itself is exempt from taxes, but not the income derived from its investment); privy purses themselves may one day become taxed—it is enough to have a two-thirds majority in the Parliament to change the constitution. But the princes are, as always, fretting in vain. Now that Patel, their only champion, has gone, they worry in case the Government decides one day to cut or tax their privy purses; they scrutinise constitutional clauses with a magnifying glass while failing to see the obvious fact that the constitution is after all nothing but the legal expression of the will of the people and in a democracy, especially in a democracy short of money, people will not for long pay taxes while some privileged persons do not, especially once the privileged class has lost its purpose. The grace with which the princes surrendered their powers cannot be eternally held to their credit.

But Patel's death is not the only cause for the vague nostalgia and frustration that have caught hold of princely fancies. The princes, with the exception of Bhopal and Jodhpur, had primarily at heart the welfare of their country; and it is wrong to assume that a prince, with a long tradition of rule behind him, is less of a patriot than a congressman whose tradition is at the very best 60 years old. The princes would like to do something—what they do not always know—but at any rate something for their country. They are full of good intentions—but few have the mental or the cultural equipment to make them really useful.

The Government of India has tried its best to give positions to the abler princes who could also be trusted not to intrigue against the Government or belittle the Congress to outsiders. The Jamsaheb of Jamnagar has been made not only Rajpramukh of Saurashtra (integrated Kathiawar) but is also being made the fullest use of both at Lake Success and London, on the occasions when it is felt that his horse-sense, charm, cricket connections and sensitive palate are assets; in fact, whenever the austerity of India's High Commissioner in London becomes heavy a dose of the Jamsaheb has a soothing effect on the British press, and Americans are invariably more impressed by the jovial bonhomie of an

authentic prince than by the graceful saris of a Mrs Pandit. The Jamsaheb is not the only ruler to hold office in Congress India. The Maharaja of Bhavnagar is the Governor of Madras, while Jaipur, Gwalior, Patiala, Mysore, Travancore and the Nizam are Rajpramukhs. Of the younger princes, 40 were interviewed for the Foreign Service and 25 selected. None of them has the academic qualifications required for the Civil Service.

The States Ministry—the Political Department under another name and another flag—fully realises that to keep the princes happy it must keep them occupied. Owing to retrenchment it cannot absorb more princes in the diplomatic service this year and so it consoles itself with the thought that two younger princes have successfully sat for the Indian Administrative Service. And the princes have been wisely advised by the State Secretary to give their sons a solid education which will make them able to stand on their own feet and compete for jobs in open competition. The army is equally a suitable channel; there has already been one high ranking prince in the Indian Army for some time, General Ragendrashinji. Some princes, like young Bikaner, are thinking of going into business and bringing honesty and tradition into a sphere of life still sniffed at in India. Some princes would like to stand for the coming elections, Pataudi among others; but it has been pointed out to them that if they stand they will perforce lose their political immunity, as there can be no legal discrimination between candidates. This has been taken by many princes as an indirect blackmail aimed at their privy purses. The real reason behind the States Ministry's reluctance to see the princes stand so soon after integration is the very understandable fear that many a skeleton may be brought out of the election cupboard by Congress candidates; and there are discreditable, as well as creditable, skeletons in the past of almost every prince. It is quite true that it might be unwise for the princes to stand at this juncture. But next time there should be no reason why they should not share in the burden of state as full citizens of the Indian Union.

Some Weaknesses in the Soviet Army

[BY A FORMER SOVIET STAFF OFFICER]

THE Soviet Union is an empire with 200 peoples whose histories, lives, cultures, languages, and religions are quite different. The second world war showed that many non-Russian people, those of the north Caucasus for example, were not only not resolved to fight for the Kremlin but actually rose in revolt in the rear of the Red Army with the slogan: "Down with both Hitler and Stalin!" It is not surprising therefore that in the Ministry of War, in the main political departments, in Germany, Austria and other occupied areas, commanding staffs are drawn almost exclusively from officers of Russian nationality. In the Politburo for example 197 out of the 200 peoples of the Soviet Union are not represented. This is not because the non-Russian peoples have not trained personnel; quite the contrary. And if one takes into account the fact that the non-Russian peoples form a very large proportion, if not the majority, it is easy to understand how much potential inflammable material there is in all this. It is significant that in the army by far the greatest number of repressions for political reasons are inflicted on people of non-Russian nationality.

It should also be remembered that in the recent war several million men left the Soviet army. Moreover since the war officers and soldiers in occupied Europe have seen with their own eyes that Soviet propaganda has lied shamelessly. This contact with the free world infected them so powerfully that even the fanatics began to think. The units of the Soviet army which have served abroad are the most unreliable ones.

Now **TWA** offers *Luxurious* **ALL-sleeper service**

on "The
Ambassadors"

**THE ONLY
ALL-SLEEPER FLIGHTS
OVERNIGHT TO
NEW YORK**

Effective April 8th

New York Ambassador
departs London every Sunday at 8.30 p.m.,
arrives New York the following day
at 8.30 a.m.
departs Paris every Monday at 7.00 p.m.,
arrives New York the following day
at 7.40 a.m.

This is the finest, most luxurious air service to the United States . . . planned for you who prefer to travel in spacious comfort. TWA's Ambassador Constellations are the only all-sleeper flights to New York from London and Paris.

Soon after take-off, specially trained cabin attendants serve you delicious hors d'œuvres and complimentary cocktails . . . followed by elaborate continental cuisine with champagne and liqueurs. Then later, it's sweet dreams in your own wide, wonderful bed till you're awakened by the tempting aroma of hot breakfast, served in bed if you like.

Passenger capacity is limited to eighteen on TWA's world-proved all-sleeper Constellations, the airplane proved by over 25,000 ocean crossings. Yet you enjoy this superb luxury for only a small surcharge over regular fare.

For reservations and information, see your **TRAVEL AGENT**
or call TWA. In London, REGent 3211, in Paris, BALzac 10-83.

*Only TWA takes you over the
Atlantic and across the USA*

TWA
TRANS WORLD AIRLINES

U.S.A. • EUROPE • AFRICA • ASIA

There are significant weaknesses also in the reserves of food for the Soviet army. The root of the matter lies in the fact that the collective farm peasant is concerned only with quantity fulfilment of the plans and this prompts him to deliver to the state grain which is insufficiently ripe, or which has been deliberately moistened; sometimes he even puts stones in the grain; and the State's representative cannot check every individual. Secondly there is a serious lack of good grain store houses, a deficiency which includes efficient elevators. And thirdly the bad state of the roads and the bad conditions under which grain is transported lead to heavy losses. As a result the Soviet soldier receives not more than 50 per cent of the rations he is supposed to get. Herring, coarse black bread, salted fish which has lain a long time in the stores, cabbage and potatoes provide the basic diet of the Soviet soldier. Normally the first course consists of soup (potato, fish, beetroot, or cabbage); whatever was boiled in the soup is served as a second course.

The Soviet soldier receives about 20 roubles which is enough for his membership contributions to the Party or the Komsomol, and the rest goes to the Treasury as a state loan. Junior commanders are better paid, but not so well as their British or American counterparts. Officers of middle rank are perhaps fed as well as an ordinary soldier in the west. But a senior officer or a general gets very rich rations for ridiculously low prices and is excellently fed. Pay varies from 1,000 roubles for officers of junior and middle rank to 6,000 roubles for senior officers. I myself, for example, used to get 4,000-4,400 roubles a month. A general also receives first class materials in quantities sufficient to provide for his whole family. A senior officer is dressed probably better than a British general but only in the central garrisons; in the provinces he is dressed worse than a British soldier.

There is probably no other country in the world where the soldier has as few rights as in the Soviet Union. The generals and officers have the legal right to shout at him, to abuse him in unprintable language, to subject him to one insult after another, and to treat him as though he were an animal. It is clear from an endless flow of secret orders that the practice of corporal punishment and striking flourishes in the army. The soldier has not the right to show himself in a Red Army House, in a cinema or theatre, in a park or other public place unless he is in formation or under command. There is no worse experience for a soldier than to go with his girl friend to a place where his superior officers are to be found; he dare not smile or enjoy himself or even sit down. If his girl friend or his wife happens to please his senior officer, the soldier has no right to make any objections. In short, little remains of the human dignity of the Soviet soldier. And since not all soldiers are at the bottom of their hearts fanatics, it may perhaps be assumed that all this may some time assume ominous and far-reaching proportions which bode ill for Stalin's empire.

Who Will Buy Balkan Tobacco?

[FROM OUR GENEVA CORRESPONDENT]

A WORKING part of the Organisation for European Economic Co-operation has been discussing the vexed question of Balkan, and particularly of Greek, tobacco. Before the war Turkey and Greece primarily depended on Germany and the United States for outlets for their tobacco. Half of the Greek exports went to Germany and one-fifth to the United States, and for Turkey the corresponding figures were about 40 per cent and 35 per cent. The importance of the trade was very great; tobacco accounted for just under half the total value of Greek exports and for about a fifth of Turkish. The disappearance of Germany as an importer in the years immediately after the war therefore naturally

tended to cause serious difficulties for both countries, and these were accentuated by the continuing trend of European taste away from chewing and pipe tobacco in favour of American type cigarettes. For Greece these problems were further and enormously complicated by the disorganisation resulting from the civil war.

Not all the factors, however, were unfavourable. World consumption continued to expand, and in some countries the dollar shortage limited imports from the United States in spite of the shift in taste and the generous pressure of ECA

BALKAN TOBACCO EXPORTS ('000 Metric Tons)			
	Average 1934-38	1948	1949
Bulgaria	24.2	34.0	n.a.
Greece	43.8	18.5	28.1
Jugoslavia	4.2	18.6	13.5
Turkey	29.0	49.1	77.6
TOTAL	101.2	120.2	160.0*

* Estimated.

financing, reinforced by the arguments of the tobacco lobby in Washington. The United Kingdom and France encouraged production in Rhodesia and Algeria respectively, but the increase there could not fill the gap between the domestic demand and the dollars they were willing to spend. In the event, most of the Balkan countries have been able to expand their exports of tobacco since the war. The United Kingdom and France together, for example, bought 19,300 tons from Greece and Turkey in 1949, as against an annual average of about 1,500 tons before the war.

Greece's Problem

The problem is thus essentially a Greek one. Bulgaria will be looked after by its Cominform partners, tobacco exports are not particularly important for the Yugoslav economy, and Turkish experts expect that their production will be stabilised at about 100,000 tons, which would leave 70,000 to 75,000 tons, or rather less than the 1949 figure, available for export. For Greece, however, the problem is extremely important, if it is ever to become independent of external aid and free itself from the political difficulties and the feeling of national inferiority which attend such aid. Greek exports in 1949 only paid for about a quarter of its imports, and, as before the war, tobacco accounted for nearly half their total value. Production, which reached a maximum of 82,000 tons in 1936, has risen from 19,000 tons in 1945 to 53,000 tons in 1949, but domestic consumption, although it has risen considerably, is still only about 10,000 tons a year, and in the last few years large unsold stocks have accumulated.

The OEEC working committee is thus faced by a marketing problem on whose solution depends the livelihood of about a million people in the politically vital areas of Thrace and Macedonia. The average holding is very small, and they cannot get round their difficulties by shifting to other crops. Some contribution to a solution must be made by the Greeks themselves. They must offer their tobacco at a price competitive with the Turkish, and must come nearer to Turkish standards of grading and packing. The remission of the export tax on tobacco in 1948 and the devaluation of the drachma in 1949, have helped greatly on the price side; but the administrative arrangement required to ensure proper grading and packing, where so many small producers are concerned, are bound to be difficult to work out.

Meanwhile the importing countries can help by entering into long-term contracts and by increasing the proportion of Balkan tobacco in their American type cigarettes, in order that Greek salvation may not be achieved solely at Turkey's and Yugoslavia's expense. Recent technical developments

in the utilisation of tobacco should make this easier. The expansion of German exports, and the return of the control of Western Germany's trade from American to German hands should facilitate German purchases, and, indeed, a Greek-German trade agreement has been concluded. It is difficult, however, to co-ordinate national policies, when in some countries the import of tobacco is in private hands and in others is reserved to a state monopoly, and the OEEC working party has made little, if any, progress. For Greece, however, the problem is urgent, and if the OEEC cannot help it will have to turn elsewhere. It has already made tentative enquiries of the Economic Commission for Europe as to the possibility of holding an *ad hoc* tobacco meeting on the lines of the grains conference in Geneva last year, which might enable it to sell tobacco to the East as well as to the West.

Plan for Europe's Farmers

The French Government has asked the Council of Europe to act as convener of a meeting on the Pflimlin Plan—the project to rationalise West European agriculture and to liberalise trade in agricultural products. The Secretary General of the Council has accepted this responsibility and no doubt welcomes it as the first occasion on which the organisation has been requested by a European government to carry out a very specific assignment. Invitations to the conference will be sent some time in May or June to the members of the Council plus Austria, Switzerland and Portugal.

The agricultural scheme is likely to prove even more difficult to handle than the Schuman Plan. Many of the West European countries have made themselves more or less self-sufficient in foodstuffs, in part by holding down the standard of living and in part by maintaining behind tariff and quota barriers a high-cost agricultural industry; in some cases the wind has been tempered for the industrial consumers by subsidies.

Supporters of the Pflimlin Plan have in mind two main objectives. They wish to increase the output of European agricultural producers: first, as a dollar saving measure and, secondly, as a means towards raising the standard of living of the European urban worker. In the past the peasants and farmers of Western Europe have stolidly resisted the temptation to raise output. Most of them know that expanded output on their part necessitates as a first step increased capital expenditure and also the bringing into production of high cost land. They are fearful that higher output would lead to a fall in agricultural prices, and this, in conjunction with higher costs, would mean losses.

In short, on the Continent as in Britain, a larger volume of agricultural production depends upon increased government subsidies to help meet higher costs and on government guarantees of selling prices. Apparently one of the central threads running through the Pflimlin Plan is the aim of creating for all the member countries a co-ordinated subsidy and price maintenance programme. Without such co-ordination it is feared either that some countries will take no steps to stimulate agriculture or that each of them acting separately will subsidise the same branches of agriculture—for example, sugar beet growing or wheat farming.

Critics of the plan have concentrated most of their fire on two objections. They feel that the authors exaggerate the dollar famine in the post-Korea world and they deplore the whole idea of devoting Europe's limited resources to increased production in an industry where costs are in general above the world level. They recognise that for political, social and strategic reasons European agriculture cannot be reduced to a size determined by competitive world prices—with

tremendous effort it is occasionally possible to close down high-cost coal mines, but the history of European politics shows that it requires a bloody revolution to liquidate high-cost peasants. The critics are not convinced that the dollar shortage is so acute that it justifies an addition to the existing burden of uneconomic farming; nor do they consider that much rationalisation could be accomplished under these circumstances.

Britain and the Japanese Peace Treaty

The British Government has now communicated to Washington its views on the American proposals for a peace treaty with Japan. Although there is general agreement between the two Governments on the need for preventing the formation of a power vacuum in Japan, there are still considerable divergences of view on Japan's economic future, particularly the revival of Japanese shipbuilding. The American policy over the last two years has been to foster Japan's industrial recovery as a means both of relieving the American taxpayer of the burden of supporting an insolvent nation and of reducing social unrest within Japan; the Korean war has now produced boom conditions in Japan, since such a large part of the supplies for the American forces in Korea are drawn from Japan. The prospect of a renewal of Japanese commercial competition on a pre-war scale is, however, a cause of some alarm in this country. Britain also has to take into account the attitudes of other members of the Commonwealth, and Australia in particular is far from being definitely reconciled to the pro-Japanese trend of American policy; Mr Menzies indeed appears to have been largely won over to the American point of view by Mr Dulles's recent visit to Canberra, but Mr Evatt remains extremely hostile to it, and Labour is expected to make Japan a major issue in the forthcoming election campaign—which may have important international repercussions, even if Labour does not return to office.

In Tokyo there is an expectation that a peace treaty with the United States may be signed in July, as the American Government is reported to be anxious to get a treaty without further delay and to have given up all hope of a general conference. Here, too, it seems that there is a difference between British and American attitudes, as the British Government is very reluctant to contemplate a final settlement in which Communist China has no part. Within Japan there is now also a danger that the peace treaty will become an explosive political issue, with the Communists doing everything possible to make trouble. The Communists have been trying to form a united front with the Socialists for opposing a "majority peace" (i.e., one without Russia and China) and demanding an "overall peace"; the line is further to condemn both Japanese rearmament and the lease of military bases to America and to dedicate Japan to perpetual unarmed neutrality. The Socialists have adopted this programme and have also put it through a national convention of the General Council of Trade Unions; there is thus a serious amount of opposition to the proposed treaty, which might be rendered inoperative if the Socialists were to increase their strength greatly at the next general election. On the other hand, the new Social Democratic Party has come out in favour of Japanese rearmament, and a Communist-Socialist combination in Japan need be no more fatal to American-Japanese co-operation than the similar front in Italy has been. Some anti-American effervescence is only to be expected in Japan with an early prospect of an ending of the occupation regime, but there is a solid basis of common interest for the projected post-treaty relations, and the risks of restoring full sovereignty to Japan are of a kind which it is reasonable to take.

Coventry Climax
fork-lift trucks
put production
up!

This is a machine for cutting non-productive time. It carries, lifts, stacks and loads almost any material up to 6,000 lbs. at a time — swiftly, deftly, economically. Think of your present costs in moving and storing; the cost of handling and trundling by old-fashioned methods; and you will see how, with this machine, these non-productive costs may be cut and your output increased — forthwith.

THE BUSINESS WORLD

Building Societies' Boom

THE role of the building society movement in the national economy since the war has been radically different from its prewar role, and the change has been both unexpected and paradoxical. No one in the movement would have ventured to predict, during the war, that a postwar quinquennium in which the completion of new houses by private builders was restricted to an annual average of 26,000—or only one-tenth of the 1938 rate—could be a period of unprecedented boom for the building societies, whose prewar lendings were founded upon the finance of private building of homes for owner-occupiers. Yet in both 1949 and 1950 the movement's aggregate new advances on mortgages were approximately £275 million, or almost exactly twice their annual level just before the war. It is true that this increase has not been quite proportional to the increase in the price of houses. Recent estimates by the Co-operative Permanent Building Society have suggested that the average price of modern medium-sized houses is over three times the prewar average; and, to take another test, the average price of all houses on which the Halifax Building Society has recently lent money is apparently about 2.4 times its surveyors' valuations in 1939. Another sign that the real volume of business financed may be rather smaller than before the war is that the number of borrowers from building societies, at one and a half million, is fractionally below the number on their books in 1939. But in view of the fact that new advances in one war year fell as low as £10 million, and in view, too, of the harrying to which the private house-owner has been subjected, both as a species and as a class, the progress since the war is certainly greater than any building society leader could reasonably have foreseen when Mr Bevan's housing policy was first formulated in 1945.

The explanation of the paradox lies, of course, in the fact that the main stream of the societies' lendings has perforce been diverted from its original purpose of financing the purchase of newly constructed houses to the financing of purchase of existing properties. The name of building society, like that of the Marylebone Cricket Club, is becoming one of those pleasing archaisms in which the English language abounds. The movement's postwar customers have come from three main groups. First, there have been those "sitting tenants" who, in the words of the advertisement, have ceased to "rent their houses because it is cheaper to rent the purchase money." The pressure of rent restriction—and of taxes on income but not on capital gains—has kept the supply price of many rent-restricted houses (relative to the prices of uncontrolled houses and of most other goods and services) down to bargain levels; and the accumulation of war savings by working-class tenants, who would not otherwise have considered buying their houses, has enabled some of them to take sensible advantage of this fact. The second main class of postwar customer has been the existing house-owner who has painlessly converted the appreciation in the

money value of his house into cash by borrowing on mortgage and spending the proceeds. The third, and most important, type of transaction financed has been the normal turnover of secondhand houses. It was natural that there should be a boom in this sort of business immediately after the war, but it was scarcely expected that demands on the movement from this source would have remained so high once resettlement was complete.

The changing pattern of demand for mortgage advances, and the high prices at which most sales are now taking place, have given rise to some uneasiness in building society circles. It has been argued that the sitting tenant, who has been tossed almost unconsciously into the role of house-owner by the accident of inflation and rent-restriction policy, may not be as thoroughly grounded in the traditions of husbandry as the man who has deliberately set out to buy his own house. The same fear applies, with even more force, to the existing house-owner, who has turned mortgagor to cash in on the inflation. While real incomes have been expanding, albeit slowly, mortgage and interest repayments have been well maintained, as the accompanying table shows. It has been suggested, however, that in the coming year, when real incomes begin to fall owing to the pressures

of rearmament, building societies may find that borrowers are becoming less punctilious in their repayments. This fear may be as illusory for the immediate future as it is real for the long-term prospect. The trouble that a fixed-charge industry, such as the building society movement, most needs to fear is an old-fashioned recession in which real incomes and money values are declining simultaneously. The second of these conditions is not now in prospect; though real incomes will fall, money values will continue to rise.

The pattern of borrowing by building societies has also changed very noticeably since prewar days, though perhaps not so radically as the pattern of their lending. The continual increase in share holdings and deposits in the last few years, while most other forms of saving have been lagging, has sometimes been read as a sign that those who do their saving through building societies have miraculously proved more able to be thrifty than those who save through such channels as the National Savings movement. The increase in shares and deposits, however, is in large part a mere switch in accumulated savings. It is a reflection of the entry into the building society field of the more sophisticated investor who would have gone towards the Stock Exchange in days when taxes on profits were lower and ordinary shares had no ceiling as well as no floor. With income tax at its present level, the customary 2½ per cent tax-free return on building society shares is equivalent to a gross yield of 4.1 per cent at the standard rate of tax.

Several considerations, however, are leading the societies to question whether they can count much longer on the ease of borrowing they have enjoyed in the recent past. The first is the fear that stock exchange money is "hot" money that might flow back to Capel Court if a stock market boom set in; if this were to happen, however, it would probably be as a result of the sort of political and social change that should enable the movement to put up its own lending rates—and finance more new construction. It is also argued that the new character of part of its funds makes the building society movement, like the Stock Exchange, now more vulnerable in the event of a "liquidity crisis" caused, for example, by international fears; perhaps all that can be said here is that such a crisis at the moment would probably frighten as much stock exchange money into building society shares as it would frighten holdings of such shares into cash. The second, more immediate, fear is that the coming Budget may "regularise the position of the surtax payer" as Sir Stafford Cripps forecast it would do. This might remove some of the attraction of building society shares to surtax payers, who might henceforth be called upon to gross up their income from such investments at the standard rate of income tax (or possibly at the special building societies' composite rate, now equal to 5s. 2d. in the £). If surtax payers' money is to be impelled out of the building societies as a result of such legislation, however, it is not very clear where it will want to fly to. A third fear in many building society boardrooms is that the standard rate of income tax will be raised in the coming Budget, and that the building societies' composite rate will be raised correspondingly.

If this happens, it seems inevitable that either the 4 per cent mortgage rate will have to go up or the tax-free interest paid to shareholders will have to go down. In judging all these possibilities, however, it would be unwise to exaggerate the extent to which building societies' resources do now consist of "hot" money. After all, there are now over 2,900,000 shareholders and depositors in the movement, a figure that is broadly the same as in the peak year of 1938.

★

Differing opinions within the movement about such influences as these (and about their impact on individual societies) have led to considerable diversity of building society practice since the war. The accompanying table shows that the liquidity ratio of the movement as a whole (i.e., the ratio of cash and investments to total assets) is now about 15½ per cent, compared with under 10 per cent in 1938 and with the very high figure of 30 per cent attained at the end of the war, after six years of virtual closure of the normal outlets for the societies' funds. This average liquidity ratio for the whole movement, however, conceals very considerable divergences in individual practice. For example, the largest of the building societies, the Halifax, has a liquidity ratio of 23.5 per cent and has expanded its balance of mortgages outstanding by only 20 per cent since 1938. The second largest society, the Abbey National, has a liquidity ratio of 13.7 per cent and has expanded its balances of mortgages outstanding by nearly 32 per cent since 1938. Some of the smaller societies have expanded their advances even more rapidly. In the last two years, however, there has been a tendency towards greater uniformity, and the varying rates of expansion may have been to some extent merely a reflection of differences of timing in the reviews of mortgage portfolios that many boards have recently been undertaking.

For the future, the building societies must look to the possibility—perhaps the probability—of substantial changes in the official housing policy that has developed since the war. They can feel reasonably sure that the demand for home ownership by the British public has not been impaired by the big changes that have occurred in income distribution. But it is equally clear that the policy of rent restriction and of concentration of new building on local authority houses has not promoted "fair shares" in housing; all that is happening now is that some landlords and all ratepayers are subsidising those who have been lucky enough to find themselves in a restricted house or to secure a new subsidised house.

The policy cannot reasonably be defended on grounds of equity. Partly for this reason, the weight of housing subsidies, now running at some £70 million a year (quite apart from the hidden subsidy involved in the low lending rates to local authorities), is precisely the sort of ballast that the overburdened ship of state should jettison as it sails into the rough weather of rearmament. The implication of all this is that the official policy of favouring the tenant at the expense of the house owner must, sooner or later, be modified. When steps are taken in this direction the prospective closing of the gap between

demand and supply of new houses for sale might bring existing house prices fairly rapidly down towards a more reasonable relation with the prices of other things—whether money prices come down or not. The effect that such a change of policy would have, both on the market in secondhand houses and on the volume of “sitting tenant” business, is a subject that the building societies would do well to ponder. The fact seems to be that a movement towards the kind of housing policy that most building society leaders now rightly advocate would not be without its troubles for the movement itself.

The Garage Trade—II

How Many Filling Stations?

THE first of these two articles on the changing structure of the garage trade described the “servicing” side of the business, as distinct from the retailing of motor spirit. It showed that major repair work is tending to be increasingly concentrated in the larger units linked with the manufacturers. The service station on the main traffic arteries is already well on the way to being primarily a petrol and oil supply depot, selling no more than a limited range of accessories and providing a minimum of facilities for greasing, tyre repairs and other light maintenance. The prosperity of this type of station depends on the volume of business that can be attracted by offering a high quality of these simple services; its siting in relation to the main plan of traffic is all-important. The major obstacle to the development of efficient filling stations with a large and economic flow of business is now, as it was before the war, the excessive number of pumps and stations. Many of the smaller garages attract only haphazard trade. Comparatively little capital was needed to enter the garage trade in the nineteen-thirties—enough, perhaps, to put up a shed, buy a minimum of tools, and acquire pumps and storage tanks on hire purchase.

When, as often happened, the trade in motor fuels and repairs failed to come up to expectations, they looked for ways of filling in slack periods by dabbling in some other business activity. Supplying the motorist's need soon became only incidental, and this sometimes led to a distressing lack of service for petrol and oil and an inability to deal with urgent requirements for even such key items as fuses, lamps and plugs. The high incidence of this practice of combining other business activities was revealed by surveys undertaken in 1947 in Birmingham, Bristol and rural Somerset for a committee set up by the Minister of Transport, under the chairmanship of Lord Waleran. It was found in the two towns that, quite apart from such activities as haulage, hiring cars or coaches, and agricultural engineering, 33 per cent of the petrol stations carried on a range of business activities not connected with the motor trade—general engineering, hardware, accommodation and refreshments, general store, radio dealer, and so on. In the rural areas of Somerset the proportion of petrol stations carrying on extraneous activities was as high as 38 per cent.

Many garage owners hung on stubbornly, long after the pressure of competition had made their business unprofitable. A survey of petrol pump facilities made for the Waleran Committee showed that the trunk roads

had on an average one service station to every 1.7 miles of road, or 2.6 pumps a mile. On Class 1 roads the average frequency of the filling station was 2.2 miles, and even on Class 3 roads there was a station to every 4.2 miles of road. At the same time, the Committee was able to show that the frequency of petrol stations was not sufficiently related to the volume of traffic on particular sections of road. Consequently, the Waleran committee gave the following guidance as to the number of stations needed for different degrees of traffic density.

Number of Vehicles likely to Need Petrol Facilities	Miles per Station
Over 2,000 daily.....	2.5
Over 1,000 but less than 2,000.....	3.0
Up to 1,000.....	5.0

The recommendation that there should not on an average be more than one station every 2½ miles on roads with fairly heavy traffic does not seem revolutionary. Yet, in the course of the survey made in 1947, only one road in the first category of traffic density—the trunk road from Manchester to Liverpool—fulfilled these conditions. On this route the number of miles per station was 2.54, and the daily traffic amounted to 4,300 vehicles likely to need petrol facilities. As a result the average throughput per filling station amounted to nearly 90,000 gallons a year, against the average of 51,000 gallons for all sites on trunk roads. In contrast the Preston-Lancaster road, which has a mixed traffic with a good proportion of light vehicles totalling some 8,500 vehicles per day, has as many stations as one to every 0.76 miles of road. The throughput per site on this route falls in an almost direct relationship to the number of sites, i.e., to some 32,000 gallons a year. The gross profits provided by these throughputs give a good idea of the excessive dispersion of petrol fuelling in this country. At the standard retail margin of 3½d. per gallon 90,000 gallons a year brings in £1,300 per site before costs are met; a throughput of 32,000 gallons a year means less than £470 per site.

Not only does this state of things make the cost of retailing petrol high; it also makes the distribution by the oil companies costly, because of the frequent calls that have to be made to deliver small quantities. It was, in fact, the great economy of distributing petrol by means of full road-tanker loads making only one or two

“drops” that impelled the distributing companies in the United States to develop exclusive sites marketing the products of one company alone. Actual figures of the saving to be derived from this system are not often quoted, but one American company calculated in 1939 that the extra delivery cost of serving “split” dealers (as found in England) instead of exclusive sites amounted, on a time basis alone, to more than a sixth of a penny a gallon at 1939 price levels.

The Waleran committee also found that the dealer's gross margin of profit on motor spirit, 3½d. a gallon, was higher in Britain than in any of the other countries investigated except Switzerland and parts of the United States. The Committee did not consider that a reduction of the dealer's margin was a suitable method of relating the number of filling stations to the potential business in the locality. Holding that a reduced margin would ultimately lower the standards of service, it concluded that the desired result could best be achieved by enforcing reasonable standards of services and equipment for three different categories of filling station.

★

The enforcement of the Waleran recommendations could bring substantial improvements in three ways. The motorist could then be confident of certain standards of service. The control of frequency of stations and the requirement of adequate storage capacity would reduce the number of small drops per road-tanker load of petrol and so reduce distribution costs. Careful location of new stations would avoid the creation of danger spots.

But whatever the extent of regulation imposed on the garage trade, competition will play a vital part in remoulding the industry. The turnover of the motor retail and repair section of the trade in 1949 is estimated at £300 million, exclusive of sales of petrol and oil. With the addition of these sales, unrestricted by rationing, the turnover in 1950 was probably over £500 million. The motor retail and repair trade employed in 1946, in its 25,000 establishments, more than 150,000 people, or as much as 50 per cent of the total manpower employed in the motor manufacturing industry. Something like half the labour force of 150,000 is employed in less than 2,000 establishments, but the great majority of the remaining 23,000 establishments employ less than ten men.

It seems reasonable to expect that the repair side of the industry will ultimately be concentrated in well-equipped factories working 24 hours a day, fed by nominated garages and probably financed by the motor manufacturers, who will erect their own associated establishments in a few selected towns to be supplied with their own units and spares from the main manufacturing works. Garages will then be enabled to give literally overnight service on engine exchanges and other major replacements. The petrol station, shorn of its ancillary trades, will depend for its prosperity on its siting in relation to the main stream of traffic and on the quality of service it offers to the motorist. In the same way as motor manufacturers are concentrating on assisting the repair side of the trade, one can expect that the oil companies will become far more closely associated with methods of retailing petrol and oil: some of the larger companies are already moving in this direction.

TRINIDAD

PORT OF SPAIN
LA BREA
SAN FERNANDO
ORIO CLARO

ASPHALT: A local legend at La Brea, Trinidad, describes how the famous pitch lake was once the site of an Indian village. The villagers offended the local deity by their persecution of the humming birds (which were animated by the souls of dead Indians) and as a punishment they were engulfed in the pitch lake with all their belongings.

In 1595 when on his ill-starred expedition to South America in search of El Dorado, Sir Walter Raleigh called at Trinidad. He made use of the pitch for caulking his ships and reported that he found it ‘most excellent good’—an opinion which has since been endorsed by road makers in Great Britain and in many other parts of the world.

Full and up-to-date information from our branches in Trinidad on market conditions and industrial trends in the island is readily obtainable on request. Please write to our Intelligence Department at the address given below.

Business Notes

Higher Railway Freights

Before Parliament rose for the Easter recess the Minister of Transport went through the guarded ceremonial forms that precede an increase in railway charges. The British Transport Commission puts the deficit on net revenue account in 1951 at £25 million (a rather lower sum than had been expected), and it has asked the Minister to use his powers under Section 82 of the Transport Act to authorise an "immediate increase" of 10 per cent in railway freight charges, parcel rates and dock and canal charges. Such an increase, if granted, would yield £20 million, and that only in a full year; thus even assuming that the deficit is as small as £25 million this year (and that would seem to lean heavily on the chances that substantial operating economies can be secured this year) the anticipated yield of the 10 per cent increase would still be insufficient by £5,000,000 to balance the books—apart from the accumulated deficit of £40 million.

Mr Barnes's statement made it quite clear that no public inquiry into the proposed increase is intended. The Act requires him, when he exercises his powers to make transitional increases in charges, to "consult with, and consider the advice of, the permanent members of the Transport Tribunal, acting as a consultative committee." Such consultations are in train, but in his reference to the Tribunal the Minister has taken occasion to emphasise the urgency of the application and to recall that a public inquiry was held just over a year ago, when the 16½ per cent increase in railway freight rates was examined. "There has," said Mr Barnes, "been no substantial change in the circumstances"—which might be paraphrased in the statement that the old difficulties have become more serious.

It is not possible to accept the decision not to hold a public examination of this application without misgiving, even granted the substance of the Minister's arguments. On what ground has a 10 per cent increase on freight rates been chosen? Is it the intention to do nothing about passenger fares until the long-awaited passenger charges schemes have been considered by the Tribunal (not on this occasion offering advice, but acting as final arbiter) and put into operation? Certainly the comparative levels of freight and passenger charges (assuming that the increase in freight rates now sought is granted) will be rather widely separated, and even after making full allowance for the sensitive response of passenger traffic to changes in fares and standards of service, a large divergence between the two scales—after taking account of differences in operating costs, would not be economically justified.

Commodity Conference Becalmed

The international materials conference in Washington has reached the doldrums. The newly expanded central group met for the first time last week, but did not agree on a permanent chairman: it discussed the relationship between the group and the individual commodity committees, but here again reached no conclusion. It is now more or less generally accepted by member countries that the real function of this central group is to establish a procedure for the various commodity committees without limiting their autonomy. But it remains to be seen whether such a large central group, drawn from major powers, can restrict its endeavours to such a small compass.

Three of the existing five committees (the copper, lead and zinc committee, the sulphur committee and the cotton and cotton linters committee) have completed their preliminary organisation. Each has passed an almost identical resolution to the effect that non-member countries may put their own

requirements of a particular commodity before the appropriate committee. Such a policy had initially been suggested by the three convening powers, and it is now apparent that this formula will be adopted by all the committees. One point of procedure has therefore been determined. But others remain. Is, for example, the quantity of a particular commodity available for export to be determined by the exporting country or by the commodity committee? In other words, is allocation to embrace total production or merely exportable surpluses? The same applies, of course, to importing countries; is their domestic production of any particular commodity to be considered in fixing their import requirements? Clearly the policy adopted must be uniform for all commodity committees, and it should be settled first by the central group. But would not such a step imply restricting the autonomy of the committees?

The negotiations on tin in Washington, at which Britain, the United States, the Netherlands, Belgium and Indonesia were represented, have apparently met with little success. Their primary purpose was to decide whether or not to set up a tin committee within the larger materials conference. This decision depended on whether it was feasible to introduce an allocation scheme for tin, a point on which no agreement has been reached. Certain reports have suggested that the negotiations have broken down completely, while others state that they have merely been adjourned. But unless these five countries can agree about allocation there seems little value in straining Washington's already limited accommodation by setting up yet another committee.

Miners' Hours

Saturday shifts in coal mining, which helped to avert the threatened fuel crisis, have been worked under the terms of an agreement upon extension of hours negotiated in 1947 between the National Coal Board and the National Union of Mineworkers. This week, when board and union representatives met the Minister of Fuel and Power to consider coal production in 1951, the renewal of the agreement for a further year was discussed, and the NUM is to convene a special delegate conference next week upon the matter. Such an extension should not prove difficult; the recommendation, perhaps slightly modified, seems likely to pass fairly smoothly through the union's usual channels. Acceptance of the principle, in the last three years, has been easy: but the extent to which miners have worked longer hours in the pit has varied from time to time and from coalfield to coalfield. Before the special appeal at the end of last year, only about half the pits in the industry were operating Saturday shifts; in recent weeks nearly all have been doing so. Renewal of the agreement, therefore, would not guarantee that miners will continue to work as many shifts a week as they are doing at present; and Mr Noel-Baker has already conceded that they should not be expected to do so indefinitely.

The production targets that the Minister this week set before the industry (it is significant that the NCB has steadfastly refused to hazard any itself) allow for something less than the latest extra efforts. He asked for a minimum of 210 million tons of deep-mined coal during the year, or rather less than the 4 per cent increase compared with 1950 achieved so far. With opencast production, this should mean a combined target of 220 million tons or slightly more. From this total Mr Noel-Baker hopes to build home stocks to 18 to 19 million tons by the beginning of the coal winter, a level considerably higher than the figure that has been considered adequate in recent years. That would require 3 or 4

million tons more for stocks from the year's current production than was conserved last year. Inland consumption, which should have been slightly curtailed by the economies decreed, has in the first eleven weeks of the year been roughly 3 per cent higher than in the same period of 1950; industrial dislocation through shortages of materials might limit this rate of increase a little later, but it would be prudent to budget for home consumption in the region of 208 to 210 million tons. Heavy inroads must therefore continue to be made upon the residue of supplies still available for export; apart from the financial consequences of this for the Board, there will also be an unwelcome effect upon the balance of payments, particularly in conjunction with the price paid for imported American coal. Another import from America this week was the knowledge garnered by a coal mining productivity team, who arrived back eager with comments. These included the impression that highly efficient American methods might not be widely applicable in the different geological and technical conditions of British coal mining, and the confident belief that "British miners work harder." One of these impressions may be right, and the other wrong; but neither is new. No doubt the team will impart more interesting data than these points in its report.

South Africa's Mining Taxation

The budget that Mr Havenga, the South African Finance Minister, introduced in Cape Town last week, was marked by lenient principles of finance that may arouse envy in the apprehensive minds of British taxpayers. On the basis of taxation for the old financial year, he was confronted with a probable deficit of £13,690,000 for 1951-1952, but elected to finance two-thirds of this from expected collection of tax arrears (£5,000,000) and from sales of surplus war

stores (£4,000,000). Only £5,250,000 is to be secured by increases in taxation, but on this basis of calculation there remains a prospective surplus of £560,000. The additional taxation falls over a fairly wide field but does not touch personal income tax. There are to be higher excise duties on wines and spirits; the tax on base metal mining profits is increased from 4s. 6d. to 5s. in the £; the tax on undistributed profits is abolished but this is offset by increasing the income tax on company profits from 4s. to 4s. 6d. in the £; the total tax on diamond mines is raised by 10d. to 4s. 6d. in the £, and, last but not least, the taxation on gold mining profits is increased by a return to the earlier formula.

In the past financial year the percentage rate of tax on gold mining profits, which is a variable one intended to hold the balance fairly between mines working differing grades of ore, has been determined by the formula $60 - \frac{360}{x}$ (where x represents the percentage ratio of profit to revenue). The formula now reverts to $63 - \frac{378}{x}$. This change is expected to bring in an additional £925,000 of revenue in 1951-52. This added burden on the South African gold mining industry is no doubt intended to take account of the additional income that is being secured by sales of gold at a premium. Mr Havenga announced that these premium sales had given the industry an additional income of £2,185,000 during 1950 and he added that, if existing prices and scope of sales were maintained, this extra revenue would amount to "much more" than this figure during the current year. In this context Mr Havenga anticipated pressure by the International Monetary Fund on South Africa to reduce the scale of premium sales; but he made it quite clear that any such efforts would be strongly resisted, since South Africa regards these facilities as a partial and very poor compensation for the maintenance of the official price of gold at what it considers to be an artificially low level. The increased burden on the gold mining industry has had scarcely any effect upon the share market. The gold mining taxation

LOWER BROCKHAMPTON HALL
(Property of the National Trust)

Situated in Herefordshire about twelve miles west of Worcester, Lower Brockhampton Hall is a very fine specimen of a West Country manor house in miniature, of the late fourteenth or early fifteenth century, complete with detached gatehouse and protective moat. It stands in a hollow and originally belonged to the family of Brockhampton.

MARTINS BANK

LIMITED

LONDON DISTRICT OFFICE:
68, Lombard Street, E.C.3.

HEAD OFFICE:
4, WATER STREET, LIVERPOOL, 2.

GEORGE II WAS KING

The private bank of Glyn, Mills & Co. was founded in 1753. It withstood the vicissitudes of the uneasy 18th century. It grew strong in the expansion of the 19th, aiding many a small enterprise to rise to international prominence. Today it is still a private bank. It still acts as financial guide and mentor to many great industrial concerns. It has large resources, and a completely modern yet personal banking service available to those firms now planning expansion in the mid-20th century.

GLYN, MILLS & CO.

BANKERS

Royal Bank of Scotland • Williams Deacon's Bank, Ltd.

formula is so designed that the main impact will fall on mines with a high ratio of profit to recovery. Some of the outstanding examples of these high-grade mines, such as Blyvoor, are to be found on the western extension of the Rand where the recent West Driefontein development results have been so favourable as to neutralise completely the effect of the budget. The increased burden of the separate tax changes on diamond and base metal mines has, however, been reflected in modest falls in the prices of the shares concerned—De Beers in the diamond group and Messina and Consolidated Murchison in the base metals.

Thaw in Insurance Dividends

Until last October the insurance companies had observed dividend limitation to the letter. The Commercial Union was the first to break the ice when it increased its interim dividend from 37½ per cent to 40 per cent. It was followed in November by the Prudential, which distributed 3s. 6d. net per "A" share out of its "special dividend reserve"—the reserve set up in 1949 to receive that part of the profits accruing to "A" shareholders under its Articles of Association that could not be distributed if the dividend freeze was to be maintained. The example of these two companies has now been followed by other offices. All the insurance dividends so far declared this year have been higher than in 1950. The Sun declared a second interim dividend in January, making payments on account of 1950 so far 3s. 10d., compared with 3s. 4d. per share for the whole of 1949. More recently, the Britannic and Pearl have both raised their 1950 dividends to 55 per cent net compared with 50 per cent net in 1949, the Sea raised its dividend to 22½ per cent (against 17½ per cent), and the Equity and Law to 6s. per share (against 4s. 6d. per share). The Prudential raised its 1950 dividend to 17s. net per "A" share (against 15s. 5d. net), and announced its "present intention" to distribute before the end of the year not less than 2s. 6d. net per "A" share from the special dividend reserve; the dividend on the Prudential's "B" shares (which receive non-life profits only) has also been stepped up from 1s. 6d. net to 2s. net per share.

The 1950 final dividends of the composite offices have not yet been declared: it will be surprising if most of them are not increased. Although the bumper profits of the composite offices in 1949 are unlikely to have been repeated last year, there is no doubt that earnings are high enough for more liberal dividends to be paid and maintained.

Extra Sulphur—Or Not?

The Washington announcement that Britain would receive an "emergency allocation" of 19,000 tons of American sulphur was gratifying, if not entirely clear. It is not yet known whether this amount is in addition to the first quarter's allotment of 81,000 tons, or whether it will have to be considered as part of the second quarter's supplies, which have not yet been announced. This extra, or advance, sulphur, in any case, represents the lion's share of 30,000 tons that will similarly be made available to countries in Western Europe. It may be that this is the first result of the statistical survey of world supply and requirements that has now been completed by the sulphur committee of the materials conference in Washington. But if it is, the United States Government has not said so.

Sulphur consumption in this country has been cut by a third, following a similar cut in American exports to Britain; though full import requirements for 1951 are officially estimated at 460,000 tons, the supply of 100,000 tons a quarter that this new announcement may indicate would provide some relief to consuming industries. The Board of Trade has prepared a system of priorities for distributing

whatever quantities of sulphur may become available during the coming year, but until it is sure what total supplies it can count upon it is unlikely to put this into operation. If the quarterly allocation remains at 81,000 tons, the present cut in total supplies will have to be maintained, and the difficulties already besetting industrial users will be accentuated.

Emergency shipments or higher quarterly allocations, however, will relieve only the immediate threat to British industry. The sulphur shortage is a long-term phenomenon; if Britain gets larger supplies of regular sulphur from the United States now, less will be available in future. The British Government has approved this week the erection of a large plant to produce sulphuric acid from anhydrite, and although the process will be more costly than producing acid from elemental sulphur it has the advantage of using indigenous raw material. The plant will take at least two years to construct and will be able to produce about 150,000 tons of sulphuric acid a year; total British production of acid from all sources last year averaged 150,000 tons a month. Two American experts, Mr F. J. Curtis, of Monsanto Chemical Company, and Mr E. B. Lopker, of Blockson Chemical Company, who are consultants to the Economic Co-operation Administration, are at present in Britain to discuss with the Board of Trade, the Ministry of Supply, and representatives of the British chemical industry, ways and means of increasing British supplies of sulphur and sulphuric acid from alternative sources.

* * *

Record Rise in Bank Advances

The three months to the end of February are always the season when bank advances show their biggest quarterly rise. This time, however, the rise was a record one. Members of the British Bankers' Association increased their advances by £123.6 million to £1,807 million in the quarter; this increase was £10 million more than that in the same quarter of 1949-1950 (which held the previous record for expansion) and some £35 million more than in the equivalent quarters of 1947-48 and 1948-49. Although the latest rise was spread over twenty-two of the twenty-five groups of borrower in the Association's classification, the main source of increased demands upon the banks has been those industries that use raw materials that are still available but have lately soared in price. Thus the wool industry shows the biggest increase of all; advances to it have jumped by £17.6 million to £38.6 million. Other textile industries (except cotton), together with the leather and rubber industries, have also increased their borrowing by more than they did a year ago, but the cotton, non-ferrous metal and chemical industries have not shown a commensurate increase—partly, no doubt, because their purchases of raw materials have been restricted by difficulties of supply. The first impact of the rearmament programme can be seen in the £6,500,000 increase in advances to the engineering industry, which was repaying bank loans fairly steadily throughout 1949 and early 1950 and had not been a substantial net borrower since. The four biggest groups of borrower in the Association's classification—"personal and professional," "other financial," retail trade, and agriculture and fishing—all show increases in borrowing outstanding, though not on the same relative scale as the big raw material using and rearmament industries; indeed the personal and professional group now accounts for only 23.8 per cent of the loans outstanding (against 24.8 per cent at the end of November) despite the pressure that the season of heavy tax gathering usually lays upon this group.

It is difficult to guess whether the recent pace of expansion of bank advances will persist. Last year, when the effect of post-devaluation price increases was still seeping through the economy, advances continued to rise (by £70 million) between February and May; they then dropped by £31 million between May and November, largely as a result of

Time for Eastern trade

Ten-fifteen in England and the London, Manchester and Liverpool offices of The Chartered Bank of India, Australia and China have already opened to the public. At New York the day's work has not yet begun. In the East at Colombo it is tea-time and in Hong Kong business is finished for another day. But wherever business men engaged in the Eastern trade may be, they will find at the nearest branch of The Chartered Bank up-to-the-minute information, skilled assistance and efficient banking services.

THE CHARTERED BANK OF INDIA, AUSTRALIA AND CHINA

(Incorporated by Royal Charter 1853)

LEAD

LEAD, one of the heaviest of the elements, is found in many parts of the world as galena or sulphide of lead. It is still mined in Northern England and in Wales. Lead was one of the first metals to be worked by Man. The baths of ancient Rome were supplied with water through pipes made of lead, and for centuries it has been used as a roofing material. Soft, easy to shape and resistant to corrosion, lead is still employed for these purposes, but today it has many other important uses. Large quantities alloyed with antimony are now used to make plates for electric accumulators and to protect insulated cables. Soft solder is an alloy of lead and tin, and alloys of copper, tin and lead are used for bearings. Litharge, an oxide of lead, is used in making flint glass, pottery glazes and in the processing of rubber. Red lead, another oxide, and white lead, or lead carbonate are well known in the manufacture of paint. In the chemical industry, plant and equipment for the manufacture and storage of sulphuric acid are lined with lead because of its resistance to corrosion. I.C.I. makes wrought lead products such as sheet, pipes, tape and wire for a wide variety of purposes. It also makes the compounds, lead-azide and lead-styphnate for the detonators used with blasting explosives in mining and quarrying.

THE NEW FRIDEN
All electric, will handle every calculating need. Completely automatic. If you must have the best—buy FRIDEN.

THE ADDO
Adding and Listing Machines—Electrically or Hand Operated—the best help for general office work.

THE MULTO
Handy, portable lightweight calculator. Adds, subtracts, divides and multiplies. Takes up no more room than a desk telephone.

Every business depends largely on accurate figures, available immediately, when, and as, they are wanted. Old methods, laborious, wasteful and often inaccurate, cannot be tolerated today. Modern business, using **BULMER'S CALCULATORS and SYSTEMS**, is successful business, economising in time, labour and money. Thousands of commercial firms, and organisations, large and small, throughout the British Isles, also government departments, have our equipment in constant use producing vital figures.

Let us help you, without obligation.

repayments of past loans out of the £150 million Electricity loan and other new issues. This year the pressure exerted by higher raw material prices on the demand for bank finance is likely to be greater than in 1950—for the full force of price increases already recorded has yet to be felt—but the banks themselves may feel that many users of unduly expensive raw materials are nearing the upper limit of their legitimate credit lines.

Sugar and Cuba

The news that Britain was discussing with Cuba the possibility of a long-term contract for sugar has raised a storm of protest from Commonwealth sugar producers who maintain that such a contract would be contrary in spirit, if not in letter, to the provisions of the Commonwealth sugar agreement negotiated twelve months ago. A letter on this subject on page 737 calls for a reply, since it flatly questions certain statements made in these columns last week.

The British Government has two obligations to consider in its negotiations with Commonwealth producers. The first is to see that an adequate supply of the particular commodity is obtained for the British public at a reasonable price, and the second is the indirect obligation to help the producing countries to maintain economic viability. The Ministry of Food considered that it had fulfilled these two obligations in its offer to Commonwealth sugar producers last year, when it guaranteed a market for a substantial portion of their export surplus at reasonably remunerative prices to be negotiated each year, while at the same time leaving a part of the British market uncommitted. Cuba is the largest exporter of sugar in the world and can fairly claim that Britain is one of its traditional markets. It was therefore clear that part of the British market was being reserved for Cuban sugar—in the sense that Cuba would be free to sell to Britain if it wanted to and if Britain would pay the appropriate price. Further, by keeping part of its market uncommitted, Britain could get a fairer estimate of what is a "reasonably remunerative price," since the intention was to buy the additional supplies at world prices.

The question of resuscitating the international sugar agreement has been under discussion for some time. Last summer the British West Indies sugar producers based their claim that Britain should guarantee a market for 725,000 tons of sugar a year instead of the offered 640,000 tons on the grounds that Cuba could dispose of its exportable surplus on the world market at prices that bore little or no relation to costs of production. It was this fear that made the prospect of an international agreement attractive, since such an agreement would prevent signatory countries from "dumping" their supplies on the world market. It is true that an international agreement would be based on export quotas and not on import quotas, but the agreement would make it possible for Cuba to have a share of the British market if it wished.

The real question at issue is not so much whether this particular long-term contract for Cuban sugar would be advantageous to Britain—on the face of it, it would seem to be distinctly disadvantageous—but rather whether the system of long-term contracts is the best method of procuring sugar. The protest against the contract should come from British consumers rather than from Commonwealth producers, on the grounds that it is likely to keep the price of sugar at a relatively higher level by restricting competitive trade. But such a protest would apply equally to the Commonwealth long-term contract. Clearly, if Britain contracts with Cuba for, say, 500,000 tons of sugar a year, this country would be assured of a supply (provided there are no payments difficulties) that would permit the abolition of rationing. But it has never been suggested in these columns that sugar rationing in Britain could be abolished only by signing such a contract.

Outside Finance for Ships

Order books in the British shipbuilding industry, which at present has contracts for more than two years' output even apart from rearmament demands, do not yet suggest that its business is being seriously affected by shipowners' inability to finance replacements and new construction. But spokesmen of both industries have recently emphasised that the problem would soon make itself felt, so that the formation of a new and specialised corporation, the Ship Mortgage Finance Company, Ltd., which is designed to provide outside finance for this purpose, will be welcomed. Though British companies have a fair amount of new tramp tonnage on order, much of this represents the purchase of a few ships that may be written off more quickly than usual at present high freight rates, rather than orders for steady replacement and expansion of their fleets; and there is some evidence that the smaller companies, needing both dry-cargo ships and tankers, are already being restrained by their lack of liquid resources.

The new company, with a capital of £1,000,000 to be subscribed privately by insurance companies and other City institutions, and by the Shipbuilding Conference, will make medium-term loans on first mortgage on completed ships constructed in the United Kingdom, financing itself by the issue of up to £10 million of debenture stock. Since the war, the building of new ships has been partly financed by the grant of initial credit and extended payment terms by British shipbuilders; the new company's loans will generally be limited to 50 per cent of the cost or value of the completed vessel, and will normally be for five or six years, with a maximum term of ten years. Apart from helping to bridge the difficult interval that must elapse before shipowners can hope to gain any results from their industry's plea for tax reliefs to the Royal Commission upon Income and Profits taxation, the company should be of permanent value. Its success will naturally depend, however, upon how far the principle of limited spreading of risks makes its debentures more attractive to lenders than direct and individual ship-mortgages would be. But if the superiority of the new security can be clearly established, it should then be possible to tap wider sources of savings by creating a market in the debentures. The company's loans will not be confined to British shipowners; since the extension of credit has been in the past more general in Continental yards than in British, it may be of assistance in bringing orders to British yards from foreign owners such as the Norwegians, who have been hampered in placing orders here by financial difficulties.

Germany and EPU

The Ministerial Council of the Organisation for European Economic Co-operation, when it meets towards the end of next week, will have high on its agenda the problem of Germany's balance of payments. This has eased considerably during the month of March, in consequence of the German retreat from trade liberalisation. The March compensations, which will be worked out by the European Payments Union early in April, will, however, reveal another deficit for West Germany; this will probably exhaust the special credit of \$120 million that was put at Germany's disposal to supplement its exhausted EPU quota. The managing board of EPU has drawn up a report on Germany's balance of payments and this will form part of the documentation put before the Ministerial Council of OEEC. The report is understood to emphasise the need for further tightening of the credit control mechanism in Germany. It also suggests that German fiscal policy has not yet attuned itself to the emergency. It requires of Germany a greater sense of urgency in meeting its current payments difficulties. It does, however, also recommend certain measures designed to minimise the repercussions of Germany's quantitative import

restrictions upon certain neighbouring countries, notably the Netherlands, Denmark and Norway.

Since the report was tabled in Paris, Germany's neighbours have been busy whittling away at any recommendations that might conceivably affect them adversely. It is doubtful, therefore, whether the coming OEEC meeting will achieve the necessary consensus of opinion on the German problem to make effective action possible. The Benelux and Scandinavian countries are, naturally, incensed at the sudden curtailment of German imports. The British are finding some fault with the Dutch for importing sterling area goods that are then resold to Germany. The preoccupation of each country with its own reactions to the German difficulties will hinder a truly objective approach to the problem. It may be assumed, however, that the German situation will now be kept under more continuous supervision by EPU than hitherto. One point on which unanimity is likely to be reached is the need for further United States assistance to meet the German deficit between now and the end of the year. Whether that unanimity will include the United States itself is a matter on which there must, at present, be considerable doubt.

* * *

Army Orders for the Motor Industry

The Secretary of State for War said during the debate on the Army Estimates early this month that orders for £5,000,000 worth of vehicles for the Army had been placed. Nearly all the orders are for combat vehicles; that is, vehicles that have been specially designed for use in forward areas. About 16 per cent of army vehicles will eventually fall into this class. Their specifications call, among other things, for first-rate cross-country performance and for water and dust proofed engines, requirements that bring their costs above that of the average army vehicle. The new range mentioned by Mr Strachey has been developed since the war; the four, six and eight cylinder Rolls-Royce engines have interchangeable components to simplify the supply of spare parts. The vehicles in question consist of a cross-country jeep being built by Austin Motors, a one-ton lorry being built by Rootes, and a three- and a ten-ton lorry, orders for which have not yet been announced; the engines have also been tested in vehicles of up to 60 tons.

The Army Estimates include provision for an expenditure of £26 million on "mechanical transport." Tanks probably account for the greater part of the expenditure under this heading, because, apart from combat vehicles, large military orders are not likely to be placed with the motor industry in the coming financial year. Stocks of commercial-type lorries are being reconditioned from store—some of them for the second time—but they will not be replaced for another year or so. The Army is more interested in the development of a third class of vehicle, prototypes of which are being built by a number of motor manufacturers and should be completed in a few months. The specifications are midway between those of a combat vehicle and an ordinary commercial vehicle; that is, they call for refinements such as multi-wheel drive, but not for the same standards of water-proofing and cross-country performance. Since it will take some time to test the various prototypes, orders for these vehicles will not be placed this year, but subsequently they will form the bulk of military requirements.

*

In the last war an army division contained as many as 27 different makes of engine, and the supply of spares is so complicated that an excessive number of recruits have to be trained in store-keeping. The Army hoped to reduce the number of different engine spares by adopting the standardised Rolls engines for all its vehicles, but the Treasury did not approve this; most members of the motor industry, more-

over, were opposed to building engines to designs not their own. Some of the leading firms have declined to co-operate in the development of the new combat vehicles, to which the standardised engines have been restricted. In one case, the Ministry of Supply has been able to carry simplification a stage further by placing the entire order for each type of combat vehicle with a single manufacturer. But in the case of other types of vehicle it will not be possible to avoid putting a number of different makes in service, and the orders that will eventually be placed for these non-standardised, "general purpose" vehicles will be much larger than those for the standardised combat vehicles. Both engines and chassis for these general purpose prototypes are being built to their manufacturer's own design. The difficulty of ordering such vehicles in peacetime is that the manufacturer who develops an approved prototype is not likely to have the factory space or the available labour in his district to build more than a proportion of the army's requirements, and the Ministry is at present unable to induce other manufacturers to build to that design in preference to their own.

* * *

Car Exports and Prices

The motor industry is one of the country's leading exporters and if it has big defence orders, shortage of materials, labour and factory space will inevitably curtail the production of passenger cars and commercial vehicles for export. Falling output and lack of shipping space are already reducing export shipments. In February the number of cars and chassis dispatched was smaller than it has been for some time—24,093 cars and 3,023 chassis compared with 28,340 cars and 5,795 chassis in January. This effect upon valuable export trade is causing the Government to consider alternative, foreign suppliers for the motor vehicles needed for defence. Some manufacturers have spare capacity in Belgium, France and particularly in Italy, where the Fiat works were recently re-equipped under Marshall aid. The Ministry of Supply has been investigating the possibility of placing orders in those countries, a step that would conform to the policy laid down by the North Atlantic Treaty Organisation but one that is not easy to carry out in practice. The most satisfactory course would be for foreign manufacturers to build vehicles to British specifications, but there seems to be little chance that Nato countries, including Britain, would be prepared to standardise their vehicle requirements in the same way that they have standardised those for aircraft. The Ministry's envoys have therefore also been instructed to see whether, for example, the existing designs of Fiat vehicles would meet British army requirements; the main difficulty would be to provide spares for a foreign design. An alternative policy would be for the Ministry to place orders for vehicle components abroad—in this case some could certainly be obtained from Germany. Supplies of electrical equipment for vehicles have been scarce in Britain for some months and will become even scarcer as manufacturers have to meet growing aircraft orders. It will take about eighteen months to two years to extend British capacity for making these components.

Tenders from European manufacturers may also be lower than those from British firms—at the recent Geneva motor show their prices appeared to have risen less than those for British cars. Model changes make it difficult to compare prices from one year to another, but the price of the Hillman, 1,027 of which were sold in Switzerland in 1950, has risen from 7,700 Sw. Frs. to 8,200 Sw. Frs., and the price of the Austin A.40 from 7,200 Sw. Frs. to 8,250 Sw. Frs.; 761 Austin cars were sold in Switzerland last year and 987 Morris cars. German manufacturers took the largest share of the Swiss market with a total of 7,943 new German registrations. The Volkswagens, of which 3,598 were sold, now range in price from 5,450 Sw. Frs. to 8,600 Sw. Frs. compared with a lower price of 5,500 Sw. Frs. twelve months ago. All but

CORRESPONDENTS IN IMPORTANT
CENTRES ALL OVER THE WORLD

The Bank, through its Banking Department, offers complete banking service for Foreign Exchange Transactions, provides special facilities for Documentary Credits, etc., and with its numerous Branches in Iran deals with every description of banking business. Especial services for all kinds of information regarding import, export and trade regulations in force in Iran.

ADMINISTERS NATIONAL SAVINGS

ABRIDGED REPORT

CANADIAN PACIFIC RAILWAY COMPANY

(Incorporated in Canada with Limited Liability)
SEVENTIETH ANNUAL REPORT OF THE DIRECTORS
FOR THE YEAR ENDED DECEMBER 31, 1950

TO THE SHAREHOLDERS:

The year 1950 was marked by the final decision on the application of Canadian railways launched in July, 1948, for a 20% increase in freight rates; by the completion of the hearings of the Royal Commission on Transportation; by a strike of non-operating employees for higher wages and shorter hours, and the settlement of that dispute by compulsory arbitration. Notwithstanding that the volume of traffic handled was lower than in 1949, net earnings from railway operations, while much below those of the war years, were greater than in any year since 1944. This resulted from higher freight rates which corrected, in some measure, the serious lack of balance between rates and costs which had developed progressively since the end of the war. Other income was slightly less than in 1949. Net income available for dividends on Ordinary Stock and for surplus amounted to \$44 million, or \$3.32 per share, compared with \$26 million, or \$1.93 per share, in the previous year. The Board has been asked to undertake an audit of the investment in railway property of your Company, either by the staff of the Board or by independent experts to be appointed by the Board, the cost of which your Company has undertaken to bear. The income and Profit and Loss accounts of your Company show the following results for the year ended December 31, 1950:

INCOME ACCOUNT			
Gross Earnings	...	...	\$378,576,688
Working Expenses	...	...	340,556,331

RAILWAY OPERATIONS

Gross earnings increased \$15 million, or 4.2%, as compared with 1949. Freight revenue in 1950 was approximately \$14 million higher than in 1949. This was entirely the result of increases in freight rates which produced approximately \$23 million more revenue. The volume of traffic handled was lower, and there would have been a reduction in freight revenue of some \$9 million but for the increases in freight rates. The average revenue per ton mile for the year was 1.33c, an increase of 0.13c over 1949. Tonnage carried amounted to 53.9 million tons, a decrease of 2.5 million tons, and the average haul decreased by 4 miles to 426 miles. Railway tax accruals increased \$10.6 million, of which \$9.7 million was for income taxes. Railway net earnings for the year were \$38 million and represented a return of 3.5% on the net investment in the rail property of your Company at the end of the year.

ERIC A. LESLIE,
Vice-President and Comptroller

A kangaroo is all very well . . .

but a prospective settler, a trader or traveller wants more information about Australia than the fact that it is the continent from which kangaroos come. Current information concerning all aspects of life in Australia and New Zealand is always available at the Bank of Australasia. Our Booklet, "The Answers To Your Questions", may be obtained from the Bank on request. It contains not only information concerning the commercial world but also more personal details about life in these two Dominions.

THE BANK OF AUSTRALASIA

(Incorporated by Royal Charter 1835)
MANAGER: G. G. COWAN

Head Office: 4 Threadneedle Street, London, E.C.2

Strand Branch: 263 Strand, London, W.C.2
(opposite Australia House).

The Gateway to India

Businessmen need go no further than London to find the key to the gate, for the National Bank of India can provide all commercial banking facilities needed for trade with the subcontinent of India. Moreover, the Bank's specialized knowledge of this area and of East Africa can be of great value to those interested in developing trade with these territories. Enquiries are welcome at Head Office and branches.

A comprehensive banking service is
available at the Bank's branches in

INDIA PAKISTAN CEYLON BURMA KENYA
ZANZIBAR UGANDA TANGANYIKA and ADEN

NATIONAL BANK OF INDIA
LIMITED

Head Office: 26 Bishopsgate, London, E.C.2.

122 of the 3,222 Italian cars sold in 1950 were Fiats; the cheapest model now costs 4,700 Sw. Frs., only 100 Sw. Frs. more than it did last year. The cheapest Renault shown at Geneva this month cost 4,656 Sw. Frs.; last year the cheapest cost 4,850 Sw. Frs. Switzerland is not a large car market, but it is one of the few remaining markets in which manufacturers from all countries are competing freely. Although car sales increased there in 1950, when 28,248 new cars were registered, the number of British cars sold during the year, about 5,700, was the same as in 1949. In spite of their higher prices, more American cars were sold in 1950; 1,602 of the total of 5,574 were Chevrolets, the cheapest of which cost 12,950 Sw. Frs.

Freights Still Rising

The Chamber of Shipping index number of sterling tramp shipping freights for February, at 164.7, compared with 151.9 for January, clearly measures the continued rise in tramp shipping freights. The March figure, when it is announced, may show a further rise. Although much of the present shortage of shipping space can be traced, directly or indirectly, to the British coal crisis at the end of last year, there is little likelihood that the completion of the Government's coal importing programme will be followed by any drastic fall in freight rates. A great deal of business has been held up by the high level of freights in recent months, and as the movement of coal begins to slacken and rates show signs of declining, much of the tonnage released will be absorbed by the demands of other bulk cargoes awaiting shipment, or taken on time charter by liner companies. The importation of American coal to Europe is not by any means the only unusual movement at present.

The paradoxical nature of some of the voyages undertaken by tramp shipping today is well illustrated by a recent instance: a vessel was chartered from Calcutta to Denmark with coal at a time when it was in fact engaged in carrying coal from Poland to Pakistan. When this sort of thing is ended by the recent trade agreement between India and Pakistan the effect on freight rates might be immediate; a similar effect would result from the restoration of normal working conditions in Australian and New Zealand ports. The withdrawal of about 85 ships from the United States Reserve Fleet, to be operated by the newly established National Shipping Administration, will doubtless have a quicker effect on the freight market. But as these ships are to be used to carry increased United States shipments of wheat, their effect will be to prevent further rises in rates rather than to reduce them.

Productivity and Print

"The one factor which more than any other has made for the high productivity of the United States is the attitude of its people towards work." This quotation, from the report* of the productivity team that recently investigated letterpress printing in the United States, might equally have come from the reports of any of the productivity teams that have been published. In printing, where the skilled craftsman and his craft practices have a dominating influence upon output, it is particularly applicable. The printing report stresses the important influence of American unions in fostering "productivity-mindedness," and their willingness to accept new methods and machinery even at the risk of displacing labour. Output per man in the American printing industry is far higher than in Britain, but the team concluded that this higher output does not entail an expendi-

* Letterpress Printing. Anglo-American Council on Productivity, 21, Tothill Street, London, S.W.1. Price 2s. 6d.

ture of physical effort proportionately greater than that exerted by the average British printer.

The skilled worker in America concentrates his efforts upon that part of the work that requires his skill and is willing to leave the remainder to unskilled and semi-skilled workers; the British skilled worker, by contrast, tends to regard the whole of the job, including the unskilled portion, as falling within his craft. The attitude towards female labour in American printing is equally different: women are found in many occupations that are closed to them in Britain. Women keyboard operators, proof-pullers, readers, and even hand compositors, are found among the members of the International Typographical Union; they take their turn on shift work, and receive the same rates of pay as the men.

Although the attitude of printing labour is vitally important in establishing the causes of higher productivity in American printing, almost equally important is the care given in American plants to planning the job. In the most efficient plants printing is no longer regarded as a craft; it is considered as a production problem and is often given to a production engineer to solve. This approach naturally results in a lower general standard of printing than prevails in Britain; but it has often been argued that the standard of much of the print produced in this country is unnecessarily high. The report rightly emphasises the important part played in American printing by the designer, whose skill masks from the layman the small imperfections that are inescapable if high productivity is to be reached.

Of the team's recommendations, those dealing with technical matters may be the most easily implemented. On the fundamental question of labour relations, none of the recommendations is strikingly novel and almost all would require something of a revolution of thought in the unions before they would be accepted. It is not very encouraging to read that "the team feel strongly that the unions and the employers, through their respective organisations and the Joint Industrial Council, should initiate campaigns to stress the need for greater output and the gains which high productivity must bring to all." This suggests a faith in the efficacy of such campaigns. But would they be needed if these self-evident propositions about productivity already commanded any appreciable measure of agreement?

Dearer Non-Ferrous Scrap

It was to be expected that the maximum prices for non-ferrous scrap that came into operation on February 3rd would not encourage a free flow of supplies to industry. They were fixed substantially below the open market prices ruling just before the regulation was introduced, and the order contained a number of anomalies. It has recently been amended. Certain definitions have been clarified, and prices of some types of scrap have been raised. Copper scrap, for

THE ECONOMIST, 22 RYDER STREET LONDON, S.W.1.

example, has been raised by about £10 a ton and lead scrap by about £5 a ton. Prices for certain types of brass and cupro nickel scrap have also been increased. The alterations in the definitions make a direct comparison of prices in the two schedules difficult, but presumably the authorities have come to realise that their first attempt fixed the maximum prices too low.

The main adjustments, however, have been made to trade margins. The maximum commission on material other than lead has been raised from 2 per cent to 3 per cent. The maximum charge for bagging has been increased from 9d. to 1s. 6d. a bag or 25s. a ton whichever is less; a charge for "briquetting" not exceeding 25s. a ton has also been authorised. The basis of lead prices has been changed from "delivered buyer's address" to "ex depot"; if the seller delivers the lead scrap he may charge up to £2 a ton for delivery.

It is still problematic whether even the amended order will do its intended job of encouraging larger supplies of scrap. The basic objections to the maximum price schedule remain as before. The new limits are still below prices ruling three months ago and there is still no control on prices for secondary ingots. The Ministry of Supply apparently hopes that the higher trade margins will induce scrap merchants to be more industrious in gathering supplies together.

India's External Assets and Liabilities.

India shows signs of trying to rival the United States in the comprehensiveness and complexity of its official financial statistics; it is unfortunate, therefore, that its ideas of promptness tend to conform rather to British official practice than American. Nevertheless, the two latest volumes from the research department of the Reserve Bank of India—the "Census of India's Foreign Liabilities and Assets in June, 1948" and the annual report on banking trends in 1949—set down in a profusion of tables and charts, a mass of data of the sort that is all too often lacking or withheld in Britain. The Census shows that India's external liabilities amounted to about £785 million at the end of June, 1948, and its external assets to about £1,790 million. Some £485 million of the external liabilities, however, were "official" liabilities such

as those to Britain for payments for pensions and war stores (which have since been adjusted) and the nominal non-interest bearing rupee securities held in favour of the International Monetary Fund. The greater part of India's real external liabilities still outstanding consists of just under £300 million of liabilities in the "private sector." These liabilities include foreigners' direct investments in India, foreign holdings of Indian stocks and shares, bank balances held by foreigners and so on. Over £185 million of this £300 million was held by United Kingdom subjects, over £37 million by those of Pakistan, and about £19 million by the United States.

Approximately £1,650 million of India's £1,790 million of external assets in June, 1948, were held in the "official sector" and more than £1,125 million of these represented the Reserve Bank's gross sterling assets; most of the rest consisted of debts due from Pakistan and Burma. Between June, 1948, and June, 1949, however, the sterling balances were depleted by no less than £400 million; although they recovered slightly in the next twelve months, it is believed that by mid-1950 India's net sterling assets were in the region of £620 million. Quite a substantial part of this reserve is needed as ordinary backing for the currency.

The report on banking trends for the year 1949 is the first of the annual reports required from the Reserve Bank by the Indian Banking Companies Act, 1949. When the terms of this Act were first published, they excited some criticism as they appeared to impose a vast amount of paper-work on the commercial banks and to give the central bank undesirable powers of control over their advances—even individual advances. It seems, however, that the main use of these powers has been the blameless one of providing a check on the propensity of certain small Indian banking companies to grant large unsecured advances to their own directors, their directors' relations or their directors' firms; as so often happens, laws that might be classed as illiberal in a Western context look less so in the East. The report reveals that India was one of the only two important countries in the world where the level of bank deposits was falling fairly steadily during 1949 (the other was South Africa); this fall was due to the large adverse balance of payments (since corrected) and the decline of savings held in the form of bank deposits.

Shorter Notes

During the year beginning on October 1st next, cinema exhibitors will be obliged to select 30 per cent of the features they show, and 25 per cent of the supporting programmes, from among British films. The exhibitors' quota, set annually by the Board of Trade, is thus unchanged from the level to which it was reduced for this year: in 1949-50, when it was set at 40 per cent, more than half the cinemas in the country, including the three major cinema circuits, failed to fulfil their obligation. Among the film technicians and actors, an increase in the quota would have been welcomed; but the quota must depend upon the state of film production, not the other way round, and there is no reason to believe that the production side of the industry, even with present Government assistance, is likely to turn out enough good films to justify a higher figure.

*

Motor insurance premiums for private cars, motor cycles and commercial vehicles (excluding agricultural vehicles) are to be increased by 12½ per cent from June 1st by all members of the Accident Office Association. Since the abolition of petrol rationing, the number of motor accidents has increased substantially and the cost of repairs and of third party claims is now from two to three times as great as in 1939, while present premiums are only some 25 per cent above the pre-war level; even after the new increase, motor insurance in this country may be unprofitable to many offices.

Company Notes

Swan Hunter.—The fall of 5s. to 62s. 6d. in the £1 ordinary units of Swan Hunter measured the sharp disappointment in the market in the company's conservative dividend policy, coupled with the setback in group profits from £2,150,678 to £1,929,171. The ordinary dividend has been maintained at 16 per cent since 1946, and, although distributable earnings have fallen in the latest year, the cover is still ample. After allowing for nearly £648,000 retained in the business, the distribution of 16 per cent represents a little more than 3 per cent on the real equity capital, and as the prospects for the shipbuilding industry are good, there seems to be some reason for the market's disappointment. The appropriation of £250,000, against £200,000, to the reserve for replacements and special repairs suggests that the inadequacy of the normal depreciation provision to meet fixed assets replacement costs is still causing concern.

	Years to December 31, 1949	1950
Consolidated earnings:—		
Group profit	2,150,678	1,929,171
Taxation	1,120,013	1,020,761
Group earnings for ord. stock	631,035	548,222
	(71%)	(63%)
Ord. divs.	150,574	150,574
	(16%)	(16%)
Replacements reserve	200,000	250,000
Added to carry forward	24,143	55,963

£1 ordinary stock at 62s. 6d. yields £5 2s. 5d. per cent.

Until the full accounts are published, it would be advisable not to attempt to dogmatise about the trading problems which have led to the fall in profits. Increased development and reconstruction expenditure, which is charged before striking trading profits, may provide part of the answer, and the chairman's statement that high costs of building are "a severe deterrent to a larger flow of contracts" might also be relevant, although Swan Hunter should secure its fair share of shipbuilding orders in the future. But shareholders will be disappointed if this does not allow a higher return on their venture capital.

*

Ford Motor.—The excellent results shown in the preliminary statement of Ford Motor, published this week, accord with the best expectations. Admittedly, the increase in dividend from 10 per cent to 12½ per cent had been more than taken for granted (15 per cent was considered a possibility), but that group net profits, after tax, should have soared from £2,447,526 to £3,773,657 is a remarkable achievement, more especially as tax absorbed the formidable total of £4,729,394, as compared with £2,735,743 for the previous year. Before tax and other charges, actual gross profits are up from £6,030,300 to over £11 million. Among noticeable items in the statement are the increase in depreciation

	1949	1950
Group profit, after tax	2,447,526	3,773,657
Taxation	2,735,743	4,729,394
Assets replacement reserves	500,000	2,000,000
Contingencies reserves	—	400,000
Preference divs.	—	66,772
Ordinary div.	495,000	618,750
Carried forward	9,126,455	4,717,952

charged to the profit and loss account from £732,518 to £1,683,558, and a special provision of £1,224,292 (nil for 1949), representing an expansion of employees' benefits—a generous sum when viewed in relation to the £618,750 of gross ordinary dividend, 59 per cent of which goes to the Ford Motor Co. (USA). Some £2,000,000 (£500,000) is allocated to assets replacement reserve, and £400,000 (nil) to contingencies.

What may seem a conservative and almost cautious distribution policy is explained by a note from the Chairman, which explains that the 1950 profits resulted from exceptional production and from the consequent spread of overhead charges. Sir Rowland Smith adds: "It is now evident that such profits

are unlikely to be repeated in 1951, a year during which we have to experience the introductory stages of our new models, substantial further changes in layout, and shortages of sheet steel and other materials. It was, in fact, in anticipation of these coming adverse factors that we aimed at a high profit in 1950."

The ordinary shares have shown little change on balance at 49s. 9d., at which price the yield on the new dividend is just over 5 per cent.

*

Footwear Profits.—Trading results of some of the leading footwear companies (summarised in the accompanying table generally) reflect the general experience of lower profits, despite the achievement of increased turnover. The greater part of these companies' total sales no doubt consisted of utility shoes, on which maximum prices have been fixed by the Board of Trade although control on retail profit margins was relaxed last May. Such was the force of competition in the trade, however, that selling prices were effectively reduced below the permitted maximum levels. Rising costs, particularly of raw materials, further squeezed these already competitive profit margins.

The almost universal rise in stocks of footwear companies is in part a consequence of an expansion of raw material stocks, as distinct from manufactured stocks. Almost the whole of the increase in the stocks of Freeman, Hardy and Willis is attributable to raw materials and over 25 per cent of the stocks of J. Sears (True-form), valued at £3,219,839, represented raw materials. Whether these value figures correspond with a physical expansion of raw material stocks is less clear; they must be greatly affected by the substantial rise in hide prices since the middle of 1950.

	Years to December 31, 1949	1950
Drevitt:—		
Group trading profits	232,850	246,912
Stocks	271,582	436,819
Freeman, Hardy and Willis:—		
Trading profits	404,505	720,267
Stocks	1,491,877	1,562,853
Lotus:—		
Group trading profits	681,914	644,406
Stocks	1,368,060	1,248,904
J. Sears (True-form Boot):—		
Group trading profits	1,410,710	1,247,392
Stocks	2,891,714	3,219,839
Stead and Simpson:—		
Trading profits	507,717	427,937
Stocks	639,168	912,383

Stocks may provide something of a cushion against sharp increases in retail prices in the current year—so long as they last. Mr D. R. Church, chairman of J. Sears (True-form), has commented: "Fortunately we carry very large stocks of leather and we have been able to maintain our present price ranges. As and when this stock is exhausted, the higher prices of all our raw materials will inevitably be in the retail price of boots and shoes." As the price of leather continues to rise, the search for substitutes continues and the chairman of Lotus, Mr H. J. Bostock, quotes an estimate that more than one-third of the shoes made today have other soles than leather. In view of this statement, it is hardly surprising that group trading profits of Phillips Rubber Soles for the year ended November 30, 1950, rose from £143,340 to £190,787.

Leather substitutes, however, are not the complete solution to the problem of rising costs, for their prices can be expected to increase in turn. Further rises in the prices of boots and shoes seem inevitable in the current year, and if consumers' resistance to higher prices grows, the outlook for the footwear companies is likely to remain uncertain.

Binding Cases

Binding cases for THE ECONOMIST and RECORDS & STATISTICS can now be supplied. These cases, made by Messrs. EASIBIND LTD., are in stiff, dark blue cloth covers, and are gilt-lettered on the spine; they provide an extremely effective and firm binding. The case for THE ECONOMIST will hold 26 issues and the half-yearly Index; that for RECORDS & STATISTICS will hold 52 issues. The year can be stamped on the spine. The cost per case, post free throughout the world, is 11/-.

Orders, stating requirements clearly and enclosing a remittance, should be sent, not to THE ECONOMIST, but to—

EASIBIND Ltd.,

(Dept. E), 84 Newman St., London, W.1.

A binding case can be sent on approval, if required.

Statistical Summary

EXCHEQUER RETURNS

For the week ended March 24, 1951, total ordinary revenue was £63,805,000, against ordinary expenditure of £77,077,000 and issues to sinking funds nil. Thus, including sinking fund allocations of £19,347,000, the surplus accrued since April 1st is £757,122,000, compared with £648,755,000 for the corresponding period a year ago.

COMPANY MEETINGS

THE STANDARD LIFE ASSURANCE COMPANY

CONTINUED PROGRESS

GREAT STRENGTH

The one hundred and twenty-fifth annual general meeting of The Standard Life Assurance Company was held in Edinburgh on March 20th with Captain The Hon. Sir Archibald Cochrane, G.C.M.G., K.C.S.I., D.S.O., R.N., in the chair.

The manager and actuary having read the auditor's report, the chairman said:

Ladies and Gentlemen.—May I take it to be your wish that the directors' report, which is in your hands, be held as read?

I am happy to say that during the year under review no changes have taken place amongst our directors at home or overseas. The local boards of directors in Canada, the West Indies and Uruguay have rendered very valuable service and I should like to take this opportunity of putting on record our thanks for their assistance. During the course of the year we had the pleasure of visits from Mr G. C. Heward, of our Montreal Board, and Mr S. H. Banning, of our West Indies Board. Soon after the annual meeting a year ago I visited Canada to renew my acquaintance with our colleagues on that side of the Atlantic, and was accompanied by my co-director, Mr Watson. Another director from the Head Office Board, Mr Harrison, was also able to pay a visit to some of our Canadian offices last year.

You may, perhaps, have seen that the extension to our Head Office building is making progress. Shortage of materials, shortage of labour and exigencies of the weather make the maintenance of a time schedule somewhat hazardous; but, if the present rate of progress is continued, I hope that this time next year we shall be in occupation. It may also be of interest to members to know that we are reconstructing our office in Dublin. During the process of rebuilding there we have occupied temporary premises, but we hope to return to our old address in the course of a few weeks.

You may already have seen from the figures of our new business which appeared in the Press some weeks ago that the company has once again enjoyed a successful year. The report now in your hands shows that our new life assurances total £23,385,000. Included in this is an amount of £8,813,000 of group life assurances effected on the lives of workers in industry, commerce and the professions, to whom we have in addition contracted to pay pensions amounting to £5,574,000 per annum when their working days have drawn to a close. I am glad to say that every country in which we operate has contributed a record amount of life assurance business. Throughout the United Kingdom and the Republic of Ireland, in Canada, the West Indies and Uruguay, the advantages of a policy with the Standard are becoming more and more appreciated and it is encouraging to think that in all these countries an increasing number of new members are joining with us in mutual association.</

NEWTON CHAMBERS AND COMPANY, LIMITED

EXCELLENT TRADING RESULTS

BONUS TO EMPLOYEES

INCREASED DIVIDEND TO SHAREHOLDERS

SIR SAMUEL ROBERTS'S REVIEW OF ACTIVITIES

The ordinary general meeting of Newton Chambers and Company, Limited, was held at the Royal Victoria Hotel, Sheffield, on March 29th. In the absence abroad of the chairman, Sir Samuel Roberts, Bt., the managing director, Sir Harold West, presided. The secretary (Mr Andrew W. Grogan) read the notice convening the meeting and the report of the auditors.

The following is the statement by the chairman which had been circulated with the report and accounts for the year to December 31, 1950:

The following statement is sent out with the accounts in lieu of a speech at the annual general meeting. This will enable shareholders to study the accounts and my comments on them and on the year's working at the same time. It is thought that it is convenient to shareholders to study these matters together, and not with an interval of one month between receiving the accounts and the print of the speech.

The directors much regret the resignation of Lt.-Col. H. W. Woodall, C.I.E., M.I.C.E., owing to ill-health. They wish to place on record their great appreciation of the valuable services rendered by him to the company and two subsidiary companies for the past 21 years.

They welcome to the board Mr A. M. Holbein, C.B.E., M.I.C.E., B.Sc., F.C.G.I., D.I.C. Mr Holbein is a director of Demolition and Construction Company, Limited, also of D. and C. and William Press, Limited, civil engineers and contractors, vice-president of the Federation of Civil Engineering Contractors, member of the Building Research Board, chairman of the technology committee of the City and Guilds of London Institute and a member of the National Advisory Council on Education for Industry and Commerce. Mr Holbein is keenly interested in apprentice training. He is also a member of the committee appointed by the Government to inquire into the cause of unofficial strikes in the London docks.

PROFIT

The gross profit of the year was £394,235 as compared with £393,011 for the previous year. This profit has been charged with the sum of £52,182 as an addition to the reserve for the replacement of fixed assets raising this reserve to £395,668.

The net profit amounts to £147,574 as compared with £167,446 in the previous year. This slight reduction in the net profit is accounted for by increase in profits tax and of income tax deferred in respect of initial allowances.

EXCEPTIONAL YEAR BONUS TO EMPLOYEES

The excellent trading results have been secured by the united efforts of the employees of the company who have applied themselves most conscientiously to their respective jobs, be they large or small, and your directors have provided in the accounts the sum of £25,000 for distribution in the form of an extra week's wages to all employees of the company. You have for many years expressed thanks to the managers and all our

employees at the annual general meeting for their services, and I am sure you will be equally pleased to approve this innovation in view of the exceptionally good trading results of the past year.

SUPPLEMENTARY PENSIONS FUND

We have this year transferred £25,000 to the supplementary pensions fund, of which £3,047 became available in respect of lapsed policies, the remaining £21,953 being set aside from current year's profit. When I explained to you the reason for the creation of the supplementary pensions fund four years ago, you may remember that I said it was the intention of the board to build up a fund on the advice of our actuary, so that our staff might have complete confidence in the safety of their pensions even under adverse economic conditions. The transfer of £25,000 is therefore to strengthen the fund on which depends the supplementation of the pensions contributed for by the employees of your company. It may be necessary for further small transfers to be made in the future.

DIVIDEND

It is proposed to increase the dividend for the year from 15 per cent. to 20 per cent. This increased dividend, which is equivalent to 4½ per cent. only on the capital employed in the business, is moderate and reasonable, and certainly due to the shareholders.

CAPITAL

The nominal capital of the company is £650,000, which is far less than 25 per cent. of the actual capital employed in the business, the reserves alone amounting to over three times the capital, and it is obvious that the capital structure of the company needs alteration. Unfortunately, it is not practicable to do this until the compensation money for the collieries and coke ovens (now nationalised) has been ascertained. In the meantime, as a small instalment, it is proposed to capitalise £50,000 of the reserves. This will mean that each shareholder will receive one new share for every thirteen now held, and the necessary resolution will be submitted at the meeting. There is one matter on the balance sheet to which I would draw your attention. The amount expended by the company on the Newton Chambers Sports Ground, £34,494, has been added to the value of freehold and leasehold property, but as this is let at a nominal rent to the Thorncliffe Social and Recreational Association, the whole amount has been added to depreciation as a special provision, so although the company owns the recreation ground, the net value of the fixed assets of the company do not show any increase.

Another point of interest is the extent to which money has been provided out of our own resources for the rehabilitation and extension of buildings, plant and machinery, in recent years. During the past five years over £800,000 has been expended on capital items and further capital expenditure of £200,000 has been authorised, including the provision

of up-to-date foundry baths. Expansion of the excavator buildings and machinery and the provision of more machines for the heavy castings department has also been authorised.

CHEMICALS BRANCH

The Chemicals Branch, although achieving a higher sales turnover than in 1949, had to face very substantial increases in the prices of the raw materials used; in view of the need to combat inflation, selling prices were not increased in 1950 although a still further rise in the price of materials has since made this unavoidable and, despite the record sales turnover achieved, a reduction in the profits of this part of the company's business was inevitable. Full use has been made of the new production facilities throughout the year in order to deal with the increased sales.

HEAVY CONSTRUCTION DIVISION

The Heavy Construction Division has a very full order book. By means of improved methods and increased efficiency it achieved the most satisfactory results, both in sales turnover and profit, in spite of the increasing difficulties of iron and steel supplies which developed in the latter part of the year. For management purposes the Enscofe department was, during this year, merged with the heavy construction division.

LIGHT CASTINGS DEPARTMENT

The Light Castings Department has continued to make most satisfactory progress and both sales turnover and profit are again substantially improved. The mechanised foundry has been well occupied throughout the year and a satisfactory share of competitive contracts for heating apparatus has been secured. It is pleasing to report that our "Redfyre" stoves business has greatly increased.

MOBILE ENGINEERING DEPARTMENT

The Mobile Engineering Department has had an exceedingly busy year and appreciation of the quality of the N.C.K. Excavators has shown itself in a steadily increasing demand. Orders for our excavators have been obtained from many new overseas markets, including a considerable proportion from hard currency areas.

The increasing demand for these machines has made extensions to our factories and additions to the machine tools and equipment necessary. It is expected that a larger type of N.C.K. Excavator will be in production this year.

SUBSIDIARY COMPANIES

Some progress has been made with claim for compensation for our subsidiary companies. Thorncliffe Coal Distillation, Limited, and N. C. Thorncliffe Collieries, Limited. Full details of the claims have been prepared and members of the valuation boards have made inspections both at the collieries and the coke ovens. It is, however, impossible to say when the compensation will be assessed. Thorncliffe Coal Distillation, Limited, has paid the full preference dividend and the customary ordinary dividend of 1s. per share for the 12 months ended December 31, 1950. N. C. Thorncliffe Collieries, Limited, showed a small loss for the year ended December 31, 1950, which has been carried forward in the books of that company.

The company, well equipped with buildings, machinery and finance, can face the future with confidence. Our thanks are due to our managing director, Sir Harold West, our local directors, managers and all who have worked loyally under his guidance to achieve this very satisfactory result.

The report and accounts were adopted and the final dividend of 12½ per cent., making with the interim dividend of 7½ per cent. 20 per cent. for the year, was approved.

THE ECONOMIST, March 31, 1951

The retiring directors, Mr L. W. Bickford Smith and Mr A. M. Holbein, C.B.E., M.I.C.E., were re-elected, and the remuneration of the auditors, Messrs. Blackburns, Rebsom, Coates and Company was fixed. Resolutions were passed approving the capitalisation of £50,000 of the reserves and a bonus distribution of one new share for every thirteen now held.

SCOTTISH AMICABLE LIFE ASSURANCE SOCIETY

A YEAR OF NOTABLE ACHIEVEMENTS

COL. HUGH B. SPENS' REVIEW

The 125th annual general meeting of the Scottish Amicable Life Assurance Society was held on March 28th in Glasgow, Sir J. Milne Barbour, Bt., D.L., M.P. (President of the Society), presiding.

In moving the adoption of the report and accounts, Col. Hugh B. Spens, C.B.E., D.S.O., D.L. (chairman of the ordinary board of directors), said that for the Society the year 1950 had been notable in at least three respects. In the first place, it had established fresh records in almost every aspect of the Society's business. Secondly, it had brought to a close another quinquennium for which most satisfactory results were now reported. Thirdly, it had completed the first quarter of the Society's second century and had carried their long history forward to another important milestone.

RECORD NEW BUSINESS

Dealing first with the Society's operations during 1950, it was noteworthy that the year's net new business under individual life assurances had exceeded £6,000,000 for the first time and showed an increase of more than £1,000,000 over the corresponding figure for 1949. New group life assurance and pension business transacted during 1950 was also far in excess of all previous records. The premium income increased last year by £500,000 to approximately £2,700,000—in addition to which annuity considerations amounted to £800,000. Thus, in this one year, the record sum of £3,500,000 had been entrusted to the Society by its members for safe investment and to obtain those forms of protection that could be secured only by means of life assurance and annuity contracts. In the mortality experience during the past year, the rate of mortality was exceptionally favourable and the rate of interest earned on the funds was slightly higher than in the preceding year. The record increase of £2,250,000 in the Society's funds had been well spread over the principal groups of investment, with the sole exception of British Government securities, which remained virtually unchanged in amount. The margin of appreciation on Stock Exchange investments, consisting of the excess of net values over balance-sheet values, had been substantially during the year.

SATISFACTORY OUTCOME OF QUINQUENNIAL VALUATION

Turning to the results of the quinquennial valuation as at December 31, 1950, the liabilities had been valued on a conservative basis, while the assets had been subjected to a detailed review which showed their value to be substantially in excess of the amount appearing in the balance sheet. In the result, net liability under all life assurance and annuity contracts was £22,401,006—the amount of the fund being £23,773,387. The surplus as at December 31, 1950, was therefore £1,372,381, of which the directors had decided to apply £1,229,430 to declare a compound reversionary bonus of 32s. 6d. per cent. per annum in respect of the past quinquennium.

This bonus represented an increase of 2s. 6d. per cent. over the rate declared for the preceding ten years. In the light of present conditions, both in this country and in the world at large, the directors had thought it prudent to leave the rate of interim bonus payable on claims during the current year unchanged at its former level of 30s. per cent. per annum—this practice, however, being reviewed from year to year. It was noteworthy in this connection that, in respect of every year since the Society was founded in 1826, a compound bonus of at least 30s. per cent. had been declared. This record was believed to be unique in the history of British life assurance.

SERVICE OVER 125 YEARS

This led to the third subject, the century and a quarter of service to the community which now stands to the credit of this old Society. It was on January 1, 1826, that the Society was founded in Glasgow. From these early beginnings the Society had grown and prospered. Branches were opened in other cities and in 1850 a most important step was taken when the Society's London office was opened and an influential London board was appointed. Looking back to the centenary meeting, one was struck by the expansion which had taken place in every phase of the Society's activities during the past quarter-century. The annual premium income was then £600,000; it was now over £2,600,000. The funds were then £9,000,000; they were now over £24,000,000. The new business in the whole quinquennium 1921-25 was £6,000,000—a figure which was comfortably exceeded in the one year now under review. Thus, on this 125th anniversary, it could justifiably be claimed that the Society was not only venerable but virile and was worthily upholding its long tradition in the world of life assurance.

The report and accounts were adopted.

GENERAL INVESTORS AND TRUSTEES

MR S. S. LAMERT'S STATEMENT

The forty-fourth annual general meeting of the General Investors and Trustees, Limited, was held on March 29 in London, Mr Sidney S. Lamert (the chairman) presiding.

The following is an extract from his circulated statement:—

Despite nerve-racking news from the Far East, and in face of gloomy forebodings regarding the coming Budget, markets have maintained a firm front throughout. They have been helped, no doubt, by the stream of dividend increases which numbers of industrial companies have felt themselves justified in declaring.

Your widely distributed portfolio of investments has had its full share of the dividend increases to which I have referred. In the result our "normal" income from dividends and interest has increased from £128,208 in the previous year to £140,592 in the year under review, enabling us to recommend the payment of a bonus of 2 per cent. in addition to the final dividend of 7 per cent. on the Ordinary Stock.

We have securities valued at £2,703,569, against an issued amount of share and loan capital of £1,671,200. We also have £85,461 on current and deposit accounts at the bank.

We propose in future to pay the basic dividend of 10 per cent. in two equal parts. You may, therefore, expect to receive 5 per cent. in October and with the final of 5 per cent. in March of next year, perhaps a bonus repetition.

A preliminary survey indicates that the present year's income should not be less than that of the year under review.

The report was adopted.

SCOTTISH MUTUAL ASSURANCE SOCIETY

A YEAR OF OUTSTANDING ACHIEVEMENT

The sixty-eighth annual general meeting of the Scottish Mutual Assurance Society, Limited, was held on March 28th at Glasgow, Sir John Craig, C.B.E., D.L. (the chairman) presiding.

The chairman, in the course of his speech, said:

Although this is the sixty-eighth annual meeting of the company, it is the first to be held under our new name, the Scottish Mutual Assurance Society, Limited.

The year 1950 has been one of outstanding achievement in the new business field. The new ordinary sums assured, gross and net, are record figures and have exceeded £2,000,000 for the first time. Under the group life and pension schemes the group sums assured and group pensions are also record figures. The total net new sums assured amount to £2,655,260.

THE ACCOUNTS

For the first time our gross premium income exceeds £1,000,000, the amount of the life assurance fund exceeds £10,000,000 and our total assets exceed £11,000,000. All these figures are satisfactory in themselves and are further evidence that the company is giving good service to the assuring public.

The gross and net rates of interest earned on the life fund are a few pence lower than in the previous year. The slight fall is accounted for by the fact that the directors throughout the year kept substantial sums of money on deposit at short call and were thus able to take advantage of suitable investment opportunities as they arose. Since the beginning of the year most of the available money has been invested at a satisfactory rate of interest.

On the outgo side claims by death are £50,000 more than in 1949 but are still less by a good margin than the amount expected according to the mortality table used in the valuation. Sums payable on maturity are down by £45,000. Payments under surrenders are up to the highest figure since 1939.

The life assurance fund has increased by £440,000 a record in any one year and as I have stated is now over £10,000,000.

The capital redemption fund is a small one and shows a small normal increase following the unusual fall in the previous year.

The accident and general fund continues in a healthy condition, premiums being up slightly and claims pleasingly low.

BALANCE-SHEET FEATURES

On the liabilities side of the balance sheet the only substantial change is in the item life claims outstanding, where the figure is rather lower than usual this year. On the assets side the amount of mortgages on property is up by nearly £200,000, and has increased further since the date of the balance sheet. British Government securities have been reduced by nearly £600,000, but part of this has been replaced following on the nationalisation of the steel industry. Debentures, Preference and Ordinary stocks all show substantial increases, as does the item money at short call and cash in bank, to which I have already referred. Over the year there has been on the whole a rise in Stock Exchange security values, and there is a comfortable margin between the book value and the market value of the securities held by us. The company is in a sound financial condition and the directors have every confidence in its continued success.

The report was adopted.

INDIAN JUTE MILLS ASSOCIATION

IMPROVED OUTLOOK FOR RAW MATERIALS

MR J. R. WALKER'S SURVEY

The annual general meeting of the Indian Jute Mills Association was held at the Royal Exchange, Calcutta, on Friday, March 9th.

Mr J. R. Walker, F.T.I., M.L.A., the chairman, said: Though some relief is in sight our position in regard to supplies of raw material became more precarious as 1950 progressed. It is the Indian jute industry, more than any other sector of the economy, which has paid the price of the prolonged deadlock between the two rupees, which we rejoice to know is now at an end. Our troubles are primarily due not to mismanagement, speculative influences, greed or ineptitude, but to the physical partition of the sub-continent in which the industry had for nearly 100 years grown up as a homogenous whole. In the last analysis more than eighty per cent. of our troubles are on the physical plane and are the direct outcome of circumstances over which we have never had any kind of control. We had of necessity to resort to shifts and expedients which could not but be distasteful to all concerned, and it is a matter of gratification that we have done as well as we have. When we are able to see the events of the past twelve months in their proper perspective we shall look back on the tempestuous times from which we are now emerging as a period in which we acquitted ourselves reasonably well and with profit to the country which so greatly depends upon our products for its earnings of foreign exchange.

We are living in another wave of world inflation and, whereas a year or two ago our fear was that we would be priced out of our traditional markets, the position is today that the prices of competitive and substitute materials have risen comparatively and substantially more than the prices of jute manufactures. Imperfect as our controls may have been in other respects they have at least prevented a run-away price inflation in our own industry. To this extent our customers have reason to be thankful, though we all sympathise with them in their inability to purchase all the goods they would like to.

TRADE PACT WELCOMED

What is required for the industry to put its house in order is a period of stable economic relations between India and Pakistan, and we warmly welcome the recently concluded trade pact. So far as the jute industry is concerned there can be no two opinions as to the value of the pact. It has come just in time to save us from a prolonged stoppage of work. Even now much will depend upon the spirit in which it is carried out. The transport problem has already been accorded high priority in official discussions, and we have secured the approval of Government to our working in direct contact with the Pakistan Jute Board to ensure expeditious movement of ten lakhs of bales from that country. Under the pact we are promised 1 million bales of raw jute between now and June 30th and for the subsequent twelve months we are to receive a further 2,500,000 bales. This represents approximately half our total requirements of

raw jute material and then only if we continue to work our present somewhat restricted programme of hours and machinery. The rest will have to be made good by Indian grown jute and the industry's real margin of safety lies in maintaining the Indian crop at a figure of not less than 3,500,000 bales (exclusive of Mesta and Bimli) and many of us would like to see a good deal more.

DEARER RAW JUTE

Our jute, from whatever source it comes, is going to cost us more. So far as Pakistan jute is concerned we have to make good the difference in the exchange value of the two rupees and the price of Indian jute has got to bear some relation to that of the imported fibre. In a sense the industry is making a deferred part payment for the benefits of devaluation which the country has otherwise enjoyed since September, 1949. In the altered circumstances, following recognition by India of the Pakistan rate of exchange, we reviewed our position and urged upon Government that controls should now end. I am now able to tell you of Government's decision to end control over prices of raw jute and jute goods. Government have insisted, however, on the retention of those powers of directioning under which I as Jute Controller have since 1949 been empowered to act. We must accept that decision and hope that events will work so that resort to these powers will be dictated solely by overriding necessity. Liaison between Government and the Association will ensure that raw jute prices will not get completely out of hand.

The Association have accordingly been appointed by Government as nominees for the receipt and distribution of the first 350,000 bales of Pakistan jute constituting the direct Government to Government purchase, and it is hoped by the end of this month that the jute in question will have been moved into the mills. The price will be, I reckon, somewhere in the region of Rs. 58 per maund (1.06 shillings per lb.). Details of licences for the import of the balance of the jute due from Pakistan are being worked out, and it is agreed by Government that nothing should be allowed to impede the free and rapid movement of jute to the mills through normal trade channels.

MARKETS AND DIRECTIONING

Principal consuming markets have not had all the goods they would have liked. But the following is a summary of how they have fared under "directioning" as compared with normal offtake. America leads as a consumer of hessian cloth and on a five-year average prior to World War II she took over 53 per cent. of our exports of these goods. In the jute year July, 1949, to June, 1950, we exported to America 58 per cent. of our total exports; in the six months July-December, 1950, the figure was 62 per cent. On the five-year prewar average we shipped to Argentina almost 14½ per cent. of our total hessian exports. In 1949-50 we shipped 15 per cent., and in the six months July-December, 1950, we shipped just over 12½ per cent. In the matter of sacking goods India is our biggest market, and after that comes Australia which normally takes about 14 per cent. of our sacking exports. In the jute year 1949-50 we shipped there practically 17 per cent. and in the six months July-December, 1950, practically 28 per cent. of our total exports.

ANGLO-FRENCH EXPLORATION COMPANY, LIMITED

INVESTMENT POLICY

The sixty-first annual general meeting of The Anglo-French Exploration Company, Limited, was held on March 29th in London.

The chairman, Mr F. R. Cottell, A.C.A., in the course of his speech, said: Our investments stand in the books at £929,853 and are valued at £1,085,782. We have widened somewhat the range of our holdings in Orange Free State gold mining companies. Our preponderant interest in the Rand gold-mining industry remains in the mines along what is generally known as the West Wits line, and I am hopeful that within the next year or so your company will begin to reap the benefit of its long-term policy of investment in mines in this area. Our other investments include our holdings in Apex (Trinidad) Oilfields, Anglo-Burma Tin Company, Apex Mines and Rooiberg Minerals, and carefully selected holdings in the Northern Rhodesian copper and Malayan tin mines.

The amount available for appropriation is £69,143. We recommend a dividend of 7½ per cent., which requires £30,938. The profit carried forward is £28,945.

PRICE OF GOLD

No change has occurred in the world official price of gold but there is increasing evidence that official policy is out of line with realities. The gold mining industry in South Africa has benefited from sales of gold in the form of fully fabricated and semi-processed articles, but it is now clear that a large part of these sales has found its way into free markets at premium prices over and above the amounts received by the gold mining industry.

It has recently been revealed that on world markets the present turnover of premium gold sales exceeds by 50 per cent. the total gold production of South Africa. Moreover, the International Monetary Fund has announced that such sales have recently been increasing at a rate which indicated that at least part found its way into private hoards, and the Fund has issued a directive that consultations should be held with member countries to draw up more effective methods of implementing the Fund's policy on gold sales. However, other gold producing countries are likely to follow South Africa in obtaining similar facilities for selling gold above the official price, and the question arises as to how long the International Monetary Fund can continue to maintain this artificial position.

Is it not time that the price of gold, like wheat, wool, cotton, base metals and other commodities should be allowed to reflect something nearer its real value in the much over-valued currencies of the world? As long as gold is kept at an artificially low price it cannot fulfil its true functions and the currencies of the world will continue to be suspect. As I have indicated on the last two occasions on which I have addressed you, a change in the value of the currencies of all members of the International Monetary Fund is required in order to bring currencies into line with their real value in terms of gold. I am in no doubt that events will, in time, force the International Monetary Fund to face the realities of the situation, but in the meanwhile the world will suffer from the restrictions which their policy imposes upon the functions of gold.

The position of the company is a strong one and there is no reason to expect that the revenue for the current year will not be at least maintained.

The report was adopted.

CENTRAL LINE SISAL ESTATES

SUBSTANTIALLY IMPROVED RESULTS

MR E. W. BOVILL'S STATEMENT

The fourteenth annual general meeting of Central Line Sisal Estates Limited was held on March 14th in London, Mr E. W. Bovill (the chairman) presiding.

The following is an extract from his circulated statement:—

The accounts now presented show a profit of £141,625, after charging all London expenses and depreciation on buildings and machinery and after providing for rotation planting. Taxation will absorb £79,030. You will note that as a matter of prudence we have made full provision for United Kingdom income tax in dispute amounting to £15,700.

The general reserve has been increased by £30,000, bringing it up to £70,000. As a result of the sale of Kiwege and Mguide Estates, our capital reserve has been increased to £59,418. The board have therefore felt able to recommend the payment of a final dividend of 20 per cent., less tax, making with the interim dividend paid on June 30, 1950, 25 per cent., less tax, for the year.

Our production of fibre and tow totalled 3,499 tons against 3,724 the previous year. The totals are not comparable because from the end of February we were operating only two estates instead of four. But allowing for this the results for 1949-50 were a substantial improvement on those for the previous year.

The improved results were due to a better labour supply and less mechanical trouble in our factories. Against these favourable circumstances must be set the severe drought of 1949 which persisted during the first half of the year under review, and we are still suffering from its adverse effects.

Our costs of production were unduly high, which was partly due to a 50 per cent. increase in the cost of foodstuffs, which affected every operation on the estates. In the middle of the year the Tanganyika Government imposed a wholly unexpected export tax of 5 per cent. on the f.o.b. price of sisal.

As I told you last year, we have rented from Government 2,000 acres of land for the growing of food crops for our labour force. This we call Wami Farm. During the year we planted about 200 acres with maize and beans, and cleared or partly cleared a further area of about 200 acres. During the current year we hope to increase the area under crops to 600 acres, the produce of which should materially reduce the cost of feeding our labour force.

SALE OF KIWEGE AND MGUDE ESTATES

A notable event was the sale of our Kiwege and Mguide estates, which as shareholders were informed was negotiated towards the close of the financial year. These estates, while having considerable merits, were not as good as Pangawe and Kingolwira, and their comparative remoteness from our headquarters at Pangawe made them difficult to control, especially when, as sometimes happened, the communicating road became impassable. We appear to have timed the sale wisely, and I hope that shareholders will regard the price of £200,000 as eminently satisfactory.

Shareholders will recollect that our Kingolwira estate has been leased from the Custodian of Enemy Property since September, 1939. Although it had always been our hope that we might ultimately be able to purchase this very fine estate, which most conveniently adjoins Pangawe, there was never any certainty that we should be able to do so. After the close of the year under review the company was offered Kingolwira for the sum of £161,200, about a third of

which, £58,900, was payable on a royalty basis. The price appeared reasonable to the board and the offer was accepted. The estate was taken over on January 1st last by a wholly-owned subsidiary company, called Kingolwira Sisal Estate Limited, which we formed for this purpose and which will be controlled in East Africa. The accounts of this subsidiary will be incorporated in consolidated accounts.

Last year I warned you that the high prices for sisal then ruling, averaging about £120 per ton c.i.f. for all grades, were not a matter for unqualified congratulation on account of the encouragement they were giving to substitutes for sisal fibre. Since then the price has risen to over £220 per ton for No. 1 grade, so the warning I then uttered is more than ever necessary. That a time of stress is in store for us cannot be too firmly impressed on the mind of every shareholder. To meet it the board are making every effort to improve the efficiency of the company's estates; and they trust that shareholders will appreciate the need to pursue a very conservative dividend policy.

The report and accounts were unanimously adopted.

THE INVERESK PAPER COMPANY, LIMITED

RESULTS EXCEED EXPECTATIONS

MIR B. H. BINDER ON THE OUTLOOK

The twenty-eighth annual general meeting of The Inveresk Paper Company, Limited, was held on March 29th in London. Mr B. H. Binder, F.C.A., the chairman, in the course of his speech, said: Your directors are gratified that the results are better than had at one time seemed possible. Last March the outlook was unfavourable owing to a general reduction in demand through the natural reluctance of buyers to purchase on a falling market. The subsequent recovery in the profits for the whole year are largely due to the increased demand during the latter part of the financial year resulting in increased production at a more remunerative margin of profit. Although general operating costs continued to rise, they were offset by higher sale prices and the cumulative effect of improvements and economies arising from the continued group capital expenditure which has amounted to nearly £2,000,000 during the last three years and is continuing.

PROFIT AND LOSS ACCOUNT

The group's trading profits amounted to £1,391,000, about £480,000 more than the disappointing results of the previous year. It should be noted that these profits are about £80,000 less than those for the year 1948. After charging taxation, the net consolidated profits amounted to £587,595. Practically all group companies comprising some 30 companies have contributed to these improved results which, in particular, have been assisted this year by the recovery in the earning capacity of the Inveresk Mill, whose operations were dislocated in the preceding year during the installation of the new power plant and mill improvements.

Your directors felt justified in recommending an increase in the dividend to 20 per cent. This increase represents only a small return on the £2,000,000 of capital expenditure made during the last three years of which nearly £1,800,000 has been accumulated during that period by provision for depreciation and increasing reserves. This dividend only represents 3.1 per cent. on the present capital and reserves attributable to the Ordinary stockholders, which is a modest return.

The total current assets amount to £6,781,000 and exceed current liabilities and

provisions totalling £2,361,000 by £4,420,000, an increase of £50,000 over last year notwithstanding the large amount of capital expenditure.

RESERVES EXCEED £3,550,000

The group's reserves, excluding future taxation, now total £3,556,000, an increase of £390,000. The stock reserves have been increased by over £200,000 to £408,000 as a safeguard in case of our having to write down the value of stocks on a falling market.

THE OUTLOOK

The future is overshadowed by the international situation and prospects for the current year will be affected by many factors beyond our control. In particular we are faced with a world shortage of materials.

Profits for the first five months of the current financial year have been satisfactory. Prices of all materials have risen sharply and are continuing to rise owing to increased demand and have reached dangerous heights which are causing us grave anxiety. General operating costs also continue to rise but every effort is being made to effect economies in working. In fact our capital expenditure programme has always been inspired by this objective.

We are now beginning to reap the benefits of much of our capital expenditure which will stand us in good stead to meet future competition and difficulties. Since the end of the war our capital expenditure has totalled £2½ million and commitments still outstanding will absorb a further £1½ million, but it should be appreciated that these large capital outlays will necessitate increased provision for depreciation. This capital expenditure programme has so far been financed entirely out of our own resources which amply justifies our policy of ploughing back substantial surplus profits into the business.

All our existing resources will be required to finance our present capital expenditure programme and to provide the additional working capital now needed, particularly if raw material prices are maintained.

Gradually during the years the present strong financial position has been built up and we feel confident that the reserves we have accumulated will enable us to overcome future difficulties, including the effects of further inflation or a fall in commodity prices.

The chairman concluded with a tribute to the managing director, management, staff and workpeople.

The report was adopted.

CHURCHILL AND SIM LIMITED

ACTIVITIES MAINTAINED

The thirteenth annual general meeting of Churchill and Sim, Limited (Timber Brokers), was held on March 28th in London.

The accounts for the year ended December 31, 1950, show a net profit, before taxation, of £91,051; £20,000 has been placed to reserve, bringing the total of reserves to £170,000, and a final dividend of 9 per cent. has been paid on the ordinary shares making an unchanged 15 per cent. total for the year 1950.

The following is an extract from the statement by the chairman, Mr A. Chatterton Sim, which was circulated with the accounts.

It is with the deepest regret that I have to report the death of one of your directors, Mr B. E. A. de Maré, who died in Stockholm during July last. In addition to being a founder director of your company, Mr de Maré had occupied an eminent position in the trade both in this country and in Sweden. Numerous expressions of esteem and regret were received when he died.

Our profits for 1950 are less than for 1949. Notwithstanding that the total U.K. imports

of sawn softwood declined by about 27 per cent. compared with the previous year, your company's trading activity has been well maintained, and the reduction in profits can be attributed mainly to the unusually large volume of contracts the shipment of which has been deferred from 1950 to 1951 owing to shortage of sea transport strikes and other circumstances over which we have no control.

The first full year of private trading in imported hardwood has been of benefit to your company and has created a demand for bill credits. This resumption of one of our normal functions is reflected in the balance sheet by the reduction in our holding of gilt-edged securities.

Partial decontrol of the softwood trade was initiated in the autumn of 1950, but the bulk of the softwood continues to be purchased solely by the Timber Controller. Given favourable conditions there is some hope that the whole of the national purchasing of sterling softwoods may be restored to private enterprise, perhaps some time during 1951.

The rising price tendency has continued and a pronounced upwards movement began last summer and has resulted in softwood prices reaching record high levels—at present over 50 per cent. higher f.o.b. than in mid-season 1950 and with a continuing rising trend. These high values represent five or six times the prewar value of the timber, and although satisfactory from the viewpoint of earnings on commission are likely severely to tax the financial resources of the trade.

The course of the timber market during 1951 is so dependent upon the political situation that I do not feel qualified to make any forecast.

The report and accounts were approved, and new articles of association were also adopted.

LONDON AND LOMOND INVESTMENT TRUST

THE HON. W. B. L. BARRINGTON'S STATEMENT

The twentieth annual general meeting of London & Lomond Investment Trust, Limited, will be held at 116, Old Broad Street, London, E.C.2, on April 11, 1951.

The following is the statement by the chairman, the Hon. W. B. L. Barrington, circulated with the report and accounts:

The gross revenue from investments amounted to £126,052, an increase of £15,514 which arose partly from the fact that the funds were more fully invested, but in the main represented increased dividends received from investments held. The amount earned on the ordinary stock was equivalent to 27.16 per cent. The directors recommend that the dividend on the ordinary stock in issue during the whole of the year should be raised to 17½ per cent. by a final payment of 12½ per cent. The additional £20,000 ordinary stock issued last autumn also ranks for this final dividend. £10,000 has been transferred from profit and loss account to general reserve which now amounts to £160,000. After the appropriation to general reserve and provision for dividends there will remain £5,428 of surplus net revenue to be added to the amount carried forward at the credit of profit and loss account.

If these recommendations are adopted the disposal of the net available revenue after expenses and income tax will be as follows:

	per cent.
Debtenture stock interest	20½
Preference stocks dividends	15
Ordinary stock dividends	40½
Retained by company	24
	100

INVESTMENT POSITION

At January 31, 1951, the total value of the investments as stated in the balance sheet was £2,414,675 which was £443,502 more than the aggregate amount of their book values at that date. My usual summary shows the position this year to have been as follows:

Appreciation in value of investments	£ 443,502
Share premium account	40,000
Capital reserve	533,331
General reserve	160,000
Profit and loss account	24,777
	£1,201,610

which means that at January 31, 1951, after providing for the final dividend recommended, each £100 of ordinary stock was represented by net assets of approximately £529. This compares with £427 at the close of the previous financial year.

ISLE OF THANET BUILDING SOCIETY

PROGRESS MAINTAINED

Addressing the one hundred and first annual general meeting of the Isle of Thanet Building Society at Ramsgate on March 15th, Mr H. J. D. Fuller (chairman) said that, although this was the last occasion on which they would meet as its members, there could be little cause for regret. Indeed, the meeting might well be regarded as a preliminary celebration of May 1st, when they would unite with their old friends and good neighbours, the Hastings Permanent.

Referring to progress, Mr Fuller said that during 1950 investment income reached £1,300,000. Although not quite so high as the corresponding figure for 1949, this represented a great achievement, and came from all parts of the country. Over the same period £1,670,000 had been advanced, chiefly to those buying houses for owner-occupation, and to sitting tenants.

Total assets had increased by over £500,000 to reach £7,875,120, and the substantial sum of £23,000 had been added to reserves. Trustee securities stood at a higher figure than the value shown in the society's books, and in addition to these investments there was a bank balance of £350,000.

In view of the priority given to rearmament, it seemed obvious that they could not expect any increase in the housing programme. However, there was every justification for the new Minister to review the ratio of houses to be built for sale, so as to provide that substantial section of the community with the opportunity of home-ownership for which they sought. At present, such people were practically compelled to accept council tenancy. Quite apart from restoring the freedom of individual choice, such a measure would help to arrest the growing burden of local and national taxation imposed by the large subsidy required for every council house.

It should not be beyond the wit of their planners, said Mr Fuller, to make this overdue adjustment, and so provide builders with the incentive to erect more houses, possibly at less cost. He hoped, therefore, that the new Minister would review the problem impartially and dispassionately, and give "fair shares" to would-be home-owners as well as to would-be tenants. They realised, of course, that the proper development of their country must be subject to planning at both national and local levels, but surely it was never intended that this should create conditions wherein the skill and enterprise of the private builder was frustrated and almost sterilised.

The report was adopted.

BOWMAKER LIMITED

CONSIDERABLY IMPROVED RESULTS

The twenty-third annual general meeting of Bowmaker Limited was held on March 29th in Bournemouth, Mr Tom H. Hewitt (the chairman) presiding.

The following is an extract from his circulated statement: It is with pleasure that I am able to report that the accounts for the year ended October 31, 1950, show considerable improvement. The consolidated profit before taxation amounts to £165,204 compared with £126,535. Our trading profit has increased by no less than £74,264. Your directors recommend a final dividend of 7½ per cent. on the ordinary shares, thus maintaining a rate of 10 per cent. for the year.

The consolidated balance sheet reflects the general improvement in the company's strength with capital and revenue reserves and undistributed profits now totalling £207,814.

Bowmaker (Ireland) Limited carries on precisely the same type of business as the parent company. To some extent, its activities are limited by restrictions similar to those experienced by the parent company, but it has built up an excellent goodwill.

Bowmaker (Plant) Limited has now been appointed distributor for the products of the Caterpillar Tractor Company of Peoria, U.S.A., covering a large territory in the Midlands and South-West of England and Wales. "Caterpillar" tractors and other products have a world-wide reputation for quality and performance and Bowmaker (Plant) Limited is well experienced and equipped to handle this important agency. Your directors are confident that this association will prove a successful and worthwhile move.

Norcon Limited manufactures concrete pipes and other concrete products. It is well established in the trade and its products are in increasing demand.

The report was adopted.

JEREMIAH ROTHERHAM AND COMPANY, LIMITED

CAUSES OF LOWER PROFITS

The fifty-third annual general meeting of Jeremiah Rotherham and Company, Limited, was held on March 28th in London, Mr Joseph Hockley (chairman and managing director) presiding.

The following is an extract from his circulated statement:—

The trading for the year shows a reduction of profit of £15,280 as against the previous year. Although sales for the first four months showed an increase, the unreasonable spring and summer weather had an adverse effect on the fashion side of the trade. This, together with a further reduced margin of profit by the Board of Trade on Utility goods, is accountable for the lower profit.

The burden of purchase tax on certain non-Utility goods still creates a resistance by retailers and the public to purchase goods bearing the tax. I sincerely hope that the Wholesale Textile Association, which is pressing the Chancellor of the Exchequer for a reduction of the 6½ to 3½ on certain non-Utility household goods, will have a favourable result.

The net trading for the year amounted to £97,525, as against £112,805. The directors recommend a dividend of 6 per cent. and a bonus of 4 per cent., making 10 per cent. for the year on the ordinary stock.

It is impossible to attempt to forecast for the future. Orders for later deliveries are coming in satisfactorily, but the indications are of further increases in prices and a reduced volume of available goods. We are still faced with increased expenses and a still further increase in carriage costs.

The report was adopted.

NOTICES

NATIONAL COAL BOARD—EAST MIDLANDS DIVISION ECONOMIC STATISTICIAN

Applications are invited for the position of Economic Statistician in the East Midlands Division.

The successful applicant must have considerable skill in sifting statistical data and in higher statistical analysis.

Salary will be in accordance with qualifications and experience of the successful applicant.

Applications, giving full details of age, experience and qualifications should be addressed, not later than fourteen days after publication of this advertisement, to: The Secretary, National Coal Board, East Midlands Division, Sherwood Lodge, Arnold, nr. Nottingham. Envelopes to be marked "S.V.72."

THE BRITISH IRON AND STEEL RESEARCH ASSOCIATION

Economist required by the above Association to carry out Operational Research in the Iron and Steel Industry. Good degree in economics and knowledge of statistics essential.

Age range 23–28.

Salary according to age, qualifications and experience.

Post is superannuated under the F.S.S.U.

Location of work London.

Written applications only, giving full curriculum vitae to the Personnel Officer, B.I.S.R.A., 11, Park Lane, W.1.

BALLIOL COLLEGE, Oxford, proposes to elect an Official Fellow (or appoint a Lecturer) in Politics as from September 29, 1951, and invites applications to be received not later than April 30, 1951. The choice of the College will not necessarily be confined to those who apply. Details may be obtained from the College Secretary.

YOUNG MEN of good education between 20 years and 24 years of age required by The Eastern Bank Ltd., for service in their London office. Apply by letter only, giving full particulars and experience to The Accountant, Dept. A, The Eastern Bank Limited, 2 and 3, Crosby Square, London, E.C.3.

GRADUATE in Economics and Law—B.A. Cantab Hons. Econ., with first class honours, LL.B.—aged 30, at present director of firm engaged in specialised construction and with previous commercial and financial experience including four figure position with group engaged in wholesale and retail distribution, is anxious for personal reasons to obtain a full time, permanent administrative or financial position in London with a large or well-established company.—Box 596.

A WELL-KNOWN Industrial Organisation with world-wide interests manufacturing electric welding equipment has a vacancy for a personal assistant to the managing director. University degree, preferably a works and general technical background, administrative ability essential.—Apply giving details of age, qualifications, experience, etc., to Box No. 589F, A.K. Adv., 212A, Shaftesbury Avenue, W.C.2.

INFORMATION Bulletins, Journals of Societies or Institutions: editing, design, layout and finalisation of text for printer. Moderate fees. Inquiries from Embassies, literary, social and industrial bodies.—Box 589.

ACCOUNTANT-STATISTICIAN, F.I.A.C., wide practical experience, administration, budgetary control, standard costs, and statistics, requires position of greater scope and responsibility.—Box 600.

LEARN Languages without Translation. The Pelman Languages Institute teaches French, German, Spanish, Italian without the use of English; the method is explained in four little books, one for each language; write for book and specimen lesson sent gratis, post free. (Reduced fees for serving and ex-Servicemen members of H.M. Forces.) Pelman Languages Institute, 87, Norfolk Mansions, Wigmore Street, London, W.1.

SOLE owner small British Export House with background knowledge experience connections and current trading experience U.S.A. and Canada would like to contact British Manufacturers unlikely to be affected by Re-armament who are contemplating development in the North American Market. All communications will be treated as strictly Private and Confidential.—Write Box 604.

NO Capital Depreciation and a return of 2½ per cent. (Income tax paid by the Society) are the terms offered for Share Investments by the 73-year-old Chelsea and Walm Green Building Society. Write for Leaflet F to 110-112, Kings Road, Chelsea, S.W.3.

STATISTICAL ASSISTANT: Young lady of good education required by important commercial organisation in London to assist with analysis work, card index records, etc. Reply stating age, previous appointments, experience, and salary required to Box 612.

CHIEF Accountant required by well-known group of scientific Publishing and Bookselling companies. Age between 35-50. Must be qualified and have sound business experience including final accounts, budgetary control and Company Law requirements. Knowledge of German would be an advantage. Good salary and conditions according to qualifications and experience. Reply with full particulars to Box 610.

THE ECONOMIST, complete but unbound, from 1936 to 1950 inclusive, and *Records and Statistics* complete from First Issue, January, 1947, to March 24, 1951.—Box 615.

BOOK Lists: Please ask for our lists of secondhand and new books, specifying your subjects.—W. Heffer & Sons, Ltd., Petty Cury, Cambridge.

REQUIRED urgently back numbers of *Economist* and other specialised Journals.—Stechert-Hafner Inc., 2, Star Yard, Carey Street, W.C.2.

ECONOMIST Vols. CL-CLIX inc., CXXXVI, CXXXVIII (all complete, with indexes) in uniform green binding. Offers.—Box 608.

UNIVERSITY OF ST. ANDREWS

The University Court of the University of St. Andrews invites applications for appointment as Lecturer in Political Economy in the United College, St. Andrews. Preference will be given to a candidate with special knowledge of industrial and commercial organisation. The salary payable is £550 per annum together with F.S.S.U. benefits. The University operates a scheme of Family Allowances and a grant towards expenses of removal may be made. Further particulars of the appointment may be obtained from the undersigned with whom one copy of the application together with testimonials and/or the names of three referees should be lodged not later than April 30, 1951.

DAVID J. B. RITCHIE, Secretary.

THE UNIVERSITY OF MANCHESTER

Applications are invited for the posts of Senior Lecturer and Lecturer in Social Anthropology. Salary scales per annum: Senior Lecturer £1,150 to £1,500, Lecturer £500 to £1,100. Membership of the F.S.S.U. and Children's Allowance Scheme. Initial salary according to qualifications and experience. Applications should be sent not later than April 21, 1951, to the Registrar, The University, Manchester 13, from whom further particulars and forms of application may be obtained.

THE UNIVERSITY OF LEEDS

DEAN SCHOLARSHIPS

It is intended to appoint one or more suitably qualified graduates to Dean Scholarships, of an annual value of £300, ordinarily tenable for two years. Scholars are required to undertake research on the history and economics of the wool textile industry.

Applications should reach the Head of the Department of Economics and Commerce, The University, Leeds, 2, not later than June 1, 1951.

UNIVERSITY COLLEGE OF HULL

Applications are invited for a Lecturer in Economics. Salary range £550 (or for initial University appointment £500) x £50-£1,100 with superannuation benefits and children's allowances. Particulars from the Registrar to whom applications (four copies) should be sent not later than April 28, 1951.

UNIVERSITY OF BIRMINGHAM

DEPARTMENT OF SOCIAL STUDY

Applications are invited for the post of Assistant Lecturer in the Department of Social Study tenable in the Faculty of Commerce and Social Science. Special qualifications in Social Psychology and some experience in practical social work would be an advantage. The appointment will be in Grade III (£400-£500). Applications, accompanied by the names of at least three referees, should be sent to the undersigned, from whom further particulars may be obtained, by Monday, April 30, 1951.

C. G. BURTON, Secretary.

The University, Birmingham, 2, March, 1951.

NEW ENGLAND UNIVERSITY COLLEGE

(University of Sydney)

NEW SOUTH WALES, AUSTRALIA

Applications are invited for the position of Lecturer in Economics. Commencing salary will be within the range—£A650 to £A1,000 per annum according to qualification, with annual increments of £A50. There is also a cost of living adjustment, at present £A70 for males, £A55 for females. Salary is subject to deductions under the State Superannuation Act.

Further particulars and information as to the method of application may be obtained from the Secretary, Association of Universities of the British Commonwealth, 5, Gordon Square, London, W.C.1.

The closing date for the receipt of applications is April 30, 1951.

WOOLLEN AND WORSTED TRADES' FEDERATION. A vacancy exists for the post of Secretary of the Woollen and Worsted Trades' Federation. This is an important post and carries with it a high degree of responsibility covering industrial and commercial relations.—Applications to President, Woollen and Worsted Trades' Federation, Manor Buildings, Manor Row, Bradford.

THE ECONOMIST Intelligence Unit requires assistant research workers aged 20-24; salary to begin at £375-£450 according to qualifications.—Please send full particulars to 22, Ryder Street, St. James's, S.W.1.

HIGH Grade Executive, aged 40, wishes to become associated with established industrial undertaking at director's level. Experienced and subtle negotiator; well-informed on international trading conditions, marketing, advertising, and sales problems. Possessor of exceptional personal connections at the highest level in business and government circles, both in the U.K. and overseas. Would be prepared to manage representation from London of substantial foreign or provincial company, or similar responsible task. Write Box 607.

SECURITIES Dealer required by Merchant Bankers. Must be experienced or willing to be trained in arbitrage business. Write stating age, experience and salary required to Box 605.

B. SC. ECON. (ECONOMICS) requires temporary work, full or part-time.—Box 614.

FOR SALE—Complete set *Economist* Sept., 1944, to Dec., 1950. Offers.—Box 601.

FOR SALE—*Economist* July, 1942-December, 1950, without indexes and records.—Offers to Box 603.

A FAMOUS London food manufacturing firm will shortly appoint two University men to its Production Department. Applicants should be aged 22-25, have completed National Service, possess (or obtain this summer) good degree. Common-sense, intelligence, mechanical aptitude and an open mind are essentials. Salary not less than £450 p.a.—Write, giving personal and educational record, to Box 616.

WANTED copies *Records and Statistics Supplement to The Economist* dated January 13 and 20, 1951.—Box 617.

UNIVERSITY OF BELFAST

The Senate of the Queen's University of Belfast invites applications for the Chair of Applied Economics. The appointment dates from October 1, 1951. Salary £2,000 plus F.S.S.U. Applications should be received by April 20, 1951. Further particulars from G. R. Cowie, M.A., LL.B., Secretary.

ANGLO-IRANIAN OIL COMPANY require one Mathematician, one Mathematical Physicist and one Physicist with some mathematical ability, with 1st or 2nd class honours degrees, for posts at a new research and development centre on the Nottinghamshire Oilfield. The work will involve theoretical investigation of the movement of fluids in oil reservoirs and problems connected with recovery of oil. Methods and equipment will be developed for electrical recording at surface of a wide range of physical observations on oil and gas bearing formations penetrated in deep wells. The observations include resistivity of formations, radio-activity, temperature, pressure, fluid velocity, well diameter, etc. The equipment will also be used for actuating sample devices and special bottom hole instruments. The mathematician will be concerned with oil reservoir future production performance and the mathematical physicist with the allied survey research and development work. The physicist will be responsible for interpretation of records and laboratory experiments, both electrical and physical, bearing on interpretation. Men with some years practical experience of electronics preferred for the two latter posts.

Applicants aged from 27-35 years should be prepared to go abroad for periods extending to six months. Write, giving full details and quoting Department M.1415, to Box 6171 at 191, Gresham House, E.C.2.

THE Civil Service Commissioners invite applications from men and women for the following permanent and pensionable posts in the Inspectorate of the Home Office Children's Department:

(1) One post of Deputy Chief Inspector. Preference will be given to candidates who hold a university degree or equivalent qualification with a post-graduate diploma in social work or education or have had other comparable training, and have had such practical experience as fits them for a responsible administrative post. The post carries a fixed salary of £1,750 for a man or £1,575 for a woman.

(2) About eight posts of Inspector Grade II. Preference will be given to candidates between the ages of 23 and 40 who hold a university degree or a diploma or certificate in social science or domestic science or institutional management, or who have taken other recognised training in social or educational work; account will be taken of experience of residential establishments for children, of boarding out, of work in child guidance clinics, and of family case work or health visitors' work. The salary scale in London for a man is £700 to £25,490, and for a woman £575 to £25,475. Entry will be at the minimum of the scale. Salaries for posts outside London are somewhat lower.

The main duty of the Inspectorate, which is organised in six regions in England and Wales, is inspection of the arrangements made for the care of children in foster homes, children's homes, and residential nurseries, and in approved schools.

Further particulars and application forms from the Secretary, Civil Service Commission, 6, Burlington Gardens, London, W.1, quoting No. 4017/51. Completed application forms must be returned by April 26, 1951.

CHARTERED SECRETARY (37) with first-class commercial experience seeks administrative appointment with substantial prospects. The post which is sought would offer scope for enthusiasm and initiative with the possibility of development into a top ranking executive within a few years. Initial salary is secondary to the prospects attached to the post.—Box 613.

Postal Tuition for B.Sc.ECON.

The London University B.Sc. Econ. Degree is a valuable qualification for statistical, research, and welfare work in commerce and industry, and for teaching or administrative posts under Education authorities, etc. The degree is open to all without University residence. You may prepare for the three examinations at home under the experienced guidance of Wolsey Hall (est. 1894); fees are reasonable, and may be paid by instalments, if desired.

Prospectus from the Director of **WOLSEY HALL, OXFORD** Studies, Department P17.

GLASGOW SCHOOL OF MANAGEMENT STUDIES
THE ROYAL TECHNICAL COLLEGE, GLASGOW
The Department of Industrial Administration offers a fifth full-time nine-weeks' course in
WORKS MANAGEMENT
and
LABOUR RELATIONS
Commencing April 2, 1951
Fee, £18 18s.

The Course is primarily intended for persons of 25 years of age and over, who have been nominated by their firms and who are expected to take increasing responsibility in the future. Further detailed information as to the aim, scope and content of the Course can be obtained from the Head of the Department of Industrial Administration at the Royal Technical College.

NORWICH EDUCATION COMMITTEE

THE NORWICH CITY COLLEGE AND ART SCHOOL
ST. GEORGE STREET, NORWICH.
Principal: FRANK BRIERS, D.Phil. (Oxon).

Wanted as soon as possible, and at latest by September 1, 1951, Lecturer for teaching Advanced Commercial and Management Subjects in the Department of Commerce and Languages. Teaching and business experience essential.

Salary will be in accordance with the 1951 Burnham Award for Teachers in Establishments of Further Education, namely, £999 per annum rising by £25 to £1,000.

Application forms, which may be obtained from the Director of Education, City Hall, Norwich, on receipt of a stamped addressed envelope, should be returned to the Principal as soon as possible.

INCORPORATED STATISTICIANS

EXAMINATIONS, JUNE, 1951

The Association of Incorporated Statisticians, Ltd., announce that their examinations for Registered Statistical Assistant, Intermediate and Final will be held on June 18, 19 and 20. Applications on the prescribed forms must be forwarded to the Secretary, 54, New Broad Street, London, E.C.2, not later than Monday, April 16, 1951.

APPLICATIONS are invited from graduates, preferably in Science, Textiles or Economics, for the position of Lecturer in the Department of Education of the International Wool Secretariat. Lectures are given on various aspects of wool in all types of schools, training colleges and clubs throughout the country. Lecturers are illustrated with filmstrips and the work entails considerable mid-week travelling. Training will be given after appointment. Salary from £140 (men) and £400 (women) with superannuation (after qualifying period), subsistence allowance and first-class travelling expenses. Applications should be made to the Director of Education, International Wool Secretariat, Dorland House, 18-20, Regent Street, London, S.W.1, within 14 days of the appearance of this advertisement.

THE United Africa Company, Limited, invites application from men and women for training in its Buying Department in London. Candidates should have determination, considerable powers of observation, initiative out of the ordinary and a high level of practical intelligence. Applicants without previous experience should not be less than 23 or more than 28 years old, and their commencing salary will be between £375 and £475 per annum. For those who have good commercial or other relevant experience, these age limits can be extended; appointments in such cases would be made at an initial salary fixed according to qualifications and experience. Preliminary selection will be made on the letters of application, which should be framed accordingly, and addressed to Staff Dept. (UAC), Unilever House, Blackfriars, E.C.4.

PHILIPS Electrical Ltd., require a thoroughly competent Buyer in their Purchasing Organisation at Mitcham. The main essential qualifications are: (a) Full experience in mass production buying; (b) Thorough knowledge of the supply problems inherent to the Electronic Industry; (c) A forceful personality with a keen analytical mind. Familiarity with economics and international markets would be an asset. Age limit 32-42.

The above position has large scope for development into a Senior Purchasing Executive. Persons not fully answering the above description should not apply. Applications giving full details and salary required to be addressed to: The Personnel Officer, Philips Electrical Ltd., New Road, Mitcham Junction, Surrey, quoting reference "JA".

PRODUCTION Executive. A large light Engineering Works on the outskirts of Coventry has a vacancy for a Production Executive who can show evidence of outstanding ability in the application of modern management and also of having achieved results as a higher production executive. The position is intended to be progressive and the successful applicant must have had a comprehensive apprenticeship, have high technical qualifications, a history of continuous promotion on the production side and preferably be between 35 and 45 years of age. The salary will not be less than £80 per month with participation in profit sharing and pension schemes. Application, which will be treated as confidential, must state age, salary required, qualifications and chronological statement of experience and appointments held.—Box 609.

COMPANY Secretary required for large engineering concern in Lancashire. Must be chartered accountant and have had considerable secretarial experience preferably with a group of companies. In addition to accountancy training. Age 35/45; University degree desirable but not essential. Salary dependent on qualifications and experience. Candidates should give full details and salary required.—Reply to Managing Director, Textile Machinery Makers Ltd., 60, Huddersfield Road, Oldham.

THE Government's Economic Survey for 1951 has not converted to certainties any of the previous guesses about what the Chancellor of the Exchequer will do next week. It has narrowed the range of Budget possibilities. If he bases himself on the Survey's analysis, Mr Gaitskell can hardly raise less than £150 million from increased taxation. The official planners estimate that if taxes were to remain unchanged, further inflationary pressure would be avoided only if personal saving was £110 million greater than it was in 1950. They recognise with proper candour that in 1951 people are, in fact, likely to save less, not more. The factors involved in these tenuous calculations of the nation's capital account are discussed in more detail in an article on page 808. Here, it is sufficient to say that Mr Gaitskell may conclude that he needs between £150 million and £250 million in new taxes to close the threatened gap.

In any normal year, this would appear as a formidable burden. But for a country grown accustomed, in mood if not in behaviour, to a crippling and dispiriting level of taxes, it seems a surprisingly small price to pay for rearmament on an unprecedented scale in peacetime: if he chose to play for popularity, Mr Gaitskell could cheer the Labour Party with the belief that defence may, after all, be combined with business as usual—on the postwar model. But the Chancellor can be expected to avoid the temptations of such unreality. What is directly obvious in extra taxation will represent only a part of the cost of rearmament. The main burden will fall, as the Survey emphasises, in the form of higher prices for consumer goods. Even so, the conclusion that an extra £150 million of taxes might be enough—for the first Budget of the expanding three-year defence programme—depends on four assumptions for which the Chancellor would hardly claim any degree of certainty. The first is that the transfer of resources to defence production can be made, in spite of the shortage of raw materials and labour, without major industrial dislocation, and without any loss of output as a whole. This assumption seems optimistic: and the survey freely admits that it will not be justified if supplies of sulphur, zinc, copper, cotton and other basic materials are no bigger than those at present in prospect.

The second assumption is more acceptable, though not very palatable. It is that in 1951 Britain will run down the surplus in its overseas payments—last year's proud achievement—and use part of its exchange reserves to pay for such stocks of strategic materials as can be accumulated. The Survey admits that "the need for a substantial surplus is not in principle affected by the new defence programme"; the country has heavy debts abroad, and responsibility for aiding economic development in backward areas. The cold war makes this aid not an expendable luxury but a more than usually pressing necessity; in Asia and Africa the psychological struggle between Communism and the West has to be fought largely in terms of what they promise towards material progress. A Britain incurring heavy, fresh debts to some of its partners

in the sterling area will not give the impression of strength or inspire the confidence among weaker allies that is part of the immediate purpose of rearmament. The Government is probably right to accept an overseas deficit this year as part of the price of immediate action: given the economic background, the defence effort can make a quick start only if an overseas deficit is tolerated this year. But that cannot be allowed to continue. Next year it will be necessary to re-establish a surplus, and this will be another extra demand on British resources at a time when the direct calls of defence are still rapidly increasing. It certainly cannot be assumed that economic policies which are adequate this year, because an overseas deficit is accepted, will remain adequate for the three-year programme.

About the third of the Government's assumptions the Economic Survey inevitably says very little. It is that wages will rise much less quickly than prices. The work required of higher prices, in the Government's scheme of things, is to absorb the increase in purchasing power that has already taken place, and so hold down the volume of consumption. This purpose will be defeated if the effect is in fact to swell still further, by additional wage increases to offset the cost of living, the flow of money incomes chasing the available goods. There is no prospect of deliberate wage restraint being restored. A further round of advances is almost certain to occur during this year. The question is whether the advances will be large and fast enough to offset the rise in prices. If they are, the Government's intention that this year rising prices will impose most of the sacrifices for the defence effort will be frustrated.

*

Of these three assumptions, on which the possibility of a fairly mild Budget rests, the first—the increase in production—is optimistic; the second—the deficit in the balance of payments—is acceptable only in the short run; and the third—the outpacing of wages by prices—is very doubtful. There is a fourth assumption that cannot be much more than a matter of faith. It is that the grounds, such as they are, for making the first three assumptions will not be removed by an increase of £150 million or more in taxation. It presumes that the Government can levy more taxes without risking any further weakening, at any rate in the short run, of the incentives to hard work, inventiveness and industrial mobility (on all of which, as well as on the supply of raw materials, the assumption of increased production depends). It presumes, too, that wages will lag behind prices not only as the situation is now but also as it will be after the Chancellor has imposed extra taxes on wage-earners. And it assumes, finally, that people will pay the extra taxes largely by spending less, and not by saving even less than the Government assumes as a basis for its estimate of the amount of extra taxation needed.

These are the critical questions for Mr Gaitskell. The Government is accepting the defence programme as a net addition to the state's economic activities, without attempting the slightest cut in its civilian expenditure. The assumptions about production and the rest amount, in essence, to the belief that this extra burden can be shouldered without any appreciable economic disturbance. That assumption will be justified, the welfare economy can become (for a time at any rate) the armed

welfare economy, if Mr Gaitskell can find taxes which in themselves satisfy the same condition. His taxes must not upset the delicate balance: they must not encourage wage claims, they must not make people refuse to work overtime, and they must not reduce savings still further.

It is certainly not easy to find taxes that satisfy such conditions. Mr Gaitskell may, of course, ignore the conditions: he may yield to the pressure from behind him and make a political attack on profits. But such taxation would be paid mainly at the expense of company savings, for which the Survey has already taken full credit. Taxation that is relevant to the economic purposes of his Budget cannot be aimed at profits alone; it must fall on the community as a whole, and the Chancellor will fail in his duty if he refuses to recognise this fact.

*

If the red herring of profits is resisted, Mr Gaitskell's choice lies between the income tax and a fairly narrow range of indirect taxes. Both will almost certainly reduce savings; higher income tax may weaken the incentives to work, and higher indirect taxes may encourage wage demands. Mr Gaitskell's problem is to balance the two evils, and conceivably he may regard the first as the lesser. There is, it is true, one indirect tax that he will be strongly tempted to increase. Petrol is about the only thing that can be paraded as a luxury (though it and the other light hydro carbon oils are very far from being luxuries) that is not already taxed to the point of diminishing returns and that could be made dearer without offending any large section of wage-earners. An increase in the duty might, in the Chancellor's view, meet the conditions of the Budget better than anything else; a repetition, say, of last year's ninepence would provide a ready-made £75 million. It is hard to see any other indirect tax of any importance that would meet them at all.

Indirect taxation in this country is already elaborately graded: the system of tax-free utility goods, combined with the different rates of purchase tax on various categories of "non-essentials," does all that well can be done to minimise its regressive effect. There is no more revenue of substance to be raised from luxuries. Extra indirect taxes would have to fall on things that are widely consumed; they would, that is to say, have to press more heavily on the poor than on the rich. That does not destroy the case for some specific increases, particularly on durable goods that will in any case become very scarce as rearmament progresses. Mr Gaitskell may offset the worst effects of higher prices by increasing old-age pensions and some family allowances. But to do so would increase his tax requirements by perhaps £50 million or more, and it is difficult to imagine that even so he would be bold enough to attack working-class consumption by a broad increase in purchase taxes.

It is conceivable that from petrol and some other indirect taxes Mr Gaitskell might scrape together more than £100 million of revenue without doing great harm either by reducing savings or by provoking wage increases. But if he sets out to get £150 million from new taxes, and certainly if he chooses the higher estimate of £250 million, he has little choice but to raise income tax, either by reducing allowances or by adding sixpence to the standard rate. In terms of social justice, the last is the least of the evils; no one can pretend to know how effective—in reducing spending rather than saving—it

would be in the short run. In economic terms, the case in its favour is chiefly that the other ill-effects, of weakening incentives, would probably make itself felt only after a time.

Such, in essentials, are the budgetary problems that Mr Gaitskell faces. It would be foolish to be dogmatic about the right answers. The question is rather whether there are answers, whether taxation can be increased in any ways that will avoid inflation and make the British economy healthy while it carries out the rearmament programme. The problems that Mr Gaitskell has to meet are not those of finding an extra hundred million or so in his Budget, but of producing the where-

Mr Morrison's Debut

MORE than one British Foreign Secretary has learned in the past that the small party meeting in the provinces is a bad setting for his more serious utterances. There is something demoralising in its atmosphere. People come to such meetings—especially to those of the Labour Party—wanting to carry away a cosy feeling about the present and a measure of illusion about the future. About foreign affairs they want to be told that all foreigners are at bottom reasonable fellows, that all problems can, sooner or later, be settled around a table, and that the British are, anyhow, strong enough or lucky enough to get their own way in the end. This, roughly speaking, is the prescription for a successful party meeting on foreign affairs; and Mr Herbert Morrison followed it only too closely in the speech he made last Monday at Dudley—in the Baldwin country. Doubtless he did so in the belief that he would do well to make some impact on the party and the public in his new role of Foreign Secretary before tackling the problems of peacemaking elsewhere. The intention was sensible; but the execution was in several respects regrettable. Both in mood and in scale the speech was inappropriate to present circumstances; it gave a misleading picture of the world outside Britain; and its tone was bound to be misunderstood abroad. For it combined traditional principles and fashionable bromides in almost equal proportions.

The statements of principle were sound enough. Mr Morrison spoke of the Government's duty "to sustain the interests of the British people throughout the world"; of its loyalty to organisations for international co-operation; of its interest in the well-being and security of the Middle East; of the "goodwill and material support" that will be at the disposal of the peoples of South and South-east Asia; and of peace as something greater and more vital than the mere absence of war. He reaffirmed the British Government's readiness to "seek a reasonable and genuine settlement of differences by negotiation" and its determination to show by its defence programme that war will not pay any would-be aggressor. These axioms as they stand are impeccable; but their value can be judged only by the Foreign Secretary's application of them to particular problems. It was here that the bromides for backbenchers appeared.

What evidence is there, for example, that the rulers of the Soviet Union want to "join with the rest of the world in the great constructive tasks which await us all"? In fact—and it must be said with the greatest regret—

withal for rearmament out of the mouths and off the backs of the private consumer.

It is already clear that the Government is not prepared to throw in a single penny of its spending for peacetime purposes. Mr Gaitskell's first Budget will be judged not solely by what he does in this year, but by the attitude of mind that he brings to bear on the problems of 1952 and 1953, when the burdens of defence and the Government's civil commitments will be still bigger. He cannot afford to give the impression, despite the expedients suggested in this year's Economic Survey, that adequate defence is something that can be added on top of welfare as usual.

there is none. On the contrary, all that they say to the Russian people and to their allies emphasises the great destructive tasks of world revolution now made possible, as they believe, by the power of the Soviet Union and Communist China. Again, where is the evidence that the Soviet Government does not wish to discuss the "smaller differences" but wishes to "go to the heart of the whole problem" of present tensions? Was it not Moscow that insisted—and still insists through Mr Gromyko—that discussion of specific and detailed Soviet grievances must not give way to the more general talks sought by the Western Governments? Again, Mr Morrison declared, "this is a psychological moment to see if we cannot bring the fighting in Korea to an end." What evidence is there for this statement? It is true that everybody in the free world wants an end to the fighting on just terms; but it is no good pretending that Peking gives any sign of sharing that desire. To believe in negotiation as a means of settling differences it is not necessary to pretend that opportunities for it exist when they do not. Likewise, Mr Morrison's gentle references to China made no mention of the aggression against which 22,000 British and Commonwealth troops are fighting in Korea, or of the great commercial interests which are being abandoned in China, or of the humiliations to which British diplomacy has been subjected there.

Mr Morrison dealt with these matters in a manner which made no distinction between things he would like to happen and things that are likely to happen. His audience at Dudley must have felt that things were not so bad in the outside world after all. There was a kind word for everybody; the cold war was not mentioned by name; the Foreign Office was described as the "Department of Peace"; and the Foreign Secretary seemed to be in amazing good humour. None of these things was objectionable in itself; indeed, if one could feel certain that Mr Morrison intended nothing more than a first run on the nursery slopes of diplomacy, a tumble or two would have called for no comment. But his purpose was more ambitious: he said specifically that he wished to set out "a few of the main principles by which I propose to be guided in our relations with other members of the human family"; and an examination of what he said confirms the misgivings expressed in these columns three weeks ago—that Mr Morrison might be pliable where Mr Bevin was stubborn, ingenious where Mr Bevin was forthright, and optimistic where Mr Bevin was merely patient.

What, then, was most conspicuous by its absence from this survey? First, there was no firm avowal that he is aware of the special dangers of 1951. For Mr Morrison it is Festival Year; for many millions of people on the Continent it is danger year—the year which will show whether the Soviet Union will or will not allow the west to build up the strength to defend free Europe. Second, there was no reaffirmation of belief in the strength and supreme importance of the partnership with the United States. There can be no adequate statement of principles of British foreign policy without this, and it is necessary that such declarations should be made with full emphasis before Labour audiences. Third, there was little recognition or explanation of the huge and dangerous task of British foreign policy in the face of Asian and African awakening. Deep and widespread changes in the world over which the Commonwealth is scattered are inevitable. Some will be for better, some for worse; but it will always be a British interest to see that such changes take place peacefully and not by force. To achieve peaceful change in the world as it is likely to be in the years ahead will demand for an indefinite period a wise, patient and resolute exercise of national power, both alone and in company with allies. There is no smooth and easy prospect ahead; what Mr Morrison calls the human family will remain quarrelsome. That is, perhaps, the fact that democratic politicians are most loth to explain to their followers—that, and the further fact that reasonable prosperity and living standards will be maintained only if that power is efficiently exercised.

It would be foolish to assume that Mr Morrison, after more than ten years in the Cabinet, is unaware of these realities of the international situation. Doubtless he will deal with them in due course and their omission from his first major speech must be judged deliberate. But his failure to say anything about the relation between British and American policies was serious. An opportunity had been offered to clear up some, at least, of the misunderstandings of recent months. First, Mr Acheson in his letter to a GI in Korea; then Dr Jessup three weeks ago in a speech to the students of Union College, New York; and then Mr Kennan, formerly one of the chief planners of the State Department—fresh from a rest for thought and reading—have been setting a new course for American policy and opinion. They have

been stressing that the United States is morally and by treaty bound to oppose all idea of preventive war and to exercise patience and restraint in its dealings with foreign powers—even to feel and show sympathy with the Russian people. They have been calling on Americans to prepare themselves intellectually and morally for something more than the present convulsive heave back to a quarter-war footing—to prepare, in fact, for the long haul of the political and economic struggle between two rival systems. As Dr Jessup put it, the United States aims at attaining a position where it can be certain of success if the Soviet Union makes war inevitable, and at the same time remain ready to negotiate a general settlement if the Soviet Government shows a desire for it. In other words, American statesmen have been stressing a point that has more than once been urged in these pages: that arms and diplomacy must work together, that rearmament and readiness to negotiate are not incompatible. Until lately, it is true, the American emphasis has been on rearmament; but now that the process is well under way the emphasis has switched quite properly to the peaceful hopes and defensive intentions that inspire this policy.

Here, then, was a trend—so far almost unnoticed in this country—that Mr Morrison should have singled out and reinforced, as Mr Bevin once singled out and supported a hint from Mr Marshall. To have done so in a week that has seen General Eisenhower beginning his duties as Supreme Commander and the celebration of the anniversary of the Atlantic Pact would have been a genial gesture. Instead, Mr Morrison ignored altogether the subject of relations with the United States and missed the opportunity of pointing how far American policy statements have lately come towards meeting the British point of view. Was this the way to make the task of the western deputies in Paris easier or to rebut the belief of Moscow and Peking that the western diplomatic front can eventually be split? Mr Morrison may have succeeded in leaving his audience with a vague idea that he has some prescription for peace that Mr Bevin had overlooked, and this rosy impression will please some of the backbenchers of his party. But it is not a good omen for the real business of diplomacy among allies and opponents that the Foreign Secretary must now undertake.

Bases of Soviet Power

INFORMATION about the economic strength and progress of the Soviet Union depends on the foreigner's technique of analysing Soviet official material. Lately he has improved his detective skill and Moscow itself has made his study easier. With the completion last year of the first five-year plan since the war, new information about Soviet recovery has been appearing, some of which has already been examined*. At the beginning of March, the financial budget for 1951 was presented to the Supreme Soviet. These Soviet disclosures leave many dark corners, but they do accord some general conclusions about the economic bases of Soviet power.

An accurate assessment of the strength and quality of the Soviet war machine would be too much to expect. But western observers can form, from available facts

* (See *The Economist* of February 24th, March 3rd and March 10th.)

about Soviet peacetime economy, some estimate of its ability to sustain a war once started, and this is the crucial test. Stalin, no less than Mr Charles E. Wilson, believes that military strength must be built on a properly geared economic machine. Defence potential means for him far more than the capacity to turn out tanks; it means, above all, a powerful heavy industry and an agriculture that can support industrial workers as well as soldiers. In 1946, Stalin gave his own explanation of why Hitler was defeated:

The Party rightly decided to concentrate on heavy industry and collectivised agriculture; it knew that war was coming . . . and that to be too late in this task was to lose.

There is every reason to believe that, in 1951, Stalin's intentions for peace or war are heavily influenced by Soviet progress in these two fields.

Two major conclusions about the Soviet economy can

be stated at once. First, it seems reasonable to assume that the Kremlin has not yet put it on a war basis, though Stalin may well be revising his time-table in the light of developments in the west. Neither the fulfilment of the five-year plan nor the 1951 budget reveals anything decisive about the state of Soviet armaments; but both the shape of the plan and the degree of its achievement indicate that reconstruction rather than rearmament has, so far, been the major preoccupation. The significance of the new budget is even less positive, for it shows only that the proportion which Stalin is prepared to acknowledge as spent on defence has stayed fairly constant since 1945. Figures can, of course, be cooked, but the trend of the budget tends to confirm the evidence of the plan. It will be easier to tell how well this first conclusion will hold for the future when the prevailing silence about the next five-year plan has been broken.

The second conclusion is that "defence" has remained a basic object of Soviet planning since the peace. If war has not so far been Stalin's immediate intention, long-term preparation for a war economy has received his constant attention. Even in 1946, Mr Voznessensky, the Soviet chief planner (now retired), was explaining that:

It is our task to improve further the defensive ability of the USSR . . . the Soviet Union wants to see its armed forces still more powerful to insure the country for every eventuality and to guard peace . . .

So when the rest of the world was disarming and slashing its military expenditure (the United States cut its defence spending by 87 per cent between 1945 and 1948), the Kremlin reduced its disclosed payments for arms by a mere 20 per cent. Even in 1946, Soviet planning concentrated upon the development of heavy industry. It is true that for an under-developed and devastated economy such as that of the Soviet Union, a flourishing heavy industry is as much the condition of a prosperous peace as of military power; but the extent to which the Russians have been obsessed with heavy industrial expansion at the expense of the consumer and the countryside suggests that something more than peaceful prosperity has been at stake.

The emphasis of the last five years can thus be summarised as reconstruction accompanied by every practical preparation for a war economy. What can be said of the achievement of individual industries? Heavy industry, having received the greatest attention, has made the greatest leaps in production and has brought success for the completed plan as a whole. The output of machine tools, intensified during the war, has been trebled since 1945; production of electric motors has increased by five or six times; lorries (which were desperately scarce during the war, until lend lease came to the rescue) by four times, and tractors (the capacity for which had been virtually destroyed by the end of the war) by fourteen. All these increases, except for tractors, were well above the planned targets, though the general over-fulfilment of the 1950 targets undoubtedly conceals particular failures. Output of tractors, for instance, may have increased by fourteen times, but there are still fewer of them than in 1939; and, even on a generous estimate, there cannot be more than one machine, and that probably of uneven quality, to 500 acres of sown land.

In the production of basic materials there has also been impressive progress. Outputs of pig iron, steel, coal, electricity and oil have, broadly speaking, doubled

since the end of the war (slightly less for coal and oil; considerably more for steel). The original targets for the five-year plan were easily passed; but by the beginning of 1950 it was clear that they had been set too low and they were raised by about 10 per cent. Even these targets probably still underestimated industry's real needs, and no confident claims have been made that they were reached. Oil appears to have been particularly short, a fact that may explain the somewhat surprising exhortation to the power industries that "the foundation of mechanised production is electrification."

Direct comparisons with western production of these key materials are bound to be fallacious. The private consumer in the Soviet Union has little or no chance of competing for them, since the requirements of Soviet industry are paramount. The Soviet soldier uses them far less extravagantly than would the GI. It would, therefore, be misleading to conclude, as many people are tempted to do, that the Russians cannot be strong enough to fight because they produce only a quarter of the steel output of Britain and America. Nevertheless, Stalin himself has given some measure of the real inadequacies in this field. In 1946 he announced the ultimate "targets for reconstruction"—prefaced by an analysis of how to win wars. These are given below with the results achieved in 1950 in brackets:

50 million tons of pig iron a year (20 million tons),
60 million tons of steel (26 million tons),
60 million tons of oil (37 million tons),
500 million tons of coal (264 million tons).

Whatever the Soviet industry's capacity for expansion may be, and by western standards they remain phenomenal, Stalin's "reconstruction" would still appear to be some way off.

*

If planning in industry has on the whole been successful, in agriculture there has been a story of failure. Production of livestock and grain is openly admitted to have fallen far short of the targets. Though success has been claimed for sugar, cotton and wool, circumstantial evidence is heavily against it. If, as it appears, the towns have really fed well and the supplies of cattle to state abattoirs have really risen, it can only mean that the villages have suffered proportionately. This is born out by many signs that the Kremlin respects neither the peasant nor nature in its efforts to increase the consistently low yield from Soviet farms.

The crux of the problem is that the amount of arable

Commercial History and Review of 1950

This week's issue of the *Records and Statistics Supplement* to *The Economist* includes the third part of the Commercial History and Review of 1950.

Part III of the Commercial History contains reviews of economic developments in all important overseas countries. Production, finance and foreign trade in these countries are surveyed in detail. Part III of the Commercial History completes the review of 1950; earlier parts dealing with British financial and industrial developments were published on February 17th and March 3rd.

The *Records and Statistics Supplement* is obtainable by subscription only, at £2 10s. a year; a combined subscription to *The Economist* and *Records and Statistics* costs £5 a year.

land in the Soviet Union can vary only within narrow limits. The peak of cultivation reached in 1913 is being approached at the present time, but even this means that less than one-third of the country's total area—or about 250 million acres—can be used for grain crops without costly effort. As a result, an enormously swollen population is now living on less grain than was produced in Tsarist Russia early in this century. There is no evidence that bread is scarce; but the problem of strategic grain stores and the need to have more for political exports, are clearly causes of constant anxiety. This is why Stalin has risked the disruptive consequences of the "Agro-town" policy, and has put his name to a "Plan for Changing Nature" in waste places. As most of the places have no railways either in fact or in prospect, the transformation will take some time.

As for the other consumer industries of the Soviet Union, they have manifestly been sacrificed to the needs of capital development, although they have shown some recovery from the primitive levels of 1945. So far the Russian consumer has also been cushioned from complete austerity by the contributions of the light industries in the satellite countries, except in one important respect: the shortage of urban housing remains as intractable as ever, with incalculable consequences for industrial efficiency and morale. In Moscow, for instance, less than half the housing target was reached.

The consumer's prospects for the future seem little brighter. The already overburdened satellites are now being exhorted to concentrate on heavy industry, and so they may cease to provide incentive goods such as

textiles and footwear. Any acceleration of the Soviet's own time-table for heavy industry—whether for peaceful or military purposes—can only mean that light industry will continue to get the worst of the bargain. How much this will affect the productive efforts of the Russian consumer it is difficult to say. He is clearly much less sensitive to these things than the worker in the west; but differential wage rates are used at least as much in the Communist as in the free world to influence output, and it can be assumed that if supplies of consumer goods fall below a certain point these wage incentives will cease to be effective. It would seem that, by all independent calculations, Soviet productivity per man-hour appears to have risen by only 10 per cent since the end of the war; whereas the British Government claims for the British worker an increase of more than 45 per cent in the same period.

In short, the main weaknesses in the Soviet economy, which emerge even from Moscow's own figures and comments, are to be found in the production of such key raw materials as coal, oil, grain and timber. By western standards the shortages are serious indeed; but Russian ability to make do with a minimum is greater than anything known in the leading capitalist countries. Stalin's economy has an amazing resilience. Thus, the picture at the end of the first postwar five-year plan is not that of a country fit and ready to go into the ring. Its muscles have been and are being systematically trained, and it has no surplus fat; but it is still far from that peak of condition which would entitle it to make a bid for the world championship.

Farming Merry-Go-Round

THE Government has at last completed its annual negotiations with the farmers' organisations, and has announced a new schedule of agricultural prices. Only the most summary details of the new arrangements were published last week, and full comment must await the promised White Paper which is to elucidate them. But the broad character of the Government's decisions is plain enough.

This is the last year of the four year expansion programme for British agriculture launched in the autumn of 1947. For 1950-51 the net output of British agriculture has climbed to about 21 per cent above that of 1946-47 (when the weather was bad). At 40 per cent above the prewar output it is higher than ever before. This increase of output has been achieved by price inflation. In accordance with the provisions of the Agriculture Act, the Government every year fixes such a schedule of farm prices as will provide a satisfactory level of remuneration to those engaged in the industry. During the past four years the Government's interpretation of this duty towards the farmers has been deliberately generous, with the object of getting them to grow more food. In addition, and as a novel way of financing new investment, a special bonus of £40 million a year has since 1947 been included in the fixed prices, to provide farmers with additional working capital.

The result of these policies is that net income from farming, which was £60 million in 1938, reached about £300 million in 1950. To get on the average five times his prewar income for less than one and a half times his

prewar output cannot be considered a bad bargain from the farmer's point of view. It is true that the value of money has been approximately halved. It is also true that British agriculture was not nearly so important to the national economy before the war as it is today. All the same, farmers have achieved a greater improvement in their standard of living than any other section of the community—not excepting farm workers and coal miners. Today the income (before tax) of the average farmer can be estimated at about £830. This, perhaps, does not sound overmuch like "featherbedding." But the average figure is kept down by the large number of small family farmers, whose standard of living (and level of skill) is traditionally not much above that of the farm worker. The medium scale farmer, employing two or three workers, must be earning appreciably more than this average figure; and he is generously treated for income tax purposes.

In any case, the policy of high prices has now achieved its immediate object of increasing production. It is not physically possible to bring about a further rapid increase in the output of British agriculture—and if it were possible, it is doubtful whether the nation should go on using methods that procure comparatively little extra food for a very high cost. This is not, of course, to deny that it would be useful to get more food from British farms. There are some products, meat in particular, of which the output could and should be considerably expanded to meet a large unsatisfied demand. But domestic meat production cannot be quickly or specu-

larly raised; probably it cannot be raised at all without some diversion of resources from other agricultural production. The marginal costs of production in British agriculture—that is, the cost to the nation of procuring each extra unit of home grown food—were high in 1947. They are higher still now that the possibilities of quick expansion are almost exhausted. To stick to the policy of fixing prices that generously cover marginal costs would achieve very little at a rapidly rising cost. In future, the farmers' task (unless war plunges Britain back to a subsistence economy) will be a slow, uphill struggle to improve the supply of certain livestock products; and the Government's duty will be to facilitate this process without making home grown food impossibly burdensome to the taxpayer or impossibly costly to the consumer. In short, circumstances have changed; the Government's agricultural policy would need amendment even if it had been perfect in the past; and this price review was the right occasion for amending it.

★

But other considerations, of a more immediate and pressing character, had to be reckoned with in the price negotiations. The farmers have been faced during the past year by a steady rise in costs of production, affecting labour, feeding stuffs, fertilisers, and farm machinery. They have even instanced the burden imposed by a rising level of agricultural rents—which is in fact the inevitable concomitant of their own prosperity. The Minister had already promised that prices would be adjusted to cover the increase of 6s. a week in farm workers' wages awarded last autumn. The farmers demanded that their other increases in costs should be recouped in the same way. The Government, on its side, had obvious and powerful reasons for resisting this pressure.

In the main it is fair to say that the farmers have had the better of the tussle. There is to be a general increase in farm prices, applying to livestock products from this month and to crops at the 1952 harvest. The increase in farm costs has been estimated as £73 million a year. Against this, about £43 million a year will be paid out to farmers in higher prices. On the face of it, therefore, farmers are left to find about £30 million in higher costs out of their own pockets. But this impression of shared sacrifices is a little misleading for two reasons. In the first place, most—and perhaps all—of the deterioration in the net income earned by the farmers per unit of output should be offset—as it has been during the last year—by the rising level of their production. In the second place, prices were due in any case to be deflated this year by the removal of the special bonus for financing capital expansion. In fact this bonus has been cut by only one quarter; the remaining £30 million is to be eliminated in three further annual stages. This year the farmers are fully recompensed for the reduction in their profit margins by the continuation of a special payment after its original purpose has been exhausted. All in all, they have done better than they had any right to expect.

It is known that the Government originally hoped to avoid price increases of this order. What has caused it to change its mind? The reason can hardly be found in calculations of electoral interest; Labour will lose more votes through higher prices in the shops than it will gain through higher prices on the farms. The real reason lies simply in the nature of the price fixing

machinery. The Government is formally responsible for fixing the new season's prices. But in point of fact they are worked out in negotiations between the Ministry of Agriculture and the National Farmers' Union. Before these negotiations start, representatives of the Treasury, the Ministry of Food and the Ministry of Agriculture try to decide jointly just how far the farmers' claims can be met. They set the brief for the Ministry of Agriculture. But in the past that brief has not always been adhered to very strictly. It is difficult for an agricultural department to adopt a "take-it-or-leave-it" bargaining attitude with its own farmers.

Within the framework of the price increases, the Government has offered a special incentive to meat production. But here again its policy is vitiated by a too tender regard for established farming interests. It is well known that the profitability, quick return and convenience of milk production act as a deterrent to the production of more meat; also, the public is now consuming all the milk it can afford at prices that are already very heavily subsidised. Despite these obvious considerations, the Government has raised the farmers' price for milk by almost 5 per cent, and is also offering favourable prices for fat cows. Dairy farmers have protested that even so their increased costs will not be fully covered. But are consumers never to have first consideration? They are unlikely to be willing to pay another £10½ million a year in milk bills (so that this sum will presumably have to be added on to the £103 million or so already spent on milk subsidies and welfare schemes). The increase in liquid milk consumption is a great nutritional achievement, but it has been bought at a high price. The Government has become much more anxious to safeguard the prosperity of milk producers (who are now responsible for a third of the value of British agricultural output) than it is to give consumers a wider choice of foods than they are prepared to pay for.

A critical question about the effect of the price review has still to be answered. Where will the extra £43 million a year to pay the farmers be found? The obvious and only sensible answer is to find it by raising prices to consumers. But within a fixed subsidy bill of £410 million, the Ministry of Food has ample scope for manoeuvre as between different foodstuffs. The higher cost of, say, home-produced beef could, for instance, be masked by raising the retail price of butter or bread or margarine. The Ministry of Food will no doubt perform such juggling with the individual subsidies in order to make the rise in the cost of living index as small as possible.

This may, from the Government's point of view, be a convenient way of mitigating the immediate blow of the price increases. What matters in the long run, however, is that the Government has failed to seize this year's opportunity to open a new chapter in agricultural policy. It should have made the end of the expansion programme the occasion for preventing a further increase in the total purchase price of home-grown food and for redistributing the resources of British agriculture along the lines indicated by consumer's demand. It has tackled neither objective effectively. Instead, the Minister of Agriculture has taken another turn on the agricultural merry-go-round, in which rising costs and rising prices chase each other in annual cycle around the fixed point of "safeguarding" both the level and the distribution of farm incomes.

NOTES OF THE WEEK

Peace at Westminster

The House of Commons has calmed down remarkably this week. The chief reason may well be simply the ten days' rest that members got over Easter. The edge of Tory enthusiasm may also have been a little blunted by the evidence of the latest Gallup Poll that the Conservatives have recently lost rather than gained ground in relation to Labour. As, however, the poll was conducted between March 13th and March 20th, and measures the change of opinion since the middle of February, it cannot be taken to express a public verdict on the tactics of harrying the Government in Parliament. The more important factor is that this week both sides have had an obvious interest in saving their shot for the battle of the Budget—of which the increase in Post Office charges announced on Wednesday was regarded as a foretaste.

Whatever the cause, amiability has been the general rule on both front benches, and the brisk correspondence flowing between Mr Ede and Mr Churchill has cleared the way for discussions about late night procedure. As *The Economist* went to press it appeared probable that Mr Wilson would next week resume his suspended negotiations about price increases, and as a result talks between the three parties in the Commons would also begin. Meanwhile, four Prayers were disposed of in an hour and three-quarters on Tuesday evening after a debate which showed some signs of being concerned at least as much with the contents of the regulations as with the chances of keeping Ministers out of bed. What will happen when the Budget provides more solid ground for controversy is, however, another matter.

* * *

Political Tipsters

Even the Prime Minister's habitual calmness is not altogether proof against the political tension of recent weeks. His broadcast last Saturday contained a few effective thrusts at the Opposition. But, in its attack on Mr Churchill, it fell short of the dignity that is one of Mr Attlee's political as well as personal assets; and, in its emphasis on the unremarkable theme that things have changed in the past 130 years, it was uncommonly remote from current controversy.

The broadcast also made it plain that what really worries the Labour party is not the Opposition but the public opinion poll. In his evident discomfort at their evidence Mr Attlee put the polls on a level with the students of racing form. The analogy is patently false, but if it were sound it would still provide no basis for the sensational conclusion that

I do not think a Prime Minister should be influenced by political tipsters.

Every reasonable politician always has taken, and always will take, account of the best evidence about public opinion that he can get. It is his business. The importance of the polls is simply that they have given rather accurate evidence. In the past the practical politician could not neglect, and no sensible democratic theory asked him to neglect, the erratic (and often misleading) straws provided by by-elections.

The public opinion poll tests the general verdict for or against the Government regularly and much more accurately, but it is a new tool for an old job and not a repugnant and ridiculous monster which in some strange way will run the country if it is allowed to have any influence at all. No one suggests that Mr Attlee ought automatically to hold a general election because the polls show a majority for the Conservatives. The argument is that—for a variety of

reasons, but chiefly because the country's verdict in its favour thirteen months ago was so narrow—Labour now has too little authority to govern well in the present Parliament. The polls provide merely part of the evidence for that judgment, and abuse of them can hardly do anything but confirm it.

* * *

Professional Freedom

Durham County Council has to admit defeat. The teachers' decision to strike crystallised their resistance to its attempt to enforce the closed shop. The decision also gave the Minister of Education the necessary grounds for direct intervention in the dispute. On Monday the six teachers' unions called upon the teachers in two of the county's divisional areas to hand in notices to end their engagements. On Tuesday the Minister sent a directive to the county council instructing it to reverse its closed shop policy on the grounds that to insist on trade union membership would result in a breakdown of local education.

This is a victory for firmness. The 1944 Education Act gives the Minister wide powers: under it he has authority to "give such directives . . . as appear to him to be expedient" if he is satisfied that a local education authority has acted unreasonably in the exercise of its powers and duties under the Act. If the authority were to refuse to obey the Minister's directive it would be breaking the law. More important still, the Minister can withdraw his Exchequer grant, which covers about 60 per cent of local education expenditure. This is a sanction which brooks no argument.

This is also the first time that teachers have carried the threat to strike so far. With the backing of the Minister it is extremely powerful, and should be repeated only in issues raising the highest principles. Both teachers and Minister must have been encouraged by the strong line taken at the annual conference of the National Union of Teachers, which immediately preceded their action. Political and professional freedom was the chief subject of debate at the conference, and the county councils, both of Durham and Middlesex, were roundly condemned—the one for its attitude towards the closed shop and the other for its decision not to appoint Communists as head teachers. Whatever may be said on a conference platform, teachers themselves have not reacted similarly on the two issues. The closed shop has been resisted by every possible means. Middlesex County Council's decision not to appoint as heads of schools teachers who are members of the Communist party or closely associated with it is working smoothly, in spite of an initial protest by the National Union of Teachers. Candidates are signing the necessary declaration of non-association and no troubles have arisen. It is possible that Middlesex teachers may take some action as a result of the resolution passed at the conference. More probably they appreciate more clearly than their union leaders the risks of putting Communists into positions of authority in the school.

The Americans and Persia

Mr Morris, on and senior Foreign Office officials have spent two days in intensive but inconclusive discussion on problems with Mr McGhee, the US Assistant Secretary of State, who has just returned from Persia and the Middle East. The Foreign Secretary was anxious to learn the latest American views on the strategic dangers which may be arising—or neglecting—British interests. These conferences form an important prelude to petroleum talks

which are to take place next week in Washington. A delegation of officials and oil experts has already left London, briefed to discuss Anglo-American policy in the Middle East in the hope of reaching an unofficial agreement on the general lines of action to be taken in Persia. The delegation will consider with Mr McGhee the economic consequences of any new deal likely to be negotiated between Teheran and London. No attempt is being made, on either side of the Atlantic, to minimise the gravity or urgency of the situation. But full measures to maintain the stability of the area have yet to be finally decided. Meanwhile, the Persians have privately invited American experts and technicians to advise and assist in the process of "nationalisation"—a move which is, to say the least, premature.

* * *

Teheran and Treaty Rights

Any attempt that the Russians might make to interfere in Persia as a result of action by the Nationalists or Tudeh (Communist) Party would be made under a cloak of legality. What then are Persia's Treaty commitments with the two great powers?

The Persians are free of any treaty obligations with Britain and America outside the United Nations Charter. The Soviet Union, however, considers the Soviet-Persian Treaty of 1921 still binding. This was made clear on January 31, 1948, when a Note was handed to the Persian Government accusing the latter of "lending itself to alleged American plans for converting Persia into a military-strategic base." It demanded that the Persian Government should take immediate steps "to eliminate the existing abnormal situation" which it considered incompatible with the state of good neighbourly relations outlined in the Treaty of 1921.

The Note referred to article five which prohibits the presence of "organisations," "troops" or "armies" whose object is to engage in acts of hostility against the Soviet Union and article six which states that if a third party should use Persian territory as a base of operations against it, and

if the Persian Government should not be able to put a stop to such a menace, after having once been called upon to do so by the USSR, the USSR shall have the right to advance its troops into the Persian interior for the purpose of carrying out the military operations necessary for its defence.

In the exchange of Notes with the Soviet Union in December, 1921, the Persian Government, after seeking clarification of these two articles, was informed that they were intended to apply only to cases of a "considerable armed attack" by those foreign powers who are in a position to assist the enemies of the Workers' and Peasants' Republics and make Persia a base for counter-revolutionary forces. In other words the treaty was directed against the White Russians of thirty years ago. But it is being kept alive for contemporary use.

Persia is also a signatory of the Saadabad Pact of July, 1937, which is a treaty of non-aggression between the Moslem states of Turkey, Iraq, Persia and Afghanistan. Recently this agreement has received but scant attention though it provides through Iraq a contact between member states of the Arab League and the non-Arab Moslem States. The Anglo-Russian-Persian Agreement of 1942 which made the necessary arrangements for the wartime occupation and administration of Persia terminated automatically when foreign forces evacuated the country after the war.

Europe's Two Tasks

Mr Foster, head of the Marshall Plan organisation in the United States, has been telling Europeans much the same

optimistic story that the American public has lately been hearing from the men who run its mobilisation effort. What Mr Foster said to Europe this week was, in effect, "You can carry a heavy defence burden and at the same time maintain or even raise your standards of living. Europe can have guns and more butter."

Theoretically the six-point programme which Mr Foster advanced would do much to achieve this goal. Western Europe, he suggested, should create a mass market and adopt mass production techniques. Restrictive practices should be eliminated. With the savings thus made, European industry could afford both to reduce the price of goods to the consumer and to raise wages. Managers and workers should be trained in methods which will bring greater efficiency and the programme of American technical assistance must be expanded. All of these measures will have to be accompanied by "vigorous" fiscal policies on the part of European governments.

If Western Europe is not again bombarded, overrun and exploited by alien forces, Mr Foster may well prove right and European industry may emerge in many ways strengthened by rearmament—just as American productive capacity was greatly expanded by the vast effort of the last war. There is, however, one important proviso which is missing from Mr Foster's statement. The shortage and the rising prices of raw materials threaten not only rearmament programmes but also the living standards of the ordinary consumer. Until some equitable plan is devised for sharing raw materials and until concerted action is taken to expand their supply to all members of the non-Communist world, talk of higher living standards will only raise false hopes. It may even, in the long run, deepen the "pessimism, doubt and neutralism" which Mr Foster seeks to ward off, and to which General Eisenhower, too, has referred.

* * *

Politics in the Survey

The fifth of the Government's annual Economic Survey provides about the way in which Whitehall is looking to announce than any of its predecessors. The outlines of economic policy for 1951 were given in the defence programme. What is new in the Survey is the working out of some of their implications; and the things that matter most in this respect are not the figures—which are of necessity more than usually tentative—but the evidence that the Survey provides about the way in which Whitehall is looking at the details of policy.

This evidence is moderately encouraging. The tone of the Survey is generally frank and firm, particularly in its insistence that prices have got to rise—which is obvious economics but still rather dangerous politics. It is this general sobriety that makes the occasional political intrusions stand out so clearly. Recent history is treated with a remarkable smugness, apparently intended to suggest that everything would be wonderful if only the Russians were less difficult. At some points, indeed, the authors look back to the middle of 1950 almost as a new (but already remote) Golden Age. It is certainly not objective economics to suggest that, because production has increased in the past two years, the rise would remain as rapid as ever if only "we were assured . . . of adequate material supplies from overseas." Again, it is a little difficult to know what the Survey is supposed to convey to the inexpert reader by the statement that the shortage of sulphur "stems from" controls imposed by the United States (though "designed," it is added, "to safeguard its diminishing reserves").

There should surely be no place in the Survey for a cheap sneer to the effect that rearmament in the thirties was paid for "by reducing previous waste." At one point, distortion of fact goes beyond the ordinary gloss over mistakes of past

policy: British stocks of food and raw materials are said to have fallen in 1950 "because world scarcities developed." Had the dollar import cuts, whose continued necessity Mr Gaitskell was defending late in the year, nothing to do with it?

Such blemishes are, however, few: in general the Survey's factual analysis is clear and sensible. But no one could claim that it offers anything in the nature of a plan. The extreme of ineffectiveness in government by exhortation is surely reached in the declaration that "While some adjustments to wages have been necessary and some are still taking place, there should be no unreasonable increases in wages, salaries or profits."

* * *

Festival Extravagance

Mr Stokes, the Minister of Works, has only recently taken over responsibility for the Festival of Britain from Mr Morrison. Perhaps if he had been in charge from the beginning his business sense would have prevented Festival Gardens, Ltd., which is organising the pleasure gardens and fun fair in Battersea Park, from getting into financial difficulties. As it is, it looks as if one more example will be added to the list of Government failures in commercial enterprise. Mr Stokes said this week that an independent inquiry will take place to find out why the company needs an additional loan of £1,000,000 to carry out its task. Until this inquiry is completed, blame must be withheld. But the Government cannot get away with Mr Morrison's statement, made on March 19th, that the main reasons for the additional loan are bad weather, labour troubles and the "worldwide forcing up of prices." As recently as last December it was thought that the financial commitments of Festival Gardens would not exceed £1,500,000. On March 6th Mr Morrison gave a warning that its expenditure would be higher than this, but he thought that it would not amount to more than £1,625,000—which, assuming that the fair was open for six months in 1951, would leave a deficit on this part of the Festival of £572,000. A fortnight later he had to revise this estimate of the loss by a million pounds.

It would have needed only ordinary prudence to recognise the red light long before this, and to re-examine thoroughly the original estimates of costs. But a Government-sponsored concern appears always to think that the essential thing is to push blindly on towards its target—whether that target is groundnuts, eggs or see-saws—regardless of costs because the taxpayer can always be relied on to foot the bill. And if the taxpayer demurs, there is always the argument that more money would be lost in abandoning the project than in completing it at the extra cost.

*

One sidelight on the Festival's finances deserves notice. The taxpayer will have to bear any loss that is incurred. Nevertheless, private concerns that decorate their buildings are informed—to quote the words of one chamber of commerce—that "the cost of such decorations is permitted as deductible expense by the income tax authorities."

* * *

Refurbishing the Blunderbuss

Advocates of the capital levy are so frequently addicted to emotional opinion, so usually illiterate in the very elements of common sense, that it is a genuine relief to find the case stated in reasonable and realistic terms. In a recent pamphlet* Mr Roy Jenkins MP. Tribune

* Fair Shares for the Rich. By Mr Roy Jenkins, MP. Tribune Publications, Ltd. 16 pp. 6d.

possibly be made. The levy, in his view, is not primarily desirable as a means of easing the burden of the national debt, still less as a way of dipping into private capital to meet current national expenditure, which would clearly be inflationary and improvident. Its merits lie elsewhere. In the short run it is the only way of preventing the large property-owner from supplementing, by progressively using up his capital, the consumption possible on his post-tax income—and so both frustrating the national plan which sets a limit to consumption for the benefit of investment and defence and increasing the burden on the non-property holder. In the long run, Mr Jenkins argues, it is the indispensable means to the establishment of an economically just, classless society.

About the long-run effect one may well feel some scepticism. Those rich men who are consuming their capital will, on Mr Jenkins's own showing, run down their fortunes in any case. Moreover, a once-for-all levy (and Mr Jenkins is very firm that it should be once-for-all) would do nothing to prevent the rebuilding of fortunes by those means which escape the tax-collector's net. Mr Jenkins regards an adequately redistributive capital gains tax as impracticable.

But the crux of the argument turns on the short-term effect: the merits of the levy as the only remaining way of cutting present consumption by the rich. Mr Jenkins's case would have been stronger had he given some estimate of the amount of dissaving that would be prevented by the levy, and thus given a quantitative weight to the economic gain which he expects. The arguments by which he seeks to minimise the importance of the ensuing dislocation of market values are distinctly unconvincing; and his preference for payment in "a wide range of assets" to be held by the Government "for the income they produce" opens up a prospect—appealing to him—of a virtual extension of nationalisation regardless of the suitability of the enterprises concerned for public control in any form. For all its merits, his pamphlet leaves untouched the conclusion reached by his fellow-Socialist Mr Cooper-Willis (in the Fabian pamphlet "Towards Equality") that the levy is a "blunderbuss," uncertain in aim, destructive out of all proportion to its positive achievements, and likely to recoil uncomfortably upon those who use it.

Heads Roll in China

Many months ago, when the clemency and moderation of the conquering Chinese Communists were winning for them golden opinions among the more foolish of both Chinese and foreign residents, a saying gained currency among the more wary: "First heads will be nodded, then they will be shaken, and then they will be chopped off." Time has now brought fulfilment of this prediction which might, indeed, have been made in other words by anyone familiar with Communist political technique. Terror is an essential part of it, but not at the beginning, especially when "Popular Front" tactics are used to obtain power. Nowhere have Communists made their front so broad as in China; they have been all things to all men, so that in the first stage of their rule hardly anyone except the "Four Families" was excluded from their benevolence. But this political honeymoon could not last, and the steel-hardened cadres round Mr Mao did not expect it to; while their popularity waned, and the revolutionary wave began to ebb, they were building up a nation-wide secret police organisation for the day of liquidation.

The decree which assigned the death penalty to a wide and vaguely defined range of offences was promulgated on February 21st; since then the Peking Government and its publicity organs have been making no secret of the numerous exemplary executions which have been taking place. Miss Shen, a steel-hardened cadre who is President of the Supreme

CONTROL OF DEFENCE

THERE is much muddle and misunderstanding in the discussions of the appointment of an American admiral as Supreme Commander in the North Atlantic. What should be pointed out is that neither this nor the exactly similar appointment of General Eisenhower in the West gives to the United States control over the other eleven Powers who are joined in the North Atlantic Treaty Organisation with her. *Any idea that America will have a bigger share than others in sea, air or land decisions can be dismissed.* There is no comparison between Atlantic Treaty control arrangements and those in Korea.

The Supreme Commanders are in fact not supreme. Then who is boss? The answer is that the Governments of the twelve nations boss the show through the Atlantic Council. They boss their Defence Ministers, who consult together as the Committee of Defence Ministers.

The Committee of Defence Ministers bosses the Military Committee, which consists of the chiefs of staff of the twelve nations. The Military Committee bosses its offshoot, the Standing Group, which is established in Washington and consists of three men—a Briton, an American and a Frenchman. The Standing Group in its turn bosses the Supreme Commanders. The chain of control is thus:

Governments of twelve nations
Atlantic Council
Defence Ministers' Committee
Military Committee
Standing Group
Supreme Commanders

The Atlantic Treaty control is too complicated and ought to be streamlined, but there is no question whatever that Britain has full say in anything that is done. The rights of all nations are safe-guarded; it is for them to act for the good of the team.

That does not alter the fact that national pride is involved in the choice of operational commanders, and is of real importance. If command in the air under Eisenhower and in the Mediterranean fall to Britain, we should have small reason to be dissatisfied.

HOTELS

personally and independently

recommended by

Ashley Courtenay

"This blessed plot, this earth, this realm, this England."

Put aside for awhile the problems of a troubled world by staying for a weekend or longer at one of my selected hotels featured in my "Shop Window" column. But if you are interested in some other districts please do not hesitate to write me, enclosing stamped-addressed envelope, to 65, St. James's Street, London, S.W.1.

HAWKHURST, Kent. COLLINGWOOD HOUSE HOTEL. In this historic and lovely Georgian home, the art of gracious living is still practised. Warmth, unusual comfort and a high standard of catering will be your lot. For Brochure write: N. Allan-Smith. Tel.: 3350.

HYTHE, Kent. HOTEL IMPERIAL. Holiday this year on the Kentish Coast, at this magnificently equipped hotel facing the sea. 50 acres garden, private Golf Course. A large number of rooms with private bath; some private suites. Fine Ballroom and Cocktail Lounge. A.A., R.A.C. Tel.: 67441.

JERSEY, C.I. ST. BRIELEN'S BAY HOTEL. (1st Register) 11 hys. Right from London. Flowers, sunshine and an exquisite climate. Completely sheltered, facing the sea and the south. Early booking advisable. Details with pleasure from R. H. Colley. Tel.: St. Aubin 1.

LYMOUTH, Devon. TONS HOTEL. "Stands by itself." Not only in a beautiful setting, but in personal service and comfort. As nearly perfect a base as you could wish, for all the recreational and sight-seeing attractions of North Devon. Write for Brochure C. Tel.: Lynton 3250.

MINEHEAD, Somerset. NORTHFIELD. Situated in 3 acres of grounds, aims at high standards of catering and comfort AT ANY TIME OF THE YEAR. Connoisseurs? A Honey-moon? Or just in holiday mood? Exmoor, the sea, and Northfield make a happy combination. Tel.: 864.

NEWQUAY, Cornwall. HEADLAND HOTEL. Re-opens April 25th. Billiards, Bridge, Dancing, Tennis, Surfing, magnificent sands. 18-hole Golf Course adjoining. Good food, well-stocked cellar, attractive Cocktail Bar and Sun Lounge. Every room with a sea view. (Private bathrooms available). Early booking advisable. Write W. Polignac. Tel.: 2211.

NR. NEWQUAY, Cornwall. GLENDORGAL. Nigel Tugay offers you the perfect holiday by the sea. Private steps to Atlantic sunbathing and golden sands. 30 acres of private coastline grounds. Own farm produce; cream, milk, Children's paradise; comfort and rest for adults. Fully Booked August. Newquay 2544.

SALCOMBE, S. Devon. TIDES REACH HOTEL. What a lovely address for a seaside holiday! Here, on the edge of a sandy beach with boats, fishing, safe bathing and fine walks, are added the finishing touches of comfortable accommodation, good fare and ample garage space. Tel.: 283.

SAUNTON SANDS HOTEL, Mr. BRAUNTON, R. Devon. Overlooking Bideford Bay. All that is best in a modern Hotel. Squash, Dancing, etc. Golf at Saunton Golf Club. Fully Licensed. Spring terms 25/- daily. Trains met by appointment. Tel.: Croyde 212.

SIDMOUTH, Devon. BELMONT HOTEL. A.A. Appointed. A first-class luxury hotel, noted for its excellent food, and occupying the finest position extending to the sea front. Through-coaches daily from Waterford. Private Suites. Gas fires. Private bathroom. Lift. Fully licensed. Tel.: Sidmouth 1261.

RAVENSCAR, Scarborough. RAVEN HALL HOTEL.

A completely self-contained, fully licensed holiday hotel. Heated sea-water Bathing Pool, 9-hole Golf Course, Putting, Hard Tennis, Bowls, Billiards, Dancing (Orchestra)—all free to residents. 42. Riding available. Fully inclusive terms 25/- to 35/- per day. Tel.: Cloughton 223.

SCARBOROUGH, ROYAL HOTEL.

Comfortable, Civilised, is extraordinary. For all that it offers, the value is extraordinary. Terms 25/- to 35/- per day. Managing Director, T. Loughton. 62.

TORQUAY'S GRAND HOTEL.

Grand in name, grand in position, grand in everything it offers. With a view to a grand family holiday this year, write E. Paul for detailed brochure. Tel.: 2234.

Tradition

When in 1485, King Richard the Third cried:—"A horse! a horse! my kingdom for a horse!" a Catesby was there to serve his need.

Successive Generations of the House of Catesby offer the same tradition of service to the Leaders of Commerce and Industry of to-day in Catesbys Office Furnishing—for a complete new office or a single item we invite your enquiry to our Director of Contracts.

Your enquiries for floor-coverings, and for any assistance are cordially invited.

Court, has rebuked local judicial authorities for excessive leniency towards counter-revolutionaries and has demanded retrials in some cases. The good work is now apparently proceeding briskly in all parts of China. In Kunming 31 persons described as "local despots, special agents and bandits" were executed in two batches; in Taichow eight members of the "Peasant Self-defence Army" were shot for "plotting rebellion, spreading rumours and undermining the 'Resist America, Aid Korea,' movement"; in Tichling and Suichung twelve leaders of "reactionary religious sects" have been executed for subversive activity.

It may be argued that these measures are consequences of the Korean war and of the Communists' fear of foreign intervention in support of counter-revolution. It must be pointed out, however, that the Korean war is being fought entirely outside China, that no part of Chinese territory is under attack, and that the only effect of American "aggression" in Formosa on the mainland of China has been to put a stop to the Nationalist bombing of coastal cities. No large rebel army is at present in the field against the Peking Government within continental China. When Danton and Robespierre organised terror in Paris, or when the Russian Bolsheviks did the same in 1918-20, they had at least the excuse that large areas of the national territory were in the hands of counter-revolutionary and hostile foreign forces. The Chinese Communists cannot claim any such degree of justification. If, nevertheless, it is held that the current ferocity is an unpremeditated effect of alarm and panic, then the growth of discontent against the regime must be far more serious than has hitherto been supposed.

The Japanese as Trade Rivals

The prospect of a peace treaty with Japan does nothing to quieten the nerves of British business men who fear increased competition in overseas markets. For, whatever be immediate political and military effects of removing allied occupation, it can hardly fail to put the Japanese in a stronger position to try to expand their foreign trade. At the moment, however, in spite of last year's sharp improvement on 1949, Japan's foreign trade position is neither healthy nor, as yet, a serious menace to competitors. The small surplus of \$70 million in 1950 was only achieved after \$400 million of American aid had been received, bringing the total of direct American aid of this type since the war to some \$1990 million.

It is true that the Korean war has led to a flood of American orders in Japan; but this sudden boom has a warning, and beneath it lie several reasons for long-term Japanese anxiety. At home inflation is once more rampant, and some Japanese exporters are actually losing foreign business because their prices are not competitive—compared, for instance, with Italian textile exports to Africa. Nor, even now, has the index of industrial production yet risen above 65 per cent of 1937.

What worries British industrialists is the future pattern of Japan's overseas trade. There the prospect is less promising. Before the war Japan imported virtually all its raw materials from Manchuria, Korea, China and Formosa. They were largely paid for with direct manufactured exports, with dollars earned in America, and with the sale of textiles and consumer goods to South-east Asia. Nowadays, Japan is desperately short of raw materials owing to the great reduction in trade with China. And so long as this situation continues, Tokio is bound to seek new sources of raw materials by making a determined effort to open up new markets and expand old ones. In spite of all its difficulties, Japan re-established itself last year as the world's leading tile exporter; cotton cloth shipments, for instance, rose around 1,000 million yards. And under a three-year plan now being studied by the government in Tokio efforts are to be made to raise textile exports by 25 per cent by 1954. This certainly spells trouble for Lancashire, since the idea

is to achieve these results in order to run a sterling surplus—which is necessary if Japan is to pay its way without American aid. For the free world as a whole, however, there is much to be said for pouring Japanese consumer goods into the backward areas. New times need new methods. If Britain cannot produce the goods cheaply and quickly enough it will be difficult—indeed, most unwise—to attempt to stop the Japanese from doing so.

Mechanics of the Census

Next Sunday's Census, the fifteenth since 1801, is expected to cost some £1,250,000 for Great Britain, spread over about five years. For the 1931 census the cost was £460,000, but 6d. per head of the population is still not excessive. Nor indeed is the fee of £10 paid to each of the 60,000 people—mostly civil servants, local government employees and school teachers—who are delivering and collecting the forms. The enumerator has had to master an elaborate brief. He must call until he finds people at home, for he himself has to fill in details of their accommodation; and he must check the forms with those who have made obvious errors—which will be frequent, for the census form is not light reading. Nor does the enumerator's work finish with collection. From his own records he must add up the numbers of men, women and children, of structurally separate dwellings, of rooms separately occupied or vacant. He must make out cards for those who live or work in local government areas other than the one in which they are "enumerated." All this for £10 plus the liability to severe penalties—a fine of £10 for giving up the job in the middle, and two years' imprisonment, or a fine, or both, for improperly disclosing information. Yet in England and Wales there were three times as many applications as there were enumerators' jobs to fill. No doubt this reflects in part a healthy desire for democratic service; but it is also a mark of the poverty of the lower middle classes.

On the basis of the enumerators' count, preliminary population figures will be published within about eight weeks. Meanwhile the schedules will be sent to Southport where personal particulars become holes punched in nameless cards, to be sorted in a hundred ways by the machines of Messrs Powers-Samas, who have done this work since 1911. (Scotland and Northern Ireland are running their own censuses.) The results will come out in stages, with a volume for each county, followed by general volumes on housing, occupations, industries and so forth. Last will come a general report, reviewing and summarising earlier volumes. The full information eagerly awaited by planners, businessmen and actuaries will thus not be available for four or five years. Meanwhile, however, partial answers will be provided on the basis of a 1 per cent random sample from each enumerator's returns, the results of which will be published within a year or so.

New Light on Britain

As a "snapshot of the population" on the night of April 8th the Census will be larger than that of 1931, but here and there somewhat blurred. Population figures will include all foreigners in the country on that night (although most of the more detailed tables will exclude them), and will exclude British residents, including servicemen, who are abroad. Housing statistics will remain ambiguous about what constitutes a structurally separate dwelling. The enumerator is told that a structural subdivision is "a portion of a house or building which has been structurally designed or adapted as a self-contained unit. Its distinctive feature is that it has a separate front door of its own apart from the street door." Must it also have the "usual offices" behind its front door? If it has all modern conveniences to itself but no front door, does it rank as shared accommodation

while a hovel standing in isolation is recorded as a separate dwelling?

Also blurring the deficiency of houses in relation to the number of families is the definition of a household, the criterion of which is that the people eat together. Thus a couple living with their parents for want of other accommodation would not be regarded as "doubling up." In the sample, however, an attempt will probably be made, by inference from the data on relationship, to sort out real families from miscellaneous households; and the information on the possession of piped water, stove, sink, wc and bath, and whether these are shared, will be important. The opportunity to find out how many dwellings are owned and how many rented has been missed.

The new questions on education will permit interesting cross-tabulation between the length of people's education and their present occupations. It is a pity that this inquiry could not be extended to cover the type of education. Age is only a rough guide to this; for example, a group completing full-time education at 21 could include the shorthand-typist, the technical diplomat and the university graduate. It was felt, however, that it would be too much to expect people to classify their own education.

Another new feature of the census is that it will provide facts about travel to work. There will be no measurement of distances, but the analysis will show the numbers of people who cross a local government boundary to go to work and specific results such as the number who live in Brighton and work in London, or who work in London and live outside it.

Mr Shaw's Newspeak

It is often regrettable when the benevolent intentions of a testator are frustrated by death duties. The financial crippling of Mr Bernard Shaw's posthumous propaganda campaign for a new English alphabet is, however, a matter for general rejoicing. Were it to result, in fact, in the introduction of the forty-letter alphabet and the phonetic spelling which this would make possible, certain advantages might indeed accrue. Typists and scribes might save time; teachers and schoolchildren might save effort; and a major obstacle to the use of English as the universal world language might be removed. The savings in time and effort would, it is true, require a very large initial investment in both, and the unpredictable idiomatic English use of prepositions might still disqualify English as an acceptable *lingua franca*. But the case against the Shavian alphabet does not rest on second thoughts about the magnitude of the gains which it would bring.

Even its disastrous effect in blurring the structure, and obliterating the historical overtones of the language is a comparatively minor disadvantage. The really appalling implication of the Shavian alphabet is that it would relegate our whole written heritage to an inaccessibility as absolute, for all but specially trained or exceptionally assiduous explorers, as that dividing the modern reader from Chaucer and his predecessors. Of course transliterated reprints would rescue the classics. But contact with the mind, the feelings, the ways, the characteristic savour of the past down to the year of adoption would be strictly rationed. Over the great domain of English letters a few trunk roads would remain open—which roads, Authority and the future economics of book production would settle between them; the rest would revert, so far as future generations are concerned, to almost impenetrable jungle. And along with literature proper would go all the factual records now open to the casual reader, the newspaper and periodical files, the private letters and diaries, the whole complex miscellany which links the generations; a clean sweep, only less effective than Mr George Orwell's "Newspeak," and as unmistakably useful to future tyrants concerned to mould men's minds to their own use.

Here, rather than in any saving of typists' time, can be found the only sufficient motive for the Shavian alphabet. Were it really desired to save time at the expense of a mere aesthetic predilection, a more promising line of inquiry could be directed to the discovery of a reliable and harmless depilatory which, used on the heads of both sexes, would produce a permanent, hygienic and enormously time-saving baldness. Distasteful as this prospect might appear, it would at least affect only the outside, and not the inside, of the human head.

Investment in the Schuman Plan

As realisation dawns that the Schuman Plan may become a real and permanent institution, many economists and businessmen in this country have begun to take a closer look. Much of their inquisitiveness is directed at the investment policy which will prevail under such a regime. Any project concerned with the efficient operation of the west European coal and steel industries must make provision for new investment, indicating how fresh capital will be raised and what considerations will govern its allocation.

The previous postwar attempt to co-ordinate European heavy industry was made by the Organisation for European Economic Co-operation (OEEC), whose efforts came to very little. Its failure sprang in part from the fact that OEEC was merely a collection of sovereign national delegations assembled to guide the spending policy of an external benefactor; its advice, therefore, often tended to be the outcome of horse-trading between the delegations, and where this was not the case American funds were frequently applied to those programmes that seemed more important to the ECA authorities.

In its present form the draft treaty of the plan is not very explicit on the subject of investment. Article 54 declares

Obstructives in Parliament

Everything in nature has its uses, even the obstinate adherence of the obstructives to old errors and old abuses. In the flight of the ball, the gravity that in the end brings it to the earth plays just as important a part as the explosion which gives it impetus. So in the moral world, the explosive passions of youth that hurry forward society are neither more nor less important than the mature reflections of age which hold it back. We are quite ready, on these principles, to acknowledge that the obstructives were only performing their allotted part in the great system of society when they resisted, on Thursday evening, Lord John Russell's motion for the House of Commons to go into a committee to consider the disabilities of the Jews. At the same time, their opponents only did their duty in carrying the motion by a majority of 68, in a House of 264 members. . . . Though we admit that the obstructives only perform a duty, we can but admire their courage and devotedness. Successive defeats never dishearten them. They stick to their object with the pertinacity of instinct, and hold fast while there is any hope to hold by. Experience never alters their views. As their predecessors were defeated in opposing the Dissenters, the Catholics, reform of Parliament, extending the freedom of the Press, so they are defeated in giving freedom to trade and equal rights to the Jews. So they will, of course, on all such questions be in the end always defeated. They will nevertheless continue to resist, as they always have resisted. To war against progress is their ordained vocation, and society would lose one of the elements of its perfection were they as yet to drop aside.

The Economist

April 5, 1951

that the High Authority may help to carry out investment programmes either by granting loans to individual enterprises or by giving its guarantee to loans that they may obtain elsewhere. Again, in order "to encourage a co-ordinated development of investment" the High Authority may call on all firms to submit their investment programmes before proceeding with them. On receiving these programmes, it will not only judge them but will pass on its opinions both to governments and to the public at large. Where any new investment runs counter to the non-discriminatory aims of the plan, the High Authority can forbid the use of any but the firm's own funds.

There is nothing in the draft treaty to prevent an undertaking from devoting as much of its own resources as it wishes either to economic or uneconomic investment. This latitude, however, may well be illusory. In the next few years any sizable investment in any branch of the European coal or steel industries is likely to require the flotation of public loans or large-scale American assistance. And it is possible that the investors, whether European or American, will come to regard the High Authority's stamp of approval as an essential item in any prospectus. Thus, if the High Authority makes the most of the opportunities written into the draft, it may well plan and direct the greater part of all new investment; but it will only acquire this role if it is manned by people of the highest calibre.

New Freedom for German Industry

The western Governments have never followed a sensible, clear-cut policy towards Germany; and as soon as the Germans realised that they were a key factor in the quarrel between east and west, it became virtually impossible to do so. The long-delayed decision on April 4th to relax restrictions on German industries—with the important exception of arms production—is a case in point. It comes too late and is too hedged about with exceptions to induce the Germans to do anything but ask for more. "Where," they will still demand, "is the equality we must have as the price for our aid?" At the same time, it restores formidable industrial might to a country which is still not firmly anchored in the western harbour. Nobody, and least of all the Germans, can assume that those restrictions which are still maintained will not later go the way of the rest, or that the methods by which they are to be enforced in the meantime are adequate.

The chief cause of German disappointment lies in the retention of control over capacity in certain industries. The steel capacity of the Ruhr is still subject to the Allied High Commission, despite the Schuman Plan, and output is still limited to 11.1 million tons a year, plus whatever is needed for the purposes of western defence. It is small consolation for the Germans to hear that they could not in any case produce more steel, since they are bound by the Ruhr Authority to export so much coke. They feel that they should have been better rewarded for joining the Schuman Plan. Dr Schumacher, who has called for "the mobilisation of all forces against the Plan," will doubtless continue his irresponsible campaign with added fire.

There are some branches of production, notably of synthetic rubber and oil, in which manufacturers are reluctant to take advantage of the raising of the ban. Many works have turned over to a different type of output, and there is uncertainty whether the boom in world prices will continue long enough to justify reconversion. Moreover, the Germans are now out-of-date in some processes of which they were once justly proud; though there are instances where opportunity is now offered for renewed production, possibly in collaboration with British and American manufacturers. German shipbuilding, without question, will gain by the raising of restrictions. Lack of capital stands in the way,

but the past few years have shown that German enterprises have an astonishing way of overcoming this handicap. They can be trusted to make full use of their new freedom.

Bonn in Economic Straits

The Council of Ministers of the OEEC will once again be at grips with the problem of German bankruptcy when the report from the managing board of the European Payments Union (EPU) reaches them in Paris on Friday. The Ministers' immediate concern will be not so much with western Germany as with the effect of the German position on its trading partners in Europe. The Danes, the Dutch, the Austrians and the Greeks—countries whose trade with Germany was an important part of their economies and who are themselves in debt to the EPU—have appealed against the impact of the interim measures which Bonn has had to take to keep itself afloat in the next two months. It makes no sense, they claim, for Germany to be kept swimming if they have to sink in the process.

Though the German position has improved in the last six weeks, there is still no doubt that they will have only just enough money to cover their outstanding licences till June 1st, if they do not assume any new ones. There are, therefore, only two ways in which the stricken countries can be relieved: the Germans can—at the cost of breaking industrial contracts—delay the incidence of payment on, or refuse to renew, some of the outstanding licences and thus make room for a little new trade from the smaller countries; and the bigger countries, Great Britain in particular, can import more of the goods that would normally have gone to Germany. The trouble here is not capacity but price. The British, for one, would be delighted to buy; but they claim, with some justification, that they cannot afford what they believe to be the inflated prices that Germany has been paying while it was building up its deficit with the EPU.

On the trade problem, as opposed to the internal financial situation, the Ministers cannot for the moment go much further. They cannot consider what is to happen after June 1st, when the Germans will begin to relax their import embargo, as the Germans have not yet produced a draft import programme. They have already been sent off home by the managing board of the EPU to prepare one, but one of the things which has made progress so slow and cumbersome has been the consistent German inability to produce hard facts and figures—about anything, from their raw materials stocks to the content of their outstanding liabilities.

The programme is to be prepared on a commodity, not on a country, basis; once the Ministers have collectively approved it in principle, there will be a rush to drive bilateral bargains with the Germans. At this stage, the EPU creditors will have to agree to allow some measure of discrimination on a commodity basis. Britain is, in the meantime, awaiting the German reply to the offer it has made to include Germany in the Transferable Account area; this, it hopes, will increase the inflow of sterling to Germany and thus ease its EPU position. The reply will come after a German cabinet meeting this month, and is expected to be favourable.

Letters to the Editor

Post-mortem on Wheat

Sir,—In your analysis, on March 17th, of the British-Canadian Wheat Agreement you drew attention to the effort being made by some in this country to insist that Britain has defaulted on the contract.

Many of us do not agree with this view as far as its legal aspect is concerned, and which is the view the Canadian Government takes. Whether there is a moral obligation on Britain to pay compensation to prairie farmers is, however, a different matter. Certainly for four years the people of Britain secured wheat from Canada at far less than the world's market price, and at much cheaper prices than Britain was purchasing wheat from the United States, Argentina, Australia and, it is said, Turkey and some other countries.

Your article implies, I think, that because the sales of class II Canadian wheat were relatively small—amounting to 196 million bushels over the four years—perhaps all Canadian wheat could not have been sold at the class II price had there been no contract with Britain. Experienced merchants and students of marketing here do not take this view, for we notice that during the same period close to 3 billion bushels were sold on the world's markets by the United States, Argentina, Australia, Canada (class II wheat) and from some other countries, and all at prices as high as, or higher than, class II price. During this time the world was badly short of food, to the extent that world buyers were eagerly purchasing Canadian rye at \$4.83 a bushel and even Canadian registered seed wheat to be used not as seed but for making into flour and bread, at \$6.00 a bushel. What reason, then, is there to suppose that an additional 140 million bushels for each of the last two years of the contract would not have commanded the same high price as class II wheat sold to some 65 different countries? This price can, therefore, be truly regarded as a world price.—Yours faithfully,

H. G. L. STRANGE
Searle Grain Company, Winnipeg

Walter Bagehot

Sir,—I am engaged on a biography of Walter Bagehot (1826-1877), the literary critic, economist and author of *The English Constitution*, who was also the second Editor of *The Economist*.

If any of your readers have any unpublished letters or other material concerning him, I should be most grateful if I could see them. I would, of course, take the greatest care of any documents entrusted to me.—Yours faithfully,

ALASTAIR BUCHAN
Elsfield Manor, Oxford

Tobacco Supplies

Sir,—Your note of March 24th on "Tobacco Supplies and Prices" said that "Presumably there is nothing to prevent British manufacturers from buying more [than two-thirds of the crop] if they are willing to bid up prices at the auctions."

This is not the case. The entire Rhodesian crop is allocated to the various markets by the Tobacco Marketing Board, and the allocations are policed by the operation of strict export control. Thus only two-thirds of the marketed crop will be given export permits to Britain and under the agreement Britain could only issue import permits for this amount.—Yours faithfully,

J. M. WADSWORTH
Southern Rhodesia

Arabic and Persian Broadcasts

Sir,—In your leading article on "Britain, Persia and Oil," published on March 24th, you described the BBC services in Arabic and Persian as often "dull and characterless" and argued that they had "lost their interest and many of their listeners."

I think it is fair to assume that an increase in letters from listeners means an increase in the total number of listeners. The rise in the number of letters from Persian listeners has been startling; they have increased from 400 letters in 1948 to over 2,000 in 1950, and

in the first three months of this year already 2,500 letters have been received. Arabic letters have been rising steadily by 1,000 each year since 1946; the number was 6,000 in 1950 and in the first three months of this year they have been coming in at the rate of 900 a month or 10,000 a year. These letters from Persia and from the Arab world show that there is great interest in the transmissions; suggestions or criticisms are made, and there are many questions about life in Britain and about the international situation.

The news is followed closely; Arab and Persian newspapers make use of the BBC news and many listeners check the news given out by their own broadcasting station by listening to the BBC; this is especially the case in times of crises, such as the Arab-Israeli war or the recent dispute between the Sultan of Morocco and General Juin.—Yours faithfully,

GORDON WATERFIELD,
Head of BBC Eastern Service
London, W.1

[Unhappily Persians who can write, and especially those who are able to address an envelope to the BBC in Latin characters, are not in such need of an entertaining and informative news service as the ninety per cent (or more) illiterates.—EDITOR.]

The Defence of Britain

Sir,—In your article in *The Economist* of March 31st you say,

Britain is the only country in Western Europe which is guarded on all sides by the sea. Of all the Nato countries it is the least vulnerable. . . .

I suggest that this country would be one of the most vulnerable in Western Europe in any future war. Any invasion in the future would inevitably be preceded by a thorough softening-up process, a new and terrible "Blitzkrieg." We are the ideal target for that form of attack. We are not only "the most important industrial target in Europe," but also the most highly concentrated. Of all the industrial communities in Western Europe ours would be the easiest to paralyse with the new weapons.—Yours faithfully,

ROGER HUNT
Lincoln College, Oxford

Books and Publications

The Liberty to be Human

Liberties of the Mind. By Charles Morgan. Macmillan. 252 pages. 12s. 6d.

Here is something less formal than a book, more shapely than the usual collection of essays; a series of variations on a theme indicated by the title, all coloured more or less deeply by alarm and despondency; all, on the other hand, lit by personal faith and informed by the highly deliberate and civilised style which is Mr Morgan's trade mark. Liberty is endangered not merely in its manifestations—freedom of speech and assembly, freedom from arbitrary arrest, and the like—but in its essential source, the mind itself; to the familiar conditioning pressures of public opinion and education there is in process of being added something more, which Mr Morgan provisionally labels "switch control," of which he sees evidence in successive Soviet trials: the technique of "annihilating in a man his national identity and substituting for it another identity which shall not have the faculty of individually willing and choosing." This technique may not yet have passed the laboratory stage; but everywhere man is being prepared to acquiesce in it.

Prepared by whom? By a personal Devil using materialists as his instruments. Having reached this point a good many readers by no means unsympathetic to Mr Morgan's outlook on life will feel, not like putting his book in the waste-paper basket—he is far too urbane and delightful a stylist for that—but like relegating his ideas at once to the realm of fantasy. In fact it is not necessary, in order to appreciate and weigh those ideas, to accept Mr Morgan's Devil, any more than it is necessary to accept the view, so thoroughly disproved by the lives of so many agnostics, that no sense of, and loyalty to, eternal values is compatible with a disbelief in personal immortality. One may refuse to follow Mr Morgan either in his imputation of motive or in his derivation of that motive from a diabolical source, and still share his alarm; a plague is no less disastrous because it has resulted not from malignity but from the random migration of rats.

These essays, writes Mr Morgan in his introduction, "seem to have selected themselves and to have indicated my book's subject by their convergence upon it." They are indeed richly various. The theme is stated in the first two chapters; thereafter Mr Morgan wanders widely, discussing the Dark Ages, what makes a good teacher, the Lost Generation, the *douceur de vivre*, the historical imagination as it may be applied to the present, romantic and classic writers, poets and saints—to name but a few of his topics. The connecting thread, however, is unmistakable. Always it is either the essence of liberty which is illustrated, or the essence of the threat to liberty, the

sources of strength, or the techniques by which strength is sapped.

Mr Morgan presents in some ways an easy target to criticism. Personal devils apart, he appears so self-consciously a Superior Person, so confidently one of the *élite* and the *élus*, so well aware of his dramatic rôle as champion of the Good, the True and the Beautiful against the materialist power-seekers and grubbers among statistics, so . . . One tails off, looking for the verbal equivalent of a ripe tomato to launch at this impeccability. The epithet "Pharisee," perhaps? But the missile goes wide. Self-consciousness is not the same thing as insincerity; there is no exclusive virtue in that casual understatement which flatters the reader with an illusion of equality. If a tocsin can be sounded harmoniously, so much the better—and if the danger is real the tocsin should be heeded. About the reality of the danger which Mr Morgan illustrates with such virtuosity there can be, unfortunately, no doubt at all.

Pleasure, Profit and Pain

The People of South Africa. By Sarah Gertrude Millin. Constable. 324 pages. 20s.

Mrs Millin is already well known as a novelist, and for her earlier book *The South Africans*, published in 1926. The present book is a revaluation which takes into consideration the vast postwar changes which have influenced the already complex situation:

Here we all are, a heterogeneous collection of Europeans; an imported and established population of Indians; a man—rather than a God-created nation of half-castes; a ghosthood of yellow aboriginals and a flood—a strong, spreading flood—of dark-skinned peoples. And, since we are not alone on the planet, and, so small as we are, cannot control our own destinies, the problem that chiefly concerns us is how, being here together, we may live and grow with the least unhappiness and enmity.

The approach is dispassionate. The six races that inhabit the Union are presented from their beginnings, through their development, to their situation in the interplay of political and social forces that make the modern South African scene. Boers, Englishmen, Jews, Indians, half-castes and Africans, each follows a destiny conditioned by the powerful thrust and riposte of temperament and circumstance, and Mrs Millin builds them up in their hopes and fears, meannesses and generousities, cruelties, greeds and stubbornness, with a patient acceptance of human frailty, kindled at times to a wry irony but never to condemnation. She writes with an

immense pity for lost ideals and false aspirations, and a sense of amazement that men should so destroy each other and their own inheritance—but no reproach.

Interwoven with the argument are vignettes of the men who influenced South African development. Rhodes, the superman "with enough vice in him to keep his virtues earthbound," creating and destroying with boundless arrogance, but unable to live down defeat; resting at last beside the Kaffir warrior Moselikatze, in the vast desolation of the Matoppos Hills, saluted, alone among white men, as a king by the black men he had won and betrayed and saved. Hertzog, frustrated by conflicting passions, but perhaps "the greatest Afrikaner of all times." Hofmeyr, the wonder-child who died too soon and left Smuts unfulfilled. Smuts, the idealist, tilting at the windmills of party strife; the lost leader who forgave too soon and so became a prophet without honour in his own country while loaded with honours abroad. Malan, his bitterest opponent, who now faces the conflict between Asians, Africans and Europeans alone, with the weapon of *apartheid* which began when the first ditch was dug to separate the Dutch from the Hottentots in the seventeenth century and remains the compromise of reason against feeling in a continent of four million whites and a hundred and sixty million blacks.

This is an enthralling book, sombre in implication, colourful in presentation, and those who are interested in travel, world politics and humanity will read it with pleasure, profit—and pain.

Latin America

The Economic Development of Latin America. By Raul Prebisch. United Nations Publications. 59 pages. \$3.

There has been a spate of books about Latin America in all its aspects—often by authors with an axe to grind. The present informative pamphlet, written for the Department of Economic Affairs of the United Nations, is the attempt of a Chilean economist to find

a solution to the basic problems confronting Latin America, the correct presentation of which has become a matter of immediate concern.

It is refreshing reading, because it is objective, sincere and constructive. A skilful avoidance of the mention of any individual country by name lifts the discussion out of the potential exasperations of the parochial into the realm of world planning.

Professor Prebisch considers Latin America as part of the periphery of the world economic system whose centre is the great industrial countries, and he maintains that the benefits that these derive from increased productivity due to technical progress have not, in the past, reached the periphery in com-

parable measure. The response of the new countries to this disequilibrium is industrialisation. The author is fully aware of the difficulties ahead. The crux of the matter is the need for capital goods from the United States, and the lack of dollars to pay for them—which lack cannot be supplied by increased trade with Europe unless the United States is able to increase its import quota for European goods. Moreover, the industrial development of Latin America, and its rapid adoption of modern technology, depends to a large extent upon foreign investments, and these must be paid for by exports in the same currency. The problem is complicated by a natural eagerness to assimilate quickly ways of life which technically more advanced countries adopted gradually as their productivity increased. Professor Prebisch gives a warning that the raising of the standard of living of the masses depends not only on abundant capital, but also on the ability to use it well.

Sound rules of monetary behaviour for these countries are still in the making, and can only be evolved by means of adapting the universal truths of the theories expounded by older countries to the regular and intensive economic development of the new. For there is no longer a choice between industrialisation and the export of primary materials in exchange for manufactured and capital goods. Events in Europe during the last thirty years have broken that pattern, and industrialisation has become a prime necessity for the well-being of these countries.

Trivialities of Travel

Invitation to Morocco. By Rom Landau. Faber, 309 pages. 18s.

At a time when Morocco is very much in the news and a book, in English, giving some idea of the particular problems that now face the French administrators would have been most welcome, it is unfortunate that Mr Rom Landau should expend his knowledge and his industry on producing 309 pages filled entirely with slightly uninteresting trivialities. He claims (page 72) to have "known the Arab world most of his life" and he has obviously passed some of those 52 years in Morocco, yet he describes his last visit to North Africa in the manner of a missionary's wife after her first visit to the east.

One soon tires of his inclination to fall in love with Moroccan towns from which, for no apparent reason, he is obliged to drag himself away, and his pen-pictures of the country's leading personalities are as insubstantial as his appreciation of their problems. Passages such as the following, which occur throughout the book, with no further comment or extension, can only seem an utter waste of everybody's time:

Mogador was the first Moroccan town I visited that is administered by a civilian and not a soldier. The official residence of the *Contrôleur Civil* is in one of the largest and most historic houses in town, and one most typical of the local style: very high, with a small patio inside and galleries running round

it on each successive floor. But when I dined there, what impressed me far more than the beauty of the house or the excellence of the food—what artists the French are in culinary matters!—was the great love my host and his wife had for the Moors.

Mr Landau certainly travelled extensively in Morocco, and he seems to have had the right introductions to the right people, Moroccan nationalists and French administrators, but apart from reporting what they looked like, what they gave him to eat, how unfailingly charming everybody was to him, he tells us nothing at all. Problems in Morocco? Banish the thought! Let's go and have a cup of mint tea and watch some dancing-girls.

The Lesson of Defence

Fortress Tobruk. By Jan Yindrich. Ernest Benn, 214 pages. 21s.

Tobruk has the misfortune of being at one and the same time a symbol of disaster and of defiance. The epic of its resistance in 1941 was overlaid, and has been to some extent obliterated, in the public mind by the shock of its collapse in 1942. No good book has yet emerged to give a full account of both these actions. This present volume by Mr Yindrich, who was a war correspondent in Tobruk in the 1941 siege, gives us some useful eye-witness material, particularly in his interviews with troops, but contributes little in the way of military evaluation and is not well enough written to re-create the atmosphere of those fantastic early days when the fate of the fortress depended at times literally on the action of a single platoon or company. Major-General Birks, one of the British commanders during the siege, contributes a valuable foreword which underlines one of the most important facts about Tobruk—that its defences were essentially thin and brittle. He points out that the inner-perimeter defences in 1941 were virtually non-existent and the outer-perimeter had fallen into neglect. Why then did Tobruk not fall in 1941, when its defences were in disrepair, and yet did fall a year later when they had been greatly strengthened? The answer to this paradox is given in part by another addendum to Mr Yindrich's book, an epilogue by General von Ravenstein, who commanded the 21st Armoured Division under Rommel. It lay in the character of the attacking Axis forces. In 1941, as von Ravenstein points out, Rommel's forces against Tobruk during the first crucial days consisted only of one German division, plus some Italians, and though they broke through the defences they could not exploit their opening. But in 1942 Rommel was able to hurl against a disorganised Tobruk command the full weight of the Afrika Corps.

The military moral of Tobruk is indeed old and elementary enough, but one of which we could do well to remind ourselves in our present situation in Korea and Europe—that a resolute defence may produce results beyond all expectation. It can be as dangerous to over-estimate the enemy as to under-estimate him.

Reference and Text Books

Economics and Public Welfare. By Benjamin McAlester Anderson. Macmillan and Company, Limited. 602 pages 42s.

The tone of this financial and economic history of the United States from 1914 to 1946 is set by its explanation of the 1930-1939 depression as "due to the efforts of the governments, and very especially of the Government of the United States, to play God." In the opinion of the author, governments actually play the devil, and as a result his review of the performance can hardly be described as unbiased; he does not pretend that it is. But as economist to the Chase National Bank, and later as a professor of banking, he was standing in the wings, and sometimes in the prompt box, throughout most of the exciting period covered by this book and his account of what he saw is both interesting and valuable.

An Introduction to the Theory of Statistics. 14th Edition. By G. Udny Yule and M. G. Kendall. Charles Griffin. 701 pages. 34s.

This standard work, which first appeared in 1911, was given a complete revision in 1937. Now, in its latest edition, there have again been some substantial alterations, mainly in the way of additional material. The analysis of variance is given a somewhat fuller treatment and some of the problems of practical statistical sampling are discussed. New chapters on index numbers and time series will be particularly welcome to students of economics. A warning is given against many of the claims made for the existence of periodic cycles in economic data. Professor Kendall asserts that probably none of these cycles are periodic in the strict sense of the word. This statement is made here without any analytical proof but there is some discussion of the famous example of the Beveridge periodogram analysis of wheat prices over 300 years.

The book, as now amended, aims at covering the theoretical part of the syllabus laid down by the Royal Statistical Society for its Certificate.

Register of Research in Social Sciences. The National Institute of Economic and Social Research, London. Cambridge University Press. 174 pages. 15s.

This register is published annually; it is described as a cross-section of work in progress and not a complete record. The information is collected from the individuals or institutions engaged in research and no attempt has been made to evaluate the work. The register is arranged so that it is possible to find out the work being done by a given institution, by any individual and on any given subject. A Directory of Research Institutions is also included.

Post Office London Directory for 1951. Kelly's Directories Limited. 2835 pages. £5.

The 152nd annual edition of this directory continues to provide as much information about the streets and occupants of London as may reasonably be expected in one book. The street directory, the most useful since it is the most complete section, contains references to very clear large-scale maps. Commercial and professional names are given in alphabetical and classified lists. Other sections include Parliamentary, postal, municipal, legal and clerical and transport information. A general index as well as a guide to the principal contents makes it easy to find the items required.

SHORTAGES?

*Many manufacturers today suffer from shortages of one kind or another. Yet those who look beyond their immediate difficulties discover why it is vital to preserve **CONTINUITY** of advertising, whatever happens. For they realize that—should the present emergency be tided over—U.S.A. stockpiling may be halted. The present balloon of inflation would be punctured—and the danger of world-wide recession become very real. By keeping your name before the public you are not only able to control your present sales at the level you want (and to take prompt advantage of any sudden improvements in supply): but you also build for yourself the strongest possible safeguard against any future recession. That is why continuity is essential. And that is why Picture Post is of supreme value today—because it guarantees you this vital*

Picture Post aims to offer its advertisers large spaces and colour wherever possible; to provide merchandising services when needed: and—despite the present shortage of space—to accommodate all-comers. For all space enquiries please get in touch with

Why Linen Mesh Underwear?

Most doctors are insistent that for health reasons a mesh garment next to the skin is essential. The mesh structure ensures that a layer of dry air is in direct contact with the body, thus protecting it from the extremes of heat and cold and maintaining an even temperature.

Irish Linen Mesh is not woven but knitted for maximum elasticity, and has super-absorbent, quick-drying qualities. Perspiration is dispersed instantly; never allowed to chill. Wearers claim immunity from coughs, colds and rheumatic complaints.

Go in for Irish Linen Mesh

or

The finest of all Linen mesh underwear, 100% Irish Linen.

Slightly less expensive but with most of the qualities of AIRLIN.

At all good outfitters and stores. Write for name of nearest stockist to: The Irish Linen Mesh Co. Ltd. Dept. E1 Henry St., Belfast, N. Ireland.

AMERICAN SURVEY

Troops for Truman

Washington, D.C.

THE "Great Debate" has wound wearily to its close—satisfying nobody and clarifying almost nothing. The American public, which was supposed to learn from it some of the more pressing facts of international life, is probably more mystified than it was when Mr Hoover first introduced Gibraltar into the strategy of the atomic age. Most Americans long ago gave up trying to understand the intricacies of Paragraph Six of the Senate Resolution, which, as Senator McMahon asserted during the first day of the debate, "means different things to different members of the committee." They turned instead to the simpler pleasures of watching Mr Greasy Thumb Guzik on Senator Kefauver's television programme. There has been less and less talk lately of the boost which the whole discussion would give to European morale and the help it would be to General Eisenhower.

The final vote, when it came at last, was numerically impressive enough (69 for and 21 against) had the resolution itself had any substance left in it. The original idea of adopting a resolution which would show the world that Congress and the American people are behind President Truman, General Eisenhower and the Atlantic Pact had long ago given way to one which would tell the President what Congress did not want him to do, although it was unable to stop him doing it. What the Senate said in effect was, as the *Washington Post* pointed out:

We are with you in carrying out your present policy of sending four divisions to Eisenhower. But we resent your assumption that you can carry out major policies of this sort solely on your own authority and your statement that you consult Congress only out of politeness. If you want to send any more troops to Europe, come and ask us first.

This, as the *Post* observed, is "a long way from saying that no more American troops will be committed to the Atlantic army if needed." Only a few Senators were prepared to say that and to agree with Mr Hoover.

Everything that has happened since the controversy began in December has been nicely calculated to destroy domestic confidence in the elected representatives of the American people; but its effects should be much less discouraging in Europe. The speeches of those who drafted the original resolutions and the amendments which, it was hoped, would clarify them show that the hesitations, the quibbles and the compromises which have been so evident are but one more by-product of the disintegration of the present Administration. The opposition to sending troops to Europe was little stronger than the opposition to the Marshall Plan or to the ratification of the North Atlantic Treaty. The opposition to the idea of letting Mr Truman have too much rope was considerable. The problem was to find a way of approving the policy which the Defence Department had recommended

to the President without at the same time expressing unlimited confidence in his judgment. The problem was never solved, but it lay behind all the muddle.

Senator Wiley, who has taken Senator Vandenberg's place as the leading Republican on the Foreign Relations Committee and is making a gallant attempt to fill his shoes, took the view that "the North Atlantic Pact is very definitely not self-executing." He believed that it required Congressional implementation but, unlike most of the mid-westerners, who used this argument in order to avoid implementing it all, he added that "there is, at least, a moral obligation, if not a legal obligation, for the Congress to implement the Pact." And Senator Saltonstall explained the result of the deliberations of the committees by asserting that "by means of this resolution we simply say to the President: 'You now interpret the treaty differently from the way you interpreted it two years ago. We back you in this new interpretation.'"

★

Despite all the efforts of the Administration to pretend otherwise, the dispatch of troops to form part of an international army in Europe is in fact a new interpretation of the North Atlantic Treaty. Many Senators voted for the treaty because of the definite assurance (however unrealistic such an assurance might have been), given by Mr Acheson to Senator Hickenlooper, that the United States was not "going to be expected to send substantial numbers of troops over there as a more or less permanent contribution to the development of these countries' capacity to resist." They now wanted an opportunity either, like Senator Saltonstall, to register their approval of, and agreement with, the decision that changed conditions needed new policies or, as in the case of a minority, to show that they had only voted for the Atlantic Pact in the belief that it was a more or less meaningless gesture. And one and all were aggrieved at Mr Truman's easy assumption that he need not consult them at all.

Senator Taft tilted away, right up to the last moment, at the technical constitutional issue, and it is quite clear, though the Senator pressed his point, that, as the Court of Claims once explained in simple language, "Congress may increase the army or reduce the army or abolish it altogether; but as long as we have a military force Congress cannot take away from the President the supreme command." But the Constitution was not written with a situation like the present one in mind and the President would have been more tactful, and would have got a better resolution in quicker time, had he recognised the fact. Hardly anyone disputed his right to reinforce the army of occupation if he wanted to do so—or denied that he could have provided General Eisenhower with the necessary forces on this pretext—but nobody was prepared to accept the idea that the establishment of an international army was a routine departmental matter about which Congress need not trouble itself, and for which the drafters of the Constitution had provided specific authority.

Even in spite of Mr Truman, a strong resolution might have come out of the committees which spent so long in listening to evidence and such care in drafting unintelligible resolutions if Senator Lodge and Senator Smith of New Jersey had not involved themselves in the dubious project of trying to get everyone to go along. It was the attempt to get an overwhelming majority for the Pact itself two years ago which led Mr Acheson before the Foreign Relations Committee, and Senator Connally during the debate in the Senate, into the error of denying the possible implications of some clauses which had been drafted with considerable clarity. The two Republican Senators, in their efforts to stick their party together again, after it had been badly split by the attitudes of Mr Hoover and Senators Taft and Wherry, produced a clause so obscurely worded that everybody could vote for it without knowing how far it was intended to go. It was no doubt this timidity which encouraged the opposition to try to emasculate the resolution still further.

But, flat and unprofitable as the whole affair may have been for the United States, it should not be allowed to obscure a number of facts of importance to the rest of the world. The debate was begun by Mr Hoover's urgent cry that the Western Hemisphere should become a fortress and that American strategy should not contemplate sending troops to Europe. In those terms the debate never even reached the floor of the Senate. Senator Smith, who split most of the hairs about which there has been so much complaint, explained that Article 5 of the Atlantic Treaty was not involved. He said:

There has been no question whatever in the mind of anyone that, if there should be an armed attack upon one of the parties to the North Atlantic Pact, there are no restrictions of any kind, character or description upon the President's power immediately to send such armed troops as he, under the advice of his military advisers, might deem to be needed in order to meet the situation.

It was the "continuous and effective self-help and mutual aid" in Article 3, which included the possible establishment of a collective force, that was the subject of the resolutions and they, while approving the policy of sending four additional divisions to Europe, added the advice "when you come to a change in the policy, come to the Congress." This simply means, as the *Washington Post* pointed out, that "the Senate would like to hobble the President in carrying out a basic policy of which the Senate approves," or, perhaps more accurately, that it does not trust him to carry out an approved policy, and such a revolutionary one, with the blending of imagination and caution which they think it needs.

The nineteen Republicans who voted against the resolution in the end are the full strength of the "retreatists"; Senator Fulbright presumably joined them because he would have preferred no resolution at all to such a restrictive one. The full strength of those who have no confidence in Mr Truman as President and wanted to show it is the forty-nine who voted for the McClellan amendment which provided that "it is the sense of the Senate that no ground troops in addition to such four divisions should be sent to Western Europe without Congressional approval." On other amendments the strength of two other groups was on display—those like Senator Taft who prefer a narrow interpretation of the President's powers regardless of the merits of Mr Truman himself, and those friends of Mr Taft's who hoped, by defeating or weakening the resolution, to improve his presidential chances and hurt those of General Eisenhower. A motley crew they were and they nearly scuttled the ship of state.

Industry's Expansion

[FROM A CORRESPONDENT IN THE UNITED STATES]

AMERICAN industry is in the midst of an unprecedented effort to expand its capacity. The largest expansions are planned by the industries participating directly in defence production, but the effort is not confined to these fields. The aims of this expansion, as laid down by the President and by his advisers, are threefold:

1. To provide, by July 1, 1952, the equipment for an armed force of 3,500,000 men, including a 95-group air force.

2. To provide additional capacity on a scale sufficient to turn out rapidly the arms which would be needed to expand these forces in the event of total war.

3. To supply the civilian economy with the essential minimum of goods during the emergency period, and to raise the level as soon as possible to somewhere near a normal standard.

All this calls for an expansion of the gross national product by 20 per cent in the next five years. In keeping with this

The estimates for 1951 in the above chart are based on surveys, conducted jointly by the Securities and Exchange Commission and the Department of Commerce, in December, 1950, and March, 1951, of the amounts which businessmen planned to spend on capital goods during 1951. These surveys are not exactly comparable to the McGraw-Hill survey, mentioned in the accompanying article, but confirm its conclusions.

aim, the Government has offered businessmen liberal inducements to increase the capacity of their plants. These inducements include advance payments by the military procurement services, direct or guaranteed loans by the Government, and the authorisation of accelerated depreciation, for tax purposes, on new facilities. The Government has also set goals for the additional capacity in such key defence industries as aircraft and tank manufacturing, steel, aluminium and electric power. There can be no question that this combination of carrot and stick has spurred private industrial expansion to an unprecedented extent.

It would be incorrect, however, to say that this is an investment programme directed by the Government. Free market incentives have been even more powerful in recent months than have government policies. Corporate profits are running at an annual rate of \$25 billion, even after the recent increase in taxes. Consumers, as well as the Government, have been buying industry's wares with an avidity seldom matched before. And businessmen are haunted by the memory of the second world war, when new equipment for factories

"AMERICAN SURVEY" is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

became unobtainable for many of them. With plenty of cash on hand, the biggest market of the century before them, and the costs of construction and machinery rising rapidly, increasing numbers of industrial companies are rushing to complete new facilities before it is too late.

It is still not possible to separate, in any precise fashion, the general surge of industrial expansion from such strictly defence activity as the manufacture of tanks and aircraft. Expansion in the steel, electric power, chemical, aluminium and machine tool industries is largely encouraged by, and related to, the defence effort. In the case of machine tools, particularly, the Government will place advance orders for up to \$600 million worth of tools, which will then be distributed to defence contractors as needed. In all these industries, however, plants and equipment serve civilian, as well as military, needs. Until more definite details of military requirements are known, neither the managements nor the Defence Production Administration itself can say how much of the output of a new plant will go directly or indirectly into military products.

Preliminary indications of the scope of this industrial expansion come from the fourth annual "Survey of Business Plans for New Plants and Equipment," conducted by the Department of Economics of the McGraw-Hill Publishing Company in January. It shows the plans for capital expansion which industrial companies—at least the larger ones—had at that time. American manufacturers hope to raise their total capacity by at least 9 per cent in 1951, on top of a 7 per cent increase in 1950, and a 75 per cent increase since 1939. Heading the list, as might be expected, is the aircraft industry, which is planning to expand its facilities by more than 40 per cent. Next comes the automobile industry, which is getting ready to make tanks and military trucks, as well as aircraft and parts, and anticipates an increase of 17 per cent in capacity. The electrical firms are also among the leaders, largely because of the enormous military electronics programme. Chemicals, steel and non-ferrous metals and the machinery industries also have major expansions under way. Altogether, industry's current plans add up to a greater growth than almost anyone had expected, or even hoped for.

*

Whether all this expansion can be achieved is another question. As a rough estimate, the plans reported in the McGraw-Hill survey might call for putting a third more finished steel into industrial construction and machinery during 1951 than was so used in 1950. This much steel could conceivably be made available by drastic cutbacks in the

output of consumers' durable goods, but it seems most unlikely that there would be enough steel in the necessary forms (chiefly shapes and plates), or that enough of it would be alloy steel, which is vital both for many tools and for the military programme. As yet, Washington has placed no direct restrictions on industrial expansion. However, more complete allocation of steel and copper is scheduled to begin this summer, and the Defence Production Administration will then have to decide how much can be used for various types of capital equipment. No one will be greatly surprised if production of some items, such as textile machinery, is curtailed in order that the steel may be used to make such things as machine tools. Even the size of the expansion proposed by industries directly connected with defence has been questioned in some quarters. For example, a number of experts have pointed out that the proposed increase in steel ingot capacity may be greater than the increase in supplies of iron ore which can be achieved within the same period. Moreover, the construction of fully integrated steel facilities may require more finished steel out of current supply than can be justified by the gains to be achieved in late 1952 or 1953.

Business expansion also involves political issues. It is a political maxim in the United States that defence work should be spread among small businesses, to the greatest extent possible. Unfortunately, the products for which new capacity is most needed—tanks, aircraft, electronic equipment, steel and aluminium—are typically the products of very large firms. Labour leaders, as well as spokesmen for small business, have been quick to accuse Mr Charles Wilson, the Director of Mobilisation, of favouring "Big Business," and of leaving small companies out of the defence programme. One of the hottest arguments is over the award of certificates authorising accelerated depreciation for tax purposes; relatively few small firms appear to have received such certificates. Mr Wilson's position is that, if certificates were handed out too freely, it would encourage indiscriminate expansion, which would cost more in scarce materials than it would benefit the defence effort. This is a logical viewpoint, but it remains to be seen whether it is politically tenable.

Perhaps as formidable as these short-run problems is the long-term question of what the United States will do with its greatly expanded industrial capacity once the emergency is over. There has long been a school of economists which contends that more steel capacity is needed if full employment is to be sustained in the metal-working industries. The same reasoning can be applied, of course, to the expansion of aluminium, power and other basic resources. If this con-

...requires a well planned and executed sales program. Irving Trust Company will put you in touch with competent organizations in the United States to help you develop or expand your sales there.

tention is correct, then the post-emergency economy of the United States will operate at a very high level, for there will be tremendous capacity in both the basic industries and the fabricating lines.

It should be pointed out, however, that production of durable goods in the United States—and this is primarily a durable goods expansion—has seldom remained at such high levels for very long. If the production of consumers' durable goods is halted during the emergency, all the new metal-working capacity may indeed be fully employed in meeting the backlog of demand for automobiles and other such products. However, if consumers are able to obtain reasonable quantities of durable goods during the emergency period, which comes after the huge volume of purchases between 1947 and 1950, demand may be much less than it was after the second world war. Then the American economy would face the severest let down it has experienced since the nineteen-thirties, and the very firms which expanded most during mobilisation would be the victims, a thought which has worried the president of more than one company. Nevertheless, private industry will provide all the capacity America needs, for defence products and for civilian products as well. There has been no hesitation. In fact, the current expansion is the most spontaneous, as well as the largest, in the history of American industry.

American Notes

Rearmament Gets into its Stride

The optimism of Mr Wilson, whose job as Defence Mobiliser deals primarily with production, made a noticeable contrast last week with the pessimism of General Marshall. The Secretary of Defence, who knows that even a little good news can take the edge off the public's eagerness for sacrifices, declared that, despite the favourable turn in Korea, international tension was greater than it had been in November, and that any let down could be disastrous. Mr Wilson, on the other hand, in his first quarterly report, surveying the "miracles" on the production lines since the attack on Korea, concluded that the safety of the country has been measurably increased, that next year American strength will be formidable in many respects, and that by 1953 reasonable safety against aggression should be assured. He paid a handsome tribute as well to Western Europe's contribution to the growing security of the free world. In Washington, the Defence Department has now placed contracts for \$23 billion of the \$32 billion at its disposal; more than half of this has been committed in the past three months. A third supplementary request for this fiscal year is expected shortly, to prevent any interruptions as rearmament gets into its stride. Actual expenditures, which of necessity lag far behind the placing of contracts, are, at \$2 billion monthly, twice what they were at the time of Korea.

Consumers, who have been enjoying an Indian summer of plenty, cannot expect it to continue. But, as the chart shows, the defence programme, carved out of a steadily increasing national product, is not, even at its height in 1952, expected to take more than 20 per cent, compared with 40 per cent during the war. By 1953, given smooth sailing, stocks of weapons and defence capacity will be sufficient to enable the United States to wage an all out war, if one is thrust upon it, and civilian supplies will be able to resume their upward march.

Metals and men will be strained before this point is reached. In his first press conference in three months, Mr Wilson overcame his fears that civilian production might be hampered, and finally announced that outright allocation of steel, copper and aluminium—a limited con-

trolled materials plan—must take the place of priorities in order to guarantee supplies to defence industries. But supplies of manpower, he made clear in his report, will be recruited only by voluntary means—an assurance which, with the departure of General Clay from Mr Wilson's staff, may end the suspicions of the unions that direction of labour is a card up Mr Wilson's sleeve.

The Defence Mobiliser is responsible, however, not only for production, but for stabilisation of the economy, and on this score he was far less optimistic. He is strongly supported by the Joint Congressional Committee on the Economic Report, which for the first time since 1947 has come to a unanimous conclusion: that to curb the present

"galloping inflation," from which both consumers and the defence effort suffer, cuts must be made in federal spending—even defence spending—to hold it to a maximum of 28 per cent of the national income, and that not even military spending should be authorised until the revenues to cover it are in sight. The existence of a temporary budget surplus, which has forced the Secretary of the Treasury to lower his tax sights from \$16 billion to \$10 billion, may make it hard to convince Congress of this need for financial austerity.

Latin-American Defence

The first resolution approved by the Foreign Ministers of the twenty-one American republics, who expect to finish their conference by the end of this week, was the Declaration of Washington, affirming the hemisphere's determination to resist Communist aggression and to support the United Nations. Nevertheless there was a strong feeling amongst the Latin-American representatives that both President Truman and his Secretary of State, in their opening addresses, put too much stress on the links between, and obligations of, the Organisation of American States to the United Nations and too little on Latin-America's own difficulties.

This feeling lies at the root of the dissension on the first item on the agenda—co-operation for the defence of the Americas. The United States proposed that the Inter-American Defence Board should draw up plans by which the Latin-American republics would make themselves collectively responsible for the defence of the hemisphere below the Rio Grande, and that the troops set aside for this purpose would also be available to fight on behalf of the United Nations. But the second part of the proposal was unacceptable to many of the Latin-American representatives. Countries participating in this mutual defence scheme would be helped out of the sum of about \$80 million which has been set aside by the United States for military assistance to Latin-America; countries which held aloof would have no hope of receiving such aid.

It is expected that Argentina would be one of the latter, for the uncompromising attitude of its representative at the conference, the self-satisfaction of its atomic energy claims and, above all, the *La Prensa* affair, show that Argentina is determined to walk by itself as far as the hemisphere is concerned. The Argentine situation makes many Latin Americans feel that they are in more danger from totalitarianism at home than they are from Communism abroad. Furthermore, they are convinced that Communist aggression, as far as they are concerned, will take the form, not of a direct attack, but of the gradual infiltration which would thrive on unsatisfactory economic conditions.

For this and other reasons the Latin American ministers were more interested in long-term economic assistance than in the emergency measures on which the United States would have liked to centre the arguments—arguments which could not come down to brass tacks until 46 individual resolutions on various economic questions had been sorted out. The United States has offered a number of fairly satisfactory concessions on such matters as purchases of basic materials. But so far nothing has been done to satisfy the Latin Americans that the amounts they can earn by their exports will not be reduced by price controls in the United States, or to guarantee that the purchasing power of their dollar balances will not be diminished by inflation before they can be spent.

Crime Goes to College

When an Ambassador is shown to have had shady dealings with known criminals, and White House stenographers a failing for mink coats, and the President shows no sign of ordering a house-cleaning, the average citizen is inclined to look with some leniency—perhaps too much—upon the 16 college basketball players now under arrest in New York for accepting bribes to “fix” games. That toleration does not extend to the professional gamblers who tempted them; Governor Dewey has just signed a Bill doubling the penalty for such gentry to a maximum of ten years in jail. But it is argued that these poor boys are the victims of a general lowering of moral standards and of the lengths to which colleges will go to build winning teams. If the players stand in the dock, so should the community which demands its circuses.

Basketball, today the most popular spectator sport, attracted audiences of 100 million or so last year, and earned nearly half a billion dollars. College games began to interest professional gamblers when, to cash in on their popularity, they were moved to the big public arenas, such as Madison Square Garden. The invention of the points system also encouraged betting—and corruption. To “throw a game” today need not mean to lose it, but to win it by a smaller margin than was expected. In the last three seasons, 20 games at the Garden are said to have been fixed.

The basketball scandals have begun to draw some attention to the other evils of commercialised college sport, which may be less dramatic, but are more pervasive, and create a climate favourable to bribery. The *New York Times* has conducted a survey of 40 institutions which shows that, while some have seen the danger in time, others have succumbed to the theory that, without a winning football or basketball team, they have failed in their mission. The University of Chicago twelve years ago took the then startling step of abandoning inter-collegiate events and has not regretted it. But others find it a profitable source of income in hard times: Ohio State University, for example, earned over a million dollars last year from five games. Others find that basketball receipts build new stadiums (which in turn require more winning teams to keep filled) or pay for less remunerative sports. Still more find that the most effective way to maintain the interest and tap the pocketbooks of old students is through semi-professional sport. In Ohio some indignant

legislators recently demanded an investigation to discover why the state university did not win more games.

The practice of bidding for promising players and making life easy for them in college is forbidden by the big college leagues. But it continues under cover and in institutions which are not members, particularly in the south, generous “athletic scholarships” are awarded openly. In most colleges easy jobs are found for deserving forwards and centres, either by the college itself, or by local enthusiasts. Academic standards are shaded in their favour, and some courses of study, such as physical education, seem tailor-made for the brawny who have not the brain for mathematics or Greek. The recent scandals will have served some good purpose if they direct attention to the devaluation of a college degree and the distortion of values involved in the over-emphasis on competitive events.

Making Shipping Pay

Senator Fulbright's investigation into the Reconstruction Finance Corporation unearthed a number of unwanted bones which have been thrown to other committees. The Senate Commerce Committee is now gnawing at a surplus ship transaction which proved amazingly profitable for a group of shareholders, including, amongst many others, the late Mr Edward Stettinius, Mr Julius Holmes and Admiral Halsey. The prime mover in this affair, ex-Representative Joseph Casey, in 1947 chartered five tankers to an oil company and then, on the strength of the charter, borrowed the \$10 million needed to buy the tankers from the Maritime Commission—a carefully synchronised negotiation of which he confesses himself proud. The charter fees were paid to a Panamanian company, and thus escaped income tax. As a result the loan was paid off out of earnings and, when the tankers were sold in 1950, the partners had a clear profit of about \$2,800,000, less only the 25 per cent capital gains tax, on an initial investment of \$100,000.

There is no suggestion that there was anything illegal about the affair, apart from possible laxity in the Maritime Commission itself. Fresh attention has, however, been drawn to loopholes in the tax laws, especially since the tankers' earnings are still apparently tax free. For the ships seem now to be owned by a charitable organisation, the China International Foundation, which uses the charter fees to help Chinese students in the United States.

*

These tankers turned out to be so lucrative largely as a result of the sudden shortage of shipping caused by the Korean war. This has meant that the Economic Co-operation Administration has recently had difficulty in finding enough bottoms for its bulk cargoes. It has been forced to fall back on uneconomic Liberty ships from the reserve fleet. These will be operated by the new National Shipping Authority, which has now been set up in the Maritime Administration, to provide for the most effective use of the merchant marine in the present emergency. In the event of war it would become a full-fledged War Shipping Administration, with requisitioning powers, and would represent the United States in the international shipping pool.

While insisting that the NSA has no intention of interfering with private shipping business in general, the government is splitting every legal hair it can find in order to maintain its hold on one particular company. This is the old Dollar Line, renamed the American President Line; its chief shareholder gave his 92 per cent of the stock to the government in 1938, in return for loans and subsidies which set the failing company on its feet again. The subsequent shipping boom enabled the loan to be recouped long ago, but the government maintains that the stock was handed over outright, not merely as collateral, and still refuses to surrender its profitable holding, in spite of two adverse decisions from the Supreme Court.

THE WORLD OVERSEAS

The Screw Turns on Soviet Germany

EVERYTHING that is being done in the Soviet zone indicates that Moscow still intends it to be, politically, a base from which to win the West German Republic and, economically, a valuable source from which the Russians can secure the products of Germany's skill in the field of heavy engineering, precision instruments and chemicals. There is nothing in recent developments in the Soviet zone to suggest that the Russians intend to offer any serious concessions in order to establish German unity, whatever propaganda says to the contrary.

By and large, the People's Republic has not so far proved an effective political base for acquiring Western Germany. This is largely due to the gross contrast in the standards of living which still exists between the two parts of the country. In spite of improvement during 1950, the indigenous population has only half as many goods, including capital equipment, at its disposal as the West Germans. The Soviet Union still takes about one-third of the total production. There has been only a negligible change since 1949, when 25 per cent of the zone's industrial output was in the hands of the Soviet A.G.s, the Russian-owned key enterprises. According to the estimates of Dr Gleitze of the Berlin Economic Research Institute, over 50 per cent of chemical production, 46 per cent of the metallurgical industry, 41 per cent of electro-technical, and 36 per cent of mining production is owned by the Soviet companies. The Soviet Union also takes reparations from the current output of the nationalised factories to the extent of about 1,500 million marks a year, as well as occupation costs for the maintenance of over 20 divisions. In addition, uranium from the mines on the Czech frontier operated by the notorious Wismut A.G. is channelled to the Soviet Union.

Direct trade deliveries to the Soviet Union from the Soviet zone, apart from reparations, are believed to amount to about \$300 million a year. Furthermore, the Russians also secure from their German outpost another advantage which is impossible to assess, but which is certainly very great—that is, a hole in the fence through which strategic goods may be smuggled. Though controls have been tightened, the illicit traffic through the free ports of Western Germany and through Berlin, still continues. Only last week, the director of a Berlin iron and steel firm was arrested on a charge of delivering many thousands of tons of steel to the Soviet zone. Against this, it may be noted that the Soviet

German authorities are seriously concerned about the smuggling of valuable goods and machinery out of their grasp to the West. In spite of savage sentences imposed for this crime, the Soviet zone has undoubtedly suffered a considerable loss of high-class machines and—even more important—technicians.

Targets are very high, and have not been fulfilled in the most important branches of industry. In January, Herr Selbmann, one of the Communist economic “bosses,” revealed that, owing to a serious drift from the mines and absenteeism, hard coal production had fallen short of the target in 1950 by no less than 500,000 tons—a big proportion in view of the small total output in the zone. Serious weaknesses in engineering were also admitted. A drastic reorganisation of methods was ordered to eliminate faulty planning and inefficient administration. Engineering output is supposed to be 35 per cent higher this year than last, partly in order to reduce dependence on the West. Chemical plant is to increase by no less than 70 per cent. These targets can only be reached by a 20 per cent increase in productivity. Workers, said Herr Grotewohl, must realise “the magnitude of their task.”

Of the twenty-four key factories in the zone, twenty are producing heavy machinery, most of which is exported. Herr Ulbricht has declared that East Germany's foreign trade would be doubled in 1951, and imports of pig iron, coal and coke would be greatly increased. It is, however, clear that large imports of steel from the Ruhr will also still be required; although steel production has increased, and a big new plant on the Oder is in its initial building stage, there is still a wide gap to fill.

There has been much ominous talk of “sabotage” in the zone's steelworks. In fact, it is evident that the “young activists” upon whom the Communists rely have been overzealous and have caused serious breakdowns by forcing output. But this drawback to Communist policy of pushing on young workers will be offset by the SED Politbureau against the advantage of securing the allegiance of the rising generation. In the meantime, the prevailing inefficiency is met chiefly, according to the Communist formula, by establishing a party network in the factories for the purpose of “raising political consciousness.” In time—and the Communists are looking far ahead—this method will probably show dividends. Boys who have, for instance, been given

the authority to run a shipyard will learn by their mistakes, and will—so it is hoped—graduate from the Youth Organisation to the Party, loyal servants of Stalin as well as good technicians. The West German Government and employers who have failed, because they have scarcely tried, to cope with the problem of the 600,000 young people who leave the Federal Republic's schools every year, would do well to learn something from the East in this field.

Nowhere has the failure of the Soviet German planners been so marked to date as in agriculture. The days are long past when Soviet propagandists dared to boast about the land reform of 1945. Now they have to admit that the big state farms, which were supposed to prove models for collectivisation, have been losing money, and must pay their way somehow by the end of this year. They also admit that the drift from the land of peasants who cannot meet the exorbitant delivery quotas continues. References to "unused land" are constant and revealing. In an effort to remedy this trend, peasants have now been told that quotas will not be raised this year, even if they produce more, and smallholders with 2½ acres will not need to deliver anything. Talk of coming collectivisation is denounced as sabotage; and, to assuage discontent, the organisation of "People's Control Committees" has been told to listen to complaints and henceforth to send in accurate reports to Government headquarters.

To sum up, therefore, it may be said that, from the standpoint of the Cominform leaders, the People's Republic does not yet qualify for the title of "People's Democracy," and will not do so until the SED, purged of Social-Democrats, becomes a militant "party of the new type." On the other hand, it is an extremely valuable source of industrial strength to the Soviet Union, and has a high nuisance value *vis-à-vis* the West, which will grow as the indoctrinated German youth take over the reins.

Persia in Trouble—III

Roots of Agitation

[FROM OUR SPECIAL CORRESPONDENT RECENTLY IN TEHRAN]

FOR the moment a combination of martial law and the national holiday of No Ruz (the Persian New Year) seems to have stopped panic in Teheran. At least such is the claim of General Husain Hijazi, the town's military governor, who has been firm enough to arrest several of Mullah Kashani's crusading gunmen, allegedly after a plot on his own life. A much publicised strike at Abadan—though it may be symptomatic of the uneasiness felt by the Persian oil workers at being so persistently reviled in the national press—has been declared on a minor issue affecting some 10,000 out of 55,000 workers. The atmosphere is more conducive to sobriety than it was before the holiday. Yet the political situation remains balanced on a knife edge. Public business, notably financial business, the imperative nature of which was described in *The Economist* of last week, remains at a standstill. Mullah Kashani, threatening bullets for all who deal with foreign dogs, is still at large. The Cabinet can keep threats of violence at bay so long as it swims with the stream of public fervour. But can it get any serious state business done? Here is its immediate problem in the weeks ahead.

Direct Soviet propaganda had little to do with last month's sudden upsurge of public emotion against Britain and in favour of nationalisation of the "southern oil." Persians do not so easily dance to tunes piped by the Soviet Union; they do not like the Russians. If they join, or sympathise with, the Tudeh party, they do so not for love of Moscow but for a chance that they are beginning to think is otherwise unobtainable—the chance to rid the country of a situation in which 200 or so wealthy families live off a

penurious population of peasants and workers. (There is no Persian bourgeoisie; even civil servants are so badly paid that they have to find other means of livelihood—for instance, to compose slander on foreigners for opposition newspapers—with which to make some money in the afternoons.) The basic fear in any Persian mind is that of pressure along the 2,500 kilometres of frontier exposed to the Soviet Union. It is safe to affirm, therefore, that had Soviet pressure in favour of nationalisation of the southern oil been exercised it would have checked the impulse which caused so many responsible men to vote for ousting the British oil company. The Russians, though not direct instigators of the outbreak, are, however, benefiting immensely from it. Their direct influence is at present chiefly exercised in the universities and among secondary school students—the school teachers of the future. It is said that at least 25 per cent of Teheran university students are Tudeh party members, and that a further 50 per cent are sympathisers. But the best job that is being done on their behalf is not being done directly. It is the handiwork of the wealthy politician who does not dream of paying tax, of the landlord who rails against the Shah's recent small effort to start distributing crown lands as smallholdings, and of the rich nationalist who is shouting for the downfall of the West.

Compensation Condemned

What does this last mean when he votes for nationalisation of the Anglo-Iranian Oil Company? This topic, much discussed behind closed doors and in low voices, has not yet been thrashed out in public. Premier Ali Razmara was shot for venturing, in what was virtually his last speech, the cautious remark that "expressions of personal opinion cannot be of much value unless technical groups have studied and clarified the situation. . . . We cannot, under present conditions, endanger the future of a large number of people simply on the opinion of a few." Yet the number of theories that are advanced whenever doors are shut suggest that quite a number of responsible persons hold this view. It is easier and may for the moment be physically safer, to march behind the extremists who shout for expropriation and who, turning a blind eye to the state's financial plight, shout: "What matter if we lose money; better be paupers than take a foreign rental for our black gold." Persians are not thinking in terms of compensation. They suggest that the company and shareholders have profited excessively already. The attitude of the majority in the Majlis amounts to a jungle grab. Another group of senators and deputies know that the Persian nation lacks the technicians to run even the extraction of oil much less its refining and marketing. The change they want is a share of the financial proceeds that is demonstrably as high as that enjoyed by other and newer concession-givers in the Middle East—notably by Saudi Arabia. They also want a greater sense of partnership in their sole national enterprise of consequence than is afforded by the company's present slow if steady "Iranianisation" policy. It is less the gifts than the manner of the giving that has touched off their emotion.

Few or none are ready to argue (as Razmara was shot for arguing) that the Persian oil known to exist in the south-east and in the north is already in the hands of a national company, and that the exchequer would do best to take what it can from the going foreign concern in order to make the Persian company a working concern. Most are feeling for some solution that would impart a sense of nationalisation or at least of partnership. But who dares to speak of compromise in public? Here, then, is Persia's dilemma. Who dares to say that the advocates of expropriation are wreckers who will bring down not only the oil company but the whole of Persia's flimsy social fabric with it. But Persians must realise that their irresponsible actions will effectively prevent any foreign bank or government from lending money in order to bolster their national finances or pay for schemes of social improvement. The Iraqis and Syrians, who advo-

The Start

A GOOD START sets the right rhythm for the whole race. The full capacity of John Laing and Son Limited is applied to the start of every contract.

As soon as a tender is accepted all departments are immediately in action to a pre-arranged programme. The requirements of the job have been worked out in advance. Within hours the transfer of picked men is arranged; materials are on order for specified dates; plant is ear-marked and perhaps on the move; key staff and mobile offices are on their way to the site.

This immediate, co-ordinated action is team work at its best. It sets the rhythm which will be maintained until the job is done and another Laing contract completed smoothly, efficiently and on time.

For speed and efficiency in building and civil engineering

JOHN LAING AND SON LIMITED Established in 1848
London, Carlisle, Johannesburg, Lusaka.

Aspects of enterprise

No. 12.

The possibilities of mechanised materials handling in industry are almost unlimited, and so are the problems it presents. In recent years one firm of international repute has given Simon Handling Engineers orders totalling nearly half a million pounds for sixty-nine handling, storage, weighing, blending and processing plants for an immense range of different materials and purposes in its numerous factories. No two of these plants are alike, and many have involved original research and experiment. Simon Handling Engineers are regularly consulted by this firm and many other large concerns on materials handling problems.

Communists in the Austrian Police

[FROM OUR VIENNA CORRESPONDENT]

THIS week Herr Helmer, the Austrian Minister of the Interior, has fallen foul of the Soviet occupation authorities because he refuses to reinstate three hundred officers dismissed from the Austrian police. This conflict has arisen because of Herr Helmer's determination to cut out completely a canker which has existed in the Austrian police force ever since the first Austrian State Secretary of the Interior, Franz Honner, who was a Communist, managed to infiltrate some 15,000 of his co-believers into the various sections of the force. Herr Helmer, who is a Socialist, asserts that most of this *Putsch*-fodder has already been eliminated. Nevertheless, enough individual Communists still remain to have caused a considerable shock at the elections of Civil Service Trade Union officials which were held early in March. When the results were counted, the Communists were found to have polled 1,070 votes out of 6,617 in the Vienna Security Police, 310 out of 889 in the Secret Police (or Criminal Investigation Department), 23 out of 113 at Police Headquarters and 31 out of 67 among the so-called State (Political) Police. In the country as a whole, the Communists got nearly twice as many votes in the police as their general voting strength seems to justify, the increase being due entirely to the size of their vote in Vienna and Styria.

The publication of the figures for Vienna was not unnaturally greeted by the Communists with much delight coupled with expansive claims that, had it not been for gross intimidation, the votes of "the opposition" would have been much more numerous. Somewhat rashly, perhaps, non-Communist newspapers immediately started a campaign for the complete elimination of Communists from the police. They pointed out, with justification, that, in the event of industrial or political unrest, the Communists in the force could not be relied upon to obey the orders of a government representing the wishes of the majority of the population. With considerably less justification some of them accused Herr Helmer of having failed to do his duty. He himself has suggested it was perhaps a mistake for the People's Party and the Socialists to present a joint list of candidates to the voters, because this left the voter no alternative but to vote Communist if he disliked either of the two coalition parties. This argument seems to have considerable force especially as the Union of Independents did not put forward any candidates in either Vienna or Styria.

Causes of Success

The Communists claim that their successes are the result of dissatisfaction at the wage-price agreement last autumn and the increase in unemployment which has just begun to go down again after having risen above 200,000 in February. They claim considerable increases in membership and in the circulation of their newspapers since the beginning of the year. They may also have gained merit—though they do not claim it—through the cheap goods in the USIA retail shops which are increasing somewhat rapidly in numbers and are now to be found in almost every large village in the Soviet Zone.

But however much ground the Communists may or may not have gained—or lost—the fact is that Communist strength in the police dates back nearly six years and has nothing whatever to do with recent developments. The continued presence of what can only be a subversive and unreliable element in a vital department of state administration well illustrates the difficulty with which the Austrian Government is faced when dealing with any issue which

cate nationalising various enterprises, have grasped these points. They will pay compensation, which is, however, considered inadequate. The best that most Persians hope for is that the company will provide them with a new proposition which affords a bridge of compromise over which they can walk. Otherwise they are stuck on the pinnacle of hyper-nationalism up which they dashed three weeks ago, and from which few dare descend so long as Mullah Kashani and his gunners lurk round the corner.

Peking Finds Food for India

[BY A CORRESPONDENT]

THE Chinese Government has offered to supply India with a million tons of food grains at "competitive rates" in addition to the 50,000 tons of rice which it has already contracted to supply. The Chinese Embassy in Delhi allowed this to leak out last Tuesday. Peking and Moscow will no doubt now make a good propaganda point out of this as they have already out of the fact that shipments of Chinese rice have already reached Calcutta, while the prospects of American wheat arriving in time to check the threatened famine in India are diminishing daily. Some Indian newspapers are providing just the reaction that China's gesture was meant to obtain; the Lucknow vernacular paper "New Dawn," for example, declares that the contrast shows "who has a genuine concern for the welfare of the Indian people." It has already been pointed out that India's vast deficit will scarcely be affected by the 50,000 tons of rice which China is sending in exchange for jute and jute goods. But, apart from the Indian Food Minister's expressed hopes of obtaining more Chinese grain, the mere fact that a country which previously imported so much food can now export it even in fairly modest quantities is a good propaganda point. Sections of the Indian Press are telling their readers that land reform has enabled China to solve its food problem in one year.

Evidence to the contrary is provided by Peking's own published statistics, which show that the increase of 10.5 per cent in food production achieved in 1950 fell short of the Government's target by over a million tons, while the more modest 1951 target of a 7.1 per cent increase will still leave total production well below the pre-war average. The Chinese Communist radio has recently admitted the existence of several serious local famines, one of which occurred on Hainan island and another in northern Kiangsu; in neither of these cases can it be argued that cross-country transport problems might have prevented the timely arrival of food even if adequate stocks had been available. While land reform has, doubtless, stimulated production in many areas, its effect has sometimes been to dislocate rather than to inspire; a sharp public rebuke was delivered in March to local Communist leaders in two Honan districts, whose doctrinaire insistence on putting through the reform at a time of food shortage had led to the flight of thousands of people and reduced many to begging for their food. The Government's policy of giving priority in fertiliser supplies to cotton, tobacco and other industrial crops, and the recent epidemics of cattle plague, which killed at least 10,000 draught animals and seriously impeded spring cultivation, are two more factors which make it unlikely that China is already free from hunger. Against such a background the rice shipments to India and the new offer of much larger supplies have an unpleasantly familiar character. A Communist government which exports food for political reasons while its own people go hungry is not acting without precedent.

touches, or seems to touch, the interests of the Russians. During the disturbances which followed the new wage-price agreement last September the Ministry of the Interior tried to dismiss or transfer a number of police officials in Vienna on charges of having helped the rioters instead of obeying orders. With one exception they are still there, though the Control Agreement places the duty of maintaining law and order in the hands of the Austrian Government and only authorises the Allied Council (not an individual occupying power) to intervene if the Austrian Government fails to carry out this duty.

Before this latest conflict Herr Helmer had pointed out that the Soviet authorities continually interfere in Austrian affairs "even to the point of preventing the dismissal of officials who have violated service regulations." Some of these interferences are by local Soviet commanders and are subsequently overridden by the Soviet High Commissioner—provided they have not been over-publicised so that questions of prestige are involved. He has also said that the Austrian police are the backbone of the state and do not provide a basis for Cominform plans for a totalitarian *putsch*. In this he is undoubtedly right. The elections, moreover, told the authorities little they did not know already. They only brought the facts to the notice of the newspapers and the public in a way which has perhaps made Herr Helmer's task of reducing the Communists in the police to negligible proportions more difficult.

The Outlook for Whales

[BY A NORWEGIAN CORRESPONDENT]

THE high price now being secured for whale oil is threatening to tempt newcomers into the industry to an extent that may prove uneconomic to all concerned. In the last few months there have been reports of the preparation of new expeditions in a number of countries, including Italy, which have never before engaged in whaling. All these expeditions are intended to operate in the Antarctic, which is now the only region still offering opportunities for large scale whaling. In the last Antarctic whaling season which ended on March 9th, nineteen expeditions took part, the largest number since before the war. In some prewar seasons this number was surpassed, but the capacity of the individual expeditions is much larger today, with larger and more elaborate factory ships and more catcher boats and auxiliary aids.

The capacity of the whaling industry has probably never been greater than it is today. Certainly it is already much larger than is necessary to catch the maximum quota of whales permitted by the International Whaling Convention of 1944. Proof of this is the successive shortening of the whaling season year by year since the war. The last season began as late as December 23rd, and the whole quota of 16,000 blue whale units was caught in the 77 days up to March 9th. The capacity of the industry is under-employed. Although this represents an economic loss to the community at large, it has not yet affected the prosperity of the whaling companies, who have enjoyed an unsurpassed demand for their oil since the war. There is serious concern, however, about the consequences if Japan, Holland, Italy and possibly other countries all try to join in.

A further increase in the number of expeditions will mean a further drop in the share of each expedition in the quota of whales. A paradoxical situation may arise in which more expeditions will produce less oil, as the full quota of whales will be caught earlier in the season when their content of oil

is smaller than it is later in the season. The alternative might be to lift the present restrictions on catching. This would probably mean the virtual elimination of whale stocks in the Antarctic in a few years. This has happened on other whaling grounds after unrestricted catching. There were already signs of such a development in the Antarctic in the 1930s, but the war brought a much needed respite. There were attempts before the war to restrict catching, more for commercial than biological reasons, but no effective system was achieved until the London Conference of 1944. The agreement reached then has been maintained successfully ever since, but whether it can continue to be enforced now that the whaling fleets have been rebuilt and expanded is open to question.

The necessity for maintaining a maximum catching limit seems clear. Even though practically no whales were caught during the war, the stock has markedly deteriorated. The number of whaleboat days expended per whale caught has risen steadily, and the ratio of rich oil bearing blue whales to other poorer types has declined steeply. It is obvious that the slow breeding whale has not yet recovered from the enormous and unrestricted depredations of before the war. From a biological point of view a reduction rather than an expansion of the present quota is clearly necessary.

Protests from Norway

The veteran whaling nation, Norway, is anxious that the present quota should not be exceeded, for it is concerned about the biological basis of an industry of vital importance as a currency earner. Norway sent ten of the nineteen expeditions engaged this last season, and also provided most of the men for the three British and one South African expeditions. The Norwegian authorities have pursued a policy of discouraging new expeditions. Norwegians are forbidden to take employment on any but Norwegian and British expeditions. A licence has been withheld from a Norwegian whaling company which wanted to operate a new factory ship, and this valuable vessel is having to be used as an oil transport ship.

There were strong protests by Norway when General MacArthur allowed Japan to resume whaling after the war with two expeditions. Norwegian workers were withdrawn from the one Russian expedition after the first postwar season; and the one Dutch expedition has been completely boycotted. A stubborn resistance was maintained against the new Olympic expedition which was sent to the Antarctic for the first time this last season. This cosmopolitan enterprise has a factory ship converted in Germany, registered in Panama, and manned by Germans. Last summer an offer to disband the expedition in return for a payment of \$730,000 or £300,000 by the Norwegian Whaling Companies' Association failed, because the Norwegian currency authorities refused to grant either sterling or dollars for the transaction. It is now reported that the expedition's oil production has been sold at an exceptionally high price, considerably more than the £100 a ton received for the advance sale of the bulk of the Norwegian and British expedition's production to the Ministry of Food last autumn. At Belfast a factory ship, *Juan Peron*, has been under construction for an Argentine company. It appears that in this case Norwegian non-co-operation in providing personnel has created difficulties, and there have been various rumours concerning the disposal of this vessel.

Norwegian whaling leaders view the present expansion plans of other countries with considerable alarm, and are pessimistic about the ultimate outcome of the increasing competition for the limited supply of whales. It appears certain that the next international whaling conference, to be held in South Africa this summer, will have to make recommendations of vital importance to try to protect this industry which, in the Antarctic alone, produces over 300,000 tons of whale oil annually.

Keep me on the run!

says
JACK SCRAP

How many tons of iron and steel scrap would you find in odd corners of your factory or farm if you had a thorough search made?

Find that scrap, round it up, turn it in. Every ton of scrap that gets back to the steelworks will make a ton of new steel.

Scrap Merchants are glad to help with dismantling and collection.

A FREELY MARKETABLE INVESTMENT IN A TRUST
SPREAD OVER THE SHARES OF THE LEADING
30 BRITISH INSURANCE COMPANIES

INSURANCE-UNITS

AT THE PRESENT TIME, these Trust Units are particularly suitable for those who seek a stable income combined with good prospects of capital appreciation.

Dividend Prospects

The insurance companies, whose shares constitute Insurance-Units, have a common policy of maintaining a wide margin between what they earn and what they pay out in dividends. Many of these margins are substantial enough to give the investor high hopes that his patience during the past few years will soon be rewarded.

Advantages of £ Revaluation

These companies receive a large part of their premium income in \$. They also have very big \$ investments. Revaluation of the £ means therefore greater £ income from \$ sources and a considerable increase in the £ value of their \$ investments.

Easy Purchase of Units

Though "Insurance-Units" gives a spread over the shares of the 30 leading British insurance companies, the investor can purchase Units for as small a sum as £10 approximately. Ask any Stockbroker or Bank for full details.

Offer Price 5th Apr. 23/6 Yield calculated in accordance with Board of Trade requirements £3/7 1/2%

THE BUSINESS WORLD

Economic Survey for 1951

"The problem is how to rearm as fast as we can, while maintaining a strong and healthy economy." The economic prospect for 1951 "is in many ways harsh and unpleasant . . . even so, many of the assumptions on which the Economic Survey is based may well prove to be optimistic." The task is presented explicitly; whether it can be successfully achieved is hedged with doubts. Will industry be able to secure an increase in output sufficient, as the Survey hopes, to provide more than three-quarters of the extra goods that the Government needs for defence? Will it be possible to increase export earnings sufficiently to pay for the big rise in the cost of imports that is in prospect this year? Will the stiff rise in internal prices that is implicit in the Survey's reasoning be acceptable to the community or will it delude itself into thinking that the real burdens of defence can be side-stepped by another bout of inflation?

I—Prospects for Output

MANY of the Survey's calculations are based upon one already familiar and hopeful assumption—that production in the industries covered by the official interim index will be 4 per cent higher during 1951 than it was during 1950. This implies no considerable rise beyond the level reached by the end of 1950, which was 4 per cent above last year's average, though it probably implies a slightly higher increase in the production of manufacturing industries (which in recent years have risen rather more than have the "mining, building and public utilities" components of the index). It is difficult to assess the possibilities of achieving—or approaching—these objectives. The factors that will contribute to the assumed increases—manpower, fuel and power, steel, and other raw materials—and the output of manufacturing industries in general, are examined in the document with a degree of circumspection that allows of far less detailed "estimates" or "forecasts" than were contained in previous Surveys.

Manpower.—Concentration upon the labour requirements of the defence programme has entirely replaced the discussion, in earlier years, of attempts—generally unsuccessful—to divert manpower from employment such as distribution to essential industries short of workers, including coal, agriculture, textiles, and pottery. Indeed, the record and forecasts of manpower within individual industrial groups have now disappeared from the Survey. Its statistics, as Table I shows, are designed to cover broad divisions that convey little impression of manpower logistics for defence, while such detailed estimates as it provides in the text are heavily swathed in qualifications.

It appears that rather less than half a million workers were engaged upon defence production in mid-1950: and that by the peak of the programme in 1953-54 this figure will have to be "more than doubled." During the next two years increasing numbers serving in the armed forces will offset the small increases expected in the total population of working age, leaving total civil employment practically constant. Not all of the extra half-million required for defence production will need to change their jobs, since many employers will switch to defence orders: but the aircraft and ordnance factories

will require 175,000 extra workers, and manpower will have to be found for the additional capacity to be created to produce aero-engines and tanks. The first difficulties to be faced will be in finding sufficient draughtsmen, jig-makers and tool-makers to prepare the production lines for defence contracts. In general, the Government will rely upon existing methods within the Ministry of Labour to assist the changes it has outlined: "special attention" to the labour requirements of

defence work in engineering, whatever that may signify, is mentioned, as are "the system of labour preferences," training, up-grading and dilution. The Survey touches upon one form of diversion of labour—as distinct from formal "direction" which, according to a statement by Mr Bevan this week, will not be restored unless or until actual war appears to be imminent.

In some cases the allocation of scarce materials and control over output will make it impossible for particular firms to keep their existing labour fully and usefully employed. Release of labour under such circumstances will help in providing workers needed for defence production, so long as it is in the right areas and the labour is of the right type.

The qualifications are formidable: while much of the labour thus forcibly "released" may be in areas where defence production needs workers, its suitability for defence work may be more doubtful. The Government holds that such passive measures "seem likely to be adequate" for the present, which is to say that labour may be attracted to defence work by the normal, un-

planned economic incentives: following its failure since the war to influence the flow of labour within industry in desired directions, the Ministry of Labour appears to have despaired of "manpower planning" in a peaceful economy.

Coal.—The Survey is rather less specific in its estimates of what "may be looked for" from the coal industry this year than the Minister of Fuel and Power was in the previous week: its hopes of production almost coincide with his, but it has little to say about inland consumption, stocks, or exports. It holds that a total production of 219 to 222 million tons may be achieved this year (deep-mined 208-210 million tons, and open-cast 11 to 12 million tons): this appears reasonable on the basis of the favourable trend of production during the first quarter of this year. The Survey hopes that manpower may continue to increase, but recognises the counter-attraction of industries engaged in rearmament; it is not easy to be confident that this recent rise of the labour force in mining can long continue, but the industry's present numbers are consistent with the production target. It is expected that inland consumption will rise by between three and four per cent, as it did last year; and there is a somewhat pious observation that "It is no less important to begin to increase our exports, if we prudently can, from the low levels of the winter"—on the basis of which Britain's allies in Western Europe must presumably make their own plans.

Electricity.—There is a note of complacency in the Survey's single paragraph upon electricity generation. It remarks that the "better balance between supplies of different types of equipment" permitted more generating capacity to be brought into service; but as this new capacity was not enough to offset the growth of demand for electricity, consumers remained as short of power during peak periods as they had been, and apparently no nearer satisfaction of their needs. Co-operation is requested from domestic consumers to avoid power shortages that would interfere with industrial production, but no hint is allowed to appear that special measures might be taken to render this co-operation more likely.

Steel.—Difficulties in supplies of raw materials, particularly imported scrap and iron ore, are mentioned in the Survey as being likely to affect steel output; but their full importance may not appear to have been accepted. From the increased capacity becoming available this year under the industry's development

Exports of finished steel	1,448	1,735	2,350	—
Deliveries of finished steel to home market	9,674	10,471	10,200(a)	12,250

(a) Includes the equivalent of 100,000 ingot tons obtained by drawing on producers' stocks.

plan, it states, a crude steel output of 17.75 million would be possible if full supplies of materials were available, but in present conditions "it would be unwise to rely on" more than 16 to 16.25 million tons, as shown

in Table II. Even this, it is admitted, might prove to be an optimistic forecast (though it is one of the few concerning materials or production that the Survey is prepared to include in a statistical table). But on this basis 12.25 million tons of finished steel would be available for home needs and for exports, which will be reduced (supplies of imported steel, also expected to be lower, are left out of the sum). There seems by now little doubt that this forecast is distinctly optimistic: the assumption of an output almost unchanged from that of 1950 is not easy to reconcile with the reductions in output that have already been forced upon certain producers by the running down of stocks of raw materials.

Raw Materials.—Discussion of the shortages of other raw materials that are now besetting the economy contains little that is new, and it reveals no considerable degree of prescience on the part of the planners. It is significant that sulphur, which was scarcely mentioned in the 1950 Survey, this year ranks first in importance among the critical shortages. Reference is made to the projects for producing sulphuric acid from other materials and for recovering sulphur from gas-works, coke-ovens, and oil refineries; but it is admitted that these cannot be expected to yield large amounts for at least two years. On non-ferrous metals, wool and softwood, the story is again familiar. The running down of material stocks during a period in which official quarters were claiming credit for the enhancement of the gold and dollar reserves is attributed to the development of "world scarcities"; there is no admission that in certain cases at least it may have been due to a wrong calculation of market prospects by official purchasers.

Defence Production.—The main burden of rearmament will fall upon what the Survey calls "the metal-using industries"—a heterogeneous group including engineering, vehicles, aircraft, hollow-ware, cutlery, shipbuilding, jewellery and drop forgings. It is this group that has shown the greatest increases in output since the end of the war: and in 1950 it was responsible for roughly half the country's exports. The Survey holds that the output in 1951 of this group of industries will be limited by steel and non-ferrous metal supplies, and assumes that it will not rise above the level achieved in the last quarter of 1950—which implies a rise of perhaps 7 per cent in the yearly average. With this "modest increase" in output, and cuts in civilian consumption, it hopes to meet most of the direct defence demands (£350 million in the present financial year) upon these industries; total supplies for export and investment should not, it estimates, be seriously reduced, though exports of certain varieties of plant and machinery will have to be cut. "The aim must be" to increase exports of other metal goods, and maintain the total volume of exports from the group in 1951 at the average level of 1950 though less than that at the end of that year. Plant, machinery and vehicles for home investment, again, should be maintained in total volume, though a larger proportion will be needed for defence production. On specific defence needs, some anxiety is expressed about supplies of machine tools; at the time that the Survey was completed, at any rate, the substantial imports of tools from the United States and from Europe with which it is hoped to supply a very large part of the defence needs were "not yet assured," and the need to cut exports as well as civilian supplies of tools is clearly accepted.

Textiles.—The Survey promises considerable burdens for the textile industry. Rearmament demands, it records, will "fall with particular severity upon the cotton industry"; at the same time, "a new export drive by the textile industries is called for." Though no export targets appear in the Survey, it is stated that these are now being worked out in conjunction with the textile and other industries. It is recognised that "it may not prove possible to achieve more than a moderate increase in the volume of textile exports," but owing to the fact that prices of these goods have advanced by much more than those of other exports, it should be possible for textiles, and particularly wool goods, to earn "very much more." Supplies to the home market in 1951 will be subject to "some reduction"; but the authors of the Survey are able to temper this prospect with the assurance that a substantial part of home supplies

II—The Balance of Payments

The theme of rearmament dominates the balance of payments section of the Economic Survey as completely as it does the others. The Government reaffirms its determination to ensure that in the cold war the defence burden will not, as in shooting wars, be met by measures that would mortgage the future, that is, by further liquidation of overseas assets or accumulation of overseas debts. The aim, therefore, is to achieve approximate equilibrium in the overall current balance of payments during 1951 apart from any purchases for the strategic stockpile, for which £100 million is estimated for the calendar year.

In facing this task in a year of steeply rising import costs, the nation has, however, something in hand. In 1950, the United Kingdom achieved an overall surplus of £229 million in its balance of payments. This is the largest surplus, in terms of money values, to be achieved for thirty years. It compares with revised estimates of a current surplus of £30 million for 1949 and of a deficit of £30 million for 1948. The improvement as between 1949 and 1950 has been wholly due to the invisible account. The balance of visible trade in each year is surprisingly the same—a net deficit of £153 million. The surplus on invisible account, however, which amounted to £183 million in 1949 had risen to £382 million in 1950. There was an increase of one-third in income from tourists and a substantial, though relatively smaller, increase in shipping earnings. The dominant factors were, first, the earnings of overseas investments (mainly those connected with the production of raw materials such as rubber, tin, and other non-ferrous metals) and, secondly, the overseas operations of British oil companies, which enjoyed both higher prices and higher sales in 1950.

The changes in the United Kingdom balance of payments are shown in greater detail in Table III, which is based on the new definitions of the current account surplus and of the United Kingdom's sterling liabilities used in the latest Balance of Payments White Paper. It will be seen from this table that during 1950 the United Kingdom's sterling liabilities to the rest of the sterling area increased by no less than £382 million. There was, however, a reduction of £27 million in liabilities to non-sterling countries. The divergence of these movements is partly accounted for by sales to Europe by the United Kingdom; the sterling countries receive payment in

1950 went into stocks. Supplies available on the home market may, therefore, turn out to be "not much less" than in 1950: and in any case, the consumer is reminded, their prices will be such that he will not be able to buy as much as he did last year.

The Survey plainly reveals the Government's fears that the rise in production may be prejudiced by the shortages of materials and dislocations in the switching of many factories to defence production. It points out that in many cases the first of these difficulties may be countered by the substitution of less scarce materials; and that the rise in prices of such materials may drive demand away from products containing them. But in its final section it frankly states that "we cannot count on getting the raw materials required for a 4 per cent increase in industrial production."

sterling, thereby adding to their balances, while the European countries pay for their purchases either by running down their own sterling balances or, more usually, by borrowing from Britain through the European Payments Union. The Economic Survey points out that the big rise in prices of some of the most impor-

tant sterling area raw materials, such as rubber, tin and wool, must be expected to produce a "further considerable rise" in the external sterling assets held by the overseas sterling area in 1951.

The regional accounts reveal radical changes in Britain's balance of payments with some of the other sectors. The direct deficit with the dollar area has been reduced from £303 million in 1949 to £111 million in 1950. The account with OEEC countries, which showed a deficit of £8,000,000 in 1949, had changed to a surplus of £118 million in 1950. With the rest of the sterling area the total surplus was reduced from £284 million in 1949 to £225 million in 1950, and the Economic Survey suggests that it will be difficult for the United Kingdom to prevent a further decrease.

defence work may be more doubtful. lateral trade is again holds that such passive measures "as in the United adequate" for the present, which is to say, the light of attracted to defence work by the payments.

The complicated pattern of multi-lingual evidence when the figures of change in the United Kingdom's sterling liabilities are viewed in the light of the sterling area's gold and dollar balance.

Details of this are given in Table IV, which shows the remarkable improvement that took place in payments with the dollar world between 1949 and 1950. It is an improvement in which the overseas sterling area has played the major part, converting a deficit of \$132 million for 1949 into a surplus of \$788 million for 1950. But Britain's performance, in reducing its own dollar deficit to nearly one quarter of what it was in 1949, is certainly remarkable. Mr Gaitskell revealed in the House of Commons this week, however, that in the first quarter of 1951, while the sterling area's dollar earnings

continued to boom, Britain's own dollar deficit persisted and its overall balance of payments deteriorated substantially.

The financing of the gold and dollar surplus or deficit and the concurrent changes in the gold and dollar reserve, are shown in Table V. This table brings the story up to date by including the end-March figures, which do not appear in the Economic Survey. In this last quarter the gold and dollar reserve has risen from \$3,300 million to \$3,758 million. The Survey, referring to the gold and dollar reserves, points out that they are still insufficient to meet Britain's essential long-term requirements. Of the latest quarterly increase of \$458 million, only \$98 million is due to ERP reimbursement, while \$76 million was earned through EPU; in March, however, the total surplus in EPU dropped to \$5 million (against \$33.6 million in February). If the ERP

III—Investment and Savings

ALTHOUGH the task of maintaining a bare equilibrium on the external balance of payments is now expected to be much more onerous than had been assumed by earlier official estimates, the Economic Survey firmly reiterates the Government's determination to ensure, so far as possible, that the burden of rearmament does not fall upon the maintenance and development of domestic capital assets. Despite the large demands that defence work will make upon the building, civil engineering and machinery industries, and despite the dislocation to be expected from shortages of raw materials, it is estimated that the volume of fixed investment, including repairs, may show "a very slight increase."

element is excluded, the latest quarterly gain is only \$38 million smaller than that for the last quarter of 1950—and this despite the fact that about three quarters of the \$130 million net of dollar capital that flowed in in anticipation of sterling revaluation in the second half of last year is believed to have been used for current payments in recent months.

This past history, however, is far from being the most striking feature of the balance of payments chapter in the Economic Survey. Its outstanding feature is the estimate that the rise in import prices alone will add no less than £700 million to the import bill in 1951. Hence, on the assumption that an extra £150 million of goods can be secured for restocking—apart from strategic stockpiling—it estimates that the total cost of imports will reach £3,200 million, or £850 million more than

TABLE V.—BRITAIN'S GOLD AND DOLLAR RESERVES (U.S. \$ million)

for 1951. It hazards the guess that the surplus on invisible account in 1951 should be of the order of £450 million (after allowing for payment of the first annuities on the American credits) compared with £382 million in 1950. On this basis, the exports required merely to achieve a balance will be about £2,750 million, or £530 million more than in 1950. It is reckoned in the estimates that the physical volume of exports will be £100 million larger, implying that £430 million will be found from the increase in export prices. The tone of the Economic Survey does not suggest that these targets can be reached. It admits that a large contribution towards increased export earnings may be looked for from higher prices, but it points out that "too large or too rapid an increase in export costs would endanger long-term trading connections." The Survey also suggests that there will be growing difficulties in selling certain types of exports in the face of the recovery in German and Japanese production.

This seems to be a distinctly optimistic assumption—even if it can be presumed that firm steps will be taken, by budgetary and other controls, to reduce the volume of resources absorbed by consumption. It is based on the hope that output in the building and civil engineering industries (which account for over half the total of fixed investment) will "go on rising at least as fast as in recent years"—in which the increment of productivity is estimated to have averaged 4-6 per cent. Most of the outlay on defence works and buildings, which is put at £80 million in the calendar year 1951 and at £145 million in 1951-52, is included in the estimates for the defence programme, but work on Government-

owned factories, research establishments and storage, estimated at £30 million in the fiscal year, is classified as investment. Allowing for this, it is admitted that the volume of civil investment will decline—though the Survey wisely declines to guess “how large the cuts will be, or where they will fall.”

This year, therefore, the usual forecasts by industrial categories are omitted, and so is the detailed appendix

TABLE VI—CHANGES IN REAL OUTPUT AND EXPENDITURE IN 1951
COMPARED WITH 1950

<i>Consequence for consumption:—</i>	
Fall in personal consumption	50

on investment that has been customary in recent years. These omissions need not be regretted, for this is a sphere in which estimation is prone to very wide error; figuring in earlier years has tended, by its very detail, to lend an air of unjustified reliability to the whole series of forecasts. It certainly is to be regretted, however, that in giving classified figures for previous years (1948 to 1950), the statisticians have once again changed the basis of classification and definition, thus making it impossible to reconcile either the totals or the details for 1948 and 1949 with the figures previously published for those years.

The estimates of floating investment are even more tenuous. It is expected that the volume of stocks of imported food and materials will, apart from strategic stockpiling, be at least maintained (in 1950 they fell “substantially,” but no quantitative estimate of the fall is given), but that the addition to work-in-progress will be smaller, because of the decline in the rate of increase of industrial production. On this basis, it is assumed that the physical volume of total home investment (fixed and floating, and including some defence outlays) will be roughly the same as in 1950, but that its monetary value will rise from £2,277 million to £2,315 million, excluding £100 million that it is hoped to spend in this calendar year on strategic stockpiling and excluding, too, the appreciation of existing stocks.

Notwithstanding the virtual certainty that stocks of non-essential consumption goods will run down, and despite the probability that building and constructional work will be held back by shortages, home investment is not expected to afford any net relief to the national economy. A slight relief is, however, expected from the external account: it is assumed, with distinct optimism, that the physical volume of exports can be raised by £100 million, but against this it is estimated (with equal optimism) that the volume of imports will be raised by £125 million—apart from stockpiling. If industrial production were to be increased by 4 per cent, and if there were “an associated increase” in other production, the additional resources would amount to £325 million. This, with the net inflow of £25 million of overseas goods, would provide £350 million towards the additional requirements of Government expenditure;

for the calendar year these are put at £400 million, in real terms. These calculations, all at 1950 prices, therefore imply that the required cut in the physical volume of consumption would be no more than £50 million.

Up to this point, the analysis, though subject to many debatable assumptions, is reasonably straightforward. But it becomes more complex, and much more questionable, when an attempt is made to translate the “real” changes into monetary terms. The expected increase in the monetary value of the gross national product, allowing for price changes attributable to the rise in costs now foreseeable is, of course, much greater than the assumed increase in “real” output; it is put at £900 million. As Table VII shows, the gross product at market prices is estimated at £14,500 million in 1951, compared with £13,572 million in 1950 and £12,933 million in 1949; the corresponding figures for net national income at “factor” cost would be £11,760 million, £10,846 million and £10,426 million respectively. On this basis, after providing for Government current expenditure on goods and services and for the investment outlays, the monetary value of resources available for consumption would be £9,675 million at market prices, compared with £9,041 million in 1950 and £8,567 million in 1949.

* Domestic servants' wages, output of private non-profit making bodies and income from abroad.

In other words, although it would cost consumers £630 million more (even in the absence of an inflationary rise in prices) to buy these goods, they are expected to get £50 million less in real terms.

The Economic Survey emphasises, as several recent articles in *The Economist* have also done, that the task of maintaining equilibrium “may not be so great as at first sight might appear”—because part of the increase of £900 million that is assumed to occur in money

income will accrue, not to consumers, but to industrial profits, while a large part of the addition to consumers' spending power will be mopped up by the higher prices they have to pay for their purchases. The official estimates in the so-called “combined capital account”—which relates the investment demands to the prospective flow of savings created without the aid of inflation—

* Assuming 1950-51 tax rates.

plainly show that the rise in prices of consumers' goods attributable to increased real costs will not by itself exert a sufficient restraint upon consumption. The estimates of the flows of savings are, however, particularly difficult to interpret. Despite the big rise that is expected in prices and in the money value of consumption, and despite the gains in productivity achieved last year, it is

IV—Budgetary Implications

The net result of this complex figuring (displayed in Table VIII) is that personal savings would need to rise from an estimated £332 million in 1950 to £445 million in 1951 if the whole process of financing were to be achieved, at existing rates of taxation, without a further dose of inflation. Since personal savings, as the Economic Survey points out, are much more likely to fall than to rise, these estimates imply an inflationary “gap” of the order of, say, £150 million. But it is admitted that the whole reckoning is based on flimsy assumptions. The most important of these is that industrial production will rise by 4 per cent; and the Survey bluntly states that Britain cannot count on getting the flow of raw materials necessary to make this possible. It points out that a shortfall of even 1 per cent would mean that available resources would be £80 million less than the notional estimates assume—and “the aim would be to concentrate this reduction, so far as possible, on consumption.” In other words, the required volume of additional “disinflationary” taxation would be further increased, though not correspondingly, since net spendable incomes would also fall short of the estimate. Finally, it is emphasised that the disequilibrium in the fiscal year 1951-52, to which next week's budget will be related, will be greater than in the calendar year 1951 (to which the Survey's figures refer) because defence expenditure will be expanding rapidly.

For these reasons, it is clear that if the budget were to be strictly related to the calculations and arguments

estimated that Government revenue at present tax rates would be only £87 million higher in 1951 than in 1950; of this rise income tax and surtax would provide only £44 million. After allowing for the rise in Government expenditure on current account (including an extra £50 million for debt service, because of the first annuities that will fall due on the North American loans), the estimated true surplus for the calendar year drops to only £15 million, in contrast with £481 million realised surplus in 1950. It should be noted that this surplus is computed after providing for war damage and other capital transfers; if these are added back, the prospective surplus becomes £145 million, compared with £626 million in 1950.

★

Business savings, however, are expected to rise substantially. Depreciation allowances have apparently risen much more sharply in 1950 than was expected twelve months ago; and no further increase is assumed for 1951. But undistributed profits and business tax reserves are estimated at £1,310 million in 1951, in contrast with £687 million in 1950. No less than £700 million of this expected surplus of business profits (and £270 million of the 1950 surplus) would, however, represent profit arising from the money appreciation of stocks. Since the corresponding increase in the money value of stocks is excluded from the investment side of the account (as well as from the estimate of national income) these stock-appreciation elements in profits have to be excluded from the available savings arising from companies. This reduces the expected rise in available business savings to slightly below £200 million.

presented in the Survey, the additional fiscal burden required to be imposed for 1951-52—in higher taxation, cuts in subsidies or specific charges for social services—could be reckoned at £200 to £250 million. And it is difficult to see how, even on the most sanguine assumptions, any honest attempt at disinflation could put it at much less than £150 million, with perhaps some delay in the impact of part of it.

But, whatever the Chancellor decides, it is clear that the greater part of the burden to be borne by the public will be imposed by the rise in prices—a rise so large as to change quite radically the character of the problem of inflation. It is estimated that the average rise in price of consumer goods during the year will be about 7½ per cent; this implies, of course, a much bigger percentage rise from the beginning to the end of the year. The risk of a spiral movement is very much greater now than at any previous postwar period. The Government therefore appeals again for “commonsense and restraint,” but it is noteworthy that its references to its “personal incomes” policy are much more cautiously phrased than in the past. The declaration that “there should be no unreasonable increases in wages, salaries or profits” clearly implies a recognition that mere exhortation cannot any longer be expected to exert much effect. The greater is the need, therefore, for more courageous standards of disinflationary policy than those followed in previous budgets—and also for a new approach to monetary policy.

Business Notes

Pre-Budget Markets

The City's first reflections upon the Economic Survey—rather muddled ones in some instances—have shaken the relative calm with which, only a few days ago, the stock markets were approaching the budget. Despite the Survey's indications, for what they are worth, that the Government may be taking a reasonably "tough" attitude towards the problem of inflation, the City seems to have concluded from its study of the figures that inflationary pressures are bound to keep several steps ahead of any counter-measures the Government may essay. That, at least, is the conclusion to be deduced from the behaviour of the markets. Whereas industrial equities, broadly speaking, have shown a further net gain, gilt-edged have been flat. The paradoxical firmness of the gilt-edged market that set in before the Easter holiday continued until Monday last. During that fortnight there were price increases on virtually every working day, with gains on Monday ranging up to $\frac{3}{8}$. Consols $2\frac{1}{2}$ per cent had risen by nearly 2 points from their mid-March level, while 4 per cent Consols, the net price of which had dropped below par, recovered to a shade over 101. On Tuesday and Wednesday of this week this trend was violently reversed; on each day there were losses of up to $\frac{3}{8}$. On any discerning view of the longer-term prospect, this behaviour of the market is more rational than its earlier strength; but, in the light of the City's recent attitude, and of the fact that this week it has been worried about the possibility not only of an increase in profits tax but of new measures to reinforce dividend limitation, the reaction in gilt-edged was unexpectedly sharp.

Industrials, too, were rising until Tuesday last, when the *Financial Times* index, at 121.9, was a full point above its level at the end of last week and 2.3 points above the nadir of the mild recession that started in mid-February. This recovery was apparently founded upon the realisation that this year a much larger part of the financial burden of rearmament will be thrust upon the public by higher prices than by higher taxation—a fact that is very clearly driven home by the estimates and arguments in the Economic Survey. These arguments, however, served to dispel the widespread illusion that any consolation can be found in this prospect, and thus provoked a setback in industrials at the opening of business on Wednesday—as well as a tendency to seek refuge in companies, such as South African gold mines, registered outside the United Kingdom. The early losses in industrials, however, were generally regained, thereby demonstrating afresh the City's present inability to take the measure of this year's financial problem or to guess the Chancellor's intentions in coping with it.

* * *

The Budget Surplus

The financial year 1950-51 came to an end last Saturday with the large overall surplus that had been shown in previous weekly Exchequer returns unimpaired by any last minute surprise. As the accompanying table shows, ordinary revenue exceeded Sir Stafford Cripps's estimate by £80 million, while ordinary expenditure fell short of his original estimate by no less than £197 million. The ordinary surplus, at £720 million after provision for sinking fund, was therefore £277 million higher than that expected last April; since £43 million of defence supplementaries and £24 million of civil supplementaries had been introduced during the year, the improvement over the revised estimates was even greater than this. The "below the line" accounts did not make such a good showing, for net payments here were £23 million greater than originally expected; net lending to local authori-

ties exceeded the estimate by £34 million and there was an advance of £23½ million to the Raw Cotton Commission still outstanding at the year's end. Nevertheless, the overall surplus for the year, taking current and capital transactions

BUDGET OUTTURN AND ESTIMATE (£ million)

* Including Sinking Funds.

together, came out at £247 million—a notable turn-round from the overall deficit of £7,000,000 for which Sir Stafford Cripps had budgeted.

All this, of course, does not have any major bearing on the prospects for next week's Budget. This is not simply because the surplus shown in 1950-51 has already been used for repayment of debt. It is mainly because the attainment of this surplus in the old year is little or no guide to the chances in the new; most of the unexpected gains on estimate were attributable to the performance of expenditure and it is already known that in 1951-52 expenditure will greatly exceed even last year's estimates. It should be noted, too, that in any case the Chancellor's approach to the budget is, or should be, conditioned by all the complex factors entering into the nation's capital account (discussed on pages 812-14 of this issue) rather than by the particular income and expenditure flows that happen to find their way through the budget accounts. The main question aroused by last year's Budget outturn is whether the substantial shortfall in expenditure below the estimate is partly a symptom of genuine Government economies or merely a sign that the trading departments have been living off stocks and that other expenditure has been delayed by physical shortages.

* * *

Living Off Stocks

On this point, evidence is accumulating that any real economies in Government expenditure have been only very modest ones. Estimates of the physical fall in 1950 of stocks held by the Ministry of Food were given in *The Economist* on February 24th; it is difficult to assess the reduction in Ministry of Food expenditure that will have been caused by this liquidation, but it must certainly have been large. The Economic Survey also reveals that there was a "substantial fall" in stocks of imported food and raw materials last year; it shows, incidentally, that current Government expenditure on goods and services was only £34 million lower in 1950 than in 1949. And, finally, the civil estimates for 1951-52 show no sign of any decrease below the original estimates for 1950-51; the new estimates have pre-

sumably been drawn up on the Economic Survey's formula that stocks of imported raw materials and food in the present year "should be at least maintained." The rather surprising shortfall of defence expenditure below the original estimate (and well below the original estimate plus the supplementaries) is apparently due to delays in getting work started; it is accounted for by a £16 million shortfall in Ministry of Supply expenditure on defence.

The £80 million excess of ordinary revenue over estimate was largely due to an excess of just under £35 million in customs receipts and of just under £12 million in excise receipts; these increases may have been due partly to the end of petrol rationing, partly to intra-European trade liberalisation, and partly to higher import prices (which automatically boost the yield from *ad valorem* duties). Among other tax yields, income tax brought in only £16 million above estimate despite the rise in earnings, while the yield of profits tax was actually £2,300,000 below estimate. Receipts from sales of surplus war stores were £10 million and from motor vehicle duties £5,000,000 higher than had been expected, but death duties were £10 million below estimate while the yield from surtax was little changed.

* * *

Meatless Months?

Reports from Argentina suggest confidently that the meat negotiations are likely to be settled soon. The cause of this sudden swing of expectations from deadlock to settlement is not yet known. But settlement, if it came, would certainly mean that Britain would have to pay substantially more than the average of £104 a ton offered to Argentina three months ago; an average price of £125 a ton has been mentioned, which itself represents an advance on the £120 a ton asked by the Argentine Government last

February. Price, however, is now almost of secondary importance. The vital question is whether, even if a successful conclusion emerges from the negotiations, any sizeable quantity of meat can be shipped from Argentina to this country in the next two or three months.

Last season the severe drought in Argentina forced farmers to market a large number of light, unfinished cattle, and although pastures have improved considerably this season and cattle are likely to be well finished, total cattle numbers have declined from 45 million to 43 million. In addition, domestic consumption of meat in Argentina has reached a new record level, while shipments of canned beef to the United States in 1950 were double those of 1949—88.5 million lb. against 44.5 million lb.—and this high rate of export is continuing. Another factor reducing the supply of Argentine beef is the Argentine Government's restriction on the marketing of young cattle. This decree has encouraged the export of live cattle to neighbouring countries, chiefly Chile; in 1950 some 130,220 head of cattle were exported, representing an increase of 40 per cent. on the 1949 figure.

The chances of large shipments to this country in the next month or so therefore seem slight. The present restricted meat ration requires 18,500 tons of carcase meat a week; so far this quantity has been provided from stocks and imports from Australia and New Zealand. Stocks are now down to their barest minimum. For the past month shipments from New Zealand have been held up by the dock strike, and New Zealand farmers have decided, particularly in view of the high price of wool, to keep their lambs over the winter and to shear them in the spring. Thus imports from New Zealand between April and July will be greatly reduced; imports from Australia this year have been barely a half of last year's quantity, so that even eightpennyworth of meat is clearly in danger. Supplies this month and next will be augmented by home killings. But unless an agreement with Argentina is signed quickly and unless a minimum shipment of

REFUGE Assurance Company Limited.

Chief Office: Oxford Street, Manchester, 1.

In 1950 representatives of the Company provided service, usually at the homes of the policyholders, in respect of **NINE MILLION POLICIES**, making more than **200,000** maturity payments totalling **£5,100,000** and paying **£3,400,000** in death claims.

Failure at Torquay

Although the tariff negotiations at Torquay are supposed to have been held in the closest secrecy and the results are not due to be published until May 12th, it is now clear that there will be no agreement between the United States and Great Britain. Other Commonwealth countries—including Australia, South Africa and possibly New Zealand—will also be unable to reach any new agreement with the Americans. These failures are unlikely to be compensated by the positive achievements of the Torquay conference, which can therefore already be written down as a failure. Although it is true that spectacular results were never expected from Torquay—since the previous rounds of tariff negotiations at Geneva in 1947 and Annecy in 1949 had skimmed much of the cream off the potential concessions—the complete deadlock that has been reached in the negotiations between the United States and most of the Commonwealth countries is a sad disappointment on both economic and political grounds.

No details of the difficulties that led to this deadlock can yet be divulged, but it seems clear that the negotiations were mainly wrecked on the rock of Commonwealth preferences. The Americans' dislike of preferences has always been deeply rooted and their desire to secure impressive concessions on this front has lately been enhanced by the difficulties that the United States Administration has been encountering in obtaining Congressional approval, not only for the International Trade Organisation Charter but also for the Reciprocal Trade Agreements Act. The State Department has long believed that no concessions would do more to sweeten the present rather sour outlook of Congress on trade liberalisation than sizeable reductions or eliminations of the margins of imperial preference. When the United States offers of concessions were announced to Britain and the other Commonwealth countries at the beginning of the Torquay conference, therefore, they were found to include a large number of items on which Britain had made no requests and which were in fact of little value to the Commonwealth countries. The United States price for this unexpectedly large package was a demand for considerable reductions in margins of preference within the Commonwealth. To this demand most of the Commonwealth countries felt unable to accede. Britain appears to have pleaded its "uncertain future" as one of the main reasons why it could not at present retreat from the preferential system at the price offered by the United States.

* * *

Repercussions of the Deadlock

This failure has had wide repercussions on other negotiations at Torquay. Britain had very substantial secondary interests in some of the negotiations conducted by the United States with other countries (especially those with Germany) and it is probable that some of the concessions that the Americans originally offered to these countries will now be withdrawn, since the Americans would be obliged to extend such concessions to Britain under the rules of the conference. The negotiations between the United States and the Commonwealth group have also been complicated by the fact that a Commonwealth country that grants a reduction or an elimination in a margin of preference does so not so much at its own expense as at the expense of the third party that enjoys the preference. This has set up a criss-cross pattern of interests and the Americans have repeatedly complained that they are being called to pay twice for their concessions, once to the country granting the reduced

margin and after that to the country that previously enjoyed the preference. The United Kingdom has argued throughout that in these matters the Commonwealth has to be regarded as a single group. There have in fact been suggestions that a Commonwealth conference should be convened to restate the view of the Commonwealth on this issue in the light of such international obligations as Article 7 of the Lend-Lease Agreement and the General Agreement on Tariffs and Trade. These suggestions have, however, been opposed by Canada, which, almost alone among the Commonwealth countries, has succeeded in completing a satisfactory agreement with the United States. Canada wants at all costs to avoid the obligation to make a definite choice at this moment between closer economic adhesion to the Commonwealth and freer trade with the United States.

When the results of the Torquay conference are announced, it is likely to be stressed that at least a hundred separate agreements have been negotiated and that some of them (especially those that involve Germany, which was appearing for the first time at a GATT conference), are likely to yield considerable benefits. Britain's own agreements include those with Germany, Peru, the Philippines, Turkey and France. These, however, are very "small beer" in relation to what the conference might have provided. The blame for failure cannot be attributed until more is known of the specific differences on which the talks foundered; but wherever the blame may lie, there seems to have been a surprising blindness to the wider political issues that were at stake at Torquay.

* * *

Steel Output and Prices

Steel output figures for March, which will appear shortly, should not reflect the influence of raw material shortages upon the industry by more than perhaps a slight decline. But production in the industry is now beginning to be affected fairly generally. From Scotland, the North-East coast, Lincolnshire, Sheffield and South Wales there have been reports of local interruptions in the output of individual firms; and the industry as a whole is probably reducing its stocks of scrap and iron ore.

These difficulties, unfortunately, seem certain to be accentuated in the next few months. Supplies of imported iron ore continue to be affected by the shortage of shipping, apart from the competitive demand now being experienced from America; coal shipments to Europe are still taking a considerable amount of tonnage, and other bulk freight movements are also competing for space. While the recent fuel economy measures have been in force, it has generally been possible for the industry to obtain just sufficient coke to smelt the ore it was receiving; but further switching to lower-grade domestic iron ores would require larger coke supplies, and these are not likely to materialise. While the supplies of iron ore seem unlikely to improve, those of imported scrap are certain to deteriorate; Germany is likely to cut its supplies from two-thirds of the 1950 rate to nearer a half. The industry's drive for steel scrap at home is being pursued vigorously, but there may not be much greater supplies to be had than are already being obtained. And it is virtually certain that another increase in the price of steel will soon have to be imposed to meet higher costs of materials and transport—perhaps as much as £3 a ton.

For many steel consumers the shortage has already become acute. In the lighter engineering industries there is already a considerable amount of short-time working, though managements are for the moment reluctant to dismiss redundant workers; in a few areas workers are changing over to companies whose steel supplies are for the present assured by their possession of defence contracts. But even these are expecting the conflict of demand for steel between defence and civilian production to make itself felt much earlier than was expected. Official forecasts of steel consumption this year

NEW DEFENCE BONDS

Higher Rate of Interest

- Interest increased from 2½% to 3%.
- Interest paid to you half yearly—Income Tax is not deducted at source.
- Repayable at par on the interest date next following ten years after date of purchase, or at 6 months notice.
- Maximum amount which can be invested £2,500 including previous issues.
- Buy them through Banks, most Post Offices or through your stock-broker.

Finance for the Private Company

Rising costs of plant, stocks, and work in progress have combined with taxation to set new problems for the Private Company in raising additional capital or long-term funds. To assist sound enterprises in solving such problems within the limits of today's priorities is one of the functions of I.C.F.C.

I.C.F.C. operates on commercial principles and offers despatch, economy and flexibility in method.

were based upon the assumption that with the economy in a state of full employment, even a switch to rearmament could not greatly increase the national steel consumption per head; whatever the validity of this formula, it was originally allied with the hope that steel output could be maintained at roughly last year's level (a belief also expressed, with characteristic caution, in this year's *Economic Survey*). That does not at present seem likely to be fulfilled; and the possibilities of some closer control over steel supplies, at least for ensuring supplies to defence producers, are correspondingly greater.

Rise in Bank Advances Continues

Between mid-January and mid-March bank advances in this country were rising by about £12.5 million a week, compared with a less steady average rise of about £8½ million a week in the same period last year. The clearing banks' statement for March mirrors the same trend as did their statement for February. Once again the fall in net deposits, at £27.1 million, is significantly less than the fall recorded a year before, when it was £58.9 million. Once again the Government's net repayment of indebtedness to the banking system was broadly the same as in the previous year; the clearing banks' holdings of cash, floating debt and call money fell by £87.7 million this March compared with £87.1 million in March, 1950. And once again, therefore, the smaller rate of fall in net bank deposits has been mainly due to a greater increase in advances, which rose by £50.9 million this March compared with £29.1 million in March, 1950. In addition there have again been some fairly substantial net purchases of investments by the Midland bank; this bank bought just under £12 million net of investments last month, although the other clearing banks sold about £3,500,000 on balance.

It seems probable that bank advances will continue to rise in the next few months unless the pace of repayments out of the proceeds of new capital issues rises still further. The *Economic Survey*, in a reference to the £120 million rise in bank advances in 1950, argues that the expansion of credit last year was probably not excessive in view of the increase in output and prices. This year, although output will rise by less than in 1950, prices are likely to rise by much more. In fact the authors of the Survey estimate that the value of stocks and work in progress, which is one measure of the likely trend of industry's demand for bank advances, may rise by £885 million in 1951 against £465 million in 1950. The trend of Government borrowing from the banking system will depend on how far the inevitable decline in this year's overall surplus offsets the monetary repercussions of the deterioration in the balance of payments; it will be surprising, however, if such borrowing does not represent a somewhat lower proportion of bank assets at the end of this year than it did at the end of 1950. This fact, together with the news that turnover in the Bankers' Clearing House was some 21.3 per cent higher in the first three months of 1951 than in the same period of 1950, suggests that this may be a year of higher current earnings for the banks. It is also, however, likely to be a year of rising expenses and of the rising risks that always accompany price inflation.

Associated Electrical Reverse

The abandonment of the projected issue by Associated Electrical Industries Ltd. of Ordinary shares to employees at £2 per share, because the recipients would be liable to tax assessment on the notional bonus involved, is an odd ending to an odd story. Was the AEI, with the Austin and Standard cases so fresh in memory, surprised by discovery of the tax difficulty? The board can hardly have supposed that the intended two-year

embargo on sale would introduce any difference of principle. On the other hand, what is the distinguishing feature, if any, between an issue to employees on the lines intended by AEI and the privileged subscription rights that figure in so many profit-sharing schemes? If there is none, how do the bonuses represented by such issues rank for tax, especially those made in the past two years? What particular assessment of the public interest by the CIC can reconcile (a) the permission granted to issue 699,228 Ordinary shares to employees at £2 with (b) the refusal of the company's proposal last month to issue 1,000,000 shares at the same price to Ordinary stockholders? There is more in all this than merely the frustrations of a surprisingly open-handed gift by the proprietors to the employees of a substantial portion of the equity of the company. It is time that the authorities realised the damage to entrepreneur morale wrought by this sort of financial *Kriegspiel*. The part of the capital scheme concerned with the conversion of the 8 per cent Preference capital to a 4½ per cent rate and the issue of 800,772 Ordinary shares at par in connection therewith is to proceed.

Commodity Bargaining

The difficulties that have beset the talks on international allocation of rubber and tin give a fair indication of the problems confronting the commodity committees in Washington. Officially, neither rubber nor tin has been brought within the scope of the international materials conference. The rubber talks were held in London eight weeks ago and are to be resumed in Rome next Monday. The tin discussions were held in Washington but they were adjourned last week and so far no new meeting has been fixed. Both producing and consuming countries agree on the need for some system of international allocation for tin; producers fear that present high prices presage a sharp fall some time later on, while consumers object to present high prices.

There are two fundamental points of disagreement. The first is the price to be fixed for the immediate period and the second is the period during which producers would be given a guaranteed market.

On the first point the gulf between what producers and consumers consider to be a reasonable price for tin is so great as to be outside the scope of bargaining. Prices for both tin and rubber during the past three months have remained substantially higher than before Korea despite the American price freeze, despite the institution of bulk buying and despite the suspension of stockpile purchases. Producers quite naturally cite this experience as evidence that the buoyancy of the markets is not wholly dependent on the United States. The United States, on the other hand, believes that the firmness is of a temporary character and that the cessation of stockpiling has not yet had time to show its full effect on prices. Again, producers of both rubber and tin have claimed that the agreed price must be related to the cost of the goods they have to buy from abroad, whereas the consumers argued that raw material prices were at present unduly inflated and that their present relationship to prices of manufactured goods cannot be maintained.

As regards the period of security to be given to producers, the United States has been thinking in terms of one or two years. Producers are more anxious to get a guarantee for as long a period as five years, on the ground that the existence of strategic stocks presents a threat to the future stability of the commodity markets. Clearly this point is closely related to that of prices. If consumers were willing to give a long-term guarantee they might have to pay dearly in the first year, but they would have a chance of obtaining supplies more cheaply in the later years. The tin producers put forward a scheme incorporating a maximum and minimum price somewhat akin to the wheat agreement. But this was rejected by the American delegates.

The possibility of international allocation is once more receding. The present series of meetings has brought forth no fresh ideas on the subject, nor has it shown any change of heart on the part of the major producing or consuming countries. If agreement is to be reached, the only way open may have to be direct bargaining of dollar against sterling commodities.

Armament Production in 1951

The Ministry of Supply estimates that were published last week give a clearer picture of the size of the year's armament programme than do those of the fighting services. All Army, Air Force and a proportion of Admiralty orders are placed through the Ministry, which makes progress pay-

ments during the year to government contractors. Its expenditure, therefore, bears a direct relation to work in hand. Service estimates relate only to equipment that will be delivered during the financial year and that may have been ordered some years before. Thus, while the air estimates provide for an expenditure of £81 million on aircraft during 1951-52, the Ministry estimates provide for an expenditure of £108 million on the same item during the same period. This is an increase of £38 million on last year's figure. It will cover progress payments on the big supplementary orders for standard jet fighters, bombers and anti-submarine aircraft that were placed last autumn, and a varying amount of assistance to companies preparing to put into production new aircraft that have been ordered off the drawing board.

Development work on all aircraft and engines will be paid

for out of the £76 million allowed for "research and development." Some of the most important military work of the Ministry comes under this heading. Expenditure was already high last year at £63 million, but the current estimates are £13 million higher. Development work done by industry, which besides aircraft development includes a large proportion of the work on guided missiles, radio and radar and army vehicles, accounts this year for £45 million and work at Ministry establishments for a further £30 million; this sum includes the expenses of the Atomic Energy Research Establishment. Under another heading, more than £3 million has been allowed for new buildings for research projects, which will ultimately cost £34 million; a large proportion of this is presumably intended for new AERE plants.

Estimated expenditure on armament and vehicles is put at £113.7 million, an increase of £56.6 million. Nearly half this total will go on "mechanical transport": that is, tanks and a relatively small proportion of army vehicles. Tank output at existing factories is increasing and two new tank factories are being prepared, one an existing Royal Ordnance Factory that will be tooled up solely for tank production, and the second a completely new building. The estimates show that work is due to start this year on new ROF buildings that will eventually cost £3,000,000, while another £4,500,000 million has been allowed for grants to contractors for factory buildings; for example, one of the new Rolls Royce engine factories in Scotland is being built by the Ministry. A further £10 million has been allowed for grants towards equipping these factories and retooling others, among them, presumably, the new production lines for aero engines being laid down by a number of manufacturers. This is in addition to the £30 million for a proposed pool of machine tools and compares with expenditure last year of only £1,000,000 upon buildings and a similar amount for equipment. This need for new factories follows upon the policy of attempting to implement an expanded armament programme with the minimum disruption to civilian production: with so few empty factories in existence, even those now authorised may not prove sufficient.

The third large item for the services is the provision of clothing and general stores, £56 million compared with £26 million last year. Orders for clothing and textiles, estimated at £38 million, have more than doubled. During the year the Ministry will receive £314 million from the services for equipment delivered; this, with other appropriations in aid, will reduce the total estimate from £525 million to £160 million.

* * *

Income Tax Consolidation

Before the limelight is turned on the first report of the Tucker Committee and next week's Budget Statement, a word of tribute should be paid to the draft Income Tax Consolidation Bill that has been laid before Parliament. This is a far more important measure than its charmingly modest preliminary note would suggest. It is true that its purpose is limited to the consolidation of the Income Tax and Finance Acts, rather than to codification in the wider sense of the incorporation of practice and case-law and the removal of ambiguities and anomalies. But even consolidation has very great advantages in matters on which, as in the case of the income tax, the law has to be traced among more than fifty Acts spread over thirty years.

Reference to the table of contents proves at once how great a simplification can be achieved; and if, for any reason, the Bill was never enacted it would remain an invaluable aid to all concerned with the interpretation and administration of the fiscal code. It will undoubtedly be a major tool of the Cohen Commission and its appearance is an encouragement to those who believe that tax reform is possible. As a piece of parliamentary draftsmanship the consolidation represents a considerable achievement. The existing Income

Tax Acts turn the scales at more than six pounds, but the Draft Bill weighs less than a pound and a half. One can perhaps perceive in this the operation of a new legal principle of *de maximis curat lex*.

Patient taxpayers and their professional advisers have waited far too long for this consolidation. They have until the end of July to make suggestions for any improvement of an already admirable draft. Examination may reveal other small points besides the misprint in Clause 223, but not, it would seem, changes of great substance. Is it too much to hope that the draft will be quickly enacted and that its advantages and economies will persuade the Revenue that a quinquennial consolidation is worth while?

* * *

Advisory Committee on Purchase Tax?

The FBI's closely reasoned study of the impact of purchase tax and the utility programme on exports deserve to be clearly differentiated from the spate of "count me out" proposals that has lately been directed towards the Chancellor. The most immediate proposal that emerges from this study is that a Purchase Tax Advisory Committee should be set up to hear cases where it is alleged that the present level of tax involves a net disadvantage to the national economy. Although it is probably true that such a committee would become an all-too-general coconut shy, the fact must be faced that the present system, whereby the level of purchase tax on each category of product tends to be determined largely by some planner's assessment of how "essential" it is, is leading to some unforeseen distortions of production, tastes and design.

The most harmful effect of the present system, as the FBI sees it, is that it is tending to force some manufacturers to make an entirely artificial distinction between non-utility goods, which are subject to purchase tax and therefore have only a limited sale on the home market, and utility goods, which enjoy booming sales in Britain but only limited sales abroad. In some industries this division of production into two water-tight compartments reduces the economies that can be gained by spreading overheads over long runs; in other industries (where economies of large scale are not so important), it is having the opposite effect of hampering the desirable degree of differentiation of product; goods of qualities slightly above utility levels, which were profitable before the war because they sold well both at home and abroad, now fall between two stools. In many industries, too, the risks involved in experiment and new design are too heavy to be undertaken now that the fickle export market is the only testing ground; this problem is perhaps even more serious in the long term than in the short since Britain's former leadership in many fashion trades is being gradually undermined by the steady growth of the British habit to consume utility goods alone, as well as by the decline in the intake of recruits to the ranks of skilled craftsmen. There is some evidence that the slower rate of growth since the war of exports of consumer goods (relative to those of capital goods) may have been due to factors of this sort as well as to the discriminatory effect on consumer goods exports of import restrictions abroad. Provided the floodgates are not opened too wide to everybody's complaints, an advisory committee of the sort proposed would seem to have a useful job to do.

* * *

Magnesium Production Again

The Ministry of Supply's decision to reopen a magnesium reduction plant near Manchester is a logical consequence of rearmament both in Britain and abroad. Since 1947 British production of this ultra-light metal has been at a standstill, and industrial demands have been met by

Drawn by A. R. THOMSON, R.A.

Backroom Boy with a bucksaw Although his name never appears Halloran is one of the most important contributors to the newspapers. In fact, it is on his bucksaw that the publication of the newspaper depends. For Barney Halloran* is a Newfoundland logger, on the pay roll of the largest paper mill in the world — Bowater's at Corner Brook. His job is to fell and cut the trees into four foot logs, using the length of his bucksaw as a measure. They are then ready for the journey to Corner Brook by sleigh, truck, train, ship or most usual of all, floating down by river, there to be pulped and processed into newsprint. Halloran stands five foot eleven in his socks, and weighs 200 pounds, according to the Medical Officer who runs the foot rule over every logger at the start of the season. According to the camp cook, his appetite is built in proportion! "He'd eat a cow between two biscuits." But Barney just smiles tolerantly, knowing that a logger without an appetite is as useless as an axe without a handle.

THE WHOLE WEALTH OF BOWATER CRAFTSMANSHIP, EXPERIENCE AND RESEARCH IN THE ART OF MAKING PAPER — THE 'KNOW-HOW' IN SHORT — IS FREELY AT YOUR SERVICE.

running down the considerable stocks that the Ministry retained from wartime deliveries. But since the first announcement of the new defence programme, demand for the virgin metal here has almost trebled, partly through increased production of aircraft but also presumably through the building of stocks by manufacturers expecting defence contracts. The aircraft industry is the largest consumer of the virgin metal, for incorporation in special alloys; but it seems likely that this year it may be compelled to meet more of its requirements from secondary magnesium.

Demand in the middle of last year was running at about 2,000 tons of virgin metal, with perhaps 3,000 tons of secondary metal, of which the largest consumer is probably the Ferguson tractor. This year demand for the virgin metals alone seems likely to reach 6,000 tons, and this will be difficult to supply. A long-term contract has been concluded with Canada, and other imports are being sought from Norway and from France, which is a high-cost producer; but even with the production from the reopened British plant—perhaps a thousand tons this year—it will be difficult to obtain enough virgin metal to meet requirements, and the Ministry has therefore assumed control of the supply and distribution of all virgin magnesium.

The Clifton Junction plant, which is owned by the Ministry on a site belonging to Magnesium Elektron, Ltd., is one of the extensions erected during the war to the company's original electrolytic reduction unit there. Its raw material is magnesite produced from sea water by a plant at West Hartlepool: this has not been closed, since the material is used for refractory bricks, but its output will probably be increased. Magnesium Elektron were the first producers in this country, and their plant was the last to be placed on a care and maintenance basis; during the war the Clifton Junction plant and another near Burnley produced nearly 50,000 tons of magnesium for war production. The country's peak war production was between 20,000 and 30,000 tons from these electrolytic plants and from thermal reduction plants operated by three other companies. The thermal plants, however, were closed very shortly after the war as uneconomic; and in 1947, with electric power—the most important factor in magnesium, as in aluminium, production—costing roughly four times as much as when the plant was set up in the late thirties, Magnesium Elektron also closed its electrolytic plant. At that time the price of magnesium was down to some 1s. 2d. to 1s. 6d. a pound; today, with the price in the region of 2s. and certain to rise higher, commercial production might again be a sound proposition, even apart from the operation of Government plant for strategic purposes.

* * *

New Prices for Base Metals

The Ministry of Supply is gradually being forced to adopt an independent policy on non-ferrous metal prices. Since July, 1949, the Ministry has assiduously pursued its self-imposed policy of keeping selling prices of copper, lead and zinc closely aligned to those ruling in the New York market, altering its prices upwards or downwards according to changes in official American quotations. This week, however, although American prices of the three metals have not altered, the Ministry has increased the price of copper from £202 to £210 a ton, and has put up zinc from £151 to £160 a ton and lead from £136 to £160 a ton. In Britain zinc and lead are now selling at the same price; in the United States zinc is officially £4 a ton dearer than lead and the difference is greater on the "grey" market.

According to the Ministry's announcement, the increases for zinc and lead are necessary to cover the higher prices it has to pay for some of its supplies. It may be recalled that the Minister of Supply recently asserted that the Ministry would not pay more than "official prices" for its metals. This week's price increases suggest that the Ministry

is now more concerned with procuring supplies, even if this means paying prices above those ruling in the New York market. The increase in the price of copper is said to be due to higher freight and handling charges, but the fact that it is as large as £8 a ton suggests that the Ministry might also be attempting to improve its own profit margins. The corresponding maximum prices for non-ferrous scrap have also been raised.

It may not be a bad thing at this stage for Britain to pursue an independent price policy for base metals, for the American official market during the past nine months has failed to reflect the dearth of spot supplies of copper, zinc and lead. The shortage of metals in this country is more acute and the hold-up in shipments from Australia is making lead more scarce than either copper or zinc, though the scarcity is likely to be only temporary. For that reason, exports of semi-manufactures of lead have not yet been restricted. This week the Board of Trade announced that exports of semi-manufactures of copper and copper alloys in the second quarter of this year would be limited to approximately half the rate prevailing in the first half of 1950, while exports of zinc semi-manufactures will be permitted "only in exceptional circumstances." In the first half of last year some 21,200 tons of copper semi-manufactures were exported and 11,800 tons of brass and other alloys of copper; exports for these two groups were together worth £7½ million. Exports of zinc manufactures were small, amounting to only 2,600 tons in the six months period. The new order will thus save some 1,750 tons a month of copper semi-manufactures and 1,000 tons a month of copper alloys; over a year, such quantities would not be insignificant.

Shorter Notes

In his annual address to members of the Halifax Building Society, Mr Algernon Denham was able to look back on a record increase of assets—by nearly £11 million to £165.5 million—in the year ending January 31, 1951. Of the 30,793 new loans made by the society last year, however, less than 1,000 were for new homes financed during erection. The Halifax has continued its policy of cultivating the small investor and only £1,335,000 of the money invested with it is either limited company money or in a sufficiently large block (i.e., over £5,000) to attract the standard rate of income tax. The expected legislation in the coming Finance Bill to "regularise" the position of the surtax payer who invests in building societies should, therefore, have little effect upon the Halifax.

*

The Shell Petroleum Company and Anglo-Iranian have together organised an exhibition of the petroleum industry which opened in London this week and which will later tour a number of universities. It represents an attempt to explain a highly technical industry to the public, largely by means of photographs, diagrams and flow sheets covering every process from prospecting to the final stages of petroleum chemical production.

*

More insurance companies have announced modest increases in their dividends this week. The Royal is paying 5 per cent more for the year, raising its final dividend from 3s. 9d. per £1 unit to 4s. 9d. The Royal's subsidiary, the London and Liverpool and Globe, is paying 10 per cent more for the year with a final dividend of 17s. 6d. per £5 share (against 13s. 6d. last year). The Caledonian is paying 3s. 6d. per £1 share in equal half-yearly instalments against 3s. per share last year, and the North British and Mercantile is paying 8s. 6d. per £1 5s. share against 7s. per share last year. The dividend on the Prudential's "B" shares was stepped up from 1s. 6d. net to 1s. 9d. net per share in 1950, not to 2s. as stated in *The Economist* last week.

Company Notes

British Aluminium.—The question posed by the British Aluminium preliminary statement for 1950 is how far the substantial recovery in profits shown is due to the first fruits of the company's heavy programme of capital expenditure and how far to the dramatic change in the trading situation during the year. It will be recalled that combined profits reached their peak of £2,341,944 in 1947 (struck after providing an additional reserve for fluctuations in stock prices); they fell in 1948 to £1,845,677 and in 1949 to £1,538,359 owing broadly to the decline from sellers' market conditions and the exaggerated effect on profits when mills change from running at very high pressure to merely normally full production. For 1950 the combined profit figure shows a 37 per cent advance on the previous year at £2,089,259. This year the company will have the benefit of its largely expanded capacity coinciding with sellers' market conditions all the way—a combination which may well boost gross profits spectacularly. Apart from rearmament the substitution demand for aluminium in place of copper is likely to be an important factor.

	1949	1950
Group trading profit	1,538,359	2,089,259
Total income	1,803,595	2,112,771
Taxation	478,262	720,547
Depreciation, plant replacement, hydraulic works maintenance	610,459	589,492
Contingencies	30,860	9,690
Group earnings for ord. stock	323,200	404,706
Ordinary dividends	165,000	198,000
(10%) (10%)		
Added to general reserve and c/f	158,200	206,706

As a result of the issue last November of 2,000,000 new ordinary shares at 34s. the issued ordinary capital now stands at £5,000,000. The new shares are entitled to half the final dividend of 6 per cent (making the total dividend for the year 10 per cent, as before). To maintain the 10 per cent rate on the present capital would call for an increase in the gross distribution of £140,000. The position shown by the 1949 balance sheet suggested that the £3,400,000 raised by the new issue would by no means exceed the probable needs of the development programme and the increasing burden of current finance. The £1 units are quoted at 43s. 1½d. to yield £4 12s. 9d. per cent.

*

British-American Tobacco.—Under existing world conditions the affairs of such a vast international trading organisation as B.A.T. can hardly be rendered realistically with a consolidated sterling account. However adequate the presentation may be as a feat of accountancy, the shareholder who attempts to interpret the consolidated figures in terms of dividend prospects is at once confronted by such factors as the massive provision made in the current accounts of the group to correct distortions due to currency depreciation, exchange transfer restrictions, and the vagaries of the incidence of taxation. The preliminary statement for the year to September 30, 1950, shows that the group has taken direct to fixed asset and stock replacement reserve £4,832,775, being the surplus due to devaluation arising on pre-devaluation stocks of dollar leaf used during the year and the senior company itself has added to the same account £1,000,000 from provision for British taxation no longer required (owing to progress made in settling E.P.T., etc.) as well as a further £1,300,000 out of the free profit balance available for appropriation.

The fact that the company's general reserve gets nil against £1,500,000 last year raises the question whether the fixed asset and stock replacement reserve is of the character of a free reserve or a specific provision. If the latter is the case, the dividend

is barely covered, and the directors' decision to restore the rate to 15 per cent tax free against 14½ per cent tax free would be a surprising gesture. In fact, shareholders can safely take this as a faithful indication that those best qualified to judge consider that the group's affairs are moving in the right direction without spending too much time on the elaborate accounting notes and explanations which, no doubt, will again be found in the full accounts.

	1949	1950
Group net profit	15,328,761	15,157,824
U.K. taxation	7,274,003	7,059,428
Preference dividends	321,750	321,750
Ordinary dividends	3,365,683	3,563,664
(14½% t.f.) (15% t.f.)		
Fixed asset and stock reserve	195,884	2,300,000
General reserve	1,500,000	Nil
Carried forward	3,806,580	3,896,239

(a) After deducting all charges, including foreign and U.K. taxes, also after transferring to fixed asset and stock replacement reserve £4,832,775 (nil) devaluation surplus on stocks of dollar leaf. (b) Includes £1,000,000 tax provision freed.

The market seemed a little disappointed at these figures, possibly because some optimists had hoped that B.A.T. might deal less conservatively than Imperial Tobacco with the devaluation surplus. The most interesting factor in the outlook, which, however, can hardly affect the accounts until 1951-52, is the prospect of the end of the freezing of Brown and Williamson's profits under the conditions of the R.F.C. dollar loan. In the meantime the gross yield on the ordinary stock of approximately 5 per cent at the current price of 5½ indicates that there is no disposition to discount a further dividend increase in the near future.

*

British Oxygen.—The preliminary figures of British Oxygen for 1950 show that the group's earnings have resumed their secular upturn—as foreshadowed on the occasion of the placing last November of £4,000,000 3½ per cent Unsecured Loan stock and the rights issue of 693,820 ordinary shares. The group trading profit is actually up by almost 30 per cent, from £3,264,022 to £4,225,584, a most satisfying achievement against the fact that the capital for the next stage of the large development programme has already been provided. The final dividend of 12 per cent is payable on the increased capital, and there is ample cover for the present 20 per cent rate to judge from the current level of profits. In the circumstances, the increase in earnings which it seems reasonable to expect from the company's expanding capacity, the upturn in prices and the secondary consequences of rearmament represent a valuable equity.

	1949	1950
Group trading profit	3,264,022	4,225,584
Taxation	1,290,673	1,712,167
Depreciation	966,624	1,212,220
Minority interests	101,678	166,199
Retained by subsidiaries	251,919	319,899
Preference dividend	67,375	67,375
Ordinary dividend	381,602	427,394
(20%) (20%)		
General reserve	350,000	150,000
Carry forward	200,463	370,793

(a) On increased capital.

The final dividend with the interim Ordinary dividend and the Preference dividend absorbs a net amount of £494,769. Although the allocation to general reserve is reduced by £200,000, the carry forward is increased by £170,330 and the profit retained by subsidiaries by £67,980, so that the forthcoming balance sheet should show a large increase in net resources apart from the proceeds of last year's issues. At their present price of 94s. 6d. the ordinary shares show a gross yield of £4 4s. 8d. per cent.

Statistical Summary

EXCHEQUER RETURNS

For the week ended March 31, 1951, total ordinary revenue was £77,661,000, against ordinary expenditure of £114,277,000 and issues to sinking funds £10,000. Thus, including the sinking fund allocations of £19,357,000, the surplus accrued since April 1, 1950, is £720,515,000 compared with £548,739,000 for the financial year 1949-50.

On March 30th applications for 91 day bills to be paid from April 2 to April 7, 1951, were accepted dated Monday to Saturday as to about 66 per cent at £99 17s. 5d. and applications at higher prices were accepted in full. Treasury Bills to a maximum of £240 million are being offered for April 6th. For the week ending April 7th the banks will be asked for Treasury deposits to a maximum of £80 million; £40 million at 154 days, and £40 million at 182 days.

REFUGE ASSURANCE COMPANY LIMITED

LIFE ASSURANCE AND SAVING

TOTAL SUMS ASSURED £285,000,000

BONUS INCREASED TO £1 8s. 0d. PER CENT.

MR J. WILCOCK HOLGATE'S REVIEW

Mr J. Wilcock Holgate, the chairman, presiding at the eighty-seventh annual ordinary general meeting of the Refuge Assurance Company Limited, held at the Chief Office, Oxford Street, Manchester, in the course of his speech said:—

Once again I am happy to put before you accounts which reflect continued progress by your company. During the year we issued over 375,000 new policies assuring a total sum of some £23,000,000; we paid in claims a total sum exceeding £8,500,000; our affairs continue to be economically conducted; and our bonus in the ordinary branch has been increased to £1 8s. 0d. per cent. This is a record of service to our policyholders—and, I may add, of assistance to the economy of the country—which the founders of your company, so long ago, could hardly have imagined.

TENACITY OF EARLY INSURANCE PIONEERS

It is a far cry indeed to those days in the 1850's when the Refuge first entered the field of industrial assurance and set itself gradually to overcome the difficulties confronting any new venture under private enterprise. Recently when reading of some of the happenings in the very early days of your company, I have marvelled at the tenacity and the singleness of purpose which characterised the pioneers of those days. There was little to encourage and much to discourage them. But life assurance, being—as you well know—not a business in the ordinary sense so much as a service to one's fellow men, found its strength in the hearts of men, and strength from such a source is indomitable. What was true then is no less true today. The insurance man must still have his heart in the right place.

Naturally, enthusiasm and industry were not sufficient in themselves to enable us to attain success; the fact is, of course, that we have had to give satisfaction in order to survive—that is a characteristic of private enterprise. Moreover, throughout the years, we have had to face the keenest competition; but I have never regarded that as any other than a spur and a potent influence towards success, and I very much doubt whether, without it, we should have progressed as we have done.

OVERCOMING "SALES RESISTANCE"

We have always enjoyed an advantage in that we satisfy a very real and general need, and the service we render is the greater in that this need is so often not realised or is at least faced with reluctance. You may call this attitude of mind "Sales resistance." I suppose it is; but it is a special form of sales resistance which requires a most sympathetic approach by our representatives. Old age or death are not inviting prospects, and most people prefer to keep them out of mind: and it is always a ticklish matter to remind a man of his duty, which is, quite frankly, what we do when we induce a man to provide for the future of his dependents. But it is a rewarding experience to see with what appreciation the payment of the claim

moneys is received, and to realise how great is the comfort they invariably are. Our numerous representatives are no strangers to this experience; indeed we pay in claims, on the average more than £28,000 each working day. Without our efforts where would that money be?

A CENTURY OF PROGRESS

I have remarked upon our long history. A hundred years is a long time; and during the years how many changes—what unexpected and sudden changes—have we not seen! We have emerged successfully through booms, slumps, wars, civil disturbances, alterations in our modes of life. But it is an essential feature of the operations of a life office that it should, as far as is possible, provide against the unforeseen. Indeed, how else should it conduct its affairs when the very reason for its being is to enable individuals to secure themselves against "the slings and arrows of outrageous fortune"? For that is precisely what it seeks to do. In the early days of its history it envisaged provision only for a man's dependents, creating for him an estate which otherwise would have taken him years to accumulate. Later on, however, this provision was extended so that in his later years a man could himself enjoy the fruits of his thrift, by the sum assured being paid during his lifetime. Still later, to secure him still further against the risks attending the private investment of money, different forms of pension policies were devised whereby an income could definitely be assured throughout the remainder of his life.

What this really means is that as times change, so the needs of men are modified; and it is our function to move with the times, to anticipate these modified needs, and to provide for them. In these days, when it is reputed that "Whitehall really does know best," it is a pleasant thought that a man is still free to protect his dependents or to provide for his old age as he himself, and no one else, may think fit. The individual himself knows precisely what he wants to do in either of these connections: it is his own money he is saving; and, fortunately, he can still choose as to how, and with which financial institution, he may provide for his need which only he can foresee. It would be an ill day for him and for thousands like him, if political considerations should so contrive as to remove from him this essential freedom of choice.

"MUTUALISATION"

Since the last Election we have heard very little of the word "mutualisation"; but we are not reassured by that, and shall not be until we are convinced that the harsh reality of facts has, at last, convinced the planners that theory alone is a fatal basis upon which to conduct a business. We have learned in a hard school that the customer is always right: and for nearly a hundred years we have sought to satisfy him, knowing well that if we did not there would be no future

for us in the business. Dr Johnson said something to the effect that if a man knew he might be hanged in five minutes, the knowledge wonderfully sharpened his intellect: just so as our knowledge that we depend solely upon our own abilities kept our minds alert, and impelled us to the most thoughtful and economical administration of our affairs.

PUBLICITY

Until recent years we have regarded our business as hardly one which called for advertisement. We were content to rely upon the traditional excellence of our services to make ourselves known amongst an ever-growing circle. Recent events, however, have caused us to alter our views. We are today much discussed in public; and it has been felt that it would be well to publicise our business on our own account, in the Press and by other means, in order that the services we render and the manner in which we render them should be made known more widely than amongst merely our

cent. to 13.05 per cent. In the industrial branch the expense ratio remains practically unaltered at 28.32 per cent.

VALUATION

In the ordinary branch the life assurances valued were as follows:

Policies	Amounts Assured	Premiums
529,800	£122,031,205	£6,310,087

The number of new policies effected was 28,706, assuring the total sum of £10,236,831. The premium income increased by £166,360 to £6,552,411 and the net interest amounted to £1,715,861. The life assurance fund now amounts to £54,155,981, in addition to which there are investments reserves of £2,900,000.

The basis of valuation as regards the life assurances was more stringent than a net premium valuation by the A24/29 ultimate table of mortality, with interest at 2 per cent. The annuities were valued with interest at 3 per cent. The resulting surplus was £1,546,775, which included £222,646 brought forward from the previous year.

In the industrial branch the policies valued were as follows:

Policies	Amounts Assured	Premiums
8,739,249	£163,612,809	£9,105,768

The premium income was £8,685,727, showing an increase over that of the previous year of £201,730. The life assurance fund now amounts to £54,264,821, having increased by over £2,278,000 during the year, in addition to which there are investments reserves which now amount to £4,575,000.

The valuation was made by the net premium method using the English life table No. 10 males, with interest at 2½ per cent. The resulting surplus was £1,267,364, which included £113,174 brought forward from the previous year.

DISTRIBUTION OF SURPLUS

The above surpluses have been dealt with as follows:

	Ordinary Branch	Industrial Branch
	£	£
To policyholders.....	1,222,239	932,000
To investments reserve.....	100,000	125,000
To profit and loss account..	100,000	105,000
Carried forward	224,536	105,364

The sum of £250,000 has been transferred from profit and loss account to general reserve. The directors recommend that £165,000 net be distributed to shareholders as dividend for 1950.

ALLOCATION OF PROFITS TO POLICYHOLDERS

In the ordinary branch it has been decided to declare a reversionary bonus in respect of with-profit policies, at the increased rate of £1 8s. per cent. on the sum assured, and until further notice an interim bonus of the same rate will be allowed on policies becoming claims by death or survival. The corresponding rate for the previous year was £1 6s. per cent.

In the industrial branch the policies are, in form, non-profit, but as I have already stated an amount of profit has been allocated to policyholders, and out of this sum it is proposed to grant additional benefits to existing premium-paying policies (with certain exceptions) dated prior to January 1, 1946, and certain paid-up policies. The sums assured under such policies where death or survival of the endowment term occurs within the twelve months commencing March 20, 1951, will be increased by amounts varying from £3 per cent. of the sum assured upwards. Certain additional paid-up policies will also be granted on whole-life assurances.

INVESTMENTS

In financial matters, the past year has once again, unfortunately, been fruitful in its problems, particularly those arising from the unsettled international situation with its reflection in the rise in commodity and retail prices. The attendant repercussions demand extreme care on the part of those responsible for the investment of such large sums as those with which we are concerned.

The discriminatory taxation levied on risk-bearing capital and the insufficient tax allowances for replacement of fixed assets during a period of increasing prices, make investment in ordinary stocks of less value than formerly as a protection against the effects of inflation. Nevertheless, such securities remain of service in this connection, and we have therefore increased our holdings by over £1,250,000 during the year, making a total of £6,000,000 invested in the equity shares of a carefully selected cross-section of British industry.

The total value of our stock exchange securities based on middle market prices at the year-end reflected a substantial increase over those of the previous year. An addition of £125,000 has been made to the industrial branch investments reserve fund.

During 1950 there was a revival in the capital issues market to provide the additional sums required by industry for expansion and replacement of plant, and for the financing of stocks. The opportunity was taken to effect an advantageous exchange of securities in a number of cases with a beneficial effect upon the rate of interest secured. These transactions did not, however, materially affect the amount of our holdings in British Government and British Government guaranteed securities, which now stand at £59,017,469, representing 61 per cent. of our stock exchange securities and 50 per cent. of our total assets.

It will be observed that both gross and net interest revenues in the industrial branch exceeded £2,000,000 for the first time in our history, reflecting not only the growth of the fund but also the improvement in the rate of interest obtained, which was £4 0s. 10d. per cent. gross and £3 17s. 2d. per cent. net. In the ordinary branch, where the effect of taxation is rather heavier, the corresponding figures were £4 2s. 11d. per cent. gross and £3 5s. 11d. per cent. net.

HOUSE PURCHASE

One of the unfortunate features of the postwar existence of so many people in this country is their tragic housing situation. It is hardly possible to exaggerate the unhappiness and domestic unrest it can cause; and I am glad that we are able, through our house purchase scheme, to help them to secure that aim common to all of us—a place of one's own. It is largely the result of our activities in this connection that our investments in mortgages on property increased during the year to nearly £10 million, the amount actually advanced as new house purchase loans during 1950 being over £2,735,000.

In justice, of course, to those whose funds we are lending, that is to say, the other policyholders who are not in themselves borrowers, it is necessary that we should ensure that the loans are well secured and that the terms on which they are granted are no less favourable than those available to us in other directions. It was for this reason that last year I remarked that we were keeping a close watch over the changing financial conditions, and that we deemed it wise to exercise particular care in the acceptance of mortgages under our scheme. Although we have not as yet felt it necessary to increase the rate of interest charged on house purchase advances, which remains at 4 per cent., the more attractive avenues of investment which

have become available to us in other quarters have necessarily accentuated the need for care.

TRIBUTE TO STAFF

I would like particularly to express our thanks to the staff of the company both at chief office and in the field for their loyalty and support during a year that has been far from easy for any of us. We have always been fortunate in the number of our employees who have identified their interests with those of the company, and who have been happy in their association with us. Of one thing I am sure—that the real and very human interest taken in the staff by the management is an important factor in encouraging and maintaining that cordial relationship which means so much to the success of any undertaking and of those dependent upon it. In this respect an important part is played by our two staff associations, which have ready access to our officials whenever questions affecting the welfare of the staff arise. We have been in contact with them now for over 30 years: and despite our differences of opinion, which quite naturally arise from time to time, but which are never left undiscussed, we maintain a cordial understanding. I know quite well that this ready contact has been productive of much good; and I trust it will continue to operate to such effect.

The report and accounts were adopted.

THE SCOTTISH LIFE ASSURANCE COMPANY, LIMITED

A MOST SUCCESSFUL YEAR

ALL PREVIOUS RECORDS BROKEN

MR CHARLES R. MUNRO'S REVIEW

The annual general meeting of The Scottish Life Assurance Company, Limited, was held on April 4th in Edinburgh, Mr Charles R. Munro, C.A. (chairman of the board of directors), presiding.

In moving the adoption of the report and accounts for 1950 the chairman said:—The company, as you will have seen from the annual report, has had a most successful year, but since its close has suffered a most grievous loss by the death of Mr James Harrower Guild, who died on March 8th. Mr Guild joined the board in 1924, and during this period of twenty-seven years he was one of the company's most active directors. In him the company has lost one of its greatest servants and we, his colleagues, and all the staff, one of our best friends.

THE YEAR'S RESULTS

The financial year just ended broke all previous records, and the net new business of £4,167,328 shows an increase of over £500,000 as compared with that written in 1949. The aggregate net new business of the quinquennium amounts to over £18 million, which far surpasses the business of any previous quinquennium in the history of the company.

The life premium income has increased from that in 1949 by £143,000 to £1,132,000. Five years ago the corresponding figure was £631,000, so that during the quinquennium an increase of nearly 80 per cent. has been registered. The gross rate of interest earned in 1950 on the life fund was £4 9s. 3d. per cent. as compared with £4 5s. 6d. per cent. in 1949, and the net rate after deduction of income tax was £3 14s. 7d. per cent., against £3 11s. 4d. per cent. Claims by death are

lightly higher than last year, being 76 per cent. of the amount expected by the valuation mortality table as against 69 per cent.

The book value of the invested funds, less reserves, at £11,927,856 is about £300,000 more than in the previous year. In some sections, particularly in government securities and preference shares, there has been a reduction, while, on the other hand, there are increases in mortgages on property, in debentures and in ordinary shares. Your directors hold the view that in an inflationary period such as the present, the proportion of the fund invested in equities can with advantage be, and indeed ought to be, increased; and their present investment policy is framed with this principle in view. The market values of our assets have improved since last year and the margin over the values at which they stand in the balance sheet has therefore increased.

SATISFACTORY OUTCOME OF QUINQUENNIAL VALUATION

I come now to the very satisfactory results of our quinquennial valuation as at December 31, 1950. The liabilities under life assurance contracts have been valued as in 1945 on a 2½ per cent. interest basis and an additional reserve made which is more than sufficient to cover a reduction to 2¼ per cent. Annuity contracts have been valued, as previously, at 3 per cent. with an additional reserve against increased longevity of annuitants. You will have noticed from the annual report that your directors have decided to increase the bonus from 30s. per cent. to 32s. per cent. on full profits policies. It is perhaps appropriate that I should remind you that your company since its incorporation has never failed to declare a bonus to its policyholders at each valuation, a distinction which very few life offices can claim. This, then, is the company's proud tradition which has been maintained throughout two world wars and which it is your directors' special care to preserve.

Interim bonus additions on full profits policies which become claims during the current quinquennium will be at the same rate as that declared, 32s. per cent., subject, in the case of claims by death, to alteration at any time by resolution of the board of directors.

THE OUTLOOK

The outlook for this country, and indeed for the world, is obscure. Increased taxation, and rising costs of even the bare necessities of life, seem inevitable. Nevertheless, the premiums now being charged for life assurance show little change from those charged in 1939. Adequate provision for dependants by way of ordinary savings has become impossible, and life assurance is the only way by which this can, under present conditions, be achieved. Consequently you will not be surprised when I tell you that in the first few months of this year the flow of new business has been more than maintained.

The appointment by the Government of a committee under the chairmanship of Mr J. Millard Tucker, K.C., to consider the taxation treatment of superannuation and similar schemes, was indeed timely. Firstly, because of the anomalies which exist under present legislation between the taxation treatment of different types of scheme; secondly, because of the disadvantages facing "self-employed" persons and directors of director-controlled companies in providing for old age, as compared with employed persons. The problems before the Tucker Committee are both complex and intricate, but there is every reason to believe that the committee will devise a satisfactory solution to overcome the existing anomalies.

The report was adopted.

WESLEYAN AND GENERAL ASSURANCE SOCIETY

ONE HUNDRED AND TENTH ANNUAL GENERAL MEETING

SUBSTANTIAL PROGRESS

CLAIMS PAID EXCEED £49,000,000

HOUSE PURCHASE—RECORD ADVANCES

The annual general meeting of the members of the Wesleyan and General Assurance Society was held on April 3, 1951, Mr A. H. Sayer, M.C., J.P., the Society's chairman, in the chair.

The General Manager (Mr D. R. Woodgate, M.Com., F.I.A.) presented the reports and statement of accounts for the year ended December 31, 1950.

The chairman, in moving the adoption of the reports, said:

It is my privilege and pleasure to welcome the members of this Society to the one hundred and tenth annual general meeting. Before I comment upon the achievements of 1950, I should like to refer to three points of interest, namely: (1) Since 1928 the premium income of the Society has more than doubled and now stands at over £3,500,000, and (2) the assets have increased in the same period by over three times and now stand at over £27,000,000, and (3) the total paid in claims since the establishment of the Society exceeds £49,000,000.

Every year through which we pass seems at the time to be the most difficult and to give rise to more perplexities than all previous years of which we have experience. Last year, which began with the flurry and uncertainties of an expected General Election and ended with the even graver uncertainties of the war in Korea and the effort for rearmament, was no exception. It is a tribute to the firm foundations of the finances of the Society that it has come through the year in the thoroughly satisfactory manner as demonstrated by the accounts which are before you today, and to which I shall refer in some detail.

INVESTMENTS

The marked rise in the prices of all raw materials has posed before many trading companies the serious problem of how to finance their stocks of goods in course of manufacture. High taxation has made it impossible for them to accumulate sufficient reserves for the purpose and they have had to come to the market for fresh capital. Unwelcome though this may be from the national point of view, nevertheless the opportunity has been afforded to Institutions such as the Society for a profitable investment of their funds. The influence of this factor is shown in the rise of £270,000 in the Society's holding of debenture stocks. Another marked rise is that of £763,000 in mortgages on property within the United Kingdom to a total of nearly £5,500,000, which reflects the success of the Society's popular House Purchase Plans and also the opportunity which presented itself during the year of making substantial mortgage advances on other suitable property. On the other hand, the Society's holding of British Government and British Government Guaranteed Securities fell by over £600,000.

RATES OF INTEREST

The gross rate of interest earned on the Society's funds was £3 14s. 11d. per cent., and the corresponding net rate of £3 9s. 6d. per cent. was only 1d. lower than that for the previous year. I am hopeful that we have seen the end of the fall in the rate of interest

earned which has been a feature of recent years and which was the result of a cheap money policy on the part of the Government and the nationalisation of many of the basic industries in which the Society had invested policyowners' funds.

Notwithstanding the more favourable investment opportunities of 1950, the market values of Stock Exchange securities as at December 31, 1950, were on the whole higher than those for a year earlier. The directors have, nevertheless, deemed it wise and prudent to augment the investments and general reserves, and the accounts show that £126,000 has been transferred out of the year's surpluses for this purpose. During the year, £26,000 had been applied specifically to writing down the book values of certain Stock Exchange securities, the reserves now stand at the substantial total of £1,550,000.

HOUSE PURCHASE

The Society's House Purchase Plan proved extremely popular last year; in fact, a record amount of new advances was made. That there is still a field for further expansion is indicated by the fact that only 35 per cent. of dwellings in this country are owner-occupied.

The programme of rearmament on which the nation has embarked may cut down the number of new houses which it is possible to build. It is vitally important, therefore, that houses now in use, which are all too few in number, should be kept in good order. However conscientious a tenant may be, he will never have the same pride in a house or take as much care of it if it belongs to someone else, as he would if it belonged to himself. Even the most willing owner of a house may find it financially embarrassing at times to effect repairs to his house when they become necessary. His difficulties are taken care of under the Society's Maximum House Purchase Plan. Under this plan a cash payment is made to the owner every five years to enable him to pay for repairs, decorations, etc. The usual advantages of all the Society's House Purchase Plans apply in full, namely, should the owner die before the period contemplated at the outset, the advance made by the Society is discharged and the owner's dependents or legal representatives receive the deeds of the property, freed from the loan. Furthermore, under the "maximum" plan an annual payment from the date of death to the end of the original term is made to the widow or legal representative. There is no other plan which covers so completely the needs of the man who wishes to buy his own house and its advantages are becoming increasingly known.

NEW OFFICES

I am pleased to be able to say that the Society is opening new offices in Haverfordwest, Pembrokeshire, and in Scarborough, Yorkshire. These areas present an opportunity for expansion of the Society's activities. I feel sure that existing policyholders in the areas will welcome the closer contact which will result from the presence of responsible officials in the locality.

The report and accounts were received, approved and adopted.

BRITANNIC ASSURANCE COMPANY LIMITED

INCREASED BONUSES TO POLICYHOLDERS

FUNDS OVER £70,000,000

Mr J. A. Jefferson, F.I.A., presiding at the eighty-fifth annual general meeting, said:

Ladies and gentlemen, the company has again made considerable additions to its funds and income. The total funds for the security of our policyholders, at the end of the year, amounted to £70,545,000—an increase of £4,446,000. Our premium income in the two life branches amounted to £9,952,000—an increase of £297,000—and for the first time the fire and accident premium income exceeded half a million pounds. We were again able to report larger surpluses in both life branches and to declare increased bonuses to policyholders.

GREATER APPRECIATION OF WORK OF INDUSTRIAL LIFE OFFICES

The threat of state interference with our business has had at least one gratifying result. It has caused us as an industry to tell the world just what we are doing for our policyholders and the part we are playing as an important savings medium in the field of national economy. Our policyholders have always recognised the worth of our work, but during the hundred years of this industry's existence we have made little effort to bring to the notice of people other than our policyholders the benefits of the services which we have been rendering—in other words we have in the past neglected what is now termed "public relations." Today, as a result of our efforts to bring knowledge of our business to a wider audience, there is everywhere a greater appreciation of the work of the industrial life offices. We are proud of our achievements and we are satisfied that if we are left free from interference we shall achieve even greater progress, to the mutual benefit of policyholders, staff and stockholders.

ORDINARY BRANCH

The ordinary branch premium income of £3,260,000 showed an increase of £140,000, and there was an increase of £1,748,000 in the fund, bringing it up to £25,571,000. The net rate of interest was £3 2s. 5d. per cent. Death claims, although up by £51,000 at £337,000, were well within the expectation by the mortality table employed in the valuation. Maturities at £1,093,000 were £134,000 less than in 1949. Expenses were again moderate at 11.91 per cent., compared with 12.03 per cent. last year. Our new business at £7,031,000 was slightly better than in 1949, and there was a further increase in the average sum assured to £477.

INDUSTRIAL BRANCH

Industrial branch premiums at £6,691,000 were up by £157,000 and the funds increased by £2,291,000 to £38,516,000. The net rate of interest was £3 13s. 9d. per cent. Death claims showed an increase of £32,000 at £1,554,000, and maturities increased by £77,000 to £1,573,000. The expense ratio of 25.72 per cent. was very moderate in a time of rising prices, and indicates the efficiency with which our business is run.

Cases on which policyholders were unable or unwilling to continue payment of premiums were actually fewer in number than in 1949, and it may interest you to know that in 39 per cent. of these cases we gave a paid-up policy for that proportion of the sum assured which the number of premiums actually paid bore to the total number

of premiums payable—a very generous settlement. In 33 per cent. of the cases we paid a cash surrender value which was nearly always greater than that fixed by Parliament.

In the remaining 28 per cent. of the cases, less than one year's premiums had been paid, but on all of these we gave life assurance cover for a much longer period than the period of the premium payments; indeed, in a large number of cases we received only two or three weeks' premiums but gave cover for as long as twelve or fifteen weeks. The company does not profit from these very early lapses, and if it were possible at the outset for our agents to identify proposals which were likely to lapse, they would not put them forward. It is of course possible for any proposer to become unable to pay his premiums, or to change his mind or experience a change of circumstances.

In the ordinary branch the surplus was £1,041,530, inclusive of £256,638 brought forward. The directors have allocated £582,769 to with-profit policies which has enabled them to declare a reversionary bonus of £1 8s. per cent. of the sum assured, which is 2s. per cent. higher than in the previous year.

In the industrial branch the surplus was £2,128,049, inclusive of £654,888 brought forward. The directors have allocated £740,000 for bonuses to Britannic policies, against £700,000 in 1949. The vested reversionary bonus scheme has again been improved, and inclusive of those previously declared the bonuses on premium-paying policies on which 10 years' premiums had been paid will be 6 per cent., increasing by 1 per cent. for each additional year's premiums paid, up to a maximum of 27 per cent. Formerly, the bonus rose from 5 per cent. to a maximum of 25 per cent.

FIRE AND ACCIDENT BRANCH

In the fire and accident branch the premium income for the first time exceeded half a million pounds. At £514,000 the premiums were over £36,000 greater than in the previous year. We are hopeful that this branch will continue to make steady progress.

In the ordinary branch the interests in the divisible surplus are contractually fixed at 90 per cent. to the policyholders and 10 per cent. to the stockholders. In the industrial branch there is no contractual right by which the policyholders share in the surplus, but by voluntary action over many years we have established the principle of bonus distributions, and today the major share of the surplus is allocated to policyholders in this branch. This year's allocation of £800,000 brings the total sums voluntarily allocated to industrial branch policyholders for bonuses to over £6,300,000.

DIVIDEND POLICY

With the growth of the business and surpluses, a gradual increase in the transfers to profit and loss account would normally accrue and would benefit the stockholders. In August, 1947, your board was considering a modest increase in dividend and proofs of the dividend warrants had been printed. In the very week in which we had fixed our board meeting for formal decision, Mr Attlee made his appeal for the wage-freeze and its complementary partnership of dividend limitation, and we immediately decided not to increase our dividend. Since 1947 the

wage-freeze has been allowed to thaw, and limitation of dividends has been replaced by moderation and restraint. By holding our dividend unaltered until now, we consider that we have been exceedingly moderate and restrained.

HOUSE PURCHASE SCHEME

The steadily growing popularity of our house purchase scheme is reflected in the increase of £1,852,000 in mortgages. Our experience in this field goes back to 1908, and we now have a steady stream of repayments. Last year the total repayments amounted to nearly £1,000,000. In cases which terminate through maturity of the policy or by the death of the borrower, not only are the deeds of the property handed over to the borrower or his dependants free from debt, but in addition substantial bonus payments have accrued on the with-profit policies. Actual new advances during the year were 2,835 in number for mortgages of £2,838,000—an average of just over £1,000 for each advance. There is no doubt that this scheme is of great benefit to our clients who are purchasing their houses out of income and who over so long a period have proved themselves to be thrifty and credit-worthy borrowers.

INVESTMENTS

Debentures, which include the unsecured loan stocks now being issued by leading public companies, have increased by £731,000. No longer can the successful company finance its growth out of profits, facing as it does high taxation coupled with high replacement costs of plant and raw materials. Whilst we are glad to play our part in financing industry, I am concerned at the heavy increase in fixed charges with which industry is being loaded. If we are called upon to face a recession of trade at any time, such charges may seriously retard recovery. Risk-bearing capital has the elasticity and resilience to absorb shocks and should be given greater, not less, encouragement by any government seeking to lead a prosperous industrial nation. If you wish to limit the rewards for success, you should also be prepared to limit the losses of failure, and the result of this policy would surely be stagnation.

Ordinary shares have increased by nearly £1,000,000. In selecting our investments in this class we have assumed that difficult times lie ahead, and we have therefore concentrated on companies whose soundness has been proved in the past and whose present financial position appears capable of weathering any such difficulties.

STAFF PENSION FUND

We are again proposing to transfer £175,000 to the Staff Pension Fund, and I am certain that this will be approved by you. The amounts allocated to the fund now amount to over £3,000,000 and the staff, through the Staff Pension Fund, is today the biggest Britannic ordinary stockholder. As you all realise, it would be quite impossible to produce such excellent results year after year without the hard work and co-operation of a grand staff, and the transfer to the Pension Fund is our tangible form of thanks.

Orders and copy for the insertion of Company Meeting reports must reach this office not later than Wednesday of each week and should be addressed to:—

NATIONAL PROVIDENT INSTITUTION

NET INTEREST RATE 4½ PER CENT REDUCED NON-PROFIT RATES

The annual meeting of the National Provident Institution for Mutual Life Assurance will be held at 48, Gracechurch Street, London, E.C. on Tuesday, April 10th.

The following are extracts from the address to be submitted by the chairman, Mr Vincent W. Yorke:—

Members will have had our report and I feel sure that they will have found much ground for satisfaction in the achievements which we record and for confidence in the future growth and progress of our Institution. During 1950 we did—though by a small margin—establish yet another record of new business.

It is well known that life assurance per head of the population in Great Britain is smaller than that in some other countries such as the United States, Canada and Australia and that the percentage growth also of sums assured in force in those three countries during the past ten years has been greater than in Great Britain. Admittedly an important factor may be that the three countries that I have mentioned are at a more active stage of development than Great Britain.

A cause of this is the great demand for "genuine" life assurance in those countries, by which I mean whole life assurance, and policies providing an income for widow and children of the type that we call "family protection." We are doing our best to encourage this by attractive forms of policies. Many of us somewhat regret the modern preference of young men for endowment assurances for comparatively short terms regardless of their real needs, and we know well that the same amount of premium could have been used to better purpose for a longer term policy and perhaps some "family protection" income for the family that is left behind.

For the young man taking out his early policies while his family are still young, I say "Put your premiums to the best use by obtaining the largest possible cover." We are doing our best to encourage this by offering appropriate forms of policy in attractive guise.

Our claims experience continues to be light—over the last four years the claims by death have averaged only 75 per cent. of the amount expected according to modern assurance mortality tables.

HIGH INTEREST EARNINGS

The rates of interest earned on our fund were £5 14s. 11d. per cent. gross and £4 5s. 6d. per cent. net, after deduction of tax. In a widely-spread portfolio of investments I think we may well be proud of such remarkable figures.

Most life offices, like ourselves, write down the book values of securities when necessary. We satisfy ourselves that no individual holding stands in our books at more than its market selling price at the triennial valuation. The effect of this gradual writing down of book values is reflected in an increase in the apparent rate of interest earned.

In the case of most offices the same general principle is applied, with a corresponding effect, and you may well be pleased when you compare the rates quoted in our report with those of other offices. Our considered investment policy is active and forward-looking and we believe that it is the best to adopt in the interests of our members, especially in an inflationary period.

For there are many signs that inflation is gathering pace. At such a time investment in ordinary shares, both at home and overseas and in real property, is a prudent method of trying to maintain the real value of capital and of income.

On various earlier occasions I have spoken of the substantial margin between the market value of our assets and the written down figure at which they appear in our balance sheet. The existence of this hidden reserve is well known to you and the present position is one which gives us every confidence in facing the future.

INCREASED INTERIM BONUSES

After reviewing the position disclosed at the end of the first two years of the current triennium, we feel we can properly increase the rates of interim bonus which we allow on full profit policies which become claims by death or maturity, and we have announced the following increased rates as from April 1, 1951:—

Whole Life Assurance: 45s. per cent. per annum—increase in the case of certain policies of long duration.

Endowment Assurances: 32s. 6d. per cent. to 45s. per cent. per annum, according to the maturity age.

We have also reviewed the rates of premium that we charge for without-profit policies, under which a larger guaranteed sum assured is available for a given amount of premium.

Our new scales of premium for policies effected since March 1st last are very attractive, and I would remind you also that we charge reduced rates of premium for policies of large amount. Those people who prefer the certainty of a guaranteed policy and are prepared to forego the right to share in profits should consider our new terms.

I reserve my final words for the staff, and would like to express in the board's name—and I am sure in yours—high appreciation for their sustained efforts at all times. Their task is two-fold, namely to give efficient service, and with the help of members, agents, and other connections to increase the membership of the Institution.

BANK OF SCOTLAND

SATISFACTORY RESULTS

LORD ELPHINSTONE'S ADDRESS

The annual general meeting of the Proprietors of the Bank of Scotland was held within the head office, Edinburgh, on April 3rd. The Right Hon. Lord Elphinstone, K.T., governor of the bank, presided.

In submitting the directors' report, the chairman said:—When I addressed you last year the outlook at home and abroad was clouded by uncertainty, an uncertainty which was the more disturbing because of the improvement which seemed to be taking place in our trading position as a nation. The fear that the efforts which were being made to restore our balance of trade might be frustrated by the need for expenditure on defence was always present. It is therefore satisfactory that during the last twelve months we have been able to maintain our world trade and at the same time bear our share in the strengthening of the defences of the peace-loving nations.

We would warmly associate ourselves with the recent expressions of appreciation by bank chairmen of the assistance which this country and other nations have received from the United States of America. Their generosity has helped to preserve the freedom of democratic countries and to restore to some extent their standards of living.

Once again we contemplate an economy dictated by defence requirements and the heavy additional burden of rearmament may require higher taxation. No doubt our people will accept this in the proper spirit provided they can be assured of the urgency of the need and of the equity and wisdom of the measures proposed. They are, however, entitled to expect the most stringent economy in the administration of government. Re-

armament and defence should as far as possible be financed on a "pay as you go" basis: maximum productivity should be the accepted and universal rule and the utmost economy demanded from all departments of governmental administration. There is need for public policies which will counteract the erosion that has been taking place in the value of our money through the insidious process of inflation.

The Royal Commission instituted to inquire into the present system of taxation of incomes and profits will, it is hoped, press forward with their investigations and recommendations.

While there was justification for a cheap money policy during the war and in the early postwar period it would seem to be of doubtful advantage now in face of an intensified inflationary threat. Existing rates of interest are somewhat unrealistic and appear actually to aggravate the inflationary trend. In the past the fluctuating bank rate proved its efficacy as a corrective and we believe it could again operate beneficially.

LOANS AND ADVANCES

We are pleased to record an increase of £4,000,000 in our loans and advances. These are spread over a wide range of industries and the increase occurred largely in the last quarter. We continue to find that we are frequently asked to grant facilities for purposes which normally would be financed out of the borrower's own resources. This is only one reflection of the excessive burden of taxation which makes the provision of sufficient working capital and the accumulation of adequate reserves for replacements and renewals very difficult and indeed, in many cases quite impossible. The steep rise in costs of raw materials is another explanation of increased borrowings from the banks.

The bank's extensive branch system enables us to keep closely in touch with all branches of industry, particularly agriculture, in which we have a substantial stake through our advances to farmers. Shipbuilding—another very important industry in which we are much interested—is experiencing satisfactory trading and we are glad to think that the immediate outlook there is favourable.

LIQUID ASSETS

It is very necessary that a strong liquid position should be maintained and throughout the year, as always, we have observed orthodox principles with a good margin to spare. Assets in cash, bank balances, cheques in transit, money at call and short notice and in bills discounted (including £1,500,000 of Treasury bills) amount to £35 million—equivalent to 31 per cent. of our total liabilities to the public. When there is added thereto our holding of Treasury deposit receipts and our investment portfolio of over £53 million we have liquid resources of £91,961,000, equal to 80 per cent. of our public liabilities. The value of the investments, which are practically all British Government stocks, is greater than the amount at which they appear in the balance sheet.

RESULTS FOR THE YEAR

After allowing for taxation and making provision for contingencies the net profits are slightly lower at £303,948. Adding the balance from last year, £191,431, there is available £495,379. Out of this there has been transferred to reserve for contingencies £100,000, to trustees for officers' pension fund £30,000, to Bank of Scotland widows' fund £15,000, and after payment of a dividend of 12 per cent. for the year (less tax) taking £158,400, there is left to be carried forward £191,979. In all the circumstances I think you will agree that these results are satisfactory.

The report and accounts were adopted.

THE NATIONAL MUTUAL LIFE ASSURANCE SOCIETY

HIGH BONUS RATES RESUMED

The one hundred and twenty-first annual general meeting of this Society was held on April 4th at the head office, 39, King Street, London, E.C.

Mr Kenneth A. E. Moore, F.C.A., the chairman, presided.

The actuary and manager, Mr G. H. Recknell, F.I.A., F.F.A., read the notice convening the meeting, the minutes of the previous annual general meeting and the report of the auditors.

The chairman, in the course of his speech, said:—The report and accounts which are before you today, read in conjunction with the actuary's valuation report, show in effect how the Society has fared during the two years which have elapsed since the last valuation, and the financial position at the end of that period.

You will see that the Society has emerged from that very troublesome period financially strong, with a reserve fund restored to £1,000,000, and able to repeat the high rates of bonus which we had paid in earlier years. The increase in the reserve fund is made up of £259,000 transferred from revenue account, and £241,000 representing investment profits earned during the past year.

The last two years have included many disturbing events and trends ranging from the collapse of the Dalton technique of over-cheap money, the devaluation of the pound and the loss of remunerative investments through nationalisation, to the Korean war and the immensely increased expenditure on defence. It is quite remarkable that through this depressing time the British life offices in general and the Society in particular, have contrived to remain sound and flourishing and more active in new business than in any corresponding period in the past.

ADVANTAGES OF LIFE ASSURANCE

The fact is that the trend of economic events has greatly strengthened the case for life assurance. The decline in the ability to accumulate personal savings and the inability of whole classes of the population, due to the pressure of economic changes and of taxation, to make adequate provision for their old age has led to a keener realisation of the advantages of life assurance as a means of saving and of providing for old age and dependants.

The Society has in being an active and well-equipped department covering pension schemes and is particularly concentrating on meeting the individual circumstances of smaller businesses and firms. Many representations are now being submitted by professional bodies to the committee appointed by the Chancellor of the Exchequer to consider, among other things, the anomalies which arise from the barring by existing legislation of professional classes and self-employed persons from income tax advantages which are enjoyed by their own employees where superannuation schemes are in existence. If these representations bear fruit the Society will be well placed for a substantial extension of its activities and usefulness.

In this year we celebrate our coming-of-age in the second century of our existence. The work of the board and of our staff is not becoming less arduous with the passing of the years but it is an encouragement for the future to know that we have such a long and splendid history behind us. Our most sincere thanks are due to Mr Recknell, our actuary and manager for many years past, and to his officials and staff for their stewardship.

The report and accounts were unanimously adopted.

THE BRADFORD DYERS' ASSOCIATION LIMITED

RECORD GROSS TRADING FIGURES

MR JAMES EWING'S ADDRESS

The fifty-third annual general meeting of The Bradford Dyers' Association Limited was held at the Midland Hotel, Bradford, on April 4th. Mr James Ewing (the chairman), who presided, in the course of his speech said:

The gross trading figures are a record in the history of the Association, but the net figures, after meeting heavy depreciation and severe taxation, are not the highest. The total yardage of wool, cotton and rayon piece goods processed during the year by the Association was 520,000,000, of which nearly one-third was processed by our foreign companies. Since 1948 the yardage has increased. In the consolidated profit and loss account we have introduced a division of the gross trading profits as between our home branches and our overseas companies, from which will be seen that the latter are responsible in a marked degree for the improvement in and for a substantial proportion of our profits. Part of this is dollar earnings.

TRADING RESULTS

Our gross trading profits, as shown by the consolidated profit and loss account, amounted to £2,836,523, an increase of £1,063,280 on the previous year. Of this increase, £600,000 was provided by our overseas companies and £464,000 by our British branches and subsidiary companies.

In the last four years, our group of companies has spent over £2,000,000 on additions and replacements of buildings, plant and machinery, and outstanding commitments amount to £785,000.

Your Board has decided that the charge for depreciation must be increased to provide for the wearing out and obsolescence of our equipment, on a basis commensurate with the current level of values. In 1948 the total provision for depreciation was £389,000. This was increased to a total of £652,000 in 1949, and has been further increased to £792,000 in 1950. Similar considerations have led to the retention by subsidiary companies of a large proportion of the net profits they have earned during the year. Further, increasing turnover at rising price levels demands more working capital. In two years, as shown by the consolidated balance sheet, customers' outstanding accounts have risen by £930,000; our overseas companies, in particular, have found it prudent to conserve their resources in order to meet this demand of present-day conditions of trade.

After making these necessary provisions and deducting £752,000 for taxation—£208,000 more than the previous year—and also deducting the share of minority shareholders in profits of subsidiaries, debenture interest and directors' remuneration, there remains £492,891 as the profit available. Adding the amount brought forward, we have £612,000 for disposal. £200,000 has been added to general reserve account, and £60,000 provided for staff and workpeople's pensions.

DIVIDEND RECOMMENDATION

Since the resumption of payment of dividend on the ordinary stock with a modest

4 per cent. for the year 1943, we have restricted the rate of distribution to 5 per cent. until last year, when 7½ per cent. was paid. These dividends represented only a proportion of our earnings, and could have been increased but for the necessity of rebuilding our reserves and meeting the request of the Chancellor for "moderation and restraint" in dividend payments. This year, we feel amply justified in raising the rate to 10 per cent., the largest dividend we have paid since 1928. The parent company's general reserve now amounts to the sum of £1,000,000, while our properties and plant are carried in our balance sheet on an extremely conservative basis. It is of interest to note that, while the total Preference and Ordinary dividends for the year, before deduction of income tax, amount to £353,000, we have received the equivalent of gross dividends of £312,000 from our overseas companies—an indication of the conservative policy of your Board in strengthening the Association both financially and technically, to enable it to face the future with confidence when competitive conditions return such as the market in textiles experienced in the decade before 1939.

As commission dyers and finishers—selling our labour, skill and services—we fortunately have not to carry the risks of the fantastic prices of cotton and wool; but the repercussion of these prices may be felt in due course in decreased volume. There is grave danger that wool and cotton fabrics may rise in cost beyond the purchasing power of the community.

OVERSEAS COMPANIES

BRADFORD DYEING ASSOCIATION (U.S.A.)
RHODE ISLAND, U.S.A.

This company has had another satisfactory year, having processed several million yards more in 1950 than in 1949, in spite of keen competition from the Southern States, where wages are much lower, and from the large vertical concerns. This is a creditable achievement on the part of both management and employees. Large expenditures have been made by the company in the past few years on the modernisation of its plant and on research, and these have greatly helped the company to enhance its already high reputation.

Research is continually being carried on, particularly in the field of the new synthetics such as Nylon, Orlon, Fortisan, Amilar (Fibre V), etc., and the company is capable of meeting the demands likely to be made upon it whether for civilian goods or for the Defence Programme.

During the current year the company will have to meet substantially increased labour costs, under the provisions of an agreement which has recently been entered into with the union, rising costs of fuel, chemicals and dyestuffs, and a higher rate of taxation. On the other hand, the volume of business is increasing, and includes several contracts for the dyeing and finishing of cloths intended for the various branches of the U.S. armed forces. Under the efficient management of the resident Board, which has recently been augmented by the election of three new directors from the company's personnel and given a continuation of the existing cordial relations with its employees, there is no reason to anticipate any serious diminution in the earnings of the company in 1951.

BEIDA DYERS, S.A.E. ALEXANDRIA, EGYPT

In this company we have the majority holding. The yardage of cloth processed was in excess of that in any previous year. Units No. 1 and No. 2 are running steadily, and the output of prints from No. 3 unit is increasing as new machinery is brought into production. The high quality of its output has assured a ready market for all the cloth this printing unit has been able to process. Although the majority of fabrics produced at Beida are for local consumption, a very encouraging start has been made with an export trade. Overseas buyers have given a most favourable reception to Beida qualities, and appreciable quantities have been shipped to various parts of the world.

In view of the development and expansion, and owing to rising prices of raw materials, labour, etc., the capital of Beida Dyers, S.A.E. has been increased from half a million to one million Egyptian pounds. A new issue of shares has therefore been made, one new £E4-share being offered to existing shareholders for every share already held, at par, plus 10 piastres to cover expenses of issue. Your Board has subscribed for its entitlement in the new issue at a cost of £282,092. The increase in capital reflects the further progress of the company and prepares the way for still expanding business. We are indebted to the Exchange Control Department of the Bank of England for the helpful and expeditious manner in which they approved our application to make this investment abroad.

BRADFORD DYEING ASSOCIATION (CANADA) LIMITED, MONTREAL AND COBOURG

Our acquisition of this business in August, 1949, was followed in September, 1949, by the devaluation of sterling, which had an unfavourable influence on the Canadian woollen and worsted trade. In 1950 conditions still remained unpropitious.

Prompt steps have been taken to improve the company's position. One small branch has been closed, the building sold at an advantageous figure, and the machinery transferred to the remaining two branches without loss of productive capacity. Installations of the latest types of machinery from the United Kingdom and the United States have been made and the company is now equipped to cater for lightweight dress flannels and dress crêpes imported in the grey from the United Kingdom and for the larger range of domestically manufactured goods such as mixture suitings, piece dyed suitings, serges, gaberdines, etc. The company is in a position to give patented shrink resisting finishes suitable for all washable wool goods, and in a short time will be equipped to apply many of the specialised finishes available in the United Kingdom, with special attention to the dyeing and finishing of a variety of mixture cloths composed of wool and viscose, wool and nylon, wool and ardil, etc.

Our aim is to enable this company to offer the best dyeing and finishing of wool types and to provide in the Canadian market service equal to that we give in the United Kingdom.

BRADFORD DYEING ASSOCIATION (AUSTRALIA) PTY. LIMITED, SALE, VICTORIA

Last year I reported to you that we had decided to erect, at the City of Sale, Victoria, a works for the dyeing and printing of all types of rayon woven fabrics, and that we had formed a company in Australia with a capital of £A500,000 to carry out that project. It is our intention that this company should provide service not only for Australia's domestic producers but also for our customers in the United Kingdom who cater for that market. Some delay has been caused by difficulties in regard to the supply of steel, but all preliminary arrangements have

now been completed and the contracts for the buildings and other constructional work will be let shortly. We are hopeful that the works will be in production in the latter part of next year.

RESEARCH AND DEVELOPMENTS

Mention of several of our main developments during the past few years might be interesting. Recognising the need for unshrinkable and stabilised finishes in both natural and synthetic fibres, we have devoted a great deal of research to that objective. As finishers we believe we are unique in offering to the trade the latest developments in unshrinkable and stabilised finishes in cotton, rayon and wool. Our trade names "Rigmel" for cotton, "Maxifix" for wool, and "Quintesse" for rayon, are household names in the industry and are a guarantee of the newest developments in these important fields. In printing we have continued to expand in both roller and screen printing. An ancillary to our printing is our subsidiary company "Roll-Phot," and we are now producing completely new styles of printing.

Our "Rigmel" shrunk finish for cotton cloth ranks as one of our most prominent achievements and is the most outstanding contribution to the finishing of cotton textiles since the discovery of mercerising. During the last three years an already large turnover has been almost doubled. "Rigmel" is now one of the best known trade names in textiles. Today it is advertised in about 400 papers throughout Great Britain, with a monthly readership estimated at 115 million; and B.D.A. has become the leading advertiser in this field. Already 4,000/5,000 shops regularly display goods with the "Rigmel" mark. Demand on us for garment tabs and tickets has reached the impressive figure of 15 million in a year. As a result, some of the most influential shirt-makers are now realising that it is in the public interest to identify "Rigmel" on their garments, and this is resulting in more and more collaboration with them.

Despite the general encouragement given to research, the Government has as yet seen no way of helping to relieve the dearth of University graduates who are indispensable for present-day research teams, the size of which suffers under the continued impact of military service requirements. Although our research effort is, for this reason, much below the degree of intensity that we would like to see, we have been successful in uncovering a number of new and interesting finishes, which are the subject of patent applications and will improve your company's competitive position by their future exploitation.

SUPPLIES

May I say a few words regarding the important question of supplies of raw materials? The world shortage of sulphur is yet another of the many difficulties likely to affect our industry. Although in comparison with other sulphur consumers our requirements of the country's sulphur commodities are small, the extent to which they have permeated our industry and dominate certain processes is perhaps not generally realised. Owing to the shortage, the Board of Trade has found it necessary to control sulphur itself and sulphuric acid. In this difficult situation your company is endeavouring to reduce the use of acid, but any worsening in acid supplies might well have a serious influence on the output of carbonised wool piece goods and of dyed wool pieces generally. In other sulphur containing materials, and notably sodium hydrosulphite and related products vital to the application of the highly important fast dyes, neither economy nor substitution appears feasible. Additional economy by a company already working at a high degree of efficiency is rarely possible.

and a rationing system hits it the harder. As stocks of these commodities are non-existent and use is on a hand-to-mouth basis, the future of vat dyeing and printing is precariously balanced. Through the appropriate Trade Federations, which provide a necessary and powerful voice when the occasion demands strong representations have been made to the Board of Trade, and it is hoped that the threat to production may not materialise.

It is realised that the outcome depends on the world distribution of sulphur, which, along with other vital basic commodities, must be discussed at the highest international level. Nevertheless, our own mineral wealth must not continue unexploited. Combined sulphur is available to us in our island soil. Its winning involves great capital expenditure and use of vital steel. With taxation at its present levels it is too much to expect the whole burden of capital requirements to fall on private enterprise; it should rather appeal to the Government as a prudent and wise long-term investment, affecting the national well-being.

SULPHUR SHORTAGE AND THE RAYON INDUSTRY

Yet another result of the sulphur shortage is that which faces the rayon producing industry, in the products of which we are so closely interested. I referred last year to the growing importance of manufactured fibres in the nation's economy. Their importance has increased substantially because of the high and advancing price of natural fibres. It is all the more tragic, therefore, that at a time when expanded output of viscose rayon is required, the shortage of sulphur has imposed a reduction in output. The future of both viscose and acetate rayon is bright and they will continue to loom large in your company's finishing production.

As for fibres from synthetic polymers, there is unfortunately little immediate change in this country, whilst both volume and variety in U.S.A. continue to expand and develop. Announcements of projected new American fibres are fairly frequent. Nevertheless, we are convinced of the important part these classes of fibres will play in our textile industry, and in a pioneering spirit we have re-equipped a works solely to deal with these fibres. Much valuable experience is being gained, leading to development of new and novel finishes, and in this work we are fortunate in having access to the latest developments in U.S.A. through our subsidiary company there.

Other vital supplies for our industry are coal and chemicals. During the past few months we have had to draw upon our stocks of coal to maintain our production. We record with appreciation the assistance we have received from the local officials of the Coal Board during a very difficult and trying time. I also wish to express our thanks to British dyestuff suppliers for the very adequate support they have given us. But for the protection afforded to the Dyestuff Industry by the Dyestuffs Import Regulation Act, which enabled this industry to be built up so that it was capable of meeting all U.K. requirements, today we would have been faced with a position not unlike that during the World War No. 1.

SURPLUS CAPACITY IN THE PIECE DYEING AND FINISHING INDUSTRY

I have repeatedly urged that the finishing sections should take action to reduce in an orderly manner the surplus capacity which exists in their industry. The Cotton Industry Working Party Report of 1946 made the plain statement:—

"There is in the Finishing Section the most clear case of 'unbalanced' redundancy in the sense that its capacity is much greater than could be required for handling the

potential output of the other two Sections (Spinning and Weaving). . . ."

The bleaching and the printing sections of the Finishing Industry have approved and have put into operation agreements designed to correct this state of affairs as it affects them. In the cotton and rayon piece dyeing industry a company—Dyeing Industry Reorganisation Limited—has been formed to promote and administer a similar scheme. Copies of the Memorandum and Articles of Association of the company have been circulated to all firms in the trade, together with copies of a levy agreement which they were asked to execute. The arrangements embodied in these documents would bring into being, under a continuing scheme, administrative machinery by means of which the industry could from time to time acquire the businesses of those who were willing to sell.

If one takes the long view, confidence in the stability of the industry cannot be felt until the capacity of the piece dyeing industry is brought more into conformity with the potential output of the complementary spinning and weaving sections. It is true that production of cotton cloth in the United Kingdom last year showed a further recovery and that the increase in the production of rayon cloth was impressive. But comparing these figures with the production in earlier years, and remembering that this was the level of production which governed the size of the piece dyeing capacity which has not since been materially reduced, it is made apparent that the "unbalanced" redundancy stressed in the Working Party Report still remains. This is illustrated by the following table:—

Year	Cotton	Rayon	Total	Index Figure
1912	8,050	n.a.	8,050	100
1924	5,590	n.a.	5,590	70
1937	3,640	482	4,122	51
1947	1,622	388	2,010	25
1948	1,895	498	2,393	30
1949	2,003	588	2,591	32
1950	2,125	706	2,831	35

The fall in exports of cotton cloth from the United Kingdom in 1950 as compared with 1949, contrasted with increases in exports from India and Japan, demonstrates that cotton textiles are not a sheltered industry.

JAPANESE COMPETITION

Two years ago I stressed the latent menace to the economy of the United Kingdom of Japan's re-emergence as a textile exporting nation. Events in 1950 have demonstrated that such fears were not groundless. The United Kingdom's production in 1950 of cotton piece goods increased by 6 per cent., and her production of rayon and rayon mixture cloths by 20 per cent. in comparison with 1949. Japan's output in 1950 of cotton piece goods increased by 55 per cent. and her output of rayon cloths by 200 per cent. (estimated) in comparison with 1949. Despite this very marked increase in production, the volume of Japan's output of cotton cloths and rayon cloths combined still amounted to only 75 per cent. of the volume produced in the United Kingdom; but her exports exceeded United Kingdom exports by 28 per cent. Japan has exported in the past two years nearly 75 per cent. of her total production of cotton cloths.

The United Kingdom's lower volume of exports of cotton piece goods in 1950 compared with 1949 was attributable more to insufficiency of production than to competition from Japan and other exporting nations. Whatever the cause, Japan is gaining a grip on consumer markets which it will be practically impossible to loosen. It must be realised that many of Japan's former markets are now closed to her, and this will intensify her efforts to penetrate into British Colonial and other markets.

At the time of the visit to Japan, in May, 1950, of the Anglo-American Cotton Textile Industries Mission, labour costs there were reported to be one-fifth of those in Britain; machinery was being worked two shifts of 48 hours per week (they are now stated to be contemplating the adoption of a 7-day week system of operation, with an increased labour force so as not to violate the Labour Standards Law). In contrast to the United Kingdom they have an almost unlimited supply of labour, consisting mainly of young girls of between 16 and 21 years of age.

It is patently impossible for any country with Western European standards of living to compete with the costs of production possible under the conditions ruling in Japan. The position of the United Kingdom has not been made easier by S.C.A.P.'s removal of the limitation on Japan's spindleage, nor by the inadequate allocation of American cotton to the United Kingdom in contrast to the much more generous treatment accorded to Japan—an ex-enemy country.

THE COTTON BOARD

As provided under the Industrial Organisation and Development Act, 1947, the Board of Trade has been reviewing the Cotton Industry Development Council Order, 1948 (which put the wartime Cotton Board on a peacetime footing as The Cotton Board 1948) and has consulted the organisations of workers and employers in the industry. The representatives of the Finishing Employers' Organisations have recommended, without reservation, the continuation of the Cotton Board on the same basis as at present. The new proposals to allocate the costs of the Board between the different sections of the industry cannot logically be assailed; but I question whether it would not be more economical to revert to the method of levying the cost directly upon cotton, preferably in the raw state. The Cotton Board has played a major part in the recovery that has been made by the industry from its shrunken state in which concentration and the shutting down of its export trade had left it at the end of the war. Because of its fundamental importance, the rebuilding of the industry's labour force may be counted as the Cotton Board's outstanding achievement. To this task it has applied itself with energy and imagination, with the result that the employees in the industry have reached a number well above that which was thought to be possible at the end of the war, even though the pre-war number has not been recovered. It has served to fuse the activities of the several sections of the industry and, being a body established by Statutory direction, it has been able to represent the industry authoritatively to an extent which would have been beyond the power of any sectional organisation or combination of organisations. As the representative body of the industry in negotiations with the Government, it has saved the different sections much frustration and delay which could not have been avoided if they had been left to deal directly with the various Government departments—a form of decentralisation which could, with much advantage to industrialists, be extended. It was the first development council to be established in any industry, and it will serve as a model to any that have been or may be established later.

MONOPOLIES AND RESTRICTIVE PRACTICES ACT, 1948

Much has been heard of late of this Act and of restrictive practices in industry. It is very right and proper that there should be an inquiry into such matters, but it requires a true and balanced perspective. In modern society the citizen is governed by a large number of restrictive practices devised by the State for his own well-being, and similarly in industry, practices, apparently restrictive, may in fact be the attempts of an industry

to enforce a self-discipline which redounds to the common good. It is by this criterion that such practices must be judged.

Collective price maintenance is a much-maligned and misunderstood term. It is commonly regarded as a device for keeping prices up. Rather is it a method of preventing prices from falling to levels which are disastrous to employee and employer alike and to the community. In short, it is to prevent competition in its most vicious forms. It is this principle which has resulted in collective price maintenance to provide security and a fair reward both to worker and industrialist. Indeed, it is the very essence of the Board of Trade Utility Scheme, which fixes prices to provide a reasonable return to all involved in production and distribution of utility articles. The maintenance of an economic price level not only ensures to the worker and the employer their due reward, but it removes the serious danger of degradation of quality, which is the usual corollary of unbridled price competition.

The Monopolies Commission has useful work to do, but it may suffer because of the narrowness of its terms of reference. An inquiry into monopoly should consider the whole field of industrial activity, whether private or public and irrespective of whether the activity emanates from organised capital or organised labour. Only such a comprehensive review can be justified.

THANKS TO MANAGEMENT, STAFF AND WORKPEOPLE

Once again I express on your behalf thanks to our management, staff and workpeople for their loyal and devoted service. No company could be better served. If I might sum up the objectives of the Association, they are threefold: to give to our customers the most up to date and efficient service and reliable workmanship; to earn for our stockholders a reasonable return on the capital provided; and to provide for our employees good wages and conditions of employment. These three objectives, I believe, we are today fulfilling.

THE OUTLOOK

Last year I endeavoured to forecast our immediate prospects. Today the future is too obscure because of the uncertainty of the raw materials supply position to which I have already referred. All I can say is that our branches today are fully occupied and I can foresee no immediate diminution in volume of work. We are fortunately placed in having interests in substantial producing units in Egypt, U.S.A. and Canada, which will not be affected to the same degree as the United Kingdom in procuring supplies. For the first quarter of this year our figures compare favourably with the corresponding period of last year, and our stockholders may rest assured that the Board is fully alive to the situation and that nothing will be left undone to ensure a further year's satisfactory trading.

Demands of the Defence Programme on the engineering and metal using industries mean that exports by these industries, which have expanded greatly in recent years, will be reduced. If we are to maintain our overall balance of payments, the consumer goods industries, and in particular the textile industries, must increase their exports to fill this gap. It is unfortunate that at this time they have to face additional handicaps imposed by the shortage of raw cotton, high prices of wool, and shortage of sulphuric acid for the making of rayon. The situation demands renewed effort by all sections of the textile industry, both management and employees, directed towards obtaining expanded and more efficient production and towards keeping our products competitive in quality and in price in the international markets. I believe the industry will rise to the occasion.

The report and accounts were adopted.

THE STEETLEY COMPANY, LIMITED

INCREASED PRODUCTION AND SALES

EXPANSION OF DOLOMITE BUSINESS

MR N. M. PEECH'S STATEMENT

The twenty-first annual general meeting of The Steetley Company, Limited, was held on March 30th, at the Royal Victoria Hotel, Sheffield, Mr N. M. Peech (chairman and managing director) presiding.

The acting secretary (Mr G. M. Norledge) read the notice convening the meeting and the report of the auditors.

The following is the statement by the chairman which had been circulated with the report and accounts for the year ended December 31, 1950, and was taken as read:

In submitting the annual report for the year 1950, I should point out that the group production and sales were again higher than in any previous year.

DIVISIONAL REPORTS

In the Dolomite division, the main re-equipment of the management has been the re-equipment of the Coxhoe (Co. Durham) and Taffs Well (South Wales) works. The former was completed by the end of the year and some progress was made with the latter but it will be the summer of 1952 before this work is completed. Simultaneously with rebuilding large sections of these plants on restricted sites, high productions had to be maintained at both works, and this factor, coupled with delays in delivery of machinery, retarded progress.

In the refractory brick division, a measure of re-equipment proceeded at the Oughtibridge and Worsnop brickworks. This work will continue for two or three years and will be financed from year to year out of current resources. New and larger machines will be installed and an improvement in working conditions obtained. The capacities of both the Oughtibridge and Steetley brickworks were increased during the year.

In the magnesia division, the extension to the Hartlepool works of the Ministry of Supply, for whom we act as managers, is now coming into operation. This extension will increase the capacity of the works by 40 per cent. A notable feature of the year's work was that we established an export market for British magnesite of which a considerable proportion went to the United States and the output for this year is fully sold.

PRODUCTION EFFICIENCY AND SELLING PRICES

Many shareholders are aware that the new Cadeby works and the re-equipment of the Coxhoe and Taffs Well works are part of a long term development programme entered into several years ago. That programme had two principal objectives, namely, an increased production of dolomite refractories (heat resisting materials) and greater efficiency in the works operations. We were anxious to ensure our ability, particularly in winter weather, to meet an increasing demand for this product. The Cadeby works, which bears some resemblance to a small but modern blast furnace plant, has been successful in achieving these objectives. It has resulted in better working conditions and has proved to be a well-conceived project, the justification for which is manifest in times of rising wages and the national necessity for using manpower to the best possible advantage. The production per man employed is as good as the best American results. The re-equipment of the Taffs Well works will complete the programme.

To illustrate the extent to which selling prices have been kept down in relation to the

bills we have to meet for fuel, raw materials, repairs and maintenance materials, wages, etc., a table is attached to this report. Fuel prices at December, 1950, had increased by 186 per cent, compared with 1939, yet the prices of the three principal products made by our group had increased by only 83 per cent in the same period.

DEVELOPMENT

It has been decided to develop and expand the existing finely ground dolomite (magnesian limestone) business particularly for agriculture. Orders for new plant have been placed amounting to £100,000 which will be provided out of current resources. Production from the first unit has now commenced.

REGROUPING AND EXTENSION OF SUBSIDIARY COMPANIES

The development referred to in the preceding paragraph is being undertaken by a subsidiary company named Steetley Ground Limestone Company, Limited.

Two new subsidiary companies, namely Steetley Dolomite (Quarries) Limited and Steetley Doloma (Processing) Limited have been formed and subject to the necessary consents being obtained, it is intended that the issued capitals of these two companies will be increased to £400,000 and £500,000 respectively.

By this arrangement of wholly owned subsidiary companies in the Dolomite division, The Steetley Company will become a holding company which will facilitate organisation and administration.

In the Refractory Brick division, the business of the Steetley Refractory Brick Company has been consolidated with that of the Oughtibridge Silica Firebrick Company, Limited.

GROUP BALANCE SHEET AND PROFIT AND LOSS ACCOUNT

The issued capital remains unchanged at £1,163,760.

The additions to plant and machinery during the year amounted to £326,712, and the authorised expenditure on capital account outstanding at December 31, 1950 amounted to £227,500.

The group trading profit at £508,563 compares with £474,773 last year. After deducting depreciation amounting to £130,325, taxation amounting to £191,104 and directors' fees amounting to £5,317, the net profit is £187,990 compared with £168,007 in 1949.

The revenue reserves have been increased by £100,000 and the balance on profit and loss account, after making this allocation and providing for recommended dividends amounting to £73,632, will be £75,680.

DISPOSAL OF INCOME

You may be interested to know how each £1 of sales, which amounted to approximately £3,000,000 in 1950, was spent:—

	s. d.	%
Raw materials, works maintenance, repairs, stores, etc.	5 8	28
Fuel	5 6	27½
Wages and salaries	3 11	20
Delivery charges	2 6	12
Making a total of	17 6	87½
The remaining 2s. 6d. was spent on:		
Taxation	1 5	7
Reserve for new works and expansion of the business	7	3
Dividends	2 0	2½
	20 0	100

It is thus clear that even if no dividend were paid to those who provide the capital to build our works, the reduction in the price of the goods we sell would be only 6d. in the £, or 2½ per cent.

THE DIVIDEND

Your company is proud to be a part of the free enterprise system of this country which was the backbone of the economic recovery made last year. Your company is also proud to be able to afford to pay a very slightly larger sum, amounting to £8,540, out of the year's surplus of £187,990, to those who have led, established and have extended this business so substantially and created employment thereby. The return to them is meagre rather than generous for the risks they have taken. This larger payment we believe is due to those people who have been hard hit by taxation and the cost of living and have not had the benefit of higher wage earnings. We are grateful to our shareholders who have backed our judgment to the extent of investing £700,000 in the last three years in this business and so enabled the building of the new works and re-equipping and extension of our other works.

MANAGEMENT

Firstly, I should like to express our thanks to everyone who works for us. Their united efforts have increased production and improved efficiency. All who are interested in the company's and consequently in our contribution to the country's welfare, should be grateful to them. This year I would like to refer particularly to the importance of the work done by management. The success of a company depends largely on whether the day-to-day management of the business is good and in the more distant future on the progressive development of the undertaking. It is often not appreciated that a small difference in management, hardly perceptible on the surface, can bring about vastly differing results by a works or company. One wrong decision can ruin a whole works or delayed decisions, perhaps through remote control, can ruin morale and the works will soon drift downhill.

Referring to the development of our own undertaking, the production of magnesia refractories using dolomite and seawater as raw materials, stabilised dolomite refractories and the design of the new Cadeby works, were all original ideas of the board and senior executives—a hard working section of the community. Nothing like these enterprises existed in the world at the time we embarked upon them. To bring them from the stage of original thought in 1936 to today's position when the domestic magnesia production is 55,000 tons per annum (handling 15,000,000 gallons of seawater each day), stabilised dolomite production is 20,000 tons per annum, and the Cadeby works finished product output is 150,000 tons per annum, required a great deal of hard and intelligent work on the part of the management. I believe that shareholders will join with me in wishing to pay a special tribute to all who have had a hand in these developments in recent years.

We intend to develop not only original enterprises but also to apply original thought to adapting production methods and practices in our existing plants and facilities in order to improve efficiency. It is therefore essential that we should remain young in outlook and our young men should be given the fullest possible scope and encouragement to use initiative and enterprise. The staff training scheme is working well in providing the initial background and scientific training and our works managers find time to further practical training and to develop human relations and judgment in these young men. It is tragic that so much of management's

time is taken up in complying with Government regulations affecting the operations of industry.

PROSPECTS

The re-equipment of the Coxhoe works will not show such tangible results as those achieved at the Cadeby works, partly because the quarries have been mechanised for some years. A benefit however will be felt this year from the new large crushing and screening plant and the new processing works. No benefit will be felt from the capital expenditure proceeding at Taffs Well works until the middle of next year.

Uncertainties at present exist as to the availability of raw materials for some of our principal customers and for this reason their demands on us may be rather lower than in 1950. On the other hand improved efficiency in our works should go some way to offsetting a possible lower demand that may arise for our products.

Unless industrial production is dislocated due to a fuel, electric power or other national crisis, we expect to be able to present another acceptable report at the next annual general meeting.

The report and accounts were unanimously adopted, and a final dividend on the ordinary shares of 11 per cent., less tax, making 15 per cent., less tax, for the year, was approved.

The retiring director, Mr Stanley Brooke, was re-elected; Mr C. F. Penruddock was elected a director; and the remuneration of the auditors, Messrs. John Adamson, Son and Co., having been fixed, the proceedings terminated.

Table illustrating the increases in selling prices, between December, 1939, and December, 1950, of our products and the prices of the materials we have to buy and what we have to pay for wages and delivery.

ERICSSON TELEPHONES, LIMITED

NEW RECORDS

The forty-eighth ordinary general meeting of this company was held on March 30th, in London.

Sir Harold A. Wernher, G.C.V.O., the two-man, in the course of his speech, said: "The last general meeting I concluded with the words 'we have every reason to look to expect immediate future with confidence.' Now you have seen the accounts I think you will agree that my confidence was fully justified. For the third year running, and in the face of many difficulties, new records have been established, both for output and profit. Once again a very large proportion of our sales has been to overseas customers."

At home, too, we know that there are approaching 450,000 applicants awaiting telephone service and with very little sales effort

this number could be increased considerably. There are, in addition, 300,000 subscribers who share a line. On several occasions during the past few years I have drawn attention to the inadequacy of the Government's building programme for housing public exchanges. This is causing disquiet in the telephone industry because the position seems to deteriorate.

The gross profit amounted to £1,188,223, compared with £1,051,071 for 1949. Taxation takes £655,609 or nearly 56 per cent.; this load, together with purchase tax, National Insurance contributions, etc., bears very heavily upon industry. There is already sufficient evidence to justify me in saying that we should be able to meet you again next year with another satisfactory report.

The report was adopted and a final dividend of 12 per cent. and a bonus of 5 per cent., both free of income-tax, on the ordinary stock were approved.

JAS. WILLIAMSON AND SON

(Manufacturers of Linoleum, Felt Base, Leathercloth and Lancaster Cloth)

RECORD TURNOVER AND ACTUAL TONNAGE SOLD

RIISING DEMAND AT HOME AND ABROAD

THE RT. HON. THE EARL PEEL ON THE YEAR'S TRADING

The twentieth ordinary general meeting of Jas. Williamson and Son, Limited, Lancaster, was held on April 3rd at Lune Mills, Lancaster.

The Right Hon. The Earl Peel, chairman and managing director, presided.

The following is his statement which was circulated with the report and accounts:

Last year I began my statement by saying that the turnover of your company had reached a record figure during 1949. I am pleased to be able to tell you that during the year under review this turnover has not only been maintained but has been increased, despite rising costs and shortages of certain raw materials. The actual tonnage sold is itself a record. We are still unable to satisfy the demand at home and abroad for the majority of our lines, and our export sales have continued to rise during the year. Our new pattern book, issued in June and containing a range of all types of linoleum, has been extremely well received and we have every justification for the belief that our products are in the forefront of design.

SHORTAGE OF RAW MATERIALS

Raw materials continue to be a cause for concern. The shortage of hessian, which I have mentioned for the past two years, has been felt even more keenly and there seems to be little prospect of improvement in the near future. The number of employees has increased satisfactorily during the year, special attention has been paid to training methods, and the keenness and interest of our operatives is proved by the large number of suggestions aimed at improving our methods of manufacture put forward and accepted during the past year.

Your directors have continued their policy of improvement to plant and equipment and capital expenditure during the year has amounted to £180,583.

We shall obtain a further initial wear and tear tax allowance, and to meet the increased tax liability which will arise in future years your directors have placed the appropriate proportion to reserve, bringing the initial tax allowance reserve to £185,000.

STOCK POSITION

You will note from the balance-sheet that the value of our stocks has increased sharply to £2,138,112 as compared with £1,306,697 in 1949. We have for the first time a bank overdraft amounting to £495,480, compared with cash at bank of £319,557 last year. The rise in the stock figure is due partly to holding a larger volume of goods and partly to higher prices consequent upon the devaluation of sterling and the deterioration of the international situation. A shortage of working capital under current conditions is indicated by the reduction in our cash balances and the creation of a bank overdraft. To those of you who studied my statement last year this will not come as a surprise, since taxation has withdrawn so much from the earnings of your company that it has not been possible to build up sufficient reserve to meet the inflated costs of the post-war period.

After very careful consideration of this problem your directors have decided to exercise their borrowing powers under article 100 of the company's articles of association and to issue £1,000,000 of debenture stock. Application has been made for Treasury consent to make this issue and a reply is awaited.

DIVIDEND OF 10 PER CENT

Your directors have again recommended that £75,000 be placed to the development reserve to meet the increased costs of replacements over and above the normal depreciation set aside annually, and that a further sum of £100,000 be placed to general reserve. You will note from your directors' report that a final dividend of 7½ per cent. is recommended, which, with the interim dividend of 2½ per cent. already paid, makes a total for the year of 10 per cent.

It is with regret and with a sense of personal loss that I have this year to record the death of one of your directors, Mr J. C. L. Parsons. Mr Parsons, who joined the firm in 1931, had been a director continuously since 1941, and had for many years been in charge of production. Your board has secured the services of Mr I. D. Taverner, who took up the appointment of works manager on January 1 this year.

You will observe from the notice of meeting that Mr H. E. Sier, F.C.A., the deputy-chairman of your board, has reached the age limit laid down by the Companies Act, 1948. Mr Sier has been associated with your company for very many years and his guidance and judgment have been, and still are, of the greatest value to us. Despite the fact that he may have hoped for some easing of his responsibilities in the future I am pleased to say that Mr Sier has agreed to continue to serve your company, if re-elected to the board, and you will be asked at the annual general meeting so to re-elect him.

In conclusion, I should like to express thanks to all those employed by the company for their co-operation and loyalty throughout the year and for the efforts they have made, and are making, to increase our turnover and the reputation of our products still further. You will not expect me to make any forecast of the future, for it is only too well known that industry is today dominated by conditions quite outside its control. I can say that I have every confidence in the efficiency of your business and, given reasonable trading conditions, we have every hope of achieving satisfactory results.

The report and accounts were adopted.

RYLANDS AND SONS, LTD.

ANOTHER SUCCESSFUL YEAR

SIR EDWARD RHODES' STATEMENT

The annual general meeting of Rylands and Sons, Limited, was held on March 30th at 6, High Street, Manchester. Sir Edward Rhodes (chairman and managing director) presided.

The following is his statement which was circulated with the report and accounts:—

In April last your directors appointed Mr Alexander Hamilton Dunbar, C.A., to a seat on the board. Mr Dunbar joined us in 1930 and became secretary of the company four years later. In that important position he has shown outstanding ability and thoroughly merited his promotion. He is an added strength to the board.

It is gratifying to be able to report another successful year, to which all sections of our organisation have contributed.

HOME TRADE CONTRIBUTION

The largest contribution, as usual, has been made by the home trade, in spite of many obstacles: on the one hand, an all-round increase in expenses, including a new advance in wages, and, on the other, reductions in permitted margins of profit.

It cannot be denied there is a confused state of affairs in the home trade, and now, with the impending demand for large supplies for the defence programme and the Government's determination to maintain, and if possible increase, the export trade, the share for the home market may run the risk of being reduced. Only a higher production can meet the situation.

The restrictive utility plan and the oppressive purchase tax are the undesirables of the home trade, and the Government would do well to consider making the utility scheme a much more flexible one and also making a radical reduction in the purchase tax on essential goods.

BETTER EXPORT RESULTS

Our export department and overseas company have done well and have shown much better results than in the previous year. In my statement a year ago I expressed the hope and expectation that the advantage of the large stocks which were held up owing to lack of import licences would be gathered in 1950. That turned out to be the case. Whether we shall, in these days of scarcity, be able to obtain sufficient supplies to meet the continuing demand from overseas is a problem which must be faced.

We are still short of operatives at our Wigan spinning and weaving mills. This means idle machinery and the irksome necessity of refusing considerable orders owing to the long delivery required by us. Notwithstanding the many and increasing difficulties, the final result for the past year in the manufacturing section, taken as a whole, is a much better one than the year before.

Our allied company, Thomas Witter and Company, Limited, of Appley Bridge, Heapey and Chorley, linoleum and felt will therefore strive to surmount all obstacles and thus get its full share of what business is passing in the company's several sections.

Once more I offer my grateful thank to my colleagues on the board and to the management and staffs of every department for their able and loyal support.

The report and accounts were adopted. Mr William Emmett Ainley, Mr Charles Joseph Franklin and Mr Alexander Hamilton Dunbar, C.A., were re-elected directors and the auditors, Messrs Cooper Brothers and Company, chartered accountants, reappointed.

ACCOUNTS

I will first draw your attention to Rylands' balance-sheet and to the fixed assets. Land and buildings, plant, machinery and equip-

ment amount, after depreciation, to £1,069,675.

Current assets are stocks, which stand at £1,106,458, debtors and payments in advance £670,762, investments £1,698,458, tax reserve certificates £253,175 and balance at bankers and cash in hand £180,661.

Turning now to the liabilities side, the capital is still £3,000,000 and capital reserve £534,666. We have added to the capital reserve £8,084, which amount has been spent during the year on capital re-equipment. The balance of the excess profits tax refund now stands at £2,795.

The general reserve remains at £200,000. The contingency reserve will be increased by £110,000 to £810,000 and the profit and loss balance carried forward will be £92,471, against £90,635 brought in, if the recommendations of the board are approved. Thus revenue reserves and surpluses will become £1,102,471, against last year's total of £990,635.

Consolidated profit and loss account: Profit on trading is £460,173, an increase on last year of £60,347. As I have already mentioned in my reference to our allied company, Thomas Witter and Company, Limited, we have again received a good dividend. This amounts to £54,545. Income from investments is £54,529. Last year we were able to include an item of £35,255 interest on war damage claims which had been settled during that year; we have no such item to include this year—the only amount is a small one withdrawn from provisions no longer required of £2,628. Nevertheless, the total profit is £571,875, against last year's total of £534,716.

On the other side of the consolidated profit and loss account the directors' total emoluments are £25,739. United Kingdom profits tax for the current year is £87,500 and income tax £185,136, a total of £272,636. The net profit for the year comes to £243,836, against last year's £239,993.

INCREASED DIVIDEND

The directors recommend:

(a) That for the half-year ended January 19, 1951, a dividend of 6 per cent. per annum, less income tax, on the preference stock shall be paid.

(b) That for the year ended January 19, 1951, a participating dividend of 2 per cent., less income tax, on the preference stock shall be paid.

(c) That the dividend for the year ended January 19, 1951, on the ordinary stock shall be increased to 8 per cent., less income-tax.

(d) That £110,000 shall be transferred to the contingency reserve, increasing it to £810,000, and, finally,

(e) That £92,471 shall be carried forward to the next account against £90,635 brought in.

The coming year is likely to be another difficult one. But past years have not been free from serious problems. Your board will therefore strive to surmount all obstacles and thus get its full share of what business is passing in the company's several sections.

Once more I offer my grateful thank to my colleagues on the board and to the management and staffs of every department for their able and loyal support.

The report and accounts were adopted.

Mr William Emmett Ainley, Mr Charles Joseph Franklin and Mr Alexander Hamilton Dunbar, C.A., were re-elected directors and the auditors, Messrs Cooper Brothers and Company, chartered accountants, reappointed.

ASSOCIATED ELECTRICAL INDUSTRIES

INCREASED PRODUCTION

The fifty-first annual general meeting of Associated Electrical Industries, Limited, was held on April 3rd in London.

The Rt. Hon. Oliver Lyttelton, D.S.O., M.C., M.P. (the chairman), said that 1950 had once again been a year of increased production, but they had not maintained the same rate of increase which had been achieved over the last three years. The figures had been affected towards the end of the year by the decision of the hourly rated employees at the Trafford Park Works of Metropolitan-Vickers to work only on day work and to abandon piece work. Piece work had, however, been resumed in February, 1951. Deliveries of finished apparatus amounted to more than £55 million sterling during the year. That result was due in the main to the large sums which the group companies had expended upon new equipment since the war. However highly equipped their factories might be, that massive output could only be gained through the keenness and enthusiasm of all those employed by the group.

It was again necessary that stockholders should realise how heavy a burden of taxation the company had to bear. During the three years 1948-1950 the company had paid in income tax and profits tax more than £10 million, and the ordinary stockholders had received dividends amounting to £3,000,000 before the deduction of income tax, or £1,650,000 net. The figure paid out for wages and salaries for the period was £57 million, and included an increase of 17 per cent. in the average earnings of those employed. In the current year the company would have paid in taxation more than five times the distributed profits. From the net profits of the year £1,250,000 had been transferred to general reserve, which now stood at £8,250,000. Other reserves stood at £2,290,000.

ORDERS EXCEED £100,000,000

The total orders on the books greatly exceeded £100 million in value, but they were well spread out over the next three or four years.

The stockholders would expect him to say something about the effects of re-armament upon the company's fortunes. Their principal preoccupation, of course, concerned the maintenance of a free flow of raw materials for their manufacturing plants. The difficulties were likely to be serious; at the same time he must point out that in any rearmament programme the electrical industry must be one of the highest priority, and they had some hopes that those shortages would only affect a small part of their business.

They must, however, expect difficulties in maintaining the production of certain types of their lighter electric appliances. Any falling off was likely to be more than offset by armament orders in the heavier sections. They had planned, as the armament programme advanced, that those of their factories engaged on such products as domestic appliances should be organised for the manufacture of components for the heavier side.

The products of the group were essential to the life of the country. Whatever the future might hold, the A.E.I. Group had an indispensable part to play. The stern tasks of rearmament and the threat of war brought many new problems. They could face them in the confidence that they were well equipped with machines and loyally served by all those who worked in their factories.

The report was adopted.

LEWIS'S LIMITED

LORD WOOLTON ON "WHAT HAPPENS TO THE PURCHASER'S POUND"

The forty-second annual ordinary general meeting of Lewis's Limited was held on April 3rd in Liverpool. The Rt. Hon. Lord Woolton, P.C., C.H., D.L., LL.D. (the chairman), in the course of his speech, said: Although our primary business is that of operating departmental stores, which in themselves contain large retail food and catering sections, we also have banking, manufacturing, and wholesales interests, and carry on a substantial food, catering, and milk distribution business independently of our main organisation: our final profit result is built up from the successful operation of all these many different interests. I mention this lest anyone should draw the inaccurate and misleading conclusion that all our profits arise from the operation of our departmental stores.

We have enjoyed another successful year of trading. In Lewis's group the consolidated net profit, after deducting debenture and note interest, depreciation, amortisation of leaseholds, and all taxation on current profits, is £923,902, against £782,303 last year. In the L.I.T. group the corresponding figures are £519,038, against £380,589. After making various further adjustments for inter-company dividends and including the results of Lewis's Bank, Limited, the total net profit, after tax earned by the organisation as a whole, was £1,258,418, against £1,014,213 last year, an increase of £244,205. This is a result with which we have reason to be satisfied.

Taking our eight major stores together, the turnover on the year increased, but not to the same extent as in previous years. Our increased turnover reflected a real increase in volume as well as the rise which has occurred in retail prices. For many years past we have had to rely on this increase in sales to make up for the ever-increasing expenses of doing business.

REAL "CAPITAL"

The practice which we have now pursued for several years past of retaining in the business some 60 per cent. of the net profit we earn after tax, has an important bearing on the real capital employed. There are many different formulae for determining the amount of such "capital," but for the purpose of my argument I have begun with the total net assets of the combined businesses. I have then excluded all inter-company holdings and disregarded intangible assets such as goodwill and the premiums paid on the acquisition of shares in subsidiaries. This gives me a total of £14,741,191, which you will see is much in excess of the total issued capital as shown on the two balance sheets of £6,571,640. The total gross amount paid by way of dividends and interest on loan capital, excluding inter-company payments, is £1,018,698, which represents 6.91 per cent. on the capital employed computed as I have described. I do not believe that by any standards this figure could be regarded as an extravagant return on the actual capital employed in such a risky and speculative business as retailing.

THE CUSTOMER'S POUND

My argument may not appeal to the retail customer who wants to know what happens to the £1 which she spends in a shop and who may be inclined to suspect that the retailer takes too much in return for the services which he renders. Here, unfortunately, the retailer has always suffered, and continues to suffer, from ignorance, if not deliberate blindness, about the way in which he conducts his business. I have spent much time trying to increase public knowledge about the

facts of distribution, but am conscious that growers, manufacturers, or retail customers are still little the wiser about the essential service which the retailer performs, namely, that of making available to the public the goods that are grown or manufactured in a place where the purchaser can easily get at them. I have, therefore, had our trading results last year broken down into the various parts which together add up to the £1 which the customer spends.

In the first place out of the 20s. which she hands over the counter 14s. 10d. is accounted for by the price we had to pay for the goods which she buys, less any cash discounts which we may have received from our suppliers. This figure represents the average cost price of all the goods we sell, utility and non-utility, food as well as clothing, and of this 14s. 10d. purchase tax takes 1s. 4d. It is, unfortunately, an all too common illusion that the balance of 5s. 2d. which remains in the hands of the retailer is net profit. This, of course, is far from being the case. Out of it we first have to pay 3s. 5d. to meet the expenses of carrying on the business. Of this amount 2s. 2d., or about two-thirds, is accounted for by salaries, wages, pensions, etc., and the balance by general expenses such as rent, rates, repairs and renewals, wrapping paper, etc. Debenture and other interest, depreciation, and amortisation take a further 2d., and taxation, including income tax and profits tax, requires 10½d. (In passing, it is interesting to note that (a) in 1939 wages represented barely half of our total expenses, whereas now they account for nearly two-thirds; and (b) including purchase tax, the State takes 2s. 2½d. out of the consumer's £1, which is a larger proportion than that accounted for by salaries, wages, pensions, etc., put together.) It is only after all these charges have been met that we arrive at the balance which remains at our disposal, and of this balance we have retained in the business 5½d. and distributed in dividends 3½d. There you have a picture of what happens to the £1 note which the retailer takes over his counter, and from it it is not hard to reach the conclusion that if he distributed no dividends at all the difference in the ultimate selling price to the consumer would be negligible.

COST OF GOODS	14s. 10d.
PURCHASE TAX	1s. 4d.
SALARIES, WAGES, PENSIONS	2s. 2d.
GENERAL EXPENSES	10½d.
DEBENTURE AND OTHER INTEREST	2d.
DEPRECIATION AND AMORTISATION	2d.
TAXATION (INCOME & PROFITS TAX)	10½d.
RETAINED PROFITS	5½d.
DISTRIBUTED PROFITS	3½d.

THE OUTLOOK

To give some forecast of the prospects of the coming year in present circumstances, is more than usually hazardous. Although sales as a whole are increasing, extreme pressure on certain merchandise and particular departments has gone hand-in-hand with uneven results in others where there is no apprehen-

sion of shortage. Such conditions are not healthy, and it is quite uncertain at this stage how the impact of national rearmament will affect our business during the remainder of the year.

I am satisfied, however, that if our profits are to be maintained we shall have to look once more to an increase in our turnover to cancel out a still further rise in expenses.

In spite of this background of rising expenses, we are now threatened with a further cut in permitted maximum margins.

INFLATION FEEDING INFLATION

We deplore the levels to which the price of many necessities is now rising. In this connection the public should be made aware of the impact of purchase tax on consumer goods when prices rise; the higher the wholesale value of the article the greater is the amount of tax imposed. It is at least peculiar that while the Government continue to express regret at the increased cost of living, they should maintain a tax which rises with wholesale price increase and therefore adds to the burden on the customer. This is Government feeding on inflation.

I feel compelled once more to condemn the whole principle of the purchase tax. It is both unjust in its operation and against the interests of the public.

As a result of the recent quinquennial valuation we decided to increase our annual contribution to the non-contributory pension fund which we maintain for our staff to a round figure of £100,000. This sum is deducted before we strike the net profit out of which shareholders receive their dividends, and to this extent our staff can feel that their pension-provisions have the first charge on the trading profits which we earn. The other milestone which we hope soon to reach is that this year the amount of the pension fund should exceed £1,000,000.

The report was adopted.

BREVITT LIMITED

SATISFACTORY RESULT

The second annual general meeting of Brevitt Limited, was held on March 29th in London, Mr E. S. Harding, chairman of the company, presiding.

The following is an extract from his circulated statement for the year ended December 31, 1950:

I am again pleased to report a satisfactory result of the year's trading by the group, the accounts showing a net profit of £220,477 before taxation. This is an increase in trading profit which is very satisfactory in view of the many adverse conditions and difficulties with which the company has had to contend during the past twelve months. Having regard to the results achieved the board feel justified in recommending that an increased dividend at the rate of 20 per cent. per annum (less tax) be paid for the year.

My reference last year to the continued and increasing demand for the Brevitt shoe has been fully justified. There has been a substantial increase in sales, both at home and abroad and the company's factories have been fully employed in meeting the demand. Your board has been greatly concerned by the steeply rising prices of raw materials and other marked increases in the costs of production, but it is their policy not only to maintain the high quality of the Brevitt shoe, but to make it available at an economic price to fashionable women throughout the world.

The entire production of the group is fully booked up for some months ahead. Much has been done to establish a securely a world-wide goodwill for the Brevitt look and, therefore, we see forward with every reasonable confidence.

The report was adopted.

BORAX CONSOLIDATED, LIMITED

RECORD PROFITS

The fifty-third annual general meeting of Borax Consolidated, Limited, was held on April 2nd in London, Mr D. Abel Smith, M.C. (the chairman), presiding.

The following is an extract from his circulated statement:

Trading profits of the parent company for the year have attained the record figure of £1,407,774. This compares with £629,057 in 1949, £857,571 in 1948 and our previous record of £995,978 in 1947. After taking into account our investment income and exchange profits and after charging directors' remuneration, depreciation and debenture interest, profits before taxation are £1,558,601 compared with £920,667 last year. Taxation accounts for £907,000 against last year's figure of £512,000. This leaves a net profit for the parent company of £651,601 compared with £408,667 in 1949, the group figures being £687,662 (1950) and £416,602 (1949).

We have transferred £85,000 to exchange reserve. After making provision for the above dividends the balance to be carried forward is £1,066,573, an increase of £398,851 on the previous year.

INCREASED DISTRIBUTION

As you will see from the directors' report and the accounts, your board has resolved to recommend an increase in the total distribution on the deferred ordinary stock from 12½ per cent. to 15 per cent. For the last three years the deferred Ordinary stockholders have received a dividend of 10 per cent. plus a bonus of 2½ per cent. Although the distribution proposed this year on the deferred ordinary stock is 15 per cent. on the nominal deferred capital of the company, it represents but 4.38 per cent. on the actual equity capital employed in the business. After taxation, the amount paid in cash to the deferred ordinary stockholders is reduced to the equivalent of 2.41 per cent. on the actual equity capital employed in the business which is not excessive. The company's business is world-wide and a great part of the profit is earned overseas. We have achieved new records of production and sales.

As you can see from the balance sheet, since October 1, 1946, we have ploughed back into the business for buildings, plant and machinery over £1,150,000. This has enabled us to increase our productive capacity all the way down the line and, although at the time this increased plant was installed the present demand had not yet developed, we foresaw its advent as new uses for our products became more widely known and adopted.

BRISK DEMAND FOR PRODUCTS

At the present time a brisk demand for all our products continues in this country and abroad and subject to any unwelcome events, such as a severe curtailment in production of consumer goods or a further reduction in the supplies of sulphuric acid, of which there is a serious shortage both here and in the U.S.A., we can look forward to the future with reasonable confidence.

During the year considerable work has been accomplished in the field of research and outlets under development continue to maintain good progress. All-time records have been reached in the extent to which boron products are used in agriculture, glass, porcelain enamel and for preventing corrosion of metals, while consumption by other industries has been well maintained. Our technical service at the disposal of consumers continues to render valuable assistance.

The report was adopted.

ANGLO-MALAY RUBBER COMPANY, LIMITED

MR H. ERIC MILLER'S SPEECH

The thirty-first annual general meeting of The Anglo-Malay Rubber Company, Limited, was held on March 29th in London, Mr H. Eric Miller (the chairman) presiding.

The chairman, in the course of his speech, said: Last year and the year before I referred to the subject of amalgamation, and explained that the Malayan Income Tax Ordinance of 1947 had been so framed as to penalise amalgamating companies quite heavily by additional taxation arising out of their rehabilitation expenditure. This impediment was not removed until October 25, 1950, by which time we had entered a phase of steeply rising profits. Our taxation experts advised us that amalgamating companies would then have to face much heavier payments of income tax than would be payable if they continue their separate existence until they have been through a couple of years or so of stabilised or declining profits. We have therefore relegated the matter to cold storage for the present.

For the current year our crop is estimated to be much about the same as last year, but we have the advantage of an appreciably higher price level. Forward sales are confined to sole crepe, in which we have specialised, and which has been a valuable standby in lean years. To cater for this seasonal trade we are participating in some group forward sales extending a few months ahead.

NATURAL OR "MAN-MADE" RUBBER

Following Sir Stafford Cripps's visit to the U.S.A. in the autumn of 1949 the American Government relaxed for a period their regulations for the mandatory use of synthetic rubber, but in August, 1950, the R.I. order was tightened up to limit the use of natural rubber, so that more might be available for the stockpile. In spite of this, U.S.A. manufacturers consumed 714,000 tons of natural rubber in 1950 as against 574,500 tons in 1949. This is not without significance when one recalls the virtues claimed by leading manufacturers for their "man-made" rubber.

The *Wall Street Journal*, of March 14, 1951, contains an interesting article by one of their staff correspondents, who was then in Akron collecting views from some of the leading works' chemists in the industry there. These men recognise that, although they have at their disposal synthetics which can outperform natural rubber in one respect or another, the resiliency of natural rubber is a major characteristic which they have not yet succeeded in reproducing. It is up to us, through our own research and development organisations, to tell the world how to make the best use of what we have to sell, and on our estates, to do all we can to ensure that Nature's wonderful product reaches the user in the most acceptable condition of cleanliness and uniformity. In this respect well-equipped estates have an undoubted advantage over the smallholders whose methods of preparation are necessarily more primitive. The large discount which has to be accepted nowadays for grades below standard quality smoked sheet or crepe emphasises this point.

Because of the U.S.A. Government's desire to acquire as much No. 1 rubber as possible for their strategic stockpile, pressure is being put on manufacturers to make do as far as they can with the lower grades of natural rubber. When the stockpile goal has been attained we hope they will allow natural rubber freely to enjoy that fuller share of the trade which its undoubted merits will attract.

The report was adopted.

JOHN EMSLEY LIMITED

CONSERVATION OF RESOURCES

The fourth annual general meeting of John Emsley Limited was held on March 30th at the Bradford Chamber of Commerce, Cheapside, Bradford, Mr Harold Jaques (chairman and joint managing director) presiding.

The following is an extract from the chairman's circulated statement:

The net profit for the year, after charging directors' emoluments, depreciation of fixed assets, and taxation, amounts to £227,621, as compared with £227,811 for the previous year.

The Board recommend a final dividend of 15 per cent. which, with the interim dividend paid of 10 per cent., gives a total dividend for the year of 25 per cent., compared with a total dividend of 22½ per cent. for last year. The directors' recommendations as to dividends follow the policy of moderation and restraint, and the profits retained should enable the company to finance both the future expenditure on fixed assets and the continually increasing costs of raw materials.

During the past year another subsidiary—John Emsley (Exports) Limited—has been formed to take charge of three American companies which have been taken over to facilitate and increase the distribution of the companies' goods to America.

While the cautious policy is continued in regard to commitments, the Board recommend an increase in the reserve for contingencies of £49,500, making a total reserve of £174,500.

With regard to future prospects it is not possible, with conditions as they are today, to give any decided opinion. Delivery of raw materials does not improve, but given the same flow and the absence of anything of an unforeseen nature, another satisfactory year's trading may be looked forward to.

The report and accounts were adopted.

BEANS INDUSTRIES

RECORD PRODUCTION

The seventeenth annual general meeting of Beans Industries, Limited, was held on March 30th in Tipton, Staffs.

Mr J. H. Bean, C.B.E., the chairman, said: The net trading profit, after all charges including taxation, amounts to £103,868 compared with £57,561.

The Board are of opinion that it is equitable that the ordinary shareholders whose dividend has remained stationary for many years should now participate to some degree in the increased prosperity of the company. They therefore recommend that a bonus of 10 per cent. be distributed for the year ended November 30, 1950.

The capital of the company is considerably out of line with that actually employed in the business. It is proposed to increase the authorised ordinary capital to £400,000 by the creation of 1,040,000 new shares of 5s. each, and to capitalise £50,000 from the general reserve to be applied in distributing a bonus issue of 200,000 ordinary shares, fully paid, at the rate of one new share for every two shares held.

Last year I reported a substantial increase in output over the previous level. This upward trend has continued and the all-round volume of production in 1950 was approximately 34 per cent. higher than in 1949, constituting, apart from the war years, a record for the company. It is only by effecting improvements in our efficiency through the installation of the finest plant possible that we have been able to supply our customers without increasing or only slightly increasing our prices which have remained stationary until recently.

The report was adopted and the bonus issue approved.

THOMPSON AND NORRIS MANUFACTURING COMPANY, LIMITED

YEAR OF CONSIDERABLE PROGRESS

INCREASED PRODUCTION AND TURNOVER

MR K. N. BEACH ON IMPROVED EFFICIENCY

The seventieth ordinary general meeting of the Thompson and Norris Manufacturing Company, Limited, was held on April 4th at Brentford, Middlesex, Mr K. N. Beach (the chairman) presiding.

The secretary (Mr K. S. A. Wright) read the notice convening the meeting and report of the auditors.

The chairman said:—

Ladies and gentlemen,—Since we last met, your previous chairman, Mr H. Minch, decided to retire from the directorate on January 6th last, when he had completed 50 years' service with the company. Although I am pleased to say he is still available to us in a consultative capacity, I am quite sure you will echo my feelings of regret that he will no longer represent you on the board. During the 50 years he has contributed much, not only to this company but to our industry as a whole, and, as chairman, I am glad to have his presence at my first annual general meeting.

I am very conscious of the honour of being elected to the chairmanship of your company and you may rest assured that, as in the past, I shall continue to use my best endeavours in the furtherance of its interests. I would like at this point to emphasise that this company was originally a family concern, of which I am the third generation, and built up by private enterprise with initiative and personal responsibility. It is my opinion that private enterprise, because of its inherent qualities of initiative and personal responsibility, must still be an important factor if this country and its people are to attain some measure of its former greatness and prosperity.

TRADING RESULTS

I should now like to turn to the accounts, which have been in your hands for the last three weeks, and I am confident that the results shown will give you cause for satisfaction.

The net profit has increased from £170,662 to £257,283, due entirely to increased production, turnover and increased efficiency, and of this I will speak later. Your directors have decided to transfer £45,000 to general reserve, £10,000 to dividend equalisation account and £45,000 to stock reserve. After these appropriations and taking the balance of profit and loss into account, you will see that the total of reserves and undistributed profits amounts to £721,018, a not unsatisfactory amount when compared with the issued capital.

You will also notice variation in the comparative figures of current assets, which is caused by the increased turnover and the continued rising costs of raw materials.

The figure for trade investments has also increased substantially and results from the continuation of our policy of acquiring interests in related companies from which material benefits are being obtained.

IMPROVED PRODUCTION AND TECHNICAL EFFICIENCY

Following the period of consolidation referred to at the last annual general meeting,

we have made considerable progress, despite all the difficulties which have been common to industry generally. Much energy has been exerted to improve the productivity and technical efficiency of all our factories. We have continued to re-equip with the latest machinery when available to us and, as a result, have very materially increased our production and so held our rightful place as leaders, as well as pioneers, of our industry.

With regard to this, you will note that there is a commitment of capital expenditure amounting to £276,000, which represents new machinery on order and other necessary equipment. These orders have been placed in view of the delay in obtaining new machinery and will fall to be delivered over the next three to five years.

On profits generally I would like to spare a few moments in view of the ill-informed talk these days on such matters. It has always been the policy of the company to plough back a considerable proportion of its profits into the business. These profits have been used for factory development on the most modern lines, equipping with the latest machinery and technical developments to the benefit of our customers, employees and the ultimate advantage of your company. As a result, we have five modern factories, which are now taking their part in the rearmament, dollar export and other priority programmes. During the year and since, in common with other commodities, there have been very considerable increases in the costs of our main raw materials, and our profits have only been achieved as a result of the increase in output made possible by increased efficiency. These profits are arrived at after absorbing part of the rise in our raw material prices against our profit margins.

As your new chairman I would like to emphasise that whenever possible it is my policy to look after the shareholders as well as our employees. The latter are well taken care of with good wages and a non-contributory pension scheme—the former, when results justify it, will receive adequate rewards to offset the lean years.

In view of this and because of the exceptionally good results the board has declared a second interim of 30 per cent., which makes 45 per cent. for the year, and it is not intended to pay anything further for the year under review. This increased distribution represents 38.5 per cent. of the net profits and continues our policy of ploughing back a large proportion of the profits earned, as well as providing the increased funds necessary under present trading conditions.

CHANGES IN DIRECTORATE

Continuing our policy of appointing directors from within the organisation, and in view of Mr Minch's retirement, the board has appointed, as fellow members, Mr K. N. Henley, who has obtained a very good general knowledge of the business through the previous positions he has held, including that of secretary, and is now our buyer and Mr J. J. Harper, who has been responsible for the works management of several of our factories and will bring great experience of these matters to the board. I trust that our action will be approved by your reappointment of these two gentlemen. With these appointments the average age of your directors is

under 50 and their average employment with the company over 20 years. We have a young and enthusiastic board of very considerable experience and in whom I have great confidence.

Present trends make it very difficult for me to forecast the future, but you may rest assured that my colleagues and myself are making, and will continue to make, every endeavour to maintain supplies of essential materials, to ensure that production continues to be maintained at its highest efficiency and that you, the shareholders, our employees, and our customers shall continue to share fairly in the results of our efforts.

The fine results of the past year could not have been achieved without the loyal co-operation of all employees—both factory and office—and I would like to thank them most sincerely for their efforts.

The report and accounts were adopted and the dividends, as recommended, were approved.

The retiring directors, Mr J. N. Beach, Mr H. N. Barclay, Mr K. N. Henley and Mr J. J. Harper, were re-elected and the proceedings then terminated with a vote of thanks to the chairman, directors and staff.

THE ALLIANCE TRUST COMPANY, LIMITED

ANOTHER SATISFACTORY YEAR

MR W. D. MACDOUGALL'S STATEMENT

The sixty-third annual general meeting of The Alliance Trust Company, Limited, will be held in the company's office, Meadow House, 64, Reform Street, Dundee, on April 27th.

The following is the statement by the chairman (Mr W. D. Macdougall) circulated with the report and accounts:—

INCREASED REVENUE

The improvement in our gross revenue by £92,855 to £988,529 in the accounts now submitted brings the earnings for our ordinary stock to the high level of 66.21 per cent., against 53.97 per cent. last year. Your directors have accordingly thought it proper to raise the dividend further from 33 per cent. to 40 per cent. After this payment it is still possible to add to the company's reserves £151,358 out of the year's revenue (over 27 per cent. of the income available for interest and dividends) and £2,786 tax recovered in respect of earlier years. Out of this surplus it is proposed to transfer £150,000 to general reserve fund bringing it to £1,050,000 and leaving £138,158 to be carried forward to next year.

EFFECT OF DEVALUATION ON DOLLAR INCOME

These high figures are largely due to our return to the United States of America in recent years including, for the first time, the effects of devaluation over a full year. This higher dollar income is reflected not only in our gross income but, due to double taxation relief, in a reduced tax liability on that income. On the conservative basis employed such tax relief represents in the accounts under review earnings of some 5 per cent. on our ordinary stock. The bulk of our funds, however, still remain in United Kingdom holdings and although these have necessarily been reduced to finance US purchases the amount of our sterling income has been virtually maintained.

The valuation of investments shows appreciation of 53.85 per cent. against 37.37 per cent. a year earlier, and the proportion of our funds invested in the U.S.A. stands at 21.76

per cent. apart from mortgage and real estate assets, which it is impossible to value.

FUTURE PROSPECTS

I imagine that you will approve of these figures as such and there is no reason now evident for supposing that they may not be equalled in the current year. But it would be a wholly different matter to suggest that they should give equal satisfaction as a measure either of sound economic conditions or of the real value to our stockholders of the dividends which they receive. A year ago it seemed possible to discern signs of a return to more normal conditions in which one might expect a freer interplay of purely economic forces and some stability of money values. The need for rearmament has now led us back full circle to the feverish conditions of inflation which governments induce when they become peremptory buyers of a large part of the world's output. We are faced, therefore, with a return to shortages, controls, rationing, increased taxation and renewed inflationary pressures, to the last of which the devalued pound may make us more vulnerable. At this moment living and other costs have still to reflect the full weight of the rise in commodity prices. There is growing understanding that the published profits of many industries are illusory in reflecting both under-depreciation and profits on essential trading stocks. At the same time, due to fallacies in our tax system, many companies are deprived of the cash resources to replace these trading stocks let alone to keep up their fixed plant. It must continue to be our concern therefore to try in our operations to take into account all these trends in seeking to improve both the amount of our income and its security.

MUAR RIVER RUBBER COMPANY

The thirty-first annual general meeting of the company was held in London on April 3rd.

Sir John D. Barlow, Bart., the chairman, in the course of his speech said: The profit for the year was £91,341 against £19,927 for 1949. In view of this satisfactory result your board propose the payment of a final dividend of 15 per cent., which with the interim of 5 per cent. will make 20 per cent. for the year. Taxation requires £50,000; we propose placing £10,000 to replanting reserve and the dividend absorbs £26,400, which will leave a balance of £21,213 to carry forward.

Your board hopes that this rate of dividend will afford some compensation for many lean years. Chamek Estate had a successful year's working, but had not declared a dividend by the end of the financial year.

The Muar River crop for the year was 1,363,500 lb., and the estimate for 1951 is 1,370,000 lb. No. 1 rubber is sold in the form of latex to a neighbouring estate at the average monthly prices.

Labour is becoming increasingly difficult to recruit, and, providing the necessary labour is obtainable, it is hoped to continue the replanting programme, and 100-150 acres are scheduled for this year.

Last year I dealt at some length with the position in Malaya. In spite of reassuring statements made in Parliament, the reports we receive from reliable sources indicate that conditions show little, if any, improvement. We can only hope that when what has become known as the Briggs plan becomes fully operative, conditions will gradually improve.

The year's excellent results could not have been secured without the most praiseworthy co-operation of all concerned—the European and Asian staffs, our Eastern agents and the labour force of different nationalities. To all of them we owe a debt of gratitude.

The report was adopted.

THE HALIFAX BUILDING SOCIETY

SUCCESSFUL RESULTS

The ninety-eighth annual general meeting of members of Halifax Building Society was held in Halifax, on April 2nd, the president of the society, Mr Algernon Denham, J.P., presiding. In moving the adoption of the accounts the president said:

The balance sheet as at January 31st last discloses assets at £165,487,783—an increase of £10,949,627 over those of a year ago and an accretion without equal in our history.

The amount due to our shareholders and depositors totalling £155,224,657 has increased by £10,350,915 during the year.

Mortgage business has continued to be available in satisfactory volume throughout the period under review and we have made advances of £28,062,600 in 30,793 new accounts.

In addition, £2,437,678 has been advanced to 15,152 existing borrowers taking advantage of our facilities.

Our lending policy has continued to be based on prudent lines. We feel it still desirable to relate our loans to real rather than to inflated values, and as always we look upon the provision of a personal cash stake by the borrower to be a vital pre-requisite to the making of an advance.

The demand for houses remains unsatisfied and ruling prices of the more attractive properties are still considerably higher than the present day cost of building. This is an unhealthy and, in my view, an unnecessary state of affairs for which the Government must bear responsibility as an ample and effective remedy is in their hands.

CONTINUED DISCRIMINATION, HOME OWNERSHIP

I realise full well that the rearmament programme must have its effect on the capital available for housing and it may well be that economic circumstances will necessitate a restricted building programme. But that there should be a continuing discrimination against those who wish to become home owners rather than to become municipal tenants does not seem to me to display common sense. From whatever angle the problem may be considered it stands out clearly that a higher proportion of new licences should be allocated to private enterprise to build for home ownership and I would suggest that a 50-50 basis would be fair to all concerned.

This suggested increase in the allocation of licences for houses for sale to occupiers would in my view have the effect of bringing down vacant possession prices which are far too high and, in addition, relieve both Government and Local Authorities of subsidy obligations which they can ill afford. But the greatest advantage of all would be the direct stimulus to saving, for, strange as it may sound, the most consistent savers amongst building society members are the borrowers.

IMPETUS TO INFLATION

Unfortunately for all of us, a rearmament programme of a magnitude unequalled in times of peace has been forced upon us and this, following devaluation of the pound and accompanied by the crazy scramble amongst nations for raw materials, has given a new impetus to inflation which will require political courage of a high order to control.

In order to win the fight for the stability of the pound (and win we must), it is obvious that we shall have to accept a long period of high taxation. This, though disappointing, is, I venture to say, a hardship which will be stoically borne provided we can be assured of an absence of extravagant expenditure by our Government and Local Authorities.

VINE PRODUCTS LIMITED

HIGH QUALITY MAINTAINED

The twenty-fifth ordinary general meeting of Vine Products Limited was held on April 3rd at Surbiton.

The Viscount Marchwood, K.C.V.O., the chairman, in the course of his speech, said:

The year 1950 was a happier year for your company since, for the first time in four years, no alteration was effected in the existing rates of duty and therefore it was possible to develop sales along the lines laid down in the previous year.

It is on quality that our success has been built, and it is no exaggeration to say that our wines are accepted throughout the trade as representing the highest quality produced in this country.

I am happy to report that our "Votrix" Vermouth has continued to find favour with the public in spite of the influx of imported Vermouths which, because they are produced in continental countries, are proclaimed as being the only "real" or "genuine" Vermouth.

We continue to be actively interested in the importation and distribution of Empire Wines, and these have also contributed to the very satisfactory results disclosed by the accounts.

Turning to the accounts, £100,000 has been placed to general reserve as against £50,000 in the previous year, bringing the total up to half-a-million pounds.

I am pleased to say that our financial position is the strongest yet attained, owing to the conservative dividend policy followed in past years. In view of this position and the profits earned, we feel stockholders are fully entitled to a higher distribution from the company's profits. I am pleased to say that our sales to date have been most satisfactory.

The report was adopted.

INTERNATIONAL COMBUSTION (HOLDINGS)

SOUND ORDER BOOK POSITION

The seventeenth ordinary general meeting of International Combustion (Holdings) Limited was held on April 3rd in London.

The following are extracts from the review by the chairman (Mr G. R. T. Taylor):—

Sir George Usher, who was appointed managing director of your company on its incorporation in July, 1934, tendered his resignation as such as at September 30th last upon taking up permanent residence in South Africa. He will continue as from October 1st last to serve on the board as resident director in Africa to look after the company's interests there.

I am happy to inform you that Mr F. G. Penny, M.Inst.C.E., M.I.Mech.E., who has been general manager of the company since September, 1942, has been appointed managing director of the company.

Still further expansion of output and increased profits of overseas and other subsidiary companies has resulted in a record trading profit of the group for the year being achieved.

The increase in the distribution on the ordinary stock is being provided from increased dividends received on investments in our subsidiary companies in Australia and Africa.

Our order book continues to increase and shows steady and hard work in hand for some years ahead.

Our output for the past year constitutes another record and has enabled us to maintain promises made to most of our customers. Subject to current events, we hope to at least maintain the present rate of production and to even improve upon it so as to fulfil the extensive programme we have in hand.

The report was adopted.

THE HONGKONG AND SHANGHAI BANKING CORPORATION

REFUGE
ASSURANCE COMPANY LIMITED
CHIEF OFFICE
OXFORD STREET MANCHESTER
THE REFUGE
WILL SAFEGUARD THE FUTURE

A CHARTERED ACCOUNTANT required to understudy the Director and Company Secretary of a large Engineering concern in S.W. London. Applications are invited from well-educated men with commercial experience in the Engineering industry. Knowledge of the Statutory and Legal duties of a Company Secretary, together with experience in Income Tax procedure, mechanical cost accounting and budgeting is necessary. Applicants should be between 30 and 40 years of age. Contributory superannuation scheme in operation. Commencing salary not less than £1,250 per annum, plus bonus, with exceptional prospects. Write, giving full particulars of qualifications and experience, to Box 623.

ACCOUNTANT, age 37, with five years' experience of Investment Research work with old-established Stockbrokers, and practical knowledge of Trust Company administration (gained with Scottish Group), seeks responsible position in Investment Management. First-class references.—Box 621.

THE ECONOMIST Intelligence Unit requires assistant research workers aged 20-24; salary to begin at £375-£450 according to qualifications.—Please send full particulars to 22, Ryder Street, St. James's, S.W.1.

THE Institute of Bankers has a vacancy for a male administrative assistant. Applicants should have a degree of a United Kingdom university and some experience of banking or kindred matters. Age should be preferably not more than 35 years. The post will be pensionable and the commencing basic salary £750 per annum or more, according to experience, plus a cash payment at present of 17½ per cent. of basic salary.

Apply in writing, by May 1, 1951, giving full details to the Secretary, The Institute of Bankers, 11, Birchin Lane, London, E.C.3.

PRIVATE SECRETARY required for Chairman of a large group of public companies holding a dominant position in a major industry. The post calls for a lady, preferably aged over 25, who, in addition to being a highly competent shorthand typist, has a quick intelligence, physical and mental energy, some experience, and a good general background. Terms and prospects excellent.—Write, with full details, to Box 798, Dorland Advertising, 19-20, Regent Street, S.W.1.

IS THIS MAN YOU?

A persuasive speaker in public, a cool, calm thinker, never embarrassed, a good loser, a good mixer, making friends without effort? If not, you need RAPIDISM, the fascinating new course, endorsed by leading psychologists. Write now for free booklet to: THE RAPIDISM INSTITUTE, G.663, TUITION HOUSE, London, S.W.19 (or call at 235 Grand Buildings, Trafalgar Square).

GLASGOW SCHOOL OF MANAGEMENT STUDIES

THE ROYAL TECHNICAL COLLEGE, GLASGOW
The Department of Industrial Administration offers a fifth full-time nine-weeks' course in

WORKS MANAGEMENT
and
LABOUR RELATIONS

Commencing April 2, 1951
Fee, £13 13s.

The Course is primarily intended for persons of 25 years of age and over, who have been nominated by their firms and who are expected to take increasing responsibility in the future. Further detailed information as to the aims, scope and content of the Course can be obtained from the Head of the Department of Industrial Administration at the Royal Technical College.

THE MANGANESE BRONZE AND BRASS COMPANY, LIMITED

NOTICE IS HEREBY GIVEN that the Preference and Ordinary Share Transfer Books of the Company will be closed from May 11 to May 24, 1951, both days inclusive.
By Order of the Board.
W. K. GIBB, Secretary.

HAVE YOU A GRASSHOPPER MIND? A mind that nibbles at everything and masters nothing. Pelmanism will enable you to concentrate and develop your mental powers generally. Reduced fees for serving and ex-Servicemen members of H.M. Forces.—Write for a free copy of "The Science of Success," which describes the Course, Pelman Institute, 87, Norfolk Mansions, Wigmore St., London, W.1.

APPLICATIONS are invited for the position of Executive in charge of the Sales Office of a large firm producing Metals, Pigments and Chemicals selling to wide variety of industrial users. Applicants should be between 30 and 40 years of age and have had experience of sales office management; an accounting qualification or experience would be an advantage. Location, London, W.1. Starting salary according to experience, with a minimum of £750 p.a.—Write fully to Box 620.

BOOKS Bought: Please send lists of any standard or rare books, runs of learned journals, for disposal.—W. Heffer & Sons, Ltd., Petty Cury, Cambridge.

One Year Only

MR GAITSKELL deserves all the personal praise he has received this week. His first Budget meets the immediate needs of 1951 as sensibly and, on the whole, as fairly as could have been expected. Never was a Chancellor less of a free agent. He has succeeded to the inheritance of overtaxation and overspending left by his predecessors. He has to make room in a fully stretched economy for a defence programme short only of war itself. And he is the Chancellor of a Government elected by a narrow majority and holding to office when popular opinion has moved decisively against it. It is greatly to his credit that in these circumstances his Budget exhibits so much good sense and courage, and so little concession to those of his own party who, in their bewilderment at the nature of the contemporary world, cling like limpets to the defensive principle that anything the Government has once done must at all costs be maintained for ever.

With the Government imprisoned by weakness and inhibitions, the Budget is inevitably one of marginal adjustments. Mr Gaitskell has at least tried to ensure that the adjustments will, in their total effect, be adequate for this year even though he has thereby taken some calculated political risks. Within its political limitations, the Budget is tough. The Chancellor has insisted that rising prices must be allowed to do their work of restricting popular consumption without the cushion of bigger subsidies. He has confined reliefs to those on whom the rising cost of living will inflict the severest hardships: the limited increases in pensions and children's allowances represent an efficient act of social policy, achieving a necessary result at moderate cost. The part-charges for spectacles and false teeth are also a sensible way of putting some check on the extravagances of the health service. There ought to be—indeed, before long there will have to be—a sharper check: but it required courage for Mr Gaitskell to stand up to Mr Bevan at all, and he has won the first round.

By these means the Chancellor has limited the increase in expenditure on the social services to £50 million in spite of the rise in prices. Even so, Government expenditure as a whole, on revenue and capital account, will rise by £973 million. The Budget rests on the assumption that this prodigious increase will exert no new inflationary pressure on the economy provided that £138 million—one seventh of the total—is matched by new taxation. Apart from the higher yield of existing taxes, the rest of the gap can be filled, to put the matter in a much over-simplified way, by almost eliminating last year's surplus, on the conventional Budget reckoning, of £720 million.

To the unsophisticated, this sharp turn from the budgetary practice of the past three years must be startling, but Mr Gaitskell was able to make a perfectly reasonable case for it. The underlying assumptions are, indeed, optimistic. It is doubtful whether industrial investment will fall or that private savings will rise to the extent that the Chancellor assumes. Equally, his assumptions about the pace of wage

increases, though not explicitly stated, appear to be optimistic. There are far too many uncertainties in these calculations of modern budget technique for anyone to say categorically that the Chancellor is doing too much or too little. He spoke gravely enough about the possibility and consequences of a runaway inflation, and it is not easy to reconcile these sombre words with the relatively small measures he proposes to combat the danger. His estimate of the inflationary gap is probably about as small as could honestly be made. But honest it undoubtedly is; there is, for the present, no alternative but to be thankful for that and hope for the best.

*

If £138 million of new revenue is accepted as a reasonable measure of this year's need, most of the methods by which Mr Gaitskell proposes to raise it are as unobjectionable as could be found. The tax changes are discussed in more detail in an article on page 872. In general, the increases in indirect taxation fall at the obvious and expected places—through the petrol duty and a limited range of purchase taxes—and should help to squeeze consumption without raising the cost of living so directly as to provoke additional wage demands. The sixpence on income tax will not in itself weaken incentives much more than they are already weakened. The sparing of incomes in the lower-middle range is an inevitable corollary of the political situation and of the burden that the smaller salary-earner will in any case have to carry through higher prices. Admittedly, the increased rate will prompt persons with middle and higher incomes who have hitherto been able to save little to save less in future. But at any rate the Chancellor has resisted political pressure from behind him for punitive taxes on capital or income that would strike at "the rich" without contributing anything at all to the transfer of real resources to rearmament.

The one concession that Mr Gaitskell has made to the cruder sentiments of his own party is the increase in the tax on distributed profits. This will produce little revenue in this year; its menace lies further off. If fewer companies increase their dividends no one will shed tears for the man who has provided the risk capital. In income and profits tax together the state will now absorb up to two-thirds of his return. On such terms, little new money is likely to be put into the expansion of businesses whose future is at all uncertain. The recipe is simple: first provide an inflation; secondly, make it impossible for industry to maintain its capital by taking part of it away; thirdly, make sure that the excess of paper profits is skimmed off for the sacred purposes of the Government's own needs. It spells the end of innovation and industrial expansion.

The increase in profits tax might be defended as an expedient for one year. Plainly it is not intended to be anything of the kind. In combination with the removal of the initial depreciation allowances from next April, it may indicate the pattern by which, if the Labour Government survives so long, the expanding needs of defence could be met in 1952 and 1953—not from consumption in those years but at the expense of the capital formation on which the future safety and prosperity of the British people depend.

It may be unfair to suggest that Mr Gaitskell has any such deliberate policy in mind. But there is nothing

in his Budget to suggest that he has any other steps in mind. He has taken this year's burdens as they stand; the far greater strains of the next two years found no mention in his speech. Can this have been unconscious? By his tax changes he acknowledges that personal taxes have reached the limit. It is true that cuts in expenditure also cannot be made without hurting people; but they hurt just as much if they are brought about by inflation. If Mr Gaitskell had any ambitions to make his first Budget memorable and constructive, they have not been satisfied. He has altogether ignored what the historian will see as the essential task facing a British Chancellor in the early nineteen fifties. That task is to reshape the whole pattern of state financing in order to meet needs that have grown so much in size as to become quite different in kind from anything previously attempted as a peacetime permanency.

*

Politically, there is virtual unanimity about ends, as distinct from means. The aim of both political parties is to maintain the main structure of the welfare measures—and the social revolution—of the past ten years, but to add to them the greatest practicable degree of defensive armament. This cannot be done simply by adding bits and pieces to the existing fiscal structure. The taxes that did little harm in moderation are unlikely to be those that can now efficiently draw off from private use all the resources required or controlled by the state.

The tests of efficiency have been made plain enough in the postwar years. They are that the state should acquire its resources without provoking continuous inflation and without gradually sapping the inventiveness, flexibility and risk-bearing on which economic progress depends. The welfare economy had already made these dangers far too great. Two years ago the Labour party tried to meet them by the policy of "consolidation"—of taking the social services, for the time being, no further. It was just possible to hope that this might work, that the natural increase in production might provide enough room for economic manoeuvre, enabling the costs of welfare to be absorbed with a gradual reduction in the weight of taxation. This possibility was never strong: rearmament has entirely destroyed it. A new approach to the whole problem of government finance is now urgently necessary.

Few men could have pursued the old approach as intelligently and honestly as Mr Gaitskell has done. That he has been forced into further resort to obviously damaging expedients is surely final proof that on such terms the problem is insoluble. No marginal adjustments could produce a significantly better Budget. What is required is an absolute determination to shift the burdens away from the points at which they press most heavily on enterprise and on savings. The obvious first step still remains: to shift some of the cost on to consumers whose food and rents are subsidised. That is not the complete answer. A radical reshaping of British public finances will be beyond the compass of any single Budget; but it was imperative, granted the greater tasks both in defence and in exports that are in prospect for 1952, to make a beginning this year. If the way was barred for Mr Gaitskell this week, that is merely to say again that new Ministers and methods are urgently needed.

After MacArthur

MANY who feel relief at General MacArthur's dismissal can feel no pleasure at the manner of his going. It does no credit to a personality of great qualities. That he should have preferred persistent disobedience to resignation is a measure of the self-confidence of the man and the extent to which five years of supreme power in Japan had made him lose contact with the world beyond the North Pacific. The verdict will undoubtedly be that these were faults intolerable in a general operating under the orders of a democratic government and as the representative of an international body; but they were also the virtues of a great fighting commander, which stood the free world in good stead through the desperate rearguard action of last summer and autumn. MacArthur the soldier may have been deplorably wrong in Northern Korea, but he was brilliantly right at Inchon. MacArthur the statesman misjudged Chinese intentions in October, but it is not yet certain that he was wrong in believing that Korea is the test case for the free world's ability to deter aggression in future by defeating and punishing the aggressor now. His last claim was that he could achieve complete victory if he were given the means and the authority to open a second front in China; but his instructions were to fight a war of limited liability. Because the Communists feared he might be right they called him a warmonger; because most Europeans and many Americans feared he might be wrong they called him dangerous and irresponsible. Out of all this arose intolerable confusion, bitterness and delay.

Because the story of MacArthur in Korea has been shaped not only by the faults of the man but also by the pattern of American politics, it behoves the world outside to observe restraint in its comment. Only President Truman could remove the Supreme Commander, and it was the direct challenge of the soldier to the civil authority that ended the story in Asia; it will doubtless continue in the United States for reasons discussed elsewhere in this issue. To pretend that foreign criticism of the General, some of it unfair and inaccurate in detail, was mainly responsible for his removal is to play the game of those Americans who oppose their Government's interest in Europe and will go to any lengths to discredit the President and his Secretary of State. Restraint is specially needed in this country. The charge that MacArthur is the victim of British agitation and the Government's policy towards China is already being made in the United States; that it should be substantiated by any gloating over the General's discomfiture and the President's difficulties will be intolerable to anyone who values Anglo-American relations. His offence was against American authority, and its punishment is for the Americans to decide.

None the less, MacArthur had become an international figure, a symbol of many fears and the whipping boy for many grievances. What precisely was his offence in the eyes of the world and—let it be admitted—among many Americans? First, perhaps, was the fact that he inspired fear among friends. He had a manner of speech and an air which frightened Europeans, who have had their full measure of strong and headstrong men in the last twenty years. He became a symbol of the American self-confidence, impatience for results and enjoyment of power which reveal themselves more conspicuously

outside than inside the United States. He seemed to represent the opposite of everything that is associated with the wise and revered figure of General Eisenhower; and the impression was based entirely on his own statements, and on the Tokyo legend, reinforced by massive Communist and non-Communist propaganda. Secondly he had a way of shattering complacency by reminding people that collective resistance to aggression in the cold war is quite simply war—war that has to be won lest other wars follow. As Americans, British, French and others slowly braced themselves to send a few more troops to Europe, to move to a semi-war or one-third-war footing, MacArthur was saying that the battle had already begun, that Asia was no side-show, that it needed more men, aircraft and guns. Third, there is a natural and healthy distrust of generals who appear to be running ahead of Ministers and courting the gravest risks of spreading conflict. This distrust was reinforced by a wish to think that there was no real quarrel with the Chinese, that they would not have intervened in Korea if the parallel had not been crossed, and that the Americans were wrecking—out of pique over the defeat of Chiang Kai-shek—the British policy of conciliating Peking.

Indeed, it has to be said quite frankly that in many countries—certainly in Britain—General MacArthur had become the focus of anti-American feeling, which in turn has sprung from resentment at Washington's predominance, from a surfeit of world politics and above all from the arguments and reports of certain sections of the press. If the contribution of the Chinese to the deadlock in Korea and to the general anxiety about Asia has been underrated, it is because many governments otherwise friendly to the United States have presented to their peoples a picture of events in the Far East far different from that which Americans see behind the casualty lists. For example, the recent confusion and excitement over the question of re-crossing the parallel in Korea arose from assumptions about the causes of Chinese intervention which are, to say the least, partisan.

*

Because there has been this sudden and drastic change in Korea it does not follow that all the results will be good or welcome. The new Supreme Commander, General Ridgway, has won not only respect but devotion among his international forces; but he lacks political experience. When he has spoken about his job he has talked sense. He can be trusted to carry out his orders; but his task will be no easier than was MacArthur's if those orders do not come to him firmly and quickly. And for that to happen the governments responsible must think and act more realistically than they have in the past. The change of commander is, among other things, a sign that the first experiment in collective action by Uno has not worked well. If it is to work better there will have to be a collective will and point of view. First thoughts might suggest that all this will now be easier; but second thoughts suggest caution. So far as Anglo-American relations are concerned, the departure of MacArthur removes the lightning conductor; if Washington and London disagree, there is now no popular scapegoat. The meeting of divergent views will be direct; and if there is not to be conflict

there will have to be give and take on both sides. Both Mr Acheson and Mr Morrison will have to start educating public opinion in those facts and views about the prospects in Asia on which their governments can agree; and that will not be easy for either of them, although it should now be less difficult for both than it has been. Mr Morrison said a fortnight ago that this was the psychological moment for ending the fighting in Korea. At the time the reasons for this statement were not evident, but President Truman's courageous action may have created a new opportunity. Whether it lasts depends greatly on what is said outside the United States, and on how American opinion reacts.

This is not to say that no share of responsibility for using and prolonging this new situation rests on the Chinese. Much depends on whether the Asian Communists interpret the dismissal of MacArthur as a gesture of appeasement—which it certainly is not. Let it be hoped that their understanding of the outside world is not so distorted that they do not grasp the meaning of what President Truman has done. They are unlikely to admit that the bottom has fallen out of their charge that the United States and their allies were preparing aggression against China; although in fact their propaganda has suffered a reverse. They will be tempted to go on with the new offensive which they appear to be mounting, for they have committed themselves—and Stalin has publicly committed them—to total victory in Korea. They are doubtless being advised by Moscow to press

on, for Stalin's advisers have a genius for advocating action which closes the free world's ranks. In short, it rests with Peking to show whether MacArthur was right or wrong in his estimate of Chinese aims. The United Nations will shortly restate its aims; Mr Morrison on Wednesday stated British policy in terms which, if optimistic, are in principle unexceptionable, and President Truman's explanation of his reasons for dismissing General MacArthur at least makes clear what American policy is not. The road to negotiations for a cease-fire is open if the Chinese wish to take it.

The problem remains of how each side can save face. Communism has to save face before the eyes of Asia; the United Nations has to save face before the eyes of the world. The Chinese have demanded total success; the United Nations have demanded only limited success. Communist actions remain under the control of a handful of men responsible to no one; the actions of the Uno Supreme Commander have been firmly restored to the control of freely elected governments and public opinion whose desire for peace is clear and strong. It is within those limits that the Korean problem must be solved; and the condition of solving it is that American and British statesmen should make a supreme effort to align their policies and their peoples. Otherwise the policy of attaining a free, united and independent Korea—restated by Mr Morrison on Wednesday—will be impossible, and the spectre of General MacArthur will haunt Washington and London.

The British Colonial Army

IN the House of Commons four weeks ago a private member's motion, urging the government to investigate the possibilities of raising bigger forces in the colonies, was passed by a majority of 182. During the course of the debate Mr Strachey, the Secretary of State for War, put the present strength of British colonial troops at 60,000 men—a decline of one-third from the 90,000 of two or three years ago, but half as large again as in 1939. At the same time he claimed that the government is now reversing its policy of retrenchment and is already beginning a careful development of imperial forces in all parts of the Commonwealth. Mr Strachey's caution, however, by no means met the mood of the House. There was, and is in many quarters, a strong feeling that Britain is not making the best possible use of the manpower available—and much of it ready to serve—in the colonial empire. It is felt particularly that colonial troops could and should be used to offset the decline in strength created by the removal of the Indian Army to independent command. The question, indeed, is important and likely to become more so as the necessity to build up the forces of the free world becomes more acute and the resources of British manpower become more strained. What are the facts about it? How effective have colonial troops been in the past? What ought now to be done to increase their strength and their usefulness?

In these discussions, what is really in mind is the possibility of raising a large expeditionary force from Africa. Of a total of nearly 500,000 colonial citizens enlisted in the last war, 350,000 were Africans. Africa is by far the biggest reservoir of manpower in the colonial empire—the next is the West Indies. It is, therefore,

the decision about policy in Africa which is crucial. And here it must be said at once that, while many Africans make good soldiers, there are many obstacles in the way of recruiting them in large numbers. At present, the Royal West African Frontier Force (RWAFF) is on a peacetime establishment of nine battalions—five of the Nigeria Regiment, three of the Gold Coast Regiment, and one of the Sierra Leone and Gambia Regiment—with two batteries of light artillery, a few armoured cars, and a very small administrative and technical "tail." The King's African Rifles (KAR) in East Africa has seven battalions—two each for Kenya, Uganda and Nyasaland, and one for Tanganyika. In addition there is a Northern Rhodesia Regiment of one battalion—making eight under East Africa Command, together with a few ancillary units. These are not forces which could at present produce more than a trickle of manpower for service outside their own territories—where they are employed, often below strength, on essential internal security duties.

Africans fought in both world wars. The difference between the two was that in the first war none fought outside their own continent, while in the second they did, most notably in Burma—where some of the Nigerians even served with Major-General Wingate's Chindits. In the last war African troops, all of them volunteers, took part in the campaigns in Somaliland, Abyssinia and Madagascar, and then in 1943 provided three divisions—the 81st and 82nd West African and the 11th East African with two extra brigades—for Burma. A fourth, the 12th East African Division, was retained at home, while Africans were also extensively employed for lines of communication and pioneer duties

in the Middle East. This made a total equivalent to over five divisions.

What could be expected of African troops in the future? The African is a good soldier and he has stood up in battle both to Germans—in Togoland, the Cameroons, and Tanganyika during the first war—and to the Japanese. It would be wrong, however, to expect African troops to be up to the standard of the best Indian or British units. Given the training, they can handle all the normal equipment of an infantry division, except armour, at least without a white man in every tank. But their education is too limited for them to be able to handle armour. By and large, it is education—the ability to think out and execute tactics, or to obey technical commands under fire—and not character or courage that is the limiting factor. Indeed, a necessary assumption throughout is that, as in the last war, at least eight per cent of the officers and NCOs of any African force must be European; it is also preferable to have a white battalion in each brigade. Another qualification is that training takes time; the first African division to arrive in Burma took three and a quarter years to create, and then had to find its feet. With the experience now gained this period might at best be cut down to a minimum of two years, but even this would partly depend on obtaining European instructors of the highest quality.

It must be remembered that almost all African recruits are entirely illiterate, speak a variety of languages and have no martial tradition; the French Senegalese now fighting in Indo-China are one of the few warrior races in the continent, the Ghurkas of Africa. The language problem alone is serious. In the last war it was decided that the only way out was to teach all African soldiers English, but this is not easy and in itself consumes time. It was also found that, while the man from a fixed agricultural community, the man who digs, makes a good soldier, the nomad is less successful, the East African Somali being the worst of the lot. The chief bottleneck in any proposed expansion would be the African non-commissioned officers; at first the senior NCOs would again have to be white. As regards officers, two Africans received King's commissions during the war, and two have lately been sent to Sandhurst. Although it is highly desirable to speed up this process—as is now being done—to attempt too much is in the long run to sacrifice lives unnecessarily in war; all but the most nationalistic of African propagandists had this brought home to them by the Burma campaign.

At the moment the training of an appreciably larger number of Africans would overtax the already inadequate resources of the British regular army. The shortage of good junior officers and NCOs is one of the most serious limiting factors in the creation of new formations at home. As things are, many British officers and NCOs serving with African forces are unsuitable, either from temperament or because, in the merry-go-round of current postings, they do not stay long enough to gain the special experience needed to be any good. If it is intended to replace the Indian Army with Africans, three comparisons with the former Indian Army are helpful. First, the old Indian Army was an entity of its own, to which British officers were commissioned direct, and to which British and Indian officers could devote a lifetime of service. Secondly, it should not be forgotten that behind the production of a first-class fighting machine like the 4th Indian Division at El Alamein lay no less than two

centuries of military tradition in the service of the British. Thirdly, the old India had 400 million people to recruit from instead of only 45 million.

The War Office has recently taken over from the Colonial Office full responsibility for raising and administering colonial troops. This does not mean, however, that the Colonial Office either can or will abandon its interest in the matter. Indeed, the colonial governments must continue to be consulted at many stages. There have, for instance, already been outcries from African nationalist leaders at suggestions in the House of Commons that African troops should be sent to Malaya. It would be quite wrong and inconsistent with the trends of British colonial policy to attempt to treat Africans as pawns; whatever is done must benefit the colonies themselves as well as the rest of the Commonwealth. And if bigger forces are to be recruited, African leaders must be persuaded that this is in their own interest in the world of today. The task may not be as difficult as it sounds. Although the taint of imperialism may offer a handle to those who are already hostile agitators, there are many among the natural leaders of the African communities who understand and value the British connection as they did in the war. They actively want their young men to serve the Crown—though whether this should include overseas service in peacetime is another matter. One of the main limiting factors to a bigger recruiting drive, on the other hand, is economic. There is little slack in the economy as a whole and in many places in Africa there is an actual shortage of labour; moreover, the tendency is to move from agriculture to industry, and it is the man from the land who provides most of the military manpower. What is, perhaps, worth considering is whether an African Army should not be created, on the analogy of the Indian Army, in which both Africans and British could find a career, as they do in the colonial service.

The immediate need is for the Chiefs of Staff to state their requirements; until they do it would be wrong for the civil power to countenance indiscriminate, hypothetical recruiting. These requirements might run to a front-line strength of two divisions in the first instance, hardly more. The five divisions raised in the last war almost certainly represented too high a figure, both from the point of view of economic and social stability at home, and because the rate of expansion was too rapid to maintain the necessary military standard. A great deal must naturally depend on the role which African forces can be expected to play. For the purposes of the present cold war, so far as they can be foreseen over the next few years, it would seem that Africans might best be used in two ways. One would be as small, mobile, highly trained forces for service, if required, in the tropical territories of the Far East—Africans cannot ever be expected to serve in the temperate zone. The other would be to relieve British troops on garrison duties, for instance, in the Middle East; it is doubtful how far this could be carried, but in nature it would be a repetition of the invaluable service performed on lines of communication in the last war. Beyond this, it is not at present realistic to go. And while every effort should now be made to decide on and launch an agreed, modest programme as soon as possible, there can be no question of calling the colonies in to redress the full balance of the great Asian empire.

NOTES OF THE WEEK

Bevan and MacArthur

No Budget since the war has caused so little reaction at Westminster, favourable or unfavourable, as has Mr Gaitskell's first effort. Trapped between the twin walls of rearmament and the welfare state, the Chancellor would have found little room for spectacular manoeuvre even had his personality or his policy run towards such action. Mr Gaitskell's clear exposition could not dispel a certain flatness about the occasion, despite the observance of all the due ritual of Gladstone's dispatch box, the glass of rum and orange sipped halfway through the speech, and even the half-dozen top hats worn somewhat self-consciously by Opposition backbenchers. There was little of the tension of other years when members sat on the edge of their seats alert for some Daltonian wiliness or Crippsian hammer blow. Relief, rather than anger or pleasure, was the chief emotion when Mr Gaitskell had finished—relief among the Labour Party that the burdens on consumers were not heavier, and among the Opposition that none of the hints of capital levies or capital gains taxes had materialised.

In the lobbies that evening and in the papers the next morning the Budget had to compete with the news of Mr Bevan's anger at the health service charges, anger which sent him hurrying to see Mr Attlee in hospital and which loosed a flood of rumours that he would carry out his threat to resign if a charge were put "on the health service for the patient." On the next day, even the prospective fate of Mr Bevan faded into insignificance beside the actual fate of General MacArthur, and the sounds of Ministerial dispute were drowned in the Labour Party by sighs of thankfulness.

There is little doubt that the whole of the Labour Party and the bulk of the Opposition approve President Truman's action, though for different reasons. Mr Churchill made it clear in his brief comments on Wednesday that his support was for the maintenance of the principle that the "constitutional and civil authorities should control the actions of military commanders"; it in no way affected his respect for General MacArthur as a commander and as an individual. Innumerable precedents for this principle can be garnered from Mr Churchill's own memoirs. Mr Churchill had also made plain in the last two foreign affairs debates his wish to avoid, so far as is consistent with honour and obligations, any conflict with China.

These are also the views of many Labour members, and Mr Morrison was careful to pay tribute to General MacArthur's past services. But Labour feeling goes much further than this. A section of the party is frankly delighted at the General's removal. He has appeared for some months to embody a policy of war with China and of the overthrow of Communist power throughout the world by war. Certain Labour backbenchers have tended to load on to him every defect, which they perceive or imagine in the American character, until in the mind of some he has assumed the guise of a *Pravda* caricature. The timing of the President's action must, therefore, have been a relief to Mr Gaitskell, who would certainly have found it more difficult to justify a rearmament Budget to the Labour left wing, if it had appeared that the arms were being provided for use by generals liable to race off on policies of their own. The removal of General MacArthur also cut from under Mr Bevan's feet any ground on which he might have been inclined to make a left wing stand critical of rearmament and of too close an alignment with the United States. But on the domestic issue alone Mr Bevan's resignation never looked likely.

Social Service Changes

The changes announced by Mr Gaitskell in the finances of the social services mark a small but significant departure from the principles that have governed the social security scheme set up since the war. The Government proposes, first, a break from the principle that the social services should be "freely" available to all by introducing a charge, subject to a needs test, in two branches of the health service. With the exception of children and mothers treated in local authority clinics, people are to pay about half the cost of all denture work, and everybody, except children, will be required to pay half the cost of his glasses. How these charges are to be collected, whether through the dentist and optician or through the executive councils, has not yet been made known, but they will save about £13 million in 1951-52 and £25 million in a full year. These savings, Mr Gaitskell pointed out, were allowed for in the estimates for the national health service, the cost of which in 1951-52 was originally estimated at £30 million more than in the year just ended. As it is, the net cost of the service to the taxpayer is to be kept, "for the time being," within the limit of £400 million. This does not allow any increase in the capitation fees for general practitioners, and it is probable, therefore, that the charges for dentures and glasses are only a beginning.

The second departure from principle is the institution of a higher rate of benefit for pensioners than for the sick and the unemployed. But the most interesting feature of the increase (which will bring the basic pension up to 30s. a week for a single person and 50s. for a married couple) is that it is applicable only to men of 70 and over and women of 65 and over. Old age will in future officially begin at these ages. Elderly workers in the twilight of their sixties can continue to draw a retirement pension at the old rates or, as the Government hopes, will postpone their retirement until they reach their old age. To encourage them to do this, the increments to their pension that they already gain by postponement will be increased from 2s. to 3s. a week for each extra year they stay at work.

Unfortunately, the Government has largely offset this encouragement to elderly people to postpone retirement by increasing from £1 to £2 a week the amount that they can earn without forfeiting any of their retirement pension. This is bound to encourage them, not to stay on in full-time employment—which is desirable—but to take their retirement pension at the minimum age—which is very undesirable—and to supplement it by part-time and casual earnings. Moreover, for administrative reasons this concession may have to be extended to the disregard of earnings by pensioners in receipt of national assistance, with a consequent increase in the cost of assistance. Mr Gaitskell, however, ignored this and, indeed, omitted all reference to the future of the assistance scheme. Yet if the Government really wished to direct relief where it is most needed, an increase in the national assistance scales should have taken precedence over higher pensions.

From Poll to Poll

The Labour Party did not do quite as badly in the Ormskirk by-election last week as superficial comment has suggested. It is true that the Labour vote was 5,614 smaller than at the general election; even when for comparative purposes the 686 votes cast this time for the ILP candidate

are added to the Labour poll (in February, 1950, there was a straight fight), the decline was more than a third. The Conservative vote—24,190, against 28,654 at the general election—was cut by a much smaller proportion. But what else was to be expected? On April 5th Sir Arthur Salter obtained 71.5 per cent of the votes cast, compared with Sir Ronald Cross's 66.3 per cent in 1950. The "swing" of 5.2 per cent in favour of the Conservative party is appreciably less than that of 7.6 per cent—from 43.4 per cent of the electorate to 51 per cent—shown for the country as a whole by the Gallup Poll.

It is always hard to assess the special influences on voting at by-elections. But in the case of a safe Conservative seat there is no apparent reason why the Conservatives should suffer more from by-election apathy than do the Labour champions of a hopeless cause. Moreover, at Ormskirk the Conservatives had in Sir Arthur Salter a candidate not only of great distinction but also of special attraction to the floating voter. It must be assumed that the 2 per cent of the poll gained by the ILP candidate was drawn from people who voted Labour last year, and on this basis the Ormskirk result certainly does not do more than illustrate—with local qualifications—the swing against the Government that the public opinion polls had already made plain. It is not an additional encouragement to the Conservatives; that, of course, does not make it any comfort to Labour.

Deputies in the Undergrowth

Since Mr Gromyko offered his compromise item I, he and his western colleagues in Paris have shown signs of losing sight completely of the wood as they play hide-and-seek amid the trees and undergrowth. As a transitional state of affairs this is not altogether a bad thing, for the main purpose of their meeting was to save the Foreign Ministers the time and the tedium which this exploration entails. The confusion and deadlock at the Palais Rose are worth while if they produce a final clarification of the position on both sides.

What then, are the respective positions? The Russians still hope, as they have made evident in every Note they have presented on the subject—and as Mr Gromyko has underlined—with every word he has spoken in Paris—to throw a wrench into the wheels of western rearmament without having to allow any comparable blockage to occur in their own plans for the future. The western representatives still hope to keep the wheels free, at least until such time as they can see whether the Russians, if forced to it, will concede anything for the privilege of blocking them.

This much has been clear all along. And this was why it was important to get Mr Gromyko to include the question of German rearmament within a comprehensive list of the other causes and effects of world tension. What the western deputies have now to ask themselves is whether any further wrangling over the agenda can really help their purpose. They can no longer escape from two basic facts of life; and, while Mr Charles Bohlen is seeking new instructions in Washington, the American delegate, Dr. Jessup, appears to have been drawing attention to them. The two facts are these. In the first place, there is, within the broad limits already established, no power on earth, far less a written agenda, which can stop the four Foreign Ministers from talking about anything in any order to which the spirit moves them. Secondly, if the conference now breaks down, the failure will be attributed by the man in the street to the western refusal of a Russian proposal and not to the Russian refusal of a western proposal. This must not be allowed to happen.

At this stage, therefore, the agenda ceases to be the significant point. The western capitals should now be concentrating not on drawing up their battle order, but on the tactics which must be used when the battle is joined. And

the essential feature of these tactics must be to deprive the Kremlin of its diplomatic initiative. For this, there is a comparatively simple formula. The conference of Foreign Ministers must be held in private; and the western powers themselves must have positive proposals for dealing with the central problem of Germany. It has been suggested before in *The Economist* that there is such a policy ready to hand; a policy which would either force the Kremlin back on to the diplomatic defensive, or out into the open with concessions in the broader field. It is that the Foreign Ministers should discuss an Austrian solution for Germany, an Austrian peace treaty, and inspection of armaments in all the ex-enemy countries. The Russians would find this difficult to refuse, and the west would gain a great deal if it was accepted.

Treaty Offer to Egypt

Nahas Pasha, the Egyptian Prime Minister, in his last public statement on Anglo-Egyptian relations on March 28th was hard and uncompromising. The old demands for the complete evacuation of British forces from Egyptian soil and the "unity of the Nile Valley" under the Egyptian crown were restated with vigour. In addition, Nahas Pasha warned the world that Egypt "cannot be expected to remain patient indefinitely" and they were "glad to be described as intransigent." The statement was doubtless intended to increase the waning popularity of the Wafd Government, which has accomplished but little since it came to power in January, 1950, but it has created an atmosphere in which negotiations will not be easy. Nahas Pasha was fully aware that the British Ambassador was at that time in London discussing with the new Foreign Secretary fresh proposals to take back to Egypt.

Details of the new proposals have not been disclosed in Whitehall, but it is known that the British Ambassador, Sir Ralph Stevenson, will soon put before the Egyptian Government a plan for the gradual evacuation of British bases in the Canal Zone and the gradual handing over of installations to the Egyptian army which, it is hoped, will man them with the help of British civilians.

Although a new agreement would be welcomed by all parties, the present treaty remains in force until 1956; so from a purely British viewpoint there is no great hurry. No doubt, however, the Wafdist Government fears that a general election in Britain might bring into power men whose ideas are not as liberal as those of the present Government. The main difficulty in the way of a new treaty would appear to be the man in the Cairo café, who has been fed on anti-British and anti-foreign propaganda for years. There is little doubt his feelings would soon change if the newspapers altered their tone, as the Egyptian left to himself is not unfriendly. A hint from his government that violent anti-British sentiments were no longer welcome would be certainly sufficient to cause a large section of the influential press to change their policy. In any case, the Government, which has just prolonged the censorship for another year, must learn to master the disadvantages of a controlled press as well as it has learned to enjoy its advantages. The Wafd have a vast majority in the Chamber, they are on terms of cordiality with the Palace, and both King Farouk and his Government are known to be aware of the dangers of the international situation. If the present negotiations break down, London can only say, "Your lead, Nahas Pasha."

On Israel's Frontier

The series of frontier incidents between Syria and Israel is viewed with fear and anger in the whole Arab world but especially that part which borders on the new state of Israel. If words and promises meant anything, the Syrians would not be too deeply disturbed because all the Arab states have

promised his good and faithful servant its just reward, guaranteed employment "on a continuing basis." One decision then, at least, has been taken, and taken for the good. As the emphasis on American aid to Europe shifts from reconstruction to defence, the good will and experience accumulated by the American instrument of reconstruction will not be wasted.

For this both Europe and America may be grateful. The events of the last few years have provided conclusive proof that the manner of the giving may make or mar the effect of the gift. There is no more ungrateful role in human or international relations than that of the generous creditor. To be too free with one's credit may be to invite disaster by throwing away the opportunity to use it not only to relieve a current emergency but to build a securer future. To hold the purse strings too tight, on the other hand, is to destroy the good will on which such a future can only be based. It was the task of the ECA to strike the right balance between these two, as well as between the ideal as envisaged by the Administration and the realisable as determined by the Legislature of the United States. The fact that the European Recovery Programme has not only achieved its economic objective but has been the foundation for a new unity within Western Europe and between Europe and America is the most eloquent tribute to the way in which the ECA has discharged its burden.

So much for the past. What President Truman has not yet decided, or at least announced, is exactly what part the ECA is to play in future programmes. Is it to continue, its main task nearly done, as a subsidiary friend and counsellor; or is it to assume the major role in the administration of American foreign aid in its new forms? A decision on this cannot be long delayed, as the new foreign aid bill must soon come before Congress. It is difficult to see to whom the task could be better entrusted.

* * *

The Second Million Houses

In February 1951 the millionth new house built since 1945 was completed.* This million covers only new houses, permanent and temporary, and excludes the 340,000 extra dwellings provided by requisition, repair, conversion and adaptation. The question now is how long it will take, and how much it will cost, to try to build another million houses by sticking to present policies.

The prospect is not encouraging. The one favourable sign is that the competition organised by *The Builder* for the design of a £1,000 house (discussed in *The Economist* of February 24th, page 422) has caused much interest among housing authorities, and Dr Dalton has stated that a new circular is to be sent to them dealing with the design of council houses and methods of combining economy with the maintenance of essential standards. It is possible, therefore, that economies in standards of construction will receive official blessing.

A step in this direction is badly needed. If conditions remained exactly as they are now it would still take another five years to build the second million houses. As it is, the increasing competition of rearmament will push up prices and make materials scarcer. The Economic Survey published last week says little on housing itself; it merely states: "It is not intended to reduce the housing programme as a whole." But the Survey also makes an assertion about productivity in building in general which unfortunately does not appear to be applicable to housing in particular. It states that productivity is increasing by 4 to 6 per cent each year for the whole of the building and civil engineering industry. This generalisation applied to housing would mean, with the same investment, an extra 8,000 to 10,000 houses a year. Yet between 1949 and 1950 the average monthly labour

force rose by about 8,000 men and produced during 1950 only another 544 houses. Similarly, the average time taken to build each house showed no sign of falling. On January 1st, 1949, there were 195,000 houses under construction, and during the year 197,000 were completed. On January 1, 1950, 201,000 houses were under construction, and in the course of that year 198,000 were completed. Both sets of figures show no improvement in productivity. If Dr Dalton can increase the rate of building by encouraging authorities to reduce unnecessarily high standards, he will do a service both to those who need houses and to those who pay for them.

* * *

Support for Economies

If Dr Dalton needs encouragement for a policy of housing economies he has received it from the Housing Centre. This non-party organisation has just sent him an admirable memorandum outlining a programme for housing and also some detailed proposals for modifying housing standards. The Housing Centre is anxious that the total housing programme should not be cut, and that the hard-won improvements in standards should not be wildly jettisoned. But it sees its objectives in the perspective of rearmament, and consequently modifies its ideals to the pressure of the times. Its aim is to preserve many old houses from decay by modifications of the Rent Restriction Acts, and to squeeze as many new houses as possible out of the total housing allocation without the sacrifice of basic standards of structure.

Most of the suggestions are unexceptionable. Of the two that are more controversial, one is designed to meet the problem of the many houses which have exhausted their economic life but are likely to be occupied for another 20 to 30 years. Even if the Rent Restriction Acts were modified the private landlord would be unlikely to carry out the heavy repair work necessary to make them really habitable. The Housing Centre therefore proposes the establishment of a national non-profit-making association, which would have official backing and capital. Sub-standard housing presents a very difficult problem, and any suggestion which would help to solve it without an additional burden on the taxpayer deserves consideration. It is not, however, clear from the present statement what the financial implications would be. They should be elaborated.

The second suggestion is concerned with the relative costs of development in New Towns and in high-density flats in the centre of cities. The Centre has investigated the social needs of families with children living in flats in congested areas. The cost of these blocks is already enormous; to provide conditions more suitable to young families would increase them still further. The Centre believes that a study of total costs might show that the costs of New Towns compare less unfavourably with flat development than is generally supposed. Here again is a case for investigation. Far too little is known about the costs of flats, and nothing about them has been published by the Ministry of Health. Meanwhile, despite the very high subsidy these schemes fall very far short of paying their way.

* * *

The Honour of the German Army

The Federal German Government took an important step last week towards rehabilitating the German professional soldier, both morally and materially. Though the facts that the Republic consists only of a fraction of the former Reich and that its financial position is weak do not justify generosity, the *Bundestag* has approved second reading of a Bill to pay full pensions to all former regular soldiers and members of the Reich Labour Service. Promotions for bravery are to be recognised and non-commissioned officers with long service are to receive special aid. The Chancellor himself declared, amid continuous applause, that the Allied laws

had quite unjustly made professional soldiers "partially responsible for the lost war," although they had merely done their duty to the state. The Government, he said, would never support the real war criminals; but the percentage of such guilty men was so "extraordinarily small" that it did not destroy the honour of the former *Wehrmacht*.

It may be wondered what standard of comparison the Chancellor had in mind when he pronounced this acquittal. Herr Carlo Schmidt, for the Social-Democrats, justly remarked that many of the officers had not proved loyal to the Weimar State but helped Hitler to undermine and overthrow it; he also argued rightly that the false doctrine of collective guilt should not now be replaced by an equally false belief in collective innocence.

The whole problem of war guilt, *Soldatenethre* and the state of the former professional soldier in Germany has become acute now that the victors have proposed to re-form a German army for Europe's defence. For civilian states like Britain it is hard to understand—let alone to sympathise with—the importance of an idea of overriding professional honour rooted in German history of the last 50 years, and the voice of understanding abroad is silenced whenever some voices inside Germany are heard laying down terms for collaboration in western defence, which honourable Germans know to be unacceptable. Some light on the question is thrown by a review of three recent books by German generals which appears on page 867.

* * *

OEEC Tries Again with Bonn

It is difficult to believe that the German Government will carry out the promise to live within its means which its representative made in principle at the meeting of the OEEC Council of Ministers last week. There is still in Germany a tendency to treat the country's bankruptcy in the European Payments Union as a matter for which the Germans are not to blame and which their trading partners must and will put right. Since the days of Dr Schacht, Germany has become wedded to the idea that its creditors will not dare to ruin their vulnerable German market by retaliating if they are not paid. The hope was still expressed last week that a fresh investigation into the circumstances would lead the OEEC to recognise Germany's claim to further credit. And Dr Erhard still informs the public that it is all the fault of the others for not giving Germany sufficient aid and allowing the prices of raw materials to rise—factors which undoubtedly played a part in creating the present situation, but only a part. Dr Erhard also holds out hopes that world prices are falling and that, if Germany enters the sterling transferable account area, it will not only increase its exports but perhaps secure Commonwealth raw materials on favourable payment terms. In the meantime, German warehouses are comparatively well-stocked with raw materials.

Though fresh credit has not been offered to Germany, the OEEC has made an effort to save its trade with some of the hardest hit of the smaller countries, who will be favoured in future agreements and the allocation of licences. Strong creditor countries in the EPU have been asked to grant large import quotas to Germany and ask for only small quotas in return; they have also undertaken to do what they can to buy up the perishable goods which were originally destined for the Germans.

The OEEC will henceforth try to supervise German foreign trade after June 1st and will appoint three men to advise on the allocation of licences in April. These are, however, very limited measures. As it has often been pointed out in *The Economist*, a number of factors, such as excessive decentralisation, an inefficient civil service and corruption prevent effective control of foreign exchange or trade. In the same way, Bonn has as yet done nothing

about fiscal reforms. Even the federal budget for the financial year which ended last March is still in the committee stage. Plans continue to be put up and discarded, while measures to increase expenditure on social welfare—but not occupation costs—are passed without asking where the money is coming from. The Federal cabinet would do well to make up its mind that it must now hurt some German interests as well as its trading partners.

* * *

The Inferior Male

Most pension schemes are based on a higher retiring age for men than for women, presumably because men are considered to be the stronger sex and therefore capable of working for a longer span of their lives. It is difficult to square this with a paper read recently to the Royal Statistical Society by Mr Martin, a member of the Medical Research Council's Statistical research unit, which gives the impression that in reality man is biologically inferior to woman.

For the past hundred years the death rate for men has been higher than the rate for women. But, as the accompanying chart shows, the difference is greater now than it was in 1841 (the sharp increase in the ratio of male to female mortality in the war years is accounted for by the withdrawal of large numbers of fit men from the civilian population). Men may wish to attribute their higher mortality to their harder work, but, as Mr Martin pointed out, in the last two decades, when conditions of work have greatly improved and hours of work shortened, the sex mortality rates, instead of favouring the male—or at least showing a smaller difference between the male and the female—actually show a faster rate of decline for female mortality. That environment has some influence is shown by the analysis of the mortality ratio

by social classes, for on the whole in social class V (the unskilled) the excess mortality of males is not so great, except in middle age, as it is in social class I (the professions). But in every social class grandmothers are likely to live longer than grandfathers.

Mr Martin's paper also analysed the mortality rates by regions, by age groups, by causes of death in each age group, and by occupations. Women, men may be interested to note, are apparently much more likely than are men to die from "rheumatism, nutrition, etc.", particularly at the age of 45-54. But this seems to be the only consistent advantage men have over women throughout their adult life. If they wish to have a fair chance of surviving their wives they should apparently become engine drivers—which presumably explains a universal ambition of their boyhood—farmers or agricultural labourers; they should not be doctors, waiters, hairdressers or makers of alcoholic drinks.

Helping Discharged Prisoners

Mr Chuter Ede has recently appointed a committee to review the work of the Discharged Prisoners' Aid Societies and consider what changes are desirable to improve the chances of men and women when they leave prison. Such an inquiry is to be welcomed. The most critical time in a prisoner's punishment is the moment of his discharge, for in the period immediately ahead of him he will be at his cross-roads. Unless he is an habitual criminal he almost always wants to run straight, but if he could not resist temptation when his slate was clean, how will he stand up to it now that he is burdened with a prison record? Of first offenders the majority do, miraculously, stand up to it, but the size of the majority must depend on the conditions that face the men and women when they come out. If they have to fend for themselves among people who look the other way at the first sight of them, then the majority that makes good cannot be as large as it might and should be, and the reformatory work that has, one hopes, been done in prison will be wasted *pro rata* to the failures.

The work of helping these ex-prisoners is entrusted mainly to the Discharged Prisoners' Aid Societies. These are voluntary organisations, but they are subsidised by the taxpayer. For this reason alone, there is a good case for having an impartial review of their work. Unfortunately, Mr Ede's committee is to consist entirely of civil servants and officers of the aid societies, who will be sitting in judgment on themselves and reporting on the quality of their own work. The unofficial members should surely be chosen from the general public which subsidises the organisations (to the extent of more than £21,000 a year), particularly as their efforts have not always passed without criticism.

Italian Communist Congress

Signor Togliatti, the Italian Communist leader, has a reputation for bluntness even in Cominform ranks. When he returned recently to Italy after renewing his terms of reference in Moscow he made a flat bid to rejoin Signor De Gasperi's government. This striking change of tactics was a reversion to the policies of 1946 and 1947, when Signor De Gasperi manoeuvred the Communists out of power; but the new Italian bid is fully in keeping with the line being adopted internationally by the Communists. In Italy Togliatti has merely put it more crudely and his action will perhaps have a more direct impact than on the national political scene elsewhere. Behind this apparent mood of sweetness and light lies the aim of the Cominform to throw everything into the "peace" campaign against the Atlantic Pact.

Signor Togliatti's declaration was naturally expanded at the five day annual party congress which is just over. He emphasised that the Communists, while they want to join any government that replaces the present administration, might even be prepared in certain circumstances to come to terms with Signor De Gasperi himself, if he changes his foreign policy and if "Italy ceases to form part of the nations that are preparing war under United States control." This fantastic and unscrupulous offer has no immediate chance of being accepted.

It is not, however, outside the bounds of possibility that the Communist plan, in the present state of political uncertainty surrounding the government, might in time gain ground. The Christian Democrat party contains a small but vigorous section which is not entirely happy about the government's policies, and the result of the recent Socialist merger—which is dealt with on page 866—has not been to strengthen the government. In fact, the value to the Communists of their party congress has lain partly in the opportunity that it has given them to voice the maximum charges that could be brought against Signor De Gasperi's stewardship. They have alleged that the rearmament policy, by eating up financial reserves and monopolising raw material supplies, is

blocking social development and so actually increasing unemployment. Unemployment from 1919 to 1921 never affected more than two per cent of Italy's socially active workers; under Christian Democracy, say the Communists, it affects from 10 to 11 per cent. The minimum wage rates in even the most favoured trades correspond to only half the officially recognised minimum for maintaining a family of five. These accusations cannot be ignored.

Cold War in the Post Offices

There is among the British a very sound resistance to MacCarthyism and witch-hunting; but the Communists themselves make it increasingly difficult to maintain it. When they gather together at resorts behind the iron curtain they are inclined to boast to each other about their activities in sabotaging the western defence effort. Some attention should certainly be paid to a statement made in East Berlin at the recent "European Workers' Conference," called to further the aims of Moscow's World Peace Council. The head of the postal, telegraph, telephone and radio department of the World Federation of Trade Unions, who has the German name of Willi Baumgart, declared that the agreement concluded last year between postal workers in the German Democratic Republic and France had clearly shown what successes could be achieved. The agreement, which was "designed to prevent the misuse of postal installations for imperialist war preparations," had caused "considerable anxiety" to the French authorities.

Herr Baumgart pointed out that, of all workers in the postal services, those connected with radio had the best opportunity of working for peace by refusing to participate in "warmongering" transmissions; but the time had come to pass from passive to active measures. At the time when the WFTU trade departments were formed last year, the postal and radio workers were also reminded that they held key positions for hindering western plans.

Apart from this form of struggle for "peace," Moscow has in the last few days increased its open frontal attack by propaganda. Radio Centre Moscow has taken over four or five hours a day from the home services of the Soviet satellite countries for relaying its own foreign-language propaganda, directed to the Balkans, France and Italy. The Soviet Union's own network of transmitters has thus been powerfully reinforced, and the direction of political warfare further centralised.

Shorter Notes

The visit to Paris of Dr Adenauer, the German Chancellor, is a welcome event of great significance. It is made in the teeth of the most violent onslaught on the Schuman Plan yet made by that incorrigible demagogue Dr Schumacher, and at a moment when Franco-German issues are being brought daily before the French public by Communist propaganda and speculations about the meetings of the Deputies. It needed courage on the part of both hosts and guests to arrange this visit; and it is a great pity that the German Chancellor is not coming on to this country. He will survive the storms ahead only if he is fortified by dignified gestures of understanding which London should be able to offer at least as readily as Paris.

In last week's issue of *The Economist* it was stated (page 782) that production per man-hour in Britain had increased by 45 per cent since the war. In fact precise measurement of the change is impossible. A reasonable estimate (based on the official index of industrial production and statistics of employment and average hours worked) might be that in 1950 the average output per man-hour in British industry was about 20 to 25 per cent greater than in 1946. This compares roughly with the estimate of 10 per cent mentioned for Soviet Russia.

"Good Gracious — I'm in Australia!"

No special Act has been passed, but England and Australia are getting closer and closer. When we went to press, they were only four days apart.

If things go on like this you'll soon be able to tumble out of bed, rub your eyes and exclaim: "Good gracious—I'm in Australia!"

British Commonwealth Pacific Airlines already make this nearly possible with a luxurious free sleeper service across the Pacific from San Francisco and Vancouver, via Honolulu and Fiji.

Excellent connections are available from London, Glasgow or Shannon via New York or Montreal.

What is a sports car, Daddy?

It's the kind of car I used to take your mother out in before we married.

Is this a sports car?

No—this is a family runabout.

What's the difference?

Well, the sports car was... more sporting—of course, you could get any amount of BP in those days. I wish we could now!

When will BP be back, Daddy?

We don't know yet—but that will be the day!

BP is the trade-mark of

ANGLO-IRANIAN OIL COMPANY, LTD., whose whole organisation is behind it.

Letters to the Editor

British Universities

Sir,—In the article on "British Universities" published in *The Economist* of March 31st reference is made to the "crabbing effect" of local education authority control of major technical colleges. This control, it is said, is "not calculated to attract first-class staff or to encourage the independence that is necessary for the best work."

You cannot imply, surely, that the ultimate responsibility for a college lying with a democratically elected body involves interference with the academic life and freedom of that college. The whole system of relations between the Ministry of Education, local education authorities, boards of governors and teaching staffs has allowed in all types of educational establishments a freedom in educational matters achieved in few countries.

Perhaps, however, your intention was to imply that local education authorities are unwilling to develop their colleges. It is only necessary to refer to the schemes for further education prepared by authorities to realise the unfairness of any such implication. By 1950 the Ministry of Education, having analysed the schemes of 95 authorities, was in a position to state that in the limited period 1948-53 these 95 authorities, many of which did not represent industrial areas, had planned to spend in respect of vocational education alone £2,600,000 on new sites and £31.5 million on new buildings. What has in fact retarded the realisation of authorities' schemes has been the national shortage of men and materials which has interfered with all plans for capital expenditure. It would seem in any event somewhat unjust to use the word "crabbing" in connection with the attitude of mind which contemplates expenditure on the scale described above.

Or did you feel that the salaries paid by local education authorities to their teaching staffs in technical colleges were insufficiently generous? The facts are that a college lecturer whose work is of university standard will receive under the 1951 Burnham Tech-

nical Scale a salary of £1,000 per annum rising by annual increments of £25 to a maximum of £1,150 and that the various grades for heads of departments range at their maxima between £1,000 and £1,600 per annum. It would be difficult to contend that these salaries are "crabbing" compared with those offered to the lecturing staffs of universities.—
Yours faithfully,
W. H. PETTY
Northallerton

The Soviet Army

Sir,—I am unable to accept wholly several points made by my colleague. Indeed, I feel that one point in particular could be very misleading to the British public in its search for reliable first hand information on life in the Soviet Union.

Firstly, the Politburo does not in any way claim to be a representative body. It is, however, worthy of note that of its eleven full members six are non-Russians, among them two of the most powerful men in the Kremlin: Stalin, and the head of the secret police, Beria—both Georgians.

Secondly, it is true that the peoples of Russia represent a variety of languages, cultures and religions. It would, however, be wrong to ignore the fact that many centuries of common historic destiny and development have knit them together more closely than might at first appear.

The mass surrenders to the enemy of the first year of the war, the subsequent change of heart brought about by the horrors of the German occupation, the movements of opposition behind the front lines and the refusal of so many DP's of all the nationalities of the USSR, including Russians, to be repatriated after the war, are eloquent proof of the fundamental unity of the peoples of Russia. Hitler's policy in Russia was aimed precisely at exploiting the national differences and antagonisms of these peoples, and the complete failure of his policy speaks for itself.

As for the discriminating persecution of non-Russians in the Soviet Army for political reasons, I can find nothing in my experience to support this. The

gravest threat to the Bolshevik regime lies not in possible internal strife between the people of the Soviet Union, but in their fundamental unity in opposing Communism and all it stands for.—
Yours faithfully,
"ANOTHER FORMER SOVIET OFFICER"

Balkan Tobacco

Sir,—Your Geneva correspondent's article on Balkan tobacco in your issue of March 31st omits the primary cause of the slump in the Greek industry. OEEC's concern about this problem will seem belated to the Greek tobacco trade, where the Greek loss of German markets has long been attributed mainly to large purchases of Virginian made possible only by ECA dollar authorisations.

Before the war, exports of Virginian to Germany—the traditional market for oriental tobaccos—were insignificant. But in 1949 and 1950 Germany became the largest single European importer of Virginian leaf. According to official British sources, American shipments in 1949 to Bizonia alone reached 62 million pounds, thus exceeding by nearly a third the prewar annual average for Greek exports to the whole of the German Reich—in spite of a sharp decline in German postwar consumption.

The expansion of Turkey's tobacco exports, referred to in your article, has largely been achieved at the expense of Greece, whose position in foreign markets deteriorated because of its participation in the war on the side of the Allies. A report issued in 1947 by the Food and Agriculture Organisation stressed this latter factor, recommending it should be taken into consideration in any international tobacco agreements. Today many advantages enable Turkey to produce more cheaply than Greece. But American competition is more serious. Even if Greek official protests should now lead to a reduction in Marshall aid credits for American leaf, the damage to the Greek economy, as the result of ECA's policy, which has fostered the taste for Virginian, previously alien to the Germans, may well prove irreparable.—Yours faithfully,

NANCY CRAWSHAW

Cæsar of the Pacific

The Riddle of MacArthur: Japan, Korea and the Far East. By John Gunther.
Hamish Hamilton, 219 pages. 12s. 6d.

Readers of Mr Gunther's earlier works would have expected him to give a book dealing mainly with Japanese affairs the title "Inside Japan." But, as it was about Japan, in the days before the Great Dismissal, General MacArthur had to be in the centre of the picture and to take over the title. This is certainly as it should be, for the author's pages abundantly confirm the general impression that General MacArthur is a man with a good opinion of himself. During the war, after his words on departure from the Philippines, "I will return," had become famous, the American Office of War Information wanted to change the slogan to "We shall return," but the projected alteration had to be abandoned owing to his furious and persistent opposition. In the event, it was MacArthur who returned, almost as in the days when kings rode to battle; he waded ashore on Leyte with the first landing force, and after Japan had surrendered, but before any instrument of surrender had been signed, he flew into Japan in an unarmed and unescorted aircraft ahead of the occupation troops. Such behaviour is apparently a family trait. His father, General Arthur MacArthur (of whom an acquaintance said "I thought he was the most fantastically egotistic man I had ever known until I met his son") always said he wanted to die leading his troops; he actually fell dead at an advanced age while making a speech at a reunion of his old regiment and his body was promptly covered with the regimental banner. It is impossible for a MacArthur to live or die in any other manner.

The present General MacArthur held an extraordinary combination of powers. He was American Commander-in-Chief, Far East, controlling all arms, and Commanding General, United States Army,

Far East. He was Supreme Commander for (not "of") the Allied Powers in Japan, bearing unlimited authority, both military and civil, in that country. Finally, he was Commander-in-Chief of all United Nations forces operating in Korea. His own view of his responsibility in all these capacities was expressed in his remark that "only God or the Government of the United States can keep me from fulfilling my mission." As far as is known, God has never intervened to thwart General MacArthur's will; the American Government has at last recalled him, but only after he had openly appealed to Congress against its authority. Mr Gunther writes that "there has never been an instance in MacArthur's history of specific refusal to obey an order," but his critical publicity was no less embarrassing to his superiors than direct disobedience.

What, then, was General MacArthur's "mission" to which he was dedicated? Curiously enough, though his temperament is that of an autocrat, his convictions are quite genuinely those of American democracy. Fifty years ago his father, as a military governor, introduced *Habeas Corpus* into the Philippines, and it is his son's greatest pride to have introduced it into Japan. General MacArthur worked every day of the year, Sundays included (he never took a holiday and has not set foot in the United States for fourteen years), to accomplish what he believes to be good for Japan as well as in his own country's interest. The theatricality and bravado which surround all his acts have blinded many observers to the magnitude of his achievement as ruler of Japan, but Mr Gunther gives a fair and convincing account of it and hazards the opinion that "MacArthur the Reformer should rank high in history even if MacArthur the Hero has to be forgotten."

The Hydra's Head

Monopoly and Free Enterprise. By George W. Stocking and Myron W. Watkins. Twentieth Century Fund. 596 pages. \$4.00.

This book, the third publication of the Twentieth Century Fund's Committee on Cartels and Monopoly, is the sort of volume in which American research excels. It is the product of highly skilled and beautifully co-ordinated expertise in three fields: in economic theory, particularly of course the theory of imperfect competition and monopoly pricing policy; in large-scale business practice; and in law. It studies the motives, nature, development and methods of monopoly with a comprehensiveness which no British analyst or historian has approached; a national deficiency connected, presumably, not only with the lack of any such body of evidence as the records of proceedings under the Sherman and Clayton Acts, or of the Securities and Exchange Commission, but with the peculiarly inhibiting effects of the British law of libel.

The authors have divided their vast field with great expository skill. A brief statement of the case for the competitive economy is followed by a concise account of a century's changes in American economic structure. Against this background is set a study of "the basic factors in industrial concentration"—economics of scale in operation or control, the pressures making for co-ordinated price policies, the strategic motives of economic empire-building. This is followed by a statement of oligopoly theory, against which is exposed for comparison the actual recorded behaviour of business men in markets of few sellers—and a fascinating record it is. Price leadership (illustrated by two excellent case histories), the basing point system as used particularly by steel and cement producers, and collaboration through trade associations, provide the next three chapters; then follows the intricate but clearly-told story of the making of case law under the Sherman and Clayton Acts, in which there is traced the development of two significantly incompatible viewpoints. One is that legality depends on how a monopolist or near-monopolist actually behaves—reasonably or unreasonably, with public spirit or as an extortioner; the other, that the very acquisition of monopoly power, no matter how used, is an offence. This statement of legal doctrine makes comprehensible the subsequent account of trade practices and of their regulation; and the authors then find, themselves in a position to evaluate the effect on competition of Government policies not directly relevant (monetary and fiscal policy, conservation of resources, agricultural policy and labour legislation) and of the technicalities of corporation and patent law. The concluding chapters stress the continuing danger to competition (less from actual monopoly than from oligopoly) and with it to free enterprise itself, and

We are not interested in smokers who could not care less what they smoke. We began our business nearly a century ago by providing for the careful—those who smoke because they expect a deep pleasure from good tobacco and not merely the satisfaction of a craving.

SOBRANIE

The name SOBRANIE still means in pipe tobaccos or cigarettes a maintenance of standards and a regard for the superlative which appeal to the few who are still connoisseurs in an age which has surrendered so much to mass production for the masses. We are only embarrassed because the few are frequently too many for us.

Make certain of History TODAY

Few phrases are more final—more exasperating—than the words "Sold out." But a firm order *today* with your newsagent, or an annual subscription, will secure your regular copy of HISTORY TODAY—and save you from disappointment. The April number is on sale tomorrow.

HISTORY TODAY is issued monthly at a cost of half-a-crown. Its contributors are experts whose aim is to interpret the events of the past and relate them to the problems of today. The magazine is profusely illustrated with prints and photographs.

Contributors to the April issue include Arthur Waley, Julian Huxley, Sir Henry Bashford and others.

You can obtain HISTORY TODAY from your usual newsagent or bookseller, or by annual subscription of 30/- from: HISTORY TODAY, 72 Coleman Street, London, E.C.2.

KEESING'S

In these times of swiftly moving events it is hard to follow and remember all the important occurrences which make up the history of our day, still more difficult to recall even the approximate date of a certain happening.

In 1931 the idea was conceived of putting news on record in permanent and handy form—"canning it" as it were—and tabulating each entry in a living Index which constantly keeps pace with day-to-day developments.

The result is KEESING'S and, after 20 years' experience and perfecting, we offer this modern News-plus-Reference Service which enables you to put your finger at a moment's notice on full data concerning Politics, Economics, Social Questions throughout the world.

KEESING'S is absolutely objective, comprehensive and always up-to-date through the addition of a fresh bulletin each Friday, ready for filing in the book-like Binder. Let it save you much frantic search and reduce your reading by many hours every week while building up your own authentic diary of our epoch.

THE WOODEN HORSE

The author here tells of Peter Howard's earlier and equally exciting adventures prior to the Wooden Horse escape; of how he was shot down over Germany, came within a stone's throw of the Dutch frontier only to be caught; of his first escape and recapture; and, finally, of how he and thousands of his fellows faced up to the hardships of long confinement in a prisoner-of-war camp. 10s. 6d.

COLLINS

by
ERIC WILLIAMS,
author of

make recommendations. Among these are a study of the whole corpus of relevant legislation with an eye to its incidental bearing on the maintenance of competition; the repeal of certain laws; the extension of antitrust provisions to the unions; the breaking up of all concentrations, beyond a certain percentage of the whole industry concerned, not capable of justification on grounds of superior efficiency; the co-ordination of present antitrust enforcement agencies and the stiffening of penalties; lower tariffs; and (a tough nut to crack) a sweeping reform of patent law.

This is a most valuable work of reference, a stimulating social study, and, most emphatically, required reading for members of the Monopolies Commission.

Nutshell for Planning

Industry and Prudence: A Plan for Accrington. Borough of Accrington. 186 pages. 30s.

This report should be read by anyone who doubts the necessity of statutory planning; also by anyone impatient for quick spectacular results. Accrington, a town of 38,000, not merged in a vast agglomeration, is a quickly-understandable laboratory specimen of the problems left by the unplanned industrial building of the 19th century. It grew fast as a one-industry (cotton) centre to 45,000 in 1911, lost by migration through grave unemployment in the 1930s, and now has a somewhat better but still unsatisfactory industrial balance. Professor J. S. Allen and the late R. H. Mattocks,

as consultants to the Borough, base on a succinct geographical, historical and economic survey a lucid presentation of the town's present predicament, judiciously illustrated. Without fanciful writing the picture comes to life: 13,000 families living mostly in drab gardenless dwellings, often at 24 to the acre; blighted areas of conflicting use; no central open spaces; roads inadequate for traffic; a smoke-pall cutting the regional sunshine from 1,500 to 1,100 hours yearly; and the one architectural monument a railway viaduct.

Yet Accrington is a vital community, and, sooner or later, it will have to be extensively rebuilt. That cannot be done on any conceivably acceptable standards without rearranging building plots and streets. The authors confine their plan to the minimum changes necessary; they make no showy proposals. They suggest the stages for the central reconstruction, but wisely give no dates, since its speed must depend on economic circumstances. On their modest standards, rebuilding must finally displace at least 12,000 persons. For these there must be new neighbourhoods on the fringe, or a sub-regional new town for the combined overspill from several centres. The choice is a matter of public policy. Here is the planning problem of modern England in a nutshell.

Britain in the Caribbean

The British West Indies. By W. L. Burn. Hutchinson's University Library. 196 pages. 7s. 6d.

Roughly two-thirds of this book is devoted to a general discussion of the history of the British West Indies up to the end of the emancipation period a hundred years ago. In this section Professor Burn demonstrates once more the excellent qualities of his historical scholarship, and it is a great pity that his treatment of the subsequent periods of history has been compressed into so small a space. The short section on crown colony government in the West Indies during the latter part of the nineteenth century, for instance, whets one's appetite for more. Surely, in a book of this kind, the seventeenth century might well be sacrificed to the twentieth?

For the rest, it is hard to say what the book is about. It starts with the very true criticism of Froude's "The English in the West Indies," that it was by an "embittered man clinging to the least practicable of ideas, that of a static society"; it ends, nevertheless, with an appreciative comment on his political faith. Professor Burn seems to fear that contemporary colonial policy, even tempered by the Development and Welfare Act, is evidence of the fact that the British people is "temporarily afraid of greatness," and he echoes Froude's words when he laments that they "affect too much to despise heroism." He tars advocates of changes in colonial administration with the brush of "crude and obstinate reformism," and even if such people must sometimes be credited with an ability to see more or less clearly the troubles that lie ahead, this merely

makes him dub the advice they give as "counsels of despair."

In general, the book is inconclusive, and, in so far as no ways of advance are made clear from the discussion it contains of the historical trends of the century that has elapsed since emancipation, it is unsatisfactory. The keynote will, perhaps, be found in Professor Burn's chance remark that though "native talent and initiative" in the West Indies are "real," they are nevertheless "limited." He is, of course, perfectly justified in pointing out that the West Indian peoples have not hitherto been loyal to their political leaders (though this does not appear to be as true today as it has been), but if the corollary is drawn that the nationalist movement is fundamentally untrustworthy, then Professor Burn must be regarded as a much blacker pessimist than those whom he criticises. It is the People's National Party of Jamaica, and the Labour Party of Barbados, that are producing leaders whom the British Government can both respect and collaborate with, and if the opportunity is lost there seems to be no political future left except boss rule of the South American type, or a new and more complete crown colony despotism, both of which Professor Burn would doubtless deplore as strongly as any other "reformer."

Theology versus Economics

Marx Against Keynes. By John Eaton. Lawrence and Wishart. 142 pages. 7s. 6d.

It must be pleasantly simple to be a Marxist economist. One does not have to square the conclusion of any argument with historical or current facts; one does not have to consider logical sequences on their merits; worsted in any controversy, one can always, like an unsuccessfully belligerent street urchin, achieve an oral victory satisfactory to oneself by shouting "My big brother can lick your big brother!" Mr Eaton's critique of Keynesian theory and of the social-democratic policies which have drawn (with whatever measure of justification) intellectual sustenance from Keynes, follows a fairly recognisable pattern throughout. A sentence or paragraph from the General Theory (or from any earlier work suiting the purpose) is quoted, discussed, and analysed. From the analysis there emerges an implication conflicting with one of the major premises of Marxism—such as, for instance, the implication that real wages may rise under capitalism. That does it; Keynes is *ipso facto* demonstrated to be talking nonsense, or, rather, he is caught at his diabolical game of monopoly-capitalist apologetics. Marx or Lenin (never mentioned without verbal genuflections) said something with which the criticised statement can be shown to conflict; and there is an end of the matter.

This theological appeal to authority makes an entertaining parlour game for those with nothing better to do, and Mr Eaton plays it quite nicely. As a contribution to the establishment of objective truth it ranks about where it did when Galileo's opponents invoked Aristotle.

AMERICAN SURVEY

The Americas Compromise

Washington, D.C.

THE Organisation of American States, which includes every independent country in the Western Hemisphere except Canada, is geographically more compact and politically more haphazard than the British Commonwealth. But its successes, which have been surprising, have been achieved, as have those of the Commonwealth, by stressing those areas where agreement is possible and carefully looking the other way when indelicate subjects are mentioned. It is always interesting to watch the United States, so fervent a champion of rigid moral principles in other international gatherings, carefully picking its way among the dubious characters who appear at Pan-American meetings and emerging triumphant at the end with compromises of the kind which are traditionally supposed to delight only cynical European diplomats.

The meeting which has just finished was no exception to the rule; indeed, the areas of agreement, as disclosed by the resolutions adopted, were larger than had been expected. When the Foreign Ministers started to gather in Washington, over the few days before March 26th, there were justifiable apprehensions. None knew what to expect from the new Guatemalan Minister of Foreign Affairs; all thought they knew only too well what to expect from the Argentine; and there were other visitors who might have caused trouble. The affair of *La Prensa* hung over the meeting and the truculence of Señor Paz on the matter at his Press conference got him off to a bad start.

That the meeting had a rousing finish was, in great part, thanks to the hard work of Mr Edward Miller, the Assistant Secretary of State for Inter-American Affairs, both before the conference on his trip round South America, and during it. Another reason for all the unanimity was, as Mr Ferdinand Kuhn pointed out in the *Washington Post*, that the actions of this conference do not have the force of law and that they consist almost entirely of recommendations which may or may not be followed by the governments whose representatives so enthusiastically joined in making them.

There were three main subjects on the agenda and all three of them contained potentially explosive material, as was seen when the draft resolutions started to pour in. The first covered political and military co-operation for the defence of the continent,

and to prevent and repel aggression, in accordance with inter-American agreements and with the Charter of the United Nations and the resolutions of that organisation.

This was, in essence, a double hint from the United States—that it would like a little more help than it had between 1942 and 1945 in defending South America, should war come again, and that it would appreciate the presence of some troops from the other Americas in Korea. (Colombia and Cuba are preparing some, but none have yet reached the Far East). In the end the meeting recommended that each of the Republics should examine its resources and see what it could do to contribute to the defence of the continent and to the security efforts of the United Nations and should then, without prejudice to its national self-defence, set about training and maintaining troops for these purposes.

The Foreign Ministers also resolved

to charge the Inter-American Defence Board with preparing, as vigorously as possible, and keeping up to date, in close liaison with the governments through their respective delegations, the military planning of the common defence.

The Rio Treaty, which began by serving as the pattern for the North Atlantic Treaty, and was then surpassed by it in scope, is itself being broadened on the same lines as the later model. It is intended that each government should maintain continuous representation on the staff of the Inter-American Defence

Board, and the signs are that this will be done—if only to avoid all planning being left to the United States alone.

Since both Argentina and Guatemala had made it quite clear that they would not send their troops outside their own borders, their eventual affirmative votes can only mean that they believe other countries should do what they themselves are unwilling to undertake. But, as Señor Paz remarked apparently in this connection, "Argentina believes that America is something more than a geographical continent; it is a body of principles." His affirmative vote can be taken as an expression of thanks for the tact displayed by the other members in failing to mention *La Prensa*, except very obliquely in a recommendation that newsprint should not be rationed in a way affecting the freedom of the press.

The second main heading of the agenda referred to the strengthening of the internal security of the American Republics. It reflected the anxiety of the United States over

And So It Goes On

Further Thoughts on present Mismanagement

BY

ROY HARROD

Author of *The Life of John Maynard Keynes*

This volume is a sequel to *Are These Hardships Necessary?* in which Mr. Harrod attacked the Government's postwar economic policy. Subsequent events have served to confirm his figures, and the soundness of his approach. Mr. Harrod now carries the matter forward, brings into relief recent mistakes of policy and points the moral as to what should be done now.

Paper covers 6/-

36 Soho Square, London, W1

the laxity of some of its good neighbours' supervision of the movements, across borders, of Communist agents. Again, there was a universal resolve to recommend a number of technical studies, including one

concerning measures to prevent the abuse of freedom of transit, within the Hemisphere, including clandestine travel and the misuse of travel documents, aimed at weakening the defence of the Americas.

The preamble made frequent reference to "the subversive activities of international Communism" but many of the Foreign Ministers were more interested in the activities of enemies nearer home and it may well be the Apristas, the Dominican opponents of President Trujillo or men like Dr Gainza Paz of *La Prensa* whose "clandestine travel" is most effectively curtailed.

*

But it was the third item on the agenda—emergency economic co-operation—which brought the most headaches, the largest number of draft resolutions and, in the end, probably the greatest measure of relief to Mr Miller. There were few among the visitors to Washington who did not arrive with the firm intention of making the United States—and, by extension, the other Atlantic Treaty nations who are in need of raw materials—pay dearly and immediately for what they wanted. The United States, by its policies in the postwar period, had laid itself open to the complaint that the dollars which primary producers had been forced to stockpile during the war had lost much of their value by the time they could be spent. Its only answer to those who demanded capital for development projects, which could only be related vaguely, if at all, to the present emergency, was that, regardless of their value, the dollars had been spent in a most intemperate way.

Brazil was the chief spokesman of those who wanted to drive a hard bargain—as its Foreign Minister answered Mr Truman's opening speech he had the chance of firing the first gun—but it was joined by every other country when Mr Charles Wilson spent an unhappy morning trying to explain that even the economy of the United States had its limitations. Again, there was a compromise which, if its spirit is observed, can be considered generally satisfactory to the North Atlantic powers. There was a declaration that

the economic development of under-developed countries should be considered as an essential factor in the total concept of Hemisphere defence

and a resolution that

during the present emergency period, preference among economic development projects should be given in the following order: projects useful for defence purposes and projects designed to satisfy the basic requirement of the civilian economy; projects already begun, the interruption of which would entail serious losses of materials, money and effort; and other projects for economic development.

The United States did not escape, however, without a resolution that

there should be taken into account the desirability of establishing in international commerce an equitable relationship between the prices of raw materials, foodstuffs, strategic materials and the price of manufactured products.

There is also a wistful reference to the desirability of

"AMERICAN SURVEY" is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

continuing price controls as long as the threat of serious inflation persists. This is all laudable, but it is doubtful how much weight it will have with a Congress which likes to remove controls at politically opportune rather than economically desirable moments, which seldom wants to reduce the price of American manufactured products, which artfully supports the price of American farm products, and which screams shrilly when the cost of imported raw materials goes up.

Nevertheless this Fourth Meeting of Consultation of Ministers of Foreign Affairs of American States has done nothing but good, however limited the good may eventually turn out to be. There is, among the visitors, a greater understanding of the problems of the United States; the State Department is aware of the depth of the bitterness about the aftermath of the war; and everybody knows a little better what is expected of him. No more could have been expected; less could have been attained.

American Notes

MacArthur Goes Too Far

President Truman, with the courage which he always shows in a crisis, but which had not been expected on this occasion, has at last taken General MacArthur by the horns and thrown him out of the Far East. The General has been relieved of all his commands, since he has proved himself unable to support wholeheartedly the policies of his own government and of the United Nations. He is succeeded by Lieutenant-General Matthew Ridgway, at present commander in Korea, who is likely to be much more amenable to direction from Washington than General MacArthur ever was. The latter's third, and last, act of insubordination was his letter to Representative Martin, the leader of the Republican opposition in the House, implying that the Nationalist troops in Formosa should be used to start a second front on the Chinese mainland, and openly saying that in the war against Communism the Far East should be put before Europe. General MacArthur thus allied himself in public, as he had long done in private, with Mr Truman's political enemies and the President was forced to realise that he could no longer sidestep the General.

But by turning General MacArthur out of his military and diplomatic pastures, Mr Truman has left him free to roam in the political china shop, and the Republicans are already shaking the shelves in preparation for his return. The damage the General can do is considerable and the President will certainly have even more difficulty than usual in getting Congress to give him the backing he needs for his foreign programmes. But there is no reason to suppose that out of the General's defeat will come victory for his policy of attacking Communism in the Far East and leaving Europe to look after itself.

The fundamental issue raised by General MacArthur's insubordination is that of civilian authority over military commanders. President Truman, in asserting the constitutional obligation of generals in the field to be bound by decisions made by civilians in Washington, will have on his side the great majority of Americans, including many who sympathise personally with General MacArthur. The only excuse for the General was that it was difficult for him to avoid filling the vacuum which the Administration had left in its Far Eastern policy. It is to be hoped that Mr Truman will now fill it himself. Much of the recent uncertainty, in domestic as well as foreign affairs, has been because the President was not supplying the leadership which only he can give and which, if his vigorous and dignified handling of the MacArthur affair is a reliable guide, he is once more ready to provide.

Deferring the Bright Boys

Few Americans would quarrel with the view that the United States, being no match in numbers for the Iron Curtain countries, must make the best possible use of its available scientific and technical talent. But there are deep misgivings about the Administration's plans for deferring college students, announced while the House had yet to vote on the Bill providing for virtually universal military service. This scheme, drawn up by a committee of educators, would defer the "bright boys": those scoring more than 70 out of a possible 100 on an aptitude test, to be given in May and June, and those standing in the upper half of their class in the first year, upper two-thirds in their second, and upper three-quarters in their third. In addition, all medical, veterinary and dental students, as well as graduate students in good standing, would be able to put off their military service until they had finished their training.

These standards could be raised or lowered to meet the needs of the services, and the scheme would prevent universal service from sharpening the present shortages of engineers, doctors, and scientists. The colleges would remain solvent; while students who, not knowing when they might be conscripted, have lost interest in their studies this winter would return to them with redoubled vigour. The services would profit in later years by having more highly trained men available; today both camps and the equipment are short.

No doubt this is an extremely crude and wasteful way of deferring those whose best service will be given outside the armed forces or in some specialised work inside them. Ability to pass tests is not an infallible mark even of intellectual ability and disregards many other factors; moreover, the standards of colleges and the level of their student bodies vary tremendously. No one, however, has suggested a better way.

It is not on this score that the scheme has been most forcefully assailed, and that by two eminent educators, President Conant of Harvard and President Dodds of Yale. What offends them and many other Americans is the creation of an undemocratic "aristocracy of brains" which would not only cause resentment among those excluded, but would also encourage the gifted—and comfortably off—to believe they were entitled to special privileges. Even in the United States, where so much higher education is free, most families cannot afford to support their sons for four years at college. Many feel that such special consideration would harm those it was meant to benefit by cutting them off from the general experience of their generation. The Administration will have to make it very clear that by deferment it does not mean exemption, if it does not wish to undermine the principle of universal service before it is adopted.

* * *

Trouble with Truth

The Voice of America, which last year, at the height of the Korean crisis, was treated so generously by Congress, is in disfavour again. The House Appropriations Committee, swinging its economy axe in all directions, has lopped \$87 million from a State Department request for funds to build 13 new transmitters and relay stations. These are needed if the Voice is to be picked up on primitive sets behind the Iron Curtain and is not to be drowned by jamming. One, at least, is already being installed on a fast ocean freighter, which can be moved around at need and cannot be overrun as some stations in Korea have been. Last year the construction programme was warmly approved by Congress and the first instalment of money provided; the rest was to be spread over the next two years.

The committee refused to be hurried by the President's plea that the international tension demanded a quicker pace; while reiterating its belief that the Voice of America, properly run, was the best instrument for advancing the cause of truth,

it complained of avoidable delays, inefficiency and vagueness in administration and plans. This gesture of economy made, the Voice may fare better in the regular appropriations Bill. But many who are convinced the United States should spend more, rather than less, on the battle of ideas, also are disappointed with what the Voice has to say and how it says it. Some feel its programmes are not imaginative enough in grasping what will interest those who listen at great personal risk. Others, such as Senator Benton, who helped to originate the information programme, feel the Voice of America can never be really effective and efficient until it is freed from the heavy official hand of the State Department. It lacks the freedom and flexibility enjoyed, for example, by Radio Free Europe. This is an enterprise of the Crusade for Freedom, financed by private contributions, which has a transmitter in Berlin and is building another in Munich. Better salaries than a government department can pay are a great need, if first-rate talent is to be attracted from the highly paid communications industry.

It is the contention of the State Department that it would be fatal to have the United States speak with two voices abroad. In fact, however, this is already happening in the field of political warfare as the Department of Defence and the Central Intelligence Agency begin once more to add their voices to those of the State Department. There are reports that Mr Truman may soon create a new Psychological Strategy Board to see that the representatives of all three sing the same tune as the cold war is intensified.

tion Policy. Labour was only induced to come back to the conference table, after its seven weeks' boycott of defence planning, by two promises: that the board would advise the President directly, not through its chairman, Mr Wilson, and that its advice would be taken. If these promises are kept, the labour leaders think they will be able to go over the head of Mr Wilson, in their opinion an ogre who is denying them their fair share in the defence programme, and settle their difficulties directly with the President.

Settlements of two of these difficulties are already in sight. With the departure of General Clay from the Office of Defence Mobilisation, labour can have one of its leaders appointed as Mr Wilson's deputy for the asking. And a compromise on the argument over manpower policy has also been found; a new manpower committee will probably be appointed, with the chairmanship shared between Dr Flemming of ODM and Dr Graham of the Department of Labour. But the ULPC, which left the mobilisation programme like a lion, has no intention of coming back like a lamb. It insists on being tempted with solutions for all its difficulties tied up together in one big package, and so far no solution has been found for the wreck of the Wage Stabilisation Board. Mr Eric Johnston has been making continuous efforts to launch it anew, but every time it runs aground on the refusal of the management representatives to allow it to handle labour disputes over matters other than wages. The Board is now badly needed to decide on a number of wage increases, which are due under cost of living clauses, but have been held up under the stabilisation formula.

Even if the Board does set sail again, it will be in danger of sinking unless Congress can be induced to pour oil on the inflationary waters by giving the Administration sufficient powers to keep the cost of living down effectively. Labour will expect its package to be wrapped up in a guarantee that the Administration will put all its energies into the task of persuading Congress to do this.

* * *

Television for All—Sometime

The Federal Communications Commission's Easter egg for the television industry was the announcement of its long delayed scheme for opening up the ultra high frequency reaches of the air for broadcasting. This would make room for some 70 new television channels, in addition to the 12 already being used in the very high frequency range. Altogether there will eventually be space for about 2,000 television stations in over 1,200 communities; at present only 107 stations are in operation in 65 cities. But it will be next Easter, or the Easter after, before viewers in even a few of these communities will be able to enjoy whatever attraction has by then taken the place of the Congressional crime investigation as the most popular television show ever offered, and before the manufacturers of television receivers, whose present markets are approaching saturation with 12 million sets in use, will be able to exploit their new opportunities.

Hearings on the FCC's scheme open in May; after it is approved and permits to operate the new stations have been granted, the licensees will still have to build their transmitters—at a time when the electronics industry will probably be fully occupied with defence work. By then, even the makers of television receivers will be finding it difficult to get the materials they need and the sets which are already in stock will need conversion before they can receive programmes in the ultra high frequency channels. Viewers will also need what are called "more critical" antennae, which suggests that the cat's cradles of wire which at present disfigure American roofs will develop into crows' nests.

The most interesting part of the FCC's proposal is that 10 per cent, about 200, of the new UHF channels should be reserved for educational televisers, universities, school boards, city governments, religious bodies and so forth. While there are a number of broadcasting stations operated

by such organisations, on the whole they missed the radio bus and they are determined not to be left behind again. Even if they succeed in getting places on the television coach, they will have difficulty in keeping them unless they exploit their opportunities quickly. The great difficulty of educational broadcasters, whose programmes as a rule have no commercial appeal, has always been finance, and this is a worse problem when it comes to the much more expensive television operation. There are a number of possible solutions, of which the most fancied is that the rich charitable foundations might be interested in developing educational television stations. One of them, the Sloan Foundation, is already financing a series of adult education programmes in co-operation with a television network.

* * *

Houses for Defence

Housing as a whole must tighten its belt this year, but there is one exception: new homes, streets, schools, sewers and playgrounds must be provided in new defence areas if they are to attract the workers they need. This is particularly true of atomic installations in remote areas, where already the government has begun to relax the credit curbs now beginning to squeeze the private builder elsewhere. One would expect that any other incentives or encouragement offered by the government to private industry to build these houses would be gratefully received. It is true that the number of new houses put in hand in January was 10 per cent above that a year ago, but builders will soon be running out of loan commitments exempt from the new credit restrictions.

In fact, however, the opposition of the private builder has been so great that the House refused, on the grounds that it was "socialistic," even to consider the Defence Housing Bill. It was sent back to committee and will not reappear unless the Senate takes favourable action. Even in the Senate, a much reduced measure seems likely to pass only because failure to act might precipitate an emergency which would justify the government in embarking on a large housing programme.

This "socialistic" Bill originally provided for \$3 billion in authority to insure private mortgages; this has been cut in half by the Senate Banking and Currency Committee and will be confined strictly to houses in defence areas. In addition, \$60 million is provided for community facilities and purchase of land to prevent speculation (there has been one instance of this already), and \$50 million for direct federal building of homes, if, and only if, private builders and local communities cannot be persuaded to do the job. What the housing lobby was seeking was to remove this provision, and to exact special premiums for mortgages on defence houses which fall in within three years, and special tax privileges. In this fight, the Administration has suffered from the defection of an old ally: the Congress of Industrial Organisations, on its new high horse, has refused to compromise its principles and support a Bill which it believes is inadequate and will lead to rents higher than workers can pay. But even half a house may be better than no roof. The housing authorities are planning to ask Congress for a greatly tightened rent control act, which for the first time would control rents of new housing, and would again bring under control states and cities which have been permitted to choose freedom, or to pass their own laws. Without strong support from the unions, its chances will not be good.

Shorter Note

The Senate Crime Investigating Committee has been allowed an extra thirty days, until the end of this month, to prepare its report. The Senate has also cited twelve witnesses, who refused to testify, for contempt of Congress. These include such stars as Mr Costello, Mr Adonis, and Mr Guzik, and also two whose alleged contempt consisted solely of refusing to speak in front of the television cameras.

The docks at Fisons new fertilizer factory at Immingham on the Lincolnshire coast where every year ocean-going ships will discharge 120,000 tons of phosphate rock. Immingham is the first triple superphosphate plant in Britain.

IMMINGHAM . . .

On April 27th Fisons new fertilizer factory at Immingham will be officially opened by Mr. Harold Wilson, President of the Board of Trade. Immingham is Fisons 23rd factory in Britain, built in counterpoise to the Government's Plan for Agriculture, and soon, by another 200,000 tons, to swell Fisons output to nearly 2,000,000 tons of fertilizers for Britain's harvest every year.

THE WORLD OVERSEAS

Baghdad and The Oil Talks

(From Our Special Correspondent in Iraq)

THE Iraqi Government and the Iraq Petroleum Company have started new negotiations about the revenue per ton that Iraq will in future derive from its oil. This important news reflects credit on several parties—on the present Iraqi Government for taking the sober line of negotiation and compromise, and on the oil company for responding to Iraqi feelings very much more rapidly than has been its wont in the past. But it also reflects great credit on a third group—the moderates among the Iraqi opposition. The extremist section of the opposition had tabled a motion for “nationalisation of oil” in a mood copied from Persia’s. The word “nationalisation” is catchy; it goes with “nationalism” and other well-grasped conceptions. Nothing would have been easier than to shout it, to goad the easily-roused Iraqi crowd, and to use it to upset Nuri Pasha’s Government with that wave of emotion against the pasha clique that is never far below Baghdad’s surface. But the moderate opposition refrained. Showing a considerable sense of public responsibility, it has so far held its hand. The decision of leaders such as Saleh Jabr not at once to exploit the oil question may prove as important to the development of their country as to the fate of the oil industry in the whole Persian Gulf area.

The grievances of Iraqis against their oil company differ somewhat from the Persians’ outcry. Both quarrel with their rate of revenue and with their lack of partnership in the company’s management. But where the Persians also resent the discrepancy between the profits accruing to them and the profits accruing to the British exchequer and shareholder, the Iraqi’s third grievance is different largely because their company has not made great profits yet. Their major complaint is at the rate of oil production. Iraq contains three known oilfields, all of them operated, under British management, by the same international group. The northernmost, at Mosul, has proved insignificant by modern standards. That at Kirkuk is immense but remote from markets, and its output is dictated by pipeline capacity. It exported 6,000,000 tons in 1950 and could have exported double but for the Iraqi’s political objection to using the pipes to Haifa in Israel. It will, thanks to a new and large diameter pipe, export at the rate of 18½ million tons from a date in 1952 and at over 20 million from some time in 1953.

The three concessions are not identical; those at Mosul and Basra afford the Iraqi state 20 per cent of output as free oil. The Iraqi’s chief grievance is, therefore, that the company is “not hurrying over Basra.” They ask why a wartime

moratorium on exploration was declared there, while work in Saudi Arabia went ahead; and why King Ibn Saud was first on the list for a big diameter pipe for the thousand-odd miles to the Mediterranean while they, with a mere 600 miles to go came second; and why the Anglo-American combine in the tiny sheikdom of Koweit has produced so much faster than the related group at Basra.

Some of their arguments are unsound, but to some there is no answer. The reason why work went faster in Saudi Arabia than at Basra is that the former was an older concession and a field of dimensions was already certain when the war curtailed manpower and prospecting. The harried Allies went for the field they knew. The Iraqi argument that production must be speeded because more money is wanted quickly is greatly weakened by the fact that the company has lost heavily over the Iraqi refusal to use the

pipes to Haifa. It is also weakened by the fact that just round the corner, thanks to Kirkuk, is more money than Iraq can spend at once without causing the gravest inflation. The bill for five-year development just tabled in Parliament proposes the spending of 57 million Iraqi dinars (the dinar is equivalent to the £ sterling) out of the I.D.91 million that will in that time accrue from oil alone. Iraqis will not listen to the economic argument that, as they do not need the cash, there is from their point of view no hurry about Basra. Who knows, they say, that the oil boom will last? Like all who have lived in the world of Asiatic insecurity, they

want the exploitation and the profit now. They also want, and here their argument is unanswerable, most-favoured nation treatment—that is, the same rate of profit as under the agreement of December last, the Americans now pay in Saudi Arabia.

Much hangs upon the Iraq Petroleum Company’s approach to the negotiations. Like all the oil companies in the area, it is technically the height of efficiency. It is also a good employer, paying well by Iraqi standards, offering excellent rewards to steady employees, looking after their welfare, encouraging savings. But, much like its blood-relation, the Anglo-Iranian Oil Company, it has kept its nose so close to the drill and the pump that it has paid far too little heed to local psychology and susceptibilities. Its head office is not even in Iraq. It has been slow and obtuse about public relations. It has tended to settle grievances through the local authorities rather than by means of a chat in the coffee shop, and to haggle over trifles. Even in this critical year,

it is ready to take the Iraq Government to account over whether the gold mentioned in its concession terms is due at the official or at the unofficial rate. Within the last eighteen months it has made some praiseworthy efforts to make up for lost time; it has begun to organise the higher technical education of Iraqis and to improve publicity for the very considerable indirect benefits that it brings to the country's social life. But it has still to get over a certain squeamishness about public relations in the widest sense. For its security's sake, it must devote more time to this, even if efficiency is lost, because there is therefore less time for the far simpler job of extracting oil.

One extraneous and little known factor in the situation is the recent arrival in Iraq of representatives of an independent American oil group. This is making glittering offers for production at Basra if the Iraqis will break with their present concessionaire. On the evidence, presumably, of the tough Texan drillers at work at Zubair—the IPC geologists say they cannot as yet be sure—they offer highly attractive prospects of 20 million tons of oil per annum, and that quickly. Their credentials include impeccable bank references and the presence, as their legal adviser, of the respected figure of ex-Senator Tydings. About some of their other representations the Iraqis are not so sure; but they are to be seen hobnobbing in corners with sheiks and opposition deputies. Maybe the British devil the Iraqis know will be judged better than the American devil they do not. But the incident constitutes a useful stick to wave at the IPC negotiators.

The points now to be weighed, therefore, are whether or no all the companies in the Middle East area—most of which are interrelated—must pay an equivalent rate per ton to each local government. Clearly this is in their interest; life will not be quiet till they do so. Also is it not now necessary, in the interests of the companies' public relations, to put up with a little less western efficiency—a debit item—in order to be able to enter a credit for a greater share of local participation in management? And, lastly, it is the West's business what the eastern governments do with their profits? Should the latter be checked from spending these on luxuries, as the Saudi royal house is doing, or should they be encouraged to devote them to technical and social progress by some form of earmarking, or of aid in kind? All these are burning questions in the Middle East today. Iraq is undoubtedly the best country in which to approach them reasonably. It is suitable partly because it has immense potentialities for development—rivers, money, a potentially fertile desert, a realisation that where it lacks technicians, foreigners had best—for the moment—be hired to do the job. But it is also suitable because the Iraqis appear more capable of sober judgment than are any other of the oil-owning peoples in the area. They have proved their restraint by agreeing to negotiate. If they achieve, around the table, terms that they think fair by prevailing standards, they will

have done well not only for themselves but for the free world. If the Iraq Petroleum company moves fast enough, the force of an Iraqi example might even instil some calm into the over-excited Persians next door.

Signor de Gasperi Surmounts Another Crisis

[FROM OUR ROME CORRESPONDENT]

THE Italian Government has avoided an April crisis by a novel kind of reshuffle in the Cabinet? Three Social Democratic Ministers reluctantly left their posts in conformity with the decision of their party (PSLI) Congress to join ranks with the quasi-oppositional PSU. Their jobs have now been parcelled out among Ministers who had hitherto been without portfolios. This leaves constitutional sticklers debating whether the present is still the sixth or has now become the seventh de Gasperi Government. If a quick journey this week by President Einaudi to Naples, ostensibly to open a sanatorium, was really undertaken for the sake of a colloquy which he held with the elder statesman and liberal oracle, the great philosopher Benedetto Croce, then the President himself must have been feeling doubts; and there had in fact already been rumours that he was in disagreement with the Government on the quite independent question of his right to nominate one in three of the judges in the new constitutional court. It is suggested that he regards this power of nomination as inherent in his own office, while the Government, or the Premier, understands that advice is to be tendered by itself. These rumours, in any case, show that Liberal and independent political circles are now watching Signor de Gasperi's constitutional behaviour with marked interest.

The shelving of the Government crisis has produced reactions inside the Christian Democrat party showing that here, too, the critics are on the alert. The party committee in the lower chamber this week invited Signor de Gasperi to refrain from officially nominating the former Ministers without portfolio to the vacant ministerial posts, and instead simply to entrust them provisionally with the jobs. That would have necessitated a "proper" Government crisis as soon as the municipal elections are out of the way, but the suggestion was rejected.

The resort to a mere internal reshuffle is officially justified by the manner in which the PSLI-PSU fusion, due to come into operation on May 1st, was this week decided upon. Hitherto it had seemed that the PSLI, if it wanted fusion, would have to slide on to the official platform of the PSU, which has been defined as that of "constitutional opposition." In fact, the PSU has only tardily and dubiously accepted the Atlantic Pact and its deputies recently voted

against the extraordinary armament credits for the next two years. Now the PSU in the person of Senator Romita has pledged itself to swallow the Atlantic policy without reserves, and the PSLI can claim that it has, while drawing its men out of the Government, brought the Government a fresh handful of supporters for the most essential and contentious of its planks of policy. In reality both the fusing parties are sundered internally. It was by a very narrow majority that the PSLI agreed to leave the Government, and by a still narrower majority that the PSU put Romita in a position to make concessions. The PSLI congress had to listen to many earnest warnings from its right wing about the perils of "maximalism," a term harking back to the unhappy Socialist history of thirty years ago. Maximalism then denoted the middling brand of Socialism which attempted to be full-bloodedly revolutionary and to maintain an atmosphere of high-minded turbulence without tying itself down to the dogmatism of the Comintern. A similar striving is detected in the left or Silone wing of the PSU, and more particularly in the movement of the ex-Communist deputies Cucchi and Magnani, and the ex-Nennian Matteotti, whom Silone hopes to bring one day into the PSULI—the new combined party—with the blessings of Comisco and the little Foreign Office of Transport House.

Meanwhile the municipal elections which have been round the corner for some years, and in the case of a Government crisis would have been yet again deferred, are due to be held for most of North Italy in June and for other regions later in the summer. They will afford the first test of public opinion since 1948, since the Italian system provides for no parliamentary by-elections. In reality the lessons will be very difficult to draw. Previous municipal elections, since the war, staggered over the years 1946-48, were held on the basis of antiquated laws and scrap voters' lists. Very roughly they put a third of Italy's 8,000 communes in pro-Communist hands, but the shadings are manifold. Under the new law voting will be by two different systems, the first for the 700 odd communes having over 10,000 inhabitants, the second for all smaller communes. Both systems attribute an absolute majority of the council seats to the list winning the top place, namely two-thirds in the larger and four-fifths of the seats in the smaller communes, the rest being distributed proportionally among the less successful lists. But, in the larger communes only, there is a faculty of combining two or more lists so as to win the top place for a coalition. This shape was given to the new municipal electoral law largely to satisfy the PSLI whose leaders had laid the basis of electoral coalitions with the Christian Democrats. But following the Socialist fusion it has now been decided to leave the combinations to local initiative. A searching test for the new PSULI will lie in its ability to achieve a fair measure of coherency in its electoral compacts: in some places, at all events, the PSU element will bring it into association with the Communists. The municipal results, if they show or can be represented as showing a big decline in Christian Democrat voting power, will certainly be followed by a fresh Communist clamour for the Government's resignation.

Pressure Against Land Reform

But the Government's future depends much more directly on the position inside the Christian Democrat Party itself. On his seventieth birthday last week the Premier listened to warm tributes even from such a persistent critic as the President of the Chamber, Gronchi. There is no questioning of the adroitness of the political management which gives the country a formal political continuity in such difficult times, but there is a good deal of concern lest under the veil of this order intolerable tensions should be maturing. The agrarian reform problem is one upon which it has become exceedingly difficult for the Government to speak with any clearness. The main land reform law, limiting the permitted

size (or, strictly speaking, financial value) of land holdings throughout the country has yet to be presented to Parliament; but meanwhile a large and perhaps unmanageable body of parliamentarians with some strong expert backing are claiming that the "sample law" or advance measure relating to selected areas is being applied in a way which violates understandings and pledges made to secure its passage through Parliament, and on technical and economic grounds demand an abatement of this radicalism.

The Italian situation is, in fact, richly paradoxical, with plans for reactivating the industries useful for rearmament tumbling over uncompleted efforts to redirect the old war enterprises to peace purposes; while the great aim of leveling up the backward south is freshly compromised by the need to concentrate a rapid rearmament effort in the northern regions where industry is most advanced. The military effort required of Italy is not really on a scale to rule out simultaneous civil progress. But the true possibilities in the new situation have not been convincingly presented within their real limits. Much room is left both for catastrophic and interested campaigns to abandon social purposes for the sake of military strength, and for denunciations of the military effort as marking a necessary defeat for all social aims. The Government crisis which—though deferred—is still on the list of expected events, will give the politically expert de Gasperi a new chance for getting the public opinion behind him, including those sectors which look hopefully to PSULI, on to firmer ground.

German Generals as they See Themselves—I

[BY A CORRESPONDENT]

EXCEPT for the interval of the Weimar Republic—and even then the tradition of the army was retained—the German state has for so many decades rested upon the power of a military caste that its disappearance after 1945 left a peculiarly wide gap in the social structure. The officer corps, chiefly Prussian and Protestant in the highest ranks, was bereft of the landed estates in Eastern Germany which formed its material basis, and was dispersed throughout the predominantly Catholic West. Prussia was officially abolished by the victor Powers. Not only was the army gone more completely than in 1918, but in more shameful circumstances. Unconditional surrender and the war crimes trials were hard enough to bear; but the ex-officers have also been embittered by the attitude of indifference to their fate which the German public, engrossed in its struggle for individual existence, showed during the first postwar years.

The German officer corps is still largely without property or power in what is today predominantly a business man's state. But the proposal to re-form a German army, made last September by the United States, has brought it new self-confidence. On the one hand the former generals feel bound to try to explain the attitude of the officers towards the Fuehrer and justify themselves in the eyes of the nation. On the other hand they are increasingly determined that the victors and the nation shall make amends for the past treatment which has so embittered them, before they will agree to take part in Western defence.

Among a number of books written with these ends in view, three are of particular interest. These books, by Adolf Heusinger, Hans Speidel and Heinz Guderian* show us the kind of German officers the West will have to reckon with. Heusinger and Speidel are the advisers to the Federal Government who are negotiating with Allied military experts

about the contribution of Western Germany to the Atlantic Pact forces. Guderian, creator of the German *Panzerwaffe*, during the war colonel-general commanding a tank army, inspector-general of the armoured formations and finally chief of the General Staff of the Army, can perhaps be taken as the typical professional officer. It is reasonable to search in their memories and views of Hitler's war for clues to their present outlook and principles.

Hans Speidel groups the military leaders of Germany in three categories: the *Nur-Soldaten* (soldiers only) men of blind obedience and good faith, who put their position and comfort above political considerations; the Party soldiers, men of ambition following their personal advantage; and, lastly, the "thinking soldiers" with the ethos of patriotism. Speidel and Heusinger belong to the last and smallest category; Guderian and a fair majority of officers and men to the first. The second category—very numerous at the time when Hitler's star was rising but thinning out during the later years of the war—is today publicly represented only by Nazis like Remer and some of the more active members of the organisation of officers known as the *Bruderschaft*. Outsiders as they now are, these men would get their chance only if the present German regime were to fail completely, and if the western Allies were to tolerate the development in Germany of conditions similar to those of 1923. At the moment they are without political weight, though their confused and dangerous dreams are shared by a wide public which likes their touching stories (such as "Comrade Remember") in the illustrated weeklies.

"Thinking Soldiers"

In the near future it is the minority of "thinking soldiers" who will probably guide German defence policy, but not without giving full consideration to the views of the large majority of *Nur-Soldaten*. The German General Staff, which consisted primarily of members of the army staff, produced a higher proportion of "thinking soldiers" than any other military body. It alone had the opportunity to weigh the practical possibilities of realising Hitler's vast and vacillating plans. Naturally its members now try to show that they really saw the Fuehrer's irresponsibilities. According to their memoirs, the best brains in the General Staff saw that blind allegiance would soon demand that they make the impossible possible. What men like Guderian, to explain their obedience, call "fate" and the "tragedy of the German soldier," appeared to the thinking soldier as the foreseeable consequences of the over-ambitious military schemes and political dreams of a madman. Fritsch and Beck grasped the situation in 1938. The dilemma of these men before and during the war is the theme of Heusinger's book.

The contradiction between an officer's conscience and his military oath in the changing circumstances from 1923 to 1945 are shown in reports of conversations. Adolf Heusinger, a former lieutenant-general, was in the General Staff from 1937 and Chief of Operations in the High Command of the Army (OKH) until July 20, 1944. He was a witness of the OKH's most important decisions, had constantly to reconcile the contradictions between Hitler's orders and the necessities of the front for the chiefs of staff of the armies in the east. Like the men in real life, he draws no conclusion from the conflict in the minds of his characters. His own person recedes into the background though his views are well enough known through his participation in the plot of July 20th. Unemotional and cautious in all his utterances, he eluded the inquisition that followed the plot. He records how, in a last conversation with Hitler at the end of September, 1944, he defended his comrades against the wild accusations of the Fuehrer, who demanded from generals the same immediate, blind obedience as from the common soldier. Heusinger rejoined:

That will not always be easy. The majority of generals have had a thorough military education, they are used to consultation and co-operation and they feel deeply their

responsibility for the troops under their command. To forbid them to think, to make them into uncritical tools and to force them to act against their own conscience can hardly succeed.

Heusinger, the thinking soldier, speaks for those few German officers who openly revolted against the dictator. He argues against the new *Dolchstoßlegende*: "The armed forces did not succumb to a stab in the back but to the enemy's superiority, which was brought to bear upon them by a demoniac." But he excuses those who failed to act before it was too late. He shows that most officers chose to remain loyal to their oath and tried, by giving expert advice, to avert disaster. They failed because Hitler positively distrusted the General Staff.

The main cause of the German tragedy is, one would conclude from Heusinger's conversations, that the "thinking soldiers" did not act immediately after General Schleicher's assassination in 1934 or at the time of the 1938 crisis, when Fritsch and Beck fell into disgrace. After Hitler's initial successes during the war, the use of force against him would have meant civil war. When nevertheless some tried to force his hand, it led only to July 20th. Heusinger makes it clear that while the common soldiers' confidence in Nazi leadership remained unshaken at least some officers of the army staff recognised the impossibility of winning the war. But none had the character to take responsibility for surrender to the west in time. The fact that Heusinger himself chose the path of open revolt does not influence him against those who did not follow the same course. He avoids creating an unbridgeable gulf between himself and his comrades of the *Wehrmacht*. When he negotiates in Bonn, he certainly considers himself entitled to speak for the bulk of the soldiers of the old *Wehrmacht*, "thinking soldiers" and *Nur-Soldaten* alike.

(To be concluded)

After the Auriol Visit

[FROM A CORRESPONDENT IN PARIS]

M. VINCENT AURIOL is a travelling President. Last year in London, this year in Washington and Ottawa, he took on conscientiously and unassumingly the task of speaking for France in friendly countries. Thanks to his personal qualities and to the charm and style of Mme. Auriol, the French have had the pleasure of watching something which seems to them quite novel—a presidential pair who are modern and dynamic.

This American visit seems to have had a more avowedly political importance than the President's visit to Britain. This time M. Auriol was received not by royalty, but by a President who is both head of state and leader of a government, and M. Auriol gave more attention to public affairs than to the protocol. It was significant that his speeches before the American press and before Congress were remarkably more meaty than might have been expected from a President of the Republic without responsibility for government. This fact proves how gravely Frenchmen regard present circumstances and how much value they attach to trust between America and the old world. The French President in effect set out to reassure American opinion about the vitality of France, and about its will to play an active role in the community of free nations. The liberation of 1945 left France so stricken—both in spirit and in economic strength—by two world wars and by the German occupation that its recovery could then reasonably be regarded as doubtful. The French, after all, had been making great sacrifices since 1870. The proof that life is strong in France lies in the fact that, six years after liberation, the work of technicians and of the men and women in factories and fields have achieved the great progress to which the President pointed. Frenchmen often feel that people abroad, especially in the United States, do not adequately understand the obstacles that had to be overcome or the efforts made. Many Americans have made them-

selves a picture of France which is a caricature—sympathetic in some cases, hostile in others—which has been generally superficial. By presenting a truer picture M. Vincent Auriol was doing the job a president should do.

Besides insisting on the vitality of his country, he also defended it against those who say that it hesitates to carry out its obligations in the world. In particular he was anxious to counter the effects of a campaign by the "neutralists," the strength and intentions of which have often been misunderstood abroad. If certain influential Frenchmen want to see French foreign policy more clearly directed towards a constructive end, that does not mean that they are proposing a policy of neutrality, or that the French people as a whole are tempted by neutralism.

It was certainly worth saying this in the United States, where the isolationists have been quick to turn what they claim to be French "neutralism" against France. The great majority of Frenchmen, who are not Communists, will be happy if M. Auriol has helped to get rid of this misunderstanding, even if they are not all agreed on support of the "Atlantic policy."

That is to say, the French believe that M. Auriol and M. Schuman have been working in Washington not only for France and for Franco-American friendship but also for peace. The French people have followed events in the Far East with growing anxiety. The increasingly audacious political pronouncements of General MacArthur have disconcerted some and outraged others. No one, in any case, has been able to understand how a military chief, the commander moreover of international forces, could play so freely and openly a political game, still less one so dangerous. The French are always ready to defend their country for any good reason. But they are not equally resolved to involve it, for the fourth time in eighty years, in the devastation of war, solely at the capricious will of General MacArthur; and if one says that, after all, the obligations of the Atlantic Pact are only valid in Europe that does not provide any reassurance. The French have enough good sense to realise that if war breaks out in the Far East between the United States and the Soviet Union hostilities would not be limited to the Korean front and American aircraft based in Europe would soon be coming out of the hangars.

As long as General MacArthur was the commander of the troops charged with punishing the aggression of June 25, 1950, all non-Communist Frenchmen had an easy conscience. Even if they did not entirely approve of the South Korean regime, they had at any rate no doubt about the guilt of the North Koreans, and they understood very well the significance of Washington policy and the decisions of the United Nations. But since then the Commander-in-Chief of the United Nations has become a different man; his speech to the Chicago ex-servicemen and his recent letter to Mr Martin showed that he had intentions and ambitions completely foreign to those of the United Nations and in particular to those of France. So long as South Korea is preserved the French feel that the chief task is to bring peace to a country which has already suffered too much and to lower the general tension. For all these reasons the French reaction to General MacArthur's dismissal has been one of profound relief.

Uneasy Indonesia

THE resignation of Dr Natsir's cabinet last month has already left Indonesia without a government for several weeks. President Sukarno has called on the parties and leaders a little to the left of the outgoing cabinet to form a new coalition, but it may not be known for some time what the outcome will be. Dr Natsir had been in power for only seven months and his fall had not been generally expected in Jakarta. It is, in fact, to be widely regretted.

Succeeding Dr Hatta, one of the founders of the new Indonesian state and its first Prime Minister, Dr Natsir faced an exceedingly difficult task. At home, he had three leading problems on his hands: the continued lawlessness and guerrilla activity in Java, the economic difficulties which it has accentuated—including the intransigence of the trade unions, 75 per cent Communist-controlled—and the constitutional question of regional autonomy. Abroad, there were—and still are—two outstanding problems. The Natsir government, like any other which may come to power in Jakarta, felt bound to try to steer a middle way between the two great power blocs of the world; it had also to establish a working relationship with The Hague, its partner in the Netherlands-Indonesian Union but its deadly rival for sovereignty over western New Guinea (Irian). In the end, Dr Natsir resigned over an internal dispute about regional elections. But he had already been severely criticised for excessive friendliness with the West and for attempting to be too authoritarian with the labour unions.

Fight Against Disorder

The fact is that, although Indonesia has achieved complete independence, its leaders have not yet been able to establish full control over their own people. This is not their fault. They are on the horns of that dilemma which so often faces men who, having come to power, see the difficulties ahead of them in a different light from that which they formerly shared with their followers. It is now touch and go whether the sense of moderation which prevails among many of those in Jakarta will be able to communicate itself to the rest of the country. The supreme problem in Indonesia is that of internal order; military and police efforts to secure it account for 35 per cent of the outlay in a budget which ran last year to a deficit of 1,800 million rupiah. Although the back of the revolt in South Moluccas appears to have been completely broken, over thirty battalions of the Indonesian army are now fighting both the extremist Moslem rebels of Dar-ul-Islam in western Java and the scattered bands of Communist guerrillas in both Java and Sumatra. Nor is the economic front much better. Although the Korean commodity boom has temporarily brought a gratifying prosperity, inflation has sent the prices of rice and clothing rocketing. The price of rice, for instance, doubled in the month of February alone. The currency circulation, which was cut by the reform of May last year from 4,000 to 2,600 million rupiah, has now risen again to 4,500 million. All this has naturally given a handle to a most maliciously directed strike movement, openly encouraged by the Indonesian Communist Party.

Cautious Foreign Policy

Taking South-East Asia as a whole, Indonesia is the one country where the state of the battle with Communism is probably less promising than it was a year ago. It is true that there is no immediate emergency in Indonesia—as there is in Indo-China, Malaya and Burma—but the trend there is still the wrong way, whereas there are new grounds for hope that a corner has at least been reached in the other countries. Dr Natsir's government pursued a very cautious foreign policy and it is likely that his successor will do the same. The present Indonesian leaders are just as concerned about not becoming too involved with the Communist powers as they are with the West. The Peking Government, for instance, recently asked if it could increase the number of Chinese consuls on the basis of so many consuls to so many thousand Chinese inhabitants. But Jakarta has replied with neat guile—"It all depends what you mean by Chinese." And there the matter may well rest for many months. While encouraging and helping the present parliamentary regime in Jakarta to the best of their ability and as far as the Indonesian leaders themselves will permit it, the western powers must avoid above all trying to force the pace of closer association.

THE BUSINESS WORLD

The Budget

AS a prescription strictly related to the inflationary malady that besets the national economy this year, Mr Gaitskell's first Budget is a workmanlike mixture; and some of its ingredients, notably the changes in the Health Service, the increases in the "reduced rates" of income tax and the refusal to raise the bill for subsidies, make the decision to administer it definitely courageous. It is also, as the Chancellor himself quite justifiably claimed, an honest Budget. It tries to apportion the burden equitably, and it scorns subterfuge. But honesty is no shield against error. Measured against the needs of longer-range policy, this Budget errs grievously, as an earlier article demonstrates. There may also be flaws on a short-range analysis, with which this article is primarily concerned. Even on the Chancellor's own figuring, it is questionable whether the disinflationary prescription will prove strong enough to prevent the threatened acceleration of the spiral tendencies of inflation.

In presentation and reasoning, however, the Budget followed the precepts of disinflationary finance much more closely than any previous Budget has done. At every step, the Chancellor firmly and clearly related the budgetary position, and each proposed change in taxation or in expenditure, to the notional savings-investment account for the national economy as a whole. Hence he specifically rejected the widespread but faulty assumption (which even crept into last year's Budget speech) that any particular significance attaches, in this context, to the "overall" balance of central Government revenue and expenditure. Instead, his budgetary analysis was focused on the surplus or deficit shown by a true current account of Government transactions; this is the "above-line" portion of the Alternative Classification, which excludes all capital items from the conventional account. The Chancellor therefore rightly ignored the "below-line" account; the relevant items in this are reckoned separately as part of the investment that has to be financed from the nation's whole flow of savings—including, of course, the current Budget surplus.

On the conventional basis, the Chancellor was confronted with an even larger deterioration in the "above-line" account than had been generally assumed before the appearance of the Economic Survey. Total ordinary expenditure in 1951-52, including £160 million for supplementaries to bring defence estimates into line with the increased programme announced in January and including £40 million for the first interest payments on the American credits—a provision that has to be made because it cannot be known now whether circumstances will justify a request for waiver—is put at £4,197 million. On the old basis of taxation, Inland Revenue was expected to be buoyant—£150 million more from income tax, £7,000,000 more from surtax and £37 million more from profits tax and EPT. On the other hand, Customs and Excise, despite their buoyancy in 1950-51, were expected to drop by £40 million, three-quarters of this loss being attributed to an expected drop in consumption

of beer, wines and spirits. Heavy declines are also envisaged in receipts from surplus war stores and trading services. Hence the net gain in total ordinary revenue is put at only £120 million, making a total of £4,098 million.

Measuring the Gap

On this basis, the conventional "above-line" account showed a prospective deficit of £99 million, in contrast with last year's realised surplus of £720 million, a total worsening of £819 million. Fortunately, the deterioration in the true current account, which is what matters from the point of view of disinflationary budgeting, is very much less than this. Capital expenditures included in the conventional "above-line" account will be £282 million larger in 1951-52 than they were last year—principally because stockpiling outlays will rise by £130 million, while trading stocks are expected to rise by £3,000,000, whereas last year they fell by £108 million. In addition, the capital items of revenue to be excluded from the conventional account will decline by £62 million. In consequence, the deterioration shown by the true current account was put at £344 million less than that shown on the orthodox Budget. On the existing basis of taxation, therefore, the true current surplus was expected to fall from £561 million in 1950-51 to £86 million in 1951-52.

From this figuring, the Chancellor proceeded to estimate the size of the inflationary gap that needed to be bridged. To the expected decline of £475 million in the flow of savings from the central Government he added an expected £15 million fall in the savings of other public bodies—the local authorities and the social insurance funds. He estimated, however, that £170 million of this shortfall would be made good by an increase in private savings and that a similar relief would be provided by a reduction in the money value of investment at home and abroad. While home investment in the fiscal year is expected to rise by £30 million, external investment—that is, the surplus on the overseas balance of payments—is expected to fall by £200 million (compared with a fall of £229 million estimated by the Economic Survey for the calendar year). The estimated rise of £170 million in private savings apparently allows for a moderate fall in personal savings, since the Economic Survey forecasts (for the calendar year) that gross corporate savings, excluding stock appreciation but including tax reserves, would rise by £189 million—and their rise should be greater in the fiscal than in the calendar year. On these assumptions, the Chancellor concluded that the inflationary gap to be bridged was about £150 million—approximately the amount implied by the Economic Survey.

Mr Gaitskell emphasised, as he had been expected to do, that despite the additional taxation necessitated for the bridging of the gap, the greater part of the new burden to be shouldered by the public this year will be thrust upon it by rising prices—mainly attributable to the

steep rise in import costs. He set his face against the demands that attempts should be made to insulate the consumer from this rise, and declared that the bill for food subsidies should be maintained at last year's ceiling of £410 million. The only concession in this context was a decision to increase old age pensions—but not until October 1st next, and only to persons five years older than the ages at which the existing retirement pensions start. This relief, which will be accounted through the National Insurance Fund, will cost £39 million in a full year, but only £19 million this year—thereby raising the prospective gap to virtually £170 million.

The Tax Changes

The tax changes proposed will, according to the Chancellor's reasoning, exert an almost precisely corresponding disinflationary effect, for this is estimated at £168 million—although only £138 million of it figures as a net addition to the Budget surplus. The remaining £30 million represents an assumed consequential increase in savings by companies. Of the tax increases, by far the most important is a uniform increase of 6d. in the

standard rate of income tax and in the "reduced rates" that apply to the first slices of taxable income. This is expected to bring in £100 million this year and £114 million in a full year, but £27 million of this year's expected gain (and £32 million of a full year's) is relinquished by increases of £10 in the married allowance (to £190) and child allowance (to £70). The net yield of £73 million thus accounts for rather more than half the year's additional taxation. Most of the remainder comes from increases in Customs and Excise—£35 million from an increase of 4½d. a gallon in the petrol duty, £20 million from purchase tax (after allowing for concessions costing £2,500,000) and £6,000,000 from an increase in the entertainments duty.

The two most contentious changes—the increase in the tax on distributed profits from 30 to 50 per cent and the abolition of the initial allowances, which are fully discussed below—will have scarcely any effect on the Budget accounts this year. The increased profits tax will yield only £8,000,000 gross this year, and £3,000,000 of this will be consequentially lost in income tax; next year, however, the gross yield will rise to £125 million and the net to nearly £66 million—before

allowing for the cost (£4,000,000 net in a full year) of an associated concession to director-controlled companies. The Chancellor's reckoning assumes, however, that the need to provide for increased profits tax payable in 1952-53 will lead companies to reduce their dividends, and that this will fortify gross corporate savings by £30 million this year. The abolition of initial allowances, which takes effect next year, will not, of course, bring in anything this year, but for a full year the budgetary gain is estimated at £170 million—offset by a precisely corresponding reduction in company savings. Although the change is delayed, the Chancellor's reckoning optimistically assumes some disinflationary effect this year—on the supposition that the coming abolition will help to produce a "significant" reduction in civil investment. Without this assumed cut, the investment total requiring finance (which includes certain defence outlays) would have been larger, and the prospective inflationary gap correspondingly so. It is for this reason, and because of the doubt whether the aggregate amount of dividend payments will in fact be so substantially reduced this year as Mr Gaitskell estimated, that the sufficiency of his effort at disinflation is open to question.

These tax changes, when viewed as a whole, make it plain that the Chancellor has worked on the reasonable assumption that retrenchment among the lower income groups should be sufficiently ensured by the lag in wages behind the rise in the cost of living. Among these income groups, the only people who will be significantly hit by the tax changes are the unmarried workers. The effect of the increased income tax allowances is actually to reduce the tax liability of married couples without children when the income of the man is below about £7 a week, and where there are two children there will be reductions until income reaches £21 a week. It is noteworthy that, by working through income-tax allow-

ances instead of family allowances (which are taxable as income) the Chancellor has given relief over the whole range of incomes.

The middle and upper income ranges, however, will carry most of the burden not only of the income tax changes but also of the other tax increases. The additions to purchase tax are on items far removed from the general cost of living, while the concessions on various household goods will of course be of relatively greater significance for those of moderate incomes. The only new impost that will primarily hit these income groups is the charge for dentures and spectacles.

Purchase Tax Changes

The purchase tax increases will yield £22 million this year while the concessions will cost just over £2,000,000; in a full year the net yield will be £29 million. The increases are from 33½ per cent to 66½ per cent upon cars (which will bring in £12 million this year and £17 million in a full year), and upon radio and television sets and certain gas or electrically operated domestic appliances (£10 million this year and £14½ million in a full year). Against these, the Chancellor conceded freedom from tax for a wide variety of household articles previously taxed at 33½ per cent—including kitchen utensils, wringers, hot water bottles and rolling pins.

The Economic Survey last week declared that "home supplies of many durable consumer goods produced by the metal-using industries will have to be reduced"; and the increases in purchase tax have been designed partly to effect this reduction. The selective effect of purchase tax in discouraging home consumption of particular articles has until now been used mainly to encourage their export: now it is to be used in addition to encourage diversion of production to defence. The

principle is obviously acceptable and preferable to physical controls over production: but its efficacy is likely to vary between different industries. Rearmament is expected to make considerable direct demands upon the radio and television industry, and in particular upon the makers of components. Restraint upon the buying of radio and television sets is therefore logical. The industry will have to expect some general shrinkage in sales; but for this reason it is entitled to expect that whatever demands the defence programme will make upon it should be formulated expeditiously. Demands of defence upon the manufacturers of power-consuming domestic appliances such as washing machines and refrigerators are generally not direct; but these are the sections of the engineering industry in which the Survey required "a number of firms . . . either to switch over themselves to defence orders or to release labour for such work elsewhere." As in the case of radio, shortages of materials would probably have begun to reduce output of these appliances very shortly, whatever the state of demand.

So far as restraint upon home consumption is concerned, the doubling of purchase tax upon private cars is in a somewhat different category. Home supplies of cars have been governed since the war fairly strictly by physical control, and this has worked effectively; though the "allocation" of cars to the home market takes the form of a request by the Ministry of Supply to the industry as a whole and to individual firms, the industry has complied with it (and by retaining the allocation scheme for sheet steel the Ministry has a lever over the industry that it has generally not needed to apply). The increase in purchase tax, therefore, does not necessarily mean that the home demand will be cut down by a single car below the 80,000 already laid down for this year. It means that the 80,000 motorists concerned, many of whom ordered the cars several years ago, will be forced to pay substantially more for them—or else give up their places in the queue. Even so, it is fair to note, second-hand car prices have been promptly lifted. For makers of higher-priced and specialist cars, whose special circumstances have always been recognised by allowing them to sell a larger proportion of output at home, the 66½ per cent purchase tax may have a more significant effect; these makers have not the long order-books of the companies making cars at what used to be called "popular" prices, though their large proportion of business customers may have more elastic purses, particularly if they can get delivery before the initial allowances disappear. In their case the Chancellor's secondary purpose may eventually be fulfilled; but in general this new burden on the home motorist is not likely to influence the industry towards greater exports or further participation in rearmament.

Entertainments Tax

The increase in entertainments tax (upon only those commercial entertainments paying the full rate of tax, which exclude the live theatre, football and cricket) has occasioned pained surprise in the cinema industry: more, perhaps, than is justified. The pain, no doubt, is real, but the various sections in the industry that in recent months have been urging the Treasury to take responsibility for extending schemes that would have the effect of increasing admission prices for their benefit can hardly be surprised when it does so partly for its own. There is not much evidence that this tax, though extremely high, is

yet approaching the point of diminishing returns (as the Chancellor appears to concede in the cases of the beer and tobacco duties). Box-office returns have receded from the peak of the immediate postwar years, but appear now to be levelling off: television may eventually become as powerful an influence on attendance as tax. The increases in the tax (which in cinemas amount to an average of 2d. per admission) will bring in about £10 million in a full year; but the Treasury is again to allow the industry £2,500,000 of this—a halfpenny a seat. Discussions have already begun about the sharing of this additional cinema revenue between the different branches of the film industry: the Chancellor laid down the principle that "this time the larger part of the Exchequer remission goes to the producers." Last year's "Eady scheme" took the form of a general increase in admission prices, with an increase in tax only upon the more expensive seats; of the additional £2,500,000 thus raised in cinema revenues, the exhibitors kept half and passed the remainder on as a "voluntary levy" to a fund set up to share the money among producers. Similar arrangements are presumably in mind now. Of the £5,000,000 to be added to the revenues of the film industry during this year and last, perhaps £3,000,000 should accrue to the producers, many of whom in any case are making films only with the assistance of Government finance advanced through the National Film Finance Corporation.

Petrol

Another increase in the petrol tax (which now will reach 1s. 10½d. a gallon) had been commonly expected—but that will not lighten its impact. This will fall mainly on transport and industrial costs, though it will make private motoring (particularly in the over-taxed prewar vehicles with a high fuel consumption that still comprise two-thirds of the cars on the road) more costly. Business and public service undertakings buy about 85 per cent of the motor fuel (petrol and diesel oil for road vehicles) used in this country; and inexorably the tendency must be to pass on this total increase in costs (perhaps £30 million of the £35 million the tax will raise in 1951-52) to the consumer. The Chancellor held that the increase of 4½d. a gallon amounted to only about 2 per cent of the operating costs of commercial and passenger vehicles, and that this "on its own" would not justify any increase in fares and freights. This increase, however, will not remain "on its own"; with the accumulating rises in other costs, it is idle to suppose that any increase, however small, can long be prevented from contributing its proportionate effect. In any case, to the extent to which the tax is "absorbed," it merely repletes company savings and thus has no disinflationary effect. The British Transport Commission expects the increase in tax to cost it just over £3,000,000 a year; in company with the private Road Hauliers' Association, it was immediately ready to declare that road haulage rates would have to go up. The expectation of higher London fares will certainly be enhanced.

There is no repetition this year of the wasteful attempt to safeguard agriculture from the effects of the increased tax on light oils. Last year's plan to compensate farmers whose petrol-driven tractors were affected (though gas oil or kerosene driven tractors were not) by a subsidy to offset the cost of the tax was an utter failure. Farmers are now in the same position as other industries using light hydrocarbon oils, such as paint, plastic, rubber, and

linoleum makers. These suffer from a tax designed to affect road users simply because the Treasury's definition of these spirits is based upon chemical formulae, and not upon their use on the road or elsewhere (a distinction that has been conceded in the case of heavy oils).

Profits Tax Increase

It would have been too much to expect that Mr Gaitskell in his first budget would have been prepared to turn a deaf ear to the demands behind him for a further impost on profits. In this part of his speech he came closest to purely political argument and furthest from the conspicuous fairness of his broad economic approach. Profits had been increasing rapidly; so had dividends, though the Chancellor chose to demonstrate the increase in dividends not in terms of cash but in terms of percentages. The Chancellor approved an increase in profits resulting from efficiency, but not an increase in "the whole level of profits" resulting from "the general economic climate and not through the aptitude of individual managements." Whether this is an adequate description of the increase in profits that has taken place is a matter of political taste; if it is, the question of responsibility for "the general economic climate" surely arises.

In present circumstances, Mr Gaitskell argued, "we simply cannot afford such substantial increases in dividends"; they add (in the Chancellor's view) directly to inflationary pressure and also to claims for higher wages. It has never been clear why profits retained by industry are not equally "inflationary" if they are used to expand the demands for fixed capital and stocks beyond the capacity of the economy to meet them. But it is at least a matter for relief that the Chancellor has rejected the idea of statutory control of dividends; if he felt that action against increases in dividends was demanded, he was indeed wise to use the existing profits tax.

Whether he has done so in an equitable and logical way is open to doubt. His professed concern is to stop "substantial increases." The instrument he has chosen to do this involves not only increases but the whole corpus of preference and ordinary dividends as it now exists. With effect from January 1, 1951, the rate of profits tax on distributed profits is raised from 30 per cent to 50 per cent, leaving the tax on undistributed profits unchanged at 10 per cent. Only a small yield will accrue to the Exchequer in the current fiscal year from this change—£5 million after the abatement of income tax, compared with £66 million in a full year. But the Chancellor assumes that the prospect of the increased liability for profits tax in 1952-53 will encourage companies to pay out less in dividends than had been estimated, and he is counting on £30 million of extra savings by companies this year to assist in filling the inflationary gap. At the combined rate of 10s. 6½d. on undistributed profits, this sum is equivalent to just over £60 million gross. According to the National Income White Paper, some £827 million was distributed in dividends and interest by companies in 1950. If it is assumed that interest absorbed one-eighth of this total, last year's dividend payments must have absorbed about £700 million. The Economic Survey's calculations already assumed an increase in 1951 of nearly £200 million in undistributed profits, though it did not disclose any estimated figure for dividends. It is asking a good deal to believe that £60 million will be found without further

inroads on industry's real capital—in other words, without counting on a further profits inflation.

The effective combined rate of profits tax and income tax, assuming full distribution of profits, will now be 13s. 3d. in the £—the Chancellor will take twopence for every penny that the preference and ordinary shareholder receives when profits are divided up to the hilt. In the case where no dividend distribution is made, the combined rate will be 10s. 6½d. The effect of the profits tax changes can be summarised thus:

Division of Profits	1950-51 Income tax, 9s. in the £ Profits tax, 10% undistr. 30% distr.	1951-1952 Income tax, 9s. 6d. in the £ Profits tax, 10% undistr. 50% distr.
<i>Full distribution:</i>		
Combined rate of profits tax	25%	35.72%
Combined rate of profits tax and income tax	58.75% = 11s. 9d. in the £	66.25% = 13s. 3d. in the £
<i>No distribution:</i>		
Profits tax	10%	10%
Combined rate of profits tax and income tax	50.75% = 10s. 1d. in the £	52.75% = 10s. 6½d. in the £

For equity share investors who require to calculate total earnings percentages allowing for the full effect of profits tax, the simplest procedure will be to deduct 35½ per cent from gross earnings and express the remainder as a percentage for the ordinary capital. But complications multiply as soon as gearing is introduced, for then the remainder has to be divided rateably between the preference and ordinary capital. The gearing factor will make a great difference to the relative prospects of different ordinary shares at the higher rate of distributed profits tax; other things being equal, the greater the proportion of preference capital that has to be provided for, the more difficult it will be to maintain a given rate of ordinary dividend. To have raised the distributed profits rate to 50 per cent without making any attempt to end the fantastic anomaly that equity shareholders bear its full weight not only in respect of their own dividends but also in respect of preference dividends is surely impossible to reconcile with the Chancellor's professed object of penalising dividend increases. It is now high time to rename the ordinary share; for purposes of profits tax, it has become, in its treatment as distinct from its deserts, the inequity share.

Initial Allowances Suspended

At a quite early stage in his speech, Mr Gaitskell announced that he had decided to suspend, as from April 6, 1952, the initial allowances of 40 per cent on plant and machinery and 10 per cent on industrial buildings, mines and oil wells. The arguments command a certain respect. The allowances were introduced under the Income Tax Act of 1945 with the object of stimulating capital expenditure and encouraging modernisation. Such a stimulus, the Chancellor holds, would now endanger the defence and export programmes; the allowances can be reintroduced when it becomes desirable to stimulate investment again.

There are undoubtedly ways in which the allowances have unduly encouraged investment. The sole trader or part owner of a director-controlled business who may be paying an effective rate of 15s. in the £ was obviously well content to buy a motor car without too much regard for price so long as he could charge 65 per cent of its cost against a single year's profit. It may also be true that to suspend the initial allowances is a better way of checking the demand for equipment that is desperately

needed for defence than reintroducing the fantastically difficult licensing system for machinery that operated during the war. But it is still possible to question the wisdom of a complete withdrawal of the allowances, compared with reducing them to their original level of 20 per cent. And it is an odd coincidence that in the very week in which the Tucker Committee has been arguing that the initial allowances could be used to provide all the relief that is necessary for industry to offset the erosive effects of inflation on its fixed assets, the Chancellor should decide to withdraw them altogether.

The year's notice may have odd effects—for example, a possible stimulus to the prices of secondhand equipment and an unexpected burden for companies that ordered new plant long ago, but cannot expect delivery within the next twelve months. But it will make some concerns that have blithely assumed that the 40 per cent allowance was a permanent interest-free loan look foolish if they have taken and used full credit for past allowances. The true nature of the initial allowances was fully examined in two articles in these columns on June 25 and July 2, 1949. Put shortly, the point is that in the income tax year 1953-54 many concerns will find themselves receiving a smaller capital allowance for taxation than they need to maintain the progressive writing down of their assets; they will have to provide from taxed profits the difference between what is allowed by the tax authorities and what is required to satisfy their accountants. For many this will be a very painful obligation, not least because net profits in 1953-54 will bear a higher rate of tax charge than the reliefs obtained from the allowances of earlier years, unless in the meantime the allowances are restored.

The yield in a full year (which will in fact be three years off) is put at £170 million. Industry had no prescriptive right to an annual interest-free loan of this order. But it is impossible not to connect the decision to suspend the initial allowances with the increase in profits tax and to regard both as the first step in a new doctrine of posteriority for industrial capital. Is it so certain that the process of modernisation can be safely threatened in this way? Is it sufficient to hold that the claims of investment in the public sector—settled by a crude process of interdepartmental bargaining without benefit of the restraining influence of the rate of interest—have absolute priority in their own right? It is quite clear that the strains of finance on industry, already serious though they are, will become greater in the next few years and that the Chancellor has thought it proper to add to them.

Social Services under Pressure

In framing his Budget the Chancellor was faced with estimated expenditure of £1,615 million on the social services and food subsidies this year, compared with £1,589 million in the 1950-51 estimates. This £1,615 million was divided, broadly speaking, as follows: £400 million on national insurance and assistance and war pensions; £400 million on food subsidies; £400 million on health; £250 million on education; and £150 million on housing, local grants and the Ministry of Labour.

It was obvious from the first that the £400 million for national insurance and assistance would have to be increased if those "completely and continuously dependent" on these benefits were not to experience very real

hardship in the period of rising prices that lies ahead. Mr Gaitskell's task was to see that increases went only to those urgently in need of them. His solution has been to raise the standard weekly rates of old age pension, for men over 70 and women over 65, from 26s. for a single person and 42s. for a married couple, to 30s. and 50s. respectively; these increases will come into effect on October 1st. Other old age pensioners will receive the same rates as at present, but those who remain in work will be allowed to earn up to £2 instead of £1 per week before any reduction is made in their pension; moreover, each year's work after normal retirement age will bring an addition of 3s. per week to their eventual pension (against 2s. per week previously). There will be no increases in basic rates for war pensioners—on the grounds that most of them are working and earning—nor for sick or unemployed adults, presumably on the ground that people must do more towards tiding themselves over such temporary misfortunes. There will, however, be special adjustments for war pensioners in real need—adjustments that will cost the Exchequer about £600,000 a year. No provision has been made for any general increase in national assistance payments, nor will family allowances be raised.

On food subsidies, the Chancellor sadly remarked that he had been "faced with conflicting advice. Some argue that in order to hold the cost of living it would be right to increase the food subsidies; others say that £410 million is already much too high a figure and it should be reduced or cut out altogether." The politician in Mr Gaitskell has adopted the expected compromise and the subsidies are to be kept at £410 million as before. It seems probable that this decision will lead to a rise in the average individual's food bill of over 8d. a week this year; possible ways of passing on this burden to consumers are discussed in a separate note on page 884.

Health Service Charges

The Chancellor revealed that the original estimates presented to him for 1951-52 put the gross cost of the health service at about £495 million and the net charge falling on the Budget at £425 million; these estimates were about £30 million above last year's levels. He decided that they must be pruned by £25 million and to this end all adults needing denture work (except expectant and nursing mothers) and all adults who order spectacles through the national health service are henceforth to meet about half the cost out of their own pockets. Until now the public has generally made some contribution towards the cost of spectacle frames, but the cost of the lenses themselves—about £3 per pair if opticians' fees are included—has been borne wholly by the Exchequer. These new charges (the effects of which were accounted in the civil estimates and do not, therefore, fall within the budgetary changes) should bring in about £13 million in 1951-52 and £25 million in a full year; they will be accompanied by administrative economies spread across the whole service. It seems reasonably certain that this desirable principle of imposing specific charges for use of the health service would have been pushed some way further but for political passions.

There are apparently to be no major economies in education expenditure except that implied in the decision, announced some weeks ago, to increase by 1d. the

price of school meals. The school building programme seems to have been jostled through unscathed. The Government discussed whether the school leaving age might be lowered or the school entry age raised, but rightly decided against either proposal.

The Chancellor made no detailed reference in his speech to the £150 million expenditure on housing subsidies, local grants and the Ministry of Labour. This was perhaps his most serious omission. The country is now to enter a period of rising prices with one sector of the community living in accommodation for which it pays less than an economic rent (thanks to subsidies and rent restriction) and the other sector living in—often much worse—accommodation for which it pays more than an economic rent (thanks partly to the scarcity value that rent restriction on other houses creates). The latest National Income White Paper puts central government and local authorities' subsidies on rents in 1950 at £65 million; this subsidy is quite separate from the hidden subsidy contained in the low rate now charged on housing loans to local authorities. Yet the opportunity to effect retrenchment here has not merely been missed—it has been passed over as apparently unworthy of comment.

The Insurance Fund's Surplus

One other step that the Chancellor announced in his speech deserves to be noted here, although it has no direct bearing on the budgetary problem. For the past two years the national insurance and the industrial injuries funds have together been running an annual

current surplus of between £160 million and £170 million—thanks to the shortfall in unemployment below the original $8\frac{1}{2}$ per cent estimate. The Chancellor estimated that the national insurance fund alone was currently running a surplus of £140 million—although this will be reduced by the increased pensions benefits from October onwards. Part of the income of both these funds has come from the "supplement" that the Exchequer makes to the contributions of each employed and self-employed person, and another part of it has come from the annual Exchequer "grant" laid down under the National Insurance Act; in each of the last two years the Exchequer has paid out between £145 million and £155 million in this way. It has now been decided that the Exchequer's payments to the national insurance fund will be cut to the level required to keep the fund in balance, but without a surplus. This book-keeping switch of funds from one public account to another will not, of course, have any effect on the level of taxation that has to be imposed. It may, however, carry with it two pregnant possibilities for the future. In the first place, it may make the way politically easier for a subsequent increase in insurance contributions—apart, that is, from the small increases already due after next October. Any such increases would, of course, be wholly similar in their effect to increases in taxation. Secondly, given the conventions about the investment of insurance funds, the switch may have some significant implications for the gilt-edged market, into which the greater part of the insurance funds' annual £165 million surplus has hitherto gone.

Taxation of Profits

THE Chancellor of the Exchequer took occasion in his budget speech to thank Mr Millard Tucker and his colleagues for their report on the taxation of company profits, which was published three days earlier—and had in its turn followed hard on the heels of the new Income Tax Consolidation Bill. He confessed, not surprisingly, that he had not been able to study the Committee's recommendations in detail; indeed, his decision to suspend the initial allowances traverses one of the principal recommendations of the report so completely that this fact was clear without explanation. Mr Gaitskell has put off until next year any question of legislation on the report (presumably certain of the points in it may be implemented before the Royal Commission on Taxation reaches its conclusions) and he now awaits the reactions of industry and commerce. It is already clear that these are mixed.

The terms of reference of the Tucker Committee were narrowly concerned with the definition of trading profits; only eight out of 529 sections in the new Consolidation Bill are devoted to definitions, but their importance is fundamental. The committee has applied two guiding principles to them: first, that taxable profits should correspond as closely as possible to profits computed by established accountancy practice, and, secondly, that reasonable simplicity is to be preferred, even at some cost to equity, to further complexity. These are admirable guides provided that established accountancy principles are equal to the responsibility placed upon them—and the proviso, unfortunately, is necessary. One of the main functions of the committee was to give guidance on the taxable capacity of business in a period of rapidly

rising prices, and on this matter official opinion in the accountancy profession has shown itself to have very set views. On this crucial problem of inflation and its effects on profits ascertained on conventional lines, the views of the committee come as a very great disappointment.

In his 1949 Budget statement, Sir Stafford Cripps accepted industry's complaint that the existing 20 per cent initial allowance on plant gave insufficient help towards financing the enhanced cost of new machinery and he doubled the allowance. He went on immediately to mention further representations on "the whole question of calculating profits in a way which can take care of marked changes in price" and announced that a committee would be set up to consider the "technical issues which arise in connection with the computation of taxable profits." Given this background it is surprising that the Tucker Committee should at first have questioned "whether problems of this kind could be said to affect the computation of business profits and so fall within our terms of reference." The committee took steps to discover that its views were wanted and it has given them without evident enthusiasm.

The committee's approach to this basic matter is not concerned with the impact of inflation on the maintenance of real capital. It states its attitude quite bluntly: "We are unable to agree with the view that a proper system of computing profits must necessarily take into account changes in the value of money." All the schemes for revaluation of assets or for the creation of replacement reserves "amount to a proposal that a business should be relieved altogether from tax on some part of its true profits, that is to say, upon its profits

as computed on ordinary accountancy principles." It would be hard to beat this as an example of begging the question. The recommendation of the Institute of Chartered Accountants is quoted as authority and is apparently considered to be final. The "minority view" of the opposite "school of thought" in the controversy that has "agitated" accountants "was not strongly pressed before us." This is simply not good enough. The official bodies of the accountancy profession cling to existing principles because they are fearful of the admittedly enormous practical difficulties of making accounts tell the economic truth in a period of rapid price changes. When the report talks of a "minority view" can it really mean that the committee is unaware that businessmen, economists and many accountants now agree that profits computed on obsolete conventions of historical costs, so far from being "true," are largely meaningless? "Profit" is a word already in political disrepute; it will soon be professionally discredited too unless it can be made to denote an increment in the real substance of the assets of a business; the test must be whether it can be paid away, in dividends or taxes or in financing expansion, without impairing the physical stuff of the business as it existed at the start of the trading period in which the profit was made. If "ordinary accounting principles" had been established, not in an era of reasonably stable monetary values, but in the China of the last decade, the point would not need to be argued.

Having taken this stand, the committee recognises that the increasing cost of replacing assets—fixed and current—involves additional capital requirements that industry cannot provide itself, so long as its profits, struck before providing for such increased cost, are taxed at existing rates. After examining schemes for revaluation (that is, recomputing the values of fixed assets for purposes of allowances by reference to an index of prices) and for special replacement allowances, the Tucker Committee rejects them as being inequitable as between different classes of business or impracticable in administration. This negative conclusion is particularly unfortunate, for the committee has undoubtedly given anxious attention to the problem. Some form of revaluation must be evolved if "true profits" are to be arrived at; perhaps with a change of heart the impossible will take only a little longer. Unaware that the initial allowances would shortly be suspended, the committee in fact recommends that they should be used as a method of providing relief: it recommends that a minimum rate should be prescribed and that this should be varied to take into account changes in the price level of the plant in question on the one hand and of the value of the industry in the national economy on the other. This last is dangerous doctrine: differential rates of tax based on the presumed merit of the services rendered to the community would be thoroughly objectionable. Most people would agree, in midwinter, that the National Coal Board merited greater relief than the ice cream manufacturer but at midsummer a different view might prevail. Ships (as the report argues) are more important than fairgrounds, but which will earn more dollars this summer: a cargo boat importing fruit, or Battersea Park?

As a limited means of providing finance for fixed assets in the form of interest-free loans, initial allowances have considerable merits. An article in *The Economist* of July 2, 1949, showed that the total of such loans with allowances at 40 per cent might amount to as much as

£2 billion at the maximum. So long as businesses continue and constantly replace their assets, initial allowances can provide an important infusion of capital into industry of a more or less permanent nature. They have the further merit that they automatically ensure that the relief is used for the purpose intended, the financing of the new plant, and it more or less coincides with the expenditure. There are two drawbacks. The first is that the relief takes the form of a reduction in the tax liability of the business and this reduction inflates and distorts the balance of free profit. Many concerns now offset the immediate benefit of the initial allowance by setting up an equivalent reserve; but there are others that do not. Should the benefits not be distinguished from ordinary income by being earmarked in a statutory reserve? Secondly, initial allowances do nothing to help traders whose assets are in stocks rather than plant or buildings. The need of such traders can be just as great and deserving as that of industrial concerns with much plant to maintain; the committee's logic in refusing relief to holders of stocks on the grounds that it would involve preferential treatment appears faulty. No doubt the practical difficulties would be great; but to say that there is no ground of principle on which relief could be justified is going much too far. If the Tucker Committee has never heard of the modern black magic by which inflation dissipates capital in the guise of income, the compilers of the Economic Survey certainly have. They estimate that such "profits" in 1951 will amount to £700 million; the Survey excludes this amount from its computations of gross income—yet more than half of this "income" will be paid over in taxes.

★

There will be widespread regret that the committee has been unable to recommend that income tax should be charged on a current year basis. But there are serious difficulties—the impairment of budget flexibility, acute transitional problems and the immense complication of provisional assessments. Even so, the feeling remains that the committee may have been somewhat daunted by a superabundance of conflicting evidence and by Inland Revenue objections on the score of practicability. Perhaps the change may come not as a result of a public inquiry but from the Inland Revenue itself—acting on the Chancellor's orders, as was the case with PAYE. The worst features of the present system are the anomalies that arise in tax assessments in the opening and closing years. Partnerships, with their frequent changes in constitution, are particularly affected by the present rules, and the tax assessments levied on individual partners frequently vary widely from the profits they actually receive. The report makes recommendations that should remove these anomalies with a minimum of legal and practical difficulty.

Disappointment with the report's negative conclusions on inflation and the basis of assessment must not obscure its many valuable recommendations. There are more than sixty of these, many of wide scope and highly technical; together they would provide a major improvement of the taxation law. The proposal that sur-tax should be spread at the taxpayer's option by averaging the rate over five years will be a gain to equity at comparatively small cost to the Revenue. The recommendations that losses should be carried forward without time limit against future profits of the same business, and for one year against other income, are important advantages. The proposal that there should

be set-off of group profits and losses is sensible and overdue: it is also proper, as the report recommends, that inter group stock profits should be eliminated. It is disappointing that the Chancellor is to strengthen the law in the opposite direction.

The chapter on the computation of profits gives a valuable exposition of existing rules and makes many useful proposals. The doctrine based on Lord Davey's dictum in *Strong v. Woodfield* that disbursements, to be admissible for tax deduction, must not merely be made in the course of the trade but must be for the purpose of earning the profits, is condemned. The "wholly and exclusively" rule is justified, provided that any given expense may be apportioned between business and non-business purposes: it need not be all or nothing. The cost of tax appeals, whether successful or not, ought to be admissible. Revenue expenses incurred before the legal date of commencement of business should be allowed; so should expenses of acquiring leases. There will be some disappointment with the committee's acquiescence with the disallowance of repairs to assets purchased in a defective condition. The decision in the *Law Shipping Case* was natural, but it works unfairly and the injustice is aggravated by the importance that the revenue authorities attach to it.

The committee approves the proposition that relief should be given in respect of the wastage of all assets that are used up for business purposes. The capital allowances are slowly broadening down from precedent to precedent: the industrial buildings allowance was given by Sir John Anderson in 1945 on grounds, not of right, but of expediency. Now, however, the Tucker Committee is able to conclude that "a tax which refuses to give an allowance for the depreciation of all business premises is not limiting itself to a tax on income, but is encroaching on capital" and it recommends that all commercial buildings should be covered by a depreciation allowance. The comment that the work and loss of revenue involved "may perhaps lead to a decision that

The National Dividend in 1950

THE National Income White Paper for 1950 follows faithfully in the footsteps of its predecessors. It presents a first estimate of the nation's economic outturn in 1950 and a radical revision of many of the estimates put forward in previous years. This should not be treated as a cause for complaint; the official statisticians are to be commended for their readiness to reveal the many instances in which paucity of information has led them into errors in earlier estimates. The latest batch of estimates will undoubtedly be subject to similar revisions in their turn. The "national income approach" to economic analysis and planning—although it is the best approach that can be adopted—is still one that winds over treacherous and shifting statistical ground.

According to the latest estimates, the gross national product—that is the money value of all work done in this country—rose by £517 million, or 4½ per cent, last year, to a total of £11,970 million. In 1949 it had risen by £801 million, or 7½ per cent. Since the average price of all goods entering into personal consumption is believed to have risen by about 2½ per cent in 1950, compared with 2 per cent in 1949, it would seem at first sight that the size as well as the money value of

the reform must be postponed till more prosperous times" is, however, surprising: are owners of commercial buildings to continue to pay a tax on capital in order that the general body of taxpayers shall not be called upon to pay a heavier tax on their income? There are many other proposals in this section: those concerned with mining overseas will find that their careful evidence has been heeded and it is pleasant to note that cemeteries and the Mersey Tunnel have at last established their genus!

In dealing with Profits Tax the only important recommendation made by the committee is that the present allowance for directors' remuneration in director-controlled companies—at present a total of £2,500 or 15 per cent of the profits with a maximum of £15,000—should be increased. This is to be conceded in the next Finance Act, for the Chancellor is raising the maximum to £4,500. The hardship previously suffered by this limited class can be measured by the cost of the reform—£4 million in a full year. The committee has "much sympathy" with the view that preference dividends should be treated for Profits Tax purposes in the same way as debenture and other interest and that the consequential switching over of company finance from preference shares to unsecured notes is undesirable, but it concludes that these matters are outside its terms of reference and passes them over, leaving the Chancellor to make matters worse by raising the distributed profits tax to 50 per cent.

It is clear that on the majority of matters it should be possible to accept the findings of the Tucker Committee without detailed re-examination. But it is also quite clear that on the major issue of depreciation and costs the last word has not been said: industry, economists and the so-called "minority school" of accountants should see to it that the Royal Commission is not left in ignorance of the full force of their views. This stone that the builders have rejected may yet become the headstone of the corner.

the national cake must have risen less in 1950 than it did in 1949. The compilers of the National Income White Paper are convinced, however, that this is a false deduction. The rise in prices to consumers last year was apparently more than accounted for by the rise in import prices. Domestic enterprises seem to have turned out more goods, but the money value of their output rose less than proportionately; for example those enterprises that figure in the official index of industrial production are believed to have increased their output by 8 per cent but their receipts by only 5 per cent in the year. Thus the rise in individual productivity, and the restraint shown by both workers and profit-takers, kept down the domestic cost of living—and also made British goods unnecessarily cheap for the foreigner. When allowance is made for this, it is believed that the rise of £517 million in national product last year represented a real increment at least as great as the rise of £801 million in 1949.

What happened to this £517 million increase? The second column of Table II shows that, broadly speaking, 70 per cent of it went to personal consumption and 30 per cent was devoted to improving the foreign balance, by increasing the export surplus. The other two sources

that could have laid claim to part of the dividend—public authorities' expenditure and gross investment—showed little change from the year before. Within the category of "gross investment," however, there was an important change. Fixed investment (thanks chiefly to the erection of more buildings and the installation of new plant) rose by £80 million to £2,162 million, but investment in stocks and work in progress fell by £100 million; the White Paper estimates the value of the physical increase in stocks and work in progress at £215 million in 1949 and £115 million in 1950. There has been some misconception about this latter figure. The White Paper's definition of stocks includes all products on the assembly lines, all British exports still on the high seas and all goods on retailers' shelves as well as raw material stocks. Since the rate of output in industry was about 8½ per cent greater towards the end of 1950 than towards the end of 1949, and since the volume of exports increased by 15½ per cent, there was almost bound to be some increase in total stocks during the year. The fact that the increase is estimated to have been £100 million less in 1950 than in 1949 (when industrial output increased in much the same proportion) is a clear sign, however, that some users of raw materials must have been scraping the bottom of the barrel by the end of the year. Government-held trading stocks of food and raw materials are shown to have fallen by £132 million in 1950, whereas in 1949 they fell by only £19 million; part of the latest decline, however, reflects the return of certain commodities to private trading.

TABLE I—GROSS NATIONAL PRODUCT IN 1949 AND 1950 (£ Million)

	1949			1950		
	Wages and Salaries	Profits, Rent and Depreciation	Total	Wages and Salaries	Profits, Rent and Depreciation	Total
Agriculture, forestry and fishing	250	371	621	248	362	610
Mining and quarrying	348	56	404	350	43	393
Manufacturing	2,720	1,439	4,159	2,929	1,489	4,418
Building and contracting	442	156	598	465	159	624
Gas, electricity and water	120	117	237	131	120	251
Transport and communications	629	329	958	652	324	976
Distributive trades	638	867	1,505	675	866	1,541
Other services	666	535	1,201	694	545	1,239
Ownership of dwelling houses	...	438	438	...	448	448
Services of public authorities (including health and education)	1,058	97	1,155	1,125	102	1,227
Domestic services	99	...	99	96	...	96
Services to non-profit-making bodies	61	...	61	53	...	53
Gross domestic product	7,021	4,405	11,426	7,418	4,478	11,896
Net income from abroad	...	...	27	...	...	74
Gross national product at factor cost	...	...	11,453	...	...	11,970

Although the £517 million increase in gross national product in 1950 was £284 million less than that in 1949, the rise in the national wage bill (at £240 million) was £35 million bigger and the rise in the salary bill (at £150 million) was exactly the same. It is not so easy to assess the true rise in profits, even if one accepts the admittedly tentative official estimates; for "profit" is what Ruskin once called a "chameleon word"—it can change colour according to the speaker's taste. If depreciation is allowed for at inland revenue rates and windfall profits from stock appreciation are included, the trading profit of companies fell by £92 million in 1949 and rose by £204 million in 1950; if profits on stock appreciation are excluded (on the argument that they will be needed for stock replacement at higher prices), then the trading profits of companies and public cor-

porations rose by £51 million in 1949 but by only £25 million in 1950. The rise in profits of sole traders and partnerships is estimated at £5,000,000 in 1949 and £30 million in 1950, if profits from stock appreciation are included. For the rest, professional earnings rose by some £10 million and income from rents by £13 million

TABLE II—DISPOSABLE INCOMES (AFTER TAX) AND EXPENDITURE (£ Million)

Disposable Income after Tax	1949	1950	National Expenditure	1949	1950
Persons:—			Personal consumption:—		
Wages	3,862	4,096	Food	2,366	2,408

Less indirect taxes minus subsidies	1,480	1,602	Gross expenditure	11,453	11,970

in both years, but income from farming, which had risen by £43 million in 1949, to about four and three-quarter times its 1938 level, fell by £2,000,000 in 1950.

All these estimates, of course, are struck before allowing for the depredations of the tax collector, who in each of the last five years has garnered between 26 and 28 per cent of all personal incomes—and a considerably larger proportion of corporate incomes. The first two columns of Table II show the White Paper's estimates of disposable incomes—that is to say gross incomes minus direct taxes—accruing to persons and companies in 1949 and 1950. It is estimated that personally disposable income (after providing for accruing tax liabilities) rose by £448 million in 1950—or by £26 million less than personal expenditure. Gross personal saving is accordingly estimated to have fallen by £26 million to £332 million, or from 9½d. to 8½d. out of every pound of disposable personal income. This was not so substantial a fall as might have been expected in view of the storm signals presaging future price increases that were hoisted before every consumer's eyes in the second half of the year. Nor, indeed, do the detailed estimates of the pattern of expenditure show much sign of precautionary buying in 1950. Men very sensibly bought 9½ per cent more clothes and they or their wives bought 14 per cent more furniture and furnishings than in 1949, but increases in sales of such things as women's clothes and footwear actually lagged behind the rate of increase in disposable incomes. A surprising proportion of the 3 per cent average increase in consumption, in fact, was accounted for by increases that were associated with a higher standard of living rather than with precautionary restocking. Expenditure on tobacco, alcohol and cinema-going rose during 1950 after having declined in 1949 and earlier years, while the biggest percentage increase of all (thanks to petrol

de-rationing) was the 18½ per cent increase in the volume of private motoring; actual expenditure on private motoring, in fact, rose by 33½ per cent, thanks partly to the increased price of petrol.

TABLE III—FINANCING OF GROSS DOMESTIC CAPITAL FORMATION

	£ Million			Percentage of Gross Domestic Saving		
	1938	1949	1950	1938	1949	1950

Additions to company's free reserves	231	480	354	30	21	15
Gross personal saving	224	353	332	29	15	13
Set aside through action of public authorities	-45	559	783	-6	24	31
Gross domestic saving	775	2,327	2,506	100	100	100
Lending by foreigners	78	-30	-229	...	...	...
Gross capital formation	845	2,297	2,277	...	...	...

The first columns of Table II also show that companies and public corporations added £116 million less to free reserves in 1950 than in 1949, although the reserves they had to accumulate against accruing tax liabilities were £135 million greater; the swing round in this latter item was due to the doubling of the rate of initial depreciation allowance on plant and machinery in the 1949 Finance Act. The fall in the rate of accumulation of free reserves by companies, together with the estimated fall in personal savings, had a marked effect on the pattern of financing of capital formation. Table III shows that saving resulting from the action of public authorities financed more than 50 per cent of net domestic capital formation last year; in 1938 this saving had been a minus quantity.

The emergence of the Government as the largest net purveyor of new savings must necessarily have had an impact on the pattern that new investment has assumed. The White Paper contains fuller estimates of the shape of capital expenditure than have previously been available; these estimates, which are summarised in Table IV, are backed up by the preliminary results of a sample census of investment in manufacturing industry in 1948 and 1949, the details of which are to be fully described in a forthcoming issue of the *Board of Trade Journal*. The division of investment activity between the different industrial groups in Table IV is not completely clear-cut, since purchases of such things as road vehicles, second-hand plant and office furniture have not been allocated to particular groups. Nevertheless, the ratio of capital formation to gross current output shows rather startling variations from one group to another: in 1950 this ratio was over 70 per cent in the gas, electricity and water industries, about 9 per cent in manufacturing industry as a whole and about 8½ per

cent in the "public services" sector (which includes health and education, but also a wide range of purely administrative expenditure). Within manufacturing industry itself, the biggest increase in investment activity in 1950 was in the chemical and allied trades and in metal manufacture; there was no visible correlation between increases in investment in individual industries and increases in company profits in those industries in 1949 (as shown in another new table in this year's White Paper).

This indication that the distribution of investment shows no consistent relationship to either output or profitability of the several industrial groups is not, of itself, proof that investment activity was misdirected last year; it is merely a sign that the old (and admittedly imperfect) mechanism whereby scarce investment resources were channelled into the most profitable forms of capital formation, is no longer functioning now that the Government has such a preponderant voice in the capital market. The tendency to disregard the profit-yardstick of the trend of demand, and to regard profit as something that is almost socially pernicious, can have

TABLE IV—CAPITAL EXPENDITURE ON FIXED ASSETS (£ Million)

TOTAL	851	631	1,482	890	697	1,577

some odd results. In judging last year's outturn of the national economy, for example, there is food for thought whether official encouragement of a time-lag between rising import prices and rising retail prices (at the expense of profits) did not lead to an undesirable diversion of the whole increment of production towards consumers—especially foreign consumers—and also to a dangerous fall in raw material stocks. It may be that much of the value of these annual national income statistics—wide as the margin of error contained in them necessarily is—will be found increasingly to be in the light that they throw on unexpected outturns of this sort. The statistics provide a check on the past—as well as raw material for the future—of economic planning.

CHROMIUM

THE only workable source of the element chromium is chromite, a compound of chromium, iron and oxygen mined in Russia, Africa and Turkey. Chromium is known everywhere as the plating on taps, hardware and motor fittings, but it has other and more important applications. Alloyed with steel, for example, it imparts superior strength and surface hardness, and it is from chromium that stainless steel derives its resistance to corrosion. As well as being the source of chromium, crude chromite ore is used to make heat-resisting firebricks and cements for the construction of furnaces. Chromium derives its name from the Greek "χρῶμα", meaning colour, because its compounds are almost always coloured. Known as chrome pigments, some of these—the chromates of lead, zinc and barium for example—are used extensively for colouring paints, linoleum, rubber and ceramics. Chromium sulphate is important in tanning, and potassium dichromate in the dyeing of wool, silk and leather. Other chromium compounds are used in photography and in the manufacture of safety matches. I.C.I. makes a complete range of chrome pigments for the paint, linoleum and rubber industries, besides employing chromium compounds as catalysts in the manufacture of aviation petrol and methanol, an industrial alcohol.

In industry felt means filters for gaskets, seals, washers, shock-absorbing mountings. Felt can be die-cut, punched, machined and even ground, and does not ravel, shred or fray.

Business Notes

Markets and the Budget

It was perhaps paradoxical that, on the morrow of a Budget that had raised distributed profits tax to 50 per cent and had given notice of the suspension of initial allowances in a year's time, the *Financial Times* index of ordinary shares should have risen by 2 full points to 124.6, its highest level for over three years. In part this performance reflected the City's relief that the Budget revealed no deliberately vicious Socialist drive against capital—and perhaps a failure to realise fully just how seriously industry's capital will eventually be affected by the measures now proposed. The relief helped to bring to the market some investment funds that the cautious had been holding back. More specifically, however, this post-budget strength of industrial equities apparently reflected a feeling that higher tax imposts—even on distributed profits—will come out in the wash of general inflation—at any rate for the not inconsiderable number of companies that would still have a large earnings cover for present ordinary dividends after providing for tax at the new rates. Apart from a few shares with a capital gearing that exposes them harshly to the increased tax, almost the only real falls on Wednesday were in brewery shares, for some investors had strangely expected a reduction in the beer duty. Shares hit by increased indirect taxation—such as entertainment shares and radio retailers—were marked down modestly at first but met little selling, while radio and television producers recovered fully from their initial mark-down on the thesis that purchase tax has been increased on their products only because rearmament should tend to keep their order books full. At the opening of business on Thursday the mood in the industrials market seemed a little more restrained than on Wednesday, but there was no sign of any substantial falls.

For the first hour of business on Wednesday, the gilt-edged market also seemed inclined to look the Budget squarely and firmly in the face, but, as the switch to industrials proceeded, it very naturally sent gilt-edged prices down. This downward movement seemed to have gathered a little more momentum by Thursday's opening, and, if the market is right in its apparent assumption that the Budget will still leave an uncovered inflationary gap, this tendency may continue for a time. The Chancellor's very mild observation in his Budget speech that rising interest rates had helped to damp down investment may be a sign that the Government has at last joined the ranks of those who do not regard this automatic (though imperfect) corrective to inflation with open disfavour—but it seems unlikely that it is much more than that.

* * *

The Future of Food Prices

The Chancellor's prudent decision to hold the bill for food subsidies at £410 million means that food prices will rise appreciably during the coming year. The Minister of Food is expected to announce shortly the increases he proposes to make in the retail prices of the rationed foods in order to keep within this ceiling. Quite substantial increases are inevitable, because Britain has recently agreed to pay more for both foreign and domestic food supplies. For example, it has been announced that a retrospective increase of 7½ per cent is to be paid for all Australian and New Zealand shipments of butter and cheese since last July. The price for Danish butter has also been increased by 7½ per cent and for Danish bacon from 5½ to 7½ per cent. A higher price is to be paid for both Commonwealth and foreign sugar. A fortnight ago the Minister of Agriculture announced higher prices to British farmers for home-produced foods,

while the Argentine meat negotiations, when and if they are concluded, will probably raise the price of meat by at least 20 per cent. Unfortunately, too, the increase in retail prices this year is likely to be proportionately greater than the increase in the Ministry's purchase prices; last year the Ministry was drawing on stocks that had been acquired relatively cheaply before devaluation. Against this, however, it must be remembered that the total cost of the food subsidies varies directly with consumption—and the Economic Survey's forecast that it will be possible to maintain food consumption in 1951 at about the same level as in 1950 may prove to have been too optimistic.

A fortnight ago the Minister of Food, in an address to the National Conference of Labour Women, said that it was likely that the increased cost of rationed and controlled foods would not amount to more than 8d. or 8½d. a week on each ration book in the coming fiscal year. This figure suggests an increased annual burden of about £85 million, which accords pretty well with the increased purchase prices already granted by the Ministry. Some £43½ million of the higher cost of home grown food is to be passed on to the consumer; the higher cost of imported butter and cheese will be about £6,500,000, based on last year's imports; meat and bacon will probably be about £20 million more and sugar about £7,000,000 more. These items together seem to account for £77 million of Mr Webb's implied figure of £85 million. The Minister has, of course, ample scope to juggle with the individual food subsidies and it is impossible to forecast on what foods increased prices will be passed through to the public. Bread has already gone up by ½d. for each 1½-lb loaf. Other increases that might be made would be to raise butter, cheese and meat by as much as 4d. a lb each, sugar by 1½d. a lb and potatoes by 2d. per lb. Such increases—and they are only examples of the wide scope available to the Ministry—would mean an increase in weekly expenditure of 7d. a person on present rations, so that there would still be need for further increases, equivalent to 1d. to 1½d. a week, to reach Mr Webb's figure. It is clear that the increases eventually decided upon will have to be spread over a fairly large number of foods and that they will have appreciable effect upon the cost-of-living index.

Ten per cent on Rail Freights

Mr Barnes was at pains to deny, when he recently sought the advice of the Transport Tribunal about the proposal to raise railway freight charges by 10 per cent, that he had reached any conclusions himself either about the increase or about the need for examination of the proposal in public hearings. Both matters, however, were foregone conclusions. The Tribunal proffered the advice that everybody—save possibly the Minister—had expected: the 10 per cent increase imposed from next Monday. So, without benefit of public examination, a major increase in British costs is brought into effect. How easy the process has become: the unions make their claim; one Minister tells the Railway Executive to meet it; a few weeks later, another Minister signs the order and sheds the load on to the consumer. There used to be an argument that if monopolies were inevitable they should be publicly owned. If there are any who still hold this view, they might reflect on this episode.

The Tribunal confirmed what was already clear—that the increase in rates will not be sufficient to meet the rise in railway costs in fact and in prospect and called for "substantial economies." It also revealed that a passenger charges scheme is in an advanced stage of preparation, with a freight

Wool Market Sags

The long-awaited break in the wool market occurred last week. On April 2nd, the very day that the new wool committee held its first meeting in Washington, wool prices in Australia fell by 10 per cent, primarily because there was no American buying. The United States is now the world's largest importer of raw wool, and the wool market, dominated in recent months by American demand, has proved no less responsive to the withdrawing of American support. The fall in prices in Australia was reflected in the London sales that opened last week. New Zealand crossbreds were the only types to resist and they showed a rise of up to 5 per cent. The hold-up in shipments from New Zealand because of the waterfront strike and the postponement of the New Zealand wool sales have created an acute dearth of these wools. On the opening days of this week, wool prices fell by as much as 30 per cent, but the market became noticeably firmer on Wednesday.

Any weakness in the wool market at this stage of the selling season is likely to be temporary. Wool consumption has declined in recent months, but annual consumption is still believed to be running beyond available supplies. Manufacturers are anxious about consumer resistance to higher retail prices for wool textiles when these come to reflect the greatly increased replacement costs of raw wool. But the facts about raw wool are inescapable; even if defence purposes required not a single bale of wool, supplies available for civilian consumption this year would be some 10 per cent less than in 1950.

No official news has come from Washington on the progress of the wool committee. It would be surprising if any concrete result could emerge. Schemes for international allocation of wool have been discussed many times during the past twelve months, and producing and consuming countries still persist in their widely divergent views. A further complication this time is the coming Australian election. The present Australian Government can hardly commit itself to any proposal that might vitally affect its woolgrowers, when it is not certain that it will be in office when the proposal has to be put in operation.

* * *

Rising Sterling Balances

The Balance of Payments White Paper was published too late to receive detailed treatment in last week's issue of *The Economist*, although it was possible to describe the general pattern of the external accounts in 1950 from statistics presented in the Economic Survey. The fuller information now available throws new light on such matters as the growth of the United Kingdom's sterling liabilities, the pattern of external capital transactions, and the details of payments cleared through the Intra-European Payments agreement and the European Payments Union. Official estimates of the size of the sterling balances are now compiled on a different basis from that previously adopted; holdings of United Kingdom securities by Colonial marketing boards and certain other official bodies are now included among these balances instead of being treated as investments in the United Kingdom. These changes in definition appear to have increased the estimate of United Kingdom sterling liabilities by nearly £100 million. The new compilation of these liabilities,

ties, showing the changes between December 31, 1945, and December 31, 1950, is as follows:

UK STERLING LIABILITIES
(£ Million)

At Dec. 31st:	1945	1946	1947	1948	1949	1950	
						June 30	Dec. 31
TO NON-STERLING AREA COUNTRIES:—							
Dollar area	36	35	21	24	36	37	85
Other W. Hemisphere...	164	213	235	135	80	88	45
OEEC countries	421	424	481	371	441	393	393
Other non-sterling countries	613	632	672	533	516	456	494
TOTAL — non-sterling area countries	1,234	1,304	1,309	1,063	1,073	1,004	1,023
TO STERLING AREA COUNTRIES:—							
Dependent overseas territories	447	495	502	554	583	646	752
Other sterling area countries	2,007	1,922	1,786	1,807	1,769	1,924	1,982
TOTAL — sterling area countries	2,545	2,417	2,288	2,361	2,352	2,570	2,734
TOTAL — STERLING LIABILITIES TO ALL COUNTRIES...	3,688	3,721	3,597	3,424	3,425	3,574	3,757
Non-territorial organisations	...	26	388	398	576	579	575
TOTAL	3,688	3,747	3,985	3,822	4,001	4,153	4,333

During the year 1950 the sterling liabilities to all countries rose by £332 million; there was a fall of £50 million in the balances held by non-sterling area countries and a rise of £382 million in the balances held by the sterling area. At the end of 1950 the sterling area held £2,734 million, or £280 million more than at the end of 1945. The dependent overseas territories showed the biggest proportional increase in their sterling holdings in 1950; their balances increased by £169 million as a result of the increase in prices of such commodities as tin, rubber and cocoa. It should be noted, however, that the net increase of £332 million in the sterling liabilities of the United Kingdom during 1950 was accompanied by a rise of £576 million in the gold and dollar reserves, an accumulation of £80 million by way of credit balances with EPU and an increase of £28 million in the Exchange Equalisation Account's holdings of non-dollar currencies. Thus the "cash reserves" of the sterling area banker went up by £684 million while his deposit liabilities increased by only £332 million; even allowing for the fact that this outturn was accompanied by a fall in certain other assets, such as stocks of food and raw materials, this was certainly a remarkable performance.

* * *

How the Surplus was Financed

The Balance of Payments White Paper also gives details of external investment transactions and of the financing of the surplus. The main categories in the investment and financing account are shown in the accompanying table.

INVESTMENT AND FINANCING ACCOUNT IN 1950
(£ Million)

	Dollar Area	Other Western Hemisphere	OEEC countries	Other non-sterling countries	Rest of sterling Area	Non-territorial organisations	TOTAL
GRANTS, ETC. (TO UK, —)	— 239	+ 2	+ 97	+ 1	...	...	— 139

Time for Eastern trade

Ten-fifteen in England and the London, Manchester and Liverpool offices of The Chartered Bank of India, Australia and China have already opened to the public. At New York the day's work has not yet begun. In the East at Colombo it is tea-time and in Hong Kong business is finished for another day. But wherever business men engaged in the Eastern trade may be, they will find at the nearest branch of The Chartered Bank up-to-the-minute information, skilled assistance and efficient banking services.

THE CHARTERED BANK OF INDIA, AUSTRALIA AND CHINA

(Incorporated by Royal Charter 1853)

Head Office: 38 Bishopsgate, London, E.C.2.
Manchester Branch: 52 Mosley Street, Manchester 2.
Liverpool Branch: 27 Derby House, Liverpool 2.
New York Agency: 65 Broadway, New York, 6.

Branches of the Bank are established at most centres of commercial importance throughout Southern and South-Eastern Asia and the Far East.

The full account shows how the current account deficits and surpluses with the separate regions were financed. It also shows transactions in sterling, gold and foreign exchange that involved transfers of United Kingdom assets and liabilities between the major geographical areas; it thus makes it possible to reconcile Britain's overall surplus of £229 million on current account with the rise in the gold and dollar reserves and the changes in net sterling liabilities and other overseas investment transactions.

An innovation in the White Paper is a group of tables analysing transactions under the Intra-Europeans Payments Agreement and, after July 1st, 1950, under the European Payments Union. These show that the United Kingdom ran a current account surplus of £156 million with OEEC countries in 1950 and that the rest of the sterling area ran a surplus of £148 million with them. This total surplus of £304 million, however, was partially offset by net sterling transfers of £31 million to OEEC countries from other non-sterling countries (such as the South American and Middle Eastern countries). In consequence, the net sterling surplus handled through IEPA and EPU amounted to £273 million. It will be seen that the United Kingdom itself achieved about half of this surplus; the other half was achieved by the rest of the sterling area. It is provisionally estimated that the net sterling surplus achieved through EPU fell to £5,000,000 in March (not \$5,000,000 as inadvertently stated in *The Economist* last week); this fall, from an average of between £20 and £30 million in the past eight months, seems more likely to be due to a fall in the United Kingdom's than in the overseas sterling area's share of the surplus.

* * *

Vauxhall Motors Profits

The chairman of Vauxhall Motors Limited has reported that in 1950 the company produced 47,025 passenger cars and 40,429 commercial vehicles, total output being 4 per cent higher than in 1949. Total net sales increased by 6 per cent. They amounted to £31,637,999, more than half being exports; 76 per cent of the cars and 63 per cent of the commercial vehicles produced were sold abroad. The company showed a trading profit of £4,532,410 and a net profit of £1,101,495 after allowing for taxation, depreciation, special tooling, and other charges. This net profit was 12 per cent lower than last year's figure of £1,249,254 although the trading profit was 11 per cent higher.

Mr Vansittart gave two reasons for the drop in net profit. First, the company had tried to keep its prices unchanged for as long as possible in the face of rising costs, so that the profit margin earned on each vehicle had tended to shrink. Secondly, the allowances for depreciation, special tooling and loan interest aggregated £1,404,506, compared with only £944,422 in 1949. The first half of the company's £10 million expansion programme had been completed during the year with the opening of an additional 19-acre plant and a new boiler house; nearly £1,000,000 was spent on tools for new models.

The erection and equipping of these new buildings has so far cost Vauxhall £5,000,000, and has been responsible for a drop of nearly £3,000,000 in the company's cash balance during the year. Expenditure on such a scale can be justified only by increased output, so that the 20 per cent reduction in sheet steel allocations has come at a particularly unfortunate time for the company. Limitations on production last year made it impossible to obtain full benefit from the new plant, in which all commercial vehicle production has been concentrated, and the new cut this year has forced the company to work a 4-day week since the beginning of February. It is one of those likely to receive army contracts this year, but these orders will not increase total output unless extra materials are allocated for them. Although such allocations have, in fact, been given to other motor manufacturers who have received army contracts,

general shortages could make it impossible to continue to do this in every case.

Controlling Rubber Exports

The so-called "special" rubber conference resumed its meeting in Rome this week. It first met in London last month, and was adjourned to allow governments to reconsider the problems of controlling exports and of providing long-term stability for the rubber market. It has reopened in a more optimistic setting. Since April 9th the Board of Trade has required licences for the export of natural rubber (including crêpe), latex and gutta-percha to all destinations other than the Commonwealth, the Irish Republic and the United States: Britain will thus be able to control the flow of supplies to Russia, China and other communist dominated countries. But before this control can be really effective, similar regulations must be introduced by those countries excepted from the order; otherwise a three-way trade could develop. Malaya, following closely on Britain's heels, put a similar order into operation on the same day, and the open general licences previously in operation have been withdrawn. Thus the problem of re-directing exports is at last being tackled, though it remains to be seen how effectively the new regulations can be enforced.

The second problem is more difficult. A system of multi-lateral long-term contracts covering a period of about five years has already been proposed, but the United States apparently feels that it cannot commit itself for such a long period. Rubber production in Indonesia is expanding rapidly and considerably adding to total world output. In the first quarter of this year Indonesian smallholder output reached an annual rate of 700,000 tons; this compares with a total smallholder production there last year of 516,000 tons and an estate production of 171,000 tons. World production of natural rubber this year, therefore, might reach 250,000 tons more than in 1950—a total of 2,100,000 tons. Such a large output could be easily absorbed by civilian consumption, defence requirements and purchases for stock at the present time, despite the expansion in American synthetic rubber production. But it might be extremely embarrassing when the armament drive subsides.

A meeting of the rubber study group is due to take place in Rome next Monday after the "special" conference has ended, but this appears to be a matter of routine. Questions of policy are clearly being dealt with by the conference; the study group will most probably be left its usual statistical task of forecasting trends in world production and consumption.

Experiment in Darlington

Patons and Baldwins' decision during the war to concentrate the productive capacity of its six knitting-wool mills in Yorkshire and Leicestershire under the roof of one vast new plant in Darlington ranks as one of the boldest ventures undertaken in the wool industry in recent years. The spinning plant now completed and almost fully equipped is the largest in the world for knitting wool; it is designed to employ 3,000 workers with an output of 15 million lb. a year; it brings together all the processes between the fleece and the packed, branded product. In detail, its departures from the industry's established practice are equally radical. The factory is a single-storey structure covering 34 acres of a 140-acre site, utterly unlike the multi-storey mills traditional in the industry since it first established itself on the steep banks of Yorkshire streams. It incorporates mechanical handling methods entirely new to the industry; its working atmosphere is constantly filtered and washed by air-conditioning plant that also controls heat and humidity; and

certain of the spinning and twisting machinery is of the new centrifugal type introduced in the wool industry since the war.

The location, selected partly at the instance of the Government, confronted the company with human as well as technical problems. Darlington is only a few miles outside Yorkshire, but its labour was untrained in wool spinning; many of the girls, who make up two-thirds of the factory's labour force, had never worked in any factory before, and there was none of that "inherited skill" the wool industry prizes. In recruiting the 2,000 workers now employed, Patons and Baldwins have had to cast their net fairly wide, organising a special transport service to fetch employees from Tees-side and other outlying districts; gathering the final thousand needed to bring the factory into full production by the end of this year may not be easy. But an elaborate "Training within Industry" scheme has already been extremely successful; in certain processes entirely fresh workers are more easy to train in correct methods. The company has brought only 150 operatives from the older mills that are gradually being closed down; already, in some sections, the new workers these have trained are achieving standards well above those normal in the West Riding. Provision of welfare and sports facilities has laid a foundation for good labour relations from the start.

Patons and Baldwins' experiment will be finally assessable (though parts of the Darlington factory have been working since December, 1947) in the course of years rather than months. The venture has cost roughly £7,000,000, far more than was expected at the outset, but the savings in labour resulting from mechanical handling and better layout of machinery have also been greater than was thought. Mr P. A. Wright, vice-chairman of the company, who was responsible for the planning of the Darlington plant, believes that rebuilding of this kind in a new area would probably not be economical for an individual mill in the wool industry;

and doubtfully so for a number of mills in the same concern engaged upon sectional work such as spinning or top-making. But for a group of mills concerned with the raw wool to the finished article, and consequently involved in an inevitable duplication of processes and stocks, concentration into one big unit may be a far sounder proposition.

Suez Canal Traffic Trends

Traffic through the Suez Canal in 1950 was the heaviest on record. No fewer than 11,751 ships passed through the Canal, totalling 81,786,000 tons net, compared with 10,420 vessels of 68,862,000 tons in 1949; and although the number of transits was only 12.8 per cent higher, the net tonnage was 18.8 per cent higher, indicating an increase in the average size of ships using the Canal. The average size did increase, in fact, from 6,609 tons in 1949 to 6,961 tons in 1950, while for tankers alone the increase in size was from 7,334 to 7,720 tons net. The predominance of tanker traffic was even more marked than in the previous year, accounting for 52,092,000 tons, or 63.7 per cent of the total. But it is notable that the proportion of tanker traffic to the total declined in the later months of the year, partly because of the opening of pipelines and partly because non-tanker shipments increased.

The total cargo shipped through the Canal was also a record in 1950, reaching 72,609,000 tons, compared with 61,055,000 tons in 1949. Northbound traffic increased from 48,027,000 tons to 60,468,000 tons, more than three times the prewar average, and this increase was mainly due to oil products, which accounted for 79 per cent of the northbound traffic. Kuwait for the first time was the principal country of origin, followed by Iran and Saudi Arabia, which was the principal exporter in 1949. Despite the opening of the Trans-Arabian pipeline in the last quarter of the year,

Keen of eye and deft of hand—

The Maltster

Only the best barley is suitable for making beer, but first the maltster converts it into malt—a job requiring his constant supervision. Here you see him turning the grain on the malthouse floor, where it is allowed to sprout before being fed to kilns for 'drying off.'

beer is best

Issued by the Brewers' Society, 42 Portman Square, London, W.1

Saudi Arabia's Canal traffic was 15 per cent greater than in 1949. The destination of oil traffic through the Canal showed little change, more than 20 per cent going to Great Britain, some 50 per cent to the rest of Europe, and about 16 per cent to North America.

An influence of considerable importance, in view of the expected decline in tanker traffic with the opening of the new pipelines, is the development of non-tanker traffic through the Canal. Every month since March, 1950, products other than oil have exceeded the prewar average, the annual increase amounting to more than 10 per cent. Unlike 1949, northbound traffic exceeded southbound, oil always excepted, although only by 8 per cent compared with the prewar average margin of 82 per cent. Total southbound traffic slightly declined during 1950, principally because of a drop in imports of salt to Japan and the falling off of grain imports to India through the Canal in the last half of the year; manufactured metal goods and cement, however, formed the principal cargoes. The increase in non-tanker cargoes in the northbound direction was due principally to increased American imports of manganese, zinc and rubber.

Gold Output in 1950

The Annual Bullion Review published by Messrs Samuel Montagu and Company contains the Union Corporation's customary annual estimates of world gold production. These estimates are as follows:

WORLD GOLD PRODUCTION (in thousands of fine ounces)			
	1948	1949	1950
Union of South Africa	11,585	11,705	11,653
Canada	3,530	4,113	4,400
USA	2,025	1,935	2,400
USSR	2,000	2,000	2,000
Australia	831	835	850
Gold Coast	672	677	630
Southern Rhodesia	514	523	510
Mexico	353	405	400
Colombia	353	353	405
Congo	300	334	350
Philippines	203	283	300
Korea	300	300	200
Chile	154	179	200
India	189	151	189
Brazil	157	180	180
Japan	70	130	120
Peru	111	112	110
Fiji	93	90	90
New Zealand	94	85	85
New Guinea	87	93	75
Sweden	75	75	75
Tanganyika	58	69	65
Elsewhere	815	757	652
World Total	24,633	25,500	25,000
British Empire	17,785	18,493	18,700
British Empire percentage	72.2	72.5	71.9
South African percentage	47.0	45.9	44.9

Estimated production in 1950 was 500,000 ounces higher than in 1949. The increased output of Canadian and the United States mines has more than offset declines elsewhere. The estimates for Soviet production are said to be purely nominal and may bear little relation to reality. In their comments on the future of gold prices Messrs Samuel Montagu seem to harbour few expectations either of an increase in the official price of gold or of an appreciable rise in the free market price. They suggest that "the attention of gold producers is likely to be focused more than ever on the premium prices obtainable in the free markets and . . . it is difficult to envisage a very much greater expansion of output which would absorb this potential increase. . . . Therefore unless continued inflation and very large losses of gold force a radical change in the present US gold policy, we do not envisage any material rise in free market prices." The recent experience of the market bears out this reasoning.

Shorter Notes

Last week's coal output from the mines amounted to 4,439,000 tons, which was the highest, apart from seasonal "bull" weeks, for more than ten years; so far this year 58,240,000 tons has been produced in fourteen weeks, which is some 1,250,000 tons higher than in 1950. The miners, therefore, are likely to come much nearer the Prime Minister's target of "three million tons extra" by the end of April than any observer outside the industry would have predicted when it was made. This lends justification to their decision last week to suspend Saturday work in the three summer months, and resume it in September. Saturday work at many pits is uneconomic, even apart from the effect it tends to have upon attendance during the week; and in the coming months the continued training of new recruits and better organisation underground should bring more miners forward to the coal-face out of the 14,000 who have entered the industry since the beginning of the year.

The price of cement was recently increased by 2s. a ton, bringing the price in the London area up to 84s. a ton; but this is still considerably lower than prices in other countries. The outcome of current wage negotiations in the industry is likely to lead to a further rise, so will the increase in railway freight charges. The price of cement bags is expected to go up from 13s. 6d. for each ton of cement to between 17s. 6d. and 18s.—this charge is included in the selling price of cement. The new Associated Portland plant at Shoreham is now in production and the prices in its delivery area, which includes parts of Wiltshire and Somerset, have risen by an average of 6s. a ton. A large proportion of this increase represents the difference in the cost of amortising the new plant, which cost about £2,500,000, compared with that of older plants, the costs of which previously set the price level for those areas.

Company Notes

Ford Motor.—The report for 1950 contains several points of special interest. Not least of these is the completion, since the last report, of the sale of European and Egyptian subsidiaries by Ford Investment Company to the American Ford Company. The Investment Company was consequently liquidated early in 1951, and its funds have been transferred to the parent company, whose financial resources have thus been substantially strengthened. The consolidated balance sheet shows that considerable progress has been made in connection with expansion and replacement of capital assets, net additions to which amounted to more than £3,369,000; plans for further substantial expenditure have also been made, the aggregate amount of which, not provided for in the accounts, is estimated at £3,221,000. The reserve for replacement of fixed assets, which a year ago stood at £2,000,000, has been increased to £6,543,517 by the transfer of £2,543,517 of excess depreciation dating from July 1, 1948, and of £2,000,000 appropriated from the profit and loss account. The directors' comment on this item in the balance sheet records that even so "the amount of this reserve is less than the estimated sum required to meet the excess ultimate cost of replacing fixed assets."

	Years to Dec. 31, 1949	1950
Consolidated earnings	6,000,300	11,643,282
Total income	6,295,672	11,762,368
Taxation	2,771,481	4,729,394
Depreciation	732,518	1,683,558
Ordinary dividend	495,000	618,750
	(10%)	(12½%)
Carry forward (parent)	1,937,689	258,274
Consolidated Bal. Sheet Analysis:		
Fixed assets, less depreciation	6,751,829	11,319,783
Net current assets	18,745,675	21,365,633
Stocks	7,684,378	7,991,420
Cash and tax res. certis.	12,397,230	20,600,494
Revenue reserves	2,158,537	4,106,000
Ordinary capital	9,000,000	9,000,000

The profit and loss account shows an increase of £5,612,982 to £11,643,282 in trading profit, this increase being largely due to continued development of the company's exports. Depreciation is increased by £951,040 to £1,683,558, of which £962,333 results from a change in the basis of computation. A contingencies reserve is inaugurated with an appropriation of £400,000 and the reserve for replacement of fixed assets (as stated above) receives £2,000,000 (£500,000). Employees' benefits are generously augmented to the amount of £1,200,000.

As for the future, the general strength of the company's finances augurs well. The chairman's recent statement that the 1950 profits are unlikely to be repeated in 1951 is associated with the introduction of new models. These changes have no doubt heightened the difficulties already caused by shortages of materials and components. To be fair, Ford ordinary shares should be judged neither by the spectacular figures for last year nor by the prospective fall in this year's earnings. There is nothing in the report that suggests any impairment of their long-term prospects.

At their present price of 48s. 9d. the ordinary shares show a gross yield of £5 2s. 6d. per cent.

Canadian Pacific.—Despite rising costs, a nine day stoppage due to a strike by non-operating employees and a lower volume of traffic, net income of the Canadian Pacific available for dividends on Ordinary stock and surplus amounted to \$44,478,000 last year or \$3.32 per share, compared with \$25,852,000 or \$1.93 in the previous year. This result was achieved partly by freight rate increases which became effective in April and June as a result of the final decisions

for a 20% increase by the Royal Commission on Transportation on the railways' 1948 application. But substantial savings brought about by improved efficiency and equipment (including installation of some diesel power and conversion of certain coal-burning locos to oil) were also a significant factor. Gross railway earnings rose \$15,324,594 to \$378,576,688, but working expenses fell by \$2,063,794, and the ratio of net to gross earnings rose from 5.7 per cent to 10 per cent. Substantial wage increases for the non-operating employees became effective from August 31, 1950, and on June 1st this year the 40-hour week will be introduced on the railways. The improvement in earnings due to the freight rate increase is thus threatened already, and the steadily rising cost of labour and materials has impelled the company, together with other Canadian Railways, to apply to the Board of Transport Commissioners for authority to make a further and immediate general increase in freight rates of 5% (10c. per ton on coal and coke and statutory increases on West Canadian grain) plus such additional percentage as may be necessary to cover the increase in operating expenses which will follow the inauguration of the 40-hour week.

The company is also requesting the Board to fix "a fair rate of return" on the net investment in railway property, submitting that such rate should not be less than 6½ per cent, and this should establish a rate base. The railway net earnings of \$38,020,357 last year represented 3½ per cent. But before ordinary stockholders get out their slide rules to work out what their earnings would be if this contention were to be granted, they would do well to recall the history of the Standard Rate conception in this country. In an end-1950 statement the President of the company referred to consciousness of "the great strides made by other forms of transport in the past two decades and of their improved competitive position."

The dividend rate for the year has been stepped up from 5 per cent to 6 per cent, i.e., \$1.50 on the \$25 shares. The apparent earnings rate is over 13 per cent, but stockholders will rightly regard this arithmetical surplus as less important than the course of the new application for an increase in freight rates.

British Aluminium.—One of the chief features of interest in the full British Aluminium report for 1950 (the preliminary figures were discussed in these notes last week) is the impact of the capital issues on the financial position. Of the £3,400,000 represented by the issue of 2,000,000 £1 ordinary at 34s., £2,000,000 had been received at the end of the year. Net current resources of the parent company at £5,206,468 actually increased by £2,200,000 after providing £90,000 for issue expenses and £737,000 for gross additions to fixed assets. With cash in hand at £1,304,873 and £1,400,000 received since the end of the year the company appears comfortably placed to handle the requirements of the expansion programme, outstanding contracts for which were estimated at £789,469 at the date of the balance sheet.

The accounts do not show directly how the volume of trading changed during the year. Stocks of metal, materials, etc., and sundry debtors at £6,763,010 are only some £370,000 up. Though aluminium prices have not risen greatly in the past year, the increase in these current items seems to indicate that higher prices rather than any substantial increase in the volume of trade may have accounted for the augment in trading profits from £1,292,622 to £1,780,150. It seems, therefore, that the main results of the expansion scheme have yet to be seen.

THE ENGLISH ASSOCIATION OF AMERICAN BOND AND SHARE HOLDERS, LIMITED

CONTINUED EXPANSION OF BUSINESS

The sixty-sixth annual general meeting of the English Association of American Bond and Share Holders, Limited, was held on April 12, 1951, at 5, Great Winchester Street, London, E.C., Mr J. F. A. Swanston, the chairman, presiding.

The secretary (Mr C. R. Hardy) having read the notice convening the meeting and the report of the auditors;

The chairman said: Gentlemen—unless any shareholder signifies to the contrary I will assume it to be the wish of the meeting that the annual report be taken as read. (Agreed.)

The comments I ventured to make, when I had the opportunity of addressing you a year ago, as to the inaccessibility of dollar stocks to the would-be British investor, apply with equal force at the present time. And until the situation permits of some relaxation in the present restrictions we cannot hope for any amelioration. There are, of course, quite a considerable number of Britons who held and still hold dollar stocks, which were not vested in the British Treasury. Many of these stocks have shown remarkable increases in both capital values and dividends, to the benefit of their owners and to the supply of dollars to the British Treasury, which latter factor is sometimes overlooked.

There have been many stock issues in America during 1950, sometimes carrying valuable subscription rights, which prompts me once again to mention the special certificates we issue against the original dollar certificates, which ensure that if the owner of such certificates is away or incapacitated his interests are looked after by this association. Our secretary will be happy to supply an explanatory leaflet.

We pay a tribute in our report to the work of our officers and staff, with which I am sure the shareholders would wish to be associated.

Our annual report calls for little comment from me, as it speaks for itself. You will have observed that our gross revenue from ordinary business shows an increase of £4,663 and that we continue to build up our general reserve. I would merely like to emphasise the fact that our revenue figures give little idea of the wide volume of our business, which is constantly being extended. It only remains for me, gentlemen, to proceed to the formal business and I now beg to move:

"That the report and statement of accounts for the year ended December 31, 1950, be received and adopted and that a final dividend of 10 per cent., namely £1 per share, be distributed making, with the interim dividend of 8s. per share, already distributed, a total of 14 per cent., less income tax, on the paid up capital of the company."

Mr Leslie W. Farrow, C.B.E., seconded the resolution and it was carried unanimously. The chairman proposed the re-election of Mr Leslie W. Farrow, C.B.E., the director retiring by rotation.

Mr Hubert Smithers, O.B.E., seconded the resolution and it was carried unanimously. A cordial vote of thanks was passed to the chairman which he suitably acknowledged.

The proceedings then terminated.

UPSONS LIMITED

(Dolcis Shoe Company)

CONTINUED EXPANSION

The thirty-first annual general meeting of Upsons Limited was held on April 12th in London, Mr T. N. Bird (the chairman), presiding.

The chairman, in the course of his speech, said: The accounts under consideration today cover the period of 13 months to January 31, 1951, and include two Januarys, a month not usually one of the most profitable.

I have the pleasure to report another period of expanding business. Unit sales of Dolcis shoes increased at home and in countries overseas. Eleven new branches have been opened. Our short experience of the new branches is satisfactory in every way and up to our expectations.

EXCLUSIVE DESIGNS

As you know, we enjoy a very considerable trade in ladies' footwear. Our studio has developed the most up-to-date ideas and has materially assisted our manufacturers in producing exclusive Dolcis designs. In addition we are showing a steady increase from year to year in the sales of Dolcis men's shoes. The new Dolcis store at 55-59, Oxford Street, London, exclusively for men's shoes, has been remarkably successful. Fretoze shoes for children have been continued on well established lines and an increase in turnover has been achieved.

In continuation of the energetic and progressive policy of the board and as a further effort in the export trade, we are planning to convey Dolcis shoes and Dolcis methods to Canada. A careful study of conditions in the Dominion has been made and steps are being taken to open later in the year two Dolcis shops in Toronto and another in the capital city—Ottawa. This is likely to be the basis of further developments there.

Since our accounts were prepared, the Chancellor has opened his Budget. The main provisions which affect us are the increase from 30 per cent. to 50 per cent. in Profits Tax on distributed profits and from 9s. to 9s. 6d. in the £ in the standard rate of income tax. I calculate that in a full year the extra Profits Tax on the basis of our present distribution will cost us net about £22,000. The extra 6d. on income tax will take about £15,000 in a full year.

ADVERSE EFFECT OF PURCHASE TAX

It is not within my province to criticise the wisdom or unwisdom of Budgetary policy beyond reminding you that Profits Tax, whether on distributed or undistributed profits, falls wholly on undistributed profits. Business requires profit for development and progress, and I am glad to notice that the Chancellor in his Budget Speech did not dissent from this view. I regret that he found himself unable to take a more courageous view about purchase tax, which we believe to be wrong in principle and which continues to have its adverse effect on our industry by discounting the value of craftsmanship and quality, while at the same time inflating prices in an unjust manner.

A promising start has been made for 1951. So much now depends on the influence on trade of political circumstances at home and abroad that one needs to be cautious rather than prophetic. I feel certain, however, that it will not be through any lack of effort on the part of the management and staff if the coming year is not as successful as last.

The report was adopted.

TRADE INDEMNITY COMPANY

INCREASINGLY VALUABLE OPERATIONS

MR C. H. FALLOON ON THE BUSINESS EXPANSION

The thirty-third ordinary general meeting of the Trade Indemnity Company Limited was held on April 5th in London.

Mr C. H. Falloon, the chairman, who presided, said:—

As you will have seen from the report, Mr R. M. Hamilton has resigned his position as a member of the board on his retirement from active business. I would like to take this opportunity of acknowledging the valuable support rendered by him to the company during his 13 years of service and to wish him many years of health and happiness in his retirement. In his place we welcome Mr H. T. Silversides, and we are also very pleased to have acquired the support of Mr A. C. Bull, Mr W. F. Gardner, and Mr L. J. Taylor, whose re-election I shall ask you in due course to confirm.

To turn now to the accounts, the 1948 underwriting account has been closed at the end of its third year with a favourable balance of £66,488, which has been transferred to profit and loss account.

The 1949 and 1950 underwriting accounts remain open and the balances of £86,388 and £69,774 respectively are carried forward. It is, of course, quite impossible at this stage to forecast the ultimate fate of these accounts, but, in the light of past experience, the balances carried forward can be regarded as satisfactory. An interesting feature is the continued progress made in our activities as demonstrated by a gross premium income for the year 1948 of £203,925, as compared with £312,062 for 1949 and £448,733 for 1950.

Rents, salaries, and other charges have risen from £51,540 in 1949 to £68,687 in 1950. The rise is not unreasonable in view of our larger turnover, and, of course, some increase is inevitable with a rapidly expanding business.

As regards the profit and loss account, you will have noticed that we made a profit of £21,647 on realisation of investments. In view of the uncertainties of today we have thought it prudent to transfer £20,000 of this to the contingency reserve, bringing that reserve up to £70,000. We have also written off the whole initial expenditure of £7,255 on the lease of our new office premises at Palmerston House, 51, Bishopsgate. This will leave an available balance of £186,284, out of which we recommend the payment of a dividend of 10 per cent., less tax, amounting to £13,750, leaving £172,534 to be carried forward.

PROPOSED CAPITAL INCREASE

Although the point falls to be dealt with at an extraordinary general meeting immediately following this meeting, it may not be out of place to mention the proposal to increase the company's capital to £300,000 by the creation of 50,000 fully paid £1 shares. If the proposed resolutions are passed they would reduce the carry-forward of £172,534 to £122,534.

I think we can claim that the progress of the company in 1950 has been satisfactory and that our operations are making an increasingly valuable contribution to the country's trade. It does, however, bring with it many serious problems for us. In the last 12 months the cost of basic materials used in industry has more than doubled. The Board of Trade index for 1950, based on 1930 at 100, gave the cost as 320. In February, 1951, it was 661.1. At the top of the list was wool, which has risen from 388.1 to 1,005. Obviously these price increases

have created a very serious financial problem for merchants and manufacturers who in 12 years of penal taxation have not been able to build up their capital resources at the rate required to maintain normal safety factors. So long as prices continue to rise and the spiral of inflation remains unbroken the danger of a major catastrophe is obscured, but the possibility is there nevertheless and we are watching the position most carefully.

Arising out of this difficulty of finance, we have been asked from time to time whether we would consider issuing marginal guarantees to enable traders to obtain larger loans and advances against goods in transit and in stock, and so far we have refused. In our opinion the need for these marginal guarantees only arises where a concern is over-trading, and, although that applies to most businesses judged by pre-war standards, we maintain it is a problem for the banks rather than for us.

One difficulty facing the merchant or manufacturer to-day is that his customers require more time to pay for their goods and he is called upon to grant credits beyond limits which he would have considered justified a few years ago. He is extended himself and he knows that, if he incurs a bad debt it may be of a size to cripple or destroy him. Accordingly, he is more than ever inclined to turn to us for protection and, what is equally important, for guidance. This, as much as anything, is the explanation of our expanding activities. Whilst we welcome

the increased interest in credit insurance which circumstances have helped to arouse, we, too, are somewhat concerned at the size of the credits we are called upon to insure, and it would be foolish to lose sight of the growing strain and reduced safety factors to which I have referred earlier on. However, as I have said before, we are fully alive to the position generally.

Before I close my remarks I would like to pay tribute to the work done by Mr. Patrick and his staff. The rapid increase in our business, combined with the problems brought by inflation, has made a very difficult year for them all. They have, however, responded loyally to the call upon them and are to be congratulated upon the excellent results they have produced.

The report and accounts were adopted.

TELEGRAPH CONSTRUCTION AND MAINTENANCE COMPANY, LIMITED

FURTHER PROGRESS

The eighty-seventh annual general meeting of this company was held on April 10th in London, The Rt. Hon. Lord Colgrain, the chairman, presiding.

The following is an extract from his circulated statement for 1950:

The company has had another successful year. The year under review has been a very active one, while the trading results of our subsidiary and associated companies have been both satisfactory and encouraging.

The balance of trading account £307,408 shows an increase of £12,601 over that of last year. The net profit is £160,924. The board recommend a final dividend of 5 per cent. and propose to augment it by distributing the 1 per cent. on issued capital reserved last year, in "Revenue reserves and undistributed profits."

The metals division made an excellent contribution to the trading results and has started the new year with a good order book. I am quite confident of its ability to assist in the rearmament programme, given adequate supplies of non-ferrous metals. Our high frequency and communication cable departments have also had a satisfactory year and been reorganised to some extent to meet changes in the type of business. Exports have increased and there is every reason to look forward to a good year.

Our associated company, Submarine Cables Limited, is owned equally with Siemens Brothers & Company Limited. The amount of submarine cable manufactured in our works during the year has been a record, both in volume and value, since the formation of the company in 1935. Its present order book is large and its future prospects excellent.

The report was adopted.

NOTICES

UNIVERSITY OF BIRMINGHAM

DEPARTMENT OF HISTORY

Applications are invited for the post of Lecturer (Grade III) in Modern History. Salary within the range £400-£500 p.a. Other things being equal, specialist in 17th Century European History preferred. Applications should be sent to the undersigned, from whom further particulars may be obtained, not later than May 7, 1951.

C. G. BURTON, Secretary.
The University, Birmingham, 3. March, 1951.

OVERSEAS APPOINTMENT

Large Group of Companies (Engineering) have a vacancy for an Assistant Office Manager in Pakistan. Training will be provided in this country and passage out and back for leave after three years will be paid. Applicants should be unmarried and aged under 30. They should have reached a good educational standard and have had some sound commercial or engineering experience. Salary range: Pakistani Rs. 1,000/- per month, rising by Rs. 100/- to Rs. 1,300/- per month gross, plus certain allowances. The position is pensionable. Apply to Box 618, giving details of age, education, experience, etc.

AN ADVERTISING ORGANISATION, such as our own, owes its success and reputation to creating, in turn, success and reputation for its clients—with economy. If you are not entirely satisfied with your own advertising, we believe that our experience, facilities and director level co-operation could more efficiently progress your purpose. We shall be happy to be of service to you.—Townend-Smith Limited, Advertising, 40-41, Conduit Street, London, W.1. REGENT 2690.

A DIRECTOR OF RESEARCH is required to become Head of the Research Organisation of a leading Group of Plantation Companies in Malaya. This key post calls for a Scientist with a general training, of which the emphasis is towards Chemistry, Soils, and Plant Physiology. It offers exceptional scope for personal direction and initiation of research of the first importance to industries which are vital to the economy of the sterling area. It will, accordingly, be highly remunerated. Suitably qualified candidates are requested to write in confidence with full details of career and qualifications to Box 816, Dorland Advertising, 18-20, Regent Street, S.W.1.

TRAINEE Personnel Officer (female) required by well-known fashion house. Applicants should be between the ages of 21 and 30 and must be prepared to work anywhere in England. Social Science Diploma, or Personnel Management Course an advantage. Apply in writing with full details of qualifications to Box 626.

PETROCHEMICALS LIMITED has outstanding vacancy in its Export Department for senior Sales Executive. The appointment is at London Head Office. Candidates should preferably be not more than 40 and have sound technical background in general chemical or allied industry. Good knowledge of French and/or Italian and/or German essential (in that order of preference) as well as previous first-class experience of export selling. Salary to successful candidate will be commensurate with the responsible nature of the appointment. Generous non-contributory Staff Assurance Scheme. Apply in strict confidence, giving full details of age, experience, etc., to Export Manager, Petrochemicals Limited, 170 Piccadilly, W.1.

CHARTERED SECRETARY (37) with first-class commercial experience seeks administrative appointment with substantial prospects. The post which is sought would offer scope for enthusiasm and initiative with the possibility of development into a top ranking executive within a few years. Initial salary is secondary to the prospects attached to the post.—Box 613.

BER-LINE to Austria. Conducted parties Tyrol, Salzburg, Vienna: 154 days from £25; no night travel. Dr. Beer, 154, Westbourne Grove, W.11.

THE UNIVERSITY OF MANCHESTER

RESEARCH STUDENTSHIPS IN ECONOMIC AND SOCIAL STUDIES

Applications are invited for the above studentships. The studentships are of the value of up to £300 per annum, tenable for one year in the first instance, but renewable. Candidates must, at the date of election, hold the degree of Bachelor or Master of this or any other approved University. Regulations governing the award may be obtained from the Registrar, the University, Manchester, 13, to whom all applications should be sent not later than July 15, 1951.

THE UNIVERSITY OF LEEDS

DEPARTMENT OF ECONOMICS AND COMMERCE

Applications are invited for appointment as Lecturer or Assistant Lecturer in Economic History. Salary scale £550-£50-£1,100 for Lecturer, £450-£25-£500 for Assistant Lecturer. Candidates, who should have had experience of research in Economic History, will be required to undertake and supervise work on the history of the wool textile and other industries in the West Riding. Applications should reach the Registrar, The University, Leeds, 2 (from whom further particulars may be obtained), not later than May 21, 1951.

INTELLIGENT YOUNG MAN, University scholar, Hons. B.A., B.Sc., with interest in economics and commerce, requires progressive post. Good salary important. Not afraid of hard work.—Replies to Box 619.

SALZBURG SEMINAR IN AMERICAN STUDIES—Schloss Leopoldsdorf Austria. Summer sessions: May 1st-30th, June 5th-July 3rd, July 17th-August 30th. Scholarships offered for courses in American literature, philosophy, politics, contemporary social and economic theory and practice in America. Extensive knowledge of these subjects not essential, but candidates must be able to show that the course at Salzburg bears some definite relation to their work. Special consideration given to those engaged in teaching, public life or creative work, and to research students. For application forms and further details write to: Education Secretary, International Student Service, 59, Gloucester Place, W.1.

SCOTSMAN, having wide secretarial and business experience, at present employed in senior executive post in Calcutta, and whose present contract shortly expires, seeks responsible administrative or secretarial post in the U.K. Highest references.—Write Box Z.X.486, Deacon's Advertising, 36, Leadenhall Street, E.C.3.

WHAT IS THE AMERICAN POLICY on Soviet expansion, the Far East, the hydrogen bomb? A booklet, "Our Foreign Policy," published at President Truman's request, covering these and other vitally important problems, is now available here.—Write or telephone for a FREE copy to: United States Information Service, Dept. 6, 6, Grosvenor Square, London, W.1. (GRO 9000—Ext. 729).

PERSON REQUIRED to fill vacancy in the Statistics Department of progressive Company. Essential qualifications are: Aptitude for figure work; keen student of economics; ability to work on own initiative. Write, stating salary required.—Box 622.

GENERAL MANAGER, with administrative ability, is required to run a plywood factory, sawmills, drying kilns, wharves and storage yards in Home Counties, directly responsible to the Group's Managing Director and Assistant Managing Director. He must have experience of factory management and movement of material, and some engineering knowledge, age 35-40. First-class prospects for outstanding applicant.—Write, giving qualifications, age and experience, to William Mallinson & Sons, Ltd., 130-150, Hackney Road, London, E.2.

OFFICERS & EXECUTIVES LOAN CO., LTD., 6, Chandos Street, W.1. Personal Loans from £50.—Langham 6714.

AGGREGATE ASSETS
at 31st March 1950.
£102,585,433.

Established nearly 90 years.

1, Queen Victoria St., E.C.4
O. M. Samuel, Manager.

Head Office: WELLINGTON, N.Z.
R. D. Moore, General Manager.

REFUGE

ASSURANCE COMPANY LIMITED
CHIEF OFFICE
OXFORD STREET MANCHESTER 1

THE REFUGE
WILL SAFEGUARD THE FUTURE

NATIONAL COAL BOARD—EAST MIDLANDS DIVISION
ECONOMIC STATISTICIAN

Applications are invited for the position of Economic Statistician in the East Midlands Division. The successful applicant must have considerable skill in sifting statistical data and in higher statistical analysis. Salary will be in accordance with qualifications and experience of the successful applicant. Applications, giving full details of age, experience and qualifications should be addressed, not later than fourteen days after publication of this advertisement, to: The Secretary, National Coal Board, East Midlands Division, Sherwood Lodge, Arnold, nr. Nottingham. Envelopes to be marked "S.V.72."

RALLI BROTHERS LIMITED

Ralli Brothers Limited announce that an offer for sale to the Indian Public is being made of shares in their Indian Subsidiary, Rallis India Limited, as follows:—115,000 Ordinary shares of Rupees 100 each and 65,000 6 per cent. Taxable Cumulative Preference shares of Rupees 100 each. The Ordinary shares will be offered at Rupees 115 and the Preference shares at par. If the offer is fully taken up it will mean that the voting control of Rallis India Limited will pass into the hands of the Indian Public. Application lists will open on April 23, 1951.

PRODUCTION Executive. A large light Engineering Works on the outskirts of Coventry has a vacancy for a Production Executive who can show evidence of outstanding ability in the application of modern management and also of having achieved results as a higher production executive. The position is intended to be progressive and the successful applicant must have had a comprehensive apprenticeship, have high technical qualifications, a history of continuous promotion on the production side and preferably be between 35 and 45 years of age. The salary will not be less than £80 per month with participation in profit sharing and pension schemes. Application, which will be treated as confidential, must state age, salary required, qualifications and chronological statement of experience and appointments held.—Box 609.

AMERICA—Transportation only £50, £65, £83, £99 return. Sailings s.s. *Charlton Star* chartered by The Open Road, Inc. Rotterdam, Southampton, Montreal, from May to October. Write International Travel and Study Commission, 2, Littlegate, Oxford, for details.

FIRST-CLASS SECRETARY (male) for Managing Director of West End wholesale fashion house. Must be of good appearance and capable of dealing with correspondence. Write Box 2961, George Cuming Ltd., 35, Davies Street, W.1.

INFORMATION Bulletins. Journals of Societies or Institutions: editing, design, layout and finalisation of text for printer. Moderate fees. Inquiries from Embassies, literary, social and industrial bodies.—Box 611.

ADVERTISING is the artillery of a well-co-ordinated sales force. Whether you are planning a well-timed mailing shot or a full-scale advertising campaign, it is sound strategy to begin by consulting Samson Clark & Co., Ltd., 57-61, Mortimer Street, London, W.1. MUSEUM 5050.

Postal Tuition for B.Sc.ECON.

The London University B.Sc. Econ. Degree is a valuable qualification for statistical, research, and welfare work in commerce and industry, and for teaching or administrative posts under Education authorities, etc. The degree is open to all without University residence. You may prepare for the three examinations at home under the experienced guidance of Wolsey Hall (est. 1894): fees are reasonable, and may be paid by instalments, if desired. Prospectus from the Director of Studies, Department P17.

WOLSEY HALL, OXFORD

BANK OF SCOTLAND

Constituted by Act of Parliament 1695

Labour without Bevin

THE valedictions on Ernest Bevin as Foreign Secretary were said in these columns five weeks ago. Nothing that has happened since disturbs the judgments then made. His achievement was monumental and his death removes a great figure from the English scene. It is a tribute to the greatness of the man that he leaves so large a vacuum in his own party and his own Government. His death and the retirement of Sir Stafford Cripps six months ago have removed from the Government the two architects of policy for Labour in power. It was Mr Bevin first, and Sir Stafford after 1947, who fashioned from the raw aspirations, the ideals and the untested theories of 1945 measures that took account of the real nature of the contemporary world.

The social legislation of the Labour Government has never been an issue of real political dispute: nationalisation quickly showed itself to be of quite subordinate importance. The critical postwar issues lay in the fields of foreign affairs and economic policy, and to both of these Labour came emotionally and intellectually unprepared. It is to Mr Attlee's great credit that he gave the utmost freedom in these matters to the two ablest members of his cabinet, to the men who responded to unexpected situations with new ideas—new, at least, to the Labour party. He bent much of his own energy to ensuring that the rest of Government policy hampered them as little as possible; if there was anyone who generally had the last word over the whole range of cabinet action it was either Mr Bevin or Sir Stafford. One or the other was dominant at different times according to whether it was foreign affairs or economic policy that imposed the most pressing needs, and before devaluation in 1949 they sailed to Washington together. The arrangement was not ideal, but in the circumstances of the Labour government from 1945 to 1950 it worked better than anything else could have done; in conception and in execution it demonstrated both the shrewdness of Mr Attlee's statesmanship and the modesty of his personality.

The ill-health of Mr Bevin and Sir Stafford has not been the reason for the Government's mental and moral collapse during the past six months in face of the problems of rearmament. The fundamental causes—of which the chief is simply the narrowness of Labour's majority—would still have been at work if both men had remained in office and in full vigour. But certainly the collapse would have been less sudden and less complete; it would have done far less harm to the Labour party and to the country. What is to happen now that even the sense of Mr Bevin's presence—a sense so important both to Mr Attlee personally and to many sections of the Labour movement—has gone?

To answer this question in terms of the balance between Right and Left, of the possibilities of a split in the Labour party, would be a misleading simplification. It could hardly have been entertained by any serious politician if Mr Bevin's death had not coincided with the duststorm raised by Mr Bevin's grotesque tantrums about the

Budget. Neither Mr Bevin nor Sir Stafford Cripps belonged by temperament and intellect to the Right wing of the Labour movement in the same way as, say, Mr Morrison and Mr Ede. But their work of devising a Labour policy for the real world brought them into conflict with the sections of the party that embodied the spirit expressed by one of Mr T. S. Eliot's choruses: "We must insist that the world is what we have always taken it to be." Most of the romantics were, and remain, on the Left of the party. By taking power from them Mr Bevin and Sir Stafford played the main part in establishing the present leadership of the Right wing. The fact that numerically it is stronger than ever before was shown last week by Mr Bevin's failure to win support for an active demonstration against the Budget.

The paradox of the Government's present situation is that, just when the relative power of the Right wing seems more firmly established, it has lost the two personalities who gave it a policy and won for it the confidence of the trade unions and of middle opinion in the country as a whole. Unquestionably the voice of the Right wing will now be less authoritative both inside and outside the party. But political argument alone never carried the day. There is no reason to suppose that Mr Attlee will now be compelled to yield to the Left on issues that Mr Bevin's help would have enabled him to defend. Still less is there reason to expect an open break between the two sections of the party. Marked differences of opinion capable of producing a split have existed in the Labour party since 1945, as they have often existed in other parties. But the intellectual grounds for a split become politically relevant only when there is added an occasion—an issue that puts an abnormal strain on normal loyalties—and a man who can see in leadership of the rebels an opportunity to gain power either for himself or for a cause. The only man who could conceivably split the Labour party is Mr Bevin: and it is very hard indeed to imagine his doing it at a time when the party as a whole is weak and the fraction of it that would follow him into the wilderness is small.

Mr Bevin's qualities were never those of the expert paperer-over of cracks, and his loss does not make the Labour government more likely to break up as a result of its internal feuds. The effects will be slower, though hardly less damaging. A government without Bevin will command less respect in the country. It will have less grip on the fundamentals of politics. Disagreements falling far short of an open split will be more thoroughly ventilated in public. Mr Attlee will have much more difficulty, not perhaps in holding his Ministers together—for there is no one who can desert him and profit thereby—but in getting them to work as a team. Mr Wilson's aberration a few weeks ago in stopping negotiations with industry about the revision of prices was an example of the sort of trouble that is likely to increase.

These effects can easily react to strengthen each other. What had already begun, and what is now more likely to proceed at an increasing pace, is a galloping paralysis of government. There are no new men with the power to arrest such a decline, no one with the constructive abilities in policy-making of either Mr Bevin or Sir Stafford Cripps alone. The qualities both of Mr Attlee and of Mr Morrison are great, but they do not lie in that direction. Nor do the other two members of the new quartet—Mr Ede and Mr Gaitskell—fill the missing part, though both have deserved much praise for

their skill, patience and fairness in recent weeks. The Labour party has run short not so much of competent Ministers—though those are hardly plentiful—but of commanding politicians, of men who can frame a policy and persuade the public to support it. At any rate until devaluation, Sir Stafford Cripps was of such stature. As far as his health allowed, Mr Bevin had it to the end. As Foreign Secretary he earned in remarkable measure the confidence of all parties; but, above all, he was the man who could carry the trade unions with him and with the Government. The greatest of all the Labour party's handicaps is now the lack of a politician from the trade unions. Perhaps it is this that, on the longer view, most seriously endangers the stability of the British Labour movement. The character of the political party has been determined by the unions from which it has drawn its strength. It cannot increasingly draw its leadership from elsewhere without a real risk of disintegration—and, perhaps even more important, of a sharp change in the character of union leadership. The responsibility for supporting Government policies within the industrial movement now falls directly on the union leaders, instead of on former leaders who have become politicians. Can the unions provide now, and in the future, men willing and able to take such responsibility?

These, however, are remoter questions that cannot be expected to occupy Mr Attlee's attention now. The immediate fact is that the loss of Mr Bevin's wisdom and authority surely destroys what little chance there was of restoring administrative vigour and competence to the Government; it makes the framing of policies adequate to take this country safely through the next two years more than ever unlikely; it makes the task of re-establishing public confidence in the Government next to impossible. These are not judgments that any Prime Minister can recognise as final, however plainly many of his supporters and some of his Ministers may show implicit acceptance of them by their actions. But it is surely apparent that the longer Labour clings to office the more crushing is the eventual defeat at the polls that it risks.

Good government in the present situation, in the present mood of electioneering and with the present balance of Parliamentary power, is impossible for any party. Mr Attlee no doubt sincerely believes, as it is the politician's job to believe, that good government cannot in any circumstances come from the other party. But even on that assumption the right policy cannot be to go on trying to govern on the present terms. The result, by Mr Attlee's own standards of judgment, would be to waste the abilities of the party that could govern well and possibly to lose for it so much support that a sweeping electoral victory will put the other party securely in office for five years. In Mr Attlee's mind, the sort of Conservative government that would be really disastrous for the country is one commanding a very large parliamentary majority. This is precisely the result that Labour is likely to secure by holding on to power in circumstances in which it is most unlikely to regain lost strength. Is Mr Attlee really prepared to contemplate such grave risks? Is it not better to hold a general election soon, while the stretch of Conservative government that may follow is more likely to be short in duration and moderate in power? It is very difficult to believe that Mr Attlee can resist this conclusion beyond the autumn, and possible to question whether he can resist it until the holidays begin.

New Deal for Persian Oil

IF passions and policies in Persia are now cooling down, much of the credit for the improvement goes to Mr Morrison. His firm statement to the House on Friday of last week, when it was clear that British lives were in grave danger and the Abadan oil refinery was slowing down to a standstill, made its mark in Teheran. The forces of order were strengthened and those who started the campaign for nationalisation of the petroleum industry found themselves in riotous alliance with the Communist-led Tudeh party, associated with violence and strikes, and moving uneasily at the heart of a new centre of international tension—for not only the Russians but all the Middle East peoples are watching the crisis. Mr Morrison clarified the issue immediately; by his obvious determination to defend this country's most valuable asset overseas, and by his implied warning that negotiation about petroleum cannot take place under threat of mob violence, he separated the problem of maintaining order from the problem of the Anglo-Iranian Oil Company—which is to negotiate with Teheran some way of dealing with the demand for what is called "nationalisation."

Fortunately only a small proportion of the 37,000 Persians employed in the great refineries of Abadan and the oil port of Bandar Mashur took any active part in the rioting. They were mainly the privileged students and apprentices to whom the company is giving free education and technical training such as they would obtain nowhere else in Persia. They, and the Communist agitators to whom the whole oil dispute has been a glorious opportunity, managed to bring on to the streets a mob of several thousands of excited and angry people, which the Persian police and the few available troops were able eventually to bring under control. Thanks to considerable reinforcements of troops and an unexpected show of authority by the Persian Government, further serious outbreaks have been prevented. But the division between order and anarchy is so terribly thin in Persia, the administration so unbelievably inefficient and corrupt by any standards, even those of the Middle East, that no one can be sure that another emergency, however slight, might not cause total collapse. How long, for example, will policemen and soldiers, many of whom have received no pay for weeks, continue to oppose their countrymen? For, if the crowds believe not only the incessant Tudeh propaganda but also the incessant outpourings of their Deputies and leaders, they are fighting to rid Persia of the foreigners who are the cause of all their country's vast misery.

It is in this inefficiency and corruption that the seeds of the present troubles are to be found. No Persian with any common sense really believes that the Anglo-Iranian company—the one solid and stable element in Persian public life—is responsible for the horrifying poverty of the masses. On the contrary, it has followed a very generous and enlightened policy of social improvement and education. Nor does he believe that to seize the company's installations and property, and turn them over to a government which has proved totally unable to run its own affairs, will do anything to relieve that poverty. Yet to the leading Persian nationalists—who are both corrupt and hysterical, without constructive policies or ideas—Anglo-Iranian is a truly monumental scapegoat. By attacking it they can distract attention from their own failure to provide anything like the simple and fundamental amenities of modern life out of the revenues it has furnished to the state. This spirit is not the early nationalism of Saad Zaghlul in Egypt or of

Michael Collins in Eire; for Persia has been under foreign domination in modern times for only a short period during the world war. It is the desire for power and prestige of a small group of politicians allied with the crowd's resentment against the progressive foreigner and the backward state of its own country—all focussed on this one issue of "nationalising" petroleum.

The fact has to be faced that "nationalisation" means, as at present stated, nothing more or less than expropriation—that is to say seizure of an enterprise in which over £350 million of British capital has been sunk. Yet it is absolutely certain that the Persian Government could not run the enterprise without extensive foreign help. If it were to persist in its aim, it would be the end not only of the oil company but of the Persian economy; for it is clear that not for decades would Persians be able to operate a concern of the magnitude and international ramifications of this gigantic oil extracting, refining and marketing organisation. And without the already great, but potentially even larger, revenue it draws from Anglo-Iranian, the Persian Government would be without a regular reliable income. Internal collapse would be dangerous in any country; how much more far-reaching would the results be for a country which is next-door neighbour to a great power whose shortage of oil is one of its chief economic weaknesses—the Soviet Union.

Important and obvious though these facts are—and the company has relied too much on them in the past—a new approach to the problem has to be made. A solution, practical, equitable and peaceful, must be found.

Already four of the eight weeks that were asked for by the Majlis commission which is considering ways of "nationalising" petroleum have passed. Whoever first puts up a reasonable proposal will gain the initiative in negotiation. Ideas are needed; and they should be ideas that can be applied equally well to the similar problems that arise wherever a great western commercial interest has to come to terms with the growing national pride and ambition of the government to which it owes its opportunities. Persia *versus* the Anglo-Iranian Oil Company is a test case which will set precedents for other great companies. (That is the main reason why there have been Anglo-American consultations in Washington.) And it is an opportunity for the British to show political imagination and administrative ingenuity. In Rumania, on the Danube, in eastern Germany, in Manchuria, the Russians have settled the problem in their own drastic manner—the Communist-imperialist solution of the "joint company." That is not the British way with independent nations; but a British way must be found.

What are the essential facts? First, the oil belongs to Persia. Secondly, this oil has been found, extracted, refined and sold thanks entirely to British skill, initiative, labour and money. Thirdly, the Persians could not possibly operate the company themselves; Anglo-Iranian are training young Persians and indeed employ far more in skilled and senior posts than is generally known; but the replacement of British by Persian staff is not yet possible. Fourthly, for internal reasons the Persian Government must be more closely associated with the oil operations—and must obtain more money from them. Into what kind of a solution can these facts be fitted? A simple and practical plan might be to form a new and purely Persian company—let it be called, say, the Imperial Iranian Oil Company—which would acquire the sole rights to the oil from Anglo-Iranian's present oilfields and would own and operate the wells, pumping stations and pipelines. The role of the Anglo-Iranian Company would be to refine the oil and market it—in fact deal with all the essential international operations. The Persian Government would ultimately obtain its revenue not from royalties on the oil extracted, as at present, but by selling its own nationalised oil to the AIOC. But, as neither the proposed new company nor indeed the Persian Government would have sufficient funds to compensate Anglo-Iranian for the loss of its concession and at least £300 million of equipment, compensation would be paid for some years to come in oil, with an additional agreement that

the highly trained British staff should work for the new Persian company during the period that compensation is being paid. The present process of "Persianisation" would continue and would in fact be speeded up as much as possible, especially by taking Persian directors on to the board of AIOC, until the entire oil business would be in Persian hands. An agreement on these lines should not be difficult to negotiate, given good will on both sides. But in view of the probability that such an agreement would become a prototype for other agreements in other parts of the world, consultation between the British and American governments should be viewed with neither resentment nor alarm in Persia.

On one point there can be no doubt: straight expropriation is unacceptable and it is useless to believe that Persian National feeling would allow proper money compensation over a long period. Expropriation would make it impossible to secure capital for those further developments in the oil fields on which Persia's future prosperity and power depend. Likewise it should be clear that it is for the Majlis commission to say what its two houses meant by "nationalisation" when they voted for it five weeks ago. It can be argued that it would be in the Persian interest to be content with nothing more than a new scheme for the sharing of profits on the "fifty-fifty" Saudi Arabian model, but nationalist feeling may now have been brought to the pitch where no purely commercial solution can be accepted by the government. If that be so, then sooner or later the company, with the support of the British Government, must propose a solution which meets "national aspirations," is technically and financially practicable, and safeguards a vital British interest based on a freely negotiated agreement which has another 40 years to run.

Some will call such a policy appeasement. Yet the British, as Teheran well knows, can negotiate from great strength in this matter; and any effective and obviously fair solution that is offered will receive American support.

If talk of "nationalisation" in its loudest form can be disregarded, national pride cannot; and there are obvious strategic as well as commercial reasons why the British should take the lead in the pacification of oil politics in the Middle East. The American interest in Persian oil is no more than marginal, and the Persians have stated officially that they have no intention of giving the oil to any other country or of depriving Britain of its use. The problem is therefore one for London and Teheran to settle; and the sooner Communist intimidation in Abadan can be broken, the sooner will the way be open to a new agreement and an important act of British policy.

Goodbye to All GATT

THE tariff and trade conference at Torquay, which opened on September 28th last year, is due to close this week-end amid the oratory and ceremonial familiar on such occasions. If, as is proposed, trees are to be planted, a "Gattery" of weeping willows would be appropriate. In the ceremonies and speechmaking it will not be difficult to detect a note of disappointment and frustration. The Torquay Conference has admittedly yielded fair results. Some 150 separate tariff negotiations have been completed; the tariff concessions made at previous conferences, at Geneva in 1947 and at Annecy in 1949, have been prolonged and given an assured life of three years; seven new countries have been elected to membership of GATT—the General Agreement on Tariffs and Trade.

But these achievements, welcome though they are, cannot fully atone for the setbacks to international co-operation which marked this conference. They are three in number. First, there was the failure to complete any new tariff agreements between the United States, on one side, and, on the other, the United Kingdom and the Dominions of Australia, New Zealand and South Africa. The second was the formal demise of ITO—the International Trade Organisation. Early in the Torquay conference the United States administration announced that it would not ask Congress to ratify the elaborate charter for ITO agreed to at Havana after so much travail. ITO thus disappears, with all the hopes built upon it, into the limbo of stillborn international organisations, though there is fair hope that much of its substance may be allowed to live in the General Agreement on Tariffs and Trade. The third setback arose from the demands made on the United Kingdom and certain other member countries that they should gradually relax their import restrictions and, particularly, that the discriminatory manner in which those restrictions are applied should be modified. The demand was backed by a report of the International Monetary Fund on the adequacy of the currency reserves of the countries concerned. There is scope for much controversy about the way in which the episode was handled by both sides. But Britain summarily rejected the demand.

Must these three events be taken to indicate that the brave new world, fully equipped with the international organisations that were elaborated with such optimism during the last war, the world of Bretton Woods and ITO, will never take shape? The economic and political consequences of any such admission deserve closer investigation than they have yet received. If the principal currencies of the world are never to become freely convertible into each other, if trade is for ever to be conducted on a discriminatory basis, if the transitional period envisaged both in the Bretton Woods agreements and in the ITO charter stretches indefinitely into the future, it will be more difficult than had been supposed to give substance to the political and economic collaborations that are the essence of the North Atlantic Treaty and to the hopes of economic co-operation with the United States in such ventures as the Colombo Plan.

In fairness to those who have laboured to make a success of the Torquay conference, it should be stressed that within its limitations it has achieved a great deal. Those limitations were set chiefly by the fact that Torquay was the third round of these postwar tariff

negotiations; many of the participants had exhausted the bulk of their bargaining power in the earlier concessions exchanged at Geneva and Annecy. For this reason the main results of the Torquay negotiations, which are to be published next month, will probably be found to lie in the agreements reached with the newcomers—and, particularly, with the German Federal Republic. Here was virgin ground for the exchange of tariff concessions and it appears to have been well cultivated. It would, however, have produced an even higher yield had the United States and the United Kingdom found it possible to agree on further concessions between themselves. For it must be remembered that concessions exchanged between any two countries must, by the rules of the game, be extended to all the others. If the others are thought to be undeserving of such indirect, uncovenanted benefits, that fact will prevent the direct benefits being exchanged at all. Torquay will have shown, not for the first time, that the most-favoured-nation clause can, in certain circumstances, be an impediment to tariff reductions.

The discussions between the United States and at least four of the Commonwealth countries, including the United Kingdom, are known to have foundered on the issue of preferences. No assessment of responsibility for this failure can be made without full knowledge of the demands and offers exchanged by each side. Information on this is unlikely ever to find the light of day. It is known that the United States made extensive offers of tariff reductions but that the concessions it required, in the shape of reductions in margins of Commonwealth preferences, were also considerable. The American Government wanted these not merely for the value they represented to American trade, but as a trophy that could be laid before Congress. The need to soothe Congress in such matters is particularly pressing because at this moment Congress has before it the Administration's demand for a renewal of the Reciprocal Trade Agreements Act. This Act, far more than adherence to any ITO charter or to GATT, is the root of the more liberal commercial policy of the United States since the war. If it is not renewed, or if its renewal is hedged round with damaging restrictions and amendments, a far more mortal blow will have been dealt to the cause of expanding world trade than was delivered by the news that the United States would not go forward with ratification of the International Trade Organisation. If the failure of Great Britain and the three Dominions to come to an agreement with the United States at Torquay contributes to such a mishap, a heavy responsibility will lie on all concerned.

These tariff negotiations are conducted for Britain by Board of Trade teams and it is difficult to believe that the wider political issues that may be involved always leap to the minds of Mr Harold Wilson's officials. One of these issues is the relation of the Torquay discussions to the trade of the dependent territories in the Commonwealth. During the last few months many of these countries have been substantial earners of dollars. Their earnings have, in the normal course of sterling area practice, been sold to the British Treasury. They have been paid for in sterling;

ALLIANCE

they have helped, that is to say, to cause an exceptional increase in the sterling balances held in London on behalf of the dependent territories. Such balances rose by more than £106 million during the second half of 1950, and the trend has probably been accelerated in 1951. The Labour Government often prides itself on having been the first British administration to have discovered and lived up to its full responsibilities to the Commonwealth. The evidence of Torquay does not support this claim. It is true that preferences have been defended with a ferocity that would do credit to Lord Beaverbrook. But it may be asked whether West Africa, Malaya and the other dependent territories are not more interested in importing—whether from the United Kingdom or the United States—the capital and consumer goods they need than in retaining the existing margins of preference they enjoy in the Commonwealth and in building up impressive sterling balances in London. If the growth in these balances continues at its recent pace, and if the creditor countries are deprived of the opportunity to use them in expanding their imports from non-sterling as well as sterling countries, the Government will have earned the reputation of rediscovering not the Empire but the will and the capacity to live on its back. The end of that road is the disruption of the Commonwealth.

Political relations between Britain and the United States, which are not strictly the province of the Board of Trade, have also received some buffeting from the proceedings at Torquay. The United States may not be without responsibility for this. Its offer of concessions may have been more impressive in bulk than in weight; it may have asked too much in return; its abandonment of the ITO charter did not help to get

the Torquay atmosphere right. But the general impression given by the British delegation has been that no concessions by the other member countries would have been thought sufficient to justify any appreciable withdrawal on the preference front. In this uncertain and dangerous world it seems still to be the British policy to pull down the shutters, to seek the cosy security of the Commonwealth—without Canada—cushioned by exchange control and import licensing. It seems to be too readily forgotten that Britain's signature is appended to a succession of solemn undertakings to work with like-minded nations for a reduction of tariffs and the elimination of discrimination in international trade. These commitments, as the United States has occasionally assured Britain, were not meant to act as a strait-jacket on British trade. On the other hand, they are not to be considered as an empty form of words. They are embodied in the clauses in the Atlantic Charter, the Lend-Lease, Bretton Woods and Anglo-American financial agreements and the General Agreement on Tariffs and Trade—not to mention many official exchanges of letters—all of which in one form or another commit the British Government to make sterling convertible and to free import licensing, both in this country and in the dependent territories of the Commonwealth, from the discriminatory practices which have obtained for more than ten years. It would be reasonable, after the fiasco of most of its negotiations with the Commonwealth at Torquay, for the United States to ask the British Government to define the circumstances in which Britain would consider it safe to implement those agreements. It might then at least be easier to judge how far Mr Harold Wilson carries his new economic nationalism.

Famine in India

MR NEHRU'S cabinet is responsible for one of the most desperate and heart-breaking tasks confronting any nation in the world today. The problem of India's hunger is so old that in the country itself chronic undernourishment and starvation are accepted by millions as part of life. Traditionally, India has at least one bad crop year in five; but this year the prospect of extreme famine in many different parts of the sub-continent constitutes a unique and desperate challenge. For the people the suffering, which is only just beginning, will certainly match the horror of five million deaths in the Bengal famine of 1943, and may considerably exceed it. For the government the shortage of food represents political dynamite, and poses an immense administrative problem. Moreover, the rest of humanity has to answer its conscience whether the slow death of these millions of human beings could have been prevented. And, lastly, in the harsh reality of the struggle for power now going on in the world, India's desperate need has provided the Communists with an opportunity to exploit the situation for their own ends.

Although the full extent of the famine cannot yet be known and may not really come to light until well after the monsoon breaks in June, the measure of India's present crisis is already clear. The only areas where the harvest has been at all satisfactory are the East Punjab, Rajasthan and Madhya Bharat. The worst provinces are now Bihar, where there were floods last June and a

severe drought in September, and Madras, which had a bad monsoon for the fifth year running. West Bengal, the Deccan, Bombay and Assam have also suffered a variety of natural tragedies.

The result is that in some districts there are no grain stocks at all and in others only a fraction of what is needed to keep the population barely alive. Even in good years, the leanest months are between July and September; this year supplies have already been drawn from forward stocks, but even so the meagre ration is not being met. For India as a whole, the food deficit is put at 6,000,000 tons, as a minimum. To meet this, 3,700,000 tons have been bought abroad, but so late that it may not arrive in time to prevent people dying. In addition, the United States is debating whether to give 2,000,000 tons, China has recently offered 1,000,000 and Russia has proposed a barter deal for 500,000 tons. Even if these various offers were implemented and the first shipments were made at once, it is questionable whether sufficient food could arrive and be distributed soon enough to prevent disaster.

Delhi's problem in trying to deal with this emergency is involved. The shortage is not an all-round deficiency. Certain provinces are better off than others but if they are to relieve the plight of the famine areas some of their grain will have to be transported; and transport, in Bihar for instance, is inadequate. Nor can grain be moved at all in many outlying districts once the monsoon

breaks. Then there are difficulties of procurement and inequalities between one class and another, and between the country and the town. One of the menacing factors in Indian life is the unscrupulous rapacity of the money-lender and the trader—a blight on India's countryside as well as on its nascent industrial system. Merchants have been speculating in the shortage of grain and have often withheld stocks from the market till the very last minute. For a harassed government trying to buy at reasonable prices and to ensure continuity of supplies, such tactics are even worse than the natural unwillingness of the cultivator to sell until he is quite sure that all his own needs have been met. Here, too, politics enter the field. With the prospect of coming elections provincial governments are afraid to enforce procurement and rationing in districts where the Congress Party is weak. In Rajasthan, for instance, where there is a bumper crop, rationing of food has been stopped. In Bombay, Madras and Mysore the administration is good, so that a system of procurement by levy or government monopoly can be more or less made to work; over much of the rest of India this would be impossible. In these circumstances, no principle of equal sacrifice can be enforced.

There can be no doubt that Delhi is partly to blame for the severity of the present emergency. It has been caught by a series of crop disasters at a critical phase in its policy of self-sufficiency in food. This policy, launched personally by Mr Nehru in 1948, has been advanced as a reason for not buying grain abroad—in theory perhaps a good reason, but in practice one quite unjustified by the progress of Indian agriculture. For instance, the capital works programme for irrigation and power had to be cut back because it was originally much too ambitious for India to bear; and the proposed expansion of the acreage under food crops has had to be reduced, in order to grow more jute to make good the suspension of imports from Pakistan. As if this was not enough, the population, now standing at 357 million, has been growing even faster than had been estimated. In Bombay, for example, the population has risen by one-fifth in ten years, whereas the government had assumed an annual increase of only 1.4 per cent. For these reasons alone, India's total food needs rise by 500,000 tons of grain a year.

★

In this appalling dilemma, what should the Government of India do? There are two problems, one immediate and the other of a long-term character. Immediately, the task is to secure grain by every possible means, and to import enough to meet India's minimum needs. For the longer term, the question whether to grow more food or more cash crops clearly has to be reviewed, together with improvements in the productivity of Indian agriculture—some suggestions for increasing output were discussed in *The Economist* of October 28th and November 4th last year. Until farming efficiency can be improved, however, there is a case for concentrating on a sufficient production of cash crops, such as jute, cotton and groundnuts, to support a minimum level of Indian manufacture for export from which enough foreign exchange can be earned to buy essential food abroad. At present levels of productivity, for instance, an acre under jute or cotton provides an economic return some five times greater than it does under rice or other suitable grain, and an acre under

groundnuts brings in as *vanaspati* (cooking fat) perhaps six times as much as it would under millet. India's ultimate aim must be to approach self-sufficiency in food production, but this aim can never be realised without major reforms of agricultural methods and the gradual construction of more dams and irrigation works. Self-sufficiency in food is impossible for ten years at least.

In spite of the great shortages that already exist and in spite of all that the Communists have tried to do in India during the past twelve months, their cause has made little recent progress. But the famine inevitably improves their prospects. Control of India would be a great prize indeed. Apart therefore from internal propaganda playing upon the unpopularity which the famine is inevitably bringing on the government, the Communist world is making a determined bid to capture the hearts and loyalties of millions of Indians by offering to step in where America can be made out to have failed. The delay in passing legislation through Congress to send the 2,000,000—or even 1,000,000—tons of grain proposed by President Truman is unquestionably beginning to have a worse effect on Indian opinion than if the offer had never been made. Perhaps the Indians could increase their own purchases of American wheat, but even the most lavish expenditure of dollars would still leave a tragic gap. Both the Chinese and Russians have therefore made a concerted and deliberate political move in choosing this moment to announce their own offers of "aid"—hitherto America has at least had the international field to itself in providing economic assistance. The Chinese could not, of course, actually provide a million tons without starving their own people—though the Russians would no doubt release some stocks through Manchuria to be classed as Chinese deliveries. Nor could they ship it without Russian help. Equally, the Russian offer to barter jute, tea and cotton is insincere. Moscow's original offer was to provide 50,000 tons of grain, but when the Russians discovered that India had no surplus of the commodities they wanted, they pushed their offer up to 500,000 tons for its propaganda effect.

These Communist offers are peculiarly effective because they come from Asians to Asians. In fact, so sinister is the haunting shadow of the white man that many Indians are tempted by wishful thinking to accept the offers at their face value, and to turn on the Americans for not being quicker with their generosity. In reality, President Truman's proposal for aid was a great humanitarian gesture and the pause in its execution has partly been brought about by political reactions in the United States to India's own attitude on the Korean conflict. The situation, however, has changed again with the politically-inspired Communist offers to help India. The apparent fact that Mao Tse-tung should be willing and able to come to India's rescue, in spite of China's poverty, can be dressed up as a powerful argument for Communism. Anti-Communists in America should now reflect whether the tactics of the Russians and Chinese do not make the carrying out of the President's original purpose more necessary and urgent than ever. India needs a monthly shipment of 200,000 tons of grain from America, over and above the amounts that are already being imported against normal payment. Such shipments would do a great deal to call the Communist bluff and could have a decisive effect on Indian opinion. It is to the humanitarianism instincts of the American people that India now looks.

NOTES OF THE WEEK

Towards a Pacific Pact

The United States is ready to guarantee the security of Australia and New Zealand. This most important and historic step forward in the Pacific is to be warmly welcomed. Hitherto, particularly of recent years, it was generally understood that any aggression against these two members of the Commonwealth would involve the United States; but no unequivocal public declaration to that effect had ever been made in Washington, and the absence of it has adversely affected Australia's and New Zealand's strategic planning. Now, at his press conference on Wednesday, President Truman has initiated the drawing up of a formal defence pact which will shortly be signed between the three nations. In American thinking, this is designed as part of the background to the Japanese peace treaty. It should allay the fears of the Australians and New Zealanders that, by agreeing to the kind of treaty which is now proposed for Japan, they might jeopardise their own safety if the Japanese again became powerful in the Pacific.

Mr Morrison, the Foreign Secretary, is giving the new American move Britain's sincere blessing. The pact will not directly affect the defence relationships of the rest of the Commonwealth with the two dominions; these are secured by bonds of mutual interest and common purpose which would not at present be strengthened by definition on paper. The question arises, however, of extending the new security arrangements to other states in the Pacific. The argument against this is that to do so would unnecessarily expose any country that had to be left out; the states of South East Asia, for instance, are by no means ready to join a collective security pact. And while President Truman's declaration reaffirmed the American interest in the Philippines as well as envisaging an eventual Pacific Pact of a wider nature, there should be no immediate hurry in bringing this about.

The new American guarantee should have a great effect on Commonwealth views about the defence of the Middle East. For the first time it bolts the back doors of Australia and New Zealand, so that, if they send forces overseas for service in the Middle East, there should be no more worries about the homeland—as there were, most understandably, ten years ago. The New Zealanders have lately taken a more sanguine view of these problems than the Australians. It would be a great thing for the Commonwealth if the question of overseas service could now be lifted out of the arena of Australian politics.

The Schuman Plan Signed

The signature last Wednesday of the Schuman Plan was an historic act of statesmanship and a rebuff to the cynics. It was the first time since the war that a German Chancellor had made a public appearance in a foreign capital. It also brought one stage nearer the launching of an exercise in European co-operation, much more far-reaching than anything that has yet been attempted. M. Schuman, in his concluding remarks, stressed the common will of the signatories to pursue other practical ventures on this model. The kind of thing the French Foreign Minister has in mind was demonstrated by the release this week in Paris of the memorandum on the creation of a European pool for agriculture—the so-called Pflimlin Plan.

In the strenuous all-night sessions which preceded the final agreement, the Ministers of France, Germany, Italy and the Benelux nations reached a compromise between two views on the composition of the High Authority and the voting procedure in the Council of Ministers. The

French and the Germans had originally agreed that the High Authority should consist of five members—a supra-national formula which excluded individual representation of the six. For the Council of Ministers, an inter-governmental body which is superior to the High Authority in certain important instances, the "big two" had intended to allot themselves two votes apiece, leaving the "little four" with only one vote each. This solution proved unpalatable to the smaller powers. According to the final agreement the High Authority will consist of nine men, eight of whom will be nominees of individual governments to be elected unanimously by the Council of Ministers; the ninth member of the High Authority will be selected by the other eight. In theory the nine may all be English or Chinese—in practice, however, it is probable that at least six will be nationals of the member countries. The agreed voting procedure for the Council of Ministers gives France and Germany a joint veto over proposals made by the "little four"; but at the same time it prevents them from imposing their own proposals on the other four.

A last minute diversion was created by Herr Hoffman, Prime Minister of the Saar, who tried to obtain separate representation for the Saar. But this attempt to pre-judge the issue of the Saar's final status—no small one for Paris and Bonn—did not gain the support of M. Schuman who, for the purpose of his plan, agreed to regard Saar coal and steel as part of French production.

Before the plan may be put into operation the six parliaments must ratify it. Here all will not be plain sailing. In Germany Herr Schumacher's campaign against the plan is increasingly venomous. In France much depends on whether the government decides to present the treaty to the expiring Parliament or to risk the emergence of an unfavourable house from the elections in June.

* * *

Parliament After the Budget

When Mr Gaitskell's elevation to the Chancellorship was causing some surprise at Westminster last week, one of the more level-headed of his Ministerial colleagues commented that, though the new Chancellor might be a bit too small for the job, he would rapidly grow. Even in an important stage of that growth has been witnessed. July and budget debate. Mr Gaitskell emerges as a politician of greatly increased stature and importance. He made a good budget speech, and he followed it with a very good broadcast and an excellent winding-up speech last Monday. In many respects a winding-up speech is a much greater test for a parliamentarian than even a major set speech. The new Chancellor must now be reckoned with as a figure at Westminster—though not yet necessarily at first sight.

The four days of the budget debate have into it. An aim that, quite apart from the economic merits of the proposals, Mr Gaitskell has secured for his party, the considerable political advantage of shaping a budget from which the Opposition could quarry few missiles for their Parliamentary battle. Apart from the general case that expenditure should be lower, the Conservatives found themselves able to attack only the profits tax and the petrol tax with vigour, though they made a last minute effort to take over a further criticism—first voiced from the Labour benches—that inadequate relief had been given to old age pensioners under 70 (or 65 in the case of women). On the report stage of the budget resolutions they voted against only the petrol and the entertainments taxes, though they will attack the Finance

Bill at other points. But to have provided his party, in what may well be an election year, with a budget which can broadly be called non-controversial is politically no mean achievement.

As Mr Gaitskell's stock has risen inside the Parliamentary Labour Party, Mr Aneurin Bevan's has suffered a corresponding slump. What is interesting about his threat of resignation is not that he made it, not even that he did not carry it out, but rather that he failed utterly to gather any real support for his attitude among the Labour rank and file. Several backbenchers agreed with him in opposing the charges on the health service, but not in his willingness to precipitate a Government crisis to stop them. The truth is that Mr Bevan is much more of a lone figure at Westminster than one would gather from the publicity that his personality commands. On many controversial issues, when all the smoke and dust have cleared away, only a handful of close friends has been seen by his side. When the Labour Party is again in opposition his power will undoubtedly increase, but for the present he must be reckoned, at Westminster at least, as the leader on the Left rather than the leader of the Left.

* * *

Economics in the Debate

The postwar change in the aims of budgetary policy—from the mere balancing of Government expenditure and revenue to the control of the entire shape of national economic activity—has never been more strikingly reflected than in the Budget debate which ended last Monday. What used to be a debate on the Chancellor's fiscal stewardship has become a grand inquest on the state of the nation, whose terms of reference include any and every governmental action which has contributed, positively or negatively, to make that state what it is. The result is a confusion of unanswered argument, irrelevancy, theoretical dissertation and party sniping in which properly fiscal questions are almost bound to be submerged.

It is some tribute to the Commons that, nevertheless, the main lines of controversy did show themselves fairly clearly during the four days of debate. One, of which more will undoubtedly be heard, was the Labour Party's own internal controversy over the principle of the free health service. Another, also predominantly within the Labour ranks, concerned the adequacy of the concessions to old-age pensioners. The old and fundamental opposition of views on the role and justification of profits flared up, as was inevitable, over the increased tax on distributed profits; the controversy was enlivened by the usual demonstrations of muddleheadedness about bonus issues. But on the whole the debate was less concerned than in past years with the direct influence of the Budget on the distribution of income. The big guns on both sides were trained on the questions of inflation, productivity, and the proper use of the national resources—a significant shift of emphasis exemplified in the speeches of Mr Lyttelton, Mr Clement Davies, Mr Maudling, Mr Eccles, Mr Crosland and Sir Arthur Salter, and also in Mr Gaitskell's own reply to the debate. The notion that a high tax burden may exert an inflationary pressure irrespective of whether the Budget is formally in surplus or in deficit—the notion that in fact there is more to the inflationary problem than the existence of an inflationary gap—is gaining ground among theoretical economists. It is encouraging that it should be ventilated in the House of Commons, and that the Chancellor should show himself aware, however partially, of the limitations of his power.

Partial understanding, or complete misunderstanding, is on the showing of the debate by no means limited to the Labour Party. Indeed, it is arguable that more nonsense originated from the Opposition than from the Government side. The mirage of an undiminished standard of living, to be somehow attained in the face of all external misfortune

by means of a reshuffling of expenditure between public and private control, dazzles the Tory backbencher perhaps even more effectively than it does Labour members. The latter at least realise that someone must suffer—the "someone" being of course, in their view, the mythically inexhaustible rich; the former appear to cherish the notion that if only the Government would pursue the right policy adjustment to Britain's changed world position could be quite painless all round. Mr Lyttelton's declaration that a Conservative government would not cut the food subsidies seems to offer the painlessness without even any change of policy. This may be a good way to win office; it does not augur well either for the use or for the holding of that office when won.

* * *

Command in the Mediterranean

There are signs that NATO deputies and their military advisers are coming to the end of their debate about who shall command what in the Mediterranean. The difficulty arises not merely from traditional British interest in this sea corridor, or from French interest in communications with North Africa, or from the thrill that an American fleet gets out of Mediterranean cruises round the flank of the iron curtain. It is inherent in the map of Europe and in the shape of NATO's scheme of defence. General Eisenhower's command was specially designed on a north-south line to stop western Europe from being overrun and to defend the land and sea approaches to the Atlantic; therefore it can claim a vital interest in both shores of the western Mediterranean. But there is also an eastern Mediterranean; and once a fleet has passed Sicily in an eastward direction it approaches three countries—Yugoslavia, Greece and Turkey—where the United States and Britain have clear defence commitments so far not formally included in the Atlantic Pact. Further eastward the fleet approaches the region of Israel and the Arab states, the defence of which is entrusted to the British alone of the western powers, the Americans having thrice turned down proposals for tripartite bases and engagements with Egypt.

These distinctions are strategically without sense. They exist for political reasons, just as the idea of holding a line across Europe is based on political rather than strategic reasons. The lesson of the last war is that the defence of Europe and North Africa, and of the Middle East bridge between them, is one problem, which is not changed by the fact that NATO has an artificial eastward limit of operation. The particular form that the problem would take in any future war would depend on the strategy of the aggressor; and it is in nobody's power to make all necessary dispositions against all possible contingencies.

The immediate practical problem of NATO is surely to maintain the highest possible morale among its limited forces in Europe—in fact to take a political rather than a military decision about the Mediterranean command. There is every reason for loyally accepting the appointment of the American Admiral Fechteler to supreme command in the Atlantic, if the reasons that make it acceptable in this country are allowed to point—as they do—to a British supreme commander in the Mediterranean. The main naval bases are British; British experience in that sea is greater than American; the line of communication to the Commonwealth is there—these are all arguments of weight; but far weightier is the fact that the British have been allocated responsibility for defending the Middle East and need, to carry out that task, the prestige and authority that command in the Mediterranean gives. It is, after all, for cold war that the western powers are planning, and for the prevention of the real thing. If they failed to prevent it, then political considerations would cease to be important between allies and the division of Mediterranean commands could be decided on military grounds alone.

Tito Asks for Arms

Marshal Tito has just made one of his most spectacular moves since he abandoned Moscow; though it must be said that leakages about it in the press have made far more of the news than he had wished. Why, the anxious cry goes up, did he openly ask for British and American arms, no more than a month after a firm statement that he would do no such thing unless an attack on Yugoslavia appeared inevitable? The answer is probably less sensational than the question suggests.

Military developments on the frontiers have been disturbing; but the proportions of the threat from the Communist neighbours have changed little since December, when Tito reckoned the combined military strength of Hungary, Roumania and Bulgaria at 660,000 men. The new anxiety has arisen, rather, from three other factors. There is growing evidence that the quality and armament of these frontier forces are the best that the satellites can muster and the Soviet Union can provide; the number of incidents has been steadily increasing in the last few weeks; and the world tension, from Persia to the Palais Rose, is more obvious than in February. Tito has concluded, not that invasion is imminent, but that sterner measures are necessary to deter these neighbours, and that he must restore the balance of military power more quickly than Yugoslav resources will allow. The current economic discussions in London, and the British and American decision to meet his requests for raw material credits, must be viewed in this context.

Having made up his mind that it was now more important to strengthen his defences than to abstain from action that might be called "provocative," Tito had two courses open to him: to apply for membership of the Atlantic Pact, or to ask Britain and America for arms as an independent party. It is arguable that he would do better to bite the bullet and join the alliance than to maintain his political independence; but on balance the argument is on his side. The moral advantage of his unique position both to his government and to the west is still considerable; neither would get any benefit from a formal treaty relationship while the Russians are shouting that Yugoslavia is to be the springboard of a western attack; and some of the smaller countries in NATO are not yet ready to embrace the prodigal son.

Tito has made it clear that resistance to aggression anywhere in Europe would have his support and that he would, if attacked, immediately appeal to Uno. He has in fact taken all the diplomatic precautions he can against everything except what the Communists call a "civil war."

* * *

La Prensa

The suppression of *La Prensa*, Argentina's outstanding newspaper and one of the great journals of the world, is now complete. Last week both Houses of the Argentine Congress put a rubber stamp on President Peron's expropriation of Dr Gainza Paz; not, however, without 12 brave men in the Chamber of Deputies voting against the regime. One of them, Señor Frondizzi, who had been the sole dissentient voice on the investigating committee, declared roundly and succinctly: "We are not considering the destiny of a newspaper but the destiny of the country." A new management is now to produce a newspaper called the *Prensa Argentina*. Like the press in Mussolini's Italy and nearly all the rest of the Argentine papers—with one or two notable exceptions—this will no longer be based on an independent regard for the truth, but will reflect the frustrated and querulous outlook of the regime.

President Peron has alienated respect in much of the outside world over this business, and it is very doubtful whether it will pay him in the long run. He may avoid being confronted every day with the unpleasant facts of hard reality, and, by removing knowledge from his country-

men, he may be able to dragoon them for longer and more easily. But there can be no more question at present either of such things as dollar credits from the United States or of international respect—outside perhaps the Communist states whose methods he appears to emulate.

The Actuary's Warning

The report (Cmd. 8212) of the Government actuary on the financial provisions of the new National Insurance Bill, presented to Parliament this week, should warn politicians of all parties of the costs of being too generous to old age pensioners. The fact that the proposed increases in old age pensions will be met without any further increase in contributions may have lulled people into thinking that the finances of an ageing population are not so bad as they are sometimes made out to be. Their belief has been strengthened by the knowledge that the national insurance fund has been running a large surplus because of the large savings on unemployment benefit.

Any such comfortable illusions should be dispelled by the Government actuary's report. His salient facts are as follows. First, the actual financial cost of the proposed increases and changes in old age pensions, together with the increases in other benefits in respect of children, will be £39 million in the first full year, but will be considerably more than double (£87 million) in twenty-five years' time. This estimate, it may be pointed out, allows for some further deferment of retirement as a result of the additional incentive; it is perhaps not sufficiently realised that the more successful the campaign for postponing retirement, the higher the cost of the pension when it is eventually drawn.

Secondly, the Government actuary discloses that, in considering the financial effect of the new Bill, he has been instructed to assume a long-term average of 4 per cent unemployment. (For the next few years, the assumed rates of unemployment are as follows: 1½ per cent until March, 1954, and 2½ per cent in 1954-55.) This fall in the assumed rate of unemployment (which hitherto has been 8½ per cent) obviously allows a more favourable view to be taken of future expenditure from the national insurance fund, and, as Mr Gaitskell said in his Budget speech, the Exchequer's supplements and grant to the fund are to be reduced accordingly. But this reduction is only a temporary mitigation of the Exchequer's liability to the fund. The Government actuary shows that, in 1957-58, the Exchequer grant will have to rise from £60 million—the figure at which it is to be fixed for 1954-55—to £125 million if income is to equal expenditure. Together with the Exchequer's supplement, the total contribution from taxation will have to be £151 million in 1957-58, £310 million in 1967-68 and £444 million in 1977-78. This last figure, the actuary points out, is nearly £40 million more than was contemplated in 1946, in spite of the lower assumed rate of unemployment. The employment of old people may enable the country to shoulder this financial burden with less difficulty. But the burden will still be there.

* * *

False Teeth and Glasses

The main question about the new National Health Service Bill is whether it will provoke a political crisis when Mr Bevan faces its second reading. But the details of the proposed charges for false teeth and glasses are themselves of some interest. The charges are to be collected by the dentists and opticians, or by the hospitals in respect of appliances supplied to hospital out-patients. For false teeth they will range from £2 to £4 5s. according to the number supplied. For glasses, the charge will be 10s. per lens—that is, 20s. for a pair of spectacles—plus the cost of the frames. Thus, the total charge will range from 23s. to 35s. according to the type of frame chosen. In 1949, accord-

ing to evidence given to the Select Committee on Estimates, the average cost of supplying spectacles was 65s. 6d., including the sight-testing and dispensing fees. The proposed level of charges therefore suggests that people will have to pay part of these fees as well. They may well ask whether the dispensing fee, which is now 24s., cannot be reduced.

Since more than 20 million pairs of glasses have already been issued, and the charge will not apply to appliances contracted for before the new Bill comes into force, the savings will not be very great. They are estimated at £8,000,000 in a full year for glasses and £17 million for dentures. To a certain extent the total savings to the Exchequer depend on the standard of need allowed by the Assistance Board, which will be empowered to grant assistance for paying the charges even to people in full-time employment. But it is likely that these first charges to be imposed for health service facilities will not be the last. They have been introduced in order to provide extra money for the hospital service. Mr Gaitskell and Mr Marquand can hardly refuse to extend the principle if more money has to be found for the general practitioners.

* * *

Durham Dallies

On Tuesday night Durham County Council decided that for the time being it would not comply with the Minister of Education's order that the closed shop policy in the appointment of teachers should be dropped. Instead, it asked him to see a deputation. When *The Economist* went to press the Minister's response was unknown, but Mr Tomlinson and Mr Bevan saw a similar deputation last November and nothing has happened since to strengthen the county council's case. The Minister will be fully justified if he refuses to see the deputation until the council promises to comply with his directive.

The closed shop issue now comes to a trial of strength between Minister and county council. The Minister has the sanctions of the High Court and the Exchequer grant behind him if he does not weaken. His directive to the council was categorical; the promptitude with which he acted after the teachers' decision to resign shows no sign of vacillation. Having committed himself so deeply he would find it exceedingly hard to withdraw with dignity—if indeed he has any wish to do so, and of this there is so far no sign. If the Minister stands firm to the point of using his sanctions—against a stronghold of the Labour and trade union movements—it must, nevertheless, be reckoned an act of considerable political courage.

Mr Tomlinson has one important factor on his side. Opinion in Durham is deeply divided about the wisdom of coming into open collision with the Labour Government. The council has failed in an attempt to mobilise the local trade union branches and Labour parties in its support. The decision by the Labour members of the county council to oppose the Minister was taken by only 35 votes to 32, with 36 members abstaining. Persistent defiance is hardly possible on that basis. Indeed, the tone of the meeting suggests that the first reply to the Minister was designed more to save face and to play for time; if the Minister stands firm, he will probably have no need to use sanctions to force the council to give way.

* * *

Verdict for the Dockers

There could hardly have been a more unsatisfactory ending to the trial of the seven dockers at the Old Bailey this week. They were indicted on the three counts of inciting an illegal strike, of inducing other dockers to break their contracts with their employers, and of conspiring together to cause an illegal strike. The jury disagreed over their findings on the first count, but nevertheless found the men guilty

on the second count. This illogicality left the Attorney General with no alternative but to ask that the whole case be dropped, and the men were accordingly discharged. As Sir Hartley Shawcross said, it seemed that the jury thought the defendants ought to be convicted of something, but they were not quite sure of what.

The case hinged on whether the strike was the result of a dispute with employers or with union officials, for the Lord Chief Justice directed that a dispute between the men and their own union officials was not a trade dispute within the context of the Control of Employment and National Arbitration Order (No. 1305). It would seem, therefore, that a strike which was the result of such a dispute would not be an illegal strike within the meaning of Order 1305; but, as the Attorney-General subsequently pointed out, it might be illegal within the meaning of the Trade Disputes Act or the Conspiracy and Protection of Property Act.

To the layman, these are bewildering points. The only person who may be persuaded or forced by a strike to act in a particular way is the employer. In this sense all strikes are necessarily directed against the employer, and it would seem to be nonsense to maintain that the object of a strike could ever be to secure the dismissal of union officials or to force those officials to pursue a particular policy. Clearly the whole structure of present legislation about strikes is confused and radical changes are necessary. There are, however, strikes that are clearly illegal. If the law is not to fall into entire disrepute before it is reformed, it is important that there should be the firmness in prosecuting in such cases that Sir Hartley Shawcross promised.

Malan's Breach of Faith

The Union of South Africa, in its relentless pursuit of race discrimination, defied the United Nations at Lake Success, and is now defying its own constitution. The

A Watching Brief

An Investor who keeps his money active is running a complex, one-man business. His time is limited, and he is largely dependant on professional advice for his business decisions. Obviously it would be better if he himself were in close touch with market events. Fortunately, this is possible. By daily reading of THE FINANCIAL TIMES, the investor can keep a watching brief on market values as they change.

Read

THE FINANCIAL TIMES

every day

even if you have to borrow a copy

occasion has been the ruling of the Speaker of the South African House of Assembly—in a crowded and excited House—that the Union Parliament is competent to pass the Representation of Non-Europeans Bill (which removes Coloured voters from the common electoral roll) by an ordinary majority vote. In the South Africa Act of 1909, certain "entrenched clauses" were inserted which could be modified only by a two-thirds majority of a joint sitting of both Houses of Parliament; Section 35 of the Act specifically guarantees equal voting rights for the Coloured people under this arrangement. What is more, the most solemn assurances were given to the Coloured people—both in 1931 when the Statute of Westminster was debated, and again in 1936, when the Natives (not the Coloured) were put on a separate voters' roll—that the entrenched clauses of the South Africa Act would remain untouched.

All this is now set at naught. Dr Malan cannot command a two-thirds majority of both Houses, but he is certain of a normal majority in the House of Assembly; the Bill will, without doubt, pass into law. The Speaker, in giving his ruling, based it on the fundamental argument that the Statute of Westminster acknowledged the sovereignty of the Union Parliament, which is now entitled to amend any clause of its Constitution as laid down in the South Africa Act by an ordinary majority vote. The Union's Parliament is thus declared to be as omniscient as the Parliament of the United Kingdom, with its own unique and unwritten constitution, and to possess a greater absolute authority than the American Congress, and the Parliaments of Canada and Australia.

The South African Opposition has denounced the proposed legislation as a cynical breach of faith and will fight it clause by clause. Not only Coloured persons' votes, but the equality of the English and Afrikaans languages is covered by the entrenched clauses, and there is no knowing what, if they are successful this time, the Nationalists will do next. United Party lawyers have suggested that they may challenge the constitutionality of this Act of Parliament—when it becomes an Act—in the Courts. What is certain is that the Coloured people must feel themselves the victims of a most flagrant betrayal and that the whole spirit and content of the South Africa Act are at stake.

* * *

Yet Another Dominion?

Constitutional problems—differing in content but not so different in context—are also challenging attention in Southern Rhodesia. A select committee has recommended that its status should be changed to that of a Dominion and the title "Colony" abandoned. These proposals are now before the House in Salisbury and it is suggested that they come into effect in 1953, the hundredth anniversary of the birth of Cecil Rhodes. There are various reasons why Rhodesians want this change, not least being the desire to reach the same rank as India, Pakistan and Ceylon; but the crux of the demand is native policy. In the constitution of 1923 one important restriction was imposed: that any legislation discriminating against Africans required the King's consent on the advice of the British Government. In point of fact a whole statute book could be filled with the discriminatory legislation passed against Africans in the last 28 years. Whether owing to weakness or indifference, this restrictive power has never been used; its mere existence is the irritant.

The Select Committee recognises, however, that one cannot easily remove safeguards without putting something else in their place. It therefore recommends that an Upper House consisting of 15 members be constituted, including two nominated for their knowledge of Native affairs. These should not be specifically regarded as representing the Africans, but the whole of the Senate would be the safeguard for just treatment of all races. How far it will in fact act in this way is

doubtful; for eight of the Senators are to be elected on an ordinary voters' roll (almost exclusively European) and the remaining five are to represent special interests.

The prospect of Dominion status, whether bicameral or unicameral in constitution, will gladden few African hearts. Nor will the Commonwealth's repute in the free world be enhanced by a second Dominion based on race discrimination. In some ways, however, it will be a relief to conscientious British public opinion to be no longer directly responsible for a principle which has been honoured so much more in the breach than the observance. The pretence is dropped that the British Government is protecting people for whom, in practical politics, it can apparently do nothing. Whether Southern Rhodesia, with its 140,000 whites, can afford all the trappings of Dominion status is another matter.

* * *

Pressure on Czech Workers

There seems to be no end to the exhortations and devices by which the Czech Communist leaders attempt to reconcile the growing inertia of the Czech workers with the growing demands of the Soviet Union. According to the latest arrangements the original Five-Year Plan is to be fulfilled in this, its third year, in many branches of industry, including coal and raw steel, and next year in many more. But according to Mr Zapotocky, the Prime Minister, the fulfilment of the plan's targets "is neither organised nor smooth." They are usually reached, but only by last-minute spurts (*sturmovstina*) and by "a whole series of extraordinary measures."

The old policy of more or less bribing workers to achieve their maximum output has, in fact, not produced good results. Wages have risen and with them production costs, but productivity has declined. Works managers, who up to now have had no limits placed on their wage bills, have frequently evaded the wages regulations so that workers have often been paid more than they really deserved. Under the new system introduced at the beginning of this month, the amount of each enterprise's "wage fund" will be worked out in advance, and it will only receive the full amount if it has completely fulfilled its planned production targets. It is true that the concern will receive an additional sum if it exceeds its target; but it is expected that the general effect of the new system will be to force the worker to work considerably harder to maintain his present wages.

At the same time a concerted effort is being made to boost production by overcoming the widespread prejudices of ordinary workers against stakhanovite methods. But Mr Zapotocky, who a year ago was strongly advocating higher rewards for shockworkers, is now forced to point out that "we are not out to create shockworker prima donnas," and that the real stakhanovite works for the good of the community as a whole and not for his own personal profit. In view of the new drive to get more out of the workers for less reward, he could hardly take any other line. It is probable, however, that this drive will deepen the divisions already existing among the Communist leaders just as it will certainly infuriate the workers.

French Tax Dodgers

Tuesday night's vote of confidence in M. Queuille's government by 311 to 240 may at last have put an end for the moment to the several weeks of wrangling over the French budget. Increases in taxation amounting to over £50 million have in effect been accepted as unavoidable; they are recognised to be part of the price of rearmament and inevitable in view of the increase in government expenditure caused by the inflation now suffusing the French economy. This settlement, however, should not be regarded as more than a temporary factor in stabilising prices and propping up the currency. Indeed, it is to be hoped that it only defers

"He has indeed better bettered expectation."
Hardly a day goes by without some letters of thanks, with some such expression as "you have never once let me down." May the good work continue, in my humble prayer. Perhaps I can help you in your choice of where to stay. My "Shop Window" should be cut out for reference. For other districts please write me, enclosing stamped address envelope, to 63, St James's Street, London, S.W.1.

HAWKHURST, Kent. COLLINGWOOD HOUSE HOTEL. In this historic and lovely Georgian home, the art of gracious living is still practised. Warmth, unusual comfort and a high standard of catering will be your lot. For Brochure write: N. Allan-Smith. Tel.: 3350.

HYTHE, Kent. HOTEL IMPERIAL. Holiday this year on the Kentish Coast, at this magnificent hotel facing the sea. 30 acres garden, private Golf Course. A large number of rooms with private bath; some private suites. Fine Ballroom and Cocktail Lounge. A.A., R.A.C. Tel.: 6741.

LYNNMOUTH, TORS HOTEL. "Stands by itself." Not only in a beautiful setting, but in personal service and comfort. As nearly perfect a base as you could wish for all the recreational and sight-seeing attractions of North Devon. Write for Brochure C. Tel.: Lynton 3238.

MINEHEAD, Somerset. NORTHFIELD. Situated in 3 acres of grounds, along at high standards of catering and comfort AT ANY TIME OF THE YEAR. Convalescence? A Honeymoon? Or just in holiday mood? Embrace the sea, and Northfield make a happy combination. Tel.: 864.

NEWQUAY, Cornwall. HEADLAND HOTEL. For your May or June honeymoon. Billiards, Bridge, Dancing, Tennis, Snaring, magnificent views. 18-hole Golf Course adjoining. Good food, well-stocked cellar, attractive Cocktail Bar and Sun Lounge. Every room with a sea view. (Private bathrooms available). Early booking advisable. Write W. Polglaze. Tel.: 2211.

MR. NEWQUAY, Cornwall. GLENDORGAL. Nigel Tanya offers you the perfect holiday by the sea. Private steps to Atlantic surf-bathing and golden sands. 10 acres of private coastline grounds. Own farm produce; cream, milk. Children's paradise; comfort and rest for adults. Fully booked August. Tel.: Newquay 2919.

ST. MAWES, Cornwall. HOTEL TRESANTON. Lovely Country House in sheltered bay. Beautifully furnished, every modern convenience. First-class cuisine; Club bar; terms from 20/- per day. Trains met Truro. Resident Manager, A. Miles Humbert. Tel.: 322.

SALCOMBE, S. Devon. TIDES REACH HOTEL. What a lovely address for a seaside holiday! Here, on the edge of a sandy beach with boats, fishing, safe bathing and fine walks, are added the finishing touches of comfortable accommodation, good fare and ample garage space. Tel.: 233.

SAUNTON SANDS HOTEL, Nr. BRAUNTON, N. Devon. Overlooking Bideford Bay. All that is best in a modern Hotel. Squash, Dancing, etc. Golf at Saunton Golf Club. Fully licensed. Spring terms 23/- daily. Trains met by appointment. Tel.: Croyde 212.

SIDMOUTH, Devon. BELMONT HOTEL. A.A. Appointed. A first-class luxury hotel, noted for its excellent food, and occupying the finest position extending to the sea front. Through-coaches daily from Waterloo. Private Suites. Gas fires. Private bathrooms. Lift. Fully licensed. Tel.: Sidmouth 1261.

RAVENSCAR, Scarborough. RAVEN HALL HOTEL.

A completely self-contained, fully licensed holiday hotel. Heated sea-water Bathing Pool. 9-hole Golf Course. Putting, Hard Tennis, Bowls, Billiards, Dancing (Orchestra)—all free to residents. Riding available. Fully inclusive terms 25/- to 47/6 per day. Tel.: Cloughton 233.

SCARBOROUGH, ROYAL HOTEL.

Comfortable, Civilised, Stimulating. For all that it offers, the value is extraordinary. Terms 29/- to 39/- per day. Managing Director, T. Laughton.

TORQUAY'S GRAND HOTEL.

Grand in name, grand in position, grand in everything it offers.

With a view to a grand family holiday this year, write E. Paul for detailed brochure. Tel.: 2234.

Whenever Export figures are quoted there comes the accustomed reference to 'expert British Craftsmanship'. But... have you ever stopped to ask yourself...

"Who are Britain's Craftsmen?"

Introducing Herbert Martin. Many years ago he learned the craft of fitting a frame with teazle heads for finishing fine woollens. This age-old process was one of the factors that made British cloth pre-eminent throughout the world... and that is today helping raise woollen exports to new records.*

But does craftsmanship mean only handcraftsmanship? Consider, for instance, the manufacture of the cloth from the spun wool. The care and skill necessary in weaving, dyeing and finishing to established standards of quality... and to modern demands of output. Craftsmanship gives the answer though it may be difficult to single out one man or one part of the process. For must there not be craftsmanship at every stage if the finished article is to be a masterpiece? Monsanto think so and they follow this rule in making chemicals for a long list of British industries. In the spinning, weaving, dyeing and finishing of fine textiles Monsanto chemicals play a vital and increasing part.

* Illustration: Courtesy of Mr. H. Martin and Messrs. Hunt & Winterbotham Ltd. Cam, Gbs.

Monsanto make over 200 chemicals for use in industry. Of widely varying application, they all conform to the highest standards of craftsmanship in chemical manufacture.

MONSANTO CHEMICALS LIMITED
8 Waterloo Place, London, S.W.1

THE FIGHT OF OUR LIVES

PRESIDENT TRUMAN has made a speech saying that selfishness and greed are tearing the U.S. apart. It is more than that. It is the civilisation of the world that selfishness and greed have been tearing apart with increasing destructiveness for more than a century, and the evil is in Britain as much as America.

Let us realise this: *the world is in the state that we deserve.* Men make the state of the world by the state of their minds. If there is conflict everywhere, that is what our ideas of self-interest have led to, undisciplined by sufficient care for the good of our fellow men.

Listening to the talkers of clap-trap among us, one might get the impression that the evil was exclusive to those who seek to pile up profits. It is not. Every group in society, from top to bottom, is poisoned by those who live for themselves alone.

These are people who have shrunk. If life for them becomes joyless and empty, that, too, is what happens when people shrink all their interests upon themselves.

But there is hope for us today just because this is being realised. There is hope in the effort within Britain for social justice. There is hope when a President of the United States can make a great moral appeal to defend and advance spiritual values in the world.

It is no good getting morbid about our troubles. It is perilous to run away from them. There is a cure for boredom and depression and that is to feel that we are part of a community who are out to make life for everybody worth the living.

Our age is challenged to make civilisation live. It is in the minds of men that the fight will be decided.

until after the elections—now likely to be held on June 10th—a more thoroughgoing review of French revenue and fiscal policy, which is very badly needed. This ought no longer to be just a matter of slipping from one government compromise to another, but should involve a revolution in the whole administrative and political approach to the problem of French taxation.

M. Edgar Faure, the Minister for the Budget, put his finger on some of the trouble at the beginning of the month—though his touch was far too delicate to have much effect. In France, he said, direct taxes only account for 30 per cent of the central government's revenue, compared with 70 per cent in the United States and 60 per cent in Britain. The one-third of the population which lives on the land, he also suggested, virtually only pays its taxes by receiving low prices for its produce; it does not pay them in a normal form. The peasants in other words, as many Frenchmen know, are not being taxed in proportion to their genuine resources and are not carrying their fair share of the load. Nor can any other conclusion be drawn from the statistics of direct taxation than that evasion of income tax and concealment of real wealth in the nation at large have reached alarming proportions.

M. Faure claimed that the average French income per head is only one-third of that in Britain, and hence that in France the real burden of taxation at its present level is heavier than in Britain. But this is to gloss over simple facts which all can see, and to run counter to observations which can be made in the everyday life of the French middle-class business community; the total number of income tax payers, for instance, is far too low to make sense when compared with the number of car owners. What is happening is that taxes are being scrupulously collected from the lower and fixed incomes but not from the higher; and while British incomes probably are higher than French, the average difference is by no means as great as the figures at present suggest. With constitutional reform now out of the way, this question of fiscal reform should be one of the very first to be tackled by whatever government comes to power with a fresh mandate at the approaching general elections.

Mr Webb Looks Ahead

The Minister of Food is having an anxious time. Food stocks are low, imports of many of the main rationed foods are smaller than they were twelve months ago, and bad weather appears to be reducing the volume of home-produced food. It is perhaps to distract his own as well as the housewife's attention from shortages in the next few months that Mr Webb has announced that in August the meat ration will be increased to 1s. 8d. a week. That is not to say that the British public will get twice the present quantity of meat. In the first place, home-killed meat is dearer than imported meat, and in August and September the ration is likely to be met almost entirely from home supplies. Secondly, the retail prices of many foodstuffs will shortly be increased. When asked whether the increase in the meat ration was induced by a rise in price or by the increased quantity available, Mr Webb replied rather cryptically that "it is the expected result of an increase in home production at that time of the year." He had admitted earlier that the possible rise in prices had been taken into account when estimating the increase in the meat ration.

In August, then, the consumer may get by quantity some 50 per cent more meat than at present. But in July and possibly in June, too, he may well get 50 per cent less than at present—or, at worst, no meat at all. The absence of Argentine supplies and the reduction in supplies from Australia and New Zealand, caused by shipping difficulties, are imposing a severe strain on the Ministry's distribution system. The increased home killings this spring have brought a temporary relief, but as home-produced meat

cannot be stored the problem of finding sufficient supplies in the earlier summer months remains.

Eggs are another source of worry for the Minister, and the weather is blamed for it. Because of the heavy rains, the so-called "spring flush" of eggs has not materialised and the allocation is still one per ration book per week. Rumours in the trade suggest that hens are laying almost as well as ever, but that the eggs are being preserved for distribution later in the year—perhaps for distribution when the meat ration disappears. Some unkind people have even said that the eggs are being preserved to augment the rations for visitors to the Festival. But the scarcity really reflects the folly of the Ministry's buying policy. It could have obtained supplies from the Netherlands, Denmark and other European countries. No matter how unseasonal the weather, private trade never reduced the supply of eggs to one per person per week, let alone when output per hen-shift is at its peak.

Gambling

The report of the Royal Commission on gambling,* published this week, is sensible and well argued. It finds that many of the arguments of those who oppose gambling are much exaggerated. It is true that a large proportion of the adult population gambles, but very few appear to do so to excess; the net personal expenditure on gambling—about £70 million a year—is a great deal less than such bodies as the Churches' Committee had calculated. The commission thinks that moderate gambling does no serious harm to the characters of gamblers or to the community in general, and it states as a principle that:

It is the concern of the state that gambling, like other indulgencies such as the drinking of alcoholic liquor, should be kept within reasonable bounds, but this does not imply that there is anything inherently wrong in it.

It follows, therefore, that the state should control gambling as it does drinking but should not attempt to prohibit it altogether.

The subsequent proposal that betting shops for off-the-course cash bets should be allowed under licence, and strict police control, would seem, however, to be a moderate encouragement rather than a deterrent to gambling. Both the bookmakers' associations and the Churches' Committee, in an unusual alliance, were strongly against the suggestion when it was put to them. Yet it is a logical development of the argument for state control as against prohibition, and it is the only way to avoid the evils of street betting which is virtually uncontrollable. The scheme recommended by the commission is very similar to the present system of licensing public houses, with safeguards against loitering and excessive gambling as there are against excessive drinking. There is no reason to suppose that such betting shops will encourage gambling addicts any more than public houses encourage drunkards. And it is better to keep the addicts who exist in the open, where they can be watched and controlled, than to conceal them in alleys and dark corners.

The commission's other proposals are less controversial. They would clear up the tangle of gambling legislation, remove anomalies in the gaming and lottery laws, and more strictly supervise and control football pools. They are proposals with which few people will disagree, and it is to be hoped that legislation to put them into force will not be delayed.

The Powers of the Central Land Board

Last year, in the case of *Earl Fitzwilliam's Wentworth Estates Co. v. Minister of Town and Country Planning*, the Court held that the Central Land Board had power, under the Town and Country Planning Act, 1947, to buy compulsorily land available for immediate development in order

* HMSO. 4s. 6d.

to compel the owner to part with it at its "existing use" value and no more. Last week the Court of Appeal, by a majority, confirmed this decision. But it gave leave for the matter to be taken to the House of Lords.

The dissenting judgment of Lord Justice Denning contained a survey of the basic functions and powers of the Central Land Board and the Minister—and also, by implication, of the position of all subordinate but partially independent governmental agencies. The board, his lordship said, had power to buy land compulsorily, not at discretion but in the performance of the duties laid on it by Parliament. Those duties were to assess and collect the development charge on land and to administer the compensation fund for lost development rights. It was admitted that the board could buy land to "test the market," for the development charge was based on a market figure. But the board was not, in his lordship's view, concerned with the promotion of land development itself. That was the function of the local authorities. In any event the board had not acted to promote the development of this particular piece of land. It had acted to enable it to be developed at a particular price, and that was quite another thing. It was the promotion of a particular policy adopted by the board.

Lord Justice Denning then turned to the 1947 Act. He pointed out that Parliament had nowhere said that land could only be sold at its existing use value, nor had it authorised anyone else to make such a law. Parliament had assumed that, if a purchaser of undeveloped land had to pay a charge on development, he would pay the seller no more than its existing value. This expectation has not been fulfilled. Yet, instead, his lordship said, the Central Land Board was itself attempting to enforce such a policy by the use of its compulsory powers to buy land, which was tantamount to legislation by the board. He came to the conclusion that the ultimate object of the board, and of the Minister, was not lawful. It was capricious in operation and it was based on the views of expediency which a government department might entertain. In the result, he would have allowed the appeal. The consideration of these arguments by the House of Lords will have great interest and importance.

Housing Discrepancies

Students of the economics of housing have been provided with invaluable information by the Institute of Municipal Treasurers and Accountants. For the first time the institute has published a return of housing statistics. It covers the year ended March, 1950, and is thus more up to date, as well as much more comprehensive, than any government figures. All the large and many of the smaller housing authorities are covered, and the statistics include costs of building and repairs, rents, subsidies and details of housing revenue accounts. They will stimulate many comments and comparisons. In 1949-50 three-bedroomed houses cost £2,320 each to build in East Ham, but £1,301 in Tynemouth. Bristol was spending £1,825 on each house, charged a net rent of 17s. per week, and had a very high additional rate subsidy. In Manchester and Liverpool comparable houses cost about £1,450, there was no extra rate subsidy, and net rents were 10s. and 13s. 1d., respectively. The returns suggest a number of reasons for these discrepancies but leave some unexplained. In future it should be possible for public opinion to be much better informed about the results of housing policy.

A Feast of Art

Anyone with any interest in the arts may feel pleasure and pride in the programme of the "Season of the Arts" which will take place in London in May and June. In number and variety the concerts and exhibitions, plays, operas and ballets offer the richest of feasts, almost too rich since most people will be able to taste only a few of the

dishes set out for them. The official souvenir programme* is as attractive as its contents promise to be.

The Festival of Britain has provided not only an opportunity for the display of the talent of the past but also a stimulus to new work. The Arts Council says frankly that it has used the Festival as a lever to establish the operatic tradition more firmly and has therefore "commissioned, promoted and coaxed new operas into existence." Seven operas are being written for the Festival. Two new ballets in the programme have also been specially commissioned, though ballet needs little external stimulus. The South Bank has provided an opportunity to commission murals, decorations and sculpture by artists who established their reputation just before the war, and the Arts Council has also organised an art competition which will be exhibited. But the major part of all the exhibitions and performances is naturally devoted to the productions of the past. Most impressive of all is the programme of concerts. Sir Malcolm Sargent, in a prefatory note, rightly draws attention to the immense growth in musical appreciation and musical output over the last hundred years. Where there were tens of concerts for the 1851 Exhibition there are hundreds for 1951, and these are not confined to the more conventional kinds in the Albert Hall and the new Festival Hall. The great variety of contemporary performers is demonstrated by the wealth of choral music in churches, serenade concerts and string orchestra concerts. Whatever industrial prowess the South Bank exhibits, whatever frivolity Battersea Park can provide, London can be justly proud that it can make so large a display of the arts.

* "London Season of the Arts." Arts Council of Great Britain. 2s.

Retrenchment versus Reform

In the desultory debate on Chancery Reform which took place last week in the House of Lords, the Lord Chancellor made a few significant remarks which are strikingly illustrative of a sore and growing evil of our days . . . viz., the confounding of parsimony with economy, and the disposition to purchase cheap government at any cost, however dear. . . . What *ought* to be done *dares not* be done, because our senators take a narrow, partial, short-sighted view of their duties, and forget that they have other and higher functions than that of guardians of the public purse. They forget that they are intrusted with the money of the nation in order that they may purchase therewith those blessings which the nation needs, and on which its happiness and prosperity depends. They forget that their duty is so to dispense the public revenue as to further most effectually those objects which the public has at heart, and for which the community submits to be taxed; and that if the first of these is defence against foreign foes, the second at least is the administration of prompt, rigid, and impartial justice at home. For this they ought to feel, as the country feels, that no price can be too high; and if the additional number of Equity Judges required to clear off arrears of Chancery business, and to prevent any such accumulation in future, involved an increase in the civil list of £100,000 a year, the amount should be voted without a scruple or a murmur. . . . The point most important to be brought out and fixed clearly in the popular mind is that the sticklers for "cheap government" in the House are the supporters of mal-administration; that matters have reached a point at which Retrenchment and Reform no longer go hand in hand, but are pitted against one another;—that, in a word, the party who would save the money of the people, and the party who would spend it well, are distinct, and at issue.

Letters to the Editor

The British Colonial Army

Sir,—I should like, if I may, to add one or two points to your admirable article of April 14th. My only criticism of it is that it deals entirely with Africa, to the exclusion of the other parts of the colonial empire.

I am convinced that the first principle in raising a volunteer colonial army is that it should be on a long-service basis and that its officers should find their careers in it, as happened in the case of the old Indian Army, and not be seconded for short periods from the British Army.

But the colonial empire can help in other ways as well. Far too many British battalions and batteries are engaged in garrison duty overseas when they ought either to be in Germany or in the strategic reserve in this country, and they could be replaced by specially-raised colonial units which for various reasons would not normally form part of a field army. Both the Royal Navy and the Royal Air Force too seem to be largely ignoring the possibilities of direct enlistment from the colonial empire. There was a time when Maltese enlisted in large numbers in the navy and were encouraged to do so. During the last war several thousand Jamaicans served in the Royal Air Force. Why do we not use our imagination and think of the jobs in our world-wide military commitments where colonial volunteers could add to our strength?

It seems too as if we have not considered the possibilities of the colonial empire over rearmament. We in this country are at our wits' end for manpower; yet in Jamaica, Barbados and Malta there is unfortunately a permanent surplus of labour. Why not build small arms factories on the spot as we did in India and where there are existing factories give orders for boots and shoes, clothing and other necessary equipment?

This question of defence should not be bedevilled by perverted politics. It is not a question of the colonies being asked to fight for us or we for them. We both share the same peril and should pool our effort. Surely too in training the colonies for self-government we are only doing our duty if we teach them the need for self-defence.—Yours faithfully,

DAVID GAMMANS

House of Commons

Incidence of Income Tax

Sir,—Two years ago I sent you some particulars regarding the percentage of this firm's employees paying up to one hour's pay per week in income tax. I am now sending you similar figures which bring home one or two salient points.

First, the average wage in two years has risen from just over 2s. 6d. to just over 3s. 6d. per hour. Secondly, the increase in wages has resulted in a greater number of employees paying income tax, yet there are still many who only contri-

bute one hour's pay per week towards the inland revenue.

Out of 160 employees engaged in high quality automobile and general engineering:—

10½ per cent pay no tax at all.

6½ per cent pay up to 1s. per head per week.

4½ per cent pay up to 2s. per head per week.

3½ per cent pay up to 3s. per head per week.

This means that exactly 25 per cent pay less than one hour's pay per week income tax, a drop of 5 per cent compared with two years ago. It is still abundantly clear that the greater part of the income tax from concerns such as ours is contributed by skilled operatives and executives.

Thirdly, the difference in pay between unskilled, semi-skilled and skilled labour is now so narrow that there is little incentive to serve apprenticeships as was the practice fifteen to twenty years ago. This results in an increasing difficulty in obtaining skilled labour, and a tendency for mediocrity to spread throughout industry. The only way to keep up the quality of output is to employ more administrative and executive staff with a consequent rise in overhead costs.—Yours faithfully,

A. J. GURNEY

Laystall Engineering Company,
London, S.E.1

Moral Disarmament

Sir,—The statesmen and publicists of the West are criticised by you—I think rightly—for their dignified rejoinders to Communist propaganda. You say of them in your issue of March 24th (page 668):

If they find it difficult to grasp what is required of them, let them imagine themselves involved in a permanent international general election. No local politician, however inexperienced, is so foolish as to think that he stands a chance at the polls without the aid of an active party machine.

Your diagnosis is accurate, but the remedy prescribed is not in the local politician's book. You advocate

A permanent machine for western political warfare . . . firing [more words, I suppose] incessantly into the enemy's ranks.

Local politicians, of all grades of experience, know that patronage rather than clever words produces results. The American and, I imagine, the British and other so-called democratic political systems were successful because instead of, or in addition to, words, the party in power provided for voters more substantial things, and left the final distribution to local politicians. The conventional verbal *obligato* is, of course, always faithfully played, but neither the central nor the local politician depends on it for results; they know that only special and specified advantages will produce votes and loyalty. The Democratic Party does

not appeal to New Yorkers via New York's Republican Governor, but through local democratic politicians who pass around jobs, post offices and other federal benefits.

You seem to think, as do our statesmen and politicians, that help should be given only to governments of whom we approve. I am not proposing that we help Franco, Chiang Kai-shek and Stalin to tighten their grips on their subjects. However, instead of withdrawing into splendid isolation, I suggest that the problem of inducing the Spaniards to act and vote "right" be handled with the same intelligence as are our local political problems.

There is nothing improper in Washington dealing with Spaniards the same way as it does with Californians or Marylanders. While we know next to nothing about the game of broadcasting ideologies, we know how to appeal to people through local politicians. Also we could offer more than the Russians; instead of bliss in a Marxist paradise, or a commissarship when the proletariat comes to power, we could offer cash on the barrel-head, or the wheat, shoes and tractors that our friends-to-be could enjoy here and now.—Yours faithfully,
New York PAUL KOLISCH

Farming Merry-Go-Round

Sir,—In your article on the new agricultural prices in *The Economist* of April 7th you state that "it is not physically possible to bring about a further rapid increase in the output of British agriculture." As it stands this statement is only partially true. For instance, a greater use of fertilisers offers means of a significant and rapid increase. A recent survey of fertiliser practice (*Agricultural Progress*, Vol. XXIV, 1949) indicates that the application of an extra 100,000 tons of nitrogen would increase total energy production of British agriculture by at least 5 per cent. A greater use of other fertilisers and of lime should also result in yet greater yields. Even allowing for the rise in fertiliser consumption since the survey was made, there is undoubtedly great scope for increasing output in this way.

The curtailment of the fertiliser subsidy last year was, therefore, probably unsound. For when cuts in expenditure are necessary, many farmers find fertiliser purchases the easiest and, thereby, the first item to reduce.—Yours faithfully,
THOS. EASTWOOD

School of Agriculture, Cambridge

British Universities

Sir,—It is to be hoped that time will justify Mr Petty's statement, in his letter in *The Economist* of April 14th, that a college lecturer whose work is of university standard will receive under the 1951 Burnham Technical Scale a salary of £1,000 rising to £1,150 per annum. There is nothing in the report which says that this must be so. Such a

salary grade has indeed been established and a teacher placed in it must be on that scale, but the local authority has full discretion whether anyone, in fact, shall be so placed. Local authorities have been asked to reduce expenditure on education, and they are bound to think of the rates. It is not surprising that among technical teachers there is a feeling that national funds should be more responsible for technical college expenditure than is at present the case.

It is agreed that the scale quoted by Mr Petty can stand comparison with that offered to the lecturing staffs of universities, but that is not the end of the matter. Investigation will show that terms are longer in the technical college than in the university, and the weekly teaching hours are also longer.—Yours faithfully, S. RUBINSTEIN

Derby Technical College

Helping Discharged Prisoners

Sir,—I am grateful to you for having drawn your readers' attention to the inquiry into the work of the Discharged Prisoners' Aid Societies. There are nearly 60 such societies in England and Wales, and the aid they render is largely material: a little money, sometimes a job.

Most delinquents, whatever their intellectual and physical development, are emotionally immature. Their offence is frequently the outcome of a failure to adjust themselves to the demands of life. When such people are sent to prison

they are not only removed from these demands; there are precious few alternative incentives to positive action open to them. Their lives are ordered for them by someone else, and such little work as they are allowed to do (between 19 and 25 hours per week in local prisons) is usually dull.

On release they return to a hostile society. If they are to be helped to become responsible and constructive members of society, they must be shown how to fight their own battles, how to channel their energies, and how to use the sometimes inadequate equipment at their disposal to the best advantage. Material aid is usually required. But something much more subtle and comprehensive is needed: a rehabilitation service which begins when the offender is sentenced and which ought not to end until he has managed to readjust himself wherever readjustment is possible.—Yours faithfully, HUGH J. KLARE
Howard League for Penal Reform,
London, S.W.1

Decimal Weights

Sir,—Mr Rawson Gardiner, in your issue of March 3rd, pleaded for a decimal currency. The advantages it offers may indeed be considerable, but I should be far more concerned to see the United Kingdom adopt the metric system for weights and measures, especially for medical prescriptions. Someone I know well has to take a daily dose of a certain medicine, one of whose characteristics is to act as a soporific. It is important

for his health that this dose should not vary. On one occasion, finding himself deprived of his English source of supply of this drug, he called upon a French doctor for a corresponding prescription in a French drug. The attempt at conversion was made jointly by the patient and the doctor but, like all human activities, was subject to error, and for a few days my friend found himself frequently overcome by an irresistible desire to sleep. The conversion sums were gone over again, and it was found that the doctor was prescribing an overdose.

As soon as he could, my friend returned to his English drugs and their English quantities. Four years later he found himself in the same predicament as before; he had lost his earlier prescription, and again had to go to a doctor to get a new French prescription. There was the same attempt at conversion; once more it went wrong—this time in the opposite direction—and my friend was involved in an accident which might easily have proved fatal not merely to himself, but to completely innocent third parties.

You will tell me that it should not be very difficult to convert grains into milligrams. My reply is that neither my friend nor his doctors were stupid men; yet a mistake was made. Is there really any virtue in the grain that makes it worth preserving? I believe that in the United States, which still counts in miles and pounds, the metric system has been adopted for medical prescriptions. I suggest that it is time to do so in the United Kingdom.—Yours faithfully, Paris G. H. G. N.

my ethical and philosophical creed" must have helped. A year or so after his recovery he met Mrs Taylor for the first time. He fell quickly, deeply and permanently in love. She seems to have been a most delightful person: a year younger than he, beautiful, witty, excitable, and brave. Though at first contentedly married, and the mother of three small children, she soon returned his passion. After various troubles she imposed a strange arrangement on her husband, a worthy goose among these swans, by which her time was divided between the two men: Mr Taylor, "an obtuse, most joyous natured man," according to Carlyle and "the pink of social hospitality" and Mill, shy, withered, twitching, and, again according to Carlyle, "innocent as a sucking dove."

The strain on poor John must have been tremendous. He continued to live at home, and to work under his father at East India House. Harriet was never mentioned in the family: James Mill tried it once, and it is pleasant to record that after John's reply made no second attempt. There was another nervous breakdown while James lay dying. Friends gossiped. John dropped them, and never afterwards forgave them. He withdrew from all social life and went for long holidays abroad with his Harriet. In fact he hid, and worshipped at a secret shrine.

his life before he met Mrs Taylor, and much of the rest describes the public work of the glum widowerhood which started 28 years later. The deepest experiences of the intervening period, all his thirties and all his forties, he walled up behind a few brief pages of fulsome but colourless eulogy. Professor Hayek's patient excavations have disinterred some vivid fragments of the greatest psychological interest. He has modestly refrained from filling in the gaps, and the whole picture may be variously interpreted, but a brief, incomplete summary will suggest the value of his discoveries.

When Mill was twenty he had a severe depressive illness. It was perhaps to be expected after the long years of subjection to his bully of a father. He himself describes how his recovery dated from his reading about a boy who on his father's death resolved to replace him in the family. It seems to have been largely by plucking his father out of his heart that poor Mill restored his sanity, though the simultaneous discovery that "the cultivation of the feelings" had become "one of the cardinal points of

So, it seems, it went on for twenty years: years in which the public saw him only as he worked steadily at India House, published two great treatises, and did an immense amount of serious political journalism. At last John Taylor died, devotedly nursed by Harriet. On April 21, 1851, a century ago today, Mill at last married her. He was then close on forty-five. And it is curious to record that at the same time he picked quarrels with all his own family and never willingly saw them again. Professor Hayek prints a furious letter that Mill sent to one of his brothers and a most touching protest from a sister. John and Harriet went off to live in seclusion at Blackheath with the younger Taylors, and we have a brief glimpse of him extemporising wild music on the piano after tea.

Very soon they were both ill—both were tuberculous—and they had to spend much time apart, one or the other too ill or too busy to travel. The two chapters given to Mill's letters home during a six months' trip he made to France and Italy in successful search for health are the happiest in the book, and have even a glint of humour. But while John recovered Harriet still weakened. Their tale ends abruptly in 1858. They had been detained in London longer than usual into the autumn while John's retirement from India House was arranged. On the journey to their beloved Riviera Mrs Mill caught cold, pneumonia followed, and she died at Avignon. They had been married seven years.

Historical Perspective

The Stakes of Democracy in South-East Asia. By H. J. van Mook. *Allen and Unwin.* 312 pages. 15s.

Dr van Mook was born in Java and has spent most of his life there, becoming head of the Department of Economic Affairs in the Netherlands East Indies before the war and subsequently Lieutenant Governor-General. He was Minister for the Colonies in the Dutch wartime government in exile and returned to Indonesia as Governor General in October, 1945, after the Japanese collapse; he resigned in November, 1948, on a disagreement with The Hague. One of Holland's most highly experienced pro-consuls, Dr van Mook puts today's confused events in South East Asia into

an historical perspective that is most refreshing. He shows that the unrest created by modern nationalism is no sudden flash in the pan.

The book is divided into three parts. The first is an historical survey going back to Vasco da Gama's landfall on the coast of India in 1498; the second covers the Japanese invasion in the Second World War; and the third deals with the economics and politics of South East Asia today. Dr van Mook inevitably writes at length about the Indonesia he knows so well, but he also sets down some wise general thoughts about the whole area he has set out to cover. In the early days of white settlement, he says, there was no sense of colonialism or of racial inequality on either side. At the same time the original white vanguard was carried forward by the forces released in Europe at the time of the Reformation; the "ferocious tenacity" of these men was something new and overpowering in the East. Later, when colonial rule had grown set and hard, it "suffered from all the evils of absentee landlordism."

The Japanese, Dr van Mook points out, never attracted to their side any important number of revolutionaries in South East Asia; they thus failed completely to create any real pro-Japanese sentiment among the peoples they conquered. But what they did, both in smashing up the previous colonial regimes and in making their own colonial-type rule so unpopular, was to stimulate anti-colonialism to a degree never previously inherent even in the growing prewar sense of nationalism. This had little intrinsically to do with any anti-white feeling, although it has naturally since played into the hands of anti-European Communist agitators.

With Dr van Mook's book the reader has the sense of being in the hands of the expert; his point of view is in any case of interest for its own sake. The book is unfortunately printed in a rather trying type, but the author's English is impeccable and he has many valuable things to say.

An American Symposium

The Future of Democratic Capitalism. *Pennsylvania University Press* (London: Geoffrey Cumberlege). 112 pages. 16s.

The title of this book suggests something more consecutive and more

systematic than the book itself actually provides. The future of Democratic Capitalism is a large subject, and a larger volume than this would be needed merely to set out and relate to one another the problems, discrepancies, dynamic forces and constructive or destructive influences which it covers—except in the form of a mentally stimulating essay. The five distinguished contributors to this volume, which constitutes the Benjamin Franklin Lectures of the University of Pennsylvania (second series) for 1949, are stimulating enough, but they have wisely sacrificed comprehensiveness to a deeper consideration of special topics. Mr Thurman Arnold, indeed, is perhaps rather disappointingly averse both from the particular and from the theoretical in his chapter on the "Preservation of Competition"—a subject on which, as an expert in the mythology of capitalism, he has long ago demonstrated his authority. His central thesis, backed by historical analogy, is the connection between a viable competitive order and the free movement of men and goods. The laws of growth and behaviour of big business he leaves to Dr Adolf Berle, whose acute and realistic analysis is eminently applicable not only to private but also to public corporations. Dr Berle, however, concentrates rather on the political (in the widest sense) than on the economic aspects of the large business unit; in America as in Britain there remains in economic theory a painful void, lit only by occasional limited special studies, where there should be a naturalistic account of the economies of scale. On this topic, vitally important to any democracy whether capitalist or socialist, little light is cast either by Dr Berle or anyone else.

Another question to which both socialist or capitalist democracies must find an answer, on pain either of economic dislocation or of losing their democratic character, is that of the role of the trade unions. Mr Lloyd Garrison, evidently with his experience on the War Labour Board vividly in mind, draws an interesting parallel between the position of organised labour in America today and that which it held in Britain fifty years ago, and proposes a "national industry-labour board" with terms of reference remarkably like those advocated for a similar body in a recent Fabian pamphlet.

The remaining two papers, by Mr Morris L. Ernst and Sir Alfred Zimmern

Books and Publications

Window on J. S. Mill

John Stuart Mill and Harriet Taylor: Their Friendship and Subsequent Marriage. By F. A. Hayek. *Routledge and Kegan Paul.* 320 pages. 18s.

The patron saint of British Socialism is a mysterious figure. Despite the noble "Autobiography," several volumes of letters and a stiff little "Life" by Bain, to most readers he has never come alive. On this evidence, even his modern admirers may perhaps be excused for thinking of him as a tender-hearted prig, a rationalising bore mainly memorable for being so much the wisest of Victorian radicals.

Professor Hayek's book should remedy this injustice. In it he has published for the first time the surviving correspondence between Mill and Mrs Taylor together with all the extracts from the letters and diaries of their contemporaries that throw any light on their long courtship and short marriage. He has arranged his material with great art and provided a commentary, admirable in brevity and taste, clearly founded on long research. The result is a most moving and fascinating book. It will become the indispensable companion of the "Autobiography" because it tells us much more than Mill did himself about the years of his prime. Over half of Mill's own story is devoted to the 24 years of

British Economic History Since 1760
By S. G. E. Lythe, M.A.
Lecturer in the School of Economics, Dundee.

THIS new book provides a clear introduction to the economic history of modern Britain. The author follows in general the plan of his lectures given to candidates for London University Degrees in Economics, and he clears up many of the difficulties and misconceptions brought to his notice by succeeding generations of students. His book lays emphasis on modern developments and summarizes the conclusions of such modern research as is not yet normally incorporated in the accessible textbooks: it explains the historical origin of present-day economic conditions and provides useful lists of the author's sources of information. 15s. net.

SIR ISAAC PITMAN & SONS, LTD.
Kingway London, W.C.2.

are not strictly speaking concerned with capitalism at all. Mr Ernst deals admirably with the question of free speech and its limits—which he sets refreshingly wide, but would make conditional, so far as press and public-meeting privileges are concerned, on full publicity regarding financial backing. Sir Alfred Zimmern contributes a beautifully lucid, timeless, and highly topical analysis of the organs of international relations. Serious students of public affairs will want to read this book and, having done so, to keep an eye open for next year's series.

Railway Town

The Social and Economic Development of Crewe, 1780-1923. By W. H. Chaloner. Manchester University Press. 326 pages. 30s.

Detailed studies such as Dr Chaloner has made of Crewe are all too rarely undertaken by economic historians who have the breadth of knowledge necessary to make the most of their local material. Dr Chaloner writes with great scholarship and an exemplary care for detail. His writing is also, it must be said, rather flat and monotonous. Two things, however, combine to make this book interesting and important as well as learned. One is its subject matter. The other is Dr Chaloner's sense of the broad strategy of economic and social development in the nineteenth century. By oblique reference, rather than by the self-conscious provision of "background," he makes the story of Crewe stand in its place, and in its place it is fascinating.

Crewe is the pure-bred child of the industrial revolution in general and of the railway age in particular. Before the railways came there was not even the nucleus of a village, only scattered farmsteads. The line was opened in 1837 and for a short time Crewe was a stopping-place of no great distinction. But by 1842 the Crewe-Chester and Crewe-Manchester branches from the south-north main line had settled the shape of the railway map and the importance of the junction. The Crewe-North Staffordshire branch followed within a few years, and finally (in 1858) the line from Shrewsbury. More important, the Grand Junction had in the meantime moved its locomotive, carriage and wagon works to Crewe; "the finest and most expensive workshops in the world" began production in 1843, after some 750 to 900 people (workers and their families) had been moved directly from the previous works at Liverpool. The employer had had to prepare for them a town as well as a factory.

Dr Chaloner examines in detail the social policy of the railway company at Crewe. At most times it was an enlightened policy. The bad phase was the first dozen or so years after the incorporation of the town as a borough. The company itself (the L & NWR) had become large and remote, and the growth of a vigorous local politics at Crewe had reduced its sense of responsibility for the town; but its officials entered into the politics with much vigour and little sense, and intimidation of the company's employees reached the notoriety of its of

national scandal. Dr Chaloner describes fully the development of the railway works, the rise of labour and the co-operative movement, and the development of social services and municipal enterprise. In the nineteen-thirties the town that had been created by one great enterprise was trying to solve its unemployment problem by itself taking the initiative in attracting new enterprise. In 1938 the solution, for the time being, was brought by the rearmament programme.

Shorter Notices

Universities of the World Outside.

Edited by M. M. Chambers. American Council on Education. 924 pages. \$12.

The World of Learning, 1950. Europa Publications. 882 pages. 60s.

The first of these books is a new work published in America but excluding information about universities in America. The educational system of each country is described together with a detailed description of each university, its history, size, degrees and regulations, system of government and its chief administrative officers. In most cases nothing below the status of a university college is included.

The "World of Learning" which has now reached its third edition and which grows yearly larger, has a different function. It covers a wider range of institutions, including learned societies, libraries, research institutions and so on. But with the exception of the universities only a very brief reference is made to each. Perhaps the book's most valuable function is to give a full list of the names of all professors and readers in universities. It can therefore be said to be more concerned with individuals than institutions. On the whole the two books perform functions which are complementary rather than competitive and are valuable works of reference.

Sweden's Way to a Balanced Economy.

By Arne Nilsson. The Swedish Institute, Stockholm. 48 pages.

Nicely produced in modest—one might say a friendly—size, with plenty of illustrations and a judicious sprinkling of pertinent statistics this little pamphlet is the counterpart in English for the English-speaking world of the series of informative popular booklets on Sweden's economy which the employers' federation, the unions and the state combine to produce sporadically in Swedish for their own people. It gives a handy survey of all aspects of Swedish economy without burking unpleasant facts—such, for example, that the balance in foreign trade is achieved largely by severe controls on imports. The intrinsic strength of Sweden, fortified by the intensive industrial investments in the last few years—not least by the rapid increase in home-produced power—is evident throughout, as are the moderation and relative wisdom with which its resources are managed.

Animals and the Law. By T. G. Field-Fisher. Stevens. 104 pages. 4s.

Buying and Selling a House. By M. B. Evans. Stevens. 163 pages. 6s. 6d.

British Nationality. By Clive Parry. Stevens. 216 pages. 30s.

The first two books are the latest in the series, "This is the Law," which now comprises 23 titles. They maintain the standard already set and are comprehensive, well-arranged and intelligible to the layman. become "of wide interest, for most of

the population must at some time or other have owned a house or an animal or both.

The third is a more technical survey, again much needed since the radical changes in the law of British nationality made, or rather evidenced, by the Act of 1948. It contains the text of the 1948 Nationality Act and of the relevant sections of the Ireland Act, 1949, and is planned, in parallel with Dicey's "Conflict of Laws," in the form of statement of principle, comment and illustration. British nationality is now in transition from its 19th-century simplicity to the 20th-century concept of the Commonwealth, and the process is by no means complete. The only criticism one can offer of this book is that, since it does touch on the status of aliens, it would have been useful to have included the text of these statutes and also of the appropriate regulations.

Reference and Text Books

Whitaker's Almanack, 1951. J. Whitaker and Sons, Limited. Complete Edition, 1156 pages, 12s. 6d.; Shorter Edition, 676 pages. 7s. 6d.

The 83rd annual edition of Whitaker's Almanack continues the provision of "general information" in the widest sense of that phrase. Some of the subjects which have been omitted since before the war have been reinstated, including sections on customs and excise duties, stamps and taxes and lists of the professors in the Universities of Oxford and Cambridge. The articles on London churches and buildings and places of interest in and near London, which have also been reintroduced, include records of bomb damage and restoration.

FBI Register of British Manufacturers, 1950-51. Kelly's Directories Limited and Iliffe and Sons Limited. 852 pages. £2 2s.

This is the 23rd edition of the authorised directory of the Federation of British Industries. It provides information on the products, names and addresses of the members and on brands, trade names and trade marks.

The Canada Year Book, 1950. Department of Trade and Commerce, Canada. 1238 pages. \$2.00.

This is the official statistical annual of Canada, published by the Minister of Trade and Commerce. The 1950 edition incorporates data for Newfoundland which became a Canadian province in March, 1949, though in many cases it is still necessary to treat it separately as the information, particularly the statistics, has been collected in different forms from that used for the older provinces.

As well as the standard information given year by year there are special articles on such varied subjects as Canada's climate, the Royal Canadian Mounted Police, mineral resources, a summary of the Report on the Royal Commission on Prices and a study of the distribution of investments.

Year Book and Guide to East Africa, 1951. Editor A. Gordon-Brown, FRGS. Robert Hale Limited. 434 pages and maps. 6s.

Year Book and Guide to Southern Africa, 1951. Editor A. Gordon-Brown, FRGS. Robert Hale Limited. 769 pages and maps. 8s. 6d.

These two guide books have been prepared for the Union-Castle Mail Steamship Company, and are primarily designed to provide the traveller with descriptions of towns and places of interest. But a little history and a great deal of economic information have also been included.

IN BRITAIN TO-DAY we are trying to maintain over 50 million people. Even in times of peace and expanding trade it would not be easy. In these days it is a most formidable task.

Fortunately we are still the centre of a great estate—partners in the world's largest trading area. Thanks to the enterprise and courage of our ancestors, a world-wide market is standing ready and anxious to expand and develop. For centuries it has been our most friendly market. In the years ahead it can be the foundation of a new age of progress and prosperity for the British people. We cannot escape our responsibility. If we make the right sort of effort to build up trade with the British Commonwealth we can make history.

"New Commonwealth" is dedicated to the task of developing this vast trading area and to thousands of British firms who have never tackled this market it offers a unique information service.

An advertising campaign in "New Commonwealth" provides effective lines of communication with a scattered and complex market. It enables progressive firms to begin to make their names and their services known to selected key

buyers all over the world—with economy and authority.

The pages of "New Commonwealth" offer to British Industry direct and privileged entry to the most encouraging and most stable market open to the people of this country to-day.

UNITED

NATIONS

NEW BOOKS AND REPORTS

Statistical Yearbook 1949-50

556 pp. Clothbound, 40s. (1s. Postage)

For your desk or library a current source book of official facts and figures on world economic and social conditions. Contains data from 1930 to 1950 from 250 countries and territories regarding manpower, agriculture, industrial production, electricity, gas, transport, internal and external trade, finance, balance of payments, etc.

Foreign Investment Laws and Regulations of the Countries of Asia and the Far East

88 pp. 5s. (4d. Postage)

This useful study summarises the current laws and regulations of 13 Asiatic and Far-Eastern countries governing the remittance of dividends, interest and profits, taxation of foreign investments, etc.

Review of International Commodity Problems 1950

63 pp. 5s. (4d. Postage)

A survey of international commodity shortages and surpluses during 1950 with a review of recent international action concerning commodities. Also contains brief reports on the current situation regarding such commodities as rubber, tea, wool, tin, coal, petroleum, fats and oils, etc.

Demographic Yearbook 1949-50

558 pp. Clothbound, 45s. (1s. 2d. Postage)

The insurance actuary and business librarian will find constant use for this compilation of current statistics on the world's population and its trends which contains figures on births, deaths, marriages, international migration, etc., for the major countries and territories.

Nationality of Married Women

74 pp. 3s. 9d. (3d. Postage)

When a woman marries a man from another country she may lose her citizenship or acquire dual nationality. This report contains extracts from the laws and constitutions of 60 countries relating to the nationality of married women.

Training for Social Work

248 pp. 15s. (6d. Postage)

Social workers and students and teachers of social work will welcome this survey of the different methods of social work training throughout the world. It also presents a directory of the leading schools of social work in various countries as well as summaries of the organization and programmes of work of 41 schools of social work.

AMERICAN SURVEY

Reckoning With MacArthur

Washington, D.C.

THE cost of relieving General MacArthur of his command is plainly going to be at least as high as was estimated beforehand by the Administration's realists. There was little evidence then that any of America's allies—and least of all, perhaps, the angry members of the House of Commons—had the slightest conception of the consequences they were urging President Truman to invite. A very good idea of what would happen when the prophet-emperor-hero was dethroned was available, however, in Washington.

The importance of unifying the United Nations and of saving Anglo-American relations from perdition loomed large in London; but it would not be true to say that these objectives alone, desirable as they were seen to be in Washington, would have led the President to unleash the forces which are now playing about the White House. Mr Truman acted less to preserve the allied front than to preserve the prerogatives of the Presidency, as defined in the American Constitution.

What he has done did not require less courage on that account. Still, it had better be understood that it was the urgent necessity of asserting the supremacy of political government in the United States—the need to demonstrate that the elected President was in fact as well as in name the Commander-in-Chief of the armed forces, and must be obeyed by his military subordinates—that turned the scale. In plain language, General MacArthur had precipitated (presumably deliberately, since he is a former Chief of Staff, well aware of the limits within which a commanding general is normally able to work) a situation in which the President was obliged either to assert or to yield his constitutional authority.

The over-worked word hysteria has been used a good deal since 1 a.m. on April 11th, when the presidential order dismissing General MacArthur was announced, to describe the extraordinary public demonstration it has evoked. But the explanation of what has happened is less simple. There has suddenly been provided a new magnetic pole which is exercising a violent attraction not only for the emotional and the congenial hero-worshippers but also for all classes and creeds, all divisions and sub-divisions, of the great company of the frustrated. Among them are to be counted the immense majority of convinced Republicans (who have been denied the fruits of office continuously since 1932), the haters of the New Deal and the Fair Deal, those who distrust Britain, the anti-labour union faction, the anti-Acheson and the anti-Marshall anti-Trumanites.

To all Republicans who long ago reasoned themselves into a state of mind in which they could be isolationist about the West and interventionist about the East, General MacArthur, raising anew the standard of Asia First, was heaven's gift. Those who a few months ago challenged the appointment of General Marshall as Secretary of Defence, on the ground that the constitutional civilian government should not be endangered by the conferment of such authority on a military man, now upheld without a second thought the authority

of General MacArthur to substitute his own policy for that of the President.

And for those who had temporarily suppressed their old, deep-seated and probably irremovable resentment of the British, the dismissal of General MacArthur was an act almost of liberation. President Truman had acted at British dictation. "The State Department is nothing more than a branch office of 10 Downing Street," cried Senator Dirksen of Illinois. A bountiful providence, at this point, allowed to leak out of (apparently) the State Department the substance of a ten-day-old Foreign Office *aide mémoire* on the draft Japanese Treaty, which could easily be made to show that Britain was intent on appeasing the Chinese Communists by inviting them to the treaty talks and promising them Formosa. What could be plainer than that General MacArthur, the historic enemy of such appeasement, had been sacrificed to save British investments in Hongkong and British trade with China?

★

The hot-tempered telegrams and the tumultuous hero's receptions are one thing. Mr Truman benevolently endorsed the invitation to "one of our greatest military men" to address a meeting of Congress, and the Pentagon quickly arranged guards of honour and 17-gun salutes. But the question of whether the Truman policy shall be scrapped in favour of the MacArthur policy is quite another thing. Mr Truman, Mr Acheson, General Marshall and the Chiefs of Staff are not going to stand about with their hands in their pockets while General MacArthur convinces the country of the wrongness of the Administration policy (localise the Korean war and try to create a climate in which a settlement is possible) and of the rightness of the MacArthur policy (bomb and blockade China, send General Chiang Kai-shek's men into battle and be ready for whatever consequences may come).

General MacArthur has yet to make his complete case, and he has yet to answer questions; but the hints from his staff in Tokyo and the Republicans in Washington seem to indicate that some of the things he is going to say will be attuned to the current American mood. It is not a bad thing to know that, as lately assessed by the Gallup Poll, that mood is a great deal closer to the British mood than the political and diplomatic news is apt to suggest. Within the last two months 77 per cent of the voting cross-sections of the public have agreed that it would be a mistake for the United States to start an "all-out war" with China. Most of those who have expressed opinions would have the United Nations stop fighting at the 38th Parallel if the Chinese and North Koreans would stop too. A con-

"AMERICAN SURVEY" is prepared partly in the United States, partly in London. Those items which are written in the United States carry an indication to that effect; all others are the work of the editorial staff in London.

considerable majority thinks the United States should "try harder" for a settlement in Korea. There is—or there has been up to now—nothing to encourage the idea that Americans want to march into a big war in the Far East.

But General MacArthur and the Republicans are almost certainly not going to offer a big war. They are apparently preparing to say that only their course will bring swift victory without a big war; that the only language the Communists will understand is the language of strength; that theirs is the way to an early and secure peace, while the other way is the Munich way, with retribution sure to follow.

Mr Truman is reliably reported to have predicted privately that the Republicans will come to rue the day when they embraced General MacArthur and his cause. He may be conspicuously right about that. It remains to be seen whether public approbation or public disillusion will result from the closer scrutiny of the hitherto-distant hero which the wireless microphones and television cameras will provide. It remains to be seen whether a vigorous Chinese offensive in Korea will help the Republican-MacArthur doctrine ("We'd have been in better shape if he'd had his way") or hinder it ("They're playing politics when men are dying"). And it remains to be seen whether the hero himself is going to be satisfied with his political allies, who are manifestly well aware that the election is far enough away to remove the risk that they will have to make any serious commitment to him as a candidate.

The President, moreover, has some considerable cards to play. Whether or not any minor military support for General MacArthur should reveal itself, it is beyond doubt that the military leadership of the United States is firmly against him. How easy is it going to be to convince the American people that everyone is out of step except General MacArthur—the White House, the State Department, the Pentagon and the wide company of America's allies? What is the reply to the question, now trembling upon Democratic lips, about the confident prediction that the Chinese would not intervene in Korea and the "home-by-Christmas" promise? When people have had time to think, whose judgment will they accept on the nature of the risks and possible penalties of the "Up Guards and at 'em" course?

This is at present a situation in which the best estimates about both the immediate effects and the eventual outcome of the MacArthur dismissal are educated guesses. It should be recorded, nevertheless, that after conceding the stiff price that is being and will be exacted, some well-educated guessers in Washington now think that the often derided, often underestimated, but doggedly single-minded tenant of the White House will come out on top once again.

New Hope for the Seaway

[FROM A CORRESPONDENT IN OHIO]

WHEN, in February, Mr Franklin D. Roosevelt, Jr., introduced into the House of Representatives a Bill to carry out the St Lawrence Seaway and power project, he was following in his father's footsteps. From his first inauguration in 1933 until his death, President Roosevelt supported this prodigious venture, yet, in spite of his appeals, and those of every other President since Woodrow Wilson, the project has never been approved by either House of Congress. But its chances look brighter now that the need for steel for the latest industrial mobilisation has coincided with an approaching exhaustion of the middle west's reserves of that all-important raw material, iron ore.

For almost half a century Americans, like Canadians, have dreamed of a Seaway 2,300 miles long that would join the land-locked middle west with the salt-water highways of the world via the Great Lakes and the St. Lawrence. Interest has been quickened by the prospect of harnessing, for electricity production, the tremendous water power of the International Rapids section of the river. The chief obstacle is the 115-mile stretch from Ogdensburg, New York, to Montreal, where the river drops 224 feet. Here a system of locks and canals has long provided a waterway 14 feet deep. The 1941 agreement between the United States and Canada, still to be approved by Congress, called for a new channel 27 feet deep that would accommodate 70 per cent of existing sea-going vessels. The Seaway would put directly into world commerce at low cargo rates the immense agricultural, mineral and industrial riches of the midwest. Great inland cities like Chicago, Detroit and Cleveland would become ocean ports, yet in wartime the ship-lane would be secure from prowling submarines. And the American half of the 13 billion kilowatts of hydro-electricity to be made available each year would help to relieve serious power shortages in upper New York State and New England.

Although this project fires any disinterested imagination, and is a non-partisan issue, it is a chronic source of intense conflict for special and sectional interests—between rail and water transport companies, between private coal and electricity concerns and those who want public water power, between ports on the Atlantic Ocean and Gulf of Mexico and those on the Great Lakes, between businesses in the east and in the middle west, and so on. All the national farm organisations want the Seaway as a cheap avenue for grain exports, but industrial interests are sharply divided and the trade unions tend to go along with the industries

they serve. Thus, the railroad brotherhoods line up behind the rail carriers, while the longshoremen back the seaports; coal companies which still oppose the venture have the miners' redoubtable Mr John L. Lewis in their corner.

Some of the opposition's arguments have been answered by time or by changes in the original scheme. The old cry against "waste of the public's money" has been muted since 1947, when the plan was changed to make the Seaway pay for itself in 53 years by means of toll charges. The assertion that the channel would be blocked by ice four months of the year is true, but that does not disturb great industries which for years have stored raw materials against the winter freeze-up of the Great Lakes. The argument that became familiar during the last war—that the Seaway would be worthless to national defence because it would require six years to complete—is heard less often now that everyone feels that the present emergency will last a decade at least. The Seaway is in fact already about 90 per cent complete. Of the 18 big locks needed to overcome the 600-foot drop in water levels between Lake Superior and the Atlantic, nine have already been built and much dredging has been done by Canada and the United States acting individually. The latest estimated cost of construction is \$818 million, of which the United States would pay \$565 million, with Canada receiving credit for the Welland Canal portion of the route.

The opposition remains powerful, however, and has lately been searching for national rather than sectional objections to the plan. Opponents argue that only 16 per cent of the American merchant marine could use a waterway 27 feet deep. Shipowners scoff at the suggestion that partially loaded vessels might still pay their way, and demand a 35-foot channel or nothing. This would require an investment of \$1,500 million—too much to be liquidated by tolls. A new line of attack challenges the Seaway as a wartime asset. The entire Great Lakes region is now a potential target for enemy bombers coming over the Polar route. The locks would certainly be vulnerable to bombing or sabotage, but Seaway or no Seaway, the existing locks, which can carry more traffic than the combined tonnages of the Panama, Suez and Kiel canals, would have to be protected.

The Department of Commerce estimates the probable volume of traffic on the Seaway at between 57 and 84 million tons annually, but thinks that this competition would cost the crowded port of New York less than 2 per cent of its annual income. Eastern railways, which have to carry a millstone of high operating costs, would undoubtedly suffer an initial loss of freight. But many of their complaints echo similar denunciations of the Panama Canal 50 years ago. Today the transcontinental lines are the most prosperous in the country.

The loudest voices in the present controversy, however, are not those of eastern opponents but of midwestern proponents, who have recently recognised that the supply of high-grade iron ore (which comes from the Mesabi Range in the Lake Superior district of Minnesota), is diminishing at an alarming rate, and may be exhausted within a decade. The Secretary of Commerce says the United States will have to import 40 million tons of iron ore by 1960. Here is a long-term threat to the prosperity of Ohio, Indiana, Illinois and Michigan—perhaps the greatest manufacturing centre in the world and one which produces 70 per cent of America's steel. The threat is scarcely lessened by new discoveries of limited deposits in Ontario or by plans for utilising low-grade taconite—still a slow and expensive process. The only real promise of relief is in the discoveries in Labrador and Quebec, north of the Gulf of St Lawrence port of Seven Islands. This area, which probably contains as much high-grade ore as the Mesabi district, is now being developed by several midwestern steel companies.

This find at the threshold of the proposed route has put new life into the campaign for the Seaway. For a generation business men and industrialists in the middle west felt that they could ignore the dispute. But they have been taking anxious second looks since they realised the cost handicap their region would suffer if iron ore had to be brought in by way of the Atlantic and expensive rail transit from the coast. A cold chill goes up the midwestern spine every time the US Steel Corporation or some other big company acquires a site for a plant on the eastern seaboard to handle the vast new iron deposits of Venezuela. As a result, midwestern farm organisations and trade unions which have long pleaded the Seaway cause are being reinforced by worried editors, chambers of commerce, steel makers and steel users. Huge concerns like the General Motors Corporation and the Ford Company are now actively interested. The important Ohio Valley Improvement Association has changed over from opponent to advocate.

In his budget message Mr Truman asked Congress for \$20 million to launch the Seaway and power project, and this time his plea is sharpened by intimations from Ottawa that, if the United States continues to mark time, Canada will next year begin to construct both Seaway and power plant on its side of the border. The opposition is still strong and vocal, but there is a growing feeling, in and out of Congress, that an enterprise which makes obvious economic and engineering sense and one which Mr Herbert Hoover once called "the greatest internal improvement yet undertaken on the North American continent" will eventually be carried out.

UMT Another Day

The House of Representatives has sent the Administration's plan for Universal Military Training away to yet one more commission and told it to come back again another day, when the commission has prepared a detailed scheme for Congress to consider. The new military manpower Bill, as passed by the House, contains a time-table for UMT which should keep it moving through Congressional channels fast enough to ensure that it will emerge before the Administration actually needs it. But Congress is not in the habit of keeping to time-tables it sets for itself, and the House's refusal to accept various more effective compromises that were proposed on UMT suggests that it adopted it in principle, with no intention of putting it into practice.

But something may be done to remedy this in conference with the Senate representatives, for the upper house gave the Administration what it asked for—authority to begin six months' military training, followed by five and a half years in the reserve, for 18 year olds as soon as they are no longer needed to keep the active fighting forces up to strength. What the Department of Defence wants is a flexible and long-term plan for military manpower, which can be adapted either to all-out war or to a prolonged period of preparedness. To sugar this pill, it held out hope that by the end of next year UMT might be dovetailed into selective service and that the size of the standing army might begin to be reduced.

The Senate also agreed to the Administration's request that the draft age should be reduced from 19 to 18, while the House Bill puts it at 18½. This is not, however, a serious matter, since registration is permitted at 18, and the actual process of calling the men up takes some time. The House got two months nearer to the Administration's goal of 27 months' service than did the Senate, which approved only two years; the present period is 21 months. The House also did better than the Senate by refusing to set a ceiling on the number of men in the armed forces. Nor would it go along with those members from the south who wanted to interfere with the Administration's policy of abolishing racial segregation in the services. Most important, by defeating an amendment that would have required Congressional approval before any drafted men were sent to Europe, the House declined to stick its thumb into the Senate's constitutional quarrel with the President. But further Republican attempts to make it pull out a plum are expected in the Foreign Affairs Committee and when the various military appropriations are debated.

* * *

Reconstructing the RFC

The Reconstruction Finance Corporation, after a year's investigation of the part favouritism and influence have played in its lending operations, is itself to be reconstructed. The President's reorganisation plan, which closely follows the recommendations of Senator Fulbright's sub-committee, squeezed through the Senate last week as narrowly as it had through the House. To defeat such a scheme, "constitutional" majorities (more than half the membership) are required, and its opponents failed by eight votes in the Senate and eighteen in the House. On both occasions, however, a majority of those present disapproved the plan, either because, as Republicans, they were sorry to abandon the muck-raking, or because they favoured more drastic remedies, including that of abolishing the RFC altogether. The latter group doubts whether present reforms will eliminate "political lending" and feels that the depression-born RFC is now merely pumping inflationary credit into unsound enterprises.

While the critics have not yet given up hope of abolishing the RFC, to wind it up would mean mustering a two-thirds

vote to override a certain Presidential veto. So the victory will probably lie with those who feel that under proper management the RFC still has essential functions to perform: providing credit for small businesses and for war production and supervising the production and sale of strategic materials such as synthetic rubber and tin. Mr Wilson, the defence mobiliser, believes that the defence effort would be injured if the RFC disappeared; many Congressmen know their standing with constituents who depend on the RFC would suffer too. Proper management is to be assured, under the plan, by concentrating responsibility in a single administrator, who will be advised on general lending considerations by a high-ranking Loan Policy Board and on individual loans, above \$100,000, by a Review Board. If he ignores the latter's advice, his reasons must be put on file. A top-flight administrator has been nominated—Mr Stuart Symington, the chairman of the National Security Resources Board, whose job became largely meaningless when Mr Wilson was given his broad powers over mobilisation.

Senator Fulbright, however, has little faith that corruption can be cured by passing a new law. At his suggestion Senator Douglas is opening new hearings, in a week or so, into federal morals and ethics, inviting the advice of a long list of worthies as to a possible code of conduct. These hearings apparently are to be televised, but Senator Douglas is optimistic if he thinks that ex-President Hoover, speaking on ethics, will secure the rapt attention accorded to Mr "Greasy Thumb" Guzik and Mrs Young's royal pastel blue mink coat.

* * *

Five-Star Candidates

Should the Republicans by any chance finally hitch their wagon to General MacArthur in 1952, they may find him racing against another five-star general. For the Democrats made it clear, by their cheers when General Eisenhower was praised at the party's annual Jefferson-Jackson Day dinner, that they would have no objection to letting him pull their chariot in the coming election. And the next morning a Gallup Poll showed that he was the first choice of the voters, whatever their party, for the Presidency: 43 per cent of the Democrats questioned preferred him, while only 18 per cent chose Mr Truman; of the Republicans, 38 per cent wanted General Eisenhower, compared with 22 per cent for Senator Taft and 14 per cent for Governor Dewey. This survey was conducted before General MacArthur's dismissal put him in the running, but even now there can be very little doubt that the majority of Americans "like Ike" best.

Whether he would like to be President—and as the leader of which party—is, however, much more doubtful. He has always refused to commit himself, but he might consent to shine in the political darkness if General MacArthur, or even Senator Taft, were to stand, as either of them presumably would, on a platform that put Asia before the Europe that to General Eisenhower comes a long way first. But in this case the General, who is believed to have Republican sympathies, would probably compete for that party's nomination. There is no reason to suppose that the Democrats' dream of getting him to accept their rests upon anything more substantial than pie in the sky.

When in a year's time the political star-gazers come down to the solid earth of primary elections and party conventions, the Democrats will almost certainly decide that President Truman can have their nomination if he wants it. But a few weeks ago, before General MacArthur forced him to act like a President again, Mr Truman seemed virtually to have abdicated already. In this unaccustomed climate, Democratic presidential possibilities began to shoot up for the first time since 1932. Of these, the most flourishing was, surprisingly, the freshman Senator, Mr Paul Douglas of Illinois, a professor of economics and an ex-Marine. To the professional politicians, however, the quality that made

him seem a likely winner, at a time when the Democrats are everywhere accused of corruption and insincerity, was his unblemished reputation for honesty, even though that honesty takes him along the straight and narrow way of political independence with a frequency which his party's leaders deplore.

* * *

Curbing the Communists

The Supreme Court has upheld the Ober Loyalty Law of Maryland, in so far as it requires candidates to declare, on oath, that they are not trying to overthrow the government by force or violence. The chief interest of this decision lies in the fact that the Ober Law was modelled, in part, on the Smith Act of 1940. This is the law under which the eleven Communist leaders were convicted in New York in 1949 of conspiring to use force and violence to overthrow the government, and the assumption of the Justices that any government is justified in controlling "force and violence" directed against it suggests that the constitutionality of the Smith Act, which the Communists challenge, may soon also be sustained.

In the original trial Judge Medina insisted that the Communists were being tried, not for their opinions, but for illegal actions, and the Attorney-General's view was the Party would not be outlawed if the convictions were upheld. Nor will it be proscribed if the Subversive Activities Control Board, created under the McCarran Act, concludes, after hearings which begin next week, that it is a subversive organisation directed from Moscow. But it will have to register as such, submit lists of officers and members, and give a financial accounting.

The Board itself, though preparing bravely to proceed, is in an embarrassing position, for the Senate for six months has failed to confirm the appointments of its members and its findings, if confirmation eventually is refused, would hardly hold water. Senatorial jealousies are also responsible for delays in passing legislation which the President's Commission on Security and Individual Rights feels it must have before it can set to work; the Senate Judiciary Committee, prevented from undertaking its own inquiry when the Commission was appointed, is in no hurry to oblige. The final knot in this tangled skein is that with the Commission temporarily disbanded, it cannot tighten the security standards issued to guide the loyalty boards which sift government servants; yet the failure to do so is a cause of bitter Congressional recrimination and one factor in the Senate's reluctance to confirm the members of the Subversive Activities Control Board.

The House Un-American Activities Committee is happy in suffering from no such snarled authority; it has returned with zest to the Hollywood hunting grounds which it found so rich in publicity in 1947. Several actors have confessed to having joined and then left the Communist Party; a number of other witnesses have refused to answer despite the fact that the "Hollywood Ten," who took a similar stand in the earlier hearings, are still in jail. It is difficult, however, to see what purpose such an investigation serves, except to show that, though political control of the committee has changed hands, its zeal is unabated. This time it is not even charged that Communist propaganda has been thrown on American screens.

Controlled Materials

After weeks of "now you see it, now you don't," the National Production Authority has at last announced details of the Controlled Materials Plan to be introduced on July 1st for the three metals which are basic to the defence programme—steel, copper and aluminium. Under the scheme, firms working on military contracts or making essential

civilian goods, such as machine tools and railway wagons, will estimate in advance their requirements of these materials for each quarter; NPA, after checking these estimates, will allocate the appropriate amounts to each consumer. NPA emphasises that under CMP the controlled industries will be given drafts on the national supply of metals, which will be honoured, instead of merely licences to hunt for them; this was all the priority system amounted to in 1941 and 1942, and what it was in danger of becoming again as supplies of metals grew increasingly short.

While CMP has been imposed at a much earlier stage of the present armament programme than of the last, it is not the all-embracing scheme that it was then—although it would quickly become so, in the event of a full-scale war. For this time allocations are not to be applied to firms making non-essential civilian goods, a group which at present includes manufacturers of automobiles and all types of durable household equipment. They will be free to track down their own supplies of materials, after the essential allocations have been met. Attempts are, however, being made to ensure that small businesses get their fair share, and also that the metal markets shall not be over-hunted. The existing limitation orders, by which manufacturers are allowed to use only a percentage of the quantities of metals which they used in the first half of 1950, will be continued. The orders will be adjusted each quarter to match the amounts of controlled materials which will be left over for non-essential uses.

Most of the pulling and hauling that delayed the announcement of CMP seems to have arisen out of arguments over which uses are in fact non-essential, and out of fears that the scheme would cause an undue scarcity of goods for civilians. It is suggested that, if these fears look like being justified to an extent that would strain the national economy unnecessarily, makers of essential goods may not be allocated their full requirements of metals. Mr Wilson himself confessed that he had taken a great deal of convincing that CMP was indispensable at this stage. In fact, it probably could have been avoided until next year, when the full demands of the defence programme will be felt. But the authorities are rightly anxious to get CMP into full working order before then, and they are well aware that it is unlikely to run smoothly in its initial stages.

Shorter Notes

Of the three spies, all American citizens, found guilty of stealing the secrets of the atomic bomb for the benefit of Soviet Russia, during 1944 and 1945, two, Mr and Mrs Rosenberg, have been sentenced to death, the third to the maximum of thirty years' imprisonment. If the executions are carried out, which seems probable, it will apparently be the first time, in peace or war, that the death penalty has been imposed by the civil courts. The judge, when delivering sentence, pointed out that, if the espionage had been committed in peace time, the punishment would only have been twenty years in jail, which he considers inadequate in today's circumstances.

*

Last year's catch of only just over 2,000,000 muskrats is worrying Louisiana, the leading fur producing state in the nation. It is usually two or three times as great and supports, in whole or in part, some 40,000 people. The disappearance of the muskrat from its normal feeding grounds has been caused, it is thought, by exploitation of another resource—oil. Mink ranchers, and not only those in Louisiana, have a stranger complaint. They have been encouraged officially to feed their precious livestock on chickens' heads—an economical and nutritious diet. This worked well until poultry farmers, to produce better eating birds, adopted the practice of injecting female hormones into the chickens' heads. On the minks' bill of fare, such hormones have produced a disastrous loss of interest in the opposite sex.

MUNICIPAL AND GENERAL SECURITIES COMPANY LIMITED

THE PIONEERS

OF UNIT TRUSTS

PRESENT A SHORT ACCOUNT OF TWENTY YEARS OF UNIT TRUST MANAGEMENT

In 1931, in the creation of the FIRST BRITISH FIXED TRUST, "M & G" introduced to the investing public the first modern Unit Trust to be established in this country. Since that date, they have been continuously engaged in developing and improving on the Unit Trust method of investment. In this, their aim—and their achievement—has been to offer to every investor, large or small:

- (i) a widely-spread equity portfolio at economical cost;
- (ii) a free market for his units at a price calculated daily on the market value of the underlying securities;
- (iii) a dividend every half-year, paid on known dates, which represents a reasonable return on his outlay and does not fluctuate greatly;
- (iv) relief from the burden of detailed attention to his own investment affairs; and
- (v)—a benefit which has proved of particular value in recent times—some protection, as regards both capital and income, against the ever-falling value of money.

HISTORY.—The successful launching of the "FIRST BRITISH" was followed by the creation of the SECOND, THIRD and FOURTH BRITISH FIXED TRUSTS between 1932 and 1934. These were the Fixed "Appropriation" type of Trust—the only one then known. It had, however, its imperfections—notably, a constant liability to capital dispersion (*see note to table below*) and a conflict of interest between Managers and Unitholders during the creation period. In 1935 and 1936, therefore, "M & G" ceased to issue any further units in these Trusts and created THE LIMITED, THE MIDLAND AND SOUTHERN and THE SCOTTISH AND NORTH COUNTRY INVESTMENT FUNDS—"Cash" Funds in which all capital accruals are retained and the Managers act solely as agents in the creation of Units. These are, moreover, Managed (or Flexible) Trust Funds, and their portfolios can, within certain limits, be varied in the light of changing political and industrial circumstances. Later, in 1938, "M & G" devised a means of applying to a Fixed Trust the advantages inherent in the "Cash" method of construction; and they created, in the "NEW BRITISH," the only "Cash" Fixed Trust in existence.

RECORD

The performance of these eight Trusts—and a comparison with the general run of the investment market during their lives, based on the Actuaries' Index of Industrial Ordinary Shares (All Classes Combined), last published for 27/3/51—can be briefly illustrated by the following figures:—

	Fixed Trusts					Managed Investment Funds		
	First British	Second British	Third British	Fourth British	New British	Limited	Midland & Southern	Scottish & N. Country
Opening Date	April, 1931	Dec., 1932	Dec., 1933	Feb., 1934	Dec., 1938	Dec., 1935	Mar., 1936	Mar., 1936
PRICE MOVEMENT OF UNITS:								
Initial Offered Price of Units	31/9	22/3	20/6	20/6	9/4½	20/-	20/-	20/-
Offered Price 17/4/51	55/2½	32/6½	34/3½	23/3½	15/5½	25/10½	29/10½	34/7½
PRICE MOVEMENT OF UNITS COMPARED WITH ACTUARIES' INDEX (from Opening Dates to 27/3/51):—								
Price Index of Units, 27/3/51 (Opening Date=100)	167*	140*	159*	111*	157	123	148	166
Actuaries' Index 27/3/51 (adjusted to Opening Date=100)	151	157	130	123	142	110	106	106
Price Index of Units as % of Actuaries' Index (adjusted)	110*	89*	123*	90*	111	112	139	156
DIVIDENDS (gross % p.a. of initial price; allowing for management charges and excluding all capital items):—								
Average over life of Trust	£5.16.3	£5.12.3	£5.15.9	£4.10.3	£4.18.3	£4. 9.9	£5. 6.6	£5. 4.9
Paid during 1950	£7. 1.3	£6.11.6	£5.19.0	£4.16.6	£6. 2.3	£5.15.0	£6.10.3	£7. 5.6
YIELD 17/4/51 (allowing for all expenses)	£4. 1.9	£4. 9.9	£4. 1.9	£4. 6.3	£3.18.3	£4. 9.9	£4.15.3	£4. 8.0

* No allowance made for returns of capital during the life of the Trusts: First British 2% of initial price; Second British 20%; Third British 7%; Fourth British 1%.

● This summary, though brief, may yet suffice to show that this medium of investment was well conceived, and that subsequent improvements have been effective. The fundamental idea of investing in a well-spread portfolio of equity shares instead of using fixed interest securities was almost unheard of in 1931; it is now being ever more

widely recognised as sound investment practice for both small and large investors and even for settled funds. Stockbrokers and Bank Managers who might care to investigate the economies and other advantages of Unit Trusts in any particular case are invited to enquire for further information from the Managers.

THE WORLD OVERSEAS

Moods of the Australian Electorate

(From Our Melbourne Correspondent)

ELECTIONS in Australia are usually fought more on fears than on hopes. In the Federal polls on April 28th, which follow the double dissolution of both Houses of the Commonwealth Parliament, Mr Menzies, the Prime Minister, is seeking to return to office on the basic issue of fear of Communism. He places part of the blame for increases in the cost of living on the Communists, whose "twin poisons of go-slow and absenteeism" have, he reasons, been the greatest cause of low production, which in turn is the greatest cause of high prices. On the other side of the political fence, Mr Chifley, Leader of the Opposition, is making a strong bid for office by inviting the people to contemplate the dire consequences of uncontrolled inflation. All sections of the community were threatened by the rising tide of prices, Mr Chifley warned in his policy speech, but those in receipt of fixed incomes faced the future "with fear and dread." Out of the mass of "platform points," which have been punctiliously presented to electors by the party political leaders, the issues of Communism and inflation are clearly those on which the Australian people are being asked to choose their new Parliament. There is, however, no certainty that the electors will accept these as the vital issues of the poll, for both Mr Menzies and Mr Chifley have undertaken to do many more things than outlaw Communists and control prices.

On the issue of Communism, Mr Menzies faces an awkward position, for it was not the Labour-dominated Senate which finally torpedoed the Government's anti-Red legislation, the cardinal point of Mr Menzies' 1949 election programme, but the High Court of Australia, which invalidated it by a six-to-one majority. Therefore, Mr Menzies's grievance on this issue is not really with a hostile Senate which, he says, made Parliament unworkable, but with the High Court, which declared the legislation *ultra vires*.

This is no mere academic point, for it anticipates the difficulty which the Government if it is returned will face in dealing with the Communist threat to the industrial life of the nation. Effective control of both Houses of Parliament will not circumvent the High Court's veto of the legislation to outlaw the Communists; that can be done only by amending the Constitution, a procedure always fraught with difficult and uncertainty in Australia. No other issue in recent years has been charged with such emotion, with such bitterness and with such confusion as that of Communism. If it were possible to decide the election on this issue alone the result would be in little doubt. Mr Chifley has supported Mr Menzies by pledging all out war on the Reds.

There are in this election, as indeed there are in all elections, a number of important side issues which inevitably induce many voters to deviate from the strict party line. There can be little doubt that in the December, 1949, elections, Mr Menzies' pledge to abolish petrol rationing swung many votes from the Labour to the Liberal cause. Many Labour supporters have motor-cars, and lack of petrol was as distasteful to them as it was to the Liberals. In the same way, Labour is this time indulging in the gentle art of vote catching by offering, among other things, increased old age, invalid and war pensions, together with a lift in the endowment payable to the first child from 5s. to 10s. a week. These down-to-earth concessions could well weigh more

with the electors than the more general, and seemingly theoretical, issues of Communism and inflation.

But if the electorate feels as strongly against Communism as Mr Menzies thinks, there is provided a very simple remedy—amend the Constitution. Mr Menzies will interpret a decisive victory in both Houses as a mandate to proceed to fight and defeat the Communists. Amendment of the Constitution by a referendum would give him full and untrammelled power to go right ahead and smash the Party. And, as the Melbourne *Argus* commented: "It seems that if the Communist Party is abolished, the sun will come from behind the clouds all over Australia. Increased production and prosperity will follow automatically. Our little group of Red mischief-mongers has never had such a magnificent compliment—or one so undeserved."

Woolgrowers' Boom

It is thus against this general background of fears rather than hopes for the future that Australian electors are being asked to choose their new Parliament. The fear of a further rise in living costs is a very real issue with the housewife. It is no mere abstraction and is certain to count more than such an academic consideration as the limitations of individual freedom which legislation to ban the Communists may involve. There is, furthermore, still another fear stalking abroad among the electorate, and that is the fear that "things are too good to last." This arises from the fact that prosperity in Australia follows very closely the fortunes of the export industries. The man in the street knows vaguely that much of the fantastic volume of public spending power springs somehow from the tremendous increase in the level of wool prices. When wool sells at £200 a bale compared with about £15 before the war, there is an uneasy feeling that a fall must be somewhere around the corner. Australians have vivid memories of the dark days of 20 years ago when a collapse in export prices led to an internal economic crisis of first magnitude and they feel that "it could happen again." All this makes for uneasiness and indecision in the political as well as in the economic field. The Menzies Government made a 20 per cent deduction on woolgrowers' cheques as an advance payment for tax. Mr Chifley has pledged to reverse this and refund the amounts already collected to the growers. Mr Menzies has said nothing about the highly explosive issue of the exchange rate. Mr Chifley has undertaken to maintain the existing relationship with sterling. Strong pressure groups are affected by these pledges, the effect of which may lead to a considerable defection in orthodox party support.

It is this that makes prediction particularly difficult for April 28th. It would not be unreasonable to suggest that Mr Menzies' Government has suffered somewhat in popularity since December, 1949; that would be logical in the course of political affairs. His majority in the House of Representatives would allow a considerable falling away in support, but in the Senate the position is difficult and well-nigh impossible to assess. The only pointer has been the luck of the Government in obtaining pride of position in the Senate voting paper in Queensland which, as in 1949, is likely to be the vital state.

AMERICA'S THIRD

LARGEST INDUSTRY

Next week, *Picture Post* starts a series of six special features on Hollywood. Between them they comprise a full, frank and objective report on America's third largest industry. They reveal how the world's wealthiest community does, in fact, behave. They review Hollywood's best film of the year—and its worst. They touch on some curious intrigues and causes celebres. And they demonstrate how much Hollywood, directly or indirectly, influences the thought and conduct of almost every one of us. This remarkable series is being widely advertised; and forms part of *Picture Post*'s plans for future expansion. But—however fascinating in themselves—to advertisers the articles are chiefly significant as one more proof of *Picture Post*'s great and ever-increasing popular appeal. And it is this distinctive character of *Picture Post*—popular yet responsible—which makes it the best of all possible back-grounds for promoting public confidence and demand, in a mass market.

Chassis frames that cracked ... water jackets that leaked ... gear boxes that broke

When S. F. Edge won the 1902 Gordon Bennett Cup race for England in his Napier, he considered himself lucky to have finished the Paris-Innsbruck course. The racing cars of that day were magnificent but uncertain performers. Their reliability was affected by water jackets that leaked, gear boxes that broke and even chassis frames that cracked—vide the experience of Charles Jarrott in the same race, who braced his car with the legs of a bedroom table. Performances of modern racing and production cars illustrate the progress that has been made in engineering design and materials. Nickel steels, nickel cast iron and other nickel alloys have helped by increasing reliability and by solving many design and production difficulties. In material problems such as these, our Development and Research Staff are most willing to make available their accumulated knowledge and experience.

The Cominform on MacArthur

[BY A CORRESPONDENT]

THE sudden removal of General MacArthur caught the Communist propaganda staffs badly off balance. In such cases it is not uncommon for the Soviet and satellite press and radio to withhold the news of an important event from their public for several days while the correct line is hastily worked out and approved. This time, however, something dangerously like a leak occurred at an early stage. A detailed explanation was given to a small fraction of Moscow Radio's foreign listeners, and then abruptly withdrawn from circulation; and the next few days were marked by uneasy silence as far as the Russian public was concerned, by hesitancy in Soviet broadcasts to other countries, and by open discrepancies between the theories advanced by Communist newspapers and radio commentators in Europe and the Far East.

In broad outline, of course, the Communist reactions have been consistent with the long-maintained thesis that no real quarrel exists between President Truman and the former Supreme Commander. This argument was developed at length in an anonymous commentary broadcast from Moscow on the day of the dismissal to Greek, Hungarian and Italian audiences. They were told that MacArthur had done "nothing that disagreed with the aggressive policy of ruling circles in the USA; he was, so to speak, the living incarnation of this policy." He had been "kicked out" because he had met with severe military defeats, and had "talked repeatedly and volubly about the true plans of the US Government" to such an extent that Truman had to dismiss him to quieten British and French fears of being drawn into a disastrous Asiatic war; but it was emphasised that his withdrawal would not alter the "adventurous character of the USA's aggressive policy."

Victory for Peace Campaign

Although at first sight this analysis would appear impeccably orthodox, it was not repeated either to other European listeners or to the Soviet public. The latter was merely given the bare fact of MacArthur's removal and replacement by General Ridgway. Most Soviet newspapers on April 12th were equally reticent; but readers of *Literaturnaya Gazeta* found a brief note at the end of a general review of the Korean military situation which made two points; first, that MacArthur had been dismissed for incompetence as a commander, and secondly, that he was being made a scapegoat while the rulers of America continued their policy of aggression. Later on the same day this review was broadcast to Moscow's listeners in Czechoslovakia, Greece, Yugoslavia and Hungary; but while the Czechs and Greeks heard the comment on MacArthur in full, the Serbo-Croat version omitted the first point and the Hungarian version both. Listeners to Moscow's transmission to Britain were meanwhile informed that the reasons for the dismissal had—surprisingly enough—not been published in the American press.

Moscow's hesitancy did not deter the press and radio of Eastern Europe from giving the news prominence and adding copious comment. Most satellite broadcasters and journalists saw no inconsistency in hailing the removal of MacArthur as a "historic victory for the world peace movement," while warning their peoples that it would make no difference to American plans for aggression in Korea and China. A commentator in East Berlin declared that Truman and MacArthur were still in complete agreement, and that any reports to the contrary were Western inventions. Polish listeners, however, were told that the dismissal was a victory for the faction in Washington which wanted war to start in Europe

and not in Asia. According to Warsaw Radio, Eisenhower had secured approval for his view that the whole effort must be concentrated in Europe and particularly in Germany.

Hesitation in China

This last interpretation was somewhat in conflict with that given by Communist newspapers and broadcasters in the Far East itself. Peking made no comment until April 13th, when the official Communist news agency issued a statement ascribing the dismissal to the great victories of the North Korean forces and Chinese "volunteers," but declaring that American imperialism was still resolved to pursue its hopeless aggression in Korea. The charge that US aircraft had bombed Antung, just north of the Yalu, after MacArthur's removal was added as proof of this resolve. Next day the Peking newspapers enlarged on the agency's analysis. The *People's Daily* warned the Chinese not to relax their efforts in the slightest. The *Kwangming Daily*, the organ of the now wholly subservient Democratic League, explained Truman's action as designed to evade responsibility for defeat, to conceal his plot to expand the war, to "quieten down the controversy within the American ruling circles," and to unite the members of the imperialistic camp. Whatever "dirty schemes" might follow, warned the newspaper, the Korean war could only be ended "by the complete defeat of the aggressor." The *People's Daily*, which had overlooked the point about dissensions between the imperialist countries in its first comment, remedied the omission two days later.

While these Chinese comments failed to stress the unanimity between Truman and MacArthur as their colleagues further west had done, they certainly provided no basis for the rather unorthodox line taken by Ho Chi Minh's radio in Vietnam, which declared that MacArthur had repeatedly made statements contrary to those of Truman and Acheson, but had nevertheless been removed only when he proved an unsuccessful commander. The North Koreans, on the other hand, showed a certain caution. Pyongyang radio, which announced the dismissal two days before it was disclosed by the Peking Press, agreed on most points with the Chinese analysis, but omitted the insistence on total defeat as the only end to the war. This omission may have some significance in view of the latest North Korean Note to the United Nations.

Japan Without the General

WHATEVER have been the feelings evoked in different quarters in the West by the dismissal of General MacArthur, the predominating initial reaction in Japan was one of dismay. This had nothing to do with the dispute over the strategy for waging the war in Korea, with which the Japanese have no direct concern, but was a consequence of the extraordinary position of authority which General MacArthur built up for himself in Japan. He was much more than merely the instrument of an American or Allied policy in occupied Japan; for the Japanese he embodied power in his own right as a victorious commander-in-chief, and the very qualities which made him so untypical of America render him peculiarly well suited for governing Japan. After their crushing defeat the Japanese required only one thing of their conqueror, that he should not humiliate them by behaving like an ordinary man. In this respect the Supreme Commander never failed them; his bold bearing and behaviour marked him as one made of no common clay, and the very aloofness and seclusion of his authority—he had virtually no social contacts with Japanese—made it the more acceptable. To say that he was popular is to use a word which can easily be misleading, but in five years he succeeded in convincing most Japanese that he was not only all-powerful, but a genuine friend of the

Japanese people who could be relied on to represent them in a dangerous and unfriendly world. Hence the remarkable send-off given to him on his departure from Tokyo—a demonstration which went far beyond the courtesies which might be considered obligatory for a viceroy deposed from office.

General MacArthur's removal has undoubtedly left a political vacuum in Japan which will be much harder to fill than the military command which he has handed over. General Ridgway, a brilliant soldier, has neither the experience of the Far East nor the personal prestige to play the part of "SCAP" as his predecessor played it. This office is in any case due to come to an end when an American-Japanese peace treaty is signed—which may be during this summer—but it had been assumed that General MacArthur would remain until then as a factor of confidence and stability in the negotiations. His departure and the feeling in Japan that America is now divided over Far Eastern policy are likely to make the Japanese Government more wary of committing themselves and the treaty harder to conclude. The weight of political responsibility on the American side will now be squarely on the shoulders of Mr Dulles, who has returned to Tokyo as President Truman's special envoy; but it is significant that he has at once tried to claim the moral support of the former Supreme Commander by talking of an "unforgettable radio conference" with him when their aircraft passed each other in mid-Pacific. Mr Dulles has a difficult road ahead in Tokyo, but also much greater scope than he had before, and the next two or three months will be a real test of his capacity as a statesman and diplomat.

Exodus from Iraq

[FROM OUR SPECIAL CORRESPONDENT RECENTLY IN BAGHDAD]

It is questionable whether the Iraqis have done much good to themselves, or any good to the Arab cause as a whole, by their two latest moves to deal with the departing Iraqi Jews. Apparently they feel that they have done their political and human duty by granting these a year of grace in which to leave for Israel, and that no more is called for. The year ran from March, 1950, to March, 1951. During that period a law allowed Jews to leave carrying £50 per adult head. At its expiration the Iraq Government froze all the property of the Jews remaining in the country. This law is particularly hard on those Jews who left the country legally before 1948. Only if they return within two months and claim Iraqi citizenship cards will their account be unfrozen. The Government took this drastic action because it had gradually become concerned over the illicit flow of capital from Baghdad which was being cleverly organised via Persia by the departing Jews.

The chaos in Baghdad business circles which has resulted from this exodus proves how great were the capacity and energy of this centuries-old Jewish community. The Jews have lived in Baghdad for fifteen centuries but until international trade was developed as a result of the creation of the Iraqi State, the Jews were largely underdogs. Their ascendancy has been recent and has gradually increased until a year or two ago they ran almost the whole of Iraq's import trade. Even now not only Jewish businesses but Muslim concerns are thrown into confusion by the new decree because of the substantial Jewish share in many Muslim houses. Muslim business houses have used Jews as clerks because of their accounting and linguistic abilities and Jews were also agents for a number of foreign firms. Not only did banks and merchants lose large sections of their staff overnight but hospitals were left without nurses. Since the Jews still remaining were at the stroke of a pen deprived of their nationality, thousands were thrown on the streets because they were working in businesses which may only employ Iraqi nationals. By a second step in the same direction the Iraqi Government also confiscated the property of all Jews now outside Iraq. Presumably part of the object of the operation is to exact some compensation for the Arab property now frozen in Israel. But there is very much more of this than there is Jewish property in Iraq; it would seem, therefore, that, if bargaining and compensation are ever to take place, the Arab victims would be better off if the Iraqis were in the strong moral position of having treated Jewish property well.

There is nothing to be said, therefore, for the second of the Iraqi moves; the first, however, had one logical aspect, since the authorities wanted to know definitely who was going and who staying. Some 105,000 Jews have registered to go, but only 40,000 have in fact gone. The full size of the community has never been known but it is believed that about 20,000 Jews will stay.

But for those registered to go the immediate outlook is black. Protests are vehement in Israel. Yet the risk of penalisation once the year of grace was over was always there. It seems to have been anticipated neither by the Iraqi Jews nor by Tel Aviv, for the bottleneck over departures is of their joint making. The Iraqi Jews are to blame for being slow to register and then doing so in a rush at the end of the year of grace; fathers, it seems, were reluctant to leave the homes and businesses of their ancestors and in the end did so for their sons' sake. But the Israeli authorities are also to blame. Presumably because of congestion at the Israel end, they had until about a fortnight ago limited transport to a single air firm, refusing all other tenders. However much this firm crowded its craft, and it did so nightly, it could remove people only in hundreds, whereas 70,000 were waiting to go.

How are these remaining people, now stateless and penniless, to live pending departure? Even though the operation

Ahead of the headlines

Persuading a man to choose an Austin Reed hat is all part of the Austin Reed advertising, but persuading young men to wear hats instead of going bareheaded is a matter of vital concern to the Hat Industry as a whole.

The aims of collective publicity differ widely from one industry to another and so do the methods of presenting them. We conduct a number of these campaigns and can speak with knowledge of the strategy to be employed and the advantages that can accrue.

Such campaigns heighten public awareness of the goods or services they promote. They add point and emphasis to the advertising of individual firms in the same field. They stimulate whole industries. By making popular contact through varied channels of publicity, they keep industry ahead of the headlines and provide it with a public platform from which its best interests can be maintained and fostered, in good times or bad.

In these days when new influences, new trends in public taste and usage, are creating new and tougher problems for industry, the possibilities of a collective campaign should be fully investigated. Those interested are invited to discuss the matter with us at no cost to themselves.

has now been accelerated, and hundreds are leaving daily, some must wait until June before the transfers can be completed. Another toll of human misery is being taken, though anyone who has seen the Arab refugees, and can compare this distressing sight with that of the evening flotsam of Jews and their small effects waiting on the open field at Baghdad and Basra airports must feel that the latter are the better off.

The Pakistan Budget

IN a world where governments grab more and more of the fruits of their people's labours, it is refreshing and, indeed, astonishing to find a country which can budget to cover increased expenditure and yet cut down taxation. Pakistan's estimates for 1951-52 which were recently presented to parliament by the Finance Minister, Mr Ghulam Muhammad, even show an expected surplus of Rs. 20.74 crores—on an estimated revenue of Rs. 159.85 crores and expenditure of Rs. 139.11 crores. Nor has this unusual feat been accomplished by reducing defence expenditure, which still accounts for some 60 per cent of total outgoings. In fact, part of the surplus is to be used on a special fund of Rs. 7½ crores for initiating the proposed manufacture of aircraft, tanks and heavy guns. The air force and navy are also to be expanded.

So long as raw material prices remain at the stratospheric levels to which they have risen since the Korean war began, Pakistan will be on top of the world. For Pakistan is essentially a producer of raw materials. In its present boom, the country can not only maintain with ease its un-devalued exchange rate, but can afford to pass on to the hapless foreign consumer much of its own taxation. The main feature of the budget on the revenue side, and the explanation of why direct taxes can be reduced at home, is the higher export duties, particularly that on raw cotton; this has been raised by over 1,000 per cent in the last few months. It could certainly not be kept at anything like the present level, if world conditions slipped back to even a pre-Korean normal.

As a result of the flood of money now pouring into the treasury, Karachi has appreciably reduced income tax and super-tax. A sliding scale of income tax reductions has been coupled with an increase of from 15,000 to 20,000 rupees before the full standard rate is paid. Super-tax has been changed similarly, with a substantial reduction—from 9 annas to 7½ annas per rupee—on the highest incomes. Many import duties have also been either reduced or abolished; in particular they have been abolished on the raw materials required by Pakistan's incipient industries, such as pig iron, coal, coke, pitch and tar.

Since its foundation in 1947, Pakistan has had an extraordinary run of good luck economically—just as it has, on the whole, had bad political luck. While the present boom presents the Finance Ministry with the problem of how best to cash in to the full on its good fortune—a problem which it appears to be solving with gusto—the boom also imposes an obligation to do what will most favour Pakistan's political and economic progress. In this respect, another outstanding feature of the current budget has been the further encouragement given to approved industrial undertakings. This takes the form of an extension up to 1955-56 of the period in which the first 5 per cent of the business profits are exempt from taxation, together with a complicated but sizeable tax concession to investors in approved companies floated during the next two years. It is, however, worth considering whether Pakistan has been entirely wise in lifting so much direct taxation at a time when the Communists are on the march throughout Asia. Although it is right to encourage investment, many of the people of Pakistan are still struggling with gravely inadequate social, educational and medical services.

German Generals as they See Themselves

[BY A CORRESPONDENT]

SPEIDEL'S book* is a tense narrative. It relates the facts of the 1944 invasion, Rommel's hopeless dual fight against the superiority of the Allies and the mismanagement and confusion of the Nazi High Command. Above all, it shows Rommel's human tragedy. Speidel writes from an intimate knowledge of all the facts. He was Chief of Staff of Rommel's army group as well as his confidant in the preparation of the July plot. According to Speidel, Rommel was perhaps the only Field Marshal who would have given the signal for a rising of the fighting forces against the Nazi hierarchy. Neither Speidel nor Rommel had any illusions. They knew that a successful rising, though it would not have influenced the Allies to renounce unconditional surrender, would have prevented the untold destruction and the useless sacrifices which resulted from Hitler's fight to the end.

After Rommel's death Speidel himself still tried to influence events in the west on several occasions. He refused to pass on to the formations of Army Group B the order of the new Chief of the General Staff (Guderian) concerning the guilt of the General Staff in the preparation and execution of the July plot. He also prevented the transmission and execution of Hitler's command to destroy Paris by long-range artillery fire, V1's and all available air formations. Speidel's active fight ended when he was arrested on September 5, 1944. Rommel was for Speidel the incarnation of the good, clean German soldier. His book is a tribute to him and at the same time a passionate indictment of Hitler. He declares that the "ethical forces on the side of our enemies were stronger than on the German side, where a moral vacuum was created through Hitler's aberrations."

Heinz Guderian does not come into the same category as Heusinger and Speidel. He owed too much to Hitler to take an objective view during all the stages of the war. Though Guderian remained almost to the end fascinated by what he calls Hitler's "genius," his memoirs are a most devastating—though unintentional—indictment of the Nazi political and military leadership. The anarchy of direction in a totalitarian state, the inefficiency, the complete lack of scruples, the egotism of Hitler and his paladins all become evident in his account of the many excited scenes in the Fuehrer's headquarters.

Hitler's Willpower

Like the overwhelming majority of officers, Guderian held to the way of obedience to the last. He opposed the plans of Goerdeler and Beck as being damaging to the interests of Germany and unrealisable; he still maintains that view. He kept the secret of his conversations with them, but he did not approve the conspiracy.

The key to Guderian's attitude can be found in his relationship to Hitler. The more closely he had to work with Hitler, the more he found to criticise in his decisions and the more he saw the weaknesses and vices in his character. Nevertheless, his willpower mastered Guderian again and again. Even for the rift between Hitler and his generals Guderian partly puts the blame on the General Staff whose uniform he himself wore proudly for 15 years; he condemns their adherence to tradition, which caused the Fuehrer to distrust their sincerity.

As he was Germany's chief expert in tank-warfare, Guderian's book will certainly find its place in the military literature of the last war. But what is most interesting here

* Hans Speidel, "Invasion 1944." Rainer Wunderlich Verlag. Guderian, "Erinnerungen eines Soldaten," Bei Kurt Vowinkel/Heidelberg.

is his self-justification, in which probably most of the officers of the Wehrmacht see their own reflection: "I tried my best; if I failed it was not my fault; fate was against us." By this argument the *Nur-Soldaten*, who will probably again play a preponderant role in any future German military organisation, want to establish themselves in public respect.

The real problem of how to fit these men into an integrated European or North Atlantic army is neither organisational nor military. It is in the first place a political problem. There is scarcely any danger of them being a disruptive force or a new threat to European peace as long as there is a strong political direction. A stable, democratic and respected government in Western Germany, strong enough to keep strict control of its armed men whatever may be their military organisation, is a better guarantee of a desirable development than narrow-minded restrictions from outside. Foreign controls did not prevent the technical and spiritual rearmament or the continuance of forbidden Staff work and preparations after the last war. Guderian's book is worth reading with that in mind.

(Concluded)

Countering Dr Malan

[FROM OUR JOHANNESBURG CORRESPONDENT]

DR. MALAN'S attacks on British native policy in Africa have raised echoes in the Rhodesias and in Kenya. "Northern Rhodesia will not go the way of the Gold Coast," says Mr Roy Welensky, the leader of the 40,000 Europeans there. In Southern Rhodesia, the leader of the "Liberal" Opposition, Mr Ray Stockil, says: "Repression has no place in our policy, but we must insist on white leadership in this part of Africa for a very long time." Sir Godfrey Huggins, the Prime Minister, has himself declared: "I think the speed at which the Colonial Office has gone is absolutely disastrous. Not only are they hurting the Africans in the territories they look after, but they are creating a threat to Southern Rhodesia."

In Kenya, the *East African Standard* maintains: "South Africa and Rhodesia have every right to make representations to the United Kingdom on British colonial policy in Africa. Colonial policy and Commonwealth policy cannot be allowed to follow conflicting directions. For one remote partner in the Commonwealth (Britain) deliberately to follow a course that might . . . threaten the very existence of other partners in Africa . . . is a possibility that both South Africa and Rhodesia must challenge." More accustomed to Dr Malan's propaganda and so more sceptical, the Johannesburg *Star* examined his prediction that the Gold Coast developments would lead to the expulsion of the white man from a great part of Africa, and decided: "No such development is in the least likely. It certainly forms no part of British policy. Political advances there will undoubtedly be . . . but wherever there is a strong, settled white population, they will continue to dominate the political scene. . . . The supposed advance of 'West Africanism' down the continent to the Union's borders appears completely unreal."

A former editor of the *Star*, Mr Charles D. Don, suspected that Dr Malan "was indulging in a little electioneering with an eye to that section of the white population in the Union who, though not illiterate, are as ignorant of world affairs as most of the Gold Coast inhabitants—and possibly more so." All the same, Mr Don admitted that "many people, holding very different views on native policy from Dr Malan, would share his implied opinion that the British Government is pressing 'democracy' in the shape of the parliamentary system, too far and too fast in native states largely illiterate and only recently emerged from barbarism." On the whole, Dr Malan's argument has won more adherents than that of the *Star*. The possible advance of "West Africanism" is

regarded by the European settlers in the southern half of the continent as a real not an imaginary danger, and they feel unable to share the *Star*'s confidence that such an advance "forms no part of British policy." Whether well- or ill-founded, their fears and doubts must be treated as important facts in the situation.

Tribute must also be paid to Dr Malan's skill as a propagandist. He has never concealed his intention to turn South Africa, sooner or later, into a republic. This is anathema to the 40 per cent of the white electorate in South Africa who are English-speaking, and to many Afrikaners as well. It would also seem to disqualify him from leadership of the British communities in southern Africa who not only wish to retain their British connection, but resent such symptoms of incipient "Afrikaner imperialism" as Nationalist political infiltration of the Rhodesias and insistence on the teaching of the Afrikaans language in Kenya and Tanganyika. For these and other reasons, the Union, under Dr Malan, is feared rather than loved by its smaller neighbours.

Despite those handicaps, Dr Malan is scoring successes both in the Union and outside of it. He does it by untiring use of his favourite propaganda weapon, the black bogey. In the Union, he monotonously repeated day in and day out, and in the face of all the evidence, that his great opponent, the late General Smuts, stood for absolute equality between white and black. Now in power, he and his henchmen continue the charge against the United Party under its new leader, Mr J. G. N. Strauss, and nothing the United Party do or say seems able to shake off the accursed spell. Outside the Union, he now levels what amounts to exactly the same accusation against the British Government and British policy in Africa, and almost immediately rouses a response among people who on almost every other issue dislike and distrust the things he stands for.

A Genuine Dilemma

In the Union and out of it, Dr Malan is exploiting a genuine dilemma. The whites fear black numbers. In South Africa they are outnumbered four to one, and elsewhere by ten to one. Policy must take cognisance of this terrible disparity, which is creating a white nationalism opposed by a new black nationalism. The Europeans outside the Union do not want to repress anyone, but they do not want to be repressed either. In South Africa, the United Party has temporarily been defeated by the Nationalists, but in Southern Rhodesia, Sir Godfrey Huggins is trying to work out a policy which will mean neither two separate racial communities (*apartheid*), nor one community sitting on top of the other (*basskap*). The ultimate aim, he says, is partnership.

Meanwhile, however, the struggle between white and black nationalism is going on. In Northern Rhodesia, the Gold Coast development has spurred both the 40,000 whites to press for (white) self-government, and the Northern Rhodesian African Congress to demand Cabinet posts as well as more seats on the Legislative Council (where they now have two out of 14). In Kenya, the Europeans hold as many seats as the Africans, Indians and Arabs combined; but now the African political leaders are asking that African representation should equal the combined representation of the other three groups, thus reversing the position in the Africans' favour.

The trend is clearly towards putting everything on a racial basis. It is a trend which Dr Malan supports. But this is the very trend that the Europeans in their own interests should oppose, if only because of their small numbers. Three years of Nationalist rule in South Africa have indicated that Dr Malan has nothing to offer but a policy of racial repression, which is bound to fail in the long run even in the Union, where the Europeans are strongest. The urgent need is somehow, and before it is too late, to cut across these purely

**It'll cost you less
to take things easy**

Let Burroughs take the strain

THE NERVES of a business are in the office—and they're just as easily overstrained as the nerves of its executives. Once antiquated figuring methods lead to delays and bottlenecks, mounting tension endangers the whole health of the organization. Rising office costs can upset the carefully balanced budget of the business.

There's a quick antidote to inefficient calculating—"Burroughs." Whatever your problem, there will be a Burroughs business machine that exactly meets your requirements. Economies begin as soon as you get vital facts and figures when you want them—and in the way you want them.

Call Burroughs today, and ask to see models 51435 and 51455—the British-made, key-driven, non-listing adding-calculating machines.

**GROUP TOTALS AND
AUTOMATIC GRAND TOTAL**

Where a grand total of individual results is required, the Duplex Adding-Calculator gives maximum speed, simplicity, and accuracy. Special features are: positive registration of full key values, a column lock that prevents operating errors, direct subtraction without use of complements.

ADDS, SUBTRACTS, MULTIPLIES,
DIVIDES, ACCUMULATES.
THIRTEEN COLUMNS OF KEYS.

racial divisions. This can best be done by reverting to the policy, attributed to Rhodes, of "equal rights for all civilised men irrespective of colour." Dr Malan has nothing to offer but disastrous repression, and for this reason alone his specious appeals to his fellow Europeans in Africa must be countered by a policy which will both avoid repression and at the same time assure the Europeans that they are not going to be swamped by illiterate black millions.

Deadlock on New Zealand's Waterfront

[FROM OUR WELLINGTON CORRESPONDENT]

THE New Zealand waterfront dispute has now been in progress since February 14th. The trouble started when the dockers refused to accept the 15 per cent general wage increase ordered by the Arbitration Court, and their union (the Waterside Workers' Union) ordered them to refuse overtime work; the Governor retaliated by promptly suspending the powers of the Waterfront Industry Commission under which the watersiders operated, and settled down to what rightly promised to be a protracted struggle. The position now is one of complete deadlock. Neither the Government nor the watersiders (if they retain their present leaders) can afford to capitulate or even to move towards appeasement. If the Government gives way it will probably lose so much support that it will be defeated at the next election. If the watersiders give way they must as a start, disown their present leaders who are, quite literally, fighting for survival. In these circumstances, all that can be expected is a war of attrition with the odds very much on the side of the Government.

The history of waterfront relations in New Zealand during the whole of the 13 year term of the Labour Government was one of continual disputes, stoppages, go-slow, haggling and unrest. In a series of "settlements" which all involved a certain degree of appeasement, the Labour Administration steadily lost ground, and the watersiders made more money and worked shorter hours. The result is that New Zealand now has the unenviable distinction of being one of the slowest countries in the world in working ships; and it is so dependent upon its shipping trade that this has imposed an increasing burden upon the whole of the national economy and has not been without its effect on the present high cost of living.

Trade Union Split

The Government's position is now unquestionably considerably stronger than it was when the dispute began. It then faced the possibility that the series of sporadic sympathy strikes and other demonstrations which accompanied the watersiders' challenge might develop into a general strike. This was prevented because the New Zealand trades union movement is at present split into two very unequal divisions—the Federation of Labour, which represents at least two-thirds of all unions, and all the moderate section, and the New Zealand Trades Union Congress, a militant association of dissidents headed by the watersiders, which broke away from the federation early last year.

The dock dispute, as it has developed, has become not only a struggle between the Government and the watersiders, but between the moderate Federation of Labour and the militant TUC, with behind it all a strong current of animosity between the individual leaders of the two union groups. This has led to the unprecedented spectacle (in

New Zealand) of the major and senior industrial group ranging alongside the National Party Government which ousted Labour from power, and quarrelling, in the process, with the Parliamentary Labour Party. This quarrel occurred when the Labour Parliamentary caucus on February 28th issued a statement on the strike which the federation executive, with some reason, regarded as equivocal. The federation leaders then bluntly refused to attend a second caucus meeting on April 4th and charged the Labour Parliamentarians with failing to give them the support they considered their due as the defenders of constitutional trades union procedure. The Prime Minister, Mr Holland, put this into plainer terms when he accused the new leader of the Parliamentary Labour Party, Mr Walter Nash, of rail sitting and of trying to make political capital out of the dispute.

As the position stands at present, the Government is working the wharves with service labour and has established an efficient emergency supplies organisation which is keeping essential cargo moving both inwards and outwards. In this it is backed by the great majority of the trades unions and unquestionably by the great majority of the general public. Support for the watersiders has been whittled down to a section of the freezing workers, about three-quarters of the miners, a section of the cement workers and a section of the seamen. This last is a significant development, however, for the Seamen's Union is affiliated to the Federation of Labour and its president is F. P. Walsh who, as vice-president of the federation, has been one of the major influences in aligning the federation against the watersiders and with the Government. Some very vicious personal attacks have been made upon Mr Walsh in anonymous leaflets and an effort is plainly being made to get rid of him by attacking his position in his own union.

Shoes Begin to Pinch

With the strike now in its tenth week, the shoes of most of those engaged in the scrimmage are beginning to pinch. The watersiders are maintaining an outward front of solidarity, but about a sixth of their number—some 1,000 men—are reported to have taken other work. On the other hand they appear to have organised an effective under-cover supplies system which the police, with all the power of the emergency regulations behind them, have not been able appreciably to check. The Government has shown no signs of wavering, but it must take note of the increasing effect of the hold-up upon many sections of the national economy. Though essential supplies are being moved, fresh overseas ships are arriving all the time, and the backlog is mounting. Many New Zealand factories and importers are becoming short of supplies and many firms, with goods tied up on the wharves, are reaching the end of their overdraft limits. The level of overdrafts in New Zealand before the strike began was already inconveniently high owing to the effect of high prices and stockpiling and the banks and finance houses are facing difficult problems as a result. A considerable proportion of this season's wool clip is also tied up in stores and the farmers who have sold it cannot be paid for it until it is shipped. Internally, rail services have had to be seriously curtailed because of the coal shortage caused by the miners' sympathy strike. On the other hand, the Wellington, Nelson, Marlborough and Taranaki section of the N.Z. Freezing Workers' Union, which also went out in sympathy, and which was de-registered as a result, appears to be disintegrating.

Whatever the final outcome of the dispute, it must have far reaching effects. It will either make or unmake the National Government; either split the New Zealand Labour Party or cause a breach between it and its major industrial section; either see a new deal on the New Zealand waterfront or an intensification of docker domination; and either strengthen or undermine the traditional basis of arbitration and conciliation in New Zealand's industrial relations.

THE BUSINESS WORLD

Transport and Efficiency

IT is entirely accurate in law to describe the document lodged by the British Transport Commission with the Transport Tribunal as a passenger charges scheme. In substance, however, it amounts to nothing more than an application for increased passenger fares on the main line railways and on London Transport services. It is not a scheme that has any bearing on the integration of passenger fares and services by rail and also by road; nor does it claim to put passenger and freight charges on the railways in proper relation (whatever that may be) with one another. The scheme proceeds under Section 76 of the Transport Act, and must be submitted by the due process of law to the Transport Tribunal for public hearing, whereas the application for the ten per cent increase in freight charges that came into effect last Monday was not a "scheme" but an emergency application made to counteract, as far as might be, the effect of the recent wages award dictated to the railways by the Government.

This is a distinction that some will hold to be of no consequence: what does it matter whether it is a "scheme" or an "application" that produces the increase in charges? There is something in this point. A charges scheme, in the original conception of the Act, was something beyond a mere matter of increasing the rates. Would it have been necessary to lay down a maximum period of two years from August 1947 (since extended by a further two years) within which such schemes were to be presented by the Commission for the consideration of the Tribunal if increased rates only had been at stake? It was supposed that charges would be the instrument by which the Commission could organise its transport services most efficiently and give the individual user the best service at the lowest cost. The logic of the charges scheme was to encourage the integration of transport, but there is no mention of that magic word in the outline of the charges scheme for railway and London passenger fares; nor could there be, since the Commission has not attempted to unify the road passenger services that it controls with its railway services or to integrate rail services and charges for passengers and freight. A charges scheme for rail freight is promised later this year; if it is of the same character as the proposed passenger scheme, it will not be concerned with road haulage rates. The concept of integrated transport, it seems, is as far off as it was four years ago.

This is not to be blamed solely on the Commission. No undertaking could be more vulnerable to the effect of rising costs and lagging revenues. Public policy about rail transport charges still has much of the flavour of the early nineteenth century legislation against monopolist rapacity. A legitimate increase in prices to cover costs that would pass without comment in a dozen industries becomes a gross extortion when the railways seek to make it, grudgingly conceded if at all. The Commission puts the loss in 1950 caused by delays in bringing

increased charges into effect at £15 million—equal to its deficit for the whole year. But since the increase in freight charges became effective last May and London fares were raised later in the year, the Commission's cost levels have jumped once more beyond the bounds of revenue. The Commission has an accumulated deficiency of £40 million. Compared with the end of 1949, its costs have increased by at least £40 million a year, and the prospect as this year opened was that a net revenue deficit of £25 million would result at current levels of fares and charges. The ten per cent increase in railway freight rates now in force will provide less than £15 million this year (£20 million in a full year) towards meeting this deficit and the further increases in costs that have occurred since the estimate was made.

*

The scheme now proposed would raise the average cost of passenger travel in the London area to about 175 per cent of the prewar level and to about 190 per cent outside London. Thus it would approach the general character of the average increase in freight charges (90 per cent higher than before the war) except in London. It is important to notice that these are average results, and if the changes are approved they will produce about £17 million in a full year—and necessarily a distinctly smaller sum in 1951 if they should be brought into effect later this year. Thus the Commission has obtained an increase in freight charges and is seeking an increase in passenger charges together estimated to produce £37 million in a full year. If it is supposed that this would wipe out a deficit of the size in prospect for this year, let it be remembered that costs are still rising (the Budget added £3½ million to the Commission's bill for road fuel) and that the estimate of yield is for a full year—that is for 1952, by which time, it is safe to predict, costs will have risen further still. If they do not, the Commission will be left with a modest surplus to set against its accumulated deficit and make more adequate provision for replacement.

The general character of the fares scheme is to propose increases of such a kind as to make the least threat to the volume of traffic. The London traveller, already bound to the integrated road-rail services of London Transport and the main-line suburban services, is threatened with an increase of one-fifth in the scales approved by the Transport Tribunal last year, with a twopenny minimum fare. Season ticket rates, it is proposed, should be increased by about 20 per cent in the London area and rather less in the provinces. A further attempt on "workmen's fares" (known as "early morning return fares") threatens these privileged travellers with an increase of 20 per cent. At the other end of the scale, the highly prized trader's season ticket is to be withdrawn. But one element remains unchanged in all this detail of demanding one-fifth more on many tickets and ending concessions on others: the standard

ordinary single fare by railway is to remain at 2½d. a mile. It is only on the monthly return (fare and a third) tickets that the Commission is prepared to risk proposing an increase of 10 per cent which it can make at its discretion.

All this the Transport Tribunal will have to examine in great detail. Objections may be lodged up to June 13th and it can be assumed that there will be no lack of them. Thus a decision on the draft scheme—which is a matter entirely for the Tribunal and not for the Minister—can hardly be expected until after the summer holidays. The Commission must suffer, with what patience it can, the consequences of this further delay between rising costs and higher charges. It would be well for both Commission and public to reflect in the meantime on the relation of these two factors. When the public complains that the vicious spiral of inflation has now become something of a tour round the inner circle of nationalised industries—an increase in rail freight charges one day, covered by a rise in coal prices the next—they should be careful to put the proper share of blame in the right place. This may be the Commission, but only to the extent that it is capable of controlling its own costs, and manifestly that is not so of many of the things that it buys. Yet when the Commission argues that

in the face of rising costs of the magnitude described, shortages of materials, national restrictions on capital investment, and other causes outside the control of the Commission, measures to secure increased efficiency and economy can only have a very limited offsetting effect

it greatly weakens such sympathy that the transport user is disposed to feel towards it. The danger about proceedings before the Tribunal—and this said with all proper respect to the authority and skill of that expert body—is that points of law and accountancy are sometimes used in an attempt to prove that what the Commission seeks would fall with less harm on the other fellow. But contentions about "very limiting offsetting effects" of economies are surely most relevant to any scheme that is put before the Tribunal. And it is not merely economies that might be obtained from better operation of the railways that are in question. It is also the possibility of improving the whole organisation of nationalised transport. It is not enough to accept that the deficit is £x million on the Commission's estimate; what has to be determined is how much less the deficit could have been if its business had been better run.

It will be hoped, therefore, that the Transport Tribunal will find it possible to construe the powers entrusted to it under the Act in such a way that the

argument is concerned primarily with efficiency and secondarily with the effects of specific cost increases. The mood of despair that prompted Lord Lucas, speaking as Parliamentary Secretary to the Ministry of Transport, to declare recently that "for good or for ill the transport system of this country, in the main, is a liability for ever" is perhaps the most damaging contribution that could have been made to all the adverse factors that now press upon the Transport Commission. It has been caught by a cost inflation before it has had any chance of squeezing the benefits from co-ordination and integration of the various forms of transport. It has suffered from mistaken ideas of organisation laid down in the Act and applied in a too rigid manner. It has attempted too much too quickly, forgetful of the years of hard work that went to the grouping of the railways after 1921.

These and other points have been made before in these columns. But the facts that the Commission is open to criticism and that the Transport Act is far from perfect does not justify rank pessimism of the kind in which Lord Lucas has lately indulged. If ideas of that sort gain ascendancy in the minds of the Commission and its Executives, all hope of improvement will have to be written off. Before that happens, it may be well to set out a few basic principles on which higher efficiency can best be sought. First, transport is a business, and must be run on business lines. Secondly, the unit of management is much too large for efficient operation and a purposeful measure of decentralisation is needed. Thirdly, such a splitting up of unwieldy areas of command must give full opportunities for good leadership and creative thinking—qualities that are hard to evoke given the present rigid hierarchy of management. Fourth, the effort to reduce costs by unifying and standardising the various parts of the transport system must be unrelenting; standardisation must also be realistically conceived to give the best return and must not be made an end in itself irrespective of its effects on capital and operating costs. Fifth, the Commission must try to get outside its pressing preoccupations with day-to-day problems and draw up a programme by which integration has some chance of becoming effective in a decade. These principles would demand radical changes in the organisation of the Commission and its Executives and in the legal framework within which they operate. They might in the long run promise a chance of success for integration; there is no evidence that, if present arrangements remain unchanged, integration and efficiency will ever come to pass.

Steel Castings and Defence

THE Ministry of Supply has recently outlined to members of the British Steel Founders' Association the problem that rearmament poses for their industry. Apart from the actual makers of munitions, few sections of engineering are affected more directly than steel foundries. The casting of strong and complex steel shapes is in peacetime an essential but relatively small industry on the border between steel-making and engineering; in war its contribution is far greater in scale. Two world wars in this century put demands upon steel founding far beyond the foundries' capacity. In the last war, production was more than doubled, from roughly 140,000 tons in the late 'thirties to more than 350,000 tons by the middle of the war. Today the industry has a greater capacity than before the war; but it is fully engaged at the moment when the three-year defence programme presents it with new demands.

The industry has some reason to approach a sudden need for expansion, even to meet national demand, with caution. It was saddled throughout the 'twenties and

OUTPUT AND DISTRIBUTION OF STEEL CASTINGS

early 'thirties with a load of surplus capacity created during the 1914-18 war when Government finance was poured in to increase capacity rather than efficiency. Few companies disposed of this surplus plant, though in some cases it nearly disposed of them; the majority struggled through lean years with enough capacity to produce twice or three times the tonnage that they ever managed to sell. "For fifteen years," as one spokesman in the industry put it recently, "no new money was put into the industry and nobody took a profit out of it"; and British foundries were unable to match the prices of imported castings, particularly from Belgium. In that bleak period, the industry embarked on its policy of price-fixing; the men who now control it gathered their experience during hard times, still fresh in their memory.

The second world war left steel founding in a far sounder condition. Much, if not all, of the new plant built, with Government assistance, in private industry during the war was taken over by the "foster parent" companies: but most of the Government-owned specialised foundries were closed and their equipment dispersed, while ironfoundry concerns that had converted their plant to handle steel (a major operation) returned to casting iron. Output of steel castings declined from the war peak to a level of about 200,000

tons a year. The industry's hundred or so foundries are dispersed fairly widely in the Midlands, North, and Scotland, with one or two in the South of England; of this total, 14 are "captive foundries" owned by companies in other industries and producing for their owners' use only, another 38 are tied to other engineering activities of their owners but sell most of their output to outside customers, and the remainder are independent foundries. Just under 60 of them cast carbon steel only, 34 cast carbon and alloy steels, and eleven specialise on alloy steel castings. There is a wide range of size: one company turns out nearly 20,000 tons of finished castings a year, another (now nationalised) not much less, and about four others 8,000 to 10,000 tons a year, while there is an extensive fringe of small foundries with an output of only about 1,000 tons. Few were integral parts of large steel-producing units: less than a quarter of the industry's output comes from foundries that have been nationalised as part of steel companies. These remain in the closest formal co-operation within the British Steel Founders' Association and thus with the privately-owned firms; the privately-owned foundries may be forgiven if informally they begin to show a certain constraint.

Technically the industry has made useful progress. Electric melting was well established by the late 'thirties, and closer attention was being paid to quality; but it still needed the assured demand of wartime to bring some recognised improvements into practice. More important, the pre-emption of the bulk of the industry's output by a few service customers requiring ever higher production and more exacting specifications promoted a useful liaison between the designer needing a cast steel component and the foundry manager who had to cast it. A casting may be as strong, though not as assured of soundness and homogeneity of material, as a forging: it does not possess a forging's "grain-flow" (which may be an advantage or a disadvantage); it generally requires far less machining; its pattern and core-boxes may be fairly expensive for short runs, but less so than the dies required for drop stamping; and for complexity of shape, castings are hard to equal. But if a designer chooses a steel casting, in preference to forging, drop stamping, fabrication from shaped steel by welding, or in some cases malleable iron casting, his choice of process imposes certain requirements upon his design. "Designer-foundry co-operation," developed during the war, has since been encouraged by the industry; collaboration may save trouble and result in a sound and straightforward job in the foundry instead of a difficult and expensive casting with a high rate of rejects. Closer control of processes and keener inspection, together with a wider employment of expert metallurgists, justify the industry's claim that the quality of steel castings today shows a vast improvement compared with prewar standards.

Attention to technique, moreover, has been fostered by an event that brought the industry more publicity in a few months than it normally attracts in a decade—the publication, late in 1949, of the first "productivity report." The team that visited the United States under the auspices of the Anglo-American Council of Productivity discovered that American foundries produce a ton

of steel castings using only half to two thirds of the man-hours required in a British foundry, and its report had a sharp impact upon the industry. This is still being felt; experiment with technique, particularly in mechanical handling, is growing, and much greater attention is being paid to productivity. One indirect consequence of the report has been equally important. Uniform, anonymous costing information had always been circulated by the BSFA in connection with price-fixing; but in the last eighteen months a far greater exchange of information and assistance has developed between competitors than is usual in British industry. The most efficient foundries in the industry may produce a ton of castings (in so far as these are comparable) with practically half the man-hours needed by the least efficient; but this spread, common in British industry, is at least fully appreciated in steel casting, and the average number of man-hours needed per ton shows a considerable tendency to drop. Few British foundries enjoy the large orders that enable American foundries, serving a market ten times as large, to mechanise the production even of large castings; and though man-hours per ton of American castings are 30 per cent at least below the British, lower wage rates make British castings 30 per cent cheaper than American. British steel founding, however, still retains elements of a craft mystery, and it uses far more craftsmen than American foundries use: it tempers enthusiasm for planned productivity with the knowledge that a difficult casting cannot manage very well may be produced first time without flaw by one of the most old-fashioned, worst-laid-out foundries in the business.

Increased attention to efficiency and research has been encouraged by steady prosperity. The postwar re-equipment of industry, a high export effort in the metal-using industries such as locomotives and heavy electrical equipment, great expansion in new industries such as agricultural machinery and petroleum and chemical equipment—all these have called for large tonnages of steel castings, and since fighting started in Korea demand has further increased. Much of the industry's output goes to industries closely concerned with defence; the table shows that only a small part of the industry's output goes to consumption demands that could be classed as inessential.

*

In 1949-50 defence absorbed a small part of the industry's output; at the peak of the programme, defence demands may require perhaps 30 per cent of the industry's present output. Existing capacity would provide about 240,000 tons, against maximum civilian and defence requirements of perhaps 280,000 tons. A few enthusiasts within the industry hold that production could rapidly be raised by a quarter, without more capacity or more men, but this would mean bringing the industry generally to the peak of efficiency already reached in its most efficient plants. In the long run this might be possible; it is highly desirable; but it is not likely to be on the cards in the next three years. The new burden of defence will have to be borne by extension of plant, both privately and Ministry owned.

In pattern as well as volume, the demands of an economy now committed to defence will differ from those hitherto involved in re-equipment and export. Tank production, for example, makes exceptional and

specialised demands upon the foundries, and heavy alloy castings may well be the immediate bottleneck of the present programme. This is not simply a question of weight: a tank turret weighs seven tons finished and involves pouring perhaps ten to twelve tons of metal, but many foundries can cast work in the 20 to 30-ton class, and marine castings may exceed 100 tons. The difficulty arises in the lengthy heat treatment of armour quality alloy steel, which ties up the heat-treatment furnaces. At present only two foundries in Britain are known to be handling these turrets and upon them the pressure will be increased. Mantlets and gearboxes are other complex items for tanks; here too it is difficult to spread the order load very widely. Tank track links are perhaps even more important, because of the vast quantities in which they are required; the rate at which any given tank now wears them out is important tactical information, but it seems likely that for quantity production of tracks special mechanised foundries will have to be reopened. Castings for gas turbines, again, require high-frequency furnaces to deal with the heat-resisting alloy steels, and here again capacity must be expanded. British turbine producers have generally favoured turbine blades machined expensively from stock, stamped (with heavy wear on dies and a high reject rate), or perhaps produced by powder metallurgy to provide porous and sweat-cooling blades, but some have been made by precision casting. The industry has been glad to leave this tricky, unrewarding business to one or two specialists; but if quantity production of gas turbines should demand more cast blades, more specialised extensions would be needed.

The decision to expand the capacity of certain companies, and open or reopen certain specialised foundries under the "parenthood" of existing producers, is therefore inevitable; but it will not be easy to carry through. Expansion since the war has been hampered by excessive delays in delivery of equipment; two to three years' waiting for equipment that could be bought in the United States in three or four months has been known. The Ministry of Supply, rightly reluctant to assume unnecessary powers, will have to use what influence it can with suppliers of equipment, and possibly with other Government departments; since the defence programme was announced, equipment that Government-owned foundries might usefully have obtained has been exported beyond the Iron Curtain. Manpower presents other difficulties. Foundries provide well-paid but unattractive and very heavy work and need a fairly high proportion of skilled men. Staff to direct the new plant may be even harder to find; top-grade metallurgists and foundry managers are scarce, and pressure upon those now at the top of the industry, and the officials planning the programme, will be intense.

Business Notes

Boom in Equities

This week's experience in the stock markets very plainly shows that investors' second thoughts on the budget have confirmed and intensified the first impression it left on the City. Equities, especially industrial equities, have been strong, while gilt-edged—despite the moderate rally that began on Tuesday, on bear covering and a little investment buying—have lost a good deal more ground. Prices of the irredeemable and long-dated stocks are now only a little above the low point reached in November, 1949, while the net price of 4 per cent Consols (1957 or after) has again dipped a shade below par. The rise in equities, is, indeed, assuming the proportions of a minor boom. At 130.3 on Thursday, the industrial index of the *Financial Times* was no less than 7.6 points above its level on budget eve, and more than 10 points above the trough of the minor recession that began in mid-February. It now stands at its highest level since July, 1947.

In industrial equities, three distinct influences have been at work. First, and most important, is the virtually unanimous opinion in the City that Mr Gaitskell's proposals will not suffice to prevent an intensification of the inflationary pressure. Although this view seems well founded, the Stock Exchange is probably both exaggerating the degree of likely inflation and under-estimating the damage it will do in the long run to industrial capital. In particular, it appears to be basing its guesses about future inflation too narrowly upon the extent to which it expects prices to rise, virtually ignoring the crucial fact that a large part of the rise will be attributable to the increase in import costs. Any questionings on this score have, however, been thrust into the background by the second of this week's major influences—the market's belated realisation that the authorities are themselves counting upon a substantial rise in profits this year. In the budget debate, Mr Gaitskell declared that there was "no doubt whatever" that the rise will be sharper than in 1950 (officially estimated at 14 per cent), while Mr Douglas Jay forecast that profits would be high enough to meet the increased dividend tax, to pay dividends as high as last year's and to provide reserves for the increased cost of stock financing. The third market influence, taken in conjunction with the other two, seems to be the most decisive of all. The act that the distributed profits tax has been raised as an alternative to imposing formal limitation of dividends and the tone of Ministerial comments are regarded as signs that here is no longer any official disapproval of increases in dividends—provided that, in the terms of the new memorandum to the Capital Issues Committee, they are of "moderate" extent.

The gilt-edged market has, of course, suffered from the backwash of these market arguments in favour of equities, but the more penetrating of market observers have been noting that they also have to contend with more direct adverse influences. Particular attention has been paid to the act that the impending extinction of the surplus of the National Insurance Fund will reduce the departmental resources available for gilt-edged operations. In the long run, this may prove to be a change of importance for the market, but in the short run its significance can easily be exaggerated; the money that the Treasury saves by reducing its contribution to the Fund will reduce its overall deficit and therefore its need to seek outside finance. A much more important influence is the Chancellor's recognition that the recent rise in interest rates may help to check the volume of industrial investment; this indication of his attitude

towards interest rates has finally extinguished the market's hopes that efforts might be made to keep money cheap for defence financing. There is no sign, however, that it implies any intention to raise rates deliberately. Indeed, Mr Gaitskell argued this week that a tighter credit policy could not bring down prices—unless it was "pushed so far that it created losses and underemployment."

* * *

New Rules for the CIC

The new instructions to the Capital Issues Committee, which the Chancellor foreshadowed in his budget speech, make only some very obvious changes in the scale of vague priority directions under which the Committee works, and do not in themselves imply any noticeable tightening of the system of control. Their main interest, indeed, lies in the new rules governing bonus issues. The general directives are little changed. The Committee is authorised, as in the past, to "recommend" approval where it is satisfied that the finance is needed for the "effective maintenance of existing facilities for necessary goods and services"—a wording that is presumably intended to give scope for the finance of rising inventory costs wherever the supply or service is "necessary." To secure approval for new investment, a project must fall within one or other of the priority categories, now extended to five by the addition of "projects essential to enable approved defence programmes to be achieved"—a category that of course goes to the top of the list. Apart from this, the highest priority is still accorded to projects designed to alleviate basic deficiencies, particularly of raw materials. Schemes that may save imports now appear to rank ahead of, instead of equally with, those for promoting exports, but both types are no longer exclusively related to dollar saving, as they were in the directive of April, 1949.

The Committee is expected to discourage "any measure likely to lead to any more than a modest increase in dividends distributed" and is also reminded that "any distribution of capital appreciation which might lead to spending out of capital would ... be contrary to the national interest." These directives, though not specifically related to proposals involving "rights" issues, are evidently intended to be read in this context; the second of them is obviously directed against schemes for making such issues in the form of redeemable preference shares as a means of reducing liability to profits tax. This last condition does, in fact, figure specifically in the new rules directly relating to "rights" issues. Before sanctioning any such issues the Committee must also be satisfied that the application "relates as a single operation to the capitalisation of true reserves and as one which will benefit the stability, credit or efficiency of the undertaking"—and that it falls within the general scale of priorities. Except for its attempt to close the loophole presented by redeemable preference shares, the new instruction therefore seems to concede a slight liberalisation of the rules for control of bonus issues. The whole system remains highly anomalous and illogical, but at least the possibility of securing approval to a "rights" issue is no longer restricted, as it has been since the end of 1949, to projects "necessary to enable the company to continue, or to expand its production or to increase the volume of its exports." The new memorandum has been accompanied, as in the past, by a further directive to the banks. The text of this has not been published, but it appears that its only new feature, apart from such changes as may be inferred from the C.I.C. memorandum, is the intention to stabilise the existing volume of advances made for the purposes of hire-purchase finance.

An External Deficit

The provisional trade figures for March tell a gloomy story. The cost of imports last month rose by £55 million to £303 million, the highest figure yet recorded, while exports (including re-exports) increased by only £24 million to £207 million. The excess of imports (valued c.i.f.) over exports (valued f.o.b.) thus amounted to £96 million, the largest monthly deficit since the end of the war. These results in themselves are bad enough, but they follow on those for January and February which were only a little better. The President of the Board of Trade, when he announced the March figures in the House last Monday, said that in the first three months of this year exports and re-exports were £17 million a month above their 1950 average, but imports were £66 million a month more than last year's average—"a very serious worsening in our position."

It is unfortunately not possible to reconcile directly the figures given in the trade and navigation accounts with those in the balance of payments white paper, but a rough estimate of the actual deficit can be made from the trade statistics. Imports in the first quarter of this year were valued at £848 million (c.i.f.) compared with total exports of

NOTE: The above graph shows excess of imports over exports and re-exports as given in the Trade and Navigation Accounts.

£613 million (f.o.b.). On the assumption that the time-lag between payments and arrivals of imports and between receipts and shipments of exports during the first three months of this year was approximately the same as in 1950, and further that the cost of insurance and freight bore the same relation to the cost of imports, then f.o.b. payments for imports in the first quarter amounted to about £775 million and receipts from exports to about £605 million, leaving a visible deficit of £170 million. If the invisible surplus is still running at the same rate as in the second half of 1950—£110 million a quarter—then the overall deficit for January-March was £60 million or an annual rate of £240 million. Last year Britain had a net surplus of £229 million and this year the Government has been hoping to limit the deficit to £100 million, to cover the purchase of emergency stocks of foodstuffs and raw materials.

The Import Bill

The main cause of the deterioration in Britain's trade balance this year has been the sharp rise in the value of imports. The volume of imports has increased by "something like 5 per cent" on last year, according to the President of the Board of Trade. But this increase in physical quantity is barely equivalent to the rate required to meet this year's programme of emergency purchases for stock, much less to ensure a supply of raw materials adequate to sustain the present level of industrial output. Commodity prices generally have tended to level off in recent weeks; some have even fallen. But even if they rise no further the

import bill is likely to continue to increase during the year as the volume of imports increases.

Total exports during the first quarter were £613 million, £80 million more than in the first quarter of 1950. The switch to arms production and the delays in shipping are likely to limit the expansion in the volume of exports this year or even cause a decline, but there should be ample scope for export prices to rise. British exports to both the United States and Canada made a welcome recovery in March and were higher than the monthly average for 1950, though below the average for the last quarter of 1950. If this rate can be maintained or even improved during the year, Britain's dollar deficit may not increase to any alarming extent despite the overall deficit. This year's trade crisis will therefore be a sterling rather than a dollar one, and it will be reflected in a rapid rise in sterling balances held by Commonwealth countries.

Second Thoughts on Initial Allowances

The suspension of initial allowances on capital expenditure after April 5, 1952, sets two distinct problems for industry—the provision of finance and the effect on distributable profits. For Sir Stafford Cripps, the allowances represented a means of providing the money required to meet the increased costs of replacing capital assets, and thus of encouraging investment: for Mr Gaitskell the emphasis is on the stimulus alone. The idea that the initial allowances had a permanent part to play in financing industry in a time of inflation has been rejected; they now become an expedient to be given, or withdrawn, according to the Chancellor's assessment of the need for capital investment in the private sector. They have given important help to industry during the period of postwar reconstruction. Broadly speaking they will have been granted on expenditure in the six years from April 6, 1946, to April 5, 1952, corresponding normally to the fiscal years 1947-48 to 1952-53. For the first three years the allowances were at 20 per cent and for the last three at 40 per cent, on the cost of plant, and throughout at 10 per cent on the cost of industrial buildings. If investment on plant has been proceeding at a steady rate of £750 million a year, the total "interest free loan" (after allowing for the automatic repayment through the reduction of annual allowances, and taking a combined average rate of income tax and profits tax of 11s. in the £) must amount to about £600 million for plant alone by the time the allowances end. Suspension is not the end of the matter: the repayment of the "loan" must go on—and go on it will, through the automatic reduction of the annual allowances, for the next twenty years or more. The repayment of £600 million over such a period may not be an impossible burden, but it represents a further strain on the capital of industry.

Industry must in future finance itself without this substantial help and for certain concerns whose long-term investment policies will not be completed by April, 1952—shipping companies in the middle of new building programmes, for example—some concession will clearly be needed. This the Chancellor has already recognised. Insofar as the withdrawal of allowances damps down expansion programmes, the need for finance will be correspondingly reduced, but current replacement must go on and, as the Tucker report pointed out, the allowances went some way towards filling the gap between the cost of replacement and the funds built up internally by depreciation provisions based on original cost. The Chancellor ought at least to be asked to suspend the balancing charges on assets replaced, as a counterpart to the suspension of the allowances. There has long been a feeling that the balancing charge can operate as a tax on capital

What colour is more production?

That's what we said: if you find a factory producing more, more quickly and efficiently, what colour do you expect to see on the walls, the machinery, the controls?

This question matters a lot, and of course there's no single answer to it. But we do know an answer to eye-strain, greatest single factor causing fatigue and keeping production down. That answer is: careful colour planning. Dingy dark greys and browns, which cloak dirt instead of making it easy to shift, are not good enough—even positively harmful sometimes. Yet at no extra cost, when painting, factories can be made lighter, more cheerful, easier places to keep clean and to work in.

This improved atmosphere is always followed by improved production.

In 'Factory Painting for Increased Productivity' you'll find principles that can be applied with profit to any factory, simply and interestingly set out with practical illustrations in colour. We will send you your copy, free of any obligation, if you will write for it to

Spotlight on Australia

In the business world today attention has been focussed on the remarkable industrial development in Australia. The Union Bank of Australia has therefore published two Booklets: “Industrial Australia” containing authoritative information on industrial resources, markets, labour and finance, “Company Formation in Australia” providing a general guide to Company Law with notes on current taxation and the establishment of a business in the Commonwealth. Anyone contemplating business in Australia, will find in these Booklets the preliminary information they require. Copies of these Booklets will be sent on request.

profits arising from inflation; after the withdrawal of the initial allowances the injustice of the balancing charge will become even more apparent.

The effects of the suspension of the allowances upon profits shown in company accounts will depend on the manner in which the allowances have hitherto been accounted. No clear ruling has ever been given on this point by the accountancy bodies, for although they recognised that the initial allowances would lead to distortion of profits, they felt nevertheless that it would be sufficient to make a note of their existence and to leave to the prudence of directors any question of transfer of the “loan” to a separate reserve. Many concerns have in fact placed the tax benefit of the allowances to a separate reserve whilst others have no doubt merged it with their reserves for future taxation. But there must be large numbers of businesses that have been content to provide merely the actual tax liability as reduced by the allowances. The profits of such businesses will reflect the full severity of the change for not only will the tax saved by the allowances cease to swell their distributable profits, but provision will have to be made out of the profits, after tax, for the repayment of the loan. For certain companies and for at least one nationalised industry—the British Electricity Authority—this may be a distinct embarrassment.

Sulphurous Phrases

Mr Wilson's violent phraseology this week about the country's sulphur shortage—“totally inadequate” supplies, “slashing reductions” in output, danger of an “unparalleled industrial disaster”—was no doubt intended primarily for transatlantic reading. There is nothing he can tell British industry about the gravity of this problem, which is the more vexatious because there is little that either industry or Government can do about it in the short run except beseech the Americans. Mr Wilson's extravagance of language, however, seems a little superfluous even for this purpose; and it is not altogether consistent with the figures he quoted from the more selective allocation schemes that the Board of Trade is likely to substitute next month for informal cuts already imposed “across the board.” He mentioned two alternatives, based upon Britain receiving either 100,000 tons this quarter, or 81,000 tons. The most important single difference between the two would be that the rayon industry would receive 80 per cent of its 1950 rate of supplies in the first case, and 70 per cent (the Board of Trade put it at 40 per cent less than it was receiving at the end of last year, or 30 per cent less than its average throughout the year) in the second. Whatever the effect of such a margin on rayon output it hardly qualifies as the centre of an “unparalleled” disaster. Again, the chemical industry in general, and many other industries using sulphur, would have to accept a 10 per cent cut if 100,000 tons are received, and cuts averaging 30 per cent if only the smaller quantity arrives. But in either case superphosphate production will remain at its present low level (62½ per cent of 1950 production), which has been accepted because demand for fertiliser is lower than last year. In either case, too, almost 100 per cent supplies are to be ensured to industries considered essential, which include tinplate, iron and steel, metal extraction, explosives, mineral and vegetable oil refining, tar distilling, rubber beltings, fuel for aircraft, factory effluence and sewage water purification, and edible fats: some of these, such as the Margam sheet-steel plant, will require more sulphur as the year goes on. The allocation scheme also appears to be based upon sulphur supplies from America alone; how far it will affect sulphuric acid made from pyrites, or any packets of sulphur obtained elsewhere, is not easy to gauge, though these alternative supplies are naturally under pressure.

If Mr Wilson's words were intemperate, his department's action appears to have been as effective as could be expected.

There seems a fair chance that the 19,000 tons “supplementary allocation” granted at the beginning of the month will be in addition to, and not counted as part of, a “basic allocation” of 81,000 tons for the quarter, and there is some hope that the total of 100,000 tons a quarter may be continued. The original 19,000 tons, indeed, was originally released for the first quarter of the year, not the second. Accusations recently aired that the shortage is the result of “a failure in Government planning” are misplaced; short of subsidising the conversion of sulphur-burning acid plants to pyrites, the Board of Trade could have done little more in the last 18 months to encourage such re-equipment than it has done. It did not expect the crisis to arrive so fast, accelerated by stockpile buying; nor did industry here, or the Americans. The present plans for conversion to other sulphur-bearing materials, mainly pyrites, should in three years or so cut Britain's raw sulphur needs by more than 50 per cent; the £3,500,000 anhydrite project sponsored by ICI and certain major acid consumers has now reached the stage of registration as a company. In the meantime—which is the term of rearmament—the dependence of America's allies upon American sulphur could hardly have been avoided.

* * *

Electricity and Rearmament

Not unexpectedly, Lord Citrine's speech at the annual lunch of the British Electrical Development Association last week expressed his concern about the repercussions of rearmament upon the British Electricity Authority's programme of building and equipping power stations. One may concede that “without adequate electrical development it will be impossible for Great Britain to survive as a first-class power.” But Lord Citrine put the cart before the horse—even though there must be a point at which capital cuts imposed on BEA might in turn seriously hamper the defence programme. It is surely going too far to declare uncompromisingly that the building and equipment of generating stations must be “given the highest precedence.”

Lord Citrine felt that “substantial progress in the direction” of diminishing the gap between electricity capacity and peak-hour demand had been achieved in the first three years of nationalisation. Sir John Hacking, his deputy chairman, was a little more cautious in a lecture to the Royal Society of Arts this week; he said that “year by year the rate of increase in demand has exceeded the plant brought into service—although by now the point of balance has probably about been reached.” This means that the installing of nearly a million kilowatts of capacity in 1950 still left BEA about as far behind the public's swelling demand for power as it was at the start. Since consumption in the first three months of this year is already 13 per cent above that in the same period of last year, despite the stopping of sales promotion, this is not surprising. Sir John feels, however, that, on the most favourable assumptions, BEA might carry out its prodigious task of “catching up” by 1954; but on more realistic assumptions it is unlikely to achieve it until “after 1958.” He, too, fears cuts in capital expenditure; but it is worth noting that so far probably no single item of generating equipment installation has been held up by Government restriction of capital expenditure. The Government is allowing BEA to install up to 1,500 mW. of plant in one year, and so far BEA is still “a few years” away from being able to do so. The review of the programme ordered by the Government this week, or even outright capital cuts, might thus cause less immediate difficulty than the Authority fears.

* * *

More Flexible Thinking

It is only fair to record, however, that Lord Citrine's speech also contained a passage that revealed an unwonted and welcome flexibility in BEA's thinking on policy.

The use of load controlling devices has been under consideration for some time, and large scale tests are being instituted in the areas of the Southern, Merseyside and North Wales, and South West Scotland boards.

This decision follows study, by a working party set up within the authority, of certain devices suggested to it by the Clow Committee and other outside students of the peak load problem. Such devices would have as their object the limiting of domestic demand during peak hours, in order to avoid the drastic power cuts that have seriously interfered with industry during the winter months; and in the long run they might also to some extent "flatten the peaks" and improve the load factor of electricity generation as a whole—thus enabling BEA to overtake growing demand with less expansion of generating capacity.

The tests are to be made upon two or three of the 50 existing "ripple control" networks, in which a central station can send out an impulse over the distribution circuit to operate switches, for example in water heating or street lighting systems. It is proposed to offer consumers in these areas a "non-firm" supply, liable to interruption, at concessionary rates. If they agreed, the whole or part of their supply would be passed through a load limiting switch that could be operated by ripple control; and at peak hours this would be set into operation to cut off (with or without warning signals such as light flickering) the agreed "non-firm" demand of the domestic consumer concerned. Supplies would be interrupted only in particularly cold weather—when all consumers in any case would be liable to indiscriminate cuts.

These experiments will cost time and money. It is hoped to carry them out in closely-knit areas where perhaps 1,000 consumers at least can be induced to agree to the installation of the limiting switches. The systems can be tested only in winter; and since their introduction will require a considerable degree of "educative" propaganda to the boards' customers, it may be that next winter will be largely spent in persuading enough consumers to accept to provide adequate tests. The winter after next, therefore, may be the first in which the devices can be tested fully. Nevertheless, the authority is to be congratulated upon withdrawing from the stone-walling attitude that it has formerly adopted towards such suggestions; the acceptance even of tests designed to solve the supply problem by limiting demand rather than expanding capacity denotes a departure from the established tradition of the industry.

* * *

Film Finance

The second annual report of the National Film Finance Corporation (published within a fortnight of the ending of its financial year) is as laconic and as clear as the first; it has also much the same tale to tell. There has been "a great improvement" in cost control over the films for the production of which the Corporation provided part of the funds; but British film production is not yet "by and large profitable," since between income and expenditure "the gap has been narrowed; nothing like bridged." The £6,000,000 that the Corporation has been allowed to borrow from the Board of Trade is "near exhaustion"; all likely projects can probably be financed until well into the summer, but after that the only funds available will be those from repayments—"perhaps £500,000 a year for the next year or two." This would mean only 10 to 12 first features a year: far too few to fulfil the cinema quota at the present rate.

Once again the report excepts British Lion from some of its general remarks. Cost control on this company's productions has improved, but "is not yet wholly satisfactory"; the whole of its £3,000,000 loan falls due for repayment this year (at the same time as, but having priority over, a substantial loan due to another creditor); and in its accounts

the Corporation has considered it prudent to increase the provision for loss on this loan from £500,000 to £1,000,000.

During the last twelve months 165 inquiries concerning the provision of funds for films were made to the Corporation; only 91 merited serious discussion. Of these 91 (24 under consideration at the beginning of the reporting year), 42 were approved: 38 did not materialise, 24 were rejected for various reasons, four withdrawn and seven are under consideration. Of Corporation-financed films generally released, 26 first features have been out long enough for reasonable estimates to be made of ultimate takings (this can be done for the United Kingdom within three months of general release). Twelve are expected to make profits, which is a much higher proportion than has been usual in the industry recently; but only two are certain to recover production cost from the United Kingdom alone.

The Corporation quite bluntly points out that the running out of its primary funds, and the reduction of its lending to financing films only from repaid loans, would provoke another crisis of the kind it was set up to meet. For its desirable "fade-out" it holds two things necessary; more income for producers, to make operation reasonably profitable, and more capital to carry through till then. The Corporation does not want more money to make more losses: "losses are only inevitable till the deficit on production as a whole is remedied, as it surely ought to be, and soon." That remedy, as it recognises, would require a more drastic operation upon the internal set-up of the whole business than the Corporation can be expected to undertake.

* * *

Australian Port Delays

Liner freight rates in several trades are now being subjected to a further round of increases. The latest example is provided by rates between central and southern Brazil and the United Kingdom and the Continent, which will be advanced some 15 to 20 per cent as from June 1st, though a 10 per cent increase came into effect as recently as March 1st. Increasing operating costs, particularly crews' wages, bunker prices and port charges, are partly responsible for these further increases; but perhaps the most serious factor is the delay incurred in ports. The worst case remains the trade between Europe and Australia, where the notoriously bad turn-round in Australian ports has now completely dislocated regular liner services. The companies concerned have been compelled to warn shippers that exports to Australia and New Zealand may be subject to prolonged delays during coming months. It is likely that this month, and in each of the next three, only about half as many sailings to these destinations will be available as took place in January or February.

The primary cause of this dislocation is the inability of liners to maintain their scheduled sailing dates, owing to the unprecedented delays in Australia. Ports there are being called upon to handle a volume of traffic three times as great as that before the war, thus straining port equipment and an inadequate labour force. Dockers work only a 40-hour week, and their unions are riddled with Communists. In New Zealand the situation is even worse. One costly new refrigerated cargo liner has just returned from a round voyage to New Zealand that occupied over 245 days, of which only 72 were spent at sea; 131 days were spent discharging and loading in New Zealand. Several food ships now on their way to this country were loaded by Servicemen, and it is expected that Communists here may try to stop these being unloaded when they arrive. The Servicemen, incidentally, though entirely untrained, managed to load cargoes such as flour about three times as fast as the regular dockers in New Zealand, which would confirm that restrictive practices in the docks are an international problem.

Fleets designed to cope with the normal flow of traffic cannot keep up their schedules when subjected to such

Type these fifteen letters please

The MEMOBELT has revolutionised office dictation!

FIFTEEN LETTERS or more on a little plastic belt! That is only one of the amazing developments in office dictation made possible by the Memobelt, the new recording medium of the Dictaphone Time-Master.

MORE DICTATION

Fifteen minutes of solid dictation goes on to each Memobelt; fifteen minutes of notes, letters or memoranda for your secretary to type when it is most convenient. Memobelts fold flat for compact filing and up to ten can be posted for 2½d. in a standard envelope.

EASIER DICTATION

The Time-Master is extremely simple to operate—there are no time-wasting controls to set or adjustments to make. It is designed to achieve the maximum efficiency with the minimum of effort both when you dictate and when your secretary transcribes.

BETTER RECORDING AND REPRODUCTION

Time-Master recording on Memobelts is crystal-clear from beginning to end. The sensitive microphone catches every word you say—even a whisper: this makes transcription both easy and accurate for secretaries.

UNION CORPORATION, LIMITED

(Incorporated in the Union of South Africa.)

ABRIDGED REPORT OF THE DIRECTORS FOR YEAR 1950.

After providing £550,400 for United Kingdom Income Tax and Profits Tax the profit for the year is £927,319, plus £213,003 brought forward, making a total of £1,140,327. The Directors have placed £300,000 to the credit of Exploration Reserve Account, and have declared a final dividend of 4s. United Kingdom currency per share free of United Kingdom Income Tax, absorbing £372,000, and making, with the interim dividend of 2s. per share, a total distribution of 6s. per share free of United Kingdom Income Tax of £558,000 for the year, leaving £582,327 to be carried forward. Holdings of shares, debentures and other securities have been taken into the Accounts at cost or under, but in no case above the market value of December 31st last, or, where no market price exists, above the Directors' valuation. At present market prices these holdings show a very substantial surplus over the amount at which they stand in the Balance Sheet. The Directors, as on other occasions, have thought it expedient to write down the book cost of certain holdings below both cost and market price. A copy of the Corporation's Annual Trade Cycles Chart, revised to date, is enclosed with the Report.

Working Profit per ton	51s. 10d.	11s. 7d.	33s. 6d.	27s. 2d.	5s. 8d.
Total Working Profit	£4,505,000	£742,000	£3,800,000	£985,000	£340,000
Net Profit ..	£2,254,000	£1,251,000	£1,883,000	£545,000	£331,000
Dividends: Total	£2,193,000	£1,205,000	£1,716,000	£412,000	—
Per cent.	11½	8½	60	18½	—

The net profit figures include revenue from other sources. Thus East Geduld Mines' dividend income in 1950 on its shareholding in The Grootvlei Proprietary Mines was £50,640 and Geduld Proprietary Mines' dividend income in 1950 on its shareholdings in East Geduld Mines and The Grootvlei Proprietary Mines was £818,833.

On Van Dyk, development in the No. 5 Shaft area has commenced. Payment of dividends has been suspended in order to finance this Shaft and initial development therefrom.

ST. HELENA GOLD MINES.—During 1950 No. 4 Vertical Shaft was completed and station cutting was carried out on the 2nd to 12th Levels. Development work from No. 3 Shaft was again retarded by the intersection of water-bearing fissures which necessitated sealing by cementation. A total of 12,406 feet was completed. Of the 3,865 feet on Basal Reef, 2,595 feet or 67 per cent. were payable, having an average assay value of 13.0 dwt. over a width of 25 inches. Though the development footage has been disappointingly low for the reason given above, the grade and payability are satisfactory.

It now appears unlikely that development will have progressed sufficiently to enable the reduction plant to be supplied with ore by the middle of 1951 on the substantial scale originally planned, but the plant should be ready to go into commission early in the second half of the year, in the expectation that adequate electric power will be available.

THE WITKOP PROPRIETARY COMPANY.—The borehole in the centre of the Company's property, which was referred to in last year's report, intersected the Main Reef at a depth of 7,161 feet with a value of 45.4 dwt. over 3.9 inches, equivalent to 177 inch/dwt. A deflection of this borehole assayed 29.5 dwt. over 6.3 inches, equivalent to 188 inch/dwt. A second borehole is being drilled by the Company in the north-eastern portion of its property and had reached a depth of 1,085 feet at the year-end.

OTHER MINING INTERESTS

SAN FRANCISCO MINES OF MEXICO.—In the year to 30th September, 1950, the absence of labour trouble enabled the Company to treat a record tonnage of 623,000 tons of lead-zinc-silver ore compared with 580,000 tons in the previous year. The substantial recovery in the level of base metal prices which set in around the middle of 1950 has favourably affected the Company's revenue, though taxation in Mexico continues to be a heavy burden upon earnings.

CHROME MINES OF SOUTH AFRICA.—The Company increased its production and sales from the Zwartkop Mine in the Rustenburg area and the Grootvlei Mine in the Lydenburg district of the Transvaal. The Company has large orders for future delivery, but has been handicapped by the shortage of railway trucks.

TRUMBEE CORPORATION.—The net profit of this Company for the year ended 30th June, 1950, was £1,495,572. During the year the balance of £780,000 of Promissory Notes outstanding was redeemed and in addition a bonus share dividend of three fully paid 5s. shares for each share held was paid. On 1st June, 1950, an initial cash dividend of 9d. per share on the increased capital was paid and during the current financial year further dividends totalling 4s. 9d. per share have so far been declared.

OTHER INTERESTS

BAY HALL TRUST.—The net profit for 1950 was £70,626 and a dividend of 6 per cent. free of tax was declared. The Trust's investments as at December 31st last showed an appreciation of £375,341 over book cost of £2,169,559.

BRITISH ENKA.—During 1950 the Company further increased its output. SOUTH AFRICAN PULP AND PAPER INDUSTRIES.—During the year production was at full capacity. The net profit for the year, after making provision for taxation and depreciation, amounted to £293,222. Dividends totalling 1s. 10½d. per share have been declared. Construction work has progressed satisfactorily in preparation for further expansion of operations at Enstra, and the erection of the smaller of the two additional paper machines referred to in last year's report is well advanced.

In addition the Company will establish a new pulp and paper mill at the mouth of the Tugela River in Natal to manufacture initially about 100 tons per day of kraft papers. To finance this expansion the Company has obtained a long-term loan of £1,000,000 from the S.A. Mutual Life Assurance Society. It is intended that the balance of the funds required will be raised in due course by an issue of ordinary shares in which the Corporation will participate.

EXPLORATION

CAPITAL MINING AREAS continues to hold prospecting contracts over a large area in the Bethal, Ermelo and Standerton districts.

WESTERN KROONSTAD AREAS is abandoning most of the prospecting contracts which it holds over a large area in the Kroonstad and Bothaville districts of the Orange Free State.

The Corporation itself continues to hold the mineral rights on certain farms in the Orange Free State.

CENTRAL MINERAL EXPLORATION is continuing prospecting operations in the Mlala area of Tanganyika Territory.

delays in port. Normally the conference lines would charter extra tonnage to fill any gaps in the schedule, but ships are now so scarce that this cannot be found. For the few ships that may be available from time to time, the rates at which they can be chartered are now so high that the liner companies could not afford to put them on the berth at tariff rates without suffering heavy losses. The lines propose, however, to take some ships on charter when available, and to offer them to shippers on the basis of tariff rates plus a special surcharge, which will be calculated to cover the cost of charter in each case. Even so, shippers have been warned that despite such occasional assistance there will be serious delay in getting cargoes away. This is already causing goods made for export to clog warehouse space all along the line in Britain, and making light of Government admonitions "not to lose an inch of the ground gained in exports." It is reported that motor manufacturers, in an attempt to circumvent the delays in shipment from Britain, are chartering two vessels to carry cars to Australia on their own account; but it seems unlikely that these ships can do anything more than join the queue.

Better Balance in EPU

The latest settlements of the European Payments Union, covering operations in March, reflect a significant and welcome change in the balance of current creditor and debtor positions in Western Europe. The most important change is the switch of Western Germany from debtor to creditor status. After showing a net deficit of \$58.3 million in February, the German balance of payments with other members of EPU swung right round to a net surplus of \$11.3 million in March. This reversal is mainly due to the severe import restrictions imposed in Germany last month. Most of the March surplus has been used for repayment of part of the special credit of \$120 million granted to Germany by EPU when the original German quota had been exhausted. As expected, however, the German import restrictions have had an immediate unfavourable reaction upon the Netherlands, which ran up a net deficit of \$37 million in March. The Netherlands have chosen to pay some \$32 million of this in gold, taking only \$4.9 million by way of further credit from EPU. The loss of gold and the subsequent increase in the Dutch Bank rate from 3 to 4 per cent are indications that the Netherlands are intent on tackling their balance of payments difficulties by severely orthodox measures.

The United Kingdom had a considerably smaller surplus with EPU in March than in previous months; its surplus for the month was only £5,334,643. Of this, £1,922,857 was met by other members out of existing resources and the balance (which was equivalent to \$9,600,000) was converted into EPU units. Half of this balance, that is \$4,800,000, was taken in gold. Since EPU began on July 1, 1950, the United Kingdom's net surplus with other member countries has totalled £226,633,572. Of this, over £30 million has been met out of existing resources, £53½ million was provided out of the initial debit position of the United Kingdom and £33,367,000 has been taken in gold; the rest has been left on credit with EPU.

Tea Market Re-opens

Last Monday saw the first sale in the London tea market for over eleven years. Mincing Lane has so far been granted only partial freedom, and buyers were naturally cautious. Their total purchases are prescribed by their ration requirements; the maximum price they could bid was determined by the fixed retail price, by the fixed subsidy and by their skill in blending different qualities of tea. Dealings are also restricted to supplies for home consumption. Despite these serious limitations, however, the market

reflected, as merchants hoped it would, a preference for better quality teas. The second auction is to be held on April 30th and the third on May 21st, when the flat rate subsidy will be reduced from 1s. to 8d. a lb and the retail price correspondingly increased by 4d. a lb.

The quantity of tea marketed was only a fraction of its prewar volume. Over half of the 11,513 packages (approximately 1,250,000 lb) offered came from Africa. Northern India provided 2,572 packages, Ceylon 2,442, Formosa 110, Java 96 and Malaya 30. At the second auction an even smaller quantity will be offered; large supplies will not be available until May. But total offerings for this year are expected to reach 300 million lb, compared with Britain's consumption last year of 430 million lb.

As an experiment this partial restoration of private trading in tea is interesting. It enables merchants to use their skill in blending, and the public should get a better average quality of tea in consequence. But Mincing Lane will have little chance to recapture its prewar glory so long as the present restrictions continue. Prices last Monday tended to be lower than those ruling in the Colombo market, and although some of the larger producers may be willing to make a financial sacrifice in order to re-establish their connections with London, a market cannot function for long on faith alone.

The Colombo and Calcutta markets, which were also closed during the war, have already been operating for a few years, and they do not take kindly to the intrusion of London. These two markets, however, are limited to indigenous supplies; London can offer supplies from all quarters of the globe. The practical difficulty is that India and Ceylon at present account for the bulk of the world's supply. Supplies from Indonesia are increasing but are still much smaller than was expected two years ago. The United States in recent months has been buying tea on such a large scale that the hope of a world surplus of tea, which the Ministry of Food has nurtured for some time, may not materialise even next year. But present restrictions on the London market should not remain until surpluses appear. It would be feasible to abolish both tea rationing and the controlled price in Britain while maintaining a fixed subsidy, which would enable Mincing Lane to extend its activities without the British public having necessarily to pay more for its tea.

Still Dearer Coal

The rise in retail prices of all grades of coal, by an average of about 1s. 9d. per ton, that was announced by the Ministry of Fuel and Power this week, is a direct consequence of the 10 per cent increase in railway freight charges. The increases, which vary from about 4d. to 4s. a ton in accordance with the distance the coal has to be carried (in London, for example, the average increase is about half a crown a ton), are permitted increases in the coal merchant's margin, and have nothing to do with pithead prices or the National Coal Board: which will of course make them no more palatable to the consumer. The steel and electricity supply industries, both of which are contemplating increases in price, may not need to adjust these further to take this coal increase into account (particularly because they are at present studying the changes in price suggested by the National Coal Board for its long-planned "price structure"); but the speed with which prices of primary materials and services are beginning to push each other upwards is becoming alarming.

Shell's New Tankers

Shell's new £45 million tanker building programme, upon which work has already begun, is the largest announced

*It is the Age of Machinery,
in every outward
and inward sense
of that word*

SIGNS OF THE TIMES. Thomas Carlyle (1795-1881)

THE SAGE OF CHELSEA was well on in his fifties when Marshalls and when Fowlers first began to build machinery over a hundred years ago. These two firms are now united in the Marshall Organisation. It is their joint pride that generations of their craftsmen have handed down their skill from grandfather to father, from father to son. Paradoxical as it may seem, this long tradition has been one of pioneering, of innovation and improvement, not only in industrial heavy engineering, but also in the field of mechanised farming.

At the British Industries Fair the Marshall Organisation is showing THE FOWLER CHALLENGER MK. III DIESEL CRAWLER • THE FOWLER MK. V F DIESEL CRAWLER • THE FIELD-MARSHALL SERIES 3 TRACTOR THE ROAD-MARSHALL TYPE RT 508 TANDEM DIESEL ROAD ROLLER • THE ROAD-MARSHALL RD SERIES 2 THREE-WHEEL DIESEL ROAD ROLLER.

ELECTRO-MATIC vehicle-actuated signals provide an immediate and economic solution to the urgent problem of traffic control. All types of vehicles either in built up areas or at busy arterial junctions are enabled to circulate freely without congestion and in complete safety. If necessary, co-ordinated control can be provided over a large area embracing a large number of intersections, the flexibility of the system rendering it capable of adaptation to every type of road layout and every form of traffic. Thousands of "ELECTRO-MATIC" installations all over the world are continuously providing a degree of safety and efficiency which could not be obtained by any other means.

A cleaner office every morning—and in a fraction of the time, too. The same with every other part of your building when you "take on" Columbus, the Mechanical Charwoman. This brilliant new machine does all five of your biggest, most troublesome cleaning jobs—Floor Scrubbing, Drying, Polishing, Suction Cleaning, Dusting—better and far more thoroughly than ever before.

Write for literature and name of your nearest COLUMBUS DEALER.

since the war by any company in the world. It consists of 41 general purpose tankers of 18,000 tons deadweight of entirely new design and five 28,000-ton "supertankers," together totalling about 900,000 tons. Two-thirds of the orders—31 vessels totalling about 600,000 tons and worth perhaps £30 million—have been placed with British shipyards, and the remainder with yards in the Netherlands. The group expects one to be delivered next year, eight in 1953, half the total by the end of 1954 and the remainder in 1955; deliveries from the Netherlands are expected to be slightly faster than from British yards, since the Dutch shipbuilders are less heavily booked in the later years of the programme. This addition to the fleet will be larger than the total Shell fleet in 1930: but even when it is completed it will bring the proportion that Shell owns itself of the total fleet operating on its behalf to only about 50 per cent, compared with 60 per cent before the war.

Sir George Legh-Jones announced the new programme two days after the Budget decision to remove the 40 per cent initial allowance from the end of the present fiscal year. The additional burden this would impose would, he admitted, be very heavy, but not one the group felt it could not stand. The programme will be financed out of group resources; "though this does not preclude the possibility that the group may take advantage of any favourable opportunities that present themselves of financing more distant schemes." Instalments paid on ships laid down during the current year will qualify for the initial allowance; but the main weight of the cost will fall upon the group in 1954.

The programme will probably bring orders so far this year for British shipbuilders to roughly the million and a half tons added to order books in the whole of last year; and it will further accentuate the weighting of the British industry's orderbook towards the construction of tankers rather than dry-cargo vessels. The new general purpose tanker, which will be operated upon the main ocean routes, should be more economical to operate than the prewar 12,000-ton general purpose type, or the American T.2 adopted during the war; the super-tankers, to be used mainly in carrying crude oil from the Middle East to refineries in Britain and Holland, are of the type based upon the successful *Velutina*, and will bring the number of tankers of this size operating under the Shell house flag to 14. The Shell order follows two other very large tanker orders within the last two months—placed by Anglo-Iranian's British Tanker Company and by the new operating company formed by Anglo-Iranian, Common Brothers, and Matheson and Co., Ltd.

The Prudential's Expanding Assets

The Prudential continues to fortify its position as a giant among British insurance companies. Last year its assets rose by another £37.5 million to £608.3 million; the total increase in assets in the last three years now amounts to over £100 million. Within these assets totals its holdings of debentures jumped by nearly £20 million last year, from 9.3 per cent to 12.0 per cent of total assets, while the proportion of British Government and Government guaranteed securities fell from 49.8 per cent to 47.4 per cent. In part, this a symptom of a general trend. Most life offices took the opportunity last year to expand their investments in debentures, including unquoted loan stocks, and to cut down their holdings of gilt-edged. The Prudential, however, went rather further than most in this direction and subscribed over £10 million to the unquoted, unsecured loan stocks issued by ICI and Distillers last autumn.

New sums assured in the Ordinary Life Branch rose from £88.4 million to £94.4 million. About one-third of this new business (£32.1 million in 1950 against £28.8 million in 1949) came from overseas. In the Industrial Life Branch, however, new business was £74.3 million in 1950 compared with £75.5 million in 1949—a result rather less favourable

than that of some other leading industrial-cum-ordinary offices. The life profits last year were £6,200,000 in the ordinary and £11.2 million in the industrial branch. The reversionary bonus in the ordinary branch has been increased from 26s. per cent to 28s. per cent for policies issued in the United Kingdom, with slightly different rates for overseas business. There was also an increase of 2s. in the industrial branch bonus to 26s. per cent. Premium income in the General Branch (fire, accident and marine insurance) was £8,300,000, of which £4,100,000 related to overseas business; in 1949 premium income in this branch was £7,300,000 (£3,500,000 of it from overseas). In addition the premium income of the American subsidiary was just over £1,000,000. Fire underwriting profits were £428,847, accident profits £488,175 and the small marine account showed a profit of £43,000. These are clearly very satisfactory results. The dividend on the "A" shares has been stepped up from 15s. 5d. to 17s. net per share and that on the "B" shares (which share only in the general branch profits) from 1s. 6d. to 1s. 9d. net per share. Last November 3s. 6d. net per "A" share was paid out of the special dividend reserve fund; it is the Prudential's present intention to distribute not less than a further 2s. 6d. this year from this fund, now equivalent to 12s. 5d. per "A" share.

Commodity Prices Falter

The first stage of the commodity boom has passed, and the prolonged rise in prices seems temporarily to have exhausted itself. Some prices are still rising, but only moderately; others are falling and a few have fallen quite sharply. Grains have remained relatively firm and though prices fell in March they have since recovered. Tea prices have tended to decline since the turn of the year and are now below their level of last June—a rare example. The cocoa market, which

is usually a good indication of American consumers' spending power, has remained quite firm. Sugar has declined slightly in the past three weeks, but in view of the bumper crop this season the price is still very high. Lard and tallow, two commodities that have often proved a barometer of an approaching recession, are still quite firm with prices substantially higher than last June. In general, textile fibres have experienced the sharpest falls. Egyptian cotton prices, particularly those types (Ashmouni and Zagora) that can be substituted for American staples, declined sharply in March; although a slight recovery has taken place this month, they are some 25 per cent lower than at the beginning of the year. American cotton prices have remained fairly stationary at

the maximum level fixed by the United States Government. Wool prices fell sharply this month and fax, too, has eased a little. In contrast, the prices of jute and sisal are still rising.

Copper, lead and zinc prices in New York continue unchanged, though in Britain they were raised at the beginning of this month. "Grey" market prices for these three metals have eased in the United States but in Europe they are still tending to rise. Tin has fallen by over £100 a ton during the past week and is substantially below the peak price of £1,615 a ton reached in the middle of February; it is now £25 cheaper than at the end of 1950. The price of tungsten declined very sharply in the first two weeks of March and the market seemed to be steadying at 540s. a unit; this price, however, was still nearly 200s. a unit above the price ruling at the end of December and there was a further decline of 15s. last week. Rubber, like tin, has fallen during the past six weeks but it is still well over double its price of last June.

Commodity markets generally have experienced a much smaller volume of American buying in recent weeks. To some extent this reflects a change in official American stock-piling policy (though, contrary to some announcements, the United States is still buying rubber for stock). The main reduction in demand, however, has come from American manufacturers who had built up their inventories too much and too swiftly in the past six months, and an "inventory recession," perhaps more modest than in 1949, seems to be developing.

* * *

Higher Prices for Alcohol

The price of industrial alcohol was increased recently from 2s. 2½d. to 4s. 5½d. a gallon. This sharp rise is almost wholly due to a 400 per cent increase in the price of Cuban molasses, itself the result of rising world demand. Last year

the current price of Cuban molasses was 4 cents a gallon, but the reopening of the American synthetic rubber plants last summer made such heavy demands on alcohol supplies for the production of butadiene, one of the essential ingredients of synthetic rubber, that Cuban stocks were exhausted long before the new crop shipments started in March. In November the Cuban Government announced that instead of being open to tenders the coming crop would be sold to all consumers at 20 cents a gallon and would, moreover, be allocated by the Government. The British allocation was 50 million gallons—about half the estimated requirements. Cuba is the only big exporter of molasses, and since British owned stocks were exhausted by the end of last month, the Cuban decision could have led to a serious cut in British alcohol deliveries.

In one way or another it has been possible to acquire piecemeal enough beet and cane molasses from other countries to safeguard British alcohol supplies for the coming year. In 1950-51 consumption reached 60 to 65 million proof gallons. Deliveries were reduced by 15 per cent in February and are likely to continue at this lower level until the middle of the year, but this is the result of a shortage of sulphuric acid at the distilleries rather than a lack of molasses.

This year the supply of alcohol from the distilleries will be supplemented by production from the petroleum-based chemical plants. The Grangemouth plant of the British Petroleum Chemical Company, owned by Distillers and Anglo-Iranian is the only one of the three being built which will actually produce alcohol. It was finished in January, but is not yet working because the local authorities have failed to complete the water pipeline which they are laying to the plant. It is always difficult to assess accurately the cost of producing a single chemical in a big plant, but while the price of molasses was as low as 4 cents a gallon, the petroleum based alcohol was more expensive than that produced by fermentation. At current molasses prices it is probably cheaper.

Rayon in Difficulties

Full effects of the 20 per cent reduction in allocations of sulphur to rayon producers will not become apparent until the output figures for March are ready in a week or two, but the fall may be less steep than the cut in sulphur and acid deliveries would suggest. In the last quarter of 1950, 98.4 million pounds of rayon yarn was produced; of this total, about 2,500,000 pounds is nylon yarn and a percentage of the remainder is acetate rayon, which uses almost no sulphuric acid. The latest figures available show that in 1949 acetate rayon accounted for 36 per cent of total British rayon production. Although the viscose producers have recently been receiving only 80 per cent of their acid requirements, by using up stocks at the factories they should be able to maintain output for the first six months of the year at 90 per cent of the end-1950 figure. After that a 20 or a 40 per cent cut in acid deliveries, compared with those for the last quarter of 1950, will inevitably lead to a proportional drop in yarn output.

Mr Wilson said in Parliament last week that rayon yarn exports would in future be restricted on a basis to be decided in consultation with the producers. No cut in export shipments is likely before the middle of the year and even then the dependence of many Commonwealth rayon industries on British yarn producers may make it impolitic to cut deliveries to these, the largest markets, too severely. Rayon yarn imports into the country from Italy, Germany and Belgium reached nearly a million pounds of yarn in February compared with an average of half a million a month in 1950, but there seems little hope that British spinners and weavers would be able to offset the fall in home deliveries by obtaining more from abroad.

The first half of the year is unlikely to show any marked reduction in viscose rayon spinning activity. Deliveries of viscose rayon staple, which have doubled in the past eighteen months, reached 1,800,000 pounds a week early in the year. The rayon producers held considerable stocks of staple yarn, and these stocks, together with those held at the mills, will make it possible to maintain yarn output at a relatively high level for some time. Some mills are considering the spinning of higher counts, a change that would help the doubling sections; others may change back to cotton or cotton mixtures, but the present scarcity of cotton may make this difficult.

The full effects of the cuts will thus not be felt for another three months or so; nevertheless, the small immediate reduction in yarn deliveries has already been a serious blow to the spinners. The secretary of the Rayon Spinners' and Doublers' Association explained last week that its mills had expected staple yarn deliveries to continue rising until they reached 2,000,000 pounds a week and that its plans for yarn production and machinery conversion had turned on this figure: more than 2,000,000 mule-equivalent spindles belonging to the Association were active at the end of 1950. "The present setback has been especially grievous to those mills who were staking more of their resources in prospect of further rayon staple expansion, and whose ambitions out-paced the common average curve of rehabilitation. Means being devoted to modernisation and amenities appear temporarily as if they were to no purpose." The same might be said of the yarn producers whose new and costly plants will run below capacity, but Lancashire is more vulnerable to discouragement of this kind.

Shorter Notes

Steel output last month was at an annual rate of 16,546,000 tons, compared with 17,147,000 tons in 1950; and the rate in the first quarter of this year was 16,425,000 tons, against 16,679,000 tons in the first quarter of 1950. The month's output was of course affected by the Easter holidays, which fell in April last year; but even so it appears that the shortages of iron ore and scrap which have interrupted or reduced production in some centres of the industry are beginning to make their effect felt throughout.

*

The steady rise in wool prices in the postwar years has presented UK-Dominion Wool Disposals Limited with a handsome profit. This joint organisation of the British and certain Commonwealth governments was set up in 1945 to dispose of the 10½ million bales of wool accumulated under the wartime wool scheme. In its trading year 1949-50, for which the accounts have just been published, the organisation made a profit of over £40 million, making the total in the five years of its existence £126 million. Stocks of raw wool at June 30, 1950, had dwindled to only 484,400 bales and this entire quantity will have been sold by the end of the current trading year.

Company Notes

British-American Tobacco.—The difficulty in presenting the affairs of such an international trading organisation as BAT in a consolidated sterling account was discussed in a recent note. In the latest accounts, the directors admit that a comparison of trading results for 1949 and 1950 is "rendered difficult by the increased sterling equivalents of figures relating to subsidiaries operating in countries which did not devalue in 1949." This factor, in addition to "improved results in local currencies in many parts of the world," has contributed to the increase in trading profits from £30,679,595 to £35,231,066. The decision to raise the ordinary dividend from 14½ to 15 per cent tax free focuses attention on the distributable earnings cover; on a conservative estimate group earnings which would be freely available for distribution cover the dividend twice.

BAT have transferred the whole of inventory profits arising on stocks held at the time of devaluation to fixed assets and stock replacement reserves. After taxation has been deducted from these windfall gains, a surplus of £4,832,775 has been so transferred; in addition £2,284,073 appropriated from the profit and loss account and £1,000,000 from a provision for British taxation no longer required has been added to these reserves. As in the previous year, the total appropriation to capital reserves of £2,532,996, against £1,248,022, is credited to the subsidiary companies' account, as are

"other revenue reserves" of £1,179,475, against £381,054. The whole of the transfer to general reserves of £3,053,259 is retained by subsidiaries; in 1949, subsidiaries retained in general reserves £2,583,055 and the holding company £1,500,000.

	1949	1950
Consolidated Earnings:—		
Trading profit	30,679,595	35,231,066
Leaf devaluation surplus	—	4,832,775(a)
Taxation	15,668,116	18,200,205
Depreciation	1,250,404	1,750,320
Ordinary dividends	3,365,683	3,563,664
	(14½%)	(15%)
Replacement reserves	1,838,019	2,284,073
Capital reserves	1,248,022	2,532,996
Added to reserves and carry forward	5,462,860	4,482,086
Cons. Bal. Sheet Analysis:—		
Fixed assets, less depreciation	19,059,638	24,437,673
Net current assets	105,151,825	122,647,947
Stocks	106,799,017	119,100,355
Cash	27,117,749	34,675,005
Revenue reserves	45,249,212	56,806,147
Ordinary capital	23,757,761	23,757,761

† Free of tax. (a) Transferred to replacement reserves.

The extension and modernisation of manufacturing facilities has accounted for most of the increase of £5,378,000 in the net book value of fixed assets. Stocks have risen by some £12,300,000 to £119,100,355; this partly reflects the effects of devaluation on stock value figures and partly increases in the market price of leaf tobacco in the year. This seems to suggest that there has been little, if any, improvement in the physical volume of stocks. Although the burden of

stock is heavy, it does not seem to have imposed as great a strain on BAT's resources as is the case with other tobacco companies; the company have not been forced to raise additional loan capital and have reduced in the year group bank overdrafts from £6,064,892 to £3,036,254. At the same time, liquid resources have been strengthened; cash, for example, is up from £27,117,749 to £34,675,005. The future outlook for the company is overshadowed by the heavy calls on profits to maintain the real capital of the group intact in the face of continuing inflation throughout the world.

*

Cunard and P. and O.—Both Cunard and P. and O. have recommended higher equity dividends. Cunard have raised the ordinary dividend from 10 to 12½ per cent, and P. and O. have increased the distribution on deferred stock from 12 to 16 per cent. These increases are welcome and if they look modest to some stockholders, it is to be noted that the operating profits of the companies have been heavily drawn upon by additions to taxation, depreciation and asset replacement reserves.

The operating profit and investment income of P. and O. in the year ending September 30, 1950, has risen from £12,443,418 to £14,408,480, but net profits of the group are only up from £1,150,437 to £1,368,431. The provision for taxation has fallen slightly from

PEARL ASSURANCE COMPANY LIMITED

Chairman: **G. R. L. TILLEY, M.A., F.C.I.S.**

Points from the Annual Report and Balance Sheet for the year ending 31st December, 1950.

POLICYHOLDERS' FUNDS £183,062,952

GROSS INCOME £35,774,691

INVESTMENTS

The funds show an increase of £8,235,811. The market value of the investments exceeded the price at which they stand in the balance sheet.

LIFE BRANCHES

In the Ordinary Branch sums assured under new policies issued during the year amounted to £16,502,584. Premium income in the Industrial Branch was £14,475,462, an increase of £190,648.

FIRE AND GENERAL

In these Branches the premium income was £5,499,343.

REVERSIONARY BONUSES

ORDINARY BRANCH—A reversionary bonus of **£1 8s. 0d.** (£1 4s. 0d. in certain overseas territories) per **£100** sum assured on policies entitled to participate in full profits.

INDUSTRIAL BRANCH—A sum of **£1,534,833** has been allocated to policyholders in the Industrial Branch (rates of bonuses raised) making a total allocation up to date of **£17,724,036** all of which has been applied to improve the contractual terms of the policies.

PRESIDENT'S ADDRESS

Aly Shamsy Pasha, the president, in the course of his address, said: The war in Korea and its consequence, the rearmament of the Atlantic Pact countries, has greatly changed the economic factors of the world situation. During the first six months of 1950 the progress made the previous year in the field of production had so far been consolidated that a certain stability was appearing. This recovery was evidenced by

an expansion of trade, both between countries of the Western Hemisphere and in the interior of Europe, between countries receiving Marshall aid.

The European Payments Union was to contribute to the development of this tendency and to permit the gradual removal of restrictions upon foreign trade. We were in sight of the normalisation of trade and the restoration of currency convertibility, at least among the European countries. Briefly, the increase in production and the wise devaluation of the pound in September, 1949, as well as that of other currencies, had borne fruit.

STEEP RISE IN PRICES

The war in Korea abruptly altered these promising perspectives. First of all there has been the steep rise in the prices of the raw materials required by factories producing arms and military equipment, a rise in prices aggravated by a race to build up stocks. Nevertheless, this movement will have a certain beneficial effect on the monetary plane, since it caused a marked decrease in the scarcity of dollars and a relative hardening of the European currencies, including sterling. It will perhaps not be of long duration, but the fact is worth mentioning.

On the other hand, the United States is engaged upon an intensive rearmament programme, which should result in a general rise in internal prices, and this rise in prices is likely soon to be passed on to other countries, and particularly to those associated in the common defence plan. The problems which henceforth face us are those of a war economy.

Naturally, the situation which has developed throughout these great producing countries has had more or less immediate repercussions on the economy of Egypt. But it is necessary to discern the disturbing factors which are likely to last some time, and which are of a type likely to alter more profoundly the already numerous economic problems of the country.

DIVIDEND MAINTAINED

Our profit and loss account shows earnings at £1,897,536, as against £1,793,607 for the previous year. On the other hand, our expenses amount to £1,277,734, as against £1,189,527 in 1949. The increase in our expenses is thus £88,208 and is due to augmented salaries and allowances of the staff. The net profits amount to £607,153, against £589,730 in 1949, which enables us to propose the distribution of a dividend similar to last year, namely, 20 per cent. per share.

Last year I referred to the marked fall which had taken place in the value of some of our securities on the London market. I am pleased to say that some of the depreciation has since been recovered, although events in the Far East have not allowed the full effects of the improvement of the pound sterling to be felt. We have again made a generous allocation to our inner reserves against depreciation of our portfolio, and I am glad to say that the margin between the market value of our securities and the figure shown in the balance sheet is now very substantial.

The report and accounts were adopted. Copies of the President's Address in full will be available at the National Bank of Egypt, 6 and 7 King William Street, London, E.C.4.

NORTH BRITISH & MERCANTILE INSURANCE

SATISFACTORY OUTCOME OF OPERATIONS

The annual general meeting of North British & Mercantile Insurance Company Limited will be held on May 10th.

The following is an extract from the statement issued by the chairman, The Rt. Hon. Lord Brand, C.M.G., D.C.L., in connection with the accounts for 1950:—

In the fire department we have again had a most satisfactory year. Our 1950 fire income was £14,619,209, compared with £13,152,569 in 1949—an increase of very nearly £1,500,000.

Losses amounting to £6,238,409 absorbed 42.67 per cent. of income, an improvement of 1.26 per cent. on the already satisfactory ratio of the previous year.

Commission, expenses of management and overseas taxation amounted to £6,402,551—43.79 per cent. of income, compared with £6,115,190 representing 46.50 per cent. in the previous year.

The profit transferred to the profit and loss account amounts to £1,391,594, being 9.52 per cent. of income, against £1,519,644, representing 11.55 per cent. for 1949.

Casualty Department.—This largely represents the business of the Railway Passengers' Assurance Company and the year 1950 has again produced what can be regarded as a very satisfactory underwriting result, coupled with further steady progress in premium volume. The casualty business as a whole has produced premiums of £3,761,624, being £262,175 in excess of those for 1949.

Losses amounted to £1,884,838 (50.11 per cent.), against £1,717,538 (49.08 per cent.) and commission, expenses and foreign and colonial taxes were £1,427,972 (37.96 per cent.), compared with £1,323,112 (37.81 per cent.) in 1949. The underwriting profit is £343,943 (9.14 per cent.), compared with £376,263 (10.75 per cent.) for 1949.

Marine Department.—Premiums for the year amounted to £1,586,292, against £1,661,290 in 1949. We have transferred £214,542 from our marine fund to profit and loss account.

Life Department.—The year 1950 has witnessed a considerable expansion in our new business figures. The total amounted to £11,510,746, after deduction of reinsurance and this compares with the preceding year's figure of £8,258,500. It constitutes a record for the company, even if we deduct group assurances which totalled £4,630,514, against £1,862,975 in 1949.

DIVIDEND POLICY

The directors are recommending the payment of 8s. 6d. per share, less income tax. We have given careful consideration to this question and have been guided by two principles; first that due "moderation and restraint" should be shown, and second, that shareholders are entitled to just as much consideration as any other class of the community.

If the company, which they own, prospers, they are entitled to their due recompense just as they have to bear the loss in times of adversity.

The most vital need of this country is to maintain and improve its whole productive structure, since only by so doing can we maintain our standard of life. For such maintenance and improvement the provision, whether from undistributed profits or from new investment, of sufficient capital is essential. New money can only be found out of new savings and the savers, so far as they are persons, must be assured that they will receive a due reward. It is one of our chief dangers that our inordinate taxation puts a great obstacle in the way of enough of such savings being available in the future.

THOMAS TILLING LIMITED

PROGRESS OF REDEVELOPMENT POLICY

MR W. LIONEL FRASER'S REVIEW

The fifty-fourth annual general meeting of Thomas Tilling Limited will be held on May 9th at Crewe House, Curzon Street, London, W.

The following is an abridgment of the review by the chairman, Mr W. Lionel Fraser, C.M.G., in respect of the year ended December 31, 1950:—

I shall now give a review of your company's present interests, starting with the subsidiary companies:—

CORNHILL INSURANCE COMPANY, LIMITED

This company transacts a world-wide fire, accident and marine insurance and re-insurance business. The underwriting results for 1950 were not as good as those for the two previous years, which were assisted by certain non-recurring factors. Moreover, the higher accident rate since the ending of petrol rationing adversely affected the underwriting experience of home motor insurance business during 1950. The profits are, nevertheless, very satisfactory.

I cannot refer to this company without mentioning the grievous loss it suffered during the year by the sudden death of its general manager, Mr Claude Wilson. Mr Wilson had been with the company for over 25 years, and was more responsible than anyone else for its present strong position; he is indeed sorely missed. We are fortunate in his successor, Mr L. A. Dunthorne, who had for some years been assistant general manager, as well as in the appointment of Sir William Christie as chairman in succession to the late Lord Hacking, and we are confident that further substantial development may be expected in the future.

DAIMLER HIRE LIMITED

Following the programme of expansion to which I referred last year, this company had made excellent progress, and in spite of considerably increased costs, it had a record year in 1950. The activities of this company—the finest car hire service in the world—are probably so well known that it is hardly necessary for me to enlarge upon them, but I might mention that it is doing a large and increasing business with overseas visitors, and it continues to gain much praise for the facilities it offers and for the efficiency of its service.

To meet modern conditions the company now caters for all tastes, and its Drive Yourself Service, re-established in new premises in May last, has been an unqualified success. A theatre ticket bureau as a further service for the company's many clients has also been opened in Brompton Road. Additional expansion is taking place and we are hopeful that results in the current year will be equally gratifying, but rising costs and the possible effect of the international situation on overseas visitors to Britain in 1951 cause reluctance to forecast.

JAMES A. JOBLING AND COMPANY, LIMITED

This company manufactures "Pyrex" ovenware, and laboratory, industrial and lighting glassware. Our purchase was concluded in January, 1950, and I can say that your board have no reason to be dissatisfied with this acquisition. Sales and profits for 1950 constituted a record and the prospects for the current year also appear good.

Following the completion of extensions to the factory at Sunderland, it is proposed to start the manufacture of a number of interesting new products which should further

enhance the reputation of this progressive company, whose existing products are in considerable demand.

STRATSTONE LIMITED

This company is acknowledged to be one of the leading motor distributors in the country and specialises in Daimler and Lanchester cars. It has for many years held the Royal Warrant of Appointment to H.M. The King as motor-car suppliers, and this position is also held in respect of H.M. Queen Mary and H.R.H. Princess Elizabeth.

The retail car trade is in these times largely dependent on deliveries of new cars, but nevertheless, profits for the company's last financial year were only slightly lower than for the previous year which was itself a record. Present indications are that the results for the current year should be well maintained.

F. TROY AND COMPANY, LIMITED

The companies in this group are engaged in general building and contracting mainly in London and the Home Counties, and in a number of specialist sub-contracting trades. The painting and decorating section is today probably one of the largest of its kind in the London area, and it has during the last year completed a number of important contracts on buildings of national and historic interest.

At the time of acquiring these companies we were aware that a period of convalescence, reconstruction and development would be necessary before certain unsatisfactory contracts were worked off and before reasonable profits could be expected, and the group is only now approaching this stage. It should also be added that the business of building and contracting is today hampered by far too many controls and restrictions, and is beset by many abnormal problems. Some of these are the difficulties of obtaining suitable labour, together with recurrent shortages and delays in delivery of materials, which upset the proper planning of work. These obstacles are likely to be accentuated as the rearmament programme develops, but are being tackled with energy.

ASSOCIATED COMPANIES

I now turn to our associated companies, and as you will observe from the balance sheet, there is an increase in this item over the figure for last year. This is due to the fact that we have acquired substantial holdings in two further companies, which we are of opinion will be interesting investments. The first of these is *Timothy Hird & Sons Limited*—a company engaged in wool-combing and the spinning of worsted yarn at Keighley, Yorkshire. The business is a very old-established one and occupies up-to-date premises equipped with modern machinery. Despite the present difficulties of this trade as a result of the phenomenal rise in the price of wool, there are no indications of any slackening in demand for the company's products. The company has a first-class connection with its customers, cemented over many years of friendship, and it faces the future with confidence.

The other new associated company is *Western Motor Holdings Limited*, whose subsidiary companies, mostly old-established concerns, are engaged in the motor retail trade and repair business, and they operate in the principal centres in the West of England. The business is to some extent

analogous to that of other of our interests and was well known to us in the days when your company was engaged in road transport. It should be capable of still further extension when motor vehicles are once again in freer supply.

OTHER INTERESTS

I will now review the affairs of the other associated companies.

British Steam Specialties Limited, of Leicester, manufacture and distribute a variety of bronze, iron and steel valves, and a wide range of pipe-line ancillary equipment. The past year's trading, though subject to fluctuations in both supply and demand, and to shortages and high prices of certain base metals, was quite satisfactory. The number of the company's customers continues to increase and there is no doubt that it is in a good position to meet any adverse conditions with which it may be faced.

E. R. Holloway Limited, I may remind you, is engaged in the production and sale of plastic powders and a variety of plastic mouldings by injection process. It has one of the most up-to-date injection moulding shops and is, we believe, the largest manufacturer of combs in the country. Although the year 1950 was also for this company one of wide fluctuations both in the demand for its products and in the supply of raw materials, it has had a successful year as a whole and during recent months has had some difficulty in meeting all the demands made upon it, despite increased productive capacity.

Westpool Investment Trust Limited. We have since the date of the balance sheet disposed of our interest in this company at a substantial profit over our book value. As I stated last year, it is our policy to realise our own quoted investments, mostly high class equities, as soon as we think fit and as suitable opportunities offer for the re-investment of the proceeds in industrial or commercial undertakings, and it was in pursuance of this policy that our holding in the Westpool Investment Trust Limited was sold.

NEW ACQUISITION

I have once again to report to you that since the date of the balance sheet we have made a new acquisition—this time by the purchase of a 60 per cent. interest in *Hobourn Aero Components Limited* of Strood, Kent. This company and its subsidiaries manufacture a wide range of engineering products, including textile machines, oil pumps, domestic radiators and many components in the light engineering field for the automobile, aircraft and agricultural industries. The company, established 29 years ago, enjoys a high reputation for precision engineering and there will be no change whatever in its management. It has associated companies in Australia, and New Zealand, in the early stages of development, and we believe the group has great potentialities.

Properties.—The income from our properties is slowly but steadily improving, and during the year we have disposed of some of our older and smaller freehold properties on satisfactory terms.

PRESENT POLICY AND FUTURE PROSPECTS

Last year you were informed of the lines along which your company was developing and of your board's thoughts for its future. Since then the process of re-investing your company's resources has continued and this has resulted in a substantial increase in income. Many new propositions have been examined, but only those reported above have demonstrated the high standards which we require. There are still large liquid funds, at present on deposit at short call, available for investment, to say nothing of our quoted

investments, and these we propose to employ, as already mentioned, by further direct participation in industry, and by developing our existing interests.

We still see for ourselves a positive and active future whereby our success will be measured by the correctness of our own judgment and of our own decisions. Our interests are varied and we believe well chosen. We know each company has skilled and efficient management, which is a vital factor, and on our part we lend all our weight wherever and whenever it may be required, either through our representatives on the various boards or by direct consultation. I am happy to note the growth of a family spirit amongst our companies, for this is surely a potent asset in any organisation.

ENCOURAGING PROGRESS

So far, so good. It will be clear that the transition from the old to the new Tillings is proceeding in accordance with the declared policy of your board. Our present activities are perforce more diversified than in the old days, and this early stage of your company's re-development necessarily calls for the exercise on the part of your directors of special care and discrimination. We look before we leap, but we endeavour not to allow our actions to be fettered by fear or negativens. We are encouraged by the progress which has already taken place and we hope that, given reasonable trading conditions, your company's interests will over the years yield an increasing income. Yet none of us can express with conviction any real confidence regarding the future, for there are too many hazards and imponderables facing industry at this moment over which it has no direct control. All we can do is to be alert and ready to grapple with difficulties should they arise, and, needless to say, your directors will do their best not only to surmount them, but to surmount them successfully.

May I here express my gratitude to my colleagues for their continued support and consideration, and especially Mr Falconer, our managing director. Ably assisted by Mr Matheson and a most capable staff at Crewe House, he has rendered valuable service. Our thanks are due to them, and to the boards, executives and all employees, men and women, of our subsidiary and associated companies for their work during the year.

UNITED KINGDOM PROVIDENT INSTITUTION

MR JOHN BENN'S SPEECH

The annual general meeting of the United Kingdom Provident Institution was held on April 18th in London. Mr John Benn, the chairman, who presided, said:

In moving the adoption of the report and accounts for the year ending December 31, 1950, the one hundred and tenth year in our history, I have pleasure in reporting still further progress to you. The net new sums assured of £6,680,766 were the highest in any year except 1947, and show an advance of more than £750,000 on the previous year's figure. The reversionary bonuses of 35s. per cent. on with-profit policies in the general section and 37s. per cent. on long-term policies in the temperance section show increases of 5s. per cent. on the previous triennial declarations. The gross interest rate of £5 6s. 6d. earned on the fund represents a rise of 2s. 1d. on the rate reported to you a year ago, while the fund itself is so conservatively valued that the assets of the Institution now stand in the balance sheet at more than 20 per cent. below their current market value.

Our subsidiary, the United Kingdom Fire and Accident Insurance Company Limited, presents another successful report. In its tenth year a record premium income has enabled the company to pay a dividend of 4 per cent. while further adding to reserves.

No one who takes a thoughtful view of the economic outlook can feel complacent. Yet it is still true that each individual who is shaping his own course wisely and well is helping the whole community; and I believe that this mutual Institution, which has a proud past and great present strength, may look to the future with continued confidence.

INNS AND COMPANY

MR W. WALLACE ON THE TUCKER COMMITTEE RECOMMENDATION

The sixteenth annual general meeting of Inns and Company Limited (Public Works Contractors, Asphaltes, Sand and Gravel Pit and Quarry Owners) was held on April 13th in London.

Mr Walter Wallace (Chairman and Joint Managing Director), in the course of his speech, said: The Company has had another successful year's trading. Every department shows satisfactory results, and the turnover, both as to volume and value, has substantially increased.

BURDEN OF ORDERS AND ILLOGICALITY OF PRESENT SYSTEM OF TAXATION

I spoke last year of the burden cast upon the company, and its officials, by the various Acts of Parliament, Departmental Orders, etc., under which the business has to be carried on. Shareholders might like to know that during the period covered by the accounts, in addition to the cost of complying with the numerous Government and Local Authorities' requirements, the Company's burden in respect of direct contributions to Central and Local Government bodies, amounted to the sum of £124,763.

Last year I was able to inform you that two of your directors had given evidence before the Tucker Committee on the Taxation of Trading Profits, on the subject of the unfair treatment of our industry by reason of the fact that we are not allowed to charge against our taxable profits, the decrease in the value of our land by reason of the depletion of minerals by the extraction of sand and gravel.

The following extract from the report appears to be the result of the evidence which was given by your Company:—

"An extreme example of the illogicality of the present system, and one which was brought to our notice specially in the written and oral representations made to us, is that of the company, a great part of whose business consists in extracting and selling sand and gravel.

"We cannot believe that the prohibition of any allowance, or relief, in respect of the wastage of the capital expenditure on the purchase of the land in such a case can be regarded as consistent with a proper ascertainment of the Company's business profits."

The Committee made the following recommendation:—

"It will be sufficient for us to record our view that the business profits of a concern of the kind in question cannot be properly computed without a proper allowance for depletion of minerals."

It is to be hoped that legislative effect will be given to this recommendation and thus relieve our industry from the very unfair provisions under which it has suffered for many years.

The report was adopted.

ARISTON GOLD MINES (1929), LIMITED

SATISFACTORY DEVELOPMENTS

The twenty-first annual general meeting of Ariston Gold Mines (1929), Limited, was held on April 19th in London. Major-General W. W. Richards, C.B., C.B.E., M.C., chairman of the company presiding.

The following is an extract from the statement of the chairman, which was circulated with the report and accounts for the year ended September 30, 1950:

Two hundred and ninety-three thousand tons of ore of an average grade of 7.564 dwts were milled during the year, against 267,500 tons of 7.401 dwts grade milled for 1949. In addition, 7,608 tons accumulated concentrates were retreated. One thousand and eight ounces of gold were produced from the special treatment of slags.

The total amount realised for the year was £1,286,506, against a total of £858,859 for 1949, an increase of £427,647. The ore reserves at September 30, 1950, were computed at 3,125,344 tons of an average value of 6.66 dwts, showing an increase of 50,606 tons and an increase in value of .03 dwt as compared with the preceding year's figures.

UNDERGROUND DEVELOPMENT

Very satisfactory developments are being disclosed at depth, not only in the North orebody, from which we can expect considerable further augmentation to our ore reserves at values higher than average ore reserves grade, but also on the main orebody on the 23rd level, on the No. 2 orebody 21st level, from which exploration in depth will be carried out, and also to the good values being disclosed on the west reef between the 9th and 22nd levels, from which it will be noted that at September 30th last 122,862 tons of ore of an average value of 8.88 dwts is included in the reserves.

I feel sure you will agree that the results disclosed in the accounts are extremely satisfactory, and represent a very great effort indeed. The profit for the year before taxation amounts to £495,705, against £246,375 profit for 1949. The provision for taxation, on the other hand, is increased from £97,000 to £246,163, which leaves a net profit of £249,542 for the year.

However, additional taxation allowances for capital expenditure have been obtained, and accordingly we receive the benefit of a credit in the appropriation account of an over-provision in respect of previous years' taxation and gold export duty of £44,881.

DIVIDENDS

Out of the available balance the board submit for your confirmation the declaration of a final dividend for the year of 4½d. per unit (15 per cent.), less income tax, making a total of 9d. per unit (30 per cent.), less income tax, against 6d. per unit (20 per cent.), less income tax for 1949. After charging the amount of £185,625 to cover these dividends, the amount remaining to be carried forward as at October 1, 1950, is £75,793.

The board feel that the very satisfactory progress during the current year warrants the declaration of an interim dividend of 2½d. per unit (7½ per cent.), less income tax, on account of the year ending September 30th next.

I am pleased to say that on the basis of the figures to date for the current year both of tonnage and revenue, we are showing consistent returns. For the five months October, 1950, to February, 1951, the tonnage milled is 135,650 tons, as against 119,500 tons for the corresponding period of the previous year, the mine revenue is £536,127, an increase over the corresponding period of the previous year of £47,141, and the mine working profit for the five months is £246,240.

The report was adopted.

THE MATADOR LAND AND CATTLE COMPANY, LIMITED

STATEMENT BY THE CHAIRMAN MR W. D. MACDOUGALL

The annual general meeting of the Matador Land and Cattle Company, Limited, was held within the board room of the Association of Jute Spinners and Manufacturers, 5, Cowgate, Dundee, on Monday, April 16, 1951, Mr W. D. Macdougall, chairman of the company, presiding.

The following is the statement made by the chairman on the report and accounts for the year ended December 31, 1950. This had been previously circulated.

The report for last year, which has been in your hands for the statutory period, is full and informative. The accounts show figures which are sufficient in themselves to commend them to your approval and adoption.

PROFIT AND LOSS ACCOUNT

The profit for the year is £404,059 against £243,695 last year, an increase of £160,364.

Last year I stated that we kept an open mind on the question of dividend limitation. We have paid a dividend and bonus which only takes 31 per cent. of our profits after taxation. It is, therefore, a modest distribution.

BALANCE SHEET

Turning to the balance sheet, the company is in a strong financial position. It will be seen from paragraph 9 of the annual report that the herd, land, improvements, and equipment have been restored to original cost, and the sums which had been written off these items in the past have been carried to the corresponding reserves. Even with the original costs now appearing in the balance sheet at December 31, 1950, these are far below present-day values in each case, so there is a substantial hidden reserve on these assets. Our net cash resources (after taxation) are on the £1,000,000 mark, and in these uncertain times, mainly political, it is desirable to conserve these resources. We have invested £287,000 mainly in short and medium term government securities, and in bank and insurance shares, investment trusts, and certain selected industrials.

On the liability side, the terminable debentures have been repaid. It looks for the future that our only liability (apart from taxation) will be the ranch monthly accounts and feed lot charges. We are therefore in a sound position to meet any contingency, and able to take advantage of any opportunities that come along.

Regarding the share capital, while the issued capital is £200,000, the shareholders' equity is shown at £1,822,000, making an exceptional showing.

INFLATION

In these days of paper money, when its purchasing value is going steadily down, there are two standards of real value. The first is gold, which is sought after everywhere, and which has held its value (that is, purchasing power) throughout the centuries. The second is first-class land and property. It is a truism to say that in time of crisis it is a sure foundation. I have often thought, on broad principles, that the nearer a man is to the soil the more important he is. At least he can always survive. That is where Matador is fortunate. We have two fundamentals—land and cattle. When these are in a com-

paratively young and growing country, which the United States still is, we are doubly fortunate. We hold the perfect hedge against inflation.

ALAMOSITAS RANCH OIL LEASE

With reference to prospecting for oil on the Alamositas Ranch, this will commence shortly, and we are in the hands of a first-class company, the Superior Oil Company of California. It is only a large corporation such as this which can have the resources to conduct tests on so large an acreage as Alamositas with its 396,000 acres. If oil or gas is discovered we get a royalty of ¼th of all production.

Our connection with Superior came about in a curious way. Mr Wright was travelling from San Antonio, Texas, to Phoenix, Arizona, when he met a gentleman on the train who turned out to be connected with oil production. The Alamositas Ranch was mentioned to him, when he became interested. He was put in touch with our general manager in Denver, Mr John Mackenzie, an agreement reached, and the lease signed. The property will now be thoroughly tested.

GENERAL

The general manager's report on the year is, as usual, full, informative and interesting. Broadly speaking, the herds, the ranches and equipment are in first-class condition. Recently we have made sales of cattle for future delivery at the highest prices in our history.

Mr Wright has paid many visits to the ranches, covering a long period of years. A statement on his recent visit will be found in the annual report.

We are glad to know that Mr John Mackenzie, Junr., assistant general manager, is to pay a visit to this country shortly. He hopes to be present at the annual general meeting.

We are fortunate in our management. In Mr John Mackenzie we have a manager of great experience and ability, who does not spare himself. His son, John Junr. is his assistant, and he is keeping close contact with the ranches. To our organisation at Matador under John Stevens and at Alamositas under Roland Howe, we are indebted. Mr Drought takes a keen interest in the company's affairs and with the visits of many years knows the properties intimately. To Mr Mackenzie and all his colleagues and assistants we tender our thanks and good wishes for the future.

The report and accounts were approved and adopted.

ORIENT STEAM NAVIGATION

MR I. C. GEDDES' REVIEW

The annual general meeting of Orient Steam Navigation Company, Limited, was held on April 17th, in London.

Mr I. C. Geddes said that the working profit was £1,321,231 as compared with £886,745 for the previous year, the accounts under review having benefited from a full year's trading of *Orcades* and the absence of any substantial debits for deferred repairs and reconditioning ships after war service. After providing for taxation, depreciation and the same dividends as last year, £50,000 had been applied to general reserve, £100,000 to writing down shares in subsidiary companies and £66,914 to increase the carry-forward.

Mr Geddes spoke of the steep rise in all expenses: running expenses were about two and three-quarter times what they were pre-war; building costs showed the same trend. The price of a new sister to *Orcades* and

Orcansay, which the company had very recently ordered from Messrs. Vickers-Armstrongs, Limited, showed a rise of about £1,000,000 on the figure which was now being paid for *Orcansay* just about to be delivered. These rapid and unpredictable increases were most disturbing. Freight rates had been raised and it remained to be seen whether passage rates could be indefinitely held at their present level which, for comparable cabins represented an increase of only 50 per cent. over prewar single fares.

With a wool clip this year yielding over £A600,000,000 Australia was very prosperous. With prosperity, prices rose and wages followed. Her need was to secure some measure of stability. She was suffering from a shortage of population and the policy of full employment had run riot, with the urge to work fast disappearing.

The chairman said ships were lying idle in Australian ports owing to a lack of berths and labour. The situation was serious and unless dealt with, the flow of imports Australia was capable of landing, would fail to provide for her needs.

Mr Geddes said that the ships would resume their pre-war calls at Naples.

The speech concluded with a warm message of appreciation to the staff ashore and afloat.

The report was adopted.

NATIONAL MORTGAGE AND AGENCY COMPANY OF NEW ZEALAND LIMITED

A SUCCESSFUL YEAR

The seventy-fifth annual general meeting of this company was held on April 17 in London, the Rt. Hon. Viscount Hampden, G.C.V.O., K.C.B., C.M.G. (the chairman), presiding.

The following is an extract from his circulated review:

The company has enjoyed yet another successful year and the profits earned have enabled your directors to pay a dividend of 7½ per cent., free of tax, on the capital as increased by the bonus issue.

The year 1950 was one of the most remarkable in the history of the wool trade. The first half of the 1949-50 selling season was remarkable for the effect on prices of the devaluation of sterling and other currencies, which led to an improvement in the level of world trade and a consequent increase in demand for all commodities, including wool. The outbreak of hostilities in Korea, coupled with the deterioration of the international scene, led to a vast increase in demand.

The opening of the current season in Australia at the end of August and in London and South Africa during September was sensational. The opening of the second half of the season in January was almost as sensational, and prices showed a further sharp advance. There does not seem to be any reason why the market should not maintain its present strength. Altogether, the company has had a very satisfactory year and the prospects continue good.

The report was adopted.

Orders and copy for the insertion of Company Meeting reports must reach this office not later than Wednesday of each week and should be addressed to:—

*The Reporting Manager,
The Economist,
22 Ryder Street, S.W.1*

present speed would disrupt the economy of the whole western world—led to a sweeping criticism not of this country but of the United States. Mr Bevan does not argue that because the United States is rearming, as he thinks, too fast, Britain should contract out of rearmament altogether. His criticism of the defence programme is that it attempts too much because it is inconsistent with the maintenance of the standard of living and the social services. This is a disagreeable economic discovery that others have made besides Mr Bevan. If the proposed £1,300 million is the wrong figure, what is right—£1,200 million or £1,100 million? Could even Mr Bevan argue for less, or was the vigour with which he championed the present programme in the House of Commons less than three months ago just another manoeuvre?

★

There are two things to be said about his attitude. First, Mr Bevan's criticism of the extent and speed of the British programme has no logical connection whatever with his criticism of the United States. If there were really any prospect that the consequences of American rearmament would be as disastrous for the whole Western world as Mr Bevan fears, then a reduction of 10 per cent in the British programme (a reduction that he appears to regard as physically inevitable) could not conceivably make the difference between effective defence and a disaster on the scale Mr Bevan threatens.

The second overwhelming criticism of Mr Bevan's present position is that nothing whatever has happened to make things worse since the present defence programme was launched, apparently with his full support, in January. It was always plain that rearmament would impose a heavy strain on supplies of raw materials. It was always apparent that, because stocks had been run down last year—largely as a result of the Government's own miscalculations—this country was particularly vulnerable to shortages. It was always certain that the production of many civilian goods would have to be cut. It was always probable that even if these cuts were made, the scale of armament production and the total of national production could be maintained only if Britain managed to import more raw materials than have been or are in prospect. This is the hazard on which Mr Bevan fastened with such characteristic extravagance when he talked of the western world outside America being "undermined" and plunged into "mass unemployment." It is alarming indeed that the Atlantic powers have so far failed to agree on ways of distributing raw materials to ensure that their defence effort as a whole is as effective as possible. But the failure is not final, nor is the fault exclusively American. So far British industry has faced some difficulty and dislocation, but to talk of its being "threatened by partial paralysis" is outrageous and irresponsible nonsense. No realist rules out the possibility that in the second half of this year shortages may prevent industry from doing everything to which it is committed for defence, exports and essential needs at home. But even Mr Harold Wilson admitted, in his slightly more restrained statement of Mr Bevan's economic case, that enough materials "may" be obtained. This week's news from the United States justifies a reasonable Micawberism—which Ministers have summoned to their rescue often enough in the

past—and there is no case whatever for modifying now a programme that Mr Bevan and Mr Wilson thought reasonable three months ago.

The motives for the rush to pessimism are all too plain. When new charges were being put on the country for the expansion of the social services, no one was more willing than Mr Bevan to strain the economy to its limits, to risk inflation, to decry caution, to put his faith in the expansion of production. What holds him back now is not a more realistic assessment of the expansive powers of the economy but a difference of enthusiasm about the objective. Even if the reasons for pessimism about production were much stronger than they are, the most definitive conclusion to which they could lead would be that some of this year's £1,300 million for defence might not be spent until next year. Yet Mr Bevan is prepared solemnly to declare that the £4,700 million programme for the next three years "is already dead." This assertion has no meaning, unless it is an expression of Mr Bevan's wishes.

The essence of Mr Bevan's position is not that he objects to tanks but that he rates them lower than dentures. There is no point of high principle involved in the new charges for teeth and spectacles. Some parts of the health service have always been subject to charges. But Mr Bevan is determined that rearmament should not stop the development of the social services. Rearmament is acceptable if it can be added to the state's existing obligations and met by squeezing the rich. It is unacceptable when it can be achieved only at some real sacrifice of the general standard of living. His former colleagues have at least learned to recognise that an effective rearmament programme puts a limit to the liabilities of the welfare state. This is evident enough this year, when it is possible to hope that the demands of rearmament can be met by little more than a halt to the advancing standard of living. Next year, it will be difficult realistically to argue—in or out of office—that a cut is avoidable. Mr Bevan and Mr Attlee will then stand very far apart. Intellectually the division is not new: the unexpected thing is that Mr Bevan has chosen to expose it publicly while Labour is still in office.

★

There can be little doubt where this may lead Mr Bevan. His limited criticism of rearmament cannot possibly be sustained. Either it must gradually be withdrawn, which from Mr Bevan is most unlikely, or it must be developed into an unlimited attack; he will be tempted to pass on, that is to say, from criticising the practicability of the present rearmament programme to rejecting the need for any great increase in armaments at all—and rejecting, therefore, the foreign policy that rearmament is designed to support. This is the card still in Mr Bevan's hand. There is no reason to doubt the sincerity of his opposition to Soviet Communism. But there is also no reason to doubt the strength of his anti-Americanism. On Monday he declared that the evils of the Budget arose "because we have allowed ourselves to be dragged too far behind the wheels of American diplomacy." He said that if American rearmament continued at the present pace "more harm will be done by this unrestrained behaviour than by the behaviour of the nation the arms are designed to restrain." The grounds for a British doctrine of the "third force" in foreign affairs could hardly have been more openly suggested.

If Mr Bevan conjures with these ideas, he will certainly get very little response in the country as a whole. If he widens his attack while the Government remains in office Mr Attlee and Mr Morrison are surely bound to demand his dismissal from the Labour party, and there is little doubt that at this stage a large majority would support them. Mr Bevan would then have incurred all the odium of completely splitting the party at a time when its ability to retain power had not been put to the final test of an election. His more likely course is to try to restrain himself for a time. There is no doubt, even so, that he has become a grave liability to the Labour party. Labour without Bevan might damp the enthusiasms of some constituency organisations, but Labour with Bevan will cut a sorry figure before the electorate as a whole.

Mr Bevan appears to believe that while he had lost

Fighting for a Draw

THE Communist High Command in Korea decided last Monday that the psychological moment had come for resuming serious fighting, and took the offensive. So once again the conciliatory gestures of a British Foreign Secretary are spurned by Peking, and the frail hopes of stopping the fighting are lost in the grim clamour of guns and bombs and tanks inflicting fearful slaughter. The dismissal of General MacArthur is interpreted by the enemy as clear evidence not of America's limited and just objectives but of President Truman's displeasure with his generals' "failure" to crush the "armies of liberation." Those who talk peace in Washington and London—unless they are "partisans of peace"—are treated as hypocrites, and Chinese and North Koreans appear to pin their faith to the forecast made two months ago by Stalin:

If Britain and the USA finally reject the peace proposals of the People's Government of China, the war in Korea can end only in the defeat of the interventionists.

These are grave facts, which demand a sharp readjustment of many opinions held in this country about the Korean war.

Although General MacArthur has departed, the fighting goes on; the dismissal of the United Nations Commander-in-Chief has not removed what many liked to believe was the main obstacle to peace. Instead, it now seems likely that the spring offensive will show the Russians and the Chinese intervening more weightily than ever before, even challenging the supremacy of the United Nations forces at sea and in the air with aircraft that only Moscow can supply. If so, then President Truman's wise and brave refusal to take the initiative in extending the zone of hostilities is to be treated by the Communists as the opportunity for taking greater risks. How great the next few weeks may show.

The new UN commander in the field, General Van Fleet, has said he is confident that his forces can deal with the new offensive; and it may be that no acute military crisis is to be expected. Yet that is merely another way of saying that this is a war to which no end is in sight, a struggle of attrition which, just because its conditions preclude a knock-out blow, has become a searching test of endurance and morale, both civil and military. The Americans, faced with a casualty list of over 60,000—as great as that for the first month of the

influence in office he will regain it when the Labour party is in opposition. Since he will then be able to play on all the natural discontents that the harsh necessities of effective rearmament must create, this may well be correct. In that case, the Labour party will have seriously to consider whether it can allow itself to be used for such ambitions and for political objectives that are certainly not its own. There is a deeper question. If the Labour party were to lose Mr Bevan, and the vague left-wing fire that goes with him, what would remain? Would its present leaders be able to re-create a moderate policy, fitting their old ideals to the needs of a harsh new world, that would appeal to their followers? If they cannot do so, Mr Bevan may yet succeed in filling a political vacuum. But at least the past three weeks have made it plain beyond doubt that such a man could never triumph on any other terms.

Normandy battle—have never regarded Korea as a sideshow; they have felt for some time that their allies should realise that this has become, and may well remain, the fighting front of the cold war, the test case against Communist aggression. Not only Asia, but the whole world will judge from the issue what are the material, and still more the moral, capacities of the contestants. As the contest is resumed, it is the moment to concentrate attention on the facts that face soldiers and statesmen as the third round begins in Korea—and in the United States.

By dismissing General MacArthur from his command President Truman has staked everything on not losing the war: that is to say, on proving that aggression has been repelled, not bought off. The General's case was that the war can be won only by a "Hit China" policy. The President's answer is not that it would be better to be defeated than to carry the war into China, but that it can and must be won by fighting on the Korean peninsula. Each side in this American controversy has nailed its colours to the mast; both agree that the United Nations must win but they disagree over the means to be used. If, therefore, the campaign were to end in defeat or to fade out into what is called an "Eastern Munich," then many would claim that General MacArthur has been proved right. The political consequences of such a verdict would be far-reaching. What is more important, if failure in Korea could be represented as the result of America's allies dragging their feet then the consequences would be felt in Europe, and especially in this country. It is no use protesting that these are not the arguments of fair-minded people; for it is not the fair-minded people who conduct such a controversy.

These facts about opinion in the United States (more fully discussed in "American Survey" this week) are data as important for British policy in Korea as the mood or dispositions of the Chinese, and should be treated as such by all opinion in this country that recognises the importance for peace of the Anglo-American partnership. It should not be forgotten how, only four months ago, when the UN forces were in full retreat, many Americans were ready to attack China rather than lose the war; whereas many British were ready to lose the war in Korea rather than attack China. This divergence between national moods never came to the point of

crisis because of the rally and renewed advance achieved by General Ridgway; but it is this divergence that may reappear at any time to bedevil the alliance.

It is salutary to look for a moment at the picture as it is presented in the Communist camp. There are expressed day after day a fanatical belief in the superior morale of the revolutionary peasant masses, and a determination to prove that in the long run this will triumph over the mechanised forces of the western world. That the Korean war has already lasted ten months must seem a fact of little importance to men who fought a civil war for over twenty years, even though the strain of the campaign on the resources of China and of the Soviet Far Eastern command must be heavy. That the western governments, whose men are fighting in Korea, from time to time openly disagree; that the United Nations takes weeks to agree even on a simple definition of aims; that public opinion in the United States and Britain is constantly forcing statesmen into reassuring statements about the limits they will set to their strategy—all this must appear in Moscow and Peking as a sure sign of failing stamina, of lack of political support for the fighting men. Stalin said as much when he declared in February that American and British officers and men were in no way inferior to their opponents save in one respect: that they did not know or believe in the cause for which they were fighting. In short, the lesson of the last six months is that "approaches to Peking," programmes for negotiation, talk of conciliating the aggressor are treated by the Communists as signs of weakness, especially when the tide of battle is not moving against them.

To acknowledge this is not to throw aside all hopes of

negotiation and a political settlement; nor does it mean accepting the leap-in-the-dark strategy recommended by General MacArthur; nor does it lead to the view—as some Americans suggest—that the United Nations' aims in Korea cannot be achieved by limited war. So many factors in the Communist camp—and in the American and British situations—are unpredictable that the ultimate outcome is not to be discovered at the end of a long chain of strictly logical reasoning. What recognition of these facts does mean is that the United Nations, having decided on a simple statement of aims and minimum terms, should firmly declare that these will be fought for in Korea just as long as the Chinese choose to make the battle last. If there is to be a struggle of attrition—and that it what cold war means—policy has to be backed by patience and resolution.

What the statement of policy should be emerges fairly clearly from the debates of the last months at Lake Success. First, it should be stated that the United Nations will agree at any time to a cease-fire on the basis of existing military positions on or near the 38th parallel. Secondly, they should declare their readiness to negotiate an international settlement of the Korean question without any details being laid down in advance. Thirdly, they should make it clear that there will be no offers of negotiation or peace terms so long as fighting continues, nor will major political demands be accepted as conditions of a truce. It will be said that such a limited statement is valueless because it leaves out all the essential questions: what is to be done about Formosa; how to recognise the Chinese People's Government and its claim to a seat in Uno; who is to keep order in Korea. In fact its strength would lie in these very omissions; for it cannot be repeated often enough, to Chinese and British

alike, that the answer that can be eventually given to these questions depends on the way and the time that the war ends. A solution that was acceptable six months ago is impossible now; a compromise that looks unacceptable now may be possible when the MacArthur affair has faded away. To expect a nation losing men as the Americans are losing them to accept now any proposal that would give Formosa to the Communists is unrealistic; to ask Uno now to promise a seat to a government which has flouted its authority and the principles of its charter is neither realistic nor dignified; to foresee how Korea can be united and pacified until the possibilities of Chinese co-operation are known is next to impossible. Of course, if the whole problem is to be treated realistically it is also necessary to point to the vital strategic interest of Russia and China in Korea and Formosa, to the face that must be saved by Asian Communism, to the revolutionary mood of Mao Tse-tung

Whose Mediterranean?

NO war with Russia could be won without the Western Powers controlling the Mediterranean. The discussions now going on about command in that area and the relationship of that command to the North Atlantic Treaty Organisation (Nato) are therefore of very great importance. They are also very complex. As the Minister of Defence, Mr Shinwell, stated in last week's debate in the House of Commons, these discussions have been taking place simultaneously with those which have led to the appointment of a Supreme Commander in the North Atlantic. Conflicting political as well as military interests, however, have delayed agreement over the Mediterranean, and whatever solution is finally reached, it will cause nearly as much grievance as satisfaction.

The leading questions to which answers must be found are three. Since the western Mediterranean constitutes the southern flank of the North Atlantic treaty powers operating in western Europe, should this fact dominate the dispositions made—to what extent, that is, should the whole Mediterranean area come under Nato? Following a decision on this question, what should then be the structure of the Mediterranean command itself? And which countries should be included in or associated with it? There is also great argument whether a supreme commander should be British or American; but this is really a secondary problem in spite of its political prominence at the moment.

Seven countries are vitally interested in the answers to these questions and each has a special point of view—Britain and the United States, France, Italy and Yugoslavia, Greece and Turkey. For Britain, the Mediterranean is the vital route to the Middle East, to British interests in southern Asia, and to the distant members of the Commonwealth in the Pacific—Australia and New Zealand; the way through the Mediterranean is also the shortest route for supplies of sterling oil to western Europe. This area is therefore one strategic unit and in the past has been defended under a single, and British, command. To the Americans, the emphasis on the problem is different. In the west, the Mediterranean is essentially General Eisenhower's right flank; in the east, it is primarily the approach road to Greece and Turkey, advanced bastions of American interest. The

and his men. But realism begins at home and the Chinese will see to it that their interests are not forgotten.

If the spring offensive develops, it would be wise to assume that the Chinese stake great hopes on it and would like to see the UN forces back in the Pusan bridgehead before the anniversary of the campaign's beginning. The United Nations on the other hand can and should hope for no more than successful defence and another stalemate in the field; for it is out of such a stalemate, during the lull of exhaustion, that Communist readiness to agree on a cease-fire is most likely to come. The whole difference between the two sides may be summed up in one sentence: to the Communists victory means the total defeat of the United Nations, but to the United Nations victory means a draw. And it is for a draw that they must now fight, with stubborn confidence and patience. There can be no sterner test either of statesmanship or of military morale.

whole sea is an important arm of the vast strategic network of American bombing bases, including aircraft carriers. And in the Bosphorus lies one of the two Russian outlets to European waters.

The French are primarily concerned with communications from north to south across the western Mediterranean to Algeria and Morocco, since North Africa is vital to France as a military base. They also want to retain an interest in the defence of the eastern Mediterranean. Plans for the area are being discussed by Nato's Standing Group of three representatives from the Chiefs of Staff; in this France is represented by one of its rising soldiers, Lieutenant General Paul Ely, and recently Admiral Lemonnier has been appointed as General Eisenhower's Naval Deputy. But so vehemently has Paris felt, and not without justification, that it is being left out of policy-making decisions in the Mediterranean that M. Plevin, as Vice-Premier, has lately protested officially to Washington and London. Likewise, Italy's outstanding interest as a Nato power is to see the Mediterranean made safe for its allies and so for itself; to this end, Rome, like Paris, tends to favour an American commander. Marshal Tito in Yugoslavia depends on allied control of the Mediterranean for the arms and support from the West which are increasingly necessary to his defiance of the Cominform Goliath; he does not, however, mean to enter any western alliance, either in the Mediterranean or in Western Europe.

These attitudes have all helped to slow up the creation of the Mediterranean command. But Greece and Turkey present the western planners with their most serious trouble; for the strongly expressed desire of these two countries to join Nato raises in acute practical terms some of the most fundamental issues facing the West. Turkey—whether regarded as a European or a Middle Eastern country—is at present one of the leading military powers of the continent, deeply resolute, in a key strategic situation, already bound by treaty to receive British and French assistance if attacked, and backed by the clear, if unspecific, commitment of American support. Greece is in a similar position in relation to Britain and America, though not

GOOD LEATHER AND TRADITIONAL CRAFTSMANSHIP

to France. And the Greeks as a people have a long and proud record of courage, endurance and loyalty in resisting aggression; with American and British help they alone have successfully met and beaten militant Communism since the war, both within and at their frontiers. The military problem facing these two countries is severe. Although associated with the leading powers of Nato, they can at present take no formal part in its wider general planning. If they are not eventually to join Nato, they want firmer American guarantees of security and need to open bilateral staff talks between themselves, as well as to exchange basic military information with Marshal Tito—if he will do so.

These, then, are some of the leading facts. They raise at least three major issues for the Western Powers: the defence organisation that can be created for the whole free world in circumstances short of open war; the real function of Nato; and the most practical limits for a regional organisation based on western Europe. For world defence the ideal would be for all anti-Communist powers to band together to resist Soviet imperialism jointly everywhere; but in practice this is quite impossible at the present stage. Even in a specific region such as Western Europe or the Western Pacific or the Persian Gulf, political rivalries, vacillating governments and inequalities of military power make an effective local defence organisation extremely difficult to arrange. Nato is so far the only one of its kind, and it still has many limitations. Outside Nato, strategic and tactical planning for defence must remain, at any rate for the time being, primarily a responsibility of the main real force in the western world, the Anglo-American alliance.

Nato is concerned with the most crucial battlefield of all—Europe. If western Europe were once lost to Communist invaders, it might be recaptured, but the democratic and cultural heritage that has survived two great wars could never be brought to life again after a third war. Nato's function is therefore political as well as military. Its primary aim is as much to deter and if possible to prevent war, as to provide the best possible means of fighting the war should it come. In the present stage of the struggle it is more important that Nato should receive the willing political support and technical co-operation of its members in carrying out its task, and less important to achieve military perfection. Naturally, the work of building an effective defensive machine must be as efficient as possible. But, for the present, one that runs smoothly is better than a racing model which might be always stopping. This is why it should be Nato's chief aim to produce quickly a compact and politically accept-

able organisation of existing forces. General Eisenhower's last command SHAEF was set up at the height of a war; his new command SHAPE is being set up to meet quite different requirements.

If these principles are applied to the problem of associating the Mediterranean with the western European and North Atlantic area, a good case can be made out for extending Nato to cover the western Mediterranean but not the eastern. In itself, this tends to strengthen the American argument that the Mediterranean should be administered by two commands and not a single one. Once attempts are made to extend the area covered by Nato, whether on political or strategic grounds, it is very difficult to see where a line could properly be drawn short of Singapore. Nato is quite unsuitable as a world organisation; but it should logically include all the immediately adjacent land and sea areas in which the continental Nato powers are vitally interested. The French long ago insisted on including Algeria for this reason. A line drawn on this basis would come down the centre of the Adriatic and then south across the Mediterranean.

To turn now to the secondary issue: in the House of Commons last week Mr Churchill argued in favour of an American commander in the Mediterranean, that this officer would have under him a powerful American carrier fleet and would control the great American air bases to be built in France and French North

Africa. If this command were closely associated with General Eisenhower's and limited to the western Mediterranean, Mr Churchill's argument would probably come nearest to satisfying most people, provided that a satisfactory political counterbalance were arranged in the defence structure of the eastern Mediterranean. There, if the British are to remain the most prominent power in the Middle East—for all the reasons which have led to their playing that role over the past thirty years—they should also continue to have the main say in the defence arrangements. The eastern Mediterranean and the Middle East are complementary.

Lastly, there is the problem of Greece and Turkey. Since they feel so strongly about more specific American guarantees, they should be given them. Like the security of Australia and New Zealand, that of Greece and Turkey has become a vital American interest, proclaimed by President Truman in 1947. But to the people on the spot this is by no means the same thing as having a firm formal pledge around which confidence can be built. While Greece and Turkey are not, therefore, suitable candidates for Nato, no satisfactory settlement of the now acute Mediterranean problem is likely to be reached

without reviving and implementing the suggestions current over a year ago for a Mediterranean Pact. Only by this functional and regional approach can the anti-Communist powers build up an adequate system of

world security strong enough to resist the threats and pressures to which, even without open war, the Communist powers may now continue to subject them for several years to come.

Charity and the Hospitals

(By a Correspondent)

TO the lawyer, "charity" is a technical term. In the courts, charitable purpose is divorced from charitable motive. The classes of charities that the courts recognise (and so endow with the power to hold property in perpetuity) have a basis in a statute passed in Queen Elizabeth's reign and since overlain with hundreds of judicial decisions. But a gift to a hospital has always been recognised as a charitable gift. Nearly two years ago, when the National Health Service Act of 1946 came into operation, a quite novel complication was thrust into the picture and the courts, with the instinctive reaction of an oyster, at once set to work to make the best of the intrusion. Is the result anything like a pearl?

The National Health Service Act came into operation on July 5, 1948. Twelve days before Mrs M. A. Kellner had died, and by her will she had given one-eighth of the residue of her estate to the Cancer Research Institute and another eighth to the Royal Cancer Hospital, both of which at her death were independent institutions existing under the hospital's Royal Charter, granted in 1910. The Act transferred hospitals and all their property, except endowments, to the Minister of Health; it provided for the ultimate dissolution of all the governing bodies, both incorporated and unincorporated, that owned and managed them; it placed each teaching hospital under the control of a separate board of governors and grouped the non-teaching hospitals under regional hospital boards, with hospital management committees under them. The teaching hospitals retained their existing endowments. The endowments of the others were transferred to a single Hospital Endowments Fund; the hospitals were left with the promise that not less than £20 million from the pooled endowments (they totalled nearly £27 million, mostly in trustee securities) would in the end be shared, according to the number of beds in each hospital, among all the non-teaching hospitals brought under the scheme. The Act left two questions largely unanswered. One was particular: what would happen to gifts accruing under existing wills, such as that of Mrs Kellner? The other was general: what should the future relation be between the charitable impulse and the nationalised hospital?

The destination of Mrs Kellner's gifts occupied first the Chancery Court and later the Court of Appeal and, since the case was the first under the Act, it provided battle over the widest field. The Ministry was bent on establishing that the net created by the National Health Service Act would catch each and every fish. The next of kin were equally determined to show that a charitable impulse towards a voluntary hospital was one thing; the case of a nationalised hospital was something quite different and the claims of the next of kin should prevail. So the Attorney-General argued, first, that the gifts were already part of the endowment of

the hospital on July 5, 1948; alternatively, that they were a "right" which passed to the Minister with the hospital itself; alternatively, that they were covered by a section of the Act dealing with existing trusts; and that, in any case, the courts had no jurisdiction because the Act provided that all disputes should be settled by arbitration.

Mr Justice Harman, in the Chancery Court, was not persuaded by any of these arguments. He took the view that the charities named by the testator had ceased to exist after her death but that, since the will intended the money to be used for a particular charitable purpose, the court should see that a suitable scheme for it was drawn up. He held against the claims of the next of kin. There was an appeal, and the Court of Appeal held that the gifts did not lapse, since the Act had not revoked the Royal Charter under which the Royal Cancer Hospital existed as a body; in consequence the gifts passed, via this incorporated body, to the new Board of Governors of the hospital. So the courts did, in the end, out of the tangle of Act and argument, direct the trustee of Mrs Kellner's will to carry into effect the obvious intention present in her mind when she made her will. Her gifts reached the governing body of the Royal Cancer Hospital and became available, under the provisions of the Act itself, for the services of the hospital and for research as this particular Board of Governors might think fit.

Later came a case of a gift to a non-teaching hospital. A Miss Morgan, by a will made in 1944, gave the residue of her estate in trust for the benefit of Liskeard Cottage Hospital. She died in September, 1948, without altering her will to conform to the changes made by the Act. Again, the next of kin claimed that the Liskeard Cottage Hospital no longer existed, for the hospital at Liskeard had become one of a group of hospitals under the management of the Plymouth, South Devon and East Cornwall Hospital Management Committee. The court held that the gift was a gift to a particular hospital, whatever its name, and that, if the hospital existed and still carried on its work, the gift should go to the management committee responsible. Another point of importance in the case was that the Ministry, and the committee, conceded that the gift should be used for this particular hospital, not for all the hospitals within the new group. This policy was followed in a later case where the legacy was to a named infirmary and dispensary in South Shields.

No one, of course, can know how many wills were altered and bequests to hospitals revoked after the Act of 1946 first appeared on the parliamentary scene; but, at least in two reported cases, apprehensive testators who attempted to guard against the eventuality of nationalisation met with little success. One prepared his own petard, in the shape of what read like a home-

made will. He included in one document a provision that a legacy to his local hospital, at Fleet in Hampshire, should be payable only if the hospital were operating on a voluntary basis. He then proceeded to leave the residue of his estate to that hospital without adding a corresponding provision, with the result that the new hospital management committee received the whole of residue of the estate, plus the legacy itself.

The other case arose under the will of Lady Bland-Sutton, the widow of a well-known surgeon. She, by a will made in 1943, left a considerable endowment fund for the Bland-Sutton Institute of Pathology at the Middlesex Hospital, but directed that, if the institute ceased to be carried on or should "the Middlesex Hospital become nationalised or by any means pass into public ownership," the fund should be held as an endowment fund for the Royal College of Surgeons. She died in February, 1943, and all went well until the 1946 Act came into force; then the trustees of the will thought it prudent to seek a ruling from the court. The trial judge held, first, that the Royal College of Surgeons was a charity and could therefore take the gift if the institute lost the right to it; but that, since the Middlesex Hospital had not been nationalised or passed into public ownership, the question of transfer to the college did not arise. The Court of Appeal took an almost diametrically opposite view of the law but managed to produce the same net result. It held that the Middlesex Hospital had been nationalised but that the gift could not pass to the Royal College of Surgeons since the college, being a professional association as well as a teaching body, was not a charity under the legal definition of charities. But it further held that the Bland-Sutton Institute still remained free from national ownership and control, so, since the gift could not pass to the college, the institute took it absolutely. There is nothing to be gained by speculating how far this judgment corresponds with the views Lady Bland-Sutton would have held, had she survived to read the National Health Service Act and its provisions.

In short, the courts, over these two years, have, with their customary common sense, contrived to interpret the Act of 1946 so that its effect on existing wills has not been too alien to the obvious intentions of the testator. Money left to a particular hospital in its pre-nationalisation name and state does now come into the hands of the body responsible for managing that hospital and on terms that confine the direct benefit to that hospital. But the courts have not seriously tackled the question of whether a nationalised hospital is still a legal "charity," and this question has an increasing importance. True, the courts have given an answer to the question. The argument that a nationalised hospital has ceased to be a charity was raised in one case and mentioned in the judgment, but it was dismissed summarily. The court held that the argument was inconsistent with other decisions (in which, however, the point had not been argued) and that in any case the 1946 Act implied that boards of governors and management committees were charitable bodies. That answer is not really satisfying. A hospital today is no more a "charity" than is a branch of the National Insurance Ministry—or, indeed, of the Post Office. Although the work of the hospital remains very much the same, the element of charity has gone. The hospital is no longer an instrument through which an individual's charitable

impulse finds expression; it is a governmental institution discharging a duty accepted by the state. The distinction is one which the late Lord Haldane would have argued with zest before the House of Lords—and it has yet to be argued before the House of Lords. Yet, if the hospital itself is no longer a charity, charitable services and functions can be, and are, grouped around the hospital. Just as the courts held, in 1892, that a gift to the National Rifle Association "to prevent as far as possible a catastrophe similar to that on Majuba Hill" was a good charitable gift (although no one would suggest that a gift to the War Office itself could be charitable, in the legal sense), so the courts, last year, held that a gift to St. Mary's Hospital, Paddington, to provide accommodation for the relatives of the critically ill and to assist the work of the almoners was a good charitable bequest.

The process of assembling, tidying up and allocating the pooled endowments of the non-teaching hospitals has been proceeding, and the last report of the Auditor-General on the fund showed that the first income payment made (for a nine-month period) was some 30s. per bed. It is possible that at some future time the distribution of part of the capital itself will be made, though so far the Minister has refused requests that such transfers of capital should take place. If later they are allowed, the original inconsistency in the approach of the Act to this question of endowments will become more noticeable. What should be the purpose of the non-teaching hospitals' endowments? The Act pooled all existing endowments and so produced an uninspiring egalitarian monotony. At the same time, the Act allows individual committees to receive individual gifts and the Minister of Health, perhaps under pressure from the courts, yet none the less effectively, has agreed that even a particular hospital within a group may have its own earmarked endowment fund. Once again, some hospitals will tend to become richer than others. It is in this situation that the question of whether a hospital is still, in itself, a legal charity or not becomes of practical importance.

There are two possible views on the future use of the endowments of the non-teaching hospitals. While each hospital has an equivalent endowment fund, fixed for each on the basis of the number of its beds, no more and no less, the almost irresistible temptation will be to spend the endowment income on the same basis, so much per bed per year, and, on the present figure, that will just about provide a fresh bunch of flowers each fortnight. And that will be making the hospital itself the charity supported from the endowment fund. But, if the hospital is not a charity, if it is not possible to spend the endowment income on this kind of service, then the endowment funds, both existing and future, may again become a powerful impulse towards the finding of fresh charitable objects connected with the hospital and so towards an extension of the services of the hospital. Those with egalitarian minds may object. Why should the patients at Liskeard, or Fleet, or South Shields, have some service not available to everyone, they may say? If they do, they will ignore two facts. One is that progress in hospital science, and in medical skill, did not come from a dead level of opportunity but is a product of apparent inequality. The other is that charity is not only a matter for the recipient. A country can only lose if a source of charitable expression is blocked. It can only gain if the link between the charitable impulse and all the yet unexplored opportunities around a hospital is restored.

NOTES OF THE WEEK

Mr Bevan Goes

The crisis at Westminster lasted for less than three days. Mr Bevan's resignation was known on Monday morning. By Wednesday evening it seemed no more likely than it had been last week that the Government would fall or retire before mid-summer—before the Finance Bill is passed, the promised increase in the meat ration is near, and the Labour party organisation in the constituencies has been put into better shape for an election campaign. Mr Bevan was followed only by Mr Harold Wilson from the Board of Trade and Mr John Freeman from his junior post at the Ministry of Supply. The gaps have been temporarily filled with little trouble. Mr Robens is expected to make an adequate Minister of Labour and Sir Hartley Shawcross can probably handle the countless activities of the Board of Trade at least as well as Mr Wilson did. It seems unlikely, however, that these appointments alone complete the main reconstruction of Mr Attlee's Government: the office of Lord Privy Seal was left vacant by Mr Bevan's death, and it is now politically important to make some special arrangements to deal with raw material supplies.

But on Monday and Tuesday the Parliamentary Labour Party looked into the abyss. The reverberations of Mr Bevan's many quarrels in the Cabinet had echoed frequently enough through the lobbies in the past, for no Government has ever managed to advertise its internal differences so well. "Open disagreements openly arrived at" is a popular Tory description of Labour policy-making. But few members had believed that Mr Bevan would resign now. It was with curiosity, as well as elation on the Tory benches and deep anxiety on the Labour side, that the House of Commons assembled on Monday afternoon to hear the ex-Minister of Labour make his resignation speech.

Mr Bevan has always believed that it pays to shock, and he shocked the House with a speech which was anything but the restrained explanation customary on such occasions. He developed his case in the violent style that he at times resurrects from his street meeting days—his fists and arms flailing as if he were literally pounding his opponents, his voice thundering, his eyes blazing. This can be highly effective at a party meeting, but it is highly inappropriate from the third bench below the gangway in a crowded Commons Chamber.

Churchill or Mosley?

Mr Bevan's speech failed as a parliamentary performance, and it also failed as an effort to move opinion among Labour members. Its manner contributed greatly to the ease with which the Parliamentary party and Labour's national executive have digested the revolt. At the party meeting on Tuesday, Mr Bevan not only met with a detailed reply from Mr Gaitskell and with the lash of Mr Ede's tongue, both of which he had expected, but with something he had not expected—the hostility verging on hatred of many of the older party members. His support in the House so far comes almost exclusively from the Left-wing "intellectuals." His only backers at the meeting of the executive on Wednesday were Mr Mikardo, Mr Driberg and Mrs Castle.

Mr Harold Wilson, who learned from Mr Bevan's mistake and made a reasoned and calm statement to the Commons on Tuesday, has widened the sympathy, if not the support, for the rebels' views about raw materials and the level of rearmament—though his denunciation of American stockpiling was weakened by the announcement, a day later, of Britain's

increased sulphur allocation for the current quarter. On the broad issue Mr Bevan can expect constant support from only about fifteen members. He will gain added support—extending in some cases to the left centre of the party—on specific issues such as the health service charges. But as an opposition group inside the Parliamentary party, the position of Mr Bevan's followers is both circumscribed and vulnerable. They have pledged themselves not to vote against the Government, a step which would in any case bring down on them the blackest opprobrium for forcing Labour's downfall. They will have to cope not only with the resistance but with the deep resentment of their own front bench and of the majority of their fellow back-benchers. For this reason, they will clearly make their main effort in the country. There, if not in Parliament, Mr Bevan is going into open opposition to Government policy, and he is likely to work hard to win over constituency support before the party conference in October. He will have to step with some care, for every word he utters will be scrutinised carefully by Transport House.

But despite the speed with which the other party leaders have closed the bulkheads against the damage caused by Mr Bevan, the fact is inescapable that this is a very dangerous split in the party leadership. It is not surprising that the ghosts of 1931, which the Labour party has made such efforts to lay, have once again been stalking the corridors of Westminster. Indeed, the irony of history decreed that Tuesday's party meeting was held in the same Scottish Grand Committee Room in which the party met during the 1931 crisis. The Government's main tactic has therefore naturally been to appeal to that deeply-felt sense of loyalty which was then created. But it would be wrong to carry the analogy far. This is not in fact like 1931. It is a break-away not by the Right but by the Left. It is to be compared more with Mr Churchill's move into the wilderness, as a prelude to power, or Sir Oswald Mosley's move into the wilderness as a prelude to extremism and then obscurity. Which of these two parts fits Mr Bevan's character better is plain to almost everyone except himself.

Red Army and Trojan Horses

What is sauce for Mr Strachey is, it seems, not sauce for Mr Shinwell. The Secretary for War told the House of Commons in March that the Russians had 175 divisions, the figure used by other Ministers before and since. Last week-end the Minister of Defence pushed the figure up to 200 divisions. One wonders why. There has been no evidence of Russian mobilisation in the last three months that would account for an increase of 25 divisions; and no inflation of the original estimate was needed to justify the rearmament programme—at any rate the British part of it.

Ministers should be scrupulously moderate and frank in the picture that they paint of the dangers to be met in the foreign field. Nothing is gained by exaggeration. There are many thousands of officers and men in this country, both serving and in civilian life, who know one or two simple facts about the Red Army: that the number of men per division is half that in a British or American division; that there is a sharp difference of quality and mobility between the armoured divisions, the mechanised infantry and the footlogging riflemen; that there is a shortage of trained technicians and NCOs to train conscripts, and that the frontiers of the Soviet Union are vastly long. If these things were not so, then Mr Shinwell and his fellow defence Ministers in Nato would be exposing

General Eisenhower and his modest army to the gravest risks by not immediately increasing its numbers.

At the other extreme is Mr Bevan, who argues that the totalitarian enemy always uses "social and economic" weapons first, and then military, and so tries to undermine Mr Shinwell's case for a considerable military effort. Mr Bevan is, in fact, mistaken. The Soviet Government has succeeded in imposing its grip and creating a satellite government only in those countries where it could threaten military intervention without fear of retaliation. And the purpose of the Trojan Horses of which he has spoken is to open the gate to the armies following up behind.

Basically, therefore, Mr Shinwell is right and his former colleague is wrong. The Soviet Army and Air Force have an unacceptable preponderance of numbers; and it is this preponderance that has enabled the Communist Party, until lately, to frighten millions of Europeans who have no use for its politics. Social stability and progress depend—in Europe and outside—as much on overcoming that fear as on maintaining standards of living and employment. The vigour with which Communist propaganda asserts the opposite is only one of the proofs that this is so.

Soviet Five-Year Plan Results

The final balance sheet of Soviet economic development during the fourth Five-Year Plan (1946-1950) is now available, drawn up by the Gosplan and the Soviet Statistical Office. The output figures of 1950 for basic materials quoted in this report (over 19 million tons of pig iron; more than 27 million tons of steel; over 260 million tons of coal; and more than 37 million tons of oil) confirm the estimates recently published in *The Economist*.*

The report now proclaims officially that for industry the Five-Year Plan was carried out in four years and three months. Indeed, targets had to be raised for the last year of the plan. Total industrial production, it is claimed, rose by three quarters in relation to 1940, not by half as had been planned. Yet time and again the report strikes a more modest note: for example, though the achievements have been great "industrial output does not correspond to the growing requirements of the national economy." It would seem that half way through the plan Stalin came to the conclusion that the planners had been unduly cautious. This may be the clue to the mysterious dismissal in 1949 of the chairman of the Gosplan, and Voznesensky, the official author of the plan. At the same time, it implies that the new plan, when announced, will set more ambitious targets. Reasons for the delay in its publication are discussed in an article on page 990.

From the report it may also be gathered that, as has been pointed out in *The Economist*, agriculture and consumers' goods industries are lagging behind heavy industry. In fact it is now disclosed that the modest target for textiles and that for shoe production have not been fulfilled. Another deficiency occurs in housing: for the output of both bricks and tiles fell short of the plan. This is particularly disturbing for the authorities, since wartime destruction has not yet been completely made good and the organisation of agriculture has added a new burden for housing authorities. As for agriculture, it is now announced officially that collective farming has been established in the Baltic States, in western Ukraine and Byelorussia (formerly Poland) and in Moldavia (formerly Rumania).

Policies for Persian Oil

The situation in Persia has improved. All the strikers in the petroleum fields and the refinery of Abadan have returned to work, after 13 days, despite the efforts of the

* See the issues of February 24th, March 3rd, March 10th, 1951.

Tudeh Party to keep them away. Soviet broadcasters, reduced to despair, informed the world this week that the "main meal" of Persians working in the refinery consisted of "worms dug up from the mud flats." There is no reason to suppose that the employees are looking closer at the juicy steaks in the Palm Court Restaurant or at the savoury stew provided in the canteens of the Anglo-Iranian Company.

However, despite the lessening of tension in Teheran, the moment hardly seems propitious for negotiations between the company, which will be supported by the British Government, and the Persian Government, which it is suggested will shortly begin. Our correspondent in Persia writes that it is difficult to see how the Majlis will sober down to the task of drafting concrete proposals, and suggests that there are only two ways out of the dilemma. One would be for the Shah to dissolve Parliament, frame concrete proposals with a team of experts and put them to a new house; but there is no guarantee that a seventeenth Majlis would be superior in intelligence and commonsense to any of its predecessors. The alternative would be to summon a Prime Minister capable of cajoling, or otherwise managing, the present irresponsible body. Almost the only man capable of this is Qawam-es-Sultaneh, known to his face as "the old fox." But Qawam and his absolutism are not popular with the very much younger Shah.

Further reasons which make delay advisable come from Washington, where the talks between the British and American Governments and petroleum experts ended last week. This series of conferences, arranged to study the broad outline of policies which the two Governments are pursuing in the Middle East and Persia, were useful but indeterminate. The Americans do not yet appear to realise that what is happening today in Persia will occur tomorrow in Saudi Arabia. Surely now is the moment at least to consider possible means of keeping those strange and dangerous bedfellows—violent nationalists and Communists—at bay. Meanwhile, the Anglo-Iranian Petroleum Company continues to give the Persian Government one of their main props for remaining in power—£2,000,000 monthly in advance of royalties. In addition to this the company's local expenses are running as they were in 1950 at a rate of over £21 million a year.

The total sums paid by the Anglo-Iranian Company to the Persian Treasury in 1950 were £19½ million, including some payments in respect of 1949, as well as £13 million in advances against 1950's estimated earnings. In 1951 £11½ million has so far been paid by the company to the Persian treasury; and advances will continue at the rate of £2,000,000 monthly until the sum of £25 million is reached in addition to other payments, or until a new agreement is concluded.

The Debate on the Charges

Robbed of its political excitement by Mr Bevan's resignation, last Tuesday's debate on the new National Health Service Bill was humdrum. There was general approval of the clause which permits the responsible Ministers to spend money on the treatment of the tuberculous in Swiss sanatoria; and there was general interest in the role of the Assistance Board, and the tests it will apply, in refunding the charges for spectacles and false teeth to those who might otherwise suffer hardship. But on the main principle of the introduction of the charges there was little passion—except from a member who had been Mr Bevan's parliamentary private secretary.

Mr Marquand, the Minister of Health, stated that charges on spectacles and false teeth had been chosen for four reasons: they would bring in the extra money required for the hospitals; they would not fall on people who were seriously ill; the cost of collecting them would not be high; and they would act as a deterrent to abuse of the services concerned. No other charges within the health service,

according to Mr Marquand, would satisfy these four criteria so well. Charges for board in hospitals would fall on people who are ill and unable to earn. The proposed charge on prescriptions, after the necessary exemptions were made, would produce only £6,000,000 a year and would hurt most those who were chronically sick. Charges on appliances such as invalid chairs and artificial limbs would yield less than £2,000,000.

But all Mr Marquand's persuasiveness cannot hide the fact that more drastic changes in the health service's finances will be necessary. The proposed charges are estimated to bring in £13 million this financial year and £25 million in a full year. The estimate for the hospitals is £15 million more this year than it was in 1950-51, and the total net expenditure on the health service that falls on the Budget is to be £398 million. Next year Mr Marquand counts on having £12 million more from the charges now being imposed with which to meet "essential needs, and possibly rising costs" without going beyond the limit of £400 million on the cost of the health service as a whole. He spoke as if this £12 million would be used for a still further expansion of the hospital service. What is virtually certain is that there will be pressure to increase the hospitals' budgets year after year so long as the present system of financing them is maintained. At the moment those responsible for running the hospitals have a direct incentive to overbudget and to spend on unessentials. Until they are allocated a certain sum, and given freedom to spend within that sum, no real economies in the service will be made. Mr Marquand ought not to allow automatic annual increases in hospital costs, which can only be at the expense of other branches of the health service, without considering a radical overhaul of hospital financing.

Wages Claims and Arbitration

In his Budget speech Mr Gaitskell asked the trade unions to exercise a limited restraint, which he did not try to define, in wage claims. Such an appeal can count for very little indeed in practice. The second round of wage claims, after the formal abandonment of wage restraint last September, is already in an advanced stage of preparation. The agenda of the forthcoming annual conferences of many unions are full of resolutions calling for substantial wage increases. The agricultural workers are suggesting a rise of £1 a week; furniture operatives, postmen, dockers and garment workers—to name but a few trades—are all pressing their unions to put in for higher wages now, before the rising cost of living catches up with their recent gains. There is little doubt that such feelings are shared by all sections of industry.

In these circumstances a second round of wage advances is plainly inevitable. The union leaders certainly have no choice but to press the claims of their followers. The most that can be expected of them is to see that the general rise in wages is not too precipitate. A great deal depends on the spirit in which their next set of negotiations is conducted. If the present campaign for the abolition of the National Arbitration Order (the famous Order 1305) is successful, these negotiations will take place when the full prewar liberty to strike has been restored. There is no reason to suppose that this will make much difference in general, but unless the new situation is carefully handled on both sides there may be some special problems to sharpen tempers. One difficulty, from the workers' side, was pointed out last week by the general secretary of the National Union of Public Employees, who stand to lose more than they would gain by the abolition of compulsory arbitration. They are among the workers who, either for legal or for humanitarian reasons, are prevented from using the strike weapon. For them, the Order is a weapon to ensure that grievances are heard and if need be submitted to arbitration. The people concerned

include hospital workers, the police, firemen, coastguards, certain civil servants and local government employees. Many of them believe that Order 1305 has enabled them to force their employers, usually public authorities, to rectify many injustices in wages and conditions of work.

Such public employees obviously constitute a special case, but it is an example of the type of problem that the TUC would be wise to examine more carefully. The unions have to remember that there is nothing inherent in strike action that ensures that an employer will give in to the strikers' demands. There are still cases where workers can gain much more, even in the short run, by arbitration. The unions will not be allowed to have it both ways—that is, to regain the unrestricted right to strike while retaining the power to force employers to accept arbitration. The demands put on the good sense of both sides of industry are certainly not going to be any lighter during the next few months, and the atmosphere of political doubt and discontent is not the best of environments.

Facts for Fabians

The Fabian Society has just published two speeches delivered at a conference of its International Bureau in February—one by Mr R. H. S. Crossman and the other by Mr Kenneth Younger.* Both addresses are significant of the development of views on foreign policy within the Labour Party, for the Fabian Society is the place where the party's conscience is preserved as in an ivory casket safe from the contamination of this wicked world. Before that august tribunal a mere Member of Parliament or Minister of the Crown can only defend himself, like a prisoner at the bar, against charges, not perhaps of "deviation"—for the Labour creed is hardly definite enough to deviate from—but of spiritual decomposition. In the speeches now published both speakers were in fact, not so much guiding or exhorting their hearers, as replying to an indictment which has to be inferred from the fellow-travellerish interruptions printed in brackets.

Mr Crossman boldly took the bull by the horns—or perhaps one should say, the fellow-traveller by the hair. Admitting that the Government's foreign policy was "in many respects remote" from the views and feelings of the rank and file and of "politically conscious Socialists," he declared:

There are two possible reasons for this concern—that the Government has departed profoundly from the principles of the Party, or that the Party is very remote from reality.

Mr Crossman came down in favour of the latter explanation, and said that he wanted "to discuss the realities from which Cole is escaping"—a reference to Professor Cole's letter to the *New Statesman* three months ago condemning British participation in the Korean War. Mr Crossman found "neutralism" both impossible in practice and wrong in principle. He called the attention of the Party's traditionalists to the fact that Britain was no longer as powerful in world affairs as it once was:

How wonderful it must have been when one could pass a resolution in one's trade union branch and have the conviction that, if the great Government at Westminster adopted it, it could be enforced on the foreigner!

But in a world as unresponsive to British precepts as that of 1951 British policy must have its international alignments and Mr Crossman set the cat among the pigeons with a blunt declaration that "we have far more in common with the United States than we ever had, or could have had, with the USSR," and that the Atlantic Pact "is not something dirty and distasteful for Socialists, but a necessity of survival." In quarters where "politically conscious

* Socialist Foreign Policy, by R. H. Crossman, M.P., and the Hon. Kenneth Younger, M.P. Fabian Tract. No. 287. Price 1s.

Socialism" has never prevailed there may not appear to be anything particularly original or courageous in such remarks; but it should be recognised that it has never been an easy or simple matter for Western Socialists to choose in foreign policy between a totalitarian socialism and a capitalist democracy.

Senator Vandenberg

In the course of a few days the Atlantic alliance lost two of its strongest supports—Mr Bevin and Senator Vandenberg. To the American statesman the people of Western Europe owe a deep debt of gratitude for his part in guiding his people towards acceptance of the immense new duties and responsibilities thrust upon them since the war. The man who was renowned in the 1920s for his editorial fulminations against the League of Nations exerted in 1945, with perhaps decisive effect, the whole of his influence to bring his country into the new United Nations Organisation.

In his famous speech of January 10, 1945, Senator Vandenberg had the courage to break with his isolationist past and to proclaim his belief that the world could no longer be divided into watertight compartments. He went on to lift the issues of foreign policy out of the scrimmage of party politics. As a delegate to the San Francisco conference, as Republican adviser to Mr Byrnes and General Marshall, and as chairman of the Senate Foreign Relations Committee, he was one of the principal architects of the bipartisan—or, as he preferred to call it, "non-partisan"—foreign policy, which allowed the United States Government to act with such authority and resolution in the first critical postwar years. He was also one of the first to realise that the Soviet Union must be treated with firmness; and if he was not himself the originator of the policies embodied

in the Truman programme of aid to Greece and Turkey, the Marshall Plan and the North Atlantic Treaty, he played an invaluable role in securing their acceptance by the Senate.

British Policy and the Schuman Plan

When the Schuman Plan was signed just over a week ago Whitehall's attitude of sceptical and benevolent indifference evaporated overnight. Its first reaction was to make a *démarche*, asking the French Government to refrain from promising Germany support in throwing off the economic controls imposed by all three Occupying Powers through the Ruhr Authority and other inter-allied programmes. London claims, quite correctly, that these questions are a matter for discussion among all the Occupying Powers, whereas an official French statement has already assured Dr Adenauer of such support once the plan is established.

In the past few days British officials have been trying belatedly to evolve a realistic policy toward the Schuman Plan. Although not yet ratified by the parliaments of member countries, the plan denotes a trend toward the integration of European industry which Britain can no longer ignore. Minds have still to be made up about its economic importance to British industry; but some of the considerations that must receive attention are fairly obvious. Under normal conditions, the six continental nations are a market for about one-tenth of this country's total steel exports. The Schuman Plan Treaty, however, makes ample provision for restricting British sales in these markets unless this country carries through "satisfactory" reductions of its own tariff barriers against continental coal and steel. So long as the present emergency conditions of worldwide steel and coal shortage continue, these provisions are no threat to British coal and steel. Of more immediate concern is the question of raw materials, in particular French North

African iron ore. The Schuman countries may enjoy both priority and preferential prices in buying these ores, which are important to steel production here.

Politically the problem is even more complicated. The overriding political purpose of the Occupying Powers has been to ensure that the Ruhr's resources should never again be used to equip an aggressive German army; at the same time the Ruhr Authority was intended to ensure that some part of Germany's coal should be at the disposal of former victims. The question asked in London is whether these policies are in jeopardy. As stated in the Treaty, the essence of the plan is that the development of the coal and steel resources of the six nations should be limited only by economic considerations operating in a competitive single market; this implies lifting the current limitation on German steel production. Thus Britain and the United States are now faced with the necessity of deciding at once what degree of freedom they are prepared to grant to Bonn. As a member of the Schuman community can Germany be trusted, in the long run, to resist the temptation to rearm for national purposes? If not, then is the High Authority strong enough to act as a check?

If the British Government should decide to become a full member of the Schuman community, it would probably be for these compelling reasons of international security; the economic difficulties could undoubtedly be solved without full-scale membership. But its fundamental objection remains: a majority in the Council of Ministers of the Schuman Plan can impose its decisions on all member countries, for no one nation has a veto.

Towards French Elections

For at least a year the race has been neck and neck between Britain and France as to which would have a general election first. Now the winner is still in doubt. In Paris last week's vote of confidence in M. Queuille's government, which seemed for a time to have made certain the holding of French elections in June under the new electoral law, has since been invalidated. This again makes possible the deferment of elections till October, which is the latest constitutional date for them.

M. Queuille's government has again been under fire, and the Prime Minister has been concerned to force a decision either way, not an easy thing to do in what has become a complicated parliamentary situation, even for France. The broad issue has been plain enough. If M. Queuille could have secured the further necessary vote of confidence that he sought, the plan for elections in June would have gone ahead and the remaining parliamentary time would have been devoted primarily to detailed financial discussion. If not, then elections would probably be deferred till October. M. Queuille's difficulty has been that he needed not only a plain majority but a favourable vote of more than 311 in order to overrule the Senate's rejection of the new electoral law. This law, having brought down M. Plevin's government two months ago, was only passed in the lower house with much difficulty when M. Queuille took office.

At the root of the uncertainties in Paris has been the malaise widely felt among the deputies at the inexorable approach of elections—whether in June or October, under the new electoral law or the old. This has had the effect of weakening party ties and making party agreements insecure. Deputies are face to face with all the considerations of local politics and their personal positions. This has tended to make them turn their backs on national issues, and vote according to individual conscience and convenience. The sooner such a situation can be brought to an end, the better not only for France but for Europe, which wants to know just how strong the extremists of Gaullism and Communism are.

Educational Priorities

Competition with rearmament has brought the inevitable fears that the standards of education will have to be reduced. Two Conservative back-benchers last week introduced a debate in the House of Commons about educational priorities. The gist of the arguments of Mr Ashton and Mr Maude was that if cuts are necessary they should fall least heavily on primary and secondary schools. Mr Maude went so far as to argue that expenditure on the universities should be sacrificed in favour of the primary schools.

The weakness of this argument is that the fringes of the educational system are so small, and the centre is so large, that even if all expenditure on youth and community centres and a crippling proportion of university expenditure were cut out, the benefit to primary and secondary schools would be very small. On the other hand, this general approach to priorities is the right one, and makes it the more regrettable that some Labour speakers flatly refused to consider economies. There are many things that it would be right to cut before education, but nothing is gained by Mr Morley's ostrich-like declaration: "I do not accept the . . . hypothesis that there is only a limited amount [of money] available for education."

So far Mr Tomlinson has succeeded in getting more money, men and materials for educational building than there has ever been before. Even so, the margin for absorbing, without further overcrowding, the increased number of new pupils (the consequence of the high wartime and postwar birth-rate) is as narrow as can be, and everyone must be apprehensive lest rising costs should remove it completely. So far it is not clear what cuts, if any, will be necessary. Educational expenditure as a whole is still rising and capital expenditure is being kept stable. Mr Tomlinson gave no real clue to his future expectations. But it is clear that to maintain the essentials some paring-down will be necessary. The cost of school building has been reduced from £195 to £140 per place in primary schools and from £320 to £240 in secondary schools. If these reductions had been made earlier more schools would now be in existence. The important thing is to lay down for the whole of educational expenditure what has already been decided for school building—that is, the order of priorities. If standards are to be preserved in essentials then less essential things may have to be sacrificed.

Arrested Development

The Board of Trade is at present making its first triennial review of the Cotton Board. This has revealed trade opposition on particular points—notably to the financing of the Board's activities by a levy on spinners alone—but general support for its continued existence. A recent pamphlet by PEP* points to its history and structure as reasons why the Cotton Board has been more successful than the other development councils.

The original Cotton Board was established by law in 1940. Its purpose was primarily to encourage wartime exports, but the prewar attitude of the majority of the industry, which had sought in "self-government" some defence against slump, was still fresh in memory. Moreover, the horizontal structure of the cotton industry made central co-ordination particularly desirable, and in wartime conditions of control the board could at the worst be regarded as a way of muffling Whitehall's impact on Lancashire. When the Cotton Board was turned into a development council in 1948 it enjoyed a considerable measure of goodwill.

At any rate in the postwar boom, other employers have taken less kindly to development councils. They dislike a

Irish Linen Mesh

The finest UNDERWEAR in the world

A little dearer

A lot healthier

Fine linen is not cheap. It is traditionally a fine washing and wearing material. Luxuriously soft, kind to the most sensitive skins, pleasant to handle. It is certainly not expensive if you compare its long wearing qualities with those of other fabrics.

The fact that Irish Linen Mesh Underwear provides immunity from colds has a simple explanation. Linen is more absorbent and quicker drying than any other fabric. Linen Mesh absorbs perspiration before it has time to chill, allowing dry air to come in direct contact with the body, for perfect insulation.

Go in for

OR

The finest of all Linen Mesh underwear. 100% pure Irish Linen.

Slightly less expensive, but with most of the qualities of AIRLIN.

At all good outfitters and stores. Write for name of nearest stockist to: The Irish Linen Mesh Co. Ltd., Dept. E2 Henry St., Belfast, N. Ireland

The Modern Clock for the Modern Office

No clock could be more in keeping with the modern office than the Smiths 'Sectric' Delhi, with its clear, easily read dial and smart but dignified appearance. It is one of the most popular wall clocks in the Smiths 'Sectric' range. Available with 12", 9" and 6" dials.

SMITHS' 'SECTRIC' CLOCKS

SMITHS ENGLISH CLOCKS LTD., SECTRIC HOUSE, LONDON, N.W.2
The Clock & Watch Division of S. Smith & Sons (England) Ltd

statutory body, fear Government interference, and resent the compulsory levy and the intrusion of independent members. The furniture council, it is true, enjoys the support of its industry. But the jewellery and silverware council is rejected by one of the two main trade organisations; and the clothing council, whose establishment was opposed by legal action, has the support of only a small minority of employers. Three years of negotiations have failed to establish a development council for the pottery industry.

An attempt to compromise has been made in the china clay industry and will be made in the wool textile industry, in the shape of joint advisory committees without statutory authority. The President of the Board of Trade has the right to appoint the chairman and the independent members, but all the members are responsible to the industry, not to the Minister. Such bodies, lacking the support of a compulsory levy, seem certain to be more limited in their activities than the development councils were intended to be—though not necessarily more limited than, except in the case of cotton; they in fact are. The PEP report observes that it will be a pity if we lose the opportunity to build up experience which could be useful in a slump. Is this not to say that the councils might become acceptable to industry if they were engaged in limiting competition, fixing minimum prices, and so on? That is not, of course, the ostensible definition of "development." The official view is that there must be a pause to digest what has been done so far. It would probably be as well if the pause became a determination never to tackle anything so indigestible again.

* * *

Northern Rhodesia's Constitution

Discussions about Northern Rhodesia's constitution have begun this week between the Secretary of State for the Colonies and a deputation from the territory. These discussions are an attempt to improve a political situation that in the last two or three years has been steadily deteriorating. At a time when official policy is based on the ideal of partnership between the two races—African and European—partnership seems to be the last thing that either wants. Recently, two factors have contributed to the general uneasiness. One is the increasingly illiberal policy of Dr Malan in the Union of South Africa, coupled with the very heavy immigration of Afrikaners into Northern Rhodesia. This has provoked fears that in a few years' time Afrikaners, of Union origin, will dominate Northern Rhodesia's legislature. The other factor is the new Gold Coast constitution coupled with the recent general election there. This has frightened the Europeans, who think that similar advancement will be given to Africans in Northern Rhodesia—to the detriment of the Europeans' position—and encouraged the more vocal and extremist Africans. The result is that both sides are making impossible demands—by the Europeans for self-government (that is, self-government for themselves on the Southern Rhodesia model), and by the Africans, who have asked, among other things, whether the Imperial Government eventually intends to hand Northern Rhodesia back to the Africans.

The tension is so great that it is difficult to believe that it will be relieved by any modification of the constitution which may be hammered out in the present discussions. At present, as a result of a compromise reached with the Secretary of State in 1948, power has largely passed into the hands of the Europeans, even though the European unofficials are still in a minority in the Executive Council—where there is as yet no direct representation of the Africans. The two African representatives in the Legislative Council are taking part in the present discussions, but it is unlikely that any further promotion for Africans that may be agreed on will satisfy their more vocal politicians for long. It is quite certain that the Colonial Office cannot agree to the Europeans' demands for self-government.

The right lines of constitutional advance are thus far

from clear. Yet it is very important that a solution should be found, both because of Northern Rhodesia's geographical position between the Union's sphere of influence in the south and the Colonial Office's sphere in the east and north, and because Northern Rhodesia is not the only African dependency where constitutional progress is hampered by the problems of a plural society.

* * *

The Stone, Scot Free

Last week required from the Attorney-General two decisions in that difficult field of legal action where varying conceptions of "public interest" meet. At the Old Bailey, in the case of the prosecution of the seven dockers, he was left to resolve the difficulties created by a verdict, and a disagreement, which could never be reconciled. There was also the Coronation Stone, and the report of Scotland Yard's investigations into its removal. Sir Hartley Shawcross decided that "public interest" did not compel him to direct that criminal proceedings should be taken against those mentioned in the report as the "individuals concerned." This decision does not settle the matter in any absolute sense. In theory, it is still open to any citizen of the United Kingdom to prosecute those who removed the stone, provided he is prepared to spend his own money on the assembly of the evidence and the conduct of the proceedings. Indeed, even if a magistrate declined to send for trial anyone brought before him on a private prosecution, the prosecutor could still make an application for a trial direct to an Assize Judge or to the Central Criminal Court. But, for practical purposes, it may be assumed that the events in Westminster Abbey last Christmas Day will not have a sequel in court.

That is a little surprising. Those who were courageous enough to break into an unguarded church may, to some, have become heroes overnight, entitled to a freshly minted silver medal. Gaelic emigres in Fleet Street—happily, on this occasion, for the most part confined within what can only be described as a seventh day adventism—may have manipulated every stop in their outsized calliopes. The heroes themselves (if the published accounts have any validity) may have reached a pitch of emotion only equalled by an American schoolgirl of fifteen meeting Mr Frank Sinatra for the first time. The fact remains that the religious centre of a large part of the world was broken into on the eve of the major Christian festival and an object, part of the tradition of that church, ignominiously carted off in a truck. The only shred of dignity in the whole story is to be found in the circumstances of the return of the stone to Arbroath Abbey. Yet, Sir Hartley Shawcross says, it is not in the public interest to prosecute. Such feelings as the English may have—what, apparently, could matter less?

But perhaps Sir Hartley has made a shrewd estimate of the sum of emotion involved. The English, with something of the patience learnt in a long parenthood, do conduct their affairs on the principle that it takes two to make a quarrel. Indeed, in a fortnight charged with Celtic emotion of one kind or another, the harshest comment any of the English can make is to take it all at its face value, and ignore it.

Japanese Industry and Rearmament

In Tokyo, as in Bonn, American negotiators have found that an ex-enemy needs not so much to be permitted, as to be persuaded, to rearm. Mr Dulles has been presented with provisional plans for a limited Japanese rearmament drawn up by former Admiral Kichisaburo Nomura (Ambassador to the United States in 1941) and former Lieut.-General Torashiro Kawabe, but he did not meet with any enthusiasm in government circles for financing the scheme. Formerly in Japan the financiers and industrialists had to share political ascendancy with those whom they called "our soldier friends," and though there might be pickings for them from the proceeds of the Imperial Way, they often had occasion to sigh

How will YOU reward those who serve you well?

THERE are times when you may wish to confer upon members of your staff some mark of your appreciation of their service. On such occasions the choice of presentation is not always simple. J. W. Benson, Ltd., are proud to be consulted regularly by many leading firms about their staff awards—appropriately enough, since Benson's reputation, too, is founded upon the signally long and faithful service which their fine watches and clocks are known to give. We hope that at some time you, too, will allow us to give you the benefit of our experience.

A most suitable presentation—Benson's English-made "Ludgate"—guaranteed to give many years of service. In Steel and Chrome £14.14.0d. In Gold £25.0.0d.

MERCURY

MERCURY, also known by its old English name quicksilver, is the only pure metal that is liquid at ordinary temperatures. One of the heaviest of the elements, it is obtained from cinnabar, a compound of mercury and sulphur, which is mined in Italy, Spain and the Americas. The best known use of mercury is in thermometers and barometers, but its ability to dissolve certain other metals makes it of importance in the chemical industry, and in gold-mining where it is used in one method of extracting gold. Compounds of mercury have many uses. Both mercurous and mercuric chloride play an important part in medicine—Paracelsus, the Swiss physician was using mercury compounds early in the sixteenth century. In agriculture they are used in the manufacture of seed dressings. Oxides of the metal are used in special marine paints, and the bright scarlet pigment, vermillion, is made from mercuric sulphide. Fulminate of mercury, a powerful explosive, is used in the manufacture of detonators. I.C.I. uses mercury in one method of producing caustic soda and chlorine. It also uses compounds of mercury to make plastics, dyestuffs and other chemicals, including phthalic anhydride, one of the intermediates used in the manufacture of the brilliant 'Monastrol' blue pigment.

deeply over the taxation imposed by the demands of the armed forces. Today the Japanese business man has found by experience how pleasant it is not to pay anything for national defence while being protected against both domestic and external violence by a benevolent foreign power anxious to preserve the country from Communism. The financiers and industrialists are thus strongly pacifist and insist that rearmament must not be permitted to interfere with the programme of tax reductions initiated by the Yoshida Government. With the national income well up since last year, the Government is slashing taxation in the 1951-52 budget, including a 50 per cent cut in liquor and amusement taxes and reductions up to 21 per cent in income tax. It is pointed out that these popular measures will not allow Japan to do more than start building up a lightly equipped army of some 200,000 men.

At the moment, whatever may be the desires of former generals and admirals, the political leaders of Japan are more interested in rebuilding industry than in creating a new army, and the economy can certainly be well fitted in with American defence production as a complementary industrial workshop. This cannot be done, however, without a greatly increased pressure on scarce raw materials supplies, and Japanese industrialists are taking full advantage of their new bargaining position. The Economic Stabilisation Board in Tokyo has already declared that it expects America to release to Japan in 1951-52, 1,800,000 bales of raw cotton, 400,000 bales of wool, 160,000 metric tons of manganese ore, 20,000 metric tons of copper ore, 5,000 metric tons of lead, 10,000 metric tons of zinc, 1,500 metric tons of nickel and 100 metric tons of cobalt.

Ideologically, it seems that the Japanese are somewhat bewildered. The President of Tokyo University has complained in a public speech that Japan's being told in 1946 to renounce the right of national defence and in 1950 to rearm could only produce "spiritual confusion." His students, however, appear to be gradually emerging from this confusion on the side of rearmament; a poll showed 61 per cent in favour of it, 34 per cent "doubtful" and five per cent against it.

* * *

Peasant and Party in Bulgaria

Recent events in Bulgaria must have brought home to Communist leaders throughout Eastern Europe the truth of their reiterated assertion that the resolution in the countryside must not be carried through by force, and that the peasants must be thoroughly prepared before they are brought into the collectives. In Sofia these precepts seem to have been honoured more in the breach than in the observance. The result has been rapid progress on paper towards complete collectivisation, but much unrest, uncertainty and disorganisation in practice. Mr Chervenkov, the Prime Minister, said recently that more than 50 per cent of the farmers had joined collectives; but he admitted "that for the time being we have failed to convince them that the co-operative cause is right."

It appears that in many districts over-enthusiastic Party members have bribed peasants into joining collectives with promises that the state will provide them, if they do so, with everything: food, money, houses and even clothes. These peasants, now thoroughly disillusioned, are applying to leave the collectives; some have just walked out, taking their implements and livestock with them. They have been encouraged by the disciplinary measures publicly taken against the Communists in the Kula and Yablantsa districts, who "distorted" official policy by forcing peasants into collectives. Mr Chervenkov has said these "honest and industrious farmers" must be persuaded that it is against their best interests to leave the collectives, and that any "temporary inconveniences" now will be compensated "a hundredfold in the near future." More potent than any

promises of future benefits will be the knowledge that those who walk out now cannot take their land with them until after the harvest. Only where coercion has obviously been used does the farmer stand a chance of leaving at once, taking his land and possessions with him. Nothing in fact that the Bulgarian Government has yet done to counter the opposition to its agricultural policy indicates any real amelioration of it. Unlike the Hungarian Government, it has not called a temporary halt to the collectivisation drive; it has merely asked that this should be pushed forward with more discretion. Behind the bare bones of controversy revealed by the statements of Mr Chervenkov must lie a moving story of personal suffering and bureaucratic tyranny.

* * *

The Closed Shop

On second thoughts, the Labour group of Durham County Council decided last Monday to obey the Minister of Education's order that the closed shop policy in the appointment of teachers should be dropped. The Minister had previously agreed to see a further deputation from the council only if he had first received an assurance that it would comply with his directive. Faced with the threat of sanctions and lacking solid local support, the recalcitrants could only climb down. The affair thus ends in a notable victory for the National Union of Teachers, who are unlikely to be faced with the same problem again.

Erskine May

A PRACTICAL TREATISE ON THE LAW, PRIVILEGES, PROCEEDINGS, AND USAGE OF PARLIAMENT. By THOMAS ERSKINE MAY, Esq. Second Edition. Butterworth, Fleet Street.

The seven years that this work has lived have testified to its great value. It has been continually referred to. It has been the text-book for Parliamentary lawyers and for those who have discussed Parliamentary privileges. The present edition is only so much better than the first edition that has already received the public approbation, inasmuch as it contains more matter and is adapted to all the changes that have been made in the seven years. . . . The greatest alteration . . . is in the management of private business, the vast accumulation of which has compelled the Houses of Parliament to make these changes, and has made Mr May's third book, which treats of them, a new treatise on Parliamentary procedure. It may be very delightful to the members of the two Houses to exercise the control given them by private business over the fortunes and pursuits of individuals; but we must say that it is quite foreign to the legislation for the interests of a great empire to decide between the rival claims of gas and water and railway companies. Certainly one of the most feasible and most constitutional reforms of Parliament would be the removal of private business from the control of the two Houses into some court constituted and appointed to settle such questions. The court might have the power, under certain limitations derived from Parliament, to decide all such controversies between private property and the public good as arise from proposed new enterprises, and of compelling a man to give up his land when necessary. . . . Questions of this kind and all questions connected with the proceedings of the House as they are suggested by the work can only be discussed by having Mr May's book in the hand and referring to it for information of the existing practices. . . . Being corrected by the assistance of Mr Speaker, which is gracefully acknowledged, to the present time, it is an authority which no man should neglect who has to act or speak of the rules of Parliament or guide his conduct by them.

Letters to the Editor

Britain, Persia and Oil

Sir,—I am inclined to agree with some remarks made in your leading article of March 24th about the Arabic service of the BBC. No one denies that the news service is excellent and useful, but I have frequently felt that the transmissions, despite many recent improvements in the talks section, lacked life. The subjects are sometimes highly specialised, even precious, while the manner of presentation tends to be pompous. In the field of music, very little enterprise is shown and the Arabic service contents itself by offering what, in the opinion of the directors, the Arabic listeners expect. That the tastes and mentality of the Arabs have considerably changed in the past 20 years seems to have made little difference to the general colour of the programme.

I am under the impression that the North African Arabs, whose tastes vary greatly from the Asiatic Arabs of the Near East, are the main concern of the Arabic service, the argument being that the North African Arabs have no stations of their own and that they write letters. If that is the case then the service had better be called the North Africa Service. On the other hand if it tried to cater for the Syrians, Lebanese, Jordanians and so on, its appeal would be much more general. It is a great pity that the Arabic service does not aim to arouse new interest amongst the Arab speaking races but goes on following the same old formulas with slight variations here and there.

It is not enough for the North African (and other) Arabs to know what is going on in England and to listen to gramophone recordings and so on. A more personal and spirited approach would increase the number of listeners even in those countries that boast of broadcasting stations.—Yours faithfully,

AFIF BULOS

Street, Somerset

*

Sir,—Your article in *The Economist* of March 24th was very welcome but, like the belated offer by the Anglo-Iranian Oil Co. of increased royalties, was long overdue. For the company to take the line that "we are busy oil men" will not do, of course. Their position is a unique one and the lack of imagination and judgment shown has been disastrous.

What of the Foreign Office's responsibility? Should not any deficiencies in "diplomacy" by the company have been made good by H.M. Government—directly or indirectly? The hesitancy to assume responsibility, from which our diplomatic representatives have shuffled away on the excuse that the company's contract is a commercial one, has resulted in neither doing the difficult job of public relations. These, by default, have deteriorated progressively.

The negative attitude of both company and Government, and the failure to grapple with changing circumstances,

have permitted the most valuable single asset we possess, outside the Empire, to drift into jeopardy.—Yours faithfully,
A. G. I.

Baghdad and the Oil Talks

Sir,—May I comment briefly on your correspondent's article in your issue of April 14th to show the point of view of the Iraqi people? While your correspondent admits that one of the Iraqi's major complaints is at the rate of production, he maintains that the "Iraqi argument . . . is greatly weakened by the fact that the company has lost heavily over the Iraqi refusal to use the pipes to Haifa," and "by the fact that just round the corner . . . is more money than Iraq can spend at once without causing the gravest inflation."

This twofold argument is, at best, a temporary explanation of the short-run rate of oil production. It is hardly capable of explaining the very low rate of oil production which has been prevailing in Iraq for a long time—the lowest among oil producers in the Middle East. Thus in the period between 1938-47, oil production in Persia was almost doubled and in Saudi Arabia increased from virtually nothing to 92 million barrels, while it has increased by only two million barrels in Iraq. It is clear, therefore, that the argument of the Iraqi refusal to use the pipes to Haifa can afford no explanation for this long-run tendency of the extreme slowness in the rate of oil production, despite the fact that almost 8 per cent of world proved oil reserve lies in Iraq.

However, the real explanation of the low rate of production must be sought, I think, in first, the attitude of the British Government to keep up the oil reserve in case of war and, secondly, the virtual absence of refineries, except for the home market, within the territory of Iraq. The absence of refineries, though it is overlooked by your correspondent, is one of the major grievances of the Iraqis against the oil companies.

Turning to the second part of your correspondent's argument—the inflationary pressure which may be caused by a greater revenue from oil—I admit that there is some truth in it so long as the country is at the mercy of the exploiters of the feudal system. But if there is a Government which sincerely embarks on a large-scale programme for economic and social development, and imposes an equitable as well as effectively administered system of taxation, the increase in the revenue from oil need not cause any further inflationary tendencies. On the contrary, any large-scale capital investment will, I think, increase the capital outlays more than the corresponding increase in the flow of money, by reason of the rising prices of capital goods. If, therefore, the increase in revenue were exploited according to the benefit of the people, it is likely to prove a disinflationary rather than inflationary measure.—Yours faithfully,

IRAQI

The Budget

Sir,—In his lucid presentation of the national budget for the forthcoming year, the Chancellor of the Exchequer brought in the projected reduction in overseas investment amounting to £200 million as a pound for pound offset to a reduction in his own budget surplus.

Had the reduction been ascribable to a decrease in our volume of exports or an increase in the volume of imports, his proposition could be accepted without qualification. Unhappily, it is probable that a reduction of £200 million (or more) will be due to the worsening of our terms of trade. In such a case the reduction of overseas investment will not provide a pound for pound offset to a reduction in the budget surplus and may provide little offset.

The worsening in the terms of foreign trade leading to a reduction in the overseas balance by £200 million must raise the cost of domestic investment and domestic consumption together by £200 million. To the extent that it raises the cost of a given investment programme, it makes no contribution to the finance of that programme. To the extent that it raises the cost of consumption, it only contributes to the finance of an investment programme by the amount by which it leads consumers to curb consumption. It is to be feared, therefore, that the Chancellor has not closed the gap, and that higher taxation and/or a more powerful curtailment of domestic investment will be needed if this is to be done.

There is, however, another possible remedy. If by a revaluation of sterling the terms of trade could be rendered more favourable, at least to the extent of not being worse in 1951 than they were in 1950, then the Chancellor could validly bring in the reduction of the overseas investment as a contribution to the general balance.—Yours faithfully,

Washington

R. F. HARROD

Post-Mortem on Wheat

Sir,—With reference to Mr Strange's letter in *The Economist* of April 7th, does not his argument as to the moral obligation of the British people to pay compensation to Canadian farmers involve the very principles on which contracts are based and for which purpose they are entered into?

The four years' wheat contract was a bilateral undertaking, drawn up to provide stability of prices to both sellers and buyers and at that time was no doubt considered equitable by both parties to the bargain. Had circumstances taken an opposite direction during these last two or three years, and had world prices dropped to below the figure contracted for, would Mr. Strange, on behalf of his farmer friends, have felt any moral obligation to give the British Government purchasers a corresponding reduction of the contractual price?—Yours faithfully,

Lincoln

H. E. CAMPBELL

Farming Merry-Go-Round

Sir,—Though I agree with Mr Eastwood's letter in your issue of April 21st that a further rapid increase in the output of British agriculture is possible, I am at issue with him in his advocacy of the greater use of nitrogen. It seems rather that too much is used already if layered, poorly rooted, and over-green sappy crops are any criterion; phosphates and humus are the remedies for this heavy wastage. Of the former a 25 per cent increase is vitally necessary; of the latter, the least said the better, as under the present system of extensive farming, failure of animal husbandry, unscientific sewage disposal, and labour shortage, humus must remain scarce.

The long-term solution of the agricultural problem lies in the adoption here

of the balanced and truly scientific French agricultural system. — Yours faithfully,
DOUGLAS T. BAILEY
Sevenoaks

The Inferior Male

Sir,—There are implications in Mr Martin's paper to the Royal Statistical Society, discussed in *The Economist* of April 14th, page 851, which you fail to bring out. You say

Most pension schemes are based on a higher retiring age for men than for women, presumably because men are considered to be the stronger sex and therefore capable of working for a longer span of their lives.

I know a little about pension schemes and I believe that, like so many others, you do not realise that the object of pension schemes is to get people out of

employment when they are of no use in employment. Other schemes, not for this particular purpose, are often called pension schemes, but they are not pension schemes (Mr Millard Tucker, please note!). They are, in fact, savings schemes. If, under a pension scheme, it has been decided that males are to be retired normally at age 65, then everybody knows that females should be retired normally much earlier than this age, probably even earlier than age 60. The period of usefulness of the male is so much longer than that of the female. The fact that, for some reason, females continue to live to higher ages than males simply extends even more their period of relative uselessness as compared with the male! It is just one of those things! —Yours faithfully,
J. REAST

Books and Publications

Recovery of Realism

Russia by Daylight. By Edward Crankshaw. *Michael Joseph.* 240 pages. 15s.

Book by book, speech by speech, article by article the slow return of British thinking towards realism about foreign policy proceeds. It is not just a matter of overcoming an understandable and healthy war weariness; it is also a matter of conquering the fears created in the 'thirties by appeasement, wishful thinking and escapist slogans. As the public is always at least five years behind the times in its thinking about these matters, the process is still very hard work; and there is a long way to go before people want to, or dare to, say that Russian military strength may have been exaggerated, that appeasement has a part to play in diplomacy, that Communism is losing ground in Europe, and so on.

It is to the recovery of realism about the Soviet Union and to the shooing away of bogeys that Mr Crankshaw applies himself. One would like to say that he lays mines under and explodes many illusions and confusions; but his manner is urbane and on the whole modest, that of the intelligence officer and not that of the sapper. He is sweetly reasonable throughout and at times even seems to protest too much that the Russian people have no friend like him. On the other hand, when he is indicting cruelty, fraud and savage ambition he is stern as a liberal should be.

Mr Crankshaw quite rightly objects to the way in which people are hypnotised by the alleged moral and religious appeal of Communism. It is fashionable to regard the men of the Kremlin either as gangsters ready to surge across Europe and Asia in search of booty and far flung frontiers; or as apostles of a new religion, crusaders for a world new deal, who strike terror into bourgeois society by the moral authority with which they speak to the masses. The two conceptions are clearly incompatible. This book shows very clearly how Lenin

began the corruption of European Marxism by bringing Russianism into it; how Stalin has moved steadily towards the revival of Russian nationalism and his own transformation from Secretary General to Leader and "father of humanity"; how monstrous failure at home, the degradation of the Russian people and the creation of a proletariat which was not there before have all driven him into an aggressive, fearful, and melodramatic foreign policy.

The impromptu and inconsistent nature of that policy in some of its European operations is well exposed in Mr Crankshaw's examination of Soviet actions in Germany; and he makes a powerful case for the view that cold war as we now know it began at the moment when Molotov walked out of the first conference on the Marshal Plan. In 1945 Stalin had the choice between exploiting the position won in the war and withdrawing Russia into a convalescent isolation. When he was offered in 1947 a third possibility—that of co-operation with the West—he dared not accept it; for it would have revealed to the whole world the weakness and backwardness of the system that claimed to lead the world. Having given up the chance of bringing Russia to Europe's level, he decided to try to drag Europe down to Russia's level. Now, particularly since Tito's defiance, the distinction between Communism and Russian nationalism geared to the Politbureau is beginning to appear; and it is the task of western policy to encourage and clarify this distinction, not to lump Stalinism, Communism and imperialism together into one monstrous bogey. There are blemishes of style in this very readable book—most of them jocose—but it is full of excellent points expressed in persuasive and good-tempered argument. It should do a lot of good in the United States.

Patchwork Introduction

The Essential T. E. Lawrence. Edited by David Garnett. *Jonathan Cape.* 327 pages. 12s. 6d.

Sheikh Hamoudi's beautiful lament for Lawrence intoned in his stone-flagged hall in Aleppo opens this book, which is described by its editor, Mr David Garnett, as "a patchwork portrait of Lawrence by his friends." Unfortunately, after this notable beginning the picture of T. E. Lawrence tends to become submerged under the opinions of various members of his family and those of senior officers and others among Lawrence's English friends and acquaintances. No other Arab of note is quoted, whereas a few lines from, for example, the present Prime Minister of Iraq, Nuri Pasha es Said, who served with Lawrence throughout the Arab revolt, would today make a fascinating and, one imagines, illuminating reading.

Mr Garnett may be excused for overlooking contemporary Arab sources, important though they must be in any attempt to present the essential Lawrence, but it is not so easy to forgive the omission of that remarkable portrait of Lawrence which emerges from George Antonious's "The Arab Awakening." In this, an educated Arab, writing in English, tells us that Lawrence, contrary to the legend which has grown up around him and has been widely accepted, could not in fact speak Arabic well enough to have been mistaken for an Arab, except possibly in a brief, chance encounter. But M. Antonious also gives detailed accounts of some of the "most original and daring expeditions" which Lawrence himself passed over in silence in all his published writings.

Despite its omissions, this book shows much of the enigmatical quality of Lawrence's character. The extracts from the Arab Bulletins, the letters and the "Seven Pillars of Wisdom" are well chosen, but readers already familiar with them will be tempted to turn quickly to the passages from the unpublished "The Mint" which describe Lawrence's life

in the RAF. They will find that this work, which has achieved considerable notoriety since Lawrence's death, does absolutely nothing to solve the mystery of his personality. It illustrates only too vividly the inconsistencies and sometimes even the downright untruthfulness of Lawrence's writings. For example, when the RAF doctor asked him how long he had been short of food, Lawrence described his thoughts as "Since April I've been taking off my friends what meals I dared. . . I'd haunt the Duke of York's steps at lunchtime so as to turn back with someone to his club." Yet Colonel Newcombe, an admirer of Lawrence, recalls that, at this time, "he constantly refused or neglected invitations to meals," and points out that he was, in any case, receiving sufficient money for his needs. There is no question, however, that "The Mint" is beautifully written. Lawrence was one of the few men of this country who could over-write effectively; all his writings can be read aloud without ever sounding either affected or trite.

For the generation growing up that knows nothing of Lawrence this book should be an entrancing and compelling introduction. But it would be surprising if those who read it do not turn at once to the unabridged edition of "The Seven Pillars of Wisdom"—which is as near to the essential Lawrence as anyone who never met him is likely to get.

History of Coal

Coal: History of Second World War Series. By W. H. B. Court. *HMSO and Longmans, Green.* 422 pages. 21s.

It is fitting that the first volume in the Civil Histories of the Second World War to deal with a single industry should be on coal, since getting enough coal to meet wartime needs was one of the most persistent and intractable of problems on the United Kingdom home front. It was the obverse of the prewar problem of finding markets for all the coal raised and work for all the men attached to the industry. The Mines Department had foreseen this reversal; as sometimes happens in economic planning, their assumptions were wrong, but their answers came out more right than wrong. They planned to meet a coal deficit, and the wartime story of coal is one of varying degrees of shortage broken with a single burst of surplus, when the fall of France removed one important call on United Kingdom supplies.

Professor Court traces through the various expedients—including wage incentives but excluding price disincentives—adopted for increasing supplies and for checking demand with the least harm to the war economy. It is a complex story ranging from Bevin boys to coal programming; from abortive rationing schemes to the Coal Charges Account, and is told with clarity and objectivity—and with notable self-denial of the use of hindsight.

How far was the wartime coal policy successful? Professor Court can give no simple answer. There was never enough coal to meet demand at prices

charged. But prices themselves were unduly low, unless one accepts the new orthodoxy of nationalised industries, that prices should be equated with average and not marginal costs. The wartime (unlike postwar) control never failed to keep essential production fuelled, but this was achieved not by increasing production from the mines but by scraping up open-cast coal and by compelling the householder to defer to wartime industry's fuel needs. Domestic electricity consumption leaped ahead unchecked, either by rationing or price discrimination (very much the reverse, in fact) leading to power shortages, which remain today a hindrance to an economy at full stretch. While charges for coal distribution were tightly controlled, no serious attempt was made to cut its lavish use of labour.

The complex story is well told, but, although one cannot expect to find an official history spilling all the beans, one might have looked for a more critical attitude towards official analyses, estimates and programmes. Any wartime civil servant knows how plans were flung together with whatever material and stock of ideas were available at the time, as urgent problems rushed upon harassed officials and busy Ministers, and how often "budgets" gave desired or convenient figures when the answer was unknown or unknowable. Just a little of Professor Devons's iconoclasm on economic planning in wartime would have been welcome.

Professor Court's final sentence is just: "No other major British industry carried so many unsolved problems into the war: none brought more out." But one thing the wartime control did settle: there could be no return to even that degree of competition in the coal industry which existed in 1939. The levy-subsidy arrangement under the Coal Charges Account which had insulated consumers from high cost production, the national minimum wage and national wage negotiations, coal programming and grouped production control, all these were barriers to the road back and pointers to a new form of organisation which turned out in the postwar political context to be nationalisation.

The Wandering Coin

Zwei Jahrhunderte Maria-Theresien-Taler, 1751-1951. By Dr. J. Hans. Published by the Author. 60 pages. 33 schillings net.

The publication of a monograph on the Maria Theresa dollar is a welcome event, the date chosen for its appearance is appropriate, being the bicentenary of the birth of that romantic and adventurous coin. And Dr Hans, a well-known specialist in oriental currencies, was the right person to undertake the task. He provides us with a wealth of factual material, including some statistics on the amounts of Maria Theresa dollars minted since 1751 in Vienna and elsewhere.

Dr Hans's approach is historical rather than theoretical. Yet there is ample scope for a theoretical use of his material. It provides, for instance, much ammunition to opponents of G. F. Knapp's state theory of money. According to that

theory money is essentially a legal institution, and owes its acceptability to the writ of the state. The Maria Theresa dollar certainly provides a striking exception from this rule. Although originally it was an Austrian currency, it soon became the principal currency in Arabia and in large parts of Africa. It achieved this position without having been decreed legal tender by most of the state or tribal authorities concerned. Indeed, in many instances it retained its monetary role in spite of the efforts made by the state authorities to demonetise it and to replace it by other forms of currencies.

The first instance, quoted by the author, of unsuccessful Government intervention against the use of Maria Theresa dollars occurred in the Ottoman Empire. The ban placed on their circulation was defied, and their replacement by Turkish coins failed in the provinces of Jemen and Hedjaz. Nor had King Ibn Saud, a hundred years later, an easy task when he tried to replace the Austrian coins by his own rials. Indeed, during the inter-war period the demand for Maria Theresa dollars in various Arabic countries reached new peaks. To satisfy it, large quantities were minted in London, Rome, Paris, Brussels and Bombay.

In the Italian Colonies of Eritrea and Somaliland, too, the authorities had to fight hard to ensure the use of their own currencies. Right to the eve of the collapse of the Italian colonial empire the inhabitants preferred the Maria Theresa

CHARLES MORGAN

LIBERTIES OF THE MIND

A new volume of Essays

"This book retains the flavour, the very texture of cultivated discussion. It appears at a moment in history when it is most urgently needed. . . . It is Mr. Morgan's self-appointed task . . . to safeguard for the mind of the future the liberty, never challenged, of the mind of the past; and to free it from the present peril of propaganda or the future menace of Possessive Control."—GUY RAMSEY (*Daily Telegraph*) 12s. 6d.

Macmillan & Co., Ltd.

dollars, especially in backward regions. In Abyssinia the Maria Theresa dollar reigned supreme for at least 150 years. After the Italian conquest it was officially demonetised, and in this instance Government intervention was more successful, because it coincided more or less with a world-wide demonetisation of silver. Even so, many millions of dollars were smuggled into Ethiopia, partly to take advantage of the favourable exchange rate fixed by the Italian authorities, and partly to satisfy demand in remote areas where Marshal Graziani's writ did not run.

Dr Hans brings his history up to date by giving an account of the progress of the demonetisation of Maria Theresa dollars in most countries in the Red Sea region since the end of the war. It is a pity he confines himself to that region. He should have covered the use of these coins in various remote parts of Africa. For they penetrated as far west as the Tuareg Oasis and the Mahommedan communities of Nigeria. In some communities they circulated jointly with various kinds of primitive currencies, such as salt bars in Abyssinia and cowries in Sudan. Such secondary currencies were needed because the dollar was too large a unit for the everyday requirements of most people outside commercial centres. To judge by the material produced by Dr Hans, there would have been every justification for the production of a much larger work on the subject.

Amateur Sociology

Human Needs. By Michael Graham. Cresset Press. 252 pages. 15s.

It is a commonplace that the specialisation of knowledge has reached a point where it frustrates understanding and, with understanding, much potentiality for good; and nowhere is this more true than in the social sciences. There is thus a real need for the kind of incorrigibly confident amateur who rushes in where angels fear to tread, asks awkward questions about the Emperor's new clothes, thrusts under the noses of preoccupied professionals disconcerting facts garnered from other fields, and insists on translating the abstractions of specialists into terms of human happiness or unhappiness, fulfilment or frustration. He may make a fool of himself, but he brings fresh air and a sense of proportion to his subject, and experts outraged by his impudence may be better occupied in profiting by both than in fortifying their own sense of superiority by pulverising his errors.

"Human Needs" is essentially a study of those built-in, universal characteristics shared in different proportions by all mankind and deriving not merely from the historical past but from prehistory and even from animal group life; of the needs corresponding to those characteristics; and of the relation of those needs to present-day institutions. It ranges widely from the habits of baboons in liberty and captivity to the social implications of the Great Pyramid, from Eskimos to travel on the Tube, from the prehensile toes of apes to the in-

adequacy of the written word, from Isaiah to Mr Lewis Mumford. Its derivation of human needs is psychologically convincing; its analysis of the ways in which past and present social institutions have either served or denied them is, to say the least, controversial; its sketch of the institutions which might in the future fully meet them is a wonderful blend of back-to-the-landery, small-scale democracy, culture without civilisation, large families (mysteriously immune to the machinations of the Malthusian devil), national autarky, and (implied though not stated) an Erewhonian attitude to technical progress. It is, as a matter of fact, rather more attractive than most Utopias; and its crashing impracticability is mitigated by its remoteness—a millennium at least, Mr Graham calculates, is needed to work through successive generations to a harmonious society. "Meanwhile"—so his final chapter is entitled—he has much sensible advice for the present generation; and his book, unlike so many on social topics, can be read for fun.

Governing Marriage

The Marriage Law of England. By J. C. Arnold. Staples Press. 150 pages. 12s. 6d.

Marriage, in the eyes of English law, is not a sacrament. The English legal code governing marriage, the canon law, was separated from its continental counterpart before the Council of Trent imposed the element of sacrament on what, in Roman Law, was essentially a contract. But it has become in part a contract, in part a status and in part a Christian institution and in doing so has had to surrender any claim to consistency. The statute law governing the making of a marriage has recently been codified by the Marriage Act, 1949, and that in itself is a justification for the publication of this book. The law governing the effects of the married state on individual's rights and duties has mainly been made by judges and is still in the process of development. This is the further merit of the book; there has been a great deal to assimilate during the last few years.

Mr Arnold has written a text book which describes what constitutes a valid marriage and under what conditions a purported marriage is void and an actual marriage can be declared void. It contains a chapter on legitimacy and the text of the Marriage Act, 1949. It does not deal with how a marriage can be dissolved (as distinct from being declared void), and its purpose is to set out the law as it is and not to offer views on what the law should be. It does not fall into the class of book which no young man or woman should fail to read but it should have a wider public than the legal profession; magistrates, social workers, local government officials and, as its jacket suggests, foreign lawyers (who will, it is to be hoped, derive no more than quiet enjoyment from some of the unconscious arrogancies of the 19th century judges when confronted with a foreign marriage or a marriage with a foreigner). The only serious criticism that can be offered is that the author might have dealt more

fully with the effect of the British Nationality Act, 1948, on the consequences that now follow a marriage between people of different nationalities.

The publishers are especially to be congratulated on their feat in producing a book in the first quarter of 1951 which is able to quote a case reported in the 1951 volume of *The Times Law Reports*.

Insurance Broking

Insurance Brokerage and Agency. By Victor Dover. Stone and Cox, Limited. 200 pages. 12s. 6d.

The insurance agency system is typically British. It has grown untidily over many years and has obvious shortcomings, yet it works well, is flexible, and disputes are very rare. The author discusses at some length the law and practice of a nebulous and specialised subject: insurance brokers and those in industry and commerce responsible for the placing of insurance should find much of practical value in this book besides an exposition of their rights and duties.

More space could perhaps have been advantageously devoted to points of wider interest. Whilst Lloyd's underwriters accept business only through brokers elected by the Committee of Lloyd's, the insurance companies appoint as agents not only insurance brokers (and anyone may so style himself) but also, at any rate in the United Kingdom, a large number of part-time agents who, although they are frequently little more than contact men, receive commission on practically the same scale as the brokers. The part-time agency system, and even more the existence of "own case" agents give scope for considerable self criticism. Does the present system give the public the best possible service at the minimum cost? A high standard of skill, knowledge and probity is rightly demanded from insurance brokers by the author, who properly insists that competition in this business must be by service and not by price. The public should be able to look to insurance brokers not only to carry out instructions but also to watch their clients' interest in all matters connected with insurance.

The Middle Lands

Scandinavia. Between East and West. Edited by Henning Friis. Cornell University Press: London, Geoffrey Cumberlege. 388 pages. \$4.50. 36s.

Based on a series of eleven lectures on Scandinavia given at the New School for Social Research in the summer of 1948, this book provides a wide and useful survey of the political, economic and social aspects of Scandinavia at the present time. The editor's two contributions—"Scandinavian Democracy" and "Social Welfare"—are among the best. So is the longest section, a rather specialist paper by Petter Jakob Bjerre, Director of the Norwegian Central Statistical Bureau, on "Government Economic Planning and Control." In quite a different sphere but also excellent is the last chapter, "We Americans and

Scandinavia," by Bryn Hovde, Director of the New School and *doyen* of American-Scandinavian sociologists. "The Scandinavian Countries in a Changing World Economy" (by Svend Laursen) and "Scandinavian Foreign Policy, Past and Present" (by Mrs Brita Skottsborg Ahman) are perhaps the least satisfactory sections, accurate enough but dull and stiffly written.

The book's title conveys its attitude, that, just as Scandinavia is geographically between East and West, so also is it politically, where it appears to have found in "the middle way" the solution to the more extreme doctrines farther East and farther West. There is much truth in this—and it will surprise many readers to discover that Denmark rather than Sweden was the pioneer of many of the experiments which have focused so much attention on Scandinavia in recent decades. But from its very nature the work is merely an introduction. An ample bibliography should ensure that most of the points it makes are followed up.

Shorter Notices

Land of Lakes. By Henry McGrady Bell. Robert Hale, Limited. 246 pages. 15s.

Few foreigners, if any, are so well qualified to sing the praises of Finland as that living legend, "Harry" Bell. This book of happy varied memories—an account of the escapades, excitements and enchantments of the life of a timber merchant, who became the first British Minister to the new Republic of Finland and is now Finland's Consul-General in London helps to explain both why Mr Bell is the *doyen* of Anglo-Finns and also why he should pay tribute in his seventieth year to his second homeland, fifty years after he first set foot in it. His account of this period sheds little new light on momentous developments nor does it claim to: but it adds many an illuminating personal touch and anecdote which point the tenacious shrewdness of the Finns and the considerable achievements of this great small nation.

The Middle East, Second Edition, 1950. Europa Publications, Limited. 375 pages, 13 maps. 50s.

This "survey and directory" provides facts on twelve countries in the Middle East and gives a short account of the geography, history, economic life and cultural activities of each of them. Short biographies of important individuals in the Middle East are given. The standard pattern adopted for the presentation of the very varied amount of information available for the different countries makes the book easy to consult.

Information Services, Their Organisation and Administration. By R. L. Collinson, F.L.A. James Clarke and Company, Limited. 80 pages. 6s.

The author describes this book as "purely introductory" to his subject in what amounts to an apology for not dealing with some sections in greater detail. The reader will find it "purely introductory" in the sense that it tells him how to start setting up an information service or library to which it is possible to add refinements and elaborations later.

Mr Collinson gives advice on staff, space and equipment, and he urges his readers

to remember the fully-developed scheme and begin as they mean to go on. His own straightforward and well-illustrated explanations are supplemented by bibliographies from which further and more detailed information can be obtained. For anyone setting up a new information section or faced with a collection of material in need of rearranging the short time needed to read this book will be well spent.

Reference and Text Books

Executives' Edition of the Blue Book of South African Business, 1951. National Publishing Company (Pty) Limited. 338 pages. 25s.

Most of this book is devoted to the law and regulations concerning commerce and employment, finance, taxation, debt and insolvency, and industrial law in South Africa. It is intended only as a general guide, and references are given to the Acts, Ordinances and Regulations which give the details. Financial information on public companies and foreign trade figures for 1949 are also given.

Australia 1950, The Herald Year Book. The Herald and Weekly Times Limited, Melbourne. 800 pages. 17s. 6d.

Starting with a diary of world and Australian events in 1949, this handbook goes on to cover all the subjects usually found in such reference books. They are given in summary form for foreign and Commonwealth countries and in detail and by States for Australia. As is to be expected, cricket and other forms of sport are included.

The Municipal Year Book and Public Utilities Directory, 1950. The Municipal Journal Limited. 1829 pages. £3 3s.

Although designed primarily as a reference book, the prefaces and general reviews in this work provide a very useful account of the activities of local governments and of their relations with the central authority. The information is not confined to municipal affairs, but deals also with rural and county councils and the regional bodies of nationalised industries and the hospitals. Short histories of the development of the municipalities are given. The scope and variety of the information tempts the reader to browse through the book after finding the facts he is looking for.

Finishing Handbook and Directory, 1951. Sawell Publications, Limited. 245 pages. 15s.

This is the first edition of a handbook which is intended to extend its scope in future editions. It deals with the materials, methods and processes of finishing in painting, electroplating, electropolishing, light alloy finishing and wood finishing. The first two sections of the book are designed for the technician, but the third provides a directory of firms undertaking finishing.

Pottery Gazette and Glass Trade Review Reference Book and Directory, 1951. 442 pages. 25s.

This classified guide is mainly of interest to those concerned with the pottery and glass trades. An illustrated section dealing with trade marks has a more general appeal since it enables users of glass and china articles to trace the manufacturers of their possessions.

The new novel by ARTHUR KOESTLER

THE AGE OF LONGING

Europe's leading novelist sets his new story at the moment of Europe's greatest crisis—the threatened Soviet onslaught on the western democracies.

"The book is a remarkable one and should be read."—OBSERVER

"Among the most original and stimulating novels of the past 12 months."—PETER QUENNELL

"A moving and disturbing novel. Brilliant characterization: intellectually exciting dialogue."—
