The Ropp Report.—Our mining correspondent writes:—Special interest attaches to the results secured by the Ropp Tin owing to the fact that it is much the largest producer in Northern Nigeria, the output fluctuating around 100 tons of concentrates per month. In 1919 the company made a net profit of £55,150 on an issued capital of £67,200, and the fortunate shareholders received dividends totalling 60 per cent., besides a bonus of 1½ shares for every share held. Last year's report, however, has a very different story to tell—a trading loss of £7,600. This is more than covered by an admitted claim for return of excess profits duty, but, naturally, there is no dividend, nor can one be expected until conditions in the metal market are different from those prevailing now and during the greater part of 1920. The output for the first six months of the current year amounts to 561 tons, representing a fair increase over the total for the corresponding period of last year. In this connection it may be noted that the metal responsible for more than half the 1920 revenue was on hand or in transit at December 31st, while nothing is said as to how the yield of the current year has been dealt with. Presumably it will

not have been sold at unremunerative prices. The ore reserve position is strong, the 10,000 tons reckoned upon being equivalent to over eight years' supply. On the financial side, it is satisfactory to observe the disappearance of the balance of both the loans and the debentures.

Obersea Correspondence.

UNITED STATES.—GOVERNMENT'S COTTON REPORT —SMALLEST YIELD IN 26 YEARS INDICATED— LARGE CARRY-OVER—COMMODITY PRICES IN JULY.

(FROM OUR CORRESPONDENT.)

NEW YORK, August 5.

THE extremely unfavourable report on the cotton crop, issued by the Department of Agriculture this week, was a great surprise to the cotton trade. It was much worse than anyone had expected. The report places the condition of the crop as on July 25th at 64.7 per cent. of normal, as compared with 69.2 per cent. on June 25th, 74.1 on July 25, 1920, and a ten-year average of 75.4 per cent. The final yield, as at present indicated, will be only 8,203,000 bales—the smallest in 26 years. The acreage planted to cotton this year was 26,519,000 acres, representing a decrease from last year of 10,524,000 acres, or nearly 29 per cent. Boll weevil depredations were widespread, the insect pest having been particularly active last month, causing exceptionally heavy damage throughout the belt, with "continued and increased damage threatened," the report says. Furthermore, the lack of fertiliser is becoming an important factor; from many cotton-growing sections it is reported that heavy rains have washed out the small supplies of fertiliser which had been used. Even with such a small crop as now indicated, the addition of the large carry-over from last year's crop—reckoned by Secretary Hester of the New Orleans Cotton Exchange as 8,871,000 bales—will give an abundant supply, based on last year's estimated consumption, which is placed by some authorities at 10,500,000 bales. Under normal conditions such a sensationally short yield would be regarded almost as a calamity, but this year it is considered in the nature of a godsend to the South if it results in sustained higher prices for the staple, thereby placing cotton-growers and allied interests in better circumstances financially. The immediate response of the market to the Government's report was a rise of about \$5 a bale. On the other hand, advances in the price of cotton will add to the many problems confronting cotton goods manufacturers, who, quite generally, complain of the meagre margin of profit, if any, afforded by current prices for their products, and of the great difficulty in getting consumers to pay more. The "consumers' strike" is not yet a thing of the past, either in textiles or in many other lines.

The slight rise in commodity prices in June was accentuated in July, Bradstreet's index number as of August 1st, \$11.0576, showing an increase of 3 per cent. over July 1st, which, added to the gain in June, has resulted in an advance from the low point on June 1st of 4.1 per cent. Most of that gain has been in food products, but the rise in the latter was strongly reinforced by textiles, notably cotton goods, in July. Prices of the latter, however, are still very low in many lines, compared with the present actual cost of production; so low, in fact, that manufacturers of print-cloths, for instance, are refusing to accept contracts for deliveries very far ahead at current levels. In all, seven groups of commodities advanced last month—namely, breadstuffs, live-stock, provisions and groceries, hides and leather, textiles, naval stores, and miscellaneous products; while six groups—fruits, metals, coal and coke, oils, building materials, and chemicals and drugs—declined. Of the 106 commodities included in Bradstreet's price compilations, 96 of which are contained in the index number, 36 advanced, 27 declined, and 43 remained unchanged. Although the index number has advanced in the past two months, and the general level is above that on the first of any month since April, it is still 12 per cent. below January 1st this year, 41 per cent. below August 1st a

year ago, 44 per cent. below August 1, 1919, and 42 per cent. below August, 1918. With the last three months excepted, it is lower than any index number since January 1, 1916, but is still 27 per cent. higher than that recorded on August 1, 1914, at the outbreak of the war.

FRANCE.—FINANCIAL CONFERENCE AND GERMAN COAL PRICES — REPARATION PAYMENTS — REVENUE.

(FROM OUR CORRESPONDENT.)

PARIS, August 16.

IF the decision of the Supreme Council to refer the Upper Silesia problem to the Council of the League of Nations for settlement has proved satisfactory to France, inasmuch as it has enabled a bridge to be found over an obstacle that threatened to cause a breach between her and her nearest Ally, it cannot be said that an equally agreeable outcome has characterised the sittings of the Inter-allied Financial Conference that has been sitting here alongside the Supreme Council. The decisions arrived at by the Allied Finance Ministers who composed that conference are almost universally regarded here as seriously detrimental to this country, and concrete evidence of this feeling elsewhere has been given by a fresh sharp fall in the franc, which stood somewhere round 46.50 when the conference began, but closed this evening at a point appreciably over 47.

On one point the Inter-allied Finance Conference came to a decision plainly in favour of French interests, and that was as to the price at which France is to be debited with the coal she has received from Germany through Rotterdam and Antwerp, and which she will continue to receive through those ports down to August 31, 1922. Hitherto this coal has been debited to France at the prices charged for coal exported from Great Britain, as to which prices, it will be remembered, the French Government has protested time after time, in view of the fact that the export price of British coal was for many months (at a time when France could not do without such coal) fixed at a much higher price than those ruling in England itself for the same coal. The difficulty as to the high price of English coal exported to this country was overcome by (1) the miners' strike, which rendered those exports impossible, and (2) competitive and much lower prices offered by exporters of American coal, who placed at the disposal of this country all the combustibles that were needed. This left unsettled, however, the f.o.b. price, at Antwerp and Rotterdam, of the coal Germany was compelled to furnish to France under the terms of the Treaty of Versailles, to compensate her for the loss of combustibles from which she suffered owing to the wreckage of the Northern French mines during the war. After a long discussion the Inter-allied Financial Conference decided that the coal in question is to be debited to France at the same price as that ruling in the interior of Germany. The decision, I understand, represents an advantage to this country down to the present of over 140,000,000 marks gold.

This "windfall," however, has been more than cancelled by the decisions of the Conference as to the manner in which the first 1,000 million marks gold paid by Germany is to be distributed among the Allies. This first milliard, it may be recalled, must be utilised, according to the provisions of the Treaty, to reimburse the various Allies for the cost of maintaining their respective armies of occupation. It was stipulated, however, that when the time came to settle accounts under this heading the value of the payments in kind that had been received by each of the Allies must be included in the calculation. On this basis it was found that Belgium had received between 280 and 300 million marks gold more than the maintenance of her army of occupation had cost her down to May 1, 1921, the date fixed as the basis of the account. Italy, it was contended, had received from 30 to 40

millions in excess of her expenditure under this head, while Great Britain still had outstanding claims of between 600 and 700 million marks gold to be satisfied, and France some 300 millions.

In regard to Belgium, it was specially agreed at Spa that there should be no question of her being called on to repay any of the amount she might receive in cash or kind over and above her actual expenditure on her troops in the occupied area. No such provision existed in regard to Italy, who may therefore be expected to be called upon to repay the comparatively small amount for which she is debtor. With regard to Great Britain's claim, two important factors were raised with a view to largely increasing the value of the payments that have already been made to her in kind (and consequently reducing the outstanding balance due to her). The large amount of merchant shipping that was surrendered to the Allies by Germany, and by them allotted to Great Britain, it was contended, was debited to that Power at a much lower price per ton than it ought to have been, if a proper commercial value had been fixed upon it. Figures published here insisted that merchant shipping, which ought to have been valued at £20 per ton, was actually debited to Great Britain at £8 per ton only. Further, it was pointed out that Great Britain had expended on its army of occupation a greater amount than that expended by France for similar purposes, although the French army on the Rhine is very substantially greater in number. This, it was explained, was due to the much higher cost per head for maintaining the British soldier as compared with the French.

Revised figures were ultimately adopted in regard to both shipping and the cost of the British army of occupation. On the latter account, the conference decided to adopt as a base figure the cost of maintaining the French soldier, which was taken as 16 francs per day. This figure was increased by 2 marks gold per day for the British soldier, and by 3 marks gold per day for the American soldier, owing to the greater distance of the troops of these two Powers from their respective countries. The actual figures have not yet been worked out (and will not be known, it is expected, before November 1st in any case), but it is estimated that the modification of these two factors will reduce the outstanding British claim to something in the neighbourhood of 500 million marks gold, as against between 600 and 700 millions.

There remained the question of what was due to France, and in this regard the question turned on whether the value of the coal mines in the Saar district, which have been attributed for a term of years, at any rate to France, must be included under the heading of payments in kind that have already been made to that country. France had expended, down to May 1st, 300,000,000 marks gold on the maintenance of her army of occupation, and this she claimed to be re-imbursed in cash out of the first 1,000 million marks gold paid by Germany. The Inter-allied Finance Ministers, however, decided that, under the provisions of the Treaty of Versailles, she has already received, in the shape of the Saar coal mines, value to the amount of more than she has spent on her army on the Rhine, and that consequently, assuming that the capital value of those mines is more than 400,000,000 marks gold, she must repay the balance of 100,000,000 marks gold which she has received in excess of her expenditure on the troops. It was further decided that, whatever the exact amount may ultimately be decided to be, France will be required to repay it to the rest of the Allies by ten equal half-yearly instalments, with interest at 5 per cent., during the five years beginning from November 1, 1922. By that date, it was pointed out, Belgium's preferential rights will have been exhausted, and France will find no difficulty in liquidating the amounts due every half-year from the payments to be made by Germany.

As may readily be understood, the decisions of the Inter-allied Finance Conference have caused a great deal of dissatisfaction here, and there is little doubt more will be heard of them in the future. These decisions have to be approved by the Supreme Council, in any case, and as they were not completed until two o'clock in the morning after the close of the Supreme Council's sittings in

Paris, much may occur before that august body is called upon to signify its assent. The document embodying the decisions of the Conference was approved by the whole of the assembled delegates, but in the case of France and Japan this was a pure matter of form, as both M. Doumer, the French Finance Minister, and the Japanese delegate signed under the express reserve that the document must be subject to the approval of their respective Governments. The effect of the decisions of the Conference, if they are ultimately put into force, would be that, to put it in a nutshell, France will not receive a centime of liquid cash from Germany before the end of next year, at the earliest.

The French taxation returns continue unsatisfactory. Although the Budget estimates were substantially reduced, some time ago, in view of the altered circumstances since the last Budget was compiled (particularly in regard to the disappointing tax on turnover), the yield for the month of July proved to be 137,000,000 francs less than even the revised estimates. There was a similar deficit in June of 104,000,000 francs, in May of 121,000,000 francs, and in April of 86 millions. The total deficit for the seven months since the beginning of the financial year is 597,932,300 francs. The returns for July show substantial increases in the yields from the luxury tax (which produced 2,130,000 francs, or exactly the same amount as last year, which was 1,130,000 francs more than the estimate), duties on securities (over 29,000,000 francs over the estimate), indirect taxes (over 34½ millions up), and petroleum and motor spirit. The revenue from posts, telegraphs, and telephones, doubtless owing to the increased tariffs, has fallen off nearly 8½ million francs as compared with the estimates, but is over nine millions higher than it was in July last year. The great causes of the falling off in revenue are to be found, however, in connection with the turnover tax, which is over 95½ millions less than the Budget estimates, and with the yield from Customs, which shows a falling off of nearly 72,000,000 francs on the month.

The returns of the Bank of France for the last week, the previous week, and the corresponding week of 1913 are as follows:—

GERMANY.—SILESIA — FINANCIAL REFORM—EXCHANGE AND BOURSE—TRADE BOOM—PRICES.

(FROM OUR CORRESPONDENT.)

BERLIN, August 15.

THE submission of the Upper Silesian question to the League of Nations has been on the whole welcomed here. A Supreme Council compromise, it was argued, could only be unsatisfactory to Germany, and it is predicted, on not entirely convincing grounds, that the French contention will be badly outvoted in the Council of the League.

Dr Wirth has published his financial reform plan in the shape of a list of 15 Bills submitted or under preparation. In some cases the rates, and in most cases the estimated yield, are not given; but the total additional revenue yield is estimated at from 32 to 36 milliards, and the whole revenue on this basis at 80 milliards. As the estimated expenditure, including reparations, is at lowest 130 milliards, there still remains a large deficit, and further taxes are being considered. The new fall in Reichsmark exchange makes the prospect still blacker by increasing both the price of foreign currency for reparations aims, and the cost of home administration.

The Bills submitted or announced as nearly ready provide both indirect and direct taxes. The new Customs Bill enacts considerably higher import duties on tea, coffee, chocolate, cocoa, and certain spices and unnecessary foods, and doubles the import duties on unnecessary or semi-necessary manufactured goods, including typewriters, cash registers, calculating machines, and talking machines. The State Spirits monopoly is to be reformed, the tax being raised from 800 to a minimum of 4,000 marks per hectolitre; the sugar tax is to be raised from 14 marks to 100 marks per 100 kilos; and the tax on artificial sweeteners increased. The additional yield from these three sources is 2 milliard marks. The matches and mineral water taxes are to be doubled; the beer and lighting materials taxes to be quadrupled, and 900,000,000 marks more is to be got from tobacco by abolishing certain partial exemptions, the whole yield from tobacco being brought up to 2.7 milliards. The motor-car tax will be raised, and there will be a new tax on racing bets, and legalisation of bookmaking. In most cases the above increases mean no very heavy *ad valorem* burden, as the old rates were fixed on quantity, and effectively they have fallen heavily owing to the price rise. The coal tax is to be raised until it yields 9.2 milliard marks, against 4.7 milliard marks in 1920. This is effected by increasing the present 20 per cent. rate on selling price to 30 per cent.; the Bill, however, gives the Government power to reduce the new rate provisionally to 25 per cent. This plan does not fulfil the Government's intention to tax coal until it reaches world-market level, but that can only be done gradually.

The Corporation Tax is to be trebled. At present this is a uniform 10 per cent. income-tax for public companies, with supplements progressively rising to another 10 per cent., according to the height of dividend. The new tax will be 30 per cent. of profits, dividends being ignored. The Sales Tax (*Umsatzsteuer*), also one of Erzberger's imposts, is to be doubled. The present rate is 1½ per cent. on all turnover in necessary goods (15 per cent. for luxuries). Certain existing exemptions, e.g., on first sales at home of imported goods, and on receipts from exports, will be abolished, and this will bring 170 milliards of new transactions under the tax, the additional yield of which (unofficial estimate) will be 12 milliards. It is further proposed to bring certain half-finished luxury goods under the luxury rate, which at present falls only on finished goods. The Stamp Duties laws, including those dealing with Bourse deals, are comprehensively reformed by a new tax on capital transactions (*Kapitalverkehrssteuer*), in which the duties on company foundations and transactions, and on stock, share and bond transfers are raised, and a new tax is imposed on dealings in foreign exchange. The last rises from one-tenth per mille on dealings in gold, bills, and cheques for trade purposes to 2½ per mille on dealings between private parties. Sales and purchases of foreign banknotes pay double these rates.

Only one entirely new direct tax on property is proposed, but the existing Emergency Levy and Property Tax (*Besitzsteuer*) are abolished, and replaced by two taxes of different character. The entirely new impost is a post-war gains tax. The last tax of this character, Erzberger's War Gains Tax, was levied on the increment of wealth between June, 1913, and June, 1919, and it took 100 per cent. of all increase exceeding about 270,000 marks. The Post-War Gains Tax is on increase of wealth between June, 1919, and June, 1921. Increases not exceeding 100,000 marks are exempted; above that limit the rate rises progressively from 5 to (when the increase exceeds 2 millions) 30 per cent. Instead of the Emergency Levy will be imposed a *Vermögenssteuer*. The levy was to yield 45 milliards, payable originally in 30 or 40 annual instalments, but as amended one-third was made payable this year. The main motive for abolishing it is the rise in nominal values caused by the currency decline; the amount of the tax, and of the instalments, was assessed on land, houses, stocks, &c., at the values of December 31, 1919, and therefore the nominal revenue yielded remains unchanged, while the effective burden on the taxpayer becomes ever smaller and smaller. The new *Vermögenssteuer* will prevent that by providing for reassessment of all wealth every three years, first on December 31, 1922. Wealth not exceeding 50,000 marks will be exempted. On December 31, 1925, and each following third anniversary, individual taxpayers will pay from ½ to 1 per cent., and corporate taxpayers 1½ per mille, to which rates during the first 15 years will be added supplements for individuals of 300 per cent. of the tax, and for corporations of 150 per cent. The yield is not stated; it depends largely upon currency developments. The abolished *Besitzsteuer* was a triennially assessed tax on increment of wealth. The *Vermögenszuwachssteuer*, which replaces it, will also be assessed triennially, and will be imposed on the increment of wealth. Tax-free will be increment not exceeding 25,000 marks, after which the rate will rise from 1 per cent. on the first taxable 100,000 marks to 10 per cent. of any increase exceeding 6 million marks.

The Government, it is stated, is again considering a Forced Loan, this time to be imposed only on productive capital in banks, industrial undertakings, &c.; and further, some new means of taxing the "gold values" is being considered. The reformed Corporation Tax practically makes the State owner of three-tenths of the assets of all public companies, and it is not clear whether this is considered as fulfilling Dr Wirth's promise that the State will "participate in industrial profits." The Ministry of Industry has prepared a memorandum, showing that the Government might acquire capital values of 382 milliards by dealing ruthlessly with the "gold values." In principle the Ministry's plan provides for imposing on all property (other than fixed-interest loans and bonds, which are paper values) State mortgages which would represent a great part of the nominal increase in value caused by the currency decline. This plan would complete the ruin of the propertied classes, as the sixfold profits and dividends have only about a third of the gold value of pre-war profits. But as the bond-holding and rentier class has been automatically expropriated by the currency decline, the owners of "gold values" have so far got off relatively easily.

The fall in the mark exchange has produced in bourse, industrial, and commercial affairs a repetition of the "Catastrophe Boom" of the winter of 1919-20. The selling rate of sterling was to-day 315.16, the highest point touched since early last year, and of the dollar 86.09, which is near the high point of last November. The mark's fall has now lasted since May, but as there has been no appreciable temporary recovery, the fall appears slow in comparison with that of early 1920, when the foreign exchanges doubled in a couple of weeks. The Reichsbank report for August 6th shows a decline of Treasury bill discounts by 4,852,105,000 marks to 75,129,862,000 marks, of private bills by 89,086,000 marks to 1,096,443,000 marks, of State deposits by 2,980,215,000 marks to 1,829,811,000 marks, and of private deposits 3,532,001,000 marks to 7,482,129,000 marks. Note circulation rose by 263,827,000 marks to 77,654,680,000 marks; Kassenscheine fell by 81,200,000

marks to 8,277,100,000 marks. The bourse boom developed last week into a buyers' panic, which continued to-day, though the close was somewhat quieter.

Reports as to conditions of industry are extremely good. Exceptions are the machine, chemicals, and ship-building branches. In all iron and steel branches except thick plates, the sale of which is checked by the ship-building depression, almost a boom prevails, in particular in bar-iron and wire. The textiles branches are enjoying sudden and quickly-increasing prosperity. For woollen goods large foreign orders from Scandinavia, Holland, and the new Baltic States have been received, and American orders have come for knitted goods. The wool spinners and weavers are sold out, and some report having orders until the end of the year. Cotton spinning and weaving are also booming; producers are rejecting orders, and wholesale dealers cannot get goods. The silk branches are improving, and prices are rapidly rising. In other branches there is a marked increase in foreign orders.

This prosperity is entirely a phase of the same "Catastrophe Boom" that sends up stocks. Foreigners buy because of the cheapened mark, and natives buy because they dread a further decline in the mark's home buying power, and hasten to get rid of their money. The Commodity Prices Index of the *Frankfurter Zeitung* for July (before the newest mark decline) show how this apprehension is justified. The index for 77 commodities (based on 100 for January 1, 1920) rose during the month from 135.4 to 156, which is also the top figure of May 1, 1920. The index which took five months (since February 5th) to drop 11 points, rose over 20 points in one month. Food has risen enormously. The wholesale foods index rose in July from 144.5 to 203, and is far above the former maximum (177) of early December.

CANADA.—THE RAILWAYS IN 1920.

(FROM OUR CORRESPONDENT.)

OTTAWA, August 3.

THE preliminary report on Canadian railway operations for 1920, issued by the Dominion Bureau of Statistics, shows the heavy handicap imposed by the high wage scales, and the well-nigh impossible position occupied by the national system.

The returns, which are for steam roads only, show that the year was the most unfavourable experienced during their history. The ratio of operating expenses to operating revenues was 97.17 per cent., as compared with 92.2 per cent. for 1919, and an average of 71 per cent. for the period 1900 to 1917 inclusive, the range for these years being from 67.4 to 74.4 per cent. The Bureau of Railway Economics is authority for the statement that the operating ratio on American roads was 93.59 per cent. in 1920, and 85.25 per cent. in 1919.

Of the 56 roads reporting, 31 paid operating expenses and 25 had a deficit. Of these 31, after paying taxes, interest, rents, &c., 19 had a corporate income of \$36,581,437. The corporate loss on the other 37 roads amounted to \$79,669,825, the larger items being as follows:—

Canadian Northern	\$ 40,501,705
Canadian Government lines.....	9,432,054
Grand Trunk	4,519,809
Grand Trunk Pacific.....	17,456,359

It is significantly added that the loss on the Canadian Government lines—that is, on the Intercolonial and the National Transcontinental, does not include interest on funded and unfunded debt; the figures for the Canadian Northern, however, include interest.

Seven roads declared dividends as follows:—Canadian Pacific, \$29,227,226; Canada Southern, \$450,000; Hereford, \$32,000; Massawippi, \$24,000; Naperville Junction, \$36,000; Quebec Central, \$169,000; Thousand Islands, \$4,200.

The total revenue from operations was \$491,938,857, an increase of \$83,340,496 over 1919, but operating expenses increased from \$376,789,093 to \$478,002,823, or by \$101,213,730. The net operating revenue was \$13,936,003, a decrease of \$17,873,265.

THE MERCANTILE BANK OF INDIA, LTD.

Head Office: 15 Gracechurch St., London, E.C.3
Capital Authorised £3,000,000
Paid Up Capital 1,050,000
Reserve Fund and Undivided Profits 1,227,638

Branches:

INDIA, BURMAH, CEYLON, STRAITS SETTLEMENTS, CHINA, and PORT LOUIS, MAURITIUS.

The Bank buys and sells Bills of Exchange, Issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East, on terms to be had on application.

Fixed Deposit Rates will be quoted upon application.
On **Current Accounts** interest is allowed at 2 per cent. per annum on daily balances.

After paying taxes, \$9,553,990, interest on funded and unfunded debt, \$59,102,979, and with other deductions and additions to income, there was a corporate loss of \$43,088,388 as compared with \$14,928,666 in 1919. As an evidence of how the higher wages scales added to the burden of the roads, it may be said that 56 per cent. of the increase in operating expense was due to this cause, the wages and salaries bill having gone up during the year from \$233,323,074 to \$290,431,221, while the cost of fuel increased from \$52,563,334 to \$66,983,301. The number of employees increased by 11,206, or 6 per cent.

The revenue freight carried one mile increased 4,942,584,394 ton miles, or 18 per cent., but the passenger traffic fell off to the extent of 137,013,216 passenger miles, or 3.7 per cent. The decrease in passenger traffic was not caused by fewer people travelling, but by shorter journeys.

The summary of returns for all the roads gives the miles operated as 39,196, the capital stock as \$1,106,949,621, and the funded debt \$981,272,646. As already indicated, the operating revenue was \$491,938,857, of which freight brought in \$103,470,351, an increase of \$70,000,000 during the year, showing that the rate increases granted last Fall were of appreciable assistance. The increased passenger rates, however, only brought in \$6,500,000 more than in 1919. Operating expenses, which were over \$101,000,000 in excess of those for the preceding year, show heavier charges in every department. For example, maintenance of way and structures shows an increase of nearly \$18,000,000 maintenance of equipment, \$30,000,000; traffic, \$2,400,000; transportation lake and water, \$49,000,000. Taxes were \$4,000,000 in excess of those for 1919; interest on funded and unfunded debt was \$4,500,000 greater; the net corporate loss increased by \$30,000,000.

The superior management of the Canadian Pacific and Grand Trunk, as compared with those on the various roads constituting the Government system, is strikingly demonstrated. The Canadian Pacific, in spite of the increased charges of \$37,000,000, had a net operating revenue \$3,000,000 larger than in 1919, and this notwithstanding the fact that it paid nearly \$2,500,000 more in taxes, \$620,000 more in interest. Its net corporate income was \$33,344,084, as compared with \$31,820,869 in 1919. The Grand Trunk, while its net operating revenue was little more than \$3,000,000 below that of the preceding year, made an infinitely better showing than that of any branch of the Government system. Its operating revenue was \$12,500,000 greater, but its operating expense went up \$15,700,000. This reduced its net operating revenue from \$8,678,366 to \$5,575,362. It paid \$77,000 more in taxes than in 1919, \$628,000 more in interest, and other deductions amounted to \$2,800,000. The increase in wages paid was \$10,696,000. In tons of freight carried this road making a particularly good showing, the increase being 3,035,000 tons, while the C.P.R.'s increase was only 106,000. Indeed, its increase in this respect was about 900,000 tons more than that on the C.P.R. and C.N.R. combined, while the Grand Trunk Pacific reported a loss of 150,000 tons. The increase of nearly \$9,000,000 in wages paid a great deal more than exceeds the corporate loss.

The Canadian Government lines—that is, the Intercolonial and the National Transcontinental—while they increased their operating revenue by nearly \$4,000,000,

had increased operating expenses amounting to \$7,000,000, of which nearly \$5,500,000 was due to increased payment for wages. Their net operating deficit was \$2,800,000 greater than in 1919. Their revenue train per mile was \$400,000 lower than in 1919, but the tons of freight carried show an increase of 1,700,000. The Canadian Northern figures show an increase of \$41,000,000 in the total capital obligations during the year. While the operating revenue was \$13,000,000 greater than in 1919, the operating expense shows an increase of nearly \$23,000,000, the operating deficit being \$9,700,000. Interest shows an increase of \$4,600,000, the net corporate loss being \$40,458,000, as compared with \$26,187,000 in the preceding year. The tons of freight carried was a little more than 2,000,000 in excess of that for 1919.

The Grand Trunk Pacific had an especially unfortunate year, operation by the Government not having, apparently, much improved its position. The operating revenue was \$2,700,000 greater than in 1919, but the total operating expense shows an increase of \$7,000,000, leaving an operating deficit of \$10,134,513, as compared with \$6,272,444 in 1919, and a net corporate loss of \$17,456,359, as compared with \$12,430,354. The increase in wages paid was nearly \$4,000,000.

ITALY.—REVENUE RETURNS—SAVING BANKS. (FROM OUR CORRESPONDENT.)

TURIN, August 13.
RECENT revenue statistics give interesting particulars of the financial results of past year. The general real revenue was 12,600 millions lire. About 1,700 millions are classified under the head of minor or miscellaneous items. The other items are classified as follows (in millions of lire):—

	1919-20.	1920-21.	Inc. or Dec.
Income-taxes	2,331.4 ..	3,993.4 ..	+ 1,662.0
Stamp and concession taxes	633.4 ..	1,107.8 ..	+ 474.4
Succession and registration taxes	665.8 ..	773.5 ..	+ 107.8
Excise and other consumption taxes	1,314.7 ..	1,608.0 ..	+ 293.3
Industrial monopolies	1,829.1 ..	2,744.1 ..	+ 915.0
Lottery	90.5 ..	151.0 ..	+ 60.5
Commercial monopolies	452.5 ..	521.9 ..	+ 69.3
Total	7,317.4 ..	10,899.7 ..	+ 3,582.3

In the income-tax category, the most interesting feature is the great increase in the yield of the excess profits tax, which goes from 1,029 to 1,991.5 millions lire. For two years this tax will still give a large yield, but its ultimate disappearance must be looked forward to with some concern. Fortunately, other taxes show signs of taking its place. First of all there is the extraordinary tax on capital, which from nothing in 1919-20, rose to 452.5 millions lire in 1920-21, and may yield during the first ten years of its existence about 1,000 millions annually. This will enable the Treasury to surmount the most difficult period in the reorganisation of the old income-taxes. The oldest of all, the tax on land income, progressed only from 114 to 115.6 millions lire in the last two years. The yield is stationary owing to the antiquated methods of valuing land incomes. Once reformed, the tax will give more important results. The tax on professional, industrial, commercial incomes and on incomes of capital and public and private employments rose from 686.4 to 935.3. This is a satisfactory rate, and full of promise. Next year the provisional super-tax on incomes above 10,000 lire will be superseded by a new complementary tax on total income, which is bound to yield a much greater sum than the paltry one of 89.4 millions lire furnished by provisional tax.

In the stamp and concession category, perhaps the most interesting items are the luxury taxes:—

	1919-20.	1920-21.	Increase.
Tax on cinematographs	14.3 ..	17.4 ..	+ 3.1
Tax on motor cars	36.2 ..	83.2 ..	+ 47.0
Tax on jewellery	17.8 ..	24.1 ..	+ 6.3
Tax on perfumeries	39.2 ..	43.1 ..	+ 3.8
Tax on restaurants	4.5 ..	5.4 ..	+ 0.9
Tax on liquor and fine wines	14.2 ..	21.5 ..	+ 7.3
Tax on sales of luxury goods	..	66.1 ..	+ 66.1
Tax on theatres	..	2.5 ..	+ 2.5

This category, which is in its initial stage, is very promising, especially if the Exchequer will resist proposals to

increase excessively the rates of tax. The increase of 293.3 millions in excise is wholly due to the new tax on wine, which from nothing in 1919-20 passed to 311.1 millions lire in 1920-21. But the wine growers are very influential in Italy, especially among the popular or catholic party. This party has secured a partial repeal of the voted increase of the rate of the tax from 10 to 30 lire per hectolitre. The tax will be increased only to 20 lire. Even so, the wine tax will give next year an increased return.

The commercial monopolies on coffee, coffee substitutes, &c., have been repealed, as I said in a recent letter, but the Exchequer will lose nothing, as coffee and coffee substitutes will remain subject to an equivalent excise tax.

The industrial monopolies continue their brilliant career:—

	1919-20.	1920-21.	Increase.
Tobacco	1,580.1 ..	2,435.4 ..	+ 855.3
Salt	125.8 ..	133.3 ..	+ 7.5
Matches	117.0 ..	167.6 ..	+ 50.5
Playing cards	6.2 ..	7.8 ..	+ 1.6
Lottery	90.5 ..	151.0 ..	+ 60.5

Tobacco and matches are closely connected, and the regularity of their consumption, in spite of heavy increases of prices, is a most interesting feature of post-war finance. It appears that common people, who before the war consumed very little of this luxury, have learned the taste for tobacco in the trenches, and are not apt to lose it.

A report on the ordinary saving banks (exclusive of postal savings bank) gives the following figures of deposits (in millions of lire):—

	1914	1915	1916	1917	1918	1919	1920	1921
End of June, 1914	2,800.0							
" December, 1914	2,703.0							
" " 1915	2,785.0							
" " 1916	3,222.3							
" " 1917	3,727.4							
" " 1918	4,781.4							
" " 1919	5,841.8							
" " 1920	6,668.4							
" March, 1921	7,135.0							

The increase is following the march of the depreciation of the lire; but, nevertheless, is a proof that workers public and private employees, farmers, and the middle class of professional and commercial people, which constitutes the bulk of the saving bank clientele, are no losing their saving capacity.

SWITZERLAND.—BANK RATE AND EXCHANGE-INDUSTRIAL CONDITIONS.

(FROM OUR CORRESPONDENT.)

GENEVA, August 15.
THE Swiss National Bank has again lowered the official rate by one-half per cent. There are optimists in the country who believe that cheaper credits ruling in Switzerland will stop the unhealthy rise of the Swiss francs in neighbouring countries. The boom in Swiss francs ruling in Vienna and Berlin, and to a smaller extent in Milan, had its origin in those places, and not in a of foreign currencies in our markets. There is still very strong demand for Swiss francs in all our neighbouring countries, and if only a small part of purchases of Swiss francs transforms itself into purchases of Swiss goods, there would be an excellent industrial prosperity in Switzerland. But only a few buyers Swiss francs are would-be buyers of Swiss goods.

The annual report of Messrs Brown, Boveri, Lim the biggest Swiss industrial firm, producers of electrical machinery, is pessimistic in every respect as to the immediate future of Swiss engineering. Owing to the value of our currency we pay, according to this report too high wages to our workers. But the Swiss working class is fully justified in replying that they live no better than their comrades in countries of depreciated currencies such as France or Belgium. The Protectionist Swiss customs system has the effect that the Swiss consumer derives not the slightest advantage from the big buying power of the Swiss franc abroad. Swiss importers of cattle receive extraordinarily cheap prices for slaughter cattle from Yugoslavia, Denmark, Czechoslovakia, &c., &c., but no import licences are granted. There are also no import licences for

for cheap foreign corn, foreign butter, &c., &c. Artificially the cost of life in recent years has been maintained in order to prevent a drop in the value of agricultural land. It is true that many Swiss peasants were short-sighted enough to buy land at ridiculously high prices during the latter part of the war. But it is not the function of the State to protect gamblers against natural losses. Such a state of affairs creates a very pessimistic feeling as to the future of Swiss industry.

Letters to the Editor.

ECONOMIC TROUBLES AND THE CURRENCY.

TO THE EDITOR OF THE ECONOMIST.

SIR,—I have read with interest the correspondence in your columns dealing with England's financial difficulties on the one hand, and with the difficulty of restoring stability among the international exchanges on the other hand. Most of your correspondents advocate overcoming the difficulties by some ingenious innovation. Mr Leighton Jordan and others would straighten out the national finances by a capital levy which would be ruinous to the country, while many of your correspondents would stimulate international trade and stabilise the exchanges, not by re-establishing the gold standard, but by some novel paper arrangement of their own.

The world suffers from the waste and confusion caused by the war and by the post-war boom. National finances and the national economy are subject to the same laws as private finances and private economy. In both cases loss and waste can be made up only by increased production and diminished consumption, by hard work and thrift. The American worker produces, on an average, three times as much as the English worker. By Americanising our industries we may treble production, national wealth, national income, and the yield of taxes. With a trebled income our war debt will appear small. Imaginative writers propose replacing the homely and necessary virtues of hard work and thrift by some artificial arrangement of their own, and they recommend a totally unworkable international currency. There has been an international currency up to 1914, which the wisdom of ages has established. The international business was based on gold. The only satisfactory international standard is gold, for a variety of reasons which can scarcely adequately be discussed in the present letter. "Money is gold, and nothing else," as the late Mr Pierpont Morgan used to say. No artificial standard, however ingenious, will replace the gold standard which has the confidence of mankind.

One of the ablest organisers and business men, and one of the most open-minded men in the world, is Mr Herbert Hoover. The United States are in a position not dissimilar to that prevailing in this country. On July 15th Mr Hoover stated, before the National Association of Real Estate Boards in Chicago:—

"This depression is to a great degree born of the malevolent forces we set in motion by inflating and by all booms. It is in the booms that we speculate, over-extend our liabilities, slacken down in effort, lower our efficiency, waste our surplus in riotous living instead of creation of new capital, drive our prices to vicious levels, lose our moral and business balance. We must suffer a period of duress from war and punishment for the boom, and only until we rebuild our virtues of hard work, frugal living, more saving, sober conduct, higher honesty. These things are trite enough, but they are as immutable as history, and they are the only way out. There are a few people who will not accept these hard facts, who will persist in the notion that they can by various devices avoid reaping what they have sown..... We are flooded by economic patent medicines that would evade the stern laws of economic hygiene."

Mr Hoover spoke solid common sense. Plans, however ingenious, will not re-establish national prosperity and international trade. Hard work and thrift are needed, and it is a great misfortune that the necessity of working hard and saving is obscured by the alluring plans which are unceasingly placed before the public.—I am, Sir, your obedient servant,
J. ELLIS BARKER.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET. August 25. ACCOUNT. August 26.

Stock Exchange markets cannot complain that they have been left this week without sensation. Indeed, the excitement has been much more marked than the volume of business, which latter, except in one or two markets, is running at about the usual holiday rate. Markets all round were unsettled by a violent slump in oil shares, which, occurring on Wednesday afternoon, spread uneasiness throughout other parts of the Stock Exchange, being regarded as traceable to forced liquidation on behalf of people with loans at Scottish banks who had asked their customers to put up more cover. The outstanding feature of strength is provided by Foreign Government bonds and South American railway stocks. The mining markets remain uninteresting.

There is not much doing in investment stocks, and although the prices of gilt-edged securities keep fairly firm, with rises on balance in corporation stocks, the amount of business doing is small. War stocks are rather easier. The Home Railway prior-charges are inclined to droop, but no particular depression developed, except in some of the Scottish stocks, these being

lowered in consequence of the unsatisfactory dividend announcements from the companies. Foreign Government bonds stand out as a bright spot. New York has been a large buyer of Brazilian Government bonds, apparently in consequence of the strengthening of the Brazilian exchange. Argentine, Chilean, Uruguayan, Chinese, and Japanese bonds are mostly better. French and German bonds, on the other hand, have gone back. A slight recovery occurred in the new Norwegian Sixes.

Home Railway stocks have not benefited by the passing into their own control of the railway companies. Where prices moved at all, the changes were irregular. Underground Income bonds advanced, but the other Tube stocks are mostly down, Metropolitan and Districts both following the example of the steam issues. Canadian Pacifics hardened, and Mexican Rails, after being better, reacted towards the end of the week. Argentine Railway stocks have gone ahead very substantially. The better appearance assumed by the traffic returns has brought in buyers, who quickly found that the amount of floating stock in the market was negligible. Pressure to buy brought about advances of several points, and with these improvements some of the other Foreign Railway stocks sympathised, San Paulos, for instance, Leopoldinas, and United of Havana.

The Rubber market is weak and dispirited, raw rubber having dropped to 8d per lb. The Oil market has been the scene of a violent slump, which demoralised a market none too well supplied with supporting orders. Furious selling of Shells, Mexican Eagles, Burmahs, and Royal Dutch led to a heavy tendency all round, and although the break brought in a good many small buyers, the result of the week's work is seen in a long list of falls. Shipping stocks started to go better at the beginning of the week, but, finding little public backing, prices soon reacted. Iron, Coal, and Steel shares are unfavourably affected by the postponement of the interim dividend announcements in several cases. Harrods gave way abruptly on the passing of the interim dividend, the price dropping to 24s, to rally sharply later on. Marconis also broke away, the dividend announcement, making 15 per cent. for the year, causing disappointment, which was emphasised by the material falling away of profits shown in the company's statement. There was, however, a smart recovery from the lowest. Dunlops have dwindled, and the effect of Harrods' dividend announcement is seen in falls amongst the shares in various other companies of somewhat similar class. Banking shares have lost part of their recent strength, P and O. Banking being more particularly affected, while the Insurance list is idle and its movements narrow. Bond of several Mexican utility companies have been quoted this week ex their arrears of interest, and this has caused a little demand for the bonds at the cheap-looking ex dividend prices. The premiums on new issues are fairly well maintained, though some of them show a tendency to relax. The whole of the Miscellaneous market is affected by the disturbance in Oil shares, and, in spite of the recovery which occurred from the worst prices touched, a good deal of uneasiness remains, inasmuch as nobody can judge whether or not there is more stock to be forcibly liquidated before the selling is finished.

Although the price of gold is well maintained, Kaffir shares attract no public attention. Professional buying, however, has helped prices. A minor feature amongst Rhodesians was a sharp rise in Lonely Reefs, in consequence of good developments. The price was run up to 2½ before it gave way under the influence of a little profit-taking. Globe and Phoenix also rose abruptly. Tin, the metal, has weakened by several pounds per ton, and this caused depression amongst shares in tin-producing companies. The well-known Ropp Company has passed its dividend, causing flatness in the shares and spreading dullness amongst others of its kind. West Australians are also easier, and the recent excitement over Russians has entirely subsided, leaving the market in a sagging condition. Burma Corporations gave way on vague gossip as to a possible new issue, and Mexican Mining shares have been dormant.

NEW ISSUES.

The new issues of the week and the current year and date of opening of the lists have been as follows:—

	Nominal Capital.	Cash Subscription.	First Payment.	Further Liability.
ISSUES OF THE WEEK—

COMPANY MEETINGS, &c.

BANK OF NEW ZEALAND.

SATISFACTORY YEAR'S BUSINESS.

THE CHAIRMAN ON NEW ZEALAND'S INDUSTRIAL PROSPECTS.

FINANCIAL AND ECONOMIC CONDITIONS IN NEW ZEALAND.

The ordinary general meeting of the proprietors of the Bank of New Zealand was held at the head office on Friday, June 17, 1921, Mr H. Beauchamp, chairman of directors, presiding.

With the consent of the meeting, the report of the directors and the balance-sheet were taken as read.

The Chairman, in moving their adoption, commented upon the figures in the balance-sheet.

The following are some of his remarks:—

NOTES IN CIRCULATION.

£4,741,492. Decrease, £1,023,845. When commenting upon last year's balance-sheet, I mentioned that the greater part of the increase of £2,000,000 in our circulation which was shown at that time consisted of notes in the hands of other New Zealand banks and not circulating amongst the public. The present amount contains no such item, the whole of the notes which were held in this manner having been retired by transfers of funds from London. The notes shown in the balance-sheet were actually in the hands of the public, and represent their requirements in the way of currency at the rate of the balance-sheet.

DEPOSITS.

£34,475,655. Decrease, £3,185,955. The decrease in our deposits reflects the stringent condition of the money market which existed at the date of the balance-sheet, and still exists.

In November last there was a very considerable drain upon the available funds of the community, when the Government placed upon the market a loan of £6,000,000 for the purpose of the settlement of discharged soldiers, and obtained £4,500,000 of the amount.

A further demand upon the available credits took place in February, when income-tax, amounting to about £8,000,000, became due.

Further, the reduced earnings from business, the decrease in the proceeds of the realisation of our produce, and the opportunities for investing at high rates of interest, have all been contributing factors to this decrease in bank deposits.

BILLS PAYABLE AND OTHER LIABILITIES.

£4,116,573. Increase, £408,268. This increase is largely due to our heavy sales of exchange on London, resulting from causes to which I shall allude later.

RESERVE FOR TAXES.

£426,000. Increase, £86,000. The increase in this amount, so far as the Dominion taxation is concerned, is entirely due to the employment of funds in New Zealand, where income-tax paid by the banks bears no relation to the profits made. Banks are taxed arbitrarily on the total of their assets and liabilities, and for the past year our payment of income-tax in New Zealand represents 14s 8d in the £ on our New Zealand profits.

The amount which we paid in taxation during the year now under review was as follows:—

	£	s	d
Income-tax	306,051	7	0
Land tax	17,559	3	0
Tax on note circulation	152,538	10	6
Rates	8,945	19	0
	485,094	19	6

Turning to the other side of the balance-sheet, the principal assets are:—

COIN AND CASH BALANCES AT BANKERS, GOVERNMENT NOTES, LEGAL TENDER NOTES, AND BULLION.

£6,685,738. Decrease, £2,086,547.

MONEY AT SHORT CALL, SECURITIES AND BILLS RECEIVABLE IN LONDON.

£8,324,356. Decrease, £1,959,285. The decreases in these two sets of figures have resulted from the same cause.

The requirements of our importing customers, who have had to make unusually heavy payments for goods brought into the Dominion, and the increased advances, to which I shall refer more fully later on, have brought about this considerable reduction in our London funds held at short call, and have also caused us to

draw upon the large balances which were held with our London bankers a year ago.

Our investments in London were written down to their market value at the balance date. Since that time they have appreciated in value, and are now worth more than the figure at which they stand in our books.

Investments in the Dominion	£ 3,513,102
Australian Government securities	399,316
Total	3,912,418

There are shown in the balance-sheet at their market value, except in a few cases where there is no public quotation. In such cases the securities have been written down to a figure at which they would yield such a return as buyers now expect.

LANDED PROPERTY, &c.

£337,468. Decrease, £33,640. We have again appropriated the sum of £50,000 from the year's profits in reduction of this item, although there is a very large margin of value in the assets by which it is represented.

PROFIT AND LOSS.

The net profits, you will notice, amounted to £726,900. During the past year we had the full earning power of the £500,000 of new capital furnished by the calling up of the balance of the old ordinary share capital of £3 6s 8d per share; also the benefit of unusual exchange rates.

Further, our large investments in London, which amounted at the beginning of the year to over £20,000,000, and remained in the neighbourhood of that amount for the first six months of the year, yielded handsome returns.

The "carry forward" has been increased by £214,755.

As a large portion of the year's profits were represented by exchange derived from the excessive importation of goods, and as we may look forward to a corresponding reduction in imports this year and next, it has been thought proper to provide in this manner for the expected falling off in future exchange profits.

ADVANCES.

Our advances in New Zealand have increased during the period under review by no less a sum than £10,500,000. This result arises from assistance given to our customers, caused by:—

(a) Excessive importations. (b) Very much

be a matter of months before the overdrafts of importing firms will commence to run down steadily, and that before long our advances to them will have come back to more normal figures.

I believe that traders generally now realise the necessity for reducing prices and facing losses, in order to restore the equilibrium.

In the conditions which have existed during recent months, we have naturally had to extend increased facilities to those of our customers who are engaged in the sheep and cattle industries. Their receipts have fallen far below expectation, and those who bought land at high prices and are heavily mortgaged will experience considerable difficulty in carrying on. Fortunately, there is a general disposition to face the position with courage and equanimity, and we may hope that, with industry and strict economy, the position will be gradually retrieved.

The holding of more land than the owner's capital warrants—much of which has been purchased within recent times at inflated prices and with borrowed money—is the principal cause of the financial difficulties in which many farmers are now involved.

During these years of high prices for our principal products your directors and your executive have never been persuaded that these would continue permanently, and, consequently, that it was justifiable to base the value of land upon such an expected permanency of high prices. In our lending, therefore, we have to a large extent disregarded what were considered to be current prices for farm land.

Mr Beauchamp continued:

EXCHANGE.

In the speech which was read to you on my behalf at the half-yearly meeting in December last, I referred to the difficulty in effecting remittances from Australasia to Great Britain and other parts of the world, which was at that time attracting considerable attention on the part of the community and the Press.

During the six months which have since elapsed this difficulty has not materially decreased. While traders generally have made great efforts to reduce the amount of the imports which have to be paid for in the shape of London or other exchange, goods have continued to arrive in very large quantities and representing very high values, so that for the first three months of this year (viz., January-February-March, 1921) the total imports amounted to £15,658,502. Imports are now falling off, and doubtless before long the demand for London exchange will have come back to reasonable figures.

It is interesting to note that, to meet the requirements of this Dominion, the bank has drawn no less than 16 millions from London during the past 12 months. It is fortunate for all concerned that it had such large sums available in the world's centre.

As you will see by the balance-sheet, the funds which we hold in London, although much reduced, are still of substantial amount, and we have every reason to expect that we shall be able to continue to meet our customers' requirements in the matter of exchange until conditions become normal and the question of external exchange ceases to attract the attention and to cause the interest which have attached to it during the past eight or nine months.

STAFF.

To commemorate the sixtieth anniversary of the bank, which occurs this year, and in view of the high cost of living, the members of the staff have been granted during the year bonuses aggregating more than £60,000, special provision being made for married men drawing less than £425 per annum, who received bonuses amounting to 25 per cent. of their pay.

Salaries and allowances have also been revised on a liberal basis, as we feel sure that it is your desire that our employees should receive adequate remuneration.

The last six months has been a very anxious time for the general manager and the chief executive officers, as well as for the branch managers and other senior officers, and they have not spared themselves, but have given the closest and most unremitting attention to the bank's interests.

The present strength of the staff is:—

1,121 Men.
196 Women.
1,317

CONDITIONS IN NEW ZEALAND.

The conditions in New Zealand reflect in some degree the adverse factors ruling in Britain, and disclose features peculiar to the country. The scarcity of merchandise in New Zealand, due to the transport and other difficulties arising out of the war, induced importers to send abroad orders much in excess of requirements. These orders, instead of being executed over a considerable period of time, as was anticipated, were dumped on the country in a few short months, with the result that the imports into the Dominion were on a tremendous scale. At the same time, owing to the

Imperial Government discontinuing the purchase of wool and meat, and the slump in the market value of these goods, there was a contraction in the exports. Shipping difficulties also rendered the position serious by hampering the export trade.

The imports for the year ended March 31st last, compared with the figures for the immediately preceding year, are as follows:—

Imports.	Imports.
1919-20.	1920-21
£32,162,029	£67,463,269

The imports increased by the huge sum of £35,301,240, equal to about 110 per cent. This means that we have imported in one year more than sufficient to meet requirements for two years: and the distressing fact is that most of these goods were bought at peak prices. The imports during the year under review cost more than three times as much as those of any year prior to 1916.

The principal increases during the year, as compared with 1919, were:—

Soft goods	£9,456,000
Hardware, &c.	4,702,000
General merchandise	6,428,000
Benzine, &c.	1,447,000
Motor-cars and other vehicles	1,832,000

The exports during the same period contracted, and the figures compare as under:—

1919-20.	1920-21
£50,776,650	£48,199,329

There is a decrease of £2,577,321, which is not very much. If we take the exports and imports for the year ended March 31st last we get the following:—

Exports.	Imports.
1920-21.	1920-21.
£48,199,329	£67,463,269

The imports exceeded the exports in the twelve months by the substantial sum of £19,263,940. It must be borne in mind that, besides paying for the imports, we have to pay interest on public and municipal indebtedness to Britain out of our exports, also large sums for freight, insurance, and other charges. It will, therefore, be seen that we were very much to leeward in the year under review. It must also be remembered that the total represented by the exports was not all available to provide funds for the inward trade, for it includes a good deal of produce purchased and previously paid for by the Imperial Government.

The new conditions that have arisen have brought about a scarcity of loanable credit, with the result that interest rates have materially hardened.

On first-class security, money is not very readily obtainable on mortgage at even 7 per cent., and Government bonds have recently been bought in the open market at prices which will yield the investor from 6 to 6½ per cent. As a consequence of this, the rates charged on bank advances and those allowed on fixed deposits have been increased.

Almost immediately after the Armistice, the local bodies throughout the Dominion took stock of the works needed in their respective localities, and as quickly as possible set about obtaining the authority of the ratepayers to raise loans for local public works. These authorities ran into many millions, and those who were fortunate enough to go on the market in 1919 and the first half of 1920 obtained the money they required at 5½ per cent. Later on it became difficult to obtain money at so low a rate, and local bodies had to offer the full rate then permitted by Statute, 5½ per cent. When this was found ineffective the local bodies were given authority to offer 5¾ per cent., and, in some few recent cases, to sell debentures at such a price as to yield the investor 6 per cent. But even this rate is not attractive, in view of the return obtainable from purchases of Government Bonds, and of the fact that sound commercial concerns are offering bonds at par at as high as 7½ per cent., free of income-tax.

The scarcity of credit led to another unexpected development during the short session of Parliament in March last.

When our half-yearly meeting was held in December, 1907—more than 13 years ago—a monetary crisis in the United States of America was one of the outstanding topics of the time, and was alluded to in the remarks which I addressed to the shareholders upon that occasion.

In view of the experiences through which the United States had just been passing, and their evident causes, I sounded a note of warning in connection with the action of several large trading concerns in New Zealand which were making a practice of receiving deposits from the public while holding no reserves in the shape of liquid or readily-realizable assets to meet these deposits when required.

Now that the prosperous times of the past few years, with their abundance of money, have ended, and there are many opportunities of obtaining highly remunerative investments, there has naturally

been a very considerable withdrawal of deposits held by these companies and firms.

NEW ZEALAND MORATORIUM.

The Banks of New Zealand found some months ago that they were being approached on every hand by their borrowing customers with requests for increased accommodation. These requests were assuming in the aggregate very large amounts, and it became evident that discrimination must be exercised, not so much with regard to the safety of the desired advances (as to which there was usually little doubt), but as to the objects for which they were asked.

A large number of such requests were being made in order that the applicants might repay the deposits which they had taken and which were being called for by the depositors. Had such applications been granted by the banks, they would not have been able to meet the legitimate requirements of the farming and commercial community, and the banks therefore notified their borrowing customers that the arrangements between them were not to be availed of for the purpose of repaying such deposits.

Such a step on the part of the banks undoubtedly placed many trading concerns and local bodies in a very difficult position, but it was felt by the banks, with a deep sense of responsibility to the community as a whole, that the course which they were taking was a wise and proper one.

As a consequence of this, I understand that some of the concerns which had taken deposits and could not repay them without that assistance from their bankers which they were unable to obtain, laid the position before the Government, with the result that on March 21st last, Parliament passed an Act extending the Mortgages Extension Act by declaring a moratorium until May 31st with regard to all deposits except those held by the Associated Banks and the Savings Banks, and providing that the borrowers could, by giving notice to the lenders before May 31st, and offering a higher rate of interest, postpone payment of such deposits until December 31st next.

We understand that this latter provision has been widely taken advantage of, and that most deposit-receiving companies and public bodies have notified depositors, whose money is at call or would in ordinary course be repayable before December 31st next, that repayment will not be made until that date.

It is generally believed that, when Parliament next assembles, some legislation will be introduced to compel those who accept deposits from the public, to do to some extent what banks are required to do—hold a reasonable proportion of these deposits in a form more readily available than if the money is used as business capital.

To make provision for repayment of their deposits, some companies are raising the necessary funds by the issue of bonds at from three to ten years' currency; others, no doubt, will get in uncalled capital; and some may require to issue preference shares.

Whilst a certain amount of inconvenience is being experienced by some of these depositors, it is unlikely that any of them will suffer loss, and in the long run the result will be a much-needed improvement in the conduct of the finances of these deposit-taking concerns.

During the war, and since, there has been a noticeable yearly expansion in the business of the Post Office Savings Bank, and the total amount at credit of depositors at the end of last March was £42,953,028, equal to £36 per head of the population.

DOMINION PUBLIC FINANCE.

The results shown in the national balance-sheet for the financial year ended March 31st last were as follows:—

	£
Revenue	34,192,986
Expenditure	28,058,728
Surplus	6,124,258

Both revenue and expenditure are record figures.

The annual surpluses, beginning with 1916, have been exceptionally large, but practically the whole of the realised surplus has been disbursed or allocated, and very little remains, so that, in the present and subsequent years, we must rely upon current revenue to meet each year's disbursements.

The public debt is steadily increasing, and now must be over £200,000,000. During the past financial year £7,831,593 was paid in respect to interest and sinking fund as compared with £2,871,512 charged in the year 1913-14. There was paid in pensions during the past financial year £2,812,750, as against £2,691,444 in the previous year.

NEW ZEALAND PRODUCE.

Had the Imperial Government continued purchasing our produce at the same prices as when the various commandeurs ended, we should have been still revelling in prosperity. Just what the Imperial purchases have meant to New Zealand may be realised from

the fact that the total payments made by the Imperial Government up to April 30th amounted to £158,602,725.

The outstanding feature during the past season in connection with produce was the excellent return obtained from both butter and cheese. Butter was taken by the Imperial Government during the season now ended at the extraordinarily high price of 28s per cwt f.o.b. New Zealand ports. Butter and cheese shipments and values for the year ended March 31st last, compared with the figures for the previous year, show:—

	1919-20.	1920-21.
	Cwts. £	Cwts. £
Butter	310,283 .. 2,832,991 ..	476,730 .. 6,114,464
Cheese	1,540,949 .. 7,720,366 ..	1,208,263 .. 6,514,519
	1,851,232 .. 10,553,357 ..	1,684,993 .. 12,628,983

There has been a decrease in the quantity of cheese exported, but this was due to the attractive price ruling for butter, causing factories which had the necessary plant to turn over from cheese to butter manufacture.

During the 1920-1921 season, up to the present time, cheese has been realising prices much in excess of those which were obtained under the commandeering. The present tendency is towards lower prices, as the new Canadian output is now coming on the market and being sold at a much lower price than has up to now been obtained for the New Zealand product. Still, the outlook for cheese is distinctly good.

WOOL.

Wool has apparently fallen to its lowest point—at all events for the time being—and there is now a better demand for the staple and more activity in the market. There is, however, a great mass of wool in store, and how to get this into consumption and at the same time to obtain a fair price for the clips now coming forward is a problem that has been fully and freely discussed for some months past. One outcome of this has been the formation of the British Australian Wool Realisation Association, more popularly known as "B.A.W.R.A."

New Zealand wool-growers were invited to join the Association, but, after full consideration of the proposals which were submitted to them, they—wisely, I think—declined to do so, preferring to follow an independent course. They are, however, co-operating with the Association as regards the fixation of minimum reserves and limitation of offerings, while retaining in New Zealand the full control of all matters concerning the handling of the wool clip.

At the present moment, wool is almost a drug on the market. This applies especially to coarse wool, and by far the greater part of our New Zealand product is of this class.

Apart from the large quantity in store, the European and North American clips, whatever they may amount to, are now coming in, and in the course of a few weeks Australia will be baling another clip, while there will also be Argentine, New Zealand, and South African clips to be taken into account. On the other hand, only a limited market can be found in the United States, because in that country also there is an accumulation of wool, and the new administration is expected to adopt such a high tariff as will effectually exclude most of our wool from the United States.

The proposal to uphold values by arbitrarily fixing prices does not commend itself to me, for I hold the opinion that values can be created only by the inexorable law of supply and demand, and not by any artificial means. All commodities satisfying human wants can be sold at a price, and it is for the seller, in the ordinary course of trade, to ascertain what that price is, and to meet the market as best he may, and so endeavour to stimulate the consumptive demand. Wool is one of the necessities of life—at least, to the peoples of Europe and North America and some other countries—and therefore there will always be a demand for it. Large though the accumulations are now, they would be speedily reduced if the people of Europe were able to make purchases, but they are unable to buy through sheer inability to pay for the goods. They are literally poverty-stricken, and must be accommodated in the best way possible. Until Central and Eastern Europe are able to absorb wool, the market will be in an unstable condition, zigzagging up and down and causing a great deal of trouble.

It is understood that the reserves fixed by the B.A.W.R.A. for coarse wool, in which New Zealand is principally interested, are sufficiently low to ensure that they will not deter would-be buyers from making purchases. This being so, it may be hoped that, in the course of time, the enormous stock of wool may be gradually reduced, and that, demand overtaking supply, better times may return for wool-growers.

Unless a demand can be created which will annually absorb the whole of the year's output and a portion of the previous accumulation, it is to be feared that little relief will be obtained

from the operations of the B.A.W.R.A. and the New Zealand Committee.

In experiencing a severe fall in the prices obtainable for our staple products, we are on common ground with primary producers in other countries. All markets have fallen, but some more than others, and how long this downward tendency will continue is not within the power of prediction. History shows that after the Napoleonic Wars prices sagged for a long time. Even after the American Civil War—which, compared with the Great World War, was a trifling affair—it took fourteen years for prices to stabilise, so that, if history repeats itself, as seems likely, it will be some years before the point of stabilisation will have been reached.

It would be idle for us to look for any big recovery in the prices of produce—the very circumstances of Europe make that impossible just now—consequently, we must endeavour to make production pay on the basis of present prices, and to that end there must be a contraction of profits and a contraction of wages, with greatly increased efficiency of production, thereby lessening its cost. The cost of living must be reduced, and can be reduced if all sections in the community will do their part.

COSTS OF PRODUCTION AND TRANSPORT.

In the past we have frequently seen prices for our primary products as low as, and in some cases distinctly lower than, those ruling to-day in the world's markets, but cost of production, transport and other charges have, in the meantime, advanced enormously.

SHIPPING FREIGHTS.

The rise that has taken place in freights is, of course, a serious handicap to New Zealand producers. Lately, owing to Government pressure, the companies have made some concessions which will mean a saving of approximately £250,000 per annum to the producers, but, even taking this into account, the freights remain abnormally high, having in view the greatly reduced prices that are likely to be realised for what is shipped.

SHIPPING SUPPLY.

A great increase has taken place in the world's shipping tonnage since the signing of the Armistice, and, except as regards insulated ships, the supply is now greatly in excess of the demand. Hundreds of vessels are, at the moment, laid up in Great Britain, America, Sweden, and elsewhere. It is expected that the shortage in insulated tonnage will be remedied in the near future, as there are several large vessels now in course of construction.

FUTURE OF PRODUCE MARKETS AND TRADE.

It may possibly be that, with so many causes combining to make sheep and cattle-raising less profitable than in the past, some of our farmers who own suitable land will turn their attention to the growing of wheat and other crops, for which there is a satisfactory local market. This may afford a certain measure of relief to the situation.

How long the monetary stringency and industrial depression will last depends upon a variety of circumstances, but mainly upon the rapidity with which the economic unity of the world is restored. All the Great Wars of the past immensely stimulated the economic development of the world, and invariably gave a powerful impulse to the greater use of labour-saving machinery. Probably we are on the eve of some such economic developments. After all, we must rely upon hard work and thrift and the moderation of party politicians in arranging the national affairs. There will be a continued demand for New Zealand's products; our wool, meat, butter, cheese, hemp and tallow are all wanted, and the purchasers are willing to pay up to the limit of their purchasing power. That limit just now is a low one, but it will expand, and so will the demand for the products. Our trouble just now is in adjusting the cost of production to meet the changed conditions. As soon as prices of commodities show some signs of stabilisation there will be manifest confidence in the situation, and on that confidence a new and enduring structure of trade and commerce will be built. The present is a time for the avoidance of extremes—extreme optimism and extreme pessimism. It is a time when conditions should be looked at squarely and dealt with courageously. New Zealand is not feeling the pinch as seriously as some other countries, and if all sections co-operate for the common welfare, the recovery will be speedier.

Sustained effort in production, efficiency, and economy should be the keynote of all classes of the community in these critical times.

The Chairman having replied to various questions, the motion for the adoption of the report and balance-sheet was carried, and a vote of thanks having been accorded to the directors and staff, the proceedings terminated.

FURNESS, WITHY, AND COMPANY, LIMITED.

DROP IN OVERSEAS TRADE.

NEED FOR DECREASE IN PORT AND OPERATING CHARGES.

The thirtieth annual meeting of Furness, Withy, and Co., Limited, was held, on the 18th instant, at the Great Eastern Hotel, Liverpool street, London, Sir Frederick W. Lewis, Bart., presiding.

The Chairman, in moving the adoption of the report and accounts, said: I have pleasure in submitting to you the accounts for the year ended April 30th last, which, while they naturally show less favourable results than those achieved last year, I hope you will regard as satisfactory.

The profit for the year, including the balance brought forward, amounts to £955,848 4s 6d, which is arrived at after making provision for all taxes payable both in this country and abroad. After deducting the dividend on the preference shares and the two half-yearly dividends at the rate of 5 per cent. per annum, free of income-tax, on the ordinary shares, there is an available balance of £703,348 4s 6d, out of which the directors have allocated £300,000 to depreciation account, and now recommend the payment of a bonus of 5 per cent., free of income-tax, on the ordinary shares, which will leave £203,348 4s 6d to be carried forward to the current year's account.

WEST INDIAN INTERESTS.

We have continued our policy of developing and extending our organisation upon natural lines, and since we last met we have added several highly important units to our properties.

In order to round off our West Indian interests we purchased in the autumn of last year from the Trinidad Shipping and Trading Company the three steamers "Maraval," "Matura," and "Mayaro," together with the goodwill of the New York-Trinidad service, and all the auxiliary properties of that business, which include various profit-earning assets. To enable us to exercise the best possible supervision over this business we have opened our own office at Trinidad under the charge of the Hon. A. Fraser. The important feature of this acquisition is that we have been able to establish a community of interests with our Quebec Steamship Company's New York-West Indian service, which will mean more economical operation from our point of view, and more efficient service for the supporters of the two lines.

Our passenger and cargo service to Bermuda continues to give satisfaction to our friends in that delightful colony. We have kept both the "Fort Hamilton" and the "Fort Victoria" practically continually running in the New York-Bermuda service.

For the purpose of developing the Bermuda and West Indian passenger business we have recently purchased the s.s. "Fort St George," a sister ship to the "Fort Victoria," and during the usual slack season in these trades she is being employed in the Quebec and Saguenay River tourist service, in which she has already proved herself a very popular vessel.

CHAIRMAN'S VISIT TO THE MEDITERRANEAN.

In the early part of this year I visited all our organisations in the Mediterranean, where the Prince Line and Johnston Line particularly have very important interests. As you know, we already have offices in Piræus, Alexandria, and Constantinople, and it was a pleasure to me to see at first hand the efficiency of these branches and the loyal work of our representatives there.

For a long time past we have taken a special interest in the Danube trade, and to strengthen our already strong position there we have during the year acquired an interest in the firm of Watson and Youell, one of the most highly respected firms trading in the Near East, with offices at Bucharest, Braila, Galatz, Sulina, Constanza, and Oltenitza. The firm, as previously constituted, did a merchant business as well as shipping agency, but as we always make it a rule not to engage in merchant business in possible competition with our shippers and consignees, it was mutually agreed that the merchant business of Watson and Youell should be entirely separated from their shipping business, and the latter section is now operated under the style of Watson and Youell Shipping Agency, Limited, and it is in this section alone that we are interested.

Altogether, my visit to the Mediterranean was a most interesting one, and I returned with full confidence that no other company is better organised for the development of the various interests with which we are associated in those waters.

Before passing on to other subjects, I should also mention that since we last met together we have opened offices at Hong Kong and Shanghai, under the management of Mr Leonard Yates, and to round off our United States organisations we have acquired an interest in the old-established firm of W. and R. Warriner, New Orleans, from all of which we look for added business and revenue.

PANAMA CANAL TRADE.

In the shipping business we have ever to be on the lookout for changed conditions and trade development, and, in fact, shipping

more often than not plays a big part in the creation of new trade routes. One of the most important occurrences in commercial history has been the opening of the Panama Canal in 1914, but the impetus which the trade of the Pacific Coast regions might have been expected to gain from this event was very much retarded by the war. The development is, however, now making rapid strides, and a considerable export business is being built up between Canadian and United States Pacific Coast ports and the United Kingdom and European Continent, in connection with which we have inaugurated a new service of general and refrigerated cargo steamers. The first steamer on this service will leave the Pacific Coast in September, and thereafter we will maintain regular sailings.

Our United States branches have, under the able guidance of Mr H. C. Blackiston, efficiently and satisfactorily carried out the large amount of business entrusted to their charge. It will be readily recognised that these branch organisations which we possess or are largely interested in at home and abroad, amounting now to 35, in effect very much reduce our operating costs.

I mentioned in my speech last year that no new shipbuilding contracts had been entered into, and the same remarks apply to the past year, although we have not yet received delivery of some of the vessels which we had previously contracted for.

FALL IN OVERSEAS TRADE.

I need not tell you that since we last met we have experienced a very heavy drop in freights. A study of the statistics recently published by "Lloyd's Registry of Shipping" shows that of the total world's steam tonnage of 54,217,000 gross tons, there is, eliminating wooden vessels altogether, 11,703,000 gross tons of shipping afloat more than there was in 1914, notwithstanding the tonnage lost during the war. The approximate increase that would have occurred normally during this period of seven years is 15,000,000 gross tons—that is, on the assumption that there had been no war and no substantial increase in the shipbuilding plants of the United States. It will, therefore, be seen that there has been no over-production in the ordinary sense of the expression. Furthermore, these figures include a number of old vessels which, in the ordinary course of events, would have passed into the shipbreakers' hands long ago, and which have only been kept in service owing to the fact that during the war any seaworthy vessel, however old, could find employment. It is fairly safe to say that these vessels will never again be put into commission unless under exceptional circumstances, as the cost of repairs and surveys would exceed their value when completed. Vessels on the register of over 25 years of age represent 5,757,175 gross tons, of which 4,055,847 are owned abroad and 1,701,328 are owned in the United Kingdom. If for the purposes of estimating the effective world tonnage these are disregarded we arrive at an increase of 5,945,825 gross tons over 1914. Of this increase, however, 2,940,000 gross tons are represented by the increase in bulk oil carriers, and while to some extent these may displace coal carrying, for ordinary general purposes of the world's trade, it may be said there are, in effect, only 3,005,825 gross tons more of serviceable vessels afloat to-day than there were in 1914. Notwithstanding these figures, there is laid up in the world's ports an amount of tonnage which was recently estimated at round about 10,000,000 tons. It follows, therefore, that the principal cause of the decline in freights is due not so much to the over-production of tonnage as to the falling off in the world's overseas trade, and, so far as shipowners are concerned, I can only see one practical thing to be done, and that is to reduce operating costs to such a level as will help forward a revival of international trade. Seamen's wages have already been reduced by mutual agreement; we have extended our self-insurance arrangements in order to minimise the expenditure on insurance premiums, while coal has been decontrolled and has come down in price, but still not far enough.

PORT CHARGES IN THE U.K. AND ON THE CONTINENT.

There is, however, very great room for improvements and economies in ports both at home and abroad. In many cases the cost of handling vessels in port shows very little diminution from the height of the war period, and I can only say that those ports which are backward in putting their house in order will find that they will gradually be avoided by shipping in favour of other ports where more reasonable charges are made, where better despatch can be relied upon, and where there is more strict supervision by the authorities to prevent pilferage of cargo.

A comparison between Northern Continental and United Kingdom ports in respect to despatch and expenses is all in favour of the former. This means that a vessel can earn more money by trading to the Continent, and that unless the conditions are remedied sooner or later a higher freight will be asked to English ports, with a consequential effect upon the cost of living.

TRADE CONDITIONS.

I have mentioned what we as shipowners are doing to reduce costs, but still there is not nearly enough overseas business being

done to keep all our vessels fully and profitably employed. Before there can be any real industrial revival there must be increased and cheaper production at home, so that we may be able to send our coal and manufactures abroad in competition with other nations in sufficient quantities to enable us to purchase food and raw materials, and incidentally keep our ships employed, thereby creating an invisible export of service which has always helped to restore the balance between our normal excess of imports over exports. As I have on previous occasions pointed out, the Board of Trade imports are calculated upon a c.i.f. basis, whereas the exports are calculated upon an f.o.b. basis, and, therefore, to the extent that a portion of our imports have been carried by British vessels, and the freight included in the Board of Trade import figures has been earned by British vessels, the adverse balance of trade is reduced. Over and above this, however, British vessels have for many years carried on a large foreign trade, and as the earnings of these vessels are not shown in any Board of Trade statistics, they are apt to be overlooked. None the less, it is worth while recalling the fact, in view of the great bearing it has upon the value to the nation generally, of the existence of a large and successful mercantile marine. At the present time, when it is practically impossible for any purely freight vessels to earn more than a very bare profit at the best, our ships are contributing comparatively little towards the invisible exports. Two years ago, when dealing with this subject, I estimated the gross freights of British shipping at £350,000,000 to £400,000,000. Applying the same method of calculation this year, and making allowance for paid-up vessels, the earnings would be about £60,000,000 to £70,000,000, from which, however, should be deducted the coal purchased abroad during the coal strike, and the joiners' work effected abroad owing to the joiners' strike. When allowance is made for these two items, I fear there will not be much surplus. On the £60,000,000 to £70,000,000 as a contribution to our invisible exports. This figure, I would emphasise, is not profit, because expenses and depreciation have to be provided out of it.

PROSPECTS OF THE INDUSTRY.

As to the outlook for the current year, the rôle of prophet is always a thankless one—never more so than under conditions now existing, when there are so many unknown factors at work. A prudent traveller across the desert has his baskets full of bread and his bottles filled with water. The policy of your board has in the past always been a conservative one, and we are well equipped to face whatever the future has in store, as you will see from our balance-sheet that we have absolutely clear decks, with no debenture or other charges upon our property.

It is no use disguising the fact that shipping has a difficult period to face, and it will take a good deal of time and patience before all our difficulties are overcome. With the wonderful natural resources which we as a nation possess, with the commonsense which has invariably triumphed over our past difficulties, and with a broad-minded understanding between Capital and Labour, I believe ultimately we are capable of regaining our erstwhile commercial supremacy which will reflect itself in our particular industry. But, to use a rowing expression, every man in the boat must pull his full weight, and the principle of *ca' canny* must be left behind as one of the spectres of the past.

It has been my custom at these annual gatherings to refer to our various associated and subsidiary undertakings. But time would fail me were I to speak in detail of the vast interests with which we are connected, most of which are known to you without mentioning them all in detail. Suffice it to say that they are all in a strong position, and have shown satisfactory results during the period under review.

Next year when we meet together I hope it will be possible to entertain you in our new offices. Building operations have been most disappointingly delayed, but we now have every hope of getting into our new home early in the new year, where most of our associated companies in London will be under one roof. This will enable us to effect concentration in management as well as increase the general efficiency of our organisation by the consolidation that will then be possible. It is again a pleasure to me to place on record the loyalty, efficiency, and zeal of all our officials and staffs, both at home and abroad.

Mr R. E. Burnett seconded the resolution, which was carried unanimously.

It was moved by Mr W. H. Beckingham, seconded by Mr R. J. Thompson, and resolved:—"That the retiring directors, Sir Frederick Wm. Lewis, Bart., Sir John Esplen, Bart., K.B.E., Sir Osborn G. Holmden, K.B.E., and Mr R. I. Dodsworth, O.B.E., be re-elected."

The auditors, Messrs W. T. Walton and Son, were re-elected. A hearty vote of thanks to the chairman, directors, and staff was proposed by Mr G. A. Harradon, of Liverpool, seconded by Mr Walter Lee, of Newcastle, and carried unanimously.

The Chairman having briefly replied, the proceedings terminated.

MITCHELLS AND BUTLERS, LIMITED.

TAXATION'S EFFECT ON THE INDUSTRY.

PROHIBITIONISTS METHODS TO ATTAIN THEIR END.

BISHOP OF OXFORD'S BILL CRITICISED.

The thirty-fourth annual general meeting of the shareholders of this company was held at the White Horse Hotel, Birmingham, on the 18th inst., under the presidency of Mr W. Waters Butler.

The Chairman, in moving the adoption of the report and accounts, said: Ladies and gentlemen,—It is, I am glad to say, a very rare occurrence for the board to present, as it does this year, a balance-sheet to the shareholders showing a lower profit than that of the preceding year. I have no doubt you would like some information as to the reasons for such a result, which coincides to some extent with the experience of other brewing undertakings and industrial concerns presenting balance-sheets of a similar trading period to that covered by our accounts. The causes for the check upon our usual advancement in profit are the onerous and unexpected impositions of the Budget of April, 1920, coupled with controlled retail prices, high costs of production both from the point of view of brewing materials and labour, but mainly the general trade depression prevailing since the end of the year 1920, accentuated by the miners' strike.

1920 BUDGET'S EFFECT ON THE COMPANY.

It must be remembered that we are not only wholesale brewers, bottlers, maltsters, and wine and spirit merchants with a big turnover, but that we also carry on a huge retail business in our managed houses, which now number nearly 700, by far the largest number of directly managed licensed houses connected with any company in the United Kingdom. So that the Budget not only affected our wholesale, but also our retail profits.

Any excess profits which may have been made by the wholesalers and retailers of the licensed trade were most certainly by the Budget of 1920 wholly transferred to the Exchequer in the form of permanent taxation, so that the announcement of the abolition of the Excess Profits Duty brought no relief or gain to brewers and retailers. The present onerous duties are most unfair to the consumers of alcoholic beverages. It is a scandal that the so-called Drink Bill annually put forward by the Prohibitionist Party as representing so much wasted expenditure does not honestly set out how much of that expenditure represents taxation contributed to the revenue, and thereby lightening the burden upon abstainers. This Drink Bill, to my mind, plainly indicates that the people of this country look upon alcoholic beverages not as luxuries, but as very costly necessities, otherwise they would not expend so much upon them. Indirect taxation is always unfair in its incidence; it may be easy to collect, but to a taxpayer it is a much more costly method of making a payment to the revenue than through direct taxes.

Our total brewing costs per barrel last year were the highest in our experience.

No doubt, with depressed trade we shall have to meet with more intense competition, but our policy will be to meet that competition, not by a poor article and a reduced price list, but by appealing to the consumer through the quality of the article offered to him.

The company owns through its licensed houses nearly 1,300 distributing centres, mainly in the Midlands, in each of which the same qualities of goods are sold at uniform prices.

RETAIL PRICES AND BEER AND SPIRIT DUTIES.

Freedom from Government Control will afford an opening for giving the public better quality beverages, but not a reduction in retail prices, which is not possible in consequence of the high prices prevailing to-day being mainly made up of enormous and inequitable amounts of taxation imposed upon the consumer of alcoholic beverages.

The high beer and spirit duties, and not the costs of production, will control the retail prices of such beverages. Consumers should realise this fact, and strongly protest against such excessive and inequitable taxation. The revenue figures plainly indicate that the tax-yielding capacity of such beverages has been exceeded, and the impositions are having a prohibitive effect, although the Chancellor of the Exchequer, when imposing the duties, plainly indicated that they were not intended to do so.

As you will see from the report, we have now concentrated the whole of the brewing operations at Cape Hill, which, fortunately, we were able to do by making full use of our new brewery, which I think we can rightly claim to be the most modern in the United Kingdom.

PROSPECTS FOR CURRENT YEAR.

As to trading prospects during the current financial year, it is impossible to say with the general trade depression still prevailing what may be the results, but it is certain that with any trade improvement our rate of profit will advance at a greater pace than is usual with most brewery companies, seeing that we are not only large wholesalers, but also big retailers through our managed houses, and consequently we get an advance in the two trading profits. Here let me say that, while generally speaking, no brewery company has a better group of tenants, we have always favoured the managerial system, particularly in connection with our larger properties, for which in these days of harassing legislation suitable persons with adequate capital are not applicants for tenancies. Our preference for this policy is not because we make a retail as well as a wholesale profit, in the place of a rent and wholesale profit when a house is tenanted, but that when managing houses we can make more certain of our patrons obtaining their supplies of goods in the best condition, can regulate our trading operations so that prices and qualities are uniform, and at short notice can bring into early operation any regulations desired by the licensing justices or ourselves in connection with the proper conduct of licensed premises.

I desire that my remarks shall not be construed as casting any slur upon our tenants or those of any other brewery, but on more than one occasion I have been greatly annoyed by, and have strongly resented, the one-sided statements which have been put before magistrates in condemnation of the managerial system.

NEW LICENSING LEGISLATION.

A Licensing Bill which represented the agreed views of the wholesale and retail sections of the licensed trade as to the licensing conditions which should come into force on the termination of the Central Control Board's regulations was introduced by Colonel Gretton.

A MOVING APPEAL.

A moving appeal by the Attorney-General, framed in the most persuasive language, brought about the withdrawal of the Bill, he stating that, while the Government recognised the Bill had its good points, it was anxious to present to the House an agreed measure.

Shortly afterwards the Government set up a Committee composed of 18 members of the House of Commons, which might be looked upon as representing the contending parties, and diluted down with others who might be looked upon as holding impartial views. This Committee held several meetings, but not taking outside evidence, and finally presented a report to the Government which for some unknown reason was never made public, and, consequently, what measure of agreement among the members of the conference was arrived at is not known, but it resulted in the Government bringing forward the Licensing (No. 2) Bill, which probably will become an operative Act from September 1st next.

But one cannot help feeling that the great blot on the Act is that in Monmouthshire the inhabitants of that English county have had "Sunday closing" imposed upon them, which must result in great inconvenience to them, and inflict great loss upon the licensed traders, for whom no compensation whatever is provided.

CENTRAL CONTROL BOARD.

The Act will put an end to all the regulations of the Central Control Board (Liquor Traffic), and terminate the life of that body, of which I have been a member during the past five and a-half years. I shall welcome my release, and while it has not been altogether an enviable position, I have enjoyed the work, and have gained useful experience from it. I fear there will not be many mourners at our funeral, but notwithstanding the pleasure that our approaching demise appears to afford, I have no hesitation in saying that during the Board's existence, particularly in war-time, it counteracted the clamour of the extremists of the teetotal party, who would have taken advantage of the war—as was done in America—to inflict Prohibition upon this country.

My own work on the Board has been closely connected with what are known as the Direct Control Undertakings, of which Carlisle is the chief example. I am confident that out of the so-called "Carlisle experiment" much has been learned in the direction of true temperance reform. In the face of the declarations which have been made repeatedly by the prominent citizens of Carlisle as to the good effects brought about by the scheme, one

cannot imagine that the inhabitants of Carlisle will be parties to it being "scrapped," and the properties returned to private ownership.

The new Act brings about a variation in the hours of trading, and gives the power to Licensing Justices to allocate the permitted hours in their respective districts, and it is anticipated they will fix such hours as will meet the requirements of the public.

TEETOTAL PARTY'S ACTIVITIES.

Whether the public will consider their liberties have been unreasonably curtailed time will prove, but we are already warned by the teetotal party, as plainly indicated during the discussion on the Bill, that they do not look upon it as in any way representing a compromise, but only as an instalment towards the total suppression of the consumption of alcoholic beverages—which is their ultimate object.

To attain this end a vigorous campaign, promoted by a religious body, is to be carried on during the next five years, and a big fighting fund is being raised for the purpose. No doubt all the fervour of a religious movement will be engendered, and even used in an unchristianlike manner if compliance is made to the demand of the United Kingdom Alliance as set out in its official organ of last month, where, in an article headed "The Church and the Liquor Traffic," men and women are taunted with outwardly professing the Christian faith while still consuming alcoholic beverages, and it is laid down as a duty that "every Christian minister is bound to make plain beyond all possibility of mistake to every member of his congregation the full and far-reaching responsibility which such member is incurring if he takes and continues to take 'intoxicants.'"

THE CHURCHES AND LIQUOR TRADE.

The article goes on to call attention to the fact that great Churches have closed the door to office in the Church to persons actively engaged in this trade, and appears to lament the fact that this practice—this despicable practice—is not universal.

Such views one cannot imagine are approved of by the heads of our Christian Churches, and can only be the outpouring of fanatical and hypocritical minds who appear to belong to that group of persons who thank God they are not as other men. The spirit of Christianity will certainly not be advanced by such actions, and if, as is suggested, that every pulpit on a given Sunday should be used for propagating such vile suggestions and encouraging congregations to treat a section of their fellow men and women, and even children, as social lepers, one must not be surprised if we continue to read of the decreasing attendances at our Churches, Chapels, and Sunday Schools, for no Church worthy of the name can be expected to thrive upon the foundations of such teachings.

PROHIBITIONIST PARTY'S TEMPERANCE REFORM POLICY.

It appears that the Prohibitionist party in this country is endeavouring, as it did in America, to use the Christian Churches as a cat's paw to attain its desired end, regardless of what injury it might inflict upon those Churches in so doing. There are signs that the Christian Churches are to be bullied by the Prohibitionist party when they depart from the line laid down by it. I should not be surprised that very soon we shall find that some of those Churches are banned by the United Kingdom Alliance, just as it suggests the licensed trader should be treated by the Churches, for I see in the official organ of that body a plan of agreement to secure Temperance Reform in England, issued by the Temperance and Social Welfare Committee of the Wesleyan Church, is severely criticised because the Committee do not propose the wholesale confiscation of a trader's belongings, and do not carry out what the official organ of the Alliance commands to the Christian Church to do, viz., that when it stretches out its hand to the trade it "must hold a sword and not a purse," which is an advancement upon the methods of the highwayman by demanding not only your money but also your life.

For the same reasons, it condemns the Bishop of Oxford's Bill, known as the Liquor (Popular Control) Bill, which was introduced in the House of Lords a few weeks ago, not with the object of making it an Act, for, as its author stated, his intention was not to proceed with the Bill even if it obtained a Second Reading—the motion for same was Negative,—but he introduced it for the purpose of affording the community an opportunity of understanding precisely what the proposal was, and also for securing discussion and conference with representatives of the various interests concerned, in the hope that an agreed policy might be arrived at, and the ultimate result be the production of an agreed Bill.

BISHOP OF OXFORD'S BILL EXPLAINED.

Candidly, I fear the Bishop of Oxford has a long way to go before he will get all interests concerned to agree to a Bill framed on his present proposals, and it is certain he will not get the licensed trade to be parties to such an agreement without a large measure of amendment. Still, I must candidly confess that, in

my opinion, the Bill appears to be an honest endeavour to please all the contending parties, with the usual result, I fear, of satisfying no one. It appears to me to be a conglomeration of every proposal which, as far as I can remember, has ever been put forward in connection with licensing reform, from "No Change" down to "No Licence," but the aim of the authors has been so skilfully obscured that it is difficult to find out what is the ultimate result it is hoped to attain.

The Bishop has stated that the fundamental principle which underlies the Bill is that areas should determine for themselves the manner in which, and the extent to which, the liquor trade would be carried on, which would give to localities the right to choose one of three options:—

1. "To leave the present system untouched."
2. "Prohibit altogether the issue of licences."
3. "To take the ownership and management of the trade completely out of the range of private enterprise, and entrust it to what is called 'disinterested management.'"

It is estimated that the cost of polling the whole of England, on the basis of the expenses incurred in Scotland last year, would be £250,000, which would have to be borne by the ratepayers of the various polling districts.

I will not trouble you with my views, which are well known to you, upon local veto and prohibition. It is generally agreed that prohibition does not appeal to the majority of the inhabitants of this country, and prohibition in patches, which might be brought about by a Local Veto Act in areas where drunkenness was practically non-existent, is certainly not a solution of the temperance problem, seeing that it would in such areas only cause irritation, inconvenience, and evasion of the law, and create in adjoining so-called "wet" areas conditions far more likely to bring about an increase, rather than a decrease, of drunkenness.

COMPENSATION UNDER "NO LICENCE" AND "STATE PURCHASE."

What I think, however, will interest the shareholders of brewery companies is to know, in the event of a "no licence" or "State purchase" resolution having been carried, upon what basis they would have been compensated for their loss under either resolution. In the case of "no licence" areas, no compensation in any form would have been paid if such a resolution were passed at the fifth or any subsequent poll. This was an attempt to again introduce a "time limit" to compensation for the trade, which Parliament rejected in 1908, and which all honest men ought to oppose, for if the principle of a "time limit" to ownership is ever accepted, no property of any kind would be free from spoliation. No provision was made for compensation to be paid to a brewery firm suffering loss through a number of its licensed properties having to cease trading under a "no licence" vote. One can readily realise how such severance might render a brewery practically valueless, or so cripple its trading operations that it could be carried on only at a great loss. The compensation for licences suppressed (for the buildings would not be taken over under a "no licence" resolution) was to vary from 12 years' purchase to two-thirds of the average annual net profits, or equal to eight years of the net profits, down to two years' purchase of the net profits, according to whether a "no licence" resolution is passed at the first or the fourth poll. Clubs also were to receive compensation, although not to be called upon to contribute to the compensation fund.

In the case of a "State purchase" resolution having been passed, breweries, licences, and properties could be acquired at diminishing values from 12 years' purchase, down to a minimum of three years' purchase of the average annual net profits, varying according to the poll at which it was passed.

METHOD OF ASSESSING PROFITS.

Under both resolutions the net profits would be the average of the annual net profits during a period of three years immediately preceding the passing of the "State purchase" or "no licence" resolution. From such profits would be excluded any sum which may have been paid in respect of excess profits duty, and no allowance made in either case on account of the acquisition being compulsory. Any compensation awarded would be apportioned among the persons the Commissioners decide were interested therein, and in default of agreement among the parties, the Commissioners were to determine the division of the sum awarded, and no appeal could lie from such determination. In making the division among the holders of shares, stock, debentures or other securities of a company, the Commissioners were to have regard to the annual gross income received by the respective holders during the "datum" period (generally meant to be a period of three years immediately preceding the passing of a "State purchase" or "no licence" resolution), having regard to the market value and the terms of redemption thereof, and the sufficiency of the security thereof, but were not to be called upon to give effect to the priorities subsisting under the regulations of the company or otherwise as between different classes of shares, stock, debentures, or securities.

Provisions were also made for compensating occupiers of licensed premises, and persons suffering pecuniary loss by the loss of any office or employment. Any capital sum payable by way of compensation less than £500 was to be paid in full; and, subject to the consent of the Treasury, sums in excess of that amount could likewise be paid in full, or in the form of 5 per cent. terminable annuities extending over a period of not less than 12 or more than 15 years.

PROVISION OF COMPENSATION FUND.

While the proposals in connection with the provision of compensation were totally inadequate, a most remarkable proposal was made as to how the funds for compensation were to be provided. It was suggested that the present compensation levy under the provisions of the Act of 1904 should be doubled in the case of "on licences," and that "off licences" (which to-day do not contribute) should pay an annual sum equal to the amount of their annual licence duty. These contributions to form what was to be known as a central compensation fund. To this fund were also to be contributed payments at the same rate in respect of premises in a "State purchase" area, any proceeds realised by the sale or other disposal of any property acquired by the Liquor Management Board, and the balance of the net profits of any business carried on by them. It was provided that if this sum should not be sufficient to meet all claims, the State should be called upon to find the balance, but the probability is that in the case of a deficiency the scale of charges imposed upon the trade would have been increased to meet the deficit. In fact, the Bishop in an interview seems to confirm this likely action, so that this so-called compensation takes the form of an industry being called upon to pay for its own extinction within a certain number of years, and that after a certain date it could be put an end to without even any compensation, although a huge sum may have been extracted from the trade before such date, and not made use of for the purpose for which it was raised. Because the trade contributes a sum under the Act of 1904 for the purpose, be it noted, of reducing

the licences in the area wherein the fund is raised, which, when so used, adds a varying amount of betterment to the contributors in such area, it is ridiculous for the promoters of the Bill to contend that it justifies the raising of a much larger sum without any undertaking to apply it in the area from which it is obtained, and leaving an authority free to apply it in a far remote district. It is as if the ratepayers of the City of Birmingham were called upon to contribute to a fund for street widening in Liverpool. Surely thieving does not become an honest act if the person robbed is called upon to make good his own loss. I can quite anticipate it being said that a brewer and licence holder would not have to find this money, but rather the consumer of alcoholic beverages, upon whom these charges would be passed. Even if that could be carried out, which I doubt, considering how to-day taxation forms by far the major part of the cost of such beverages, and makes them nearly prohibitive, it would be none the less wrong that such consumers should be saddled with the losses brought about by the actions of others, and for which they were in no way responsible.

I am still a believer in the "State Purchase" of the trade as a solution of the so-called temperance problem, and realise that the state of national finance is such at the present time that it is not a practicable policy to apply it to the whole of the country; but whether applied nationally or locally, I should strongly oppose any such method, as was suggested in this Bill, whereby traders would be called upon to find their own compensation, although I have at all times been prepared to support the payment of betterment which might accrue to properties brought about by the reduction of licences.

MR JOSEPH CHAMBERLAIN ON TEMPERANCE REFORM.

One never appreciates merely destructive criticism, so while feeling that the Bill does not attain the Bishop's hope that it represents an agreed line of policy based upon agreed principles, and being strongly of opinion that there is much in it that must be unacceptable to the trade, yet it deserves our close scrutiny and consideration, for I feel that I can recognise in it the work of

well-known true temperance reformers, who, generally speaking, are broad-minded on this subject, and desire to attain their ideals without injustice to those interested in the licensed trade, and whose line of policy as set out in the Bill appears to exhibit so much the spirit of compromise that it may perhaps appeal to a larger body of persons than the unscrupulous methods of those to whom Mr Joseph Chamberlain referred when speaking in support of a system of "disinterested management," he said that "he had no sympathy at all with those who desired to carry out a public advantage at the cost of a private injustice, and who would be perfectly willing to be desperately virtuous provided it was at the expense of other people." Again, when speaking in Birmingham, he stated that, "so long as temperance reformers deny to a large section of the population, to all those who in one form or another are engaged in connection with this great industry, the rights of ordinary citizens, so long as they propose to take away their property without any compensation; so long the legislation of the future will be no more a success than the legislation of the past." How refreshing such words are, and how one regrets that in these days such honest and outspoken declarations are so rare.

NEED FOR DEFENCE MEASURES.

It has been plainly indicated by the supporters of the Prohibitionist Party in both Houses of Parliament that they do not look upon the Licensing Bill which has just become law as giving a satisfactory solution for the years to come, and that it is entirely inconsistent with the kind of promises which have been made with regard to the Government's intentions of legislating upon licensing matters. Therefore all connected with the licensed trade must maintain in the strongest form their defence organisations, and I appeal to our shareholders to discuss these matters with their womenfolk, as our opponents are relying upon a great accession of strength through the women's vote, which we must do our best to prevent by stating our case, and counteracting the plausible and often untruthful statements of the enemies of our industry. One must not be apathetic in condemning proposals which, if they became law, would inflict ruin on the many thousands directly and indirectly connected with this industry, which, as shareholders, it is your duty to protect to the uttermost.

I hope you will forgive me for again availing myself of our annual meeting for addressing you at such length upon trade matters. My only excuse for doing so is that my close connection with the work of our trade defence organisations—which were never stronger—enables me to fully realise the activities of our opponents, and the continued necessity for watchfulness to preserve, not only our property, but also to prevent the unreasonable curtailment of the liberty of the individual.

Ladies and gentlemen, with these remarks I have much pleasure in moving the adoption of the report and balance-sheet.

The resolution was duly seconded and adopted.

The formal business having been transacted, the proceedings terminated.

CITY OF SAN PAULO IMPROVEMENTS AND FREEHOLD LAND COMPANY, LIMITED.

RESULTS OF NEW CAPITALISATION SCHEME.

The ninth ordinary general meeting of the City of San Paulo Improvements and Freehold Land Company, Limited, was held, on the 16th instant, at Winchester House, Old Broad Street, London.

Mr Herbert Guedalla, F.C.A. (the chairman of the company), presided.

The secretary (Mr F. S. Tompkins) having read the notice convening the meeting, and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said: This is the ninth ordinary general meeting of this company, the last meeting being held on October 5th of last year. Since that date a great change has taken place. Instead of all the Ordinary capital being held by about 50 shareholders, we now have about 2,000 shareholders, because, by virtue of the scheme which has been carried out, the old shareholders have surrendered practically all their shares to the debenture holders of the company.

COMPANY'S FINANCIAL POSITION.

You will appreciate that it is difficult to compare the present balance-sheet with that issued on December 31, 1919. In 1919 we had the debenture holders and interest accrued amounting to over £3,300,000. This has now all disappeared, and we are left with an issued share capital of £2,000,000. Even of this amount 266,688 shares are held in trust, and are available for the benefit of the company. These shares, which were surrendered by the old shareholders under the scheme, were not distributable amongst the debenture holders, and are kept for the purpose of either finding additional working capital or for generally assisting in any scheme which may expedite the realisation of the company's

property. Further, our creditors at February 28, 1921, are reduced to £32,578, as against £106,032. In preparing the balance-sheet as at February 28th last we have set aside £75,000 as provision both for cancellations of purchases of land and fluctuations in the exchange value of the balance of our liquid position in San Paulo. Unless the land which has been sold falls considerably in value, there is really no necessity for such a reserve, but its existence will assist us in being able to maintain our reputation for fair dealing in these matters, so that purchasers will know that they will not be harshly dealt with in the event of their honestly not being able to carry out their engagement.

EXCHANGE.

With regard to the matter of exchange, as you are informed in the report, the liquid assets and liabilities in San Paulo are taken at the rate of 9½d to the milreis, which was the rate at the date of the balance-sheet. The present rate is just above 8d to the milreis, so that an actual realisation of this part of the position in San Paulo at that date would have involved a difference against us of about £25,000, which is amply covered by the reserve. Of course, it must be remembered that the debts are only recoverable over a course of years, and everyone is entitled to his own opinion as to what the rate of exchange may be when such payments are made. Should exchange in the future improve to better than 9½d per milreis, it will be a very good thing for the company.

Turning now to the asset side, we are enabled by this reorganisation to include the cost of our large properties at an amount of £1,754,478, as against an amount of approximately £3,275,000, at which it would have stood if we had taken the cost value as at the last balance-sheet and deducted the sales for the 14 months under review. At our general meeting in October of last year the chairman was able to state on the authority of the managing director that the value of the land remaining to be sold, according to the prices which have been and are being realised, would work out at a figure exceeding £4,000,000, so that it is clear that there is ample margin for the realisation of these lands at a good profit, even if this estimate is not ultimately attained. Land, like other security, has its ups and downs in value, but it is only right to point out that this particular property is building property, and is adjacent to the city of San Paulo, which is spreading out in our direction.

SALES AND DEVELOPMENT.

During the 14 months under review 260,331 square metres were sold, and realised milreis 2,298,325, as against sales during the preceding 12 months of 106,330 square metres, realising milreis 1,021,876. According to the reports from San Paulo, substantially higher prices were realised during this last period as compared with previous years. Since February, owing to monetary conditions, the sales have dropped by about 50 per cent. as compared with the corresponding period for the previous year, but your directors are taking steps to rectify this position by a scheme of finance, to which I will refer later. During all this period considerable progress has been made in development work, construction of roads and drains, and the provision of public utilities, such as water, gas, electric light, and sewerage.

The item for improvements, house property, plant, &c., stands at £64,561, and this figure has been arrived at on the basis of a conservative valuation. In the former balance-sheet the item stood at £114,826, but this included overhead and engineering charges, which were properly chargeable to this expenditure. These charges have now been eliminated, and only the actual value of the assets is taken. The debtors for land sold, house construction, &c., amount to £178,444, and, as I have told you before, this amount is payable over a course of years. We have taken it at the exchange of 9½d, but in the reserve on the other side full provision has been made for what we deem to be any possible fall in exchange. The investments since realised are taken at the actual realised value, £14,550. The cash at the date of the balance-sheet amounted to £95,544, and I think I may claim that, as the result of the reorganisation, we start with a very clean sheet and in a satisfactory position.

BOARD'S POLICY.

The main policy which we have to pursue is to realise our book asset of freehold land at the best price possible, and in the shortest period compatible with the attainment of this object. We do not desire to press sales in bad times, but we must be ready to take advantage of any turn in events. We possess an enormous building estate, and it is obvious that the present value of that estate will be much greater if it can be realised to advantage during a period, say, of 10 years, as against a period of 15 years. The present difference in value on this basis of realisation represents a very large amount, and it must be our endeavour to save this amount for the benefit of the shareholders. Now, it has been our past experience that the sale of land is very greatly facilitated when we have been in a position to finance the purchaser for the building or residence which he may wish to erect. Such a scheme will

THE SOUTH AMERICAN BANKS.

are established.

necessitate intensive development, and absorb a great deal of our present cash, so that this would not be available for building loans, and we are, therefore, endeavouring to evolve a plan by which the cash may be provided from outside sources, leaving our company any residual profit which may result from the transaction after the loans, with interest, have been repaid. At present negotiations are proceeding with the object of securing an amount of about £250,000, to be utilised for the purpose of such loans. As the negotiations are still in progress, it is not advisable to go into further detail on the matter, but I must ask you to leave it to your directors to make the best terms possible in the circumstances.

Mr Leslie R. Vigers seconded the motion, which was carried unanimously.

GOVERNMENT RETURNS.

TREASURY BILLS BY PUBLIC TENDER.

Tenders for £45,000,000 in three months' Treasury Bills, dated from Monday to Saturday, Aug. 22-Aug. 27th, were opened on Aug. 19, 1921, and the total amount applied for was £78,435,000. Tenders for Monday to Friday bills at £98 15s 11d will receive about 92½ per cent. and above in full, and for Saturday bills at £98 16s 3d and above in full. The average rate of discount was £4 14s 10.62d. The following table shows Treasury Bills by tender outstanding:—

Date and Duration of Bills, 1921.	Amount.	Applied for.	Average Rate of Discount.	Rate for Additional Bills.	Tenders at Rates below receive.
July 22 (3 months)	50,000,000	123,005,000	4 8 3.31	4½	£98 17s 8d (Monday to Friday bills) about 80% above in full, and for Saturday bills at £98 17s 11d above in full. £98 17s 5d (Tuesday to Friday bills), at 49½% above in full, and for Saturday bills at £98 17s 8d above in full. £98 16s 10d (Monday to Friday bills), about 94% above in full, and for Saturday bills at £98 17s 2d above in full. £98 15s 8d (Monday to Friday bills) about 73½% above in full, and for Saturday bills at £98 16s 1d above in full. £98 15s 11d (Monday to Friday bills) about 92½% above in full, and for Saturday bills at £98 16s 3d above in full.
July 29 (3 months)	60,000,000	99,975,000	4 8 7.82	4½	
August 5 (3 months)	50,000,000	77,955,000	4 10 10	4½	
August 12 (3 months)	45,000,000	74,340,000	4 15 3.8	4½	
August 19 (3 months)	45,000,000	78,435,000	4 14 10.62	4½	

The amount to be offered next week will be £50,000,000.

NOTE.—Budget Estimate as in the House of Commons, Paper No. 89 of 1921. Treasury, August 15, 1921.

A POLICY IN THE SCOTTISH PROVIDENT INSTITUTION

owing to the very MODERATE RATE OF PREMIUM, is the ideal method of providing for

DEATH DUTIES

DEPRECIATION ON INVESTMENTS.

particularly in view of the Abatement of Income Tax allowed in respect of PREMIUMS PAID.

Example: Age 40 next Birthday.

The Annual Premium, limited to 25 payments, to assure £2,500, payable at death, to provide Estate Duty of £ s. d. that amount would be .. 82 7 11 Less rebate of Income Tax (at 3s. per £) .. 12 7 2

Making Net Annual Outlay £70 0 9

MAXIMUM Amount of Premiums Payable, £1,751

MINIMUM Sum Assured Payable, £2,500

Head Office: 6, St. Andrew Square, Edinburgh.

LONDON: 3, Lombard Street, E.C.3.

WEST END: 17, Pall Mall, S.W.1.

Accumulated Funds .. £16,500,000.

SCOTTISH UNION & NATIONAL INSURANCE COMPANY.

ESTABLISHED 1824.

ASSETS EXCEED £12,000,000

FIRE. LIFE. ACCIDENT. MARINE.

Edinburgh: 35, St. Andrew Square. London: 5, Walbrook, E.C.4 and 4, St. James' Street, S.W.1.

British South Africa	782,458		
British India	610,015		
Total values of imports of gold	1,419,420	Total declared value of exports registered in the week	1,318,605

Messrs Samuel Montagu and Co. write, on August 18th, as follows:—

GOLD.

The Bank of England gold reserve against its note issue is £126,584,040, as compared with £126,564,510 last week. A fair amount of gold came on offer, and was taken for the United States of America. Gold to the value of \$7,500,000 is reported as having been received in New York—\$6,500,000 from France and \$1,000,000 from Uruguay. A discovery of

gold is reported in two widely distinct districts of the British Empire—namely, on Cariboo Island, on the north shore of the Great Slave Lake in Canada, and in the Australian Northern Territory. The following are the United Kingdom imports and exports of gold during the month of July last:—Imports, £4,226,266; exports, £5,686,534. From a commercial standpoint there is a gold par of more definite use than the Mint par, usually found in text-books. The latter is of academic interest, but it is not of practical utility. Take, for instance, the relation between the sovereign and the 20s gold piece. The sovereign is minted at 77s 10d per standard ounce, and the franc at 3,100f per kilo .900 fine. Hence the Mint par of the sovereign is 25.2215f. This calculation may be useful to fix a theoretical point (such as the duty under the Safeguarding of Industries Bill, should it become operative), but as a guide to exchange operations between the two countries it is irrelevant, and that for the following reasons—(our remarks refer to the normal conditions which obtained before the Great War had suspended the free export of gold from this country):—As a general rule, sovereigns only of average weight can be obtained for export—say, 3 per mille light. When sent into the French Mint a seignorage is charged of 6.70f in the kilo .900 fine—say, 2½ per mille. Therefore, an actual conversion of a sovereign into gold francs would probably only produce 25.0927f, instead of 25.2215f—the Mint par to which we have alluded. When gold coins leave a country for remittance abroad, they must be regarded as mere bullion, and any seignorage incurred when they were coined necessarily disappears. To obtain a par of real use to an exchange operator, we must find the relation between the bedrock price of gold in the London market and the bedrock price of gold in the French market (77s 9d per ounce standard, and 3,437f per kilo fine). On this basis—namely, 25.207f to the pound sterling—innumerable transactions have been carried through, and the movements of the French exchange, up or down, have been and doubtless will be governed. As exchange rises above or falls below this figure the possibility or otherwise of gold being obtainable—either from Paris at 3,437f per kilo fine, or from London at 77s 9d per standard ounce—has to be ascertained. If it were possible to buy at the bedrock price, taking the pre-war cost of transmission as 1 per mille, the gold points were 25.232 to London and 25.182 to Paris respectively. Hence, making due allowance for any premium upon the price of gold in the remitting country, this par of 25.207 affords a sound basis for calculation.

SILVER.

During the week the tone of the market has been steady. A fair inquiry has arisen from the Indian bazaars; China has operated both ways; offerings from the Continent and elsewhere have not been on a large scale; and the appreciation of the U.S. dollar exchange has militated against sales from that quarter. Imports of silver bullion from the beginning of the year to the end of June amounted to 24,933,171 ounces, and exports to 27,823,038 ounces—a net export of 2,889,866 ounces; that is to say, an average of half-a-million a month. When we approach the figures for the month of July a novel feature appears, for imports total 1,333,961 ounces, and exports 5,736,683 ounces—a net export of 4,402,722 ounces. This great excess implies a very important source of supply within the United Kingdom, the mining production of which has been negligible, and is incapable of any great expansion. If, however, it is assumed that the large supplies resulting from the reduction of the quality in the United Kingdom coinage from .925 to .500 fine are beginning to be placed upon the market and to form a considerable portion of the exports, the figures are not difficult of explanation.

The Bank of England in its early days.

THE old wooden strong box for the "protection" of one's valuables—in vogue when the Bank of England was founded in 1694—has long since given place to the modern Safe and Strong-Room.

To-day THE CHATWOOD SAFE represents a degree of security far in advance of any known contingency, affording protection against Fire, Fall and Burglary, including attack by the deadly Oxy-acetylene Blow-pipe.

The Chatwood Safe Book should be in the hands of every intending purchaser of a Safe or Strong-Room. May we send you a complimentary Copy?

RUBBER OUTPUTS AND DIVIDENDS.

In the table below we give the latest and past three years outputs, and dividends for five complete years of a number of Rubber Companies, while the latest reports of Rubber Companies are analysed under our Summary of Profit and Loss Accounts each week. The latest dividends declared appear under Dividend Announcements, and the Rubber Share Market is dealt with in our Stock Market section. Particulars as to the Market Price of the Commodity and other information will be found in our Produce Market Section.

Name. Year ends December 31, Except where Stated.	Outputs.			Output Month July, 1921.	Increase or Decrease.	Output Seven Months of 1921, Except Where Otherwise Stated in Brackets.	Increase or Decrease.	Dividends paid in Past 5 Complete Years.

BROKEN HILL SOUTH.—Six weeks ended Aug. 13th.—“11,960 tons of crude ore and 14,832 tons of dump slime were treated, and produced 4,709 tons of concentrates, assaying 55 per cent. lead and 32 ozs silver per ton.”

CAM AND MOTOR.—Cable: “No. 11 level drive south entered ore shoot at 435 ft; average 30s per ton over width of drive 5 ft and at 440 ft 36s per ton over width of drive. Full width of lode not exposed.”

CASCALHO SYNDICATE.—Result of the clean up for the past four weeks:—“Treated 1,950 cubic yards of cascalho for a return of 387 diamonds, weighing 155 carats, and 32 ozs of gold. The diamonds have realised £775. One diamond weighing 9 carats has not been sold.”

NORTH BROKEN HILL.—Production for July:—“1,200 tons lead concentrates, averaging 65 per cent. lead, and 1,170 tons zinc concentrates, averaging 48 per cent. zinc.”

ONOVILLE DREDGING.—“Pato: Gross returns for 18 days to August 12th, £23,392 from 116,803 cubic yards.”

ROOIBERG MINERALS DEVELOPMENT.—July:—“Ore mined, 2,792 tons; total ore accumulated for crushing at a later date, 7,179 tons. Tons treated—Ore, 3,170; alluvial ground washed, 4,082. Concentrates produced, 50 tons. Expenditure, including realisation charges and exploration, £5,795; revenue, £5,184; adjustments, nil.”

SULPHIDE CORPORATION, LIMITED.—During the four weeks ended July 30, 1921, 9,995 tons of ore and 2,074 tons of slimes were milled at the Central Mine, producing 2,183 tons of lead concentrates (including 240 tons from the delecting plant) which assayed 43 ozs silver, 65 per cent. lead, together with 3,671 tons zinc concentrates, assaying 13 ozs silver, 6 per cent. lead, 46 per cent. zinc per ton. At Cooke Creek, 1,755 tons of lead concentrates and purchased ores were smelted, producing 896 tons lead bullion for treatment in the refinery. The refinery products for the same period were 1,314 tons soft lead, 138,151 ozs silver and 424 ozs gold.

THE MEXICAN CORPORATION, LIMITED.—Advices have been received to the effect that the first unit of the Fresnillo Mill, consisting of one-half of the plant, has commenced operations. It is anticipated that the remainder of the plant will be brought into operation in September.

THE MOUNT LYELL MINING AND RAILWAY COMPANY, LIMITED.—The following cable, dated the 6th inst., has been received from the head office in Melbourne:—“From June 30th to July 27th, inclusive, ore treated by flotation plant, 5,276 tons; concentrates produced by flotation plant, 1,443 tons. A total quantity of 11,838 tons of ore was smelted, being 8,348 tons from the Mount Lyell Mine, and 3,490 tons from the North Mount Lyell Mine; also 1,072 tons concentrates. The converters have produced during the same period 450 tons of blister copper, containing: Copper, 446 tons; silver, 14,479 ozs; gold, 385 ozs. Furnace in blast 973 hours. Increased furnace hours caused by necessity running second furnace in consequence of furnace trouble early in period.”

WAHAI GOLD MINING.—Bullion Return.—For the period ended Aug. 6th, 13,950 tons of 2,000 lbs have been crushed, and 4,033 fine ozs of gold and 42,384 fine ozs of silver have been produced.

ZINC CORPORATION.—July:—“Zinc concentrator treated 33,860 tons of tailings, producing 9,195 tons of zinc concentrates, and 925 tons of lead concentrates.”

OIL OUTPUTS.

UNITED BRITISH OILFIELDS OF TRINIDAD, LIMITED.—Combined production for week ended August 10th amounted to 646 tons.

UNITED OIL AND REFINERY CO., LIMITED.—Throughout of refinery for July, 29,195 barrels.

BRITISH BURMA PETROLEUM CO., LIMITED.—A cablegram has been received from Burma reporting that the total production of crude oil by this company and the Rangoon Oil Co., Limited, amounted to 79,571 barrels for the month of July.

Chilean 33s for Tawny, Canada Western 34s to 35s per 320 lbs landed. Native steady, while ranging from 32s to 42s per 336 lbs as to sample. Forward sales were of moderate extent, and prices ruled easier. Oatmeal firm, owing to small imports and temporary shortage of the raw material. Beans firmly held, but demand quieter. English Springs 70s to 80s, new Winters 55s to 60s per 52 lbs. Peas very firm, with sustained inquiries. Duns 62s to 68s, Maples 80s to 100s per 504 lbs. Lentils, No. 1 split 35s to 40s, and Egyptian 30s per 100 lbs. Homeward grain freights have ruled easier in most directions, with fair chartering transactions. The River Plate shows more interest now that a number of maize cargoes have been cleared, and steamers up river loading September 15th-October fixed at 40s, and all October 38s 9d U.K./Continent. North American grain easier. Montreal to U.K. done 55 7½d qr. and 22 cents 100 lbs Continent. Gulf done 6s 6d to 55 9d U.K./Continent, with 5s 6d accepted for a large Greek vessel. North Pacific October fixed at 62s 6d and 60s wheat-flour, with 1s 3d ton more money for barley. Eastern markets generally steady. Bombay/Karachi done 30s on dead weight. Saigon rice 62s 6d, Dalney wheat/beans done 70s U.K./Continent. From Australia a large number of steamers were taken prompt at 72s 6d, October 7½d, with current rates at 70s and 65s respectively. South Africa quotes 42s 6d for maize cargoes, while Danube barley was closed at 24s 6d September to U.K./Continent.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1920-21, contrasted with 1919-20, 1918-19, and 1917-18.

	1920-21.	1919-20.	1918-19.	1917-18.

IRON, STEEL, AND COAL.

Our Middlesbrough correspondent's report, dated August 18th, is as follows:—Pig-iron: There is no iron market this week on account of the local race holidays. The resumption of the manufacture of pig-iron is very slow indeed. Blast furnace owners cannot yet contract for their coke supplies except at a price which would leave them a considerable loss on pig-iron, and consequently are delaying restarting. Prices are nominal and unchanged at about last week's figures. Manufactured iron and steel: Steel works are executing old orders. New business is scarce. Steel ship-plates, £15; steel ship angles, £14 10s; iron bars, £16; steel rails, £14 net. Iron ore: Business cannot improve until we get a general resumption of blast furnaces making hematite pig-iron. Makers' ideas are considerably below those of sellers, but the former have no orders meanwhile.

Our Sheffield correspondent writes:—Business in nearly all the steel branches is as stagnant as ever, and only a limited proportion of the plant is in operation. Nevertheless, a feeling of optimism is apparent, based upon the certainty of early reductions in prices and the knowledge that buyers' stocks are becoming exhausted. On the other hand, producers have large stocks of material bought at inflated prices. A few more pig-iron furnaces have gone into blast, but more of the hematite furnaces are still idle. The Lincolnshire iron and steel works are standing with a single exception. The crucible steel trade is extremely bad, with no signs of recovery. A further examination of the United States Tariff Bill makes it quite clear that the increased duties on high-speed steel will completely shut out the Sheffield material from the American market, as it amounts to £200 per ton based on the current prices of the steel in question. The Sheffield makers also demur at the condition that all invoices must be accompanied by an analysis of the material supplied, because this would mean the disclosure of valuable trade secrets. The new duties on tungsten exceed the current price of that metal. In the absence of profitable trade local firms find it increasingly difficult to meet their financial obligations, and the economic position generally is regarded as being highly critical. Ironmasters are demanding a substantial reduction upon the best coke used for smelting hematite iron, as it remains at 42s. House coal has developed further weakness since our last report. Inland buyers of steam coal are ordering on the barest scale, in expectation of reductions in prices. The export trade continues limited. The starting of coke ovens proceeds slowly, and meantime stocks are accumulating.

Our Glasgow correspondent (writing on Thursday) says:—Since the week began a gleam of sunshine has come into the industrial situation and sensibly changed the aspect of immediate affairs. Quite unexpectedly one of the largest steel works in the district has entered on arrangements for the starting up in the course of next week of the whole of their smelting and rolling powers. In brief, they are going on full. In the meantime, energies are to be concentrated on the production of plates and sections necessary to shipbuilding. These, it appears, have been ordered to the extent of a few thousand tons by one or two firms of builders who have work on hand which they have resolved on pushing to completion. Another leading firm of sheetmakers who have been laying down a boiler-plate rolling mill of the largest size (said to be the largest in the district) has taken measures for its prompt completion. It was the custom to roll boiler plates on the one side only, but Lloyds have now enacted that both sides should be run through, and the new mill has been designed to do so expeditiously. Plant of the description referred to is not provided on chance, and it is a fair deduction from the steps being taken that work is in prospect for the new machinery. The most cheering item of news (made known this morning) is that the prolonged dispute in the shipyards with the joiners has been settled, and that the operatives are to return to their respective shops on Monday. The deadlock has been in force from the beginning of the year, and has led to the laying-up on the Clyde alone of probably 200,000 tons of new shipping. Progress will now be made with the fitting-up of about 50 boats at least, and it is said that, hands being available, Fairfield and Clydebank are in a position to each employ over 1,000 men. Another satisfactory item is disclosed in the fact that a number of steamers which have been lying up in the docks for months for lack of freight have, last week and this week, been liberated for transport purposes in export directions. These details must not be misinterpreted, as oversanguine people may be disposed to. They do not mean that a revival of trade has set in here, and that brighter times have been entered upon. All that can be confidently said is that a conjunction of hopeful signs have appeared on the horizon and give promise of moderate expansion—thanks to the disappearance now of all serious labour disputes and to the advent of a cheap or rather cheaper material period. It is understood that the Scotch steelmakers are to meet on Saturday to discuss a price reduction, which, with coal 50 per cent. down in cost, and wages lowering, is held as due. Scotch pig-iron makers are preparing to blow in some more furnaces, only, however, for the manufacture of No. 3 foundry, a very scarce commodity, considering demand, which is general, while not active. This week the quotation for prompt has been fixed at £8 5s a ton at the producing works. Inquiries on export account are on the increase, and where sales have been made (forward) concessions on the figure named have been granted. Some respectable orders for black sheets have been given out, sufficient to keep works going comfortably, but there is no booking ahead proceeding. Pipe founders advise a better tone in their position, and tube-makers are busy again on both home and shipment contracts. Bolt, nut, and rivet makers are rather more fully engaged again. Coals weak, demand being a long way behind supplies, which consequently are glutting all the markets. Good fuel can be bought at 28s a ton, which compares with 60s prior to the strike.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—The market has been affected this week by the annual holidays, but the attendance on 'Change to-day was larger than might have been expected. Generally speaking, there is more doing, and most qualities of wool and tops display a hardening tendency. Importing top-makers frankly state that values in Australia are now practically the same as those current in Coleman street last series, and the upward movement has had the effect of hardening prices all round. A somewhat sudden development has occurred in low crossbreds, some considerable weights having been sold to Germany in the scoured state, while there is a fairly satisfactory movement in 56's and upwards. Consumption in home mills is somewhat larger, but all the same the home piece trade is anything but satisfactory. This continues to be the missing link, and one fears that the discouraging news from Lancashire will more or less be duplicated in the West Riding. At the same time, wool values are firmer than for months past, and consumption is well maintained at the best point seen recently.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

The principal event of the week in wool circles is the visit of Mr W. M. Hughes, Australian Premier, to Bradford, where, besides the civic reception given to him on Tuesday, and at which he said many things with which the trade largely agreed, he met the British Wool Federation on Wednesday. On the latter occasion, when the discussion took place in private, various matters were dealt with. It was agreed that Mr Hughes had rendered great service in stating the position of wool growers, though the Federation thought that the Premier had not previously recognised the present position here. The object of the conference was to bring about a better understanding, and strong hopes are entertained of closer co-operation between growers and users. At the civic reception Mr Hughes said nothing that could really be regarded as new. He emphasised the fact that almost every wool grower in Australia had lost money on his last clip, that current values for the raw material are not

sufficient to pay production costs, and that as Australian growers were in business for a profit, it was imperative that prices should take an upward turn in order to inspire every grower "down under" to renew his energies and produce the best wool possible. Mr Hughes and every Colonial wool grower no doubt recognise the present world slump, and there has been as much loss in the manufacture of wool as in its production. Mr Hughes pointed out that Australian growers sold their clips at most reasonable figures during the war; pastoralists never had a chance to line their pockets to the same extent as spinners and manufacturers in this country, which no doubt is quite true. At the same time, pastoralists have not had to face such tremendous losses as users, and the firm who has as much capital to-day as in 1914 is to be congratulated. Colossal profits were made by spinners and manufacturers during the war and 15 months after the signing of the armistice, but subsequent losses have been tragic, and it must not be forgotten that 64's tops dropped from 14s per lb to 2s 9d, all this taking place in 12 months. When the slump began every firm had big stocks of wool, tops, yarns and pieces, and to-day there are many firms who will feel the effects years hence. It is hoped that Mr Hughes will take back to Australia the full facts relating to the slump. It has been repeatedly stated in this column that wool buyers do not want lower prices, for they have never been a material source of profit to the trade; business has always been best when values have been on a paying level to growers. Mr Hughes spoke optimistically of the future. It is well known that the trade do not approve of Mr Hughes's idea of putting on one side all the old wool until Australian growers market their new clips, for that would be unfair to the British public. It may be expected that the entire trade, from the grower to the distributor of piece goods, will experience a lean year or two, but eventually business will be placed upon a sounder basis than could possibly obtain during the war, and with renewed confidence in industry and reasonable paying prices for all, growers will once more come into their own.

The cables from Australia are certainly inspiring, values apparently having risen all round 10 per cent., particularly for merinos. This is very satisfactory providing the advance can be maintained. The unfortunate thing is that the bulk of the demand is on Continental account, and the home trade still shows very little real sign of improvement.

The British-Australian Wool Realisation Association gives the following figures of stocks of wool at July 31, 1921:—

AUSTRALIAN.	U.K.	Antwerp.	Estimated in Aust'ia or Afloat.	Totals.

MANCHESTER, August 18.

The market has continued slow. Sellers have experienced a very poor week, and owing to the absence of business most spinners and manufacturers have lost ground. Prices tend to be easier, and as is usual in a falling market, buyers are holding aloof. Very little demand has been met with in piece goods for India, but there has been some improvement in exchange, and monsoon reports remain healthy. There is some expectation of more activity next month. Fewer orders have been placed for China, and leading shippers seem to have satisfied their more important wants for the time being. Not more than a sorting-up trade has been done for the several minor outlets East and West. Some manufacturers are being forced to curtail production on a larger scale. The yarn market has been flat. Only a retail turnover has taken place in both American and Egyptian counts. There is some talk of the Masters' Federation organising short time again. Scattered transactions have been arranged in export yarns for India, China, and Germany.

VEGETABLE OILS AND OIL SEEDS.

(FROM OUR CORRESPONDENT.)

A period of activity in the linseed market has been followed by a lull and an easier tendency of prices. Crushers' requirements appear to have been met for the present, and spot and near values have declined somewhat sharply, due to the pressure of the sellers. "For shipment" is also easier, parcels of Plate seed to Hull, July-August loading, having changed hands at £19 15s, and August-September at £20, with 20s premium paid for September-October. In view of the comparatively small quantity of Argentine linseed remaining to be shipped (about 130,000 tons), Plate shippers do not appear to be pushing sales, notwithstanding the falling off in demand. Reports from America are to the effect that a European syndicate is being formed to purchase the unsold Argentine balance. The latest figures give the estimated yield of the United States crop at 222,500 tons, against 275,000 tons last season, a rather smaller decline than at one time expected.

In sympathy with seed, values of linseed oil have eased off considerably from the highest level reached a few days ago, spot to December oil being obtainable at Hull early in the week round £35 per ton naked ex mill, second holders showing anxiety to quit. America is again reported to have been a good buyer. Cottonseed and cotton oils have shown an easier tone, with prices tending lower. A good trade has been done in soya bean oil (both crude and deodorised). Only a small inquiry is moving for rape oil. Ground nut oil has been in good request at late values. Palm kernel oil, following the erratic market for the raw material, is cheaper to buy.

Linseed cakes are difficult to dispose of, and with the arrival of huge quantities of seed at the milling centres should soon be in ample supply again. Some trade is being done in cotton cakes.

THE TIMBER TRADE.

(FROM OUR CORRESPONDENT.)

The timber trade has been passing through a quiet period during this holiday month, but the market has had its surprises, emanating from the break-up of the Swedish and Finnish selling combines, and the resumption of f.o.b. business on free trading principles. The result has been a rapid fall in shippers' quotations for almost all descriptions of building woods, particularly of the smaller dimensions. There, however, has not been such a rush to operate as anticipated, as importers are not sanguine as to whether even present quotations, which must entail considerable losses to exporters, will be maintained.

The Canadian spruce market also shows little signs of lifting from the depressed conditions that have surrounded it for many months past. Stocks at Lancashire ports are not quite so heavy as at this time last year, but the consumption is not nearly so large, and the little forward business done has been at weaker prices. Fair quantities of spruce have been put through the sale rooms by the Associated Importers, Limited, with most disappointing results to sellers. The export trade is bad in all parts of Lancashire, which reflects itself on the poor demand for Canadian spruce for packing-cases.

There is little difference in the furniture woods market to that reported in these columns a month ago. For mahogany, prices are inclined to weaken still further for inferior logs. Stocks of States furniture woods are ample, but the slight increase in the home demand, and the fact that forward quotations are higher in America have the effect of keeping the market steady.

For native woods there is little of an encouraging nature to report, but merchants in this section regard the transport situation with more hope now that the railways are out of the hands of the Government.

HIDE, LEATHER, AND ALLIED TRADES.

(FROM OUR CORRESPONDENT.)

Tanners must be looking forward to a revival in business, as they are still forcing the hide market up week by week. At Thursday's Bermondsey sales, best ox sold from 7½d to 10½d per lb, one class of runts making as high as 11½d. Cows also shared in the advance, and made from 7½d to 7½d per lb. On average these prices show ½d to 1d as compared with last prices. Calf also advanced, lights making as high at 16d per lb. The foreign hide market is also firmer, and quotations in the River Plate are again creeping up. The inquiry from the Continent continues good, and Germany is known to be a large buyer in Calcutta and elsewhere. The American hide market remains steady with best heavy packers selling at 14 cents and cows at 12 cents.

Although there is a better demand for sole leather, yet it does not yet come up to expectations. The call is for 12-14 lb bends in the cheaper grades, lights not being popular just now. The break in the weather has led to a demand from repairers. Shoulders are a slow sale, and big parcels have again changed hands at very low prices. Upper leather is improving, but it is disquieting to find that the demand is increasing for cheap stuff, which is entering so largely into the composition of the "stunt" advertised boots.

The shoe section reports an improvement, but there is still a good deal of anxiety in regard to the poor state of the export trade. Walsall reports an improvement, as cycle saddlers are busier, and there has been quite a rush on japanned ladies' belts of late.

PORTLAND CEMENT.

The following quotations for Portland cement are supplied by the Cement Marketing Co., Limited:—Best English, complying with British standard specification, delivered in London area—in full van or motor loads to site, 8½d to 9½d per ton; alongside in River Thames up to Vauxhall Bridge in full barge loads (80 tons minimum), 80s 6d per ton. Extra on above prices for the following special brands:—

"Blue Tiers," a fine-ground slow-setting cement, and "Red Tiers," a fine-ground quick-setting cement, 3s per ton. "Ferrocement," a cement prepared to meet the requirements of specialists in ferro-concrete constructions (in 20 sacks to the ton), 10s per ton.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, August 19.

The various markets during the week disclosed quieter features on balance, though a fair amount of business was effected in some directions. Consuming demand, however, was not fast, both with regard to home and exportation.

SUGAR.—This market exhibited general quietness, demand, both on grocery and manufacturing account, being measured by wants of immediate necessity, and prices ruled lower. Tate's cubes, 6½d to 6½d 3d; granulated, 5½d to 5½d 6d; caster, 6½d to 6½d 6d; pieces, 4½d to 5½d. Lyle's granulated, 5½d to 5½d 3d; yellow crystals, 5½d. Crystallised West India sold slowly at 4½d to 5½d 6d, as to sample. American granulated, spot, changed hands at 5½d to 5½d; afloat parcels, 3½d to 3½d 6d; August, 3½d to 3½d, c.f. and i. U.K. Dutch granulated, prompt, 3½d 6d; cubes, 3½d 6d; H.U.M. granulated, 3½d 6d, f.o.b. terms. Czechoslovakian, granulated, prompt, 3½d 6d; cubes, 3½d 6d, f.o.b. Hamburg. Belgian crystals, October-December, sold, 2½d, f.o.b., Antwerp. White Brazilian, spot, 5½d to 5½d 6d; Mauritius, 5½d 6d to 5½d 6d. Cuban stocks stand at 1,340,000 tons, against 363,000 same time last year. Terminal market lower. October, sold, 17½d to 16½d 9d, new terms; and December, old, 17½d to 16½d 3d.

COFFEE.—Spot market generally steady, but general demand

GIRARD TRUST COMPANY

PHILADELPHIA, PENNSYLVANIA.

Equipped to perform all kinds of fiduciary service—under appointment by courts, corporations and individuals.

Correspondence invited.

Chartered 1836.

Capital and Surplus - \$10,000,000.

Member of Federal Reserve System.

proved quieter. In auction, fine bold Costa Rica sold up to 156s 6d; peaberry, 174s 6d. Future delivery market steadier. December, sold, 45s to 46s 3d.

COCOA quietly steady, and small sales include fine Grenada at 55s to 56s; Jamaica, 54s. Butter quiet, at 2s 1d per lb.

TEA.—Indian sales this week totalled 43,300 packages, which met with fair support. Fine qualities ruled firm, but medium and common were barely up to recent level. 24,900 packages Ceylon proved quieter and medium classes tended in favour of buyers.

RICE.—Market steady, but not much business resulted this week. Two stars Rangoon, spot, sellers, 2½s; afloat, sold, 2½s to 2½s 6d; Hamburg, No. 1 garden Siam, afloat, 2½s 6d; ditto September, sellers, 2½s. No. 1 Saigon, afloat, 2½s 6d. Bran quiet. Rangoon, August-September, 18 10s per ton, ex ship. Beans quieter. Rangoon, spot, 16s; August-September, 16s; December-January, 15s 9d. Madagascar butter beans, new crop, all white, spot, sold, 36s; old, 30s. Japanese peas, crop 1921, September-November, sold, 4½s. Dutch blues, prompt, done 30s, c.f. and i. terms.

SPICE.—Pepper market opened the week steadily, but assumed a quieter tone. Fair black Singapore, spot, 4½d; August-October, steamer, sold, 4½d; Aleppy, spot, 4½d; Tellicherry, 5d; white Singapore, 9½d; Muntok, 9½d; ditto, August-October, done 9½d to 8½d. Zanzibar cloves sold on the spot at 1s 2½d to 1s 2d. Pimento, spot, 2½d. Tapioca, after being dearer, ruled quiet and easier. Fair flake, spot, sold, 2½d per lb; ditto, September-November, steamer, London, 18s 6d to 17s. Fair Penang seed pearl, spot, 2½s 6d; ditto, September-November, London, done 22s 6d to 20s 6d; Hamburg, 23s to 21s 6d. Small fair sago, spot, 27s; sago flour, August-October, Liverpool, 16s 9d. Dried coconut, spot lots, sold, 5½s; August-September, 5½s; and September-October, 5½s. Ginger quiet, but steady. Japan limes, spot, 45s.

FRUIT.—The market for currants ruled steady, and a moderate demand was experienced. Dates steadily held. Siar, 15s 9d. Valencia raisins and sultanais steady, quiet.

JUTE is dearer on the week, and quite a good volume of business resulted in the early part, but the market is since quieter. Native first marks assortment, spot, Hamburg, sold, £31 10s to £32 10s, as to quality; ditto, spot, Dundee, sub M-D/E, £31 10s; old crop subs, August-September, £27 to £27 10s; lightning subs, old, August-September, £22 10s to £23 10s; afloat, £23 10s to £24; ditto tops, £25 5s. Calcutta hessians steady, and to oz, spot, sold, 22s.

HEMP.—Manila steadily held, but there was not much response from buyers. J grade, August-October, £38; K, £35 15s; L, sold, £35 15s; M, quoted £31. New Zealand slow, and fair quality, August-October, quoted £34 10s, with high points ditto, £37 10s.

SHELLAC firm. Fair T.N., spot, 300s; August, sold, 270s to 290s; October, 275s, 290s, and 285s.

COPRA.—A fair amount of business was effected during the week, at irregular and lower prices. F.M.S. Straits, August-October and

September-November, Rotterdam, sold down to £32, then £34 5s; Ceylon, August-October, London, £34 5s to £34 15s; Cebu, to Hamburg, £31 10s to £32 5s, and £33 5s; South Sea Islands, to London, £31 10s. Palm kernels, spot, sold, £21; and September-November, at £21 10s to £22 15s.

MENTHOL.—Spot, sold, 23s 6d; Japanese peppermint oil, spot, 4s; aniseed, 2s 4½d per lb.

RUBBER remained in a dull state for standard qualities, but there was a fair demand for dark and clean specky, from 6d to 6½d. Standard crepe, spot, sold, 8d to 8½d and 8½d; October-December, 9d to 9½d and 9½d; January-March, 9½d to 10d and 9½d; April-June, 10½d to 10½d. Standard sheet, spot, sold, 7½d to 8½d and 8d; October-December, 8½d to 9d and 8½d. Fine hard Para, spot, quoted 15½d; and caucho ball, 7d.

OILS.—Linseed irregular and easier. Spot, net, naked, 37s; September-December, 36s. Rape quiet. Crude, spot, 54s; refined, 62s. Cotton quiet. Crude Egyptian, 43s; Bombay, nominal; common edible, 52s. China wood firm. Hankow, spot (barrels), 102s; and shipment, 75s. Coconut quiet. Ceylon, spot, 55s; August-September, 53s; Cochin, ditto, 58s. Soya quiet, Oriental, barrels, ditto, nominally 44s. Japan fish steady. July-August, cases, 23s. Cod steady. English, spot, 25s. Groundnut quiet. English crushed, naked, spot, 52s; deodorised, barrels, 63s. Turpentine easier. American, spot, 64s; September-December, 61s 6d. Rosin weak. American, grade B, 16s; F, 16s 6d; G, 16s 6d; K, 18s; M, 18s; WW, 24s 6d; French, F/G, 14s; H, 14s; WW, 17s; extra pale, nominal. Petroleum easier. American, refined, 1s 4d; standard white, 1s 4½d; and water-white, 1s 5d per gallon.

OILSEEDS.—Linseed: Market quiet and easier. Calcutta, August-September, sold, £23 5s. Plate, spot, Hull, £20 5s; afloat, sold, £19 15s to £20; July-August, sold, £19 15s to £20; August-September, £20 5s; September-October, £20 10s to £21. Rapeseed quiet. Toria, July-August, sold, £22 5s; real bold Ferozepore quoted £22; brown Cawnpore, £21. Cottonseed quiet. Egyptian black, August, sold, £14 5s; and white, £13 15s. Bombay, August-September, £11 5s. Gingly firm. Chinese, August-September, Continent, sold, £28 10s; ditto September-October, sold, £31 to Italy. Castor, Bombay, August-September, £19. Ground nuts easier. Coromandel, machine-dried, August-September, £27 10s. Chinese decorticated, f.a.q., afloat, sold, £26 15s per ton.

METALS.—Tin occupied quiet attention until last Tuesday, the tendency being easier, when cash changed hands down to £155, and three months' to £156 5s. Values declined further during the middle of the week on a good deal of selling, cash fluctuating to £151 5s and three months' to £152 10s, while since registered at £151 15s and £152 15s respectively. At Thursday's meeting cash realised £150 15s to £151 10s, and three months' £152 to £153. A firmer tone prevailed at Friday's session. Cash sold at £152 to £152 10s, end of

Continued from page 323.

October £153 10s, and three months' £153 10s to £154 10s, while finally done at £154. English ingots, £151. Copper continued a quiet market at the opening of the week, cash being sold at £69 17s 6d to £70, three months' £70 7s 6d. A lower range characterised price movements until Wednesday, when these dates changed hands down to £68 5s and £68 15s respectively, with business on a fairly large scale. At Thursday's meeting cash sold at £67 2s 6d to £67 7s 6d, three months' £68 5s to £67 12s 6d, improving since to £67 17s 6d. At Friday's session cash changed hands at £67 2s 6d, early October £67 10s, and three months' at £68 to £67 10s, while subsequently placed at £67 15s. Electros, £71 10s to £73; best selected, £67 5s to £69 5s; strong sheets, £103. Wire bars, £72 to £73. Lead easier, at £23 7s 6d to £23 17s 6d, as to position. Spelter lower, at £24 12s 6d to £25 5s, according to position. Antimony remains steady. English regulus, £37 to £40. Aluminium, home trade, £115.

TALLOW.—Messrs Colchesters and Woolner write on August 17th as follows:—The tallow market was quieter during the week, several parcels offering for re-sale. At to-day's auctions there was less competition, and prices showed an advance of 1s on good mixed only. Shipments of tallow from Australasia in July amounted to 3,000 tons. At auction to-day 1,616 casks tallow were offered, and 762 were sold. Quotations are:—Australian mutton: Fine, 48s 6d; good to fair, 48s to 47s; dull to dark, 42s 9d to 39s; hard, 48s. Australian beef: Fine, 48s; good to fair, 47s to 43s 3d; dull to dark, 42s 6d to 38s; sweet, 50s. Present shipment from Australasia:—Mutton, fair coloured, 48 degs.; and mixed, 43½, c.i.f., London, 44s 6d. The market letter is unchanged for tallow, stuff is dearer. Town tallow, 37s 6d per cwt. Rough fat, per 8 lbs, 2½d; melted stuff, 2½s per cwt. Quotations are:—Town, 38s 6d, net cash, naked, ex works. Country: Frail casks, 38s; home melted, shipping casks, net, f.o.b., good coloured, none; fair to dull, 39s 6d to 37s. Bone fat: White, none; pale, none; benzine, 32s; melted stuff, 31s, f.o.b.

Foreign Exchange Fluctuations

MERCHANTS importing goods from abroad for sale in this market may eliminate the uncertainties of exchange which affect the selling price of their commodities by securing with us contracts for forward exchange covering fixed periods. Similarly, exporters selling abroad in foreign currencies may protect their sterling proceeds by forward contracts.

The Guaranty Trust Company of New York is prepared to make quotations for forward exchange embracing all the main currencies of the world as well as the United States dollar.

Our Officers will be glad to explain in detail how merchants and others may eliminate the uncertainties of exchange in their transactions.

Guaranty Trust Company of New York

A Complete International Bank

THE MONEY MARKET.

SCANT supplies of credit have been noted on several days, and on Thursday borrowers occasionally paid up to 5 per cent. for loans over night, until the situation was relieved by purchases of short Treasury bills by banks. The market is still apprehensive about the effect of repatriation payments, and it is possible that the indirect effects of them are already being felt, if, as seems likely, the increase in departmental Ways and Means Advances, which enabled the Government to reduce those from the

GERMANY.—CAPITAL LEVY — MARK'S BUYING POWER—EXCHANGE AND BOURSE—COAL.

(FROM OUR CORRESPONDENT.)

BERLIN, August 20.

THE texts of the new taxation Bills as to-day published agree with the official memorandum summarised by me last week, but many of the details are new. The increase of import duties includes some foreign fruits; the coffee (unroasted) duty is raised from 130 to 200 marks per 100 kilos; the cocoa beans duty is doubled; the tea duty raised from 220 to 350 marks. Among other wares on which import duties are doubled are perfumes and cosmetics, ivory goods, precious stones, luxury-automobiles, and certain textiles products. The new beer tax is progressive according to individual brewers' production, rising from 41 marks per hectolitre on a brewery's first 2,000 hectolitres production to 50 marks on production over 100,000 hectolitres. The motor-car tax is progressive according to horse power, the present rate on the lowest horse power being nearly trebled, and on the highest horse power increased about eightfold. Thus the tax on the first horse power is raised from 27 marks to 75 marks; on 30 horse power from 450 marks to 3,450 marks. In the sales tax (Umsatzsteuer) only the present 1½ per cent. rate on turnover in necessary goods is doubled, not the 15 per cent. tax on luxuries; but the 15 per cent. may be imposed each time a half-finished luxury article is transferred to a new department of the first maker's concern—a measure directed against evasion by the "Vertical Trust" system, and a new luxury tax of 10 or 5 per cent., according to class, is imposed on food and drink served in the dearer hotels and restaurants. The stamp duties on all kinds of insurance contracts are raised, sometimes eightfold, and duties are imposed on certain insurances (livestock, accident, &c.) which are at present stamp free. The tax on bets is 10 per cent. of the sum staked. Book-makers will be licensed and taxed; but the existing legal totalisator system remains. The additional yield of the reformed tax on capital transactions (company registration, stock transfers, &c.) is stated as 881,400,000 marks. Several of the new indirect taxes were yesterday sanctioned by the Reichswirtschaftsrat, but the new tobacco tax as a whole has been rejected. The memorandum, summarised last week, on the proposed levy on "gold values" has been published. The Government does not propose to claim voting power in the industrial and trading companies in which it is to take a 20 per cent. share. Execution of the levy plan, says the memorandum, would cause a decline in the currency inflation through the purchase by the public of the State's mortgages on land

and houses, and of its shares in companies; the State's mortgages could form a basis for conclusion of foreign gold loans, and the mark exchange would gain support. The plan is severely attacked in many newspapers. Its execution would do a great deal to restore the State finances if at the same time the Budget, including Reparations Expenditure, were balanced; but if the Budget is not balanced (and at present there is small prospect) the capital yield to the State would largely go on current expenditure, or be used to raise money for current reparations, a result of which would be that in a few years a very great part of the national capital wealth would pass into foreign hands, after which there would be little surplus income left from which to meet later Reparations payments. On a greater scale would be repeated what happened with Herr Erzberger's Emergency Levy, which was designed to pay off State debt, but was finally used to cover a very small part of the current deficit.

The exchange and stock markets are in a state of violent agitation as result of the mark's drop to a new low point, and its sudden partial recovery. The Reichsbank statement for August 15th shows the usual mid-month pressure, Treasury bill discounts rising by 3,849,069,000 marks to 78,978,931,000 marks. Private discounts fell by 92,504,000 marks to 1,003,939,000 marks; State deposits rose by 1,895,393,000 marks to 3,725,204,000 marks; private deposits by 1,676,966,000 marks to 9,159,095,000 marks. Note circulation fell by 258,540,000 marks to 77,396,140,000 marks, and Kassenschein circulation by 157,900,000 marks to 8,119,200,000 marks. On the 16th sterling sold at 348.85, the dollar at 91.10, and the Swiss franc at 1501.50, the highest points since February, 1920; rates yesterday were 309.35, 84.59, and 1431.45. The exchange market was in a state of confusion. The director of Bremen Statistical Amt publishes statistics to show that, contrary to belief, the buying power of the German mark since 1914 has mostly been lower at home than abroad. His price basis is living-cost, not commodities. Only in the second half of 1914 and since the first quarter of 1919 has the home buying power been higher. The greatest disparity was in February, 1920 (the month of the heaviest mark exchange fall), when the mark was worth 14.5 pfennigs in Germany and only 4.6 pfennigs in Amsterdam. The disparity has since decreased, the mark in June, 1921, being worth 10.6 pfennigs at home and 7.2 pfennigs in Amsterdam. These figures show that during actual hostilities the mark exchange held relatively well. The agitation for higher wages and official salaries is very active. The officials demand that the temporary "high prices supplements" paid on salaries be converted into permanent salary increases. The Association of Trades Unions condemns the proposed taxes on consumption and the new increase of bread prices, demands an increase of old-age and other social pensions, and declares that further price rises can only be prevented by Socialisation of the instruments of production. The price of the standard 1,900 gramme loaf has been raised from 5 marks to 6.95 marks. The Government has rejected a Bavarian demand for independence in matter of breadstuffs, declaring that Bavaria is not under but over supplied, and that the Republic must be an economic unit.

On the first day of the week the bull movement in stocks reached its highest point, the outside public buying recklessly, though it was known that experienced speculators were realising. The recovery in mark exchange duly produced a very sharp reaction, which most of all affected mining and iron stocks, that is, the stocks which had risen most rapidly. The reaction, however, was not homogeneous, as the banks and brokers had large numbers of unfilled buying orders, and there was heavy buying of certain stocks, even on the reaction days. Owing to suggestion the Berlin Bourse had to be closed on Wednesday, and it will be closed next week on Thursday, in addition to the customary closing on Tuesdays and Saturdays. The Bourse buildings, hours, and system are not suited to the new conditions caused by the enormous increase since 1914 in the quantity of quoted stocks and shares, and by the growth of private speculation. Measures under discussion are restriction of quotation of certain securities to two or three days weekly; lengthening of hours; settlements every ten days; and increase in the

number of licensed stockbrokers. Yesterday, with a new slight rise in foreign exchanges, stocks were again firm, under leadership of Phoenix (iron), which touched 1,280. The following are yesterday's quotations of leading stocks:—

Deutsche Bank	323	Harpener Mining	721
Disconto Bank	266	Hirsch Kupferarwen	460
Dresdner Bank	237	Hohenlohe	299
Hamburg-America	178	Howaldt	444
Norddeutsche Lloyd	172½	Ise Bergbau	730
Hamburg South America	390	Aschersleben (Potash)	410
Otavi Mines	648	Laurahütte	440
Schultheiss-Patznerhofer	595	Linke-Hofmann	530
Aachener Leather	601	Mannesmann	821
All-Elektricitet	359	Nd-Deutsche Wool-Combng	998½
Badische Anilin	500	Orenstein and Koppel	700
Bochumer Gusstahl	610	Phoenix	1,244
Buderus (Iron)	656	Rhein Stahlwerke	685
Concordia Chemicals	970	Sarotti Chocolate	1,560
Daimler Motors	254½	Siemens and Halske	434½
Deutsch-Luxemburg	482	Thale (Iron)	998
Felt and Guillaume	495	Varziner Paper	609
Gelsenkirchen	500	Verein. Glanzstoffe	1,295
Glabach Textiles	605		

War Loan was yesterday 77½, 4 per cent. 78.40, 3½ per cent. 68, 3 per cent. 76½, Colonial 4 per cent. 69.20, and Savings and Premium 80.

The Ruhr coal production in July was 7,782,676 metric tons, or 299,334 tons per working day, as against 7,753,350 tons, or 307,063 tons per working day in June. There is still a deficit as compared with February, the last month in which the miners observed the agreement of 1920 for three extra half-shifts weekly; then output was 8,174,606 tons, or 340,609 tons per working day. Output in July, 1921, was 10,150,347 tons, or 375,939 tons per working day. A report estimates that the Ruhr field contains 213,600,000,000 tons of workable coal; the Upper Silesian field, 166,000,000,000 tons; Saar fields, 16,500,000,000 tons; rest of the Left Rhine coal districts, 10,500,000,000 tons; Lower Silesia, 2,900,000,000 tons; and rest of Germany, 480,000,000 tons. The brown coal supply in the former German area, excluding Anhalt, Brunswick, Mecklenburg, and Thüringia, was estimated before the war at 13,400,000,000 tons. In 1900 the brown coal output was (in weight) only one-fifth of that black coal output; to-day it is four-fifths.

New capital raised in July, 1921, for all purposes was (Frankfurter Zeitung's compilation) 1,506,670,000 marks, of which 340,700,000 marks was for new foundations, 702,270,000 marks for capital increases, and 463,700,000 marks for fixed-interest securities. In June was raised 2,237,980,000 marks new capital, and in January-July inclusive 13,104,800,000 marks, which is little short of the (gold) capitalisation of all private companies in 1913.

SWEDEN.—BANK FIGURES—THE PREMIUM BOND ISSUE—INDUSTRIAL CONDITIONS.

(FROM OUR CORRESPONDENT.)

STOCKHOLM, August 13.

THE last monthly review of the balance-sheets of 11 of the largest Swedish private banks indicates several important changes. The position is now similar to that on May 31st last, viz., loans 1,984 million kr, bills 1,320 and letter credits 1,448 million kr. With regard to debts due abroad, the 11 banks had on May 31st last 124, on June 30th 147, and July 30th 130 million kr due to them. It is evident that there is no actual relaxation in the position generally, and under such circumstances the further lowering of the discount rate so much hoped for must be accounted unlikely. The new premium bonds will be issued on the 16th inst. During 1918 we had in this country a similar loan taken up, which was not absorbed to its full extent. Energetic preparations have, however, this time been made all over the country to interest the public, and a novelty has been introduced. After 10 annual lotteries the bonds are exchangeable for one 5 per cent. State bond at 50 kr par, thus combining gambling with investment. Thus after having provided 10 annual chances of winning a prize the premium bonds automatically change into 5 per cent. State bonds, which under normal circumstances ought to be valued at par. There is no material change in the industrial position. Some strikes, amongst them the sailors' and stokers'

strikes, have been finished with defeats to the men, who have to be content with 20 per cent. reduction in wages, but otherwise there is more cutting down in operations. Now and then works restart, but it is often only in order to execute occasional orders. The timber exporters are having a difficult time, and have applied to the Government for assistance in the way of postponed payments for timber which they have bought from the State. This will probably be granted them for another month or two. The last two weeks have been marked by strong fluctuations in foreign exchanges, most of them tending downward. In particular the dollar quotation has caused surprise by steady dropping. Sterling has moved more slowly, and the general belief is that this rate is abnormally low, and that only a very slight stimulus is wanted to send it up. There was a loss of 34 million kr in values on the Stock Exchange last week. There was further a drop in wholesale prices during July last of 1 per cent. Vegetable foodstuff, coal, oils, building material and woodpulp were lower, whereas animal foodstuff, textiles, hides, and leather increased in price. As the British prices for fuel are steadily falling, consumers are stubbornly holding off, and will probably not buy until the last minute. The Swedish Government has decided to take an active part in assisting starving Russia. An expedition is being prepared in conjunction with the Swedish Red Cross, the expenses of which will be paid by the State. It is, however, pointed out that all will be done jointly with other European powers. A reconnoitring expedition will proceed, before the large expedition starts to prepare the ground. Generally speaking, Sweden cannot complain very much of the drought. Of course, there are some parts in the south which are very hard hit, but the rest of the country will probably be in a position to deliver a satisfactory harvest.

SPAIN.—WAR CREDITS.

(FROM OUR CORRESPONDENT.)

MADRID, August 21.

THE Madrid Gazette publishes a Royal decree granting a number of supplementary credits to the War Office—one credit of 7,072,800 pesetas, and another 1,800,000, the first for military supplies and the second for air services. In connection with action in Morocco, the War Office is granted 55,551,150 pesetas for artillery, 19,285,700 pesetas for engineering services, 6,000,000 for commissariat services, 7,288,200 for sanitary services, 10,000,000 for the military breeding stud and riding establishment, and 5,700,000 for aeronautic services. These extraordinary war credits amount to 112,637,850 pesetas. By another Royal decree the naval department is granted a credit of 298,146 pesetas for salaries of ship employees, and another of 5,500,000 for naval repairs. With minor items, the naval war credits amount to 6,131,346 pesetas. The total amount of these supplementary credits, military and naval, therefore, reaches the sum of 118,769,196 pesetas.

Letters to the Editor.**THE GOLD STANDARD.**

TO THE EDITOR OF THE ECONOMIST.

SIR,—Mr Mason's admission in your issue of July 30th, that the gold standard will not "prevent crises from occurring," should be—one would think—a sufficient reason for him to question the wisdom and safety of such an institution. What would be said of an engineer who advocated the employment of a certain metal for bridge-building after admitting that this metal would not prevent the bridge from occasionally collapsing? But when he says that "under its operation they are less likely to occur," one can only marvel at his lack of financial history. The fact is that no single financial crisis has ever been created by paper money where such money has been issued for productive purposes.

The classical instance always cited of the French Assignats—to which will now, of course, be added the Russian Soviet Currency—are merely cases of currency madness

in which money was issued to meet political ventures, or solely for speculative or destructive purposes. In the case of Russia, we now know that Lenin purposely flooded the country with paper money in order to render it valueless and so destroy the capitalistic system. Had he possessed a mountain of gold, and issued the same quantity of roubles, the results would have been much the same. Where crises have occurred have been the result of governments attempting to "redeem" paper money with gold and silver, a practical illustration of attempting to make a camel pass through the eye of a needle! This happened after the Napoleonic wars in this country and the United States after their Civil War. Mr Mason speaks of the need of greater elasticity. But surely this can only be obtained by the use of paper money or its equivalent—credit. A gold currency is certainly not elastic. Mr Mason says that my statement that gold disappeared from circulation in 1914 before even a shot was fired is an exaggeration. Anyone who remembers the last two days of July and beginning of August will corroborate my statement. Why did the banks close their doors and proclaim a holiday during those eventful days if gold was available?

Mr Mason says, to-day we are paying the price for the lack of foresight in having failed to provide for gradually redeeming the emergency paper money. This is indeed a curious assertion. In the first place, the Treasury Notes have been redeemed again and again. If I give a promissory note to a merchant for a certain sum payable at a given time, and in the interval supply the same merchant with goods to the value of the note, by taking back the note in payment of the goods I have redeemed the note. Now, the Government issued Treasury notes which became legal tender for the payment of taxes, and by receiving these in settlement they redeemed them. And this process of issuing and redeeming these notes has been repeated again and again.

But if Mr Mason thinks that the Government should have provided a gold reserve fund of £400,000,000 for redemption purposes, again I ask him to point out where the gold was to come from? As to the price we are paying, the only difficulties I know of are those engendered by the attempt to revert to the pre-war standard. The six years' experience from the autumn of 1914 to the spring of 1920, during which we employed the so-called "inflated" currency, was the most prosperous ever known as far as trade and the general well-being of the masses of the people were concerned. Our industrial troubles only started after Mr Austen Chamberlain announced the Government's intention of pursuing the fatal policy of deflation. The high prices were not the direct result of an excessive supply of Treasury notes. They were mainly due to the destruction of munitions of war which had cost thousands of millions of money to manufacture. Instead of destroying them, supposing we had adopted the attitude of America up to her entrance into the war (as recommended by certain Radical journals) and had sold all these munitions to the belligerents. Would not the results have been the creation of a vast fund of wealth instead of an irredeemable national debt? And would Mr Mason then have claimed that these notes were inflated? Up to November, 1916, a period of over two years of war, our legal tender was no greater in volume than in pre-war days. Treasury notes had merely replaced golden coins, and yet prices had risen 100 per cent. This was due to the shortage of goods. Dr Shaw pointed this out in an able article in the *Quarterly Review* for January, 1919. I have cited Germany as an example of a nation that is deliberately pursuing the financial policy which Mr Mason and his friends believe to be ruinous. Money is merely a token, a convenience, a tool, and if Germany's financial tools enable her to turn out goods of every description, and undersell all her rivals, the sooner we follow her "ruinous" policy the better for this country. No! cheap currency is not the only means for producing wealth. The creation of paper money is not the creation of wealth. To cite Poland and Russia as competitors, as Mr Mason does, is not argument. Russia's currency was produced to destroy wealth, and the system by which it has hitherto been produced. If Poland could add to her cheap currency an unlimited supply of the three other factors, labour, raw material, and capital, then she would prove

a dangerous competitor. Here in England and in America we are witnessing poverty and want in the midst of an abundance of all these three prime factors, which remain stagnant because of an insufficiency of the necessary tools of exchange, which the Governments and banks of both countries have deliberately destroyed. The Gresham law cited by Mr Pawle was announced in an age when all trade was barter, and is not particularly instructive. Under the barter system gold may be considered as better—weight for weight—than silver or copper. And hence it might have been correct in a sense to say that "bad money drives out good money." Properly expressed, Gresham's law is merely a truism, viz., the cheap drives out the costly. But this is the law of progress, the survival of the fittest. And if paper money drives out gold it is not because paper money is "bad" and gold "good," but because of the higher natural law, viz., that mankind always seek to satisfy their wants with the least expenditure of energy. It is the line of least resistance. Cheap money will always drive out dear money, just as cheap cotton machine goods have driven out expensive hand loom goods. But this doesn't mean that the cheap goods are necessarily "bad." The fit will always drive out the unfit—under free conditions. And this is why the employment of gold for monetary purposes can only exist under a protective system. To talk of free trade in a country where the tool of trade is highly restricted and protected by Parliamentary laws is to talk nonsense!—Yours faithfully,

ARTHUR KITSON.

12 St James's square, London, S.W.,
August 15th, 1921.

THE CURRENCY PROBLEM.

TO THE EDITOR OF THE ECONOMIST.

SIR,—That portion of Messrs Albert and Percy Wallis's letter dated August 6th, replying to my letter of August 4th, reveals a difference of method in the interpretation of historical facts. Messrs Wallis complain of a want of "exact" knowledge, and that is just the trouble. One cannot prove that the addition to-day of a stated quantity of gold coin to the currency will cause prices of commodities to rise to-morrow and to forecast exactly the degree of the rise. It must be borne in mind that there are other factors—such as the quantity of commodities produced and the quantity of demand—which are no more static than the quantity of currency. It is really a question of relativity, but the whole scheme is thrown out of gear when one factor, (for example, the currency) is increased or decreased out of proportion to the others. All that an economist can say is that the continued increase in a country's currency will cause a rise in prices over approximately the same period as the increase lasts, and, conversely, a continued diminution in a country's currency will cause a fall. One cannot say that the price of this or that particular commodity will rise or fall, but one can say that prices of commodities in general will rise or fall. And, similarly, one cannot say of a period of years that there will be a steady yearly rise or yearly fall in prices; but one can say that the general trend of prices during the period will be up or down. The general trend of prices during a period may, indeed, be interrupted by temporary movements in the opposite direction, but such movements will only be temporary, and the ultimate result will reflect the general trend of the period.

Thus Messrs Wallis say that, notwithstanding the inadequate supply of metallic money during the period 1873-1896, prices "went up considerably about 1883, and went up very high indeed in 1890." The facts are that these rises were only of a temporary nature, and even then not sufficient to wipe out the declines which had preceded them, as the following table will show:—

WHOLESALE PRICES IN PERCENTAGES OF FIGURES FOR 1913.					
Date.	England.	Rise or Fall.	U.S.	Rise or Fall.	
1873.....	130		137		
1878.....	100	— 30	100	— 37	
1880.....	105	+ 5	110	+ 10	
1883.....	100	— 5	110		
1887.....	85	— 15	88	— 22	
1890.....	88	+ 3	84	— 4	
1895.....	75	— 13	70	— 14	

That is why I based my arguments on a review of a long period (1790-1921), divided broadly into sub-periods, when the increases or decreases in the currencies of England and the U.S. were continuous. The principal factors which I mentioned as affecting the amount of metallic money available were the discovery of gold in California and Australia (1848-49—increase), the demonetisation of silver (1873—decrease), and the discovery of gold in Klondyke and South Africa (1896—increase). And the information upon which I based those arguments is as follows:—

The figures for British prices are made up from an index prepared by W. Stanley Jevons for the years 1782 to 1817, and the Sauerbeck-Statist index for the rest of the period. The index for prices in the U.S. is a combination of indices published in the quarterly of the American Statistical Association by Alvin H. Hansen for the years from 1801 to 1840, and by Carl H. Jurgens from 1825 to 1863; and index published by Roland P. Falkner in the report of the Senate Committee on Finance (1893) for the years 1840 to 1891; and the current index of the United States Bureau of Labour Statistics.

It is noteworthy that the Federal Reserve Bank of New York, commenting in its Review of June 1st on these statistics, remarks:—"The fact that index numbers compiled by different methods from varying numbers of commodities show such close correspondence is evidence of the stability and accuracy of price index numbers as well as of the intimate relation between price changes in the two countries."

The problem now before us is to get back to a relatively stable standard of value.

I have suggested the issue, intelligently directed, of credit on easy terms to producers for the express purpose of facilitating the production of goods wherewith we may redeem our paper obligations. What applies to us of course applies to every other impoverished belligerent, but the nation which first gets down to work in a serious endeavour to balance its Budget and redeem its debts will have the advantage. I should be interested to know to what extent this view is gaining ground.—Yours very truly,

W. J. COOK.

20 Bracken gardens, Barnes, S.W.,
August 16th, 1921.

TO THE EDITOR OF THE ECONOMIST.

SIR,—I congratulate Mr Mason on having arranged a conference on the currency question, and I hope that it will be able to throw light on this extremely important but difficult problem.

Mr W. J. Cook's account of price movements since 1790 is masterly, but there seems to be an at least apparent contradiction between his insistence on the need of reducing outstanding issues of paper, and his suggestion that fresh bank credit should be issued to producers. Surely bank credit and currency are substitutes, and it is difficult to see the gain of creating the one to extinguish the other. If, as Mr Cook supposes, mankind are firmly wedded to gold and silver as standards of value, in spite of the fluctuations in their value, which he describes, and are unwilling to adopt a more scientific standard (I hope this is not so), it should be possible for a country which has checked further inflation to get right back to a gold standard without delay by adopting a new and reduced gold equivalent for its depreciated paper currency.

The labour of giving these tokens a greater value than they now possess is not likely to be faced, and the desirability of doing so is at least questionable.

The very fact that money is becoming more valuable stops trade and new construction work, and is the principal cause of the ridiculous position of going in want in the midst of plenty, pointed out by "Observer."

"Observer's" account of how the war debt was built up by the creation of fictive credit is true enough, and although this does not justify repudiation, we can at least refrain from adding to our burdens by magnifying the unit in which they are expressed.—I am, Sir, your obedient servant,

C. CRAIES.

Apollo House, 4 Bunhill row, London, E.C. 1,

ECONOMIC TROUBLES AND THE CURRENCY.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Under the above heading in your issue of to-day Mr Ellis Barker says: "Loss and waste can be made up only by increased production and diminished consumption, by hard work and thrift."

Please allow me to say that I am in agreement with him on that point: I do not propose a "capital levy" in substitution for that course, but as supplemental to it.

Bluntly put, my contention is that war debt is properly a charge on capital, not on revenue; and therefore the debt ought to be distributed *pro rata* among us, making each man responsible for an equitable share.

The Government would neither receive nor pay cash on account of capital; but each man would have to pay his *pro rata* of bonds into a clearing-house and be liable for 6 per cent. per annum interest on it until paid, so that the Government would be getting 1 per cent. per annum profit on all uncanceled debt; and the charge of £450,000,000 which the Chancellor has determined to get from our pockets every year for 50 years would vanish like a bad dream.

If the Chancellor's course is persisted in capital will gradually find its way to countries in which industrial enterprise is not subject to that heavy tax.—I am, Sir, your obedient servant.

WM. LEIGHTON JORDAN.

Royal Societies Club, August 20th, 1921.

POST-WAR TROUBLES.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Allow me to thank your correspondents for their courteous treatment of my epistle, although my objective does not seem to be quite clear to them.

For instance, I would like "E. H. B." and Mr C. S. Pawle to appreciate this point: Mr J. Bull (let us say) last year owned actual goods to the value of £10,000, and this year has increased his store to the value of £15,000. In his account books he has, however, entered a sum of £8,000, which he says he owes to himself, and, treating this as an ordinary debt, he claims to be actually £3,000 poorer than he was last year!

Your correspondents will admit that Mr Bull is really better off, because the £8,000 debt is no debt at all.

What appears to me to be the great outstanding fact (which our business men either overlook or refuse to see) is that we have borrowed the National Debt from ourselves. They admit it was "our" war, but will not see that the debt is also "ours." It is only in fancy that a man can owe goods to himself. Our business men being apparently convinced that it is a quite proper proceeding, and suiting their actions to that belief, we consequently get the trouble we are going through now, and shall get more of it, without a shadow of a doubt. "Observer A" (to whom I apologise for unwittingly stealing his pen-name) sees something of what is going to happen if, and when prices get back to normal. (For instance, income-tax at twice 6s in the pound, with a crushing burden of indirect taxation and worse horrors to follow.) He should also see that his No. 1 remedy is as impossible of adoption as No. 2. How can values and prices be rendered permanently stable? Perhaps (I say perhaps) under some Socialistic régime, but not under a competitive system.

Business men, in this problem of paying for the war, remind me of a balking horse which has to be driven along a narrow path threading a dangerous marsh. Each time he is brought to the path he plunges to left or right and is bogged. The narrow path that we have to follow is that of getting rid of the distended fraud known as the National Debt—the sooner the better, for, as prices fall, the job will become more and more difficult. The task at present lies in persuading the business world that it will be (1) a benefit to be rid of the debt, and (2) that it can be immediately cancelled without reducing the total amount of real capital. It is unfortunately true that many business men look upon the debt as a good investment, and think its existence is beneficial.

If the readers of the *Economist* can agree that the debt is a piece of financial sleight-of-hand, and that its immediate cancellation (not repudiation) is the way out

of our troubles, there would be hope of bringing over the rest of the community. That is my point for the present. It would be useless attempting to state a remedy unless there is agreement in the diagnosis of the complaint.

In conclusion, I would say (1) if the debt continues to be cancelled in the same way and on the same terms as now, it will cost the nation's producers and their children forty thousand million pounds or more, and, if prices fall, it will cost a sum larger in proportion to the fall. (2) A continuance of the attempt to deal with the debt in this way, however, will probably bring ruin to business or an upheaval on the Russian model. (3) The war was waged for us all, and we all ought to have paid for it in proportion to our ability to pay.

"Observer A" says:—"It is common knowledge that the whole of the nation is responsible for the creation of same (the debt) by tacitly agreeing in 1914 to fight German militarism." The nation agreed to fight, but did not agree that it should get into debt to itself. Those who produced the munitions of warfare and existence did practically pay their share in life and work, and produced a surplus. Why, then, should we find ourselves in debt to ourselves? This is the vital fact which we have to spike down in our minds so that it does not escape us. From that we may go on to find a way out of the trouble.—Yours faithfully,

OBSERVER B.

REVIEWS.

"A Digest of British Economic History." By F. H. M. Ralph, M.A. and W. J. N. Griffith, B.A. London: John Murray. 1921. 5s net.

"ECONOMIC history is the story of the fight of the human race with Nature, and of the social organisation brought about by the struggle for life. Economics is not the fine flower of history; it is the root." Accordingly the authors summarise British economic development from the Stone Age to the present time. Their information is admirably condensed and comprehensive, and seems to be fully on a level with the latest results of research. Moreover, and in contrast to some other books on this subject, the recent periods and the present are quite as accurately described as the remoter past. Perhaps a little more might have been said of the influence of the screw propeller and the compound engine in transforming oceanic freight traffic, of the influences that led to the collapse of the old Poor Law system, and of the limited liability principle; and the date of the failure of the City of Glasgow Bank is placed four years too late. But such things do not lessen the value of an admirable little book.

"American Economic Life in its Civic and Social Aspects." By Henry Reid Burch, Ph.D. New York: The Macmillan Company. 1921. 9s net.

This volume is designed for use as a text-book of elementary applied economics in American secondary schools. Starting from the position that the end aimed at by the study is not wealth, but welfare, it sets forth the fundamental ideas of the science in respect of consumption, production, exchange, and distribution successively, with both force and clearness, and applies them in each department to the actual conditions in the United States to-day. Hence it gives much valuable economic information which every student of American conditions should bear in mind—and usually remembers inaccurately—on irrigation, forest conservation, inland navigation, water-power, immigration, labour problems, railroad and trust regulation, large-scale production, and other features of contemporary America. The only thing we miss is a reference to dry farming. It closes with a summary of the chief problems of economic reform. It would be an excellent model for a similar text-book applicable to conditions in England, and the danger of dogmatism, always imminent in dealing with current problems, is averted by a treatment which is strictly impartial and by the suggestion of topics for free discussion. It may be cordially recommended both for consideration by educationists and for use by students of American politics and society.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET.	ACCOUNT.
September 13.	September 14.

Investment this week has been playing second violin to speculation. The volume of orders for purely investment stocks has been smaller than of late, while revival of a speculative spirit is noticeable amongst Kaffir shares, and in a few of the industrial sections. That investors are by no means unmindful of their opportunities, the prompt closing of the Southland Electric subscription lists on Wednesday morning, after those lists had been open for a few hours, is ready evidence. But so far as the War Loan and its immediate circle of British Government stocks is concerned, there is a noticeable falling away of business. The 3½ per cent. Conversion Loan, dealings in which began on June 6th, was quoted ex dividend yesterday morning, and, allowing for the deduction, the price is practically the same as it was when the market started. The 6 per cent. Corporation stocks continue to advance. Home Railway prior-charge descriptions have scarcely moved during the week.

One of the features in the foreign market is the way in which Brazilians have been rising, owing to the improvement in the milreis. Part of the demand emanated from Paris, and as soon as the exchange showed signs of wavering, bonds came to market, from which the inference is drawn that a proportion of the buying was speculative. Danish and Scandinavian municipal bonds have been taken at substantially better figures. Germans have fluctuated according to the movements in the mark, but the French issues are neglected for the time being. Uruguay bonds have held the greater part of their rises. There has been the usual amount of investment business in Chinese and Argentine; the Norwegian 6 per cent. scrip gained a small fraction.

Prices in the Home Railway market have been moving wildly. One afternoon the price of North-Westerns rose a couple of points in less than five minutes. Public inquiry has been stimulated by the handing back of the companies to their own proprietors, while the advertisements of pre-war travelling facilities have undoubtedly contributed to revival of interest in Home Railway stocks. The market, however, proved too narrow to sustain its strength, and it required little profit-taking to bring about a reaction from the best. Canadians are very quiet, and Mexican Railway stocks have gone back a trifle. The Argentine Railway market, after a show of buoyancy, eased off on the statement that the companies may be required to hand back to their customers the extra charges for freight which, through some misunderstanding, the companies have been collecting during the past few months. Brazilian railways have declined on the drop in the milreis.

Rubber shares are weaker, in consequence of the continued flatness of the raw material and the fact that some rubber shareholders are selling their shares at this time of crisis in the industry. Last week's forced selling of oil shares has not been repeated, and there has been a general recovery in values, notwithstanding rumours of difficulties in the oil trade due to general conditions. Textiles were a little cheered by the Calico Printers' Company declaring a small dividend where none had been expected. The death of the chairman of Courtaulds caused a slight dullness in the price. Shipping shares are easier under the leadership of P. and O. deferred and Indo-China deferred. Gentle depression characterises the market for iron, coal, and steel shares, but Vickers have gained a few pence. Marconis rallied after the meeting on Wednesday afternoon, at which statements were made to the effect that the Imperial Commission had asked the Marconi company to co-operate in the work of the Wireless Chain. The hotel and catering list is uninteresting. Amongst banking investments, P. and O. banking shares, after a drop to 11½, recovered to 12 again, and the recent heaviness shown by some of the London banking shares; although it brought in a few buyers, is still noticeable in the prices. There is nothing doing in the insurance group.

The Kaffir market is the liveliest part of the Stock Exchange. Various reasons have contributed to the growing activity. For one thing, there is a hope that agreement has been reached between the Public Trustee in this country and the Custodian of enemy-held shares in South Africa, on the point of disposal of South African shares taken over from ex-enemies. Lower working costs on the Rand are freely prophesied. Both Cape and Paris have sent a sufficient number of buying orders to bring about fairly substantial rises in the leading shares. The public are beginning to observe the animation, and a gentle amount of speculation has been noticeable during the past few days. The expected profit-taking at the end of the week left prices below the top. The Rhodesian market participated to a milder extent in the attention paid to Kaffirs, and diamonds are also better. Modest improvements in Mexican mining shares balanced dullness in Broken Hills. The various tin groups continue to reflect the disappointment felt with the manner in which tin, the metal, fails to recover. Indian and Russian copper mining shares have attracted no attention, owing to the interest that is centred upon South Africans. Business round the markets gives some degree of indication that there may be better things to come after the holiday season is over.

NEW ISSUES.

The new issues of the week and the current year and date of opening of the lists have been as follows:—

5½ per Cent. Treasury Bonds.—Repayable at par on April 1, 1929. Issued at 97 per cent. Interest payable half-yearly on April 1st and October 1st. The bonds of this issue will be convertible at the holder's option as on April 1, 1922, or October 1, 1922, into £3 10s per cent. Conversion Loan at the rate of £146 Conversion Loan for each £100 of bonds converted. Full particulars of these bonds, together with comments, will be found in *Economist*, July 9th, see page 43, also in our issue of the 16th ult.

Dominion of New Zealand (County of Southland Electric Power Board Debentures).—This is an issue at 96 per cent. of £750,000 in debentures to bearer of £100 each, and carrying interest at the rate of 6 per cent. per annum, principal and interest unconditionally guaranteed by the Government of New Zealand. The principal will be repayable at par on September 15, 1934 (for which a sinking fund will be provided. The right is reserved to redeem the debentures at par on or after September 15, 1936. The loan is issued to provide funds for the erection and equipment of the County of Southland electric power station, and it stated that "most of the plant for which has been, or will be, purchased in this country." The County of Southland, having for its capital the town of Invercargill, is the southernmost county of the South Island, New Zealand. The Southland electric power district comprises the whole of the County of Southland, together with a large portion of the counties of Tuapeka and Clutha and the borough of Tapanui. The population of this district is 65,450. The improved value of the property in the County of Southland Electric Power Board district is £22,000,030, and the unimproved value £13,600,471—total value £35,600,501. The board has taken power to borrow up to £1,500,000, but £750,000 is estimated to cover the cost of development for nearly two years. The board has no capital indebtedness other than the present issue. The estimated cost of the initial development of 8,000 horse-power, its transmission and distribution over 1,750 miles of road lines, is £1,100,000. The balance of £400,000 will only be provided or borrowed as and when required by the extension of the board's activities. A well-secured investment, which was quickly over-subscribed.

Liebig's Extract of Meat Company, Limited.—In accordance with previous announcements, 120,000 ordinary shares of £5 each are offered at par to holders of ordinary shares in the proportion of one new share for every share held on August 17th. The profits of this company were slightly down for its last published financial year, but the directors maintained the 25 per cent. distribution on ordinary shares and placed £59,228 to reserve, as compared with £92,000 in the previous year (see the *Economist* for July 9, 1921, page 49). The company appears to be in an excellent financial position. In July the £5 existing ordinary shares were quoted at £18½. These are now marked at 10½ to 12½, ex dividend, bonus, and rights. This later quotation leads one to suppose that the shares are firmly held.

Cauldon Potteries, Limited.—Authorised capital, £500,000 divided into 150,000 8 per cent. cumulative preference and 350,000 ordinary shares, all of £1 each. All the ordinary shares have been issued, and are held by the directors and employees, and apparently 10,000 preference shares have been already issued; the remaining balance of 140,000 preference shares are now offered at par. The advertised prospectus states that the company was formed in April, 1920, to acquire and amalgamate the business of eight china and earthenware manufacturers in the pottery district. Net assets.

of combined undertakings are valued at £500,046. No sum is payable for goodwill, but it should be noted that in assets the miscellaneous item of £62,263 includes the word "designs." Profits are shown for two years only, which is rather surprising when it is considered that some of the businesses were established many years ago. And, further, these profits are described as "trading profits," it being explained that depreciation, interest, &c., have not been taken into account. Preference shareholders have limited voting powers. It may be that this is an excellent undertaking, but the absence of information about past profits in the advertised prospectus renders a subscription to its shares something in the nature of a speculation.

Low Temperature Carbonisation.—50,000 of the "A" preference shares of 10s each recently created are now offered at £1 per share to shareholders in the proportion of one new share for every 15 complete shares held. We summarised particulars of this company in the *Economist* for July 3, 1920, on page 18. We should be interested to know the reasons which led the directors to the conclusion that these 10s "A" preference shares should be offered to shareholders at a premium of 10s each.

Keelings Oxides (1921), Limited.—Authorised capital £250,000, divided into 100,000 10 per cent. cumulative preference and 150,000 ordinary shares, all of £1 each. Applications are invited for 90,000 10 per cent. preference and 45,000 ordinary shares at par. The prospectus states that "the directors and their friends have applied for at par, and will have allotted to them on the terms of this prospectus £45,000 in shares of this issue," also that the holders of preference shares have on a poll one vote per share at general meetings of the company, and holders of ordinary shares one vote for every two shares. We quote in full the following interesting variation of the company promoters' art:—"The shares now offered will be allotted in the proportion of two preference shares to one ordinary share, or in corresponding multiples. Offers for one class only of shares will not be entertained. Under Article 6 of the company's articles of association, as recently amended by special resolution, the directors are empowered to pay a commission not exceeding 35 per cent. of the nominal amount of any shares offered for public subscription. And they hereby offer to every person who subscribes for shares of this issue in the above-mentioned proportions a commission in cash of 33½ per cent. of the nominal amount of the shares allotted to him. Such commission will either be paid by the company in cash or it may be deducted by the allottee from the final instalment due from him on September 30, 1921." The company has been formed to acquire as a going concern the business of the manufacture of zinc and other metallic oxides now or lately carried on by Keelings Oxides, Limited, of Stoke-on-Trent. The manufacture of zinc oxide was commenced early in 1914 as a branch of the established chemical business of Keeling and Walker, Limited, of Stoke-on-Trent. In the year 1918 Keelings Oxides, Limited (the old company), was incorporated as subsidiary to Keeling and Walker, Limited, to carry on and develop the process of manufacture, which had then been "perfected," and after erection of the first instalment of plant production begun upon a commercial scale in July, 1919. The purchase price has been fixed at £122,500, payable as to £58,000 in cash and £64,500 in shares, and it is stated that the vendor makes a profit of £17,500 out of the sale. Profits are given for one year as £17,399. The terms of this offer (as quoted above) brings the question of issuing shares at a discount once again to the forefront. It is difficult to see what advantages can be claimed for this method. It will be noted that goodwill, "rights, processes, and trade marks," are to be acquired at a comparatively substantial amount, and issuing the shares at such a heavy discount will only place a further burden in paying dividends on what can only be described as "inflated" capital.

Nuneaton Gas Company.—Incorporated by special Act of Parliament. Issue of £12,300 8 per cent. "redeemable" second debenture stock at par. The stock will be repayable at par on March 25, 1942, but the company reserves the right to redeem it at 102 per cent. in any year after March 25, 1922, subject to six months' notice. This issue of debenture stock will constitute a charge on the assets and undertakings of the company, and will rank next after the existing issue of £12,300 4 per cent. debenture stock. The company was incorporated under the Nuneaton Gas Acts, 1886, and the capital of the company consists of—1,969 original shares of £8 each, 3,573 new shares of £8 each, and £12,300 4 per cent. debenture stock. Profits are shown for the past 10 years, and these reveal the fact that interest on the debentures is well covered. The net proceeds of this sale of stock will be applied in the reduction of the company's overdraft at the bank and in providing for further necessary expenditure on capital account. Subject to the usual objection of small issues—namely, the difficulty of selling in case of need in the absence of a free market—the issue is not without attraction.

ACTIVE SECURITIES.

COMPANY MEETINGS, &c.

ANCHOR LINE (HENDERSON BROTHERS), LIMITED. TRADE SLUMP AND ITS REMEDY.

NEW METHODS NEEDED FOR SETTLING INDUSTRIAL DISPUTES.
The twenty-third ordinary general meeting of this company was held at Cunard buildings, Liverpool, on the 23rd instant. Mr Francis Henderson presided, in the unavoidable absence of Sir Alfred Booth, Bart. (chairman of the company).

DIRECTORS' REPORT.

The report of the directors for the year ended April 30, 1921, states that:—

The various services of the company, consequent on a return to more normal conditions, have been more satisfactorily maintained than during the previous year. They are, however, still below their pre-war standard, owing to the difficulty in replacing tonnage lost during the war.

Both the freight and passenger business have continued good during the year under review. Since then, however, the freight situation has suffered a severe collapse, whilst the steerage passenger business on the North Atlantic is now adversely affected by the U.S. Act limiting immigration. The directors hope that a revival of the freight business, especially in the Eastern trade, may take place during the current year.

The "Cameronia" was delivered by Messrs William Beardmore and Co., Limited, on March 10, 1921, and has since that date completed three voyages. She is proving herself a most satisfactory addition to the fleet.

Owing to the delay in delivery of new tonnage, the directors have purchased during the year the ex-German steamers "Ypiranga" and "Kigoma," which have been renamed "Assyria" and "Algeria" respectively.

The directors desire to record, with very sincere regret, the death of Mr James Gardner on July 24, 1921. Mr Gardner was a valued servant of the company for upwards of 50 years, latterly as secretary, and finally as general manager and secretary.

The profits for the year which ended on April 30, 1921, after providing for depreciation and special reserves against income-tax, war taxation, and contingencies, amounted to £205,245 13 3. Add balance brought forward from April 30, 1920... 141,398 17 3

Out of which there has been placed to reserve account... £200,000 0 0
And there has been paid dividend on preference shares for year ending April 30, 1921, less income-tax... 12,512 10 0

Leaving a balance of £134,132 0 6
Which the directors recommend should be applied as follows:—

To payment of dividend on ordinary shares at the rate of 10 per cent., free of income-tax... 25,000 0 0
Leaving a balance to carry forward to next year of £109,132 0 6

Sir Alfred Booth, Bart., Mr J. Fred. N. Graham, and Sir Aubrey Brocklebank, Bart., retire at this time, but, being eligible, offer themselves for re-election.

Messrs McClelland, Ker, and Co., the company's auditors, retire, but are eligible for re-election.

CHAIRMAN'S SPEECH.

The secretary (Mr John Binnie) read the notice calling the meeting and the auditors' certificate.

The Chairman said: Gentlemen,—I fancy it is a disappointment that we have not got the chairman with us on this occasion, but, as you know, Sir Alfred Booth has had a strenuous time lately, and is taking a much-needed rest. The 12 months through which we have passed since we last met have been characterised by exceptional difficulties for all those who had to do with the import or export business of the country, but more particularly for those who were, like ourselves, engaged in the carrying trade. The enormous cost of new vessels, the delay in getting delivery of them, the almost prohibitive price of coal, and the difficulty for many months of getting coal at all, not to speak of the increase of wages to all classes of men employed, both ashore and afloat, were surely handicaps enough with which to contend, but to all these was added a collapse in trade unprecedented in its suddenness, and quite unforeseen even by the most experienced.

It is not to be wondered at, therefore, that the accounts which we present to you to-day are not quite so satisfactory as some of those you have seen in recent years, but we think it will be admitted that shareholders have little to find fault with in view of the singularly intricate and perplexing condition of affairs with which we had to deal. The directors have been much assisted throughout a trying and arduous year by the earnest and zealous co-operation of all our agents at home and abroad, and by the unremitting energy of the managers and staffs at the different offices of the company.

WARNING TO TRADE OPTIMISTS.

At the moment there seems to be a lightening of the clouds which have overhung the country for months past, and those who know—or think that they do—prophecy that we shall soon see a return of our former prosperity. While it is far from my wish to throw cold water on any such hopeful suggestions, I am firmly convinced that we shall not regain the position we occupied in 1913 until the people of this country not only believe in the gospel of hard work, but practise it. The people of Belgium and Germany have had this salutary truth hammered into them by their tragic experiences since 1914, and are now showing us an example which we would do well to follow.

Much has been said at meetings in Liverpool and elsewhere of the burden of taxation, and how it hangs like a millstone round the neck of industry, and cramps all our efforts at reconstruction, but the only remark I would make here is that one of the worst results of the coal strike is to make it impossible to anticipate any reduction of taxation for several years to come. The Committee of Business Men that we see talked about in the papers may, and no doubt will, give the Chancellor of the Exchequer much good advice, but they cannot alter the circumstances in which we are placed. The fact of the matter is that if we wish to regain our lost trade and compete successfully with other nations, all of us, employers and employed, will have to be content during the years that lie before us with a smaller return on our capital and lower wages for our work than we received in the years 1917 to 1920. If we attempt to take more out of an industry than it can afford to pay, the inevitable result will be a cessation of the industry, and examples of this are all around us to-day, as is shown by the numbers of our unemployed.

COAL STRIKE AND ITS LESSONS.

The splendid way in which our industrial classes endured the privations brought about by the recent unfortunate strike has frequently been commented upon, but the mortifying suggestion occurs to one that there need not have been any strike at all had reasonable counsels prevailed. What the coalowners and miners entirely overlooked was that without cheap coal our industries and our shipping cannot live, and unless we export about 70 million tons of coal per annum we cannot pay for the food we require, and many of our steamers will be lying idle for lack of cargo, so that in allowing a strike to take place all those concerned were doing their utmost to ruin their own country.

Gentlemen, it seems to me that unless the statesmen of this country can devise some better methods of settling an industrial dispute than by a four months' strike, bringing ruin and misery upon millions of people, then, to use the sailors' simile, our rudder is jammed, and we are heading straight for the rocks of national disaster. The welfare of my native country is very dear to me, and if there are any—I do not care to what class they belong—who through stupid, selfish obstinacy would retard or prevent the recovery of the prosperity of this country, I hope their ways will be dark and slippery, and their end confusion.

This is the twenty-third annual meeting of the company, though

some of us have been engaged in the shipping business for much longer than that, and have witnessed many periods of depression similar to that which we are experiencing now, but they have invariably been followed by periods of prosperity. I am convinced, therefore, that if we have learned aright the lessons of the past two years, we may look forward to the future with confidence, relying upon the innate common-sense of our people and their indomitable industry and perseverance to bring us eventually to better times.

THE DIVIDEND.

I have much pleasure in proposing that the report of the directors and statements of accounts be hereby received and adopted, and, as recommended by the board, a dividend of 10 per cent. on the ordinary shares for the year ending April 30, 1921, be and is hereby declared.

Mr A. J. P. Henderson seconded, and the resolution was carried unanimously.

The retiring directors (Sir Alfred Booth, Bart., Mr J. Fred N. Graham, and Sir Aubrey Brocklebank) were re-elected, and the retiring auditors (Messrs McClelland, Ker and Co.) were reappointed.

The proceedings then terminated.

UNITED PREMIER OIL AND CAKE COMPANY, LIMITED.

COMPANY'S SOUND FINANCIAL POSITION.

CURRENT YEAR'S SATISFACTORY RESULTS.

The second ordinary general meeting of the members of the United Premier Oil and Cake Company, Limited, was held, on the 23rd instant, at Winchester House, Old Broad street, London.

Mr Herbert Guedalla, F.C.A. (the chairman), presided.

The secretary (Mr. F. S. Tomkins) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said: Gentlemen,—In the first place, I must apologise to you for, and explain, the long delay in issuing the accounts. The periods to which our various subsidiaries take their accounts do not exactly coincide, and important points have arisen with reference to the proper treatment of the accounts for the purpose of settling excess profits duty with the revenue authorities. This has all taken a great deal of time. There were many most complicated questions to settle, and both our accountants and the revenue authorities must have been overwhelmed with work of this character. We had to be most careful to make all the adjustments that we could fairly maintain in our favour in arriving at this last and final settlement. I note we are not the only ones to suffer in this respect, and one of the results of this wretched form of taxation has been to occupy so much time of those in charge of a business, which should have been more properly employed in actual administration.

BALANCE-SHEET ITEMS.

With your permission I shall take the report and accounts as read, and if we turn now to the balance-sheet you will note that the ordinary capital has been increased by £250,000, which shares we issued on April 30, 1920, at the price of 25s each to the ordinary shareholders of the company. We have redeemed during the year, in accordance with the trust deed, £5,750 nominal of the 6 per cent. debenture stock. The item of £41,137 for sundry creditors and credit balances includes a liability of £24,000, which was payable at the date of the balance-sheet on account of a contract entered into for the acquisition of a further small business. We received on account of premium on the share issue £62,500, and to make sure of the success of the issue we paid an underwriting commission of 1s per share, or £12,500, leaving a net reserve on account of share premiums of £50,000. On the asset side of the balance-sheet our investments stand at £1,344,858, being an increase of about £22,000, and in dealing with this asset perhaps it might be more convenient also to take the loans against securities and advances to subsidiaries, amounting to £371,106. Of this amount at the date of the balance-sheet about £114,000 represented loans at interest which could be called in at any time, the balance of £256,000 being advances to subsidiary companies for the purposes of their business. Our subsidiary concerns are Wray, Sanderson, and Co., Limited, J. L. Seaton and Co., Limited, the Premier Oil Extracting Mills, Limited, Sowerby and Co., Limited, and the Universal Oil Company, Limited. We have various other businesses which we work in conjunction with these larger concerns. During the period under review these businesses have been under the able management of our Hull executive. The accounts only display the general results of the work performed, but, as you can imagine, the various businesses have their ups and downs. The period under review has been most difficult for this particular industry, and it

has required the closest and keenest attention to business to steer a safe course for the various concerns. For the last nine months of 1920 there was a continuous drop in the price of our products, and we had to legislate accordingly.

IMPROVEMENTS IN PLANT COMPLETED.

During this period our subsidiaries have been engaged in making considerable additions, and the extensions and improvements in plant mentioned in my last year's speech are now about completed, and have proved to be quite up to expectations in regard to output and efficient and economical working of the mills and refineries, so that we can fairly claim to have as up-to-date plant and buildings as any similar concerns in this country. The railway sidings in connection with the Premier Oil Mills are now in part working order, and will prove to be a valuable acquisition to this property. We have about 4½ acres of spare land on this site, and this land is being laid out as a sports field for our staff and workmen. The charge for repairs and renewals, mainly due to war conditions, has proved exceptionally heavy, owing to the high cost of labour and materials, but the mills have now been brought up to very good order and condition, and at the lower cost of material and labour we can look forward to this charge being much lighter in the future. Our research department have carried out some good work, and their investigations prove of great value in the efficient working of the mills. The amount of seed and nuts treated during the year was in excess of any previous 12 months. Our stocks of seed, nuts, oils, cakes, &c., at the end of the year were taken at cost or market price, whichever was lower, and this, together with the trading for the first six months of this year, has worked out with satisfactory margins of profit. The item of sundry debtors and debit balances represents, for the most part, dividends declared by subsidiaries and not received at the date of the balance-sheet. We have written a further amount of £9,675 off preliminary expenses, but we do not touch the item for discount on debenture stock, because that will automatically disappear as redemption proceeds.

REVENUE ACCOUNT.

Turning now to the revenue account, we have taken dividends from our subsidiary companies to the amount of £156,521, and we have received in interest £15,188, so that with transfer fees our total receipts for this period have been £172,038. This compares with the amount of £247,093 received for the previous 7½ months, but I would point out that the previous period was one of remarkable prosperity, and I am sure that in all the circumstances we can congratulate ourselves on the results achieved. Considering the broken period, the expenses are much the same, but you will observe an item of £2,502 in respect of a West African proposition written off. This was a proposition to acquire an estate producing palm kernels, and *prima facie* on reports received it looked like a scheme in which this company might fairly take an interest. It was arranged, therefore, that one of our executive committee, Mr O'Brien, should proceed to West Africa to examine the business on the spot. His report was unfavourable, and so the matter was dropped. After writing off £9,675 on account of preliminary expenses, providing interest on debenture stock and also instalment of sinking fund for same, there remains a balance of £114,108. To this has to be added the net balance brought forward from last year of £45,673. We have then a total of £159,872 to dispose of, and after payment of £34,434 on the dividend on the preference shares for the year, and £56,250, being the interim dividend of 7½ per cent., less tax, on the ordinary shares paid in December last, there remained a balance of £69,191. I have already explained to you the long delay in settling taxation questions with the revenue authorities, but we thought that in the circumstances we should not wait for the general meeting, and we accordingly at the end of June last declared a further interim dividend of 5 per cent., less income-tax, on the ordinary shares, which absorbed £26,250, and this amount deducted from the above balance will leave to be carried forward £42,941, which is subject to the percentage of profits due to the directors under the articles of association. This 5 per cent. was really a final dividend, but we had to wait for the general meeting to confirm it as such.

TRADE CONDITIONS AND PROSPECTS.

We have gone a long way into the current year, and I am glad to inform you that the results so far as we know them are quite satisfactory. This is the more gratifying when we consider the unfortunate position in which the general trade of this country stands to-day. With so many adverse factors, it is impossible to see daylight yet. The whole root of the evil has been the policy of deflation which has been so rigidly enforced. In this country it must be appreciated that we have two classes of capital, one which employs productive labour, and the other which employs money only, and it has been unfortunate that the advice of the latter has predominated in the policy to be pursued. The trade of the country is short of working capital. It is an acknowledged fact that for any single business to maintain the pre-war turnover

RAPHAEL TUCK AND SONS, LIMITED.

THE WORLD'S ART SERVICE.

The twentieth annual general meeting of this company was held on the 24th instant, at Winchester House, Old Broad street, London, Sir Adolph Tuck, Bart. (the chairman), presiding.

The Chairman, in moving the adoption of the report and accounts, said that the company had entered on its majority year. Commencing operations on May 1, 1901, although actually incorporated in October of that year, it was now well in its 21st year, and, adding the 35 years during which the business established by his late father in 1866 was carried on as a private undertaking during the first 30 years, and afterwards as a private company, the business had now completed the 55th year of its existence in one unbroken line. This was cause for congratulation not merely to the shareholders of this company, but to the country at large. It must be to the art-loving propensities of the people of the United Kingdom in the first instance to which the success of such an undertaking was due, and it was only these which could have enabled the founders to lay such firm foundations to the structure, add art department after art department to the business, and, extending its ramifications in every civilised country, create what was now acknowledged as "the world's art service."

RECORD TURNOVER.

So far as volume was concerned, he was glad to say that the past year's trade was the largest in the history of the company, being actually above last year's figures, which were then the highest on record. He wished it had been possible to make the same gratifying statement with regard to the net profit derived from this large turnover. The expenditure during the 12 months under review, from May 1, 1920, to April 30, 1921, was abnormally high. In common with almost all other business corporations, it was practically impossible to call a halt to its continuous increase.

THE SOUTH AMERICAN BANKS.

This Map indicates the points at which
THE ANGLO-SOUTH AMERICAN BANK, LTD.,
and its affiliated Institutions,
THE BRITISH BANK OF SOUTH AMERICA, LTD.,
and THE COMMERCIAL BANK OF SPANISH AMERICA, LTD.,
are established.

INCREASED POSTAL RATES.

Referring to the increased postage on picture postcards to 1½d, he said it would be remembered that it was first threatened by Mr Chamberlain in his capacity of Chancellor of the Exchequer last year. As chairman of a representative committee formed without loss of time by the picture postcard industry to combat this increase, he (the speaker) introduced an important deputation to the then Postmaster-General, Mr Illingworth, whose reply gave some hopes of further consideration, and, on his retirement to the House of Lords before the question was settled, he led a second deputation in June of this year to Mr Kellaway, who had been appointed to the position of Postmaster-General. The practical arguments they brought forward against this proposed increase appeared unanswerable. All that they were asking was that picture postcards might be treated in the same way as in France and other countries, that was separate from the ordinary correspondence postcard, and that 12 words of any general character be allowed on the address side only at the penny postage rate.

Surely this was a modest enough request, and one which with such limitations could not possibly compete with the twopenny letter post, while, on the contrary, the recipient of a picture postcard often enough sent a grateful acknowledgment by letter. He could only hope that the common sense which, with his usual insight, H.R.H. the Prince of Wales, when presiding over the recent dinner of the Chamber of Commerce, rightly claimed was the characteristic of the British people would ultimately prevail, that a promising British industry would not be permitted to languish through any false notion of official etiquette, and that this limited penny postage on picture postcards would be restored at an early date.

SPLENDID TURNOVER IN CHRISTMAS CARD, &C., DEPARTMENT.

Again it was the Christmas and New Year card, birthday card, and greeting card department generally which, true to its traditions of the past 50 years, continued its great lead. Raphael House was to the fore this season with one of the finest collections of new publications in all its varied art departments which had ever left its studios, and the "world's art service" would be found to be completely maintained by the wide-world dissemination of this year's marvellous array of art productions. The art stationery and printing journals, which occupied a deservedly high position in the trade, were one and all emphatic on this point.

Coming to the profits for the year, these, after providing for bad and doubtful debts, depreciations, income-tax, and all expenses, amounted to £47,363. The directors recommended the payment of a final dividend on the ordinary shares for six months to April 30, 1921, at the rate of 10 per cent. per annum, making, with the interim dividend already paid, a dividend for the year of 10 per cent. There was transferred to special dividend reserve fund, as provided by the articles of association, £2,586, the remaining £5,136 being carried forward to next year. The total reserves, if the shareholders approved of the directors' proposals, would stand at £86,008.

Sir Arthur Conan Doyle seconded the motion, which was carried unanimously.

Orders for the publication in these columns of the reports at Company Meetings should be addressed to the Reporting Manager of the ECONOMIST, 3 Arundel street, Strand, London, W.C. 2.

Other Countries	£1,090	£4,270
Total values of import of gold	£12,767	£2,248,645

Messrs Samuel Montagu and Co. write on August 25th as follows:—

GOLD.

The Bank of England gold reserve against its note issue is £126,586,435, as compared with £126,584,040 last week. A fair amount of gold came into the market, and was taken for the United States of America. Gold to the value of \$14,850,000 is reported as being received in New York—\$8,000,000 from France, \$4,000,000 from Sweden, \$2,800,000 from Germany, and \$50,000 from London. We are informed from Bombay, under date 6th inst., that there had been a drop of one rupee in the gold price during the week caused by the advance in sterling exchange. With the price falling continually, the banks had been heavy buyers, and had purchased about 300,000 tolas of gold. The stock at that date was 100,000 tolas, and the up-country arrival 35,000 tolas per day. The closing prices were Rs. 32.4 for ready and Rs. 32.4 August settlement. In view of the recent high premium (over

105 per cent.) on sovereigns in India, to which we have drawn attention lately, it is not surprising to learn that the Australian Federal Treasurer has stopped the issue of sovereigns to outgoing travellers. Passengers have transacted profitable business in exchanging the coin at ports en route, especially at Colombo. The output of British Columbia seems to be improving. The Rossland Mines are expected to produce £375,000 this year, as against £150,000 last.

SILVER.

Business has not been on a large scale during the week. China has been inactive, and India has been a moderate buyer for both cash and forward delivery. The price of silver in the bazaars has fallen heavily in correspondence with the very sharp advance in the sterling value of the rupee. This rise, probably, is connected with the Indian trade balance moving in favour of that country. The June total was minus 167 lacs, and that for July plus 135 lacs. The export of wheat from India has been prohibited owing to the recent rise in local prices, but this is of minor importance. Continental and other supplies have been slight. In view of the erratic and speculative tendency of exchange generally, the prospects of the silver market are obscure. The prospects of Mexican silver production, especially in the above district, depend upon a settled condition of affairs. The agent in Mexico City of the Equitable Trust Company of New York, who has had 16 years' experience of the country and was U.S. Consul in Mexico City from 1910 to 1917, reports that the situation has never been so promising since the overthrow of President Diaz. Revolutionary outbreaks have ceased; the people are sick of warfare; business conditions have been improving; trains are running according to schedule, and through services are in operation from the capital to New Orleans and St Louis; railroad congestion will soon be relieved by increased rolling-stock; American business men are visiting the country and opening up trade relations. It is reported from India that the accumulation of silver rupees in the Indian note reserve has become so large that some difficulty is experienced in storing them. The total of 747,600,000 silver rupees now held by the Treasury is equal to over 255 million ounces. Each week for some time past a fresh record is created of the total silver holding.

INDIAN CURRENCY RETURNS.

(In Lacs of Rupees.)

	July 31, 1921.	Aug. 7, 1921.	Aug. 15, 1921.

No rupees were coined during the week ending the 15th inst. The stock in Shanghai on the 20th inst. consisted of about 29,100,000 ounces in sycee, 25,500,000 dollars, and 2,100 silver bars, as compared with about 29,400,000 ounces in sycee, 25,000,000 dollars, and 410 silver bars on the 13th inst. The Shanghai exchange is quoted at 3s 8d the tael.

(b) New Sylhet Tea, Prof. dividend for six months.

generally quiet, and prices the turn in buyers' favour. The demand for home milled is chiefly confined to best grade, patents being quoted at 68s, town households 61s, and London straight run 64s, while all English flour offers at 58s 6d per sack delivered. Imported quiet. Canadian export patents 68s, straights 65s, Kansas top patents 65s, Australian 60s-61s, and Chinese 50s to 51s per 250 lbs ex store. Forward business quiet. Kansas top patents, September seaboard, quoted 58s, Canadian patents 64s, straights 61s, Australian 54s c.i.f. Maize generally quiet, and prices easier in sympathy with lower c.i.f. offers. La Plata, also yellow round African, quoted 41s 6d to 42s, white flat African 43s 6d landed, American mixed 38s ex ship per 480 lbs. On c.i.f. terms a moderate trade resulted in cargoes at generally easier rates. Plate steamers loading sold at 41s, ditto September 2 40s. Of European, Dan-Gal-Foxanian afloat 41s 6d, and a part cargo Moldavian afloat 41s 3d per 480 lbs. Barley quiet, but generally steady. New English malting quoted 65s to 85s, ditto grinding 60s to 65s, Californian ex ship 54s to 60s, Morocco landed 46s per 448 lbs. No. 4 Canada Western 48s, ditto ex ship 46s, Canadian feed ex ship 43s 6d, American feed landed 43s per 400 lbs. Only limited sales occurred in the forward section. A cargo of Dan-Bess-Kustendji afloat sold 42s 6d, and a part cargo ditto 43s 3d, while parcels of No. 4 Canada Western October-November were dealt in at 41s 6d per 400 lbs. Oats quiet and easier. English quoted 32s to 40s per 336 lbs. Of imported, Plate f.a.q. 31s 6d, ditto clipped 32s, Chilean tawny 32s to 32s 6d, No. 2 Canada Western 34s 6d, No. 3 ditto 34s, and No. 1 Canada feed 32s 6d, all landed, per 320 lbs. Forward positions easier, and Plate f.a.q. afloat and August-September sold 28s 6d. Beans quiet, and tendency easier. English springs 70s-80s, new winter 55s to 60s per 532 lbs. Peas quiet. English duns 60s-65s, maples 85s to 95s per 504 lbs. Oatmeal quietly steady. Scottish £26 to £27, London made £24, American £23 10s, rolled oats £24-£25 ton. Offals steady. Middlings £14, broad bran £10 10s to £12 10s ton ex mill. Lentils quiet. No. 1 split 34s to 39s, and Egyptian 30s per 100 lbs. Homeward freight markets generally quiet with regard to heavy grain, and rates weak. From the River Plate 32s 6d was done for a spot steamer, with 30s now indicated, and 32s 6d backward loading up river U.K./Continent. Montreal chartered several steamers on the basis of 5s 3d to 5s 9r U.K. and 22 cents per 100 lbs Antwerp/Hamburg, while Gulf to Continent done 22 cents, Mediterranean 25 cents, and Baltimore 19 cents 100 lbs, Continent. North Pacific 60s wheat/flour and 61s 3d barley per ton. Eastons quiet. Bombay/Karachi 30s

dead weight. Saigon rice 60s-62s 6d, Dalry beans/wheat paid 70s, and Australian wheat October at 70s to U.K./Continent. South African maize quiet at about 42s 6d U.K./Continent. Danube inactive, and other markets generally unaltered.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1920-21, contrasted with 1919-20, 1918-19, and 1917-18.

	1920-1921.	1919-1920.	1918-1919.	1917-1918.

IRON, STEEL, AND COAL.

Our Middlesbro' correspondent's report, dated August 25th, is as follows:—Pig-iron: Makers continue to delay restarting their blast furnaces with the object of getting fuel prices down to an economical basis, and indications point to them succeeding, as prices of coke have been further reduced. There are still no orders for pig-iron, and prices will have to be further

CUMBERLAND IRON.

(FROM OUR CORRESPONDENT.)

reduced if foreign competition is to be met. The nominal price of No. 3 Cleveland G.M.B. pig-iron is 135s per ton, and for East Coast mixed numbers hematite 160s per ton. Manufactured iron and steel: Steel works cannot see more than a week or two ahead, and may be obliged to stop at any time. Steel ship plates and angles have been reduced £1 per ton, and the following are the quotations:—Steel ship plates, £14; steel ship angles, £13 10s.; iron bars, £16; steel rails, £14 net. Iron ore: Trade in foreign ore is quite idle. Hematite makers have good stocks and are not using any ore.

Our Sheffield correspondent writes:—No appreciable change in the condition of the local industries has taken place on the week, and all of them are experiencing the most acute depression in the history of the city. Opinion is sharply divided on the prospects of an early revival, but the proportion of pessimists has been increasing rapidly of late. The building of four battle-cruisers will bring a substantial amount of work to Sheffield in armour-plate, steel castings, and many kinds of tools, and relieve the unemployment, but alone the work will not suffice to restore trade to anything like its normal level. The chief problem confronting manufacturers to-day is the comparative collapse of the export markets. There is a little revival of trade with Russia, but Eastern Europe generally cannot buy from the outside, nor can much be done with France, Italy, and Germany. The last-named country was Sheffield's best overseas customer for high-grade steels. Pig-iron prices are easier, with little doing. Belgian foundry pig is off the British market at present in consequence of German underselling to the extent of 10s per ton. English foundry pig costs about £7 10s at works, and German about £6. The demand for steam coal continues poor, as users are buying as little as possible, and the output of the pits has been reduced in consequence of the depression of the market. Not much export business is being done. Stocks of small fuels at the pits have increased. The demand for household coals has fallen off considerably, and the volume of trade is far below what is usual at this period of the year. Sellers scout the idea of prices coming down.

Our Glasgow correspondent (writing on Thursday) says:—The main factor of industrial interest in this district this week was the return to work yesterday of the carpenters and joiners, who have been on strike since the end of last year. A good beginning was made, no fewer than 85 per cent. of the men having put in an appearance. It is pretty certain that the full quotas will be in attendance by Saturday. In some cases the hands to be employed will considerably exceed the old staffs, for there is an enormous amount of delayed work to overtake. It is calculated now that there are nearly 100 vessels lying at various ports in the Clyde in need of fitting out, including some three or four great Atlantic liners for the Cunard and the Canadian Pacific companies. In addition to the joiners, respectable groups of engineers and general artificers will be employed, so that there is prospect, when things get into full swing, that sensible reductions in the numbers of unemployed generally will be effected. It is of good augury for the coming winter that one or two of the bigger shipbuilding firms have new boats to lay down whenever certain vessels on the stocks are launched. While nothing definite has yet transpired as to the allocation of the new Admiralty work that has been authorised, those presumed to be in the know are satisfied that a couple of orders will come to the Clyde, in which event conditions for the winter will not be so bad as threatened only recently, even though no account is taken of the possibility of private firms proceeding with additions to their fleets. Altogether the outlook for trade on the river is regarded more hopefully this week, and relatively those for steel and iron have been described as brighter. But that has to be seen; and experts still hold that there is a bit of road to travel before conditions can possibly reach normal state again. Last Saturday Scotch steelmakers intimated a drop of 20s per ton on their list prices for ship and boiler plates and for angles, making them respectively £19, £14, and £13 10s, with extras in each case, and extras, it seems, occasionally mount up to £5 a ton. Consumers are very sore over extras, the fixing lying wholly in the hands of the makers; and as to the £1 break just determined, they look upon it as wholly inadequate to existing circumstances. It was anticipated that the cut would reach up to several pounds a ton, and therefore no expansion in steel consumption is looked for. At the same time, it cannot be overlooked that several steel establishments are steadily adding to their outputs of plates and sections, and that arrangements are completed for starting more rolling mills, indicating that the managements must have orders, and by no means light ones, on their books, or in negotiation. It would be most unprofitable business to prosecute the lines they are following on any other hypothesis. As a prominent authority puts it: they don't do these things for fun. In various circles it is common talk that shoals of inquiries for steel and iron material and manufactures thereof are in circulation—chiefly from India, our different colonies and South America, and largely for railway undertakings. These are not materialising as could be wished, solely because our quotations are out of range. The one encouraging feature is that our buyers are well-inclined towards us, and prepared to stretch points in our favour provided our producers are reasonable. Continental competition in certain grades of hematite is very keen—Belgium, Germany and France are all sellers of basic, and that at £5 a ton, against which Scotch makers named £9 a ton. One steelmaker in the West is lighting up a few furnaces to turn out basic, and good results are expected. By next week-end the manufacture of Scotch foundry iron should again be entered on, and the production of Scotch ordinary may be revived in a few days at several places, where repairs have been fully executed. Coals a drug, and prices weakening.

The condition of the coal trade offers the surest hopes of a revival of activity in the Cumberland and North Lancashire hematite pig-iron industry in the course of six or eight weeks' time. The collieries, with the bottom gone out of the Irish demand for landsale coal, and with little or no demand at all for their smalls, are now working short time, and sidings at yards and at docks are filled with accumulations of supplies for which there is no outlet. And this, in spite of reductions in price varying from 3s to 1s 6d per ton. It cannot be long, therefore, before smelters will be able to command fuel at a figure at which they can make iron that is readily marketable. Whether coke will come down to between 30s and 35s per ton, delivered before the winter, is a moot point, but certainly there will have to be a further substantial fall in coal values if the occasion for the resumption of coking at the local ovens is to arise. Meanwhile, signs multiply that costs all along the line are to descend to a level at which smelters will be enabled to fight some of their furnaces. The iron ore miners have already signified their willingness to waive the present wages scale agreements, and it is evident that the price of fuel alone bars the way to the hematite pig-iron industry meeting the competition from the Continent. Not a great deal of importance can be attached to the restarting of furnaces at Cleator Moor, North Lonsdale and Millom, for here low phosphorus iron only is being made, and as even at the figure quoted, it is being smelted at a loss, the conclusion must be drawn that the iron is being produced mainly, if not entirely, to oblige customers whose business must be retained at all costs. But, of course, this small beginning, springing from whatever cause it may, engenders a feeling among others that the lead must be followed, and if conditions continue to grow favourable, there is little doubt that before the advent of winter, furnaces may also be blown in by the companies which turn their iron into steel. The steelmakers, it is true, do not at the present time hold orders representing more than a week or two's rolling. With iron, however, in the neighbourhood of £6, the figure to which it will have to fall before the market shows much sign of animation, steelmakers believe that they could soon secure such business as would warrant operations on a fairly extensive scale. It is certain that until there are ten or a dozen furnaces in draught again, the coal trade must continue in a bad way, and that not more than one-half of the by-product coking plants can draw full loads. The chemical industry, it is scarcely necessary to say, is idle.

THE BY-PRODUCTS TRADE.

(FROM OUR CORRESPONDENT.)

This market shows signs of waking up; prices are very firm, while there are many foreign inquiries about. Pitch is quoted in the neighbourhood of 85s per ton, but with the approach of the shipping season traders are diffident about making contracts very far ahead as present conditions rather point to an advance in quotations. Solvent naphtha is not too plentiful, and despite the very small demand from rubber manufacturing industries, prices show a tendency to advance; latest value about 3s 2d per gallon. Carboic acid dull so far as crude is concerned, but improving slightly in crystals (now 7d per lb) on a small inquiry from Japan. Crude naphthalene also wanted at £8 per ton for the firelighter industry. Beyond a small improvement in export trade, there is little fresh in sulphate of ammonia.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—A considerable amount of business has been done during the past week in wool and tops, orders having been booked for the home trade and also for America and Japan. The increased demand is apparently due to the small stocks in hand rather than to increased consumption in the mills, and the strength of the primary markets has also had a hardening influence on quotations in this country. Merinos and low crossbreds appear to be most wanted, and top-makers have advanced their quotations for merinos about 1d per lb. Probably business will slacken a bit until the real position of the raw material is again established at the London auctions, which open next Tuesday. Some topmakers report being booked up for the next two months, and in the circumstances they are not willing to add to their commitments. Average 64's tops may be quoted at about 3s 3d per lb, and a really good warp will command 1d or 2d more. There is more inquiry for yarns, though prices offered are in many cases too low. The demand for coloured and mixture yarns continues, and spinners are well employed on these. Unfortunately, there is not much improvement in the piece goods trade. This department is always slack at this time of the year, and it is hoped that trade will develop on better lines towards the end of September. The export section is better employed than the home trade, though the volume of business for overseas markets is not large.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

The trade is now looking forward to the forthcoming series of Colonial sales, which are due to begin in Coleman street next Tuesday. There is to be available 70,000 bales of "free" wools, and 60,000 bales of B.A.W.R.A. wools. Fully half the latter will con-

sist of New Zealand crossbreds, and altogether there should be a good offering of both merinos and crossbreds. It remains to be seen whether the "slating" which Mr W. M. Hughes, Australian Premier, gave the officials of the Wool Section of the Ministry of Munitions whilst he was in Bradford last week, will have any effect, but the fact remains that he strongly condemned the policy of the said officials in not selling the Government's surplus at the right time. If this had been done British taxpayers' money would have been saved to the extent of millions of sterling. It is to be hoped good competition will be witnessed at the forthcoming sales leading to a recovery of the ground lost last series, but that will depend entirely upon Continental demand, particularly Germany. Some seem to think that the home trade will be a bigger buyer, and it is to be hoped that will be the case. Still, the fact remains that on home trade account there is little or no improvement at the piece end of the industry, though this is the section in which improvement will have to commence before topmakers and spinners can begin to buy as they would like on home trade account. Some improvement has taken place during the interval, this being entirely the outcome of considerable buying on export account. As was stated a week ago, Australian selling centres have come up to the level of prices ruling in Coleman street last series, and it now remains to be seen whether any higher level will be established in the latter centre. The home trade needs to-day all the inspiration it can get, for then wholesale fabric buyers will feel that it is policy on their part to start buying at least reasonable quantities of fabrics for next spring. If reports are correct, and there is no reason to doubt them, financial pressure upon woollen merchants in particular is still serious, and it is doubtful whether the general public have any conception of the extent of the private arrangements which have to be made for paying accounts on the extended time principle. We believe the worst is past, but all the same, business is far from being good, and it remains to be seen whether competition will be strong enough to lift prices higher than the close of the last series.

The strike among the textile workers of the mills in Northern France is not very inspiring to French buyers as another series of sales opens. An equally untoward circumstance is the depreciation in the German mark, and many are afraid that this will seriously curtail German competition at the forthcoming auctions. There will certainly not be the same encouragement to operate as there would have been if the mark had improved in value, hence it is not likely that values in London, for the time being, will be any more than firm. Then, too, B.A.V.R.A. has published figures giving the stocks of old wool on hand last July 31st, and the fact that there are 2,209,083 bales of this wool, is quite sufficient to show the entire consuming world that nobody is going to be short for a long time to come. All the same, there does not appear to be any reason why competition should not be good, with values on a full parity with the close of last series.

MANCHESTER, August 25.

There has been a slight improvement in the tone of the market during the past week. Prices have hardened, chiefly in sympathy with the stronger tone in raw cotton circles, and to some extent inquiry in yarn and cloth has been stimulated. Most of the demand in piece goods for India has been unworkable, but the turnover, especially in light fabrics, has been rather larger. The

trade outlook is improved by the favourable monsoon advices and the stiffening in exchange rates. Inquiry for China has been fairly persistent, and some useful lines have been booked in miscellaneous goods. A few more orders have been placed for the Near Eastern outlets. Certain home trade buyers are now taking rather more interest in prices. The yarn market has been firmer. In both American and Egyptian qualities for home use more business has been offering, without the total sales being at all important. Scattered transactions have been put through in shipping counts for Eastern and Continental outlets.

VEGETABLE OILS AND OIL SEEDS.

(FROM OUR CORRESPONDENT.)

Very much quieter conditions are ruling in the market for vegetable oils. The prices of raw linseed oil are barely maintained, notwithstanding that a fair business has been done on consumptive account at the lower level of values ruling in the past fortnight. About £35 10s for spot to December delivery remains the value ex Hull mill, with 20s premium quoted for January-April, the easier tone reflecting the weakness in linseed to a large extent. Plate seed on spot at Hull has receded to £20, with seed afloat and for shipment rising on a progressive scale to £21 5s

Capital, Surplus and Profits

\$37,500,000

for October-November loading. A rather steadier tone has manifested itself this week in consequence of firmer Argentine markets, poor crop reports, and smaller shipments, but buyers are showing but little interest. A firmer feeling for Indian linseed is also reported.

With regard to cottonseed and cotton oil, a slight favourable reaction in prices from the recent decline is in evidence, though the ground lost has not been recovered. Crude Egyptian cotton oil is now quoted round £40 per ton naked ex Hull mill. English soya bean oil is firm on scarcity, but only a small trade is reported in rape oil. Ground nut oil is a steady market, but palm kernel oil is cheaper. Castor oil has been reduced by £4 per ton, "first pressure" now being quoted by manufacturers at £55 per ton (barrels free) ex Hull mill.

The demand for oilcakes has fallen off owing to improved weather conditions and the cancellation of foreign contracts.

LINEN TRADE.

BELFAST, August 24.

Flax.—There was less flax offered for sale in the Irish markets this week, as some of the markets have closed for a month, and other markets, which were held weekly, will only be held fortnightly for some time. The quality of the flax was unchanged, but selection was not quite as good. On the Continent Ghent and French spinners are now buying, and as supplies are small this additional demand has made prices sharper all round. Yarns.—Prices remain steady, and business has been on a moderate scale. Weavers.—A steady business is being done. Buyers are continuing to operate with more confidence. Manufacturers are having to pay advanced rates for active numbers, and this gives a consequent steadiness to the market. Orders have been placed during the week for crases, checks, dress goods, and damasks. Merchants.—Merchants report that business is coming forward in small quantities. Once the tariff in U.S.A. is settled, buyers will probably be prepared to place forward orders in a normal way, even though quantities may not be up to pre-war requirements.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR CORRESPONDENT.)

The scramble for hides seems to have been arrested, as prices in London and the provinces have this week been steady. Best ox made in Bermondsey from 7-1/2d to 10-1/2d, and cows 7-1/2d to 7-1/2d, showing practically no alteration over last rates. Calf were, however, slightly firmer, and most classes advanced 1/2d to 1/2d per lb. There is more activity in foreign hides, and advances are recorded in South Americans, Argentine frigorific ox selling at 9-1/2d c.i.f. Dry hides are not moving very freely, and holders find it difficult to maintain recent quotations. Cables report the condition of the American market as firm, with best heavy Chicago packers now selling at 14 cents, and Bogota drys at 13 cents.

Trade in sole leather seems uncertain, some merchants reporting a fair business, others a quiet one. The optimistic tone, however, still prevails, as large stocks of boots and shoes have been cleared off, and orders are coming in in consequence. Medium-weight bends are the best sellers, as the wet weather is leading to a demand from repairers. Rough leather is also selling better, indicating that carriers are again obtaining orders. Waxed butts are moving off, whilst waxed splits are quite a good sale. Glacé kid and box calf are wanted in good grades, and prices are very firm in view of the limited stock arriving from America. This week, however, a very large sale is announced of American kid returned from Russia, which will probably again upset the market.

The shoe trade seems improving, and longer hours are being worked. Makers, however, are still complaining that retailers are holding up prices of the better grades, and that this prevents an expansion of the trade. Export is still dull, and it is difficult to see how an immediate improvement can be looked for in view of the state of the exchanges.

PORTLAND CEMENT.

The following quotations for Portland cement are supplied by the Cement Marketing Co., Limited:—Best English, complying with British standard specification, delivered in London area—in full van or motor loads to site, 87s 6d to 93s per ton; alongside in River Thames up to Vauxhall Bridge in full barge loads (80 tons minimum), 80s 6d per ton. Extra on above prices for the following special brands:—

"Blue Tiers," a fine-ground slow-setting cement, and "Red Tiers," a fine-ground quick-setting cement, 3s per ton. "Ferrocement," a cement prepared to meet the requirements of specialists in ferro-concrete constructions (in 20 sacks to the ton), 10s per ton.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, August 26.

A quiet tone generally pervaded the markets, buying on the part of consumers being measured by wants of immediate necessity, and prices, while irregular in some cases, ruled distinctly lower in others as regards leading commodities.

SUGAR.—After opening the week very quietly, business showed some extension, as sellers were willing to accept lower prices. Tate's cubes sold, 61s 9d to 62s 9d, as to quality; granulated, 57s to 57s 6d; caster, 61s to 61s 6d; pieces, 45s to 48s. Lyle's granulated, 57s to 57s 3d; yellow crystals, 52s 6d. Crystallised West India, 44s 6d to 51s. American granulated, spot, sold, 56s; ditto, afloat, 29s, c.f. and i. terms. White Java, September-October, 23s, c.f. and i. U.K. White Mauritius, spot, 51s 6d to 52s. Belgian crystals, October-December, sold, 21s, f.o.b., Antwerp. Czechoslovakian, granulated and crystals, prompt, 28s, f.o.b., Hamburg. Dutch granulated, prompt, 30s, f.o.b. terms. Cuban stocks, 1,310,000 tons, against 335,000 at corresponding period last year. Terminal market quiet. December sold, 16s 9d.

COFFEE.—Moderate quantities were catalogued in auction, and met with fair support, while all the finer descriptions were readily saleable at full to dearer rates. Nicaragua bold colour, sold, 11s 1/2 to 12s 6d. Future delivery market steady quiet. December, sold, 45s 6d to 45s; March, 46s 6d to 46s 3d.

COCOA.—Only retail sales occurred in parcels on the spot, London, but recent rates were secured. Butter quiet at 1s 11d per lb.

TEA.—During the week, the smaller quantity of 40,500 packages Indian was submitted to auction and elicited fair support, but prices on balance showed some irregularity. Common and low medium sold in buyers favour. 24,300 packages Ceylon aroused good competition, and steady prices were secured.

RICE.—Market again dull, and second-hand parcels were forced off at easier prices. Two stars Rangoon, spot, 24s; ditto, afloat, 22s. No. 1 garden Siam, afloat, 21s; No. 1 Saigon, ditto, 20s 3d. Siam C 1 broken, August-September, 15s 6d; C 3, ditto, 15s. Rangoon hand-picked beans, September-December, sold, 15s to 14s 6d. Japanese peas, crop 1292, September-October, sold, 40s 6d. Dutch peas, prompt, sellers, 30s, c.f. and i.

SPICE.—Pepper barely steady, and a moderate demand was experienced. Fair black Singapore, spot, 4-1/2d; September-November, sold, 4-1/2d. Aleppo, spot, quoted 4-1/2d; Tellicherry, 5d; white Singapore, 9-1/2d; Muntok, ditto, 9-1/2d; ditto, September-November, 8-1/2d. Zanzibar cloves, spot, 1s 2d; pimento, 2-1/2d; fair flake tapioca, spot, 2d, all per lb. Ditto, September-November, London, sold, 17s; continent, 18s. Fair Penang seed pearl, spot, 22s 6d; ditto, September-November, London, sold, 21s; Hamburg, 21s 6d. Desiccated coconut, spot, sold, 54s. Sago flour, August-October, sold, 16s 6d.

FRUIT.—Market for currants ruled firm, with a good inquiry. Dates steady. Khredrowie, spot, sold, 18s and Siar, 16s.

JUTE.—There was a fairly good amount of business effected this week, and prices though inclined to show some irregularity at times, while under the influence of rates of Exchange, ruled firm on balance. Native first marks, assortment, spot, Hamburg, sold, £32; ditto, old crops, subs, August-September, Hamburg, £27 15s to £28 5s; ditto, September-October, £27 10s to £28; lightning subs, old, August-September, £23 15s to £24 5s; Heart subs, £17 15s. Calcutta hesians firm. 10 oz, spot, 22s 6d; 8 oz ditto, 20s. A twills, October-December, £75; B ditto, 65s.

HEMP.—Manila flat, demand showing no revival. J grade August-October, £36 10s; K ditto, £35; L, £35; M, £31. New Zealand largely nominal. Fair, August-October, quoted £35.

SHELLAC.—Market generally steady. T.N., spot, 290s; August, sold, 275s; October, 275s to 270s; December, 255s to 260s. GAMBIE quietly steady. Block, on spot, quoted 31s 3d.

COPRA.—Market ruled very unsettled, but a fair amount of business was effected. F.M.S. Straits, September-November, Rotterdam, sold, up to £35 2s 6d down to £32 15s, and later £33 15s; Ceylon, to London £34 10s to £34 15s; Cebu, to Hamburg, £33 to £32 and £32 10s; South Sea Islands, September-November, London, £32. Palm kernels unsettled. August-October, Liverpool, sold, £22 10s to £21 15s and £22 10s.

RUBBER.—Market remained in a quiet state. Crepe, spot, sold, 8-1/2d to 8-1/2d and 8-1/2d; October-December, 9-1/2d to 9d and 9-1/2d; January-March, 9-1/2d to 9-1/2d and 9-1/2d; April-June, 10-1/2d. Sheet, spot, sold, 8-1/2d to 8d and 8-1/2d; October-December, 9d to 8-1/2d and 9d. Fine hard Para, spot, quoted 8s 1/2d; and ball, 7d.

OILS.—Linseed irregular and firmer. Spot, net, naked, 36s 9d; September-December, 36s 3d. Rape quiet. Crude, spot, 54s; refined, 61s. Cotton quiet. Crude Egyptian, 42s; Bombay, nominal; common edible, 51s. Chinawood: Hankow, spot (barrels), 104s; and shipment, 71s. Coconut quiet. Ceylon, spot, 55s; August-September, 53s; Cochin, ditto, 57s. Soya quiet, Oriental, barrels, ditto, nominally 41s. Japan fish steady. July-August, cases, 23s. Cod steady. English, spot, 25s. Groundnut quiet. English crushed, naked, spot, 52s; deodorised, barrels, 66s. Turpentine irregular. American, spot, 63s 9d; September-December, 63s; January-April, 64s. Rosin firm. American, grade B, 16s; F, 16s 6d; G, 16s 6d; K, 18s;

TERMS OF SUBSCRIPTION.

Quarterly, 14s 6d; Half-yearly, £1 9s 6d; Yearly, £3 18s 6d.
Colonies and Abroad, £3 15s 6d per Annum.
Single Copies, One Shilling.Cheques and Post-office Orders to be made payable to the Proprietors of the "Economist".
Office: Granville House, Arundel street, Strand, London, W.C.2.

Copies of the Economist may always be obtained in the City at Messrs Davies and Co., 95 Bishopsgate; Leathwait and Simmonds, 5 Birch Lane; Barker and Howard, East India Avenue, and 6 Fenchurch Buildings; Sugar Loaf Court, Leadenhall Street; Pottle and Son, 15 Cullum Street; Willing and Co., Limited, 50 Cophall Avenue, and 53 Finsbury Pavement.

Paris: Galignani Library, 224 Rue de Rivoli; Messrs Brentano's, 37 Avenue de l'Opera. New York: Economist Office, 20 Broad Street (Room 1,709).

THE MONEY MARKET.

MONEY has been becoming increasingly easy as the week has progressed. Supplies of credit proved ample for end-of-the-month requirements, and on Thursday, the 1st, some £23 millions were released for Victory Bonds and other dividend disbursements by the Government. More over, no disturbance was caused in the market by the German reparation payment, and superabundant order of the day yesterday and on Thursday the plethora of money and to the scarcity of Treasury bills was still more marked. The rate for three months' bills was about 4 1/2 per cent.

M, 18s; WW, 24s 6d; French, F/G, 15s; H, 15s; WW, 18s; extra pale, nominal. Petroleum quiet. American, refined, 1s 4d; standard white, 1s 4 1/2d; and water-white, 1s 5d per gallon.

OILSEEDS.—Linseed: Market quiet. Calcutta, August-September, quoted, £22. Plate, spot, Hull, £20; afloat, sold, £19 15s to £20; July-August, sold, £19 15s to £20; August-September, £20 5s to £20 10s; September-October, £20 10s to £20 15s. Rapeseed quiet. Toria, July-August, quoted, £22 5s; real bold Ferozepore, quoted, £22; brown Cawnpore, £21. Cottonseed easier. Egyptian black, August, quoted, £13 10s; and white, £13. Bombay, August-September, £11 5s. Gingelly firm. Chinese, August-September, Continent, quoted, £29. Castor, Bombay, August-September, £19. Ground nuts quiet. Coromandel, machine-dried, August-September, £27; Chinese decorticated, f.a.q., ditto, £26 15s per ton.

METALS.—Tin slightly firmer last Monday, fair dealings being effected in cash at £152 to £152 15s, three months' £153 10s to £154 7s 6d. Prices declined until Thursday's meeting, when cash changed hands at £148 10s to £149 and three months' at £150 10s to £151. At Friday's session rates advanced. Cash sold up to £152 5s, October dates £151 5s to £154 5s, and three months' from £151 10s to £154 5s, while finally done at £154. English ingots, £151. Copper continued lower during the early part of the week, standard cash declining to £66 and three months' to £65 15s, ultimately improving to £66 15s. Better support was accorded during the middle of the week, cash rallying to £66 10s and three months' to £67 5s. The market manifested a lower tendency at Thursday's meeting, cash being sold at £66 12s 6d to £66 5s, three months' at £67 10s to £66 15s, and since at £67. At Friday's session the market hardened. Cash sold at £67, and three months' up to £68 5s. Electros, £70 10s to £72 10s; best selected, £67 10s to £69 10s; strong sheets, £101. Wire bars, £71 to £72 10s. Lead easier, at £23 5s to £23 15s. Spelter quiet, at £24 15s to £25 2s 6d, as to position. Antimony: English regulus, £37 to £40. Aluminium, home trade, quoted at £122; export, £125.

command such general acceptance that they can be no longer questioned or usefully discussed.

But the fact is that men of affairs make such a sharp distinction between theory and practice that the management of other people's money remains an art for which no corresponding science has yet been evolved. Economy and economics have both suffered from the existence of this deep cleavage between the professionals and the professors, and there is all the more reason for welcoming any attempt to express in general terms the principles that govern—or should govern—the administration of money.

As soon as any attempt of the sort is made, one realises the inchoate condition of the subject. With special reference, it must be admitted, to his fellow trustees, the author of "Other People's Money" apologetically makes a "solemn catalogue of platitudes" with regard to investment policy. Some of them are so far from being platitudes as to appear at first sight to be highly contentious; and others, in spite of being indisputably valid, appear in practice to offend the most fundamental instincts of the human race. It is a self-evident truth that "there is no real difference between holding on to a stock which you could sell for a certain price, and buying that stock at the same (or approximately the same) price"; and it is almost equally self-evident that "a loss is sustained when the market price of a stock falls below the price at which it was bought. You do not escape that loss by refusing to sell." But it is perhaps a good thing that we shall never know what quantity of investments is held by the managers of other people's money in defiance of one or other of these principles. "These two classes of unwilling sellers—those who will not sell in a rising market for fear of missing a better price, and those who will not sell because of the alleged 'loss on realisation'—seem to comprise a very large proportion of the population of the British Islands."

In such a little book it was, of course, not possible to do more than glance at the great variety of general questions which are raised in passing, and a critic should perhaps be less inclined to carp at partial statements than to be thankful that these broad questions were raised at all in a practical form. To what extent, for example, is it really good policy to spread one's risks? The theory, we are told, that in investing one should not have too many eggs in the same basket was always of doubtful validity. "If one is making risky investments, it may be prudent to spread the risks as widely as possible, just as an underwriter spreads his risks; not in the hope of escaping loss (for the more widely spread the risks the greater the probability that some loss will be incurred), but in order to minimise the possibility of any single loss proving disastrous. But when one is making investments in which the risk of loss is negligible, nothing is gained by extending the area over which they are spread."

On the other hand, there are certain risks which no amount of ingenuity can avoid. The irredeemable securities favoured by trustees give an assured income over a long period at the cost of a speculation in commodity prices; and short-term loans give security against capital depreciation at the cost of a speculation in the course of interest rates. The theory of "spreading one's risks" is, as a rule, only one of the many specious devices for avoiding—or appearing to avoid—this necessary choice. For managers of other people's money the responsibility of taking a position, or forming a view, and backing it, is great; but it is a mistake to think that to decline to make a choice, even if it is Hobson's choice, is to conform to the principle of "safety first." One wonders how much of the depreciation in investments, of which those who have money to entrust to others read nowadays with monotonous regularity, is attributable to risks which, if they had not been "spread," might have been avoided altogether.

Before the war, when price movements were neither wide nor sudden, and when the foreign exchanges were for the most part stable, the management of a business often required no very deep knowledge of the wider principles of finance and investment. Since the war, success in the narrower and more specialised field has often been jeopardised or more than offset by losses resulting purely from financial management. In fact, in these days the

general principles on which other people's money is administered by those who take charge of it threaten to be far more important than the particular uses to which it is put. Those general principles, so far from having been established and universally accepted, are often little understood by the specialists and practitioners who in times past have been able to neglect them without having a very heavy penalty to pay. Now that the necessity is upon us of having to give close attention to them, we find that the means of learning them are few and that, in fact, the theory of the subject has scarcely been worked out at all. "A Trustee" has found that, in order to arrive at any practical conclusions as to the best policy for private people to pursue in the interests of *cestui que trust*, he has had to go back to first principles. It now remains for someone to attempt the more ambitious task of building up a theory of financial administration which meets the needs of those whose profession it is to control other people's money.

WORKSHOP COMMITTEES.

(BY A CORRESPONDENT.)

SAID the Greek sage: "The people ruling—the very name is beautiful." And for a good two thousand years humanity has been thinking on and off that it would be nicer to see the thing than to hear its beautiful name. A little further meditation has lately begotten the conclusion that, after all, what we call politics is, or ought to be, the least part of the ruling as it concerns Tom, Dick, and Harry—the men in the workshop. Thus it came to pass that a body as august as the British Association brought forth in 1918 a sub-committee's report on Industrial Unrest, embodying a chapter on Workshop Committees, or the people ruling in the workshop. So rapidly are our conditions changing that the republication of this chapter, only three and a-half years later, already gives the author, Mr C. G. Renold,* opportunity to chronicle many new developments and throw out many new suggestions.

To grant the case for capitalism is not to deny the case for workshop committees. Taking what would generally be called a "moderate" view, and, in fact, believing that the industrial world will continue to wag more or less in its present way, with an appreciable transference of power and responsibility from the people who own the money to the people who do the (manual and mental) work, Mr Renold outlines what he believes to be the scope and the right constitution of workshop committees.

Such committees are required, in the first place, for the interpretation of agreements of all kinds made by representative bodies of wider scope—trade unions and employers' associations, or Joint Industrial Councils. The making of an agreement about wages, or hours, or dilution, or trade union practices, or what not, is no more a finished process than is the passing of a statute. For the interpretation of the latter there are lawyers and the courts; but the successful application of the former to the individual workshop requires, if needless friction is to be avoided, some kind of workshop committee with a recognised status. Secondly, Mr Renold argues that a committee of the workers ought to have a voice in those matters of shop regulation and discipline which compose, according to the manner in which they are treated, the raw material of either corporate spirit or petty tyranny. Nor are questions of wider importance, such as apprenticeship, education, and promotion necessarily the exclusive business of the management. And the existence of workshop committees affords an opportunity, which is by no means to be despised, of directing the attention of aspirants to the control of industry towards some of the larger problems of business policy. Finally, the social activities which grow up round a big works are best managed by those for whose recreation they exist.

It is apparent that in any but the smallest works a single "omnibus" committee cannot appropriately deal with all these matters. The purely social activities, Mr Renold suggests, may well be left to an autonomous social union, preferably under the virtually complete control of the employees, and, if possible, financially self-supporting without assistance from the firm. In this union will be federated the various clubs dealing with the football and

picnics and pastoral plays which are the modern adjuncts of the business of getting a living. The rest of the ground then falls (at any rate at first) into two broad divisions—matters of welfare and matters of bargaining. Welfare is everybody's affair. A welfare committee may therefore advantageously include on the one hand nominees of the management, and on the other hand elected representatives of all grades of workers (including the office and technical staffs), both unionist and non-unionist also, if such there be. It will discuss questions "in which there is no clash of interest between employer and employedincluding all questions of general shop conditions and amenities, and the more purely educational matters." Subjects, however, the discussion of which necessarily partakes of the nature of bargaining, must be reserved to a shop stewards' committee, representing the unionist workers alone, and possibly only the better organised amongst these. The precise composition of this committee is a trade union affair, and so long as the committee functions properly, the wise firm will abstain from all interference with its mode of election. The line of demarcation between the shop stewards' committee and the welfare organisation is not easily drawn, and we rejoice that Mr Renold's experience in his own works leads him to the belief that it will eventually be found possible to combine the two bodies without general amenities swamping particular matters of bargaining or *vice versa*.

A word may be said about the position of the "higher management." Especially where there is a strong workshop organisation representing the manual workers, the technical and higher clerical staffs come to feel themselves to be between the devil and the deep sea. Since it has become proper to add the formula "by hand and by brain" to the term "worker," organised labour has begun (if somewhat theoretically) to recognise the importance of the technician and the industrial administrator, and the existence of a considerable measure of community of interest with these persons. The name of the people ruling can only be completely beautiful when the status of the staff and their due measure of responsibility and self-government are as clearly defined as are those of the better organised manual workers. A Marxian who, believing his employer to be Mammon, gives his energies to the service of the god of class war is not (whatever he may tell you) himself an unhappy person. But the higher staffs, with a less fervid belief in Mammon and no god to serve, may be very unhappy indeed.

In practice, there are all sorts of conditions of workshop committees in existence. Progress in establishing the joint works committees of employers and employed proposed by the Whitley Report has been slow, much slower than in the establishment of joint councils for whole industries. The explanation possibly lies in the fact that industrial organisation must be built quite as much from the small unit upwards as from the large unit downwards. On the other hand, the shop stewards' movement has made rapid advances, particularly in the engineering industry. It is a striking testimony to the common sense of British trade unionism and British industry generally that this movement, which originated in a rank-and-file rebellion against official trade unionism on the Clyde in 1915, should so soon have found constructive work to do within the framework of recognised trade unionism. Both the engineering employers and the engineering unions now recognise the shop stewards, elected by the shop and themselves working in the shop, as the spokesmen of the shop's interests.

Thus a sense of the difference in outlook between the whole-time trade union bureaucrat and his nominal master, the ordinary worker—a difference which does not, incidentally, consist entirely in the more advanced views of the latter—was an important first cause of early works committees. Moreover, in the engineering industry, where members of different unions frequently work in the same shop, it might sometimes happen that there was no representative, official or other, qualified to act as spokesman for the interests peculiar to the whole workshop. Workshop committees are thus partly based on dissatisfaction with representative institutions as we have known them in industry. They are a reversion to the primitive form of democracy, in which the people ruling does not mean that some people make a whole-time profession of ruling

on behalf of the rest of the people. For that very reason extravagant expectations of their future are foredoomed to disappointment. In an age of large scale, nation- or world-wide undertakings, vast issues cannot be settled nor vast businesses conducted by the admixture of a few hours' committee meetings into each week's work. Few corruptions, however, are as quick as the degeneration of an unvoiced desire, even if it is only the desire to have a particular window open or shut, into a grievance. We welcome the growth of workshop committees as a safeguard against poisons of this character, and as a contribution to the publicity, the straight-forward dealing, and the recognition of the human factors in industry which are the first essentials of industrial progress.

Business Notes.

The Railway Deficit.—The statement issued by the Ministry of Transport of the claims of the railway companies against the State shows a substantial increase in the receipts during July. Total passenger train revenue amounted to £11,242,800, as compared with £7,809,600 for June, while goods train receipts were £20,534,600, against £13,974,700. Expenditure for July was £20,448,900, as against £19,828,100 in June, the net balance being £110,200 on the right side. The Government guarantee was £4,878,000, leaving a net Government liability of £4,767,800, as compared with £9,880,000 for June, when there was a debit balance on working of £6,181,000. The debit balance for the first four months of the current financial year is £17,171,200, and the net Government liability £33,286,200.

Coal Output.—The production of coal in the mines of Great Britain for the week ended August 20th amounted to 4,334,000 tons, which, as will be seen from the figures below, shows a reduction on that of the previous week:—

1921.	Tons.	1921.	Tons.
April 4th to July 4th ..	179,100	Week ended—	
July 9th	2,352,700	July 30th	4,592,500
July 16th	3,935,200	August 6th	3,623,200
July 23rd	4,334,200	August 13th	4,536,600
		August 20th	4,334,000

A reduction is shown in every district for the last week. The output for the week ended August 21, 1920, was 4,697,200 tons.

Stock Exchange Peace Tasks.—A Stock Exchange correspondent writes:—It is natural enough that the Stock Exchange should be discussing with lively interest the position as it stands in regard to the pre-war account, now that the time has come at which the borrowers of money and bulls of stock have not more than 12 months in which to make up their minds as to the manner in which their liabilities must be liquidated. The subject has been discussed in the *Economist* many times during the past few years, and in the absence of any reliable data upon which to base an opinion of the actual amount of stock open, the only clear conclusion that can be reached at the present moment is that a certain amount of hardship, and probable suffering, will have to be faced in the course of winding-up the old account. There are people who have been paying interest on the pre-war making-up prices of shares which, since July, 1914, have dwindled

away to next to nothing. In the Home Railway market some of the prices are practically halved as a result of the seven years' work, and yet bulls of stock who have not closed their pre-war position are liable, of course, for the securities at the former prices. The Stock Exchange Committee set before themselves the necessity, after war broke out, for upholding credit by every fair means which could be devised. The Committee went out of their way in order to assist in the staving off of failures, and the maintenance of confidence as far as possible. The ordinary Stock Exchange rules that apply in cases of failure were abrogated. The Committee acted in flat defiance of the tradition that anything in the shape of financial weakness should be treated in a manner which, to the outsider, had always sounded austere to the point of harshness. The effect of this war-born leniency has been remarkably successful, and has assisted, in conjunction with the system of cash dealings, in raising the credit of Stock Exchange members to a point as high as, if not higher than, that current at any other time in the history of the House. The Committee are now considering the steps which they shall take in the direction of getting back to pre-war conditions upon the completion of the year allowed from last Wednesday for fulfilment of pre-war bargains. There is much spade work to be done, and the Stock Exchange Committee, who may be credited with the sincere intention of conscientiously shouldering their responsibilities, are not likely to burke the difficulties which loom in the path of the next 12 months. They have to settle the hotly-disputed point as to whether it will be to the advantage of the public, and of the Stock Exchange, for carry-over facilities to be re-introduced; whether periodical settlements could be re-instituted in order to afford greater flexibility to markets, without at the same time increasing the risk attendant upon dealing both on the side of the community and of the Stock Exchange member. The Stock Exchange is left, as a legacy from the war, with a book of rules and Treasury regulations which contain masses of prolixity and, in some cases, of contradiction in terms. A good many of the rules date back to the middle of the last century. Some are older still. Others have been grafted into the book within the past half decade. The Stock Exchange Committee may well shrink from taking in hand such a formidable task as that of revising the rules, giving them a co-ordinate character, and stripping them from the overlay of confusing complexities. The Stock Exchange has to thank the war for having provided the opportunity for proving beyond a shadow of doubt that it is master in its own house, and therefore the Committee can undertake such a codification of the rules such as could stand without challenge from outside interference. Those who are called upon to deal with Stock Exchange affairs are well aware of the anomalies, anachronisms, and confusions which exist in the present book of rules and regulations, and without pressing the claims of modernity to extreme lengths, it may well be suggested that the first work which calls for the hand of the Committee, in these early days of official peace, is to make preparation for a revision of the rules which shall bring them up to date.

The German Margarine Industry.—A correspondent writes:—It is estimated that there are at present about 170 margarine works in Germany, but this includes several small ones. It is generally known by now that a great part of the German margarine industry is in the hands of the two Dutch firms, Jurgens and Van den Bergh, who control at least 75 per cent. of the output. Some new works are being erected, and several considerable increases in capital of existing firms have been notified recently, mostly of firms under Dutch control—e.g., Jurgens and Prinzen, of Herford, have increased from 2 million to 10 million marks and S. and G. Müller from 2.8 to 5.6 million marks. This latter firm paid a dividend in 1920 of 20 per cent., plus a bonus of 10 per cent., equivalent to 15 per cent. on the increased capital. The output of margarine at the beginning of this year was about 35,000 tons per month, and the amount of raw material allotted to the German Margarine Association was increased to 10,000,000 tons per annum, although it is

not stated whether this means oil or oil-bearing material. In either case it would be, of course, inadequate for an output of 35,000 tons per month. It is, as a matter of fact, largely supplemented by animal fats—of which a considerable amount is used in German margarine—and also to a certain extent by home-grown oilseeds. Serious attention is now being given to the possibility of extending the area and yield under home-grown oilseeds, notably linseed, rapeseed and sunflower seed; and the matter is being vigorously taken up by the rejuvenated Oils and Fats Research Institute (Wissenschaftliche Zentralstelle f. Öl u-Fettforschung). This same institute also includes in its programme a thorough study of processes of oil-refining for edible purposes, fat-splitting, and fat-hardening or the hydrogenation of oils whereby liquid oils are converted into hard white fats. The firms under Dutch control will also have the advantage of drawing on the vast supplies of oils and oilseeds and nuts in the Dutch East Indies, which are largely under the control of Messrs Jurgens. The ramifications of this great firm, one of the largest in Holland, reach far and wide. It has a capital of 186,000,000 florins, and paid a dividend of 15 per cent. in 1918, and 25 per cent. for each of the three previous years. Another large firm, with headquarters in Holland—namely, Van den Bergh—in conjunction with Jurgens, is also extending its activities in Germany and adjacent countries, including Czecho-Slovakia. Their works in Germany include two large factories at Cleve and Mannheim; and in co-operation with their associate firm at Tetschen they are opening a new factory in Czecho-Slovakia, with a daily output of 50 tons. A still more important move in the direction of unified control in the whole of the German margarine and edible fats industry is the formation of one single association, representing the interests not only of the Dutch group, but also of the firms outside. A meeting of the representatives of the various groups recently took place in Berlin and provisional agreement was reached as to the constitution of the new association. There was some difficulty in connection with the question of proportionate representation and voting power; but it is understood that this difficulty has been successfully negotiated. Hitherto there has been keen competition between the firms in the Dutch combine and those outside, but it seems that this will now be removed.

Hall Marking Linens.—A Belfast correspondent writes:—A revival of the spirit of the ancient guilds in maintaining the standard of workmanship and the good quality of the goods manufactured is now being introduced by the Irish Linen Society, the representative body of that industry. Henceforth, it has been determined that an official seal, guaranteeing the fabric to which it is applied, shall be displayed on all linen goods emanating from members of the society, and "made from pure flax" and "true Irish linen." As a matter of fact, this course has been rendered essential by reason of the exceedingly high standard achieved by many cotton and union goods and also as a protection alike to both sellers and buyers of Irish linens. Moreover, it cannot be overlooked that not the least of its purposes will be to give these flaxen fabrics a distinguished prestige in the world's markets. Singularly enough, this sealing policy is but a revival of a practice much in vogue during the eighteenth century, when the institution of official examinations and sealing by the then Linen Board evoked greatly increased prosperity to the Irish linen trade.

Mexico and the United States.—The decision of the Mexican Supreme Court in the case of the Texas Oil Company should go far towards obtaining the recognition by the United States of President Obregon's Government. The Carranzist Constitution of 1917 confines concessions of mineral and oil lands to natives of Mexico and to such foreigners as will agree to be treated as Mexicans—i.e., to refrain from invoking the protection of their own Governments in any dispute with that of Mexico. It also provides that no foreigner, even under the above condition, shall acquire direct ownership of lands within 100 kilometres of the frontier or 50 kilometres from the coast, or bordering on navigable rivers. Such lands and concessions had been acquired previously by American com-

panies. Another clause of the Constitution provides that no law shall be given retroactive effect to the prejudice of any person whatever; but the United States Government demanded that the rights of the companies should be established by treaty, and President Obregon naturally felt unable to promise that Congress would ratify one. The Carranzist Government had taken steps to clear up the legal position by denouncing the concessions in question, and President Obregon had prohibited drilling upon them pending a legal decision. Apparently the judgment of the Supreme Court implies that they are protected by the prohibition of retroactive legislation. Should this be so, we may expect an early settlement of the other differences between the two Governments, followed by American and British recognition of President Obregon's Government. In his Message to Congress on Thursday, the President is stated to have rejected explicitly all idea of a treaty, on the ground that it would create special privileges for citizens of the United States. But such privileges are not demanded, and the decision gives hope that all that can reasonably be expected may be obtained otherwise.

Anglo-Mexican Trade.—Since the termination of the war the British Chambers of Commerce in oversea countries have taken over from the Trade Boards the function of informing importers as to British sources of supply of the goods formerly obtained from German or Austrian firms. To this end the British Chamber of Commerce in Mexico City began last month to issue an eight-page Bulletin, shortly to be enlarged and published weekly, and also to be supplemented by a 30-page monthly magazine. The first number states that the Chamber is forming a permanent exhibition in Mexico City of British products, and requests British firms to send samples, or, in the case of machinery, catalogues and photographs, and to register with the Chamber the names and addresses of their representatives in Mexico. It mentions also that the value of the exports to Mexico from the United Kingdom in the first three months of the current year amounted to £1,753,288, as compared with £681,155 in the corresponding period of 1920—an increase of nearly 157 per cent., and almost three-fourths of their value for the whole year preceding the fall of President Diaz. Even after allowing for the rise of prices since 1910, these figures indicate the growing confidence in the stability of the new order felt by the commercial world.

Bulgaria's Difficulties.—French financial interests in Bulgaria are considerable, and are preponderant in the External Debt, so that French opinion is naturally alarmed at the two problems set by Allied action to the Bulgarian Government. The Treaty of Neuilly requires Bulgaria to disband her conscript army, but permits her to raise 20,000 men by voluntary enlistment for a twelve years term of service—this period being fixed in order that the war strength may not be raised considerably beyond the limit by rapidly training successive classes of recruits. In addition, she is allowed to maintain a force of 10,000 gendarmes and 3,000 frontier guards. From the first her Government has predicted that the recruits would not be forthcoming, the mass of the population being, like all peasants, determined to stay on the land. But the Allies have insisted, and the disbanding is to be completed by October 1st. Meanwhile, the recruits for the new army number about 300, the non-commissioned officers who have re-engaged about 1,300. Now, there are possibilities of internal disorder—not so much from Bolsheviks or the native Communists or intrigues of pro-German ex-Ministers, as from the unemployed Bulgar refugees who have flocked in from Thrace and Macedonia, and are said to be taking to brigandage. Again, though the country is on good terms with Roumania, and is even drawing closer to its late enemies in Jugo-Slavia, the movement is motivated by their common jealousy of the Greek Kingdom, which, having obtained Thrace, whose population is largely Slav, thereby depriving Bulgaria of a coastal seaboard, is alleged to be hampering the trade of both countries through its natural outlet at Salonika. Further, it is stated that the

Greek delegate on the Frontier Commission has demanded the inclusion in Greek territory of certain points in the Rhodope district, which might be of strategic importance for Bulgaria. "Frontier incidents" are always possible; if they occur Bulgaria cannot deal with them, and so they may be turned to the profit of Greece. Besides this, there is a financial problem. The Allies have lately accorded Bulgaria a delay of a year in beginning to pay reparations, on condition that the Sobranje repeals the Budget recently passed and substitutes another to be approved by the Inter-Allied Commission at Sofia. This body is stated to disapprove of the tax recently imposed on war profits, and to demand heavier taxation on land. But a peasant electorate will not accept this or tolerate a Ministry that proposes it. A settlement of the arrears of interest on the Foreign Debt has recently been effected with the French bondholders and accepted by the English, except as regards the loan of 1910, on which negotiations are still in progress. But unless the problems in question are solved satisfactorily the future service of the Debt may be endangered.

Rand Cross-Currents.—Our mining correspondent writes: It really seems as though the gold industry of the Witwatersrand is fated never to sail in smooth waters for any appreciable length of time. A week ago the barometer appeared to be at set fair; within the past few days an intimation has appeared that, owing to the restriction of demand, the explosives manufacturing companies will be compelled to raise their charge for dynamite. The restriction of demand, it may be noted, arises partly from the suspension of operations by several of the low-grade main reef propositions, but mainly through the severe curtailment of work at the diamond mines; and the advance in the price of the explosive comes about automatically under the somewhat unusual terms upon which the commodity in question is supplied, namely, co-operative contracts at cost, plus a fixed charge on the capital employed. The difference is stated at a few shillings per case: if 4s be assumed, the amount involved would represent about £100,000, the Rand consuming somewhat over half a million cases annually. This additional expenditure may be regarded as swallowing up some two-fifths of the sum to be saved by the recent reduction in the wages of the white miners, or, alternatively, of neutralising in part the economies in other stores. Such is the extent of its importance. On the other hand, rumours have been current as to a new treatment process calculated to effect a great saving in both capital cost and working expenses. These statements appear to be founded on the departure which has just been made at the Springs Mines, whose reduction capacity is being extended 25 per cent. by the installation of four tube mills, with no addition to the stamp battery—to which they are usually supplementary. During the past ten years or so the work of the stamps on the Rand has been increased enormously, as much as 15 tons per day being now dealt with, against an average of about 7½ tons in 1910, and less than 5 tons in 1903. The expansion arises from two causes—growth in the weight and efficiency of the stamps, and a less complete reduction of the ore, the remainder of the task being performed by the improved subsidiary processes. It is obvious that if the preliminary crushing of the ore can be adequately performed without the service of the stamp battery, a large capital cost will be avoided, and while a company would scarcely find it worth while to scrap an existing installation, the new method might be adopted for extensions, or in the case of new works. Other favourable points consist in the rapidity of the modified process, and in the lessened liability to theft; the whole of the gold recovery being effected by means of the cyanide solution, there is no amalgam of quicksilver and gold to be stolen by a dishonest operator. Simplicity and speed naturally make for economy. As a matter of fact, the "new" process is largely an adaptation of the "direct-cyanide" method devised in connection with the Western Rand about a quarter of a century ago. The furore then aroused was not justified by results; but conditions are now different in several respects. Experiments on the part of the Minerals Separation Company are also in progress. As

the special feature of the company's process consists in its applicability to complex ores, there seems no great field for its employment on the free-milling Rand banket.

British-Hungarian Debts Settlement.—The Board of Trade announces that under the Treaty of Trianon the Mixed Arbitral Tribunal between the British Empire and Hungary has been constituted, and is about to commence work in London. The president is Mr B. C. J. Loder, LL.D., judge of the Supreme Court of the Netherlands, the British member is Mr Heber Hart, K.C., LL.D., and the Hungarian member Mons. Bela de Zoltan, formerly Minister of Justice in Hungary. An important part of the work of the Tribunal will be to decide upon claims in respect of debts under the Treaty where a difference arises between British and Hungarian nationals or between the British and Hungarian Clearing Offices. By the Treaty the High Contracting Powers have agreed that their courts and authorities shall render to the Tribunal direct all the assistance in their power, particularly as regards transmitting notices and collecting evidence, and they have also agreed to regard the decisions of the Tribunal as final and conclusive, and to render them binding upon their nationals. The British Government has provided headquarters for the Tribunal in Winchester House, 21 St James's square, S.W.1. Mr Claud Mullins, barrister-at-law, is the British secretary.

Obersea Correspondence.

UNITED STATES.—STEEL WAGES REDUCED—PIG-IRON PRODUCTION—TRADE AND INDUSTRY.

(FROM OUR CORRESPONDENT.)

NEW YORK, August 20.

THE United States Steel Corporation's announcement this week of another cut in wages had long been expected, in fact ever since the Corporation reduced its prices of steel products some time ago. The reduction, which will become effective on August 29th, is the third made since the decline in steel prices began, and will amount to 7 cents an hour for unskilled labour, lowering the wage to 30 cents an hour, or to the scale which prevailed on May 1, 1917. The low selling prices of steel as compared with costs of production, Judge Gary, chairman of the Board of Directors, explained, made it necessary to lower wages; other wages and salaries are to be equitably adjusted to the new basis. At the reduced rate, unskilled labourers will receive \$3 per day for a ten-hour day, which is 50 per cent. above the wage paid at the beginning of 1915, but approximately 40 per cent. below that in effect February 1, 1920, when the pay was \$5.06 for a ten-hour day. The latter was the highest point reached, and represented an advance of 153 per cent. over the \$2 per day wage that was in force in 1915. On May 16th of this year a cut of 20 per cent. was made, which brought the daily wage down to \$4.05; that was followed on July 16th by the elimination of time and a half for overtime work over eight hours, which reduced the daily wage of unskilled labourers to \$3.70. The cut announced this week amounts to a reduction of 18.9 per cent. About the only surprising feature of the corporation's action is that it has been delayed so long, for various independent proof that a have been lowering wages, and some are now in the rates, it is understood, that are lower than those of Van the Steel Corporation will put into effect cent. of the out- of this month. Just what saving to be effected, and several con- result from the wage cuts cannot be ascertained, since existing firms have been with any degree of accuracy, since under Dutch control— upon the rate of operations, at Herford, have increased rendered more difficult by the marks and S. and G. Müller authorities, however, calculate. This latter firm paid a similar to those of 1920, 10 per cent., plus a bonus of 10 per a proportionate readjustment. The cut at the beginning of this year was In 1920 the Corporation paid 10 per cent. per month, and the amount of raw approximately in the German Margarine Association 10,000 tons per annum, although it is

per ton of finished steel averaged \$40.80 in 1920, \$39.95 in 1919, \$32.64 in 1918, \$23.24 in 1917, and \$16.74 in the year before the war, 1913. According to a reliable authority, the wage cuts announced this year, including the current reduction, together with the increased efficiency of the employees, will bring the average labour cost per ton down to about \$25, or close to the 1917 average. Whether or not the further wage reduction, just announced, foreshadows still lower prices for steel is problematical, because many other factors must be taken into account, such as the possibility of lower freight rates, and the reduction of overhead expenses through increased operations. Unless freight rates are reduced, and unless competition becomes keener, no drastic cuts in steel prices are expected in the near future. Wage reductions alone, as indicated, cannot be taken as presaging such a development. The Steel Corporation's policy is to lower prices before reducing wages; therefore the present wage cut is regarded as the result of the recent reductions in prices of finished steel, rather than as a forerunner of any immediate lowering of the latter. Furthermore, it is noteworthy that pig-iron this week has advanced, some former speculative sales at \$18.50 having been covered at \$20 a ton.

In this connection it is interesting to note that recent returns of pig-iron production in this country seem to indicate that the 1921 output will be extremely small. For the first half of the year, production, according to statistics of the American Iron and Steel Association, totalled 9,530,981 tons, as against 18,166,413 tons in the second half of 1920 and 18,435,602 tons in the first six months of last year. The figures show a reduction of about 48 per cent. from the first half of 1920, a percentage of decrease not witnessed in any corresponding period since the decline in the first half of 1908 from the first six months of 1907. The actual production this year for the first six months is the smallest recorded in any half-year since the second half of 1908, and with the exceptions of the first and second halves of that year is the smallest since the last half of 1905. During the last six months of 1921 pig-iron production will have to reach 27,395,006 tons in order to bring the year's total up to that of last year; such an output has never been recorded in any six months. The nearest approach to it was 29,826,914 tons in the second half of 1918.

Trade and industry still show irregular conditions and tendencies. Business, upon the whole, is somewhat more active than at the beginning of the current month; but the improvement has not been general. In a few lines, such as silk piece goods, shoes, canned goods, iron and steel, and raw wool, the volume of sales has lately increased to a considerable extent, although it has not reached really large proportions. Buyers, as a rule, have continued to operate in a very conservative fashion, taking merchandise or commodities only in quantities sufficient to meet present or nearby needs. Notable exceptions are found in a few textile and wearing apparel lines where substantial forward buying has developed. Men's wear woollen and worsted fabrics for Fall and for next spring have been well patronised, but trade in dress goods for the approaching Fall season is extremely dull, so much so that manufacturers have been asked to withhold deliveries until distributors can see an outlet for the goods they have ordered. Broadcloth manufacturers are confining their attention of official examinations and sealing in Patne then Linen Board evoked greatly increased prosperity to the Irish linen trade.

Mexico and the United States.—The decision of the Mexican Supreme Court in the case of the Texas Oil Company should go far towards obtaining the recognition by the United States of President Obregon's Government. The Carranzist Constitution of 1917 confines concessions of mineral and oil lands to natives of Mexico and to such foreigners as will agree to refrain from interfering in the internal affairs of Mexico. It also provides that no concession shall be made to a foreigner who has not yet been re- operating at about 50 with manufacturers. prices lately have consumers are ng of shoes ale, while an more crops larger on

way. Reports to the National Automobile Chamber of Commerce from plants producing 75 per cent. of the total output indicate that shipments of automobiles in July were 61 per cent. of July last year, and 7 per cent. less than in June, 1921.

FRANCE. — SUPPLEMENTARY BUDGET — THE FINANCE COMMISSION AND THE FINANCIAL CONFERENCE—BANK OF FRANCE—NEW ISSUES—BOURSE.

(FROM OUR CORRESPONDENT.)

PARIS, August 30.

THE Minister of Finance has now issued the text of his supplementary Budget for 1922, known as the Budget for Recoverable Expenditure—recoverable, that is, through the medium of payments that will be made to this country by Germany during the more or less long period that will be covered by the reparation payments. The expenditure provided for in this Budget is solely connected with matters that come under the control of the Allied Reparations Commission, and may be described in general terms as being expenditure necessitated for the restoration of the devastated area and for pension charges. No provision, as I have more than once explained, is made for obtaining this money by means of taxation.

It is estimated that the amount to be expended on restoration work and pensions during 1922 will be 7,158,620,742 francs, made up as follows:—

	Francs.
Ministry for the Liberated Regions	1,146,508,977
Interest on Credit National Loans	556,703,295
Interest on other loans in respect of compensation for war losses	300,000,000
Cost of Ministry of Pensions	405,988,970
Pension allowances	3,656,887,660
Ministry of Finance:—	
Cost of payment of war losses	4,341,340
Other expenses	1,322,000
Expenditure by other Government departments	1,086,868,500

The preamble to the Budget calls especial attention to the difficulties connected with the drawing up of such a Budget owing to the fact that it has necessarily to be based on the amount which it is hoped will be recovered from Germany. According to Article 4 of the scheme of payments that has been accepted by Germany, the latter will pay over to the Reparations Commission every year an annuity consisting of a fixed sum of 2,000,000,000 marks gold, plus a variable sum equivalent to 26 per cent. of the value of the German exports. Under the Spa agreement France will receive 52 per cent. of the total amount that will thus be paid by Germany. In these circumstances it is impossible to arrive at anything more than an approximate idea of the amount Germany will pay during 1922. The total amount of the annuities will be subordinated, in fact, to the total figure of the German exports during the current year. So far as it is possible to arrive at any conclusion in these difficult circumstances, the Finance Minister estimates that Germany's contribution to the Allies during 1922 will amount to something in the neighbourhood of 4,500,000,000 marks gold, of which France should receive 52 per cent., or 2,340,000,000 marks gold. In any case, M. Doumer asserts, the Budget of Recoverable Expenditure for 1922 will not provide for this expenditure to be met by any loan, but is drawn up on the basis that the money required will be obtained out of the payments that will be received from Germany, plus such sums as may be obtained by further issues of Credit National bonds or from special loans that may be issued by certain categories of sufferers from war damages. (Loans, it will be remembered, have already been issued by certain cities in the devastated area, such as Rheims, Soissons, and Verdun, while the mining, the beet sugar, and other industries have also successfully appealed to the public for money for reconstitution purposes.) The only loan to be issued by the Treasury, he repeats, will be for the purpose of consolidating the floating debt.

The Finance Commission of the Chamber, notwithstanding that the House is on its holidays, has resumed its examination of M. Doumer's Budget proposals, and is sitting daily at the Palais Bourbon for that purpose. These sittings have an exceptional importance at present in

THE MERCANTILE BANK OF INDIA, LTD.

Head Office: 15 Gracechurch St., London, E.C.3
Capital Authorised £3,000,000
Paid Up Capital 1,050,000
Reserve Fund and Undivided Profits 1,227,638

Branches:

INDIA, BURMAH, CEYLON, STRAITS SETTLEMENTS, CHINA, and PORT LOUIS, MAURITIUS.
The Bank buys and sells Bills of Exchange, Issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East, on terms to be had on application.
Fixed Deposit Rates will be quoted upon application.
On Current Accounts interest is allowed at 2 per cent. per annum on daily balances.

view of the very close relation between the Budget proposals and the decisions arrived at by the Inter-Allied Financial Conference that recently met in Paris, simultaneously with the Supreme Council. These decisions, which were signed by the French Finance Minister under all reserve, have yet to be ratified by the Government, and it was in view of this fact that the Finance Commission yesterday decided to call before it both M. Briand and M. Doumer, in order that the whole effect of the Paris decisions will have on the French national finances may be thoroughly threshed out before the decisions of August 13th come before the Ministerial Council (possibly during the present week) for ratification or rejection.

On one of those decisions the Finance Commission has found no reason for anything but entire satisfaction, and that is connected with the price at which the coal delivered to France by Germany is to be debited to this country. The British view, it is asserted, was that the price France should pay should correspond to the price of British coal sold for export to France. The assembled Finance Ministers, however, decided that this coal should be debited to France at the price at which German coal is sold in Germany. The effect of this decision, according to the latest estimates of the Finance Commission, is a saving to the French Treasury to date of about 400,000,000 francs.

There are three important points, however, on which the Finance Commission is by no means satisfied with the decisions of the Inter-Allied Conference. The first is based on the fear that it may ultimately be found that France's 52 per cent. share in the 132 milliards which Germany will have to pay, will be reduced owing to claims put forward by Italy and certain of the smaller Allies with regard to claims in respect of their expenditure for the purpose of carrying on war against Germany's allies, Austria and Turkey. A second question that may vitally affect France arises out of the decision that was taken for the 1,000 million marks gold, due in cash from Germany on August 21st, to be divided between Belgium and Great Britain, the former receiving 550,000,000 marks gold, and the balance going to the latter in repayment of the expenditure incurred by her in respect of her army of occupation on the Rhine. The Finance Commission is anxious to know if Belgium will be prepared, out of the 550,000,000 marks gold she is to receive, to pay off the debt she owes to France, or if she proposes to liquidate this by means of long-term bonds.

The fourth and most serious question raised by the Finance Commission, however, is in regard to the decision that, instead of receiving any portion of Germany's first milliard, France must regard herself as having been largely repaid the cost of maintaining her troops on the Rhine by reason of having received the Sarre coal mines, and, further, that not only will she receive any sum in cash, but she will be required to repay to the rest of the Allies the difference between the value of those mines and the amount her army of occupation has cost her. The Commission argue that there is nothing in the Treaty of Versailles that justifies the view that the attribution of the Sarre coal mines to France must be regarded as a factor in connection with the repayment to her of the cost of maintaining her army of occupation. Much, of course, depends on whether M. Briand will be able to persuade the Finance Commission that it is necessary for France,

in the interest of the maintenance of the Entente, to accept the decisions of the Inter-Allied Conference, but as matters stand at the present moment it is regarded as quite possible much of the work of that conference may have to be done over again.

The balance-sheet of the Bank of France continues to show a very satisfactory improvement, both in respect of reduced note circulation and of a progressive diminution in the amount owing by the State to the Bank. The total note issue, which on August 26th last year stood at 37,904,500,000f (compared with 35,090,400,000f on August 28, 1919), and which reached its maximum of 39,649,000,000f on November 4th last, is now only 36,782,000,000f, or approximately where it stood at the end of October last. The reduction in the notes in circulation amounts to 2,864,000,000f, as compared with November 4th last. The amount owing by the State to the Bank, which reached 26,000,000,000f a year ago and reached 26,700,000,000f on May 6th last, has been brought down to 25,100,000,000f, a reduction in three and a-half months of 1,600,000,000f. On the other hand, the issue of short-term bonds is progressing remarkably. The latest available figures show that during June two-year 6 per cent. Treasury bonds and National Defence bonds and obligations were absorbed by the public to a total amount of 6,023,639,100f.

New issues in this country during the second three months of 1921 were as follows:—

	Francs.
Treasury issues	11,005,898,300
Railways (French)	416,589,332
Municipal loans	25,000,000
Various French companies	2,499,764,000
French companies operating abroad	31,850,000
Foreign companies	42,160,000
	14,021,261,632

The average rate of interest offered during the period was 6.71 per cent., as compared with 6.67 per cent. during the previous three-monthly period.

The Bourse this last week has been notably in better shape. Buying has been more active and a number of sales have been cancelled. For the last two months there have been no serious issues, and in consequence French thrift has been looking for outlets. Three per Cent. Rentes have been rather better at 56.45, as against 56.30, and foreign Government securities have been considerably more in demand. Banking shares advanced during the week; Banque de Paris, for instance, starting at 1,350, reached 1,375, to finish at 1,363; l'Union Parisienne, opening at 840, touched 880, to finish at 868, and others similarly. Transports are in advance, Metro improving from 390 to 405, and Omnibus from 627 to 637. Shipping has shared in the movement, Chargeurs Réunis fluctuating between 635 and 610, after having been at 595, Chargeurs Français varying between 1,000 and 975, as against 900, and Messageries Maritimes moving up from 233 to 238. Electrical undertakings are more in demand, Thomson advancing from 850 to between 880 and 870, and others similarly. Metallurgical undertakings are also well supported. Acieries de France has risen from 545 to 575, Micheville from 960 to 1,000, and Peugeot from 400 to 470. It is hoped that the reduced price of coke may improve still further the metallurgical industry. Petrol has been hesitating, and various rumours have been set about, to which, however, no great attention has been paid. All the same, Royal Dutch is down from 18,800 to 18,400, Shell is stationary at 299, but Mexican Eagles, after various fluctuations, gained a few points, to finish at 221.

The returns of the Bank of France for the last week, the previous week, and the corresponding week of 1913 are as follows:—

	Aug. 25, 1921.	Aug. 18, 1921.	Aug. 28, 1913.

GERMANY.—POLITICS — FINANCES — REICHSBANK POLICY — EXCHANGE AND BOURSE — EMPLOYMENT — SHIPBUILDING.

(FROM OUR CORRESPONDENT.)

BERLIN, August 29.

The conclusion of peace with the United States has not had any visible effect upon business or exchange conditions, and little upon the Bourse. The first practical question opened is the fate of the sequestered German property, which is stated by an American authority to reach the value of \$314,179,000, and is probably largely exceeded by American claims against Germany. The restoration of this property or any part of it would need a special American law. German home politics have been seriously disturbed by the Erzberger murder, by conflicts at Potsdam between Royalists and Republicans, and by a Socialist agitation in Bavaria against the exceptional measures in force for maintenance of order, as against the extreme Left. The ferment is aggravated by a new general wages movement, caused by the rise in cost of living. The Federal Government, under pressure from the trades unions, has promised to use its influence in favour of restoration of the Constitutional guarantees in Bavaria; but it has itself been obliged, as against the extreme Right, to limit drastically the right of free speech and assembly all over the Republic. The threats of counter-revolution from either side ought not to be taken too seriously; the new disturbances are probably only one more transitory reaction against a general movement towards greater political stability. The Government has conceded increases of official salaries and allowances equivalent to between 13½ and 20 per cent., and it has been obliged to decide for further increases of railway rates and fares (probably 25 per cent.) and postage rates. The new price rise and exchange fall have again had the effect of upsetting State financial estimates.

Revenue in the first quarter (April-June inclusive) of the financial year 1921 developed satisfactorily. Receipts totalled 17,263,151,609 marks, which is 13,574,785,785 marks more than in the same quarter of last year. The estimated receipts for all 1921 are 42,425,500,000 marks, and of this 39.88 per cent. has already been received. The largest yields were:—

	April-June, 1921.	Excess Over April-June, 1920.
Emergency levy	4,317,141,434	4,135,498,465
Sales tax, 1919	2,776,433,214	2,754,882,585
Increment of wealth	1,448,024,982	1,425,667,411
Income-tax	3,305,860,813	2,360,747,142
Coal tax	917,227,414	25,662,276
Tobacco tax	715,755,264	323,828,797

The large increases are mainly due to the fact that a year ago the new property taxes had hardly begun to come in. Of the above income-tax receipts 1,088,751,700 marks belong to the financial year 1920. The receipts from posts and telegraphs, not included in the above total, were 1,385,271,238, or 689,554,234 marks more than in the first three months of last financial year, and from railways, also not included above, 5,696,422,000 marks, or 2,008,907,000 marks more. The floating debt on July 31st totalled 219,205,707,540 marks, of which 190,674,900,300 marks consisted of discounted Treasury bills, these including 9,600,000,000 marks Prussian Treasury bills taken over in connection with the transfer of Prussia's railways to the Republic.

The Government has accepted a recommendation of the Reichswirtschaftsrat Reparations Committee that the full sum lost by retention of the sanctions levy in England should be guaranteed to the exporter. This means that where the goods are invoiced in foreign currency the exporter will be repaid sufficient paper marks to buy the lost amount of foreign currency at the exchange rate of the day of repayment, not at the rate on the day of issue of the reparations bond. In the case of exports invoiced in marks, the British Government is to be requested to state the mark price on which its sterling deduction is calculated.

The Reichsbank report for August 23rd shows a decline in Treasury bill discounts by 3,947,784,000 marks to 75,031,147,000 marks, an increase of private discounts by 27,760,000 marks to 1,031,609,000 marks, a decrease of State deposits by 1,582,206,000 marks to 2,142,998,000 marks, and of private deposits by 1,662,617,000 marks to 7,496,478,000 marks. Note circulation fell by 205,565,000 marks to 77,190,575,000 marks, and Kassenscheine by 262,100,000 marks to 7,857,100,000 marks. The total of outstanding Darlehenskasse Loans has now fallen to 11,536,400,000 marks, which is around a third of the maximum reached. A Socialisation Commission inquiry into methods of Reparations payments has raised several questions of Reichsbank policy. Regarding means of meeting the continuing deficit in the foreign payment balance, the Commission held that the Reichsbank's gold reserve no longer plays any important rôle as cover for note issue, that the reserve should not in principle be considered inalienable, and may occasionally be used for checking panic falls of the mark's foreign exchange. Plans to export art treasures were rejected as undesirable, and plans to expropriate and realise jewellery as impracticable. On the question whether the Reichsbank discount rate, which has remained at 5 per cent. since 1914, should not be raised, the Commission's experts agreed that a discount increase would not attract foreign money, as the slight gain would count for nothing compared with the prospects and risks of exchange fluctuations. Only with a relatively stable exchange would the discount rate play any international rôle. The Reichsbank's gold on August 15th, at the pre-war valuation at which it is booked in the weekly statements, covered only 1.4 per cent. of the note issue; at the rate at which the Bank pays for gold, in paper marks, it covered, however, 23.8 per cent.

Stocks again rose rapidly last week, although the foreign exchanges slightly fell. The *Frankfurter Zeitung's* Bourse index for the 26th shows 19,475 for the sum of quotations of 25 dividend-bearing and 10 fixed interest securities, against 18,782 on the 19th and 18,273 on the 12th. Until the end of September the Berlin Bourse will be closed on Tuesdays, Thursdays, and Saturdays, but official foreign exchange rates will continue to be published on the first two of these days. Stocks of concerns interested in sequestered property in America were in demand, as were also various Rhenish-Wesphalian stocks, these in connection with fusion and capitalisation reports, which led to rises in the week of 100 and more points. The chief gainers were Phoenix and Rhenish Steel, which are about to fuse with the Gutehoffnungshütte, an iron concern interested together with the Hamburg-America Line in the Deutsche Werft, Germany's newest and biggest shipyard. Mannesmann Tubes, the smelting concern, Thale, which rose over 200 points, and the Hoersch iron and steel stock, which rose about 150 points, were also in demand.

Business conditions continue to improve, prices to rise, and unemployment to decline. The number of publicly supported unemployed on August 1st was 269,424, as against 315,458 on July 1st. As compared with March, the worst month of this year, the unemployed have fallen by 143,000. The close way, in which, as often reported from here, manufacturing conditions follow the foreign exchanges, is shown in a diagram newly published by the *Frankfurter Zeitung*, in which the curve of unemployment runs almost exactly parallel to, but always naturally a little behind, the mark's exchange value; in January-February, 1920, the mark's exchange and the unemployment figure fell rapidly, rose together rapidly up to the early summer, and have since been on the whole downward, with a slight brief rise in November-February. The Leipzig Technical Fair has opened very successfully, shows a great abundance of new inventions, and illustrates, particularly in the exhibits of Krupp's, the speed and skill with which armaments producers have adapted their plant and methods to peace exigencies. Prices are still rising, and the home public and foreigners are buying heavily. The price of American cotton on August 27th was 31 marks a kilo, against 18½ marks at the beginning of April, of cotton yarn 54-65 marks per kilo, against 39-52 marks; cotton cloth, 7.80-10 marks per metre, against 6.5-8 marks; silk (organdie), 1,200 marks per kilo, against 770 marks; sole leather, 65-85 marks per kilo, against 50-65 marks; ox hides, 10.50-16.85 marks per lb on August 25th, against 8.5-16.40 marks on April 20th; boots (production cost), 130-200 marks a pair on August 27th, against 125-200 marks on July 21st. Eggs have risen from 1,250-1,350 marks per thousand, wholesale, in April, to 1,600-1,800 marks; rice from 4-6 marks a kilo to 6.75-8.75 marks. Other imported foods have also risen.

An unofficial compilation as to German shipbuilding in January-July, inclusive, shows (counting only vessels of over 1,000 tons), that nearly 400,000 tons have been added to the merchant and passenger fleet. The largest vessels launched, of which there have been seven, are of 12,000 tons; in addition there have been launched 20 vessels of over 5,000 tons; and in all about 55 vessels of over 1,000 tons. There have been bought or bought back from abroad 31 vessels of over 1,000 tons. The present condition of shipbuilding is bad, owing to the exhaustion of the State compensation paid for 1921 to the ship-owning companies.

CANADA.—CROP FORECASTS—INDUSTRIAL CONDITIONS.

(FROM OUR CORRESPONDENT.)

OTTAWA, August 17.

The Dominion Bureau of Statistics in its preliminary crop forecast places the yield of wheat for all Canada at 288,000,000 bushels, these figures being based on the condition of the crop as at July 31st. As this is 25,000,000 bushels in excess of the 1920 yield, it is very satisfactory. While the estimate is based on the best information obtainable, the co-operation of the provinces in its preparation imparting to it a more than ordinarily reliable character, still there is a disposition to think that possibly the figures may be rather high. Owing to rains, harvesting operations in Saskatchewan, which will produce more than 50 per cent. of the wheat for all Canada, have been delayed, and the general effect will probably be to reduce the yield, for black rust is working in a number of districts. On the whole, however, this province seems to have been less adversely affected than any of the others.

For all Canada the yield of grains other than wheat is forecasted as follows:—Oats, 457,544,000 bushels, as against last year's record crop of 530,000,000 bushels; barley, 58,027,000 bushels, as against 63,310,000 bushels; rye, 11,707,000 bushels, as compared with 11,306,000 bushels; flaxseed, 6,930,000, as compared with 7,997,000 bushels; potatoes, 99,937,000, as against last year's record-breaking crop of 133,831,000 bushels. The total yield of fall wheat is definitely placed at 15,473,000 bushels, or 4,000,000 bushels below that of 1920; the average yield per acre being 21½ bushels, while last year

it was 24. The total yield of hay and clover for all Canada is put at 10,374,000 tons, as against 13,338,000 tons in 1920, and 16,348,000 tons, the record-breaking crop, in 1919. Owing to the prolonged drought in Eastern Canada the yield of hay and clover per acre is the lowest on record, being only one ton, as compared with an average of 1.30 tons last year, and 1.50 tons for the last ten years. A little over 280,000,000 bushels of wheat should easily be worth \$400,000,000 to the country, and there is no doubt about securing a ready market for it this year. Coarser grains will also yield another very large sum. The effect of this on the general commercial situation should be decidedly beneficial. From a business standpoint, the prairie provinces are the hope of the country this year.

While the drought in Europe is creating a strong market for all the wheat that Canada has for export, and has delivered the farmers this year from the ill-effects that seemed likely to follow the closing of the American market to this cereal, the livestock industry has felt the full force of the dreaded blow. Alberta, which has been hit especially hard, is doing her utmost to persuade the Dominion Government to assist in working out a solution of the problem, and has succeeded in enlisting the hearty support of the other prairie provinces. But while public opinion is eager to do all in its power to relieve the situation, there seems to be little that either it or the Dominion Government can do. The best expert opinion in the West is that the real solution lies in gaining access to the United States market, and that even the removal of the British embargo would only afford temporary relief. It is too much to expect that a Government supported mainly by the forces that defeated Reciprocity in 1911 would yield to the request that it approach Washington with a view to securing a partial reciprocal trade arrangement. So it looks as though the livestock interests will have to work out their own salvation. During the last month they have received a measure of relief in the reduction of freight rates on stock, but it is little use shipping if a market is not available.

The Western crop will have the usual effect of improving business during the fall, but there are no indications of a genuine revival in commercial activities. On all sides there are signs that the forces working for the adjustment of conditions are far from having completed their work. The trade returns for July contain strong evidence of this. As compared with the same month last year there was a decrease of 50 per cent. in the value of the total trade, the figures being \$234,180,201 and \$118,846,033 respectively. Imports and exports have been affected to almost the same extent, the former having fallen from \$127,268,811 in July, 1920, to \$62,405,890, while the total exports are given as \$107,900,000 and \$56,400,000 respectively. During the first four months of the current fiscal year the value of the total trade was \$474,804,739, as compared with \$825,267,761 for the same period last year. Imports declined from \$473,572,589 to \$253,862,462, and total exports from \$351,700,000 to \$221,000,000. The unfortunate feature of the situation is that the trade figures will continue to shrink during the remainder of the year, for outside of wheat there is little hope of finding in other quarters new markets for what has been lost in the United States, or will be lost when the new Fordney Bill becomes law.

The truth is that the pains of the readjustment process are only now being felt in this country; that they will be quite severe is undoubted, though they will not be of anything like a fatal character. Canada is sound at heart, but post-war conditions are practically certain to result in a partial reshaping of her fiscal policy. During the last 15 years the manufacturing industries have been expanded out of all proportion to the needs of the country. To some extent this was due to other causes than the definite shaping of policy, the war, with its demands for munitions, having stimulated some industries far beyond all dreams. Many of these cannot now be readily converted into plants producing saleable peace-time products. During the war, and for some months after, a considerable export trade in certain manufactured products was built up, but the rate of exchange, to say nothing of the competition of certain low-cost production countries, has checked this in all lines except those of pulp and paper.

In the meantime, the home market grows but slowly, and through the marked fall in the prices of native products the demands of the home market are much below normal. To make matters worse, the railway problem, which is much more acute in Canada than in most other countries, shows no signs of real improvement. During April the operating deficits on the Government lines proper were approximately \$1,000,000 greater than they were during the same month last year. On the other hand, the net operating revenue of the C.P.R. was nearly \$400,000 greater.

Growing realisation that the main dependence of the country for some years to come must be on agriculture accounts very largely for the support that the Agrarian or National Progressive party is receiving, not only in the rural districts, but in a number of the towns and cities too. In the city of Medicine Hat, Alberta, the Agrarian candidate defeated his opponent, who is a resident with a long record of civic service. It is the insistent demand for an outlet for the main natural products of the country that is forcing Reciprocity again to the front. The pressure of circumstances is also drastically reshaping the system of Federal taxation. Before 1914 90 per cent. of the revenue was obtained through the tariff; this year not more than 25 per cent. will be. So the total of these influences is likely to produce drastic changes in policy.

AUSTRALIA.—COMMONWEALTH LOAN—TARIFF—LIFE ASSURANCE.

(FROM OUR CORRESPONDENT.)

MELBOURNE, July 29.

THE Commonwealth Government has issued the prospectus of its 6 per cent. loan of £10,000,000 for war and repatriation purposes, applications closing on September 5th. The price of issue is £96, the terms giving no accrued interest, and the loan being repayable on December 15, 1930, the yield to the investor, including redemption, is about £6 12s per cent. The price of issue is above the current market rate for the 6 per cent. stock, 1930, previously issued, the Melbourne quotations for which on July 28th were 93½-93¾, but the Government looks for support on the ground of the objects of the loan. There is, however, a critical feeling as to the scale on which the Government is still spending money, and those who subscribed on previous occasions with a view to reselling, even at a loss, for the purpose of supporting war efforts, are now less willing to continue doing so. On the other hand, the supply of money available for investment has recently been increasing, and the stock exchanges in Sydney and Melbourne have been showing buoyancy during the last few weeks as regards first-class securities. Since internal war borrowings by the Commonwealth Government began in 1915, the total amount raised (exclusive of the present issue) has been £239,852,770, of which £232,759,880 was outstanding on March 31, 1921. The gross public debt of the Commonwealth Government for all purposes on June 30, 1921, according to a statement in Parliament by the Treasurer, Sir Joseph Cook, was £401,595,000, of which £70,000,000 is represented by interest-bearing indebtedness of the States to the Commonwealth for soldier land settlement, war service homes, and advances for public works, &c. These figures do not include the direct debts of the six States.

The Customs Tariff, which was introduced last year, is now practically out of hand so far as Parliament is concerned, and will henceforth rest on a strictly legal basis, after having been based practically upon resolutions of Parliament during the various modifications which have been made from 1914 onwards. During the Parliamentary discussions of the last few weeks the tariff has undergone criticism from some of the country members to the effect that it is burdensome upon rural production, but the Government has had the support of the Labour Opposition for its proposals. The Labour Party, which largely represents the working classes in the cities, does not object to the maintenance of high prices on manufactured goods if in the interests of those classes. On the other hand, increasing attention is being directed to the small amount of progress made by the country, as evidenced by the Census returns, which so far as they are yet published

show that nearly all the increase in population during the past ten years has been in the capital cities and provincial towns, and that little increase has taken place in the purely rural population.

The annual reports of the life assurance offices, with head offices in Australia and New Zealand, show a large increase in the new business transacted, a comparison for the last few years being as follows:—

	Ordinary. £	Industrial. £	Total. £
1916.....	16,681,194	5,010,561	21,691,755
1917.....	18,440,602	5,751,926	24,192,528
1918.....	23,844,289	6,674,077	30,518,366
1919.....	29,869,266	7,717,165	37,586,431
1920.....	35,466,756	8,800,000*	44,266,000*

* Approximate.

For some years the mortality experience of the offices was affected, first, by war claims, against which the policies issued before the war usually contained no condition, and, secondly, by post-war influenza claims. The war claims paid by the various offices aggregated nearly 4½ millions sterling, and the influenza claims over £800,000. During 1920, however, with the cessation of these adverse influences, the mortality experience was favourable, and between the reduction in claims and the increased income from premiums and interest the funds of the life offices have been growing at a faster rate, the excess of income over expenditure in the ordinary department alone being over £5,300,000 in 1920, against 3½ millions in 1919 and about 3 millions in 1918. The net interest return, after deducting taxation, has risen to about 5.07 per cent. for 1920. The funds of the ordinary and industrial departments at the end of 1920 amounted to about 87½ millions, and adding the figures appertaining to other classes of business in a few cases, together with capital of proprietary companies, investment reserve funds, and current liabilities, the total is represented by assets of about 98 millions, of which 57 millions consists of Government and municipal securities and loans on rates and about 22½ millions consists of mortgages. Government securities held by the life offices have increased considerably since 1914, owing to the support given to War Loans, but mortgages have declined during the same period by about 5½ millions.

ITALY.—REVIVAL IN THE STOCK EXCHANGE—NEW REGULATIONS ABOUT CONFISCATION OF WAR PROFITS—SUSPENSION OF THE COMPULSORY INSCRIPTION OF PRIVATE SECURITIES.

(FROM OUR CORRESPONDENT.)

TURIN, August 28.

AFTER mid-August holidays, the Stock Exchange reopened with a better tone in regard to industrial securities. It is too soon to say whether the movement will be a short-lived one, but the undertone is distinctly improved. Two facts stand out to explain the more roscate vision of the bourse. The first is the partial surrender of the Finance Minister in the face of the strong opposition encountered in financial and trade circles against the too severe interpretation of the law of September 24, 1920, which confiscated all war profits from August 1, 1914, to June 30, 1920. Several criticisms were formulated as to consequences of the law of confiscation, the first and most important of these being the fixation at June 30, 1920, of the end of the war period. At that date prices touched in Italy their highest mark. Suppose an industrial concern, at August 1, 1914, had a stock of, say, 1,000 tons English coal, valued at 40 lire per ton, or a total value of 40,000 lire; if at June 30, 1921, the same company had the same stock, at 700 lire per ton, was to suffer a valuation of 700,000 lire, with a war-profit of 660,000 lire, to be confiscated. The same thing happened to all stocks of raw materials, machinery, &c. If, after June 30, 1920, prices of assets went down, the taxpayers may be ruined, having to pay the confiscation tax on values very much higher than the present. A recent order of the Finance Minister prescribes that the valuation shall be made only after December 31, 1921, when the prices will have perhaps settled down. When made, valuation shall take account not only of the prices current at June 30, 1920, but of the possibility for the taxpayers of utilising the various assets. And so, machinery, of the value of

100,000 lire, at June 30, 1920, will be valued only at 30,000 lire, if its future utilisation is capable only of this minor capitalisation. Various other devices are prescribed, so that the confiscation of war profits may not result in the ruin of taxpayers.

The Stock Exchange heard even more gladly the announcement that the Government had resolved to suspend the by-law regulating the compulsory inscription to the name of the possessor of all private securities. This was one of the principal planks of the Giolitti Cabinet's platform. The fundamental reason for compulsory inscription or registration of securities, in a country like Italy, where nine-tenths of securities were to bearer, was that the bearer securities made it very easy for taxpayers to evade the succession taxes, capital tax, and income surtax. All these taxes have a progressive rate, increasing with the increase of the capital or income of the recipients, so that it is imperatively necessary to know the name and the total fortune or income of the taxpayer.

Protests were in vain. The law of September 24, 1920, made compulsory the inscription or registration of all State or private securities, excepting only Treasury bills (Buoni del Tesoro). The consequences were rapidly felt. The issue of State loans was made impossible, the war loan 5 per cent. tumbled down from 82-83 to 67 lire, and stands to-day only at 75 lire. The Treasury was obliged to have recourse to short-dated bills. At the close of the financial year 1920-1921, of a total external debt of 84,000 millions lire, only 50,000 are funded debt, 25,000 millions lire being Treasury bills at short dates, and 9,000 paper notes, issued by the banks for Government account. Last spring, when the Government sought to float a loan of 1,000 millions lire for the reconstruction of invaded provinces, banks advised the Treasury Minister that the public would not touch a loan liable to compulsory inscription. For this reason, the loan was launched under the nominal disguise of seven-year 5 per cent. Treasury bills. As "Treasury bills," they were exempted from inscription or registration, and the issue was therefore rapidly absorbed. One may add that the Treasury was wholly unprepared to the gigantic task of inscribing and transferring 90 billions lire of funded debt, apportioned among a million at least of individual possessors. For these two reasons, the by-law which should have regulated the inscription of State securities was never published. The section of the law of September 24th is thus suspended, and no one knows when and if it will be put into execution.

The other section, relating to private securities (stocks and shares of joint-stock companies, land bonds, loans of local authorities, &c.) seemed, at one moment, to be ready for institution. In the last days of the Giolitti Cabinet a by-law was published in the *Gazzetta Ufficiale* of July 2, 1921, which purported to give the rules under which all private securities were to be compulsorily inscribed before January 2, 1922, and all issues of bearer securities were forbidden. Feeling ran high in financial circles; in the Senate a sort of revolt took place. The impending economic crisis, which was developing somewhat late in Italy, made doubtful of the wisdom of the abolition of bearer securities in a country where no other kind of securities can easily find a market, even those men who, for fiscal reasons, were favourable to the inscription system. The bourses, which had been for many months very apathetic, went down. The new Minister of Industry, Signor Belotti, who, during Parliamentary debates, in July and August of last year, was among the few members who opposed the Bill, took the opportunity of suspending the by-law with the consent of the Cabinet. That is how things stand at present. The law of September 24, 1920, is not repealed, but the by-laws, which are necessary to its practical application, do not exist. The one relating to State securities, was never published; the other, relating to private securities, was first published, and afterwards suspended. The bourses, which had always been fiercely opposed to the inscription system, hailed the suspension as a token of the final repeal of the law. Perhaps the law will not be repealed, for we in Italy are apt to follow the dictum of our greatest poet, Dante Alighieri: *Le leggi son, ma chi pon sweno ad elle?* There are the laws; but they are not applied if they prove a nuisance.

**POLAND.—INFLATION — EXCHANGES — STRIKES —
OPENING OF THE WARSAW CORN EXCHANGE
—CUSTOMS UNION WITH DANZIG.**

(FROM OUR CORRESPONDENT.)

WARSAW, August 26.

The last return of the Polish National Bank for July shows a fresh record as regards the increase of paper money. During this month 12.5 milliards of new paper marks have been put in circulation, or nearly 4.4 milliards more than during June. The table below illustrates the progress of inflation since the beginning of this year:—

(Milliards Polish Marks.)

1921—	Notes in Circulation.	Increase in Comparison with Previous Month.
January 31.....	55.1	5.7
February 28.....	62.6	7.5
March 31.....	74.1	11.5
April 30.....	86.8	12.7
May 31.....	94.6	7.8
June 30.....	102.7	8.1
July 31.....	115.2	13.5

Neither the conclusion of peace with the Bolsheviks nor the policy of economy pursued by Mr Steczkowski was able to bring the expenditure of the Government within the limits of the revenues. The printing press works without interruption with an increasing speed.

The effects of such a state of affairs are disastrous. The economic life of the country is being disorganised by a permanent crisis, which is becoming every day more acute. This is reflected by the total collapse of the exchanges illustrated in the table appended:—

	English Pounds.	American Dollars.	French Francs.	German Marks.
End of April.....	3,300	815.0	60.50	12.90
" May.....	3,970-4,075	1,020.0	88.50-89.25	17.00
" June.....	6,390	1,690.0	136.0	23.00
" July.....	7,325	2,020.0	161.50	26.65
August 25th.....	9,500	2,500.0	200.0	30.00

During the last four months the quotation of the English pound has risen from 3,300 to 9,500, and the other foreign exchanges have moved in a similar direction. The decline of the Polish mark has entailed a rise of prices exceeding 200 per cent., so that the whole economic system has been thrown out of gear.

In nearly all branches of industry strikes have broken out. In Posnania and Pomerelia the railway employees have abandoned work, and only a limited number of trains are run by the military authorities. In Warsaw the tramway servants have gone on strike, and fears are expressed that this movement might be extended to other public undertakings. All these strikes have a purely economic character. They are caused by the abnormal rise of prices.

The situation has been aggravated by the economic unification of the different provinces. Hitherto the former Prussian Poland was divided by a frontier barrier from the rest of the country. In particular the export of food products from Posnania and Pomerelia to the other provinces was prohibited. Thanks to it prices in the former Prussian Poland were kept at a comparatively low level. While in Posen only 20 marks were paid for one kilogram of bread, in Warsaw the price for the same quantity was five times as high. The abolition of the barrier entailed a rise of prices in the former Prussian provinces. In the course of a few days they reached the Warsaw quotations. In different towns riots of a serious character have broken out, directed partly against the Warsaw authorities. The abolition of the food control and of the maximum prices for agricultural products has necessitated the reopening of the Warsaw Corn Exchange, which has been idle since the outbreak of the war. A new statute based on the organisation of similar exchanges in Berlin and Vienna has been approved by the authorities. The general assembly of the exchange is composed of 16 members, of which one quarter is elected by the producers. The first meeting of the exchange took place on August 20th. The negotiations between Poland and Danzig have been brought to an end. According to the agreement which

has been signed the Free State will form from January 1, 1922, a common Customs union with Poland. The import duties will be paid in German or Polish marks. The two States will have a separate Customs administration.

**NORWAY.—NOTE ISSUE—TRADE CONDITIONS—COST
OF LIVING—CROPS.**

(FROM OUR CORRESPONDENT.)

CHRISTIANIA, August 26.

As will be remembered by the readers of the *Economist*, the Bank of Norway, according to an Act passed last year, was authorised to make an extraordinary issue of notes up to a certain amount (the ordinary amount being 250 million kroner) in excess of its stock of gold. This extraordinary amount until July 25th was 80 million kroner. On that date, by an Order in Council, the amount was reduced by 30 millions to 50 million kroner.

The reduction of the note circulation last week was 2 million kroner, to 416.5 millions, being about 8 millions less than the average for last month. Business generally is still very dull, though some improvement may be perceptible in some quarters; the canning industry, more particularly, has experienced some encouragement lately. Labour unrest is still rife; at present there is a strike of the workmen in the wood-pulp and paper industry, owing to disagreement as to wages, &c., after the previous tariff matured on the 15th instant.

According to *Farmand*, the cost of living during the month of July increased by 6.8 per cent. A great deal of the rise must be ascribed to the rise in the sterling and dollar exchange, which went on all through the month, until a culmination—for the present, at least—was reached by the middle of the present month, since which time there has been a constant fall.

The rains that have lately fallen all over the southern part of the country have, although they came late, done a great deal of good. The cereals, but still more the potatoes and the pastures, have benefited greatly from them, and the harvest outlook is much better than it was a month ago. The Stock Exchange is not very active, but most values are steady, and lately an upward tendency has been felt. Norway, just as England and some other countries, has now arranged a commercial agreement with Russia, which will be signed shortly. It is stated that the agreement leaves for special treatment the question of Norwegian property in Russia, said to aggregate 100 million kroner.

Letters to the Editor.

MONETARY POLICY.

TO THE EDITOR OF THE ECONOMIST.

SIR,—I have read with very great interest your article on monetary policy in last week's *Economist*. May I say, however, that I do not think it quite fair to attribute to Mr Kitson a desire for a limitless issue of notes à la Lenin, when he has repeatedly declared that these notes should only be issued for the purpose of assisting production.

You end your article by saying: "What we want is a monetary policy which will give genuine producers a chance, without setting us off again round the vicious circle of rising prices." There I think we can all agree with you. My viewpoint is that the policy of reverting as soon as possible to the "complete and effective gold standard" involves starting a vicious circle of falling prices and falling wages, which will end with 10 millions on the bordering line of starvation; for such was the result of 70 years' pre-war experience of the Bank Charter Act. In addition, it would mean such an increase in our national debt that would be impossible to bear.

On the other hand, the unrestricted issue of currency notes, such as took place during the war, ends in a vicious circle of ever-rising wages and prices, the rising prices being largely accelerated by speculation. Between these two extremes it ought to be possible to find some mean. This is why I think it so important to have a further inquiry.

In his last speech to the shareholders of the London City and Midland Bank, the late Sir Edward Holden said emphatically that the Bank Charter Act should be repealed, and that the cover for notes should be gold, plus bills of exchange. This has always appealed to me as being a sound and practical suggestion, and one that could be introduced with the least possible disturbance to our present system. This would give an elastic currency, expanding and contracting as production expanded and contracted, and as the goods would first have to be made and sold there could be no question of inflation.

There are, of course, many other suggestions for the control of currency with the object of keeping prices steady, all with more or less to be said in their favour. If the inquiry suggested by the Federation of British Industries is set up, and a committee is formed, comprised not only of bankers, but of representatives of industry, commerce, and labour, with a statesman of weight and authority as chairman, a thoroughly exhaustive examination of these various suggestions could be made. Mr Darling's scheme of an Empire unit of account is most attractive, and such an inquiry would give it full publicity. I hope, Sir, you will use your powerful influence in support of the suggestion of the Federation of British Industries.

The ideal currency is paper, but this paper must be controlled. The problem is to find the best method of control. —Yours truly,

T. B. JOHNSTON.

Bristol, August 29th.

P.S.—I see in the *Daily Telegraph* of August 22nd a letter from Mr Moreten Frewen, in which he quotes Mr Skelton Williams (the late Comptroller of Currency in America) as follows:—

"I say, and the record proves, that the Board was abundantly warned by the leaders of public opinion in many parts of the country, by able members of both houses of Congress, and by me, as Comptroller of Currency, of the necessity for a revision of their policies before the resulting losses should become irreparable. For example, on October 18th last I pointed out to the Board some of the appalling shrinkages in value which had already taken place; for instance, the loss of 500 million dollars in wheat, of 2,000 million dollars in maize, of 1,000 million dollars in cotton."

This statement bears out Mr Kitson's remarks as to the result of deflation in the States.

THE CURRENCY PROBLEM.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In your issue of August 27th, Mr Cook points out that the difference between his view of the effect of quantity of money on prices and our view of the same question reveals a difference in the interpretation of historical facts. We feel this to be a very true recognition of the controversial difficulty, and believe it is of the greatest importance that we should try to appreciate each other's difficulties of interpretation, because history is useless as evidence unless we can agree about its interpretation.

Mr Cook thinks we can only expect to find a broad agreement between price level and quantity of gold over long periods of review, because there are local disturbances from contributing causes that may greatly affect any short period. If this view is true it is very unfortunate, because it is the particular periods of trade boom and depression that matter; they are what we are discussing. Our view is that the price movement of these all-important "sub-periods" can be analysed with considerable exactness if we compare price level with the labour cost of money instead of its quantity.

The ordinary index number compares prices with a standard weight of gold, not with a standard cost of gold; the ounce of gold varies in cost, but the sovereign is always one sovereign's worth. Therefore, it may be questioned whether the index numbers quoted by Mr Cook really show the variations of price between 1873 and 1895, or only obscure them. These figures show a net fall of price of 42 per cent. in England between 1873 and 1890, and a fall of 53 per cent. in America. Now, the only figures we have for actual wages paid during that period in Great Britain show that wages rose 23 per cent.,

and the American census figures show that from 1869 to 1889 wages rose 46 per cent. It is very hard to see how the price of labour could rise 46 per cent. while the value that labour produces falls 53 per cent.

If this comparison is extended to the long period reviewed by Mr Cook, it will be found that prices have fallen over 100 per cent., while wages have risen more than 100 per cent., a grotesquely contradictory result that leaves it very questionable whether the index number method of investigating prices is any use at all. Our price indexes, based on cost of gold, show for this period in England a rise of prices by 63 per cent., and in America from 1885 (only) to 1890 a rise of 61 per cent. This agrees much better with the record of wages paid, and shows it is very necessary to reinvestigate our interpretations of historical facts.—Yours faithfully, ALBERT AND PERCY WALLIS.

Westacre, Kettering, August 28th, 1921.

THE REMEDY.

TO THE EDITOR OF THE ECONOMIST.

SIR,—I have chosen a new heading for this correspondence, because Mr Craies, in his letter of the 8th inst., bringing to bear a keen and analytical mind, has very considerably advanced the subject. To sum up "The Currency Problem," it appears that most of your correspondents are agreed, though they may express themselves in varying ways, that the trouble with the currency is that it consists for the most part of paper which cannot be exchanged for metal, but only for other paper. Mr Craies points to the apparent contradiction of urging the reduction of outstanding issues of paper, and yet advocating the issue of fresh bank credit to producers, and goes on to say that bank credit and currency are substitutes.

This is, however, not quite the case. Bank credit and currency are not brought into being simultaneously, and on an equal footing, but rather the creation of bank credit precedes the issue of currency. At present currency circulates among the population to a great extent without any definite aim or object. Holders of currency exchange it for what they will, necessities or luxuries, and a good deal of what they buy is consumed, and the paper is left in other hands without any backing. This tendency is accentuated when currency is freely issued and is easily come by. There is, in short, very little control over the uses to which our currency is put, but with bank credit it is quite a different matter. If bank credit is only to be created on certain conditions, the banks issuing it will have a very real control. The person who then avails himself of the creation of this bank credit is under the obligation of delivering the equivalent in goods at a later date, and consequently, although the bank credit gets converted into currency, the first taker of the credit is now impelled towards some useful occupation. This impulse begins to permeate the population, and production is set going. Not the hectic production of war, but the more economic, though not less energetic, production of peace. I say advisedly "more economic," because the commodities now to be produced are for sale, and must be produced at prices which will make them attractive to foreign buyers.

Everything must be done by all parties of the transaction to ensure success. Firstly, the issue of this fresh credit must be intelligently directed through the medium of the banks, and it must be issued upon easy terms. The taker of the credit must not abuse his new privilege, but must honourably deliver the goods.

Out of the proceeds of the sales of our new production our unbacked paper will be gradually extinguished. That is what I had in mind as a reduction of outstanding issues of paper, a reduction of the present outstanding and unbacked paper. If we can find a means of backing it either with gold or commodities probably no one will object whether it is actually reduced in quantity or not.

At any rate, this point is not so urgent as the question of setting the machine going again. I am aware that this letter does not deal with many difficulties which lie in the way of the issue of fresh bank credit, but I do not believe these difficulties to be insuperable.—Yours very truly,

W. J. COOK.

20 Bracken gardens, Barnes, S.W., August 30th, 1921.

A TABULAR STANDARD OF VALUE.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Before the fatal August 4th seven years ago the average business man fixed his attention on the changes in the prices of the articles in which he dealt, and looked upon money as the one thing which did not vary in value. The experience of the last seven years has brought home to all of us, what has long been a commonplace to students of economics, that variations in the price of an article depend on circumstances affecting the supply and demand, not only of the article in question, but also of money. There is nothing in a change of price of one article, or even of several articles, to tell us from which side the change comes. It is only by constructing an index number of the ratios of the price changes of a considerable number of commodities that the variation in the value of money can be ascertained. In this way the fluctuations in price which are due to circumstances affecting the different commodities cancel one another out, and the broad movement due to variations in the supply and demand for money is shown.

Index numbers of prices may be calculated in many different ways. It is not possible within the scope of this letter to discuss the complicated and difficult questions which arise both as to the method of calculating the ratios of price changes and as to what commodities should be included. For practical purposes the changes of the value of money are well shown by an index number which includes the wholesale prices of the principal standardised commodities, a weight being given to each commodity proportional to the value of the average annual consumption.

The war has also made us familiar with the quantity theory of money. We have watched prices go up in many countries roughly in the same ratio that the printing press has added to their currencies. We know that a certain quantity of money and bank deposits with a certain velocity of turnover can suffice for a certain volume of trade at a given price level, and that the velocity remaining the same an increase of money relative to trade tends to higher prices and a decrease to lower prices.

A general rise or fall of price, if it were evenly spread, would make no difference to real wages and real profits. Variations in the purchasing power of money are important only in relation to debts and contracts, through which great injustice and disturbance of trade are caused. For instance, a merchant who borrowed £1,000 in April, 1920, might well have to realise 70 per cent. more of his stock than he originally contemplated in order to repay his loan now.

A rising price level injures persons with fixed incomes, but encourages trade. A falling price level is a far more serious thing for the mass of the population, because it discourages enterprise, checks trade, and creates unemployment. Periods of falling prices, such as the first 40 years of the nineteenth century, have been marked by slow trade and great misery among the working population, while the real value of fixed interest securities has greatly increased.

After the recent vagaries of uncontrolled paper currencies (which only confirm past experience), it is not unnatural that we should set our minds on restoring the gold standard, which is comparatively reliable, and has behind it the authority of age-long tradition. Nevertheless, the fluctuations in the purchasing power of gold have been very serious, and over long periods of time a necessary foodstuff like wheat is a much better standard of value. The fluctuations in gold prices since the beginning of the nineteenth century may be roughly summarised as follows:—

1809-1849 gold prices fell about 50%.
1849-1873 gold prices rose about 30% (gold discoveries: California, 1849; Australia, 1851-2).
1873-1896 gold prices fell about 20% (adoption of gold standard by many countries).
1896-1914 gold prices rising (South African gold mines).

Gold production has been falling since 1912, and had there been no war prices would probably have been on the down grade.

The problem which faces us to-day is to get away from the vagaries of uncontrolled paper currency without going

through a long period of falling prices, depressed trade, and unemployment, and without increasing the burden of war debt by magnifying the unit in which it is expressed.

In this connection it is well worthy of careful study whether a satisfactory tabular standard of value can be constructed, as first proposed by Joseph Lowe in 1822, and subsequently developed by W. S. Jevons and J. Irving Fisher.

The first form of this proposal was that an index number of the prices of commodities used in the household should be used as a table of reference for adjusting payments under contracts, just as wages are adjusted under sliding scales according to the Board of Trade Index Number of the cost of living. Professor Irving Fisher has brought this proposal a step further by suggesting that the purchasing power of money should be kept steady by regulating the circulation of a token currency, to the end that the same sum of money should always buy the same average quantity of commodities.

Besides its importance in avoiding injustice in regard to debts and money contracts (which affect the richer classes principally), this plan would have a still more important result in preventing periodical trade slumps and unemployment due to variations in the purchasing power of money. The knowledge that currency and credit could expand freely so long as the price level did not advance would promote industry and discourage speculation.

The adoption of such a principle would not make any outward difference visible to the man in the street. To carry such a proposal into practical effect would mean simply to hand over the Treasury note issue to the Bank of England, remove the limit, and that the Bank of England should regulate the expansion and contraction of currency and credit by a new principle.

The construction of an index number intended as a guide for preventing variations in the purchasing power of money presents less technical difficulty than in the case of an index number intended to exhibit such variations, where no attempt is made to control them. It is important that the method of computation should be so simple as to be readily understood and checked by all. A list of the principal standardised commodities, such as foods, textiles, minerals, timber, &c., would be taken, and a quantity of each article included in the standard proportionate to the average value of the average annual consumption. The whole parcel, having been priced at a base date, would be repriced at regular intervals, and the totals calculated. Currency would be controlled so as to keep the total price of the parcel steady, while the prices of the individual items might vary according to the laws of supply and demand. In this way fluctuations in price due to purely monetary causes would be eliminated.

If prices were to show a rising tendency, currency and credit would be contracted in any of the following ways:—

- (1) By raising the rate of discount, and by restricting and calling in loans so as to put pressure on holders of commodities.
 - (2) By the sale of gold and securities held in reserve and holding the currency received in payment.
 - (3) By borrowing from the market.
- If prices were falling currency could be expanded—
- (1) By reducing the rate of discount and granting loans more freely.
 - (2) By purchasing gold or other valuable securities.
 - (3) By paying off floating debt.

The curve of prices in the past shows a number of surface ripples, some of which are strictly periodical, such as quarterly movements and the usual autumnal squeeze. These could easily be anticipated and met. The main object of a tabular standard of value would be to counteract the big tides of expanding and contracting credit known as trade cycles and the large permanent changes in price level due to increased or decreased gold production.

Foods and materials are a better basis for checking the variations in the value of money than manufactured goods, for the price of manufactured goods is liable to fall so much by improved methods of production as to completely obliterate any trace of the influence of money on the price. Some persons who make loans or enter into contracts are more interested in the prices of securities and capital goods than in those of commodities. These persons do not need

protection against loss, for they are well able to weigh the circumstances before entering into a contract. The main object aimed at by the tabular standard is steadiness in trade.

One of the principal causes for desiring the restoration of the gold standard is the use of gold as an international currency. The mobility of gold, which levels up prices in different countries, is only a special case of the general mobility of merchandise. Even under inconvertible paper currencies exchanges tend to purchasing power parities. Therefore, if all countries successfully steadied their price levels there would be steady exchanges.

Under a tabular standard gold would be a mere commodity, but could be used all the same as a reserve, as a regulator of exchanges, and as a means of paying trade balances. Instead of having fixed gold equivalents for various currencies, variable equivalents could be adopted. At the base date the price of gold could be fixed in every currency on the basis that for unit currency would be given that weight of gold which possessed the purchasing power fixed for unit currency. This price would remain unchanged until the purchasing power of gold changed. Thereupon the price of gold could be altered by a simultaneous percentage increase or decrease made by international agreement. There could be a small difference between buying and selling prices to discourage speculation in gold. In this way gold could perform its function as a regulator of exchange without upsetting trade by its fluctuations in value.

The exact composition of a tabular standard and the base to be taken are admittedly extremely difficult problems, which can only be decided by a careful discussion between experts. The possibility of such a tabular standard as a solution for the present currency difficulties of the world certainly deserves investigation. The proposal is backed by economists of world-wide fame, and rests on the firm moral basis of fair dealing. It seeks to create honest money.—I am, &c., C. CRAIES.

REVIEWS.

"Reflections of a Financier." By Otto Kahn. Publisher's Hodder and Stoughton. 10s 6d net.

MR OTTO KAHN is a financier, and a good many other things as well; so that his reflections range from business and economics to war and foreign relations, and even Art. Part of what he has to say is intended chiefly for American ears, and part of it relates to a period which is now, happily, past history. But with the help of a little judicious skipping, this collection of essays, rather loosely knit together, will be found to be suggestive and stimulating reading. The best thing in the book is 10 years old, and comes quite near the end—an address delivered in 1911 on Edward Henry Harriman. This brilliant study, printed some years ago, but never very accessible, is worth having at all times, and especially to-day, when the aims and motives of "big business" are habitually and systematically traduced. Just as America, we are apt to think, has something yet to learn from us about the treatment of labour by capitalism, so we in this country have a good deal to learn from America about the social value of big men in industry and commerce. "For better or for worse, the people appear determined to put limits and restraints upon the exercise of economic power." Mr Otto Kahn believes it is better so, "unless we go too far and too fast." But his essay is a powerful refutation of this belief—so long as there are men to be found like Edward Henry Harriman; and admittedly there are few.

"Imperial Taxation." By A. B. Cliff. (London) Estates Gazette, Limited.

THOUGH primarily intended for students for professional examinations, this volume of 300 pages or so should be useful to a wider circle. The author summarises the history and system of taxation, and explains the origin and scope of various duties. Voluminous notes, appendices, and tables are given, the information is up to date,

and the book includes a serviceable index. While controversy is, so far as possible, excluded, a final chapter on present problems of public finance contains some shrewd comment on the economy question. Mr Cliff makes the statement that "there has not been a single instance in the last twenty-five years when the House of Commons, by its own direct action, has reduced, on financial grounds, any estimate submitted to it." A few pages are devoted to considering desirable reforms in the financial administration of the country, on the lines of the 1918 report of the Select Committee on National Expenditure.

A review of the activities of this undertaking since it first opened its doors—now fifty years ago.

The Fifty-Third Annual Co-Operative Congress, 1921. (Manchester) The Co-Operative Union, Limited, Holyoake House, Hanover street.

Annual Conference of Incorporated Accountants, to be held at Liverpool, September 28, 29, and 30, and October 1, 1921. (London) 50 Gresham street, E.C.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET.	ACCOUNT.
September 13.	September 14.

Anticipation proved correct which presumed that the fixing of the day for the end of the war would not bring in any large amount of selling from Germany and Austria. So far as the actual amount of business is concerned, it can scarcely be said to have benefited or suffered from the fact of the war having concluded, officially, last Wednesday night. The markets during the past week may be described as placid, showing a slightly increased breath of speculation that, in some quarters, is hailed as precursor to the return of more activity to the Stock Exchange now that the holiday season is nearly over. Indian securities gave way at first on the news of the riots, but most of the decline was recovered.

Quotation of Victory Bonds ex dividend led to an improvement on balance in the price. Prompt subscription of Southland Electric and Thames Valley (N.Z.) Electric 6 per cent. debenture issues, both offered at 96, served to strengthen the market for such securities, in that it was regarded as indicative of the public's willingness, and capacity, to take good stock at reasonable prices. The War Loan and its attendants have moved within narrow limits, and amongst foreign Government bonds the features have been confined to reaction in the prices of Japanese "dollar" securities, and to substantial rises in most of the bonds connected with Denmark and Scandinavia. Uruguay bonds are lower, after their recent rapid advance, and Brazilians have wavered owing to the slight decline in the milreis. Mexican bonds are good.

Home Railway stocks are inclined to go better. Were there to be any public support, the market, it is safe to say, would certainly improve. But as things are, the meagreness of public interest leads to fairly sharp fluctuations brought about by a mere handful of orders. The undercurrent is described

as firm. Grand Trunks are a little better on the expectation that the award will be made known at the end of this month. Grand Trunk Pacific debentures eased off, upon the announcement that the Dominion Government is not going to pay, at present, the interest due this week. The market regards this as continued postponement. Mexican Railway stocks advanced. Argentines are a very erratic market. It is now declared that the companies are not likely to be put to any particular loss by reason of the reported mistake which they made by increasing freight charges in advance of the proper time for so doing. On this statement there was a sharp rally in values, and the market being none too well supplied with floating stock, prices firmed up. Indian Railways show a few unimportant falls.

Rubber shares remain heavy, with the exception of Rubber Trusts, where the expectation of the imminent report continues to act as a prop to the price. A third meeting of the organising committee of the new Rubber Shareholders' Association was held yesterday (Friday); active steps are being taken for launching the new body. The oil market enjoyed a spurt late in the week, on buying which started from Paris, and was continued by the bears in the London market, public interest in oil shares, from the active market point of view, being comparatively small. A few of the shipping shares are firmer, and further progress has been made in the advance of gas companies' stocks, owing to the impression, already mentioned, that the companies will gradually return to a pre-war basis of dividends. Improved conditions in trade are responsible for a fair sprinkling of rises amongst iron, coal, and steel shares. This has affected the armament group also, where Vickers and Armstrongs both improved. The London banking group is dull, and certain of the Indian banks went back in consequence of the Moplah rising. Excitement in cotton gambling led to a further rise in the shares of the textile companies both in London and Manchester, the market proving volatile and difficult to gauge. Cable and wireless shares are steady; catering, hotel, and stores uninteresting. Brewery stocks are a little better, owing to the coming into force of the new Licensing Act. Egyptian stocks and shares have benefited by the rise in the price of cotton.

The semi-professional animation in Kaffir shares is being kept alive by the efforts of its promoters, though it cannot be said that the public are showing any great inclination to take a hand in the market so far. There still seems to be a certain amount of labour trouble on the Rand, though not of a serious order. The price of gold has drooped. Next week's returns from the producing mines are awaited with unusual interest, owing to the greater activity displayed by the market during the past fortnight. De Beers provided a spectacular feature of strength, on Paris purchases, and, incidentally, it may be observed that Rio Tintos were taken in hand by Paris at the same time; the price advanced briskly. Other copper shares have strengthened. Various Cornish tin counters are a trifle better, but Malayan tin shares exhibit no vitality. West African have hardened.

The passing hence of D.O.R.A. raises interesting points in connection with what facilities can now be claimed by speculation. The Stock Exchange is bound, of course, under Treasury Regulations, which remain unaffected by D.O.R.A. considerations.

NEW ISSUES.

The new issues of the week and the current year and date of opening of the lists have been as follows:—

ISSUES OF THE WEEK—	Nominal Capital.	Cash Subscription.	First Payment.	Further Liability.
Amount previously recorded....	£	£	£	£
152,658,080		152,658,080		

TREASURY BONDS.

DOMINION STEEL CORPORATION AND CONSTITUENT COMPANIES.

ANNUAL REPORT, 1921.

To the Shareholders:—

I believe in view of the conditions which prevailed in all branches of industry during the period covered by the report and statements, that you will regard the results as reasonably satisfactory. The volume of business was less than previous years, and this is particularly true as regards the British market, the contraction having been brought about by the serious depression in Great Britain, and by the keenness of Continental European competition.

Nevertheless, during all these trying times your company, the Dominion Steel Corporation, as one of the greatest industrial institutions in Canada, has endeavoured to maintain operations at the largest capacity possible, recognising its obligations to the country and to its employees, and you can more readily appreciate this when I tell you that the Dominion Steel Corporation disbursed in wages and salaries last year the sum of \$21,839,285.25.

HARMONIOUS INDUSTRIAL RELATIONS.

One of the most important branches of your company's operations is, of course, the mining of coal. The employees of your mines are members of the United Mine Workers of America, and with this organisation your company has entered into wage agreements for the past few years. The Dominion Coal Company had an agreement which should have extended until February 1st this year, but we were compelled in November, 1920, to negotiate a new contract. Had we been able to continue under the agreement until February 1st of this year, our men would undoubtedly have realised the condition into which the country was rapidly drifting, and unquestionably a contract much more satisfactory to the company would have been arrived at. Your officials realise that the contract would be a great hardship on the company, particularly in connection with the production of steel, and a burden also upon the industries of Eastern Canada, but every pressure was brought to bear upon us, by the Government, by the railroads, and other interests, insisting that under no condition must we permit a stoppage of the production of coal. Consequently a new contract was entered into effective until November 30th of this year, and I may say that our relations with our employees under the contract are most harmonious. It must be recognised, however, that wages are too high to enable us to produce coal at a cost that will permit profitable operation of the steel plant under existing conditions.

For the last sixty days operations have been materially assisted by sale of our coal in England and Scotland, and the reports from gas plants and railroads using it in those countries are very satisfactory. I do not expect that we will be able to hold the British market, but I am in hopes that gradually our coal will find a market in some of the other European countries.

In this connection I wish to call to the attention of the holders of preferred shares the fact that the statement for the past fiscal year shows that the dividends on your shares for the three companies named were earned five times over. I need not, of course, emphasise the fact that business conditions are most unsatisfactory at present, and in view of this it is all the more gratifying to be able to say to you that for the first quarter of the current fiscal year ending June 30th the Dominion Steel Corporation, after providing for depreciation, sinking funds, and bond interest, has earned at the rate of over three times the amount required for payment of the combined dividends on its preference shares, and on

the preferred shares of its constituent companies. I believe that we should be very well pleased with the results, particularly as I have just stated in view of conditions during the past three months.

On August 1st the British Empire Steel Corporation will deposit its 7 per cent. first preference stock with Prudential Trust Company for the purpose of effecting this exchange, and after that date any holders of 6 per cent. preference shares of this corporation, or of the 7 per cent. preferred stock of the coal and steel companies who desire to exchange may forward their certificates to the Prudential Trust Company and receive certificates of British Empire in exchange for them.

PERIOD OF READJUSTMENT.

Business the world over has been passing through a period of very strenuous readjustment. While perhaps some of us may have anticipated a year ago that something of this nature would occur, not even the most farseeing expected that anything quite so drastic would take place. Undoubtedly, however, this was the most effective manner of bringing costs down to a basis that would restore confidence, and the results are already becoming evident in that our extravagant habits are slowly but surely giving place to economy and hard work, and I believe that in many industries the readjustment of prices is already practically complete.

Many of our Canadian industries are in need of additional financing, and this is always to be expected in a growing country possessing vast natural resources awaiting development. Present world conditions and national needs render such industrial financing exceedingly difficult of accomplishment, and the taxes imposed on Corporation earnings and upon the incomes of individuals have diverted into the national treasury funds ordinarily available for investment in new securities, and for the extension of the extent of industrial operations in this country, are discouraging new development, thus reducing employment, and at the same time they are unfortunately failing to obtain the purposes for which they were imposed, that is, the elimination of individual waste and a return to pre-war economies.

Fundamentally, conditions are more satisfactory in Canada than in most other countries. I am, however, of the opinion that additional protection granted to our industries so as to hold the business of this growing country to our own manufacturers for the next few years would bring remarkable results in the future.

NEED FOR STRICTEST ECONOMY.

It is most essential that we should all realise that the situation throughout the world and in this country demands the practice of every economy; we must recognise also that wages are gradually being reduced, and that the cost of labour will further decrease, both through increased efficiency, and by further reductions from the very high scale that has been put into effect during recent years. Concurrently with this will come further reductions in the cost of living, and at the same time the income of the wage-earner should maintain approximately an equal purchasing power.

Finally, we must recognise that in meeting these new conditions, Canadian industry must be satisfied with smaller margins of profit, and aim at greater production.

For the Board of Directors.

R. M. WOLVIN.

President.

TIMBER FIREPROOFING COMPANY, LIMITED.

LARGE DEMAND FOR COMPANY'S PRODUCT FOR SHIPS.

The tenth ordinary general meeting of the Timber Fireproofing Company, Limited, was held, on the 30th instant, at Cannon street Hotel, London, Sir Richard V. Vassar-Smith, Bart., D.L., J.P. (the chairman of the company), presiding.

The secretary (Mr A. A. Welsh) read the notice convening the meeting and the report of the auditors.

The Chairman, in moving the adoption of the report and the payment of a dividend of 7½ per cent., less tax, on the ordinary shares for the year, said that the present accounts, although for a period of 12 months, really only included five months of actual work. The company had been moving their works to Market Bosworth, and were not ready to commence work until the beginning of October.

There were one or two matters in connection with the company which he desired to mention as being interesting and likely to result in increased prosperity for the company. Shipping companies were now making use of the "Oxylene" process on board their ocean-going liners. They had orders on hand to fireproof the woodwork for some 500 doors for two ships now building for the Canadian Pacific ocean services, and from inquiries they were receiving from other shipping and shipbuilding firms they had every reason to believe that the use of the process would extend very largely in that important direction.

He had referred to America at the previous meeting when they were about to establish some works there, but owing to financial and business conditions in America they had done practically nothing during the year except to make their arrangements for commencing operations. He thought it was a good thing that they had not gone too hastily into that business, because the state of affairs there had not been such as to lead them to expect profits. However, they had come to an agreement there, as a result of which they were not spending very much money in connection with arrangements they were making for the formation of an American company to purchase their rights for that country.

They were dealing with an English firm established in Japan, and had asked them £30,000 for their Japanese rights. That firm had

recently cabled asking for an option for 12 months, to which the directors had agreed upon payment of £500. The agreements were now being exchanged with that firm's British representative, and the directors expected to receive a cheque for £500 in the course of the post.

In conclusion, he drew attention to the fact that the net profit for the year under review was £6,448, which, with the balance brought forward, made an available amount of £7,148, out of which they proposed to pay a dividend of 7½ per cent., less tax, on the ordinary shares, leaving a balance to be carried forward of £4,287.

Mr H. Flude seconded the resolution, and it was carried unanimously.

The formal business was duly transacted.

Orders for the publication in these columns of the reports at Company Meetings should be addressed to the Reporting Manager of the ECONOMIST, 3 Arundel street, Strand, London, W.C. 2.

NEW YORK · ANTWERP · BOMBAY & MAURITIUS

The London Joint City and Midland Bank announce the opening of new branches at 1, 2, and 3 Middle row, East Grinstead, and Market square, St Neots, Hunts, under the management of Mr H. S. Lawson and Mr H. G. Hodge respectively, and at 213 High road, Streatham, S.W. 16 (Mr A. R. Crimp, manager); High street, Towcester (Mr Robert Bruce, manager); 247 Halesowen road, Old Hill, Staffs (Mr J. A. James, manager).

We regret to announce the death, following an operation for appendicitis, of Mr Henry Chalmers, general manager (and a director since June, 1920) of the National Bank of India, Limited. He had been in the service of the bank for 44 years. For many years he was manager at Bombay, and subsequently was appointed inspector of branches, and later London manager. On the withdrawal of Mr J. A. Toomey from active management at the beginning of 1914 he was appointed general manager.

Reports and Notices.

Baring Brothers and Co., Limited, notify that the transfer books of the Commercial Cable Company sterling 4 per cent. 500-year debenture stock will be closed from the 20th to the 30th instant, both days inclusive, for the preparation of the warrants for the interest due October 1, 1921.

GOVERNMENT STOCKS, &c.

3 PER CENT. DIPLOMATIC DEBT OF VENEZUELA, 1905.—The Council of Foreign Bondholders notify the receipt of a sight draft for £4,390 15s 4 $\frac{1}{2}$ d, being the moiety of the second fortnightly instalment of the Debt Service payable to the Council in respect of the half-year ending December 31, 1921.

MINES.

NATIONAL MINING CORPORATION, LIMITED.—The question of the corporation's uncalled capital, which was raised at the last annual meeting, has since received most careful consideration, and has been discussed at various times with some of the largest shareholders. The directors see no reason to alter their opinion that the uncalled capital is of the greatest importance to the corporation's future, and that the idea of its cancellation must be dismissed as fatal to any future development of the business of the corporation. At the present moment the directors do not intend to proceed to the calling up of further capital; in fact, under present financial conditions, they desire to avoid doing so unless circumstances should arise which would render such a step desirable or necessary.

MISCELLANEOUS.

SPANISH RIVER PULP AND PAPER MILLS.—Net earnings for year ended June 30th amounted to \$4,836,001, and after providing for depreciation, interest charges, contingencies, and taxation, there was available, including \$1,060,948 brought forward, \$4,023,948, out of which dividends amounting to 7 per cent. have been paid on common stock, \$304,097 transferred to bond sinking fund reserve, and \$2,349,796 has been carried forward.

BROKEN HILL PROPRIETARY.—Report for four weeks ended August 17, 1921.—Coke ovens produced 19,657 tons of coke; 15 new ovens added. No. 1 blast furnace produced 3,835 tons. No. 2 blast furnace produced 14,036 tons; latter furnace created weekly record of 3,715 tons. No. 3 blast furnace lighted up 15th inst.; first cast 17th inst. under very satisfactory conditions. Open hearth produced 23,322 tons. Blooming mill produced 21,478 tons. Rail mill produced 11,961 tons. 18-in. mill produced 6,873 tons. 12-in. mill produced 2,280 tons. 8-in. mill produced 1,478 tons. New heating furnace at 8-in. mill commenced operations on August 1st will assist materially production. Rod mill produced 2,158 tons. Iron Knob: Operations continuous; shipped 44,132 tons. Broken Hill: Unchanged.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Weather conditions have been somewhat unsettled, but fairly favourable, and the later portions of the grain harvest are being secured slowly. Prospects for autumn and winter fodder have improved by recent rainfalls, but in Southern localities more moisture is needed. Native wheat is in liberal supply at the principal distributing centres, and, with only moderate interest displayed by millers, prices declined somewhat sharply, 55s to 60s being quoted per 504 lbs, free on rail. Imported quiet but generally firm. No. 1 Northern Manitoba 94s 6d, No. 2 ditto 93s, Australian 75s 6d, ex store, per 496 lbs, and Plate 79s 6d, landed terms. In the forward market there was only a small demand for cargoes, and prices were somewhat irregular in sympathy with fluctuating American advices, sales being confined to white Walla and hard Pacific October at 65s 6d per 480 lbs, while only a moderate business transpired in parcels, chiefly North American grades, at generally firm rates. No. 1 Northern Manitoba, September 15th, sold 81s 3d to 78s 6d, October 68s 6d, October-November 67s 6d to 68s per 480 lbs. Crop prospects in the Southern Hemisphere continue fairly satisfactory, though Argentina is in need of rain, while the outlook in India is satisfactory, but reports as regards North America are somewhat conflict-

ing. Ploughing is proceeding in the United States winter wheat belt, and first estimates of acreage indicate an area about equal to last year. Flour trade generally quiet, the inquiry for home-milled being chiefly for best grades. London straight run quoted 64s, town households 61s, patents 68s per sack, delivered. All English straights 57s 6d, delivered. Country flour 50s, 52s, f.o.r. Imported sorts slow. Canadian export patents 68s, straights 65s, Kansas patents 65s, Australian 61s, and Chinese 50s per 280 lbs, ex store. On c.i.f. terms, Australian arrived quoted 56s, September 52s, Kansas straights, August, seaboard, 58s, Manitoba export patents, August, 59s 6d, Pacific, September, 50s 6d, per 280 lbs. Maize generally quiet, but prices fairly steady. Plate, ex ship, quoted 39s 9d, landed 41s 3d, yellow round African 40s, ex ship, and 41s 3d landed, American mixed, ex ship, 39s 6d per 480 lbs. The cargo market ruled quieter, and rates weak for near positions, but forward firm. A steamer of yellow La Plata September 25th-October sold at 41s 10 $\frac{1}{2}$ d. Parcels were quietly dealt in at irregular prices. Barley generally quiet, with an easier tendency. English malting quoted 68s to 90s, grinding 52s to 56s, Californian ex ship 52s to 60s, Morocco landed 45s to 46s per 448 lbs. No. 4 Canada Western ex ship 43s 6d, Canada feed 42s 6d ex ship, and American feed 43s landed per 400 lbs. Forward market inactive, and tendency of values in a downward direction. Oats quiet, and occasionally the turn easier. English 32s to 38s as to sample per 336 lbs. Of imported, Plate quoted 31s to 31s 6d, Canadian 34s to 34s 6d, Chilean 32s to 32s 6d, all landed, per 320 lbs. Forward parcels easier; afloat sold down to 28s, and forward 28s 6d. Oatmeal quiet and rather easier. London made all cuts £23 10s to £24 10s, American £22 10s to £23, flaked oats £27 10s to £28 10s per ton ex store. Offals quiet. Middlings £12 10s-£13, broad bran £10 10s to £11 10s per ton ex mill. Beans firm to rather dearer. English old crop 63s to 67s, new crop 52s to 55s per 532 lbs. Peas dull, and prices tended in buyers' favour. English maples 95s to 105s, small blues 95s to 105s, split 115s to 125s, Duns 65s to 70s per 504 lbs. Lentils quiet. No. 1 split 38s to 39s, and Egyptian 30s per 100 lbs. Homeward grain freights ruled quiet, the demand being chiefly on Continental account. River Plate upper ports to U.K./Continent October done 35s, with 30s indicated for near loading. Montreal to U.K./Continent rules at 45 10 $\frac{1}{2}$ d to 5s per qr, and Gulf 5s 6d, option Mediterranean 6s 4 $\frac{1}{2}$ d, while Baltimore to Rotterdam paid 18 cents per 100 lbs. North Pacific easier at 57s 6d wheat/flour, and 1s 3d extra barley. India quiet, Bombay/Karachi 27s 6d dead weight. Saigon rice paid 57s 6d. Australia chartered several steamers at 68s 9d one and 70s two discharging ports October-November, with slightly lower rates now current. South African maize done at 41s 3d September U.K./Continent. Danube slow, and other departments quiet, unaltered.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1920-21, contrasted with 1919-20, 1918-19, and 1917-18.

	1920-1921.	1919-1920.	1918-1919.	1917-1918.

IRON, STEEL, AND COAL.

Our Middlesbrough correspondent's report, dated September 1st, is as follows:—Pig-iron: There are actually only 14 blast furnaces blowing on the North-East coast, chiefly making basic pig-iron, but it is expected that three more will start shortly. Fuel prices are greatly retarding a general resumption, and although the price of coke has fallen, it is still at a price which, in many

THE CHATWOOD SAFE

Since 1858

THE custodian of treasure who relies for security on a cheap safe and the inefficiency of a Burglar's attack, rather than on the power of resistance offered by his Safe or Strong Room, is in very much the same position as an Army Commander who relies for the defence of his position on small arms in the fond hope that the enemy may not possess artillery.

The Squirrel guards against what may happen and carries a store of nuts against a possible scarcity of food in the future.

Both in the design and in the construction of THE CHATWOOD SAFE every conceivable contingency of both Fire and Burglary has been effectually provided against. Neither the intense heat of a raging fire nor the desperate attacks of the most scientific Burglars can penetrate the

invulnerable defences of THE CHATWOOD SAFE.

Holders of the **HIGHEST AWARDS** throughout the world.

The Chatwood Safe Book, containing fullest particulars and striking testimony to the superiority of THE CHATWOOD SAFE, gratis and post free upon request.

cases, prevents economical working. Business in pig-iron is not active, and present quotations are:—135s per ton for No. 3 Cleveland G.M.B., and 100s per ton for East Coast hematite mixed numbers. Manufactured iron and steel: Steel works cannot see more than a couple of weeks ahead, and the outlook, in view of foreign competition, is still very precarious. Steel ship plates, £14; steel ship angles, £13 10s; iron bars, £16; steel rails, £14 net. Iron ore: Business in imported ore is stagnant. Best Bilbao Rubio is quoted generally at about 28s per ton, but consumers say they have offers at a lower figure.

Our Glasgow correspondent (writing on Thursday) says:—Following upon the recent declines in the quotations for steel materials, Scotch makers of black sheets on Monday lowered their prices by from 20s to 30s a ton, bringing their reductions since the beginning of the year up to from £6 to about £8 a ton. The new rates are therefore:— $\frac{1}{2}$ gauge, £14 15s; $\frac{3}{4}$ gauge, £15; 16 gauge, £16; 20 gauge, £17; 24 gauge, £17 10s; and 27 gauge, £18 10s. Producers are not fully employed, yet they are turning over a good tonnage and have promise of more orders, which are in that market mainly from India, China, and Japan. Makers here are particularly well situated in competition with other countries, notably America, from the fact that they can import almost any quantity of half products from the Continent at quite £5 a ton below what is usually named at home. Steel makers are a good deal busier than they were a week ago on all kinds of plates and sections, which are in request from bridge and ship constructors. In the latter connection, an impetus has been given to operations through the return of the joiners to duty; indeed, several of the yards are quite busy, and will be well engaged for the remainder of the year. This, however, on old contracts, some booked over a year ago. There are, so far as understood, no new orders being placed, though it is said one or two big liners are in the planning. But, as for tramps, the state of the freight market and the high cost of building put them for the moment out of consideration. Official returns show that in the course of last month Clyde shipbuilders launched 34 vessels of 34,616 tons, raising the aggregates for the year to date up to 165 boats of 299,864 tons. In all the circumstances, these figures are satisfactory. It is interesting to note that a couple of large steamers—9,500 and 7,000 tons—were of the motor type, which is attracting great attention from engineers, who are also busy devising new methods for the utilisation of oil in the engine rooms. Experiments, it is stated, are proceeding in nearly all the large yards on the river. It transpires to-day that a heavy order for military tanks has been given out to a West of Scotland steelmaker—in the interest of a foreign Government. Pig-iron makers have been lighting up some additional blast furnaces these last few days—for the production of foundry iron, which is in growing demand. There is still a good deal of ordinary pig-iron and basic iron being landed at East Coast ports from the Continent, at pounds a ton under what Scotch makers quote. Sweden is now sending in lots of hematite at exceedingly cheap rates. Bar-iron makers are not getting more than half-time business, but they have resolved to maintain list prices—at least, until coal reaches even a lower level than obtains, and it is fully 40 per cent. under what ruled prior to the late strike. Coal miners are only getting from two to three days a week, and the expense of operating in existing conditions is inducing certain owners to consider the advisability of shutting down altogether. In engineering circles a respectable volume of work is in hand, and the outlook is fairly encouraging.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—The sharp advance in values at the London wool sales this week has occasioned some surprise in the consuming centres. A slight rise in prices was generally expected in view of the strength of the primary markets, but few anticipated quite such a decided movement as that recorded in Coleman street Wool Exchange. It is significant that home trade buyers have been active—more so than at any series this year—yet it is difficult to find any material expansion in machinery consumption. The obvious conclusion is that some topmakers and spinners have been forced to cover. It remains to be seen whether the new level can be maintained, and on this point there is some doubt among users. However, topmakers have mostly put up their quotations to a protective level, and this has tended to check business somewhat. Spinners report a little more inquiry on home trade account, but many are still cutting prices; and business is being taken at unremunerative prices. The export section is the most active, though Germany has been much quieter during the week. In the piece-goods trade a small amount of business is being done, much of it from stock, and values show no change.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

The event of the week in the wool trade is the opening of the seventh series of sales, Coleman street Wool Exchange being thronged last Tuesday with a large number of buyers, all sections except America being fully represented. There was at times as much enthusiasm as was seen in the earlier days of 1920, when a veritable struggle took place to secure wool. The series opened more auspiciously than any that have been held during the past 12 months, practically the whole of the catalogues being cleared. The offerings consist of 70,000 bales of "free" wool, and 60,000 bales of B.A.W.R.A. wool, and everything points to ready clearances being made. On the opening day the merinos were a somewhat scrappy lot, but the crossbreds made an excellent show, and, rather unexpectedly, a sharp advance of 5 to 10 per cent. took place on medium and coarse qualities. I must admit being surprised at the sudden burst of enthusiasm and the sensible advance in values, good-conditioned merinos appreciating 7½ to 10 per cent., ordinary and faulty merinos 5 per cent., while fine crossbreds advanced 10 to 15 per cent. These are sensible advances, and clearly indicate a strong market. One of the most satisfactory features in connection with the sales this week has been the increased eagerness on the part of the home trade to operate. Germany is not so active, but French buyers are operating as freely as anyone could reasonably expect in face of all their mills being standing on account of a strike. Everybody seemed pleased with the opening results, except those Bradford topmakers who have been selling forward at 3s for 64's, and unless they are well covered out of Australian purchases they stand to lose considerably. After Tuesday's sale it looks as if warp 64's are going to cost in the neighbourhood of 3s 6d, and a commoner top 3s 4d. The upward movement in crossbreds is indeed significant, and clearly shows that there is returning confidence in these. This is all the more surprising in view of the tremendous stocks of old crossbred wool which are to be marketed, fully 75 per cent. of B.A.W.R.A.'s stocks consisting of crossbreds of one sort and another. In addition, a new clip will shortly be shorn in New Zealand and South America, and we hope that developing trade in textiles will pave the way for a big consumption of crossbred wools.

In their comment on the future, Messrs H. Dawson and Co. make some most significant remarks. They call special attention to the state of the home trade. "The improved inquiry in semi-manufactured goods," it is stated, "is chiefly a reflection of Continental activity rather than home consumption, and the more advanced sections of the home industry show little improvement." Practically everyone will agree with that expression of opinion; and, after referring to growing confidence in raw material, Messrs Dawson say that "at the cloth end the financial pressure is still severe, and the general position not sufficiently clarified, to allow of more than a hand-to-mouth turnover." These facts are far from being inspiring, but we believe that firm and advancing wool markets will inspire more confidence at the piece end of the industry—a factor which has been very much wanting during the past 12 months.

AUSTRALIAN WOOL SALES.

Messrs Dalgety and Co. have received the following cablegram from their Brisbane branch under date August 30th:—"Wool sales opened. Attendance of buyers is large. Competition animated. Yorkshire buyers are the principal operators, more especially greasy wools of medium quality. Greasy wools of fine quality, strong demand from Japan and from the Continent; scoured wools, poor demand, as compared with last sales. Sydney prices par, all qualities. Splendid clearance."

THE COTTON TRADE.

MANCHESTER, September 1.

Business in the market this week has been thoroughly disorganised by the violent fluctuations in raw cotton rates. Traders have not displayed any confidence in the recent rise in values, and a waiting policy is being adopted pending more settled conditions. In cloth for abroad there has been an increased inquiry, but dealers on the other side are very slow in raising limits. Only retail lots have been sold for India and China, and cable advices from those outlets are

"ALL-IN" POLICY

affords the Householder the most complete cover yet devised. The method of covering household risks by a diversity of Insurance is wasteful, to say the least. By covering all your household risks by the "All-In" Policy, you are economising in the true sense of the word—5/- per £100 per annum (Minimum Premium, 7/6) will cover practically every serious risk in respect to the contents of your home. List of risks and full particulars post free. Address:—"All-In" Policy Dept.

ASSETS EXCEED - - £19,000,000.

not encouraging. A rather larger turnover has taken place for the Near Eastern markets, especially Egypt. Manufacturers have reported an increased inquiry in home trade fabrics. Buying in American and Egyptian yarns for home use has been very irregular. There has been considerable variation in prices when tested. Spinners are doing very badly, and continue to lose ground. Only occasional transactions have been mentioned in export yarns.

LINEN TRADE.

BELFAST, August 31.

Flax.—There is no change to report in the Irish markets this week. Some lots of new flax were sold, and these are more favourably reported on than the old crop. On the Continent there is no change to report. Yarns.—Without material change, the market has been steadily maintained during the week. Tow yarns have again been the chief feature. The figures for the month now ending are not yet available, but without doubt will show a further reduction in stocks, with a corresponding increase in orders. This process has gone on steadily since March 1st. Weavers.—More business is being done, and quite respectable quantities have been booked by manufacturers. The strength of cotton will undoubtedly help union goods; altogether, the feeling is decidedly better in this section of the trade. Merchants.—Merchants have experienced a quiet week; if anything, housekeeping goods show most life.

VEGETABLE OILS AND OIL SEEDS.

(FROM OUR CORRESPONDENT.)

A somewhat firmer tone has developed in raw linseed oil, which has been in fairly active demand at advancing prices, both America and the Continent apparently taking advantage of the lower level of values ruling. Oil on spot and for delivery to December has thus appreciated about 25s per ton naked ex mill; at Hull to £36 15s, and London £38. January-April oil is at about 20s premium, with some inquiry on speculative account.

Cotton oils have continued a very quiet market, with spasmodic appearances of interest. Values of both crude and refined are lower. The demand for soya bean oil continues, but stocks of English crude are about exhausted, and are being supplemented by arrivals of Oriental. A fair demand is reported for palm kernel, ground nut, and rape oils at about unchanged prices.

The market for linseed is nervous, and prices generally are slightly lower. There is a fairly good demand for seed afloat, and full cargoes of La Plata have been secured at £20 10s to £21, due to arrive in the latter half of September; while about £21 2s 6d for September-October and £21 7s 6d for October-November represents current values. Calcutta has been done at £22 10s for August-September. Egyptian cottonseed is more or less inactive. More disposition on the part of shippers of soya beans to meet the market, but buyers are scarce.

Oilcakes of all descriptions are meeting with a very poor demand.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

The hide market retains its steady position, as alterations in price at the auctions in Bermondsey on Thursday were of no importance. Best ox sold again from 7½d to 10½d per lb, one class only showing a slight reduction of ½d. Cows were firmer, and best at 7½d to 8d were ½d to ¾d up. Calf were steady, although best light at 16½d showed a slight advance of ½d. Business is better in foreign hides, and the home tanner has bought Rio Grandes at higher rates. Frigorifics have sold from 9½d to 10d. This week's cables report the Chicago market as steady, with best packer hides remaining at 14 cents.

The trade in sole leather is of moderate dimensions, although not quite up to the standard expected. Both shoe manufacturers and repairers pursue a very cautious policy in view of the very firm market for leather, and only order immediate requirements. Ten to 12 lb bends are most wanted, although manufacturers are calling for lighter weights in view of the necessity for turning out lower-priced footwear. Pinned offal is very firm, and prices are advancing. In upper leathers business has improved, and a demand is at last springing up for waxed and russet kip butts. Semi-chrome is dull and prices depressed. Chrome leathers are selling fairly well, and it is a surprising fact that American importing houses are selling leather freely, in spite of the severe loss on the exchange.

Orders for boots and shoes are more numerous, and samples for the spring trade are already being talked about. The export section is still a cause for anxiety, and normal conditions cannot be looked for unless this improves, as the British output cannot be absorbed in this country.

PORTLAND CEMENT.

The following quotations for Portland cement are supplied by the Cement Marketing Co., Limited:—Best English, complying with British standard specification, delivered in London area—in full van or motor loads to site, 87s 6d to 93s per ton; alongside in River Thames up to Vauxhall Bridge in full barge loads (80 tons minimum), 80s 6d per ton. Extra on above prices for the following special brands:—

"Blue Tiers," a fine-ground slow-setting cement, and "Red Tiers," a fine-ground quick-setting cement, 3s per ton. "Ferrocrete," a cement prepared to meet the requirements of specialists in ferro-concrete constructions (in 20 sacks to the ton), 20s per ton.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, September 2.

There was a moderate amount of business doing during the week in some directions, but in a general sense the markets disclosed a quiet tone, with business largely governed by wants of immediate necessity.

SUGAR.—With a decided improvement in demand trade proceeded with fair animation, and a very steady state of affairs prevailed. Tate's cubes sold, 61s 9d to 62s 9d; granulated, 57s to 57s 6d; caster, 61s to 61s 6d; pieces, 45s to 48s 6d. Lyle's granulated, 57s to 57s 3d; yellow crystals, 52s 6d. Crystallised West India sold from 45s to 50s 6d, as to sample. White Mauritius, spot, 52s to 53s. American granulated, spot, sold, 55s 9d to 56s; ditto, afloat, 28s 6d, c.f. and i. terms. Canadian, spot, done 56s 3d. Czech granulated, and also crystals, prompt, changed hands at 27s 6d, f.o.b., Hamburg. Belgian crystals, October-December, sold, 21s 3d, f.o.b., Antwerp. Dutch granulated, spot, realised 56s; ditto, prompt shipment, sellers, 30s, f.o.b., Amsterdam. Brazilian basis, 80 per cent., September, sold, 22s, c.f. and i., U.K. Cuban stocks stand at 1,255,000 tons, against 327 same time last year.

COFFEE.—Moderate quantities were brought forward at public sales this week, and with fair competition steady prices were realised for the part sold. Nairobi fine bold sold up to 110s 6d; Nicaragua-Maragipe, 126s 6d. Future delivery market firmer. September, sold, 46s 3d; December, 46s 6d to 46s 9d.

TEA.—In auction this week some 39,000 packages Indian were catalogued, and, apart from medium qualities showing irregularity and slight weakness, a firm tone predominated, with active biddings. Nearly 27,000 packages Ceylon were brought forward, and general run of quality showing an improvement, full prices were secured.

COCOA steady, though quiet, and small transactions this week include Trinidad at 60s to 62s. Butter quiet at 1s 11d per lb.

RICE.—A steadier tone prevailed, and fair inquiries were reservedly

met. Rangoon, two stars, spot, 24s; ditto afloat, 23s; No. 1 garden Siam, afloat, sold, 22s 6d; ditto, September-October, quoted 24s; No. 1 Siagon, afloat, sold, 20s 3d; and ditto, September-October, 19s 3d. Broken steady, but firmly held. Rangoon, No. 1 A, September-October, 17s; 2 A, 16s 6d; Siam C 1, August-September, 16s; C 3, 15s 6d. Saigon 1 and 2 mixed, afloat, sold, 15s 9d. Bran quiet but firm, and Rangoon, September-October, held for 9p per ton, ex ship terms. Beans, after being dull and depressed, became steadier. Rangoon, spot and forward, sold 114. Madagascar butter, all white, spot, sold, 33s 9d and 29s, for new and old crops respectively. Japanese peas, crop 1921, September-November, sold, 38s 6d. Dutch hand-picked peas, spot, changed hands at 35s.

FRUIT.—A good demand continued for currants, and prices ruled firm. Pyrgos quoted 50s to 52s; Amalia, 54s to 58s; Gulf, 62s to 68s. Cape sultanas range from 98s to 135s. Cape new crop raisins, 75s to 85s; and Australian, 87s to 96s. Dates remain firm. Khredrowie, 18s 6d; and Siar, 16s 3d.

SPICE.—There was a moderate amount of business doing in pepper, and market ruled steady. Fair black Singapore, spot, sold, 44d; ditto, August-October, 44d; September-November, 44d to 44d 1/2; Aleppy, spot, 44d; Tellicherry, 54d; white Singapore, 91d; Muntok, ditto, 93d; ditto, September-November, steamer, sold, 84d to 84d 1/2. Cloves stronger, and Zanzibar, spot, sold, 1s 3/4; August-October, steamer, 1s 3d, and September-November, 1s 3d. Pimento, spot, sellers, 24d. Tapioca steadily quiet. Fair flake, spot, sold, 2d per lb; ditto, September-November, steamer, London, also Havre, 17s 6d to 16s 6d; fair Penang seed pearl, spot, quoted 22s 6d; ditto, September-November, London, 20s 6d. Hamburg, sold, 21s 6d. Small sago, spot, 28s. Sago flour quiet. Afloat lots to Liverpool, sold, 14s 6d; September-November, 16s 14d; October-December, quoted 16s 4 1/2. Ginger steady, quiet. Japan, limed, spot, 43s 6d. Dried coconut, fine cut spot, sold, 52s 6d; medium, 53s to 52s; afloat, London, 50s 6d to 48s; and Hamburg, 51s cwt.

JUTE.—A fairly good amount of business was concluded during the week, and with reserve on the part of sellers, owing to stiff advices from Calcutta, the general tone of the market proved very firm. Native first marks, assortment, substitutes, old crop, August-September, sold, 128 1/2 to 129 1/2; ditto, spot, Hamburg, 132; lightning assortment, old crop, substitutes, afloat, 125 1/2 to 127; substitutes, August-September, old crop, 124 1/2 to 125; Hearts assortment, substitutes, August-September, sellers, 118 1/2 to 120. Calcutta hessians quiet. 8 oz, spot, sold, 19s 6d.

HEMP.—The market for Manila disclosed firmer features this week, buyers interesting themselves with more freedom, probably due to the fact that the period bringing the elimination of grade from J quality downward has now arrived. Forward positions in particular ruled firm. J grade, July-September, sold, 137; ditto, August-October, quoted 137; K, 136; L, 135 1/2; M, 131 1/2. New Zealand steady, but generally quiet. High point fair, on spot, changed hands

at 142; fair ditto quoted 138. Italian firm in local markets on increased purchases by German spinners, but as far as the U.K. is concerned, the position of this fibre is quite a nominal one.

SHELLAC.—Market firm, and fair T.N., spot, sold, 290s to 300s; October, 295s to 300s and 295s; December, 285s to 282s 6d.

GOPRA steadier, and a fair demand was reservedly met. F.M.S. Straits, September-November, Rotterdam, sold, 134 1/2 to 134 1/2 and 134 1/2 to 134 1/2; Ceylon, September-November, London, quoted 136; Cebu, ditto, to Hamburg, sold, 133 1/2; South Sea Islands, to London, September-November, quoted 133 1/2. Palm kernels firmer. September-November, Liverpool, sold, 123 to 122 1/2, then 123.

RUBBER.—Market remained generally quiet and featureless. Standard plantation crepe, spot, sold, 84d; October-December, 91d; January-March, 93d; sheet, spot, sold, 84d; October-December, 84d; January-March, 93d. Fine hard Para, spot, quoted 105d.

OILS.—Linedseed irregular. Spot, net, naked, 38s; September-December, 37s 6d; January-April, 38s 6d. Rape quiet. Crude, spot, 54s; refined, 61s. Cotton quiet. Crude Egyptian, 42s; Bombay, nominal; common edible, 51s. Chinawood: Hankow, spot (barrels), 95s; and shipment, 69s to 70s. Coconut steadier. Ceylon, spot, 55s; September-October, 53s 3d; Cochin, ditto, 58s. Soya quiet. Oriental, barrels, ditto, nominally 41s. Japan fish steady. July-August, cases, 23s. Cod steady. English, spot, 25s. Groundnut quiet. English crushed, naked, spot, 52s; deodorised, barrels, 66s. Turpentine easier. American, spot, 62s; September-December, 62s; January-April, 63s. Rosin firm. American, grade B, 16s; F, 16s 6d; G, 16s 6d; K, 18s; M, 18s; WW, 24s 6d; French, F/G, 15s; H, 15s; WW, 18s; extra pale, nominal. Petroleum quiet. American, refined, 1s 4d; standard white, 1s 4 1/2; and water-white, 1s 5d per gallon.

OILSEEDS.—Linedseed: Market unsettled. Calcutta, September-October, sold 123 1/2. Plate, spot, Hull, 120 1/2; afloat, sold, 120 1/2; July-August, sold, 120 1/2; August-September, 121 1/2; September-October, 121 1/2 to 121 1/2; October-November, 121 1/2 to 122. Rapeseed quiet. Toria, July-August, quoted 122 1/2; real bold Ferozepore, quoted 122; brown Cawnpore, 121. Cottonseed quiet. Egyptian black, September, quoted 113 1/2; and white, 113 1/2. Bombay, August-September, 111 1/2. Gingelly firm. Chinese, August-September, Continent, sold, 129; ditto, September-

October, Italy, 131. Castor, Bombay, September-October, sold, 119. Ground nuts quiet. Coromandel, machine-dried, August-September, 129; Chinese decorticated, f.a.q., ditto, 128 1/2 per ton.

METALS.—Tin firmer on good supporting orders. Cash last Monday changed hands up to 153 and three months' to 155 1/2, while prices continued to move in an upward direction until the middle of the week, these dates fluctuating to 157 1/2 and 159 1/2 respectively. A decline followed at Thursday's meeting, cash sold at 155 1/2 to 156 1/2, early November 157 1/2, and three months' down to 156 1/2. At Friday's session cash advanced to 156 1/2, early November being sold at 158 1/2; three months', 159 to 159 1/2, and again at 159. English ingots, 155 to 156. Copper steadier at the week's opening, business being done in standard cash at 167 1/2 to 167 1/2, three months' 168 to 168 1/2. The tendency was rather easier on Tuesday, but improved during the middle of the week, cash being done at 167 1/2 to 167 1/2 and three months' to 168 1/2. Thursday's market manifested no material change, these rates being closed chiefly at 167 1/2 and 168 1/2 respectively. At Friday's session cash improved to 168 1/2, and three months' to 169 1/2, the demand being fair. Electrolytic, 171 1/2 to 173 1/2; best selected, 169 to 171; strong sheets, 170. Wire bars, 172 to 173 1/2. Lead steady 123 1/2 to 122 1/2 as to position. Spelter quiet, at 124 1/2 to 125 1/2, according to position. Antimony remains unchanged. English regulus, 137 to 140.

METROPOLITAN CATTLE.—SEPTEMBER 1.

Nearly 6 per cent. for eight years on a Government Security

THIS WEEK'S DIVIDENDS

Interest is payable
this week on
National War
Bonds, 3rd Series,
3½% War Loan
(1914); 4% Victory
Bonds.

HOLDERS of securities on which dividends are payable this week, and Bank Depositors with money available for investment, should buy 5½ per Cent. Treasury Bonds.

The yield on these Bonds, including redemption, is £5 19s. 6d. per Cent. There are few investments affording equal security which give you so large a return on your money. You can count on getting substantial dividends every six months for the next 8 years, and at the end of that period you will be repaid £100 for every £97 invested now.

Your interest will be exempt from Corporation Profits Tax, and you will have the right to exchange your Bonds for 3½ per Cent. Conversion Loan next year, at the rate of £146 of Conversion Loan for every £100 of Treasury Bonds.

The purpose for which the Bonds are issued is to provide money, *not* for any fresh expenditure, but solely to meet existing national obligations as they mature.

Buy
5½%
Bonds

with your September Dividends

On sale daily through Banks, Stockbrokers and Money Order Post Offices. Bank Issue: £50 Bonds and upwards. Post Office Issue: £5, £20, £50 Bonds.

Buy Savings Certificates also.

THE MONEY MARKET.

As was inevitable, owing to the big creation of fresh credit for the payment of interest due on September 1st, money has been extremely abundant; balances were dealt in at 1 per cent. last Saturday, and have been placed at rates ranging down to 2 per cent. on several days this week; weekly fixtures have been lent by some of the banks at 3½ per cent. Discount rates were consequently depressed, and attempts to place December maturities at 4 per cent. were not altogether unsuccessful. The

market, however, was by no means voracious at this level, remembering that on previous occasions similar conditions have quickly been cured by quicker sales of Treasury bills, enabling Ways and Means advances to be cancelled; and yesterday the tendency was a shade firmer, on the result of the sale of the week's batch of Treasury bills.

	Sept. 9, 1921.	Sept. 2, 1921.	Aug. 26, 1921.	Aug. 19, 1921.	Previous Rate and Date Changed.
Bank Rate	5½	5½	5½	5½	6 (Jly. 21, '21)
Banks Deposit Rate	3½	3½	3½	3½	4 (Jly. 21, '21)
Discount Call	3½	3½	3½	3½	4 (Jly. 21, '21)
Houses Notice	3½	3½	3½	3½	4½ (Jly. 21, '21)

Market rate (3 months' bills)	4½	4½	4½	4½	..

* Additional to those offered by tender the preceding week.

The Bank return ought to be good for trade if deflation is really the cause for depression. The stock of gold increased by £1,000, and the circulation declined by £457,000, so that the Reserve is £458,000 higher. Against this small deflationary symptom, however, we can set an increase of 19 millions in the Government securities, and a consequent expansion of 19½ millions in the total deposits, of which 17½ went to Other. The circulation of currency notes fell by £85,000 to £319,168,900, which includes £1,925,300 for notes called in, but not yet cancelled. The fiduciary issue is £269,293,600, which is £48,261,600 below the maximum.

The following table shows public income and expenditure for the week ended September 3rd:—

RECEIPTS.	Min. £	EXPENDITURE.	Min. £
From Revenue	16170	Supply Services	11775
Taken from Exchequer Balances	691	Interest on Debt	17787
Amount borrowed	12173	Sundries	72
	29034		29034

These operations increased the National Debt by the sum of £12,172,703, and caused the following changes, which are reflected in our table of National Debt, given in another column:—

	Min. £		Min. £
Treasury Bonds	+ 620	Treasury Bills	- 14389
Advances by Public Depts. ..	+ 5400	Surrenders of Bonds, &c.	- 686
Bank of England Advances ..	+ 21000	Depreciation Fund	- 500
Civil Contingencies Fund ..	+ 1000	Other Debt	- 242
National Savings Certificates ..	+ 209		
Sundries	+ 958		
	+ 29188		- 16417

Customs and Excise added £3,521,000 to the revenue, and Property and Income-tax produced £6,818,000. The Floating Debt was increased by £11,135,000 to £1,358,131,000.

In the foreign exchange market the most striking feature has been the further rapid depreciation of German marks, which from 328½ on the 2nd have moved up to 372 on Thursday, but came back on Friday morning to 360 on the sudden springing up of a strongish Continental demand. It has been suggested in some quarters that the Germans have been deliberately weakening their exchange, partly in order to demonstrate the impossibility of reparation on the present scale, and partly to counteract the threatened anti-dumping legislation in England. There is little likelihood of truth in this suggestion. The certainty alone of labour difficulties on further depreciation is enough to frighten the German Government off such a policy, and there are certainly enough other explanations for the movement. Although the first reparation instalment has now been made, this has been achieved only by straining existing resources to their very limit, and, in addition, by short-term borrowing through Holland, which will have to be redeemed in the near future. The note circulation continues to increase, and there has been a

recrudescence of the movement to convert internal savings into some foreign currency at almost any cost. The continual discussion of reparation settlements is also having its effect, and even in France doubts are growing as to Germany's solvency in the near future. All this talk has naturally influenced the many holders of marks abroad, and it is significant that a large part of the selling during the last week has come from New York. The rate for dollars has moved relatively little during the week. After falling from 3.72½ on Saturday last to 3.71½ on Tuesday, it has climbed up quietly again to 3.73½ yesterday morning. At the same time, there is a considerable feeling of uncertainty as to future movements. The rate for futures stands at ¼ cent per month, a further narrowing on last week. Paris at 49.10 yesterday shows a more rapid rise than has taken place recently from 47.95 a week ago, and the rate is expected to go higher. Brussels at 50.05, as compared with 49, has again drawn a little closer to Paris. Italy, after its recent recovery, has again started to depreciate, being yesterday 85½ as compared with 83½ a week ago. One adverse feature in this exchange, of which perhaps not sufficient note has been taken, is the heavy falling off that has taken place in emigrants' remittances as the result of trade depression in America. Amsterdam at 11.75 has gone about 3 cents. in our favour, Switzerland at 21.75 about 9 centimes against us. Spain at 28.62 seems to have got steadier after its recent rise. Scandinavian rates have again been erratic, and Christiania has ended the week over half a krone higher at 28.40, Stockholm about 8 ore higher at 17.25, and Christiania, after being up to 21.90, about the same at 21.05. Helsingfors at 270, a little below the highest, is moving up again rapidly. In spite of excellent harvests, the disintegration of the Polish mark, due very largely to the muddled policy of the Government and the impossibility of extracting taxes from the peasants, continues its disastrous course, the rate being now about 14,750, as compared with about 10,700 on the 2nd. The London rate for Viennese Auslands-kronen has also reached a new high level at 3,550, and the assistance promised through the League seems as far away as ever. The Viennese (Inlands-kronen) rate on the 6th was 4,925, as compared with the London rate of 3,250. Prague at 310 is pretty steady, but shows an upward tendency. Budapest at 1,600 shows no signs of the recovery promised on good harvests and a restricted note issue. Belgrade, too, at 180 continues to rise more rapidly than of late, while Sofia is about 35 higher at 480. Bucharest also is continuing to disappoint those who expected an improvement following the harvest, and has moved up still more rapidly from 317 to about 362. To some extent the harvest has been worse than was expected, but the main difficulty remains, that of moving crops with an inadequate and grossly mismanaged transport system. Athens recovered a little during the week, but at 66.12 has lost most of this again. In South American exchanges there has been a slight but general movement against this country. The rupee has remained unchanged at just over 1s 4½d, while the yen at 2s 7d is just a little cheaper. Silver has been more active with bear covering and a good Indian demand, and although there was a slight weakening at the close, it is anticipated that China will be able to absorb sufficient to keep prices steady for a little time to come. Hong Kong and Shanghai are both rather higher than a week ago.

A SUMMARY OF NATIONAL FINANCE.

FINANCIAL YEAR, 1921-22 (TO DATE) APRIL 1 TO SEPTEMBER 3, 1921.

	£		£
Total spent	438,324,253	Raised by revenue ..	385,870,267
Inc. in balances	134,430	Net borrowings	52,588,416
Total	438,458,683	Total	438,458,683

ESTIMATES for YEAR 1921-22.

	£		£
Ordinary Receipts ..	1,058,150,000	Ordinary Expenditure	974,023,000
Special Receipts ..	158,500,000	Special Expenditure	65,705,000
Total	1,216,650,000		1,039,728,000
		Surplus*	176,922,000

* Owing to liabilities which could not be precisely calculated, it was estimated that the final balance would not exceed about £80,000,000.

EVENTS OF THE WEEK.

SEPTEMBER 3RD.—Mr Lansbury arrested.
SEPTEMBER 4TH.—Mr De Valera's reply published.
SEPTEMBER 5TH.—Trades Union Congress opened at Cardiff.
SEPTEMBER 6TH.—Unemployed riot at Dundee.
SEPTEMBER 7TH.—British Cabinet meets at Inverness. Grand Trunk Arbitration Board decides that 37 millions of stock is valueless. Retail coal prices reduced.
SEPTEMBER 8TH.—Cabinet's reply to Mr De Valera published. Price of flour reduced.
SEPTEMBER 9.—Informal conference between Chancellor of the Exchequer and French Finance Minister.

In the stock markets the principal event of the week was the violent fall in Grand Trunk stocks on Thursday, owing to the decision of the arbitrators that preference and ordinary stocks are valueless. Other markets have been steady, although inclined to dullness, with the exception of oils, in which there was a sharp reaction at the end of the week. Fluctuations in raw cotton prices disorganised business in yarn and cloth, and the outlook continues to be uncertain. Conditions are unsettled in the wool trade, and there is some difference of opinion over the continued maintenance of to-day's market price for wool, although quotations at this week's London sales have been firm. There is still some competition from France and Germany, despite the strike of textile operatives in the former country. There is little change in the iron and steel trades. It is stated that more open hearth steel works are about to restart, but the price of coke is not favourable for smelting. Works are still short of orders for manufactured iron and steel for export, although in some sections works are busy on home orders. There is still no business in foreign ore. Prices for hides and skins were inclined to advance slightly, but boot and shoe makers are only buying for immediate requirements. The oil and linseed market is inactive, large stocks arriving and big quantities being announced afloat, which cannot be absorbed until trade improves. Details of movements and full reports on the principal markets from special correspondents will be found on later pages of this issue.

HOLIDAY TASKS.

It must be admitted even by the most virulent critics of our present rulers that at least they get little peace or rest. With the Cabinet meeting in the Highlands to wrestle with the Irish problem at a time when most of us are or have been enjoying holidays under exceptionally pleasant weather conditions, we may surely spare some sympathy for Ministers in the Titanic task that they have to handle. It is only too true that they have done those things that they ought not to have done, and *vice versa*, but few will envy them the enjoyment of the "sweets of office," involving such continuous and terribly trying effort in the face of difficulties which grow up incessantly. Even the Chancellor of the Exchequer, who might have been thought to have secured a short spell of ease by handing over his most pressing problem to his Business Committee, amid a howl of derision which, we hope, may prove to have been too hasty—even he has to rush first to Inverness, to attend the Cabinet meeting on Ireland, and then to London, to confer with M. Doumer on the question of the division of the first German milliard of marks received on account of occupation expenses and reparations. In a later page our Paris correspondent describes once more the consternation with which French public opinion has received the idea that England should "divide with Belgium" this first milliard of marks, and tells us that this consternation was almost as great in the French Cabinet as in the public mind. We have every confidence in our correspondent's accuracy on this point, but it seems to show that the French Cabinet has been almost as dangerously unenlightened on the subject of the real nature of the agreement arrived at as the French public. It ought to have been clear to all who had given the proper amount of attention to this most important question, that Belgium had a prior claim on the German payments, and that if Belgium chooses to use part of her receipts in repaying advances received from this country, it is hardly correct on that account to describe England and Belgium as "dividing" the German payment. It ought also to have been clear that expenses of occupation had priority over reparation claims, and that under the terms of the Treaty and of the Spa agreement, the value of the grant of the Saar coal mines to France had to be considered as a payment in kind. It is true that this payment has not put any cash into the French Treasury, but it is surely possible for it to be made to do so, if the French Treasury so wishes, by a sale or lease of the right to work the coal mines. Moreover, it must be remembered that the French have received from Germany very considerable payments in coal which were certainly the equivalent of cash. In view of the very substantial assets which our Ally has thus received, it is clear that the keen perception of the French people only has to have the facts put before it plainly,

and will quickly recognise that its "consternation" has been unfounded. In the meantime it is somewhat amusing to find that French public opinion, which not long ago was convinced that Germany was being let off much too lightly, largely owing to the lukewarm support given by England to the French view on the indemnity, is now taking Mr Keynes as its "guide, philosopher and friend" on the subject of Germany's possible bankruptcy in the near future, and so is eager to secure as much as possible of any payments that are now forthcoming. Its uneasiness, also reported by our correspondent, owing to Mr Crammond's contention that the German indemnity ought to be restricted to a point that will not upset the world's economic equilibrium, evidently refers to an address delivered by him at the end of June, and referred to in the *Economist* of July 2nd. In it Mr Crammond was careful to point out that any attempt to re-open the indemnity question, because of its effects on our trade, would have to provide for the divergence of French and British interest on this point; and he urged that the whole problem should be reconsidered by France, the United States, and this country, on the understanding that Great Britain and America would cancel the French war debts. At the same time, it may be observed that the agreement lately made by the French with Germany for reconstruction work on the devastated areas certainly tends to reduce Germany's power to make reparation to the other Allies. This country can well afford to see France thus taking a prior lien on Germany's productive capacity with an indulgent and sympathetic smile, in view of France's much greater losses through the war; and every arrangement that helps to make French and German statesmen meet and talk amicably is a step in the right direction. But the Italians may not feel quite so philosophically on this point, and in any case, this French achievement must surely not be forgotten by France when she thinks herself wronged because the first cash payment by Germany brings her nothing. If she has to have coal and the Saar district and reconstruction goods, and cash to boot, some of her poorer Allies may begin to grow restive. All this will be very evident to France if once it is made clear, but in all countries there has been much too much reticence about the facts of the economic position. It is pleasant, however, to note that the tone of the French Press is admirable, and in this country, at least, the desire to do the fullest justice to France in this and all other matters is certainly universal.

At home the question of unemployment during the coming winter is necessarily engaging the attention of Ministers, and the inevitable new committee is getting to work with a view to stimulating relief schemes. With regard to the grant of relief to the unemployed, the Ministry of Health has issued a circular which will restrain those boards of guardians whose enthusiasm on the subject has been excessive. The chief principle enunciated is that relief, though sufficient to relieve distress, should be calculated on a lower scale than the earnings of a workman. Clearly this limitation is essential, as long as human nature is what it is, and might be more vigorously expressed. Most of us, if we could earn by idling anything near the reward of our labour, would prefer to cultivate the *dolce far niente*. The Trades Union Congress has been resolving that work or adequate maintenance should be provided by the State for every willing worker. The principle has long been recognised that it is a public duty to maintain those who cannot find work, so the resolution of the Congress will be accepted by all, with much variation in opinion on the definition of the word "adequate." But the terms in which it was discussed are significant. Mr Tillett was quoted by the *Times* as saying that "Parliament is in the hands of a financial gang without heart and without soul," and that we are living in a Paradise of rogues, murderers, and fools. This sort of rhetoric answers itself, but we have to remember that the present depression is causing a terrible amount of suffering among people who have no responsibility for it, and that this spectacle naturally inflames the tempers of those who face it.

OVERSEAS TRADE IN AUGUST.

THE figures of our overseas trade for last month are not such as to inspire enthusiasm, but taking into account the holiday season there is some ground for satisfaction in the improvement shown over the July figures. Imports are nearly £8 millions higher than in July, while British exports have risen by over £8 millions, and re-exports show a slight increase. As compared with August, 1920, however, the decline is very heavy, but allowance must be made for the fall in prices, which is without doubt largely responsible for the big discrepancy. The figures for August and the eight months are compared with those of the corresponding periods of 1920 in the table below:—

MONTH OF AUGUST.				
	1920.	1921.	Inc. or Dec. in August, 1921.	
	£	£	£	%
Imports	153,343,305	88,581,040	-64,762,265	-42.3
British exports	114,903,335	51,346,307	-63,557,028	-55.2
Re-exports	13,368,347	9,997,779	-3,370,568	-25.2
Total exports	128,271,682	61,344,086	-66,927,596	-52.0
Excess of imports over total exports ..	25,071,623	27,236,954	+2,165,331	+8.6

EIGHT MONTHS ENDED AUGUST 31.				
	1920.	1921.	Inc. or Dec. in 1921.	
	£	£	£	%
Imports	1,349,045,419	740,881,573	-608,163,846	-45.0
Exports	889,822,123	463,413,733	-426,408,390	-48.0
Re-exports	167,107,877	69,045,024	-98,062,850	-58.8
Total exports	1,056,929,997	532,458,757	-524,471,240	-49.8
Excess of imp'ts ov'r total exports ..	292,115,422	208,422,816	-83,692,606	-28.5

The import excess is over £2 millions higher than in August, 1920, but it is nearly a million less than in July last, and is not much over the average for the previous seven months. The total adverse balance for this year to date still shows a substantial reduction over the corresponding period of 1920, but this is due to the good figures of the first three months, for which a total reduction of £107 millions was shown.

The drop in imports as compared with last year has occurred as to £11½ millions under food, drink, and tobacco, £31½ millions under raw materials, and £21½ millions under manufactures. Practically the whole of the decline in first category occurs under wheat, imports of which from America fell by £5½ millions, from Argentina by £4½ millions, and from Canada by over £2 millions. Imports of meat increased by £2½ millions. The only group to show an increase under the raw material heading is coal, the value figures of which were £592,800. This compares with £4,885,450 for July. Heavy declines are registered for timber, cotton, and wool. Declines in manufactures are general, the largest being shown by machinery.

On the export side there was a substantial recovery in coal as compared with July, but as compared with August, 1920, the value figure is £2,372,400 lower at £5,668,600, although the volume exported, namely, 3,103,200 tons, compares with 1,847,400 tons twelve months ago. The bulk of the decline in total exports as compared with last year again occurs under the head of manufactured goods. Cotton yarns and manufactures alone account for a drop of nearly £25 millions. This is again partly a matter of price. The value of cotton piece goods, for example, fell from £28½ millions to £7½ millions, while the quantity dropped from 366½ million square yards to 212½ million square yards. Woollen and worsted manufactures dropped by nearly £8 millions to £3,633,100, while iron and steel and manufactures thereof fell from £12,164,300 to £2,796,600, the quantity declining from 276,100 tons to 74,500 tons.

The Board of Trade figures of the volume of trade show that the total tonnage imported in July was 4,050,000 tons, as against 4,195,000 tons in July, 1920, while exports amounted to 1,350,000 tons against 3,657,400 a year ago, and 8,702,900 tons in July, 1913. Some

interesting trade figures are given in the monthly review of the London Joint City and Midland Bank, the object of which is to show the internal as well as the external trade of the country. The tonnage of merchandise carried by the railways, is given, as affording the best available guide, and from this, together with the figures of exports and retained imports, it is deduced that, whereas during 1920 the tonnage of external trade other than re-exports and coal was only 80 per cent. of the total for 1913, the tonnage carried by the railways was practically the same as for the pre-war year, omitting coal in each case. During the first half of the current year, however, conditions changed considerably, and, as compared with the December quarter of 1920, the fall in railway freight has been very much greater than the fall in tonnage of the external trade, coal being omitted. The general trade of the country, it is shown, during the June quarter of 1921 bore the same proportion to the 1913 level as did the tonnage figures of exports and retained imports. The general inference drawn from the figures is that the decline in the tonnage of internal trade during the current year has been more rapid than the fall in the country's overseas trade, and that the tonnage of trade as a whole, other than coal, is only about half what it was in 1913.

Imports of gold coin and bullion were £6.2 millions in August against £3.7 millions in August, 1920, and £34.3 millions for the eight months, against £29.9 millions last year. Exports for August were £6.3 millions, against £4.7 millions a year ago, and £41.6 millions for the eight months against £51 millions. This year the United States has so far taken £39.4 millions. The import and export value figures for August this year and last and for the eight months are appended:—

THE THIRTEENTH CENSUS OF SCOTLAND.

THE publication of the Census of Scotland has followed close upon that for England and Wales. The population of Scotland on June 19, 1921, was found to number 4,882,288, of whom 2,348,403 were male and 2,533,885 were female. The total population is 121,384 more than that of the previous Census on April 2, 1911, and the intercensal increase is equivalent to 2.5 per cent. of the 1911 figure. The first official census of Scotland was taken in 1801, and at that time the population was found to be 1,608,420. Since then a census has been taken every ten years, and each successive census has shown an increase of population. The population first exceeded two millions in 1821, and three millions in 1861, and four millions in 1891. It is now fully three times what it was in 1801, and fully twice what it was in 1831.

The intercensal increase, 121,384, is the smallest found to date, the previous smallest being 173,552, which was that of 1861. The largest intercensal increases were those of 1901 and 1881, being 446,456 and 375,555 respectively. The intercensal rate of increase, 2.5 per cent., is the smallest yet shown in Scotland. From 1811 to 1851 the intercensal increase was in each case more than 10 per cent.—the maximum of 15.8 per cent. being that of 1821. In 1861 the increase was only 6 per cent., in 1871 it was 9.7, and in 1881 it had risen to 11.2 per cent. In 1891 it fell to 7.8, but in 1901 it had risen to 11.1, and in 1911 it had again fallen to 6.5.

TABLE SHOWING POPULATION OF GREAT BRITAIN AND NEIGHBOURING BRITISH ISLANDS.

	1911.			1921.		
	Persons.	Males.	Females.	Persons.	Males.	Females.
England.....	34,045,290	16,421,298	17,623,992	35,678,530	16,984,087	18,694,443
Wales.....	2,025,202	1,024,310	1,000,892	2,206,712	1,098,133	1,108,579
Scotland.....	4,760,904	2,308,839	2,452,065	4,882,288	2,348,403	2,533,885
Isle of Man.....	52,016	25,937	26,079	60,238	27,321	32,917
Jersey.....	51,898	24,014	27,884	49,494	22,338	27,156
Guernsey and ad- jacent islands.....	45,001	22,215	22,786	40,120	18,926	21,194
Ireland.....	4,390,219	2,192,048	2,198,171	4,470,000?	?	?

The table shows increases in the numbers of persons, males and females, except in the cases of the Channel Islands, which show decreases at the recent Census under each heading:—

TABLE SHOWING INTERCENSAL INCREASES AND DECREASES OF PERSONS PER CENT.

Census.	England.	Wales.	Scotland.	Great Britain.	Isle of Man.	Jersey.	Guernsey and Adjacent Islands.
1901.....	+ 12.1	+ 13.3	+ 11.1	+ 12.0	+ 1.5	+ 3.6	+ 14.1
1911.....	+ 10.5	+ 17.7	+ 6.5	+ 10.4	+ 5.0	+ 1.3	+ 7.6
1921.....	+ 4.8	+ 9.0	+ 2.5	+ 4.7	+ 15.8	+ 4.3	+ 10.8

The considerable percentage increase at the late Census shown in the case of the Isle of Man is probably due to an influx of holiday visitors, a cause which showed abnormal increases in the population of Southend-on-Sea and Blackpool and other seaside resorts in England, and which is specially referred to by the Registrar-General for Scotland in connection with the great percentage increases shown in certain places in the counties of Bute, Ayr, and Argyll. In Bute the two burghs of Millport and Rothesay are shown to have increased by 261.5 and 63.7 per cent.; in Ayr the population of the burgh of Largs rose by 153.8 per cent., that of Prestwick by 74.5 per cent., and that of Girvan by 62.6 per cent.; whilst in the burgh of Dunoon, in Argyll, the percentage increase was 114.8. These increases are shown to have taken place in districts to which town populations go for summer quarters. The disadvantage of the delay of the date of the Census from April 24th to June 19th is thus clearly shown:—

TABLE SHOWING the INCREASES or DECREASES PER CENT. of the COUNTIES OF SCOTLAND.

Census of 1921.	Inc. %	Increase = +, Decrease = -.	Dec. %
Bute.....	85.4	Dumfries..... + 3.5	Moray (Elgin)..... 4.3
Ayr.....	11.5	Kinross..... + 1.9	Roxburgh..... 4.7
Dumfries.....	10.9	Perth..... + 0.9	Inverness..... 5.6
Haddington.....	9.8	Peebles..... + 0.5	Nairn..... 5.7
Fife.....	9.4	Stirling..... + 0.5	Banff..... 6.7
Argyll.....	8.4	Midlothian..... - 0.3	Orkney..... 6.9
Renfrew.....	7.1	Kirkcudbright..... - 3.2	Selkirk..... 8.1
Kinross.....	5.8	Aberdeen..... - 3.6	Ross and Cromarty..... 8.5
Linlithgow.....	4.7	Forfar..... - 3.7	Shetland..... 8.6
Clackmannan.....	4.6	Wigtown..... - 3.8	Caithness..... 11.6
Leven.....	3.6	Berwick..... - 4.2	Sutherland..... 11.8

Of the 33 counties, the table shows that 16 recorded an increase upon the Census of 1911, and 17 showed a decrease. To what extent the considerable percentage decrease in certain of the counties is due to the recent extension of deer forests remains to be explained.

The publication of the table showing the population of the burghs of Scotland enables us to construct a table showing the cities and towns of Great Britain with populations exceeding 100,000:—

London (City and Administrative County).....	4,483,249	Salford.....	234,150	Middlesbrough.....	131,103
Glasgow.....	1,034,069	Plymouth.....	209,857	Derby.....	129,836
Birmingham.....	919,438	Cardiff.....	200,262	Leyton.....	128,432
Liverpool.....	805,118	Croydon.....	190,877	Coventry.....	128,205
Manchester.....	730,551	Bolton.....	178,678	Walthamstow.....	127,441

Bristol.....	377,061	Southampton.....	160,997	Norwich.....	120,653
West Ham.....	300,905	Sunderland.....	159,100	Preston.....	117,426
Kingston-on-Hull.....	287,013	Aberdeen.....	158,969	South Shields.....	116,667
Bradford.....	285,979	Swansea.....	157,561	Huddersfield.....	110,120
Newcastle-on-Tyne.....	274,955	Tottenham.....	146,695	Southend-on-Sea.....	106,021
Nottingham.....	262,658	Birkenhead.....	145,592	Burnley.....	103,175
Portsmouth.....	247,343	Oldham.....	145,001	St Helens.....	102,675
Stoke-on-Trent.....	243,304	East Ham.....	143,304	Wolverhampton.....	102,373
Leicester.....	234,150	Brighton.....	142,427	Blackpool.....	99,640

The population of London is less than it was in 1911, and the populations of Bradford, Bolton, Oldham, Blackburn, Norwich, and Burnley are also lower. Probably the holiday season accounts for the diminution in the Census returns for the northern cities. The area of Birmingham was extended in 1911, after the date of the Census, and the area of Glasgow was extended in 1912. In 1911 the

highest populations of our colonial cities were those of Sydney (629,503), Melbourne (588,971), Montreal (470,480), Toronto (376,538), and Johannesburg (237,104). The cities of Adelaide, Brisbane, Perth, Auckland, Winnipeg, Vancouver, and Cape Town also had populations exceeding 100,000 in 1911.

A glance at the Parliamentary constituencies of Scotland shows that for Montrose district the female voters outnumber the male voters, and that for South Edinburgh the numbers of male and female voters are nearly equal.

THE RAILWAYS ACT—RATES.

(BY A CORRESPONDENT.)

It will be difficult to appraise at its proper value the arrangement aimed at in the third part of the Railways Act, which is occupied with the problem of rates, without fully realising the importance and significance of the new Rates Tribunal. It may be useful, therefore, to see what machinery other countries are employing to control railway rates. In America, as in England, there is a rooted jealousy from time immemorial towards an executive department. So great has been the force of this tradition that it has now grown into a habit. In France, on the other hand, they shook off this hatred of the Administration as soon as the day of popular institutions dawned on that country.

This confidence of the French people in the Executive resulted naturally in entrusting the regulation of rates to a Department of the Government—the Public Works Department. Parliament there, as in England, had the right to fix the maxima. But below this maxima the Minister could sanction or refuse any changes proposed by the companies. The defective part of the arrangement was that the Minister could only allow or disallow a rate *en bloc*. He had no power to substitute another in its place. In other words, he had no power to initiate rates. The above statement is, however, subject to a reservation that he could introduce an exceptional rate, needed in the interests of the nation. According to the new Bill which is pending before the French Parliament, all rate-making power has been assumed by the Minister, who will be advised in these matters by the Conseil Supérieur, the final word resting with the Minister of Public Works.

The experience of America is a more valuable guide to this country. It has not only been alike in its hereditary jealousy of the Executive, but it has shown the same partiality towards the judiciary. Force of circumstances led the people at last to recognise the necessity of creating the Inter-State Commerce Commission in 1887. Not the least of its powers were those for regulating rates. But the decisions of the Commission were subject to a broad judicial review. For a long time judicial interpretation of these powers virtually “emasculated” the Commission. Congress was forced every time to come to its aid in order to see that its aims were not frustrated by the law courts. Four Acts have been passed in 1903, 1906, 1910, and 1920 respectively to amend the earlier Act and to strengthen its administrative arm to deal effectively with matters of rate regulation. It can now prescribe just and reasonable, or maximum or minimum, or maximum and minimum, rates. It can now suspend of its own motion any new rate or regulation for four months until it has determined upon its lawfulness. Rate changes are therefore no more possible without determination of their reasonableness in advance.

The decided preference of the English people for the judiciary led to entrusting the powers of rate regulation to the Railway and Canal Commission. It had powers of adjudicating upon cases of undue preference. The Railway and Canal Traffic Act, 1894, which further limited the powers of the companies, at the same time increased the powers of the Railway Commissioners. It provided that in the event of any complaint being made of any increase

of rates, direct or indirect, since December, 1892, “it shall lie upon the company to prove that the increase is reasonable.” The complaint, in the first place, was to go to the Board of Trade, and, failing settlement, the trader could appeal to the Commission. The main remedy of the people was, therefore, before a judicial body, and not an administrative one. It is true that the Parliament had, and still retains, the right of statutory maxima; but hardly three years had elapsed after that elaborate scheme of maxima had been prepared when it was found necessary to pass the Act of 1894 (reference to it has been made above), which virtually confessed the uselessness of the maxima as a means of protecting the public.

To summarise briefly, the problem of rates concerns two main interests: (1) The companies; (2) the public, who act through their accredited leaders in Parliament. The latter has attempted to safeguard the interests of the public by two methods: (1) By the exercise of legislative functions—*e.g.*, prescribing the maxima; (2) partially delegating its own powers to an agency, either a judicial or an administrative body. In France it was clear to the people from the outset that the Executive was the most fitted to protect the public. But the Parliament there has clung until to-day to the right of fixing the maxima. The new Bill, however, withdraws that power from the Houses, and authorises the Minister to go beyond the maxima.

American experience of rate regulation has an object-lesson for England. The only escape from the desperate plight in which judicial control had landed the country lay in the strengthening of the Commission. Professor Ripley points out three main objections to judicial control: (1) “The only remedy for an unjust rate is not to continue an unfair one, but as speedily as possible to substitute a reasonable charge.” (2) “Correction can be applied only by an expert body, possessed of the same sort of knowledge had by those who issued the tariff.” (3) “Judicial control in contradistinction to administrative regulation is necessarily intermittent than steady and constant.” To these may be added the difficulties of form and procedure necessarily attendant upon a court of law. As for its legislative power, Congress had early in 1906 empowered the Commission to fix the maximum rates. The new Act of 1920 authorises the Commission to prescribe any rate which it considers just and reasonable. This delegation of power has been made on the following ground:—“There may be such delegation where the purpose in the original conferring of the powers can be subverted only by delegation to an agent. Obviously Congress cannot spend time and labour upon rate-making, were it economically competent to do so. If the power is to be executed at all, practically it can be done only through an agency like the Commission.”

The above reasoning leaves no doubt that the creation of the Rates Tribunal will go to satisfy the most crying need of the country. The Railway and Canal Commission is constitutionally unsuited to handle and decide upon matters concerning the complex problem of rates. Parliament, by allowing the Rates Tribunal to fix the maxima beyond which Parliamentary sanction will be needed, has cut its own hands off. The Rates Tribunal can fix these at a limit, as will make the necessity of the sanction of Parliament very remote. The powers of the Railway and Canal Commission have been transferred to the Tribunal. Its powers have been further extended to include the power of rate-making.

Despite its designation, which may mislead people into a belief that it is a legal tribunal, it is nothing of the sort. It is pre-eminently an administrative arm of the Executive, as it ought to be, with both judicial and legislative powers added to it. That this combination of powers in the hands of the Tribunal is necessary has been abundantly proved by events in this country and others. Promptness to deal with the rate questions has been the guiding aim in constituting the Tribunal. How far the above object has been adhered to will be clear from the statement of the Minister in the House:—“What we want is not a body representing particular interests or with a very large number of co-opted members. We think if we have a judicial body of three—one a lawyer, one a man with railway experience, and one a man of commercial experience—you will get a suitable body. Are we to have a judicial Tribunal or a sort of Conciliation Conference?”

AMERICA'S POPULATION POLICY.

(BY A CORRESPONDENT.)

THE United States have been singularly blessed by Providence with vast and varied resources. They possess an extraordinarily fruitful soil, an excellent climate, more than half of the world's coal and iron, more than half of the world's water-power, &c. They dominate the world's markets with their wheat, meat, petroleum, cotton, and many other commodities too numerous to mention. However, one of their most precious resources consists not in dead natural products, but in men. The vast natural wealth of the United States could be developed only owing to the rapid increase of the inhabitants. That increase has not taken place fortuitously, as is widely believed, but it is due to the farseeing policy of successive American Governments. Colbert and Frederick the Great taught that the greatest wealth of nations consists in well-occupied men. The extraordinary expansion of America's wealth is due to the fact that the Great Republic has received for many decades more than half of the overseas emigrants of the world.

Progress is a matter of comparison. During the last hundred years the population of the United Kingdom and of the United States has increased as follows:—

United Kingdom.		United States (without Outlying Possessions).	
1821.....	21,272,187	1820.....	9,638,453
1841.....	27,036,450	1840.....	17,036,353
1861.....	29,321,288	1860.....	31,443,321
1881.....	35,241,482	1880.....	50,155,783
1901.....	41,976,827	1900.....	75,994,575
1921 (estimated)....	47,500,000	1920.....	105,683,108

A century ago the population of this country was more than twice as great as that of the United States. The United Kingdom was far ahead of the United States in population, wealth, and power. Even in the age of Cobden England's supremacy in men and means was maintained. The opening up of the United States by railways, and the bridging of the Atlantic by the steamship, brought about the peopling of the Western States of the Republic, which was effected chiefly by millions of European emigrants. Never in the history of the world has there been so gigantic a transference of population as that which has taken place from Europe to the United States. The great stream of migrants, and even of British migrants, has flowed, not to the British overseas possessions, but to the United States. A few millions wisely spent by British Governments might have completely changed the balance of political and of economic power throughout the world. Before long the United States may have twice as many white inhabitants as the British Empire, which possesses a territory that is four or five times as large as that of the Great Republic.

The founders of the Republic believed that the position of the new State was very insecure because of the vastness of its territory and the sparseness of its population. They encouraged immigration by every means in their power. That may be seen from numerous statements of Abraham Lincoln and other leading statesmen. The first law establishing federal control over immigration was passed in 1882, but its aim was not to discourage immigration in general, but to exclude undesirable immigrants who were likely to be a burden to the country. Only quite recently that old-established policy of encouraging immigration has been reversed.

The American immigration statistics have not been kept very satisfactorily. For many decades the American authorities recorded the number of immigrants without taking note of the number of those who temporarily or permanently left the United States. Consequently the American immigration figures must be considered with great reserve. Only a few years ago the immigration figures were supplemented by emigration statistics, so that we are now able to find out how many people on balance migrate per year to the United States. According to the defective statistics existing, the United States received from 1820 to 1920 33,630,104 immigrants. Up to 1844 the number of arrivals increased slowly from 8,385 in 1820 to 78,615. Then a rapid increase took place, owing to the failure of the harvest in Ireland and on the Continent, and owing to political commotion. By great waves the number of yearly immigrants reached 427,833 in 1854,

458,803 in 1873, 788,992 in 1882, and 1,285,349 in 1907, which is the largest figure on record. The full meaning of these figures may be gauged from the fact that immigration from 1776 to 1820 is estimated to have come to 250,000. During the first 44 years of the Republic immigration per year came only to a little more than 5,000.

While the immigration figures are not very reliable, the decennial censuses are trustworthy. We learn from them that the number of foreign-born inhabitants of the Republic has increased from 4,138,697 in 1860 to 13,515,886 in 1910. At present the number of foreign-born people in the United States should exceed 16,000,000. Naturally, the full effect of America's population policy cannot be gauged from these figures, for we must add to the foreign-born inhabitants of the Republic their offspring. At the census of 1910 it was found that there were in the Republic 13,345,543 foreign-born whites, 12,916,311 native white Americans who were the children of a foreign-born mother and a foreign-born father, while there were 5,981,526 native whites possessing one foreign-born parent. It follows that fully one-third of the present white population of America consists of foreign immigrants and of the children of foreign immigrants. Not unnaturally, foreign immigrants and their children are in the majority in many towns and country districts. At the census of 1910 New York contained only 921,318 people of native white parentage, while there were 1,927,703 foreign-born whites in the town and 1,820,141 whites of foreign or of partly foreign parentage. In Chicago and many other places the position is similar to that of New York. That great town owes its importance to foreign immigrants. It is supposed to contain more than 1,000,000 Jews, a number three times as large as that of the United Kingdom. There were in 1910 in New York 484,189 people of Russian birth, 340,765 native Italians, 278,114 German immigrants, 252,662 people of Irish birth, 190,237 migrants from Austria, 103,023 people from Great Britain, &c. One cannot wonder that one sees on the American bookstalls newspapers in dozens of languages.

The character of America's immigrants has changed very greatly. For decades the United Kingdom and Germany were almost the only sources which filled the human reservoir of the Republic. In the 'sixties Scandinavia and Austria-Hungary became important, and in the 'seventies Italy, Russia, and the countries of South-Eastern Europe came to the fore, while German and British migrants declined rapidly in number. Of late years the vast majority of immigrants into the United States consisted of illiterate Italians, Poles, Russians, Roumanians, Greeks, Turks, &c. Not unnaturally, many American patriots became alarmed at the change in the character of the millions arriving from abroad, and the demand to "put up the bars" against the illiterate and largely unamalgamable people from Southern and from Eastern Europe and from Asia Minor became more and more insistent. Besides, organised labour looked upon immigration with an unfriendly eye. Foreign immigrants readily undertook unskilled work at wages which native-born Americans declined to accept. Foreign immigrants became habitual strike-breakers. Certain unskilled occupations became the monopoly of foreigners. One never meets in America a native-born servant, waiter, shoemaker, navvy, or unskilled miner. All the rough and unpleasant work is done by immigrants. Patriotic considerations and labour pressure combined the passing by the House of Representatives of a Bill restricting immigration by the overwhelming majority of 276 to 33 votes on May 19th of this year. By that Act immigration is restricted up to July 1, 1922, to 3 per cent. of the aliens resident in the United States in 1910. The platform of the Republican party demands the restriction of immigration "such as to ensure that the number of foreigners in the country at any time shall not exceed that which can be assimilated with reasonable rapidity, and to favour immigrants whose standards are similar to ours." It seems not unlikely that drastic restriction of immigration will become a permanent feature of America's population policy. Such a change would obviously seriously affect the growth of the Republic, which is largely due to the liberal immigration policy pursued in the past.

Painstaking investigations have revealed the fact that the foreign-born are far more prolific than the native-born

Americans. The important Report on the Natural Resources of the United States, published during the Presidency of President Roosevelt, contained a most interesting forecast of the future growth of the population of the Republic. During the decennial periods the increase of population had been slackening from 35 per cent. between 1790 and 1800 to 21 per cent. between 1890 and 1900. Assuming that that increase should continue declining progressively at a similar rate, it was estimated that the United States would contain 150,000,000 in 1950, 249,000,000 people in the year 2000, and 500,000,000 people in the year 2100. Such an increase seems quite possible in view of the vastness of America's natural resources. If peopled as densely as Spain, the Republic should have room for 300,000,000 people, and if peopled as densely as Germany or Italy, it should have room for 1,000,000,000 people. However, the estimate was based on the assumption of unrestricted immigration. The reversal of that policy may falsify the forecast completely.

FINANCIAL REFORM IN HUNGARY.

(BY OUR WARSAW CORRESPONDENT.)

ONE of the most noteworthy events in the financial situation of Central Europe in the course of this year has been the rise of the Hungarian krone. At the end of December the quotation of Budapest at Zurich was 1.15. In May the Hungarian krone rose to 2.20, and though it has declined since, it stands actually at about 50 per cent. higher than at the end of the last year. During the same time the currencies of the other Succession States declined, with the exception of the Czecho-Slovakian krone. The Polish mark lost about 75 per cent. of its value, Agram fell from 4.10 to 3.20, Vienna from 1.35 to 0.65.

The rise of the Hungarian krone is due in the first instance to the financial policy of Mr Roland de Hegedüs, who since the end of last year is at the head of the Ministry of Finance. His programme of financial reform is based on two very simple devices—economy and taxation. Though this remedy for all monetary evils connected with a debauched currency is generally known to all Ministers of Finance, Mr Hegedüs' merit consists in having forced the patient to swallow the bitter pill. He accepted the post of Minister of Finance only under the condition that he could exercise an absolute dictatorship over the expenses of all departments of the State. In this respect he has been merciless. He abolished Hungarian embassies in neutral countries, sold a part of the motor cars which were at the disposal of higher officials, and refused the credits to all departments which he considered as superfluous.

At the same time he increased the taxes considerably. Mr Hegedüs had to overcome, in shaping his financial programme, the same difficulties with which all other Ministers of Finance, especially in Central Europe, have to cope. The public wealth has passed during the war to a considerable extent from persons whose income could be easily ascertained into the hands of speculators, who without great difficulty can hide it from the tax gatherer. Mr Hegedüs gave in one of his speeches an interesting illustration of the methods actually used by reluctant taxpayers. One of his friends since the Armistice four times changed his citizenship according to rumours of a capital levy which was to be introduced in one of the Succession States.

Under such conditions the financial policy must find new methods of distributing the burden of taxation according to the paying power of the contributors. Mr Hegedüs obliged all joint-stock companies to issue shares to the value of 15 per cent. of their subscribed capital. This new issue is to be handed over to the Government, which has the right to sell the shares at the market price. The companies, however, have a right of pre-emption. This reform caused a panic among the shareholders. By this means, however, the unscrupulous capitalist who hid his funds from the financial authorities was obliged to contribute his share to the expenses of the State.

Besides the taxes mentioned, other taxation bills have been worked out by Mr Hegedüs. The most important are:—

1. A tax amounting to the total income of the contributors during the last three to five years will be levied. This tax will be introduced instead of a capital levy.

2. The Government is taking 20 per cent. of all foreign stocks and currencies. The banks are obliged to give the names of all persons who, according to their knowledge, have acquired since the beginning of the war foreign shares, bonds, &c.

3. Certain taxes on articles of consumption are introduced, as, for instance, a matches tax, a wine tax, a cigarette paper tax, &c.

4. A turnover tax.

It is certainly too early to pass a final judgment on Mr Hegedüs' financial reform. But it may be said already that the Hungarian Minister of Finance succeeded where most of his colleagues in other Central European countries failed. In March Mr Hegedüs could make before the Diet the announcement that during that month the expenses of the country were covered by the revenues. It was not necessary for balancing the Budget to resort to the printing press. Mr Hegedüs promised that beginning with May 1st the Hungarian currency would not be further debauched by new paper issues. In this respect he was not able to keep exactly his promise, as shown by the figures below:—

	Notes in Circulation. Millions of Kronen.
April 30, 1921	13.1
May 31, 1921	13.7
June 30, 1921	18.1
July 31, 1921	15.8

In June the circulation increased by 4.4 milliards. Though it has declined since, the actual level is higher than that at the end of April. Nevertheless, if compared with the inflation in other Central European countries—Czecho-Slovakia excepted—this result can be considered favourable. Mr Hegedüs' financial reform is a proof of the great power which can be exercised even under the most unfavourable conditions by a firm hand.

Business Notes.

Coal Output.—The production of coal from the mines of Great Britain for the week ended August 27th shows a further decline, the total of 4,102,300 tons comparing with 4,327,800 tons in the previous week, 4,526,600 tons for the week ended August 13th, and 4,590,600 tons in the corresponding week of last year. The only districts to show an increase on the previous week are Northumberland and Scotland.

Safeguarding of Industries.—Under Section 1 (5) of the Safeguarding of Industries Act, 1921, which provides that for the purpose of preventing disputes arising as to whether any goods are or are not any goods chargeable with duty under Part I. of the Act, the Board of Trade may from time to time issue lists defining the articles which are to be taken as falling under any of the general descriptions set out in the Schedule to the Act, the Board of Trade have prepared lists defining the articles which are to be taken as falling under the following general descriptions set out in the schedule, viz.:—Optical glass and optical elements whether finished or not; optical instruments, scientific glassware, laboratory porcelain, scientific instruments, gauges and measuring instruments of precision of the types used in engineering machine shops and viewing rooms, whether for use in such shops or rooms or not; compounds (not including ores or minerals) of thorium, cerium and the other rare earth metals; synthetic organic chemical (other than synthetic organic dyestuffs, colours, and colouring matters imported for use as such, and organic intermediate products imported for their manufacture), analytical re-agents, all other fine chemicals (except sulphate of quinine of vegetable origin), and chemicals manufactured by fermentation processes. The lists will, it is hoped, be published about the beginning of next week, and will be obtainable either directly or through any bookseller from H.M. Stationery Office.

HARRISONS & CROSFIELD, LIMITED.

(Associated with Harrisons Ramsay Proprietary, Ltd., established throughout Australasia.)

Eastern and General Merchants.
Commercial Agents for Sale of Produce.

Agents for Engineering and Estate
Supplies and Hardware generally.

1-4, Great Tower Street, London, E.C.3.

The Crops.—The monthly report of the Ministry of Agriculture and Fisheries states that the long drought was broken during August, and in the north and west there was a good deal of rain, though in the south-eastern half of the country the rainfall was comparatively small. The corn harvest was not hindered to any appreciable extent, except in the north and west, and throughout the greater part of the country practically all the corn was secured in good condition by the end of the month. Where there was more rain, however, progress was slow, and in the extreme north very little corn had been carted by the end of August. Some sprouting is reported from the north and from parts of Wales. Wheat is generally of good quality, though a certain amount of damage by smut is reported. The crop is now estimated to be heavier than was anticipated a month ago. Winter oats and early spring crops of barley and oats are generally fairly satisfactory, but, on the whole, crops are light. The quality of the oats is generally good, but much of the barley is reported to be variable. Both beans and peas are light crops. The former were damaged by fly, and the latter filled badly during the drought, and maggots did some damage. Summarising the returns it would appear that wheat, barley, and oats have turned out to be rather heavier crops than appeared likely when standing, but all crops except wheat will be under average. Expressing an average crop by 100, the probable yields per acre are indicated by the following percentages:—Wheat, 104; barley, 89; oats, 89; beans, 85; peas, 86; potatoes, 81; turnips and swedes, 70; mangolds, 82; and hops, 89.

Port of London.—The report of the Port of London Authority for the year ended March 31, 1921, shows a further substantial recovery in the trade of the Port, the net tonnage of vessels arriving and departing with cargoes and in balance in 1920 amounting to 32,758,604 tons, as compared with 26,335,191 tons in 1919 and 14,654,008 tons in 1918. The net register and deck cargo tonnage of shipping increased by 3,420,672 tons, or 16.4 per cent., of which 2,612,088 tons were in the foreign and 808,584 tons in the coastwise trades. A comparison of financial results with those of previous years is given below:—

For Year Ending March 31.

	1914.	1917.	1918.	1919.	1920.	1921.
Total revenue	£ 3,434,453	£ 4,567,426	£ 4,407,846	£ 5,723,690	£ 8,305,801	£ 10,043,731
Total expenditure ..	£ 2,217,822	£ 2,786,946	£ 2,910,599	£ 3,532,604	£ 5,531,726	£ 7,101,691
Balance of rev.....	£ 1,216,631	£ 1,780,480	£ 1,497,247	£ 2,191,086	£ 2,774,075	£ 2,942,130
Fixed charges	£ 932,786	£ 1,159,140	£ 1,226,917	£ 1,264,567	£ 1,600,323	£ 1,944,166
Surplus revenue	£ 283,845	£ 621,340	£ 270,330	£ 926,519	£ 1,173,752	£ 997,970
Brought forward	£ 69,637	£ 232,059	£ 340,465	£ 341,953	£ 349,384	£ 383,347
Written off, &c.	£ 373,482	£ 853,399	£ 610,795	£ 1,268,472	£ 1,523,136	£ 1,381,317
Carried forward	£ 281,578	£ 512,934	£ 268,842	£ 919,088	£ 1,139,789	£ 485,273
	£ 91,904	£ 340,465	£ 341,953	£ 349,384	£ 383,347	£ 896,044

The amounts written off include £250,000 for expenditure on works other than general repairs and renewals and £150,000 to general reserve, which now stands at £983,337. Port stock issued amounts to £28,090,459, out of an authorised total of £32,647,156. The table below shows the recovery made by the principal ports

as regards values of total imports and exports (excluding coastwise goods):—

	1918.	1919.	1920.	Inc. in 1920.
London (including Queenborough).....	£541,909,302..	£819,875,330..	£1,005,276,386..	22.6%
Liverpool	682,997,302..	827,986,112..	1,091,657,022..	31.8
Hull	90,398,722..	148,023,115..	172,951,919..	16.8
Manchester (including Runcorn)	107,082,759..	146,890,745..	207,683,045..	41.4
Southampton	39,715,812..	41,046,404..	88,509,359..	115.6
Glasgow	96,536,848..	110,248,762..	158,126,941..	43.4

During the 12 months ended March 31, 1921, the Authority landed or received 2,872,903 tons of import goods for warehousing or for immediate delivery, an increase of 173,722 tons, or 6.4 per cent., as compared with the previous 12 months.

Grand Trunk Trouble.—A Stock Exchange correspondent writes:—The dramatic event of the week in the Stock Exchange markets has been a violent fall in Grand Trunk stocks. A telegram was received by the company on Thursday morning to the effect that two of the arbitrators found that the first, second, and third preference stocks and the ordinary stock were "valueless," though the third arbitrator, Mr Taft, took the view that these stocks have a value, and he placed such value as slightly more than the maximum fixed by the Act. In spite of the dissentient opinion, Grand Trunk prices melted rapidly. The first preference fell 22 points, seconds 16½, thirds 7, and the ordinary stock, which had been 5½, dropped to a somewhat nominal 2½. The prices of the senior stocks gave way a little, though Grand Trunk 4 per cent. debenture stock remained at 61, the 4 per cent. guaranteed, which has been standing at 61, went back to 58½, and Grand Trunk Pacific 4 per cent. debenture at 46½ showed a fall of a couple of points. It is not too much to say that the market was paralysed by the unexpected character of the arbitrators' award. Accustomed as they have been in the past to bitter disappointments, proprietors of Grand Trunk stocks had been nursing a hope, especially during the past few days, that the award of the arbitrators would justify the stocks in standing substantially higher than those from which the declines already enumerated took place. There was a little modest buying, and Trunk firsts, for instance, had gone up from 42 to about 47. The crash befell not so much as the result of a rush to realise, but as a precautionary measure against the possibility of holders trying to get out. There is something peculiarly sweeping in the word "valueless," and this disorganised the market. To deal at any prices became a matter of great difficulty. Grand Trunk first preference changed hands on Wednesday night at 46½, and the first bargain recorded on the following morning was at 24. Other markings were somewhat similar. It was taken for granted that the company would at once lodge an appeal against the findings of the arbitrators, and once more, as on previous occasions, opinion became very vocal on the point that confiscatory action on the part of the Dominion Government was inconceivable, in the light of the necessity for the Dominion to maintain its credit in the London money market. Such considerations, it must be confessed, do not appear to have weighed with Canada very much in recent years. The United States, it is understood, provided capital where necessary, and Canada has been able to finance her main obligations without much difficulty by internal loans. There is accordingly so much the less strength in the argument that the Dominion is bound to act generously towards Grand Trunk proprietors through the lowest standpoint of retaining her reputation from the credit point of view. The majority arbitrators refer to a "consideration" which might be paid to the Grand Trunk stockholders by way of a compassionate allowance, but this sounds far from hopeful to those who had been looking forward to what they regarded as a reasonable sum being allocated to the service of the preference and ordinary stocks. The Grand Trunk market is one of the few in which prices have failed to rise to the pre-war making-up prices of July, 1914. Grand Trunk firsts now stand about 66 points below that figure, and the second preference at 18 is some 53 points less than the pre-war contango price. It is already declared that the Trunk collapse will cause distress and trouble in other markets,

and a sharp reaction amongst oil shares was at once attributed to selling on behalf of those who saw themselves enormous losers over the Grand Trunk arbitration decision.

Raw Cotton.—Our Manchester correspondent writes:—Since the beginning of this month the raw cotton markets of the world have been very excited. There has been a larger turnover in futures than for a few years back. At the end of last week the official report of the United States Government on the crop confirmed the previous private, unfavourable advices. The condition was given as 49.3 per cent., against 64.7 per cent. a month previously, and 67.5 per cent. at the end of August, 1920. On the basis of these figures it is estimated that the output will only be about 7,000,000 bales, against 11,377,000 bales last season. The spot quotation for fully middling American cotton in Liverpool, on September 1st, was 10.76d. On the following day there was a rise of nearly 1d per lb, the figure being 11.70d. Monday brought an advance of 56 points, followed by a further rise of 62 points on Tuesday, whilst on Wednesday all recent records were broken by prices being put up 182 points, the official rate being 14.70d. Late on Wednesday afternoon there was a break in futures, and on Thursday the spot quotation was reduced 160 points to 13.10d. The changes in the Egyptian staple have been even more remarkable. On September 1st the price for fully good fair Sakellaridis on the spot in Liverpool was 18.00d. By Monday the quotation had advanced to 20.00d, and on Wednesday there was a smart rise of 4½d a lb to 24.50d. A reaction occurred on Thursday, there being a reduction of 3d a lb to 21.50d. It may be mentioned that the lowest quotation for American cotton this year was on February 28th, the figure being 7.13d, and on the same day 13.00d was posted for Egyptian cotton. It is almost unnecessary to state that there has been tremendous gambling in the article. Some traders were caught short at the beginning of the week, and rushed to cover, but most of the operations in futures have been of a speculative character. Business in yarn and cloth for the time being is demoralised, and the tone in New York and Liverpool will have to be much steadier before any trade of importance can be done. For many months Manchester merchants have been seriously handicapped by the steady fall in the value of stocks of manufactured goods. This tendency has now been checked, and supplies on hand have appreciated. The financial position of some leading concerns will undoubtedly be improved by the recent developments.

Cotton Cloth Export Statistics.—At the beginning of last year the Board of Trade made a change in compiling the statistics relating to exports of cotton cloth. Formerly the returns were made in linear yards, but it was decided to make an alteration to square yards. At the time, writes our Manchester correspondent, protests were made from Manchester traders against this change unless the authorities were prepared in addition to publish linear yards for several years in order that business people might have the advantage of comparative figures. On representations being made by the Manchester Chamber of Commerce, the Board of Trade offered to supply the statistics required on the payment of a fee of £12 10s for each monthly return. This charge was considered excessive. This week the Chamber has decided to request the Custom House to supply the figures for the six months ended June 30th for a fee of £39. The position of affairs has been placed before the Board of Trade, and the Chamber has urged the Government to consider carefully the details to be provided relating to the trade in 1922. It may be mentioned that Manchester merchants have felt very keenly the disorganisation of the statistics relating to shipments of cotton cloth as a result of the Board of Trade action.

Calico Printing and Bleaching Charges.—For some time there has been expectation in the Lancashire cotton industry of a reduction in the prices for calico printing and bleaching, but according to statements made this week there seems to be little probability of lower rates in the

near future. The Bleaching Trade Advisory Board has notified customers that having given the question of a reduction in charges careful consideration, they have decided that it will not be possible to make any further concession for some time to come. They are prepared, however, to enter into contracts with a falling clause to the effect that should a reduction take place, cloth which was under order but had not passed into the hands of the bleacher would be charged at the revised price. As a result of inquiries made amongst calico printers, there seems to be no possibility of lower rates at present. One of the chief standing charges for calico-printing concerns is coal, and industrial fuel will have to be cheaper before a concession can be granted to customers. The wages of the operatives in the calico-printing industry vary according to the cost-of-living index figure of the Ministry of Labour, and in view of the trend of events, there is a possibility of an increase in the wages of the workpeople before very long.

South African Trade.—The Standard Bank of South Africa have received a cablegram from their general managers intimating that during August the Union of South Africa imported approximately £3,888,000, and exported approximately £4,665,000. The exports included £2,780,000 native gold. Mr W. G. Wickham, his Majesty's Senior Trade Commissioner in South Africa, is engaged on an official tour of this country for the purpose of discussing with firms the possibilities and conditions of United Kingdom trade with the Union of South Africa. The first part of his tour includes Leicester, Nottingham, Sheffield, Leeds, and Bradford. Firms in these centres desiring to interview Mr Wickham should communicate immediately with the Secretary of their local Chamber of Commerce.

Transvaal Statistics.—The report for 1920 of the Transvaal Chamber of Mines contains, as usual, a large amount of statistical and other information reflecting the progress of the mining industry. So far as the former relates to the gold section, it has already been published in part, but can now be scanned with the assistance of supplementary particulars. For example, there is a table showing that although last year's output of the precious metal scored a further decrease in actual quantity, it represented a record proportion of the world's total—practically one-half. Appended is a contrast of the salient figures for the past two years with those of 1913—the last complete pre-war period:—

	1913.	1919.	1920.
Gold output, Witwatersrand	35,812,600	34,454,480	33,767,690
Yield per ton	27/9	28/7	*35/3
Costs per ton	17/11	22/11	25/8
Transvaal percentage of world total ..	39.3	47.2	49.9
Rock drills at work in December ..	5,753	6,207	5,716
Transvaal coal output	5,253,040	6,622,500	7,180,120
Value at pit's mouth	4/4	5/1	6/1
Diamond output	2,156,900	673,960	905,300
Value per carat	25/28/-	61/07/-	79/54/-
Silver output	952,930	891,260	892,190
Value	115,150	228,790	224,760
Copper ore sold	5,290	5,210	3,000
Value	138,330	273,480	163,110
Tin ore sold	3,600	1,600	2,450
Value	427,860	272,920	433,370
Mortality—Whites per 1,000	17.16	20.50	14.10
Coloured	26.79	16.95	18.23

* Including gold premium.

The mortality statistics show the effect, more particularly in the case of the native workers, of the measures taken to improve the conditions of living and working; in 1911 the Kaffir rate was practically 33. Then the figures as to the percentage of dust in the different portions of the mines indicate a vast improvement. Last year's wages and salaries to gold mine employees totalled £17,370,000, as against £13,476,000 in 1913, when the tonnage crushed was larger.

Queer Far Eastern Finance.—Our mining correspondent writes:—During the past year or so, owing to the prevailing financial conditions, companies desirous of raising further capital have been under the necessity in all cases

of offering generous terms, and in some of resorting to curious expedients. It has been left for the Southern Van Ryn Reef Gold Mining Company to eclipse all others in both respects. This concern owns an area in the Heidelberg district of the Transvaal, and at one time enjoyed the co-operation of the Consolidated Gold Fields of South Africa. After much flourishing of trumpets, production commenced at the end of 1920, although the ore reserve position was far from being such as to inspire confidence. Not until the middle of April was the first return published, and the results then shown were unsatisfactory. A profit was confidently promised as the outcome of operations during April, but failed to eventuate. It was stated that certain adjustments to the plant had been found necessary; production on the scale of 2,000 tons per month would be resumed in June. Actually, however, the mine remains shut down. These events constitute a sad commentary upon the flamboyant advertisements published in South Africa in the autumn of 1920. In these announcements the Southern Van Ryn was described as "unique in the world's greatest goldfield"; stress was laid upon the existence of two pay reefs, and investors were urged to buy for the rise while the market was low, or better still, to hold for dividends in the "coming great mine of the Far-East Rand!" Unfortunately, in lieu of the payment of dividends, offers were made of £50 six-year notes, carrying 10 per cent. interest, and redeemable at par at the end of the period with what was described as £50 "deferred interest." Now a fresh scheme is afoot for the provision of further working capital. Instead of undergoing reconstruction, the Southern Van Ryn Reef Co. is selling the bulk of its assets to the New Southern Van Ryn Gold Mining Company for 1,205,000 shares of 2s 6d each, payment of the debts of the parent company (estimated at £7,500), and assumption of the liability in respect of the six-year notes—which, it appears, brought in no more than £3,500. Under this scheme the shareholders in the old company will receive one and a-half shares for every one now held, and will be offered 430,000 shares at par, subject to a scrip bonus of one share in respect of every two subscribed, and an option at par until the end of 1922 over a like number. The guarantors are to be given an option upon 600,000 shares at par until December 31, 1922, and upon a further 350,000 at 5s until the end of the following year. They are also—if a semi-official summary of the scheme is to be relied upon—to be "paid" 345,000 shares. On the question of what the guarantors undertake, the prospectus is delightfully vague; the shareholders are merely told they "may feel assured that the £243,000 cash which the scheme provides for will be obtained within a comparatively short time." The idea is gradually to bring the mine production up to 15,000 tons per month.

The New Era in Mesopotamia.—A correspondent writes:—With the coronation of King Feisal at Baghdad on August 23rd the three Turkish vilayets comprised in Mesopotamia begin their national life as the Arab kingdom of Iraq, under the supervision of Great Britain as mandatory Power until it can stand alone. The draft mandate, now awaiting revision and approval by the Council of the League of Nations, vests the control of foreign relations in the mandatory, and, while abolishing the capitulations, safeguards the rights of foreign residents, and a Council and an elective Assembly is to frame a Constitution. Competent observers in Baghdad describe King Feisal as a broad-minded man with high ideals, and his sympathies are avowedly British. Great Britain may maintain troops for the defence of the country, and the native Government may contribute to the cost, and, pending the establishment of the Constitution, Great Britain may raise native forces, which are now being trained by British officers and recruited in the towns. Tribal recruits, though physically better, would be less amenable to discipline and more exposed to the pressure from disaffected elements which caused the native levies to desert during the siege of Kufa. The great military and economic difficulty is that the population, some 3,000,000, is inadequate to defend the long frontiers or to cultivate all the land that improved irrigation will open

up, and the tribal Arabs would not tolerate immigration. But the wealthy non-tribal landowners and the richer sheikhs were thoroughly alarmed by the rising last year, and see the value of railways and roads. By tribal co-operation in irrigation works and flood banks cultivation may be extended greatly, and tribal labour on these is mostly unpaid. Finance, however, is becoming a problem. An external loan is at present impracticable, though some day it may be raised on the security of export duties on grain and oil, and the chief source of revenue is now the land tax, which increases in yield with the production, being essentially rent paid to the State as supreme landlord. An income-tax was levied by the Turks, with many abuses, but there are no data adequate for its reimposition. The conjunction of British advisers with native heads of Departments has increased the expenditure, and new Customs duties are to be imposed on sugar, tea, coffee, groceries, fruits and vegetables, and tobacco, but, except the first three, these will fall mainly on the foreign residents and the town dwellers. Tobacco growing is to be fostered, but the curing and packing must be improved before an export can arise. It is stated that the oil rights granted by the Porte before the war have been divided, the Anglo-Russian Company taking half and the Shell and a French group one-fourth each, so that the production should soon increase. There is a great future probably for cotton, and certainly for grain, oil seeds, fruit, leather, and wool. The salting of soil by irrigation, a danger made much of by some British observers, was investigated by the Provisional Administration, and is curable by proper control. The prospect of internal disturbance is slight, and independent Arabia is friendly. The only real frontier danger is now in the north, through Bolshevik agitation or Persian or Turkish unrest. But the mandate permits Great Britain to organise local autonomy for the Kurd areas, and so provides to some extent against these dangers.

Conditions in Japan.—According to telegraphic advices from Tokyo, the money market was rather firm, owing to the settlement according to the old calendar, demands by silk manufacturers and farmers, and the payment of Government loans, although there was an easy tendency just after the customary settlement. Short loans were quoted from 5 to 5½ per cent. per annum, and there was an unexpected demand by the city banks on the Bank of Japan, and the discount rate hardened. The Stock Exchange was steady, and the cotton yarn market very firm. The rice crop is estimated at 57,000,000 koku, and is considered poor, but the price of rice was rather lower. The note issue of Bank of Japan is 1,192,000,000 yen, against 1,217,000,000 yen a year ago.

Chile.—Our Latin-American correspondent writes:—The somewhat gloomy reports reaching this country in regard to the condition of Chilean finances should be read in conjunction with the efforts made to economise all unnecessary expenses in the various departments of public service. At the beginning of the year funds in the Treasury were at a very low level, amounting to no more than 7,000,000 pesos, while pending obligations amounted to \$36,000,000. The best part of the year's revenue is usually realised towards the autumn months. The more difficult period for Chilean national finances is the months of May, June, July, and part of August, when Treasury obligations have to be covered by ordinary revenue. Such period this year has been remarkable for the falling-off of the export trade, while no improvement has been manifested in imports. Bank credits have continued restricted, collection being very slow, in spite of efforts made upon the part of merchants to sell stocks at a considerable reduction. According to the statement made at the end of March last, by the then-Chilean Minister of Finance, before the Chamber of Deputies, the national income for 1921 had been calculated at 419,229,900 in terms of paper pesos, including the item of 31,000,000 paper pesos estimated as the extra revenue to be obtained from an increase in stamp-taxes and import duties, while the expenses were taken at 419,238,539 pesos, leaving a deficit of about 8,000 paper pesos. On the other hand, the expected income from export duties on nitrate, which had been based on an estimated export for the year of

55,000,000 Spanish quintals, has not been realised, a deadlock in the nitrate industry having since occurred. According to the Association of Nitrate Producers, the probable exports for the current year, owing to the slackening in the foreign demand for nitrate, will not be more than 40,000,000 Spanish quintals, and, if this is so, the decrease would lower the returns to the Chilean Treasury by about 46,650,000 paper pesos. The statements made to the Houses of Deputies and Senate by the Minister of Finance (Dr. Daniel Martner) in May and July last to the effect that "the Budget deficit for 1920-21 would be covered by the revenue accruing from nitrate taxes," has doubtless to be revised by his successor in office, Señor Victor Gelis, who succeeded him in August. It is clear that steps will have to be taken to ensure a greater revenue to the State in order to make-up both previous and existing deficits. With this object, the fiscal system of the country is being revised, the general consensus of opinion being in favour of direct taxation. It is suggested that the present taxes on properties and inheritances should be increased, in addition to a tax on incomes and upon the profits of business and industry. According to advices, the taxes at present paid in Chile average 30 paper pesos (at present rates of exchange approximately 18s) per inhabitant, which, if accurate, cannot be regarded as at all excessive.

Guest, Keen, and Nettlefolds.—After a spectacular rise a year ago, the profits of Guest, Keen, and Nettlefolds, Limited, for the year ended June 30th last show a slight decline, but are still well over double the average for the six years 1913 to 1919, and so small a drop is remarkable in view of the depression in the iron and steel industry. The results are compared with those of previous years in the table below:—

	1913-14.	1915-16.	1916-17.	1917-18.	1918-19.	1919-20.	1920-21.
Gross profits	£ 401,722	£ 424,480	£ 433,453	£ 446,645	£ 417,141	£ 934,530	£ 884,121
Debit interest	69,548	74,020	74,020	74,020	74,020	74,020	74,020
Net profit	332,174	350,460	359,433	372,625	343,121	860,510	810,101
Brought forward	239,016	357,319	377,029	405,712	173,316	235,687	261,605
Available for distribution	571,190	707,779	736,462	778,337	516,437	1,096,197	1,071,706
Preference dividend	86,000	86,000	86,000	86,000	86,000	200,756	200,756
Reserve	70,000	100,000	100,000	130,000	50,000	50,000	50,000
Ordinary dividend	144,750	144,750	144,750	144,750	144,750	633,836	516,686
Rate	15 %	15 %	15 %	15 %	15 %	15 %	10 %
Carried forward	270,441	377,029	405,712	417,587	235,687	261,605	264,098

No allocation is made to reserve, and the ordinary dividend is reduced from 15 to 10 per cent., free of income-tax. During the year 1919-20 the preference capital was increased by £3,625,200, and the ordinary by £3,925,900. A further addition of £670,400 to the preference and £276,000 to the ordinary has been made during the past year, and it will be seen that the ordinary dividend of 10 per cent. requires £371,900 more than the 15 per cent. distribution two years ago. The more important changes in the balance-sheet include a reduction in creditors, which cover special taxation liabilities, from £2,641,200 to £1,395,000, and in debtors from £2,043,600 to £410,400. The report mentions that controlling interests were acquired during the year in three kindred companies, and also that 394,425 preference shares in John Lysaght, Limited, were obtained in exchange for an equal number of the company's 5 per cent. second preference shares. The directors state that they had decided to make up the accounts in future as at March 31st, but that it has been found impossible to carry out the arrangement this year.

The "British Industry" Ship.—We are informed that according to present plans a specially designed exhibition ship, under the title of "British Industry," will set sail from the Thames in the summer of 1923 for the chief ports of the world. During a voyage of 18 months 43,000 miles will be covered and 34 important trade centres visited. The table allows for a stay of from a week to a fortnight at each place, showing a total of 346 days during which the exhibition will be open. The ship will be specially constructed for the purposes of an exhibition, and every detail of her equipment, from the engines to the fittings and furniture, will itself be an exhibit of British workmanship at its best. A company called the British Trade Ship, Limited, has been formed, with registered

offices at 12 Grosvenor gardens, S.W. 1, and among the directors are Earl Grey, chairman, Sir G. B. Hunter (chairman of Messrs Swan, Hunter, &c.), vice-chairman, the Duke of Northumberland, Commr. R. W. Day, Major G. P. Denton, Sir Maxwell Hicks, Messrs J. W. Beaumont Pease, Noel E. Peck, T. E. Thirlaway, and Edmund Hill (general secretary of the Federation of British Industries). Arrangements will be made for forwarding fresh samples to meet the ship at any particular spot, so keeping the exhibition both up to date and appropriate to the countries visited.

Leipzig Exhibition, 1914.—A report received from the Department of Overseas Trade states that of the exhibits displayed in the British Pavilion and the Graphic Arts Building, no less than 98 per cent. have been returned. "It is gratifying to record that up to the present time the only claims for damage and missing objects amount approximately to £650 only. In the unique circumstances these results are as gratifying as they are surprising, and most creditable to all concerned."

A LECTURE conference for welfare supervisors, at Balliol College, Oxford, organised by the Industrial Welfare Society, is to be held on September 15th to 20th. The secretary is Mr C. Cullen, 51 Palace street, S.W. 1.

Oversea Correspondence.

UNITED STATES.—NEW LAWS TO REGULATE GRAIN EXCHANGES AND PACKING HOUSES, AND TO FACILITATE AGRICULTURAL EXPORTS—RAILROAD REFUNDING BILL.

(FROM OUR CORRESPONDENT.)

NEW YORK, August 26.

CONGRESS adjourned this week for a 30-day recess, leaving unfinished a great deal of work that it was expected to accomplish. But in the five months' session just ended some legislation was enacted that is of more far-reaching importance and significance than is generally realised. The outstanding feature of the past session is the number of new laws passed at the request, and presumably in the interest, of farmers. Among such measures is the Bill regulating grain exchanges, which authorises the Secretary of Agriculture to watch the business activities and operations of all grain brokers, and to regulate them, although his decisions are subject to appeal to a Commission. Another law seeks to regulate the packing industry in the same way. In short, supervision of the grain exchanges and packing houses is to be much the same as that exercised by the Interstate Commerce Commission over the railroads. Singularly enough, these two measures have been passed by an Administration which from the beginning has preached "less government in business." In addition to the foregoing legislation, a Bill was passed authorising the use of Government credit and funds, through the War Finance Corporation, to assist bankers and others in the export of agricultural products, although loans are not to be made direct to farmers. Still another measure in the interest of the agricultural community is the new statute which adds \$35,000,000 of Government funds to the farm loan banks.

Considerable disappointment is felt over the failure of Congress to enact legislation for the relief of the railroads. The Administration's Railroad Refunding Bill was passed by the House of Representatives, but not in time to be acted upon by the Senate. It is expected that strong pressure will be brought to bear, if necessary, upon the latter to secure prompt action when Congress reconvenes; but that will not be until a month hence, and present indications are that it will be late in the autumn, and perhaps not until the close of the calendar year, before the railroads will receive the benefit which the measure is designed to afford, even should the Senate acquiesce without delay in the Bill as adopted by the House. As it now stands, the measure authorises the War Finance Corporation to buy or sell securities of the railroads to the amount of \$500,000,000. It contains a provision that the securi-

National Bank of Commerce in New York

Capital Paid up \$25,000,000
Surplus and Undivided Profits
over \$30,000,000

The National Bank of Commerce in New York places complete banking services at the disposal of business throughout the world bringing it in contact with all phases of commerce and industry in the United States.

KENNETH H. ROCKEY, Representative,
Gresham House, Old Broad Street,
London, E.C. 2

ties which were pledged with the Federal Railroad Administration, during the period of Government control and operation, for improvements and equipment shall not be bought or sold at less than their original cost. The War Finance Corporation has \$400,000,000, but a part thereof must be devoted to other purposes. With its available funds, however, and the amount in the hands of the Railroad Administration, it is thought that the total will be sufficient to purchase the securities. If not, the corporation is authorised to sell some of its own bonds for that purpose. One section of the Bill prohibits any of the funds being used to pay the railroads for the alleged inefficiency of labour during Government control.

Developments in the railroad situation are being very closely watched; some are favourable and encouraging, while others have created fresh uncertainties. The Pennsylvania Railroad, for instance, has finally taken issue with the United States Railroad Labour Board over two recent decisions by that body. It has asked the Board to set aside its recent decision upholding and extending for the most part the operation of the shop crafts rules, affecting 137 carriers, which were established by the Federal Railroad Administration during Government control. The Pennsylvania avers that the Labour Board has no power or authority in law to extend the so-called national agreements, entered into with various labour unions, but which were terminated on July 1st of this year. It has also requested the Board to vacate its recent order for a new election of representatives of employees on the Pennsylvania system to confer with the management for the purpose of framing new working agreements. The Board had decided that the previous election was improperly conducted and therefore null and void, and set aside the rules and regulations adopted and put into effect by the Pennsylvania as a result of the conference held with employee representatives chosen at that election. The company claims that the election was in all respects legal and fair. The vast majority of the men themselves have since expressed the opinion that the election was fair, and that the working conditions agreed upon were satisfactory.

Meanwhile strike ballots are being prepared by leaders of the "Big Four" brotherhoods and the Switchmen's Union for submission to the 400,000 members of those organisations, including trainmen, firemen, engineers, conductors, and switchmen. The ballots, it is understood, call attention to the unsatisfactory negotiations with railroad managers at conferences as to whether or not the carriers intended to ask for further wage decreases, in addition to the 12 per cent. average reduction effective July 1st, and to seek the elimination of time and one-half for overtime. Members are to be asked if they are satisfied to continue to work under such conditions. The voting is to begin September 1st, but fully a month will probably be required to complete the referendum. This movement plainly indicates that union labour leaders are seeking a virtual guarantee that wages and working rules will not be changed to their detriment, regardless of possible developments in the future, which might make such readjustments necessary. That, at least, is how their latest move, in calling for a strike ballot, is generally construed. As there are some four or five million men out of employment in this country, if recent estimates are correct, perhaps union railway employees will think twice, however, before they quit their jobs.

July railroad earnings statements now coming to hand continue to show the result of the wage reduction which became effective July 1st. The Pennsylvania Railroad, for example, shows gross income for July of \$41,231,622, a decrease of \$9,978,199 as compared with the corresponding month of last year. Nevertheless, the company shows net operating income of \$4,880,247, an increase of \$4,349,191 over the amount reported for July, 1920. That favourable result was due largely to a reduction of \$6,000,000 approximately in maintenance of equipment, and a reduction of some \$6,000,000 also in transportation expenses. Total operating expenditures were \$33,537,337, a decrease of \$14,795,238. Southern Pacific's gross earnings for July, \$22,627,508, were \$1,180,636 less than in the like month a year ago, but net operating income of \$3,453,454 was \$462,890 larger. Similarly good results are reported by other railroads.

FRANCE.—THE FINANCIAL AGREEMENT—RECORD CROPS—NEW CAPITAL FOR BANQUE DE PARIS—BOURSE.

(FROM OUR CORRESPONDENT.)

PARIS, September 6.

ONE subject is interesting the French financial world to the exclusion momentarily of all others, namely, the famous Inter-Allied Financial Agreement of August 13th. M. Doumer, the Finance Minister, it will be remembered, signed this agreement for France, but the signature was only to be valid if it was approved by the French Cabinet. The idea that England should divide with Belgium the first milliard of marks was received by the French Cabinet with almost as much consternation as it was received by the general public. Matters were made all the more critical here by the publication of M. Keynes' article in the *Sunday Times* as to the probability of Germany becoming bankrupt. A further thing that has increased uneasiness is the publication of M. Edgar Crammond's view on the thesis that Germany ought only to pay in so far as the payment made by her did not upset the economic equilibrium of the world. Consequently the fear is very generally felt here that France may be faced in the comparatively near future with a bankrupt Germany. In this event she would receive nothing of the amount due for reparation. On the invitation of Sir Robert Horne, M. Doumer is visiting London on Friday, and will discuss this and certain other points on the agreement with him. Considering how keenly it is felt here that the allocation of the milliard would constitute a great injustice to France, the tone of the Press is admirable. The leading journals all write with very great restraint, expressing the hope that an agreement can be reached that will prove satisfactory to both parties.

The Reparation Commission has issued a statement to the effect that subject to the final adjustment of the accounts, the payment of the milliard of marks gold due under Article Five of the Schedule of Payments has been

effected. It will be remembered that under this Article it was communicated to the German Government, on May 5, 1921, that Germany should pay within 25 days from the notification contained in the Schedule a sum of one milliard gold marks in gold or approved foreign currencies, or approved foreign bills, or in drafts at three months on the German Treasury endorsed by approved German banks. Germany had, on May 31st, paid to the Reparation Commission approximately 160,400,000 gold marks in approved foreign currency, and had supplied drafts at three months on the German Treasury, endorsed by approved German banks, for the remainder of the milliard gold marks. The Reparation Commission has received in approved foreign currencies from the German Government a total of approximately 770,000,000 gold marks in redemption of these drafts. The German Government has, moreover, shipped gold specie to New York to complete payment of the one milliard gold marks due under the provisions of the Schedule of Payments referred to above.

Despite the Jeremiahs of the farmers as regards the deplorable effects of the drought—a set of sluice gates in Paris has not been touched for 15 months, though within the recollection of the gate-keepers the longest previous period of idleness has been three months—the harvest returns constitute records from several points of view. There has never been a year when the yield of wheat to the hectare has averaged 12.70 quintals, and the total harvest of 87,843,770 quintals, which shows an increase on last year's crops of 23,361,590 quintals, approaches very nearly to the best previous record for France. The result is extremely satisfactory, as it makes France nearly independent of foreign grown wheat, an important fact when it is remembered that she has to pay a heavy penalty on all such purchases owing to the exchange. The following are the figures as published this week provisionally in the *Journal Officiel* :—

Wheat: Surface cultivated 5,329,830 hectares; yield 87,843,770 quintals, average weight of the hectolitre 78.32 kilogrammes, mean yield to the hectare 16.48 quintals.

Millet: Surface cultivated 108,220 hectares; production, 460,880 quintals; mean weight to the hectolitre, 74.72 kilogrammes, mean yield to the hectare 13.49 quintals.

Rye: Surface cultivated 874,270 hectares; yield 11,302,030 quintals, mean weight to the hectolitre 73.91 kilogrammes, mean yield to the hectare 12.92 quintals.

Details of the new issue of capital by the Banque de Paris et des Pays Bas have been issued to-day. The Banque has decided to increase its capital from 150 to 200 million francs, and proposes to issue 100,000 new shares of nominal value of 500f. The shares will be reserved by preference to the present shareholders, who will have a right to take up the new shares in the proportion of one new to three old shares. The price of issue has been fixed at 750f, that is, at a premium of 250f a share; 375f are payable on subscribing, and the balance is payable by the end of the year. The shares will pay 5 per cent. interest after September 25th, and interest thus earned will be deducted from the sums payable by the end of the year. As it is pointed out below, the issue has had a very stimulating effect on the Bourse, because the Banque de Paris is well known as one of the leading commercial banks in Paris. Consequently, it is hoped that the long-expected trade revival may really be at hand.

The general tendency towards a rise that has been typical of the last few weeks has entered on a new phase characterised by a very brisk advance. The reasons for the improved position are clear and unmistakable. For some time past there have been no considerable issues of capital, and in consequence the effects of French thrift have been able to make themselves felt. The situation was consequently such that the market was ready to react to any cause that might stimulate speculation. This cause has been given by the Banque de Paris, which has announced an increase of capital. Buyers have all interpreted this news as meaning that there will be a trade recovery at an early date, and consequently stocks of all sorts have shared in the upward movement. Banks are notably in demand, Banque de Paris moving up from 1,363 to 1,435. Crédit Lyonnais has improved from 1,422 to 1,495, Comptoir National d'Escompte from 966 to 990,

Union Parisienne from 868 to 898, while the Société Générale has held its own at 703. Petrol securities have shared in the general optimism, Royal Dutch strengthening from 18,400 to 19,000, Shell from 229 to 240, and Mexican Eagles from 221 to 243. Transports have been well supported, Metro being up from 405 to 414, Chargeurs Réunis from 595 to 639, and Messageries Maritimes from 238 to 245. Metallurgical undertakings still remain depressed, and improvements in value are only trifling. Acières de France have advanced from 575 to 585, Gnome from 420 to 430, and Peugeot from 470 to 525, while Micheville have dropped from 1,060 to 982. In electrical undertakings Thomson is stronger at 890 as against 880, and the Compagnie Générale d'Electricité at 1,000 as against 980. Despite the low price of metals some mining securities are higher. Thus Tintos have moved from 1,440 to 1,500, Boléo from 370 to 400, and Penarroya from 1,050 to 1,080.

The returns of the Bank of France for the last week, the previous week, and the corresponding week of 1913 are as follows:—

GERMANY. — WAGES AND PRODUCTION COST — EXCHANGE AND BOURSE.

(FROM OUR CORRESPONDENT.)

BERLIN, September 5.

THE German price level cost of living and wages, which are attracting so much attention in England, are not difficult to treat independently as a matter of statistics. They are less clear and less enlightening when treated from the standpoint of present English interest, that is, as indications of Germany's ability to undersell competitors in international trade. On the first point there are accurate records and indexes. But the second question is complicated by numerous factors which by their nature cannot be adequately recorded or indexed. One can give German nominal wages, real wages, gold wages, and wages expressed in sterling, gulden, or crowns (which are not gold wages), compare these with wages in the assumed competing countries, and find summarily that they mean exceedingly cheap production and export. But

a non-German manufacturer who in his particular branch adopted this easy method of ascertaining whether he could compete with Germans would find himself very far from the truth. To be correct, he would first also have to calculate the proportion of wage outlay in total production cost of the particular article, and, secondly, to calculate the cost of raw material, here distinguishing between German-produced raw material, which is usually cheap, and German-imported raw material, for which the Germans at a given exchange must pay the same price as their competitors. By this means, and by estimating rent, taxes, and other secondary factors, he might get an apparently trustworthy estimate of German production cost. But as German wage indexes are mostly based on hour, day, or week work, and as an international comparison of piece pay rates is impossible, the estimate would still be wrong, because the relative productivity of labour would not be taken into account. On this point there are no reliable data. It follows that the summary method of comparing German and foreign production cost is misleading, and in practice it would never be applied by a foreign manufacturer desirous of ascertaining German production cost in a particular branch. By the summary method he might find, as appears in some letters to English newspapers, that German average production cost in all branches is in gold about the same as before the war, but in particular branches he would find that German paper-mark production cost has risen between tenfold and fortyfold, that is, that gold production cost varies roughly between 50 per cent. below and 100 per cent. above pre-war cost. Finally, even exact knowledge of the production cost of a German article does not settle the competition question, because Germans, certain goods excepted, are not allowed to export at home sale prices when these are materially below those of high exchange countries. The real competing price of German goods is in most cases the minimum export price fixed by the Foreign Trade Boards (Aussenhandelsstellen), which has nothing to do with home production cost, but is based upon the selling prices of competing high exchange countries.

Were export pricing free, German wages, with the above important qualifications, would be a safe enough guide to production cost. As it is, they have only statistical value. Nominal (paper mark) wages rose about elevenfold between 1914 and the end of July, 1921. This figure refers to Frankfurt-on-Main, and is taken from the *Frankfurter Zeitung's* monthly report, which is most up to date. For ten important trades the wages index (100 in 1914) is 1,103. In some trades the increase is much greater—up to sixteenfold. Absolute wages in pfennigs per hour at different dates were:—

	1914.	Jan., 1920.	Jan., 1921.	July, 1921.
Bricklayers and carpenters	65	300	680	700
Metal workers	62	287	660	660
Soap workers	45	284	590	630
Food-products workers	44	275	580	708
Boot factory workers	63	270	470	600
Wood workers	63	265	675	675
Decorators	61	260	630	690
Rubber workers	50	235	600	640
Chemical workers	48	220	600	640
Miners (per shift)	449	2,700	4,860	5,410

This list does not contain textiles wages, because here only wages since the beginning of 1920 are available. The weaver wage (Augsburg) is given as 326 pf an hour

in January, 1920, and 514 pf since November 1st last. The tables in general show that wages increased most rapidly in the first months of 1920, when, after a heavy mark exchange fall, the cost of living rose rapidly. Between 1914 and January, 1920, the wage index rose from 100 to 450, thereafter until end of July this year to 1,103. The index for 28 trades is: 100, January, 1920; 180, July 1st; 207, January, 1921; and 220 end July, 1921. The cost of living fell considerably in the first months of this year, but wages did not decline in any of the 28 trades, and were stationary only in four. Outside Germany, at least in the high exchange countries, wages tended to fall, but the foreign price levels began to fall long before the German, and fell more. Three months back, before the German price fall had gone far enough to cause a reduction of wages, began a new heavy drop in mark exchange, with a sharp increase in the general price level and in the cost of living. Since early in August there has been a general demand for higher wages, which in some cases has succeeded. At present the wage movement is upward.

German gold wages, or (what is not the same thing) sterling wages, can be calculated from the above figures, and very different results will be obtained, according to the date and exchange taken, but the gold wage at any date was much lower than in England. To-day this gold wage is considerably lower than at the beginning of the year. So are, in gold, German commodities prices and cost of living, because in this matter the mark exchange leads, and when the mark falls the adjustment in shape of higher commodities prices and cost of living follows. The real wage of German workmen, which is sometimes confused with the gold wage, does not directly concern German production cost and ability to compete internationally; but it is interesting because on it are based certain theories as to German standard of living, and in particular as to the willingness of German workmen to bear, in shape of a harder life, the reparations liabilities and other war burdens. Facts about this were lately given in the *Economist*. The main fact is that the cost of living has not risen so rapidly as wages; the buying power of the present average wage is higher than before the war, and the real wage has risen. The increase in real wage varies materially from month to month, and is ultimately governed, like everything else, by the mark exchange, but only considerable changes in the exchange, maintained for a considerable time, have any visible effect. The cost of food in the world market plays a secondary rôle. When the mark exchange is falling the real wage also at first falls, because on the exchange fall follows an increase in living cost, and wages do not go up until workmen have had time for agitation. When the mark exchange is rising the real wage increases, because the cost of living falls, and the nominal wage does not fall, though it no doubt would fall were the higher mark level and the lower living cost to last sufficiently long. This has never been the case in the last 20 months.

The cost of living indexes vary materially. The average of six indexes, all beginning with January, 1920, shows the following movement, besides which I put the nominal wage index for 10 trades:—

1920.	Cost of Living.	Wages.
January	100	100
March	132	120
May	154	164
July	150	180
September	138	182
October	147	186
December	165	196
1921.		
January	161	207
March	157	..
May	153	216
June	156	..
July	168	220

These figures prove that the real wage has increased in the last two years. The figures for January and March, 1920, show how, when a particularly heavy fall takes place in mark exchange with corresponding rise in living cost, the real wage, not keeping pace at first, declines.

As compared with 1914, the real wage has also risen. In January, 1921, the official cost of living figure for all Germany reached a high point (100 in 1914) of 924. In that month the wage index for nine trades was 1095.

After that followed a drop in the cost of living to a new low point of 880 (May), but wages continued slowly upward, so that the real wage increased. With the latest mark exchange drop, cost of living rose rapidly, wages lagged behind, and the real wage declined; but it remains higher than before the war. At the end of July the official cost of living index figure was 963, as against 1103 for wages; but at end of August the cost of living figure was 1045, the wage index being not yet reported. The new wage increase agitation of August is on the basis of this new increase in cost of living; and a general wage rise is inevitable, the State having already led the way with its employees. There is, therefore, yet no sign of the real wage falling to the pre-war level. The real wage has been kept high mainly by the State policy of paying price-cheapening subsidies on food, enforcing maximum prices, and keeping dwelling rents practically at pre-war level, so that part of the industrial wage has been really paid by the State, the food-producers, and the house-owners. Maximum prices and subsidies have now practically come to an end, and the Government, as already reported, is considering an all-round increase of rents, the yield of which is to go to the State in shape of interest on State mortgages. These measures, apart from coming taxes and the exchange fall, must send up the cost of living; but, judging from the past, Labour will compensate itself in shape of higher wages; and the question who is ultimately to bear the burden will remain unsolved.

Stocks last week again rose, and the market was very active. To-day, with sterling exchange rising to 338.60, and the dollar to 91.10, there was a wild buying panic, and some papers rose 100 points. Preferred last week were Westphalian mining and metal stocks, and certain engineering stocks, and one chemicals stock rose 435 points. Bank stocks were mostly weaker. The *Frankfurter Zeitung* Bourse index shows 20,193 for September 2nd, against 19,475 a week earlier, 13,438 on March 5th, and 17,013 at the high point of January. Average quotations in this index are 133 per cent. higher than on January 1, 1920. To-day, War Loan quoted 77.50, 4 per cent. Federal 77.60, 3½ per cent. 67.40, 3 per cent. 75.60, Colonial 4 per cent. 66.10, and Savings and Premium 79.80. The Reichsbank statement for August 31st shows a new heavy demand for State credit. The holding of discounted Treasury bills rose by 9,012,774,000 marks to 84,048,891,000 marks. State deposits increased by 2,707,845,000 marks to 4,850,843,000 marks, and private deposits by 802,278,000 marks to 8,798,756,000 marks. Note circulation increased by 2,882,146,000 marks to 80,072,721,000 marks; Kassenscheine fell by 20,200,000 marks to 7,836,900,000 marks. From the gold reserve, which has been practically constant of late, 68,000,000 marks was parted with for the one milliard gold mark reparations payment on August 31st. Of new capital for all purposes was raised in August, 1,227,780,000 marks, against 1,506,670,000 marks in July. Total new capital raised in the first eight months of the year was 14,332,580,000 marks, of which 2,432,130,000 for new foundations, 8,357,150,000 marks for capital increases, and 3,543,200,000 for bonds.

INDIA.—THE BOYCOTT OF FOREIGN GOODS— FIRMER EXCHANGE.

(FROM OUR CORRESPONDENT.)

BOMBAY, August 13.

THROUGHOUT this Presidency during the past fortnight there has reigned a condition of political unrest and Non-co-operationist activity, directly attributable to the presence of Mr Gandhi and his followers in Bombay. Mr Gandhi has now instigated a boycott of foreign cloth. On the first anniversary of the death of Mr Lok. Tilak, English- and Japanese-made caps and coats, and other items of wearing apparel of foreign manufacture, were publicly burnt on the Chowpatty sands here. Foreign cloth in the eyes of Mr Gandhi is tainted, and the "dumb millions" of Indians who are cringing beneath the iron heel of our "Satanic Government" (a favourite expression of Mr Mohammed Ali) are being persuaded to cleanse themselves by destroying all clothing not spun in India. The movement is but a passing phase of irritation. The

Government and police authorities are ignoring it; the cloth merchants and general importers have no intention of observing the boycott, and a natural death to the movement is predicted with confidence.

Counter-activities of a constitutional order are also taking place in the city of Bombay in connection with the coming visit of the Prince of Wales. An influential reception committee, with the Governor at its head, has been formed, and a subscription list opened. Many well-known Indians have already come forward with amounts varying between Rs. 40,000 and Rs. 25,000 each.

The rupee exchange has remained unusually firm of late, owing mainly to our export of gold and the absence of demands for remittances. It has been suggested that the Gandhi boycott of foreign cloth is responsible for the firmness, and a belief has gained ground in certain quarters that there will be a great decrease in the imports of Lancashire goods, and that within a short period the balance of trade will again swing round in favour of India. If the boycott was to prove a success, such a state of affairs would tend to materialise; but by some just a little too much faith is being placed in the powers of the Non-co-operationist leader. Telegraphic transfer has reached 1s 3¼d during the past week, and the three months' buying rate is gradually improving, now standing at 1s 4½d.

Two bank dividends of 14 per cent. per annum have been declared within the last two days, the concerns being the Central Bank of India, Limited, with a net profit for the half-year ended June 30, 1921, of Rs. 7,52,286; and the Bank of India, Limited, with a net profit for the same period of Rs. 11,13,028. The average Bank rate for the six months was 6.18 per cent., as compared with 6.98 per cent. for the corresponding period of 1920. The Imperial Bank of India has issued its report of its first five months' activities—viz., January 27 to June 30, 1921. A net profit of Rs. 58,14,793 was returned, and a 16 per cent. income-tax, free dividend, declared. In the case of the Imperial Bank, the average rate for these five months is put at 6.038 per cent.

SWEDEN.—DEPRESSION—ORE EXPORTS—CURRENCY CONTRACTION.

(FROM OUR CORRESPONDENT.)

STOCKHOLM, September 1.

UNDER ordinary circumstances a revival of trade is always felt at this time of the year, but this can hardly be said at present. The daily papers try to encourage the public by giving accounts of business transacted, but these newspaper reports refer to very limited quantities, and, of course, hideously low prices, at which enormous losses are brought on the sellers, and maybe also on buyers, because everything is still falling, except taxes and rents. Talking of the former, the Swedish Taxpayers' Union has recently strongly criticised the way in which the Board of Domain Administrators are financially working. The receipts of this institution amounted during the first six months of this year to 11 million kr and the expenses to 17 million kr, as against the corresponding period last year 21.6 million kr and 12.6 million kr respectively, and while last year there was a net surplus of 8.9 million kr, the first half-year 1921 has left a loss of 6 million kr. What is specially criticised is the fact that while the receipts this year are far less the expenses have exceeded those of 1920, and that sums which have been granted are spent notwithstanding the deterioration in trade and industry. It is regretted that the policy which is adopted by this department in attending to its affairs is one of extreme bureaucracy, and totally devoid of sound business principles. The depression in the iron and steel industry is more accentuated than ever, and the production and exports of pig-iron show a substantial falling off. At the meeting of the Ironworks Association recently it was reported that of 134 furnaces registered only 20 were working at the end of July last, as against 50 furnaces at the end of the first quarter this year. At the same time the exports of iron ores from Sweden show better figures, showing during the first seven months this year a total of 2.56 million tons as against 1.9 million tons last year. The

"The Swedish Bank
of Commerce"

bulk of ores goes to Germany, *via* Holland, and it seems that there is still a considerable demand for Swedish ore with the German works. The prices for Swedish high-grade ores have gone down to the extent of almost 30 per cent., but deliveries are mostly made on old long-standing contracts. It is the same thing with iron ores as with ready-made or half-finished iron and steel products, prices are below cost of production. The contemplated fusion between two of the leading concerns in the telephone industry—the L. M. Ericson Company and the Cedergeren Industrial Company—has been completed, and the deal will no doubt contribute to a strong consolidation of the Swedish telephone industry for the production of telephone and telegraph apparatus and accessories. Financial reports show that lately the circulation of notes has declined and that the lowest figure on record has been reached, viz., 585.2 million kr, as compared with 694.6 last year at this time. A steady decrease in the amount of domestic bills in the Riksbank is also to be noted, the total amount of this portfolio having gone down to 375.9 as compared with 598 million kr at this time last year. Activities on the Stock Exchange are more restricted than ever, with a total turnover during last month of 9.3 million kr, which is also a fresh bottom record. We expect a better and quieter tone in the labour market after the settlement of the shipping strikes, and undoubtedly the negotiations for fresh agreements, which will be taken up at the end of the year when a number of agreements expire, will go smoother. The Baltic shipping season has still some months to go until the ice will close up probably one of the worst trade campaigns in history.

SWITZERLAND.—THE BANKERS' CONGRESS— REDUCED CLEARING TURNOVER.

(FROM OUR CORRESPONDENT.)

GENEVA, September 6.

THE annual meeting—held on September 3rd and 4th in St Gall—of the Swiss Bankers' Union approved the point of view of Mr de Haller, late manager of the Swiss National Bank, now managing director of the Basle Commercial Bank, namely, that every attempt at inflation in Switzerland must be fought with the utmost energy. All endeavours to help Swiss export industry by the means of printing fresh banknotes, in order to open for Swiss goods a ready market in countries with depreciated currencies, are to be considered as wrong means of fighting against the present industrial crisis. In the discussion there was nobody who defended the project of export premiums such as proposed by the Union of Watch Manufacturers. On the contrary, the present manager of the Swiss National Bank underlined that there is still in Switzerland ruling a certain inflation, which causes a depreciation of the Swiss franc in the United States, the markets of which country are of utmost importance for the Swiss supply of raw materials and foodstuffs. It is to be expected that this unanimous view of the Union of Swiss Bankers will influence the attitude of Swiss authorities, who unfortunately are only too often inclined to accept short-sighted Protectionist proposals, such as export premiums to watch manufacturers.

The commercial crisis ruling in this country had the effect that in August, 1921, the turnover of the Swiss clearing houses amounted to only 959.7 millions as

against 1,132.9 millions in August of last year. Up to February, 1921, the turnover in Swiss clearing houses was steadily increasing, in spite of the serious industrial crisis felt since August of last year. But this was chiefly due to the considerable transactions in foreign exchanges. In recent weeks there is a visible recovery in Stock Exchange transactions, but a very sensible decline in transactions in foreign exchanges. Thus since April of this year every month shows a sharp reduction of turnover in clearing houses in comparison with the previous year. In the same proportion the amount of transactions in banking business are declining.

Letters to the Editor.

A TABULAR STANDARD OF VALUE.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Most of your correspondents whose interesting views upon trade depression and currency have appeared in the *Economist*, whether they favour a gold standard or not, seem to think that trade could in some way be kept flourishing by some form of financial policy. Those who favour a gold standard still think that credit can be founded upon the value of goods or other securities, and constitute increased purchasing power, which may be controlled in some measure to keep prices steady. So that Mr Craies' "tabular standard" seems to sum up most of the suggestions for getting a satisfactory form of currency.

Mr Craies' learned presentment of the proposal is certainly picturesque, but it is to us a little unconvincing. All such schemes seem to involve a mysterious process of basing a standard of value upon the price of a number of commodities, the prices of which are to be determined by the very standard which they are to determine. This seems a complete circle of each depending upon the other, and could Mr Craies explain where the circle starts?

Then there is the difficulty that this artificial standard is to be based on index numbers, which we pointed out last week are of doubtful value, because they do not show any change in the price of labour. All these schemes are based on index numbers which leave out the price of labour (usually considered by economists the most important commodity of all). How are we to know the value of this most important commodity? It is hard to see how we can fix the price of anything, or base anything on that price, without first knowing the price of labour.

So far as we know, the only test of the real money value of labour is to find how much gold it can produce in a given time. If it can produce one ounce, its value is £4 (approximately); and can never be anything else but what it has produced. Unless we can find some new standard, and can express our prices in that standard (*i.e.*, go into a shop and ask for, say, 60 wheat grains' worth of pins), it is quite useless to invent grand schemes for measuring prices in terms of gold while basing the measure of that price on the price of things other than gold. It would be exactly like selling coal by the bushel, the size of the bushel to be fixed by the average size of all the other things in the shop.—Yours faithfully,

ALBERT AND PERCY WALLIS
(ALBERT WALLIS).

Westacre, Kettering, September 5th, 1921.

MONETARY POLICY.

TO THE EDITOR OF THE ECONOMIST.

SIR,—The concluding sentence of your leading article of August 27th, and Mr W. J. Cook's letter published in the same issue, encourage the hope that a workable plan is emerging from this controversy. That is, that sufficient credit should be granted to producers on easy terms to restore our full production, with strict precautions against speculation, the expansion of currency and credit to be regulated by the guidance of an index number of prices, so as to keep the price level steady. Thus the

question of the restoration of the gold standard would be postponed, and, if the new system worked well, might eventually be quietly dropped.—Your obedient servant,

C. CRAIES.

4 Bunhill row, London, E.C. 1., August 31st, 1921.

Books and Publications.

REVIEWS.

"Sweden as Producer of Wood Goods, Pulp, Paper, Tar, and Other Forest Products." (Stockholm) A. B. Svenska Teknolog Förenigens Förlag.

"Iron and Steel in Sweden." (Same publishers.)

THESE handsome volumes are published under the supervision of the associations representing the respective trade associations, and are themselves an excellent sample of the products of the paper manufactures of Sweden. The industries dealt with in the first comprise wooden goods, joinery, wood pulp, cellulose, paper, and wood distillation, and their sub-divisions, and the seeker after any one of more than 500 of their products, or of more than half that number of kinds of iron and steel goods, can instantly find the postal and telegraphic addresses of firms who will supply anything from pit props and turpentine to greaseproof paper and dolls' furniture, or from pig-iron to steel for watch springs, the most convenient port for shipment, and, in many of the more important branches, the average output of the leading firms during the three years before production was upset by the war. Then there are illustrated descriptions of some of the more important undertakings, several of which, beginning as mining companies, date back to the seventeenth century, and one even to the fourteenth. The illustrations show how fortunate the industry of Sweden is in its natural surroundings, and there are also useful maps, and accounts of the services of the Svenska Handelsbank to the wood industries, and of the Jernkontor, or Iron and Steel Institute, to the iron trades. The indices are in English, French, and Spanish, and the books, while excellent for trade purposes, form interesting contributions to commercial geography and history.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET. ACCOUNT.
September 13. September 14.

The principal event of the week in the Stock Exchange markets has been the violent fall in Grand Trunk stocks brought about by the decision of two out of the three arbitrators that the Grand Trunk preferences and ordinary stocks are valueless. The effect of this decision was to shake Grand Trunks severely, and several other markets are involved in the débacle which has fallen upon the stocks. It is said, for instance, that Liverpool operators have been badly hit, and that this accounts for a fresh outburst of oil selling from the North. Business has been tolerably active in some of the markets round the House, and investment stocks are well maintained.

National War Bonds, Bank of England stock, India Government securities and War Fours all stand higher on the week. The colonial list is steady without showing further improvements, but Home Railway preference stocks have advanced, in spite of the Stock Exchange theory that the outlook is still uncertain, and that this week's speeches at the Trade Union Congress at Cardiff do not point to any appreciation on the part of some of the Labour leaders that hard work and extra production must be regarded as essentials at the present state of affairs.

German bonds have given way, in consequence of the depreciation in the mark. There is nothing much doing in the French issues. Brazilians and other South Americans are rather better, while Uruguay descriptions are inclined to droop.

Home Railway ordinary stocks, after a decline, braced up towards the end of the week, though the jobbers admitted that there was not much public business at the back of the movement. Some of the Grand Trunk prices have fallen almost in half as compared with the prices ruling earlier this week. The debenture and guaranteed issues are not much affected, of course, but the announcement of the arbitrators caused a cataclysm in the market for the first preference and other junior stocks. Mexican Rails are dormant. Brazilians have improved in most cases, though United of Havana and Argentine Rails are what the Stock Exchange calls droopy, the Argentine traffics being regarded as disappointing.

Rubber shares continue weak, but the Oil market has given a fresh taste of its quality for meteoric movement by violent rises and equally rapid falls. The bulls took their stand upon the agreement that is supposed to have been reached between the United States and the Mexican Governments, paving the way, it is claimed, to recognition of the latter by the former. This brought about the rise already mentioned, but Liverpool sold heavily on the advance, and a swift reaction followed. Shipping shares are better, thanks to the improved prospects that are declared to have opened in the trade during the past week. The excitement in the raw cotton market brought about slight improvement in textiles, though it was accompanied by no animation worth mentioning so far as the London market was concerned. The rise in Egyptian cotton exercised an important effect upon most Egyptian stocks and shares, prices advancing buoyantly. Rumours of amalgamation in the insurance market caused a little animation here. The brewery market is firmer. Iron, coal, and steel shares, after being better, became somewhat dull on the speeches at the Cardiff Congress. The wireless group is a little better. Gas stocks have boomed, some 50 prices adding to their quotations this week. Following in the wake of this improvement, electricity shares are also hardening, although the manufacturing shares of the group remain heavy, by reason of the fears that have arisen in regard to possible German competition.

Kaffirs pursue an uneven and erratic path. Their progress is dictated mainly by Cape and Paris orders, the public on this side doing comparatively little. The August returns served to cheer the market, and on balance prices are better on the week. Chartered moved up again, on the hopes of what General Smuts may be able to do in connection with Southern Rhodesia. Two or three Rhodesian mining shares are better, by reason

of good developments that have been reported. De Beers and Jagers have risen sharply on Paris purchases, yet the market was always somewhat nervous. Copper shares are again harder, and a few West African tin shares are better, thanks to the idea that the price of the metal is on the eve of recovering. Esperanzas have once again risen above 20s. Other mining sections are uninteresting.

NEW ISSUES.

The new issues of the week and the current year and date of opening of the lists have been as follows:—

	Nominal Capital.	Cash Subscription.	First Payment.	Further Liability.

1918	1,318,596,010
1917	885,436,850
1916	685,232,336
1915	512,522,633
1914	196,536,980

5½ per Cent. Treasury Bonds.—Repayable at par on April 1, 1929. Issued at 97 per cent. Interest payable half-yearly on April 1st and October 1st. The bonds of this issue will be convertible at the holder's option as on April 1, 1922, or October 1, 1922, into £3 10s per cent. Conversion Loan at the rate of £146 Conversion Loan for each £100 of bonds converted. Full particulars of these bonds, together with comments, will be found in *Economist*, July 9th, see page 43, also in our issue of July 16th.

British Guiana.—The Government of British Guiana on July 20th issued a prospectus inviting applications for \$5,000,000 6 per cent. debentures at par. These debentures are for a term of 50 years, with the option to the Government to redeem at any time after the expiration of 10 years from date of issue, but subject to 12 months' notice. Clause 3 of the prospectus states that "a sinking fund of such equal annual proportion of the capital sum of the bonds as with interest will be sufficient in the aggregate to pay the same as and when they become payable will be provided for the repayment of the bonds."

Kingdom of Iceland.—This is an offer at 91 per cent. in this country of £500,000 of Kingdom of Iceland 7 per cent. 30-year sterling bonds, to be redeemed by a cumulative sinking fund, beginning in 1923. It is stated that complete redemption will take place by 1951. Power is retained to redeem bonds on giving six months' notice at 103 per cent. These bonds, it is stated, are a direct obligation of the Kingdom of Iceland, and will further be secured by a specific charge on Customs receipts. Average imports for the past six years work out at just over £2 million per annum, and the average annual imports are about the same. Customs receipts for four years to 1920 averaged £148,000 per annum, while the service of this loan costs approximately £41,000 per annum. The total debt of Iceland is given as £1,090,000, including this loan, the value of State properties as £1,450,000, the population as 95,000, and the debt per head £11 10s. Apparently it is intended to apply for a London Stock Exchange quotation at some future date. This is an interesting issue, and those interested in developing trade with Iceland may probably give it support. For the small investor, however, a subscription is somewhat in the nature of treading a pioneer path.

New Southern Van Ryn Gold Mining Company, Limited.—Registered capital £204,375, in shares of 2s 6d each with provision in the articles of association for increasing to £350,000. To make provision for additional working capital the directors of the Southern Van Ryn Reef Gold Mining Company, Limited, are disposing of a portion of its assets to a subsidiary undertaking, with the above title. The consideration is (a) 1,205,000 fully-paid shares of 2s 6d each, (b) £7,500 in cash, (c) and the new company to take over 10 per cent. six-year notes amounting to £3,500, and pay licences

and claims as from July 1, 1921. The following ingenious scheme is proposed to obtain fresh capital:—"Shareholders will retain their shares in the original company, and will receive out of the purchase consideration 1½ shares for every one share held by them in the parent company, the Southern Van Ryn Reef Gold Mining Company, Limited. This will absorb 645,000 shares. Of the balance, 215,000 shares will be given as a bonus to those who subscribe for the new capital, amounting to 430,000 shares, to be offered to the present shareholders at par, and 345,000 are to be paid to the guarantors and promoters of the new company." Our mining correspondent comments upon this flotation in this issue under "Business Notes."

To complete our record of new issues, company secretaries are requested to furnish us with copies of new prospectuses. Our readers can also assist by forwarding copies of prospectuses which may fall into their hands.

GOVERNMENT RETURNS.

TREASURY BILLS BY PUBLIC TENDER.

Tenders for £50,000,000 in three months' Treasury Bills, dated from Monday to Saturday, Sept. 12th-Sept. 17th, were opened on Sept. 9, 1921, and the total amount applied for was £73,835,000. Tenders for bills at £98 19s 6d will receive about 50 per cent. and above in full. The average rate of discount was £4 1s 6.36d. The following table shows Treasury Bills by tender outstanding:—

Date and Duration of Bills, 1921.	Amount.	Applied for.	Average Rate of Discount.	Rate for Addition'l Bills.	Tenders at Rates below receive.
August 12 (3 months)	45,000,000	74,340,000	4 15 38	4½	£98 15s 9d (Monday to Friday bills) about 73½%, above in full, and for Saturday bills at £98 16s 1d, above in full.
August 19 (3 months)	45,000,000	78,435,000	4 14 10.62	4½	£98 15s 11d (Monday to Friday bills) about 82½%, above in full, and for Saturday bills at £98 16s 4d (Monday and Tuesday bills) and above in full, and for Wednesday to Saturday bills at £98 16s 7d, about 9%, and above in full.
Aug. 26 (3 months)	50,000,000	75,145,000	4 13 0.38	4½	£98 18s 1d (Monday to Saturday bills), about 80½%, and above in full.
Sept. 2 (3 months)	50,000,000	83,540,000	4 7 1.53	4	£98 19s 6d bills about 50% and above in full.
Sept. 9 (3 months)	50,000,000	73,835,000	4 1 6.36	3½	

The amount to be offered next week will be £45,000,000.

IRON, STEEL, AND COAL.

Our Middlesbrough correspondent's report, dated September 8th, is as follows:—Pig-iron: There is very little change in the position with regard to the production of pig-iron here. In some cases it is reported that open hearth steel works are being restarted, in addition to those already in operation, but the price of coke is not yet sufficiently favourable to permit a number of our consumers on the North-East Coast to resume smelting on an economical basis, as if they once start they will have to continue, and the initial expenses of starting are very great. Prices are nominally as follows:—No. 3 Cleveland G.M.B. pig-iron, 135s per ton, and East Coast mixed numbers hematite, 140s per ton. Manufactured iron and steel: Works are still short of orders, and are running practically from "hand to mouth." Quotations for foreign steel are considerably lower than the home prices. Steel ship plates, 14; steel ship angles, 13 10s; iron bars, 16; steel rails, 14, net. Iron ore: There is still practically no business at all in foreign ore, and the resumption, of course, will depend upon the hematite furnaces going in. The price of best Rubio is approximately 28s per ton, on a 50 per cent. basis, for prompt cargoes.

Our Glasgow correspondent (writing on Thursday) says:—In iron, steel, and coal trade circles this week the tone has been to the quiet side, consumers in the several relations speculating for a lower level of prices, and therefore acting conservatively in the matter of covering requirements. These, at the same time, are not of an unsatisfactory character, so far as immediate needs are concerned, but considerable uncertainty, and therefore dubiety, obtains as to the future, and induces caution at least on the part of buyers. Steelmakers are fairly well employed on the rolling of plates and of building sections, and are likely so to remain for a month or two to come; but that only applies to home business. On export account there is next to nothing doing actually, yet hope is strong that, from the variety of inquiries in circulation, a better condition of things will prevail ere long. India, China, Japan, Australia, and South America are each and collectively in the market for manufactured material—at a price, however, which unfortunately is under what our producers can conveniently face. For most of the new work offering the Continent seems capable of successfully competing, if the stories thereabout from Germany and Mid-Europe can be relied upon; but it remains that the divergence of quotations between us and other countries is gradually narrowing to a point that should tell in our ultimate favour. It is largely a case of waiting and seeing. Report has it these last few days that Beardmores, Limited, have booked four orders for plates (ship and boiler), and that they have also secured a line for war material for Spain. Black sheet makers are busier again on home orders. Galvanised sheet makers are doing better. There is more activity recognised in the shipbuilding yards, which are employing thousands more of joiners. Engine builders and machinery engineers are doing well, mainly on export order. Tubemakers are increasingly employed, and are benefiting from free imports from Germany and Belgium of half products—slabs, blooms, &c. Bolt, nut and rivet makers are busy, as are nail makers, rail makers, and wagon builders. The whole industrial position promises to gain in due course from the easier tendency of coals, which have fallen during the month from 40 per cent. to 50 per cent. below recent pre-strike level.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—Things are not moving at the same rate as they are in Coleman street, the market being sharply divided into classes. There are those who are feeling the impetus of London sales, and who are protecting themselves by naming higher quotations than a week ago. At the same time it is with difficulty that 42d can be made for really good 64's tops, and they have been sold to-day as low as 3s 4d for good average tops. Nobody is now disposed to sell heavily on forward account, preferring to see if to-day's standard of values is maintained. There is a good deal of scepticism over the permanence of to-day's market price for wool, users pointing to the fact that the home trade is heavily handicapped by large stocks of dear piece goods. Practically all the trade recently done has been on export account, and with the further sensible depreciation in the German exchange, the majority are at a loss to understand the sensible rise that has taken place in wool and tops. In the case of yarns, spinners are quoting botanies about 3d per lb more, but are unable as yet to make it. At the same time there is evidence of increasing confidence, and if London finishes firm, it should do much to galvanise the home trade into renewed activity.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

The London sales have continued to show all the sound features of the opening week, and at the time of writing there has been no evidence of an easier market. In fact, if anything, merinos have somewhat hardened since the opening, and the demand seems to be insatiable. The offerings have not been anything like as good

as during previous series, and it almost looks as if there is a scramble for 60's and upwards. Crossbreds predominate at the current auctions, reminding one of a May and July series in pre-war days. The daily offerings of New Zealand wool have provided Bradford topmakers with an opportunity to acquire good desirable stock, and there is no gainsaying the fact that the bulk of crossbreds is anywhere from 1d to 3d per lb dearer compared with June rates. This certainly is a sensible advance, and those who have been heavy sellers of 40's tops on forward account at 11d cannot feel very comfortable. However, the demand is there, and I take it that a good deal of covering is being done by Yorkshire in particular. It seems at the moment as if London is by far the dearest market for crossbred wools, for even B.A. crossbreds are to-day procurable at less per clean scoured lb than the prices now ruling for similar quality wools in Coleman Street Wool Exchange. Germany continues to give commendable support to these wools, the purchases of fair weights of crossbreds having entirely removed the depression which was in evidence in July.

The way merinos are selling clearly shows a very strong market. According to Kreglinger and Fernau, the clean scoured cost per lb shows an advance of about 4d compared with the close of the July series, which means a considerable increase in good topmaking wools. A cable received last Friday from Melbourne stated that 64-70's good top-making fleece wool was selling on a clean basis of 30d, c.i.f. London, and that market seems to offer an inducement for users operating abroad. The bulk of the merino offerings is more suitable for Continental requirements than for the home trade, and anything well grown and shaggy is the turn against the buyer compared with the opening night. Considering the conditions prevailing in France and Germany, competition from that quarter is causing some surprise, the strike of textile operatives in the former country not yet having been settled. Cape merinos have also advanced, which augurs well for the advent of the new clip, which should begin to arrive at the various selling centres in South Africa at the end of the month. All average Cape merinos are 10 per cent. above last series. On the whole, the sales are making excellent progress, and a firm finish is already in sight.

The interview which Sir Arthur Goldfinch has given to the *Yorkshire Post* has made interesting reading; but it has fallen very flat with the trade. To a very large extent it is an apology for the error of judgment of the Wool Section of the Ministry of Munitions last year in refusing to sell at shillings per lb more than can be made to-day when only 2d to 1d divided sellers and buyers.

THE COTTON TRADE.

Telephone: 1773 Avenue.

MANCHESTER, September 8.

The excitement in the raw cotton market has thoroughly disorganised business in yarn and cloth, and the whole conditions have been very unsettled. It has been quite impossible to arrange a basis on which to do trade. As usual, some operators have been caught short, and there has been a rush to cover, but Manchester traders, as a body, have refused to follow the rise in values. Poor advices have been received from India and China. Despite the advance, cases have been mentioned of dealers in Calcutta cancelling contracts owing to late delivery. There has been a fair amount of activity in stock lots for the Near Eastern outlets. Supplies in the hands of merchants and producers are worth much more to-day than a month ago, and this development should facilitate clearances of dear stocks. The outlook is very uncertain, and most people are adopting a waiting policy until the tone is steadier. Buying in American and Egyptian yarns has been very irregular, and here and there very fair orders have been put through. Prices, of course, are distinctly dearer.

VEGETABLE OILS AND OIL SEEDS.

(FROM OUR CORRESPONDENT.)

The market for both linseed and linseed oil continues in an inactive and hesitating condition, the overshadowing factor being the enormous quantities of seed arrived, and afloat both for this country and the Continent, and the doubt as to whether conditions of trade will improve sufficiently to conveniently absorb these big supplies. Very little, or hardly any at all, business has been done in seed in the past few days, but quotations are only slightly lower, there being no pressure to sell in the near positions. Consequently, it may be said that the undertone is good. With regard to the oil product, trade has been on very quiet lines, with sellers maintaining prices at perhaps a shade over late rates. The demand for cotton oils appears to have been satisfied for the time being, and crushers do not seem inclined to restore their stocks at present prices of Egyptian cottonseed and in view of the poor inquiry for cakes. Trade in rape oil continues of a hand-to-mouth description, and only a small business is reported in English-made soya bean oil, Oriental now competing at a lower level. Palm kernel and ground nut oils are in only moderate request. The trade in oilcakes of all descriptions is very poor indeed, despite lower quotations.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

Prices for market hides and skins were firm to a slight advance at the auctions held in Bermondsey on Thursday, best and second ox and heifers selling at the previous week's figures. Cows and bulls made higher prices, the advances ranging from 1d to 5d per lb. Keen interest was again displayed in regard to calfskins, and most classes made from 1d to 3d per lb more money. Considerable activity has been noticed in regard to foreign hides, and quite an appreciable amount of the business put through during the week has been at higher figures. The demands of the home trade have been well in evidence, and interest has been mainly centred around middle and better-class hides.

Consumers of sole leather are only buying just sufficient to cover immediate requirements, as there is a feeling abroad that the present range of values have no stability. Tanners in most cases, however, are holding out for full asking prices, as with the hide market in its present condition there appears to be little prospects of any fall in the price of leather so long as hide values are on

the up grade. In bonds the heavy weights are mostly in request, and anything from 12 lbs and up usually finds a buyer. Light weights are not so much sought after, as is also the case with middle weights in bellies and shoulders. The lights and heavies in the latter classes of goods, however, are a satisfactory sale.

Upper leathers are selling steadily, and some fair-sized parcels have changed hands during the week. Manufacturers of boots and shoes report very little change in the position. In some quarters one hears of a few more orders coming to hand than has been the case of late, while other firms report the demand as having fallen off slightly.

PORTLAND CEMENT.

The following quotations for Portland cement are supplied by the Cement Marketing Co., Limited:—Best English, complying with British standard specification, delivered in London area—in full van or motor loads to site, 83s 6d to 89s per ton; alongside in River Thames up to Vauxhall Bridge in full barge loads (80 tons minimum), 76s 6d per ton. Extra on above prices for the following special brands:—

"Blue Tiers," a fine-ground slow-setting cement, and "Red Tiers," a fine-ground quick-setting cement, 3s per ton.

"Ferrocrete," a cement prepared to meet the requirements of specialists in ferro-concrete constructions (in 20 sacks to the ton), 10s per ton.

OVERSEAS PRODUCE MARKETS.

Mining Lane, Friday, September 9.

Business in most directions pursued a quiet course, demand being confined to wants of immediate necessity, but prices on the whole proved steady. Jute was an exception, while showing increased firmness under very reserved offers from Calcutta and larger buying orders being in circulation.

SUGAR.—There was a moderate amount of business concluded this week, and prices for spot goods ruled steady without particular change. Tate's cubes 61s 9d to 62s 9d; crushed, 58s 6d; granulated, 57s to 57s 6d; Lyle's granulated, 57s to 57s 3d; yellow crystals, 52s 6d. Crystallised West India, 45s to 50s 6d, as to quality. American granulated, spot, sold, 56s; Canadian, ditto, 56s; Dutch, 56s, duty paid. American granulated, September, sold, 28s to 27s 6d; and white Java, August, 24s 6d, c.f. and i. terms. Belgian crystals, November-December, changed hands at 21s 9d, f.o.b., Antwerp. Dutch granulated, prompt, 28s, f.o.b. Amsterdam. Czecho granulated, prompt, 27s 3d, October-December, 25s 9d f.o.b., Hamburg. Terminal market steady. December, 96 per cent., old terms, sold, 17s; and white, November, 23s 6d; December, 22s 9d. Cuban stocks stand at 1,225,000 tons, against 314,000 same time last year.

COFFEE.—A good demand continued, especially for the more attractive qualities, and market ruled firm to occasionally dearer. Some Blue Mountain Jamaica was eagerly competed for, and realised extreme rates. Midding to fine middling, sold, 157s 6d to 181s; bold sizes, 186s to 220s; peaberry, 150s to 223s. Good bold Nairobi, sold, 96s to 103s. Future delivery market firm, and dearer. December, sold, 48s 6d; March, 49s 3d.

COCOA.—Only a small business transpired, but prices ruled nominally unaltered. Butter quiet at 1s 10d per lb.

TEA.—In auction some 40,500 packages Indian were offered, and met with active and well distributed competition at full to dearer rates. Some new season's Assam sold well when quality was satisfactory, but in certain instances prices bid were not up to importers' ideas. 26,400 packages Ceylon were soon disposed of under active biddings, at full to rather dearer prices.

RICE.—Business in this market came quite to a standstill during the week, and quotations, also for broken descriptions, ruled quite nominal and difficult to define. Rangoon beans quiet, but steady. Hand picked, spot, 15s 3d; August-September, 14s 6d; September-October, 14s 3d, and October-December, 14s. Madagascar butter beans, all white, spot, sold, 33s 6d, new crop, and 28s, old. Dutch peas, hand picked, prompt, 27s, c.f. and i., and Japanese peas, crop 1921, September-November, 38s.

SPICE.—A quiet tone governed the market for pepper. Fair black Singapore, spot, sold, 42d to 43d; September-November, ditto, 42d; October-December, 42d to 43d; Aleppy, spot, 42d; Tellicherry, 52d; white Singapore, spot, 92d; September-November, 83d; Muntok, spot, sold, 92d, and September-November, 83d. Zanzibar cloves, on spot, quoted 1s 3d; pimento, spot, 25d; flake tapioca, spot, 12d, all per lb; ditto, September-November, steamer, London, sold, 16s 6d to 16s 9d; October-December, Havre, 17s 3d. Fair Penang, seed

pearl, spot, 22s 6d; ditto, September-November, steamer, sold, 20s 3d, c.f. and i. terms, London. Sago flour, September-November, 16s 3d. Japanese farina, October-December, sold, 28s 6d. Desiccated coconut, spot lots, sold, 52s; afloat, 50s.

JUTE.—The market steadily hardened under very reserved offers from Calcutta and steady buying orders in circulation from spinners. Native first marks assortment, spot, Hamburg and Dunkirk, sold, £32 to £32 10s; ditto, in dock, £30 to £31 10s; ditto, subs, old crop, August, declared steamer, £31 10s; ditto, August-September, up to £30 15s to £31; ditto, September-October, £30 15s. Lightning subs, old crop, August-September and September-October, done £26 15s; and heart subs, ditto, August, £19 10s; September, £19 5s to £19 10s. Calcutta hessians firmer; 10-ounce, spot, sold, 24s 6d; October-December, 26s; 8-ounce, spot, 21s 6d; October-December, 22s. A twills, spot, 78s; B ditto, sold, 65s.

HEMP.—The market for Manila continued in a very slow state, and rates ruled quite nominal. J grade, September-November, quoted £37; K ditto, £36; L, £35 10s; M, £31 10s. New Zealand quietly steady, and fair August-October changed hands at £35. Italian firm in local market, but nominal as far as the United Kingdom is concerned.

SHELLAC.—Market firm, and a fair demand prevailed for forward positions. Fair T.N., spot, 300s; October, sold, 297s 6d; and December, 287s 6d.

COPRA.—Market unsettled, though a fair amount of business was effected. F.M.S. Straits, July-September, Rotterdam, sold, £34 15s; August-October, £34 5s to £33 15s and £34 10s; September-November, £34 to £33 10s, and £34 5s; Ceylon, September-November, London, sold, £35 5s to £35 15s; Cebu ditto, Hamburg, £32 10s to £33; South Sea Islands, September-November, London, £32 15s. Palm kernels, October-December, Liverpool, sold, £22 17s 6d to £23 5s.

RUBBER. remained in a quiet condition, and without particular change in prices. Standard crepe, spot, sold, 8½d; October-December, 9½d; January-March, 9½d. Sheet, spot, sold, 8½d; October-December, 8½d; January-March, 9½d. Fine hard Para, spot, sellers, 1s 0½d; and Caucho ball, 7d.

OILS.—Linseed irregular. Spot, net, naked, 39s; September-December, 38s 6d; January-April, 39s 6d. Rape quiet. Crude, spot, 55s; refined, 61s. Cotton quiet. Crude Egyptian, 45s 6d; Bombay, nominal; common edible, 53s. Chinawood: Hankow, spot (barrels), 93s; and shipment, 69s to 70s. Coconut steadier. Ceylon, spot, 55s; September-October, 53s 6d; Cochin, ditto, 58s. Soya firmer. Oriental, barrels, ditto, 45s. Japan fish steady. July-August, cases, 23s. Cod steady. English, spot, 29s to 31s. Groundnut firm. English crushed, naked, spot, 55s; deodorised, barrels, 66s. Turpentine firmer. American, spot, 65s 9d; October-December, 66s 6d; January-April, 68s. Rosin firm. American, grade B, 17s; F, 17s 6d; G, 17s 6d; K, 18s; M, 18s; WW, 24s 6d; French, F/G, 15s; H, 15s; WW, 18s; extra pale, nominal.

Petroleum quiet. American, refined, 1s 4d; standard white-1s 4½d; and water-white, 1s 5d per gallon.

OILSEEDS.—Linseed: Market unsettled. Calcutta, September-October, £23. Plate, spot, Hull, £20 10s; afloat, £20 10s; September-October, £21; October-November, £21 5s; November-December, £21 10s; January-February, £21 15s. Rapeseed quiet. Toria, September-October, quoted £22 5s; real bold Ferozepore, quoted £22; brown Cawnpore, £21. Cottonseed firmer. Egyptian black, September, quoted £14 10s; and white, £14. Bombay, August-September, £12. Gingly firm. Chinese, September-October, Continent, £30 10s. Castor, Bombay, September-October, £20 10s. Ground nuts firmer. Coromandel, machine-dried, August-September, £29 10s; Chinese decorticated, f.a.q., ditto, £28 10s per ton.

METALS.—Tin continued active and firmer during the first part of the week, cash fluctuating to £161 5s, and three months' to £164 5s. After exhibiting a further advance last Wednesday, a set-back in prices followed under selling pressure, these dates being sold at £163 5s to £162, and £166 5s to £164 10s respectively. The downward movement was prolonged at Thursday's meeting, while cash eased to £159, and three months' to £161 10s. At Friday's session, cash relapsed to £156, and three months' to £158 5s, while finally done at £158 15s. English ingots, £154 to £155. Copper occupied steady attention, the market being rather firmer until last Tuesday, when standard cash changed hands at £69 5s; three months' at £70. A slightly easier tendency prevailed during the middle of the week, with business in September at £69 5s, three months' £70 to £69 12s 6d. At Thursday's meeting cash relapsed to £67 5s, and three months' to £68 5s, while finally registered at £68 10s. At Friday's session, late September sold at £67 5s, and three months' at £68 7s 6d to £68 5s. Electro, £72 to £74; best selected, £68 5s to £70 5s; strong sheets, £70 3. Wire bars, £72 10s to £74. Lead steady at £23 7s 6d to £22 17s 6d, as to position. Spelter firmer at £25 7s 6d to £25 17s 6d. Antimony: English regulus, £37 to £40. Aluminium, home trade, £120; export, £125.

TERMS OF SUBSCRIPTION.

Quarterly, 14s 6d; Half-yearly, £1 9s 0d; Yearly, £2 18s 0d. Colonies and Abroad, £3 1s 0d per Annum.

Single Copies, One Shilling.

Cheques and Post-office Orders to be made payable to the Proprietors of the "Economist," Office: Granville House, Arundel street, Strand, London, W.C.2.

Copies of the Economist may always be obtained in the City at Messrs Davies and Co., 95 Bishopsgate; Leathwait and Simmons, 5 Birch Lane; Barker and Howard, East India Avenue, and 6 Fenchurch Buildings, Sugar Loaf Court, Leadenhall Street; Pottle and Son, 15 Cullum Street; Willing and Co., Limited, 50 Copthall Avenue, and 53 Finsbury Pavement.

Paris: Galvani Library, 224 Rue de Rivoli; Messrs Brentano's, 37 Avenue de l'Opera. New York: Economist Office, 20 Broad Street (Room 1,709).

THE MONEY MARKET.

MONEY has been rather less plentiful, thanks to the reduction of Ways and Means advances from the Bank of England, but the supply was amply comfortable, and the tendency of the discount market has remained weak. There was much talk in the middle of the week of a substantially higher rate for Treasury bill tenders, but three months' bills could be placed fairly

easily at 4 per cent. Six months' bills were wanted in some quarters at $4\frac{1}{2}$ per cent., and it is suggested that Treasury bills of this usance might find a ready market.

	Sept. 16, 1921.	Sept. 9, 1921.	Sept. 2, 1921.	Aug. 26, 1921.	Previous Rate and Date Changed.
Bank Rate	$5\frac{1}{2}$	$5\frac{1}{2}$	$5\frac{1}{2}$	$5\frac{1}{2}$	6 (Jly. 21, '21)
Banks Deposit Rate	$3\frac{1}{2}$	$3\frac{1}{2}$	$3\frac{1}{2}$	$3\frac{1}{2}$	4 (Jly. 21, '21)
Discount / Call	$3\frac{1}{2}$	$3\frac{1}{2}$	$3\frac{1}{2}$	$3\frac{1}{2}$	4 (Jly. 21, '21)
Houses / Notice	$3\frac{1}{2}$	$3\frac{1}{2}$	$3\frac{1}{2}$	$3\frac{1}{2}$	4 (Jly. 21, '21)
Treasury Bills, 3 months	$3\frac{1}{2}$	$3\frac{1}{2}$	$3\frac{1}{2}$	$3\frac{1}{2}$	..
Market rate (3 mths' bills)	$4\frac{1}{2}$	$4\frac{1}{2}$	$4\frac{1}{2}$	$4\frac{1}{2}$	..

* Additional to those offered by tender the preceding week.

The Bank return showed a marked improvement. A decline of £1,225,000 in the note circulation left the Reserve higher by that amount, and since Government securities were reduced by $12\frac{1}{2}$ millions, the deposits were $11\frac{1}{2}$ millions lower, chiefly at the expense of "Other." The circulation of currency notes was reduced by £1,133,000 to £318,036,500, which includes £1,916,000 for notes called in but not yet cancelled. The fiduciary issue is £268,170,600, or £49,384,600 below the maximum.

The following table shows public income and expenditure for the week ended September 10th:—

RECEIPTS.	Min. £	EXPENDITURE.	Min. £
From Revenue	14,343	Supply Services	10,260
Less—		Interest on Debt	901
Added to Exchequer Balances	401	Sundries	333
		Debt Reduction	2,808
	14,302		14,302

These operations decreased the National Debt by the sum of £2,807,637, and caused the following changes, which are reflected in our table of National Debt, given in another column:—

	Min. £		Min. £
Treasury Bills	+ 860	Bank of England Advances ..	— 5,000
Treasury Bonds	+ 2,250	Surrenders of Bonds, &c.	— 578
Advances by Public Departments ..	+ 650	Depreciation Fund	— 1,160
Civil Contingencies Fund	+ 1,000	Sundries	— 1,130
National Savings Certificates	+ 300		
	+ 5,060		— 7,868

Property and Income-tax yielded £4,351,000, while Customs and Excise brought in £4,331,000. The floating debt now stands at £1,354,676,000, having been reduced by £3,455,000. It will be noted from our table that Treasury bonds were sold to the satisfactory extent of $2\frac{1}{2}$ millions.

In the foreign exchange market the main interest of a busy and exciting week has been concentrated on the movements of the mark and the franc. From 361 on the 9th the mark moved up rapidly, but with wide fluctuations, to about 405 on Monday. On Tuesday it reached 412, but ended slightly lower at 402. Since then it has moved spasmodically up and down, but yesterday morning was again quoted at 402, forward rates being about one mark per month below spot. The main causes for this movement, which were discussed last week, continue to operate, and there is at present no reason to expect an improvement, although the statement that the leading bankers have met the Government and given it assurances as to the provision of funds necessary for the next reparation payment (on November 15th) may go some way towards allaying uneasiness. There is much talk in Germany as to the reimposition of exchange control in order to counteract the present wild speculation, but it is unlikely that this will be introduced. The depreciation of the mark would seem at last to be having a direct effect on the value of the franc, which has risen much more rapidly than of late, from 49.82 $\frac{1}{2}$ on the 9th to 51.82 $\frac{1}{2}$ on Monday. There was a slight recovery on Tuesday, but rates again rose on the following day to 52.77 $\frac{1}{2}$ on Thursday. Yesterday morning there was again a slight reaction to 52.70. It is reported that the demand for sterling from Paris has been heavy, both there and in New York. The Brussels rate has, as usual, moved in sym-

pathy from 50.74 $\frac{1}{2}$ to 53.30, but it will be seen that the spread between the two is some 32 centimes narrower than last week. The forward rate for French francs is about one centime per month over spot; for Belgian about five per month below. Italy has also depreciated on the week from 86.37 $\frac{1}{2}$ to 87, after having on Monday been over 88. The New York rate has been difficult to understand, having risen at first from 3.72 $\frac{1}{2}$ to as high as 3.74 on Monday. Since then it has tended to be weaker, having at times been well below 3.70; but yesterday morning again it was up to 3.71. There is a general feeling that the position is hardly stable, and that a demand for dollars may spring up at any time. The quotation for futures is $\frac{1}{2}$ per cent. per month above spot. Among the neutral exchanges Amsterdam, which is feeling the strain of the heavy depreciation in the mark, has moved up from 11.75 $\frac{1}{2}$ to 11.80, after having been as high as 11.82 $\frac{1}{2}$ in the earlier part of the week, futures being $\frac{1}{2}$ cent. per month above spot. Madrid, after going up to 28.80, has improved considerably again, and at 28.50 is only 11 points above the previous week. Switzerland at 21.53 has moved about 20 centimes against this country. The Scandinavian rates have moved irregularly, and both Stockholm and Copenhagen have increased in value, while Christiania has again depreciated. Helsingfors, at over 300, would seem, in spite of the relatively favourable position of the country, to be unable to escape the phase of collapse through which all the new States of Europe are passing. Among the Central European States both Austria and Poland have established new high levels. The London rate for Vienna (Auslandskronen) is now about 4,200, as compared with 3,650 on the 9th, when the Vienna or Inlandskronen rate on London was 4,800. The main reason for this further fall is the unfavourable report by the Finance Minister of the results of his recent visit to London and Geneva. Warsaw, after showing some recovery at the beginning of the week, has moved up again to 15,500, and now to the other difficulties of Poland there has been that of finding a new Cabinet to replace the very unsuccessful Witos régime. Budapest, in spite of real attempts at financial reform, shows a further depreciation to about 2,000, the result of the unfortunate complications in West Hungary, which may lead to very serious troubles with the neighbour States of Czechoslovakia and Jugoslavia. In Prague the rate has remained very nearly steady at 310, in Belgrade there has been further depreciation from 180 to 210, and it is unlikely that much money will be found abroad for the new loan now being floated in Serbia. The Bulgarian rate has also continued to move up from 470 to 580, while Bucharest, after a rapid rise to 500, is showing a slight tendency towards recovery. Constantinople has moved very little at 385, but Athens has again depreciated. The rupee, at 1s 5 $\frac{1}{2}$ d, is beginning to show a distinct upward tendency, and the yen is also somewhat dearer at 2s 7 $\frac{1}{2}$ d. Among the South American currencies, Buenos Ayres and Montevideo are rather dearer, while Rio and Valparaiso have depreciated a little. There has been a distinct upward movement in silver on good demand from India, prices having reached their highest since the end of January, and although there has been a slight reaction, the tendency seems firmer. Shanghai and Hongkong have both become dearer in sympathy.

A SUMMARY OF NATIONAL FINANCE.

FINANCIAL YEAR, 1921-22 (TO DATE) APRIL 1 TO SEPTEMBER 10, 1921

	£		£
Total spent	449,818,840	Raised by revenue ..	400,212,987
Inc. in balances	174,926	Net borrowings	49,780,779
Total	449,993,766	Total	449,993,766

ESTIMATES for YEAR 1921-22.

	£		£
Ordinary Receipts ..	1,058,150,000	Ordinary Expenditure	974,023,000
Special Receipts ..	158,500,000	Special Expenditure	65,705,000
Total	1,216,650,000	Total	1,039,728,000
		Surplus*	176,922,000

* Owing to liabilities which could not be precisely calculated, it was estimated that the final balance would not exceed about £80,000,000.

EVENTS OF THE WEEK.

SEPTEMBER 10TH.—Trade Union Congress ended.

SEPTEMBER 11TH.—Death of Lord Milford Haven.

SEPTEMBER 12TH.—Mr De Valera accepts invitation to Inverness Conference. Heavy rainstorm in London. Unemployed riots in Liverpool.

SEPTEMBER 13TH.—Cabinet Committee on Unemployment meets. Two Sinn Fein couriers confer with Premier in Scotland.

SEPTEMBER 14TH.—Disposal Board agrees to sell all remaining stocks of surplus textiles to syndicate for £3 millions. Last meeting of British Association at Edinburgh.

SEPTEMBER 15TH.—Premier cancels proposed Irish Conference. Royal Commission advises the admission of Canadian store cattle.

The gilt-edged section of the stock markets has been almost alone in showing any firmness, other departments being dull and inclined to weakness.

Business in the cotton trade has been irregular. Inquiry for cloth from overseas markets has been on a small scale. The London wool sales closed on Thursday with prices at their highest point, competition being keen. Yorkshire mills are now running longer hours. Inquiry from abroad for piece goods is more encouraging. The high price of fuel is delaying the restarting of blast furnaces, and there is not much life in the steel trade yet. Glasgow reports speak of increasing activity on the Clyde. The vegetable and oilseeds trades are irregular. Inquiry is better in the leather trade, but boot and shoe manufacturers do not find much improvement in business. Detailed trade reports from special correspondents will be found in later columns.

A FINANCIAL SYMPOSIUM.

VERY good work was done, under the able chairmanship of Mr W. L. Hitchens, at the Economic Section of the British Association at the Edinburgh meeting, which has just concluded its labours. On the strictly financial aspect of its problems, Section F had the benefit of a report on the "Effects of the War on Credit, Currency, Finance, and Foreign Exchanges," issued by a committee consisting of Prof. W. R. Scott (chairman), Mr J. E. Allen (secretary), Prof. Bastable, Sir E. Brabrook, Dr J. H. Clapham, Dr Hugh Dalton, Mr B. Ellinger, Sir Drummond Fraser, Mr A. H. Gibson, Mr C. W. Guillebaud, Mr F. W. Hirst, Prof. A. W. Kirkaldy, Mr F. J.

Lavington, Mr D. H. Robertson, Mr E. Sykes, and Sir J. C. Stamp. These names are enough to show that a great deal of varied experience and ability was brought to bear on the problems dealt with by the committee, but it appears to have been further reinforced, since the report is brightened by observations from Dr Cannan, Messrs Hilton Young, Bernard Shaw, and others. It is an unusual document, since no attempt has been made to arrive at unanimous conclusions—that fatal process which generally takes all the pith and savour out of committee reports—but extracts from the answers of the various pundits to questions put to them are skilfully edited and brought together. So we get what reads like a racy discussion by these distinguished experts. For example, among the answers to the question, whether a capital levy or a forced loan offer any escape from the dangers of national insolvency, we get the following:—

"Mr Gibson maintains that 'No country is nationally bankrupt until it cannot pay, within a reasonable time, the interest on its external debt by exports or other form of settlement. Last year we had a net trade balance in our favour, taking invisible exports into account, and a net favourable balance is likely to be maintained in future years. I see no present necessity for a forced loan. A capital levy directed solely against war-fortunes I support if practicable.....'

"Sir J. C. Stamp replies: 'It is a nice balance. It all depends upon the prevailing psychology in financial circles at the time when it is introduced. It is not enough to prove that mathematically or actuarially the effect should not follow. It is what people imagine that will rule the issue, and not what they ought to think.'

"Dr Dalton also does not take seriously 'the dangers of national insolvency.' He adds: 'But I favour a capital levy sufficiently productive of revenue to wipe out at least half the National Debt within the next few years. Unless the business world is successfully bamboozled into unreasonable panic, I believe that no appreciable shock to private credit need result from such a levy.....'

"On the other side, Mr Shaw writes: 'A capital levy is utter nonsense economically; it is the delusion of "the practical business man," who thinks that because he can sell an income of £5 a year for £100 down, the whole income of the world could be sold for twenty times its figure. There is nothing to be got out of capital by way of taxation except the income it produces. As to a forced loan, why not a forced gift? All taxation of the interest on a loan to the State is repudiation. The War Debt is already repudiated to the extent of 11s in the £ in the case of the very rich. How far the repudiation should go, and what form it should take, are matters of expediency.'

"Mr Lawrence replies: 'Yes. Capital levy, complete

revision of peace treaties, Free-trade, limitations of paper currency, and many other steps....."

Again, on the question whether it was possible to prevent expansion of credit and currency during the war: "Dr. Dalton answers: 'Yes; by heavier taxation (or alternatively, to some extent, by offering higher rates of interest on voluntary loans). This policy, if it had been adopted in this country, would have prevented the greater part, if not the whole, of the rise in prices and money wages, and of the depreciation of the American and other exchanges. Especially in the early part of the war, it was a gross error of policy not to impose heavier taxation.' Mr Hirst, Commander Hilton Young, Mr Mason, and Mr Bernard Shaw also answer Yes. Sir J. C. Stamp answers: 'Theoretically Yes, but psychologically No, the stimulus given to profit-making by the expansion is too important an ingredient for waging the war to have been left out.' Dr Dalton comments: 'This doesn't say much for the patriotism of the business community.' Mr Allen observes: 'A Napoleon may be compelled to mislead his countrymen, a self-governing community ought to face a war with a full knowledge of its costs and dangers. To take a classical analogy, the choice was between the policy of Pericles and that of Cleon; and Cleon's won.'Professor Cannan holds that the expansion of credit could have been stopped 'by not issuing it.' He adds, 'Of course, this might have stopped the war; but that isn't economics, but politics.' So far the discussion, as quoted, has had a somewhat academic flavour, but the report comes to more practical questions when it asks whether the taxable capacity of a nation can be ascertained and whether ours has been passed, and seems to show a small majority of negative answers to both questions. It also seems, on the whole, to incline to the view that, if the principle of ability to pay be accepted, it follows that the greater part of the national income should be raised by income-tax. On the very important question whether we wish prices to be steady or to rise or fall, stability seems to have received most support, but, nevertheless, the balance of opinion seems to have been in favour of working back to the old gold parity, Dr Cannan remarking that "the fixed-income people will have been robbed of a good deal even then."

In the daily papers a less scientific discussion is being carried on concerning the urgent and practical question of the measures to be taken for dealing with unemployment. A statement issued early in the week by the Ministry of Labour showed that the number of wholly unemployed had fallen from 2,170,000 on July 1st to 1,527,000 on September 2nd, and of those on short time from 988,000 to about 400,000. It is thus clear that the country is slowly recovering from the effects of the coal strike, but that the situation is still grave. It is understood that the Cabinet is determined not to continue the system of doles, but to give pay for work to be provided to meet the crisis. With all its obvious economic disadvantages, this course appears to be the best. It is suggested by the National Alliance of Employers and Employed that all local authorities and public utility companies should be required by the Government to prepare schemes of public utility, and that the Government should guarantee loans to them to the extent of 75 per cent. of the total cost, at a proper rate of interest. Presumably, since the Government is only to guarantee, the money would actually be raised by public subscription, and it is rather hard to see why utility companies should be "required" to embark on work which is almost certain to involve loss, so specially taxing their shareholders for a purpose for which they are no more liable than their neighbours. Mr Harold Spender, in a letter in Thursday's *Times*, urged the Government to turn their backs on the whole policy of loans, and "pay the cost of these relief works as they go along out of the National Exchequer." These are brave words, but unless fresh taxation is imposed any money so used will necessarily reduce the already attenuated balance available for debt reduction, and so will really be

found out of loans. Does Mr Spender suggest fresh taxation, and if so, what? In the *Daily Mail* of the same date Sir Robert Hadfield urges that the United States must "distribute her gold, and so equalise the exchanges." If America would lend freely to the rest of the world, other countries' position would temporarily be more comfortable; but would they cease to outrun the constable, and is America likely to do so in view of its recent experiences? Sir Peter Rylands, through the same medium, proposes to remedy the situation by minting sovereigns with a lower standard of gold parity, "say, 25 per cent. less." As sovereigns do not now circulate, this seems to be a somewhat ineffectual measure; but presumably Sir Peter really means that we should write down the pound sterling by 25 per cent., and so "stabilise" it at the present rate of exchange. This proposal is hardly relevant to the present problem, since it would not have any effect on the erratic course of Continental currencies. In fact, there is much too much talk about depreciated exchanges, and too little thought about the evils which cause them, such as "Safeguarding of Industry" measures, economic "sanctions," continued after Germany has begun to pay the indemnity, and other such foolishnesses.

THE POSITION IN RUSSIA.

(BY A RECENT VISITOR.)

It is very difficult to discuss the present economic position of Bolshevik Russia, both on account of the ruin of Russian industry, due to innumerable causes during the last seven years, and also owing to the lack of any definite and permanent policy on the part of the Bolsheviks. There is no need here to go into details with regard to the break-up of Russian industry. The facts are sufficiently well known to everyone who is interested. Still, a few remarks about the actual appearance and condition of industrial centres in Russia may be of some interest.

The whole position has been changed by the new economic policy of the Bolshevik Government, which is supposed to have been decided upon last April, and is only now being put into effect. This policy affects different kinds of industries in different ways. I have not read all the decrees bearing on the subject—no human person could unless he had the whole day to devote to them—but I have been assured by a prominent member of the Government—a Minister, in fact—that the position is as follows.

In the case of big factories, these may be leased to foreign concessionaires, who take over these enterprises from the Government, to whom they are to pay a large proportion of their profits. So far, of course, there is no difference between this practice and that of any backward capitalist State in the world. But the Bolsheviks claim that their workmen and their workmen's trade unions will determine the conditions of their labour in these enterprises leased to foreign concessionaires. The other day, however, I heard that one of the most prominent English concessionaires in Moscow said that, conditions or no conditions, he had got back his concession on better terms than he had ever had it before under the old régime. This applies only to big enterprises controlled by foreigners. Such leases are not going to be extended to native Russian manufacturers; the best that these can hope for under the new economic régime is to be invited back as so-called "technical advisers" to their own factories. Needless to say, this prospect has no very great attraction for the average Russian manufacturer.

The first concession that was granted was that for the Great Northern Telegraph Company; and Mr Leslie Urquhart is also in the field, and has, I believe, been quite successful. The hope of the Government is that they will be able to lease factories and other enterprises to trade unions, and other groups of workers who, in return for taxes in kind to the State, and a sharing of profits with it, will conduct their industry according as

THE CARDIFF CONGRESS.

(BY OUR LABOUR CORRESPONDENT.)

It is difficult to glean from the daily Press any clear impression of such a gathering as the Trades Union Congress. Yet it is a representative assembly of sufficient importance to merit the attention of all who take an interest in public affairs. The nine hundred delegates who attended the Congress at Cardiff last week represented about six and a-half million organised workers. They were met to consider the annual report of the Parliamentary Committee of the Congress and a long series of resolutions and amendments tabled by various affiliated trade unions. But the weighty agenda does not exhaust the activities of Congress week. The opportunity is taken of arranging other business meetings, and local labour bodies invariably take advantage of the presence of prominent leaders to address public meetings. From the broad public point of view, the main interest of the Congress lies in the indication which it gives of the temper of organised labour, and the decisions taken on matters of policy.

The Congress met under the shadow of an unemployment crisis which had created graver apprehension than any previous trade depression within living memory. There was not a union represented at the Cardiff Congress which has not at the present time a long list of unemployed members. There was hardly a union represented whose members had not suffered substantial reductions of wages. The hopes of "reconstruction" have receded into the background before the ugly spectre of unemployment and the widespread policy of wages reductions. It is not surprising, therefore, that the predominant note of the Congress should have been one of deep seriousness. The general impression of a Trades Union Congress as an exhibition of fireworks by irresponsible delegates never was true, but it was more than ever untrue of the gathering at Cardiff.

The subject which aroused the deepest interest was a resolution on unemployment, submitted by the Parliamentary Committee. It is no exaggeration to say that there is no question on which the Congress feels more strongly than unemployment. The great majority of the delegates have suffered the experience of walking the streets in search of work; they know what unemployment means, and the havoc wrought by it. When the resolution came up for discussion at the Congress, the spectator in the balcony must have realised something of the seriousness with which the delegates regarded the question, and of the sense of injustice and bitterness underlying many of the speeches. Perhaps he would detect a feeling of impotence, which rendered the situation all the more tragic. It is probable that, as a result of the Congress discussion, organised labour will formulate detailed proposals for enabling the country to face the winter months.

As regards the general policy of the trade union movement, two questions call for comment. In the first place, there has never been any real central trade union organisation. The Congress is an annual gathering, the decisions of which are carried out by the Parliamentary Committee, the name by which the executive of the Congress was known, far back to the days when there was no political Labour Party, and the political and Parliamentary sides of its work have diminished in recent years. Last year the annual pilgrimage to Ministers of the Crown to consult with them on questions raised at Congress was discontinued. The industrial activities of the Parliamentary Committee in the meantime tended to expand, but it has never really grappled with the growing number of problems which lay to its hand. The development of trade unionism, the increasing scale of industrial disputes, and their inevitable reaction upon non-combatants, the need

seems best to them, subject, of course, to the innumerable economic decrees, and the advice, tantamount to commands, issued by the Government. Already a certain number of enterprises have been restarted in this manner—a leather factory here and a soda water factory there—but it is not until we get down to the smallest kind of industry that we shall find the position in Russia to-day much changed from what it has been for the last two or three distressful years.

Factories employing less than 20 labourers—the number is apparently not clear even to the originators of the project—may be worked according to the old ideas of *petit bourgeois* economy; in ordinary words, you may open a shop now in Moscow and elsewhere if you are prepared to take the risk that the local officials either may not understand or may not approve the new economic policy of the Government, in which case they are likely to close the shop as soon as it has been opened, giving as their excuse the well-worn accusation of speculation.

Every day the position in Moscow is different. You walk down the street one day and notice with surprise that a restaurant has opened—I call it a restaurant, but perhaps a tea-room would give a better idea of it to the English reader. Next day one discovers that a provision shop has opened next door. Next day one discovers with amazement that a window near by has three or four furs in it, and that the owner obviously expects you to go inside and ask the price of them—a thing that has been equivalent to suicide during the last few years on account of the Bolshevik suppression of "speculation"—i.e., private trading. It is the same thing in the markets. Until recently, I am told, one bought and sold in the street markets with a certain amount of hesitation, knowing that one was infringing a law which at any moment might be put into force at one's expense. Now, however, you may buy and sell in the markets as much as you please, and there is great activity there. I am told that you can buy anything in Moscow if you have got the money to pay for it, but with the exchange at 120,000 Soviet roubles to the English £ in the North—though I am told that it is 400,000 in the Caucasus—it is clearly only foreigners and foreign speculators who are in a position to pay the prices demanded.

I have tried in this letter to give a certain idea of the general economic position as it is. To turn now to the prospects in the future, I am afraid that most of the boomed Bolshevik schemes of industrial and electrical enterprises, exist mostly only on paper; and I am not at all sure that quite a number of the offers of concessions that they announce that they are prepared to make will not also remain in the same position for some considerable time. It is not enough for the Bolsheviks to offer a mill, let us say, to its previous owners, no matter on what favourable terms the offer is made; because the owner has got to put the machinery of the mill into condition again, has to rebuild the houses and buildings connected with it; and he has, in fact, all, or nearly all, of the expenses connected with starting an industry—for everything that was left in Russia is in a very bad condition. Most people to whom concessions are being offered are, I believe, very doubtful about taking them until they can be sure that they will not be interfered with by the Government.

My own impression is that the Bolshevik Government is perfectly sincere and definite in its desire to see Russian industry re-established by foreign capital and foreign capitalists. I do not believe, therefore, that such industrialists would have anything serious to fear from the malice of the Government; but, unfortunately, the incompetence of so many of the major and minor Bolshevik officials is so great that the danger of interference, warranted or unwarranted, from the Bolshevik point of view, is undoubtedly a great drawback to the re-establishment of foreign industry in Russia.

for a common policy on common questions, the tendency towards trade union federation and amalgamation—these factors called for an executive different from the Parliamentary Committee, which was constituted when the affiliated membership of the Congress was but 118,367. Last year the Congress agreed to the appointment of a large body, to be called the General Council, on which various industrial groups would be represented.

This body will be the industrial Cabinet of organised labour, or, as the newspapers prefer (quite erroneously) to call it, "the general staff." This change will involve the much-needed development of the administrative machinery of Congress.

But events have shown that the reorganisation of the central executive of the Trades Union Congress is not in itself sufficient. Industrial questions have a political bearing, and experience has proved the need for a co-ordination of the industrial and political sides of the Labour movement. A scheme was, therefore, evolved for this purpose. It was proposed that, with a view to securing common action and a common policy, a national joint committee should be appointed representing the general council of the Trades Union Congress, the executive committee of the Labour Party, and the Parliamentary Labour Party. Further, it was suggested that there should be established four joint departments, dealing respectively with research, publicity, legal questions, and international affairs, under the joint control of the general council of the Congress and the Labour Party executive. This scheme, which was adopted by the Labour Party Conference at Brighton in June, was also ratified by the Trades Union Congress at Cardiff. These new developments are clearly of great importance, and with their acceptance the history of the Labour movement has entered upon a new phase.

The second question to which reference should be made is that of the education of trade unionists. Last year the Workers' Educational Association and the Iron and Steel Trades' Confederation, a trade union affiliated to the association, worked out a scheme for the provision of educational facilities (of a non-vocational kind) for members of the Confederation. The results of the first winter's work amply justified the experiment, and the Workers' Educational Trade Union Committee, which represented the work of the Confederation and administered the scheme, called a conference of trade unions to consider the whole question of the education of trade unionists. A committee was appointed to draft proposals. Its report was adopted by the Conference, and subsequently blessed by the Parliamentary Committee. A resolution was passed at the Cardiff Congress instructing the new general council to consider the steps to be taken to carry the report into effect. The result already has been to stimulate interest in the question. The Union of Post Office Workers has recently come into the scheme of the Workers' Educational Trade Union Committee; and it is probable that other unions will sooner or later follow the same course. The movement is not a new one, but the report will give it a new impetus. In this respect, also, the Cardiff Congress marks a new stage in the development of the Labour movement.

There was, of course, a bewildering succession of resolutions at Cardiff—both important and trivial—but real significance attaches to the debate on unemployment and to the decisions regarding co-ordination and education. The importance of the first of these lies in the indication it gives of the mood of Labour. The decisions on co-ordination and education show the new vision of Labour.

INDEX NUMBERS OF SHIPPING FREIGHTS.

PROVIDED always that the limitations of index numbers are realised, and that they are recognised to be illustrations of a movement rather than an exact measure of that movement, their use is to be encouraged, and their application to other things than prices to be commended. Formerly the plaything of ingenious statisticians, index numbers have become a serious factor in our daily lives. Civil Service bonuses, and the rates of wages under many trade agreements, now move in accordance with the famous "cost of living" index of the Board of Trade (subse-

quently taken over by the Ministry of Labour), and housewives comparing wholesale and retail index numbers, acquire heavy ammunition for the bombardment of their profiteering grocers and butchers. There is nothing more difficult to challenge than an index number with a good authority behind it, and in controversy it is a most effective half-brick to hurl at the heads of one's opponents. Always regarded with suspicion by their creators or calculators, index numbers are now in danger of too ready acceptance by the general public. Tabloid statistics can be almost as dangerous a popular diet as tabloid drugs. They should not be absorbed except "by direction of a physician." Nevertheless, in skilful hands they have much value.

The earnings of national shipping, by far the largest contribution to a maritime country's "invisible exports," have come in for careful examination on both sides of the Atlantic. In February of this year the Board of Trade explained in their official Journal the bases on which they estimated the total contribution of British shipping in 1920, at 416 millions, against 110 millions in 1913. It was a most convincing exposition, which inspired the statisticians of the Federal Reserve Board to estimate and publish in April the corresponding shipping balance of America. In the course of that inquiry the Division of Analysis and Research of the Federal Reserve Board accumulated much data on ocean freight rates, which they now, greatly daring, have employed to build up monthly index numbers for 1920, and the first half of 1921, of freight rates in the trades between the United States and European ports. The very competent statisticians of the Federal Reserve Board know how rapidly index numbers deteriorate in quality as they pass from the particular to the general. It is not more difficult to compile trustworthy index numbers of the freight rates on specific cargoes in a selected trade than it is to frame index numbers of the wholesale prices of a particular commodity, say, wheat or rubber. The difficulties and the unreliabilities begin when one seeks to combine a series of specific index numbers into a general comprehensive number illustrative of movement of prices as a whole, or of freights as a whole. The Division of Analysis and Research*, therefore, took the public into their confidence, and explain precisely what they have ventured to do, and why they have done it. They have in the first place limited their survey to the United States Atlantic-Europe trades—leaving South American and the Far-Eastern trades to separate and possibly future examination—and in the second place, have confined the index numbers to the weekly freight rates on grain, provisions, cotton, cottonseed oils, and sack flour. General cargo freight rates have been deliberately omitted. European ports have been classified into five trade regions—United Kingdom, French Atlantic, Netherlands and Belgium, Scandinavia, and the Mediterranean. We, therefore, have an inquiry limited to the freights on five specific classes of commodities carried from the United States to five specific regions in Europe.

The basic number selected as "100" is an average of the freight rates in January, 1920, before any large drop had occurred in the rates ruling during 1919. From this month as a base have been calculated the average monthly rates of 1920 and the first half of 1921, and the averages expressed as percentages of the basic "100." The selection of five commodities and five regions brought the number to be calculated of separate series down to 25. Two systems of "weighting" the series averages had to be thought out and determined. The average freight rates on the five commodities were weighted mainly in accordance with the actual number of pounds weight of the commodities exported during 1920; and the five trade regions of Europe were assessed in importance according: (1) to the total value of the export trade of the United States with each European region in 1920, and (2) to the net tonnage of vessels clearing American ports for each European region in 1920. We have here definite systems of weighting—always the most anxious task of the calculation of index numbers—and systems which are at once intelligible and reasonable. Mr H. W. Van Pelt, of the Division of Analysis and Research, who directed the survey, and explains the results, is clearly a

We may now give the results arrived at. The average monthly freight rates on each commodity were arithmetical averages, but a weighted geometric mean was employed whenever percentages had to be averaged.

INDEX NUMBERS OF OCEAN FREIGHT RATES.

Month.	United States Atlantic to—					
	United Kingdom.	French Atlantic.	Netherlands and Belgium.	Scandinavia.	Mediterranean.	All Europe.
1920.						
January	100.0	100.0	100.0	100.0	100.0	100.0
February	96.5	86.9	83.3	90.1	91.1	90.3
March	91.2	78.5	78.0	84.6	79.5	83.4
April	90.2	87.2	78.9	82.7	72.2	83.5
May	96.2	85.9	87.3	82.5	75.2	87.5
June	101.2	87.1	89.5	82.1	76.5	90.0
July	96.0	85.6	82.1	82.0	75.3	86.3
August	85.7	77.9	80.4	82.1	73.2	78.5
September	86.7	73.7	66.9	82.1	71.6	76.9
October	84.9	68.9	70.9	75.3	69.6	75.4
November	77.8	51.6	59.9	59.6	59.2	63.8
December	72.3	38.5	47.0	51.6	49.2	53.6
1921.						
January	60.7	30.2	34.1	42.9	43.2	43.3
February	54.7	27.7	29.2	30.9	43.8	38.5
March	49.3	24.6	28.3	30.8	42.2	35.9
April	50.1	32.6	36.6	29.4	35.7	39.0
May	50.6	35.0	38.2	31.3	34.6	40.1
June	42.7	34.7	38.3	31.3	34.0	37.6

We need not discuss these index numbers in detail. They all show an enormous reduction from the high level of January, 1920, though the rates from the United States to the United Kingdom fell less than those in the other groups. As a general illustration of freight movements the index numbers are extraordinarily interesting. For example, one sees at once reflected the strong position of the North-Atlantic United Kingdom Conference, which during the first half of 1920 was able to withstand the European fall. We see, also, the effect in February and March last of the rate war between the Compagnie Générale and the French Conference lines, and the upward movement in April which followed upon a settlement. Good index numbers smooth out small movements, but tend to emphasise those which are really significant. Our first impression of these shipping index numbers is that they are most promising, and may become of great value. We should like to see Mr Van Pelt tackle in the same thorough fashion the freight rates to South America and the Far East, and we suggest that the Board of Trade—even in these days of economy—should consider whether a beginning cannot be made with a series of freight rate index numbers on our side of the Atlantic. Once a trustworthy system has been worked out, it is only the beginning which is costly or difficult.

TEA PLANTATION COMPANIES IN 1920.

In reviewing the activities during the season of 1920 of a group of companies representative of various types of tea-growing concerns, it may be as well if our readers first of all take a glance at the general statistical position of the industry. With this end in view, we extract from the Board of Trade Returns the following figures, which will be found to act as a useful comparative guide between pre-war and post-war trade:—

IMPORTS AND EXPORTS OF TEA.

From—	1913.	1919.	1920.	1913.	1919.	1920.
	Lbs.	Lbs.	Lbs.	£	£	£
India	203,359,657	286,932,201	248,582,932	7,833,223	19,152,219	15,441,044
Ceylon	110,936,427	137,332,872	124,704,524	4,179,462	9,064,551	7,994,029
China	16,272,548	26,755,017	15,927,535	613,147	1,939,474	1,101,688
Dutch Indies	32,052,717	37,146,096	40,190,736	1,072,515	2,436,806	2,273,748
Other countries	2,322,115	6,227,280	1,192,189	78,558	415,762	118,444
	365,043,464	494,353,466	431,717,976	13,782,905	33,050,853	26,928,953
Re-exports	57,555,651	29,536,461	41,280,187	2,808,940	2,702,931	3,432,671

Imports considered in weight follow an interesting line. For 1919 imports from most tea-producing countries show a big increase on the figures given for 1913. But for 1920 some marked changes are recorded. A big falling off is shown on imports from India and Ceylon when compared with those for the previous year, although still well over the figures for 1913. Imports from China are actually below 1913 figures, but Dutch Indies continues to show a steady growth. Exports show considerable expansion, although not in such volume, perhaps, as those interested in the industry could have wished; for tea stocks in bond at December 31, 1914, were approximately 101 million lbs. In 1919 these had increased to 153½ millions, while in 1920 a total of roughly 171 millions is recorded.

Unfortunately, these figures do not fully reveal the chaotic conditions which prevailed in the industry during this period, and the full extent of the havoc wrought by a combination of adverse circumstances can be seen after an examination of the table which we give below. This records the crop and net financial results annually of a selected group of tea plantation companies for the past three years:—

	Crop.	Net Profits.	Crop.	Net Profits.	Crop.	Results.
	1918.	1918.	1919.	1919.	1920.	1920.
	Lbs.	£	Lbs.	£	Lbs.	£
Amalgamated Estates	5,973,565	88,852	6,184,410	144,644	5,442,184	89,423 Loss
British Indian	1,877,963	24,301	1,675,414	13,587	1,650,987	24,178

Yatiantola	504,665	11,596	478,452	19,578	620,161	30,559

* Loss.

The Ceylon Tea Plantations—the only company which shows a profit in our list—also grows rubber and coconuts; to what extent the company has profited by these other crops it is difficult to determine. The cause at work to produce such unfortunate results as those recorded above may be briefly summed up as follows:—(a) The big stocks accumulated during the period of Government control. (b) The loss of European and Greater Russian markets. (c) Higher costs of production. (d) Producers paying too much attention to quantity production as against the quality of the produce, perhaps mainly owing to the Government's equalisation of the price of tea; and (e) the rise in the rate of exchange.

It has been authoritatively stated that many gardens which under ordinary conditions could produce tea at 7d per lb landed in London found their costs increased to 1s 3d per lb. These higher costs of production were chiefly caused by the high price of rice for feeding "coolies" and the excessive charges for freights.

The summary analysis given below of these selected companies shows the balance-sheet position of each undertaking:—

	Capital including Debit- ures.	Reserves and Undivided Profits.	Creditors and Bills payable.	Assets and Property.	Plant and Stocks.	Debtors and Ad- vances.	Cash and Invest- ments.
Amalgamated Estates..	898,350	295,656	413,755	772,650	288,997	55,207	490,907
British Indian	77,325	28,700	26,368	58,367	23,298	20,332	17,774
Ceylon Plantations ..	470,000	103,876	188,927	407,841	92,334	146,002	116,639
Chargola Association ..	163,017	51,994	37,145	153,000	5,784	52,237	35,893
Chubwa	106,000	37,500	76,837	123,371	85,766	947	10,622
Consol. Tea and Lands	2,550,000	751,297	581,329	2,026,644	738,013	265,058	854,699
Doors	348,000	40,529	95,898	312,913	92,496	14,635	60,315
East Indian Tea and Produce	249,250		208,641	232,642	92,019	30,878	10,849
Eastern Produce	405,000	144,215	97,236	411,837	113,521	56,321	
Jhansia	100,000	73,081	58,989	100,000	86,872	20,145	24,664
Jokai	350,000	151,921	235,945	384,444	226,502	21,803	74,215
Lungla	375,000		102,459	277,645	82,131	13,501	50,730
Neddeem	540,000	23,986	119,869	456,061	141,329	14,943	27,139
Yatiantota	202,500	17,500	30,552	201,360	23,487	9,767	506

In the three last-mentioned companies increases of capital have taken place during the year. Lungla raised £75,000 by the issue of 10 per cent. debentures, convertible into ordinary shares at par. Neddeem capitalised £135,000 of reserves, which was "distributed in shares to the ordinary shareholders"; and the Yatiantota also capitalised £52,500 of reserves, and issued 52,500 shares *pro rata* to existing shareholders.

As far as the actual financial position of companies is concerned, the only bright spot in an otherwise depressing picture is the substantial sums which companies recover for amounts overpaid in excess profits duty. In many cases these sums are of such a considerable amount, which, when taken together with the amount brought forward, enable many companies to pay dividends, and in some cases to start the new financial year in a condition at least as good as they were before this disastrous season began.

Our final table shows a record of dividends, share prices, and yields:—

Company.	Am't of Share	Divi- dend for Year 1920.	Divi- dend for Year 1918.	Divi- dend for Year 1919.	Price End of July, 1914.	Price Sept. 21, 1920.	Price Sept. 1921.	Present Yield.

(b) On new capital.

The tea share market experienced a pronounced depression when the news of these troubles first began to be spread abroad and prices rapidly fell. But as the results for 1920 of a number of leading companies began to appear it was gradually realised that these adverse conditions were probably of a temporary nature, and the share market enjoyed a partial recovery. It is true values are still low when compared with the heights which they climbed in past years, and holders generally will probably take the view that matters have been so bad during 1920 that the 1921 record can scarcely fail to show

some improvement on the year under review. One prominent tea share broker with whom the writer discussed prospects is very enthusiastic over the outlook for the future, and points to the fact that several companies having already sold their next season's crops at remunerative prices, as a reason for anticipating good dividends next year. However, recent advices show that in some quarters the "serious loss of labour" arising out of the "non-co-operation" agitation may have ill-effects on future profits.

Business Notes.

The Bank Statements.—The monthly statement of average weekly balances of the London clearing banks for August, as issued from the Bankers' Clearing House, is set out in full elsewhere. In the table below we compare the averages for the nine English banks in recent months:—

	(Million £s.)					
	Weekly Average.					
	Jan., 1921.	April, 1921.	May, 1921.	June, 1921.	July, 1921.	Aug., 1921.
Capital and reserves	115.4	115.6	115.8	115.9	115.9	115.9
Acceptances	88.4	63.0	63.0	57.7	52.2	49.4
Deposits (including un- divided profits, &c.)	1,810.1	1,709.9	1,729.3	1,768.4	1,785.4	1,764.0
Total liabilities	2,013.9	1,888.5	1,908.1	1,942.0	1,953.5	1,929.3
Coin, notes, balance at bank, and cheques in course of collection, &c.	256.2	249.6	250.3	265.1	252.1	250.3
Money at call	98.9	91.9	96.5	98.0	103.6	100.0
Investments	341.3	333.7	331.2	335.9	336.3	326.3
Discounts	361.9	275.1	304.0	346.2	372.6	379.9
Loans and advances	845.1	852.2	839.9	815.4	812.2	798.7
Cover for acceptances, pre- mises, &c.	110.5	86.0	86.2	81.4	76.7	74.1
Total assets	2,013.9	1,888.5	1,908.1	1,942.0	1,953.5	1,929.3

There is a reduction in all items on the credit side, with the exception of discounts, which show a further increase of £7½ millions. Loans and advances are down by £13½ millions, and cash and money at call by over £5 millions, while investments have dropped by exactly £10 millions. These changes are balanced by a reduction of nearly £21½ millions in deposits.

Iron and Steel Production.—The National Federation of Iron and Steel Manufacturers states that the production of pig-iron in August amounted to 93,600 tons, compared with 10,200 tons in July. The output in March, the month immediately preceding the coal stoppage, was 386,000 tons, and in August of last year 752,400 tons, which was the record monthly total since the war. The production of steel ingots and castings in August amounted to 432,600 tons, compared with 117,200 tons in July, 359,100 tons in March, and 709,200 tons in August, 1920. The number of blast furnaces in operation at the end of August was 46, as against 15 at the end of July. The number in operation immediately before the coal stoppage was 109, and in August of last year 303. Of the pig-iron produced in August 30,200 tons were hematite, 24,400 tons basic, 28,500 tons foundry, 8,500 tons forge, and 2,000 tons of "other qualities."

New Serbian Loan.—The Banque Franco-Serbe, London announces that a new Serbian loan is on issue for 500,000,000 dinars at par at 7 per cent., "redeemable" in 50 years by drawings or repurchase. Interest will be payable half-yearly. Interest and bonds are free of all taxation, present and future, and no conversion can take place within 10 years. The Government guarantee to reimburse holders at face value should any conversion be made at a later date. This loan is to be utilised primarily for the repair and construction of railways, ports, and roads, &c., "throughout the realm," a necessity for this country, which has suffered so much during the Great War. "The loan is guaranteed by mortgage on the undertakings benefiting." For the moment only small

supplies are sent. The rate of exchange is, it is stated, "the least depreciated exchange of Central Europe and the Balkans." The loan is being largely taken up in Jugo-Slavia, especially by the banks in the new provinces, and a Belgrade paper predicts that the whole amount will be covered by subscriptions within the kingdom. The proceeds are to be apportioned by a Commission among the various public works on which the money will be spent and secured, but it is expected that they will be devoted partly to improving the ports of Antivari, Ragusa, and Senj, or some other outlet supplementing that through Fiume, and to the improvement of their communications with their respective hinterlands. Jugo-Slav traffic has rights of way through Trieste, Fiume, and Salonika, but independent routes are obviously desirable under full national control. The new kingdom has great natural resources in grain, timber, cattle, and minerals, and abundant coal, lignite, and undeveloped water-power. Arrangements are being made for an extensive export to Northern and Western Europe of poultry, eggs, and prunes, and the Serbs showed considerable enterprise in finding oversea markets in the days when the Dual Monarchy commanded, and occasionally blocked, their trade. Labour and many small rivulets of capital will probably be provided to develop the country by returning immigrants from America. The financial system is still in the melting-pot; a reform in the Serbian Kingdom was overdue before the war, and it remains to be seen how the taxation will be apportioned between the provinces and the central Government. With an area of 95,000 square miles and a population of 11 or 12 millions, the credit of the new kingdom should soon be good.

Russo-Norwegian Trade Agreement.—We have received a copy of a preliminary agreement concluded by the Government of the Russian Socialist Federative Soviet Republic and the Royal Norwegian Government, who are both desirous that—pending the re-establishment of normal diplomatic relations—trade and commerce between the two countries should be forthwith resumed. Each Government grants free admittance to a delegation of the others, the heads of the delegations of both countries having full power to act in the name of their Governments, and the official delegation of the R.S.F.S.R. in Norway being regarded as the only representative of the Russian State. Both Governments declare that they will not initiate nor support any steps with a view to attach or take possession of any funds, goods, or movable or immovable property, belonging to the other party or its nationals, lawfully imported into or acquired in the respective countries after the conclusion of this agreement. As long as the present agreement is in force, property belonging to the Russian Government shall in Norway enjoy the immunity extended under international law to the property of friendly Governments, and shall especially not be subjected to Norwegian jurisdiction or sequestration by Norwegian authorities. The previous stipulation does not, however, apply in the case of legal actions arising in connection with contracts, acts, and events taking place under this agreement. The Russian Government gives a corresponding guaranty as regards property belonging to the Norwegian Government. The official representatives enjoy the right to grant visas and passports, and to certify documents, and all other rights of that kind which belong to official representatives of other foreign Governments in the country in question. The members of the delegations and their staffs engage themselves to abstain from any political propaganda, and not to interfere with the internal affairs of the respective country. The delegations of both parties shall abstain from entering into any service or receiving any commission from any Government, firms, or private persons of any other country than their own. Russian and Norwegian merchant ships, crews, and cargoes shall in ports of Russia and Norway respectively receive the privileges and protections which are usually accorded by the established practice of commercial nations to ships visiting their ports. The commercial agreements and transactions between the two countries "should" be based on the following principles, viz.:—

(a) The monopoly of the foreign trade—as far as Russia is concerned—belongs to the Government of the R.S.F.S.R., which works through the Commissariat for Foreign Trade and its organisations.

transactions of every description.

Correspondents in all parts of the world.

COX & CO. (France), Ltd.,

in FRANCE and ALGERIA.

(b) Every commercial agreement and transaction which has been made with some private persons or groups who are not working on behalf or with the consent of the Government of the R.S.F.S.R. will be regarded as a violation of such monopoly, with all consequences arising out of the Russian law in the matter.

(c) The monopolisation of the foreign trade by any party cannot be regarded by the other party as a reason for imposing any Custom duties or claiming any compensation.

The present agreement shall not prejudice any existing claims for the payment of compensation or the effecting of restitution of either party or of its nationals against the other party. This agreement shall enter into force as soon as ratified by both Governments.

South African Conditions.—The National Bank of South Africa has received the following cable from their Cape Town office stating that for the half-year ended June 30th imports at £33,810,877 show a decline of 14½ million pounds compared with the corresponding 1920 period, and exports at £29,832,000, a decline of 21½ million pounds, the marked decreases being wool, £10,750,000; diamonds, £6,500,000; hides and skins, nearly £3,000,000. A gratifying feature of the exports is that food and drink increased by about 120 per cent., the principal items being maize, maize meal, sugar, and fresh fruit. Imports from the United Kingdom amounted to £16,000,000, or 53.8 per cent. of total, as compared with £22,500,000, or 56 per cent., in the 1920 period. Imports from the United States amounted to £5,500,000, or 18.3 per cent., as compared with £7,000,000, or 17 per cent. Total imports from British Empire amounted to £18,750,000, or 63.4 per cent., as compared with £27,500,000, or 68 per cent. Generally trade remains stagnant, and forced liquidations of general merchandise at auctions are again becoming a feature. Johannesburg reports severe competition on commercial exchange. In the building trade a grave labour dispute is threatening. Employers have notified wage reductions to take effect September 16th, and to revert to a 48-hour week, to which the men refuse to agree, but submit counter proposals unacceptable to masters. It is hoped that the Government will intervene, and bring about a conference between the parties, as housing and unemployment problems remain acute. Iron and steel business continues restricted, with very few enquiries. Electrical goods: Trade is quiet, and prices display a falling tendency. Stocks are arriving steadily, American wares being slightly cheaper than British. The latter are 30 to 40 per cent. dearer than Continental goods. Agricultural machinery: Business quiet, with restricted demand, owing to the diminished purchasing power of farmers. Maize: Official estimate of current season's crop is 12,000,000 bags, leaving approximately 2,250,000 bags available for export. The tonnage exported during the five months ended May exceeded the average annual quantity shipped in the past five years. Freight is scarce, and market unsettled. Twos are nominally quoted 9s 6d per bag; sixes, 9s 3d per bag. Wool: A strong market is anticipated for super wools on better news regarding London sales. Mohair: A fair demand exists for super firsts. Dealers report the receipt of a few bales of new season's winter kids of excellent style, character, and length. It is anticipated that the new winter clip will be exceptionally good. Considerable interest has been aroused as the result of a conference recently held at Port Elizabeth to consider the erection of a factory for the

purpose of converting mohair into yarns and tops on a co-operative basis, the object being to force more mohair into consumption. It is essentially a self-help project on the part of growers, who will find the necessary capital, and the Government are asked to underwrite the capital on the security provided by the export tax. Hides and skins: More active tone, apparently eager competition for sheepskins. Ostrich feathers: Sales closed, dull and weak. Wattle bark: Market steady. Chopped pressed, £8 12s 6d per ton; ground, ditto, £9 5s per ton, Durban. Asbestos: Rhodesian production for six months ended June was 13,980 tons, an increase of nearly 100 per cent. compared same period, 1920.

Mexican External Debt.—Messrs Morgan, Grenfell, and Co. announce that the International Committee of Bankers on Mexico has requested its acting chairman, T. W. Lamont, to accept the invitation extended some time ago by the Mexican Government officials, and at his early convenience to proceed to Mexico for the purpose of discussing there the status of the outstanding external obligations of the Mexican Government. Mr Lamont has been asked by the other sections of the International Committee—namely, the British, French, Swiss, Dutch, and Belgian—to represent their interests during the pending discussions in Mexico City. The Department of State at Washington is cognisant of the fact that the International Committee's representative will shortly visit Mexico.

Argentine Railway Rates.—The following cable has been received from the Buenos Ayres branch of the Anglo-South American Bank, Limited, under date of September 9th:—With regard to the increased railway tariff which has been sanctioned as from the 1st instant, it may be noted that livestock and livestock products are exempted from the higher rates. The increase in rates averages about 20 per cent. In addition to the advance in ordinary freight rates, the companies have been authorised to charge higher passenger fares as from the 15th instant.

Cotton Dispute Settled.—There was some alarm at the end of last week in Lancashire cotton trade circles, writes our Manchester correspondent, when it was announced that the Master Spinners' Federation had threatened to bring about a general lock-out owing to the action of the trade union officials in issuing strike notices at the Anchor Mill at Oldham. The dispute had arisen as a result of some of the cardroom operatives being "played off" during a change in the machinery from coarse to fine counts, and on behalf of the workpeople it was claimed that wages should be paid during the interval. The Masters' Federation stated that a precedent of this kind could not be entertained for one moment, and they proposed to take the advice of their members as to what action should be adopted should the mill be put on strike. This week some correspondence has passed between the Card and Blowing-room Operatives' Amalgamation and the Master Spinners' Federation, and on Wednesday last the secretary of the trade union announced that, acting on the suggestion of the federation, the strike notices had been withdrawn. Although a possible crisis has rather adversely affected the market for textile shares on the Manchester Stock Exchange, in leading trade circles there has not been any fear of such a trifling matter bringing the industry to a standstill.

Lancashire Cotton Dividends.—Mr Frederick W. Tattersall has just issued his usual monthly analysis of the stocktaking returns of Lancashire cotton spinning companies. For three months' trading to the end of August 22 companies, with a total paid-up ordinary share capital of £2,440,682, have paid an average dividend per company of 8.56 per cent. per annum. Of these 22 companies seven were unable to make a distribution to shareholders, but four companies paid 5 per cent., five 10 per cent., five 20 per cent., and one 25 per cent. per annum. The previous average dividends for the same 22 companies were: quarter ended May, 1921, 8.95 per cent.; quarter ended February, 1921, 27.24 per cent.; quarter ended

November, 1920, 47.45 per cent.; and quarter ended August, 1920, 51.23 per cent. per annum.

Bolckow, Vaughan.—The report of Bolckow, Vaughan and Co. for the year ended June 30th last states that the accounts between the company and the various Government Departments are still unsettled. Provision has been made for such liabilities, however, in the accounts, which show a profit, after writing off £77,700 for depreciation, of £364,000, as compared with £696,900 a year ago, when £108,400 was written off for depreciation. A comparison of results for a number of years is given below:—

	Gross Profit.	Depreciation and Extensions, &c.	Deb. Int. and Pref. Div.	Balance.	Written Off Cap. Expenditure.	Ordinary Div.	Rate.
1905-7	£ 683,010	£ 135,734	£ 45,545	£ 501,731	£ 150,000	£ 274,630	10
1907-8	444,201	140,523	48,220	285,458	80,000	164,778	6
1908-9	322,035	173,740	51,311	96,984	nil	137,315	5
1909-10	390,485	135,317	55,477	198,691	nil	164,778	6
1910-11	403,664	173,472	56,618	123,574	nil	164,778	6
1911-12	318,861	159,887	56,119	101,855	nil	137,315	5
1912-13	642,235	161,850	54,368	436,017	160,000	274,630	10

1920-21	441,641	77,664	72,513	291,464	nil	300,451	8

* After allowing for War taxation.

The debenture capital has been increased, and interest now requires £48,900, as against £16,600 a year ago. No allocation is made to reserve, as against £200,000 last year, and after reducing the rate of dividend by one-third the balance forward is £9,000 lower at £203,500. Capital expenditure for the year was £471,100, as compared with £425,300 in the previous year. The balance-sheet shows a reduction of £815,000 to £506,200 in sundry creditors, of £427,000 to £1,599,400 in stocks on hand, and of £542,000 to £481,700 in debtors.

Trust Houses.—The directors in submitting to shareholders the 18th annual balance-sheet of Trust Houses, Limited, admit that "for the first time in the history of the company it presents unsatisfactory features," a sentence which will be endorsed by most people who read the report and study the accounts. The report states that, "owing to the number of new houses acquired and arranged to be acquired in the year ending March 31, 1920, and the excessive cost of building operations and labour difficulties in the ensuing spring and summer, the directors found in the autumn of last year that the estimates upon which their financial arrangements had been based were not reliable, and that their capital commitments were largely in excess of the provision which had been made to meet them and of any figure which had been put before them." The admission that they—the directors—"had been insufficiently informed as to the capital commitments of the company" is candid but surprising. With that part of the report which seeks to apportion the blame for the conditions set out in the balance-sheet we are not greatly interested. It is sufficient for us to know that a drastic policy of reform is being undertaken, that weak spots are to be remedied, and that the board is to be strengthened by the addition of certain shareholders who have experience in the trade. According to the report, the accounts show a net loss of £57,509 for the year ended March 31, 1921, but the figures and explanations which follow cannot be very intelligible to shareholders. However, when the accounts themselves are carefully examined the position is made more clear. If we call the net loss £60,079, and take the surplus balance of profits brought forward from last year's accounts at £52,409 (which sum includes £28,070 for Excess Profits Duty reclaimed), the difference shows a small debit balance of £7,670 remaining. But as an interim dividend had already been paid amounting to £36,541, the reserve fund, amounting to £35,000, was absorbed, which practically squared matters, leaving a further small debit of £1,541 to be added to £7,670, making the total debit carried forward to next year's accounts £9,211. Probably at the meeting the directors will shed some further light on the various items in Capital and Loan Issue expense account. There is a sum

of £15,000 to be paid in settlement of a claim, and a commission of £31,250 paid on the sale of 250,000 shares, concerning which further particulars might usefully be given. Information as to the basis on which stocks of wine, spirits, &c., have been valued also might not be out of place. In view of the distinguished names on the "council" and directorate, which undoubtedly influenced subscribers in taking up shares in the undertaking, and the eminently well-meant purpose of the enterprise, the results recorded in the report can only be described as disastrous. We believe, however, that efficient measures are being taken to put things right in the future.

Union Cold Storage.—The report of the Union Cold Storage Company for the year ended December 31, 1920, shows a substantial increase in profits. Out of earnings £54,127 of debenture stock has been purchased and cancelled, and outstanding mortgages have been reduced by £20,800. In addition, as will be seen in our table below, £87,939 has been set aside for "Depreciation." Our table shows profits and their distribution in each of the past five years, and in 1913:—

	1913.	1916.	1917.	1918.	1919.	1920.
Gross profits ..	£ 137,094	£ 242,213	£ 289,922	£ 293,424	£ 306,360	£ 467,333
Deb. int., &c. ..	31,727	47,333	66,637	62,333	58,133	72,118
Net profit ..	105,367	194,880	223,285	231,091	248,227	395,275
Brought forward	20,806	31,993	45,014	45,454	51,066	71,717
	126,173	226,873	268,299	276,545	299,293	466,992
Res. and depr. ..	43,185	59,459	75,048	76,679	78,777	87,939
Pref. dividends ..	46,109	92,400	117,797	118,800	118,800	261,556
Ord. dividend ..	..	30,000	30,000	30,000	30,000	30,000
	(10 %)	(10 %)	(10 %)	(10 %)	(10 %)	(10 %)
Carry forward	36,879	45,014	45,454	51,066	71,716	87,497

Dividends on the increased preference capital, which now amounts to £4,480,000, take £261,556. As the preference dividend a year ago only took £118,800, practically the whole of the increase of profits goes in this direction. But the premiums received on the new issue of 10 per cent. "A" preference shares, amounting to £210,000 in all, have been placed to the credit of the depreciation reserve. This brings the grand total of depreciation reserve to £860,693. The ordinary dividend is still maintained at 10 per cent., which absorbs only £30,000, and £87,497 is carried forward as compared with £71,717 brought into the accounts. The auditors' report draws attention to the fact that "no provision has been made for the amount, if any, payable by the company in respect of excess profits duty (1914-20)." The balance-sheet will be found analysed in another column.

Mount Morgan.—In the prevailing conditions it is unfortunate for the shareholders that the title of the Mount Morgan Gold Mining Company, of Queensland, should be a misnomer, the bulk of the revenue having for some time past been derived from copper. During the war period large profits were made, but recently the undertaking has suffered not only from the relapse in the price of the red metal, but also from a fresh spasm of labour trouble—that perennial bugbear of Australian mining. The company has hitherto followed the somewhat curious practice of issuing a report and accounts for the half-year to November 30th, also a statement covering the following six months and the whole year—thereby creating some confusion. Appended is a comparison of the salient figures for the past three financial periods ended about May 31st:—

	1918-1919.	1919-20.	1920-21.
Blister copper, &c.	959,382 ..	999,043 ..	1,024,029 ..
Working surplus and interest ..	216,974 ..	254,003 ..	225,869 ..
Net profit ..	111,641 ..	131,816 ..	120,158 ..
Dividends ..	100,000 ..	150,000 ..	..
Brought forward ..	98,736 ..	110,376 ..	92,192 ..
Carried forward ..	110,376 ..	92,192 ..	212,350 ..
Smelter output—			
Fine copper..... tons	6,268 ..	5,880 ..	5,149 ..
Gold..... ozs	92,983 ..	80,578 ..	76,463 ..

It will be seen that the net profits have failed to keep pace with the expansion in revenue. This, so far as last

year is concerned, arises mainly from a large increase in the depreciation allowance; but there is the important point that the surplus shown was due to the realisation of products on hand at prices greater than those at which they had previously been taken into account. Sale of the present metal stocks at current prices would, it is stated, result in a substantial loss; hence the action of the directors in making no distribution for the past year is easily apprehended. The various labour unions having refused to agree to such a reduction in wages as, in conjunction with the rebate of £1,000 per week offered by the Government, would enable the concern to pay its way, work was not resumed after Easter. Evidently the Australian miner is no believer in the axiom that half a loaf—or even four-fifths—is better than no bread.

The Finances of the Falcon.—Our mining correspondent writes:—The Falcon Mines enjoys the distinction of being responsible for almost the entire copper output of Rhodesia. It has, however, only succeeded in paying one dividend during an existence of about a dozen years—20 per cent. in respect of 1916-17, a period including the greatest degree of inflation in the metal markets. Moreover, the financing of the company has presented considerable difficulties. A debenture issue of £250,000 was made in August, 1912, and at the date of the last balance-sheet—June 30, 1920—a further £50,000 had been issued as security for a loan. By April of the current year the loan had been reduced to £5,000, but the company's liabilities for income-tax, and for debenture redemption shortly accruing, again amounted to about £50,000. The report for the half-year to June 30th last, issued this week, shows that those in control have taken drastic measures to deal with the situation, resulting from the drop in the price of copper. Expenditure has been reduced to the minimum by utilisation of the stores on hand to the fullest possible extent, as well as by the stoppage of development, the retrenchment of staff, and other economies. As a result, the liabilities existing in April have been "substantially diminished," and it is hoped that the company will be clear in a few months. This, of course, presages no material alteration in the prices of copper or gold in the meantime. With development in abeyance for about one-quarter of the year, the ore reserves naturally show a decrease; the present estimate of 417,000 tons of good-grade ore represents, however, more than two years' supply for the mill. It is satisfactory to find that the realised value of the output for the December half-year so far exceeded the valuation as to give a working surplus of £11,400 in place of a deficiency of £7,400. In all probability the estimated result for the June six months—a profit of £800—will also prove under the mark. All this is well, so far as it goes, but part of the economies recently effected will have to be made up for when operations are once again proceeding normally. Another point is that the balance of the debenture debt—about £7,000—falls due for repayment at the end of July next year. It certainly looks at present as if this will have to be financed by some method or other. Such an improvement in the price of the red metal as would provide the necessary surplus is hardly within the bounds of possibility.

The "Safeguarding" Panel.—In accordance with Section 7 of the Safeguarding of Industries Act, the President of the Board of Trade has appointed the following to be members of the permanent panel, from which committees, consisting of five persons, will be selected from time to time to consider and report upon complaints referred to them by the Board under Part II. (Prevention of Dumping) of the Act:—Sir W. M. Acworth, Sir William Ashley, Sir George S. Barnes, Sir John N. Barran, Bart., Sir Cecil L. Budd, Sir James C. Calder, Dr J. H. Clapham, Sir E. C. K. Gonner, Sir George R. Lowndes, Professor D. H. Macgregor, Sir Douglas Newton, Sir Henry Rew, Sir Charles Stewart, Sir Edwin F. Stockton, Sir Frank Warner, and Messrs J. A. Aiton, Arthur Balfour, J. T. Brownlie, T. P. Cook, F. R. Davenport, A. K. Davies, F. P. Dorizzi, Rayner Goddard, Stanley Machin, G. A. Moore, J. W. Murray,

Owen Parker, R. G. Perry, Arthur Pugh, C. A. Russell, Arthur Shaw, H. L. Symonds, G. Vile, and Sir Frank Warner, K.B.E.

London School of Economics.—The new building at the London School of Economics and Political Science, the foundation stone of which was laid by H.M. the King on May 28, 1920, is now available for occupation. The address of the school in future will be Houghton street, Aldwych. The calendar for the coming session (beginning October 3rd) shows a great extension of work, made possible by the increase of accommodation. The courses for the third year of the commerce degree provide advanced instruction in many new branches. Special features in the lecture list are courses on "English Composition and Style," by Mr Robert Lynd, Mr J. C. Squire, and others; "New Lights on Unemployment," by the Director (Sir William Beveridge); "The Co-operative Movement," by Professor Sidney Webb; "Shipping Documents," by Mr L. C. Harris; and "Ships in Relation to their Work," by Sir Westcott Abell, K.B.E. The following public lectures have been arranged:—"Economics and Happiness," by Sir Arthur Steel-Maitland, M.P., on October 3rd, at 5 p.m.; "Indian Economics," by Mr G. Keatinge, late Indian Civil Service, on October 5th, at 3 p.m.; "New Methods of Long Distance Communication and their Probable Economic and Political Effects," by Sir Halford Mackinder, on October 6th, at 5 p.m.; "Foreign Relations and International Law," by Professor Pearce Higgins, on October 12th, at 5 p.m.; "The Administrative Factor in Government," a course of four lectures, by Sir J. C. Stamp, on Tuesdays, at 6 p.m., in Lent term, beginning February 14th. Admission free by ticket.

Transvaal Output for August.—The August statistics of gold output in the Transvaal show that the total production of fine gold during the month amounted to 711,526 ounces, as compared with 689,555 ounces in July, and 702,083 ounces for August, 1920. The following table shows the production for a number of years past:—

	1916.	1917.	1918.	1919.	1920.	1921.
January.....	787,467	782,634	714,182	676,059	670,503	651,593

The Central Y.M.C.A., 186 Aldersgate street, E.C., announces a course of addresses on "Banking" and "Insurance," at 6 o'clock, as follows:—September 20th, Sir Herbert Hambling, "Banking and Foreign Trade"; September 21st, Sir William Schooling, "The Importance and Influence of Saving"; September 22nd, Sir John Ferguson, "Banking as a Profession"; September 23rd, F. E. Steele, "Bankers and Borrowers"; September 28th, Sir Charles Hobbhouse, "Banks and Budgets"; September 29th, S. G. Warner, "Life Assurance." Admission tickets free.

The executive committee of the Naples Fair, which takes place from September 15th-30th, having offered H.M. Government free space for a propaganda bureau, it has been arranged that the local British Chamber of Commerce shall make the necessary arrangements. There

will be no charge to British firms desiring to show trade catalogues, leaflets, or other printed trade propaganda, and firms interested should despatch their parcels as soon as possible, addressed to the British Chamber of Commerce, 31, Via Agostino Depretis, Naples.

Oversea Correspondence.

UNITED STATES.—THE SHORT COTTON CROP—ITS BENEFICIAL EFFECT—OTHER CROPS.

(FROM OUR CORRESPONDENT.)

NEW YORK, September 2.

PRIVATE reports on the condition of the cotton crop had indicated considerable deterioration during August, but this week's Government report was far worse than any one expected. The crop's condition as of August 23rd—namely, 49.3 per cent. of normal—is the lowest ever reported since condition estimates were begun in 1870. It represents a decline of 15.4 points from the previous month's figure—a percentage of deterioration exceeded only once in the past during August—and compares with 67.5 a year ago, and with the 10-year average of 67.7. The indicated yield, 7,037,000 bales, is the smallest in 33 years, and compares with last year's production of 13,365,754 bales; the decrease in the prospective production amounted to 1,116,000 bales since last month's forecast. In announcing its forecast, the Department of Agriculture remarked that "everything seemed to have gone wrong with the crop." For the country as a whole the yield per acre is given as only 127 lbs, the lowest in the last 56 years. The area planted this year was only 26,519,000 acres, a decrease of 10,524,000 acres, or about 28 per cent., from that of last year. Fertiliser was used very sparingly throughout the cotton belt. Ravages of the boll weevil were chiefly responsible for the great deterioration in August, and other pests are numerous. In North Carolina and Virginia the prolonged drought has caused almost as much deterioration as the weevil has elsewhere.

Naturally, the Government's condition estimate and forecast of the yield occasioned wild trading in all cotton markets here. Extraordinarily heavy buying, reflecting not only covering of speculative sales, but purchases by mill interests who had held off in anticipation of some reaction from the recent upturn, caused a violent rise in prices, ranging from 129 to 145 points in futures and 145 points for spot cotton at New York. Further advances have carried the market five or six cents a lb above prices current when the July 25th report was made. The complete change in the cotton market during the past month or two, and especially in the last fortnight, has created a much better feeling throughout the South, where trade and industry have been greatly depressed. Cotton growers can now market their crop without sacrificing it at prices below cost of production, as many have been obliged to do with the old crop. More optimism prevails also among Southern bankers, since at current prices many of them will be able to come out even on cotton loans made some time ago. Cloth and yarn markets have been greatly unsettled by the advance in the staple, which in the past two days has amounted to about \$11 a bale. With few exceptions, Eastern and Southern mills have withdrawn temporarily all their lines of grey goods, particularly print cloths and sheetings, pending an upward revision of prices, and similar action has been taken by cotton yarn spinners, despite sensational advances already made in yarn prices before this week's violent rise in the raw material. Similarly, nearly all large handlers of branded cotton goods have withdrawn their offerings, and refuse to quote prices for any delivery. Throughout the country buyers, who have been pursuing a hand-to-mouth policy in purchasing, have suddenly awakened to the fact that such cotton goods are going to cost a great deal more. Finished cottons generally have not been advanced in recent weeks in keeping with the rise in the staple, but selling agents have now been forced to withdraw from the market or to place their lines "at value," in compliance with manufacturers' demands for higher prices. Ordinarily, such a short crop as is now promised would be considered little short of a calamity, but the belief is grow-

ing that, in view of well-known conditions in the cotton industry and in the cotton goods trade, it may prove to be more of a constructive development than otherwise. Much depends, of course, upon the attitude of buyers towards the higher prices which must be asked, or, rather, upon the extent of their purchases at the higher levels.

With respect to other crops, hot, forcing weather has placed the corn crop out of danger from frost. In Western Nebraska some injury is reported in a few sections, but the outlook is still for a yield close to the record. Wheat and other small grains are turning out better than anticipated, and some North Dakota counties will produce yields second only to the big totals of 1915. In this connection, it is noteworthy that for the week ending September 1st wheat, including flour, exports from the United States and Canada, as reported to Bradstreet's, aggregate 15,285,578 bushels, the largest total on record. For the nine weeks ended September 1st exports were 89,915,617 bushels, against 90,216,762 in the corresponding period a year ago.

FRANCE.—CONFERENCE BETWEEN M. DOUMER AND SIR ROBT. HORNE—THE FALL IN THE FRANC—TAXATION RETURNS—BOURSE.

(FROM OUR CORRESPONDENT.)

PARIS, September 13.

THE financial world has received the news of the conversations between Sir Robert Horne and Monsieur Doumer much more calmly than seemed probable in the early part of last week, a fact that is undoubtedly largely due to the tact and courtesy shown by Sir Robert Horne, and the public is now patiently waiting for the decision to be arrived at by the experts. The reports that reached Paris from London were conspicuous for the emphasis that was laid on the cordiality of the meeting, and the following extract from the *Agence Havas* merits quotation as indicative of the general tone adopted:—"To show once again the harmony of the conversations on Friday, it should be added that by a *délicatesse* that is worth noting Sir Robert Horne made no allusion to the actual cause that brought about the interview with M. Doumer, and that he never spoke of the non-ratification by the French Government of the agreement conditionally signed by the French Finance Minister."

While the meeting between Sir Robert Horne and Monsieur Doumer has been valuable in relieving the tension, it has not, unfortunately, been able to prevent a further depreciation of the franc. At the beginning of the week it stood at 47.58, but by Saturday 51.50 was being given for sterling. An even higher figure was reached on Monday, but the rather better price of 51.20 was quoted last night (Tuesday). Naturally the fall has aroused considerable comment, and the whole question has been reviewed by the *Situation Economique et Financière*. The public had not unnaturally hoped that as a result of the magnificent harvest there would have been a tendency in the opposite direction, but, unhappily, there are so many causes working other ways that depression has ensued. A point that has to be remembered is that, looking back over the rates, the franc is very notably stronger than it was early in the year, when it reached the rate of 61.59. Since then, owing to the economic crisis, France has had to restrict imports, and the franc has been in demand on the international market, because it had been anticipated that Germany would be obliged to buy francs to meet her indebtedness to France. This last cause has had considerable effect, but recently there has been the reduction of the amount of the French claim on Germany, and more particularly there has been the widely spread suggestion that Germany may declare herself bankrupt. This belief has operated against the franc. Further, it has to be remembered that since the Armistice France has had vast stocks of materials of all sorts in the country. These are gradually becoming exhausted, with the result that France will be forced to come into foreign markets, and pay for what she purchases in sterling dollars and foreign currencies. Such in economic circles here are considered the chief reasons for the decline in value of the franc.

THE MERCANTILE BANK OF INDIA, LTD.

Head Office: 15 Gracechurch St., London, E.C.3

Capital Authorised ... £3,000,000
Paid Up Capital ... 1,050,000
Reserve Fund and Undivided Profits 1,227,638

Branches:

INDIA, BURMAH, CEYLON, STRAITS SETTLEMENTS, CHINA, and PORT LOUIS, MAURITIUS.

The Bank buys and sells Bills of Exchange, Issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East, on terms to be had on application.

Fixed Deposit Rates will be quoted upon application. On **Current Accounts** interest is allowed at 2 per cent. per annum on daily balances.

The taxation returns issued this week for the month of August again show a deficit on the Budget estimates, and this despite the fact that the latter were revised last March in order to compensate for the deficit that experience had shown must be expected in the tax on business turnover. The deficit for August amounts to 118,395,300f, and the total revenue received is 1,016,389,500f. On the first eight months' working the deficit amounts to 716,327,600f. The chief items where there is a serious discrepancy between the estimates and the returns are stamp duties (46 millions), Customs (60 millions), and tax on business turnover (95 millions). In the original Budget the yield on business turnover had been estimated at 415,666,500, but this in March last was reduced to 241,666,500 millions; but the amount actually recovered, 146,615,000, appreciably the same as that brought in May, June, and July, falls short of the estimates by 95 millions. Stamp duties are 8 per cent. under the estimates, the reductions being marked chiefly in dues received from the sale of furniture and real property, death duties, mortgages, and Bourse operations. There has been some compensation in the returns from sales of businesses, from sporting licences, and from the tax on income from capital. The whole situation is, of course, due to the steady persistence of the economic crisis. This same factor accounts to some extent for the deficit of 15 per cent. in Customs. There has been a large falling off in imports of iron and steel, of machinery, of wool and cotton tissues, and of foodstuffs, notably cereals. This falling off has, to some extent, been compensated for by an increased importation of sugar, undertaken to counterbalance the anticipated poor harvest.

The Bourse has continued firm, the tendency having been particularly marked during the first part of the week. Towards the end there was a certain realisation of profits, and the upward tendency was somewhat checked. The belief prevails, however, that the market will remain firm until the end of September, when large calls will be made for capital, and in consequence there will be less funds available for investment on the Bourse. Apart from other factors to which attention has been drawn in previous weeks, the profits made in the country during the holiday season have helped on the movement, for a considerable part of these have come into Paris for investment. French Rentes have remained unchanged. Banks were firm and in demand in the early part of the week, but fell back as a result of sales. Thus Banque de Paris declined from 1,445 to 1,382, Union Parisienne from 915 to 890, and Crédit Lyonnais from 1,545 to 1,525. Transports are generally stronger, P.L.M. rising from 770 to 780, and Nord from 850 to 873. Metro, however, was calm at 405, after having reached 411, while Est-Parisien rose from 72 to 78. Owing to the uncertainty of freights, shipping has shown hesitation. Chargeurs Réunis are at 620, as against 639, and Transatlantique at 279, as against 283. Electrical undertakings have been well in demand, Compagnie Générale d'Electricité has attained 1,020, Electricité et Gaz du Nord has advanced to 310, Téléphones have improved from 615 to 640, but Thomson is back from 910 to 885. Metallurgical undertakings are in great demand. Thus, Acieries de France have risen from 582 to 690, Longwy from 1,125 to 1,555, Micheville from 982 to 1,000, and most others similarly. Mines, for the most part, are stronger, Tintos having improved from 1,495 to 1,530, and Utah from 640 to 692. Boléo, however, has dropped from 400 to 390.

The returns of the Bank of France for the last week, the previous week, and the corresponding week of 1913 are as follows:—

GERMANY.—POLITICS—EXCHANGE AND BOURSE—PRICES—LABOUR MOVEMENT—TRADE—INDUSTRY—CROPS.

(FROM OUR CORRESPONDENT.)

BERLIN, September 12.

No settlement has yet been reached on the two most important domestic questions. The negotiations with Bavaria concerning the Republic's objection to the Kahr Cabinet's suspension of Constitutional guarantees and Bavaria's objection to the Republic's similar suspension have so far only led to Dr von Kahr's resignation. The other question concerns reconstruction of the Prussian Cabinet on a more progressive basis. Herr Stegerwald, the head of the Cabinet, like the head of the Federal Cabinet, is a Centre politician, but he belongs to the right wing of his party, and as a supposed reactionary has had to survive more than one attack from the Socialists. Dr Wirth desires to have a Prussian Cabinet with a policy more in line with his own, which means with Socialist support. The Centre and Democrats desire that the new Prussian Cabinet should also include the German People's party; but this plan is rejected by the Socialists. The Reichswirtschaftsrat has passed a resolution demanding a more homogeneous policy in direct taxation. At present five big property taxes exist in law or in shape of Bills: the Emergency Levy, the Increment of Wealth Tax of 1920 (*Besitzsteuer*), the new Property Tax, which is to replace the levy, the new permanent Increment Tax, and the non-recurring Post-War Increment (1919-21) Tax, in addition to which is the not yet fully paid 1913-19 Increment Tax. The real subject of all these taxes is the growth of nominal wealth, caused by the currency depreciation, compared with which vast fictitious growth the variations in the real wealth of individuals is insignificant. The differentiation

between the taxes is mostly meaningless, and causes needless collection costs. Behind the Reichswirtschaftsrat's resolution is the theory that it would be better to abandon all five taxes, and substitute a single permanent Property Tax.

State finance, industry, trade and labour are all under the influence of the exchange fall of the mark, which has now reached the lowest point of January-February, 1920. For long past Berlin's valuation of the mark has closely followed New York quotations; but in the present downward movement Berlin has sometimes taken the lead; and it is complained that frightened Germans are hoarding foreign currency, and that mark bear speculations have become merely a supplement to the universal bull speculation in stocks. The public ignores warnings that no great movement in either direction can proceed without reactions. The Reichsbank statement for September 7th shows a decline of 3,540,895,000 marks in discounted Treasury bills to 80,502,996,000 marks—this large drop is explained by the abnormally heavy month-end increase shown in the statement for August 31st. Private discounts declined by 39,428,000 marks to 963,069,000 marks; State deposits by 1,957,462,000 marks to 2,875,381,000 marks; private deposits by 2,156,328,000 marks to 6,642,428,000 marks. Circulation of notes increased by 654,805,000 marks to 80,727,526,000 marks; Kassenscheine fell by 44,100,000 marks to 7,792,800,000 marks. The total clearings in the Bank's Clearing Offices in 1920 are reported at 695,776.2 million marks, against 182,767.8 million marks in 1919, and 73,634.2 million marks in 1913. The increase against 1919 is 281 per cent., number of clearings being 22,464,365 against 16,661,291, an increase of only 34.8 per cent., so that the 281 per cent. rise is mainly due to currency depreciation. The average value of cheques cleared increased nearly threefold.

Stocks continue to rise rapidly, and activity was so great that the whole apparatus—Bourse, stockbroking establishments, and securities departments of the private banks—broke down; and the Bourse had to be closed altogether in the second half of the week. Bourse working hours have now been lengthened, and changes have been made in hours for fixing official quotations. Heavy business in stocks continued on the closed days. The Bourse quotations have entirely ceased to reflect the sentiment of the day for which they are issued. Orders to buy and sell are often executed a day or even two days after they have been given, and prices are, therefore, still moving violently in one direction when orders are being given in another direction. Stocks have therefore several times risen long after the beginning of bear moves by dealers. The *Frankfurter Zeitung's* Bourse index shows 21,191 for end of the week, against 20,193 a week before; the stocks and bonds used in the index are 162 per cent. above the figure of January 2, 1920. Nearly all stocks gained. Textile stocks rose as much as 400 points, mining and metal mostly between 100 and 350, engineering between 50 and 200. Bank ing stocks were active, and rose considerably; potash stocks moderately. One stock, Adler und Oppenheimer, rose 600 points, and with 2,975 is to-day the highest native stock quoted. The exchange decline is sending stocks up, not only because of the "Flight from the Mark" movement, but also because the export prospects of industrial companies is much improved, and because the decline in the mark's buying power makes necessary fresh increases of capitalisation, which usually bring privileges to existing stockholders. That capitalisations have not kept pace with the currency decline is shown by the fact that 5,658 companies (*Aktiengesellschaften* only) had capital on December 31st last of 29,026,800,000 marks, whereas on September 30, 1909, 5,222 companies had capital of 14,722,800,000 marks. Loan quotations to-day:—War Loan, 77.50; 4 per cent., 76½; 3½ per cent., 67; 3 per cent., 77.25; Colonial 4 per cent., 66.99; Savings and Premium, 79.75.

The upward move in prices is still marked, though in August the rise was smaller than in July. The *Frankfurter Zeitung's* wholesale index for September 2nd shows 164 for 77 commodities, against 159 on August 6th, and 135.4 on July 2nd. The food index in August-September fell from 214 to 210; textiles and leather rose from 84 to 96; minerals from 117 to 125; and miscellaneous from 186 to 193. This index is based on 100 for January 1,

1920. Taking 100 as the last peace price level, prices on September 2nd were 1,777 (1,083 in January, 1920). The agitation for higher wages continues. Coal miners have been granted an increase of from 7½ to 10 marks a shift, as a result of which Ruhr coal has been raised 21 marks a ton, the price of best quality anthracite being now 418.20 marks a metric ton, and of best quality "fat coal" (Nuss I.) 340.50. There have been partial strikes in Berlin. A Bill providing for the compiling of official wage statistics, to serve as a basis for collective agreements, has been submitted, also an Eight Hours Labour Bill. The eight hours' working limit first became law provisionally (in November, 1918) under a decree of the People's Delegates, which expires next spring. The essential innovation in the renewing Bill is a clause forbidding employees to work extra hours in a second factory or workshop in their regular branch of industry after they have worked the full eight hours for their chief employer. Hitherto this practice has been very common, not only in Germany, but in Sweden, Finland, and other countries where eight hours is the legal maximum. Reports of the German Control officials show that many workmen consider limitation of hours a grievance, and therefore either work after hours for second employers, for themselves at home, or in petty factories and workshops of their own. This is objected to by employers on the ground that men come exhausted to work in the morning; by trades unions on the ground that it deprives men of employment; by independent handworkers on the ground that it causes competition; and by eight hours' advocates on the ground that it foils the specific social aim of the law. Opposition to the law is very strong among individual workmen, but the trades unions, including the anti-Socialistic and the Left parties, are solid for the law.

The foreign trade report for May (January-April inclusive not having yet appeared) shows a heavy decline both in volume and values as compared with December, 1920. The decline in exports is partly ascribed to the Sanctions and partly to the reduction in Upper Silesia's output, caused by the disorders. Imports in May were 15,342,700 double centners, against 20,073,500 double centners in December (values not reported), and exports were 11,386,600 double centners, against 17,582,100 double centners, of value 4,511,600,000 marks paper, against 7,863,000,000 marks. Of exports, 80 per cent. of values, or 3,600,000,000 marks, went to Europe, and 7.1 per cent. to the United States. Chief buyers were Holland, 735,900,000 marks; Denmark, 282,000,000 marks; Austria, 279,600,000 marks; and Switzerland, 268,600,000 marks. Great Britain bought for only 189,100,000 marks. Sales to the United States were 319,200,000 marks, and to South America 230,000,000 marks. Chief export groups were:—

	Millions of M. Paper.
Metals	1,088.2
Machines and vehicles	911.1
Textiles	624.4
Food, fodder, wood	305.1
Chemicals, dyes, fertilisers	302.2
Mineral raw materials and oils	216.2
Arms, clocks, instruments	188.6
Paper and cardboard	182.3

The exports of metals were little more than half those of December, exports of machines and vehicles little more than two-thirds. The Prussian Ministry of Trade's report on industry for August shows an improvement in nearly every branch. Extreme activity prevails in some branches of iron and steel, and in textiles, clothing, and leather. The chemicals and dyes market shows improvement.

Crop reports are favourable, with the exception of oats and hay. The yield per hectare of this year's harvest, as estimated at the beginning of September, shows for winter wheat 19.4 double centners, against 17.1 in 1920; spring wheat, 18 against 17; spelt, 13.9 against 11.2; winter rye, 15.5 against 12.4; spring rye, 11.2 against 10.5; winter barley, 20.9 against 17; spring barley, 16.5 against 16.2; oats, 14.9 against 15.5. The area under bread crops increased, as a result of which, and of the higher yield per acre, the harvest of wheat, spelt, and rye is estimated at 6,350,000 metric tons, against 5,200,000 tons last year. The area under barley and oats has declined, and the crop is estimated at 4,510,000 tons, against 4,760,000 tons.

CANADA.—THE RAILWAY PROBLEM.

(FROM OUR CORRESPONDENT.)

OTTAWA, September 1.

MUCH has been said and written on the Canadian Government railway problem during the last 10 years, but undoubtedly the most constructive contribution to the subject is the report of Sir Joseph Flavelle, which has recently been made to Premier Meighen. Sir Joseph points out that if Parliament in 1903 and after had not made possible the separate schemes of both Grand Trunk and Canadian Northern promoters, but had told them that in their Western projects they must get together, the present trouble would have been prevented. With this view there is very general agreement. But, as he says, the country is confronted with the actual results of Parliament's policy. Of the nearly 20,000 miles of road embraced within the Government system in Canada no less than 4,600 miles are, on Sir Joseph's authority, "not actually needed for the business of the country."

After being reminded that the deficit on the Government roads last year, including the Grand Trunk, was \$69,564,176, the information is given that this did not include interest charges on loans by the Government, amounting to \$353,000,000. At 5 per cent. this would have brought the total deficit up to \$86,000,000. Sir Joseph states that the estimate of \$8,377,000 loss on operation during 1921, submitted to Parliament, which with fixed charges would bring the total estimated loss up to \$45,375,981, will be exceeded, returns for the first six months having shown that this figure for operating loss is not large enough. He further says that additional capital expenditure ranging from \$125,000,000 to \$175,000,000 will have to be made if the system is to compete with the Canadian Pacific for business.

Aside from other considerations, Sir Joseph points out that one of the chief causes of the poor showing made by the Government system is to be found in lack of business through the country served, and he further points to the fact that, as compared with the Canadian Pacific, the company has a much shorter haul, with a greatly reduced earning power. Above all other things, immigration must be secured. On this point Sir Joseph emphatically says: "The railways in Canada have been developed in advance of the requirements of the country. Apart from better operating conditions, incident to the consolidation of the national lines into one system, the chief remedy will be found only in increased population, and consequent increased tonnage of commodities for movement by the railways, and increased passenger, express, and other revenues. Canada must secure this increase through settlers who will occupy the unoccupied lands in the West."

The capital investment in the Government system, including the Grand Trunk, is placed at \$1,652,107,965 for 19,433 miles owned, being an average of \$85,000 per mile, as compared with \$83,117 for the Canadian Pacific. The statement of fixed charges that will have to be met makes the net total a little over \$66,000,000 per annum, as compared with \$15,910,516 for the Canadian Pacific. "Manifestly," concludes Sir Joseph, "the Canadian National system, with its second transcontinental line that is not immediately required, plus the burden of the National Transcontinental and Hudson's Bay Railways, cannot possibly bear fixed charges of such magnitude."

Sir Joseph recommends the writing down of the capitalisation to \$750,000,000. He also proposes that a new National Railway Company be formed with a nominal capital of 5,000,000 common shares, and, say, 2,500,000 of 6 per cent. preference shares, each with a par value of \$100, the total authorised capital being thus \$750,000,000. It is further proposed that the Government take common shares at par in payment of the existing advances to the various systems, these at December 31st being \$320,000,000 of loans and \$33,000,000 of G.T.P. debentures. "The Government would turn over to the company the equity in the system, subject only to the bonds and debentures and guaranteed stock issued to the public, and to the fixed charges that may result from the Grand Trunk arbitration. Thus the existing Government advances, excluding the capital cost of the Intercolonial and Transcontinental, would be represented by common-stock

ownership only, and no part of the interest on it would be a fixed charge or would be cumulative." As for the future, it is suggested that any expenditure that should be charged to capital be provided by the Government from year to year, and be capitalised by an issue to the Government of a preference stock at par in respect of the capital advances. Any annual deficit that has to be met by the Government, plus fixed charges to the public, should be met by an issue to the Government of common stock at par.

After observing that "the abundant resources of the country and the character of the people will enable the country to meet every obligation," Sir Joseph finally says: "I do not venture an opinion as to what will happen to these great properties if politics will not permit, and Parliament and the Press will not allow, the necessary freedom, and will not give the necessary support to the administration of publicly owned railways."

ITALY.—SUBSIDIES TO SHIPBUILDING, AND LEGISLATION BY DECREES.

(FROM OUR CORRESPONDENT.)

TURIN, September 11.

AN interesting constitutional and financial problem has been debated this week in the Press and political circles. It is a residue of our D.O.R.A. war methods, which, by the way, were much more arbitrary than in your country. By a law of May 22, 1915, the Government was empowered to legislate and to act freely on the basis of the old dictum *salus publica suprema lex*. All the governments after May, 1915, freely used the machinery of Royal legislative decrees. Bureaucracy was substituted for Par-

liament. Not a single budget after 1915 was laid in the ordinary way before Parliament and subjected to a regular debate before the beginning of the financial year. Even to-day taxes are laid and expenditure effected on a vote of provisional authorisation for the first six months of the financial year, which vote was given by Parliament after a perfunctory general debate. Signor Giolitti promised in his Cabinet programme that he would put an end to the system of legislative decrees, but on the eve of his fall he did not refrain from publishing, on June 30, 1921, a Royal decree enacting a new protectionist custom tariff, thus breaking a solemn promise made to the Chamber that no new tariff would be enacted without the consent of the Parliament.

The slowness with which legislation by Royal decrees is dying is due to its being much more easy thus to impose taxes and make expenditure. Bureaucracy felt supreme during the war and armistice, and is to-day sorely grieved to renounce any of her privileges. Industries dependent for life on the patronage of the State obtained subsidies and favours without embarrassing public debates. Ministers were satisfied with their almost absolute powers.

The Shipping Subsidies Bill furnished at last a test case. June 30, 1921, was the day after which ceased to be effective the decrees of August 18, 1918, and March 30, 1919, giving new ships various subsidies amounting in all, for a 8,000 D.W. tons ship, to the nice sum of 17,000,000 lire. There were, at the date of June 30, 1921, in course of construction, a number of from 50 to 73 ships which, for various reasons, were not completed before the fatal date, and had not a legal claim to the State subsidies. Shipbuilders began to cry on the damage which would be done if ships remained unfinished on the yard, and if thousands

of men were put out of employment. Signor Alessio, who was Minister of Trade in the Giolitti Cabinet, felt that a continuation of the subsidies on the old scale was unbearable. Parliament would not have consented to an expenditure of from 850 to 1,240 million lire merely for the sake of shipbuilders, who were well aware that ships unfinished at June 30, 1921, had not the right to receive a single farthing from the Exchequer. But he believed that on the ground of equity a partial subsidy could be given to those ships which were already laid on the yards at June 30, 1921, and for which constructional materials were already on the spot on April 30, 1921. For this sort of ships it may be assumed that shipbuilders had done all their might for completing the construction at the prefixed date, but were impeded by some external cause. A Bill was accordingly laid by Signor Alessio on the table of the House on June 20, 1921. The subsidies were fixed on a new scale, and for a total sum of 300 million lire.

The fall of the Giolitti Cabinet and the political debates on the programme of Bonomi Cabinet were not favourable to an immediate discussion of the Alessio proposals. Moreover, the new Minister of Industry, Signor Belotti, dropped the Alessio Bill, substituting it with two new Bills, laid on the table of the House on July 26, 1921. Soon afterwards, however, the House rose for recess, and it is not probable that it will meet before November next.

Shipbuilders began again clamouring against the imminent closing of the yards; Socialist deputies insisted that Government should give some aid against unemployment. Signor Belotti took an extraordinary course. As it was impossible to obtain the consent of Parliament before November or December, and as he was afraid to legislate by Royal decrees without some sort of authorisation, he laid the Bills before the two committees of the House, those on finances and on transports, which, according to our legislative methods, are bound to report on Bills to the House as a whole.

Committees of the Italian Chamber of Deputies are composed in exact proportion to the respective importance of various political parties—Liberals, Catholic, and Socialist parties being exactly represented in each committee. If, then, argued Signor Belotti, the special committees of the House give an advice favourable to the Bills, he would be authorised to enact them by Royal decree. The committees, in effect, reported favourably to the first of the Bills, which granted a subsidy of 750 lire per D.W. ton to those ships which, however unfinished at June 30, 1920, had reached at that date a 30 to 40 per cent. stage of completion. The financial burden for the State was estimated at 125 million lire. The decree was accordingly enacted.

On the second Bill, one of the committees felt at first unable to reach a conclusion. The Bill stated that a sum of 200 million lire could be spent by the Ministry of Industry for buying for State account a certain number of ships from among those unfinished at June 30, 1921, if from 500 D.W. tons upwards, and if built to carry men in addition to goods. The Bill was open to various technical objections. Above all, a keen debate arose in the Press about the legitimacy of the new legislative method of enactment after the advice of a House Committee. Committees, it was observed, have not the authority to legislate and of advising Government when Government thinks it urgent to legislate during the recess of Parliament. The legislative authority is only enjoyed by the Chamber as a whole. Moreover, the Italian Parliament is composed of two branches—the elective Chamber of Deputies and the nominated (for life) Senate. Legislation by decree after advice of a Committee of the Chamber of Deputies amounted, in fact, to a practical abolition of the Senate. Grants of sums to be spent are the most jealous privileges of Parliament; they cannot be transferred to a single committee of a single House.

The debate was not without influence on legislators. The Finance Committee of the House re-examined the matter, and after a lengthy debate refused its assent to the Bill. There matters stand at present. It appears that Government has felt the lesson, and that it will abstain in future from legislation by decrees, as everyone is feeling that it is a short cut to absolute government by bureaucracy.

POLAND.—BUDGETARY DEBATES—CABINET CRISIS—EXCHANGES—CORN FOR EXPORT—PRE-WAR DEBTS OF THE TEXTILE INDUSTRY.

(FROM OUR CORRESPONDENT.)

WARSAW, September 9.

THOUGH the official session of the Diet has been closed, the Financial Committee is actually discussing the budgetary estimates for the current year, which we reproduce below:—

(Million Polish Marks.)

	Revenue.	Expenditure.
1. President of the Republic	13.0	
2. Diet	222.9	
3. Board of Control	138.6	
4. Cabinet	819.2	
5. Ministry of Foreign Affairs	1,788.6	3,601.4
6. Ministry of War	4,892.7	61,033.3
7. Ministry of Finance	64,453.6	12,150.8
8. Ministry of the Interior	1,516.4	7,203.2
9. Ministry of Justice	187.0	2,647.5
10. Ministry of Industry and Trade	450.7	7,374.4
11. Ministry of Railways	26,142.6	42,095.8
12. Ministry of Agriculture	4,394.8	8,149.7
13. Ministry of Education	74.4	11,404.7
14. Ministry of Posts and Telegraph	3,693.1	3,200.3
15. Ministry of Food	5,575.1	19,879.7
16. Ministry of Public Health	601.7	2,275.9
17. Ministry of Art	1.3	122.6
18. Ministry of Public Works	325.5	10,842.5
19. Ministry of Labour	639.0	1,411.4
20. Board of Liquidation	207.6	392.2
21. Rural Board	1,067.2	1,103.0
22. Ministry of the former Prussian Poland	18,980.5	12,879.0
	135,166.7	208,961.2

The Budget closes with a deficit of 73.8 milliard marks. Mr Steczkowski hoped to be able to cover this huge deficit by Treasury bills, a new internal loan, and a lease of the forests of Bialowiesha to a foreign concern, &c. These plans have been partly thwarted by the delay in the decision relating to Upper Silesia. According to declarations made by Mr Steczkowski, a final settlement of the Polish frontiers is a necessary condition for a conclusion of the agreement between the Government and the foreign syndicate which has the intention to exploit the forests of Bialowiesha. This, however, is only a secondary factor. In the first instance, Mr Steczkowski's calculations have been entirely upset by the decline of the Polish mark during the last weeks. It has been necessary to increase the salaries of the officials, and this will necessitate during this year an extra expenditure of 28 milliard marks. It can be hardly expected that this process has attained its climax. The prices of all necessities are rising by leaps and bounds, and already at the present moment the increased salaries are hardly sufficient for the maintenance of a family.

The opposition took advantage of this situation by attacking in the Financial Committee the whole Government policy. Mr Steczkowski, feeling that he had not a sufficient and reliable majority behind him, tendered his resignation at the end of last week. A few days later his example was followed by the whole Cabinet. From this a political deadlock has ensued, because all efforts at forming a Parliamentary Government are at the present juncture almost vain. It seems that there is only one way out of the present crisis—the appointment of a non-party business Cabinet. This solution, however, cannot be considered satisfactory.

During the two last weeks there has been hardly a day without a fresh decline of the Polish mark. The English pound, which stood on August 25th at 9,500, has reached on September 7th 14,250. The respective quotations for American dollars were 2,500 and 4,050, for German marks 30.00 and 42.00. This collapse of the exchanges is happening in a moment when a record crop has just been bought in from the fields. According to official data this year's corn crop is by 234,000 wagons greater than the previous one. It is estimated that of this 100,000 wagons can be easily exported, the remaining quantity being quite sufficient for home consumption. This can be considered as a proof that the foundations of the economic life of the country are healthy, and that only the financial superstructure is rotten. All Ministers of Finance have hitherto failed in the very difficult task of bringing the revenues and the expenditure of the country

into equilibrium, and this lack of a strong and able hand is principally responsible for the actual state of affairs.

It has been reported already in a previous letter (*Economist*, August 6th, page 226) that the Lodz manufacturers, whose pre-war debts for cotton imported from England are estimated at 2 million pounds, declared themselves unable, at the present rate of exchange, to meet their obligations. They have addressed now a circular to their foreign creditors, in which they draw from Part IV. of the Treaty of Versailles the conclusion that their obligations have been taken over by the Polish Government. They point out that the creditors should claim, through these respective Governments, from the Polish State the repayment of the pre-war debts. The manufacturers add that they would be able to settle directly their debts in the case of a payment by the German Government of the sums which they have to receive for textile goods requisitioned during the occupation. The total amount of this debt exceeds several times the foreign pre-war obligations of the Lodz district.

Letters to the Editor.

MONETARY POLICY.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In your article about "Monetary Policy" in the *Economist* of August 27th you related that the report of the Netherlands Bank shows that in Holland the rationing policy succeeded without any increase in the discount rate.

I beg to observe that the contention that the rationing system has succeeded in Holland is not by any means generally admitted in that country. I wish to place in the foreground that the Netherlands Bank, speaking of its rationing policy, does not make a distinction between the credit granted to the public (trade and industry) and the credit granted to public corporations (municipalities and the State). It is obvious that with regard to the latter refusing credit is the most effective method of curtailment, as spendthrift municipalities do not pay much attention to the rate of interest. But what is interesting for your readers is the question, if the rationing policy succeeded with regard to the credit granted to the public. And that, I think, cannot be affirmed. The figures of the annexes of the report of the Netherlands Bank suggest that the amount of credit granted to the public (chiefly trade and industry) increased during the report year, and also since the beginning of the armistice (the figures of the operating capital of the Rotterdam head branch and of the agencies increased during the report year by 41 per cent.). A substantial decrease of the loans granted by the bank on securities is to be seen from the very moment the rate for loans was increased from 4.5 per cent. to 5.5 per cent., not from the moment a circular was addressed to the public.

As for the amount of banknotes and deposits at the Netherlands Bank, it did not decline substantially by the rationing policy all in all during the report year. The total amount was fl 1,142 millions on April 3, 1920, and fl 1,105 millions on April 3, 1921, and in the meantime the transfers (giro) by the Netherlands Bank increased from fl 15 to 23 milliards, which equals with an important increase of currency. On the other hand, trade is dull now, which means that the same amount of currency on April 1, 1921, was relatively bigger than a year before.

Nor was the effect of the rationing policy on the depreciation of the florin favourable. The dollar equalled 2.69 fl on April 1, 1920, 3.37 fl on November 8th, fell to 2.77 fl on May 19, 1921, and rose again to 3.28 fl on August 4th last. Prices are declining in Holland, but much slower than in England and America. So there is no reason at all for the contention that the rationing policy has had any favourable effect.

Moreover, that policy tends to arbitrariness, giving credit too cheap to people who plead their cause cunningly, and refusing credit to other people who tell the truth and nothing else; it also may lead to eye-service. Therefore, it never can take the place of the well-tested system of increasing the discount rate.—Yours truly,

A DUTCH PROFESSOR OF ECONOMICS.

UNEMPLOYMENT, CREDITS, AND THE CURRENCY

TO THE EDITOR OF THE ECONOMIST.

SIR,—The Press, and even your own columns, are filled with proposals to abolish unemployment by arranging Government credits and by tampering with the currency. Both measures are, of course, hopeless. Business has come to a standstill because British and foreign buyers find British goods too dear, and no granting of credits and no juggling with our monetary arrangements will improve matters. Buyers will buy the goods which they want in the cheapest market, and if they are unreasonably dear, owing to the short-sighted attitude of British labour, they will either employ foreign labour or go without. No juggling can improve matters. Germany, Belgium, and other countries, where labour is reasonable, suffer little from unemployment, while over here it is unprecedentedly large. Meanwhile, a million men might be employed for years to come in the building trade. There is a need for hundreds of thousands of new houses in this country, and about 5,000,000 of existing houses require repairing and re-painting. However, property owners cannot afford to employ labour at existing rates. The manipulation of credits and of the currency will not improve matters, nor will doles and the "creation" of work by the Government and the local authorities. There is work for all. Let the workers work well for reasonable wages, and unemployment will disappear. The policy of high wages and low output is at the bottom of our troubles, and tampering with credits and with currency can make matters only worse.

In the United States the position is very much as it is over here. The *Commercial and Financial Chronicle* of New York of August 27th, which has just come to hand, stated editorially, with excellent good sense:—

"The irony is that wages kept up means trade kept down and labour kept out of work. Reduced wages would mean greater employment, increased production, lower prices, lower cost of living for everybody—labour, of course, included—increased buying power, and therefore increased consumption and a return to normal prosperity. Labour stands in its own light. Retail prices are still high, but they have had to come down somewhat. The chief trouble is high labour costs everywhere."

It would lead too far to show in detail why the watering of the currency, while bringing about prosperity on paper, would be ruinous to the nation as a whole. The advocates of dilution tell us that the credit of the Government is better than gold as a security. All the terribly depreciated currencies of the Continent have the Government guarantee behind them. It is, of course, no security whatever. Credit is destroyed if the men who lend money for three months may get only half the money back they have lent owing to the depreciation of the currency. Besides, the dilution of the currency is most demoralising both to employers and employed.—I am, Sir, your obedient servant,

J. ELLIS BARKER.
Albion Lodge, Fortis Green, N. 2.

A TABULAR STANDARD OF VALUE.

TO THE EDITOR OF THE ECONOMIST.

SIR,—I will endeavour to clear up the interesting points raised by Mr Albert Wallis in his letter published in your issue of September 10th. He writes: "It is quite useless to invent grand schemes for measuring prices in terms of gold, while basing the measure of that price on the price of things other than gold." I thought that I had made it clear that under a tabular standard prices would not be measured in gold, but in ideal units of value analogous to the yard as a measure of length. Under the gold standard prices are measured in gold, but the value (purchasing power) of gold is measured by a weighted average of the quantities of the principal commodities which can be got in exchange for a given quantity of gold from time to time. There is no circle involved in leaving out the gold altogether and expressing the price of each commodity in the terms of a weighted average of the quantities of the principal commodities for which a given quantity of it will exchange. In fact, there is no other intelligible way of expressing the general exchange value of an article. Under a tabular standard each unit of currency would be

maintained at parity with an aliquot part of the total parcel of commodities which formed the standard.

Mr Wallis is concerned because under a tabular standard there is no automatic means of ascertaining the money price of labour, which he imagines to exist under a gold standard. I do not see any reason to doubt the accepted doctrine that the real wages of labour do not depend upon any system of currency, but on the produce of labour, and upon the share in that produce secured by the labourer. This share again depends on the amount of capital employed in industry, and upon the number of labourers and their degree of organisation. Money wages are adjusted accordingly. Under a tabular standard money wages and real wages would coincide and would advance with improved methods of production, and also as workmen secured a larger share of the output.

As supporters of the gold standard appear convinced that the value of gold is fixed by nature, I would like to point out in what a very great degree this value is affected by the arbitrary action of Governments, banks, and the trading community generally. If gold were the sole means of exchange its value would vary according to the supply from the mines and the growth of trade. As the increase in trade forced up the value of gold poorer and poorer mines would be worked. Actually gold is supplanted in 97 per cent. of transactions by credit instruments, which keeps down its value. If credit bore a fixed ratio to gold, gold would still control prices, but it is known that the tides of expanding and contracting credit cause fluctuations in prices quite unconnected with gold. The adoption of a gold standard by Germany and other countries in 1873 and after caused gold to appreciate, and the substitution of paper for gold during the war in many countries caused gold to depreciate in spite of the falling production. If many countries return to gold standard gold will thereby gain in value.

Currency and credit are but contrivances for "clearing" the exchange of goods. The reason for believing the present stoppage of trade is due to the contraction and freezing of credit is as follows:—The demand for goods consists ultimately of other goods. General over-production of all commodities is impossible. When you get the appearance of general over-production as now, and as has happened in other crises, the explanation must be that the machinery for exchanging goods has got out of gear, owing to a sudden contraction of credit and falling prices. The crisis ends when credit again expands and prices cease to fall. These periodic crises should not occur under a tabular standard of value.—I am, Sir, your obedient servant,

C. CRAIES.

REVIEWS.

"Le Système Monétaire et le Change Anglais Depuis la Guerre." Par Alfred Mawas, Docteur en Droit. (Paris) Marcel Giard et Cie.

M. ALFRED MAWAS, a pupil of Professor Charles Rist, to whose help and influence he pays an affectionate tribute, begins his introduction to this most interesting work by observing that he publishes it with some apprehension. His fears are groundless. As he says, a study of England under a paper money system is a subject of the highest importance, and though it is too early as yet to give a complete review of it—since light has still to be thrown on much that is obscure in the story—this eminently sane and clear account of our monetary history during and since the war will be a timely help to all those who are trying to find the way out of the chaos in which our rulers have landed us. It is all the more valuable as being the work of an intelligent and critical, though sympathetic, foreign observer, who has evidently taken an immense amount of trouble to master his facts, and with surprising success. Among the few mistakes that we have noticed is the statement on p. 287, that the 3½ per cent. War Loan of 1914 "fut un succès et le Chancelier en était, a juste titre d'ailleurs, très fier"; and his remark that issues of Treasury bills were not accompanied by the

danger of inflationary creations of bank deposits seems to need qualification. Naturally and inevitably M. Mawas finds much to criticise in the monetary measures taken here during the war—especially the rising of Bank rate to 10 per cent. in August, 1914, the unnecessary (in his view) general moratorium then declared, the dear money policy that culminated in 1916, and the pegging of the American exchange. The after-war measures, such as the limit imposed on the currency note issue and the dear money policy of 1919 and 1920, meet with his approval, and he ends his study on a hopeful note concerning our financial future, and a quotation from Professor Shield Nicholson in favour of hard money and hard thinking. His 400 odd pages of closely-reasoned comment and criticism should help us towards both these objects.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET.	ACCOUNT.
September 28.	September 29.

Stock Exchange markets were inclined to look for a fall in the Bank rate on Thursday, and there was a good deal of banter when the electric indicators flashed their message on Thursday morning to the effect that the rate was to be left unchanged at 5½ per cent. A few minutes previously, the War Loan had risen to 89½, being an advance of practically a point in a day. The Bank's announcement caused a decline to 88½, but other stocks in the Consol group show noticeable strength, the Funding Loan in particular being prominent. A number of Colonials have gained a point or so. New issues fully maintain their premiums. The Ipswich (Brisbane) Water Supply 6½ per cent. 20-year debentures, to be offered at 96, were easily underwritten, and there was also a brisk demand for under-

South Africans benefited from some idea that the ex-enemy shares, in the hands of the Custodians, had been disposed of, although the statement was received with caution. Previously, Paris has been dominating the Kafir Circus, and the weakness of the franc became reflected in the prices of South Africans generally. De Beers, which touched 13½ last week, gave way to 12½. Most of the gold-producing shares went easier. There seemed to be no special reason for the dulness, other than the refusal of the public on this side to lend any support to Kaffir shares, added to disinclination on the part of the Cape to take any active hand in the market. Copper shares have fallen, on account of the general factors. The Indian mining shares, and St John Del Rey's, stand out with refreshing prominence, as having secured rises on the week. Tin shares, however, came off with the rest.

April 1 to September 10, £1,480,000	£ 300,000	..	£ 300,000
---	-----------	----	-----------

The Antofagasta (Chili) and Bolivia Railway Company, Limited.—Issue of £600,000 $7\frac{1}{2}$ per cent. five-year secured convertible notes. These notes will constitute a direct obligation of the above-mentioned company, and will be specifically secured by a trust deed "providing for the deposit of £1,200,000 of that company's 5 per cent. (Bolivia) debenture stock" with the trustees of the noteholders. The notes "will be repayable" on November 1, 1926. The notes are convertible into the company's 5 per cent. (Bolivia) debenture stock in the ratio of £675 of debenture stock for every £500 of notes. The company was incorporated on November 27, 1888, and operates lines of railways in Chili and Bolivia. The authorised share capital is £8,000,000, divided into £2,000,000 5 per cent.

The Brompton, Chatham, Gillingham, and Rochester Waterworks Company.—Incorporated by special Act of Parliament, 1860. Issue at par of £40,000 7 per cent. debentures, to be redeemed at par on July 1, 1931. The total authorised share capital amounts to £242,500, of which £180,017 has been subscribed. The authorised loan capital is £93,000, and of this £14,750 has been issued, exclusive of the present issue. The net average annual revenue of the company for the four years 1911-14 amounted to £12,257, while the average for the war period 1915-18 worked out at £12,622. But, unfortunately, owing to increased costs of labour, coal, &c., the net revenue for the 12 months ended June 30th fell to

The Rangoon Electric Tramway and Supply Company, Limited.—The London secretaries have received cable advice from the company in Rangoon that the balance of the ordinary capital of the company, amounting to 72,999 ordinary shares, recently offered for subscription at par, has been duly allotted.

RUBBER OUTPUTS AND DIVIDENDS.

In the table below we give the latest and past three years outputs, and dividends for five complete years of a number of Rubber Companies, while the latest reports of Rubber Companies are analysed under our Summary of Profit and Loss Accounts each week. The latest dividends declared appear under Dividend Announcements, and the Rubber Share Market is dealt with in our Stock Market section. Particulars as to the Market Price of the Commodity and other information will be found in our Produce Market Section.

Reports and Notices.

We are informed that Mr Robert Grant, junior, of the firm of Messrs Higginson and Co., has been appointed a director of Richard Thomas and Co., Limited, to take the place of Lord Bledisloe, who recently left the board.

Messrs Coutts and Co. will pay on and after October 1st the coupons of the Peruvian Corporation, Limited, first mortgage 6 per cent. bonds at the rate of 4 per cent. per annum.

GOVERNMENT STOCKS, &c.

BULGARIAN 5 PER CENT. GOLD LOAN, 1902.—The Bulgarian Government announces that it is prepared to pay to French, British, and Belgian bondholders the coupon No. 38 of the above loan maturing on September 14, 1921, at French francs 12.50 each, and the bonds drawn for redemption on that date at French francs 500 each. Holders of bonds which have been in British ownership since August 1, 1914, who are desirous of availing themselves of the offer thus made by the Bulgarian Government should present the above-mentioned coupons and drawn bonds (to which all coupons due after

IRON, STEEL, AND COAL.

Our Middlesbrough correspondent's report, dated September 15th, is as follows:—Pig-iron: Blast furnace owners still delay re-starting their furnaces, as coke at 40s, or even at 35s, is much too dear to use in making pig-iron which will compete with imported iron. 120s is now the official price for No. 3 Cleveland foundry pig-iron, but only one firm is producing this grade at present. Although the price of East Coast mixed numbers hematite has been reduced to 135s for export, the price is not yet sufficiently low to secure foreign orders. There are at present only six blast furnaces making hematite on the North-East Coast, and next week it is expected that two more will be blowing. Manufactured iron and steel: There is no life in the steel trade yet. Competition is severe for the few orders there are about, and our steel works have difficulty in keeping going. Steel ship plates, £14; steel ship angles, £13 10s; iron bars, £10; steel rails, £14 net. Iron ore: No buying yet. An occasional cargo comes forward on old contracts, which are generally heavily in arrear. Nominally, the price of best Rubio is about 28s 6d per ton.

Our Glasgow correspondent writes:—Though there has been no positive departure or improvement in the industrial position this week, reports bear out the conclusion that in the past eight days or so there has been an expansion in the volume of business passing in iron, steel, and coal connections, while the actual tonnage dealt with still falls far short of what could be desired, and is, indeed, essential to the lifting of the cloud of depression that overhangs the district. Several shipbuilding yards are much busier than they were, thanks to the change for the better in the carpenters' position, and there is no reason to fear for an adverse movement in that relation—for months at least to come. There are 50 steamers waiting on refitment and overhauling on the upper reaches of the Clyde, and a fair number of new boats are on the slips. There is a lot of marine engine building on hand, and, beyond all, the extensive dock extensions designed by the Clyde trustees—to take up over seven miles of space. These factors and influences are bound to make for good in steel-making, iron-founding, and constructional work in general. There are none of these departments overwhelmed with work at the moment, but more than one of the larger establishments have fair contracts in operation and promise of additions, especially and immediately if further price concessions are granted. These, experts contend, are not only possible, but due, because of the reductions in wages effected of late and of the drop of over 40 per cent. that has taken place recently in coals. It may be here mentioned that boiler plates continued to be listed at £19, ship plates £14, and sections £13 10s, delivered Glasgow stations. A contributory influence thereto promises in the information that Continental competition in raw materials is slackening, prices easing and deliveries slowing down. At the same time, it cannot be ignored that there are substantial quantities of semi-refined steel being landed at Grangemouth and Glasgow. But these are largely wrought up by our manufacturers in the production of finished goods, which, again, are exported to Colonial, Far Eastern, and South American markets, which we could not otherwise successfully enter. The imports of semi-refined materials, therefore, are not wholly a black feature in the picture. It is advised that tube-makers are well engaged on export orders, that black sheet makers and crane builders are

doing better, that wire rope makers are fully employed, but that bar iron makers are poorly off, with crown bars neglected at £16 a ton, delivered Glasgow. A moderate inquiry is felt for foundry iron, which the blast furnaces are producing at an increasing rate. No. 1 is quoted £8 5s, No. 3 at £8, and Scotch hematite at £7 5s. Coals continue in over-supply, and are easier in tendency. It is calculated that there are 10,000 miners idle in Lanarkshire, and that 25 per cent. of the Fifehire staffs are in the field. Foreign demand is extending, and if that progresses, the general fuel position will certainly be ameliorated.

THE COTTON TRADE.

MANCHESTER, September 15.

The market continues to present an unsettled appearance. The fluctuations in raw cotton rates have not been quite so violent as last week, but many ups and downs have taken place in New York and Liverpool. Trade cannot flow freely until there is increased confidence in the current level of values. Cloth advices from India have not been encouraging, but most of the inquiry has been for early delivery, and this indicates that supplies are not heavy in the bazaars. Some buying has been reported for China in bleaching descriptions, but standard grey makes have attracted no attention. White goods and printing and finishing styles have been in moderate request for the Straits Settlements, Egypt, and the Levant, and fancies for the home trade are now moving off rather more freely. Most of the business done in piece goods has been in stock lots. Quotations in American and Egyptian yarns have been very irregular. There has been a slow offtake in home counts, and not much activity in shipping numbers.

The Chatwood Safe survives 4 days in burning debris after falling through 3 floors!

RIPOLIN LIMITED.
3/9, Drury Lane.
223, LITTLE PORTLAND-ST.,
LONDON, W., 29th July 1921.

TELEGRAMS:
RIPOLIN, LONDON.
TELEPHONE:
Messrs. The Chatwood Safe Co.
56, Gracechurch Street, E.C.

Dear Sirs,

We are very pleased to be able to testify to the wonderful fire and fall resisting qualities of your Standard Quality Safes, which when opened today were found to have preserved their contents in perfect condition.

As you are aware the disastrous fire on the 2nd instant which entirely gutted our premises (including the warehouses containing stocks of paint and oil situated under our offices) was of a very severe character.

Your safes were subjected to the fiercest heat and one fell, on the collapse of the floors, from the 2nd floor into the basement but after being opened with their own keys we were happy to find the above result, although safes not of your make were burst open in the fall and their contents destroyed.

We consider ourselves fortunate to have been the possessors of your safes, which enabled us to save all our principal books and documents. The Salvage Corps stated that the safes must be of exceptional merit to withstand a test of this nature, when steel girders were knotted and cast iron structures melted by the heat.

We bought your safes because we believed them to be the best; we are now assured of this, and will continue their use in the future.

Yours faithfully,
for RIPOLIN LIMITED.
R. Osorio
Manager

SOME idea of the terrific heat of this fire may be gained by examining the condition of the giant steel girder (shown in the foreground) under which THE CHATWOOD SAFE is buried.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—The strength of the raw material markets continues to excite much comment, especially as it is difficult to find any corresponding movement in the demand for piece goods. The sharp rise in the price of wool has caused topmakers to advance their quotations, and in many cases it is obvious that protective rates are being quoted. The real fact is that it is almost impossible to make to-day's prices in the ordinary way of business, yet wool cannot be bought either in the colonies or in London to make tops at prices below those now quoted. Average 64's are offered at about 3s 6d per lb, and for a good warp top 2d more is wanted; in both cases these prices show an advance of 2d on the week. Spinners have also advanced their quotations in keeping with the higher rates for tops, but here also it is difficult to make to-day's prices. There is a fairly good demand for merino and fine crossbred yarns, and hosiery spinners are well employed. The export section is by far the most active, and Germany continues to lead the way as the principal customer. The financial position of that country, however, is causing a good deal of uneasiness, and many firms are adopting a policy of extreme caution. There is not much change in the piece goods trade, but inquiry from overseas markets is rather more encouraging.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

The London sales have finished with values at the highest point, the attendance being well maintained to the end. The number of buyers present throughout the whole series has surprised everyone, even American interests having been in evidence. There has not been a slack night throughout the entire series, and although towards the finish German buying was hardly so pronounced, values have been well maintained, and the series closed on Thursday in a splendid way. Competition could not have been better. Selling brokers in particular, and even B.A.W.R.A., cannot but feel pleased with the response they have had. The marvel is that the Continent should have operated so freely in face of the greatly depreciated exchange, and it is a surprise to everyone how Germany could keep on day after day operating fairly extensively with the mark in the neighbourhood of 400 to the £. On the lips of everyone is the question: Where is the sterling coming from to pay for the wool? Evidently buyers are finding the cash from somewhere. No doubt German spinners and manufacturers are doing a fairly extensive export business, which is one way of finding money to pay for wool. It was stated this week in London that Leicester hosiery firms were purchasing fair big weights of yarns, such as were bought before the war, from Germany, and the British money paid was being used to pay for London sales purchases on German account.

The auctions have had no equal since April, 1920. America has paid the highest price for Australian and South African greasy combing wool, the super combing Western Province Cape wool sold last Monday presumably going to that destination. America will need to buy the best class of merinos, no matter what the import duty may be. Most selling brokers quote merinos 15 per cent. dearer compared with the close of the July sales, but the advance was often 20 per cent. No class of merinos dragged, even faulty carbonising wools being disposed of most readily. Home trade buyers have been keen to secure merinos, paying quite as much as their Continental rivals. The change is certainly marvellous, and many are wondering what is the real cause. It is certainly not due to any materially increased demand on home trade account, and many fear that Bradford top-makers in particular have to cover large sales of tops at little prices. The advance in fine and medium classes of crossbreds is 10 to 12½ per cent., while coarse crossbreds are 7½ per cent. dearer. Slipes have often appreciated 10 per cent., and the same can be said of scoureds. A particularly satisfactory feature of the sale of these wools is the incoming of Scottish and West Riding firms, which is taken as evidence that more is being done in tweeds and blankets. Crossbred fleece wools have been readily absorbed by Bradford top-makers, but Germany has been by no means silent.

The permanence of the rise in values appears to depend upon Germany. Many are forecasting a smash, but I cannot help thinking that the demand for wool throughout the series has been brought about by a real consumptive demand, speculation being absent.

THE BANK OF TAIWAN, LIMITED.

BRANCHES: Amoy, Batavia, Bangkok, Bombay, Canton, Fochow, Hankow, Hongkong, Kiukiang, Keelung, Kobe, Moji, New York, Osaka, Semarang, Shanghai, Singapore, Soerabaya, Swatow, Tainan, Tokyo, Yokohama, &c., &c., and Correspondents in every principal town in the World.

The Bank is incorporated by Special Charter of the Imperial Japanese Government, and is authorised to issue notes in Formosa, conducts general Banking Exchange Business, and takes Trust Business, and acts as Business Agents for other Banks. Special facilities are available for Exchange Business on Japan, China, India, Straits Settlements, Dutch East Indies and France, where the Bank has special working arrangements with Cox and Co. (France) Limited. Deposits are received for fixed periods on terms which may be ascertained on application.

No doubt the present low value of the currency in France and Germany creates a critical position on the Continent. The strike of textile operatives in Roubaix-Tourcoing is also another adverse factor. Still more business is being done everywhere, and though the home trade is not awakening as one would like, consumption is greater, mills throughout Yorkshire running longer hours. A really speedy revival is not likely to take place, but there is more confidence in the future, with a disposition to buy both hosiery and piece goods, lower values not now being expected.

VEGETABLE OILS AND OILSEEDS.

(FROM OUR CORRESPONDENT.)

Market conditions are somewhat irregular. On reports of adverse weather conditions regarding the new crop in Argentina, a much firmer tone developed, and the loss last week was more than recovered. The firmness was also contributed to by a fair inquiry for raw linseed oil from America, the Continent, and the home trade, since when, however, easier conditions have set in, and the advance in both seed and oil has not been maintained. Spot oil rallied to £40 in London and £38 10s ex Hull mill, with a premium of 10s to 20s paid for January or April delivery. Notwithstanding heavy arrivals of linseed in the past fortnight, these have been pretty well absorbed, and about 20s more money wanted for shipment. The quantity of linseed (Plate and Indian) on passage to the U.K. is now slightly over 100,000 tons, and to the Continent 75,000 tons, the aggregate being nearly three times what it was a year ago.

Egyptian cotton seed has continued a strong and rising market, but buyers have been reluctant to follow the advance, and consequently little actual business has been done. Bombay has also been firm in sympathy, and transactions concluded in new crop round £12 for January shipment. Cotton oils are scarce, and a sharp advance in values has taken place, crude Egyptian at Hull moving up £6 at £46 per ton, and edible refined £3 to £4 dearer. A large business was put through at something less than these figures.

Large quantities of Soya beans have come to hand at Hull, and will relieve the scarcity of oil to some extent. For shipment, Soya beans are inactive, but £15 10s has been paid for 1,000 tons on passage from Hull. Rape oil shows no change, and only a small trade is reported in palm kernel, and ground nut oils at unchanged values.

The inquiry for oilcakes continues very disappointing, and sellers are disposing of their holdings at a discount.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

Ox and heifer hides were practically unchanged at the auctions held in Bermondsey on Thursday last, the exceptions being 59 lbs and under in both first and second class, these making more money. Second-class cows advanced ¼d per lb in value, while bulls made from ¼d to ½d per lb more money. Best kips were ¼d per lb up, seconds unchanged, and thirds ¼d per lb down in price. Calfskins were a strong market, and made further advances of from ½d to ¾d per lb. Lambs realised from 1s 4d to 5s, and pelts from 2s 3d to 4s per skin. A good demand has been experienced for imported hides on both home and foreign account, and I understand that during the week some decent sized parcels have changed hands at full asking prices.

In the sole leather market much more optimism is apparent, and factors and merchants report a steady inquiry for most classes. Tanners are firm on the recent advanced quotations and do not hesitate to hold out for full figures, especially in regard to heavy bends. As a matter of fact, the brighter outlook has caused some tanners to think seriously of increasing their output, although opinions differ as to the wisdom of this policy. In many quarters it is stated the present demand does not warrant such action, as any accumulation of leather stocks would only cause another collapse in prices.

The demand during the week has mostly consisted of inquiries for heavy weight bends, of which supplies are small and prices, generally speaking, firmer. The lighter averages are not so much sought after, and here prices do not show the same tendency to appreciate. Shoulders and bellies in extreme heavy and light

LONDON OFFICE: J. D. DONNELLY, D.S.O. 53, CORNHILL.

weights are a good sale; medium weights, however, are not going into consumption very freely.

Upper leather is only sought for in grades suitable for low-priced and very high-priced boots and shoes—the middle trade taking very little interest in the market. Prices on the whole are inclined to be firmer, particularly in regard to willow calf and glacé kid. Boot manufacturers continue to find business somewhat on the slow side, although in some instances I hear travellers report a little more doing.

PORTLAND CEMENT.

The following quotations for Portland cement are supplied by the Cement Marketing Co., Limited:—Best English, complying with British standard specification, delivered in London area—in full van for motor loads to site, 83s 6d to 89s per ton; alongside in River Thames up to Vauxhall Bridge in full barge loads (80 tons minimum), 76s 6d per ton. Extra on above prices for the following special brands:—

"Blue Tiers," a fine-ground slow-setting cement, and "Red Tiers," a fine-ground quick-setting cement, 3s per ton.

"Ferrocrete," a cement prepared to meet the requirements of specialists in ferro-concrete constructions (in 20 sacks to the ton), 10s per ton.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, September 16.

The market in most instances presented a very quiet appearance, demand on export account being considerably reduced, due to the question of rates of exchange, movements in which formed a barrier to anything like general trade with near Continental countries.

SUGAR met with quiet support, and prices on the week are lower for all descriptions. Tate's cubes sold, 58s 9d to 59s 9d; crushed, 55s 6d; granulated, 54s to 54s 6d; caster, 58s to 58s 6d; pieces, 42s to 47s 6d. Lyle's granulated, 54s to 54s 3d; yellow crystals, 49s 6d. West India crystallised sold, from 43s 6d to 48s, as to sample. Muscovado quiet, but fine grocery lots still scarce. American and Canadian granulated, on spot, changed hands at 53s. American, September, 25s, c.f. and i. terms U.K. White Java, September-October, quoted, 22s, c.f. and i. Belgian crystals, October, sold, 22s 9d to 21s 9d; and November-December, 20s 3d, f.o.b. Antwerp. Czech crystals, prompt, 27s, f.o.b. Hamburg. Dutch granulated, prompt, 27s, f.o.b. terms. Brazilian basis, 96 per cent., October-November, sellers, 18s; and business done in basis 80 per cent. ditto at 11s 6d, c.f. and i. London. Terminal markets quiet, and basis 96 per cent., December, sold, 16s 4½d to 15s 3d; and white, November, at 22s 6d to 20s 3d; with December, from 22s to 19s 9d.

COFFEE.—The market on spot ruled very steady, but trade moved quietly, while offerings in auctions were far from attractive upon the point of quality. Of East India, bold Mysore sold, 110s 6d to 117s 6d; good mid hard grey Vera Paz, 132s. Future delivery market steady, and sales include December at 49s 6d, and March, 50s 3d.

COCOA.—Only a retail amount of business was effected during the week at previous quotations. Butter quiet, at 1s 10d per lb.

TEA.—The smaller supply of 38,000 packages Indian offered in auction this week, and with active competition for all qualities possessing character, full recent rates were secured. Ordinary plain lots, however, sold quietly at barely late values. 25,000 packages Ceylon soon cleared to a brisk demand at full to occasionally dearer rates. Some choice new season's Assam, sold, 6s 7d to 7s 2d per lb, in bond.

RICE.—This market remained in a nominal state, with quite a dearth of buyers throughout the week, owing to adverse rates of exchange in near Continental countries. Beans quiet, but steadily held.

FRUIT.—A generally quieter tone governed the market for currants, but rates maintained a steady level. Pyrgos, quoted 51s to 52s; Patras, 56s to 63s; Vostizza, 85s. Australian raisins range from 87s to 100s. Dates firm. Siar, spot, quoted 17s 6d cwt.

SPICE.—Pepper met with slow support. Fair black Singapore, spot, sold, 4½d; ditto September-November steamer, 3½d; Aleppy, spot, 4½d; Tellicherry, 5½d; white Singapore, 9½d to 9d; Muntok, ditto, 9½d; ditto September-November steamer, 8½d to 8½d. Zanzibar cloves, spot, sold, 1s 3½d to 1s 3d; pimento, spot, 2½d, sellers. Tapioca quiet. Fair flake, spot, sold, 1½d per lb; ditto September-November steamer, London, 16s 3d; fair Penang, seed, spot, 21s 6d; September-November, London, 20s 3d. Small sago, spot, 28s. Sago flour, afloat, sold, 14s 9d; September-November, 16s. Desiccated coconut, spot, sold, 52s to 51s 6d; afloat, 50s to 49s.

JUTE.—There was a fair off-take of spot lots at full prices, but forward positions ruled rather quiet though steady in value, closing dearer on crop estimate of 4 million bales. Daisee 2 to 3, spot, Dundee, sold, £26 10s; Daisee No. 3, ditto, £23 to £25; native firsts, assortment, old crop, subs., September-October, Hamburg, £30 15s to £31 10s; lightning subs., old crop, ditto, £26 15s to £27 10s; and heart subs., at £19 10s. 10 oz hessians, spot, sold, 27s; 8 oz, ditto, 23s. A twills, spot, quoted 80s, and B, ditto, 68s.

HEMP.—The market for Manila proved steady though quiet. J grade, September-November, quoted £37; K, ditto, £36; L, £35 10s; M, £31 10s. New Zealand dull, unaltered. Fair, September-November, nominally £35 per ton.

SHELLAC.—There was a fair trade effected this week, and market showed firm features. Fair T.N., spot, sold, 310s; October delivery, 300s; December, 295s.

COPRA.—Market unsettled and easier on balance. F.M.S. Straits, August-October, Rotterdam, sold, £34 to £32 10s; September-November, £33 10s to £32; Ceylon, September-November, £34; South Sea Islands, September-November, London, sold, £31 15s to £32 and £31

ros; Cebu, ditto, to Hamburg, £32 15s to £31 5s. Palm kernels, October-December, Liverpool, sold, £23 to £22 10s.

MENTHOL.—Spot lots sold, 22s 6d; and shipment parcels, 19s 6d. Japanese peppermint oil, spot, quoted 4s 9d; aniseed, 2s 3½d; slab camphor, Japanese, spot, 3s 11d; Chinese, 3s 10d per lb. Japanese wax, spot, 105s per cwt.

EGG PRODUCTS.—Market very quiet, and quotations largely nominal. Liquid yolk, spot, 115s cwt; and albumen, spot, 3s lb.

RUBBER in quiet request, and market very featureless. Standard plantation crepe, spot, sold, 8½d to 8½d; October-December, 8½d to 8½d; January-March, 9½d; standard sheet, spot, sold, 8d to 8½d; October-December, 8½d; and January-March, 9d to 9½d. Fine hard Para, spot, 1s 6½d; Caucho ball, ditto, 7d per lb.

OILS.—Linseed lower. Spot, net, naked, 37s 9d; September-December, 37s; January-April, 38s. Rape quiet. Crude, spot, 55s; refined, 57s. Cotton quiet. Crude Egyptian, 47s; Bombay, nominal; common edible, 53s. Chinawood: Hankow, spot (barrels), 90s; and shipment, 69s to 70s. Coconut steader. Ceylon, spot, 55s; September-October, 54s 6d; Cochiti, ditto, 58s. Soya firm, Oriental, barrels, ditto, 45s. Japan fish steady. September-October, cases, 24s. Cod firmer. English, spot, 30s to 32s. Groundnut firm. English crushed, naked, spot, 55s; deodorised, barrels, 68s. Turpentine very unsettled. American, spot, 66s 6d; October-December, 66s 6d; January-April, 68s. Rosin firm. American, grade B, 17s; F, 17s 6d; G, 17s 6d; K, 18s; M, 18s; WW, 24s 6d; French, F/G, 15s; H, 15s; WW, 18s; extra pale, nominal. Petroleum quiet. American, standard white, 1s 4½d; and water-white, 1s 5d per gallon.

OILSEEDS.—Linseed: Market unsettled, and easier on larger estimates of Argentine exportable surplus. Calcutta, afloat, sold, £22 10s to £22 5s; September-October, £23, value. Plate, spot, Hull, £20 7s 6d paid to £19; afloat, £20 7s 6d paid, to £19; September-October, £20 5s to £18 15s paid; October-November, £16 10s value; November-December, £20 5s; January-February, £20 15s. Rapeseed quiet. Toria, September-October, quoted £22 5s; real bold Ferozepore quoted £22; brown Cawnpore, £21. Cottonseed firmer. Egyptian black, September, quoted £15 5s; and white, £14 15s. Bombay, September-October, sold, £12 10s. Gingelly firm. Chinese, September-October, Continent, £31. Castor, Bombay, September-October, £20 10s. Ground nuts quiet. Coromandel, machine-dried, September-October, £28 10s to £29; Chinese decorticated, f.a.q., ditto, £28 to £28 15s per ton.

METALS.—Tin, on a fair amount of selling, continued an easier market at the week's opening, cash fluctuating down to £156 and three months' to £158 5s. The tendency was rather better at Tuesday's meeting, these dates improving to £156 15s and £159 10s; but prices again declined on Wednesday, cash relapsing to £155 15s, with three months' to £157 15s, and £158 since registered. At Thursday's market cash further receded to £155 5s, three months' being done at £157 10s to £157, and subsequently at £158 to £157 10s. At Friday's session cash sold at £155 to £154 10s, and three months' £157 to £156 10s. English ingots, £152 to £153. Copper: The standard market manifested a steadier tone until last Tuesday, cash moving to £67 12s 5d, and three months' to £68 17s 6d, business being moderate, while during the middle of the week these dates changed hands at £68 7s 6d to £68 2s 6d and £69 5s to £69 respectively. A rather easier tendency prevailed on Thursday. Cash changed hands at £67 12s 6d, and three months' at £68 12s 6d. At Friday's session business was confined chiefly to three months' at £68 10s to £68 12s 6d. Electros, £72 10s to £74; best selected, £69 to £71; strong sheets, £103. Wire bars, £73 5s to £73 15s. Lead slightly easier, at £23 2s 6d to £22 15s, as to position. Spelter rather lower, at £24 17s 6d to £25 7s 6d, according to position. Antimony: English regulus, £37 to £40. Aluminium, home trade, £120; export, £125.

A Survey of the World's Markets

THE Guaranty Trust Company of New York issues a monthly publication entitled "The Guaranty Survey," which summarises the current financial and business situation of the various countries of the world, with particular reference to those factors which affect international trade.

The London Office of the Company will be pleased, upon request, to forward the publication, without charge, to individuals and firms of standing.

Market rate (3 mths' bills)	4 ½	4 ½	4 ½	4 ½	..

* Additional to those offered by tender the preceding week.

The Bank return showed a further marked improvement. An increase of £6,000 in the stock of gold and a decrease of £801,000 in the note circulation left the Reserve £807,000 higher, and at the same time there was a decrease in the total securities of 16½ millions. Government securities ran off by no less than 21½ millions, but some other borrowers (possibly in order to pay for Treasury bonds) had added 5½ millions to "Other." Deposits thus declined by nearly 15½ millions, most of which came off Other. The circulation of currency notes declined by £2,124,000 to £315,912,400, which includes £1,896,300 for notes called in but not yet cancelled. The fiduciary issue is £266,066,100, or £51,489,100 below the maximum.

The following table shows public income and expenditure for the week ended September 11th:—

Receipts.	Mln. £	Expenditure.	Mln. £
From Revenue	20'233	Supply Services	10'700
Less—		Interest on Debt	1'018
Added to Exchequer Balances	1'152	Sundries	3'364
		Debt Reduction	6'999
	19'081		19'081

These operations decreased the National Debt by the sum of £6,998,946, and caused the following changes, which are reflected in our table of National Debt, given in another column:—

	Mln. £		Mln. £
Treasury Bills	+ 12'426	Bank of England Advances ..	— 18'750
Treasury Bonds	+ 4'420	Advances by Public Depts.	— 5'050
Civil Contingencies Fund ..	+ 1'000	Telegraphs	— '700
National Savings Certificates	+ 3'500	Surrenders of Bonds, &c.	— '645
		Sundries	— '050
	+ 18'196		— 25'195

Property and Income-tax yielded £4,207,000, while Customs and Excise brought in £10,745,000. The floating debt now stands at £1,343,196,000, having been reduced by £11,480,000. It will be noted from our table that Treasury bonds were sold to the extent of nearly 4½ millions.

In the foreign exchange market, though movements have not been as sensational as those of the preceding week, the period under review has been most awkward and disturbing. Uncertainty and depression has gained ground rapidly. Financial collapse in Germany is now being openly canvassed, increasing doubt is being felt as to the position of France, in spite of assuring semi-official statements as to the prospects of next year's Budget and the proposed issue of a large consolidation loan in January next. In Central Europe Hungarian activity in West Hungary contains a threat which may involve most of the surrounding States, while Serbia's Ultimatum to Albania is also big with possibly very disturbing consequences. To those who are demanding some panacea for exchange difficulties the report of the Financial Committee of the League of Nations—a committee of experts whose opinion should carry the greatest weight—brings a cold douche by confessing that it can discover no remedy beyond those already suggested by the Brussels Conference over a year ago; that is to say, reduction in Government expenditure, the balancing of budgets, and deflation.

Almost without exception movements have been irregular and uncertain. The dollar, which began at 3.71, has, after moving up and down, showed a decidedly firmer tendency, and yesterday morning opened at 3.73½. It is doubtful, however, whether this improvement will continue. It is true that New York is showing an increased interest in foreign securities, and that the amount taken off the London market now reaches a considerable figure. But there is an uncomfortable feeling that America may be a bull of sterling, and there is the certainty that a good deal of cotton must still come on the exchange this autumn for which provision has not yet been made. The quotation for futures has widened again to ½ cent per month over spot. The Paris rate has been even more irregular, having been down to 51.10 and up to 53.50. Yesterday morning it was quoted at 52.55. The Brussels rate has at last recovered, having at some times during the week been actually below Paris again. Yesterday at 52.65 it was slightly higher. The forward rate in Paris has widened to 2 centimes per month above spot, in Brussels to 8 centimes per month below. Italy, after some hesitation, has moved up again rather rapidly, being quoted yesterday at 90½ as compared with 87½ a week ago. The German mark, after a rapid recovery on the 17th to as low as 380, rose again on more and more gloomy reports as to German prospects to about 409, but is now back at 403. The rate for futures has moved to one mark per month below spot. Amsterdam, after rising to above 11.80, has fallen back again somewhat, and is rather steadier than usual at 11.77½. Future dealings are at par for one month and after that at ½ cent. higher per month. Switzerland at 21.62½ is considerably higher than last week, although lower than the 21.65½ reached on the 22nd. In spite of this movement it still remains surprising that the value of the Swiss franc should be so high, in spite of the very serious decline in Swiss exports and the increase in note circulation. The explanation generally accepted is the persistent removal of funds from other countries to Switzerland, a movement which is creating great uneasiness among the Swiss themselves. Madrid at 28.65 is some 20 points higher than a week ago. Among the Scandinavian group the chief feature is the continued rapid rise of Christiania, which on Wednesday was up to 29.89, and, although there has been some improvement, still stands at 29.62½. Shipping depression, and the serious effects on new industries of German competition, goes far to explain this movement. Stockholm, on the other hand, has moved equally sharply in the opposite direction, being at times on Wednesday below 17, and at 17.07½ yesterday, well below last week's quotation. In Helsingfors, a real grip seems at last to have been obtained on the exchange, which has now sunk again to 240, as compared with 300 a week ago. Among the Central and Eastern European States depreciation continues unchecked. Vienna was quoted yesterday in London at 4,100 (Auslandskronen), after some slight improvement earlier in the week. On September 16th the rate in Vienna (Inlandskronen) was 6,025, the London rate on that day being 4,100. Warsaw is about 18,500, as compared with 15,500 a week ago. Prague has moved up some 10 points to about 318, Budapest is considerably higher at 2,400, and Bucharest, after a recovery down to 367, is up again to about 412. Sofia, on the other hand, is a good deal better at 525, while Belgrade at 200 has also improved. In the bullion market an unexpectedly heavy demand from India has brought up the price of gold well above the New York parity. At the same time the Indian demand for silver has continued strong, so that the price of 41½d is now higher than at any time since the first week of the year. This movement, together with the rise in the price of the rupee to 1s 5½d from 1s 5½d a week ago, has had no satisfactory explanation, as the Indian position prospects, although better, are hardly sufficiently good to justify it, and there is a fear that speculation is playing too large a part if the demand for bullion is not put down to other reasons. Shanghai is slightly dearer, Hong Kong so far unchanged. Among South American rates, Buenos Ayres, Valparaiso, and Rio have gone slightly against us, while Montevideo is a little cheaper.

A SUMMARY OF NATIONAL FINANCE.			
FINANCIAL YEAR, 1921-22 (TO DATE) APRIL 1 TO SEPTEMBER 17, 1921.			
Total spent	£ 461,901,054	Raised by revenue ..	£ 420,446,338
Inc. in balances	1,327,117	Net borrowings	42,781,833
Total	463,228,171	Total	463,228,171
ESTIMATES FOR YEAR 1921-22.			
Ordinary Receipts ..	1,058,150,000	Ordinary Expenditure	974,023,000
Special Receipts ..	158,500,000	Special Expenditure	65,705,000
Total	1,216,650,000	Total	1,039,728,000
		Surplus*	176,922,000

* Owing to liabilities which could not be precisely calculated, it was estimated that the final balance would not exceed about £80,000,000.

EVENTS OF THE WEEK.

SEPTEMBER 17TH.—British note to Soviet.
SEPTEMBER 18-19TH.—Communications pass between Prime Minister and Mr De Valera.
SEPTEMBER 20TH.—Departure of Afghan mission from London.
SEPTEMBER 21ST.—Mr Clynes appeals to the Speaker of the House of Commons on unemployment. Disastrous explosion in Rhine aniline factory.
SEPTEMBER 22ND.—Prime Minister receives deputation of London Labour Mayors on unemployment. Death of Sir Ernest Cassel.

Stock markets have been very dull, and there has been some selling of gilt-edged issues. A feature has been the strength of Mexican Government bonds, on hopes of a resumption of interest payments. Chinese bonds have recovered a little, but elsewhere prices have drooped. The cotton market shows a further improvement, and demand has been on broader lines. Confidence is gradually returning in the wool market, the principal obstacle to progress being the lack of outlet for fully manufactured goods. In the Middlesbrough district there is no improvement in the iron and steel trades, but trade and employment are better in the West of Scotland. Glasgow iron makers have reduced prices by £2 a ton, but foreign competition is still severe. The Sheffield steel industry is working barely one-third of its capacity. Heavy shipments from Argentina have caused a further decline in the linseed market, but Egyptian cottonseed is firmer. There is a better tone in the leather trade, and shoe manufacturers are rather busier. Detailed reports from special correspondents will be found in later columns.

MONEY AND TRADE.

This week was generally expected to be marked by some indication that would make clear the policy of those who rule our monetary destinies. With Treasury bills being sold week by week at a level out of all touch with the official rate, with money generally comfortable and sometimes extremely abundant, and with a trade crisis that calls loudly for the freest encouragement being given to the producer and the merchant, the case for a lower Bank rate has for some time been strong. Moreover, it was known that the Governor of the Bank of England was due to return to his post after a "holiday" in America, where, it was generally assumed, he had found opportunities for exchanges of views with the great ones on the other side of the water. In the early part of the week inspired cables began to hint at a reduction in the New York Federal discount rate, and this change was announced in Thursday's papers. And yet, though the Stock Exchange seems to have expected a decline in our Bank rate with some confidence, the best informed opinion in banking circles did not, and it did not happen, in spite of a highly favourable Bank return and a further considerable reduction in the circulation of currency notes. If our monetary policy has thus been made clear, it seems to be based on the principle that the conditions calling for a fall in Bank rate must not only be strong, but overwhelming before they are allowed to prevail; and with all deference to the wise heads that give so much thought to these problems, and have so much more information to work on than the rest of us, this seems to be a somewhat curious policy at this time, when languishing industry, just convalescent after a serious seizure, needs every tonic that it can get, and perhaps even a little mild stimulant. Explanations that have been given, *viva voce* and in print, for nailing the rate to the 5½ per cent. point, have been plentiful and unconvincing. Some said that the Bank was holding its annual Court on Thursday, and that the task of preparing and uttering the Governor's speech was always recognised as enough for one day. Others avowed that to follow New York too closely would be undignified, and that we must wait awhile. But the explanation that appears to have been most successfully inspired was perhaps at the same time the most astonishing. It said that the Government will have to borrow heavily in the next few months; that inflation is therefore inevitable, and that Bank rate consequently had to be kept up. This chain of reasoning may be logical, but it is logic that is baffling to a commonplace mind. If the Government and local authorities have to borrow to meet the unemployment crisis, it does not seem a good reason to keeping money dear at a time when other considerations point to its being cheaper. It is doubtful whether the maintenance of Bank rate will have any effect on the price at which the Government will sell Treasury bills, and if it makes financing dearer for local authorities, that will not check their demands, and will only make them more expensive to the ratepayers or taxpayers. And it will be most unfortunate if an impression should arise that the City is anxious, by keeping money dear, to make measures for dealing with unemployment expensive and difficult. Then one heard again the good old story of the bad effect of cheaper money in

stimulating Stock Exchange speculation and a flood of new issues, with a subsequent collapse and losses. But surely if people choose to buy securities for which they cannot pay, and then lose money that they might have spent to better purpose, they have only themselves to thank. If the banks find it necessary to grant credits for these purposes, as in practice they do, they ought surely to be able to protect themselves by arranging for proper security against any possibility of bad debts; and in the meantime it is at least possible that these purchases of securities may have enabled debtors to meet liabilities. It is not easy to see why trade and industry should be denied the very moderate drop of comfort that a half per cent. fall in Bank rate brings with it, lest a few speculators should disport themselves too gaily in Capel Court. And so the week ends in bewilderment, with our monetary policy clear enough in one sense, and very puzzling in another to the plain man.

In the meantime some of the daily papers call on the Government or on the financial machine to stabilize the foreign exchanges, a task which would involve controlling the finances of the most impoverished countries of the world. The Finance Section of the Provisional Economic and Financial Committee of the League of Nations has told us, through Sir Henry Strakosch, its chairman, that "no international agreement could at this juncture advance the matter of the stabilisation of exchange. The fundamental bases for such action are lacking almost completely." On this point some very pertinent sentences were contained in an address given by Sir Herbert Hambling last Tuesday to the Y.M.C.A. on the subject of Banking and Foreign Trade. "You may say," said Sir Herbert, "that it is for bankers to find some way out of a difficulty, which is obstructing trade in every direction. In point of fact, many solutions have been put forward for stabilising the foreign exchanges, but although certain of them might possibly be helpful, I say, without hesitation, and with all the emphasis at my command, that no scheme can be effective unless it is based on the observance by the nations concerned, not the bankers, of certain cardinal principles. Amongst these, I regard as the most important the establishment of concord amongst the various countries, and the establishment of a genuine peace and a genuine desire to be helpful the one to the other. We must also have the realisation that no nation can base its prosperity on the poverty of other nations. Trade is, before everything else, a question of mutual advantage. We buy goods because we want them, not to oblige the other man. The operation is just as beneficial to the buyer as it is to the seller, and if we could only remove all artificial obstructions from international trade for five years, I feel certain the world's position at the end of that period would be better all round than it was even in 1914." Our own Government's effort to remove artificial obstructions from trade is discussed in our next article.

OBSTRUCTING INDUSTRY.

It is a sound legal principle that men are held to be responsible for the reasonable and probable consequences of their actions. Last session the Government forced through Parliament the Safeguarding of Industries Act—avowedly as political payment for a political bargain made in December, 1918, between Mr Bonar Law and the Prime Minister—and the reasonable and probable consequences are about to develop. It is alleged that an inspired printer of the Order Papers one morning rendered the title of this Act as "The Safeguarding of Interests Bill"—the ingenuous copies were hastily suppressed—but we are beginning to doubt whether the hungry interests, to whose clamour the Act was mainly due, will not lose more by official obstruction arising out of legislation than they will gain by the protection of their so-called key industries.

For the moment we confine our attention to Part I. of the Act relating to key industries. A panel of respectable gentlemen, "mainly persons of commercial and industrial experience," has been set up under Part II. to provide "dumping" courts of first instance, but we shall have to wait until the machinery of Part II. begins to turn

round before we can examine the effects of its working. Part I., on the other hand, starts right away—on October 1st to be precise—and imposes a Customs duty of 33⅓ per cent. on imports of all those goods scheduled by the Board of Trade as coming within the general categories of key industries as laid down in the Act.

The Board of Trade is charged with the statutory duty of framing lists of the articles which fall within the general descriptions of optical glass, optical instruments, scientific glass ware, scientific instruments, synthetic organic chemicals, and so on. The officials of the Board have obliged with lists containing 6,500 items (H.M. Stationery Office, price 9d net). They had no choice other than to make these lists as exhaustive as possible. Theirs not to reason why, theirs but to smile and try—to collect trade catalogues and to weigh in with items. There are a great many duplicates and triplicates, so that the number of distinct articles which on October 1st would be subject to 33⅓ per cent. duty at our ports probably does not exceed 3,000. Yet as a first crop of protection the lists are evidence of statutory fertility.

We cannot in a single article review these lists in detail, but, as is appropriate at the close of summer, we will consider as a typical example how they will affect that popular favourite, the Kodak Girl, when she equips herself for next year's photographic operations at the sea coast.

The enormous expansion in amateur photography in this country is due to the Americans and the Germans. The Americans have built up the trade in cameras, plates, films, and papers; the Germans have evolved the synthetic developers and the silver salts which go to coat the plates, films, and papers. On and after October 1st the Kodak Girl will pay one-third more for her camera and lenses and such accessories as view finders and spirit levels. All the American Kodaks imported will have to pay duty, and the British makers of cameras—whose output cannot be one-tenth of the American production—will try to put up their prices. If they use American or German lenses, they will have to pay duty on them, and in so far as they make their lenses from German glass, they will have to pay duty on the glass. The Kodak Girl's camera equipment for 1922 is certainly going to cost her more. Amateur photography will be less popular to take up and to keep up.

Now we come to the upkeep—the outlay in plates, films, papers, and chemicals for development and printing. And here, as always with these legislative attempts at protection, the comedy begins. American plates, films, and papers are not chargeable with duty. They do not come within the key industry schedules, and hence are omitted from the Board of Trade's lists. The Kodak Girl can still get her Kodak plates, films, and papers free of duty. But the British makers of plates, films, and papers who wish to compete with what is almost an American monopoly—a practical monopoly gained by sheer merit and business enterprise—will have to pay duty on the imported silver salts which make the sensitive emulsions. In so far as American films, plates, and papers are duty free, and British makers have to import, and pay duty on, the silver salts, the Act helps to maintain the American monopoly. The Kodak Girl, whether she does her own development and printing, or whether she puts them out with those chemists who seek to confine her energies to looking charming and pressing the button, will have to pay duty on the imported developers and printing salts in the production of which the German chemical factories are pre-eminent. Taken as a whole the Act and its schedules are certain to add to the costs of amateur photography, and are not going to help materially the British competitors with American and German specialities.

So much for photography. In many other ways the Act will add to the daily burden of life which presses upon our people. It will increase the cost of some of their necessities, and hamper their indulgence in recreation. The short-sighted and the long-sighted will pay more for their spectacles—the imported glass is charged with duty and so are the imported lenses. Expensive German field glasses and cheap French opera glasses will be dutiable at 33⅓ per cent. The refined chemicals which form the basis of high-grade disinfectants will be dutiable; all the

household remedies made up in the form of "tabloids" (a trade mark) or competitive tablets—aspirin, phenacetin, and so on—will be charged with duty when the chemicals are imported. Mathematical instruments, slide rules, "T" squares, compasses are all within the Board of Trade's lists. And human nature being what it is, the British makers of all the 3,000 or so of articles scheduled as key industries, will do their utmost to add one-third to the selling prices of their home productions. We, the consumers, shall in these hard times, on and after October 1st, have a first taste of the blessings of protection, and the British producers will also find that official protection carries with it official obstruction, and that attempts to take advantage of duties on imports will drive away customers for goods which rank as amusements and not as necessities. This is not the time to encourage retailers to add to the cost of living.

THE TRADE BOARDS.

(BY OUR LABOUR CORRESPONDENT.)

THE attack upon the Trade Board system is creating a good deal of feeling in Labour circles. A concerted attempt is being made to undermine the legal minimum wage machinery, and the Minister of Labour appears to be yielding to the pressure which is being exerted by opponents of the Trade Boards. Viewed from the Labour angle, the active efforts which are being made to weaken or destroy the present Trade Boards and to prevent the extension of the legal minimum wage are seen to be part of the great onslaught on wages. What is causing grave apprehension is that the attack on Trade Boards is actually an attack on the basic wages of labour, and that if the generally accepted minima are lowered wages as a whole will tend to fall still further. The issue is therefore one of the greatest importance for the Labour movement.

It was generally thought that the principles of the legal minimum wage as embodied in the Trade Boards was universally accepted nowadays. The gloomy forebodings of those who opposed the Act of 1909 were never realised, and the incalculable benefits of the legal minimum wage were obvious. But it appears that there are still back-woodsmen amongst the employers who hate Trade Boards as much as the devil is reputed to hate holy water. According to the *Times*, Dr Macnamara's statement the other day to the Grocers' Federation that "there were plenty of people up and down the country who said 'why don't you abolish Trade Boards altogether?'" was met with cheers.

Arguments are now being adduced against Trade Boards which were brought against the Bill of 1909. It is being urged that the machinery of the Trade Boards is "inelastic." Apparently the desire of the employers in certain industries is to give the Boards an elasticity which really destroys the minimum wage. The Act makes provision for the payment of rates less than the legal minimum to workers who cannot earn the minimum rates. But some employers want more than this. They wish to have the advantages of delay in raising wage rates during times of prosperity and of rapid action in reducing them during periods of trade depression. As the law now stands, minimum rates fixed by a Trade Board operate for four months, at the end of which period they may be revised. It is obvious that this cannot be shortened to meet the wishes of employers who desire to reduce wages during periods of bad trade, unless it is shortened to enable workers during times of good trade to force frequent increases of minimum rates. In the past, however, employers have pressed for long-term wages agreements with the unions in order to be rid of the uncertainty which would otherwise prevail. It now appears that a section of employers are anxious to give the Trade Boards greater elasticity in order to secure reductions without delay when trade falls off. The period of four months seems reasonable, and any reduction of it would merely mean more frequent revision of rates in both good and bad times, and it is difficult to see where the employers would gain.

It is also urged that the Trade Board machinery is inelastic, because it fails to take into account local circumstances. The effect of the adoption of a system of district

minimum rates would obviously be to increase the complexity of Trade Boards administration, a consequence which the foes of "bureaucracy" would deplore. There are, of course, local variations in the cost of living, but they are insignificant compared with the variations of wages in certain trades which fear the application of the Trade Boards Act. It is not clear that the economic circumstances of employers and their ability to pay certain wage rates vary as between district and district any more than they do as between individuals in the same town. The employers who plead this argument do not appear to have made any proposals as to how "local circumstances" should be taken into account. One thing, however, is clear; the greater the number of areas into which the country is divided for the purposes of the Trade Boards Acts, the more the minimum wage becomes a farce. The critics overlook the fact that the Trade Boards Acts provide for the establishment of district committees with the object of taking "local circumstances" into account. It cannot be denied that real difficulties may arise when minimum rates cover wide areas, but in the absence of concrete proposals, and in view of the experience of the attempts to deal with the question in the past, the Labour movement must make a stand against the overthrow of national minimum scales in order to satisfy "local circumstances."

Another criticism which is laid against Trade Boards is that they ignore the effects of the legal minimum wage on foreign competition. As the present agitation against the Trade Boards has arisen mainly out of the attempts of the distributive trades to avoid coming under the Act, this criticism is amusing. In manufacturing industries, no doubt, ability to meet competition depends *inter alia* on wages costs; but what the critics ignore is that minimum rates are not laid down by an external authority. A Trade Board consists of employers' and workers' representatives in equal numbers and a minority of independent "appointed members," who are men and women of education and experience, and often include economists and lawyers who, it is reasonable to suppose, are able to weigh evidence. If the employers and workers do not agree, a decision, in effect, rests with the appointed members who will obviously base their conclusions on the facts and arguments adduced by both sides. In these circumstances, it is unlikely that the factor of foreign competition (where it exists) will be overlooked. If due weight has not been given to it in any particular case, the fault must rest with the employers' representatives.

A good deal of stress has been laid on the criticism that the operations of the Trade Boards are creating unemployment. Cases of individual firms have been published where it is said that after the establishment of legal minimum rates sweeping reductions of staff took place. But the information available regarding these cases is insufficient to justify the conclusion that Trade Boards are in any appreciable degree a cause of unemployment, though it is sufficient to warrant the conclusion that before the appointment of a Trade Board the wages in the firms who have since discharged workers must have been shockingly low. If, as is alleged, a firm reduced its staff from 2,500 to 700 workers when legal minimum rates began to operate, it must either have paid sweated rates before, or the Trade Board rates must have been fixed so high as to put the trade as a whole out of business. The latter explanation does not square with the facts; if it did the Trade Board critics would not have been driven to quote individual firms. The truth is that the unemployment argument merely amounts to a plea that a whole industry should be allowed to continue to pay sweated wages, because otherwise a minority may become unemployed. This contention clearly cannot be accepted by the Labour movement, for its acceptance would condemn the most helpless section of the workers to inadequate wages. Nor will it endorse the view that low wages are a cure for unemployment.

For months past these and other spurious arguments have been paraded in the columns of the Press. The Trade Boards have been misrepresented, and the impression created that they are bureaucratic institutions conducted at enormous expense to the taxpayer. The campaign has been conducted by certain groups of employers and by the Association of British Chambers of Commerce. It must

be said, however, that the movement has not met with universal approval from employers. It has, indeed, been engineered by employers in trades and industries with an evil tradition of low wages. They are of the type which dislikes trade unionism and clings to the notions of days long past.

Unfortunately, however, some of them have resorted to "direct action." They have taken the law into their own hands. In the recent Portsmouth case several drapery firms were summoned for paying wages below the legal minimum rates for the trade, and for not exhibiting the official notice of the legal rates. For the latter offence the local magistrates imposed a nominal fine, but they dismissed the more serious case under the Probation of Offenders Act. Loyal citizens are presented with a pretty spectacle. A number of Portsmouth drapers defy the law and are aided and abetted by the local Bumbles, with the approval of a section of the Press. One can imagine how different it would have been if the drapers' assistants had flouted the law. The magistrates would have regarded the offences in a serious light, newspapers would have commented on the pernicious Bolshevik tendencies of the shop assistants, and Mr Lloyd George might even have declared that such a challenge to the Constitution would be met by the whole resources of the State. If the employers up and down the country are going to adopt the tactics of the Portsmouth drapers and cast aside the constitutional methods which are open to them of seeking to attain to their ends, a serious situation will be created.

The Minister of Labour, however, is seeking to mollify the critics by the appointment of what is called "a strong committee" to advise him as to the modifications and improvements which should be made in the machinery of the Trade Boards Act. The trade unions specially interested in the Trade Board industries view the proposed Committee with alarm. They fear that the "modifications and improvements" suggested by a supposedly impartial body may be in the direction of weakening the Trade Board system. They regard the appointment of the Committee as a surrender to the employers, and they cannot dissociate the campaign against Trade Boards from the general policy of wages reductions. They will not tamely submit to the virtual destruction of the legal minimum wage system. There seems to be no room for compromise. The Association of Chambers of Commerce is apparently irreconcilable; the trade unions concerned with the worst paid workers will fight to retain the one safeguard which these workers possess. The issue is one which must be finally decided by public opinion; but, as on all other questions affecting the workers, the difficulty will be to get the facts fairly before the public.

LAW AND BUSINESS AT THE HAGUE.

THE International Law Association held its thirtieth conference at the Hague from August 30th to September 3rd. Many international law questions were discussed, but perhaps the most important was the drawing up by the Maritime Committee of a draft treaty defining the risks to be assumed by sea carriers under a bill of lading. In the opinion of the association international trade and commerce would be promoted and disputes avoided or the settlement thereof facilitated if the rights and liabilities of cargo owners and shipowners respectively were defined at an early date by rules of a fair and equitable character with regard to bills of lading, which shall be of general application. The association approved, under the name of "The Hague Rules, 1921," the rules as to carriage by sea framed by its Maritime Law Committee, which had been settled during the conference after consultation with representatives of the interests concerned from numerous maritime States, and recommended the same for international adoption. In the opinion of the association the use of shipping documents, known as "received for shipment" bills of lading, and like documents has become in many cases a necessity of commerce, and therefore the interests concerned should co-operate to remove difficulties which at present attend the use of such documents in the cases in which the necessity for their use is generally recognised. Whereas special legislation on the subject dealt with by these rules exists

in various States and is proposed in other States, and whereas it will only be possible in such States to bring these rules into operation if they be in accord with national legislation, it is in the opinion of the association desirable, in order to secure uniformity, that such legislation, or proposed legislation, should be brought into harmony with these rules. The most important point in these rules is that limiting the shipowner's liability for loss or damage to goods to £100 per package or unit, unless the nature and value of such goods have been declared by the shipper before the goods are shipped, and have been inserted in the bill of lading.

Professor Suyling, of Utrecht, dealt with the question of double taxation in the British and Dutch Income Tax Acts. He said that in taxing incomes States are accustomed to show a greater or less amount of reserve. Every Income Tax Act declares the power of taxation dependent upon the existence of some relation between the income taxed and the taxing State. If residence is generally regarded as a safe basis for taxing the total income of the resident, on the other hand the States do not think it always fit to tax all income, accrued or received within their borders. At least the right of taxing income on account of the place of its origin is exercised in some countries with more discretion than in others. Every remedy against double taxation demands a sacrifice from the States concerned, as its application diminishes the yield of the tax. Both the English and Dutch systems of taxation lay the income-tax upon income of residents as well as upon that of non-residents. In one respect, however, the Dutch law treats the British resident better than the British law does the Dutch resident. If the British resident happens to hold shares or bonds issued by a Dutch company he will not suffer from double taxation, because the Dutch law does not know the taxation by "deduction at the source," which characterises the British system. The Dutch company pays, therefore, the British holder of its shares or bonds his dividends and interests to the full. Incorporated companies are not assessed under the income-tax law; they are liable to another tax, the dividends tax. As the name indicates, it is due by the companies on account of the dividends distributed among the shareholders. The burden of the tax is really borne by the shareholders, but the Dutch law considers the dividends tax as a special duty quite different from the income-tax. It makes, therefore, the shareholders themselves—at least, those who reside in Holland—pay income-tax in respect of their dividends, on account of which the companies have already been assessed under the Dividends Tax Act. Non-residents who possess Dutch shares or bonds are treated more liberally in Holland than non-residents owning British shares or bonds are treated in the United Kingdom. The hardship caused by double taxation is strongly felt in both countries. Taxes have reached such a high point that double taxation has ceased to be a matter of mere individual complaint. The States demand so great a part of the income of the taxpayers that the process of production risks to be imperilled by the strain laid upon the saving power of the nations. Social progress depends upon the continuous supply of new capital. But out of what sums is the indispensable renewal of plant and factories to be paid for, when the States take from their subjects too considerable a part of their income? If people are not sure of being allowed to keep a reasonable portion of their profits and gains a weakening of their energy is to be feared, for, strong as the altruistic tendencies in modern society may be, they do not warrant, as do the egoistic motives, that the ordinary individual will exert himself to the utmost.

The tax rates nowadays are so high that double taxation tends to approach the line which separates taxation from confiscation. This fact makes double taxation a danger, whether the taxpayer is charged for the second time in a colony or in a foreign State. And the danger is so great that it must be averted, even if the remedy applied would encourage the export of national capital. Moreover, one can doubt whether double taxation constitutes an appropriate remedy against the exodus of capital. And the national industry does not necessarily suffer when the national capital seeks employment abroad. By controlling foreign enterprises the exported capital may be able to open to the national industry new fields of

action. At all events, it seems better to allow the national capital which does not give adequate returns at home to leave the country under reasonable conditions, than to expose it to partial annihilation by double taxation. The interests of nations which are accustomed to invest a part of their capital in each other's concerns will therefore be served if an agreement can be arrived at about the charges laid by both Governments on the incomes of non-residents. The United Kingdom and the Netherlands entertain intimate commercial and industrial relations. In either country capital of the other is to be found. By alleviating the burden of double taxation, both States may thus hope to remove impediments which bar for the time being the way to the free development of each other's industry and commerce.

Another matter which was briefly touched upon, but which is of considerable commercial importance, is that of "domicile and bankruptcy jurisdiction." It is a well-recognised part of the comity of nations that the Bankruptcy Courts of one country will assist those of another. But will the courts of one country always recognise a judgment in bankruptcy in another country provided that, in obtaining that judgment, the laws of the latter country have been properly applied? It is an established principle of international law that if a man is domiciled in a country, and proceedings are properly instituted against him in that country, he is amenable to the jurisdiction, although he does not appear or take any part in the proceedings. It was suggested that it has been established as a principle in international law, to be recognised by those who have to deal with bankruptcy, that for the purposes of the exercise of jurisdiction a mere commercial domicile obtained by (a) residence, or (b) the carrying on of business, whether personally or by agent, or (c) being a member of a firm carrying on business, should be regarded as sufficient to give the domestic tribunals of all countries such jurisdiction in bankruptcy, that a decree pronounced, even in the absence of the debtor, will be recognised in other countries.

Business Notes.

Employment in August.—Employment was still bad on the whole in August, but some improvement is reported in many industries, and particularly in pig-iron, tinplate and sheet steel manufacture. In the brick and pottery trades, in agriculture, and in the building trades employment generally was fairly good. The monthly figures of the *Labour Gazette* show that the percentage unemployed among members of trade unions from which returns are received was 16.5, as compared with 16.7 at the end of July, while the percentage unemployed among workpeople insured under the Unemployment Insurance Act fell from 14.8 at July 29th to 13.15 at August 26th. The total number of workpeople registered at the Employment Exchanges as unemployed at August 26th was approximately 1,573,000, of whom 1,190,000 were men, 275,000 were women, and the remainder were boys and girls. In this connection, it should be noted that at that date about 209,000 persons who were wholly unemployed had exhausted their unemployment benefit, of whom 104,000 had ceased to register at the exchanges. At July 29th the number on the Live Register was 1,780,000, of whom 1,351,000 were men and 317,000 were women. In addition to those unemployed, 218,600 males and 189,200 females were registered as working systematic short time at August 26th in such a manner as to entitle them to benefit under the Unemployment Insurance Act. At July 29th the corresponding figures were 278,000 males and 256,000 females. There were also 13,600 persons working systematic short time whose unemployment benefit was exhausted. The trade union percentages month by month for a number of years are shown below:—

* Excluding coal miners.

Changes in rates of wages reported as having come into operation in August in the industries for which statistics are compiled by the Department affected nearly 3,160,000 workpeople, of whom 3,070,000 sustained decreases, while nearly 90,000 received increases. The net effect of all the changes was a reduction in weekly full-time wages of about £690,000.

Cost of Living.—The *Labour Gazette* statistics show that during August the cost of living fell by 2 points. The monthly movement since January of last year is given below:—

ALL ITEMS: AVERAGE PERCENTAGE INCREASE OVER JULY, 1914.

1920.	Per Cent.	1921.	Per Cent.
January 1st	125	January 1st	165
February "	130	February "	151
March "	130	March "	141
April "	132	April "	133
May "	141	May "	128
June "	150	June "	119
July "	152	July "	119
August "	155	August 2nd	122
September "	161	September 1st	120
October "	164		
November "	176		
December "	169		

Food prices alone declined by 1 point in August, declines in the price of potatoes, meat, flour, bread and fish being mostly offset by upward movements in eggs, butter, cheese, and margarine. The current number of the *Labour Gazette* contains a detailed reply to the criticisms of the official Cost of Living Index Number made in a report by a joint committee representing the Trades Union Congress, the Labour Party, the Co-operative Union, and other Labour organisations. Reference to this report was made in the *Economist* of September 3rd.

Coal Output.—The production of coal from the mines of Great Britain for the week ended September 10th declined to 3,940,400 tons from 4,141,900 tons in the previous week. Small increases were shown in Durham, Scotland, and South Wales. The weekly output since the resumption of work at the beginning of July has been as follows:—

Week ended—	Tons.	Week ended—	Tons.
July 9th	2,352,700	August 13th	4,536,600
July 16th	3,935,200	August 20th	4,327,800
July 23rd	4,334,200	August 27th	4,101,700
July 30th	4,592,500	September 3rd	4,141,900
August 6th	3,623,200	September 10th	3,940,400

In the week ended September 11, 1920, the output was 4,606,800 tons.

Cotton - Growing in Brazil.—In 1919 a commercial mission from Brazil visited England. It received an invitation from the International Cotton Federation to present to its committee a report on the possibilities of cotton-growing in Brazil. The report suggested that a delegation from the International Federation should visit Brazil. The delegates, led by Mr Arno S. Pearse, the general secretary, arrived in Brazil in April last. Mr Pearse has just returned, writes our Manchester correspondent, and he will present to his committee in Paris next month a statement of the work of the mission. It is understood that the investigation reveals the fact that the area suitable for cotton cultivation in Brazil is larger than that of the United States of America, and the conditions of climate and soil are probably more favourable to cotton cultivation than in any other part of the world. Brazil, however, does not produce more than about 700,000 bales of cotton, against 12,000,000 to 16,000,000 bales in the United States. One of the hindrances to progress in Brazil is the scarcity of labour, but it is anticipated that as a result of impending immigration from Europe this disadvantage will be somewhat reduced. In Sao Paulo and the North-East of Brazil the yield per acre is larger than in any other country of the world. Besides the scarcity of labour there are various factors which have prevented Brazil from occupying that place which Nature destined for her as a world supplier of cotton. There is without exception a complete absence of uniformity of fibre amongst Brazilian cottons. The work of producing pure strains of seed appertains to the scientific branch of agriculture, and for this reason it is only in rare cases that the ordinary planter can undertake this work successfully. It is very important that seed farms should be established. A large loss to the grower and to the country at large results from the careless picking of the cotton crop. One of the greatest evils to which Brazilian cotton is subjected is ginning, which in most cases is carried out in a most unsatisfactory manner. Brazil possesses all the natural possibilities for growing cotton on a large scale. It is believed that if the development of cotton-growing is taken in hand by the authorities, good results will accrue in a few years.

International Cotton Statistics.—Our Manchester correspondent writes:—This week the half-yearly statistics of the International Cotton Federation have been published, particulars being given of the consumption of raw cotton during the six months ending July 31st, and stocks in spinners' hands on August 1st. Mr Arno S. Pearse, the general secretary, has published with the tables a most interesting report on the extent of short time throughout the world. It is evident from the figures that curtailment of yarn production, especially in Europe, during the half-year has been very extensive. The restriction of output in Great Britain is equal to nearly 13 weeks, and short time in Belgium has been on a similar scale. In France the amount is given as nearly 7 weeks, Germany 5½ weeks, Italy over 3 weeks, Spain 9 weeks, and Switzerland 3½ weeks; whilst in Denmark the short time has been equal to over 15 weeks. In a summary dealing with the position of affairs in England, it is pointed out that more than 2,000,000 spindles have gone out of existence during the past year. It is evident that firms have reduced their machinery, and there has not been any replacement. The consumption of raw cotton throughout the world during the six months totalled 7,357,212 bales. Of this amount, Great Britain used 630,230 bales; France, 251,935 bales; Germany, 457,257 bales; Italy, 289,044 bales; Spain, 117,529 bales; Belgium, 82,286 bales; India, 904,181 bales; Japan, 971,654 bales; and the United States of America, 2,540,000 bales. Stocks of cotton in the hands of spinners throughout the world on August 1st amounted to 3,926,619 bales. Of this amount, Great Britain held 296,997 bales; France, 84,642 bales; Germany, 176,287 bales; Italy, 170,780 bales; Spain, 85,573 bales; Belgium, 59,673 bales; India, 845,369 bales; Japan, 700,846 bales; China, 186,128 bales; and the United States of America, 1,102,000 bales. There are now in Great Britain 56,140,738 spinning

spindles, and the Federation has obtained returns from the owners of 49,740,631 spindles. These consist of 38,961,707 mule and 10,778,924 ring spindles. Throughout the world there are 152,317,054 spinning spindles, and the Federation has obtained returns from the owners of 129,458,472 spindles.

Home Railways and Local Rates.—A Stock Exchange correspondent writes:—The home railway market has sunk into a state of coma, and scarcely a flicker of interest disturbs the stillness of its lists from day to day. Money continues to flow steadily into the prior-charge stocks, on the assumption that trustees can afford to take a comparatively low rate of interest on debenture stocks available at prices which are sufficiently low to render it probable that, in years to come, when money grows cheaper, the prices are likely to mount in a manner which will justify purchases being made at the present moment at quotations which offer 6 per cent., or even less, on the money. In the market for ordinary stocks, every occasional gleam of public interest is succeeded by a deeper gloom of stagnation as the effect of a little buying wears off. The amount of floating supply of stock in the market is negligible, but if there is no one to take what comes on offer, prices are bound to go down on what may be a mere handful of selling orders on behalf of deceased accounts, and of people who want the money for other purposes. Had it not been for this paucity of public interest, it is likely that the Great Northern's example in appealing against its present assessments for rates and taxes would have aroused widespread attention. Sir Frederick Banbury, the Great Northern's chairman, has the reputation of being sufficiently energetic to leave no stone unturned that is likely to weigh down upon the success, not only of his own company, but of the railway industry generally, and the letter sent out a few days ago from the Surveyor's Department of the Great Northern, addressed to various local authorities, certainly opens up a very important question for railway stockholders and ratepayers alike. The text of the letter runs as follows:—

The question of finding a means of enabling railway assessments to be readily adjusted during the abnormal period in which the railway companies and the assessment committees find themselves, was discussed with a sub-committee of the National Conference of Assessment Committees of England and Wales during the progress in Parliament of the Railways Bill, but, unfortunately, it was not found possible to come to a final agreement.

It is necessary, therefore, for each railway company to approach the matter direct.

In order that the assessment committees may be in a position to discuss matters, it is necessary, in the present state of the law, that notices of objection should be given as a preliminary, and instructions for this to be done have been issued. The serving of notices throughout a railway system is abnormal, and the company will have to rely on the co-operation of the assessment committees in obtaining the adjournment of the hearing of cases where the dates fixed for the different committees' meetings coincide.

The general situation is that, although there has been power to increase railway charges, the working expenses have been increased in far greater ratio. In addition, the value of the equipment necessary for earning the receipts has very largely increased, and another item of reduction, viz., local rates, has also increased. The excess in this latter respect averages, on this railway, 134 per cent.

It is obvious, therefore, in the foregoing circumstances, that the company cannot continue to pay rates on the existing bases, but every effort will be made, so far as this company is concerned, to come to a mutual arrangement as to what the future assessment of the company's property should be.

The question of future poundage is a vital one to all ratepayers, and particularly to railway companies who have such heavy assessments, and no doubt you, in common with all local authorities, are endeavouring to restrict expenditure.

We understand that the rates, at all events, of some of the parishes which have been circularised by the Great Northern Railway, run for the six months from March to September and from September to March, so that the present appeal will cover the period which finishes with the end of this month. Such a period as this will embrace four months of the time during which the railways remained under Government control, and the somewhat remarkable spectacle is presented of the Great Northern appealing against payment of rates, two-thirds of which in respect of the current six months fall to be discharged by the Government under their control of the companies up to the beginning of August.

Co-operative Trade and Losses.—Some reflex of the world's trade position appears in the operations of the Co-operative Wholesale Society for the first half of the present year. A correspondent informs us that the sales were £42,341,576, a decrease of £8,884,292, or 17 per cent., on the corresponding period of last year. There was also a decline of 12 per cent. in the supplies from the various productive factories, the output being only £14,182,684. The fact that much of the stock was purchased at high values, and has had to be written down to serve the societies, is responsible for the heavy loss incurred by the society. But the directors, by charging £3,434,600 against reserve fund, are able to pay all expenses of distribution and production, interest on share and loan capital, and depreciation of property according to rule. Thus the loss of practically 3½ millions has been met and the total reserves maintained at £1,500,000, while the fact that most of the land and buildings have been depreciated till they stand at very little in the accounts is an element of added security. The sales have been about equally decreased at the Manchester, Newcastle, and London centres, the greatest declines being over 55 per cent. in drapery, woollens, ready-mades, and boots, and 36 per cent. in furniture. Despite the coal strike, the sales of groceries in the North of England were only down 3 per cent.—owing to the coupon system which was introduced by several societies. The C.W.S. Bank operations have also been affected owing to the many more trade unions now banking with the C.W.S.

British Capital in Canada.—We have received a letter from the secretary of the Halifax Graving Dock Company giving its experience. This English company was formed for constructing a dry dock at Halifax, N.S. The dock was opened in 1889, and for nearly 20 years was unprosperous, and shareholders have never received a dividend. About 1911 the dock became a paying proposition, and years of prosperous business seemed opening before it. During the war it was fully employed on Government work, but in December, 1917, the explosion at Halifax nearly wrecked it, and for three months put it out of commission. By an Order in Council, dated January, 1918, the Canadian Cabinet undertook to bear the cost of repair. In May, 1918, after the company had spent over \$200,000 in repairing the dock, which had been reopened in the previous March, the Order in Council was revoked, and the company has received no part of that money from the Canadian Government. "Meanwhile, a group of Canadian speculators approached the Canadian Government with a proposal to establish a shipbuilding yard in Halifax if the graving dock were handed over to them. This fact only became known to my company later. In June, 1918, acting under the powers of the Canadian War Emergency Act, the Government commandeered the dock for compulsory purchase, and immediately thereafter transferred it to the new shipbuilding company on a lease for one year, with the option of purchase at a fixed price. In this way a profitable business and a valuable goodwill were confiscated by the Government by an abuse of the Emergency Act, and my company was awarded by the Exchequer Court a sum of \$1,400,000 as the bare value of the dock as it stood. It is true that the company is a small one, but it was formed with English capital, and for 30 years the shareholders received nothing. Yet, just as prosperity was on the point of being achieved, the company's business is confiscated." From a speech made by the chairman in 1920 it appears that the company's contention is that "if the Dominion Government desired to expropriate the dock as a war measure, the company was certainly entitled to receive a fair value for the dock as a going concern, after it had been reinstated, and a fair value for the property alone would certainly not be less than three million dollars."

The Financial Difficulties of China.—It is not surprising that the uncertainty of the political and financial situation in the Chinese Republic should have caused a fall in Chinese bonds. The Peking Government controls only a few of the provinces, the Southern Government only Kwangtung; and the Southern provinces, which might be

expected to support it, apparently prefer an autonomy which practically means independence. Hupeh and Hunan are the scene of civil war: the rival armies are living on the country, and the Northern provinces are threatened with a conflict between rival leaders. The Peking Government cannot raise an internal loan of 30 million Mexican dollars, or about £3,750,000; and until the Northern and Southern provinces come to an agreement there will be no loan from the revived Consortium. Some months ago an association of Chinese bankers was preparing to make fresh loans to the Peking Government, on condition that it assigned certain revenues to the liquidation, under the supervision of the Inspector-General of Maritime Customs, of existing domestic obligations. But the arrangement seems not to have been carried out. Then an attempt was made to form an association of British and Chinese bankers to advance money to the Peking Government. This also, we are informed, is not likely to succeed. Finally, it has been announced this week that a syndicate of Canadian bankers, which, we understand, originated in British Columbia, has offered a loan of \$3,000,000 for one year, to be secured on the surplus of the salt revenue, on terms yielding 20 per cent.; but this arrangement will also break down, in view of the disapproval of the Canadian Government. As regards the great mass of the loans quoted in London, however, there is no reason whatever for anxiety. Broadly, they fall into three groups. (1) The 5 per cent. loan of 1896 is secured on the Maritime Customs; the 5 per cent. Reorganisation Loan of 1913 on the surplus of the Customs after certain other charges are paid; the 5 per cent. loan of 1912 on half the salt revenues; the 5 per cent. loan of 1908 on certain provincial revenues, with a provision for the deposit of funds for its service six months in advance. The Customs and the salt tax are collected under the supervision of European officials, and the Customs revenues for this year constitute a record. (2) The various railway loans are secured on the revenues of the respective lines, and in some cases also on those of other railways, or on the lines themselves. The railway receipts are known to be entirely adequate. (3) The 8 per cent. Treasury bills and the 8 per cent. sterling Treasury notes, known respectively as "Marconis" and "Vickers," and amounting to £600,000 and £1,803,300, are not secured on any specific revenues. The "Marconi" coupon is in arrear since August; the "Vickers" coupon is due next week; but there is no doubt the Chinese Government will pay when it can. The immediate outlook is improved by the liberal offer made by Japan to renounce her rights in Shantung under the Versailles Treaty on condition of the open door in Kiao-chao, the establishment of new Treaty ports, and the joint working of the railway to Tsinan-fu, and still more by the certainty that Chinese affairs will be discussed at the Washington Conference, with the probable result that co-operation will take the place of competition among the Powers interested in China.

Conditions in Japan.—Cable advices state that the money market was firm in the beginning of the month, but eased owing to the recall of funds from the country. A new issue of 5 per cent. Exchequer bonds, amounting to 50,000,000 yen, is being well subscribed. A rumoured determination of the bankers to refuse money for speculative demands took the Stock Exchange by surprise. All shares went down, cotton mill wool shares especially declining sharply. Some recovery set in after all-round liquidation, but the general tone is still very dull, and the improving tendency of the leading commodity markets is at present checked. The steady tone of the cotton yarn is ascribed to dearer raw cotton and silver, the decreased home stock, and the approaching export season for China. Cotton spinning companies, who had cut down 40 per cent. of their labour following the depression, increased their work to 70 per cent. of their full working capacity on September 15th. Rice had a strong tone, but the silk market was quiet with higher prices. The note issue of the Bank of Japan is 1,077,000,000 yen, against 1,043,000,000 yen a year ago. Exports in August were 105,000,000 yen, against 175,000,000 yen; imports, 131,000,000 yen, against 123,000,000 yen.

Trade Boards.—The following Committee has been appointed to inquire into the working and effects of, and to report any changes which may be necessary in the Trade Board Acts:—Viscount Cave (chairman), Lord Weir of Eastwood, Dame Adelaide Anderson (late his Majesty's Chief Woman Inspector of Factories), Dame Edith Lyttelton, Mr J. Bell, M.P. (secretary Oldham Weavers' Association), Mr W. T. Layton (director of the National Federation of Iron and Steel Manufacturers), Sir Arthur Pease, Mr E. L. Poulton (chairman of the Parliamentary Committee of the Trades Union Congress), Mr A. Pugh (secretary of the Iron and Steel Trades Confederation), and Mr A. MacCallum Scott, M.P. Mr H. D. Hancock, of the Ministry of Labour, will act as secretary to the Committee, and all communications in respect of it should be sent to him at Montagu House, Whitehall.

Anglo-Bulgarian Tribunal.—The Board of Trade announces that the Mixed Arbitral Tribunal between the British Empire and Bulgaria has been constituted. The president is Mr B. C. J. Loder, Judge of the Supreme Court of the Netherlands; the British member is Mr Heber Hart, and the Bulgarian member is Mons. Alexander Ludskanoff, formerly Secretary of State in Bulgaria. As the system of clearing offices has not been adopted between the United Kingdom and Bulgaria, claims in respect of disputed debts due by Bulgarians to British subjects will be dealt with directly by this tribunal. The rules of procedure which have been adopted by the Tribunal may be obtained (price 5d) on application to the Secretariat in Winchester House, 21 St James's square, S.W. 1, where the British Government has provided headquarters for the Tribunal.

Oversea Correspondence.

UNITED STATES.—GOVERNMENT'S CROP REPORT—RAILROADS SHOW MARKED GAIN IN NET OPERATING INCOME IN JULY—COMMODITY PRICES IN AUGUST—DECREASE IN STEEL CORPORATION'S UNFILLED TONNAGE.

(FROM OUR CORRESPONDENT.)

NEW YORK, September 12.

THE Department of Agriculture's latest estimates are:—Winter wheat, 544,000,000 bushels, against 577,763,000 harvested last year; spring wheat, 210,000,000, against 209,365,000; all wheat, 754,000,000, against 787,128,000, and corn, 3,186,000,000 bushels, against 3,232,367,000. This total is only 48,000,000 bushels less than the record crop of last year, and is 388,000,000 greater than the five-year average. The oats crop, on the other hand, promises to be 436,000,000 bushels less than last year's, and 343,000,000 below the five-year average. Late potatoes were helped by rain, the estimated production being increased 7,000,000 bushels. The present forecast, however, of 322,000,000 bushels is extremely small, as compared with the five-year average of 371,000,000 bushels, and with last year's crop of 428,000,000 bushels. The condition of the principal crops on September 1st, or at time of harvest, is given as follows:—Spring wheat, 62.5 per cent. of a normal; all wheat, 72.6; corn, 85.1; oats, 61.1; barley, 68.4; buckwheat, 85.6; white potatoes, 63.7; sweet potatoes, 80.7; tobacco, 70.5; flax, 62.3; rice, 83.8; sugar beets, 90.4. Private reports received within the past few days indicate that corn is maturing rapidly; late corn has improved materially in Ohio and in the central Mississippi valleys, and the bulk of the crop is no longer in danger from frost. Throughout the greater part of the corn belt cutting is well advanced. The latest returns show that Minnesota and South Dakota have the best crops in years. The threshing of small grain is practically finished, haying is about over, and Fall ploughing is well under way in the Central States, but from the East, South, and South-West come complaints of the ground being too dry. Further damage to cotton from boll weevil, leaf worms, and high temperatures is reported, especially from Texas and Oklahoma.

Not since last October have the railroads made such a good showing in earnings as they did in July. The net operating income of the 203 class 1 carriers as \$69,485,000, an increase of approximately \$17,000,000, as compared with June. On the basis of the tentative property valuation fixed by the Commerce Commission, the July earnings would be at the annual rate of 4½ per cent., or \$23,782,000 for the month less than the railroads should have earned as the normal July proportion of a 6 per cent. annual return (allowed by the Transportation Act). The results have been awaited with unusual interest, because they show the effect of the average 12 per cent. reduction in wages which was put into force on July 1st. The monthly saving as a result of the wage reduction has been variously estimated at \$30,000,000 to \$35,000,000. Total operating revenues for July were \$462,953,000, a decrease of \$66,000,000, or 12½ per cent., as compared with July, 1920, although freight and passenger rates are higher. Operating expenses were \$362,776,000, showing a reduction of \$151,000,000, or 29.4 per cent. The net operating income of \$69,485,000 compares with a deficit of \$11,878,000 in the corresponding month of last year. For the eleven months since September 1, 1920, when the Government guaranty period expired, the net operating income of all class 1 railroads in the United States was \$438,000,000, which, on the basis of the tentative valuation is \$570,000,000 short of the amount they were expected to earn in order to show a 6 per cent. annual return.

The stabilisation point in commodity prices as a whole appears to have been reached in August, according to Bradstreet's, whose index number, as of September 1st, was \$11.0868, representing a gain of only three-tenths of 1 per cent. over that of August 1st, although it is the third consecutive rise in the past three months, and occurred notwithstanding the fact that individual decreases exceeded increases, while one group—namely, textiles—advanced sharply owing to the pronounced strength in raw cotton and the consequent upturn in prices of cotton cloths. The rise in the textile group, plus fractional gains in provisions and groceries, coal and coke and naval stores more than offset fair declines in livestock and one grade of leather and very slight decreases in six other groups. In the list of commodity price changes during August, the outstanding feature is the steadiness or strength shown by the great majority of prices. Out of 106 articles, 50 were unchanged on the month, 22 advanced and 34 declined, most of the latter showing very small changes.

All markets for cotton cloths and cotton yarns, as well as cotton knitted goods—especially underwear and hosiery—are still extremely unsettled by the further violent advances in the staple and the moderate reactions of the past few days from the highest levels recently established. Practically all eastern and southern manufacturers of gray goods are still out of the market, and refuse to name definite prices at which they will accept orders for goods to be made. The wild fluctuations of raw cotton have made it impossible for mills to figure out any trading basis. In the past week or so their calculations have frequently been completely upset over-night. Such business as has been transacted lately has covered stock goods or goods in second hands, and such offerings in most cases have been, and continue, very limited. The same conditions prevail in the cotton yarn trade and industry, and in other lines directly affected by the sensational rise in raw cotton, which is greatly benefitting the South in many ways, but is adding to the problems of cotton goods manufacturers, who are much concerned over the prospects for distribution at the higher prices which must be named if cotton stays anywhere near its present level.

The report of the United States Steel Corporation this week showed a much larger decrease in unfilled tonnage last month than had been expected. On August 31st unfinished orders on the corporation's books stood at 4,531,926 tons, the smallest since May, 1919, and representing a decrease of 298,398 tons for the month. At the close of July unfinished business amounted to 4,830,324 tons, and at the end of August a year ago, 10,805,038 tons. The heavy falling off is attributed to increased mill operations during the latter part of August,

when output was about 4 or 5 per cent. greater than at the beginning of the month. The slow rate at which new business developed was also a factor. Steel men quite generally, however, express confidence that conditions in the industry have made a turn for the better, and that gradual improvement from now on may be expected.

FRANCE.—THE HARVEST—EXCHANGES—BOURSE.

(FROM OUR CORRESPONDENT.)

PARIS, September 20.

FURTHER figures are now available as to the remarkable character of the cereal harvest this year in France. Barley and oats have proved to be as abundant as the wheat crop, to which I recently drew attention. I have just returned from a visit to the North of France with some 50 British mayors, several of whom were representatives of agricultural districts in England, and there was not one of them but was deeply impressed on the one hand with the intensive cultivation of the land, and on the other hand with the way in which the farmer in the devastated area had seen to the housing of his crops before taking any serious thought as to his own accommodation. Obviously, the French Government has been to some extent responsible for this attitude of mind, because peasants and farmers have found the State a friend when it was a question of reconstituting barns and a somewhat stern stepmother if the farmer wished to rebuild a comfortable farmhouse that would give him the comfort to which he had been accustomed before the war. The fact, however, remains that the Government policy has not been disastrous, as is shown once again by the figures for barley and oats that have just been issued by the Ministry of Agriculture in the *Journal Officiel*. The figures are so eloquent, in view of what France has suffered, as to need no commentary:—

BARLEY.

Years.	Hectares Sown.	Hectolitres Yield.	Mean Weight Per Hectolitre in Kilos.	Quintals.
1921	669,000	12,909,060	63.76	8,230,980
1920*	663,910	13,086,410	63.85	8,356,880
1919	561,180	7,951,170	62.88	4,999,840
1918	554,860	9,333,430	64.09	5,982,000
1917	687,420	12,828,230	63.24	8,331,890
1913	760,205	16,251,250	64.40	10,437,600

OATS.

Years.	Hectares Sown.	Hectolitres Yield.	Mean Weight Per Hectolitre in Kilos.	Quintals.
1921	3,358,170	76,332,730	46.62	35,591,900

* Including Alsace and Lorraine.

As I pointed out last week, the question of the foreign exchanges is of very vital interest to France, and the situation has so exercised public opinion that the Ministry of Finance has given a semi-official interview on the subject to the *Journal*. Before summarising this, it may be of interest to recall in tabular form the most notable movements of the pound and the dollar in the last few months. They are as follow:—

	£	\$
January to May	Highest.. 61.59 (Jan. 10th) .. 17.18 (Jan. 4th)	
	Lowest .. 45.455 (May 19th) .. 11.315 (May 19th)	
June to April	Highest..... 47.68 (Aug. 26th) .. 13.16 (Aug. 2th)	
	Lowest 46.11 (June 17th) .. 11.91 (June 1st)	
September	Highest..... 53.14 (Sept. 15th) .. 14.33 (Sept. 15th)	
	Lowest 47.585 (Sept. 1st) .. 12.73 (Sept. 1st)	

The Finance Ministry shows extreme discretion as to the agreement of August 13th, but it does point out that under it France secured solid advantages as to the rate of exchange at which Belgium's priority claims were to be discounted and as to the material benefits gained in regard to coal. It refuses seriously to consider the possibility of Germany going bankrupt, though it recognises that there may be a monetary crash. As against this it

The National Bank of Commerce in New York places complete banking services at the disposal of business throughout the world bringing it in contact with all phases of commerce and industry in the United States.

KENNETH H. ROCKEY, Representative,
Gresham House, Old Broad Street,
London, E.C. 2

argues that the wealth of Germany is such that the Allies are quite capable in such a contingency of taking their own guarantees. There has been so much public interest taken in the exchange question, that the Ministry has taken the trouble to analyse the situation. It recognises that speculation is a factor to be counted with, but it considers that this can only accentuate and exaggerate movements based on natural economic causes, and contends that it can have only a very limited effect. It considers that the fall in value of the franc is due in the main to the following governing causes—the rise in price of American cotton, the need of the reconstitution by France of her stocks of raw material, and to the confidence of dealers that there will be a trade revival that has induced them to place large orders abroad, with the inevitable corollary that they have had to cover their commitments by purchasing in advance sterling and dollars to meet their obligations.

Under the influence of the textile strikes in the North of France, that at the moment of writing show no signs of settlement, and as a result of the widespread information that there will be very shortly a number of interesting appeals to the public, the Bourse this week has been somewhat more restrained, though foreign securities: owing to the exchange have been in demand. In commenting on the situation of the Bourse, the *Situation Economique et Financiere* strikes a rather new note when it writes that France should follow the example of England and of the United States in seriously undertaking a reduction of wages. This point of view has already been raised, and has had its effect in depressing the Bourse. The result in general terms has been that home securities: are somewhat under the weather, while foreign values, owing to the exchanges, remain, and probably will remain, in demand. French Rentes have been unchanged, but Crédit National has dropped from 474 to 466. Most of the foreign Government stocks have registered notable improvements. Thus Argentine Fives are at 935, as against 883, Brazilian Fours at 107, as against 95, and

Chinese Fours at 168, as against 156. Banks generally have dropped owing to holders realising profits, and railways have been irregular. Thus, P.L.M. has fallen from 780 to 770, Nord has been well in demand at 873, and Midi has been rather stronger in improving from 700 to 720. Shipping securities are still suffering from uncertainties as to freight charges. Chargeurs Réunis, after fluctuating between 620 and 605, settled down at 615; Transatlantique dropped from 279 to 274, and Havraise Peninsulaire made no change at 1,351. Certain railway returns have been issued for the first eight months of the year. Paris-Lyons, on over one and a-quarter milliards, shows as against last year an improvement of some 80 million francs, Orleans is up nearly 25 millions, Est some 95 millions, and Midi some 21 millions. Electrical undertakings have been rather under a cloud, and there has been a general slight drop in the group. Metallurgical shares are lower, though not to any very marked extent, and mines, except when saved by the exchange, have generally dropped back.

The returns of the Bank of France for the last week, the previous week, and the corresponding week of 1913 are as follows:—

	Sept. 15, 1921.	Sept. 8, 1921.	Sept. 18, 1913.

GERMANY.—INDUSTRY AND REPARATIONS—TAXATION OF FOREIGNERS—EXCHANGE AND BOURSE—INDUSTRY.

(FROM OUR CORRESPONDENT.)

BERLIN, September 20.

THE failure to carry out the promised removal of the economic sanctions is a sharp disappointment to Germans. As has been pointed out from here, this measure has had a very bad effect on industry and trade. Technical difficulties are no good reason for maintaining the system in force; the technical difficulties in creating the new Customs frontier did not—though they led to serious confusion and traffic congestion—stand in the way of its creation. Negotiations are proceeding between the Chan-

cellor and the banks, here representing industry, to determine whether industry cannot voluntarily help the Government to obtain gold for improvement of the foreign payment balance. It is suggested that industry should pledge its credit. The lowest of several sums unofficially mentioned as to be raised in this way is one milliard gold. The initiative came from industrial circles, whose plan, it is understood, is an alternative to the Reichswirtschafts Ministry's plan to appropriate one-fifth of the real substance of industry, land, and city house property.

The position of foreign holders of German property and of foreigners resident in or carrying on business in Germany under the proposed taxation reform is now clear. First, as regards the three new direct taxes on wealth. These are the property tax (*Vermögenssteuer*), which replaces the emergency levy, the permanent triennial property increment tax, which replaces the *Besitzsteuer*, and the tax on post-war increment of wealth, between June, 1919, and June, 1921, which is a non-recurring tax. These taxes fall on all property in Germany, regardless of citizenship or residence; foreign-owned land, for instance, will pay the first and second taxes, and under the third tax it will pay on the increase of its nominal (paper mark) value between the two above dates. This liability is on German property as such. As regards personal liability, the first tax is severer to foreigners than the abandoned emergency levy. For the emergency levy foreigners were liable "who reside permanently (*dauernd*) in the German Republic for sake of gain." Under the new property tax foreigners are liable "who have a dwelling in Germany, or who reside in Germany for gain, or who have their ordinary residence in Germany for longer than six months." It seems that under the emergency levy a foreigner could not be taxed on his foreign property merely because of a short residence if his lasting residence and business interests were abroad. In the property tax, however, the German income-tax personal qualification is applied almost literally, and on this qualification the foreigner will be taxed "on his entire taxable property with the exception of foreign-situated working capital and land." It follows (the point was developed in detail lately in the *Vossische Zeitung*) that a foreigner with a dwelling in Germany, which is not his chief dwelling, and in which he may reside only a few weeks in the year, is liable for property tax on all his property everywhere, with the two stated exceptions. The personal qualification for the recurring triennial increment tax is the same. The third tax (non-recurring 1919-21 increment tax) is not so important for British subjects, as relatively few resided in Germany or held German property in the two years in question. The personal qualification here is the same, with the difference that it reads: "permanently (again *dauernd*) reside in Germany for gain," which means "resided." The first two taxes affect materially the interests of foreign residents or business men with their main businesses or branches in Germany. The foreigner is in principle to be compelled to pay the taxes on all his wealth everywhere, foreign working capital and land excepted, which means that a rich person with, say, one-fiftieth of his wealth in Germany in shape of a dwelling—a seaside villa or shooting box—might have to pay on the other forty-nine fiftieths. A minor taxation official in the Bavarian Alps would be responsible for assessing and collecting perhaps on the whole wealth of an American millionaire. In practice this tax could not be enforced, but in strict law (and officials are required to enforce the law) the defaulting foreigner's whole property in Germany would be seized to meet the taxes on his wealth elsewhere. Further, as the tax is progressive, a person relatively poor in pounds or dollars is taxed at a high rate as a very rich man in German marks. The increment of wealth taxes only recognise marks. Under the permanent increment tax a foreigner who invested a given sum in pounds in a German factory, and who lost half his (pound) capital, would nevertheless be compelled to pay on a possible increase in his mark capital caused by a fall in mark exchange. The proposed amendment of the company income-tax (*Körperschaftsteuer*) affects foreign holders of German dividend-paying securities. This tax is to be

increased from 10 to 30 per cent. of company profits. Under the gold values levy, which is so far only an official plan, foreign owners of company stocks, land or house property, would be compelled to cede a fifth of their interests to the State. The official Memorandum does not mention foreigners, but the levy would be imposed on property, not on any personal qualification.

The foreign exchanges on Saturday had a considerable recovery, apparently under the influence of the offer by industry. The Bourse last week was undecided; and many of the more active stocks had slight recessions; but the *Frankfurter Zeitung's* index shows 21,852, against 21,734 at the close of the preceding week. The stock market remained very active; according to a newspaper statement, given in default of official statistics, the Berlin banks receive daily about 200,000 buying and selling orders for stock parcels of between 1,000 and 100,000 marks nominal. From October 1st the Bourse will be open at 11 a.m. daily, but the so-called "Einheit" stock quotations will be fixed only on three days of the week. The banks last week tried to bring pressure on their clients in direction of reserve, and terminated some credits. There was a good deal of realisation, mostly followed by fresh buying. Upper Silesian stocks sharply rose, Bismarckhütte by 700, Oberdorf by 100, Caro by 64, and Hohenlohe by 31. These stocks had, however, lagged considerably behind the general upward movement. Most of the Western Heavy Industry shares declined, but lost only a fraction of their big rises in preceding weeks. Shipping securities fell; and banking and brown coal stock rose. War Loan quoted yesterday 77½, 4 per cent. 75½, 3½ per cent. 68½, 3 per cent. 77½, Colonial 4 per cent. 69, and Savings and Premium 79½. The Floating Debt on August 31st was 219,061,306,492 marks, of which 202,776,170,300 marks consisted of discounted Treasury bills here in 9,600,000,000 marks Prussian Treasury bills taken over by the Republic in connection with the transfer of Prussia's State railways.

The condition of industry continues to improve, though the only cause is still the decline in mark exchange. The iron and steel market is very active; delivery terms are being prolonged; and for certain qualities the demand exceeds the supply. Latest prices and lowest prices of June are as follows, it being noted that the September prices are partly nominal, as producers refuse to sell at these rates:—

	Per Metric Ton.—	June.	Mid-Sept.
Bar iron	Marks.	1800	3000
Construction forms	Marks.	1750	2900
Thick sheets	Marks.	1700	2500
Medium sheets	Marks.	1750	3100
Thin sheets	Marks.	1850	3500
Rolled wire	Marks.	1850	3000
Zinc wire	Marks.	2950	4350

The wire market is the most active of all. According to the *Bergwerks-Zeitung*, the price rise is mainly accounted for not by the increased demand, but by a great increase in production cost. Since June the known increases in cost factors would, regardless of selling conditions, raise the bar-iron price from 1,800 to 2,740 marks a ton, main factors being the increases in coal prices, railway freights, and wages. Speculation in and hoarding of iron and steel are again common; accusations in this respect are made against the biggest and most reputable electrical concerns, one of which, according to the *Bergwerks-Zeitung*, lately held 100,000 tons of iron, worth 300,000,000 marks. The Upper Silesian smelting industry, which depends upon Swedish ore, is badly hit by the mark exchange fall, as home sale prices for pig-iron have not yet been correspondingly raised; while the zinc companies, which use local ore, are affected by the heavy price fall of zinc in the world market. Silesian production has considerably increased since order was restored; *per capita* production is more than double that of May, but it is still slightly below that of the first four months of the year. The sulphuric acid industry's production cost is above the sale price. The hide and leather market is active; the output of all German tanneries is estimated at 60-65 per cent. of pre-war figure. At present there is a heavy demand for hides and for leather. Reports from the textiles centres continue good.

POLAND.—CABINET CRISIS—FINANCES AND POLITICS—TRADE WITH THE EAST—INCREASE OF THE RATE OF DISCOUNT—CONSTRUCTION OF ROLLING-STOCK.

(FROM OUR CORRESPONDENT.)

WARSAW, September 18.

DURING nearly a fortnight the Diet tried in vain to form a new Parliamentary Cabinet, and so it was necessary to resort to a business Cabinet. The peasant Premier has been replaced by a member of the *intelligentsia*. Mr. Ponikowski has the intention of selecting his colleagues not among party politicians, but among those who are considered to be especially fit for directing the affairs of the different departments. The present Cabinet crisis may be considered as a consequence of the collapse of the Polish mark. Mr. Steczkowski, being unable to keep the expenditure within the limits of his Budget, was obliged to tender his resignation, and the whole Cabinet followed his example. In consequence, the principal task of the new Government will consist in a reform of the existing financial system. It may be said that the whole public opinion is realising the dangers which the country must face at the present moment. Different leading organs of the Press are comparing the present situation with that which existed one year ago, when the country was menaced by a Bolshevik invasion. Drastic measures, which would put the revenues of the country in equilibrium with the expenditure, are demanded.

In Government circles, a plan of forming a Financial Board, with dictatorial power, is discussed. In the case of the formation of such a board, there exists the intention of inviting a foreign expert as one of its members. Among the projects which are put forward for saving the finances of the country, one which has been put by Mr. Steczkowski before the Budgetary Committee of the Diet is worth mentioning. The Union of Landlords has made an offer of putting at the disposal of the Government, gratuitously, large stretches of land. In exchange, they demand a postponement of the agrarian reform. It is estimated that by selling these lands to the peasants at the actual market price the Government could easily obtain 100 milliard marks.

During recent weeks different events have taken place which prove that the efforts of Polish industry to enter the markets of the East have been successful. Roumanian merchants have visited Lodz, and have ordered there large quantities of textile goods. Hitherto the Roumanian market was principally supplied by Austrian, Czechoslovakian, and Italian fabrics. Before the war Russia was the principal, and almost exclusive, customer of Lodz. During more than six years this connection has been entirely severed, and only now the first step towards the resumption of the traditional relations has been taken. According to reports from Lodz, the Economic Committee of the Soviet Delegation in Warsaw has placed there an order for 15 million metres of cotton goods. The payment will be made in American dollars and Polish marks. The actual production of Lodz amounts to 50 per cent. of the pre-war level. This quantity could be easily increased if the difficulties in obtaining the necessary credits and raw materials did not hinder development.

The Polish National Bank has increased its rate of discount by 1 per cent. The rate amounts actually for three months' bills to 7 per cent., for bills running from three to six months to 7½ per cent.

The building of rolling-stock is rapidly progressing in Poland. There are now three factories constructing locomotives for the State railways, and five factories are occupied with the building of passenger cars and wagons. These undertakings have obtained from the Government orders for 2,970 locomotives and 7,800 passenger cars and 70,000 wagons. The orders are extending over a period of 10 years. This year the Polish factories will put at the disposal of the State railways 18 engines, 150 passenger cars, and 2,625 wagons. This production will be increased every year, and it is intended to reach in the near future a yearly production surpassing many times this quantity.

SWEDEN.—RUSSIAN GOLD SHIPMENTS—TIMBER TRADE—WAGES FALL.

(FROM OUR CORRESPONDENT.)

STOCKHOLM, September 14.
DURING the past week the foreign exchanges have been exceedingly restless, moving up and down, mostly downwards, and interfering sadly with business. As for pounds and dollars, an explanation is suggested to be found in increased export of gold from Russia *via* Sweden. The fact is that considerable consignments of gold have arrived lately in Swedish ports, and are being melted down for transshipment to America. Now the American buyers of this gold have, of course, to pay in dollars; but business between America and Sweden being exceedingly slack, there is little demand for dollars in this country, and consequently it has been found more advantageous to offer the dollar payments for sale in the London market. But more marked has been the drop in German and Finnish marks, both currencies having established bottom records. German marks have been down during the week in the open market at 4.10 and the Finnmarks 5.85. On the Stock Exchange prices are sagging, and the tendency is anything but reassuring. The last record shows a loss of over 50 million kr in all values. It is suspected that the tax-paying term has something to do with the stringency, and many speculators are forced to sell out to get ready cash. The term for special war taxation payments has been postponed until the end of the year, thereby relieving many commercial and industrial undertakings. There is a much better tone in the timber trade, and sales of late have been quite considerable. The turnover hitherto amounts to between 200,000 and 300,000 standards, and it is fully expected that there will be a slight rush as the year is tending to its close from buyers who have to fill in stocks for the winter. The Swedish timber mills have large stocks to go on with even for next year, and no cutting will be undertaken this winter. The report of the Swedish Shipowners' Union at their last board meeting describes the year as the worst in the annals of the union since its formation 15 years ago. For the shipowners it is now simply a question of calculating whether least loss will be caused by laying up or keeping ships running. The report inspires no faith in the future, as the surplus of tonnage will affect rates and tonnage prices for a good long time to come. Wages in Sweden have, it is estimated, gone down on the average 17 per cent. For the paper industry, which employs 10,000 workmen, the decrease is 20 to 30 per cent.; for the furniture makers, 6,500 workmen, 25 per cent.; in the textile industry, with 23,000 hands, 20 per cent.; for 1,200 miners, 20 to 25 per cent.; for 5,000 sailors, firemen, and engineers, 20 per cent.; for woodpulp workers, 18,000 to 19,000, 15 per cent.; and for 24,000 hands in the sawmill industry likewise 15 per cent. The smallest reductions have taken place for 6,000 printers, 10 per cent., and for 4,600 tailors only 5 per cent. For the last category of workers another decrease of 5 per cent. will come into effect on the 1st prox. and another 5 per cent. after that before the year closes. The strongest reduction has taken place for 3,000 workers in the iron and steel industries, with 30 to 40 per cent., but in the manufacturing industry 54,000 men have accepted 17 per cent. reduced pay. In general, it is reckoned that the reduction in wages has kept pace with the fall in living costs, but it is difficult to say what the development will be in future. There are many factors to be taken into consideration, not the least the high position of the Swedish krona, which makes it imperative for Swedish employers to get costs down in order to be able to compete successfully with foreign competition. So far no negotiations have been opened from Swedish side for the renewal of a trade agreement with the Soviet. Most business done with Russia consists of grain exports, and a good deal of rye has lately been shipped to Russian Baltic ports.

SPAIN.—FINANCE AND MOROCCO.

(FROM OUR CORRESPONDENT.)

MADRID, September 19.

THE new Minister of Finance, Señor Cambó, stated in the Council of Ministers that, though he has found the

financial situation of Spain in a deplorable condition, he does not think it necessary at present to advise the issue of a loan, though most likely toward the end of the year it might be unavoidable. At present he expects to face the extraordinary expenses of the situation in Morocco from the margin of the Treasury account in the Bank of Spain, which amounts to 400 million pesetas. Señor Cambó expects also to obtain a large balance from November's financial collection, his firm intention being to force payments and taxation of all the large concerns and influential individuals who hitherto have been able to avoid contribution. This is more than necessary when Morocco costs the nation 50 millions a month.

Books and Publications.

REVIEWS.

"The Cotton Industry in France." By R. B. Forrester, M.A., M.Com. (London) Longmans, Green, and Co. 10s 6d.

THIS volume contains the report of Mr Forrester to the electors of the Gartside Scholarships. He deals with his subject in a very comprehensive manner; but the value of the book is somewhat lessened by the fact that the inquiry was practically completed before the outbreak of war, and only minor reference is made to the destruction of machinery and changes in the conditions since 1914. The cotton industry in France has made steady progress, as in 1870 there were 4,500,000 spindles and 55,000 looms, whereas according to the latest statistics the spindles now number 9,400,000 and the looms 121,000. The future of the trade rests very largely upon the rapidity of reconstruction during the next few years. The character of goods produced are chiefly specialties, and compared with England spinners and manufacturers are at a disadvantage owing to the mills being more scattered. The chapters dealing with the Working Conditions and Industrial Organisation, the Position of Labour, and Wages and Trade Unionism are full of interest, and the volume is probably the best history which has so far been written on the cotton industry in France.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET.
September 28.

ACCOUNT.
September 29.

THE course of Stock Exchange business is not running very smoothly. What hopes had been entertained of a general improvement coming after the holiday season has been damped by the reluctance of the public to deal in stocks and shares. Even the investment markets are quiet. There has been a certain amount of selling amongst gilt-edged issues, and some fairly large lines of stock have come to market, but the expectations of a fall to 5 per cent. in the Bank rate led to no such supporting orders being placed as might have counteracted the slightly depressing effect produced by the sales. New issues of good stock, however, continue to go well. The Lancashire Power Company closed the subscription lists, for its new 7½ per cent. debentures, within three hours of their opening. It is said that half-a-dozen of the leading gas companies contemplate new issues of debenture stock in the near future, and that there will be a lively demand for underwriting of whatever good stock may be offered from these undertakings, it is safe to prophesy in advance.

The tragical death of Sir Ernest Cassel has had no effect upon any of the Stock Exchange markets.

The Consol market lies under the influence of the selling just mentioned. The various forms of Government borrowing are out of favour for the time being, and the recent strength of the Funding Loan, for instance, has given way under the pressure of quiet sales. National War Bonds suffered a fall, a movement exciting curiosity as to its reason. Surmises suggest that the holders may require the money for ordinary living purposes, or for the payment of taxes, seeing that so many people are receiving less dividends than usual, and, at the same time, are making but little money in their usual business. The Home Railway prior-charge stocks suffer from the same tendency, yet Colonials in a number of cases have hardened on the week, the gains being mostly confined to about a point.

The feature amongst foreign Government bonds is the dramatic way in which Mexican 5 per cents. have been rising. A mild gamble has sprung up in the bonds, partly owing to insistent buying from New York, whence has proceeded hopes of Mexico making an early start—some say next month—with the resumption of interest payments on the country's debts. These anticipations are regarded by many as being over-sanguine, but they have had the effect of keeping alive interest in the bonds. German and French issues are lower, on the exchange movements. Chinese bonds, which had fallen heavily on the fears aroused by internal conditions reported from the country, have recovered in the cases of those issues which enjoy specially hypothecated revenues for their service. Brazilians move irregularly, but Argentines are firmer. Russians are not particularly affected by the latest note of Lord Curzon, protesting against the manner in which the Soviet Government is disregarding its obligations in respect of British trade facilities.

Home Railway stocks are weak throughout, for no reason other than that the public are doing nothing except to realise in a small way. Railway stocks generally are in a depressed condition, Grand Trunks having further fallen, Argentines being lower, and Mexican Rails failing to derive any benefit from the firmness shown by Mexican Government Bonds. A market started on Thursday in the new 7½ per cent. Notes recently issued by the Antofagasta Company at 97½, the price being about 1 premium.

With a better tendency for rubber, prices of rubber shares exhibited a further tendency to improve, with Anglo-Dutch and Rubber Trust, the leaders of the market, distinctly better on the week. The August Board of Trade returns show that both America and Central Europe are beginning to take rubber in more substantial quantities than has been the case for some

time past. The oil market is neglected. People are a little nervous, owing to the latest reports regarding salt water intrusion into the Mexican wells, while in the Dutch East Indies the prospect of further heavy taxation does not encourage enterprise in the way of fresh purchases. The Trinidad shares are also heavy, and the oil market as a whole has lost its previous magnetic charm for the speculator. Amongst shipping issues, P. and O. deferred continues to advance, owing to dividend anticipations. The iron, coal, and steel market is disposed to sag, taking armament shares with it, and Dunlops have further given way, the protracted delay in any announcement with regard to the company's payment of its preference dividends being one cause of the dulness. Maypoles have been a lively market, showing a fall on the week by reason of the reduction in the interim dividend. The gamble in Low Temperature shares subsided, and the price has reacted after its previous jump. The textile group has no special characteristic other than that of a sagging market; the same description will apply to catering shares and a number of the minor departments connected with industrials. Marconis have fallen back, but Radios responded to a little New York inquiry, and moved upwards, after having been a dead market for months past. There is very little doing, either in banking or in insurance shares. At the same time, it is no easy matter to buy sound stock that has found a permanent home, and in the list of trust companies, for instance, would-be buyers find themselves confronted with the fact that there is hardly any stock on offer. Good preference shares in other markets are equally difficult to obtain.

The Kaffir market continues to be the favourite field for the circulation of rumours, of which the majority are not worth repetition, owing to their transparent impossibility. Apart from a little professional and semi-professional dealing, it must be said that Kaffirs attract no attention, a circumstance which, as usual, tends to lead prices gently downwards where they move at all. Rhodesian shares are coloured by Kaffirs. Diamond shares, together with Rio Tintos and others in the copper group, remain under the somewhat depressing influence which Paris is exerting at present. A rise to 3s 4d per ounce in the price of silver failed to galvanise activity in shares of the Mexican and other silver-producing companies. In the tin markets there is nothing doing. Russians have given way, because of Lord Curzon's note, to which reference has been made above.

NEW ISSUES.

The new issues of the week and the current year and date of opening of the lists have been as follows:—

5½ per Cent. Treasury Bonds.—Repayable at par on April 1, 1929. Issued at 97 per cent. Interest payable half-yearly on April 1st and October 1st. The bonds of this issue will be convertible at the holder's option as on April 1, 1922, or October 1, 1922, into £3 10s per cent. Conversion Loan at the rate of £146 Conversion Loan for each £100 of bonds converted. Full particulars of these bonds, together with comments, will be found in *Economist*, July 9th, see page 43, also in our issue of July 16th.

Government of India Rupee Loan.—Subscriptions in India and London to the Indian Government's 6 per Cent. Rupee Loan (free of Indian income-tax) amounted to Rs. 45,90 lakhs up to September 10th. This figure does not include the final results of the conversions of 1921 and 1922 Indian War Bonds. Conversions of 1922 War Bonds ceased on September 15th, but holders of 1921 War Bonds may convert into the new loan up to October 29th, either in India or in London.

Manchester Brewery Company, Limited.—Authorised share capital £395,000, of which £375,392 has been issued. Exclusive of first mortgage bonds, to be redeemed out of proceeds of present issue, the existing loan capital authorised and issued is £450,000, all of which is irredeemable. This is an issue of £500,000 7½ per cent. first mortgage debenture stock at £95 per cent., repayable at £103 per cent. "on or before" December 31, 1931. This debenture stock is limited to £500,000, and will be secured by a trust deed between the company with Walker and Homfrays, Limited, as guarantors, and the Royal Exchange Assurance as trustees, by specific first mortgages on 216 licensed and other properties, and a floating charge on all the company's other property and assets, subject, of course, to prior floating charges in favour of perpetual debenture stocks, mentioned above. The company undertakes not to create any charge ranking in priority to or *pari passu* with these debentures. The assets of the company shown by the certificate of its auditors available for security of this debenture stock amount to £1,091,318, or, without deducting trade liabilities, to £1,330,043. The net excess of assets over liabilities of Walker and Homfrays, Limited, the guarantors, as shown by their last balance-sheet, is (subject to excess profits duty and corporation tax for 1920) £1,059,916. The 216 licensed properties specifically allocated have been valued, under date of September 9, 1921, at £800,350. These, however, are probably taken at only a little under boom values. Profits of both the issuing and guaranteeing companies are set out from 1913. The issue has been underwritten for 3 per cent., and an overriding commission of ½ per cent. The prospectus is fairly full and informative, but we should like to have seen a detailed statement of Walker and Homfrays' balance-sheet. During the past few years there has been but little competitive struggle between brewery undertakings, and for this reason the cautious investor will probably pay more attention to 1913 figures than war and post-war results. These debentures are not without attraction, but the announcement of the early closing of the subscription list is surprising.

Staveley Coal and Iron Company, Limited.—Authorised capital £2,500,000, divided into ordinary shares of £1 each. The authorised capital of this undertaking is to be increased to £3,000,000, and it is intended to issue 463,773 shares, which will be offered to existing shareholders at par, in the proportion of one for each five fully-paid shares held. As the present market price of existing shares is round about 31s each, the offer is in the nature of a substantial bonus to shareholders.

The Lancashire Electric Light and Power Company, Limited.—Issued share capital £689,838. This is an issue of £400,000 7½ per cent. prior lien debenture stock at 95 per cent. (of which £150,000 has been applied for firm, and will be allotted in full). A further £135,000 of this stock will be issued at par to the holders of £135,000 prior lien bonds of the company now outstanding. This prior lien debenture stock is limited to a total issue of £700,000, and will be secured by trust deeds constituting such stock a specific first mortgage on the whole of the debenture and share capital issued by the Lancashire Electric Power Company (the Parliamentary Company) and a floating charge on the undertaking and all other assets of this company. Prior lien debenture stock will be repayable by means of a 2 per cent. cumulative sinking fund on or before April 1, 1948, and the fund will be applied in redemption of the stock, either by annual drawings at 105 per cent., or by purchase at or below 105 per cent. Redemption will begin in the year 1924, but the company reserves the right to redeem at any time on giving three months' notice at 105. In addition to the above

7½ per cent. prior lien debenture stock, and "ranking behind it," there is £150,000 5 per cent. debenture stock, the interest on which will be increased to 6 per cent. The company was formed in 1903 under the name of the Lancashire Power Construction Company, Limited, and owns all the issued debenture and share capital of the Lancashire Electric Power Company. The latter has up to December 31, 1920, outlaid £1,209,406 by way of capital expenditure. Net earnings are given from 1913, but the table could have been made more informative as to the amount of interest paid, and on what amount, dividends paid, and sums placed to reserve, if any. The Stock Exchange official list shows that the 6 per cent., free of tax, convertible first preference shares are changing hands at from 17s 6d to 17s 6d, which cannot be very encouraging to subscribers for that issue. We were not favourably impressed by this issue when it was made (see the *Economist*, December 13, 1919, page 1098). In the supplementary list of the London Stock Exchange dealings were effected in the 5 per cent. prior lien bonds of the Lancashire Power Construction Company at 84½ and 84 on March 21, 1921. Including the overriding commission, the issue was underwritten for cash at 3½ per cent., which appears to be reasonable enough. The company, possibly, and even probably, has a profitable future in front of it, but we do not think that the terms are sufficiently attractive to tempt the opulent investor, for whom it might otherwise have been suitable. The issue was quickly oversubscribed, which is somewhat astonishing, considering the terms offered and the lack of clarity of the prospectus.

Indo-Burma Oilfields (1920), Limited.—Authorised share capital, £2,000,000, of which £1,440,000 has been issued, and £600,000 is to be issued by agreement. This is an issue of £250,000 10 per cent. convertible first mortgage debenture stock at par, repayable on June 30, 1924, at 110. £55,000 of this stock has been subscribed in India on the terms of this prospectus, and the remaining £195,000 is now offered for subscription. Each stockholder will have the right in any year up to June 24, 1924 (on giving seven days' notice), to exchange an equal amount of fully-paid stock at par into fully-paid shares of the company at par. The stock is secured under a trust deed in favour of the trustees by means of a specific mortgage on the oil mining properties and fixed plant, and a floating charge on the remaining assets and undertaking of the company. The company was incorporated in February, 1920, for the purpose of acquiring and developing certain oil properties in Burma. The assets of the company are given as £1,557,942, but mention is made of a liability to a bank for £29,700. The company has still to prove that it can produce oil as a commercial proposition. We would refer our readers to our criticism of this undertaking when it made an issue of ordinary shares (see the *Economist* for February 14, 1920, page 326). Dealings in the £1 shares, according to the Stock Exchange Supplementary List, are being effected at round about 8s 7d. This somewhat reflects the opinion of the market on the enterprise.

Dreamland, Margate.—Authorised share capital £75,000 divided into 8 per cent. cumulative participating preference shares of £1 each, and 100,000 ordinary shares of 5s each. This is an issue at par of 15,000 participating preference and 2,000 8 per cent. debentures of £20 each. Preference shareholders will participate in further profits up to a total dividend of 12 per cent., while debenture-holders have also the right to participate in profits up to a sum which would equal a further 2 per cent. on their debentures, or 10 per cent. in all. The debentures will be secured by a specific first mortgage on the freehold property and a floating charge upon other assets. They will be "redeemable" at 105. We have before called attention to the vagueness of the term "redeemable" in cases such as this. The company is an amusement undertaking, and has been formed to purchase certain premises and assets at Margate. The purchase price has been fixed at £77,440, which will be satisfied by the issue of £35,000 in shares, and balance in cash, the latter at the option of the company. An independent valuation of the property and assets is given at £75,000, and an accountant's certificate for profits in periods in 1920 and 1921 appear in the prospectus. It is stated that the vendor makes no promotion profits. This is a speculative enterprise, which will probably appeal to many local people. For this class of undertaking the prospectus is unusually informative, and to that extent must be commended, with the exception mentioned.

Manchester and District Picture House Company, Limited.—Authorised capital £80,000, divided into shares of 2s each, of which 92,170 shares have been issued for cash. This is an issue of 559,830 shares at par. The company was registered in August, 1920, to acquire cinema theatres. Certain properties to be acquired are independently valued at £36,650. The advertised abridged prospectus is not very clear to us, as it states that "the said purchase prices are payable as to £36,000 in cash and as to £26,150 in shares or partly in cash and partly in shares." Later on it states that "in the year 1920 52,700 ordinary shares of £1 each were offered for public subscription, 9,217 were allotted for cash, and are fully paid up,"

which reads curiously, and further, we are informed that 8,800 shares were issued in part payment of purchase consideration. The information given is not sufficient for us to offer an opinion upon the flotation.

The Winter Gardens Picture Theatre, Limited.—Authorised share capital £30,000, divided into shares of £1 each. Issue of 26,999 ordinary shares at par. The company has been formed to acquire the Tivoli Theatre, Manchester, and run it as a cinematograph house. The purchase price has been fixed at £50,000, payable in cash, of which the sum of £30,000 is being left on mortgage by the vendor. We cannot find any valuation of the theatre, independent or otherwise, in the prospectus. The board of directors is the same as the Gaiety Cinema, Manchester. A speculative proposition, with possibilities of success, but we have before pointed out in these columns that we do not care for the method of finance where the total capital of a company is the marginal difference of the purchase price and a loan from vendors.

Mengkibol (Central Johore) Rubber Company, Limited.—Authorised capital £150,000, divided into shares of £1 each, of which 100,000 ordinary and 8,349 8 per cent. convertible preference shares, all of £1 each, have been issued. This is an issue at par of £65,000 seven-year 10 per cent. convertible debenture stock. Applications have already been received from existing shareholders for £16,251 of this issue, and from a creditor of the company for £20,000. The loan will be repaid at par in June, 1928, but the company has the option to redeem after September 24, 1924, at 105 per cent. on giving three months' notice. Holders may convert this stock during its currency into ordinary shares at par values, on giving one month's notice. This issue is secured by a trust deed, and the trustees are acting without remuneration. If existing shareholders in rubber companies have a margin of capital to spare for speculative purposes, and are convinced that their companies have been economically and efficiently conducted in the past, there is no reason why fresh capital should not be subscribed on the generous terms offered from time to time by rubber-growing undertakings.

Glen Bervie Rubber.—Issue *pro rata* to shareholders registered on August 31st, of 25,000 £1 shares. It is stated that "allottees" will be entitled to the right to be exercised on or before September 30, 1926, to subscribe at par for one share for every ten shares allotted. The new shares have been underwritten, and others to the extent of 8,000 shares for a commission of 5 per cent. in cash, together with option rights at par on the same basis as the rights given to the subscribers of this issue, "to the extent of 15 per cent. of the shares underwritten." As the existing £1 shares have been dealt in at 15s, it is good for shareholders to know that the underwriters had such faith in the future of the company.

The Cronite Foundry Company, Limited.—Authorised capital £36,000, divided into 35,000 8 per cent. participating preference and 20,000 founders' shares of 1s each. Holders of preference shares are entitled to receive out of profits of each year, in addition to the 8 per cent. dividend, 50 per cent. of "surplus profits." This is an issue of 25,000 preference shares at par. The company was formed in November, 1919, for the purpose of developing a process for producing an alloy "largely composed of nickel and chromium, and preference shares for £10,000 were offered and subscribed." Freehold property is valued at £24,250, but this carries a 7 per cent. £15,000 debenture. £5,000 of this issue is reserved for the Mond Nickel Company, which nominates a director. This is an issue suitable only for those with inside knowledge of the flotation.

South Kent Water Company.—Incorporated by special Act of Parliament. This is an offer to shareholders by tender at a minimum par price, of 189 7 per cent. preference shares of £10 each. A good lock-up investment, but with difficulties of finding a ready market in case of need, however, attached.

The North British Publishing Company, Limited.—Authorised capital £5,000, divided into 3,000 preference shares of £1 each, and 20,000 ordinary shares of 2s each. This is an issue of 3,000 12½ per cent. preference shares at par. Applicants for preference shares have the right to apply at par for two ordinary shares in respect of each preference share. The circular issued and general information offered is not sufficiently attractive to tempt the cautious investor, and it is an issue which should appeal only to opulent people who consider that the publications of this company deserve financial support.

Yorkshire Electric Power Company.—We are informed that the whole of the £130,000 5½ per cent. debenture stock has been taken up, and no further stock is available.

To complete our record of new issues, company secretaries are requested to furnish us with copies of new prospectuses. Our readers can also assist by forwarding copies of prospectuses which may fall into their hands.

Company Meetings should be addressed to the Reporting Manager
of the ECONOMIST, 3 Arundel street, Strand, London, W.C. 2.**COMPANY MEETINGS, &c.****GUEST, KEEN, AND NETTLEFOLDS, LIMITED.****PAST YEAR'S TRADE CONDITIONS AND PRESENT PROSPECTS.**

The ordinary general meeting of Guest, Keen, and Nettlefolds, Limited, was held, on the 15th instant, at the Queen's Hotel, Birmingham, Mr Edward Steer (chairman and managing director) presiding.

The secretary (Mr J. H. Jolly) read the notice convening the meeting and the auditors' report.

The Chairman, in the course of his speech, said:—

The most important event which has occurred has been the acquisition by us of a controlling interest in the important coal distribution business of L. Guéret and Co., Limited, of Cardiff. They are one of the largest shippers of coal in South Wales, and are the selling agents, solely or jointly, for some of the most important collieries in that district. We have made a satisfactory arrangement with them for the sale of the output of coal from our Dowlais and Cwmbran Collieries, and from the Cyfartha Collieries of Crawshaw Brothers, Limited, and they will purchase for us our requirements of pitwood, which represent a very large annual expenditure. Another important matter in connection with our business has been the acquisition by us of a considerable proportion of the preference shares of John Lysaght, Limited, in which we hold over 99 per cent. of a total issue of 2,000,000 ordinary shares. Since our last annual meeting we have secured a large interest in the Crown Preserved Coal Company, Limited, who take considerable quantities of the small coal which we have for disposal, and we have also availed ourselves of an opportunity of increasing our holding in the firm of Brevillier, Urban, and Co., of Vienna, who, like ourselves, are large manufacturers of screws, bolts, and nuts and similar goods. In connection with our subsidiary companies, the Orconera Iron Ore Company, in which we have a very large interest, has recently acquired the San Salvador, a neighbouring mine to their Obregon property, which will add considerably to the minerals at our disposal in years to come. I have now referred to all the extensions of our trade associations made during the 12 months. We are not looking for worlds to conquer, but we shall not let any opportunity pass of carefully considering the acquisition of other works or interests which might conduce to the advantage of our operations.

PAST YEAR'S CONDITIONS.

The conditions which have obtained during the 12 months under review have been the most difficult this company has ever had to contend with, as those of you who are engaged in business will readily appreciate. Although the coal settlement was arrived at towards the end of June, it took some time before our collieries were in full working order again. Needless to say, the strike has caused a great set-back to the coal industry, and here we look for much assistance from Messrs Guéret's organisation in our endeavours to regain our overseas trade. With the arrangement which has now been agreed I sincerely trust that we may look forward to an era of peace, so far as our coalfields

are concerned. Another, and by no means the least, of the difficulties we have had to contend with during the year has been the altogether unforeseen collapse in the prices of all classes of our goods, for which I consider the coal strikes responsible to a great extent, but which is also largely due to Belgian and French competition. It may be asked why British manufacturers are not able to meet this competition, but the answer is not far to seek. After the signing of the armistice there was a short period of good trade, and while this demand continued, and prices remained high, employers could pay the very heavy wages which the war had brought into existence. Sellers, however, had to contend with rates of exchange which enabled Continental makers to sell their goods in our markets well under, in many cases, our cost of production, and yet obtain a fair margin of profit, and at the same time to pay their workmen satisfactory wages.

NECESSITY FOR CHEAPER PRODUCTION.

I do not believe that any artificial scheme of regulating European rates of exchange would be of lasting benefit, and the true remedy is, I think, obvious. If we are to maintain our position in the markets of the world, there will have to be such a substantial fall in the prices of the chief necessities of life as will warrant substantial decreases in wages without entailing hardship on the workers, and, above all, greatly increased production will have to take place. It is a very satisfactory indication that in some of our great industries employers and employed have come together, and, by frank discussion and consultation, have arrived at agreements which have avoided stoppages of work, and in nearly all cases reductions have been accepted with an admirable spirit of compromise. Unfortunately, industry is handicapped by ever-increasing burdens. During the year there has been an increase in the contributions of employers to the health and unemployment insurance funds. In reference to the future, it is more than usually difficult to prophesy. Bad times alternate with good seasons, and we must take both as they come and make the best of them. If there are plenty of unfavourable symptoms, there are others which encourage us not to abandon ourselves to pessimism. We are thankful to be at last rid of excess profits duty and mine control, which have been so terrible a burden to all manufacturers and colliery proprietors. I trust that their evil effects on industry may gradually disappear, and that we may now look forward to a return to more or less normal times. The Chairman moved the adoption of the report and accounts and the declaration of a final dividend on the ordinary shares, making 10 per cent., free of tax, for the year.

Mr F. W. Keen seconded the motion, which was supported by Mr H. Seymour Berry, and carried unanimously.

GENERAL MINING AND FINANCE CORPORATION, LIMITED.
SATISFACTORY RESULTS—INCREASED PROFITS.

Report of the proceedings at the twenty-first annual general meeting of shareholders, held in the board room, General Mining Buildings, Johannesburg, on Thursday, August 25, 1921.

Mr Leopold Albu presided, and in moving the adoption of the report and accounts, said:

Gentlemen,—Your chairman, Sir George Albu, who is at present in Europe for health reasons, asked me before leaving to preside at this meeting. As you are aware, I returned to South Africa only a few months ago after an absence of over 15 years. The changes which have taken place in that comparatively short time in the history of this vast country are truly amazing. Agriculture, then in its crudest infancy, has in the interval blossomed out into a great industry. It is quite amazing, too, to see what strides South Africa has made in industrial development during my absence. Who would have believed it possible that iron, steel and cement factories would spring up in so short a time, or that in the coal trade South Africa would so soon have become an exporter of considerable magnitude? On the other hand, the gold industry, which should have profited more than any other by the war, has, I regret to see, come off very badly indeed through it. Whilst the price of gold, in contrast to any other commodity, remained stationary during the war, the cost of production continually mounted up, owing to colossal increases in wages, material, plant and everything in connection with mining.

LABOUR DIFFICULTIES.

But this is not all; the efficiency of the workers has, I am sorry to say, gradually deteriorated, and we find to-day the existence of many mines threatened as a result of this fatal combination of high costs and low efficiency. There can be no doubt about the seriousness of the position in which the gold mining industry as a whole finds itself, and unless wages are forthwith considerably reduced and pre-war efficiency at least is restored, you will witness within a short period the gradual closing down of mines which to-day are producing in the aggregate something like 250,000 ozs

of gold per month, and employing about 9,000 white men and 80,000 natives.

I hope the leaders of labour will recognise in time the hopelessness of the position created since the war, and will without delay urge their unions to accept the inevitable reduction of wages and especially to give that efficiency without which neither the gold industry, nor, indeed, any industry, can be successfully carried on. They must in their own interest cease to insist on maintaining conditions which are rendering a very large number of mines quite unremunerative, and will force them sooner or later to close down. It is not the shilling or two per shift more or less which will resuscitate the comparatively low grade mines of the Rand, but a drastic improvement in the efficiency of the miners. That to my mind is the real crux of the situation, which is sapping the life-blood of an otherwise well-organised, sound and progressive industry.

The net profit for the year at £53,913 represents a considerable advance on the operations for 1919, the enhanced earnings being due to the fact that our share transactions for the period under review resulted in a surplus on balance of £44,672, as compared with £17,798 from this source in the previous year, while an increase in dividends on investments, amounting to nearly £14,000, made a further welcome addition to our income.

I hope, however, that the depreciation in values of mining shares is only a temporary phase, and that with the advent of more normal conditions we shall be able to show our investments at a much higher realisable value than we were able to do at the close of last year. Indeed, since the closing of the accounts the values of some of our holdings have appreciated, and if costs can only be reduced and efficiency raised, there is no doubt that a much more prosperous state for the whole of the gold industry can be achieved; a result which would be to your great benefit in every respect.

DWARSFONTEIN AND BRAKFRONTEIN DEVELOPMENTS.

Judging from the developments so far accomplished, both on Dwarsfontein and Brakfontein, I have no hesitation in saying that in these two mines alone the Transvaal Silver Company has an asset of great possibilities, and that we may reasonably and confidently look forward to the eventual fulfilment of the great expectations we have all entertained in connection with this venture. I may mention that, in order to complete the plant and bring the property to the producing stage, the capital of the company was increased in May from £140,000 to £300,000 by the creation of 160,000 additional shares of £1 each. This new capital was guaranteed by your corporation at 21s per share; 140,000 shares of this were offered to existing shareholders at the same price, and nearly 100,000 shares were taken up by them. Since I last addressed you we have had to deal with quite a number of minor differences between the industry and its employees. On the whole, however, I am glad to say we have reason to believe that the spirit of "give and take" is gaining ground, and that the men are beginning to realise that the counsels of the extremists are not for the ultimate benefit of the rank and file.

It is a hard economic fact that no industry can continue unless value is received by employers for wages paid.

The motion adopting the report and accounts was seconded by Mr J. V. Blinkhorn and carried unanimously.

UNION GOLD STORAGE COMPANY, LIMITED.
SPLENDID RESULTS OF PAST YEAR.

The twenty-fourth annual general meeting of the Union Gold Storage Company, Limited, was held, on the 21st instant, at Winchester House, Old Broad Street, London, Mr Roger P. Sing (chairman of the company) presiding.

The secretary (Mr E. Hinchliffe) having read the notice convening the meeting and the auditors' report,

BRANCHES OF THE ANGLO-SOUTH AMERICAN BANK, LTD.
BRANCHES OF THE BRITISH BANK OF SOUTH AMERICA, LTD.
BRANCHES OF THE COMMERCIAL BANK OF SPANISH AMERICA, LTD.

The Chairman said:—Ladies and Gentlemen,—I know you will take pleasure in joining me in tendering to Sir Edmund Vestey our congratulations upon the honour of the baronetcy recently conferred upon him—it is a fitting reward for the energy and industry rendered to the commercial world generally. We of the Union Cold Storage Company, Limited, know how largely his industry and ability have contributed to the success of our business.

In moving the usual resolution for the adoption of the report, I will ask you to give me your attention for a few minutes, so that I may briefly bring to your notice such matters as deserve to be specially mentioned. Progress with the Union Cold Storage Company has become habitual, and the year 1920, which is now under review, compares favourably with the years which have gone before, and I have no hesitation in stating that the results attained are, under all the difficult circumstances that prevailed during the year, wonderfully good. Such results can only be achieved by constant care and close application to business, and in this respect I can claim that the Union Cold Storage Company is second to none in the energy of its directors, in the efficiency of its management, and in the whole-hearted and untiring co-operation of the whole staff throughout all our branches.

The capital increase made in the early part of 1920, to which I was able to allude at our last annual meeting, now appears for the first time in our balance-sheet. You will remember that this took the form of a further issue of 700,000 10 per cent. cumulative "A" preference shares and the issue of 2,000,000 7 per cent. preference shares of £1 each. The assets acquired exceeded considerably the amount of the new capital raised, and this is reflected in the amount of outstanding creditors and loans. Personally, I do not like an overspent capital account, and I am glad to tell you that we are in process of carrying out certain arrangements which will reduce these outstanding debts to a very much smaller figure. No new capital issue is contemplated at the moment.

REVENUE AND DIVIDEND.

If you will turn now to our revenue you will see that as a result of the year's working, and including the amount brought forward from last year, there is a balance available of £539,110. After paying debenture interest, dividends on all classes of preference shares, interest on specific mortgages, and making the usual reserve for depreciation, there remains a balance of £117,496, which will permit of the payment of the usual dividend of 10 per cent. paid on the ordinary shares, which is what we recommend, and will enable us to carry forward £87,496 to 1921, as compared with £71,716 brought in from the previous year. You will notice that for the year 1920 we have purchased and cancelled £54,127 debenture stock, and have reduced the specific mortgages by £20,800. The total amount of debenture stock which has been redeemed and cancelled to date is £535,333, and the total amount repaid to date on specific mortgage account is £98,750. These reductions in the amount of our indebtedness improve the position of the company materially. I do not think there is anything further in the accounts which calls for special attention.

From what I have already said, both to-day and on previous occasions, you will realise that year by year our progress has been both consistent and material; at the same time, I do not wish you to think that we do not have our difficult times, and I can assure you that the successful conduct of your world-wide business requires at all times quite exceptional care and foresight on the part of the management.

I can claim that we have established a reputation, and the "Union" is thereby able to attract by its known superior conduct of its business those trades which require the most reliable refrigerating facilities, and we all feel that it is one of our first duties to maintain and to further that reputation.

CURRENT YEAR'S PROSPECTS.

Having now reviewed our report and balance-sheet, and given you a few comments on our aims and methods, it only remains for me to add a few words concerning the current year. Ever since last autumn a pronounced depression has prevailed throughout the business world generally, which, as far as this country is concerned, was gravely accentuated by the industrial troubles of the early summer. It seems now at last as if wiser counsels are to prevail, and we all devoutly hope to see our domestic affairs settle down, and that business may revive and a real and lasting improvement may be established throughout the country generally. In spite of all the depression to which I have referred, I have pleasure in telling you that for the year 1921 to date our business continues to make the usual progress, and if it should again be my privilege to meet you next year and to preside at your annual meeting, I look forward with every confidence to being able to present to you satisfactory accounts for the year 1921.

The report and accounts were unanimously adopted, and the formal business was duly transacted.

GOVERNMENT RETURNS.

TREASURY BILLS BY PUBLIC TENDER.

Tenders for £60,000,000 in three months' Treasury Bills, dated from Monday to Saturday, Sept. 26th-Oct. 1st, were opened on Sept. 23, 1921, and the total amount applied for was £83,985,000. Tenders for Monday bills at 98 1/8 1/2 and above in full. Tuesday to Saturday bills at 98 1/8 1/2 and above in full. The average rate of discount was 3 1/8 1/2. The following table shows Treasury Bills by tender outstanding:—

Date and Duration of Bills, 1921.	Amount.	Applied for.	Average Rate of Discount.	Rate for Addition of Bills.	Tenders at Rates below receive.
Aug. 26 (3 months)	50,000,000	75,145,000	4 13 0-38	4 1/2	£98 1/8 1/2 (Monday and Tuesday bills) and above in full, and for Wednesday to Saturday bills at £98 1/8 1/2 and above in full.
Sept. 2 (3 months)	50,000,000	83,540,000	4 7 1-53	4	£98 1/8 1/2 (Monday to Saturday bills), about 80 1/2%, and above in full.
Sept. 9 (3 months)	50,000,000	73,835,000	4 1 6-36	3 1/2	£98 1/8 1/2 bills about 50% and above in full.
Sept. 16 (3 months)	45,000,000	71,075,000	4 0 6-33	3 1/2	£98 1/8 1/2 bills about 14 1/2% and above in full.
Sept. 23 (3 months)	60,000,000	83,985,000	3 19 11-31	3 1/2	£98 1/8 1/2 (Monday bills and above in full). Tuesday to Saturday bills £98 1/8 1/2, about 39 1/4%, and above in full.

The amount to be offered next week will be £50,000,000.

Outstanding with public	43,73,55,000	27,32,60,000
In paper currency reserve	61,26,00,000	60,00,00,000
Total	104,99,55,000	87,32,60,000
India Office, September 22, 1921.		

BULLION.

The gold movements to or from the Bank of England are no longer announced. For the week ended September 21, 1921, the stock of coin and bullion showed an increase of £6,583 compared with the previous return.

IMPORTS AND EXPORTS OF GOLD.

Gold Imported into the United Kingdom.		Gold Exported from the United Kingdom.	
Countries from which Consigned.	Week Ended Sept. 21, 1921.	Countries to which Exported.	Week Ended Sept. 21, 1921.
British W. Africa	31,644	United States	660,000
British S. Africa	718,678	Bombay, via other ports	15,000
British India	278,465		
Total values of import of gold	1,028,787	Total declared value of exports registered in the week	675,000

Messrs Samuel Montagu and Co. write on September 22nd as follows:—

GOLD.

The Bank of England gold reserve against its note issue is £126,594,805, as compared with £126,591,545 last week. There was a strong demand for India this week, and quite a large proportion of supplies was taken for that country; the remainder was reserved for the United States of America. After this week there will be no more supplies of South African gold in the market until October 3rd. Gold to the value of \$23,085,000 has been received in New York—\$12,000,000 from Germany, \$5,885,000 from France, and \$5,200,000 from London. Reuter states that the export of gold from the Transylvanian and Roumanian mines has been authorised by the Roumanian Government for a period of one month, provided a deposit in lei for an equivalent sum is made at the Roumanian Customs or at one of the Roumanian Legations abroad. The Chilean Minister of Finance has decreed that importation duties, warehouse rent, lighthouses and buoys, and consular fines will have to be paid in the future in the following way:—In July, 65 per cent. in gold and 35 per cent. in currency, with the corresponding recharge, and an extra 5 per cent. in gold each month till January, 1922, when 95 per cent. will be payable in gold and 5 per cent. in currency. In February and onwards the total will have to be paid in gold coin.

SILVER.

MACFARLANE AND ROBINSON.—The directors have declared an interim dividend on the two classes of preference shares, viz., 7 per cent. preference and 8 per cent. "B" preference, both less tax, for the half year to June 30, 1921 (payable September 30th), but have decided to pay no interim dividend on the ordinary shares at this time, but to await the result of the final accounts. Interim dividend paid to the ordinary shareholders last year was at the rate of 10 per cent. per annum, less tax.

THE IMPERIAL COAL STORAGE AND SUPPLY COMPANY, LIMITED.—Coupon No. 36 of the 5 per cent. first mortgage debentures will be paid at the London office, Threepenny House, 31 Bishopsgate, E.C. 2, on the 1st day of December 1921, at 16s in the £, and British income-tax at 4s 6d in the £ on the gross amount of the interest.

THE STERLING TRUST, LIMITED.—£240,000 "C" (Income) Debentures.—On and after October 1, 1921, upon surrender of coupon No. 61 and 62, he debenture, after October 1, 1921, upon surrender of coupon No. 63, ending December 31, 1921, will be paid at the office of Messrs. Glyn, Mills, Currie, and Co., 16 Lombard street, E.C. 3, at the rate of 85 per cent., less income-tax, by the company's bankers.

Mr Harry Kahn has accepted a seat on the board of the Cardinal Investment Trust, Limited.

We are informed that the firms of Blades, East, and Blades, of Abchurch lane, E.C. and Finsbury, and W. W. Sprague and Co., of Bread street hill, E.C., have arranged a fusion of interests as from October 1st next, and the two businesses will be converted into private limited companies under the titles of Blades, East, and Blades, Limited, and W. W. Sprague and Co., Limited.

Messrs McAuliffe, Davis, and Hope, chartered accountants, have removed their offices from 34 Bishopsgate to Winchester House, Old Broad street, E.C. 2. Telephone, London wall 718.

It is announced that the offer made by the Forestal Land, Timber, and Railways Company, Limited, to the shareholders of Messrs H. Renner and Co., of Hamburg, for the purchase of their shares, has been accepted.

To fill the vacancy on the board of the Phoenix Assurance Company, Limited, caused by the death of the late Mr John Large, Lt.-Col. E. R. A. Kerrison, C.M.G., has been appointed a director, that gentleman having been nominated by the board of the Norwich Union Fire Insurance Society, Limited, in accordance with the terms of the fusion between the two companies.

GOVERNMENT STOCKS, &c.

CHINESE GOVERNMENT 5 PER CENT. GOLD LOAN OF 1912.—The coupons due September 30, 1921, will be paid on and after that date in England at Lloyds Bank, Limited, 74 Lombard street, E.C.: Chartered Bank of India, Australia, and China, 38 Bishopsgate, E.C.: or at the British Bank for Foreign Trade, Limited, 48 Bishopsgate, E.C.

BANKS.

INTERNATIONAL BANKING CORPORATION (NEW YORK).—A cable has been received from the International Banking Corporation, New York, to the effect that a dividend for the half-year ended June 30th last has been declared at the rate of 24 per cent. per annum, payable September 30th next, while U.S. \$213,867.37 has been added to the amount of undivided profits, which will then stand at \$4,229,013.08.

MISCELLANEOUS.

BRITISH ELECTRIC TRANSFORMER COMPANY, LIMITED. — The profit for the half-year ended June 30, 1921, amounted to £51,983 as compared with £35,344 for the same period of 1920, and £21,415 for the first half of 1919.

PEARSON AND KNOWLES COAL AND IRON COMPANY, LIMITED.
The profits for the year ending June 30, 1921, after making all necessary provisions, amount to £78,919, and the balance brought forward from last year is £101,300, making a total available balance of £180,219. An interim dividend of 3 per cent. on the first preference, $3\frac{1}{2}$ per cent. on the second preference shares, and 5 per cent. on the ordinary shares, all less tax, amounting to £49,735, has been paid. The directors now recommend that a final dividend be paid of 3 per cent. on the first preference shares, $3\frac{1}{2}$ per cent. on the second preference shares, and of 5 per cent. on the ordinary shares, all less income-tax, making a total distribution of £99,470 for the year, leaving a balance of £80,750 to be carried forward.

ROVER COMPANY.—The report and accounts to July 31, 1921, show a net profit of £102,320, to which must be added £24,928 brought forward, making £127,248 available. A dividend is being paid of 10 per cent., less tax, absorbing £73,500, while £10,000 is put to reserve and £10,000 is being utilised to write off part cost of employees' canteen and sports club, while £33,748 is being carried forward.

SHEEPSBRIDGE COAL AND IRON.—The report to June 30, 1921 shows that the net profit amounted to £109,138. The balance brought forward from previous year was £33,561, making £142,699 available for disposal. Dividends of 7½ per cent., free of income-tax, are being paid on the ordinary and preference shares, absorbing £100,389, thus leaving £42,310 to carry forward. The report states that "the company's operations during the financial year have been seriously interfered with by the stoppage of the collieries on two occasions, one in October last, when the miners stopped work for three weeks, and the other from April 1st to July 1st. The second stoppage ensued on the cessation of Government control on March 31st, the men having refused to accept the terms offered by the coal owners. During the year, the rapid diminution in the volume of trade in the country was accompanied by heavy falls in prices. Not only was the demand for coal for export reduced to very small proportions, but other industries consuming large quantities of coal were seriously affected, and coal prices have fallen in consequence."

STAVELEY COAL AND IRON.—The report and accounts for year ended June 30, 1921, shows a net profit, including part of coal award of £232,740. The amount brought forward from previous year was £40,425, making £279,165 available. A dividend of 10 per cent., free of income-tax, absorbed £231,887, leaving £47,278 to be carried forward to next account. The report states that "the whole of the plant and machinery has been maintained in good working order. Production has been seriously interfered with by labour troubles."

STOLL PICTURE PRODUCTIONS.—The net profit of Stoll Picture Productions for the period ended June 30, 1921, was £35,858, less dividend paid on preference shares up to March 31st, leaving £29,321, which the directors propose to carry forward. The purchase of property at Cricklewood was duly carried out, and the building has been converted into a perfectly equipped studio for production of first-class pictures. With regard to an item in the balance-sheet "amounts receivable in respect of contracts, £215,485," the directors have taken into account only actual contracts booked against which they have debited the whole cost of production relating thereto, although in many cases further bookings will be made.

VICTORIA FALLS POWER.—The net profit of Victoria Falls and Transvaal Power Company for 1920, after providing for interest and premium on debentures, £183,892, and for depreciation and income-tax, &c., £409,940, was £173,161, plus £94,320 brought forward, making £267,482. A dividend of 5 per cent., less tax, on ordinary shares for the year was declared, and as the preference shares are entitled to share *pro rata* with ordinary shares in surplus profits distributed, the directors also declared further and final dividend of 4 per cent., less tax, on preference shares, carrying forward £92,481.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Favourable weather conditions have prevailed over the United Kingdom during the past week, so that good progress has been made in preparing the land for the new crops. Latest threshing returns confirm the good yield of wheat, while late-sown fodder crops are doing well, and in Eastern districts grass is fairly plentiful as a result of recent rains. Offerings of native wheat are coming forward less freely, consequently prices are inclined to harden on holders becoming more reserved. There is a good demand for best quality, also for seed purposes, fancy prices being paid for suitable samples, but as a rule values range from 59s to 65s per 504 lbs free on rail. Imported descriptions were dull and rates easier in sympathy with lower c.i.f. offers. No. 1 Northern Manitoba ex ship quoted 93s, No. 2 ditto 91s 6d, No. 2 hard winter 66s, ex ship per 480 lbs. Australian to arrive 74s per 496 lbs ex store terms, and Egyptian feed 70s per 480 lbs landed. In the forward market a slow demand prevailed, and prices were reduced, following lower advices from North America. Shipments were again on a liberal scale, principally from the United States and Canada, while imports into the United Kingdom were in excess of estimated requirements. Crop reports from the chief exporting countries continue satisfactory. Further rains have fallen in Argentina, India, and Australia, while the official estimate of the Canadian crop has been raised, and harvest reports are very favourable. The flour market remains quiet, and prices generally easier. London straight run was reduced to 61s, town households 59s, patents 65s, all English straights 54s, per sack delivered. Country straights 49s to 51s delivered on rail London. Im-

ported dull and lower. Canadian export patents 64s, ditto straights 60s, Kansas patents 61s, Australian 58s, and Chinese 50s per 280 lbs ex store. On c.i.f. terms, Canadian patents September seaboard offered at 55s, straights 51s, Kansas patents 58s, and Australian 53s per 280 lbs. Offers quiet and easier. Broad bran quoted 9 15s to 10, ordinary bran 8 15s to 9, middlings 12 to 12 10s per ton ex mill, bags included. Maize dull, and values on a lower basis owing to reduced forward offers. Yellow La Plata, ex ship, quoted 35s, ditto, landed, 37s, yellow African, landed, 37s to 37s 6d, white flat ditto 39s, landed, and American mixed 36s 6d, ex ship, per 480 lbs. In the cargo section a dull tone prevailed and rates appreciably lower. Plate cargoes, loading, sold 36s 6d, September 15th-October 35s, October-November 38s, part cargo Moldavian, afloat, 37s per 480 lbs. Barley dull and weak. English steady and malting ranges from 65s to 90s, grinding sorts 60s to 65s, Californian, ex ship, 47s to 55s, Morocco 43s to 44s, landed, per 448 lbs. No. 3 Canada Western, ex ship, 43s, No. 4 ditto, landed, 43s 6d, Canadian feed, landed, 40s, and American feed, landed, 38s 6d per 400 lbs. Scotch pearl barley 22 to 26 per ton. On c.i.f. terms a part cargo of Dan-Bess-Kustendji, afloat, sold at 39s per 400 lbs. Parcels of superior Californian, arrived, sold 44s to 43s 6d and 45s, afloat 44s to 44s 6d per 448 lbs. Oats quiet and values weak. English ranges from 30s to 38s as to quality and description per 336 lbs. Of imported, Plate quoted 27s 9d to 28s 3d, Canadian 32s to 33s, Chilean 29s to 29s 6d per 320 lbs, landed terms. Oatmeal in moderate request, and English reduced by 30s per ton. English all cuts 22 to 23, American 23 to 23 10s, ordinary Scotch 25, American rolled oats 24, and flaked oats 26 to 27 per ton. Beans quiet. English springs 60s to 85s, new winter 53s to 56s per 532 lbs. China horse beans 9 to 11 per ton. Peas slow. English Maples 80s to 95s, Duns 60s to 65s, split 118s to 120s per 504 lbs. New Zealand blue 26s to 27s, and Dutch blue 27s to 30s per cwt. Homeward grain freights dull, and rates moved in a further downward direction. From the River Plate 22s 6d was paid up river, October 1st-20th to United Kingdom-Continent, with 30s indicated for December. Montreal to United Kingdom quotes 4s 9d to 5s, Northern Range 4s 6d to 4s 9d per qr, with proportionate increases to Continent and West Italy. North Pacific paid 56s 3d to 55s wheat, October-November, to United Kingdom-Continent. India dull, and 30s the nominal rate on dead weight. Australia quotes 67s 6d, with 65s the nearest obtainable. South African maize paid 37s 6d one, and 38s 9d two ports discharge United Kingdom-Continent. Danube dull, and rates weak at about 17s 6d ton United Kingdom-Continent, with Mediterranean discharge at 5s ton less money. Other markets nominally unaltered.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1921-22, contrasted with 1920-21, 1919-20, and 1918-19.

IRON, STEEL, AND COAL.

Our Glasgow correspondent writes:—While not wholly unexpected, the action on Tuesday of Scotch bar iron makers in reducing their quotations for all sizes and qualities by £2 a ton came somewhat as a surprise to consumers, who, however, will substantially benefit, as they have no stocks in hand. The basis price will now be £14 a ton delivered Glasgow, and that for both home and export business, the latter being "freed" (for the first time for many months), but, for the time being, the common selling figure may also be taken as £14. With this latest decline of £2 a ton, the fall in crown bars since the year came in amounts to £13 a ton, and the comparatively low rate now fixed may be looked for to help business; but on that point opinion is not very sanguine, for Continental competition remains very keen, with values some pounds sterling a ton under even the new level. Advices from Belgium, especially, encourage the expectation that competition from that market is easing—from the facts that producers there have sold heavily ahead, that they cannot give general deliveries as promptly as was the case only recently, that they are beginning to be seriously inconvenienced by labour troubles, chiefly in relation to wages, and that the rate of exchange is moving in our favour. But too much reliance cannot be placed on these features. At the worst, it may be taken that under the new conditions our bar makers should be nearer the mark than they have been since the trade reaction set in, at which they can successfully hold their own in export markets, without which we really cannot get along. It is currently expected that steel-makers will at once make a "cut," more or less substantial, in their productions—as it cannot well continue that bars and ship plates should stand at an equality of price, £14. At the same time, steel-makers are strongly protesting that they are losing money at present rates for material. An inquiry into the position of the Scotch steel trade, as to its ability to bear an increased measure of local taxation, is this week proceeding in Glasgow, and at the sitting of the court on Tuesday it transpired that the latest quotation for Continental steel plates was £9 per ton, delivered into works in the Clyde area. The home manufacturers' price is, as already stated, £14, "on which there is a loss." This statement discloses a serious state, and how the difference of £5 a ton is to be overcome baffles those directly interested. Expert authorities argue that a reasonable adjustment may prove possible through a stiffening of the adverse influences (already specified) working on the Continent and from further reductions on this side of costs—in operating, in wages, and in coals. Home conference on the subject between employers and employed are to be held in the course of a week or so, with what result falls to be seen. There is a big volume of trade doing in the West of Scotland, thanks to the multifarious character of its business undertakings. The employed far outstrip the numbers of unemployed, and the distress, while acute, is not so widespread as in many other parts of the nation. Idleness and trouble is most pronounced in shipbuilding and some engineering relations; but even their prospects are not desperate, and will spin out fairly favourably for a period. Locomotive engineers are said to have secured some few fresh orders, and so have tube-makers, founders, and sheet makers. Pig-iron makers have been selling special brands for home account, and inquiries are in circuit for a big catalogue of material. A strong and hopeful feature disclosed in inquiry

circles is that buyers the world over are short of material, particularly raw, which means that a very moderate increase in consumption would tell immediately and favourably on the general trade and industrial situation. Fortunately fuel is plentiful.

Our Middlesbro' correspondent's report, dated September 22nd, is as follows:—Pig-iron: There is no change in the policy of our ironmasters to delay restarting their plant until raw material, fuel especially, has become cheaper. On the other hand, coal owners have not lowered their price of coke. Unemployment is acute. Prices are nominally as follows:—No. 3 Cleveland G.M.B. pig-iron, 120s per ton; East Coast mixed numbers hematite, 140s per ton. Manufactured iron and steel: Rather more enquiry for steel, but few actual orders. Foreign pig-iron and steel is still being imported, and has a paralysing effect on our local iron and steel industry. Steel ship plates, £14; steel ship angles, £13 10s; iron bars, £14; steel rails, £14 net. Iron ore: No sign of any revival in business. The few hematite furnaces running are getting deliveries on account of old contracts with an occasional fresh purchase.

Our Sheffield correspondent writes:—A recent survey of the local industrial situation shows that little or no progress towards recovery of normal conditions has taken place during the past six months. In fact, the volume of business to-day is rather less than before the strike. The steel industry is operating barely a third of its capacity. A good deal of business available in colonial and eastern markets is being lost because makers here are not in a position to finance large orders, a condition of which are credits of from six to twelve months. The assistance proffered by the Government in such cases proves to be more or less illusory. The financial difficulties of large concerns who have been running their works at a loss for nine months become more acute every week, and there is no present sign of an early revival of buying. The building of four battle cruisers will, however, bring a lot of valuable work to Sheffield, and owing to this prospect the outlook for the winter as regards unemployment is less threatening. A few firms are able to report the receipt of new business in crucible and mining steel, machine knives, and files, but the orders are individually inconsiderable. Goods are badly wanted in all parts of the world, but the question of payment checks trade. Makers of plate and cutlery are experiencing a lean time, as the customary revival in connection with the Christmas season trade has failed to materialise this year. Owing to the approach of winter there is increasing activity in the house coal market, and stocks are by no means large. Prices are steady. There is a rather better enquiry for steam coal and cobbles for inland consumption, but the aggregate sales are still relatively small. Export trade continues at a low ebb. The heavy stocks of slack coal are being reduced by lighting up of more coke ovens and the lessened production at the collieries. Prices are steady at the lower level.

CUMBERLAND IRON.

(FROM OUR WORKINGTON CORRESPONDENT.)

The process of recovery in the Cumberland hematite pig-iron trade is very slow, the reason, of course, being that the cost of production is too high to permit iron to be sold at the price at which users want it. Several reductions have taken place since the coal stoppage was ended, but iron is still considerably above the figure at which it is believed it will be readily saleable, and until, in fact, iron comes down to £6 per ton at works there is little hope that business will be forthcoming in such volume as to justify the lighting of as many furnaces as were in blast in February of this year. It is satisfactory to note, however, that one by one the obstacles in the way of an improvement in the position of affairs being brought about are being overcome. Wages readjustments are being arranged, both as regards the iron-ore miners and the blast furnace, and the former, after having been out of employment for over eight months, have accepted iron selling at £7 10s as the basis on which their scale will be calculated. And there is scarcely any doubt that fuel will shortly be cheaper. In Cumberland itself many of the collieries are standing idle, or are working short time because they cannot get rid of their smalls, the coking plants, of course, being unnecessary while so few furnaces are in operation on ordinary iron. East Coast coke is used almost exclusively for the low phosphorus iron which is being smelted at four of the furnaces that are in draught, and so the coal industry is doomed to inactivity as long as the depression hangs over the iron trade. It should be said that not all the special iron now being made is going into consumption. Some of it is being stocked, and the remainder is being absorbed by high-class steel makers in the Midlands. As for the ordinary iron, that is all required for the steel works at Workington, which are executing practically their first orders for basic steel rails. Steel-makers are far from well off for orders, but there is a prospect that the mills may be kept going three or four shifts a week for some time to come. There is only partial employment for the iron-ore miners, and those only of them who work at the pits which raise the low phosphorus ores.

MANCHESTER, September 22.

The tone of the market during the past week has improved. The turnover in yarn and cloth has not been distinctly larger, but demand has been on broader lines, and the outlook for spinners and manufacturers is brighter. India merchants are still harassed by the effects of the Gandhi agitation, but more requests have been received from Calcutta and Bombay for cloth quotations to be cabled out, and occasional orders have been booked. For China substantial contracts have been arranged in a well-known make of grey shirtings and sheetings. Considerable activity has prevailed for the Near-Eastern outlets in printing and bleaching styles, and inquiry of a more encouraging character is now coming through for South America. Goods in the home trade section have moved more freely. Prices have hardened in the yarn market, especially in fine counts, and an increased turnover has taken place in qualities suitable for home consumption. Business continues to be done in bundles for China, and cops are now attracting more attention for the Continent.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—The tone of the market is very well maintained, and unless anything unforeseen occurs to destroy the gradually returning confidence, steady progress should be made during the next few weeks towards an all-round revival in trade. At present the weakness of the position is seen in the lack of an adequate outlet for fully manufactured

goods, and it is hoped that the continued strength of the raw material market will induce wholesale fabric buyers to operate with a little more freedom. There are, however, some heavy stocks of pieces in manufacturers' and merchants' hands, and the low prices that have been accepted in recent months seem to have demoralised this section of the industry. Some fair weights of fine crossbred and merino tops are changing hands, and quotations are very firm, with average 64's quoted at about 3s 7d per lb. Worsted spinners are also finding more business, and most firms are now in a position to run machinery about four days a week. The bulk of the business is on export account, and Germany is by far the best customer. Prices of yarns are steady, and there is less disposition on the part of sellers to cut rates. Some manufacturers are finding more inquiry from overseas markets, but the home trade is quiet. In most cases orders can be executed from stock, and prices are much below to-day's cost of production. Home-grown wools are moving more freely, and in most qualities of fleece and skin prices are firm. The mohair trade is quiet, and only small weights of alpaca are passing into consumption.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

The firm finish of the Colonial sales seemed to please everybody, providing no reason for users in consuming centres to bring forward reasons for lower prices. Often an easy finish leads to a very unsatisfactory vacation, but this time there is nothing to lead anyone to look forward to an immediate set-back in values. There are those who are already emphasising the big weight of raw wool which is to be catalogued between now and the end of the year, and while there is bound to be some slight up-and-down movement, I am not looking for any serious setback in values, unless German trade and finance collapse. That seems to be the only doubtful quantity, many strongly asserting that the present artificial boom will eventually mean a collapse, after the order of that which took place in Japan, the United States, and this country last year. The fact should be remembered that Germany is not handicapped with big stocks bought at extremely high prices, as was the case in the three countries named, and the collapse in Germany would not mean anything like the serious loss that the slump has meant to the commercial world in this country and elsewhere. Dealing specifically with wool textiles, the slump caught everyone in this country, from the wool merchant to the wholesale and retail distributor of textiles, loaded with stock, whereas Germany has no stocks, her manufacturers rushing out to retailers everything produced with the utmost speed possible. There are still huge numbers on the Continent wearing paper suits whose wardrobe has not been replenished for years, while the state of the population of Russia and the Balkan States is one which words are utterly incapable of conveying to the average reader's mind. I am not, therefore, pessimistic in regard to the future course of trade in Germany, and while nobody likes to see the value of the mark in the neighbourhood of 400 to the £, Germany will still be a force to reckon with in the wool markets of the world in the near future.

The publication last week-end by the directors of B.A.W.R.A. of a comparative statement of stocks of wool at August 31st from 1918 to 1921 proved of real interest to the trade. They show clearly that during the past three years slightly more merino wool has been consumed than the quantity grown, while in medium and low-combing crossbreds, and in slined and scoured crossbreds, there has been a substantial increase in the world stock as compared with 1918. That is what one could reasonably expect.

Directly the war finished there was naturally a cessation in the tremendous consumption of crossbred wool, which was being used in the production of khaki, blankets, &c., the entire consumptive world swinging at one stroke on to merinos. At the same time, I think that in the aggregate there is to-day a larger consumption of crossbred wool than at any time since the war, and, given better conditions in Europe, consumption of crossbred wool will continue to expand. I see across the Atlantic that the tendency is in this direction, and there certainly is a larger production of crossbred yarn in Bradford and district than at any time since the armistice.

VEGETABLE OILS AND OILSEEDS.

(FROM OUR CORRESPONDENT.)

A very marked change has come over the linseed market in the past few days. The easier tendency noted last week has become accentuated, and values both of spot seed and for shipment have declined rather sharply, the contributing causes being heavy shipments from and general rains in Argentina, coupled with a sluggish demand for oil.

In addition, the market has been taken somewhat by surprise by the Argentine export surplus being officially reported at 252,000 tons on September 12th, which is at least 100,500 tons more than importers on this side had calculated upon. Approximately 979,800 tons had been shipped from Argentina between January 1st and September 17th, as follows:—To the United Kingdom, 408,800 tons; Continent, 417,000 tons; and North America, 154,000 tons. The yield was estimated at a million or more tons, so that it is evident that either the estimate has been exceeded or the carry-over from last crop was fairly substantial, or both. Plate linseed, in the absence of support, was marked down to £18 10s spot and September-October, and £19 for later shipment, without finding buyers. Largely in sympathy with seed and the failure of demand, raw linseed has declined to £35 for spot to December, and £36 January-April, ex Hull mill, and at these figures the market was weak and inclined lower.

Egyptian cotton seed, owing to few offers from Egypt, is firm, and, if anything dearer. Recent arrivals of cottonseed have relieved the scarcity of oil, values of which are slightly below last week's highest. Soya beans have also come to hand in large quantities after a long interval, and the oil product is now competing with cotton oil. Rape, ground nut, palm kernel, and castor oils are only in poor request, but quotations are generally upheld.

Oilcakes continue a poor trade. Linseeds are in better supply, but there is no disposition to press sales.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

The hide market remains very firm, and tanners regard the position with anxiety, as they consider values of raw stock are not on a sound basis. Best ox sold from 8½d to 10½d at the Thursday's Bermondsey auctions, and cows at 8d—showing no change on last high prices. Calf were again firmer, heavy selections showing ½d to ¾d advance, and lights ¾d to ¾d advance. The strong position of domestic hides is reflected in foreign; stocks are now getting lower, as tanners have been buying freely of late at advanced rates. South Americans have been selling from 10½d to 12d, and higher rates are expected. The American market is cabled as stronger, with best heavy packers still selling at 14 cents.

There is a better tone in the leather trade, and quite a good business has been done this week in Bermondsey. Advanced prices for 12-14 lb bends have been obtained, tanners standing very firm on quotations in view of the firm prices of hides. Low-grade stock is also demanded for the "stunt" footwear now so freely advertised at low prices. Upper leather is selling better, but in low grades for the same reason. Some stir has been caused this week in trade circles by the news that the Government are offering the 27,000 bales of E.1 kips they hold to factors. I hear that about 1,500 bales are already sold on a basis of about 16d per lb. The remaining stock is of low grades, but the sooner this block of leather is absorbed the better for the trade.

Shoe manufacturers are rather busier, although I regret to state that orders received are mainly for the cheap and nasty kind of footwear. Makers of football boots are very busy, but the fine weather seems checking the demand for stout boots. Unemployment is still prevalent in the shoe centres, and all sorts of schemes are being considered by the authorities for dealing with the question.

PORTLAND CEMENT.

The following quotations for Portland cement are supplied by the Cement Marketing Co., Limited:—Best English, complying with British standard specification, delivered in London area—in full van, or motor loads to site, 83s 6d to 89s per ton; alongside in

River Thames up to Vauxhall Bridge in full barge loads (80 tons minimum), 76s 6d per ton. Extra on above prices for the following special brands:—

"Blue Tiers," a fine-ground slow-setting cement, and "Red Tiers," a fine-ground quick-setting cement, 3s per ton.

"Ferrocrete," a cement prepared to meet the requirements of specialists in ferro-concrete constructions (in 20 sacks to the ton), 10s per ton.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, September 23.

Taking the markets as a whole, there was some increase in the amount of business doing, and while prices for some commodities suffered a further decline, more steadiness was observable in others. The question of rates of exchange, however, still proves troublesome to traders in general. In the case of jute, a marked advance is registered, with quite an extensive business effected in manufactured goods during the week. This is the outcome of the final estimate of the crop being from 4,000,000 to 4,100,000 bales, or in other words, only half a normal outturn.

SUGAR.—Market again lower for all descriptions, and trade at the moment moves rather quietly, while pressure to sell American granulated during the greater part of the week formed a feature. Tate's cubes sold 57s 3d to 58s 3d; crushed, 54s; nibs, 54s 6d; granulated, 52s 6d to 53s; caster, 56s 6d to 57s; pieces, 41s to 45s. Lyle's granulated, 52s 6d to 52s 9d; yellow crystals, 48s. Crystallised West India ranges from 40s to 47s, as to quality. American granulated, spot, sold, 52s to 51s 6d and 51s 9d; ditto, afloat, 24s 6d to 24s, c.f. and i. terms; white Java, arrived, steamer, at 23s to 22s 6d, c.f. and i. Belgian crystals, November-December, done, 19s 6d to 20s, f.o.b. Antwerp. Dutch granulated, prompt, 24s; and Czechoslovak granulated and crystals, prompt, 24s, f.o.b. terms. Brazilian, basis 96 per cent., October-November, sold, 16s 6d; and ditto, basis 80 per cent., at 11s, c.f. and i., United Kingdom. Cuban stock stands at 1,205,000 tons, against 301,000 tons same time last year. Stocks in the three chief ports of the United Kingdom, 135,000 tons, against 127,400 tons same time last year.

COFFEE.—There was a steady inquiry, all the finer parcels being chiefly favoured and prices ruled steady. Some Blue Mountain Jamaica, sold, small sizes, 90s to 118s 6d; medium, 135s to 202s 6d; bold, up to 210s; good bold Honduras, sold, 116s 6d. Future delivery dull, and December, sold, 49s 3d.

COCOA. In quiet support, though price changes are not of much importance. Butter steady at 1s 10d per lb.

TEA.—During the week offerings in auction totalled 41,160 packages. Indian. With active and well-distributed competition, prices ruled firm to rather dearer. New season's Assam brought stiff rates. Of Ceylon 26,100 packages were submitted, and here again firm to slightly higher rates were secured under brisk biddings. New season's Assam broken orange, sold for fine, from 7s 11d to 8s 2d per lb in bond.

RICE.—Market dull and featureless. Two stars Rangoon, spot, 22s 6d; ditto, afloat, 21s; No. 1 garden Siam, afloat, 21s 6d; No. 1 Saigon, September-October, 17s 9d; Burma broken, 1A., October-November, quoted, 16s 6d; 2A., 16s; Siam C1, October-November, 15s; C3, 14s 6d. Beans quiet. Rangoon hand-picked, spot, 14s; October-November, 13s 6d. Madagascar butter beans, all white new crop, spot, 27s; old, 24s. Japanese peas, October-November, sold, 35s.

SPICE.—Pepper market rather unsettled in forward positions, and trade ruled quiet. Fair black Singapore, spot, sold, 4d; ditto, October-December, steamer, 3½d to 3¾d; Aleppy, spot, quoted, 4½d; Tellicherry, 4½d; white Singapore, spot, 8½d; Muntok, ditto, 9d; ditto, October-December, sold, 8½d to 8¾d and 8¾d. Cloves quiet. Fair Zanzibar, spot, sold, 1s 3d; October-December, steamer, 1s 2½d to 1s 2d. Pimento, spot, quoted, 2½d. Tapioca generally slow. Fair quality flake, spot, sold, 1½d per lb; ditto, September-November, steamer, London, 15s; September-November, Havre, 16s 6d. Fair Penang seed, spot, 21s; September-November, London, 18s 6d. Small sago, spot, 27s to 28s; sago flour, September-November, Liverpool, sold, 15s 3d; and ditto, Rotterdam, 16s 9d. Desiccated coconut slow. Spot lots sold, 51s 6d to 51s; and afloat, 48s. Nutmegs firm, and a moderate demand prevailed this week, while stocks on hand are very small.

FRUIT.—The market for currants remained quietly steady. Pyrgos, 51s to 52s; Patras, 56s to 64s. New Cape sultanas, 102s 6d to 110s. New crop Valencia raisins, on spot, 134s to 135s for halves. Cape, new, 80s to 100s. Dates firm. Hallowee, spot, 34s; Khredrowie, 22s; Siar, 17s 6d.

THE MONEY MARKET.

OWING to the end of the quarter, and the further reduction in the Bank of England's holding of securities, money has been in keener demand, and applications to the Bank were found necessary on Thursday for loans at 6 per cent. Discount rates remained easy, with a general expectation that money will be very plentiful again after the turn of the month, when interest payments and the meeting of maturing Exchequer bonds are likely to necessitate a further creation of credit. An announcement, however,

JUTE.—The market steadily hardened during the week in face of very reserved offers, and which chiefly consisted of secured parcels. Final estimate totals 4,052,000 bales. Condition in Northern and Eastern Bengal fairly satisfactory, but Daisee district poor. Native first marks assortment, old crop, subs, September-October, sold, £33 10s; lightning subs, ditto, £29 10s; native firsts, spot, Dundee, £33 to £34 10s; tops of ditto, £37; Daisee No. 2, spot, Bremen, £35; heart subs, natives, September-October, £17 5s; new crop, first grade, November-December, Dundee, £36 5s. Grey Daisee No. 2, spot, Dundee, £50; 10-ounce Calcutta hessians, spot, London, 31s; 8-ounce, 25s 6d; A twills, 85s; B ditto, 73s.

HEMP.—Manila quietly steady. J grade, September-November, sold, £37 10s; K, £35 10s to £36; L, £35 5s; M, £31 10s. New Zealand nominal. Fair, September-November, quoted £35 15s.

SHELLAC.—Market rather irregular forward. T.N., spot, 330s; October, sold, 330s to 320s, and 325s; December, 330s to 322s 6d to 327s 6d.

COPRA.—Steadier, with sellers more reserved this week, and afloat parcels were well absorbed. F.M.S. Straits, August-October, Rotterdam, sold, £32 15s to £33 5s; September-November and October-December, £32 10s to £32 15s. Ceylon, September-November, London, quoted £35. South Sea Islands, afloat, sold, £32 to £31 5s, as to position. Cebu, September-November, Hamburg, sold, £32. Palm kernels, October-December, Liverpool, sold, £22 12s 6d to £22 5s.

RUBBER.—In better demand, partly on American account, and prices are steadier. Plantation crepe, spot, sold, 8½d to 9½d; October-December, 9½d; January-March, 10½d. Sheet, spot, sold, 8½d to 9½d; October-December, 9d to 9½d; January-March, 9½d to 10½d. Fine hard Para, spot, 1s 1d. Caucho ball, 7d per lb.

OILS.—Lined lower. Spot, net, naked, 34s; September-December, 34s 3d; January-April, 35s 3d. Rape quiet. Crude, spot, 54s; refined, 61s. Cotton quiet. Crude Egyptian, 46s; Bombay, nominal; common edible, 52s. Chinawood, Hankow, spot (barrels), 90s; and shipment, 69s. Coconut steady. Ceylon, spot, 55s; September-October, 54s 6d; Cochin, ditto, 58s. Soya dearer. Oriental, barrels, ditto, sold, 44s 6d. Japan fish steady. September-October, cases, 24s. Cod firm. English, spot, 30s to 32s. Groundnut quiet. English crushed, naked, spot, 55s; deodorised, barrels, 68s. Turpentine firmer. American, spot, 68s; October-December, 69s; January-April, 71s. Rosin firm for common grades. American, grade-B, 17s; F, 17s 9d; G, 17s 9d; K, 18s 6d; WW, 23s; French, F/G, 16s; H, 16s 6d; WW, 17s 6d; extra pale, nominal. Petroleum quiet. American, standard white, 1s 4½d; and water-white, 1s 5d per gallon.

OILSEEDS.—Lined: Market very unsettled, and prices on balance appreciably lower for Plate. Indian largely nominal. Calcutta, arrived, sold, £19; September-October, £20 10s, value. Plate, spot, Hull, £17 15s; afloat, £17 15s; September-October, sold, £17 to

£16 10s and £18; October-November, £17 5s to £16 15s and £18 5s; November-December, £18 10s; January-February, nearest, £18 15s. Rapeseed quiet. Toria, September-October, quoted £22; real bold Ferozepore quoted £21 15s; brown Cawnpore, £20 15s. Cottonseed quiet. Egyptian black, September, quoted £15; and white, £14 10s. Bombay, September-October, sold, £12. Gingly firm. Chinese, September-October, Continent, £31 10s, paid. Castor, Bombay, September-October, £21; ditto, to New York, August-September, sold, £20 5s. Ground nuts quiet. Coromandel, machine-dried, September-October, £28 10s to £29 10s; Chinese decorticated, f.a.q., ditto, £28 to £29 per ton.

METALS.—Tin: The market exhibited slight irregularity forward last Monday, while cash changed hands at £154 10s to £154 5s, three months' £157 to £156, since improving to £156 12s 6d. An upward tendency prevailed until the middle of the week, dealings being on a fair scale, these positions settling down, however, below the best at £156 and £158 5s respectively. Thursday's market opened firmer, but a setback in prices followed under selling desire, cash being sold at £156 15s to £156 5s, and three months' £159 to £158 5s. At Friday's session cash realised £156 15s to £156 5s, early October £157, and three months' £158 10s to £159, while finally sold at £158 5s. Copper opened rather dearer at the week's commencement, but the points were not maintained as business proceeded, standard cash being registered at £68 7s 5d to £68 2s 6d, and three months' £69 5s to £68 17s 6d. A gradual downward movement subsequently ensued, while these dates by Wednesday left off at £67 17s 6d and £68 12s 6d, Thursday's market manifested no material change. At Friday's session business continued on a limited scale. Standard cash changed hands at £67 15s, early November £68 5s, and three months' £68 12s 6d. Electros, £72 to £74; best selected, £68 10s to £70 10s; strong sheets, £103. Wire bars, £73 to £74. Cash realised £67 17s 6d and three months' £68 10s. Lead easier, at £22 15s to £22 10s, as to position. Spelter firmer, at £45 7s 6d to £45 10s. Antimony: English regulus, £37 to £40. Aluminium, home trade, quoted at £120; export, £125.

that the Treasury bond issue is to be replaced by a new series, offered at 98 instead of 97, will certainly have stimulated the sale, which has already been very large, owing to intelligent anticipations by investors and stags; and the need for the manufacture of fresh credit will to that extent have been reduced. On the other hand, the Government's intentions with regard to unemployment measures seem likely at least to stimulate the kite-flying industry. Money was plentiful again yesterday, but the high rate at which the Treasury bills were allotted was rather a shock to the market, which quoted $4\frac{1}{2}$ per cent., very nominal, for January bills.

	Sept. 30, 1921.	Sept. 23, 1921.	Sept. 16, 1921.	Sept. 9, 1921.	Previous Rate and Date Changed.

* Additional to those offered by tender the preceding week.

The Bank return showed a further improvement. Quarterly needs had expanded the note circulation by £566,000, and with a small decrease in the gold stock, reduced the Reserve by £569,000. But Government and Other securities declined by £6,330,000, and £4,626,000 respectively, and so the total deposits were reduced by 11 $\frac{1}{2}$ millions, 9 $\frac{3}{4}$ of which came off Other. The circulation of currency notes declined by £1,530,000 to £314,381,900, which includes £1,880,700 for notes called in, but not yet cancelled. The fiduciary issue is £264,551,200, or £53,004,000 below the maximum.

Revenue for the half-year ended September 30, 1921, amounted to £456,163,160, as compared with £619,299,498 in the corresponding period of 1920. This is a net decrease of £163,136,338. Customs show a decrease of £4,516,000, while Excise records a gain of £4,579,000. Stamps show a decline of £5,340,000. Property and income-tax at £140,057,000 is an increase of £13,702,000, but Excess Profits Duties, &c., are £82,336,000 lower. Under "Miscellaneous" a decline of £96,274,483 is recorded. Expenditure amounts to £497,993,849, as compared with £541,671,530, the total estimated expenditure for the current year being £1,130,204,000. The floating debt on September 30, 1921, stood at £1,320,590,000, an increase of £45,260,000 since the commencement of the financial year on April 1, 1921.

The following table shows public income and expenditure for the week ended September 24th:—

RECEIPTS.	Min. £	EXPENDITURE.	Min. £
From Revenue	14,986	Supply Services	7,700
		Interest on Debt	1,826
		Sundries	284
		Taken from Exchequer Balances ..	911
		Debt Reduction	4,465
	14,986		14,986

These operations decreased the National Debt by the sum of £6,268,312, and caused the following changes:—

	Min. £		Min. £
Treasury Bills	+ 4,404	Bank of England Advances ..	— 21,750
Treasury Bonds	+ 14,750	Advances by Public Departments ..	— 1,241
Civil Contingencies Fund ..	+ 1,250	Depreciation fund	— 500
National Savings Certificates ..	+ 150	Surrenders of Bonds, &c.	— 513
		Sundries	— 650
		Other Debt	— 2,118
	+ 20,554		— 26,172

Savings Certificates to the extent of £650,000 were issued for housing. Property and Income-tax yielded £3,083,000, while Customs and Excise brought in £7,802,000. It will be noted from our table that Treasury bonds were sold to the extent of 14 $\frac{3}{4}$ millions.

Interest in the exchange markets during the week has been largely focussed on the German mark, which has undergone violent and rapid fluctuations, from round 408 last Saturday to 490, which figure was touched on Wednesday. A better tendency was, however, evident on Thursday, when the closing quotation was 458. The

position remains very obscure, and the abolition of the sanctions which is now announced appears to throw an interesting light on how the German position is viewed by France. Apart from other factors, the removal of restrictions in the Rhine area should be reflected in German trade recovery, with a consequent temporary steadying effect on the mark, but in considering future movements, the general position and heavy weight of reparation payment must remain the ultimate important factors. The quotation at the time of writing is 437, with a falling tendency, while forward quotations are 1 $\frac{1}{2}$ marks per month below spot. Dollars opened the week at 3.73, and remained a fairly firm market round this rate until Thursday, when the rate broke to 3.71, closing at 3.71 $\frac{1}{2}$. There was a recovery from this figure, yesterday's midday quotation being 3.72 $\frac{1}{2}$. New York futures are now quoted $\frac{1}{2}$ cent, as compared with $\frac{1}{2}$ cent per month over spot last week. The Paris position is fraught with possibilities, and the steadiness of the rate fractionally over 52 does not reflect the nervousness with which the market regards future movements. To the uncertainty of political influences has been added the disturbing influences of the heavy speculations which have been disclosed. The rate yesterday was round 52.05, with future quotations 4 centimes per month above spot. Brussels, though still influenced by the French movements, shows more sign of independent fluctuation. The spread between the two rates, which at one time last week had practically run off, has again increased to about 90 centimes at 52.95. The forward rate is unchanged at 8 centimes. Movements in Dutch florins have been irregular, last Saturday's quotation of about 11.74 $\frac{1}{2}$ falling away to 11.57 $\frac{1}{2}$ on Wednesday. A sharp reaction followed on Thursday, when the closing quotation was 11.68, and the rate yesterday was round 11.71. Futures were quoted round the same rates as last week. The Italian lira has continued its gradual depreciation, the rate 93 $\frac{1}{2}$ at the time of writing showing a rise of 3 lire on last week's figure. Contrary to what might be expected in view of existing conditions, the Swiss rate at 21.50 has moved slightly against this country. This movement may be largely accounted for by the fact that the nationals of less favourably situated countries appear to be using Switzerland as a custodian of their reserve wealth. Spain, though slightly irregular, has moved against this country on balance, yesterday's rate showing a fall of 7 centimes. In the Scandinavians, Norway has now gone over 30, and the tendency seems still towards rising rates. On the other hand, both Swedish and Danish kronen have appreciated slightly in value at 16.78 and 20.88 respectively. Escudos, after dipping to 5 $\frac{1}{2}$ d last week, have shown considerable recovery. The rate has risen steadily, and is now once more round 7d. Among the countries with heavily depreciated currencies, Austria and Poland again show heavy tumbles. The Vienna rate reached 6,000, while Warsaw touched the new record of 25,000. There was an improvement yesterday, however, when the quotations were 5,600 and 23,000 respectively. Prague and Helsingfors have to a less degree moved in a similar direction, and are now quoted round 340 and 260 respectively. The silver exchanges have responded to the increased price of silver, Hong Kong at 2s 11 $\frac{1}{2}$ d and Shanghai at 4s both showing an increase of almost 2d on the week. The tone of the South American market has been generally firm, Buenos Aires and Valparaiso especially being quotably higher on the week at 46 $\frac{1}{2}$ d and 33d.

A SUMMARY OF NATIONAL FINANCE.			
FINANCIAL YEAR, 1921-22 (TO DATE) APRIL 1 TO SEPTEMBER 30, 1921.			
	£		£
Total spent	497,993,849	Raised by revenue ..	456,163,160
Dec. in balances	262,082	Net borrowings	41,568,607
Total	497,731,767	Total	497,731,767
ESTIMATES FOR YEAR 1921-22.			
	£		£
Ordinary Receipts ..	1,058,150,000	Ordinary Expenditure ..	974,023,000
Special Receipts ..	158,500,000	Special Expenditure ..	65,705,000
Total	1,216,650,000	Total	1,039,728,000
		Surplus*	176,922,000

* Owing to liabilities which could not be precisely calculated, it was estimated that the final balance would not exceed about £80,000,000.

EVENTS OF THE WEEK.

SEPTEMBER 24TH.—Mr Churchill at Dundee on trade depression.

SEPTEMBER 26TH.—President Harding opens unemployment Conference at Washington.

SEPTEMBER 27TH.—Publication of Soviet reply to Lord Curzon.

SEPTEMBER 28TH.—Prime Minister's reply to Mr de Valera published.

SEPTEMBER 29TH.—Budget speech in House of Representatives of Australian Commonwealth. Prime Minister to consult bankers and economists on foreign credits and exchange.

Prices on the Stock Exchange were unaffected by Thursday's decision to make no change in Bank rate, though a lowering had been expected earlier in the week. The gilt-edged market has been heavy. Foreign bonds were irregular, and Home Rails more depressed than ever. Further liquidation in oil shares has lowered prices.

The cotton market has shown a hardening tendency, and the trade outlook is said to be improving. Wool prices rose at the Liverpool sales, but the piece-goods section remains quiet. There is no improvement in the iron and steel trades reported from Middlesbrough and Sheffield, and there has been a check in the placing of new orders in Glasgow, owing to the threatened revival of labour trouble. The hide and leather trades both show an improvement, and the timber market has shown more activity, but the oils and oilseeds markets have been dull.

Reports on the various markets from special correspondents will be found in later columns.

THE GAPS IN THE MACHINE.

We have to wait till next week to hear what the Government means to do about unemployment, and we must wait, as usual, with hope tempered by apprehension. Every allowance must be made for a set of not very great men struggling with enormous difficulties, even though we must admit that these difficulties have largely been created by their own actions. The core of the whole problem lies in Central Europe's inability to produce and consume as of yore, with the result that the world's economic machine has a gap in its working which puts it out of gear. For this gap the action of the Supreme Council is largely responsible, for it arises chiefly out of the long delay in arriving at a peace settlement, and out of the terms of that settlement when finally hatched. Central Europe was necessarily impoverished, but if we had had a real peace

and a quick peace, the task of recuperation would have been infinitely easier. As a member of the Supreme Council, the Government certainly had an extremely difficult task, but it had helped to increase its difficulty by its fatuous promises to the country during the General Election of 1918. These promises also helped to produce the obstinate resistance of the manual workers to the necessities of the economic position, which is the second great cause of the dislocation which has resulted in the unemployment with which the Government is now going to try to struggle. It is reaping its own harvest of tares, and it has to do so with the help of a nation that is over-taxed both by the State and by local authorities, and is thoroughly disgusted by the manner in which the Government has spent, and is spending, its money. As to the schemes to be expected, we can only hope that it is not true that the Prime Minister means to try to solve unemployment by "beautifying" the outskirts of London with a circle of garden cities. It would evidently take many months before such a scheme could be started, and its effects would almost certainly be most unpleasant. In the meantime, experts are being dragged up to Gairloch for week-end discussions concerning the need for credit expansion. Not long ago the banks were lectured by Mr Chamberlain for creating credit and so defeating the Government's efforts at deflation. Now it seems they are to be asked to expand. If inflation is to provide the means for meeting unemployment, it is perhaps better that it should be the comparatively mild variety that the ordinary banks produce rather than the strong and heady vintage that the Bank of England uncorks. But the credit schemes so far officially organised have failed almost completely to stimulate our exports, and Mr Leaf, chairman of the County Westminster and Parr's Bank, was reported in the *Daily Mail* of last Thursday to have told it that though the banks are quite anxious to extend their loans, "the opportunity does not present itself," so that there seems to be already more credit available than is wanted. In an article on a later page our Labour correspondent quotes a suggestion that the Government should "place orders with British manufacturers for staple commodities for which there is an ascertained demand and export these goods abroad on credit terms." But how long would it take to get such a scheme to work? Mr Winston Churchill told his constituents at Dundee last Saturday that what is immediately needed is "a medium of international exchange which would be unbiased by war obligations, and would secure, at any rate temporarily and during the period of recovery, sales of goods between nations on a natural and normal basis." Perhaps Mr Churchill knows what he means, but the ordinary mind is left wondering whether he is really asking for a League of Nations' note issue, and, if so, on what it would be secured, who would take it, how its issue would be regulated and apportioned, and how it would solve the real difficulties of the position. Sir Edward Mountain has made a suggestion for a syndicate of bankers and insurance companies to grant credits, on behalf of the Government, charging a small premium to exporters. It is possible that such a scheme might be more expeditious and successful than the Board of Trade's, but,

like the other proposals mentioned, it does not strike the true knot of the problem, which is to revive real, not spooned, buying power.

All the suggestions so far made, as far as we have been able to master them, leave out the real need for encouraging the trade of impoverished Europe by freeing it from fiscal and political shackles. This need was urged a year ago at Brussels, has been acknowledged by the Supreme Council, and emphasised by a memorial signed by our leading bankers. But the Government has recognised it by the Reparation Recovery Act and the Safeguarding of Industry Act, and has now been a party to checking Germany's trade and so helping the depreciation of the mark, by insisting that though the economic sanctions are to be dropped—as common honesty demands, since they were imposed to force Germany to accept the indemnity ultimatum, which she has done—yet an inter-Allied Commission is to supervise the granting by Germany of export and import licences. The amount of delay, friction, and hindrance to trade involved by this stipulation is as obvious as the fact that until Germany recovers Europe cannot do so, and the gap in the machine that is the great international cause of unemployment will continue to yawn. In the meantime it has been announced that there is to be no new Committee to revise the work of Lord Cunliffe's, but the Sound Currency Association is organising an International Monetary Conference to be held in London early in October, and it was hinted by Mr Churchill that a conference on the "establishment of normal exchanges" may possibly follow the one which is to discuss disarmament at Washington.

Besides these international difficulties, there is the jarring of the economic machinery due to the belief of labour that it does not get a fair share of the goods that it helps to produce. It has suspicions that are, in view of the past attitude of many employers, natural enough, and can only be dispelled by fair argument and demonstration, based on facts that are beyond dispute. Company accounts as now presented do not give these facts. In this connection some very interesting remarks were made by Sir Josiah Stamp, in a speech delivered yesterday, to a conference of incorporated accountants at Liverpool, on the relation of Accountancy to Economics. After an amusing description of the difficulties encountered by those who try to apply economic abstractions to practical life, Sir Josiah brought the following "serious indictment" against accountants:—"Scientific accountancy has now been developing for some 50 years, but I cannot trace that it has yet made a single substantial contribution to economic science over its own field of the analysis of the results of industry, although it has practically a monopoly grip of the required data. Can any of us at present hazard a guess as to how many marginal businesses there are in a trade, and as to how far profits over and above economic interest arise through disadvantages in situation, excessive capital expenditure, excessive distribution costs, and inferior organisation respectively? This is only one of the immense additions that might be made in applied economics, if accountants, as the trustees of valuable economic data, would free themselves from their present doubtless inadvertently 'dog-in-the-manger' position. They have the figures; other people cannot use them, and if accountants will not, then we get nothing: economics continues its abstract deductions, and business blunders on by individual instinct. The only considerable body of facts of which I am aware in this country relating to the results of businesses and aggregated on a sufficiently wide scale to justify any inference is the *Economist's* quarterly summary of industrial and trading results. Here a gallant struggle is made, working on such intractable material as the final published balance-sheets, to reduce the results to comparable form to aggregate them and extract the facts of general application. The series is extremely valuable, but every accountant will appreciate that it is a task undertaken in the face of the greatest difficulties. I fully realise that the great majority of those in your society over, say, 40 years of age will scoff at my suggestions as 'highbrow,' Utopian, and unpractical for a hard business world, but I am content to make my appeal to the rising generation and to pray for a co-operation between accountancy and economics in the future that will be fraught with the highest advantages to both."

INDIAN RAILWAYS.

THE Report of the Committee appointed by Mr Montagu last November to investigate Indian railway affairs has now been published in full [Cmd. 1,512, 1s 6d net]. Of the ten members three, namely, the chairman, Sir William Acworth, and two others, the one an experienced railway man, the other an experienced banker, had no previous connection with India. Four were Anglo-Indians, three of them railway men with experience both of State and company railways, while the fourth was a merchant. The remaining three were Indian gentlemen, two of them merchants, while the third was Mr Sastri, now a Privy Councillor, who since he joined the Indian Railway Committee has represented India both in the Imperial Cabinet of last summer and in the Assembly of the League of Nations at Geneva. The Committee spent several months in India, travelling over the country from Bombay to Calcutta and from Madras to the Punjab. They sat for 50 days and examined 142 witnesses, of whom 67 were either railway men or Government officials. Of the non-official witnesses 45 were Indian and 30 were Europeans.

The "entire inadequacy" of the Indian railway system to meet the needs of the country is wholly due, in the opinion of the Committee, to the failure of the Government either to provide itself, or to permit private enterprise to provide, adequate funds. Such money as has been found has been spent prudently and economically. But much more money could have been provided and could have been profitably spent. The Report ascribes "the policy which has been persistently pursued of starving the development of Indian railways" to one main cause: the fact that railway accounts, both revenue and capital, have always been treated as a part of the general Budget of the Indian Government. It describes at length the system under which it is assumed that the railways go out of business on March 31st of each year, and recommence the following day, with all its appalling complications of "Forecasts," "Programmes," "Provisional Grants," "Final Allotments," and "Lapses." The Committee's comment is that "on the face of it it does not look businesslike." And they give, as an instance of actual working in practice, the case of a railway begun in 1908 and expected to be opened for traffic in 1926 at a capital cost of 4½ crores of rupees, of which 1½ crores will represent interest on capital during the 18 years of the construction period. The remedy, in the eyes of the Committee, is the entire separation, as in Switzerland, in South Africa, in Japan, and elsewhere, of the railway budget from the general Budget of the country. The Committee propose that in future the railways shall have an independent budget of their own, that, subject, of course, to the general control of the Government and the Legislative Assembly on broad matters of policy, the Railway Department shall manage its own finance, being responsible to the Finance Member only for the provision of funds to meet the interest on the money borrowed by the Government for railway purposes.

The remaining portion of the unanimous recommendations of the Committee are of less general interest. They are largely concerned with proposals as to administrative reorganisation. One recommendation deals with the establishment of a Rates Tribunal on the lines of that provided in this country by the new Railways Bill. But the Committee are evidently in full sympathy with the underlying principles of what we may call the Montagu policy. They recommend the immediate establishment of Central and Local Railway Advisory Councils; that greater facilities should be provided for training Indians for the superior posts, and that the process of their employment in such posts should be accelerated. Further, they say that the utmost efforts should be devoted "to stamping out the very serious and widespread abuses in connection with the allocation of railway wagons," which they say "have grown into a system of organised blackmail"; and that everything possible should be done to redress, or, at least, mitigate, the hardships to which third-class passengers are at present subjected.

We now come to the portion of the report which will naturally arouse controversy both in England and in India. Out of the 36,000 miles of railway in India, about 25,000

are included in 11 major undertakings; and of the 25,000 roughly one-third is worked directly by the State, and the remaining two-thirds by English guaranteed companies. But the whole 25,000 miles belong absolutely to the State. The companies own nothing, not even, apparently, the furniture of the London board rooms. Their share capital is invested in beneficial financial contracts with the Secretary of State, terminable in each case at a fixed date, if not renewed, and is then repayable at par, the company apparently being then wound up. Even the debentures issued in the name of the X.Z. Company have no charge on the physical assets of the property called by the company's name. Their security is the unconditional guarantee by the Secretary of State of both principal and interest—ample, no doubt, but not a debenture security in the ordinary acceptance of the word. It is common ground with the Committee that the State-operated lines shall continue to be so worked; and that, in deference to the unanimous Indian opinion, the management of the guaranteed companies' lines shall be transferred to India, the several contracts of the existing English companies being terminated in each case at the first due date. These dates, in the case of the two most important companies, the East India and the Great India Peninsula, are 1924 and 1925 respectively. So the matter presses. The Committee have found themselves sharply divided on the question whether these two undertakings shall be operated directly by the State, or handed over to the management of new Indian companies. Five members, three English and two Indian, recommend the former alternative. Five members, one Indian and four Anglo-Indian, recommend the latter. The divergence of opinion between the two sections of the Committee does not rest on any point of principle. The majority, for so presumably it may be called, as the chairman is one of the five, agree that a company "usually conducts its business with more enterprise, economy, and flexibility than a State organisation," and add that "most of us have approached the question with a strong prepossession in favour of private enterprise as a general proposition." They rest the case for State management on the practical ground that the existing guaranteed companies are not owners, and that the actual owner has always refused to leave any real initiative to them; while, on the other hand, the Government, having delegated the actual management, cannot itself initiate. After giving instances of the manner in which the companies are hampered by meticulous Government control over every detail of expenditure, they conclude that "the guaranteed companies do not possess the essential attributes which belong to ordinary companies. To claim that because ordinary companies possess the advantages of energy, enterprise, and so forth, therefore companies of the nature which we have described may be expected to possess these advantages, is to be misled by a mere name." They refuse to believe that it would be possible to set up in India new companies substantially independent, on the ground that Indian public opinion is so strongly in favour of direct State management that the Government would be forced to refuse to part with its property; and that even if it were prepared to do so, the necessary private capital could not be raised. And they further add that all the evidence supports the unanimous opinion of the Indian Government, expressed as recently as 1917, that "so far as efficiency is concerned, there is really nothing to choose between a company-managed line in this country and one under State management." They accept the implication of their policy, that all the money required for Indian railways must in future be raised directly by the Government. But they are of opinion that this will present no difficulty, provided the Government are prepared to accept the view that loan money is a commodity with a variable market price.

The other section of the Committee rest their case on the belief that the Government cannot, or at least will not, find the necessary money, and that private companies with a sufficient degree of independence can be formed in India. The company which they propose for the management of the East India Railway should, they say, invest in the undertaking a capital increasing year by year from one-twenty-seventh to five-twenty-sevenths, and possibly ultimately to ten-twenty-sevenths of the total sum invested in the undertaking, the balance continuing to be owned by

the Government. This share capital should be guaranteed by the Government a dividend of 1 per cent. less than the current interest on Government loans, and be entitled also to a certain share in further profits. It should be managed by a board of directors—of whom one-half, including the chairman with a casting vote, would be nominated by the Government—with a right to appeal by the elected directors against the decision of the Government nominees to the Government itself. For this scheme its advocates do not claim that it is more than "an experiment certainly worthy of trial." We may leave it with the comment made upon it by the other section of the Committee, that they are satisfied that, "as a matter of practical politics, companies substantially independent cannot be formed in India, and that without such independence the advantages of private enterprise are lost. The fact that our colleagues can only propose the formation of companies in which the State would own the great bulk of the stock, appoint half the directors, and nominate the chairman, with an ultimate appeal in case of disagreement on the board to the Government itself, has confirmed us in our belief that we have correctly understood the position."

THE QUARTERS NEW CAPITAL.

THE past quarter has been an exceptionally quiet one in the new capital market, July and August being unprecedentedly slack months. In July the total of new capital raised, including Government borrowing on Treasury bonds and Savings Certificates, was £10½ millions and in August £13½ millions, but in September the total rose to £33½ millions. The last figure owes its size principally to the fact that in the fortnight ended September 24th sales of Treasury bonds have amounted to over £19 millions. The new capital applications for each quarter since 1904 are set out in the table below:—

New Capital Applications.					
Year.	First Quarter.	Second Quarter.	Third Quarter.	Fourth Quarter.	Total for Whole Year.
1904.....	£ 19,905,000	£ 50,654,000	£ 9,547,000	£ 42,913,000	£ 123,019,000
1905.....	67,301,200	36,915,500	22,854,100	40,116,600	167,187,400
1906.....	30,264,800	55,059,800	10,835,800	24,012,800	120,173,200
1907.....	49,428,600	40,304,600	15,631,400	18,265,400	123,630,000
1908.....	45,287,900	64,385,600	31,541,800	50,988,400	192,203,700
1909.....	64,238,400	56,835,200	27,694,400	33,588,800	182,356,800
1910.....	99,355,600	88,721,400	28,111,600	51,250,500	267,439,100
1911.....	61,245,000	56,238,800	14,914,500	59,361,100	191,759,400
1912.....	47,966,100	62,377,500	40,687,100	59,819,300	210,850,000
1913.....	50,344,700	70,014,900	29,961,800	46,216,000	196,537,000
1914.....	97,610,200	54,739,100	20,265,200	339,908,100	512,522,600
1915.....	46,313,500	25,693,200	586,772,500	26,462,500	685,241,700
1916.....	156,251,200	131,022,500	111,578,000	186,584,700	585,436,400
1917.....	825,925,200	221,254,300	57,054,400	214,362,100	1,318,596,000
1918.....	475,258,700	220,921,500	329,674,000	367,527,200	1,393,381,400
1919.....	291,901,400	93,879,000	536,502,200	113,776,800	1,036,059,400
1920.....	135,094,500	98,011,700	61,195,600	73,247,800	367,549,600
1921.....	63,292,600	65,281,900	57,890,600	..	..

These figures include Government borrowing with the exception of Treasury bills and Ways and Means Advances. During the past quarter up to September 24th 5 per cent. Treasury bonds were sold to the extent of just over £39 millions, while repayments of National Savings Certificates exceeded sales by £100,000. Of the £58 millions raised in the quarter, therefore, less than £19 millions was issued by borrowers other than the British Government. The latter has raised over £59 millions in the nine months out of a total of £186½ millions. From the following analysis of the destination of new capital it will be seen that a much larger proportion has gone abroad than in the corresponding period of 1920, when British industrial issues were on a very heavy scale:—

	First Nine Months.				
	1911.	1912.	1913.	1920.	1921.
United Kingdom.....	£ 22,104,300	£ 35,533,400	£ 25,595,200	£ 264,582,900	£ 118,101,400
British Possessions..	39,433,500	35,501,800	56,948,100	25,002,600	46,478,800
Foreign countries..	70,860,500	78,995,500	67,778,200	4,716,300	21,884,900
Total	132,398,300	150,030,700	150,321,400	294,301,800	186,465,100

The amount required for domestic purposes this year is considerably below last year's total, but very much in excess of the pre-war average. New capital for British

Possessions and foreign countries, on the other hand, though more than double the amount shown a year ago, is very much lower than it was in pre-war years.

An analysis of the purposes for which the capital was issued gives the following results:—

Description.	Total, First Half-year, 1921.	Third Quarter, 1921.	Total Nine Months to September 30.	
	£	£	1920.	1921.
British Government Loans	20,067,000	39,092,300	22,054,000	59,159,300

Tramways, omnibus, &c.	647,500	126,500	34,300	774,000
Motor traction and manufacturing	605,000	300,000	8,122,700	905,000
Gas and water	1,465,600	831,500	366,700	2,297,100
Hotels, theatres, and entertainments	1,915,300	414,600	5,367,000	2,329,900
Patents and proprietary articles	66,200	50,000	1,068,200	115,200
Docks, harbours, and shipping	2,243,200	2,940,000	17,819,000	5,183,200
Banks and insurance	2,052,000	250,000	15,616,400	2,302,000
Miscellaneous	1,171,100	1,148,400	47,950,000	2,319,500
	128,574,500	57,890,600	294,301,800	186,465,100

So far as the past quarter is concerned, Colonial Government and Corporation loans account for nearly £8 millions, leaving very little over £10 millions for other issues. This week's South African loan is the only issue under Colonial Government loans, but there have been four issues by Colonial Corporations—the Port of Calcutta, £1,000,000, the County of Southland (New Zealand), £720,000, Thames Valley Electric (New Zealand), £336,000, and Metropolitan and Ipswich Sewerage Board (Queensland), £960,000. Most of the industrial issues have been in the form of debenture stock, a significant sign of the times. There have been five issues in the Electric Light and Power group, four of which were in the form of 7 or 7½ per cent. debenture stock. The largest was an issue of £470,000 this week by the County of London Electric Supply Company. The Eagle Oil Transport Company's issue of £2,940,000, which appears under the Docks and Shipping group, was in the form of 12-year 7 per cent. notes, issued at 98 at the end of July. In the Miscellaneous section the principal issues were £375,800 in 8 per cent. debentures by the Pullman Car Company in July, and £600,000 ordinary shares to shareholders only by Liebig's Extract of Meat Company in August.

UNEMPLOYMENT.

(BY OUR LABOUR CORRESPONDENT.)

It may be argued that unemployment is a tough nut to crack, but no one can say with truth that the Government has made any real attempt to grapple with the problem. The economic consequences of the peace, for which the Allied Governments must share the responsibility, are regarded by the Labour movement as the prime cause of our present difficulties. But the situation has been intensified by the aimlessness of British domestic policy and by the Government's apparent indifference.

Early in 1919, at the express request of the Government, a Joint Committee of employers' and workers' representatives met to consider the industrial situation, and one of the subjects on which the Prime Minister, in most feeling terms, asked for guidance was unemployment. It was significant of the temper of those early post-war days that the Joint Committee presented a unanimous report, which included recommendations regarding unemployment. But the Report, save for an overdue extension of the Unemployment Insurance Act, remains a dead letter, notwithstanding the undertaking given by Mr Lloyd George that agreed recommendations from the Joint Committee would be put into effect. This and other bitter experiences destroyed every vestige of faith in the Government's sincerity. Consequently the Prime Minister's approach to

Labour ten months ago was rejected. The Labour leaders had no intention of being used as a "smoke screen" behind which the Government might hide.

The Government did not proceed with the appointment of its proposed Committee, nor did it formulate a policy of its own. It merely allowed matters to drift until it became panic stricken by the cries of the "anti-wasters," when it plunged wildly into a campaign of economy. The need for economy is not disputed; the criticism of Labour is directed against the unenlightened, short-sighted, and indeed stupid manner in which the policy was applied.

It was not until the question could be no longer ignored that the Government was driven to set up a Cabinet Committee on Unemployment. Its very appointment at this stage is a damning criticism of Government inactivity and opportunism. So far as this body has made known its proposals to the world, its first thoughts are to saddle the local authorities with the main expenditure involved in local schemes of work. Naturally enough, municipal and county authorities, already staggering under a load of taxation, have condemned the Mond Committee's proposals as utterly inadequate. Now, after the London Labour Mayors have succeeded in compelling Mr Lloyd George to realise something of the gravity of the situation, he talks airily and vaguely of calling in bankers and business men for a great pow-wow.

In the meantime the Parliamentary Committee of the Trades Union Congress and the Labour Party executive have submitted proposals, which have met, as usual, with a good deal of uninformed and rather stupid criticism from the daily Press. The Labour attitude towards the problem of unemployment is easily defined. Work is far better than maintenance allowances, whether through the Unemployment Insurance Acts or the Poor Law. But all work which is made available for the workless should contribute to the restoration of normal industry, and should be of some social utility. Organised Labour has declared against "relief works," as generally understood, on the ground that they are "wasteful for the community and demoralising for those they (are) intended to assist."

Work may be made available by embarking upon or accelerating schemes of development, national and local. But such schemes vary in the extent to which they create what might be called a secondary demand for labour. Useful as schemes of road making and improvement are, they do not lead to the same ultimate demand for labour as building operations or tramway extensions. Hence it is that the recent Labour Manifesto suggests that the national and local schemes should be placed "roughly in the order of the extent to which their operation will create a further demand for labour," and that preference should be given "to those most calculated to stimulate the revival of industry."

So far as local schemes are concerned, generous financial assistance must be provided. It is suggested that in the case of approved schemes for revenue-producing works the Government should make a grant of 75 per cent. of the necessary expenditure, and lend the remaining 25 per cent. to local authorities free of interest for three years, after which the rate of interest might be, say, 3 per cent., arrangements being made for repayment at stated intervals. In the case of schemes of a non-revenue-producing character, 90 per cent. of the initial cost should be provided by the State, the remainder being lent to local authorities free of interest for five years, after which the rate suggested above should be charged. The Government's proposal is to put almost the whole burden on local authorities. The Labour Manifesto puts the major portion of the burden on the State.

The Joint Labour Committee on Unemployment, in its report issued at the beginning of the year, put forward the view that "the root problem lies in the revival of industry and commerce abroad," and schemes of public utility, however valuable they may be, will not directly assist in this direction. The suggestion now put forward is that the Government should place orders with British manufacturers for staple commodities for which there is an ascertained demand, and export these goods abroad, on credit terms. Woollen goods, agricultural machinery, railway equipment—to mention a few items—are necessary if the productive capacity of certain European countries is to be restored. But credit is essential, and it is sug-

gested that the British Government should provide the credit necessary.

In the proposals made by the Labour movement, the main financial responsibility is placed upon the Government, which plaintively asserts that its pockets are empty. It is clear that we shall not worry through the cycle of bad trade without paying a pretty stiff price in one way or another. We can pay for it by expenditure on insurance benefits, poor relief, and "relief works," by absorbing the scanty savings of the working class and sending furniture and clothing to the pawnshops, and, finally, by reducing the vitality and efficiency of the workers and their families. Or we can pay for it in the most efficient way by devoting our resources to measures which will hasten the return of normal times. The latter is obviously the wiser course, and the "money" can be found. Labour men argue that if Mr Lloyd George were to declare a war on Ireland in order to maintain the integrity of the British Empire, the means would be found. He might have to pay a stiff price for the sinews of war, but "money" would be forthcoming. If this be so, the "money" can be found for an unemployment policy.

But critics of the Labour Manifesto hold up their hands in horror at what they believe would be the cost of adopting the Labour policy. They do not in the least realise the importance which the Labour movement attaches to a bold attack on unemployment, and they over-estimate the cost of its proposals. We do not forget that even in the worst of times it is only a minority which is unemployed, and that relatively small additions to the total demand for goods and services may be the means of turning the curve of employment steadily upward. The British Government set aside £26,000,000 for its Export Credit Scheme, and owing to the restrictions and conditions imposed by the Treasury on the utilisation of the fund, the bulk of it still remains in the Government's hands. This fund could be used for the purposes of the scheme outlined above. As for the cost of national and local schemes of public utility, it may be pointed out that every scheme, once it is put into operation, diminishes the number of people in receipt of unemployment benefit and outdoor relief, and that these schemes will tend to enlarge the volume of employment amongst those not directly engaged upon them. The Government cannot allow men, women, and children to starve.

The Labour programme contains a reasoned policy. The Government is beginning to grope after something which will serve for a policy. As the *Manchester Guardian* expressed it, referring to "the niggardly stupidity of the Mond Committee" and the Labour proposals, "the most obvious difference between the two is that the Labour men really want to get as many of the unemployed at work as possible, and the Mond Committee are concerned with getting themselves and the Government out of a hole. To the Government Committee unemployment is a tiresome encumbrance; to the Labour men it is a spectre of want and misery. And if the Labour men have their way the spectre would be laid."

THE SOUTH WALES COAL MUDDLE.

(BY OUR CARDIFF CORRESPONDENT.)

AN extraordinary situation has been created in the South Wales coal trade under the operation of the national coal strike agreement of last July. One of the conditions of that strike settlement was that the wages liability of the owners should vary with the capacity of the industry to pay, and that no district should receive any assistance out of the £10,000,000 subsidy if the earning capacity of such district was large enough to pay the maximum wage reductions determined by the Government. Under the Government wage scheme the workmen were to receive their March wages less 2s per day in July, less 2s 6d per day in August, and less 3s per day in September. In some of the coalfields the earning capacity of the collieries has been sufficient to meet the cost of this graduated scale of reduced wages, and since August those few coalfields have drawn nothing out of the £10,000,000 subsidy. In the coal export districts, however, and particularly South Wales, the proceeds of the industry have fallen very short indeed of the amount required to meet the wages fixed by

the Government. In some weeks since July South Wales has been drawing upwards of £450,000 per week to pay the wages bill.

The wage liability of the South Wales owners in July and August last was determined by the earning capacity of the industry in that district, judged by the March trading results. In that month the results showed a pit-head loss of 23s 4d per ton exclusive of capital charges. In that situation the employers could only carry the weight of the minimum wage cost, and accordingly the wage for which they were liable in July was fixed at 29.5 per cent. on the standard wages of 1915. The wage liability of the owners in September, however, was to be determined under the conditions of the strike settlement by the trading results in July, and, as in that month the position of the trade was very much better than it was in March, the liability of the owners to pay wages increased. In the report of the joint auditors of the South Wales Coal-Owners' Association and the South Wales Miners' Federation that increased wage liability was given at 46.34 per cent. on the 1915 standard rates, and on September 1st the colliery owners in South Wales were informed by their secretary that that would be their liability during the whole of the month of September. This figure of 46.34 per cent. seems to have been arrived at by the application of the permanent clauses of the strike agreement under which the owners are entitled to a minimum standard profit, and to a fixed proportion of the surplus profits of the industry.

It now transpires, however, that a serious blunder was committed in the ascertainment of the wage liability of the owners under the permanent part of the agreement instead of under the clauses relating to the working of the agreement during the temporary period. Clause II of the strike settlement agreement deals exclusively with this temporary period of three months, and under that clause the owners agreed to surrender the whole of the profits as a district in so far as the wages paid were assisted out of the £10,000,000 subsidy. The South Wales coalowners made a nominal profit of £325,000 in July, but that was because their wage liability in that month had been limited to 29.5 per cent. on the standard rates of 1915, whereas if they had paid the whole of the percentage involved in the Government guarantee of a maximum reduction in July of only 2s per day below the March wage, their liability would have exceeded 100 per cent. on the standard rates of 1915. Under the profit-disabling provisions of Clause II. these nominal profits had to be surrendered, but by some inexplicable oversight these provisions appear to have been entirely overlooked, and accordingly the South Wales collieries went on working for more than three weeks in September on the assumption that their wage liability would be limited to 46.34 per cent. on the 1915 rates. Their astonishment and anger can easily be appreciated when at the end of last week they were told that their liability would not be 46.34 per cent. but 97.57 per cent. on the 1915 standard rates. It was the Mines Department of the Board of Trade which discovered the discrepancy, and the immediate effect of the discovery of the discrepancy was the withholding on the part of the Government of any assistance to South Wales in September out of the subsidy till the new percentage figure had been definitely agreed to. In these circumstances business in South Wales was almost entirely suspended. Most of the important collieries withdrew their quotations, and many collieries were temporarily closed. The increase in the liability of the owners of from 46.34 per cent. to 97.57 per cent. represented approximately 6s 6d per ton extra working cost on disposable coal, and as a great majority of the collieries had been throughout September either working at bare cost or at a loss, this extra charge became prohibitive.

The Monmouthshire and South Wales Coalowners' Association do not question the right of the Mines Department under the agreement to deprive the district as a whole of any profits in the temporary period so long as the district has been in receipt of aid from the subsidy, but they disagree as to the exact figure of the percentage for which they are liable in September. They state that that liability is 72.6 per cent. on the 1915 standard rates, and not 97.57 per cent., but the Mines Department are ad-

hering to their figure, although they have offered that the point in dispute might be referred to arbitration. The South Wales coalowners are delaying a reply to this offer of arbitration pending a meeting in Cardiff on Monday, but it may be of interest to point out that whether the lower or higher percentage is eventually agreed to, it will mean the denial to the South Wales mining industry as a district of a single penny profit on the output during the three months ending September. In that period there will probably be several individual collieries which will have made and retained profits by virtue of the fact that they have been able to pay the guaranteed wage out of their own proceeds and without any assistance from the subsidy, but the district as a whole will have been entirely profitless in the quarter, while the losses of the less efficient and costly pits will be considerable. It is estimated that the losses of the district as a whole in September under the 97.59 per cent. wage liability will amount to between £500,000 and £600,000.

A "CORNER HOUSE" MINE QUARTETTE.

(BY OUR MINING CORRESPONDENT.)

OF the four mining companies under the control of the Rand Mines-Central Mining group whose reports for the year ended June 30th have been issued this week, the New Modderfontein, of course, is by a long way the most important. For the past eight years in succession this Far-Eastern Rand proposition has put up fresh records in earnings, and while this has not invariably been accompanied by increased dividends—a good proportion of the profits being devoted to capital expenditure—the rate has, nevertheless, during that period expanded from 30 per cent. to 100 per cent. The mine being a rich one, its results during the last few years have been less affected by the gold premium than those of low-grade properties; still, of the 1920-21 earnings, 44.2 per cent. was represented by the excess obtained for gold over the standard price. The policy of milling ore in excess of the average value of the reserves was continued, but not to the same extent as before, last year's yield averaging 9½ dwts, as against over 10½ dwts in 1919-20. The policy in question, although unsound as a rule, is in this particular case justified by the nature of the developments. It tends, however, to prevent increase in the value of the ore reserves. Although an increased footage was performed, the estimated tonnage of ore blocked out, at 8,884,600 tons, shows a small decrease. Examination elicits this to be due mainly to increase in the tonnage milled with a shrinkage in the percentage of payable development. Allowing for sorting, the latest estimate represents 5½ years' work for the mill at the capacity to which it has been raised by the recent addition of eight Nissen stamps. On the basis of the latest dividend total, the yield afforded by the shares is about 13½ per cent., which, although attractive, makes some allowance for the potentialities of the future, others of the Modder group giving a higher return. Appended is a summary of the results for the past three years of three of the companies; the fourth—the Modder East—did not commence crushing until the early part of last year:—

	1919.	1920.	1921.
NEW MODDER—			
Ore crushed	920,500	868,500	1,083,000
Yield per ton	43/10	52/9	54/10
Working costs per ton	20/2	21/11	23/5
Profit per ton	23/8	30/10	31/5
Total working profit	1,089,891	1,493,845	1,699,052
Dividends	875,000	1,155,000	1,400,000
Rate per cent.	62½	82½	100
Carried forward	255,867	344,026	306,849
NOUVEAU MINES—			
Ore crushed	457,800	477,300	508,700
Yield per ton	27/1	33/1	35/6
Costs per ton	26/7	29/5	30/10
Profit per ton	6	3/8	4/8
Total working profit	11,292	87,970	118,347

Rate per cent.	..	7½	7½
Carried forward	155,337	134,037	116,267

	1919.	1920.	1921.
CONSOLIDATED MAIN REEF—			
Ore crushed	570,710	557,500	561,800
Yield per ton	29/6	37/3	39/4
Working costs per ton	26/3	29/2	32/3
Profit per ton	3/3	8/1	7/1
Total working profit	93,715	227,035	199,125
Dividends	62,380	155,950	155,950
Rate per cent.	5	12½	12½
Carried forward	174,178	193,563	188,462

The Nourse Mines has now attained an interesting stage in its career—the completion of the sinking of the shaft designed for the exploitation of the deep level area secured mainly by the absorption of the South Nourse in 1909. During the past two years the outlay upon this shaft, with some additional pumping plant, has swallowed up a large proportion of the profits; hence, if the company can continue to earn on anything like the recent scale, the shareholders should receive increased dividends. This prospect, however, depends for its realisation mainly upon the maintenance of the gold premium, a reduction in working costs, or a balance between the two. The point is startlingly brought out by the fact that but for the surplus realised above the standard price of gold, last year's work would have resulted in an operating loss of £110,600. Development was attended with a small increase in the quantity and decline in the value of the ore reserves, which, at 1,589,000 tons, represent somewhat less than three years' supply for the mill. Much importance attaches to the outcome of work from the new shaft. The showing made by the latest report of the Consolidated Main Reef must be frankly written down as disappointing and the indications disquieting. With a large expansion in revenue, both total and per ton, the working profit fell somewhat short of that for 1919-20—owing to a further jump of 3s 1d per ton in costs. Maintenance of the dividend at the previous year's rate entailed a moderate draft upon the carry forward. Despite the performance of a slightly increased footage, the ore reserves have again shrunk in quantity, as well as in value. Nor does the consulting engineer hold out any hope of improvement. On the contrary, he expresses the opinion that the prospects of encountering considerable bodies of ore which would be payable under present conditions do not appear promising. In these circumstances, the question of putting down a new deep level shaft has been postponed, the existing incline shafts being extended as a makeshift.

The Modderfontein East is an ambitious undertaking which so far has not succeeded in making good. It was floated in 1917 for the purpose of amalgamating various properties, including an area leased from the Union Government. In September, 1919, additional funds were provided by the issue of £300,000 debentures, while at various times shares have been taken up under options and otherwise. On June 30th last the share capital stood at £1,215,600, and the debentures outstanding at £410,760, a portion of the latter having been converted into shares. The balance of the bonds fell due for redemption on July 31st. To enable the company to meet its liability in this respect, the Central Mining and Investment Corporation advanced £400,000 on first mortgage, carrying 8 per cent. interest, redeemable at par on December 31, 1922, and meantime convertible into shares at par. By the beginning of 1920 the company had accumulated a substantial ore reserve. On account of the financial position and the expensiveness of everything, the erection of a reduction plant was deferred, an arrangement being made for the use of the mill of the Apex Company, which had ceased to figure as a gold mining enterprise. Naturally, in these circumstances, the returns have been comparatively small and expenses high. Last year the joint works of two companies in liquidation were purchased, but for the same reasons as before their removal and re-erection was deferred. At about 1½ million tons value over 7 dwts, the ore reserves represent many years' work on the present restricted scale. The consulting engineer emphasises the point that the mine is still in a transition stage, but it is evident that the shareholders will need to exercise much patience.

Business Notes.

Savings Certificates and Local Loans.—Lord Islington, chairman of the National Savings Committee, at a Savings Conference held in Birmingham on Tuesday, announced that, in future, much wider facilities were to be given to local authorities in obtaining loans from money invested in National Savings Certificates. Loans from this source had hitherto been restricted to purposes of subsidised housing schemes. The Chancellor of the Exchequer had now given instructions, however, that, from October 1st next, local authorities might obtain loans from certificate money for any of the purposes for which the Public Works Loan Commissioners had power to lend. In this extension of the scheme, the basis of the loans would still be the same as when they were made for housing purposes only. A local authority could claim from the Public Works Loan Board loans of an amount up to 50 per cent. of the gross proceeds of the sales of Savings Certificates in its own area, while the Treasury would still undertake to meet repayments to investors out of the remaining 50 per cent. Lord Islington pointed out that this scheme would be made to play a very large part in local finance. Indeed, he had been told by several borough treasurers that, on the basis of their local sales during the war, enough money would be forthcoming to meet all their local needs for borrowing. The total number of certificates already sold was nearing the five hundred million. During the present year, in spite of industrial depression and the coal stoppage, sales had averaged a million a week. It was, therefore, clear that if local authorities gave active co-operation to the savings organisation in stimulating sales, a very substantial and steady stream of capital would be forthcoming for purposes of local finance. It would be capital of the right kind, created by thrift and real saving, and the amount realised should be the greater for the fact that the investor was offered an opportunity to benefit his own locality through an investment which was guaranteed by the State.

The Australian Budget.—We are informed that a cheerful outlook, expressing full confidence in the status of the Commonwealth, was the dominant note in the Federal Treasurer's Budget speech, delivered in the House of Representatives on Thursday last. Certain abnormal factors and the general economic strain are easing, and there are favourable omens in the general situation indicating that Australia is turning the financial corner. The mountain of wool is being reduced, and the demand has increased at better prices, the quality being excellent. Sir Joseph Cook emphasised the economic importance of, and the need for, disarmament, and pointed out that disarmament meant for Germany a financial and economic relief amounting to well over £300,000,000 per annum. The actual revenue for the year ended June 30th last was £65,517,608, an excess on the estimate of £2,152,908. The expenditure out of revenue was £64,624,007, being less than the estimate by £4,248,000. This saving of almost £4,250,000 was effected notwithstanding the very heavy expenditure for basic wage and increased cost of living allowances which

was not provided for in the estimates. The surplus on the year's transactions was £893,521, the accumulated surplus to June 30th last being £6,618,000. For the year 1921-22 the estimated revenue is £61,787,000, a decrease of £3,730,000. The expenditure out of the revenue is estimated at £64,604,000, being £19,600, less than last year's sum. The estimated deficiency for the current year is £2,817,000, leaving an estimated accumulated surplus of £3,801,000 at June 30, 1922. It is anticipated that the aggregate Commonwealth expenditure for this year will be £11,476,000 less than last year. The principal items of proposed expenditure out of War Loan are for soldier land settlement, £7,000,000; for War Service Homes, £4,000,000; and for forestry and reserve employment allotments to the States, £196,000. The estimated expenditure out of works loan totals £5,597,000, against £4,101,000 for last year. Some concession with a view to the readjustment of the incidence of taxation having been proposed, the Commonwealth will adopt the scheme recommended by the Sub-Committee of the British Royal Commission on Income-tax for the elimination of double taxation within the Empire. As a special consideration to primary producers it is proposed to tax incomes at a rate of tax that will be applicable to the average income over a period of five years. The total direct and indirect taxation of the States and Commonwealth amounts to £12 18s 11d, as against £24 2s 6d in the United Kingdom and £18 11s 1d in New Zealand. The gross Public Debt at June 30th last was £401,720,025, including the war debt of £359,606,719. This shows an increase during the year of £20,410,121. The net Public Debt at June 30th last was £332,009,032, being an actual reduction of £8,800,872. The Commonwealth's war indebtedness included £234,800,000 owing to Australian bond holders, and £92,480,000 to the British Government. For purposes of the war and for repatriation £256,000,000 were raised in Australia, and of this amount £11,598,590 have been redeemed.

The Stock Exchange and Pre-War Accounts.—The petition recently circulated in the Stock Exchange, praying the Committee to take such steps as may be necessary for repealing the prohibition against dealings for fortnightly settlements, is answered by the issue of a circular letter addressed by the Secretary of the Stock Exchange Committee to all members of the House, in which Colonel Satterthwaite sets out the position as it stands to-day, together with the Government's suggestions for helping business in the House. The Committee approached the Chancellor with reference to a possible return to fortnightly accounts before the expiration of the full 12 months fixed by the Government as the term allowed, after the termination of the war, to borrowers for settling up their loans. The Chancellor replied that he is most desirous of doing anything that he can to encourage business in the Stock Exchange, but that he is not able to deal with the repeal of the regulation governing loans to the Stock Exchange under the schemes of 1914. He thinks, however, that the Committee may profitably obtain returns of what stock and shares, together with loans, still remain open as a legacy from the 1914 account, and the Committee, acting upon his suggestion,

now call upon all members having such accounts and loans open to make a return of them by the end of next week. Particulars are asked in respect of about 250 stocks, and the total amounts are to be communicated to the Committee and the Chancellor of the Exchequer, although whether the results will be generally published is not stated. A further return is required to be made at the end of next January, from which the inference may be drawn that the Committee will be requested to put quiet pressure on their members to get as much as possible of the account closed down within the next four months. We

may take it that the amount of stock open, and the total of the loans which are still running, in respect of the 1914 obligations will be announced, for the figures have an application to public interest of a far wider circle than that confined by the walls of the Stock Exchange.

South African Imports and Exports.—The Standard Bank of South Africa advise us that the trade figures for British South Africa for the seven months ended July were as follows:—Imports, £38,143,840; exports, includ-

THE REVENUE.

I.—An ACCOUNT of the TOTAL REVENUE of the UNITED KINGDOM in the undermentioned periods of the Year ending March 31, 1922, as compared with the corresponding periods of the preceding Year.

	Quarter from July 1 to September 30, 1921, compared with the corresponding Quarter of the preceding Year.				Period from April 1 to September 30, 1921, compared with the corresponding period of the preceding Year.

ing re-exports, £35,631,378. The figures for the corresponding period of 1920 were:—Imports, £58,807,958; and exports, including re-exports, £57,725,754.

Liverpool Cotton Association.—This association has published its annual circular relating to the season ending July 31st last. The average price of fully middling American cotton during the 12 months was 12.93d per lb, against 26.32d per lb in 1919-20. With regard to Egyptian cotton, the average quotation for fully good fair Sakellaridis during the past year was 30.24d per lb, as compared with 60.34d per lb in the previous season. The highest price of American cotton during the season was on August 6, 1920, when fully middling was quoted at 28.60d per lb, and the lowest point was on February 28, 1921, when the figure was 7.13d per lb. The American crop amounted to 11,355,000 bales, as compared with 12,218,000 bales in 1919-20. The total import of raw cotton into Great Britain compared with the preceding year shows a decrease of 1,551,453 bales American, 64,680 bales Brazilian, 370,939 bales Egyptian, 91,901 bales Peruvian, 3,953 bales West Indian, 107,387 bales East Indian, and an increase of 28,842 bales African, the total decrease being 2,160,571 bales. There was a marked drop in the consumption of raw cotton in Great Britain, the total being 1,065,713,488 lbs, against 1,726,011,159 lbs in the previous season. The table in the circular relating to the proportional distribution of the American crop is always of great interest. The exports last year to Great Britain were very small, the percentage of the total being only 15.86, against 21.29 in the period 1915-20 and 41.23 in 1885-90. Although there was a small decline in the proportion consumed by spinners in the United States, there has during recent years been a steady increase. Last season the amount taken by American spinners was 49.22 per cent., against 56.49 per cent. in the period 1915-20, and 32.83 per cent. in 1885-90.

Cotton Trade Research.—The second annual meeting of the members of the British Cotton Industry Research Association has been held this week in Manchester. The association has now 1,466 members, and it has the support of 90 per cent. of the trade. There has been considerable delay in the building and equipment of the Shirley Institute at Didsbury, near Manchester, which is the headquarters of the association. Notwithstanding difficulties, a good deal of useful work has been accomplished. Members of the staff have visited various works, and generous help has been afforded by the University of Manchester. As soon as the laboratories are complete the programme of research will be pushed forward. The ordinary expenditure during the year has been £16,700, leaving a credit balance of about £3,000. The amount spent on building and equipment during the year has been £51,000. It is expected that in another year the staff at the Shirley Institute will be hard at work on questions relating to research.

Proposed Copper Property Sales.—Our mining correspondent writes:—By a curious coincidence the surprising announcement of the provisional arrangement for sale of the Arizona Copper undertaking to the Phelps-Dodge Corporation has been followed by an intimation on the part of the directors of the Mason and Barry that negotiations are proceeding which may lead to the disposal of the company's property in Portugal. Space does not permit an exhaustive discussion of the first-named scheme, but the whole position is such as to give the shareholders ground for both anger and disappointment. The negotiations were initiated some 18 months ago. It is understood that an offer equivalent to 70s per share was made, but the directors stood out for a few shillings more. In the meantime the slump has taken place, and the present offer represents less than 25s. On the basis of the dividends paid by the respective companies, and in view of the value of the assets as set out in the last balance-sheet of the Arizona, the offer seems inadequate. Moreover, a time when the condition of the metal market is about as bad as it is likely to be is scarcely a time to carry through such a deal. If, however, the shareholders refuse assent, they must be prepared to face the alternative—the pro-

vision of the money necessary to extinguish the losses and to provide the plant required for the treatment of the low-grade ores. In the case of the Mason and Barry further information must be awaited.

The Prospect in Mexico.—The hopes of a speedy settlement in Mexico are increasing. On Monday the Supreme Court unanimously confirmed its decision in the case of the Texas Oil Company that Clause 27 of the Carranzist Constitution, making oil lands the property of the Federal Government, is rendered inoperative as regards lands acquired before the enactment of the Constitution by the provision of Clause 14 that no legislation shall have retrospective effect. The pronouncement of the Court could not be more definite, and it removes the chief obstacle to the recognition by the United States of General Obregon's Government. Washington demanded that the American companies' rights should be recovered by a Treaty; but it would have had to be ratified by Congress, and, as President Wilson's experience has demonstrated, no President of a non-Parliamentary Republic can venture to presume on the support of a Legislature which, like all corporate bodies, is jealous of its own privileges, and can oppose the Executive without risking dissolution. The principal aim of the Treaty being now secured otherwise, the United States Government has one reason the less for insisting on the Treaty as a preliminary to recognition, which is stated officially at Washington to have become more probable, and will certainly be followed by similar action on the part of Great Britain and France. Meanwhile, Mr Lamont's mission to Mexico on behalf of the International Committee of Bankers has strengthened the hopes of a partial resumption of the service of the Foreign Debt. The means are to be provided out of the revenue from the export of oil, and the gross yield of the oil taxes and export duties for July alone is stated to exceed £250,000, though the increased export duty has diminished the export by about 50 per cent., as compared with the total for June. Even allowing for the reduction to be noted presently, there must be an ample margin on the annual yield permitting at least a payment on account of the interest on the three external loans of 1899, 1904, and 1910, which, with the City of Mexico Loan of 1889, are recognised as Federal obligations by President Obregon's Government, and it is even predicted that a payment will be made on account of the arrears on the 5 per cent. loan of 1899. Purchases of the external bonds, as well as of some railway stocks, are stated to have been made on orders from New York. An agreement with Washington has yet to be reached regarding the claims of American citizens for damage during the ten years of revolution, and on the revision of the export duties on oil; but the first difficulty is being adjusted by a Commission; the oil taxes for August and September have been modified to the average extent of nearly 50 per cent.; and, when recognition comes, Mexican revenue from other sources should be largely increased. The railway services appear to be improving, the country is quiet, and the business outlook continues good. The people are tired of revolution, and experience has shown that the danger of fresh outbreaks can be largely averted by agrarian reforms.

British-American Continental Bank.—It is announced by the Liquidator of the British American Continental Bank that a second dividend of 1s 3d in the £ is payable

on and after October 3rd. This makes a total return of 6s 3d in the £. During the period January 7th to July 25, 1921, realisations have taken place, mainly derived from the collection of book debts, aggregating £156,963; outgoing in respect of Board of Trade and Court fees, salaries, rent, &c., have absorbed £6,695; and payments have been made to preferential and secured creditors of £2,673. The dividend of 5s in the £ to unsecured creditors absorbs £57,737; leaving a balance, in cash and Treasury bills, at July 25th last of £89,857. An estimate has been made of the ultimate realisable value of the assets, and it is probable that claims will exceed these by about £82,000. Having regard to all the circumstances, the Committee consider that, in order to provide the estimated deficiency of £82,000, a call of £1 per share should be made.

British Glass Industries, Limited.—The second annual report of the British Glass Industries, Limited, will probably prove a disappointment for shareholders. The balance-sheet for the year ended March 31, 1921, records a net loss of £23,216, and a debit suspense item of £28,263 was written off. An interim dividend, moreover, of 2s per share had been paid on September 30, 1920, which required £245,000. To provide for these outgoing £387,616 was transferred from a premium on share account, and the result is a credit at profit and loss of £91,136. A fresh liability makes its appearance in the shape of an item of £605,233 for debentures and secured loans. Investments, loans, patent rights, and goodwill are lumped together in one item as "acquired at cost, less reserve," £3,050,334, but we should imagine that shareholders would feel more comfortable if they knew what the amount of this reserve really is. It would be interesting also to know the amount represented by patent rights and goodwill. Figuring amongst assets we find that preliminary expenses, including £120,500 for underwriting, are given as £161,860, which instead of showing signs of reduction records an increase. In the previous balance-sheet this item amounted to £127,623. The authorised capital of this undertaking is £5,000,000, in £1 shares, of which 3,659,709 shares have been issued, and bargains have lately been effected in them at round about 3s 6d each. Perhaps the directors will take shareholders into their confidence at the ordinary general meeting which is to be held next week, and give a few particulars as to the progress of subsidiary companies, together with some details of their assets. Meanwhile we would suggest that the trading position might be made a little clearer if a more informative profit and loss account could be issued. The balance-sheet will be found analysed in our usual column.

Johannesburg Consolidated Investment.—Our Mining correspondent writes:—The financial statement of this important South African undertaking for the year ended June 30th last is not up to its immediate predecessor—and probably not up to market expectations. The reduction in the dividend from 12½ per cent. to 10 per cent., tax free, presaged reduced profits. At £388,000, the latter are £111,200 below the 1919-20 total, and scarcely cover the distribution. The decline arises mainly from the changed fortunes of the diamond industry, in which the company is so largely interested. The more or less readily available cash assets of £1,444,600 are slightly exceeded by the creditors item. Once again the portfolio has expanded, reflecting the participation taken in coal enterprises, whose equipment is approaching completion. A portion of the advances made to subsidiary undertakings has been paid off. The position of the company's chief Rand gold mining interests was dealt with at the time of the issue of the reports for 1920.

The next Swiss Sample Fair will be held at Basle from April 22nd to May 2, 1922.

The Right Hon. Stanley Baldwin, President of the Board of Trade, has appointed Mr C. Patrick Duff his principal private secretary, vice Mr Cecil Litchfield, who

has been appointed Secretary of the Ministry of Commerce under the Government of Northern Ireland; and Mr E. W. Reardon his second private secretary.

The first general meeting of the Society for Constructive Birth Control and Racial Progress will be held on October 13th, at 8 p.m., at the Lecture Room, Hotel Cecil. The presidential address by Dr Marie Stopes will be entitled "Anecdotes of the Past, Present, and Future of Birth Control."

(FROM OUR CORRESPONDENT.)

NEW YORK, September 16.

DURING the past month or two there has been a decided change for the better in several directions. In July net operating income of the railroads was by far the largest of any month since they were returned to private ownership. Pig-iron production last month showed an increase for the first time since the depression began about a year ago. The general decline in commodity prices, so long in progress, was halted in August. The South, it might almost be said, has been given a new lease of life by the higher price which cotton now commands. With the steady improvement in the banking position the credit tension has further relaxed in all sections, and money rates, especially within the past week, have become distinctly easier. To these significant developments is now added the fact that in August the decline in our foreign commerce, which had been under way almost continuously since last December, was arrested. According to the statement issued this week by the Department of Commerce, our exports increased approximately \$54,000,000 and imports about \$17,000,000 during August as compared with July. The increase in exports last month is all the more striking since outward shipments in August ordinarily decrease. The gain was due largely to the heavy grain and cotton movement. We shipped overseas about 8,000,000 bushels more of wheat than in August of last year, and approximately 250,000 bales more of cotton, and the total of each was considerably larger than in recent months. Exports during August totalled \$375,000,000 in value as against \$321,000,000 in July and \$578,000,000 in August, 1920, and reached the highest total of any month since March, when exports aggregated \$387,000,000. Imports for the month were \$194,000,000 as compared with \$177,000,000 during July and with \$513,000,000 in August of last year, and was the largest total since May of this year, when imports were valued at \$387,000,000. Although August imports exceeded those of July by \$17,000,000, the greater increase in outward shipments made the excess of exports \$181,000,000 for the month, or much greater than in any month since February, and nearly three times as large as the excess of exports in August, 1920, notwithstanding the great shrinkage in the total value of our foreign commerce as compared with last year. Gold imports for August, totalling \$86,000,000, were the highest of any month for the current year with the exception of March, when they reached \$87,000,000; in fact, the August total has been exceeded by only six other months in our history. From January 1st to August 31st gold imports into this country amounted to more than half a billion dollars, as compared with \$158,000,000—the largest amount brought in during any calendar year before the war. Silver imports in August were \$8,000,000, against \$4,000,000 in the corresponding month of 1920. For the eight months ended with August exports of merchandise and commodities amounted in value to \$3,230,000,000, compared with \$5,475,000,000 in the like period of 1920, while imports aggregated \$1,693,000,000 as against \$3,995,000,000.

The recent rise in cotton prices from around 11 cents to about 20 cents a pound is enabling the South to pay its

debts. New York bankers who deal largely with banking institutions in the cotton belt report that there has been a decided change in the attitude of those institutions which have been heavy borrowers in this market. Southern banks, which have repeatedly asked extensions of loans which have been carried for over a year, are now paying off such loans. The amounts thus far actually paid are small when compared with the total of such frozen credits, but many southern institutions have informed New York lenders that if cotton holds around its present levels they expect to be able to cancel their indebtedness much sooner than anticipated at the end of the cotton season. Heretofore southern borrowers have been compelled to ask extensions of maturing obligations, owing to their inability to collect from cotton customers. The situation in that respect has now completely changed, however, and the payments that are being made to lenders here are regarded as tangible evidence of a disposition to liquidate cotton at current levels to meet debts outstanding against it, instead of endeavouring to hold for still higher prices. The beneficial effect in the South of the advance in cotton is being reflected in many other ways, notably in the freer purchasing by southern buyers of merchandise and commodities in New York and other markets.

FRANCE.—THE "MATIN" AND SECRET AGREEMENTS — COST OF OCCUPATION — COST OF LIVING—RECONSTRUCTION OF MINES.

(FROM OUR CORRESPONDENT.)

PARIS, September 28.

THE publication by the *Matin* of the secret agreement entered into between M. Clemenceau and Mr Lloyd George has caused a certain amount of bitter comment here. So much was spoken during the Peace Conference about open covenants openly arrived at that it has come as somewhat of a shock to financial opinion to find that the decision reached at the Peace Conference was thus modified by the two Premiers in secret consultation. The agreement, it will be remembered, dealt with several points affecting reparations, and the *Matin* complains bitterly that it was the existence of this document that tied M. Doumer's hands at the recent financial conference in London. As illustrating financial opinion on the subject, the following quotation from *La Situation Economique et Financière* is interesting. It writes:—"Since 1919 new texts have completely modified the spirit and the letter of the treaty, and they have never been submitted to Parliament..... The most sacred interests, the renaissance to life of a whole mutilated region, the prosperity of the public finances thus appear to be at the mercy of the often changing humour and the sometimes unequal competence of a few uncontrolled politicians. The fact should be proclaimed for it is not the least cause for the feeling of bitterness, disillusion, and insecurity that is manifested in France."

The Reparations Commission has published approximately the cost of occupation of German territory by the allied armies for the period from the armistice until May 1, 1921. The cost for the United States is 278,067,610 dollars, for France 2,304,850,470f, for Great Britain £52,881,298f, for Belgium 378,731,390 Belgian francs, and for Italy 15,207,717 French francs. The cost per day per man for each of the armies is: U.S.A. 4½ dollars, France 15.25f, Great Britain 14s, Belgium 16.50f, and Italy 22f. The total amounts to some three milliards of marks gold, though the exact sum has not been officially determined. Approximately one milliard is owed to the United States, one milliard to France, 900 millions to Great Britain, 175 millions to Belgium, and five millions to Italy. In connection with the figures it may be noted that on May 1st the French had some 70,000 soldiers on the Rhine, the British some 18,000, and the Americans only a trifling number of troops.

The Union des Industries Minières et Métallurgiques has embodied in a table some of the most interesting results of the investigations into the cost of living in France that have been arrived at by the various regional, departmental, and local commissions that were appointed

under the decree of February 19, 1920, to undertake this work. The index figures are based on the figure of 100 as representing the prices of 1914, and are valuable as indicating the fall that has taken place in commodity prices since the commissions began their work last year. I extract merely a few of the localities cited:—

		1920.		1921.	Decrease
Paris	4th quarter..	370	2nd quarter..	307	17.0
Marseilles	October	415	June 30	310	25.3
Dijon	April	394	June	291	26.1
St Brieuc	November ..	417	June	323	22.5
Nîmes	October	464	May	388	16.4
Bordeaux	Year 1920 ..	388	June	303	21.9
Grenoble	October	439	April	367	16.4
St Etienne	October	404	June 1	352	12.9
Lille	September ..	415	June	336	19.0
Lyons	August	316	June 1	250	20.9
Rouen	October	376	April 9	330	12.2

The Regional Commission for the Paris area has published some striking figures, which show a marked fall in the cost of living during recent months. Foodstuffs are shown to have fallen 7.7 per cent. between the first and second quarters of the present year, and 17 per cent. between the last quarter of 1920 and the second quarter of 1921. Heating and lighting fell 11.7 per cent., between the last quarter of 1920 and the second quarter of 1921, and clothing 11.3 per cent. between the first and second quarters of 1921 and 20.7 per cent. between the last quarter of 1920 and the second quarter of 1921. On the other hand, rents increased 10 per cent. between the first and second quarters of the current year. On the whole, as shown above, the cost of living in Paris has fallen 17 per cent. during the nine months from Michaelmas, 1920, to June 30, 1921.

The reconstitution of the Northern coalfield is making good progress, and there is every reason to be satisfied with the results disclosed by the latest available figures. Much work, of course, remains to be done, for it must not be overlooked that, in addition to the complete reconstitution of the overhead and underground equipment, the coalowners have had to reconstruct, since the armistice, the whole of the miners' dwellings, to get together complete technical and working staffs (which has proved an almost insurmountable task, in view of the devastations that transformed the whole region into a veritable inferno), and to reinstall all kinds of motive power, &c. Quite apart from the damage wrought in the Department of the Nord, the damage done to the mines in the Pas de Calais (which in 1913 produced 11,847,000 tons of coal, or more than a quarter of the whole French output) is estimated at over 707,000,000f (pre-war values). To enable the mining companies to reconstitute their properties a loan of 1,200 million francs, it will be remembered, was issued for public subscription a few months ago.

With the aid of this money some 736,000,000f had been expended on reconstruction work, down to the end of July, on the Pas de Calais mines. What proportion of the sum actually required is represented by this amount may be gathered, perhaps, from the fact that on the mines in the Vimy district, where the total damage at 1914 values was estimated at 2,876,221f, over 7,300,000f have already been expended in reconstruction work. On the great Courrières mine, where the 1914 value of the damage was estimated at 149,000,000f, the sum of 174,000,000f has so far been spent, which has sufficed to bring many of the levels back to their pre-war producing point. At Lens, where the damage was estimated in pre-war figures at over 262 million francs, 217 millions have been expended, but have sufficed only to restore to production a few of the levels exploited before the war.

The clearing away of the wreckage has been completed in the whole of the Pas de Calais mines, but in the majority of the pits the deeper levels are still full of water, as only the higher ones have as yet been pumped dry. The overhead works are still of a purely provisional character in practically every case, while the restoration of the underground galleries has scarcely been begun. Thus in the Courrières mine only 25 kilometres of underground roads

out of 275 have been restored to service, and 37 kilometres out of 231 in the Dourges mine. In the smaller Ostricourt mine, however, 71 kilometres of roads out of a total of 92 kilometres are again in service, while the whole mine has been pumped dry. Coal getting has been resumed to a substantial extent in most of the pits, in spite of the poverty of the means available. Courrières is producing 2,000 tons a day, or just over 20 per cent. of its pre-war total; Lens only 220 tons a day, Carvin about 20 tons daily, Liévin and Drocourt nothing at all. Ostricourt, on the other hand, is producing more than its pre-war output. To sum up, if the present progress continues, it is hoped that the combined output of the mines in the Nord and the Pas de Calais combined will amount to over 9,000,000 tons in 1922, and about 11,250,000 in 1923. This will still leave the total output far behind that of 1913, when the mines of the Pas de Calais alone, as already stated, produced nearly 12,000,000 tons.

The Bourse during the week has fluctuated from strength to weakness, and in fact has reacted to the general feeling of uncertainty that prevails owing to the many doubtful factors, such as the fluctuation in exchange, the state of political finance, and the evolution of the industrial crisis. The market is also to some extent under the influence of the many new issues that are expected, as these will be made at higher rates than previously, and in consequence holders of stock have been realising with a view of having capital free for investment. It is now known that the three milliards of 6 per cent. Crédit National loan will be followed by other large operations of a similar sort. French Rentes have been somewhat depressed, the three per cents. standing at 51.15, as against 51.50, and the Crédit National five per cents. at 450, as against 466. Argentines, under the influence of exchange, have been stronger; Russians remain heavy, but Turkish bonds have improved owing to the news of the Greek reverses. Banks generally have declined owing to heavy sellings.

The returns of the Bank of France for the last week, the previous week, and the corresponding week of 1913 are as follows:—

ITALY.—PUBLIC REVENUE—DECREASE IN THE CONSUMPTION OF LUXURIES—COST OF LIVING AGAIN INCREASING.

TURIN, September 26.

THE official statistics on public revenue are good:—
(In Millions of Lire.)

	Fiscal Year. 1920-21.	July and August 1920.	1921.
Income and capital taxes	4,067.1	450.7	794.4
Succession and registration duties	773.6	115.1	116.0
Stamp duties	1,107.8	195.3	315.7
Excise, Customs, and other consumption taxes	1,608.0	191.2	214.7
Industrial monopolies	2,744.1	406.7	487.5
Commercial monopolies	521.9	59.0	118.8
Lottery	151.0	21.7	26.9

All categories give an interesting yield; and if we multiply by sixfold the yield of first two months of the current fiscal year, we obtain figures sensibly higher than those relating to the whole of the fiscal year 1920-21. But there are not wanting signs of the economic crisis, especially in those taxes which are liable to feel more immediately the effects of decreasing transactions. In the succession and registration duties category, apart from the succession tax, which is stationary, the registration taxes diminished from 66.8 to 59.4 millions lire in the two months considered, and the yield is much lower than the sum which would be necessary to come up to the 491.7 millions obtained during the whole of last year. Stamps yield 110.2 millions lire more in 1921 than in 1920, but of that increase 76.1 millions lire are due to stamp duty on the increased notes issue and 25.3 millions to the new tax on luxury sales. As in France, this tax is a little disappointing. The tax is exacted by means of stamps to be put on double notes of sale, of which a part is given to customer and a part is retained by the selling party. As the tax is very high—from July 1, 1921, it has been increased from 10 to 11.50 per cent. of the sale price—it appears that very frequently sellers and buyers conspire together, to the loss of the Exchequer, for evading altogether the tax, or inscribing in the note a sum notably less than the true sum paid. A symptom of the economic crisis may be seen also in the lessened yield of taxes on cinema palaces (from 1,897,970 to 1,848,501 lire), on gems and other jewellery (from 3,967,775 to 2,490,465 lire), liquors and fine wines (from 3,859,400 to 1,697,150 lire).

The diminished consumption of luxuries is probably explained by the persistence of the high cost of living in the face of decreasing opportunity of employment, and more or less severe cuts in wages of the working class. The decrease of retail prices was short-lived, as may be seen from the following table compiled by the Turin municipal bureau of labour statistics of the cost of living of the working family (father, mother, and three sons of 10 to 15 years). The basis is fixed in the first half of 1914:—

	Food.	Clothing.	Rent.	Fuel and Light.	Miscellaneous.	Total.
Year 1914 (first semester).....	100	100	100	100	100	100
1920—January	351.0	347.2	100	406.5	344.5	318.5
1921—January	513.1	547.3	110	527.3	513.6	467.4
February	509.5	547.3	110	446.5	513.6	460.9
March	536.5	496.7	110	428.4	543.9	472.2
April	534.4	496.7	110	416.9	543.9	470.3
May	521.2	465.2	110	378.0	542.6	455.7
June	485.4	433.4	110	358.8	538.7	429.6
July	446.2	411.4	120	354.2	537.1	404.7
August	461.1	410.6	120	366.9	537.1	413.9

As rent is subject to legal maximums, the variations are those authorised by royal decrees. New occupiers, in fact, are obliged to pay very much higher rents if they desire to secure a house for their family. The increases of rent above the legal maximums are unlawful, even for new occupiers, and house owners are liable to refund them at the request of the occupier. But, in fact, the restitution is never claimed, as the excesses above the maximum are frequently veiled as entrance fee, price of furniture, and so on.

NEW ZEALAND.—FINANCE—INCOME-TAX—REASSURING SIGNS IMMINENT.

(FROM OUR CORRESPONDENT.)

AUCKLAND, NEW ZEALAND, August 16.

So far, the New Zealand Government has not formulated any definite policy with regard to the deflation of the currency. The local bank rate for sight drafts on London is about 2 per cent. The Post Office has raised its rate for small remittances to 2½ per cent., and in view of the uncertainty of the financial position it is feared there may be some difficulty in maintaining the parity of exchange with English currency.

There have been many changes of Finance Minister during the last few years, and another change is now announced. When Parliament meets the portfolio of Finance will be taken by the Hon. W. Downie Stewart until Mr Massey's return. The principal charges made against the Finance Department are extravagance, undue incidence of taxation and of expenditure, and a want of lucidity and preciseness in rendering accounts. This latter criticism is even made by papers which support the Government, though it is strenuously denied by the Finance Minister.

The first issue of War Loan Certificates matures this week. Arrangements have been made by the Treasury for payment in cash or renewal, at the option of the holder, into Post Office investment certificates, bearing interest at 6 per cent., for a period of either five or ten years. New certificates will also be issued on similar terms. The original certificates were issued at 4½ per cent., free of income-tax, and at 5½ per cent., subject to tax, both issues being practically compulsory, and made in the form of bearer bonds.

The increase of income-tax on companies to 8s 9d in the £1 (in reality the amount in some cases is greater owing to the manner in which the tax is levied) has had the effect of greatly depreciating Stock Exchange quotations, which have fallen on an average of from 15 to 25 per cent., and show little sign of recovery. Although some of the companies may continue to pay fair dividends, the increased cost being passed on to the public as far as possible, the crushing taxation has had the effect of discouraging the investment of fresh capital in any industrial undertakings, and owing to numerous complaints with regard to the consequent dislocation of industry, it is not improbable that the Government will be compelled at no distant date to modify their legislation in this direction, especially as public bodies (such as tramway lines run by city councils) escape this form of taxation altogether.

While the income-tax on companies is 8s 9d, the tax on debentures is only 3s in the £1. Consequently, many large companies, instead of issuing new capital, have found it more advantageous to issue debentures, which are being freely offered at 7½ per cent. to 8 per cent. interest, the former quotations being free of income-tax.

The present indications are that New Zealand's recovery from the financial effects of the war will be slow. The most reassuring signs are the absence of labour troubles, which were very marked about a year ago, the mildness of the winter, which has proved very favourable for the dairying industry, and the gradual fall in the price of articles of general consumption. On the other hand, the fall in wool, hides, meat, and other farm produce has hit the farming industry very severely, although so far this has not applied to any extent to the dairying industry.

INDIA.—THE MUNITIONS BOARD CASE—FOODSTUFF PRICES—EXCHANGE.

(FROM OUR CORRESPONDENT.)

BOMBAY, September 10.

WHILST Mr Gandhi is exhorting the Marwaris at Calcutta to burn their foreign cloth—an exhortation they have resolutely decided to ignore—moderate and constructive political activities in the country have been revived by the

THE MERCANTILE BANK OF INDIA, LTD.

INDIA, BURMAH, CEYLON, STRAITS SETTLEMENTS, CHINA, and PORT LOUIS, MAURITIUS.

The Bank buys and sells Bills of Exchange, Issues Letters of Credit and Circular Notes, and transacts banking and agency business in connection with the East, on terms to be had on application.

Fixed Deposit Rates will be quoted upon application.
On Current Accounts interest is allowed at 2 per cent. per annum on daily balances.

re-opening of the Legislative Assembly at Simla, where His Excellency Lord Reading delivered his first representative address as Viceroy. He covered much ground—the Prince's visit, racial feeling, the question of the status of Indians within the Empire, and the Munitions Board Case.

The Munitions Board Case, as it is termed, has so engaged the attention of the public that for the past three weeks it has been the most important matter before the country. Its commercial aspect is also full of interest. Briefly, the funds of the Board have been cheated of Rs.1,49,000. Two contractors were prosecuted. Suddenly Government withdrew the charges, although the Law Officers asserted that they could prove the case up to the hilt. The official reason for the withdrawal was that by proceeding with the trial many *Swadeshi* firms would be injured, if not ruined. There was an immediate outcry in the Press and by commercial associations all over the country. The continuance of the trial was demanded. An official statement was then issued. It appeared that the charges were withdrawn at the instance of Sir Thomas Holland, the Commerce and Industries Member of the Council, without the Viceroy's cognizance. Sir T. Holland has resigned, and H.E. Lord Reading deprecating the "error of judgment" of his Minister, declared the withdrawal irrevocable. He added, however, that steps have been taken to prevent a recurrence of such an error. The outcry continues, nevertheless, and it is the opinion of thinking India that this unfortunate business has somewhat impaired general confidence in official methods of procedure.

The prices of Indian foodstuffs continue to rise. As a preventative in one direction, Government has extended the ban on the export of wheat until at least March, 1922, although firms importing wheat may export fine flour. It may be safely reckoned that we are dealing, compared with early 1914, with a four-anna rupee, although our local Labour Bureau states that the cost of living is 80 per cent. above that of July, 1914. Meat is scarce and prices rule high. This is in the main attributable to the huge exports of cattle to Africa and South America during the war for breeding purposes. Vegetables are limited in supply owing to the difficulty experienced last year in obtaining seeds from Europe, and owing to the bad rains. Bread, too, is very dear.

Since my last letter, exchange has moved upwards, and has closed firm at 1s 4½d. Bills are beginning to appear in small quantities, which is a helpful sign. Our gold receipts, however, have fallen off, and our waywardness, after a purchasing period, keeps the metal at a point considerably above which banks can export it. An exchange at over the 16d mark and a decrease in gold imports may be taken, even at this stage, as an indication that produce is gradually re-assuming its position as a pointer in matters monetary so far as the rupee is concerned, and that slowly, very slowly—considering our financial standing as a whole—we are returning to the normal. Silver touched 39½d during the week, but has closed at 38½d.

HOLLAND.—THE BUDGET—ROYAL DUTCH EXPORT DUTIES—THE CRISIS.

(FROM OUR CORRESPONDENT.)

AMSTERDAM, September 25.

THE Budget was 154,000,000 fl in 1900, 258,000,000 fl in 1914, and is now 800,000,000 fl. The only chapter of the eleven chapters which together make up the Budget, and which does not show any increase, is the "Household of the Queen," costing 900,000 fl annually. The "National Debt" requires 74,000,000 fl, against 38,600,000 fl before the war, the Ministry of Finance 194,000,000 fl, against 39,000,000 fl. (Half of this amount is destined for advances in connection with the building of dwelling-houses.) The Department of Agriculture required 21,000,000 fl in 1914, against 150,000,000 fl now. The ratable income over 1919-20 was 2,250,000,000 fl, and the taxes absorb already 40 per cent. hereof. In 1915-16, however, the ratable income was 1,290,000,000 fl. If expenditure is maintained on the same level, the result will be that when the ratable income should again recede to the figure of five years ago the Government would require nearly all of this. It is evident that this cannot go on. The newly-appointed Minister of Finance, Mr de Geer, has appointed a Committee for studying measures of economy, and his inaugural speech in Parliament gives hope that drastic curtailing of expenses will take place.

The Royal Dutch have addressed a letter to the Ministry of Colonies, dated August 23rd, in which they complain of the contemplated increase of the export duty in Netherlands India on derivatives of petroleum. They state that in May last the duties have already been increased, and as a consequence hereof the Royal Dutch have to restrict their activities in our East Indian colonies. The export duty has the same effect as the protection of foreign competition. When prices of petroleum were relatively high the export duty was not so much felt, but as the world production at present is far in excess of the consumption and competition fiercer than ever, the disadvantageous consequences of such a measure are severely felt. Already the Royal Dutch-Shell have stopped production in such fields where the cost price, plus export duty and freight to the places of sale, exceeds the price which has to be paid in such places on oil produced elsewhere. The Dutch Constitution excludes privileges in the matter of taxes, but the selection of some special industry with the purpose of taxing such industry abnormally high should consequently likewise be intolerable. As an example of the magnitude of such a body as the Royal Dutch, an address from a totally different group of industrials, merchants, and shipping companies has just been sent to the Government. This address, which has been signed, among others, by the Furness-Stokvis group, Philips Incandescent Lamps Factories, and PHS van Ommeren, supports the request for the abolition of export duties on petroleum in Netherlands India on account of the pernicious effect which the reduction of the action of the Royal Dutch in our colony has on the industry of Holland. The signatories openly avow that their request is inspired by egotism, but they point out that where the interests of so many important firms are concerned a general interest is at stake. Orders aggregating millions of florins have already been cancelled by the Royal Dutch, and whereas Dutch industry, trade, and shipping have already to face the extreme difficulties of foreign competition, the influence of such an arbitrary measure as an increased export duty on petroleum reaches much farther than one should judge at first glance.

The crisis in Holland has now come to a very critical stage, which is illustrated by the fact that leaders in the banking and navigation and trading world, which played a prominent rôle in war time and during the period of upward movement of prices, lose their position and disappear from the firmament where they were glittering. The Royal Dutch Lloyd Navigation Company is in a very bad condition—the chief manager withdraws. Van Nierop's Trading Company has lost heavily—several managers retire. The Insulinde Oil Factories' shares quoted about 200 per cent. not long ago and 8 per cent.

at present. The Netherlands Indian Trading Bank financed this enterprise—its chief manager has withdrawn. And the Compania Mercantil, of the well-known Kröller concern, have lost their reserves of 15,000,000 fl, but the stock capital of 20,000,000 fl will emanate unimpaired from the crisis, as the directors ascertain. It is a fact that the crisis is very much accentuated in Holland in these last weeks, and a period full of alarming rumours, in which it will be good to keep cool heads, is certainly before us.

SWEDEN.—THE ELECTIONS—ACUTE DEPRESSION—A GLOOMY OUTLOOK.

(FROM OUR CORRESPONDENT.)

STOCKHOLM, September 26.

ELECTIONS to the Diet are at present in progress, which will finally decide the new Government. The results so far obtained are strongly in favour of the Socialist party, that is, the Right Socialist party, whereas the Bolsheviks and Communists have not scored any remarkable success. Undoubtedly election results have somewhat influenced the financial situation, and a marked slump in values on the Stock Exchange has been recorded, quotations now approaching the worst previous records in June. The general outlook in business and industry is, however, the strongest moving factor for this drop, and it must be admitted that the prospects are anything but rosy. The position of the German mark, which has long ago beaten its previous bottom record, makes it impossible for Swedish manufacturers to compete, and were it not for the fact that many German works, particularly in the steel and iron trades, are now well booked ahead and cannot, or do not care to, enter into further business for the moment, the position would have been even worse. Already it is as bad as it can be, and therefore there may seem to be very little to lose, but it is remarkable that in these days business, however small, is able to stimulate people. Thus some sales in the timber market, which in normal times would have been considered comparatively small, have brought about a firmer tone, and the mills are hopeful of being able to reduce their stocks before the season closes. The increase in timber sales has, however, not brought about any relief in shipping, where conditions are becoming more ruinous than ever. If things continue like this there will be a big smash in the shipping trade, because many owners cannot hold their fleets indefinitely, especially with the dwindling prospects there are of making a remunerative start again. As a sign of the depression the number of bankruptcy cases from January to August inclusive this year were 3,169, as against 1,415 during the corresponding period last year. As a foretaste of what is coming this winter, one of the leading banks, the Mälarprovinsernas Bank and the financing concern, the Svenska Emission A.B., report that there will be no dividends this year. The Alb. Söderberg and Co. A.B., a financing concern, which expanded considerably during the war, has decided to liquidate. The liquidation of the Söderberg concern brought about a substantial fall in the shares of the Sydsvenska Kredit A.B., but a pacifying announcement from the board caused the shares to improve again. A sensational case is at present fought between the State Railways and the Trafikaktiebolaget Grängesberg-Oxelösund, one of the largest industrial concerns in Sweden, owning mines in the North and Central Sweden. It concerns an amount of 50 millions kroner, which the railways claim as due to them on the strength of an old agreement in connection with the transport of ores on the Ofoten Railway. The company pleads *force majeure*.

NORWAY.—CONTRACTING TRADE—STRIKE DIFFICULTIES—THE HARVEST.

(FROM OUR CORRESPONDENT.)

CHRISTIANIA, September 20.

THE Sample-Fair just held in this town proved a success. All the most considerable manufacturers had stalls there, and a considerable number of buyers attended.

The Fair was visited by over 100,000 people. This is the second fair, and probably will be made a permanent institution.

General trade is contracting, as is also manifested by the decreasing note circulation of the National Bank. The strike in the pulp, paper, and timber trade which has been going on for a month seems far from a solution. While the workmen may be inclined to accept the reduction in the wages proposed by the employers, their leaders will not give up the 14 days' holiday which they carried through during the boom last year. The employers maintain, however, that the industry cannot subsist by so little work being done—48 hours weekly, quite a number of extra holidays, and then a fortnight vacation besides. The struggle is likely to be a hard one, for the principals think eight days the utmost they can concede.

The weather is very mild and mostly dry. Practically the harvest, excepting that of the potato crop, now is finished, and the average yield is perhaps not much under the medium.

The foreign exchanges are breaking all previous records. To-day sterling was kr 29.70, far above anything hitherto known, and very near the kr 30 to the £ which has been predicted as probable.

SWITZERLAND.—PLENTIFUL INVESTMENT FUNDS—NESTLE FINANCE.

(FROM OUR CORRESPONDENT.)

GENEVA, September 23.

THE Cantonal Government of Vaud has issued a loan of 12.5 million francs. This was, after a long period of 6 per cent. loans, the first which yielded merely 5½ per cent. The purpose was productive, namely, the increase of the share capital of the Banque Cantonale Vaudoise, the State bank of that Republic. Within three days only no fewer than 412 millions of francs were subscribed, a quite extraordinarily high sum. The ease in the money market, which hitherto existed only in the Swiss discount market, seems now to extend to the investment market.

The Swiss Nestlé concern, which was always to a certain extent an international milk trust, has now absorbed the three leading independent Australian condensed milk companies, and paid the price for their shares with scrips of a loan of 820,000 English pounds at a percentage of interest not yet published in this country. After having issued last spring preference shares in British currency, now there are issued bonds also redeemable in English currency. From the balance-sheet point of view this means no danger, for the eventual increase of the liabilities, reckoned in Swiss francs owing to a rise of value of the British pound, will be counterbalanced by an increase of the value of assets in England and her colonies in such a case. This issue in England is considered as the outcome of an industrial policy, namely, that of transferring systematically the commercial and industrial centre of this concern from Switzerland to London. No doubt the centre of the chocolate production of this concern (Peter-Cailler-Köhler brands) will remain in Switzerland, but export of condensed milk is obviously losing importance in the Swiss commercial balance. The first seven months of 1913, before the war, Switzerland exported 22,651 metric tons of condensed milk; in the first seven months of the current year of 1920—a year when fodder of all kind was rather cheap—the Swiss export amounted only to 10,210 metric tons. As in the same period from 1913 to 1920 the Swiss export of cheese sank by even 90 per cent., this reduction of Swiss export of dairy products cannot be considered the consequence of any incapacity of the Swiss leaders of the Nestlé concern. The war brought for Swiss agriculture such high prices of land and tools, labour and artificial manures, that Switzerland cannot remain a country exporting agricultural products.

Books and Publications.**REVIEWS.**

"Inflation et Déflation." By Messrs Yves-Guyot and Arthur Raffalovich. (Paris) Felix Alcan. 10 fr net.

THIS work, by two doughty champions of sound money, sound finance, and sound fiscal policy, provides plenty of powder and shot for those who are trying to combat the theory that the way to economic salvation now lies through depreciating the currency. It gives a very interesting historical survey of the effects of inflation in France, England, America, Italy, and elsewhere in the past, and then deals with the financial policy of the world since 1914. As an exposure and criticism of inflationary evils and illusions the book is full of interesting matter. On the question of deflation we gather that its distinguished authors see no halfway house between the present chaos and a return, for all countries affected by it, to the pre-war gold parities; and this uncompromising view seems to be somewhat out of touch with practical politics.

"Australia: Economic and Political Studies by Various Writers." Edited by Meredith Atkinson. (Melbourne) Macmillan and Co., Limited. 1921.

It would require a very lengthy review to deal adequately with these 13 essays by as many authors on Australian politics, history, geographical conditions, colonial and external policy, and social and economic life. Together they confirm the impression left by the first. Australia *farà di sé*; her people believe her destined to become an ideal commonwealth, and mean to take their own way to make her so. It leads through high organisation of labour, extensive nationalisation of public services, the New Protection, and the exclusion of the unassimilable races; and they intend to work in unfettered association with the other British Commonwealths with full liberty of self-determination. More British than any other part of the Empire, the nation seems to us characteristically John-Bullish in its mental limitations; and its outlook is further restricted by its geographical remoteness, and is not yet broadened by its system of higher education. If (as these writers tell us) the resultant narrowness is conspicuous on both sides in labour conflicts, and the nationalised services might be much better organised, it may fairly be said that the policy of Australia in Papua and other dependencies is notably free from exploitation of the natives, that the case for a "White Australia," as here set forth, is strong, and that in diffusion of wealth, standard of comfort, and social and economic equality, the nation unquestionably stands first in the world. The essays are a mine of varied and valuable information; we may specially note the accounts of the Labour movement (showing, *inter alia*, the defects of compulsory arbitration), of land legislation, and of the Australian attitude to Imperial politics. But much might be said in praise of them all. The book is indispensable to all students of contemporary history.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET. ACCOUNT.
October 12. October 13.

For another week the Stock Exchange remained on the tenterhooks of expectation in regard to a possible fall in the Bank rate. With the unemployment question entering into the question, it was considered probable that financial factors might be relegated to a second place in the matter of the Bank's decision. Gilt-edged stocks failed to derive any benefit from the expectation, owing to the fact that the Union of South Africa, with a five million pounds loan, followed closely by Ceylon with a three million pounds issue, were two of the substantial borrowers, who have been accompanied by others during the week, and who attracted money that otherwise might have gone into previously existing securities. The County of London Electric achieved swift success with half-a-million pounds of 7 per cent. debenture stock, offered at 94. The new Union of South Africa scrip is $\frac{1}{2}$ premium. No particular surprise followed the Bank's announcement of an unchanged rate.

Consols have been up to 48 $\frac{1}{2}$, but failed to maintain their best price, and the pressure from new issues led to the senior stocks being somewhat heavy in tone. Ceylon Sixes fell $\frac{1}{2}$ on the day that the underwriting of the new loan proceeded, and this affected other similar stocks. The foreign market witnessed a sharp fall in the three German issues, as marks became worth two a penny. Chinese bonds are better upon news that the coupon due to-day on the 8 per cent. Treasury Notes (Vickers) will be duly met. Argentines and Brazilians have appreciated, but there was some disposition shown to sell French bonds. Russians have given way still further.

The Home Railway market has got into that dismal condition in which the only movements are downwards. There is not a single section of the market free from a depression which has deepened into flatness. Grand Trunks are lower, the announcement from the company as to an appeal to the Privy Council on the question of the arbitration award having no favourable effect. Mexican issues of all kinds went timidly better on a jump in the price of silver, but there was no support worth mentioning, and prices quietly sagged back. Argentine Railway stocks dropped, because of the latest edict respecting fares, and Brazilian Railways are flat on a modicum of selling.

Rubber shares have shown a little activity so far as the leaders are concerned. The price of the raw stuff rose at one time from 8d to 9 $\frac{1}{2}$ d per lb, but as it eased off the share market took on a dull tone, and part of the previous rises became lost. The oil group is dominated by the movements in Mexican Eagles, where acute weakness occurred, owing to sales from New York, declared to be based upon the news of fresh intrusions of salt water into Mexican oilfields. But Paris and this country also sold lavishly. The Continent has done nothing to support Royal Dutch, and these, together with Shells, Burmahs, and the rest of the oil market have been lowered. Kern Rivers stand out as a bright exception on the declaration of bonus and dividend. The banking market is inclined to heaviness, although two or three of the Eastern shares are a little better in consequence of the improvement in silver. Insurance shares exhibit a firmer tendency. The shipping market is very quiet. Electric manufacturing shares have taken a turn for the better, apparently on the assumption that the Safeguarding of Industries Bill will prevent the market for their wares being swamped by German competition. Electricity supply descriptions are also firmer, and one or two gas stocks advanced on the serio-humorous idea that, with "summer-time" past, more attention will be directed to shares in illumination companies. The iron, coal, and steel market, together

with that for armament shares, became unsettled by the misunderstanding which has risen between the Board of Trade Mines Department and the coalowners of South Wales over a matter of wages, a misunderstanding which, according to rumour, may cost the companies anything up to half-a-million pounds. Dunlops have further fallen on sales by people tired of waiting for improvement. Marconis are dull on the impression that the company is probably sharing in the general trade depression. Some of the shares in industrial companies, stores, catering, &c., are lower for the same reason, and the textile market is only comparatively steady. Cook, Son, and Co. shares have been depressed, owing to the uncertainty felt in regard to the dividend payment on the preference shares, due yesterday. Levers preference shares are flat, and Harrods, both of London and Buenos Ayres, also gave way.

The South African market is not assisted by a couple of good reports, one from the Modderfontein and the other from the Johannesburg Consolidated Investment companies. There is not sufficient business on the part of the public to keep alive any interest in Kaffirs, and prices accordingly sag. In the diamond group the passing, for the second time in succession, of the dividend on Jagersfontein excited no surprise or change in price. Copper shares are heavy. Arizonas, which came down from 32s 6d to exactly half that price on the circular issued last week, recovered to about 18s. Russian mining shares remain depressed, and in the tin groups nothing of fresh interest has happened.

NEW ISSUES.

The new issues of the week and the current year and date of opening of the lists have been as follows:—

	Nominal Capital.	Cash Subscription.	First Payment.	Further Liability.
ISSUES OF THE WEEK—				
Amount previously recorded....	166,202,642			
TREASURY BONDS.				
Total receipts, 5-15 Year, 1925-35				1,024,990
5 $\frac{1}{2}$ 1923 receipts week ended September 17, 1921				24,410,000
Week ended September 24, 1921				14,750,000
Receipts to date				39,160,000
NATIONAL SAVINGS CERTIFICATES.				
NET RECEIPTS INTO THE EXCHEQUER WEEK ENDED SEPTEMBER 17, 1921.				
April 1 to September 17, £1,980,000		150,000		150,000
To the Public—				
Union of South Africa, £5,000,000 Cons. 6% Stock (red. at par, 1930-40, issued at 96% (Sept. 26)	5,000,000	4,800,000	250,000	4,550,000
Andover Theatre, Hotel, and Shops, 50,000 Shares, £1, at par	50,000	50,000	6,250	43,750

1916	398,851,300	1915	685,236,326	
1915	658,988,006	1914	512,522,635	
1914	173,023,446	1913	196,536,980	

5 $\frac{1}{2}$ per Cent. Treasury Bonds.—Repayable at par on April 1, 1929. Issued at 97 per cent. interest payable half-yearly on April 1st and October 1st. The bonds of this issue will be convertible at the holder's option as on April 1, 1922, or October 1, 1922, into £3 10s per cent. Conversion Loan at the rate of £146 Conversion Loan for each £100 of bonds converted. The first series of 5 $\frac{1}{2}$ per cent. Treasury bonds will be brought to an end to-day. Receipts (including conversions) have exceeded £135,000,000. A second series of 5 $\frac{1}{2}$ per cent. Treasury bonds will be issued as from Monday, October 3, at 98 per cent.

Union of South Africa Consolidated 6 per Cent. Stock, 1930-1940.—This is an issue of £5,000,000, at £96 per cent. The principal is repayable in London, at par, on November 1, 1940, the Government of the Union of South Africa having the option to redeem the stock at par on or after November 1, 1930, on giving three months' notice. Trustees may invest in this stock, subject to the provisions of the Trustee Act, 1893. The loan is to be raised for railways, harbours, irrigation works, land settlement, and other public works. Union of South Africa debenture stock interest, issued and payable in London, the property of persons not domiciled there, is not subject to any taxes in that country. The prospectus states that "the sinking funds established in connection with specific loans amount to over £10,000,000. In addition, it is provided that any surplus revenue of the Union shall be handed over to the Public Debt Commissioners for the extinction of debt, and the amount of debt so extinguished since the Union was constituted in 1910

October 1, 1921]

is over £15,000,000." The stock will be "inscribed" in the books kept by the London County Westminster and Parr's Bank, Limited—and will be transferable without charge and free of stamp duty at that bank, either by the stockholders personally or by their attorneys. Interest of 6 per cent. will be payable on behalf of the Government of the Union of South Africa at the London County Westminster and Parr's Bank, Limited, Lothbury, on May 1st and November 1st in each year. The Consolidated Fund of the United Kingdom and the Commissioners of his Majesty's Treasury are not directly or indirectly liable or responsible for the payment of the stock or of the dividends. Subject to this point, these debentures are an excellent trustee investment, yielding £6 7s 5d per cent., allowing for redemption in 1940. The loan was quickly oversubscribed.

The County of London Electric Supply Company, Limited.—Authorised share capital £3,000,000, of which £1,405,780 has been issued. The authorised loan capital amounts to £2,000,000, of which £1,000,000 has already been issued. This is an issue of £500,000 7 per cent. debenture stock at 94, to be redeemed at par on October 1, 1931, or at the option of the company at any time after April 1, 1931, on giving six months' notice. A cumulative sinking fund of 1 per cent. will accrue from October 1, 1922, and will be applied in the purchase of debenture stock of this issue "at or under par." This debenture stock will be secured by means of a trust deed made between the company and the Trustees Corporation, Limited, giving a general floating charge on the company's undertaking and properties, other than "The Barking Supply," as defined by this company's Act of 1921, subject to the existing charges in favour of the £500,000 4 $\frac{1}{2}$ per cent. first debenture stock and £500,000 4 $\frac{1}{2}$ per cent. second debenture stock. The company was registered in June, 1891, for the purpose of supplying electricity, mainly in the County of London, and started active operations in 1895. An excellent and instructive table showing gross revenue, net profits, and how profits have been allocated, is given in the prospectus, which we would recommend to the notice of the directors of other utility undertakings when they are issuing prospectuses. Although the issue is only secured by a floating charge, net surplus assets, including the proceeds of this issue, after deducting the £1,000,000 of existing debentures, amount to approximately £2,314,811. The proceeds of the issue are required to repay bankers' advances and other purposes. The issue has been underwritten at 2 $\frac{1}{2}$ per cent., plus an overriding commission of $\frac{1}{2}$ per cent. The prospectus is a clear statement of affairs, succinctly worded. These may be considered good debentures in their class, and thoroughly deserved the remarkable reception accorded by the investing public.

Peter Walker (Warrington) and Robert Cain and Sons, Limited.—Authorised share capital £5,000,000, divided into 2,000,000 8 per cent. preference and 3,000,000 ordinary shares, all of £1 each. All the preference and, including the amount of present offer, 2,270,000 ordinary shares have been issued. Debentures for £2,500,000 are authorised, of which £2,000,000 7 per cent. first mortgage debentures are now offered at 92 $\frac{1}{2}$ per cent., together with 1,500,000 ordinary shares at par. The debentures are to be secured by a first mortgage on properties, and on "the ordinary share capital of Peter Walker and Son," and a floating charge upon other assets. The charge is to be effected by a trust deed, and the debentures "will be repayable at par" on December 31, 1964, by means of a sinking fund, "to be applied in the redemption at par." The company has been formed to amalgamate two big brewery concerns. Apparently the purchase consideration is £5,420,000; Robert Cain and Sons being acquired for £3,000,000, payable £2,000,000 in preference, £720,000 in ordinary shares, and the balance in cash. The whole of the ordinary capital of Peter Walker and Son is being acquired for £2,420,000. Gross assets of Robert Cain are given as £2,378,000, with liabilities of £690,879, and the profits of the concern are shown from 1917. These show remarkable variations, as, for instance, £454,268 for 1920, as against £267,820 for 1921. Assets of the associated Peter Walker companies are given as £4,307,054. This is presumably the net figure, but it should be noted that this sum includes goodwill. Profits are recorded from 1916. These jumped from £368,006 for 1916 to £749,651 for 1917, since which date they have remained steady round the latter figure. Part of the specific security for debenture holders is properties valued at £1,830,281 in the balance-sheet of Robert Cain and Sons. These are stated, if considered in the light of to-day's building costs, to be worth twice this figure—a not unreasonable contention, although falling building costs will affect boom values in the course of a few years. The pledge of ordinary shares as security opens up a difficult question. It would be interesting to know to what extent this company is to be allowed to pledge its assets, and thus affect the value of its ordinary share capital. Most holders of brewery securities are of opinion that the prospects of the industry are much brighter than in 1914. If this is so, then these debentures should be a reasonable investment of their class. But the ordinary shares must be considered speculative, especially as profits have to be maintained at a good round amount to pay comfortable dividends.

Globe Kinemas, Limited.—Authorised capital £100,000, divided into ordinary shares of £1 each, of which 57,595 shares have been issued and 42,405 are now offered for subscription at par. This company was incorporated as a private company in June, 1919, to build and carry on the Globe Kinema Theatre at Acton, and has now been converted into a public company. An independent valuation for £171,344 is given, but this, we notice, is dated January 5, 1921. Mortgages for a total of £58,575 are outstanding on the property. The usual generous estimate of future profits appears, but it is perhaps a pity that actual results from the day of opening (March 26th of this year) could not have been shown. Application is to be made for a Stock Exchange quotation for the shares. The enterprise is too speculative for us to recommend the shares.

Andover Theatre, Hotel, and Shops, Limited.—Authorised capital £50,000, divided into shares of £1 each, the whole of which are now offered at par. This company has been formed to build a theatre, shops, and flats, &c. Apparently certain property is to be acquired for £13,500 which cost £10,250. Some interesting estimates are given, but the prospectus fails to convince us that the promoters will make a financial success of the undertaking. We find no suggestion of making an application for a Stock Exchange quotation mentioned in the prospectus.

To complete our record of new issues, company secretaries are requested to furnish us with copies of new prospectuses. Our readers can also assist by forwarding copies of prospectuses which may fall into their hands.

COMPANY MEETINGS, &c.

THE SHEEPBRIDGE COAL AND IRON COMPANY, LIMITED. RESULTS OF THE COAL STRIKE—NEED FOR MINERS' CO-OPERATION.

The fifty-seventh ordinary general meeting of the shareholders of the Sheepbridge Coal and Iron Company, Limited, was held, on the 26th ultimo, at Sheffield.

The Right Hon. Lord Aberconway presided, and other directors present were the Right Hon. Sir Henry Norman, Bart., M.P., Mr W. H. McConnel, Mr R. W. Fowler, Mr M. Deacon (managing director), Mr W. B. M. Jackson (general manager), together with Mr T. E. Haslam (secretary).

The Chairman referred to the recent death of Mr Frederick Fowler, who was one of their most valued and useful directors, and was associated with the company for 47 years.

WORKING THE NEW AGREEMENT.

The Chairman went on to say that they were meeting under the new régime—the national agreement between the owners and

the miners, which was to operate for 12 months, and which provided a standard wage. The owners also were to receive a standard profit. Any surplus remaining after payment of standard wages, the working costs, and the provision of the standard profit was to be divided in the proportion of 17 per cent. to the owners and 83 per cent. to the men. That, of course, constituted for the first time in the coal trade a big profit-sharing system. The men were now directly interested in the success of the collieries, and he was in hopes that if that agreement was loyally worked—and the owners intended to work it loyally—the owners and men might agree to sink all petty differences, and strive together to make the trade a success.

Pits that were losing money—and there would be pits losing money at this time of bad trade—must certainly close down, and unprofitable districts in good collieries would have to be closed too. It was no use the men going to the owners and asking them to work unprofitable districts. That would only be depriving the great body of the miners of profits they were entitled to share.

RESULTS OF RECENT STRIKE.

The owners were now really trustees for the men, and he hoped it would be understood by every section of the men that they must work the pits on those lines. Their answer, when the men asked them to work unprofitable districts, would simply be: "You joined in smashing the coal trade during the last three months; you allowed the safety men to be taken out, and you did nothing to prevent the flooding of the pits, and now you will have to abide by the result." The result was that we lost temporarily the whole of our foreign markets. Depots in France and Italy and other foreign countries had been filled during the strike with American and German coal, and not only that, but we had paid five millions of money during the strike for American and other coal. Not only did those who supported the coal strike smash the coal trade, but they smashed all trade dependent on the coal trade. Blast furnaces, rolling mills, iron

foundries, steel foundries, steel rolling mills, shipyards, engineering works, if not at a standstill, had been badly hit, and probably, taking them all together, they were not working more than a quarter of their normal capacity, and hundreds of thousands of skilled men were walking about the streets idle, simply as a result of the strike which smashed the trade by which they earned their living. We could not compete to-day in price with the foreigner owing to the high price of coal. That high price was again reacting adversely upon the coal trade, and we were not only sending less coal abroad, but we were selling vastly less for home consumption. He did not see much prospect of improvement for many months to come unless the men came to their assistance by agreeing to modifications on all existing customs, price lists, and restrictive conditions which had hampered them in the past, and let them consider together what they could do to improve matters.

WARNING TO THE MINERS.

Lord Aberconway then went on to quote from a recent speech of Mr Herbert Smith, in which he commented upon the error that had been made by the withdrawal of the safety men. That, commented his lordship, was a pretty strong thing for one of the miners' leaders to say, but it was perfectly true. He knew perfectly well that the miners as a body were sensible men and good citizens. "Then why don't they shake out those Bolsheviks and Communists from their ranks, and why did they elect such men on their Executive Council who showed such cruel and heartless indifference to the lot of their fellow workmen in their own trade?"

The owners were the trustees for the miners; it was they who had established the collieries, who studied prices and foreign markets, and who worked night and day in bringing business to their pits in order that the men might get wages. They had struggled for years to improve the position of the miner, and by establishing the coal trade on a firm basis to give him security of employment. What had happened? These men had kicked away the ladder the owners had been slowly mounting, and unless the men made it certain that it would not be kicked away again, he saw very little prospect for the future of the coal trade in this country.

COMPANY'S POSITION.

Dealing with the Sheepbridge Company's affairs, Lord Aberconway said that the output of the Sheepbridge group of collieries fell during the year by 712,000 tons owing to the strike, and the men lost in wages £700,000, enough for the men to have bought a controlling interest in Sheepbridge and its subsidiary companies. The coal-getters' wages at June 30, 1921, were 23s, as compared with 12s in 1913, and the output per man for all men employed was 158 tons in 1921, as against 322 tons in 1913.

The collieries had suffered but little from the strike. The sinking at Glapwell had been hindered, but operations had been resumed. He referred to the high railway rates and the handicap of the Midland collieries by a rate of 8s per ton, as compared with North-East collieries or South Wales.

With regard to the iron trade, he stated that in the hope that matters would improve they were lighting up one of the large blast furnaces at Sheepbridge. They were doing it partly in the hope of setting a good example and of being able to get coke at a cheaper rate, and also in an effort to relieve the distress. The outlook was very serious, and they wanted to keep men in employment as far as possible.

He thought the shareholders would agree with him that, having regard to all the circumstances, the balance-sheet was fairly satisfactory. He then moved the adoption of the report and the balance-sheet.

Mr M. Deacon seconded, and it was passed unanimously.

The final dividend of 5 per cent., making 7 1/2 per cent. for the year, free of income-tax, was agreed to.

Lord Aberconway and Mr W. H. McConnel, the retiring directors, were re-elected.

Messrs Alfred Tongue and Co. were re-appointed auditors to the company.

TRANSVAAL AND RHODESIAN ESTATES, LIMITED.

CHAIRMAN ON POSITION AND PROSPECTS.

The annual general meeting of the Transvaal and Rhodesian Estates, Limited, was held on the 30th ult., at River Plate House, Finsbury circus, London, Mr H. G. Latilla, presiding.

The secretary (Mr H. J. Holt) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said: The item "dividends and interest" again showed an increase, but revenue from estates and profit on sales showed a decrease of some £1,700 due to decreased sales, but having regard to the times through which they had been passing, the net figure of £8,751 was not unsatisfactory. The net profit was £23,402, or within £400 of last year.

The chief revenue producer had again been the Fred Mine. The position with regard to the mine was encouraging with regard to the immediate future, although not without elements of doubt if one took a longer view. The ore reserves were slightly lower in point of tonnage, but appreciably higher in gold contents. The working profit for the year was £25,369, as against £27,892 for 1919, and £20,479 for 1918. The result was satisfactory, bearing in mind that they crushed 10 per cent. less than in the previous year owing to a breakdown in the electric hoist.

In Nigeria results had of late been consistently disappointing, partly owing to labour difficulties, but mainly because of the fall in the price of tin and all metals. The progress of the silver lead areas had not been unsatisfactory in view of the difficulties encountered. In Trinidad their interests were represented by their holding in the Globe Oilfields, Limited. On neighbouring properties good results were being secured, and in due time they might hope to do well. As regarded their interest in Maraisdrift on the Far-Eastern Rand, this area contained the most profitable gold reef in the world to-day, and they could well afford to wait until times improved to raise capital to equip the property. As regarded the land sales, considering the commercial and financial depression, they must consider themselves fortunate in having been able to effect sales to the amount of over £24,000 at higher prices. The building programme at Salisbury, which they contemplated, must be postponed. If the outcome of the deliberations and negotiations now going on was a decision to enter the Union of South Africa there could be little doubt that a large accession of prosperity would result. By this time next year the question would probably have been settled, and the decision was bound to affect their policy and outlook.

The report was unanimously adopted, and the usual formal business transacted.

CENTRAL AMERICAN EXCHANGE RATES.

The Commercial Bank of Spanish America, Limited, quotes the following rates of exchange:—

Country.		Par Value.	Usance.	Year, 1921.	Rate.
Ecuador	Sucres to £1	10-15	Sight London	Sept. 24	14-20
Venezuela	Bolivares to £1	25-25	"	Sept. 21	23-00
Colombia (Bogota)	Dollars to £20	48 1/2	"	Sept. 21	86-00
Nicaragua	Cordobas to £1	49-31 1/2	"	Sept. 26	5-60
San Salvador	Colonos to £1	24-65	"	Sept. 20	7-00
Guatemala	Pesos to £1	2-66d	"	Sept. 24	199-80
Costa Rica	Colonos to £1	10-45	"	Aug. 13	16-20
Bolivia	pence to Boliviano ..	..	"	Aug. 19	14-10

ways; some sales have been made from the Continent. On the other hand, a certain amount of bear covering has been effected. So much speculation exists in connection with the Indian and Chinese markets that it is risky to forecast movements from day to day. For the same reason an attempt to diagnose the more distant future is almost as hazardous, owing to the possible entry of factors as yet unknown. The "Times" correspondent at Simla wired on September 21st that the recent rain in Bombay and the Deccan had removed the last trace of anxiety in regard to the monsoon. Meanwhile, the monthly balance of trade for August, as cabled by the Director-General of Commercial Intelligence, Calcutta, is plus 234 lacs, as against plus 135 lacs for July. In these circumstances, it is not surprising that a considerable bull account in silver for cash and forward delivery should exist in London, and that the sterling value of the rupee should be fairly well maintained. Yesterday the price of silver per 100 tolas at one time touched 100 rupees, though it afterwards receded a couple of points.

No coinage was reported during the week ending 22nd inst. The stock in Shanghai on the 24th inst. consisted of about 26,400,000 ounces in sycee, 25,500,000 dollars, and 2,330 silver bars, as compared with about 26,600,000 ounces in sycee, 26,000,000 dollars, and 1,720 silver bars on the 17th inst. The Shanghai exchange is quoted at 3s 11d the tael. The silver quotations to-day for cash and forward delivery are each 1½d above those fixed a week ago.

GOLD AND SILVER PRICES.

The price of gold and cash and forward prices of bar silver during this week and in previous years are as below:—

(a) Tax free on smaller capital. (b) Increased capital. (c) Also bonus 20 % (less tax) is to be paid on account of the profits accruing from the McLeod lease.

Newcastle Electric Supply Company announces that owing to the adverse effects caused by the stoppage of the coal mining industry, profit for six months ended June 30th last is not such as to justify the payment of an interim dividend on either the ordinary shares or the 5 per cent. preference shares. Last year 2½ per cent. was paid on the ordinary.

The Argentine Iron and Steel Company announce that while the trading for the financial year ended February 28, 1921, resulted in a net profit of £106,389, the heavy stocks on hand and the great fall in steel prices necessitates transferring the whole of this profit to reserve for contingencies, from which the sum of £210,000 has been appropriated and applied in writing down the value of stocks as at February 28, 1921.

TRANSVAAL GOLD MINING ESTATES.—The Chairman announced that there would be no dividend for the period ending September 30th, but that, since the desired financial reserves had now been attained, dividends would be resumed for the next half-year and onwards as permitted by the profits earned.

COOK, SON, AND CO. (ST. PAUL'S).—Having regard to the unprecedented fall in value of stocks this year, they regret they are unable to declare the half-yearly dividend on the cumulative participating preference shares due on September 30th. In the meanwhile the shareholders may be assured that the company is obtaining its full share of business, having regard to the conditions existing, and that the accounts will be laid before the shareholders as soon as possible after the completion of the financial year.

MAN, BYARS, AND CO. (1920), Limited, state that owing to the reasons given at the general meeting held recently, it is considered necessary that the deficit of the past year should be made up before any further preference dividends are paid. Accordingly, the dividend on the preference shares for the past half-year will be postponed. This dividend is cumulative, and will consequently be made good out of the first available profits of the company.

Palmer's Shipbuilding and Iron Company for the year ended June 30th, recommend a payment of the final dividend on the preference shares. An interim dividend of 2½ per cent. was paid on the ordinary shares, but no final dividend is proposed. For 1919-20 the ordinary shares received 12½ per cent.

OIL OUTPUTS.

UNITED BRITISH OILFIELDS OF TRINIDAD.—Combined production for the week ending Wednesday, September 21, 1921, amounted to 2,014 tons.

UNITED OIL AND REFINERY COMPANY, LIMITED.—Throughput of refinery for August, 18,942 barrels.

RAILWAY AND TRAMWAY TRAFFIC RETURNS.

No traffic returns of British Railways have been issued since the Government took control of the Railways at the outbreak of the War. The Government took over control of the Irish Railways as from January 1st, 1917.

Reports and Notices.

Mr A. J. Fransella, London representative of the Rotterdamsche Bankvereeniging, has removed to 36 New Broad street, E.C. 2. It is announced that Sir Henry Bell, Bart., desiring more leisure, has retired from the boards of the Central Uruguay Railway Company of Monte Video, Limited, and Allied Companies, and that Mr Henry J. Bell has been elected to fill the vacancy.

We are informed that Mr L. H. Kiek, one of the general managers of the Anglo-South American Bank, Limited, has resigned that position as from September 30th, in order to join the firm of Messrs Erlangers, 8 Crosby square, E.C.

The coupons of the Chinese Imperial Government 5 per cent. Gold Loan of 1896 for £16,000,000, and the Imperial Chinese Government 5 per cent. Tientsin-Pukow Railway Loan (1908), due October 1, 1921, will be paid on and after that date at the offices of the Hong Kong and Shanghai Banking Corporation, 9 Gracechurch street, E.C.

A partnership is announced between Sir Charles Bright and Mr A. Hugh Seabrook, Mr A. J. Stubbs and Lieut.-Col. H. W. Woodall, C.I.E., under the style of Sir Charles Bright and Partners, at 146 Bishopsgate, E.C. 2.

The Lamson Agency have removed to 12 St Mary Axe, E.C. 3.

MISCELLANEOUS.

PALMER'S SHIPBUILDING AND IRON.—The net profit for the year ended June 30, 1921, amounted to £85,376, to which is to be added £30,306 brought forward, making £115,682 available. Preference dividend absorbed £10,000, while the ordinary dividend of 2½ per cent. for the year amounted to £31,336. The sum of £40,000 is put to reserve against investments, leaving £34,346 to be carried forward. The directors state "the financial year under review began with and for some time continued to yield excellent results in all departments. Unfortunately labour upheavals brought about and, in conjunction with other disturbing circumstances, accentuated the general paralysis of industry from which the country is now slowly emerging. The operations in the docks and repairing department, although extensive, were restricted owing to the trade depression. In consequence of the miners' strike in October, 1920, and the later strike extending over the last quarter of the year, combined with the serious depression in trade, operations at the iron and steel works were curtailed, particularly during the second half of the year. The profits shown in the balance-sheet have been arrived at, not only after providing the usual depreciation on capital account, but also after writing down all stocks to present day values.

ARGENTINE IRON AND STEEL COMPANY.—The report for the year ended February 28, 1921, states that "during the first half of the financial year the company's sales showed remarkable increases. The great development of the business induced the local management to

place proportionately large orders for goods in advance. Unfortunately, these goods were long delayed in shipment, and when they were suddenly delivered in large quantities the world crisis had overtaken Argentina and the sales of the company had greatly fallen off. The trading results of the year are considered good, but, on account of the heavy fall in the prices of steel, there has been a corresponding depreciation in the value of stocks on hand as at February 28th last and of orders then outstanding for materials which have since been delivered. In these circumstances the directors have reluctantly decided that they would not be justified in recommending the payment of the preference dividend, and they have deemed it prudent to transfer the credit balance of the profit and loss account, viz., £106,389 16s 4d, to the reserve for contingencies, thus increasing that reserve to £280,782 7s 2d. For the reasons given above, the sum of £210,000 has been appropriated from the reserve and applied in the writing-down of stocks on hand and in transit as at February 28, 1921. The balance of the reserve for contingencies, £70,782 7s 2d, will be carried forward against possible loss on goods for which orders were outstanding at the beginning of the current financial year.

BROKEN HILL PROPRIETARY.—Report for four weeks ending September 14, 1921:—Coke produced 22,828 tons; No. 1 blast furnace produced 10,976 tons; No. 2 blast furnace, 13,151 tons; No. 3 blast furnace, 8,454 tons; open hearth, 23,377 tons; blooming mill, 21,834 tons; rail mill, 10,390 tons; 18-inch mill, 9,032 tons; 12-inch mill, 2,411 tons; 8-inch mill, 1,960 tons; rod mill, 2,813 tons. Operations at Iron Knob: 49,341 tons ironstone shipped to Newcastle (N.S.W.). Broken Hill: Decided to restart various plants for treatment of dump material.

BROKEN HILL SOUTH.—Six weeks ended August 13th:—11,960 tons of crude ore treated, assaying 14½ per cent. Pb., 76 ozs Ag., and 156 per cent. Zn., produced 2,146 tons concentrates, assaying 64½ per cent. Pb., 28½ ozs Ag., and 84 per cent. Zn. Of the foregoing, 1,836 tons came from the lead concentrating mill, assaying 66½ per cent. Pb., 24½ ozs Ag., and 8½ per cent. Zn., and 310 tons were produced from current slime, assaying 56½ per cent. Pb., 41 ozs Ag., and 10 per cent. Zn. 14,832 tons of dump slime were treated, assaying 11½ per cent. Pb., 7-8 ozs Ag., and 134 per cent. Zn., and produced 2,563 tons of concentrates, assaying 47½ per cent. Pb., 35½ ozs Ag., and 15½ per cent. Zn. Despatches of zinc tailings were as under:—To Zinc Corporation, 40,433 tons net; to Amalgamated Zinc (De Bary's), 5,607 tons net.

MOUNT LYELL MINING AND RAILWAY.—Cable:—"From Aug. 25th to Sept. 21st, inclusive, ore treated by flotation plant, 6,446 tons; concentrates produced by flotation plant, 1,636 tons. A total quantity of 10,251 tons of ore was smelted, being 6,576 tons from Mount Lyell, and 3,675 tons from North Mount Lyell mine, also 1,248 tons concentrates. Converters produced 607 tons of blister copper, containing—copper 602 tons, silver 20,152 ozs, gold 412 ozs. Furnace in blast 672 hours."

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Fine and open weather has continued during the past week, and farmers have made good progress in preparing the land for the new seed bed. In late districts clearing up the harvest is proceeding favourably, while excellent yields of wheat continue to be reported. Threshings are on a liberal scale, so that ample supplies of wheat in good condition are coming forward at the principal distributing centres. Prices, however, show a weaker tendency, and here fair to good milling samples offer at 58s to 60s per 504 lbs f.o.r. Imported grades ruled quiet, and rates easier in sympathy with lower c.i.f. offers. No. 1 Northern Manitoba, ex ship, quoted 91s, No. 2 hard winter 63s ex ship, Australian to arrive 70s ex store terms, and Egyptian feed 68s 6d landed per 480 lbs. In the forward market a very quiet demand prevailed for cargoes, and prices were reduced rather sharply for North American grades in accordance with lower markets on the other side. Parcels of No. 1 Northern Manitoba, October-November, sold down to 62s 6d, and No. 2 hard winter, afloat, 59s per 480 lbs. Imports of wheat and flour continue in excess of estimated requirements, and port stocks have increased, while the American and Canadian visible supply is also larger. Crop reports from the chief exporting countries are generally maintained, and the outlook for harvest favourable. The flour market is again weaker, though the demand for home-milled shows slight improvement at the reduced rates current. London straight run quoted 59s, town households 57s, patents 62s, all-English straights 53s per sack, delivered. Country straight run 49s to 51s, free on rail London. Of imported, Kansas top patents rule at 59s, Manitoba export patents 63s, straights 59s, Australian 57s 6d, and Chinese 50, per 280 lbs, ex store. On c.i.f. terms

THIS crude, brass-bound, oaken chest, in which, generations ago, simple folk entrusted their Treasure, is eloquent of the age when the thief's chances of robbery were measured merely by the strength of his arm.

Times have changed, but for ever the warfare between the possessors of Treasure and those who seek to rob them has carried on. As a natural consequence we find, as the years have passed, more scientific attempts to rob and still more scientifically protected receptacles for valuables.

To-day, after these years of evolution, the crude, brass-bound, oaken chest is replaced by THE CHATWOOD SAFE—a triumph of steel and ingenuity—proof against Fire, proof against Fall, and proof against the most up-to-date scientific burglar, equipped with the finest Drills, Cutting tools, High Explosives or the deadly Oxy-acetylene low-bpipe.

SINCE 1858

parcels of Kansas top patents, October seaboard, quoted 63s, Canadian patents 56s, straights 51s, and Australian September 52s per 280 lbs. Offals quiet and easier. Broad bran, 49 5s to 49 10s, ordinary 48 5s, middlings 41 10s, per ton ex mill, bags included. Maize in slow request and prices much lower. Plate, ex ship, quoted 32s, ditto landed 33s, yellow round African 33s, white flat ditto 35s, all landed, per 480 lbs. On c.i.f. terms, business was more or less at a standstill, and quotations appreciably lower, with pressure to sell near positions. Cargoes of Plate afloat sold 34s 9d, and South African white flat on passage at 30s per 480 lbs. Parcel trade also slack, and rates easier. On the spot, white African maize meal rules at 49 per ton. Barley dull and values weak. New English malting ranges from 65s to 90s, according to sample, and grinding sorts 59s to 65s per 448 lbs. Morocco landed 43s per 448 lbs. No. 3 Canada Western ex ship 43s, No. 4 ditto landed 44s, Canada feed landed 40s, and American feed landed 38s per 400 lbs. Forward market weak, and parcels of No. 4 Canada Western, October-November, sold at 33s 9d to 33s per 400 lbs. Oats dull and values showed a further decline. Native ranges from 30s to 40s per 336 lbs. Of imported, Plate f.a.q. quoted 25s 6d, ditto clipped 27s, Chilean tawny, 29s, No. 2 Canada Western 32s 6d, and No. 3 ditto 31s 6d landed per 320 lbs. Oatmeal quiet and rates weak. English all cuts 22 to 23, American 22 to 22 10s, ordinary Scottish 22 to 23, rolled oats 23, flaked oats 22 to 27 10s. Beans neglected. English Spring 60s to 65s, new Winter 51s to 54s per 532 lbs. Peas remain quiet. English maples 70s to 80s, and Duns 60s to 65s per 504 lbs. Dutch blue 27s to 30s, and New Zealand blue 26s to 27s per cwt. Only a moderate chartering business occurred in homeward grain freights, and rates were weaker in all directions. From the River Plate heavy grain Upper ports to U.K./Continent indicates 23s 9d, with 22s 6d the best obtainable for October, and October-November quoted 26s 3d ton. Montreal to U.K. done 4s 6d, Northern Range ports to Continent 4s per qr, and to Greece 6s 3d one, 6s 6d two ports discharge, with India at 8s 9d, Gulf to Continent quoted 17 cents per 100 lbs. North Pacific quiet at 55s ton U.K./Continent, with Indian options at same rate. India quiet, as grain is now being imported from Australia and America, and Bombay nominally 30s on dead weight. Australia in moderate request. Wheat to U.K./Cont./Mediterranean 65s, with Indian options at 45s, and Bombay/Karachi direct 40s ton. South African maize quotes 35s, October-November loading. Danube grain dull and weak, while 15s is named for Barley Tunisia to U.K. October. Other markets dull, and nominally unaltered.

COMPARATIVE AVERAGES OF GRAIN.

The following table gives the estimated sales of home-grown wheat during the harvest year 1921-22, contrasted with 1920-21, 1919-20, and 1918-19.

IRON, STEEL, AND COAL.

Our Glasgow correspondent writes:—The business tone this week has been, if anything, quieter than has been the experience for some time. Not that any material or positive change has really taken effect in the industrial and trade positions, but a check has been noticeable in the giving out and placing of new orders in iron and steel, especially in the finished state. It does not follow in evidence that there are fewer fresh contracts available; but the buying disposition has been modified adversely by the threatened revival of labour troubles in the railway and engineering circuits—that over the movement initiated by the several employers' organisations to wipe off certain wage bonuses presently paid to the men. The reductions are substantial, probably running to fully 16 per cent., and are being resisted, not unnaturally, yet certainly unreasonably in existing circumstances. In the event of matters not being adjusted, a serious crisis, involving many thousands of artisans, will result, and that is a contingency which cannot be complacently faced. As indicated, it has already weighed against the placing of new orders—some good lines in engineering have been withdrawn, at least temporarily, from the market; others have been indefinitely cancelled, and not a few which were well forward in negotiation have been diverted to the Continent. This, which goes without saying, is

most unfortunate, for there were gradually growing signs in force here and there that prospects were moderately on the mend. One particularly satisfactory feature was the indication of a recovery of life in shipbuilding, in respect (as one report has it) that half-a-dozen or so of leading shipowners (large "liners") had issued instructions to constructors to proceed at once with the prosecution, to a finish, of orders they have had in hand and which have been hung-up since the collapse of the boom of last year. It is now stated that, owing to the troubles referred to with labour, these instructions have been partially withdrawn. A few days should determine how conditions are likely to develop in this connection. Rumour has it that some shipbuilders have had inquiries lately as to the cost of laying down modern tramp tonnage, for which, however, the state of the freight market does not hold out much encouragement. Still, if shipbuilders are successful in their present efforts to get costs reduced, there might be some expansion realised in the building of boats. Currently, it appears, builders are asking from £16 to £17 a ton deadweight for new vessels, while intending owners are meantime indisposed to pay more than £10 a ton, leaving a disparity that will not be easily bridged. In fact, the gap will be impossible of negotiation unless steelmakers make a further break in prices and an all-round concession in wages is acquiesced in. The downward course of coal is altogether favourable for action on the part of steelmakers, who recognise that their existing rates are not encouraging consumption, especially in the export connections. Inquiry for pig-iron lacks animation, and that circumstance, coupled with an increase in production, has rather flattened quotations. Scotch hematite exceptionally remains firm at £7 15s, but No. 1 foundry is down 5s at £8, and No. 3 5s at £7 15s. Ferro-manganese is £2 a ton lower at £16 per ton for 75 per cent. Textile, agricultural, and general machinery makers are fairly well engaged. A big business, in the aggregate, is being put through by motor builders—in carriages, lorries, &c. Though foreign trade is of limited amount, an active inquiry exists for innumerable descriptions of material, which buyers would like to get in before the recovery sets in, and yet are afraid to anticipate the lowest level.

Our Middlesbrough correspondent's report, dated September 29th, is as follows:—Pig-iron: The recovery from the effects of the coal strike moves very slowly, and so long as the imports of cheap foreign pig-iron continue, as at present, there is a poor prospect of more blast furnaces going in on this coast. Coke costs 35s delivered at the furnaces, and this is considerably more than consumers can afford to pay if they want to avoid a loss. No. 3 Cleveland G.M.B. is 120s per ton, and mixed numbers East Coast hematite 130s per ton. Manufactured iron and steel: Steel orders are still very scarce, and rolling mills can only keep going with difficulty. Steel ship plates (home), £14; steel ship angles, £13 10s; iron bars, £14; steel rails, £14 net. Iron ore: Business is limited to an occasional prompt cargo. The few blast furnace works which are operating have old contracts for ore which are mostly in arrear.

Our Sheffield correspondent writes:—The local industrial situation is rather worse on the whole, although cases of individual revival are to be met with. Recent movements of the national currency exchanges has increased the obstacles to overseas trading, and the home demand for steel materials is restricted owing to the large amount of idle plant in the country. About a third of the milling plant in the heavy steel section is working. Unfortunately, the orders being booked do not suffice to keep the furnaces running, and several are being stopped until business comes forward. Although competition from the Continent continues severe, it shows signs of waning. Prices of foreign steel and iron indicate an upward movement, nor is it possible to get such prompt delivery as in the past. The depression in the crucible steel department is as profound as ever. Business is also quieter than of late in saws, files, and quite a variety of hand and engineers' small tools. There is, on the contrary, a good demand for mining steel from the goldfields, and machine knives are in request. Having regard to the season, the cutlery and plate branches must be described as slack. Germany and France are supplying the

Every description of British & Foreign Banking Business Transacted

bulk of the razors, scissors, and pocket-knives now being sold, while Sheffield makers are doing well in table knives. Trade with Australia has fallen flat, and no recovery is looked for this year. Some revival in the buying of house coal is reported. Consumers having little or nothing in their cellars, and the cold weather being at hand, they are under the necessity of getting in their winter supplies. There is also rather more doing in steam coal and export, and the market for small fuels is firmer. Blast furnace coke can now be bought at 22s 6d, and steel melting coke has been reduced to 45s. Coke is selling rather better.

BY-PRODUCTS TRADE.

(BY OUR CORRESPONDENT.)

The market remains inactive, and there is very little fresh business passing; until the coke ovens get properly going, the quantity of materials available is small, and it is consequently difficult to see how prices are to be maintained when full production is the order of the day. Pitch, meantime, is nominal at between 80s and 90s per ton. A demand has sprung up for crude naphthalene for the firelighter trade at £5 10s to £8 per ton. Refined is only moderately active at £17 10s. Supplies of solvent naphtha have been increased, though there is a fair demand for good quantities at 2s 9d and 3s per gallon. Cresylic acid is quiet at about 2s 4d per gallon on rail, and carbolic acid is a dead market at 1s 8d per gallon. Crystals are almost unsaleable at 6d per lb. It is certain that it does not pay to extract the carbolic acid at this price. Benzol is scarce, 90s being quoted at 3s per gallon in the London area; pure is 3s 6d per gallon on rail. A fair inquiry continues for intermediate products, with moderate business passing. Salicylic acid has an upward tendency at 1s 4d per pound for technical grade. Aniline oil and salt are wanted on the Continent, and make is 7d and 1s 8d per pound respectively. Technical resorcin makes 6s and beta-naphthol 2s 6d per pound. There is a fairly good demand for sulphate of ammonia for export, the price being firm in the neighbourhood of £16 per ton. France has lately come into the market as a substantial buyer. For home uses, prices have been advanced for November and December deliveries. Subject to orders being received prior to October 15th, the following are the prices quoted:—Neutral quality, 25½ per cent. ammonia, November, £14 18s; December, £15 13s. Ordinary quality, 25½ per cent. ammonia, November, £13 15s; December, £14.

MANCHESTER, September 29.

We have experienced a firm and hardening market during the week. Without there being any decided increase in the turnover, inquiry has broadened, and the trade outlook is improving. More orders have been booked in piece goods for China. Bids for India still lag behind, but dealers in the bazaars are displaying more interest in Lancashire goods. The grain crops in our Dependency are said to be in splendid condition. Active buying has again occurred in a variety of cloths for Egypt and Turkey, and an increased inquiry has been met with for South America. Goods in the home trade are moving off more freely, and manufacturers have secured a fair amount of new business. The general outlook for the weaving section is brighter. Prices in American yarns have hardened, and towards the end of the week the turnover has been better. Export numbers have been in active request for China. Operations in Egyptian spinings have been patchy, and many users do not seem able to pay the higher rates required.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—When members of the trade met on 'Change to-day they were soon made aware of the significant news which had been received by telegraph from Liverpool. The reports from that centre emphasised that a record attendance of home and Continental buyers were keenly bidding for Colonial wool, and that prices were going even higher than those ruling at the close of the last series of auctions in London. Most of the messages agreed in placing the advance in merinos at 7½ per cent., while crossbreds were reported about 5 per cent. higher. The effect of this further advance in the price of the raw material was at once seen in higher quotations for tops, and as the market is extremely bare of spot merinos, topmakers are in a position to make their own terms where urgent delivery is essential. The rise in prices may check demand to some extent, though it must be noted that spinners are finding more inquiry, and quotations for Botany yarns have again been advanced. Most of the yarn business is on export account, but there is certainly more doing in crossbreds for the hosiery trade. It cannot be said, however, that the piece goods section of the industry shows much movement, and the lack of an adequate outlet for the finished article, combined with the possibility of a collapse in the German industry, tends to make many traders view the future with some apprehension.

(FROM A CORRESPONDENT.)

It is plain to be seen from cables and private mail advices that Australian pastoralists and those responsible for selling wool at the different centres are looking forward with confidence to the forthcoming season, believing that an altogether higher level of values will obtain than during the earlier part of this year. The auctions at all the selling centres during the past two months have given considerable encouragement to pastoralists. Any advance in wool that is not based upon actual consumptive needs is soon lost, and after the terrible experience of the past 18 months the textile trade of this country needs just the tonic which steady, firm values for wool is capable of giving. The contention of many is that the advance in wool started at the wrong end of the trade, that the tale is wagging the dog even to-day, wool markets trying to force the pace in fully manufactured textiles. I must admit having a desire to see the order of things reversed, but an improvement in pieces has often been forced from the raw material end of the trade. The mountain

THE BANK OF TAIWAN, LIMITED.

of piece stocks which merchants and export houses are carrying to-day will be difficult to move, but if wool moves freely and spindles run longer hours, an effect is bound to be produced upon wholesale fabric buyers. Nothing will do the wholesale fabric end of the trade so much good as steady, firm prices for the raw material, and there are undoubted evidences of confidence increasing where it is most wanted.

It would appear that Germany holds the key to the future of wool values. I believe for the time being that even merino prices have advanced as far as commonsense and the trade of the world warrants. Almost the whole of the users, both in the West Riding and Northern France, are of opinion that German trade and finance are riding for a serious fall, that the present boom is largely artificial, and that sooner or later there will be a slump after the order of what was seen in this country last year. It is to be hoped that no such catastrophe will happen, and I think that if there should be a slump in the textile trade in Germany, the effects cannot be as tragic as they have been in this country during the past 18 months. German spinners and manufacturers, as well as wholesale fabric buyers, are not handicapped with dear stocks, and whatever they are carrying to-day is out of wool bought at the lowest point of the market. I certainly desire to see consolidation of to-day's market values in preference to any further advance, for not until the trade of both England and France improves can there be any justification for any further improvement in wool values.

VEGETABLE OILS AND OILSEEDS.

(FROM OUR CORRESPONDENT.)

With Plate linseed offered freely by shippers owing to the continued depression in Argentine options, prices on this side fell at an extraordinarily rapid rate, till at one time last week October-November shipment was offered at as low as £16 5s. At this figure consumers were in the market, and bought readily, with the result that an appreciation of 30s or more per ton followed. Demand for a time appears to have been satisfied, and crushers are not disposed to add to their commitments at the figures now quoted by shippers. Very little interest is taken in Indian linseed.

In sympathy with seed, raw linseed oil suffered a severe reaction in the latter part of last week, down to £31 15s being accepted for near positions and £32 10s for January-April. On better inquiry, prices improved 40s per ton, but have failed to maintain the advance, demand being very moderate, and consumers, home and export, holding aloof.

Cottonseed continues a dull market, owing to the absence of offers by Egyptian shippers. Spot values are again higher, but very little business can be done at the figures quoted. The oil product has continued firm, with rising quotations, crude Egyptian having reached £47 10s, and edible refined £51, ex Hull mill; but next to no business is doing. Practically all available soya bean oil for near delivery has been absorbed, and prices are tending higher. Soya beans, however, are quoted above buyers' ideas, though £15 is reported paid for September Manchurian to the Continent.

Rapeseed is firmly held by Indian shippers, but no business is passing to this country, buyers being amply supplied to meet the poor trade in oil. Palm kernel oil neglected; ground nut oil steady.

Oilcakes are moving off fairly well, but fresh orders for linseeds are few. Cottons, however, are in slightly better demand.

THE TIMBER TRADE.

(FROM OUR CORRESPONDENT.)

The market for foreign timber for building construction and general work showed much more life in September than was experienced during the previous eight months. Free-on-board quotations have fallen about 50 per cent. on the most favoured sizes, compared with those in the early part of the year, and more for narrower widths.

Forward buying has shown a decided improvement at the lower rates, the gradually decreasing prices attracting importers who had previously held aloof. Even now importers are not committing themselves too freely, but they can find consolation in the fact that shippers' quotations cannot get much lower. As a matter of fact, the f.o.b. market has shown a slight stiffening for good Swedish stocks of favoured sizes. A fair average price f.o.b. for 3 by 9 deals is from £18 to £22 a Petrograd standard, £14 to £16 for 8 in.; £13 to £15 for 7 in.; and £12 to £13 for 6 in. wide battens. Finnish timber is about £2 to £4 a standard cheaper, and for some time has been creating keen competition with the Swedish productions. Floorings are not meeting with a good market, Sweden asking £16 to £17 10s a standard, c.i.f.

As regards the spot market, this has also shown more life during September, but the demand has not been large, nor can it be while the industrial position is so bad. The fair call for deals, battens, and floorings for house and large building work has been the mainstay of the trade, but it is not expected to increase now that the winter is coming on and building work likely to slacken.

For packing-case work the demand for timber has been decidedly slow over the month, reflecting the condition of those trades, particularly in Lancashire and Yorkshire towns, which use wood containers. Timber for that class of work can now be obtained very cheaply, prices being little, if any, above those ruling before the war.

Timber consumers are now benefiting not only from cheaper wood but cheaper transport, the freight market being very depressed. Charterers are preferring the smaller-sized sailers and steamers, which are fetching higher rates than the large vessels. Rates are now about 60s Gulf to East Coast U.K. for steamers of large capacity, the smaller boats making from 5s to 7s 6d more a standard.

The fancy wood market shows little change from the dull conditions that have been ruling for so long. Mahogany of good quality is keeping steady in price, both for logs and converted wood, but the low-grade stock, which is large, is not attracting much attention.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

The hide market is again advancing, and best ox hides sold at Thursday's Bermondsey auctions from 8½d to 10½d per lb—showing an average advance of ½d. Cows at 8½d also advanced ½d, whilst calf skins showed advances of ½d to ¾d, as against last prices. Tanners are in a quandary, and seem unable to control the price of raw material, although the demand for their finished product is at the best uncertain. Foreign hides are also in a strong position, stocks of best hides now being very low. South American fregorifics are again dearer, and the Continental demand seems improving. Dry hides share in the improved demand, and higher rates are demanded by owners. The American market is cabled as strong, with best heavy packers now selling at 14½ cents.

There is a better tone to the leather trade, and fair-sized deliveries of sole leather have been made during the past week at advanced prices. The position is uncertain, however, as merchants hold in some cases stocks of leather which they can afford to sell at below tanners' prices for the new output, and this naturally checks business. Cheap offal seems wanted for low-grade boots, and a trade is doing in shoulders from 8d to 10d per lb. Upper leather is decidedly firmer in price, and importers and tanners of glazed kid and box calf have been doing quite a fair business. Carriers are a shade better off for orders for waxed kips and semi-chrome kips, chiefly for the lower grades. Much is expected at the Shoe and Leather Fair, which opens at the Agricultural Hall on Monday next. Many overseas buyers are, I know, coming over, and the exchange of opinion on international conditions will be of benefit to all sections of the trade.

PORTLAND CEMENT.

The following quotations for Portland cement are supplied by the Cement Marketing Co., Limited:—Best English, complying with British standard specification, delivered in London area—in full van or motor loads to site, 83s 6d to 89s per ton; alongside in River Thames up to Vauxhall Bridge in full barge loads (80 tons minimum), 76s 6d per ton. Extra on above prices for the following special brands:—

"Blue Tiers," a fine-ground slow-setting cement, and "Red Tiers," a fine-ground quick-setting cement, 3s per ton. "Ferrocement," a cement prepared to meet the requirements of specialists in ferro-concrete constructions (in 20 sacks to the ton), 10s per ton.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, September 30.

With one or two exceptions the markets remained in a quiet state, as export requirements do not extend, and the bulk of business stirring at the moment is on home account.

SUGAR.—A steady tone governed this market, and business was on a fair scale. Tate's cubes sold 57s 3d to 58s 3d; crushed, 54s; nibs, 54s 6d; granulated, 52s to 52s 6d; caster, 54s 6d to 55s; pieces, 38s 6d to 43s. Lyle's granulated, 52s to 52s 3d; yellow crystals, 47s 6d. Crystallised West India sold rather quietly at 42s to 46s, according to quality. Muscovado ranges from 38s to 42s. American granulated, spot, sold, 51s 9d to 52s and 51s 6d; ditto, afloat, 24s 3d; white Java, spot, 49s; ditto, September, 21s, c.f., and i. terms, United Kingdom.

GIRARD TRUST COMPANY

PHILADELPHIA, PENNSYLVANIA.

Equipped to perform all kinds of fiduciary service—under appointment by courts, corporations and individuals.

Correspondence invited.

Chartered 1836.

Capital and Surplus - \$10,000,000.

Member of Federal Reserve System.

Dutch granulated, prompt, 24s; and Czecho granulated and crystals, 23s 6d; and Belgian crystals, October, 21s; November-December, 19s 6d, f.o.b. terms. Terminal market steady. December raw quoted 16s 6d; white, December, sold, 20s to 19s 9d; March, 19s 6d to 19s. Cuban stocks total 1,195,000 tons, against 303,500 at corresponding period last year.

COFFEE.—There was a moderate inquiry this week, the market being rendered somewhat quiet, owing to general run of quality offered in auction showing but little attractiveness. For future delivery the market continued steady, and December sold, 50s.

COCOA.—Market still quiet, but prices for the chief part unaltered. In auction, some 4,272 bags were brought forward, and about 1,200 sold: good to fine Trinidad, 59s to 61s; Grenada, 53s to 55s 6d; selected West Coast African, 45s to 49s; fine Samoa, 104s 6d. Butter steady, at 1s 10½d per lb for English.

TEA.—The smaller supply of 35,700 packages Indian offered in auction this week experienced quieter competition, but all grades possessing quality went off at steady rates. Inferior, however, only saleable at a slight decline, and a good many lots were bought in. 23,500 packages Ceylon were submitted, and these met with active and well-distributed competition at full to slightly higher prices.

RICE.—Market still very dull, and quotations for the chief part nominal. Two stars Rangoon, spot, 21s; afloat, 20s; No. 1 garden Siam, afloat, 20s 6d; No. 1 Saigon, September-October, 17s 9d to 18s; Burma I.A., broken, September-October, 15s 6d; No. 2, A, 15s; Siam, C 1, broken, ditto, 14s; C 3, 13s 9d. Rangoon bran quiet, and parcels to arrive quoted 8s 5s per ton, ex ship. Beans very dull. Rangoon hand-picked haricot, spot, sold, 13s; and October-December, 13s. Madagascar butter beans, all white, new crop, spot, 27s; old, 23s. Japanese peas, October-November, 35s, c.f. and i.; and arrived parcels, 44s landed.

FRUIT.—The market for currants ruled quietly steady. Patras quoted 70s to 74s for new crop; Vostizza, 80s to 84s. Cape new crop sultanas, 103s to 110s. Dates remain firm.

SPICE.—Pepper quiet, and forward positions disclosed some irregularity. Fair black Singapore, spot, 4d; ditto, October-December, 3½d; November-January, sold, 3½d. Aleppy, spot, quoted 4½d; Tellicherry, 4½d; white Singapore, 8½d; Muntok, 9d; ditto, October-December, sold, 7½d. Zanzibar cloves, spot, sold, 1s 4d; September-November, steamer, 1s 3d; October-December, 1s 3½d. Pimento, spot, sold, 2½d per lb. Tapioca steady, quiet. Fair flake, spot, 18d per lb; ditto, September-November, steamer, London, 15s; fair Penang seed, spot, 21s; September-November, London, 17s 9d; small sago, spot, 27s; sago flour, September-November, 15s 6d, London. Japanese farina, September-November, London, 27s. Desiccated coconut, spot, sold, 50s 6d; afloat, 48s; and September-October, 50s. Ginger steady. Japanese limes, spot, 45s. Nutmegs firm, quiet, with only small spot stocks.

JUTE.—The market continued very steady, though general trade ruled quieter as demand from the near Continent was adversely affected by rates of exchange. Native first marks, spot, Hamburg, sold, £35; ditto actuals afloat, Hamburg, £35; ditto subs, old crop, September-October, £33 10s to £32 15s; lightning subs, old crop, spot, Hamburg, £29 10s; ditto September-October, £29 10s to £29; heart subs ditto, £21 5s; Gooti circle D, spot, Dundee, £70; 10 oz Calcutta hessians, spot, London, sold, 30s; 8 oz ditto, 24s 6d; A twills, spot, 84s; B, 74s.

HEMP.—The market for Manila is slightly dearer on the week, and there is a moderate inquiry. J grade, September-November, sold, £38 to £39; K ditto, £36 10s to £37; L ditto, £36 10s to £37; M, £32 10s; and streaky threes, September-November, at £42 10s to £43. New Zealand high points, January-March, sold, £38 10s; fair, October-December, £36 10s; August-October quoted £35 15s.

SHELLAC.—Market unsettled and easier on balance. T.N., spot, 330s; October, sold, 325s to 310s, and later at 315s; December, 330s to 315s, and 320s.

COPRA.—Market declined steadily on lack of buying orders and some pressure shown to sell. F.M.S. Straits, August-October, Rotterdam, sold, £32 10s to £30 10s and £31 5s; September-November, £32 5s to £30 2s 6d and £30 7s 6d; October-December, £32 to £30 and £30 15s. Ceylon, September-November, London, £34 5s to £33; South Sea Islands, £29 10s; Cebu to Hamburg, £29 10s; F.M. Straits, August-October, Marseilles, £31 10s to £30. Palm kernels, October-December, Liverpool, sold, £21 10s to £20 5s and £20 12s 6d.

RUBBER.—Market steadily hardened in the early part of the week, but soon relapsed on increased selling orders. Standard crepe, spot, sold, up to 9½d and then 9d; October-December, up to 10d then 9½d; January-March, 11d to 9½d and 10d; standard smoked ribbed sheet, spot, sold, up to 9½d then 9d; October-December, 9½d then 9½d; January-March, 11d then 9½d, but later 10d. Fine hard Para, spot, 1s 1d. Caucho ball, 7d per lb.

EGG PRODUCTS.—Market still very quiet and featureless. Liquid yolk, spot, 11s for prime quality; and September-October, steamer, 95s per cwt. Albumen, spot, 3s; and ditto, to arrive, 2s 10d per lb.

MENTHOL.—Spot, 23s. Japanese peppermint oil, spot, 4s 7½d; aniseed, 2s 3d per lb.

OILS.—Linseed irregular. Spot, net, naked, 32s 3d; September-December, 31s 6d; January-April, 32s 6d. Rape quiet. Crude, spot, 54s; refined, 61s. Cotton firmer. Crude Egyptian, 48s; Bombay, nominal; common edible, 57s. Chinawood: Hankow, spot (barrels), 85s; and shipment, 69s. Coconut easier. Ceylon, spot, 55s; September-October, 52s; Cochin, ditto, 57s. Soya steady. Oriental, barrels, ditto, 44s 6d. Japan fish steady. September-October, cases, 24s. Cod firm, English, spot, 30s to 32s. Groundnut quiet. English crushed, naked, spot, 55s; deodorised, barrels, 68s. Turpentine irregular. American, spot, 71s 3d; October-December, 70s 6d; January-April, 71s 6d. Rosin firm for common grades. American, grade B, 17s; F, 17s 9d; G, 17s 9d; K, 18s 6d; WW, 23s; French, F/G, 16s; H, 16s 6d; WW, 17s 6d; extra pale, nominal. Petroleum quiet. American, standard white, 1s 4½d; and water-white, 1s 5d per gallon.

OILSEEDS.—Linseed: Market very unsettled, and prices again appreciably lower for Plate. Indian largely nominal. Calcutta, arrived, sold, £18 5s to £16 5s; September-October, £17 10s, value. Plate, spot, Hull, £16; afloat, sold, £16 2s 6d to £15 10s, £16; September-October, sold, £16 5s to £15 10s, £17 and £16; October-November, £16 10s to £15 15s, £17 and £16 5s; November-December, £16 15s to £16, £16 10s; January-February, nearest, £16 5s. Rapeseed quiet. Toria, September-October, quoted £20 15s; real bold Ferozepore quoted £21 10s; brown Cawnpore, £20 10s. Cottonseed quiet. Egyptian black, September, quoted £15; and white, £14 10s. Bombay, September-October, £11 10s. Gingelly firm. Chinese, September-October, Continent, £31 10s, paid. Castor, Bombay, September-October, £21. Ground nuts quiet. Coromandel, machine-dried, September-October, £29 10 to £29 10s; Chinese decorticated, f.a.q., ditto, £28 10s to £29 per ton.

METALS.—Tin exhibited a rather firmer tendency at the week's commencement, a good business being done in cash at £157 10s to £157 15s, three months' £159 to £159 15s, but a quieter feeling prevailed until Wednesday, when cash changed hands at £156 15s to £156 5s, and three months' at £159 to £158 5s, while £158 15s was since registered. At Thursday's meeting these dates settled down at £156 5s and £158 10s respectively, dealings being on a limited scale. At Friday's session the limited dealings included cash at £156 10s, and three months' £158 5s to £158 10s, setting down at £158 7s 6d. English ingots, £154 to £155. Copper opened rather dearer, standard cash being sold at £68 to £68 2s 6d, and three months' £68 17s 6d. No material change characterised Tuesday's movements. During the middle of the week, cash sold at £68 10s to £68 7s 6d, and three months' £69 5s to £69 17s 6d. Thursday's market manifested a quiet tone, cash realising £68 10s to £68 5s, and three months' £69 10s to £69 5s. At Friday's session cash changed hands at £68 5s, and three months' £69 7s 6d, business being restricted. Electros, £72 10s to £74 10s; best selected, £69 10s to £71 10s; strong sheets, £103. Wire bars, £73 10s to £74 10s. Lead slightly steadier, at £23 2s 6d to £23 17s 6d, as to position. Spelter firmer, at £26 7s 6d to £26 15s. Antimony: English regulus, £37 to £40. Aluminium, home trade, quoted at £120; export, £125.

International Banking Service

THE Guaranty Trust Company of New York offers a complete and direct banking service to all parts of the world.

Its chief functions and facilities are:

Opening current and deposit accounts
Dealing generally in foreign exchange and collecting foreign bills

Issuing documentary credits and discounting approved acceptances

Issuing letters of credit and travellers' cheques
Supplying credit information to responsible firms and companies

Buying and selling foreign and domestic securities for customers' account
Safe-keeping of securities

Acting as executor and trustee under wills, etc.

The Company issues a series of booklets which explain the wide range of its services and also contain commercial and financial information of current interest.

A list of "Publications of Current Interest" will be sent on request.

and

1,500,000 Ordinary Shares of £1 each at par

will be published to-morrow.

SECURITY FOR THE 1st MORTGAGE DEBENTURES.

Freehold and Leasehold properties stated
by the directors to be of a replacement
value of £3,600,000The whole of the ordinary shares of Peter
Walker & Sons, Ltd., acquired by this
Company for 2,420,000

£6,020,000

The Earnings will show that the Interest and Sinking Fund on the 1st Mortgage Debentures on the average profits for last 5 years are covered more than four times, whilst, after paying all fixed charges and deducting all expenses, an amount is left over equal to 17% on the issued Ordinary Shares of the Company.

Prospectuses and application forms may be obtained from The London Joint City & Midland Bank, Limited, 5 Threadneedle street, London, E.C.2, and all branches; Belfast Banking Company, Limited, Belfast, and all branches; Clydesdale Bank, Limited, Glasgow, and all branches; Messrs. Haes & Sons, 24 Throgmorton street, London, E.C.2., and Messrs. Horsfall Bros., Liverpool and London Chambers, Liverpool.

JOHANNESBURG CONSOLIDATED INVESTMENT CO., (Incorporated in the Transvaal.) LIMITED.

REPORT OF DIRECTORS to be submitted to the Shareholders at a Meeting to be held in the Board Room, Johannesburg Consolidated Investment Company, Limited, Consolidated Building, Fox Street, Johannesburg, on Wednesday, the 23rd day of November, 1921, at 11 o'clock in the forenoon.

ACCOUNTS.

1. The Company's Balance Sheet and Profit and Loss Accounts for the financial year ended 30th June, 1921, are submitted herewith.

PROFITS.

2. After providing for depreciation, English and Colonial Income Tax, and other charges, the profit for the year, including £191,453 8s. 4d. brought forward, amounts to £579,411 13s. 8d.

DIVIDEND.

3. On the 23rd June the Directors declared a Dividend of 10%, free of Income Tax, payable to Shareholders registered as at 30th June, 1921. This distribution (excluding provision for Income Tax) absorbs £395,000, leaving a balance of £184,411 13s. 8d. to be carried forward to next account.

VALUE OF SHAREHOLDINGS.

4. The Company's shareholdings have (where necessary) been written down to their market value as at 30th June.

FINANCIAL POSITION.

5. The financial position of the Company continues to be very satisfactory, and as opportunity occurs the Company's interests are being extended and developed.

MINING INTERESTS.

6. The usual Reports issued by the various Gold Mines under the Company's control afford all necessary detail as to their position. The following general information may however be of interest to this Company's Shareholders.

Government Gold Mining Areas (Modderfontein) Consolidated, Limited. This property continues to make excellent returns. The tonnage mined for 1920 amounted to 1,515,000 tons, which was an increase of 154,000 tons, and the number of fine ounces of gold recovered was 503,239, an increase of 33,857 fine ounces when compared with the previous year. In view of the Company's large ore reserves, amounting to over ten million tons, the policy of the Company is to maintain the ore reserves at this figure.

Van Ryn Deep, Limited. The ore reserves are over three million tons of an average value of 9.7 dwts. over 72 inches; both tonnage and grade showing an improvement as compared with the previous year. The development of the Western Section of the mine shows improvement.

Randfontein Central Gold Mining Company, Limited. The scheme for the re-organisation of this mine is now nearing completion, but progress has been retarded by strikes and other obstacles beyond the control of the management. It should be borne in mind that the work which required to be undertaken has been practically equivalent to the opening up of a new deep level proposition at the bottom of the former workings. There is every reason to anticipate that substantial benefits will shortly accrue from the re-organisation of this property.

The taking over of the Randfontein Deep, Limited, property, referred to in last year's Report, has been completed, and mining operations in this area have been carried on for the last twelve months. It is anticipated that ore from the Randfontein Deep section will be sent to the mill at an early date.

Randfontein Estates Gold Mining (Witwatersrand) Limited. In the Company's previous Report reference was made to an Action successfully brought by the Randfontein Estates Company against Sir Joseph B. Robinson, which resulted in the Randfontein Estates Company being awarded £215,000 plus interest at 6 per cent. as from February, 1907. In respect of this judgment a payment of £391,155 11s. 6d. on account has been made to the Randfontein Estates Company. The latter's Solicitors have since been served with a notification that Sir Joseph B. Robinson has applied for permission to appeal to the Privy Council against this judgment.

New State Areas, Ltd. The work of sinking the two shafts on this property is now completed, the South Shaft having been sunk to a final depth of 4,071 feet and

the North Shaft to a final depth of 3,768 feet. The reef intersected by the South Shaft gave the extremely high average value of 89.3 dwts. over 18.9 inches. The reef intersected by the North Shaft was found to be faulted and disturbed by numerous quartz intrusions, and therefore no reliable assay value has yet been possible. Development is rapidly proceeding and there is every reason to anticipate that the New State Areas will prove a most valuable property.

WORKING COSTS.

7. It has for some time been obvious that existing circumstances no longer justified a continuance of the high scale of wages paid to the miners in South Africa. It is therefore satisfactory to report that an amicable arrangement has been concluded between the Transvaal Chamber of Mines and the Trade Unions concerned resulting in an immediate reduction of wages with the probability of further reductions in the near future.

GOLD PRODUCTION.

8. The value of the gold produced by the Company's Group of Mines during the year under review amounted to £9,926,943, the average price obtained being approximately £5 11s. 0d. per fine ounce.

COAL INTERESTS.

9. As mentioned by the Chairman on the occasion of the Company's last Annual Meeting, the Company has acquired considerable coal interests in South Africa. The equipment of the mines is nearing completion, and they will be capable of producing a large quantity of coal. Your Directors are hopeful that the Company will eventually derive material benefit from this new enterprise, more particularly when the necessary railway facilities have been obtained.

DIAMOND MINES.

10. Regarding your Company's interests in the leading Diamond Mines in South Africa, it may be mentioned that during the period under review the falling off in the demand for stones has been met by a drastic curtailment of production. This is no new feature in the history of the diamond industry, and it is confidently anticipated by those who control the policy of the diamond mines that an improvement in the position may be expected in the near future, and of such improvement indications are already apparent.

ESTATES AND TOWN PROPERTY.

11. Sales of building sites on the Company's residential estates continue to be effected.

VISIT OF THE PERMANENT CHAIRMAN TO SOUTH AFRICA.

12. Early in the year Mr. S. B. Joel, the Permanent Chairman, went out to South Africa on the Company's business. His visit was very valuable, as it enabled him, in consultation with the Directors, to deal with many matters of considerable importance and urgency.

DIRECTORS.

13. In terms of the Articles of Association, four of the Directors, viz., Sir John S. Parcell, K.C.B., J. Emrys Evans, C.M.G., J. Friedlander and Isaac Lewis retire by rotation, and offer themselves for re-election.

ELECTION OF AUDITORS.

14. Messrs. W. Fergusson and S. Thomson, the Auditors of the Company in Johannesburg, and Messrs. Kemp, Chatteris, Nichols, Sennell & Co. the Auditors in London, retire from Office and offer themselves for re-election.

By Order of the Board,

THOMAS HONEY, } Secretaries.
W. H. MARDALL, }

THE MONEY MARKET.

CONTRARY to expectations, Saturday's dividend payments did not produce easy conditions on Monday, and the market had to go to the Bank for a fair amount at 6 per cent., the absence of Treasury Bill maturities being partly responsible. Supplies of money became distinctly easier on Tuesday, and thanks to further creation of credit by the Government to meet Exchequer bonds maturing on Wednesday, there has since been an abundance of short credit. A moderate amount due to the Bank was repaid

on Thursday. The discount market has been easier, the working rate being about $4\frac{3}{8}$ per cent., there being a slight hardening on Thursday's decision to make no change in Bank rate. A fair amount of business was done in the various usances of Treasury bills, with a small inquiry from the banks for December bills. Yesterday money was again easy. The three months' bill rate was called $4\frac{3}{8}$ per cent.

	Oct. 7, 1921.	Sept. 30, 1921.	Sept. 23, 1921.	Sept. 16, 1921.	Previous Rate and Date Changed.

* Additional to those offered by tender the preceding week.

The Bank statement reflected Government borrowing for October 1st dividend payments, and the repayment of maturing Exchequer bonds on Wednesday. The circulation expanded by £694,100, and the reserve was reduced by a similar amount. Government securities rose by over £25 millions, and Other by nearly £4½ millions, so that deposits were increased by over £29 millions, £22½ millions of which went to Other. The circulation of currency notes was reduced by £1,035,000 to £313,347,400, which includes £1,875,100 for notes called in but not yet cancelled. The fiduciary issue is £263,522,300, or £54,032,900 below the maximum.

In the foreign exchange market conditions have been even more confusing and difficult than before, and the feeling of uncertainty which hangs over the whole position has been intensified. Mr Lloyd George's recent reference to the necessity of stabilisation of the exchanges shows at least a recognition of the evils with which we are oppressed, but he gives no indication that the Government is prepared to tackle the main underlying causes of instability—reparation and inter-Allied debts. The most unexpected feature was a sudden rise in the dollar quotation, which went up to just below 3.80. From this it reacted somewhat, but yesterday morning it had again risen to 3.78½, as compared with 3.72½ a week ago. The only explanation so far afforded for this movement is a sudden and strong demand for sterling in New York, which fits in ill with the generally expected tendency at this time of the year. The rate for future dollars has narrowed again to ½ cent per month over spot, as compared with ¼ cent a week ago, and ½ cent a fortnight ago. Paris has been irregular, and after having been up to 52.80 on Monday has ended, at 52.25, about 20 centimes higher than the previous week. The provisional arrangement of the special reparation agreement with Germany may do something to help the French position, but the dispute over next year's budget betrays the real seriousness of the outlook. The Brussels rate, at 53.15, shows the same difference on Paris as the week before. Future quotations in Paris and Brussels have moved to 2 and 7 centimes respectively, as compared with 4 and 8 the previous week. The lira, after rising a little, has steadied somewhat, and at 94½ is 1 lira higher than last week's quotation. Amsterdam has again moved against us from 11.71½ on September 30th to 11.67 yesterday morning. Madrid is slightly higher, while Switzerland has fallen again from 21.50 to 21.30. Stockholm and Copenhagen have both improved in value, the former to 16.65, the latter to 20.25. Christiania, on the other hand, has further depreciated from 30.18 to 31.35. Berlin, after its last week's recovery, moved up again sharply to just below 470 on Wednesday. On Thursday it recovered to 458½, but yesterday it was back again to 461, reports from Germany being increasingly gloomy. Helsingfors, after its recent relapse, shows signs of recovery again, and has fallen to 252½, as compared with 260 last week. Among the Central European exchanges Warsaw shows signs of some re-

covery from its recent débâcle, being back again at 16,000, as compared with last week's figure of 25,000. Vienna, however, continues to depreciate, the London (Auslands-kronen) rate being well over 6,000. On October 3rd the Viennese (Inlandskronen) rate was 9,900, as compared with the London rate on the same day of 5,800. Prague has risen to over 350 from 335 a week ago, Belgrade is up to 215 as compared with about 197, Budapest is over 2,500, as compared with 2,400. Bucharest has moved up again from 410 to over 430, Sofia alone remaining more or less stationary at about 550. In Athens depreciation continues its rapid course, the drachma having now risen to about 90 from 78.40 last week. Among South American exchanges Buenos Ayres, Monte Video, Rio, and Valparaiso have all gone slightly in our favour. The rupee, in spite of favourable reports, is also rather cheaper, while the yen has also gone about ½d in our favour. The silver market has been much more uncertain with India and China, both as sellers and buyers, and the price has dropped during the week more than 1d. On the whole, however, the reaction from the recent upward movement has been less than might have been expected. Hong Kong and Shanghai rates have not yet reflected this downward tendency.

A SUMMARY OF NATIONAL FINANCE.

FINANCIAL YEAR, 1921-22 (TO DATE) APRIL 1 to SEPTEMBER 30, 1921.

Total spent	£ 497,993,849	Raised by revenue ..	£ 456,163,160
Dec. in balances	262,082	Net borrowings	41,568,607
Total	497,731,767	Total	497,731,767

ESTIMATES FOR YEAR 1921-22.

Ordinary Receipts ..	£ 1,058,150,000	Ordinary Expenditure	£ 974,023,000
Special Receipts ..	158,500,000	Special Expenditure	65,705,000
Total	1,216,650,000	Total	1,039,728,000

Surplus* 176,922,000

* Owing to liabilities which could not be precisely calculated, it was estimated that the final balance would not exceed about £80,000,000.

EVENTS OF THE WEEK.

OCTOBER 1ST.—First conference at Gairloch on plans for revival of trade.

OCTOBER 3RD.—Welsh coal-owners accept arbitration.

OCTOBER 4TH.—Premier's speech at Inverness on unemployment and foreign exchanges. Demonstration of unemployed in London.

OCTOBER 5TH.—Prime Minister consults General Council of Trades' Union Congress.

OCTOBER 6TH.—Cabinet discusses unemployment. Premier not to attend Washington Conference.

OCTOBER 7TH.—Labour Conference on Premier's invitation.

On the Stock Exchange the gilt-edged market remains the only centre of any real activity. Consols have touched 49, and the first series of 5½ per cent. Treasury bonds have risen to 97½. Elsewhere in the markets the chief feature has been somewhat heavy selling of oil shares. The Ceylon Loan and several other new issues have been rapidly oversubscribed.

Rather more activity than of late is reported in the cotton trade, home buying being of fair extent. But towards the end of the week business was checked by the easier tendency of raw cotton rates. In the wool trade the price of the raw material is well maintained, and holders of piece goods are able to dispose of stocks at slightly better prices. Competition was keen at the recent sale of colonial wool at Liverpool. The demand for pig-iron remains in abeyance, and there is little sign of improvement in the iron and steel industry as a whole. The markets for hides and leather are firm. Linseed continues a weak market. More activity is reported in the Belfast linen trades.

Details of news and movements in the principal markets will be found on later pages of this issue.

THE PREMIER'S PRESCRIPTIONS.

It was not to be expected that the Prime Minister would say anything very definite or illuminating in his speech at Inverness, on Tuesday, on the subject of unemployment, but he certainly improved the occasion by enunciating some very sound principles, and pointing some very obvious morals. It is much to be regretted that the admirable copybook headings that are now brought forward by Mr Lloyd George have been so often ignored by the policy of his administration during the last three years. If we could be certain that he and the Government were now going to adopt them as principles to be acted on, and not merely formulas to be unctuously uttered, there would be good hope for the future. But, unfortunately, similar statements have been made before, and even more emphatic stress has been laid by official spokesmen on the need, as a basis of prosperity, for co-operation between the nations and the freeing of commerce from all restrictions on the international exchange of goods. In spite of these declarations the Government has forced through the House by the use of its subservient majority, and amid a chorus of criticisms from all parties, its Safeguarding of Industry Act. In the light of this record one can only read the Prime Minister's admirable sermon with the suspicion that it was only meant for Sabbath day consumption, and is not to be used as a basis for practical action in the workaday world.

Mr Lloyd George spent a good deal of time in demonstrating that what he called "the yawning chasm of unemployment" has been produced by no ordinary cause. Most of us were aware that there has been a war which lasted quite a long time, and caused a very serious amount of damage. It was hardly necessary for the Prime Minister to lay stress on the fact that "practically every great empire in Europe has been spending gigantic sums of money in the great conflict," with the result that they are all impoverished. This was indeed a fact that is only too well known, and another one that is almost equally obvious, about which the Prime Minister was perhaps naturally reticent, was this—that the impoverishment due to the war has been enormously increased by the delay on the part of the Allies in arriving at the terms of Peace, and the action taken by the Allied Governments, including our own, in imposing a huge indemnity upon Germany, and then taking measures which thwarted Germany's economic recovery, leaving Central Europe without economic leadership. It is most certainly true that "this is not an ordinary trade depression"; it has been brought about by bad politics and bad leadership at home and abroad; by the policy of hanging the Kaiser, and making Germany pay, accompanied by cheap promises of a "land fit for heroes to live in," which naturally produced a state of mind which made the work-

ing classes unwilling to face the facts of the economic position when the inevitable reaction came. They were deluded into the belief that they only had to strike and go on striking in order to secure a comfortable life with high wages, short hours and an easy time while at work. On these factors in the position the Prime Minister was eloquently silent, preferring to dilate on the question of fluctuations in exchange, and the impossibility of doing business while these fluctuations continue. "When," he asked, "will these conditions be stabilised?" and he answered that he was hopeful, and thought that things are improving. "These conditions," he said, "will stabilise first of all when nations learn that concord and co-operation with their neighbours constitute the only real, firm basis for their own national prosperity—they are beginning to learn it." Let us hope so, but we have had this very week a particularly flagrant example of the fatuous working of our Aliens Restriction Act, which can hardly be called a good example of international concord and co-operation. On the subject of the actual measures which the Cabinet proposes to take against unemployment, the Prime Minister was only able to tell his audience that the schemes of Ministers have not been formulated, and can only be determined by meetings of the Cabinet; but he put forward three or four general considerations which must, as he said, apply to any sound scheme which any Government can submit to the House of Commons. First, that if there are men willing to work, but for whom no work can be found, "they cannot be allowed to starve as long as there is a crust in the national cupboard"; second, that in considering the making of provision for those who cannot provide for themselves and for their children we have to remember that "myriads of these men have willingly placed their lives at the disposal of this country," and are consequently more than ever entitled to demand that their children shall not be allowed to starve; thirdly, that the country cannot give more than it can afford; fourthly, that does unduly prolonged are demoralising, and it is much better to provide work; fifthly, that it is infinitely better, if you can, to find work for a man in the ordinary operations of his own trade; and, finally, that the "best thing of all, of course, would be if you can restore normal conditions." This last is certainly a very illuminating diagnosis, but it is rather like telling a patient whose temperature is 104 deg. that the best thing, of course, would be if it could be brought down to 98.6 deg. We should certainly be only too glad if we could make any approach to getting back to normal conditions. But when the Prime Minister proceeds to prescribe the means to that end we find that they consist of another copybook heading reading very like the Peace, Retrenchment, and Reform to which our happier ancestors once paid more than lip service, and thereby built on sure foundations the national strength and wealth which even the war and its consequences have not been able to destroy. "To expedite the return to normal conditions," says the Prime Minister, we must promote "an atmosphere of peace throughout the world. It will have to be done by the sternest and strictest economy on the part of everybody. The Government, local authorities,

private individuals, nations, must not only live within their means—they have to do more than that. We used to trade with foreign countries on our savings. We lent those savings to countries who bought from us. That is an element which deserves the most careful consideration on the part of the Government and municipal authorities, and private individuals." It certainly does. In last Saturday's *Economist* we called attention in our article on the quarter's capital issues to the small amounts which we are, now and during the past two years, lending overseas, compared with our pre-war record on that account. Export of capital means export of goods, and would be the best remedy for unemployment that we could devise. But the Government, by its own protective policy and its wanton extravagance, makes it difficult for us either to save or to trade. High taxation, high rates, and a growing schedule of protected goods, already 6,700 strong, check the saving power of the individual, and so prevent us from lending to our former foreign customers, while at the same time they keep the cost of production in this country so high that, even if we were to lend money abroad, the borrowers would be almost forced to spend it in the cheaper markets that are open to them. The Prime Minister concluded with an eloquent appeal in favour of complete co-operation between all classes, and urged that consideration should be given to the projects which the Government proposes to put before the country in a spirit "not of class criticism, not of class advantage, but in a spirit of seeing what is best for all is best for each class," and so forth. We can assure him that the proposals, when they are published to the world, will be considered by us in the spirit that he desires. But if, as is whispered by those who ought to know, these projects include a widened credit exports scheme, under which raw materials and reconstruction goods may be sold to impoverished countries to stimulate their productive power, may we ask the Prime Minister to let us know, when he publishes this part of his scheme, what can be the use of administering with one hand these artificial stimulants to the productive power of our neighbours, while with the other we bolt and bar the door of our markets against their goods?

A NEW TAX SYSTEM.

(BY A TAX-GATHERER.)

MR P. D. LEAKE has a deservedly high reputation for his published work upon such accountancy questions as the proper treatment of depreciation and goodwill, and his views are always likely to obtain a respectful hearing. His latest thoughts upon taxation* will probably excite considerable discussion at a time when there are people who will clutch at any straw of betterment, and rather than suffer the ills they have, will fly to others unrealised.

Mr Leake holds that the present methods are breaking down, and causing indescribable complications, and he points to the "only practicable principle of taxation under present-day conditions." His proposal is a "production tax," and he claims that the principle is clear, the tax is "simple, just, and comparatively very easy to levy." The principle is indeed clear. "The true foundation of the taxable capacity of a nation is the amount of its annual production arising from the work of its nationals....." and accordingly it is proposed to tax, not "turnover" or "sales," with their duplication of charge upon all goods sold for further manufacture or resale, but what the Census of Production calls "net produce." This represents in the case of any given business the whole difference between goods bought and goods sold, and thus covers the fund out of which wages, all fees for services, interest, rent, and profits are paid, and this whole sum would be chargeable under his scheme at a flat rate. He does not provide for the tax reaching every element equally by way of deduction, and, therefore, he assumes that it will be "shifted" by economic forces, so as to make a *pro rata* reduction of the several shares going to the wage-earner, rent receiver, &c. It is as if someone came along in the night and secretly extracted the Government's require-

ments from the national heap of production, leaving the population to ignore the abstraction, and divide the remainder in the proportions that would have obtained if the actual national production had been restricted to the smaller amount. Mr Leake is under no delusions whatever upon the question of principle; he is, like many others, gravely concerned with the fact that the increasing spread of progressive taxation had depleted those funds of the wealthy classes out of which formerly came the greater part of the 350 to 400 millions of the nation's annual savings. Those classes who have been relieved from that burden of taxation, which would otherwise have fallen upon them, are not, in turn, performing the obligation of saving the amount which the wealthy classes are now unable to save owing to the higher taxation. Thus there is a tendency for the success of progressive taxation to dry up the funds of future development. For this reason, and for others touched on above, Mr Leake proposes in effect to throw the whole of our present system of taxation, principles and all, on the dustheap. He has no sympathy with the economic and psychological grounds upon which progressive taxation is based, and regards it as fundamentally unsound. He says: "Our methods are based on a misconception of the foundation of taxable capacity." For he regards taxation not as a thing to be borne by individuals—though paid by them as agents—but as first charged upon the aggregate production of the nation before any incomes are thought of. He boldly proposes, therefore, to tax the income of the poorest by 2s 6d or 3s, or whatever may be necessary, in the £, just as he taxes the income of the millionaire to the same degree. There is no minimum of subsistence, no allowance for family conditions, no difference between earned and unearned incomes. We are back to the early days of the income-tax, when the burden was, indeed, a light one, except for the important fact that the minimum of subsistence is omitted. He realises that the income-tax and super-tax go by the board, but he does not seem to realise that logically, also, all the indirect taxes should go too. The indirect taxes are already, admittedly, much heavier upon the lower classes, and only justified when viewed in relation to the whole scheme of taxation on the ground that they are compensated for by the much lower rates of income-tax on the lower levels of income. It has been shown that this compensation is not complete, and, viewing the taxation as a whole (especially taking in local rates), that our system is regressive still on the lower levels, in spite of the apparent heavy taxation of the wealthier classes. To leave the lower classes where they are in the matter of indirect taxes, and to charge them a flat rate by a production tax, is, virtually, to turn our progressive system upside down, and to charge the lower classes at a substantially higher rate than the middle classes. How far this is likely to commend the scheme will be left to the average reader to judge, and whether anything so subversive of our present ideals of justice would be acceptable to the majority of our people need not be discussed here. Assuming, however, that the new production tax replaces indirect taxes as well as direct taxes, it is clear that the total sum at a flat rate must be some 3s or 4s in the £.

Now there are two ways of working this tax. Either the payer of the duty—say, the management of a business—has the right to deduct a flat rate from all the distributions of the produce, so that it reaches the wage-earner, the rent receiver, &c., exactly, or he has no such right. Whichever course is chosen leads immediately to such practical dilemmas that Mr Leake should address himself to the subject again before describing the system as easy. Take the case, first, where there is no such right of deduction. What happens with all the long-dated obligations, debenture and preference interest, service agreements for salaries, lease rents, and every description of fixed contractual payment at the present time? These, unless repudiated, cannot be affected by economic forces, and you would have side by side for many years the two classes of payments. To make businesses responsible for the payment of 4s in the £ on the whole net produce, and to give them no rights to reduce these payments, would, of course, ruin many of them. Suppose that they have the right to reduce those that are in existence at the time of the change by an amount equal to the flat rate of

tax. What happens in a later year when the rate of tax is changed?

Mr Leake's system seems to assume that there is always a profit. In the case where the net result of the business is a loss, it seems impossible to discover how the fund of taxation, which economic forces are presumed to have put into the hands of the payer of the tax, can properly reach the Revenue.

Definitions of services required to be made. Would the payments to lawyers for business advice be part of the net produce or not? Presumably they should be, under Mr Leake's scheme. Then the receipts of a lawyer would consist partly of payments from businesses which had been subjected to the tax, and partly payments from private individuals legally advised and not subject to such automatic reduction. For if I receive £1,000 instead of £1,300 as my reduced share or salary under the new scheme, I proceed to use it by paying domestic servants, doctors, gardeners, and lawyers for their services to me, and there seems to be no way in which these are reduced by economic forces, unless they, too, are included in the "net produce charge" at the source. Mr Leake's system leads to the most hopeless confusion when the ultimate effects of it are traced to the recipients of rewards for services. We seem thrown back, therefore, to make it practicable, upon the kind of flat rate reduction with which we are familiar under income-tax, with the exception that wages and fees will now be charged by deduction like interest, and there will be no rights of repayment to exempt persons. Such a scheme of deduction seems to destroy the merits claimed for Mr Leake's proposal, but he has not shown that anything else is practicable. One last type of case may be put. The net produce of a given business cannot be taxed until the amount is known and realised at the end of a trading period. The total shares in wages, &c., for the ensuing period are quite unknown, and may be quite different from the period for which the tax has been paid. It is quite possible that the economic forces which regulate what that business can do in the way of total production and total wage payments depend upon a knowledge of the tax burden, and this burden is not known until after the forces are presumed to have acted.

Mr Leake should make it clear whether he is prepared to face the consequences of "deduction at the source," and, if so, how he proposes to overcome the very obvious difficulties that will fall upon the immediate agents for the payments of his new tax.

OUR INDEX NUMBER.

A FURTHER upward movement is recorded in our Index Number as at the end of September, the advance amounting to 105 points. This brings the total up to 4924, which is practically the same as at the end of April last. As will be seen from our usual table below, the whole of

this rise is due to movements in the textiles group, cotton being chiefly responsible:—

Date.	Cereals and Meat.	Other Food Products (Tea, Sugar, &c.).	Textiles.	Minerals.	Miscellaneous (Rubber, Timber, Oils, &c.).	Total.	Percentage Change.

The textiles group is now higher than at any time this year, the rise as compared with the end of August amounting to no less than 260 points. Each of the other groups shows an appreciable decline, the largest being that in cereals and meat. Apart from a slight rise in barley, all commodities in this section are lower. Liberal supplies of home-grown wheat are coming to market, while imports of wheat and flour are still in excess of requirements, and port stocks have increased. Among subsidiary foodstuffs, tea is higher, but sugar and butter show a substantial decline.

In the textiles group a sharp advance in cotton and cotton yarn and cloth is the feature. The bulk of this took place in the early part of September. The movement started on the publication of an unfavourable crop report by the United States Government, which resulted in a large amount of wild speculation. During the first fortnight fully middling American rose from 10.76d to 13.69d, and Sakellaris fully good fair Egyptian from

* "The Taxable Capacity of a Nation." By P. D. Leake. An article published in "Business Organisation and Management" for October, 1921. (London) Pitman. 1s 6d.

18d to 22d. Messrs Robt. Barbour, in their monthly report, state that—

There has certainly been little attempt from customers abroad to follow the advances, and such offers as have been received from the principal markets have for the most part borne no relationship whatever to current values. India has done scarcely anything, but the rate of exchange has further appreciated, and cable reports from Calcutta are encouraging in so far as they indicate good clearances, advanced selling prices, and a relaxation of the Gandhi agitation. Fighting, looting, and pillaging in the Yangtze Valley still hampers trade with China, but Singapore has been rather more active, and both Java and South America have done something. But it is the Near East only that has been actually prominent as a buyer, and quite a respectable business has been transacted for Egypt or its immediate neighbours. The month closes with an increase in inquiry and general activity. The tone of the market is firm, and whilst some still consider the cotton scare very much overdone, and bound to be followed by a sharp reaction, opinion for the most part is content to accept a higher level of prices as inevitable, subject, however, for actual business, to a liberal discount on quotations, and coupled with a very free exercise of caution.

Wool prices are higher, and rises are also recorded in other textiles. The jute market, according to Messrs Wigglesworth and Co.'s fortnightly report, has been more active, and an advance in prices has followed the final forecast, which estimates the present crop as 4,152,000 bales for all Calcutta and Madras districts. A great scarcity of jute is expected this season. Messrs W. F. Malcolm and Co.'s flax report states that a larger volume of business has been done than at any time since the decontrol of the trade. "With the exception of Belfast, all buying centres have participated in the business, but the great bulk of the sales have been made to France and Belgium."

In the minerals section, pig-iron and iron bars are lower, and coal has fallen, but the minor metals are all a little higher. In the miscellaneous group there are no outstanding changes.

We show below how the present levels compare with those of July, 1914, the latter being taken as 100:—

End of—	Cereals & Meat.	Other Food.	Textiles.	Minerals.	Miscellaneous.	Total.
July, 1914	100	100	100	100	100	100
Dec., 1914	124	117	82	103	124	109
June, 1918	220	220	294	186	250	238

Sept., 1921	193	195	204	189	178	192

Textiles, thanks to last month's sharp upward movement, have reversed their position, and show the largest increase over pre-war prices, while minerals are well down.

THE HARVEST YEAR.

(BY A CORRESPONDENT.)

WHEN the returns of a harvest year are completed and a new campaign is before us, efforts to estimate the farmers' position become of interest, and therefore it has long since in this country been necessary to study the fortunes of grain importers and of those who make up the formidable food deficiencies left by home production. The price of wheat probably paid the farmer for ten months out of the twelve, but the fall in July and August was serious, and the new harvest year thus far has resulted in heavy losses on sales. Barley sold fairly well on the average, but the mean price of 62s represented very great oscillations. Those who sold in the late autumn of 1920 did best, and there was a notable recovery in August of this year. On the other hand, the spring sales were at most depressed prices. Oats fell steadily in price after November, the cause being the increased supplies of maize. In July and August large arrivals of Argentine oats completed the rout of the British farmer. Beef sold very well in the winter months, and the dry summer with consequent heavy expenses of food to replace grass has compelled farmers to charge a

higher price than would otherwise have been taken. Wool is a most depressing survey, for the enormous competing sales of Government imported wool have reduced prices far below profit level. The Government selling against the home producer represents a state of things against which agriculture struggles in vain. Hay was dear, as usual, in mid-winter and up to March. It would have been reasonably cheap from April to August but for the extraordinary drought which set in with May. The shortness of the new crop has prevented farmers from making money by their hay, despite the good price paid.

In the above table wheat, barley, and oats are per quarter, wool is per lb, and beef and hay per cwt. After January 1, 1923, all returns of dry produce will, under the new Statute, be per cwt, a great convenience. The imports of wheat for the past 12 months have been rather small, but those of flour large. The desire of overseas producers to keep the manufacturing profit is a somewhat serious matter, and causes British mills to be worked short hours. This in turn creates a singularly evil economic condition, uniting a high rate of wages with discontented labour. The machinery standing idle is also to be considered.

It will be seen that wheat arrivals are heaviest in September and October, after the new harvests of the United States and Canada. This year there were also heavy arrivals of Australian in June. Barley, like wheat, is controlled largely by new crop shipments from North America, but in oats Argentine supply dominating June and July is a very leading feature. Maize is a very steady supply from abroad, though in January, February, and March there appears to be a lull. The imports of rice are large at the beginning of a new cereal year as a rule, but for the present new season the embargo on Indian and Burmese shipments imposed on July 1st is bound to cause many changes. Supplies of grain on passage are thus returned for 1920-21:—

June " ..	3,200,000	140,000	460,000	860,000
July " ..	2,700,000	200,000	280,000	690,000
August " ..	2,465,000	190,000	290,000	1,350,000

The new harvest year 1921-22 came in with 2,390,000 qrs of wheat, 150,000 qrs of barley, 240,000 qrs of oats, and 2,100,000 qrs of maize on passage, but wheat arrivals in the first three weeks of September have reduced the quantity of wheat afloat to 2,110,000 qrs. The other totals are not much changed. The large total of wheat in June was mainly due to Australian cargoes which accumulate on that long voyage. The colossal quantities of Indian corn now coming represent an Argentine rush to clear the large surplus of the April crop

LATIN AMERICAN NOTES.

(BY OUR CORRESPONDENT.)

THE exceptional situation in Brazilian domestic financial circles is proved by the comparative failure which attended the flotation of the internal loan for 25 million milreis, offered by the State of Rio Grande do Sul for the purpose of paying off the indebtedness contracted by that State for the purchase of the lines of the Compagnie Auxiliaire de Chemins de Fer au Brésil. Generally speaking, investments of this character are readily absorbed in the Republic, and the fact that this loan should have missed fire has caused considerable uneasiness among financial interests of the State, largely in the hands of the Portuguese and Pelotense banks which have acted as underwriters. Scarcely one-tenth of the total amount offered was subscribed publicly, and, owing to the failure of the issue, it is highly improbable that the contemplated reconstruction and extension of the railway referred to can now be entered upon at present. While the State of Rio Grande do Sul has no foreign debt, its internal obligations exceed 5,750,000 milreis, and the obligations contracted in connection with the acquisition of the lines of the Compagnie Auxiliaire exceed 37,000,000 milreis. The budget for the present year provides for revenues to total 34,300,000 milreis, and ordinary expenditures of 31,509,000 milreis. It is still likely, however, that the revenues of the State may show a better result towards the end of the autumn, when most of the productive months of the year will have been realised.

Financial conditions in Pará remain unsatisfactory, but the Federal Government has not replied favourably to the suggestion put forward by the State Congress and Municipal Council of the Province for a moratorium.

There can be no doubt that most South American commodity markets have been considerably over-stocked; Colombia, for example, has been glutted to an extent approaching conditions in Cuba. The congestion and the general condition of trade depression may be attributed, to a wide extent, to transportation troubles in the first-named Republic, and to reckless speculation in sugar and building in the other. Until the summer of 1920, foreign commerce had been active; the extension of credit to Europe and the purchase of European bonds diminished South American gold supplies. The result was the paralysis of international trade, and the realisation of the necessity to reduce to a minimum the importation of foreign goods.

Venezuela has been in almost as bad a position. But the process of readjustment, amounting at one time almost to the verge of a panic, has proceeded without many large failures, while the banks report a better feeling, and even some slight encouragement. Notwithstanding the disquieting condition of affairs, the only Latin-American States to resort to a moratorium have been Paraguay and Cuba. South America has likewise had its share of other economic disturbances and specific labour troubles. The most conspicuous have been at Buenos Ayres, but late reports prove that in the majority of cases these drawbacks to industrial progress have come to an end.

The long-continued depression existing in Nicaragua, caused by the unfortunate situation in the local coffee market, has not, at the time of writing, been appreciably relieved. An important factor in the situation was the termination by France of the 1902 Convention, whereby it was provided that certain French products could be imported into Nicaragua at a reduction of 25 per cent. of the ordinary duty, while, on the other hand, Nicaraguan products entering France enjoyed concessions. Up till recently a large proportion of the Nicaraguan coffee crop

found its way to France, so that the seriousness of the loss of the concession becomes evident. While there is some hope that the French Convention of 1902 may be restored, shippers are faced with the fact that the last consignments sent by them to France brought little but heavy losses owing to the heavy depreciation of the franc. Thus it may be doubted whether, even with the restoration of the French Convention, the position of Nicaraguan coffee shippers will be much improved. The United States now remains the only possible market for Nicaraguan coffee. It is hoped that better prospects for the new coffee crop will be experienced with the coming month, since the *temporal* (heavy rainstorm at the end of the rainy season, lasting for a week or more) will set its seal upon a bumper crop. The coffee should ripen about the month of November, and if the *temporal* arrives late the heavy rains wash away a large proportion of the ripe berries, causing losses which materially reduce the quantity of the crop. In other directions, the prospect for crops in grain, rice, beans, &c., are not unpromising, much depending upon these for the supply of native food. Some disappointment has been occasioned by the lack of financial support from American bankers which was looked for, it having been hoped that an arrangement could have been made for the advance of from \$200,000 to \$300,000 for a period of four months, in order to enable the coffee growers to gather the new crop when ripe. So far, this assistance has not been forthcoming.

Business Notes.

Coal Output.—The production of the coal mines of Great Britain in the week ending September 24th was 4,273,900 tons. This compares with 4,161,700 in the previous week, and 3,939,800 tons in the week ending September 10th, but is well below the figure of 4,834,000 tons in the week ended September 25, 1920. The weekly output since the resumption of work at the beginning of July has been as follows:—

Week ended—	Tons.	Week ended—	Tons.
July 9th	2,352,700	August 20th	4,327,800
July 16th	3,935,200	August 27th	4,101,700
July 23rd	4,334,200	September 3rd	4,141,900
July 30th	4,592,500	September 10th	3,940,400
August 6th	3,623,200	September 17th	4,161,700
August 13th	4,536,600	September 24th	4,273,900

The number of workpeople employed in and about the coal mines at the end of August was 1,078,900, as compared with 1,043,400 at the end of July, and 1,197,765 at the end of March last, just before the stoppage began.

American Cotton Crop.—Our Manchester correspondent writes:—The United States Government has this week published two important reports on the cotton crop for the season 1921-22. In the first place, it has been stated that the amount of cotton ginned up to September 28th was 2,907,000 bales, as compared with 2,250,000 bales at the same time last year, and 1,835,000 bales in 1919. The amount ginned was not quite equal to expectations, as the growth has matured quickly, and the material is coming forward earlier than usual. The condition of the crop has been given on September 25th as 42.2 per cent., against 49.3 per cent. in August and 59.1 per cent. in September last year. In trade circles a figure of about 40 per cent. was anticipated, and on the report being pub-

lished prices gave way, but owing to active buying the decline was soon recovered. It is now realised that the American crop this season has met with disaster, and on the basis of the official figures available the yield is likely to be only 6,500,000 bales, against 11,377,000 bales last season. The Agricultural Bureau of the United States states that the present condition is the worst on record. There will be little middle crop and practically no top crop. The record extremes of heat and dryness have forced unprecedented early maturity of the plants. The deficiency of fertilisers has shortened the fibre, thus lessening the yield. Boll weevils are said to be swarming over almost the entire belt. Since the beginning of July prices in Liverpool have advanced from 7d to 15d per lb. The worst is now known about supplies, and future values very largely depend upon the trade demand.

The Rubber Shareholders' Association.—On Monday last a meeting was held, at Winchester House, of the members of the Rubber Shareholders' Association, the body just formed to institute propaganda work in connection with extending the uses of rubber, and at the same time to do whatever is possible to lift the industry out of the slough of despond into which it has fallen. There were about 150 people present, including ladies, and Mr D. F. L. Zorn, a member of the London Stock Exchange, occupied the chair. His speech outlined the objects of the association, and frankly stated the intention of the body to put into the forefront of its programme the interest of the industry as a whole. This meeting was in the nature of a preliminary to a larger gathering which is to be held at the end of the month or early in November, and to which are invited those who are interested in the rubber-planting industry. Mr Devitt, a partner in a well-known Mincing lane firm, supplied a practical illustration of the way in which rubber can be utilised by mentioning the matter of soleing of sports shoes, and various other methods were mentioned at the meeting whereby the use of the material may be largely increased through its employment in various ways at present little known. It is certainly true that the rubber industry stands in need of leaders imbued with a missionary spirit for spreading the knowledge of rubber's availability. The new Rubber Shareholders' Association has made an excellent start in arousing enthusiasm and willingness to work on the part of its members, who, if they can do nothing else at the moment to push the uses of the material, can assist by getting as many members as they can to join the association, the value of which must depend very largely upon the amount of public support to which it can point in its membership. Meanwhile, the Rubber Growers' Association has issued a circular announcing that insufficient support has been forthcoming for their attempt to form a Rubber Producers' Corporation to regulate the production and sale of plantation rubber. The circular says:—"In view of the experience of the past 12 months (the history of which has been briefly recorded in the foregoing) the council of the Rubber Growers' Association are regretfully forced to the conclusion that it is impossible to get sufficient support to establish the proposed Rubber Producer's Corporation, and they have accordingly abandoned the scheme. Whilst the council are alive to the importance of enlarging the channels for the consumption of rubber, and have used, and will continue to use, their best endeavours to achieve this end, they remain of the opinion that it is disastrous to continue to produce rubber which can only be sold at less than cost of production."

Japanese Trade and Finance.—Cabled advices from Tokyo report that, after a quiet period in the money market there, a strong demand arose at the end of the month on account of unexpectedly large remittances to the country, the rate for day-to-day loans being raised to 2 sen 8 rin. The continued rise in the price of silver served to maintain cotton yarn prices at a high level, while rice quotations quickly increased, owing to the bad weather conditions, the quotation for futures reaching 43 yen per koku. In the last few days of September European and American buyers were active in the silk market. The Formosa sugar crop was good, and sugar remains a dull market. The tone of the stock markets retains its firmness, but a rise in quotations is held back

by such influences as an adverse trade balance, industrial slackness, troubles between capital and labour, and the continued rise in commodity prices. The note issue of the Bank of Japan is 1,232,000,000 yen, as compared with 1,170,000,000 a year ago, discounts and advances being 133,000,000 yen, against 285,000,000 yen.

The Future of the Philippines.—Eight years ago Filipino politicians were excited and American opinion sharply divided by the Democratic promises of independence for the Filipino Republic as soon as it is fit to stand alone. The promises were confirmed by President Wilson's Message to Congress in December, 1913, and by the preamble of the Jones Act passed three years later, a measure which abolished the system of American administration, tempered by a native Assembly, and substituted almost complete self-government. It is now announced that General Leonard Wood, the Governor-elect, and Mr W. Cameron Forbes, Governor from 1909 to 1913, who have been sent out as a Commission of Inquiry, have confirmed the promise, stating, however, that its fulfilment must be deferred till it is certain that the Filipino Government can adequately safeguard its relations with other Powers, and till the defences of the islands are satisfactory. The defensive preparations await the results of the Pacific Conference; meanwhile General Wood begins his term of office next week, and his record in Cuba gives promise that he will effectively promote the general welfare of the islands, especially public health. The repetition of the Democratic promises by representatives of a Republican Administration puts the islands in much the same position as the first class of mandatory States under the Versailles Treaty; and the Filipino State seems to be making good. The numerous linguistic barriers between the various peoples are being overcome by the spread of education conducted in English; the Moslem and Pagan races, the former until lately fanatical and militant, form about 9 per cent. of the total population of rather more than 10,000,000, and are quieting down under the influence of their own schools and of their special representation in the island legislature; the administration is largely in Filipino hands; native municipal government appears to be satisfactory; and great progress has been made with roads, railways—of which the mileage, under American rule, has been multiplied sixfold—and sanitation, which under Spanish rule simply did not exist. The railways are in the hands of the Government. Since 1913 a financial deficit has been replaced by a recurring surplus; foreign trade has more than doubled, the great bulk of the exports going to the United States, though here Great Britain came second in 1919 with about one-seventh of the total; a native bank and insurance company have been established, and the coastal shipping is said to be largely in native hands. Agriculture of all sorts was greatly stimulated during the war, and is being furthered by rural co-operative credit societies and modern machinery; the cultivated area has increased in ten years by 45 per cent., the yield per hectare 25 per cent., and the various kinds of cattle, in spite of much disease, by amounts varying from 79 to 178 per cent. Before the war the American opponents of Filipino independence laid stress on the unfitness of all but a few of the inhabitants, and those Eurasian, to govern either themselves or their barbarian subjects; on the existence of peonage, and practically of slavery; and on the danger that the islands, if independent, would be seized by Germany or Japan. The first objections are being met by the moral and intellectual progress of the islanders under American protection; as to the last, Germany is no longer an Imperialist Power, the Japanese residents are few, and it is doubtful if the race can prosper in a tropical climate. Further light, however, may be thrown on Japanese aspirations at the coming Conference. The projected defensive preparations in the islands include a militia raised by universal compulsory service.

National Welsh Slate Quarries, Limited.—When this undertaking issued a prospectus in March, 1920, there were several points about it which appeared to be unfavourable. Assets were valued at £87,141, and these, apparently, were to be acquired for £180,000, of which

£50,000 was payable in cash. The promoters estimated that the "immediate output" would, with a capital of £280,000, yield a profit of £133,200 per annum. It was further impressed upon intending investors that "there is no preliminary or experimental stage to be undertaken. Work, on a highly remunerative basis, can be commenced at once." The first annual report and statement of accounts has been recently issued. This records a loss of £9,274. The item freehold land, &c., is taken "at cost" as £180,000, to which another item is added under the heading of "additions to date" at £9,564. Preliminary expenses are given as £11,961. After a perusal of the prospectus and balance-sheet, the following sentences extracted from the auditors' report are instructive:—"The whole of the development expenditure has been charged against revenue, and in view of this fact, no amount has been specifically provided during the period under review for depreciation of capital outlay. A list of missing vouchers has been supplied to your secretary. The heavy cost of the Belle Walk property does not coincide with an independent architect's valuation, and the contractors have been asked to account for the apparent overcharges. The preliminary expenses are very much in excess of the estimate given in the prospectus. No sinking fund has been created."

Rubber Plantations Investment Trust.—The accounts of this company for the year ended March 31, 1921, show a loss of £12,150, as compared with a profit of £174,922 a year ago. Trading profit is down from £151,066 to £88, and although dividends and interest brought in as much as £49,632 (which compares with £58,384 for the previous year), the accounts are saddled with a loss of £42,202 on revaluation of rice stocks in Sumatra, and general expenses are also a little higher. Recent years' results are compared below:—

	1915-16.	1916-17.	1917-18.	1918-19.	1919-20.	1920-21.
Dividends, int., &c.	£ 57,302	£ 46,550	£ 44,299	£ 29,652	£ 58,384	£ 49,632
Produce account, &c.	15,139	74,526	31,820	Dr. 106,630	152,216	749
Expenses and interest	72,441	121,076	76,119	Dr. 76,968	210,600	50,381
	24,487	8,734	15,344	37,107	35,678	£2,531
Brought forward	47,954	112,342	60,775	Dr. 114,075	174,922	Dr. 12,150
	109,309	16,592*	56,600†	117,375	3,300	106,471
Dividend	157,263	128,934	117,375	3,300	178,222	94,321
	32,754	63,361	..	..	62,782	..
	(3 %)	(6 %)	..	..	(6 %)	..
Directors	3,276	8,448	nil	nil	..	..
Carried forward	121,233	57,125	117,375	3,300	106,471	94,321

* £121,233, less £104,641 transferred to reserve.
† £57,125, less £525 in donations to war charities.

The net result of the year's operations is that last year's carry forward of £106,471 is reduced to £94,321, which sum is carried to the current year's account. This year, presumably, the loss on rice will not recur, but it cannot, on the other hand, be assumed that receipts, dividends, and interest will be maintained at last year's level. The accounts and report were rather better than market expectation, but the shares have been marked down on the idea that the company requires more capital. The chairman's speech at the meeting on Monday will be awaited with special interest on this account. The balance-sheet position is set out in a later column of this issue.

North Broken Hill.—Our mining correspondent writes:—At the moment, when so much is heard of unemployment, a vivid light on one of its chief causes is thrown by the report for 1920-21 of this important Broken Hill undertaking. Early in 1919 the Miners' Union presented a new "General Log of Wages and Conditions of Employment." The main stipulations consisted in the payment of £1 per shift for all men and boys, whether working on the surface or underground; six-hour shifts, operating only five days per week; the abolition of both night shifts and the contract system. The companies concerned offered to submit the dispute to the Federal or State Arbitration Courts, but the Miners' Association would have none of it, and the property remained closed down until towards the end of 1920, after the award of the Special Tribunal. The award in question, although falling short of the demands, was such as to render production scarcely profitable, except under a high range of metal prices; however, operations were resumed on a

small scale. Then came the fall in lead, and the fire at the Port Pirie works of the Associated Smelters. It is consequently not surprising to learn, from the cabled summary of the report to June 30th last, that although the profit and loss account included £70,400 received for concentrates produced in preceding periods, the working surplus amounted to only £8,100, and this without any provision having been made for depreciation, taxes, and royalty. The said surplus is applied towards new plant; a debenture sinking fund reserve of £13,300 is apparently brought in and carried out again. The surplus liquid assets are stated at £397,400. This works out at the equivalent of about 13s per share, or nearly half the current market price. Sight should not be lost of the fact that there were outstanding on June 30, 1920, some £141,000, balance of a debenture issue. On the other hand, no credit has been taken for the company's large holding in two associated undertakings—200,000 shares in the Broken Hill Smelters, and 150,000 in the Electrolytic Zinc—with other smaller interests. The last ore reserve estimate available is that of December, 1918, which placed the quantity of material opened up at 2,600,000 tons—sufficient to last many years with operations in progress at full scale. The North Broken Hill is a well-managed undertaking; but, obviously, it cannot earn profits in times of all-round adversity.

United Steel Companies.—The report of the United Steel Companies, Limited, for the year ended June 30th last, shows a substantial decline in net profits. The company was incorporated in March, 1918, as an amalgamation of several important iron and steel companies in the North of England, including the Workington Iron and Steel Company, and the report shows that net income from associated companies amounted to £705,258, as against £915,477 in the previous year. Results for the past three years are compared below:—

	1918-19.	1919-20.	1920-21.
Gross revenue	£ 1,164,585	£ 930,521	£ 711,146
Administration expenses and income-tax	48,133	38,007	81,485
Interest	209,820	146,853	146,254
Net profit	906,632	745,661	483,407
Brought forward	..	64,674	80,381
Reserve and written off	906,632	810,335	563,788
Preference dividend	41,822	119,369	32,021
Ordinary dividend	79,024	79,051	55,336
	721,112	507,042	168,138
	(10 %)	(10 %)	(3 %)
Carried forward	64,674	104,873	308,293

A year ago preliminary expenses amounting to £91,487 were written off, and £27,881 was transferred to reserve for sinking fund. The latter receives the same amount this year, and £4,140 is written off new issue expenses. An interim dividend of 3 per cent. was paid on the ordinary shares in March, but no further distribution is made, "having regard to financial and general conditions." The directors state that due provision has been made for depreciation and for writing down stocks to a value enabling the company to compete in the market when trade revives. The balance-sheet shows an addition of £413,865 to the ordinary capital, which now stands at £8,006,549. Creditors show a reduction of £882,200, but a new item—advances by associated companies—of £1,196,250 makes its appearance. The credit side of the balance-sheet has been considerably expanded, and comparison becomes a somewhat complicated matter. Investments last year stood at over £10 millions. They now figure at £8,934,025, and new items, land and minerals, &c., £2,324,685, and goodwill £253,369, appear for the first time, the report explaining that the liquidation of the Rothervale Collieries branch has now been completed.

A Tin Trio.—One of various undertakings which relinquished the convenience of a London office in order to escape the inconvenience of British taxation is the Aramayo Francke Mines, the company being re-registered in Switzerland. Consequently we have the complication of a company conducting operations in Bolivia, with its

office in Geneva, issuing to British shareholders an annual report drawn up in the French language, and with the financial results set out in Swiss francs! Converting the latter into sterling at 22.50 to the £, the net profits for the 12 months ended December, 1920, amounted to £234,500, as compared with £663,900 in the preceding 19 months. The heavy decline shown, after allowing for the difference in the two periods, arises, of course, from the slump in tin and the decline in silver. Here it may be noted—although the report does not supply the information—that last year's output included over 2,000 tons of the first-named and 1,000,000 ozs of the last-named metal. In view of the difficult financial conditions, the dividends for each of the past two sessions—20 per cent. and 45 per cent. respectively—have been kept below half the net earnings. No less than £574,600 is now carried forward—locked up in stocks and stores. The most noteworthy change in the balance-sheet is the expansion in the buildings and machinery entry, due chiefly to the expenditure on the new silver concentrating plant. The undertaking—now known as the Compagnie Aramayo de Mines en Bolivie—owns large groups of mines and treatment works; the output includes bismuth and wolfram, as well as the metals already named. Last year the shares were at one time well over £5. A cable announcing the closing down of the famous Mount Bischoff Tin Mine in Tasmania "owing to the unfavourable conditions in the tin market" has been interpreted to mean the end of this wonderful property, which has paid dividends exceeding £210 per £5 share. The Tronoh South, whose report for 1920 has just been issued, is in a transition stage. Last year's operations resulted in a small loss, but it is stated that during the current year fair profits have been made from the new property.

Arizona Shareholders' New Interests.—Influenced largely by the stocks of the metal on hand, future financial requirements, and the anomalous position of the "A" preference shares, the shareholders of the Arizona Copper Company decided to throw in their lot with those of the Phelps Dodge Corporation. In these circumstances, some brief particulars relative to the latter will be *apropos*. The Corporation—originally registered in 1885 as the Copper Queen Consolidated Mining Company—now has an issued capital of \$45,000,000, and owns various groups of claims in Arizona with treatment plants; also 11,000 acres of coal lands, and the shares in a number of subsidiaries, including a mercantile and store business. In 1917—the "boom" year—the output reached its record figure of 204,868,300 lbs, falling away to not much more than half that quantity in 1919, and to 95,652,500 lbs last year. Some of the properties also yield gold or silver and lead. In respect of 1920 the net earnings rose to \$35,930,200. Practically the whole of this was absorbed by allowances for depletion, depreciation, &c.; nevertheless, dividends totalling \$4,500,000 were paid on the same scale as for the preceding year, when there was also an over-distribution. For 1918 the deductions ruled on a small scale, absorbing only about one-third of the net earnings, and \$10,800,000 was paid to the proprietors. These amounts are irrespective of distributions from depletion reserve. The last balance-sheet total stood at \$215,693,800. An extensive programme of additions to property and plant is now approaching completion, and the corporation will be able to take full advantage of any improvement in the copper market.

Sound Currency Association.—A Correction.—Last week, on page 500, we mentioned that the Sound Currency Association were organising an international conference to be held in London early in October. The association now officially inform us that an International Monetary Conference will be held on December 6th. Mr F. C. Goodall is the secretary of the Sound Currency Association, and the address is 115 Cannon street, London, E.C. 4.

THE Lord Mayor has kindly allowed a meeting on behalf of the Great Northern Central Hospital, Holloway, to be arranged at the Mansion House on October 17th, at 3 p.m.

Oberzee Correspondence.

THE UNITED STATES.—REDUCTION IN NEW YORK RATE—MONEY EASIER—GOVERNMENT SELLING RAILROAD EQUIPMENT TRUST CERTIFICATES.

(FROM OUR CORRESPONDENT.)

NEW YORK, September 23.

THIS week's reduction in the New York Federal Reserve Bank's rediscount rate from $5\frac{1}{2}$ to 5 per cent. was something of a surprise to the financial community generally. Reports had been current that the Federal Reserve Board in Washington was considering the advisability of a lowering of rates by the central reserve institutions, but such action was not generally expected at this time, when autumn activities ordinarily cause increased demands upon the banks. The reduction plainly reflects the marked improvement that has taken place in the banking position not only in the New York district, but throughout the country; it is, perhaps, all the more significant because it occurred at a time when call money on the Stock Exchange was ruling above 5 per cent., and private bank discount rates for commercial paper were higher than the New York Reserve Bank's $5\frac{1}{2}$ per cent. rediscount rate, which has just been cut. The bank's action, it is thought, was also prompted to a considerable extent by a desire to encourage and assist the recovery in trade and industry. As heretofore, the reduction applies to three classes of paper—namely, advances on commercial paper for a period not exceeding 15 days; advances not exceeding 15 days on Liberty bonds, Victory notes or United States certificates of indebtedness, and customers' notes secured by those issues, and for the rediscount of customers' notes so secured for periods not exceeding 90 days; and advances not exceeding 15 days, secured by bankers' acceptances, and for rediscounts of the same not exceeding 90 days. The Federal Reserve Bank at Boston also cut its rediscount rate from $5\frac{1}{2}$ to 5 per cent., and similar action is expected to be taken in due course by central reserve institutions in other parts of the country, which heretofore have followed the New York bank's reductions. Some of the 12 Federal Reserve Banks are now maintaining a 6 per cent. rate, while the Minneapolis bank still has a $6\frac{1}{2}$ per cent. rate—the only Federal Reserve institution that has not lowered its rediscount rate in recent months. The lower Bank rate here has not yet been reflected in any pronounced drop in the open market discounts for commercial paper, although an easier tendency is noticeable. Recently prime names have been discounted quite generally at 6 per cent., with exceptionally choice business paper of short maturity moving at $5\frac{3}{8}$ per cent. Time money rates are also relaxing. Funds for 30 to 60 days are now available at $5\frac{1}{2}$ per cent., and for the longer periods at $5\frac{3}{4}$ per cent.; the 6 per cent. rate has virtually disappeared. The following summary of the New York Federal Reserve Bank's statement last week and for the corresponding week of 1920 shows the very striking changes that have taken place in its position in the year:—

	1920.	1921.
Total gold held by bank.....	\$ 148,273,000	\$ 395,714.85
Gold with Federal Reserve agent.....	268,711,000	501,598.17
Total reserves	581,819,000	972,388.58
Bills discounted	267,203,000	190,142.32
Bills bought in open market.....	103,702,000	23,334.03
Total bills on hand	863,412,000	340,051.10
Surplus	51,307,000	59,318.36
Deferred availability items.....	129,807,000	107,906.33
Federal Reserve notes in circulation ..	861,597,000	639,847.18
Ratio of total reserves to deposit and Federal Reserve note liabilities combined	39.5%	75.7%

This week the New York institution, as well as the entire system, reported a remarkable increase in reserve per centages. Owing to heavy transfers to this centre by other reserve banks of credits in the central gold fund at Washington, the New York bank's gold reserve was increased by \$106,000,000, bringing the total above the billion-dollar mark for the first time in its history. There was also a further heavy reduction in its rediscounts, it

holdings of member bank reserves, and in note circulation, with the result that its ratio of reserve to note and deposit liabilities showed an extraordinary advance from $75\frac{3}{4}$ to $84\frac{1}{2}$ per cent. Similar changes caused a rise in the reserve ratio for the entire Federal Reserve system from $67\frac{1}{2}$ to $68\frac{3}{4}$ per cent.

The Railroad Administration has recently effected a number of sales of railroad equipment trust certificates, given to the Government by the carriers during the period of Federal control in payment for equipment then purchased by the Director-General of Railroads. Such notes in the hands of the Government aggregate about \$313,000,000, less a total of \$33,000,000, approximately recently disposed of, mostly to bankers, insurance companies, or others, presumably for investment purposes. The first public offering of such securities, however, was made by a syndicate of New York bankers, who offered some \$12,000,000 equipment 6 per cent. gold notes for public subscription at prices to yield investors from 5.75 to 5.80 per cent. The offering represented the larger portion of a block of such notes which the syndicate purchased from the Railroad Administration at par (as required by law), and consisted of the following:—

	Amount.	Yield
Atchison, Topeka, and Santa Fé	\$ 1,346,400	5.75
Central Railroad of New Jersey.....	783,000	5.75
Chicago, Burlington, and Quincy	831,000	5.75
Atlantic Coast Line	2,551,800	5.80
Louisville and Nashville	4,223,400	5.80
Great Northern	1,145,200	5.80
Norfolk and Western	1,158,000	5.80

The notes are dated January 15, 1920, and mature between 1930 and 1935, with two exceptions—namely, the Great Northern notes, which mature from 1928 to 1935, and the Chicago, Burlington, and Quincy obligations, part of which mature from 1933 to 1935. This offering is attracting a great deal of attention in financial circles, where it is regarded as a test of the investment market, which has not been called upon to absorb what are practically new issues at such a low yield since the war ended. In many quarters the relaxation in money rates and the recent upward tendency of bond prices have been taken as foreshadowing a smaller yield than heretofore to investors in new financing involving securities of the highest standing. The result of this week's offering will test that theory, although it should be borne in mind that, while these notes carry no Government guarantee of any kind, they are exceptionally attractive. Thus far there has been a very good response from investors.

FRANCE.—FINANCE COMMISSION AND DEPARTMENTAL ESTIMATES—OCCUPATION COSTS—BOURSE.

(FROM OUR CORRESPONDENT.)

PARIS, October 4.

THE Finance Commission of the Chamber has been sitting frequently throughout the Parliamentary recess, for the purpose of giving detailed consideration to the Budget proposals for 1922, in order that its recommendations may be ready for submission to the Chamber on its re-assembly, and that the new Budget may come into operation at the beginning of the coming financial year. A very serious hitch has now occurred, however, which will probably render it impossible for this desirable programme to be carried out. It may be recalled that the Finance Minister, M. Paul Doumer, has submitted proposals which involve a deficit of 2,500,000,000 of the estimated expenditure for the year, and the estimated revenue. This deficit the Minister proposes to meet by doubling the present tax on turnover, which now stands at 1.1 per cent. on all sale transactions other than those subject to the 10 per cent. *taxe de luxe*. In view of the fact that there is a general opinion in opposition to the imposition of any fresh taxation, and also against the issue of any further national loan to meet budgetary deficits, the doubling of the *taxe sur le chiffre d'affaires*, in the Minister's opinion, is the only way in which the deficit of 2,500 millions can be met.

National Bank of Commerce in New York

President
JAMES S. ALEXANDER

Capital Paid up \$25,000,000
Surplus and Undivided Profits
over \$30,000,000

The National Bank of Commerce in New York places complete banking services at the disposal of business throughout the world bringing it in contact with all phases of commerce and industry in the United States.

KENNETH H. ROCKEY, Representative,
Gresham House, Old Broad Street,
London, E.C. 2

These views the Finance Minister adhered to when he appeared before the Finance Commission of the Chamber to-day. He was rather pressingly questioned as to whether it would not be possible to reduce the various departmental estimates to a substantial extent by suppressing the extra allowances made to public servants in respect of the high cost of living. These allowances, which take the form of an extra payment of 720f a year to all persons in the public employ, amount to a total of 714,000,000f a year, and it was contended that the reason for them had now ceased to exist, in view of the substantial reduction in commodity prices during the past ten or twelve months. The Minister explained that he had decided, as far back as last July, on the suppression of these allowances, but that he had been unable to issue the necessary decree for their suppression owing to the economic conditions due to the recent harvest having been so seriously affected by the drought, and to the fact that commodity prices have not yet been sufficiently reduced.

After the Minister had retired an animated discussion took place, as the result of which it was resolved to leave the Chamber to decide whether the deficit should be met in the manner proposed by the Finance Minister. The Commission agreed unanimously not to recommend either the imposition of fresh taxation, or the doubling of the tax on turnover. Eventually, on the proposal of M. Herriot (who is both the leader of the Radical party in the Chamber, and, as Mayor of Lyons, one of the ablest local government officials in France), it was decided by a large majority that it will be impossible to accept the estimated deficit of 2,500 million francs "without peril for the economic and financial restoration of the country." After insisting that "the time has come to add to the economies already effected, still more profound economies arising from the simplification of the suppression of certain services," the resolution referred back the whole of the estimates to the Government, in order that the proposed expenditure may be brought within the limits of the esti-

mated revenue. This means, of course, that the estimates put forward by each Government department must, in the opinion of the Finance Commission, be respectively reduced to such an extent as to wipe out the estimated deficit of 2,500,000,000; in other words, the work of drawing up the Estimates for 1922 must be begun all over again. Whether the Chamber will accept such a recommendation remains to be seen, but that it will be more than probable, in view of the importance with which the Parliamentary Finance Commission is usually regarded in this country.

The difficulties set up by present day exchange problems have never perhaps been more strikingly exemplified than in connection with the payment by Germany of the cost of the Allied Armies of Occupation. The Reparations Commission recently issued figures showing the total amounts respectively expended by the five Allied and Associated Powers in this regard, from the date of the armistice down to May 1, 1921. The figures have excited much attention here, owing to the high rate of pay prevailing in the British and American Armies of Occupation, and to the enormous discrepancies between the total number of men in each army and the cost of maintaining them. The following table shows the total amount expended by each Allied country on maintaining its troops (expressed in its own currency), the actual daily pay of the private soldier in each army, and the relative total expenditure if calculated in French francs, on the supposition that the troops of each country were paid at the same rate as the French soldier:—

	Total Expenditure.	Soldier's Daily Pay.	French Soldier.
United States.....	\$278,067,600	\$4.50	981,235,600
France.....	Frs.2,304,858,500	15 frs. 25 c.	2,304,850,500
Great Britain.....	£52,881,300	14s	1,230,906,300
Belgium.....	Frs.378,731,400	16 frs. 50 c.	376,053,300
Italy (in French frs.)..	Frs.15,207,700	22 frs.	12,152,200

If calculated on this basis, as one commentator points out, "the total amount to be paid by Germany under this heading would amount to about 5,000,000,000. In reality, by reducing the figures to gold marks, the amounts work out approximately at 1,000 millions for the United States, 1,000 millions for France, 900 millions for Great Britain, about 175 millions for Belgium, and about five millions for Italy, or a total of 3,000 millions of gold marks." Still more edifying, says the same writer, is the fact that on May 1st last there were 70,000 French soldiers on the Rhine, and only 18,000 British, while the less said about the number of Americans the better, while the proportion of French soldiers in the plebiscite and other areas was still greater. The Reparations Commission, by the way, has now decided that the conversion into gold marks of the cost of the Armies of Occupation down to May 1st last "shall be effected at the average rate for the quarterly periods during which the expenses had been incurred."

The bourse this week has, as was to be expected, been comparatively idle owing chiefly to the attractive offers of the new loan issued by the Crédit National. The fluctuation of the exchange has also caused hesitation, and the fall of the mark, more particularly with the great stimulus that it gives to German industry, has been a depressing factor. France, England and America, during the war very greatly developed their powers of production, but with no outlet in Central Europe or elsewhere, the allied economic situation is inevitably regarded with anxiety. French Rente has shown no serious change, but the Five per Cents. Crédit National have dropped from 450 to 444. Foreign Government securities have merely reacted to the exchanges. Banks have shown signs of depression, and both railways and shipping descriptions have been weaker. Electrical undertakings have shared in the general depression, Thomson dropping from 850 to 845, and the Compagnie Générale de l'Electricité from 1,000 to 970. In metallurgical undertakings Acieries de France are back from 630 to 600, Longwy from 1,110 to 1,090, and Acieries de la Marine from 1060 to 1031. In mining securities Tintos dropped during the week from 1,450 to 1,430, but recovered. Utah, under the influence of the exchange, rose from 707 to 727, but Boléo dropped from 400 to 390.

The returns of the Bank of France for the last week, the previous week, and the corresponding week of 1912 are as follows:—

DEBTOR.			
	Sept. 29, 1921.	Sept. 22, 1921.	Oct. 4, 1921.

CANADA.—IMPENDING GENERAL ELECTION—TARIFF ISSUE—GRAND TRUNK ARBITRATION—CANADIAN TRADE RETURNS—CROP REPORTS—TREND OF PRICES—STOCK MARKETS AND INDUSTRIAL CONDITIONS—REPORT ON HYDRO-ELECTRIC COMMISSION—PLANS FOR CATTLE EXPORT TRADE.

(FROM OUR CORRESPONDENT.)

OTTAWA, September 15.

PREPARATIONS are now under way for a General Election; it will probably take place in the early days of December. Mr Meighen's recent utterances and the tone of the Government Press make it plain that he intends if possible to make the tariff the main issue of the campaign, and paint in lurid colours the probable effect upon Canadian towns and cities of the fulfilment of the tariff programmes of the Opposition parties. The contest will be complicated by the presence of a third party, the Agrarians or National Progressives, who are now seriously challenging the monopoly of the two historic parties, and outside Quebec have shown themselves capable of meeting them on equal terms. The next Parliament will maintain three groups of more or less equal strength, with a score of Labourites and a fresh Coalition of some sort will be inevitable.

The award of the arbitrators in the Grand Trunk case caused little surprise to people who had been closely following the evidence and arguments. The hopeless financial situation in which the Grand Trunk had stood for years was patent long ago to many people in Canada, and once evidence about physical valuation, for whose rejection the action of the railway's own officers was largely responsible, was vetoed, there was scarcely room for any other decision. It is not expected here that the Privy Council can alter the decision, and the shareholders would be well advised to study the evidence before they incur further expenditure. Nor are

hopes of some compassionate allowance from the Canadian Parliament to be encouraged, for the next House will be dominated by people even less friendly to railway corporations than the present.

The sharp decline in Canadian trade figures continued during the month of August. For that month the total trade of Canada amounted to a value of \$127,510,299, as compared with \$238,085,409 for August, 1920. Imports fell from \$124,318,014 to \$65,147,301, and exports from \$112,278,064 to \$61,485,993. The respective figures for the five months of the current fiscal year ending August 31st are 1921, \$602,315,038; 1920, \$1,063,358,170. These represent a decline of 40 per cent. in value, but Professor G. E. Jackson, of Toronto University, as well as the statistician of the Bank of Commerce, agree in pointing out that the volume of exports at least has not seriously diminished. On the basis of values the declines visible in the first and second quarters of this year, as compared with the corresponding periods of 1920, are respectively 29.1 and 32.1, but adjustment of the figures to the terms of the price level of January, 1920, shows that, while there was a decrease in volume of 10.5 per cent. for the first quarter, there was an actual increase in volume of 2.7 per cent. for the second quarter. Canada is evidently selling in undiminished quantities, but has been compelled to meet the prices of the foreign buyer.

The latest bulletin of the Bureau of Statistics, issued September 15th, strikes a more optimistic note than its precursors about the wheat crop. It calculates an average of 15½ bushels per acre for spring wheat as against 14 last year, and a total volume of fall and spring wheat of 294,387,800 bushels, as against 263,189,300 last year. The rye crop is estimated to have increased from 11,306,400 to 11,847,500 bushels, but there is considerable decrease both in the average return per acre and the total volume of the oat and barley crops. Late-sown crops have been improved by recent rains, and clover and pasturage have also benefited. The harvest is a week or ten days earlier than usual, and the threshing stage has already been reached in many Western districts. Wheat from the new crop is moving freely to the seaboard, and there is such a congestion at some of the Lake ports and Montreal that the Department of Trade and Commerce has been compelled to institute a permit system as a means of restricting the influx of American wheat which has been seeking this outlet.

The fall in the cost of living which has been in progress since the beginning of the year has been checked, and the figures of the Department of Labour show that the average price of the weekly food budget for a family of five rose from \$10.96 on July 1st to \$11.41 on August 1st; the figure in August, 1914, was \$7.68. However, practically the whole increase is accounted for by rises in the price of potatoes and butter, for which the phenomenal drought of the summer is responsible. The total budget for food, fuel, and rent on August 1st was \$21.95, as compared with \$26.60 in August, 1920. The subjoined table gives a more extensive picture of the trend of trade and industry in Canada:—

	Aug., 1920.	May, 1921.	June, 1921.	July, 1921.	Aug., 1921.
Wholesale prices*	274.4	176.8	169.8	167	165.4
Family budget	\$26.60	\$22.84	\$21.74	\$21.53	\$21.95
Volume of Employment.....	106.7	89.5	88.1	89.0	89.0
Average price of 12 Canadian securities	122.9	108.6	103.9	103.6	103.0

* Base (equal 100) refers to period 1900-09.
† Base (equal 100) refers to the week ending January 17, 1920. Subsequent figures refer to the second week in each month.

After a hearing by the Railway Commission, it is settled that there will be no immediate reduction in railway rates. The chairman of the board and Mr Nantel recommended a general reduction in freight rates of 10 per cent., and a 25 per cent. reduction in Pullman and parlour car rates. But the remaining three Commissioners dissented from this judgment on the ground that pending the decision of the special tribunal appointed to investigate the question of railway wages, the application for rate reduction should be refused.

In recent weeks there has been a slight improvement in the tone of the Montreal and Toronto Stock Exchanges. It took the form of a broadening of the active list, with a definite trend in the direction of price appreciation. It

has not assumed the dimensions of a bull movement, but it was noticeable that attention was bestowed upon stocks which have been dormant for months. The Riordan corporation is still labouring under difficulties, but some of the other paper companies find their situation improved. Industrial stocks generally have little ground for improvement. The disposal of the crop will set in circulation large sums of money, and stimulate business in the rural districts, but hopes of a broad industrial revival this autumn have now waned. Price adjustment must proceed still further before a satisfactory basis which will prove a stimulus to trade is reached. The largest farm implement factory in Toronto is almost completely shut down through lack of orders, and it is obvious that the volume of unemployment in the cities will during the coming winter reach very serious proportions. Harvest work has temporarily absorbed many of the urban unemployed, but the West now reports that it has a surplus of labour for farm work, and as soon as the harvest ends the discharged workers will flock into the towns to aggravate the situation there.

The Commission appointed by the Drury Government in Ontario to investigate the projects of the Hydro-Electric Commission has presented a report which is very critical of many of the Commission's plans, and has strongly recommended against any further expenditure on the scheme for a network of electric railways in Western Ontario.

The report of the British Commission on the cattle embargo is awaited in Canada with keen interest, but meanwhile a committee of the Canadian Council of Agriculture which has been investigating the situation in Britain has made a report recommending that the farmers of Western Canada proceed to the organisation of a co-operative export company to handle their export trade in cattle. The committee find that proposed schemes for the development of a traffic in chilled meat are not feasible.

AUSTRALIA.—A YEAR'S TRADE.

(FROM OUR CORRESPONDENT.)

MELBOURNE, August 19.

THE returns of Australian trade for the financial year ended June 30th compare with those for the previous year as follows:—

	1919-20.	1920-21.	Inc. (+) or Dec. (—).
Imports—			
Merchandise.....	£ 98,925,302	£ 163,322,642	+ 64,397,340
Gold	48,990	10,862	— 38,128
Total imports	98,974,292	163,333,504	+ 64,359,212
Exports—			
Merchandise	144,275,428	126,596,882	— 17,678,546
Gold	5,548,081	5,328,236	— 219,845
Total	149,823,509	131,925,118	— 17,898,391

In 1919-20 exports exceeded imports by £50,849,217, but in 1920-21 imports exceeded exports by £31,408,386, the large increase in imports having produced the difficulty in exchange which prevailed from last October onwards. This difficulty has been alleviated by the good wheat harvest, which has enabled wheat and flour to be shipped to the value of over 3½ millions sterling between

January 1st and June 30th this year, in addition to the exports of butter at the extremely high price paid by the British Government, and the more active shipments of free wool since the demand improved last April, these factors being supplemented by the various Government borrowings in London during the last few months. As it is, however, the exports of £131,925,118 during 1920-21 do not entirely represent fresh payments to Australia, as they include a quantity of wool and wheat previously purchased by the British Government, and paid for in anticipation of shipments. The reduction in imports which has been shown by the monthly returns for May and June indicates that the period of excessive importations is now over. The gold exports shown above include premium.

The area under wheat in Australia for the new season is estimated at about 15 per cent. more than last year, but as the average yield per acre was then exceptionally large the result to be expected will not necessarily increase in the same proportion, even under ordinarily favourable circumstances. The crops have made good progress so far, but the critical period will be in October, when showery weather is necessary to assure the harvest. The average price obtained this year for export has been in the neighbourhood of 9s per bushel f.o.b., but so far as can be estimated at present only 6s can be calculated upon for the new season. A good butter export is hoped for during 1921-22, and the outlook is now for better pieces than were expected a short time ago, the market having hardened in consequence of the drought in Europe. For pastoralists the season has shaped well, and the lambing has been favourable.

Letters to the Editor.

PAYMENT OF INDEMNITIES AND UNEMPLOYMENT.

TO THE EDITOR OF THE ECONOMIST.

SIR,—Some of our leading statesmen appear to be under the impression that the payment of the indemnities is going to cause great unemployment at home and certain leading organs in the Press share their view. Are they conversant with the flow of trade currents? It seems rather odd that the payment of a debt to a nation should be a disaster which the individual generally welcomes. Let us examine this profession.

We owe the United States one thousand millions, and other countries owe us a much larger sum. We have no bullion or specie wherewith to pay, so must export commodities or services—but not necessarily to our creditor direct. The U.S.A. possess a high tariff whereby our manufactures are practically excluded. Their principal imports are sugar, rubber, hides, skins, Egyptian cotton, wool, tobacco, coffee, cocoa, tea, copper, and tin. We import all these ourselves as we cannot raise them. Let us trace what I understand to be the mechanism of debt reduction. Assume our Government to have a million to spare out of taxation. The million will find its way to a discounting bank. The object is to cancel some debt owing by the traders of America indirectly to us, and that can only be done by the establishment of a credit in that country. The bank holds bills for a million secured on machinery, cotton, and woollen cloth exported by us to India. India pays by a shipment of indigo or jute to the Straits Settlements. The Straits pay by the export of a million's worth of tin and rubber to the U.S.A. The credit has now arrived. The proceeds of the sale of the tin and rubber are paid to the Government by the agent of the discount bank, and the accounts are squared. It is perfectly true that there has been a transfer of wealth from England to the United States, and England's wealth is so much less, but she has reduced her liability for debt and interest thereon, and if her capital were exhausted the demand for labour would be diminished accordingly. But an effort must be made by industry to recreate wealth to fill the gap, and just as in the first instance the export of machinery, cotton and woollen cloth is a demand for labour, so the repair of the breach is likewise. Taking the indebtedness of other countries to us, this

may be also mainly liquidated through the agency of the United States. The exports of our debtor countries, France, Italy, Germany, &c., will be effected by their shipping, directly or indirectly, to the countries whose exports consist of raw materials, which will be shipped to the United States on our account, and the proceeds reach our shores in the form of raw cotton, wheat, and other foodstuffs, which for so many years before the war constituted the excess of America's imports to us over our exports to her. These represented the world's payment to us for freights, profits, interest, and capital repaid. The motive power to drive this mighty engine must be effective production at low costs. Boom profits, trades union wages at fancy rates, trade boards, cost of living ideals must be scrapped or we cannot compete with our rivals, for our exports must be manufactured articles with the exception of coal and china clay. I venture to say that the payment of international debt will result in the greatest demand for Labour's efforts the world has ever seen, if Labour will settle down to reasonable wages and peace be maintained.

This liquidation can be accomplished without the importation of so much as a teaspoon into this country, but our Government must learn that obstructive legislation and wasteful administration only check that creation of wealth from which alone the one million pounds and its successors can proceed.—Yours, &c.,

ALFRED E. LEAF.

Manchester, October 3rd, 1921.

REVIEWS.

"Economic Sophisms." By Frederic Bastiat. Translated by Patrick James Stirling, with an Introduction by the Right Hon. H. H. Asquith. New impression. (London) T. Fisher Unwin, Limited. 7s 6d net.

THE reissue of this work, first published in 1909, is welcome now that the sophisms of Protection are presented under a new disguise. As Mr Asquith says in his introduction, they will always have a vogue so long as there are people who think confusedly, and so Bastiat's exposure of them will never be out of date. That "Protection concentrates on one point the good that it produces, while the evils that it inflicts are spread over the masses," and so visible only to the eye of the mind; that its goal is scarcity produced by artificial obstacles; that it rejects the gifts of nature in order to make work for certain labourers and monopoly profits for their employers; and that these characteristics are obscured by the mechanism of exchange, by misapplied metaphors from warfare, and by the unavoidable but misleading personification of nations as individuals trading with and seeking to overreach each other, are truths which every successive generation forgets, and which Bastiat set forth once for all. The translation occasionally contains gallicisms. "Gentlemen Protectionists" is no more English than the "Men, brethren, and fathers" of the Authorised Version of the Acts; and the allusions to the controversies of Bastiat's day might be cleared up by notes. But these blemishes do not detract appreciably from the value of the book.

"Rubber Producing Companies, 1921." Official Guide for Investors in Rubber Shares. (London) Office of the *Financial Times*, Limited. 9s.

THIS useful handbook on rubber companies is issued by the Mincing Lane Tea and Rubber Share Brokers' Association. In the present difficult position of the rubber industry, up-to-date and comprehensive information is of the utmost importance, and investors will find in these pages details concerning almost every rubber company whose shares are dealt in on the London Exchanges. These statistics embrace directorate, capital, acreage, tenure, when planted, purchase price, crop yields, and net price per lb for last seven years, synopsis of accounts for last seven years, investments, and estimates. Finally, all recent reorganisations and amalgamations are recorded.

STOCK EXCHANGE NEWS.

SETTLING DAYS.

TICKET.	ACCOUNT.
October 12.	October 13.

The second half of the Stock Exchange year has begun without any noticeable increase in the general volume of business. Markets are quiet, and even those parts of the House in which violent fluctuations have occurred cannot be said to have attracted any large amount of public dealing. That there has been considerable liquidation, more especially in the oil market, the Stock Exchange agrees, but the only section where any real activity prevails is that for gilt-edged securities. New issues command varying success. The County of London Electric 7 per cent. debenture stock, issued at 94, was ten times over-subscribed in less than three hours, and the price rose to 3 premium. The Mersey Power Company's offer of 7½ per cent. debenture was promptly accepted. The feature amongst gilt-edged issues is the way in which Treasury 5½ per cent. bonds "A" series have risen from 97, their issue price, to 97½, the improvement being due to the withdrawal of the "A" series by the Government and replacement by a "B" series offered at 98. Consols have again touched 49, and the War stocks have been a good market throughout the week. In the case of the 5 per cent. War

BARCLAYS BANK LIMITED.

Head Office: 54, Lombard Street, London, E.C.3.

This Bank is in close touch with leading Bankers in all parts of the world, and provides facilities for the financing of every description of Overseas business. Trade is interested in the Foreign Markets are invited to correspond with

THE FOREIGN MANAGER.

Foreign Branch: 168, Fenchurch Street, E.C.3.

Loan, the price will go ex dividend in a fortnight's time, and this consideration brought in a fresh supply of buyers. Union of South Africa scrip, after being over 1 premium, came on offer at ½ premium, in consequence of the preparations for the latest New South Wales issue. The Ceylon 6 per cent. subscription lists were closed well in advance of the advertised time. Home Railway prior-charge stocks are a slack market.

German Government bonds provided mild excitement for the gamblers in the foreign market. The investor will take more stock of the manner in which the 8 per cent. bonds of the Chinese "Vickers" and "Marconi" loans have appreciated sharply, on the announcement that a special security is to be given to the Vickers section. South Americans have been dormant. Salvador and Columbian bonds continue to improve. There is nothing much doing in the French loans, which is not surprising in view of the new issue of three milliards of francs, in bonds of 500f each, to be offered at 49½, in a fortnight's time.

Home Railway stocks, after being flat, recovered from the worst of the depression, though the only feature of strength is Metropolitan Consolidated, where buying was stimulated by the increased facilities which the company is offering to its passengers. Grand Trunks are no better, and Mexican rails have sagged. Argentines are flat, the Central Argentine, Buenos Ayres Great Southern, and Buenos Ayres Western companies declaring interim dividends of 2 per cent. actual. Brazilians are very weak, owing to reduction in the San Paulo dividend, and to the passing of the interim dividend on Leopoldinas preference. Foreign rails throughout are thoroughly depressed.

The rubber market is uninteresting. The new Rubber Shareholders' Association received a good send-off on Monday, but this had no effect upon prices in the market. The Rubber Plantations Investment Trust report makes a poor showing. The Rubber Growers' Association has notified that its proposed scheme for the control of production and prices has to be abandoned for lack of sufficient support. The oil market continues to be the theatre of wild and erratic movements. Liquidation poured in from all parts early in the week, and prices have had but spasmodic recoveries. The oil shareholder looks on with mingled bewilderment and anxiety at the way in which prices are slumping. The shipping market is heavy, and amongst textiles further falls occurred, although Cook, Son and Co. ordinary and preference rallied after giving way on the announcement that the interim preference dividend would not be paid. Dunlops have dropped on rumours of possible reconstruction. The company's report is almost due, and people who profess to have inside knowledge declare that, although the figures will be very bad, reconstruction will not be proposed. The weakness in Courtaulds is surmised to be due to the selling of a few shares in the estate of the late chairman. In the brewery market, the new Manchester Breweries debentures have given way to 2 discount. Electrical manufacturing shares are weak, and the only feature in the gas market is a substantial rise in Imperial Continental ordinary. The various stores' shares are keeping tolerably steady. Marconis have eased off, though Radio Corporations again received a little support from America. Iron, coal, and steel shares, together with those of the armament companies, show a disposition to weaken on account of recent dividend disappointments. Taken as a whole, the industrial market is inclined to be heavy, with business running on very retail lines.

South Africans are a melancholy market owing to a fall in the price of gold. This took all the heart out of prices, and the weakness in Kaffirs was communicated to diamonds and Rhodesians. Russian issues of all kinds have declined—mining, municipal, and Government. The Mexican mining group is a little lower, and there is no business doing in any of the tin groups.

The Stock Exchange has declared a dividend of £2 2s per share net in respect of the first six months of the current year, and the price of the shares is unchanged at 84½. The dividend is the same as that of a year ago.

NEW ISSUES.

The new issues of the week and the current year and date of opening of the lists have been as follows:—

Series B 5½ per cent. Treasury Bonds, issued at 98 per cent., payable on application. Repayable at par on April 1, 1929. Interest payable on April 1st and October 1st. The first dividend will be paid on April 1, 1922. The principal and interest of the bonds are chargeable on the Consolidated Fund of the United Kingdom. The interest on the bonds will be exempt from Corporation Profits Tax. Bonds of this issue will be convertible at the holder's option as on April 1, 1922, or October 1, 1922, into £3 10s per cent. Conversion Loan at the rate of £146 Conversion Loan for each £100 of bonds converted. Bonds of this issue may be registered free of cost in the books of the Bank of England or of the Bank of Ireland.

Ceylon Government 6 per Cent. Inscribed Stock 1936-1951.—Issue of £3,000,000 at £97 per cent. The loan is the second instalment of a loan for £6,000,000, raised to repay to the general balance of the Colony sums advanced to the Municipal Council of Colombo for the construction of the Colombo drainage works and the extension of the Colombo waterworks, and also to meet the cost of the Batticaloa-Mahoe and Trincomalee Light Railway, the duplication of the main line, and other railway and public works in the Colony. The loan is secured on the general revenues and assets of Ceylon, "which is a Colony not possessing responsible government, and the administration of which is under the control of the Secretary of State for the Colonies." The principal will be payable at par on July 1, 1951, by a sinking fund of £1 16s per cent. per annum, to be formed in this country under the management of the Crown Agents, who are appointed trustees; but the Government of Ceylon will have the option of redemption at par on or after July 1, 1936, on giving six calendar months' notice. The revenues of Ceylon alone are liable in respect of the above stock and dividends, and the prospectus states that "the Consolidated Fund of the United Kingdom and the Commissioners of his Majesty's Treasury are not directly or indirectly liable or responsible for the payment of the stock." Subject to geographical considerations, this is a good trustee stock. The issue was oversubscribed.

Joshua Hoyle and Sons, Limited.—Authorised share capital £5,000,000, of which £1,793,978 has been issued and subscribed. This is an offer for sale of £1,500,000 7 per cent. first mortgage debenture stock at 94 per cent. The present issue is limited to £1,500,000, but may, on conditions set out in the trust deed, be increased to £3,000,000. The remaining £1,500,000 can only be issued on terms which adequately protect the interests of those who will be the holders

of the present issue. This first mortgage debenture stock will be constituted by a trust deed, and secured by a first specific charge on property and plant and a first specific charge on the land, buildings, plant, &c., of subsidiary companies, also by a general floating charge on the undertaking and assets, including uncalled capital, of Joshua Hoyle and Sons, Limited. The company is precluded from creating any charges upon the assets included in the floating charge, ranking in priority to, or *pari passu* with that charge, except for the purpose of securing bankers' advances, made in the ordinary course of business. The trust deed contains provisions for preventing subsidiary companies from creating any further mortgages or charges upon any part of their property. The stock will be repayable by means of a cumulative sinking fund, beginning in 1922, which provides for repayment by December 31, 1950, by annual drawings at par or by purchase in the market at or under that price. Profits are shown from 1911 to 1920, and it is stated that results for 1921 are not yet available. As the financial year of the company ends on September 30th, it would have been thought that some idea of the past year's results could have been shown, especially as the period covers a term which has been unfavourable to many companies. Apparently, however, the directors anticipate a good year. According to the statement of assets and liabilities, there is, excluding the proceeds of the present issue, an excess of assets over liabilities of £3,084,141. As the latest financial period is recently ended, it seems a pity that some estimate of 1920-21 results is not given. But the prospectus is clean, clear, and informative, and the offer may be regarded as a very fair one in its class. The debentures have been bought *en bloc* at £88 per cent. by the present vendors, B.S.T., Limited, who, in turn, pay an underwriting commission of 2½ per cent., with an overriding commission of ½ per cent. and the expenses of the issue.

The Mersey Power Company, Limited.—Authorised capital £250,000, in ordinary shares of £1 each, of which all have been issued. This is an offer for sale of £300,000 7½ per cent. mortgage debenture stock at £97 per cent., repayable on December 31, 1946, at 102 per cent., or earlier by means of an annual cumulative sinking fund beginning in 1922. The sinking fund will be applied in the purchase of the stock in the open market, or privately, at or below 102 per cent., or by drawings at 102 per cent. These debentures will be secured by a trust deed constituting a mortgage upon the fixed property of the company and a floating charge on remaining assets, subject to a fixed and floating charge in favour of the Minister of Munitions to secure the sum of £300,000, of which £280,000 has been received. The company was formed in April, 1911, and has apparently made rapid progress as regards the supply of electricity. Net assets of the Mersey Power Company are given, including proceeds of the present issue, as £557,213, and profits are set down from 1915, together with rates of dividend paid. As further security the debentures are guaranteed both for payment of interest and repayment of capital by the Salt Union, Limited. Net assets of the latter company are recorded as £1,919,958. These debentures, therefore, may be considered to be well covered, both for interest and capital. The price paid by the British, Foreign, and Colonial Corporation, the present vendors, to the Mersey Power Company, Limited, is £92½ per £100 debenture stock, "the company bearing the charges in connection with this offer." The British, Foreign, and Colonial Corporation pay an underwriting commission of 2½ per cent., and an over-riding commission of ½ per cent., on the nominal amount of the debenture stock offered in this sale. A good offer in its class. We are informed that the offer has been "largely oversubscribed."

The Clyde Valley Electrical Power Company, Limited.—Incorporated by Act of Parliament.—Authorised share capital £1,900,000, of which £900,000 has been already issued. The issued capital consists of £600,000 in ordinary shares of £10 each and £300,000 in 6 per cent. preference shares of £10 each. A further £500,000 in 8 per cent. cumulative second preference shares of £10 each at par is now offered for subscription. The prospectus states that "the company's borrowing powers on mortgage of their undertaking are limited to one-half of the nominal amount of the shares for the time being subscribed, and on which at least 50 per cent. has been paid up." The directors have also power to borrow on temporary loan. At December 31, 1920, the company had borrowed £90,000 from the Traction and Power Securities Company, £241,137 from the Government, and £299,695 from bankers. The Clyde Valley Electrical Power Company was incorporated in 1901 with power to supply electricity within the industrial districts of the counties of Lanark, Renfrew, Dumfries, and Stirling, representing an area of about 735 square miles, with a rateable value of approximately £5,000,000. An informative table of past profits from 1911 is given, also a statement is submitted which shows a sum of £1,611,193 as representing net surplus assets for the security of the present issue. But in view of the company's borrowing powers on mortgage, the value of these

figures is somewhat problematical. The issue, however, is a fair one in its class.

Roneo, Limited.—Authorised capital £610,000, of which £547,437 has been issued. This is an offer for sale of 160,000 10 per cent. cumulative preference shares of £1 each at par. These shares rank after £90,350 issued 6 per cent. preference capital and before £297,087 issued ordinary capital. The prospectus states that "the articles of association of the company are in course of alteration so as to secure that the company shall not be at liberty to issue any debentures or any other security charging any part of its assets (except to secure bankers' or other loans temporarily not exceeding £150,000 at any one time), or any shares ranking in priority to or *pari passu* with the 10 per cent. cumulative preference shares, except with the sanction of holders of the 10 per cent. preference shares. A useful table is submitted showing profits from 1912, while, according to figures extracted from balance-sheet and accounts, including the proceeds of the present issue, and excluding the value of goodwill, patent rights, &c., net surplus assets are valued at £638,688, as against an issued capital of £547,437. In this "offer for sale" we cannot discover what the voting rights attached to these 10 per cent. preference shares are. At the present time this is rather an important point. The Imperial and Foreign Corporation, Limited, in consideration of a commission of 25 per share, agreed to subscribe at par for the shares now offered. Roneo, Limited, is a progressive concern, with a good record of past earnings, and the attraction of the shares is commensurate with the degree of risk denoted by the 10 per cent. yield.

To complete our record of new issues, company secretaries are requested to furnish us with copies of new prospectuses. Our readers can also assist by forwarding copies of prospectuses which may fall into their hands.

COMPANY MEETINGS, &c.

ARGENTINE IRON AND STEEL COMPANY, LIMITED. BOARD'S CONSERVATIVE POLICY.

The ninth ordinary general meeting of the Argentine Iron and Steel Company (Pedro Vasena é Hijos), Limited, was held, on the 6th inst., at Winchester House, London, Baron Emile B. d'Erlanger (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, dealt first with the balance-sheet. He explained that the bills payable, bank overdrafts, and creditors and credit balances—the three important items of quick liabilities—with certain small items added, totalled £965,000, while the quick assets, consisting of stocks after being written down, moneys owing to the company and cash in hand, totalled £1,352,000, leaving a balance to the good of nearly £387,000. If the debenture debt of £242,000 were deducted from this surplus it still left a balance of £145,000, which, added to the fixed assets of £784,000, gave a figure in excess of the total share capital, and provided a margin of some £425,000 over and above the preference capital. Their secretary (Mr Yaxley), who had paid a long visit to the Argentine, had been greatly impressed with the value of the company's fixed assets, and confirmed the directors in their belief that those assets stood in the books at far below their intrinsic value. The stock in hand, standing in the balance-sheet at the cost value of £830,000, had been written down to £620,000. The trading profit for the year was the highest on record since the formation of the company, and although they had increased the depreciation fund by £26,000, as against £19,000 in 1920, the net profit showed an increase of £3,000.

Up to well in the summer of the year 1920 the difficulties of obtaining iron and steel products were very great, the buyer being almost entirely at the mercy of the supplier, and the only source of supply at that time was the United States of America. In the autumn of 1920 the position of the steel industry became suddenly reversed, and though prices did not fall severely or rapidly at first production overcame demand, and the North American steel producers suddenly dumped upon their customers all the delayed and current orders. These accumulated deliveries coincided with the arrival of the wave of trade depression in Argentina. In these circumstances it behoved the board to take drastic measures, and they had added the net profit of the past year to the contingency reserve, thus raising it to £280,000, and applied £210,000 to writing down stocks, leaving £70,000 to be applied to reducing the value of such stocks as had been delivered since February, 1921. They could congratulate themselves upon having been extremely conservative in their financial policy in the past and having built up an important contingency reserve, for to that was due the unstinted support that had been vouchsafed to them by the South American banks. He was certain that the courageous way in which they had faced the situation created by the world crisis could but strengthen the confidence of all those directly or indirectly concerned in the welfare of the company, and that they would feel that the management would leave no stone unturned to liquidate the company's indebtedness to third parties and to their preference shareholders for the arrears of dividend and to resume the regular dividends as promptly as possible.

The report and accounts were unanimously adopted.

LEACH'S ARGENTINE ESTATES, LIMITED. ADVERSE FACTORS IN ARGENTINE CANE INDUSTRY.

The ninth ordinary general meeting of Leach's Argentine Estates, Limited, was held, on the 7th instant, at Winchester House, Old Broad street, London, Baron Ferdinand A. d'Erlanger, vice-chairman, presiding.

The secretary (Mr W. F. Yaxley) having read the notice calling the meeting and the auditors' report,

The Chairman, in the course of moving the adoption of the report and accounts, said: I am sorry to say that the profit and loss account does not compare favourably with that of last year, as the profit on trading amounts to £171,581 against £268,792 for 1920. The balance carried to the balance-sheet is £61,727, against £121,958 last year. This result is due to various causes, which I will endeavour to put before you as briefly as possible. At our last meeting I referred to two important points, namely, the occurrence in the middle of July of very severe frosts, and the efforts of the Argentine Government to pass a law for the expropriation of 200,000 tons of sugar, at the same time prohibiting exportation. With regard to point number one the effects of the frosts had a most disastrous result, as the crop, which had originally been calculated to produce about 20,000 tons, ultimately produced only 13,132 tons of sugar. In addition, great damage was done to the roots of the cane already cut at the time of the frosts, reducing very materially the number of lines available for the following (that is, the current) crop. Further, the banana plantations, from which great results were expected, were adversely affected, so that our profits, instead of being increased, were reduced from £12,000 to £5,000.

As to the second point, the threat that special sessions would be held to discuss the Expropriation Bill again, hung over the market for several months, unsettling the minds of commercial people and interfering with the freedom of sales. After the turn of the year the market took a firmer trend and prices gradually improved, without, however, giving cause for either the consumer or the Government to complain. In a word, we have produced far less sugar than we expected; the cost of production has been abnormally high, and the average price obtained for output below what it would have been had the market been allowed to follow its natural course.

As a result of the frost last year a large number of lines of cane had to be thrown away, and to replace these a special effort has been made during the current crop to lay down about 60,000 lines of new cane.

As to the current crop the total production of sugar in the Argentine is calculated at 183,000 tons, of which 11,450 tons corresponds to our factory. I regret that I have again to report serious frosts in the early part of the cropping season. By the date the frost occurred we had manufactured 2,000 tons more sugar than at the corresponding date in the previous year. These successive blows are very disheartening, and the oldest inhabitants wonder at the phenomenal change in the climate.

The report was unanimously adopted, and the usual formal business transacted.

OIL OUTPUTS.

APEX (TRINIDAD) OILFIELDS.—Estimated production of crude oil for September was 48,380 barrels, equal to, approximately, 6,900 tons.

LOBITOS OILFIELDS, LIMITED.—The production for September is called as 8,631 tons.

UNITED BRITISH OILFIELDS OF TRINIDAD, LIMITED.—Combined production for the week ending Wednesday September 28, 1921, amounted to 1,661 tons.

(a) Also distribution of 300 per cent. in bonus shares. (b) Also capitalised bonus. The directors of Tankers have decided to defer consideration of the payment of a dividend on the preference shares until the final results of the year's working are ascertained.

UNITED STEEL COMPANIES state that, having regard to the financial and general conditions, they do not propose that a further dividend for the year under review should be paid on the ordinary shares.

CENTRAL URUGUAY RAILWAY OF MONTE VIDEO.—Net revenue account for the year ended June 30, 1921, does not admit of the recommendation of a dividend on the ordinary stock of the company, but the warrants for dividend on the 5 1/2 per cent. preference shares will be posted on October 25th.

THE LEOPOLDINA RAILWAY COMPANY.—We are officially informed that "In consequence of the low rate of exchange that has been ruling in Brazil for the past

nine months the board do not consider it advisable to make an interim payment in respect of the 5 1/2 per cent. preference shares of the company, as has been customary in October. Although the gross receipts from January 1st to September 24th amount to Rs.36,416,000—and are the highest in the history of the company—comparing with Rs.30,955,000 for the corresponding period in 1920, the sterling equivalent amounts to only £1,271,587 as compared with £2,013,104 last year, a decrease of £741,517, or 36.83 per cent. Had the exchange during the current year averaged that for 1920 (15 1/2d) the gross receipts would have been £2,385,058. The recent improvement in the exchange encourages the directors to hope that it may be possible for the dividend on the preference shares to be paid after the annual accounts have been presented to the shareholders in May next."

THE PARENT TYRE COMPANY.—The directors announce that the yearly dividends on the company's 5 per cent. cumulative preference and 8 per cent. cumulative ordinary shares to August 31, 1921, will be paid after the annual general meeting. A distribution at the rate of 25 per cent. per annum on the company's deferred shares will be recommended, to be paid after the receipt by the company of the dividends accrued to August 31st last on its holding of Dunlop "C" cumulative preference shares. The directors desire to state that important negotiations, of a nature advantageous to the company, are in progress, and as these cannot be concluded until the end of October, the holding of the annual general meeting will be postponed until then.

Reports and Notices.

Mr Charles S. Blackwell, retired, formerly president of Matthews, Blackwell, Limited, packers, now chairman of the board of the Toronto General Hospital, has been elected a director of the Dominion Bank.

The National Provincial and Union Bank of England, Limited, announce that a branch of the bank is now open at 81 Omberstone street, Droitwich, Mr H. T. Meredith being the resident officer.

We are informed that the firm of Nelke, Phillips, and Co., of 6 Angel court, Throgmorton street, E.C. 2, is being dissolved by agreement as from Friday, September 30th, and Mr P. Nelke, who is retiring from active business, has been entrusted with the duty of liquidating the firm's affairs. All communications relative to the liquidation of the firm's business should be addressed to Nelke, Phillips and Co., c/o Cull and Co., 11 Throgmorton avenue, E.C. 2 (Mr H. Marx is becoming partner in Cull and Co.). Mr J. Stern will continue business on his own account at 9 Drapers' gardens, E.C. 2.

GOVERNMENT STOCKS, &c.

CHINESE GOVERNMENT 8 PER CENT. TREASURY NOTES, 1925-1929.—Holders of the above notes are informed that, according to cable advices received by Messrs Vickers, Limited, from their representative in Peking, the Chinese Minister of Finance has instructed the Salt Administration to pay out of the surplus salt revenues available after meeting all prior charges on such revenues, and subject only to such prior charges, the sum of 100,000 Mexican dollars a month, commencing in January, 1922, and continuing until the whole of the above notes are paid off. These payments are to be made to a fund which is to be applied in or towards payment of the interest on the notes falling due in April, 1922, and the subsequent half-yearly interest payments.

REPUBLIC OF NICARAGUA GOLD BONDS, 1909.—The Council of Foreign Bondholders have received a telegram from the bankers in New York notifying the payment of the September instalment of the Debt Service in accordance with the arrangement of May 25, 1921.

VENEZUELA (3 PER CENT. DIPLOMATIC DEBT).—The Council of Foreign Bondholders notify the receipt of a sight draft for £4,390 15s 4 1/2d, being the moiety of the fourth fortnightly instalment of the debt service payable to the Council in respect of the half-year ending December 31, 1921.

GREEK DEBT.—The Council of Foreign Bondholders issues the following information, compiled from figures published by the International Financial Commission at Athens, with regard to the revenues assigned under the Law of Control for the service of the Greek Debt

MISCELLANEOUS.

BENGAL IRON COMPANY.—The second report for the year ended March 31, 1921, shows a net profit, including £8,157 18s 6d brought forward from last account, of £318,710, from which is deducted depreciation and colliery sinking fund, £28,264; transfer to taxation reserve, £54,000; transfer to general reserve, £16,168, making available £220,278. Preference share dividends absorbed £37,496, leaving £182,781, which the directors recommend be applied in payment of 10 per cent. dividend on the ordinary shares, making £157,403, leaving a balance to carry forward of £25,378. As already reported to the shareholders in the circular dated March 7, 1921, floods on the railways interfered severely with the supplies of raw material during the last six months of 1920, and caused a large reduction in output. Working costs have also

RAILWAY AND TRAMWAY TRAFFIC RETURNS.

No traffic returns of British Railways have been issued since the Government took control of the Railways at the outbreak of the War. The Government took over control of the Irish Railways as from January 1st, 1917.

Commercial Reports.

THE CORN TRADE.

Mark Lane, Friday Evening.

Weather conditions have remained favourable for ploughing and sowing operations, and good progress has been made in preparing the ground for new cereal crops. Large offerings of native wheat were on sale at most of the chief distributing centres during the week, and with pressure to sell prices gave way, owing chiefly to the decline in imported varieties. Farmers are very dissatisfied with the low prices ruling for their produce, and which may have an adverse effect on the acreage laid down under the all-favoured cereal this season. Prices generally show a decline of 2s to 4s per quarter, fair to good milling samples selling at 52s to 55s, with inferior down to 45s per 504 lbs, free on rail. Imported descriptions marked a sharp decline, especially for Manitoba grades, due chiefly to lower advices from North America, and much cheaper Canadian offers on c.i.f. terms. Values at the moment are very irregular and difficult to gauge. No. 1 Northern Manitoba, ex ship, nominally 58s to 60s, ex ship, as to position; No. 2 hard winter, 57s to 59s, all ex ship, and Egyptian feed, 53s per 480 lbs, landed. In the forward market, prices marked a substantial decline, with a moderate business passing in parcels, the position being governed by weakness in Canada and the United States, with free offers from those countries, also pressure to sell Australian, including new crop. It would appear that the matter of finance weighs very heavily in most producing countries, growers being unable to hold, and thus forced to market their produce, while in some instances Government assistance is being sought. The flour trade is also very dull, and prices tend lower in sympathy with the wheat situation, general course of trade being affected by the abnormally small bread consumption for the time of year, a further spell of warm weather tending against any improvement in this respect. London straight run nominally quoted at 60s, town households 58s, patents 63s, all English straight run 53s per sack delivered, while country straight run sold down to 45s per sack, on rail London stations. Imported grades also in slow request, and lower prices are necessary in order to sell. Manitoba export patents 61s, straights 57s, Kansas patents 58s to 59s, and Australian 54s to 55s per 280 lbs ex stores. On c.i.f. terms Canadian parcels are offered at 50s to 55s October seaboard, Kansas top patents 56s per sack. Maize market again very depressed, and values continue decline, owing chiefly to lack of demand, financial difficulties prevailing in most European countries, together with weak Argentine advices. Spot business is almost at a standstill, due to abnormally hot weather. Yellow La Plata 32s, African quoted 32s 6d, and white flat African 34s landed per 480 lbs. In the cargo market business was confined to Plate steamers arrived at about 34s, with affloat sellers now at 32s, November-December 33s 6d per 480 lbs. Barley inactive, and rates again easier for all descriptions. English malting good to fine quoted 68s to 73s, with very choice samples up to 80s, and poor qualities down to 50s, feeding bulks selling at about 45s per 48 lbs. Grinding sorts 40s to 48s per 48 lbs. Of imported, No. 3 Canada Western ex ship 36s, No. 4 Canada Western 36s, Canada feed 35s, American feed 34s 6d, all landed per 400 lbs. On c.i

prices in the future. No. 3 Cleveland G.M.B. can be bought at 120s per ton. The position with regard to East Coast hematite is not good. The supply exceeds the present demand. The price of mixed numbers is nominally 130s per ton. Manufactured iron and steel: Orders very scarce. Only a few works are operating, and most of those are not working full time. Steel ship plates, home, £14; steel ship angles, £13; iron bars, £14; steel rails, £12 10s. Iron ore: Best rubic is about 28s per ton, c.i.f. East Coast, and business is limited to an occasional cargo.

Our Sheffield correspondent writes:—In spite of public utterances to the effect that a revival of trade has begun, the actual position of the steel industry remains as bad as ever, and there are fewer heavy furnaces in operation than a month ago. The depression in the crucible department also shows no sign of lifting. At the same time, a partial revival during the next few months is by no means improbable, owing to the narrowing margin which separates the prices of British and Continental iron and steel. Foreign competition, and particularly Germany, appears to have reached its apex, and now tends to decline. Prices are advancing in Germany, and no new business will be accepted for early delivery. On the other hand, there has been further deflation in British prices. British steel is preferred to foreign, and the latest quotation shows only £1 per ton difference in the cost of the two makes. British foundry pig has dropped to £6 15s or £6 10s, delivered. A good deal of British steel material is now therefore in the market, and but for the financial stringency orders would be placed on a substantial scale. Local armament firms are buying material in readiness for the construction and armament of the battle cruisers which the Government are about to order. The departments making railway axles, tyres, and springs have not been working to a fourth of their capacity for a long period. The arrangement with the makers of cast-iron pipes for gas, water and sewerage mains has been dissolved, so that competitive quotations in this important industry are restored again. In consequence of the lower foreign offers for pipes lately, local authorities when buying have had to decide between economy and patriotism. Other organisations to maintain uniform selling prices are showing signs of weakness. The absence of overseas buying continues to be the most prominent feature of the situation, and two-thirds of the local productive resources are standing idle. Although the demand for house coal is more active, it is phenomenally small for the time of year. The inland demand for steam coals expands slowly, and the same remark applies to the export trade. Overseas buyers appear to be holding off the market with the object of forcing lower prices. The glut of small fuel is being reduced by the gradual restarting of coke ovens.

Our Glasgow correspondent writes:—There is no marked change to note this week in the trade and industrial positions of this district. If anything, there has been less buying in evidence, and the general tone, therefore, in iron and steel connections has been quieter, but this, in great measure, has been due to the atmosphere that has been created over the question of unemployment, and the uncertainty that obtains as to what will come of the various policies propounded for dealing with that important and vexed problem. Until the course of events in that relation are more clearly defined than they are at present, those interested are moving warily. As a consequence, it is understood, quite a lot of inquiry is being hung up—inquiry on export account for finished material chiefly. The easier tendency of coal prices has enabled Scotch iron masters to intimate further reductions in foundry qualities, No. 1 now standing at £7 10s, and No. 3 at £7 5s (f.o.b. makers' works), or 10s a ton less than was the case a week ago. Scotch hematite remains firm at £7 15s (f.o.t. makers' works). Conditions at the steel works lack substantial improvement. At the Steel Company of Scotland's Hallside section a couple of rolling mills have been re-started, and at one or two large establishments preparations are in hand for various developments; but all over order books are light, and much plant is idle. Official statistics show that during last month there were 15 vessels of 50,000 tons launched on the Clyde, bringing up the totals for nine months of the year to 181 steamers and 350,000 tons. The figures for the corresponding period in 1920 were 166 and 488,000 tons respectively, representing a drop of 132,000 in tonnage. So far as disclosed, there are few, if any, new boats being laid down in the vacant slips, yet there are a good many steamers which stand in need of completion before they can take the water, and the finishings will afford fair employment in several yards for months to come. Some light on mercantile marine prospects was forthcoming at an Anchor Line launch from Fairfield on Tuesday. It was stated that the cost of constructing a new steamer to-day was three times greater than it was in 1914; that ship builders were quoting for boats at figures that took no note of profits; that others were

laying down vessels on speculation (to keep their places running), knowing that for every 20s spent they would receive in return not more than 10s; and that many owners were instructing procedure with the overhauling and finishing of vessels, aware of the losses involved—from a desire to modify the out-of-work position. Though general conditions, as stated, have been quiet, a fair volume of constructional business has been put through by machinery engineers, particularly marine, by bolt and nut makers, boiler-makers, electrical engineers, bridge builders, and tube makers, yet it goes without saying that one and all could have comfortably faced additional orders. Locomotive engineers are unexpectedly getting short of contracts again, and are cutting operations down. Several big schemes for roads and bridges are in contemplation locally, and these, when further advanced, should benefit steel and iron producers. Coals have fallen off by 2s to 3s a ton; still demand is indifferent, though in the last few days a good many inquiries for foreign purchases have been received, and it is just possible that these may materialise.

MANCHESTER, October 6.

There has been more activity in the market than for some time, but towards the close of the week business has been checked by the easier tendency in raw cotton rates, and buyers have been afraid to commit themselves to large lines, owing to the possibility of a slump in values. In cloth for abroad the feature of interest has been the larger turnover for China, and encouraging transactions have been arranged for Shanghai and Hong Kong. An increased inquiry has come through for India, and occasional sales have been put through, but most of the bids have been too low. Owing to the Jewish holidays, rather fewer orders have been booked for the Near Eastern outlets. Manufacturers as a body rather tend to improve their position, and better reports are being received from the chief weaving centres. Home trade buying has been of a fair extent. In American and Egyptian yarns for home use a healthier business was done last Tuesday, but since then demand has been rather quieter. Stocks in the hands of producers have recently been reduced. Export yarns continue to be sold for China, but most of the demand for India has been impracticable.

THE WOOL TRADE.

Our Bradford correspondent, writing on Thursday, says:—Although some members of the trade assert that they have no confidence in the current level of values for raw wool, the fact remains that the strength of the raw material market is exceptionally well maintained. At Liverpool last week there was a particularly keen demand, and reports from Antwerp to-day indicate that B.A.W.R.A. wool is selling exceedingly well at that centre at prices showing a rise of 15 to 20 per cent. in merinos and fine crossbreds, and 10 per cent. in coarser grades, compared with the rates at the June auctions. Up to the present prices of tops and yarns have responded fairly well to the higher price of raw wool, but there is very little indication of the improvement spreading to the piece goods trade, and it is this absence of movement in the finished article that is causing a certain amount of apprehension in the trade. Topmakers' quotations are very firm, and a good warp 64's is now generally quoted at about 4s per lb, though cheaper lots may be found here and there. There is also some improvement in fine crossbred tops, but medium and low sorts are not particularly active. Worsted spinners are much better employed, and some firms will have to refuse foreign orders where prompt delivery is essential unless the operatives agree to organised overtime. This question is now before the Industrial Council. Most of the yarn business is on export account, and while Germany has not been so prominent, America and Japan have been active buyers. There is also a good

demand for hosiery yarns. The advance in the price of raw wool is helping holders of piece goods to dispose of stocks at slightly better prices, but values in most cases are well below the current cost of production.

COLONIAL WOOL.

(FROM A CORRESPONDENT.)

Since writing last a sale of colonial wool has taken place at Liverpool, at which there was a record attendance of buyers, competition being very keen. Not even the most sanguine expected to find such a strong sale, the competition of some leading Bradford topmakers giving clear evidence of their position. Unless the majority in the trade are greatly mistaken, several who were caught severely in the slump are going to be caught on the rebound, for the big sales of 64's tops which took place at from 2s 6d to 3s mean that wool must be bought at the level of last March-April in order to avoid loss. Since August there has been a scramble to cover in London, Liverpool, and Australia, and there is every indication of another brisk time at the forthcoming London sales. It may be interesting to the B.A.W.R.A. to learn that wool was bought last March-April that produced 70's tops at 2s 5d. Wool was bought in July that produced warp 64's tops at 2s 10½d, but last series the cost was in the neighbourhood of 3s 8d to 3s 9d for good 64's tops. Many feel that out of last week's Liverpool sales such an article will cost 4s, and this is evidence of prices having materially risen since B.A.W.R.A. decided to reduce their limits to last March level of values, which proved to be low-water mark. Both French and Belgian buyers bought keenly in Liverpool last week, and although German interests were present, not a great deal was taken for that quarter, due undoubtedly to the state of the exchange. Crossbreds appreciated 5 to 7½ per cent., fine crossbreds and come-backs in particular being in keen request.

Next Tuesday will see the opening of another series of London sales, and as far as one can see there should be a good time. Some disappointment has been expressed with B.A.W.R.A. deciding to offer such a small quantity of merino wool in view of her present stocks, but apparently crossbreds are going to be put on to the market very liberally while the buying fever is on. Many seem to think that the Liverpool standard of values will be repeated; certainly the level of the close of last London sales should be easily established. During the interval some very big orders for merino yarns have been placed among West Riding spinners, the result being that many firms are now running a full 48 hours week. Several could do with running 5½ hours, and operatives having been out of work for months, it is most desirable that an arrangement should be made which is more in harmony with present needs. Anything in reason to reduce costs of production should be encouraged on the part of the union leaders. There is to-day no justification for a 48 hours week being continued if operatives are willing to work 5½ hours, and can do so without undue strain. This would help to bring costs down, and so enable spinners and manufacturers to compete with Continental firms in the markets of the world. It would also help to bring down the cost of living, for everyone is persuaded that cheaper production costs will be an important factor in rehabilitating the whole textile trade. Taking a broad view, we think that last London sales values should not be exceeded at the forthcoming auctions, for all the business the West Riding is doing is on export account, chiefly to the Continent and Japan, the number of looms running on home trade orders showing very little improvement.

ALEXANDERS DISCOUNT Co., Ltd., 24, LOMBARD STREET, E.C.3

Telephones: 1392 & 225 Avenue. Telegrams: "Alexanders, Thread-London."

CAPITAL SUBSCRIBED - £1,000,000 RESERVE FUND - £270,000
CAPITAL PAID UP - £550,000 RESERVE LIABILITY £450,000

Approved Mercantile Bills discounted. Money received on deposit at call and short notices at current market rates; for longer periods on specially agreed terms. The Company deals in British Treasury Bills of any maturity.

LINEN TRADE.

BELFAST, October 5.

FLAX.—The Irish markets last week were well supplied, and all flax was quickly bought up at unchanged prices. On the Continent, French, Belgian, and German spinners are buying freely, especially in lower class of flax, and consequently prices are tending higher.

YARNS.—Buying has broadened during the past week. Tow yarns have sold freely, and advanced prices have been secured without difficulty. Line wefts in coarser end have moved off in quantity. Warps, also, though not so largely. A considerable business has been done in shear qualities. A few more mills have commenced work, but on a very restricted production.

WEAVERS.—The more confident tone noted for some time past in this section continues. More machinery has been started. Orders placed are for the most rapid delivery possible, indicating bare shelves. Manufacturers are finding yarns stiffer in price all round. It is much more difficult to find material for immediate delivery, which up to the present it has been necessary to do in order to give goods in the time required. The higher cotton rates will mean a struggle for better prices in unions, and some orders have had to be referred back for price revision.

HOUSEHOLD LINENS.—The merchant section is finding more inquiries all round. The United States continue to operate on household goods where delivery can be made promptly. The handkerchief section finds good demand for Christmas trade. Many American buyers are visiting the market.

DRESS LINENS.—Since last report there has been a steady demand from the U.S.A. for coloured dress linens, especially medium and heavy weight goods. Deliveries are wanted up till end of December, and in some cases January shipment has been arranged.

HIDE, LEATHER, AND ALLIED TRADES.

(BY OUR OWN CORRESPONDENT.)

Market hides are still advancing, and best ox sold from 83d to 103d at Bermondsey auctions on Thursday, two classes making more money. Cows were also dearer, advancing 1d, prices being 84d to 83d for best selection. Calf shared the firmness, and advanced 1d to 1d per lb over last week's prices. Trading in foreign hides is brisk, at advancing prices. Frigorifics ox are selling well at 103d c.i.f., and Liebig's at rs. Dry and dry-salted are also now held for full prices, and all classes have shared in the demand. The American market is cabled as firm, and best heavy Chicago packers are now selling at 14½ cents. The leather market has this week been transferred to the Shoe and Leather Fair at the Agricultural Hall, Islington. The attendance has probably beaten all records, and buyers from all parts of the world have been in evidence. The heat has been terrific in the Hall, but there is no doubt the fine weather has had a good deal to do with the success of the function. All the leading tanners have leather on view, and so far have firmly held out for higher prices in bends and offal. Large blocks of cheap bends have been cleared, and so great has been the demand for shoulders that many tanners and factors have cleared their stock. This class of leather has been bought, however, to make the low-grade "stunt" rubbish so freely advertised. Sellers of upper stock have done a good business, and both box calf and glacé kid have sold well at firm prices. Some big buyers have, however, been "shopping around," and are waiting until the end of the week for a break in prices, which at time of writing seems very unlikely.

Foreign buyers of machinery and shoes have been well in evidence, but the exchange difficulty has been a bar to several deals which might have been put through.

VEGETABLE OILS AND OILSEEDS.

(FROM OUR CORRESPONDENT.)

Linseed has continued a weak market, and although there have been slight rallies, prices are again substantially lower on reports from Argentina of depression in options and good weather outlook for the new crop. Re-sellers have been very nervous, and though most of these have cut their losses, the market is lacking in support, and quotations have a decidedly lazy tendency, with Plate seed down to £15 for September-October loading.

There is still a considerable surplus in Argentina for shipment. On September 12th the figure was cabled 252,000 tons, since when 67,500 tons have been exported, leaving on October 1st approximately 184,500 tons on hand. The total shipment from Argentina from January 1st to October 1st are:—To the United Kingdom, 421,800 tons; Continent, 447,000 tons; and to North America, 155,000 tons—in all 1,023,800 tons, against 792,200 tons a year ago. Including Indian linseed this year's world shipments are 1,090,125 tons, against 931,150 tons. The quantities on passage are sensibly less than a few weeks ago, having been reduced to 69,600 tons to the United Kingdom and 76,500 tons to the Continent. The dis-

position at the beginning of the week was inclined to be optimistic, but immediately succeeding events did not confirm it.

In sympathy with seed, raw linseed oil has further declined to under £30 per ton for spot and near delivery at Hull, and this in spite of a fair trade on export account, chiefly American, encouraged by the lower range of values. For January-April delivery £31 to £31 10s has been accepted.

Following easier markets in Egypt, cotton-seed has declined about 20s per ton, but buyers are not active. Crude oil is scarce and firm for September-October deliveries, but quotations are slightly below highest of last week. Soya beans are inactive, and re-sellers of crude oil more inclined to meet the market. Palm kernel oil is about 40s down. Little trade is reported in ground nut oil, and rape oil in poor demand.

PORTLAND CEMENT.

The following quotations for Portland cement are supplied by the Cement Marketing Co., Limited:—Best English, complying with British standard specification, delivered in London area—in full van or motor loads to site, 83s 6d to 89s per ton; alongside in River Thames up to Vauxhall Bridge in full barge loads (30 tons minimum), 76s 6d per ton. Extra on above prices for the following special brands:—

"Blue Tiers," a fine-ground slow-setting cement, and "Red Tiers," a fine-ground quick-setting cement, 3s per ton. "Ferrocrete," a cement prepared to meet the requirements of specialists in ferro-concrete constructions (in 20 sacks to the ton), 10s per ton.

OVERSEAS PRODUCE MARKETS.

Mincing Lane, Friday, October 7.

The markets in most instances during the week furnished very little for comment, trade being reduced to limited proportions both for raw and most manufactured goods.

SUGAR.—Actual transactions in this market were confined to a moderate compass, but prices on balance were not materially altered, though tending in buyers' favour. Tate's cubes, sold, 57s 3d to 58s 3d; crushed, 54s; granulated, 52s to 52s 6d; caster, 54s 6d to 55s; Lyle's yellow crystals, 47s 6d; and granulated, 52s to 52s 3d. Crystallised West India in but retail request, and ordinary to fine colour, sold, 41s to 45s 6d. American granulated, spot, changed hands at 51s to 51s 3d; ditto, afloat, 24s 6d; October, 24s, c.f. and i. U.K. White Java, October, to U.K., quoted, 21s, c.f. and i. terms. Belgian crystals, November-December, held for 19s 6d, f.o.b. Antwerp. Dutch granulated, prompt, 24s; cubes, 29s, f.o.b. terms. Czechoslovakian granulated and crystals, prompt, 23s 6d, f.o.b. Hamburg. Terminal market quiet. White, November, sold, 20s 3d to 20s 13d; December, 19s 9d to 19s; and March, 19s to 18s 9d. Cuban stocks, 1,700,000 tons, against 311,000 same time last year.

COFFEE.—A rather quiet tone prevailed on the spot, though all the finer descriptions realised steady prices. Jamaica, mountain grown, good to fine bold, sold, 157s to 188s 6d; peas, 165s to 192s 6d. The market for future delivery presented a quiet and easier tone. December delivery, sold, 49s 3d to 48s 9d and 49s 3d.

COCOA market generally steady, though quiet. Butter easier on the week at 1s 9d per lb.

TEA.—At public sale, 37,600 packages Indian were offered, and with rather quieter competition recent rates were barely maintained, particularly for broken medium qualities. Ceylon offerings totalled 20,300 packages, and while all the finer descriptions cleared readily at full rates, inferior ruled quiet, with plain the turn in favour of buyers.

RICE.—Market still largely nominal, with quite an absence of support. Two stars Rangoon, spot, quoted 21s; afloat, 20s 9d; No. 1 garden Siam, afloat, 21s 6d; No. 1 Saigon, October-November, 20s 6d. Rangoon bran, October-November, sellers, 90s per ton, ex ship terms. Beans very slow, and Rangoon hand picked, October-December, sold, 12s to 11s 6d and 12s. Madagascar butter beans, new crop, all white, spot, quoted 20s to 22s; and old crop, 15s. Japanese peas, October-November, 24s 6d.

SPICE.—Pepper market generally steady, and a fair demand prevailed, chiefly forward. Fair black Singapore, spot, quoted 4d; ditto, October-December, sold, 3½d; Aleppo, spot, quoted 4½d; Tellicherry, 5d; white Singapore, 8½d; Muntok ditto, 9d; and ditto, October-December, sold, 7½d to 7½d. Zanzibar cloves, spot, sold, 1s 3½d; ditto, October-December, steamer, 1s 3d. Pimento, spot, changed hands at 2½d. Flake tapioca, spot, sold, 1½d; fair Penang, seed, spot, 20s; sago flour, October-December, 15s 3d. Japanese farina, October-November, 28s; desiccated coconut, spot lots, sold, 49s 6d to 49s, near 45s. Ginger steady, quiet.

FRUIT.—The market for currants remained in a quiet state. Amalia, new, quoted 58s to 62s; Patras, 64s to 68s; Vostizza, 82s to

WEEKLY COMMERCIAL TIMES,

Bankers' Gazette and Railway Monitor:

A POLITICAL, LITERARY, AND GENERAL NEWSPAPER.

Vol. XCIII.

SATURDAY, OCTOBER 15, 1921.

No 4,077.

OILSEEDS.—Linseed: Market unsettled, and prices again lower Indian largely nominal. Calcutta, arrived, sold, £16; September-October, £17 10s, value. Plate, spot, Hull, £15; afloat, sold, £15 to £14 10s; September-October, sold, £15 to £14 15s; October-November, £15 12s 6d to £15 5s; November-December, £16 5s to £15 12s 6d; January-February, nearest, £16 10s. Rapeseed quiet. Toria, September-October, quoted £20; real bold Ferozepore quoted £19 15s; brown Cawnpore, £19. Cottonseed quiet. Egyptian black, October, quoted £14 5s; and white, £13 10s. Bombay, September-October, £10 10s. Gingelly quiet. Chinese, September-October, Continent, £29 to £30 paid. Castor, Bombay, September-October, £21. Ground nuts quiet. Coromandel, machine-dried, September-October, £29 to £29 10s; Chinese decorated, f.a.q., ditto, £28 10s to £29 per ton.

METALS.—Tin: The market exhibited a firmer tendency last Monday, cash being sold at £157 5s to £157 7s 6d, and three months' £159 to £159 15s, but prices moved in an easier direction until the middle of the week under a fair amount of selling, while these dates changed hands down to £156, and three months' to £158 respectively. Little change occurred on Thursday, cash changed hands at £155 10s, middle of December £157 to £157 5s, and three months' at £158. At Friday's session dealings were on a limited scale. Cash changed hands at £155, end of November £156 15s, and three months' at £157 15s to £157 5s, while since registered at £157 12s 6d. English ingots, £153 15s to £154 5s. Copper continued slightly steadier during the early part of the week, standard cash by Tuesday realising

£68 12s 6d, three months' £69 10s, with cash at Wednesday's session reaching £69 10s, and three months' £70 7s 6d. The tendency was rather lower on Thursday, standard cash being sold at £69 15s to £69 2s 6d, and three months' £70 12s 6d to £70. At Friday's meeting cash sold at £69 10s, late November £70, and three months' £70 12s 6d, settling down at £70 7s 6d. Electros, £74 10s to £76 10s, best selected, £70 to £71 10s; strong sheets, £103. Wire bars, £74 10s to £75 10s. Lead steadier at £23 2s 6d to £22 17s 6d, as to position Spelter rather firmer at £26 12s 6d to £27. Antimony: English regulus, £37 to £40. Aluminium, home trade, quoted at £120; export, £125.

THE MONEY MARKET.

AN increased desire to employ funds in Treasury bills and short loans has been discernible this week. So money has been plentiful, and the Bank was easily repaid on Monday. Second-hand Treasury bills, too, were dealt in at 4 per cent., the market having missed most of those they

point. The narrow Protectionist attitude is exactly the wrong attitude from which to approach the world's difficulties to-day. What is wanted, what is essential, is a broad, generous outlook which realises the interdependence of nations and the common interest of all the countries of Europe. We have fallen into our present distress mainly because our statesmen have persisted in looking at things from a selfish national standpoint, and thought to improve the condition of their own people by impairing the condition of their neighbours. Lord Hugh Cecil's recent attack on nationalism has an economic as well as a political bearing, and a change of heart in the politicians would be the best augury for an improvement in our commerce and industry.

On the question of remedial measures for trade, the medicine that the patient ought to be given, the Cabinet, by all accounts, is still divided and uncertain. Among their outside advisers, the president of the Federation of British Industries, anticipating the Federation's Memorandum to the Prime Minister, has suggested this week in Scotland that the right course is not merely to jettison the policy of reducing debt, but to start incurring fresh debt, and so relieve the overburdened taxpayer. His scheme, if he is reported aright, is for the Government to come into the market again as a borrower, and restore the debt which has already been cancelled. So deeply is he impressed with the crushing burden of taxation that he would have us follow the example of Continental nations, allow our revenue to fall below our expenditure, and make good the deficiency by loans, the only qualification being that the money so raised must not be wasted by Government Departments—a stipulation that might apply as well to tax revenue as to the product of loans. Here, surely, is a counsel of despair. To ease the burden that the business man is carrying, and give him fresh energy and confidence, we are to proclaim our inability to pay for what we buy.

In our view, there was never a time in which it was more important than now to make revenue cover expenditure. Owing to the working of the three years' average—which admittedly is a burden to the taxpayer in lean years—the slump in income-tax has scarcely started. The real pinch for the revenue is due when the prosperous years 1918 and 1919 no longer come into average, and the tax will be collected on the miserable results of 1920, 1921, and (we fear we must add) 1922. When the contributing profits are the profits of the present depression we must expect a shilling in the £ to produce far less than it does to-day, and to lower the rate of tax just as we approach the time when the tax must automatically become less productive seems to be courting disaster. How can we, for the sake of a temporary respite from taxation, afford to increase the debt charge in the next few years, and throw an increased burden on to income-tax as the yield of the tax becomes progressively thinner?

INDUSTRIAL PROFITS.

We ventured to predict in our last quarterly article on the subject of the profits of industrial companies that the effects of the depression in trade would soon be reflected in our figures. From the statistics set out below it will be seen that these anticipations have already been borne out, for never before since these statistics were first compiled has so sharp a decline in profits been recorded. Before proceeding to a detailed examination of the figures, we may be permitted to give our usual explanation of the method in which they are compiled. There is published each week in the *Economist* a table summarising the profit and loss accounts of the company reports which have appeared during that week, railways, mines, insurance companies, and banks being omitted. The companies are grouped under their appropriate headings, and the previous year's net profits are given for comparison. At the end of each quarter the figures are combined, and statistics obtained which enable us to compile the tables which follow. It should be added that the figures given for the various quarters do not represent the profits earned in that particular quarter, but the profits disclosed during the quarter. They are not necessarily the profits earned in the previous twelve months, for company directors do not all display the same alacrity

in presenting accounts. The reports analysed during the past three months, for example, cover a variety of periods, the majority referring to the year ended March 31st last. The number of reports analysed was 232, and these show aggregate net profits, after payment of debenture interest, &c., of £13,912,771, as compared with £24,157,772 earned by the same companies in their previous financial year, a decrease of no less than £10,245,001, or 42.4 per cent. The comparison of the third quarter's figures of 1920 with those of 1921 may be shown thus:—

1920	£ 24,157,772
1921	13,912,771
Decline	10,245,001

A comparison of these figures with those of the four previous quarters is given below:—

NET PROFITS (after PAYMENT OF DEBENTURE INTEREST, &c.).

	No. of Cos.	Reports Published in		Increase.		Decrease.

1920.							
Third quarter	252	19,045,351	27,332,462	7,987,111	41.9	..	..
Fourth quarter	334	21,726,731	27,633,839	5,907,108	27.1	..	..
1921.							
First quarter	412	41,915,998	43,387,538	1,471,540	3.5	..	..
Second quarter	355	44,173,294	40,467,496	..	..	3,705,798	8.4
Third quarter	232	24,157,772	13,912,771	..	..	10,245,001	42.4

As we have explained above, these figures do not reflect present trade conditions, but rather those of six or more months ago. Taking this into consideration, and reading the figures above in conjunction with the next table, the course of the trade boom and the ensuing depression can be clearly traced:—

NET PROFITS (after PAYMENT OF DEBENTURE INTEREST, &c.).

	Number of Companies.	Reports Published in Year Ended June 30.		Increase.		Decrease.	
		1918-19.	1919-20.	£	%	£	%
1919.							
Third quarter	259	17,439,117	16,843,142	2,157,457	10.5	595,975	3.4
Fourth quarter	292	20,503,429	22,666,886	..	..	..	..
1920.							
First quarter	500	34,590,797	43,926,134	9,335,337	26.9	..	..
Second quarter	355	25,974,556	35,778,799	9,804,243	37.8	..	..
Third quarter	1,406	98,507,899	119,208,961	20,701,062	21.0	..	..

Thus two years ago our quarterly article showed a decrease in the profits of 259 companies of 3½ per cent. From that time onwards increases were shown, until at this time last year an expansion of nearly 42 per cent. was shown. Since then the decline has been clearly marked down to the past quarter's 42½ per cent. decrease. A year ago the average profit per company worked out at approximately £107,300. For the past quarter the average has dropped to £60,000. A year ago each of the various groups showed an increase. For the past quarter, with the solitary exception of the nitrate group, which passed through a depression rather earlier than other industries, all groups show a substantial decline:—

NET PROFITS (after PAYMENT OF DEBENTURE INTEREST, &c.).

	Number of Companies.	Reports Published in Quarter Ended Sept. 30.		Increase.		Decrease.	
		1920.	1921.	£	%	£	%
Breweries	19	5,132,177	4,192,192	..	..	939,985	18.2
Gas	9	67,347	54,925	..	..	12,422	18.5
Hotels, restaurants, &c.	7	299,083	15,992	..	..	283,091	94.8
Iron, coal, and steel	20	4,562,714	3,245,391	..	..	1,317,323	28.8
Land mortgage, &c.	14	1,346,376	896,845	..	..	449,531	33.3
Nitrate	4	1,140,921	141,133	99,922	205.1	..	..
Rubber, &c.	43	1,766,105	1,365,905	..	..	400,200	22.6
Shipping	6	319,310	282,161	..	..	37,149	11.6
Shops and stores	5	675,474	583,855	..	..	91,619	13.6
Tea	24	1,467,773	438,164	..	..	1,029,609	70.0
Telegraph, &c.	5	1,597,791	Dr 665,643	..	..	2,263,434	141.5
Textiles	6	754,051	595,841	..	..	158,210	20.9
Trust companies	9	4,982,399	3,757,389	..	..	1,225,010	24.6
Miscellaneous	61	24,157,772	13,912,771	..	..	10,245,001	42.4

The tea and textile groups are conspicuous with an aggregate net loss, while the rubber and hotel groups show very heavy declines. It is perhaps significant that the section most concerned with retail trade—namely, shops and stores—shows the smallest decline.

With profits falling heavily, the apportionment between

ALL BRANCHES OF INTERNATIONAL BANKING

BANKERS TRUST COMPANY

shareholders and reserves is of more than usual interest. Here is a comparison of the figures of the past three quarters:—

DISTRIBUTION OF PROFITS.

	Net Profits.	Ordinary Dividend.	Preference Dividend.	Reserve, &c.
1921.				
First quarter	£ 43,387,538	£ 24,377,364	£ 6,357,529	£ 12,652,645
Second quarter	40,467,496	23,732,561	8,028,662	8,706,273
Third quarter	13,912,771	10,646,266	2,834,956	431,549
	97,767,805	58,756,191	17,221,147	21,790,467

The last line but one shows that in the past quarter reserves have been the first to suffer. The last column includes, in addition to amounts specifically allocated to reserve and other funds, the differences between amounts brought in and carried forward. As will be seen from the next table, which gives the distribution of profits in the past quarter for each group, reserves and balances brought forward have in many instances been heavily drawn upon in order to pay dividends:—

DISTRIBUTION OF PROFITS.

	Net Profits.	Ordinary Dividend.	Preference Dividend.	Reserve, &c.	% of Profits.
Breweries	£ 4,192,192	£ 3,027,848	£ 530,777	£ 633,567	15.2
Gas	54,925	68,334	1,844	15,253	27.9
Hotels, restaurants, &c.	15,992	59,663	372.9	108,871	670.4
Iron, coal, and steel	3,245,391	2,412,803	74.2	479,350	14.8
Land mortgage, &c.	896,845	690,213	76.9	228,097	25.5
Nitrate	141,133	71,010	50.2	70,123	49.8
Rubber, &c.	1,365,905	649,839	47.5	87,898	6.4
Shipping	282,161	118,414	42.0	33,948	29.6
Shops and stores	Dr 583,855	53,654	39,420	Dr 676,929	..
Tea	438,164	614,854	140.4	Dr 176,690	40.4
Telegraph, &c.	Dr 665,643	515,793	..	Dr 1,345,675	..
Textiles	595,841	444,923	74.6	104,130	17.5
Trust companies	3,757,389	1,720,674	45.6	993,367	26.6
Miscellaneous	13,912,771	10,646,266	76.6	2,834,956	20.3

Notable exceptions are the nitrate and shipping groups, the latter reserving over 46 per cent. of profits. It should be added that the six shipping companies do not include any of the small concerns floated at the time of the boom. The hotel group is prominent. Profits were less than £16,000, but dividends to the extent of over £124,000 were distributed to shareholders at the expense of the reserves and balances in hand. The textile and tea groups have also depleted reserve funds to pay dividends.

The next table shows the ratio of profits and of reserve allocations to total ordinary and preference capital:—

	Total Ord. and Pref. Capital.	Net Profits.	Carried to Reserve, &c.
1920.			
Third quarter	£ 163,024,500	£ 27,032,462	£ 8,422,345
Fourth quarter	182,215,000	27,633,839	10,127,723
1921.			
First quarter	365,534,600	43,387,538	12,652,645
Second quarter	336,719,100	40,467,496	8,706,273
Third quarter	1,047,493,200	138,521,335	39,908,992
	166,443,500	13,912,771	431,549

Both ratios have been dwindling rapidly, and the past three months' figure compares very unfavourably with the average for the four previous quarters. We next show the average rates paid on debenture, preference, and ordinary capital:—

	Debenture Capital.	Debenture Interest.	Average Rate.	Average Rate a Year Ago
1921.				
First quarter	£ 86,124,600	£ 3,831,042	4.43	4.25
Second quarter	76,243,900	3,538,103	4.61	4.40
Third quarter	35,707,800	1,589,573	4.45	4.12
	198,076,300	8,958,718	4.51	4.25

	Preference Capital.	Preference Dividends.	Average Rate.	Average Rate a Year Ago
1921.				
First quarter	£ 128,124,800	£ 6,357,529	5.0	5.1
Second quarter	144,065,100	8,028,662	5.6	5.0
Third quarter	56,733,200	2,834,956	5.0	4.9
	328,923,100	17,221,147	5.2	5.0

	Ordinary Capital.	Ordinary Dividend.	Average Rate.	Average Rate a Year Ago
1921.				
First quarter	£ 237,409,800	£ 24,377,364	10.3	11.2
Second quarter	189,654,000	23,732,561	12.6	13.7
Third quarter	109,710,300	10,646,266	9.7	14.2
	536,774,100	58,756,191	11.0	12.8

The principal feature is the decline in the past quarter in average dividend on ordinary capital to the lowest figure recorded for several years. The average rates in each group for the past quarter were as follows:—

	Debenture Capital.	Rate of Interest.	Preference Capital.	Rate of Dividend.	Ordinary Capital.	Rate of Dividend.
Breweries	£ 12,629,931	3.9	£ 10,015,161	5.3	£ 22,632,025	13.4
Gas	477,759	4.5	12,500	14.8	1,651,027	4.1
Hotels, restaurants, &c.	1,915,000	4.7	1,170,000	5.6	2,910,881	2.0
Iron, coal, and steel	6,100,194	5.1	10,411,861	4.6	24,161,339	10.4
Land mortgage, &c.	4,486,986	4.6	4,862,955	4.7	5,593,356	12.4
Nitrate	..	..	55,400	12.0	5,064,071	3.9
Rubber, &c.	255,670	6.0	2,282,720	3.8	6,240,700	10.4
Shipping	..	..	1,315,000	6.4	1,066,481	11.2
Shops and stores	398,060	5.7	1,203,507	3.3	2,744,287	1.9
Tea	146,370	5.2	..	..	4,488,001	13.6
Telegraph, &c.	1,374,694	4.2	3,383,527	4.9	5,097,699	10.1
Textiles	682,250	4.1	1,828,680	5.7	4,394,569	10.1
Trust companies	7,240,871	5.0	20,191,837	5.6	23,298,840	7.4
Miscellaneous	35,707,785	4.5	56,733,151	5.0	109,710,326	9.7

Ordinary shareholders in tea and rubber companies have had their rate of distribution very much reduced, and small decreases are general, with the exception of the shipping, brewery, and nitrate groups.

NINE MONTHS' OVERSEAS TRADE.

THE September trade returns may be regarded as deplorable to the point of despair by those who make comparison with the figures of a year ago, without allowing sufficiently for the great fall in prices which the past twelve months have seen. Looked at from any point of view, their chief feature is the immense room for improvement which they suggest. Nevertheless, if the figures be carefully examined, they disclose some degree

of progress, which should not be overlooked. As a result of the coal strike, British exports dropped in June to the low level of £38.2 millions. Since then they have risen in successive months to £43.2 millions, £51.3 millions, and £55.2 millions—the September figure. Whatever may be the effect of price changes here and there, one way or the other, the recovery of the export value figures must be taken to denote steady and progressive, if slow, recovery in the volume of exports of British produce and manufactures. The recovery is very much slower than was at one time hoped, but it is at least something that the movement is in the right direction.

The value figures for September and the nine months ending September 30th compare as follows with the value figures for the corresponding periods of 1920:—

MONTH OF SEPTEMBER.				
	1920.	1921.	Inc. or Dec. in September, 1921.	
	£	£	£	%
Imports	152,757,136	87,118,507	- 65,638,629	- 42.9
British exports	117,455,913	55,267,578	- 62,208,335	- 53.0
Re-exports	13,350,608	8,594,644	- 4,755,964	- 35.6
Total exports	130,806,521	63,842,222	- 66,964,299	- 51.2
Excess of imports over total exports..	21,950,615	23,276,285	+ 1,325,670	+ 6.0

NINE MONTHS ENDED SEPTEMBER 30TH.				
	1920.	1921.	Inc. or Dec. in 1921.	
	£	£	£	%
Imports	1,501,412,239	827,678,470	- 673,733,769	- 44.6
British exports	1,007,278,036	518,661,311	- 488,616,725	- 48.5
Re-exports	180,458,482	77,639,668	- 102,818,814	- 57.0
Total exports	1,187,736,518	596,300,979	- 591,435,539	- 48.6
Excess of imp'ts over total exports ..	313,675,721	231,377,491	- 82,298,230	- 26.3

In the past nine months, in spite of all adverse influences, £82 millions have been knocked off the adverse balance shown by the published figures. Had it not been for the coal stoppage, the reduction might have been substantially larger. September's import excess of £23 millions is rather more than double the average monthly balance of pre-war times, and, when the change in values is taken into account, represents a visible monthly balance which, if there is any stirring in international trade, should be easily translated by invisible exports into a favourable balance of useful dimensions. Under the present conditions of depression, an estimate of how the real balance of trade stands is a very difficult task. But, obviously, the semi-official estimates put out at the beginning of the year must be subjected to severe revision. Since a comparison of value figures with those of last year is so far vitiated by price changes, the volume figures accessible in the official returns demand careful study. Here are some examples of how the volume of important exports in the nine months compare with that of the corresponding period of 1920 and 1913:—

BRITISH EXPORTS. January 1st to September 30th.			
	1913.	1920.	1921.
Coal	54,517,788	19,851,555	13,351,554
Coke, &c.	2,380,420	3,185,089	898,734
China-ware and earthenware, &c.	3,065,631	2,907,393	2,013,071
Cement	587,353	454,596	231,282
Pig-iron and ferro-alloys, tons	850,859	498,775	99,937
Railway material	593,515	231,883	217,217
Agricultural machinery	60,185	8,278	4,748
Textile machinery	130,525	35,816	111,637
Total machinery	513,697	316,121	586,856
Cotton yarn	154,761,750	118,447,700	90,592,600
Cotton piece-goods*	5,350,278,900	3,540,677,100	1,886,341,100
Wool tops	331,141	163,982	257,184
Woolen tissues*	81,997,400	151,721,800	55,449,900
Linen piece-goods*	142,307,300	81,827,400	24,720,900
Jute yarn	32,656,200	30,479,900	17,364,500
Jute piece-goods*	129,668,700	120,587,900	47,185,900
Jute sacks and bags	3,117,385	2,423,623	1,330,257
Boots and shoes	1,089,120	623,816	234,964
Soap	1,359,716	1,599,589	596,285
Fur skins, dressed	3,150,495	2,310,201	872,515

* Yards in 1913, square yards in 1920 and 1921.

Declines in quantities exported as compared both with 1920 and 1913 are in most cases very impressive. The most satisfactory items in the list are textile and other machinery and wool tops. In the first nine months of this year, as compared with last, increased quantities of textile machinery have been sent to the following countries:—India, 33,000 tons; Japan, 11,300 tons; China, 9,853 tons; France, 6,441 tons; U.S.A., 3,491 tons; and South America, 3,176 tons.

The Ministry of Transport has issued the following estimate of the weight of imports and exports in August, as compared with August, 1920 and 1913:—

Month of August.	Imports.		Exports.	
	Tons.	Per Cent. Inc. or Dec. in August, 1921.	Tons.	Per Cent. Inc. or Dec. in August, 1921.
1921	3,389,000	..	3,901,000	..
1920	4,302,000	- 21.2	3,184,100	+ 22.5
1913	4,898,000	- 30.8	7,395,900	- 47.3

The increase in the weight of exports in August as compared with a year ago is a good deal more than accounted for by increased coal shipments. Increase in the latter is welcome, but makes the figures a little misleading. Leaving coal out of account, August exports, judged by weight, were over 500,000 tons below those of August, 1920.

The shipping figures show that the tonnage engaged in foreign trade clearing with cargoes from ports of the United Kingdom during the nine months was 24,389,472, compared with 27,630,643 for the corresponding period of 1920. The coal stoppage is in itself sufficient to account for the difference. The latest figures are more encouraging, the September clearance being 4,103,575 tons, against 3,016,720 tons in September, 1920.

The bullion and specie account for the nine months reads as follows:—

	Imports.	Exports.
	£	£
Gold	38,903,831	47,062,507
Silver	7,476,773	8,114,211

Of the gold exported, £44,385,390, or rather more than twice as much as in the first nine months of 1920, went to the United States.

The following tables show the value figures of principal imports and exports for September and the nine months of 1920 and 1921 classified under 43 heads:—

IMPORTS (Value C.I.F.).				
	Month Ended September 30.		Nine Months Ended September 30.	
	1920.	1921.	1920.	1921.

GOVERNMENTS AND THE REVIVAL OF TRADE.—I. (FROM A CORRESPONDENT.)

As war is a teacher of geography, so hard times may be a great school of economics, the fallacies and false hopes that flourish in days of easy profits withering away in the bleaker atmosphere of trade depression. The past 18

months have done much in this respect to educate both public opinion and the politicians; there is to-day in the public mind a general anxiety, not visible two years back, to attack evils at their roots, and there is less disposition in the political world to despise and reject the accepted doctrines of old-fashioned political economy which in 1919 were believed to have nothing of value for the modern statesman. The Prime Minister himself has called into consultation some very capable economists, and whatever may result from his conferences with them, it is something

because Europe is impoverished by war and bad government, and whatever we may do in our own domestic affairs, however much we lower the standard of living here and reduce the sterling cost of production, we cannot regain our prosperity until our customers abroad can buy from us once more. That is a truism which is everywhere accepted in theory but is easily forgotten in practice. It is a vital truism, and it provides the touchstone by which every proposal for reviving trade is to be tested. "Does it help to increase the purchasing power of the impoverished countries?" This test, if applied, would have demolished most of the measures adopted by Governments in the last three years, and would knock out not a few of the schemes floating about to-day. Every selfish sectional remedy goes. Bills for safeguarding industries and checking the flow of such exports as the poorer countries have to offer go. The perpetration of old feuds and the enforcement of too burdensome obligations on former enemies go. The spirit that delights in keeping your enemy down goes. All these things go not because of the moral objection to them, but because they check the recuperative power of the people with whom we must buy and sell if trade is ever to be restored.

Taking this as the acid test, we may in a further article try to consider the scope and the limitations of Government action, setting out a few of the things that Governments can do to help the revival of trade, and *per contra* a few of the things that they will probably be tempted to do, but would be very much wiser to leave undone.

OIL MARKET TROUBLES.

(BY A STOCK EXCHANGE CORRESPONDENT.)

THE oil market is very much in the limelight owing to the drama, amounting to something of a tragedy, which is being fought out upon its boards. To understand dimly the widespread character of the interest, even in a few companies, it may be mentioned that the issued capital of the Shell Transport is nearly £20,000,000 sterling in ordinary shares; the Burmah Oil Company has an issued capital of nine million pounds in ordinary and preference, while of Mexican Eagle shares there are over ten millions issued. At the present time it is difficult to form any accurate idea of the number of shareholders in the "Big Four"—Burmah, Shell, Mexican Eagle, and Royal Dutch—but an estimate of 100,000 people is probably conservative. Apart from this quartette of companies, there are, of course, many other oil concerns, the prices of whose shares are largely dependent upon those of the leaders. Within the last six months the shrinkage in sterling value of Burmah, Mexican Eagles, and Shells comes to something over fifty million pounds sterling. Burmah Oil six months ago stood at 7½. During this October they have been down to 4½, recovering to 5½ before another slight reaction occurred. Mexican Eagles were nearly 7 in the early part of May; they have been down to less than half that price within the past few days, while Shells have fallen from 6¾ to 4¾. The oil market slogan, that no home is complete without some Shells, received exemplification in the extraordinary confidence manifested in the company by its vast proprietary, which includes many thousands of ladies. Consequently, the *débâcle* in the market, as illustrated by the depreciation figures we have quoted, has caused, and still causes, a widespread apprehension verging upon positive alarm. The latter feeling proved too much for some of the holders, and led them to sell their shares during the recent slump, so adding to the depression brought about by extrinsic as well as intrinsic causes. The trouble in the market is of old standing, going back to the time when people went mad over oil shares, and when no imaginary price seemed too absurd for oil shares to reach. Coal was to be superseded by oil, and, in spite of the warnings from the more cautious counsellors, the world and his wife went as wild over oil as ever they did over rubber 11 years back. From time to time during the past 12 months unpleasant reports have reached this country, mostly *via* the United States, to the effect that salt water was making rapid incursions into the Mexican oilfields and ruining part of the field. Five months ago these reports assumed very definite shape in a statement made by a New York expert, whose conclusions were

promptly challenged on this side, and who was declared, in some directions, to be a pessimist put up for the express purpose of depreciating Mexican oil investments at the instigation of the Standard Oil Company of New York. The Mexican Eagle Company, after some little pressure, issued a guarded but cheerful statement, which had the effect of stopping the then slump and inducing a return of hopefulness to the shareholders. Later on, however, the oil market became suddenly swamped by selling of lines of shares from various quarters. Glasgow contributed some of the blocks, Paris more, New York sent its quota, and, as already mentioned, the thoroughly alarmed shareholders turned out their investments upon a market far from willing to take lines of shares at a time when trade depression is rife, and when the prospect of dividends being maintained is at least problematical. The Mexican Eagle has been paying 60 per cent., the Shell 35 per cent., free of tax, and the Burmah 30 per cent., also tax free. Loth as the optimists were to admit the likelihood of these dividends being reduced, the strong probability of "cuts" being made is now forced home upon everybody, except upon the still incurable believers in oil as an exception to the other industries that are suffering from world depression. From the lowest prices reached during the slump of last week there has been a decided recovery, but it is no use blinking the fact that the market is in an excited and a very nervous condition. It would require little selling to bring about another sharp fall. The American policy in regard to the price of crude oil is difficult to understand, for, while this is put up in one week, it may be reduced once or twice shortly afterwards. In the circumstances, it is natural enough that a cry should arise as to the Americans being bent upon securing control of the world's oil industry, through the acquisition of Mexican oilfields lying so conveniently contiguous to their own wells, which under any substantial pressure of demand might run dry. The fight, if it be indeed a fight, is one of the biggest which even the Americans have taken on in the commercial world. Looked at calmly, however, it would appear as though the demand for oil should be sufficiently widespread, as soon as more normal conditions of trade prevail, for powerful corporations to work side by side in the same harmony as that which prevailed during the boom period of the war. It is impossible to say that there will be no further fall in the prices of leading oil shares. What effect the inevitable cuts in dividends will have upon shareholders nobody can foresee, but people who are prepared for quotations to go lower, and who are content to wait for better times ahead, will probably decide that it may be as well not to be scared out of good-class oil shares when prices, notwithstanding the reaction from the worst, are still so flat.

LANCASHIRE COTTON TRADE.

(BY OUR MANCHESTER CORRESPONDENT.)

THERE has been an improvement in the Lancashire cotton industry during the past quarter compared with the previous three months. The outstanding feature of the period has been the marked rise in raw cotton rates. Spinners and manufacturers have been forced to put up their quotations to meet the additional cost of the raw material, but in all instances it has not been possible to secure adequate advances. The higher values, however, have stimulated demand for manufactured articles. Although the conditions are more favourable, production is not yet in full stretch, and large numbers of the operatives are still unemployed. A most satisfactory development has been the appreciation in the value of stocks, and this feature has undoubtedly prevented financial difficulties. Exchange rates throughout the world are still disorganised, and politically there are disturbing factors in the situation; but there is ground for believing that better times are near at hand for Lancashire, and there seems to be no probability of the trade slipping back into a depression similar to that prevailing in the early summer.

There has been a remarkable rise in raw cotton prices. On June 30th the quotation for fully middling American cotton on the spot in Liverpool was 7.85d. By July 18th the rate had advanced to 8.83d. After a slight decline to 8.33d on July 29th, an upward movement showed itself, and on August 8th the quotation was 9d. The higher prices were

fairly well maintained, and towards the end of August another rise took place to 11.05d on the 31st. Fresh high records were established early in September, the figure on the 7th being 14.70d. Violent fluctuations were registered from day to day, but the tone of the market was stronger than ever towards the end of September, the rate on the 26th being 15.34d and on the 29th 15.71d. Since then there has been a rather easier movement, the quotation on Wednesday last being 13.81d. The striking change in the situation has been due to a continuance of very adverse reports with regard to the growing crop in the United States. The official statements issued by the Government have established fresh low records relating to the condition, and the latest estimate of the yield is 6,500,000 bales, exclusive of linters. This means that the probable output will only be about 7,500,000 bales, against 11,355,000 bales in 1920-21. A much larger business has been done in raw cotton. Lancashire spinners have bought more freely, especially in the better grades, which are expected to be scarce, and extensive purchasing has also occurred for Continental and American interests. An important advance has also taken place in Egyptian cotton, partly in sympathy with the rise in the American staple, and partly owing to less satisfactory advices relating to the crop in Egypt. On June 30th the quotation for fully good fair Sakellaridis on the spot in Liverpool was 15.50d. At the end of July the price was about the same, but August brought rather higher rates, the figure on the 31st being 17.75d. Since then a striking upward movement has shown itself, until 30.75d was registered on October 4th. During the last few days there has been a decline, the figure on Wednesday last being 27.50d. The growth in Egypt is said to have been unfavourably affected by insect pests, and owing to the smaller acreage it is not anticipated that the output will be more than 3,800,000 cantars against 4,876,000 cantars in 1920-21.

There was a partial revival of demand in piece goods during July, chiefly for India, but the buying was not general, and before very long the requirements of our customers seem to be satisfied for the time being. In August, when prices began to harden, buyers did not believe in higher values, and they were slow to operate. Since then, however, there has been distinctly more inquiry with an increased turnover, and many manufacturers have been enabled to clear stocks and add to their order lists.

The following is a comparative table of our shipments of cloth for the nine months ended September 30th:—

	1913	1920	1921
yards	5,350,278,900	3,540,677,100	1,866,341,100
sq. yards	73,659,119	242,732,477	100,045,277

So far this year on last we are shipping more freely to Roumania, Mexico, Morocco, and British East Africa, but there is a big decrease in the takings of Bombay, China, Turkey, Egypt, British West Africa, and the United States.

During the last week or two there has been decidedly more inquiry for India, and the turnover has improved. A big business, however, cannot be expected until the political situation abroad is clearer. It is no use disguising the fact that the Gandhi agitation is having a serious effect upon Lancashire trade with dealers in Calcutta and Bombay. Merchants are in no mood to speculate, and indent orders are few and far between. The monsoon season has been excellent, and apart from the uncertain political situation the trade outlook in our Dependency may be described as healthy. For several weeks there has been quite an encouraging turnover in cloth for China. The buying has covered standard makes and fancies, and many producers are now more deeply sold. Distinctly more activity has also shown itself for the Near Eastern markets, especially Egypt. Inquiry has also been better for South America. Clearances in the home trade have improved, but developments for the winter season are being checked by the warm weather. Looms that have been standing idle for many months in Blackburn, Burnley, and Preston are now being restarted, and unemployment amongst the weaving operatives is being reduced.

Organised short time, which had been in force since the end of last year in the spinning section of the trade, was abandoned in July. It cannot be said that this decision was reached owing to any distinct improvement

in trade, but it was felt by the Masters' Federation that individual members should be allowed to run their machinery as they thought fit. In both American and Egyptian yarns more business has been done in home counts during the past month. Prices in most instances have been very unsatisfactory, but cheap stock lots are now more difficult to be found, and, given a steady demand, there is every probability of producers being in a stronger position in the near future. This section has derived considerable support from the larger off-take in qualities suitable for shipment abroad. A big business has been done for China in two-fold descriptions. More trade is now coming round for India. The turnover for certain Continental countries, such as Holland, is broadening.

The following is a comparative table of our foreign trade in yarn for the nine months ended September 30th:—

	1913	1920	1921
Lbs.	154,761,700	118,447,700	90,592,600
£	11,022,055	37,656,977	15,987,327

The prospects for the industry are brighter than for a long time back. Demand for most outlets abroad is much more encouraging. So far the business done has not been sufficient to strengthen spinners and manufacturers, but cheap goods are in reduced supply, and there is every likelihood of the prices ruling being more profitable before the end of the year. The uncertain political situation in India is an adverse factor; but if this trouble can be removed there should be an extensive trade with our Dependency. In China and the Near East supplies are not excessive, and although no trade boom can be expected, it is reasonable to anticipate that by Christmas there will be much less unemployment in Lancashire. In view of the facts known relating to the raw cotton situation, lower values are not likely.

Business Notes.

The Bank Statements.—The monthly statement of average weekly balances issued by the joint-stock banks shows no striking changes in September. The statement is set out in detail on a later page, and in the table below we give a comparative summary of the totals for the nine English banks:—

(Million £'s.)

	Weekly Average.					
	Jan., 1921.	May, 1921.	June, 1921.	July, 1921.	Aug., 1921.	Sept., 1921.
Capital and reserves	115.4	115.8	115.9	115.9	115.9	115.9
Acceptances	88.4	63.0	57.7	52.2	49.4	47.2
Deposits (including undivided profits, &c.)	1,810.1	1,729.3	1,768.4	1,785.4	1,764.0	1,771.4
Total liabilities	2,013.9	1,908.1	1,942.0	1,953.5	1,929.3	1,934.5
Coin, notes, balance at bank, and cheques in course of collection, &c.	256.9	250.3	265.1	252.1	250.3	250.4
Money at call	98.9	96.5	98.0	103.6	100.0	98.9
Investments	341.3	331.2	335.9	336.3	326.3	332.7
Discounts	361.9	304.0	346.2	372.6	379.9	394.3
Loans and advances	845.1	839.9	815.4	812.2	798.7	786.2
Cover for acceptances, pre-mises, &c.	110.5	86.2	81.4	76.7	74.1	72.0
Total assets	2,013.9	1,908.1	1,942.0	1,953.5	1,929.3	1,934.5

Deposits have risen again, while acceptances are slightly lower. Discounts show another substantial increase, which is partly offset by a decline in loans and advances. The increase in investments may be partly due to purchases of Treasury Bonds. The figures should serve to dissipate fears that rapid deflation is in progress.

The Crops.—The monthly report of the Ministry of Agriculture and Fisheries states that the weather during the greater part of September was dry, and the corn harvest was completed by the middle of the month in the later districts. During the second week of the month there were good rains in most parts of the country, which had a beneficial effect on pastures, roots, and catch crops, but the subsequent dry period counteracted the advantage to a great extent, especially in the east of the country. Practically all the wheat was secured in good condition, though in the North some crops were damaged by rains. The grain is generally of good quality, but smutty samples are to be found in most parts of the country. Barley and oats were also well secured as a rule. In the North and West, however, some crops were in stock for a long period, and became discoloured, and there was some sprouting. Winter oats are a good sample, but the quality of spring oats and barley is variable. Early crops are generally good, but later sowings have given small, thin grain. In many districts in the South of England the lifting of main crop potatoes is well advanced, but in other parts of the country this work as a rule is only beginning. The tubers are generally small and second growth is prevalent, but disease is practically non-existent. In the East crops are lifting even lighter than was anticipated a month ago, but in the North and West a better yield is now expected. On the whole, the probable yield per acre is now estimated at 20 to 25 per cent. below average. Mangolds have freshened up since the rains, and prospects are slightly more favourable than a month ago, but crops generally will be light, the plant frequently being patchy and the roots rather small. The probable yield per acre is now estimated at 15 to 20 per cent. below average. Turnips and swedes are much less promising than at the beginning of September, and the probable yield is now estimated at about 40 per cent. below average. All root crops appear to have done better in the North of England and in Wales than in other parts of the country. The apple crop is heavy, but the fruits are generally undersized, although larger than was at one time expected. Apple rot is very prevalent, and is developing in the store. Pears are scarce. The rains of the latter part of August and second week of September improved the pastures, and in the North and West there were good supplies of grass during September, and cattle and sheep made good progress in consequence. Owing to the early harvest, good progress has been made with autumn cultivation, and this work is much more forward than usual.

The Quarter's Shipbuilding.—*Lloyd's Register* shipbuilding returns for the quarter ended September 30th last show that the merchant tonnage returned as under construction in the United Kingdom at the end of September, 1921, amounts to 3,282,972 tons. This represents a reduction of about 247,000 tons as compared with the total at the end of the previous quarter, but under the present conditions the figures can only be regarded to a large extent as nominal. As in the previous quarter, the total includes a considerable amount of tonnage on which work has been suspended owing to the decline in the demand for tonnage, and also a large quantity of tonnage the completion of which has been postponed owing to abnormal causes. The tonnage on which work has been suspended amounts to 731,000 tons and the tonnage which has been delayed in completion amounts to about 457,000 tons. These two totals, amounting to 1,188,000 tons (equal to 36 per cent. of the whole of the tonnage under construction), must be deducted in order to enable a comparison to be made with the figures for normal times, and we thus arrive at a reduced total of 2,095,000 tons under construction in the United Kingdom. As compared with the figures for the quarter ended June 30, 1921, there has been a reduction of about 14,000 tons in the tonnage launched during the past quarter. Attention

was called in recent quarterly returns to the fact that, although the total tonnage returned as under construction was so large, the amount completed compared very unfavourably with pre-war times. In 1913 the average tonnage completed during each quarter was over 23 per cent. of the total work in hand at the beginning of the quarter; the corresponding figures for 1920 fell below 13 per cent. There is still a further reduction during 1921, the average output for the first three quarters having fallen as low as 8½ per cent. There is a continued reduction in the tonnage commenced. In the March quarter the decrease amounted to 113,000 tons in the June quarter there was a further reduction of 324,000 tons, and for the quarter under review the tonnage commenced only amounted to 51,343 tons, or a decrease of 455,000 tons as compared with the last quarter of 1920. This is perhaps the most significant figure in the return as indicating the very unfavourable outlook for the immediate future. The total merchant tonnage building abroad is 2,260,006 tons, but this includes about 375,000 tons (equal to 16.6 per cent. of the total) upon which work has been suspended, leaving 1,885,000 tons actually under construction. The countries where the largest amount of work is suspended are Italy and the United States. Apart from the United States, the leading countries abroad are:—Italy, with 397,544 tons; France, 350,681 tons; Holland, 349,122 tons; and Japan, 186,782 tons. The total for Italy shows an increase of about 87,000 tons, as compared with the previous quarter, but, as stated above, the total includes a very considerable tonnage on which work is now suspended.

Finance Accounts for 1920-21.—The final accounts for the financial year ended March 31st last have just been published. Total gross liabilities on that date amounted to over £757½ millions, and our estimate of National Debt, given in another column, has been adjusted accordingly. Amongst assets we notice that there is a recorded decline of £3,828,000 through the fall in the market quotation of Suez Canal shares. This is the more interesting as other investments made by the Government are taken at cost. For instance, the item Anglo-Persian Oil Company shares and debenture stock is recorded at £4,250,000, with no fall in values for the year. This is followed by shares in British Dyestuffs Corporation at cost £1,700,001, and French 4 per cent. Rentes at cost £3,604,306. To special receipts, which totalled over £286½ millions, the Food Ministry contributed practically £35 millions, while £155 millions came from the Ministry of Munitions, sales of surplus stores yielding £141½ millions of this amount. Gold saved from ss. "Laurentic" brought in practically £12,000 for the Treasury during the period, while sales of dyestuffs delivered by Germany under the Treaty of Versailles are recorded at £188,000.

Railway Amalgamation.—Viscount Churchill, chairman of the company, has issued to shareholders in the Great Western Railway a circular with regard to grouping and amalgamation. The Railways Act provides for the division of the railways of Great Britain into four groups, namely—(1) the Southern group; (2) the Western group; (3) the North-Western, Midland, and West Scottish group; (4) the North-Eastern, Eastern, and East Scottish group. The Western group comprises, besides the Great Western, the Barry-Cambrian, Cardiff, Rhymney, and Taff Vale railways, and the Alexandra (Newport and South Wales) Docks and Railways. It also embraces 26 subsidiary companies. After setting out these, the circular concludes:—"A clause was introduced into the Bill during its progress which provides that the Great Western Railway Company is to be the Amalgamated Company for the Western group, without change of name, and that the other constituent companies shall be amalgamated with, and the subsidiary companies absorbed by, the Great Western Company. With the view to obtain as early as may be practicable the advantages in the direction of economy, working and management to be brought about by the formation and operation of the group, negotiations are already in progress with certain of the above-named companies, and will at once

be taken in hand with the remainder, for the settlement of terms for their amalgamation or absorption, as the case may be, and if a scheme be agreed it will, in pursuance of the provisions of the Act, be submitted for the approval of the proprietors and debenture stockholders prior to its submission to the Minister of Transport and its reference by him to the Amalgamation Tribunal for confirmation. In case of failure to agree terms with any of the companies concerned, it is provided by the Act that the Amalgamation Tribunal shall prepare and settle a scheme for the amalgamation of the constituent companies, and also a scheme for the absorption of any subsidiary company with respect to which an agreed absorption scheme has not been framed."

Iron and Steel Production.—The National Federation of Iron and Steel Manufacturers states that the production of pig-iron in September amounted to 158,300 tons, compared with 94,200 tons in August, 386,000 tons in March, and 741,000 tons in September, 1920. Of the pig-iron produced, 47,400 tons were hematite, 48,100 tons were basic, 49,100 tons foundry, 10,700 tons forge, and 3,000 tons other qualities. The number of blast furnaces in operation, which had been 15 at the end of July and 47 at the end of August, was 67 at the end of September. The number in blast at the end of September, 1920, was 300. The production of steel ingots and castings in September amounted to 429,300 tons, compared with 434,100 tons in August, 359,100 tons in March, and 884,700 tons in September, 1920.

German Customs Duties.—The Board of Trade makes the following announcement:—"The German Minister of Finance has issued an Order increasing from 900 to 1,900 per cent. the premium or "agio" which is leviable when the "gold" duties of the Customs Tariff are paid in paper currency. The effect of the Order is to double the paper currency duties by requiring 2,000 paper marks to be paid for each 100 marks "gold" duty leviable, instead of 1,000 paper marks as hitherto. The new Order is to take effect on October 20th.
